CURRENT LABOUR CONDITIONS

This article summarizes the latest employment and labour information available at July 10, as the LABOUR GAZETTE went to press. It was prepared by the Economics and Research Branch, Department of Labour.

EXPECTATIONS of a rapid increase in employment in most sections of the country in the spring and summer continued to be fulfilled during the month of June. Largely as a result of the heavy demand for labour in agriculture, construction and transportation, the number of registrations on hand at National Employment Service offices fell to 204,600 at July 1, about 50,000 below the figure for a month earlier. This decline continued at a time when there were a large number of students and university graduates entering the labour force. The heavy labour requirements of these industries account in large part for the decline of over 230,000 in the number of live registrations at local employment offices since the peak at the beginning of April.

In many sections of the country, particularly in Ontario and the Prairies, shortages of experienced agricultural workers have already appeared, and a scarcity of this type of worker is anticipated during the western harvest. Plans are already under way for organizing a movement of harvest workers through National Employment Service and the provincial departments of labour, from the east to the Prairie harvest in August. Part of the shortage of labour in agriculture is due to the fact that workers have indicated a preference for jobs in insured industries such as construction, where wages are higher than in agriculture. Because of the late spring, the heavy demand for agricultural workers was delayed this year until May, and by that time many workers who had previously been available for farm work had found jobs in construction.

While agriculture, construction and transportation have provided the main impetus behind the rapid improvement in the employment situation this spring, increases in employment and production in the United States which took place at the same time as the seasonal increase in employment in Canada, have been particularly important to some industries and areas. In June, employment in the United States reached 61,482,000, only slightly below the record set in June, 1948. This improved economic situation in the United States has been directly reflected in an increase of Canadian exports to that country to \$175,290,000 during May, some 45 per cent above the corresponding figure for 1949.

This expansion in markets in the United States has helped to cushion the whole Canadian economy against the decline in markets overseas.

The pulp and paper industry and metal mining, whose chief markets are in the United States, have benefited particularly. In Quebec and Ontario, increased demand for pulp and paper products has maintained employment in the industry at high levels. In both provinces it has been necessary to hire more workers for the summer pulpwood cut than originally anticipated. Agriculture will probably benefit from good markets in the United States, particularly as the American crop is expected to be below that of last year.

It is in the Maritime provinces where employment has increased most as a result of improved markets in the United States. The heavy demand for Maritime lumber from the United States has arrested the decline in employment and production in the lumber industry which had set in as a result of restricted overseas markets, and it is now possible that employment in this industry will approximate that of last year. In the Maritimes, as in Quebec and Ontario, summer cutting of pulpwood logs has been much greater than anticipated, as pulp and paper companies restore depleted inventories. This improvement has helped stimulate retail trade and the service industries of the region.

Although the manufacturing industries of central Canada have benefited indirectly from the increase in demand from the United States, it is the high levels of consumer income, and the stimulus provided by both the construction program and the resource developments such as the oil explorations in the western provinces which have been largely responsible for the maintenance of employment in most Canadian manufacturing industries close to last year's level. Some industries such as primary iron and steel, automobiles, electrical apparatus, and consumer non-durables have maintained their employment above that reached in 1949.

Some industries, such as machinery, shipbuilding, and those manufacturing railway equipment, have decreased their staffs. This is a reflection in part of the decline in overseas demand, and in part of the shift in investment in Canada from manufacturing into public utilities.

The slowing down in the rate of expansion, particularly in manufacturing, in combination with the shift in export markets from overseas to the United States, has created employment problems for particular areas and groups of workers which neither the excellent markets in the United States nor the heavy labour requirements of agriculture, construction and transportation have solved completely. Newfoundland is an example of an area which is having difficulty in finding an outlet for one of its main products, salt cod. Uncertainties over the sterling markets have delayed the Newfoundland fishery by several weeks, and it was only just at the end of June that the cod fishery got under way. The skilled and semi-skilled workers who have lost their employment in shipbuilding, or machinery industries will not be easily absorbed into either agriculture or construction. The existence of special employment problems such as these probably means that unemployment will remain somewhat higher this summer than last.

No major strikes have disrupted employment in Canada so far this year. On June 21, a new agreement was reached between the United Automobile Workers and the General Motors Corporation, covering both Oshawa and Windsor plants, to run for the next five years. The agreement, which closely follows the pattern set in the American agreement, provides for a pension of \$55 a month at age 65 after 30 years' service, progressive wage increases of 3 cents an hour over the life of the contract beginning this year, reduction in hours of work in progressive stages over the next five years from 44 to 40. In addition, there were increased life insurance, accident and sickness benefits.

(Concluded on page 993)

CURRENT LABOUR STATISTICS

(a) Estimated on basis of sample labour force survey. Only those who did not do any work in the survey week are here classified as persons without jobs.

(b) Some of these "unplaced applicants" registered at the National Employment Service Offices are persons with a job who are seeking other work. On the other hand, there are persons without jobs and seeking work who do not come to the N.E.S. offices.

(c) These percentages calculated on basis of 1949 figures excluding Newfoundland.

(d) These percentages compare the cumulative total to date from first of current year with total for same period previous year.

Data in this table are preliminary figures from regular reports compiled by various government agencies, including Dominion Bureau of Statistics, the Unemployment Insurance Commission, the Immigration Branch, Department of Citizenship and Immigration, and the Economics and Research Branch, Department of Labour. Detailed information can be found in the statistical appendix of the Labour Gazette.

NOTES OF CURRENT INTEREST

Doctor MacNamara awarded Citation of Merit

Meeting in convention in Long Beach, California, on June 2, the International Association of Public Employment Services awarded the "Citation of Merit" to Doctor Arthur MacNamara, Deputy Minister of Labour for outstanding services to "wage-earners and society". The citation, illuminated on parchment and bound in full leather, reads as follows:—

Arthur MacNamara, C.M.G., LL.D. Humanitarian, Distinguished Citizen and Devoted Public Servant, Deputy Minister of Labour for Canada.

Crusader for enlarging the opportunities of useful work for all and for minimizing the hazards of unemployment to wage-earners and to society;

Pioneer in planning and building a system of Unemployment Insurance and National Employment Offices in Canada;

Whose knowledge, devoted spirit and unique abilities, in serving to strengthen the forces of democracy, are recognized with appreciation by the International Association of Public Employment Services at its 37th Annual Convention in Long Beach, California, June 2, 1950.

*James G. Bryant, President,
B. C. Seiple, Secretary-Treasurer.*

As Doctor MacNamara was unable to attend the convention, the citation was presented to him in Ottawa by Mr. Bart G. Sullivan, Chairman of the International Services' Citations Committee. The presentation address concluded:—

"Your achievements in the public service of your country have been remarkable and, as a tribute to your outstanding accomplishments, your tireless devotion to duty, your unrelenting zeal and ultimate accomplishments in the struggle for improved labour-management relations in war and in peace, your successful operation of the National Selective Service in the war years, as well as organization and implementation of unemployment insurance and the National Employment Service embracing agricultural labour and the establishment of displaced persons in Canadian employment—it is our proud privilege to add to your already imposing list of well-earned honours, the highest award within the

power of the International Association of Public Employment Services—that of the Citation of Merit."

Among those who felicitated the Deputy Minister of Labour on the honour accorded him was Canada's elder statesman and former Prime Minister, the Rt. Hon. W. L. Mackenzie King and the Rt. Hon. Louis S. St. Laurent, Canada's present Prime Minister.

Mr. King, writing from Laurier House, expressed his pleasure at the recognition that had come to Doctor MacNamara for the services "rendered the parties to industry and through them to the country at large." Mr. King also noted the appreciation of the significance of the award by the press of the country.

LMPC continue steady growth

The May issue of *Teamwork in Industry*, published by the Industrial Relations Branch of the Federal Department of Labour, draws attention to the steady and consistent extension of the Labour-Management Production Committee plan. During the year commencing in June, 1949, there were 72 new committees established. Of these, 46 were set up since the end of December, 1949. The total number of active committees in May, 1950 was 681.

It is stated that the provinces are represented in this total as follows: Prince Edward Island, two; Nova Scotia, 33; New Brunswick, 21; Quebec, 145; Ontario, 324; Manitoba, 56; Saskatchewan, 35; Alberta, 24; British Columbia, 47.

Of the 641 committees that were functioning at December 31, 1949, 383 were in various manufacturing enterprises. The larger figures include: 33 in edible food products plants; 24 in lumber and its products; 98 in iron and its products; 22 in chemicals and allied establishments; 26 in edible animal and sea products; 23 in leather and leather products; 16 in electrical apparatus; 39 in pulp, paper and paper products and 13 in clay, glass and stone products. There were 129 in transportation enterprises, including steam railways, street and electric railways and air transport.

Trade union affiliations of the bargaining agencies in companies in which LMPC's are established as at December 31, 1949 show that 276 were affiliated with the Trades and Labour Congress of Canada; 244 with the Canadian Congress of Labour; 39 with the Canadian and Catholic Confederation of Labour and 82 with various other groups.

**Deputy
Minister
submits brief
to Old Age
Security
Committee**

Dr. Arthur MacNamara, Deputy Minister of Labour, was among those who appeared recently before the Joint Committee of the Senate and the House of Commons on Old Age Security.

His brief was designed primarily to provide information, for the use of the Committee, on the operation of the Unemployment Insurance Act and the Canadian Government Annuities Act, legislation which he described as constituting "an important part of the Canadian pattern of social security." In supplying estimates of the cost of administering a contributory system of old age security in conjunction with the Unemployment Insurance Act, Dr. MacNamara stated: "It would be feasible . . . to combine Unemployment Insurance and Old Age Security by using the same technique and machinery for both. Ultimately universal coverage could be attained for both although I do suggest that this objective could best be developed over a period of years."

After reviewing the operation of the Canadian Government Annuities Act, Dr. MacNamara made a number of "general personal comments." In particular, he suggested the possible advantages of combining, in the over-all plan for old age security, a contributory system covering the wage and salary-earning population, and a special Annuities scheme covering the self-employed. "In respect to those insured under the Unemployment Insurance Act," he stated, "contributions might be, as in the case of the Unemployment Insurance Act, from employers, employees and the federal treasury. In the case of the sale of Annuities, an . . . equitable corresponding situation might be brought about by cheapening the cost of limited Annuities to the purchaser."

In concluding his brief, Dr. MacNamara emphasized the need for encouraging "the feeling that people able to work should work."

The Joint Committee on Old Age Security concluded its public sittings on June 2, after hearing the information and proposals put forward by the following organizations and individuals: Canadian Chamber of Commerce; Canadian Congress of Labour; Canadian Association of Social Workers; Canadian Manufacturers' Association; Trades and Labour Congress of Canada; Canadian Welfare Council; Canadian Life Insurance Officers Association; L'Union Catholique des Cultivateurs (Catholic Union of Farmers); Dr. G. F.

Davidson, Deputy Minister of Welfare, Department of National Health and Welfare; Mr. J. W. Willard, Director of Research, Department of National Health and Welfare; Mr. W. M. Anderson, CBE, General Manager, The North American Life Assurance Co., Toronto; Mr. M. W. Sharp, Director, Economic Policy Division, Department of Finance; Mr. Maurice Lamontagne, Professor of Economics, Faculty of Social Sciences, Laval University, Quebec; Dr. H. M. Cassidy, Director, School of Social Work, University of Toronto; Dr. Charlotte Whitton, OBE, Ottawa; Mr. Leslie A. Mutch, MP, Parliamentary Assistant to the Minister of Veterans Affairs; Col. F. J. G. Garneau, Chairman, War Veterans Allowance Board; Mr. F. P. Varcoe, KC, Deputy Minister of Justice; Dr. Arthur MacNamara, Deputy Minister of Labour.

The report of the Joint Committee on Old Age Security, expected during the current session of Parliament, will be reported on in an early issue of the *LABOUR GAZETTE*. On page 1011 of this issue, the briefs presented to the Committee by the Trades and Labour Congress of Canada and the Canadian Congress of Labour are summarized.

**Settlement
reached in
Chrysler
dispute**

A threatened strike of some 4,300 employees of the Canadian Chrysler Corporation at Windsor was averted when the company and Local 195, United Automobile Workers (CIO) reached a settlement on June 5.

The terms of agreement, according to press reports, include a straight six cents an hour wage increase, a company-paid health and insurance plan, 47 contract changes, and two-and-one-half times the regular hourly rate for work performed on recognized holidays. No pension plan is provided. It is estimated that the benefits represent a package wage gain of around 11 cents an hour for each worker, apportioned as follows: six cents in wage increases, four cents in health and insurance security, and about one cent for minor economic clauses of the agreement. The contract, which will run for two years, is re-openable on wages only within one year.

The union earlier had sought a pension plan but this was dropped in favour of wage increases; there is to be no re-opening of talks on pensions for five years.

Settlement followed just four weeks after the handing down of a Conciliation Board majority decision, recommending the

adoption of a \$55 a month company-financed pension plan, "similar to the Ford Motor Co. of Canada" (see p. 1045 of this issue), and containing the principles of funding and joint administration or, as an alternative, a \$100 monthly pension, under which the company would pay \$55, the remaining \$45 coming under a Canadian Government annuity scheme, with company and employees contributing equally.

Canadian GM-UAW announce new agreement

A five-year agreement between General Motors Corporation of Canada and the United Automobile Workers (CIO) was announced in the press on June 21.

The settlement, according to a joint statement by the company and the union, covers wages, company-paid pensions, insurance and hours of work at the company's Oshawa and Windsor plants, and is patterned on the agreement recently concluded by General Motors and the UAW in the United States. (See note below.)

The new agreement, which will run until June, 1955, includes the following provisions:—

1. Continuation of the cost-of-living formula established in the 1948 agreement, under which wages are reviewed quarterly and adjusted in accordance with the Canadian cost-of-living index.

2. An annual improvement factor of three cents an hour to be added to wages, commencing June of this year.

3. A funded, non-contributory pension plan providing for a pension of \$55 a

month for workers with 30 years' service at age 65, with proportionately lower pensions for workers with less than 30 years' service.

4. Increased life insurance and sickness and accident benefits under the company's group insurance plan, at no additional cost to the employees. The company will also share the cost of hospitalization and surgical coverage for employees, and will extend these benefits to members of their families.

5. Hours of work will be reduced from 44 to 40 in progressive stages over the next five years.

6. Three weeks' vacation with pay for employees having 15 years' service or more.

7. A five-cent increase for non-productive workers.

8. Some adjustment in rates as between Oshawa and Windsor.

Industrial Accidents and Workmen's Compensation Benefits during 1949

According to figures released by the Industrial Accident Prevention Associations, there were 431,859 industrial accidents in Canada during 1949, of which 1,024 were fatalities. During the year, workmen's compensation benefits totaling more than \$58,300,000, were awarded by the nine Canadian Workmen's Compensation Boards.

The following tabulation shows the record of awards and accidents during 1949 by provinces:—

	Total benefits	Deaths	Total accidents
Alberta	\$ 4,701,347.30	110	32,396
British Columbia	13,128,241.21	210	69,252

Saskatchewan Federation of Labour urges 40-hour week

Legislation for the gradual establishment of a 40-hour week throughout the province is being sought by the Saskatchewan Federation of Labour, CCL, according to a press and radio release.

The Federation's statement, issued following a meeting of the executive in Moose Jaw on May 6-7, "cites the present (May) unemployment situation as a further indication of the growing necessity for the establishment in Saskatchewan of the 40-hour week, through legislation."

The implementation of a 40-hour week, it says, "will assist in the absorption of substantial numbers of unemployed workers," and will "constitute a deterrent to depression" by providing some measure of stability in employment and consequently in purchasing power.

"The tendency towards increased mechanization and efficiency in both industry and agriculture is an important factor in the displacement of the gainfully employed," the statement reads. "The migration of young people from farm areas is due, in the main, not to the 'bright lights' of the cities, but to greatly restricted opportunities for entering into farm operations."

The executive of the Federation proposes the institution of the 40-hour week, with the same earnings, through the following progressive steps: During 1951, institution of the 40-hour week in all cities of the province; during 1952, institution of the 40-hour week in all towns having a population of 1,000 or more; during 1953, application of the 40-hour week to the remaining rural centres.

"The increased efficiency and productivity of labour in recent years, and other corresponding factors, can bring in a 40-hour week without noticeable disruption or dislocation of industry," the Federation believes.

Increase in earnings in British industry

A survey of earnings and hours for October, 1949, published in the United Kingdom *Ministry of Labour Gazette*, shows that the average weekly earnings

of British workers have risen 18 per cent since April, 1947.

This rise, according to the *Gazette*, reflects factors other than increases in wage rates, "including the rise in output which particularly affects the earnings of piece workers."

An index of industrial production, covering the same period as the earnings index, shows a rise of 28 per cent.

The *Gazette* states that there has been a "slight increase in the proportion of workers paid under a system of payment by results." The proportion varies widely in different industry groups, as is shown in the following table covering almost 6½ million workpeople.

Average weekly working hours increased slightly during the period under review, from 45·0 to 45·4. In the great majority of industries the average hours worked by men in the last pay-week in October, 1949, ranged between 44 and 49, those worked by youths and boys mostly ranged between 42 and 46, while those worked by women and girls were mostly between 40 and 44.

Percentage of Time and Piece Workers, Etc., Employed in October, 1949

U.S. Federal State aid to low-income families and unemployed

A report summarizing *Selected Government Programs which Aid the Unemployed and Low-Income Families* in the United States has been prepared for the Senate Joint Committee on the Economic Report. The data, which includes federal, state and local programs, was assembled by the subcommittee on unemployment and low-income families.

(A brief summary of *Low-Income Families and Economic Stability*, an earlier report prepared by the Senate subcommittee on low-income families, appeared in the March *LABOUR GAZETTE*, p. 307.)

While there are a number of programs such as public assistance and minimum-wage legislation, designed specifically to aid low-income families, there are, according to the report, an even larger number of programs which, while designed to meet a general economic problem, have nevertheless a direct bearing on the economic status of low-income families. Examples of these programs are unemployment insurance, old age and survivors' insurance and retirement plans.

The first program with which the report deals is social insurance and related programs which assist in preventing dependency when earnings are interrupted or cease.

The Social Security Act established two social insurance programs to provide protection against wage loss resulting from old age or death (federal old-age and survivors' insurance) and from unemployment (federal-state unemployment insurance).

Old age and survivors insurance is the largest of the various insurance programs. During 1948 the total number of persons with insured employment was about 50,000,000. The coverage of the State unemployment insurance laws closely approximates the coverage of the old-age insurance programs.

Only a small fraction of the five million government employees is covered by any type of unemployment insurance. Of the 2,000,000 civilian Federal Government employees, most enjoy retirement protection under the civil service and other special retirement systems. Almost three-fifths (about 2.1 millions) of state and local government employees are covered by a variety of retirement systems.

Workmen's compensation laws, now established in all 48 states, provide occupational injury or death benefits in many types of industries. Federal workmen's compensation laws cover Federal Govern-

ment employees, private employees in the District of Columbia, longshoremen and harbour workers.

A recent amendment to the Fair Labour Standards from 40 cents to 75 cents an hour, will favourably affect about 1.5 million workers, most of whom are in the low-income groups, the report states.

In addition to the insurance and related programs whose benefits are available as a right, a number of other programs are accessible to low-income groups and the unemployed on the basis of need. Through grants-in-aid the Federal Government provides funds to the States for assistance in three cases: the aged, dependent children and the blind. Some provision is made in all States for general assistance, but in many the localities bear the entire financial burden. Other federal grant-in-aid programs are vocational rehabilitation, child health and welfare and the national school-lunch programs.

The provision of adequate housing for a large segment of the low-income population was first encouraged by the U.S. Federal Government with the passage of the Housing Act of 1949. "In the slum clearing and redevelopment program," states the report, "an unprecedented opportunity is afforded for a joint attack on the evils of slums by local communities, the Federal Government, and private enterprise."

Primarily designed to make farm ownership operating, and flood and disaster loans, the Farmers Home Administration also attempts to aid farmers indirectly in their housing needs by providing, through its loans, the initial stimulus to better farm operations. In 1950, the FHA's housing functions will be expanded to provide \$25,000,000 as building loans to farmers to construct, alter, repair or replace dwellings and other farm buildings.

Finally the report describes the benefits available to veterans.

Considerable statistical material appears in appendix table and charts.

GM-UAW agreement acclaimed

The new five-year contract between General Motors Corporation and the United Automobile Workers (CIO), details of which were concluded on May 23, was hailed as one of the most significant ever negotiated, the *New York Times* reports.

Not re-openable until its expiration in May, 1955, the agreement is the longest term to have been achieved in the industry, and assures the company of five years of uninterrupted production. It will have

"a stabilizing influence not only on our business but on the economy of the whole country," the General Motors president is quoted as saying. "Removing the fear or possibility of a strike for five years is a tremendously constructive achievement," for all those immediately concerned and for the general public.

The contract includes provision for a company-financed pension plan, annual wage increases, welfare benefits, a modified union shop, and retention of the cost-of-living wage adjustment formula adopted two years ago.

Under the pension plan agreed upon, workers retiring at the age of 65 with 25 years' service will receive a pension of \$100 a month, including federal social security. If Congress approves increases in federal benefit the maximum monthly payment will be \$117.50. The contract calls for a trust fund to be set up and joint administration of the plan. Although the normal retirement age is 65, an employee, if he is capable and wishes to do so, may continue until age 68. At the company's option, an employee with "unusual skill" and good health may continue beyond age 68. Disability pensions ranging from \$50 to \$90 a month, depending on length of service, are provided for employees who become totally and permanently disabled after 50 years of age.

The contract provides for a guaranteed annual wage increase of four cents an hour, described by the union as a reward for increased productivity, to be added to the basic wage rate; also for continuation of the cost-of-living "escalator" clause, providing for wage adjustments in accordance with the Bureau of Labour Statistics price index, with no upward limitation but limited downward to a point no lower than the basic wage rate.

The new agreement requires the company to pay half the cost of medical-hospital benefits. Life insurance is increased by \$500, with coverage ranging from \$2,500 to \$5,000. Sickness and accident benefits will rise by \$14 a week in all brackets, and sickness benefits will be payable up to \$45.50 a week for up to twenty-six weeks. Vacation pay in lieu of days off is provided for as follows: forty hours' vacation pay after one year of service; up to 120 hours' pay after fifteen years of service.

Under the modified union shop clause, new employees will be required to join the union but will have the option of withdrawing after one year. Workers not now in the union may remain non-members.

The UAW, which had asked for demands totalling 31 cents an hour, estimates that the immediate benefits gained add up to 19 cents an hour and that in five years they will aggregate 35 cents an hour. Of the present 19-cent total gain, the union credits 7 cents to the pension plan, 5 cents to medical-hospital insurance, 4 cents to a flat wage rise, 1.5 cents to improved vacation provisions, and the remainder to an increase for tool and die workers, other skilled workers and apprentices.

In its first year the new contract is expected to increase the company's payroll by \$144 million, and by the end of the five-year period by more than \$1 billion.

Besides applying to nearly 250,000 General Motors employees, 30,000 tool and die workers will receive the benefits agreed on, as well as an additional five cent an hour raise.

Commenting on the agreement, UAW international president, Mr. Reuther, called it "historic," and "the most significant development in labour relations since the mass production industries were organized in 1936-37." Referring to the application of its terms to other companies, Mr. Reuther gave assurance that the union will be "reasonable." The pattern established for 1950 negotiations by the union through the General Motors agreement will be "trimmed to meet the occasion when the UAW meets with other companies," he said. "The union is not committed to five-year contracts as such, because the facts in each case will determine that."

GM-IUE conclude 5-year contract Agreement on the terms of a new contract was reached on May 27 between General Motors Corporation and the International Union of Electrical, Radio and Machine Workers (CIO). The contract is reported in the press as "virtually a duplicate of the five-year agreement between General Motors and the United Automobile Workers (CIO)."

Covering 30,000 employees, the IUE agreement provides for \$100-plus pensions, higher insurance and sickness benefits, guaranteed annual pay increases, and the cost-of-living tie-up incorporated in the GM-UAW contract. The one basic difference is that the IUE did not win an immediate modified union shop. Before the union can bargain for that condition an election under the National Labour Relations Board must be held; but a provision is inserted which gives to the IUE a modified union shop if the vote favours it.

Validity of Taft-Hartley cause upheld by U.S. Supreme Court

The validity of the non-Communist affidavit required of union officers under the Taft-Hartley Act was upheld by a decision of the U.S. Supreme Court delivered May 8.

The Act provides that the services of the National Labour Relations Board are not available to a union unless each of its officers has filed an affidavit that he is not a member of the Communist Party and does not believe in the overthrow of the Government by force. The constitutionality of this provision was challenged jointly by two unions, the United Steelworkers and the American Communications Association, on the ground that it abridged the freedom of speech, press and assembly guaranteed by the First Amendment to the Constitution.

The Court's decision, delivered by Chief Justice Vinson, was that Congress' authority to protect inter-state commerce gave it the power to take necessary steps to prevent obstruction through "political strikes." The duty of the Court, it was held, was to weigh the public interest against the partial abridgement of liberty of a small group. It found this section compatible with the Constitution. The decision and the dissenting judgment of Mr. Justice Black are reported on page 1072 of this issue.

Changes in organization of U.S. Department of Labour

The U.S. Department of Labour was one of several federal departments affected by recent moves to reorganize the executive branch of the U.S. Government in accordance with the recommendations of the Hoover Commission.

Sixteen of the 21 proposals submitted to Congress by President Truman came into effect on May 24. Three of these related to the Department of Labour. Under their provisions, the Bureau of Employees' Compensation and the Employees' Compensation Appeals Board were transferred from the Federal Security Agency to the Department of Labour; the Secretary of Labour was authorized to co-ordinate the administration of all legislation regulating wages and hours of work on contracts to which the Government is a direct or indirect party; and finally, authority and responsibility within the Department was centralized in the hands of the Secretary of Labour. Formerly, authority over three of the Department's bureaus (Bureau of Labour Statistics,

Wages and Hours Division, and Women's Bureau) was vested mainly in the units themselves.

Industrial Relations Research Association

Some twenty papers were presented by leading academic authorities at the Second Annual Meeting of the Industrial Relations Research Association, which

took place in New York City at the end of December.

Following the Presidential Address, entitled "The Social Control of Industrial Relations," by Professor Sumner H. Slichter of Harvard University, a number of aspects of the following general subjects were dealt with: Labour and the Public Interest, Capitalism and Free Labour Markets, Crucial Issues in the Pension Problem, Economic Power Blocs and American Capitalism, and Measurement of Employee Attitudes. A small number of miscellaneous papers were also presented.

The proceedings of the meeting have been recently published in a 300-page volume.

Higher wages on program of AFL

Following a meeting of the National Executive Council of the American Federation of Labour in May, President

William Green announced that the AFL would fight for higher wages and pegged consumer prices during the next year as a means of increasing purchasing power and warding off unemployment.

Speaking before a press conference in Philadelphia, Mr. Green is quoted in the *New York Times* as claiming that "the high earnings of corporations show that they can increase wages without increasing costs by giving up some of their profits. If purchasing power is reduced, while producing power remains normal," he said, "we'll have a surplus which will lead to unemployment."

Contrariwise, "the purchasing power which will result from a high level of wages," Mr. Green maintained, "will broaden the market for all types of goods and services, as well as stimulating increased efficiency in business."

Limitations on hours of work in U.S.A.

The United States Labour Department has published an analysis summarizing the various state, territorial and federal laws regulating hours of work. The information

is set forth in tabular form.

Industrial Relations in Germany 1945-49

A report recently presented to the British Parliament by the Secretary of State for Foreign Affairs gives an account of the post-war growth of employers' and workers' associations in the British Zone of Germany between 1945 and 1949. The report states that the British authorities, in encouraging the development of German trade unions, have tried to foster a sense of personal responsibility that would offset the former authoritarian principles and practices, and build a free self-governing organization through which the voice of the German worker might be heard.

By the end of 1949, the total number of trade unionists in the British Zone was over 3 million. The majority of these are members of a united trade union organization (the DAG) but there are also small independent workers' organizations. There were about 1½ million union members in the U.S. Zone and about 400,000 in the French Zone.

Attempts were made to attain an inter-zonal unity by bringing the workers' organizations in the three Western Zones together. A Bi-zonal Trade Union Council for the British and U.S. Zones was set up in 1947 and later included French representation. In October, 1949, delegates from the three zones, meeting in Munich, formed a trade union federation (the DGB) for the entire area of the German Federal Republic. The British authorities have also fostered the growth of works councils and collective bargaining machinery. Although the British had

urged that such machinery should be entirely voluntary in growth and regulation as it is in England, it became evident that the German workers and employers were more inclined to look to State legislation for regulation.

The Report concludes as follows:

If the German people are not once more to become disillusioned with democracy they must have adequate means of self-expression, and a sense of common purpose, in the economic field. With the establishment of a German Government and the entry into operation of the Occupation Statute, the role of the Occupation authorities has changed and the responsibility for finding a solution to the problems of industrial relationships rests with the Germans themselves. On the success of their efforts probably depends, in no small degree, the future of democratic government in Germany.

Trade Union membership in the Netherlands

A recent despatch from the Canadian Embassy at The Hague gave the following statistics on trade union membership in the Netherlands:—

Trade Union Group	Jan. 1, 1949	Jan. 1, 1950
NVV (Socialist)	365,400	381,600
KAB (Catholic)	268,900	296,100
CNV (Christian)	147,500	155,200
EVC (Communist)	163,400	163,300
Others (estimated)	30,000	30,000
Total	975,200	1,026,200

(Continued from page 984)

IN BRIEF . . .

The 1950 capital expenditure of business and government will probably be about \$3,700 million—\$105 million higher than the estimate announced earlier this year. . . The cost of living index advanced to a new high of 165.4 at June 1, as compared with 164.0 at May 1, and 160.5 at June 1, 1949. The latest increase was due almost entirely to higher meat prices . . . Average wages paid to male farm help at May 15 this year were lower by the day, both with and without board, for all Canada than a year earlier. With board provided, wage rates per day averaged \$3.84 for all Canada (excluding Newfoundland) for the middle of May, as compared with \$4.04 in May last year and \$3.93 in 1948.

UNITED NATIONS ECONOMISTS REPORT ON FULL EMPLOYMENT

The United Nations Economic and Social Council received in December a report on "National and International Measures for Full Employment". The result of a study undertaken by five leading economists from France, England, Australia and the United States, the report has attracted widespread interest, redirecting international attention to Articles 55 and 56 of the United Nations Charter, under which all members are pledged to undertake measures for the promotion of "full employment".

At the request of the Economic and Social Council, a small group* of world-renowned economists was appointed last fall to prepare a report on national and international measures to achieve full employment. Their unanimous report was completed in time to be presented at the meeting in January of the Economic and Employment Commission, and, later, at the tenth session of the Economic and Social Council, which took place at Lake Success in February.

In this article, a summary of the report itself is followed by an account of the general reaction of the two UN agencies to which it was presented. The statement made by Mr. John Deutsch, Canadian representative to the Economic and Employment Commission, is summarized at some length.

The Report

The economists agreed that "the major cause of unemployment in industrialized countries is the insufficiency and instability of effective demand". In the main, their report is devoted to this problem of demand, although passing recognition is given to the fact that unemployment or under-employment may also result in underdeveloped countries from a lack of capital equipment, and in some countries from certain structural features of the economy.

A number of recommendations outlining measures to provide a level of effective demand sufficient to maintain full employ-

ment are set forth in the last section of the report. According to the economists, these recommendations, while involving a considerable amount of government action, are "fully consistent" with the institutions of free enterprise economies.

A Consideration of the Problem

Full employment can be provided, states the report, only when there is a sufficient level of effective demand. Liability to unemployment varies between countries and is greatest in industrially advanced economies, where consumption consists largely of durable consumer goods, purchases of which can be postponed.

Instability, as well as insufficiency of effective demand is of concern. Cyclical fluctuations are largely due to instability of private investment; and production, employment, prices and wages are all affected. Changes in the distribution of real incomes are induced by these fluctuations, chiefly by movements in the prices of primary products. The latter are traditionally less sensitive than secondary products to changes in effective demand with the result that depression is reflected in a primary economy not so much by unemployment as by a severe reduction of real incomes, consequent to rapidly falling prices.

Owing to the pervasive nature of international trade, economic fluctuations of leading industrial nations have a determining influence on fluctuations elsewhere, which has given the United States an unique position in the world economy, and has placed on her the prime responsibility for the achievement of the United Nations goal. The successful maintenance of prosperity is, nevertheless, the concern of all nations, assert the economists, since failure to maintain prosperity in one part of the world makes it more difficult to attain in another.

* The group was composed of the following: J. M. Clark, Professor of Economics at Columbia University who worked in association with Arthur Smithies, Professor of Economics at Harvard University; Nicholas Kaldor, Fellow of King's College, Cambridge; Pierre Uri, Economic and Financial Advisor to the Commissariat général du Plan, Paris; and E. Ronald Walker, Economic Adviser to the Australian Department of External Affairs (Chairman).

Recommendations

In drafting their report, the experts sought measures which would provide a comprehensive framework for the maintenance of full employment in democratic countries.

Their recommendations, subject to individual implementation, are grouped according to domestic or international application, and are designed to form a single, unified plan of action.

Domestic Measures

According to the report, it is desirable that each government should adopt and announce a full employment target which will define the meaning of full employment in the country concerned. The experts define full employment as "a situation in which employment cannot be increased by an increase in effective demand . . . a situation in which unemployment does not exceed the minimum allowances that must be made for the effects of frictional and seasonal factors".

In industrialized countries, targets should be defined in terms of unemployment and should represent the smallest percentage of unemployment compatible with seasonal movements and structural changes. These targets should be expressed as a range, such as two to four per cent or three to five per cent of the total wage-earners, rather than as a precise figure, and will vary with the economic circumstances of each country. In underdeveloped countries, it may be desirable to define the target in terms of industrial employment, producing a figure which would be subject to annual revision in accordance with the growth in industrial capacity.

Due to the large expansion of governmental activities since the war, their co-ordination in the interests of full employment will have a correspondingly greater influence than formerly would have been possible. Accordingly, the report recommends that governments should announce a comprehensive program for directing their fiscal and monetary policies, investment and production planning, and wage and price policies. While the main features of the program will vary from one country to another, the goal can be achieved in either socialistic or private enterprise economies, the principal difference being in the relative importance placed on direct and indirect measures.

Fiscal policy undoubtedly will be an important vehicle for stabilizing effective demand in a free-enterprise economy. When effective demand for goods and

services is deficient, it can be augmented by increased government spending or by reduced taxation, depending on the social needs of the country. The degree to which reliance is placed on fiscal policy will depend considerably on the extent to which public expenditures are accelerable and taxation changes feasible administratively. There is evidence, the economists believe, that more co-ordination of fiscal programs between central and local governments is highly desirable.

Control over the rate of private investment may be achieved by providing special credit facilities or tax inducements at times when expansion of investment is appropriate. Integration of public and private programs of long-term investment in basic industries may also be feasible. The timing of public projects of an anti-cyclical nature is the crucial factor and governments must assure that advance administrative, legislative and technical preparations are made so that the "shelf" of public projects may be utilized promptly when needed.

The experts propose that it may be found expedient to stimulate consumption directly by lowered taxes, expended transfer payments, etc. This principle may be ramified, when desired, to include reduction of profits and price control to procure a more equitable distribution of income.

In undeveloped economies, supplementary measures for the support of agricultural incomes are necessary, and for this purpose, the report states, the most suitable method is the stabilization of staple product prices through international commodity agreements. National schemes could be introduced for the benefit of domestic producers, to be used, however, only in conjunction with the recommendations for the stabilization of international trade set out below.

The report recommended that governments adopt and announce an appropriate system of compensatory measures designed to expand effective demand automatically when the general plan has failed to maintain the employment target for three months. To be effective, the report says, the measures would have to:—

- (a) Be capable of raising effective demand promptly and generally;
- (b) Be capable of measurement in their effects;
- (c) Be sufficient to reduce unemployment to the full-employment range.

In industrially advanced countries, the most appropriate measure would be the provisions for alternative tax schedules, the lower rate to come into effect in specially defined circumstances. For this purpose,

contends the report, the personal income tax is generally held best, and could be supplemented by varying the rates of social security contributions. Where these prove inadequate, periodic payments to both employers and employees could be made. In countries where the above measures are not developed sufficiently, variations in sales taxes could be used effectively.

The economists urge that governments should announce the adoption of policies designed to maintain a stable price level and combat inflationary tendencies. Such measures are deemed to be a necessary complement to any full employment policy, since unforeseen price inflations might occur which, if persistent, might tempt governments to abandon their full employment obligation. Because price increases do not necessarily indicate a general excess of demand, automatic measures designed to curb excessive demand have no place. Instead, selective measures are needed as circumstances dictate, taking the form of credit control, direct control over inventories, and selective price controls.

The report also recommends that governments should adopt their legislative procedures, their administrative organization and their statistical services to the implementation of their full employment program.

International Measures

The experts propose to create a workable system of international trade for a stable and expanding world economy through the elimination of the present structural disequilibrium in world trade.

The Report recommends that the Economic and Social Council convene a meeting of governments to develop a joint program designed to establish a new equilibrium in world trade by the adjustment of all necessary domestic and external policies. Countries would reveal to one another their own particular difficulties and how they hoped to solve them, with a view to determining policies of mutual benefit to all. It is suggested that an Expert Advisory Commission be set up to work out procedures, indicate problems, and report on progress. According to the economists, there is reason to believe that the desired equilibrium could be obtained within three or four years.

The measure proposed by the experts are designed to accelerate the orderly economic development of underdeveloped areas through the promotion of a stable and adequate flow of international investment.

This is believed to be obtainable only through the medium of an international organization, such as the World Bank. Lending countries would place at the disposal of the Bank such sums as are consistent with previously determined, long-term investment targets. The Articles of the Bank would have to be amended to permit it to borrow from governments, and to lend generally for developmental purposes to central governments. In determining its new loan policy, the Bank would as a rule lend only when the loan will permit the borrowers to discharge their obligations as a result of an improved balance of payments position.

To prevent the international propagation of fluctuations in effective demand, the economists recommend that external surburements be maintained in the face of internal fluctuations in effective demand.

The maintenance of the monetary reserves of countries facing a depletion in their reserves consequent to a decline in effective demand abroad can be achieved most efficiently by an extension of the functions of the International Monetary Fund, the Report maintains. The plan calls for the deposit, by a country undergoing a contraction of effective demand, of an amount of its own currency equal to the increase in its favourable trade balance with respect to a certain base year. This deposit would be made available for purchase by other countries to the extent that their import balance with the depositor had increased. Currencies of purchasing countries would be credited to the depositor country for subsequent use as needed.

Separate Concurring Statement by J. M. Clark

Mr. Clark felt that the Report should have noted the problems inherent in the wage-price structure, the solution of which may be necessary to develop the type of economy that spontaneously tends towards full employment. The problems noted, for example, were the effects of wage levels on employment; the relative importance of wages and prices in causing economic fluctuations; the effect of social security financing on the balance of saving and investment. He stressed the important role of the U.S. today, and placed himself on record as favouring the use of imperfectly tested fiscal devices rather than risk the evils of inaction.

The remainder of the group concurred in principle with Professor Clark's statement.

Reaction to the Report

The economists' report, received by the Economic and Social Council in December, was given lengthy consideration at a meeting of the Economic and Employment Commission in January, and, in February, at the tenth session of the Council itself.

In general, the report was favourably received. The members of both the Commission and the Council expressed appreciation to the authors for their "excellent and stimulating report". It was urged unanimously that the document be circulated to all countries, so that member governments of the United Nations, interested specialized agencies and non-governmental organizations could facilitate widespread public consideration and discussion of the economists' proposals. In addition, members of the Economic and Social Council were asked to be prepared, at the next session, to express their considered views on the recommendations contained in the report, "in order to enable the Council to formulate such recommendations as it may consider appropriate".

Although there was general agreement with the tenor of the report, and with the approach to full employment proposed by the economists, a number of doubts were raised concerning the practicability of implementing the recommendations on an international scale. It was claimed that they involved an unwarranted dependence on automatic "self-stabilizing devices"; that too little consideration had been given to the full employment problems of countries other than those which were highly developed or greatly industrialized.

Members drew attention to the difficulties involved in a court interpretation of the proposed employment targets until such time as existing statistical methods and services were improved and standardized. Most members cited economic problems peculiar to their own countries, setting forth circumstances in which the proposed measures appeared to be impracticable.

Statement of Canadian Representative

Mr. John Deutsch, Canadian representative to the Economic and Employment Commission, presented his views of the report as it applied to the Canadian economy. The following is the official summary of his remarks:—

Mr. Deutsch thought that the report of the experts had the twofold merit of drawing attention to the problem of full employment by encouraging the respon-

sible organs to consider concrete solutions, and of establishing a link between the action to be taken at the national level and the various factors which influenced the international economic situation.

The report therefore constituted a step forward in the thinking of economists. The correlation it established would facilitate the analysis of the problem of full employment in the future.

With regard to national measures, however, the experts' recommendations frequently appeared to over-simplify when they came to be applied to specific countries. That was certainly so in the case of a country like Canada, where the level of foreign trade and the development of natural resources were dominant economic factors.

The level of employment in Canadian industry was greatly affected by the level of foreign trade and the extent of the development of natural resources.

The experts' recommendations concerning pre-determined automatic devices would thus hardly be adequate by themselves to combat difficulties occurring as a result of a decline in international economic activity or a contraction in development. Canada would have to consider other measures; measures which were more appropriate to the problem of falling export markets and prices and for the encouragement of enterprise and development.

With regard to international measures, the experts had made a realistic approach to current problems resulting from the imbalance in the world economy and particularly in balances of payments. That was a paramount consideration for Canada, which was strongly affected, like many other countries, by the dollar shortage. The Canadian Government was aiming at a policy which would contribute to a solution of that problem and was constantly endeavouring to maintain its export markets. The experts admitted that the establishment of expanding international trade was necessary in order to ensure the successful application of a policy of full employment at the national level for many countries. However, their specific proposal for the establishment of quantitative targets for balances of payments and the co-ordination of those targets by means of a general international conference was neither practical nor realistic. The world already possessed a number of international institutions where those questions could be discussed, including the International Monetary Fund, the Organization for European Economic Co-operation and the future International Trade Organization.

The work should be done through the facilities already available rather than that new machinery should be set up. Another large international conference at which the problems of reconciling balance of payment targets would be discussed could hardly be expected to achieve a solution.

With regard to the other recommendations in the report, he felt that a way must indeed be found to restore the flow of international investment and to ensure it in the future. Governments and specialized agencies should seek a better method, but the proposal for automatic and guaranteed investment avoided the real difficulties. There should be no illusion regarding the possibility of obtaining such guarantees. It was inconceivable that Governments would be willing to undertake such rigid and one-sided commitments. The cause of the trouble must be dealt with; a study should be made of the possibility of creating advantageous conditions for investment in countries which were to benefit. To stimulate investments, favourable conditions should therefore be created, both in the borrowing countries and in the lending countries. It was a two-sided problem. The Point IV program was the beginning of a promising approach which should be pursued energetically.

With regard to the part the experts wished to assign to the International Monetary Fund, which was to check trade restrictions during cyclical recession, once again it appeared that they had pointed to an important factor but had been less than thorough in the "automatic" character of their proposal.

On the other hand, as the experts showed, the Fund, which had been established at a time when price levels, volume of trade and extent of fluctuations were lower than those likely to be prevailing in the future, probably did not possess adequate funds to fulfil the task assigned to it. It would seem that the adequacy of the resources of the Fund might well be reconsidered.

The experts envisaged the possibility of separating fluctuations arising from cyclical changes from those arising from structural changes in the economy. Mr. Deutsch did not think that that could be done as easily as was implied. The International Monetary Fund had therefore been given certain discretionary powers regarding the use of its resources rather than an automatic mechanism.

He agreed that the Commission should not take a final decision at its current session in connection with the report as a whole; firstly because most of the members had not yet received final instructions from

their Governments, which had not had time to examine the report; secondly, because the report advocated proposals which were designed to be universally applicable and it was necessary to know the extent to which they appeared to be practicable in the different economies.

He proposed therefore that Governments should be requested to examine the proposals and to communicate their views, and that no decision should be taken until that had been done.

Mr. Deutsch supported the principle of compensatory measures in the event of unemployment, as laid down by the experts. When a decrease in effective demand occurred, the necessary measures must be taken to prevent an acceleration of that decrease, which would entail considerable unemployment. But he did not agree with the experts concerning the application of the principle on the automatic basis which they had proposed.

Decrease in effective demand in the Canadian economy had its origin abroad. The investment rate in Canada depended to a large degree on the position of the export industries.

The measures to be taken in the event of a decrease in that demand was therefore quite different from those to be applied when that decrease had internal causes. In any event, it was difficult to foresee what those measures should be and their automatic nature might not be suitable to the Canadian economy. They could only be determined in the light of the circumstances of the moment and with due regard for the nature of the export difficulties in question.

The automatic system advocated by the experts carried simplification too far.

Canada had taken important steps in the direction of the measures recommended, but if the experts meant that countries must be ready beforehand to apply a whole series of automatic measures, he could not support them in that idea which he considered too impractical for many countries. Moreover, the results which the experts hoped to obtain by such automatic measures appeared much too optimistic.

The Canadian economy depended to a large extent on the measures taken in industrialized countries. If, for example, the United States took measures to maintain its effective demand, that simplified the problem very much for Canada.

Mr. Deutsch stated that if industrialized countries could not maintain their effective demand, the economy of agricultural or underdeveloped countries would be placed in a very difficult position. The applica-

tion of automatic measures would be no remedy for them. Clear emphasis must be placed upon the over-riding importance of the maintenance of activity in the large industrialized countries.

For a country like Canada there were various possible means of combating inflation. One of the difficulties lay in the fact that the central authority had not sufficient power to put into effect many of the remedies proposed in the experts' report, as certain prerogatives in that matter belonged to the provincial governments, which might not be able to act in concert. That being so, the Federal Government had to pay constant attention to the way in which financial policies might lead to inflationary tendencies.

Mr. Deutsch agreed that in order to meet the problem of providing sufficient international investment, underdeveloped countries must receive more loans for development purposes than they had in the past. As the Chinese representative had correctly pointed out, excessive rigidity in project loans should be avoided. The rapid development of certain countries, including Canada, during the past forty years had been facilitated through loans made to their Governments both for specific projects and general development purposes. On the other hand, by facilitating Government borrowing, as suggested in the experts' report, Governments might be encouraged to use loans to finance budget deficits

which they should have overcome by proper fiscal policies. Moreover, in the 1920's large funds had been lent to Governments for general development purposes, a large part of which had remained unproductive and been wasted both from the creditor's and the borrower's point of view. Consequently, while more general purpose lending was necessary, the Bank must first make sure of the general soundness of each loan before granting it.

In view of those considerations Mr. Deutsch was opposed to the automatic lending operations proposed by the group of experts. It would be impractical, even impossible, for lending countries to undertake rigid guarantees, however useful that might be to promote greater stability in international investments. Nevertheless, it was necessary for the International Bank as well as for the lending and borrowing countries to realize that capital must be made available to underdeveloped countries for general development purposes on a much larger scale than in the past, if an adequate system of international trade was to be achieved.

(A report entitled "Action Against Unemployment" has been prepared and published recently by the International Labour Office, for consideration at the Thirty-third Session of the International Labour Conference. Its contents will be synopsised in the August issue of the LABOUR GAZETTE.)

RECOMMENDATIONS OF LABOUR TO ROYAL COMMISSION

Views and recommendations of Canada's three major labour Congresses were submitted to the Royal Commission on National Development in the Arts, Letters and Sciences during its hearings in Quebec City.

The Congresses were in general agreement in their recommendations, which included Federal Government grants for education, continuation of Government policy in regard to radio broadcasting, Government control of television, and corporate status for the National Film Board.

Following a recommendation by the Prime Minister "that it is in the national interest to give encouragement to institutions which express national feeling, promote common understanding, and add to the variety and richness of Canadian life," the Royal Commission on National Development in the Arts, Letters and Sciences was appointed by Order in Council in April, 1949, to examine "with a view to recommending their most effective conduct" certain Federal agencies and activities contributing to these ends.

Representatives of the Trades and Labour Congress of Canada, the Canadian Congress of Labour, and the Canadian and Catholic Confederation of Labour availed themselves of the opportunity to appear before the Royal Commission in January and April last, during its hearings in Quebec City, to submit the views of their organizations on the subjects falling within the Commission's terms of reference. The Congresses were in agreement as to their main recommendations. The following is a summary of the main points contained in the briefs:—

Education

Federal aid for education, especially for higher and adult education, to aid in equalizing educational opportunities throughout Canada was urged by the three Congresses. The principle of Federal aid to education is not new, it was stated, having already been accepted in the case of vocational training and of education of veterans.

In advocating Federal assistance, it was emphasized, there was no suggestion of centralization, or encroachment of the constitutional rights of the provinces. "Any suggestion of that sort would be just silly, unworkable, an affront to our whole national tradition," the Canadian Con-

gress of Labour observed. Under the Constitution, education "in and for each province" is exclusively under provincial jurisdiction, and only when remedial measures are required for the protection of certain specified minority rights has the Parliament of Canada the power to intervene, it noted. "So it has been for over eighty years; so it must remain," the Congress declared.

Expressing the same view the Trades and Labour Congress said, "the leaving of jurisdiction over educational matters in the hands of the various provinces was wise, and should remain there. However, it added, "it is obvious that some provinces have greater economic resources than others. This creates inequalities in training and opportunity for our rising generations." On the same point, the Canadian and Catholic Confederation of Labour expressed the view that, while education is a matter for provincial jurisdiction, the Federal Government could give financial assistance without infringing on provincial rights.

Education "in and for each province," however, "is not the whole of education," the CCL brief declared. "Education has a national aspect as well as a provincial. There is education in and for Canada as well as in and for each province. Minority and provincial rights in education are vitally important and must be preserved. But there are other rights not less important: the right of the nation as a whole to have a well-educated citizenry; the right of every Canadian child to the best education he can absorb and the best his country can give him. These rights are not being fully implemented now. They cannot be unless the Dominion provides a substantial part of the money. Six of the ten provinces are just too poor to carry the burden unaided."

Continuing, the brief said, "the ordinary people of this country constitute a vast reservoir of talent and ability which has been largely untapped. For generations we have been suffering from a tragic waste of our national human resources because so many of our best young people have been too poor to get the education they, and Canada, needed."

Equality of Opportunity

The doors of the universities should not be closed to any individual because of inability to pay, the Congresses declared. "The mental capacity of the pupil should be the sole determining factor and not the financial ability of the parents," the Trades and Labour Congress maintained.

In expressing the same view, the Canadian Congress of Labour stated it was not suggesting that everybody ought to have a university education, or "the same kind of education. It does not want to see quality sacrificed to quantity. It does not hanker after a dead level of uniformity. Neither of these things is involved in the ideal of giving every Canadian child the best education he can absorb and the best his country can give him. . . . The universities ought not to be cluttered up with people incapable of profiting by the education they offer; but the doors should be shut not by lack of money, only by lack of brains."

The Canadian and Catholic Confederation of Labour emphasized the same point as follows: "As we cannot hope that all children of working and low income families can attain to secondary and university education, at least those who have the ability should be enabled to benefit by the instruction provided by our great institutions of learning."

The CCL also expressed the belief that "ideally, university education should be available without cost to every Canadian capable of absorbing it," and further that such free education should be supplemented by living allowances. According to a survey carried out by the Dominion Bureau of Statistics, the brief pointed out, the cost of a year at university for male students, including tuition and other fees, in the academic year 1947-48 ranged from \$895 to \$1,247 (L.G., Dec., 1949, pp. 1513-14).

Scholarships

A comprehensive scholarship scheme, it was the general opinion, would do much to remedy the present situation. Such a

scheme, the Canadian Congress of Labour recommended, should provide for:—

- (1) A national scholarships committee composed of representatives of the universities and the federal and provincial governments, to act as a clearing house for scholarships, determine quotas and fix standards;
- (2) Federal grants-in-aid to the provinces to make possible a basic standard of assistance;
- (3) Scholarships of not less than \$500 per university year, to cover tuition fees, books and other necessary items;
- (4) A basic living allowance of \$500 per university year, with supplementary allowances where need is shown;
- (5) Expansion of the number of scholarships, "to make them available to at least three out of four students instead of one out of six or seven as at present;"
- (6) Extension of financial aid to the universities in view of the additional facilities which would be required.

The Canadian and Catholic Confederation of Labour suggested that scholarships should be at the secondary as well as the university level, and also submitted the view that the "pursuit of study could be facilitated by the Federal Government" by means of further income tax relief to parents in respect of children attending school, college or university.

Adult Education

Development of a "broad program" of adult education was advocated by all three organizations.

Many workers, it was pointed out, are engaged at tasks which are monotonous and uninteresting, affording no creative outlet, and work becomes "merely a means to an end." Adult education should "make up for the daily drudgery," it was observed, by providing avenues of activity which can "add colour to life." Classes, discussion groups, hobbies, community activities, arts and crafts were suggested as "part and parcel of a broad program."

Workers' Education

The Congresses expressed increasing concern with the development and expansion of workers' education—"an important branch of the adult education movement which has been evolving during the past 40 years."

The workers' education movement, the CCL brief stated, has three specific objectives: assimilation; the acquisition of special skills; and labour participation in the community.

Dealing first with assimilation, the brief made reference to the increase in the number of organized workers which has taken place in Canada over the last ten years. During that period, it stated, the number has risen from about 360,000 to almost one million. "Established unions have taken in many thousands of new members, new unions have entered fields hitherto unorganized. In both cases, but particularly the latter, there is a strong need to go beyond getting the member to sign an application card and pay dues. It is essential that these hundreds of thousands of newly organized workers become acquainted with the intrinsic nature of their organizations, their traditions and practices. They must, in other words, become an integrated part of this movement which plays so important a role in the economy of Canada. This process of assimilation, of adjustment to collective rather than individual action and responsibility, and of education for democratic self-government, is one of the jobs of workers' education."

Concerning the acquisition of special skills, industrial relations, the brief observed, "are at their best when the parties concerned are able to participate on the basis of knowledge. Collective bargaining has become a complex activity. It involves not merely the process of negotiation but the day-to-day relationships between management and labour once the collective agreement is signed." If a "mutually advantageous" industrial peace is to be maintained, the brief continued, it is desirable that labour should have officers and members "capable of handling the manifold problems of industrial relations intelligently and skillfully. This requires training in such practical matters as labour law, grievance adjustment procedures, time study, contract observance, economics, etc."

Finally, dealing with the question of labour participation in the community, the brief said, "In modern industrial society, groups rather than individuals are the dynamic of social action. As an institution, the labour movement is one of the largest in Canada. Its influence, actual and potential, on Canadian affairs is therefore considerable. The interests of the labour movement extend far beyond matters of wages and hours, as this very submission attests. Canadian labour is very conscious of its responsibilities to the community. It believes it can improve the quality of its participation through a better informed membership."

The Federal Government, the Congresses felt, should assume some measure

of responsibility for the financing of a program of workers' education, proportionate to the size of the labour movement and its educational needs. Such a program, it was considered, could best be provided by the universities, and the Commission was urged to recommend Federal endowments to the universities for this purpose.

One of the Congresses, the Canadian Congress of Labour, referred to the progress it had made in the field of workers' education through its national committee on education. "In the two years or so of its existence, the Committee can point to some achievements: resident short-term summer and winter schools, a staff seminar, and week-end institutes in cities across Canada; in many instances, this was done in co-operation with universities. This program of education has not only reached a good many rank and file members, as well as officers of the Congress, but, what is more important, has stimulated an interest in this type of activity. A very real appreciation of the value of workers' education is now apparent among Congress unions. As a result, the Committee's program is expanding and the establishment of a full-time Department of Education is anticipated in the not very distant future."

Aid to Universities

Federal aid, the Trades and Labour Congress believed, should begin first with the universities. "In particular," the brief stated, "such aid in the beginning could be afforded at no better point than in the field of Social Studies. Federal endowments for these University Departments and the studies that such grants could make possible would undoubtedly provide rich returns. The rapid and spectacular material progress of these days has created very difficult social problems for the individual and the community. A greater understanding of these and how they may be treated to produce a new feeling of confidence and social adaptability in the individual, and, with that, a development towards greater social tranquillity in the community would be more than sufficient return to justify the Federal expenditure involved.

"In this same field it appears reasonable to suggest that the new Federal Department of Citizenship and Immigration should be encouraged to make grants available to University Departments of social studies for the express purposes of enabling research into and study courses on race relations.

"Another field in which Federal grants to Universities would show immediate returns is Industrial Relations. . . . A prime need is for teaching courses in industrial relations, or union-management problems, in which either jointly or severally, management executives and union executives could enroll."

Federal aid to universities, the Canadian and Catholic Confederation of Labour suggested, would "convince the working class that the great institutions of education to which they contribute financially, through state aid, are equally at their service."

Radio and Television

Desire for the continuation of the present policy of Government control of radio broadcasting, and development of television as a nationally-owned utility, was expressed by all three Congresses.

Canada has developed a culture of her own, it was observed, and this culture must be preserved. "Outside control of radio is incompatible with that ideal."

On the question of making available additional funds to the Canadian Broadcasting Corporation, the Congresses, while recognizing the need, were unanimous in opposing any increase in the present radio licence fee. On the other hand, they did not wish to see the Corporation forced to depend upon private sources and commercial programs for revenue.

Application of the principle of fixed statutory grants, subject to revision by Parliament every ten years, as contained in the Bank Act, was recommended by the Trades and Labour Congress. "The affairs of the Corporation would thus be assured of public airing regardless of the particular desire of the government of the day or the existing political atmosphere throughout the country."

Two consultative committees, one for the English network, and one for the French network, to replace the Board of Governors, was recommended by the Canadian and Catholic Confederation of Labour.

The CCCL also proposed that the French and English networks should carry weekly one-hour programs, on both the French and English networks, devoted to subjects of especial interest to labour. Suggested as suitable topics were information on the cost of living, wage rates, employment, labour laws, the ILO, and legislative proposals of labour organizations. To give effect to this proposal, the Congress recommended the appointment of a committee composed of representatives of the CBC and the trade unions.

National Film Board

Corporate status for the National Film Board, comparable with that of the Canadian Broadcasting Corporation was recommended by the three Congresses.

The present conditions under which the Film Board is working were criticized, and there was general agreement that the Board, if it is to "fulfil its function," must be provided with increased funds and staff, and suitable accommodation.

The Congresses highly commended the documentary films produced by the National Film Board, and expressed a desire to see the Board extend its production and distribution activities.

National Gallery of Canada

The Congresses praised the work being done by the National Gallery of Canada in the face of difficulties due to lack of space and funds and urged that a new building, designed to meet the Gallery's specific needs, should be provided, together with adequate funds and staff.

Provision of facilities for the showing of the National Gallery's collections throughout Canada, by means of travelling exhibitions, was also recommended. "Pictures and works of art that are now owned and stored in the Museum at Ottawa cannot be shown in many parts of Canada because suitable facilities for their showing and protection are not available," the TLC brief observed. "The provision of country-wide facilities should be part and parcel of the development of a National Gallery in Ottawa."

National Museum of Canada

Adequate space and increased funds, sufficient to meet the needs of the National Museum, were also recommended. Because of lack of space, "major collections have had to be stored where the public cannot see them, and where students cannot make use of them," it was stated. Additional funds are required to make possible the publication and distribution of the Museum's "great volume of information."

Extension of Library Facilities

Attention was called to the need for providing increased library services throughout Canada. As a first step towards supplying this need, the facilities of the Library of Parliament should be extended, it was submitted.

A national library "should be an immediate project," the TLC brief declared.

"The need for such an institution, capable of meeting the expanding growth of knowledge and publications to provide a national fountainhead for all other libraries throughout Canada is far from a dream. Such an institution should be financed by the Federal Government but free to accept contributions and endowments from private individuals and organizations. Its collections, work and promotional activities should be integrated with those of the Library of Parliament and the Public Archives, but it should be separate from these in its management."

New Department Advocated

Canada's culture is "already having considerable influence upon the rest of the world," the Trades and Labour Congress stated. "It is bilingual and bi-traditional. Canada is not, as is so often claimed, just

a melting pot of the peoples and customs of the world. It is two melting pots, or perhaps more accurately, a melting pot in two sections. What is more important, there is now an almost continual bubbling over from one section into the other with a consequent improvement in the flavour and body of the cultural brew in each. Organized labour wants to see that process stimulated in the interests not only of culture and the arts, but of greater human understanding and national harmony.

This Congress, therefore, believes that your Commission would be more than justified in recommending the creation of a new department of Government with a full-time Minister to take all of these matters into consideration, give leadership to their development, and seek in the widest sense the public support for such cultural projects."

CANADIAN LABOUR ORGANIZATIONS PRESENT BRIEFS ON HUMAN RIGHTS AND FUNDAMENTAL FREEDOMS

On March 20, 1950, the Senate of Canada established a Special Committee "... to consider and report on the subject of Human Rights and Fundamental Freedoms, what they are and how they may be protected and preserved, and what action, if any, can or should be taken to assure such rights to all persons in Canada ..."

In this article, the briefs submitted to the Special Committee by the Trades and Labour Congress and the Canadian Congress of Labour are summarized.

Canada's two major labour union congresses, in separate briefs to the Senate Committee on Human Rights and Fundamental Freedoms, have expressed the mutual conviction that a Bill of Rights should be incorporated into the Canadian Constitution. In this way, the Congresses agreed, labour and Canadians in general would be assured of a just, democratic and united society.

The Canadian Congress of Labour on April 27 urged the passage of a Bill of Rights and provision to curb the "discriminate and irresponsible" use of injunctions in labour disputes. On May 2, the Trades and Labour Congress expressed a similar request regarding human rights with the added statement: "While we strongly

desire the fullest expression and preservation of civil liberty in Canada, we are mindful of the existence of those who would use such freedom to destroy our civil rights and foment discord between minorities."

Welcoming the opportunity to present their views on such a vital subject as human rights, both congresses expressed their gratitude for the appointment of the Senate Committee. "We are pleased to note," the Trades and Labour Congress brief stated, "the creation and work of your Committee as one of the milestones along the educative and legislative road . . ." In its presentation, the Canadian Congress of Labour stated that the work of the Committee is "of the highest importance to Labour and to all Canadian citizens."

Both congresses expressed the opinion that, without a Bill of Rights, injustices which had been perpetrated against labour in the past would be repeated in the future.

"Labour is vitally interested in this question," stated the CCL brief. "It has reason to be. Individually and collectively, it has suffered more from the deprivation of human rights and fundamental freedoms than any other section of the community. Unions came into existence to gain these rights and freedoms for the workers. They remain in existence to protect what they have won and to gain more. Their burden will be considerably lightened if some of the most important rights and freedoms can be protected, by a fundamental law, against violation both by private persons and corporations and by public authorities—Dominion, provincial and municipal.

"That is one obvious reason why Labour favours the incorporation of a Bill of Rights in our written Constitution. But there is a more basic reason. Unions can flourish, and workers can progress, only in a genuinely free and democratic society, in which the rights of all citizens, not merely of union members or wage-earners, are secure."

In a similar vein, the TLC paper pointed out that its demand "for positive assertion and preservation of human rights and fundamental freedoms, though made in 1950, has a long history. Trade unions know from bitter experience the need for constitutional protection of the right of peaceful assembly and the freedom of association. In this connection, it may be well to recall that trade unions were illegal bodies in Canada eighty years ago. Not until 1872, with the passage of the Trade Union Act, did they become legal associations.

"Although unions were no longer considered conspiracies after 1872, various provisions of the Criminal Code made union organization difficult and the rights of citizens as citizens, because they were trade unionists were often abrogated.

"Not only has the right of assembly been accorded to unionists in hesitating and niggardly fashion throughout the years, but it has been set aside in the past by unilateral action of the Parliament of Canada. In 1919, as a result of the activities of the One Big Union and the Winnipeg general strike, the Parliament of Canada amended the Criminal Code in Section 98. This amended section set aside the so-called inalienable rights of Canadians to peaceful assembly and freedom of speech.

"This piece of unreasonable, un-Canadian and unwarranted legislation enacted under

conditions of temporary panic remained in force until 1936. In those seventeen years sound, sensible and prudent citizens urged the repeal of Section 98. Their efforts were seemingly unavailing."

Injunctions

Opposition was also expressed towards the use of injunctions, police and the military in labour disputes. The Trades and Labour Congress stated: "We recognize and advocate the use of police forces for the protection of persons and property. However, many instances are on record of the use of such forces and, at times, of the military, in labour disputes. This use of police forces and military power we greatly dislike and oppose, and we believe any statement of civil rights and fundamental freedoms should be precise enough to preclude such action by the governing administrator."

Dealing with injunctions, the CCL quoted at length from a statement made by the Canadian Brotherhood of Railway Employees and Other Transport Workers to the House of Commons Committee on Industrial Relations in 1947. At that time the Brotherhood had protested against "the indiscriminate and irresponsible use of the injunction process, particularly the *ex parte* interim injunction" which, the CCL affiliate declared, "is coming to be used with increasing frequency."

Proceeding further with its argument, the Brotherhood had stated:—

The injunction procedure comes into operation usually at a critical period of employer-employee relations. Generally speaking, the injunctive procedure is exercised by an employer in the event of picketing activities by his employees in the course of a strike. The Labour Relations Board and the Department of Labour in each province administers the relationships between employers and their employees up to the moment where a strike is called. Very often, in fact almost invariably, the Department of Labour carries on its attempts to settle a strike after a strike is called. The courts do not figure in the picture at any stage of the proceedings. To bring the courts into the picture at the most critical stage of the proceedings is clearly unreasonable and unrealistic.

Courts of law are not familiar with industrial relations. The injunctive process is highly obnoxious to organized labour and its indiscriminate use is certainly not conducive to industrial tranquility.

It is suggested, therefore, that the injunctive process should not be permitted to be used unless there is real justification for exercising it in order to restrain violence, real or apprehended, etc. By requiring an employer to obtain approval of the Labour Relations Board, the courts are not being deprived of any jurisdiction.

It is merely a means of ensuring an investigation by a board whose approach to the problem would not be narrow and confined to the specific issue involved but, rather, would approach the problem from a broad standpoint and with a full knowledge of all the implications involved.

Union Security

The two labour organizations also maintained that adequate protection should be guaranteed with regard to union security. Alluding to the Universal Declaration of Human Rights as adopted by the United Nations, the TLC sought a third subsection to Article 17, the first two subsections of which read:—

(1) Everyone has the right to freedom of peaceful assembly and association.

(2) No one may be compelled to belong to any association.

The suggested subsection as advanced by the TLC states:—

(3) Nothing in subsections 1 and 2 of this section is to be construed as prohibiting the proper operation of a trade union agreement made between an employer and his employees, which contains a clause requiring all of the employees of that employer to be members of the specified union.

Striking a similar note, the CCL requested clarification of the same clause as contained in a draft amendment to the British North America Act submitted in 1948 by the Committee for a Bill of Rights to the Joint Committee of both Houses on Human Rights and Fundamental Freedoms.

"Article 17 (1) is the very corner-stone of trade unionism," stated the brief. "But Article 17 (2) might be held to prohibit closed shop, union shop, maintenance of membership, and even the Rand formula. Union security is a hard-won right. We set great store by it. We shall not give it up without a struggle. If this clause was not meant to outlaw union security, then it should be dropped or redrafted; if it was so intended then we shall be glad to submit detailed reasons for holding that any such prohibition would be a disastrous mistake, which would restrict freedom, not enlarge it . . ."

Among other topics upon which the congresses agreed in principle were: positive protection for all minority groups to prevent racial and religious discrimination; the right to own (or lease) property; rights and freedoms to be extended to the native population and opposition to dictatorship.

Economic Rights

While desiring economic and social rights for the Canadian people, the TLC and CCL approached these matters from different points of view in so far as the proposed Bill of Rights is concerned. In the opinion of the Trades and Labour Congress, a Canadian Bill of Rights should contain an article setting forth the right to an education; the right to work and the free choice of employment; the right to security in the event of unemployment, sickness, disability, widowhood, old age or other lack of livelihood in circumstances beyond the individual's control.

On the other hand, the Canadian Congress of Labour stated: "We are not asking for the inclusion in the Bill of Rights of such 'economic' rights and freedoms as the right to full employment or freedom from want, or decent housing, or as much education for every child as he can profit by. Our reason is well stated in the brief supporting the 1948 draft Act, p. 7: ' . . . We exclude them because the establishment of such rights is the function of detailed legislation and economic policy within the scope of Parliament and the provincial legislatures and indeed of international action. It is an illusion to suppose that the "right of employment" or "freedom from want" can be secured by the type of constitutional declaration which is envisaged in a Bill of Rights . . .'"

THE TRADES AND LABOUR CONGRESS' BRIEF

Launching into its presentation, the Trades and Labour Congress called to the attention of the Senate Committee the fact that the Congress had established in 1946 a Standing Committee to Combat Racial Discrimination. One of its principal objectives was the enactment of a Bill of Rights. Under the guidance of the Standing Committee, local committees have since been established in the main trade union and industrial centres to promote education on racial and religious prejudices, methods of eradicating them, and education on fair employment practices.

As mentioned previously, the Congress felt that a Bill of Rights was necessary to prevent a repetition of parliamentary unilateral action, such as Section 98 of the Criminal Code, which set aside civil liberties in 1919. At present, the "rights to free speech and freedom of assembly still remain unprotected against another similar action by Parliament," the brief stated.

Recommendation

The Congress then recommended "that our constitution . . . be amended so that our human rights and fundamental freedoms may be written into it, and, at the same time, that our constitution in regard to these matters be capable of amendment only by unanimous agreement of the Parliament of Canada and all of the provincial Legislatures."

Turning to political ideologies, the TLC reiterated its unalterable opposition to dictatorship, whether in the form of Fascism, Naziism or Communism.

Racial Discrimination

Strongly emphasizing the need for protection of minority groups the Congress stated: "We believe that the strength and constructive development of our Canadian democracy depends upon the unity of all our people. We recognize that there are individuals and groups who desire to maintain and foster their heritage of national characteristics and customs. These people and groups in our opinion need not be a weakening factor in our democracy. But we are also aware that certain persons and groups seek to accentuate these differences between native and foreign born people and foment antagonisms between racial and religious groups.

"This Congress believes that our Constitution should provide positive protection to all minority groups and definite legal restraints against discriminatory practices which may be employed to the detriment of any members of such minority groups.

"While it may not be possible to remove all discrimination against members of minority groups, many of these practices can be suppressed or greatly lessened by laws. Laws can foster the conviction that discrimination is wrong and fix standards that are recognized by the majority of the people. People obey the law to avoid its penalties although they may not respect it. Social customs grow up in harmony with the law. Not the least important factor arising from the existence of laws banning discrimination is the provision of indemnities for the person wronged."

In its choice of human rights and fundamental freedoms which should be preserved for all Canadians, the Congress referred the Committee to the Universal Declaration of Human Rights, extracts from which are reproduced in the brief.¹ In

¹The full text of the Universal Declaration of Human Rights appeared in the *LABOUR GAZETTE*, February, 1949, pp. 162-5.

the view of the Congress, its recommendations should be prefaced with suitable wording which would carry into the Constitution the prescription of Article 30 of the United Nations Declaration: "Nothing in this Declaration may be interpreted as implying for any State, group or person any right to engage in any activity or to perform any act aimed at the destruction of any of the rights and freedoms set forth herein."

Rights for Indians

In addition, the brief recommended that the rights and freedoms enunciated in the Declaration be enjoyed by Canada's native Indian population, who are subject at present to Federal law. In this way, their rights as well as those of all other Canadians would be among the entrenched clauses of the constitution.

Property

Regarding subsection 1 of Article 14 which states that everyone has the right to own property alone as well as in association with others, the brief expressed the opinion that it does not provide sufficient protection. "Many of our people are unable to own property," it explained. "They are forced through economic circumstances to lease for shelter the property of others. We would recommend that subsection (1) of this Article be amended to read: "Everyone has the right to own or lease property alone as well as in association with others."

In its concluding remarks, the Congress expressed the conviction that the "first and most important way in which our rights and freedoms can and will be preserved is through the constant vigilance of those who hold such rights and freedoms sacred. But along with this, we believe that our human rights and freedoms, once stated, and enacted into law, can be given constitutional and legal protection by requiring that they can be amended only by the unanimous consent of the Parliament of Canada and all of the Legislatures of the Provinces."

CANADIAN CONGRESS OF LABOUR BRIEF

At the outset of its presentation, the Canadian Congress of Labour explained its own definition of a Bill of Rights. "A mere Act of the Dominion Parliament is not enough," stated the Congress. "What Parliament has done, Parliament can undo; and there are many things it cannot do at

all. Many of the most important rights and freedoms lie wholly, or largely, beyond its jurisdiction. They are almost completely at the mercy of the provinces and of the municipalities, over which the provinces have jurisdiction, and it is from the provinces and municipalities that many of the worst attacks on freedom in the last fifteen years have come."

While the Dominion has certain powers of control over the provinces, such as the power to reserve or disallow provincial acts and to make Remedial Orders, these are not sufficient protection against what the brief describes as "some iniquities" which "have been on the statute books for many years." To illustrate this statement, the Congress added: "Reservation stopped the Alberta Accurate News and Information Bill in 1937. It did not stop the Quebec Padlock Bill in the same year, nor the Prince Edward Island Trade Union Bill of 1948. Disallowance wiped out a series of Alberta Acts infringing on fundamental freedoms in 1937 and the years immediately following. It did not touch the Quebec Padlock Act . . . nor the Prince Edward Island Union Act of 1948 (though in this case the possibility of disallowance may have helped bring about the repeal of most of the 1948 Act in 1949)."

On the basis of this argument, the Congress proposed that a Bill of Rights to be effective must be part of the nation's fundamental law. "It must put the rights it seeks to protect beyond the power of both the Dominion Parliament and provincial legislatures."

Why a Bill of Rights?

In the awareness that nothing of its kind exists in Britain, the Congress nevertheless maintained that a Bill of Rights is necessary in Canada for four reasons. First, since Canada is a Federal state, local infringements on civil liberties cannot be remedied by Parliament; for the municipalities are beyond the power of the Dominion Government and the provinces almost entirely so.

Second, Canada is a land of many peoples and many traditions which enrich our national life but also give prejudice "extra targets". Third, the British tradition in the matter of civil liberties is not as strongly rooted here, even among people of British origin, as it is in Britain. "Everybody knows," states the brief, "that certain resorts patronized mainly by people of British stock refuse to admit Jews. The Prince Edward Island Trade Union Act issued from a community overwhelmingly British."

Finally, "Britain has no written Constitution incapable of change by ordinary Act of Parliament. Canada has and it establishes rights which neither Parliament nor Legislatures can touch. Until civil liberties are as powerful an influence as they are in Britain a Bill of Rights is essential," the brief stated.

Contents of the Bill

The Congress then presented a detailed draft suggesting 31 clauses which it believes should be contained in a Bill of Rights. Included in these clauses was the proposal that the phrase "civil liberties" be used in preference to "civil rights." The latter might be misconstrued as referring to the civil rights clause in Section 92 of the BNA Act which sets forth the powers within provincial jurisdiction. Any ambiguity with regard to the meaning of the term might hinder the adoption of the legislation, the CCL maintained.

Another proposal stated that every person should be entitled to the rights and freedoms set forth in the Bill without distinction of any kind such as race, colour, sex, language, religion, political or other opinion, national or social origin, property, birth or other status. The Congress heartily endorsed the inclusion of such a clause with one qualification. "The word 'political,'" states the brief, "raises the possibility that Communists or Fascists might use this section to force themselves into positions from which, in the interests of public safety, they should be debarred. We do not favour any enactment which would lead to this result, though we admit the difficulty of framing a section which would protect the community against this danger without at the same time making easier improper discrimination against members of ordinary political parties."

Dealing with racial and religious discrimination, the Congress declared that the necessity for protective legislation had been made "painfully evident." It, therefore, suggested the inclusion of the provisions of the Saskatchewan Bill of Rights, Section 8-14:—

8. (1) Every person and every class of persons shall enjoy the right to obtain and retain employment without discrimination with respect to the compensation, terms, conditions or privileges of employment because of the race, creed, religion, colour or ethnic or national origin of such person or class of persons.

(2) Nothing in subsection (1) shall deprive a religious institution or any school or board of trustees thereof of the right to employ persons of any particular creed or religion where religious instruction forms or can form the whole or part

of the instruction or training provided by such institution, or by such school or board of trustees pursuant to the provisions of *The School Act*, and nothing in subsection (1) shall apply with respect to domestic service or employment involving a personal relationship.

9. Every person and every class of persons shall enjoy the right to engage in and carry on any occupation, business or enterprise under the law without discrimination because of the race, creed, religion, colour or ethnic or national origin of such person or class of persons.

10. Every person and every class of persons shall enjoy the right to acquire by purchase, to own in fee simple or otherwise, to lease, rent and to occupy any lands, messuages, tenements or hereditaments, corporeal or incorporeal, of every nature and description, and every estate or interest therein, whether legal or equitable, without discrimination because of the race, creed, religion, colour or ethnic or national origin of such person or class of persons.

11. Every person and every class of persons shall enjoy the right to obtain the accommodation or facilities of any standard or other hotel, victualling house, theatre or other place to which the public is customarily admitted, regardless of the race, creed, religion, colour or ethnic or national origin of such person or class of persons.

12. Every person and every class of persons shall enjoy the right to membership in and all of the benefits appertaining to membership in every professional society, trade union or other occupational organization without discrimination because of the race, creed, religion, colour or ethnic or national origin of such person or class of persons.

13. (1) Every person and every class of persons shall enjoy the right to education in any school, college, university or other institution or place of learning, vocational training or apprenticeship without discrimination because of the race, creed, religion, colour or ethnic or national origin of such person or class of persons.

(2) Nothing in subsection (1) shall prevent a school, college, university or other institution or place of learning which enrolls persons of a particular creed or religion exclusively, or which is conducted by a religious order or society, from continuing its policy with respect to such enrolment.

14. (1) No person shall publish, display or cause or permit to be published or displayed on any lands or premises or in any newspaper, through any radio broadcasting station, or by means of any other medium which he owns, controls, distributes or sells, any notice, sign, symbol, emblem or other representation tending or likely to tend to deprive, abridge or otherwise restrict, because of the race, creed, religion, colour or ethnic or national origin of any person or class of persons, the enjoyment by any such person or class of persons of any right to which he or it is entitled under the law.

(2) Nothing in subsection (1) shall be construed as restricting the right to freedom of speech under the law, upon any subject.

Referring to the "deplorable shortcomings" of our policy towards the Indians, the Congress stated that "a Bill of Rights prohibiting discrimination would be of immeasurable assistance."

In addition, the CCL proposed that the arbitrary arrest, detention or exile of any person should be illegal. The Congress maintained the necessity of such a clause for two reasons. First, the Order in Council of October 6, 1945, as a result of which people suspected of espionage were detained and interrogated by a Royal Commission. "The ordinary protection of counsel and *habeas corpus* was denied to them," the brief stated. "No charges were preferred against them but they were held incommunicado." Second, three Orders in Council of December, 1945 "which, if they had been enforced would have exiled to Japan some 11,000 or more persons of Japanese origin, a large proportion of whom were Canadian-born citizens."

Finally, the Congress maintained that because the need to protect "religious freedom, and freedom of assembly for unpopular minorities . . . has been made abundantly clear" there should be provision for the following:—

Everyone has the right to freedom of thought, conscience and religion, this right includes freedom to change his religion or belief, and freedom, either alone or in community with others, and in public or private, to manifest his religion or belief in teaching, practice, worship and observance.

Everyone has the right to freedom of opinion and expression; this right includes freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers.

Everyone has the right to freedom of peaceful assembly and association.

Endorse Universal Declaration

With a view to protecting civil liberties until such time as the envisaged bill may be adopted as part of the Canadian constitution, the CCL urged Parliament to endorse the Universal Declaration of Human Rights. It also proposed that the Dominion use the extensive power it now has to protect fundamental rights and freedoms. This could be accomplished possibly by the establishment of a permanent standing committee and the organization of a civil rights section of the Department of Justice.

The Canadian Congress of Labour also dealt in detail with seven pieces of provincial legislation which were described as "flagrant violations, or attempted violations, of fundamental rights and freedoms in the last 15 years." These acts were:

The Credit of Alberta Regulation Act, 1937; the Bank Employees' Civil Rights Act (Alberta), 1937; The Judicature Act Amendment Act (Alberta), 1937; A Bill to Ensure the Publication of Accurate News and Information (Alberta), 1937; An Act Respecting Communistic Propaganda (Quebec), 1937 (The Padlock Act); The Trade Union Act (Prince Edward Island), 1948; An Act Respecting Publications and Public Morals (Quebec), 1950.

"Against measures of this kind, which have actually come into force," states the brief, "disallowance affords the quickest and most effective, and, if they are *intra vires*, the sole remedy. There can be no doubt that the Fathers of Confederation meant the power to be used against unjust, oppressive or even unwise legislation."

In the opinion of the Congress, disallowance is not, however, always an adequate remedy because irreparable damage may occur between the time of the passage of the legislation and its disallowance by the Dominion Government.

"Against this," comments the brief, "the only remedy would appear to be in the Dominion's power to instruct a Lieutenant-Governor to reserve bills for the Governor-General's pleasure. The British North America Act, Section 90, gives the Lieutenant-Governor power to reserve any bill 'according to his discretion but subject to the provisions of this Act and to His Excellency's Instructions.' . . .

"The power is, as the Department of Justice remarked in 1938, 'a statutory power in full vigour, and it cannot be said

to have become inoperative through non-use. For even if it were the case (and it is not . . .) that this power had never been exercised, or had been infrequently exercised, . . . the continued legal existence of the power and the legal right of the responsible authorities, in the exercise of a sound discretion, to exercise it would be wholly unaffected by that fact.'

"The use of extraordinary remedies like disallowance and reservation would be less necessary if the Dominion's legislative powers were what the Fathers of Confederation intended them to be, or if we had a Bill of Rights on the American pattern. (But now) some provinces are claiming a quasi-Dominion status, as 'autonomous communities, in no way subordinate to the Dominion, though united by a common allegiance to the Crown, and fully associated in the Canadian Commonwealth of Nations.' If the powers of reservation and disallowance were necessary in 1867, how much more now!"

The Canadian Congress of Labour brought its brief to a close with the following thought: "The work this Committee has undertaken is vital not only to our material, moral and spiritual welfare but to our very existence as a free society. The fundamental rights and freedoms the Committee is considering are the very essence of democracy. Unless we can preserve and extend them, we cannot hope to survive in the struggle with totalitarianism, nor shall we deserve to survive."

LABOUR CONGRESSES SUBMIT BRIEFS ON OLD AGE SECURITY

*Briefs submitted by the Trades and Labour Congress and the Canadian Congress of Labour were among those recently heard by the Joint Committee of the Senate and the House of Commons on Old Age Security.**

Stressing the need for full security for all Canadians, the Trades and Labour Congress of Canada and the Canadian Congress of Labour recently submitted briefs to the Joint Committee of the Senate and the House of Commons on Old Age Security. Both organizations recommended the establishment throughout Canada of a scheme of uniformly applied old age pensions at age 65 without any means test. Pensions would be granted as a right rather than a privilege and would form the basis of a comprehensive scheme of old age security.

The two briefs differ in their estimates of the basic old age pension that should be paid. The TLC estimated that \$60 per month was the basic minimum pension suitable to maintain a decent living standard. The CCL estimated that the minimum pension should be \$50 per month, but in its view, this amount should be supplemented by a productivity bonus of two per cent per year on a cumulative basis.

The TLC recommended that pensions be financed on a contributory basis, similar to the present unemployment insurance scheme, with the cost of administration paid by the government. The CCL pension would be completely financed by an increase in direct taxes.

In the field of industrial pensions, the CCL advocated a non-contributory pension financed entirely by management. The administration would be shared by the employees (through their unions), and the employer. The TLC on the other hand minimized the value of private pension plans.

Summary of TLC Brief:

In its opening remarks, the Trades and Labour Congress expressed the hope that "the Parliament of Canada will adopt legislation at this session which will provide for a comprehensive scheme of full social security for all Canadians". The basis of this scheme would be an old age pension

of \$60 payable to anyone with 15 years residence in Canada regardless of economic or social position.

The TLC does not favour private industrial pensions because, in its view, the growth of private pension plans, while providing some protection for the individuals covered, has created great difficulties. "These plans," the brief states, "have tended to immobilize the labour force and to reduce the freedom of economic movement of the individual. They have created the condition in which old age can now begin at forty years."

"The point we wish to emphasize is that, where private pension plans are in effect, the hiring policy must be geared to the scheme. The financial soundness of such schemes depends upon young people being employed and the preference is thus for those in their twenties and thirties. Regardless of the training, skill or experience of an applicant of forty or over his chances of being hired are very small because he doesn't fit into the pension scheme.

"There is this further consideration. Many thousands of our people engaged in seasonal employment cannot hope to be covered by private pension schemes. We refer to such large and important groups as the construction and logging industries. To this may be added the thousands who work for less profitable or marginal undertakings in which the establishment of private pension plans is very unlikely."

The plan advocated by the TLC would be financed on a contributory basis, similar to the present unemployment insurance scheme. The plan would include old age pensions, mothers' allowances, unemployment insurance and national health services. The cost of administration would be met by the Federal Government.

The Congress estimated that the cost of this plan would be approximately \$720 million. Assessing the national total of assessable personal income at approximately \$10 billion, the TLC recommended the levying of a six per cent social security contribution. The balance would be offset

* For further information on the activities of this committee, including a summary of the brief submitted by Dr. A. MacNamara, Deputy Minister of Labour, see page 987 of this issue.

by the \$120 million currently being spent by the Provincial and Federal Governments on old age pensions.

The brief recognizes that if "payments are to be made on a relatively fixed basis" and contributions collected from "a relatively changing base", it will probably be necessary to establish a small contingency fund. "It might be well," the brief states, "to set aside in each year a small sum, say, equal to one of two per cent of the total pension payments, as a cushion. This fund and the whole procedure should be reviewed by Parliament every ten years, and necessary adjustments made in the light of experience."

The TLC brief recommended that the eligible age for blind pensions be reduced from 21 to 18, and that following the establishment of a national health scheme, free medical, dental, surgical and hospital care be provided for old age and blind pensioners.

In concluding, the TLC expressed the view that "anything done now or in the future in regard to the improvement of security for our aged citizens, should be capable of easy integration into a scheme of comprehensive social security for all people of all ages." According to the brief, such a scheme would require the support of "a sound and flourishing economy," with the "fundamental economic security of full employment" maintained at all times.

Summary of CCL Brief:

The CCL position on old age security is based on its belief in the need for "a comprehensive program covering old age pensions, health services, sickness cash benefits, disability benefits, etc., as well as existing schemes like unemployment insurance and family allowances." The Congress brief states "that economic security should be the birthright not merely of a fortunately situated few but of all."

In the Congress view, old age security should be based on the Old Age Pensions Act, and the Government Annuities Act. The brief is divided into two parts: (1) a consideration of present federal old age legislation and possible improvements, and (2) a review of industrial pensions, with proposed changes in the Government Annuities Act among other things."

In its remarks on the Old Age Pensions Act, the CCL said: "the enactment of the Old Age Pensions Act in 1927 was thus a belated and inadequate recognition of the changes which had taken place in Canada during the first 60 years of her existence. The Act has been and continues to be open

to criticism on three major points: (1) the unduly high retirement age; (2) the insufficient pension; and (3) the means test.

"The requirement that an applicant must have attained age 70 to qualify for a pension is onerous by any standard. It is made more so by the difficulties encountered by older workers in finding employment."

The Act was also criticized because its application varies from province to province. As a result of this, the CCL points out that "two pensioners in similar circumstances may receive substantially different amounts solely because they live in different provinces."

The old age pension recommended by the CCL would be financed entirely by the federal government, and the Congress estimates that it would add a net charge of \$500 million to the Federal Treasury. This sum would be raised in three ways:—

1. By increasing the taxes on corporation incomes to their wartime levels.
2. By an average increase of 25 per cent in personal income taxes. This would be done on a graduated basis, so as to bear most heavily on larger incomes.
3. By assessing income taxes at a lower level for the specific purpose of financing old age pensions.

The CCL recommended further that the present \$500 exemption granted to taxpayers over 65 be dropped. This would recover further amounts from those over 65 able to pay income taxes.

To supplement the old age pensions, the Congress brief said that "the next logical step is a scheme of contributory pensions such as exists in many countries today, notably in the Commonwealth countries and in the United States. Such a scheme should be universal in its application; contributions should be graduated on the basis of income." These pensions should be paid on a basis of contributions the brief states, because: "a flat sum benefit would tend to be tied to the income of the lowest income group. Better paid groups would thus receive pensions disproportionate to their incomes at retirement and would face an unduly drastic cut in living standards."

The brief expresses concern over "the tendency for the pension to remain fixed for substantial periods of time. Important economic changes may take place, sometimes rapidly, critically affecting the value of the pension, but it will remain stable or change in amount only slowly."

To offset this condition, the CCL recommends that a bonus based on productivity be paid pensioners. The brief states: "While productivity is difficult to measure, the skill in measuring it has developed considerably and a more accurate yardstick is becoming available. At any rate, there is no disputing the fact that productivity has been going up and it is generally assumed to average around two per cent a year over a long span. The Congress believes that it would be safe to fix the increase in productivity arbitrarily at two per cent and give to pensioners a bonus of two per cent a year on a cumulative basis, on the basic non-contributory pension. This would provide pensioners with some assurance that they are not being left behind as the country moves forward. It would have the further important effect of enabling the purchasing power of a substantial section of the population to keep pace with the volume of goods and services being made available."

With regard to industrial pensions, the CCL was firm in its stand that these should not form the basis of old age security. In its view "private pensions would be a useful supplement for long-service employees and would be largely limited to fulfilling that purpose."

According to the brief, the Congress is now pressing for private pensions for two reasons: "(1) the absence of adequate public old age pensions and (2) the belief that employers have an obligation toward their employees that goes beyond mere payment of wages."

The CCL favours private pensions that are non-contributory in character, because it regards pension contributions by the employer "as merely a deferred wage payment; the same sums could just as easily go directly into the pay envelope. They are liable to be terminated through bankruptcy or weakened by lack of funds." While industrial pensions would be non-contributory, the Congress said that they fell within "the area of collective bargaining." The pensions "should be administered jointly in the same manner as the collective agreements which provide for their establishment. Otherwise, a major condition affecting the employees is removed from the scope of union-management relations and is placed unequivocally

in the hands of the employer." To administer the pensions, the Congress said it favoured: "the establishment of Boards of Trustees composed of equal numbers of union and management representatives together with an impartial chairman."

The brief states that the Annuities Branch of the Department of Labour would be the best agency to underwrite pension plans. However, the Annuities Act would have to be amended to eliminate what the Congress describes as "certain unfavourable features of the Annuities Act." These are set forth as follows:—

(a) "The Act does not make it possible for a Board of Trustees as contemplated above to enter into a contract with the Crown for the purpose of providing annuities to the employees of a particular firm. The Act provides that the employer alone may enter into such a contract on behalf of his employees.

(b) "There is a maximum pension of \$1,200 a year beyond which the Annuities Branch will not write a pension contract. This necessitates supplementary contracts with other agencies.

(c) "There is no cash rebate privilege on the amount of vested right if separation takes place before retirement. This removes the element of choice which an employee should properly have. (The employee must accept a paid-up annuity for his vested right, payable at his normal retirement age.)

(d) "The Act and the regulations under it are unnecessarily restrictive and rigid. Thus supplementary disability pensions may not be written into an Annuities Branch contract."

The Congress would prefer to see the Annuities Branch set up as a Crown Corporation, "with sufficient flexibility of operation to make possible rapid adjustments to new trends. This would, of course, require the repeal of the present Act and the enactment instead of legislation establishing the Crown Corporation and outlining its functions in fairly broad terms."

The CCL states that, in its opinion: "Old age security is one of the most urgent problems confronting Parliament. Its solution must not be delayed. Canada can show no greater faith in its future than by assuring a safe and contented future for its citizens in their old age."

HOURS AND WORKING CONDITIONS IN THE MANUFACTURING INDUSTRIES OF HALIFAX, MONTREAL, TORONTO, WINNIPEG AND VANCOUVER, OCTOBER 1949

The normal work week and conditions of work differed, by varying degrees, in the five major Canadian cities dealt with in the following article. Overtime, vacations and sick leave showed minor differences between cities; the normal work week and statutory holidays varied almost as much between the cities as within them. The proportion of workers reported covered by written collective agreement ranged from about 40 per cent in Halifax to 90 per cent in Vancouver.*

The manufacturing industries play a major role in many Canadian urban centres. In this study of hours and working conditions in the largest cities of each of our five main regions, information has been used not only from plants in the cities of Halifax, Montreal, Toronto, Winnipeg and Vancouver, but also from those in nearby communities which form part of their metropolitan areas.

The majority of plant workers in the manufacturing industries of each city, except Halifax, were reported on a five-day week. Over 85 per cent of the workers in Toronto and Vancouver, 77 per cent in Montreal, 54 per cent in Winnipeg and 24 per cent in Halifax were working five days per week. Most of the workers were on a work week of from 40 to 45 hours. Time and one-half was generally paid for work after standard daily or weekly hours, and double time was often predominant for work on Sundays or statutory holidays.

Initial vacations with pay of one week after a year of employment were common in all the cities, with many workers receiving an additional week or two after longer periods of employment. Most of the workers in each city were employed in

establishments observing from seven to nine statutory holidays, and the majority, except in Halifax and Vancouver, were paid for six to eight of these days if not worked. The proportion of workers under collective agreement varied from about 40 per cent in Halifax to 90 per cent in Vancouver. Sick leave with pay was granted by establishments employing from 35 to 50 per cent of the workers in each city.

Information on hours and working conditions in some 2,200 establishments, employing over 213,000 plant workers, has been analysed to obtain this comparative picture of these five Greater Cities. Over 92,000 of the workers were employed in the manufacturing establishments of Montreal, almost 80,000 in Toronto, 22,000 in Vancouver, 14,000 in Winnipeg, and about 5,500 in the establishments of Halifax (Table I).

Over one-half of the plant workers in Halifax were employed in the Iron and Steel Products Industry, and one-third in the Food and Beverages Industry. In Montreal and Toronto the industrial distribution of the plant employees was fairly similar, with one-quarter of these workers engaged in the manufacture of Iron and Steel Products. Other large industrial groups in these two cities were the Food and Beverages, Textiles and Clothing, and Electrical Products Industries. Thirty-five per cent of the plant workers in Winnipeg were in the Food and Beverages Industry, and 21 and 16 per cent were in the Iron and Steel Products and Textiles and Clothing Industries respectively. In Vancouver, 40 per cent of the workers were in the Wood Products

* Information in this article was prepared from data obtained in the annual survey of wage rates and working conditions for 1949 by the Economics and Research Branch of the Department of Labour. Employers were asked to report on certain conditions of work as well as to give, by occupation, the wage or salary rates of time workers and the straight-time earnings of employees on piece work during the last pay period preceding October 1, 1949.

For a summary of provincial legislation on working conditions, see *Provincial Labour Standards Concerning Child Labour, Holidays, Hours of Work, Minimum Wages, Weekly Rest-Day and Workmen's Compensation*, an annual publication of the Department of Labour.

IN FIVE MAJOR CANADIAN CITIES, OCTOBER 1949, . . .

. . . the normal work week of plant employees in the manufacturing industries showed about as much variation within the cities as between them.

Percentage distribution of normal hours . . .

. . . and days worked per week

The proportion of workers under collective agreement varied from about 40 per cent in Halifax to 90 per cent in Vancouver.

From 35 to 50 per cent of the workers in each city were eligible to receive sick leave with pay.

Under collective agreement . . . Eligible for sick leave with pay.

Not under collective agreement . . . Not eligible for sick leave with pay.

Overtime rates were commonly time and one-half after daily or weekly hours, but double time was often predominant for work on Sundays or statutory holidays.

Rates on Sundays

Rates on Statutory Holidays

Time and one-half

Industry, and over 20 per cent were in each of the Food and Beverages and Iron and Steel Products Industries.

The proportion of female plant employees in the manufacturing industries of the five cities ranged from 15 per cent in Vancouver to 27 per cent in Montreal. Twenty per cent of the plant workers in Halifax and 25 per cent in Toronto and Winnipeg were women. The proportion of women varied greatly between industries, with the highest ratio, from about 60 to 70 per cent, in the Textiles and Clothing industrial group.

Collective Agreements.—The number of workers reported to be covered by written collective agreement varied from 39 per cent in Halifax to 89 per cent in Vancouver. Fifty-six per cent of the workers in Toronto were reported covered by a union contract, 66 per cent of the workers in Winnipeg, and 70 per cent in Montreal. Most of the workers under collective agreement in these cities were represented by CIO-CCL or AFL-TLC international unions, except in Halifax where the largest group of workers were reported to be represented by directly chartered CCL unions. A number of establishments in Montreal reported having collective agreements with the Canadian and Catholic Confederation of Labour. Local and independent unions, including employees' associations, represented a negligible proportion of the workers in Vancouver and Winnipeg who were covered by collective agreement, about 14 per cent of the workers covered in Montreal, 17 per cent in Toronto and 27 per cent in Halifax.

The Normal Work Week (Tables II and III).—In Toronto, Winnipeg and Vancouver, provincial statutes limit the hours of work in factories. In Montreal, provincial factories legislation places some restriction on hours of work, but this applies only to women and boys under 18 except for special restrictions by Orders in Council under the Quebec Collective Agreement Act. Under all Hours of Work Acts the administrative authority has power to permit exceptions. In Montreal the legal maximum for women and boys under 18 is 54 and 55 hours per week respectively. In Toronto the maximum is 48 hours per week, and where exemption has been granted the maximum permitted for women and boys under 16 is 60 hours. In Winnipeg the maximum is 44 hours for women and 48 hours for men unless time and one-half is paid. In Vancouver the maximum is 44 hours.

The normal work week for female plant workers was generally the same as those

for the male workers in the same establishment, but in some cases the women were reported to be working fewer hours per week. In Halifax, 80 per cent of the male and 69 per cent of the female plant workers were on a 44-hour week, although an almost equal proportion of the male and female workers, 86 and 87 per cent respectively, were working 44 hours or less per week. In Montreal, 22 per cent of the male workers were on a 40-hour week, 24 per cent were on a 45-hour week and almost 20 per cent were on a 48-hour week. Of the female workers, 39 per cent were working 40 hours per week, 24 per cent were working 45 hours, and only eight per cent were working 48 hours per week.

There was a noticeable variation in the normal weekly hours of the plant workers in Toronto, as was the case in Montreal. Almost 40 per cent of the male plant workers were working 40 hours per week and 34 per cent were almost equally divided between 44 and 45 hours per week. Forty-five per cent of the female employees were on a 40-hour week. Over one-half of both the male and female plant workers in Toronto were working 42½ hours or less per week.

In Winnipeg, 60 per cent of the male workers were on a 44-hour week and 16 per cent were on a 40-hour week. Fifty-four per cent of the female plant employees were working 40 hours per week and 29 per cent were working 44 hours per week. In Vancouver, 78 per cent of the male and 68 per cent of the female workers were on a 40-hour week.

Some indication of the difference in the distribution of normal weekly hours of work in the five cities may be obtained by comparing the percentages of the total employees in each city working more than 44 hours per week. Fourteen per cent of the plant workers in Halifax, 51 per cent in Montreal, 27 per cent in Toronto, 20 per cent in Winnipeg and less than one per cent in Vancouver were on a normal work week of over 44 hours.

The five-day work week was quite common in Toronto and Vancouver, where at least 85 per cent of the plant workers were reported on this basis. Seventy-seven per cent of the workers in Montreal, 54 per cent in Winnipeg, and 24 per cent in Halifax were reported on a five-day week. In all the cities, except Vancouver, a higher proportion of the females than the males were working five days per week.

Overtime Rates of Pay (Table IV).—Time and one-half was the common overtime rate for work after standard daily or weekly hours in the five cities. For work

on Sunday, double time was predominant in Halifax, Montreal and Winnipeg, while time and one-half was paid to the largest groups of workers in Toronto and Vancouver. Substantial numbers of workers, however, did receive double time for Sunday work in Toronto and Vancouver.

Double time was the rate generally paid for work on statutory holidays in all the cities except Vancouver. Although this rate was reported by establishments employing 38 per cent of the workers in Vancouver for work on statutory holidays, a slightly higher percentage were in establishments paying time and one-half for work on these days. Time and one-half was also paid to large groups of workers in Montreal, Toronto and Winnipeg. Double time and one-half was reported paid in many cases, particularly in Montreal, Toronto and Vancouver; and in a few instances triple time was reported paid for work on statutory holidays.

Vacations with Pay (Table V).—Annual holidays with pay for most workers in Montreal, Toronto, Winnipeg and Vancouver are provided by provincial statute or under provincial statutory authority. In these cities a worker is entitled to one week's vacation with pay after one year of employment. The rate of pay for this vacation is two per cent of earnings, or, if on a time basis, regular weekly pay in Montreal; two per cent of earnings in Toronto; and regular pay in Winnipeg and Vancouver. If a worker has worked less than a year, he is entitled, in Montreal, to a half-day for each calendar month of employment. If he terminates his employment during a working year, he is entitled, in Montreal, Toronto and Vancouver, to holiday pay for the time he has been employed.

Most of the workers in the five cities were in establishments providing an initial vacation with pay of one week, generally after one year of employment. An initial vacation of two weeks, or its equivalent of four per cent of earnings or one day per month, was received by over 20 per cent of the plant workers in Halifax, but by less than 10 per cent of the workers in the other cities.

Over sixty-five per cent of the workers in each of the cities were in establishments which increased the vacation with pay as the worker's term of employment lengthened. In most cases the maximum allowance was two weeks, or four per cent of earnings, generally after five years of employment. In Montreal and Toronto a maximum vacation of three weeks with pay was given by establishments employing

Initial vacations with pay of one week after a year of employment were general in each city; maximum vacations were mainly two or three weeks.

Maximum Vacations

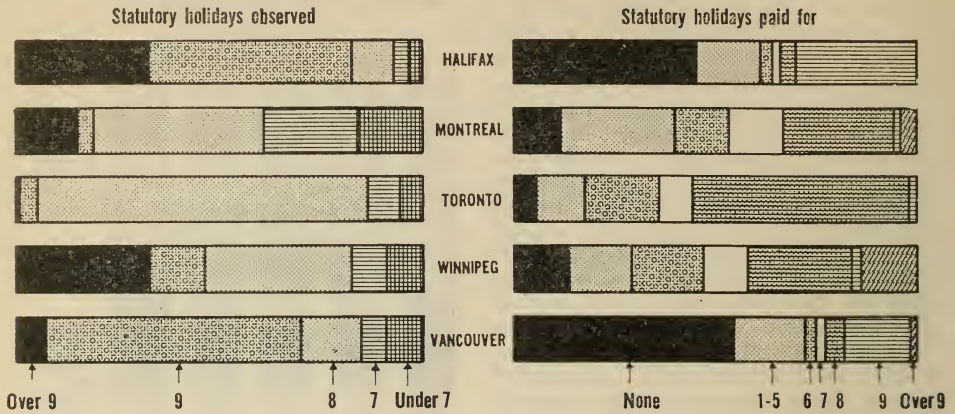

over 35 per cent of the plant workers. Most of these employees received the three weeks' vacation after 25 years of employment.

In addition to the initial and maximum vacations shown in the table, many workers were in establishments which provided for some intermediate vacation periods. These consisted, mainly, of two weeks vacation with pay after five years or less of employment.

Statutory Holidays (Table VI).—Provincial statutory regulations concerning public holidays affect the employees in Halifax, Montreal, Winnipeg and Vancouver. Factories in Winnipeg and Vancouver must be closed on public holidays unless permission is given for employment. Wages in relation to public holidays in these cities are dealt with under the provincial minimum wage laws. Quebec General Minimum Wage Order 4, however, has no provision for public holidays, but some special Orders require holidays to be observed or a punitive rate paid.

The number of statutory holidays observed by the establishments varied within each city, although a certain number of days predominated. Observed statutory holidays in this article include the number of days when the establishment is not operating by reason of Dominion, Provincial or Municipal holidays, or because of religious holidays regularly observed. Over one-half of the plant workers in each city were in establishments reporting the observance of the following number of statutory holidays:

Seven to nine statutory holidays were observed by the majority of workers in each city and most, except in Halifax and Vancouver, were paid for six to eight of these days if not worked.

nine or ten in Halifax, seven or eight in Montreal, eight in Toronto, eight or ten in Winnipeg and nine in Vancouver. Ninety-three per cent of the plant workers in Halifax, 60 per cent in Montreal, 88 per cent in Toronto, 82 per cent in Winnipeg and 86 per cent in Vancouver were in establishments observing eight or more statutory holidays.

Only about half of the workers in Halifax and Vancouver, 54 and 45 per cent respectively, received pay for some or all of the statutory holidays observed although not worked. In the other three cities most of the workers were paid for some or all of the observed days. The largest groups of workers were in establishments paying for nine statutory holidays in Halifax and Vancouver and eight statutory holidays in

Montreal, Toronto and Winnipeg. Thirty-four per cent of the plant workers in Halifax, 33 per cent in Montreal, 57 per cent in Toronto, 43 per cent in Winnipeg and 22 per cent in Vancouver were paid for eight or more observed statutory holidays.

Sick Leave with Pay.—Almost one-half of the workers in Toronto, 46 per cent in Montreal, 42 per cent in Vancouver, 40 per cent in Winnipeg and 34 per cent in Halifax were reported to be covered by some arrangement for payment during periods of illness. The usual provision was through an established group insurance or sick benefit fund scheme. In Halifax, however, the largest group of workers received sick leave with pay at the discretion of management.

Note: Thirteen establishments in Montreal, 24 in Toronto, one in Winnipeg and three in Vancouver did not report information on statutory holidays.

- (1) One establishment reported observing 7½ statutory holidays.
- (2) One establishment in Toronto and two in Winnipeg reported observing 8½ statutory holidays.
- (3) One establishment reported paying for 2½ statutory holidays.
- (4) One establishment reported paying for two statutory holidays during the first five years of employment and eight days thereafter.
- (5) One establishment reported paying for 8½ statutory holidays; three establishments reported paying for eight days after 5 years of employment.
- (6) One establishment reported paying for three to eight statutory holidays.
- (7) Two establishments reported paying for nine statutory holidays after one and three years of employment.

ADVISORY COUNCIL OF CVT MEETS IN OTTAWA

It was announced at the fourteenth semi-annual meeting of the Canadian Vocational Training Advisory Council in May that the Federal-Provincial agreements on Vocational Training had been renewed. As a result, the Dominion and the provinces will continue to co-operate in carrying forward vocational training programs throughout Canada for at least another three years.

The fourteenth semi-annual meeting of the Vocational Training Advisory Council was held in the Board Room, Confederation Buildings, May 22 and 23, 1950, with the following members in attendance:—

Dr. G. Fred McNally, Chancellor, University of Alberta (Chairman); Mr. L. S. Beattie, Director, Vocational Education, Ontario; Mr. N. S. Dowd, Executive Secretary, Canadian Congress of Labour; Dr. F. T. Fairey, Deputy Minister of Education, British Columbia; Mr. E. K. Ford, Director, Vocational Education, Nova Scotia; Mr. E. V. Gage, President, Byers Construction Co., Montreal; Miss Marion Graham, Saskatoon, Saskatchewan; Dr. (Mrs.) R. J. Marshall, President, National Council of Women; Mr. G. Poisson, Deputy Minister, Department of Youth and Social Welfare, Quebec; Mr. C. B. C. Scott, General Personnel Manager, Massey-Harris Co., Toronto; Mr. W. H. C. Seeley, Toronto Transportation Commission, Toronto; Dr. L. W. Shaw, Director of Education, Prince Edward Island; Mr. G. G. Cushing, General Secretary-Treasurer, Trades and Labour Congress of Canada.

Others present were: Mr. A. H. Brown, Assistant to Deputy Minister of Labour, Ottawa; Mr. R. H. MacCuish, Regional Director, CVT., Halifax; Mr. J. W. McNutt, Regional Director, CVT., Fredericton; Mr. H. H. Kerr, Regional Director, CVT., Toronto; Mr. W. A. Ross, Regional Director, CVT., Regina; Mr. J. H. Ross, Regional Director, CVT., Calgary; Dr. G. A. Frecker, Deputy Minister of Education, Newfoundland; Mr. R. F. Thompson, Director of Training, Department of Labour, Ottawa; Brigadier J. E. Lyon, Assistant Director of Training, Department of Labour, Ottawa; Mr. C. R. Ford, Supervisor of Technical Training, Department of Labour, Ottawa; Mr. A. W. Crawford, Director of Training and Counselling, Department of Veterans Affairs, Ottawa; Mr. H. C. Hudson, Special Placements Division, National Employment Service, Ottawa; Mr. J. A.

McLaughlin, Assistant Commissioner of Penitentiaries, Department of Justice, Ottawa; Major A. E. Wood, Special Placements Division, National Employment Service, Ottawa; Mr. H. W. Jamieson, Superintendent of Educational Training, Department of Veterans Affairs, Ottawa; Dr. G. V. Haythorne, Director of Economics and Research, Department of Labour, Ottawa; Mr. H. O. Gudgin, Economics and Research, Department of Labour, Ottawa.

Members unavoidably absent were: Captain H. G. Gonthier, President, Quebec Provincial Command of the Canadian Legion, BESL; Mr. N. C. MacKay, Director of Extension, Department of Agriculture, Manitoba and Mr. Anatole Lacombe, Canadian and Catholic Confederation of Labour.

Dr. A. MacNamara Addresses Council

In a brief address of welcome to the Council Dr. MacNamara expressed the opinion that the enrolment of teen-age young people in vocational training should be greatly increased. Similarly he felt that too few unemployed workers had been given training when they were receiving unemployment insurance benefit. While careful to point out that the Council was not responsible for the failure of young people to respond to the opportunities offered them, he suggested that thought should be given to the matter, and, if possible, recommendations made as to how this youthful lack of interest might be corrected.

Director's Report

Mr. R. F. Thompson, Director of Training, reported that the Vocational Training agreements between the Dominion and the provinces had been renewed for three years as from April 1, 1950, with very minor changes, except for the addition of a new division (schedule "K") for the training of tradesmen in the armed forces.

Veterans' Training.—At the end of the last fiscal year, there were still 270 veterans under training, the Director stated. Most of these were being given training in provincial schools, payment being made to the provinces on a per diem basis.

Service Tradesmen.—The training of service tradesmen commenced late in 1949, with the setting up of classes in New Brunswick, Quebec, Ontario, Manitoba and Saskatchewan. The enrolment so far, have been chiefly for motor mechanics and drivers.

Training Apprentices.—There had been some decrease in the number of registered apprentices during the fiscal year 1949-50, in the seven provinces with which the Vocational Training Branch has apprenticeship agreements. However, there was an increase of 30 per cent in Alberta and small increases in Nova Scotia and New Brunswick. Mr. Thompson stated that pre-employment classes, or their equivalent, had been operating in Nova Scotia, New Brunswick, Manitoba, Saskatchewan and Alberta and that in New Brunswick, Manitoba, Alberta and British Columbia, the great majority of registered apprentices were being given class training.

Unemployed Workers' Training.—There were 627 unemployed workers who were given instruction during the fiscal year 1949-50, an increase of 62 over the previous year. These were mainly in industrial classes, but there were also a number of women who received training as nurses' aides.

Youth Training and Student Aid.—The Director stated that the greater number of courses for youth were designed for rural young people. There were 3,882 youth trainees enrolled during the fiscal year.

A total of 2,740 students were assisted during the year; of that number, 581 were nurses-in-training in hospitals.

Vocational Schools' Assistance.—During the fiscal year 1949-50 the Director prepared summary reports based on studies of: (1) the report of the Royal Commission on Vocational Education and Apprenticeship in South Africa; (2) Federal Aid to Vocational Education in the United States; (3) Vocational Rehabilitation of Handicapped in the United States. In addition, a careful forecast was made of probable school enrolments for eight provinces up to 1954.

Discussion of the Director's report disclosed that the current enrolment of veterans consisted chiefly of those taking

special part-time courses organized at the request of the Veterans' Land Act authorities. A number of the veterans under training had been re-allocated from university courses. Currently, some 14,000 veterans were enrolled for university training, it was stated. This enrolment was expected to drop sharply during the next three years to approximately 1,000 by 1953.

Occupational Monographs

Dr. G. V. Haythorne, Director of the Economics and Research Branch, reported that monographs had been prepared in recent months on the following occupations: machine operator, printer, optometrist, lawyer, motor mechanic, and social service worker. A revision of the monograph on nursing had also been completed by the Department of Health and Welfare. He stated that it was planned to prepare monographs on families of occupations in industries, under such titles as, for example, "machinery building."

Training in Penitentiaries

Mr. J. A. McLaughlin, Assistant Commissioner of Penitentiaries presented a progress report on vocational training that is provided for the inmates of several Canadian penal institutions (L.G., Jan., 1950, p. 32). He stated that so far 164 inmates had completed courses and of these 59 were still serving time. Placements had been good, he said, due to the fine co-operation of the National Employment Services, various societies that were interested in prisoners' welfare and apprenticeship authorities. The attitude of employers toward vocationally trained men was continuing to improve and the presentation of certificates of proficiency to trainees was helping to develop a desire for vocational courses. Only 11 per cent of vocationally trained men have been returned to the penitentiaries as compared with 40 per cent of those who had not been trained.

Training for Nurses' Aides

Considerable variation was disclosed in the training provided for nurses' aides in the several provinces. In Alberta, the course lasts for 40 weeks, of which 20 weeks were spent in hospitals and the remainder in schools. There were nearly 200 undergoing training and 358 had graduated. In Saskatchewan a six-month course is provided, of which two months are spent in school and four months in hospitals. It was reported that the course provided in Manitoba followed the lines of that in Alberta. In Ontario, the training was being

carried out under the Department of Health and lasts for nine months—three months in school and six in hospitals. It was stated that there were 200 under training at all times in Ontario. In New Brunswick also the course extends over nine months, of which three were spent in school and six in hospitals. The educational admission requirement in all provinces was stated to be at least grade eight and in some provinces a higher grading is imposed.

In a brief address to the Council, Miss D. M. Percy of the Department of Health and Welfare, drew attention to the variations in training requirements of the several provinces and felt that it might be desirable to aim at standardization. She expressed the opinion that perhaps the time had arrived for considering a system of licence and control. She felt that nursing aides were an essential part of the nursing team. It was suggested that the Canadian Nurses' Association might take the initiative in setting up standards when it met in convention in Vancouver in June.

Apprenticeship Training

Brief reports on apprenticeship training were presented by the Directors of Training from each of the provinces except Newfoundland and Prince Edward Island. These reports indicated that while there were considerable variations in methods of training and in the emphasis placed on designated trades, each of the eight provinces had developed its own apprenticeship program which it was following actively in accordance with its evaluation of its own needs for qualified workers.

Mr. C. R. Ford, Supervisor of Technical Training, reported that apprenticeship training was making substantial progress. He stated "both trainees and employers appear to realize the importance of the class training and in three of the western provinces an increasing percentage of the apprentices are coming in for training each year." With regard to the Ontario program, Mr. Ford said that "no pre-apprentice training classes have been organized. However they expect the two-year terminal training program being organized in selected technical schools will be the equivalent of pre-apprenticeship classes."

Brigadier J. E. Lyon, Assistant Director of Training, reported that part-time classes were organized in New Brunswick in co-operation with various composite schools and in the New Brunswick Technical Institute. In both Nova Scotia and New Brunswick the syllabi for class training were based on that which had been in use

for the training of veterans, with certain additions made in accordance with current developments in the several trades and at the suggestion of the Director of Apprenticeship concerned.

Mr. R. F. Thompson, Director of Training, stated that difficulties had arisen in connection with retaining suitable instructors for apprenticeship classes which normally operate only in the winter months. In some cases this had been solved by the appointment of instructor-supervisors, who give instruction during the winter and do supervisory work in the summer. This made it possible to employ better qualified instructors on a year-round basis.

In assessing the apprenticeship work being done in the several provinces, Mr. Thompson stated that more had been done in Alberta than in any of the other provinces. However, good work was being done in Manitoba and New Brunswick where attendance at classes was high. The same was true of British Columbia, but the results in Saskatchewan and Nova Scotia had not been quite so satisfactory from an attendance standpoint. There appeared to be a general opinion in the Council that there should be no real difficulty in training apprentices in regular schools, either on a full-time or a part-time basis.

Reference was made to the counselling of prospective apprentices with a view to having more of them take up trades where the need for skilled workers was greatest. It was agreed that guidance of this nature presented difficulties and that a special study of the proposal by a sub-committee might be warranted. It was suggested that closer co-operation between the guidance personnel of the National Employment Service and organizations concerned with apprenticeship might produce better results.

Federal Assistance to Schools

The Supervisor of Technical Training, Mr. C. R. Ford, stated that a total of 106 building projects had been approved for federal assistance, under the Vocational Schools' Assistance agreements. Of these, 65 had been completed; 16 were under construction; 21 had not been started and five had been withdrawn. All the provinces except Nova Scotia, Manitoba and Saskatchewan had used their full annual allotment during the last fiscal year and Nova Scotia and Saskatchewan expected to use their allotments this year.

It was pointed out that the emphasis in vocational work under the agreements was changing from building and equipping schools to examining, revising and developing new curricula, the better to meet the

needs of the areas served by the schools. Saskatchewan had made a critical study of the vocational programs of the composite high schools and had developed new courses for shop work. Ontario was working on two-year terminal vocational courses and Nova Scotia was making a survey of community facilities and needs, as a basis for the preparation of courses of study.

Vocational Teacher Training

Steps were being taken in several of the provinces to overtake the shortage of qualified vocational school teachers, by full-time teacher training programs, or short, intensive courses, or by summer school courses.

One point that emerged from the discussion on the training of teachers for vocational schools was that tradesmen employed as teachers must be the best available in their respective trades, even if it should be necessary to pay them higher salaries than academic teachers received.

Vocational Education in Newfoundland

Dr. G. A. Frecker, Deputy Minister of Education for Newfoundland, stated that all vocational training in that province was being done in the St. John's Vocational Institute. Jubilee Guilds carry on instruction in handicrafts. Dr. Frecker pointed out that among other difficulties confronting vocational education in his province the question of financing loomed large. However, the province had signed the Vocational Training Agreement with the Dominion. He referred to a new vocational school operated by a pulp and paper company, which will have class-rooms and shops for three full-time teachers and will provide courses extending over 79 weeks.

He stated that approximately 700 residents of Newfoundland were taking vocational training correspondence courses which originated in the United States.

The Chairman, Dr. McNally, urged that every possible assistance be given by the Council and Federal officials to support and encourage vocational training in Newfoundland.

School Enrolments and Costs

Mr. R. F. Thompson, Director of Training, presented a statement which he had compiled from reports of the provincial Departments of Education (Quebec and Newfoundland excepted) covering the years 1935 to 1949. The purpose of the statement was to provide "a broad picture of the outward development" of the primary educational system in Canada in their

material aspects of public enrolled and money invested. Special schools such as those for the blind and deaf, technical institutes, etc., were not included.

The statement pointed out that the methods of compiling enrolment of pupils varied from province to province. However the total enrolment in the municipal school systems of the eight provinces was approximately 1,556,000 in 1935. It had declined by 41,000 by 1940 and by a further 71,000 in 1945. These declines were attributed in part to the lower birth rate during the depression years, the unsettled conditions during the war and, in the case of the upper grades, to enlistments in the armed services, or entry into war industries. By 1948-49, the enrolment had increased by 91,000 over 1945, but was still 20,000 under that of 1935.

In the matter of expenditures for the municipal school systems, the statement included only expenditures made by the municipalities and by the provincial governments for the ordinary school systems. In 1935, the total expenditure, both municipal and provincial in the eight provinces, amounted to approximately \$82,500,000; by 1940, it had increased to \$93,700,000; by 1945, to \$123,600,000 and by 1947-48 to \$204,600,000. (The figure for 1948-49 was not available when the statement was prepared.)

The increases were due for the most part to: (1) increases in teachers' salaries; (2) provision of new schools and facilities; (3) increased standards in the educational services; (4) general overall increase in the cost of everything purchased for the primary school systems.

The expenditure per pupil enrolled for the eight provinces in 1935 averaged \$52.95 and varied from \$26.77 in Prince Edward Island to \$66.52 in British Columbia. In 1940, the average was \$61.84; in 1945, \$85.60; in 1948-49, \$133.33. The costs in the several provinces in 1948-49 were as follows: Prince Edward Island, \$65.32; Nova Scotia (1947-48), \$76.93; New Brunswick, \$99.91; Ontario (1947-48), \$130.09; Manitoba (1947-48), \$114.88; Saskatchewan, \$143.70; Alberta, \$142.64 and British Columbia, \$214.62.

The Council expressed appreciation of Mr. Thompson's statement as being "a very valuable contribution to the current educational picture" and ordered that it be included in full in the minutes of the meeting.

It was left to the Chairman and to the Director of Training as to whether or not the Council would hold a meeting in the autumn. Should a meeting be considered necessary, it was decided that it be held in Montreal some time in November.

SURVEY OF EARNINGS AND HOURS IN MANUFACTURING, 1948

Average hourly and weekly wages of both men and women increased substantially in the eleven-month period between the 1947 and 1948 surveys. A moderate increase was reported in the average weekly earnings of salaried workers. Average working hours declined insignificantly. The proportions of women reported in both groups showed a slight decrease.

A preliminary report on the third annual survey of hours of work and earnings of male and female wage-earners and salaried employees in manufacturing has been issued by the Dominion Bureau of Statistics. The survey pertains to the last week in October, 1948,¹ and includes all employees of manufacturing establishments usually employing 15 or more persons, with the exception of travelling salesmen, homeworkers, charwomen and workers engaged on new construction.

Wage-Earners.—Wage-earners, defined as production workers, route drivers and delivery men, maintenance and related employees, comprised 83·3 per cent of all employees reported. The proportion of women wage-earners in manufacturing as a whole was 22·4 per cent. In the durable manufactured goods division the percentage was 7·9, and in the non-durable goods division 35·6. Comparative figures for 1947 and 1946 are given in the Table below.

Proportions of Women Reported as Wage-Earners in Manufacturing

Division	Last Week of		
	Oct., 1948	Nov., 1947	Nov., 1946
All Manufacturing . . .	22·4	22·7	23·7
Durable Goods	7·9	8·8	9·5
Non-durable Goods . . .	35·6	35·1	35·9

As in the preceding years, the lowest proportion of female wage-earners, 11·3 per cent, was reported in British Columbia, where the heavy manufactured goods industries are of major importance. The highest proportion, 28 per cent, was reported in Quebec, where large numbers of women are employed in the textile and apparel and other light industries.

Hourly Earnings.—Substantial increases in average hourly earnings were general in the eleven months between the second and third surveys, although they were not so high as those reported for the twelve-month period between November, 1946,

AVERAGE HOURLY EARNINGS OF MEN AND WOMEN IN MANUFACTURING

and November, 1947. At the end of October, 1948, the average hourly rate for Canada as a whole was 94·6 cents for both sexes, 102·3 cents for men and 65·1 cents for women, as compared with 85·1, 92·1 and 58·2 cents respectively in 1947.

The proportion of women's average hourly earnings to those of men again increased slightly. In the last week in October, 1948, the proportion was 63·6 per cent, as compared with 63·2 in 1947 and 62·2 in 1946. The payment of increased wage rates on an "across the board" basis in many establishments during the period for which data are available no doubt contributed to this situation, which was

¹ The data are comparable with those published in the 1946 and 1947 reports, except that in these two preceding surveys the data relate to the last week in November. As a result, they include differing proportions of workers in certain seasonal industries such as sawmills, food processing, and apparel manufacturing, which are more active in October than in November.

also influenced by the varying levels of activity in industries employing larger or smaller numbers of women.

Average hourly earnings varied widely among the provinces. The highest figures for both men and women were reported in British Columbia, where the average at the end of October was 118.9 cents for men and 75.2 cents for women.

Men's earnings increased in the eleven months by more than 10 cents an hour in Alberta, British Columbia and Ontario, while women's earnings increased by 7.3 cents an hour in Quebec and by 7.0 cents in Ontario and British Columbia. The greatest percentage increase for men in 1948 over 1947 was recorded in Alberta, and for women in Quebec. Variations in the general levels of earnings in different provinces are closely related to the industrial distributions of their working forces, with consequent occupational, sex and age differences, involving disparities in proportions of skilled, semi-skilled and unskilled workers.

Weekly Wages.—Average weekly wages showed increases in all areas as compared with November, 1947. Gains over 1946 amounted to 27.4 per cent for both sexes, 26.2 per cent for men, and 29.0 per cent for women. Advances in 1948 in per capita weekly wages over the preceding year's levels were generally lower than those of 1947 over 1946, the exceptions being the figures for wage-earners of both sexes in Nova Scotia and New Brunswick, and for women in Quebec. Women received 16.4 per cent of the gross amounts paid to the wage-earners reported for the week ending October 30, 1948. Their average weekly wages were 56.7 per cent of the average weekly wages paid men, as compared with 55.9 per cent in 1947, and 55.4 per cent in 1946.

Hours of Work.—Average working hours of wage-earners varied insignificantly from those reported in 1946 and 1947. In the last week of October, 1948, the weekly work week averaged 43.6 hours for both sexes, 44.7 hours for men, and 39.8 hours for women. The distribution of wage-earners according to their working time was, on the whole, reasonably similar in the three periods.

The proportions of wage-earners working between 40 and 44 hours were higher in 1948 than in any earlier year, while the numbers and percentages working over 45 hours decreased slightly.

The averages are based on short-time, full-time and overtime hours actually worked, plus any hours of paid absence in the week to which the survey relates.

Important causes of differences in working time include the employment of varying numbers of part-time and casual workers, short-time or overtime work due to seasonal and other circumstances, variations in working time on different jobs, absenteeism, and labour turnover during the week under review, as well as variations in the standard number of hours in the working week in different areas and industries.

SALARIED EMPLOYEES

Salaried employees, such as executive, managerial, office and factory clerical staffs, made up 16.7 per cent of all employees reported. This group included 14.8 per cent of the men and 22.7 per cent of the women reported in the survey.

Women made up 32.8 per cent of the salaried personnel in 1948, as compared with 33.1 per cent in 1947 and 34.1 per cent in 1946. The proportions of women among the salaried workers reported in different provinces varied considerably, ranging from 27.6 per cent in Nova Scotia and British Columbia, to 36.6 per cent of the comparatively small number of salaried persons reported in Saskatchewan. Women comprised 28.9 per cent of salaried personnel in durable goods manufacturing, and 35.9 per cent in the non-durable goods category. These percentages were slightly below the proportions of 29.4 per cent and 36.1 per cent reported for heavy and light industries respectively in 1947. The ratios of the salaried personnel to the total staffs vary considerably in different industries. To some extent, this is because of differences in the classification of certain groups of employees but, for the most part, variations are related to the size and organization of the typical industrial units, the proportions of professional personnel, and the organization of their distributive operations.²

Weekly Salaries.—Moderate increases in average weekly salaries between November, 1947, and October, 1948, were reported in all areas. The average in 1948 was \$52.93 per week for both sexes, \$63.48 for men, and \$31.26 for women, compared with \$49.78, \$60.21 and \$28.68 respectively in 1947, and \$43.85, \$53.21 and \$25.91 in 1946.

In general, the advances were smaller both in amount and proportion than those reported for wage-earners. In the preceding year, the increases in earnings of salaried staffs over 1946 had been greater than those recorded for the wage-earners, although the percentage gains were smaller.

² When separate sales offices are maintained, their employees are classified in the distribution industry, and are not included in this annual survey.

TABLE 1.—AVERAGE HOURS WORKED AND AVERAGE HOURLY AND WEEKLY EARNINGS OF MALE¹ AND FEMALE WAGE-EARNERS AS REPORTED BY LEADING MANUFACTURERS FOR THE LAST WEEK IN OCTOBER, 1948

Industry	WAGE-EARNERS REPORTED			Average Hours Per Week	AVERAGE HOURLY EARNINGS			AVERAGE WEEKLY WAGES

The average weekly pay of salaried men was highest in Ontario and British Columbia, but Alberta showed the greatest advance over the 1947 level. Salaried women in British Columbia were on the average most highly paid; the increase of \$3.33 in their earnings in the eleven months was greater in amount and percentage than in any other province. The average salary paid women was 42.9 per cent of the average paid men in October, 1948; in November, 1947, the proportion was 47.6 per cent and in 1946, 48.7 per cent. Occupational and age differences contribute materially to the disparities in the salaries of men and women.

Hours of Work.—The average working time of salaried employees fell slightly from the 1947 level, and was 3.3 hours below the average reported for the wage-earners. In 1948 the average working week reported for both sexes was 40.3, for men 41.1, and for women 38.8. In comparing hours for salaried and wage-earner staffs, it must be borne in mind that the time of salaried persons is generally less carefully recorded than that of wage-earners, whose earnings are usually related more directly to the hours worked. The standard week of office workers tends to be shorter on the other hand, higher proportions of wage-earners are reported as casual workers, or as working short time.

TABLE 2.—AVERAGE HOURS WORKED AND AVERAGE WEEKLY SALARIES OF MALE AND FEMALE SALARIED EMPLOYEES AS REPORTED BY LEADING MANUFACTURERS FOR THE LAST WEEK IN OCTOBER, 1948

This section covers proceedings under two federal statutes, the Industrial Relations and Disputes Investigation Act and the Conciliation and Labour Act, involving the administrative services of the Minister of Labour, the Canada Labour Relations Board and the Industrial Relations Branch of the Department.

INDUSTRIAL RELATIONS AND CONCILIATION

The Industrial Relations Branch of the Department of Labour took action during May in regard to industrial disputes on many fronts. No stoppages of work occurred in the field of labour relations coming under federal jurisdiction.

Introduction

A busy month was experienced during May by the Industrial Relations Branch as the conciliation and other procedures administered by the Department of Labour under the Industrial Relations and Disputes Investigation Act were invoked in connection with numerous disputes. At the same time the work of the Canada Labour Relations Board kept well up to the usual level of activity, with a large number of applications for certification and a small number for revocation being processed.

On May 5 the Minister of Labour established a Board of Conciliation and Investigation to deal with a dispute between three coastal shipping companies in British Columbia and the Canadian District of the Seafarers' International Union of North America. The employers involved were Canadian National Steamships, Union Steamships Limited, and the British Columbia Coast Steamship Service of the Canadian Pacific Railway Company. The matters in dispute included wage rates, overtime rates, union security, weekly leave, crew equipment, allowances for room and subsistence, and conditions governing work at sea. The companies were reported to have taken the position that present wage rates and conditions of work were fair and reasonable, and to have offered to renew the existing agreements without significant changes.

Another Conciliation Board was established by the Minister on May 13 to deal with a dispute between the Railway Express Agency, Inc., of New York, N.Y., and its Canadian employees as represented by the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The issues in dispute concerned demands of the Canadian employees for the same wage rates and other conditions as prevail for the company's employees in the United States.

On May 2 the Minister of Labour appointed Mr. J. Edwin Eades, of Vancouver, as Chairman of a Conciliation Board appointed to deal with a dispute between Canadian Pacific Air Lines, Limited, and the Canadian Air Line Pilots' Association, thus completing the personnel of the Board. The Board will investigate and report upon differences between the parties in regard to salaries, hours of service, the filling of vacancies, allowances for transportation, sickness and medical expenses.

A complaint under Section 43 of the Industrial Relations and Disputes Investigation Act, alleging the failure of various railway companies to bargain collectively, was received by the Minister of Labour on May 11. The complainants were the joint negotiating committee representing the Brotherhood of Locomotive Firemen and Enginemen, the Order of Railway Conductors and the Brotherhood of Railroad Trainmen. The respondent companies were the Canadian National Railways, Canadian Pacific Railway Company, Dominion Atlantic Railway, Northern Alberta Railways Company, Quebec Central Railway Company and the Toronto Terminals Railway Company. Following receipt of the complaint, the Minister of Labour made proposals for a round table conference between the major railway systems and the complainants in the hope that a mutually satisfactory understanding might be reached between the parties in regard to procedure. The case had not been disposed of at the end of the period under review.

Disputes between five stevedoring companies carrying on operations at Sorel, P.Q., and the National Catholic Syndicate of Longshoremen of Sorel, Inc., was brought to the attention of the Department early in May. The employers affected were Wolfe Stevedores Limited, Empire Steve-

doring Company, Limited, North American Elevators Limited, Sorel Dock and Stevedoring Company, Limited and J. C. A. Turcotte. On May 6 the Minister of Labour appointed a Conciliation Officer to deal with the disputes, which arose out of negotiations for the consummation of collective agreements between the union and the companies, following certification of the union as bargaining agent for the employees of each of the companies granted by the Canada Labour Relations Board on March 21, 1950.

Early in June the Conciliation Officer reported that he had been able to effect a settlement in the dispute between the union and J. C. A. Turcotte, on the basis of a wage increase of ten cents per hour over the basic rates which were in effect during the 1949 navigation season. No settlement was reached in respect of the other four companies, and the Conciliation Officer's recommendation of the establishment of a Conciliation Board in these cases was being dealt with at the time of writing.

On May 10, 1950, word was received from a Conciliation Officer that a mutually satisfactory settlement had been reached in a dispute between the Anticosti Shipping Company, of Montreal, and the Canadian Seamen's Union, the parties having agreed to the renewal of the 1949 collective agreement without change except for the inclusion of an open-end wage clause.

In three other cases, each of which involved the Canadian Seamen's Union, Conciliation Officers reported during May that no settlement of the disputes had been reached and that there was no prospect that the appointment of Conciliation Boards would be likely to lead to settlements. The employers involved were Keystone Transports Limited, Lakes and St. Lawrence Navigation Company, Limited, and the Upper Lakes and St. Lawrence Transportation Company Limited. In view of the nature of the reports of the Conciliation Officers, the Minister of Labour advised the parties that Conciliation Boards would not be appointed to deal further with the differences between the parties.

The following statement concerns the scope and administration of the Industrial Relations and Disputes Investigation Act and the Conciliation and Labour Act.

Conciliation services under the Industrial Relations and Disputes Investigation Act and under the Conciliation and Labour Act are provided by the Minister of Labour through the Industrial Relations Branch. The Branch also acts as the administrative arm of the Canada Labour Relations Board under the former Act.

The Industrial Relations and Disputes Investigation Act came into force on

Early in June a Conciliation Officer reported considerable progress in a dispute affecting the Con Mine property, at Yellowknife, NWT, of The Consolidated Mining and Smelting Company of Canada, Limited, Trail, B.C. The union involved was the Yellowknife District Miners' Union, Local 802, of the International Union of Mine, Mill and Smelter Workers. The report of the Conciliation Officer indicated that a tentative understanding had been reached which the representatives of the parties were prepared to recommend to their principals as a basis of settlement.

During April and May, applications for consent to prosecute were lodged with the Minister of Labour by the American Newspaper Guild affecting the Canadian Press, its subsidiary Press News, Limited, and the general managers of the two companies. The applications were made pursuant to Section 46 of the Industrial Relations and Disputes Investigation Act. Following receipt of the applications, the Minister of Labour appointed Mr. James H. Stitt, of Ottawa, as an Industrial Inquiry Commission to investigate and to endeavour to facilitate collective bargaining between the parties and, failing this, to make a report to him on the matters referred to in the applications. Formal reports had not been received from the Commissioner at the time the LABOUR GAZETTE went to press.

In the disputes affecting groups of international and national labour organizations representing non-operating railway employees, railway hotel employees and the employees engaged in the shipping operations of the railways, on the one hand, and the major Canadian railway systems, on the other hand, strike vote ballots were sent out by the unions to their members during the period under review. The ballots affecting the two national unions were returnable up to June 7, and those of the group comprising fifteen standard international unions were returnable up to July 24. Pending the tabulation of the strike votes, no action was taken by the parties concerned with a view to the settlement of the matters in dispute.

September 1, 1948. It revoked the Wartime Labour Relations Regulations, P.C. 1003, which became effective in March, 1944, and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until succeeded by the Wartime Regulations in 1944.

Proceedings begun under the Wartime Regulations are continued in so far as the services involved in such proceedings are

authorized under the new Act. Likewise, decisions, orders and certifications given by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the new Act.

The Act applies to industries within Dominion jurisdiction, i.e., navigation, shipping, interprovincial railways, canals, telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations, and works declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Additionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the Dominion Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of Conciliation Officers, Conciliation Boards, Industrial Inquiry Commissions, for the consideration of complaints that the Act has been violated or that a party has failed to bargain collectively, and of applications for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to the Wartime Labour Relations Board to administer provisions concerning the certification of bargaining agents, the writing of provisions—for incorporation into collective agreements—fixing a procedure for the final settlement of disputes concerning the meaning or violation of such agreements and the investigation of complaints referred to it by the Minister that a party has failed to bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Conciliation services are also provided by the Industrial Relations Branch under the provisions of the Conciliation and Labour Act. This statute empowers the Minister of Labour to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or arbitrator when requested by the parties concerned.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported below under two headings: (1) Certification and other Proceedings before the Canada Labour Relations Board, and (2) Conciliation and other Proceedings before the Minister of Labour. From time to time, as required, a third article under this section will cover Conciliation Proceedings under the Conciliation and Labour Act.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton and St. John's, Newfoundland. The territory of two officers resident in Vancouver comprises British Columbia and Alberta; two officers stationed in Winnipeg cover the provinces of Saskatchewan and Manitoba and Northwestern Ontario; three officers resident in Toronto confine their activities to Ontario; two officers in Montreal are assigned to the province of Quebec, and two officers resident in Fredericton and St. John's represent the Department in the Maritime Provinces and Newfoundland. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

Certification and Other Proceedings Before the Canada Labour Relations Board

The Canada Labour Relations Board met for two days during the month of May. The Board issued six certificates designating bargaining agents, rejected three applications for certification, and allowed the withdrawal of three applications. During the month the Board received five applications for certification and two applications for revocation of certification.

Applications for Certification Granted

1. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, for a unit of clerical employees of the Canadian Pacific Railway Company employed in the Office of the Auditor of Agencies, Windsor Street Station, Montreal (L.G., June, 1950, p. 824).

2. The Order of Railway Conductors, for a unit of conductors employed in the train service of the Quebec Central Railway Company (L.G., June, 1950, p. 824).

3. The American Newspaper Guild, for a unit of editorial employees of Press News Limited (L.G., May, 1950, p. 675).

4. Local 1598, International Brotherhood of Electrical Workers, for a unit of employees of the Hudson Bay Mining and Smelting Company Limited, Flin Flon, Manitoba, comprising locomotive engineers, brakemen, and despatchers engaged in the operation of rolling stock of "out-of-doors" railways (L.G., May, 1950, p. 675).

5. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, for a unit of employees of the Canadian Pacific Railway Company, comprising employees in the office of the District Accountant, Union Station, Toronto, and clerical employees under the jurisdiction of the same officer and employed at the following points: John Street, Lampton, and

West Toronto (all in Toronto) and London, Ontario (L.G., June, 1950, p. 824).

6. The Seafarers' International Union of North America, Canadian District, for a unit of employees of the Canadian Pacific Railway Company, comprising uncertificated personnel of the deck, engine room, and steward's departments on the ss. *Princess Helene*, operating between Saint John, N.B., and Digby, N.S. (L.G., June, 1950, p. 824).

Applications for Certification Rejected

1. The Brotherhood of Railroad Trainmen and the Quebec Central Railway Company (L.G., June, 1950, p. 824). The application was rejected for the reason that it was not supported by a majority of the employees affected.

2. Local 1440, International Brotherhood of Electrical Workers, and the Hydro-Electric Commission of the City of Ottawa (L.G., March, 1950, p. 339). (Reasons for Judgment will be published in the August issue of the *LABOUR GAZETTE*.)

3. Transport Drivers, Warehousemen and Helpers' Union (Local 106, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America) and Carwil Transport Limited (L.G., May, 1950, p. 675). (See Reasons for Judgment below.)

Applications for Certification Withdrawn

1. Lodge 1040, Brotherhood of Railroad Trainmen and the National Harbours Board (yardmasters, Vancouver) (L.G., May, 1950, p. 675). The Board allowed the withdrawal of the application on the request of the Vice-President of the Brotherhood.

2. The West Coast Seamen's Union (Canada) and Westward Shipping Limited, Vancouver (L.G., June, 1950, p. 824). The Board allowed the withdrawal of the application on the request of the President of the Union.

3. The West Coast Seamen's Union (Canada) and Vancouver Barge Transportation Limited, Vancouver (L.G., June, 1950, p. 824). The Board allowed the withdrawal of the application on the request of the President of the Union.

Applications for Certification Received

1. The Brotherhood of Locomotive Engineers on behalf of locomotive engineers employed by the Northern Alberta Railway Company, Edmonton (Investigating Officer: G. R. Currie).

2. The Canadian Brotherhood of Seamen on behalf of unlicensed personnel employed by the Quebec and Ontario Transportation Company, Limited, Montreal (Investigating Officer: R. Trépanier).

3. Steamship Checkers, Cargo Repairmen, Weighers, and Samplers (Local 1764, International Longshoremen of America) on behalf of employees of certain companies at Saint John, N.B., represented by the Shipping Federation of Canada (Investigating Officer: H. R. Pettigrove).

4. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees on behalf of employees of the Canadian Pacific Railway Company, employed in the office of the Auditor of Freight Receipts, Windsor Street Station, Montreal (Investigating Officer: L. Pepin).

5. The West Coast Seamen's Union (Canada) on behalf of unlicensed personnel employed by Westward Shipping Limited, Vancouver, on board the tankers m.v. *Standard Service* and m.v. *B.C. Standard* (Investigating Officer: G. R. Currie).

Applications for Revocation of Certification Received

1. On May 1, 1950, the Board received from Union Steamships Limited an application under Section 11 of the Act for the revocation of certification of Division 59, Canadian Brotherhood of Railway Employees and Other Transport Workers as bargaining agent for employees of the Company (L.G., June, 1949, p. 725).

2. On May 4, 1950, the Board received from Branch Lines Limited an application under Section 11 of the Act for the revocation of certification of the Canadian Seamen's Union as bargaining agent for employees of the Company (L.G., Dec., 1947, p. 1783).

REASONS FOR JUDGMENT in dispute between

**Transport Drivers, Warehousemen and Helpers' Union (Local 106, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America), Applicant,
and
Carwil Transport Limited, with Head Office at Toronto, Ontario, Respondent.**

The Applicant applies to be certified as bargaining agent for a unit of employees consisting of chauffeurs, chauffeurs' helpers, dockmen and checkers employed by the Respondent at Montreal, Quebec. The unit for which the Applicant seeks certification comprises only a segment of the total number of employees in the same classifications employed by the Respondent in its trucking operations.

The Respondent, which has its headquarters in Toronto, carries on an inter-provincial trucking business, and operates scheduled truck runs between Toronto and Montreal, as well as daily runs from Toronto to Oakville and Toronto to Hamilton. In connection with these operations, it runs a trucking pickup service in Montreal. The employees in the proposed unit represent only the group of employees in the enumerated classifications who are employed in the Montreal area, with the exception of one chauffeur resident in Montreal who is employed on the inter-provincial runs between Montreal and Toronto.

The Applicant's representative stated to the Board at the hearing that the reason the Applicant had restricted the scope of the bargaining unit to the Montreal employees of the Respondent was that the jurisdiction of Local 106 was limited to the Montreal area, and that another local of the union has territorial jurisdiction in the Toronto area. It was not claimed, however, that this Toronto local represented employees of the company working out of Toronto.

It is the duty of the Board in considering any application for certification to determine the appropriate bargaining unit. The Board does not consider it either feasible or advisable to attempt to formulate rules for application in determining an appropriate bargaining unit. The established practices in the industry, local conditions and considerations, and special circumstances relating to the manner in which the work is organized and carried on in the employer's establishment are all factors which may enter into the conclusion arrived at in any particular case. However, some of the general principles which apply in determining the appro-

The Board consisted of Mr. A. H. Brown, Vice-Chairman and Acting Chairman, and Messrs. W. L. Best, E. R. Complin, J. A. D'Aoust, A. Deschamps, and A. J. Hills. The Judgment of the Board was delivered by the Vice-Chairman.

priateness of a bargaining unit are illustrated in the decisions arrived at in the cases cited hereafter.

In the case of the Canadian Broadcasting Corporation and IBEW, DLS 7-617, the Wartime Labour Relations Board held a unit comprised of radio broadcast technicians employed at the Toronto office of the Corporation to be inappropriate, as these employees comprised only a small proportion of the employees in the same classifications employed at 17 offices of the Corporation throughout Canada. The Board in giving its reasons for this decision said:—

The Canadian Broadcasting Corporation is engaged in the business of communications, and its radio broadcast technicians work together on the same broadcast, although their duties are performed at points which are hundreds of miles apart.

In the case of Western Canadian Greyhound Lines Limited and Western Canadian Greyhound Employees' Union DLS 7-563, the same Board, in considering an application for certification in respect of a unit of employees consisting of motor coach operators at Winnipeg, Regina, Saskatoon and Calgary, said in its written judgment:—

The employer contends that the proposed bargaining unit is not appropriate since it includes employees in each classification stationed at only 4 of its several centres of operation. The Board agrees with the employer's contention in this respect. To appoint bargaining representatives at 4 operating centres out of 16, and to make no provision for the same classifications of employees at 12 intervening places would permit the employees at the intervening points to elect or appoint bargaining representatives who would be entitled to negotiate for separate collective agreements, and this could easily lead to much confusion and dissatisfaction.

In the present case, the trucking operations of the Respondent in and between Toronto and Montreal are an integrated operation, and *prima facie* employees in the classifications engaged in these trucking operations, particularly chauffeurs and helpers who are working out of Toronto or Montreal, would appear to be appropriate for inclusion in the same bargaining unit. The fact that the jurisdiction of the Local Union 106 is limited to the Montreal area is not, in the opinion of the Board, a governing factor in determining the appropriate bargaining unit. No other reasons have been advanced to the Board for the segregation for collective bargaining purposes of the Montreal employees from other employees employed in the same classifications in the company's operations.

