TRIPLE EXPANSION MARINE ENGINES. TRIPLE EXPANSION MARINE ENGINES. The most remarkable and interesting fact in connection with the re-turns of the tonnage of new ships launched last year is the decrease in the proportion of the tonnage of steamsbips to that of salling ships are compared with preceding years. Taking the returns of the Clyde, we find that the tonnage of screw steamers launched in 1885 was only 105,000 tons; but in 1834 the screw steamers stood at 190,000 tons and the salling ships at 66,000 tons; and in 1885 the flyures were, respec-tively, 316,000 tons and 64,000 tons. From these particulars we see new salling tonnage; that in 1885 the screw ships were only three that in 1885 the tonnage of new screw ships the halunce was turned are salling tonnage; that in 1885 the halance was turned are salling tonnage; that in 1885 the balance was turned are salling tonnage; that in 1885 the balance was turned are salling tonnage. In other words, during the short period to which we have referred, the annual production of salling tonchase do per cent., though the cost of steamsbips per ton, excepting, perhaps, a few special vessels, has been so low as to feave at the best hat small profits to the builders. Since the open-ing of the Suez Canal the screw tonnage launched on the Clyde has wotatever the causes may be which have left to this second reaction in favor of salling Ships, it is clear from the floures we have given but the reaction is a very decide one, and is of considerable interess to main engineers, who, if freights continue low, will probably avelet use staff actory that the latest great improvement of the main engineers, who, if freights continue low, will probably avelet which diminishes the working expenses of steamers is of permise theres at the present time. The streemely satisfactory that the latest great improvement of the main engineer to the extension of the ordinary compound appine known as the Triple Expansion Engine, where steam in ore with the contory s TRIPLE EXPANSION MARINE ENGINES.

before entering the low-p cylinder known as the infe takes place. In the ordinal two successive stages, and nediate cylinder, where expansion compound engine the steam expan the triple compound in three succe two intermediate cylinders have In a d the

used, and the steam expanded quadruple expansion engines. Those engineers who have triple expansion engine, agree per cent. when compared with may be cit-d where a saving been obtained, and no doubt c this; but 20 per cent. is a savi safely depend upon as being o expansions for the old coupo demends upon the particular argines. ho have had the largest experience with the e, agree in claiming an economy of fuel of 20 red with ordinary compound engines. Cases saving of considerably over 20 per cent. has doubt otners may show somewhat less than is a saving which ship-owners may, as a rule, substitution of

nsions for the old compound engine. Of course it ve nds upon the particular compound engine taken as the

of comparison. Taking a good specimen, that is, an ecc specimen, with which the consumption of fuel may be taken of coal per indicated horse power per hour, on a sea voy laking the average consumption of a triple expansion engin the initial pressure is ahout 140 los. above the atmosphere r at 16 lbs. per indicated borse power per bour, we have a saw per cent. When an old compound engine with an initial prethe initial pressure is about 140 los, above the atmospheric at 16lbs, per indicated borse power per bour, we have a say per cent. When an old compound engine with an initial pr (60bs, or less has been replaced by a triple expansion engine, ing in fact has approached 30 per cent. Assuming a saving cent. this large reduction is not only a saving of 30 per cen-coal bill which the owners have to pay, but, also, for any gi-age, a reduction of 20 per cent. In the amount of coal to be and to be provided for in the design of ship. The longer the the greater is the absolute saving, and in China and Australit the advantage is very considerable. Not only may the cap the coal borse ba diminished, but the size or the number of th may be so reduced as to occupy much less space than the has been made for an increase of space which may be need by the engine itself. The triple expansion engine, therefor the ship owner, who is ordering a me steam of a by reducting a content of a considerable in comparison will vessels which have not here supplied with this type of engine with the prospect of a considerable gain in comparison will vessels which have not here supplied with this type of engine the obtained as fully in the ordinary compound engine as in type, but experience bas shown that in the former no app gain in ecconsary is cerived by increasing the presence ove sollts, per square inch, and the cause of this appears to be the through a large range of temperature the loss of

tage over the simple engine from the application of

attack in any one cyninker is much less infait the range wonth are it to termerature through which the cylinder works is not the practice application of any new principle. For the ordinary compound engine derives its advantage over the simple engine from the application of the same principle. The advantages of economy of fue and compacturess of machinery spaces, was not this principle (generating steam of very high pressure and utilizing it by means of triple expansion brought into general use before now? The answe to this reasonable question is that, although the principle was unde stood, the difficulty of manufacturing sultable marine holiers we insurmountable question is that, although the principle was unde stood, the difficulty of manufacturing sultable marine holiers we insurmountable until the introduction of reliable steel plates capable of with standing, without impracticable ticknesses; the greet strains due to the higher steam pressure. The adoption of this in proved type of marine engine is following as a consequence of the improve improvements made in the manufacture of holler materials. The triple expansion engine was first fitted on hoard the Proport tis, by Mr. A. C. Kirk, in the vear 1874. This vessel was supplie with boilers on the water tube principle, capalle of standing a wor-ing pressure of 150hs, but after a time they gave considerab trouble and were removed from the ship. The trials proved that the engine was very economical in the use of steam. The water-tui boilers were tried in the yacht Isa, and gave satisfaction. The Abei deen, however, was the first vessel which came into gene al nots for the economical and satisfactory results attainable on a lor sato syster by means of the triple expansion engine. The Abei deen, however, was the first vessel which came into gene al not for a voyage by means of the triple expansion engines. The Abei deen, however, was all furstalized. When a set, the necessary data the particulars of the early trials were published at

umption of a crossed in less time than the hest re

sumption of fuel, and we may expect to find that the "nerring pond" will be crossed in less time than the hest recorded per-formances. We will now make a few observations in general terms about the mechanical arrangements of the triple expansion enzine. Where an old compound engine is to be replaced by the new type of engine, the length of engine room is generally so restricted that one of the three cylinders has to be fitted above the others, and the usual plan is to place the low pressure beside the intermediate cylinder, and to place the low pressure beside the intermediate the bigh and inter-mediate cylinders bas to be fitted above the others, and the usual plan is to place the low pressure beside the intermediate, the bigh and inter-mediate cylinders bas to place ach of the same crank. This is the ar-rangement hals frequently used in new engines; but a more satisfac-tory method is to place each of the cylinders over a separate crank. The two-crank arrangement takes up leves low the three erank arrangement gives a hetter balanced engine, with less wear and tear, and a more uniform motion is transmitted to the propellor, which con-equently is more efficient in the propulsion of the vessel. Experience has proved over and over again that the three crank engine. Moreover, when the three cylinders are placed side by side they admit of the internal parts being more easily and rapidly over-nauled than when one of them is below another. The engines of the Aberdeen are of the three crank type, and the small wear and tear during the four years they bave been in use should raise this type in the favor of sbipowers. To overcome the difficulty of obtaining a well-halanced triple expansion engine with two cranks, and rapidly pressure aver the difficulty of obtaining over each crank, the high pressure and a low pressure over the other one erank. Mith this plan the low pressure cylinder is divided hot two separate cylinders of equal timensions, This four cylinder over rank, and the intermediate and another tem-grank. With this plan the low pressure cylin-parate cylinders of equal dimensions. This is not likely to be a favorite for triple expans expansion it is a very suitable arrangement, rediate cylinder taking the place of one o

remediate cylinder taking the place of one of the low linders. Some little difficulty has been experienced with a few liers working at sea under the high pressures now coming i d this difficulty has been erroneously ascribed to the enclu-liers of the Aberdeen and other vessels have been in coms the longest sea voyages, and have given practically no comperience proves that with proper care, and such care as it of the cabilities of the ordinary seargoing engineer, and e conditions which obtain at sea, the boilers may be worke plact pressures without giving trouble. It's essential eat a quantity of of sh and not be used in the cylin passes the condenser and is carried by the feed water flers, where with the ordinary scale if forms a deposit bu Expension yond the case the conditions we lightest pressures when it passes the condenser and a such a poor conductor of boat that a two such a poor conductor of boat that a two such a poor conductor of boat that a two such a poor conductor of boat that a two such a poor conductor of boat that a two such a poor conductor of boat that a two such a poor conductor of boat that a two such a poor conductor of boat that a two such a poor conductor of boat that a two such a poor conductor of boat that a two such a poor conductor of boat that a two the more likely is the plate to sufter partial col the more likely is the plate to sufter partial col the more likely is the plate to sufter partial col the density of the water in the boller, feed and the density of the water in the boller, the worked on the long est sea voyag that within a measurable perior we expansion, ster the suparsion in the sufter particular the two the suparsion in the sufter particular the sufter particular the suffer the suparsion in the suffer particular the suffer the super suffer the suffer particular the suffer the suparsion in the suffer particular the suffer particular the suffer the suffer the suffer particular the suffer particular the suffer the suparsion in the suffer particular the suffer particular the suffer the suffer the suffer particular the suffer particular the suffer the suffer the suffer particular the suffer the suffer particular the suffer particular

est crouble. It is probable that within a measurable period of time the quadru-ple expansion engine will receive more attention than has yet beer given to it. With quadruple expansion, steam of higher pressur than that generally used for triple expansion is utilized in the manne

Gn(The P SAIL PLAN OF SMALL CRUISER "MERMAID."

Steam pressures as high as 180lbs, on the square inch have lately been used with triple expansion or quadruple expansion engines, and this is not likely to be much succeeded for some considerable time, for the marine boiler is not well adapted for working under a bigher pressure, owing to the thicknesses of furnace and shell plates required for such a pressure, and the ordinary type of boiler is not likely to be readily or easily superceded by a new type. The marine boiler survives numerous competitors in virtue of is superior fitness for marine work, and as its limit of working pressure has been prac-tically reached there is no reason to apprehend that the type of en-gine now coming into use will be speedily replaced by a much more economical machine.—*The Shipping World*, March, 1888.

THE A. C. A. TROPHY.

A WORD FOR THE AMERICAN SLOOP.