The Applicant referred the Board to an earlier decision made by the Board in a case involving employees of the Smith Transport Limited, in which the Board certified the Applicant for a unit consisting of the employees of Smith Transport Limited resident in the Province of Quebec and employed as city pick-up and transport drivers, dockmen, warehouse workers and helpers. In addition to other factors present in that case the circumstances there were that another local of the same union had been previously certified by the

Ontario Labour Relations Board for employees of the company in the Province of Ontario. In granting certification of the unit of employees of the company in Quebec, the Board was able to satisfy itself that employees in the same classifications in both Ontario and Quebec were represented for collective bargaining by locals of the same union. Consequently, the substantial result for purposes of collective bargaining was that all employees in the same classifications in both Ontario and Quebec were represented by the one union and collective bargaining could be carried on in an orderly and practical manner on this basis. The circumstances are not the same in the present case.

For the reasons given above, the Board finds the unit of employees in respect of which certification is applied for to be inappropriate. The application is accordingly rejected.

(Sgd.) A. H. BROWN,
*Vice-Chairman
and Acting Chairman
for the Board.*

NEIL MACDONALD, Esq.,
for the Applicant.

CARL H. WILSON, Esq.,
for the Respondent.

Dated at Ottawa, June 14, 1950.

Conciliation and Other Proceedings Before the Minister of Labour

Conciliation Officer Appointed

During the month of May the Minister appointed a Conciliation Officer under Section 16 of the Industrial Relations and Disputes Investigation Act to confer with the parties in an industrial dispute involving The National Catholic Syndicate of Longshoremen of Sorel, Inc., applicant, and Wolfe Stevedores Limited, Empire Stevedoring Company, Limited, North-American Elevators Limited, Sorel Dock and Stevedoring Company, Limited, and J. C. A. Turcotte, all employers of longshoremen at Sorel, P.Q., respondents (Conciliation Officer: L. Pepin).

Settlement Facilitated by Conciliation Officer

On May 10, 1950, the Minister received a report from R. Trépanier, Conciliation Officer, indicating the settlement of matters in dispute between the Anticosti Shipping Company, Montreal, and the Canadian Seamen's Union (L.G., June, 1950, p. 825).

Settlements Not Effected by Conciliation Officers and Conciliation Boards Not Appointed

1. On May 10, 1950, the Minister received a report from R. Trépanier, Conciliation Officer (L.G., June, 1950, p. 825), indicating that matters in dispute between the Canadian Seamen's Union and Keystone Transports Limited had not been settled. The Minister advised the parties that a Conciliation Board would not be established to deal further with the dispute.

2. On May 26, 1950, the Minister received a report from R. Trépanier, Conciliation Officer (L.G., June, 1950, p. 825), indicating that matters in dispute between the Canadian Seamen's Union and the Lakes and St. Lawrence Navigation Company, Limited, had not been settled. The Minister advised the parties that a Conciliation Board would not be appointed to deal further with the dispute.

3. On May 30, 1950, the Minister received a report from F. J. Ainsborough, Conciliation Officer (L.G., June, 1950, p. 825), indicating that matters in dispute between the Canadian Seamen's Union and the Upper Lakes and St. Lawrence Transportation Company, Limited, had not been settled. The Minister advised the parties that a Conciliation Board would not be appointed to deal further with the dispute.

Conciliation Boards Appointed

1. On May 26, 1950, the Minister appointed a Board of Conciliation and Investigation to deal with a dispute between the Seafarers' International Union of North America, Canadian District, and Canadian National Steamships, the Canadian Pacific Railway Company (B.C. Coast Steamship Service), and Union Steamships Limited. The Board was appointed following receipt of the report of G. R. Currie, Conciliation Officer (L.G., June, 1950, p. 825). Constitution of the Board had not been completed at the end of the month.

2. On May 13, 1950, the Minister appointed a Board of Conciliation and Investigation to deal with a dispute between the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees and the Railway Express Agency, Inc., New York, N.Y., affecting Canadian employees of the company. The Board was appointed following receipt of the report of R. Trépanier, Conciliation Officer (L.G., Jan., 1950, p. 67). Constitution of the Board had not been completed at the end of the month.

Conciliation Board Fully Constituted

The Board of Conciliation and Investigation appointed to deal with the dispute between the Canadian Air Line Pilots' Association and Canadian Pacific Air Lines, Limited (L.G., May, 1950, p. 683), was fully constituted on May 2, 1950, with the appointment of J. Edwin Eades, Vancouver, as Chairman. Mr. Eades was appointed by the Minister in the absence of a joint recommendation from the other two members of the Board, John G. Gould, Vancouver, and Frank R. Evans,

K.C., Winnipeg, who had previously been appointed on the nominations of the company and union respectively.

Complaint under Section 43 of Act Received

On May 11, 1950, the Minister received a complaint, submitted under Section 43 of the Act by the Negotiating Committee representing the Brotherhood of Locomotive Firemen and Enginemen, the Order of Railway Conductors, and the Brotherhood of Railroad Trainmen, that the respondent companies, the Canadian National Railways, the Canadian Pacific Railway Company, the Dominion Atlantic Railway, the Northern Alberta Railways Company, the Quebec Central Railway Company, and the Toronto Terminals Railway Company, had failed to bargain collectively with the applicants as required by Section 15 (a) of the Act.

Applications for Consent to Prosecute Received

1. On April 14, 1950, the Minister received from the American Newspaper Guild an application, submitted under Section 46 of the Act, for consent to prosecute The Canadian Press and its General Manager, Gillis Purcell, for alleged violation of certain sections of the Act. Upon receipt of the application the Minister appointed James H. Stitt, Ottawa, an Industrial Inquiry Commission under Section 56 of the Act to endeavour to facilitate collective bargaining between the parties and, failing this, to make a report to him on the alleged offences referred to in the application.

2. On May 10, 1950, the Minister received from the American Newspaper Guild an application, submitted under Section 46 of the Act, for consent to prosecute Press News Limited and its General Manager, Charles Edwards, for alleged violation of certain sections of the Act. Upon receipt of the application the Minister appointed James H. Stitt, Ottawa, an Industrial Inquiry Commission under Section 56 of the Act to investigate and report to him on the matters referred to in the application.

COLLECTIVE AGREEMENTS AND WAGE SCHEDULES

Recent Collective Agreements

A file of collective agreements is maintained in the Economics and Research Branch of the Department of Labour. These are obtained directly from the parties involved and through the Industrial Relations Branch of the Department. A number of those recently received are summarized below.

Agreements made obligatory under the Collective Agreement Act in Quebec, are summarized in a separate article following this.

A non-contributory Retirement Pension Plan providing for pensions of \$55 a month for workers retiring at age 65 after 30 years of service and the assumption by the company of the full cost of the existing Group Insurance Plan with a liberalization of life, hospitalization and sickness and accident benefits are provided for under agreements between the Ford Motor Company of Canada, Limited, and Locals 200 and 240 of the International Union, United Automobile, Aircraft and Agricultural Implement Workers of America, summarized below.

Also noted below is an agreement for teachers at Verdun, Quebec, which is one of a number of collective agreements between School Commissions and teachers' organizations in the Province of Quebec. No collective agreements for teachers in any other province have come to the notice of the department.

Manufacturing

Metal Products

TORONTO, ONT.—DE HAVILLAND AIRCRAFT OF CANADA, LIMITED AND THE INTERNATIONAL UNION, UNITED AUTOMOBILE, AIRCRAFT AND AGRICULTURAL IMPLEMENT WORKERS OF AMERICA, LOCAL 112.

Agreement to be in effect from September 1, 1949, to August 31, 1951, and thereafter from year to year, subject to notice. This agreement is similar to the one previously in effect (L.G., March, 1949, p. 300) with the following changes:—

Check-off: the company agrees to collect, in addition to the monthly check-off, a single assessment of not more than \$1 per annum as provided in the constitution of the International Union, if requested in writing to do so.

Hourly wage rates are increased by 5 cents for all classifications of employees covered by the agreement, effective from April 1, 1950.

WINDSOR, ONT.—THE FORD MOTOR COMPANY OF CANADA, LIMITED, AND THE INTERNATIONAL UNION, UNITED AUTOMOBILE, AIRCRAFT AND AGRICULTURAL IMPLEMENT WORKERS OF AMERICA, LOCAL 200 (HOURLY RATED EMPLOYEES).

The agreement of February 15, 1946, as amended March 18, 1948, was again amended May 29, 1950. The company recognizes the union for the duration of this agreement as the sole bargaining agent in respect to wages and other conditions of employment for all eligible hourly rated employees.

Check-off: the "Rand Formula", an arbitration award of Mr. Justice I. C. Rand, made in January, 1946, on the issue of union security in the dispute between the company and its employees, members of the International Union, United Automobile, Aircraft and Agricultural Implement Workers of America, Local 200, is still part of the agreement (See LABOUR GAZETTE, January, 1946, p. 123, and March, 1946, p. 315).

Hours: 8 per day 5 days a week, a 40-hour week. *Overtime:* time and one-half for all time worked in excess of 8 hours per day or 40 hours per week, whichever is the greater, and for work on Sundays and on Victoria Day; double time and one-half will be paid for work on 6 specified *paid holidays*.

Rest periods: employees shall be granted two 10-minute rest periods in each shift, provided that the time limits of such periods are strictly adhered to and that no production shall be lost as a result thereof. In addition, employees will be granted a 5-minute rest period prior to the commencement of overtime of two or more hours' duration.

Vacations with pay: the plant will be closed for a period established as the vacation period by the company. Employees with one and less than 5 years' seniority will be entitled to vacation pay amounting to 40 times, and employees with 5 or more years' seniority to pay amounting to 80 times their regular hourly rate provided they have worked at least 200 days during the preceding calendar year; otherwise they will be entitled to 2 and 4 per cent respectively of their actual earnings during the preceding year. If it becomes necessary to reduce the vacation period to one week, eligible employees with 5 or more years' seniority will be reimbursed in lieu of the second week's vacation.

Wages: subject to any law or any regulation having the force of law, scales of wages and classifications may be the subject of a supplementary agreement.

Off-shift differential: an employee shall be paid 5 cents per hour extra for work commenced between the hours of 1 p.m. and the following 5 a.m., but no overtime or extra time premium applies to such additional payment.

Provision is made for the *appointment of stewards and committeemen, seniority rights and grievance procedure.*

GROUP INSURANCE PLAN

In a separate memorandum of agreement, entered into on May 29, 1950, both parties agree to amend the present contributory Group Insurance Plan for all eligible employees in the bargaining unit of Local 200, UAW-CIO. During the period of one year from May 29, 1950, neither party shall demand any change in this agreement, nor shall either party be required to bargain with respect to the agreement.

All group insurance benefits for employees and their dependents provided under the plan shall be paid for entirely by the company. While an employee is disabled and unable to work because of sickness or bodily injury, his Sickness and Accident Insurance, Hospital Insurance, Surgical Insurance, and Hospital Insurance for Eligible Dependents shall be continued in force up to a maximum of 26 weeks; his life insurance shall be continued in force while he remains totally disabled if so disabled before his 60th birthday, and up to a maximum period of 2 years if disabled after his 60th birthday.

Life Insurance: the company agrees to increase the Group Life Insurance coverage by 20 per cent for each insured employee. Employees who participated in the previous contributory Group Life Insurance Plan shall be given individual paid-up life insurance policies for amounts equal to the amounts of their paid-up life insurance; the policies may be retained or surrendered for the cash value at the option of the employee.

Weekly Sickness and Accident Indemnity benefits for the lower earnings classes are increased to \$25, making this the minimum weekly benefit payable under the plan; the maximum period during which such benefits are payable shall be increased from 13 to 26 weeks.

Surgical benefit coverage shall remain unchanged at a maximum of \$200.

Hospitalization coverage for employees and dependents up to \$5, \$6, or \$7 per day, depending upon earnings classification, shall be extended from 31 to 70 days during any one disability.

RETIREMENT PENSION PLAN

A "Memorandum of Agreement on Retirement Pension Plan" between the above two parties, entered into on May 29, 1950, sets forth the principal provisions of the Pension Plan to be incorporated into an agreement to be drawn up by a committee having 3 members from each of the parties; the members are to be appointed within 2 weeks following ratification hereof. The effective date of the Plan shall be the first of the month following four months after the signing of the memorandum of agreement. During the period of 5 years from the effective date the plan shall not be amended, modified, suspended, or discontinued except to such extent as permitted under this memorandum.

"The Retirement Pension Plan shall be non-contributory, financed completely by the company.

"Benefit: (a) There shall be payable on retirement at normal retirements, age 65 or older, with 30 years or more of credited service, a benefit of \$55 a month, or at age 65 or older, with less than 30 years of

credited service, a benefit equal to the same proportion of \$55 as the number of years of credited service bears to 30, provided that no benefit shall be payable in respect of credited service less than 10 years.

"(b) With the consent of the company, there shall be payable on retirement after age 60, but before age 65 and after 30 years of credited service, a benefit reduced to equate for all factors so as not to increase the cost of the Plan.

"Disability Retirement. Retirement for total and permanent disability after 30 years of credited service at age 55 or older shall be at a flat retirement benefit of \$50 a month, less any Federal or Provincial retirement pension or old age benefits receivable by the employee for disability."

"Retirement Age. The normal retirement age shall be 65. Retirement shall be automatic at age 68 but there shall be no increase in benefits after age 65. An employee may retire early with the consent of the company, provided he has at least 30 years of credited service and is between ages 60 and 65.

"Retirement upon permanent and total disability is permitted at age 55 or older provided the employee has at least 30 years of credited service.

"The company, at its sole discretion, may retire any employee at age 65 or older by reason of the employee's inability to perform efficiently work assigned to him."

With some exceptions, employees who are 67 years of age or older as of January 1, 1950, shall be automatically retired on their first birthday after May 1, 1951.

"Commencement of Payments and Benefits: (a) The liability of the company for payments to the 'Pension Trust Fund' shall accrue beginning on the 'Effective Date' of the Plan.

"(b) Benefit payments shall commence one month after the Effective Date. . . .

"(c) Employees whose employment by the company terminated on or after July 16, 1949, but before the Effective Date of the Plan, who would have qualified for benefits under the Plan had it been in effect at the time of such termination of employment, shall be treated as having retired."

"Board of Administration. The benefit structure of the Retirement Plan shall be administered, within the framework of a Pension Agreement, by a joint Board of Administration having three members each from the company and the union. Suitable provision shall be made for the breaking of any deadlock by an impartial chairman, selected by mutual agreement by the company and union representatives on the Board. . . ."

"Trustee. The company shall have the sole right to select and contract with a qualified Trust Company to act as Trustee of the pension fund. . . ."

"Benefit May be Reduced. If, through governmental legislation, any Federal or Provincial retirement pension, or old age benefits should be created in favour of participants in this Plan under which the company would be required to make contributions either directly or indirectly by taxation or otherwise, the company may reduce the benefit payable hereunder by the amount by which such benefit plus any benefits created by such governmental legislation (excluding any portion thereof payable to

or on account of a spouse or other dependent) exceeds \$100 a month."

Provision is also made for crediting "*Past Service*" and "*Future Service*" and for *judging the Plan*.

WINDSOR, ONT.—THE FORD MOTOR COMPANY OF CANADA, LIMITED AND THE INTERNATIONAL UNION, UNITED AUTOMOBILE, AIRCRAFT AND AGRICULTURAL IMPLEMENT WORKERS OF AMERICA, LOCAL 240 (OFFICE EMPLOYEES).

Agreement of May 14, 1946, as amended April 28, 1948, and May 31, 1950. The company recognizes the union for the duration of this agreement as the sole bargaining agent in respect to wages and other conditions of employment for all eligible employees.

Check-off: the company agrees to deduct monthly from the pay of every employee in the bargaining unit covered by this agreement, who so authorizes, the regular monthly union membership dues and to remit same to the union.

Wages: subject to any law or any regulation having the force of law, scales of salaries, wages and classifications may be the subject of a supplementary agreement.

Provision is also made for the *appointment of committeemen, seniority rights and grievance procedure*.

GROUP INSURANCE PLAN

A memorandum of agreement on a Group Insurance Plan entered into by the two parties on May 31, 1950, is similar to the one between the Ford Motor Company of Canada and Local 200, International Union, United Automobile, Aircraft and Agricultural Implement Workers of America, summarized above except that in the present agreement no provision is made for Sickness and Accident Insurance.

RETIREMENT PENSION PLAN

A memorandum of agreement on a Retirement Pension Plan entered into by the two parties on May 31, 1950, is similar to the one between the Ford Motor Company of Canada and Local 200, International Union, United Automobile, Aircraft and Agricultural Workers of America, summarized above.

Shipbuilding

HALIFAX AND DARTMOUTH, N.S.—HALIFAX SHIPYARDS LIMITED AND INDUSTRIAL UNION OF MARINE AND SHIPBUILDING WORKERS OF CANADA, LOCALS 1 AND 13 (CCL).

Agreement to be in effect from November 1, 1949, to November 1, 1951, and thereafter from year to year, subject to notice. This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, April, 1949, p. 447, with the following additions:—

Paid holidays: employees will be granted two specified paid holidays and the union may on or before November 1, 1950, request that a third statutory holiday be added for the year commencing November 1, 1950, to the 2 paid holidays; if such request is not granted by the company it shall be referred to an arbitrator.

Vacations with pay provisions are the same as in the previous agreement: employees with 12 months' service with the company

within a period of 2 years shall be entitled to one-half day for each 25 days worked, to be taken during the succeeding vacation year. Vacation pay will be calculated at the employees' hourly rate at the time the vacation is granted for the standard working week of 44 hours, or part thereof. After 5 years' continuous service the award of vacation credits shall be doubled.

Tobacco and Liquors

LONDON, ONT.—JOHN LABATT LIMITED AND NATIONAL BREWERY WORKERS' UNION, LOCAL 1 (CCL).

Agreement to be in effect from October 1, 1949, to September 30, 1950, and thereafter from year to year, subject to notice.

Union security: except as otherwise provided only union members in good standing shall be employed. In the matter of employment the company shall give preference to unemployed members of the union in good standing and competent to perform the work. Where a non-union member is hired he shall apply to the union for membership at the end of a 6 months probationary period and if he is acceptable to the company and to the union he shall become a member of the union. The company may employ temporarily men for a period not to exceed 6 months in any one year and the union shall issue to such men, on payment of the required fee, a union permit card. Brewers and foremen shall be exempt from the agreement but those who are already members of the union may retain their membership.

Hours: 40 per week for all employees except drivers and helpers employed on highway transport work who shall work approximately 45 hours. *Overtime*: time and one-half for all work in excess of the regular hours and for work on Sundays (except in the case of engineers and watchmen); double time for four and double time and one-half for another four specified *paid holidays*. In addition, a Saturday morning to be mutually agreed upon for a picnic shall be paid for. For drivers and helpers on highway transport, overtime shall be paid for on the basis of a balanced week at the end of each 8 weeks.

Vacations with pay: after one year's continuous service 2 weeks, after 20 years' service 3 weeks.

Basic weekly wage rates: bottlers operating machines \$48, other bottlers \$46; watchmen (not more than 12 hours in any one day), fermenting room and cold storage workers, brew house and wash house workers \$48; coopers \$53.50; truck drivers, highway \$48.50, retail delivery \$47.50, helpers \$46; engineers, second class \$56.50, third class \$52.50. All new employees, except truck drivers and helpers, shall be paid at rates \$1 per week less than the above scale of wages until they have completed 6 months' continuous service.

Cost of living bonus: in addition to the above basic weekly wages, a cost-of-living bonus of \$3.20 per week shall be paid; this bonus shall be adjusted upward or downward quarterly commencing January 1, 1950, depending on the variation between the August 1, 1949, cost-of-living index (162.8) published by the Dominion Bureau of Statistics and the indices as presently calculated, published for November 1, 1949, and quarterly thereafter. Each one point in-

crease or decrease in the index shall be equal to an increase or decrease of 37.2 cents per week in the bonus.

An *off-shift differential* of 5 cents per hour will be paid for work on shifts starting between 2 p.m. and 4.59 a.m., this provision shall not apply to truck drivers (highway).

Provision is made for *seniority rights* and *grievance procedure*.

Construction

Buildings and Structures

OTTAWA, ONT.—OTTAWA MASTER PLUMBERS' ASSOCIATION AND UNITED ASSOCIATION OF JOURNEYMEN AND APPRENTICES OF THE PLUMBING AND PIPE FITTING INDUSTRY OF THE UNITED STATES AND CANADA, LOCAL 71.

Agreement, following strike (L.G., March, 1950, p. 422), to be in effect from April 20, 1950, to April 30, 1951, and thereafter from year to year, subject to 60 days' notice. Employers shall give members of Local 71, or men willing and eligible to become members within 30 days, preference in employment; likewise, members of Local 71 agree to work only for recognized shops and to give preference to shops which are parties to this agreement.

Hours: 8 per day Monday through Friday, a 40-hour week. *Overtime*: time and one-half until midnight and for work on Saturday morning; double time from midnight to starting time and for work on Saturday afternoon, Sundays and 8 specified holidays. If on a regular working day a repair job can be finished in not more than one hours' time after regular hours it will be done at straight time.

Night work differential: if it becomes necessary to do night work, only or shift work on any job, same shall commence at the close of the regular working day and shall be paid for at the rate of 8 hours' time for 7 hours' work.

Hourly wage rates: journeymen \$1.68 until August 1, 1950, and \$1.70 thereafter; helpers who started trade previous to 1949, shall have their rate increased in proportion. Any new boys starting trade must be indentured apprentices.

Transportation: men working out of Ottawa shall have their fare and board paid: time travelling to and from work shall be paid for at the rate of single time only up to 9 p.m. If a journeyman leaves the job before completion and of his own volition, return transportation and travelling time may be withheld. If working outside the city limits and returning daily, the employee shall be at such limits at 8 a.m. and 5 p.m. and shall receive transportation from the city limits to and from such work.

Provision is made for the *settling of disputes* and *grievances* and an *apprenticeship plan*.

EDMONTON, ALTA.—THE NATIONAL ASSOCIATION OF MASTER PLUMBERS AND HEATING CONTRACTORS OF CANADA INC. (NORTHERN ALBERTA BRANCH) AND UNITED ASSOCIATION OF JOURNEYMEN AND APPRENTICES OF THE PLUMBING AND PIPE FITTING INDUSTRY OF THE UNITED STATES AND CANADA, LOCAL 488.

Agreement to be in effect from April 1, 1950, to December 31, 1951, and thereafter from year to year, subject to 30 days' notice.

Union security: employers shall give members of Local 488, or men willing and eligible to become members within 30 days, preference in employment. If such members are not available, employers shall have the privilege of getting other men. Members of Local 488 likewise agree to work only for recognized shops and to give preference to such shops which are parties to this agreement.

Hours: 8 per day between 8 a.m. and 5 p.m. Monday through Friday, a 40-hour week; all time worked outside these hours (except shift time) shall be considered overtime. Second and third shifts shall be paid at the rate of 8 hours' pay for 7 hours' work; however, no time outside of regular working hours shall be deemed shift work unless worked for 5 or more consecutive days. *Overtime*: all hours worked in any shift in excess of those provided above shall be paid for at time and one-half between 5 p.m. and 12 midnight and at double time thereafter. Double time shall also be paid for work performed on Sundays, on 8 specified statutory holidays, and on Saturdays, except that Saturday work of any emergency repair nature where life may be endangered or property damaged, up to 4 hours, shall be paid for at straight time.

Vacation with pay rates shall be 4 per cent of wages earned and shall be in addition to the hourly wage rates.

Hourly wage rates (minimum): journeymen \$1.70; apprentices, first year 35 per cent, second year 40 per cent, third year 60 per cent and fourth year 75 per cent of the journeymen's rate.

The proportion of apprentices to journeymen shall be as provided in the Alberta Apprenticeship Act. Only members of Local 488 and duly indentured apprentices shall handle any tools of the trade.

Provision is made for *grievance procedure* and for *travelling expenses* in connection with out-of-town work.

CALGARY, ALTA.—THE CALGARY GENERAL CONTRACTORS ASSOCIATION AND CERTAIN OTHER EMPLOYERS AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA, LOCAL 1779.

Agreement to be in effect from April 1, 1950, to March 31, 1951. Should either party wish to change, add to or amend this agreement, 60 days' notice shall be given prior to termination date. Employees, party to this agreement, shall be given preference of employment and likewise employers, party to this agreement, shall be given preference in the supplying of union labour. Before any union members work for any employer who is not a member of the Association, said employer will sign a copy of this agreement.

Hours: 8 per day Monday through Friday, a 40-hour week. *Overtime*: time and one-half for the first 4 hours of work in excess of the regular hours and for work on Saturday morning, double time after 4 hours and for all work on Saturday afternoon, Sundays and 9 specified holidays. No work shall be performed on Labour Day except where safety to life or property make it necessary.

Wage rates: carpenters \$1.52 per hour; carpenters in charge of work shall receive not less than 10 cents per hour over the journeymen's rate.

Night shift differential: any time worked after 5 p.m. and before 8 a.m. shall be paid for at the rate of time and one-seventh if these hours are part of the regular seven hour shift.

Transportation: on jobs beyond the regular terminus of the street car line or bus service, the employer shall pay for any additional transportation or provide same. On jobs outside the city transportation, including meals and berth where necessary, is to be provided by the employer and travelling time one way on the basis of 8 hours in 24. Return transportation shall be provided on or after 60 days' satisfactory service or termination of contract of work.

Provision is made for the *settling of disputes*.

CALGARY, ALTA.—THE CALGARY GENERAL CONTRACTORS ASSOCIATION AND CERTAIN OTHER EMPLOYERS AND THE AMALGAMATED BUILDING AND CONSTRUCTION WORKERS OF CANADA, LOCAL 5 (CCL).

Agreement to be in effect from April 1, 1950, to March 31, 1951. This agreement is similar to the one between The Calgary General Contractors Association and Certain Other Employers and The Brotherhood of Carpenters and Joiners of America, Local 1779, summarized above.

Transportation and Public Utilities

Local and Highway Transport

TORONTO, ONT.—CERTAIN FIRMS ENGAGED IN THE TAXI CAB INDUSTRY AND INTERNATIONAL BROTHERHOOD OF TEAMSTERS, CHAUFFEURS, WAREHOUSEMEN AND HELPERS OF AMERICA, LOCAL 488 (TAXI CAB DRIVERS' UNION).

Agreement to be in effect from March 27, 1950, to March 26, 1951, and thereafter until changed by another agreement.

Union security: the company agrees at all times to hire only union members carrying the regular paid-up working card of the union. When a vacancy occurs the union must be given the first opportunity to fill same. If union members are not satisfactory or if none are available, all drivers employed shall join the union within 15 days. The company agrees not to keep in its employ any union member who wilfully neglects or refuses to pay his dues.

Check-off: in consideration of the company agreeing to a compulsory check-off, the union agrees that, should any of its members defraud, abscond or cheat the company out of its just moneys, the same will be paid out of the union funds; however, the union's liability shall be limited to \$25 in any one instance.

Hours: 48 per week, spread over five and one-half days.

Statutory holidays: in lieu of statutory holidays with pay, the employer will grant to drivers up to 2 days off with pay, one after 6 months' work and the other after 9 months' work, such days to be mutually agreed upon.

Vacations with pay: after one year's employment employees shall be granted one week or a minimum of 2 per cent of their year's earnings, after 2 years' continuous service they shall receive an additional 2 per cent of their year's earnings provided,

however, that for each day of unauthorized absence in excess of 6 in the year, the employer shall deduct one-sixth of the additional 2 per cent payment.

Wages: for regularly employed full time drivers \$32 per week; if the fares taken in by a driver exceed in any one week \$96, the driver shall be paid a bonus of 35 per cent of such excess; if the average fares taken in by all full time drivers employed by one employer during each period of 4 consecutive weeks equal or exceed \$90 per driver per week (not including out-of-town trips), an additional bonus shall be paid to each driver of 35 per cent of the amount that the fares taken in by him during any week exceed \$90, but such bonus shall not exceed \$2.10 per driver for any such week. Part-time drivers shall be paid \$2.67 for the first 4 consecutive hours on duty in any day (or for any shorter period if not kept on duty for 4 consecutive hours), plus 66½ cents for each consecutive hour on duty. In computing bonuses the part-time driver shall be deemed to have collected fares at the rate of \$90 a week or better if the fares taken in by him exceed 100%³⁵ times the wages paid to him; he shall be entitled to the collective and the individual bonuses on the same basis as the full time driver.

The parties agree to make, within 5 days after the signing of the agreement, joint application to the Industry and Labour Board for the Province of Ontario to have the rates as set out in this agreement incorporated into the Industrial Standards Code for the Taxicab Industry.

Uniform: 50 per cent of the cost of uniform caps, shirts or uniforms required by the company shall be paid for by the company and 50 per cent by the employee; after the employee has paid his full 50 per cent of the cost the uniforms shall become his property.

Provision is made for *grievance procedure* and *seniority rights*.

Water Transport

BRITISH COLUMBIA.—CERTAIN MEMBERS OF THE B.C. TOWBOAT OWNERS' ASSOCIATION AND THE WEST COAST SEAMEN'S UNION.

Agreement to be in effect from October 1, 1949, to September 30, 1951, except that at the request of either party wage rates may be reviewed one year from the effective date. The union is recognized as the collective bargaining agent of the unlicensed personnel of the company signing the agreement. The union agrees, when requested by the employer, to supply competent and satisfactory help, if available, for all classifications of positions covered by this agreement.

Hours: both parties subscribe to the principle of the 8-hour day in industry, but recognizing the impracticability of the 8-hour day in the B.C. towboat industry agree that equitable compensation for any time worked over and above 8 hours per day shall be made by time off. It is therefore agreed that on vessels operating on a two watch system the establishment of a working month of 20 days on and 10 days off shall go into effect on the following time schedule: from October 1, 1949, to December 31, 1949, the monthly work schedule shall be 23 days on, 7 days off; on and after January 1, 1950, 22 days on, 8 days off; on and after October 1, 1950, 21 days on, 9 days off; on and after September 30, 1951, 20 days on, 10 days off.

This monthly leave shall be granted exclusive of annual vacation. On tugs operated on the three watch system unlicensed personnel shall be allowed time off free from the ship on the basis of one day in 7 in lieu of time off as outlined in the above time schedule. In the case of employees on outside tugs the days off will be allowed within a 3-month period, at least 5 of them to be allowed consecutively. When necessary for harbour tugs to work over 12 consecutive hours in any one day in intermittent cases, additional time off will be allowed. Pay in lieu of leave shall not be tendered or accepted unless mutually agreed upon between the union and the company.

Vacation with pay: after one year's continuous service 11 days; after 60 days' continuous service an employee will be entitled to receive an appropriate share of the 11 days' vacation.

Minimum monthly wage rates: deckhands, firemen, oilers \$137.50, cooks \$145. On vessels such as "Harbour" boats where provision and staff for preparing and serving of meals is not provided, the unlicensed personnel shall receive \$1.25 per day worked in addition to the above rates. On tow-boats where subsistence is customarily provided and where for any reason subsistence is not provided, unlicensed personnel shall receive in lieu thereof \$2 per working day.

Provision is made for *grievance procedure*.

Service

Professional

VERDUN, P.Q.—LA COMMISSION DES ECOLES CATHOLIQUES DE VERDUN (CATHOLIC SCHOOL COMMISSION OF VERDUN) AND L'ASSOCIATION DES INSTITUTEURS CATHOLIQUES DE VERDUN (ASSOCIATION OF CATHOLIC TEACHERS OF VERDUN).

Agreement to be in effect from July 1, 1949, to June 30, 1951, and thereafter for another period of 2 years, subject to notice. This agreement applies only to lay teachers in the employ of the Catholic School Commission of Verdun.

Union security: all lay teachers now employed who are members of the association must maintain their membership; those who will hereafter be employed must become members of the association.

Basic scale of annual salaries (the figures quoted are for female teachers, single male

teachers, and married male teachers respectively): first to third years' service \$1,600, \$1,900, \$2,200; fourth years' service \$1,700, \$2,050, \$2,350, with annual increases of \$100, \$150 and \$150 thereafter until tenth year's service; eleventh to fifteenth years \$2,400, \$3,100, \$3,400; sixteenth to eighteenth years \$2,500, \$3,250, \$3,600; nineteenth to twenty-first years \$2,600, \$3,400, \$3,800; twenty-second to twenty-fourth years \$2,700, \$3,550, \$4,000; twenty-fifth year's service and thereafter \$2,800, \$3,700, \$4,200.

In addition, the following annual supplements according to position occupied shall be paid: junior high school teachers \$300, senior high school teachers \$500; assistant principals, elementary or junior high school \$600, senior high school \$800; principal, elementary or junior high school \$1,000, senior high school \$1,400. Female teachers of the first grade will receive at the end of the year a supplement of \$100, if satisfactory.

Since the requirements of the different faculties vary, the Commission agrees to grant *gratuities* ranging from \$50 to \$200 to teachers with university degrees or their equivalent, the amount of the gratuity to depend on the academic standing of the individual teacher.

To further encourage *higher education of teachers* there will be a differential of \$100 between teachers with elementary, intermediate and superior standings or equivalent. However, this provision will be effective from the school year 1950-51 and will apply only to new teachers engaged.

Method of payment: the salary of teachers shall be paid semi-monthly at the rate of 3.75 per cent or about $\frac{1}{8}$ of their annual salary for each payment, except that of June 30 which shall be 28.75 per cent or approximately $\frac{1}{4}$ of their annual salary.

Sick leave credit with pay of $1\frac{1}{2}$ days per month, cumulative to a maximum of 150 days, is provided for. Teachers shall be entitled to *special leave* in case of death in the family, etc.

Leave for educational purposes: after 10 years' service the Commission will allow teachers to use their accumulated sick leave with pay for the purpose of taking a university course leading to a degree or its equivalent, if approved by the Director of Studies.

Provision is made for the *settling of differences*.

Collective Agreement Act, Quebec

Recent proceedings under the Collective Agreement Act, Quebec,* include the amendment of 18 agreements. These include, in addition to those summarized

below, the amendment of the agreements for hospitals and charitable institutions at St. Hyacinthe and for municipal employees at Kenogami published in the *Quebec*

*In Quebec, the Collective Agreement Act provides that where a collective agreement has been entered into by an organization of employees and one or more employers or associations of employers, either side may apply to the Provincial Minister of Labour to have the terms of the agreement which concern wages, hours of labour, apprenticeship, and certain other conditions made binding throughout the province or within a certain district on all employers and employees in the trade or industry covered by the agreement. Notice of such application is published and 30 days are allowed for the filing

of objections, after which an Order in Council may be passed granting the application, with or without changes as considered advisable by the Minister. The Order in Council may be amended or revoked in the same manner. Each agreement is administered and enforced by a joint committee of the parties. References to the summary of this Act and to amendments to it are given in the *LABOUR GAZETTE*, January, 1949, page 65. Proceedings under this Act and earlier legislation have been noted in the *LABOUR GAZETTE* monthly since June, 1934.

Official Gazette of April 22; for barbers and hairdressers at Joliette, Beauharnois, Chicoutimi and at Three Rivers, and for clockmakers in the counties of Drummond, Arthabaska, etc. in the issue of May 6, and the amendment of the agreement for barbers at Montreal in the issue of May 13.

Requests for amendments to the agreements for the mechanical repair and construction industry and for dairy employees at Quebec, for the building materials industry in the province and for barbers and hairdressers at Hull, St. Hyacinthe, Victoriaville and at Sherbrooke were gazetted April 22, for the building materials industry in the province and for the building trades and for barbers and hairdressers at Quebec were gazetted April 29, for the building trades at Hull and at St. Hyacinthe in the issue of May 6, for funeral undertakers at Montreal and for food products retail trade at Quebec were gazetted May 13.

Orders in Council were also published approving and extending the term of the levy of assessments on the parties and others approving the constitution and by-laws of certain joint committees.

Manufacturing

Fur and Leather Products

WHOLESALE FUR INDUSTRY, MONTREAL.

An Order in Council, dated April 12, and gazetted April 22, extends until June 30, 1950, the terms of the previous Orders in Council for this industry (L.G., March, 1947, p. 368; June, 1948, p. 619; Dec., p. 1421; May, 1949, p. 604; March, 1950, p. 345, and previous issues).

FINE GLOVE INDUSTRY, PROVINCE OF QUEBEC.

An Order in Council, dated April 26, and gazetted May 6, amends the previous Orders in Council for this industry (L.G., May, 1948, p. 486; July, 1949, p. 876).

Vacation: this amendment provides that vacations shall be given between June 1 and September 1. The first week is obligatory and during that period no employee is to do any kind of work in the glove industry. The other week or half week, as the case may be, is optional. Any employee who for any reason leaves his employer shall receive, before leaving, the amount owed to him for his vacation. (Previously every employee who left the glove industry before June 1 of the current year was not entitled to any vacation.)

WORK GLOVE INDUSTRY, PROVINCE OF QUEBEC.

An Order in Council, dated April 26, and gazetted May 6, amends the previous Orders in Council for this industry (L.G., May, 1948, p. 486; June, 1949, p. 735).

Vacation provisions are similar to those summarized above for the fine glove industry in the province.

Textiles and Clothing

FASHION ACCESSORIES INDUSTRY, MONTREAL.

An Order in Council, dated April 12, and gazetted April 22, amends the previous Orders in Council for this industry (L.G., April, 1948, p. 332; Jan., 1950, p. 77).

The present agreement does not govern needle and embroidery work on power machines which are used for simultaneous large quantity reproduction of a design or pattern and are known as Schiffli, Lewis or Rachele machines.

No work shall be permitted on any of 6 specified holidays and 2 of these (Good Friday and Labour Day) will be paid for at regular rates. (No paid holidays previously provided for.)

Pulp, Paper and Paper Products

UNCORRUGATED PAPER BOX INDUSTRY, QUEBEC DISTRICT.

An Order in Council, dated April 12, and gazetted April 22, amends the previous Orders in Council for this industry (L.G., Nov., 1948, p. 1245; Oct., 1949, p. 1247).

Employees shall work or be at the disposal of their employers the day before and the day after any of 5 specified holidays in order to qualify for these holidays with pay.

Minimum hourly wage rates (female employees): the following rates in most cases represent increases ranging from 3 cents to 4 cents per hour—forelady 58 cents; hand worker (first class) 54 cents; hand worker (second class), covering machine operator, Stokes and Smith machine operator, Redington machine operator, staying machine operator, stitcher, top-piece machine operator 48 cents per hour; Brightwood machine feeder, stripper, automatic glueing machine feeder, four-corner machine feeder, hand fed machine table gummer, operator of any machine not classified above, division assembler, packer, folder 47 cents per hour; other help not classified above 38 cents per hour during the first 6 months to 46 cents during the fourth 3 months. The classification of tiers is added with a minimum rate of 48 cents per hour. Rates for apprentices 20 per cent less than those paid the regular classifications during the first 6 months and 10 per cent less during the second 6 months remain unchanged.

Minimum hourly wage rates (male employees): foreman \$1.05; machinist (foreman) \$1.01; die maker 93 cents; assistant-foreman 91 cents; automatic glueing machine operator 86 cents; machinist, scorer 84 cents; cylinder box press operator 82 cents; Brightwood machine operator, cutter on knife (first class), four-corner stayer operator 80 cents; shipper 79 cents; colt press operator 77 cents; end piece operator (double) 76 cents; truck-driver 75 cents; engineman (fourth class) 74 cents; end piece operator (single) 73 cents; general helper 72 cents; cutter on knife (second class) 70 cents; assistant die maker, circular saw operator 68 cents; Brightwood feeder, colt press feeder, cylinder box press feeder, four-corner machine feeder, punch operator, bale press operator 67 cents; stripper 65 cents; fireman 64 cents; other help not classified above from 48 cents during the first 3 months to 62 cents per hour during the fourth 3 months. (The above rates represent increases ranging from 3 cents to 9 cents per

hour.) Rate for chief engineman (second class) is increased from \$40.85 per week to \$41.33 and for chief engineman (third class) from \$35.15 per week to \$35.38 per week. The classification of repair and maintenance man is added with a minimum rate of 72 cents per hour. Apprentices' rates are similar to those shown above for female apprentice employees.

The service period acquired by each employee at the time of the coming into force of the present agreement shall be taken into account to determine his wage rates as per the above basic scale.

Miscellaneous Wood Products

FURNITURE INDUSTRY, PROVINCE OF QUEBEC.

An Order in Council, dated April 12, and gazetted April 22, amends the previous Order in Council for this industry (L.G., Oct., 1948, p. 1127) by correcting the name of one of the two unions to read "The Upholsterers International Union of North America, Locals 347-388 (Wood Furniture Workers)."

Territorial jurisdiction: all establishments located in the town of Matane or east thereof shall be included in zone III, irrespective of the number of workers employed therein.

Hours: an amendment published in the *Quebec Official Gazette*, issue of October 30, 1948, provided that by agreement between employers and employees, daily hours might be increased from 9 to 10 per day, 50 per week all year round instead of during the summer months only, as previously in effect, in which case there will be no Saturday work. (Total hours per week remained unchanged.)

Minimum hourly wage rates (male and female workers): there are two minimum wage schedules as previously in effect:—

(1) Those employers who have not declared themselves in favour of the classification system must pay the following minimum rates: employees of less than 18 years of age 45 cents in zone I, 40 cents in zone II, 35 cents in zone III; employees of 18 years of age and over from 50 cents per hour during the first 3 months to 65 cents after 2 years in zone I, from 45 cents per hour to 60 cents in zone II and from 40 cents to 55 cents in zone III. (The above rates are similar to those previously in effect but the age limits governing the above earnings are reduced by one year.) The average wage shall not be less than 78 cents in zone I (an increase of 7 cents), 69 cents in zone II (an increase of 5 cents); and 61 cents per hour in zone III (an increase of 3 cents per hour). The following classification is added: watchmen from 50 cents per hour during the first 6 months to 60 cents after 2 years in zone I, from 45 cents per hour to 60 cents in zone II and from 40 cents to 50 cents per hour in zone III.

(2) For those employers who adopt the classification of occupations set forth in the agreement in which each occupation in the industry is placed in one of four classes, the following minimum rates are effective— class I, 78 cents per hour in zone I, 73 cents in zone II and 68 cents in zone III; class II, 71 cents in zone I, 66 cents in zone II, 61 cents in zone III; class III, 68 cents in zone I, 63 cents in zone II, 58 cents in zone III; class IV (which includes all the operations not specified in the first 3 classes),

from 50 cents during the first 3 months to 63 cents per hour after one year in zone I, 45 cents during the first 3 months to 58 cents after one year in zone II, 40 cents during the first 3 months to 53 cents after one year in zone III. (The above rates for classes I, II, and III represent an increase of 3 cents per hour in all zones; in class IV rates remain unchanged but the provision governing age limit now reads less than 18 years of age instead of 18 years of age and under as previously.) The average wage rates in zones I, II, and III are similar to those shown above in minimum wage schedule (1). Employees reporting to work during regular working hours without having been advised to the contrary and any employee requested to report for work are entitled to a minimum sum equivalent to 3 hours' pay except in the case of suspension of operation in a plant or department due to circumstances beyond control. If a regular shift works less than 50 hours, the workers involved shall receive their regular rate, straight time, up to 50 hours per week, after which the clause for overtime at the rate of time and one-half shall apply.

Vacation: all employees are entitled to a vacation with pay in accordance with the provisions of Ordinance No. 3 of the Minimum Wage Commission of the Province of Quebec except that remuneration is equivalent to 2 per cent of the wages earned including vacation indemnity during the period June 1 to May 31 and entitling them to such vacation if they are paid on any other basis.

Construction

BUILDING TRADES, QUEBEC.

An Order in Council, dated April 26, and gazetted May 6, amends the previous Orders in Council for this industry (L.G., Dec., 1947, p. 1803; July, 1948, p. 741, Nov., p. 1247; Aug., 1949, p. 988, Sept., p. 1115, Oct., p. 1247).

Hours for truck drivers (employed directly by contractors of the construction industry): 9 per day, 54 per week.

Minimum hourly wage rates for a few classes in zones I and II have been changed: structural iron erector and welder (all categories) \$1.50; construction boiler-maker, steam mechanic, erector and welder \$1.50, helper to these trades \$1.10; painter (structural iron) \$1.40; steam and hot water generating mechanics (installing stokers in furnaces with a horizontal heating surface of 20 feet or less) \$1.20, helper 95 cents per hour. (The above rates represent increases ranging from 10 cents to 35 cents per hour). Apprentices' rates (structural iron) are increased from 50 to 70 per cent of the tradesman's rate during the first year and remain unchanged at 85 per cent during the second year; apprentices (steam generation mechanics and construction boiler-makers) are increased from 50 to 60 per cent during the first year and from 85 to 90 per cent during the fourth year. *Minimum rates in zone I only:* labourers, mortar makers, celanite mixers, plaster pourers and hod carriers 80 cents (an increase of 5 cents per hour). Truck drivers (employed directly by contractors in the construction industry) are an added classification and shall receive the minimum rate of 65 cents per hour or \$31 per week.

Contracting parties bound by the terms of the present agreement have agreed that the wage conditions be based upon the *cost-of-living* index at 157 points. Any 10-point increase or decrease in the said index at the time of renewal of the agreement shall entail an increase or decrease of 5 cents per hour for all employees governed.

BUILDING TRADES, COUNTIES OF DRUMMOND, ARTHABASKA AND NICOLET.

An Order in Council, dated May 3, and gazetted May 13, amends the previous Orders in Council for this industry (L.G., Aug., 1948, p. 872; May, 1949, p. 605).

Hours: 48 per week distributed as follows: 9 hours per day Monday through Thursday, 8 hours on Friday and 4 hours Saturday morning.

Minimum hourly wage rates are increased by 5 cents per hour over those previously in effect in zones I, and II. Weekly rates for shovel operators are increased from \$52.80 to \$55.20 in zone I and from \$48.70 to \$50.20 in zone II.

Vacation: one week with pay annually equivalent to 2 per cent of the regular wages earned during the previous 12 months for all employees with one year's continuous service. Employees with less than 12 months of service are entitled to vacation pay equal to 2 per cent of their regular wages for any continuous period of employment exceeding 2 months.

Provisions governing apprenticeship regulations and for board and travelling expenses are included in this amendment.

BUILDING TRADES, JOLIETTE.

An Order in Council, dated April 26, and gazetted May 6, amends the previous Orders in Council for this industry (L.G., Aug., 1947, p. 1175; June, 1948, p. 620; June, 1949, p. 736, and previous issues).

Maintenance men (permanent employees) of manufacturing or industrial establishments who benefit by a labour hiring contract for a period of at least 6 months are not governed by the provisions of the present agreement.

Hours (from April 1 to November 30): 9 per day Monday through Friday, 3 on Saturday or 10 per day Monday through Thursday, 8 on Friday, in either case 48 per week. Distribution of hours at the option of the employer. (Previously common labourers worked 54 hours per week.)

Minimum hourly wage rates for apprentices are increased by 5 cents per hour during each apprenticeship period in zone I and II. Rates for journeymen and all other occupations unchanged.

BUILDING TRADES, ST. JOHN AND IBERVILLE.

An Order in Council, dated May 3, and gazetted May 13, amends the previous Orders in Council for this industry (L.G., April, 1947, p. 544; Jan.-Feb., 1948, p. 51, June, p. 621, Nov., p. 1247, Dec., p. 1421) by providing that the names of the individual contracting parties of the first part are replaced by "L'Association des Entrepreneurs en Construction de St. Jean" and "Le Syndicate catholique national de la Construction de St. Jean."

Minimum hourly wage rates are increased by 5 cents per hour with the following exceptions: structural iron erector and welder (all categories) from \$1.11 to \$1.50 per hour; construction boiler-maker, welder, steam generator mechanic and erector from \$1.11 to \$1.50—(helper), from 84 cents to \$1.10; painter (structural iron) from \$1 to \$1.40. The installation of portable tanks and boilers under 2 tons in weight is to be paid at not less than 95 cents per hour (an increase of 17 cents). Rates for workers installing stokers in furnaces with a horizontal heating surface of 20 feet or less are increased from 89 cents to \$1.20 per hour and their helpers from 67 cents to 95 cents per hour. Rates for apprentices (structural iron) from 70 per cent of skilled workers' rates during the first year to 85 per cent during the second year; apprentices (steam generation mechanics and construction boiler-makers) from 60 per cent during the first year to 90 per cent during the fourth year. (Previously apprentices of the structural steel industry received 50 per cent during the first year to 85 per cent during the second year.)

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

The Fair Wages Policy of the Dominion Government has the purpose of ensuring that all government contracts contain provisions to secure the payment of wages generally accepted as current in each trade for competent workmen in the district where the work is carried out.

There are two sets of conditions applicable to government contracts, those which apply to building and construction work, and those which apply to contracts for the manufacture of various classes of government supplies and equipment.

The practice of the different departments of the Government, before entering into contracts in the first group, is to obtain from the Department of Labour schedules setting forth the current wage rates for the different classifications of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of the contract.

Fair wages schedules are not issued in respect of contracts for supplies and equipment. Contracts in this group are awarded in accordance with a policy which provides that wage rates must equal those current in the district.

A more detailed account of the Dominion Government's Fair Wages Policy is given in the *LABOUR GAZETTE* for July, 1946. p. 932.

Schedules Prepared and Contracts Awarded During April

(1) *Works of Construction, Remodelling, Repair or Demolition.*

During the month of April the Department of Labour prepared 135 fair wages schedules for inclusion in building and construction contracts proposed to be undertaken by various departments of the Government of Canada in different parts of the Dominion.

During the same period a total of 71 construction contracts was awarded by the various Government departments. Particulars of these contracts appear in the accompanying table.

Copies of the relevant wages schedules are available to trade unions or other *bona fide* interested parties, on request.

The labour conditions of each of the contracts listed under this heading, besides stipulating working hours of not more than eight per day and forty-four per week, provide that "where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than forty-four per week, such lesser hours shall not be exceeded on this work except in cases of emergency as may be approved by the Minister of Labour and then only subject to the payment of overtime rates as specified by the Minister of Labour", and also specify that the rates of wages set out therein are "*minimum rates only*" and that "nothing herein contained shall be considered as exempting contractors and subcontractors from the payment of higher rates in any instance where, during the continuance of the work such higher rates are fixed by provincial legislation, by agreements between employers and employees in the district or by changes in prevailing rates".

(2) *Contracts for the Manufacture of Supplies and Equipment.*

Contracts for supplies and equipment were awarded as follows, under the policy that wage rates must equal those current in the district:—

Department	No. of contracts	Aggregate amount
Agriculture.	1	\$ 153,000.00
Canadian Commercial Corporation.	5,289	22,952,838.68
Post Office.	15	104,370.72
Public Works.	5	64,784.28
R.C.M.P..	2	20,001.00

*The labour conditions of these contracts contain the General Fair Wages Clauses providing for the observance of current or fair and reasonable rates of wages and hours of labour not in excess of 8 per day and 44 per week, and also empower the Minister of Labour to deal with any question which may arise with regard thereto.

LABOUR LAW

Labour Legislation in British Columbia in 1950

No new labour laws were enacted by the British Columbia Legislature in 1950. Laws amended related to annual holidays with pay, boilers and pressure vessels, shops, and hospital insurance.

The British Columbia Legislature, which opened on February 14 and prorogued on March 30, amended the Annual Holidays Act to provide that a worker's holiday pay will now be two per cent of his earnings, as in Ontario, rather than regular pay, as before. The Boiler Inspection Act, now the Boiler and Pressure Vessel Act, was revised to cover hot water boilers as well as steam boilers and pressure vessels. Extensive amendments were made to the Hospital Insurance Act following a survey conducted by an outside authority at the request of the Government. The Shops Regulation and Weekly Holiday Act was also amended.

Holidays with Pay

Changes have been made in the method of computing the holiday pay or pay in lieu of holidays under the Annual Holidays Act.

The Act provides that every employee covered by the Act is entitled to an annual holiday of one week with pay for every working year of his employment. This holiday is exclusive of statutory holidays and must be given within 10 months after the employee becomes entitled to it.

Under the former provisions, each employee was entitled to his regular pay for a week's work depending on whether he was paid on an hourly, weekly, semi-monthly or monthly basis. The amendment provides that an employee's holiday pay must now be computed on the basis of two per cent of the total wages or salary earned for the period of his employment in the working year. The definition of "working year" has been changed to mean one calendar year's continuous service, comprising not less than 225 days of actual work, instead of 250 days, as formerly. This is the second reduction in the qualifying period. The Act as passed in 1946 stipulated that the holiday should be given after not less than 280 days' work in a year. Holiday pay must be paid at least one day before the beginning of the annual holiday.

An employee who terminates his employment before or after he has earned an

annual holiday and, in the latter case, has not been given an annual holiday is entitled to an amount equal to two per cent of the total wages and salary earned during the period he has worked. An employee who has worked throughout the whole calendar year for the same employer but whose time was broken to the extent that he did not work 225 days in all and whose employment is not terminated is also entitled to an amount equal to two per cent of his total wages earned during the calendar year. He must be paid such amount within 30 days after the end of the calendar year.

Another change had to do with the application of the Act. Previously, the only exceptions to the general coverage of the Act were employers and employees in farming and horticulture and domestic service in private residences. A new section now excludes, as in Ontario, persons and students in the professions who are subject to special statutes under which they are licensed.

"Employee" has been redefined to exclude from the definition a person who is employed for a period of less than a week, and to stipulate that it covers an employee whose work is measured by time, piece or otherwise. A new section provides that a correct record must be kept by employers of the amount of holiday pay paid to each of their employees.

Boilers and Pressure Vessels

An amendment to the Boiler Inspection Act has changed its title to the Boiler and Pressure Vessel Act. The Act has been widened to include the inspection and registration of hot water boilers as well as of steam boilers and pressure vessels, as before. Changes have also been made in the classifications of engineers and the sections setting out the qualifications of each category have been amended accordingly.

The provisions regarding inspections, inspections during construction, certificates of inspections, registrations, fees, accidents and investigations and penalties that apply to steam boilers or plants and pressure

vessels are now applicable also to hot water boilers or plants. "Hot water boiler" is defined as a boiler in which hot water is produced under pressure and includes all pipes and connections attached to it. "Plant" is defined to mean hot-water boiler plant as well as steam plant.

The exemptions from the Act are substantially the same as previously except that the Act does not apply to any hot water boiler with a capacity of 100 square feet of heating surface or less, unless installed in a school, hospital, church, theatre, hall, auditorium or other building where the public assembles. Exempted also are heating plants in rooming houses and apartment houses which have three or less self-contained suites. Formerly, heating plants in all rooming houses and apartment houses were covered by the Act.

With respect to the inspection of steam boilers, hot water boilers and pressure vessels, it is provided that any person who installs a steam boiler and hot water boiler must notify the Chief Inspector before the plant is put into operation.

After a boiler has been inspected and approved, the Chief Inspector now may issue a certificate of inspection if all taxes or yearly fees have been paid. Formerly, registration fees were required to be paid in addition to the taxes and yearly fees. This \$1 fee has been omitted in the revision.

The schedule of fees for inspection of steam boilers and pressure vessels during construction and fees for subsequent inspections and the yearly fees have been dropped from the Act and are now provided for by regulation (see p. 1063 of this issue).

Changes were made with respect to classifications of engineers. The group formerly classified as "engineers with special certificates" has been divided into three specific classes: logging-donkey engineers; boiler operators Class A; and boiler operators Class B. A logging-donkey engineer is qualified to take charge of any steam boiler used in the operation of a logging camp. A boiler operator Class A is qualified to take charge of a low pressure heating plant of not over 200 horse power and a high pressure boiler used only for heating purposes of not over 50 horse power. A boiler operator Class B is qualified to take charge of either a low-pressure heating boiler not exceeding 100 horse power or a high-pressure boiler not exceeding 50 horse power, as indicated in his certificate. A person who now holds a special engineer's certificate will be deemed to be the holder of a boiler operator Class B certificate.

The qualifications for a first, second and third class engineer and for engineers with temporary certificates remain the same. By an amendment, however, a fourth class engineer is now qualified to take charge of a low-pressure heating plant up to 200 horse power, instead of up to 150 horse power, as formerly.

A new provision stipulates that if a candidate for an engineering certificate fails both his first and second examination, he may appeal to the Chief Inspector, who will have him re-examined, upon payment of the prescribed fees. The fees for examination of engineers have been left the same as before with the addition of a fee of \$4 for boiler operators Class A and B. The fee for the issuance of a duplicate certificate has been raised from \$2.50 to \$5. Before the Minister may issue a duplicate certificate, the engineer must prove to the satisfaction of the Minister of Public Works that he has, without fault on his part, lost his certificate or that it has been destroyed.

As assistant Chief Inspector is now provided for by the Act in addition to the Chief Inspector, and other inspectors, clerks and employees. The restriction that no person shall be appointed an inspector of steam boilers unless he is a Canadian citizen and has had two years' residence in British Columbia is no longer in effect. Since the provision is now omitted from the Act, the Civil Service Act applies. The latter Act provides that only persons who are British subjects are eligible for appointment to any position.

Shops

Several amendments were made in the Shops Regulation and Weekly Holiday Act. To eliminate a practice which has been considered unfair, shopkeepers are now prohibited from advertising that they will, during the time when they are required under the Act to have their shops closed, accept orders for delivery of goods on the next day.

Two minor amendments were made in the Act to meet certain administrative difficulties. The provisions as to the closing of shops and the observance of a weekly holiday will not now apply to any of the seven days preceding Christmas Day in any year and, as before, to any week during which two or more public holidays occur. Christmas Day and the day immediately following Christmas Day are included in days designated as public holidays. The amendment will remove the difficulties which were encountered during

the 1949 Christmas season when shops were required to stay closed for three days in the week.

In respect to the early closing of automobile garages, automobile service or repair shops and gasoline service stations, which may be required by by-law, the Municipal Council may now provide by by-law for the granting of permits to certain of such places under the terms and conditions it may determine, allowing them to remain open for the accommodation of the public after the appointed hour for closing. An official of the municipality may be chosen by the Council to determine those garages, service or repair shops or service stations which may be granted permits, and the terms and conditions of such permits, including the hours during which they may remain open. Any person who has been granted a permit subject to conditions which he considers too onerous and a person who has been refused a permit may appeal to the Council against the decision of the official to whom such power has been delegated. The former provisions required that three-fourths of the occupiers of garages, service or repair shops or gasoline service stations in the area nominate in writing those garages, shops and service stations which should be permitted to remain open.

Hospital Insurance

Amendments were made to the Hospital Insurance Act which provides a system of compulsory hospital insurance for residents of British Columbia with certain exceptions (L.G., 1948, p. 1436). The principal amendments raise the maximum premium which may be charged an individual or a family, provide for a system of partial premiums for persons who become eligible for payment of the tax during the tax year, set out more specific provisions to enable the Hospital Insurance Commissioner to bring into effect a system of compulsory payroll deduction, and list new exemptions from the hospitalization tax and benefits. A new section provides that subject to the approval of the Government, the right of a beneficiary to receive benefits may be made subject to payment of part of the costs of hospital services.

As before, the Act provides that the amount of the premium is to be fixed by regulation but stipulates that it may not in any case be more than \$36 a year. The previous maximum was \$33. In the Bill as introduced, no maximum was fixed. The actual rates are at present \$21 a year for a single person and \$33 for a head of a family (L.G., 1950, p. 1065).

A person who has recently come to British Columbia will now be deemed a resident of the Province on the first day of the third month after his arrival, instead of after six months, as before. To be liable to pay the tax, however, a person must have a fixed residence to which he has the intention of returning whenever he is absent, and he must have come to the Province with the intention of making his home there and not for temporary purposes only. If a person leaves the Province and does not return within the time prescribed by the Lieutenant-Governor in Council, he will lose his residence for the purposes of the Act whether or not he intends to return in the future.

If a person becomes a resident of the Province during the tax year he will be required to pay a partial premium for the remainder of that year from the first day of the third month after his arrival in the Province. He will thereafter be required to pay the full premium. Every resident of the Province must make application for registration for the purposes of the Act.

Several new classes may claim and be granted exemption from payment of the premium under the Act. These include persons for whom the Government of Canada provides hospital benefits, those entitled to hospital benefits under the Canada Shipping Act, certain officials employed by the Government of Canada or of any other country who are provided with hospital care by their own Governments, and persons coming to British Columbia from Saskatchewan with prepaid coverage under the Saskatchewan Hospitalization Act. As before, the Act exempts Christian Scientists, persons covered by private hospitalization plans and persons living in areas where provision of general hospital services is not practical. Patients or inmates of provincial institutions or gaols are not entitled to benefits provided under the Act. The Commissioner may bring exempted persons under the Act if he is satisfied that the grounds for exemption no longer exist or if the person himself desires to pay the tax.

The Hospital Insurance Commissioner may, when he deems it necessary and advisable, require and authorize any or all employers to deduct the hospitalization premium in advance from the salary or wages of each employee. To obtain complete registration of all employers the Commissioner may require them to file an application for registration on a prescribed form. The regulations provide that where

an employer is required to deduct premiums from the wages of his employees, he must deduct each month a premium of \$1.75 from a single person and \$2.75 from a worker who is the head of a family.

In addition to other penalties provided by the Act and regulations, a fine amounting to 10 per cent of an overdue premium may now be levied on a person who fails to pay the premium on or before the date on which it falls due. This provision will become effective on proclamation of the Lieutenant-Governor in Council. A fine of from \$5 to \$25 may also be imposed in such a case and the regulations provide that hospital insurance benefits may be withheld for one month after the overdue premium is paid. New clauses have been added to the Act to clarify the procedure for the recovery of overdue premiums by Court proceedings.

An employer who fails to comply with the written demand of the Commissioner that he pay the premium owing by his employee and deduct the amount from wages is liable, on summary conviction, to pay the amount due from the employee together with costs and a penalty of not less than \$10 nor more than \$50.

Provision is made for new sources of revenue for the Hospitalization Fund. A beneficiary of the plan may now be required, with the approval of the Lieutenant-Governor in Council, to pay part of the cost of any treatment or services given to him in a hospital. Formerly, the entire cost of general hospital services was paid from the Hospital Insurance Fund.

It is now provided that the Hospital Insurance Fund will not be liable for payment of the cost of providing any hospital services or treatment rendered to a person who is given hospital services under the Workmen's Compensation Act. Previously, it was stipulated in the regulations that the Workmen's Compensation Board should pay \$8.50 per day to the Commissioner for in-patient hospital care rendered to an injured workman.

The Hospital Insurance Commissioner must have accounts kept of the moneys received and expended under the Act. This amendment was necessary in order that the Hospital Buildings Fund, to which is to be transferred money collected from the amusement tax, may be kept separate from the Hospital Insurance Fund. It is learned from a press report that, when the cost of the hospital insurance scheme exceeded the estimated figure last year, money from the Buildings Fund was used to pay the accounts.

Municipal Employees' Pensions

The Municipal Superannuation Act which provides superannuation allowances to certain municipal employees has been amended. Under the Act, the employee might choose his allowance on one of the several plans set out in the Act but a retired employee was not permitted to change the plan of allowance once it had been granted. Under the amendment, a retired employee may now request the Commissioner of Municipal Superannuation to change his plan of allowance to include either of two temporary annuity plans, provided that he has retired after his minimum retirement age before September 1, 1947, and is not yet 68 and that the Commissioner receives the employees' request on or before April 30, 1950.

Housing

In order to make provision for adequate low-cost housing in British Columbia, a Housing Act was passed. The law takes advantage of the 1949 amendment to the National Housing Act (Canada) which provides that under agreements made between the Government of Canada and any of the provinces, the Federal Government will pay 75 per cent and the Province will pay 25 per cent of the cost of housing projects. The new British Columbia Act empowers the Lieutenant-Governor in Council or any Minister to enter into agreements with the Government of Canada or any of its agencies including the Central Mortgage and Housing Corporation or any municipality for the joint undertaking of housing projects. Further, the Lieutenant-Governor in Council may constitute corporations with powers and duties necessary to carry out any housing project. Subject to the regulations made under the Act, a Municipal Council or Board of Commissioners of a municipality may also enter into agreement with the Federal Government or any of its agencies and the Provincial Government.

Miscellaneous

A new Act entitled the Pension Fund Societies Act authorizes the incorporation of pension fund societies to establish and administer pension funds for the payment of pensions to employees. The pensions may be paid to officers and employees of a company who are incapacitated by age or infirmity and, upon their death, annuities or gratuities may be paid to their widows, minor children or relatives. The pension

funds may be established on a voluntary contributory basis or on any basis which the by-laws of the society may prescribe.

To establish a pension fund society, officers of a company must sign a declaration containing specified information and file the declaration with the Registrar of Companies and pay the required fees. The Registrar must issue a certificate of incorporation and publish official notice of such incorporation.

The parent company may contribute annually or otherwise to the funds of the said society, by a vote of either its directors or its shareholders. The officers and employees of a subsidiary company of the parent company may be admitted to membership in the society at the request of the parent company and may contribute to the funds of the society.

Amendments were made to the Motor Vehicles Act. The section relating to the classification of chauffeurs' licences was amended to enable the Superintendent of Motor Vehicles to require the holder of a chauffeur's licence to be examined as to his fitness and ability to drive and operate a motor vehicle as a chauffeur. If he fails to appear for an examination or to satisfy

the Superintendent as to his fitness as a chauffeur or fails to pay the prescribed examination fee, the Superintendent may suspend or cancel the chauffeur's licence held by that person. The purpose of this change is to enable the Superintendent to prevent an incompetent man from acting as a chauffeur where passengers are concerned but at the same time permit him to carry on his business under a lower-class chauffeur's licence.

No persons under 21 years of age may drive a motor-vehicle carrying passengers for hire. Formerly, this was allowed if the person was the holder of a permit granted by the Superintendent.

An Act entitled the Indian Inquiry Act was passed providing for the appointment of a Provincial Advisory Committee on Indian Affairs of which the secretary is to be an officer of the Department of Labour. The Committee is empowered to collect information relating to Indians resident in British Columbia and to study, investigate and inquire into questions relating to civil rights of Indians and other matters which may be designated by the Lieutenant-Governor in Council.

Recent Regulations Under Dominion and Provincial Legislation

Exemptions have been made under the Hours of Work section of the Alberta Labour Act for workers on the Interprovincial Pipe Line and for certain elevator repair crews. An Order covering coal miners requires time and one-half to be paid to workers above ground who work more than eight hours a day and 48 a week. ¶In British Columbia, accident prevention regulations for grain elevators have been issued to minimize the danger from dust and fire. The regulations under the Hospital Insurance Act have been revised as a result of recent amendments to the Act, to provide for a higher hospitalization tax and for compulsory deduction of premiums by employers from their employees' wages. ¶In Manitoba, the 1950 Fair Wage Schedule for the construction industry fixes higher rates in the majority of the trades listed. ¶New mining regulations have been issued in Quebec requiring medical certificates for workers in dust exposure occupations.

DOMINION

Prevailing Rate Employees

By an amendment to the Prevailing Rate Employees General Regulations made by an Order in Council (P.C. 2299) on May 5, gazetted May 24, employees who are absent on jury duty continuously over seven working days will not lose their vacation

leave credit during the month or months in which the whole or any part of the period of absence occurs.

PROVINCIAL

Alberta Labour Act

Three new Orders of the Board of Industrial Relations approved by Order in Council 441-50, gazetted May 15, exempt

certain grain elevator repair crews from the 8- and 48-hour limits of the Act from April 1 to October 31 annually, fix an 8-hour day and 48-hour week for workers who work above ground on or about a coal mine and permit employees on the Interprovincial Pipe Line to work a 10-hour day and 60-hour week with time and one-half after eight and 48 hours.

Elevator Repair Crews

By Hours of Work Order 14, grain elevator repair crews have been exempted from the 8-hour-day and 48-hour-week limits of the Act from April 1 to October 31 of each year. For the last few years an order has been issued each spring exempting these workers from Part I, the Hours of Work section, of the Act for this season of the year. The exemption covers, as before, employees of the United Grain Growers Limited, Alberta Wheat Pool and North-West Line Elevators' Association who are working on the overhaul and repair of engines, scales and elevating and cleaning machinery, repairs to driveways and buildings, splicing of rope and painting.

Coal Mines

Order 17 limits hours of workers who work above ground on or about coal mines to eight in a day and 48 in a six-day week. Time and one-half must be paid for work done in excess of these limits.

The Coal Mines Regulation Act limits the hours of workers who work underground in a coal mine to eight in any period of 24 consecutive hours.

Pipe Line Construction

All employees engaged on the crude oil pipe line project, from Edmonton to Regina, called the Interprovincial Pipe Line, may, by Order 18, work up to 10 hours a day and 60 in a week of six working days. Time and one-half, however, must be paid for hours worked in excess of eight and 48.

Rescinded Orders

By the same Order in Council, four Orders issued under the former Hours of Work Act are now rescinded.

These included regulations, approved by Order in Council 748-37, governing the industry of drilling or operation of gas and oil wells in a specified district, and restricting the hours of male employees to eight in a day and 48 in a week (L.G., 1937, p. 974).

Order 16 (O.C. 566-41) fixed a maximum 44-hour week for women and a 48-hour

week for men employed in office work in financial institutions, with certain exceptions to cover pressure of extra work (L.G., 1941, p. 555).

Also rescinded are the Wartime Regulations governing the rolling mill industry (O.C. 1776-41) which permitted workers employed on a tonnage basis to work an 11-hour day instead of the 9-hour day which was then fixed by the Hours of Work Act (L.G., 1942, p. 307).

The fourth Order, No. 30 (O.C. 1563-43) exempted from the Hours of Work Act cooks, cookees and waiters employed by Abasand Oils Limited, provided they were paid a specified minimum wage (L.G., 1943, p. 1566).

British Columbia Boiler Inspection Act

A revised schedule of construction, inspection and annual fees has been issued under the Boiler Inspection Act by an Order in Council (No. 736) approved on April 18, and gazetted April 20. The fees, which were formerly set out in the Act, have been raised in most cases. Fees are now set for the inspection of hot water boilers as a result of an amendment to the Act at the 1950 session of the Legislature which extended the coverage to hot water boilers as well as steam boilers and pressure vessels.

Fees for the inspections of steam boilers, hot water boilers and pressure vessels during their construction must be paid by the manufacturer to the Chief Inspector on the completion of the inspection, and the fees for subsequent inspections of pressure vessels are payable by the owner. Construction fees for boilers are computed at the rate of 15 cents per horse-power with a minimum inspection fee of \$5. For pressure vessels fees vary with the diameter of the vessel. The owner of every registered steam and hot water boiler must also pay a yearly fee as a tax for Provincial purposes. The yearly fee varies with the capacity of the boiler.

Provision is now made for inspections on Sundays and on statutory holidays on written request of the owner and with approval of the Chief Inspector. Fees are set for the first time for the inspection of second-hand boilers and pressure vessels, for stamping of boiler plates, for the inspection of hot water tanks in the manufacturer's stock, for certified copies of documents and for surveying designs of boilers and pressure equipment for approval and registration.

British Columbia Electrical Energy Inspection Act

Effective from June 1, regulations have been issued under the above Act governing electrical permits and inspection fees by an Order in Council (No. 15) approved on January 7, gazetted May 18.

No person in the district described below may construct, install or alter any electrical work in any premises until he has obtained a written permit from the Inspector of Electrical Energy, on penalty of a fine of not more than \$50. This regulation applies to an area in southern British Columbia bounded roughly by the international boundary on the south, by the Kootenay River and Lake on the east, by the fifty-third parallel on the north and by the Pacific Ocean on the west.

Application for a permit for electrical work must be made by the person carrying out the work and must be signed by him. It must be accompanied by payment of the required inspection fees, which are set out in the regulations, and must give the address of the premises concerned, full details of ownership and occupation and the purpose for which the premises are used, and must list particulars regarding the size and voltage of service, number of outlets and other details. The Inspector may order changes to make the work conform with the regulations.

In all areas in which the certification of electrical contractors is in effect, a permit will only be issued to a person who holds a certificate of competency, or annual permit in good standing as described below. However, the regulations do not prohibit a person from obtaining a permit to carry out, personally, electrical work on his own premises.

Electrical installations must be commenced within 90 days after a permit has been issued, after which time the permit will be void unless an extension in writing is granted by the Inspector.

When the electrical work covered by the permit is completed, the holder must notify the Inspector in writing on the prescribed form. As soon as practicable the Inspector must inspect the work and issue a certificate of approval or order any necessary changes. Electrical work must not be connected to a source of electrical energy until the final certificate of approval has been issued.

The inspection fee will entitle the permit-holder to one inspection and one re-inspection. The Inspector may order the immediate suspension of any electrical work by posting a notice on the premises or by issuing written instructions to the permit-holder. At his discretion, the Inspector

may refuse to issue a permit for electrical work for any premises where the existing electrical work is not in accordance with the regulations.

An annual permit may be issued by the Inspector to the operator of an industrial or commercial establishment where a full-time electrician is employed and where the nature of the business necessitates alterations or additions to the plant on short notice. If the operator holds an annual permit for the current calendar year, these alterations may be carried out by the operator's own electrician without the formality of taking out a permit for each one. The annual permit, however, will not entitle the holder to proceed with any major addition to the plant, for which the operator must obtain a 90-day permit, as described above.

Each establishment for which an annual permit is granted must be inspected every six months. The operator must maintain an accurate record of all alterations and additions which have been carried out in the establishment since the last inspection, and this record must be made available to the Inspector on request.

Temporary current permits may be issued at the discretion of the Inspector to enable the supply authority to connect up to temporary work or uncompleted permanent installations. These permits will be valid for 90 days but may be renewed at the discretion of the Inspector. When a current permit is obtained, the holder must also take out a regular permit and pay the required inspection fees. The Inspector may refuse to authorize the supply authority to connect up to their lines if in his opinion the supplying of current would create a hazard to life or property.

The Inspector may, at his discretion, call for plans and specifications of electrical work in any premises, but the owner or accredited agent of a theatre, hall, factory, hotel and apartment building and of any other place where public safety is affected must submit specifications which must be accepted before a permit is issued.

Special regulations are set out for public utilities which are defined to include any person carrying on the business of generation, distribution or supply of electrical energy for consumption by or sale to any other person but it does not apply to telegraph, telephone or similar services. The annual inspection fee for each public utility provides for periodic inspection of all generating, distribution and associated equipment. The fee is based on the installed capacity of the generators which supply energy to the system, with a

minimum fee of \$5. The method of calculating the fee is also set out for a municipal body which purchases electrical energy in bulk from another public utility and distributes to consumers, and for a person who generates electrical energy primarily for consumption by his own business, but who also distributes a portion of such energy for consumption by his employees or the public.

British Columbia Hospital Insurance Act

The regulations under the British Columbia Hospital Insurance Act, 1948 (L.G., 1949, p. 1436), have been rescinded and replaced by an Order in Council gazetted May 11, chiefly as a result of 1950 amendments to the Act (L.G., 1950, p. 1060). The principal changes include a higher hospital insurance premium, a system of pro-rated payments for persons who become eligible for payment of the premium during the tax year and more detailed provisions regarding registration and payroll deduction by employers for the payment of premiums owing by their employees.

Under the new regulations the annual premium to be paid by a single person has been raised from \$15 to \$21. The annual premium for the head of a family is now \$33, instead of \$24 for a person with one dependent and \$30 for a person with more than one dependent. As before, premiums must be paid in advance either in full or on the instalment plan. If a person does not make the required payment until after it falls due, he will not become a beneficiary until one month from the date of payment, unless the Commissioner orders otherwise.

The 1950 amendments to the Act set out more specific provisions to enable the Hospital Insurance Commissioner to bring into effect a system of compulsory payroll deduction by employers for the payment of premiums by their employees. The regulations now provide that where the employer is required to deduct premiums from the wages of his employees he must deduct each month a premium of \$1.75 from each single person and \$2.75 from each worker who is the head of a family. Within one month of the date on which a person becomes an employee or upon receipt of a notice from the Commissioner or other officer of the Hospital Insurance Service, the employer must make the necessary deductions from the wages of the employee to pay any premium payments that are in arrears and to prepay the premium for a six months period. All such deductions

made by an employer must be remitted to the Commissioner within the time which he prescribes.

Within one month after receiving a written demand from the Hospital Insurance Commissioner (instead of within 15 days as before), an employer is required to furnish the Commissioner with a list of the names and addresses of his employees and their dependents, together with any additional information as may be requested. When a worker from whose wages the payroll deductions have been made leaves his employment he will continue to be a beneficiary under the Act for the number of months for which he has prepaid his premiums.

The Act, as amended, requires a person to pay a partial premium for the remainder of the current year after he becomes a resident of the Province. He is considered a resident for the purposes of the Act on the first day of the third month during which he has resided in the Province. The regulations require such a person to make the pro-rated payment not later than the day on which he becomes a resident of the Province.

Persons who were formerly exempt from payment because they were members of the Christian Science Church or because they resided in an area where provision of general hospital services is not practical and who renounce their exemption in order to qualify as a beneficiary must pay a pro-rated premium from the first day of the month following the date on which their exempted status ended. These persons will become beneficiaries one month after the date on which payment of the required premium is made.

Persons who are otherwise provided with hospital benefits are exempted from the hospitalization tax and benefits under the Act. Such persons must, when they cease to be entitled to exemption, pay a pro-rated premium covering the remainder of the hospital insurance year. These include persons for whom the Government of Canada provides hospital benefits; those covered by private hospitalization plans; persons entitled to hospital benefits under the Canada Shipping Act; persons employed by the Government of Canada or any other country who are provided with free hospital care by their Governments; inmates or patients of provincial institutions and gaols; and persons coming to British Columbia from Saskatchewan with prepaid coverage under the Saskatchewan Hospitalization Act.

When a person not liable to pay the tax because he was a dependent ceases to

be a dependent, he must pay that portion of the annual premium that is applicable to the next ensuing hospital insurance period not later than the last day of the fifth month of the current hospital insurance period or the date on which he ceases to be a dependent, whichever is later.

More detailed provisions are laid down with regard to registration. Every single person must make application for registration for himself and every person who is the head of a family must apply for registration for himself and his dependents on the form prescribed by the Commissioner. Persons who take up residence in the Province must apply for registration not later than the day on which they become residents of the Province under the Act.

A person who leaves the Province may, with the approval of the Commissioner and on payment of the required premium, continue to be a beneficiary for one year from the end of the hospital insurance period in which he left the Province. After a person leaves the Province he ceases to be a resident on the day after his premium payments expire.

Provision is now made for payment for hospital services rendered by hospitals outside British Columbia. Payments will be calculated on the basis of the public-ward rate charged by the hospital but must not exceed \$6.50 a day for a period of not more than 30 days unless the Minister authorizes a longer period.

The list of general hospital services which are provided for a beneficiary is unchanged. The regulations include an amended list of hospitals which are required to furnish the services provided under the Act. The regulations list four exempted areas in which provision of general hospital services is not practical. The form of the Hospital Insurance Card is also set out in the regulations.

British Columbia Hours of Work Act

Workers employed on the construction of the Peace River Highway are permitted to work nine hours a day and 54 a week from April 27, 1950 until December 31. This exemption from the 8- and 44-hour limits of the Hours of Work Act was made by an Order of the Board of Industrial Relations (No. 32F) on April 20, gazetted April 27.

British Columbia Male and Female Minimum Wage Acts

* Effective from May 18, motion-picture projectionists have been declared to be out-

side the scope of Order 67 which fixes a minimum of \$18 a week for persons employed in or about public places of amusement who work 40 or more hours a week. This amendment was made by Order 67A on May 11 and gazetted on May 18.

British Columbia Workmen's Compensation Act

Accident Prevention Regulations for Grain Elevators

New accident prevention regulations, issued after a public hearing at Vancouver by an Order of the Workmen's Compensation Board on April 25, gazetted April 27, are chiefly concerned with the elimination of the dust hazard and the danger of fire in grain elevators. The regulations set out minimum safety standards for ventilation, machinery, dust control systems, electrical equipment, and boiler rooms, require the provision of lockers and eating rooms for employees and lay down various fire-prevention measures including the prohibition of smoking in an elevator, and the storage of combustible materials except under specified conditions. The Workmen's Compensation Board may examine and pass on plans submitted by operators for any necessary alterations, installations or additions undertaken as a direct result of the regulations.

Ventilation by mechanical means must be used in workhouse buildings and operating rooms which do not have window ventilating area in the ratio of at least one square foot for every 160 cubic feet of room volume, not including any enclosed spaces in the room. Basement rooms, except those in workhouses, must be adequately ventilated by windows, ventilating pipes or by mechanical means, and during working periods sufficient windows and exterior doors must be open. If ventilation is not adequately provided by either windows or mechanical means, the roofs of track-sheds, tunnels and cupolas must be provided with ventilators which, along with windows, will provide frequent change of air.

The regulations lay down detailed rules with respect to equipment in grain elevators including grain-cleaning or processing machinery, magnetic or pneumatic separators and grain-driers. In general, the equipment must be dust-tight and constructed of fire-resistant materials. Cleaning and similar machines and distributing-spouts which liberate an appreciable amount of dust must be provided with adequate positive air-aspiration, unless good

ventilation is provided. Special provisions are set out for the control of dust in car loading and unloading operations.

Dust on floors, machinery and other surfaces must be removed as frequently as is necessary by means of suitable push brooms or by vacuum sweeping equipment, and spills and chokes must be cleaned up promptly. As many sweepers must be employed as are necessary to keep the building clean.

The regulations require the entire dust control system to be designed and installed in accordance with recognized engineering practice to prevent dust from entering the atmosphere and to avoid the picking up of solid grain. The dust and air in the system must be discharged to dust-collectors and from them, by suction, to an outside bin, a boiler room or to a refuse-screening bin. There must be no direct open connection between dust-collectors and boiler rooms or incinerators.

All electrical wiring, installations, appliances and equipment installed in future must conform to the requirements of the Electrical Energy Inspection Act. Where tests indicate the presence of static electricity accumulations, the electricity must be removed by permanent ground wires or other effective means. Static grounds must not be made to electric conduit systems, gas or steam pipes, dry-pipe sprinkler or steam-pipe systems or lightning rods, and the grounding circuit must have a resistance of at least 25 ohms.

The regulations require every boiler-room to be fully enclosed with suitable non-combustible materials. Boiler rooms in elevators erected after the regulations come into force must not have openings between them and any working-floor, except openings required for the transmission of power, electricity, heat and water. Such boiler rooms will also be required to have a self-closing fire-door on every doorway opening into a working-floor of the elevator. Radiators, steampipes and electric heating appliances must be kept free from combustible material. Steam-locomotives are prohibited from entering elevators or track sheds with receiving hoppers.

Smoking is prohibited except in a designated fire-proof room which is equipped with electric lighting devices, and which has no direct inter-communication with any working-floor. Signs prohibiting smoking must be placed in conspicuous places throughout the building. Persons in a grain elevator may not carry matches or cigarette lighters. On entering the building, employees must deposit their matches and cigarette butts in two clearly marked covered and fire-proof receptacles at the

entrance. Open flames or welding operations are prohibited unless all machinery is shut down and the atmosphere and all adjacent surfaces freed of combustible dust. On each floor which contains machinery, metal waste-cans with self-closing covers must be provided for oily waste and must be emptied daily.

The employees must be provided with an eating room located in a separate building or separated from the working areas by a dust-tight partition and provided with exits leading directly outdoors. Workmen's clothing must be kept in metal lockers in a separate building or in a fire-resistant room which is reasonably free from dust.

The regulations prohibit the storage of equipment or material of a combustible nature in the main elevator except in a space protected by fire-walls and fire-doors. Storage of lubricating oil and grease inside the elevator is limited to six barrels which must be kept in an oil-room constructed of non-combustible materials but the main storage of oil and grease must be outside the building.

Manitoba Fair Wage Act

The annual schedule of minimum rates of wages and maximum hours of work prescribed by the Fair Wage Board for certain public and private construction works in Manitoba (Reg. 14/50) was gazetted on April 29, and will be in effect from May 1, 1950 to April 30, 1951. The schedule is drawn up on the basis of collective agreements or in accordance with prevailing conditions within the industry. It sets differing rates for three zones, Zone "A" rates apply to private work in the Greater Winnipeg Water District and to public work in Winnipeg and a 30-mile radius; Zone "B" rates apply to private work in cities and towns with a population of over 2,000; and Zone "C" rates apply to private work within the City of Brandon.

"Public Work" includes public work authorized by the Minister of Public Works for the execution of which a contract has been entered between the Minister of Public Works and an employer.

"Private Work", as defined in the Act, applies to the building, construction, remodelling, demolition or the repairing of any building or construction work in the Greater Winnipeg Water District, or of any such work irrespective of the number of contracts made, in any city or town with a population exceeding 2,000, or in any other part of the Province to which the Act may be extended by the Lieutenant-Governor

in Council, provided that the total cost of such work exceeds \$100. Maintenance work done by a regular maintenance staff on any property under the immediate control of the owner, tenant or occupant is not included where the work is not undertaken with the intention of selling or renting the property.

The minimum hourly rates in Part I of the schedule have been raised by from 5 to 10 cents in approximately half of the trades listed in the schedule. For the remaining trades the rates are unchanged. With one exception, a 48-hour rather than a 44-hour week for shinglers in Zone B, the maximum weekly hours remain the same as those fixed for last year.

As noted above, provision is made in this year's schedule for a new zone (Zone C) covering "private work" in the city of Brandon. The rates set for this zone are in most cases 5 or 10 cents higher than those set for Zone B, but the weekly maximum hours are the same in all cases as those fixed for Zone B.

The minimum rates for all classes of workers on public road and bridge works in those parts of the Province outside the Greater Winnipeg Water District (Part II of the schedule) were raised 5 cents and hour, and it is to be noted that the

maximum hours to be worked are 108 for each two-week period. In the 1949-50 schedule, the maximum weekly hours prescribed were 48.

With respect to overtime, it is provided that time worked in excess of the standard weekly hours listed in the schedule must be paid for at not less than time and one-half the minimum scheduled rate and work on Sundays paid for at double time.

Attention is called to the fact that vacation pay stamps must be affixed by employers, to the extent of 2 per cent of the total wages earned in each pay period, where construction work is performed in Greater Winnipeg.

A new provision stipulates that a new employee may agree with his employer to prove his ability to operate a concrete paver, scraper and bulldozer, or a drag-line, shovel and crane by a short trial period at a probationary rate. The employer, not later than the day on which the employee starts work, must send to the Department of Labour, by registered mail, a letter signed by both the employer and the employee certifying that for a probationary period of not more than 30 days, a rate of 15 cents below the scheduled rate has been agreed upon.

The schedule follows:—

FAIR WAGE SCHEDULE

- Zone "A" Rates Apply: (1) To "private work", as defined in the Act, in the Greater Winnipeg Water District.
 (2) To "public work", as defined in the Act, in Winnipeg and a radius of 30 miles.
- Zone "B" Rates Apply: To "private work", as defined in the act, wherever the population exceeds 2,000 except where Zone "A" or Zone "C" rates apply.
- Zone "C" Rates Apply: To "private work", as defined in the Act, within the City of Brandon.

SCHEDULE "A"—PART I

The following schedule shall apply from and after May 1, A.D. 1950, on "Private Work" and on "Public Works", as described above:

	Zone "A"		Zone "B"		Zone "C"	
	Basic Wage Rate	Hours	Basic Wage Rate	Hours	Basic Wage Rate	Hours
	Min'm. per hour	Max'm. per week	Min'm. per hour	Max'm. per week	Min'm. per hour	Max'm. per week
1. Asbestos Workers—

25. Terrazo Workers—						
(a) Layers.....	1.30	40	1.30	48	1.30	48
(b) Machine Rubbers (Dry).....	.90	48	.85	48	.90	48
(c) Machine Rubbers (Wet).....	.80	48	.75	48	.80	48
26. Tile Setters (Including all clay product tile and Vitrolite glass).....	1.50	40	1.35	44	1.40	44
27. Tile Setters (asphalt and other composition tile).....	1.05	40	.90	48	.95	48
28. Timber and Crib Men working on grain elevators or bridges doing the "crib work" on grain elevators, or rough timber work on bridges.....	1.00	48	1.00	48	1.00	48
29. Truck Drivers (while in charge of truck on construction work only).....	.90	48	.85	48	.90	48
30. Watchmen.....	.60				.60	

SCHEDULE "A"—PART II

PUBLIC ROADS AND BRIDGE WORKS

31. The following schedule shall apply from and after May 1, 1950, on Public Works for highway, road, bridge or drainage construction where a contract has been entered into by the Minister of Public Works, in all parts of Manitoba outside the Greater Winnipeg Water District:

Occupation	Basic Wage Rate Minimum Per Hour	Hours Maximum period of 108 hours over each two week period
	\$	
32. Aggregate Batch Man.....	.80	108
33. Asphaltic Oil Distributor Driver.....	.85	108
34. Blade Grader (12 H.P. and over) Operator.....	.85	108
35. Concrete Finisher.....	.80	108
*36. Concrete Paver Operator.....	1.05	108
*37. Dragline Shovel and Crane Operator.....	1.15	108
38. Elevator Grader Operator.....	.85	108
39. Engineer, Stationary Boiler.....	.95	108
40. Labourers.....	.75	108
41. Motor Patrol Operator.....	.85	108
42. Roller Operator, 6 ton and over, steel wheels.....	.90	108
*43. Scraper and Bull Dozer Operator.....	1.00	108
44. Spreader and Finishing Machine Operator.....	.80	108
45. Teamsters.....	.70	108
46. Teamsters and Two Horse Teams.....	.95	108
47. Teamsters and Four Horse Teams.....	1.20	108
48. Timber Men (timber work where use of hammers, saws, axes and augers only are required).....	.90	108
49. Tractor Operator, 50 h.p. drawbar or over.....	.85	108
50. Tractor Operator, under 50 h.p. drawbar.....	.75	108
51. Truck Drivers.....	.80	108
52. Watchman and Flagman.....	.65

* PROBATIONARY RATES

53. (1) Where a new employee agrees with his employer to prove his ability to operate one of these machines by a short trial period at a probationary rate, not later than the date upon which the employee starts work, the employer shall send to the Department, by registered mail, a letter signed by the employee and the employer, certifying that for a probationary period not exceeding 30 days, a rate of 15c below the schedule rate has been agreed upon.

(2) Subsection (1) is applicable only to: Concrete Paver Operator, Dragline, Shovel and Crane Operator, Scraper and Bull Dozer Operator.

Newfoundland Dependents' Allowances and Mothers' Allowances Acts

Persons eligible for an allowance under these Acts may not possess annual outside income in excess of \$240, by an amendment to the regulations made by Orders in Council on April 29, gazetted May 2. The regulations, as issued, prescribed the maximum annual outside income allowed under the Dependents' Allowances Act as \$480 and under the Mothers' Allowances Act as \$440. The amendments were effective on March 1 and April 1, respectively.

The maximum mothers' allowance granted is still \$300 a year for a mother and one child and \$60 a year for each additional child (L.G., 1950, p. 883). However, the maximum now payable is the allowance in respect of a mother and six children (\$600 a year) instead of one in respect of a mother and seven children, as previously (\$660 a year).

The dependent's allowance remains the same at \$300 a year for one incapacitated adult, increased by \$120 for each additional incapacitated adult in the family. The maximum allowance payable is the allowance in respect of a family of five incapacitated adults (\$780 a year) (L.G., 1950, p. 699).

New Brunswick Minimum Wage Act

The Minimum Wage Order covering male workers employed in the production of pulpwood, pitprops and logs (L.G., 1950, p. 87), has been renewed without change for five months from May 1 to September 30, 1950. The minimum rate for these workers is \$4.50 a day. A rate of \$3.40 a day is fixed for workers who are handicapped by old age or loss of a limb and for chore-boys and cookees. An employer may charge \$1.05 a day if he furnishes

board and lodging. Workers engaged in transporting the forest products mentioned above are not covered by the Order.

Quebec Mining Act

For the protection of workmen in dust exposure occupations, new regulations have been issued by an Order in Council (O.C. 2947), gazetted on May 20, effective from July 19, requiring medical certificates for workmen who work more than 50 hours a month in all mines in the counties of Pontiac, Temiscamingue, Rouyn-Noranda, Abitibi-East and Abitibi-West where mining, reduction of ores and smelting, and preparation of metals or minerals are carried on. No workman may be employed in a dust exposure occupation in these mines unless he holds a medical certificate as required by the regulations.

A person seeking employment in a dust exposure occupation which includes all underground work in mines and all surface work in rock- or ore-crushing processes must hold a certificate issued within the last 12 months by a doctor appointed in accordance with the provisions of the Workmen's Compensation Act, stating that he has undergone the prescribed examination, has been found free from diseases of the respiratory organs and is fit for employment in a dust exposure occupation.

The employee must be re-examined before the end of the 12-month period following the date of issue of his certificate and annually thereafter, and if he is again found free from tuberculosis of the lungs the doctor must endorse the medical certificate to that effect, indicating the date of re-examination.

Employers are required to keep a record of medical certificates open at all times to inspection by the inspector of mines. A workman must deliver his certificate to the employer on request and it must be returned to the workman when he leaves his employment.

Medical certificate forms will be supplied to doctors by the Department of Mines and a detailed description of the forms is set out in the regulations.

Saskatchewan Electrical Inspection and Licensing Act

As a result of a 1950 amendment to the Act which permits any person to make an electrical installation on his own premises without holding a contractor's licence provided the Chief Inspector is satisfied as to his competency, the general regulations under the Act (L.G., 1950, p. 87) were amended to provide for the issue of a

permit in such cases. Application to make an electrical installation or install electrical equipment must be made to the Chief Inspector on forms supplied by the Department of Labour. A permit will be granted to an applicant who is considered competent if he pays the required inspection fee and a deposit of \$20 when the work to be done is wiring or re-wiring, or \$10 if only alterations to existing wiring are to be made. The deposit will be returned when the work is approved by the Department less any shortage in the inspection fee which was remitted with the application and less \$5 for each re-inspection after the first re-inspection.

The amendment was made by an Order in Council (O.C. 697/50) on April 21, gazetted April 29, and became effective on May 1.

Saskatchewan Hours of Work Act

From May 15 to September 15 of each year, swimming pool supervisors, life guards, checkers and cashiers employed by the City of Regina in connection with city-operated swimming pools may work up to 88 hours in two consecutive weeks without payment of the statutory overtime rate of time and one-half which normally applies after eight hours in a day or 44 in a week. The overtime rate is payable for any work done in excess of 88 hours in a two-week period. This change was effected by Hours of Work Order 18 (O.C. 754/50) of April 28, gazetted May 6.

Saskatchewan Industrial Standards Act

The general regulations made under the Act in 1944 (L.G., 1944, p. 527; 1938, p. 41) have been re-issued with some omissions by an Order in Council (O.C. 722/50) made on April 25, gazetted May 6. An employer is defined in the Act as any person, firm or corporation employing one or more persons, including an agent, manager, contractor or subcontractor, and any person who has control or direction of one or more employees or who is responsible directly or indirectly for the payment of wages, in whole or in part, or for receipt of wages by an employee. This definition also covers persons who are self-employed or in partnership with another person in a shop or business.

The employer is required to keep a record of the names and addresses of his employees who are governed by a schedule of wages and hours under the Act; the number of daily and weekly hours worked by each; the number of hours of daily and weekly overtime; the wages received by

each employee on each pay day and the rate on which they were calculated; particulars of the nature of the work performed by each employee and its location; the quantity of piecework done by each employee and the rate paid per piece; the amount received by each employee working on a commission basis and the rate of the commission; and any further information on these matters which may be required by the Deputy Minister of Labour.

All records must be retained for at least two years (formerly one year) and be available for inspection at any time. The Deputy Minister may require the employer to produce his records and to lodge them with him.

Each Advisory Board which is set up by the Minister to hear complaints and assist in the enforcement of the Act must keep

minutes of its meetings and provide the Deputy Minister with a copy. Whenever an Advisory Board makes a decision from which an appeal lies to the Deputy Minister, it must communicate the decision at once to the employer and employees concerned. Any person who wishes to appeal must give written notice to the Deputy Minister within 10 days of the decision from which he is appealing or within not more than 30 days if the Deputy Minister allows an extension of time. The Deputy Minister is to fix the time and place for hearing the appeal and give reasonable notice to the parties. The Deputy Minister may affirm or alter the Board's decision, transmitting to the Board a copy of his decision with such reasons and explanations as he may consider necessary.

Legal Decisions Affecting Labour

A Montreal truck driver is awarded a week's pay in lieu of notice. ¶The United States Supreme Court rules on the constitutionality of the non-Communist affidavit clause of the Taft-Hartley Act.

Quebec Courts rule workman paid by the hour entitled to a week's notice of dismissal.

The Court of King's Bench of Quebec (Montreal Division) on October 27, 1949 unanimously held that a truck driver whose wages were payable each week was entitled, having been dismissed without cause, to a week's wages in lieu of notice. This decision upheld the judgment of Mr. Justice Smith given in the Superior Court of Montreal on May 17, 1948.

The driver was dismissed following an accident which occurred December 5, 1947 when he was driving a truck belonging to his employer. The employer refused to pay him on the grounds that he had not explained the accident, that he was not entitled to pay for overtime, and that he was working by the hour and therefore notice of dismissal was not required.

The truck driver brought a claim against his employer in the Superior Court for wages including the following: the regular pay due him up to the time of his dismissal, a week's pay in lieu of vacation, overtime accumulated over a six months' period, and a week's pay in lieu of notice of dismissal. At the hearing no blame was attached to him for the accident. He obtained judgment on each of the claims listed above amounting on the whole to \$252.05 but seeking to avoid an appeal,

waived the amount awarded for holiday pay. The employer, however, appealed the decision, basing his appeal on one item only, the amount awarded as equivalent of a week's notice.

The Appeal Court upheld the decision of the trial judge that the truck driver had the right to notice of dismissal. The precedents for this decision, Mr. Justice Bertrand stated, were the Supreme Court of Canada decisions in the cases of *Stewart v. Hanover Fire Insurance Company* (1936) SCR 177 and *Asbestos Corporation v. Cook* (1933) SCR 86, 94. In these cases it was found that whoever wishes to put an end to the agreement must express his wish by giving notice to the other and the term of notice is in keeping with the periods for the payment of wages. *Concrete Column Clamps Ltd. v. Pepin, Les Rapports Judiciaires de Québec, CBR 838.*

Non-Communist affidavit clause of Taft-Hartley Act held constitutional by U.S. Supreme Court.

The Supreme Court of the United States on May 8, 1950 delivered a judgment on two cases which presented for decision the constitutionality of the non-Communist affidavit provision of the Taft-Hartley Act. This is Section 9 (h) which denies a union access to the National

Labour Relations Board unless each union officer has filed an affidavit that "he is not a member of the Communist Party or affiliated with such party," and that "he does not believe in, and is not a member of or supports any organization that believes in or teaches, the overthrow of the United States Government by force or by any illegal or unconstitutional methods." In one of the cases before the Court a union had been denied a hearing before the Board because of non-compliance with Section 9 (h); in the other the Board had postponed the effective date of an order compelling the employer to bargain, pending the union's compliance with Section 9 (h). The unions in both cases had sought court action contending that the section was unconstitutional. The District Courts in which the cases were initiated ruled that the section was valid. An appeal was then taken to the Supreme Court. The Supreme Court upheld the judgment of the lower courts. Six judges heard the case. Mr. Justice Black gave a dissenting judgment, and Mr. Justice Jackson and Mr. Justice Frankfurter dissented in part.

Mr. Chief Justice Vinson, in delivering the judgment, pointed out that the constitutional justification for the National Labour Relations Act of 1935 (the Wagner Act) was the power of Congress to protect interstate commerce by removing obstructions to the free flow of commerce. Congress sought to remove the obstructions caused by industrial unrest by encouraging the processes of collective bargaining. When the Labour-Management Relations Act (the Taft-Hartley Act) was passed twelve years later, it was stated that

Experience has further demonstrated that certain practices by some labour organizations, their officers, and members have the intent or the necessary effect of burdening or obstructing commerce by preventing the free flow of goods in such commerce . . .

One such obstruction which the new legislation by Section 9 (h) sought to remove was the so-called "political strike". Evidence was presented to various committees of Congress "that Communist leaders of labour unions had in the past and would continue in the future to subordinate legitimate trade union objectives to obstructive strikes when dictated by Party leaders, often in support of the policies of a foreign government."

The unions in the two cases before the Court urged that the non-Communist affidavit provision violates fundamental rights guaranteed by the First Amendment to the Constitution: the right of union officers to hold what political views

they choose and to associate with what political groups they will, and the right of unions to choose their officers without interference from government. The First Amendment provides: "Congress shall make no law . . . abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances." The National Labour Relations Board held that Section 9 (h) does not violate the Constitution because its sole sanction is the withdrawal from non-complying unions of the "privilege" of using its facilities. Mr. Justice Vinson considered that neither view is entirely accurate; that Section 9 (h) does not merely withdraw a privilege gratuitously granted by the Government, nor does it prohibit those persons who do not sign the affidavit from holding office. Its effect is somewhere between these two positions, and

The difficult question that emerges is whether, consistently with the First Amendment, Congress, by statute, may exert these pressures upon labour unions to deny positions of leadership to certain persons who are identified by particular beliefs and political affiliations.

Congress has the constitutional power, under its authority to regulate commerce among the several States, to attempt to prevent political strikes designed to interrupt the free flow of commerce, and the non-Communist affidavit provision was a reasonable measure towards this end. The provision is not altogether unlike other statutes denying positions of public importance to groups of persons identified by their business affiliations. The Banking Act, for example, provides that no partner or employee of a firm primarily engaged in underwriting securities may be a director of a national bank. The Taft-Hartley affidavit clause differs from restrictions of this kind in that it has the further necessary effect of discouraging the exercise of free political rights protected by the First Amendment.

Although the First Amendment provides that Congress shall make no law abridging the freedom of speech, press or assembly, it has been recognized that those freedoms themselves are dependent upon the power of constitutional government to survive. If it is to survive it must have the power to protect itself, but "the necessity which is essential to a valid restriction does not exist unless the speech would produce, or is intended to produce, a clear and imminent danger of some substantive evil which the State constitutionally may seek to prevent." But the interest of the

Government in the statute under examination in the present case is not in preventing the dissemination of particular beliefs but in protecting the free flow of commerce from harmful conduct which Congress has determined is carried on by persons who may be identified by their political affiliations and beliefs. It is not therefore necessary to establish that a "clear and imminent danger" to the state exists, but the problem is rather one of weighing the probable effects of the statute upon the free exercise of the right of speech and assembly against the congressional determination that political strikes are evils which should be prevented.

When particular conduct is regulated in the interest of public order, and the regulation results in an indirect, conditional, partial abridgment of speech, the duty of the courts is to determine which of these two conflicting interests demands the greater protection under the particular circumstances presented.

Mr. Justice Vinson then pointed out that Congress, not the Courts, is primarily charged with determination of the need for regulation of activities affecting inter-state commerce. If such regulation infringes personal freedoms guaranteed by the Constitution the Court may declare the statute invalid, but it is not in a position to substitute its judgment as to the necessity or desirability of the statute for that of Congress. Section 9 (h) is not an isolated statute but part of very complex machinery set up by the Federal Government to encourage peaceful settlement of industrial disputes. Under this system unions which become collective bargaining representatives for groups of employees often represent not only members of the union but non-union workers or members of other unions as well. Individual employees are required by law to relinquish rights for the benefit of the group, and this results in increase in the power of the union as the representative of the group, a power derived in part from "Government's thumb on the scales." The public interest in the good faith and exercise of that power is accordingly very great. On the other hand, the measure of restriction upon the rights of speech and assembly of those proscribed by the statute is not extensive. It is not aimed at the suppression of dangerous ideas nor does it prohibit the dissemination of views. It is only directed against the combination of those affiliations or beliefs with holding a position of great power over the economy of the country. Mr. Justice Vinson then referred to a previous case in which the interests involved were largely similar.

In *United Public Workers v. Mitchell* we upheld a statute which provided that employees of the Federal Government could not participate in partisan political activities, concededly a First Amendment right, if they would retain their positions. The decision was not put upon the ground that government employment is a privilege to be conferred or withheld at will. . . . But the rational connection between the prohibitions of the statute and its objects, the limited scope of the abridgement of First Amendment rights, and the large public interest in the efficiency of government service, which Congress had found necessitated the statute, led us to the conclusion that the statute may stand consistently with the First Amendment.

The Court then considered the provision concerning belief in the overthrow of the Government by force. It was held to present no different problem from that presented by the section dealing with membership in the Communist Party, for while there is the distinction that political affiliation may be established by evidence of an overt act, beliefs may be *inferred* from the things a man says or does, and courts and juries every day pass upon knowledge, belief and intent. Neither life nor liberty is at stake, and the holding of these beliefs would only result in the loss of a particular position. To the argument that the requirement to disclose beliefs in one situation opens the way to force disclosure of attitudes on all manner of social, economic, moral and political issues, Mr. Justice Vinson answered that "that result does not follow 'while this courts sits.'" He concluded that Section 9 (h) does not unduly infringe freedoms protected by the First Amendment.

That Amendment requires that one be permitted to believe what he will. It requires that one be permitted to advocate what he will unless there is a clear and present danger that a substantial public evil will result therefrom. It does not require that he be permitted to be the keeper of the arsenal.

Mr. Justice Black, dissenting, held that by this judgment the Court had "injected compromise into a field where the First Amendment forbids compromise." Individual freedom and governmental thought-probing cannot live together. He pointed to historical examples of the use of the test oath to inflict penalties and disabilities on unpopular minorities, and concluded that test oaths are the implacable foes of free thought. Since the First Amendment guarantees protection to each member of the smallest and most unorthodox minority, there could be no justification of the clause simply on the grounds

that it applied a partial restriction to a limited group. Further, such restrictions are seldom static. "I cannot regard the Court's holding as one which merely bars Communists from holding union office and nothing more," he stated. Laws aimed at one political or religious group cause hatreds and prejudices to grow and spread beyond control. He reiterated the basic constitutional precept that penalties should be imposed only for a person's own conduct, not for his beliefs or for the conduct of others with whom he may associate.

The postulate of the First Amendment is that our free institutions can be maintained without proscribing or penalizing political belief, speech, assembly or party affiliation. This is a far bolder philosophy than despotic rulers can afford to follow. It is the heart of the system on which our freedom depends.

American Communications Association, CIO et al v. Douds, etc.; United Steelworkers of America et al v. National Labour Relations Board, Nos. 10 and 13, Supreme Court of the United States, Labour Relations Reporter, Vol. 26, No. 5, May 15, 1950.

UNEMPLOYMENT INSURANCE

Selected Decisions of Umpire Under the Unemployment Insurance Act

Digest of selected decisions in appeals heard by the Umpire under the provisions of the Unemployment Insurance Act. Published in two series (1) Benefit cases, designated CU-B, and (2) Coverage cases, CU-C.

Held that the claimant had shown just cause within the meaning of the Act for having voluntarily left her employment.—CU-B 529 (December 23, 1949).

MATERIAL FACTS OF CASE:

The claimant, single, 22 years of age, was employed as a secretary for a firm in Toronto, Ontario, from January 23, 1947 to August 6, 1949, when she voluntarily left her employment to move with her parents to Victoria, B.C., whom she helps to support. Her salary, on leaving, was \$31 a week. On August 30, 1949, she made a claim for benefit at the local office in Victoria and the Insurance Officer disqualified her from the receipt of benefit for a period of six weeks as from August 7, 1949, for having voluntarily left her employment without just cause (Section 41 (1) of the Act).

The claimant appealed to a Court of Referees. The Court heard the case in Victoria, B.C., and unanimously upheld the decision of the Insurance Officer. From the unanimous decision of the Court of Referees the claimant asked the Chairman of the Court for leave to appeal to the Umpire. Permission was granted on the ground that decision CU-B 107 (July 24, 1946), which deals with a somewhat similar case had not been brought to the atten-

tion of the Court during its deliberations. In her submission to the Umpire she stated:—

My father was advised to come to Victoria for health reasons and I decided to accompany my parents to keep intact that bond which has kept our family so close together. If my parents had moved a short distance from Toronto I most certainly would have remained in my employment. However when they had moved practically across the continent I do feel I was justified in leaving my employment and to come with them. Only a person whose parents are in the older age bracket realize how necessary it is to be able to be near them, or at the very least, to be able to visit their loved ones at least once or twice a month.

DECISION:

There can be no doubt that under ordinary circumstances, a girl of the claimant's age who would voluntarily leave her employment in order to follow her parents to another town or city, would not show just cause within the meaning of Section 41 (1) of the Act. As pointed out in previous decisions, if a girl has or desires to work, she must arrange her affairs to meet the exigencies of the labour market; the object of the Unemployment Insurance Act is to protect insured persons against certain risks of involuntary unemployment.

In this particular case, however, the claimant is living alone with her parents and according to her statement, she contributes to their support. Her father had to give up his business due to health reasons and moved to Victoria, B.C., a distance of approximately 2,800 miles. The claimant felt that if she were to remain in Toronto, it would mean in effect a total separation from her parents, and she voluntarily left her employment, on August 6, 1949. Although Victoria is not an industrial centre, it was reasonable for her to expect that in view of her line of occupation she would have a good chance of finding employment there. In fact, she stated before the Court of Referees that she obtained employment in that city on October 1, 1949.

Taking all the circumstances into consideration, I am of the opinion that the claimant, whose case is somewhat similar to that dealt with in CU-B 107, has shown just cause for having voluntarily left her employment.

The appeal is allowed.

Held that the claimant had not shown just cause within the meaning of the Act for having voluntarily left his employment but in view of the extenuating circumstances of the case, the period of disqualification was reduced from six weeks to three weeks.—CU-B 566 (May 1, 1950).

MATERIAL FACTS OF CASE:

The claimant, single, 22 years of age, was employed as a bellhop by a hotel in Regina, Sask., from August 19, 1949 to October 31, 1949, when he voluntarily left to return to Vancouver, B.C., where he had previously resided. On November 12, 1949, he made a claim for benefit at the local office in Vancouver and the Insurance Officer disqualified him from the receipt of benefit for a period of six weeks as from November 1, 1949, for having voluntarily left his employment without just cause (Section 41 (1) of the Act).

The claimant appealed to a Court of Referees and stated in part:—

On the thirteenth of August of this year, I received word that my mother was very ill and not expected to live. I quit my job (in Vancouver) and went back to Regina. When I arrived my mother was dead. My father asked me if I would stay there for a while and keep him company, so I started working at the Hotel. When I applied for the job I informed the Manager that I would be coming back here in a few months and he said that was all right as it was only a temporary job anyway. I came back

here November the first as my married sister is now at home helping my dad look after the house.

The Court of Referees heard the case in Vancouver, B.C., and unanimously reversed the decision of the Insurance Officer in a finding which reads:—

Claimant impressed us in his further particularizing of his movements. In fact we are agreed that his actions were very much those of any right-minded young man acknowledging an obligation to his parents and also to his future. He in fact informed us that he had planned for over a year to be married, his fiancée being permanently located in Vancouver. While in strict terms of the law he was not justified in leaving his employment at Regina, we are, as noted above, sufficiently impressed by the human and intrinsic merits of the appeal that we will disagree with the Insurance Officer and grant it."

From the decision of the Court of Referees, the Insurance Officer appealed to the Umpire and stated in part:—

There is no evidence to indicate that (the claimant) had any reasonable prospect of employment at the time of separation and he should have been aware that the employment situation in Vancouver at that time was such that there would be difficulty in securing suitable employment.

It is submitted that the reasons for separation advanced by the claimant do not constitute just cause for voluntarily leaving his employment within the meaning of Section 41 (1). Had he exercised reasonable prudence he would first have ascertained particulars of the employment situation either through friends and acquaintances in Vancouver or through the local office of the Commission in the city where he was working.

The question of a claimant moving to another district without having any previous prospect of employment in that district was dealt with in CU-B 296 (October 31, 1947) and 337 (February 27, 1948), and in those cases the claimants were held not to have established just cause in voluntarily separating from their employment. It is submitted that the principle established in those decisions are also applicable to the circumstances of this case.

DECISION:

In view of the jurisprudence established in previous decisions of the Umpire dealing with similar cases, there can be no doubt that the grounds on which the Insurance Officer bases his appeal to me are sound. For instance, the following extract from decision CU-B 296 applies to the present case:—

The claimant, as an individual, might have had good personal reasons to take this course of action; but as an employed person, insured under the Act, she has not shown just cause for voluntarily leaving her employment and she was not justified,

as such, under the circumstances, in throwing herself on to the Unemployment Fund, when she had suitable employment in and no definite prospect of getting work in

I can quite realize that the claimant's interests lie in Vancouver and that he only returned to Regina, temporarily, in order to fulfill his obligations as a dutiful son, for which he is to be commended; nevertheless, the principle established in pre-

vious decisions, like the two mentioned by the Insurance Officer in his submission to me, must be upheld.

I am prepared however to support the sympathetic view taken by the Court of Referees, which had the opportunity of hearing the claimant, but only to the extent of reducing the period of disqualification from six weeks to three weeks.

The appeal is allowed.

Changes in Unemployment Insurance Regulations

By Order in Council P.C. 2606, dated May 23, 1950, approval was given to several changes in the Unemployment Insurance Commission Regulations, 1949. Most of these changes were necessitated by recent changes in the Unemployment Insurance Act, particularly with regard to the increase in the insurable limit and the adoption of a new table of contribution classes.

Coverage

Section 2 (1) of the Unemployment Insurance Coverage Regulations, dealing with the predetermination of earnings by employers, has been amended to conform with the increase in the wage ceiling for insurability from \$3,120 to \$4,800 a year. The regulation further provides that for the purpose of such predetermination, where the rate of remuneration is a weekly rate, the actual earnings of an employed person for a twelve-month period shall be considered to be on the basis of 52 times his weekly rate. This is to remove any ambiguity in view of the fact that a calendar year contains slightly more than 52 weeks.

Sections 14 (1), 22 (1) and 27 (1) of the Unemployment Insurance Coverage Regulations have been amended to provide that in connection with hearings of appeals before the Commission or the Umpire the travelling and other expenses of persons attending the hearings shall be repaid to them only if they are directed to attend the hearings.

Contributions

Sections 8 (4) and 16 of the Unemployment Insurance Contribution Regulations have been amended in accordance with the

amendments to the Act establishing a new table of contribution classes. These amendments to the regulations deal with the determination of the proper contribution class for (a) persons paid by commission or share of profits and (b) stevedores at designated ports where the number of daily contributions payable is determined by the use of cash divisors.

Benefit

Changes have been made to several sections of the Unemployment Insurance Benefit Regulations to provide for the following:—

- (a) defining the expressions initial claim, renewal claim, continuing claim and postal claimant;
- (b) clarifying the procedure for filing a claim in the prescribed manner;
- (c) making application for extension of the qualifying periods for entitlement to benefit, in accordance with amendments to the statutory conditions mentioned in the Act;
- (d) providing that in appeals to the Umpire from decisions of Courts of Referees the time limit prescribed for a claimant to file an appeal or for interested parties to file a statement of observations and representations may be extended in particular cases for special reasons.

Employment

Section 2 (a) of the National Employment Service Regulations, 1949, which defines insurable employment for the purpose of those regulations, has been amended to take account of the fact that lumbering and logging has been removed from the list of excepted employments.

Unemployment Insurance Statistics, April 1950*

The monthly report of the Dominion Bureau of Statistics on operations under the Unemployment Insurance Act states that during the month of April, 1950, 90,123 claims were filed at local offices of the Unemployment Insurance Commission. This number represents a decline of 32 per cent from the level of 133,404 in March, 1950 and an increase of 31 per cent from 68,979 in April, 1949.

Of the total claims filed in April, 1950, 80,028 were initial and renewal claims representing mainly new cases of unemployment among insured persons. This was a decrease from the figure of 119,533 for March, 1950, but an increase from 58,141 for April, 1949.

Ordinary claimants on the live unemployment register numbered 209,905 in April, 1950 as compared to 265,382 for March, 1950 and 134,480 in April, 1949.

Duration of unemployment is indicated by the number of days that benefit claimants are continuously on the unemployment register. During April, 1950, 191,486 persons were on the live register seven days or more (that is, the group consisting mainly of beneficiaries) as compared with 237,562 in this category in March, 1950.

Claims handled at adjudicating centres and Courts of Referees in April, 1950, totalled 97,156. Of the 96,243 claims adjudicated, 72,181 were allowed, 23,275 were disallowed or disqualified and 787 represented special requests not granted. Claims handled by Courts of Referees numbered 913.

Chief reasons for non-entitlement to benefit in April, 1950, were: "insufficient contributions while in insurable employment" 12,922 cases; "voluntary leaving without just cause" 3,792 cases and "not unemployed" 2,299 cases.

* See Tables E-1 to E-8.

Persons commencing receipt of benefit in April, 1950, numbered 59,965 as compared to 91,646 for March. This represents a decrease of more than a third.

During April, 1950, \$11,353,188 were paid in respect of 4,670,731 days as against \$15,747,725 and 6,466,268 days in March and \$7,605,824 and 3,400,443 days in April, 1949.

For the week of April 29 to May 5, 1950, 186,093 persons received \$2,674,615 in respect of 1,105,293 days as compared to 219,711 persons, \$3,162,185 and 1,297,370 days for the week of March 25 to March 31 inclusive. Average duration of benefit was the same for both periods mentioned (5.9 days) while the average amount of benefit paid during the week of April 29 to May 5 inclusive, was \$14.37 as compared to \$14.39 for the week of March 25 to March 31 inclusive.

Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission for the month ending April 29, 1950, show that 2,019,393 employees had renewed their insurance books since April 1. This figure is considerably lower than the figure reported at the end of March, 1950, due to the fact that book renewals had not been completed by the end of April. Then too, the figure for March, 1950 had included all employees who had been issued with insurance books and had made contributions to the unemployment insurance fund at one time or another since April 1, 1949.

Preliminary estimates indicate that by the end of May, when book renewals will have been completed, approximately 2,900,000 insured persons will have renewed their books or contribution records.

As at April 29, 1950, 228,369 employers were registered, an increase of 759 since March 31, 1950.

An analysis of the current employment situation prepared by the Economics and Research Branch, Department of Labour, on the basis of returns from the National Employment Service, reports from the Dominion Bureau of Statistics, and other official information.

EMPLOYMENT CONDITIONS DURING MAY

With a growing volume of outdoor work underway in all regions, there was a marked increase in the number of persons employed during May, with a corresponding decline in the total of those seeking work. Labour shortages were reported in some occupations in the forestry industry in British Columbia and a scarcity of farm workers was developing in the Prairie provinces. In Eastern Canada, farm and construction work and log-driving and sawmill operations were absorbing thousands of workers.

Although delayed by unfavourable weather conditions during the first part of the month, employment increased rapidly during the latter part of May. While agriculture, construction and forestry operations provided most of the new jobs, improvement was general in the economy as a whole.

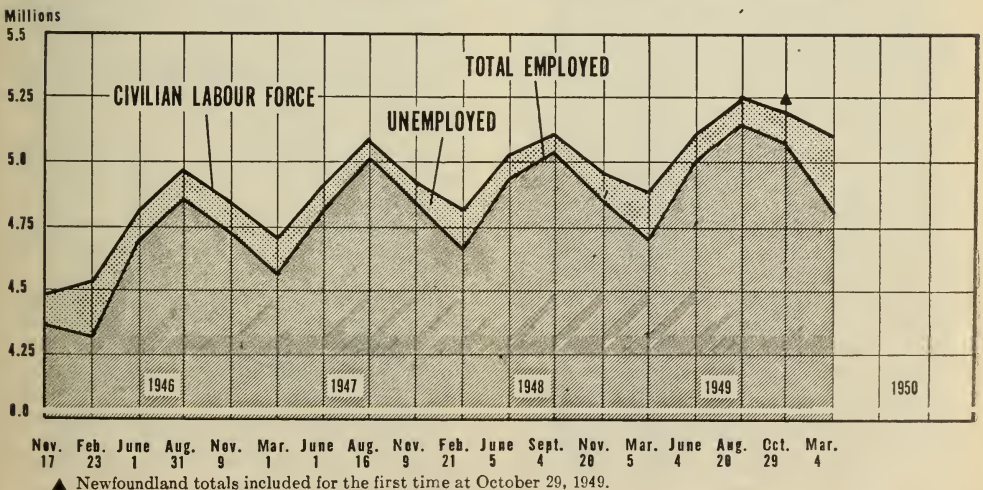

Manufacturing employment also expanded in aggregate, as industries producing food and beverages, lumber and other construction materials were moving into their active periods. Short-time work and periodic lay-offs during May, apart from those resulting from the Winnipeg flood and the Rimouski fire, involved a relatively small number of workers, chiefly in the textile, railway rolling stock and ship-building industries.

During the month, there was a decline in the number of registrations for employment that were on hand at National Employment Service offices. Registrations dropped from 387,000 to 254,000. A large part of this decline, approximately 60,000, occurred during the week ending May 18 due to the removal from the National Employment Service files of those applications from persons claiming supplementary unemployment insurance benefits which had been on hand for 30 days since the applicant last visited the office.

Industrial Analysis

In **agriculture**, shortages of farm labour appeared during May, although the supply of farm workers this year was in better balance with the demand than at any time

LABOUR FORCE, EMPLOYMENT AND UNEMPLOYMENT

since 1939. Experienced farm help, particularly men familiar with farm machinery, were in demand and shortages of this type of worker were most in evidence.

With the spring increase in job opportunities in other industries, many job-seekers were reluctant to accept farm work. A preference was being indicated for employment in occupations covered by the Unemployment Insurance Act, such as those in the construction and logging industries. In the Prairie region, large numbers of men were being hired for construction work and in the Quebec and Maritime regions experienced farm workers were accepting employment for the spring logging drive and pulpwood cut.

The first of the organized movements of farm workers, that for the sugar beet industry, began in Ontario during May and in Quebec during the first week of June. In Quebec, between 800 and 1,000 men were needed for beet blocking and were recruited mainly from Beauce, Dorchester and Frontenac counties. Orders for haymakers from the Maritimes and Western Canada were being placed at local Employment Service offices in Ontario during May. Requests for immigrants to work on farms are lower than last year, but there is some indication that farmers have underestimated their labour requirements.

During May, in the *forestry* industries, river driving and sawmill operations absorbed large numbers of workers. This, together with the opening up of agricultural activity, greatly reduced unemployment among the large group of workers in Canada from which both these industries draw their labour. The spring thaw was late this year, and as a result, log driving did not get under way in most areas until well into May.

In addition to requirements for the log drive, labour was in demand for summer cutting and cruising parties. More summer cutting is being carried on this year and full employment among woodsmen is expected until August. In the Lakehead region, experienced cutters for pulpwood operations were already scarce in May; some camps were only partly staffed; others were unopened. During the month, about 2,500 woods workers from the province of Quebec were given employment in Maine. In the Maritimes, dry weather permitted an earlier start at cutting operations, although forest fires restricted activity, both in sawmill and logging operations. A contract with the United Kingdom for 97 million feet of spruce lumber and the strong demand from the United States has greatly increased activity in the Maritime lumber industry.

Employment and production in the British Columbia forestry industries were also back to normal in May, after a slow recovery from the severe winter. A shortage of skilled men, such as engineers, fallers and riggers was reported, and suitable unskilled workers were being hired on occasion. Lower labour turnover was reported this season than in previous years.

Aggregate employment in *manufacturing* establishments expanded during the month, as seasonal activities increased in plants producing foods and beverages, lumber and construction materials. Short-time work and periodic lay-offs, which had been very evident in these industries during the winter months, were correspondingly reduced. Despite this seasonal improvement, the total number of workers employed was slightly below 1949 levels. The Dominion Bureau of Statistics index of manufacturing employment at April 1 was 119.2 (June 1, 1941=100), as against 120.8 one year previously. The following few comments are made on the employment situation in some of the individual manufacturing industries.

The declining trend of employment in the iron and steel industry, in evidence since early in 1949, is continuing. Reported employment was 279,000 at April 1, nearly 7 per cent below 1949 levels. This decline from the previous year was common to all sections of the secondary industries, with the exception of plants producing automobiles and parts, but was most marked in the case of agricultural implements, shipbuilding, foundries and machinery manufacturers. Primary steel production, on the whole, has been maintained at capacity, with advance orders for several months.

Employment has remained stable in the pulp and paper products industry, with a moderate decline in pulp and newsprint plants balanced by expansion in the secondary paper products and printing and publishing groups. Demand has been strong for newsprint but substantial increases in production as a result of expansion and improvement programs have not been matched by corresponding increases in employment. Reported employment in the three groups at April 1, 1950, was 112,000.

The demand for almost all the products turned out by the electrical apparatus industry has remained strong and the labour force in the industry has expanded over 1949 levels. Sales of household appliances have held up during the first part of the year and the demand for electrical equipment by the construction industry has also maintained employment.

EMPLOYMENT TRENDS IN CANADIAN INDUSTRIES

Average: 1941=100

The backlog of orders for heavy electrical equipment, however, has been reduced, as the bulk of the orders were placed two or three years ago for hydro-electric power projects. Reported employment in the industry at April 1 was 54,000, about 2 per cent above the figure at the same month in 1949.

The labour force in the chemical industry has continued to expand in the first part of 1950, based on the strong demand for industrial chemicals, paints and varnishes, soap, cosmetics and similar products. About 44,000 persons now find their employment in chemical plants, mainly in the more industrialized sections of Ontario and Quebec. The productive capacity of the industry continues to expand, with 12 new plants employing 535 workers, reported as completed in the first five months of this year.

Building tradesmen were being recalled to **construction** work in large numbers during May as the industry was beginning to get into full operation. Due to unfavourable weather conditions, pockets of unemployment remained in some areas, and in general the volume of work underway was not sufficient to absorb all the semi-skilled and unskilled workers seeking employment in construction work. These will be readily absorbed as the industry reaches peak production in the summer months.

The number of construction workers registered at the National Employment Service declined from 60,000 at the first of May to 28,000 at the end of the month. This decrease was distributed among the following main occupational groups:—

Occupation	Number of Applications in Live Employment Files	
	April 27	May 4
Bricklayers & Tiles setters...	1,295	559
Carpenters	24,853	11,645
Cement & Concrete finishers.	548	243
Painters	4,073	1,387
Plasterers	382	158
Plumbers & Steamfitters...	2,367	1,631
Other skilled workers....	2,583	1,331
Unskilled workers	23,496	10,876
Total	59,597	27,830

The volume of work planned for this year, as indicated by the value of contracts awarded, is above last year's record level. The total value of contracts awarded up to the end of May was \$421,000,000, as compared to \$386,000,000, in the corre-

sponding period in 1949. This increase has been concentrated in the residential and business sectors.

Beginning in May, there was an increased demand for many types of **service** workers as summer resorts and tourist establishments began to line up their staffs for the summer season. There was some improvement in the supply of labour available, although workers were often obtained at the expense of other service establishments. Waitresses, kitchen help and groundsmen were in general readily available, but shortages of cooks and stenographers were reported.

Casual workers for cleaning, gardening, and other odd jobs were also in greater demand during the month. More women were available for domestic work by the day, partly because it is more profitable, but also because the over-all shortage of domestic workers was still very apparent. Laundries were busier during May than in April and any qualified worker could easily find employment in this industry. A seasonal increase also took place in automotive repair work and first-class motor mechanics were in demand.

Regional Analysis

Registrations on hand at National Employment Service offices in the **Atlantic** region declined by 25,000, or 33 per cent, during the month of May, as seasonal activity increased with improved weather conditions. At the end of the period, registered job-seekers represented almost 10 per cent of the labour force of the region, as compared to over 14 per cent a month earlier. The greatest proportional improvement occurred in New Brunswick, the least in Newfoundland.

Although somewhat delayed by the late spring, agriculture became very active in a short space of time; construction programs were getting well under way and seasonally active manufacturing plants continued to hire additional workers. Employment in other manufacturing firms remained generally stable; coal mining employment rose, although there was sporadic short-time in some areas; road and rail transportation became more active but ocean ports were slack; trade continued to pick up, and resorts, hotels and restaurants were absorbing numbers of service workers. The river drive was largely completed during the month, bringing greater activity to pulp mills, sawmills and other woodworking establishments; in many areas, pulpwood cutting and peeling was under way and some lumber was being cut despite the forest fire hazard.

In *Newfoundland*, the future of the fishing industry continued to cause considerable anxiety, since many suppliers and fishermen were unable or unwilling to make any preparations for the current season until some basis is found for confidence in the market for fish. The lobster catch to date has been average, and salmon landings are improving. Average to heavy landings of other fish—cod, haddock, herring, etc.—and very heavy lobster catches in *Prince Edward Island* and the *Halifax, Cape Breton* and *Moncton* areas brought fish processing plants to a generally high level of activity. Improving catches of cod were making up for the poor lobster season along the south shore of Nova Scotia.

Despite a two-week delay due to unseasonal weather conditions, the latter part of May saw a substantial increase of employment in the seasonal industries of the *Quebec* region. Applications in the live files of National Employment Service offices in the region totalled 6 per cent of the Quebec labour force at the end of May, only slightly more than one-half the volume a month earlier.

Intensive activity on farms in most areas of the region, once the weather moderated, enabled farmers to complete seeding at about the usual time. The shorter hours and higher wages being paid in the construction industry, however, were making it difficult for farmers to obtain help. Ocean fisheries picked up during the month, employing considerable numbers along the lower St. Lawrence and the Gaspé coast. Mining operations continued at capacity and exploration and prospecting absorbed an increasing number of workers. The river drive was well under way throughout most of the region, although delayed by the late thaw, and a start was made at the summer cut, which is expected to equal, if not exceed, last year's.

The increase in construction activity as the weather improved was sufficiently great to account for a large proportion of the seasonal employment gain during May. When road work programs get under way in the different areas, large numbers of unskilled labourers still seeking work will be employed. Shortages of construction workers appeared in *Three Rivers, Quebec City* and some centres in the Eastern Townships.

Despite areas of slackness, manufacturing activity in Quebec was generally stable during the month, with continuing increases of employment in the seasonal industries and some expansion in the work forces of those providing more regular

employment. The production of electrical equipment and appliances continued to expand in *Montreal*. In that area, however, as in centres throughout the Eastern Townships, the slack employment situation continued in textiles, clothing, leather products, heavy transportation equipment and foundries, and in aircraft production. Newsprint production remained at capacity in *Three Rivers* and the *Saguenay-Lake St. John* district, with mills hiring additional summer staffs. Construction materials manufacturing, and especially lumber and lumber products establishments, were at capacity in the latter areas, in *Rimouski* and in the *Eastern Townships*.

Retail trade activity showed a slight improvement, although it was still generally below last year's levels as a result of the winter employment situation. The prospect of a high volume of tourist trade resulted in further hirings of service workers by hotels and resorts in *Quebec City, Three Rivers, Victoriaville* and the smaller centres in the *Laurentians*.

Decided improvement in the employment situation of the *Ontario* region was evident during May. The labour surplus, as measured by unplaced applicants, dropped by almost one-third as workers were absorbed into construction and agriculture, and as seasonal expansion in manufacturing continued. By the end of the month, applicants formed only 3.1 per cent of the regional labour force. A few spot labour shortages began to appear in some areas, particularly for farm workers.

Employment for women has not expanded as rapidly as for men, since most of the seasonal upswing has been concentrated in heavy manufacturing or outdoor industries. Furthermore, employers have been giving job preference to single girls, and by far the majority of female applicants are married women—about 75 per cent.

The two major developments in manufacturing industries were the settlement of the prolonged strike in the U.S. automobile industry, which enabled the Canadian plant at Windsor to resume production during May, and the settlement of contract negotiations in the same plant in time to prevent another serious shutdown. Heavy industries maintained steady production during the month in most areas, but a few light industries were still working on part-time schedules. The textiles industry complained of British competition, and the leather industry faced a weaker market as a result of unprecedented use of compositions and other leather substitutes. Radio manufacturing plants were busy with the production of television receivers.

A general expansion of employment in the *Prairie* region during May was offset to some extent by the havoc caused by flood conditions in the Red River Valley area. In other sections, however, the delay caused by the bad weather of the past few months was now giving added impetus to labour demand as outdoor industries opened up. Unplaced applicants dropped, especially in Alberta, to form 4.2 per cent of the regional labour force at the end of the month.

In the Winnipeg area, business, industry, agriculture and all community services severely felt the effects of the flood. Many establishments were forced to curtail activities completely, while others carried on under difficult circumstances and on a reduced scale. By the beginning of June, however, work was resumed in most cases, and as rehabilitation work began, labour demand increased sharply. Major repairs to embankments, railway tracks, bridges and highways will be necessary in addition to a heavy residential construction program, and labour shortages were expected in the area by the end of June.

Spring farm work throughout the Prairie provinces suffered repeated delays through the unfavourable weather, but more so in Manitoba and Saskatchewan than in Alberta. In the latter province, spot labour shortages were developing but the arrival of transient workers was easing the situation somewhat. The demand for experienced operators of power farm machinery has not been easily met since few workers are qualified; demand for this type of worker is increasing each year as farming becomes more mechanized.

As activity increased further in logging, sawmills, fishing, construction and agriculture, the labour surpluses of the *Pacific* region gave way to shortages in many occupations. Reflecting this, the number of unplaced applicants dropped sharply during May to form 6.5 per cent of the regional labour force at the end of the month. Further sharp declines were expected in June as employment was rising rapidly towards its seasonal peak.

With better weather conditions, logging operations throughout the region made a rapid return to full production. A shortage of skilled workers such as engineers, fallers and rigging men was becoming noticeable. Sawmills were working at capacity, and starting extra shifts where skilled men were available; the scarcity of edgemen, setters and doggers, has delayed the opening of some shifts. Shingle mills were also working full time, with the larger ones running night shifts, and should

remain in full operation all summer if there is no log shortage due to the fire season or a strike.

Berry crops were nearing the harvest season, and the recruiting of berry pickers was under way; about 1,000 pickers would be needed in the Vancouver Island district, but here and elsewhere in the region no shortage of farm help was expected. Employment opportunities in mining were increasing substantially, and nearly all available skilled men had been absorbed during May. A development which will create permanent employment in its final stage, is the construction of a highway between Whitehorse and Mayo in the Yukon Territories, which will enable the year-round shipment of ore, and thus encourage the opening of new mines in the area.

Employment Service Activities

Employment conditions have been improving to such an extent that by June 8, the number of applicants at employment offices was little more than one-half the number registered at the April 6 peak. Job orders were steadily increasing and, by the end of May, unfilled vacancies for men exceeded the number on file at the same time in 1949. A post-war record for placements was established for the month of May and claims for unemployment insurance dropped decidedly.

By June 8, there were about 240,000 persons registered at employment offices. The decline in applicants was now steady in all regions, although more rapid in Quebec and British Columbia, where the largest increase took place in the winter.

Improvement was held up somewhat in the Prairies because of the Winnipeg flood, and in Newfoundland because of the uncertain markets for fish products.

Most of the decline in applicants was in the major seasonal occupations. During May, records at employment offices showed that 30,000 loggers, about 28,000 general labourers, 27,000 construction workers and about 9,000 transportation workers had been placed or found jobs on their own. About 70 per cent of the registered persons returning to work during May found jobs in those occupations. Unskilled workers were now showing declines comparable to the skilled and semi-skilled.

Many of these workers were channelled back into jobs through the direct efforts of the Employment Service. About 76,000 placements were effected at employment offices during May, with all regions showing decided increases over the previous month. Particularly toward the end of May, hirings

through NES rose since earlier in the month many employers were recalling former staffs and thus did not report the opening to the local office.

Although the supplementary benefit program ended on April 15, many persons brought into employment offices because of the program will continue to use the Service in finding jobs. About one-half of the 125,000 persons who claimed supplementary benefits were not registered for work before the program began. A large proportion of these were workers in the logging industry, who became insured April 1, and there will thus be an added incentive for these people to continue to register with the employment offices. This increase in proportion of the working population serviced by the employment offices tends to make the statistics on applicants a better indicator of unemployment trends than they were a year ago.

VOCATIONAL TRAINING GRANTS FOR YOUTH IN GREAT BRITAIN

A permanent "Special Aptitudes" scheme to provide for vocational training grants to boys and girls in Great Britain came into operation on April 1 last, replacing the interim scheme introduced by the Ministry of Labour in September, 1947.

The purpose of the scheme is to give financial assistance to boys and girls who possess aptitudes for skilled industrial occupations, to enable them to take up training away from home when no suitable training facilities are available in their own locality. In adopting the scheme, the fact was recognized that while scholarships are provided to enable boys and girls to obtain higher education with a view to entering the professions, there was no corresponding provision for a boy or girl to receive financial assistance in training away from home for a skilled craft or trade.

When a young person who obviously has the capacity for learning a skilled industrial occupation is unable to receive the necessary training, because of lack of facilities in his district and the inability of his parents to maintain him away from home, a double loss results, it is pointed out—first, to the individual, who is deprived of the possibility of pursuing an occupation for which he is clearly fitted, and, second, to the national economy, which cannot afford to waste his potential skill.

To be eligible for assistance under the scheme, application must be made before

the eighteenth birthday, and before employment away from home is taken up. The scheme provides for the payment of initial expenses by way of free fares to the employment and settling-in grants of 10s.; a weekly maintenance allowance so calculated as to provide for cost of board and lodgings, midday meals, laundry, fares between lodgings and workplace if not otherwise paid and the distance is over two miles, with a balance by way of a personal allowance varying from 9s. to 16s. according to age. Contributions towards the cost of weekly maintenance allowance will be sought from the employer and, according to family income and liabilities, may be required from the parents or guardians. The amount suggested as the employer's contribution is not less than one-fourth of the total after deduction of the parents' contribution.

Arrangements are made for the reception, lodging and welfare of the boy or girl, and periodical reports on regularity of attendance and progress are required from the employer. Continuance of the weekly maintenance allowance is contingent upon the satisfactory character of these reports.

Since the inception of the scheme, up to the end of 1949, 1,931 applications for assistance have been received, and at that date 1,283 boys and girls had been assisted, with 124 cases still under consideration.

PRICES AND THE COST OF LIVING*

Cost-of-Living Index

The Dominion Bureau of Statistics cost-of-living index, advanced to a new high of 165.4 at June 1, as compared to 164.0 at May 1. The index stood at 160.5 on June 1, 1949. The latest increase was due almost entirely to higher meat prices which advanced the food index from 204.6 to 209.0. On average, fresh pork prices rose 6.3 cents per pound, beef prices 3.2 cents, lamb 4.4, and veal 1.9. Among other foods, butter declined 1.5 cents while fresh vegetables and lemons rose slightly. The index of clothing prices declined 0.1 point to 180.7, as lower prices for women's wear proved more important than slight increases in men's wear, piece goods and footwear. Home furnishings and services moved from 166.4 to 166.9 as a result of increases in galvanized ware and telephone rates in British Columbia. Fuel and light eased from 137.5 to 137.1 reflecting slightly lower prices for coal and coke. The miscellaneous group moved up 0.1 point to 132.4 due mainly to higher prices for automobile tires. The June rent index remained nominal at 132.7, whereas the July index will incorporate the results of a June rental survey.

From August 1939 to June 1950, the increase in the cost-of-living index was 64.1 per cent.

Cost of Living in Eight Cities

Cost-of-living indexes for seven of the eight regional cities registered narrow changes during April. Indexes for three centres moved up while four were lower. Edmonton remained unchanged at 160.4.

Among groups foods moved moderately, mainly reflecting fluctuations in butter, eggs, beef and coffee. Clothing and home furnishings and services recorded small changes at most centres while the miscellaneous items index was generally unchanged. Rents were not surveyed in May and, therefore, recorded no movement.

Composite city index changes between April 1 and May 1, 1950 were as follows: Vancouver +0.5 to 166.2; Winnipeg +0.3 to 159.3; Toronto +0.2 to 160.6;

Saint John -0.4 to 159.4; Montreal -0.3 to 166.2; Halifax -0.1 to 155.5 and Saskatoon -0.1 to 164.7. The Dominion index remained steady during the same interval at 162.7.

Wholesale Prices, April, 1950

The general index of wholesale prices advanced 0.8 point to 160.1 between March and April, 1950. Five of the eight major groups contributed to this increase. Vegetable Products and Iron Products led with equal gains to 1.4 points to 146.4 and 180.0 respectively. Wood Products increased 1.0 point to 192.5; Non-ferrous Metals and Non-metallic Minerals both moved up 0.2 point to 137.4 and 140.2. Animal Products at 166.8 and Textile Products at 162.4 were unchanged from the previous month. Chemical Products, the only group to register a decline, moved down 0.2 point to 117.2.

Among commodities which recorded increases between March and April, were the following: lemons 21.7 per cent, raw rubber 19.6 per cent, alum 16.8 per cent, rolled oats 16.0 per cent, cocoa beans (African) 11.2 per cent, lambs, Toronto, 11.1 per cent, steer carcass, Montreal, 9.6 per cent, cocoa butter 9.5 per cent, oats (western average) 9.4 per cent, western cedar shingles 8.9 per cent, corn meal 8.7 per cent. Decreases were registered in the same period for the following: onions, Toronto, 30.7 per cent, crushed stone 13.4 per cent, fresh milk, Halifax, 12.8 per cent, sodium bichromate 10.7 per cent, steer hides 9.5 per cent, sand, Toronto, 9.4 per cent, canned cherries 9.4 per cent, pork carcass 9.1 per cent, soya bean oil 8.1 per cent, chocolate liquor 6.7 per cent.

The wholesale price index of Canadian Farm Products rose 1.0 point between March and April to 148.4. Animal Products rose 1.4 points to 187.4; higher prices for livestock and wool outweighing declines in hides and skins, fresh milk and eggs. All components of the Field Products group, with the exception of potatoes and onions, recorded small gains which moved the index up 0.7 point to 125.1.

* See Tables F-1 to F-6.

COST OF LIVING IN CANADA FROM JANUARY, 1946

(Base 1935-1939 = 100)

STRIKES AND LOCKOUTS*

Canada, May, 1950

Slight increases were recorded in the number of strikes and lockouts, the number of workers involved, and the resulting time loss, as compared with the low level of the previous month. In comparison with May, 1949, with a loss of 174,000 days, the current month showed a loss of only 24,000 days. Four work stoppages which caused the greatest amount of time loss were: iron-ore miners at Bell Island, Nfld., cotton and rayon underwear factory workers at Sherbrooke, P.Q., hardware factory workers at Peterborough, Ont., and plumbing supplies factory workers at London, Ont.

Preliminary figures for May, 1950, show 23 strikes and lockouts in existence, involving 3,488 workers, with a time loss of 23,874 man-working days, as compared with 20 strikes and lockouts in April, 1950, with 2,585 workers involved and a loss of 14,640 days. In May, 1949, there were 23 strikes and lockouts, involving 10,532 workers, and a loss of 173,925 days.

For the first five months of this year there was little change in the number of strikes and lockouts and in the number of workers involved, but the time loss declined substantially, being less than one-quarter of that in the first five months of 1949. Cumulative totals for 1950 show 56 strikes and lockouts, involving 14,581 workers, with a time loss of 129,420 man-working days. For the similar period last

year there were 50 strikes and lockouts, with 16,608 workers involved, and a loss of 530,535 days.

Based on the number of non-agricultural wage and salary workers in Canada, the time lost in May, 1950, was 0.03 per cent of the estimated working time; 0.02 per cent in April, 1950; 0.21 per cent in May, 1949; 0.03 per cent for the first five months of 1950; and 0.13 per cent for the first five months of 1949.

Of the 23 strikes and lockouts in existence during May, 1950, three were settled in favour of the workers, two in favour of the employers, four were compromise settlements, and four were indefinite in result, work being resumed pending final settlement. At the end of the month 10 work stoppages were recorded as unterminated.

The record does not include minor strikes such as are defined in another paragraph nor does it include strikes and lockouts about which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Strikes of this nature which are still in progress are: compositors, etc., at Winnipeg, Man., which commenced on November 8, 1945, and at Ottawa and Hamilton, Ont., and Edmonton, Alta., on May 30, 1946; and textile products factory workers at St. Lambert, P.Q., August 29, 1949.

* See Tables G-1 and G-2.

Great Britain and Other Countries

The latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month. Statistics given in the annual review issued as a supplement to the *LABOUR GAZETTE* for April, 1950, and in this article are taken, as far as possible, from the government publications of the countries concerned.

Great Britain and Northern Ireland

The British *Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones.

The number of work stoppages beginning in March, 1950, was 143 and 24 were still in progress from the previous month, making a total of 167 during the month.

In all stoppages of work in progress in the period there were 29,500 workers involved and a time loss of 124,000 working days was caused.

Of the 143 disputes leading to stoppages of work which began in March, nine, directly involving 2,400 workers, arose out of demands for advances in wages, and 56, directly involving 6,700 workers, on other wage questions; 23, directly involving 4,000 workers, on questions respecting the employment of particular classes or persons; 48, directly involving 4,400 workers, on other questions respecting working arrangements; and three, directly involving 500 workers, on questions of trade union principle. Four stoppages, directly involving 1,400 workers, were in support of workers involved in other disputes.

United States

Preliminary figures for April, 1950, show 400 strikes and lockouts beginning in the month, in which 160,000 workers were involved. The time loss for all strikes and

lockouts in progress during the month was 3,150,000 man-days. Corresponding figures for March, 1950, are 260 strikes and lockouts, involving 80,000 workers, with a time loss of 3,750,000 days.

SELECTED PUBLICATIONS RECEIVED RECENTLY IN LIBRARY OF DEPARTMENT OF LABOUR*

The publications listed below are not for sale by the Department of Labour. Persons wishing to purchase them should communicate with the publishers. Publications listed may be borrowed, free of charge, by making application to the Librarian, Department of Labour, Ottawa. Students must apply through the library of their institution. Applications for loans should give the number (numeral) of the publication desired and the month in which it was listed in the LABOUR GAZETTE.

Balance in fund.....\$000, 000	581·0	580·3	532·4	454·1	196·3	†
Price Indexes—						
Wholesale ⁽²⁾	161·8	160·1	157·5	148·9	102·9	73·4
Cost of living index ⁽³⁾	164·0	164·0	159·3	151·6	119·1	100·6
Residential building materials ⁽⁵⁾	230·6	227·2	229·5	211·0	146·6(7)	102·3(7)
Production—						
Industrial production index ⁽³⁾	195·6	191·0	184·7	184·1	200·8	102·2
Mining production index ⁽³⁾		145·2	125·0	137·3	105·6	109·8
Manufacturing index ⁽³⁾	203·5	199·2	194·2	193·2	222·4	100·8
Electric power.....000, 000 k. w. h.	4, 417	4, 062	4, 150	3, 727	3, 277	2, 197
Construction—						
Contracts awarded.....\$000, 000	112·0	112·9	76·8	80·8	27·7	12·3
Dwelling units, started.....000		7·4	8·5	8·3	†	†
Completed.....000		5·4	7·3	6·7	†	†
Under construction.....000	50·9	50·2	48·1	39·2	†	†
Pig iron.....000 tons	195·9	185·3	180·7	170·8	170·4	46·3
Steel ingots and castings.....000 tons	290·9	279·3	270·0	264·3	260·8	99·8
Inspected slaughtering, cattle.....000	102·8	89·8	87·5	102·6	93·5	57·5
Hogs.....000	433·8	403·3	339·7	419·9	793·3	259·2
Flour production.....000, 000 bbls	1·69	1·63	1·58	1·95	1·95	1·11
Newsprint.....000 tons	459·9	422·8	442·4	385·6	236·4	220·8
Cement producers' shipments.....000, 000 bbls		1·4	1·5	1·3	3·9	2·7
Automobiles and trucks.....000	35·3	26·4	26·7	24·2	11·1	16·9
Gold.....000 fine oz.	369·7	326·9	286·1	205·6	245·6	406·4
Copper.....000 tons	22·5	22·5	22·5	20·8	22·5	24·5
Lead.....000 tons	10·6	11·3	13·1	12·6	15·3	15·3
Nickel.....000 tons	11·2	10·6	13·3	11·6	9·2	9·2
Zinc.....000 tons	23·4	17·3	19·3	22·6	14·6	14·6
Coal.....000 tons	1, 316	1, 229	1, 605	1, 236	912	912
Crude petroleum.....000 bbls		1, 845	797	838	559	559
Distribution—						
Wholesale sales index, unadjusted ⁽⁵⁾		278·9	291·7	285·1	173·7	97·7
Retail sales.....\$000, 000		647·6	673·2	573·2	†	†
Imports, excluding gold.....\$000, 000	290·2	230·9	242·7	226·7	137·5	41·9
Exports, excluding gold.....\$000, 000	287·0	205·5	237·8	212·3	282·9	50·3
Railways—						
Revenue freight, ton miles.....000, 000			4, 598	4, 686	5, 342	1, 957
Car loadings, revenue freight.....000	338·0	292·0	309·2	333·8	285·0	179·0
Banking and Finance—						
Common stocks, index ⁽⁴⁾	128·7	125·9	106·4	109·1	79·3	87·7
Preferred stocks, index ⁽⁴⁾	157·3	154·4	140·9	144·2	118·7	95·2
Bond yields, Dominion, index ⁽³⁾	90·2	90·7	84·4	96·5	97·3	96·3
Cheques cashed, individual accounts.....\$000, 000	7, 990	7, 443	7, 267	6, 868	4, 561	2, 473
Bank loans, current, public.....\$000, 000	2, 234	2, 226	2, 093	1, 851	867	814
Money supply.....\$000, 000	4, 479	4, 483	4, 252	4, 052	3, 153(6)	1, 370(6)
Circulating media in hands of public.....\$000, 000	1, 138	1, 178	1, 188	1, 126	893(6)	281(6)
Deposits.....\$000, 000	3, 341	3, 305	3, 064	2, 926	2, 163(6)	1, 089(6)

NOTE.—Latest figures subject to revision. Many of the statistical data in this table are included in the Canadian Statistical Review issued by the Dominion Bureau of Statistics.

† Comparable statistics are not available. (1) Labour Force survey figures given are as at March 4, 1950, March 5, 1949, Feb. 21, 1948. (2) Average 1926=100. (3) Figures are as at March 31, 1950, 1949, 1948, 1944, 1939 respectively. (4) Real earnings computed by dividing index of average weekly earnings of wage-earners in manufacturing by the cost-of-living index; base: average for 1946=100. (5) Average 1937-39=100. (6) Year end figures. (7) Annual index.

* Includes retroactive wage payments to railway system employees.

All totals are rounded to the nearest million independently. Therefore, the final total does not necessarily agree with the sum of the individual estimates.

C—Employment, Hours and Earnings

TABLE C-1.—EMPLOYMENT AND EARNINGS BY PROVINCE, CITY AND INDUSTRY

(The latest figures are subject to revision)

SOURCE: *The Employment Situation*, D.B.S.

Tables C-1 to C-5 are based on reports from employers having 15 or more employees—At April 1, employers in the eight leading industries reported a total employment of 1,966,408 and total payrolls of \$88,226,614.

TABLE C-6.—HOURS AND EARNINGS IN MANUFACTURING

(Hourly-Rated Wage-Earners) SOURCE: *Average Hours Worked and Average Hourly Earnings*, D.B.S.

Tables C-6 to C-9 are based on reports from a somewhat smaller number of firms than Tables C-1 to C-5. They relate only to wage-earners for whom statistics of hours of work are also available, whereas Tables C-1 to C-4 relate to salaried employees as well as to all wage-earners of the co-operating firms.

Week preceding	Average Hours Worked			Average Hourly Earnings		
	All Manufactures	Durable Goods	Non-Durable Goods	All Manufactures	Durable Goods	Non-Durable Goods
	no.	no.	no.	cts.	cts.	cts.

Personal (Chiefly laundries).....	41.4	40.5	41.2	67.6	68.1	64.7	27.99	27.58	26.66

* Industries classed in the durable manufactured goods industries.

¹ Since 1941, the Dominion Bureau of Statistics has prepared current indexes of average hourly earnings of the employees of eight establishments producing heavy electrical apparatus. Based upon the hourly earnings at June 1, 1941, as 100 p.c., the latest figures are as follows:—Feb. 1, 1950, 238.9; March 1, 1950, 239.8; April 1, 1950, 240.4; at April 1, 1949, the index was 228.3.

² Chiefly street and electric railways.³ For information respecting the sex distribution of the persons in recorded employment, see Table C-5.

Above food prices are simple averages of prices reported. They are not perfectly comparable in all cases with price averages for earlier years. Changes in grading, trade practices, etc. occur from time to time. (a) Rental ranges shown above are indicative of prevailing rents being paid. They should not be used as a measure of change in rents paid for the same quality of living accommodation over long periods of time. (b) Averages include prices for cuts with bone-in. (c) Hock-on. (d) Mixed—hock-off and hock-on. (e) Mixed—Carton and loose. (f) Loose. (g) Estimate. (h) Fancy. (i) California. (k) Pure. (m) 360's. (n) Mixed—package and bulk. (p) Package. (s) Mixed—choice and fancy. (t) Tin.

TABLE F-2.—INDEX NUMBERS OF THE COST OF LIVING FOR EIGHT CITIES OF CANADA AT THE BEGINNING OF MAY 1950

(Base: August 1939=100)

	Total			Food	Rent	Fuel	Clothing	Home Furnishings and Services	Miscellaneous
	May 1, 1949	April 1, 1950	May 1, 1950						
Halifax.....	152.4	155.6	155.5	202.2	116.5	132.6	192.2	155.1	123.1
St. John.....	156.0	159.8	159.4	196.1	121.5	134.8	190.7	158.3	130.6
Montreal.....	161.7	166.5	166.2	209.6	131.8	133.9	172.8	171.0	130.6
Toronto.....	155.0	160.4	160.6	197.7	134.2	155.1	180.4	161.7	130.8
Winnipeg.....	154.7	159.0	159.3	206.0	128.8	121.9	175.5	169.4	125.4
Saskatoon.....	161.7	164.8	164.7	215.1	126.1	140.8	186.5	172.9	123.3
Edmonton.....	155.1	160.4	160.4	214.6	118.9	114.6	185.5	161.3	129.2
Vancouver.....	161.1	165.7	166.2	214.1	122.9	140.5	189.5	161.1	135.8

N.B.—Indexes above measure percentage changes in living costs for each city, but should not be used to compare actual levels of living costs as between cities.

Cumulative totals.....	50		16,608		530,535	0.13

* Preliminary figures.

‡ Strikes un-terminated at the end of the previous year are included in these totals.

† The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is not often encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout included as such in the records of the Department is a cessation of work involving six or more employees and lasting at least one working day. Strikes of less than one day's duration and strikes involving less than six employees are not included in the published record unless ten days or more time loss is caused but a separate record of such strikes is maintained in the Department and these figures are given in the annual review. The records include all strikes and lockouts which come to the knowledge of the Department and the methods taken to obtain information preclude the probability of omissions of strikes of importance. Information as to a strike involving a small number of employees or for a short period of time is frequently not received until some time after its commencement.

TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA, MAY, 1950 (1)

Industry, Occupation and Locality	Number Involved		Time Loss in Man-Working Days	Particulars(2)
	Establish-ments	Workers		

Strikes and Lockouts in Progress Prior to May, 1950

MANUFACTURING—

Fur and Leather Products—
Leather goods factory workers,
Montreal, P.Q.

1 35

70

Commenced April 12; for implementation of award of arbitration board, providing for increased wages and other changes in union agreement under negotiations; terminated May 2; negotiations; in favour of workers.

Textiles, Clothing, etc.—
Worsted textile factory workers,
Trenton, Ont.

1 55

1,000

Commenced December 28, 1949; for a new agreement providing for increased wages and reduced hours; un-terminated.

TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA, MAY, 1950(1)

Industry, Occupation and Locality	Number Involved		Time Loss in Man-Working Days	Particulars(?)
	Establishments	Workers		
Strikes and Lockouts in Progress Prior to May, 1950—Con.				
MANUFACTURING—Con.				
<i>Miscellaneous Wood Products—</i>				
Wood cabinet factory workers, Owen Sound, Ont.	1	207	620	Commenced April 24; for a new agreement providing for increased wages, and group insurance and welfare plan; terminated May 3; negotiations; compromise.
<i>Metal Products—</i>				
Washing machine factory workers, Amherst, N.S.	1	35	500	Commenced April 15; alleged discrimination in dismissal of three union officers; (partial return of workers) unterminated.
<i>Miscellaneous Products—</i>				
Neon sign factory workers, installers, etc., Vancouver, B.C.	1	55	275	Commenced March 8; for a new agreement providing for increased wages, two weeks' vacations with pay instead of one, and pay for statutory holidays, following reference to conciliation board; terminated May 5; negotiations; compromise.
TRADE—				
Department store clerks, New Westminster, B.C.	1	30	500	Commenced August 27, 1949; for a union agreement providing for increased wages and other changes as recommended by majority report of conciliation board; unterminated.
Building supplies workers, Victoria, B.C.	1	(3) 67	469	Commenced March 30; for a new agreement providing for increased wages, payment for statutory holidays, contributory hospitalization and annuity plan, etc., following reference to conciliation board; terminated May 9; conciliation provincial and negotiations; compromise, increase in wages granted.
SERVICE—				
<i>Business and Personal—</i>				
Hotel employees, Cornwall, Ont.	5	93	2,000	Commenced March 9; for a union agreement providing for increased wages, reduced hours, overtime rates, vacations with pay, following reference to conciliation board; unterminated.
Waitresses, Victoria, B.C.	1	6	80	Commenced April 2; alleged discrimination in dismissal of one waitress; employment conditions no longer affected by the end of May; indefinite.
Strikes and Lockouts Commencing During May, 1950				
MINING—				
Iron ore miners, Bell Island, Nfld.	1	906	6,000	Commenced May 4; for improved safety measures in mines following fatal accident; terminated May 12; conciliation, provincial; in favour of workers.
MANUFACTURING—				
<i>Textiles, Clothing, etc.—</i>				
Cotton and rayon underwear factory workers, Sherbrooke, P.Q.	1	136	2,040	Commenced May 11; for a new agreement providing for increased wages, following reference to court of referees; unterminated.
<i>Printing and Publishing—</i>				
Printers, St. John's, Nfld.	1	4	30	Commenced May 22; for a new agreement providing for increased wages; unterminated.

TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA, MAY, 1950 (1)

Industry, Occupation and Locality	Number Involved		Time Loss in Man-Working Days	Particulars(2)
	Establishments	Workers		
Strikes and Lockouts Commencing During May, 1950—Con.				
MANUFACTURING—Con.				
<i>Miscellaneous Wood Products—</i>				
Lumber mill workers, Kiosk, Ont.	1	42	42	Commenced May 8; dispute over cookhouse conditions and poor meals; terminated May 8; negotiations and replacement; partially successful, new cookhouse staff.
Lumber mill workers, Mesachie Lake, B.C.	1	260	260	Commenced May 29; protest against hiring two non-union workers; terminated May 29; return of workers pending settlement; indefinite.
<i>Metal Products—</i>				
Auto electric parts factory workers, Sarnia, Ont.	1	600	1,200	Commenced May 2; for settlement of various grievances; terminated May 3; return of workers pending settlement; indefinite.
Hardware factory workers, Peterborough, Ont.	1	168	3,190	Commenced May 4; for a new agreement providing for a 42½ hour week instead of 45 with same take-home pay, increased minimum wage rates, improved seniority, and stabilization of piece-work rates, following reference to conciliation board; un-terminated.
Electrical apparatus factory workers, Vancouver, B.C.	1	18	250	Commenced May 11; for a new agreement providing for increased wages reinstatement of job classification, payment for all statutory holidays, etc., following reference to conciliation board; un-terminated.
Motor vehicle factory workers, spray painters, Windsor, Ont.	1	(4) 38	30	Commenced May 22; protest against not being asked to work on May 24; terminated May 23; return of workers; in favour of employer.
Plumbing supplies factory workers, London, Ont.	2	524	4,200	Commenced May 22; for a new agreement providing for union shop, increased wages, check-off, reduced hours, pension plan, etc. following reference to conciliation board; un-terminated.
CONSTRUCTION—				
<i>Buildings and Structures—</i>				
Carpenters and labourers, Lachute, P.Q.	1	38	150	Commenced May 16; for increased wages; terminated May 20; return of workers pending settlement; indefinite.
Painters and decorators Windsor, Ont.	125	350	Commenced May 22; for a new agreement providing for increased wages and other changes; terminated May 26; negotiations; in favour of workers.
TRANSPORTATION—				
<i>Water Transport</i>				
Seamen, Botwood, Nfld.	1	6	18	Commenced May 28; protest against disciplining seamen for refusal to obey orders; terminated May 31; replacement; in favour of employer.
SERVICE—				
<i>Business and Personal—</i>				
Waitresses, Sudbury, Ont.	2	40	600	Commenced May 11; for union recognition and agreement providing for increased wages; un-terminated.

(1) Preliminary data based where possible on reports from parties concerned, in some cases incomplete; subject to revision for the annual review.

(2) In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.

(3) 500 indirectly affected; (4) 1,447 indirectly affected.

Within a period of ten days this country and the labour movement in particular lost two men who had lived, moved, and had their being in the advancement of social causes. In the death of the Rt. Hon. William Lyon Mackenzie King on Saturday, July 22 and of the Hon. Humphrey Mitchell early on Tuesday morning August 1, there were removed from the Canadian and world scene two whose lives and service spanned a half century in the making of labour history.

Rt. Hon. W. L. Mackenzie King

Ottawa knew Mr. King first as an industrious young man who had just made a difficult decision—whether to dedicate his life to the problems of industrial peace or to accept a sheltered life as professor of economics at Harvard. That he decided in favour of the first course was the turning point in his own career and was also to have a profound influence in Canadian affairs.

Mr. King inherited his life-long interest in social, economic and political problems from his maternal grandfather, William Lyon Mackenzie, the patriot leader in Upper Canada in 1837. This interest developed steadily during the years that he was a student at the University of

Hon. Humphrey Mitchell

The Hon. Humphrey Mitchell, dead at 55 years, had still much to give in state service. He had held the portfolio of Labour Minister longer than any incumbent in the British Commonwealth; had had to see some of the cherished objectives of labour for which he had fought temporarily jettisoned in the grim reality of a war of survival; had made quick restitution of those rights as he had promised he would; and had directed the difficult period of post-war adjustment in labour-management relations with skill and decisiveness. He was seemingly in that stage of his life where his intimate knowledge of labour and industry could have been drawn upon for future usefulness when death intervened.

Rt. Hon. W. L. Mackenzie King

Concluded.

Toronto and a fellow and post-graduate student at the University of Chicago.

While in Chicago, Mr. King lived at Hull House and spent his spare time in case studies at that great social service centre. What he learned there of the manner in which the poor and the immigrant classes were being exploited profoundly impressed him.

When he returned to Toronto in 1898, he discovered similar sordid conditions in establishments working on Canadian government contracts. These he reported in person to Hon. William Mulock, the Postmaster General. His revelations started a chain of legislative action. The Fair Wages Resolution was passed by Parliament in 1899. The following year the Department of Labour was established, and Mr. King was persuaded to give up an academic career to become Deputy Minister of Labour and Editor of the *LABOUR GAZETTE*.

On July 22, 1900, Mr. King arrived in Ottawa to take up his new duties. On July 22, 1950, just fifty years later to the day, Mr. King, in the fullness of years and outstanding service and bearing innumerable honours passed peacefully away at his summer home at Kingsmere in the Gatineau hills, a few miles from Ottawa.

In the intervening period, Mr. King had served for eight years as Deputy Minister of Labour, for two years as Minister of Labour, and subsequently for more than twenty-one years as Prime Minister. He had played a leading role in Canada's evolution from semi-colonial status to equal rank with the other nations of the British Commonwealth and a world power in her own right. He had contributed greatly to the social, industrial and economic life of the nation and to the unity of the many peoples who make up its population. He had given distinguished leadership to Canada throughout the Second World War and in the early post-war years. He left a mark on the life of his day and generation that will not be soon effaced.

Hon. Humphrey Mitchell

Concluded.

Ever a strong believer in collective bargaining, he sought always to maintain the conditions of freedom in industrial relations whereby workers could achieve their fair share of the rewards of industry.

He was directly responsible for the enactment of the Industrial Relations and Disputes Investigation Act in 1948 as a result of his insistence on a measure that would guarantee general recognition and application of collective bargaining. He built up acceptance for this principle during the war years and at every stage he was meticulous in consulting the executives of labour and industry.

Forthright in speech and action, he brought to bear in his solutions of problems a decisiveness that left no loose ends.

Administering a Department that, more than any other, touched closely the lives of millions of people, he was keenly aware of the problems of the common man.

Unspoiled by power, he was the champion of the little people, the underprivileged and "the men hemmed in with the spears."

His trade union background eminently fitted him to assume the direction of the Department at a critical period of the war when Pearl Harbour, Bataan, and Singapore were disasters that rocked the Allied cause.

Besides, as an ex-Royal Navy man in the First World War, where he saw action on the seven seas hunting down German raiders, he embodied that aroused Anglo-Saxon tenacity of purpose that would brook no obstacle to victory.

He applied the techniques he had learned in the school of labour negotiation with telling effect in the organization of the labour front for all-out war.

He had to preserve the balance of labour's vital interests against the necessity of national interest. In so doing he earned the respect of employer, employee and consumer, and emerged as one of the nation's pillars.

It would seem that in his sphere of the highest state service the man was matched with the hour.

His life, shortened and terminated prematurely, was the price he paid for that service. For that, Canada will hold him in grateful remembrance.

CURRENT LABOUR CONDITIONS

This article summarizes the latest employment and labour information available at August 10, as the LABOUR GAZETTE went to press. It was prepared by the Economics and Research Branch, Department of Labour.

IN the past few weeks, accelerated defence preparations in both Canada and the United States have begun to influence the employment situation. An increase in orders for such essential materials as steel, base metals and rubber have strengthened the demand for labour in these and related industries. This new impetus to employment comes at a time when high levels of consumer demand, heavy investment and a record value of exports to the United States have already resulted in a rapid improvement in the employment situation during recent months.

These developments have been reflected in a continued decline in the total number of registrations at National Employment Service at a rate somewhat more rapid than is usual at this time of year. Between July 1 and August 1, the total number of registrations declined to 158,100 a drop of over 46,000. All regions shared in this decline: the improvement was particularly noticeable in Ontario and British Columbia. In the latter region, the total number of registrations on August 1 was below that of a year ago.

If the registrations from men alone are considered, the decline is much more marked and, in many local offices, the number of registrations on hand from male workers is below the figure for last year at this time. The total number of women registering for work has not fallen nearly as rapidly, with married women in particular finding it difficult to obtain employment as employers generally indicate a preference for single women.

This increase in the number of married women seeking employment may also be related to their desire to supplement the family income in face of rising living costs. Although real weekly earnings in manufacturing are still above the level of last year, there has been a slight decline since January, due in the most part to the steady rise in the cost-of-living

(Continued on page 1221)

NOTES OF CURRENT INTEREST

Newfoundland miners move to mainland

Hon. Humphrey Mitchell, Minister of Labour, recently announced that 100 Newfoundland miners have taken jobs arranged for them in hard-rock mines in Northwestern Ontario and Manitoba. This movement of miners was the first on an organized basis from Newfoundland to the Mainland.

The men were selected by Harlow W. Wright, Assistant to the Executive Director of the Canadian Metal Mining Association, in co-operation with the Special Services Branch of the Department of Labour, and with National Employment Service offices in Newfoundland.

Most of the men were experienced miners from Bell Island and the Conception Bay district, and ten of them qualified as carpenters for underground work.

All applicants for these jobs underwent a strict physical examination, and about seventeen per cent of those examined were rejected on physical grounds. Another 30 men, who were originally selected, decided at the last minute that they would not make the trip.

The miners have already arrived on the mainland. Transportation costs were advanced to the men by their new employers. About half the men were placed in jobs in mines in Ontario, and the other half in Manitoba.

More than 3,300 jobs found for handicapped persons

Hon. Humphrey Mitchell, Minister of Labour, announced recently that the Special Placements Division of the National Employment Service found a total of 3,312 jobs for physically handicapped persons during the five-month period from December 15, 1949 to May 13, 1950.

Of the total number of placements made, 2,320 were for handicapped men and 992 for women. Included in these figures were 924 jobs for ex-servicemen and women with disabilities.

Among those who filled these jobs were persons with amputations, and others disabled by paralysis, rheumatism, epilepsy, diabetes, defective vision, defective hearing, lung, heart or stomach ailments. These people were all physically handicapped, but none were vocationally handicapped in the jobs carefully selected for them.

All persons with disabilities applying to the National Employment Service for jobs

were not considered for "Special Placement," Mr. Mitchell pointed out. If their disabilities were such that they were not prevented from continuing their former occupations they were regarded as regular applicants for employment. It was when an applicant's disability prevented him from taking the same line of work he was formerly engaged in that the Special Placements Division stepped in and made a study of the abilities the applicant still had left. An effort was then made to find an opening commensurate with those abilities, the Minister explained.

The number of placements made by the Special Placements Division—especially during a period of seasonal unemployment—constituted an achievement which was the result of careful matching of physical capabilities with the physical requirements of the job, stated Mr. Mitchell. However, on May 13, 1950, there were still 8,535 handicapped applicants for employment registered as unplaced, and while such a situation existed the Special Placements Division would not relax its efforts on behalf of those unfortunate enough to have a disability which prevented them from engaging in their regular occupation.

Farm wage rates in May

According to a report issued by the Dominion Bureau of Statistics, average wages paid to male farm help were lower by the day at May 15 this year, both with and without board, for all Canada (excluding Newfoundland) than a year earlier. Average rates by the month were slightly lower without board and slightly higher with board. By provinces, trends in wage rates varied considerably. Reports received at the two previous survey periods in January 1950 and August 1949, showed general downward trends from corresponding periods a year earlier.

With board provided by the employer, wage rates per day averaged \$3.84 for all Canada at the middle of May as compared with \$4.04 in May last year and \$3.93 in 1948. By provinces, rates ranged from \$3 in Prince Edward Island to \$4.72 in British Columbia. Increases over a year ago were recorded in Prince Edward Island, Ontario and Saskatchewan and decreases in each of the other six provinces. Without board, the average rate for all Canada was \$4.80 as against \$5.06 last year and \$4.89 in 1948, increases being reported for Ontario and Saskatchewan and lower rates

in the other provinces, with wages ranging from \$3.75 to \$6 in Prince Edward Island and British Columbia, respectively.

In the case of monthly wages, the average all-Canada rate with board increased to \$84.64 as compared with \$83.73 last year and \$83.26 two years ago, and without board was \$113.76 compared with \$113.89 and \$113.07 in the two previous years. Monthly wages with board were higher in six provinces, lower rates being reported only for New Brunswick, Quebec and British Columbia. Rates without board were lower in five and higher in four provinces, and ranged from \$82.35 in Prince Edward Island to \$123.11 in Alberta.

New residential construction in Canada

A survey recently published by the Dominion Bureau of Statistics, covering the period January 1 to March 31, 1950, revealed that the 1949 level of activity in residential construction has been maintained in 1950. There were no significant differences in the figures for starts and completions of dwelling units for the first quarters of the two years.

During the first quarter of 1950, an estimated 17,873 dwelling units were completed and an estimated 9,015 units started. Figures for Newfoundland, included in the D.B.S. survey for the first time, show that this province accounted for 161 units completed and 82 units started.

At the end of March, 1950, an estimated 50,161 dwelling units were in various stages of construction. From the types of dwelling units being constructed during the first quarter of 1950, it is estimated that 28 per cent are designed for rental purposes.

Canada to spend \$1,250,000 for technical aid programs

Canada's commitments to the two programs of technical assistance to underdeveloped countries will total \$1,250,000, in the next year and one-half. Canada has pledged \$850,000 to the \$20,000,000 fund which is being established for this purpose by the United Nations, and \$400,000 to the Commonwealth program for Southeast Asia.

The purposes of the U.N. technical aid program were reviewed in the March issue of the *LABOUR GAZETTE* (p. 312). The United States has offered to pay up to \$12,500,000 of the cost of the scheme and Great Britain has pledged \$2,100,000.

In announcing Canada's contribution to the Commonwealth schemes, Hon. R. W. Mayhew, Minister of Fisheries, who was Canadian delegate to the conference held

in Sydney, said that it was decided that "a program of technical assistance should be established immediately to supplement the United Nations program . . . (which would) . . . organize technical assistance on a bilateral basis between governments."

Speaking of the U.N. program, Hon. L. B. Pearson, Secretary of State for External Affairs, said that it is not intended that the Commonwealth program duplicate that of the U.N., but rather that any contributions to the Commonwealth effort "are dovetailed into and do not overlap anything the United Nations may do."

Trades and Labour Congress History

The Public Relations and Research Department of the Trades and Labour Congress has recently issued *An Historical Review*, a 20-page illustrated booklet describing outstanding incidents in the career of the Congress since its early days.

The booklet also tells the story of Daniel O'Donoghue, "the Father of the Canadian Labour Movement." In the words of the reviewer, O'Donoghue, while striving nearly half a century to secure justice for his fellow workers, "never shirked a duty or wavered in his allegiance to the cause of the lowly and the oppressed."

The Trades and Labour Congress founded in 1873, was the direct outgrowth of the activities of the Toronto Trades Assembly, established in 1871, the Nine-Hour Leagues, and the Ottawa Trades Council, organized in 1872, the review states.

Under the name of the Canadian Labour Union, it first met in Toronto in 1873, and annually thereafter until 1877, although in that year it met under the name of the Canadian Labour Union Congress.

During the long depression which followed the panic of 1873, trade unions disappeared almost completely. The Congress held no meeting in 1878 and the last meeting of the Toronto Trades Assembly was in the same year.

With the general improvement in business at the turn of the decade, the Toronto central body was revived in 1881 and the Trades Assembly records were turned over to the new organization known as the Toronto Trades and Labour Council. In 1883, the Council called a national convention of delegates of union organizations. The meeting was held in Toronto under the name of the Canadian Labour Congress.

Again in 1886 the Toronto Trades and Labour Council called a meeting and since that time the Canadian Labour Congress has been an annual event.

O'Donoghue was largely responsible for the continuity of the national body and the review states that "in very truth . . . (he) . . . gave all his life for his friends, the poor. . . ." A member of the Typographical Union, he organized a local in Ottawa in 1866. In 1872 he helped to found the Ottawa Trades Council, and became its Assistant Secretary; in 1873 he was selected as the First Vice-President of the Canadian Labour Union. Elected in the following year to the Ontario Legislature, he became the first labour member of any parliament or legislature in Canada.

The review also discusses briefly the aims and objectives of the Trades and Labour Congress, the influence of internationalism on organized labour in Canada, and the efforts of the Congress, by political action and other means, to secure legislation for the improvement of working conditions.

Since 1898, the Congress has sought the implementation of certain principles. These proposals, known as a Platform of Principles have been revised from time to time. Some of these are: free education and compulsory school attendance; establishment of the six-hour day and the five-day week; national old-age pensions; public ownership and democratic management of all public utilities and nationalization of banking and credit; abolition of non-elective legislative bodies; equal pay for equal work for men and women; and proportional representation with group constituencies.

Presidents of the Congress since 1901 have been Ralph Smith, M.P., John A. Flett, Alphonse Verville, M.P., William Glockling, I. C. Watters, Tom Moore and P. M. Draper. Percy R. Bengough, C.B.E., who is now president, has held this office since 1940.

Old Age and Blind Pensioners in Canada

The number of persons receiving old age pensions in Canada increased from 277,031 at December 31, 1949 to 282,584 as at the end of the quarter March 31, 1950.

The Federal Government's contributions under the Federal-Provincial scheme totalled \$23,932,950.46 for the quarter ended March 31, 1950, as compared with \$24,909,788.05 in the preceding quarter. Since the inception of the Act the Federal Government has contributed \$634,739,055.44.

The average monthly pension in seven provinces ranged between \$37.17 and \$38.65; in three provinces between \$34.36 and \$36.22. In Newfoundland where the maximum pension payable was \$30 the average was \$29.47.

In only three provinces was the number of pensioners higher than three per cent of the total population.

In addition to the above, pensions were being paid to 10,517 blind persons as at March 31, 1950, as compared with 10,232 at December 31, 1949.

The cost of pensions in respect of blindness to the Federal Government was \$941,934.36 for the quarter ended March 31, 1950 and \$927,943.95 in the preceding quarter. Since the inception of the Act, Federal payments have totalled \$19,024,864.40. The average monthly pension was between \$37.66 and \$40 in ten provinces. In Newfoundland, where the maximum pension payable was \$30, the average was \$29.38.

Commonwealth Trade Union Conference

During the course of the Thirty-third Session of the International Labour Conference, held at Geneva during June, trade union representatives from Commonwealth countries held a special meeting for the purpose of consultation. Following this meeting the following statement was issued:—

"Taking advantage of the presence at the International Labour Conference of many representatives of national centres throughout the Commonwealth, a Conference took place on Saturday and Sunday, 24 and 25 June 1950, for purposes of consultation.

"The Conference was not concerned with registering policy decisions. The opportunity was taken of receiving first-hand reports of the main trends of trade union policy and the conditions in which that policy is operating.

"Information was given of economic conditions, wages policy, social developments and problems of organization in the various countries.

"The subject of international affiliation was similarly a point of information.

"The value of the Conference as an informative medium gave rise to the only decision recorded. This was in connection with means by which developments as they arise in the countries concerned can be notified to all the participating national centres. In this connection the British Trades Union Congress is to receive regular reports for collation and dissemination at regular intervals to co-operating national centres.

"Further meetings of a similar character are contemplated."

National trade union centres represented at the Commonwealth meeting were as

follows: New Zealand Federation of Labour; Australian Council of Trade Unions; South African Trades and Labour Council; Indian National TUC; All-Pakistan Trade Union Federation; All-Ceylon Trades Union Congress; British Trades Union Congress.

Canada was represented by Mr. Claude Jodoin, Vice-President, Trades and Labour Congress of Canada; Mr. A. P. MacArthur, President, Ontario Federation of Labour (TLC); Mr. A. J. Kelly, Chairman, Dominion Joint Legislative Committee, Railway Transportation Brotherhoods.

**TUC
relaxes wage
restraint
policy**

The General Council of the Trades Union Congress, on June 28, unanimously approved a new statement of policy which recognizes that "there must be greater

flexibility in wage movements in the future than was envisaged in the policy approved by the conference of executives in January" (L.G., Jan., 1950, p. 16).

The General Council, at the same time, issued a warning that basic economic difficulties still remain, "even if temporarily lessened in their intensity," and that increased efficiency and lower costs in industry are as necessary today as they were a year ago, and that therefore there must continue to be "reasonable restraint" in all personal claims on the nation's production.

There is no formula which can be devised as to how this flexibility can operate, the statement says, and it must therefore be left to the "good sense and reasonableness" which the unions have displayed, particularly in the post-war period.

In view of the lack of any practical formula to guide unions in wage policies, the General Council has offered facilities for consultation to any affiliated union desiring assistance in the consideration of its problems.

The statement will go before the next annual meeting of the Congress in September for approval.

On July 3, the Chancellor of the Exchequer, Sir Stafford Cripps, replying to a question on the Government's wages policy, told the House of Commons that Great Britain could not afford anything but a limited degree of relaxation of the very rigid standards laid down after devaluation. "If we were now to abandon this policy," he said, "we should set in motion a wave of inflation which would do very great harm to our economy and to the living standards of the workers. . . ."

"The policy of restraint hitherto exercised, which was intensified after devaluation, has had a striking degree of success and, thanks to the co-operation of all sections of the community, has contributed greatly towards the improvement in our affairs which has taken place since this time last year. Although, therefore, our economic situation appears more favourable today than it was, there is still a great need for continued restraint in the matter of personal incomes, as is pointed out in the statement issued by the Trades Union Congress."

**Rapid ageing
of workers
creates
problem
in France**

According to an article in a recent issue of the *Revue Française du Travail*, monthly publication of the French Department of Labour and Social Security,

France is concerned with the situation created by the steady increase in the proportion of older persons in her industrial population.

It is asserted that industrial production is related directly to the age of the workers, younger workers being given the preference to insure a maximum of production from industrial equipment and machinery. The younger worker, on his part, prefers the easier work in newer plants that have modern equipment and where less specialized training is required.

A recent study of age categories of workers in French industry, it is claimed, shows that younger workers "disdain" the hard work in the steel and mining industries, "which are the most important in France." Consequently, these key industries are being staffed increasingly by workers in the older-age categories. A further conclusion reached by the study was that older workers lack adaptability and ability to become adjusted to changed conditions. They thus constitute an obstacle to the introduction of new production methods, as well as to geographical and industrial shiftings of the labour force, which may become necessary in time of serious unemployment.

The situation is rendered more serious by a great increase in the number of old persons who want—and need—to work beyond the normal age of retirement, as well as by retired persons who are finding it necessary to supplement their incomes.

These considerations, it is urged, suggest the need for the adoption of labour policies that would offset the "problems of the ageing of the population."

It is asserted that "subsistence of the old can be secured only by previous deductions from the incomes of adult workers."

Support of the old by their families is no longer possible, it is held, "because of profound changes in family life and collective assistance is necessary."

A society that is making it possible to increase life expectancy, it is claimed, "owes decent conditions of living to those attaining retirement age" if they are unable to work.

"In the last analysis," the article states, "the problem of the ageing of the population and its consequences, can be settled only by an increase of industrial production."

Reciprocal social security in Western Union countries

A further stage in the co-operation on social policy between the five Western Union countries (Belgium, France, Luxembourg, The Netherlands and the United Kingdom) was reached with the signing on April 17 of

two Conventions and a Supplementary Agreement dealing with the exchange of student-employees, frontier workers, and social and medical assistance.

In the implementation of the Convention of November 7, 1949, the five signatories to the Brussels Treaty are negotiating a series of bilateral agreements, to link the social security schemes of their countries into a network for the extension of such benefits as sickness, invalidity, old age, death, maternity, industrial injuries and prescribed occupational diseases, to their nationals no matter in which of the countries they may be living.

The Convention concerning student-employees is intended to encourage young people to gain wider experience in their work, and to improve their knowledge of languages, by taking employment abroad. Its provisions apply to student-employees of both sexes who are in general, not more than 30 years of age and employed in either manual or non-manual work. The period of their stay will generally not exceed one year, but in exceptional cases may be extended for a further six months. No fixed numbers of student-employees are laid down; this and the basis of their admission will be determined from time to time by each country. The Convention defines the basis of remuneration, and provides for the setting-up of a central agency to facilitate their exchange.

With the consent of all five Governments, the Convention can be extended to nationals of other countries.

The second Convention concerns the regulation of conditions of work of frontier workers, i.e., workers living in one country but working in the frontier zone of a

neighbouring country. Under its provisions, frontier workers will be employed under the same conditions and at the same wages as nationals of the country in which they work, and, with certain specified exceptions, are eligible for the same unemployment benefits as if working in their own country.

The Supplementary Agreement on Social and Medical Assistance deals with matters of detail in connection with the November Convention, which provides that nationals of any of the Brussels Treaty countries, lawfully residing in the territory of any of them, who are without sufficient means, may receive financial and medical assistance on the same basis as nationals of the country of which they are residents. It provides, in particular, that recourse to repatriation will be had only in exceptional cases, and then only "when no humanitarian considerations would deter."

Free trade unions hold executive meeting at Brussels

Important decisions affecting the free workers of the world were reached when the Executive Board of the International Confederation of Free Trade Unions met in Brussels from May 25 to

27, according to the (ICFTU) *Information Bulletin*, June 1. The meeting, which was held at the Confederation headquarters, was the first since the inaugural London Congress of November 28 to December 9, of last year (L.G., Feb., 1950, pp. 172-182). Mr. Paul Finet, president, was the chairman.

The Board approved the calling of a Western Hemisphere regional conference to be held this autumn, the exact date and location to be determined later.

This decision was made during a discussion of regional organization. The Board also decided to instruct the Far East Mission to consider and report on the problem of Asiatic regional organization and it agreed that the General Secretary, Mr. G. H. Oldenbroek, should consult with the national centres in Europe as to the advisability of calling a European regional conference.

The General Secretary announced that an ICFTU three-man delegation would leave for South East Asia within three or four weeks. Through the efforts of this delegation, the Confederation plans to bring support to the union forces in Asia which are combating Communism.

Ratification was given to previous agreements between the ICFTU and the International Trade Secretariats, which are worldwide centres of unions in specific industries. Under the new arrangement, the

secretariats preserve their autonomy and, at the same time, form with the ICFTU a united international labour movement.

During the discussion on the Christian trade union centres, it was unanimously agreed that there would be no departure from the standpoint taken at the London Conference when the centres were "invited to attend . . . with full and equal rights and responsibilities," with the condition that they cease to be affiliated with any other international trade union federation.

Discussion also centred on arrangements for opening an ICFTU office in New York which will carry on close liaison with the United Nations and do publicity work on behalf of labour in the Western Hemisphere.

An important decision was reached in connection with the Ruhr problem and the re-organization of European heavy industry. The Executive Board expressed its agreement with the principle of the Schuman Plan, but at the same time demanded adequate representation on the part of the free trade unions in the working out of the Plan's details.

The *Information Bulletin* stated that the Board adopted a resolution to the effect that "while the right of the German Government to decide upon the ownership of the Ruhr industries should be recognized it is imperative in the interest of world peace that the exploitation of the resources of the Ruhr for aggressive militarist purposes and the re-establishment of the Ruhr combines should be forever prevented; that in the final re-organization of the Ruhr the management of the Ruhr industries be entrusted to administrative bodies in which all interests will be represented on an equal basis, both in the central management of each industry and in the management of the producing units. . . ."

On the subject of heavy industries, the same resolution declared "that the Governments of the Benelux countries—France, German Federal Republic and Great Britain—enter into negotiations with a view to the formation of an inter-European authority for the coal, iron ore, iron and steel industries, which shall be open to participation by other countries. . . ."

It was reported at the meeting that several countries have withdrawn recently from the Communist-dominated World Federation of Trade Unions. Among these countries are Colombia, Finland, Israel and Australia.

Canadian delegates attending the meeting were Pat Conroy, secretary-treasurer of the Canadian Congress of Labour, and Sam Finlay, international vice-president for

Eastern Canada, International Brotherhood of Boilermakers, Iron Ship Builders, Welders and Helpers of America (AFL).

British cotton mills team reports on high U.S. productivity

Without sacrificing quality or creating unemployment for some workers, British cotton mills could increase productivity almost to the American level. This is the view of a Lancashire cotton team which visited the United States last autumn to study productivity in American cotton mills.

The unanimous report of the team was published by the Anglo-American Council on Productivity which sponsored the tour. It has now been summarized in the April edition of *Labour*, a pamphlet prepared by the British Trades Union Congress.

In its report, the team refers to the high rate of output in the average American mill where 100 workers produce the same amount of cotton yarn as 238 workers in Britain, without any strain on themselves or their machines. The English mill hands work just as hard or harder than their American counterparts in obtaining their lower output, observes the report.

Three reasons were advanced for this difference: "production-mindedness; novelty-mindedness; and research-mindedness."

"Mill hand and company director both believe that low output means high costs which drive the customer away," the *Labour* article stated. Greater productivity at lower costs will encourage customers to buy over and over again, keeping men and machines busy.

If a new device comes on the market, the manufacturer does not wait for the "other fellow" to try it out, but uses it himself because he wants to know if it will help his business. Workers, too, are willing to accept a change in methods because they are informed by management in advance about the necessary innovation.

In the field of research, many mills have their own experimental departments and more money is being provided to expand the industry's central research stations.

The trade unions play a special part in assisting the drive for more efficient production. The team reported that "the willingness of unions and of workers to accept changes in work assignments when this is justified by new methods or by technological advances is undoubtedly one of the major factors which has led to the high productivity in American mills coupled with lower operating costs."

While American workers have the advantage of many mechanical aids, the main machines are basically similar to the British. The team was convinced that British machinery makers can supply anything which the industry needs.

In contrast with British methods, American manufacturers do not separate their spinning and weaving mills, the report showed. Usually, the entire output of the spinners is used by the weavers in the same firm; the dyeing, bleaching and printing are often carried out there too.

There are fewer varieties of fabrics made in the United States mills, the report continued. Manufacturers, advised by expert industrial consultants, can decide which lines are the most profitable to produce.

Even without these advantages, the report states, British mills can bring their average productivity near to that of the best American mills.

U.S. Senate bill on social security

On June 20 the United States Senate gave its approval to a bill which would effect a considerable expansion in the American system of old age security.

The provisions of the bill are substantially similar to those of H.R. 6000, which was passed by the House of Representatives last fall. Differences in detail between the two measures are now being reconciled in conference.

According to press reports, the Senate bill would add some 10,000,000 persons, about half of them self-employed, to the 35,000,000 already covered by old-age and survivors' insurance under existing legislation.

The bill would also make important changes in the amount of benefit payable under old-age and survivors' insurance, and the method of financing the program. Monthly benefit payments would be almost doubled, the maximum primary benefit rising from \$45 to \$80. The payroll tax, now levied on both employers and employees at the rate of 1½ per cent, would remain unchanged until 1956. In that year it would be increased to 2 per cent; in 1960, to 2½ per cent; in 1965, to 3 per cent; and in 1970, to 3¼ per cent. The maximum taxable income on which this tax is levied would be increased from the present level of \$3,000 to \$3,600.

The Senate also approved a thorough study and evaluation by its Finance Committee of the entire American system of social security. The Committee's study, to take at least two years, will seek, among other things, to determine whether cover-

age can be made universal and whether a pay-as-you-go method of financing the program is practicable.

UAW gains first area-wide pension plan in automotive industry

The United Automobile Workers union (CIO) has reached an agreement with 70 shops of the Automotive Tool and Die Manufacturers' Association in Detroit, Michigan, on a pension pact covering 6,000 employees. *Business Week* of June 3 reports that the agreement—the first of its kind in the automotive industry—provides for area-wide pensions designed to cover small employers with a highly mobile work force.

Under the plan, workers may move from one member employer to another and still retain credits toward the 25 years of continuous service required for retirement benefits payable at 65. When eligible for retirement, workers will receive \$100 a month from a joint fund to be set up by ATDMA.

Business Week points out that the contract is only an extension of a longstanding bargaining practice, since the Detroit union locals have been accustomed in the past to sign one master pact with the Association.

New U.S. Bill provides increased quota of displaced persons

U.S. President Truman on June 16 signed the Displaced Persons Bill thereby expanding to 415,744 the total number of persons admitted or to be admitted under the special post-war legislation, according to the *New York Times*.

The new bill makes obsolete the provisions that were said to be "un-American" in the Displaced Persons Law of 1948, the *Times* stated. In future, entry will be available to Jews who were denounced by the Nazis; to Catholics from Russian dominated countries; to Italians who fled from Fascism; to the Volksdeutsch who were forced out of the Sudetenland, Yugoslavia, Hungary, Roumania, Poland and the Baltic countries early in the war; and to orphans and a few other groups.

To ensure against the entry of people with subversive intentions, the Displaced Persons Commission is authorized to investigate the character and eligibility of DP's and immigrant applicants of German ethnic origin.

The bill provides for the issuance of 400,744 visas, including 172,230 which had been issued up to May 31. It also makes provision for the permanent entry of 15,000

students and other persons already here on temporary permits who cannot return to their homes without the risk of death or persecution.

It is believed by government officials familiar with the bill that it will "lead to the effectual emptying of the displaced persons camps in Europe," the *Times* stated. In addition to those who have already received American visas, the United States would take about 120,000 of the 300,000 left in the camps. The others would go to Australia, Canada and South America.

Commission to study U.S. migrant labour problems

President Truman has appointed a five-man commission to make a broad study of conditions among migratory workers in the United States and of problems created by the migration of workers into the country, according to the *New York Times* of June 4. The committee has been directed to report by December 15.

Three important questions will receive foremost attention during the investigation. They are:—

1. The social, economic, health and educational conditions among migratory workers in the United States, and the responsibilities now being assumed by Federal, state, county and municipal authorities to alleviate conditions among these workers.

2. The problem created by the migration into the United States of alien workers for temporary employment, and the extent to which alien workers are now required to supplement the domestic labour supply.

3. The extent of illegal migration of foreign workers into the United States, and whether and how law enforcement measures may be improved to eliminate illegal migration.

Various estimates have placed the number of migratory workers at 1,000,000 to 5,000,000, the *Times* article stated. In many instances, living standards among migratory labourers and their families are far below those of other groups in the population. Furthermore, because of the lack of a fixed residence as well as their specific exemption in various laws, the migratory workers are frequently not entitled to the benefits of Federal, state, and local social legislation.

An additional complicating factor is the presence of Mexican workers whose entry into the United States is provided for by an agreement between the two countries.

In addition to the legal migrants from Mexico, thousands of illegal entrants cross the border. While most of them are deported, no effective means has yet been found to prevent this illegal immigration.

On June 11, the *New York Times* reported that the appointment of the committee had received approval in California.

While the question of migratory labour has been with the country for half a century, many recent factors have focused greater attention on it, the article stated. Among these are the post-war drop in urban industrial employment, the rapid mechanization of many farm operations which reduces the demand for labour, crop failures and, in recent months, the threat of another potential "dust bowl" in the southern Middle West.

The four main migrant blocs in the United States, the article pointed out, are on the Atlantic Seaboard, in the mid-western grain states, in the Intermountain West and on the Pacific Coast.

U.S. employment near all-time peak level in June

At the end of June, employment in the United States had reached its highest level since the record month of July, 1948, according to a report appearing in the *New York Times*. The report, based on information from the Bureau of the Census showed gainfully employed at June 10 as being 61,482,000. This was 133,000 less than the record level of 1948, and shows an increase of 1,750,000 jobs over May of this year.

There was an increase in unemployment figures during the month, but this increase was said to have been caused entirely by the entry of school-age persons into the labour market, most of whom were seeking temporary employment. Among adult workers there was a decline in unemployment, and for the first time since early 1949, the number out of work for four months or longer also dropped.

Charles Sawyer, Secretary of Commerce was quoted by the *Times* as having said that: "Although most of the gains reported by the Census Bureau can be traced to seasonal factors, there is strong evidence of a continual improvement in the general employment picture."

Despite this high level of employment, the *Times* said that the jobless total was 1,000,000 or more greater than in 1948, and a higher proportion of the labour force was out of jobs than two years ago.

**Workmen's
Compensation
and
Rehabilitation
Conference**

The U.S. Department of Labour and the Federal Security Agency were joint sponsors of the 1950 National Conference on Workmen's Compensation held in Washington. Representatives from 43 States, Hawaii, Puerto Rico, the Virgin Islands and Canada attended the 2-day sessions.

The conference keynote was expressed by Michael J. Galvin, U.S. Under-Secretary of Labour, in his opening address, when he expressed the hope that the conference would find "both the will and the means to effect the culmination of the compensation process—the restoration of the injured worker to productive living and employment." While compensation and rehabilitation are basically State problems, "the Federal Government also has a real interest in it," Mr. Galvin pointed out.

The Under-Secretary outlined the purpose of the conference as being "to improve co-operative procedures (between Federal and State agencies) so that all the 12,000 permanently disabled who face a substantial job handicap may receive vocational rehabilitation services for which they are now eligible."

Mr. Galvin stressing the need for closer co-operation between State and other agencies recommended: "(1) Early recognition and referral of injured workers for rehabilitation soon after the injury, which may necessitate a review of State workmen's compensation laws. (2) Fuller use and perhaps extension of rehabilitation centres."

In his remarks to the conference, Federal Security Administrator Ewing said that his Agency was directly interested in the problem because the FSA has as one of its primary responsibilities "the execution of the Federal-State rehabilitation program." He expressed the hope that the conference would produce "a foolproof system whereby a seriously injured worker can start getting rehabilitation services right after the accident."

Panel discussions at the conference centred around two subjects: (1) co-operation to facilitate rehabilitation of injured workers; and (2) improving medical services to workmen's compensation clients.

One of the features of the conference was a demonstration of rehabilitation cases from the Woodrow Wilson Rehabilitation Centre. Several clients demonstrated their ability to walk, sit, fall and rise despite very serious injuries. In addition, three paraplegic patients from the Kessler Institute showed their proficiency in the

use of prosthetic appliances. Dr. Josephine Buchanan of the Woodrow Wilson Centre, stated that conversion from a hopeless cripple to usefulness was not unduly expensive, and had cost less than \$1,000 in each case.

William L. Connolly, chairman of the conference planning committee, presented several recommendations for consideration. Among the more important recommendations made were:—

- (a) A definition of medical care which would include "any treatment necessary to restore the disabled individual to his maximum level of physical capacity."
- (b) Unlimited medical aid for the injured.
- (c) Improved State rehabilitation legislation and agreements.
- (d) Vesting of full supervision and control over the provision of medical care within the scope of the workmen's compensation Act in the workmen's compensation agency.

The committee also urged "closer co-operation between the administering agencies and physicians, insurance carriers, trade unions, and employees." The committee felt that the success of a vocational rehabilitation program required "the concerted efforts of each affected party."

**Minimum
wage
regulations
in France**

A recent memorandum issued by the Information and Press Service of the Department of External Affairs of France shows that the passing of law No. 50-205 of February 11, 1950, concerning collective agreements and procedure for settling collective labour disputes has reinstated the free wage in France. Henceforth the State will not intervene except to fix the national inter-occupational guaranteed minimum wage. Wages may therefore be set freely within the bounds of the collective agreements, provided that the national inter-occupational guaranteed minimum wage is observed.

In the meantime, orders governing wages will remain in force until replaced by collective agreements or decisions by arbitrators tending to modify them, with the exception, however, of the provisions relating to the observance of a maximum wage or of a maximum average wage. Minimum wages provided for by orders in council are therefore still valid.

Wage regulations in force in France up to the passing of this law were based on the following principles:—

- (a) Determination of the minimum wage of the ordinary labourer.

(b) Establishment of a graduated employment classification. This classification is provided for by the various orders fixing wages, starting with the labourer, to whom the coefficient 100 is assigned. For example, the graduated scale ranges from 185 for engineers to 600 for army officers.

(c) Determination of a variation between the minimum wage and the maximum average wage for workers (115 per cent of the minimum) or the individual maximum wage for office employees, technicians, draughtsmen and supervisory personnel (118 per cent of the minimum).

(d) Reductions in accordance with age.

(e) Fixing of territorial zones for the determination of wages.

The wages of workers other than labourers comprise two elements: a wage based on a graduated scale; and fixed bonuses.

Australian labour paper enters its 60th year

Celebrating its 60th Anniversary on March 1, *The Worker*, a labour newspaper in Brisbane, Australia, commented: "Labour, the powerful movement that has contributed so much to the progress and development of Australia, was in its political swaddling clothes when *The Worker* was first published."

The statement appeared in an article "When Labour Was Born" which was featured in the paper's March 6 edition.

"The Labour Movement in Queensland as in other countries," explains the article, "had its origin in the dissatisfaction of the workers with the conditions under

which they worked." Vigorous agitation by unionists culminated in the launching of a Trades and Labour Council in 1885. This was succeeded by the Queensland Provincial Council of the Australian Labour Federation which held its first meeting on June 11, 1889. "This was practically the birth of the Labour Movement in Queensland," states the article. Within a few months the scheme, which was greeted enthusiastically by the workers, had been adopted in all the large centres of Queensland.

Among other features, the ALF draft scheme provided for the publication of labour papers, and less than a year later *The Worker* appeared.

* * *

A second article appearing concurrently in *The Worker* tells of the Australian Workers' Union during its years of trial and disappointment in the 1880's. The foundations of the union were laid in Victoria in 1886. From that time until 1912, when it amalgamated with an all-embracing workers' organization in North Queensland, the AWU was almost entirely the Shearers' Union. It had members in every State, but it was not until almost three decades later that the union assumed its present form, that of "one big union for all classes of workers, no matter what their occupation or sex."

Today, the working conditions existing in the 80's and 90's are gone, the article states. "Further," it adds, "the workers industrially and politically, are better organized and provided for than they are perhaps in any other country on earth."

DEPARTMENT OF LABOUR, 1900-1950

The September issue of the *LABOUR GAZETTE* will be a special number commemorating the fiftieth anniversary of the founding of the Department of Labour.

It will contain a series of articles describing labour events of the past half century, and will be attractively designed and illustrated.

The statistical tables and other regular monthly features of the *LABOUR GAZETTE* will not appear in this Anniversary Issue, but will be issued separately later in the month.

PARLIAMENTARY COMMITTEE REPORTS ON OLD AGE SECURITY

The proceedings of the Joint Committee of the Senate and House of Commons on Old Age Security, extending over a period of more than two months' duration, evoked a renewed nationwide interest in the complex problems involved in providing an adequate program of old age security for the Canadian people.

The findings of the Committee, embodied in a 112-page Report tabled in Parliament on June 28, form the basis of the following article.

The Report of the Joint Committee of the Senate and House of Commons on Old Age Security was presented to Parliament on the 28th of June. Its contents constitute the final product of an intensive study undertaken by the Committee following its appointment at the end of March by a Resolution of both Houses of Parliament. The Resolution read in part as follows:—

That a joint committee of both Houses of Parliament be appointed to examine and study the operation and effects of existing legislation of the Parliament of Canada and of the several provincial legislatures with respect to old age security; similar legislation in other countries; possible alternative measures of old age security for Canada, with or without a means test for beneficiaries, including plans based on contributory insurance principles; the probable cost thereof and possible methods of providing therefor; the constitutional and financial adjustments, if any, required for the effective operations of such plans, and other related matters . . .

The first eight chapters of the Report, designed to provide a convenient summary of the evidence and opinion considered by the Committee, reflect the thorough manner in which the Committee attempted to meet the demands of its terms of reference.

Programs now operating to provide old age security in Canada, including the existing old age pension legislation, War Veterans Allowances, Canadian Government Annuities and employee pension plans are reviewed. There follows a comparative analysis of the principal features of the old age security schemes in Australia, New Zealand, Denmark, Sweden, the United States, Great Britain, France and Switzerland. Representations received from seven provinces, and the briefs and testimony submitted to the Committee by various organizations and individuals are summarized briefly.

Further chapters deal with the financial aspects of old age security, the constitutional aspects of a Federal old age pension program, and the relationship of old age security to War Veterans Allowances, unemployment insurance, Canadian Government Annuities and the National Housing Act.

Findings of the Committee

The findings of the Committee, set forth in the last chapter of the report, are of considerable significance in view of the influence they are expected to exert on the character of future Canadian legislation in the field of old age security.

Increase of Ageing Population.—Following a recognition of the “complexity of the subject which was referred to the Committee for study,” and of the difficulty of securing even a satisfactory definition of the term *old age*, the report points out that “our aged population is growing from year to year.” The total of persons 65 years of age or over, which was 576,000 in 1931, or one in every eighteen in the total population, will be an estimated 1,101,400 in 1951 (one in every thirteen), 1,372,500 in 1961, and 1,630,000 in 1971.

The report stressed the importance of continued gainful occupation for those older people who wish to continue work, and whose health will permit it. The Committee said that it believed “increasing emphasis should be placed on efforts to remove from people’s minds the idea that there is any set age for retirement. Each individual . . . should be encouraged to continue as long as possible in gainful employment.” This would be beneficial to the “economic progress and prosperity” of the country and would ensure utilizing “to the fullest possible advantage the mature skills of these older workers.”

The problem of the prematurely aged, and invalids forced to retire from employment early in life, and the blind, was dealt with briefly in the report. The committee expressed itself as being "deeply impressed by the evidence presented" on behalf of these people but felt "that the terms of reference established for it ruled out the possibility of a detailed examination of this problem. . . ."

Social Needs of the Aged.—A considerable amount of evidence was presented to the Committee which demonstrated "that old age security does not consist solely of the assurance of adequate cash income to individuals in their later years." The report listed adequate housing, health and welfare services and suitable part time occupations as factors which "enter into the complex picture of the needs of this important section of the nation's population."

The Committee recommended that the present program of finding employment for older workers be intensified, especially "in terms of persuading employers and governments to keep open the doors of employment opportunity to individuals who are in their middle or later years. . . ."

Regarding medical and health programs for older people, the report noted that some provinces possessed "well-organized programs" and the Committee recommended encouragement and expansion of their programs, especially in provinces lacking facilities for health care of the aged. It was suggested that if the burden on the provinces of providing income security for the aged were lessened more adequate medical and hospital care could be provided.

In considering the housing needs of the aged, the Committee considered that there were "possibilities now open to private organizations, provincial and municipal authorities under amended provisions of the National Housing Act," and that sufficient time had not elapsed for full advantage to be taken of the Act. It recommended further study to develop "the machinery already in existence."

Employee Pension Plans.—The report said that "employee pension plans have already made a significant contribution to the provision of retirement security for an important section of the Canadian labour force." The Committee therefore expressed its desire to do nothing to lessen the current interest of employers in employee pension plans. However it did feel that private plans in use at present "have a very uneven

effect over the entire working force and further that the cost is passed to the consumer so that "the entire population finds itself indirectly paying part of the cost of pensions for the more fortunate groups."

The Committee therefore undertook to develop a scheme on a universal basis which "would make it possible for these industries to adjust their private plans so as to fit into governmental provisions. . . ." The public scheme in the Committee's opinion should not interfere with either employee plans or private provisions for old age security, but should serve as a floor under these, and "stimulate the development of new pension plans."

The report also recommended certain improvements in the field of private pensions. While some improvements had been effected by the action of income tax authorities, it was further suggested that there should be "as a condition of income tax exemption, a greater degree of transferability of individual pension rights."

The Committee was firm in maintaining that the provision of a basic old age security plan should not weaken private incentive to save and that everything possible should be done to encourage private saving. The report said that the merits of Government Annuities "should be made more widely known by a suitable campaign of advertising and by other methods designed to facilitate their purchase."

Other Claims to Priority.—While the Committee was limited by its terms of reference to a specific study of old age security, its report noted that "it has not felt it advisable to overlook . . . other areas of social need in which governments, both provincial and federal, may be called upon to take in the future a substantial measure of responsibility."

The Committee said that the present annual cost of "health and welfare services to the people of Canada provided at public expense by all levels of government, can presently be estimated on a conservative basis at not less than \$1 billion annually." The report also mentioned other widely advocated social security programs which would add to this total. These aspects were all taken into consideration and the Committee considered "that it must avoid suggesting such a substantial diversion of the total national income into a program for the aged as to preclude the possibility of developing . . . a fully balanced social security system."

Three Main Alternatives.—As the result of its study, the Committee suggested three possible systems: "old age assistance; an

insurance system; a universal pay-as-you-go system" (italics ours). The report noted that a program could be developed based on "two, or even all three of these systems."

The report explained that under an *old age assistance scheme* (as presently used in Canada) the determining factor in regard to receipt and amount of pension is individual need. This means investigation to find the extent of individual need, and is the most strongly criticized feature of the system.

The Committee felt, however, that investigation of need was almost inevitable in any system financed out of general revenue. The report noted that the estimated expenditure of \$136 million for old age assistance in the current year would be increased to over \$300 million if there were no investigation of need.

The basis of a system of *old age insurance* is that the individuals protected provide for their own pensions through regular contributions and consider these contributions as a form of investment. The pension received is related to the amount or number of contributions made. The Committee felt that the strength of this scheme was the fact that "the individual who is covered . . . has earned the right to his pension by his own individual contributions or by contributions made on his behalf by his employer."

Among the disadvantages of such a scheme noted in the report were the facts that since the benefits received depend on the amount of contributions and the period for which the recipient is covered, those who enter the scheme late in life could expect only a small pension. The Committee also said that it would be difficult to apply the scheme universally, especially to self-employed groups such as farmers. The report pointed out that under this system old age assistance would be needed "on a large scale for many years. . . ."

The Committee expressed the belief that by "combining old age insurance with a universal minimum benefit financed out of general taxes," some of the weaknesses of old age insurance could be lessened. However, the report said that "to the extent that this minimum benefit approaches adequacy and is paid without regard to record of prior contributions, it weakens the link between the individual's contribution and benefit which is the essential strength of the insurance system itself."

The report also said that an *old age insurance* scheme presented certain administrative difficulties such as the setting up of a reserve fund, and keeping extensive records of premiums paid by those covered

in the scheme. The committee felt that these difficulties "must be weighed against the psychological values of such a scheme."

"The universal pay-as-you-go (italics ours) system of old age security is designed to avoid the chief weaknesses of the insurance approach by assuring benefits to the entire population in the eligible age group. It does not attempt to relate the benefit which an individual receives or the amount of that benefit to the individual record of contributions," the report said. However, under this system, it is necessary to recognize both the total costs involved, and the necessity of collecting from those who will benefit ultimately to meet the cost of those persons now eligible. Under this system, it is not necessary to maintain a reserve fund or a record of individual contributions.

The Committee recognized that under a universal pay-as-you-go system some of the psychological values of an insurance scheme are lost. In particular, the report noted that there would be no direct relationship between the individual's prior contributions and right to benefits. Therefore the scheme must be solidly based on a revenue system receiving direct contributions from the largest possible number of citizens.

The report said that the pay-as-you-go system is costly by nature because benefits are not limited by any test of need. It is therefore necessary that benefit rates must not be so high as to make the over-all cost too burdensome. The Committee considered "that the rate of benefit paid should be set at such a level as to avoid so far as possible the social inequities of a situation in which the retired beneficiary group might find themselves in more favourable economic circumstances than those not yet retired who are still actually engaged in productive employment." The adoption of a plan should do nothing to diminish private incentive toward provisions for old age security, the committee urged.

Committee's Opinion

In rendering its opinion, the Committee said:—

The Committee found some advantages in each of the three systems which it studied. On balance, however, the opinion of the Committee with respect to the population presently of pensionable age (70 and over) is that the universal pay-as-you-go system is most suitable to Canadian circumstances. It can be assumed that the great proportion of the individuals in this age group have retired from active employment, and it is a fact that nearly one-half are now in receipt of old age assistance.

The Committee further believes that such a program can be financed and administered satisfactorily only by the federal government. Only the federal authority can establish a sufficiently broad base of contributions to make such a program possible, and only the federal authority can ensure that an individual will receive the benefit to which he has contributed, regardless of whether he moves from one province to another.

The Committee has not felt, however, that it would be discharging properly its duties if it were to deal solely with the group presently of pensionable age and overlook the needs of a significant section of the population in the younger age group 65 to 69, many of whom, while younger in years, are no longer able to carry on without assistance.

Application of the universal pay-as-you-go system to this younger age group would increase substantially the over-all cost. The difference between the cost of a universal pay-as-you-go pension of \$40 a month at age 70 (\$324 million) and a universal pay-as-you-go pension of \$40 a month at age 65 (\$528 million) amounts to \$204 million.

It may be doubted whether, in terms of priorities, the diversion of such a large extra amount of the national income to this particular group can be justified, particularly when such a large proportion of the people in this age group are still actively engaged in productive employment and self-supporting. There is an advantage in universality when the large majority of the age group concerned is retired. That advantage does not obtain to the same extent when the majority of the age group concerned is still active and self-supporting.

These considerations have led the Committee to the view that any program of old age security to be applied to persons in the age group 65 to 69 should involve some principle of selectivity, and this, in the Committee's judgment, involves the application of a suitable test of eligibility, designed to ensure assistance to persons in this age group most in need of it.

As already pointed out in Chapter II of this report it may be argued that such a test serves the double purpose of keeping costs within reasonable limits, and of encouraging the largest possible number of individuals 65 to 69 to continue in gainful employment. This latter consideration is of particular importance when it is realized that, with increasing longevity, the numbers of persons reaching 65 may be expected to increase substantially in future years. As already indicated, the population 65 and over will be 1,101,400 in 1951, and this number will rise, at a greater rate than the increase in our total population, to 1,372,500 in 1961 and to 1,630,000 in 1971. If universal benefits of \$40 per month were to be provided to all persons in this age group, the cost would rise from \$528,672,000 in 1951 to \$658,800,000 in 1961, to \$782,400,000 in 1971.

The Committee is not persuaded that the people of Canada would, at this juncture, be prepared to divert such a substantial proportion of the total national income to old age security purposes, particularly when, as the evidence demonstrates, there

are other priorities of unmet need, and other responsibilities, the magnitude of which is as yet unknown, which may fall upon the shoulders of the Canadian people in the field of national security.

All things considered, therefore, the Committee is of the opinion that the most suitable old age security plan for Canada under present circumstances consists of a two-fold program, as follows:—

- (a) A universal pay-as-you-go program applicable to all persons 70 years of age and over, based on the contributory principle and administered by the federal government. The benefit should be a flat, uniform amount of \$40 a month for all eligible persons, and eligibility should be based solely on age and a suitable residence qualification.
- (b) For the age group 65 and over not eligible for the universal benefit, old age assistance at the rate of \$40 a month should be available, subject to an eligibility test in some respects similar to that which exists under the present old age assistance program, but modified to take account of the different characteristics of the age group to which this test is to apply, and adjusted in such a way as to recognize to a greater extent than at present the desirability of encouraging recipients to earn supplemental income.

One important result of lowering the age of eligibility on a selective basis to 65 would be to make provision for a substantial number of persons presently in need because of premature ageing or invalidity. To the extent that the age of eligibility under old age assistance is lowered to 65 it can be considered as making a significant contribution to the security needs of the disabled members of the population in the upper age groups.

Because a program of the assistance type requires individualized treatment, it is important that it should continue to be administered by the provinces. In order, however, to limit the financial burden on the provinces, the Committee believes that the provincial share of such a program should be somewhat less than the cost to which they are committed under present legislation. This objective, according to the Committee's estimates, would be achieved if the federal government were prepared to share the cost of the assistance program on a fifty-fifty basis.

The two-fold program here set forth would accomplish the two main objectives of abolition of the means test from the present federal-provincial old age assistance program and of lowering the age of eligibility for old age assistance to 65 years. The main body of evidence placed before the Committee gave the highest priority, in that order, to the attainment of these ends.

Cost.—The Committee recognizes that this is an expensive program—a program which overnight would increase three-fold the combined expenditure of federal and provincial governments under the present old age assistance scheme.

An expenditure amounting to \$388 million (estimated) in the year 1951 for

the program outlined above is not one which any group of responsible legislators would favour if they had any fears that the cost would be more than the people of Canada were able or willing to pay, or if they were not deeply convinced that the Canadian people are firm in their desire to achieve for our aged people the ends of social justice. Such a program would indeed place Canada without question in the forefront of the nations of the world in respect to old age security.

A \$40 universal benefit at age 70 is equivalent to an estate, valued on an annuity basis, of \$4,690 for males aged 70, \$5,500 for females aged 70, and \$10,190 for a married couple of eligible age. This takes no account of the value of old age assistance payments to persons in the age group 65 to 69.

Looking at such benefits from an economic point of view, it may be assumed that most of them will be spent on the basic necessities of life—food, clothing, shelter and medical attention. Like family allowances, the program here contemplated would tend to stabilize consumer purchasing power and employment, particularly in less favourable economic periods.

The Committee has carefully considered the argument that such a universal system for persons 70 and over is economically wasteful in that it provides the same benefit to rich and poor alike regardless of their need. It is true, of course, that, under any system which abolishes the means test for the group presently of pensionable age, benefits will be paid to some persons who do not "need" them on any test of personal need. But it must be remembered that to the extent that the universal pay-as-you-go system is based on individual contributions, individuals in the upper income groups would, through their personal contributions, have bought and paid for their own retirement security, as well as making a substantial contribution towards the cost of retirement security for others. In view of these facts, the Committee does not consider that it would be equitable to impose a "means test in reverse" and wholly deny retirement benefits to those individuals who have actually made the largest direct contributions to the revenues from which the universal benefits will be paid.

A certain amount of the benefits paid to persons in the upper income levels will be recovered through the normal operation of the income tax, if benefits are considered as taxable income. Furthermore, if the special income tax exemption of \$500 presently applicable to persons 65 and over were to be withdrawn from persons receiving the universal benefit, an additional amount of the order of \$6 million would be recovered. The Committee has not considered it necessary to deal with this problem beyond pointing out that any adjustments which may be considered necessary or desirable can be made, as in the case of family allowances, through alteration of prevailing income tax exemptions.

Distribution of Cost.—The introduction of a universal pension of \$40 a month at age 70 would relieve the provinces of the cost which they are now bearing under the federal-provincial program of old age assistance. This would enable the provin-

inces to share in the cost of old age assistance to those over age 65 who will not be eligible for the universal pension.

The information placed before the Committee indicates that the total cost of old age assistance to those found eligible over age 65 would not exceed \$64 million at the present time under an eligibility test similar to that which now exists under the old age assistance program. If, therefore, one-half of the cost of the assistance program were to be paid by the federal government, the provinces would be left to pay about \$32 million, or slightly less than the cost that they now bear under the joint program of assistance at age 70. It should also be kept in mind that the provinces would, in addition, be relieved of certain expenditures which they are presently making, together with the municipalities, in respect to public assistance and institutional care for groups 65 years of age and over.

On the basis of these estimates, the total cost of the federal share of the combined program of universal pensions and old age assistance would be as follows:—

(a) Universal pensions at age 70	\$324,000,000
(b) Federal share of old age assistance at age 65...	32,000,000
	\$356,000,000

At the present time the federal share of the old age assistance program for those 70 and over is about \$100 million. In addition, certain other costs, such as war veterans allowances for those 70 and over and assistance to aged Indians, amounting to about \$6 million, would be absorbed into the total program as envisaged. The net additional funds required to finance the federal share of the program would therefore be of the order of \$250 million.

Methods of Financing.—The Committee is in favour of the contributory principle, not only because of the importance of this in raising total moneys required, but also because of the importance of establishing a close association in the mind of the individual between his contribution to the cost and the ultimate benefit he is to receive.

In considering how the cost could best be distributed fairly over the whole population, the Committee paid particular attention to the estimates given in Chapter VI of the theoretical yields of various tax and contribution rates. In reviewing the methods of raising the necessary revenues, the Committee sought to find some system of contributions which was at once practical and which achieved the objective of requiring a direct and conscious payment by the largest possible number of those who will benefit from the program.

A three-way basis of sharing the cost, involving contributions from individuals, from employers and from the general revenues of the country, was considered as a possible method of raising the revenue necessary to meet the federal share of the program. This is, of course, only one possibility among many; it is put forward as an idea worthy of consideration rather than as the final view of the Committee.

(1) Under such a tripartite arrangement, each individual would be required

so far as possible to make a direct contribution out of his individual income or earnings. If the ideal of universal contributions is to be approached, if not fully attained, it would be necessary to require contributions from individuals who are now exempt from the payment of income tax. There would, of course, inevitably be some individuals with incomes so low in relation to their personal and family responsibilities that they could not be expected to bear their share. Such individuals would clearly have to be excluded from the requirement to make contributions.

(2) A tripartite arrangement such as the Committee considered would also provide for the direct participation of employers in sharing the cost of pensions for their own employees. No new principle would be involved here, since a precedent has already been set for employer participation in existing unemployment insurance legislation.

(3) Finally, since expenditures which are now being made out of the Consolidated Revenue Fund would be absorbed into the program here set forth, the federal government would be expected to become a partner in such a tripartite scheme to the extent of contributing to the total cost of the program an amount not less than that which is now being paid out of general revenues under the various assistance programs. If an allocation of the cost along these lines were to be considered, the federal contribution might be regarded as being roughly equivalent to the cost of providing benefits to those individuals and families in the lowest income groups from whom no direct individual contribution could reasonably be expected.

(4) On the assumption set forth in (3) above, that the contribution from general revenues should approximate present costs, it would follow that the additional amount of \$250 million required to implement the over-all program would have to be obtained from employer and individual contributions. The various rates of contribution that might be required to raise such a sum can be found in Chapter VI.

The Committee, however, did not consider that it was part of its responsibility to do more than indicate possible forms of contribution. The raising of revenues is a technical problem which bears a close relation to fiscal policy in general, and the Committee did not feel

that it should suggest more than the main outlines and principles to be followed.

Residence Requirement.—The establishment of an old age security system such as that which is here set forth would, as already stated, place residents of Canada in a favoured position compared to the residents of other countries. Such a system, moreover, does not contemplate the limitation of eligibility for benefit to those who are citizens of Canada nor to those who can demonstrate that they have established an individual record of contributions during their working years.

In order to qualify for the universal pension at 70 years of age, an individual should have to reside for a reasonable period of time in Canada during his earning years and be liable during these years to make his required contribution to the old age security program. In the Committee's view, it is not unreasonable to suggest that for the universal pension program a residence requirement of twenty years should be established similar to that which exists now under the present federal-provincial old age assistance program.

With respect to an old age assistance program for persons 65 years of age and over on the basis of an eligibility test, it is the Committee's view that a requirement of fifteen years' residence should be considered.

Constitutional Aspects

In its concluding paragraphs, the report dealt with certain constitutional aspects which would have to be considered before a contributory old age security scheme could be instituted. Such a scheme would require an amendment to the constitution, "and an amendment might be necessary to give Parliament authority to impose a social security tax 'earmarked' for the payment of old age pensions," the Committee said.

The report recommended that if constitutional changes were necessary an amendment giving "concurrent jurisdiction to Parliament and the Provincial Legislatures" should be considered. The consent of the Provinces to the termination of the present Old Age Pensions Act would also be necessary.

ACTION AGAINST UNEMPLOYMENT

*The International Labour Office recently released its survey of world unemployment conditions, and a proposed program to avoid another depression. The study was prepared for debate by delegates at the ILO general conference, held in Geneva, from June 7 to July 1.**

The International Labour Office recognizing that "full employment is now universally accepted as one of the most important of economic objectives . . .", has issued its report *Action Against Unemployment*, an analysis of the extent and nature of unemployment, and recommendations designed to combat this world problem. The survey, issued at the request of the ILO Conference held in 1949, was considered by the Conference at its meetings held in Geneva from June 7 to July 1, 1950. (See p. 1157.)

The report is in two main sections. The first is concerned with a discussion of the main causes and types of unemployment in the post-war period, together with an analysis of the underlying economic causes in certain countries, designed to clarify the significance of recent trends. The second section includes recommendations which might be implemented to relieve unemployment and deals with such matters as unemployment insurance; deficiencies in aggregate demand; unemployment localized in particular industries, occupations, or places; and measures that are being, or might be taken in the field of international trade and finance.

Extent and Character of Present Unemployment

The document said that in most of the industrialized countries, unemployment has remained at low levels since the end of the war. In these countries the main causes of unemployment have been *frictional* and *seasonal* in nature. Frictional unemployment has probably been higher than usual because of delays in reconversion, and also because of marked time sequences in the shift of consumer demand as the more pressing war-time shortages have been eased. Seasonal unemployment has been alleviated in part by the presence in these advanced industrial countries of industries with complementary seasonal fluctuations.

The report noted that in several European countries, and in the United States, unemployment in the winter of 1948-49 rose to over 4 per cent of the wage and salary earners. This rise was attributed to four

main causes, and four countries were selected as principal examples of each. *Inventory liquidation* primarily affected the United States although it caused some unemployment in Germany and Italy as well. Unemployment in Belgium was due to declining exports and was aggravated by the introduction of labour-saving devices needed to meet international competition. The influx of refugees and repatriates was a problem in Bizone-Germany. The influx of these people comprising 20 per cent of the population, resulted in both the misallocation of employment, and in a high level of unemployment. Chronic overproduction was noted as being the main problem in Italy, where it is pressing against a limited supply of capital.

The report noted that economic prosperity in Latin America depends heavily upon the demand situation in foreign markets, since there are few alternatives to the export industries. However, these countries have been quite prosperous since the end of the war, and have taken advantage of this situation to undertake extensive developmental and industrialization programs.

The centrally controlled economies of eastern Europe and the USSR have coordinated comprehensive plans of investment with manpower plans, so that unemployment has been kept at a low level.

The employment situation in Asia and the Far East has deteriorated since the end of the war the report said, despite ambitious schemes of economic development in Ceylon, India, Pakistan and the Philippines. In India and Japan the present situation has partly resulted from the introduction of labour-saving devices, and has been aggravated in both these countries and Pakistan by a large influx of refugees and repatriates. In Burma, China, and other countries in the Far East the report considered that political instability and civil strife have been important causes of unemployment.

* For summary of report of leading world economists to UNESCO, "National and International Measures for Full Employment", see *LABOUR GAZETTE*, July, 1950, pp. 994 to 999.

In the Middle East the serious refugee problem, coupled with a high birth rate, aggravated the chronic problem of the region—under-employment in the rural areas, and a lack of employment opportunities in the towns.

The underlying factors which have helped to sustain a high level of employment in the industrial countries have been a high level of replacement capital expenditures, and periodical foreign aid for some countries which depend heavily upon imports according to the report. With the increasing competition in world trade, the experts felt that high employment may be more difficult to achieve in the future than in the past few years, for both the underdeveloped and the industrial countries.

Action Against Unemployment

Unemployment Benefits and Allowances.

—A majority of the industrialized countries of the world have statutory provisions providing for the payment of unemployment benefits or allowances. However, existing legislation leaves much to be desired. In the first place coverage is too limited; in some countries no legislation exists, while in others it covers too few workers. Secondly, the period of eligibility required to qualify appears to be too long, and the waiting period requirements too restrictive. The most serious defect the report noted was that the level of benefits in many cases is not geared realistically to present-day levels of wages and prices, while the duration of benefits is often inadequate. Hence the desirability of strengthening legislation before unemployment becomes acute is emphasized. In addition, it is felt that there is a need for an unemployment assistance scheme to provide for workers who do not qualify for an insurance benefit, or who have exhausted their benefit rights.

General Unemployment Arising from a Deficiency of Aggregate Demand.

—The problem, of aggregate demand, is one of maintaining total investment expenditures, and presents its greatest challenge to the industrially advanced private economies. In these countries, non-consumption expenditures form a substantial part of total expenditures, and are dependent upon a large number of undirected individual decisions. Instability of these expenditures in the past has resulted in wide fluctuations in production, employment, and income that tend to become cumulative. The problem is not as acute in the centrally controlled economies or the underdeveloped economies. The former are in

a position to control investment and consumption expenditures, while the latter spend so small a proportion of national income upon investment that the effect of fluctuations in investment expenditures on total employment is likely to be small.

Government action is called for in stabilizing both investment and consumption expenditures at a high level. The report sets forth three possibilities to stabilize investment. First, tax incentives, favourable interest policies, and subsidies are suggested as means of encouraging private investment. A number of novel plans already in operation in different countries are noted. Second, it is urged that efforts be made to increase exports through co-operative international action. Third, to compensate for lapses in the private sector, a compensatory public-works policy is suggested. Here again it is noted that a number of countries have made preparations to make use of this principle. In addition some Governments contemplate flexible operation of long-term development programs. Regarding consumption, it is pointed out that consumption may be increased by lowering prices and/or increasing the income of consumers.

Several methods of maintaining purchasing power were noted including the reduction, remission, or rebate of taxes; income transfer payments; income supplements; price supports; social security payments; minimum wage payments, while respecting the need for maintaining sufficient funds for investment expenditures; and a flexible price policy. It is pointed out in the document that full employment in a free market economy today, calls for a compensatory fiscal policy by Government, and that increased expenditures in recession periods should not be met by increased tax rates, but rather through loans or other methods of deficit financing.

Improving the Organization of the Employment Market.

—Organization of the employment market is designed to reduce that employment which is frictional in character, since both training and placement services base their activity on subsequent placement.

The report urged that the employment services in most countries should improve upon present statistics of trends in employment, and suggested various means to do this. With regard to recruitment, joint management-union machinery is pointed to as one way to achieve greater efficiency, with the United Kingdom given as an example of this approach. Second, the need for vocational guidance, and also

facilities for the training and retraining of labour is emphasized. In this connection the experts noted that it should be based on a thorough analysis of present and probable manpower needs, and carried out with employer-worker committees as consultants. Third, the problem of increasing the mobility of labour is brought out. The personal and psychological difficulties underlying immobility are stressed, as well as the general feeling of insecurity involved. Attention is called to the possibility of pressure for mobility through the possible withdrawing of unemployment benefits, but the report noted that this calls for an adequate definition of "suitable employment." This points up the need for a complete and accurate information service, as well as for some economic safeguards. Regarding transfers to other areas, the necessity of considering all possible factors is indicated, such as the duration of unemployment, age and family responsibilities, jobs available, and housing facilities.

Depressed Areas.—The two main causes of depressed areas are stated to be: First, the depletion of natural resources; and second, the loss of sales to a market on which the area is particularly dependent. The latter could result from a permanent change in the demand for a particular commodity, over expansion, or from fluctuations in the use of capital goods. Some areas, too, are heavily dependent upon export markets, and suffer if world prices drop.

Two main types of measures have already been taken or are being contemplated the report said. First, fiscal policy has been directed towards aiding areas affected by a deflationary trend. This has been carried out recently by the United States. Second, programs have been taken to promote industrial diversification within the depressed area. This policy has been developed mainly in the United Kingdom, which has developed a scheme to assist firms that fall in with its program of development, going so far as to build houses, and in some cases even factories. Belgium, Canada, and Sweden have undertaken industrial research projects, and Canada has extended financial assistance in the case of one industry. Consideration in both cases should be given to the social costs as well as to the actual costs of private investment.

In some cases of outright depletion, it might be necessary to write off investment in the area and transfer the population to more prosperous localities.

Special Problems of the Less Developed Areas.—In the less developed economies

it appears that the problem is not so much unemployment, as *under-employment*, both chronic and agricultural. It is felt that the cure lies in an alteration of their economic structures, revision of productive techniques, and a rapid increase in capital accumulation, especially in the face of increasing population.

As regards action against the long period of seasonal unemployment, four approaches are suggested: First, modernizing of declining rural industries; Second, public works, to be dovetailed in with seasonal variations in order to make efficient use of farm labour; third, encouragement of mixed farming; and fourth, improved facilities for seasonal migration.

As for chronic under-employment, a strong case is put forward for rapid industrialization, since only in Latin America could land reclamation be profitably carried out. In this connection it is noted that each country must decide for itself which combination of private and public entrepreneurship will be most effective, but that government policy with regard to respective spheres of private and public enterprise should be clearly set forth.

In such a program it would be necessary to keep a delicate balance between a full capital building program and inflation, since the low level of saving in these countries makes it difficult to finance large-scale programs from domestic national income. It is in this area that international lending institutions such as the World Bank could play a most useful role.

The report said that priority should be given to *less capital intensive projects*, since they will tend to have a greater employment-creating effect than other investment activities. This is important in view of the possible impact of industrialization upon the handicraft industries, especially in the Middle and Far East. Another factor to be considered is whether proposed industries are suitable for decentralization within regions of surplus agricultural labour, or whether the labour must be moved to the industries. The task, apparently, is to move as much industry as possible to the surplus labour area, and to move the surplus labour if the area does not permit industrial development.

It is recognized that there will probably be an increase in the population growth of under-developed countries as industrialization progresses, even where they are presently over-populated due to social and cultural factors. However, it is felt that a large increase in population in the near future is inevitable in any case, and that industrialization should be speeded up to

provide employment opportunities for these people. Some consideration, however, should be given to the desirability and feasibility of a population policy designed to help reduce the time-lag between the fall in death rates and the fall in birth-rates.

With regard to stability of employment in the primary industries of the less developed countries, it was noted that this depends chiefly upon the internal economic stability of advanced industrial economies. Hence the need for international pressure for full employment is readily apparent.

International Action Against Unemployment.—It is significant that the report pointed out that nearly all countries replying to the United Nations questionnaire stated that they would be obliged to invoke import restrictions to protect their foreign exchange position. It is conceded that, in the absence of retaliatory action, import controls can conceivably direct a country along the right path, by increasing domestic production of goods which are in competition with imported goods. But the danger of a continuing shrinkage in world trade and parallel fall in standards of living is quite evident. Rather, it is asserted, the solution lies in expanding exports to the dollar area, by limiting home demand and lowering costs, and by further increasing the volume of world trade.

Actual and possible measures for international action against unemployment are classified under five headings: First, *technical assistance*. In this area the ILO has assembled groups of experts on a regional basis, and has also set up advisory missions to assist various countries. Other agencies include the International Monetary Fund, which is continuously aiding its members with financial problems; the World Bank, which has organized groups of experts to help frame economic development programs, and to analyse specific projects; and the Food and Agricultural Organization, which is doing valuable work in the way of increasing agricultural production. Second, *migration*. One answer,

it is felt, to over-population, is international migration, and the ILO has taken the initiative in promoting international migration agreements, and in collecting pertinent information. Third, *commodity agreements*. The need for international commodity agreements to stabilize world production and consumption at fair prices is met by the International Trade Organization Charter, which lays down specific procedures for the development of inter-governmental commodity agreements. This has not yet been ratified by enough countries to set up the Organization. But the need of it is recognized. Fourth, *loans and grants*. The stabilization of the flow of international capital would help to maintain economic stability everywhere. The three primary needs set forth in this area are to stabilize the flow of international capital; to assist Governments in easing balance of payment difficulties; and to counteract deflationary tendencies in capital exporting countries. It is felt that the International Monetary Fund and the World Bank can do much to meet the first two needs, but that the resources of the World Bank are "plainly too limited for it to be considered a leading influence quantitatively in the anticyclical timing of international and domestic investment." Fifth, *promotion of trade*. The actual instrument for promoting multilateral trade in the last two years has been the General Agreement on Tariffs and Trade, negotiated at Geneva in 1947, since the International Trade Organization has not yet been ratified.

The report concludes with a recapitulation of its conclusions and recommendations, with the warning that "poverty anywhere constitutes a danger to prosperity everywhere," and a reminder that an international effort will "enable Governments to fulfil the promise of the United Nations Charter to bring higher standards of living, full employment and conditions of economic and social progress and development to all peoples of the world within our own generation."

INTERNATIONAL LABOUR CONFERENCE STUDIES INDUSTRIAL RELATIONS AND EQUAL PAY FOR WORK OF EQUAL VALUE

Meeting at Geneva, the 33rd Session of the International Labour Conference made plans for international regulations on Collective Agreements, Conciliation and Arbitration, Equal Remuneration for Men and Women Workers for Work of Equal Value, and Minimum Wages in Agriculture. It adopted a Recommendation on Vocational Training of Adults including Disabled Persons.

The Thirty-third Session of the International Labour Conference, held in Geneva, Switzerland, between June 7 and July 1, 1950, brought together over 500 delegates and advisers from 52 of the member countries of the International Labour Organization. Most of the countries sent tripartite delegations, consisting of representatives of workers' and employers' organizations as well as government members.

The principal items on the agenda of the Conference included: Industrial Relations; Equal Remuneration for Men and Women Workers for Work of Equal Value; Vocational Training of Adults; and Minimum Wage-fixing in Agriculture.

The usual practice of the ILO, in formulating international regulations on labour questions, is to consider a subject at two successive Conferences before adopting a text in final form. In accordance with this "double discussion" procedure, most of the items on the agenda of the 1950 Conference were given preliminary consideration only, with final action being deferred until next year's session.

The subjects of Industrial Relations, Equal Remuneration, and Minimum Wage-fixing in Agriculture, were treated in this way. The Conference set up committees which gave detailed consideration to proposals for international Conventions or Recommendations on these items. During the debates, the representatives of the various governments and employers' and workers' organizations were able to put forward their views, and to reach a considerable measure of agreement as to the aspects of these subjects which might be considered suitable for international regulation. The task of framing the actual texts of the international instruments to be adopted, however, is left to next year's Conference.

On the other hand the Conference took final action this year on one of the items

on its agenda, namely Vocational Training. By unanimous vote, it adopted a Recommendation on the Vocational Training of Adults including Disabled Persons.

The Conference also carried out its usual task of scrutinizing the way in which member countries are applying the Conventions and Recommendations adopted at earlier sessions. It also conducted a debate on the Annual Report of the Director-General of the ILO, which this year dealt extensively with the subject of labour productivity.

The subject of Unemployment came before the Conference, not as a formal item on the agenda, but as a result of a special report prepared by the ILO. Following debate on this question, the Conference adopted a resolution on International Action against Unemployment.

Canadian Delegation

The Canadian Delegation to the Conference was as follows: —

Government Delegation

Delegates: Mr. Paul Goulet, O.B.E., Assistant to the Deputy Minister of Labour and Director of the ILO Branch, Department of Labour; Mr. N. F. H. Berlis, Secretary, Permanent Delegation of Canada to the European Office of the United Nations, Geneva.

Technical Advisers: Miss Edith Hardy, former Executive Assistant in the ILO Branch, Department of Labour; Mr. J. E. Lyon, Assistant Director, Vocational Training Branch, Department of Labour; Mr. Angus MacInnis, M.P.; Mr. H. R. Rutherford, Executive Assistant, Labour-Management Co-operation Service, Department of Labour; Mr. R. H. Taber, Industrial Relations Officer, Department of Labour; Mr. John Mainwaring, Assistant Editor, LABOUR GAZETTE, Department of Labour.

Provincial Government Representative Accompanying Government Delegates: Hon. Charles C. Williams, Minister of Labour, Saskatchewan.

Employers' Delegation

Delegate: Mr. Harry Taylor, O.B.E., Deputy Member of the Governing Body of the International Labour Office (nominated by the Canadian Manufacturers' Association).

Technical Advisers: Mr. J. C. Whitelaw, Manager, Quebec Division, Canadian Manufacturers' Association; Mr. T. Woodford Smith (nominated by the Canadian Chamber of Commerce); Mr. A. C. Ross, Canadian Construction Association; Mr. J. A. Brass, General Secretary, Railway Association of Canada.

Workers' Delegation

Delegate: Mr. Claude Jodoin, Vice-President, Trades and Labour Congress of Canada.

Technical Advisers: Mr. Arthur J. Kelly, O.B.E., Chairman, Dominion Joint Legislative Committee, Railway Transportation Brotherhoods; Mr. A. F. MacArthur, President, Ontario Provincial Federation of the Trades and Labour Congress of Canada; Mr. Gerard Picard, O.B.E., President, Canadian and Catholic Confederation of Labour.

Officers of Conference

The Conference elected as its President Mr. Jagjivan Ram, Minister of Labour, India. The Vice-Presidents were: Mr. Mohammad Nakhai, Government Delegate, Iran; Mr. Charles P. McCormick, Employers' Delegate, United States; and Mr. Paul C. Finet, Workers' Delegate, Belgium.

In the absence through illness of Mr. David Morse, Director-General of the ILO, Mr. Jef Rens, Assistant Director-General, acted as his substitute as Secretary-General of the Conference.

Walk-out of Satellite Countries

At the opening sitting of the Conference, the Government Delegates of Poland, Czechoslovakia and Hungary rose to object to the seating of the Chinese Delegation. They demanded that a decision be taken immediately on the issue.

The Chairman of the Governing Body, Mr. Leon-Eli Troclet, Belgium, who was presiding over the Conference until the election of its President, ruled that in accordance with the Standing Orders of the Conference the observations of the three speakers would be presented in the first instance to the Credentials Committee of

the Conference, and would be considered in plenary session only after the Credentials Committee had reported.

After this ruling the Czechoslovak, Hungarian and Polish Delegations withdrew from the Conference Hall.

Mr. Philip Kaiser, United States Government Delegate, took the rostrum at the conclusion of this incident to state that the walk-out of the three delegations, following their refusal to abide by the long-established rules of procedure of the ILO, was "evidence of the fact that they are more interested in propaganda tactics than in solving the human problem with which the ILO is concerned."

The walk-out applied only to the 1950 Session of the Conference, and did not affect the membership of the countries concerned in the ILO.

Subsequently the Conference approved the Credentials Committee's unanimous report, which recognized the credentials of the Chinese delegates.

Admission of New Member States

During the course of the Conference the membership of the ILO was increased to 62 nations with the admission of Viet Nam and the United States of Indonesia. Both countries were represented at the Conference by tripartite delegations.

Report of Director-General: Labour Productivity

The Director-General of the ILO, Mr. David Morse, had this year devoted a major section of his Annual Report to the subject of labour productivity; and a considerable number of speakers commented on this subject during the debate on the Report.

Mr. Morse had urged the need of increased production particularly in the case of "the teeming, half-starved millions of people who constitute the vast majority of the people of the world." He stressed that a rapid improvement in the conditions of such persons was essential to the promotion of world peace.

As regards more highly industrialized countries, he stated that higher production was needed to bring about higher living standards; but he emphasized the importance of linking the drive to increase productivity with a full employment policy.

Eighty-six worker, employer and government representatives took part in the debate on Mr. Morse's report. A majority, including trade union spokesmen of the United States and the United Kingdom,

backed the principle of increased productivity as a means of raising living standards.

Participating in the debate on behalf of the Canadian Government, Mr. Paul Goulet expressed approval of the ILO's response to the needs of the underdeveloped areas of the world:

Citing Canada's "comparatively high rate of productivity," he pointed to the rapid growth of industrialization and the development of mass production techniques, which had made it possible for the Canadian labour force to increase its rate of output.

"In a private enterprise economy," he continued, "productivity is primarily the problem of employers and of workers. The function of Government is to help to produce a climate favourable to the efforts of the two parties in industry."

Mr. Goulet then reviewed some of the Canadian Government activities related to this objective. These included measures and policies designed to encourage business investment, maintain consumer purchasing power, expand foreign trade, encourage and aid industrial research, and provide services designed to "improve productivity in mines, forestry, agriculture, fisheries, and indeed in almost every branch of commerce and industry."

Dealing with the problem of labour productivity as it affects employers and workers, he said:

"To the employer the advantages of improvements in productivity are obvious and unquestioned. To the worker these advantages are not always so immediately apparent. Introduction of new machinery, however, beneficial to industry, may have disruptive consequences to a certain section of the labour force. It is also true that other kinds of gains in productivity, occasioned by more efficient job methods or by harder effort, may throw individual workers out of employment. Even though this unemployment may be temporary, it nevertheless influences the way the individual worker and, in fact, labour generally, looks at the problem of productivity.

"Yet the gains to the working population generally through increased productivity cannot be denied. To the extent that its benefits are distributed throughout the population, in the form of higher income, shorter working hours, or lower prices, it leads to a higher standard of living. During the past two decades in Canada real wage rates in non-agricultural industry have increased by no less than 53 per cent. That is, the wage-rate index has risen 53 per cent over the cost-of-living index. This reflects a real gain in the standard of living of the average Canadian workman, that

could not possibly have been achieved without a rise in productivity. And total industrial employment in Canada is approximately twice what it was two decades ago, which indicates that business has not failed to provide new employment opportunities to offset temporary dislocations."

Continuing, Mr. Goulet noted that the Director-General in his Report had suggested the main lines of a policy to remove the fears of labour attendant on technological progress. "He urges three conditions," Mr. Goulet noted, "namely the maintenance of a high level of employment, the provision of unemployment insurance, and the provision of training, where necessary, to fit laid-off workers to new jobs.

"Mr. Morse has done well to emphasize these three conditions," Mr. Goulet said. "That they have been increasingly accepted as public policy by the nations of the world represents one of the most significant social advances of our time. Their successful application will undoubtedly provide the kind of security which contributes to higher productivity and resultant higher standards of living.

"The two-fold role of Government, then, in relation to the problem of productivity is on the one hand to give free rein to the creative aspect of business enterprise, and on the other hand to ensure essential security for individuals in a dynamic economy."

Industrial Relations

At its sessions of 1948 and 1949 the Conference had adopted Conventions dealing with two aspects of Industrial Relations, namely, Freedom of Association, and the Right to Organize and Bargain Collectively.

In continuing its work in this field at the 1950 session, the Conference gave "first discussion" to proposals for Recommendations dealing with Collective Agreements and Voluntary Conciliation and Arbitration.

The debate in Committee on the first of these items revealed considerable differences of opinion, reflecting the differing concepts of collective bargaining existing in various member countries, and also the varying degrees of trade union organization.

The text which was finally adopted by the Committee, and approved by the Conference as a basis for next year's discussion, begins by setting forth the obligation of member countries to establish machinery to aid the parties in the "negotiation, conclusion, revision and renewal" of collective agreements.

Following a definition of "collective agreements," and a statement of their binding force, the text makes provision for the judicial extension of agreements to apply

to all employers and workers within the industrial and territorial scope of the agreement. (This clause, being contrary to general Canadian practice, was not supported by the Canadian Government Delegation, and was opposed by the Canadian Employers' Delegate.)

The text then goes on to require the establishment of machinery for settling disputes arising out of the interpretation of an agreement, and concludes by providing for the supervision of the application of agreements.

When submitted to the Conference, the text was approved by 99 votes to 13, the Canadian Workers' Delegate voting for the text, the Employers' Delegate voting against, and the Government Delegates abstaining.

The second proposal before the Committee, which was for a Recommendation on Voluntary Conciliation and Voluntary Arbitration, caused less difficulty. It provided that voluntary conciliation machinery should be available to assist in the prevention and settlement of industrial disputes, that such machinery, where constituted on a joint basis, should include equal representation of employers and workers; that both parties should be represented at all stages of the procedure, which should be free of charge and expeditious, and which should be set in motion either by the conciliation authority or on the initiative of any of the parties to the dispute.

It was agreed that the parties should be "encouraged to abstain" from strikes and lockouts while conciliation is in progress. On the other hand if a dispute is submitted to arbitration for final settlement with the consent of all parties concerned, the latter should "abstain" from strikes and lockouts while the arbitration is in progress, and should accept the arbitration award.

In plenary session the text dealing with conciliation and arbitration was adopted by 112 votes to 0.

The proposal to place the two Industrial Relations items on the agenda of next year's Conference for "second discussion" was adopted without opposition.

The Industrial Relations Committee did not have time to consider three proposed texts dealing with labour-management co-operation at the level of the undertaking, the industry, and at the national level. These items were, however, placed on the agenda of next year's Conference, the vote in plenary session being 114 to 21 with 14 abstentions. The proposal was supported by the Canadian Government and Workers' Delegates, but opposed by the Employers' Delegate.

Two resolutions asking that the International Labour Office prepare comprehensive reports on the law and practice in various countries with regard to the protection of the property of employers' and workers' organization, and the termination of contracts of employment, were adopted without opposition.

Equal Remuneration for Men and Women Workers for Work of Equal Value

The principle that women workers should be paid as much as men where they perform work of equal value is embodied in the Constitution of the ILO, which was adopted in 1919. It is also incorporated in the preamble to the United Nations Charter and in the Universal Declaration of Human Rights, adopted by the UN in 1948.

In attempting to formulate an International Labour Convention or Recommendation on the subject, however, the ILO is seeking to evolve a text which will adequately define the principle, and set forth methods for its application.

The Conference Committee which dealt with the subject found that there were wide differences among its members as to how the question should be approached. These differences reflected variations in social custom, in the systems of wage payment, and in the degree of economic development among the ILO member countries. There was also a fundamental problem as to whether the equal pay principle should be implemented through legislation or collective bargaining.

The position of the Canadian Government Delegation had been arrived at after consultation with the provincial authorities. Briefly, it was to support the equal pay principle, and to accept the obligation to apply it to employees of the state, but to consider its application in industry generally as a matter for collective bargaining rather than for legislation.

Following a general debate on the question of equal pay, the committee proceeded to a detailed discussion of a draft text prepared by the International Labour Office.

As regards definition, the committee decided first that the term "remuneration" should include the basic wage or salary, together with any additional emoluments.

The expression "equal remuneration for men and women workers for work of equal value" was defined as meaning that rates of pay "be established without discrimination based on sex." In determining remuneration it was further decided that, where appropriate, measures should be taken to promote objective appraisal of jobs on the basis of job content.

It was agreed that application of the equal pay principle might be by law, collective agreements, or a combination of both.

The view was accepted that the international regulations should set forth the obligation of governments to apply the equal pay principle to employees of the state. As regards industry generally, government action to apply the principle was to be sought through minimum wage legislation and in regard to work executed under the terms of public contracts. Governments might also help in the general application of the principle through the establishment of methods for evaluating job content, the promoting of public understanding of the equity and usefulness of the principle, and the conducting of surveys. It was also agreed that, with a view to raising their productive efficiency, women should have equal access with men to facilities for vocational guidance, training and placement.

Turning to the question of whether the international regulations should take the form of a Convention or a Recommendation, the Committee decided not to take even a provisional decision on this point, but to defer action until next year's Conference.

The conclusions of the Committee, when presented to the plenary session of the Conference, were adopted by 95 votes to 15. The Canadian Government and Workers' Delegates supported the text, which was opposed by the Canadian Employers' Delegate. A resolution to place the item of Equal Remuneration on the agenda of next year's Conference for "second discussion" was adopted by 117 votes to 0, with 21 abstentions. The Canadian Employers' Delegate was among those abstaining.

Vocational Training

Following consideration of this item in committee, the Conference took final action to adopt unanimously and with the full support of all three groups a Recommendation which sets up international standards for the vocational training of adults, including disabled persons.

The Recommendation provides that such programs should be studied and worked out in co-operation with employers' and workers' organizations wherever they exist.

It covers the definition, principles, scope and methods of training, training of production workers, on-the-job training, training outside the undertaking, training of supervisors, recruitment and training of instructors, special provisions for training of the disabled, and organization and administration.

It calls on the member states to co-operate on an international basis, with the help of the ILO, by lending experienced personnel on the request of countries seeking such assistance, by providing training opportunities for workers of other countries, and by exchanging personnel and information.

Minimum Wages in Agriculture

As the first stage in a program of study of the problems of agricultural labour, the Conference had on its agenda the question of minimum wage-fixing machinery in agriculture.

Subject to final decision by the 1951 Conference it was agreed that this question should be dealt with by a Convention supplemented by a Recommendation; and preliminary work was done on the two proposed texts.

Following discussion of the matter by a committee, the Conference decided that the Convention should lay down general principles for the establishment of minimum wage-fixing machinery.

It would provide for consultation with employers and workers and would ban abatement of rates through individual contracts or agreements. Partial payment in kind would be allowed where this system is customary or usual but only if fair and reasonable and appropriate for the personal use and benefit of the worker and his family.

The Recommendation would provide that wages should enable the workers concerned to maintain a suitable standard of living and should be comparable with rates paid in sectors where there are collective bargaining contracts.

The Canadian Government position in regard to this text was affected by the fact that in Canada paid labour accounts for only a very small proportion of the total agricultural labour force, and further that paid agricultural workers in Canada frequently expect either to become farm proprietors themselves or to transfer to other industries. Thus, while sympathetic to the needs of countries where agricultural conditions are different, and where minimum wage-fixing machinery is desirable, the Canadian Government Delegates were unable to support the adoption of international regulations, and abstained in Committee in the voting thereon.

The Conference also adopted without opposition a resolution mapping out a future program of action for the ILO in regard to farm labour. The subjects to be studied further, as they apply to agriculture, include social insurance, vocational training, hours of work, manpower, and safety and hygiene.

Action Against Unemployment

Although the subject of unemployment was not formally on the agenda, the Conference had before it a report prepared by the International Labour Office entitled "Action against Unemployment." (See p. 1148.)

A resolution on the same subject was submitted to the Conference by Mr. Alfred Roberts, United Kingdom Workers' Delegate. This resolution was considered by the Resolutions Committee, which amended a number of its clauses before placing it before the plenary session of the Conference.

Noting that unemployment "still involves serious hardship to considerable numbers of workers," and that the fear of mass unemployment "still results in a feeling of insecurity for all workers," the resolution affirms the belief that:

"mass unemployment and underemployment are social evils which can be eradicated by appropriate policies."

It accordingly suggests various courses of action, to be followed by international agencies, governments, and employers' and workers' organizations.

Among these activities, the resolution calls first for the establishment of systems of unemployment allowances, economic information and administrative services, and statistics.

Among other matters, the resolution suggests also that Governments adapt their policies so as to contribute to the maintenance of adequate demand, and so as to be prepared in advance, in case significant declines in employment occur, to take prompt corrective action, whether by flexible tax systems, price or income supports, measures to stimulate activity in particular industries or districts, or by large public works programs.

Following a section on the special needs of under-developed countries, the resolution deals with the international responsibilities of nations in regard to maintaining employment levels.

"In any particular country," it is pointed out, "the maintenance of full employment and the raising of living standards depend not only on such action as can be taken by the country concerned, but also on the policies followed by other countries."

The resolution, therefore, urges Governments to consider taking action, both individually and through the appropriate international organizations, to "ensure that fluctuations in world trade are not such as to cause the spread of depressions from one country to another"; to avoid measures

which would have the effect of creating balance-of-trade difficulties for other countries; to prevent or moderate pronounced fluctuations in international commodity prices; to encourage the progressive reduction of trade barriers; and to expand the flow of capital and technical assistance into under-developed countries.

Finally the resolution pledges the ILO to give continuing study to those aspects of employment problems which fall within its special province, and to co-operate with the United Nations and other international agencies.

The resolution on Action against Unemployment was the subject of vigorous debate in plenary session. Although supported by the Workers' Group and by almost all governments, it met with opposition on the part of the Employers' Group. It was finally adopted by 96 votes to 30, with 13 abstentions, the Canadian Government and Workers' Delegates voting in its favour, and the Employer Delegate in opposition.

Application of Conventions and Recommendations

The Conference set up a Committee to consider the annual reports on ratified Conventions submitted by member countries, and the observations thereon made by the ILO Committee of Experts which had met earlier in the year.

The Conference Committee studied carefully the observations of the Committee of Experts, particularly as regards cases where differences appeared to exist between the national legislation and practice on the one hand and the provisions of the Conventions on the other. The Committee also had before it, for the first time, reports submitted by governments on a number of unratified Conventions, in accordance with the revised Constitution of the ILO.

Following study and discussion, the Committee submitted a detailed report to the Conference, containing general comments on the way in which member states were living up to their obligations under the ILO Constitution, and specific observations dealing with particular cases.

Finance

The Conference approved a budget for the ILO for the year 1951 of 6,219,506 U.S. dollars.

Next Conference

The next session of the Conference is to be held in June, 1951, also at Geneva.

Employment Service Convention Ratified by Canada

On July 19, 1950, Canada ratified Convention No. 88 concerning the Organization of the Employment Service, which had been adopted by the International Labour Conference at its 31st Session in 1948 (L.G., Sept., 1948, p. 972).

On motion of the Hon. Humphrey Mitchell, Minister of Labour, the House of Commons approved the Convention on May 29, and Senate approval was given on June 2. An Order in Council ratifying the Convention followed on July 19, 1950.

Explaining the terms of the Convention, Mr. Mitchell said:—

“Convention No. 88 provides that each member state ratifying the Convention shall maintain a free public employment service, consisting of a national system of employment offices under the jurisdiction of a national authority. The duty of the employment service shall be to ensure the best possible organization of the labour market, in co-operation with other public and private bodies concerned. Co-operation of employers and workers shall be secured through national, regional and local advisory committees.

“The organization of the employment service shall be so arranged as to assist workers to find suitable employment and to assist employers to find suitable workers on a voluntary basis. It shall also facilitate the movement of workers to areas with suitable employment opportunities, shall collect and make available information on the employment market, co-operate in the administration of unemployment insurance and other measures for the relief of the unemployed, assist in social and economic planning to ensure a favourable employment situation, and by vocational guidance endeavour to meet adequately the needs of particular categories of persons, such as disabled persons and young persons.

“The Canadian representatives at the San Francisco conference voted for the approval of this Convention.”

Continuing, Mr. Mitchell said:—

“It will be evident, I think, to all hon. members that Canada is already in full compliance with the provisions of the Convention. Under the provisions of the

Unemployment Insurance Act, we have established and are operating a national employment service in conjunction with the unemployment insurance provisions of the Act. The nature and standards of service provided by the National Employment Service under the Act are certainly at least as high and as complete as those laid down in the Convention.

“The opinion of the law officers of the Crown is that it is within the legislative competence of Parliament to give effect to this Convention, and no new legislation is required for this purpose.

“The Convention has already been ratified by the United Kingdom, Australia, New Zealand, Norway, Sweden and Bulgaria.

“In my opinion, Canada should proceed to the ratification of this Convention for the reason that in the provision and operation of our national employment service we have given effect to the Convention, and to indicate Canada's approval of its objectives and thus to give leadership and support to higher international labour standards, and for the establishment of similar services in other countries.

“Perhaps I should explain just what obligations follow upon the ratification of an international labour organization convention by a member state. When the formal ratification has been communicated to the Director-General of the International Labour Organization, the ratifying State is required to take such action as may still be necessary to give effect to the provisions of the Convention within the State by the enactment of legislation or otherwise, if this has not already been done.

“Each of the States ratifying the Convention agrees to make periodic reports to the International Labour Office on the measures which it has taken to give effect to the provisions of the Convention. In short, a member state ratifying a convention undertakes an obligation that the provisions of the Convention shall be given continuing effect in that its legislation and practice on the subject are on a level at least as high as the standards set by the provisions of the particular Convention.”

WORKERS' EFFICIENCY AND EFFECTS OF EMOTIONAL STRAIN

A recent article by Dr. H. Graham Ross in the Canadian Medical Journal discusses ill-health among workers, caused by emotional disturbances. The article classifies the characteristics of jobs likely to bring about excessive tension, and deals with the role of the industrial doctor in diagnosing and treating such conditions.

Writing in a recent issue of the *Canadian Medical Association Journal*, Dr. H. Graham Ross of Montreal said that "the physician in industry sees in his practice more cases of emotional disturbances with their attendant somatic symptoms, than does any other branch of the medical profession, even including the psychiatrist." These disturbances are estimated by Dr. Ross to account for over 50 per cent of industrial illnesses. His findings are based on studies organized by the Industrial Relations Centre of McGill University.

Dr. Ross said that the function of the industrial doctor "is to maintain those under his supervision in the highest possible state of health and physical efficiency." To effectively realize this objective it is necessary for the physician to accept the broad modern concept which "defines health as not merely the absence of organic disease, but a satisfactory physical, mental and emotional adjustment of the individual to his environment." This concept realizes that emotional disturbances can lead to emotional disorders.

Emotional disturbances among employees can lead to lowered production efficiency in Dr. Ross' opinion, and it has been found that psychosomatic disturbances have a direct relation to absenteeism. It has been estimated that "30 per cent of sickness absence in industrial groups is due to emotional disturbances." This estimate ranks "emotional ill-health . . . second only to the common cold as a cause of lost time." In addition these emotionally disturbed people comprise the "accident prone" groups found in industry.

Because emotionally ill workers are the responsibility of the industrial physician, he is faced with a direct challenge. If he is able to properly diagnose and treat these cases, he has "a unique opportunity to make a material contribution to the efficient operation of his industry and to the health standard of his community." The difficulty facing the doctor is that employees rarely complain of being emotionally dis-

turbed. Complaints which may later be proven to have an emotional background are presented in some physical form referable to a physical symptom.

While psychosomatic symptoms are fairly obvious, the causes behind them can be complicated and obscure. These causes are often "the result of an emotional pattern which can be traced back to the childhood and even infancy of the patient." Treatment of the symptoms is therefore of little value Dr. Ross feels, because "the cause must be identified and dealt with in order to achieve a satisfactory result."

Dr. Ross has classified these emotional disturbances into two rough groups: "the chronic case" and "the acute case." The "chronic case" is one which has resulted from a long and deep-seated emotional maladjustment. The "original cause may lie in some remote incident or situation dating back to the childhood of the patient. These cases pose a very difficult problem in industry."

"Acute cases" are usually beyond the industrial physician because of his limited training, and the length of time necessary to "determine the cause of the trouble and to carry out effective treatment." Such cases should be referred to a psychiatrist, in Dr. Ross' opinion.

The "acute case" has origins which are fairly recent. These "may be found in the work, social or domestic situation." Diagnosis is not too difficult, and such cases are more susceptible to treatment than the "chronic cases." The article noted that "the most important phase of the treatment, is of course correction of the cause of trouble." If the cause lies outside the employee's work, the role of the industrial physician is restricted to diagnosis, emergency care, and supervision until an outside doctor can assume responsibility. If, however, the cause "lies in the work situation, the individual physician must assume a greater share of responsibility for the care and treatment of the patient as well as for the correction of the cause."

“Psychosomatic disturbances . . . almost always are accompanied by a state of excessive nervous tension, at least, this is true when the disturbance is of occupational origin.” In his study of these disturbances, the doctor must therefore consider what are called tensional states. Tension is actually a “degree of preparedness for action.” The normally adjusted individual should be able to relax once the need for this state of preparedness has passed. If he cannot relax, lowered mental and physical efficiency may result and eventually lead to a breakdown. Those who suffer from excessive tension usually feel insecure. The cause of this insecurity may lie in some situation unrelated to the job or on the other hand in something directly related to the work. It is actually impossible “to separate these two situations into air-tight compartments.”

Dr. Ross has listed certain job characteristics which provoke breakdowns. These characteristics may be found in (1) *the job itself* or (2) *the job setting*.

Among the characteristics of the job which may create excessive tension is fragmentation. Fragmentation is described as the modern assembly-line tendency to break jobs up so that the worker often performs functions “which have no meaning for him in relation to the finished product, and are repetitious and monotonous.” Some workers overcome this monotony by devices such as counting the units they produce in groups, or by timing. Others, however, especially the “more imaginative and intelligent” are liable to succumb to tension on these jobs.

“The degree of responsibility involved in a job and the development of tensional states,” are definitely related according to Dr. Ross. “The tendency to excessive tension is increased by such factors as undefined responsibility, divided responsibility, excessive responsibility and responsibility without authority.”

Other characteristics noted by Dr. Ross which can cause excessive tensional rise are: excessive motor demands, found in jobs where the worker does not control the speed of operation; excessive noise, vibration, temperature, etc.; unpredictable flow of work; jobs which are either above or below, the individual's capacity; deadline jobs; and repetitive jobs.

Human relations in industry also play an important part in producing emotional states in the worker according to Dr. Ross. These disturbing causes found in the job setting itself include:—

2. Rigid job standards. The employers' standards and those of the employees may differ and cause tension. This is a problem of supervision;
3. The necessity for the individual to subordinate his own interests to group requirements. This is closely linked to (1) above;
4. Inadequate qualifications. The worker who does not have proper qualifications works under a handicap which usually results in tension. “The answer to this is the provision of adequate training and preparation before the worker is assigned to such a job;”
5. Inadequate supervision. “This may result in over-direction or under-direction by the supervisor, and in either case, will produce a sense of frustration or insecurity, leading to excessive tension.”

In addition to the job characteristics which cause excessive tensional rise, Dr. Ross has listed some characteristics of the individual which are likely to cause tension. Included in this group are:—

Deviations in motivation. The worker may suffer from “overmotivation”, which means that his effort is not rewarded by his achievement. The employee's personal motivation may not be identified with the job which is to be done. This is “undermotivation” and may lead to a feeling that there is “no sense of reward of accomplishment”. There may also be a “conflict of motives, where there is not sufficient skill, training or confidence that the decision made will be rewarded in the sense of meeting the personal goal.”

Workers who are specially prone to emotional disturbances include the ageing worker, faced with failing physical capacity and possibly an uncertain future, and physically handicapped people. Others who tend to get emotionally disturbed are those who show tendencies to insecurity; inability to co-operate; hostility; and those who feel inadequate.

The “detection, correction and prevention (of these tensional disturbances) is the responsibility of the industrial physician,” in Dr. Ross' opinion, but he suggests that the physician must not exceed his “normal advisory function,” and assume any of the “line authority of management,” in his approach to the problem.

Dr. Ross concluded that the new trend in industry is toward better co-operation between the medical and personnel department, and “the industrial physician is, however, by the nature of his training and professional status, in a position to provide guidance and direction to management in the development of personnel policies directed toward the establishment of better mental and emotional health within the organization.”

1. Non-acceptance of the worker by those with whom he is in contact on the job;

OLDER WORKERS: INDUSTRIAL ASPECTS OF AGEING

The retirement problem of the older worker, and the economic and social aspects which advancing age present are of increasingly important interest. The following is a summary of an article appearing in a recent issue of the Monthly Labour Review.

The problem of retirement and the related economic and social aspects of ageing form the basis of an article by Ewan Clague, Commissioner of Labour Statistics of the United States Department of Labour and printed in the *Monthly Labour Review*. The problem is now one of general interest to government, industry, and labour.

Commissioner Clague pointed out that, "in a very direct way, the magnitude of this problem reflects the tremendous gains in life conservation which have been made possible by medical science and its practitioners." Between 1900 and 1947 life expectation for males in the United States has increased from about 48 years to 65 years. Current estimates are that about "62 out of every 100 can expect to attain the conventional age of retirement."

One direct result of this reduction in mortality has been to increase rapidly both the numbers and proportion of aged in the population. Mr. Clague noted that "in 1900, only about 3 million persons—or 1 out of 25—were 65 years of age and over. At present about 11½ million men and women, or 1 out of 13, are in this age group, and their number is rising rapidly each year." If this trend continues, the numbers of aged will have doubled by the end of the century, and "they will comprise a significantly greater percentage of the population than at present."

In addition to the increase in the 65 and over group, there has been an impressive growth of those of "mature years" between 46 and 64. The proportion of people in this group has increased from one-seventh in 1900 to one out of every five today. Mr. Clague feels that "it is likely that the group will continue to grow in importance in the next several decades."

Employment opportunities for old and near-old workers have not kept up with their increased numbers. The change from an agrarian to an industrial economy coupled with advances in technology and science have "effectively tended to limit the scope of employment for the growing aged population." This has been reflected by the decreasing numbers of men over 65 who are still gainfully employed.

Life Expectancy and Financial Security

Between 1900 and 1940, "the average gap between working life and total life expectancy had almost doubled . . .," Commissioner Clague said. Increased productivity, resulting in higher wages, pension plans and social security have enabled "a modest proportion of former workers to live comfortably in retirement, if they so desire." However, there are many aged workers who have gone on working when they would prefer to retire, "if they are given an effective choice between continued work and retirement." These people are in the very large group of industrial workers who have not been able to save any significant sums during their working life. Estimates have shown that one in three U.S. families were unable to save anything and about one-fourth have averaged savings of less than \$200. Commissioner Clague pointed out that "insurance actuaries state that a worker would require almost \$15,000 in cash to be able to provide himself with a modest annuity of \$100 per month, starting at age 65."

In the face of these facts, "organized labour has made a powerful drive to negotiate directly with management for pensions." In addition to this, Federal and State programs for "welfare old-age assistance have expanded greatly. . . ." The Commissioner feels that the adoption of the amendments to the Social Security Act before the American Senate "is fundamental." The adoption of the new Federal legislation will not replace union and industry pension programs, according to Mr. Clague, but will "supplement benefits by assistance programs for those aged persons without any substantial period of service in covered employment."

The expansion of old-age insurance programs "will afford many aged workers a real choice between continued work and retirement," the article said, and will not force those workers over 65 who are physically able, to retire if they do not want to.

"The situation of many workers of mature age, between their late forties and sixties, who have not yet attained retirement age, but who are exposed to the risk of involuntary and premature separation from the working force," is "even more far-reaching in scope," Mr. Clague asserted, and the problem of these workers is very important. While the majority of these workers do not want to retire, the increased tempo of modern production often leaves them at a serious competitive disadvantage. This situation was highlighted during the depression, the article noted, and still exists today to a lesser degree.

Commissioner Clague was firm in the belief that some way must be found to look after those who are ineligible for pensions or do not want to retire. He pointed out that one of the arguments used for not employing these people has been the decrease in physical capability brought on by old age. However, recent investigation has shown "that the extent of physical impairment may be exaggerated in popular thinking."

It is therefore necessary "to appraise the older worker as an individual, who may be quite unlike the average man of his age."

While older workers may be less adaptable to changing work situations, they compare favourably to younger workers in regard to absenteeism, and work injury records. Mr. Clague also pointed out that experience is an important asset possessed by older workers which can be used on jobs other than the production line.

While "many labour-management agreements also protect the ageing worker on the job," Mr. Clague said, the problem of the older worker who lacks continuity of employment still remains. The solution "requires large-scale development of jobs suited to the capabilities of older people and the working out of systematic means of getting them into these jobs." This program will require study and research before it can be implemented, but its success would "contribute a large and growing amount of otherwise unused manpower to the national income."

TEEN-AGE YOUTH IN THE LABOUR MARKET

A recent United States Government study reports the employment problems of 524 "teen-agers" in Louisville. It emphasizes the need for training and counselling particularly for children in low-income groups.

The findings of a survey on the employment opportunities and problems of a group of young people under typical conditions of city life have been issued by the Labour Standards Bureau of the United States Department of Labour in an illustrated report, *Hunting a Career, A Study of Out-of-School Youth in Louisville, Kentucky*.

The survey covered 524 out-of-school young persons ranging in age from 14 through 19. The reasons these young people left school, the conditions under which they looked for work and were employed, the financial pressures they were under, and the meagre or ample help they received from counselling and placement services in securing and holding satisfactory jobs are described in detail.

Besides the personal interviews held with each youth, the Bureau also obtained information from employers, union officials, community agencies, school and work-permit officials and State Labour depart-

ment officials who contributed material on employer and labour attitudes toward hiring young people, their employment problems and working conditions.

Findings of Survey

The 524 boys and girls represented cross-sections of three age groups of the out-of-school population in the labour market. Of the entire group 443 were white and 81 were Negroes. At the time of the interview they were divided according to age as follows: 113 were 14 or 15 years old; 217 were 16 or 17 years old and 194 were 18 or 19 years old.

Slightly less than half of the 16- and 17-year olds had completed as much as the ninth grade. Nearly one-third of those who were 14 or 15 years of age had dropped out of school without completing more than the seventh grade. In all there were 440 of the group who had not graduated from high school.

The motives of the 440 young people who left school before graduation, the report states, fell readily into a few general categories: dissatisfaction with school; economic pressure; the attraction of wage earning; marriage; or various personal or family emergencies.

While the general level of employment was high in Louisville and the country as a whole, at the time of the survey 177 of the 524 teen-agers were unemployed. Generally the proportion without jobs decreased as age increased. Shifting from one job to another was a frequent occurrence, the report states, those out of school three years or longer having had an average of 3.9 jobs each.

Barred from certain types of factory work under the child-labour provisions of the Fair Labour Standards Act, children under 16 looked to the trade and service industries, such as stores, restaurants and hospitals, for their jobs. On the other hand, more boys and girls over 16 years of age were employed in manufacturing than in any other industry. With the 16- to 19-year old workers trade ranked second and service industries third.

Hours of Work and Wages

While 40 hours is the maximum work week recommended for young people under 18, the report points out that many children worked excessive hours, usually because their jobs were in stores, restaurants, laundries and hospitals where long hours are characteristic. Workers 18 or 19 years of age, on the other hand, being employed more generally in manufacturing where hours are closely regulated by law or union contract, enjoyed shorter hours of labour.

The matter of wages is usually an important factor in the choice of job which a young person makes and the satisfaction he feels in his employment. In the survey, it was found that for the youngest group the median wage was 48 cents an hour and for the oldest group 71 cents. For those in manufacturing the median wage was more than 75 cents an hour.

When asked how well they liked the occupation in which they were working or, if unemployed, had last been working, one-third of the teen-agers said they were highly satisfied; slightly less than one-half were moderately satisfied; one-fifth mildly dissatisfied; and somewhat more than one-tenth were acutely dissatisfied. Feelings of dissatisfaction were greatest among the youngest workers, the Negro youth, and the unemployed, some of whom had quit

their jobs because they disliked the nature of their work.

The majority of the boys and girls, even those who were dissatisfied with their occupation, had made no vocational plans for obtaining more education, or special training, or even for changing into work better suited to them. In their choice of occupation, the largest number said that try-out on a job had influenced them most. Parents ranked second as a vocational influence, with school personnel and friends ranking third and fourth.

Employer and Union Attitudes

Some 41 Louisville employers were interviewed and of these the majority favoured greater education on the part of the youthful applicants. When hiring workers, most of the 41 employers considered educational background, neatness, courtesy and dependability as more valuable attributes than previous work experience or specific vocational skills.

Selected union officials who were interviewed were, without exception, of the opinion that young people should get all the education possible, staying in school until at least 18 years of age.

Conclusions

The Louisville study of out-of-school youth in the labour market shed light on the types of basic personal and social problems that young people face in making the transition between school and work, according to the report.

To begin with, "the immaturity of boys and girls out of school at 14 and 15 years, their poor preparation for work, and their difficulty in finding employment of any kind," the report comments, "point up with renewed emphasis the importance of continued schooling at least to the age of 16. . . ."

It was apparent from the survey that a definite lack of communication existed between the majority of the young people interviewed and the counselling, placement and other social services in the community. "To a great extent," observes the report, "the children did not seek the services and the services did not seek the children."

Suggestions made by the study for facilitating the transition from school to the working world are already being practised or investigated, the report states. The knowledge that many young people feel strongly that school is not giving them what they want or need in education has given rise to new developments in some of the secondary school curricula.

The idea of bringing counselling services to a child long before he reaches the legal age to leave school for work is also receiving wider attention. In this way the child with educational or personal problems of adjustment can be helped while those problems are still in the early stages.

That society has a special responsibility toward any child who is compelled to withdraw from school for financial reasons is an opinion advanced by the report. It emphasized that in addition to programs of public assistance and social security, adequate funds for student aid from some source are needed. Such a program would, however, require proper administration so as to maintain the self-respect of the young persons for whom it was designed.

The public employment office is of primary importance, states the report, in that it can do much to assist the young person in finding a suitable occupation.

Close co-operation between the school and public employment office, both in exchange of labour-market information and in placement of in-school youth in part-time jobs, can create a strong feeling of confidence in the employment office on the part of the young person leaving school.

In any assessment of young people's employment needs "it is important," states the report, "to look particularly to youth from Negro or other minority groups and to the children in low-income families." For it is among these groups that the problems may assume their acutest forms. "Children living in the alleys or on the wrong side of the tracks, children belonging to minority groups, are very often the ones who are most diffident in seeking help, most inarticulate in expressing their needs." "If they are to be reached," the report concludes, "the community must go more than half way."

CONFERENCE OF ADMINISTRATORS OF LABOUR LEGISLATION AT MONTREAL

The Canadian Association of Administrators of Labour Legislation, an organization of federal and provincial departments, boards and commissions administering labour laws, held its ninth annual meeting in the Windsor Hotel, Montreal, on May 29-31. In his welcome to the delegates at the opening session, Mr. Gérard Tremblay, Deputy Minister of Labour for Quebec, emphasized the value of these annual conferences for the exchange of opinion on common problems arising out of the administration of labour legislation.

In addition to officials of the federal Department of Labour, nine provinces, including the new Province of Newfoundland, were represented by the Deputy Minister or other chief labour officer. Newfoundland joined the Association in 1949.

From some Provinces there were in attendance also the Chief Factory Inspector and other officials concerned with the administration of laws governing minimum wages and labour relations. One provincial Minister of Labour attended several sessions. The topics discussed included industrial safety, labour statistics, conciliation methods in industrial disputes, minimum wages, and the organization of a provincial department of labour and its relations with other government departments.

"Labour Relations in Britain Today" was the subject of an address given at the dinner meeting on May 30 by Miss E.

Buckley Sharp, O.B.E., M.A., Deputy Director of the Institute of Personnel Management of Great Britain. Miss Sharp described the relationship between employers and organized labour at both national and factory levels. Much of the wartime machinery of consultation between the Government, representatives of employers and trade unions, she said, had been continued and developed and "despite divergent views on socialism and capitalism, the two sides in industry have never worked better together at national level than they do today." The speaker then dealt with the part played by the Ministry of Labour in industrial relations, with particular reference to its interest in the field of personnel management, and also outlined some of the problems facing the British trade union movement.

An interesting feature of the Conference was a visit to the Montreal Building Trades Apprenticeship Centre arranged for the delegates through the courtesy of the Quebec Department of Labour.

The officers elected for the coming year are: President, W. Elliott Wilson, Deputy Minister of Labour, Manitoba; first Vice-President, N. D. Cochrane, Deputy Minister of Labour, New Brunswick; second Vice-President, J. B. Metzler, Deputy Minister of Labour, Ontario; Secretary-Treasurer, Evelyn Best, Legislation Branch, federal Department of Labour. James Thomson, Deputy Minister of Labour, British Columbia, is Past President.

The following federal and provincial representatives were present at the Conference: **Federal Department of Labour**—Paul E. Côté, M.P., Parliamentary Assistant to the Minister of Labour, G. V. Haythorne, Director, Economics and Research Branch, H. S. Johnstone, Industrial Relations Officer, G. R. Carroll, Research Assistant, Labour-Management Co-operation Service, J. D. Forbes, J. B. Lane, Economics and Research Branch, G. G. Blackburn, Director, Information Branch, G. M. Ingersoll, Acting Chief, Legislation Branch, Evelyn Woolner, Edith Lorentsen, Evelyn Best, Legislation Branch; **Alberta**—K. A. Pugh, Chairman, Board of Industrial Relations; **British Columbia**—James Thomson, Deputy Minister of Labour, Macgregor Macintosh, Labour Relations Board; **Manitoba**—W. Elliott Wilson, Deputy Minister of Labour, W. Trevor Davies, Director of Industrial Safety; **New Brunswick**—N. D. Cochrane, Deputy Minister of Labour, H. F. White, Director of Minimum Wages and Labour Relations; **Newfoundland**—S. H. Parsons, Deputy Minister of Labour; **Nova Scotia**—R. E. Anderson, Secretary, Department of Labour, J. D. Whiteley, Chief Inspector, Evelyn B. Spruin, Secretary, Minimum Wage Board; **Ontario**—Hon. Charles Daley, Minister of Labour, J. B. Metzler, Deputy Minister of Labour, E. H. Gilbert, Chief Inspector, C. G. Gibson, Mechanical Engineer, Patterson Farmer, Director, Minimum Wage Branch, P. M. Draper, Chairman, Labour Relations Board, Louis

Fine, Chief Conciliation Officer, Alice Buscombe, Statistician, Department of Labour; **Quebec**—Gérard Tremblay, Deputy Minister of Labour, Donat Quimper, Assistant Deputy Minister of Labour, Jean Paul Deslières, Secretary, Superior Council of Labour, Geo. M. Giroux, Technical Adviser, Minimum Wage Commission, Philippe Rousseau, Legal Adviser, Minimum Wage Commission, Charles Bélanger, Secretary, Minimum Wage Commission, Emile Doucet, Secretary, Minimum Wage Commission, Montreal District, Edmond L'Heureux, Chief of Claims, Minimum Wage Commission, Cyprien Miron, Director, Conciliation and Arbitration Service, Noel Bérubé, Chief, Conciliation and Arbitration Service, Quebec District, Roger Lapierre, Director of Conciliation and Arbitration Service, Montreal District, J. F. Girouard, Secretary, Conciliation and Arbitration Service, Montreal District, Ubald Brunet, M. E. Lacasse, Conciliation Officers, Clovis Bernier, Chief Inspector, Paul Garneau, Secretary, Labour Inspection Service, Wilfrid Beaulac, Inspector, Quebec District, L. O. Guyon, Deputy Chief Inspector, Quebec District, F. O'Carroll, Inspector, J. B. Delisle, Technician and Special Officer, Inspection Service, P. E. Thérien, Apprenticeship Branch, David Robillard, Treasurer, Workmen's Compensation Commission; **Saskatchewan**—J. H. Williams, Director of Wages and Hours Branch, C. K. Murchison, Executive Assistant, Department of Labour, R. J. Henderson, Executive Officer, Labour Relations Board.

This section covers proceedings under two federal statutes, the Industrial Relations and Disputes Investigation Act and the Conciliation and Labour Act, involving the administrative services of the Minister of Labour, the Canada Labour Relations Board and the Industrial Relations Branch of the Department.

INDUSTRIAL RELATIONS AND CONCILIATION

The month of June was featured by the restoration of amicable relations between The Canadian Press and the American Newspaper Guild and by the settlement of a dispute affecting the ground employees of various United States air lines operating at Gander, Newfoundland.

Introduction

An amicable adjustment was secured during June of the differences between The Canadian Press and its subsidiary, Press News, Limited, and the American Newspaper Guild which had led the union to apply to the Minister of Labour for consent to prosecute the two companies and their respective general managers. As reported in the June issue of the *LABOUR GAZETTE* (p. 823) the Minister of Labour appointed Mr. James H. Stitt, of Ottawa as an Industrial Inquiry Commission under the Industrial Relations and Disputes Investigation Act to endeavour to facilitate collective bargaining between the parties and, failing this, to make a report to him on the alleged offences mentioned in the Guild's complaint. The Guild's allegations included charges that The Canadian Press had refused to bargain collectively and had refused to continue to employ any guild members on the Parliamentary staff of the news gathering agency.

In reporting that the Guild's applications for consent to prosecute had been withdrawn, the Commissioner stated that The Canadian Press was prepared to negotiate an agreement covering all its editorial employees within Canada, that the right of any staff member in Ottawa to belong to the American Newspaper Guild had been recognized, and that collective bargaining was, in fact, proceeding between the parties. The case involving Press News, Limited, was settled in similar fashion on the basis of adjustments and replacements concerning certain individuals.

* * *

On June 26, 1950, the Minister of Labour received a report from a Conciliation Officer indicating the settlement of matters in dispute between Pan American World Airways, Inc., Trans World Airlines, Inc., American Overseas Airlines, Inc., and the Allied Avia-

tion Service Company of Newfoundland Limited, represented by the Airport Employers' Organization, and the Association of Aviation Employees (Federal Labour Union No. 24609, A.F.L.), representing ground crew employees of the companies employed at Gander, Nfld.

The settlement was reached following a series of conferences between the parties presided over by the Conciliation Officer, who was appointed by the Minister of Labour to deal with the dispute on June 6, 1950, on the request of the union.

By the terms of settlement, the Association was recognized as the bargaining agent of the employees of the companies concerned who are Canadian citizens and who are permanently domiciled in Canada. Wage increases of varying amounts were granted, depending on the classifications of the employees. It was also agreed that, when overtime work is performed, employees are to be granted equivalent time off within thirty days. No provision was made in the agreement to cover changes in the cost of living, but the companies concerned undertook, in letters to the Association, to make no change prior to October 31, 1950, in the cost of living allowances currently being paid, although the companies reserved the right to reduce the allowances should employees' rentals be reduced by the companies. The employers also stated their intention to conduct a survey which would enable them to establish reasonably accurate cost-of-living allowances at Gander. Weekly hours of work were reduced from 48 to 44, and monthly hours from 208 to 191. Employees were granted two calendar weeks' vacation after each twelve consecutive months of service, the period during which vacation might be taken to be governed by seniority and the requirements of the service. It was also

agreed that sick leave would accrue on the basis of one work-day for each calendar month, with a limited accrual of twelve work-days in any calendar year and an accumulated maximum accrual of sixty working days.

* * *

In the July issue of the *LABOUR GAZETTE* (p. 1043) it was reported that a Conciliation Officer had been unable to effect a settlement in a dispute between the National Catholic Syndicate of Longshoremen of Sorel, Inc., and four stevedoring companies carrying on operations at Sorel, P.Q., namely Wolfe Stevedores Limited, Empire Stevedoring Company Limited, North American Elevators Limited and Sorel Dock and Stevedoring Company, Limited. The Minister of Labour established a Conciliation Board on June 9 to deal with the situation, but a mutually satisfactory settlement was

reached between the parties before the Board was fully constituted.

On June 6 the Minister of Labour established a Board of Conciliation and Investigation to deal with a dispute between the Ottawa Transportation Commission and Division No. 279, Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America. The matters in dispute included the terms of a proposed pension plan, wage rate increases, differentials for tradesmen and garage employees, holidays with pay, and sick benefits. Later in the month, the Minister appointed Messrs. J. J. Connolly, K.C., of Ottawa and C. L. Dubin, of Toronto as members on the recommendation of the employer and the union respectively, and early in July completed the personnel of the Board by the appointment of His Honour Judge A. Cochran of Brampton, Ontario, as Chairman and third member.

The following statement concerns the scope and administration of the Industrial Relations and Disputes Investigation Act and the Conciliation and Labour Act.

Conciliation services under the Industrial Relations and Disputes Investigation Act and under the Conciliation and Labour Act are provided by the Minister of Labour through the Industrial Relations Branch. The Branch also acts as the administrative arm of the Canada Labour Relations Board under the former Act.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948. It revoked the Wartime Labour Relations Regulations, P.C. 1003, which became effective in March, 1944, and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until succeeded by the Wartime Regulations in 1944.

Proceedings begun under the Wartime Regulations are continued in so far as the services involved in such proceedings are authorized under the new Act. Likewise, decisions, orders and certifications given by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the new Act.

The Act applies to industries within Dominion jurisdiction, i.e., navigation, shipping, interprovincial railways, canals, telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations, and works declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Additionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the Dominion Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of Conciliation Officers, Conciliation Boards, Industrial Inquiry Commissions for the consideration of complaints that the Act has been violated

or that a party has failed to bargain collectively, and of applications for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to the Wartime Labour Relations Board to administer provisions concerning the certification of bargaining agents, the writing of provisions—for incorporation into collective agreements—fixing a procedure for the final settlement of disputes concerning the meaning or violation of such agreements and the investigation of complaints referred to it by the Minister that a party has failed to bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Conciliation services are also provided by the Industrial Relations Branch under the provisions of the Conciliation and Labour Act. This statute empowers the Minister of Labour to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or arbitrator when requested by the parties concerned.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported below under two headings: (1) Certification and other Proceedings before the Canada Labour Relations Board, and (2) Conciliation and other Proceedings before the Minister of Labour. From time to time, as required, a third article under this section will cover Conciliation Proceedings under the Conciliation and Labour Act.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredrickton and St. John's, Newfoundland. The territory of two officers resident in Vancouver comprises British Columbia and

Alberta; two officers stationed in Winnipeg cover the provinces of Saskatchewan and Manitoba and Northwestern Ontario; three officers resident in Toronto confine their activities to Ontario; two officers in Montreal are assigned to the province of Quebec,

and two officers resident in Fredericton and St. John's represent the Department in the Maritime Provinces and Newfoundland. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

Certification and Other Proceedings Before the Canada Labour Relations Board

The Canada Labour Relations Board met for two days during the month of June. The Board issued six certificates designating bargaining agents, rejected one application for certification, allowed the withdrawal of eight applications for certification, and ordered four representation votes. During the month the Board received three applications for certification.

Applications for Certification Granted

1. The Seafarers' International Union of North America, Canadian District, for a unit of unlicensed personnel employed on vessels operated by Vancouver Barge Transportation Limited, Vancouver (L.G., June, 1950, p. 824).

2. The Brotherhood of Railroad Signalmen of America, for a unit of employees of the Canadian Pacific Railway Company employed in the Company's Signal Repair Shop at Westmount, P.Q. (L.G., June 1950, p. 824).

3. The Grand International Brotherhood of Locomotive Engineers, for a unit of employees of the Northern Alberta Railways Company comprising locomotive engineers handling steam or other classes of motive power (L.G., July, 1950, p. 1041).

4. Local 1764, Steamship Checkers and Cargo Repairmen and Weighers and Samplers, Saint John, N.B., of the International Longshoremen's Association, for a unit of employees of certain companies, represented by the Shipping Federation of Canada, Inc., employed at Saint John, N.B., in the classifications of steamship checkers, cargo repairmen, weighers and samplers, together with manifest clerks and office employees employed on the docks. The applicant union was also certified as bargaining agent for similar units of employees of D. Cameron and Son, Inc., and James W. Brittain and Son (L.G., July, 1950, p. 1041).

Application for Certification Rejected

Local Council No. 1, Canadian Marine Engineers' Association, and the National Sand and Material Company Limited, Toronto (L.G., June, 1950, p. 824).

The application was rejected following investigation and reference to the parties concerned.

Applications for Certification Withdrawn

1. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, and Agencies Maritimes Enregistré, Quebec, P.Q. (L.G., June, 1950, p. 824).

2. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, and F. J. Dinan, Quebec, P.Q. (L.G., June, 1950, p. 824).

3. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees and General Equipment Limited, Quebec, P.Q. (L.G., June, 1950, p. 824).

4. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, and International Fertilizers Limited, Quebec, P.Q. (L.G., June, 1950, p. 825).

5. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, and Rock City Tobacco Company, Limited, Quebec, P.Q. (L.G., June, 1950, p. 825).

6. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, and Arthur Vaillancourt, Quebec, P.Q. (L.G., June, 1950, p. 825).

7. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, and the Canadian National Railways (Harbour Workers, Quebec, P.Q.) (L.G., June, 1950, p. 825).

8. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, and the Canadian Pacific Railway Company (Harbour Workers, Quebec, P.Q.) (L.G., June, 1950, p. 825).

The Board allowed the withdrawal of the foregoing applications on the request of the Vice-President of the Brotherhood.

Representation Votes Ordered

1. Local 1454, Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America, and Canada Coach Lines, Limited, Hamilton (See below). Following an investigation of the application the Board ordered a representation vote of the employees affected, the names of both the applicant union and the intervening union, the Canada Coach Lines Independent Employees' Union, to appear on the ballot. (Returning Officer: F. J. Ainsborough.)

2. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, and the Canadian Pacific Railway Company (Office of Auditor of Freight Receipts) (L.G., July, 1950, p. 1041). Following an investigation of the application the Board ordered a representation vote of the employees affected. (Returning Officer: L. Pepin.)

3. The West Coast Seamen's Union (Canada) and the Westward Shipping Company Limited, Vancouver (L.G., July, 1950, p. 1041). Following an investigation of the application the Board ordered a representation vote of the employees affected. (Returning Officer: G. R. Currie.)

4. Division No. 59, Canadian Brotherhood of Railway Employees and Other Transport Workers, and Union Steamships Limited, Vancouver (L.G., July, 1950, p. 1041). Following an investigation of the application the Board ordered a representation vote of the employees affected. (Returning Officer: G. R. Currie.)

Applications for Certification Received

1. Local 1454, Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America, on behalf of employees in the operations and maintenance divisions of Canada Coach Lines Limited, Hamilton. (Investigating Officer: H. Perkins.)

2. Local 508, International Longshoremen's and Warehousemen's Union, on behalf of certain employees of Johnston National Storage Limited, Nanaimo, B.C. (Investigating Officer: G. R. Currie.)

3. The Canadian Brotherhood of Seamen, on behalf of unlicensed personnel employed by the Gulf and Lake Navigation Company, Limited, Montreal, on board the ss. *Birchton*, and ss. *Cedarton*. (Investigating Officer: L. Pepin.)

REASONS FOR JUDGMENT in application for certification affecting

Local Union 1440, International Brotherhood of Electrical Workers (AFL-TLC), Applicant, and The Hydro-Electric Commission of the City of Ottawa, Respondent.

This is an application for certification of the applicant trade union as bargaining agent of a unit of employees of the Respondent. Respondent is a corporate body created by by-law of the Corporation of the City of Ottawa under the provisions of the Public Utilities Act, RSO 1937, Chapter 286, and operates a public electric power undertaking owned by the City of Ottawa to provide electric power to users in and adjoining the City of Ottawa in the Province of Ontario.

The background of the present application is as follows: Prior to December 31, 1949, the Ottawa Light, Heat and Power Company Limited, a private corporation incorporated under legislation of the Federal Parliament owned and operated an electric power undertaking providing electric power to users in the Ottawa area as well as in the Province of Quebec. This company took delivery of electric power from power-producing firms at points on the Quebec side of the Ottawa River, and

The Board consisted of Mr. A. H. Brown, Vice-Chairman and Acting Chairman, and Messrs. W. L. Best, E. R. Complin, A. J. Hills and A. R. Mosher. The Judgment of the Board was delivered by the Vice-Chairman.

These Reasons for Judgment were adopted by the Board at its meeting on May 10, 1950. See L.G., July, p. 1041.

transmitted such power on its own feeder power lines across the Ottawa River into the Province of Ontario for distribution and sale to users in Ontario. As an inter-provincial undertaking connecting the two provinces the Industrial Relations and Disputes Investigation Act has been applied to this company and its employees by virtue of the provisions of paragraph (b) of Section fifty-three of that Act.

By Chapter 67, Statutes of Ontario, 1948, the Corporation of the City of Ottawa was

authorized to purchase all that part of the undertaking, property and assets of the Ottawa Light, Heat and Power Company Limited situated in the Province of Ontario. Under this statute and an Order in Council made thereunder, the purchase thus authorized was completed by and pursuant to the provisions of an agreement entered into between the Ottawa Light, Heat and Power Company Limited as the Vendor, and the Corporation of the City of Ottawa as the Purchaser, and Respondent as a third party to the agreement, under date of December 19, 1949.

Following upon the completion of the agreement; the electric power utility thus acquired under the agreement by the Corporation of the City of Ottawa became a part of the electric power utility which had theretofore been owned by the City and operated by the Respondent in the Ottawa area in the Province of Ontario. The employees of the Ottawa Light, Heat and Power Company who had been employed upon or in respect of the operation of the undertaking thus taken over were as from December 31, 1949, taken into the employ of the Respondent. Present application covers employees employed in the operation of the enlarged enterprise.

The Respondent contests the application and contends that the Industrial Relations and Disputes Investigation Act does not apply to or in respect of its employees or to the Respondent because

- (a) the work, undertaking and business of the Respondent is not within the legislative authority of the Parliament of Canada, but is within the exclusive legislative authority of the Legislature of Ontario;
- (b) the Respondent owns no property in any province other than Ontario, nor is any employee of the Commission employed in any province other than the Province of Ontario; and
- (c) the work, undertaking and business of the Commission does not fall within any of the special cases referred to in paragraphs (a) to (h), inclusive, of Section fifty-three of the said Act.

The matter was set down for hearing of argument on the specific issue so raised, and the Board has had the advantage of hearing very complete argument thereon presented by counsel for both parties.