A WORD FOR THE AMERICAN SLOOP. itor Forest and Stream: ast month while in Boston I had occasion to look at the yacht lding for General Paine. She differs little from the Puritan ept that the lead keel is carried further at than in the latter. II she outsail the Puritan? I do not see why the controlling factor at of size should not work as well in her case as in the other, for all her victories (except in that of Priselila and Genesia) over ops and cutters, in the light of comparison, size and not excellence model has been the controlling factor. It seems to be the prevail-ops and cutters, in the light of comparison, size and not excellence model has been the controlling factor. It seems to be the prevail-ophinon that nothing can be built that will outsall the Puritan. hat has she accomplished for a one-masted centerboard yacht to stall them in their ophinon? She has not equaled the performances smaller, thoroughbred American centerboard sloops. Take her ord for the season. Reginning with her maideu race at Marble-ad, where she had nothing to test her but keel schooners and sloops d cutters of inferior size, and any one acquainted with yacht salling ows that any fair sailing centerboard sloop can outsal a fast keel hooner of proportionately larger tonnage as these schooners were siger than the Puritan. The cutter Bedouin, a yacht vastly inferior size to the Puritan, defeated the speediest schooner of the lot by iger ouds over a shorter course in the same force of which the pre-ting season.

To the Purlian, defeated the speedlest schooner of the lot by roulds over a shorter course in the same force of wind the pre-geason. races for the Goelet cup, where the superiority of size showed over the small sloops, and the handicap of a faulty rig and not fierfority of model was the cause of the defeat of the Priscipla. the trial races, and the difference even with the handicap of rig dly worth mentioning. The designer and sponsors of the Pris-iccepting defeat in preference to victory at the sacrifice of the iples by which we have held the supremacy for thirty years or And this coming season, under an improved ric, the American i will yet show its soperiority. In the race with Genesta the yis of so small a margain that it passes into insignificance, ared with the victory of Vixen over Maggie. Type against type, are is no question but that Maggie is the specidiest of her class ounage in English water, while Genes a ranks second or third class. I understand that there is a one masted yach the size ritan building at Bay Ridge and modeled by Ellsworth, the firm der of american idea; which he has so practically demon-d the superiority of . and now he has departed from the prin-that have made him famous, and joined the army of low-weizbt ists and entiter rigs. What have we to show for advancement in designs of original conception, when we have to look to the sh for ideas? Our models had their faults which should be cor-tion, but it is not necessary that we should horease the draft to reat extent, as i sincerely believe thatan American conbur-tustal and be constructed of the same length of the Purisao, of eam, less draft and less sail area, with her ballast inside, that ustal super lengths thoroughbred cutter or American combu-that has been constructed on borrowed ideas. LovALTY.

NEW ROCHELLEY, C. -On March 9 the above club held its annual neeting. The following gentlemen were elected officers for the ensu-great: Chas. Pryer, Commodore; J. H. Ryley, Vice-Commodore; C. Sterling, Rear-Commodore: Ph. J. Krackel. Scoretary, Eugene ambden, Treasurer, Ward Wheeler, Measurer; N. D. Lawton, F. T. Ider, John W. Rough, Oscar L. Richards, C. Buchanan, Trusteez, pointed by the Commodore on Investigating Committee, Messrs. G. Chapin, D. D. Acker, Jr., Walter Large. At this meeting 22 we candidates were proposed which will probably bring the mem-ership list up to 130 at the next meeting-a remarkable showing rea club only having organized last July. The initiation fee to this ub is §15 and dues §10 per year. It has secured Echo Island, off the mouth of the harbor of New Rochelle for a club site. The house the island at present will be put in first class condition, and add-onal improvements made on the island. The harbor is perfectly orbeted against storms from any quarter, making it a very desir-ble club to join for this reason.

He club to join for this reason. THE INTER-LAKE YACHTING ASSOCIATION.—The first meet Iliopen at Detroit on July 5, with racing, etc. on the 6th and 6th and continued at Put-In-Bay until the 11th. Both the Michigan and the In Bay clubs have made liberal offers in the way of prizes, and e meet is sure to be a great success and to give yachting a boom, he Western Cance Association *re to have their races at Ballast land during the same week, so the Western aquatic clubs will have very interesting as well as pleasant time this coming season.

very interesting as well as pleasant time this coming season. DISBANDING OF THE HAVERHILL Y. C.-At a meeting of the averbill Y. C. March 3, it was voted to disband and sell the prop-rty. The only yachting organization in Haverhill now is the Pen-teket Y. C. All matters in regard to yachting should be addressed o Thomas Conley, Secretary Pentucket Y. C., Haverhill, Mass. BUFFALO Y. C.-Four members were elected at the last meeting, committee was appointed to amend the rules as to time allowance and another committee to act with the officers of the club in connec-on with the building of a new club house. A squadron cruise will the place during the season.

Canoeing.

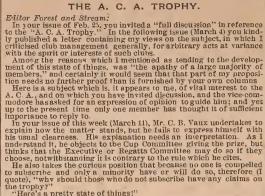

Address all communications to the Forest and Stream Publishing Co.

CANOFISTS are invited to send us notes and full reports of cruises. Jub meets, information about canoeable waters, and other commu-izations of interest.

Secretaries of cance clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signals, etc. of their clubs, and also notices in advance of meetings and races, and reports of the same. Cancelsts and all interested in canceing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

He also takes the curious position that because to due to complete to subscribe and only a minority have or will do so, therefore (I quote), "why should those who do not subscribe have any claims on the trophy?" "Here's a pretty state of things!" The resolution in reference to offering the trophy as published in your issue of Feb. 25, reade: "In view of the approaching visit of the English canceists be it resolved that a trophy be offered for compe-tition at the A. C. A. meet, under A. C. A. rules, open to all A. C. A men, and members of any recognized foreign canoe club, the trophy to be the property of the winner." If Mr. Yaux had read the above before writing his letter I do not see how he could have written his interrogatory, previously quoted. If a certain number of canoeists combine to offer a prize, and to exclude from competition non-subscribers, by what right do they do it in the name of the A. C. A. and under its rules? But of course Mr. Yaux is wrong in the position be assumes. Any person who has had much club experience knows how much of the "volur tary" there is in club subscriptions, just about as much as there is when the plate is passed at church. After a ferid appeal from the publit, and with your best girl watching to see how much you deposit. But, if Mr. Yaux is right, and the committee do assume to give the prize in the name of the A. C. A. and to exclude all non-subscribers to the fund, then indeed it is high time to awaken to the danger ahead. There is still another question I would like to have answered and that is, who are the discoverers that these English visitors are so much superior to our own members, hat what is good enough for us is not good enough for them? Woo is responsible for the assumption that the henor of winning an A. C. A. flag would not be sufficient in-ducement for them, unless backed up hy a valuable prize with privi-iege of keeping the same when won? It certainly is the reverse of complimentary to them.

REA ANGLING TALKS. DEER HUNTING.

BY JUDGE JOHN DEAN CATON.

158

BY JODGE JOINT DEAN CATON. By and by it will be time to hunt antelope and deer. It is always time to read about them. Judge Caton's book on the antelope, elk, deer, moose and caribou of America discusses in a readable way the life history of these animals and the methods of their capture. It is the work of an enthusiastic sportsman who has had a wide experience and has devoted the leisure of years to studying these interesting game animals. The volume is very fully illustrated, and is a perfect storehouse of information and entertainment. The first edition was sold by the Boston publishers at \$4. Price \$2.50.

WOODCRAFT.

BY "NESSMUK."

BY "NESSMUK," A COMPACT pocket handbook of condensed, boiled-down, gumption. "Nessmuk" has been "in the woods" in Michigan, New York, Pennsylvania, and South America, and this is a book for outers, wherever they kindle their camp-fire. The author believes in "smoothing it." He has learned how; now he tells others. It is much easier to learn from "Nessmuk" than from Dame Experience. We should not be surprised if "Woodcraft" completely revolutionized the methods of camp-ing out. If you are going to the woods, read "Woodcraft" before you go. It may add to your trip a hundred fold. Price \$1.00.

DOG TRAINING. BY S. T. HAMMOND.

BY S. T. HAMMOND. H E was a promising puppy, and when you turned him over to the breaker to be educated, you thought he was bound to make "the best dog in the world." And you'll not soon forget how disappointed and disgusted you were when the dog, the breaker and the big bill-all three turned up together, and you saw that the animal's spirit was broken and it would take a steam calliope to make him mind. Now, this could not have happened if you had been wise enough to buy a copy of Hammond's book, and in your odd leisure moments train the dog yourself instead of having him broken by some one else. We are selling edition after edition of this book, and it is revolutionizing the system of preparing dogs for work in the field. Price \$1.00.

SHORE BIRDS.

A PAMPHLET for those who "gun" along the shore. Tells and what they do at home. II. Range and Migration-Where they go to breed and where to spend the winter. III. A Morning Without the Birds-An episode of shore shooting. IV. Nomenclature-A list of our American species of *Limicola*, with a description of each species. V. Localities-Where to go to shoot them. VI. Blinds and Decoys-How to shoot them after you have reached the grounds. 45 pp., paper. Price 15 cents.

BY GEORGE DAWSON.

BY GEORGE DAWSON. A S a political writer of conceded power, Mr. Dawson welded a trenchant pen; when he terned from the conflict of parties to the praise of the favorite pastime of "simple wise men," his essays, limpid as the crystal streams, are aglow with the soft summer sunlight and melodious with the songs of birds. When angling was the theme, he wrote from a full heart and in closest sympathy with the scenes and pursuits described. These "Talks" are brimful of manly, wholesome sentiment; there is in them all not a particle of cant. Their sincerity and overflowing spirit at once win the effect is magical, like that of the mimic players in Xenophon's *Memorabilia*: he who reads, if he be an angler, must go a fishing; and if he be not, straightway then must he become one.—*Extract from Publishers' Preface*. Cloth, price 50 cents.

CANOE "AURORA."

BY DR. C. A. NEIDÉ. A CHARMINGLY written and always entertaining account of a cance cruise from Lake George, New York, down the Ohio and Mississippi Rivers to the Gulf of Mexico, by the Secretary of the American Cance Association. To read the cruise of the "Aurora" is the next best thing to having made it; and the reading is decidedly more pleasant than would have been participation in some of the misadventures related. 216 pp., cloth. Price \$1.00.

10

Second target represents 5 consecutive shots made by J. D. Marks, June 24, 1885, at Springfield, Mass., 200 yards, with rest, using a Union Hill, .32-caliber. The entire five shots are inside of a $1\frac{5}{2}$ -inch circle. The cut is full size.