Counsel for the Respondent, in referring to the terms of the agreement of December 19, 1949, between Ottawa Light, Heat and Power Company Limited, hereinafter called "the Vendor", and the Corporation of the City of Ottawa and the Respondent, and

existing operating arrangements, points out that:—

- (a) the agreement specifically provided that the sale did not include the assets of the Vendor in the Province of Quebec;
- (b) under the agreement the Vendor undertook to arrange with the Gatineau Power Company for delivery, at expense of the Vendor, of power supplied by the Gatineau Power Company at a point in the Province of Ontario or at the interprovincial boundary, but in event of the Vendor being unable to do so before December 31, 1949, at an expense not exceeding \$5,000, the Vendor, if requested by the Corporation of the City of Ottawa or the Respondent, undertook at the expense of the Vendor to incorporate a company for the purpose of holding the interest in lands, transmission lines, cables and other works of the Vendor in the Province of Quebec used for the purpose of delivering power from the Gatineau Power Company to the Vendor and to transfer all stock in such company to the Corporation of the City of Ottawa or its appointee;
- (c) pursuant to the provisions of the agreement referred to in paragraph (b), a company, the Remic Rapids Electric Company Limited, was created by the Vendor under the provisions of the Dominion Companies Act, and shares in this company are held by the Corporation of the City of Ottawa, and the directors of that company are officers of the said Corporation;
- (d) the Vendor transferred to the Remic Rapids Electric Company Limited all the feeder lines owned by the Vendor used for the purpose of transmitting power from the Quebec side of the Ottawa River to the Ontario side of that river;
- (e) the only other power feeder lines transmitting power from the Quebec side of the Ottawa River to the Ontario side thereof of which the Respondent takes delivery for purposes of its operations consist of five lines owned by the Gatineau Transmission Company Limited, which, under agreement between the Gatineau Transmission Company Limited and the Hydro-Electric Commission of Ontario, carry power contracted for by the said Commission. This power is delivered to the said Commission in the Province of Ontario, and when the said Commission obtains delivery of the power in Ontario, it gives it to the Respondent;
- (f) the Remic Rapids Electric Company Limited is responsible for the maintenance of the feeder power lines across the Ottawa River under agreement with the Vendor;
- (g) pursuant to an existing agreement between Remic Rapids Electric Company Limited and the Respondent, the Remic Rapids Electric Company Limited has agreed to and does transmit power delivered by the Gatineau Power Company to the

Respondent at the installations of the Respondent in the City of Ottawa, in consideration of the payment by the Respondent to the Company of a stated monthly amount of money.

In summary, the Counsel for the Respondent submits that the specific purpose of the provisions of the sale agreement referred to and the establishment of the Remic Rapids Electric Company Limited and the agreements made with it was to provide that neither the Corporation of the City of Ottawa nor the Respondent would acquire any assets whatever in the Province of Quebec.

Respondent further states that none of the employees of the Respondent work in the Province of Quebec in the course of their employment, except on occasions when its employees are requested by the Gatineau Power Company for special work, in which event they are taken on temporarily during the period of such employment on the payroll of the Gatineau Power Company.

Counsel for the Applicant in contending that the work or undertaking upon which the employees of the Respondent are employed is a work or undertaking connecting one province with another, bringing it within the scope of paragraph (b) of Section fifty-three of the Industrial Relations and Disputes Investigation Act, submits that the undertaking of the Respondent could not exist independently of the feeder transmission power lines running across the interprovincial boundary and owned by the Remic Electric Power Company Limited, that this Company is wholly owned by the Corporation of the City of Ottawa, and that the Respondent is the agent of that Corporation and is carrying on its operations for and on the behalf of the Corporation. Counsel asks the Board to find that the undertaking which the Respondent operates on the Ontario side of the Ottawa River and the feeder transmission lines owned by the Remic Electric Power Company Limited are in fact one indivisible work or undertaking to which the Act applies in virtue of paragraph (b) of Section fifty-three thereof.

While the legal transactions attendant upon the transfer of assets of the Ottawa Light, Heat and Power Company Limited in the Province of Ontario to the Corporation of the City of Ottawa are somewhat involved, the effect thereof in so far as the operations of the Respondent are concerned is quite clear.

The Respondent has for a good many years past operated a public utility electric power undertaking in the area of the City

of Ottawa in the Province of Ontario which is owned by the City of Ottawa and is a municipal undertaking. It has obtained the bulk of the power required by it for its operations from the Hydro-Electric Commission of Ontario, which in turn has acquired at least a portion of the power required to supply the Respondent by taking delivery of such power from the Gatineau Power Company at a point within the Province of Ontario. The power so delivered by the Hydro-Electric Commission of Ontario and given to the Respondent is transmitted from points within the Province of Quebec by means of feeder power transmission lines running across the interprovincial boundary which are, it was stated at the hearing by Counsel for the Respondent, the property of the Gatineau Power Company. The undertaking operated by the Respondent has at all times heretofore been regarded and has operated as a local undertaking to which the provisions of provincial labour relations legislation have applied without question, apart from the period in which the Wartime Labour Relations Regulations enacted under the War Measures Act had overriding effect.

As far as this Board has been able to determine, the effect of the transaction between the City and the Ottawa Light, Heat and Power Company has been to simply extend the size of the undertaking so operated by the Respondent by adding thereto the undertaking in the Province of Ontario acquired by the Corporation of the City of Ottawa by purchase from the Ottawa Light, Heat and Power Company Limited. This, however, has not changed the local nature of the undertaking or management thereof. The Respondent has continued to receive power for the purpose of the operation of the enlarged undertaking by the same means and in the same manner after the taking over of the works and undertaking of the Ottawa Light, Heat and Power Company in the Province of Ontario as prior thereto, namely by taking delivery thereof at points in the Province of Ontario. It is true that the number of feeder lines over which the power is delivered to the Respondent in the Province of Ontario has been increased to meet the requirements of the enlarged undertaking, but in the opinion of the Board it makes no significant difference for the purposes of this particular application whether the feeder transmission power lines delivering power from points in the Province of Quebec to the undertaking operated by the Respondent at points in the Province of Ontario are owned by the

Gatineau Power Company or by the Remic Rapids Electric Company Limited. The fact that the Corporation of the City of Ottawa owns the majority of shares in the Remic Rapids Electric Company Limited does not, in the opinion of the Board, affect the nature of the undertaking operated by the Respondent. The Applicant has not satisfied the Board that the nature of the undertaking, which is municipally owned and which is operated by the Respondent, a body created by by-law of the municipality pursuant to provincial legislation, has been changed by reason of the transaction between the Ottawa Light, Heat and Power Company and the City of

Ottawa so as to bring the undertaking within the classes of works and undertakings to which the Industrial Relations and Disputes Investigation Act applies.

The application is accordingly rejected.

(Sgd.) A. H. BROWN,
*Vice-Chairman
and Acting Chairman
for the Board.*

M. W. WRIGHT, Esq.,

G. C. MEDCALF, Esq., K.C.,
for the Respondent.

Dated at Ottawa, May 10, 1950.

Conciliation and Other Proceedings Before the Minister of Labour

Conciliation Officers Appointed

During the month of June the Minister appointed Conciliation Officers under Section 16 of the Industrial Relations and Disputes Investigation Act to confer with the parties in the following industrial disputes:—

1. The Association of Aviation Employees (Federal Labour Union No. 24609, AFL), applicant, and Pan American World Airways, Inc., Trans World Airlines, Inc., American Overseas Airlines, Inc., and the Allied Aviation Service Company of Newfoundland Limited, respondents. The dispute affected ground crew personnel employed by the companies at Gander, Nfld. (Conciliation Officer: H. R. Pettigrove.)

2. The Canadian Brotherhood of Railway Employees and Other Transport Workers, applicant, and the Canadian Pacific Transport Company, Limited, respondent. (Conciliation Officer: R. H. Hooper.)

Settlements Facilitated by Conciliation Officers

1. On June 1, 1950, the Minister received a report from L. Pepin, Conciliation Officer, indicating the settlement of matters in dispute between J. C. A. Turcotte, an employer of longshoremen at Sorel, P.Q., and the National Catholic Syndicate of Longshoremen of Sorel, Inc. (L.G., July, 1950, p. 1043).

2. On June 14, 1950, the Minister received a report from G. R. Currie, Conciliation Officer, indicating the settlement of

matters in dispute between The Consolidated Mining and Smelting Company of Canada, Limited, Yellowknife, N.W.T., and the Yellowknife District Miners' Union (Local No. 802, International Union of Mine, Mill and Smelter Workers) (L.G., May, 1950, p. 683).

3. On June 26, 1950, the Minister received a report from H. R. Pettigrove, Conciliation Officer, indicating the settlement of matters in dispute between the Association of Aviation Employees (Federal Labour Union No. 24609, AFL) and various aviation companies at Gander, Nfld. (See above.)

Conciliation Boards Appointed

1. On June 6, 1950, the Minister appointed a Board of Conciliation and Investigation to deal with a dispute between the Ottawa Transportation Commission and Division No. 279, Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America. The Board was appointed following receipt of the report of F. J. Ainsborough, Conciliation Officer (L.G., May, 1950, p. 683). Constitution of the Board had not been completed at the end of the month.

2. On June 9, 1950, the Minister appointed a Board of Conciliation and Investigation to deal with a dispute between Wolfe Stevedores Limited, Empire Stevedoring Company, Limited, and the National Catholic Syndicate of Longshoremen of Sorel, Inc. The Board was appointed following receipt of the report of L. Pepin, Conciliation Officer (L.G., July, 1950,

p. 1043). Settlement of the dispute was reported on June 20, 1950, before the Board was fully constituted.

Conciliation Board Fully Constituted

The Board of Conciliation and Investigation appointed to deal with the dispute between Canadian National Steamships, the Canadian Pacific Railway Company (B.C. Coast Steamship Service), Union Steamships Limited, and the Seafarers' International Union of North America, Canadian District (L.G., July, 1950, p. 1044), was fully constituted on June 15, 1950, with the appointment of H. A. Beckwith, Victoria, B.C., as Chairman. Mr. Beckwith was appointed by the Minister in the absence of a joint recommendation from the other two members of the Board, G. E. Housser, K.C., and Jack Price, both of Vancouver, who had previously been appointed on the nominations of the Companies and Union, respectively.

Recent Decisions of Canadian Railway Board of Adjustment No. 1

The Canadian Railway Board of Adjustment No. 1 has released its findings in cases heard on October 11 and November 8, 1949, and January 10 and April 11, 1950.

Case No. 538.—Canadian National Railways (Western Region) *ex parte* and the Brotherhood of Railroad Trainmen *ex parte*. The dispute concerned the dismissal of an engineman following an accident at Thunder River, B.C., on July 15, 1948.

Statement of Facts (Company): The engineer was assigned to Extra 2753 West between Jasper and Blue River. Train left Jasper on July 14 and orders were received at Albreda stating "that No. 404, engine 4326 would wait at Thunder River until 4:40K and Pyramid until 5:00K for extra 2753 West." Company stated that "extra 2753 West failed to stop clear of the east switch at Thunder River and collided with No. 404 which was standing on main track clear of east switch." The engineman was held responsible and dismissed.

The company contended that the engineman "had been previously dismissed for responsibility for head on collision . . . on November 3, 1945." The engineman was reinstated, but as the result of this second accident he was dismissed because the company felt he was "not a safe man to be in charge of a locomotive."

Report of Industrial Inquiry Commission Received

On June 30, 1950, the Minister received a report from James H. Stitt, whom he had appointed as an Industrial Inquiry Commission to inquire into applications, submitted by the American Newspaper Guild, for consent to prosecute the Canadian Press and Press News Limited (L.G., July, 1950, p. 1044). Mr. Stitt reported that the parties had reached agreement on matters in dispute and that the American Newspaper Guild had withdrawn its application for consent to prosecute.

Application for Consent to Prosecute Received

On June 22, 1950, the Minister received from the Canadian Seamen's Union an application, submitted under Section 46 of the Act, for consent to prosecute Branch Lines Limited for the alleged violations of certain provisions of the Act.

Statement of Facts (Employees): The engineman was on "Extra No. 2753 West, leaving Jasper for Blue River on July 14, 1948. At Albreda, Extra 2753 was cleared with an order stating No. 404, Engine 4326, would wait at Thunder River until 4:50K and Pyramid until 5:00K, for extra 2753 West. In stopping to head in at Thunder River train over-ran the switch, colliding with No. 404, which was standing on the main line clear of siding." The engineman was held responsible and dismissed.

The employees contended that the engineman lost the location of the siding switch because of heavy fog and ran by it. The rail was wet because of the fog and "this coupled with the fact that the train was short (considering the tonnage) tended to take more braking power to stop than was usually required to stop trains of equal tonnage contained in a train of more than 33 cars. The track is a descending grade towards the West at this point."

The employees claimed that "in view of conditions existing at the time," the dismissal of the engineman was "too severe," and he "should be reinstated as of July 1, 1949."

Both parties to the dispute presented additional oral evidence.

The decision of the board was that "the contention of the employees be not sustained."

Case No. 589.—Canadian National Railways (Central Region) and the Brotherhood of Locomotive Engineers, *ex parte*, concerning the discharge of an engineer following an accident on October 12, 1948.

Statement of Facts (Company): "Extra 3501 North collided head-on with Extra 3204 South on the main track at a point approximately 283 feet north of the order board at Beaverton, Mileage 64.2 Bala Subdivision, 9.23 p.m., October 12, 1948."

The engineer on Extra 3501 was dismissed because of "failure to fulfil form 19R train order at meeting point."

The company contended that the engineer had violated operating rule 88 which reads:—

At meeting points, trains must take the siding as herein prescribed unless otherwise provided. Between trains of the same class or between extra trains, the train in the inferior time-table direction must take the siding. . . . A train required to take siding for an opposing train must pull in when practicable. If necessary to back in the movement must first be protected as prescribed by rule 99.

The Railway further contended that it was "within its rights" in discharging the employee in the light of what it regarded as "glaring rule violations."

Statement of Facts (Employees): In their statement of facts, the employees said that "approaching Beaverton they (Extra 3501 North) were travelling at a speed of about 45 miles per hour when they observed the train order signal in STOP position, and (the engineer) immediately applied the brakes, reducing the speed of the train to about 35 miles per hour." The employees stated that as the engineer prepared to bring the train to a full stop, "he observed the signal had been changed to green indication." The fireman and brakeman confirmed this observation in the routine manner, and the brakes were released. The engineer then observed that the train order signal had changed "from green to yellow and yellow to red." When the engineer "moved his brake valve handle to service position (he) noticed there was no train line exhaust."

It was further stated by the employees that because the conductor had applied the emergency brake from the caboose it was impossible for the engineer to get a "full emergency application," and the collision followed.

It was the contention of the employees that while the engineer had erred in failing to read Order 19R No. 278 correctly, he should be reinstated on the basis of his past record of "31 years satisfactory service to the Railways."

Both parties to the dispute submitted further oral evidence.

The board referred the case "back to the interested parties for further consideration," because the "case was not properly progressed in accordance with the Board's regulations prior to its submission to the Board for hearing."

Case No. 590.—Canadian National Railways (Western Region) and the Brotherhood of Railroad Trainmen. The dispute concerned assessment of discipline of train crew "account of burned journal on C.N. 573952, at Giscome, December 8, 1947."

Joint Statement of Facts: Conductor and two trainmen left Prince George on December 8, 1947, with train consisting of five loads and caboose.

Following a stop at Giscome, a truck collapsed on the "second car behind engine, account journal failure on left rear wheel of front truck." The conductor and trainmen "were held responsible for the accident and each man was assessed with 15 demerit marks." The weather at the time was cloudy, calm and light snow had fallen during the preceding night.

The employees contended that when the car was inspected at Giscome, "it showed no signs of dope being in the journal box, the dustboard was all that was burning, and while endeavouring to set this car out it dropped on the rails."

It was further contended by the employees that "no sign of smoke or fire existed en route," and that despite the weather conditions, "it would have been possible to detect fire or smoke on this short train." The employees claimed "that the discipline assessed was not warranted in this case."

The company contended that the conductor noted "black smoke" from the box when the train was approaching Giscome, but "took no immediate action." The fireman and head end trainman "observed hot box just before train stopped." When the train stopped at Giscome, "it was found that journal was almost burned off." An attempt to put the car on a siding failed when the journal fell off.

The Railway stated that the crew had failed to make a sufficiently thorough inspection of their train in order to detect the hot box "in its early stage before damage occurred . . . and it is considered that the disciplinary measures taken were fully justified."

Both parties to the dispute presented further oral evidence.

The decision of the Board was "that the contention of the Employees be not sustained." However, the Board recommended

further consideration by the Railway "to the discipline assessed against the record of the front end brakeman. . . ."

Case No. 591.—Canadian National Railways (Western Region), *ex parte*, and the Brotherhood of Railroad Trainmen, *ex parte*. The dispute concerned discipline assessed against a conductor and two trainmen involved in an accident at Drumheller on April 21, 1948.

Statement of Facts (Railway): The train was cleared at Hanna, and received its orders. Conductor stated No. 810 was not included. The conductor delivered the orders to the engineer who read them, and then conductor gave them to trainman in caboose. No mention was made of No. 810.

Train left Hanna at 8:00K and collided with No. 810 at about 8:10K. Estimated speed at time of collision was 25-30 miles an hour. Several employees were injured on both trains and damage was extensive. Crew on Extra 2503 West were held entirely responsible and dismissed.

The railway contended that "this very serious accident was due to all members of the crew on Extra 2503 West overlooking the schedule for which failure they were dismissed from the service. There were no extenuating circumstances." The company contended that because of the "flagrant carelessness" of the crew the application should be declined.

Statement of Facts (Employees): The employees stated that "on April 21, 1948, at 8:10K, Extra West 2503 collided with train No. 810, at M.P.4.3, Drumheller Subdivision, Calgary Division."

It was contended by the employees that the "train crew overlooked and forgot the fact they had no order on No. 810, and departed from Hanna 8K, collision occurring 8:10K." The employees further contended that the train crew did not have a copy of the order showing that No. 810 was running six hours late. Because of flood conditions, "this crew had been off their assignment and used in work train service. This caused a change in their routine of work in this assignment."

The employees further contended that all members of the crew previously had good records and that "these men have been penalized sufficiently and should be returned to train service."

Both parties to the dispute presented additional oral evidence.

The Board decided "that the contentions of the Employees be not sustained."

Case No. 592.—Canadian Pacific Railway Company (Prairie Region) and the Order of Railway Conductors, *ex parte*, concern-

ing the assessment of discipline against the record of a sleeping car conductor, and a claim for compensation while held out of service.

Statement of Facts (Company): The company stated that the conductor was "on leave of absence to perform work in connection with his position . . . (with) . . . the Sleeping Car Conductors Organization." An investigation was held on April 14, 1949, in connection with three charges of having occupied space on a sleeping car "between Winnipeg and Toronto after having purchased only a sleeping car berth ticket reading from Kenora to Fort William;" and "having occupied sleeping car space between Montreal and Winnipeg—and particularly Drawing-room accommodation between Ottawa and Winnipeg— . . . knowing full well that . . . (he was) . . . not entitled to free Sleeping car space;" and "for working with a Sleeping Car Conductor in the matter of falsifying his reports to cover the last mentioned trip."

After investigation the conductor's record was assessed with 45 demerit marks.

The company contended that the conductor "as an experienced car conductor . . . was aware of the Company's regulations in regard to occupying space in a sleeping car without paying the regular tariff unless in possession of an order signed by the Company's Officer granting free accommodation."

The company further contended that all charges against the conductor "were proven at the hearing," and that the delay in holding the hearing "was on account of the local (Montreal) committee in asking for a postponement" of the hearing of the case of the other conductor involved. The company said that the conductor could have been dismissed, but his previous good record was taken into account and the company "had been most lenient in dealing with a dismissible offence."

Statement of Facts (Employees): The employees stated that the conductor "was granted leave of absence from 24K March 2, 1949 to 24K April 7, 1949, for the purpose of General Committee work, under the provisions of Article 17 (a) of the Agreement." When the conductor reported back to work on April 8, he "was forbidden to go out on his assignment and was suspended from service until May 2, 1949, a total of 24 days. Subsequently (his) record was assessed with (45) demerit marks." The employees had requested clearance of the conductor's record and full compensation which request was refused by the Company.

In their contention, the employees quoted Articles 17 (a) and 21 of the Agreement which state:—

Article 17 (a) of the Agreement reads as follows:

LEAVES OF ABSENCE

(a) Members of Employees' Committees will be granted leave of absence when required for Committee work, providing sufficient notice is given to Superintendent, and such leave of absence can be arranged so that the interests of the service will not suffer. Necessary transportation will be furnished.

Article 21 of the Agreement reads as follows:—

Discipline

No Conductor shall be disciplined or dismissed until his case has been investigated and he has been proven guilty of the offense against him, and decision rendered. He, however, may be held off such investigation for a period not exceeding five (5) days . . .

The employees also made the following contentions:—

1. That the conductor was not notified of the investigation until six days after his suspension.

2. That under the provisions of Article 17 (a) "the Company has no jurisdiction over members of Employees' Committees on leave of absence for the purpose of Committee work."

3. That as a passenger "on the trains in question he was not responsible for service matters. Company instructions regarding Car Conductors' duties read:—

It is the duty of Conductors to direct and receive passengers, assign seats and berths, make collection for and report all accommodation occupied in cars under their charge and to remit revenue collected therefor. . . .

The employees contended that the employee slept in the accommodation assigned to him by the Conductor and paid the amounts stipulated by him, and no further responsibility rested upon the passenger."

4. That the charge of helping the sleeping car conductor in "falsifying his reports" did not stand because the sleeping car conductor was not charged with "falsifying his reports," but with "failure to correctly report accommodation occupied."

5. That the "Employee was held off a total of 24 days," although "Article 21 of the Agreement places a five (5) day limit on the time a conductor may be held off for investigation."

6. The employee also contended "that the action of the Officers of the S.D. & P.C. Department in laying such charges against him . . . was more a personal matter due

to his activities as representative of the Canadian Pacific Railway Sleeping Car Conductors than a desire to enforce regulations."

Both sides in the dispute requested permission to submit further evidence.

In its general statement, the Board regretted "the introduction of the names of people who were not directly connected with the case."

The Board decided "that the contention of the employees be not sustained."

Case No. 593.—Canadian Pacific Railway Company (Prairie Region) and the Order of Railway Conductors, *ex parte*, concerning the assessment of discipline against a Sleeping Car Conductor and a claim for compensation while he was held out of service.

Statement of Facts (Company): The Conductor was "in charge of sleeping car "Turner," train No. 7 *ex* Montreal, March 16, 1949," and was charged with:—

Failure to correctly report accommodation occupied by (a) Sleeping Car Conductor . . . (on) train Number 7, between Montreal and Winnipeg 16-18, 1949.

The company stated that its investigation was adjourned at the request of the Conductor and the Employees' Committee. Following investigation, the Conductor's record was assessed with 15 demerit marks. The Railway refused a request to clear the employee's record and compensate him for time lost.

The Company contended that "the responsibility for the delay was entirely up to the Organization" and that the Employee had agreed to this.

It was also contended that the employee admitted he was familiar with the rules concerning employees "deadheading" (Rule Book, page 16, para. 3), and "Car Conductor's duties," (Rule Book, page 15, para. 1).

The Company further contended that it was the admitted intention of the Employee that the Conductor (see case 592 above) "occupy the drawing-room, complimentary and without collection of revenue."

The Company felt that there was "no possible justification for the Company compensating Conductor for time lost as any delay in conducting the investigation was entirely at the employee's request. The Company felt that the discipline assessed was "the minimum which could be applied in a case of such a serious nature."

Statement of Facts (Employees): In their statement of facts, the employees said that the Conductor left Montreal on Train No. 7 on regular assignment. His record

was assessed 15 demerit marks, and he was suspended for 19 days on the following charge:—

Failure to correctly report accommodation occupied by Sleeping Car Conductors . . . Train No. 7 between Montreal and Winnipeg, March 16/18, 1949.

The Employees contended that the conductor was "held out of service a total of 19 days in violation of Article 21" of the Agreement. The Employees also contended:—

1. That (the conductor) did not knowingly violate any Company regulations, as he considered (the passenger) entitled to free accommodation.
2. That "the extension of courtesies instituted by the Officers of the Department over a period of years, would also apply" . . . in this instance, and that there were "no instructions issued that a double standard prevails, i.e., one interpretation of Company regulations for the Officers and another for the Employees."
3. That the "investigation should have been held during his layover period as provided for in Article 21."

Both sides requested permission to submit further evidence to the Board.

The Board expressed its embarrassment "due to the introduction of names who were not directly connected with the case."

It was the decision of the Board "that the contention of the employees be not sustained."

Case No. 594.—Canadian Pacific Railway Company (Prairie Region) and the Order of Railway Conductors. A dispute regarding the application of Article 15 of the Agreement between the railway and its Sleeping Car Conductors and Parlour Car Attendants.

Joint Statement of Facts: Compensation was requested for a Sleeping Car Conductor of the Manitoba district for time lost because a Sleeping Car Conductor from the Alberta district was "used as Assistant Conductor, train number 2nd/3 ex Winnipeg to Calgary, September 14, 1949."

Article 15 reads as follows:—

Seniority districts

Atlantic and Eastern District—headquarters: Montreal.—All lines east of Montreal, Montreal to Toronto, Montreal to Winnipeg.

Ontario District—headquarters: Toronto.—Toronto to Ottawa, Toronto to Detroit, Toronto to Sudbury and Sault Ste. Marie, Toronto to Winnipeg.

Manitoba District—headquarters: Winnipeg.—Winnipeg to Calgary, Winnipeg to Edmonton.

Alberta District—headquarters: Calgary.—Calgary to Edmonton.

British Columbia District—headquarters: Vancouver.—Vancouver to Calgary.

A Conductor shall belong to the district on which his run originates.

The Employees contended that by Article 15, the Winnipeg district conductor should have been assigned to the train instead of the Alberta district conductor. The Conductor filed a claim "for the assignment compensation of 6 days' pay but this was refused by the Company."

The employees also contended "that the Company did not make the assignment in accordance with its commitments."

The Company contended that "it has always been the practice, ever since Sleeping Car Conductors have been operated, to return an available spare Conductor from an outside district to his home station in service, if required, instead of sending him back deadhead and using a spare Conductor from the seniority district for this extra work."

The Company also contended "that there is no justification for the claim of the employees, either on the basis of past practice or on the basis of the intent of the schedule rules governing working conditions."

Both sides requested permission to submit further arguments.

The Board said that it could not "find the existence of a clear defining rule to handle this situation," and it recommended further negotiations between the Company and employees to define the procedure to be followed.

Case No. 595.—Canadian National Railways (Western Region) and the Brotherhood of Railroad Trainmen. The dispute concerned the claim of two trainmen for payment for mileage lost, due to the train on which they were on duty being detoured.

Joint Statement of Facts: The trainmen were regularly assigned to passenger trains Nos. 3 and 4, between Vancouver, B.C., and Blue River, B.C. On April 29, 1948, the trainmen were members of train crew operating passenger train No. 4, Vancouver to Blue River, B.C. From Kamloops, an intermediate terminal, the train was detoured via C.P.R. to Regina, Sask., thence C.N.R. to Winnipeg. The trainmen were returned from Kamloops to Vancouver; the conductor and baggageman remained on duty and accompanied the train from Kamloops to Winnipeg.

The employees contended that the crew should not have been split at Kamloops, it being "neither the initial nor final terminal for the assignment," and quoted in support of their argument Rule 2, Article 5, of the B. of R.T. Schedule, which reads:

"When trainmen are called out, full crew governed by this schedule will be used." In this case, they held, the full crew would be constituted in accordance with the provisions of Article 1, Clause (g), reading: "One baggageman and two brakemen shall be employed on all passenger trains west of Edson."

Claim was made for actual mileage lost "due to not being allowed to continue on their assignment."

The company, in its statement, maintained that the provisions of the various schedule rules had been complied with. The detour of train No. 4 over the C.P.R. lines, Kamloops to Regina, had been found necessary because of a derailment and washouts at various points in the Alberta district—a condition over which the Railway had no control. C.P.R. train crews handled the detoured train over their own lines, Kamloops to Regina, and the trainmen "having no further service to perform on this particular trip" were ordered to return to their original terminal of Vancouver deadhead from Kamloops. The Company quoted Rule (44), Article 5, which states: "Trainmen assigned to regular trains will not be required to do other work than that to which they are regularly assigned, except in case of wrecks, when no other trainmen are available."

In view of there being no schedule rule to cover the method of payment to be applied in such a case, compensation was made on a continuous time basis, from the time of reporting for duty at Vancouver until arrival back at Vancouver, the Company explained—a method of payment "in accordance with the manner in which other trainmen had been compensated when turned short of their destination due to washouts."

The Railways contended that the trainmen had been "properly compensated."

Both parties to the dispute presented further written and oral evidence to the Board.

The Board ruled that "the contention of the employees be not sustained," but recommended that "under the circumstances in this particular case, and without creating a precedent," the employees be paid the mileage they would have earned had they operated to Blue River and returned to Vancouver.

Case No. 596.—Canadian National Railways (Western Region) and the Brotherhood of Railroad Trainmen, respecting the claims of a conductor and two trainmen for mileage and terminal time on work extra.

Joint Statement of Facts: In the joint statement of facts it was explained that the conductor and crew, in unassigned service working out of Calder Yard, Edmonton terminal, were called on August 4, 1946, to make a trip as an unassigned work train, Calder to Athabasca, Alta., to handle weed sprayer. The Railway approved payment for the trip in the amount of 217 miles, on the basis of 93 miles in each direction, plus 31 miles covering 2½ hours' time at Athabasca.

The employees submitted a claim covering road miles and delay on both trips in the amount of 248 miles, comprising 112 miles Calder to Athabasca, and 136 miles Athabasca to Calder. Claim was made on the basis of 100 miles terminal to terminal, or one tour of duty, under the provisions of Rule 1, Article 5, of the B. of R.T. Schedule: "100 miles or less, 8 hours or less, to constitute a day, in through and irregular freight, local freight, and mixed train service."

The employees' representatives contended that payment was not made in accordance with the Schedule rule.

The Railway held that the method of compensating conductors and trainmen in work train service is detailed in Article 4 of the current schedules and therefore Article 5, governing rates of pay and conditions for trainmen in all classes of service not otherwise specified in the schedule, is not applicable.

The Railway pointed out that Article 4 makes no reference to the payment of initial and final terminal delay, and does not restrict the ordering of crews in turn-around service when the mileage between the originating point and the turning point is less than 100 miles.

The Railway contended that the crew had been compensated in accordance with schedule rules and that there was "no merit in their claim."

The parties to the dispute presented additional written and oral evidence to the Board.

The Board decided that the contention of the employees be sustained.

COLLECTIVE AGREEMENTS AND WAGE SCHEDULES

Recent Collective Agreements

A file of collective agreements is maintained in the Economics and Research Branch of the Department of Labour. These are obtained directly from the parties involved and through the Industrial Relations Branch of the Department. A number of those recently received are summarized below.

Agreements made obligatory under the Collective Agreement Act in Quebec are summarized in a separate article following this.

Manufacturing

Rubber and Its Products

TORONTO, ONT.—GUTTA PERCHA AND RUBBER, LIMITED, AND UNITED RUBBER, CORK, LINOLEUM AND PLASTIC WORKERS OF AMERICA, LOCAL 375 (OFFICE AND OTHER SALARIED EMPLOYEES).

Agreement to be in effect from February 17, 1950, to February 16, 1951, and thereafter subject to notice. The company agrees to re-open negotiations with respect to salaries, vacation plan and union relationship clauses, once during the life of the agreement on 30 days' notice, providing notice is not given before April 3, 1950. This agreement is similar to the one previously in effect between the Gutta Percha and Rubber, Limited, and United Office and Professional Workers of America, Local 195 (L.G., March, 1949, p. 298) with the following change:—

Check-off: the authorizations to deduct union dues, formerly on a voluntary and revokable basis, while still voluntary, are now subject to cancellation only during the last 7 days of the stated term of the agreement.

KITCHENER, ONT.—B. F. GOODRICH RUBBER COMPANY OF CANADA, LIMITED, AND THE UNITED RUBBER, CORK, LINOLEUM AND PLASTIC WORKERS OF AMERICA, LOCAL 73.

Agreement to be in effect from December 31, 1949, to December 30, 1950, and thereafter from year to year, subject to notice. The company recognizes the union as the sole bargaining agency for all eligible employees. There shall be no discrimination, coercion, or intimidation of employees in respect to union membership or authorization of union deductions.

Check-off: the company agrees to deduct monthly from the wages of all union members who so authorize their union dues and to remit same to the union; the authorization to deduct the dues shall be irrevocable during the life of this agreement unless revoked during the annual escape period of the last 9 days of March.

Two-year collective agreements are being negotiated in an increasing number in the various industries. Two such agreements, both containing provision for the setting of wage rates for the second year, are summarized below: in the agreement between the Steel Company of Canada Limited and United Steelworkers of America a straight increase of 5 cents per hour is provided for the second year of the agreement, while in the agreement between the Mason Contractors' Association of London, Ontario, and the Bricklayers, Masons and Plasterers' International Union of America any changes in the hourly wage rates for the second year are to be based on changes in the Dominion Bureau of Statistics' cost-of-living index.

Hours: tire division departments—8 per day, 40 per week; power house shift engineers—8 per day, 48 per week, other departments—either 8 or 9 per day, 45 per week. **Overtime:** time and one-half for work in excess of above hours and for work on Sunday or the alternative day off (in the case of power house engineers); double time for work on 8 specified *paid holidays*. The clauses regarding the hours of work for power house shift engineers and for "other departments" are closed for a period of 6 months from the effective date of the agreement and may be reopened thereafter by the union upon 30 days' written notice. However, the company shall have the right to establish normal weekly hours of less than 45 but not lower than 40 hours per week at any time after the effective date of the agreement; both parties agree that the normal weekly hours shall be so reduced before the first anniversary date of this agreement.

Vacations with pay: after one year's service one week, after 5 years' service 2 weeks and after 15 years' service 3 weeks; employees with less than one year's service will receive 2 per cent of their earnings from the date of their employment.

Wages: in a memorandum of agreement, dated February 8, 1950, the company and the negotiating committee of the union agree to a wage increase of 6½ cents per hour for hourly rated employees, the increase to become effective on February 3, 1950, contingent upon its acceptance by the union membership on or before February 12, 1950.

Night-shift differential: a night shift bonus of 3 cents per hour shall be paid for hours worked on the second shift and 5 cents for hours worked on the third shift on those operations which are considered to be operating on a 3 shift basis; for operations

which are considered to be operating on a 2 shift basis and the normal hours of which exceed 8 hours per shift 4 cents per hour extra shall be paid for hours worked on the second shift.

Provision is made for *seniority rights* and *grievance procedure*.

Pulp, Paper and Paper Products

POWELL RIVER AND STILLWATER, B.C.—
POWELL RIVER COMPANY LIMITED AND
INTERNATIONAL BROTHERHOOD OF PAPER
MAKERS, LOCAL 142, AND INTERNATIONAL
BROTHERHOOD OF PULP, SULPHITE AND
PAPER MILL WORKERS, LOCAL 76.

Agreement to be in effect from May 1, 1950; it may be opened for collective bargaining as to changes, upon notice on or before March 1 of any subsequent year. If negotiations, following such notice, break down either party may terminate the agreement after 10 days' notice. The company recognizes the unions as the only agencies representing all eligible employees. It will co-operate with the unions in obtaining and retaining members.

Union security: any employee who now is a member in good standing, or who becomes or is reinstated as a member of either union shall, as a condition of continued employment, maintain such membership in good standing.

Hours: 8 per day, a 44-hour week. *Overtime*: time and one-half for work in excess of above hours (except for tour workers when due to absence of mates or change of shifts) and for work on Sundays or the designated day off; double time and one-half for work on 5 specified *paid holidays*.

Vacations with pay: one week for employees—with one year's continuous service in which two-thirds of the full time hours have been worked or, if employed less than a year, if 1,500 hours have been worked; two weeks for employees who have qualified for 3 one-week vacations, and 3 weeks for those who have qualified for 15 one-week vacations; employees with less than one year's service or 1,500 hours work will be granted one-eighth of a day for each week of actual work.

Hourly wage rates for certain classes: Wood preparing: slip crew—boom men \$1.25; outside crew—"Pup" operator \$1.37, "Blue Devil" operator \$1.33, boom men, utility man \$1.28; piledriver crew—engineer, boom men \$1.37; hydraulic barker (large)—cutoff saw operators \$1.22, barker operators \$1.53, log transfer operators \$1.16, spudders \$1.12, jeep driver \$1.22, hand barker \$1.16; chipping plant—chipper operators \$1.28, chip screen tenders \$1.20, knife grinder \$1.22 and \$1.27; sawmill—log deckmen \$1.19, sawyers \$1.89 and \$1.99, setters \$1.27 and \$1.30, doggers \$1.20, edgermen \$1.31 and \$1.40; slashermen, hog operators, lumber stopman \$1.14; filer, head \$2.24, second \$1.61, third \$1.48; trimmerman \$1.33. Groundwood—jiggermen, stone sharpener, screen tenders \$1.30, grindermen \$1.22. Sulphite—cooks \$1.63, acid makers \$1.33, blowpit operators, wet machine operators, chip bin men \$1.14, screen service men, limerock tovermen \$1.16. Kamy pulp machine—machine operators \$1.50, assistant operators and testers \$1.26, cuttermen and balers \$1.20. Beater rooms—beater engineers \$1.53, mixing tankmen \$1.18, beatermen, cleaners \$1.12, mixing machine

operators \$1.31 and \$1.36, clay mixer \$1.14. Paper machines—machine tenders \$1.93 to \$2.56, back tenders \$1.72 to \$2.32, windermen \$1.46 to \$1.86, fourth hands \$1.25 to \$1.49, fifth hands \$1.20 to \$1.33, broke hustlers \$1.12 to \$1.23, broke beatermen \$1.12. Building division—carpenters \$1.16 to \$1.53, painters classes D to B \$1.16 to \$1.40 (spray painters 8 cents extra), tile setter \$1.53, roofer, bricklayer, plasterer \$1.40, steelman \$1.38, cement finisher \$1.30. Electrical—switchboard operators \$1.53, substation operator \$1.37, wheel tenders \$1.27, electricians \$1.16 to \$1.53. Mechanical—millwrights, machinists, welders, tinmiths, pipefitters \$1.16 to \$1.53, tool clerk \$1.22, oilers \$1.16 to \$1.26. Where such an arrangement now exists, women will be paid in accordance with existing rates provided, however, that the period between the hiring and attainment of full rate shall not exceed 3 months and the difference between the hiring rate and the job rate shall not exceed 5 cents.

A *night shift differential* of 5 cents per hour will be paid for all work performed during the second half of the second shift and during all of the third shift.

Provision is made for *seniority rights*, *grievance procedure* and the *safety* of employees.

PORT ALBERNI, B.C.—BLOEDEL, STEWART AND WELCH LIMITED (PULP MILL DIVISION) AND INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS, LOCAL 592.

Agreement to be in effect from May 1, 1950; it may be opened for collective bargaining as to changes, upon notice on or before March 1 of any subsequent year. If negotiations, following such notice, break down either party may terminate the agreement after 10 days' notice. This agreement is similar to the one between Powell River Company Limited and International Brotherhood of Paper Makers and International Brotherhood of Pulp, Sulphite and Paper Mill Workers, summarized above, except that it does not contain provisions for the maintenance of membership in the union.

Hourly wage rates for certain classes: Operating: machine room—machine tender \$1.69, backtender \$1.43, balerman, scalemen \$1.20, tester, inspector \$1.26; digesters, washers, screens—cooks \$1.43, cook's helper \$1.14, chip silo men \$1.12, screen tender \$1.20, washer operator \$1.24; causticizing and lime plant—caustic room operator \$1.30, lime kiln operator \$1.28; recovery plant—shift engineers \$1.58, firemen, evaporator operators \$1.31, lanceman \$1.18, spoutman \$1.14, utility man \$1.12; yard and general—truck driver, crane operator \$1.28, labourer \$1.12, clean-up employees \$1.16; chipper mill—cranemobile operator \$1.28, cranemobile swamper, loading deck, screen tender \$1.16. Mechanical—pipefitters, millwrights, welders, machinists \$1.16 to \$1.53, helpers \$1.12, mechanics "A" \$1.58, watchmen \$1.14.

WOODFIBRE AND PORT ALICE, B.C.—BRITISH COLUMBIA PULP AND PAPER COMPANY LIMITED AND INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS, LOCALS 494 AND 514.

Agreement to be in effect from May 1, 1950; it may be opened for collective bargaining as to changes, upon notice on or

before March 1 of any subsequent year. If negotiations following such notice break down either party may terminate the agreement after 10 days' notice. The clauses of this agreement, other than the wage scale, are similar to the clauses in the agreement International Brotherhood of Pulp, Sulphite and Paper Mill Workers, summarized above; the wage scale has not been received.

Metal Products

HAMILTON, ONT.—THE STEEL COMPANY OF CANADA LIMITED (HAMILTON AND ONTARIO WORKS) AND UNITED STEELWORKERS OF AMERICA, LOCAL 1005.

Agreement to be in effect from April 1, 1950, to April 1, 1952, and for a further period of one year unless 60 days' notice is given prior to the expiration date of the agreement. The company recognizes the union as the certified collective bargaining agency for all hourly and production employees with certain exceptions. There shall be no discrimination or intimidation by reason of any activity or lack of activity of any employee with respect to union affairs or membership.

Check-off: the company agrees to deduct from the pay of all employees who so authorize monthly union dues and to remit same to the union; the authorization is not revocable during the life of the agreement. However, all employees, hired on or after May 8, 1950, except students temporarily employed, will be required, as a term of their employment, to assign to the union through payroll deductions an amount equal to the monthly union dues.

Hours: 8 per shift 5 days a week, a 40-hour week. The work pattern is 5 consecutive work days which may begin on any day of the calendar week. **Overtime:** commencing with the calendar week which includes June 1, 1950, time and one-half shall be paid for all work in excess of 8 hours in any 24 consecutive hours (except in shift change-over) and in excess of 40 hours per week. Prior thereto, overtime rates of time and one-half were to continue to be paid for the hours worked in excess of 44 hours per week in accordance with the provisions of the agreement previously in effect. Double time will be paid for work on 8 specified *paid holidays*, provided the employee works throughout the scheduled shifts immediately preceding and following such holidays; otherwise, he will be paid time and one-half.

Vacations with pay: one week to employees with one year's continuous service, 2 weeks to employees with 3 or more years' service and 3 weeks to employees with at least 25 years' service; employees with 3 months' but less than one year's service will be paid on a *pro-rata* basis. A deduction of one day from the vacation period and pay will be made for each unjustifiable absence in excess of one day in any calendar month.

Wages: the company agrees to pay and the union agrees to accept the wage rates (hourly, tonnage and piece-work) in effect immediately prior to the date of this agreement plus an increase of 8 cents per hour worked, such increase to become effective as of April 1, 1950; an additional increase of 5 cents per hour worked will become effective as of April 1, 1951.

Provision is made for an *apprenticeship plan, grievance procedure, seniority rights and the health and safety of employees.*

Non-metallic Minerals and Chemicals

TORONTO, ONT.—TORONTO PAINT AND VARNISH WORKS (CANADIAN INDUSTRIES LIMITED) AND CANADIAN CHEMICAL DIVISION, DISTRICT 50, UNITED MINE WORKERS OF AMERICA, LOCAL 13,037.

Agreement to be in effect from November 22, 1949, to November 21, 1950. Either party may on 10 clear days' notice require the other party to enter into negotiations for the renewal of the agreement within the period of 2 months prior to the expiry date. The company recognizes the union during the term of this agreement as the exclusive bargaining agent in respect of wages, hours, seniority, grievance procedure, etc. for all eligible employees.

Check-off: the company agrees to deduct monthly union dues from the wages of employees who so authorize, during the term of the agreement or until authorization is cancelled and to remit same to the union. An amendment to the agreement, dated February 27, 1950, provides that the authorization may not be revoked except during the 2 weeks' period immediately preceding the anniversary of the effective date of the agreement.

Hours: for regular day workers, night mechanics and cleaners 9 per day on 4 days and 8 hours on a fifth day of each week; for shift workers 8 hours per day Monday through Friday, 4 on Saturday; for watchmen and shift engineers 8 hours per day, 6 days per week. **Overtime:** time and one-half shall be paid for all hours worked in excess of the normal daily hours, double time for work on an employee's regularly assigned "day of rest" and on 8 specified *paid holidays*.

Rest periods of 15 minutes and 10 minutes shall be allowed employees on day shift or day work and 2 periods of 10 minutes each shall be allowed employees on the night shift.

Hourly wage rates: laboratory—serviceman, viscosity tester \$1.01, lab. tester \$1.07, technician \$1.14; mixing and grinding—grinder, paste mixer \$1.22, varnish blender \$1.14; pyroxilin—elevator operator \$1.01, serviceman \$1.07, lacquer and thinner maker, gum cutter \$1.14; reducing and tinting—reducer \$1.14, tinter, small batch \$1.22, large batch \$1.30; varnish—kettle loader, reducer \$1.22, kettleman \$1.30; specialists, lye vat and drum preparation—packer 91 cents, serviceman, drum cleaner and trucker \$1.01, lye operator \$1.07, specialties operator \$1.14; filling—labeller, lid stamper 91 cents, label distributor 96 cents, carton stitcher, service stockkeeper \$1.01, machine labeller, multigrapher, bulk stockkeeper, filler \$1.07; warehouses—truckers \$1.07 and \$1.14, elevator operator \$1.01, distributor \$1.07, shipper \$1.14; mechanical—matron 91 cents, plant cleaner, gateman \$1.01, maintenance stockkeeper, watchman, mechanic's helper \$1.07, mechanic improver, oiler, painter \$1.22, shift engineer \$1.30, mechanic, welder, electrician, carpenter, machinist \$1.35. The above rates represent an increase of 6 cents per hour over the rates previously in effect.

A *shift premium* of 5 cents an hour will be paid for all shift work which begins at or after 3 p.m. and before 3 a.m.

Provision is made for *seniority rights and grievance procedure.*

Construction

Buildings and Structures

SAINT JOHN, N.B.—SAINT JOHN BUILDERS EXCHANGE AND UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA, LOCAL 1386.

Agreement to be in effect from May 1, 1950, to May 1, 1951, and thereafter from year to year, subject to notice. The employer agrees to employ as carpenters only members of the union so long as the union can furnish them. If the union is unable to do so its members shall not cause any stoppages of work and shall work along with non-union men until satisfactory unemployed union men are available.

Hours: 8 per day Monday through Friday, 4 on Saturday, a 44-hour week. **Overtime:** time and one-half for the first 4 hours in excess of above hours; double time thereafter and for work on Sundays and on 8 specified holidays. Where it becomes necessary to work other than the regular hours (exclusive of overtime and holidays) and in the case of 2 or more shifts being employed the rate for the second and subsequent shifts shall be 8 hours' pay for 7 hours' work.

Wage rate: the established rate for journeymen shall be \$1.10 per hour. In addition, there shall be a *cost-of-living bonus* if the cost-of-living index for the Saint John area, as computed by the Bureau of Statistics, advances 4 points from the index figure of May 1, 1950. The bonus shall be computed on the basis of 25 cents per week per point, adjustments to be made quarterly.

Transportation: all employees shall provide their own transportation within the area served by the local transportation system; men travelling by foot in excess of one-half mile beyond the end of the transportation service shall be entitled to travelling time at the rate of 3 miles per hour for such excess distance only.

Provision is made for *grievance procedure*.

KINGSTON, ONT.—THE MASTER PLUMBERS ASSOCIATION OF THE CITY OF KINGSTON AND UNITED ASSOCIATION OF JOURNEMEN AND APPRENTICES OF THE PLUMBING AND PIPE FITTING INDUSTRY OF THE UNITED STATES AND CANADA, LOCAL 221.

Agreement to be in effect from June 1, 1950, to December 31, 1950, and thereafter from year to year, subject to notice.

Hours: 8 per day between 8 a.m. and 5 p.m. Monday through Friday, a 40-hour week. No work shall be done after the regular working hours, unless it is absolutely necessary. **Overtime:** time and one-half for work done in excess of above hours up to 12 midnight; double time for work performed between 12 midnight and 8 a.m. and on Saturdays, Sundays and 7 specified holidays, except that emergency work done on Saturday morning may be paid for at the rate of time and one-half up to 12 noon. If to finish a repair job on a regular working day will not take longer than one hour, same may be done at the regular hourly rate.

Minimum hourly wage rate for journeymen shall be \$1.40.

Out-of-town work: men working out of Kingston shall have their board and transportation paid, travelling time to be paid between the hours of 8 a.m. and 5 p.m.

Provision is made for the *adjustment of grievances*.

LONDON, ONT.—THE MASON CONTRACTORS' ASSOCIATION, MASTER MASONS, AND BRICKLAYERS, MASONS AND PLASTERERS' INTERNATIONAL UNION OF AMERICA, LOCAL 5.

Agreement to be in effect from May 1, 1950, to April 30, 1952. Three months prior to its expiration the Board of Arbitration shall meet to consider its renewal or amendment.

The employers shall employ only members in good standing in the union or those who are competent and willing to become members, giving preference to local members. No member of the union shall work for any contractors who have not endorsed this agreement, nor on the construction of any building where the foundation has been built of brick, stone or cement blocks by non-union labour. The terms of the agreement shall not deny bricklayers or masons the right to work for *bona fide* building construction companies, general contractors, or municipal, provincial or dominion works, subject to the approval of the joint arbitration board and the executive board of the union; however, no union member shall work for any commercial company, private individual or contractors as mentioned above who have not endorsed the agreement unless he receives \$2.10 per hour.

Hours: 8 per day between 8 a.m. and 5 p.m. Monday through Friday, a 40-hour week. **Overtime:** time and one-half for work in excess of above hours up to midnight, double time thereafter and for all work done on Saturdays, Sundays and on 7 specified holidays. Where it is desired to work 2 or 3 shifts the first two shall work 7½ hours and the third 7 hours and shall be paid for 8 hours. Where only one shift is required after 5 p.m. this must be paid at the rate of time and one-half.

November 11 of each year shall be declared a general holiday.

Minimum wage rate: \$1.80 per hour plus 4 per cent vacation pay. The wage rate of \$1.80 per hour and the *cost-of-living* index of 161.6, established by the Dominion Bureau of Statistics as of February 1, 1950, shall be the basis for the hourly rate to be established for 1951: for every 5 points increase or decrease in the cost of living the hourly wage rate shall be increased or decreased 5 cents; there will be no change in rate if the cost of living does not fluctuate over 5 points.

Apprentices: the members of the employers' association may upon taking up the matter of being allowed an apprentice every 2 years have same adjusted.

Travelling time allowance shall be established at 5 cents per mile, employers to provide transportation.

FORT WILLIAM, ONT.—THE LAKEHEAD BUILDERS EXCHANGE (GENERAL CONTRACTORS' DIVISION) AND UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA, LOCAL 1669.

Agreement to be in effect from April 1, 1950, to March 31, 1951, and thereafter from year to year, subject to notice.

Union security: the employer agrees to hire as carpenters only members of the union so long as the union is able to furnish

them. After 48 hours' notice to the union the employer is free to hire journeymen from any other source. All eligible employees shall become members of the union after 15 days and shall remain members in good standing so long as they are employed by the employer. If a lay-off occurs union members shall be given preference of employment over non-union employees.

Hours: 8 per day Monday through Friday, a 40-hour week. *Overtime:* time and one-half for the first 4 hours in excess of the above daily hours; double time thereafter and for work on Saturdays, Sundays and on 7 specified holidays (Armistice Day to be added if declared a holiday by an act of parliament), except that the first 4 hours on Saturday shall be allowed at time and one-half to permit the pouring of concrete only. There shall be an 8-hour break at all times after 16 hours. Where two or more shifts are worked the second or third shift shall carry the rate of time and one-seventh. The employer may obtain from the business agent of the union a permit for a 44- or 48-hour week providing the job is at least 30 miles from the Lakehead.

Vacations with pay: one week to be covered by 2 per cent of gross earnings.

Minimum hourly wage rates: journeymen carpenters \$1.50; carpenter foremen shall be paid at least 10 cents extra; fourth year helper \$1.36.

Apprentices: all helpers under the rating of fourth year shall be indentured apprentices. The number of helpers on the job shall be limited to one helper for each 3 journeymen employed.

Transportation: Lakehead men sent to jobs out of town shall have their transportation to and from the job paid. Time spent travelling shall be paid for at the regular rate, 8 hours for each day. Board and lodging are to be paid by the employer. On jobs outside the city carfare zone transportation is to be provided and travelling time to be allowed to and from the job. In going to work outside the city limits of Port Arthur and Fort William and returning daily the employer shall pay any extra transportation charges over the city carfare and, in addition, a travelling time allowance of 6 cents per mile from the city limits to the job and return; this applies to an area within 10 miles of city limits.

REGINA, SASK.—THE REGINA MASTER PLUMBING AND HEATING CONTRACTORS AND UNITED ASSOCIATION OF JOURNEYMEN AND APPRENTICES OF THE PLUMBING AND PIPE FITTING INDUSTRY OF THE UNITED STATES AND CANADA, LOCAL 179.

Agreement to be in effect from May 1, 1950, and to remain in effect from year to year, subject to 60 days' notice prior to February 1. Employers shall give members of the union, or men willing and eligible to become members, preference in employment. Likewise, members of the union agree to work for recognized shops only, and to give preference to employers having an agreement with the union.

Hours: 8 per day Monday through Friday, a 40-hour week. *Overtime:* time and one-half for work performed between 5 p.m. and 10 p.m. Monday through Friday and on Saturday mornings up to 12 noon; double time for work between 10 p.m. and 8 a.m. Monday through Friday, between 12 noon and 12 midnight on Saturdays and for all

work on Sundays and on 8 specified holidays. Where 2 or more shifts are worked the night shifts shall work only 7 hours on each shift and shall be paid at the rate of one and one-seventh times the regular rate.

Minimum hourly wage rate shall be \$1.55.

Apprentices are limited to one to each three journeymen employed at either trade and in no case shall a helper be permitted to work with a journeyman in preference to a registered apprentice.

Out-of-town work: employees required to work outside the city area shall be provided with transportation to and from such work. Meals and sleeping accommodation shall be provided by the employer up to \$25 per week. Travelling time shall be paid for at the regular rate and not more than 8 hours' pay in any 24-hour period.

RED DEER, ALTA.—CERTAIN BUILDING CONTRACTORS AND THE AMALGAMATED BUILDING AND CONSTRUCTION WORKERS OF CANADA, LOCAL 27 (CCL).

Agreement to be in effect from May 11, 1950, to May 10, 1951, and thereafter from year to year, subject to 60 days' notice.

Union security: only union members shall be employed so long as they are available to the employer. During the life of the agreement all present union members shall maintain their membership as a condition of employment; new employees affected by the agreement must apply for membership in the union.

Hours: 8 per day 5½ days, a 44-hour week; no work shall be performed between 12 noon Saturday and 8 a.m. Monday, except where safety to life and property makes it necessary. *Overtime:* time and one-half for work in excess of above hours; double time for work on Sundays and on 9 specified holidays. No work shall be performed on Labour Day. In case of necessity, shift work may be allowed provided shifts continue for 3 consecutive nights and are run in addition to the regular shifts. Night shifts shall be paid for at the rate of 8 hours' pay for 7 hours' work.

Vacations with pay shall be allowed as presently provided by the provincial legislation.

Minimum hourly wage rates shall be \$1.46; all carpenters in charge of work shall be paid not less than \$1 per day extra.

Out-of-town work: on jobs away from home, where a carpenter is hired at home, two way transportation charges plus sustenance shall be provided by the employer. Travelling on working days only is to be paid for at the rate of 8 hours in each 24.

Apprentices shall be employed in accordance with the provisions of the Alberta Apprenticeship Act; all apprentices shall be registered with the union.

Service

Professional

SASKATOON, SASK.—ST. PAUL'S HOSPITAL (THE SISTERS OF CHARITY OF THE NORTH WEST TERRITORIES) AND THE BUILDING SERVICE EMPLOYEES INTERNATIONAL UNION, LOCAL 287.

Agreement to be in effect from April 1, 1950, to March 31, 1951. The employer recognizes the union as the sole bargaining agent for all eligible employees.

Union security: all employees who are, or who subsequently become members of the union, shall maintain their membership as a condition of their employment. New employees shall, within 30 days after the date of their employment, apply for and maintain membership in the union. *Check-off:* the company agrees to deduct union dues monthly from the pay of employees who so request, until such request is withdrawn, and to remit same to the union.

Hours: 8 per day, 44 per week; where conditions are more favourable at the date of this agreement, no change shall be made. Working hours of any employee to be arranged by the Sister or Superintendent in charge. *Overtime:* time and one-half for work in excess of 44 hours per week. A *rest period* of 10 minutes shall be provided each afternoon for all employees covered by the agreement.

Statutory holidays: employees shall be entitled to any 9 out of 13 specified holidays as determined by the management in each year. Employees required to work on any one of the 9 holidays to which they are entitled will be given a day off with pay in lieu thereof.

Vacations with pay: after 6 months' service one week, after one year's service 2 weeks, after 3 years' service 3 weeks.

Monthly wage rates: maintenance staff—engineers, second class certificate \$150 to \$165, third class certificate \$130 to \$160; orderly department—orderlies employed previous to April 1, 1949: head orderly \$150, operating room orderly \$145, others \$130 to \$140; orderlies employed after April 1, 1949: first 3 months \$95, 3 to 6 months \$100; 6

months to one year \$110, after 1 year \$140; painters \$150 to \$185, helper \$110 to \$140; carpenters \$150 to \$190, helper \$110 to \$140; utility staff (male)—gardener \$150, cleaner, kitchen helper, truck driver \$130, utility man \$135; laundry—head man \$165, laundry man, first \$135 to \$140, second \$110 to \$130; storekeeper \$130 to \$145; laboratory helpers (male) \$110 to \$130; maids, seamstress, etc., first 6 months \$91, after 6 months \$92.50 plus \$3 bonus, after 1 year \$95.50 plus \$5 bonus, after 2 years \$100 plus \$5 bonus; medical record librarian (graduate) \$120 to \$145; uniform maker \$91 to \$145; experienced bookkeeper \$100 to \$135, switchboard operator, clerks, etc., \$95 to \$115; cooks, first class \$140 to \$170, second class \$120 to \$135, pastry cook \$120 to \$135. All present employees who have been employed 6 months, or on completion of 6 months' service, except maids and few other employees, are to receive a bonus of \$10. A further increase of \$10 is granted to the engineers and firemen and an increase of \$5 to all other male employees.

Sick leave with pay: after 3 months' service employees shall be entitled to full pay for 12 working days a year; sick pay credit shall be cumulative to a maximum of 60 days.

The management will enter into deliberations with representatives of the union with the view to establishing a superannuation plan and a plan whereby the employees and their dependents will receive medical and hospital service at a nominal fee.

Provision is made for *grievance procedure*, *seniority rights* and the setting up of a *Labour-Management Committee*.

Collective Agreement Act, Quebec

Recent proceedings under the Collective Agreement Act, Quebec,* include the extension of one new agreement and the amendment of ten others. These include in addition to those summarized below, the amendment of the agreement for barbers and hairdressers at Quebec published in the *Quebec Official Gazette* of May 27; the amendment of the agreements for barbers and hairdressers at Victoriaville, and at Sherbrooke in the issue of June 3, and at St. Hyacinthe, and at Hull in the issue of June 17.

Requests for the amendment of the agreements for the building trades at Quebec and for the men's and boys' clothing industry in the province were published May 27, for the fine glove industry in the province and for barbers and hairdressers at Three Rivers were gazetted June 3, for the building trades at Hull and for printing trades at Chicoutimi in the issue of June 10. A request for a first agreement for the glass processing industry at Quebec and requests for amendments to the agreements for the building trades at Sorel, at Three Rivers, and at St. Hyacinthe, for the furniture industry in the province, and for retail

stores in Quebec were gazetted June 17. A request for the amendment of the agreement for the printing trades at Quebec was published in the issue of June 23.

Orders in Council were also published approving the constitution and by-laws of certain joint committees and others approving the levy of assessment on the parties.

* In Quebec, the Collective Agreement Act provides that where a collective agreement has been entered into by an organization of employees and one or more employers or associations of employers, either side may apply to the Provincial Minister of Labour to have the terms of the agreement which concern wages, hours of labour, apprenticeship, and certain other conditions made binding throughout the province or within a certain district on all employers and employees in the trade or industry covered by the agreement. Notice of such application is published and 30 days are allowed for the filing of objections, after which an Order in Council may be passed granting the application, with or without changes as considered advisable by the Minister. The Order in Council may be amended or revoked in the same manner. Each agreement is administered and enforced by a joint committee of the parties. References to the summary of this Act and to amendments to it are given in the *LABOUR GAZETTE*, January, 1949, page 65. Proceedings under this Act and earlier legislation have been noted in the *LABOUR GAZETTE* monthly since June, 1934.

Mining

Non-ferrous Smelting and Quarrying

BUILDING MATERIALS INDUSTRY, PROVINCE OF QUEBEC.

See below under "Manufacturing: Non-metallic Minerals, Chemicals, etc."

Manufacturing

Fur and Leather Products

WHOLESALE FUR INDUSTRY, MONTREAL.

An Order in Council, dated June 14, and gazetted June 23, extends the term of the previous Orders in Council for this industry (L.G., March, 1947, p. 368; June, 1948, p. 619, Dec., p. 1421; May, 1949, p. 604; March, 1950, p. 345; July, 1950, p. 1051, and previous issues) to August 31, 1950.

Metal Products

SHEET METAL MANUFACTURING, MONTREAL.

An Order in Council, dated May 17, and gazetted May 27, makes obligatory the terms of a new agreement between The Builders' Exchange Inc., Sheet Metal Fabricating Section and The Sheet Metal Workers International Association, Local No. 116. Agreement to be in effect from May 27, 1950, until March 1, 1951. It repeals the agreement previously in effect and all its amendments.

This agreement is similar to the one previously in effect and published in the LABOUR GAZETTE issue of August, 1949, p. 987, with the following exceptions:—

Minimum hourly wage rates are increased by 5 cents per hour in most cases and are as follows: sheet metal mechanic \$1.20; assistant-foreman \$1.32; charge hand, welder (class A), toolmaker \$1.27; machinist mechanic \$1.22; welder (class B), blacksmith \$1.16; painter \$1.14; buffer and polisher (class A) \$1.10; welder (class C), machinist, assembler and specialist \$1.05; spray painter \$1; machine operator 99 cents; production welders from 83 cents per hour in the first 6 months to 99 cents in the fourth 6 months, when they become eligible for class C, if they qualify; apprentices 61 cents plus 5 cents per hour increase each 6 months of continuous service; boys (16 to 18 years of age) 56 cents plus 5 cents per hour each 6 months of continuous service until their nineteenth year when they shall be classified and paid as helpers. Rates for production workers, truck drivers, stock and storekeepers, warehousemen (shipping and receiving) are increased from 78 cents to 85 cents per hour and for helpers from 72 cents to 80 cents. Night shift differential 5 cents per hour extra.

Vacation: after one year's service (as at May 1), one week with pay based on 2 per cent of employee's actual wage rate at the time of vacation (previously at April 30); after 5 years' service (as at May 1), 2 weeks with pay based on 4 per cent of employee's actual wage rate at the time of vacation (previously at April 30). In both the foregoing instances the actual wage rate to be multiplied by the number of hours worked (excluding overtime) during the preceding 12 months. Vacation shall be taken between May 1 and September 30, unless subject to mutual agreement between the employees and employers, an employee takes his vacation after September 30.

Non-metallic Minerals, Chemicals, Etc.

BUILDING MATERIALS INDUSTRY, PROVINCE OF QUEBEC.

An Order in Council, dated May 31, and gazetted June 17, amends the previous Order in Council for Part II of this agreement which applies to the *stone industry* and Part III which governs the *marble industry* (L.G., June, 1950, p. 872).

Minimum hourly wage rates in the stone industry for the province: the classification stone cutter \$1 per hour is added to the wage scale previously summarized. (This rate represents an increase of 10 cents per hour over that which was formerly in effect.)

Minimum hourly wage rates for the marble industry in zone I: the rate for helpers and labourers previously indicated as 88 cents per hour is replaced by the rate 85 cents per hour.

Construction

BUILDING TRADES, CHICOUTIMI.

An Order in Council, dated May 17, and gazetted May 27, amends the previous Orders in Council for this industry (L.G., Jan., 1948, p. 51, April, p. 334, Aug., p. 872; Aug., 1949, p. 987, and previous issues) by providing that road operations carried out on behalf of any department of the Provincial Government, already governed by the Fair Wage Schedule, are not governed by the present agreement.

BUILDING TRADES, ST. HYACINTHE.

An Order in Council, dated June 14, and gazetted June 23, amends the previous Orders in Council for this industry (L.G., July, 1947, p. 1002, Sept., p. 1308; May, 1948, p. 488; Oct., 1949, p. 1247; Feb., 1950, p. 209, and previous issues).

This amendment provides that permanent employees or maintenance men in manufacturing or industrial establishments who benefit by a labour hiring contract for a minimum period of 6 months are not governed by the provisions of the present agreement.

Trade

DAIRY EMPLOYEES, QUEBEC AND LÉVIS.

An Order in Council, dated May 24, and gazetted June 3, amends the previous Order in Council for this industry (L.G., July, 1949, p. 877).

Territorial jurisdiction comprises the cities of Quebec and Lévis and the municipalities included in a radius of 10 miles (previously 5 miles) from their limits.

Overtime and holidays: as previously in effect, no deduction may be made from the wages of an employee on account of religious and other holidays; the rate for overtime and work on Sundays and 6 religious holidays remains at time and one-half; the number of other holidays for which double time is payable is increased from 2 to 4.

Minimum weekly wage rates: rates for certain classes of employees represent increases ranging from 70 cents to \$1.40 per week and are as follows:—service men \$26 to \$34; salesmen on milk delivery \$20 per week plus 3 per cent commission on sales, except butter and cream for which commission is also specified, with a guaranteed minimum of \$25 per week (commission and guarantee

remain unchanged from that which was previously in effect); delivery man (ice cream) \$32 per week. Rates for the following classes of employees remain unchanged from those previously in effect:—foreman, tester and foreman \$41.80; tester only (not foreman), shipper \$34.10; production worker

\$33; ice cream salesmen \$30.80; helper (ice cream delivery man's) \$19.80; occasional employee 71½ cents per hour.

Severance pay: any employee who leaves or is dismissed after 6 months of service will receive a cash indemnity equivalent to 3 days' wages.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

The Fair Wages Policy of the Dominion Government has the purpose of ensuring that all government contracts contain provisions to secure the payment of wages generally accepted as current in each trade for competent workmen in the district where the work is carried out.

There are two sets of conditions applicable to government contracts, those which apply to building and construction work, and those which apply to contracts for the manufacture of various classes of government supplies and equipment.

The practice of the different departments of the Government, before entering into contracts in the first group, is to obtain from the Department of Labour schedules setting forth the current wage rates for the different classifications of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of the contract.

Fair wages schedules are not issued in respect of contracts for supplies and equipment. Contracts in this group are awarded in accordance with a policy which provides that wage rates must equal those current in the district.

A more detailed account of the Dominion Government's Fair Wages Policy is given in the *LABOUR GAZETTE* for July, 1946, p. 932.

Schedules Prepared and Contracts Awarded During May

(1) *Works of Construction, Remodelling, Repair or Demolition*

During the month of May the Department of Labour prepared 137 fair wages schedules for inclusion in building and construction contracts proposed to be undertaken by various departments of the Government of Canada in different parts of the Dominion.

During the same period a total of 115 construction contracts was awarded by the various Government departments. Particulars of these contracts appear in the accompanying table.

Copies of the relevant wages schedules are available to trade unions or other *bona fide* interested parties, on request.

The labour conditions of each of the contracts listed under this heading, besides stipulating working hours of not more than eight per day and forty-four per week, provide that "where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than forty-four per week, such lesser hours shall not be exceeded on this work except in cases of emergency as may be approved by the Minister of Labour and then only subject to the payment of overtime rates as specified by the Minister of Labour", and also specify that the rates of wages set out therein are "*minimum rates only*" and that "nothing herein contained shall be considered as exempting contractors and subcontractors from the payment of higher rates in any instance where, during the continuance of the work such higher rates are fixed by provincial legislation, by agreements between employers and employees in the district or by changes in prevailing rates."

(2) *Contracts for the Manufacture of Supplies and Equipment*

Contracts for supplies and equipment were awarded as follows, under the policy that wage rates must equal those current in the district:—

Department	No. of contracts	Aggregate amount
Agriculture.	2	\$ 157,731.45
Canadian Commercial Corporation.	7,602	26,036,993.50
Post Office.	11	149,145.24
Public Works.	2	30,620.05
R.C.M.P.	2	6,751.80

LABOUR LAW

Recent Regulations Under Provincial Legislation

In British Columbia minimum rates have been set for learners in the automobile repair and gasoline service-station industry; in Saskatchewan, rates for the lumbering industry have been raised, and women are now permitted to work in certain occupations between 12.30 and 1.30 a.m., if free transport is provided to their homes. In Alberta, regulations were issued requiring Government permits for electrical work carried out in most areas in the Province.

Alberta Electrical Protection Act

Regulations have been issued under the above Act providing for permits for construction, installation or alteration of electrical work in certain areas of the Province and setting out permit and inspection fees. Similar to rules recently put into effect in British Columbia (L.G., 1950, p. 1064), the regulations were approved by Order in Council (O.C. 662-50) on June 6 and gazetted June 15. Permits will be required for all installations commenced after July 1, and for all installations which will not be connected to a source of power by October 1. They will not be necessary, however, for interior wiring in specified areas including Edmonton, Lethbridge, those parts of Calgary and Red Deer where municipal electrical departments carry out inspection work, and in the National Parks of Banff, Jasper, Waterton and Elk Island. The regulations do not apply to electrical installations which are already covered by special inspections and fees, such as passenger and freight elevators.

After July 1, in all parts of the Province with the above exceptions, no person may construct, install or alter any electrical work until he has applied for a permit. Application for a permit must be submitted in writing to the Electrical Inspection Department and signed by the person or firm carrying out the work. It must be accompanied by payment of the required permit fees, and must give the address of the premises concerned, full details of ownership, occupation and the purpose for which the premises are used and must list all details that may be required on the application form supplied by the Department.

Permits will be issued only to a person or firm who holds a certificate of proficiency or annual permit in good standing which entitles the holder to carry out electrical work within Alberta, except in those areas

in which licensed electricians are not available. The regulations do not prohibit a person from obtaining a permit to carry out personally electrical work in his own residence.

Electrical installations must be commenced within 90 days after a permit is issued, after which time the permit will be void unless an extension in writing is granted by the Department.

When the work covered by the permit is completed, the holder must notify the Department in writing. As soon as practicable the Electrical Inspector must inspect the work and issue a certificate of approval or order any necessary changes.

After October 1 in Medicine Hat, Drumheller, Redcliff, Forest Lawn, Albert Park, in the area within 10 miles of Edmonton and in the area within five miles of Lethbridge, any person or firm obtaining a permit must notify the Department in writing that a portion of the work which may be concealed on completion of the installation is ready for inspection, and no new installation may be connected to a source of power without a certificate of approval from the Inspection Department.

Payment of the permit fee will entitle the permit-holder to one inspection and one re-inspection. The Department may refuse to issue a permit for electrical work on any premises where the existing work is not in accordance with the regulations.

On and after October 1, in the area in which these regulations are in effect, supply authorities as defined in Part I of the Canadian Electrical Code must not connect to their lines any new electrical installation until a valid permit from the Inspection Department is presented by the applicant. The Inspection Department may refuse to issue permits if there are any outstanding corrections required on work done by the applicant which have not been completed to the satisfaction of the Inspector.

A schedule of permit fees is set out in the regulations based on the total cost to the customer of all material and labour involved in the electrical installation.

The Inspector may, at his discretion, call for plans and specifications of electrical work in any premises, but the owner or accredited agent of a theatre, hall, factory, hotel, apartment building and of any other place where public safety is affected must submit plans which must be accepted before a permit is issued. Fees are set out for the examination of plans and specifications.

An annual permit, effective from January 1, 1951, may be issued by the Inspector to the operator of an industrial or commercial establishment, with the exception of mines within the meaning of the Mines Act, where a full-time electrician is employed and where the nature of the business necessitates repairs or additions to the plant on short notice. If the operator holds an annual permit for the current calendar year, these alterations may be carried out by the operator's own electrician without taking out a permit for each one. The annual permit, however, will not entitle the holder to proceed with any major alteration or addition of electrical equipment over 100 KVA in a year for which the operator must obtain a permit as described above, after submitting for examination plans and specifications and paying the required fee.

Each establishment for which the operator holds an annual permit must be inspected every six months. The operator must maintain an accurate record of all alterations and additions which have been carried out in his establishment since the last inspection and this record must be made available to the Inspector on request. Fees for annual permits are also prescribed.

Temporary current permits may be issued at the discretion of the Department to enable the supply authority to connect up to temporary work or uncompleted permanent installations. These permits will be valid for 90 days but may be renewed at no extra charge at the discretion of the Department.

The issuing of a permit by the Inspection Department will not obligate the Supply Authority to connect these installations to their lines, if, in the opinion of the Authority, the supplying of current would create a hazard to life or property.

British Columbia Male and Female Minimum Wage Acts

Effective from June 1, rates are set for a learning period of six months in the automotive repair and gasoline service-station industry for employees employed exclusively in the parts department by Order 6A of the

Board of Industrial Relations made on May 25 and gazetted June 1.

Learners in the parts department must receive 40 cents an hour for the first two months' employment, 45 cents an hour during the second two months and 50 cents an hour during the third two-month period. Thereafter they will receive 55 cents an hour, the rate set for all employees other than automotive mechanics who must receive at least 90 cents an hour. (L.G. 1948, p. 746.)

Quebec Pipe Mechanics Act

Amendments have been made to the regulations under the above Act to make provision for the examination of contractors and journeymen engaged in the installation of oil burners for central heating by an Order in Council (No. 697) made on June 14, gazetted June 23. The general regulations (L.G. 1939, p. 158) provide for contractors', journeymen's, improvers' and apprentices' licences for persons employed in installing or repairing heating systems, refrigeration systems, mechanical sprayers or plumbing systems in municipalities of more than 5,000 population, and set out the qualifications required for each class of licence.

Contractors' licences are divided into two classes, Class EA issued to ordinary contractors for commercial purposes, and Class EB for special technical operations in particular industries for commercial purposes. Journeymen's licences are similarly classified (CA or CB) according as their holders work for one class of contractor or the other.

For contractors engaged exclusively in the installation of oil burners, the licence designated as EB which pertains to special technical operations is required. This licence will only be issued upon compliance with the conditions required for licence CB.

Employees engaged in installing oil burners must obtain licence CB. To obtain the licence CB an employee must serve an apprenticeship of one year, must work another year in the capacity of junior journeyman, and pass the required examinations.

Saskatchewan Minimum Wage Act

Amendments were made to ten of the Minimum Wage Orders (L.G. 1949, p. 747) by Orders in Council issued on June 16 and gazetted June 23, chiefly to raise the rates in the lumbering industry and to permit women in hotels and restaurants to work between 12.30 and 1.30 a.m. if free transport to their homes is provided by the employer.

The rates for employees in the lumbering industry (Order 11) have been increased from 60 to 65 cents an hour for all workers

except cooks, cookees, bull cooks or watchmen. The latter group must be paid a minimum of \$125 a month, instead of \$115, as formerly. Deductions from wages for three meals a day and lodging must not exceed \$1.50 instead of \$1.15 a day.

In the three Orders governing educational institutions, hospitals, nursing homes, hotels and restaurants in the cities, towns and villages covered by the Act, it is now stipulated that a woman may be employed between 12.30 a.m. and 1.30 a.m., local time, if free transportation is supplied by the employer to the employee's place of residence. Previously, women were prohibited from working in such places between 12.30 a.m. and 6 a.m. unless they resided on the premises.

The same three Orders state that the hours of work of any employee must be

confined within a period of 12 hours in a day. The provision is now added that no employee may be required or permitted to report for duty on more than three occasions in the 12-hour period.

The amendments further provide that persons employed by rural municipalities solely on road maintenance are excluded from the provisions of the three general Orders applying to cities, towns and villages; that persons employed in swimming pools are covered by Order 12 which applies to places of amusement in all places under the Act; and that the provision of all the Orders requiring part-time workers to be paid for at least three hours at the minimum rate each time they report for work does not apply to persons employed exclusively as janitors and caretakers.

UNEMPLOYMENT INSURANCE

Selected Decisions of Umpire Under the Unemployment Insurance Act

Digest of selected decisions in appeals heard by the Umpire under the provisions of the Unemployment Insurance Act. Published in two series (1) Benefit cases, designated CU-B, and (2) Coverage cases, CU-C.

Held that misconduct had not been proved and that the claimant should not have been disqualified from the receipt of benefit under Section 41 (1) of the Act.—CU-B 581 (June 7, 1950).

MATERIAL FACTS OF CASE:

The claimant made a claim for benefit on June 17, 1949, reporting that he had worked as a pipe fitter's helper for a shipbuilding and repairing company from September 2, 1948 to June 14, 1949, and that he had lost his employment on that date, because the superintendent who was walking close by had interpreted as loafing the fact that he and a fellow-workman were waiting for a truck to move some pipes. The employer, in the separation questionnaire, stated that the claimant had been found "loafing on the job".

The Insurance Officer disqualified the claimant from the receipt of benefit for a period of six weeks because, in his opinion, he had lost his employment by reason of his own misconduct within the meaning of Section 41 (1) of the Act.

The claimant appealed to a Court of Referees. Subsequent to his appeal, the assistant superintendent of the company sent a written statement to the local office of the Commission to the effect that he and the superintendent had noticed on June 14, that the claimant and his fellow-workman had spent some time talking and loafing instead of doing their work and that the superintendent had told him to inform the foreman to dismiss them. He added that in many instances the superintendent had informed him that he was not satisfied with the claimant's work. He also stated that in the course of the last two years, the claimant had been warned by letter for having been late for work.

The claimant who appeared before the Court of Referees was also represented by an official of his union. The company was represented by the general foreman who received the order to dismiss the claimant and the foreman who was the claimant's immediate superior.

The majority of the Court of Referees felt that the written evidence submitted

by the officials of the company who had been present at the scene of the incident was sufficient to justify the decision rendered by the Insurance Officer.

The claimant's union appealed to the Umpire.

DECISION:

After having carefully studied all the submissions, I agree with the representative of the "Conseil général des syndicats" that the question of the claimant's lateness on the job should not be taken into consideration in determining whether on June 14, 1949, he lost his employment by reason of his own misconduct within the meaning of Section 41 (1) of the Act.

It appears, indeed, from the transcript of the evidence given by one of the company's representatives before the Court of Referees, that the superintendent was not aware of the claimant's name when he gave the order to dismiss him, pointing him out by his badge number. Moreover, the only reason given for the dismissal in the separation questionnaire is that the claimant was loafing on the job.

What has to be determined, therefore, is whether it has been proved in a conclusive manner that the claimant was actually loafing on the job.

Apparently, the superintendent and his assistant were the only officials present at the scene of the incident which lead to the dismissal of the claimant and his fellow-workman. Those officials did not appear before the Court of Referees but were represented by the claimant's immediate superiors who admitted that they had no first hand knowledge of what had actually happened.

Therefore, we have a written statement of the assistant superintendent to the effect that he and the superintendent had, on June 14 "observed that the accused and his fellow-workman had, instead of doing their work conscientiously, spent some time speaking and loafing" and to counter that, a categorical denial from the claimant and his fellow-workman with their explanation that what had been interpreted as loafing was only the fulfilment of a task which had been allotted to them by their foreman.

The foreman stated before the Court of Referees that around 9:00 a.m., on June 14, the claimant and his fellow-workman had gone on his orders to fetch a pipe at the stores. Moreover, he stated that during the days that they were apparently being watched by the superintendent the claimant's output of work and that of his fellow-workman was satisfactory. The other company's representative, the general foreman, stated in his testimony before the

Court that the superintendent had given him the order to dismiss them also around 9:00 a.m.

In accordance with a principle established in previous decisions, misconduct must be conclusively proved by the parties who allege it before a claimant can be disqualified from the receipt of benefit for reason of misconduct within the meaning of Section 41 (1) of the Act.

I cannot find that, in this case, the claimant's misconduct has been so proved.

Inasmuch as the evidence given by the interested parties is of a contradictory nature, I am of the opinion that the benefit of the doubt has to be given to the claimant and that the appeal should be allowed.

Held that the claimant had lost his employment by reason of his own misconduct within the meaning of Section 41 (1) of the Act.—CU-B 584 (June 7, 1950).

MATERIAL FACTS OF CASE:

The claimant filed a claim for benefit on December 5, 1949, stating that he had worked as a labourer for a manufacturer of linoleum from November 1947 to December 1, 1949, and that he had lost his employment because he had been caught while "on the verge of smoking". The employer reported in the separation questionnaire that the claimant had been dismissed because he had been found "in the act of smoking in a restricted area". The Insurance Officer disqualified the claimant from the receipt of benefit for a period of six weeks on the ground that he had lost his employment by reason of his own misconduct within the meaning of Section 41 (1) of the Act.

The claimant appealed to a Court of Referees and stated that he had been unjustly treated because he was the chairman of an employees syndicate which was in the process of organization at the factory. The majority of the Court upheld the decision of the Insurance Officer stating that "it was evident that when the claimant was dismissed he was smoking."

The dissenting member expressed the opinion that the nature of the offence did not warrant dismissal as there was considerable tolerance of smoking by the company in restricted areas, a bad example had been set by the supervisory staff and it was the claimant's first offence of which the company had evidence.

The claimant appealed to the Umpire.

DECISION:

The Court of Referees seems to have been unanimous in finding that the

claimant had been caught in the act of smoking outside the allowed time and place. I do not see any valid reason to differ on this question of fact.

The claimant admitted to the Court of Referees that upon being hired by the Company he was told "that he could not smoke". Moreover he informed the Court that 15 days prior to his dismissal another employee had been caught in the act of smoking and had been suspended for one week.

Therefore, the claimant knowingly committed a violation of the rules of the company and he must be considered as having lost his employment by reason of his own

misconduct within the meaning of Section 41 (1) of the Act.

The fact that other employees were taking the liberty of smoking in forbidden areas or that it was the claimant's first offence of which the company had evidence or that the employer had dealt with similar cases in the past with more leniency, cannot be accepted as justification for the claimant's conduct.

If, as the claimant contends, his conduct was under observation in view of his union activities, it appears to me that he had all the more reason to abide by the rules and regulations of the company.

The appeal is dismissed.

Unemployment Insurance Statistics, May, 1950*

The monthly report prepared by the Dominion Bureau of Statistics on operations under the Unemployment Insurance Act states that during the month of May, 1950, there were 83,082 claims filed at local offices of the Unemployment Insurance Commission. This number represents a decline of eight per cent from the April total of 90,123, and an increase of 30 per cent over the May, 1949, total of 63,692.

Claims filed declined in all provinces from the April level except in Manitoba, where an increase of 4,331 claims, or 84 per cent, was recorded.

Of the total claims filed in May, 71,619 were initial and renewal claims, representing mainly new cases of unemployment among insured persons. This was a decrease of about 11 per cent from the figure of 80,028 for April, 1950, but an increase of 36 per cent from the May, 1949 total of 52,675.

Ordinary claimants on the live unemployment register numbered 146,453 in May, 1950, as compared with 209,905 in April, 1950, and 95,832 in May, 1949. Male claimants declined from 161,763 to 100,106, and female claimants from 48,142 to 46,347. The greater decrease in the number of males on the live register on May 31 was related to the comparatively greater expansion in the spring of the year of industries such as the construction industry which employ a high proportion of males, than in industries such as retail merchandising, which employ a high proportion of females.

Duration of unemployment is indicated by the number of days that benefit claimants are continuously on the unemployment register. During May, 1950, 136,909 persons were on the live register

seven or more days, as compared with 191,486 in April. In each case the percentage was 83. Thus, although the number of persons claiming benefit declined, the proportion of claimants becoming beneficiaries was the same.

Claims handled at adjudicating centres and Courts of Referees in May, 1950, totalled 87,145. Of the 85,821 claims adjudicated, 63,964 were allowed, 21,165 were disallowed or disqualified and 692 represented special requests not granted.

Chief reasons for non-entitlement to benefit were: "Insufficient contributions while in insurable employment" 9,789 cases; "voluntarily leaving without just cause" 4,003 cases; and "not unemployed" 2,572 cases.

Persons commencing benefit on initial and renewal claims in May numbered 56,868, as compared with 59,965 in April, 1950. Prince Edward Island, Ontario, Quebec and British Columbia all showed a decline; slight increases were recorded in Newfoundland, Nova Scotia and New Brunswick, and a considerable increase—36 per cent—in Manitoba.

During May, \$9,586,658 were paid in respect of 4,004,678 days as against \$11,353,182 and 4,670,731 days in April, 1950, and \$5,511,135 and 2,474,080 days in May, 1949.

For the week of May 27 to June 2, 1950, 132,656 persons received \$1,823,090 benefit in respect of 773,726 days, as compared with 186,093 persons, 1,105,293 days and \$2,674,615 for the week of April 29 to May 5. Average duration and average amount of benefit for the week of May 27 to June 2, were 5.8 days and \$13.74 respectively, as compared with 5.9 days and \$14.37 respectively for the week ending April 29 to May 5.

* See Tables E-1 to E-8.

HOURS AND WORKING CONDITIONS IN THE IRON AND ITS PRODUCTS INDUSTRY, OCTOBER 1949*

Over three-quarters of the plant workers in the Iron and Its Products Industry were on a five-day week, most of whom were normally working 40 or 45 hours. Time and one-half was the common overtime rate; double time was predominant for work on statutory holidays. One week's vacation with pay after a year or less of employment was given in most plants, with many giving a second week after five years and a third week after twenty or twenty-five years. Three-quarters of the workers were paid for six to eight statutory holidays. Sick leave with pay was reported by establishments employing forty-two per cent of the workers in the industry. Eighty-two per cent of the workers were reported covered by written collective agreement.

Hours and working conditions in the Iron and Its Products Industry showed some changes during the two years preceding October, 1949. Since 1947,¹ the normal hours and days worked per week have decreased slightly and the overtime rates of pay for work on statutory holidays have increased. Vacations with pay over the general one week after a year of employment have increased, and establishments have tended towards paying for more of the observed statutory holidays. A slightly higher proportion of the workers were reported to be covered by written collective agreement than two years previous.

A study of the trend in hours and working conditions from 1947 must be qualified by the inclusion, in 1949, of six additional industries manufacturing Iron and Steel Products or Metal Transportation Equipment.² There are many variations in conditions of work between industries, but the overall information in these articles is sufficiently comparable to indicate the broad trends in the Iron and Its Products Industry.

The geographical and major industrial distributions of the 959 establishments and 183,952 plant workers included in this analysis of the Iron and Its Products Industry are shown in Tables Ia and Ib. Over two-thirds of the workers were employed in the 566 plants located in Ontario, about one-fifth were in the 168 Quebec plants, and the remainder almost equally divided between the Maritime and Western Provinces.

Less than five per cent of the plant workers in the industry were women.

Collective Agreements.—Written collective agreements were reported by 515 of the 959 establishments surveyed, covering 82 per cent of the plant workers. The largest group of workers were represented by CIO-CCL international unions, the major ones being the International Union United Automobile, Aircraft and Agricultural Implement Workers of America and the United Steelworkers of America. Thirty-eight of the establishments reported having agreements with employees' associations representing about 5,000 workers.

* Information in this article was prepared from data obtained in the annual survey of wage rates and working conditions for 1949 by the Economics and Research Branch of the Department of Labour. Employers were asked to report on certain conditions of work as well as to give, by occupation, the wage or salary rates of time workers and the straight time earnings of employees on piece work during the last pay period preceding October 1, 1949.

For a summary of provincial legislation on working conditions, see *Provincial Labour Standards Concerning Child Labour, Holidays, Hours of Work, Minimum Wages, Weekly Rest-Day and Workmen's Compensation*, an annual publication of the Department of Labour.

¹ See the July, August, September and October, 1948 issues of the LABOUR GAZETTE.

² The additional industries included in this article are Fabricated and Structural Steel; Hardware and Tools; Machine Tools; Wire and Wire Products. Railroad and Rolling Stock Equipment; and Bicycles and Parts. The industries included in the article for 1947 were Crude, Rolled and Forged Products; Foundry and Machine Shop Products; Sheet Metal Products; Machinery; Engines, Boilers and Tanks; Aircraft and Parts; Steel Shipbuilding; Agricultural Machinery; and Motor Vehicles; Motor Vehicle Parts and Accessories; and Heating and Cooking Apparatus.

IN THE IRON AND ITS PRODUCTS INDUSTRY . . .

. . . wage rates increased 6.3 per cent (preliminary) in 1949, 113.1 per cent above comparable rates in 1939.

More than three-quarters of the plant workers were on a five-day week, and most were normally working 40, 44 or 45 hours.

PERCENTAGE DISTRIBUTION . . .

Initial vacations were predominantly one week after one year, with maximum vacations generally two or three weeks.

MAXIMUM VACATION

2 weeks or equivalent

Maximum same as initial vacation

4 weeks

3 weeks or equivalent

Most workers were in plants observing six to nine statutory holidays and paying for six or eight of them.

PAID STATUTORY HOLIDAYS

In some cases, more than one union held agreements with a single establishment.

The Normal Work Week (Tables IIa and IIb).—All but two per cent of the male plant employees were normally working from 40 to 48 hours per week. About the same proportions of male plant employees, 27 per cent, were working 40 and 45 hours per week, and 22 per cent were on a normal work week of 44 hours. Nine per cent of the male workers were on a 48-hour week. These proportions remain approximately the same when the 8,484 female plant workers are included, the only change being to increase the proportion of workers on a 45-hour week to 28 per cent. This information shows some lessening of the normal weekly hours of work from 1947, when 27 per cent of the plant employees were working 48 hours per week and only 17 per cent were working 40 hours.

The normal work week for male plant employees was predominantly 44 hours in the Maritime and Prairie Provinces and 40 hours in British Columbia. In Quebec and Ontario the hours varied considerably, with the majority working 42½ or 45 in Quebec and 40, 44 or 45 in Ontario. The normal weekly hours varied greatly both within and between the industrial groups shown in Table IIb.

Seventy-six per cent of the total plant workers were reported on a five-day week. The majority of workers were on this schedule in all regions except the Maritimes and the Prairies, where just over one per cent and 45 per cent respectively were working five days per week. Two years previous, in 1947, about 60 per cent of the workers had been reported on a five-day week.

Overtime Rates of Pay (Tables IIIa and IIIb).—Time and one-half was the general overtime rate for work after standard daily or weekly hours. Work on Sunday was mainly compensated by a rate of time and one-half, although 30 per cent of the workers were in establishments paying double time for work on this day.

More than one-half of the workers in the Iron and Its Products Industry were in plants which reported paying double time for work on observed statutory holidays. Almost equal proportions of workers, 18 per cent, were in the establishments paying time and one-half and in those paying double time and one-half. A small number were in plants paying triple time. In 1947, only three establishments reported rates higher than double time for work on observed statutory holidays.

Vacations with Pay (Tables IVa and IVb).—Most of the plant employees received an initial vacation of one week with pay, or its equivalent, generally after a year of employment. A few workers, however, were in establishments giving an initial vacation of two weeks with pay or four per cent of earnings.

The length of vacation with pay increased for 86 per cent of the workers as their period of employment continued. A maximum allowance of two weeks with pay or four per cent of earnings, usually after five years, was reported by 437 establishments employing almost 95,700 workers; while a maximum vacation of three weeks or six per cent of earnings, generally after 20 or 25 years, was reported by 113 plants employing about 58,500 workers. Most of the workers receiving this maximum vacation of three weeks were in establishments which gave an intermediate vacation of two weeks, mainly after five years of employment.

A plant shut-down for summer vacation was reported by 592 establishments employing 131,715 workers. Seventy per cent of these workers were in plants reporting a shut-down of two weeks, 29 per cent were in plants shutting down for one week, and the remainder were in plants which did not report the length of the shut-down.

Statutory Holidays (Tables Va and Vb).—At least two statutory holidays were reported observed by all but four of the 959 establishments included in this analysis of the Iron and Its Products Industry. Observed statutory holidays here include the number of days when the plant is not operating by reason of Dominion, Provincial or Municipal holidays, or because of religious holidays regularly observed. Ninety per cent of the plants, employing 96 per cent of the workers, reported observing from six to nine statutory holidays. Sixty-one per cent of the workers were in plants observing eight holidays and 18 per cent were in those observing seven.

The 663 plants which reported paying for some or all of the observed statutory holidays if not worked employed 90 per cent of the workers. Thirty-seven per cent of the workers were in plants paying for eight statutory holidays and 32 per cent were in plants paying for six. In British Columbia, about one-half of the workers were in plants which did not pay for any of the observed holidays.

This information shows a substantial increase in the number of employees being paid for statutory holidays since 1947, when 70 per cent of the plant workers

were in establishments paying for one or more of the statutory holidays observed. The number of observed days paid for if not worked has also increased: the proportion of workers being paid for six, seven or eight statutory holidays if not worked rose from 27 per cent in 1947 to 75 per cent in 1949.

Sick Leave with Pay.—Sick leave with pay was reported by 299 establishments employing about 42 per cent of the workers in the Iron and Its Products Industry. There was much variation in the sick leave conditions, but most of the schemes were operated through group insurance or a sick benefit fund.

(1) Some establishments pay time and one-half for the first three or four hours of overtime and pay double time thereafter. This policy was reported for overtime after daily hours on Monday through Friday by 47 establishments, employing 7,389 plant workers, and after daily hours on Saturday by 54 establishments, employing 8,585 workers. Most of these establishments were located in British Columbia.

(2) Nineteen establishments, employing 5,504 plant workers, reported paying time and one-half for work on the statutory holidays not paid for if not worked. Most of these establishments were in Ontario.

(3) One establishment paid for four and eight statutory holidays after two and five years of employment.

(4) One establishment paid for 5 1/2 statutory holidays.

An analysis of the current employment situation prepared by the Economics and Research Branch, Department of Labour, on the basis of returns from the National Employment Service, reports from the Dominion Bureau of Statistics, and other official information.

EMPLOYMENT CONDITIONS DURING JUNE, 1950

Employment continued to expand during June as the tempo of outdoor work picked up. Out of a labour force estimated at nearly 5,200,000, 205,000 persons remained registered for work with the National Employment Service at the month's end. Farm and construction work took on large numbers of workers during the month but, in addition, logging was unusually active. Secondary and tertiary industries also benefited from this increased activity in the basic industries and were adding to their staffs.

Employment conditions improved during June due to continued expansion in outdoor work as well as to a strengthening in export market conditions. The number of unemployed decreased rapidly during the month. Among those registered for work with the National Employment Service, there was a drop of 35,000, from 240,000 to 205,000. In spite of this labour surplus, a large part of which was due to workers moving from job to job, shortages of workers began to appear in the construction and agriculture industries.

The upturn in the American economy this year has had important effects in Canada. In particular, the American market for lumber, pulp and paper and mineral products has been strong. In the first five months of 1950, exports to the United States were 26 per cent above the 1949 in value. Although this increase has been offset in part by reduced sales in the United Kingdom market, total exports are holding up well. In addition, the heavy construction program and high level of domestic purchasing power are important factors in maintaining employment, in such consumer industries as food, automobiles and parts and electrical apparatus.

Despite the seasonal improvement and the generally favourable export market conditions, there remained a substantial number of persons on the labour market in June who were either seeking work or only partially employed. Unskilled workers formed a large part of this group, both among men and women workers. Among the skilled and semi-skilled occupations in the textile and iron and steel industries, in which lay-offs and short-time work were prominent last winter, job openings were still scarce. Considerable numbers of white collar workers,

including general office workers, bookkeepers, stenographers and salesmen, also remained unemployed. In construction work, some skilled tradesmen had not found work by June and the surplus of unskilled labour was greater than last year.

Industrial Analysis

Total employment in the *manufacturing* industries during the first half of 1950 was running slightly below the level of the same period in 1949. The Dominion Bureau of Statistics index of manufacturing employment at May 1 was 119.5 (June 1, 1941 = 100) as against 121.0 at May 1, 1949. Short-time work, and periodic lay-offs which have been more evident this year, do not always show up in these indexes, however.

Employment gains have been recorded in such industries as food products, automobiles and parts, chemicals, electrical apparatus, and non-metallic mineral products. The high level of production in most of these industries is based on strong domestic markets. The more important of these employment increases have been shown on the accompanying chart.

Losses in employment have been particularly heavy in some sections of the iron and steel industries. Reported employment in this section of the manufacturing group has shown a drop of nearly 20,000 in the past twelve months. The only industry in this group in which employment has increased is automobiles and parts. Production in the three basic iron and steel producers has been maintained at capacity. In the other groups, particularly industries producing agricultural implements, shipbuilding and machinery, fairly substantial declines in employment have occurred.

REGIONAL EMPLOYMENT TRENDS

(1941 = 100)

Table I—Indexes of Employment in the Manufacturing Industries at May 1, 1949 and 1950
(Base: June 1, 1941=100)

Industry	May 1, 1950	May 1, 1949	Per cent change
Edible animal	126·1	124·9	+1·0
Edible plant	130·8	125·9	+3·9
Leather	105·0	109·8	-4·4
Lumber	118·4	116·9	+1·3
Pulp and Paper	139·2	138·0	+0·9
Rubber	124·9	124·0	+0·7
Textiles	117·5	117·9	-0·3
Chemicals	99·6	97·8	+1·8
Electrical apparatus	172·5	167·1	+3·2
Iron and steel—			
Crude, rolled, forged	131·8	143·2	-8·0
Machinery	107·4	116·3	-7·7
Agricultural implements	189·6	207·3	-8·5
Automobiles and parts ¹	123·0	118·9	+3·4
Shipbuilding	75·1	79·9	-6·0

¹Estimate

Shortage of experienced men was a limiting factor in production in the **logging** industry in both Eastern Canada and on the West Coast during June. More summer cutting is being done in the East this year, as demand for lumber and newsprint remains strong and inventories are short, but qualified men available for work are scarce. River driving was being completed by the end of June and labour requirements were chiefly for cutters, peelers and sawmill hands. The following table shows the trend of employment amongst member companies of the Canadian Pulp and Paper Association.

Date	1950	1949
June 3	19,729	19,781
June 10	19,922	18,751
June 17	20,408	17,604
June 24	20,473	16,845
July 1	20,609	15,730

These data show that logging employment expanded steadily during the month of June. This was in contrast to the downward movement of employment which took place in June, 1949. The figures given cover only part of the industry, those loggers employed by member companies of the Association, but it seems likely that employment in the industry as a whole would follow the same trend, as jobbers in all logging areas were seeking men during the month. Labour turnover was reported as high during June, partly because of workers leaving for jobs in other industries and also because of the fly season and hot weather.

Some 32,000 workers in the Pacific area will benefit from a new collective agreement reached during June after the union, the International Woodworkers of America, had threatened strike action. The settlement

calls for a 12½ cent an hour increase across-the-board and a 40 hour five-day week. Other clauses include maintenance of membership and time and a half for Saturday and Sunday work. The basic wage in the industry will now be \$120½ per hour.

Although the supply of year-round labour for **farming** has been better this year, farm help during June was in short supply in some areas. Employment opportunities in other industries, particularly logging and construction, have drawn off a large number of workers who might have taken farm jobs, particularly since the wages paid in agriculture are generally lower. Monthly wages offered in most regions were in the \$75 to \$100 per month range plus board, which, in combination with the long hours, have failed to attract many workers.

There was a drop in the demand for help after the completion of seeding about the middle of June. This was particularly noticeable in the Prairies, where labour requirements for crops other than grain are light. Late in the month, such crops as berry-picking in British Columbia and haying in Eastern Canada, required large numbers of men.

There were two particular areas of labour shortage during June which were supplemented by large numbers of outside workers. In Ontario, the annual organized movement of harvesters from the Prairies and the Maritimes was under way, although some difficulty was being experienced in securing the 1,000 or more men needed. In the Prairies, the number of persons willing to make the trip was small, as wages in local farm work were higher than the minimum offered in Ontario. A satisfactory number of workers were obtained in the Maritimes, however.

In British Columbia, berry pickers were required for the lower mainland crop. These requirements were met by movements of workers, mainly women, within the province.

Additions to the farm labour force through immigration have been fewer this year than in 1949. The total number of immigrants of the farming class admitted in the first five months was 6,600, as against 8,600 in the comparable period last year. In part, this is due to the fact that fewer D.P.'s have been requested by farmers, to be brought in by the Department of Labour. Requirements, for beet work have been substantial however, with nearly 700 persons brought in for this work in the first five months of 1950.

Qualified tradesmen were being rapidly absorbed in the **construction** industry during June and labour shortages were developing among the skilled trades. Among unskilled labour, however, there was a greater surplus than at the same time in 1949.

The most recent employment data issued by the Dominion Bureau of Statistics, which are for May 1, show that reported employment in the industry was fractionally below that of last year. Expansion in employment in the building trades has been offset by declines in the two other major sectors, railway and highway construction.

Index of Construction Employment¹
(June 1, 1941=100)

	May 1, 1950	May 1, 1949
All construction and maintenance	112.7	113.7
Building	157.2	150.5
Highway	88.9	95.3
Railway	78.1	82.6

¹In establishments employing 15 persons or more.

Further expansion in highway construction during the season is indicated by a heavy increase in the value of contracts awarded for engineering work, which consists predominantly of road work. The six-month total in 1950 was \$101 millions, as against \$79 millions last year. Building construction is also above 1949 levels in the residential, industrial and business fields.

The labour market in the **mining** industry was highlighted by two local employment problems during June. The first was the movement of unemployed iron ore miners from Newfoundland to Northern Ontario and Manitoba hard rock mines. About 125 men were involved in the shifts. Most of them were young men, in their middle twen-

ties and thirties, from Portugal Cove and Bell Island, who plan to settle permanently in their new location.

In Alberta, suspension of mining at the Mountain Park Coal Co. mine at Cadomin was announced during June. It was estimated that about 130 men were affected, some of whom would be absorbed at Luscar or in new mines at Forestburg. In the same area during June, a fire at Brazeau Collieries at Nordegg threw a reported 450 men out of work and five men were lost in the workings of the Cadomin Coal Co. after a flood.

Activity in the western petroleum industry was picking up during June. Alberta, next to Texas, is the most active exploration area in the world. Some 3,000 persons are working with geological surface crews and geophysical parties; another 3,800 are operating drilling rigs; and some 2,000 are required to control existing wells and pipelines. In addition, about 1,250 men are being employed for a period of about 120 days, on the construction of the new pipeline to Superior.

Regional Analysis

Employment conditions in the *Atlantic* region continued to improve during June. The number of live applications on file with National Employment Service offices in the region declined to 40,600 at June 29, 22 per cent below the figure at June 1. Of the current total, over 16,900 were registered in Newfoundland, where the decline during June was 14 per cent.

Major factors in the improving situation during June were the continuing increase in construction, and especially building activity, principally in the three Maritime Provinces; the maintenance of strong domestic demand for lumber, and U.S. demand for both lumber and newsprint; and an upswing in fishing activity in Newfoundland, despite earlier inactivity that threatened the future of the 1950 fishery. In addition, seasonal manufacturing was generally reaching high levels of employment, the tourist trade began to pick up during the month, and there was greater activity and a brighter outlook in some shipyards. Shortages of construction skills appeared in more areas of the region, and experienced woods workers became increasingly difficult to find in several parts of New Brunswick.

In Newfoundland, a cod fishery perhaps equal to last year's is now predicted for the east and northeast shores and, at the end of June, preparation of about 30 schooners was being rushed to take advantage of the balance of the Labrador fishing season. The Fisheries Prices Support Board decision to buy balances of 1949 cod held by fishermen

may encourage still greater fishing activity, especially in conjunction with recently-announced federal government marketing arrangements for the 1950 catch, but these steps were made public too late to affect the June employment picture.

Under the influence of seasonally expanding activity, concentrated largely in construction, forestry and wood products, transportation and agriculture, employment in the *Quebec* region increased rapidly during the month of June. There was a 22 per cent reduction in the number of registrants on the rolls of National Employment Service offices throughout the region. At June 29, total registrations stood at 62,500, almost 18,000 less than at June 1.

Unusually strong demand for woods workers, originating not only locally but in Ontario and Maine as well, appeared in many areas of the region. Shortages of construction skills beset an increasing number of areas and were foreseen in others. Summer vacations brought temporary shutdowns to a variety of manufacturing industries, in many of which conditions were unsettled, with hirings and layoffs roughly offsetting one another, as in textiles and clothing. The leather and rubber industries remained largely on short time; but in many others, activity and employment maintained generally high levels or showed improvement over spring slackness.

More numerous job opportunities for men were accompanied in the Montreal area by a deteriorating employment situation for women. This condition was brought about by continued expansion in construction activity; an improvement in the heavy iron and steel industries, including shipbuilding and foundries; intense market gardening activity, estimated to have employed 2,000 farmers and 10,000 labourers during June; hirings in primary textiles; and fairly strong Ontario and Maine demand for bush workers. On the other hand, reduced production in secondary textiles and leather products continued, retail trade was only slightly improved, and resorts were not hiring female help in the usual numbers.

In the *Ontario* region, continued expansion in agriculture, mining, lumber and pulpwood cutting, construction and many branches of manufacturing brought further increases in employment during June. Particularly strong among manufacturing industries were demands for labour from sawmills, automobile and auto parts firms, producers of heavy transportation equipment and rubber products. Short time continued on the other hand, in many foundries; while agricultural implements workers were laid off or put on short time, and short time and layoffs appear to have outweighed hirings

by textiles and clothing manufacturers. Some industries were planning to extend vacation shutdowns in the hope of avoiding short time or layoffs.

Increased demand for farm help appeared during the month, with a scarcity of experienced workers. The arrival of year-round farm help from Newfoundland and excursion harvesters from the Maritimes and the Prairies, relieved the demand to some extent. The larger packinghouses felt a slackening in livestock deliveries, and refrained from replacing normal separations, but smaller establishments continued active.

As a result of the net increase in employment opportunities arising from these conditions and from less marked or less general developments in other industries, registrations with National Employment Service offices in the region declined 12 per cent during June. The total number registered at June 29 was 48,200, about 6,800 less than at June 1. This is, however, considerably reduced from the May decline of 27,500, or 33 per cent.

The highest percentage decline in registrations with the National Employment Service during June (28 per cent) occurred in the *Prairie* region, where live job applications dropped from 39,300 at June 1 to 28,300 at June 29. This is the only region in which the proportionate improvement, as indicated by Employment Service data, was greater during June than in May.

Increased activity in the primary industries and in construction was responsible for most of the improvement in employment conditions in the Prairies during June. Crop prospects are good in Manitoba and improved during June in many parts of Saskatchewan and Alberta; but most demand for farm help has been satisfied until harvest time. The Manitoba harvest is expected to be unusually late this year, due to late seeding and prolonged cold weather, and the risk of frost damage is thus heightened. Due largely to shortages of woods workers and greatly increased cutting programs, it appears that some pulp cutting operators, especially in the Lakehead area, may fail to meet summer quotas, and that winter cutting programs may have to be enlarged. Response to recruiting for the Ontario harvest excursion has been light. The expansion of construction activity and employment, while nearing record levels in some areas, was slower than had been anticipated, due not to any scarcity of projects but to unfavourable weather, shortages of building materials and the effect of rising lumber prices in home building in particular. However, there was no significant surplus of construction workers, with spotty shortages of skills at some points.

Metallic mining in the region registered a steady demand for experienced miners, and coal mining operations in Alberta showed some improvement. Exploration for oil increased in both Saskatchewan and Alberta, where petroleum output expanded. Packing-house and flour mills were seasonally quiet during the month, clothing manufacture was picking up, and sawmills and woodworking plants were generally very active.

In the Lakehead area, excessive moisture hampered some pulp cutting operations during June, but also virtually eliminated the forest fire hazard. Drives in the Fort William district were moving toward completion during the month, and there was little other activity in the woods; but in Port Arthur, over 3,000 woods workers were employed on cutting, road and camp construction. The outlook for both areas is excellent, with Port Arthur operators planning to cut 50 per cent more than last year's one million cords, and to employ about 10,000, an increase of 2,500 over 1949. Mining activity in the area was generally steady. Wood products manufacturing was below 1949 levels in Fort William, where the situation is expected to deteriorate further. Pulp and paper mills were fully active with seasonally increased staffs. Kenora and Port Arthur reported building at levels well below the comparable period of 1949. Slack grain deliveries required less staff at elevators during June.

Livestock losses in the flooded sections of the Winnipeg area are estimated to have totalled between \$200,000 and \$400,000; and seeding continued until the end of June. Crop prospects are promising. The local fishery opened about two weeks later than usual, but there will be little demand for processing workers until the boats return. Woods workers have been moving in fair numbers to the Lakehead. Most manufacturing is now returning to normal operations, with employees gradually being recalled and general prospects for increased labour demand in the near future. Construction activity increased noticeably during the month, and shortages of construction manpower are foreseen shortly.

As measured by National Employment Service statistics, the *Pacific* region employment situation showed less improvement during June than that of any other region. Registrations with the Employment Service declined 3,200 to a month-end total of 25,058. This represents a drop of 11 per cent, as compared to the May decline in that region of 33 per cent, and indicates that peak activity is nearer in the Pacific than elsewhere in Canada.

During June, employment and economic conditions in the Pacific region faced two

major threats, neither of which ultimately materialized. The first was the possibility of strike action by coastal loggers over wages and hours of work, which occasioned a state of uncertainty and restlessness among woods workers and the community generally. Agreement was reached, and activity increased in the woods and in sawmills during the latter part of the month, with strong demand for increasingly scarce skilled workers. Shingle mills continued active, although a further increase in log prices was foreseen. The second threat was the prospect of floods, particularly in the Fraser valley. High waters have subsided, and this danger is now past.

The peak of activity in agriculture drew near during June, with berry picking getting under way, some haying begun and considerable employment in orchards, dairying and market gardening.

The end of a very successful halibut fishery—a record season both in quantities caught and prices obtained—saw preparations under way for the northern salmon fishery, which should soon provide considerably increased employment opportunities in processing. Coal production was considerably below 1949 levels, but base metal mining continued active and increased its demand for skilled miners, few of whom are available. Gold mining, both quartz and placer, was fully active during the period, and there was considerable activity in oil exploration. There was a slight increase in manufacturing employment, with demand exceeding supply in many skills, particularly among metalworkers and woodworkers.

In the construction industry, activity and employment in most areas of the region reached peak proportions, although there remained scattered pockets of unemployed construction workers at interior points. The increasing cost and scarcity of lumber caused a number of building projects to be delayed and others to be cancelled. There was little activity during June in steel shipbuilding, although wooden shipyards remained quite busy. Job opportunities were numerous for truck drivers, railway extra gang workers and seamen as transportation generally expanded. Wholesale and retail trade showed marked improvement during the month, but the volume of tourist trade was below expectations.

Employment Service Activities

The gradual extension of unemployment insurance to more and more Canadian workers has been one of the most significant events in the employment field during the past few years. The latest increase in coverage, which came into effect July 3, brought about 90,000 more workers under

the scope of the Unemployment Insurance Act. These were salaried workers earning from \$3,120 to \$4,800 a year, and were in addition to the approximate 40,000 workers in Eastern Canadian logging who become insured at April 1.

Almost 80 per cent of all wage and salaried workers are now protected by unemployment insurance. The most notable exceptions are farm workers, fishermen, employees in hospitals, domestic servants, teachers, various groups of government employees, and persons such as part-time workers, workers in certain seasonal industries and similar groups exempted under special orders.

PERCENT OF WAGE AND SALARIED WORKERS COVERED BY UNEMPLOYMENT INSURANCE

Except in the case of agriculture and fishing, workers in industries still not covered have not been subject to much unemployment in the postwar years. In agriculture, unemployment has largely been among seasonal workers and some degree of protection is afforded these workers by their off-season employment in insured industries such as construction and logging. Fishermen also in some cases are employed in insurable employment during part of the year.

The provision of supplementary unemployment insurance benefits will extend the payment of benefits during the winter months for many workers who have not sufficient contributions to cover them during the full period of their seasonal unemployment. This added protection fits the opera-

tion of the unemployment insurance scheme more closely to the peculiarities of the Canadian economy.

The large increase in benefit rates will not take place until July 1, 1951. At that time, the maximum benefits paid will be raised to \$21.00 and \$16.20, the higher rate being for workers with dependents. The present maximum benefit rates (about 70 per cent of insured workers fall into this class) are \$14.40 and \$18.30.

At this time of year, emphasis is shifting away from the unemployment insurance operations to the activities of the Employment Service. Employers are looking increasingly to the Employment Service to obtain suitable workers. Throughout June and continuing into July, there were more jobs available for men than there were at the same time in 1949. The increase in demand took place in all regions. The rise was not confined to any particular occupation but was fairly general among the unskilled occupations, in logging and the metalworking trades.

As a result, placement operations had reached a new postwar high for the time of year. During June, some 75,000 placements were effected by the 200 employment offices throughout Canada.

The number of applicants dropped sharply and by early July were nearing last year's level in the Ontario, Prairie and Pacific regions; in these regions, the increase over the year was almost entirely among women. It is significant that the overall decline in applicants in Canada was large during June and early July despite the registration of high school students at this time.

In contrast to the general buoyancy, the situation for women workers shows little improvement. There is about one female applicant to two male as against the ratio of one to three in the labour force as a whole. While this unemployment is not serious, since the majority of applicants are married and not usually dependent on employment for livelihood, it does indicate a sluggish development in the labour market. Industrial openings for women are particularly scarce. Skilled and semi-skilled female applicants have increased by over 100 per cent during the year; the rise has been particularly large in the textile trades. There are also many more women registered in the clerical, sales and service occupations. The increase in the labour supply has enabled employers to be much more selective in their hiring and because of the qualifications regarding age, experience and marital status many of the applicants are very difficult to place.

PRICES AND THE COST OF LIVING*

Cost of Living

The Dominion Bureau of Statistics cost-of-living index advanced a further 2.1 points between June 1 and July 3 to reach a new high of 167.5. This compares with an index level of 162.1 a year ago, 156.9 at July, 1948, and 135.9 at July, 1947. As has been the case for some months, higher food prices accounted for most of the latest increase, although rents were also a contributing factor. The food index rose sharply from 209.0 to 214.3, largely as a result of increases in meat, eggs, and potatoes. A considerable proportion of the price rise in these items was seasonal, particularly in the case of eggs which advanced 10.4 cents per dozen, and potatoes which rose 8.6 cents per 10 pounds. Average cent per pound advances in meats were 2.9 for beef, 6.0 for lamb, 1.0 for pork, and 1.2 for veal. The rent index moved from 132.7 to 134.9 reflecting the results of a June rent survey. Fuel and light rose 0.6 points to 137.7 following slight increases for coal and coke in some centres. The index of miscellaneous items strengthened 0.1 points to 132.5, the most notable advance in this group being gasoline prices in British Columbia. The indexes of clothing and homefurnishings and services remained unchanged at 180.7 and 166.9 respectively. Slight increases and decreases within these two groups counterbalanced each other.

From August, 1939, to July, 1950, the increase in the cost-of-living index was 66.2 per cent.

Cost of Living in Eight Cities

Sharp advances in food prices, mostly meats, were responsible for increases in the cost-of-living indexes for the eight regional centres during May. Other main groups moved narrowly except in Saint John where the imposition of a 4 per cent provincial sales tax was reflected in higher indexes for clothing and home furnishings and services. The rental indexes continued unchanged—the results of the June survey are to be incorporated in the July indexes.

Composite city index increases between May 1 and June 1, 1950 were as follows: Montreal 2.8 to 169.0; Saint John 2.4 to 161.8; Toronto 1.5 to 162.1; Halifax 0.9 to

156.4; Edmonton 0.9 to 161.3; Winnipeg 0.8 to 160.1; Vancouver 0.8 to 167.0 and Saskatoon 0.3 to 165.0. During the same period the Dominion index moved up 1.4 to 164.1.

Wholesale Prices, May, 1950

The general index of wholesale prices rose 1.7 points to 161.8 between April and May, 1950. All groups, except Non-metallic Minerals, recorded advances in this period. The most substantial increase was for Non-ferrous Metals which rose 6.7 points to 144.1. Wood Products rose 2.2 points to 194.7, followed closely by Vegetable Products and Textile Products with equal increases of 2.1 points to 148.5 and 164.5 respectively. Iron Products rose 1.2 points to 181.2. The remaining groups recorded only fractional changes, Chemical Products advancing 0.3 point to 117.5 and Animal Products 0.1 point to 166.9. Non-metallic Minerals receded 0.1 point to 140.1.

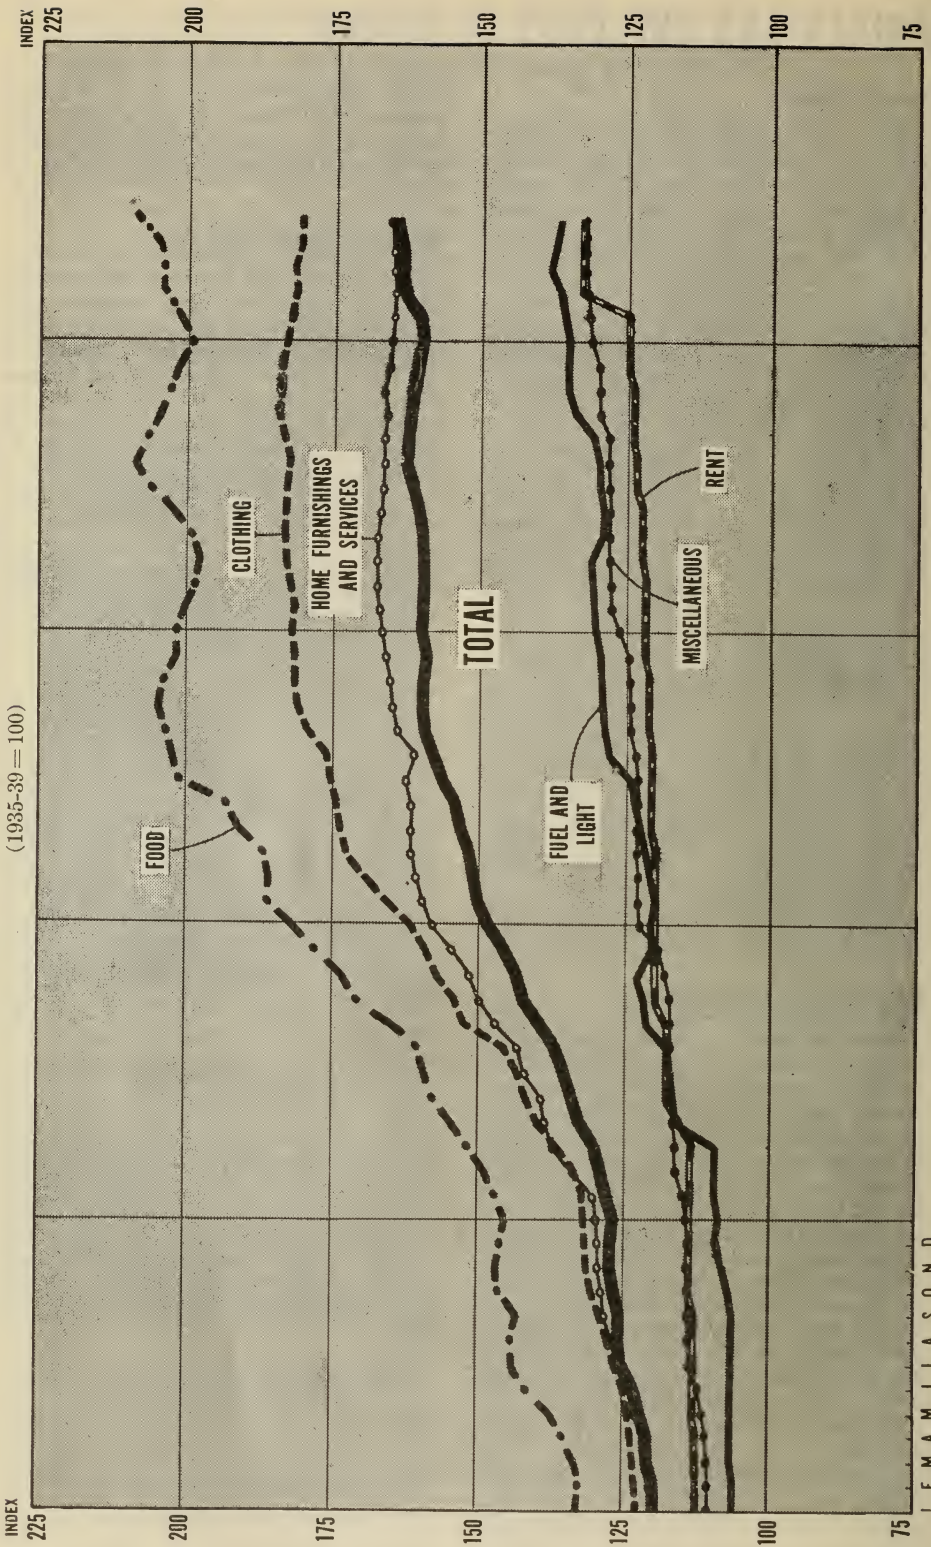

Among important commodities to record increases between April and May were the following: lemons 31.6 per cent, raw rubber 20.2 per cent, steel scrap 15.0 per cent, cocoa beans (African) 13.5 per cent, electrolytic zinc 11.6 per cent, worsted suiting 10.8 per cent, cedar shingles 10.8 per cent, bran 10.5 per cent, zinc sheet 10.3 per cent, pig lead 10.1 per cent. Declines were registered by the following commodities: shellac 22.6 per cent, lard 15.6 per cent, magnesium sulphate 14.1 per cent, butter 9.5 per cent, corn, Ontario yellow 8.0 per cent, nylon hosiery 5.3 per cent, tallow 5.2 per cent, raw sugar (BWI at Montreal) 4.7 per cent, cocoanut oil 4.5 per cent, coal, U.S. anthracite 4.2 per cent.

The wholesale price index of Canadian farm products rose 1.7 points to 150.1 between April and May. Animal Products rose 3.5 points to 190.9, reflecting gains in livestock, hides and skins, fresh milk and raw wool. Small increases in Field Products, with the exception of tobacco leaf, moved that index up 0.7 point to 125.8.

STRIKES AND LOCKOUTS*

Canada, June, 1950

Fewer workers were involved in work stoppages than in May but there were slight increases in the number of new strikes and in the time loss. Strike idleness in June, 1949, amounted to 141,000 days as compared with 30,000 days in June, 1950.

More than one-third of the time loss during the month was caused by a strike of plumbing supplies factory workers at two establishments in London, Ont. Other work stoppages causing the largest amount of time loss were: cotton and rayon underwear factory workers at Sherbrooke, P.Q., hardware factory workers at Peterborough, Ont., and hotel employees at Cornwall, Ont. There were two small strikes in the construction industry, one of bricklayers, masons and plasterers at Saint John, N.B., and one of painters and decorators at Regina, Sask.

Preliminary figures for June, 1950, show 27 strikes and lockouts in existence, involving 2,781 workers, with a time loss of 30,152 man-working days, as compared with 23 strikes and lockouts in May, 1950, with 3,488 workers involved and a loss of 23,874 days. In June, 1949, there were 28 strikes and lockouts, involving 11,511 workers, and a loss of 141,197 days.

For the first six months of this year there were 73 strikes and lockouts, with 16,259 workers involved and a time loss of 159,572 man-working days. For the similar period

last year there were 66 strikes and lockouts, involving 20,898 workers, and a loss of 671,732 days.

Based on the number of non-agricultural wage and salary workers in Canada, the time lost in June, 1950, was 0.04 per cent of the estimated working time; 0.03 per cent in May, 1950; 0.17 per cent in June, 1949; 0.03 per cent for the first six months of 1950; and 0.13 per cent for the first six months of 1949.

Of the 27 strikes and lockouts in existence during June, 1950, four were settled in favour of the workers, one in favour of the employer, three were compromise settlements and four were indefinite in result, work being resumed pending final settlement. At the end of the month 15 strikes and lockouts were recorded as un-terminated.

The record does not include minor strikes such as are defined in another paragraph nor does it include strikes and lockouts about which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Strikes of this nature which are still in progress are: composers, etc., at Winnipeg, Man., which commenced on November 8, 1945, and at Ottawa and Hamilton, Ont., and Edmonton, Alta., on May 30, 1946; and textile products factory workers at St. Lambert, P.Q., August 29, 1949.

Great Britain and other Countries

The latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month. Statistics given in the annual review issued as a supplement to the *LABOUR GAZETTE* for April, 1950, and in this article are taken, as far as possible, from the government publications of the countries concerned.

Great Britain and Northern Ireland

The British *Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones.

The number of work stoppages beginning in April, 1950, was 115 and 15 were still in progress from the previous month, making a total of 130 during the month. In all stoppages of work in progress in the

period there were 34,700 workers involved and a time loss of 159,000 working days was caused.

Of the 115 disputes leading to stoppages of work which began in April, five, directly involving 2,200 workers, arose out of demands for advances in wages, and 36, directly involving 2,500 workers, on other wage questions; four, directly involving 100 workers, on questions as to working hours; 21, directly involving 3,500 workers, on questions respecting the employment of particular classes or persons; and 48, directly involving 6,900 workers, on other questions respecting working arrangements. One stoppage, directly involving 14,400 workers, arose out of the action of a trade union in expelling certain members.

* See Tables G-1 and G-2.

Final figures for 1949 show 1,426 work stoppages beginning in the year. There were 434,000 workers involved in all stoppages in progress during the year with a time loss of 1,807,000 working days. Comparable figures for 1948 show, 1,759 stoppages beginning in the year, 426,000 workers involved in all stoppages in progress, and a time loss of 1,935,000 working days.

United States

Preliminary figures for May, 1950, show 650 strikes and lockouts in effect during the month, in which 500,000 workers were

involved, with a time loss of 3,000,000 man-days. Corresponding figures for April, 1950, are 550 strikes and lockouts in effect, with 300,000 workers involved, and a time loss of 3,150,000 days.

It is reported that the work-stoppage record for the first five months of 1950 indicates about the same number of stoppages as in the corresponding periods of 1948 and 1949. A slightly larger number of workers were involved in 1950 than in either of the preceding two years. Idleness was double the 1949 figure and a little higher than in 1948. In all respects strike activity was much lower than in the corresponding period of 1946.

SELECTED PUBLICATIONS RECEIVED RECENTLY IN LIBRARY OF DEPARTMENT OF LABOUR*

The publications listed below are not for sale by the Department of Labour. Persons wishing to purchase them should communicate with the publishers. Publications listed may be borrowed, free of charge, by making application to the Librarian, Department of Labour, Ottawa. Students must apply through the library of their institution. Applications for loans should give the number (numeral) of the publication desired and the month in which it was listed in the *LABOUR GAZETTE*.

CURRENT LABOUR CONDITIONS

(Continued from page 1131)

index. Married women seeking work are likely to continue to be something of a special placement problem, as long as employers are selective in their hiring, and as long as industries such as textiles and hotels and restaurants which employ large numbers of women are operating below last year's level.

Further evidence of the general improvement in the employment situation is found in the latest figures on employment in the eight leading industries. For the first time this year, the index, at 128.4 on June 1, was slightly above that of the same month in 1949. The increase in employment of 3.9 per cent over the previous month is one of the highest on record for this time of year. Although construction, transportation, hotels and restaurants did not increase their employment as rapidly as is usual, the increase in logging, mining and communications was well above the average.

In the manufacturing industries, there was a considerable increase in employment in food, lumber, pulp and paper, and electrical apparatus. The primary iron and steel industry is producing close to capacity and expects to do so for the remainder of the year. Shortages of some skilled steel workers have been reported. Employment in the non-ferrous metal industries is also expanding, in response to the heavy demand from the United States.

The demand for farm labour is much greater than was originally anticipated, and shortages of experienced farm help are continuing in many parts of the country, particularly in Saskatchewan. Again this year, organized farm movements of farm workers were necessary to meet the demands for labour during the harvest season. Farmers in the prairie provinces have placed an advance order for 2,400 workers for the grain harvest.

As defence preparations are stepped up, the employment situation should continue to improve over the next few months, unless the threatened railway strike materializes. At the time of writing, negotiations are being continued in an effort to bring settlement before the strike deadline on August 22.

IN BRIEF . . .

The *cost-of-living index* advanced a further 2.1 points between June 1 and July 3, to reach a new high of 167.5. This compared with a level of 162.1 a year ago, 156.9 at July, 1948 and 135.9 at July, 1947. Higher food prices accounted for most of the latest increase, but rents were also a contributing factor. . . . *Car loading* on Canadian railways during the week ended July 29 reached a new peak for the period of 81,096 cars. Since the middle of May this year, the weekly volume has been well above both 1949 and 1948 levels. . . . *Canada's export trade* totalled \$291.8 million during June, in comparison with June, 1949 exports of \$257.4 million. Sales to the United States increased from \$115.6 million in June, 1949 to \$179.8 million in June, 1950 but sales to the United Kingdom were down during the period.

CURRENT LABOUR STATISTICS

(Latest available statistics as of August 10, 1950)

Principal Items	Date	Amount	Percentage Change from	
			Previous Month	Same Date Previous Year
Manpower—				
Total civilian labour force (a).....	June 3	4,933,000	—	+ 0.1(b)
Persons with jobs (a).....	June 3	4,793,000	—	- 0.5(b)
Persons without jobs and seeking work (a).....	June 3	140,000	—	+25.5(b)
Registered for work, N.E.S.				
Atlantic Region.....	Aug. 3	27,798	-31.5	+23.4
Quebec.....	Aug. 3	49,604	-20.6	+23.2
Ontario ".....	Aug. 3	38,592	-19.9	+ 5.8
Prairie ".....	Aug. 3	21,415	-24.3	+18.3
Pacific Region.....	Aug. 3	20,657	-17.6	- 5.0
Total, all regions.....	Aug. 3	158,066	-22.7	+13.6
Ordinary claims for				
Unemployment Insurance benefits.....	July 1	109,433	-25.3	+36.1
Amount of benefit payments.....	June	\$6,378,926	-33.5	+55.1
Index of employment (June, 1941=100)				
(Eight leading industries).....	June 1	128.4	+ 3.9	+ 0.8
Immigration.....	May	8,362	+11.3	- 9.0
Industrial Relations				
Strikes and lockouts—days lost.....				
No. of workers involved.....	July	50,750	—	-71.2(c)
No. of strikes.....	July	6,379	—	-53.4(c)
	July	32	—	+22.5(c)
Earnings and Income				
Average weekly salaries and wages				
(Eight leading industries).....	June 1	\$44.61	- 0.9	+ 5.4
Average hourly earnings (mfg.).....	June 1	\$1.035	+ 1.1	+ 4.4
Average hours worked per week (mfg.).....	June 1	41.9	- 1.7	+ 2.7
Average weekly earnings (mfg.).....	June 1	\$43.37	- 0.6	+ 7.3
Cost of living index (average 1935-39=100).....	July 1	167.5	+ 1.3	+ 3.3
Real weekly earnings (mfg. Av. 1946=100).....	June 1	107.2(d)	- 1.0	+ 4.1
Total labour income.....	April	\$642,000,000	+ 1.4	+ 5.2
Industrial Production				
Total (Average 1935-39=100).....	May	195.6	+ 2.4	+ 4.0
Manufacturing.....	May	203.5	+ 2.2	+ 2.8
Non-durables.....	May	187.9	+ 1.8	+ 2.4
Durables.....	May	230.4	+ 2.8	+ 3.5
Trade				
Retail trade.....	May	\$694,900,000	+ 7.3	+ 6.1
Exports.....	June	\$289,200,000	+ 0.8	+13.4
Imports.....	June	\$282,800,000	- 2.6	+12.9

(a) Estimated on basis of sample labour force survey. Only those who did not do any work in the survey week are here classified as persons without jobs. June 3, 1950 excludes Manitoba.

(b) These percentages calculated on basis of 1949 figures excluding Newfoundland and Manitoba.

(c) These percentages compare the cumulative total to date from first of current year with total for same period previous year.

(d) Real weekly earnings adjusted for holidays.

Data in this table are preliminary figures from regular reports compiled by various government agencies, including Dominion Bureau of Statistics, the Unemployment Insurance Commission, the Immigration Branch, Department of Citizenship and Immigration, and the Economics and Research Branch, Department of Labour. Detailed information can be found in the statistical appendix of the Labour Gazette.

Deposits.....	\$000,000		3,341	3,000	2,860	(5) 2,163

NOTE.—Latest figures subject to revision. Many of the statistical data in this table are included in the Canadian Statistical Review issued by the Dominion Bureau of Statistics.

† Comparable statistics are not available.

(1) Labour Force survey figures given are as at June 3, 1950, March 4, 1950, March 5, 1949, February 21, 1948. At June 3, 1950 Manitoba is not included due to flood conditions.

(2) Average 1926=100.

(3) Figures are as at end of quarter ending March 31, 1950, 49, 48, 44, and 1939 respectively.

(4) Real earnings computed by dividing index of average weekly earnings of wage-earners in manufacturing by the cost-of-living index; base; average for 1946=100.

(5) Average 1935-39=100.

(6) Year-end figures.

(7) Annual index.

(8) Real weekly earnings adjusted holidays.

(9) Newfoundland is included after April 1, 1949.

(10) Figures for 1939 and 1944 are production data rather than shipments.

TABLE C-6.—HOURS AND EARNINGS IN MANUFACTURING

(Hourly-Rated Wage-Earners)

SOURCE: *Average Hours Worked and Average Hourly Earnings, D.B.S.*

Tables C-6 to C-9 are based on reports from a somewhat smaller number of firms than Tables C-1 to C-5. They relate only to wage-earners for whom statistics of hours of work are also available, whereas Tables C-1 to C-4 relate to salaried employees as well as to all wage-earners of the co-operating firms.

Week Preceding	Average Hours Worked			Average Hourly Earnings		
	All Manufactures	Durable Goods	Non-Durable Goods	All Manufactures	Durable Goods	Non-Durable Goods
	No.	No.	No.	cts.	cts.	cts.

*Industries classified in the durable manufactured goods industries.

¹ Since 1941, the Dominion Bureau of Statistics has prepared current indexes of a average hourly earnings of the employees of eight establishments producing heavy electrical apparatus. Based upon the hourly earnings at June 1, 1941, as 100 p.c., the latest figures are as follows—Mar. 1, 1950, 239.8; Apr. 1, 1950, 240.4; May 1, 1950, 247.1; at May 1, 1949, the index was 227.5.

² Chiefly street and electric railways.

³ For information respecting the sex distribution of persons in recorded employment, see Table C-5.

Above food prices are simple averages of prices reported. They are not perfectly comparable in all cases with price averages for earlier years. Changes in grading, trade practices, etc., occur from time to time. (a) Rental ranges shown above are indicative of prevailing rents being paid. They should not be used as a measure of change in rents paid for the same quality of living accommodation over long periods of time. (b) Averages include prices for cuts with bone-in. (c) Hock-on. (d) Mixed—hock-off and hock-on. (e) Mixed—carton and loose. (f) Loose. (g) Estimate. (h) Fancy. (i) California. (k) Pure. (m) 360's. (n) Mixed—package and bulk. (p) Package. (s) Mixed—choice and fancy. (t) Tin.

* Preliminary figures.

‡ Strikes un-terminated at the end of the previous year are included in these totals.

† The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is not often encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout included as such in the records of the Department is a cessation of work involving six or more employees and lasting at least one working day. Strikes of less than one day's duration and strikes involving less than six employees are not included in the published record unless ten days or more time loss is caused but a separate record of such strikes is maintained in the Department and these figures are given in the annual review. The records include all strikes and lockouts which come to the knowledge of the Department and the methods taken to obtain information preclude the probability of omissions of strikes of importance. Information as to a strike involving a small number of employees or for a short period of time is frequently not received until some time after its commencement.

TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA, JUNE, 1950⁽¹⁾

Industry, Occupation and Locality	Number Involved		Time Loss in Man- Working Days	Particulars ⁽²⁾
	Establish- ments	Workers		
Strikes and Lockouts in Progress Prior to June, 1950				
MANUFACTURING— <i>Textiles, Clothing, etc.—</i> Worsted textile factory workers, Trenton, Ont.	1	55	200	Commenced December 28, 1949; for a new agreement providing for increased wages and reduced hours; terminated by June 27; return of workers and replacement; in favour of employer.
Cotton and rayon under- wear factory workers, Sherbrooke, P.Q.	1	136	2,990	Commenced May 11; for a new agreement providing for increased wages, following reference to court of referees; untermiated.
<i>Printing and Publishing—</i> Printers, St. John's, Nfld.	1	4	90	Commenced May 22; for a new agreement providing for increased wages; employment conditions no longer affected by the end of June; indefinite.
<i>Metal Products—</i> Washing machine factory workers, Amherst, N.S.	1	35	500	Commenced April 15; alleged discrimination in dismissal of three union officers; untermiated.
Hardware factory workers, Peterborough, Ont.	1	168	2,850	Commenced May 4; for a new agreement providing for a 42½-hour week instead of 45 with same take-home pay, increased minimum wage rates, improved seniority and stabilization of piece-work rates, following reference to conciliation board; terminated June 23; negotiations; compromise.
Electrical apparatus factory workers, Vancouver, B.C.	1	18	375	Commenced May 11; for a new agreement providing for increased wages, reinstatement of job classification, payment for all statutory holidays, following reference to conciliation board; untermiated.
Plumbing supplies factory workers, London, Ont.	2	524	11,400	Commenced May 22; for a new agreement providing for union shop, check-off, reduced hours, pension plan, etc., following reference to conciliation board; untermiated.
TRADE— Department store clerks, New Westminster, B.C.	1	30	500	Commenced August 27, 1949; for a union agreement providing for increased wages and other changes as recommended by majority report of conciliation board; untermiated.
SERVICE— <i>Business and Personal—</i> Hotel employees, Cornwall, Ont.	8	93	2,400	Commenced March 9; for a union agreement providing for increased wages, reduced hours, overtime rates, vacations with pay, following reference to conciliation board; untermiated.
Waitresses and dishwashers, Sudbury, Ont.	2	40	1,000	Commenced May 11; for union recognition and agreement providing for increased wages; untermiated.

C. E. St. George

CIRCULATION MANAGER

○N A DAY in August, 1900, a young Ottawa Editor walked through Major Hill Park with a bundle of manuscript to the Government Printing Bureau. There he consulted a young printer on the publishing of the first issue of a new periodical.

That young editor was to become Prime Minister of Canada, and in later years he conferred many times with the printer, who became the leader of the Trades and Labour Congress.

Thus in a dingy composing room, Editor Mackenzie King, and Printer "Paddy" Draper put to press the first edition of the LABOUR GAZETTE.

No one is more deeply distressed than I over the tragic circumstances under which I have succeeded to the portfolio of the late Hon. Humphrey Mitchell.

Not only is there my personal sorrow over the loss of a sincere friend and colleague, but there is the loss to the nation in a critical hour of the wisdom and experience of one who was a born leader of labour whether in its councils or in the councils of State. His death in harness but reflects the measure of his service to his fellow-man and to his country.

The fact that I am assuming my new duties as Minister of Labour at a time when the Department is observing its Fiftieth Anniversary emphasizes my responsibility as the inheritor of a long tradition of labour administration.

This tradition is reflected in the pages of this Anniversary Issue which has been compiled to commemorate not only the progress of labour and the Department of Labour but also of the men who made that progress possible.

With such a cavalcade I am proud to be associated, and in its efforts for a better and a happier Canada I pledge my best co-operation.

Milton F. Gregg.

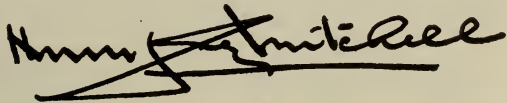

The Late Honourable Humphrey Mitchell,
MINISTER OF LABOUR

The fifty years of existence of the Labour Department span a significant period of Canadian labour progress.

In the eight and a half years during which I have had the honour of administering the Department, important advances have taken place in the growth of Canadian industry and in the living and employment standards of working men and women.

This special Anniversary Issue of the LABOUR GAZETTE will have served its purpose if it helps to put in some sort of perspective the developments achieved through the joint efforts of labour and industry over the past half century.

A handwritten signature in black ink, appearing to read "H. G. Mitchell". The signature is written in a cursive style with a prominent horizontal stroke at the bottom.

Arthur MacNamara, C.M.G., LL.D.

DEPUTY MINISTER OF LABOUR

As this century commenced Canada was emerging from a pioneer economy. There was little labour legislation; when the Labour Department was founded nine officials were sufficient to carry on its early functions.

Today, as a result of the industrialization which has transformed our Canadian economy, the Labour Department has correspondingly enlarged its services to workers and employers.

The articles in this Anniversary Issue describe some of the changes in Canada's industrial life, and the methods that have been evolved—by business, labour and government—to meet the problems of the half century.

A MacBain

**Paul E. Côté,
M.P.**

PARLIAMENTARY
ASSISTANT TO
THE MINISTER
OF LABOUR

This special anniversary issue of the LABOUR GAZETTE highlights not only the impressive growth of the labour movement in Canada and its important role in national affairs but also the way the Department of Labour has expanded its services in order to fulfil its obligations to the needs of a highly industrialized economy.

Perhaps the most significant fact borne out by this issue is the way the nation's productive achievement has resulted in such high standards of living for all our people.

I think this proves that the social-economic system under which we live in Canada is a refutation of those sinister ideologies which fortunately have not been able to take root in our soil.

A handwritten signature in cursive script that reads "Paul E. Côté".

FOREWORD

In September 1900 "workmen and others desiring reliable data in regard to questions especially affecting labour" could purchase for the first time a Canadian periodical designed to meet their needs.

This forty-one page, three-cent magazine, unpretentiously garbed in a sober grey jacket, was the *LABOUR GAZETTE*, the official journal of the newly created Department of Labour. The introductory editorial written by the first editor, W. L. Mackenzie King, announced that the *GAZETTE* "is published with a view to the dissemination of accurate statistical and other information relating to labour conditions and kindred subjects."

Mr. King emphasized that the *GAZETTE* "will not be concerned with mere questions of opinion, nor will it be the medium for the expression of individual views." Its aim rather was to "seek to record only such matters of fact, and such collections of statistics, as are believed to be trustworthy."

The *LABOUR GAZETTE* was created at the same time as the Department of Labour, that is, with the passage of the Conciliation Act in June, 1900.

It is interesting to note that the *LABOUR GAZETTE* made its first public appearance on the opening day of the 16th Annual Convention of the Trades and Labour Congress, and the presentation of the initial number by the Minister of Labour to the President of the Trades and Labour Congress (Ralph Smith, M.P.P.), was perhaps the most appropriate introduction which this new government publication could have had to the working men of the Dominion.

The LABOUR GAZETTE still adheres to the policy of its first editor. Its primary purpose is to provide factual information. It continues to follow, with a somewhat broadened range of interest, the objectives laid down for it by Mr. King, who wrote: "This journal will seek to gather from all parts of the Dominion, facts, figures and information bearing on industrial conditions and the state of the labour market. It will seek to supply intelligence in regard to labour in one locality which may be of value to labour in another; in regard to industries in one province of interest to industries in other provinces; and information of general utility to employers and workmen wherever found. It will seek, also, to bring to the notice of its readers in this country, facts from the experience of other countries, which may have a bearing on conditions here."

The pages of fifty volumes of the LABOUR GAZETTE have recorded boom and depression, war and reconstruction, strikes and their settlement, industrial problems and the legislation, both federal and provincial, directed towards their solution.

They record the meetings of labour congresses and employer organizations, and their appearances before governments. They describe the trends in Dominion-provincial relations. They reflect the economic and social changes of the time.

Some of the subjects dealt with in this Anniversary Issue were familiar to the early readers of the LABOUR GAZETTE; others, such as the International Labour Organization, unemployment insurance, and the National Employment Service, reflect social advances scarcely contemplated at the turn of the century. And among those early readers, few would have been bold enough to predict the tremendous industrial expansion whose effects are described in these pages, nor the almost hundred-fold growth in trade union membership.

It is hoped that this issue will have some value in summing up the many and varied achievements of the half century, and in affording some basis for looking forward to the future progress of Canadian industry and labour.

Our Yesterdays

by **Harry J. Walker**

Editor-in-Chief, LABOUR GAZETTE

At the turn of the century four young men were starting careers that were to lead to a rendezvous with "Manifest Destiny."

Far-off in South Africa a daring young Commando leader, Jan Smuts, was signing a peace in the veldt town of Vereeniging.

Covering that campaign was a brash young war correspondent, Winston Churchill, who had gained his first knowledge of battle tactics by leading a charge of the 21st Lancers at Omdurman.

On the other side of the world, the young scion of an old New York family, Franklin Delano Roosevelt, was leaving Groton School for Harvard.

And from the University of Toronto a brilliant Canadian student, William Lyon Mackenzie King, had just taken post-graduate work at Harvard.

In the inscrutable ways of Providence these four young men were to be brought together under circumstances momentous for mankind.

* * *

Young Mr. King left Harvard on a travelling fellowship. The Faculty wanted him back to accept an instructorship, and had, in fact, appointed him, but he was contemplating a career in sociological research into the lives of the submerged tenth, that segment of society that lived in semi-squalor below the subsistence margin.

In spite of an era of "rugged individualism," nineteenth century

liberalism had a sense of "noblesse oblige." With an ancestral background going back to a fiery rebel against an oligarchy of birth, this young man had the instincts of a militant reformer.

These inherited instincts were quickened by what he saw in a previous winter which he had spent at the Hull House Social Settlement in Chicago while studying labour organization. The Settlement and its surroundings

brought him into close contact with the sweated trades. He saw what bred slums.

Visiting a number of Canadian cities on a roving reporting assignment for the old *Mail and Empire*, the peripatetic cub reporter probed into the condition of workers in the garment trades. He saw clapboard hovels. He saw enacted the "Song of the Shirt" with "its poverty, hunger and dirt." Only these unfortunates—mostly slattern women old before their time—were toiling from dawn to dusk on letter carriers' uniforms for firms awarded contracts by the Post Office Department.

Instead of taking his story to his city editor who would probably have blasted the Government with it, he took it to the Hon. William Mulock (later, Sir William Mulock).

The Postmaster General was shocked and angry. Seeking an immediate remedy, he asked the young writer to make a report with recommendations on which the Government could act.

That interview made an enduring and favourable impression on the Postmaster General. From it stemmed the adoption of the Fair Wages Resolution of March, 1900.

There was another important development.