Hunting Trips of a Ranchman.

SKETCHES OF SPORT IN THE NORTH-ERN CATTLE PLAINS, TOGETHER WITH PERSONAL EXPERIENCES OF LIFE ON A CATTLE BANCH.

By THEODORE ROOSEVELT,

AUTHOR OF "The Naval War of 1812."

Popular edition. Octavo cloth, fully illustrated.

\$3.50.

"The author may rank with Lloyd, St. John and a half dozen other sportsmen whose books will always be among the sporting classics. . . . He vividly describes the pictures which clearly present themselves to him . . . and shows himself a careful naturalist as well as a keen sportsman. His book is a repository of thoughtful woodcraft or prairie craft."_b-Saturday Review.

"Mr. Roosevelt has given a peculiar charm to his book from his intense love of nature and his capac-ity to communicate to others his own impressions, . . . His book forms the most important chapter in the long history of the conquest of the American wilderness."-The Atlantic,

"He must be a hopeless reader who does not rise from it with a new and vivid sense of 'the fascina-tion of the vastness, loneliness and monotony of the prairies,' and of 'the sad and everlasting unrest of the wilderness,' of the Big Horn Mountains, in addition to pleasant familiarity with their flora and fearned to be heady out the otherm should be fauna. . . As already said, the charm about this ranchman author is that he is every inch a gentleman sportsman. . . A careful observer of the characters and individualities of animals. . . . We helieve he may safely reckon on a wide and permanent popularity with English readers, even with those of them who, like the writer, have long since laid aside rod and gun. ^{-}The

THE DOCUMENT REPUDIATED.

THE opening paragraph of the misleading document relating to deer hounding sent to the New York Legis-lature by Dr. Samuel B. Ward, President of the Eastern New York Fish and Game Protective Association, of Albany, was as follows:

was as follows: At a meeting of the Eastern New York Fish and Game Protective Association, h-1d on Jan. 18, 18%6, the President stated that soon after the organization of the Association the attention of the Executive Committee had been called to the present condition of the law in this State concerning the preservation of the deer in the Adirondack region, and that he had been directed to correspond with well known residents of the North Woods and others—those who were most int-prested in the success of that district of the State, and knew most about it—and ascertain what their views were on this subject. A part of the l-tters, extracts of letters and documents which follow, were received in reply. It is to be repretted that lack of space pre-vents the publication of them all in fuil. It was further stated—

It was further stated-

The Executive Committee having attentively considered all the suggestions made in the various communications received, instructed their counsel to draw up a bill to be introduced into the Legilature at as early a date as practicable, which should embody the views of as many intelligent and interested persons, and antagonize as few as possible

In our comments on this document (Feb. 11) we sail that because of its peculiar character it was not creditable to the society, and we took the liberty to suggest:

If the Eastern New York Association was not organized by active deer hounders for the express p proce of conjuring with its name at Alwayy to help their cause, the members owe to the public a disclalmer of this panupilet sent in the society's name to the Legislature.-For est AND STREAM, Feb. 11.

In reply Dr. Ward wrote (Feb. 18) as follows:

The Eastern New York Fish and Game Protective Association are responsible for the pamphlet to just exactly the extent stated in the opening paragraph. The meeting was regularly called by the secre-tary and what occurred is distinctly reported.

Commenting on this we said:

We did not question the regularity of the meeting of the Eastern Association, we simply intimated the suspicion, which Dr. Ward's acknowledgment goes to confirm as a fact, that the association was shrewely crganized by active deer hounding advocates to influence the repeal of the present wise law.

This last statement, we have now ascertained, was unjust to the Association, and we take much pleasure in correcting it. The correction is tardy, but until the last part of last week we had no information warranting us in making it.

We cheerfully state that, after a personal explanation by one of the officers of the Association, we believe that the society

was not "shrewdly organized by active deer hounding advocates to influence the repeal of the present wise law. The truth appears to be that the Association has been put forth as champion of a practice which its members condemn, and its name and influence have shrewdly been employed in the attempt to effect something which the members, ten to one, In other words, the hounding advocates did not oppose. shrewdly organize the society for their purpose, but they did shrewdly make use of it after it was organized.

An officer of the Association has declared to us in most unequivocal terms that the Eastern Association is not behind the effort to repeal the liw; that it is not responsible for the misleading document which went to the Legislature ostensibly with its sanction; that it has never endorsed the bill (contained in the pamphlet) prepared by its counsel; that it refused to pay for the printing of the pamphlet, and that the originators of the society had no thought that its name would be used to bolster up the cause of the deer hounders.

This statement is sufficiently comprehensive and emphatic. It relieves the Eastern New York Fish and Game Protective Association of a certain degree of mistrust and sus-picion on the part of the public, a feeling which it would have been difficult to overcome so long as the responsibility for the pamphlet in question attached to the society.

The disclaimer has been made in another way, equally as effective; although the credit for it belongs not to the Association, but to the efforts of certain gentlemen whose interest in Adirondack game protection induced them to make a careful canvass of the Association's members, to determine by what authority it was represented as a game protective society occupying the extraordinary position of seeking to repeal a game protective statute. Prepared blanks were sent out to the 123 members of the society, requesting their views on deer hounding. Following is the result up to March 19, the total number of replies received at that time being 72:

Have no opinion	5
Uncertain	1
Decline to vote	1
In favor of hounding	6
Opposed to hounding	58.

THE PROGRESS OF THE WORK.

THE good work of protecting our birds from useless slaughter goes bravely on. The readiness and even eagerness with which it is undertaken by people of all classes and all ages is most encouraging, though it is not surprising. We have from the first felt confident that in order to abate the evil it was only necessary to bring the harm which was being done to the people's attention. To do this work effectively, it was necessary that a strong and concerted effort should be made, and that the aid of every one who loves nature should be enlisted. To provide the machinery for this united action the AUDUBON SOCIETY was formed.

During the six weeks that have elapsed since the plan of the Society was announced in FOREST AND STREAM we have received a vast mass of correspondence on the subject, have distributed many thousands of circulars and pledges, and have received strong words of encouragement and sympathy from many of the best people in the country. The move-ment is confined to no one section of the land. From Maine, from Fiorida, from Louisiana, from California and from Canada come assurances that our hands will be upheld in the work which we have undertaken. Massachusetts is one of the most carnest States in her attitude for protection. The strong efforts of Mr. Geo. T. Angell cannot fail to have a most excellent effect.

As an example of what may be done by one man, a case may be cited in which twenty-five pledges were sent to a gentle man in New Bedford, and in three days the whole twentyfive were returned, signed. The farmers, as might be imagined, are very earnest in their support of the AUDUBON Society, and more than one New England farmers' club has placed itself on record as urging the formation of a branch AUDUBON SOCIETY in its locality.

The young ladies at some of our largest female colleges have actively interested themselves in the movement, have formed branch societies, and they are certainly most efficient and useful workers in the cause. They can wield a tremendous influence in checking forever this barbarous fashion, and can thus contribute directly toward the end we have in view. We see every reason to predict for the young society a vigorous and sturdy growth which nothing can check. We hope before long to send out to every member of the AUDUBON SOCIETY a certificate of membership. These have been unavoidably delayed by the difficulty of getting a good

portrait of the great naturalist from whom the Society takes its name, but we believe that they will shortly be ready for distribution.

We hope that others who may be interested in this subject, but with whom this interest has not yet taken active shape, may send in to us their names for information and pledges, There is no reason why the membership of the AUDUBON SociETY should not in a short time run up into the hundreds of thousands. The good that can be done by these members is enormous.

IS THERE AN AFRICAN IN THE WOODPILE?

THE Senate Committee on Railroads have submitted their report on the bill granting the right of way to the Cinnabar & Clark's Fork railroad through the Yellowstone National Park to the Clark's Fork Mine. They have thrown out the Senate bill, and favorably reported as a substitute the House bill, which grants a similar right.

The report is a remarkable document, and in its two printed pages shows more superficiality and contains more misinformation than can usually be found in this amount of matter. It opens with the statement that the committee "given this bill very careful consideration," a statement has which, we arc sorry to say, is flatly contradicted by most of the succeeding paragraphs. If these gentlemen have "very carefully" considered the bill, how can they tell us that "it appears that the portion of the Park through which the railroad would pass contains no objects of public interest to attract the attention of tourists, and that the preservation of the timber and game of the Park is more hindered and the game more extensively depredated upon by the present and increasing travel upon the wagon road than it would be under the operation of the railroad." Do these intelligent and well informed gentlemen imagine that forests are preserved by cutting them down to make railway ties? or that the game is to be made more secure by introducing settlements of railroad hands into its haunts? or does it take all the United States Senate for idiots?

As a specimen of the "very careful consideration" given the bill by the committee, the following sentence will do very well: "The total length [of the railroad] within the Park would be about twenty five miles." Now, if any of these amiable gentlemen had gone to the trouble of taking any ordinarily good map, and with the dividers or a slip of paper had measured the distance along the Yellowstone, East Fork and Soda Butte Creek, from Cinnabar to Cooke City, he would have found without any very great amount of labor, and even without any "very careful consideration," that the total length of the railroad within the Park, as laid down by this bill, is not very much short of sixty miles. The truth is that the whole line, except two or three miles, the distance from Cinnabar to Gardner, is within the Park. In support of the absurd statements made in this report

the committee quote Lieut. Kingman's report of 1833, in which he states that the present road (i. e., three years ago) is in bad condition. Mr. Teller, a gentleman largely interested in mines and mining, is also quoted as recommending the granting of the right of way. Mr. Gannett, who has cxplored portions of the Park, also recommends the route, does General Anderson. Neither of the latter are familiar with the castern slope of the range.

The committee appear to have taken pains to consult only those who are in favor of the route through the Park, and they have omitted to take the opinion of several gentlemen whose experience in this region is of more value than that of any of those whom they quote. It is quite remarkable that during this "very careful consideration" which they gave this bill they failed to remember that within easy reach of their committee room was Mr. At nold Hague, whose long experience in the Park and familiarity with the Clark's Fork country and Cooke City should make his opinion weigh more than that of any number of less well-informed men. They probably forgot too, that Mr. W. Hallett Phillips, of Washington, who was sent out list year by the Scretary of the Interior to examine into the condition of affairs in the Park, would have had good opportunities for forming an opinion as to the desirability of a railroad within the Park. There are a number of other well-informed persons who might have been asked to testify on points connected with the bill and who could have given the committee far more reliable information than they seem to have been able to obtain in the course of their investigations.

The fact appears to be that this committee have been grossly misled, and as a consequence, they have made a report which, to any one acquainted with the topography of the Park, is a mere hodge podge of fatuities. We are accus-tomed to stupid blunderings by Boards of Aldermen and even by State Legislatures, but we ought to be able to look for better things from a committee of the United States Senate, and when such a committee tell us that they have given a bill very careful consideration" it ought to mean something.

It is a serious misfortune to the interests of the Park that Senator Vest is sick and at present absent from Washing-ton. His intelligent interest in that region is sorely needed now.

It seems extraordinary that after it has been pointed out, as was recently done by the FOREST AND STREAM, that there are routes from the Northern Pacific Railroad to the mines which are perfectly practicable, and which do not enter the Park, this committee should have recommended the Cinnabar route. If the Yellowstone Park is to be turned over to enrich a corporation when the poor man cannot build a cabin in it, we think that the people at large will want some better reason for it than is furnished in this curious document.

The Sportsman Tourist.

A VISIT TO TOBIQUE LAKE.

A VISIT TO TOBLOUE LAKE. The Tobique, one of the branches of the river St. John, In the Province of New Brunswick, empties into the mouth, and is one of the pretiest in that Province. Its mouth is reached by the New Brunswick ranguary, where there is a considerable settlement of Abenaqui Indians, who are always ready to carry visitors in their light and graceful cances to the very source of ther beautiful river, distant about ninety miles from where it unites its waters with those of the St. John. Many of these Indians are very expert cancement and hunters, good cooks, and very ready-witted and intelligent. Some of the legends received by tradition from their fathers are remarkably interesting, and are com-mon to the whole Aleonquin family, as the writer discovered of take Superior in the State of Wisconsin. It may be men-tioned as a singular instance of the tenacity with which a rimitive people adhere to words once received by them, that these Indians to-day call any king "King James," while Queen Victoria's designation is King James," while primitive people adhere to words once received by the primitive people adhere to words once received by them, that these Indians to-day call any king "King James," while primitive people adhere to words once received by them, that these Indians to-day call any king "Ling James," while primitive people adhere to words once received by them, that these Indians to-day call any king "Ling James," while primitive people adhere to words once received by them, that these Indians to-day call any king "Ling James," while a ready of the public to the remarkable circumstance of these people, a portion of whom resided on the St. Lawrence, where he was their missionary, retaining the name of that wing who ruled England when they first made the acquaint-ance of the whites, and treating it as that of the designation of all subsequent sovereigns. — Tor sixty miles from its mouth to the Forks the Tobique

and of the whites, and treating it as that of the designation of all subsequent sovereigns. For sixty miles from its mouth to the Forks the Tobique is a broad, rapid river, free from falls, its waters are bright and pure, its banks only are settled. At Nictaux, or the Forks, as it is called by the settlers, the Tobique divides into two principal streams, Nictaux or Little Tobique, and the Right-hand Branch or Campbell River, the former being much the better stream for the canoeman, as he will have to make no portage for a distance of thirty miles, but can pole his canoe all the way from the Forks into Nictaux Lake, where, if he be so disposed, by a portage of two miles he can reach the Nepisiquit Lake and descend the stream which flows from it to Bathurst on the Intercolonial Railway. There is not a solitary settler above the Forks of the Tobique, and nothing but an unbroken forest, where caribou, moose, beaver and other wild animals are yet to be found, more especially on the very headwaters of these branches, where they come near those of the Little Southwest Miramichi. The Right hand Branch can be ascended to Tobique Lake by means of canoes, but it is a rapid and difficult stream, as it makes a great bend to the south as one ascends, and thus in going to this lake one can sail at least thirty miles of dis-tance by making a straight line from the mouth of the Gul-quac a stream which enters into the Tobique about forty miles from its mouth to the Tobique and Long Lakes. As a portage was being cut through the woods last autumn be-tween these two points, the writer determined to revisit by this means these lakes, which abound with trout, and in one of which, Long Lake, the "Tuladi" (*Salmo ferox*) is also taken. Our first day's journey was along the river bank, and, over a good road, by nightfall, we had received of the shak, and,

one of which, Long Lake, the "Tuladi" (Salmo ferox) is also taken. Our first day's journey was along the river bank, and, over a good road, by nightfall we had reached the house of a Mr. B., where one of our party said that we would be well entertained. Another, however, who knew the disposition of Mr. B. better, shook his head at this. When the inquiry was made the consent to remain was given in such a manuer that we all concluded that we would go ten miles further, to a Mr. Knowlton's, where we were comfortably entertained. Early the next morning Mr. Knowlton ferried us across the river in alog cance, and led us up an old timber road for about two miles, where we struck the new portage which was bung cut out to Tobique Lake. Where we first reached his road it ran through a country which fire had destroyed long ago. Although it was now the end of September there was yet great abundance of blue berries to be gathered from the vines or shrubs which were scattered around. The rock was a red sandstone of the subcarboniferous formation, and laid in a basin which was surrounded by dis-tant hills which here and there showed sharp irregular peaks. The "Blue Mountains," which laid to our left sloped off to the south and east, their summits terminating in irregular peaks, one of which reaches an elevation of nearly 2,000 fext above the level of the sea.

peaks, one of which reaches an clevation of hearly 2,000 feet above the level of the sea. The forest which had clothed these mountains the first time that I saw them had been destroyed by fire and they were now covered by white birch or poplar trees whose now golden leaves showed off the darker color of the ancient mountains against which they stood out in a pleasing relief. There were but three of us, and our intention was to walk that day about fourteen miles on the portage until we reached the place where the men who were engaged in cutting it out were camping, so that we were not obliged to carry any loads. Two or three miles brought us to the forest; the day was warm and the shelter of the trees was very grateful. Passing a smell stream we noticed some choke berries, a fruit of which the common bear is very fond, indeed one of the teamsters had surprised one feeding on those at this very apot. Our road was altogether through hard wood lands, often over long hills, the ascent of which, though gradual, was tedious; every here and there we crossed spring brobks of the clearest water, beside which we sometimes seated our

selves for rest and refreshment. There was but little wind, but each breath filled the air with the golden leaves of autumn, and the faint rustle that they made in falling as they struck the branches of the trees or the ground was the only sound heard in this silent and majestic forest. The squirrel whom one often hears a long way off running among the fallen leaves seemed to be absent, the lumbermen indeed inform me that this little creature is scarcer this season in the forests of New Brunswick than it has been for many years; last whiter, which was very cold, may have been too much for him. Wild beasts, like man, are subject to famine and pestilence; it is only a few years since there was a great destruction in New Brunswick among the Canada lynx (*Loup vervier*), many of which were found lying dead in the woods.

About three o'clock in the afternoon when we had walked About three belock in the atternoon when we have wanted nearly fourteen miles we heard the sound of axes, and were soon welcomed to their tent by the party of woodsmen, who had been employed to cut this portage for the lumbermen, who are this winter at work on the shores of Tobique Lake. The cook, whose kitchen was covered by the vault of heaven,

had been employed to cut this portage for the lumbermen, who are this winter at work on the shores of Tobique Lake. The cook, whose kitchen was covered by the vall of heaven, informed us that he had not many delicacies to offer us, but proceeded at once to pour us out tin dippers full of black tea sweetened by molasses, and handed each of us plates with field pork upon them. These articles of food, with some light, sweet and excellent bread, such as one gets nowhere else but in the woods, formed our evening repast. This finished and the woods, formed our evening repast. This finished and the woods, formed our evening repast. This finished and the woods, formed our evening repast. Atter a good night's rest we arose refreshed and invigorated from the fir boughs on which we had passed the night, and so soon as the cook had his tea boiled and pork fried, we sat down on the ground to take our breakfast with the erew. Al-though cooks in the cities never allow the tea to boil, it is not so with cooks in the forest, and many a time have 1 heard the weary lumberer, as he walked into the camp and shook off the ice and snow from his clothes before the cheer-ful fire, call out to the cook. "Cook, give the tea a good boil." Breakfast over, we started on our journey of six miles through the woods to the lake, as we were now as far as the men had reached with their road. The walking through the trees was very good, there being but little blown down tim-ber on our route; the growth consisted of a mixture of hard and soft woods, the former predominating; fir, a wood but little esteemed, was also abundant. We were not long on our journey before we came in sight of one of the "Twin" mountains, a conical hill wooded to its summit with a mix-ture of deciduous and evergreen trees. As we neared the lake we saw traces of former Indian occupation in old camp-ing grounds in New Brunswick, and there were numer-ous lakes and ponds around them to which its four, the latter eight or nine miles long, were once the best moose hunting gr

by the Provincial Government, and if these proprietors would but take joint action in this matter and appoint forest guardians, this neighborhood would soon again abound with Ambrose Bear, a famous Abenaqui hunter long since gone to his rest; he was a truthful and worthy man. At that time we had some conversation about the moose, when he mentioned a strange circumstance which had occurred to him a year or two before. He had been noose calling in the month of September, and having been very successful had some moose hides drying about his camp, an open shed. One moonlight night after midnight, when the fire had gone out, he was awakened by the sound of an animal sniffing close to him. Looking up he saw between himself and the moon the head and horns of a huge moose, which was sniffing at one of the hides which were hung up to dry. Cautiously moving his hand he took hold of the gun which he kept constantly at his side, raised it up, took aim and fired, bringing down the noble animal on the spot. The morning on the same excursion, when Ambrose and the writer had been sleeping in the open air in the woods on the ridge between Long and Tobique lakes, just after daylight the Indian awoke me with a low whisper. "Sheddrake, a species of duck common about these lakes and streams. Very quietly he arose, and taking his gun from close to where he had lain, and where he had it placed so that he could reach it from where he had ben sleeping without having to rise up, he stole off into the woods silently as the night. He had not been more flaw, bringing with him a string of four or five shelldrakes. But the earl his gun, whose report was echoed and roke and with were ot lay, bringing with him a string of four or five shelt set striver, and in about the some string of four or five shelt and where he had its placed against a pole supported by two forked states driven into the ground on either side. This shelter was open at both sides as well as in the front. On a tree near by was of these as an but the wood is an and fired, bri

the vicinity at any time. A few minutes' walk now brought us to the outlet of the lake, the brook from which seemed almost to lose itself in the bed of low-lying boulders through which it ran at the place where we took our stand. However, there was a con-siderable pond at the foot of a rapid, and everything looked as if we were going to get some trout; one of our party had taken the trouble to bring his reel and fles. On our way

Hatural History.