Unabashed in the presence of Laurier's chief lieutenant, the cub reporter, true to his craft, talked hard sense. He told Mulock that what the country needed was a Department of Labour to deal with such pressing problems.

The idea registered.

Mulock mulled over it, decided the young fellow was right. But it was something novel in the function of Government in Canada.

He had to "sell" the idea to a Cabinet of practical politicians. Mulock succeeded with some misgivings among his Party colleagues.

He introduced a Bill (The Conciliation Act, 1900) designed, among other things "to provide for the publication of statistical and industrial information in a *LABOUR GAZETTE*."

"It will," he stated in the House, "be a useful publication for all classes concerned in industrial life whether employers or employees and will enable them better to understand not only the conditions affecting their own side but the conditions affecting the side of the other party," and cognate with such an understanding, it was hoped "that parties to industrial conflicts would be more ready to adopt peaceful arguments for the settlement of controversies."

Then, as a sort of necessary after-thought, Mr. Mulock announced that "another object of the Bill is to establish a Department of Labour," one of the chief functions of which was to provide motive power for conciliation machinery.

The reaction was immediate. Here was something that smacked of upsetting the status quo in a country with strong pioneering traditions.

Her Majesty's Loyal Opposition, led by Sir Charles Tupper, a "Father of Confederation," and such giants in debate as George Foster and Nicholas Flood Davin, pounced on the proposed legislation. In the first place they wanted to know why such important legislation was left to the end of the session (Ah, perpetual mystery of Parlia-

ments!). They wanted to know who was to edit the *LABOUR GAZETTE*. Is it to be a party organ?

There were more probing questions. How is the *LABOUR GAZETTE* to be paid for? Is there to be another Minister added to those who already draw their salaries? Will the Hon. Gentleman say whether he has any person in view for the position?

Opposition critics stressed that the editorship "was a very important position requiring some person well posted on labour matters and in whom a large body of labour men throughout the country will have confidence." No mere party hack was to be considered.

Patiently, Mulock listened. Then, with his customary caution, he replied: "We have someone in view and if we are fortunate enough to get him I think he will be entirely persona grata to all classes." The first Civil Service editor thus referred to was William Lyon Mackenzie King.

With the passage of the legislation the Department of Labour was set up with an appropriation of \$10,000 for the remainder of its first fiscal year. Mr. Mulock now held the dual portfolio of Postmaster General and Minister of Labour. Mr. King was made Editor of the *LABOUR GAZETTE*, which duty was later combined with that of Deputy Minister.

Thus, fifty years ago, was established the Department of Labour and the *LABOUR GAZETTE*.

In those early years of the century young Editor King was not alone in his crusading on this continent.

William Jennings Bryan had set the mood of the hour in a speech that rang around the

world: "You shall not press down upon the brow of Labour this crown of thorns; you shall not crucify mankind upon a cross of gold."

Theodore Roosevelt, fresh from the prestige of leading his "Rough Riders" at San Juan Hill, was wielding the "Big Stick" against the Trusts.

Miss Ida Minerva Tarbell, early militant feminist and editor of *McLure's Magazine*, was tilting against the monopoly of oil.

Upton Sinclair was writing "The Jungle," a novel which made such a scathing attack on conditions in the Chicago stock yards that a Presidential Committee laid bare the abuses.

But in Canada Mr. King was blazing a new trail.

* * *

Fifty years ago that sunny interlude known as the "gay nineties" was drawing to a close.

There were still vast frontier areas. Only 15 years previously Donald Smith had driven the last spike at Craigellachie, and the Canadian Pacific Railway thus completed the vision of the Fathers.

Immigrant trains traversed the plains over which the Red River carts had creaked but twenty-five years previously.

The age of mass production and "the assembly line" was yet to make its impact on industry, although a mechanic named Henry Ford was tinkering with a gasoline engine. Orville Wright was about to fly an engined crate at Kitty Hawk. Our own Robert Dollar had recently quit working as a day labourer in an Ottawa Valley shanty and was founding a dynasty in shipping.

THE LABOUR GAZETTE.

THE *Labour Gazette* is an official publication by the Dominion Government, under the authority of the Conciliation Act, 1900. It is the Journal of the Department of Labour, and is published with a view to the dissemination of accurate statistical and other information relating to labour conditions and kindred subjects. It will be issued monthly, and the matter contained in its columns is intended to be of service to workmen and others desiring reliable data in regard to questions especially affecting labour, and such topics as have a bearing on the status and well-being of the industrial classes of Canada.

The *Gazette* will not be concerned with mere questions of opinion, nor will it be the medium for the expression of individual views. It is an official publication, and as such will seek to record only such statements of fact, and such collections of statistics, as are believed to be trustworthy. In the selection and publication of these, care will be taken to have the information as complete and impartial as possible, and so to arrange it that, while furnishing from month to month facts and figures of current interest, these may at intervals be classified and compiled in such a manner as to show, over periods of time, the trend and development of the subjects dealt with.

The work thus undertaken will, it is hoped, establish a basis for the formation of sound opinions, and for the drawing of correct deductions, but these, in themselves, are tasks which lie beyond the scope and purpose of the *Gazette*, and are ends it will seek to serve, not to meet. . . .

In estimating the position and functions of the *Gazette*, its readers must take into account the vast geographical area of the Dominion, the variety of its industries, and the extent of its trade. A sweep of industry, complex and manifold, stretching from ocean to ocean across four thousand miles of continent, is something which the world has known for the first time during the nineteenth century, and is paralleled only by one or two countries of the globe. But this is one of Canada's most striking and characteristic features, and in this fact is to be found the real significance and importance of the *Labour Gazette*, as well as the best indication of the aims of the undertaking. This Journal will seek to gather from all parts of the Dominion, facts, figures and information bearing on industrial conditions and the state of the labour market. It will seek to supply intelligence in regard to labour in one locality which may be of value to labour in another; in regard to

Facsimile of Editorial Page of the first Labour Gazette.

Editor Mackenzie King's statement of editorial policy is still adhered to as the LABOUR GAZETTE reaches its fiftieth anniversary.

In an economy emerging from a simple frontier setting the worker even if in a union (and they were not the powerful organizations of today) was in no strong position to bargain for better working conditions.

There was practically no protective workers' legislation quite apart from any social legislation. It was free enterprise at its best and worst.

While it was true that the era of "rugged individualism" did impose restrictions on workers improving their living standards, there is another almost forgotten factor in this age where powerful labour organizations can, and do, secure a wide range of benefits by process of collective bargaining.

In the personal relationship that then existed between the owner of a business and his employees, the bonds between the two were often strengthened by the fact the owner knew all his employees and their families, and was more than likely to feel a keen sense of responsibility for their welfare.

In the early years of this century, both in this country and the United States, an individual workman seeking a job presented himself at a mill or factory. Most likely the owner of the business would see him personally, and size him up. If he thought the applicant measured up, he would hire him on his own terms. There was no bargaining about it.

The worker could accept or refuse. If the worker rejected the owner's terms, there was no great hardship on either party. The owner could get another hand, and the worker could get another job, or he could home-

stead, or set up a small business of his own in a growing community.

Both worker and "boss" gloried in their self-reliance and independence.

In general, however, hours and wages and working conditions were at the whim of an employer's market. Floating labour moved from the harvest to the shanties and the railway construction camps.

Shanty and construction camps were not regulated as they are now by quite definite agreements. Railway empires were in the making. In a phrase that "stuck," a well-known evangelist proclaimed to "revival" meetings that "the Sabbath was made for man and not for Mackenzie and Mann."

The nine-hour day was the chief objective in the seventies when the TLC had its birth. In 1873, the redoubtable Dan O'Donoghue (to become Canada's first Fair Wages Officer under Mr. King in 1900) led the first labour delegation to a Government when the Ottawa Trades Council interviewed Prime Minister John A. Macdonald. Perhaps the fact that there were three Dominion and three Ontario elections in the 70's may have rendered political leaders somewhat sensitive to labour under-currents.

About this time, too, labour began calling for some type of government bureau to deal with its special problems.

It had not won any major victories either by employing the strike weapon or in the legislative field.

But in 1886, the Trades and Labour Congress did succeed in having a Factories Act estab-

lished in Ontario which forbade the employment of boys under twelve and girls under fourteen.

* * *

The Royal Commission on Capital and Labour was the first body in Canada vested with Government authority to investigate industrial conditions in this country. It travelled to various sections of the country gathering evidence and its report, published in 1889, revealed some shocking child labour and sweat shop abuses.

When Mr. King also exposed sweat shop conditions and intervened with Mr. Mulock, that, apparently, was the decisive factor leading to the establishment of the Department of Labour.

He recruited a small coterie of able assistants. Numbering less than a dozen, and of widely differing backgrounds, they had a common loyalty to their young leader. Three of them—Dan O'Donoghue, Edward Williams, and Frank Plant—were practical trade unionists fresh from the labour "wars." He sometimes had to curb their enthusiasm for the cause.

With a penchant for economists and newspaper editors, King completed his staff. There was Henry Albert Harper who had been his class-mate at the University of Toronto to whom he allocated the associate editorship of the *LABOUR GAZETTE*. He had been scarcely a year in the editorial chair when his heroic and tragic death cut short a career golden with promise. The tragedy of his self-sacrifice while on a skating party on the Ottawa river, shocked the capital and the country. His memory is per-

petuated in the Sir Galahad statue at the foot of the Parliament Buildings.

Another of his editorial colleagues was F. A. Acland who had been his chief in his reporting days, and who later became Deputy Minister of the Department. Mr. Acland brought to his task a fine and discriminating mind, eminently fair and cultured.

Then there was Frank Giddens a diligent fact-finding newspaperman from the London Free Press whose talents in his craft King used to advantage on roving commissions both in this country and abroad.

In that select company, too, were R. H. Coats, who became distinguished as Canada's first statistician, and W. W. Edgar, brought in by Mr. King to build a library that has become today a repository of labour history.

* * *

It is a far cry in the story of labour and the Department from those pioneering years to the complexities of the present.

Probably the most significant development has been that brought about in the changed basis of employer-employee relationship. Two factors were chiefly responsible for this orientation: (1) the disappearance of direct personal relationship between the owner and his workers; and (2) the advent of mechanized industry and the assembly line. To which might be added (somewhat later) a third factor, resulting, in part, from the other two—the mushrooming of the big industrial unions.

In the march of time, plus the impact of big business, the direct relation between an individual employer knowing all his "hands"

by their first name came to an end. The employment manager or personnel officer became the medium of contact with employees. This officer's responsibility was, of course, to the employer. The community could no longer exercise the influence on employment policy that it once could on the individual owner of a business.

In this new set-up, the worker had to make some drastic adjustments. With mechanization and mass production, the highly skilled workman found his former skills not in such demand as in the old days of craftsmanship. More often, there was a call for other types of skills, with the emphasis on speed. He was in no position to bargain as an individual.

To maintain his living standards, he now had to meet an impersonal machine and an impersonal company. So he, too, was forced, by the trend of events, to join with his fellows to sell his product (his labour skill) on a collective basis.

In this transformation, the character of industry itself was changed and individual craftsmanship lost something of its former connotation as applied to a trade. There are, of course, still many craft unions, but there was tremendous upsurge of individual craft unions merging their identity in what became known as industrial unions. For instance, many former carpenters, machinists, metal workers, and painters, employed in an automobile plant, preferred to be designated as an Automobile Workers' Union, regardless of their particular skill or craft.

* * *

This new alignment of industry accelerated collective bargaining. In the United States the

process was moulded into legislative enactment in the Wagner Act which provided a compulsory feature. This was one of the most important and far-reaching of President Roosevelt's "New Deal" measures during the depression of the "hungry thirties."

In Canada, the Second World War brought into sharp focus its necessity. Accordingly, the Department of Labour administered a set of regulations under P.C. 1003 which marked a complete change in Federal Government policy in industrial relations. One of the major provisions was recognition of the clear right of employees—and also of employers—to organize.

For the first time in Canada a procedure for instituting collective bargaining negotiations was set up, and provision made for the certification of collective bargaining representatives. The union, through its representatives, had to be recognized in future negotiations. Compulsory collective bargaining became a reality in law over wide areas of Canada.

With the conclusion of the war, and after an exhaustive process of consultation with organized labour, associations of employers and provincial authorities, the major provisions of P.C. 1003 were incorporated and extended in permanent legislation applying to all industries within the jurisdiction of the Federal Parliament.

There is also provision, under the present legislation, whereby arrangements can be made with the provinces for uniform administration of similar legislation.

This Federal Legislation requires employers and employees alike to undertake collective bargaining in good faith. It does not say what the bargain shall be; it leaves that

to the parties. It does list what are prohibited unfair labour practices and applies restrictions to both employers and employees.

Until the Millenium is reached it is doubtful if there will be complete unanimity on any legislation touching industrial relations.

The function of the Department of Labour is to hold the balance evenly to prevent giving either party an undue advantage. In fact, the role of the Department in industrial relations is now compounded of one part consultant, one part mediator, and one part referee. This last is in evidence mainly when the public interest must be protected.

There was a time when the opposing factions considered that the public interest did not matter. It definitely does now. Mr. King in 1907 emphasized the profound change in such thinking when, in preparing the ground for the Industrial Disputes Investigation Act, he enunciated in the *LABOUR GAZETTE* that "in any civilized community private rights must cease when they become public wrongs."

One result of all the Department's exploratory work and patient weighing of all factors is that collective bargaining is becoming a humanized process with labour and management taking their places as equals around a conference table.

* * *

The social responsibilities of a developing industrial country were reflected in the growing responsibilities of the Department as the half-century progressed. These included the sale of government annuities, co-ordination of the provincially administered employment service established in

1919, the administration of old age and blind pensions (subsequently transferred to the Department of Finance) and the Combines Investigation Act. This last was later transferred to the Department of Justice because it involved prosecution proceedings and the Justice Department was considered the proper medium for this work.

Another measure that came under the Department was vocational education and training. Stemming from the recommendations of a Royal Commission on Technical Education, the House of Commons in June, 1919, adopted legislation providing for a federal appropriation of ten million dollars to be paid to the provinces over a period of the years to assist them in providing technical education.

The necessity of job training in the depression years, accentuated by the Second World War, further projected the plan into a Dominion-Provincial set-up for vocational training.

Canada's membership in the International Labour Organization brought the Labour Department into the movement to improve working standards on a world-wide front.

Passage of the Unemployment Insurance Act in 1940 constituted a tremendous social advance, and brought with it an expansion and re-organization of the network of employment offices.

The Second World War and its aftermath brought an additional set of responsibilities under the Department's wing.

In the whirligig of events, how far the Department of Labour has broadened its orbit may be indicated in the following

administrative functions: National Registration; Selective Service; Mobilization of Manpower; Japanese Evacuation from Coastal Areas; Control of Port Loading Operations; Prisoners-of-War; Reinstatement of Veterans in Civil Employment; Polish Veterans Movement; Absorption of Displaced Persons and, most recently, the Government Employees Compensation Act.

* * *

Nothing remains static. It is a yardstick of human progress that what sufficed in human affairs ten, twenty, thirty, forty and fifty years ago is not good enough today in a world that has been rocked by two great wars and a depression.

Accordingly, social-economic developments in the past fifty years have resulted in a great expansion in the services the

Department of Labour has been called upon to provide.

Through it all Labour has gained an impressive "Bill of Rights". No longer is it the unprotected, under-privileged segment of industry that it was fifty years ago, when a keen young man applied a set of social principles to the problems of a democratic state and made it work.

What he and his successor, the late Hon. Humphrey Mitchell, have tried to do in more recent years is to unobtrusively indicate that with power goes responsibility.

And it would seem as if labour itself is moving into a wider concept of its role in community, national and even international affairs, in a mature awareness of the obligations it shares with all sections of society.

"Most of the work on Government clothing has really been executed by women and girls. Where these have been employed in shops their wages have been, on the whole, exceedingly low; and where the work was performed in homes the prices paid were often such as to necessitate long hours of labour for a very meagre return. . . .

"The conditions under which much of the Government work has been executed have been such as to prove injurious to the health and well-being of those engaged in it. There has been no proper or adequate inspection of the methods or the work itself, and, as a consequence, individuals and the public alike have been exposed to continuous risk from the spread of contagion as well as to harm in other ways.

"I need scarcely add that the existence of such conditions, apart from any other attendant evils of the sweating system, constitute emphatically . . . 'sufficient grounds for Government interference in order that future contracts may be performed in a manner free from all such objectionable features.'"

Report on Government Clothing Contracts
by W. L. Mackenzie King,
January 5, 1898.

CANADA'S MINISTERS OF LABOUR

by Allan Donnell

Editorial Staff, LABOUR GAZETTE

During the fifty years since it was established the Department of Labour has had fifteen Ministers, whose tenures of office ranged from a few months to nine years. They were men of varying talents and points of view, keenly aware of the responsibilities of public office, and each of them in his own way strove to improve industrial relationships and to create better social conditions for all Canadians.

Initially, the Department was little more than an appendage of the Post Office Department, but over the years its functions have been greatly extended until it has become one of the most important and exacting branches of the Federal Government.

Dealing as it does with all those human relationships involved in industrial affairs, the Department by its very functions becomes the medium of adjustment between labour and management in disputes which sometimes drastically affect the public interest.

It is perhaps not surprising, therefore, that the responsibilities borne by several of the Ministers, especially during the two World Wars and in the depression of the 1930's, broke their health and forced their early retirement from public life.

Sir
William
MULOCK,
K.C., K.C.M.G.

1900-1905

Few Canadians have won distinction in so many fields of public service as Sir William Mulock, Canada's first federal Minister of Labour. As an educationalist, lawyer, parliamentarian, government administrator and jurist, he was almost equally eminent.

William Mulock was born of Irish forebears in the little village of Bondhead, Ontario, in 1844. His father, who was a country doctor, died at a comparatively early age, leaving his widow and a young family in none too prosperous circumstances. As a consequence young Mulock spent his boyhood in a home where thrift was a well-worn precept. Fortunately, his mother encouraged and assisted him in every way she could to continue his education in the Grammar School at Newmarket, Ontario, and at the University of Toronto. He was an outstanding student and graduated near the top of his class in all subjects, winning the gold medal in modern languages. Five years later, in 1868, he was called to the Ontario bar.

From 1873, until the close of his long life in 1944, he was intimately associated with the administrative affairs of the University of Toronto, as a member of the Senate, Vice-Chancellor and finally as Chancellor.

It was, however, as a member of the House of Commons, Minister of the Crown, and finally as a jurist, that William Mulock won his

most enduring fame. He was elected to Parliament in the general election of 1882 for the riding of North York, a constituency he continued to represent until his retirement from political life in 1905. He was popularly known among his rural constituents as "Farmer Bill."

In 1896, he was given the post of Postmaster General. Within three years of his appointment he converted the heavy perennial deficits of the Post Office Department into substantial surpluses. He introduced the use of postal notes, became the "father of penny postage," promoted the "all-red cable" between Canada and Australia and by working in conjunction with Signor Marconi, secured for Canada the first wireless station in North America. For these services he received a Knighthood from the King in 1902.

But in another and quite different field, that of labour relations, Mr. Mulock gave proof of his kindly human qualities as well as his political foresight and sagacity. Prior to 1900, almost all of the labour legislation in force in Canada had been enacted by the provinces and such as there was, was "limited in scope and wholly lacking in uniformity."

Following the reports made by Mr. Mackenzie King in 1898 on sweated labour and other unsatisfactory labour conditions Mr. Mulock took steps to establish a federal Department of Labour. It was a touchy venture. Both politicians and the general public were suspicious of anything that looked like "class legislation" and any extra expense involved in setting up a federal labour portfolio was certain to arouse criticism. For these reasons, the title of the Bill introduced in Parliament in 1900 read: "An Act to Aid in the Prevention and Settlement of Trade Disputes and to Provide for the Publication of Statistics and Industrial Information." It became known as "The Conciliation Act."

The Act was given Royal Assent on July 18, 1900. Mr. Mulock at once appointed Mr. Mackenzie King Deputy Minister and editor of the *LABOUR GAZETTE*, and provided him with office equipment and a small clerical staff. The first issue of the *GAZETTE* appeared in September. It bore the imprimatur on its title page "Department of Labour under Authority of Parliament." From that time on in the press, public discussions and subsequently in Parliament, the Department was given general recognition and Mr. Mulock became known as the Minister of Labour as well as Postmaster General.

Mr. Mulock set about the task of organizing the work of the new Department with the same thoroughness, energy and resourcefulness that he displayed in rejuvenating the postal services. He secured the enactment of such important measures as the Fair Wages Resolution of 1900, the Railway Arbitration Act of 1902 and the Labour Disputes Act of 1903.

However, the heavy duties involved in the administration of two important departments of government for five years (in addition, he was also Acting Minister of Public Works for nearly a year) undermined his health and in 1905, Sir William retired from the government to accept a less onerous position as Chief Justice of the

Exchequer Division of the Supreme Court of Ontario. In 1923 he was appointed Chief Justice of Second Appellate Division of the Supreme Court and later in the same year was made Chief Justice of Ontario.

Sir William maintained two homes, one in Toronto, the other a country estate near Aurora, Ontario, in the heart of his old federal constituency of North York. The closing years of his long life were serene and happy. He maintained a keen interest in current trends of thought, and it was said of him that he seldom delved into the past, except to give point to discussions of the present or the future. He died on October 1, 1944, less than four months before his 101st birthday.

Sir
Allen Bristol
AYLESWORTH,
K.C., K.C.M.G.

1905-06

Elected to fill the vacancy caused by the resignation of Sir William Mulock, Allen Bristol Aylesworth entered the House of Commons in 1905 as member for Sir William's old constituency of North York. He was at once appointed by Sir Wilfrid Laurier to succeed Sir William as Postmaster General and Minister of Labour. Within a year he was transferred to the Ministry of Justice and was succeeded in the dual portfolio by Hon. Rodolphe Lemieux, then Solicitor General.

Sir Allen was a descendant of United Empire Loyalists and was born near the village of Newburgh, Ontario, in 1854. Following his graduation from the University of Toronto, he began the study of law in Toronto, with Harrison, Osler and Moss in 1876, was admitted to the Ontario bar in 1878 and was made a Queen's Council in 1889. In 1891, he was appointed a bencher of the Law Society of Upper Canada, a position he occupied until he became Minister of Justice in 1906.

In 1903, he was appointed by the King as one of three British members of the British-American tribunal to settle the Alaska boundary dispute. Mount Aylesworth, a 9,400-foot peak on the Alaska-British Columbia boundary, was so named as a tribute to his skilful handling of the Canadian argument before the tribunal.

Seven years later, in 1910, he acted as agent for Great Britain before the Hague tribunal in the arbitration proceedings over the North Atlantic Fisheries. For this service he was knighted by King George V in 1911.

Sir Allen was elevated to the Senate in 1923. As a recognized authority on constitutional law, he has on many occasions rendered valuable service as a member of that body. Although in his 96th year, he still retains a keen interest in national and world affairs.

Hon.
Rodolphe
LEMIEUX,
K.C., LL.D.

1906-1909

Hon. Rodolphe Lemieux, Postmaster General and Minister of Labour from 1906 to 1909, ranks high among those who have made outstanding contributions to the public life of

Canada. Gifted with a cosmopolitan outlook and an urbane, and courteous personality, he has been described as "a born diplomatist." A master of both English and French languages, he did much to promote the *bonne entente* in Canada, and to cultivate good relationships between Canada and France.

Mr. Lemieux was born in Montreal on November 1, 1866. He received his education at Nicolet College and later at Laval University. He graduated in 1891, with the degree of B.C.L. and was called to the Quebec Bar the same year. He soon became an acknowledged leader in his chosen profession and in 1896, joined the Law Faculty of Laval, where, for ten years, he lectured on Canadian Constitutional Law. He was elected to the House of Commons for Gaspé in the general election of 1896, a constituency he continued to represent until the defeat of the Laurier administration in 1911. Although defeated in Gaspé in that election, he was elected for the constituency of Rouville and retained his seat in the Commons until summoned to the Senate in June, 1930. In 1904, he was appointed Solicitor General by Sir Wilfrid Laurier and two years later was promoted to cabinet rank as Postmaster General and Minister of Labour.

Early in his Ministry he visited Japan to arrange a settlement of the vexed problem of Japanese immigration to British Columbia. He represented Canada at a special convocation of the International Postal Union at Berne, Switzerland in 1909 and the following year at the opening of the first Parliament of the South African Union.

Mr. Lemieux was co-author with Mr. Mackenzie King of the Industrial Disputes Investigation Act of 1907. This legislation, familiarly known as the "Lemieux Act," created widespread interest, not only in Canada, but in other countries as well, and its basic principles are still incorporated in Canadian conciliation procedure.

A few months prior to the general election of 1911, Mr. Lemieux was transferred from the portfolio of Labour to that of Marine and Fisheries. Although no longer a member of the Government after 1911, he was known as "Quebec's most energetic recruiting sergeant" in the first World War.

In 1921, and again in 1924, he refused a portfolio in the cabinet of Mr. Mackenzie King, and also the Lieutenant-Governorship of Quebec. He was elected Speaker of the House of Commons in 1922 and again in 1926. He continued as First Commoner until 1930 when he was elevated to the Senate. His death occurred on September 28, 1937.

Rt. Hon.
William Lyon
Mackenzie
KING,
O.M., C.M.G., LL.D.

1909-1911

Rt. Hon. William Lyon Mackenzie King, Canada's first full-time and Sir Wilfrid Laurier's last Minister of Labour, served a long and exacting apprenticeship before entering upon the duties of that high office.

Mr. King was born in Berlin (now Kitchener), Ontario in 1874. At the age of 17 he matriculated to the University of Toronto, from which he graduated with high honours and an Edward Blake scholarship four years later.

He inherited his life-long interest in social, economic and political problems from his maternal grandfather, William Lyon Mackenzie, the patriot leader in Upper Canada in 1837. This interest developed steadily during the years that he was a student at the University of Toronto and a fellow and post graduate student at the University of Chicago. While in Chicago, Mr. King lived at Hull House and spent his spare time in case studies at that great social service centre. What he learned there of the manner in which the poor and the immigrant classes were being exploited profoundly impressed him. When he returned to Toronto in 1898, he discovered similar sordid conditions in establishments working on Canadian government contracts. These he reported in person to Hon. William

Mulock, the Postmaster General. His revelations started a chain of legislative action. The Fair Wages Resolution was passed by Parliament in 1899. The following year the Department of Labour was established, and Mr. King was persuaded to give up an academic career to become Deputy Minister of Labour and Editor of the LABOUR GAZETTE.

During the eight years that he was Deputy Minister, Mr. King was largely responsible for drafting much important legislation, including the Industrial Disputes Act of 1902; the Railway Labour Disputes Act of 1903 and the "Lemieux Act" of 1907. He is credited with having personally settled over 40 labour disputes in the same period, some of which presented serious threats to the national economy. He was no less successful in handling delicate situations arising from Asiatic immigration and in stopping the dubious practice of importing strike breakers from Britain.

In 1908, he resigned as Deputy Minister of Labour and was elected to the House of Commons for North Waterloo. The following year he became Canada's first full-time Minister of Labour. The general election of 1911 resulted in the overthrow of the Laurier administration and Mr. King suffered personal defeat. He was not returned to the House of Commons until the general election of 1921, two years after he had been elected leader of the Liberal party. During the intervening years, he conducted a survey of industrial relations for the Rockefeller Foundation and in conciliation work in wartime industries in the United States. His well-known book, "Industry and Humanity," published in 1919, is, in essence, a report based on that survey.

Mr. King's election to the leadership of the Liberal party in 1919, and the return to power of that party in 1921, brought to a close his specialized work in the field of industrial relations. He had served an honourable apprenticeship in government administration. Henceforth he was to devote his energies and his well-trained mind to giving leadership in an ever-expanding national and international economy, until his retirement from public life in 1948.

On July 22, 1900, Mr. King arrived in Ottawa from Europe, where he had been on a Harvard University travelling fellowship. He had given up a promising academic career at Harvard to become a Canadian public servant. Hardly anyone in the capital, other than a few members of the government were even mildly interested in his arrival. No one could have been aware that a future Prime Minister and world statesman had come amongst them and that a new epoch in Canadian public life had been born. A modest office in the old Molson's Bank Chambers at 14 Metcalfe Street had been prepared for him and he entered at once upon his duties as Deputy Minister of Labour and editor of the LABOUR GAZETTE.

On July 22, 1950, just fifty years later to the day, Mr. King, in the fullness of years of outstanding service and bearing innumerable honours passed peacefully away at his summer home at Kingsmere in the Gatineau hills, a few miles from Ottawa. For more than 21 years he had been Prime Minister. He had played a leading role in Canada's evolution from semi-colonial status to equal rank with the other nations of the British Commonwealth and a world power in her own right. He had contributed greatly to the social, industrial and economic life of the nation and to the unity of the many peoples who make up its population. He had given distinguished leadership to Canada throughout the Second World War and in the early post-war years. He left a mark on the life of his day and generation that will not be soon effaced.

Hon.
Thomas Wilson
CROTHERS,
K.C.

1911 to 1918

Although he had been prominent in legal and academic circles in Western Ontario for several years, Hon. Thomas Wilson Crothers could scarcely be considered a national figure in the field of industrial relations at the time of his appointment as Minister of Labour in the first cabinet of Sir Robert Borden in 1911. His interest in education was

recognized in 1910 when he was made Chairman of the Ontario Text Book Commission that investigated the prices of primary and secondary school text books.

It became his national duty to administer the Department of Labour throughout the First World War. That experience taxed his ability and energy to the limit. In the end his health gave way and he was forced to resign less than ten days before the signing of the armistice in 1918. He was appointed to the Senate, but his death occurred before Parliament re-assembled, and he never took his seat.

Mr. Crothers was born on New Year's Day, 1850, in the small community of Northport, Prince Edward County, Ontario. He was educated in the Northport schools and at Albert College, Belleville. He studied law in the offices of Foy, Tupper and Macdonald and later with Bethune, Osler and Moss in Toronto. Before beginning the practice of law in St. Thomas in 1880, he was for three years principal of the High School at Wardsville in Elgin County. In the Ontario general election of 1879 he was defeated in West Elgin by the narrow margin of seven votes. His first entry into Federal politics was in the general election of 1908, when he was elected in West Elgin. He held the seat until he resigned ten years later.

The outbreak of war in 1914 initiated four years of intense governmental activity in solving an almost continuous stream of unprecedented problems. Writing of the work of the Labour Department a well-known journalist of the early post-war period stated: "To know when to conciliate, when to use moral suasion, when to use wartime compulsion; to be able to handle conflicting opinions and interests and to hold even a moderate degree of respect and esteem from both sides was a very difficult task."

The problems of finding and assigning workers for munitions plants, farms and even the armed forces became a vital concern of the Department of Labour. Labour unrest was all too common and conciliation machinery had to be strengthened. Manpower inventories had to be taken, anti-loafing legislation passed and in 1917 the conscription issue rocked the country. Commodity prices rose sharply and made necessary the setting up of controls.

In the early autumn of 1918, Mr. Crothers' health failed and four days before the armistice that ended the World War, he resigned.

Senator
Gideon Decker
ROBERTSON,
LL.D.

1918-1921; 1930-1932

Senator Gideon Decker Robertson, Canada's sixth Minister of Labour, held a number of unique records. He was the first Minister of Labour from the ranks of labour. He never contested a parliamentary election and never held a seat in the House of Commons. He was the first representative of organized labour to be appointed to the Senate.

He was the first, and so far the only Senator to hold the portfolio of Labour and was the only Minister of Labour who has served under three Prime Ministers. Unlike his five predecessors in that Ministry, he was not "learned in the law." However, he continued the tradition somewhat tenuously inasmuch as his paternal grandfather had been a lawyer in Scotland.

Senator Robertson was born in Welland, Ontario, in 1874. He was educated in the public and high schools of his native town and in 1893 entered the service of the Canadian Pacific Railway as a telegrapher. He took an active interest in labour union affairs, to such purpose that in 1908, he was made General Chairman of the Order of Railroad Telegraphers. Six years later he became Deputy President and in 1915, Vice-President of the Order for Canada.

Senator Robertson displayed exceptional ability as a mediator in labour-management disputes during the war years. This, together with his refusal to go along with the anti-conscriptionists among the leaders of organized labour made him a logical choice for a seat in the Senate, after the Government had decided to appoint a representative of labour. He was given the Senate appointment in January 1917, and the following October was made Minister without portfolio in Sir Robert Borden's cabinet.

Among the notable labour disputes in which Senator Robertson used his good offices were the controversy between the C.P.R. and its conductors and trainmen in 1916; the Nova Scotia coal strike and the Vancouver shipbuilding strike in 1918, and most prominent of all, the Winnipeg Civic strike of 1919. In the latter case he was threatened with bodily harm by the Bolshevik leaders in the strike if he appeared in Winnipeg. The threat did not deter him, however. He went to Winnipeg and directed operations in quelling street riots and in bringing to an end a reign of violence that has had no parallel in Canadian labour history.

Shortly after the United States declared war in the spring of 1917, Senator Robertson went to Washington at the request of the American government to pass along the experience of Canada in wartime labour administration.

Early in November 1918, Mr. Crothers resigned from the Ministry and Senator Robertson was at once appointed in his stead. The first World War ended a few days later and the task of converting the country from a wartime to a peacetime economy had to be undertaken at once. The administrative duties of the Minister at the time were scarcely less difficult than those encountered by his predecessor at the outbreak of war. Conditions were unprecedented and many problems had to be resolved by the "trial and error" method.

To add to his difficulties, other administrative duties were assigned to him, including the Government Printing Bureau; employment offices co-ordination; technical education and Canada's obligations in connection with the International Labour Office.

A large measure of Senator Robertson's success in solving early post-war problems was due to his ability to enlist the co-operation of federal and provincial officials, labour unions and industrial, commercial, transportation and construction interests.

Rt. Hon. Arthur Meighen succeeded Sir Robert Borden as Prime Minister in 1920. In the general election of 1921, the Meighen government was defeated and Senator Robertson reverted to his former position with the Order of Railroad Telegraphers. With the return to power of the Conservatives in 1930, under the leadership of the Rt. Hon. R. B. Bennett, Senator Robertson was again appointed Minister of Labour.

The great depression of the 30's was already becoming world wide. Legislation to provide immediate relief was passed by Parliament at once and the Minister of Labour was charged with the heavy task of its administration. In addition, three years of drought on the prairies was bringing ruin to thousands of farmers. To make a personal appraisal, the Minister paid a flying visit to the prairies in 1931. The scenes of desolation that he saw depressed him greatly. That, coupled with overwork in his Department, undermined his health, and a few months later he resigned his portfolio. In April, 1932, he was sufficiently recovered to head the Canadian Delegation to the International Labour Conference of which he was elected President, the first Canadian to be accorded this honour. His illness returned, however, and a great humanitarian and devoted public servant was taken by death in August, 1933.

Hon.
James
MURDOCK,

1921-1925

Like his predecessor in the Ministry, Hon. Senator G. D. Robertson, Hon. James Murdock, Minister of Labour in the first Mackenzie King cabinet, had attained to high office in one of the Railroad Brotherhoods. For 16 years (with the exception of a few months in 1920-21, when he had served as a member of the Board of Commerce) he had been Vice-President and Chief Canadian Executive of the Brotherhood of Railroad Trainmen.

Mr. Murdock was the son of a British Indian Army officer and was born in Brighton, England, in 1871. Following the death of his father and mother, he was brought to Canada as an adopted orphan in his early childhood and was given a common school education. His boyhood was not too happy, and early he determined to get away from an environment in which he felt his limitations.

He was working in Leamington as a grocer's delivery boy when one day, after he had placed his deliveries on the train, he just bolted with the spirit of a young colt. For him there was no turning back. The next job he got was in a C.P.R. gravel pit. From there he graduated naturally into the orbit of the Brotherhood of Railroad Trainmen. In 1890, he joined the operating service of the C.P.R. as a trainman at London, Ontario.

His first venture into politics was in the general election of 1921, when he was defeated in the federal constituency of South Toronto. However, he was appointed Minister of Labour in December, 1921, and was provided with a seat in the House of Commons by acclamation as representative of Kent County in January, 1922.

During the summer of 1922, Mr. Murdock summoned a Dominion-Provincial conference in Ottawa to discuss the problems of unemployment. Provincial and municipal officials, leaders of organized labour and of industrial, commercial and construction interests attended. A more or less determined attempt was made to fix the responsibility for the relief from unemployment on the Federal Government. Nearly a week was spent in heated arguments in which the Minister held bluntly to his claim that unemployment was a provincial responsibility, and the conference broke up without having extracted from Mr. Murdock any change in Federal policy.

In 1924, a decision in a test case made by the Privy Council declared the Industrial Disputes Investigation Act of 1907 *ultra vires* of the Federal Parliament and Mr. Murdock piloted an amending Bill through the Commons, restricting the Act's application to matters under federal jurisdiction.

Later in the same year, Mr. Murdock's course in connection with the failure of the Home Bank was made the subject of a Parliamentary investigation which assumed a decidedly partisan complexion. In the end, the Minister's course in the incident was vindicated. Mr. Murdock was defeated in the general election of 1925 and resigned from the Ministry of Labour. He was again defeated in the general election of 1926, and was appointed to the Senate in 1930. His death occurred in Ottawa in May, 1949.

From a boyhood that was none too happy, he mastered the experiences of his early environment until it was said of "Jim Murdock" that "his concern for his fellow men constituted his main passion in life."

Hon.
John Campbell
ELLIOTT,

K.C.

1926

Hon. John Campbell Elliott was appointed Minister of Labour in March 1926 to succeed Hon. James Murdock, who was defeated in the general election held late in October, 1925. The following month Mr. Elliott was also given the portfolio of Health and Soldiers' Civil Re-establishment.

Although that election had resulted in the official opposition securing the largest group in the House of Commons, Prime Minister Mackenzie King relied on the support of the small group of Progressives in the House to carry on the government. However, he found his position untenable and the government resigned on June 28. Mr. Elliott was thus Minister of Labour for less than four months, and that during a period when the government, lacking a working majority, was virtually powerless to initiate any contentious legislation.

Mr. Elliott was born on a farm in Middlesex County, Ontario, in 1872. He qualified as a teacher at Strathroy and Glencoe secondary schools. Subsequently, he entered Trinity University in Toronto, from which he graduated in law in 1898 and from Osgoode Hall in 1905. He was elected to the Ontario legislature in the general election of 1908 and was re-elected in 1911 and in 1914. He was first elected to the House of Commons in 1926 as Member for West Middlesex, and retained his seat in subsequent elections until his elevation to the Senate in 1940.

The federal general election in September 1926, gave Mr. Mackenzie King a working majority in the House of Commons and he appointed Mr. Elliott Minister of Public Works, a portfolio he held until 1930 when the Government was defeated. Following the general election in 1935 Mr. King again became Prime Minister and Mr. Elliott was made Postmaster General. He resigned that portfolio in January 1939 as a result of failing health and a year later was elevated to the Senate. He never regained his health, however, and died suddenly in Ottawa in December 1941.

Hon.
George Burpee
JONES,

1926

Hon. George Burpee Jones was Minister of Labour in the interim cabinet formed by the Rt. Hon. Arthur Meighen, after the resignation of Prime Minister Mackenzie King on June 28, 1926. The new cabinet was sworn in on July 13 and this was virtually the opening incident in the election campaign which ended on September 14 in the defeat of the Meighen administration. Thus Mr. Jones' tenure of the Ministry of Labour was devoted almost solely to election activities.

Mr. Jones was descended from United Empire Loyalist stock and was born at Belleisle Bay, New Brunswick in 1866. He was given a common school education at Apohaqui Superior School and at the

age of 12 entered the employ of a general merchant. After six years of apprenticeship, he became manager of a general merchandising and lumber business. Five years later he and his brother commenced their own business at Apohaqui under the firm name of Jones Brothers, lumber manufacturers and general merchants. The business prospered and in due course Mr. Jones joined the directorates of other important commercial undertakings, including the Bayside Lumber Co. in Nova Scotia, the New Brunswick Telephone Co. and the Saint John Daily Standard.

Mr. Jones took an active interest in municipal affairs and for 25 years was chairman of the Apohaqui School Board. He was elected a member of the New Brunswick legislature in 1908 and was re-elected in 1912, 1917 and 1921. In December 1921, he was elected to the House of Commons and was re-elected at subsequent federal elections until he was summoned to the Senate in 1935. He died at Sussex, New Brunswick, in April 1950, at the age of 84.

Hon.
Peter
HEENAN,

1926-1930

“Peter the Peacemaker” was the well-earned sobriquet frequently applied to Hon. Peter Heenan, Federal Minister of Labour from 1926 to 1930 and Ontario Minister of Labour from 1941 to 1943. During his years in the Federal Ministry he was credited with having personally prevented or settled more than 160 labour strikes.

Consequently, he was justly proud of this evidence of the appreciation and esteem of his fellow Canadians. That, and his success in persuading the Dominion and Ontario to agree to the payment of old age pensions, as well as his having earned a medal for youthful prowess as a professional football player, he considered as among the crowning achievements of his life. He was "a son of the people" and in his day worked as a coal miner, a deep sea diver, a professional football player and a locomotive engineer.

Mr. Heenan was born in Tullaree, Ireland, in 1874, but moved with his family to England at an early age, and was educated at an English public school. Later, he served his apprenticeship as a locomotive engineer in England, before going to Costa Rica to work on the railways there. The climate of Costa Rica undermined his health and he came to Canada in 1902, settling down in Kenora, Ontario, as an engine driver for the C.P.R. He took an active interest in labour union activities as well as in the civic affairs of his adopted town. In 1919 he was elected to the Ontario legislature for Kenora. Six years later he resigned his seat to contest—and win—the federal constituency. He was appointed federal Minister of Labour in 1926, but resigned his portfolio when the government was defeated in 1930. However, he retained his seat in the House of Commons and characteristically went back to his job of engine driving at Kenora.

In 1934, he accepted an invitation to become Minister of Lands and Forests in Premier Hepburn's cabinet in Ontario. Seven years later he was transferred to the provincial labour portfolio from which he resigned in 1943. His death occurred in Toronto in May, 1948.

Hon.
Wesley Ashton
GORDON,
K.C.

1932-1935

First elected to the House of Commons in the general election of 1930, Hon. Wesley Ashton Gordon was at once made Minister of Immigration and Colonization and Minister of Mines by the Prime Minister, Rt. Hon. R. B. Bennett. Following the failure of Senator Gideon Robertson's health and his resignation from the Ministry of Labour in 1932, Mr. Gordon was given the portfolio of Labour as well.

He was thus the administrative head of three important Departments of Government from 1932 to 1935, years in which the country was just beginning to emerge from the worst economic depression in its history. With some justification his colleagues regarded him as "a bear for punishment."

Relief for the unemployed was perhaps the most serious problem with which he had to deal and he carried out the government's policy, which had been formulated earlier, with discretion and efficiency. In addition, his term in the Labour Ministry was marked by a number of labour disputes in which the Department took an active part under the I.D.I. Act. He was credited with having personally averted a critical railway strike, and by his impartial approach to labour problems to have won and kept the confidence of organized labour in general.

Mr. Gordon was a native of Owen Sound, Ontario, and was born in 1884. After his graduation from Osgoode Hall and his admission to the Ontario bar, he developed a successful law practice in Haileybury, Ontario, and soon became an authority on mining law and the mining industry in general. He took an active interest in educational affairs in his adopted town and was largely responsible for the establishment of the Haileybury School of Mining, which continues to make a significant contribution to the mining industry in northern Ontario.

During his first session in the House of Commons he was made Chairman of the Special Committee which investigated the Beauharnois Power Company and the methods by which it obtained a lease of valuable water rights on the St. Lawrence river.

Mr. Gordon was defeated in the general election of 1935 and returned to his private law practice in Haileybury. His death occurred in Toronto in February, 1943, following a lengthy illness.

Hon.
Norman McLeod
ROGERS,

1935-1939

“An acknowledged authority on constitutional law” who had “devoted many years to the study of government and political science,” Hon. Norman McLeod Rogers was Minister of Labour at a time when the world was looking back on the economic wreckage left by the great depression and looking forward to the almost certain outbreak of the second World War. Under such circumstances the portfolio of Labour was of peculiar importance and to accept it required courage and a keen sense of obligation to render public service.

Mr. Rogers was a notable example of the scholar in public life. His speeches in Parliament and throughout the country displayed the clarity, balance and close reasoning of the skilled classroom lecturer, who knew little of and seemed to care less, for “political tub-thumping.” Similarly, there was an absence of the dramatic in his administration of the Department.

Mr. Rogers was born in Amherst, Nova Scotia, in 1894. He was educated at Cumberland County Academy and Acadia University. After service overseas in the first World War he won a Rhodes scholarship, graduated in law from Oxford University and was admitted to the Nova Scotia bar. He was appointed professor of history at Acadia and in 1927 came to Ottawa as Secretary to Prime Minister King in the latter’s capacity as President of the Privy Council. Two years later, he was made professor of political economy at

Queen's University. He was first elected to the House of Commons as member for Kingston in the general election of 1935 and received his appointment to the portfolio of Labour. When Canada declared war in 1939, Mr. Rogers was transferred from the Department of Labour to the Department of National Defence. In June, 1940, he met a tragic death when the plane in which he was travelling from Ottawa to Toronto crashed near Peterborough, Ontario.

Hon. Norman
Alexander
McLARTY,
K.C.

1939-1941

Hon. Norman Alexander McLarty was not a career man in politics. He was 46 years old before he contested—and won—a Parliamentary election. Following his election to the House of Commons in 1935, however, he was soon recognized as “cabinet timber.” During six of the ten years in which he was a member of the House he held three portfolios; those of Postmaster General, Minister of Labour and Secretary of State.

His appointment to the Labour Ministry coincided with Canada's entry into World War II and placed upon his shoulders the responsibility for organizing the country's civilian forces for the all-out war effort. The task proved too great for his physical strength and at the end of two years in which he laid the groundwork, he found it necessary to relinquish it to a forceful and energetic successor, Hon. Humphrey Mitchell.

Mr. McLarty was the son of Canadian parents and was born in St. Thomas, Ontario, in 1889. After graduating from the University of Toronto and Osgoode Hall law school, he began the practice of law in Medicine Hat, Alberta, in 1913. Ten years later, he returned to Ontario and established his office in Windsor, Ontario, specializing in corporation law. He entered federal politics in 1935, was elected to the House of Commons as member for West Essex, Ontario, and was appointed Postmaster General four years later.

The outbreak of war in September, 1939, made necessary a re-alignment of the Cabinet to put it on a war footing. Mr. McLarty was transferred to the Ministry of Labour, "one of the most onerous of all wartime portfolios." It was an impressive recognition of his ability as an administrator and organizer, inasmuch as the mobilization of Canadian labour for wartime work was an urgent necessity. His energetic and capable handling of this task set the pattern for Canada's civilian army.

Coincident with these activities, Mr. McLarty piloted the Unemployment Insurance Act, 1940, through Parliament and initiated measures to stabilize wages, as a check on inflationary tendencies. In addition, he worked diligently to settle serious labour-management disputes.

But two years of almost ceaseless demands upon his time and energy broke his health. He was transferred from the Labour Ministry to the less demanding duties of the Department of the Secretary of State. He never fully regained his health, however, and he did not stand for re-election in 1945. He died suddenly in Ottawa in September, 1945, at the comparatively early age of 56 years.

Hon.
Humphrey
MITCHELL,

1941-1950

Hon. Humphrey Mitchell, whose service to the Canadian people was suddenly terminated by death on August 1, 1950, had held the portfolio of Minister of Labour, longer than any one of his predecessors, and in fact longer than any incumbent in the British Commonwealth. In spite of the storm and stress of four years of war, coupled with the scarcely less arduous post-war period, he remained until the end the straight-talking, hard-hitting chieftain in the field of labour-management relations. Compounded of robust individualist, practical idealist, and staunch trade unionist, Mr. Mitchell brought to his administrative and executive functions a fortunate admixture of qualities that enabled him to buttress his decisions on the experiences of this unique background. He was an all-out advocate of the British brand of freedom for the individual and he never hesitated to "crack down" on those elements in any social strata of whose allegiance to the democratic ideal he was doubtful.

Mr. Mitchell was born in Old Shoreham, Sussex, England, 56 years ago. He received his formal education at a higher grade school in his native county and after learning the trade of an electrician came to Canada in 1912, settling down at Hamilton, Ontario, to work at his trade. He joined Hamilton Local 105 of the International Brotherhood of Electrical Workers but later transferred to Local 700, International Union of Operating Engineers, in which he held many offices and in which he always retained his union card. He was a co-founder of the Ontario Executive Board of the Organization.

In 1914, he went back to England to visit his mother and did not return to Canada for four years. Instead, he enlisted in the Royal Navy and saw service throughout the first World War in the Atlantic, South Pacific and in the Mediterranean. Serving on the Cruiser, *Minerva*, he shared in tracking down the German cruiser *Emden* in the Pacific to its last fight in the Indian Ocean early in the war. He also witnessed the finish of the German raider *Koenigsburg* and served with the squadron that supported Lawrence of Arabia in the Mediterranean and the Australians at the Dardanelles. He was at his battle station at the memorable big fleet engagement of Jutland.

Shortly after his return to Canada in 1918, he was made secretary of Hamilton Local 105 of the Electrical Workers. This modest recognition of his willingness and ability to serve was the beginning of progressive appointments to a succession of higher offices in labour organizations during the next 20 years. Among these were: President and Secretary of the Hamilton District Trades and Labour Council; Chairman, Ontario Executive Board, TLC; Secretary, Ontario Executive Board, International Union of Operating Engineers; President

and Secretary of the Central Branch of the Independent Labour Party of Hamilton, and Secretary of the party for Ontario for several years; and Secretary, Hamilton Labour Temple Association. He was one of the founders of the Hamilton Co-operative Dairies. He represented labour on a number of special government committees and commissions, as well as at several meetings of the American Federation of Labour, the British Trades Union Congress and the International Federation of Trade Unions at Brussels, Belgium. He travelled in France, Belgium, Holland, Germany, Poland and Russia to study labour conditions in those countries.

Nor did Mr. Mitchell confine his spare time activities entirely to labour organizations. For three years he was an alderman of the City of Hamilton, a member of the City's Board of Education and of the Board of Governors of Hamilton General Hospital. From 1931 to 1935 he was labour representative for East Hamilton in the House of Commons.

In 1936, he entered the Civil Service in Ottawa as Director of Labour Transference in the Department of Labour. In that capacity, Mr. Mitchell had a great deal to do with the care of homeless unemployed throughout the country. In 1940, he was made Secretary of the National Labour Supply Council and the Inter-departmental Committee of Labour Co-ordination. The following year he was appointed Chairman of an Industrial Disputes Inquiry Commission. This Commission held sittings in various parts of the country and settled nearly a hundred labour-management disputes in the early days of the war. From 1941 to 1943 he was the first Chairman of the National War Labour Board.

Late in 1941, the late Hon. Norman McLarty retired from the Ministry of Labour and Mr. Mitchell was appointed to succeed him. He was elected early in 1942 in a by-election to fill a vacancy in the House of Commons for Welland County, Ontario, and was returned in the elections of 1945 and 1948. At the Twenty-ninth Session of the International Labour Conference, held in Montreal in 1946, Mr. Mitchell was unanimously elected President by the delegates representing labour, employers and governments of 46 countries.

As Minister of Labour during the war Mr. Mitchell was responsible for such matters of vital importance as national registration of manpower, national selective service and economic and industrial stabilization. It was his department which administered the transference of Japanese nationals from the Pacific coast and conducted operations under the National Resources Mobilization Act. Nor were the administrative duties of the Minister in the early post-war years much less onerous. The placement in civilian employment of half a million discharged war veterans, many thousands of whom were given vocational training, as well as the re-orientation of wartime industry, placed a heavy responsibility on the Minister of Labour.

Dealing as it does with intricate industrial relations and with so many potential elements of conflict in the administration of such legislation, the Ministry of Labour has been—and always will be—one of the most difficult portfolios in the government of Canada. As such

it requires a Minister of unusual talents and strength of mind and body. In war and peace the Hon. Humphrey Mitchell measured up to his responsibilities. Recognition of Mr. Mitchell's contribution in maintaining industrial stability was accorded him following the railway dispute in 1948, when the then Prime Minister, Rt. Hon. W. L. Mackenzie King, publicly thanked him at a press conference. He extended to Hon. Humphrey Mitchell the thanks of the Government for breaking a deadlock that "might have had a very serious effect on the critical world situation. We are all deeply indebted to Mr. Mitchell for the care and thought and ability which he had to put to work in the negotiations. I am sure," continued Mr. King, "that most of us do not realize what this situation might have meant in the eyes of those contending with great difficulties in other parts of the world."

Hon.
Milton Fowler
GREGG

1950

Hon. Milton Fowler Gregg, who was appointed Minister of Labour on August 7, 1950 to succeed the late Hon. Humphrey Mitchell, is the Member of Parliament for York-Sunbury, New Brunswick.

He was born of United Empire Loyalist stock on a Kings County, New Brunswick farm in 1892. He received his early education in public and secondary schools and the provincial Normal School. Before enrolling as a student at Acadia University he taught public school for a time. It was while he was a student at Acadia that

World War I broke out and he enlisted at once, proceeding overseas with the first Canadian contingent as a member of the 13th infantry battalion of the Black Watch.

He was wounded at the battle of Festubert in May, 1915, and on his discharge from hospital was sent to the Imperial Officers' Training Corps to qualify for a Commission. For a time he served with an Imperial unit, but in 1916 he was posted as a platoon commander in the Royal Canadian Regiment. Later, he became the Regiment's adjutant and at the time of demobilization commanded a company.

Mr. Gregg was wounded a second time while leading a trench raid in front of Lens in June, 1917, and was awarded the Military Cross for conspicuous gallantry and devotion to duty in the action. In an engagement in front of Arras in August, 1918, he was awarded a bar to his Military Cross for conspicuous gallantry, courage and good leadership in repulsing an enemy attack. In the following month came a series of exploits which won him the Victoria Cross. The official citation which follows gives a description of his gallantry on that occasion.

"For most conspicuous bravery and initiative during operations near Cambrai, 27th September to 1st October, 1918.

"On 28th September, when the advance of the Brigade was held up by fire from both flanks and by thick, uncut wire, he crawled forward alone and explored the wire until he found a small gap through which he subsequently led his men and forced an entry into the enemy trench. The enemy counter-attacked in force, and through lack of bombs the situation became critical. Although wounded, Lieutenant Gregg returned alone under terrific fire and collected a further supply; then rejoining his party which by this time was much reduced in numbers, in spite of a second wound he reorganized his men and led them with the greatest determination against the enemy trenches which he finally cleared.

"He personally killed or wounded eleven of the enemy and took twenty-five prisoners, in addition to twelve machine guns captured in this trench. Remaining with his Company in spite of wounds, he again, on the 30th September, led his men in attack until severely wounded. The outstanding valour of this officer saved many casualties and enabled the advance to continue."

Although wounded three times in this action he recovered in time to rejoin his unit for the advance on Mons, the final battle of the war, and was with his unit there on Armistice Day, November 11, 1918. The following April he was demobilized from the army and entered the service of the federal government in the old Department of Soldiers' Civil Re-establishment where he rendered valuable service in the re-establishment of war veterans in civil life. In the early 1920's he was attached to the Soldier Settlement Board.

On his retirement from government service he went into private business in New Brunswick, but maintained a close interest in the

Canadian Legion and the non-permanent active militia, serving with the New Brunswick Rangers. Following his appointment as Sergeant-at-Arms at the House of Commons in 1934, he served as Honorary Dominion Treasurer of the Canadian Legion and commanded a company in the Governor General's Foot Guards.

At the outbreak of World War II Mr. Gregg immediately re-entered the active army and was appointed second in command of the Royal Canadian Regiment, with which unit he went overseas in the first Canadian division in December, 1939. The following February he was appointed to the command of the West Nova Scotia Regiment in England and served in that capacity until April 1941, when he was made commandant of the Canadian Officers' Training Unit in England. Following a change in army policy in March, 1942, when a majority of officer candidates from the overseas forces was returned to Canada for officers' training courses, he was promoted to the rank of colonel and named to command the Officers' Training Corps at Brockville, Ontario.

Early in 1943, in anticipation of the organization of a Canadian School of Infantry at Vernon, B.C., Colonel Gregg again went overseas to study up-to-date infantry training. Following that, he was promoted to Brigadier and was given command of the School of Infantry in September, 1943, a post which he occupied until the end of the war. For his services in the war he was awarded the C.B.E.

After demobilization he was called to the Presidency of the University of New Brunswick, a position he held with outstanding success for three years. He entered federal politics in 1947, winning the by-election in York-Sunbury in that year. He was appointed Minister of Fisheries in September, 1947, Minister of Veterans Affairs in January, 1948, and Minister of Labour in August, 1950. Mr. Gregg is an honorary D.C.L. of Acadia University and an honorary LL.D. of the University of New Brunswick.

An Episode of 1923

United Mine Workers of America Not Permitted to Affiliate with "Red Trade Union International".

In 1922 the Executive of District 26 of the United Mine Workers of America, which has jurisdiction in Nova Scotia, wrote to the International Executive Board of the United Mine Workers asking whether affiliation with the "Red Trade International" was permissible.

The Executive Board replied with a unanimous "no", and expressed "regret that anywhere working people can be found so woefully deficient in the knowledge of trade unionism that they will blindly follow the false teachings of the propagators of such movements." (*From the LABOUR GAZETTE for February, 1923.*)

CANADA'S DEPUTY MINISTERS OF LABOUR

A Deputy Minister of Labour, as the senior civil servant in the Department, carries full administrative responsibility for its activities, subject to the leadership of the Minister of Labour, who in turn is responsible to Parliament and the people of Canada.

Six men have held the post of Deputy during the Department's fifty-year history. They are: W. L. Mackenzie King, who served from 1900 to 1908; F. A. Acland, 1908-1923; Howard H. Ward, 1923-1934; W. M. Dickson, 1934-1940; Bryce M. Stewart, 1940-1942; and Arthur MacNamara, who took office on January 1, 1943.

Each of the last five has contributed an article, telling something of the problems and events of his term of office. Mr. King's contribution, which was unfinished at the time of his death, is printed in draft form.

Through these six narratives, highlights of the Department's history are presented from the viewpoint of the men who directed its affairs both in time of great events and through the daily round of administrative service.

The Founder of the Department

The following is the first draft of a message which might have appeared in this issue under the signature of the Rt. Hon. William Lyon Mackenzie King, first Deputy Minister of Labour. Mr. King was deeply interested in the plans which have been under way for the celebration of the Fiftieth Anniversary of the founding of the Department of Labour in which he played such a central part. He had hoped to write such a message himself but the condition of his health made it impossible for him to undertake the task. The draft was prepared, a few weeks before his death, along lines which he himself indicated. It received his general approval, subject to the kind of revision to which he subjected every statement that might be ascribed to him. Unfortunately, in the weeks of his last illness it was beyond his strength to attempt even such a revision and the message was left, in its present form, unfinished.

There is a saying that "men may not go back to Astolat;" that the scenes of one's boyhood or the places of youthful endeavour should not be revisited on any sentimental journey because of the intrusion of disillusionment.

Yet I find myself in no such apprehension in journeying through the vista of the years to the founding of the Department of Labour 50 years ago.

Splendid as has been the progress of the Department since 1900, powerful as has become the labour movement that it aided along the arduous road to social justice and on to objectives that were then beyond the horizon, the very establishment of a Department of Labour was, I think, one of the most significant milestones in the industrial-labour history of Canada.

It was not only a part of the development that marked our emergence from our pioneer setting, but it also represented a quickened social consciousness.

Here was something tangible in labour relations—something that would operate to conciliate conflicting views hitherto settled only in one way without benefit of right or reason.

Here was a Department of Government, however small, to which disputes could be submitted and where public opinion could be focused on the issues involved. True, at first it did not possess any power to restrain. The checks and balances of a "cooling-off" period came much later. But it did provide a medium before an impartial body where issues in dispute could be weighed.

Besides, through its monthly publication, the *LABOUR GAZETTE*,

the Department was a clearing house of information on matters pertaining to the developing industrial potential of this country. In addition, it prompted social measures designed to alleviate unfair practices in working conditions.

All these factors—which are now regarded as fundamental to the functioning of our industrial democracy—were considered novel and not at all generally accepted as progressive trends.

Hence the importance of the Department of Labour in the early years of the century.

To carry out our duties we had a small staff of about a dozen extremely competent people who worked hard without any impressive job titles. Mr. Mulock, then Postmaster General, was the first Minister of the Department, and our offices were in the Molson's Bank Building at 14 Metcalfe Street. In the first few years of operation the staff, in addition to myself as Deputy Minister and Editor of the *LABOUR GAZETTE*, included: H. A. Harper, B.A.; F. A. Acland; Robert H. Coats, B.A.; William W. Edgar, B.A.; Daniel J. O'Donoghue; Geo. G. V. Ardouin; Victor DuBreuil; Frank Plant; Edward Williams; Francis W. Giddens; Henry G. Andrews; J. H. Lacelle.

It was a fine team. I can see them all now as they climbed the stairs up 14 Metcalfe to their respective offices.

It has been my fortunate experience to have enjoyed the friendship of several of the outstanding labour leaders during my Departmental and Parliamentary life. In some of my major decisions have drawn on their intimate knowledge of social-economic problems.

In particular, I cherish happy memories of my association with such strong labour champions as Tom Moore and "Paddy" Draper. They were of the school of Sam Gompers, and these three "musketeers" campaigned most successfully in the hurly-burly of pioneer labour movements on this continent.

My first association with "Paddy" Draper was when as a young editor I took to him my hand-written manuscript of the first issue of the *LABOUR GAZETTE*. I remember well his kindly instructions on lay-out over the stone "bank" at the Government Printing Bureau.

Tom Moore was also my confidant, particularly in the turbulent years after the First World War when Kremlin emissaries of the Third International began their campaign of infiltration in Canada and the United States.

Moore and Draper both wielded an effective gavel and kept the Moscow disrupters clear of the labour movement.

In conclusion, I would like to felicitate both the workers of Canada and the Department of

Labour. In all the vicissitudes of the years the one has been the corollary of the other. Both have come a long way, often over rough ground, and have passed on a splendid heritage to their successors.

We must remember that on the horizon of life the fixed stars are few. But even in a changing world there are fundamentals of faith upon which all progress is based.

Life is like a sun-dial. This wonderful instrument teaches us every hour and every day the necessity of order and balance and harmony.

In its reflection of the operation of natural law, in its measurement of time and space, we see a harmonious relationship.

This lesson is particularly applicable to industrial relations and in the larger sphere of international relations at this critical hour.

Failure to live in the orbit of that ordained system of order and harmony means the destruction of the individual, or the segment of society, or the nation that flouts it.

The Pioneer Years

by **F. A. Acland**

Serving from October 1, 1908 to September 1, 1923, a span of 15 years, Mr. F. A. Acland had the longest term of Canada's six Deputy Ministers of Labour.

Now in his 89th year of age, Mr. Acland here reminisces of personalities and events during his years of office.

My connection with the Department of Labour began on March 1, 1907, when I assumed the duties of Secretary of the Department. Mr. Mackenzie King, who had been Deputy Minister since the inception of the Department in 1900, when it consisted of little beyond the *LABOUR GAZETTE*, a monthly magazine with an extensive corps of correspondents representing every city or extensive community in the Dominion, was expected to vacate the position shortly and enter public life. I was to succeed him as Deputy Minister; that was the unwritten understanding and it was carried out in due course.

Actually Mr. King had invited me as early as 1905 or early 1906 to join the Department, with a view to succeeding him when he entered Parliament, and I had visited Ottawa and gone over the situation with him and had decided in the negative. My life

had been spent in newspaper work in which I had perhaps earned some reputation. I was at the time living in Winnipeg for the *Globe* and writing of the vast developments under way in Western Canada. Moreover, I was 45 and it seemed a little late in life to make so radical a change.

In the fall of 1906 a strike occurred in the coal mines at Lethbridge, Alberta. These mines largely supplied all southern Saskatchewan and the strike caused an extensive shortage in that region. There was much public excitement. Mr. Mackenzie King wired me at Winnipeg asking if I would go with him to Lethbridge to assist in the

negotiation of a settlement. I knew something of the situation and was acquainted with the parties concerned. I agreed, and when a settlement had been negotiated Mr. King renewed his request that I would join him in Ottawa, and I agreed to come on the first of March, 1907.

Sir William Mulock had, by this time, moved on to the high judicial side of his notable career and the office of Postmaster General was in the hands of the Hon. Rodolphe Lemieux, the Department of Labour, however, continuing with the Postmaster General. Mr. Mackenzie King was compelled to be much away from Ottawa at this time and I came frequently into contact with Mr. Lemieux and found him a delightful gentleman to work with.

It was just at this time (1907) that the Industrial Disputes Investigation Act, 1907, was being enacted; Mr. King was of course the real author of the measure, but the legislation was so much before the House of Commons for details and was handled always so tactfully by the Minister that it came to be described by the press and the public as the "Lemieux Act" and I have always thought that Mr. Lemieux found some pardonable pride in having his name thus popularly associated with this important statute.

Unless my memory is at fault, the first Conciliation Board established was concerned with a strike of longshoremen at Montreal a few weeks after I became connected with the Department. Mr. King was away from Ottawa at the time and the Minister asked that I would personally look into the situation and see if the dispute could not be referred

to a Board of Conciliation under the new statute.

That sounded a simple proposition. It meant one crowded meeting after another of excited workmen, and several gatherings of shipowners, though here there was less evidence of excitement. At the employee gatherings the French-speaking were in the great majority, and in endeavouring to explain the new statute I ventured into French, though I had never previously attempted to address an audience in French. The audience was kind and gave me a little cheer and, to put the matter briefly, after two or three somewhat noisy gatherings the men agreed to resume work and have the dispute go to a Board of Conciliation; the employers had already agreed to this course.

From this time onward the work of the Fair Wages officers of the Department was considerably lightened. Whilst invaluable work was being continually done by these officers, of whom I recall particularly the two who were functioning at the beginning of my connection with the Department, Mr. J. D. McNiven and Mr. Victor DuBreuil, yet their best efforts often could not go beyond getting the parties to a dispute to agree to settlement or attempted settlement before a Board of Conciliation. Mr. McNiven I had known in Western Canada; he had been for some years a member of the Legislature of British Columbia and was destined, in later life, to become Deputy Minister of Labour for that province and to have the honour to be the father of a distinguished member of the judiciary of Saskatchewan.

Among other important officers functioning in the Department

when my connection with it began was Mr. R. H. Coats, at the time editing the *LABOUR GAZETTE*, and destined, in later years, to acquire fame as Dominion Statistician. He and I had been conferees on the *Toronto Globe*, probably about the same time that Mr. Mackenzie King had sought a brief experience in journalism, trying it out both with the *Globe* and with the *Mail*, though it was, of course, with the *Globe* only that he fell for a few months under my limited jurisdiction as city editor.

To put the matter briefly, things went much as public sentiment had appeared to forecast. Mr. Mackenzie King received a nomination to Parliament, the constituency being that of North Waterloo, which embraced his native town of Berlin, long since known as Kitchener. He retired from the Civil Service and I succeeded him as Deputy Minister of Labour. The remainder of Mr. King's remarkable career does not, of course, belong here, though I think all officers and former officers of the Department of Labour will always feel a measure of pride in the fact that this was the Department in which that career began. However, destiny had decreed a period of rough waters for Mr. Mackenzie King. Sir Wilfrid Laurier's brilliant Cabinet of 1911 was heavily defeated at the polls and Mr. King was out of Parliament for some years.

The Hon. T. Crothers who became Minister of Labour under Sir Robert Borden's premiership, made no important change in policy, and work in its various branches was continued much along the lines which had been laid down.

The first great war, however, was looming in the distance and,

like a sharp east wind, cut at new Government activities which were not especially calculated to win the war; but all branches were encouraged to infuse the war spirit wherever practicable and it was astonishing how often it could be done; after all most of us had sons or daughters or brothers or sisters at the Front or near it, and it was an aid to them to carry on at any useful work at home.

Two Ministers in turn who had been active trade union leaders succeeded each other in office, during the years that followed, Senator Gideon Robertson and Mr. James Murdock. It was about this time that the question arose if the Printing Bureau, with its attached Bindery and Stationery branches, which went naturally with the Printing Branch, would not be more appropriately placed under the Minister of Labour; hitherto all had been, since Confederation, with the Department of State. There was no obvious advantage in the change save, perhaps, that one or two positions might be cut out.

It was, I think, under the regime of the Hon. Senator Robertson that I carried on for a while as Deputy Minister of Labour and also as King's Printer, keeping my office in the Department of Labour. No particular difficulty was found in carrying on in this way save that it was obviously impossible always to give quite requisite attention at all points. When a little later on, Mr. Murdock replaced Senator Robertson as Minister, the Minister preferred that the Labour Department and the Printing Bureau should not be tied and the Government decreed that the Printing Bureau should revert to

the Secretary of State. In the re-arrangement, I continued as King's Printer and was succeeded as Deputy Minister of Labour by Mr. H. H. Ward in 1923.

I was destined to carry on as King's Printer for ten years longer, when, in 1933, being then 71½ years of age, I retired, the then Minister, as Secretary of State, being the Hon. C. H. Cahan, a very charming gentleman. I may say that during my 26 years of Service with the Government, 17 with the Department of Labour and 9 with the Department of

State, I served under 16 different Ministers.

I am in my 89th year and one is disposed to ramble on with reminiscences, but I feel that I have already exceeded reasonable limits. I close therefore with the hope that the Department of Labour may continue to flourish and prosper and with my respects and best wishes to the Minister and Deputy Minister and certainly not overlooking the Editor of the *LABOUR GAZETTE*, of which the semi-centennial is being now celebrated.

The First Post-War Period

by **Howard H. Ward**

Administration of old age pensions and unemployment relief were the major duties added to the Labour Department during Mr. Ward's term of office, September 1, 1923 to January 1, 1934.

As a retired Deputy Minister of Labour for Canada, I deeply appreciate the very kind invitation of the present incumbent of that office, Arthur MacNamara, C.M.G., LL.D., to contribute a few paragraphs for inclusion in a special commemorative issue of the *LABOUR GAZETTE* in September, 1950, to mark the Fiftieth Anniversary of the Department of Labour for Canada, and also of the *LABOUR GAZETTE*.

I commenced my tenure of office on September 1, 1923, and terminated it on January 1, 1934,

a term of ten years and four months.

During my term of office as Deputy Minister, I served under six Ministers of Labour, representing both Liberal and Conservative administrations.

Six Ministers in a period of around 10 years might be pictured as considerable of a change-over, but I do not recall that this in any way altered the general policy of the Department. Though no two Ministers were alike in temperament or disposition, I found little difficulty in my relationships with any of them. I speak most kindly of them all, and consider it a great privilege to have served under them.

It was, indeed, a big moment in my life on the day that I took office as Deputy Minister, for I realized that I was following two illustrious predecessors. Mr. King had climbed from this post to become Minister of the Department and, later on, to become the Prime Minister of Canada. I sensed the great regard he held for the Department, and quite naturally so, for, as has often been remarked, it was largely of his own creation.

I have had the pleasure of personally knowing each of my five brother Deputies. The Deputies have averaged a little better than 8 years in office, with Mr. Acland having the longest term, around 15 years. If I mistake not, the Department has been presided over by 15 Ministers in its 50 years of existence, not counting those who were appointed Acting Ministers, so that the average for Ministers is just over 3 years. The Hon.

Thomas Crothers held the portfolio of Minister of Labour for a period of 7 years (1911-1918), being exceeded only by the Hon. Humphrey Mitchell. One Minister, Hon. Senator G. D. Robertson, held the portfolio on two occasions, from 1918 to 1921, and again from 1930 to 1932.

* * *

When I took office as Deputy, I discovered that shortly before, in 1922, the administration of the Government Annuities Act, 1908, had been transferred to the Department, and, on the eve of my appointment, that the Combines Investigation Act, 1923, had been placed under the Minister of Labour for administration, thus adding considerably to the duties of the Department. Earlier, in 1918 and 1919, additional duties had befallen the Department by way of administration of the Employment Offices Co-ordination Act and the Technical Education Act, respectively and further, in 1919, the Department was assigned the responsibility of handling matters arising out of the establishment of the International Labour Organization of the League of Nations under the authority of the Treaties of Peace.

Up until 1918, the chief duties of the Department, established under the Conciliation Act, 1900, and created a separate Department by the Labour Department Act in 1909, comprised the administration of certain provisions of the Conciliation Act, 1900, designed to aid in the prevention and settlement of labour disputes; the administration of the Government's Fair Wages Policy of 1900 for the protection of workmen

employed on Dominion Government contracts; the collection, classification and dissemination of statistical and other information relative to conditions of labour; the publication of a monthly periodical known as the LABOUR GAZETTE; and the administration of the Industrial Disputes Investigation Act, 1907, applicable to disputes in mines and public utilities.

These were the manifold administrative duties of the Department at the time of my assuming office as Deputy Minister, in September of 1923.

Subsequently, additional duties befell the Department: the administration of the Federal Old Age Pensions Act of 1927; the Technical Education Extension Act, 1929; the Fair Wages and Eight Hour Day Act, 1930, supplementing the Fair Wages Policy of 1900; the Vocational Education Act of 1931; and the administration of the Unemployment Relief Act of 1930 and continuing Relief Acts of 1931, 1932 and 1933. There also befell the Department the administration of the Government's policy of assisting the municipalities and provinces in bearing a proportion of emergency disbursements for relief of distress arising from unemployment in the winters of 1921-22, 1922-23, 1923-24 and 1926-27, with the latter two periods only being within my regime as Deputy.

* * *

Joined with the duties of Deputy Minister was the office of Registrar of Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act of 1907. I recall that in 1923, shortly after I took office, the constitutional validity of the

Statute was challenged in the Courts, with the matter finally reaching the Judicial Committee of the Privy Council. The decision of the Judicial Committee, which was delivered on January 20, 1925, pronounced the Act in its then existing form to be beyond the competence of the Dominion Parliament.

Following this decision an amending Act was passed by Parliament in the 1925 Session limiting the application of the statute to disputes not within the exclusive jurisdiction of any province, but providing also that provinces might by legislation relinquish any disputes within their jurisdiction to the federal authority. In this latter regard all provinces, with the exception of Prince Edward Island, passed ancillary legislation. Thus, the I.D.I. Act was restored to more or less its original status. It might be remarked that the proceedings under the Statute were somewhat restricted during the period it was before the Courts.

From the inception of the Act in 1907 up to and including the year ending March 31, 1934 (which latter date was just subsequent to my retirement), the number of applications for Boards was 802, and 536 boards were established. The number of cases in which strikes were not averted or settled was only 38; this, I submit, indicates that the I.D.I. Act proved very beneficial to the nation's industrial life. During my term in office something like 205 boards were applied for, and around 106 established. In some instances boards could only be established with the joint consent of both parties, and at times this was not forthcoming. It should be borne in mind, of course, that

the effectiveness of the I.D.I. Act was greatly aided through the conciliation efforts of the Minister and Departmental staff. It, perhaps, should be pointed out that this Statute has attracted considerable favourable attention from legislators and publicists throughout the world. The authorship of the Act is mainly credited to Mr. Mackenzie King, who, at the time of its enactment, was the Deputy Minister of Labour.

Owing to increased demands made upon the Department's Conciliation Service, the need arose for a directing and co-ordinating head for these activities at Ottawa. A position of Chief Conciliation Officer was accordingly created, through the Civil Service Commission, and the appointment was filled on November 1, 1927. To further strengthen this important service, the Department in 1928 established a position of Wage Investigator and Mediator in the Maritime Provinces, with headquarters at Halifax. Then, too, for the Quebec area, this service was strengthened by the full time appointment of an experienced Conciliator, with headquarters at Montreal. Thus, with additional officers already located at Toronto and Vancouver, the Department felt that it was quite well equipped to meet the demands made upon it for mediation.

The duties of the Conciliation Officers were actually two-fold, inasmuch as important duties devolved upon them also in connection with the administration of the Government's Fair Wages Policy and the supplementary Fair Wages and Eight Hour Day Act. This legislation applied to varied Government works and supplies contracts, and

works undertaken directly by Government Departments, as well as to works aided by Dominion public funds. To briefly illustrate the operations of the Fair Wages Policy during my term in office, it will perhaps suffice to refer to the fiscal year 1931-32 when the Department prepared or sanctioned fair wages conditions in connection with 272 contracts for works executed by various departments of the Government, as well as several contracts for works aided by Dominion funds; also contracts for supplies, embodying fair wages conditions, totalled \$200,000 in round figures. Complaints of alleged non-compliance with fair wages conditions, of which there were about 40 in 1931-32, were always investigated; and, when found to be justified, steps were taken for proper settlement.

* * *

I have mentioned that the administration of the Government Annuities Act, 1908, was transferred to the Minister of Labour in 1922, a little more than a year before I assumed office as Deputy. For some years prior to 1922 the administration of the Act came under the Postmaster General. In my first annual report to the Minister of Labour, that for the year ending March 31, 1924, it was shown that from the inception of the Act in 1908, a period of around 16 years, the total number of contracts issued was 6,056, and the total amount of purchase money received was in the sum of \$8,147,634.39. For a number of years, commencing around 1923, an extensive advertising campaign was carried out with a view to making the Government Annuities better known to

the public, and, around 1927, in order to take full advantage of the advertising being carried on, a decision was taken to appoint special representatives in a number of the larger centres of population. These two moves proved most helpful in the sale of Government Annuities. At the conclusion of my term of office as Deputy, according to the annual report for March 31, 1934, the number of Annuity Contracts totalled 18,806, with purchase money received in the sum of \$43,285,489.07. I have noted with great interest the tremendous increase in sales of Government Annuities, i.e., as of March 31, 1949, receipts of \$530,169,462.94. This, I suggest, more or less stems from the policy of advertising and appointment of agents.

Two amendments were made to the Annuities Act in my time. The 1925 amendment reduced the minimum annuity purchasable from \$50 to \$10, the main purpose being to enable employers to purchase outright annuities of \$10 or more as gifts or bonuses for employees who had been with them for many years. The amendment of 1931 reduced the maximum amount payable as an Annuity from \$5,000 to \$1,200 a year, thus restoring the Act to nearer the basis originally intended. The maximum amount payable had been increased from \$1,000 to \$5,000 around the time of World War I.

* * *

The passing of the Old Age Pensions Act in the Parliamentary session of 1927 was one of the highlights during my term as Deputy. The Act was based on the recommendations of a Parliamentary Committee which, in 1924 and 1925, had made an

enquiry into an old age pension system for Canada, in which connection the services of the Department had proved helpful. The administration of the Act was entrusted to the Minister of Labour, who was authorized by regulations duly passed to enter into an agreement with any province passing ancillary legislation.

British Columbia was the first province to take advantage of the Act, with pensions becoming payable as from September 1, 1927. The first old age pension cheque was issued to a Mr. William Henry Derby of Alberni, B.C., and I have among my souvenirs a photograph of the presentation. During my term as Deputy, most of the other provinces passed the necessary legislation and entered into agreements for the payment of pensions. At the end of March, 1934, the total number of pensioners was 86,873, and the amount paid out was \$65,571,079.20, with the Dominion Government's share being \$42,018,002.39. Considerable duties devolved upon the Departmental officials in the drafting of the Old Age Pensions Act. By Order in Council of December 24, 1930, I was appointed a member of the Inter-provincial Old Age Pensions Board.

* * *

As previously mentioned, the Department was entrusted with duties arising out of the relations of Canada with the International Labour Organization, which was formed under Part XIII of the Treaty of Peace, and which held its first session in 1919. These entailed much correspondence, not only with the ILO, but also with other Departments of the Dominion Govern-

ment, with the provinces, and with employers' and workers' organizations. The performance of these duties, along with replying to various questionnaires circulated by the ILO, necessarily entailed a close study on the part of Departmental Officers of the various technical questions which figured on the various Conference agenda and meetings of the Governing Body. Canada was designated as being one of the eight states of chief industrial importance entitled to seats on the Governing Body, which held quarterly meetings. Owing to distance, however, Canada found itself at somewhat of a disadvantage in fulfilling the duties devolving on her. To overcome this handicap, the Canadian Government authorized the appointment of an Advisory Officer resident at Geneva, and this position was filled on January 1, 1925. The Department also had the responsibility of arranging for the composition of the Canadian Delegation each year to the Conference of the ILO held at Geneva, which included two Government delegates, one Employers' delegate and one Employees' delegate, plus a number of advisers for each group. More than one Minister of Labour for Canada has attended the Conference: I recall the names of Hon. James Murdock and Hon. Peter Heenan. At the 16th Session of the Conference, a former Minister of Labour, Senator the Hon. G. D. Robertson, was a delegate from Canada, and it should be mentioned that he was also honoured with the Presidency of the Conference. The writer had the honour of being selected as one of the two Government delegates from Canada to

attend the 7th Session of the Conference, which was indeed a wonderful experience. Twelve sessions of the Conference were held during my term of office, and many important draft conventions and recommendations were passed with the object of securing the improvement of certain industrial conditions throughout the world.

* * *

For several years the financial appropriations of the Department of Labour contained a grant to the Canadian National Safety League, a private association maintaining a "safety first" campaign throughout the Dominion. The prevention of accidents through systematized efforts was recognized as of the utmost importance in the conservation of human life and economic resources. The amount of \$25,000 was provided in the year 1923, and for each of the three subsequent years (1924-1925-1926) further grants to the League were made of \$10,000 in each case. I was for several years an Executive Member of the League.

In September of 1926 the Department had the privilege of receiving a delegation sent by the British Government to study industrial conditions and relations in Canada and the United States. The delegation consisted of seven members, and was headed by Sir Wm. W. Mackenzie, C.B.E., K.C., who was Chairman of the Railway National Wages Board from 1920 to 1925. One of the members was Ernest Bevin, now British Foreign Secretary. The British mission was invited to make its headquarters in the Department of Labour, where all assistance possible was rendered by the Minister and officials of

the Department, including the mapping out of an itinerary covering certain industrial centres in Ontario, Quebec and Maritime provinces. Time did not permit of the Commission visiting Western Canada. The delegation interviewed employers, representatives of work people (trade union officials and others) and workmen themselves. Some of the delegates attended the annual meeting of the Trades and Labour Congress held in Montreal. The Commission also visited the United States of America and studied industrial conditions throughout the east and middle west. In the Commission's report to the British Ministry of Labour in March, 1927, special reference was made to the amount of social legislation, both Dominion and Provincial, governing the industrial conditions of the work-people of Canada, and industrial relations were dealt with at some length.

* * *

Several important Conferences were held during my term of office, and I recall particularly three of them: the Dominion-Provincial Conference held in Ottawa in September, 1923; a similar gathering in November, 1927; and the meeting of the Employment Service Council of Canada in Ottawa in August, 1930.

The Federal-Provincial Conference of 1923 was called in conformity with the expressed wishes of the Provincial Governments, for the purpose of securing an exchange of views relative to the various proposals for legislative action which had been adopted by the International Labour Conference in the form of Draft Conventions and Recommendations.

The delegates in attendance at the Dominion-Provincial Conference of November, 1927, included all the members of the Dominion Cabinet, and the Premiers and various other Ministers of the Provincial Governments. The conference dealt with a wide variety of subjects, including several of interest to labour, namely: (1) participation by the Provinces in International Labour Conferences; (2) Industrial Disputes Investigation Act; (3) continuance of federal aid for technical education; (4) proposed federal aid for unemployment relief; (5) old age pensions; and (6) social insurance (unemployment, sickness and invalidity insurance).

The Employment Service Council of Canada was summoned to meet in August, 1930, by the Minister of Labour, for the purpose of discussing the problem of unemployment which had reached the point as to constitute a matter of national concern. This Council was instituted by the Dominion Government in 1918 for advisory purposes in relation to the operation of the Employment Service and generally on ways of preventing unemployment. Following a two-day session, the Council adopted a series of recommendations embodying its views on emergency steps which might be taken to provide immediate relief of unemployment. The Dominion Government accepted the Council's resolutions as a basis of its legislative policy which was placed before a special session of Parliament in September, 1930.

Extremely heavy responsibilities devolved upon the Department of Labour in connection with the administration of the Unemployment Relief Act of 1930 and continuing Relief Acts of 1931, 1932,

and 1933. To meet the administrative needs, it was found necessary to set up a separate branch on a temporary basis. The annual report of the Department of Labour for the fiscal year ending March 31, 1934, shows that disbursements from the Dominion Treasury under these several relief measures, from their inception totalled somewhat in excess of one hundred million dollars; thus it will be seen that the application of these Governmental policies constituted a work of major national importance.

* * *

I have perhaps, in what has been summarized, taken in more territory than I was asked to cover, so I deem it wise to refrain from commenting further on Departmental activity in my time. However, I feel that I am entitled to remark, out of my experience of some ten years as its Deputy Minister, that the Department of Labour of Canada, now rounding out its fiftieth year, has been a great power for good in the affairs of our national life.

It seems to me, the Department of Labour has measured up far and away beyond the fondest hope of the one who was its founder. He, I suggest, "Builded better than he knew."

The staff of the Department in my time as Deputy Minister was, numerically speaking, not overly large, averaging, perhaps around 110 to 125 or so permanent employees. Thus, as Deputy, I had the opportunity of meeting and knowing practically every member of the staff. The entire staff was situated in the one building, in Ottawa, with the exception of the Conciliation and Fair Wages Officers located at Halifax, Montreal, Toronto and Vancouver. There were, of course, a number of special representatives in connection with the sale of Government Annuities located at various centres, as well as quite a number of LABOUR GAZETTE correspondents located in industrial centres. With the enactment of the Unemployment Relief Act in 1930, a considerable staff was engaged on a temporary basis. I desire to pay tribute to all who served on the Departmental staff during my tenure of office as Deputy Minister, for I have not forgotten how loyally they served.

In the years of my retirement from the Department, I have, in a quiet sort of way, followed its activities. I am pleased to note its continued growth, and I wish for it every success in the future.

Problems of the "Thirties"

by **W. M. Dickson**

Mr. Dickson describes graphically a journey through Canada's western provinces during the depth of the depression. He also tells of the first unsuccessful attempt at unemployment insurance legislation, followed by passage of a valid law shortly after the outbreak of war. Mr. Dickson served from January, 1934, to November, 1940.

The all-absorbing question facing the Hon. R. B. Bennett and his newly appointed Government in calling a special session of Parliament in September, 1930, was the unemployment problem.

In forming his Cabinet Mr. Bennett had called on Senator the Hon. G. D. Robertson to be his Minister of Labour. Sir Robert Borden had, in 1919, likewise called Mr. Robertson to his Cabinet as Minister of Labour, having first appointed him to the Senate. The Rt. Hon. Arthur Meighen had retained the Senator as his Minister of Labour when he succeeded Sir Robert as Premier.

On his appointment in August, 1930, Senator Robertson did me the honour of offering me the position as his private secretary, and I was accordingly transferred from the Department of Justice, where I had served since February 1, 1914, as a permanent civil servant.

The Prime Minister, as a preliminary step to introducing legislation to deal with the problem, had telegrams despatched to the premiers of the several provinces and to the mayors of the principal municipalities enquiring as to the number of unemployed there were in the district. At the same time the Minister had Mr. R. A. Rigg, Director of the Employment Service, convene a meeting of the members of the Employment Service Council of Canada, a purely non-political body of which he was chairman. The meeting was called for the 21st and 22nd of August at Ottawa. A very large group attended, every province save Nova Scotia being represented.

Only one subject was discussed, namely "Unemployment." On the afternoon of the 22nd, the Council unanimously adopted 12 resolutions embodying its views on emergency steps which might be adopted to relieve the existing situation. These resolutions were used as a basis in drafting the legislation which became known as the Relief Act of 1930.

A second step taken preparatory to the introduction of legislation was the despatch of telegrams by the Minister to each Member of the Commons and the Senate asking to be advised what public works might be, in his opinion, carried out in his constituency to meet unemployment.

The Bill was submitted to the House of Commons on September 11, 1930.

Stating in its preamble that unemployment, "which is primarily a provincial and municipal responsibility," had "become so general throughout Canada as to constitute a matter of national concern," the measure provided for the appropriation of twenty million dollars out of the general revenue to be expended on public works.

Tariff changes were also put into effect by Mr. Bennett in 1930. On these he placed great confidence in correcting economic conditions in Canada, and they were quick in producing marked results in the country's economic life. In the eight months following the election of August, 1930, there was a marked influx of new concerns from outside countries into the Dominion, including at least seventy U.S. firms, ten from Britain and two from France.

However, in general, unemployment conditions did not ameliorate but on the contrary they increased. As the money voted by Parliament

at the Special Session proved insufficient, it was deemed necessary the following year to make provision for continued relief assistance.

* * *

Before submitting legislation to Parliament, however, it was deemed advisable that the Minister should visit the West and assess the existing need which had been greatly increased by three successive years of continued drought and land drifting conditions throughout the major portion of the southern portions of the three prairie provinces. Accordingly in June, the Senator, accompanied by Mrs. Robertson, Mr. R. A. Rigg, Mr. H. Hereford, Superintendent of Unemployment Relief, and myself left for Winnipeg on the first leg of our tour of the four Western provinces.

On June 26, at a time when the Senator and Mrs. Robertson had been taken by Mayor Webb to inspect certain relief works which had been performed under the Relief Act of 1930, I was informed that a delegation of unemployed had forced their way into the hotel (The Royal Alexandra) and were demanding an audience with the Minister. Accompanied by Mr. Rigg and Mr. Hereford, I met the deputation which claimed to be the leaders of the Winnipeg unemployed single men. A clean-cut young man in his twenties, was the spokesman of the group of half a dozen. He appeared to be of a higher intelligence and refinement than the run of those who had headed up the unemployed deputations which waited on us on our tour: also his presentation was much more reasonable and in more respectful and moderate language than the rest. There might have been another reason for this.

There was, quite unknown to us, a wild fight being waged outside the hotel, between the police and the rioters who had armed themselves with broken pieces of a contractor's barricade erected close to the Royal Alexandra. The marchers had milled about the hotel peaceably for quite a time, but eventually engaged with the cordon of police which surrounded the hotel. There were a number of casualties, several policemen and rioters being taken to hospital.

At Edmonton, the R.C.M.P. arranged for the interview with the unemployed. They also supervised the interview, which passed off fairly peaceably. After meeting the Government and the mayors of the principal Alberta municipalities we left Edmonton on the midnight train for Vancouver.

Here the Minister was met by a delegation of mayors from the municipalities of the Kootenays, which submitted the strongest representations concerning the depredations and general lawlessness of the Doukhobor colony in B.C. As this had nothing to do with the question of unemployment relief the Minister advised the delegation that he could only transmit their representations to the Government.

We crossed over to Victoria by night and met the members of the B.C. Government and mayors of the municipalities who laid the situation in their several jurisdictions before the Minister. From Vancouver we returned by C.P.R. to Calgary where we met the Mayor and city council. We here met a delegation from the single unemployed, quite the most defiant group we encountered on our tour.

From Calgary we proceeded to Regina. When we reached the

capital we found that arrangements had been made to drive our party through the drought area, or rather through a typical section of it adjacent to the city. I have since thought that although there were sound reasons for giving the Minister this insight into the actual conditions which obtained in the province, still in view of the fatal effects it was to have on the Minister's health it was unfortunate that it could not have been avoided.

We were driven southwest towards the Weyburn district for about 60 miles. Then we headed west for about 30 miles; then north back to Regina, having covered about 140 miles in the triangle traversed. In all that distance—a veritable desert of brown dust as fine as flour and lying in drifts which obliterated fences, ditches and roads, as snow does sometimes here in the East in the winter—in all those 140 miles we did not see one living thing save only near Forward, where we turned north to return to Regina. In a dead, stunted tree which was growing out of the bank of what formerly had been a creek but now was a part of the barren desolation over which he at the moment was lord, was a lone red-winged blackbird. Not a gopher, not a field mouse, not a blade of grass, not a vestige of green, nothing but brown dust as far as the eye could reach. This is what the Minister was seeing, not the miles upon miles of waving, golden grain reaching as far as the present desolation.

It was a terrific shock; how terrific we never guessed until the next day in Winnipeg, when, as the Minister was addressing the Canadian Club and describing the hopeless condition which he had just witnessed in Saskatchewan he

broke down completely. The same thing occurred after our return to Ottawa and the Senator was addressing the Canadian Club of that city. Again describing the desolation with which the West had been visited he once more broke down. He never was his old self again and late in the following fall he had a serious collapse in his office and was rushed to hospital where he remained for some weeks. He resigned as Minister of Labour on February 5, 1932.

On his return to Ottawa, Senator Robertson submitted a detailed report of his investigations to the Prime Minister who subsequently announced in the House of Commons that before the Session ended the Government would introduce a program for relief of the special situation which had resulted from drought and for the relief of the abnormal unemployment conditions. This Act, which received the Royal Assent on August 3, 1931, was called the Unemployment and Farm Relief Act, 1931.

Other legislation passed during the Senator Robertson's incumbency included amendments to the Annuities and Old Age Pensions Acts, and a Vocational Education Act which replaced the Technical Education Act of 1919.

* * *

On February 3, 1932, the Hon. Wesley Ashton Gordon, who up to that time had been Minister of Immigration, was sworn in also as Minister of Labour and Mines. Possibly no man at the time occupied a position of more direct relationship to industry as a whole than Mr. Gordon, in administering these three very important portfolios, inasmuch as his duties brought him into close contact with the major elements that

vitaly affect the Canadian industrial structure.

It was decided that Senator Robertson should take an ocean voyage for his health. Arrangements were accordingly made for a trip to Jamaica, from which the Senator returned in vastly improved health, so much so that it was agreed that he should head the Canadian Delegation to the Sixteenth Session of the International Labour Conference which opened in Geneva in April, 1932.

At the opening sitting, the Senator was elected President of the Conference. Although everybody connected with the conducting of the Conference endeavoured to the utmost to lighten the Senator's task as President, he insisted on performing all the duties himself and attending to all the functions of the Office with the disastrous result that following the Conference he suffered a second stroke. Mrs. Robertson, and Sir George Perley who had been attending the League of Nations, had difficulty in getting him home again. From then until his death on the 25th of August, 1933, the Senator was an invalid at his home on Delaware Avenue.

It is hard indeed for one who was intimately associated with Senator Robertson even for so short a time as it was my privilege to be, not to take the opportunity to pay tribute to his great gifts and qualities as a man which endeared him to all whose privilege it was to know him. In 1915 he became International Vice-President of the Order of Railroad Telegraphers, and served continuously in this office save for the periods he was a Cabinet Minister. He was a big man; big in stature, big in his breadth of view, and especially big in his sympathy for

his fellow man. It is certain that in his great sympathy for his fellow man during this great depression he actually wore himself out in the service of his country. It is a fitting tribute to the Senator and his devotion to the cause of labour and the raising of its lot throughout the world that his last public act should be to preside over the deliberations of the greatest labour organization in the world.

* * *

Late in the Session of 1932 the Prime Minister informed Parliament that it had been the intention of the Government to arrange a conference with the Provincial Governments to try to overcome the obstacles to enacting legislation to establish in Canada a system of contributory unemployment insurance. The greatest of these difficulties was the fact that without a ceding of some of the provincial powers under the B.N.A. Act it would not be feasible for the Dominion to pass the necessary legislation. At the conference some of the provinces proved unwilling to give up those rights or agree to any amendment to the B.N.A. Act.

In 1935, however, the Prime Minister introduced the argument that the treaty making power of the Dominion under the B.N.A. Act gave the Federal Government authority to pass legislation to implement Conventions adopted by the International Labour Organization. The Prime Minister accordingly introduced in the House of Commons bills to ratify three Conventions dealing with hours of work, minimum wages, and one day's rest in seven. On January 29, he also introduced the Employment and Social Insurance Act. Some 51 amendments

were made to this Bill in the Senate but most of them were of minor consequence and mostly to remove ambiguity and to clarify the enactment. Other legislation, regarding four ILO Maritime Conventions also received the approval of Parliament.

At the same Session, legislation was adopted extending the scope of the Combines Act, while the Fair Wages and Hours Act of 1935 replaced legislation of 1930. It included new sections to comply as far as possible with the recommendations of the Price Spreads Commission. The new features made provision for an eight-hour day and a 44-hour week on government construction work and contracts, and extended the coverage of the Act.

On July 20, the personnel of the Employment and Social Insurance Commission was announced as follows:

Hon. Gordon S. Harrington, former Prime Minister of Nova Scotia, chairman; Mr. Tom Moore, President of the Trades and Labour Congress, workers' representative; and Mr. N. Romeo Beaudet, an executive of the Confederation Life Assurance Company, employers' representative.

Mr. P. M. Draper, Secretary-Treasurer of the Trades and Labour Congress was chosen to succeed Mr. Tom Moore as President of that body.

The federal election took place on the 14th of October and owing to the confusion which had arisen as to the constitutionality of the Employment and Social Insurance Act the Commission did not continue in office long after the new Ministry took over.

* * *

The Hon. Mr. Gordon returned to private life and his law practice

in Haileybury. He was replaced by the Hon. Norman Rogers, who had formerly been Private Secretary to the Rt. Hon. W. L. Mackenzie King, but who since 1929 had been Professor of Political Economy at Queen's University.

The problem of unemployment continued to be pressing. At the end of November, 1935, the Minister appointed a Committee to make a personal survey of the unemployment relief camps. The Members of the Committee were: Mr. R. A. Rigg, Director of the Employment Service Branch of the Department; Mr. Humphrey Mitchell, former M.P. for East Hamilton and late Minister; and E. W. Bradwin, Ph.D., of Toronto, Principal of the Frontier College. On January 31, the Committee submitted an interim report. In it the Committee recommended the closing out of the camps; but meanwhile that they be run on the basis of much smaller units and with a stipulated work-day with wages basis.

(Later in the year the camps were discontinued, under the direction of Mr. Humphrey Mitchell who had been appointed to the Department of Labour as Director of Labour Transference.)

Various measures to alleviate unemployment at about this time included joint Dominion-provincial works programs; an additional series of federal projects; a housing program; a youth training program; and a Dominion-provincial arrangement providing payment to over 20,000 men who were placed on farms, and an additional payment to the employing farmer.

In 1937 I was appointed as one of the Government Delegates to the Twenty-third Session of the International Labour Conference.

As very keen interest existed among the delegates with regard

to the possible fate of the Employment and Social Insurance Act, Dr. Riddell, the other delegate, arranged that I should explain the situation existing in Canada at the moment. This I did by reading the judgment of the Privy Council which declared the Act to be *ultra vires* of the Dominion Parliament. Their Lordships added in their Judgment, "that it must not be thought that Canada was incompetent to legislate in performance of treaty obligations. In totality of legislative powers, Dominion and Provincial together, she was fully equipped, but the legislative power remained distributed, and, if in the exercise of new functions derived from her international status she incurred obligations, they must, so far as legislation was concerned when they dealt with provincial classes of subjects, be dealt with by the totality of powers—in other words, by co-operation between Dominion and Provinces."

The following January, the Speech from the Throne stated that the co-operation of the provinces had been sought to make possible the enacting of an unemployment insurance measure during that Session of Parliament.

A letter from Mr. King to the several provincial premiers indicated the extent of the amendment to the B.N.A. Act it was proposed to seek at Westminster, viz., the addition of the two words "Unemployment Insurance" to Section 91 of the Act.

In May of 1940 the Prime Minister announced to the House that practically all the provinces had indicated their willingness to support the Government in seeking the proposed amendment. This was secured on July 10, and on

August 7 the Unemployment Insurance Act received Royal Assent.

* * *

Overshadowing all other matters in national and international affairs during the month of August, 1939, was the march of events which culminated in war.

When the inevitability of war became apparent, Mr. Rogers conferred in turn with representatives of the Trades and Labour Congress of Canada, the All-Canadian Congress of Labour, the Railway Brotherhoods, the Canadian Federation of Labour and the Confederation of Catholic Workers.

The response to these discussions left no doubt in his mind of the whole-hearted co-operation of those who spoke for the various organizations with the Government in the development and operation of policies adopted to meet the emergency of war. As one of the first steps of the Government immediately prior to the outbreak of war, the Minister, following a broadcast by the Prime Minister to the Canadian people, announced over the air that provision had been made for "the immediate establishment of a War-time Prices and Trade Board which will co-operate with those engaged in production, manufacture and distribution in any regulation deemed necessary to maintain efficient operation in the marketing of goods."

With the outbreak of the war the Prime Minister re-organized his Cabinet, the Hon. Norman Rogers becoming Minister of National Defence, being succeeded as Minister of Labour by the Hon. Norman McLarty.

With a view to providing means for adjustment of disputes in all essential war activities and thus avoiding strikes and lockouts, the

provisions of the I.D.I. Act were made applicable to any dispute between employers and workers engaged in war work comprising munitions, supplies and defence projects. This was announced on November 7 by Hon. Mr. McLarty.

On the same day that Canada entered into a state of war with Italy, June 10, 1940, the Hon. Norman Rogers died at 1.25 p.m. in the crashing of a military aircraft ten miles west of Port Hope which was carrying him and party to Toronto where he was to address a joint meeting of the Empire and Canadian Clubs.

Mr. Rogers' untimely and tragic death was vastly more than a regrettable and tragic event of our lamentable war history. I know no one who would have the temerity to venture an estimate of the loss to Canada which it occasioned. Here was a young man just in his prime with all the zeal of a Knight of the Round Table to right the ills and inequalities and injustices of this world, a servant of the State with the interest of the State and the State only his whole concern, an able and conscientious administrator, a kindly and sympathetic friend.

By June of 1940 the office of the ILO at Geneva found itself practically isolated from the great majority of its member countries. Communication had become so difficult as to be almost impossible so that it was obvious that the work of the Organization could no longer be carried on efficiently. In these circumstances the Canadian Government agreed to facilitate the temporary transfer of its personnel to Canada. Montreal was selected by the Director as the most suitable location for the new quarters of the ILO. McGill

University agreed to supply the necessary accommodation for office space for the 40 or 50 personnel.

Before writing "30" to this script let me say a few words about what I consider the most important function of the Department, the conciliation service, whose function is to preserve peace in industry and keep its wheels running smoothly.

The Department is equipped with both the authority and trained personnel to assist employers and employees to compose their differences. The procedure is simple and the service is prompt.

The Conciliation Service was performed by a small—an all too small—but most competent staff of a Chief Conciliation Officer at Ottawa, Mr. M. S. Campbell; our Eastern Representative, Mr. E.

McG. Quirk, at Montreal, in charge of Quebec and the Maritime Provinces and our Western Representative, Mr. F. E. Harrison at Vancouver. I cannot speak too highly of these officers who for so many years carried the responsibility and burden of the Conciliation Service so wisely and efficiently. The former two died in the service of the Department, the last now lives on well-earned superannuation at Vancouver, B.C.

On November 1, 1940, my connection with the Department and the staff terminated through the effluxion of time, I having attained the age of 65 two months earlier. The staff were most kind in their farewells and I have carried the pleasantest of memories into retirement of my very pleasant associations with them, one and all.

"Hubristic" Cheesemaker Awarded Damages For Unlawful Dismissal

In full verbal majesty, the law moved to redress the wrongs of an Ontario cheesemaker who brought action against his employer on the ground of unlawful dismissal.

As reported in the *LABOUR GAZETTE* for February, 1923, the High Court took note of the employer's defence that the plaintiff (i.e. the cheesemaker) was insolent in his language.

"Plaintiff and the president of the defendant company," the Court noted, "in several encounters over the business of the factory, were heard 'chewing the rag,' which meant that they were indulging in a free exchange of

hubristic epithets, with mutual suggestion as to ignobility of natal origin and pungent asseveration of mental inferiority.

"But indulgence in this verbal pastime between employer and employee, on equal terms socially and commercially, as between man and man, with give and take, and covering business affairs, is not sufficient ground for the breaking of the contract under which the cheesemaker was employed. . . . The insolence of the employee is not sufficient where he has been irritated by the conduct of the employer. . . ."

The cheesemaker was awarded damages of \$1,200.

The Labour Department in Two Wars

by **Bryce M. Stewart**

Dr. Bryce M. Stewart's distinguished career in the field of industrial relations has included two periods of service in the Department of Labour. The first occurred during World War I and the period of reconstruction. He returned to the Department as Deputy Minister in October, 1940, on loan from the industrial relations firm of which he is director of research, and served until the end of 1942.

Canada entered the first world war soon after my appointment to the Department of Labour in the summer of 1914. A decade or more of heavy immigration, railroad building and urban expansion had ended and there were bread lines in the larger cities. My first assignment was to study the unemployment problem. The report of this study recommended a nation-wide employment service on a Dominion-provincial basis as a first step but meanwhile recruiting and munitions orders had taken up the slack and the report was pigeonholed. Parts of it were included in the report of the Ontario Unemployment Commission which appeared in 1916.

R. H. Coats who was then Editor of the *LABOUR GAZETTE* and Statistician of the Department was serving as a member of the Cost-

of-Living Commission at the time. Mr. Coats had decided to submit a minority report and I was assigned to assist him mainly in the research on Canada's Balance of International Payments. The majority and minority reports constituted three weighty volumes and it is said that when they came into the hands of my revered teacher, the late Dr. O. D. Skelton, he characterized them in his dry-humoured fashion as "another contribution to the high cost of living." We joined in the laughter but were pleased when some years later Professor Jacob Viner, the distinguished Canadian-born economist then at the University of Chicago, covered much the same

ground and said the report was a mine of statistical and other information and acknowledged his indebtedness to it.

Mr. Coats was appointed Dominion Statistician in 1916 and I succeeded him in the Department. Our main achievements in the next few years were the initiation of annual reports on the labour legislation of the Dominion and the provinces, a monthly tabulation of unemployment as reported by trade unions, increasing the coverage of the report on building permits from thirty-five to fifty-six cities, construction of the first national employment index in any country; and the launching of the Employment Service of Canada, the first permanent nation-wide employment service in America. We were anxious to construct a payroll index as well but budget and other considerations frustrated this ambition. The labour legislation reports, which greatly facilitated research in the field, have continued to be published. The trade union, unemployment and building permit tabulations still appear regularly in the *LABOUR GAZETTE*. The employment index, based on monthly reports from employers of the number of employees on the payroll, was transferred to the Dominion Bureau of Statistics in 1922.

Serving a British mission that recruited workers in Canada in the summer of 1915 for employment in munitions and manufacturing in Great Britain was an instructive experience. The members of the mission were W. Windham of the British Board of Trade Offices and G. N. Barnes, M.P., Assistant Secretary of the Amalgamated Society of Engineers, later a member of the War Cabinet. Their procedures of recruiting, testing, final selection and

dispatching of about two thousand skilled metal tradesmen exemplified British Civil Service efficiency at its best. I remember well when two of us from the Department had the responsibility of taking a large group of these tradesmen to Montreal by train and the anxiety we felt until our charges were safe aboard ship.

The Employment Service was a major undertaking. Late in 1917 when it seemed that the war might be nearing its end the Minister of Labour, Honourable T. W. Crothers and his cabinet colleagues became concerned about the prospect of post-war unemployment. The report of 1914 was dusted off and after conference with a committee of the cabinet I was instructed to draft the Employment Offices Co-ordination Act which Parliament passed early in 1918. It provided that the offices should be administered by the Provincial Governments and be subsidized and co-ordinated by the Dominion in accordance with an annual agreement. Then came the drafting of the agreements and a memorable trip with the Minister from Ottawa to Victoria to negotiate the agreements with the governments of the western provinces. The maritime provinces were unwilling to commit themselves and under wartime authority the Department of Labour established and operated the offices in that part of the country. We were given a special grant of \$100,000 in addition to the subsidy of \$150,000 provided in the Act, a considerable total in those days. Meanwhile Mr. Crothers had resigned, the Honourable Gideon Robertson became Minister and I was appointed Director of the Employment Service.

We were resolved to establish under conditions of the agreement

standard operating and statistical procedures and effective arrangements for the clearance of job vacancies and applications within and between the provinces. Plans to these ends were discussed with the Advisory Council of the Service on which employers, labour and various departments of government were represented and in many conferences with provincial officials. They were accepted and applied with slight modification. To relieve the offices of the statistical burden each interviewer was required to record daily the particulars of vacancies and applications on a standard form and forward it to Ottawa. There the data were compiled and classified mechanically by occupations, offices and provinces, reported to the provinces and published in the *LABOUR GAZETTE*. By this procedure we were assured of accurate national, provincial and local compilations and the offices were enabled to concentrate upon their placement function. The authoritative study *Public Employment Offices* published by the Russell Sage Foundation referred to the Canadian Service as one of the two most adequate systems of public employment offices yet established, the other being the system of employment exchanges in Great Britain.

In the development and operation of the Employment Service of Canada a number of Dominion and provincial officials worked together as a team with fine *esprit de corps*. Among those at the Dominion level were Harry Hereford who directed the offices in the maritime provinces while they were being operated from Ottawa; Arthur Odam who had charge of statistics and the processing of reports from the local offices; J. M. Wyatt, staff officer on juvenile

placement work, who directed an office in Winnipeg as an experiment in this area of employment service; G. C. Paterson who developed office procedures; Miss Mary Macoun (now the wife of Major-General Howard Kennedy) in charge of research; R. A. Rigg in charge of clearance and inspection for the Western provinces; the late Major Howard who directed the clearance and inspection functions for the Eastern provinces and Frank Compton, secretary and staff assistant. Dr. W. C. Clark on leave from Queen's University for a year or more made a fine contribution to the planning of the Service. Major L. L. Anthes of the Department of Soldiers' Civil Re-establishment, who was chiefly responsible for making the placement of veterans of World War I a responsibility of the Employment Service and supervised the staff of his department assigned to that function, was a tower of strength.

Outstanding among the co-operating provincial officials who bore the brunt of the work of organization and administration in their jurisdictions, were Dr. W. A. Riddell, Deputy Minister of Labour for Ontario; the late Joseph Ainey, General Superintendent of Employment Offices, Quebec; Tom Molloy, Secretary of the Saskatchewan Bureau of Labour; the late J. D. McNiven, Deputy Minister of Labour for British Columbia; and the late J. H. McVety, General Superintendent of Employment Offices for British Columbia.

With the collapse of the post-war boom in 1920 and the contraction of government revenues a policy of economy prevailed and the special grant to the employment service was discontinued. In 1922

the budget of the Department of Labour was reduced almost entirely in the provision for the Employment Service and in large part the initiative in employment service matters shifted to the provinces. Several of us on the staff found employment elsewhere.

* * *

On my return as Deputy Minister of Labour, October, 1940, on leave of absence from Industrial Relations Counselors, Inc., New York, the Minister of Labour the late Honourable Norman A. McLarty and his officials were wrestling with new problems and a marked expansion in the department's regular functions arising out of the war. The immediate needs were to provide for the planning of war labour policy and its administration with due regard to the related functions of other departments, federal and provincial. The first step was the establishment of the Interdepartmental Committee on Labour Co-ordination charged with the duty of defining the jurisdiction of the several government agencies and developing plans to facilitate unified planning and co-ordination of their activities, to eliminate competition for labour and to provide training in war occupations. In the main the recommendations on war labour policy and its administration derived from this committee and the Minister's staff conferences, liaison being maintained with the Economic Advisory Committee, the Wartime Prices and Trade Board, the Director of National Selective Service and other such agencies and officials.

Planning centered on three major interrelated problems—manpower and training, wage policy, and maintenance of industrial peace. As regards manpower

and training, the Labour Co-ordination Committee assembled data on the requirements of the armed services, war plants and civilian industries. On this basis the Committee during the ensuing two years submitted proposals which were implemented by Orders in Council on such matters as prevention of the enticement of skilled labour on war production, removal of the maximum working hours limitation on certain war construction work, establishment of a Wartime Bureau of Technical Personnel, provision to cover the travel expenses of workers being transferred to war industries, the establishment of a manpower inventory, appointment of a Director of National Selective Service, and transfer of all national registration functions from the Department of National War Services to the Department of Labour. Most of the Committee's manpower functions were assumed by the Director of National Selective Service, Mr. E. M. Little, on his appointment.

The training phase of the Committee's work was highly fruitful. The existing Youth Training Program, to which R. F. Thompson of the Department of Labour had given effective direction was reorganized as a War Emergency Training Program and funds and facilities were provided for the training of men and women in technical schools and industrial plants for certain occupations in the armed services and in war production. Arrangements were made with universities to give special courses in personnel administration in view of the dearth of personnel managers for the expanding war plants. The Vocational Training Co-ordination Act of 1942 drafted in the Department of

Labour formalized the wartime program and made provision for post-war vocational education and financial aid to the provinces for the purpose.

Soon after its appointment the Labour Co-ordination Committee gave attention to the need for a national wage policy in view of competitive wage bidding for employees, union demands for higher wage rates and the futility of the effort to control prices without some restraint on wage increases. An Order in Council, December 19, 1940, for the guidance of boards of conciliation fixed basic wage rates at the level then existing, permitted the upward adjustment of sub-normal wages and further wage increases only by way of a cost-of-living bonus. Later this policy with some modification was extended to war industries and in October, 1941, to substantially all industry. This unprecedented action was criticized by some authorities in the United States and immediately after the Prime Minister's announcement of the final order three Washington officials visited us and asked for arguments that might be used to oppose any demand for the adoption of such a policy in their country. However, in less than a year after the United States declared war a similar policy was announced by President Roosevelt.

Recommendations looking to the maintenance of industrial peace prompted several measures. All war industry was made subject to the Industrial Disputes Investigation Act but this step proved inadequate. In the first two years of the war the volume of proceedings under the Act was almost equal to that of the preceding ten years. It appeared that many of the applications for Boards of Con-

ciliation were unwarranted and that some speedier method of dealing with them should be devised. In May, 1941, appointment of the Industrial Disputes Inquiry Commission was announced. Its members were Humphrey Mitchell, then an official of the Department, Chairman; Gilbert Jackson, consulting economist, and George Hodge of the Canadian Pacific Railway. This body was empowered and directed to investigate disputes promptly, to require the production of evidence, to seek settlements and if unsuccessful to advise the Minister whether there were grounds for establishing a board. The Commission was highly effective. Within a few months Boards of Conciliation were being established in only about 20 per cent of the cases.

A supplementary measure was directed at the hasty calling of strikes without opportunity for all the employees concerned to fully consider the issues. Orders in council of September and November, 1941, required that the Minister of Labour should be informed of proposed strikes, authorized the Minister to direct that a vote be taken among those who in his opinion were affected by the dispute and permitted a strike only if a majority of those entitled to vote favoured such action.

Soon after the wartime wage policy was applied to all industry the duties of the Industrial Disputes Inquiry Commission were transferred to four newly appointed commissioners stationed at Vancouver, Toronto, Montreal and Fredericton and a National War Labour Board equally representative of employers and employees and nine regional boards with the Ministers of Labour of the provinces as chairmen were established

for the enforcement of the wartime wage policy, administration of the Fair Wages and Hours of Labour Act and the Orders in Council on minimum wages. The three members of the Industrial Disputes Inquiry Commission became members of the new body, Mr. Mitchell being appointed chairman. He retained this position after his appointment as Minister of Labour to succeed Hon. Norman A. McLarty who had become Secretary of State. By these provisions administration of the wartime wage policy, the long standing legislation on fair wages in government contracts and the minimum wage order, was unified. Disputes about wages were dealt with uniformly throughout the country in accordance with prescribed national policy and the activities of the Dominion and provincial governments in this area were largely co-ordinated.

The strain on the conciliation service of the Department was serious especially as its senior members were nearing or had passed the retirement age. The constant travel and prolonged negotiations would have tried much younger men. As a steadily increasing proportion of industry shifted to war production and became subject to federal wartime requirements the conciliation work of the provincial labour departments contracted. Finally a co-operative arrangement was effected whereby as cases arose they were referred to either a federal or a provincial officer as the circumstances dictated. The generous provision by the departments of labour of the provinces eased the burden but the federal conciliation service was seriously impaired by the retirement of the Assistant Deputy Minister, the late

Mr. Gerald H. Brown who had supervised this function of the Department for many years and by the death of its able Chief Conciliation Officer, Mr. M. S. Campbell. After negotiations with the Treasury Board and the Civil Service Commission a major reorganization and broadening of the service was effected. The appointment of Mr. M. M. Maclean as its director was highly gratifying to all concerned.

Union pressure for legislation patterned after the Wagner Act of the United States involved a series of negotiations with union and employer groups. These led early in 1944 to the Wartime Labour Relations Regulations (P.C. 1003) which departed from the Wagner Act in important particulars and on which the present Industrial Relations and Disputes Investigation Act was based.

* * *

This record is incomplete. Limits of space permit only the merest mention of such matters as the relationships with the defence and other departments and the various advisory committees on different phases of the war effort; extension of the Unemployment Insurance Act to persons discharged from active service; provision for the reinstatement of members of the armed services in their civilian employments; liaison with the Unemployment Insurance Commission ably managed by Arthur MacNamara, then Associate Deputy Minister; meetings of the International Labour Organization and its Governing Body; joint conferences of United States and Canadian representatives of employers, unions and the two governments on common problems of wartime labour policy under the auspices of the International

Labour Organization; co-ordination of United States and Canadian labour policy for the construction of the Alaska highway; the sessions of the National War Labour Board; the almost daily conferences with the Minister and participation in his press conferences and sessions with employer and union delegations; the constant exchanges with the Director of Selective Service after his appointment; preparation of information for the Minister, the Cabinet and Parliament; the reshaping and expansion of the Department for its wartime responsibilities and the day and night efforts to ward off industrial disputes and to effect quick settlements when they occurred.

The encouragements so outweighed the disappointments as to leave only pleasant memories. The few meetings with the Prime Minister in company with the Minister, the late Tom Moore and a few others in Mr. King's office or at tea in his house at Kingsmere to plan our next steps are unforget-

table. Visits and counsel from Sir Guildhaume Myrddin-Evans and Alec Gunn of the British Ministry of Labour helped to smooth the way for us. Perhaps the most abiding recollections are those of new friendships made, the deepening of several of long standing and the zestful team spirit of the officials of the Department in this period of wartime work companionship. Mr. McLarty and Mr. Mitchell gave no thought to sparing themselves. Seemingly impossible tasks were mastered as they were undertaken by such able and energetic associates as Arthur MacNamara, M. S. Campbell, R. F. Thompson, Dr. W. J. Couper of the International Labour Organization, Professor J. C. Cameron of Queen's University, Dean Vincent MacDonald of Dalhousie University and Miss Alice Waterman, our efficient secretary. When the burden of war work on Industrial Relations Counselors, Inc., precluded further extension of my leave, I left the Department with much regret.

Years of Crisis

by **Arthur MacNamara**

Dr. MacNamara came to the Labour Department early in the war, and took office as Deputy Minister on January 1, 1943.

His reminiscences deal particularly with the Department's two great wartime tasks of manpower mobilization and maintenance of industrial peace.

The five men who preceded me as Deputy Minister of Labour had each in his turn to face special administrative problems.

The founding of the Department, the drafting of early labour legislation, the first World War and its aftermath, Dominion-Provincial relationships in labour matters, the struggle to meet the unemployment crisis of the 'thirties—these were the dominant problems of the Labour Department's first four decades.

As one who is still in harness, it is not yet possible for me to see in perspective the happenings of my own term of office, covering World War II and the years of post-war reconstruction.

It has certainly been an eventful period, one of fast-moving incident, presenting many new problems, the solution to which could sometimes only be sought through improvisation. It has

also been a period of good fellowship; and I think particularly of the war years, when hard-working and loyal associates gave their utmost in time and effort to the Labour Department's two great wartime tasks of manpower mobilization and maintenance of industrial peace.

My introduction to Federal Government service was, as it happened, not by design on my part; nor in the initial stages was it by design on the part of the Federal authorities. When war broke out I was serving as Deputy Minister of Public Works and Labour in the Province of Manitoba, a position that was both interesting and busy.

In January of 1940, at his request, my services were loaned to the Hon. Norman Rogers, who was then the Minister of National Defence of Canada. The task was the regularizing of payments to dependents of those who were in the Armed Forces. The loan was initially for a six-month period but was extended. Several rather arduous tasks followed: the inauguration of unemployment insurance; the removal of persons of Japanese nationality from the Pacific Coast inland. Then, came a permanent appointment as Associate Deputy Minister of the Federal Labour Department.

In the autumn of 1942 I became Director of National Selective Service; and in January 1943 I was appointed Deputy Minister of Labour, retaining my Selective Service post.

Thus by stages a six months' loan proposition became a permanent move from Provincial to Federal service.

I must confess to some feelings of regret at leaving my Provincial employment, which was closely associated with actual construction projects and where I had happy business and social contacts.

But the tremendous problems in the Labour Department field—the wartime movement of manpower, post-war re-establishment, unemployment alleviation methods, conciliation of disputes, and progress towards happier labour-management relations—were overpoweringly engrossing, and presented a challenge difficult for anyone to resist.

* * *

The manpower program that the Labour Department administered through the National

Selective Service organization was essentially quite simple in its objectives. Men and women had to be found, first for the Armed Forces, and second for war plants. Meanwhile, of course, essential civilian services, such as food and supplies, had to be maintained.,

In the early stages of the war, this program could be carried out on a voluntary basis. It was only as the war effort grew in scope that special compulsory measures became necessary. War plants at first found little difficulty in securing a sufficient supply of men and women; high wages and good working conditions in the new establishments, together with the patriotic inducement of working directly on war equipment, were adequate attractions. The industries that found themselves running short of workers were those where the work tended to be arduous or not too highly paid, such as farming or mining.

The strain of the war effort on the country's manpower resources can be appreciated when it is realized that by 1943 some million and a half men and women were either in the Armed Forces or employed in war plants. In retrospect it seems almost fantastic that such a vast number of persons could have been mustered for occupations which lay outside the country's normal peacetime industrial processes, and yet that there should have been so little disruption to the civilian way of life.

Many of the extra million and a half persons came from the ranks of the unemployed; others were retired persons who returned to work, married women who found part-time or full-time jobs, or young people who started work

earlier than normal. Nevertheless a substantial number had to come from civilian industry.

It was in March, 1942, that the first civilian manpower controls were introduced, when the Prime Minister, Mr. King, announced the first National Selective Service Regulations. The pattern of the program which subsequently developed is familiar. The more stringent manpower controls were brought in unwillingly, only as they became absolutely necessary. Under the program, all hirings and separations of workers had to be channelled through Selective Service offices—offices which had only just been organized by the Unemployment Insurance Commission. Workers in essential industries and occupations were “frozen” in their jobs, and in some cases given postponement of military training. Industries were given labour priority ratings; and job-seekers were directed to high priority jobs wherever possible. Beginning in 1943, a series of compulsory labour transfer orders were issued, applying to certain low priority industries and occupations, and aimed at “scraping the bottom of the manpower barrel,” by directing to essential industry the last available supply of labour.

A significant feature of the manpower program was the care that was taken to consult with labour, management and other groups on policy matters. Before regulations were passed and put into effect they were reviewed by the National Selective Service Advisory Committee, made up of representatives of labour, management, the armed forces, agriculture, the universities, and other groups. If the Director,

who was chairman of this Committee, was not able to satisfy the group that a Selective Service order was advisable and necessary it was reconsidered.

Other countries give Canada credit for a good manpower management record during World War II. Officials, for example, from the United Kingdom and from the United States have been generous in their praise of the results shown by the various manpower regulations put into effect by the Government.

My own impressions are that the success attained was due to the patriotism of the Canadian people and a definite determination to win the war which made the workers willing to accept inconveniences. Plenty of power was given the Minister of Labour and the Director of Selective Service but fortunately the authority given by the regulations did not half require to be used. The needs were published and the people were told what it was hoped they would do and they did it. All credit is due to the Canadian workers, and a special word should be mentioned in regard to the women workers.

Selective Service controls passed away almost immediately after the war ended. A necessary job had been carried out, with every possible democratic safeguard, but such controls were not consistent with our normal way of life, and their passing was regretted by nobody.

There remained, however, the nation-wide network of local offices. These offices could now assume the task for which they had been originally intended, namely to bring together on a free and voluntary basis workers in search of employment and

COMMENDATION FROM THE FIRST TO THE PRESENT DEPUTY MINISTER OF LABOUR

Shortly after he had been awarded a "Citation of Merit" from the International Association of Public Employment Services for his work in "enlarging the opportunities of useful work for all and for minimizing the hazards of unemployment to wage-earners and to society," Dr. Arthur MacNamara received the following letter from the Rt. Hon. W. L. Mackenzie King:—

LAURIER HOUSE
Ottawa

June 14, 1950.

My Dear MacNamara:

I should like to extend to you my hearty congratulations upon the well merited honour recently conferred upon you by the International Association of Public Employment Services, which held its most recent meetings in Long Branch, California. I meant to write you at the time I saw mention of the "Citation of Merit" in the press, but for one reason or another have been prevented from doing so until today.

I suppose there is no one in our country who, more than myself, has an adequate appreciation of the services you have rendered the parties to industry, and through them to the country at large. For public as well as personal reasons, I should therefore like to say how glad I am that the part you have played in "industrial relations" over the years has become so generally recognized. I mean this in reference not so much to the award of merit recently received, as to the appreciation of the significance of that award by the press of our country. My delay in writing to convey my own congratulations has had the advantage of enabling me to make mention of this additional recognition.

I need scarcely add the pleasure it has been to me, during the years you have been in Ottawa, to have enjoyed the association we have had together on so many matters of government. The association has been one of the pleasantest of my public life.

With my best of wishes and all kind remembrances. Believe me always.

Yours very sincerely,

(Sgd.) W. L. MACKENZIE KING.

Arthur J. MacNamara, Esq., C.M.G., LL.D.,
Deputy Minister of Labour,
Confederation Building,
Ottawa, Canada.

employers with job openings; this task being coupled with the administration of unemployment insurance.

The war effort, which so transformed our Canadian economy, also occasioned changes in our attitude towards social problems; and I like to think of the structure of unemployment insurance and the employment service as symbolizing our new approach to the major difficulty that plagued the nineteen-thirties, that of unemployment. The employment offices are now playing an essential role in relationship to the Government's policy of maintaining high levels of employment and income. Moreover, their attention to the special needs of handicapped persons, of older workers, and of young "first-jobbers" reflects another aspect of our new and broader post-war concept of social needs and human objectives.

* * *

In addition to the mobilization of manpower, the second major task of the Labour Department during the war years was the maintenance of industrial peace.

It is one thing to see that workers are in jobs which are essential to the war effort; it is quite another to induce them to make their full contribution in these jobs. You cannot prevent unrest merely by passing an Order in Council; nor can you spark enthusiasm merely by means of administrative machinery. Unrest is the breeding ground of absenteeism, labour turnover, disastrous strikes, and even of sabotage. You cannot legislate against these things. What you can do is create conditions which go a long way to preventing their occurrence.

The anti-inflation program of the Federal Government did much to encourage the full participation of labour in the war effort. Though the fight against inflation benefited Canadians in all walks of life, it is its significance in the field of labour relations which is of special interest. By preventing inflationary price rises, it did a great deal to remove one of the chief threats to industrial peace.

It was the responsibility of the Department of Labour to administer wage control, an essential part of this anti-inflation program. But wage control could not mean a rigid wage freeze. It had to be firm enough to prevent inflationary increases, but flexible enough to allow for essential adjustments.

Wage control was administered by National and Regional War Labour Boards, to which labour, management, or both parties jointly, could apply for wage adjustments.

The task of these boards was not easy, in view of the tremendous pressure on wage rates which developed as labour became scarce. However the Canadian people were behind the anti-inflation program, and there is no doubt of its wartime success.

With the abandonment of wage control late in 1946 the Government withdrew from its intervention in this area of labour-management relations. In another field, however, a wartime experiment in industrial relations was to prove to have more than temporary utility, and was subsequently embodied in peacetime legislation.

This was the introduction, in 1944, of compulsory collective

bargaining between employers and the certified bargaining representatives of their employees.

This innovation needs no description here. Its introduction had the effect of virtually ending strikes over the issue of union recognition; a result of considerable importance during a period when unions were more than doubling their membership.

The conciliation work of the Labour Department increased greatly during the war years, with its application to war industries as well as to those falling normally within federal jurisdiction. Some indication of the success of this work, and of the restraint exercised by both management and labour during the war period, is revealed by the fact that the amount of time lost as a result of work stoppages averaged less than half a day a year for each worker.

* * *

I have no space here to say much more about my term of office. However it does seem necessary to give special mention, for example, to the War Emergency Training Program, organized during the war on a Dominion-Provincial co-operative basis, which trained no less than half a million persons for war industry or as tradesmen in the armed forces, and helped to rehabilitate 150,000 war veterans. The training of so many skilled workers made an essential contribution to Canada's increased industrialization, with incalculably beneficial consequences to the standard of living of the workers themselves and the country as a whole.

I think, too, of our Dominion-Provincial farm labour program, which did emergency work in the

war years, as having proved to have more than temporary value. Our wartime sponsorship of labour-management production committees has also continued into the peace, as has our expanded research work into labour and economic questions.

Perhaps the biggest of the post-war tasks we have undertaken has had to do with the placement of the thousands of new Canadians, including displaced persons, who have entered the country during this period of expanding industrial development.

We have also, of course, continued such pre-war functions as the sale of annuities, including group contracts for pension plans, the issuing of fair wages schedules for Government contracts, the analysis of labour legislation, and the publication of labour information.

Our participation in the work of the International Labour Organization has brought Canadian unionists and employers, as well as Government officials, into contact with the problems and aspirations of labour and industry in other countries, and helped to create a sense of the worldwide scope of the movement towards social justice. The current trend in the ILO's work is to render technical assistance to the underdeveloped areas of Asia, Africa and Latin-America, and to help them to develop the higher standards of living and the hope and confidence in the future which are so essential to the effective functioning and ultimate triumph of the democratic way of life.

In closing this brief review of my share of the Labour Department's half century, there only

remains for me to wish the Department luck and success in the next fifty years, and to express my confidence that it will adhere to the ideals of service to labour, management and the public that have motivated those who have carried on its work from 1900 to 1950.

It is with sorrow that, since the above was written, I must

make reference to the death of the man who, as Minister of Labour, had been my superior since my appointment as Deputy Minister. In the Hon. Humphrey Mitchell the country has lost a great labour leader and I personally have lost a friend and one whose many fine qualities made it a never-failing pleasure for me to work under his guidance.

Six Decades of Public Opinion on Labour Organization

as illustrated by reports of three Government bodies

1889

Royal Commission on Capital and Labour

“ . . . such societies should be encouraged.”

“Labour organizations are necessary to enable workmen to deal on equal terms with their employers. They encourage their members to study and discuss matters affecting their interests and to devise means for the betterment of their class. It is gratifying to be assured by many competent witnesses that labour bodies discourage strikes and other disturbances of industry, favour conciliation and arbitration for the settlement of disputes, and adopt conservative and legitimate methods for promoting the welfare of the producing members of society. It is in evidence that most labour bodies strive effectively to promote temperance throughout the country, and especially among their members. . . .

“Your Commissioners recommend that in view of the good already accomplished the increase of such societies be encouraged by all legitimate means, and that one day in the year, to be known as Labour Day, be set apart as a holiday by the Government.”

Royal Commission on Industrial Relations

1919

"... persist in dealing with their employees as individuals."

"Employers may be divided into three classes— (1) those who deny the right of their employees to organize and who actively take steps to prevent such organizations; (2) those who, while not denying that right of their employees to organize, refuse to recognize organization among their employees, and persist in dealing with them as individuals, or as committees of employees, without regard to their affiliation with the organizations; and (3) those who not only admit the right of their employees to organize, but recognize and bargain with the organization on behalf of their employees.

"There are not many employers in Canada who belong to the first class, but there are a very large number who belong to the second class. The employers who openly object to their employees organizing are not many, but, rightly or wrongly, the workers believe that numbers of employers who openly declare their willingness that their employees should organize, covertly interpose obstacles in the way of their doing so, and that employees who are active in organizing their fellows into trade unions are got rid of, or penalized in some other way. To the third class belong the great railway, telegraph and mining companies and many building trades....

"On the whole we believe the day has passed when any employer should deny his employees the right to organize.... We believe the frank acknowledgement of this right by employers will remove one of the most serious causes of unrest."

Public Inquiry of National War Labour Board

1943

"... collective bargaining should be made compulsory."

"Generally speaking, the great mass of employers, until comparatively recent years have employed all weapons in their power to resist and discourage the trade union movement... Generally speaking, we have reached the conclusion from the evidence that under present war conditions it is in the national interest that the principle of collective bargaining should be made compulsory... under a Code providing a set of rules that will be fair to both parties and in the national interest and administered by an umpire who cannot be called in question....

"Any such measure must take into cognizance that the national interest is more important than that of either industry or organized labour."

THE CANADIAN WORKER IN A CHANGING ECONOMY

*by the Economics
and Research Branch*

George V. Haythorne, Director*

Since 1900, Canada has made rapid strides in developing from a rural to an urban economy. The following article sketches some of the major economic and social changes of the past fifty years, and their effects on the working and living conditions of Canadian workers.

* While all Sections of the Economics and Research Branch contributed to this article, it was prepared mainly by J. M. Wyatt, F. W. Burton, and J. P. Francis.

In 1900, Canada was still a young country from almost every point of view. Her economy was dominated by rural activities of which agriculture was the most important. Although numerous small manufacturing and commercial activities flourished in the towns and cities, Canadian workers were engaged then largely in the production of animal products, field and vegetable crops, fish, lumber and gold. The labour force was composed mainly of farmers, merchants and craftsmen working in most instances on their own account. Social security measures were almost non-existent and educational and other community facilities were limited in scope. Most workers stayed at their jobs for long hours, little was done about sanitary, health or recreation facilities, there were no cars to carry them to work and back, and at home the coal oil lamp and the wood-burning stove were still standard domestic equipment. Although the five eastern provinces were already well developed, settlement west of the Great Lakes was widely scattered and many frontier regions existed.

Today, in 1950, Canada is becoming a highly industrialized country and already is one of the world's great trading nations. The primary industries continue to be of basic importance, but manufacturing now has emerged as the largest single industry. Far-reaching technological changes have occurred and extensive new resources have been discovered and developed. The Canadian labour force is made up mainly of wage and salary workers, each one of whom relies on the productive activities of others to provide most of the goods and services he requires. Community facilities have been greatly extended and governments have been called upon to play a greater role both in economic and social spheres.

As a result of these major developments, the standard of living of Canadian workers has increased sharply. Wages have risen, not only in manufacturing as shown in the accompanying table, but in all industries. Today, most workers enjoy the benefits of shorter hours, greatly improved working conditions, often including recreational, health and eating facilities, transportation frequently in their own cars, and at home many of the advantages of the modern electrical age. Due to natural growth, immigration and broad shifts of population, settlement has been extended across the southern expanse of the nation from the Atlantic to the Pacific, although broad northern frontier areas still remain.

Canada's evolution from an essentially rural and agrarian economy to a basically urban and industrialized one has been characterized by significant economic and social changes. Some of these changes have occurred suddenly while others have taken place more slowly and are imperceptible except over long periods of time. Because of the far-reaching effects of such events as the two World Wars of 1914 and 1939 and the great depression of the 1930's, which have acted partly as depressants and partly as stimulants, Canada's economic and social development has not taken place at a steady rate over the last half-century.

This discussion is not intended to be exhaustive; rather, some of the more basic changes which have occurred will be mentioned and their impact on Canadian workers will be pointed out. The discussion

Since 1900, Canada's population has almost tripled, the most rapid increase being in the West. . . .

will deal first with those changes that are mainly economic in nature, and then with some of the developments that can be classified as being primarily social. Finally, mention will be made of some of the more important economic and social problems that face this country today at the mid-point of the twentieth century.

Economic Changes in Canada Since 1900

The overall growth of the Canadian economy since 1900 is evident in every aspect of national life. Measured by the yardstick of population, Canada now has over two and one-half times as many people as it had fifty years ago, while the Canadian labour force is about three times as great. There are other impressive achievements. Production has increased far more rapidly than

the number of workers. The improved acreage of Canadian farms has more than tripled during the period. The physical volume of output in manufacturing and in mining has been multiplied, on the average, by about ten. The annual value of Canadian exports is over sixteen times as great as in 1900, and hydro-electric power capacity is over forty times as great.

Indicators of Canadian Economic Growth

Item	1900	1950
Population.....	5,300,000	13,845,000
Grain Acreage.....	12,000,000	50,000,000
Primary Steel—Tonnage Produced ⁽¹⁾	26,000	3,190,000
Employment in Manufacturing ⁽²⁾	280,000	1,300,000
Weekly Hours Worked in Manufacturing.....	60	43
Weekly Wages in Manufacturing.....	\$ 7	44
Wholesale Price Index.....	100	294
Exports ⁽¹⁾	\$169,000,000	2,990,000,000

⁽¹⁾ Data refer to 1900 and 1949.
⁽²⁾ Data refer to 1901 and 1950.

... Immigration was an important factor in this population growth, although many people also emigrated to the United States.

It is evident from such statistics that physical output per man-hour has increased in most industries with considerable rapidity. Not only the number of workers, but the output and the real income of workers generally, have increased greatly since 1900.

Development of Natural Resources

The development of natural resources, previously underdeveloped or untouched, was one of the chief causes of the increase in

production. In most cases, the utilization of new resources involved the settlement of new areas.

The most striking extension of settlement took place in the agricultural areas of the Prairie Provinces in the first quarter of the century. The rapid expansion of prairie agriculture was made possible by the favourable condition of world markets for food, by the application of suitable production techniques and methods of organization which had already been worked out in the western

The Canadian population has been growing older, due to an increase in life expectancy and a decrease in the birth rate . . .

United States, by the construction of railway lines and waterways, including the Panama Canal, by the distribution of free homesteads, by the stimulation of a heavy flow of immigration and, more recently, by water and soil conservation projects. To furnish these prerequisites of prairie settlement, aid of many kinds was extended by the Federal Government.

The resulting movement into the prairies, in size and rapidity, eclipsed all similar movements in Canadian history. Between 1900 and 1914, approximately one million people moved into the Prairie Provinces. The prairie wheat crop increased during this period from 20 million to over 200 million bushels. By 1921, the bulk of the prairie agricultural land had been occupied. Owing to the absence of systematic land use studies, including soil analyses,

and to the inexperience of many settlers, some areas which were occupied were found later to be unsuited to field crops.

On a much smaller scale than on the prairies, agricultural settlement has also taken place in other areas, especially in British Columbia and in northern Ontario and Quebec. Agriculture in these areas has been subsidiary in most cases to other industries developing at the same time, such as mining, logging, and closely related secondary industries.

The expansion of forest industries led to the economic development of considerable areas in many parts of Canada. The increase of population in such areas has, of course, been much less than in the case of agricultural settlement, but the total area affected has been very great, as Canada's forests cover over one-third of the total land area. The regions of

... Since 1900, the Canadian labour force has nearly tripled, the increase being chiefly in non-agricultural occupations.

During the early years of the century, production of wheat, steel, and lumber increased rapidly. . . .

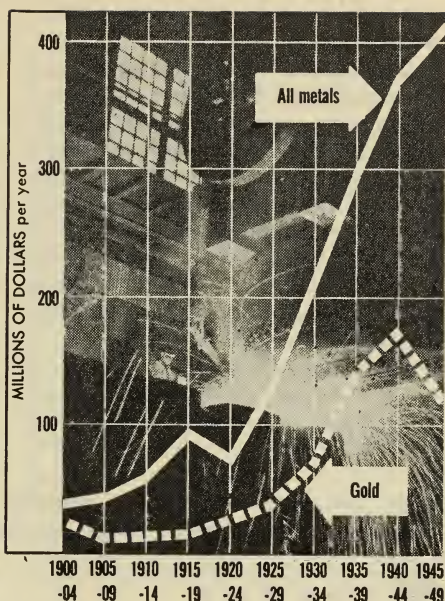

greatest development have been the British Columbian coast, northern Ontario, northern and eastern Quebec, and parts of the Maritime Provinces and Newfoundland.

Commercially, lumber and newsprint are the two major products of Canadian forests. Export markets have been important in the growth of both industries. In 1900, lumber was already Canada's leading export. Nevertheless, production has been greatly increased, chiefly by the development of a large new lumbering industry in British Columbia, where the large trees permit low cost, high quality, and the maximum use of mass-production methods.

The pulp and paper industry, in contrast with lumbering, is a development of the twentieth century, especially of the period since the first World War. About 90 per cent of Canada's total production of wood pulp and paper is destined for the United States' market. This has become the chief forest industry of eastern Canada, especially of Quebec, but it is important in all the chief forest areas of Canada. Since newsprint production has tended to be located close to the pulpwood supply, and is a highly capitalized, mass-production industry, it has resulted in the growth of modern town sites in forested areas previously unsettled.

Mining has increased spectacularly in Canada since 1900. Coal mining approximately tripled its output between 1900 and 1920, due to the increasing demand from the railways, the steel industry, and

. . . Production of pulp and paper, and metals, expanded later.

manufacturing industries in general. Since 1920, the increasing use of hydro-electric power, oil, and gasoline, has helped to reduce the rate of increase in coal mining.

Metal mining in Canada had not become a major industry before the first World War, except for the temporarily large output of gold from the Klondyke and of silver from the Cobalt area. Most of the large ore-bodies, which now form the basis of Canada's output of gold and base metals, were discovered before 1914, but large-scale development was delayed by the technical difficulties of extracting the metals from complex, low-grade ores. The urgency of wartime demand helped to solve the problem. The recent discoveries of iron ore in Labrador and northern Ontario and of oil in Alberta have given added impetus to these and related industries.

Although the number of people actually employed in mining in

Canada is small, the industry has made a relatively large contribution to the settlement of areas previously remote and largely unoccupied. The large mineral deposits have attracted large numbers of people dependent on metal refining, steel production, construction, transportation, the service industries and agriculture. Prospectors for minerals have also made a large contribution to the task of exploring Canada's remoter regions. The old-fashioned, colourful and individualistic prospector has been one of the key figures in Canadian development.

Adequate and cheap transportation was vital to the extension of settlement over large undeveloped areas, and to the shipment of large volumes of bulky staple products, such as wheat and lumber. This fact had long since been recognized by Canadian governments, and the first transcontinental railway, as well as most of Canada's

present waterways had been completed before 1900.

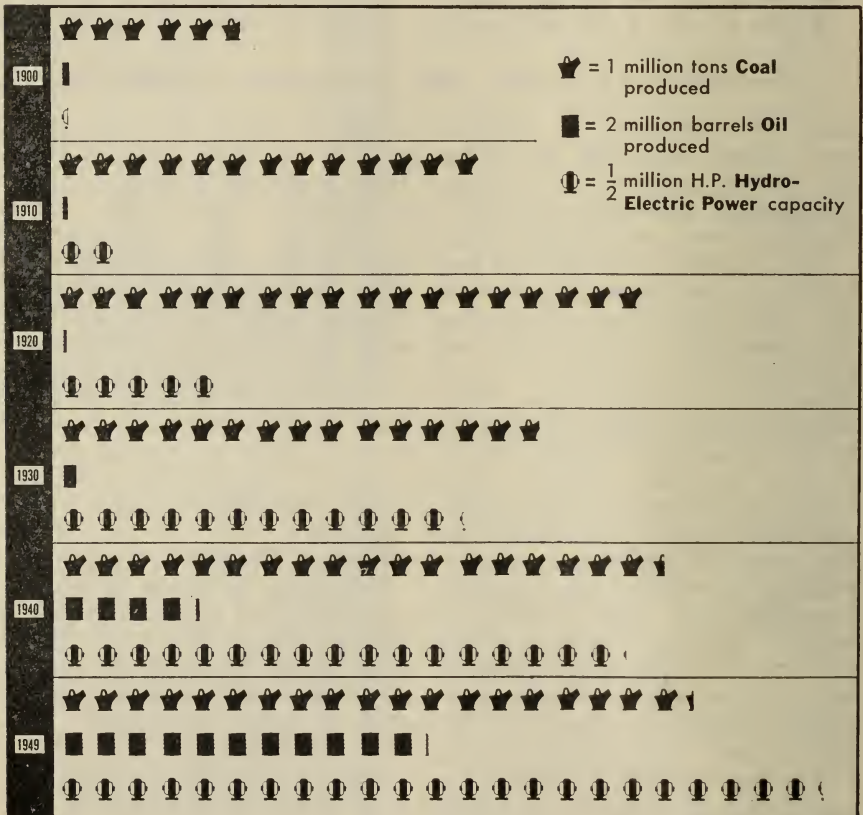

Settlement of the new areas, however, especially in the prairies, demanded a great increase in railway facilities. Between 1900 and the end of the first World War, Canada's railway mileage more than doubled. Expansion was then brought almost to a stop, partly as a result of less rapid Western development and the advent of the automobile.

Air transport later played a more vital role in the development of Canadian resources. Aeroplanes

were particularly valuable in the Canadian north, with its great distances and sparse population, and their increasing use during the thirties was closely related to the expansion of gold mining. At this time Canada led the world in volume of air freight carried.

The expansion of primary industries and of transportation facilities, and the economic development of new territories, have been the basic factors in Canada's growth in the twentieth century. In large part, these have been responsible for the rapid increase in the

Coal production increased rapidly in the early years of the century but later other sources of power became more important . . .

Canadian population, and the overall improvement of the material welfare of the Canadian worker.

Technological Progress

The rapid technological advances which have occurred in almost all fields during the twentieth century have greatly accelerated Canadian development in a number of ways. First, the application of techniques already developed and utilized elsewhere greatly stimulated industries based on Canada's abundant resources. Second, new inventions to meet unique Canadian production problems formed the basis for new industries or revolutionized old ones.

An outstanding example of the first of these two developments is the rapid expansion of prairie agriculture by the application of production techniques and settlement policies matured and tested either in Eastern Canada or in the United States. The same dry-farming methods were applicable both to the southern Great Plains and to large parts of the Canadian prairies. The necessary mechanical devices—plows, seeders, binders, windmills, grain elevators—had only to be reproduced in sufficient numbers and distributed over the prairies. Even the basic economic and social framework—the quadrilateral survey and the free homestead system—could be borrowed from the United

. . . Railway building slowed down as the use of the automobile increased.

States. A variety of wheat suitable to the climate—Red Fife—had been introduced into Ontario from eastern Europe about forty years earlier, and had subsequently been tested throughout the north central states. It was no wonder that, when world market conditions became favourable, settlement could proceed rapidly.

Similar examples of the application to undeveloped natural resources of techniques already matured in Eastern Canada, the United States and elsewhere could be found in mining, fishing, lumbering, newsprint production and other cases.