Address all communications to the Forest and Stream Publishing Co.

THE FEATHER INDUSTRY.

THE FEATHER INDUSTRY. This is trade in fancy feathers is full of fluctuations and illustrates well the vagaries of fashion; its sudden whimsical turns and the fictitious values which it places upon the objects of its demand. It is a trade seeminally without any very definite statistics. A representative of the FOREST AND STREAM spent several days looking into the rade as it exists in this city. There were plenty of estimates, no end of fragmentary guesses, but the very nature of the trade, its manner of conduct and the relations existing between its members, cut off all possible chance of the col-lections of those tables of the volume of business which are for the refer the conduct and the relations existing between its members, cut off all possible chance of the col-lections of those tables of the volume of business which are for years traveled in clearly defined channels. There is the great depot of supplies at Cape Town, South Africa, thence through the trade sales in London and so on to the world. In this country and especially this city, the trade is in the hands of a few houses conducted by Jews, and just now they are almost entirely without trade since fashion has for the time put its ban upon the feather of the great South African bird. There is near the ostrich times are worked up.

The time put its ban upon the leader of the great south A frican bird. Fancy feathers include everything outside of the various ways in which the ostrich tips and plumes are worked up. Everything in the feather line comes within the omnivorons maw of the fancy feather worker, and just here is the diffi-culty of getting any complete data. A feather-working establishment may not be a very large one—a few kettles for dyeing or steaming the feathers, a supply of wire, gun and glass beads, and the manufacturer assisted by a few girls may furnish the local shops with a great variety of this class of millinery. A gunner goes out, bangs away, right and left, brings down anything with wings, outside of bees and barns, and forthwith hies to this local taxidermist or feather dealer. He takes the lot at a few cents each, sorts them over—some hit the popular craze and bring big profits, others are put down in the insect-proof boxes to await the changing dictates of fashion.

hit the popular craze and bring big profits, others are put down in the insect-proof boxes to await the changing dictates of fashion. In and about New York the most famous of these "feather foundries" is that of A. H. Alexander, in West Hoboken. It is a three storied wooden building, well up on the Heights, and is well worth a visit. Its proprietor has lived and worked for thirty-five years at this place, and during that time millions of bird skins have pase d through his hands. He is a naturalist, a lover of birds, played through a feather manufactory while a boy, and now in middle age would feel lost unless surrounded by beaps of plumage. He has studied bird science in books and watched them in their leafy homes; has shouldered his gun and penetrated South American for-ests in search of the gaudy denizens of those sub-tropical wastes, and while the old Elysian Fields of Hoboken were yet a pleasant suburban sylvan forest, waded in the cove near by and shot wild ducks therein. To visit the manufac-tory is a privilege, to hear its head talk bird lore a pleasure to any ornithologist. "Y.s." he said, "ft is a trade of many turns and sudden whims; but 1 find that is runs in a cvote say of seven years. Now it is this bird, now that. Once we had a run on senfowl, and the sea swallow, as they were called, was on every hat. Then we bunted the seabore. Then, perhaps, humming birds were in demand, and down into South America we went. Just nowi it is whole birds for bat fronts or set pieces for turbans. What it will be next fall the Lord only knows, I dou't. It may take a sudden turn back to ostiich. A feather fancy runs about three years. In the first y ar the fashion is set by the best people, who pay the best plices. These willowy aigrettes are now the fashion, and so the long slender egret points sell for §40 an ounce. The man who foresaw the fashion and has a supply makes a fortune; the man who is loaded up with stock which is not the style cannot give it away. One season I sent over 50,000 skins to the London mark

DARCH 26, 1886]
of the feathers here are imported, and pay 25 per cent. duty when they come in the skin and 50 per cent. when made up. The raw skins should be free, for there can be no sense in putting a protective tariff, say on South American birds, under the notion that some day or other we can raise them in the United States. I should say that from 10 to 15 per cent, of the feathers consumed here are of American growth, and of these the great bulk come from the Southern States. Florida, Texas and Louisiana. I have men out now in Texas, and here are two cases of merles sent in by them. The birds have to be taken when in plumage, and this, in some species, is only a few weeks out of the year. There are a very few birds in the North taken, simply because there are few to be taken. Now and then great flocks of the snow bunting come down from the north and are welcome to the gunners who shoot and trap for the trade; herons, too, and some species of duck. The sparrow, that little pest which I saw introduced here and raised my voice in protest at the time, is now brought in and made use of. It is 'degraded,' as we say. That is, the ekin is bleached until it is a neutral int. This is done in all skins where it is desired to dye the feathers. Common poulty feathers are now entering into the trade. As yet we do not get many from this country, because our people have not yet learned their value; but in Poland and other parts of Zurope, the feathers of the pool-try killed are just as carefully preserved for sale as the eggs. Our first task is to separate them, for in the feathers of a single bird we make seven grades. Thesteaming is followed by the dycing, either black, or yellow, or red, or anything is now are server space. The stating is is not fair to say that because there are no birds where years ago to that because there are no birds where years ago to not addres. Jonnets. As settlements are made, certain species retire. I have shot foxes on that hill yonder where now, you see rows of houses, hut the h

WILD ANIMALS OF MAINE.

CARLBOU-CERVUS TARANDUS. CARLBOU-CERVUS TARANDUS. ONLY the woodland caribou occurs in this State. The barren ground earibou are found further north. Among the cervine tribe of animals of the western continent there are, perhaps, none more interesting than the caribou; com-prising delicacy of form, roundness of body, fine tapering limbs, in fact, a compactness of organism calculated for fleet-ness and endurance, seldom seen in any other animal. A full grown male will weigh alive about four hundred pounds, and the female adult near one hundred pounds less. The venison is considered by many preferable to the moose or deer.

or deer

Their hoofs are very broad, parting like the ox, and sharp, enabling them to travel with as much ease on ice as on land

Their hoors are very broad, parting, int the very stread their hoofs, squat or show. When running at full speed they spread their hoofs, squat on their haunches from gambrel to foot, and thus are able to keep top of very light deep snow and at the same time throw themselves ahead with immense force. And when under full blast, a herd of them reminds one of a train of cars under full blast, a herd of them reminds one of a train of they over his head, with two frontals nearly covering his high over his head, with two frontals nearly covering his by elevating his nose while going through thick woods. The by elevating his nose while going through thick woods. The sear some females killed in this State with good-sized horns. These are exceptions, however, as I have killed and handled a large number and have never yet seen horns on a female. The horns appear on the male the second year, and they cast

them every winter after January, generally in a thaw and generally one horn at a time. They seem to have an itching sensation and rub them against a tree, and so shed them; and like all the deer kind, receive new ones in early spring. They breed at the age of two years, going with young about nine months, dropping them in May and June. They are extremely social in their habits, congregating in large herds where they are plentiful, and only singling off when frightened and scattered, or by accident stray away. They live chiefly in swamps and subsist on mosses and lichens, though when hard pressed for food they nip the tender buds of the willow and maple. They cat the moss of trees as well as ground moss, by sitting on their hindlegs, and, putting their forward feet against the tree, stretch up high on the body of the tree. In early morning or late evening they may be found facing the south and working in that direction, and the experienced hunter will take his position and wait their approach in the feeding is that the moss grows more abundant on the north side of trees. In the rutting season, which occurs in September or October, the call has the sound of "A" flat, with a tremulous continuation, and in winter a continued grunt ending in a higher key. They may have other sounds but I have not been able to hear them. They are not considered dangerous or vicious, yet if cornered or excited I would as soon be in a safe place. They migrate from one forest to another in large herds.

HAWKS AND OWLS. BENEFICIAL OR INJURIOUS?

A T a meeting of the West Chester (Pa.) Microscopical Society, held March 4, some interesting matter on the subject of the good and bad qualities of our rapacious birds was brought out. This subject had been investigated, under the circum-stances explained below, by a committee, of which Dr. B. Harry Warren was chairman.

REPORT OF COMMITTEE.

stances explained below, by a committee, of which Dr. B. Harry Warren was chairman. REPORT OF COMMITTEE. The committee appointed at the last meeting of the Mi-crocopical Society to take into consideration the Act of Assembly passed the 23d day of June, A. D., 1885, entitled "An act for the destruction of wolves, wildcats, foxes, minks, hawks, weasels and owls, in this commonwealth, there is hereby established the following premiums for the destruc-tion of certain noxious animals and birds, to be paid by the respective counties in which the same are selain, namely: For every wildcat \$2, for every red or gray fox \$1, for every mink 50 cents, for every weasel 50 cents, for every hawk 60 cents, and for every owl (except the Acadian screech or barn owl, which is hereby exempted from the provisions of this act) 50 cents, "beg leave to report that the chairman of the committee, Dr. B. Harry Warren, Ornithologist of Pennsyl-vania State Board of Agriculture, has devoted several years of his life to the collection, dissection and examination of birds, and that all of the committee from observation and experience, have believed that all of the birds dcnounced in the law above quoted, with rare exceptions, have been found to be the best friends of the farmer. Lest, however, any of the committee might be mistaken, they have corresponded with the best ornithologists in the country, men who have made ornithology a study and are connected with that de partment in the Smithsonian Institution, asking their opinion as to the benefits or injury likely to arise from the execution of the law abaye, Curator of Department of Birds United States National Museum; Dr. Leonard Stejneger, Assistant Curator of the same department; H. W. Henshaw, of the Bureau of E-hnology, also a collector of birds for the smithsonian Institution and connected with the late Wheeler Survey of the Territories, and Lucien M. Turner, a collector of birds, etc., for the Smithsonian Institution for the last tweive years. These answers, which are annexed to thi

Vice than injury, and that it is unwise to select any of them for destruction. The committee regrets that there have been ninety odd hawks and a dozen or more owls killed since the law was passed, June 23, 1885, at a cost to this county of about \$75, and that the slaughter is still going on. Believing, therefore, that the killing of these birds is detrimental to the interest of the agriculturists, they believe that instead of being destroyed they should be protected, and they, therefore, recommend the passage of the following resolution: *Resolved*, by the Microscopical Society of West Chester, that in the opinion of the society the act of June 23, 1885, offering a premium for the destruction of hawks and owls is unwise and prejudicial to the interest of agriculture, and so far as those birds are concerned, ought to be repealed. *Resolved*, That the president and secretary of the society be instructed to forward a copy of the above resolution to our members of the Legislature at its next session and request their aid toward the repeal of the act so far as is above stated. All of which is respectfully submitted.

stated. All of which is respectfully submitted.

W. TOWNSEND, THOS D. DUNN,	Committee.
JAMES C. SELLERS.]

MARCH 4, 1886.

MARCH 4, 1886. U. S. DEPARTMENT OF ACRICULTURE, WASHINGTON, D. C., March 2, 1886. Dr. B. Harry Warren, Ornithologist of the Pennsylvania State Board of Agriculture: DEAR SIR—Your letter of the 1st inst. has just come to hand. I have read with surprise and indignation the copy sent of Section 1 page 141 of the laws of Pennsylvania for 1885, in which a bounty is offered for the destruction of weasels, hawks and owls. The clause purports to have been enacted "for the benefit of agriculture," etc. The possibility of the passage of such an act by any legis-lative body is a melancholy comment on the widespread ignorance that prevails even among intelligent persons, con-cerning the food of our common birds and mammals, and is an evidence of the urgent need of just such systematic and comprehersive investigations as this department is now making on the subject of the relation of food habits to agri-culture.

making on the subject of the relation of food habits to agriculture.
There are two kinds of weasels in the Eastern States. The smaller kind feeds chiefly on mice and insects and is not known to kill poultry. The larger preys also mainly on mice and rats, but in addition sometimes kills rabbits and poultry. Both species are friends of the farmer, for the occasional loss of a few chickens is of trifling consequence compared with the good that these animals are constantly doing in checking the increase of mice.
Tou ask my opinion in regard to the beneficial and injurious qualities of the hawks and owls which inhabit Pennsylvania. This question seems almost superfluous in view of the fact that your own investigations, more than those of any other one person, have led to a better knowledge of the food habits of these birds, and what you have done in the East, Prof. Aughey, of Nebraska, has done in the West. Many others have added their "mites," till at the present time a sufficient array of facts have been accumulated to enable us to state, without fear of contradiction, that our hawks and owls must be ranked among the best friends of the farmer, With very few exceptions their food consists of mice and insects, meadow-mice and grasshoppers predominating. The exceptions are the fierce goshawk from the North and two smaller resident hawks. Cooper's and sharp-shinned, which really destroy many wild birds and some poultry. These three hawks have long tails and short wings, which serve, among other oharacters, to distinguish them from the beneficial kind.

Strange as it may appear to the average farmer, the largest hawks are the ones that do the most good. Foremost among these are the rough-legged and marsh hawks, which

do not meddle with poultry and rarely prey upon wild birds. Of bawks and owls collectively, it may safely be said that, except in rare instances, the loss they occasion by the de-struction of poultry is insignificant in comparison with the benefits derived by the farmer and fruit grower from their constant vigilance; for when unmolested the one gnards his erop by day and the other by night. It is carnestly to be hoped that you will succeed not only in causing the repeal of the ill-advised act which provides a bounty for the killing of hawks and owls, but that you will go further, and secure the enactment of a law which will impose a fine for the slaughter of these useful birds. Yours very truly, C. HART MERRIAM, Ornithologist of the Department of Agriculture.

Ornithologist of the Department of Agriculture.

Ornithologist of the Department of Agriculture. UNITED STATES NATIONAL MESEUM, UNDER DIRECTION OF THE SMITHSONIAN INSTITUTION, WASHINGTON, March 3, 1886. Dr. B. H. Warren, West Chester, Pa.: DRAR DR, WARREN-1 am just in receipt of your letter of the 1st inst., and therefore fear that my reply cannot reach you in time for use at the meeting to-morrow evening. It affords me much pleasure, however. to comply with your re-quest for my views concerning the food habits of hawks and owls, and their relation to man. Of all the species which you name there are only two which, according to my best judgment, are at all seriously destructive to game or poultry, these being Cooper's hawks and the great-horned owl. The rest, with the possible ex-ception of the sharp-shinned hawk, which certainly is de-structive to the smaller birds, my experience leads me to re-gard as very decidedly beneficial to man, their food consist ing very largely, if not chi fly, of the smaller rodents, field mice especially. The red-shouldered and red tailed hawks oversure that their service to man far outweighs the injury which they thus do. The little sparrow hawk and other smaller species destroy large numbers of grasshoppers, locusts, and other large insects. Very truly yours, ROBERT RIDGWAY, CURATOR, Dept. Birds.

ROBERT RIDGWAY, CURATOR, Dept. Birds. SMITHSONIAN INSTITUTION, WASHINGTOM, D. C., March 3, 1886 Dr. B. H. Warren, West Chester, Pa.: Dara Stra-In reply to your letter of the 3d inst., asking for my opinion in regard to the food etc., of certain hawks and owls specified, I would state that I have read Mr. Robert Ridgways answer to a similar request from you, and that I agree with him in every particular. The idea of persecuting the majority of hawks and owls systematically is simply preposterous, and any law which has for its object their in-discriminate destruction should be immediately repealed, since most of the birds alluded to are among the very best friends of the farmer. In regard to a few species it is well worth while to suspend judgment until a thorough investiga-tion as to their habits and food in your State can be carried out, for, as you are well aware, a species which in some parts of the country and at some seasons may be injurious, in other regions and under altered circumstances may be chiefly bene-ficial. I remain, yours sincerely. LEGNARD STEINEGER, Assist, Curator Dept. Birds, U. S. Nat. Mus. WASHINGTON, March 3, 1886.

Assist, Curator Dept. Birds, U. S. Nat. Mus. WASHINGTON, March 3, 1896. B. H. Warren, M. D., West Chester, Pa.: DEAR SIR—In-reply to your favor of the 1st inst. asking for my opinion with regard to the economic utility of the birds of prey, I take pleasure in responding as follows: To the ornithologist, whose business it is to study the habits of birds, the widespread ignorance of the habits of the hawk and owl tribe and the mistaken idea as to the amount of in-jury they do are almost inconceivable. So common, however, are these erroneous ideas respecting the birds of prey and their relations to the farmer and agri-culturist that it is not at all surprising that laws similar to the one now in force in Pensylvania should be enacted. To ur own investigations into the nature of the food of the birds of prey of your country might be cited in support of the statement that such enactments are based upon erroneous conceptions. I may add that wherever such investigations averdict favorable to the birds of prey. In almost every por-tion of this country I have found the opinions of all field and owl tribe on account of the ground of their baeaflext the will come when the farmers as a class will carefully protect the hawks and owls on the ground of their baeaflext. Tollowing is the list of species most numerous in your

Following is the list of species most numerous in your

services.
Following is the list of species most numerous in your State:

class they injure, chicfly poultrymen. To place all the hawks and owls under ban, and to attempt their extermination sim-ply because one or two species are injurious, is certainly not policy

good policy. After more than twenty years' study of birds, I am decidedly of the opinion that the hawks and owls as a class are of great economic value, and that no State in which agri-culture is pursued to any extent can afford to dispense with their services. They not only ought not to be exterminated, but they should be placed upon the list of birds protected by law. I am, very truly yours, H. W. HENSHAW.

SMITHSONIAN INSTITUTION, WASHINGTON, D. C., March 3, 1886.

WASHINGTON, D. C., March 3, 1886. y
B.-H. Warren, M.D., Ornithologist Pennsylvania State Board Agriculture, West Chester, Pu.:
DEAR SIR—Your letter of recent date requesting my opin-ion of the act (No. 109) of the Commonwealth of Pennsyl-vania relative to the premiums paid for the destruction of certain species of birds and mammals, alleged to be injuri-ous and classed as novious within the meaning of that act.

Ion of the act (No. 109) of the Commonwealth of Penksyl-vania relative to the premiums paid for the destruction of certain species of birds and mammals, alleged to be injurious and classed as noxious within the meaning of that act, is at hand.
I must confess a surprise at the truly lamentable ignorance of the framer of that act in regard to the supposed noxious character of the hawks and owls, upon whose lives a premium has been set for their destruction.
It is well known that no more beneficial bird exists than the owl, whose nocturnal habits render it specially fitted to pursue the smaller rodents, such as the mice, whose navages upon the field, grain, root and orchard arc so well known that all farmers have from time immemorial exclaimed against the destructiveness of those quadrupeds whose annual devastation causes the money value of the losses sustained through their ravages to swell into countless thou sands of dollars.
The lender growths of the orchard are decorticated by the mice and rabbits, which are in turn devoured by the owls sought to be destroyed simply because some one desires to become notorious as a lawmaker, and through utter ignorance of the subject endeavors to deprive the farmer of his best nocturnal fraids, which guard the growing crop with zalous care while the owner sleeps to regain a strength to enable him to continue the daily toil of protecting his erops from the devastation of his sleek-furred enemics, most insidious at night. There is not a species of owl but that amply repays for the few incursions made at irregular periods noon isolated hen roosts. Where a single fowl is thus lost, a thousand mice pay the penalty of their lives to the same owl.
The nocturnal habits of the owls render their services far more beneficial than may be accurately ascertained.
In regard to the hawks, will preponderate in a most-satisfactory manner.
Certain species of the diurnal birds of prey are well-known to feed almost exclusively upon sm

will admit. In my own opinion the destruction of the hawks and owls within the State of Pennsylvania will, cre many years, result in an incalcutable injury to the farmer, who will be overrun with hordes of mice, which he will be powerless to limit, as their reproductiveness, when undisturbed, progresses with astonishing rapidity. It would, in my opinion, be a wise measure to heve the act relating to the alleged noxious birds totally rep aled. Very truly yours, LUCIEN M. TURNER.