The second development mentioned above—the acceleration of economic expansion by new technological advances—can be illustrated by such examples as the discovery and utilization of hydro-electric energy, the automobile industry, the chemical industry, the development of methods of extracting metals from low-grade and complex ores, the new methods of prospecting for minerals by the use of geophysics or Geiger counters, or the application of science to agriculture as, for example, in the development of new varieties of rust-resistant wheat. Some of these advances have resulted from research applied to specifically Canadian problems and undertaken by the government or by individual industries. The two World Wars gave a tremendous impetus to all types of technological advance both in Canada and elsewhere.

Arising out of these technological advances and the rapid expansion of the economy, has been a steady demand for capital to provide the new factories, machinery, railways, housing, and other

capital equipment required. By far the greater part of the necessary capital has been provided by Canadians from their current incomes; but in periods of rapid expansion there have also been large imports of foreign capital. The chief sources of such capital have been the United Kingdom and the United States. British investors, who were the chief source at the beginning of the century, were interested chiefly in railway securities and government bonds; these securities also attracted United States' investors. Another flow of capital, mainly from the United States, developed with the opening of Canadian branch plants, especially since the first world war. The World Wars, but particularly the last one, greatly reduced the supply of British capital available to Canada. This, plus the increase in Canadian wealth, increased the extent to which Canada depended upon her own resources for capital.

Growth of Secondary Industry

An important feature of Canada's development in the twentieth century has been a relative increase in secondary industry. Illustrative of this growth is the fact that the number employed in primary industry amounted to approximately 45 per cent of the total labour force in 1901, but are less than 25 per cent of the total at the present time. Manufacturing, which employed one worker in six, fifty years ago, now employs one in four. An acceleration of this shift characterized the periods of both the World Wars, and this has been one of the most important permanent effects of the two wars.

One of the major reasons for this growth in Canadian manufacturing is that products formerly exported in their primary state now are being processed to a greater extent at home. In the main, however, the relative growth of secondary industry, in Canada as elsewhere, is due to the increase in productivity, which reduces the proportion of the labour force required to provide necessities, and sets a larger proportion of the workers free to produce goods and services of other types. In many parts of Eastern Canada, the number of farmers is now smaller than in 1900, while the total agricultural output is much greater. When fewer hands are required to feed the population, more hands are available to make automobiles and radios.

One obvious result of this process is an increase in the Canadian standard of living. Another effect of the growth of secondary industry is a relative increase in the number of Canadians producing for the home market, and some reduction in the economic insecurity resulting from uncertainties in export markets.

A more obvious effect of the growth of secondary industries on the Canadian worker is a change in the types of jobs available and in the types of skill demanded. This shift is intensified by technological changes. There is nowadays a decreased demand for many of the older types of manual dexterity, and an increased demand for the ability to understand, make, and use machinery. New kinds of training are required.

Occupational shifts often involve geographic shifts, especially the movement of population, common to all industrialized countries,

from the farm to the city. This has had complex social, as well as economic, effects on Canadian workers.

Export Markets

Although the domestic market has increased over the past five decades, a high level of exports continues to be important to the Canadian economy as a whole. For some groups, exports are vital—those producing wheat, newsprint, gold, non-ferrous metals, lumber and fish. In the cases of nickel and newsprint, to take two outstanding examples, about 90 per cent of the output must be exported if the industry is to work at capacity.

Since 1900, Canadian export trade has increased greatly in both value and volume. The character of the trade has also changed. At the beginning of the century, lumber, cheese, gold, meat, wheat, and fish were the main export commodities. Twenty years later, wheat and flour had become the largest export followed by meat, lumber, newsprint, cattle, wood pulp, and fish. Today, wood pulp and newsprint have become the dominant export followed closely by wheat and flour with base metals, lumber, other agricultural products and fish among the other important export items. In total, Canada's export trade has varied from nearly one-third of the national production in prosperous years to about one-fifth in years of depression.

At times, such as the years following the second World War, Canada has been able to export considerable quantities of manufactured goods, chiefly to less industrialized countries. The staple products, which form the bulk of

Canada's exports, have also tended to be exported in a more finished form. Refined metals are now exported rather than ores or semi-refined products. Newsprint exports have increased greatly in comparison with wood pulp. Finished lumber is exported, in place of logs or square timber. Several of Canada's greatest manufacturing industries are now those which process native raw materials before export. In the case of aluminum, Canada's cheap hydro-electric power makes it possible to import the raw material and export the finished product.

A relatively great dependence on export markets, on primary industries based on abundant natural resources, and on the widespread use of modern technology to solve particular production problems, contributes to the special character of the Canadian economy. From these factors result high per capita levels of production, of income, of investment, and of external trade. Dependence on external trade makes the Canadian economy vulnerable to the effects of economic instability.

Changes in Population and the Labour Force

There has been a significant increase in the population of Canada, accompanied by regional and occupational shifts within the population. Between 1900 and 1949, the total population of Canada increased from approximately 5.3 millions to an estimated figure of 13.8 millions.

This growth came partly from natural increase and partly from immigration. Natural increase,

total births minus total deaths, amounted to nearly 6 millions for the whole period. Immigration totalled about 5 millions, of which about 3 millions arrived before the end of 1914. The total potential increase in population was therefore about 11 millions. The difference between this figure and the actual increase of 8.5 millions is accounted for chiefly by emigration to the United States.

All the five major regions of Canada showed population increases over the half century, but the rate of these increases varied greatly in different regions and at different times. The population of the Prairie Provinces, which was only 7.6 per cent of the national total in 1901, had risen to 22 per cent by 1931, but was estimated at less than 19 per cent by 1949. The population of British Columbia increased steadily from 3 per cent of the total in 1901 to 8 per cent in 1949. The greatest relative loss was in the Maritime Provinces, which dropped from 20 per cent to 12 per cent of the total. Ontario remained the most populous province, but dropped relatively from 39 per cent to 33 per cent of the Canadian population. Quebec remained steady at about 29 per cent.

The increasing average age of the Canadian population is altering the composition of the Canadian labour force and presenting new economic problems. In 1901, while approximately 35 per cent of the Canadian population was under 15 years of age, only about 5 per cent were 65 or over. Estimates for 1949 show approximately 29 per cent under 15 years, and 7.6 per cent 65 or over, in spite of the postwar increase in the birth rate.

Export trade increased rapidly, and new staples became important, such as wheat, metals, and newsprint.

Gainfully Employed as a Percentage of Total Population for Selected Age Groups

Age-group	Males		Females	
	1921	1941	1921	1941
14-15.....	29.1	16.8	8.3	3.7
16-17.....	67.9	50.9	25.8	21.2
18-19.....	85.8	77.3	39.2	40.0
20-24.....	92.3	91.5	35.0	41.8
25-34.....	96.2	97.7	17.3	24.8
35-64.....	94.3	95.2	10.7	13.7
65+.....	58.4	47.4	6.3	5.6

The Canadian labour force in 1949 represented a slightly greater

percentage of the total population than in 1901. The percentage of the male population in the labour force increased from 56 to 58 per cent, and of the female population from 9 to 17 per cent. The increasing tendency toward the employment of women is due to several factors. Among these are the smaller size of the family, the introduction of labour-saving devices in the home and the increase in the number of jobs suitable to women.

The increase in the percentage of the male population which is at work may be ascribed chiefly to the fact that a greater propor-

tion are of working age today than in 1900. The numbers in the labour force tend to be reduced, on the other hand, by tendencies toward longer schooling for young people, which withholds them longer from the labour force, and toward earlier retirement for older workers.

Standard of Living

When the standard of living is considered in the strictly economic sense, there are certain measurements by which its rise or fall may be evaluated. Assuming a consistent measurement of the cost of living, differences in the rate of growth between income and living costs over a given period are indicative of changes in economic welfare. Complete data on earnings and cost of living are, unfortunately, not available for the entire period covered in this article. Index numbers of the cost of living are available from 1913, however, and data on annual earnings of wage-earners in manufacturing are available from 1917. In the period 1917 to 1949, living costs rose by 57 per cent, while annual earnings rose 173 per cent. It may be deduced then, that during this 33 year period the standard of living in Canada in terms of real earnings of wage-earners in manufacturing has improved by 74 per cent. The trend of real wage-rates from 1917 to 1949 is seen in the accompanying chart sequence which shows index numbers of wage-rates, cost of living and real wage-rates on the base 1935-39=100.

A rougher comparison may be made on the basis of figures from the 1901 Census, which give

average wage-rates per day in manufacturing as \$1.36 for men and 69 cents for women. Weekly hours of work were 60 on the average. These figures may be compared with average weekly earnings of about \$44.00 for all wage-earners in manufacturing at March 1, 1950, for an average of 43 hours of work per week, or slightly more than \$8.00 for an 8-hour day.

Due to technological changes in industry and changes in methods of compiling statistics, a complete comparison of the occupational wage-rates prevailing fifty years ago with those of recent years is impossible. The table which follows shows a few occupational comparisons for Montreal, Toronto and Winnipeg:—

It is interesting to note that it is not uncommon for a worker today to receive as much for a day's work as his grandfather in the same trade received in a week. For instance, in 1901 hand compositors in newspaper printing in Toronto received \$14.00 for a 54-hour week; hand compositors in Toronto in 1948 were receiving \$1.78 per hour, or \$14.20 for an 8-hour day. Such a comparison must, however, be considered in the light of the fact that in 1901 beef in Toronto was retailing at 8 to 14 cents per pound, depending on cut and grade, while in June, 1948, stewing beef was selling at 39 cents per pound and sirloin steak at 66 cents. An example of the increase in purchasing power is seen in the following comparison: on the basis of wages and prices in 13 centres from Halifax to Vancouver, it is estimated that an unskilled building labourer worked, in 1901, an average of almost 21 minutes to earn a

quart of milk; at 1949 wages and prices, he would only work 13 minutes.

Accompanying these increases in wage rates, sizeable reductions have occurred in daily and weekly hours of work. Detailed figures for 1900 are not available but the 1900 LABOUR GAZETTE shows that most construction workers employed on government contracts were working a ten-hour day.

At that time, miners' hours ranged from eight to eleven per day and printers from 48 to 60 hours per week. At the present time, only about 10 per cent of Canadian industrial workers have a standard work-week in excess of 48 hours. About 40 per cent of all industrial workers today are on a 5-day week and for almost one-half of these the standard work-week is 40 hours or less.

**Comparison of Hourly Wage-Rates for Selected Occupations
In the Principal Canadian Cities, 1901 and 1948**

Occupations	Montreal		Toronto		Winnipeg	
	1901	1948	1901	1948	1901	1948
	\$	\$	\$	\$	\$	\$
<i>Daily Newspaper Printing</i>						
Hand Compositors.....	0.24	1.52	0.26	1.78	0.35	1.17
<i>Electric Street Railways</i>						
Conductors and Motormen...	0.16	1.00	0.18	1.10	0.19	1.00
<i>Construction</i>						
Labourers.....	0.15	0.80	0.23	0.85	0.20	0.75
Plumbers.....	0.18½	1.45	0.27½	1.60	0.40	1.50
Painters.....	0.17½	1.15	0.25	1.25	0.25	1.15
Bricklayers.....	0.30	1.60	0.37½	1.75	0.50	1.55
Carpenters.....	0.17½	1.25	0.25	1.50	0.25	1.35

In most of the industrial groups for which data are available, wage rates in 1948 were four to five times as high as at the turn of the century. In metal mining, 1948 rates were slightly less than three times as great. In manufacturing, records available from 1911 indicate that between that year and 1948, wage-rates have increased four and one-half times. The average hourly rate for unskilled factory labour in manufacturing is estimated as being in the vicinity of 18 cents in 1911, whereas in 1948 it had reached 82 cents per hour.

On the basis of the trend of wage-rates from 1911 to date, the relative positions of mining, construction and manufacturing in regard to weekly earnings have not changed. The tendency has been for the industrial groups with the lowest wage levels at that time to have the greatest percentage increases over the past 35 to 40 years.

In addition to these quantitative changes in living standards, qualitative improvements must be kept in mind. Food, since it is one of the primary necessities of life, may provide some indication of

these improvements. As incomes rise, food consumption also increases but not in proportion to the change in income. This means that there is a gradual decline in the proportion of income spent on food and an increase in that available for other uses. Although the increase in food consumption is important, it is the changing pattern of this consumption which is most striking. At the turn of the century much of the diet of the individual Canadian consisted of "unprepared" foods. Foods were eaten "in season" and many items such as oranges were a luxury reserved for Christmas or other festive occasions.

Numerous changes have occurred since then, a few of which might be mentioned. Increasing education in the field of dietetics has resulted in more general recognition of the need for a proper diet. Improvements in processing, transportation, refrigeration and preservatives have done much to increase the quality and variety of the Canadian diet and to make more foods available for year-round consumption. The availability of prepared products such as breakfast foods, canned goods, frozen foods and "ready-mix" baking preparations have done much to change cooking habits in the home. The two

While the cost of living rose during the half century, wage rates rose more rapidly, and real wages became higher in consequence.

100 = Average of years 1935-1939

provincial governments have adopted legislation stipulating that many foods must meet certain minimum nutritional and health standards. These things, plus the availability of electrical appliances have not only reduced the drudgery of housekeeping but have also had an influence on the number of women in the labour force.

Improvements have also been made in housing. The greater use of conveniences such as plumbing and electricity have been the result of increased urbanization and increased incomes. There have been improvements not only in designs and materials but also in some of the methods of construction, for example, the use of power equipment, pre-cutting, pre-fabricating, building several houses at the same time, and community planning of various types. Some of the changes, such as the trend from large to small houses, result both from social and economic considerations. The decline in the size of the average family, the shift to outside forms of entertainment such as the movies, and the scarcity of domestic help have all contributed to this change. The use of natural gas, oil burners, automatic stokers and air conditioning have also contributed to more efficient and more comfortable living for many people.

Increasing use of the automobile plus the engineering improvements made over the years are further indicators of advancement in the standard of living. The effects of this increased mobility on the location of shopping and amusement centres are also considerable. The

small locally-owned store is being supplanted by the supermarket and the chain store.

These have been some of the more tangible changes which have occurred in the standard of living during the past fifty years. Some of the intangible developments, however, may be equally important. Education today is considered an essential to better living. At the turn of the century the average worker had left school at "entrance" grade or earlier. Today his son has at least a good high school education, and often proceeds to university or other advanced training. The importance of education, while not measurable, is basic to Canada's social and economic growth. This is shown most readily, of course, in those areas where benefits accrue from scientific advances but it is also true in many other fields.

Another example of the intangible improvements in the standards of living concerns the medical field. Not only has medical science made rapid progress since the beginning of the century, but greater health facilities are also available to all groups in the community. That such advances have been and are being made is attested to by the increase in life expectancy.

As in so many other fields these changes have not come about in any steady progression nor have they been uniform in all areas in the country. From the end of the first World War, for example, there was little general reduction in hours of work for many years and the movement away from the 48-hour week in particular did not

come about in most industries until after the last war. The two World Wars and the long depression of the "thirties" influenced the timing of many of these

changes, but the trend over the last fifty years has been one of a substantial improvement in the economic welfare of Canadian workers.

Social Changes in Canada Since 1900

Social development in Canada in the last five decades, like economic development, has been marked by an evolution from a relatively simple to a more complex structure. This evolution influenced the individual, as an individual, and also as an associate with others in a changing environment.

This changing social fabric has arisen as a result of forces at work both within Canada and in other countries. Among the most dominant of these have been the increased extent of group or community activities associated with many of the basic economic changes noted above, the wide application of science to many phases of family and community life, increased opportunities for education, recreation and leisure accompanying the higher standard of living and on the international side, the recognition stimulated by two World Wars and a widespread depression, of the growing interdependence of all peoples.

The impact of these forces, within and without, was felt by Canada even though she was a young and vigorous country. Influenced greatly by old and new world ideas and patterns of life and work she has been free, in

the main, to work out her own destiny in a rapidly changing world. But within this range of freedom it has been necessary for her to adapt herself to changing conditions.

Development of a More Interrelated and Complex Society

In the transition from a predominantly agricultural to an expanding industrial economy, much of the self-sufficiency of the rural family and village community has been replaced by the interdependence of workers, especially those in the large urban centres. The division and specialization of labour have tended to place the worker's source of livelihood at the mercy of a single operation, and have made him so dependent upon a multitude of other single operations that it requires a host of other workers to provide him with the necessities of life.

Although manufacturing, service, trade and finance were important economic activities at the turn of the century, forty per cent of the working population was engaged in agriculture. Many of the most prominent values centered around rural living with its emphasis on the sanctity of the

family group and neighbourly obligations. The economic and social interests of each member of the community were scarcely wider than his immediate human contacts but each understood the limited economic activities and social functions of his environment and, as the occasion demanded, participated in them. There was a self-sufficiency and a stability in the social order that is often lacking in a more highly developed industrial society.

The initial expansion, stimulated by the wheat boom, the steady mechanization of farm operations and the national policies for economic development during the early years of the century, resulted in a rapid movement towards urbanization. This movement was one of the most striking social changes of the time. The organization of farm and other primary production for international markets and of manufactured goods for domestic consumption necessitated a complex commercial and financial structure which tended to be concentrated in a few large cities. This trend towards urbanization was intensified by the industrial development which has occurred since the first World War except for the depression years of the thirties.

The rapid growth of large urban centres increased the necessity for more municipal services of all kinds. Under such conditions, the nature of the individual contribution to the economic and social life of the community was changed. The community or urban group as a whole assumed more responsibility for the welfare of each individual. On the other hand, the sense of family solidarity has been extended by the increasing em-

phasis on the responsibility of the individual to the community as a whole.

The expanding industrial-commercial cities created many problems unknown in the more stable rural and village communities. The increased demand for labour was met by the immigration of overseas workers and the movement of farm workers from the land. The informal controls of the family group or the village community were not adequate to meet the needs and problems of the various cultural and racial groups in the rapidly expanding cities. The unifying influence of a people interested in one another was weakened by the heterogeneous nature of the urban group, the mobility of workers, and the contrasts between the various strata of city populations. It was becoming increasingly difficult for society to control the actions of its individual members, while it became necessary for citizens to consider themselves as a group, who work as a team, and to accept economic and social regulations.

Group organization became necessary to offset the social disorganization of the expanding cities. The growth of such organizations as the labour union and social welfare agencies was indicative of the need for group leadership and community support to alleviate some of the distresses of industrial society. As the magnitude of the problems and the cost of the social agencies assuming responsibility for their prevention or relief increased, it became necessary for these agencies to work in closer co-operation. Various church groups became increasingly active in this field.

Favourable economic conditions which prevailed through most of

the twenties, kept public welfare needs within manageable proportions. This concealed the social and economic changes which had been developing. Protection against personal misfortune, formerly assumed by the individual, by his family or by informal community assistance, was being assumed more and more by public authority. A preview of this social development was provided by the brief economic setback of the early twenties but not until the depression of the following decade did the problem assume serious proportions. Formerly, in time of depression, unemployment and destitution were relieved mainly through the self-sufficiency and solidarity of the family, or concealed by the return to rural communities. By 1930, however, the opportunities for self-reliance and social adjustment had materially lessened and a large proportion of the population was dependent almost entirely upon public assistance.

The misfortunes of this depressed period stressed the need for a comprehensive system of social security administered by the state. The state became recognized as the only organization with sufficient resources and authority to assist the individual worker when a highly specialized industrial society developed economic trouble. When prosperity returned, the individual was prepared to support measures to prevent the repetition of similar hardships.

The great industrial expansion in and subsequent to the second World War again accelerated urbanization, intensified social problems related to inadequate housing, emotional instability and juvenile delinquency. Previous

experience and more highly organized social agencies, however, combined with the continuing high levels of employment, helped to ameliorate the social consequences which the industrial economy of Canada had become subjected to during the war and post-war periods.

Role of Government

Over the past half-century, the role of government has been continually expanding. In the social field, there has been an increasing demand for the extension of legislation designed to prevent and alleviate the hazards of a complex economic structure. This demand was accelerated by both world wars and by the depression of the thirties.

One of the earliest forms of such public assistance to be introduced was a system of mothers' allowances. Beginning with Manitoba in 1916, the provinces progressively introduced legislation to provide cash benefits on a needs basis for mothers and children lacking adequate maintenance. This indicated that the state was beginning to assume responsibility for those groups that find themselves destitute or lacking proper support.

The plight of the older worker in modern industry was recognized by the federal Old Age Pensions Act in 1927, which provided federal assistance of 50 per cent towards the cost of provincially administered pensions. This Act was later amended to include pensions for the blind. Here was an indication that the community as a whole, operating through the agencies of government, was realizing that provision must be made for the aged and the handicapped citizen.

During the depression of the thirties, it became apparent that provincial and local agencies were not adequate to cope with the various problems raised by unemployment. For the first time, Canadian governments, from the local to the federal level, undertook to provide some form of economic security on a nation-wide basis for those citizens who found themselves destitute.

A more permanent system to provide against a sudden cessation of income for workers subject to industrial conditions beyond their control was a natural development. Such a system was provided by the Unemployment Insurance Act of 1940, which provides cash assistance to workers in most industries during periods of unemployment. The insurance fund, financed by compulsory contributions from the employer, employed worker, and the government, is an excellent example of responsibility and the co-operation that may exist between groups of citizens.

The Act also established the National Employment Service, which provides workers with a placement agency, and employers with a classified pool of manpower from which workers may be selected. The National Employment Service is the natural outcome of the system of public employment offices initiated in 1918.

The Family Allowances Act of 1944, provides for cash benefits to families in respect of virtually all children under 16 years of age. Health services have been greatly expanded under the stimulus of governments during the past fifty years. Most hospitals now admit all patients needing care. Illustrative of the growing concern which

the federal government feels for the welfare of Canadians was the establishment in 1944 of the Department of National Health and Welfare. This department administers family allowances and makes financial grants to the provincial governments for the provision of old age pensions and of health facilities.

The increasing role of governments is also illustrated by workmen's compensation. Workmen's compensation was first brought into effect in Ontario in 1914 and now all the provinces have legislation designed to protect the worker from the hazards of most industrial employment. The system of workmen's compensation is one of collective responsibility on the part of the employers in an industry, and as such, recognizes the duties incumbent upon one group with respect to another and the participation of governments in protecting the worker against disability.

Other examples of the increasing role of government are to be found in the National Housing Act which originated in 1935, the incorporation of the Central Mortgage and Housing Corporation in 1944, and the recent Agricultural Prices Support Act and the Fisheries Prices Support Act. Legislation and assistance through conciliation and other services have advanced labour - management relations. Agencies of governments inspect mines, factories, shops, and other places of employment. In the development of group responsibility, governments on all levels are serving more and more as connecting links in assisting the community in discharging its functions.

Labour-Management Relations

Labour-management relations are now a matter of concern to the whole community. At the beginning of the century, they were the concern almost entirely of the single employer and the individual worker. Since then, however, the growth of large industries producing goods essential to the welfare of the population and the large increase in the proportion of wage and salary workers has brought labour-management relations increasingly before the eyes of the general public.

The highlights of the half-century have been the cumulative growth of national and provincial legislation designed to facilitate collective bargaining, the organization into trade unions of workers in an increasing number of industries, and lastly the gradual

development of a social consciousness on the part of the whole community.

The full impact of the industrial revolution did not reach Canada until the beginning of the twentieth century. The mechanization of industry accompanied by its concentration in large establishments and the movement of population from rural to urban areas gradually brought about a greater division of interest between employers and workers. As had been the case earlier in England and Europe and then in the United States, the need of the workers for unions to represent them in bargaining with their employers developed with the change in the industrial system.

Apart from the Knights of Labour, which attained some success in organizing both skilled and unskilled workers in Canada between 1881 and the end of the century, most early labour organ-

Canada's rapid industrialization in recent years has required the services of an ever-increasing army of skilled workers. More than a million men and women have received training under Dominion-Provincial auspices since 1937, in addition to the many trained by industry itself.

izations in the United States and Canada were craft unions, e.g., the railroad brotherhoods, the typographical union, and the moulders' unions. This pattern was confirmed in the constitution of the American Federation of Labour, formed in 1886, one of whose main purposes was to establish national trade unions based upon the strict recognition of the autonomy of each trade, a pattern which was not effectively challenged until the 1930's.

A number of the early local craft unions in Canada joined with locals in the United States to form international unions. For the advancement of labour legislation, however, Canadian unions formed a federal body, the Canadian Labour Union in 1873 which was dissolved four years later, and in 1886, another federal body, the Trades and Labour Congress of Canada, many of whose member unions were also affiliates of the American Federation of Labour in the United States.

Although a framework of labour organization was thus set up early in the development of Canadian industry, the growth of these organizations lagged far behind the growth of industry. This lag may be attributed to a number of causes. Many employers effectively discouraged the formation of unions in their establishments and, in the early years of this century, particularly opposed international trade unionism. On the part of labour, the lag may be attributed to the existence of opportunities for self employment, to the heterogeneous nature of the labour force, and to the wide fluctuations which occurred in the demand for labour.

In addition to the craft unions, a number of unions in the AFL

and TLC were organized on industrial lines, e.g., the United Mine Workers of America, and the Amalgamated Clothing Workers of America, but few of the mass production industries were organized until a committee of the AFL undertook to do so in 1935. The unions concerned then formed a new federation, the Congress of Industrial Organizations in the United States in 1938 whose member unions now are affiliated in Canada to the Canadian Congress of Labour. The Canadian and Catholic Confederation of Labour formed in 1921 in the province of Quebec is also organized on industrial lines. Union membership in Canada has tripled since 1936—reaching a total of slightly more than a million in 1949.

Development of Collective Bargaining

The traditional concept of labour as a commodity in a market economy persisted well into this century. Employers insisted on the right of a free and open market for labour, which implies individual bargaining. Collective bargaining thus developed very slowly. The first concern of the unions which were organized at the turn of the century was for recognition by employers and for a reduction in hours of work. The fulfilment of this latter aim in the general reduction of the working week in industry from one of 60 hours or longer to one of 40 to 48 hours is among the most notable changes brought about in the half century. The right of the worker to be represented by a union of his own choosing gradually came to be accepted by most employers and by the general public and

in 1944 was recognized by a war-time Order in Council of the Federal Government, P.C. 1003, which made it compulsory for employers to bargain with unions which represented the majority of their employees concerned. This principle and obligation have since been incorporated into the legislation of the Federal Government and of most Provincial Governments.

Mainly through the efforts of unions, the area of collective bargaining has gradually widened. In addition to wages and hours, many other aspects of general working conditions now are the subject of labour-management discussion and agreement. These include safety measures and health and sanitary conditions, job security, various share-the-work plans, grievance procedures, life insurance, sickness and accident insurance including both hospital and medical expenses and some provision for continuance of the family income, and, most recently, retirement pensions. Slightly under one-third of all the wage and salaried workers in Canada now are working under the terms of collective agreements negotiated by labour and management.

The effects on the community of the development of large corporations on the one hand and of large labour unions on the other have been partly counteracted by changing attitudes on the part of employers and unions, and by legislation which protects the interests of the general public. From a utilitarian standpoint it came to be recognized by employers that adequate wages, reasonable hours, good working conditions and elimination of causes of grievances result in increased production. As early as

the 1920's, many corporations had begun to inaugurate personnel departments and to make special efforts to improve relations with their employees. Growing out of recent wartime experiences, a further means of communication between management and labour has been provided by labour-management committees.

The process of negotiating collective agreements and the continuous co-operation required in carrying out their terms have done much to improve labour-management relations. The average number of days lost per wage and salary earner through strikes and lock-outs has declined since 1920. When the growing area of bargaining is considered, a substantial improvement in industrial relations is indicated. Strikes or their absence, however, are not necessarily an exact indication of the state of industrial relations.

Formed primarily as bargaining units of labour, the union has also developed into a social institution or group, to which the worker contributes in varying degree his loyalty, support and work during free time, and from which he receives an outlet for his initiative, the satisfaction of playing a part in making decisions affecting the whole group, protection against injustice and in some cases recreational facilities.

As a social institution, the unions now form not only an integral part of the community but also of the nation. The labour Congresses make known the viewpoints of their members on national affairs through the presentation of briefs to governments. In addition, representatives of unions as well as of management organizations now serve on many governmental boards and committees.

Introduction of old age pensions in 1927 was a major social security advance in Canada. The photograph shows the signing of the Old Age Pensions Agreement between Saskatchewan and the Federal Government in 1928. Around the table are Peter Heenan, Minister of Labour, W. R. Motherwell, Minister of Agriculture, Prime Minister King, and C. A. Dunning, Minister of Railways; in the background, a group of Saskatchewan Members of Parliament.

The first old-age pension paid in the Dominion of Canada, 1927, being presented to W. H. Derby, old-time pioneer of the province of British Columbia, in the office of the government agent for the Alberni district. Mr. A. W. Neill, M.P., Comox-Alberni, and Mr. R. J. Burde, M.L.A., Alberni, who sponsored the first legislation passed in the Legislature of British Columbia, are participants in the event, together with Mr. A. G. Freeze, Government Agent. Opposite: Facsimile of the first Old Age Pensions cheque.

Growth in Educational Opportunities

Since 1900, important quantitative and qualitative changes have taken place in the field of education in Canada. School attendance up to specified ages gradually became compulsory by law in the various provinces and many subsequently raised the statutory minimum age for leaving school. Such legislation was based on a growing recognition of the need for preventing children from entering the field of employment before they had been provided with a basic education.

In 1900, secondary schools had relatively few pupils. The basic content of education in these schools was primarily along classical lines, with stress placed upon mathematics and the humanities.

The demands of industry and commerce, however, have increased training requirements, and these, combined with the recognition of the economic and social advantages of a higher level of education, have swollen the ranks of those attending secondary schools and universities. Over the

half-century, in addition, increasing recognition has been given in the field of education to individual differences, and at certain stages of the educational process the student now has a choice of a variety of courses.

There has also been a trend towards an increasing technical content and reduced cultural content over broad areas in education. This trend is partly the result of Canada's rapid industrial development and partly the result of the demand for a closer relationship between education and life interpreted in terms of work. There is sensed a danger, however, that the pendulum may swing too far in the direction of limiting education to training for specific work. If this should happen, many educationists feel that the fundamental basis of education may be narrowed and weakened, instead of having as an objective the teaching of the individual how to live, to think for himself, and to seek for and to cherish truth and knowledge, as well as prepare him for earning his living.

Another important development in the growth of educational op-

portunities is to be found in the field of adult education. Many agencies are making a contribution in this area, including the universities, various provincial and federal government departments, labour unions, industrial organizations, churches and other community groups.

Immigration and Assimilation of Ethnic Groups

Over the last 50 years, great additions have been made to the basic ethnic groups which formerly constituted the population of Canada. The railway building era and the development of the western and northern areas of Canada brought new settlers especially from the British Isles, Central Europe and the United States.

Many of these immediately fitted into the Canadian economy and played an important part in agriculture and other primary industrial and commercial life of Canada as well as in professional pursuits.

Naturally, perhaps inevitably, there have developed problems of assimilation. Some of these were due to the rapid development of Canadian industry, the trend towards centralization of certain types of industry in large cities and the overall movement from the land to urban centres. Other problems have been more closely associated with differences in modes and standards of living and an inclination to stay together and to preserve old customs.

Language difficulties have gradually disappeared and the tendency towards segregation would disappear more rapidly if housing facilities were adequate. On the whole, newcomers now are recog-

nized as contributors to a common welfare. Perhaps the severest test of the sincerity of native Canadians in their relations with those who have come from other lands is to be found in times of serious unemployment. At these times, there is always the danger of thinking of the recent immigrant as a competitor for employment which should be reserved for Canadians.

In contrast to the earlier movements of immigrants to Canada, the majority of those who have recently entered the country have been assisted in many ways to help them to become more quickly assimilated into Canadian life and work. Besides the assurance of jobs when they arrive, steps now are taken by the Federal Department of Citizenship and Immigration and the Department of Labour and by other interested agencies to help them overcome language difficulties quickly, to ensure that they enjoy satisfactory living and working conditions and generally to help them to become adjusted to their new environment.

Changing Attitudes Towards Employment of Women

Fifty years ago about ten per cent of all women were employed outside the home while today about twenty per cent are in paid employment. Also about twenty-five per cent of the women in paid employment today are married.

At the beginning of the twentieth century, in rural areas, the home provided most of the goods and services necessary for the family. The making of clothes and even cloth, baking, preserving and preparing foods and other neces-

sary tasks, were part of the regular household duties of women. In the cities, although more women were employed outside of the home, social custom and tradition prevented many from entering paid employment and restricted work almost entirely to domestic service, teaching and dressmaking.

Over the period, increased mechanization opened up a type of work where finger dexterity, adaptability and ability to do routine work were required rather than physical strength and many women workers were employed to do this type of work.

The trend towards urbanization, the expansion of trade and service industries and the utilization of labour-saving devices in the home, all contributed to the increase in the number of women workers.

The two wars opened the gates of employment still wider for women. During the first World War the number of single women employed increased rapidly while the same development occurred for both single and married women during the second World War.

At the turn of the century, the Trades and Labour Congress stated as one of its objectives "the abolition of female labour in all branches of industrial life, such as mines, workshops, factories, etc." This objective remained until 1914 when it was replaced by the policy of "equal pay for equal work." The number of women who were members of trade unions was small until the second World War, but by 1950 about one out of twelve working women was a member of a trade union.

In 1950, the trade, service and manufacturing industries accounted for more than eighty per cent of all women in paid employment.

In most provinces, legislation prohibits women from working in jobs considered injurious to their health. It is only recently that women have been able to study or practise law in some of the provinces.

The recognition of women as citizens followed closely upon the recognition of their contributions in the field of employment. In 1918, women were given the vote for the first time in the Dominion elections. Shortly after, the franchise was extended to women in all provinces, except in Quebec, where women did not receive the vote until 1940. Full nationality rights were accorded women in 1947 when they were given the privilege of retaining their Canadian citizenship when marrying an alien.

In 1950, there were five women who were members of the various provincial legislatures, of whom one, in the province of British Columbia, was the Speaker of the Legislature. Several women have been elected to the House of Commons. At present, there is one woman member of the House of Commons while there are two women in the Senate.

Recreation and Culture

Fifty years ago, long hours of work and short or rare vacations provided little opportunity for most people to enjoy recreational or cultural activities. Organized facilities were limited and there were few amusements of a public nature. More entertaining was done in the home; people made their own music by means of the piano and other instruments; means of travel were limited to horse-drawn carriages, bicycles, trains and steamers. Holiday trips to exhibitions, to relatives' homes

in other places, and, for some city folks, a few weeks at a convenient but primitive summer cottage covered most of the leisure travel of the period. Theatres were few; moving pictures were yet to come. Spectator sport was limited but there was much personal participation in games and other sports.

Today, a wide variety of commercial entertainment exists. The radio has largely supplanted the piano in the home. The moving picture and professional sports now have become major forms of entertainment. Many families now possess an automobile and this, along with greatly improved roads, has made travelling an important recreational pastime.

These developments have contributed to a wider and frequently more up-to-date knowledge of what is happening in Canada and elsewhere, although this knowledge is not always profound.

The developing culture of this country has been subject to varied and at time divergent influences

during the last half-century. The literature, and later the moving pictures and radio of the United States, as well as the family and trade contacts with Americans, have had a profound effect on the thinking and habits of Canadians. In addition, the two world wars brought many Canadians into direct contact with many European cultures and habits.

Generally speaking, travel, whether to a war or merely for business or pleasure, has taught Canadians toleration and given them a wide range of ideas during the last two generations. In assimilating those ideas, a culture is being developed which, using American and British stimuli, retaining some of the Puritanism of the English-speaking pioneers and much of the traditional customs and atmosphere of the French-speaking, and at the same time becoming conscious of Canada as a country instead of a series of parishes and provinces, will become more distinctive in future years.

Position at Mid-Century

Although the economic and social changes of the first half of the twentieth century have resulted in many improvements in the general welfare of Canadian workers, important problems still exist and more will arise as the economy grows.

A continuing overall objective is the further improvement of our actual standards of living. Basically, a higher standard of living depends upon the increased production of the goods and services

required by a nation. A growing volume and variety of production, however, are based to a considerable extent upon the natural resources at the disposal of a country and on the effectiveness with which these are developed.

Canada has been generously endowed with natural wealth. On occasions in the past, however, some of these resources have been exploited with little consideration given to their replacement or conservation. In recent years, it

has become increasingly apparent that intelligent conservation measures must be applied if the products of the forests, the farms and the seas are not to be exhausted to the point where they cannot be replenished for many years. As a result, conservation policies are being adopted by industry to a growing extent. In addition, provincial and federal governments are encouraging such practices by legislative programs designed specifically to stimulate the intelligent utilization of all natural resources. The next fifty years will undoubtedly see further progress in the development and application of conservation measures of all kinds.

The effective utilization of natural resources for productive purposes, however, also depends upon the willingness of the entrepreneur to direct his efforts to this end and on his ability to obtain the capital which is required. Although much can be done by governments to stimulate private investment, the extent of such investment is basically founded on the willingness of individuals and of the business community to invest in the future of the country. Many organizations in Canada today are emphasizing this fundamental need as one which is a prime requisite to the continued development of this country as a prosperous industrial nation.

A rising standard of living is also based on the efficient utilization of manpower as well as all the other resources of a country. Increasing productivity is an objective which is of direct concern to the whole nation. Businessmen strive to make the most efficient use of their respective working forces, their raw materials, their

equipment and plant in order to minimize costs and maximize profits. Most workers, too, recognize that improvements in the efficiency of labour, as well as in the use of other factors of production, mean a larger output of goods and services. They realize though that improvements in productivity arising from technological change sometimes mean less immediate employment in one industry, and they are naturally desirous that this should be more than offset by expansion in other industries. When overall improvements in productivity occur, workers are also naturally interested in sharing the benefits. The consumer also has a direct interest in higher productivity since this is one of the main requirements for lower prices.

On a broader scale, governments also are playing an increasingly important role. The development of a network of local employment service offices to facilitate the movement of workers from one job to another and to assist persons with special employment problems has already proven helpful and no doubt will be even more effective in the years to come. An additional trend will likely be the extension of industrial training programs and general educational facilities to assist workers in making the occupational shifts that a growing economy requires. Such measures help to increase the mobility and skill of the Canadian labour force.

Of special importance for Canada is the loss of employment and production arising from the seasonal nature of operations in many industries. Seasonality of employment in some industries results directly from the fundamental conditions of production or demand and thus cannot be

eliminated entirely. Nevertheless, the reduction of the costs of seasonality and of the burden it imposes on workers is so desirable an object that it well justifies the co-operation of all parties concerned—labour, management and government—in developing measures to deal with this problem.

One problem which faces most countries today is that of offsetting the periodic booms and depressions which have characterized the economies of the world for many years. The seriousness of these wide swings in economic activity was never more vividly illustrated for Canadians than during the depression of the thirties. In many of those years, about one out of every four workers in Canada was unemployed, and many others were under-employed.

The attack on this problem is many-sided. It calls for, and is receiving, a greater recognition by business generally that there are many steps which can be taken by industry itself to offset major depressions. Aggressive and alert marketing policies are proving helpful in sensing changes in market conditions as early as possible so that measures can be formulated to re-direct or intensify advertising efforts or to shift production to other products. It is becoming more generally recognized that such measures can be directed towards maintaining production and employment as well as profits. In the same manner, planned investment programs by industry which provide for a reasonably steady volume of expenditures each year on new plants and equipment is another helpful step which can and is being adopted by industry.

As the role of governments in economic affairs broadens, how-

ever, the responsibility for maintaining high and stable levels of economic activity becomes of growing concern to them. Almost all taxation policies, for instance, on every level of government influence general business conditions. In addition, monetary and credit policies are being designed by governments for the specific purpose of influencing the course of economic activity so as to avoid major depressions. In Canada, a central banking system has been established "to regulate credit and currency in the best interests of the economic life of a nation, to control and protect the external value of the national monetary unit and to mitigate by its influence fluctuations in the general level of production, trade, prices and employment". In the same manner, public construction projects are being planned so that they can be undertaken at the times when, and in the places where, their effects on the general employment situation will be most beneficial.

Social security measures are also being designed to deal with the problems of avoiding major depressions and of offsetting their effects on Canadian workers. Unemployment insurance, for instance, provides an alternative source of income for workers who become temporarily unemployed. Thus, the effects of such unemployment on purchasing power and the general level of economic activity is offset to some extent. Other social security measures, such as family allowances, also perform this function, while at the same time raising the incomes and thus the purchasing power of groups in the population whose earnings are especially low.

A broader need, however, is met by social security programs. The increasing proportion of wage and salary workers in the Canadian population who rely mainly on their earnings from large business organizations means that when these earnings are interrupted, not only by unemployment but also by old age, accident or sickness, most are left without any alternative means of supplying their needs. The disastrous effects of these types of economic hazards are being increasingly combatted by social security measures.

Another trend that is noticeable today is the growth of a spirit of co-operation on the part of all groups directly engaged in the production of goods and services. Such a state of affairs is usually referred to as "industrial democracy". It is primarily based on a willingness on the part of both labour and management to discuss their differences over a conference table and to keep in mind their general responsibility to the community at large.

The voice of labour in industry is given practical expression through collective bargaining procedures. The increasing acceptance of collective agreements by industry is an indication of greater industrial democracy. Such bargaining procedures, however, can still be extended to a large portion of industry.

A final mid-century problem, and an important one for Canada, is the development of greater international co-operation. It is widely recognized today that no nation "is an island entire unto itself". In many ways, economic and social progress depend upon international co-operation. This is particularly true of a country

such as Canada where about one out of every three workers is producing for markets in other countries of the world.

As an active participant in the United Nations Organization, Canada is taking an increasing interest in world affairs. In respect to economic and social matters, she has a special interest in article 55 (a) of the United Nations Charter, which provides that "with a view to the creation of conditions of stability and well-being, which are necessary for peaceful and friendly relations among nations, the United Nations shall promote higher standards of living, full employment and the conditions of economic and social progress". Overall responsibility for formulating and co-ordinating measures for the maintenance of full employment rests with the United Nations and the action program undertaken by the specialized agencies such as the International Labour Organization and the International Trade Organization. Canada has a particular interest in the Economic and Social Council to which has been delegated the problems of full employment and economic development.

As a member of the International Labour Organization since its inception in 1919, Canada has actively supported the work of the organization in promoting social justice in all countries of the world by improving industrial conditions through legislative action and international agreements. With other member states, this country recognized in the Declaration of Philadelphia (1944) "the solemn obligation of the International Labour Organization to further among the nations of the world programs which will

achieve full employment and the raising of standards of living”.

High levels of foreign trade and improvement of world trading relations remain as primary objectives of Canadians. To this end, through the International Trade Organization, Canada has striven to bring about a general

removal of trade barriers and to expand the flow of international commerce.

Through these activities, Canada has demonstrated its willingness to accept international responsibility and to play an important part in furthering international co-operation and lasting peace.

Vocational Training During the Half Century

Federal interest in vocational education was first shown by the appointment of a Royal Commission on Technical Education under the Chairmanship of Dr. James W. Robertson in 1910. Action on Dr. Robertson's voluminous report was delayed by the first World War, but the need for facilities to train discharged war veterans for civilian life, together with agitation by organized labour and the Canadian Manufacturers' Association in 1918, led to the introduction of legislation in the House of Commons in June, 1919. This legislation provided for a federal appropriation of \$10,000,000 to be paid to the provinces in proportion to population over a period of ten years to assist them in providing technical education.

The development of provincial systems of technical education with federal grants in aid was relatively slow prior to the 1930 depression years, when the need for vocational guidance for unemployed youth became urgent. The Unemployment and Agricultural Assistance Act, 1937, provided the means by which the Dominion Government could co-operate with provincial governments in dealing with the establishment of unemployed youth.

Following the outbreak of war in 1939, this developed into war emergency training. In 1942, Hon. Humphrey Mitchell, Minister of Labour, introduced in the House of Commons the measure under which vocational training is now carried out, namely the Vocational Training Co-ordination Act.

During the war years almost half a million people were given war emergency training, while about 150,000 subsequently received rehabilitation training.

The peacetime Dominion-Provincial program provides for a broad field of training—youth training, apprentice training, supervisory training for industrial foremen, retraining of unemployed to fit them for gainful employment, and vocational correspondence courses. The Dominion also provides financial assistance to the provinces for vocational training at the secondary school level.

In the fiscal year 1948, when rehabilitation training was still an important factor in the training program, Parliament appropriated over \$14,000,000 for the various types of training; for 1949 the total was \$7,300,000.

The photographs on this page were taken at the St. Paul L'Ermite Hotel Trades Vocational Training Centre, which was operated by the Labour Department during the rehabilitation period, and later converted into a hostel for displaced persons' family groups and women. Above—a cooking class is finishing French pastry. Below—training in the operation of a hotel desk.

GREETINGS FROM

Percy R. Bengough, C.B.E.

President

Trades and Labour Congress of Canada

I am very pleased to have this opportunity to extend to the *LABOUR GAZETTE* on its Fiftieth Anniversary congratulations and good wishes on behalf of the officers and members of the International, National, Provincial and directly chartered organizations affiliated with the Trades and Labour Congress of Canada.

As to be expected we have had our points of difference during the past fifty years. However, taking the batting average throughout these past years, one can quite safely say that the relationships between the Department of Labour and The Trades and Labour Congress of Canada have been generally harmonious and friendly. It is natural that The Trades and Labour Congress of Canada should have a very keen interest in the Dominion Department of Labour and its official magazine, the *LABOUR GAZETTE*. This Congress asked for the establishment of a Department of Labour in 1873.

Twenty-seven years later, in 1900, the Department of Labour was established. Many good laws resulted. The Industrial Relations and Disputes Investigation Act, Unemployment Insurance Act, National Employment Service were all worth while. Most of them of course sadly need being brought up to date

(Continued on page 1410)

LABOUR LEADERS

Aaron R. Mosher, C.B.E.

President

Canadian Congress of Labour

It gives me great pleasure, both personally and on behalf of the Canadian Congress of Labour, to extend greetings to the LABOUR GAZETTE on its Fiftieth Anniversary. The story of the Labour movement during the past half-century has been faithfully reflected in the pages of the LABOUR GAZETTE, which has objectively reported its progress and development, as well as that of the Department of Labour itself.

The Department has expanded to a far greater extent than anyone could have anticipated when the LABOUR GAZETTE was first published, and in this respect has kept pace with the growth of the Dominion.

The LABOUR GAZETTE is an invaluable source of statistics, as well as the official record of Boards of Conciliation, Labour Relations Boards, and departmental activities generally. Only rarely is it possible to find a government publication which may be read with pleasure as well as interest, but I feel that the LABOUR GAZETTE sets a fine example in its recognition of the fact that real human beings are involved in the material which fills its pages.

I hope that it will long continue to serve the workers and the people of Canada as an official journal of a very high order, and I extend warmest congratulations to all who have been associated with it through the years.

GREETINGS FROM

James B. Ward, C.B.E.

Secretary Dominion Joint Legislative Committee
Railway Transportation Brotherhoods

On this the fiftieth anniversary of the publication of the *LABOUR GAZETTE* the citizens of Canada, particularly the wage-earners, should have no hesitation in extending congratulations to the officers and employees of that branch of the Department of Labour responsible for its compilation.

This periodical has greatly expanded during the years until today it contains an abundance of data affecting the citizens in general and has become a "must" in the libraries of those who represent management and labour.

Over the years the Department of Labour has been particularly fortunate in that its personnel has consisted largely of those imbued with a substantial measure of human understanding so essential to the establishment and retention of the confidence of both employer and employee, as well as the general public.

The decisions of the Umpire under the Unemployment Insurance Act; the decisions of various Boards of Conciliation and of the Canada Labour Relations Board under the Industrial Relations and Disputes Investigation Act; the content of numerous collective agreements and wage schedules; new or amending legislation in the various provinces; labour and cost-of-living statistics, and many other important matters all make the *LABOUR GAZETTE* a periodical of inestimable value to industry and to the workers of Canada.

LABOUR LEADERS

Gérard Picard, O.B.E.

General President

Canadian and Catholic Confederation of Labour

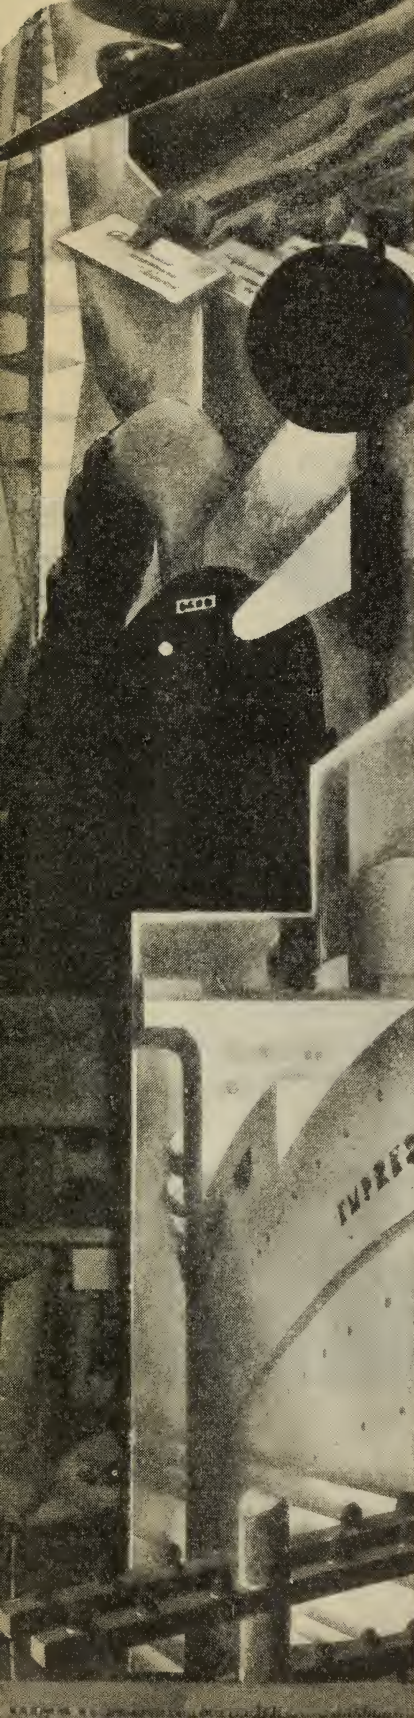

For the past fifty years the LABOUR GAZETTE, by publishing facts and statistics drawn from the best of sources, has been providing Canadian workers with first-class information.

The Federal Department of Labour, under whose authority the LABOUR GAZETTE is published, has thus been of immense service to all Canadians who are members of trade unions.

The issues of the LABOUR GAZETTE have gradually improved, and today the French edition and the English edition, published simultaneously, are both attractive and very well documented.

On the occasion of the fiftieth anniversary of publication of the LABOUR GAZETTE, I am making a point, as General President of the C.C.C.L., of expressing my personal appreciation and the appreciation of the C.C.C.L. for the pre-eminent part played by this review of the Department of Labour of Canada. May I also take this opportunity to congratulate the present Chief Editor, Mr. H. J. Walker, and the English and French Editors, Mr. Mainwaring and Mr. St. Arnaud, on the notable progress made by the LABOUR GAZETTE under their guidance.

THE GROWTH OF LABOUR ORGANIZATION IN CANADA, 1900 - 1950

by J. T. Montague,

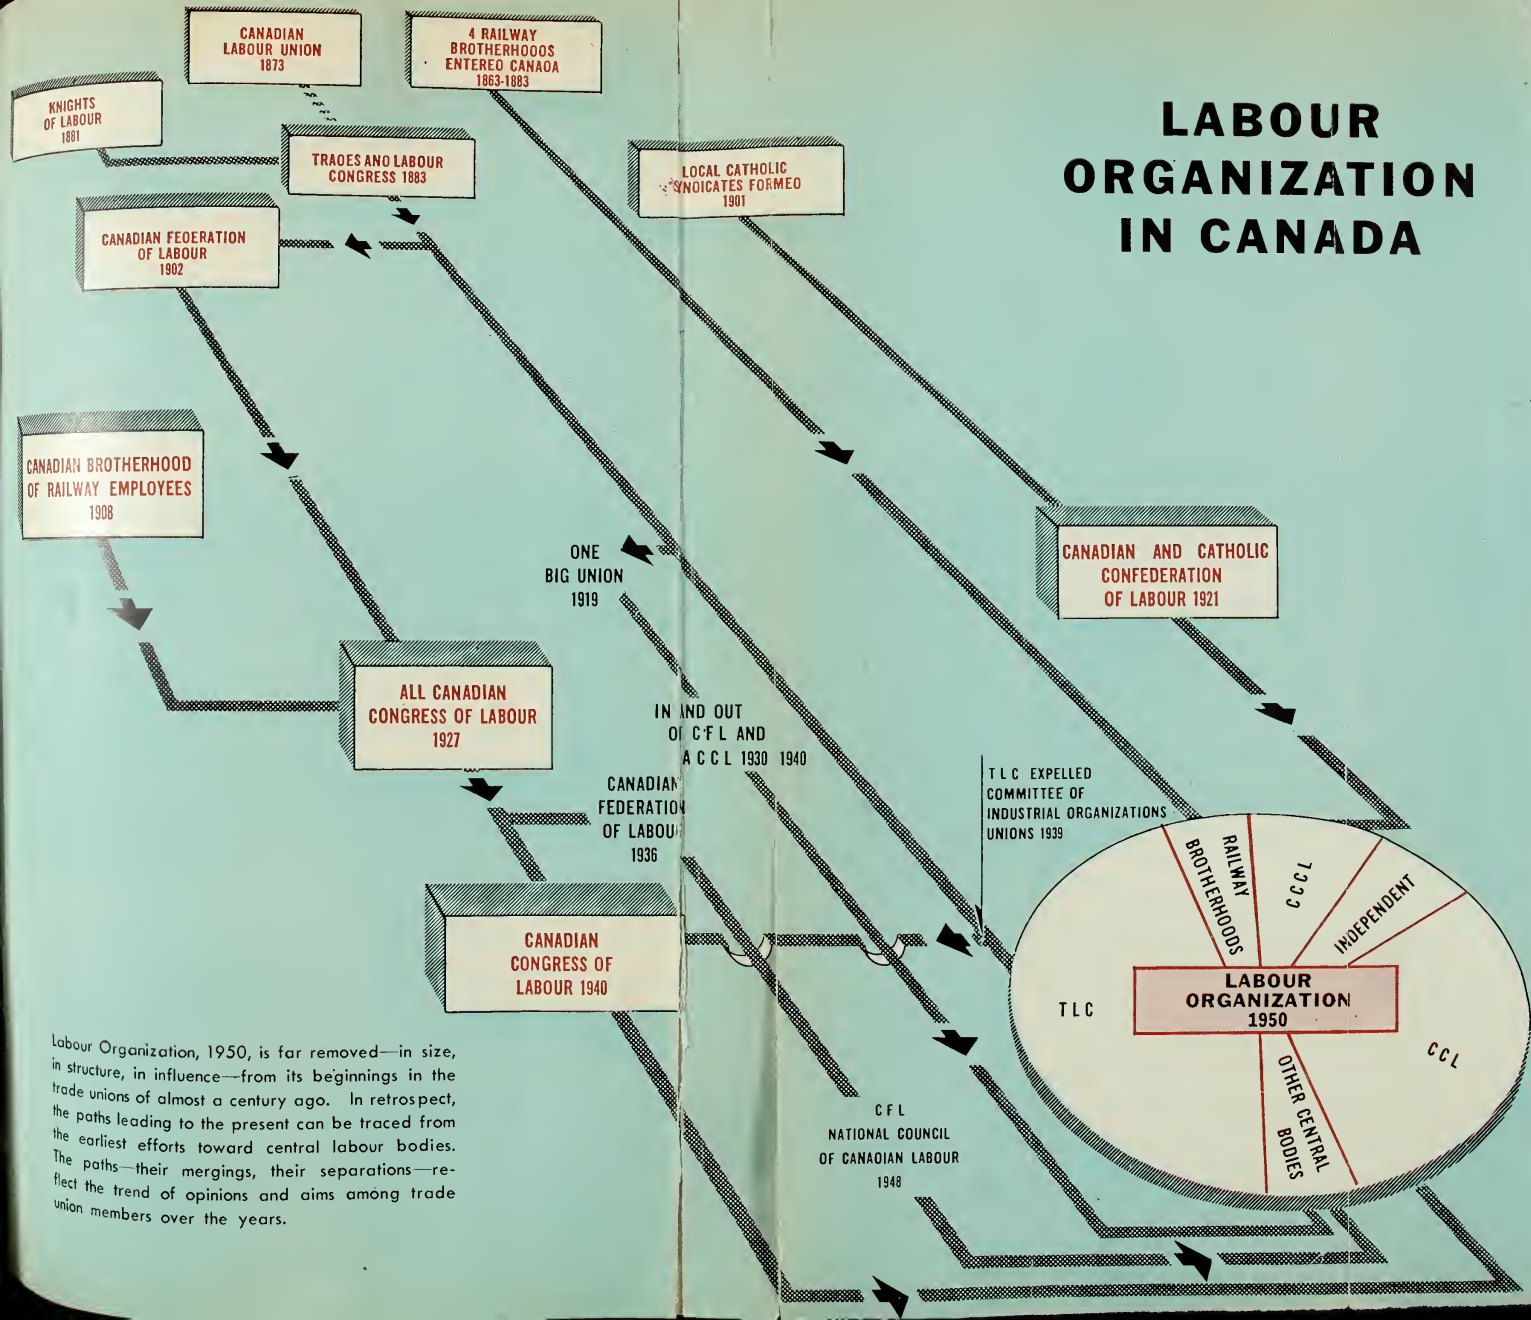

*Economics and Research Branch,
Department of Labour **

More than a million Canadian workers today are members of labour organizations.

The rise of trade unions to their present strength and influence in the Canadian economy is the subject of this article.

* Other members of the Economics and Research Branch, especially those in the Collective Bargaining Analysis Section, assisted in the preparation of this article.

LABOUR ORGANIZATION IN CANADA

Labour Organization, 1950, is far removed—in size, in structure, in influence—from its beginnings in the trade unions of almost a century ago. In retrospect, the paths leading to the present can be traced from the earliest efforts toward central labour bodies. The paths—their mergings, their separations—reflect the trend of opinions and aims among trade union members over the years.

The half century which has passed since the setting up of the Federal Department of Labour has been marked by a significant growth in the participation of Canadian workers in labour organizations. In 1900, union membership was relatively small, but already a basis, from which future unionization was to grow, had been laid. The unions of the time drew their membership almost entirely from skilled craftsmen and coal miners. Today, the structure of labour organization is more complex due both to internal and external factors. On the one side the basis of union organization has broadened to include all classes of workers and the membership has grown both in absolute numbers and in terms of its proportion in the labour force. On the other side there have been important changes in the organization of industry and in the nature of the work performed.

Consequently, it is fitting at this mid-century mark to trace, in broad terms at least, the historical pattern of events which gave rise to the present structure of labour unions. This can be done perhaps best by setting forth first of all the essential characteristics of labour organization, both as it was around the turn of the century, and as it is now. Against this background the significance of intervening events will be more readily seen.

Labour Organization Before 1900

When the Federal Department of Labour was established organizations of workers had already been active in Canada for at least seventy-five years. Earliest efforts towards union activity in Canada were undoubtedly attributable in large measure to emigrant craftsmen from Great Britain. The newness of the country, the prevalence of domestic activity in many areas of industry, and the scattered nature of the population, all reduced the effectiveness of the efforts of the craftsmen. But small local groupings of workers, so-called Labour-circles, were in existence in Lower Canada before 1830.

The lead toward a more permanent trade union movement in

Canada, just as in France, Italy, Germany and the United States, was to come from printers. As early as 1827, a group of printers in Quebec City took part in the regulation of wages, cared for its sick and provided certain entertainment.¹ In Toronto, then York, a similar organization dates from 1834. Coopers, stonemasons and shoemakers were not far behind in beginning their activities. Until the middle of the nineteenth century, however, the groupings of labourers were purely local in membership and outlook. But as the number of these groups increased it became clear that a more permanent and informed leadership was needed than could

¹ See Coats, R. H., "The Labour Movement in Canada", *Canada and its Provinces*, Volume 9.

be provided from within their own ranks. Much of the required aid was forthcoming from unions in the United States.

Led by unions, primarily of United States origin, and by skilled workers with union experience, primarily from Great Britain, groups of workers in various industries organized local unions after 1850. Among these were the moulders, the shoemakers, the sailmakers, the shipwrights and the caulkers. The first of these groups to affiliate formally with a union in the United States was the moulders, which joined the Iron Moulders Union of America, in 1859. A more significant affiliation of the time, however, appears to have been that of Canadian printers with the National Typographical Union, or the International Typographical Union as it was re-named later. The first printers to affiliate with this union were in St. John; they became a local of the I.T.U. in 1865. A Toronto local was chartered in 1869, and other locals were founded in various localities, including Ottawa, shortly afterwards. At a later date activities of these I.T.U. locals, particularly in Toronto and Ottawa, gave the original impetus to an overall labour movement in this country.

Two other ways in which the labour movement in the United States influenced its Canadian counterpart were evident at this time. First, around 1860 the four railway brotherhoods², already well established in the United States, began to take Canadians into their membership. Second, the Knights of St. Crispin spread to this country. This group was

made up of shoemakers and had as its objective limiting the use of machines in the manufacture of shoes. Its membership grew rapidly and locals were active throughout Eastern Canada during the early 1870's.

Although the Canadian unions of this time borrowed their organization in large measure from the United States, Canadian labour law was originally based on that in the United Kingdom. Canadian law, however, did not keep exact pace with changes in British law. Whereas the English Parliament passed an act in 1871 exempting trade unions from the law respecting restraint of trade, no such revision was made immediately in Canada. The importance of this omission became evident in 1872, when, in July of that year, the printers of Toronto struck in favour of a nine-hour day. Soon after the strike began a group of the union leaders were jailed on a charge of criminal conspiracy. Agitation for changes in the legislation of the country followed and, before the printers could be tried, laws, almost identical with the British counterpart, were passed—the Trade Unions Act and the Criminal Law Amendment Act of 1872. Jointly they freed trade unions from liability under the common law on conspiracy in restraint of trade.

Removal of legislative barriers to the organization and activities of trade unions, together with the short period of unprecedented prosperity in Canadian industry at about the same time, provided a stimulus for a further expansion and consolidation of unions. Encouraged by these circumstances, the first attempts were made by the unions to set up an overall trade union body in

² Engineers, firemen, conductors and trainmen.

Growth of Trade Union Membership in Canada, 1911-49

Canada. This took the form of the *Canadian Labour Union* which conducted annual conventions for the trade union movement of Canada during the four years 1873 through to 1877.

The Canadian Labour Union proved to be only a gesture toward centralization of the labour movement. Born of the optimism arising out of a period of prosperity, it disintegrated during the stringencies of the subsequent period of depression. Even as the congress was formed the prosperous conditions of the time gave way to uncertainty and depression. Union members were indefinite in their activities and, even though there were at least seventy unions in the Province of Ontario alone, there was little common action after 1877. Nevertheless, the organization, during its short life, was able to influence labour legislation for the time and brought together representatives of unions, primarily from Ontario.

Trade unions were not sufficiently vigorous to establish a central body again until 1883. In the intervening period, unions had not been overly active, although organizational efforts by international unions in Canada had become more effective and the Knights of Labour had entered the country for the first time. The latter group which originated in the United States was made up of local assemblies which took in workers from most industries and crafts. In 1883, twenty-one unions gathered together to form a labour congress. They met again in 1886 and since that time the *Trades and Labour Congress of Canada* has been in continuous existence.

The lead in establishing the overall organization on this occasion, as in the case of the earlier

Canadian Labour Union, appears to have come from the Toronto Trades Assembly. This move also had the strong support of the locals of the International Typographical Union in Toronto and in Ottawa.

The fortunes of the Trades and Labour Congress through the remaining years of the nineteenth century varied with the level of economic conditions in the country. The period of the 1890's was particularly trying for the young Congress, the lowest ebb in organization being reached in 1895. At the turn of the century, however, the Congress had been firmly established primarily by craft unions and by assemblies of the Knights of Labour.

Two other organizations were present in Canada before 1900. These affected miners on the East and on the West coasts. In Nova Scotia, the Provincial Workmen's Association had as its members a majority of the coal miners; and in British Columbia, District number six of the Western Federation of Miners organized metal miners. This latter group, a section of a radical union of the same name in the United States, did not obtain a large membership prior to 1900.

The Provincial Workmen's Association, originally formed as a result of a strike at Springhill, Nova Scotia, in the spring of 1879, included a large number of Nova Scotian coal miners. For a time the Association was able to influence the passage of labour legislation in the Province, which improved materially working conditions in the mines. At the turn of the century, however, the P.W.A. was rapidly losing ground owing to the activities of the Knights of Labour. The Associa-

An important record of early days in the trade union movement in Canada was made available to the public in 1947 when Mr. John W. Buckley, Secretary-Treasurer of the Trades and Labour Congress of Canada, presented to the Labour Department Library a bound copy of the minutes of the first meetings of the Toronto District Trades and Labour Council, 1871 to 1877. Shown above are Mr. Arthur E. Hemming, Executive Secretary of the TLC; Hon. Humphrey Mitchell, accepting the presentation; Mr. Buckley; and Mr. Percy R. Bengough, Congress President.

tion was to regain prominence after 1900 on the basis of a wider membership than could be obtained among the coal miners.

Labour Organization, 1900

By 1900, therefore, a foundation of trade unionism in Canada had been laid. Precise data as to the extent of unionism at the time are not now available, but its broad characteristics are clear. Firstly, at least fifteen thousand trade union members were active in Canada. Over eight thousand of these belonged to unions affiliated with the single central labour body of the time, the Trades and Labour Congress. The remainder were members of the Provincial

Workmen's Association, the Western Federation of Miners, or independent unions, the latter including the four independent railroad brotherhoods.

The majority of union members were craft workers in the Province of Ontario. Over half the known locals of the time were located in Ontario as was a large proportion of the membership. Thus in total, at 1900, only a small proportion of the labour force, mostly skilled workers in central Canada, was involved in labour unions.

Labour Organization, 1950

The characteristics of the group of almost a million workers who

are now organized in Canada are shown in the results of the annual survey of trade union membership³. When compared with the available information on the entire labour force, these data reveal the distribution of organized labour. Such comparisons are available on the basis of size, and of both geographical and industrial areas.

Almost one-third of non-agricultural wage-earners are union members. The existing membership is scattered unevenly through the various geographical divisions of the country. Viewed provincially, the distribution of union members, as would be expected, favours the more highly industrialized provinces, more than half the number (55 per cent) being found in the provinces of Ontario and Quebec. Only one in every ten Canadian trade unionists is located in the less industrialized maritime provinces. The remainder of the membership is divided almost evenly among the three prairie provinces and British Columbia.

Nevertheless, approximately the same proportion of the labour force is organized in each of the provinces excepting British Columbia. In the latter province, slightly less than forty per cent of the non-agricultural paid labour force is organized, as compared with less than thirty per cent in the other provinces.

Within the provinces, the great majority of union members are to be found in urban communities

having populations of 30,000 or more. Each of these communities contains 2,000 or more union members; together, they account for three-quarters of the membership in Canada. Moreover, as may be expected, the greatest concentration of membership is to be found in the metropolitan centres of the country. The Toronto and Montreal areas together contain 20 per cent of the union members and nine other main industrial centres include a further 20 per cent.

On the basis of industrial classifications, the most highly organized appears to be the transportation industries where close to two-thirds of the workers are involved. In each of the remaining industrial groups, with the exception of services and trade, it is estimated that approximately one-third of the labour force is unionized. Less than one-sixth of the workers in the service group belong to unions.

So far as can be determined less than ten per cent of the union members in Canada today belong to unions which are not affiliated to one of the central labour congresses, of which there are now several as compared with the single congress existing in 1900. The great majority, approximately 85 per cent, are associated with the two largest congresses—the Trades and Labour Congress of Canada, which comprises most of the craft unions, and the Canadian Congress of Labour which comprises industrial unions. Another ten per cent are members of unions affiliated with the Canadian and Catholic Confederation of Labour. The numerical strength of each of the central

³ See the annual issues of *Labour Organization in Canada*, Department of Labour, Ottawa.

labour bodies and of the independent unions for 1949 is listed below.

Trades and Labour Congress of Canada, 459,068.

American Federation of Labour, 13,996.

Canadian Congress of Labour, 301,729.

Congress of Industrial Organizations, 27,475.

Canadian and Catholic Confederation of Labour, 80,089.

International Railway Brotherhoods (independent), 41,363.

Canadian Federation of Labour, 3,872.

National Council of Canadian Labour, 3,451.

Unaffiliated National and International Unions, 57,923.

Unaffiliated Local Unions, 16,673.

Whereas unions at the turn of the century had only limited experience in the structure and functions of central labour bodies and delegate organizations generally, the unions of today maintain a complex system of delegate bodies. Subordinate delegate bodies have been formed within the central congresses themselves to advance the cause of member unions at the local and provincial levels. Various named and formed, these organizations concentrate on legislative and community activities. Intra-union bodies of delegates from locals in the same geographical locality are common as are inter-union bodies of unions in related trades. The activities of these latter groups are more intimately connected with the economic activities of the unions.

The Development of the Canadian Labour Congresses Since 1900

Many forces have moulded the present pattern of labour union organization in Canada. Aside from the leadership provided within the unions themselves, one of the dominant influences has been the changes in the nature and character of the labour force⁴. Besides this the changing character of industrial production, including technological advances and large-scale operations, has raised new problems for both unions and management. The special problems posed during the war years and

by the depression of the thirties have also had their influence on the nature of labour organization. Changes in the attitudes of management towards employment problems, including the establishment of personnel and industrial relations departments, and towards the role of labour-production committees have played their part.

The effects of developments in social thinking and in labour legislation both in Canada and elsewhere are hard to measure but these too have all been part of the total environment in which the present labour union organization has evolved.

⁴ See "The Canadian Labour Force", *Labour Gazette*, January, 1950. pp. 19-28.

The actual changes which have occurred during the past fifty years in labour union organization in Canada can be discussed conveniently in relation to the growth of each of the three labour congresses, namely: the Trades and Labour Congress of Canada, the Canadian Congress of Labour, and the Canadian and Catholic Confederation of Labour.

The Trades and Labour Congress of Canada

The Trades and Labour Congress is the only continuing central organization among Canadian trade unions dating back to 1900. Its success during the half century, as measured by membership figures, has varied. The conditions of the economy have at times been unfavourable to unions; on three occasions large membership groups have been lost to the Congress through decisions respecting union jurisdiction; and the experience of the twenties presented particular difficulties for the unions in the Congress.

In 1900, there were two major groups within the TLC—the locals of international craft unions and the assemblies of the Knights of Labour. Locals of both these types of organizations were more strongly organized than their earlier counterparts, more continuity of leadership being provided for them than at any time during the nineteenth century. The TLC was proving to be of importance in this respect, especially in obtaining legislative action. The activity of organizers from the headquarters in the United States of the International unions, and of the American Federation of Labour, was a major factor in organizational work. This duality

of leadership, in itself, gave rise to the first of the major divisions in the Canadian labour movement.

The Knights of Labour and the national unions which had been established were competing for membership with the international unions in some areas. Consequently, after much debate, the Knights and other unions competing with the AFL unions were expelled from the Congress by the 1902 convention,⁵ and the TLC became a central organization principally of the international craft unions in Canada⁶. Since that time these have been the largest section in the Congress, comprising usually about 85 per cent of the membership.

It should be interjected at this point that national unions have formed the second and smaller continuing group within the Congress. The size of national unions of the TLC has fluctuated between 13,000 in 1913 and more than 50,000 in 1948. The unions in the group have also varied, but mostly it has been made up of unions of purely national character such as letter carriers and maritime organizations. The third group in the TLC, now numbering about 30,000, has been the federal unions and the directly chartered locals. These small unions have no affiliation with any of the larger unions. They have been organized in fields where other organization is lacking or where mixed craft groups have been encountered.

⁵ The 1902 division of the TLC gave rise to a second national labour body in Canada, the National Trades and Labour Congress, (See below).

⁶ The experience of the TLC at this time was in accord with experience in the United States. The American Federation of Labour, established in 1881, was functioning as the central body for the craft unions in the United States and, after it had turned the Knights of Labour from its organization, was insisting on no dual unionism within its ranks.

To return to the historical development, during the early years of the century the energies of the Congress were devoted chiefly to securing legislative reform. Provincial federations or executives were set up to aid in this respect. The Congress also advocated changes in federal legislation respecting, among other things, industrial disputes and fair wages on government contract work.

A second break within the ranks of organized labour in Canada came in 1919 and gave rise to the *One Big Union*. Two issues were at the basis of this division. First, the dissenting group objected to the emphasis on craft organization within the Congress to the virtual exclusion of industrial organization. Second, the members advocated a greater emphasis on direct industrial action in preference to legislative presentations. The membership of the *One Big Union* included metal miners in British Columbia, coal miners in Alberta and many industrial workers in Ontario.

In spite of the loss of membership to the *One Big Union*, the membership of the TLC reached a peak in 1921 which it was not to reach again until 1943. The advance in membership, however, came within the organization already established rather than through the establishment of any new unions of major importance. The decreases which followed through the 1920's took place within the same framework.

Through the 1920's the membership of unions affiliated with the Congress fell off each year without exception until 1929. This is the one period in the history of Canadian unions when the membership did not rise with the

prosperity of the country. In fact, it was not until the depression period of the thirties that the membership of the TLC, and of the union movement as a whole, again began to pick up to any marked extent.

Increases in the membership of the TLC unions after 1935 reflected a broadening of the basis of union membership. Not only did the craft unions take in a greater variety of the workers in the craft covered, but new groups of industrial workers became members of unions for the first time. Workers in the automotive and steel industries were prominent in the latter group⁷.

At this time unions for workers in the railway shop trades, the building trades, the printing trades, and certain of the machine trades formed the major portion of the Congress. As time passed, however, new groups of workers have been added as they were formed within the labour force. Others were dropped as their groups became less well defined. Moreover, it may be said that craft unions, now extend beyond strictly craft lines to include many workers associated with the craft, but who are in semi-skilled or unskilled jobs.

The manner in which industrial workers were to be accommodated in older craft unions first became a matter for dispute in the American Federation of Labour. After a series of disputes, a Com-

⁷ The unions within the TLC were not alone in attempting to organize industrial workers during the 1930's. An abortive attempt in this direction was made by a Communist-led organization known as the *Workers Unity League*. Under the leadership provided by this group several "industrial unions" gained membership in industries such as furniture, meat packing and textiles. The life of these organizations, however, was brief.

mittee for Industrial Organization was formed within the AFL to organize workers in mass production industries. It included the six leading industrial unions of the AFL—the United Mine Workers of America, the International Ladies Garment Workers, the Oil Field, Gas Well and Refinery Workers and the United Textile Workers. Officers of the United Hatters, Cap and Millinery Workers and the International Typographical Union were also active in the Committee although their unions did not join. In 1936, a year after this Committee was formed, its unions were suspended from the AFL on the grounds that they were fostering dual unions. Thereupon a new central organization was set up by the unions affected. At this time it was composed of unions in such industries as flat glass, automobile, rubber and steel.

In Canada, the TLC attempted to avoid a division in its ranks such as had taken place in the AFL and did this successfully until 1938. In that year the CIO unions, now definitely expelled from the AFL, formed the Congress of Industrial Organizations, and the executive of the TLC felt it could no longer ignore the dual character of the unionism advocated by those unions. Consequently, they were expelled from the TLC. For the TLC expulsion of the CIO unions meant a loss of over 20,000 members, but it also meant a return to a more strict division of jurisdiction among member unions.

In the years that have followed this third split in the ranks of the TLC, the organization has increased greatly in membership. The organizational structure had been established in time to gain from the increase in employment during the war and post-war

periods when many workers became members of affiliated unions. The established unions took into their membership a large portion of the workers added to sections of the labour force in which the unions were active. Major membership increases were recorded in unions having within their jurisdiction such groups as railway employees, machinists, carpenters and plumbers. Together the unions in the TLC more than doubled their membership in the period 1939-1946. Today, the membership is close to three times the pre-war level.

The Canadian Congress of Labour

The Canadian Congress of Labour is the second largest of the labour congresses in Canada. It dates from 1940 when the CIO unions, then recently expelled from the TLC, joined with the *All-Canadian Congress of Labour* to form a single congress. Although the history of the CCL is short, and the CIO unions in it are relatively new, the history of the section stemming from the ACCL actually dates back to 1902.

The origins of the ACCL can be traced to an early break in the TLC. Expulsion in 1902 of the Knights of Labour, and of other unions considered to be in competition with international unions, left the expelled unions without a central body, and to fill this need the *National Trades and Labour Congress* was formed. In 1908, its name was changed to the *Canadian Federation of Labour*.

For twenty-five years the CFL existed as such within the Canadian labour movement. Its principal aim, as stated, was to advance

the cause of national as opposed to international unionism. The assemblies of the Knights of Labour were dissolved early in the life of the organization, and thereafter the membership appears to have been mainly in the provinces of Quebec and Nova Scotia.

The Nova Scotian membership consisted of the Provincial Workmen's Association which was affiliated in 1910. This body, however, became dissatisfied with the affiliation and eventually became identified with the United Mine Workers of America. In the meantime, the Federation secured a following in Ontario, principally among the printers and bookbinders, but about the same time the Quebec membership was almost entirely lost to the organization.

After 1919 the CFL experienced a short period of expansion. The affiliation of workers from the building trades, of engineers and of electrical workers, all in Ontario and in the provinces to the west, brought the total membership to over 17,000 in 1923. But despite the enthusiasm for expansion, the gains were soon lost and the Federation looked elsewhere for support. In 1927, as a solution to its problem, the Federation merged with the Canadian Brotherhood of Railway Employees and certain other independent unions to form the All-Canadian Congress of Labour.

The CBRE had been active for some years prior to this amalgamation. It was founded in 1908 at Moncton and grew to be the largest national union in the country. It functioned as an affiliate of the TLC from 1917 to 1921, but was expelled because of conflicting jurisdiction with the Brotherhood of Railway and

Steamship Clerks (TLC-AFL). The CBRE found the majority of its membership in the government-owned railroads and took in most classes of workers on these lines. Its association with the CFL in establishing the ACCL was a step toward a wider organization of Canadian workers.

The ACCL made an earnest effort through the thirteen years of its existence (1927-40) to organize large groups of industrial workers who had not been eligible for membership in older unions. These efforts were limited by lack of funds and at times unfavourable economic conditions. The activities of the Congress were also hampered by a conflict in objectives among the various member unions. This was but one of the tensions which led to a division of the Congress in 1936 when a group of unions withdrew to form a new Canadian Federation of Labour.

The unions remaining in the ACCL, recognizing the opportunity for more adequate organization, joined with the CIO unions in 1940 to form the Canadian Congress of Labour. These unions, largely industrial in nature, included workers in such industries as mining and the manufacture of automobiles, iron and steel and clothing. During the past decade they have expanded rapidly to their present position. This expansion has brought into unions, for the first time in many cases, large groups of workers from the mass production industries. The national unions which transferred from the ACCL bulked large in the membership as it was first formed. Already experienced in the activities of a central labour body in this country, these unions gave leadership to their younger associates. At the present time the

international unions have a larger membership than the national unions in the Congress. Their expansion has been swift, having as a pattern of development the establishment in the United States of international organizing committees and later replacement by international unions.

The CCL has been active in advocating legislative reform and of later years has formed political action committees. Since 1946 the Canadian Congress of Labour has passed resolutions identifying it with the policy and objectives of the Co-operative Commonwealth Federation. This is in contrast to the policies of both the Trades and Labour Congress and the Canadian and Catholic Confederation of Labour which have remained without political affiliation.

Canadian and Catholic Confederation of Labour

The remaining congress of importance in the Canadian labour movement is the Canadian and Catholic Confederation of Labour. The CCCL links together 16 federations of workers and many local unions, principally in the Province of Quebec. The federations cover barbers, longshoremen, municipal employees, and workers in building, clothing, furniture, gloves, leather and shoes, printing, asbestos, pulp and paper, textiles and commercial establishments.

In 1900 there was a lockout of boot and shoe workers in Quebec City. The employers, 22 in number, had recently organized an association and, following a strike in one factory, the others were closed down in an attempt to force the workmen to abandon their unions. The employers' proposals

included a declaration by each workman that he did not belong to any union and that he agree to a board of arbitration made up of a committee of the manufacturers' association. The employees refused these terms but expressed willingness to have the matter arbitrated by a joint body. In the end, Archbishop Begin of Quebec was asked to arbitrate. His award, following the instructions in the Pope's Encyclical of 1891 dealing with social problems, declared the right of employees to form associations for legitimate ends, but expressed dissatisfaction with the constitutions of three of the six unions. The rules in question were changed, a permanent board of arbitration was set up and the unions consented to have a chaplain appointed to advise them.

The Papal Encyclical sums up the attitude of the Roman Catholic Church toward the rights to labour. The chief points of interest are the declaration for freedom of association, for collective agreements, to determine working conditions, the duty of the state to prevent abuses in labour matters and to enact legislation to promote social justice. But, in the Church's view, economic improvement is inseparable from moral improvement and for this reason the Church must give guidance and provide chaplains for the unions.

Not until 1912, however, was a purely Catholic union set up, The first of these was among pulp workers at Chicoutimi. During the war the number of unions, *syndicats* as they are called, increased. In some cases, the higher dues of the internationals appear to have been a factor in determining allegiance. Usually, the clergy took some part in preparing the ground for union organization.

A daily paper was started in Quebec, *L'Action Catholique*, the object being "to implant Catholic unionism among the workers of the city and district of Quebec". Study circles were organized to give the workers an understanding of the Catholic doctrine in relation to labour.

In 1918, a Central Trades and Labour Council was formed in Quebec with 27 *syndicats* affiliated with it. In the same year a secretariat was set up in Quebec City for the Catholic *syndicats* of the district which was to publish a weekly paper, give lectures on political and social problems, aid in organizing unions and co-operative societies and give free legal advice and medical service. Delegates from 27 local Catholic unions met in Quebec City in 1918, and in 1919 at Three Rivers there were 123 delegates representing 31,000 union members. At a third meeting of 225 delegates in 1920 at Chicoutimi definite arrangements were made to form a Confederation of Catholic Workers of Canada. A constitution was adopted the following year and a chaplain appointed with the right to take part in all meetings but without the right to vote.

The National Catholic Unions are, in the main, organizations on

trade or craft lines but, in some cases, they are organized by industry as among the asbestos and clothing workers. The *Confederal Bureau* appoints organizers and administers the fund voted by the Confederation for organizing work.

The Confederation has advocated provision for conciliation and arbitration machinery in all collective agreements with employers. It has taken a notable part in securing legislation, not only in petitioning for changes in the law but in drafting bills to be presented to the government or directly through private members to the legislature.

* * *

In addition to these three major federations of labour unions there are several unions grouped into relatively small central labour bodies and a number of local independent unions.

Labour unions play an important role in Canada today. They are made up of workers drawn from almost every industry and geographical area of the country. As such, the history and aims of Canadian Labour organizations are important data not only for an understanding of our economy but also of other aspects of our national life.

Four Canadian

Daniel J. O'Donoghue

Born in County Kerry, Ireland, in 1844, Dan O'Donoghue came to Canada with his parents at the age of 8. In 1866 he formed the first local of the International Typographical Union in Ottawa, and six years later helped to found the Ottawa Trades Council.

He was one of the organizers of the first national labour convention in Canada, that of the Canadian Labour Union, held in Toronto in 1873. O'Donoghue also led the first labour deputation to a Canadian Prime Minister; this was to Sir John A. Macdonald in 1873, and O'Donoghue thus originated the present tradition of Labour interviews with federal and provincial governments.

Generally regarded as the "Father of the Canadian Labour Movement", he was the first labour member of the Ontario Legislature, and closed his career as the Department of Labour's first Fair Wages Officer.

Gustave Francq

A native of Belgium, Gustave Francq came to Canada as a boy in 1887. He joined the International Typographical Union as an apprentice the following year, and still retains his membership.

Active in the early days of labour organization in the Province of Quebec, he was zealous in the struggle for labour legislation, particularly workmen's compensation and minimum wages.

He was an early Secretary-Treasurer of the Quebec Federation of Labour, of which his grandson, Marcel Francq, is the present president, and held the post of Vice-President of the Trades and Labour Congress in 1909 and 1910.

He is the author of many works on labour questions and has represented Canadian labour abroad on several occasions including Conferences of the International Labour Organization.

Labour Pioneers

Thomas Moore

Tom Moore began his training as a carpenter at the age of 12, in Yorkshire, England in 1890. Coming to Canada 15 years later, he became a member of the Niagara Falls Local of the Brotherhood of Carpenters and Joiners.

After several years of union activity he was elected to the presidency of the Trades and Labour Congress of Canada in 1918. "Paddy" Draper had been Congress Secretary-Treasurer since 1900, and for the next quarter century the team of Moore and Draper dominated the Canadian labour movement. With the exception of a four-year period in the 'thirties, when he was Vice-Chairman of the Employment and Social Insurance Commission, Moore retained the presidency of the TLC until his retirement in 1943.

He attended many Conferences of the International Labour Organization, and was for many years one of the eight labour members on the ILO Governing Body.

Patrick M. Draper

"Paddy" Draper was a printer by trade. He began as a compositor in the Government Printing Bureau at Ottawa and was employed there until 1934. His activities in labour unions date from 1887, when he became a member of the Ottawa Local of the Typographical Union. He was presiding officer of that Local for 25 years.

In 1900 he was elected Secretary-Treasurer of the Trades and Labour Congress of Canada, a position which he held for 35 years. Perfectly bilingual, he was very popular in Quebec. In 1935 he succeeded Tom Moore to the position of president of the TLC, retiring in 1938 because of ill-health.

Draper was Sir Robert Borden's labour adviser at the Versailles Peace Conference after World War I, when the ILO was created, and represented Canadian labour at several Conferences of that Organization.

A Half Century's Changes in a

Significant changes in the contents of collective agreements and in the proportion of the labour force covered by them have taken place since the Department of Labour was first formed. Over the years the LABOUR GAZETTE has published monthly a review of current contracts, the first of these being included in the September, 1906 issue. Today, a regular section is devoted to summaries of agreements.

Since agreements vary widely between industries and firms, it would be difficult to select a "typical" contract of 1900 for comparison with one for 1950. But changes in the contracts of individual companies can be readily compared, even though they depart from the normal in some respects. For example, the comparative summary printed below of the agreements in an Ontario street railway company for the years 1906 and 1949, contains such an unusual provision as a guaranteed wage clause at the earlier date. On the other hand the 1949 contract contains such typical improvements as higher wage rates, shorter hours, vacations with pay, and time and one-half for overtime. There is also provision for a pension and medical benefits plan.

In reading this comparison, certain influences on the character of the contract at the two dates should be kept in mind, such as the general level of wages, the extent of union development, and the effect of new mechanical processes. The comparison is nevertheless a good one. Despite changes in the job requirements of street car operators and maintenance men, the process remains largely the same, and contract changes are thus mainly attributable to bargaining rather than to new technological conditions.

Collective Agreement's Provisions

Between an Ontario City Street Railway Company and a
Local of the Amalgamated Association of Street
and Electric Railway Employees of America

1906 Agreement

Period: December 6, 1906 to April 1, 1909, with no provision for renewal.

Union Security: recognition of the union and of its committees, a member elected or appointed to an office in the union may serve in such capacity without prejudice to his service or line of promotion with the Company.

Hours: for motormen and conductors, as many runs as possible are to be scheduled as regular day runs of 10 hours to be completed within 12 consecutive hours or late regular runs of $10\frac{1}{2}$ hours to be completed within $12\frac{1}{2}$ consecutive runs. The balance are mixed runs of at least 10 hours per day or swing runs of 12 hours. On swing runs, men are to have at least one day off each week. Hours for shopmen, linemen and trackmen are not mentioned.

Overtime and Sunday work: for motormen, conductors, linemen, shopmen, machinists and blacksmiths, all work over schedule time and all work on Sundays, 2 cents per hour extra.

1949 Agreement

Period: January 1, 1949 to December 31, 1949, and thereafter from year to year, subject to notice.

Union Security: recognition of the union; check-off of union dues and assessments on a voluntary, revocable basis.

Hours: for car and bus operators, not more than $8\frac{1}{2}$ per day, 48 per week, at straight time; where possible a scheduled run to be concluded within 12 hours, with as many straight runs as possible; for car house, shop, maintenance, garage employees, 48 per week.

Overtime and holidays: for car and bus operators, time and one-half for work over $8\frac{1}{2}$ hours on any day or 48 hours a week; for car house, car shop, garage, trackmen, linemen and other maintenance employees, time and one-half over scheduled daily hours or over 48 hours per week. For all employees, time and one-half for all work on seven statutory holidays.

1906 Agreement

Hourly wage rates: motormen and conductors 16 cents during first year's service, 18 cents during second year and 20 cents thereafter; machinists, blacksmiths and linemen, 20 cents; shopmen from 15 cents during first year to 18 cents after three years' service.

Guaranteed weekly wage: extra motormen and conductors who report at car barns and relief changes are guaranteed a minimum wage of \$6 per week.

Seniority: motormen and conductors to select their runs according to seniority.

Uniforms: one-half the cost of uniforms to be paid by the Company.

1949 Agreement

Vacation: one week to employees with one year's service; two weeks for those with three years' service; three weeks after twelve years' service.

Hourly wage rates: after one year's service; car and bus operators \$1.04, switchmen 88 cents, garage mechanics \$1.02-\$1.18, other garage employees 94 to 98 cents, skilled trades in car house and shop 98 cents to \$1.07, other employees in car house, shop and maintenance work 89 to 98 cents, linemen \$1.08 to \$1.13, trackmen 92 cents. Operators in charge of trainees and operators employed on snow-ploughs or sweepers to be paid 10 cents per hour extra.

Guarantee: all work for spare men to be divided equally among them as far as possible. For all rush hour extra work a minimum of two hours' pay; for spare operators required to report on Sundays or holidays a minimum of two hours' pay.

Seniority: car and bus operators to select their runs according to seniority.

Uniforms: new operators pay for their first uniform and overcoat and one-half the cost of their second uniform; thereafter the Company to pay for one uniform each year and one overcoat every three years.

1906 Agreement

Grievance procedure: in any case of suspension or discharge the manager if requested will grant an interview to the union grievance committee, and if upon investigation it is found that the man was not at fault he shall be reinstated and paid for time lost in the discretion of the President. Any disputes arising between the parties to be submitted by a union Committee to the traction manager and, if they cannot agree, to the president or general manager.

1949 Agreement

Grievance procedure: in any case of suspension or discharge, the man may appeal through the union committee and if upon investigation it is found that the man was not at fault he will be reinstated and paid for time lost.

Medical and Insurance Benefits: the Company to contribute up to \$1 per month for each employee who subscribes to a fund or agency, acceptable to the Company and the union, to provide against individual expenses of medication, surgery and hospitalization. The Company to pay one cent per hour to employees in lieu of Group Life Insurance, raincoats and drivers' safety awards.

Pension plan which started in 1947 was voluntary for present employees at that time and compulsory for employees hired thereafter. The Company and employees each contribute 5 per cent of the employee's annual earnings to an insurance company which provides a pension at age 65 for male and at 60 for female employees.

The Tolpuddle Martyrs

The case of "Rex versus Loveless and Others" heard at the Dorchester, England Spring assizes, March 17, 1834, has become almost a legend in British trade union history. An historian writing of that period has said that "no trial throws a more vivid light on the conditions which led to the growth of trade unions and on the difficulties which their pioneers had to overcome".

George Loveless, a farm "servant", as well as a local Methodist preacher, was the leader of a group of six unlearned agricultural labourers who formed a small union, binding themselves to secrecy by an oath of initiation and a special ritual. The purpose was "to maintain the wages of farm servants" and "to preserve ourselves, our wives and our children from utter degradation and starvation". They lived and worked near the tiny hamlet of Tolpuddle, seven miles from Dorchester and are known and revered by all English-speaking trade unionists as "The Tolpuddle Martyrs".

The immediate incentive for their action was the progressive reduction of their wages from nine shillings to six shillings a week. In other counties where agricultural workers had joined the Grand National Consolidated Trades' Union (which was disbanded about 1837), with headquarters in London, the wages of farm labourers were about ten shillings. Membership in a trade union had been legalized in 1824, so in order to break the union, the employers had recourse to the Unlawful Oaths Act of

1797, which provided a maximum penalty of deportation for seven years. The judge who was a well-known opponent of trade unions, directed the jury, composed, not of peers of the labourers, but of farmers and millers, to find the accused men guilty if they thought that an obligation, tantamount to an oath had been required of the union members. Although no evidence was produced to show that the oath was seditious, or otherwise unlawful, the labourers were found guilty and were given the maximum sentence of seven years deportation "as an example to others".

The severity of the sentence raised a storm of protest that soon spread throughout England. Many thousands in all walks of life signed petitions urging the government to annul, or at least to moderate the penalty imposed. Nevertheless the "martyrs" were deported, the leader, George Loveless, to Tasmania and the other five to Australia. At the end of two years an unwilling government felt itself compelled to submit to the persistent agitation for the annulment of the sentence and the deportees were granted a full pardon. Even then further delays occurred and it was not until August 1838 that the last of the deportees was returned to England.

In the meantime The Dorchester Labourers' Fund to help the pardoned men was being raised in England. This was supplemented by the sale of a pamphlet, "The Victims of Whiggery" written by George Loveless. The fund was used to purchase small

holdings in Essex and Dorset for each of the pardoned men and to pay the costs of the committee that worked for their release.

Canada played an interesting role in the subsequent history of "the martyrs". In 1844, five of them came to Ontario and took up farms near London. They agreed among themselves not to reveal the past and it was not until 1912 that the Canadian end of their story became known. Many of their descendants still live in Western Ontario. In 1912 the Rt. Hon. Arthur Henderson unveiled a memorial arch before the little Methodist chapel in Tolpuddle where George Loveless used to preach.

In 1934, both the British Trades Union Congress and the Trades

and Labour Congress of Canada marked the centenary of the famous trial and the contribution made by the "Six Men of Dorset" to the development of trade unionism. In 1934, Humphrey Mitchell, M.P., secured the passage of a resolution in the Hamilton District Trades and Labour Council which requested the TLC to raise a fund for a suitable memorial. The request was discussed at the TLC convention and referred to the Canadian Historical Association. Each summer labour union groups in the London, Ontario, district make a pilgrimage to the graves of the five martyrs who came to Canada, two of whom lie buried in London, two at Siloam, a few miles from the city and one at St. Mary's, Ontario.

PERCY R. BENGOUGH

(Continued from page 1384)

but why mention such things when extending congratulations.

The work, size and prestige of the Department has greatly increased during the past fifty years. We feel confident that the Department will, as time passes and ideas modernize, be recognized as the most important Department of Government, the Department that deals with the well-being of humans and human values and the Department that will administer a scheme of full social and economic security for all Canadians, including Immigration and Health.

On behalf of the Officers and Members of this Congress I have

no hesitation in congratulating the Department of Labour and the *LABOUR GAZETTE* on this half century of progress. One has to realize at all times the obstacles confronting this Department to appreciate the good that has been accomplished during the past fifty years. Organized labour extends its friendly congratulations on worthwhile past achievements of the Department of Labour and its official publication, the *LABOUR GAZETTE*. Our future efforts will be devoted to making you bigger and better and obtaining the recognition and status of a Department of Government that is concerned with the well-being of the people whose work makes living possible.

Labour and management are co-operating for the benefit of both in a wide variety of industrial firms across Canada through the medium of Labour-Management Production Committees. Pictured above is a regular monthly meeting of the LMPC at Monarch Knitting Company Limited, Dunnville, Ont. This typical LMPC is composed of an equal number of representatives of management and labour, in this case members of Local 736, Textile Workers' Union of America (CCL-CIO).

Sponsorship of such committees is the responsibility of the Labour-Management Co-operation Service of the Department of Labour, which maintains field offices at a number of centres across the country. The work is aided by an Advisory Committee consisting of representatives of national employers' and workers' organizations.

The Department had record of 681 labour-management production committees in May, 1950.

FIFTY YEARS OF LABOUR LEGISLATION IN CANADA

*by Edith Lorentsen
and Evelyn Woolner,*

*Labour Legislation Branch,
Department of Labour*

At almost every session of the Federal Parliament and of the Provincial Legislatures during the past 50 years there has been some enactment affecting labour.

The following article reviews the highlights in the development of the large body of labour legislation that has resulted.

In moving second reading in the House of Commons of "a Bill respecting the Department of Labour" on May 15, 1909, the then Prime Minister, Sir Wilfrid Laurier, spoke as follows:—

This legislation, in our judgment, is rendered necessary by the ever growing dignity and importance of labour questions and labour problems. The word "labour" is rather a complex term. It has many significations, but so far as this legislation is concerned, we understand by labour the relations between wage-earners and wage-payers. It will not be disputed that for generations and generations the wage-earners had scarcely any standing in the community. The only right the law acknowledged to the labouring men, was that they could sue in a court of law for the miserable pittance paid to them. As to the other rights of labour, as to the dignity of labour as a class, the views of the civilized world, up to perhaps fifty or sixty years ago, were very crude. But some sixty years ago the advance of civilization caused quite a revolution to take place in the relations between wage-earners and the wage-payer. At last labour has been advanced to the dignity of a class in itself, and quite as important in the economy of society as any other class.

The increasing recognition of the value and dignity of labour of which Sir Wilfrid Laurier spoke had led during the latter part of the 19th century to the enactment in industrial countries of some legislation designed to protect the interests of the wage-earner. An industrial worker in Canada at the turn of the century was heir to certain rights won for him during that period.

So far as the law was concerned, he was free to combine with his fellow workers in a trade union for the purpose of improving his conditions of work. This right had been quite recently won. Not so long before, in 1872, twenty-four members of the typographical union were arrested and imprisoned on a charge of criminal conspiracy, when a strike was called following refusal of

This article is an attempt to describe in a comparatively small space the developments in labour legislation over the past 50 years.

Only the developments and trends which seemed most important have been included.

The 50-year period has been divided into decades, each of which has been treated in a separate section.

While this method has made it impossible to trace the changes in any particular type of law, step by step, over the years, it has enabled the authors to give some impression of the interrelationship of the legislation, and the way each new enactment fitted the circumstances of the period of its adoption.

a request for a 9-hour day in Toronto printing shops. The Trade Union Act of 1872 and amendments to the Criminal Code in 1892 and 1900 provided that combinations of workers for their own reasonable protection as such were within the law, but trade unions remained subject to charges of conspiracy in civil damage suits.

That a worker was not subject to criminal charges for joining a trade union did not mean that there were no obstacles in the way of labour organization. The following excerpt from the 1889 Report of the Royal Commission on Labour and Capital indicates one way in which pressure could be exerted against unions:—

In some cases, not very numerous we are glad to say, employers have taken advantage of the necessities of the working people to compel them to sign documents which obligate the employee not to belong to any labour organization. . . . These documents are signed only because the employer makes it compulsory to do so before entering his service, and when it becomes a case of seeing his family in need of the necessaries of life or signing a "cast iron" agreement there is but little choice, and it can scarcely be looked upon as an entirely voluntary act. It is an infringement of the liberty of the subject which ought not to be tolerated.

Besides his common law right to collect wages as a just debt, certain statutes further protected his right to collect wages earned. Mechanics' Liens Acts in all provinces were designed to enable the construction worker or mechanic to recover the amount due him for work performed by giving him a lien on the product of his labour in case the employer was unable or unwilling to pay. The method of collection was through ordinary court action.

Masters and Servants Acts in most provinces also had a bearing on collection of wages, in that a "master" could be summoned for non-payment of wages before a Justice of the Peace, and upon due proof might be required to pay any wages found to be due, not exceeding a certain amount. These Acts also provided penalties for misconduct or violation of the labour contract on the part of the worker, by absenting himself without leave or leaving without due notice, and were in the main regarded by labour as restrictive upon the employee.

If he met with an accident in the course of his employment, the worker could claim compensation from his employer in accordance with the common law of England by bringing an action against his employer in the courts. He would only win his suit if he could prove that his injury was due to defective plant or machinery or the negligence of some responsible person. If he entered or continued in employment with full knowledge that there were special dangers attached to it, or if an injury was due to his own negligence or that of a fellow workman, the employer was not liable.

The LABOUR GAZETTE for the year 1900 reported many cases where an employee sued for damages but failed to obtain compensation for one of these reasons. A Mrs. McMenemy in Hamilton lost the use of her right hand when a wrench slipped forcing it against the grindstone she was using. The defence was that Mrs. McMenemy had been employed at the works for twelve years; that the grindstone was not dangerous; and that she had been careless, looking

about her when she should have watched the machine, and she lost the case. A Mr. Menard, employed by the Municipal Corporation of Granby, was killed when the side of a drainage system he was working on caved in. His widow, on behalf of herself and five children, sued for damages, but lost the case because the Supreme Court of Canada found that the accident was one that could not have been foreseen and the Corporation had not been negligent. Even if an injured workman won his suit he might not be able to collect the damages awarded him since the employer might not have sufficient resources.

In Quebec, the Civil Code provided similar recourse against an employer who was at fault. The common law had been slightly altered in Ontario by an employer's liability law of 1886, and in three other provinces by 1900, to increase the liability of the employer.

For the factory worker in Ontario or Quebec, factory laws dating back to 1884 and 1885 designed mainly for the protection of women and children laid down certain general provisions to ensure his health and safety. These laws, which laid the foundation for the present factory legislation in all provinces but Newfoundland and Prince Edward Island, were enacted when evidence heard by the Royal Commission on Labour and Capital called public attention to the fact that women and young children were working 11 and 12 hours a day and that children of eight and nine were being employed in the factories and mills of Quebec, Ontario and the Maritime Provinces.

These early Ontario and Quebec Factories Acts prohibited the employment in factories of boys under 12 and of girls under 14. Hours of work for boys under 14 and for all girls under 18 and women were limited to 10 a day and 60 a week.

In cases of emergency a factory inspector might permit these hours to be extended to a maximum of 12½ hours a day and 72½ hours a week on not more than 36 days in a year. Ontario raised the minimum age for boys to 14 in 1895 in all factories except canneries. The 12-year limit first set for boys in Quebec was raised in 1903 to 13 and in 1907 to 14, thus making 14 the minimum age for employment of boys and girls in both Provinces.

There was no legal regulation of working hours of men, nor any minimum wage set by government authority. Wages and hours were usually fixed by arrangement between the individual worker and the employer. Where there was a union—and there were 1,078 locals in Canada in 1902—it used its collective strength to secure a reasonable standard of wages and hours in one of two ways. One way was by adopting a standard below which no union man would work; the other was through collective agreements negotiated between groups of workers and employers. Nine or 10 hours a day and 60 hours or over a week were the normal standards. There was no public employment service to assist a worker in finding a job or bettering his position, and no unemployment insurance if employment was not available. The cure for local unemployment was to go West or to the United States.

With the development of Canada as an industrial country and the gradual recognition of the state's responsibility to protect its

citizens from infringements of their fundamental rights, a large body of labour legislation grew up in the next fifty years. The B.N.A. Act had given the Federal Government only limited authority in the labour field and left the major responsibility to the provinces.

1900-1910

The Development of Factory Legislation and Inspection; and the Application of a New Principle in Industrial Disputes—Prohibition of Work Stoppages Pending Investigation.

When I made my first visits of inspection I found many children employed in every factory who were under the age required by the Act. In saw mills many children were employed working around machinery of a very dangerous character, and performing labour much beyond their strength, and if told that the Act would not permit them to employ children under the age of twelve years the employers would look upon it as interfering with the liberty of the individual, whilst at this time they admit not only the wisdom of the Act but also the absolute necessity of according such protections to the young, and, although the minimum age at which children can be employed has been raised to fourteen years, it is on very rare occasions that we find any employed under that age, and then they are only employed at very light labour.—Report of Ontario Factories Inspector, 1901.

* * *

It [the I.D.I. Act] legalizes the community's right to intervene in a trade dispute by enacting that a stoppage, either by strike or lockout, shall not take place until the community, through a Government Department, has investigated the difference with the object of ascertaining if a recommendation cannot be made to the parties which both can accept as a settlement of the difference.—Lord Askwith, *Industrial Problems and Disputes*.

By 1910 considerable change had taken place in the position of industrial workers whose numbers had greatly increased in the decade. The Census of 1901 showed 299,000 employed in manufacturing. This number increased to 372,000 in 1911. The period was marked by expanding trade, a growth in population of over 2,000,000 mainly due to greatly increased immigration, new railway lines opening up further sections of the country, and the development of the West, the Provinces of Alberta and Saskatchewan having been established in 1905.

Along with the development of the country went a steady growth in trade union membership which had risen to 133,132 in 1911. As the trade union movement grew, pressure was exerted on Parliament and on the provincial Legislatures for laws to improve working conditions. As early as 1890 the Trades and Labour Congress appointed a legislative committee to endeavour to have its resolutions carried out by Parliament, and beginning in 1895 such committees were also formed in the provinces to bring pressure to bear on provincial Legislatures.

Fair Wages Policy

In the period 1900-1910 several important statutes were enacted by the Parliament of Canada. The year 1900 saw the beginning of the Fair Wages Policy. In March of that year a resolution was passed by the House of Commons which was directed against abuses arising from the sub-letting of Government contracts, as disclosed in the 1898 report of Mr. W. L. Mackenzie King on the conditions surrounding the carrying out of contracts for postal workers' uniforms. It declared it to be the policy of the Government that wages generally accepted as current in each trade for competent workmen in the district where the work is carried out should be paid on all public works undertaken by the Government itself or aided by Government funds.

The view that governments, municipal, provincial and federal, had a responsibility to see that fair wages were paid for government work was gaining ground, and unions were pressing for payment of the union rate. The City of Winnipeg had adopted a fair wages resolution fixing 17½ cents as the minimum rate per hour for labourers on City contracts. The right of the City Council to fix a rate was contested in the courts in 1898 by one of the large contractors, who maintained that to pay 17½ cents an hour was wholly unnecessary and that the City could obtain all the labour it required at 15 cents an hour. The judge (in *Kelly vs. the City of Winnipeg*) held that

There are many other considerations besides that of mere cheapness that may legitimately influence the council; and I do not think the council necessarily subjects itself to interference by

the court, if in hiring its workmen, it does not act on the principle that only such wages are to be paid as the law of supply and demand, operating on the necessities of the working men, will compel them to accept. All who make affidavits in reply to the plaintiff's motion, agree in stating their belief that 17½ cents an hour is not more than a fair living wage for a competent labouring man in Winnipeg, and that it is in the city's interests that labourers employed on the city works should be paid a fair living wage... I cannot consider that it will be acting unreasonably in any legal sense, if it insists that men engaged in city work shall be paid fair living wages for their work, even though men might be hired to do the work at a lower rate.

The Federal Government's action in 1900 helped to gain wide acceptance of the fair wage principle.

Early Conciliation Measures

The Conciliation Act of 1900, under which the Department of Labour was established, marked the entry of the Federal Parliament into the field of legislation for the conciliation of industrial disputes. Modelled on an English law, this Act authorized the Minister of Labour to appoint conciliation officers or a conciliation board whose services were available on request of employers or workmen.

A strike of C.P.R. trackmen in 1901 led next to the passing of the Railway Labour Disputes Act of 1903, which provided for the appointment of a tripartite conciliation board in disputes between railway companies and their employees at the request of either party or of the municipality con-

cerned or on the Minister's own initiative. Failing settlement, a dispute was to be referred to an arbitration board but its report was not binding. Only one dispute had been referred for settlement under this Act when in 1906 it was consolidated with the Conciliation Act under the name of the Conciliation and Labour Act.

Then came a coal strike in Alberta which necessitated prompt action by Parliament and the well-known Industrial Disputes Investigation Act was passed in 1907. It contained a new principle, that of compulsory investigation of a dispute by a Government-appointed board before a strike or lockout could legally take place, and relied, as did the Railway Labour Disputes Act, on public opinion to bring pressure on the disputants. It applied to disputes involving employers of ten or more persons engaged in mining, transport, communication and public utilities. This Act remained the statutory authority for Federal Government intervention in industrial disputes until the Second World War. There had been earlier laws in Ontario, Nova Scotia, British Columbia and Quebec providing for conciliation or arbitration of disputes, but only under the Quebec Trade Disputes Act, 1901, which is still in effect, was there much activity.

The Conciliation Act of 1900 also authorized the Minister to collect and publish labour information. This led to the publication of the monthly *LABOUR GAZETTE*, beginning in 1900, the annual reports on Labour Organization in Canada from 1911 on, Labour Legislation in Canada, containing the texts of Dominion and provincial laws affecting labour, from 1915, and other publications.

In 1906 and previous years, the Trades and Labour Congress passed resolutions asking the Government to appoint a Minister of Labour whose duties would be confined to the interests of the Department and who would be in a better position to give greater attention to the demands of the workmen. Taking into account this request and the great increase of activities of the Department of Labour, Parliament in 1909 passed the Labour Department Act setting up a separate Labour portfolio.

Sunday Work

During the 1890's the Trades and Labour Congress went on record as favouring a federal Sunday-observance law. At the 1897 convention a resolution was adopted

That in the opinion of this Congress, there is no necessity for Sunday work. The labour people demand not as a privilege but as a right that they should have the Sabbath for their own use; it was made for man: therefore be it resolved that we urge upon our members to continue their warfare against Sunday work, remembering that if six men work seven days they do the work of seven men in six days; any time six men work Sunday they are taking the bread out of the mouth of one fellow workman.

In 1901 the Congress appointed a committee to co-operate with the Lord's Day Alliance in its efforts to bring about such legislation. The Lord's Day Act was passed in 1906. It prohibited the sale of articles and the employment of persons in industrial and commercial work on Sunday. "Works of necessity and mercy" were excepted. Enacted by Parliament under its authority to

legislate concerning criminal law, it was fundamentally a law for the preservation of the Sabbath as a day of rest.

Indirectly, the statute helped to establish the practice of a weekly rest-day for workmen in industry which was later ensured by legislation in a number of provinces. There were in 1906 Sunday-rest laws in force in some of the provinces and these were not superseded by the Lord's Day Act. The Federal Government did not take direct responsibility for its enforcement since prosecutions could only be instituted with the permission of the Attorney-General of the province in which the offence was alleged to have been committed.

Protective Legislation

In the provinces there was a marked development in the field of workmen's compensation during this period. By 1911 all provinces except Prince Edward Island had on their statute-books laws which provided that if personal injury by accident was caused to a workman arising out of or in the course of his employment, the employer providing the employment was, within the scope of the Act, individually liable to pay compensation for the injury. These laws differed somewhat in form and purport in that some were modelled on the British Employers' Liability Act of 1880 and others on a more advanced Workmen's Compensation Act of 1897.

Following the lead of Ontario and Quebec, factory laws were passed in one province after another as industry developed: Manitoba in 1900, Nova Scotia in 1901, New Brunswick in 1905, British Columbia in 1908 and Saskatchewan in 1909. All these

statutes established minimum ages for the employment of children, limited the hours of women and young persons, and declared that no person might be employed so that his or her health was likely to be permanently injured. In general, the western provinces fixed higher minimum ages for children and fewer hours for women and young persons than did the eastern provinces.

Manitoba started out with 16 years as the minimum age in 1900 but in 1904 lowered it to 14 for boys and 15 for girls, not without strong trade union protest. The Manitoba Executive Committee reported to the Trades and Labour Congress annual meeting:—

We have to deeply deplore the mutilation by the legislature of a law that was justly the pride of our province, i.e. the Manitoba Factories Act... On extremely short notice your committee in conjunction with the Trades and Labour Council of Winnipeg arranged a deputation of protest to the legislature. This deputation was confronted by another, seventy or eighty strong, appearing under the auspices of the Manufacturers' Association... Your committee had the mortification of seeing the age limit for child workers reduced and the hours of labour for women and children increased at the behest of leading citizens said to be always abounding in good works.

The first factory laws of Nova Scotia, New Brunswick and Saskatchewan established a 14-year minimum and that of British Columbia fixed 14 years for boys and 15 for girls, except in fish-canning and fruit-packing plants.

As regards working hours of women and young persons, the limits set in Nova Scotia and New Brunswick were the same as those

of Ontario and Quebec—10 and 60 hours, with provision for longer hours in special cases. Manitoba first imposed an 8-hour day and 48-hour week for women and girls over 16 but the amendment of 1904 changed these standards to nine and 54. Women and girls over 15 were forbidden by the first factory law of British Columbia to work more than eight hours a day or 48 a week. Under the first Saskatchewan Act, eight and 45 hours were fixed as limits for women and young persons. Two years later these were changed to nine and 54.

The Acts also required factories to be kept in a sanitary condition, free from fumes, gases and dusts, with adequate heating, lighting and ventilation and with no overcrowding, required guards to be placed on dangerous machinery or openings, and laid down regulations concerning fire protection, elevator inspection and the reporting of accidents.

All the Factory Acts provided for inspection. Evidence before the Royal Commission on Labour and Capital had called public attention to the fact that the Ontario and Quebec Acts were not being enforced and each Province accordingly appointed three inspectors in 1887 and 1888 respectively. In each of the other provinces one inspector was appointed shortly after the enactment of the law. In 1910, Nova Scotia and New Brunswick had one inspector each; in Quebec, there were seven men, a medical inspector and three women inspectors; Ontario had eight men and two women; Manitoba had two men; Saskatchewan had one factory inspector and one sanitary inspector; British Columbia had one factory inspector. As manufacturing in-

creased and the various Acts were extended to cover additional establishments, more inspectors had to be appointed. Unions and other interested groups continued to press for more adequate inspection staffs.

The first factory inspectors in Ontario and Quebec were responsible also for the inspection of boilers and a good deal of their time in the early years was devoted to this work. General carelessness was found to be prevalent in Ontario and Quebec, both in the location of boilers and in the lack of periodical inspection. Many boilers were situated in the basement of factories, immediately beneath crowded work-rooms where an explosion would have occasioned and in some instances did cause heavy loss of life.

Repeated requests of factory inspectors in their annual reports to the Legislatures led to changes in the factory laws to ensure a proper system of boiler inspection under qualified boiler inspectors. This was effected in the 1890's in Quebec and in 1900 in Ontario, Manitoba in 1894, British Columbia in 1899 and Alberta and Saskatchewan in 1906 enacted steam boiler inspection Acts separate from their factory laws, and in each case certificated boiler inspectors were required to be appointed and to carry out periodic inspections.

In these early days, employment in shops was much less regulated than employment in factories. There was no legislation fixing a minimum age for employment. Hours of young workers in shops were restricted but the limits set were excessively long. An Act in British Columbia in 1900 prohibited employment of children

under 16 for more than 11 hours in a day, 13 on Saturday or 66½ hours in a week. In Manitoba and Ontario at the beginning of the century boys under 14 and girls under 16 could not be employed in shops for more than 12 hours in a day, or 14 on Saturday, making the weekly limit 74 hours. In Nova Scotia, the weekly limit was 72 hours, but in 1909 a very much higher standard was set when 8 hours a day with 4 hours on Saturday were fixed as the maximum allowed for boys under 14 or girls under 16.

Early Mining Laws

Mining had developed earlier than manufacturing in Canada and as a result legislation protecting workers in mines preceded the first factory Acts.

Beginning with Nova Scotia in 1858, all the mining provinces and the Yukon and Northwest Territories had enacted laws by 1900 designed mainly for the protection of mines and minerals but also providing for the safety and protection of the workers employed. All these Acts provided for mines inspectors who were authorized to make periodical inspections of mines in their jurisdictions, report fatal accidents, and so on.

Child labour in mines was prevalent and the early Acts, in addition to their safety provisions, made some attempt to correct this abuse. A mines Act of 1873 in Nova Scotia prohibited the employment of boys under 10 in or about mines and limited the hours of those under 12 to 10 in a day or 60 in a week. British Columbia was the second province to restrict employment of children in mines. In that Province in 1877, 12 was

fixed as the minimum age for boys underground and it was forbidden for boys under 14 to work longer than 30 hours in a week.

From 1900 to 1910 the important developments were the passing of mines regulation Acts in the new Provinces of Alberta (1906) and Saskatchewan (1905), both of which provided for a system of inspection; and the beginning of regulation of hours of adult workers in mines. Mine workers were well organized in unions and in British Columbia had secured an 8-hour day by agreement with the mine operators. An amendment to the Coal Mines Regulation Act of British Columbia in 1904 made the 8-hour day from bank to bank compulsory for underground workers. The only previous statutory regulation of hours of work of male employees had been the provision of an 8-hour day for underground metal miners in 1899. In 1907 the 8-hour day was gained for workmen in smelters. In Alberta, an Act fixing a maximum 8-hour day for coal miners became effective in 1909. During this period also, mines inspection services which had begun before 1900 had been expanded. In 1910 there were twenty such inspectors in the six mining provinces.

Technical Education

With the growth of industry, the need for technical education was being felt. In 1907, Nova Scotia passed an Act to provide a system of technical education for the Province. The Trades and Labour Congress had been discussing over a period of years the need for technical education and the possibility of a state system of schools as well as training

within industry and this gave rise to the appointment of Commissions by the Federal Government in 1909 and by the Manitoba Government in 1910, both of which had officials of the Trades and Labour Congress as members.

To sum up, the main legislative achievements of this decade were the new factory laws of five provinces, and the new federal Act for the conciliation of disputes in undertakings vitally affecting the public interest.

1910-1920

First Minimum Wage Legislation— Workmen's Compensation Based on Collective Liability.

The Board is authorized to ascertain . . . and make all necessary orders relative to standards of minimum wages for employees [female workers], and what wages are adequate to supply the necessary cost of living to employees, and maintain them in health.—Manitoba Minimum Wage Act, 1918, c. 38.

* * *

Where . . . personal injury by accident arising out of and in the course of . . . employment is . . . caused to a workman, his employer shall be liable . . . to pay compensation . . . An accident fund shall be provided by contributions . . . by the employers . . . and compensation payable in respect of accidents . . . shall be paid out of the accident fund.—Ontario Workmen's Compensation Act, 1914, c. 25.

The economy of Canada was transformed by the 1914-18 war in order to fill the demands of Europe for all kinds of agricultural and mining products and manufactured articles. The resulting prosperity in the western provinces due to the sale of primary products at a high price opened up a new market within Canada. Employment which was at a low point in 1914 began to improve in 1915 and the demand for workers steadily grew during the war years. There was a corresponding increase in trade union membership which reached the unprecedented figure of 378,047 in 1919.

These were conditions which were favourable to the development of labour legislation and important advances were made in workmen's compensation, minimum wages and fair wages.

The war had pointed up the disadvantages of an unknown labour potential. It had also sharpened the need for increased facilities for technical education. Under this impetus the first federal legislation relating to an employment service and vocational training was enacted.

Minimum Wages for Women

In the passing of factory laws Canada, along with other modern industrial nations, had accepted the principle that it was the duty of the state to secure by legislation reasonable minimum conditions, beyond which the free right of contract of the employer and employee was recognized. The protection of workers against exceptionally low wages as well as excessively

long hours and unhealthful working conditions gradually came to be regarded as necessary. Minimum wage legislation was begun in New Zealand in 1894 and was first tried on this continent by Massachusetts in 1912.

The views of organized labour in Canada as well as in the United States are summed up in the report of the Executive Council of the American Federation of Labour to the annual convention in 1913:—

If it were proposed in this country to vest authority in any tribunal to fix by law wages for men, labour would protest by every means in its power. Through organization the wages of men can and will be maintained at a higher minimum than they would be if fixed by legal enactment.

The fact must be recognized that the organization of women workers constitutes a separate and more difficult problem. Women do not organize as readily or as stably as men; they are therefore more easily exploited. They certainly are in a greater measure than men entitled to the concern of society. A fair standard of wages, a living wage for all employed in an industry, should be the first consideration in production. None are more entitled to that standard than are the women and minors. An industry which denies to all its workers, and particularly denies to its women and minors who are toilers, a living wage, is unfit and should not be permitted to exist.

Beginning about 1909 in Canada and continuing for a decade, a demand for a legal minimum wage for women and young workers culminated in the enactment of minimum wage legislation applicable to women in some

types of employment. Six Canadian Provinces had such laws by 1920.

Alberta was the first province to experiment with minimum wage regulation. The first Alberta factory Act, passed in 1917, contained a provision fixing a minimum wage of \$1.50 per shift for all "persons" employed in factories, shops, offices or office buildings. In 1920 the Factories Act was amended to provide for an advisory committee to deal with wages and hours for women and young persons. This committee was the forerunner of the Minimum Wage Board set up by the female Minimum Wage Act of 1922.

The first minimum wage Act in Canada was enacted by the Province of Manitoba in 1918, followed by the British Columbia Act in the same year. Quebec and Saskatchewan passed laws in 1919; and Nova Scotia and Ontario in 1920.

The general pattern of these Acts was similar—a Board consisting of representatives of employers and employees, and sometimes of the public, with an impartial chairman, was authorized to hold investigations and to issue orders as to minimum wages for female employees. In Ontario and Quebec the law at first referred to wages only. In the other Provinces the Board had power to regulate hours and conditions of labour as well.

In the main, the Acts covered women workers in shops, factories, offices, hotels and restaurants, and places of amusement. In no case did they apply to farm workers or domestic servants. The first orders issued in Manitoba applied to experienced adult women in retail stores, bag

factories, glove factories, bedding factories, pickle factories, macaroni factories and laundries, and the minimum weekly rate varied from \$9.50 to \$12. The maximum hours per week ranged from 48 to 52. Under these first laws, the rates were based on a cost-of-living budget for a single woman, determined after inquiry by the Board.

Fair Wages

Legislation to insure the payment of "fair wages" to persons employed on all public works and Government contracts preceded any other regulation of wages, and was first passed in New Brunswick in 1913. Some steps had been taken earlier to ensure fair wages on undertakings in which Government funds were involved. The Legislatures of British Columbia and Ontario had followed the example of the Federal Parliament in passing fair wages resolutions in 1900. In addition, some of the Provinces had inserted a fair wage clause in railway, highway and mines Acts. "An Act respecting public works" enacted in Saskatchewan in 1916 required the payment of "fair wages" on government work in that Province.

The principle of fair wages has been observed more widely in the Province of Manitoba than in any other. In 1916 that Province made statutory provision for carrying out the fair wage policy which had been adopted by resolution of the Legislature in 1907 and which had been in practice in the City of Winnipeg even prior to that time. The Fair Wage Act of 1916 established a Fair Wage Board with equal representation of employers and employees and an official of the

Department of Public Works as chairman. The Board was to recommend to the Minister minimum rates of wages per hour and maximum hours per day for employees on public works. The unions had succeeded in having set out in the Act the provision that the Board was to accept rates prevailing among organized workers where collective agreements were in effect as the prevailing rates. The Board was set up in 1917 and annual schedules of wages and hours for public works have been issued by the Minister since that time.

Ontario's Leadership in Compensation

The other major landmark in labour legislation in the period was the new type of workmen's compensation law enacted by Ontario in 1914. Behind this move for new legislation was the demand for a greater measure of protection for the worker injured in the course of his employment, and at the same time a desire on the part of employers to find an easier way of meeting compensation costs.

In June, 1910, the Ontario Government appointed Sir William Meredith to make inquiries "as to the laws relating to the liability of employers to make compensation to their employees for injuries received in the course of their employment which are in force in other countries and as to how far such laws are found to work satisfactorily."

Three years later, the Commissioner reported:—

There are two main types of compensation laws. By one of them the employer is individually liable for the payment of it, and that is the British system.

By the other, which may be called the German system, the liability is not individual but collective, the industries being divided into groups, and the employers in the industries in each group being collectively liable for the payment of the compensation to the workmen employed in those industries—practically a system of compulsory mutual insurance under the management of the State. The laws of other countries are of one or other of these types, or modified forms of them, and in most, if not all of them, in which the principle of individual liability obtains, employers are required to insure against it.

After examining both systems thoroughly, the Commissioner concluded that a compensation law framed on the main lines of the German system was better suited to the circumstances and conditions of Ontario than the British system. He submitted a draft Bill embodying the collective liability principle, the advantages of which he summed up as follows:—

It is in my opinion essential that as far as is practicable there should be certainty that the injured workman and his dependants shall receive the compensation to which they are entitled, and it is also important that the small employer should not be ruined by having to pay compensation, it might be, for the death or permanent disability of his workmen caused by no fault of his. It is, I think, a serious objection to the British Act that there is no security afforded to the workman and his dependants that the deferred payments of the compensation will be met, and that objection would be still more serious in a comparatively new country such as this, where many of the industries are small

and conditions are much less stable than they are in the British Isles.

Under the new Ontario Act which came into force on January 1, 1915, it was no longer necessary for a workman to show negligence on the part of the employer personally or of persons employed by him in a supervisory capacity.

The employer was presumed to be liable in all cases of injury or of certain industrial diseases in occupations to which the Act applied except where the accident did not disable the workman for at least seven days or where the accident was attributable to the serious and wilful misconduct of the workman. However, even in the latter case, if the injury resulted in serious disablement or death, the workman or his heirs were entitled to compensation. The benefits provided were in lieu of the right of action for damages at law. A workman under the Act could not sue his employer in court.

To administer the Act, a Workmen's Compensation Board of three members was established. This Board was to classify the industries under the Act according to their hazard and set a contribution rate, a percentage of payroll, for each class, sufficient to take care of all accident costs in the class. The Board was given power to administer the Accident Fund, which was supported by the resources of the Provincial Treasury, and to deal with claims for compensation. No contributions to the Fund from employees either directly or indirectly were permitted. The Board was to have exclusive jurisdiction and its decisions were not subject to review by any court.

For permanent disability a workman was entitled to receive weekly compensation equal to 55 per cent of his average wage for the previous 12 months. In the event of his death his widow was to receive a monthly benefit of \$20 plus \$5 for each child under 16, up to a maximum of \$40 a month.

Other Provinces had also found their individual liability laws inadequate, for in the next five years, five workmen's compensation statutes of the collective liability type were enacted—Nova Scotia, 1915; British Columbia, 1916; Alberta and New Brunswick, 1918; and Manitoba, 1920.

In 1918 Parliament passed the Government Employees' Compensation Act which provided compensation to federal employees for accidents occurring in the performance of their duties. Under this Act compensation is payable according to the law of the province in which the accident occurs, and the amount is determined by the provincial Workmen's Compensation Board, and paid by the Federal Government. A year before the passing of the Act the Federal Government had taken over the Canadian Northern Railway so that a large number of railway employees were protected by the federal Act.

Grants for Technical Schools

The war years had revealed the need for clearance of information concerning jobs and unemployed workers, for more public employment offices than the provinces had provided, and for increased facilities for technical training. Employment services (before the 1940 amendment to the B.N.A. Act), and education, including vocational education, came within

the provincial authority. In order that there might be nation-wide, uniform development in both fields, legislation providing for conditional grants was passed by the Federal Parliament.

In 1913 a Royal Commission on Industrial Training and Technical Education had submitted a report recommending a system of technical education for Canada which while preserving provincial control, encouraging local initiative and developing local responsibility, would involve a generous measure of encouragement by the Federal Government in the way of financial aid. The Commission pointed out that Canada was behind the times, "an interested and debating spectator of the movements for industrial efficiency". In 1919 Parliament passed the Technical Education Act, under which the sum of ten million dollars was set aside for conditional grants to the Provinces during the ensuing ten years to assist any form of technical education deemed necessary or desirable in promoting industry and the mechanical trades. The amount was to be divided among the provinces on the basis of population and the grant to any province in any year had to be matched by a corresponding expenditure by the province.

Dominion-Provincial Employment Service

Legislation to provide for a national chain of employment offices also resulted from a long felt need accentuated by the war. The Trades and Labour Congress, since the beginning of the century, had been advocating free employment exchanges. In the early 1900's, employers' and workers' groups

argued the question whether there were sufficient workers in the country to meet the needs of industry and the lack of information on available labour and employment opportunities became evident. This controversy centred around immigration which organized labour sought to limit and employers' associations sponsored.

In 1905, the Trades and Labour Congress passed a resolution urging that the provincial Legislatures be asked to establish employment bureaus in all the leading Canadian cities. They pointed out that there was no method of obtaining correct information or statistics. The 1909 proceedings of the Congress report a discussion of the abuses of commercial employment bureaus, particularly in Montreal. They were described as "places of exploitation of labour" and the Convention passed a resolution asking once again for government-operated employment offices. During the war the shortage of labour had brought to the fore the problem of labour distribution and the lack of facilities to deal with it, and it was seen that some organization was necessary to meet the problems of demobilization and reconstruction.

The Employment Offices Co-ordination Act of 1918 provided for federal financial contributions in the form of conditional grants toward the setting up or extending of public employment offices in each province, the administration remaining in the hands of the province. It was recognized that the exchange of labour between provinces could not be carried on by purely provincial machinery, and the Act aimed at providing the co-ordination necessary to enable the provincial systems to function as part of a national organization.

Prior to the passing of the Act some provinces had set up a system of offices and some municipalities gave a limited service. Quebec and Ontario had offices in some of the larger cities. The western provinces had organizations mainly designed to meet the need for seasonal agricultural labour. Several provinces took steps to abolish or regulate private employment agencies in 1919 and 1920.

The founding of the International Labour Organization and its first meeting in 1919 marked the beginning of a new influence on labour legislation.

1920-1930

The Enactment of the First Hours of Work Act—Improvements in Existing Labour Laws—Dominion-Provincial Co-operation in Industrial Disputes Legislation.

The nations of the world by the Peace Treaty have adopted principles which until now were but ideals. As Canada is just entering the stage of greatest development we have an opportunity unique among the nations for growth in harmony with those new principles.—Report of the Royal Commission on Industrial Relations, 1919.

* * *

The working hours of persons employed in any . . . industrial undertaking . . . shall not exceed eight in the day and forty-eight in the week.—British Columbia Hours of Work Act, 1923.

A keener interest in social legislation following the war had found expression in the Treaty of Versailles itself and in the setting up of the International Labour Organization. In Canada, the end of war activities created unemployment and labour unrest, manifested in the Winnipeg strike of 1919. A rapid fall in prices and wages in 1920 marked the beginning of a brief depression. Trade union membership fell to 313,320 in 1921. By 1924, employment had returned to a high level, and prosperity continued until the crash of 1929.

In this decade the Federal Government for the first time was under pressure to take some responsibility for the relief of distress caused by unemployment. The movement to adopt international standards set by the International Labour Organization led to amendments to the Canada Shipping Act to give effect to four Conventions. In the provinces, an Hours of Work Act and a Maternity Protection Act were passed in British Columbia, and weekly rest Acts in Manitoba and Saskatchewan, patterned on I.L.O. Conventions. The Apprenticeship Act in Ontario was a new venture, as was the enactment of a Minimum Wage Act for men in British Columbia, and important changes were made in some of the existing labour laws in several provinces.

In September, 1922, a Dominion-Provincial Conference was convened by the Government of Canada "to consider the problem of unemployment as well as aspects of other industrial and social questions which have been the subject of action at the International Labour Conference". A brief presenting the views of

organized labour stated that the provision of employment is a joint responsibility of the federal, provincial and municipal authorities to be effected by a program of public works for slack periods, by limiting the working day to eight hours, by financial backing for a housing program, and by restricting immigration.

The brief also recommended the development of the employment service and the institution of a system of unemployment insurance to be administered by the Federal Government. The Conference, however, did not lead to any direct Government action, the tone of it being summed up in the words of the Prime Minister, "It is desirable that in all our activities we proceed on the basis of individual self-help in the first instance, with community co-operation as the next step and government assistance only as the last and inevitable resort". Among the resolutions passed by the Conference was one stating "that the problem of unemployment is primarily one of industry and that every effort should be made in industry to prevent the occurrence of unemployment".

Some federal assistance was given, however, in emergency situations in the early '20's and with the advent of the depression in 1929, new measures to deal with unemployment relief were necessary. At a special session of Parliament called in September, 1930, the first federal Unemployment Relief Act was passed. It appropriated a sum not exceeding twenty million dollars for unemployment relief. This sum could be used for public works projects carried on directly by the Federal Government and also for aid to provinces and municipalities

for expenditures in connection with unemployment in accordance with agreements to be made between the Minister of Labour and the provinces. The agreements were to provide for "fair wages" and an 8-hour day for all workers engaged on relief work.

Fair Wages Order in Council

In 1922 the Fair Wages Policy first adopted by the Resolution of 1900 was stated in an Order in Council (P.C. 1206) setting out the conditions to be inserted in contracts for construction works and for equipment and supplies manufactured for the use of the Government. The Minister of Labour was given the definite responsibility for administering the Fair Wages Policy. In 1930 by enacting the Fair Wages and Eight Hour Day Act the Government for the first time fixed a definite limit of eight hours a day for persons employed on public works of construction and repair. The 1930 Act was repealed in 1935 but re-enacted with the additional restriction of hours to 44 a week, and the extension of its application to works assisted by federal funds.

IDI Act Validity

In 1923 the Toronto Electric Commissioners challenged the validity of the Industrial Disputes Investigation Act under which a board of conciliation and investigation had been appointed on the application of the Commission's employees to inquire into a dispute. The Commission objected to the appointment of a board on the grounds that the Federal Government did not have power

to deal with matters of contract (being civil rights) or especially with a municipal institution. The validity of the I.D.I. Act had previously been upheld by a Quebec Superior Court in 1911 in a public utility case on the grounds that the subject matter had a general or national importance and was connected with the peace, order and good government of Canada. The Toronto case was taken to the Privy Council and the decision of the Council given early in 1925 was that the I.D.I. Act as affecting cases of this kind was *ultra vires* of the Federal Parliament. This was one of several Privy Council decisions narrowing the interpretation of the Federal power in respect to labour matters.

Parliament then amended the Act to make it apply to disputes within its scope in works which were within the jurisdiction of the Federal Government and to disputes within its scope in works within the jurisdiction of any province which by legislation of the province were made subject to the provisions of the federal Act. Between 1925 and 1932, all provinces except Prince Edward Island enacted laws bringing the I.D.I. Act into force in their respective jurisdictions.

Shipping Act Amendments

In 1924 Parliament amended the Canada Shipping Act to give effect to four I.L.O. Conventions affecting vessels engaged in maritime navigation. Three of the Conventions were concerned with employment of young persons. The employment of children under 14 was prohibited, and young persons between 14 and 18 were required to be examined by an

(Continued on page 1432)

For six weeks beginning May 15, 1918, Winnipeg was the negation of a normal city and more like a beleaguered place, with its vital food deliveries cut off and its public utility functions stopped or impaired. A citizens' committee of one thousand attempted to maintain essential services.

The Riot Act was read, troops and police cleared the streets, and the culmination was the trial of the leaders on charges of seditious conspiracy.

The Winnipeg General Strike

The Winnipeg General strike began with a work stoppage of building unions and metal trades workers, over the issue of wages and the right to bargain, and rapidly developed into a general strike, spreading in sympathy strikes to other cities. At its height it involved 45,000 workers in Winnipeg and elsewhere, and caused a time loss of over 1,000,000 days.

STRIKE COMMITTEE

approved doctor before taking employment, and every year thereafter. Their employment was made conditional on a medical certificate attesting fitness for such work. Eighteen was made the minimum age for employment as trimmers or stokers. The other Convention concerned unemployment indemnity to seamen in case of loss or foundering of their ship. An amendment to the Act provided that seamen employed on such ships should continue to receive from their employers their regular wages for any resulting period of unemployment not exceeding two months.

ILO Influence on Provincial Legislation

British Columbia at the first session of its Legislature in 1921 passed five laws inspired by and modelled on ILO Conventions, subject to the condition that they would go into effect only when other provinces enacted similar legislation. This was an experiment to overcome the natural hesitation of one province to subject its industries to restrictions which other provinces did not impose. The five Acts dealt with the employment of women during the night; the employment of women before and after childbirth; the night employment of young persons in industry; the minimum age for employment of children; and the limitation of hours of work in industrial undertakings. The other provinces did not enact similar legislation, so the experiment failed as a means of attaining uniformity.

However, in the same year one of these measures, the Maternity Protection Act, was made law in the Province, the first of its kind

to be passed in Canada. This Act forbids the employment of a woman in any industrial or commercial undertaking during the six weeks following her confinement and permits her on production of the necessary medical certificate to leave her work six weeks previous to the probable date of confinement. Employers are forbidden to dismiss employees so absents themselves from work.

In 1923, although no action had been taken by the other provinces, British Columbia passed an Act to establish an eight-hour day and 48-hour week in mining, manufacturing, logging and construction industries. This Act was notable in that it was the first to restrict the hours of adult male workers. Up to this point the concern of the Legislatures had been to limit hours of women and young persons. A tripartite Board of Adjustment was set up to administer the Act with authority to grant exemptions from the 8- and 48-hour limits set by the Act after full inquiry and within certain defined limits.

A Weekly Rest-day Convention had been adopted by the ILO in 1921 and in the years following the unions sought provincial legislation to implement it. Manitoba enacted a One Day's Rest in Seven Act in 1928 requiring employees in most industries in cities to be given a rest of 24 consecutive hours each week. Saskatchewan passed a similar Act in 1930. There had been two earlier weekly-rest Acts, in Quebec and Ontario, but these were limited to persons employed in hotels and restaurants. The Quebec Act was passed in 1918 and amended in 1925 to stipulate that the rest-day should consist of 24 consecutive hours.

Ontario established a weekly day of rest for workers in hotels and restaurants in 1922.

First Apprenticeship Act

Beginning after the war, employers in the construction industry and organized labour became increasingly aware of the need for an apprenticeship plan to provide adequate training facilities for young persons entering skilled trades. The Industrial Relations Committee of the Canadian Manufacturers' Association reported to the 1928 annual meeting that employers in the building industry in Ontario had requested apprenticeship legislation "as a means of meeting the serious situation which confronted them due to the fact that in recent years the supply of British artisans has been almost entirely cut off while there are practically no Canadians coming forward to fill up the gaps."

The 1928 Ontario Act, the first of its kind in Canada, made provision for Government supervision of an apprenticeship program. It applied at first to nine designated building trades. The scheme was to be administered by the Minister of Labour with the assistance of a Provincial Apprenticeship Committee representing employers' and workers' organizations in the construction industry and the Technical Branch of the Department of Education, under an independent chairman. There were also to be district apprenticeship councils which consisted of one employer and one employee in each designated trade and a chairman appointed by the Minister. There was to be an Inspector of Apprenticeship whose salary was paid by the Province. The wages of the apprentices were to be paid by employers.

First Minimum Wage Law for Men

In 1925 British Columbia enacted a Minimum Wage Act applying to men, the first in Canada. Not until the next decade did any other province follow its example, although a general interest was growing in the idea of a legal minimum wage for all workers. The Act was first administered by the Board of Adjustment set up under the Hours of Work Act, and after 1929 by a Male Minimum Wage Board.

The important developments relating to minimum wages for women were a new Act in Alberta in 1922 and one in Nova Scotia in 1924 replacing the 1920 Act which had never come into operation. Provision was made for setting up a minimum wage board, but this was not done until 1930. In Alberta a board appointed in 1922 superseded the Advisory Committee which had been functioning under the Factories Act.

These minimum wage laws were brought into operation without any serious opposition although the validity of orders made under the first Alberta Act and the Male Minimum Wage Act of British Columbia was contested in the courts. In each case the orders were found invalid, and the result was that the first Acts were replaced in both instances by new Acts giving specific legislative endorsement to the practices of the Boards.

There was considerable interest in what effect the setting of minimum rates would have on wage rates generally, and there was some fear that "the minimum tends to become the maximum". Several inquiries in the 1920's after some years of minimum

wage operation indicated that this was not the case, and minimum wage legislation appeared to have raised the whole wage scale in the industries covered by minimum wage orders.

Hours Regulation

During the decade the unions continued to press for an 8-hour day by legislation but aside from the British Columbia Act already mentioned there was no other legislation of general application establishing this standard. However, some important steps were taken in hours regulation.

At the end of the previous decade Saskatchewan had changed its factory law to reduce maximum working hours of women and young persons to eight and 48. A revised factory act in Alberta in 1926 set nine and 54 hours as the maximum in factories, shops and offices for both men and women, and provided for the appointment of a commission to consider the advisability of 8- and 48-hour limits. The Commission which reported in February, 1927, was not prepared to recommend adoption of the 8-hour day or 48-hour week partly because so many of the important industries of Alberta were closely related to agriculture and because of the seasonal nature of other industries but mainly because of the danger of competition from outside points where there would be no similar restriction as to hours. They concluded that

Only through the co-operation of all the provinces can the suggested limitation of hours of labour be safely put into effect. To be satisfactorily effective any such law should be national in extent.

In Quebec, the Industrial and Commercial Establishments Act was amended in 1930 to make 55 hours the maximum for women and boys under 18 in all factories. From 1912 on, this 55-hour limit had been in effect in cotton and woollen mills.

In 1921 Ontario established the double platoon system of fire-fighters in the larger centres. Firemen's hours on duty had been extremely long in Canadian cities. The Royal Commission in 1889 made special reference to long hours of labour of firemen in Montreal, who, they stated, were compelled to remain on duty almost without relief.

Each man receives permission to absent himself from the engine-house only once a week, and then he may be absent only four hours. Surely the necessities of the department are not so great as to compel a man to separate himself from his family for 164 out of each 168 hours.

Custom had established shorter hours in the meantime, and support for the two-platoon system grew up following its introduction in some cities in the United States. The *LABOUR GAZETTE* reported in 1917 that "while the majority of opinion would seem to be greatly in favour of the two-platoon system, it is not unanimous", and quoted the Fire Chief of New York City as saying "A fireman's day is 24 hours; he is not working, he is waiting. The business demands eternal vigilance."

The Ontario Act was followed by similar legislation in British Columbia in 1923, in Alberta in 1924 and in Nova Scotia in 1927. Under these Acts, one of two systems could be followed. A platoon might be 24 consecutive hours on duty and the following 24 consecutive hours off duty. The second

system gave one platoon 10 consecutive hours day work while the other platoon took the remaining 14 hours night work, the two platoons changing every seven days from day to night duty.

In 1924 an amendment to the Coal Mines Regulation Act in Nova Scotia provided that a miner below ground should not be employed at his working place for more than 8 hours in a day. The Act only established by law conditions which were already in existence under agreement in the mines of the Province.

Other Advances

In the main the developments in factory legislation in the 1920's were in the nature of a tightening up of regulations in the various provinces to meet some definite abuse. For instance, in British Columbia the exemption with respect to employment of children in fish canning and fruit packing was removed by an amendment to the Act in 1927. In this period, too, provincial Departments of Health were developing their services and provincial health officers were beginning to be given some definite responsibility for health conditions in industrial establishments. The revision of the Alberta Factories Act in 1926 provided that in respect to sanitary measures the provincial Medical Officer of Health could act jointly with or independently of factory inspectors.

Two tendencies marked the changes in workmen's compensation legislation in the period, a liberalizing and extension of benefits and a movement towards uniformity in the provisions of the various laws. A new feature incorporated in the Ontario Act in 1924—provision for rehabilitation and re-training of disabled workers—was adopted by Manitoba in 1925, Nova Scotia in 1927 and Alberta in 1928. Additional diseases were made compensatable. Successive upward changes were made in the rate of compensation paid for permanent and temporary disability, the highest being the Alberta rate fixed in 1928 of 66 $\frac{2}{3}$ per cent of average weekly earnings. In 1929 Saskatchewan enacted a Workmen's Compensation Act similar to the six collective liability statutes then in effect. Two years later Quebec, after experimenting with successive individual liability statutes, also established a system of collective insurance. Benefits under the Saskatchewan and Quebec Acts were as liberal as those then provided by any other provinces, total disability being compensated at the rate of 66 $\frac{2}{3}$ per cent of the workman's average weekly earnings.

The period of prosperity ended with the close of the decade. The labour legislation of the next ten years was to be closely associated with the effects of depression.

HIGHLIGHTS IN LABOUR

1900-

Enactments of the Parliament of Canada

The Parliament of Canada, under the B.N.A. Act, may enact laws concerning trade and commerce, navigation and shipping, the criminal law, fisheries, naturalization and aliens, unemployment insurance, interprovincial or international transportation and communication agencies, and such local works and undertakings as may be declared by the Parliament of Canada to be for the general advantage of Canada or of two or more provinces. In addition, Parliament may enact laws for the peace, order and good government of Canada in relation to all matters not coming within the classes of subjects assigned exclusively to the provinces.

1900 *Conciliation Act.*

Established Federal Department of Labour. Provided for conciliation on request of parties to a dispute.

Fair Wages Resolution.

Beginning a policy of "fair wages" on Government contracts.

1903 *Railway Labour Disputes Act.*

Provided for conciliation in disputes involving railway workers.

1906 *Lord's Day Act.*

Prohibited employment on Sunday, except in "works of necessity or mercy".

Conciliation and Labour Act.

Consolidation of Conciliation Act and Railway Labour Disputes Act.

1907 *Industrial Disputes Investigation Act.*

Compulsory investigation of a dispute before strike or lockout could legally take place. Applied to mines, transport, communication and public utilities.

LEGISLATION IN CANADA

-1950

Enactments of the Provincial Legislatures

The Provincial Legislatures, under the B.N.A. Act, have exclusive power in relation to "property and civil rights in the province", municipal institutions, and with certain exceptions "local works and undertakings". Protective labour legislation is law in relation to civil rights, since it imposes conditions on the employer's and workman's free right of contract. Accordingly, the provinces have assumed responsibility for regulation and inspection of factories, mines, shops and other workplaces; laws concerning wages and hours; child labour; workmen's compensation; licensing of workmen; and labour relations in undertakings not subject to Federal jurisdiction. Education, including vocational education, is also under the control of the provinces.

1900 *Manitoba Factories Act.*

(Preceded by Ont. 1884; Que. 1885. Followed by N.S. 1901; N.B. 1905; B.C. 1908; Sask. 1909; Alta. 1917.)

1901 *Quebec Trade Disputes Act.*

Provided for conciliation and voluntary arbitration.

1904 *British Columbia Coal Mines Regulation Act amended.*

Amended to provide for 8-hour day underground. (Followed by Alta. 1908; N.S. 1924; Sask. 1932; N.B. 1933.)

1906 *Alberta Steam Boilers Act.*

(Preceded by Man. 1894; B.C. 1899. Followed by Sask. 1906; Ont. 1910; N.S. 1914; Que. 1933; N.B. 1937, in force 1943; P.E.I. 1948; Nfld. 1949. Before enactment of separate Acts, there was boiler inspection under factory Acts in several provinces, Que. from 1893, Ont. from 1900, N.B. from 1920.)

1914 *Ontario Workmen's Compensation Act.*

Collective liability system. (Followed by N.S. 1915; B.C. 1916; Alta. and N.B. 1918; Man. 1920; Sask. 1929; Que. 1931; P.E.I. 1949; Nfld. 1950.)