Set relating to the alleged noxious blue total replated. Very truly yours, LUCIEN M. TURKER. FOOD EXAMINATIONS. From a report entitled "Diurnal Rapacious Birds" (with special reference to Chester county, Pa.), prepared by B. Harry Warren and published in the annual report for 1883 of the Pennsylvania State Board of Agriculture, is taken the following reference to the stomach examinations of the species of hawks most commonly found in Pennsylvana: The Red-tailed Hawk (Buteo borealis).—My examination of one hundred and two birds of this species, revealed in eighty-one chiefly mice and small quadrupeds, also some few small birds; nine, chickens; three, quail; two, rabbit; one, ham-skin; one, part of a skunk; one, a red squirrel; one, a gray squirrel; three, snakes. The Red-shouldcred Hawk (Buteo Uncatus).—Of thirty-six examinations which I have made of this species, twenty-three showed mice and small quadrupeds, grasshoppers and coleopterous insects; nine revealed frogs and some few in sects, in two, snakes and portions of frogs were present, and from the remaining two snall birds, particles of hair and a few orthopterous insects were taken. Broad-winged Hawk (Buteo pennsylvanicus).—In twelve specimens examined by myself, four revealed mice; three, small birds; four, frogs; one, killed the 22d of May this pres-ent year, 1882 was gorged with crayfish, with which were traces of coleopterous insects. The Sparrow Hawk (*Falco sparcerius*).—The stomach contents of twenty-nine of this species, which I have dissected, showed, in fifteen, principally mice, with frequent traces of various insects; six, grasshoppers; two, coleoptera and grasshoppers; two, medow larks; four, small birds—sparrows, Cooper's Hawk (*Accipiter cooperi*).—Of twenty-seven birds which I have examined, fourteen showed the tood taken to have been chickens; five revealed small birds—sparrows and warblers—*Dandracea*-two, quail; one, bullfrogs; three, mice and insects; two, hair and other remains of small, quadru-

with a small quantity of hair, evidently that of a young rabbit, Rev. Dr. Clemson spoke deprecatingly of the merciless

rabbit. Rev. Dr. Clemson spoke deprecatingly of the merciless slanghter sanctioned and rewarded by law of these harmless animals, as he called them, particularly those brautiful creatures, easily domesticated, habitants of the woods and meadows.

THE TENDER HEART.

CHE gazed upon the burnished brace Of plump ruffed grouse he showed with pride; Angelie grief was in her face: "How could you on th. dear?" she sighed. "The poor, pathetic, moveless wings! The songs all hushed—oh. cruel shame!" Said he, "The partridge never sings." Said she, "The sin is quite the same."

- "You men are savage through and through A boy is always bringing in Some string of bird's eggs, white and blue. Or butterfly upon a pin. The angle worm in anguish dies, Impaled, the pretry trout to tease—" "My owu, we fish for trout with files." "Don't wander from the question, please "

- She quoted Burus's "Wounded Hare," Aud certain burning lines of Blake's, And Roskin on the fowls of air. And Coleridge on the water snakes, At Emerson's "Forbearance" he Began to feel bis will benombed; At Browning's "Donald" utterly His soul surrendered and succumbed.

- Oh, gentlest of all gentle girls," He thought, "beneath the blessed sun!" He saw her lashes hung with pearls And swore to give away his gun.
 She snalled to find her point was gained And went, with haops parting words (He subsequently ascertained), To trim her hat with homming birds. —Helen Gray Cone, in the Century.

MASSACHUSETTS BIRDS —Salem, March 18.—Bluebirds, redwings, cow buntings, song sparrows are with us again. A coot (F, americana) was recently shot near Boston, I saw the bird. Gulls occasionally seen in flocks on Lynn marshes. —X. Y. Z.

A RAILROAD IN THE PARK.

THE Senate bill granting to the Cinnabar and Clark's Fork Railroad Company a right of way through the Yellowstone National Park has been favorably reported by the Committee on Railroads of that body. The action is lamented by every one interested in the region. Mr. W. Hallett Phillips, who under the direction of the Secretary of the Interior, devoted two months last summer to an investigation of the Park, has written to the chairman of the Senate Committee on Rail-roads the following letter: WASHINGTON, D. C., March 18, 1886.

Toads the following letter: WASHINGTON, D. C., March 18, 1886. Hon. Philetus Sawyer, Chairman Senate Committee on Ruilroads: SIR-I observe that there has been a favorable report from you committe ou a bill granting to the Cinnabar and Clark's Fork Ra

Hinderus Saioger, Chairman Senate Committee on Reilroads:
'Sin-Lobserve that there has been a favorable report from your committee on a bill granting to the Cinnabar and Clark's Fork Railroad Company the right of way through the Yellowstone National Park.
Thinking perhaps that the attention of the committee has not been suficiently drawn to the importance of the measure as affecting the Park, I take the liberty of presenting to you some reasons why, in my estimation, the bill should not be enacted into a law.
Last summer I was instructed by the Secretary of the Interior, under an appointment from him, to proceed to the Yellowstone Park with a view of placing before him for executive action and recommendation such informati n as I might acquire in reference to the protection, improvement and preservation of the Park. My report to the Secretary was communicated by him to the Senate under a ca'l made by that body, and is printed as S. Ex. Doc. 5t, present Congress. In that report I remark: 'Interested parties have for some years brought to bear a constant pressure upon Congress and the Department to induce action in favor of a railroad through the Park. The railroad is sought ostensibly for the purpose of bringing to market the ore from Cooke City, a mining camp adjacent to the uortheast boundary line of the Park. If there is one object which should be sept in view more than any other, it is that of preserving the Park as go far to destroy its beauty, and besides, it is not demanded by the public. The roads are being improved yearly, and soon will make every portion of the Park easily accessible. The distance between the points of interest is not great, and transportation is good and plentifiel. Apart from the consideration that a railroad is not needed is the Park and that it would deface its beauly, is the further consideration that the two objects of Congress in creating the Park. The rail build is the unously oppose the project. If the parties interested in quipy that a rout

fered with. It is usedless to say that the introduction of a railroad would bring with it a settlement along the line of the road, and so practically the whole benefit of the original dedication would be greatly diminished if not extinguished. In my opinion the passage of the bill in ques-tion would be a most serious blow to the interests of the Park, and 1 may state that this opinion is shared by the officers of the Govern-ment whose dutles are connected with the Park. I refer particularly to Mr. Wear, the Superintendeut of the Park, and Lieut, Janiel, King-man, of the Eugineer Corps, the officer in charge of the roads in the Park. It is sincerely to be hoped that the bill wear the

It is sincerely to be hoped that the bill will not be enacted into a aw. Very respectfully, W. HALLETT PHILLIPS,

THE ANTI-HOUNDING LAW.

THE ANTI-HOUNDING LAW. THE following brief of the argument in support of the anti-hounding law of New York was submitted to the Senate committee Tuesday evening. The paper was accom-panied with numerous letters and sworn statements as ex-hibits. To committee will report this week. To the Honorable Committee on Game Laws of the Senate of the State of New York possesses in the wild game of the Adirondacks a natural resource of recognized value. The intent of legislation is to conserve that game as a permanent possession. If a statute accomplishes this intent it is a wise law and should be retained. In purpose the anti-hounding deer law is thus wholly econ-omic; in practice it accomplishes its purpose, and it should be retained. The law of 1879, which permitted jacking, hounding and still-hunting, was inadequate. Under its provisions, the annual destruction of deer between 1879 and 1885 was so great as to insure, if continued, the speedy extinction of the spreise. Of the three modes of killing, hounding was the most de-structive. To check the excessive slaughter, the Legisla-

great as to insure, if continued, the speedy extinction of the species. Of the three modes of killing, hounding was the most de-structive. To check the excessive slaughter, the Legisla-ture of 1885 enacted the anti-hounding law. The statute has proved a wise and beneficial protective measure. Where enforced it has already accomplished much and promises more. It is sustained by the overwhelming sentiment of sportsmen. The retention of the law is essen-tial to the maintenance of the game interests of the State. Its repeal would result disastrously. In support of these economic considerations for retaining the law, the following presentation of evidence is submitted: THE EVIDENCE.

THE EVIDENCE.

THE DEER HAD DECREASED PRIOR TO 1885.

While the numbers of hunters (of different classes) engaged in its pursuit had multiplied, the deer had been destroyed at a rate and to an extent viewed with gravest alarm by all intelligent persons cognizant of the actual condition of affairs and concerned for the perpetuity of the supply.

Interligent persons cognizant or the actual control of a affairs and concerned for the perpetuity of the supply. Statement of Professor E. L. Richards.of New Haven.Con. : "I have been in the woods off and on for almost twenty-five years. I can see that the deer are decreasing yearly. This decrease is especially noticeable in those parts of the wilderness where the running of dogs has most prevalled." (Letter of March 6, 1886). [Exhibit 1.] Statement of Dr. M. MeV. Tobey, late of Jay, Essex county, N. Y.: "Fifteen years ago I could find good hunting in North Elba and St Armand, and I was satisfied with it, but as deer became scarcer I tried other sections, thereby following the deer from one quarter to another, until ny last hust was had about 60 miles beyond Martin's, in the depths of the wilderness. * * North Elba and St. Armand, where deer used to be pienty, are almost destitute of them." (Let-ter of Fcb. 22, 1886). [Ex. 29.] Statement of Chas. H. Smith. of Petric's Corners, Lewis county. N. Y.: "I guided at the Saranac House, theu kept by William F. Martin, in 50, 57 and '58. I have followed guiding ever size. Deer have decreased very fast from '70 mil' 55. [I think the main cause was driving with dogs, as there were nore killed in that way than in all others." (Letter of Feb. 27, 1850), [Ex. 6] Statement of W. R. Smith, Petrie's Corners, Lewis county, fifteen years a guide: "There is not over one-quarter the deer in this county there was in '82, and if they had drove las. fall I don't think there would have been scarcely a deer left in the whole Adirondacks." (Letter of March 16, 186.) [Ex. 4].

THE DECREASE WAS DUE TO DOGGING.