Enactments of the Parliament of Canada

—Continued

1909 Labour Department Act.

Created separate Labour portfolio.

1914 War Measures Act.

Empowered the Federal Government to take any necessary measures for the national defence and welfare.

1918 Government Employees' Compensation Act.

Provided for compensation to Federal Government employees at the rate set by the Act of the province where the accident occurs. Replaced 1947.

Employment Offices Co-ordination Act.

Conditional grants to employment offices administered by provinces.

1919 Technical Education Act.

Ten million dollars to promote technical education in the provinces.

1922 Fair Wages Order in Council.

1925 I.D.I. Act amended.

Following Privy Council decision, the Act was amended to enable it to apply, through joint action of Parliament and Provincial Legislatures, to the same field as before.

1930 Fair Wages and Eight Hour Day Act.

Applied to Government construction projects.

Unemployment Relief Act.

First of eleven annual statutes providing federal financial contributions to relief.

1934 Canada Shipping Act.

Amended and consolidated.

Criminal Code amended (501 (g)).

Clause added concerning picketing.

1935 Fair Wages and Hours of Labour Act.

Replaced Fair Wages and Eight Hour Day Act. Also established 44-hour week on construction works.

Minimum Wages Act.

Limitation of Hours of Work Act.

Weekly Rest In Industrial Undertakings Act.

Employment and Social Insurance Act.

} Declared *ultra vires*, 1937.

Enactments of the Provincial Legislatures

—Continued

1916 Manitoba Fair Wage Act.

Provided for fair wages on public construction works. Extended in 1934 to certain private construction works. Amended in 1938 to add Part II providing for the fixing of wages and hours in certain industries by procedure similar to that under Industrial Standards Acts.

1917 British Columbia Department of Labour Act.

(Followed by Ont. 1919; Que. 1931; Man. 1931, in effect 1934; N.S. 1932; Nfld. 1933; N.B. and Sask. 1944; Alta. (Department of Industries and Labour) 1948. Earlier Bureaus of Labour in most provinces.)

1918 Manitoba Minimum Wage Act.

(Followed by B.C. 1918; Que. and Sask. 1919; N.S. 1920, in effect 1930; Ont. 1920; Alta. 1922; N.B. 1936, replaced 1945; Nfld. 1947, replaced 1950. Applied to men: B.C. 1925; Man. and Sask. 1934; Alta. and N.B. 1936; Ont. and Que. 1937; Nfld. 1947, replaced 1950.)

1921 British Columbia Maternity Protection Act.

1923 British Columbia Hours of Work Act.

(Followed by Alta. 1936; Ont. 1944; Sask. 1947; Man. 1949.)

1924 Quebec Professional Syndicates Act.

Provided for the incorporation of unions.

1925 British Columbia Industrial Disputes Investigation Act.

(Followed by Man., Sask., N.B. and N.S. 1926; Alta. 1928; Ont. and Que. 1932.) Applied federal I.D.I. Act to disputes as defined in that Act which were within provincial jurisdiction.

1928 Ontario Apprenticeship Act.

(Followed by B.C. 1935; N.S. 1937; Alta., Man., N.B., P.E.I. and Sask. 1944; Que. 1945.)

Manitoba One Day's Rest in Seven Act.

(Followed by Sask. 1930; in hotels and restaurants, Que. 1918 and Ont. 1922. Weekly rest provided under hours legislation in Alta. 1936; N.S. 1937; under minimum wage orders in Que. and B.C.)

1934 Quebec Collective Labour Agreements Extension Act.

1935 Ontario Industrial Standards Act.

(Followed by Alta. 1935; N.S. 1936; Sask. 1937; N.B. 1939.)

1937 Nova Scotia Trade Union Act.

(Followed by B.C. Industrial Conciliation and Arbitration Act 1937; Alta. Industrial Conciliation and Arbitration Act 1938; Man. Strikes and Lock-

Enactments of the Parliament of Canada

—*Concluded*

1936 National Employment Commission Act.

Set up a commission to recommend remedies for unemployment.

1939 Criminal Code amended (502A).

Made it unlawful for an employer to dismiss workman for union activity.

I.D.I. Act extended.

Applied by Order in Council under War Measures Act to war industries.

Youth Training Act.

Provided assistance to provinces for three-year period in carrying out approved schemes for the training of unemployed young persons.

1940 Unemployment Insurance Act.

Established a contributory system of unemployment insurance covering most employed persons.

1942 Vocational Training Co-ordination Act.

Provided for a Dominion-Provincial vocational training program on a permanent basis.

1944 Wartime Labour Relations Regulations (P.C. 1003).

Imposed legal obligation on the employer and employees' bargaining representatives to negotiate with each other in good faith. I.D.I. Act suspended.

1946 Merchant Seamen Compensation Act.

Gave statutory form to wartime regulations providing benefits to injured seamen. Based on individual liability of employer who is required to carry insurance.

1948 Industrial Relations and Disputes Investigation Act.

Combined compulsory collective bargaining provisions of P.C. 1003 with conciliation and investigation features of I.D.I. Act. Repealed I.D.I. Act and revoked P.C. 1003.

1950 Unemployment Insurance Act amended.

Provided for supplementary benefits during winter season.

Enactments of the Provincial Legislatures

—Concluded

1937 Nova Scotia Trade Union Act.—*Continued*

outs Prevention Act 1938; N.B. Labour and Industrial Relations Act 1938; Sask. Freedom of Trade Union Association Act 1938; Ont. Collective Bargaining Act, 1943.) All these statutes dealt with freedom of association. The Alta., B.C., Man. and N.B. Acts also provided machinery for the settlement of disputes.

1944 Manitoba Wartime Labour Relations Regulations Act.

Made P.C. 1003 applicable to industries under provincial jurisdiction. (Similar legislation enacted by B.C., N.B., N.S., Ont. and Sask. in the same year. The Sask. Act was repealed in the same year by the Trade Union Act.)

Quebec Labour Relations Act and Public Services Employees Disputes Act.

Saskatchewan Trade Union Act.

Ontario Rights of Labour Act.

Ontario Hours of Work and Vacations with Pay Act.

(Followed by Sask. 1944, in force 1946; B.C., Que. and Alta. 1946; Man. 1947.) Provided for one week's annual vacation with pay; in Sask., for two weeks.

British Columbia Control of Employment of Children Act.

1945 Prince Edward Island Trade Union Act.

Prince Edward Island Minimum Age for Industrial Employment (International Labour Convention) Act.

1947 Alberta Labour Act.

Consolidated previous statutes dealing with hours, minimum wages, labour welfare, holidays, industrial standards, conciliation and arbitration.

British Columbia Industrial Conciliation and Arbitration Act.

Repealed 1937 Act.

Nova Scotia Trade Union Act.

Repealed 1937 Act.

Saskatchewan Bill of Rights Act.

Forbade discrimination with respect to employment on racial or religious grounds.

1948 Manitoba Labour Relations Act.

(Followed by Ont. 1948; N.B. 1949; Nfld. 1950.) Similar to federal Industrial Relations and Disputes Investigation Act. (Ontario Act replaced in 1950.)

1930-1940

Relief Acts and Unemployment Insurance—Application of Minimum Wage Laws to Men—New Type of Wage and Hour-Fixing—First Statutes to Promote Collective Bargaining.

Unfair trade practices and other abuses, while they exist in prosperity, are nevertheless thrown into bold and challenging relief by depression. . . . Moreover, depression provides more opportunity for and greater temptation to indulge in unfair practices, because the very necessities of a shrinking volume of trade put the weak and unorganized in a less favourable bargaining position than ever in relation to the strong and the organized.—Report of the Royal Commission on Price Spreads, 1935.

* * *

Every employer shall recognize and bargain collectively with the members of a trade union representing the majority choice of the employees eligible for membership in said trade union.—Nova Scotia Trade Union Act, 1937.

The early thirties were characterized by mass unemployment with a consequent collapse in standards of wages and working conditions. All governments, municipal, provincial and federal, were faced with the responsibility of providing a means of livelihood for a large proportion of the population, and sought remedies in direct relief and public works projects.

When employment improved in the middle thirties, new legal standards were set for men as well as women in regard to wages and hours; the principle was adopted of making binding, by Government order on all employers and workers in an industry, the wages and hours agreed upon by a preponderant group in the industry; and seven provinces enacted legislation affecting the right to organize and bargain collectively.

Problems of Relief

The program of federal assistance to meet the problem of

unemployment which had been begun in the Unemployment Relief Act of 1930 was continued until 1941. It was provided by means of eleven successive relief acts, one in each year 1930 to 1940, on the premise that the constitutional responsibility for relief was municipal and provincial, and that federal aid was being given temporarily in an emergency.

An Act of Parliament in 1936 set up a National Employment Commission to inquire into means of maintaining and increasing employment, and to review and make recommendations concerning the unemployment and relief situation. In its final report in 1938 the Commission held that the Federal Government had a definite responsibility in regard to the employable unemployed and recommended that it be met by the development of a nationally administered unemployment insurance and employment service plan. The Rowell-Sirois Commission on Dominion-Provincial Rela-

tions appointed in 1937 reached the same conclusion in its report published in 1940:

The experience of the past decade is conclusive evidence that unemployment relief should be a Dominion function. By unemployment relief we mean relief or aid for unemployed employables as distinct from unemployables.

During the period of the Relief Acts there were various special activities in connection with unemployment which the Federal Government directly financed and administered. These included aid for single homeless men, unemployed farm workers, western farmers, land settlement, special work projects and youth training. In 1937 following a recommendation of the Youth Employment Committee of the National Employment Commission, one million dollars was set aside for the training of unemployed young people in accordance with plans submitted by the provincial governments. A program was developed to provide training in industry, forestry, mining, agriculture and domestic service. This program was continued and expanded in 1938. In 1939 it was brought under a separate Act, the Youth Training Act, with its own appropriation provided for a three-year period. A Dominion supervisor of youth training was appointed. This Act was an important step in the development of a long-term Dominion-Provincial vocational training program. The whole scheme for the relief of the unemployed, with the exception of the youth training grants, came to an end on March 31, 1941. Unemployment had virtually disappeared due to wartime economic activity.

In the meantime, pressure from various groups including trade unions had led to the passing of an Employment and Social Insurance Act in 1935. This Act, on which high hopes had been placed in the worst years of unemployment, was found to be outside the powers of the Federal Government. There was general recognition of the need for a national unemployment insurance plan, and the B.N.A. Act was amended on July 10, 1940, to place unemployment insurance among the matters exclusively within the jurisdiction of the Parliament of Canada. The following month the Unemployment Insurance Act was passed.

Regulation of Working Conditions of Seamen

In 1934 the Canada Shipping Act was revised and consolidated, following the passage of the Statute of Westminster in 1931 under which the Parliament of Canada was left entirely free to enact any legislation for the regulation of Canadian merchant shipping. Shipping laws of the United Kingdom were in effect in Canada up to the time of Confederation, and, while after that time Canada began to enact merchant shipping laws of her own under the authority granted by the B.N.A. Act, they were subject to the limitation imposed by an Imperial statute that these enactments should not come into operation until approved and confirmed by the British Crown.

The revised Act of 1934 incorporated sections of British and previous Canadian legislation and provisions implementing certain International Labour Conventions. These included the Convention regarding the protection of work-

ers loading and unloading ships and the Convention regarding the marking of weights on heavy packages transported by vessels, as well as the four Conventions mentioned earlier.

Along with measures for the protection of passengers and cargoes of vessels, the Act contains protective measures for the employment and welfare of seamen. It includes provisions concerning the engagement and discharge of seamen, rights of seamen in respect to the payment of wages, provisions for the relief and repatriation of distressed seamen, and for the treatment of sick mariners. To ensure the safety of shipping, provision is made for an inspection service.

Picketing

Another important enactment of the Parliament of 1934 was an amendment to the Criminal Code in regard to picketing. Section 501 declares that "watching or besetting" the residence or place of business of anyone with a view to compelling him "to abstain from doing anything which he has a lawful right to do, or to do anything from which he has a lawful right to abstain" is unlawful. This section was amended in 1934 by adding a qualifying clause which provided that "attending at or near" a house or place of business merely to obtain or communicate information should not be deemed to be "watching or besetting" within the meaning of the section. It is interesting to note that this qualifying clause reintroduced in 1934 had first been inserted in 1876 but omitted when the criminal law was consolidated in 1892.

Effects of Depression

Several years of depression resulted in a drastic fall in standards of wages and hours of work. The legislation which the provinces had enacted did not prove adequate to provide a basic standard under emergency conditions. In 1934 a Parliamentary investigation which came to be known as the Price Spreads Inquiry was instituted. Its report revealed facts on hours of work and wages which shocked the country.

The Commission inquired into a wide range of industries and occupations and found frequent and continuous violations of the law. Startling examples of excessively low wages and oppressively long hours were cited. For example, male pieceworkers in one large Montreal factory averaged 16 cents per hour, less than the minimum of 18 cents for inexperienced females. "One man in a Toronto ladies' cloak contract shop, for nine consecutive weeks, worked over 16 hours per day." In one boot and shoe factory "as many as 86 per cent of the adult men earned less than \$9 and 58 per cent earned \$4 or less per week".

In regard to minimum wage laws it was pointed out that adequate inspection and enforcement were required, and it was proposed that minimum wage legislation should be applied to men. "Otherwise the practice, so often illustrated in the evidence, will continue of substituting men and boys for women at wages below the legal rate that must be paid the latter". The Commission recommended that standard hours of work should be greatly shortened and should not exceed 44 hours per week. Maximum hours for

men as well as for women should be established by law. The Commission's suggestion as to the best method of regulating hours is interesting in view of later developments in some of the provinces:

Occasionally there do arise special circumstances that require flexibility in the hours of labour, but the system of frequent permits to work overtime is impossible to administer equitably. It is recommended, therefore, that the laws be amended to state the length of a normal week, with a provision that time and a half be paid for all overtime up to, say, 55 hours and double time thereafter. Permit long hours but penalize them. Under such a provision most employers would discover a means of avoiding the situations which now seem to necessitate overtime. Rush orders would be properly more expensive and would decrease. Production would not be limited, but be only more orderly. Nevertheless there would be sufficient elasticity in the law to permit the adjustment of hours to any real emergency or very profitable opportunity.

Federal Acts Invalid

In 1935 the Parliament of Canada introduced a number of Acts designed to implement the findings of the Price Spreads Commission. The Department of Justice and the Supreme Court of Canada had previously ruled that hours of work and minimum wage regulation fell within the competence of the provincial Legislatures. Recognizing this fact, the Prime Minister nevertheless took the stand that such legislation if made pursuant to a treaty was within the competence of the Parliament of Canada. Parliament then ratified three I.L.O. Conven-

tions dealing with hours of work, minimum wages and weekly rest and enacted three statutes giving effect to these Conventions. These statutes were declared *ultra vires* of the Parliament of Canada in 1937 by the Privy Council, and it was evident that only the provinces could establish general legal standards in these fields.

Provincial Action to Set Wage and Hour Standards

Meanwhile in the provinces the demand for legislation to correct abuses was also resulting in new enactments. Two considerations led to statutes limiting hours of work: the need to shorten excessively long hours and the desire to spread the available employment. An Act respecting the limiting of working hours, which came into force in Quebec in 1933, was designed to open up employment opportunities by shortening hours. It empowered the Lieutenant-Governor in Council to fix the number of hours per day or per week during which a workman employed at manual labour might work. Under it the building trades throughout the Province were given a maximum 40-hour week but later when business improved this limit was raised to 48 hours. The only other businesses in which hours were restricted under this Act were shoe-repair shops and beauty parlours on the Island of Montreal. A somewhat similar statute was enacted in Nova Scotia in 1937 empowering an administrative board to limit hours, but no board was ever established, the only effective provision of the Act being that which requires workers in mines, factories and construction to be given a weekly rest-day.

In 1936 Alberta passed an Hours of Work Act modelled closely on the British Columbia Act of 1923 and of even wider application. It applied to male and female workers in any industry, trade or occupation, except farming and domestic service. Unlike British Columbia, which set a maximum of eight and 48 for both sexes, Alberta set a maximum of eight and 48 hours for women and nine and 54 hours for men, the standards previously fixed under the Factories Act and minimum wage orders.

To overcome the apparent weaknesses in minimum wage legislation and administration, two important changes were brought about. First, the legislation was extended to men. Alberta, following British Columbia's example of 1925, enacted a separate Male Minimum Wage Act in 1936. In the other provinces except Nova Scotia, the Acts applying to women were amended to apply to men, in Manitoba and Saskatchewan in 1934, and in Ontario and Quebec in 1937.

Before this, some action had been taken to prevent the replacement of women workers by men at lower rates. As early as 1926 Alberta had provided in its Factories Act that wherever a minimum wage had been fixed for women in any class of employment, "no male worker shall be employed in such class of employment at a less wage." In 1934 British Columbia, Ontario and Quebec adopted a similar provision by amendments to their minimum wage Acts.

Secondly, to guard against payments below the minimums for slightly reduced hours, the stipulation was added in most of the Acts that the rates applied to a certain

weekly work period, with higher rates being set for part-time and overtime work.

A 1936 amendment to the Ontario Factory, Shop and Office Building Act sought to control effectively a problem of long standing which had grown worse during the depression—the problem of homework, the practice of giving out articles to be made or finished in the workers' homes. Any child, young girl or woman who was employed in homework was nominally under the Factories Act from 1889, but reports of factory inspectors in the following years indicated that "to attempt to apply factory discipline in tenement houses successfully is next to impossible", and described the "sweat-shop" conditions prevailing. From 1900 clothing manufacturers were required to keep a register of all homeworkers. In 1919, an attempt was made to regulate conditions under which such work was done by prohibiting the giving out of work without a permit in cities of 50,000 or over. In 1935 the Price Spreads Commission reported on the depressed conditions under which homeworkers were employed, and gave examples from the men's clothing industry:

Four women, with husbands helping at night, [were] making men's pants . . . at 60 cents per dozen, out of which they paid for thread at a cost of 5 cents per dozen, making net earnings of 55 cents per dozen. The daily output of these workers was from 2½ to 3 dozen.

The 1936 amendment to the Ontario Act made the provision requiring permits to be given for homework apply to the whole Province. Both the homeworkers and their employers were required

to obtain permits. The inspector was to satisfy himself as to the health of the worker and the sanitary conditions of the premises before issuing a permit. Employers were also required to comply with the Minimum Wage Act.

Similar corrective measures were undertaken in the same year by British Columbia by the addition to the Factories Act of provisions requiring homework permits. Alberta and Manitoba had earlier provided for the inspection of premises where homeworkers were employed, and for the keeping of a register of such workers by the employer. In Quebec, as in other provinces, homework is subject to the provisions of the Minimum Wage Act.

New Type of Wage and Hour Regulation

Quebec in 1934 attempted a method of wage and hour regulation unique on this continent in the passing of the Collective Labour Agreements Extension Act. It provided that wages and hours of labour which are voluntarily agreed upon by representatives of employers and employees in an industry for a given area may be made legally binding by order in council on all the employers and employees in that industry in the area. In practice, one or more employers and one or more "associations of employees" first make an agreement and then either or both parties to the agreement may apply to the Minister of Labour to have the wages and hours terms of the agreement made obligatory for all engaged in that industry in the district. The parties must represent a sufficient proportion of the industry. A joint committee of employers and

employees in each industry is set up for the purpose of enforcing the schedule. Only this joint committee may bring an action in the courts to enforce the agreement or the Act. This Act was replaced by the Workmen's Wages Act of 1937, which in turn was replaced by the Collective Agreement Act of 1940, all similar in principle. The standards made binding by the decree are minimum standards. The decree does not preclude more favourable terms of employment.

A somewhat similar type of legislation was introduced in five of the other provinces during this decade. Under the Industrial Standards Acts the Minister of Labour may call a conference of representatives of employers and employees in any industry for the purpose of negotiating an agreement as to minimum wages and maximum hours. If an agreement is arrived at by "a proper and sufficient representation of employers and employees", the wage rates and hours of labour fixed by the agreement may be made binding by order in council on all employers and employees in the industry in the district.

One of the chief differences between the Quebec Act and the Industrial Standards Acts is that the Industrial Standards Acts do not depend on either trade unions or collective agreements as such although in practice a large proportion of industrial standards schedules are based on union agreements. The Acts can therefore be applied to an industry in which the workers are not organized at all or only partially organized as well as to one in which collective bargaining is highly developed. Another difference has to do with enforcement.

Under the Industrial Standards Acts the enforcement of the schedules is the responsibility of the Government through Industrial Standards officers. A joint advisory board may be established to assist in the enforcement of the standards of each schedule.

Protection of the Right to Organize

Business began to expand after 1933 and Canadian unions began an active organizing campaign. Many employers, particularly in mass-production industries, refused to recognize trade unions. Encouraged by the enactment of the National Labour Relations Act (Wagner Act) in the United States in 1935, unions began to demand a statute not only declaring freedom of association but also making it an offence to interfere with the exercise of this right. It was pointed out at the 1937 Convention of the Trades and Labour Congress that "while the courts have recognized for about a century in a negative way the right to organize, the workers are protected by no positive law on the subject". Meanwhile, the Congress had prepared a draft Bill concerning freedom of association and requiring employers to negotiate, which it placed before each of the provincial governments before the 1937 sessions of the Legislatures. Nova Scotia, British Columbia and Manitoba in 1937, and Alberta, Saskatchewan and New Brunswick in 1938, placed on their statute-books laws which enacted the provisions of this Bill in whole or in part. In the same statutes, British Columbia, Alberta, Manitoba and New Brunswick provided machinery like that of the I.D.I. Act for settling dis-

putes. Of these six Acts, some merely declared the right of the workers to organize and bargain collectively; others required employers to negotiate with the representatives of their employees. A section of the Quebec Workmen's Wages Act, 1937, also declared it unlawful to prevent an employee from becoming a member of an association.

Representations had also been made to the Federal Government by various labour organizations that discrimination against trade unionists should be made an offence. In 1939 Parliament added a section to the Criminal Code (Sec. 502A) making it an offence for an employer "wrongfully and without lawful authority" to dismiss, or threaten to dismiss, a workman for the sole reason that he is a member of a lawful trade union.

As regards machinery for the settling of disputes, in 1939, when war came, the Federal Government had the purely permissive Conciliation and Labour Act, the I.D.I. Act and Section 502A of the Criminal Code. The I.D.I. Act was in full operation in all provinces except in Prince Edward Island and in British Columbia where the enabling Act had been repealed by the 1937 statute. In addition, as has been noted above, Alberta, British Columbia, Manitoba and New Brunswick had laws for the compulsory investigation of disputes which prohibited a strike or lockout pending a report of inquiry. Quebec had the Trade Disputes Act of 1901 for conciliation and voluntary arbitration.

These first laws to promote trade unionism afforded some experience and paved the way for the legislation passed in the next decade.

1940-1950

Com. Collective Bargaining Throughout Canada—Unemployment Insurance in Operation— Apprentice Training under Dominion-Provincial Agreements—First Vacations with Pay Legislation.

All persons who are employed in any of the employments specified in Part I . . . shall be insured against unemployment . . . The funds required for providing insurance benefit . . . shall be derived partly from moneys provided by Parliament, partly from contributions by employed persons and partly from contributions of the employers of those persons.—Unemployment Insurance Act, 1940.

* * *

When bargaining representatives have been elected or appointed, application may be made to the Board. . . for their certification as the bargaining representatives of the employees affected. . . . The parties shall negotiate in good faith with one another and make every reasonable effort to conclude a collective agreement.—Wartime Labour Relations Regulations (P.C. 1003), 1944.

The tremendous changes brought about by the war had significant effects on the relations between wage-earners and wage-payers with which labour legislation is concerned. Canada became one of the largest armament producers and her whole manufacturing output grew beyond what had been considered possible. This resulted in a general rise in income and standards of living, and, as the war developed, a shortage of manpower. From the early days of the war regulation was undertaken, and by the end of 1942 controls had been instituted over foreign exchange, over profits, and over the whole range of prices, wages and employment. In this decade the principle of compulsory collective bargaining, first made effective in P.C. 1003, was embodied in both federal and provincial statutes. Trade union membership rose from 358,967 in 1939 to 977,594 in 1948.

Labour Relations

The War Measures Act of 1914, which automatically came into effect at the beginning of the second war, gave the Federal Government power to take any steps considered necessary for the security, order and welfare of Canada in wartime.

Under that Act an Order in Council (P.C. 3495) was passed on November 7, 1939, extending the scope of the I.D.I. Act to cover disputes between employers and employees engaged in war industries. The following June the Government issued an Order in Council (P.C. 2685), setting forth certain general principles which should govern the relations between employers and employees in wartime. It declared that employees should be free to organize in trade unions, without interference by employers or their agents, and through their trade union officers or other chosen

representatives to negotiate with employers or representatives of employers' associations with a view to the conclusion of a collective agreement. It also declared that workers in the exercise of their right to organize should not use coercion or intimidation to influence any person to join their organization and that wartime suspension of established labour conditions should be brought about only by agreement.

The unions, claiming that the Government was not causing its policy as outlined above to be respected, continued their demands for legislation under which the workers' right to organize and bargain collectively through the union of their choice would be fully protected by the provision of penalties. Employers maintained that, with the best intentions to bargain collectively, it was often difficult to determine what union should be recognized as the bargaining agent, for labour was now organized in Canada under three main congresses and some smaller groups, and not infrequently rival unions tried to organize the same group of workers. These demands led to the adoption of the Wartime Labour Relations Regulations (P.C. 1003) of February 17, 1944, which suspended the I.D.I. Act.

Under these Regulations, employers were required to negotiate in good faith with bargaining representatives of labour's own choosing. A Wartime Labour Relations Board with equal representation of labour and employers was set up to administer the Regulations and in particular to determine questions of representation. The Regulations also empowered the Minister to appoint conciliation officers and boards to

investigate and try to settle disputes, and a strike or lockout was prohibited until 14 days after a conciliation board had submitted its report to the Minister. The Regulations also enumerated and provided penalties for "unfair labour practices".

The Regulations were applied to undertakings ordinarily within the legislative authority of Parliament, to war industries in all provinces, and by virtue of provincial enactments in Manitoba, British Columbia, New Brunswick, Nova Scotia and Ontario to all other industries in these provinces. While the other four provinces did not make P.C. 1003 applicable to industries within their jurisdictions, Alberta continued in effect its Industrial Conciliation and Arbitration Act of 1938, and Quebec and Saskatchewan in 1944, and Prince Edward Island in 1945, enacted legislation to require employers to negotiate, thus making compulsory collective bargaining a general requirement throughout Canada.

Combating Wartime Inflation—Wage Controls

At the outbreak of war the Government took steps to combat the inflation which experience had shown would be likely to arise if the economy were uncontrolled. A series of Orders in Council was issued providing for a system of wages and salary control covering practically all gainfully employed persons. P.C. 7440 of December 16, 1940 set out a policy applicable to industries coming under the I.D.I. Act, as amended, which was not binding but was to serve as a guide to boards of conciliation and investigation

appointed under that Act. It instructed them to recognize the wage levels of the 1926-29 period or higher levels established thereafter as generally fair and reasonable except where it could be clearly shown that such wage levels were depressed or subnormal, and to recommend that increases in the cost of living be met by the payment of a uniform bonus to all workers based on the cost of living statistics issued by the Government.

The next important step was P.C. 8253 (Wartime Wages and Cost of Living Bonus Order) of October 24, 1941, which replaced P.C. 7440 at the same time the Government's price control policy was consolidated. This Order extended wage control to all employers. Wage rates were stabilized at the level of November 15, 1941. Provision was made for permanent enforcement machinery in the form of a National War Labour Board which, with the assistance of nine Regional Boards, administered the Order and the Government's Fair Wages policy.

By P.C. 9384 of December 9, 1943, the bonus system was dropped, the cost of living bonus as at January 1, 1944, being incorporated in the general wage. Wage increases henceforth were to be granted only where gross injustices existed and where it could be shown that the increase would not require a rise in the price of the product. The Order was later amended to remove this latter condition. Federal control over wages and salaries was continued until November 30, 1946.

Manpower Controls

Another way in which the relationship between employer

and employee was greatly affected during the war period was by the system of controls undertaken to ensure the most effective distribution of manpower both within industry and between industry and the Armed Forces. P.C. 246 of January 19, 1943 consolidated some previous regulations affecting particular groups and extended manpower control to the whole labour force. When the widest measure of government control was in effect, a change in employment of any person between the ages of 16 and 65 could only be effected with the permission of the Selective Service Officer.

The Director of National Selective Service had power to direct employees from non-essential to essential industries and this power was exercised in the age groups subject to military service. Separation from employment even where a permit had been obtained could only be made by employer or employee after seven days' notice. Loss of manpower was prevented by requiring persons wishing to take employment in the United States to secure a labour exit permit and such permits were only issued in exceptional circumstances. An employer was required to reinstate in his former job an employee who left to join the Armed Forces. This Order in Council was incorporated in a statute in 1942, the Reinstatement in Civil Employment Act.

All manpower controls were relaxed at the close of the war. Aside from their immediate purpose in relation to the war effort they had the effect of giving Canadians some experience in the curtailment of the traditional freedom of contract between employers and employees in the

interests of a national problem. Another important result was that the manpower control program had necessitated the building up of a chain of more than 200 employment offices which became available for service to workers and employers in peacetime.

Unemployment Insurance Act

The Unemployment Insurance Act came into effect and the Unemployment Insurance Commission took over the operation of employment offices on August 1, 1941. The Act applied to the majority of Canadian wage-earners (2,465,100 on March 31, 1942). The main groups excluded were workers in agriculture, domestic service, permanent Government service, logging and fishing and salaried workers earning over \$2,000 annually. Benefits varied from \$4.08 to \$14.40 a week according to the previous earnings of the insured person. These benefits are payable for periods up to one year according to the number of contributions, if the insured person is capable of and available for employment and no suitable employment is available. Contributions are required from employers and employees varying in accordance with the employee's earnings. The Federal Government contributes one-fifth of the amount of the revenues so provided and the costs of administration.

Vocational Training

A war emergency training program was started in 1940 under the Youth Training Act and carried on by subsequent orders made under the War Measures

Act. In 1942, the Vocational Training Co-ordination Act was passed. This Act was designed to provide authority for whatever types of vocational training were deemed necessary or desirable either during the war or afterwards.

It authorized the Minister of Labour to undertake solely at Federal expense training of workers for war industry, tradesmen for the Armed Forces, and discharged veterans approved for training by the Department of Veterans Affairs. It also authorized him, on the approval of the Governor General in Council, to enter into an agreement covering any period with any province to provide financial assistance equal to the amount contributed by the province for the development of vocational training in secondary schools and of apprenticeship in industry, and for the training of unemployed adults, as well as for projects begun under the Youth Training Act.

Agreements have been entered into with all provinces covering some or all of these types of training. In particular may be mentioned the Order in Council authorizing apprenticeship assistance which went into effect on April 1, 1944, and covers a ten-year period. Since this Order in Council laid down certain standards and conditions under which federal payments would be made, it resulted in the passing of Apprenticeship Acts in 1944 in Alberta, Manitoba, New Brunswick and Saskatchewan. Acts were also passed in Prince Edward Island in 1944 and Quebec in 1945 but in these Provinces no apprenticeship agreement is in effect. British Columbia in 1935 and Nova Scotia in 1937 had passed

Apprenticeship Acts patterned after the Ontario Act of 1928 but these statutes had hardly begun to operate when war came. The country-wide apprenticeship program which was developed under these Acts was first used for the training of veterans.

Vacations With Pay

With wages controlled by Government order during wartime, the unions turned their attention to such matters as hours and vacations with pay. A number of collective agreements provided for a week's vacation with pay after a year's service, and the demand grew for legislation to secure this as a right for all industrial workers. The first Act to require employers to grant their employees a week's vacation with pay was the Ontario Hours of Work and Vacations with Pay Act enacted in 1944. The Act was declared to apply to all employed persons, but permitted the administrative board to make exemptions. Farm workers and domestic servants have been exempted from the Act as well as professional workers and some other groups.

Vacation-with-pay credit stamps were to be used in the construction industry, where workers are normally employed by more than one employer. Every employee was to be given a stamp book in which the employer was required to affix at the end of each pay period stamps to the value of two per cent of the wages earned during the period. On or after June 30 in each year, the employee could present his book to a provincial savings office for payment.

Within the next three years Saskatchewan, Alberta, British Columbia, Quebec and Manitoba

made a vacation with pay a legal requirement for most employees. In British Columbia, Manitoba and Quebec workers are entitled to one week with pay after a year's service; in Saskatchewan, to two weeks; and in Alberta to one week after one year's service and two weeks after two years or more. None of this legislation covers agricultural workers and only the Manitoba and Saskatchewan Acts apply to domestic service. A stamp system for construction workers is in effect in Alberta, in the Montreal and Hull areas in Quebec, and in Greater Winnipeg.

Shorter Hours

As regards hours, the Ontario Hours of Work and Vacations with Pay Act, 1944, mentioned above, limited working hours to eight and 48. In the post-war period union pressure for a shorter work-week without reduction in "take-home pay" was continued. In response to this demand, new hours legislation was enacted in Saskatchewan and Manitoba and a reduction in hours was effected in Alberta and British Columbia. In 1945, the Alberta Act was amended to apply to men the same standard which had been in effect for women for some years, eight and 48. British Columbia reduced its weekly maximum from 48 to 44 hours in 1946.

The Saskatchewan Hours of Work Act, 1947, was of a different type. It laid down no absolute limits on hours but stipulated that any employer who permitted or required his employees to work longer than eight hours in a day or 44 in a week should pay them at the rate of time and one-half for hours in excess of eight and 44.

The same principle is contained in the Manitoba Act of 1949 which, however, permitted male workers to work up to 48 hours weekly before time and one-half must be paid. The standard hours for women are eight and 44.

There is no general legal limitation of working hours in Quebec or the Maritime Provinces, although there is some control of working hours through power given to the minimum wage authorities to fix overtime rates. Industrial standards schedules in New Brunswick and Nova Scotia, and decrees made binding under the Collective Agreement Act in Quebec impose limits on working hours.

Higher Minimum Rates

During the war because of the "freezing" of wages at their 1941 level Minimum Wage Boards were first prohibited from setting wage rates and later restricted within certain limits. After the war, there was considerable activity. In 1945 a new Act applicable to both men and women was enacted in New Brunswick. Orders have been issued under it setting a minimum rate for practically all women employed in the Province, excluding farm workers and domestic servants, and one applying to men engaged in forest operations. In some provinces, new groups of workers have been covered; in others, the area to which the Act applies has been widened; and in all provinces some or all of the rates have been raised. In Alberta, where the coverage is general for both men and women, the minimum rate is now \$25 a week for men and \$20 for women.

At the same time there has been increased activity under the Industrial Standards Acts. A large number of new and revised schedules have been approved, fixing higher rates of wages and shorter working hours than those established by previous schedules. New Brunswick replaced its 1939 Act, which had limited application, by one applying to industries generally throughout the Province. In 1946 Nova Scotia also amended its Act which had previously applied to construction in Halifax and Dartmouth to permit its extension to any city or area of the Province. In 1950 in Alberta holidays with pay were included among the terms of employment which may be dealt with in an industrial standards schedule.

Improved Workmen's Compensation

Notable developments have taken place, too, in workmen's compensation legislation since the war. Additional industries have been covered in some provinces; the list of diseases for which compensation is paid has been increased and in two provinces, Ontario and Manitoba, the Act now provides that compensation is payable for any disease peculiar to an industrial process within the scope of the Act. In four provinces the "waiting period" has been reduced. In Saskatchewan compensation is now payable from and including the day after the accident.

Benefits under all Acts have been raised from time to time and in all provinces the maximum earnings on which compensation is calculated have been increased—in Ontario and Saskatchewan to

\$3,000 a year. These two Provinces also provide for the highest rate of benefit for disability, 75 per cent of average weekly earnings as against the 66 $\frac{2}{3}$ per cent provided by most of the other provinces. Another important development has been the extension of accident-prevention work by the various Workmen's Compensation Boards. In 1948, the New Brunswick Board was given power to require a workman in any employment to have a medical examination to determine whether he has an industrial disease. Most of the Acts provide for expenditures from the Accident Fund for a rehabilitation program and the emphasis upon this aspect of workmen's compensation has been on the increase.

Several new Acts were passed in this decade, including a new federal Government Employees Compensation Act in 1947, replacing the 1918 statute, and the first Prince Edward Island Act in 1949. Blind Workmen's Compensation Acts are in effect in six provinces. Under these Acts, the provincial Government makes a contribution to the cost of compensation to blind workmen.

Employment of Children

In the 1940's further steps were taken to control the employment of children. The British Columbia Legislature passed the Control of Employment of Children Act, 1944, which forbade employment of children under 15 in specified industries, except with a permit from the Minister of Labour. Prince Edward Island in 1945 by an Act directly modelled on an International Labour Convention prohibited the employment of children under 15 in a mine or factory, on

construction, or on transport by road, rail or inland waterway. Saskatchewan in 1946 raised the minimum age for factory employment to 16, and this standard was also adopted in New Brunswick in 1947. The minimum age for employment in the other provinces varies from 14 to 16.

Minimum age provisions of mines, factories and shops Acts are supplemented by a compulsory school attendance law in each province, New Brunswick and Quebec having passed such legislation in 1941 and 1943. The school-leaving age varies under these Acts from 14 to 16.

Another indirect means of ensuring school attendance and preventing employment during school hours has been the payment of monthly allowances under the Family Allowances Act of 1944 to all children in Canada under 16. The Act provides that payment ceases where a child over six and fit to attend school, fails to attend.

Post-War Labour Relations Legislation

Following the war, also, the provinces resumed their normal jurisdiction over labour relations. The fact that compulsory collective bargaining and uniform procedures for certification of bargaining agents and conciliation of disputes had been made general throughout Canada during the war, either by P.C. 1003 or provincial statutes, had given impetus to a general demand particularly from trade unions for a "national labour code". Even during the war, the Canadian Congress of Labour in its 1944 submission to the Cabinet urged that the Federal Government establish a labour policy which could serve as a model for

provincial legislation to cover industries which are outside federal jurisdiction in peacetime.

Such a plan was undertaken by the Federal Government following the war, and the principles of a new federal law were discussed at a conference of federal and provincial Ministers of Labour held in 1946. The result was the Industrial Relations and Disputes Investigation Act passed by the 1948 session of Parliament. In introducing the Bill, the Minister of Labour said:

We have tried to set a pattern which some of the Provinces may care to apply knowing that we shall not be moving as rapidly as we should towards the goal of industrial peace in this country if we have widely varying legislation of this nature in the spheres of Dominion and Provincial operation.

He explained that the new legislation contained the best features of P.C. 1003, with some changes based on the experience gained in its administration, and other changes made in the light of representations by the provinces, labour and employer organizations.

In 1947 British Columbia and Nova Scotia, in 1948 Ontario and Manitoba, and in 1949 New Brunswick, passed new labour relations Acts. These were all to a greater or lesser extent similar in pattern to the federal Act. Labour relations Acts had been passed in Quebec and Saskatchewan in 1944, in Prince Edward Island in 1945, and in Alberta in 1947. The labour relations Acts of all the provinces are not uniform in every respect, but they all contain provisions which protect the worker's right to organize and which promote collective bargaining. Except for the Prince Edward Island Act,

they all provide machinery for the settlement of disputes. Labour relations are a developing feature of Canadian industrial life, and legislation regulating them is constantly subject to demands for change. In 1950 the Acts in Alberta, Saskatchewan and Manitoba were amended and the Act in Ontario was replaced.

Newfoundland Legislation

Newfoundland became a province of Canada on March 31, 1949. At the 1949 and 1950 sessions, the Newfoundland Legislature passed seven labour Acts, including a Workmen's Compensation Act of the collective liability type, which, when proclaimed in force, will replace a former individual liability statute. A Blind Workmen's Compensation Act similar to those in six other provinces was also passed. The Labour Relations Act is modelled on the federal Industrial Relations and Disputes Investigation Act. The Trade Union Act requires a trade union to file with the Minister of Labour a copy of its rules, the names and addresses of its officers, and, when required, a statement of its receipts and expenditures. Financial statements must be made available to trade union members. Trade unions which do not comply with the Trade Union Act cannot enjoy the benefits of the Labour Relations Act; for instance, such a union may not be certified as a bargaining agent. The Minimum Wage Act establishing a minimum wage board, the Boiler and Pressure Vessel Act, and the Industrial Statistics Act, under which the Deputy Minister of Labour is charged with the collection of industrial statistics, are similar to legislation in other provinces.

Before Confederation, Newfoundland had earlier Acts dealing with workmen's compensation, minimum wages, industrial disputes, registration of trade unions and inspection of steam boilers. The new Acts will have the effect of making the labour legislation of Newfoundland very similar to that in the other Canadian provinces.

Supplementary Benefits for Winter Unemployment

Changes were made in 1950 in the Unemployment Insurance Act to meet the problem of seasonal unemployment. In introducing the Bill amending the Act, the Acting Minister of Labour stated:

The whole purpose of this new part of the Act is to endeavour the better to adapt our unemployment insurance scheme to fit the normal Canadian employment pattern, in which, in many areas of Canada,

unemployment is substantially higher and employment correspondingly more difficult to secure during the winter season.

Supplementary benefits, amounting to 80 per cent of regular benefits, were made payable between February 28 and April 15, 1950 to certain unemployed insured workers who had exhausted their regular benefit rights or who had not sufficient contributions to qualify for benefit. Provision was made for similar payments between January 1 and March 31 in future years.

Since the Act was passed in 1940, it has been several times amended to extend its coverage and increase benefits. The number of insured workers in May, 1950 was estimated at 2,967,000. The range of benefits now payable is \$4.20 to \$18.30. There is provision in the 1950 amendment for a higher maximum rate of benefit to come into effect in 1951.

Summary:

Labour Legislation Today

During the half century the scope of labour legislation widened by a gradual process from the protection of women and children to practically the whole field of relations between wage-earners and wage-payers.

The volume of legislation which grew up during these fifty years was the work of ten Legislatures and the Federal Parliament, each autonomous within the scope of its authority.

The power of Parliament in the field of labour legislation is limited. Under federal legislation, an unemployment insurance

plan covers most employed workers throughout Canada, and associated with unemployment insurance, a nation-wide chain of employment offices is available to all workers and employers. In the important fields of transportation and communication and other undertakings under federal jurisdiction, legislation (the Industrial Relations and Disputes Investigation Act of 1948) is in effect for the investigation, conciliation and settlement of industrial disputes, and for the encouragement of collective bargaining. The Canada Shipping Act sets standards for

the welfare and safety of seamen. In the considerable area of activity in which federal funds are spent on government contracts, the Fair Wages Policy ensures reasonable standards of wages and hours to the workers employed. Through joint action of the Federal and Provincial Governments, an expanding vocational training program is being developed.

Each provincial Legislature has responded to the needs and pressures in its own province. Nevertheless there has been an effort, through conferences sponsored by the Federal Department of Labour, and through the exchange of information and ideas in other ways, to achieve uniformity of standards. While provisions vary in detail from province to province, there has been in recent years a tendency towards uniformity of purport in the main labour laws.

All provinces have labour relations Acts which declare the right of workers to organize and to bargain collectively. All but Prince Edward Island provide for the conciliation of disputes.

All provinces but Newfoundland and Prince Edward Island have factory Acts, and all but Prince Edward Island have mines Acts, which are enforced by steadily growing inspection staffs.

All provinces provide compensation for industrial accidents and diseases through a system of state insurance under which employers are collectively liable for the entire cost of compensation and medical aid. There is a high degree of uniformity in these Acts, but benefits vary somewhat from province to province.

All provinces except Prince Edward Island have minimum

wage legislation which applies to most classes of workers except farm labourers and domestic servants. These statutes are very similar but the rates fixed under them vary considerably. The Nova Scotia Act does not apply to men and in Ontario no orders respecting men are in effect.

In seven provinces there is legislation of the industrial standards type for applying wages and hours conditions reached by agreement to all employers and workers in the industry concerned in a specified area.

In six provinces most employers are required to grant their workers a paid vacation, usually of one week.

Five provinces have hours of work laws setting working hours of eight and 48 or less.

So much for what has been accomplished. Organized labour today, realizing the advantages of minimum legal standards, continued to press for the enactment of legislation both to fill up the gaps where no legal standards have been established and to set higher standards under existing laws.

The 1950 submissions of provincial federations of labour to the Legislatures cover a wide variety of topics. Among these are the request for a 40-hour week, a minimum wage of 75 cents an hour, two weeks' vacation with pay and higher benefits under the Workmen's Compensation Acts. Unions are also advocating legislation against racial or religious discrimination in employment. Suggested changes to extend the coverage and to improve the working of the present labour relations Acts

form a major part of the submissions.

Criticism of labour relations legislation also figures largely in the submission of the national trade union organizations to the Federal Government. Both the Trades and Labour Congress and the Canadian Congress of Labour criticize the Industrial Relations and Disputes Investigation Act as being too limited in scope, and reiterate their belief that effective labour relations legislation in Canada will be achieved only when the provisions of the federal Act are applicable to the entire country. Both Congresses recommend amendments to the British North America Act to make this possible.

Unlike the worker at the beginning of the century, the industrial worker today has many rights laid down by statute affecting the terms of his employment. These statutes provide minimum standards. In closing this review it should be emphasized, however, that the very basis of the worker's position in the Canadian economy is his freedom to seek higher standards from his employer through the collective strength of the union of his choice. It is this freedom—itself established by legislation—together with his productive efficiency, that has helped the Canadian worker to achieve his present standard of living, among the highest in the world today.

“ . . . Realizing the helplessness of a single wage-earner dependent on his day's labour against an employer with capital and able to choose from many applicants, the workers met to discuss how they might increase their wages and began to form societies. Parliament resorted to repressive measures and in 1799 and 1800 prohibited combinations to alter conditions of work. That the Combination Acts applied also to employers was considered to be even-handed justice but there were numerous convictions of workmen and none of employers though there were known to be associations of employers.

“Perhaps the briefest comment that can be made in appraisal of the claim that is sometimes advanced for putting employers and workpeople on the same footing under the law is in the words of Anatole France:

The law in the majesty of its equality alike forbids rich and poor to sleep on park benches.

“Identical treatment is not always equitable treatment.”

by Margaret Mackintosh.

CANADA AND THE WORLD MOVEMENT TOWARDS SOCIAL JUSTICE

by John Mainwaring

Assistant Editor, Labour Gazette

Poverty anywhere constitutes a danger to prosperity everywhere . . . Lasting peace can be established only if it is based on social justice.

These are the principles that motivate the world movement to internationalize labour standards.

The origins of this movement, and the part Canada has played in its development over the past half century, are described in the following article.

In the summer of 1946, a committee of the House of Commons was examining a trade union official in connection with a prolonged strike in the basic steel industry, when the following exchange occurred:

Question:

I suppose your position is that persons engaged in the same industry—two Ontario plants and one in Nova Scotia—could compete by efficiency and salesmanship any way they wished but you do not want them to compete with . . . the wages of the workers?

Answer:

That is correct . . . It is one of the principles of our union organization that wages must not be a competitive factor.

The concept brought out in this exchange—that labour standards should not suffer in the struggle for markets between competing businesses—is one that lies at the root of the movement to set international standards for labour.

A century ago children and women, as well as men, toiled for long hours in mines and factories at subsistence wages. Employers who wished to improve their workers' lot had to consider how this would affect their competitive position. Government legislation would have protected the "good" employer against the "bad"; but an important hindrance to governmental action was the fear of putting home industries at a disadvantage in foreign trade. It was therefore necessary also to find a way of protecting the "good" country against the "bad".

The force of public opinion, and the efforts of workers themselves, helped to alleviate the worst conditions of the early factories. As the years went by,

it was also gradually discovered that shorter hours and other improvements sometimes enabled workers to improve their productivity to such an extent as to minimize the cost of reforms. But the need for international agreement to mitigate the harsh effects of business competition was widely recognized, and attracted the energies of men of good will in many lands.

This movement was finally to bear fruit after the first World War, with the establishment of the International Labour Organization. Set up under the terms of the peace treaties, the ILO was designed as an instrument to foster social progress by united international action.

The founding of the ILO did not come about, however, without many years of preliminary struggle and effort.

The Movement Towards International Labour Legislation

Robert Owen, the British cotton manufacturer and social reformer, is generally credited with being the first to call attention to the need for international labour legislation, in the year 1818. A French manufacturer, Daniel Legrand, was another pioneer in this field.

As a young and undeveloped country, barely emerging from colonial status, Canada played no part in the earliest stages of this movement, which was at first entirely European in scope.

Switzerland was a leader in the effort to internationalize labour progress—and appropriately enough Switzerland is today the seat of the International

(Continued on page 1463)

Message to the Department of Labour

from David A. Morse

*Director-General of the
International Labour Office, Geneva*

Upon the occasion of the fiftieth anniversary of the institution of the Department of Labour of Canada, it affords me very genuine pleasure to convey greetings from the International Labour Organization.

Canada was one of the first nations to establish a Department of the National Government to treat with matters intimately affecting the welfare of industrial and other wage-earners, so that in many respects the earlier activities of the Department established precedents rather than following them. Later, as other countries developed Ministries or Departments of Labour, Canadian experience proved very valuable indeed.

It was, of course, the good fortune of the Department to have as first Deputy Minister and then as first Minister that great Canadian, the late W. L. Mackenzie King, whose insight into the principles of just labour relations created an influence extending far beyond Canada's borders.

Since the establishment of the International Labour Office in 1919, we have enjoyed a most understanding relationship with the Department by reason of its responsibility to maintain liaison with the ILO on behalf of the Government of Canada. From our vantage point we have had excellent opportunity to see both the national and international significance, the real value, of the operations of the Department.

As one of the great Departments of State of the Government of Canada, we wish the Department of Labour continued success and increasing influence in its efforts to promote the welfare of Canadian workers, to improve relations between industry and its employees.

There is increasing awareness of the importance of labour administration being felt in all nations. This will be felt in Canada too. In the years ahead the Department undoubtedly will find its mission even more onerous, more challenging.

Labour Organization. In the closing decades of the nineteenth century it was Swiss initiative that paved the way for the first intergovernmental meeting called to deal with labour problems.

But plans for the meeting to take place in Switzerland were changed when the ruler of the young and industrially powerful German nation unexpectedly expressed the wish to act as host for this important occasion.

The Swiss were happy to defer, in the hope that the meeting would thereby gain in prestige. The meeting accordingly was transferred to Berlin.

* * *

The motives of the young Kaiser Wilhelm II in instructing his Chancellor, Prince Bismarck, to arrange for the conference to be held in Berlin, appear to have been twofold. On the one hand was a desire to win glory as a beneficent people's monarch; but there was also the awareness, which the Kaiser shared with other rulers of his day, of the growth of the international revolutionary movement. To counteract this movement, it was hoped to encourage workers in the belief that they could obtain redress of their grievances through legitimate means without recourse to force and violence.

The reason why the Kaiser felt that international, rather than purely national, action was necessary, is made clear in the first paragraph of his instructions to Bismarck:

I am resolved to lend a hand to the improvement of the condition of the German workers within the limits imposed upon my endeavours by the necessity to safeguard the power of competition of German industry in

the world market and in that way to secure them and their workers existence. The decline of home industry, caused by the loss of foreign outlets, which deprive not only employers but also their employees of their means of subsistence. The obstacles to an improvement of the situation of our workers which lie in international competition can be, if not overcome, at least lessened, in no other way than by international agreements between the countries which dominate the world market.

Widespread public interest was aroused by the Berlin Conference, which was attended by delegates from the chief industrial countries of Europe.* The fact that labour problems were finally being dealt with at an intergovernmental level kindled hopes that considerable progress might ensue.

The meeting lasted a fortnight, and from it emerged six resolutions, signed by 47 delegates present.

Today, after six decades of labour progress, the standards that were agreed to by the delegates of 1890 read strangely; but their very inadequacy, judged by contemporary standards, shows how urgent were the needs of the times. The resolutions dealt with three main subjects: safety in mines, the guarantee of one day's rest in seven, and the protection of women and children.

It was agreed that for children age 14 should be the limit for admission to underground work in mines, and 12 for work in factories—though in "southern" countries the age limits might be 12 and 10 respectively.

*Delegates came from Germany, Austria-Hungary, Belgium, Denmark, France, Great Britain, Luxembourg, the Netherlands, Portugal, Sweden and Norway, and Switzerland.

As Director of the ILO Branch, Department of Labour, Mr. Paul Goulet has frequently served as Canadian Government Delegate to sessions of the International Labour Conference and of the ILO Governing Body.

The Conference asserted the desirability that hours of work should not exceed eleven a day for girls and women, or ten for young workers, to be broken by rests of a total duration of at least an hour and a half.

It was also recommended that young workers (age 14 to 16) and girls and women should not work at night—a concept which, so far as women are concerned, has

today become somewhat outmoded by changing social custom.

It is to be noted that these matters were dealt with by resolution only; and that the countries concerned did not enter into any form of treaty or Convention. Switzerland did propose the framing of an “obligatory arrangement”, whereby the governments would undertake to implement the resolutions by national legislation; but Switzerland was ahead of the times. Britain joined with Germany, and the other participating countries, in favouring only an exchange of information between nations as to their progress in executing the principles adopted.

This Conference was the first notable landmark in the movement to bring about international co-operation in labour matters, and thus to lessen social injustice and help to remove one of the causes of war.

It is ironic that it should have been held at the invitation of the same Kaiser Wilhelm who a quarter-century later was to lead his nation in plunging the world into the chaos and destruction of World War I.

* * *

The immediate results of the Berlin Conference did not justify the hopes it had raised. There was a lack of follow-up; the anticipated flow of communications between governments as to their progress in attaining the objectives of the Berlin resolutions did not materialize. The Swiss patiently negotiated for further meetings, but without success.

Meanwhile, however, public opinion was beginning to mobilize in the various countries; and the next important step forward was taken by private individuals rather than by governments. During the

late years of the nineteenth century public indignation at the harsh and miserable conditions labour had to endure supplied a moral spirit and driving force which culminated in the formation in 1900 of a new international organization.

ILO Fore-Runner

This organization, the International Association for Labour Legislation, achieved the first successes in the field of international labour legislation, and prepared the way for the subsequent formation of the ILO.

Composed of social workers, government officials, people from academic life, and citizens generally who were interested in social reform, it was primarily a middle-class rather than a labour body. A number of governments lent it support or gave it recognition, so that it acquired something of a semi-official character.

The organization maintained a permanent secretariat, with headquarters at Berne, Switzerland. It issued publications in three languages and held a series of general meetings. It was supported by national branches in a number of countries, which were financed by the membership fees of individuals.

The British branch numbered among its supporters such notable figures, then in the early days of their fame, as Sidney and Beatrice Webb (Sidney Webb was the first president), William Beveridge, Ramsay MacDonald, Bertrand Russell, Bernard Shaw, and H. G. Wells. The Earl of Lytton, Keir Hardie, and G. M. Trevelyan are other names found in the early records of the British branch.

Canada was not at first represented at the meetings of the Association, but provision was made that interested Canadians could join the Association through the British branch, until they became sufficiently numerous to form their own unit.

Volume II of the *LABOUR GAZETTE* (1901) describes the forming of the Association, and cites as its aim

“to serve as a bond of union to those who, in the different industrial countries, believe in the necessity of protective labour legislation.”

The work of the Association soon bore fruit. It was decided to aim towards something more substantial than the resolutions of the Berlin Conference; in fact to seek to bring about the adoption of international agreements that would be binding upon governments.

These efforts met with success when, as a result of the Association's discussions and negotiations, the Governments of Europe agreed to hold a second labour conference. Out of this meeting, which took place at Berne in 1905, and a follow-up meeting in 1906, emerged the first two international labour conventions.

The first of these conventions dealt with a subject that had been discussed fifteen years earlier at Berlin: the prevention of night work for women. The other had as its object the elimination of an industrial disease which had aroused considerable public horror— that of phosphorus necrosis or “phossy jaw”. Caused by exposure to white phosphorus, an ingredient used in the manufacture of matches, this disease brought about the slow and painful decay of the victim's teeth and jawbone. The convention called

for the abolition by ratifying countries of the manufacture, sale or importation of white phosphorus matches.

Only the European countries participated in the Berne Conferences; but their achievements were to spread over a wider area. Britain and France applied the Phosphorus Convention to their dependencies in Africa and Asia. In the United States considerable interest developed in the work of the International Association, which led to an Act of Congress against the use of white phosphorus in 1911.

Canada initiated similar action in the same year. The instigator of the federal legislation prohibiting the use of white phosphorus was Mr. W. L. Mackenzie King, who, in 1911, was Minister of Labour. Mr. King had made personal investigations of the effects of the disease in Canada. To convince his colleagues of the necessity for bringing about this reform, he produced at a Cabinet meeting a jar containing the preserved jawbone of a woman victim of the disease. In introducing the Bill in the House of Commons, Mr. King cited the Berne Convention, and the action that had been taken by the various European countries to give it effect. (He later wrote in his book, *Industry and Humanity*: "Had the Government of Canada not been asked to become a party to an international convention to prevent the use of white phosphorus in the manufacture of matches, the disease might have gone on claiming its victims in increasing numbers for years to come.") The Bill received first reading; but an election intervened before its final passage, and it was not until 1914 that the legislation

was enacted, this time under the sponsorship of the Hon. Thomas Crothers.

Mr. King's introduction of the white phosphorus bill followed closely in his first attendance at a Congress of the International Association for Labour Legislation, held at Lugano, Switzerland, in September, 1910.¹ At this meeting, the Association decided to press for the adoption of two more international labour conventions, one to prohibit night work for young persons, the other to establish a maximum ten-hour working day for women and young persons.

An intergovernmental conference to give preliminary study to these points met at Berne in September, 1913; but owing to the outbreak of war the follow-up conference never took place. The proposed Conventions were, as it turned out, to be formulated eventually by a new organization, the ILO, which was to take shape with a more ambitious size and scope, as part of the apparatus of the post-war League of Nations.

Forming the ILO: Paris, 1919

Successful prosecution of the war of 1914-18, required an all-out effort on the production front. It thus focussed attention as never before on the vital role of the working population in backing up the military forces.

¹The extent to which international action on labour and social questions was developing at this time, is indicated by the fact that during the course of a single month in Europe Mr. King also attended an International Congress of Social Insurance at The Hague, a Congress on Higher Technical Education at Brussels, a Conference on Professional Diseases and Industrial Accidents at Brussels, and an International Conference on Employment at Paris.

It was generally agreed by the Allied governments, that labour should receive some form of recognition for its wartime exertions when the Treaties of Peace were to be formulated.

What shape this recognition should take was not, however, very clearly visualized by most national delegations. Nor were labour's own representatives united in their views as to the most effective machinery for realizing their post-war objectives. In Europe, labour leaders were making plans for an international trade union federation, to be socialist in outlook, and dedicated to fostering international class solidarity. From Moscow, the newly entrenched communists hurled vituperation at the socialists as traitors to the working class, and called on world labour to throw off its capitalistic chains. And meanwhile across the Atlantic, the American Federation of Labour, led by Samuel Gompers, sought to win for the workers their fair share of the fruits of capitalist progress through the force of free collective bargaining, and put little faith in Government intervention in the affairs of labour. Canada's Tom Moore and P. M. ("Paddy") Draper, whose 35-year-old Trades and Labour Congress maintained close ties with the AFL, were likewise anti-socialist but did not share Gompers' mistrust of labour legislation.

In spite of their differences in social outlook, there was considerable communication between the European and North American labour leaders both during and immediately after the war. As a result, two separate types of project began to emerge as embodying labour's post-war aspirations. The first was for the establishment of some kind of organization which

Formerly a member of the Labour Department, and Canadian Government Delegate to many ILO meetings, Mr. V. C. Phelan now represents the ILO in this country as Director of its Canada Branch.

would foster international labour legislation. The second was for the incorporation in the Peace Treaty of a Labour Charter, whose adoption would express the recognition by governments of the aims and objectives of working people.

As it turned out, the Allied Governments were willing to concede both these proposals in principle. It remained for the British delegation, however, to

produce a plan, carefully worked out in all its details, which crystallized and made practicable the first and more important of the two proposals.

The British plan was for the establishment of a government-sponsored international labour organization, to consist of a permanent body of officials capable of dealing with labour problems on a full-time basis. This body would carry out the wishes of member countries as expressed at an annual General Conference, at which representatives of the countries would seek to reach agreement on labour standards. Such agreements would take the form of international labour conventions, which would impose treaty-like obligations on member nations and would be brought into effect through national legislation. Furthermore—and this was the concept that gave the proposed new organization its distinctive form—the Conference would be composed not merely of Government delegates, but also of delegates representing employers and workers in each member country.

It will be seen that this proposal constituted a long step forward from the pre-war International Association for Labour Legislation—from a loosely organized group of voluntary workers, to a large-scale official body, invested with constitutional authority, and moving towards a recognized purpose with broad power and scope. The new labour organization was to be associated with the League of Nations, whose creation was the main task of the Paris Conference, but it was to have an autonomous status.

Britain's proposal gained quick support at the Paris Conference,

and a nine-country Labour Commission was set up to give it detailed consideration, and also to consider the proposal for a Labour Charter. Samuel Gompers was named by the United States Government as one of its two delegates on this Commission, and was elected as chairman by unanimous vote of the other members.

* * *

The major problem that had to be settled in regard to the new labour organization was the extent of its powers. The pre-war Association had been voluntary in structure. On the other hand there was a strong body of opinion favouring the creation of a world labour parliament with power to enact binding international labour legislation. An organization of this kind would, of course, transcend national sovereignty. Were the nations prepared to accept such a revolutionary concept?

In the year 1919, it seemed, they were very nearly ready to accept such a concept. The British, in their original proposal, approached it very closely. Their plan was that member countries would be bound to ratify and enforce the Conventions adopted by the International Labour Conference unless their national legislatures took specific action to reject them.

It was recognized that the Conference's decisions could only be made effective by administrative action on the part of national governments; and thus it seemed necessary to give governments the right to reject Conventions—but this was a reserve power, and it was intended that the International Labour Conference would achieve the authority virtually to lay down labour standards for all member countries.

Such was the idealistic spirit of the early days of the Peace Conference, that this British proposal met with no objections from any of the European countries represented on the Labour Commission of the Peace Conference—except on the grounds that it did not go far enough.

However, the American Delegation felt impelled to call attention to the far-reaching implications of this proposal. It was pointed out that the United States Constitution gave jurisdiction in labour matters largely to the legislatures of the 48 states, rather than to the Federal Government; and that the Delegation could scarcely agree to a scheme imposing obligations that the Federal Government might find itself powerless to fulfil. It appeared further that some members of the U. S. Delegation were disturbed at the idea of a “super-state” making labour laws for the whole world.

Some sort of compromise had therefore to be found, if the idea of a Labour Organization were not to be dropped completely—an eventuality which at times seemed more than likely as the discussion ranged on, with no solution in sight.

Two important changes were eventually made in the British proposals. First, the proposition that a Convention would be binding on a member country *unless* the Parliament took action to reject it was put the other way round: that the Convention would be binding *if* the competent national authority took action to approve and ratify it. Countries were under international obligation to bring a Convention to the attention of the national authority; but it was made clear that if the

authority took no action, the country's obligation ended.

The second important modification of the British proposal was the provision that countries having a federal form of government could at their discretion treat a Convention falling outside federal jurisdiction as though it were merely a “Recommendation”—in other words, merely bring it to the attention of the competent state or provincial authorities, with no procedure for ratification, or for the assumption of a binding obligation. It was with great unwillingness that the European countries accepted this provision, since it seemed to mean that federal countries would evade the ILO objective of social progress on a united international front. (In 1946 when the ILO Constitution was revised, the provision was deleted, and a new section introduced which increased the responsibilities of federal states.)

However the provision was obviously essential; and with its acceptance the Constitution of the new International Labour Organization could now be approved. The Labour Commission of the Peace Conference had thus completed the major part of its task. It now remained to give consideration to the various proposals that had been made for a Labour Charter. Again there was considerable variance of opinion, but a nine-point Charter was at length agreed on, to be incorporated into the Constitution of the ILO, as a declaration of the principles which the High Contracting Parties considered to be of “special and urgent importance”.

* * *

In spite of the active role it had taken in the work of the Labour Commission, the United States was

to decide, after the Peace Conference was over, not to become a member of either the ILO or the League of Nations. This, of course, was a political decision in which Samuel Gompers had no part, and it must be recorded that he canvassed his country for support of the ILO and of the League of Nations. Eventually, of course, under the influence of Franklin D. Roosevelt, the United States was to enter the ILO and to play a major role in its developing policy.

* * *

The rejection of the original British proposal as to the binding character of Conventions had a decisive influence on the character the International Labour Organization was to develop. Although it was clearly understood that the whole object and purpose of formulating Conventions was that they should be ratified and enforced by member countries, there was now no binding obligation to this effect. There remained only the obligation that member countries should submit Conventions to their respective competent authorities "with a view to the enactment of legislation or other action;" and if such action was not forthcoming the matter was ended.

Events were to prove, however, that few governments were yet prepared, in actual fact, to concede as much of their sovereignty to an international authority as the original British proposal would have demanded. And quite apart from the obvious difficulties of federal states in regard to such a proposal, there was also the dilemma of economically underdeveloped countries which were not able to keep pace with the labour standards of the industrialized nations, and would therefore

have been obliged to reject most Conventions.

Under the Paris agreements, then, the ILO was given the task of setting goals for voluntary rather than semi-compulsory national action. Its achievements in this endeavour will be discussed below. But first an account should be given of Canada's participation in the establishment of the new labour organization.

Canada at the Paris Conference

Canada's delegation to the Paris Peace Conference was headed by Sir Robert Borden, the Prime Minister. It included members of his Coalition Cabinet, while among his advisers was P. M. Draper, the Secretary of the Trades and Labour Congress.

The Canadians were not directly represented on the Labour Commission. But they were kept informed of its proceedings by the British, with whom the Dominions were in close association throughout the Conference, and whose delegation was known as the "British Empire" Delegation.

In particular the Canadians, as representatives of a federal state, were consulted as to the United States stand in demanding special consideration in the ILO Constitution for countries with that form of government. The view of the Canadians at that time was that their federal form of government would not hinder them from dealing effectively with ILO Conventions. Even though it was recognized that the subject matter of many of these Conventions would ordinarily fall within provincial jurisdiction, it was nevertheless

felt that Section 132 of the British North America Act, which sets forth the treaty powers of the Federal Government, was wide enough to confer on the Parliament of Canada any necessary legislative powers. As will be shown below, the problem was to prove considerably more troublesome.

But a more immediate pre-occupation was uppermost in the minds of the Canadians at this time. This was the question of the status to be accorded their nation, along with the other British Dominions, as members of the League of Nations and of the ILO. The fact that the Dominions were independent, self-governing units within the framework of the British Empire was not generally appreciated, and the suspicion persisted in some quarters that to accord separate membership to Canada and the other Dominions, apart from the British Empire, would be to present the British with six votes instead of one.

The problem arose on several occasions at the Peace Conference, and among others in connection with membership on the Governing Body, or executive, of the International Labour Organization. The Governing Body was to be composed of twelve government members (in addition to six employers' and six workers' members) of whom eight were to represent the states of "chief industrial importance."* Although Canada had good claims to be ranked within the first eight industrial states, the Labour Commission decided that she and the other Dominions should be excluded

* Three years later it was decided to increase the Governing Body to its present size of sixteen government members, eight employers' and eight workers' members.

from consideration in view of Britain's membership. This was a blow against Canada's international status which had to be resisted. The Commission's report had still to come before the plenary session of the Peace Conference for approval; and the Canadians made full use of the interval to negotiate for an amendment. Against stubborn resistance, Sir Robert Borden fought and won for Canada the recognition by the plenary session of her right to be independently represented on the Governing Body, a right which Canada has since maintained.

The Canadian Prime Minister also played an important role in regard to other phases of the Labour Commission's report, and made a decisive intervention in framing a compromise solution to difficulties in regard to the Labour Charter which at one time threatened to block the acceptance by the Peace Conference of the Labour Commission's work.

The First ILO Conference: Washington, 1919

Although the ILO had now been officially created, it existed as yet only on paper. How effective would this new and strangely fashioned labour organization prove to be?

For an answer to this question, the world looked to the first General Conference of the ILO, which opened in Washington on October 29, 1919. It was significant that the Labour Organization was getting to work well before its parent body, the League of Nations, which did not hold its first meeting until some months later.

* * *

The LABOUR GAZETTE of September, 1919, records the preparations

made by an international organizing committee for the first General Conference of the ILO. The agenda, which had been agreed to at Paris, included such subjects as the 8-hour day and the 48-hour week, unemployment, and various aspects of the protection of women and children.

To secure information on these subjects as a guide to the work of the Conference, the Organizing Committee adopted a procedure which has since become standard ILO practice: that of sending questionnaires to each of the member countries to inquire about their law and practice, and their views on the subjects to be discussed.

The preparation of a reply to this questionnaire was the first task of the Canadian Department of Labour in relation to the new International Labour Organization; and the information was promptly compiled and despatched.

The next problem to arise was the appointment of a delegation to the Washington Conference. In addition to Government members, this was to include delegates and advisers representing Canadian employers and workers.

The Department therefore approached the Canadian Manufacturers' Association, which nominated S. R. Parsons, President of the British American Oil Company, and five advisers.

As labour representatives, the Trades and Labour Congress of Canada submitted the names of P. M. Draper as delegate and Tom Moore as adviser, along with four others.

Then came the question of Government representatives; and a decision had now to be made in regard to the position of Canada's

nine provinces. It was true that at the Peace Conference the Canadian delegation had taken a broad view of the Federal Government's powers to fulfil its treaty obligations. Nevertheless the fact remained that the Washington Conference was to deal with certain matters that were normally within provincial jurisdiction; and with others on which the jurisdiction was in doubt.

It was therefore decided that, although the Dominion Government should name the two principal delegates, the provinces should be invited to name advisers. This was done, and all the provincial governments accepted the Dominion's proposal.

It is interesting to note that Prince Edward Island nominated the Hon. W. L. Mackenzie King, who at that time was Leader of the Opposition. The Ontario nominee, Dr. Walter A. Riddell, the provincial Deputy Minister of Labour, was subsequently to have a distinguished career both as a member of the ILO staff and later as Canada's Permanent Delegate to the League of Nations at Geneva. Dr. Riddell was on many occasions the Canadian Delegate to ILO Conferences, and is the only Canadian to have been elected Chairman of the Governing Body.

The Canadian Delegation was headed by the Hon. Gideon D. Robertson, Minister of Labour, and the Hon. Newton W. Rowell, President of the Privy Council. The Deputy Minister of Labour, Mr. F. A. Acland, was adviser and alternate delegate.

Eight-Hour Day Objective

The Washington Conference attracted wide attention both in Canada and abroad. Of particular

interest, of course, was the project for a Convention on Hours of Work.

At the time of the Washington Conference, the 8-hour day was one of the major objectives of labour, both in Canada, the United States, and abroad. Already considerable research had been undertaken on the subject of industrial fatigue, notably in Britain, where studies in munitions factories during the war had indicated that the utmost in productive efficiency could not be attained if hours of work were too long. There was thus a substantial body of official and public support for the 8-hour day.

However each country retained its fears as to the possible dangers that unilateral action would create, in the face of international business competition. It was widely hoped, therefore, that the adoption by the newly formed International Labour Organization of an Hours of Work Convention would be the dynamic factor that would set off national action to limit working hours in the major industrial countries of the world.

But the subject was still a contentious one, and naturally the Washington Conference was not to adopt an Hours of Work Convention without long and strenuous debate.

The Employers' Group brought in an amendment to the proposed Convention text, accepting the principle of the 8-hour day and 48-hour week, but introducing a series of modifications and conditions. According to the *LABOUR GAZETTE*, "strong opposition to the employers' plan was voiced by various workers' delegates".

P. M. Draper, the Canadian Workers' Delegate, urged as a counter-proposal that the 8-hour

day should be coupled with a 44- instead of a 48-hour week. This proposition was ruled out of order, as being contrary to the terms of the agenda.

The discussion in plenary session "ranged over a wide field and brought out most of the arguments for and against the 8-hour day and 48-hour week", according to the *LABOUR GAZETTE* report.

It took weeks of work to thresh out the details of the Convention, which gradually emerged from the discussions as an instrument embodying the closest to agreement that the various interested parties could come. When at length it was ready for the vote, it was evident that the drafters had done their work to the general satisfaction of the delegates present; for the Convention was adopted by 82 votes in favour to only 8 against, with one abstention. It thus became Convention No. 1 of the International Labour Organization.

The other items on the agenda were to cause less trouble. Five more Conventions and six Recommendations were agreed to, and the delegates could now return home, after a month of tense and exciting negotiation, while the world could begin to assess the results of their labours. But before considering this matter, it is necessary to record the steps taken to put the new Labour Organization on a permanent footing.

Building an International Labour Code

Although the drama of the Conference was over, the work of the ILO was just beginning. The first task was to establish the permanent Office of the ILO, the body which was to foster on a year-round basis the ILO's objectives.

A Frenchman, Albert Thomas, was named as Director of the International Labour Office. A brilliant orator and inspiring leader, Albert Thomas was quick to recruit a staff of international officials, to establish communications with member governments, and to commence the vast tasks of compiling information on labour subjects from all over the world and of making it publicly available in printed reports and periodicals.

Within a matter of months the second session of the International Labour Conference took place, this time at Genoa. Devoted entirely to the problems of merchant seamen, this Maritime Conference adopted three Conventions and Four Recommendations, thus laying the foundation for the structure of international regulations which were later to become known as the International Seamen's Code.

In 1920 the ILO moved to Geneva, which was to become its headquarters. Conferences now followed one another annually, and a steady stream of Conventions and Recommendations embodied the decisions of the world's workers, employers and Governments on labour standards. Workmen's

compensation; one day's rest in seven; inspection of emigrants; sickness insurance; minimum wage-fixing machinery; factory inspection: these were but a few of the subjects concerning which the ILO adopted international regulations at the early Geneva Conferences.

Canada, of course, participated in all these meetings, and also, as one of the eight states of chief industrial importance, in the meetings of the Governing Body. Canadian labour was also represented on the Governing Body in the person of P. M. Draper, one of the eight workers' members. Mr. Draper, by means of the ties that the Trades and Labour Congress maintained with the American Federation of Labour, was able in some degree to foster the interest of American labour in the ILO, even though their Government remained outside the ILO membership.

* * *

As the ILO's work prospered, its stability became assured. It was decided to construct at Geneva a permanent building for the International Labour Office. It was agreed that the various member countries should contribute to the

Geneva's Palais des Nations, where workers, employers and government delegates from almost every nation assemble for the annual ILO Conference.

structure by the gift of building materials, ornaments, or works of art, representing the most characteristic forms of national production.

The Canadian delegate to the Conference in 1924, Mr. F. A. Acland, announced that Canada's contribution, symbolizing its rank as one of the great lumber producing countries of the world, would be to provide the doors on the main floor of the new building.

"The doors", he told the Conference, "will be solid and of a substantial character destined to endure not merely for years but for generations, and I am asked by the Minister of Labour to express the hope that the nations now constituting the International Labour Organization will continue their interest in the work of the office so long as these doors will last, unless it should happen—a perhaps unlikely event—that the particular evils for the remedy or amelioration of which the International Labour Office was erected, shall have in the meantime passed away."

* * *

In 1929, as the ILO reached the end of its first decade, the time had come to take stock of the progress that had been achieved.

The Chairman of the Governing Body, Mr. Arthur Fontaine, made an interesting summation. He noted that there had been twelve Conferences, attended by delegates from some forty or fifty states, at which 29 Conventions and 33 Recommendations were prepared.

What had been the progress of ratifications? Mr. Fontaine pointed out that only 32 of the member states were sufficiently industrialized to take an active interest in the regulation of working

conditions. If all these 32 states had ratified every Convention, the total of ratifications would have been 768. In actual fact, the number registered or authorized by these states was 404, or 53 per cent of the theoretical possibility.

He pointed out that the progress made in regard to the subject matter of Conventions was usually considerably ahead of the actual number of ratifications. "The Conventions are nearly always based on a large amount of practical experience, or at least on a wave of public opinion which has already spread far beyond the limits of the working class, and in consequence they tend to form, and rapidly do form, the standard for working conditions. All countries gradually approach this standard, simply as a result of considering it as the normal condition.

"One example, the most striking one, will suffice. The eight-hour day is already considered as the normal working day, not only in the fourteen countries which have ratified the Convention, but everywhere. It is perhaps nowhere so firmly rooted in custom as in Great Britain, although Great Britain has not yet ratified. Everywhere this is the standard which is being aimed at. It is a world standard..."

This being the case, it appeared, from Mr. Fontaine's analysis, that ILO Conventions were exercising two kinds of influence on world labour progress. In the first place they comprised a system of international legislation which had gained a remarkable degree of acceptance—on a voluntary basis—among member countries. Secondly, they served the important function of setting standards, towards which the less

developed countries could gradually advance.

Albert Thomas expressed the importance of this second function succinctly: "We have taught the world," he said, "to speak something like the same language on social questions."

Nevertheless, as Mr. Fontaine pointed out, it was important that the process of ratification should continue, "not only because ratifications make the workers' position more secure, but also because a system of international legislation on general principles would be one of the strongest guarantees for peace in the future".

Yet this process of ratification, from which such advantages could be derived, was not always a simple matter to member countries, particularly where great and contentious issues were involved. This was true, for example, of the most important of the Washington achievements, the Hours of Work Convention. A quick review of the action taken on this Convention by member countries during the first few years of the ILO's existence illustrates the difficulties.

* * *

As has been seen, the Washington Conference met in October and November of 1919.

Within due course a certified text of each of the six Conventions and six Recommendations of the Conference was submitted to the various member governments of the ILO. Each of these governments had now to consider its obligations under the Constitution of the ILO, and to decide in what way it was expedient to fulfil these requirements.

Although the months following the Conference saw much

discussion of its accomplishments, the member countries were not precipitate in taking action to implement them by national legislation.

The major industrial countries, while favourably disposed to most of the Washington Conventions, were wary of ratification of the Hours of Work Convention. In Britain the Government decided to accept four of the six Washington Conventions, but it was explained in the House of Commons that the terms of the Hours Convention were too rigid to be applied in all circumstances in British industry.

Britain's principal trade rivals, France and Germany, likewise failed to ratify, as did Belgium, the Netherlands, Italy and Japan.

In 1926 an effort was made to break this deadlock, when Britain, France, Belgium, Germany and Italy held a meeting to consider whether they could agree among themselves to ratify the Hours Convention. Shortly afterwards Belgium ratified. A few months later France made a "conditional" ratification, stipulating that she would be bound only if Britain and Germany ratified also. The device proved unsuccessful in eliciting the particular ratifications desired. But the matter continued to be the subject of much discussion both at ILO Conferences and in the various countries.

* * *

The scope and limitations of the ILO were thus made clear. As a voluntary association it could set standards. And these standards could exercise a strong moral effect. But when it came to the formal implementation of these standards into legislation, the ILO could move no faster than governments were prepared to follow.

The logic of this situation was recognized by Albert Thomas, who, hard as he worked to convince the world's governments of the desirability of ratifying international labour Conventions, had to admit that "neither governments nor ministers can decide to ratify a Convention unless it accords with the prevailing public opinion in their country". It is thus necessary, Mr. Thomas concluded, to "endeavour to convince public opinion".

Canada and the ILO

In 1930, P. M. Draper could say in Canada about the ILO: "As an experiment in internationalism the ILO is all that its sponsors hoped it would be. It remains only for the nations of the world to continue to give it in the future the support they have given it in the past in order to make this great agency for world peace the complete success that it deserves to be."

This was not to say that Canada's experiences with the ILO had been altogether smooth sailing. In particular, Canada's experience with the Hours of Work Convention illustrated the special difficulties with which a federal state is confronted in seeking to follow the ILO road to social progress.

The Canadian delegates returning from the enthusiastic atmosphere of the Washington Conference, had found themselves confronted with some sober problems with regard to the application of Conference decisions. What was the precise nature of Canada's obligation in regard to ILO Conventions? Was the 8-hour day to be imposed by national or by provincial

legislation? Was legislation in fact desirable—did public opinion really favour such a step, or had the Washington Conference advanced further than it was practicable to follow? What were the other countries going to do—if they failed to ratify, would Canada's ratification place her at a disadvantage? And in particular, what about the United States, Canada's powerful neighbour, which was not even an ILO member, and therefore could not be bound by ILO standards?

Immediate implementation of the Hours of Work Convention would have meant substantial changes in Canada's industrial standards. Although there was already a certain amount of legislation on hours of work at the time of the Washington Conference, a Labour Department survey covering 612,398 workers showed that only 266,236 of these were on an 8-hour day. Even this number included 100,000 railway employees whose "basic" 8-hour day "did not necessarily constitute an actual 8-hour day," according to the LABOUR GAZETTE report. Some 133,000 employees were working 10 or more hours a day.

To institute an 8-hour day, without assurance of parallel action by other countries, and particularly by the United States, would thus have been a drastic step. Canada's concern over this situation was expressed by Mr. Rowell in an address to the American Federation of Labour which held its annual meeting in Montreal, in June, 1920.

"We in Canada," said Mr. Rowell, "believe (the ILO) is not only in the national interest, but in the interest of the peace and progress of the United States."

Turning to Mr. Gompers in the chair, he continued:

I want to say to you, Mr. President, in all seriousness, while the Government of Canada must decide for itself, or the various governments possessing legislative authority must decide for themselves, what they are going to do in connection with the Conventions and Recommendations adopted at Washington, it will make it much more difficult for our Parliaments and Legislatures to act if you do not move along the same lines at the same time. And I say this in the interests of the workers of Canada, who are anxious to see these laws and functions put into effect.

The question of jurisdictional competence to legislate on hours of work was another crucial factor in Canada's attitude towards the Hours Convention. It was generally agreed that under normal circumstances the provinces had jurisdiction in this field. Early in 1920 Senator Robertson, as Minister of Labour, conceded the right of the provinces to enact legislation on the 8-hour day. But he added that "if the Provincial Legislatures do not see fit to act in the matter, the Federal Government has jurisdiction, under its treaty-making rights, to enact such legislation."

A different picture emerged later in the year, however, when the Department of Justice issued an official opinion on the jurisdictional question. An Order in Council expressed the Department's opinion that the treaty engagement entered into by the Dominion in regard to ILO Conventions was not such as to justify Dominion action under Section 132 of the British North America Act in regard to Conventions where the subject matter fell within provincial jurisdiction—as

did the Hours Convention, except in its application to federal works and undertakings. The Dominion's obligation was merely to bring the different Conventions and Recommendations before the competent authority, whether Dominion or provincial. There was no obligation to enact legislation, and hence Section 132 could not apply.

In accordance with this viewpoint, the Hours of Work Convention, together with the other Conventions and Recommendations adopted at the first two ILO Conferences, were tabled in the House of Commons by the Minister of Justice on May 28, 1921, but no legislation was introduced. The texts were also communicated officially to the provinces.

Meanwhile the Trades and Labour Congress of Canada had been urging the Government to take action, though what kind of action was possible seemed less and less clear.

Three months after the Washington Conference, the Congress called on the Federal Government to enact a national 8-hour work day, "in conformity with the Peace Treaty"; and suggested that if necessary the B.N.A. Act be amended to make such legislation possible.

The Congress also made an approach to the various provincial governments, asking that they enact legislation on hours of work. A partial success was gained when British Columbia passed a series of acts to conform with the Washington Conventions, but the taking effect of the acts was made contingent upon the passing of similar legislation in other provinces, and this, unfortunately, was not forthcoming.

Early in 1921 the Congress returned to the Federal Govern-

ment with a two-fold suggestion: that it introduce the 8-hour day on works coming within federal scope; and that it call a meeting of Provincial Government representatives to facilitate joint action to implement the Convention within each province.

Such a meeting was, in fact, convened in 1923. It was attended by representatives of workers and employers as well as of the Dominion and Provincial Governments, and it gave careful consideration to each of the ILO Conventions that had been adopted up to that date in terms of possible Canadian action. But the Canadian Manufacturers' Association commented, following this Conference, that it seemed to be the consensus of opinion of delegates to the conference that implementation of the Hours Convention was not "practical politics".

The Association, while expressing its support of several of the ILO Conventions, had previously gone on record as opposing vigorously any legislation to give effect to the Hours of Work Convention. It argued that any such action would have "disastrous consequences in an undeveloped country such as Canada to which new capital must be attracted", and that "it is absolutely impossible for Canada to think of passing such legislation unless and until similar legislation is passed in the United States."

In 1925 the Supreme Court confirmed the view that the provinces, and not the Dominion, had general legislative competence in regard to the subject matter of the Convention. And so the matter rested, although the Trades and Labour Congress continued to urge on both Dominion and provincial

authorities, year after year, the desirability of action.

In 1930, however, an Order in Council officially established the 48-hour week as the maximum for Federal Government employees (with certain exceptions). And in 1935, the whole question of Dominion-provincial jurisdiction was re-opened when the Rt. Hon. R. B. Bennett, as Prime Minister, made an attempt to effectuate the Hours Convention for the whole country through federal legislation. This attempt will be described below.

Meanwhile it will be appropriate to record the Dominion's first successes in regard to ILO Conventions.

* * *

Among the few ILO Conventions which were indisputably within federal jurisdiction were those affecting the employment conditions of seamen. In spite of a certain reluctance to subject Canadian shipowners to conditions which were not yet generally in force in other countries, it was decided in 1924 to amend the Canada Shipping Act to bring Canadian legislation into conformity with four ILO Maritime Conventions.

The first of the four Conventions was designed to give financial protection to shipwrecked seamen. It provided for the continuation of their wages during unemployment resulting from shipwreck for a period not exceeding two months.

The other three Conventions were intended to protect young persons. They established a minimum age of 14 for the admission of boys to employment at sea, and a minimum age of 18 for their employment as trimmers or stokers. They also called for compulsory

medical examination to establish the physical fitness of young sea voyagers.

Although the Canada Shipping Act was changed in the summer of 1924 to correspond with the terms of the ILO Conventions, the coming into force of the amendments was postponed until the British Parliament should have imposed similar standards on British shipping. This happened a year later. On the first of January, 1926, therefore, the Canadian legislation came into force; and three months later Canada's first ratifications of ILO Conventions were registered at Geneva.

In accepting the international responsibilities which this action entailed, Canada proclaimed to the world her willingness to follow the spirit as well as the letter of the obligations imposed by ILO membership, and to participate in the ILO structure of international labour law.

Canada has since ratified three other Maritime Conventions; and has enacted legislation which is expected to lead to the ratification of four others in the near future.

In regard to Conventions falling within provincial scope, the federal Government has consistently referred these to the provincial governments for their consideration and any action they may choose to take.

The question of whether the Dominion should, or could, ratify a Convention on the basis of provincial legislation is one that is fraught with both legal and political difficulties. No such ratification has as yet been attempted; and thus Canada's total record of ratifications does not stand high among the ILO member countries, even though the standards of Canadian workmen are without

doubt among the world's best. But the existence of these Conventions has stimulated a considerable degree of provincial legislation; and has also helped to establish the standards that are recognized as normal by management and labour as well as in official quarters.

Action of Bennett Administration

The attempt in 1935 of the Rt. Hon. R. B. Bennett to give effect by federal legislation to Conventions normally within provincial jurisdiction was a development of the greatest importance in Canada's relationship with the ILO.

Through the early depression years the ILO had urged various remedies for the unemployment crisis which, according to ILO figures, affected as many as 25,000,000 workers throughout the world.

In 1932, for example, meeting under the presidency of a Canadian, the Hon. Senator G. D. Robertson, former Minister of Labour, the Conference adopted a resolution on unemployment calling for a bold program of national and international public works and other measures. The ILO also, in those years, was advocating such measures as the abolition of overtime, and the adoption of social security programs, including in particular unemployment insurance.

Above all, the ILO emphasized the desirability of a shorter standard work week, as a means of distributing available work over a larger number of persons.

Reflecting the general sentiment for shorter hours, which by this time was being expressed by the Canadian Manufacturers' Associa-

tion as well as by the trade unions, the Canadian House of Commons in 1932 adopted a motion calling attention to the Hours of Work Convention and urging its implementation throughout Canada. The resolution failed, however, to elicit any significant provincial action.

Early in 1935 Mr. Bennett summed up for the House of Commons the difficulty which prevented the provinces from taking full advantage of their right to legislate on hours of work. Reminding the House of the danger of a "mad competition in invitations to induce manufacturers to set up their factories in this province or in that because in a particular province he may work his labour longer hours than in another", Mr. Bennett said: "If that is wrong, as everyone agrees it must be, there is only one method by which it can be dealt with, and that is by uniformity of law. The uniformity cannot be secured by piecemeal legislation, to use the language of the books, by one province enacting an eight-hour day law and another a nine-hour day; by one province making limitations of this character and another of another. Rather there must be placed upon the statute books of our country a broadly conceived statute that will ensure uniformity and equality in the work with respect to the matters in which the workman is interested."

Mr. Bennett announced his intention, as part of his program of "New Deal" legislation, to ratify the Hours of Work Convention.

Fully aware of the judicial opinion that hours of work normally came within provincial jurisdiction, Mr. Bennett never-

theless argued that in recent years the constitutional position had changed. Privy Council decisions in the "Radio" and "Aviation" cases had upheld the Dominion's authority under Section 132 of the British North America Act to legislate to implement international treaties. He reasoned that if Canada ratified an ILO Convention, it would then be bound by the Convention as though it were a treaty. Having become subject to treaty obligations in this manner, Canada would then find power, in Section 132, to carry out its obligation by adopting the necessary legislation.

In line with this reasoning, Mr. Bennett first introduced in the House of Commons a motion approving the Hours of Work Convention. He then introduced legislation to implement the terms of the Convention.

In seeking Parliament's approval of this procedure, Mr. Bennett stressed the desirability of supporting the ILO system, in order that countries competing with Canada might be encouraged to ratify Conventions in their turn, and thus raise their labour standards.

"We have sometimes complained," he said, "of unfair competition and of conditions of living and labour in other countries, but failure on our part to ratify certain Conventions that have been made has had the effect of creating a rather unfavourable opinion amongst other countries that have adopted them."

Members of the House of Commons were for the most part in accord with the principle of shorter working hours, but Opposition speakers were dubious about the manner of procedure. Pointing to the need for proceeding in

a correct constitutional manner, the Hon. Ernest Lapointe said: "The thing will be better done if it is well done."

As it turned out, Mr. Bennett's views on the federal power to legislate on ILO Conventions were not to receive judicial support.

The "New Deal" measures were referred first to the Canadian Supreme Court, which divided 3-3 on the validity of Mr. Bennett's action. They were then submitted to the Judicial Committee of the Privy Council, whose opinion was delivered in 1937. The Privy Council ruled that the subject of hours of work was normally within provincial jurisdiction; and that Section 132 of the B.N.A. Act did not confer on the Dominion the right to invade this jurisdiction. Their Lordships reasoned that if Section 132 were to be interpreted as granting such authority, the Federal Government "need only agree with a foreign country to enact such legislation: and its Parliament would be forthwith clothed with authority to affect provincial rights to the full extent of such agreement. Such a result would appear to undermine the constitutional safeguards of provincial constitutional autonomy".

Accordingly the Privy Council ruled that the Hours of Work Act was *ultra vires* of the Parliament of Canada.

Their Lordships closed their decision, however, on a more encouraging note. "It must not be thought," they concluded, "that the result of this decision is that Canada is incompetent to legislate in performance of treaty obligations. In totality of legislative powers, Dominion and Provincial together, she is fully equipped. But the legislative powers remain

distributed and if . . . she incurs obligations they must, so far as legislation be concerned when they deal with provincial classes of subjects, be dealt with by the totality of powers, in other words, by co-operation between the Dominion and the Provinces."*

The pattern of Canada's relationship to ILO Conventions falling within provincial jurisdiction was thus fixed. Short of changing the Constitution, she could not ratify them through federal legislation. And, short of obtaining some form of agreement which would be as binding on the provinces as a treaty is to the federal Government, she would find it difficult to ratify on the basis of provincial legislation.

The position was examined by the Rowell-Sirois Commission on Dominion-Provincial Relations, and was declared to be unsatisfactory. The Commission recommended "that the Dominion and the provinces together should decide how international labour Conventions should be implemented."

The question has been on the agenda of subsequent Dominion-Provincial Conferences, but has not as yet been reached for discussion. (It has, however, been discussed at sessions of the Canadian Association of Administrators of Labour Legislation.)

Meanwhile the favourable economic conditions of recent years, and the enhanced strength of organized labour, have been accompanied by a considerable expansion of provincial labour legislation. This development has

*The Privy Council decision applied also to two other pieces of federal legislation, designed to implement ILO Conventions dealing with minimum wage-fixing machinery and the enforcement of one day's rest in seven.

In 1946 Montreal was the seat of an important session of the International Labour Conference. Shown above on the Conference rostrum are Mr. E. J. Phelan, ILO Director-General, Hon. Humphrey Mitchell, Minister of Labour, who was elected President of the Conference, and Mr. Trygve Lie, Secretary-General of the United Nations. Part of the Canadian Delegation, shown below, are Mr. Gustave Francq, Workers' Delegate, Messrs. V. C. Phelan, Paul Goulet and Paul Renaud, Government representatives, and in the background Messrs. W. L. Best and Hugh Henderson, Workers' representatives. The Employers' Delegate, not shown in this photograph, was Mr. Harry Taylor.

brought Canada a good distance towards compliance with the three Conventions ratified by Mr. Bennett in 1935.

At last year's Conference the Canadian Government Delegate, Mr. Goulet, was able to report on the considerable degree of progress that had been achieved. But he found it necessary to emphasize "that the provinces are fully autonomous as regards the subject matter of these Conventions, and that efforts on the part of federal authorities to obtain compliance are therefore necessarily limited in scope."

The ILO Today

To revert now to the main story of the ILO. There is no space here to describe the Conference's action on the many draft Conventions and Recommendations that came before it. We have traced the growth of the Organization up to the depression years. Its war and post-war experiences, leading up to the remarkable new role it has only recently undertaken in international affairs, can be quickly told.

Through the latter part of the 'thirties, Germany, Spain, Italy and Japan one by one left the ILO, as they abandoned the League of Nations.

In the summer of 1939, with the world poised on the brink of war, the member governments of the ILO agreed that in the event of crisis the Organization should so far as possible continue its activities. Thus, in the spring of 1940, the ILO was making preparations for its annual Conference when the Nazi onslaught descended on the Lowlands.

The ILO might conceivably have remained at Geneva, in an attempt

to retain some sort of international status above the battle. But an organization devoted to the interests of the workers was inevitably linked with the cause of freedom.

Led by its Director, John Winant, the ILO abandoned the neutrality of Switzerland, and, at the invitation of the Canadian Government, established wartime headquarters at Montreal. Here its fund of experience in labour and social questions was put to the use of the Allied cause. The ILO prepared studies on such matters as wage and price controls, manpower utilization, industrial fatigue, absenteeism, and factory standards. Through the loan of experienced officials, it provided aid to governments faced with a host of economic problems. John Winant himself left the ILO, to become President Roosevelt's wartime ambassador at London. E. J. Phelan, who had been concerned with the ILO since the days of the British preparations for the Paris Peace Conference, and who had been Albert Thomas' first appointee to the staff of the International Labour Office, took over the wartime direction of the ILO.

An important phase of the Organization's work at this time, had to do with reconstruction planning for the post-war period. In 1944 the ILO conducted at Philadelphia the first of the great international conferences at which the United Nations were to formulate their post-war objectives.

Here was adopted the Philadelphia Charter, which redefined the role the ILO was to play in the post-war world in the service of Labour. Here were reasserted the great principles that "lasting peace can be established only if it is based on social justice," and that

"poverty anywhere constitutes a danger to prosperity everywhere." The Declaration set forth the solemn obligation of the ILO to further among the nations of the world programs which will achieve full employment and the raising of standards of living, social security, protection for the life and health of workers, effective recognition of the right of collective bargaining, equality of educational and vocational opportunity, and other basic objectives.

Reflecting the great post-war objectives of the time, the Conference adopted three Recommendations on full employment policy, and three Recommendations calling respectively for a comprehensive plan of social security measures, a complete medical care program, and a system to provide for the rehabilitation of veterans of the Armed Forces.

One of the Canadian Government Delegates was Mr. Paul Martin, then Parliamentary Assistant to the Minister of Labour. In summing up the Conference's achievement, Mr. Martin pointed out what a long way the world had come in social progress during the ILO's 25-year history. "Agreement was reached," he declared, "on principles which a quarter of a century ago would have been labelled as revolutionary—labelled by beneficiaries of privileges as political, economic and social disaster."

No sooner had the war ended, than the ILO, in the fall of 1945, was again on European soil, holding its first post-war Conference in liberated France.

In 1946 Canada was for the first time the host country to an International Labour Conference. At this session, held in Montreal, the

Honourable Humphrey Mitchell, Minister of Labour, became the second Canadian to act as President of an ILO Conference.

In his Presidential Address, Mr. Mitchell stressed the task of the ILO in giving hope to the peoples of war-ravaged countries for the extension of social justice and the progressive improvement of living standards.

"The principles of social justice," he declared, "must be applied to our economic and social life, finding ultimate expression in their respective legislative decisions. To the extent that the International Labour Organization may help in the realization of this objective, its work must be worth while as essential to human progress."

The Montreal Conference marked a turning point in the ILO's activities. The Constitution of the Organization was thoroughly revised, to equip it better to carry on its post-war functions. The Conference also agreed that the ILO, having outlived its parent body, the League of Nations, should now enter into association with the newly-formed United Nations Organization as a specialized agency.

In 1948 with its return from Montreal to its permanent headquarters at Geneva, the ILO had completed its post-war reconstruction and had returned to normal functioning.

* * *

The retirement of E. J. Phelan as Director-General of the ILO marked the end of an era. Mr. Phelan had been associated with the ILO throughout its history. To succeed him, the ILO acquired its present Director-General, Mr.

David Morse, who at the time of his appointment was U.S. Under Secretary of Labour. Under Mr. Morse, the Organization has had to face the task of adapting itself to a world that has changed indeed since the period of the Versailles Treaty.

In response to these changed and changing world conditions, the emphasis and scope of the ILO have altered. No longer primarily concerned with European problems, the ILO has "decentralized," and is dealing with the needs of the awakening labour movements in such lands as India, Pakistan and Indonesia. It has held Regional Conferences in Latin America, Asia, and the Middle East.

The ILO has also changed its emphasis industrially. Through its newly-developed industrial committees, it is giving attention to the problems of specific industries such as was hardly possible at General Conferences. The ILO also has created committees of experts in such fields as accident prevention, industrial hygiene, juvenile employment, women's work, "white collar" workers, migration, social security and recreation.

Perhaps the most significant extension of ILO activities, however, has been its embarkation on what David Morse describes as an "operational" program by means of which the ILO is lending concrete assistance to member countries in such fields as employment service organization and industrial training. Through participation in the United Nations program of technical assistance to underdeveloped countries (commonly associated with President Truman's "Point

Four" program) the ILO is further expanding its operational activities.

* * *

But what of the ILO's achievement in its original field, which continues to represent its basic function—that of developing international labour legislation?

In 1934 Harold Butler, who had succeeded Albert Thomas as Director, could boast that ILO conventions touched almost every phase of industrial life, and constituted a "real international labour code".

Addressing the annual meeting of the American Federation of Labour, shortly after the United States Government had announced its intention to join the ILO, Mr. Butler pictured the position of a worker whose country had put the major ILO Conventions into effect.

"First of all he cannot be employed until he is 14 years old, in industry or commerce. While under the age of 16 he may not work at night in any industry, and in most industries not till he is 18. His hours of work in any industrial occupation may not as a rule exceed 48 per week and he will be entitled to one day's rest in seven. If he meet with an accident or is stricken by any of the principal industrial diseases, he will have the protection of a government-controlled fund against sickness, old age or invalidity. Finally, if he is unemployed, a government employment service will help him to find a job, and if he cannot do so, he and his family will be preserved from destitution by a state scheme of insurance or relief.

"I might add that if he is a seaman, he can apply for a job

to an employment office jointly administered by shipowners and seamen. When he is engaged, it will be under articles of agreement protecting his rights, and if he meets with shipwreck, he will be entitled to be repatriated and compensated during the period of unemployment at the cost of the shipowner."

Were today's Director-General to continue Mr. Butler's outline, in terms of the provisions of more recent ILO Conventions, he would be able to dwell on some outstanding improvements. He would first point out that today's worker, if subject to ILO standards, is on a work week of 40 rather than 48 hours. He is entitled to vacations with pay. The payment of his wages is protected by legislation. If he migrates to another country, he is entitled to the same standard of working conditions as the native-born worker. And—of supreme importance in a world threatened by totalitarianism—he has the guaranteed right to join a trade union and enjoy the benefits of free collective bargaining. Finally, the standards erected for his protection are guarded by a system of government labour inspection.

Today the ILO has increased the number of its Conventions to 98. Well over a thousand ratifications of these Conventions have been registered.

The sum total of this achievement cannot be measured. For, as Mr. Paul Goulet, the Canadian Government Delegate, declared to last year's International Labour Conference: "A thousand ratifications of ILO Conventions, vital as they are, do not begin to tell the story of the progress in human welfare that the ILO has helped to activate.

"For whether they are immediately ratified or not, these Conventions establish guidemarks for the future course of the world's social policy.

"The ILO now has thirty years behind it," Mr. Goulet concluded, "encompassing a rich and varied achievement. The work of these decades justifies our confidence that as the problems of our age change, the ILO will have the flexibility to adapt itself to changing world demands, and will thus continue to play its proud role in the history of man's struggle to attain peace, prosperity and social justice."

And—to conclude this review with a further quotation from the Hon. Humphrey Mitchell's Presidential Address to the Montreal Conference of the ILO—"Unless we make social justice the cornerstone of our respective national lives and the basis of international policies, devastation and destruction must by the very nature of things be the lot of mankind."

Prairie Assignment

by **Harry J. Walker**

Editor-in-Chief, LABOUR GAZETTE

Dramatic Origin of a Famous Canadian Statute

On a bleak day in November, 1906, a young Canadian Deputy Minister stepped briskly down the gang-plank from the red-funnelled Cunarder "Caronia" to its pier at New York. It was the New York of Rectors and the "Red Mill", but this alert young man had neither the inclination nor the time for the attractions of Broadway.

Besides, he had just been handed a telegram from the Prime Minister of Canada, Sir Wilfrid Laurier, assigning him to an urgent mission to the prairies.

As Deputy Minister of Labour and "trouble shooter" for Laurier, William Lyon Mackenzie King had just completed successfully a delicate job of telling the British Government, through fiery David Lloyd George, that it would be an act of colonial statesmanship if His Majesty's Government would amend its emigration legislation so as to prevent strike-breakers coming to Canada.

The White Ensign and the "Red Duster" flew the Seven Seas in those days of Britain's two-power navy. Trade then did follow the Flag; and the Bank of England then controlled the counting houses of the world. And with the Statute of Westminster only on the loom of the future, Canada was still a colony.

In the Downing Street office of the Secretary of State for the Colonies, they listened with great attention as Laurier's young deputy, politely, but firmly, indicated the wishes of the Canadian Parliament.

An amendment to the Merchant Shipping Bill was rushed through the House of Commons even as young Mr. King sat in the galleries. This stopped the emigration to Canada, by false representations, of strike-breakers in the guise of immigrants. Back home in Canada, "Paddy" Draper and the Trades and Labour Congress applauded.

Mr. King had earned a respite for himself, but Sir Wilfrid and Rodolphe Lemieux waited impatiently for him in the East Block, centre of political gravity in Canada.

(Little did he think then that one day he would wait there in the conning tower of the Nation while directing far more momentous operations, or that he would fly the Atlantic on lonely missions, too grave to be delegated, or even to be shared in human consultation.)

Prairie Mission

The telegram informed him of a critical situation in the Canadian

West where an eight months' coal strike in the Lethbridge area had resulted in a desperate situation. Farmers were burning fence posts and straw stacks. Two provincial governments and municipal committees, backed by health officers, were appealing to the Federal Government to do something quickly to avert disaster as zero temperatures and blizzards swept the prairies, bringing dangerously close to many people the imminence of death by freezing.

Within 24 hours of his return to Ottawa, he was on his way, via the Canadian Pacific Railway. He has left a meticulous record of that journey in the reports which he wrote for the *LABOUR GAZETTE*, official publication of the Department of Labour. Even after a lapse of 43 years, his restrained and factual reporting tells a dramatic story. One senses the gathering crisis in the march of events and in his observations on the situation as he formulated his plans.

What that young officer of the Department of Labour was turning over in his mind as the crisis gripped Western Canada was something that was to have a profound influence on the future of industrial relations in this and other countries.

As he looked out his car window he noted that a bitter winter had already set in across the prairies. "For miles on either side of the railway," he wrote, "were bleak stretches of snow-covered ground, nothing to be seen anywhere except the solitary dwelling of some settler and, now and then, a coyote or prairie wolf."

Plea Makes Headlines

At Winnipeg he had been handed a sheaf of material on

the developing crisis. Included was an open letter to Sir Wilfrid—an appeal so compelling that it had made headlines across the country. The district of Ramsay, from its headquarters in the hamlet of Bladworth, Saskatchewan, faced deadly peril. Its chairman, William Ramsay—after pointing out that the settlers were burning bramble, twisted hay and grain; that the schools were closed; that the Saskatchewan Hotel (a thirty-roomed structure) had only one stove going, and that a blizzard was blowing in sub-zero temperature—lashed out in these words:

We are informed that those persons operating the mines of the people are disputing over their rights—regardless of the right of the people to live.

I would respectfully ask that you, sir, put an end to a dispute that is intolerable, and the maintenance of which endangers the life and happiness (inalienable rights of all free people) of all settlers.

I ask you, sir, on behalf of a suffering people, that by the powers vested in you the right of eminent domain be exercised.

I can assure you, sir, without exaggeration, that this matter is one of life and death to the settlers here, one requiring immediate action.

Your obedient humble servant,
Wm. L. RAMSAY
Chairman of Committee.

The Canadian people were shocked and none more so than the young deputy on whom rested a tremendous responsibility. Fortunately his whole training and philosophy had conditioned him to assess the essentials of the situation and to prescribe an immediate remedy. His difficulty

was going to be to make the embittered disputants accept it whether they liked it or not.

New Concepts of "Rights"

This last outburst from a community, frightened and suffering acutely, confirmed his own belief in two fundamentals:

- (1) That, under certain circumstances, the rights, real or fictitious, of two parties to an industrial conflict must be subordinated to the rights of a third—the Community, or even the Nation.
- (2) That if some machinery could be established it could be a medium, with effective publicity, of exposing and remedying the underlying causes and injustices in industrial disputes.

These two principles—with their variants and concomitants of collective bargaining and a "cooling-off" period—are inherent in arbitration and conciliation procedures of today. But in those days, with our pioneering concepts of "rugged individualism" and "the public-be-damned" attitude, it was too new and much too heretical for general acceptance as sound labour economics, or sociology.

As he mused on that train journey upon the ugly manifestations of human cussedness and greed that would imperil innocent lives, young Mr. King was determined he would pioneer in what he believed was in the interests of social justice.

Shortly after he stepped off the train at Lethbridge he realized that the long-standing dispute had hardened into defiant unyielding attitudes on both sides without

any interest in the consequences to suffering fellow citizens, not even remotely concerned in the causes, but vitally affected by the results.

Straight Talk

He had to break down the resistance of the recalcitrants in union halls and behind the doors of company offices. They were not even talking to each other except out of the corners of their mouths. But King talked straight at them. They were still sullen and time was running out.

More frantic appeals had come to him but the appeals now were edged with sharpness on the part of responsible Saskatchewan officials. These men began to talk rough.

Doughty W. R. Motherwell wrote from the Executive Council at Regina:

It will not do to prolong negotiations in the matter of the coal strike. In my opinion, it has reached such a crisis that the government has no alternative but to issue an ultimatum at once. We cannot afford to dally with negotiations for the sake of diplomacy when the people are perishing without coal.

His deputy was even tougher:

We cannot allow the people of Saskatchewan to suffer from cold while these people are negotiating as to the terms on which they will mine coal. "Desperate diseases need desperate remedies." This country is approaching a crisis in its economic history; and if these people cannot be persuaded to mine coal peaceably there seems to me but one alternative.

The patient persevering King seized on this as something to persuade reason in both camps.

Here was an aroused public opinion coming on to the field late, as Blucher did at Waterloo, but definitely coming into action.

In after years these multiplying evidences of the cleansing power of public opinion convinced the lone conciliator throughout his outstanding career as a Canadian political leader and elder statesman of the value of this incalculable asset in applying democratic techniques to problems of human welfare. (Witness his recent insistence on the setting up of the Parliamentary Committee on Prices.)

“Back-room” Diplomacy

With this stimuli and his own formula, King went to work again on the “Back-room boys”.

Soon he had them considering the minimum basis of settlement even from their own respective views. These he quickly presented to the opposing group. For three days, and at all hours, he stalked the rival headquarters as the emissary of reason and the conscience of the Canadian public. Tactfully, and in impeccable good faith, he whittled down all demands and counter proposals to something like a common denominator.

The major point at issue revolved about the question of full recognition of the mine workers' union and the concession of the check-off. It was the then familiar story—which still has a faintly reminiscent ring—of a Company who would meet only its own employees or a committee of them, and of employees equally determined to meet the Company through representatives of the Union, some of whom were not in the employ of the Company.

A complicating factor was the absence, at considerable distance from the scene, of the managing director of the company and the reluctance of the workers (in the last stages of the dispute) to accept settlement without consultation with the International president of the Union at Indianapolis.

Then, there were shades of interpretation to reduce to terms that meant the same thing to both parties.

Finally the young conciliator wrote the clauses concerning union recognition. His clear-cut presentation, impartiality, and his insistence on a speedy settlement in the face of an imminent death toll for the guilt of which the Canadian public would be the judge—turned the tide and brought about a resumption of work and coal production.

Even in the final stages, the miners were dubious about a matter of union protocol—whether International headquarters in Indianapolis would accept the new clauses pertaining to union security. Harassed by all the other considerations in the snarled case, King now had to decide whether he should remain on the scene or go to Indianapolis with a committee of miners.

Misunderstanding, either at Lethbridge or Indianapolis, could still bog down the negotiations he had almost brought to fruition. His immediate presence and counsel were required at all points of contact. In his own mind he was uneasy as to storms delaying communications and he was tortured by the approaching spectre of tragedy in all those prairie homesteads. Balancing all the factors, he boarded the first train for Indianapolis. He had no sooner arrived when he received the

managing director's acceptance of his formula. King showed it to the miners' committee, who also approved. The strike was over.

Disaster Averted

Production was immediately stepped up to meet the emergency and Western Canada was saved. It was the young deputy, who, more than any other human agency, had averted disaster in the West.

But it all need not have happened. That was the irrefutable fact that impressed itself upon him. Back at his desk in Ottawa he wrote the motif of his conviction in the *LABOUR GAZETTE*:

When it is remembered that organized society alone makes possible the operation of mines to the mutual benefit of those engaged in the work of production, a recognition of the obligations due society by the parties is something which the State is justified in compelling if the parties themselves are unwilling to concede it.

In any civilized community private rights should cease when they become public wrongs. Clearly, there is nothing in the rights of parties to a dispute to justify the inhabitants of a province being brought face to face with a fuel famine amid winter conditions, so long as there is coal in the ground, and men and capital at hand to mine it. Either the disputants must be prepared to leave the differences which they are unable to amicably settle to the arbitrament of such authority as the State may determine most expedient, or make way for others who are prepared to do so.

Sir Wilfrid summoned him to offer congratulations. King offered suggestions for the machinery of compulsory investigation.

"Well, then, draft such a law", said Laurier.

Formula for Industrial Peace

By this time the Christmas season was in full swing in the social life of the Capital in that nostalgic interlude before two world wars had put its blight on the hopes of mankind. But for young Deputy Minister King there could be no skating parties at Rideau Hall. By day he worked upon the problems of his Department, but by night he concentrated on spelling out his new formula and writing it into a code of industrial relations.

Here was his chance, born out of the social-economic conflicts of the new and strident machine age, to do something for the "little people" who must serve it. He realized that the machine could be a Juggernaut, crushing the lives and hopes of those who worked in factory, mill, mine or railway; or it could be a factor in achieving a standard of living, coupled with production, far beyond anything yet attained.

He drew upon the experiences of New Zealand and Australia, but he went farther in the development of a national social consciousness by legislative enactment.

Setting a Pattern

The result was the adoption by the Canadian Parliament in 1907 of the Industrial Disputes Investigation Act. In it he did not take away from Labour any right—not even the right to strike. And he gained for Labour a right which it never had—the right of investigation, at public expense, and with the full light of publicity, into any deleterious situation likely to develop into a strike or lockout.

The only compulsory feature was to place in abeyance, by law, the right to strike or lockout (and this affected employers as well) until the dispute had been the subject of investigation and conciliation.

It was the first legislation to impose what is popularly known as "the cooling-off" period. The main principles of the Act have since been incorporated in the laws of several countries. The Transvaal (now a part of the Union of South Africa) saw its merit in 1909, and Norway adopted it in 1915. Its major principles were written also into the United States Railway Labour Disputes Act, 1926.

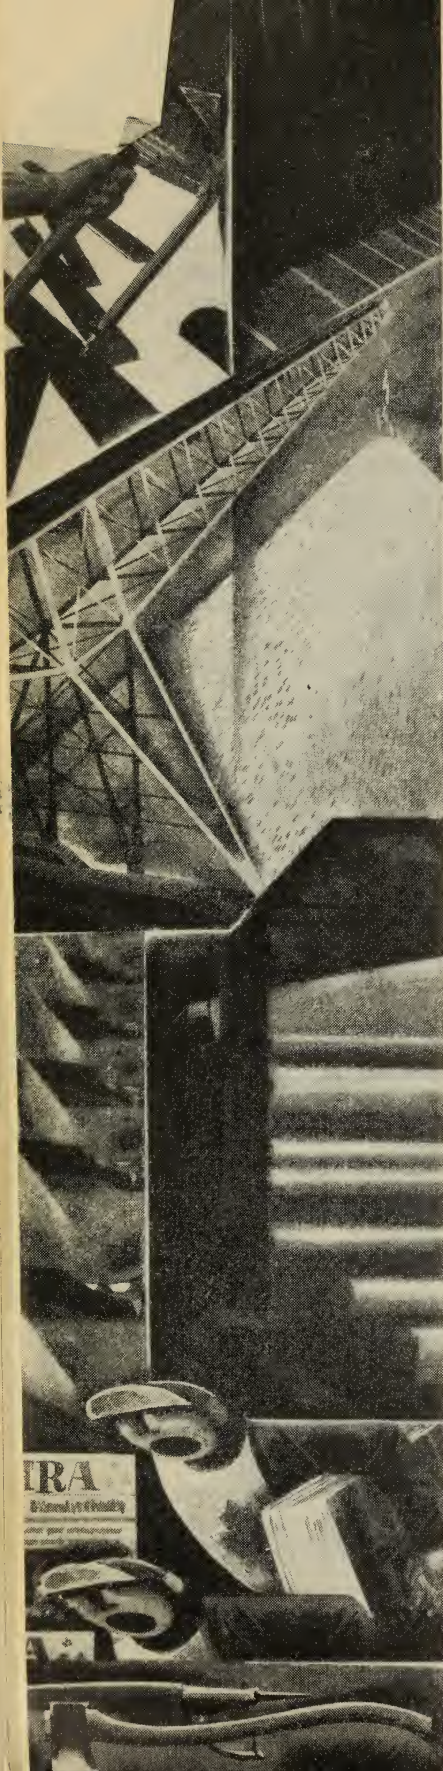

It immediately set a pattern in industrial relations and changed the entire concept of the traditional conflict role of employer versus employee to an insistence upon the recognition by the belligerents of the rights of the community, hitherto ground between the upper and the nether millstones of management and labour.

It did more than that. Throughout its history the Industrial Disputes Investigation Act has been applied, as was intended, to disputes involving conditions of work of all kinds and to disputes

concerning union questions (including demands for union recognition). From it stemmed, in broadening circles, the logical development of discussions and settlements that impinged directly upon questions of union recognition and collective bargaining.

The practical results of the Industrial Disputes Investigation Act were apparent almost immediately. The long record of industrial disputes settled in this country without recourse to strike or lockout is irrefutable evidence of its efficacy. What it has saved to Labour, to the employers and to the community is something beyond computation.

Its principles have been amplified in the present Industrial Relations and Disputes Investigation Act. While the new measure is stream-lined to include such features as compulsory collective bargaining, certification of bargaining representatives, compulsory arbitration of misinterpretations of violations of existing agreements, maintenance of the status quo in terms of employment during reference to conciliation—the machinery is geared to the motive power provided in the original formula drafted by a young man of vision 43 years ago.

CONCILIATION LAW AND PRACTICE IN CANADA

by Ronald Hooper

*Industrial Relations Officer,
Department of Labour*

Federal legislation designed to prevent or settle labour disputes stems from the founding of the Labour Department, half a century ago. The following article describes the incidents that have led to changes in the conciliation system in response to the needs of labour, management, and the general public.

Ever since Jacob went to work for his Uncle Laban and after seven years of toil received the wrong wife in payment there have been disputes of one kind or another between employers of labour and those who work for them. Jacob, it will be recalled, protested bitterly against the injustice done him, but his employer-uncle was a law unto himself and so Jacob had to make the best of it.

It seems strange in these fast-moving days to realize how many centuries were to elapse before any intelligent action was taken to prevent or to bring about a just settlement of industrial disputes. Britain took the lead in the early part of the nineteenth century when the ancient prohibition against concerted action on the part of British workmen to better their conditions was removed. The early and mid-Victorian eras of industrial England have been justly called the Dark Ages of Industry, but the industrial victims of that day did not suffer in vain. The public conscience of Britain was roused, and the need for some humanizing influence or force to control the actions of employers in their relations with their workers began to emerge. This led to a more tolerant attitude by Parliament towards the formation of trade unions, and the first legislative enactments in history designed to prevent and settle labour disputes soon followed.

In due time Canada followed Britain's lead. Statutory provision of machinery for the settlement of labour disputes was first made by the provinces of Ontario, Nova Scotia, British Columbia and Quebec. Ontario took the lead in 1873 when it passed an act which provided for local boards of con-

ciliation to be set up on agreement between employers and workers. It is notable that the act restricted the scope of the boards to disputes not involving any question of wages. It was considered an unjustifiable interference with the freedom of contract to allow any outside agency to deal with wages. It is not surprising therefore that the Ontario act became a dead-letter long before it was repealed in 1911. Except for a compulsory arbitration law passed in Nova Scotia in 1888, all the earlier acts had few compulsory features. They provided generally for voluntary conciliation and, if the parties agreed, for arbitration. Like the Ontario act they too were later repealed.

The Dominion entered the field in 1900 when the Conciliation Act was passed. This Act, besides making provision for the establishment of a labour ministry, had for its object the prevention and settlement of labour disputes by some form of voluntary conciliation. The Act was a permissive measure merely; it contemplated the active friendly intervention by the newly-created Department of Labour, under certain circumstances, in the adjustment of disputes, and the extension of the principle of conciliation and arbitration through voluntary action by the parties themselves.

The inspiration and the driving force behind this important piece of legislation was a young man, W. L. Mackenzie King, who, when the labour ministry was set up under the Honourable William Mulock, was appointed to be its first Deputy Minister.

The first settlement under the new Conciliation Act came within a few weeks, when a strike took

place of the mill operators of a cotton company at Valleyfield, Que. There had been a strike among certain labourers employed in some excavation work on the company's premises, and troops had been brought from Montreal to quiet disturbances said to have been created by these strikers. On arrival of the troops the company's mill operators also went on strike in resentment over this method of dealing with fellow-workers. They objected to troops being brought to the mills for the purpose, as they claimed, of intimidating the labourers. The good offices of the Labour Department were then asked for and the Deputy Minister, Mr. King, went to Valleyfield. One day later, after several interviews with both parties, a settlement was arranged on the understanding that the troops should be immediately withdrawn and all the men returned to work, no discrimination to be made against employees merely because of their having taken part in the strike.

In 1904 a serious strike of nearly 2,000 employees of the Dominion Iron and Steel Company took place at Sydney, N.S. At the urgent request of the Sydney Board of Trade, the Minister of Labour offered the services of the Department if the disputing parties were willing to accept them. The company's attitude toward government intervention was non-committal; but the workers' leaders left no doubt as to their wishes. They replied to the Minister as follows: "We prefer to be left to settle this dispute ourselves in our own way. Thanks for kind offer." Further efforts were then made by the Sydney Board of Trade but without avail, and the situation became further complicated by the bringing in of troops for the alleged

purpose of preventing violence and rioting. Correspondence between the workers and the Labour Department then followed over a period of two weeks with the result that the workers decided to accept the friendly offices of the Government. Mr. King went to Sydney and three days later a settlement was reached and the strike brought to an end. However another dispute developed, this time a minor one between municipal authorities and the militia department over who should pay for the transportation and feeding of the troops.

The year 1906 was marked by several serious industrial disturbances, a fact which led a year later to the passing of new legislation better designed to cope with such situations. There was, for instance, a strike of sawmill hands at Buckingham, Que., and strikes of street railway employees at Hamilton, Ont., and Winnipeg, Man. In neither of these cases was the intervention of the Department of Labour sought, and in all cases troops had to be brought in to preserve order. At Buckingham, a serious riot occurred in which two strikers were shot and several others seriously injured, while one detective was killed and several others badly hurt. It is fitting to mention that intervention of the Labour Department at Buckingham, though offered at the outset upon the request of the workers, was not permitted by the employing company. Had such intervention been allowed it is not improbable that such deplorable incidents would not have happened.

The year 1906 demonstrated that there are two aspects in which a labour dispute presents itself to the general public; first, that in

which the average citizen is only remotely concerned; second, that in which he is personally affected. A strike in a cotton mill or shoe factory, for instance, affects the printer, plumber or professional man only in so far as it may serve to depress commercial conditions in a particular area; while on the other hand, a street railway strike or a coal miners' strike causes personal inconvenience and annoyance to the population of a whole city or even province, and may cause actual suffering to many who are not even remotely connected with the disturbance.

A strike of several months' duration in the Alberta coal fields in 1906, resulting in a coal shortage of disastrous proportions to those who had to face the rigours of a Prairie winter, brought to the front the fact that the Canadian public was entitled under such circumstances to exercise a degree of legislative pressure, if not to compel the settlement of industrial disputes, at least to ensure that the dispute is fully investigated by some properly constituted authority before a strike is resorted to which might cause widespread commercial havoc and human distress.

In the Alberta coal dispute the consent of the parties to government intervention was not secured, but, nevertheless, at the urgent request of the Premier of Saskatchewan, who was gravely concerned about dwindling coal supplies in his province, Mr. King went to the scene of the trouble and successfully mediated the nine-months' strike. In his subsequent report to the government Mr. King gave expression to a life-long social philosophy in these words: "In any civilized community private rights should cease

when they become public wrongs." He followed this up by recommendations for new legislation, recommendations which were soon to form the basis of the well-known Industrial Disputes Investigation Act which was passed in 1907. This important Act will be discussed in some detail later.

It should here be pointed out that in practically every dispute dealt with under the Conciliation Act between 1900 and 1906, and certainly in all the more important disputes, strikes had actually been in progress for some time before the intervention of the Labour Department was sought. This added to the difficulties of the Department's conciliator, Mr. King, in bringing about settlements. His success, therefore, in the many cases with which he had to deal is in itself the best tribute possible both to his wisdom and his patience.

The Conciliation and Labour Act, 1906

Even before the happenings in 1906 it had become apparent that an effective statute for the prevention and settlement of industrial disputes was not to be born all complete like Minerva springing fully armed from the brain of Jupiter. Experience had shown that a purely voluntary form of conciliation was hardly adequate to a rapidly growing industrial country like Canada. A protracted strike on the Canadian Pacific Railway in 1902 led to the introduction in Parliament of a bill known as the Railway Arbitration Bill, a compulsory arbitration measure limited in its application to disputes between the railways and their employees. As the principle of compulsory arbitration

was a new one in this country, the Minister of Labour was careful to explain to Parliament and the country that the introduction of the bill was mainly for the purpose of calling forth expressions of opinion which might be a guide to further legislation. The railway companies and railway labour organizations were especially canvassed for their opinions. Few acknowledgements were received from the railway companies, but many replies came from the labour organizations of the country, especially from the local bodies of several railway brotherhoods. While some of the labour organizations endorsed the principle of compulsory arbitration contained in the Bill and some even advocated its extension to industries generally, most of the organizations strongly opposed its introduction. The daily press took an interest in the matter. While most newspapers were not opposed in principle to the compulsory feature they nevertheless saw practical difficulties in the way of enforcement of awards and penalties, and most of them supported an alternative method better suited to the end in view, which method came to be described as "compulsory investigation".

Guided both by experience and public opinion the Minister of Labour in 1903 introduced a bill which substituted for compulsory arbitration, with its coercive penalties, the principle of compulsory investigation of railway disputes whereby a public inquiry might be made under oath as to the causes of such disputes. Such investigations, he stated, would lead to an informed public opinion upon matters of vital concern to the public itself. This new measure was duly passed by Parliament

under the name of the Railway Labour Disputes Act.

It was believed by proponents of the new law that its mere existence would of itself be a means of averting future strikes and lock-outs. This hope appears to have been borne out from the fact that during the next three years there was not a single strike on any of the railroads of such nature as to affect transportation.

Only one dispute had been referred for adjustment under this statute when in 1906 the Railway Labour Disputes Act of 1903 was consolidated with the Conciliation Act of 1900 under the name of the Conciliation and Labour Act, 1906. This Act is still in force and will be referred to later in this article.

The Industrial Disputes Investigation Act, 1907

The Alberta coal miners' strike, which had continued for nine months before outside conciliation was attempted, amply demonstrated the need for legislation which would ensure investigation of a dispute before a strike took place. It was to meet such situations, particularly in the case of public utilities, that the Industrial Disputes Investigation Act was passed in 1907. Mr. King, as is well known, not only conceived the principles upon which the Act was passed but also was the driving force in bringing it into being. The basic principles of this Act were: (a) compulsory investigation by a government-appointed conciliation board, (b) reliance upon informed public opinion to bring reason to parties to industrial disputes, and (c) the prohibition of work stoppages pending investigation. The main provisions of the Act applied to mines, trans-

port and communication agencies and to gas, electrical, water and power works, where ten or more persons were employed. This machinery could be applied however to any dispute in other industries if both parties to the dispute consented.

Obviously, the public interest, no less than the interest of employers and employed, lay in the settlement of such disputes in their initial stages and before they had assumed so serious a form as a strike or lockout. The Act, therefore, required that any dispute in the class of industries named should be submitted to a Board of Conciliation and Investigation with a view to arriving at a settlement before a work stoppage could be legally brought about. This, of course, amounted to compulsory investigation, during which the parties in dispute would be brought face to face before a three-man board, representative of the employers, the workers and the public, where the points at issue could be thoroughly thrashed out. If such a procedure did not bring about a settlement, either party was then free to call a strike or lockout.

An important provision of the I.D.I. Act, as it was generally called, was one requiring employers and employees coming within its scope to give at least thirty days' notice of any intended changes in wages, hours or working conditions. Equally important was the provision that pending proceedings before a Board of Conciliation the relation to each other of the parties of the dispute should remain unchanged. A special provision allowed for the bringing under the Act by agreement of disputes in industries other than public utilities.

To avoid any suggestion of police power the I.D.I. Act did not provide that the Labour Department or any other government department should institute proceedings when provisions of the Act appeared to have been infringed. It was left to any individual concerned to lay information necessary to such proceedings, as in the case of other infringements of the law where the procedure for enforcement penalties was that prescribed by the Criminal Code.

Within a year of the enactment of the I.D.I. Act, Mr. Mackenzie King was taken into Sir Wilfrid Laurier's government as Minister of Labour, and Mr. F. A. Acland was appointed as his deputy.

It is of interest to note that six months after the Act came into operation, the Trades and Labour Congress at its annual convention passed a resolution declaring by a large majority in favour of its extension automatically to all industries. The Canadian Federation of Labour sent a deputation to the Minister of Labour urging the same thing; while the Builders' Exchange, representing employing builders in Ontario and Quebec, on several occasions urged the immediate extension of the Act to the building trade. The Department, however, thought it best to delay action until the public better understood the principles and general nature of the Act. It should be added that subsequent Trades and Labour Congress conventions were much more critical of the statute, even going so far as to demand its repeal. However, as the efforts of the Department to administer the law fairly and impartially became evident, organized labour acquired some confidence in the honest intentions of

the law and the gentlemen who had placed it on the statute book, and in 1919 the Trades and Labour Congress requested the government to extend the Act to employees of public-owned utilities, including civic employees. The Congress convention of 1920 went further and asked that the Act be extended to all industries upon application of either organized labour, an employer or a municipality, but at the same time it asked that the compulsory clause restraining the right to strike pending decision of a board be eliminated so "as to preserve full liberty of workers and employers during sittings of the board."

During the early years of the I.D.I. Act, as might be expected, the great majority of cases to be referred to boards of conciliation had to do with union recognition not with wages, hours or conditions of work. Mr. Acland has pointed out that such disputes were peculiarly difficult of adjustment as agreement could be reached only on the abandonment on one side or the other of the matter of contention, there being little ground for a common point of view.

There were no features of special importance in connection with the Industrial Disputes Investigation Act until World War I. In 1915 an Order in Council was passed applying the Act to all industries having to do with material needed for the war. There can be no doubt whatever that this action contributed greatly to the success of Canada's effort in that war. A new section was added in 1918 providing that when a strike or lockout had occurred and it seemed in the public interest to do so the Minister of Labour might set up a board of conciliation on his own

motion without any application from either party to the dispute. In 1920, following the historical general strike in Winnipeg in the previous year, a further clause was added giving the Minister the same power even though a strike or lockout had not actually occurred. By this time, of course, the staff of the Labour Department included several experienced conciliation officers.

The validity of the last clause was challenged in 1923 by the Toronto Electrical Commissioners. A dispute between the utility and its employees appeared to be leading to a strike, and to avert this the then Minister of Labour, The Honourable James Murdock, proceeded to establish a conciliation board under authority of the new clause. The Commissioners forthwith applied for an injunction on the grounds that the I.D.I. Act did not, under federal jurisdiction, apply to municipal employees, and disputing the validity of the statute. The case proceeded through the Canadian courts and ultimately reached the Privy Council in England. The Privy Council supported the decision taken by the Toronto Electrical Commissioners and pronounced the measure to be beyond the competence of the federal authority. The principle of the Act was not impugned, but only the right of Parliament to legislate in fields which the Privy Council declared to belong under the British North America Act to the provincial legislatures.

It is a common human characteristic not to appreciate a good thing until one is deprived of it. This disallowance of the I.D.I. Act was received with much regret even in quarters that had previously been most critical of it. However, at the next session of

Parliament the Act was amended to restrict it, in the first instance, to disputes within its scope having to do with works within federal jurisdiction, and, in the second, to enable its application to disputes within its scope which are within the jurisdiction of any province on enactment by the provincial legislature of a statute declaring the Act to apply. It must have been

that such works within provincial jurisdiction might receive the benefit of its provisions. Some years later, however, the provinces of Alberta and British Columbia repealed their enabling acts and passed similar provincial laws of their own.

* * *

Shortly after the outbreak of World War II in 1939 the scope of

very gratifying to Mr. Mackenzie King, its author, and to those who had been administering the I.D.I. Act for some eighteen years to observe that all the provinces of Canada except Prince Edward Island soon filled the vacuum the Privy Council's ruling had created by enacting enabling legislation so

During World War II the Canadian Labour Department assumed responsibility for the conciliation of disputes in all industries connected with the war effort. Shown above are Mr. Arthur MacNamara, Deputy Minister of Labour, Hon. Humphrey Mitchell, Minister of Labour, and Mr. M. M. Maclean, Director of Industrial Relations.

the I.D.I. Act was extended, as, during the first world war, to cover disputes between all employers and workers engaged in war work. This resulted in a great expansion of proceedings under the statute and the appointment of many boards of conciliation and investigation. For the guidance of these boards the government in December 1940 set forth its wartime wages policy in Order-in-Council P.C. 7440. As an integral part of the economic control in Canada's war effort the policy provided that, except in certain special circumstances, the highest wage rates paid between 1926 and 1940 should be regarded as fair and reasonable, and that they might be restored when necessary, and maintained, but not increased. At the same time, in order to safeguard workers against increases in the cost of basic necessities, such wage rates could be supplemented by the payment of wartime cost of living bonuses.

Much thought was given by the government to the best means of ensuring the co-operation of organized labour in the war effort. Such co-operation was being freely offered by the principal labour leaders but, feeling their efforts to co-operate were being frustrated by certain employers, they asked the government for some expression of principle that would enhance the status of labour and obtain from employers generally recognition of the right to organize and bargain collectively. In June 1940 Order in Council P.C. 2685 was passed setting forth a set of principles which, in the words of the Prime Minister, The Right Honourable Mackenzie King, should govern all industrial relations in wartime "as an obligation that should be lived up to by

all parties concerned". The principles were to the effect that war production should be speeded by all possible means; that fair and reasonable standards of wages and working conditions should be maintained; that temporary wartime wage adjustments should be in the form of bonus payments; that there should be no strikes or lockouts but that disputants should seek the assistance of the Labour Department's conciliation service; that employees should be free to organize in trade unions; that employees, through the trade unions, should be free to bargain collectively with their employers; that the terms of collective agreements should be scrupulously observed; that workers should not use coercion to increase union membership; and that suspension of established working conditions and standards for the purpose of increasing war production should be by mutual agreement between labour and management and should be understood as applying only for the war period.

In keeping with the general policy favoured by the Labour Department since its inception there was nothing coercive about this Order in Council, it had moral force only, but it served the war effort well by providing a guide to those employers and employees who were amenable to reason and suggestion. Conciliation officers and conciliation boards repeatedly brought the principles of the Order to the attention of disputants and thereby in many cases secured settlement of disputes.

As the war progressed it was not surprising that causes for industrial conflict should increase. The number of applications for boards of conciliation and the number of strikes steadily grew.

It was then found that procedure under the I.D.I. Act was too deliberate to cope with the number of disputes arising out of war industries working under pressure or to satisfy the growing army of new, inexperienced and impatient workers who were being recruited in large numbers into the ranks of organized labour. It was also found that many of the applications received for boards of conciliation had reference to disputes of a minor nature and should be capable of settlement by simpler means. To meet these new conditions the government provided for the appointment of industrial disputes inquiry commissions, consisting of one or more members, to make preliminary investigations of disputes with a view to promoting settlement, or, failing settlement, an immediate recommendation for the establishment of a board of conciliation. At about this time the Department of Labour was expanded by the appointment of additional conciliation officers and the setting up of an Industrial Relations Branch under Mr. M. M. Maclean as Director of Industrial Relations.

Wartime Labour Relations Regulations, P.C. 1003

In 1943 it became quite evident that changing conditions governing relations not only between employers and employees but also between union and union called for a newer method of treatment. A serious steel strike in that year had led to serious discussion as to the need for compulsory collective bargaining legislation for Canada, such as the Wagner Act which had recently been passed in the United States. Many were thinking along the same lines as

Daniel Webster when he wrote, "Liberty exists in proportion to wholesome restraint". More particularly, he might have added, in wartime.

In order that the government might have the fullest information as to the difficulties to be overcome and the remedies to be applied, the National War Labour Board, composed of twelve members, which had been appointed in 1941 was reconstituted. The new Board was composed of three members, a representative of employers and a representative of employees under the chairmanship of Mr. Justice C. P. McTague. It was given powers of the nature of an industrial court and was expected gradually to build up a jurisprudence to apply to its proceedings. Technical advisers and a national war labour committee were appointed to consult with and advise it.

In accordance with democratic practice the National War Labour Board at once decided to hold a public inquiry into wages and working conditions. Public sittings were held during the summer of 1943, and over 120 submissions were made to the Board by persons representing labour, industry, provincial governments and the public.

The Board presented majority and minority reports to the government in August; and as a good part of the field of labour relations and their effect upon war industry would normally be within provincial jurisdiction, the Federal Government called the Provincial authorities into conference in December under the chairmanship of the Honourable Humphrey Mitchell, Minister of Labour, to study the recommendations which

Above: These three men made up the National War Labour Board's Executive Committee. They are, left to right: J. McClelland, Chairman Hon. Humphrey Mitchell, and George Hodge.

Below: The Hon. Humphrey Mitchell addresses the Wartime Labour Relations Board. Reading from left to right around the table: A. R. Mosher; A. Deschamps; A. J. Hills; W. L. Best; Mr. Mitchell; Justice G. B. O'Connor; Justice J. N. Francoeur; F. Molineux; W. H. Brown; R. Hermegnies. In background, Bernard Wilson, Board Secretary, and M. M. Maclean, Director of Industrial Relations.

the Labour Department had prepared based on the reports. Following this conference and subsequent conferences with representatives of trade unions and employers' organizations, the government in February 1944 passed Order in Council P.C. 1003, known as the Wartime Labour Relations Regulations. This Order largely superseded the I.D.I. Act during the life of the Order itself by substituting for that Act specific regulations to govern labour relations in war industries. These Regulations, however, did not cover disputes having to do with wages, which disputes were taken care of under the Wartime Wages Control Order.

As will shortly be seen, these regulations marked a vast change in government policy in matters of labour relations. They were to be administered, at the national level, by a Wartime Labour Relations Board (National) and, in the case of certain provinces, under Federal-Provincial agreements by provincial boards or administrative agencies agreed upon by the Federal and the Provincial authorities. The National Board was to be composed of an equal number of employer and employee representatives, with a chairman and a vice-chairman who were to be impartial. The Director of Industrial Relations, Department of Labour, was to be its Chief Executive Officer.

Under the Regulations the Federal Government extended its jurisdiction over employer-employee relations which normally were exclusively within the provincial field to the extent necessary to cover war industry, but without attempting to include other industries which had no direct bear-

ing on war production. In so far as these latter industries were concerned, each province was left free to make its own decision as to whether or not it should be brought under the Regulations.

The main provisions of the Wartime Labour Relations Regulations, P.C. 1003, were later incorporated in the Industrial Relations and Disputes Investigation Act passed in 1948 and are discussed under that heading.

For administration purposes the Regulations provided specific and general penalties for non-observance of the provisions of the Regulations; prosecution in the Courts by consent of the Board for violation of the Regulations; the filing of certain information with the Board; and the making of administrative regulations by the Board for the purpose of performing its functions.

Further light on the policy favoured by the Federal Government in the administration of the Regulations is reflected by the bilateral agreements made by the Minister of Labour with the provincial governments of British Columbia, Saskatchewan, Manitoba, Ontario, Quebec, New Brunswick and Nova Scotia. These agreements, in general, provided for the establishment of Provincial Wartime Labour Relations Boards and gave such Boards authority to administer the Regulations with respect to employers and employees in essential war industry, also to industry ordinarily within provincial jurisdiction if the required enabling legislation had been passed. Provision was made for appeals to the National Board against decision of the Provincial Boards. In order that the Federal Minister of Labour should retain full con-

trol when differences between employers and workers had reached the critical stage, to him was reserved the authority to appoint conciliation officers and conciliation boards, although provision was also made for the cooperative use of Federal and Provincial Conciliation Officers. Appointment of the members of Provincial Boards were to be by consultation between the Federal Labour Minister and the Provincial Labour Minister concerned.

The Wartime Labour Relations Regulations served Canada well during the latter war years and the first years of peace. Many serious disputes had been settled under its provisions, but the time came when it would have to be replaced by legislation of a more permanent nature and better adapted to peace conditions. However, the Regulations had set a definite pattern which had been proved sound in principle and it was felt that any new legislation should follow, in so far as consistent with provincial rights, along similar lines.

Steps Leading to New Peacetime Legislation

In June, 1947, the Honourable Humphrey Mitchell, Minister of Labour, introduced into Parliament a Bill to provide for the investigation, conciliation and settlement of industrial disputes. The legislation was designed, of course, to replace the Wartime Labour Relations Regulations, P.C. 1003, then still in force; also to revoke the Industrial Disputes Investigation Act of 1907, which had been in suspension during the lifetime of the Regulations. The Bill was referred by the House of Commons to its Standing Committee on

Industrial Relations. This Committee sat during part of June and July and heard the representations of organized labour, employers, and other interested parties on the provisions of the Bill. The report of the Committee stated that, with prorogation imminent it would be impossible to give the Bill the full consideration its importance required, and recommended that a similar bill be introduced early in the next session of Parliament. Accordingly, the matter was allowed to stand over until the next session to give members of Parliament full opportunity to study carefully the evidence given before the Standing Committee. In April 1948 the Minister of Labour introduced another Bill into the House of Commons the provisions of which were only slightly different from the previous Bill. The new Bill in turn was referred to the Standing Committee on Industrial Relations. In May this Committee reported the Bill to the House with amendments, chief of which were designed to revise the definition of "employee"; to include provision for the revocable check-off of union dues at the written request of an employee; and not to permit lawyers to appear before conciliation boards without having the consent of the parties and the chairmen to do so. During the third reading of the Bill the House deleted the check-off provision which had been inserted by the Standing Committee. It also rejected amendments designed to include engineers within the scope of the Act; restrict lawyers from appearing before conciliation boards; and to make the Canada Labour Relations Board responsible for enforcing the Act. The House also accepted an amendment designed to protect the pension

rights or benefits of employees taking strike action after the requirements of the Act precedent to striking had been met. The new Act, which is entitled the Industrial Relations and Disputes Investigation Act, was proclaimed in August 1948.

It might be interjected here that there was almost a nostalgic feeling among those familiar with Canadian labour legislation over the repeal of the famous old I.D.I. Act which in its day had blazed a new trail in industrial relations. In the troubled field of compulsory investigation particularly, it was the first legislation of its kind in any country to provide a "cooling off" period. It became a model for legislation in other leading industrial countries, and it may be rightly claimed that the United States Railway Labour Act of 1926 is a conscious tribute to the guiding principles of the old Canadian statute.

The Industrial Relations and Disputes Investigation Act 1948

The new Act, which became effective on September 1, 1948, combines in its legislative principles the long-tested cooling-off period, and the investigation and conciliation features of the old I.D.I. Act; also the labour relations, compulsory collective bargaining and limited arbitration provisions of the Wartime Labour Relations Regulations, all of which had been thoroughly tested and proven after four years' trial. A summary of the Act's main features follow.

Administration of the Act—The Minister of Labour is charged with the general administration of the statute. He is responsible

for the appointment of conciliation officers, conciliation boards, industrial inquiry commissions, for dealing with complaints that the Act has been violated or that a party has failed to bargain in good faith, and for controlling consent to prosecute.

Under the Minister the Act establishes the Canada Labour Relations Board as an agency of administration. This Board, like the former Wartime Labour Relations Board, is composed of four employer and four employee representatives, with impartial chairman and vice-chairman. Its Chief Executive Officer is the Director of Industrial Relations for the Labour Department. It should be stated here that the new Board is at present composed of identically the same personnel as the Board which had so successfully administered the Wartime Labour Relations Regulations. The new Board is responsible for those provisions of the Act which concern (1) the certification of trade unions as bargaining agents for appropriate units of employees; (2) the writing of procedures into collective agreements for the final settlement of disputes concerning the interpretation or violation of such agreements; (3) the investigation of complaints made to the Minister that a party has failed to bargain collectively in good faith.

In the course of its functions outlined above, the Canada Labour Relations Board has authority to determine the appropriateness of a unit of employees for collective bargaining; to hold votes of employees to determine if bargaining agents have adequate support of the employees affected; to reject as bargaining agents trade unions which are dominated or influenced

improperly by employers; to revise or revoke decisions, orders or certificates; to issue orders requiring parties to bargain collectively; to determine who is a member in good standing of a trade union, and to determine who is an employee or employer within the meaning of the Act.

Application of the Act.—The Act applies only to industries within federal jurisdiction, i.e., navigation; shipping; interprovincial railways; canals; telegraphs; steamship lines and ferries, both interprovincial and international; air transportation and aerodromes; radio broadcasting stations, and works declared to be for the general advantage of Canada. However, the Act provides that where provincial authorities enact similar legislation to be applied to employers within provincial jurisdiction, these provincial authorities may make mutually satisfactory arrangements for the administration of such legislation by the federal authorities. Similar legislation has since been enacted by the provinces of British Columbia, Manitoba, Ontario, New Brunswick, and Nova Scotia, and is now under consideration in the province of Newfoundland.

Principal Provisions of the Act—In summary, the principal provisions of the Statute concern:

1. The right of employees to be members of trade unions and for employers to be members of employers' organizations.
2. The definition and prohibition of unfair labour practices on the part of employers, unions and other persons.
3. A procedure for certification of trade unions as bargaining agents for employees.
4. A procedure for compulsory collective bargaining and the negotiation of collective agree-

ments, and conciliation in connection therewith.

5. Prohibition of strikes and lock-outs, the taking of strike votes and changes in terms of employment until the collective bargaining and conciliation procedure prescribed in the Act has been complied with.
6. Collective agreements to be binding upon the employer and the trade union who are parties thereto, and the employees covered thereby, and a procedure for final settlement by arbitration or otherwise, without stoppage of work, or grievances arising under the agreement.
7. Prohibition of strikes and lock-outs while a collective agreement is in effect.
8. Penalties for violation of the provisions of the Act by employers, employees or trade unions or employers' organizations.
9. The establishment of a representative labour relations board (the Canada Labour Relations Board) to deal with applications relating to the right of trade unions to represent employees for collective bargaining.
10. The appointment of Industrial Inquiry Commissions to inquire into industrial matters or disputes.
11. Co-operative arrangements with provinces in relation to the administration of provincial labour legislation similar to the Federal legislation in the application thereof to any industry.

Conciliation Functions of the Industrial Relations Branch

The conciliation work of the Industrial Relations Branch today stems from two pieces of legisla-

tion, (a) the Industrial Relations and Disputes Investigation Act, 1948, described above and (b) the Conciliation and Labour Act, 1906, referred to earlier in this article.

The Industrial Relations and Disputes Investigation Act provides for conciliation machinery to attempt the settlement of a dispute when negotiations for a collective agreement following the certification of a bargaining agent have been unsuccessful; also when negotiations for the renewal of an existing agreement have been unsuccessful. On the request of either party to such a dispute, or in any other case where he considers it advisable to do so, the Minister of Labour may appoint a Conciliation Officer to confer with the parties and attempt to effect a settlement. If a Conciliation Officer reports failure to bring about a settlement, the Minister may appoint a Board of Conciliation and Investigation. The Act also provides that the Minister may appoint a Conciliation Board without prior reference to a Conciliation Officer, but the normal practice is to appoint a Conciliation Officer in the first instance.

A Conciliation Board is set up in the same manner as under the old I.D.I. Act. It is composed of three members who are nominated, one each for the two parties to the dispute and the third (the chairman) by agreement between the other two or, failing agreement, by the Minister. Conciliation Officers may also be required under the Act to investigate and report to the Minister in connection with any written complaints made by a person claiming to be aggrieved because of any alleged violation of the Act.

The Conciliation and Labour Act provides for conciliation of a more informal or general nature. It is a permissive piece of legislation. Its fundamental provision, authorizing the Minister to place the service of a Conciliation Officer at the disposal of parties to a dispute, has been of great value in the early stages of industrial conflicts. There is no instance in which the old adage, a stitch in time saves nine, applies more forcibly than in industrial disputes. The experience of a departmental officer applied at the right time may be of the highest value in bringing about a settlement. Many a point in a dispute which has perplexed employers and workers alike has been solved by the appearance at an opportune moment of an officer of the Department who has frequently encountered the same or a similar situation in other disputes and found a solution.

The Act also provides that, upon the application of both parties to a dispute, the Minister may appoint an Arbitrator or an Arbitration Board. Special provisions applying to the Crown as well as private companies relate to disputes affecting railways and their employees, authorizing the Minister to establish committees of conciliation, mediation and investigation; and in cases where these committees are unable to effect a settlement the Minister may refer the dispute to arbitration. In practice, however, the function of the Act relating to railway disputes is now more adequately performed under the Industrial Relations and Disputes Investigation Act.

The jurisdiction of the Conciliation and Labour Act is not definitely limited, but normally federal intervention is restricted to industries over which the Federal Government has constitutional authority. In industries which are clearly within provincial jurisdiction, conciliation or arbitration services are provided by the Industrial Relations Branch only upon the joint request of the parties to a dispute, and upon the expressed request or consent

of the provincial authorities concerned.

It is chiefly for the purpose of administering the conciliation legislation outlined above that the Department of Labour maintains its Industrial Relations Branch. The Director and staff are located at Ottawa with other Industrial Relations Officers stationed at Vancouver, Winnipeg, Toronto, Montreal, Fredericton and St. John's.

“... That Habits of Thrift be Promoted”

Canadian Government Annuities were originally introduced in 1908. The enabling legislation declared that it was “in the public interest that habits of thrift be promoted and that the people of Canada be encouraged and aided thereto so that provision may be made for old age.”

While Annuities have been available to Canadians for over forty years, a notable increase in their use as a safeguard to security in later life has occurred within comparatively recent years. In 1931, some twenty years after the plan was inaugurated, there were 11,781 annuities in force. In 1950, the corresponding total is 258,679.

In recent years, employers of labour, associations, and societies have been turning in increasing numbers to Government Annuities for pensions for their employees and members. In 1940, there were only four of these group annuities covering 1,240 employees. Today there are 846 group contracts covering 158,959.

Since 1940, premium receipts from annuities have increased from \$19 million to \$63 million. Benefits received by annuitants have also increased greatly. In the fiscal year 1949-50, Canadians received over \$23 million in annuity benefits compared to \$9 million in 1940-41.

Platform of Principles of Trades and Labour Congress of Canada

As originally adopted at Winnipeg Convention, 1898,
and as revised in 1935

1898

1. Free compulsory education.
2. Legal working day of eight hours and six days to a week.
3. Government inspection of all industries.
4. The abolition of the contract system on all public works.
5. A minimum living wage, based on local conditions.
6. Public ownership of all franchises, such as railways, telegraphs, water-works, lighting, etc.
7. Tax reform, by lessening taxation on industry and increasing it on land values.
8. Abolition of the Dominion Senate.
9. Exclusion of Chinese.
10. The Union Label to be placed on all manufactured goods where practicable, and on all government and municipal supplies.
11. Abolition of child labour by children under fourteen years of age; and of female labour in all branches of industrial life, such as mines, workshops, factories, etc.
12. Abolition of property qualification for all public offices.
13. Compulsory arbitration of labour disputes.
14. Proportional representation and the cumulative vote.
15. Prohibition of prison labour in competition with free labour.

1935

1. Free education and compulsory school attendance.
2. Development of technical and vocational education and of apprenticeship systems.
3. Establishment of the six-hour day and the five-day week.
4. Holidays with pay.
5. Enforcement of Fair Wage Act and Regulations (based on established union conditions) on all government work, direct or indirect.
6. National old age pensions and state insurance for sickness and disability.
7. Amendment of the British North America Act and uniform labour laws throughout the Dominion.
8. Public ownership and democratic management of all public utilities and nationalization of banking and credit.
9. Government control and fullest development of all natural resources.
10. Labour representation on all government commissions, boards, etc., appointed to deal with matters affecting workers' interests.
11. Abolition of non-elective legislative bodies.
12. Exclusion of all races that cannot be properly assimilated into the national life of Canada.
13. The demand for, and use of, the union label.
14. Prohibition of employment of children under sixteen years of age.
15. Equal pay for equal work for men and women.
16. Voluntary arbitration of labour disputes.
17. Proportional representation with group constituencies.
18. Encouragement of the establishment of consumers' co-operative societies.
19. Disarmament.

CANADIAN IMMIGRATION PATTERNS AND POLICIES

by J. Culbert Best

Editorial Staff, LABOUR GAZETTE

Some 350 years ago 28 French settlers wintered at Quebec. This began the period of European immigration to Canada. Its dominant pattern has been one of large influxes of people in periods of prosperity, easing off in more difficult times. Since the end of World War II, when a definite Government policy was established, the Department of Labour has played an important role in the selection and placement of large numbers of new Canadian settlers.

The Early Years

The story of Canadian immigration can be traced back almost 350 years to the first 28 French settlers who wintered at Quebec in 1628. This marked the beginning of a French immigration movement, which in the first fifty years of its existence was largely associated with the monopolistic trading companies. Because these people were more interested in trade than in settlement, the original 28 had increased to only 2,400, by 1661.

After 1663, Louis XIV, the King of France, himself became interested in colonization, and soldiers who had been sent to protect the colonies from the Indians were offered land to settle in the country. In addition, a systematic immigration of brides was begun, and this helped to ensure the stability of the Canadian family to such a degree that by 1701, the population numbered 17,000. Many present-day French Canadians can trace their ancestry back to these people.

Most English-speaking Canadians, however, are comparative newcomers to Canada, although the United Empire Loyalists who came to Canada had lived for quite a time in the colonies to the South before coming North. The influx of these people following the American Revolution, served to establish several permanent English-speaking settlements, and British immigration was now to proceed on an important scale.

Interest of British people in immigrating to Canada was also increased following the passing of the Constitutional Act in 1791, which divided Quebec into Upper and Lower Canada. Between 1837 and 1852, 170,677 British

immigrants entered the country. Approximately two-thirds of these people came from Ireland, and the rest from England and Scotland. As a result of this influx of settlers, Upper Canada had become more populous than Lower Canada.

The wave of new settlers continued, and between 1851 and 1861, 216,000 immigrants arrived. The discovery of coal and gold in British Columbia, the development of railways and canals and the opening up of the Northwest stimulated immigration between 1861 and 1891. During this period, immigration amounted to 1,407,000 and it was at this time that many continental European and the first Oriental immigrants came to Canada. During the last decade of the century, immigration fell off appreciably due to commercial depression and other influences, and in fact there was an important movement of Canadians to the United States.

The Twentieth Century

The arrival of the twentieth century was the signal for a new wave of increased immigration which reached its crest in 1913 when over 400,000 new settlers entered Canada. Between 1901 and 1911 close to two million people entered the country. This spectacular immigration period was brought about by the opening up of the prairies and the government's policy of granting free land, on certain conditions, to those who would undertake to live upon it. Another important factor was the almost unlimited opportunity for all types of labour in railroad and other construction work. This great flow of new settlers was interrupted by the First Great

War, and the peak of 1913 has not been approached since.

Following the war, immigration activities were restricted to those who could buy land or were prepared to take farm employment, and to household workers. This selective policy, combined with certain restrictive regulations—which were the natural aftermath of war—and other conditions such as high transportation costs and the depreciation of European currencies, resulted in a relatively small movement of people to Canada.

In 1923, a more intensive immigration policy was adopted, and the Government undertook to encourage the migration of as many as possible of those classes of settlers which Canada could absorb. In April of that year, the Canadian and British Governments concluded the first assisted passage agreement, providing assistance for four main classes of British immigrants.

These four classes were: (a) married agriculturists and

their families; (b) single farm labourers; (c) houseworkers; (d) juvenile immigrants. All assistance was for third class ocean and colonist rail transportation, repayable without interest. This agreement was followed by others in 1924 and 1925; and in 1926, the Empire Settlement Agreement reduced the cost of transportation to adult migrants to a point where the majority could (and did) pay the rate. Other agreements followed in succeeding years, and several of the provinces also participated in these.

The onset of world depression after 1929 necessitated restriction on those classes of immigrants who could enter Canada, and immigration from Europe was suspended except in the case of: (a) practical farmers with enough capital to establish and maintain themselves on farms; and (b) the wives and children under 18 of already established family heads.

No changes were made in the regulations applicable to settlers

Immigrant Arrivals to Canada

1867-1949—By Selected Periods

Period	Number	Average For Period	Period	Number	Average For Period
1867-1868	27,431	13,716	1920-1921	230,552	115,276
1869-1873	157,737	31,547	1922-1926	543,006	108,601
1874-1880	228,274	32,611	1927-1931	622,998	124,600
1881-1886	546,218	91,036	1932-1939	119,708	14,964
1887-1890	339,959	84,990	1940-1945	72,256	12,043
1891-1900	338,998	33,900	1946-1947	135,846	67,923
1901-1913	2,750,061	211,543	1948-1949	220,631	110,315
1914-1919	465,516	77,586	1867-1949	6,799,191	81,917

from the British Isles or the United States, but active encouragement of new settlers from these countries was discontinued. In the period between 1930 and 1939, immigrant arrivals were below 20,000 a year. The outbreak of World War II in 1939 brought even this trickle to a stop and between 1940 and 1944 less than 50,000 people entered Canada as settlers.

Period of Restriction

Immigration to Canada has generally been greatest in "boom" periods with very marked declines during periods of depression. During periods of "boom", there seems to be a tendency for labour and capital to leave the older countries and come to newer areas where rewards are greater as new areas are opened

up, and resources developed. Government policy on immigration has also followed this trend, and it is noticeable that more restrictive interpretations of the regulations have been applied in times of economic stress.

In 1931, Order in Council P.C. 695 prohibited immigration, with the exception of a few classes. Since 1937, however, there have been a series of orders passed which have widened the classes of people admitted to Canada; and following the end of the Second World War, the Regulations were further broadened.

Post-War Policy

Post-war government policy on immigration was laid down in a statement delivered in the House of Commons in May, 1947 by the then Prime Minister the late W. L. Mackenzie King. Mr. King announced the intention of the Government to encourage immigration and to "ensure the careful selection and permanent settlement of such numbers of immigrants as can advantageously be absorbed in our national economy."

Mr. King stated that the limiting factor on immigration at that time was the shortage of adequate transportation and not Canadian legislation or regulations. Because of this transportation difficulty, opportunity to come to Canada was to be given in the first instance to relatives of persons already in Canada, and to displaced persons and refugees. To facilitate the carrying out of this policy the terms of admissibility for persons in the first category were broadened by Order in Council P.C. 1734; and the Immigration Branch and the Department of Labour were to

determine jointly the numbers of refugees who would be admitted.

Because of the limitation on transportation at the time, Canada's new immigration policy was designed to fall into two parts: measures for immediate application, and a long-term program. One of the immediate goals was to bring in people to help relieve the acute labour shortage which existed at that time.

The long-term phase of the program was based on the conviction that Canada could assimilate a larger population. Mr. King stated the Government's attitude as being "strongly of the view that our immigration policy should be devised in a positive sense, with the definite objective . . . of enlarging the population of the country. This it will seek to attain through the development and energetic application of productive immigration measures." To carry out this policy, immigration services, which had been curtailed during the depression and war years, were expanded and developed.

The Department of Labour's Role in Immigration

The Department of Labour's entrance into the immigration field can actually be traced back to the now famous Hyde Park Declaration of 1941. The primary object of the Hyde Park agreement was to aid in the solution of the complex problems created by the exigencies of war on the financial, industrial and production fronts. From this Agreement stemmed plans to use, in most effective fashion, the available farm labour and material

in the two countries. Because of the need to accelerate the movement of seasonal farm help across the international boundary, arrangements were necessary to modify the application of immigration and customs regulations.

In the spring of 1942, therefore, the two governments made formal arrangements for the migratory movement. These arrangements were renewed annually through 1943, 1944, 1945 and 1946, with a further renewal for the crop year of 1947.

In putting these formal arrangements into effect, it was necessary to draw upon the co-operation of the Departments in both countries. In Canada, the co-ordinating agency was the Agriculture, Forestry and Fisheries Division of the Department of Labour. In the United States the work was centred in the federal Department of Agriculture.

The program of moving migratory workers was soon expanded to include other categories of greatly needed seasonal labour. Informal arrangements have been continued each year between the two governments to carry out this program, making it possible for potato and apple pickers, woods workers, tobacco workers, maple sugar workers and food processing workers to move back and forth across the border. The U.S. Department of Labour, and the Canadian Department of Labour are responsible for the active administration of the agreement. This movement has continued since reaching its peak in 1947 on a somewhat reduced scale.

Polish Veterans

In the strictest sense, the U.S.-Canadian farm labour plan

was not one of immigration since no permanent settlements were involved. The Department of Labour's initiation into immigration proper came with the movement of 4,500 Polish veterans, former members of General Anders' Army, who were brought to Canada for employment in agriculture. These men came in two groups: the first (about 2,900 men) arrived in Canada from Italy in November of 1946; and the second in May and June of 1947. The arrangements with the British Government concerning this movement were worked out almost entirely by the Department of Labour.

It was natural that the Department of Labour was called in at this time to play an active role in immigration. The National Employment Service, possessing facilities for the orderly placement of immigrants, provided an established placement agency, which had not existed in any earlier period of immigration. The NES was able to provide up-to-date information on employment conditions and trends in all parts of Canada. This information made it possible to plan for selective immigration in keeping with the country's absorptive capacity.

Selection teams made up of representatives of the Department of Justice, National Health and Welfare, and Labour were sent to Europe to screen the Polish veterans for purposes of health, security and suitability for employment in agriculture.

The Department of Labour, working in conjunction with provincial departments of agriculture through the Dominion-Provincial Farm Labour Com-

The first 2,900 men from General Anders' Polish Army arrived in Canada from Italy in November, 1946. The Department of Labour, working in conjunction with other federal and provincial agencies, found suitable farm placements for all these men at prevailing wages and conditions of employment.

mittees, had found suitable farm placements for all these men at prevailing wages and conditions of employment. On arrival in Canada the men were placed by local NES officers. According to a pre-arranged agreement, all of these veterans signed an undertaking to remain in agricultural employment for a period of two years from the time of arrival. However, Canadian farmers preferred that the contract between the Polish veterans and themselves should be for a period of one year, subject to renewal for a further 12 months if the arrangement was satisfactory to both parties.

The success of the plan was confirmed by Dr. A. MacNamara, Deputy Minister of Labour in December, 1948, when he said: "We are satisfied that the plan as a whole has been an outstanding success and that the

Polish veterans generally wish to fully honour the undertaking given by them."

Displaced Persons

With the announcement of the Government's policy of clearing the way for European Displaced Persons to enter Canada, the Department of Labour was called in to assist in the selection and placement of these people. The pattern of placement arrangements which had been established for the movement of Polish veterans was also utilized for the new and larger movement.

The Orders in Council which were passed authorizing the admission of displaced persons directed the Minister of Labour to assist the Minister of Mines and Resources in the selection and transportation of these people to Canada. The Orders also provided that arrangements were to

New Canadian settlers, from displaced persons camps, affix identification tags at seaboard prior to leaving for their new homes in Canada. Each worker has signed an undertaking to the Minister of Labour, agreeing to accept employment in the industry for which he has been selected, and to remain in it for at least one year.

be made for the reception of the displaced persons at a port of entry and for their distribution throughout the country.

In March, 1947, the Immigration-Labour Committee was established to advise on group immigration of displaced persons and other selected group immigration projects. The Committee consists of representatives of the Departments of Citizenship and Immigration, Labour, External Affairs, Health and Welfare, the Unemployment Insurance Commission (National Employment Service) and the International Refugee Organization. The Committee's work centres on the establishment of tentative quotas covering the occupational groups to be admitted. These quotas are determined by labour requirements in particular industries and occupations. Employers in industries where labour is required are invited to submit applications to the Committee, which carefully screens them and makes its recommendation. Employers must undertake to provide employment for a period of one year at rates of wages and under the same working conditions as Canadian workers in similar occupations in the district.

Selection Procedure Overseas

The selection of workers overseas is carried out by interviewing teams composed of representatives of the interested Departments, and, where special skills are concerned, representatives of the industry. In the case of domestic workers, women representatives of the Department

of Labour and the Immigration Department are members of the interviewing teams. The first step in the selection procedure following receipt of an application for displaced persons is for the International Refugee Organization to carry out a preliminary screening on an occupational basis. The IRO selects about two or three times as many people as required for final screening by the Canadian interviewing teams.

Department of Labour representatives are responsible for the first screening of the prospective candidates presented by the IRO. The people selected by Labour Department officers are then screened by medical, security, and immigration officers. Each displaced person passed by the interviewing team is required to sign an undertaking to the Minister of Labour that he will accept employment in the industry for which he has been selected and remain in it for at least one year. General conditions of employment are also set forth in this document for the information of the displaced person.

The Department of Labour has established an office in London to help in meeting the demand of employers for workers from the United Kingdom, and also to assist residents of the U.K. wishing to come to Canada. This office acts as a liaison between the Canadian National Employment Service and the British Ministry of Labour and National Service. The London office also advises interested British citizens on possibilities of employment in various industries, occupations and localities.

Transportation and Reception of Immigrant Workers

The International Refugee Organization provides and pays for the ocean transportation of displaced persons. The Department of Labour provides transportation from the port of entry for those of them who are domestic and farm workers. The costs of inland transportation for other displaced persons are advanced by the employer, who assumes the cost if the worker remains in the employment for a one-year period. Immigrant workers other than displaced persons are required to pay their own transportation costs.

The new immigrants are met at the port of entry by representatives of the Department of Labour who see that they are dispatched to their destinations. Displaced persons going to industrial employment are usually sent direct from seaboard. The Department also maintains two well equipped hostels for the reception of new workers. They are used chiefly to accommodate female domestic workers and family units which are assigned to individual employers from the hostels.

The Department's interest in these new Canadians does not end with their placement, but a follow-up is maintained, and employers are visited periodically by departmental representatives. The assistance of many church and service organizations has been received, especially in the case of female domestic workers. In addition to this help community committees have also been established in practically all areas where domestic

help has been placed, and these committees help to deal with the problems of the female workers.

Medical assistance, covering immigrants brought to Canada under the group movement plan has also been provided. Indigent immigrants who become ill during their first year of residence receive assistance.

Arrangements have also been made to facilitate the approval of applications by displaced persons who are heads of families to have their families join them. Under the terms of these arrangements, the necessity of individual investigation has been obviated, and many displaced persons have been united with their families.

Since the movement began in 1947 to the end of September 1949, a total of 84,651 displaced persons have entered Canada. These people represent many different trades and skills, and are to be found working in all sectors of the economy. Many have undertaken agricultural work, and others are working in lumbering, textiles, mining, the garment industry, construction, domestic employment, and other fields. Some have possessed skills new or undeveloped in Canada, and as a result, the country has benefited.

The admission of these new Canadians has achieved a two-fold purpose. A demand for much needed help in certain fields has been partially satisfied, and new life, new opportunities and restored hope have been granted to many thousands of people, who were the victims of circumstances over which they had no control.

In addition to the Movement of Displaced Persons from Europe who have come to Canada, there

has also been a highly successful movement of Dutch agriculturists to Canada. This movement started in 1947, following an agreement between the Netherland and Canadian Governments, and by the end of September, 1949, some 16,000 members of Dutch farm families had been settled in Canada. The ultimate objective of these people is to own farms in this country, and many have settled permanently on farms on an ownership, rental or crop-sharing basis. The majority of these immigrants have settled in Ontario, but a considerable number have gone to Quebec, the Prairies and Western Canada.

The federal Government, and the Government of Ontario have also co-operated in arranging for the transportation and employment of persons from the United Kingdom who desire to come to Canada. The Ontario Government has arranged transportation for these people, and the National Employment Service has undertaken the task of finding jobs for the immigrants.

Both of the movements described above differ from the Displaced

Persons Movement in that these people have some capital with which to help establish themselves in this country, and they have migrated to Canada for reasons different from those of the displaced persons.

The future pattern of immigration to Canada will depend in large measure on our ability to maintain present economic levels, and to develop our resources. An immigration program to be successful must be geared to the absorptive capacity of the country. A well planned immigration program can prove of benefit to the country. The late Mr. Mackenzie King, speaking in the House of Commons, emphasized this, when he said: "A larger population will help to develop our resources. By providing a larger number of consumers, in other words a larger domestic market, it will reduce the present dependence of Canada on the export of primary products. The essential thing is that immigrants be selected with care, and that their numbers be adjusted to the absorptive capacity of the country."

Towards Greater Uniformity

As a step towards securing a greater measure of uniformity in labour laws and improving administrative standards and enforcement, the Canadian Association of Administrators of Labour Legislation was organized in 1938.

The members of the Association, which includes officers of the Federal Department of Labour and of provincial departments, boards, and commissions administering any labour law, meet annually to exchange information on such subjects as minimum wages, hours of work, accident prevention, labour inspection, labour statistics, employment of women and children, apprenticeship, industrial relations, Canada and the ILO, etc. The last conference, the ninth, in Montreal on May 29-31, 1950, was attended by 44 representatives of nine provinces and 11 representatives of the Federal Department.

Tenth ACCL Becomes First CCL

At a meeting described in the *LABOUR GAZETTE* for October, 1940, as the "tenth regular Convention of the All-Canadian Congress of Labour," the Congress broadened its scope to include unions affiliated with the Canadian Committee for Industrial Organization (recently expelled from the Trades and Labour Congress of Canada) and renamed itself the Canadian Congress of Labour.

The new labour body proceeded to adopt a constitution, which clearly set forth its distinctive characteristic, that of organizing the unorganized in accordance with the "principle of organization within an industry."

The purposes of the Canadian Congress of Labour, as stated in the Constitution of 1940, are as follows:—

Section 1.—The purposes of the Congress shall be to promote the interests of its affiliates and generally to advance the economic and social welfare of the workers of Canada.

Section 2.—It shall seek to accomplish this in the economic field by developing the widest and the most effective organization of the workers, establishing wherever necessary, Organizing Committees for this purpose, and assisting existing unions to organize the unorganized workers in their respective industries. It shall, at all times, promote the principle of organization within an industry. It shall, co-operating with its affiliates, establish special funds and furnish other assistance for the purpose of carrying out the organizing objectives of the Congress.

Section 3.—In the legislative field the Congress shall promote the enactment of suitable legislative measures, Municipal, Provincial or Federal, in furtherance of the purposes of the Congress and of the interests of its affiliates. It shall exert and concentrate its influence in the promotion of its legislative program, or in opposition to any legislation contrary thereto. It shall make appropriate studies of legislation, and of associated matters, bearing upon the purpose and objects of the Congress. It shall take all suitable steps to inform its affiliates and their membership, and also legislators and the public, with regard to its legislative program.

Section 4.—The economic and legislative policies to be advanced by the Congress shall be determined in accordance with the industrial, economic and legislative conditions from time to time prevailing in the Dominion of Canada.

The following new section was added in 1946:—

Section 5.—The Canadian Congress of Labour stands unequivocally for equality of treatment regardless of race, creed or colour, and recommends to all affiliated organizations that they oppose discrimination on these grounds wherever it may appear.

UNEMPLOYMENT INSURANCE AND THE NATIONAL EMPLOYMENT SERVICE

by Ray Brown

*Director of Public Relations
Unemployment Insurance Commission.*

While as an operating program unemployment insurance in Canada has not yet celebrated its tenth birthday, its story goes back far beyond that period. In Canada as in Europe it had its origin in the trade union movement.

An important step in building a social security structure for Canada was taken when Parliament, in the summer of 1940, passed the Unemployment Insurance Act. The measure had a peculiar significance. In it, for the first time, the responsibility of government, of industry, and of the individual worker in periods of unemployment was accepted and given legal status.

The plan which Parliament outlined in the Unemployment Insurance Act provided for a contributory system of unemployment insurance. The contributing parties are the employer, the worker, and finally the Federal Government. Thus the interest which all three have in maintaining economic stability during periods of unemployment is recognized.

The legislation went further, however. It placed squarely upon the shoulders of the Federal Government responsibility for providing an organized system of finding jobs for unemployed workers. It set up a national employment service recognizing that only in close association with such a service could an unemployment insurance program be successful. In plain words, the basic idea was that, first and foremost, an unemployed worker needs a job. It is very much more important that this basic requirement should be satisfied than that the worker draw benefit.

It will be seen that unemployment insurance is, from the practical viewpoint, a comparatively recent thing in Canada. However, it would be a great

mistake to think of unemployment insurance in Canada merely in terms of the last decade. While as an actual operating program it has not yet celebrated its tenth birthday, its story goes back far beyond that period. To learn the history of unemployment insurance one must turn to records of one of the great labour organizations, the Trades and Labour Congress of Canada.

Historical Background

It is, of course, probable that the idea of unemployment insurance was a subject of informal discussion in Canadian labour circles for years before it found its way to an executive meeting or a convention floor. Certain countries in Europe had been experimenting with varying systems of unemployment insurance as early as the middle of the nineteenth century. It is apparent from the records that in Europe then, as in Canada later, it had its origin in the trade union movement. Some trade unions in European countries provided out-of-work benefits as early as the middle of the nineteenth century. Plans were voluntary, assessments usually low because workers were unable to pay large amounts, and consequently benefit allowances were frequently small and sometimes uncertain.

It remained for Great Britain to lead in adopting national compulsory unemployment insurance. In the year 1909 Rt. Hon. Winston Churchill, then President of the Board of Trade, announced that the government intended bring-

TLC Leadership

Whether or not the first world war hastened or delayed early steps toward unemployment insurance in Canada, it is difficult to say. When, in the summer of 1914, the Kaiser sent his legions goose-stepping into Belgium and plunged Europe into turmoil, Canada turned immediately from peaceful pursuits to war effort. National energy was concentrated on recruiting and equipping armies to meet an ever-growing peril. However, in spite of this tremendous effort, and possibly because of it, some men's thoughts must have been directed to the future. In the midst of maximum employment, some labour leaders were wondering what would happen when the guns became silent and the troops returned. Would the period of feverish activity be succeeded by one of depression and its inevitable companion, unemployment? Would it not be wise to make provision for such "bad times" when conditions permitted?

At any rate, whatever the thinking, it is interesting to note that the first official step by a labour body in Canada in the direction of unemployment insurance was taken in the war years. Records of the Trades and Labour Congress state that the executive of that body in a report to the annual convention of 1916 emphasized the importance of setting up a government commission to inquire into industrial relations in Canada. The convention called upon the government, by resolution, to establish such a commission.

ing in a scheme of unemployment insurance. Two years later the government of Rt. Hon. H. H. Asquith put through the National Insurance Act of 1911. It established unemployment insurance for two - and - a - half million workers in engineering, metal, shipbuilding and construction industries. The number of workers covered was greater than the combined total of insured persons in all other countries at that time. The system established involved contributions by employers, employees and the government. Insurance stamps representing joint employer-employee contributions were purchased by the employer from the post office and placed in the employee's book. The amount of the worker's contribution was deducted from his wages.

An exhaustive review of the developments in Great Britain, which culminated in the present social security system, is unnecessary in any history of Canada's unemployment insurance program. On the other hand unemployment insurance in Canada must be seen against the background of British experience. Canada was not to follow suit for some years to come, but undoubtedly men prominent in the Canadian labour movement watched with eager interest the progress of the British scheme and were stimulated by its success. Indeed records of the Trades and Labour Congress of Canada contain references to correspondence which passed between British and Canadian labour leaders discussing state insurance against unemployment.

It may be said that this contains no mention of unemployment insurance. On the other hand it should be noted that three years later, when the government of Sir Robert Borden appointed a Royal Commission to inquire into industrial relations in Canada, Tom Moore, then President of the Trades and Labour Congress of Canada, and John W. Bruce, who had moved the Trades and Labour Congress resolution of 1916, were chosen to represent labour on that body. This commission, which was headed by Chief Justice T. G. Mathers, of Manitoba, as chairman, put the issue of unemployment insurance directly before the government of the day in a formal recommendation.

This recommendation, which is a part of the commission's majority report, placed "unemployment and the fear of unemployment" first among the causes of unrest in Canada. The commission found the greatest unrest where most unemployment existed. As was to be expected this was in several of the large urban centres.

First Recommendation

In closing its reference to unemployment, the commission laid down the principle that: "Before the labourer can be made contented the haunting fear of unemployment must be removed from his mind." It continued:

Unemployment may arise from other causes than the loss of his job. He may be incapacitated by sickness, invalidity or old age. Very few labourers are able, out of their earnings, to make provision for these contingencies. We recommend to your Government the question of making some provision by a system of State Social Insurance for those

who through no fault of their own are unable to work, whether the inability arises from lack of opportunity, sickness, invalidity or old age. Such insurance should remove the spectre of fear which now haunts the wage-earner and make him a more contented and better citizen.

That this principle met with general approval at the time the commission reported would seem to be indicated by the fact that, in the autumn of the same year, a National Industrial Conference gave it unanimous endorsement. This conference was attended by representatives of Dominion, Provincial and Municipal Governments, employers and employees. Nevertheless the commission's recommendation was not acted on immediately. Constitutional jurisdiction, which was to prove disastrous to the 1935 legislation of the Bennett Government, had apparently asserted itself. At any rate the question was referred to the provinces, which took some time in its consideration. Between 1919 and 1927 no definite action was taken.

Canada was, however, in common with other countries, to pass through an experience which drove home the importance and urgency of adopting unemployment insurance. In the "twenties", after the commission had reported favourably, there was no great public demand for such a program. True there was appreciable industrial unrest—the great Winnipeg strike had taken place in 1919 and its repercussions continued—but the public was yet to face a major unemployment crisis. Then, in the early "thirties", it came. Depression, with a capital D, took the country, and indeed many other countries, by the throat. Unemployment figures rose, men

walked the streets looking in vain for jobs, Dominion, Provincial and Municipal Governments faced demands for "relief", sometimes referred to as "the dole", millions were paid out to keep workers and their families alive because no work could be found.

Constitutional Impasse

Under such conditions it is not to be wondered at that unemployment insurance assumed a position of urgency. It was something tangible and practical in answer to a need which might even become a menace. The Government of Prime Minister R. B. Bennett, in January 1935, introduced into Parliament Canada's first measure of insurance against unemployment, and it became law five months later. This measure, entitled "The Employment and Social Insurance Act", provided for establishment of a contributory system of unemployment insurance "and for other forms of social insurance and security". It also set up a national employment service. Administration was placed in the hands of an "Employment and Social Insurance Commission".

A discussion of the provisions of this Act would be fruitless in view of its brief and unhappy career. The government of the day had based its claim to legislate in the field of social security on the following grounds:—

1. That Canada signed the Treaty of Versailles, and related Treaties as an independent signatory, and thereby agreed to accept the obligations imposed upon the signatories to "secure and maintain fair and humane conditions of labour for men, women and children both in their own countries and in all countries to which their commercial and industrial relations

extend;" and that unemployment insurance being designed to protect labour falls within the purview of Canada's obligations under these treaties, and that this legislation therefore falls within federal jurisdiction under Section 132 of the British North America Act.

2. That it is essential for the "peace, order and good government of Canada" to provide for a National Employment Service and for Insurance against Unemployment; which it is urged, brings the measure again within the competence of the federal power, under Section 91 of the same Act.

3. That for the same reasons it is desirable to provide a national contributory fund for unemployment benefits "for the purposes of maintaining on equitable terms interprovincial and international trade,"—which it is again argued, being a matter directly affecting interprovincial and international trade and commerce again brings it within federal jurisdiction under the B.N.A. Act.

This claim was contested, and the Supreme Court of Canada was asked to decide the issue. It ruled that the Act was ultra vires of the Federal Parliament, a decision which was upheld by the Privy Council in 1937. Thus ended the first attempt to establish unemployment insurance in Canada.

Rowell-Sirois Report

There was, however, no stopping the movement. The Bennett administration was succeeded by that of Mackenzie King, and the new government turned its attention to solving the constitutional problem as well as producing a satisfactory plan. From the International Labour Office the services of Mr. D. Christie Tait,

an expert on unemployment insurance, were secured. Mr. Tait spent some time in Canada and made a report in 1938 which favoured federal as against provincial legislation. He pointed to the difficulty of getting nine provincial legislatures to enact laws which would be identical, and the confusion which might arise when amendments were necessary. In the same year, the National Employment Commission, headed by Arthur B. Purvis, emphasized the advantages inherent in a federal scheme.

In the meantime the co-operation of the provinces was sought with a view to amending the B.N.A. Act. Six of them agreed, but three demurred. Then came the report of the Royal Commission on Dominion-Provincial Relations (the Rowell-Sirois Report) which declared:—

In our public hearings representations from most provinces and from many public bodies supported the view that unemployment insurance should be within the jurisdiction of the Dominion Parliament. We have no hesitation in so recommending.

It will be seen that the consensus of informed opinion strongly favoured a national unemployment insurance system. The Federal Government wanted to establish such a system. Finally, by June 1940, consent of all the provinces had been obtained, and no time was lost in seeking the necessary amendment to the British North America Act.

Employment Service Corollary

It is necessary, at this point, in order to get a clear perspec-

tive, to turn back and consider for a minute the situation in respect to employment in Canada. As stated at the outset, an essential part of any adequate unemployment insurance program is an efficient employment service. No such program could function successfully unless linked with provision for obtaining employment for benefit claimants when possible.

Efforts to deal with employment in a systematic manner had been made by certain provinces for very many years before unemployment insurance was placed on the statute books of Canada. They had not, however, resulted in any satisfactory national system even though in 1918 Federal and Provincial Governments co-operated in dealing with employment problems.

The first employment offices in Canada were private agencies which charged fees. As early as 1856 a bureau of this type operated in Saint John, N.B. It would appear that the first agency maintained by a municipality was the Free Municipal Labour Bureau, in Montreal, established in 1896 at the request of the Montreal Trades and Labour Council.

The necessity for government action was emphasized by the growth in Canada's population through immigration. Obviously immigrants could not be brought into Canada and left to fend for themselves, particularly in hard times. The Immigration Branch of what was then called the Department of the Interior began in 1906 to appoint agents to assist in the placement of domestics and farm workers, particularly in Ontario and Quebec. Ontario established a number of

free employment agencies from 1907 to 1912, and the Quebec Legislature in 1910 passed a bill for the establishment of employment offices for workmen. Offices were opened by the Provincial Government in Montreal and Quebec City in 1911 and in Sherbrooke in 1912.

As was to be expected this movement continued. By 1918, the last year of the First Great War, there were in existence a dozen provincial employment offices, nine in Ontario and three in Quebec. That year saw an important development in the field of organized placement.

First Employment Service

At the 1918 session of the Dominion Parliament the government introduced a bill called the Employment Offices Co-ordination Act. This bill set aside the sum of \$50,000 for the fiscal year 1918-19, \$100,000 for the next year, and \$150,000 for each succeeding fiscal year, for distribution among the provinces in proportion to their expenditures for the maintenance of employment offices. The payments were made conditionally upon an agreement between the Federal Minister of Labour and the Provincial Governments.

This Act was passed and immediately drawn to the attention of the Provincial Governments. Before the end of the year agreements between the Federal and a number of the Provincial Governments had been signed. Following this a conference took place between employees, officials of the Labour Department and the provinces concerned. There were, of course, peculiar problems arising out of the war and entailing special provisions. For this reason certain

additional moneys were provided subsequently for the years 1918-19 and 1919-20.

The first director of the employment service for Canada established under the legislation of 1918 was Dr. Bryce M. Stewart. Hon. T. W. Crothers was Minister of Labour at the time and F. A. Acland was Deputy Minister. The headquarters of the department were located in a building on the corner of O'Connor and Queen Streets, which has since disappeared.

The Employment Service of Canada gradually extended until, by the end of 1930 it was operating offices in 69 centres. A system of clearance which made possible the transfer of labour from districts over-supplied to those where shortages existed was established. The western clearing house was located in Winnipeg, while clearance activities for the eastern part of the country, as well as for the Dominion as a whole, centred at headquarters in Ottawa. Gradually the private fee-charging employment agencies began to disappear. Their operation had been made illegal in a number of provinces by 1930, and in others, where they existed, they operated only under provincial licenses.

As a pioneer in public employment service operation in Canada, the original employment service filled an important role. For many years it did provide public placement facilities. However it became obvious in the course of time that a suitable public employment service in Canada would require more extensive facilities. The idea also developed that a national service under central control would be in a better position to organize the Canadian employment field. Consequently, up to

the time that the Unemployment Insurance Act of 1940 was passed, the employment service, even though covering the Dominion, could hardly have been described as a truly national organization in its function.

The above paragraphs give a sketchy idea of the progress Canada had made in the employment field up to the time of the 1940 legislation. During that period there had been two changes in the directorship of the Employment Service of Canada. R. A. Rigg had replaced Dr. Stewart and acted as director for many years. Toward the end of the period V. C. Phelan, who was to become Chief Employment Officer under the Commission created by the 1940 Act (and who was to have a large part in setting up the new National Employment Service), became Director of the former Employment Service of Canada. When the 1940 Act was passed, the Employment Offices Co-ordination Act was repealed.

Action on New Act

As was to be expected the drafting of Canada's Unemployment Insurance Act was the work of many hands and brains. It has already been mentioned that Mr. D. Christie Tait, an expert of the ILO, came to Canada and in 1938 made a report to the late Hon. Norman McL. Rogers, then Minister of Labour, on a proposed unemployment insurance bill. Also those working on the draft had before them Canada's 1935 Act, as well as those of Great Britain and the United States. Consequently there was plenty of material to work with.

The preliminary work was carried on largely by half a dozen men selected for the purpose. The

Labour portfolio had been taken over by Hon. Norman McLarty, who had as his Deputy Minister, Dr. Bryce M. Stewart. The late Gerald H. Brown, who took an active part before the Parliamentary Committee which examined the bill, was Assistant Deputy Minister. Among those who helped to draw up the bill were the late Eric Stangroom, A. A. Heaps, a former member of Parliament and student of unemployment insurance, and J. S. Hodgson, all of whom were later on the staff of the Unemployment Insurance Commission, and A. D. Watson, then Chief Actuary and now Consulting Actuary in the Federal Department of Insurance.

Course of Legislation

The government lost no time, after amendment of the B.N.A. Act, in introducing the bill. The basic legislation was introduced by Mr. McLarty on July 15, 1940, when a blanket of summer heat hung over Ottawa. The following day he moved its adoption, predicting that, by the legislation, "fear will be removed to some extent from 4,660,000 of the Canadian people." He pointed out that it had been approved in principle by every major labour organization in the country, endorsed by every commission and committee which had considered it, and agreed to by the House of Commons itself.

As was to be expected the bill met with general approval in the House. After comparatively brief discussion it received second reading on July 19, and was sent to a Special Committee of fifteen members, of which Mr. McLarty was Chairman. This gave opportunity for detailed discussion and explanation by experts, and also for

interested organizations to make representations. Representatives of labour and management organizations were heard at length, and actuaries, both departmental and private, gave evidence. Among the organizations appearing before the Committee were the Canadian Manufacturers' Association, Trades and Labour Congress, Retail Merchants' Association, Canadian Chamber of Commerce, Canadian Congress of Labour, Canadian Hospital Council, Canadian Railway Association, Canadian Committee for Industrial Organization, Canadian Bankers' Association, and the Canadian and Catholic Confederation of Labour. On July 26 the Minister of Labour was able to present a unanimous report to the Commons, and three days later the bill received third reading.

In the Senate, first reading was given to the measure on July 29, when it went to the Banking and Commerce Committee of the Upper Chamber. After careful examination there, it was reported, and, following defeat of an amendment moved by Senator Meighen providing that it should become effective on termination of the war, it received third reading. Royal Assent was given on August 7, 1940.

Administrative Machinery

While a great deal of work had been done before the unemployment insurance bill could be presented to Parliament, as well as during the period when it was before the Commons and Senate and the committees which examined it, it was merely a beginning. With legislative authority in its hands, the Mackenzie King government of the day had to create the necessary machinery to carry

out the provisions approved by Parliament. First a Commission had to be established. It was necessary to obtain one Commissioner who represented organizations of workers and another nominated by employer organizations. The Chairman, as provided in the Act, would be selected by the government as representing the general public.

The government's first choice for the chairmanship was a man who had already appeared prominently in the sphere of Dominion-Provincial relations. Dr. Joseph Sirois had been associated with Hon. N. W. Rowell in the preparation of the report on Dominion-Provincial Relations which had contained a recommendation favouring a national scheme of unemployment insurance. He was chosen to be the first Chairman of the Unemployment Insurance Commission.

As representative of the workers, R. J. Tallon, who had been for many years prominent in the organization of the Trades and Labour Congress of Canada was selected. Allan M. Mitchell, a Montreal industrialist, was nominated by employer organizations and appointed to represent employers.

The new Commission met with a misfortune quite early in its career. Dr. Sirois had not been in the best of health. However, he attended the first meeting of the Commission which took place in the Parliament Buildings on October 1, 1940. This meeting was also attended by the two other Commissioners, and the Minister, Hon. N. A. McLarty, was present. Meetings were held at weekly intervals and Dr. Sirois continued to preside for two months. He then found himself unable to act,

**HOUSE OF COMMONS COMMITTEE ON UNEMPLOYMENT INSURANCE,
JULY, 1940**

Back row: K. K. Homuth, M.P.; H. R. Jackman, M.P.; A. W. Roebuck, M.P.; Hon. Ian A. Mackenzie, Minister of Pensions and National Health; Hon. N. A. McLarty, Minister of Labour, Chairman; Jos. Jean, M.P.; D. A. McNiven, M.P. **Middle row:** Angus MacInnis, M.P.; E. G. Hansell, M.P.; Thomas Reid, M.P.; V. J. Pottier, M.P.; Hon. P. J. A. Cardin, Minister of Public Works and Transport; Gordon Graydon, M.P.; L. P. Picard, M.P.; Lionel Chevrier, M.P. **Seated:** J. S. Hodgson, Department of Labour; A. D. Watson, Department of Insurance; Antoine Chasse, Clerk of Committee; G. H. Brown, Assistant Deputy Minister of Labour; Eric Stangroom, Department of Labour; A. A. Heaps, Department of Labour.

and eventually died leaving a vacancy in the office of Chief Commissioner.

Organization Set-up

As the Commission was faced with the important task of organizing a national machine to operate unemployment insurance and an employment service it was necessary to fill the vacancy with the minimum of delay. A. MacNamara, who had formerly been Deputy Minister of Public Works and Labour in the Government of Manitoba and who had come to

Ottawa to head the Dependents' Allowance Board, was appointed Acting Chief Commissioner. He had just previously been appointed associate deputy minister of labour. Organization then proceeded under the Commission.

The Commission's administrative organization was, of course, designed to carry out the provisions of the governing Act. The machinery to operate a nationwide system under which employers and workers in insured employments contributed varying amounts, and which called for

payment of benefit in accordance with certain fixed rules and in proportion to contributions made, was necessarily somewhat involved. On the employment side negotiations for taking over provincial offices which had been operating for many years had to be carried through. Many new offices were required. Regulations governing both insurance and employment activities had to be drafted. Problems entirely new to Canada were encountered and demanded solution.

However, the work went forward steadily under the Commission's direction. For administrative purposes, Canada was divided into five regions—Maritime, Quebec, Ontario, Prairie and Pacific—with regional staffs directed by a Superintendent in each case. At Ottawa, a Chief Employment Officer and a Chief Insurance Officer headed the two main branches under an Executive Director. Hon. Lucien Cannon, a judge of the Quebec Superior Court was appointed Umpire. In accordance with the provisions of the Act, in due course national, regional and local employment committees were established; and the government created an Unemployment Insurance Advisory Committee. The National Employment Committee was headed by Tom Moore, President of the Trades and Labour Congress, while Dr. W. A. Mackintosh, of Queen's University, became Chairman of the Unemployment Insurance Advisory Committee. Dr Mackintosh had been a member of the National Employment Commission, and economic adviser to the Deputy Minister of Finance.

Act in Operation

On Canada's 74th birthday, July 1, 1941, the Unemployment Insurance Act began to function. At that time there were more than 100,000 employers registered and insurance books requisitioned exceeded two and a quarter million. When the bill was before Committee it had been estimated that its coverage would be approximately 2,400,000, an estimate which proved reasonably correct.

At the time the bill was under consideration there had been suggestions in certain quarters that the time was hardly appropriate for starting the program. Was a period of world conflict appropriate for launching such an important experiment in Canada? On the other hand it was argued that the very fact of war made the time exceptionally suitable for such a scheme. Maximum employment prevailed, every man and woman who could work was employed at good wages. What better time could be found for building up the insurance fund?

As events turned out, the latter viewpoint seems to have been the correct one. In spite of the fact that the fiscal year 1941-42 was largely concerned with organization, a fund of nearly \$44,000,000 had been accumulated by the end of that period. More than 100 "Employment and Claims Offices," as they were then called, had been established across Canada, and a staff of 1,570 engaged. Key officials were trained at staff training schools held in Ottawa, and they, in turn, trained staff members in the regions.

The Hon. Humphrey Mitchell had taken over the Labour portfolio from Mr. McLarty, who had become Secretary of State.

National Selective Service

A new and unexpected responsibility, and one directly attributable to the war was, however, to be assumed by the infant organization. On March 24, 1942, Prime Minister Mackenzie King announced to an expectant House of Commons, a program of National Selective Service "to effect the orderly and efficient employment of the men and women of Canada for the varied purposes of the war." The primary responsibility for the mobilization of Canada's man and woman power under National Selective Service was placed on the shoulders of the Minister of Labour, while direction of the program was given to a director and an associate director. For the former position Elliott M. Little, a dynamic figure in the pulp and paper industry was drafted.

The advent of N.S.S. had a profound effect on the unemployment insurance organization. On March 16, 1942, the post of Chief Commissioner had been filled by the appointment of Louis J. Trotter, a Montreal financier. Mr. MacNamara had returned to his post as Associate Deputy Minister of Labour. Toward the end of that year, Mr. MacNamara also took over the post of Director of National Selective Service, Mr. Little having resigned to resume his former industrial activities. At the time that he announced National Selective Service, the Prime Minister informed Parliament and the country that "the mobilization of industrial manpower will, in the main, be effected through the agency of the Employment Service of Canada". Commission offices became National Selective Service

offices, and officers of the Commission were required to administer N.S.S. regulations.

It was a time of emergency. The Commission and members of the staff were fully aware of the need for channelling men and women into those activities which would enable them to make maximum contribution to the paramount war needs.

On September 4, 1942, Cabinet, with the concurrence of the Commission, enacted Order in Council P.C. 7994 "to enable the Minister to make more use for National Selective Service of the organization already set up under the Commission." This order changed the name of the organization, for the time being, to the "Employment Service and Unemployment Insurance Branch," with Commissioner Allan M. Mitchell as Director. The Commission retained its supervision over operations of the insurance features of the Act.

Wartime Expansion

Due to the high level of wartime activity and concentration of workers in insured employments, the number of employers and workers registered under the Unemployment Insurance Act was increasing steadily. On March 31, 1943, a total of 3,067,169 insured employees were registered, while the number of registered employers was over 168,000. The Commission, in connection with the National Selective Service program, made an inventory, involving registration according to skills, adaptability and availability for work, of several groups which had not been previously registered by the Commission. This registration was national in character, and covered males in

groups referred to between ages 16 and 70, and women aged 20 to 24 inclusive.

By the end of March, 1945, the National Employment Committee was giving general supervision to 61 local, as well as the five regional committees. During 1942, Tom Moore, who had been Chairman of this committee since its inception, suffered a paralytic stroke while attending a large meeting in Montreal. His illness was a serious one, making it quite impossible for him to carry on his duties, so Commissioner Tallon was appointed Acting Chairman. He was fated to continue in this capacity for some years, because Mr. Moore's illness proved a lingering one, eventually resulting in death.

Coverage Amendments

It is not intended in this review to refer at any length, or in any detail, to changes which have been made from time to time in the Unemployment Insurance Act or Regulations. On the other hand, it is well to note, as we pass along, some of the amendments which were important from the viewpoint of coverage.

The Act, as originally passed, applied to all persons in Canada employed under a contract of service unless their employment was specifically excepted. Some of the excepted employments were agriculture, fishing, lumbering and logging, hunting and trapping, and domestic service other than in a club or in a business carried on for gain. This is not a complete list. At the outset a "ceiling" of \$2,000 a year was fixed, and persons earning more than this amount were not ordinarily insurable.

In September, 1943, an amendment raising the ceiling to \$2,400 a year became effective, and persons paid on an hourly, daily, weekly or piece rate became insurable no matter what their earnings. During the following year, study was given to the possible extension of coverage to the lumbering and logging industry, and the Advisory Committee recommended that, in view of administrative problems, such extension should be made gradually in areas prescribed by the Commission.

During 1945 coverage was extended to persons employed in transportation by air, and also to employment as a professional nurse other than a private duty nurse. A preliminary report was completed on problems connected with extension of coverage to employment in transportation by water, and on October 1, 1946, this became insurable. An Order in Council had been passed in the previous year extending coverage to employment in lumbering and logging but leaving it to the Commission to prescribe those areas in which it would apply. It became applicable in British Columbia at the beginning of August, 1946.

The year 1945 saw another change in the Commission personnel. Commissioner Allan M. Mitchell, who had given a great deal of time and energy to his post during a period of tremendous pressure, became ill and resigned at the end of July. His first five-year term would have expired on September 23, 1945. Mr. Tallon's term was renewed for another five years, and for some little time he and

the Chief Commissioner, Louis J. Trottier, carried on.

At the end of the fiscal year, the Order in Council enabling the Minister to use the Commission organization for National Selective Service administration ceased to be effective. The powers of the Commission were, therefore, automatically restored.

Peace Responsibilities

With the cancellation of National Selective Service regulations, employment offices across Canada were in a position to resume the functions for which they had originally been designed. National Selective Service offices had, of course, demonstrated the fact that they could perform a most valuable function in a period of emergency. They were yet to establish themselves firmly as

part of the essential peace-time machinery for dealing with the employment needs of the Canadian people.

It was not long, however, before Canada's National Employment Service began to assume a position of importance in its particular field. The fact that it operated offices under one centralized control in every part of the country was a most important factor in its success. Already reference has been made to the development of a limited system of clearance under the old Dominion-Provincial Employment Service started in 1918. The clearance system was greatly expanded with the consequence that the employer in need of workers found that he could, if necessary, through the National Employment Service, cover the

An unexpected responsibility was assumed by the infant National Employment Service in 1942, when the local offices were used for the mobilization of industrial manpower under the National Selective Service program. Below: Farm, factory and office workers are interviewed by a Selective Service official.

entire country in his search for suitable employees. Similarly, the unemployed worker had the entire national field at his disposal if unable to locate work in his own locality.

Only a national system could provide for such a method. Under the clearance system an employer's order was first given every attention in the local office concerned. If it could not be filled in the locality, and the employer desired wider circulation of the order, it could be cleared through the entire region. If still wider service was necessary, national clearance could be adopted.

Job Specialization

The National Employment Service also proceeded to develop certain branches of particular value to persons requiring specialized attention in order to obtain suitable employment. Prominent among these was what is known as the special placements division. Here the individual with physical or mental handicaps received specialized treatment by officers trained for the purpose. Boys and girls leaving school and taking their first steps into the world of work found here counselling and guidance to assist them in proper selection of the occupation most suited to their abilities. In this field of vocational guidance the special placements division co-operates closely with schools and other institutions interested in the development of youth and in its successful establishment in employment. In certain of the large cities vocational guidance councils were formed for the specific purpose of co-operating

with the National Employment Service in the work for young people.

The special placements division also performed an important duty for workers in the upper age brackets. One of the difficulties encountered arose from the fact that a number of employers preferred to engage only young workers. While it was obvious that this policy was short-sighted inasmuch as it ignored the valuable experience of the older man or woman, it constituted a challenge to the National Employment Service. Consequently the special placements division made a particular effort along the lines of counselling these older workers, re-establishing their morale if it had suffered from lack of employment, and generally using all its resources in order to see that they obtained the types of employment suitable.

Placing the Displaced

As an aftermath of the war Canada was faced with the opportunity, and the obligation, of assisting many of those who had suffered loss of home and employment as a result of the struggle. Many of these persons were in displaced persons' camps in Europe. The Government of Canada decided to welcome a proportion of them to Canadian soil provided that they could measure up to the standards required and were willing to accept the types of employment available.

The National Employment Service was keenly interested and very active in this movement of displaced persons. Obviously the transfer and successful placement of a large number of persons,

many of them quite unfamiliar with the English and French languages, involved a series of problems. However, these were solved as time went on and it is now apparent that the movement of displaced persons has been a great success. Approximately 40,000 of them have been admitted to Canada and placed in employment, and indications are that the vast majority will become good Canadian citizens. Employments in which these male displaced persons undertook to engage were farming, mining, lumbering and similar activities. The women brought over were largely placed in domestic service or in hospitals.

Servicing a Nation

Placement activities of the National Employment Service also included extensive movement of Canadians from one part of Canada to another. In a country of great area like Canada, where climatic conditions vary, it is sometimes necessary to move large numbers of workers from one section of the country to another in order to harvest various crops. An obvious example of this is the movement of harvest workers from eastern Canada to the western grain fields. However, the National Employment Service has developed this markedly. Not only were workers moved from east to west, but when necessary they were transferred from one region to another in order that crops might be saved. The National Employment Service took charge of the movement of berry pickers, workers to save the potato harvest in the Maritime Provinces, workers on sugar-beet plantations and workers in the

tobacco fields. All these products require additional labour at certain periods, and the National Employment Service is in a position to see that it is supplied. The movement was sometimes international in its scope, because Canada supplied potato pickers to the State of Maine, and tobacco workers came to work in Canada's fields from south of the line.

Additional changes took place in the Commission during the fiscal year which ended March 31, 1947. On September 30, 1946, Mr. Trottier resigned to accept a post with the Provincial Bank of Canada. The vacancy created was filled with the appointment of Colonel J. G. Bisson, O.B.E., for a ten-year term.

G. W. Ritchie, of Toronto, had previously been appointed employer representative on the Commission filling the post vacated by the resignation of Mr. Mitchell. His health was not good, however, and early in 1947, C. A. L. Murchison, K.C., was appointed temporarily while Mr. Ritchie took leave of absence for six months. As events turned out, Mr. Ritchie did not return to the Commission and Mr. Murchison was appointed for a five-year term.

During the summer of 1947, the post of Chairman of the National Employment Committee, which was temporarily filled by Commissioner Tallon during the period of Tom Moore's illness, and during the period following his death, was filled by the appointment of Judge W. J. Lindal, of Winnipeg, for a term of three years. Local Employment Committees scattered across Canada now numbered 67, the Commission pursuing a policy of estab-

lishing them in communities indicating a desire for such a committee, where local offices were operating.

Early in 1949 Judge Cannon, the first Umpire under the Unemployment Insurance Act, resigned on account of illness. During his term of office he had given 438 decisions. He was succeeded by Mr. Justice Alfred Savard, also a Judge of the Superior Court of the Province of Quebec, who was appointed Umpire on April 12, 1949. Judge Cannon died in Quebec on February 14, 1950.

Insurability Extended

As already mentioned, the earnings' limit for insurability originally fixed at \$2,000 had been raised to \$2,400 in 1943 to keep pace with rising wartime earnings. By 1947 the wage index showed a further marked increase, and in January 1948 the ceiling for salaried employees was raised to \$3,120 a year. Coverage was extended to employment in stevedoring, an employment which had been excluded by the 1940 Act because of the administrative problems involved.

It will be appreciated that the unemployment insurance program had, from the outset, encountered no serious unemployment situation. With operations beginning in 1941, when war needs were paramount and every man and woman who could work was in demand, the unemployment insurance fund grew rapidly. Gloomy prognostications in respect to depressed conditions during post-war years failed to materialize. A great demand for commodities, which it had been difficult, if not impossible, to satisfy during the war, now had

to be met. The wheels of industry were kept humming in order to satisfy this demand.

Thus, it is not surprising, that in less than a decade, the unemployment insurance fund has grown to considerable size. Its balance at the end of March, 1947, was \$372,878,625. In the following 12-month period it had grown to \$447,734,939. By the end of March, 1949, it had crossed the half-billion mark, amounting to \$529,535,437. At that date the total insured population was estimated at approximately 2,447,000 out of an estimated labour force of 4,964,000.

At the session of Parliament which opened in February, 1950, a bill amending the Unemployment Insurance Act was introduced. It was pointed out, when the measure came before Parliament that, in view of climatic conditions in Canada, seasonal unemployment was part of our employment pattern. The extraordinary employment situation throughout the war years and also during the post-war period had obscured, in appreciable degree, the fact of seasonal unemployment. It was now emerging again, and the government had made up its mind to change the unemployment insurance program so as to make provision for normal winter seasonal unemployment.

Supplementary Benefits

Payment of supplementary benefits between February 28 and April 15, 1950, to unemployed insured persons who were eligible was provided for in the amending bill. The rate of payment was approximately 80 per cent of the

ordinary rate, and benefit was payable to persons in four classes. It was provided that in 1951 and each subsequent year, benefit would be paid only between January 1 and March 31.

Provision was made for financing the payment of supplementary benefit by increasing the daily contribution rates of employers and employees by one cent per day each. To this would be added the government contribution of one-fifth of the combined employer-employee contributions. These amounts would be paid into the insurance fund.

It was also provided that the government would pay into the fund the amount of supplementary benefits paid out to unemployed persons in classes three and four. These were the groups who had not had time to make the necessary number of insurance contributions to qualify. It was estimated that the financial provision thus made would be sufficient to provide for supplementary benefit payments. Nevertheless, in order to safeguard the insurance fund, it was guaranteed by the government against any loss sustained in payment of benefits up to March 31, 1952.

It was indicated in the House of Commons while the bill was under discussion that the number of individuals benefiting would be approximately 100,000.

The payment of supplementary benefit from the unemployment insurance fund was an interesting development in the history of the program in Canada. It was not the only amendment which the session of 1950 produced. Another amendment provided for increasing the insurable limit for salaried employees from \$3,120 to \$4,800 a year. This

was the greatest increase that had been made in the "ceiling" which, as already stated, was fixed at \$2,000 in the original legislation. A new contribution class in line with the raising of the ceiling was created, and the number of classes was reduced from nine to seven.

Early in 1950 it was decided to make lumbering and logging insurable all over Canada. It had previously become an insurable employment in British Columbia, but administrative difficulties interfered with its inclusion in the other provinces. These difficulties were overcome to an extent which permitted the Commission to include it in the insurable employments.

It will, of course, be appreciated that the bringing in of Newfoundland inevitably meant an expansion of unemployment insurance and the National Employment Service so as to serve the inhabitants of the new province. Newfoundland became part of the Maritime Region for administrative purposes and the name of that region was changed to the Atlantic Region. The establishment of offices and the provision of staff, etc., for starting them in operation was accomplished without serious difficulty, and by the beginning of 1950 the service in Newfoundland was running smoothly.

Unemployment insurance has been in operation throughout Canada for less than 10 years. During that comparatively brief period the program has demonstrated its value both in times of war and peace. It has yet to encounter a major depression. It is hoped that such a condition will never develop. However, no

matter what the future has in store, there is some satisfaction in the consciousness that the Canadian people have made some provision, by their own effort, for unfavourable conditions of employment which may arise from time to time. There is also a

sense of achievement in the realization that across Canada has been established an efficient and active organization with the sole purpose of utilizing all employment opportunities as they exist for the benefit of the people of Canada.

When a Canadian Labour Delegate was Dismayed by Revolutionary Principles of an Early International Body

To a meeting of the International Federation of Trade Unions, held in London, England, in November 1921, the Trades and Labour Congress of Canada sent Mr. J. H. Halford, as Canadian delegate.

Mr. Halford listened to the debates for a while, but when a resolution was moved "to impress on the working classes the necessity for international mass action in the assault on reaction, etc.," he had had enough. Rising to his feet, the Canadian delegate told the Federation that it appeared to him to be a frankly revolutionary organization which was attempting to achieve political aims altogether at variance with the Canadian viewpoint. He said he had perused carefully the various resolutions to be brought before the Congress and was dismayed to find that each contained some distinctly revolutionary principle to which he could not commit the Trades and Labour Congress of Canada, and he felt he must vote against them all.

In the event, however, Mr. Halford decided to support at

least one resolution, which hurled defiance at the "Moscow Internationale" which had threatened to destroy the Federation.

According to the *LABOUR GAZETTE* (January, 1921), three distinct schools of trade union thought were represented in the Congress: the Left Group, comprising Italy, Norway, Sweden and Switzerland, were communistic trade unionists; Great Britain, France, Germany and other European countries were represented by centre socialist trade unionists, while on the right, J. H. Halford, the Canadian delegate, declared himself on every occasion to be simply a trade unionist without any political label.

At its Annual Convention the following year, the Trades and Labour Congress nevertheless voted to continue its affiliation with the International Federation, noting that the Federation had rendered "valuable assistance in exposing the policies of the Third Internationale of Moscow and in pointing out the danger to trade unions of accepting the policies of the Moscow body."

Fair Wages Policy and Prevailing Rates During the First Half Century

by **H. S. Johnstone**

Head of Fair Wages Section, Department of Labour

The Government of Canada first adopted a Fair Wages Policy in 1900 and the ensuing fifty years have shown a gradual development of this policy.

In 1897 Sir William Mulock, then Postmaster General, appointed Mr. W. L. Mackenzie King to investigate the conditions under which supplies for the Dominion Government were manufactured. As a result of Mr. King's report Sir William gave notice on March 12, 1900, of the following Resolution in the House of Commons:

That it be Resolved, that all Government contracts should contain such conditions as will prevent abuses which may arise from the sub-letting of such contracts, and that every effort should be made to secure the payment of such wages as are generally accepted as current in each trade for competent workmen in the district where the work is carried out, and that this House cordially concurs in such policy, and deems it the duty of the Government to take immediate steps to give effect thereto.

It is hereby declared that the work to which the foregoing

policy shall apply includes not only work undertaken by the Government itself, but also all work aided by grant of Dominion public funds.

On July 17, 1900, this Resolution, with the addition of the following clause, received the formal assent of the House of Commons:

That it is not expedient to mix with this proposal the salaries of those employed in the public departments of the government.

The first steps to implement the Resolution were taken in the Department of Public Works in 1901. In the following year the policy was applied in the Post Office Department in connection with the purchase of postmen's uniforms.

In the early years the administration of the Fair Wages Policy was carried out generally in accordance with the following procedure:

1. The preparation of schedules of current rates for insertion into contracts.
2. The investigation of complaints alleging the payment by contractors of a wage less than that fixed in the schedule, or the non-compliance by the contrac-

tors with other conditions in regard to sub-letting, hours of labour, piecework and actual surroundings in which the work was performed.

3. The answering of inquiries concerning the nature of the conditions under which public work was required to be performed in the various localities.

On August 30, 1907, an Order in Council was passed adding to the original resolution of 1900 the following two clauses:

1. The contractor shall post in a conspicuous place on the public works under construction the schedule of wages inserted in their contracts for the protection of the workmen employed.
2. The contractors shall keep a record of payments made to the workmen in their employ, the books or documents containing such record shall be open for inspection by Fair Wage Officers of the Government, at any time it may be expedient to the Minister of Labour to have the same inspected.

In the succeeding years the Fair Wages Policy was observed more widely as government services expanded. The Fair Wages Clause was used by the various departments of government and agencies on construction contracts and on contracts for supplies and equipment, but its actual wording differed greatly from department to department. The Government came to the conclusion that it was desirable that the labour provisions in question should be made as nearly uniform as possible in terms and administration. Therefore, in 1922, the entire Fair Wages Policy was embodied in Order in Council, P.C. 1206 of June 7, 1922. This Order

in Council divided government contracts into two classes, namely:

“A” contracts, relating to all manner of government construction work including work done by other agencies but supported by subsidies, advances, loans or guarantees from the Dominion; and

“B” contracts, which covered the manufacture and supply of all manner of fittings and equipment.

The general principles for the determination of wages and hours under P.C. 1206 were the same as those set forth in the original fair wages Resolution of 1900 and the two additions to this Resolution made in 1907. In addition, the Order in Council provided that, if there were no current rates ascertainable in the district, then fair and reasonable rates were to be paid.

Hours were to be fixed in accordance with the custom of the trade in the district and, if there were no such custom, then they were to be fair and reasonable hours. Wages and hours as defined in the Order meant the standard rates of wages and hours of labour as established by collective agreement between employers and workmen in the district from which the labour required is drawn, or the rates and hours actually prevailing, although not necessarily established by collective agreements.

Both “A” and “B” conditions stipulated that all workers must be residents of Canada unless the Minister of the Department concerned permitted other than Canadian labour to be used.

On both “A” and “B” contracts a procedure was established for the payment of wage claims. If proof satisfactory to the Minister

was furnished that improper wages were paid, the Minister might pay such wages out of the moneys owing by the Government to the contractor.

Order in Council P.C. 605 of April 9, 1924, gave to the Minister of Labour, under special circumstances, authority to determine current or fair and reasonable overtime wage rates and the proper classification of any work for the purpose of determining wages and hours. The Order in Council provided that such authority should not be exercised in respect of any employees covered by a collective agreement fixing wage rates, hours, and other conditions of labour.

In 1930 the Trades and Labour Congress of Canada made representations to the Government arguing that the existing fair wages regulations were insufficient to give the workers the protection they needed, and that developments in respect of Government-owned railways and hotels had introduced new factors into the situation and added to the difficulties of properly administering the fair wages regulations. It was argued that the existing regulations could only be applied where they were made a part of the contract, and that where failure to make such provision occurred, the worker had no protection and no legal recourse to enforce its claim. The Congress contended that statutory enactment of fair wages regulations would correct this situation.

In the same year Parliament passed the Fair Wages and Eight-Hour Day Act, 1930, which gave statutory effect to the Fair Wages Policy contained in the Orders in Council described above. The Act provided that the 8-hour day

should apply to all government work whether carried out by contractors or by the Government itself. The Act did not apply to persons employed in the manufacture of materials, supplies or equipment for use on construction work where such manufacture was carried on in any plant or factory established for the purpose of the work contemplated.

In December 1934, P. C. 3271 was passed, following the report of the Royal Commission on price spreads; substituting new "B" Conditions for those then in effect. The Order in Council stipulated that wage rates for male workers 18 years of age and over should not be less than 30 cents per hour and that rates for female workers should not be less than 20 cents per hour. It also provided that all persons under 18 years of age should be entitled to rates of wages not less than those provided for women and girls in the minimum wage scale of the Province in which the work was performed, and that where the provincial minimum laws required payment of higher wages than those set out in the Order, such higher wages should apply.

In 1935 a new Statute was passed repealing the Fair Wages and Eight-Hour Day Act, 1930. This Statute, known as the Fair Wages and Hours of Labour Act, 1935, re-enacted certain sections of the 1930 Legislation and added others to give further effect to the recommendations of the Royal Commission on price spreads.

It applied to all contracts made with the Government for construction, remodelling, repair or demolition of any work; and applied also to such works that are aided by government loan, subsidy, advance or guarantee. The hours

of work were limited to 8 per day and to 44 per week.

By 1941 there was a definite increase in prices and wage rates, occasioned largely by the expanding war economy. Order in Council P.C. 3884 of May 30, 1941, passed under the authority of the War Measures Act, amended the "B" Conditions by raising the minimum rates in the schedule to 35 cents and 25 cents for male and female workers respectively, 18 years of age and over.

The large number of Dominion Government contracts issued in connection with wartime supplies made it necessary in the early years of the war to secure some assistance from the provinces in the inspection and enforcement of labour conditions. The provincial Departments of Labour agreed to co-operate and on July 22, 1941, Order in Council P.C. 5522 was passed, authorizing the Minister of Labour to appoint any provincial officer or any other person authorized to inspect labour conditions pursuant to the law of any Province, as his duly authorized representative for the enforcement of fair wages and labour conditions on Dominion Government contracts.

Under Order in Council P.C. 3884, referred to above, only those employees of a contractor who were actually employed on government work were affected by the established minimum rates. This Order in Council was revoked October 4, 1941, by Order in Council P.C. 7679 which provided that all employees of a government contractor, whether employed on government work or not, must receive the minimum rate of 35 cents and 25 cents per

hour for male and female workers respectively, 18 years of age and over.

The rise in prices and wages in the early years of the war and the necessity of fully organizing the economy for the effective prosecution of the war prompted the Government to institute price and wage control.

Orders in Council were passed which stabilized all wage rates and prevented further wage increases except on approval by the National War Labour Board or one of the nine Regional War Labour Boards. The National War Labour Board was also given the responsibility of administering the Fair Wages and Hours of Labour Act, 1935, and Order in Council P.C. 7679.

This wage stabilization legislation was amended by Order in Council P.C. 9384 of December 9, 1943, which removed the fair wages legislation from the jurisdiction of the National War Labour Board. The Industrial Relations Branch of the Department of Labour then became responsible for the administration of the Fair Wages Policy.

In 1949 the Fair Wages Policy Order in Council was amended by Order in Council P.C. 1272 which made "A" Conditions subject to the Fair Wages and Hours of Labour Act, 1935, and amended the "B" Conditions by removing therefrom the schedule of minimum rates.

Later in 1949 all Fair Wage Orders in Council and amendments were consolidated in Order in Council P.C. 5547. Thus, at the close of the first fifty years of the operation of the Fair Wages Policy, the Fair Wages Legislation

comprises the last named Order in Council and the Fair Wages and Hours of Labour Act, 1935.

Prevailing Rates Employees

Today in Canada there are about 30,000 employees of the Government of Canada who are known as Prevailing Rates Employees. They are employed at various military and other establishments across the country, in dockyards, in workshops, on canals, in parks, and on all government vessels. The designation of this particular class of workers, and the manner in which their rates of pay have been established, is an instance of legislation and procedure worked out to suit the needs and circumstances of the changing pattern of government activity over the years.

In 1918 an amendment to the Civil Service Act provided that "In any case where the Commission decides that it is not practicable nor in the public interest to apply this Act to any position or positions, the Commission may, with the approval of the Governor in Council, exclude such position or positions in whole or in part from the operation of the Act, and make such regulations as are deemed advisable, prescribing how such position or positions are to be dealt with".

In 1922, pursuant to Order in Council P.C. 1053, the Civil Service Commission exempted from the operation of the Civil Service Act several classes of positions, including many trades, semi-skilled and unskilled labour and domestic service workers. The selection of these employees and the determination of their rates of pay were left entirely with the

employing department, with the stipulation that rates of pay were not to exceed civil service rates.

The Department of Labour was first brought into the picture in 1923 when Order in Council P.C. 1595 required that employees who were exempt from the operation of the Civil Service Act and who were employed by the Department of National Defence on construction, maintenance and repair work, should be paid rates prescribed in schedules prepared by the Department of Labour for the Department of National Defence. In succeeding years, the Department of Labour undertook a similar function in respect of other government departments employing prevailing rates employees.

A departure from this procedure occurred in the early years of the war when both the Treasury Board and the National War Labour Board began to play a part in the administration of prevailing rates legislation. Order in Council P.C. 22/4627 of June 1, 1942, required that all changes in the rates of pay of prevailing rates employees should be approved only when concurred in by Treasury Board on the recommendation of the National War Labour Board. This function was transferred to the Industrial Relations Branch of the Department on January 1, 1944.

A further change in this procedure was effected in 1944 by Order in Council P.C. 3374 which provided that prevailing rates employees should be paid wage rates established by the Governor in Council on the recommendation of the Minister of the department concerned, concurred in by the Department of Labour, and approved by Treasury Board.

Although the methods of determination of the rates of pay of prevailing rates employees had become established on a standard basis by the legislation previously described in this article, nevertheless over the years considerable diversity from department to department developed with respect to their conditions of employment. In some departments prevailing rates employees were granted no vacation leave with pay and were paid no overtime; in other departments they were given vacation leave authorized by Orders in Council already passed; in still other departments they were given more generous vacation leave with pay and statutory holidays with pay, sometimes up to the maximum enjoyed by regular civil servants. Many prevailing rates employees were paid overtime rates.

In 1948, a special committee was set up by Treasury Board to study the subject of conditions of employment of prevailing rates employees.

Following consideration of the report and recommendations of

this committee, Order in Council P.C. 4840 of September 20, 1949, was passed establishing the Prevailing Rates Employees General Regulations. These Regulations provided more generous vacations with pay than were previously in effect, granted certain statutory holidays with pay and made provision for special overtime rates beyond forty-eight hours per week. Certain minor revisions to these regulations were effected by Order in Council P.C. 6190 of December 6, 1949.

The procedure involved in the application of prevailing rates legislation at the present time, therefore, is that the rates of pay of prevailing rates employees are first requested by the employing department, recommended by the Department of Labour and approved by Treasury Board; while other working conditions, such as vacations with pay, statutory holidays with pay, and overtime are governed by the Prevailing Rates Employees General Regulations which are administered by the employing department and Treasury Board.

A Note on the Preparation of the Fiftieth Anniversary Issue

The LABOUR GAZETTE has departed in this Anniversary Issue from its customary practice by giving "by-lines" to the authors of the various special articles.

The following additional acknowledgements should be made:—

In addition to his duties as editor of the French edition, Mr. C. A. St-Arnaud, has been largely responsible for planning the lay-out and artwork, including the cover design.

In addition to those members of the editorial staff whose duties included the preparation of particular articles, Miss Kathleen Whitehurst, Mrs. F. H. Glen, Miss D. M. Hurd, Mrs. A. Lyons and Miss M. A. Huot have contributed materially to the compilation of the issue.

The *Winnipeg Free Press*, the *Hamilton Spectator*, the *Windsor Star* and the *Kingston Whig-Standard* have kindly permitted the use of photographs and historical data.

Other photographs are the work of the National Film Board, which also designed the various charts and pictographs.

Finally the LABOUR GAZETTE wishes to acknowledge the ready assistance of Mr. Edmond Cloutier, King's Printer, and his staff in facilitating the publication of this issue.

CURRENT LABOUR CONDITIONS

WHEN THE railway strike began on August 22, production and employment in Canada were at record levels and a further strengthening of demand was indicated by the rise in prices of a growing number of products. Accelerated defence preparations in both Canada and the United States, added to the sharp increase in American economic activity already under way, were the main factors responsible. While industries such as pulp and paper, lumber and mineral products were most directly affected, the new stimulus was beginning to spread to the service industries and trade as well as plants producing consumer durable goods and producers' goods, particularly steel.

As a result, improvement in the employment situation was much greater than earlier seemed likely. In the spring, there was some apprehension that such developments as the changing nature of the export trade, and increased competition for some industries from overseas suppliers would raise the number of those seeking work throughout the whole of 1950 appreciably above that of 1949. At August 17, on the eve of the railway strike, however, the total number of applications for employment on hand at National Employment Service Offices was 146,500. This was 11,600 below the figure at the beginning of the month and only 6,900 above that at the same date a year ago. Shortages of skilled workers were becoming increasingly apparent, particularly in agriculture and construction. At the time of writing there were some difficulties in obtaining enough workers to harvest the Prairie wheat crop.

The strike of 125,000 railway workers began on August 22 and lasted until late in the evening of August 30. In addition to the workers who were on strike, 47,000 other railway employees were temporarily laid off as well as slightly more than 23,000 workers in industries other than railways. These lay-offs were reflected to some extent in the fact that the total registrations on hand at National Employment Service offices at the first of September had risen only slightly to 151,600, from the total two weeks before.

Of the 23,000 non-railway workers laid off, over 8,000 were employed in coal mines in both eastern and western Canada. Shortages of coal cars made most of these layoffs necessary in the first few days of the strike. The majority of the other layoffs occurred in chemical plants, steel-using firms, and in the food processing industry, particularly flour mills and meat packing plants. Extra effort on the part of the trucking industry brought food supplies to most centres, however, and only in a few isolated areas were food shortages serious. That unemployment resulting from the railroad dispute was not more serious was due in part to the

efforts of employers to keep their staffs intact as long as they possibly could, in order to avoid disruption of their production schedules at a time when demand for their products was heavy.

The expectation of an early end to the strike was also a factor in reducing the number of lay-offs which took place. About two-thirds of the layoffs occurred in the first three days of the strike. The resumption of negotiations on August 26, at the request of the Prime Minister, increased the hopes of an early end to the dispute. In addition to wage increases, the main points in dispute were whether the hotel and water transportation employees were to be included in the same agreement, and the date of introduction of a 40-hour week.

Although negotiations broke down on August 26, the earlier decision to call Parliament on the following Tuesday provided another incentive to hold layoffs as long as possible by means of the shorter work week and the utilization of every available space to store finished products. The determination of all political parties to pass the necessary legislation as quickly as possible and the general union announcement that they would obey the law and return to work, in effect placed a time limit on the duration of the strike. Several important layoffs scheduled for the week-end of August 26 did not take place and those that did occur up until the time that Parliament met were relatively small and scattered.

The Maintenance of Railway Operations Act, which became law on August 30 ordered the resumption of work within 48 hours. The workers, including employees in hotels, and water transportation facilities involved in the dispute, were to receive provisionally a wage increase of 4 cents an hour effective immediately.

The Act applied only to the existing disputes, and did not alter the Industrial Relations and Disputes Investigation Act, or set forth special procedures to be followed in future disputes in public utilities. It provided for a period of 30 days during which the unions and managements were either to reach a settlement or agree on an arbitrator whose decision would be final. Only if they could not agree on an arbitrator within the 30 day period would the government appoint one.

The Act provided that the arbitrator could decide only on the points still in dispute at the time of his appointment. In effect this provision guaranteed the unions the best offer of the railways, which at the end of the strike included a 40-hour week, to become effective on September 1, 1951. This meant that the 40-hour week was a certainty on the railways, subject always to the proviso, agreed to by the unions, that should a national emergency be declared by the government, the men would work their present hours without overtime compensation.

IN BRIEF . . .

Canada's domestic exports to all countries during July rose to \$253,700,000, 5 per cent above the same month last year. Exports to the United States were three fifths higher than a year earlier, and accounted for 66 per cent of total shipments to all countries, compared with 43 per cent a year ago. The trend in exports to the United Kingdom and other Commonwealth countries continued downward. . . . Steel ingot production in Canada during July amounted to 259,024 tons, 11 per cent greater than last year's July output. For the seven months ending July, aggregate output was 5 per cent above that of the corresponding 1949 period. . . . Industrial employment and per capita weekly wages showed further increases at the beginning of July.

CURRENT LABOUR STATISTICS

(Latest available statistics as of September 11, 1950)

(a) Estimated on basis of sample labour force survey. Only those who did not do any work in the survey week are here classified as persons without jobs. June 3, 1950 excludes Manitoba.

(b) These percentages calculated on basis of 1949 figures excluding Newfoundland and Manitoba.

(c) These percentages compare the cumulative total to date from first of current year with total for same period previous year.

Data in this table are preliminary figures from regular reports compiled by various government agencies, including Dominion Bureau of Statistics, the Unemployment Insurance Commission, the Immigration Branch, Department of Citizenship and Immigration, and the Economics and Research Branch, Department of Labour. Detailed information can be found in the statistical appendix of the Labour Gazette.

LABOUR DAY MESSAGE OF THE HON. MILTON F. GREGG, MINISTER OF LABOUR

A few weeks ago, the people of Canada were shocked by the news of the deaths of two great friends of the working population of Canada—the former Prime Minister Mackenzie King and Humphrey Mitchell, Minister of Labour.

Just prior to his untimely death Mr. Mitchell prepared what was to become his last message to the labour world, a statement for publication in the Labour Day programs of the labour councils in many cities and towns throughout the nation.

This was his message:—

“Each Labour Day is a milestone, when organized labour looks back over the events of the 12 months which have passed.

“This year, the Department of Labour has reached a milestone of its own, its fiftieth anniversary.

“Canada has made great social and economic strides since 1900, and the accompanying growth of the trade unions has been outstanding. Although this would not have been possible without the imagination, ability and perseverance of the labour leaders of yesterday and today, I believe it will be agreed that the progress of the last fifty years would have been retarded if labour legislation had not kept pace with the times.

“At the turn of the century, trade unions faced bitter antagonism on the part of many employers, and certain sections of the population. Today, labour has a voice of confidence and strength and is a recognized force in the community. With this there has developed a sense of responsibility, a consciousness of the obligations which have come with the position reached.

“In no instance has this been more evident than during the past two years, when responsible Canadian labour organizations accepted the challenge to our free way of life.

“On all labour fronts where Communism has raised its head, it is being fought to a standstill or completely routed by the leaders and members of unions who understand the meaning of real democracy.

“The first half of the twentieth century has seen the cause of the common man advanced beyond the dreams of many early union leaders. We have seen a wider distribution of the fruits of our labours—better living standards and better educational facilities.

“Whatever the second half of the century holds for us, we must be optimists. The motto of labour is advance, and all together we can look ahead with conviction

that whatever problem arises we shall be able to meet it as a united people in the interests of the great country of which we are proud citizens.”

Those were Mr. Mitchell's thoughts just prior to his death a few short weeks ago. I fully endorse the sentiments he expressed so well.

I wish to turn now to a brief exploration of our position in relation to certain events of great consequence on the swiftly-moving world scene.

Following close on the heels of our decision to support the United Nations stand in Korea with ships and planes, has been our action to organize a special brigade of ground forces for service wherever it may be needed to fulfill our obligations under the United Nations Charter and the Atlantic Pact.

When and where this brigade shall eventually deploy in battle order we as yet cannot tell, but it will be used for a most noble cause—namely a guard against aggression. Though peace is our only objective—and no one should ever lose sight of this fact that peace is our only objective—we cannot escape the grave implications inherent in the conditions and circumstances surrounding the Korean incident.

It is this question mark hovering over the Western world which must dominate our course. Our course must naturally be towards preparedness and preparedness, regardless of degree, in this age means sacrifice. Part of our production and our wealth must be diverted into channels which from experience we know will exert unnatural pressures on our economic structure.

The spirit of co-operation which dominated our whole life during World War II so lately past must be renewed—that spirit which saw great leadership and sacrifice on the part of both labour and management in the common good.

We all must squarely face the facts and recognize the dangers to which the present situation now exposes us, so that no internal matter, regardless of its immediate importance, will sap our economic strength or divert our attention from grave international matters of direct concern to us all.

Let us all work hard together for a twofold objective, that we may be strong to help resist aggression and that we may, as well, continue to improve the social well-being of all our Canadian people.

LABOUR DAY MESSAGES OF LABOUR LEADERS

Leaders of Canada's labour organizations in their annual Labour Day messages stressed the threat of Communism to world peace, and the need for democratic institutions at home, to ensure economic and social justice, and provide a strong defence against internal Communist encroachments.

Percy Bengough, President Trades and Labour Congress

Mr. Bengough called for "unqualified determination to see that democracy is made to work for all freedom-loving people wherever they may live in this troubled world."

The TLC president warned against losing sight "of the positive steps which have been taken towards democratic expansion and enduring peace." He pointed to the United Nations Technical Aid program (L.G., March, 1950, p. 312) as one means of fostering peace.

Speaking of the International Confederation of Free Trade Unions, Mr. Bengough described it as "the instrument through which working people in the free countries of the world are determined . . . to . . . lay sound foundations upon which democracy can grow and flourish." However, it was stressed that international organizations can only be as strong as the national organizations which support them.

Mr. Bengough briefly reviewed labour's achievements here in Canada. He pointed out that the TLC membership is close to half a million, and that "many new unions have been chartered. . . ." In addition new agreements have been reached providing higher wages, shorter hours and vacations with pay.

The Congress feels however that "we still have much to do," Mr. Bengough said. He strongly advocated price controls to help stem the rising cost of living, and pointed out that this country needs more social security. The TLC favours a national health scheme and what it termed an "overall social security plan," and a lowered age limit and higher benefits for old age pensions.

Turning to the Communist menace, Mr. Bengough emphasized the necessity of making "democracy work here in Canada," and said: "The Trades and Labour Congress of Canada has always given its unqualified support to the United Nations. It will continue to. We believe that armed aggression wherever it occurs is wrong, and we are fully in accord with

the actions of the United Nations to put down such aggression.

"However, we have had enough experience with Communism and Communists at first hand in our trade unions to be entirely certain that military measures alone are not enough to defeat the well armed bandits now in control of affairs in Soviet Russia and its satellite countries, or to prevent the spread of this reactionary and deceitful ideology among the people of the world.

"We must fight Communism and the Soviet Dictatorship on three main fronts. We must step up our military defence program. We must increase our assistance to people in other countries less fortunate than ours so that they too will be able and anxious to block the progress of Communist plans for world enslavement. And, at the same time, we must do all that we can to make our own democracy grow and flourish at home."

Mr. Bengough, while stressing the importance of preparedness, warned Canadians that to forget "social security and economic democracy at home," would play into the Communists' hands. "We can encourage the spread of democracy and freedom throughout the entire world, if we have confidence in ourselves and our own democratic institutions, if we have the courage to preserve and protect them, if we have the conviction that we are right in doing so and right in urging others to follow our example.

"It was men who had confidence, courage and conviction that built our unions and bought, with their sacrifice, the freedom of the working people of Canada."

A. R. Mosher, President Canadian Congress of Labour

Mr. Mosher, referring to the unsettled international situation, said that the invasion of Korea no longer left "any doubt regarding the menace of Communism to our civilization." While making every effort to live in peace with other nations, "the democratic countries have been far too complacent in permitting the development of Communist groups, as well as the spread of Communist philosophy throughout the world." The Korean situation should put democracy on guard against Communist infiltration both at home and abroad, Mr. Mosher said.

Noting that labour in free countries has always been a target for Communist

attempts at domination, Mr. Mosher said that in "recent years, however, strong opposition has developed against Communist leadership. . . ." This opposition led to the formation, last December, of the International Confederation of Free Trade Unions to replace the Communist controlled World Federation of Trade Unions. "This was one of the notable events of the past year, and it is significant that the four large labour centres on this continent are affiliated with the new Confederation," Mr. Mosher said. Mr. Mosher reaffirmed the CCL opposition to Communism which began with the Congress' formation ten years ago.

Stressing the point that "opposition to Communism is not enough," Mr. Mosher said that "the free countries of the world (must) make their institutions function effectively in promoting the welfare of the people." But it is up to the individual in our society to recognize his responsibility. Communism can only flourish where grievances and disruption are found, and we must "make our democracy fully representative, to provide economic justice for our people. . . ."

Reviewing the CCL position, Mr. Mosher said:—

"We all believe in democratic principles, and in the traditional rights and freedoms upon which our civilization has been founded. Now more than ever we must cherish our liberties and insist that they be respected. As one of the national institutions in its field, the Canadian Congress of Labour is doing everything possible in this regard. During the past year it has laid special emphasis on educational activities, and has brought to thousands of workers an opportunity to add to their knowledge and ability through institutes and study courses. It has also carried on research into a number of Canadian problems, and has provided material for submissions to the Government emphasizing the necessity for price control, old age security, and similar matters. The views and recommendations of the Congress with regard to these questions have not been altered by the necessity of much greater defence expenditures than had been anticipated.

"We are living in an era of tension and anxiety. Our success in meeting our problems will depend upon the efforts of individuals and groups to promote good relationships, and upon their loyalty to sound principles. The Canadian Congress of Labour will gladly co-operate with other Canadian institutions in strengthening the foundations of our democratic society, and building upon them a social order in which justice and security will prevail."

Gérard Picard, President Canadian and Catholic Confederation of Labour

Mr. Picard emphasized the progress made by trade unionism in the past fifty years. He said that the trade union movement "has had to devote the greater part of its activities to . . . building up a good union structure, improving workers' wages and working conditions, calling for adequate legislation, establishing the necessary contacts with management, developing a sense of their responsibilities in its officers and members."

The first Monday in September has obtained recognition as labour's day, and unions "have organized orderly celebrations in most industrial centres, to which the public has given enthusiastic support," Mr. Picard said.

Labour today must see things in a wider scope, and "form an accurate idea" of its role in "an industrial democracy." Stressing the need for co-operation between all economic sectors, Mr. Picard said: "New responsibilities are making their appearance, and more advanced training is required. Trade-unionism must also gain a better understanding of the fundamentals on which the different economic systems are based, so that it may not be influenced by mere propaganda from one side or another. It will profit, too, by becoming familiar with agricultural problems. City workers and farm workers must get together and help one another. Co-operatives will probably be the best liaison agents between these two classes. It would be well to reflect on these few general ideas on the occasion of Labour Day."

This section covers proceedings under two federal statutes, the Industrial Relations and Disputes Investigation Act and the Conciliation and Labour Act, involving the administrative services of the Minister of Labour, the Canada Labour Relations Board and the Industrial Relations Branch of the Department.

INDUSTRIAL RELATIONS AND CONCILIATION

The non-operating railway labour organizations completed the taking of strike votes during July in connection with the recommendations of Conciliation Boards which dealt with their demands for wage increases, shorter hours of work without reduction in take-home pay, and other concessions, and early in August fixed a deadline for strike action failing a satisfactory settlement.

Introduction

During July the taking of a strike vote was completed among the non-operating employees of the major Canadian railroads represented by a group of fifteen standard railway labour unions with international affiliations. Earlier a similar strike vote had been conducted among other non-operating employees represented by two national labour organizations. Both groups reported that the employees had voted by very large majorities to "withdraw from the service" of the railways if a satisfactory settlement were not secured.

On August 1 and 2 the negotiating committees of the two groups of unions notified the railway managements that, in the absence of a satisfactory agreement being reached, there would be a concerted and peaceful withdrawal from the service on the morning of August 22, 1950.

The dispute involves over 124,000 employees of the Canadian National Railways and Canadian Pacific Railway Company and their subsidiaries, along with the Ontario Northland Railway and the Toronto, Hamilton and Buffalo Railway Company.

Following the announcement of the strike deadline, the parties entered into direct negotiations in the hope of reaching a mutually satisfactory settlement. The railway companies announced that they were prepared to go beyond the recommendations contained in the majority reports of the two Boards of Conciliation and Investigation (L.G., June, 1950, pp. 826 and 850), and to initiate a normal work-week of 44

hours without any reduction in take-home pay. No further information as to the progress of the negotiations was available at the time of writing.

* * *

On July 31 the Department of Labour was informed by the Seafarers' International Union of North America, Canadian District, that the union rejected the report of the Conciliation Board which dealt with the dispute between itself and the three principal coastal shipping companies in British Columbia, namely, Canadian National Steamships, Union Steamships Limited, and the British Columbia Coast Steamship Service of the Canadian Pacific Railway. The Department was advised at the same time that the union intended to conduct a strike vote among the unlicensed employees of the three companies.

* * *

Earlier in July a Departmental Conciliation Officer reported that he had been successful in securing the settlement of a dispute between the Canadian Brotherhood of Railway Employees and Other Transport Workers and the Canadian Pacific Transport Company affecting employees of the company in Manitoba and Saskatchewan. The sole issue in dispute was a union demand for the granting of eight statutory holidays with pay, and it was reported that a compromise was reached providing for three specified statutory holidays with pay.

Certification and Other Proceedings Before the Canada Labour Relations Board

The Canada Labour Relations Board did not meet during the month of July. During the month the following applications for certification were received:—

1. The Canadian Merchant Service Guild, Inc., on behalf of deck officers employed on vessels owned and operated by Blue Peter Steamships, Limited, St. John's Nfld. (Investigating Officer: J. R. Kinley).

2. The National Association of Marine Engineers of Canada, Inc., on behalf of operating marine engineers employed on vessels owned and operated by Blue Peter Steamships, Limited, St. John's, Nfld. (Investigating Officer: J. R. Kinley).

3. District Council No. 3, National Association of Marine Engineers of Canada, Inc., on behalf of engineer officers employed on vessels owned by Paterson Steamships Limited and operated on the Great Lakes (Investigating Officer: F. J. Ainsborough).

4. The National Union of Operating Engineers of Canada, on behalf of steam and refrigeration engineers employed by the National Harbours Board at Montreal (Investigating Officer: R. Trépanier).

5. The West Coast Seamen's Union (Canada), on behalf of unlicensed personnel employed by Shell Canadian Tankers Limited in the deck, engine room, and steward's departments of the m.v. *Western Shell* (Investigating Officer: D. S. Tysoe).

6. The International Brotherhood of Electrical Workers and the International Association of Machinists, joint applicants, on behalf of electrical workers, artificers, and marine engineers employed by the Canadian National Railways on its train ferries operating between Cape Tormentine, N.B., and Port Borden, P.E.I. (Investigating Officer: H. R. Pettigrove).

Conciliation and Other Proceedings Before the Minister of Labour

Conciliation Officers Appointed

On July 14 the Minister appointed a Conciliation Officer to deal with a dispute between the Association of Aviation Employees (Federal Labour Union No. 24609), applicant, and the British Overseas Airways Corporation, respondent, affecting ground personnel employed at Gander, Nfld. (Conciliation Officer: H. R. Pettigrove).

Settlement not Effected by Conciliation Officer and Conciliation Board not Appointed

On July 6 the Minister received a report from R. Trépanier, Conciliation Officer (L.G., June, 1950, p. 825), indicating that matters in dispute between the Canadian Seamen's Union and the Canadian Pacific Railway Company (Great Lakes Steamship Service) had not been settled. The Minister informed the parties that a Conciliation Board would not be established to deal further with the dispute.

Conciliation Boards Fully Constituted

1. The Board of Conciliation and Investigation appointed to deal with matters in dispute between the Brotherhood of

Railway and Steamship Clerks, Freight Handlers, Express and Station Employees and the Railway Express Agency, Inc., New York, N.Y., affecting Canadian employees of the Company (L.G., July, 1950, p. 1044), was fully constituted on July 7, 1950, with the appointment of the Hon. Mr. Justice Edouard Tellier, Montreal, as Chairman. Mr. Justice Tellier was appointed by the Minister in the absence of a joint recommendation from the other two members of the Board, T. P. Slattery, K.C., and Marcel Franco, both of Montreal, who had previously been appointed on the nominations of the Company and Union respectively.

2. The Board of Conciliation and Investigation appointed to deal with matters in dispute between Division No. 279, Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America, and the Ottawa Transportation Commission (L.G., Aug., 1950, p. 1172), was fully constituted on July 11, 1950, with the appointment of His Honour Judge A. Cochrane, Brampton, Ontario, as Chairman. Judge Cochrane was appointed by the Minister in the absence of a joint recommendation from the other two members of the Board, John J. Connolly, K.C., Ottawa, and C. L. Dubin, Toronto, who had previously been appointed on the nominations of the Company and Union respectively.

Conciliation Board Reports Received

On July 19, 1950, the Minister received the majority and minority reports of the Board of Conciliation and Investigation appointed to deal with matters in dispute between the Seafarers' International Union of North America, Canadian District, and

three west coast shipping companies, Canadian National Steamships, Canadian Pacific Railway Company (B.C. Coast Steamship Service), and Union Steamships Limited (L.G., July, 1950, p. 1044). The texts of the majority and minority reports of the Board are reproduced below.

REPORT OF BOARD in dispute between

Canadian National Steamships, Canadian Pacific Railway Company (B.C. Coast Steamship Service), and Union Steamships Limited, Vancouver, B.C., and The Seafarers' International Union of North America, Canadian District.

To:

The Hon. the Minister of Labour,
Ottawa, Ont.

The Conciliation Board appointed by the Minister of Labour on the 5th day of May, 1950, with reference to a dispute between the above-named Employers and their unlicensed personnel of the deck and engine-room departments (and the stewards' department of Union Steamships Ltd.) represented by the Seafarers' International Union of North America, Canadian District, has held sittings on July 3, and with the parties, on July 4, 5, 6 and 7, and since then has sat as a Board on the 12th July for consideration of the matter and settlement of the terms of this report.

The parties were represented as follows:—

Seafarers' International Union of North America

R. (Dick) Deeley.

N. Cunningham.

F. Fisher (named but not present).

The Canadian Pacific Railway Company

Captain J. T. Hamilton, Marine Superintendent, British Columbia Coast Steamship Service.

S. M. Gossage, Assistant Manager, Department of Personnel, Montreal.

H. Tyson, Personnel Supervisor, British Columbia Coast Steamship Service.

Canadian National Steamship Company

G. A. Macmillan, Superintendent, Canadian National Steamship Company.

P. E. Ayrhart, Manager, Labour Relations, Canadian National Railways.

The Union Steamships Limited

R. C. McLean, Assistant Manager, Union Steamships Limited.

Captain E. W. Suffield, Marine Superintendent, Union Steamships Limited.

E. G. Eakins, Personnel Officer, Union Steamships Limited.

On July 19, 1950, the Minister of Labour received the report of the Board of Conciliation and Investigation appointed to deal with a dispute between Canadian National Steamships, Canadian Pacific Railway Company (B.C. Coast Steamship Service), and Union Steamships Limited, Vancouver, B.C., and the Seafarers' International Union of North America, Canadian District (L.G., July, 1950, p. 1044).

The Board was composed of Harold A. Beckwith, Barrister, Victoria, B.C., Chairman; G. E. Housser, K.C., Vancouver, member appointed on the nomination of the employers, and J. Price, of Vancouver, member appointed on the nomination of the employees.

The text of the Board's report and of the minority report is reproduced herewith.

The disputes related to proposals submitted by the Union as bargaining agent, for revision of the following collective agreements:—

Canadian Pacific (Coast Service) signed December 23, 1947, effective September 1, 1947, and revised April 30, 1949, effective January 1, 1949.

Canadian National signed January 22, 1948, effective September 1, 1947, and revised April 28, 1949, effective January 1, 1949.

Union Steamships signed February 14, 1948, effective September 1, 1947, and revised April 30, 1949, effective January 1, 1949.

The Board of Conciliation consisted of—Harold A. Beckwith, Chairman, appointed by the Minister of Labour pursuant to the provisions of Section 28 (5) of the Act.

Jack Price, nominated by the Union.

George E. Housser, K.C., nominated by the Employers.

Mr. Deeley acted as spokesman for the Union and Mr. Gossage for the companies. Each of them presented his case by means of a written statement which he read and on which he made comments as he went along. Both spokesmen assured us that they had come prepared to deal with the issues on the basis of the written statements with their own comment thereon and general discussion thereof, and that neither of them expected to present evidence on oath. I made it clear on behalf of the Board that any of the representatives present would be allowed to take part in the general discussion and that the greatest possible latitude would be given in that connection and that either spokesman would have the privilege of requiring that any statement made by any opposing representative be made on oath and subject to cross-examination, or of addressing questions to any opposing representative informally or by way of cross-examination.

Although the wording is not always identical in the present collective agreements, it is substantially so and each of these agreements has the advantage of having a very complete index which is the same in each of the three agreements as to the classification of subject matter. For this reason the portion of my report which relates to the proposals made by the Union and my comment thereon can best be followed if I follow the numbering in the index and the portion of the Companies' brief which sets out the details of the three sets of proposals. I follow this course because reference is made therein to the article and section number as shown in the index in the case of each agreement, and I shall number them accordingly.

1. That Article 1, Section 2, be revised as follows:—

2. *Supplying of Men.*

(a) The Company agrees that during the period that this agreement is in effect all unlicensed personnel in the deck and engine-room departments to be hired shall be requested through the offices of the Union.

(b) Should the Union for any reason, at any time be unable to furnish a man or men to fill any vacancy or vacancies, the Company reserves the right to fill said vacancy or vacancies from other sources.

(c) Any unlicensed personnel hired in Canada for the deck or engine-room departments who are not Members of the Union, will be required as a condition of employment, either to join the Union and to continue as members thereof during

their employment or, in the alternative, to tender to the Union one month's dues and assessments as well as initiation fees as presently established and to pay subsequent monthly dues as required of Union Members (and failure to pay arrears of monthly dues, initiation fees or assessments, at pay-off shall be a bar to further employment until such arrears are paid).

This proposal really contains two different proposals although they may be connected in some agreements. The first of these is a provision in connection with the operation of the hiring hall, and the second set out in clause (c) is what is commonly referred to in trade union matters as a form of "union security". I shall deal with these separately because I think it is common ground among the members of the Board that different considerations apply to each of them.

Hiring Hall:

This is referred to by the two clauses (a) and (b) in the proposals. Each of the existing agreements has a hiring hall clause, which in the case of the CPR Coast Service and the Canadian National Steamships is worded as follows:—

(a) The Union, upon request made to them by a representative of the Company, shall furnish capable, competent and satisfactory men to fill a vacancy in any of the designated ratings. Should a man despatched by the Union be considered unsatisfactory then the Company shall so notify the Union, and the latter shall promptly furnish a replacement.

(b) Should the Union for any reason, at any time, be unable to furnish a man or men to fill any vacancy or vacancies, the Company reserves the right to fill said vacancy or vacancies from other sources.

We were informed by Mr. Gossage that supplementing the terms of this clause in the existing agreements a letter which was marked Exhibit 16 had been given under date of December 18, 1947, written on behalf of the company and addressed to the Union, and reading as follows:—

"Canadian Pacific Railway Company
Victoria, B.C.,
December 18, 1947

D. Joyce, Esq.,
Agent,
Seafarers' International Union
of North America,
Ray Building, West Hastings Street,
Vancouver, B.C.

Dear Sir,

For the purpose of Section 2 of Article 1 of Agreement, dated December 18, 1947, covering the services of unlicensed personnel in the Deck and Engine-room

Departments of the British Columbia Coast Steamship Services, Canadian Pacific Railway, the Company will rely on the facilities of the Union for replacement or new hiring of unlicensed deck and engine-room ratings. In cases where the Company rejects individuals that it does not consider satisfactory, the Union shall promptly furnish replacements. Rejection shall not be arbitrary or without due reason. Should the Union be unable to furnish promptly employees that are capable, competent and satisfactory to the Company, the Company shall secure replacements from other sources. The Company will have the co-operation of the Union in the employment of individuals recommended by the Company.

Yours faithfully,
O. J. Williams."

We were told that an identical letter had been given also with reference to Canadian National Steamships, and these letters were intended as a binding expression of policy on the part of each of the companies.

For reasons of their own we were given to understand by Mr. Gossage, the two companies would prefer to cover the situation by similar letters in this connection. I quite realize that this may be so, but I must comment that if up to the present the companies have felt themselves bound by the clauses in the agreement as varied by the letter it would be very much preferable to embody the spirit of the letter in clauses (a) and (b).

In this same connection I should refer to the fact that during the proceedings I pointed out to Mr. Deeley that clauses (a) and (b) as set out in the original proposals omitted the words "capable, competent and satisfactory" and he explained at once that in the course of the earlier part of the conciliation proceedings his attention had been brought to that fact and he had immediately corrected it, as it was not intentional.

I have to recommend as to the hiring hall situation that clauses (a) and (b) as contained in the Coast Service agreement and in the Canadian National Steamships agreement be re-worded as follows:—

(a) The Company agrees that during the period that this agreement is in effect all unlicensed personnel in the deck and engine-room departments to be hired shall be applied for through the offices of the Union. Should a man despatched by the Union pursuant to such application be considered unsatisfactory the Company shall so notify the Union and the latter shall promptly furnish a replacement. Rejection shall not be arbitrary or unreasonable.

(b) Should the Union for any reason at any time be unable to furnish a capable, competent and satisfactory man to fill any vacancy, the Company shall have the right to fill such vacancy from other sources.

With regard to Union Steamships Limited, clause 2 of Article 1 consists of three paragraphs which have the general effect of what I have recommended for the other two companies. I would recommend in this connection that while no amendment appears to me to be required, it might be desirable for the sake of uniformity that the wording in the case of all three companies should be the same, and if so the revision should take the form I have recommended.

Union Security.

The proposal of the Union as quoted above as a proposed clause (c) was thoroughly discussed and appeared to be quite impossible of compromise, as the companies were every bit as adamant in their opposition to it as was the Union in its insistence upon it. After careful consideration I propose, with what I understand is the concurrence of my colleague, Mr. Houser, that this item be held over until the time arrives for renewal or revision of the present agreements.

2. That, effective January 1, 1950, Section 2 of Article 2 be revised as follows:—

2. Weekly Leave.

(a) The employees in the deck and engine-room departments shall be granted weekly leave on the basis of eight (8) days in each month. Such leave shall be allowed in periods of not less than twenty-four (24) consecutive hours clear of the ship in the employees' home port, provided such home port is Victoria, Vancouver or Nanaimo.

(b) When schedules and traffic conditions permit, the employees shall be granted two (2) days off in each week and the balance of weekly leave shall be accumulated and allowed at a later date as mutually agreed.

During the discussion of this item the members of the Board were quite pleased to ascertain that both Mr. Gossage and Mr. Deeley were satisfied that they could between them settle upon a compromise wording, and I recommend that in that connection an attempt be made to clarify the wording and also to remove any inconsistencies as between the privileges enjoyed by the licensed personnel and those enjoyed by the unlicensed personnel. In connection with this recommendation reference may be had to page 154 of the transcript of the proceedings.

3. That, effective January 1, 1950, Section 4 of Article 2 be revised as follows:—
4. *Overtime.*

(a) The regular rate of overtime for employees covered by this agreement shall be one dollar and twenty-five cents (\$1.25) per hour for all time worked in excess of eight (8) hours in any one day or, in the case of deckhands, winchmen, watchmen and stevedores, time worked in excess of eight hours in a spread of twelve (12) hours in any one day.

(b) (c) and (d), same.

The question of increases in the rate of overtime seems in my opinion to be so closely tied in with the question of rates of wages that it should be dealt with as part of that question.

As to the application of the overtime rate, the same remark applies, but I would recommend that in any redraft of this clause care should be taken to avoid any inconsistency as between licensed and unlicensed personnel.

4. That, effective January 1, 1950, Section 8 of Article 2 be revised as follows:—
8. *Statutory Holidays.*

(a) Employees working on New Year's Day, Good Friday, Victoria Day, Dominion Day, Labour Day, Thanksgiving Day, Christmas Day, will be given the day off if convenient. If not convenient, and they are called upon to work on any of these days, they shall be allowed equivalent leave with pay, or be paid at the regular rate of overtime in lieu thereof.

(b) Same.

I would recommend that the clause in question be reworded so as to remove any inconsistencies as between licensed and unlicensed personnel.

5. That, effective January 1, 1950, Section 18 of Article 12 be revised as follows:—
18. *Subsistence and Room Allowance.*

(d) When meals are required and not made available by the Company, the employee shall receive an allowance of three dollars (\$3.00) per day in lieu thereof.

The revision proposed would in my opinion be unwise and would result in inequality as between licensed and unlicensed personnel. I cannot recommend this proposed change.

6. That, effective January 1, 1950, Section 23 of Article 2 be revised as follows:—
23. *Crew Equipment.*

(a) 1, 2, 3, 4, 6, and (b). Same.

(a) 5. Suitable mattress and pillow, but hair, straw or excelsior shall not be suitable. All mattress replacements shall be with spring-filled mattresses.

This proposal does not really present any difficulty sufficiently great for long discussion or consideration. I recommend that the proposed change be granted and the wording proposed by the Union be incorporated in the agreements.

The next three proposals should be discussed out of their numerical number slightly. Proposal No. 8 headed "Work at Sea", is as follows:—

8. That, effective January 1, 1950, Section 3, Article 3 be revised as follows:—
3. *Work at Sea.*

(a) Crew members assigned to watch duty when continuous watches are kept at sea wherever possible shall maintain a three watch system of four hours on and eight hours off. Overtime shall be paid for any time worked in excess of eight hours in any one day.

(b) Where it is not possible for the deckhands, winchmen, watchmen and stevedores to maintain a three watch system of four hours on and eight hours off the hours of work shall be eight (8) hours in a spread of twelve hours. Overtime shall be paid for any work in excess of eight (8) hours in any one day or any work in excess of eight (8) hours in a spread of twelve (12) hours.

I feel that this proposal as well as the third proposal relating to overtime should in the same manner as the third proposal be treated as part of the subject matter of proposals 7 and 9, relating to rates of wages. I make the observation however, that the effort be made by the parties in any revision of this eighth proposal to avoid inconsistencies as between licensed and unlicensed personnel.

No. 7 and No. 9 of the proposals both relate to wage increases, and my recommendation, which I believe is concurred in by my colleague, Mr. Housser, is that the question therein involved be held over for consideration in connection with revision of the collective agreements at the conclusion of the current year.

I cannot close this report without referring to the manner in which the discussions were conducted. The members of the board could not escape some knowledge of the tense situation existing with regard to these agreements and their subject matter. This occasionally made itself evident, but only to a slight degree, and I was agreeably impressed with the attitude of both sides, which I felt was conciliatory to a very satisfactory degree. In that connection I would particularly commend the two spokesmen, Mr. Deeley and Mr. Gossage, and in doing so I am not overlooking the various other representatives who attended and at

times took part in the discussion. Knowing that in all probability the three employing companies would each have a representative present, I must confess that I felt that the representatives of the Union might feel themselves embarrassed when faced with so many representatives of their opposition. This feeling was offset at the opening by the announcement that Mr. Gossage would act as spokesman for all three companies.

The other fact that impressed me in that connection was that Mr. Deeley and his assistant, Mr. Cunningham, although quite prepared to enter into a discussion in a thoroughly competent manner, were apparently not overawed by the number of their adversaries. The Board joins me in complimenting these two representatives of the Union, and assuring the employees concerned that they were well represented and that they should be thoroughly satisfied with these two gentlemen as their spokesmen, even though my report will not give the employees as much as they had hoped.

Another compliment should be paid, this time addressed to my two colleagues on the Board. Mr. Price from his long connection with labour matters was of great assistance, not only in the general discussions, but in conference among the members of the Board, and I wish to thank him for that and also for the manner in which he very courteously complied with my request that local arrangements be made in preparation for the sittings. Mr. Housser very early in the proceedings indicated that he was making an absolutely impartial approach to the questions in issue, and from that time throughout the discussions, although he was the nominee of the employers he gave the most praiseworthy demonstration that his approach to all issues was that required by his oath.

(Sgd.) H. A. BECKWITH,
Chairman.

Memorandum of Concurrence

I have perused the report of the Chairman under date of July 17, and concur in his recommendations, with one slight variation. While the wording of the hiring clause set forth in page 4 of the report is along the lines of our discussions, I would prefer to leave it to the parties to frame their own agreement in its entirety. It is possible that the suggested wording may not be entirely acceptable to either party, and that some changes may be necessary to meet the exigencies of the occasion; in other words, while we may be agreed in principle, we should not hamper the parties in their negotiations by committing ourselves to an exact phraseology.

I also wish to join with the Chairman in his expressions of appreciation of the manner in which the parties conducted themselves throughout at our hearings, and particularly to pay tribute to the able manner in which the representatives of the employees presented their case.

Dated at Vancouver, B.C., this 17th day of July, 1950.

(Sgd.) GEORGE E. HOUSSER.

Minority Report

The Conciliation Board composed of Messrs. Harold A. Beckwith of Victoria, B.C., Chairman, George E. Housser, K.C., Vancouver, nominated by the Employing Companies and Jack Price of Vancouver, nominated by the employees' organization. Hearings were held at Court House, Vancouver, commencing on July 4.

The Employing Companies were represented at all hearings, also the Employees' organization.

In giving my reason for dissenting from the report of the other two members of the board; while I am in accord with certain recommendations, I feel that the two main demands of the Employees, namely, Union Security and wage rates, were most important. While the Employees' brief specifies Union Security as the first and main point, the companies' brief deals with the question as eighth and last item. However, I am of the opinion that during the period of the hearings, it was evident that from the position taken by both parties to the dispute that Union Security was the governing factor as far as any effective conciliation was concerned.

The proposed amendment to be known as subsection C of Section 1, "Supply of Men", which reads as follows: "Any unlicensed personnel hired in Canada for deck, engine-room (and stewards department in Union Steamships Ltd. agreement) departments who are not members of the Union shall be required, as a condition of employment, either to join the Union and continue as member thereof during their employment or, in the alternative, to tender to the Union one month's dues as well as the Initiation fees as presently established and to pay subsequent monthly dues as required of Union members (and failure to pay arrears of monthly dues at pay-off shall be a bar to further employment until such arrears are paid). The Union agrees that the Company will have their co-operation in the employment of individuals recommended by the Company."

The aforementioned amendment is identical in effect to its counterpart in the

agreements between the Seafarers' International Union of North America, Canadian District, and the east coast Canadian Shipping Companies, which include the Canadian National Steamships and Canadian Pacific Steamships.

The reason given by the Companies' spokesman for refusing this clause, "that it was a matter of policy", is obviously contrary to their position taken in other agreements between the same parties, especially significant is the fact that these agreements were so satisfactory that they have recently been re-signed for another year, 1950-51.

The frequent stressing by both parties of the exceptionally good relations that exist between the Companies and the Seafarers' International on both coasts hardly justifies the position taken by the Companies when they tell the SAME organization in one locality that the clause is acceptable and in another is unacceptable due to a matter of policy. The situation as it exists at the present time, particularly on the Pacific Coast, merits more favourable consideration of the employees' proposals.

Rates of Pay.

On the matter of the employees' request for an overall increase in pay, the employees'

brief contained comparative wages paid in Local Industry in the lower brackets, which were considerably higher than the rates paid at present by the employing companies, it was admitted by both parties to the dispute that the type of employment under consideration was of a semi-skilled nature. In view of the aforementioned information and the nature of the work performed, I am of the opinion that the wages paid to the employees should be comparable with the wages paid to common labour, if not in excess of same.

In conclusion, I am satisfied that a general revision of the wage schedule should be made by an increase in take-home-pay for all employees concerned.

I wish to point out that every effort was made by every member of the Board to bring about conciliation of matters under dispute and further, I wish to state that the relationship during the whole proceeding was of a most satisfactory nature.

In conclusion, I wish to thank the other members of the Board for their co-operation and definite evidence of the impartial way the hearings were carried on.

Respectfully submitted,

(Sgd.) JACK PRICE,
Member of the
Conciliation Board.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

The Fair Wages Policy of the Dominion Government has the purpose of ensuring that all government contracts contain provisions to secure the payment of wages generally accepted as current in each trade for competent workmen in the district where the work is carried out.

There are two sets of conditions applicable to government contracts, those which apply to building and construction work, and those which apply to contracts for the manufacture of various classes of government supplies and equipment.

The practice of the different departments of the Government, before entering into contracts in the first group, is to obtain from the Department of Labour schedules setting forth the current wage rates for the different classifications of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of the contract.

Fair wages schedules are not issued in respect of contracts for supplies and equipment. Contracts in this group are awarded in accordance with a policy which provides that wage rates must equal those current in the district.

A more detailed account of the Dominion Government's Fair Wages Policy is given in the *LABOUR GAZETTE* for July, 1946, p. 932.

Schedules Prepared and Contracts Awarded During June

(1) *Works of Construction, Remodelling, Repair or Demolition.*

During the month of June the Department of Labour prepared 182 fair wages schedules for inclusion in building and construction contracts proposed to be undertaken by various departments of the Government of Canada in different parts of the Dominion.

During the same period a total of 119 construction contracts was awarded by the various Government departments. Particulars of these contracts appear in the accompanying table.

Copies of the relevant wages schedules are available to trade unions or other *bona fide* interested parties, on request.

The labour conditions of each of the contracts listed under this heading, besides stipulating working hours of not more than eight per day and forty-four per week, provide that "where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than forty-four per week, such lesser hours shall not be exceeded on this work except in cases of emergency as may be approved by the Minister of Labour and then only subject to the payment of overtime rates as specified by the Minister of Labour", and also specify that the rates of wages set out therein are "*minimum* rates only" and that "nothing herein contained shall be considered as exempting contractors and subcontractors from the payment of higher rates in any instance where, during the continuance of the work such higher rates are fixed by provincial legislation, by agreements between employers and employees in the district or by changes in prevailing rates".

(2) *Contracts for the Manufacture of Supplies and Equipment.*

Contracts for supplies and equipment were awarded as follows, under the policy that wage rates must equal those current in the district:—

Department	No. of contracts	Aggregate amount
Agriculture.	3	\$ 73,024.22
Canadian Commercial Corporation.	8,636	7,472,054.49
Post Office.	10	58,909.82
Public Works.	7	135,896.81
R.C.M.P.	3	10,807.26

* The labour conditions of these contracts contain the General Fair Wages Clause providing for the observance of current or fair and reasonable rates of wages and hours of labour not in excess of 8 per day and 44 per week, and also empower the Minister of Labour to deal with any question which may arise with regard thereto.

LABOUR LAW

Amendments to the Labour Relations Act and the Workmen's Compensation Act were the more important features of labour legislation passed at the 1950 session of the Manitoba Legislature.

Labour Legislation in Manitoba in 1950

The 1950 session of the Manitoba Legislature opened on February 14 and prorogued on April 22. Among the measures passed was one amending the Labour Relations Act to change the section which determines the effect on certification and a collective agreement when an employer's business changes hands. The definition of industrial disease under the Workmen's Compensation Act was broadened to cover any disease peculiar to, or characteristic of, an industrial process. This amendment will come into force on Proclamation. Minor amendments were also made to the Fair Wage Act, the Factories Act, the Vacations with Pay Act, and the School Attendance Act. Under the latter Act the school-leaving age which may be fixed by school districts with an attendance officer has been raised from 15 to 16 years. The Employment Services Act provides for the licensing of private employment agencies.

Labour Relations

An amendment to the Labour Relations Act, 1948, changes the section which determines the effect on existing certifications and collective agreements when the ownership of an employer's business passes to another employer or when the businesses of two or more employers are merged. Provision is also made for the termination of a collective agreement when a union is decertified and is not replaced by another bargaining agent.

Before amendment the Act provided that where a trade union was certified as a bargaining agent, and a collective agreement was in force and the ownership of the business passed to another employer, both the certification and the agreement were binding on the new employer. The Act now provides that the certification is binding on the new employer whether or not a collective agreement has been made, and a collective agreement entered into by a certified bargaining agent is binding on the new employer.

Where a merger of two or more businesses takes place, the several certifications remain in force till duly terminated. If two or more collective agreements are in force, they will remain in effect until ter-

minated and will be binding on the certified bargaining agents that are parties to them and on the employer who owns the amalgamated business. If, in the opinion of the Manitoba Labour Board, the two or more collective bargaining units may appropriately become one unit, it may order that the units be merged and may certify a bargaining agent for the new merged unit. All the existing agreements will then be binding on the new certified bargaining agent and on the employer until they are terminated or a new agreement is made, subject to any modifications prescribed by the Board to remove any inconsistencies between the agreements.

It is stipulated in the Act that, when the Board considers that a bargaining agent no longer represents a majority of the employees in the unit for which it was certified, the Board may decertify the bargaining agent. The amendment provides that if a collective agreement is in force when a bargaining agent is decertified, and no other union is certified to replace it, the employer may apply to the Board for an order authorizing him to terminate the agreement, after giving seven days' notice to the decertified union of his application for permission to terminate the agreement.

When the parties to conciliation procedure agree to make the findings of a conciliation board binding, the proceedings before the board may be received as evidence in a court action to enforce the recommendations of the Board. Previously, such evidence could not be used.

Another change would allow the Minister of Labour to refer complaints of alleged violations of the Act to the Labour Relations Board as well as to an Industrial Inquiry Commission or a conciliation officer.

A Bill to amend the Labour Relations Act, introduced by a Private Member, failed to pass second reading. The Bill would have added a provision to the section on unfair labour practices to protect the pension rights of employees if they were involved in a legal strike or lockout. In addition, the Bill would have broadened the coverage of the Act to include members

and employees of Government boards, commissions, corporations, and similar bodies.

Workmen's Compensation

Amendments were made to the Workmen's Compensation Act with respect to the definition of industrial disease, and the definition of a learner under the Act. These two changes, however, have not yet been proclaimed in effect. Other changes deal with medical aid and investment of surplus moneys in the Accident Fund.

The definition of industrial diseases has been broadened to cover any disease peculiar to, or characteristic of, an industrial process within the scope of Part I, as well as any of the diseases specified in the schedule to the Act. In thus providing for the payment of compensation for any disease peculiar to an industrial process, trade or occupation, the Manitoba Act is like the Act of Ontario which was similarly amended in 1947. The section empowering the Workmen's Compensation Board to add by regulation classes of workers who may contract occupational dermatitis is no longer necessary and is therefore repealed, as is the list of such classes of workers formerly enumerated in the schedule.

A "learner" is now brought under the coverage of the Act. This change follows a recent decision of the Manitoba Court of Appeal (L.G., 1950, p. 895) in which the Board was prohibited from awarding compensation to an injured student trainman on the grounds that the injured man was not a "workman" within the meaning of the Act. "Learner" is defined in the Act as "any person who, although not under a contract of service or apprenticeship, becomes subject to the hazards of an industry within the scope of Part I for the purpose of undergoing training or probationary work specified or stipulated by the employer as a preliminary to employment".

At the request of an injured workman, the Board may permit treatment by a registered osteopathic physician or chiropractor, and any treatment so given is under the supervision and control of the Board, as in the case of other medical aid.

Factories

The Factories Act was amended by simplifying the definition of factory and changing the sections requiring notice to be given to the factory inspector by new occupiers of factories.

The Act formerly required an occupier to serve written notice, containing specified information, on the inspector within one month after he began to occupy a factory.

Where a factory was operated for the first time, the owner, proprietor or manager was required to give prior notice of at least 15 days to the inspector, and no operations could be begun in the factory until he received a permit following inspection of the premises.

The same requirements are laid down in the revised Act but now, in addition, 15 days' notice is required before a substantial change is made in the type of operation carried on in a factory or before alterations or additions to a factory building, or to machinery, equipment or motive power are begun. A permit and a certificate of inspection are required before these changes may be made. All notices are now to be sent to the Minister of Labour rather than to the factory inspector.

The definition of "factory" has been made more concise and comprehensive and as a result the schedule which listed the types of factories covered by the Act is repealed as being unnecessary. "Factory" is now defined to mean "a building, structure, or premises of any kind, or land, in or on which three or more persons are employed for remuneration in preparing, processing, producing, manufacturing, repairing, cleaning, altering, or adapting for sale, any material, substance, article or thing, by manual labour or by the use of machinery, or by both such labour and such use of machinery".

Fair Wages

A new section in the Fair Wage Act, 1916, provides that the draft schedule of wages and hours drawn up annually by the Fair Wage Board for public and certain private construction works must be made available to the public so that written representations concerning it may be made to the Minister of Labour before he approves the schedule. The Minister must allow at least 10 days for such representations to be made. Formerly, only the schedule as approved by the Minister was placed before the public.

As now revised, the Act provides that, upon receiving the report of the Board containing its recommendations with respect to the minimum wages which should be paid and the maximum hours which employees should be required to work, the Minister must publish a notice stating that the Board's recommendations may be seen at the office of the Department and that he will receive written submissions regarding them for at least 10 days after the publication of the notice.

If the Minister finally approves the recommendations either as they were made or as amended by him, he must again

publish a notice making provision for public inspection of the recommendations and fixing a date and place for public hearings.

The recommendations of the Board respecting wages and hours of labour are, as before, to be based on such evidence of mutual agreement between employer and employee as the Board deems conclusive, or such wages and hours as the Board considers to be in accordance with prevailing conditions or, by a 1950 amendment, on "such factors as the Minister requires it to consider".

The provision requiring employers to comply with a schedule after it comes into force is amended to state specifically that every employee in respect of whose wages the order applies is entitled to be paid wages at a rate per hour not less than that specified in the order.

A further change stipulates that, unless the Minister directs otherwise, the employer must pay wages in full within five days after the end of the pay period for which the wages are payable. Previously, there was no time limit specified for payment of wages.

Acceptance by an employee of wages at a rate lower than the fixed rate does not protect the employer from prosecution for violation of the Act if the employee within thirty days after receiving his first pay at the lower rate lodges a complaint with the Minister. Previously, the Act stated that an agreement to accept less than the fixed wage was not a defence in an action for the recovery of wages or in a prosecution under Part I of the Act.

Vacations with Pay

An amendment to the Vacations with Pay Act, 1947, requires every employer to notify each of his employees who becomes entitled to a vacation of the date on which the vacation begins. Formerly, the Act stated that the employer should "permit" each of his employees to take a vacation within 10 months after he became entitled to it. This did not mean, according to a court decision, that the employer was required to notify each employee of the vacation date.

The Manitoba Labour Board is now given specific power to direct an employer to pay vacation wages to an employee or to grant him a vacation, or both. Previously, the Board was authorized to make decisions regarding any matter to which the Act applies but was not specifically authorized to make orders to carry out its decisions.

The section of the Act which provides for more favourable alternative vacation arrangements which may be established by

custom, agreement, contract of service or by any other Act was rewritten to ensure that no employee loses benefits to which he is entitled under the Vacations with Pay Act by reason of such custom, agreement, contract of service or other Act.

A Private Member's Bill which failed to pass would have amended the Vacations with Pay Act to give an annual vacation of two weeks with pay to every employee after he has been employed by an employer for two years.

School Attendance

An amendment to the School Attendance Act raises from 15 to 16 years the school-leaving age which may be fixed by by-law by a school board which has an attendance officer. As before, a person reaching the school-leaving age during the school term must attend school until the end of that term. The school-leaving age in other places under the Act is 14 years but children between 14 and 16 years must attend school if not regularly employed in industry, household duties or farm work.

Employment Services

The Employment Services Act was passed to repeal the Employment Bureau Act, 1918, which provided for the establishment of a Government Employment Bureau. Since there are local employment offices throughout the Province forming part of the Federal Government's Employment Service under the Unemployment Insurance Act, a provincial employment bureau is no longer necessary.

The new Act provides that no employment agency in the Province may be operated without a licence from the Minister of Labour. Further, no person, association, or municipal or other corporation, whether operating for reward or not, may, unless he is licensed, send any person or persuade or induce any person to go from any place in the Province to any other place within or outside the Province to seek or obtain employment.

The Act does not apply to an employment office maintained by an employer as part of his business organization for engaging workers for his business, nor to a registered trade-school which is endeavouring to secure employment for its students or graduates.

Upon application, the Minister may issue or refuse to issue a licence for the operation of an employment agency and he may also suspend or cancel a licence previously issued. A licence is valid for one fiscal year.

A provision similar to one in the Employment Bureau Act was re-enacted.

This provision forbids any person, association or corporation operating an employment agency and having knowledge of a legal strike or lockout in an industry from sending any person to take employment in place of an employee who is on strike or locked out without informing the person sent of the existence of the strike or lockout.

The Lieutenant-Governor in Council is empowered to make regulations prescribing application forms for licences, licence forms, the fees to be paid for licences and other matters. Penalties for contravention of the Act are fines of not less than \$10 and not more than \$25, and in default of payment imprisonment for not more than three months.

The section of the Employment Bureau Act which provided for the setting up of an employment office by by-law of one or more municipal corporations has been transferred to the Municipal Act.

Pensioners' Special Assistance Law Repealed

An Act passed at the 1949 session of the Legislature entitled an Act to Provide Special Assistance to Municipalities for Old Age and Blind Pensioners (L.G., 1949, p. 997) was repealed. This Act gave special assistance to municipalities for old age and blind pensioners in addition to the regular payments under the Old Age and Blind Persons' Pensions Act.

Housing

To enable the Provincial Government to act in co-operation with the Government of Canada and with the municipalities of the Province for the purpose of developing more housing accommodation in the Province, a Housing Act was passed similar to those adopted in several other provinces at the 1950 sessions. The Act takes advantage of the 1949 amendments to the National Housing Act (Canada) which provide that under agreements made between the Government of Canada and any of the provinces, the Federal Government will pay 75 per cent and the Province 25 per cent of the cost of approved housing projects.

The new Manitoba law enables the Minister of Labour or other Minister designated by the Lieutenant-Governor in Council to enter into agreements with the Federal Government to undertake joint projects for the acquisition and development of land for housing purposes and for the construction of houses for sale or rent. Further, the Government of Manitoba is empowered to make agreements with any municipality with respect to housing pro-

jects in the municipality, and the municipality is to assume the whole or part of the Province's 25 per cent share of the cost, as required by the agreement. The Lieutenant-Governor in Council may set up corporations with the powers and duties necessary to carry out the terms of an agreement. The Manitoba Housing Act, 1946, which permitted the Government to make agreements with local housing authorities or municipalities is repealed.

Minimum Age for Elevator Operators

An amendment to the Public Buildings Act repealed the section which prohibited any person under 16 years of age from operating a passenger elevator in public buildings anywhere in the Province. This section is unnecessary since the regulations issued under the Elevator and Hoist Act set the minimum age for operation of power-driven elevators at 18 years and require the operators to be licensed by the Department of Labour.

Bills not Passed

In addition to the two Bills noted above which failed to pass, several others did not get beyond first reading.

The maximum weekly hours of work of men would have been reduced from 48 to 40 hours and of women from 44 to 40 hours, unless time and one-half was paid, by a Bill to amend the Hours of Work Act. In addition, the coverage of the Act would have been extended to all work projects done by or on behalf of the Government in any part of the Province.

A Private Member's Bill to Protect Certain Civil Rights, similar to those presented in the past three years, was withdrawn after first reading. The Bill was designed to prevent discrimination on grounds of race, creed, religion, sex, colour and national origin.

A Bill to amend the Manitoba Election Act would, if it had passed, have lowered the minimum age at which a person may vote from 21 to 18 years. Further, Indians or persons of Indian blood receiving an annuity or treaty money from the Crown would be allowed to vote in provincial elections. The Bill would, in addition, have stipulated that an employer must allow every voter in his employ at least two additional hours other than the noon hour for voting and must not deduct any pay or impose any other penalty on the employee by reason of his absence during the hours. At present, the Act provides that workmen must be allowed to absent themselves from their employment from twelve o'clock until two o'clock.

Resolutions

A motion carried in the Legislature on March 9, by a vote of 35 to 15, urged the Government of Manitoba to recommend strongly at the forthcoming Federal-Provincial Conference that the Federal Government should introduce a contributory old age pension plan without a means test, and further, to request that the Federal Government make effective immediately its 1945 proposals to assume full

financial responsibility for old age pensions and to provide for social assistance for other age groups.

By a resolution of March 21, passed by a vote of 30 to 14, reference was made to the Supreme Court decision in the rentals case and the House stated that it was of the opinion that control of rents in Canada should be continued by the experienced rental control agency of the Federal Government in a uniform and equitable manner throughout Canada.

UNEMPLOYMENT INSURANCE

Selected Decisions of Umpire Under the Unemployment Insurance Act

Digest of selected decisions in appeals heard by the Umpire under the provisions of the Unemployment Insurance Act; published in two series (1) Benefit cases, designated CU-B, and (2) Coverage cases, CU-C.

Held that the employment offered to the claimant was not suitable within the meaning of the Act.—CU-B 504 (October 7, 1949).

MATERIAL FACTS OF CASE:

The claimant, a single girl, 21 years of age, was employed as a cashier by a departmental store in the City of from March, 1946 to January 5, 1949, on which latter date she was laid off due to a shortage of work. Upon termination of employment her rate of pay was \$16 a week.

On January 7, 1949, she filed an initial application for benefit which was allowed.

On May 13, 1949, the local office notified her of permanent employment with as a salesgirl at \$13 a week, which, according to the submissions, was the prevailing rate of pay in the district for that type of work.

The claimant refused to apply for that employment on the grounds that she had no experience as a salesgirl and that she wanted work as a cashier as she had worked three years as such. The local office reported that the claimant had "registered salesgirl as her usual occupation and cashier as her secondary occupation".

The Insurance Officer disqualified the claimant from the receipt of benefit for a period of six weeks because, in his opinion, she had, without good cause, refused to

apply for a situation in suitable employment within the meaning of Section 40 (1) (a) of the Act.

The claimant appealed to a Court of Referees. The Court after having heard the claimant upheld, in a majority finding, the decision of the Insurance Officer. The majority of the Court felt that, in view of her lengthy period of unemployment, the work offered was suitable in spite of the fact that it was at a salary lower than that which she received in her previous employment.

The dissenting member was of the opinion that it was not suitable as the claimant held "a competency card from her Joint Committee as a clerk on a percentage basis which, by virtue of the Decree relating to the retail trade, entitles her to a minimum weekly salary of \$19".

The claimant appealed to the Umpire.

DECISION:

When the claimant was notified of employment as a sales clerk, she refused to apply for it because she wanted work as a cashier. This reason, after four months of unemployment, was not sufficient to establish good cause within the meaning of the Act.

However, according to the dissenting member of the Court (the employees' representative) "the claimant holds a competency card from her joint committee

as a clerk on a percentage basis which, by virtue of the (provincial) Decree relating to the retail trade (City of), entitles her to a minimum weekly salary of \$19”.

Under the circumstances, I consider that the employment offered to the claimant as a sales clerk at \$13 a week was not suitable within the meaning of the Act and her appeal is allowed.

Held that the claimant had, without good cause, refused to accept a situation in suitable employment.—CU-B 527 (December 21, 1949).

MATERIAL FACTS OF CASE:

The claimant, a married woman, 36 years of age, was employed by a furrier, as a fitter, from September, 1948 to December, 1948 when she was laid off due to a shortage of work. Upon termination of her employment her rate of pay was \$35 a week. She filed a claim for benefit on July 21, 1949, which was allowed.

On September 26, 1949, the local office notified her of an offer of permanent employment, as a finisher with another furrier at a wage of \$25 a week, which according to the submissions was the prevailing rate of pay in the district for the type of work offered. The hours were 8 a day and 49 a week. The claimant refused to accept the employment stating she was ready to work at the same salary she was earning before—\$35 for 44 hours.

Upon the evidence before him, the Insurance Officer disqualified the claimant from the receipt of benefit for a period of six weeks, because, in his opinion, she had, without good cause, refused to apply for a situation in suitable employment within the meaning of Section 40 (1) (a) of the Act.

The claimant appealed to a Court of Referees.

She was present at the hearing of her case and the Court in a majority finding upheld the decision of the Insurance Officer. The dissenting member of the Court was of the opinion that “it was not fair to consider the date of cessation of work as the beginning of the unemployment period but, instead, the period during which she drew benefit”.

The claimant appealed to the Umpire.

DECISION:

It appears from the transcript of the evidence given before the Court of Referees, that the claimant filed a claim for benefit in January 1949, shortly after having lost her employment as a fitter in a furrier's store. She commenced drawing unemployment insurance benefit, but after a few weeks, was disqualified “because she was pregnant”. Subsequent to the birth of her child, she again claimed benefit and on September 26, 1949, was offered employment as a finisher with another furrier at the prevailing rate of pay in the district.

When that offer of employment was made to the claimant on September 26, she had, therefore been unemployed for a considerable length of time. Furthermore, it is interesting to note that she contemplated starting a business on her own account in the near future.

Under the circumstances, I agree with the Court of Referees that Section 40 (3) of the Act must apply in this case and that the claimant has, without good cause, refused to accept a situation in suitable employment.

As to the dissenting member's remarks, I emphasized in a recent decision (CU-B 488) that the number of days benefit paid to a claimant was not the criterion in determining cases under Section 40 of the Act.

The appeal is dismissed.

PRICES AND THE COST OF LIVING

Cost of Living

The Dominion Bureau of Statistics cost-of-living index advanced 1.0 points to 168.5 between July 3 and August 1. The index stood at 162.8 on August 1, 1949, and at 157.5 at August 2, 1948. Foods were again responsible for most of the July increase; the index for this series moving from 214.3 to 216.7. Prices continued upward for practically all meats, while eggs, sugar and coffee also advanced. Fresh vegetables recorded moderate seasonal declines. The clothing index showed a slight advance from 180.7 to 180.9, reflecting increases in footwear and piece goods. This is the first upward movement in clothing prices since October, 1949. Fuel and light advanced 0.7 point to 138.4 in response to higher prices for coal and coke in Ontario and Quebec. Home furnishings and services moved up 2.0 points to 168.9, due mainly to an increase in telephone rates in eastern Canada. Indexes for the two remaining groups continued unchanged—rentals standing at 134.9 and miscellaneous items at 132.5.

From August, 1939 to August 1950, the increase in the cost-of-living index was 67.2 per cent.

Cost of Living in Eight Cities

Further sharp increases in food prices were mainly responsible for advances in the composite cost-of-living indexes for eight regional cities. Higher rentals were recorded in six centres reflecting results of a June survey. Fuel and light remained unchanged except for Montreal and Toronto where advances for anthracite coal moved the indexes to higher levels. Other main groups were generally unchanged to slightly lower.

Composite city index increases between June 1 and July 3 were as follows: Montreal 2.6 to 171.6; Saint John 2.2 to 164.0; Halifax 2.1 to 158.5; Toronto 2.1 to 164.2; Edmonton 2.1 to 163.4; Vancouver 2.0 to 169.0; Winnipeg 1.8 to 161.9 and Saskatoon 1.4 to 166.4. During the same

interval the Dominion index rose 2.1 points to 166.2.

Wholesale Prices, June, 1950

The general wholesale price index rose 3.2 points to 165.0 between May and June, 1950. It was an all-time high for this series, exceeding the previous peak of 164.3 recorded in May, 1920 by 0.7 point. All of the eight component groups shared in the advance. Non-ferrous metals led with an increase of 14.1 points to 158.2, followed by Wood Products which rose 6.3 points to 201.0, Animal Products, 6.1 points to 173.0, and Iron Products, 1.2 points to 182.4. The remaining groups registered fractional increases. Textile Products moved up 0.9 point to 165.4; Vegetable Products and Chemical Products 0.5 point each to 149.0 and 118.0 respectively, and Non-metallic Minerals 0.2 point to 140.3.

Important commodity price increases between May and June included the following: Cheese, new (Toronto), 31.9 per cent, fir dimension, No. 1, 25.9 per cent, pork carcass (Winnipeg) 21.3 per cent, nickel 20.9 per cent, zinc, Grade A electrolytic, 20.4 per cent, lamb carcass 19.0 per cent, zinc oxide 16.6 per cent, rolled oats 15.6 per cent, steel scrap 15.0 per cent, eggs, Grade A large, 12.8 per cent and electrolytic copper 12.4 per cent.

Decreases were recorded by the following: tallow 18.2 per cent, oranges 16.9 per cent, Magnesium sulphate 15.3 per cent, pepper 15.0 per cent, coconut oil 11.2 per cent, antimony 7.7 per cent, rosin 6.7 per cent, soya bean oil 5.6 per cent, milk (Vancouver) 5.1 per cent, cast iron scrap 5.0 per cent.

The Canadian farm products wholesale price index rose 2.1 points between May and June to 152.2. Animal Products rose 5.1 points to 196.0 reflecting higher prices for livestock, raw wool, and hides and skins. Field Products edged up 0.2 point to 126.0 when an increase in grain prices outweighed declines in onions, hay, potatoes and tobacco.

STRIKES AND LOCKOUTS*

Canada, July, 1950

Strike idleness increased during the month, the number of strikes and lockouts, the workers involved and the time loss being higher than in June. The number of workers and the time loss were slightly lower than in July, 1949. Work stoppages causing the largest amount of time loss were: knitting factory workers at St. Jérôme, P.Q., aluminum foundry workers at Etobicoke, Ont., can and canning equipment factory workers at Toronto, Ont., and painters and decorators at Toronto. Four work stoppages occurred in the construction industry.

Preliminary figures for July, 1950, show 32 strikes and lockouts in existence, involving 6,379 workers, with a time loss of 50,750 man-working days, as compared with 27 strikes and lockouts in June, 1950, with 2,781 workers involved and a loss of 30,152 days. In July, 1949, there were 20 strikes and lockouts, involving 12,592 workers, and a loss of 58,005 days.

For the first seven months of this year there were 91 strikes and lockouts, with 21,189 workers involved and a loss of 210,322 man-working days. For the similar period last year there were 78 strikes and lockouts, involving 28,615 workers, and a loss of 729,737 days.

Based on the number of non-agricultural wage and salary workers in Canada, the

time lost in July, 1950, was 0.06 per cent of the estimated working time; 0.04 per cent in June, 1950; 0.07 per cent in July, 1949; 0.04 per cent for the first seven months of 1950; and 0.13 per cent for the first seven months of 1949.

Of the 32 strikes and lockouts in existence during July, 1950, one was settled in favour of the workers, four in favour of the employers, five were compromise settlements, and 11 were indefinite in result, work being resumed pending final settlement. At the end of the month 11 work stoppages were reported as unterminated.

The record does not include minor strikes such as are defined in another paragraph nor does it include strikes and lockouts about which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Strikes of this nature which are still in progress are: compositors, etc., at Winnipeg, Man., which commenced on November 8, 1945, and at Ottawa and Hamilton, Ont., and Edmonton, Alta., on May 30, 1946; textile products factory workers at St. Lambert, P.Q., August 29, 1949; and printers at St. John's, Newfoundland, May 22, 1950.

* See Tables G-1 and G-2.

FATAL INDUSTRIAL ACCIDENTS IN CANADA*

Second Quarter of 1950

There were 262¹ industrial fatalities in the second quarter of 1950 according to the latest reports received by the Department of Labour. This marks a decrease of 49 fatalities compared with the previous quarter in which 311 accidents were recorded including 40 in a supplementary list. The accidents recorded are those which involved persons gainfully employed, during the course of or arising out of their employment and included deaths which resulted from industrial diseases as reported by the provincial Workmen's Compensation Boards.

Statistics on industrial fatalities are compiled from reports received from the various provincial Workmen's Compensation Boards, the Board of Transport Commissioners, and certain other official sources. Newspaper reports are used to supplement these data.

During the quarter under review there were two accidents which resulted in three or more industrial fatalities in each case. On June 10, a trainman and two engineers were killed in a collision between two freight trains near Sioux Lookout, Ontario. Five miners were killed at Cadomin, Alberta, on June 14, when they were trapped 350 feet underground by a cave-in.

Grouped by industries the largest number of fatalities, 54, was recorded in manufacturing. Of these 24 occurred in the iron and steel products group and 10 in saw and planing mills. During the previous quarter 72 fatalities were recorded in manufacturing, including 20 in iron and steel products and 12 in the textiles industry. In the second quarter of 1949 there were 57 industrial fatalities in manufacturing.

There were 41 industrial deaths in mining during the second quarter of 1950, of which

22 occurred in the metalliferous mining group. In the first quarter of 1950 there were 39 industrial fatalities in the mining industry including 20 in metalliferous mining. During the second quarter of 1949, 39 fatalities were recorded in the mining industry.

Of the 36 fatalities noted in transportation during the quarter under review, there were 15 in steam railways and 9 in water transportation. In the previous three-month period 43 fatalities were recorded in transportation including 28 in steam railways and 9 in local and highway transportation.

In agriculture there were 22 accidental deaths during the three-month period as compared with 10 during the first quarter of 1950. The increased activity in agriculture during the spring and summer months is reflected in these figures.

There were 30 fatalities in the logging industry during the second quarter of 1950 as compared with 45 during the previous three months, and 38 in the second quarter 1949.

In the various branches of the construction industry there were 27 accidental deaths as compared with 28 in the first quarter of 1950, and 38 in the second quarter of 1949.

An analysis of the causes of industrial accidents shows that 69 or 26.2 per cent were caused by moving trains, watercraft and other vehicles. During the previous three months, 25.2 per cent of the fatalities recorded were attributable to the same causes. Falls of persons caused 44 deaths and falling objects 29. Industrial diseases, infection and other causes resulted in 51 fatalities while dangerous substances caused 37 deaths.

The largest number of industrial fatalities was recorded in Ontario where there were 111. In British Columbia there were 50 and Quebec 39.

During the quarter under review there were 70 fatalities in April, 103 in May and 89 in June.

* See Tables H-1 and H-2.

¹ The number of industrial fatalities that occurred during the second quarter of 1950 is probably greater than the figure now quoted. Supplementary lists compiled from reports received in subsequent quarters, generally revise upwards the figures for previous periods.

Deposits.....	\$000,000		2,986	2,896	2,163(5)	1,089(5)

NOTE:—Latest figures subject to revision. Many of the statistical data in this table are included in the Canadian Statistical Review issued by the Dominion Bureau of Statistics.

† Comparable statistics are not available. (1) Labour Force survey figures given are as at June 3, 1950, June 4, 1949, June 5, 1948. All figures for June 1950 exclude Manitoba. (2) Average 1926=100. (3) Real earnings computed by dividing index of average weekly earnings of wage-earners in manufacturing by the cost-of-living index; base: average for 1946=100. (4) Average 1935-39=100. (5) Year end figures. (6) Newfoundland is included after April 1, 1949. (7) Figures for 1939-1944 are production data rather than shipment.

TABLE C-6.—HOURS AND EARNINGS IN MANUFACTURING

(Hourly-Rated Wage-Earners) SOURCE: *Average Hours Worked and Average Hourly Earnings, D.B.S.*

Tables C-6 to C-9 are based on reports from a somewhat smaller number of firms than Tables C-1 to C-5. They relate only to wage-earners for whom statistics of hours of work are also available, whereas Tables C-1 to C-4 relate to salaried employees as well as to all wage-earners of the co-operating firms.

Week Preceding	Average Hours Worked			Average Hourly Earnings		
	All Manufactures	Durable Goods	Non-Durable Goods	All Manufactures	Durable Goods	Non-Durable Goods
	no.	no.	no.	cts.	cts.	cts.
June 1, 1945	44.3	44.7	43.9	70.3	77.5	61.4

* Industries classed in the durable manufactured goods industries.

¹ Since 1941, the Dominion Bureau of Statistics has prepared current indexes of average hourly earnings of the employees of eight establishments producing heavy electrical apparatus. Based upon the hourly earnings at June 1, 1941, as 100 p.c., the latest figures are as follows—Apr. 1, 1950, 240-4; May 1, 1950, 247-1; June 1, 1950, 247-4; at June 1, 1949, the index was 227-7.

² Chiefly street and electric railways.

³ For information respecting the sex distribution of the persons in recorded employment, see Table C-5.

TABLE C-10.—EARNINGS, HOURS AND REAL EARNINGS FOR WAGE EARNERS IN MANUFACTURING INDUSTRIES IN CANADA