Wond have been scarcely a deer left in the whole Adirondacks." (Letter of March 10, 1586.) [Ex. 4.]
THE DECREASE WAS DUE TO DOGGING.
Among the several modes of taking dccr, hounding was recognized as most disastrous, and the certain result of its continued practice was clearly foreseen to be the impending run of the North Woods as a game region.
Statement of Richard M. Shutts. Chatcaugay Lake, Franklin county (northeast part of Adirondacks): "For thirty years I have hunted them by jacking, trapping. hounding, crusting and still hunting. * * If the dors are allowed to be used, you may protect the time every possible way and our deer are doomed." (Letter, Jan. 5, 1860.) [Ex. 15.]
Statement of K.W. Young (thirty-five years experience), of Watson, Lewis county, N. Y.: "As to hounding * * I know that it is uter destruction to the deer. * * Thelieve two or three years of the wilderness." (Letter of Feb. 7, 1866.) [Ex. 39.]
Statement of F. A. Young, (twelve years experience.) of Watson, Lewis county, N. Y.: "Two years more of hounding would have been utter extermination of deer in this section, as there were nearly 300 deer killed by hounding in the Beaver River section in the year of 1884. This number does not include the deer killed by floating. On the statement of H. Wetmore (an Odhunter), of Petrie's Corners, Lewis county, N. Y.: "Two years more of March 1, 1880.) [Ex. 33.]
Statement of H. Wetmore (an Odhunter), of Petrie's Corners, Lewis county, N. Y.: "They is in a former years driven deer of mark ind dogs and think that it is by far the most destructive to the deer of any kind of hunting, and have given it up." (Letter of March 8, 1880.) [Ex. 34.]
Statement of H. Wetmore (an Od hunter), of Petrie's Corners, Lewis contry, N. Y.: "They ensite and the deer killed by floating. On the state the by far the most destructive to the deer of any kind of hunting, and have given it up." (Letter of March 8, 1880.) [Ex. 34.]
Statement of R. A. S

March 7, 1886) [Ex. 8.] Statement of Wm. R. Smith, Petrie's Corners, fiftcen years a guide: "There are but tew killed by hoating or still hunting in season, but * * * of all evils the hound is the worst and the only thing that will exterminate the deer." (Letter of March 19, 1880,) [Ex. 4.] Statement of Chas. H. Smith (forty-five years experience), Petrie's (Corners, Lewis country, N. Y.: "Deer have decreased very tast from '9 until '5. I think the main cause was driving with dogs, as there were more killed in that way that in all others." (Letter of Feb. 27, 1886.) [Ex. 6.] DOGS AND NO DEER, OR DEER AND NO DOGS.

DOGS AND NO DEER, OR DEER AND NO DOGS. The Legislature of 1885, then, was petitioned to enact an anti-hounding law. This was not asked for as a piece of odious class legislation, working to the deprivation of one particular class of hunters for the benefit of another class. It was not to stop the sport of the hounder that the still-hunter might have the privilege of killing more game, but that the stoek might be rescued from extinction, and that there might be deer left to hunt at all. It was in New York as it had been in Maine and Penpsylvania, an alternative between deer dogs and no deer, or deer and no deer dogs. Statement of Gen. R. U. Sherman, Secretary N. Y. State Fish Com-

mission: "I am quite certain that if the hounding had gone on on th scale it did in the fall of 1883 and 1884, the Adirondack deer would soon have been practically exterminated." (Letter of Jan. 19, 1886). [Ex. 11.].

Statement of A. C. Clifton, Hague, Warren county (east side of the Woods), for many years a guide: "The act was passed barely in season to prevent extermination in several of the border counties of the deer range." (Letter of Dec. 28, 1885, in Glens Falls *Republican.*) [Ex. n]

HEX. 0.] SIMLAR LAW IN MAINE.—Statement of E. M. Stilwell, Com. Fisheries and Game, Bangor, M.e.: "We cruld have achieved nothing without it. * * * The only question is between deer and dogs. 'You cannot have the one without stringently anforcing the law against the other. There is no such thing as a compromise between the two. Since the passage of the amended dog law in 1853, the deer of our State have more than doubled." (Letter to Forszer ANS STREAM, Feb. 16, 1886.) Statement of H. O. Stanley, Com. Fisheries and Game, Oxford, Me: "The law, in my opinion, is the very best one we have on our statute books for the protection of our deer in the Maine forests. * * * To the enforcement of this law I attribute the increase of the game, that has filled our forests with deer as they are to-day." (Letter of Feb. 14, 1886.) [Ex. 82.]

THE LAW HAS PROVED A WISE ONE.

The law has been in force one season. It was not every-where strictly observed. Some of the petitioners for its repeal defield and violated it. But where obeyed it dimin-ished the number of deer killed in 1895. Its effect was beyond all cavil protective. In the Adirondacks, as in Maine, it saved the deer.

It saved the deer. St. Lawrence and Franklin counties.—Peter B. Leonard, Protector for st. Lawrence and Franklin counties, says: "In its working there can be no question but the law prohibiting dogging has saved large numbers of deer." The reports from Mr. R. M. Shutts (Upper Cha-teauzay Lake), of the Chateaugay and Meacham lakes, Plumador and Duck ponds and Deer River section in Franklin county, show a like beneficial result; the total for Meacham Lake, Plumador and Duck ponds and Deer River in 1885 was 69, against 169 for the year hefore; in the Wolf Pond and State Dam section in 1885 by still-hunting 17 against 40 by dogging in 1884. Esser and Clinton counties.—Iohn Liberty. Protectorfor Free and

in the Wolf Pond and State Dam section in 1885 by still-hundling IT against 40 by dogging in 1884. Essex and Clinton counties.—John Liberty, Protector for Essex and Clinton counties, says: "I think the law has saved a great many deer in my district." Warren, Washington, Saratoga and part of Hamilton counties.— Seymour C. Armstrong, Protector for Warren, Washington and Sara-toga counties and town of Indian Lake in Hamilton county, says: "There were not as many deer killed in 1855 as there were in 1853, notwithstanding that there were only a very faw, days of good still numing in 1854 and a month or more in 1855. This is shown by the numbers of deer expressed from Norkl Creek during the months of September, October and November, 1854 and 1855. The former year there were 176 against 154 this year." Lewis, Herkimer and part of Hamilton counties.—"Where the law was enforced, it worked well, the Beaver River district (Lewis and Herkimer counties) showing total of 60 killed in 1855 against 260 in 1854." (In: Chas. Fentou.) Fulton County.—Protector T. C. Bradley in his annual report urges that the anti-hounding law ought to be more stringent than it is. Statement of O. F. Hulser, supervisor of the town of Forestport, One lae ounty. "From a record that I have kept it shows that two years ago last fall there were brought out of the woods in this itclinity 47 carcasses of venisou, one year ago last fall 155, and this last fall 15 outy." (Letter of Feb. 12, 1855,) [Ex. 22.] In St. Lawrence county an anti-hounding law has been in force since 1879. The result is that the deer have increased there in that time. Statement of A. Ames Howlett, of Syracnse: "In St. Lawrence county, the increase of deer thety on the out of and the stat the counts of there in that time.

there in that time. Statement of A. Ames Howlett, of Syracuse: "In St. Lawrence county, the increase of deer [hetween 1879 and 1855] has been very marked indeed. for, by comparison, in 1880 I saw there about fifteen deer in a six weeks' trip, while in 1884 I saw about forty deer in an eighteen days' trip, and in 1885, in a ten days' trip, I saw more deer than ever before. (Letter of March 22, 1880) [Ex. 41.] See Stoddard's Guide, p. 15. [Ex. 37.] It is significant that

It is significant that in this county sentiment supports the anti-hounding law. Its repeal is asked for only by those who are in districts where the few remaining deer can be gotten in no other way.

GENERAL SENTIMENT SUSTAINS THE LAW

The law is sustained by the overwhelming sentiment of sportsmen in all parts of the State, and nowhere more carn stly than in many districts in the North Woods.

Statement of R. M. Shutts, Chateaugay Lake, Franklin county: Eight men out of the of those here whose interests are affected, are a favor of retaining the present law." (Letter of Feb. 24, 1886,) $F_{\rm er}$ 15.1 in IEs avor 15]

IEx. 15] Statement of F. A. Young, thirty years guide: "I think it [present taw] is good. In proof, I owned two hounds, when the present law was passed, they were as good as any in the North Woods. I shot both of them. . . I know every guide in this section, and there is not one in favor of hounding deer." (Letter of March 1, 1886) [Ex. 83.] Statement of O. F. Hulser, supervisor, town of Forestport, Oneida county: "The non-nounding law I believe to be the best that has ever been enacted, and so do nine out of every ten people say who live hereabout on the borders of the woods." (Letter of Feb. 12, 1886) hereabou [Ex. 22]

Statement of John D. Collins, Esq., Utica, N. Y.: "I am wonder fully surprised at the earnest and unanimous enthusiasm with which people sign the petition [to retain the law] here. They are very de cided." (Letter of Feb. 24.) [EX. 23]

Statement of Mark Smith [March 1]: "I think if we can prohibit bounding of deer for three years I think they will increase. All our hotels are not in favor of hounding, for one reason-extermination and unwholesomeness of the uncat." [Ex. 38.]

THE LAW IS ESSENTIAL TO THE FUTURE WELFARE OF THE ADIRONDACKS.

THE LAW IS ESSENTIAL TO THE FUTURE WELFARE OF THE ADHRONDACKS.
The conditions which, on economic grounds, demanded the enactment of the law in 1885, have not changed—save in so far as the law itself in this brief time and with imperfect execution has worked advantageously; and these conditions call for the law's retention.
Statement of T. Q. Frost, storekeeper and postmaster at Belfort, N. Y: "The way to make the deer last the longest is to simply keep the dogs out of the woods. We have paid to externinate the wolf and panther, aud feel keenly the injustice of turning the dogs in the woods. If the more plency if there were no dogs." (Letter.) [Ex. 16.]
Statement of O. A. Batcheller, Commander U. S. Navy: "I have no doubt deer would be much more plency if there were no dogs." (Letter.) [Ex. 16.]
From Edward H. Litchfeld, New York: "I disapprove most decidedly of bounding in a contry where the deer nust take to water and there be batchered by having their brains beaten out with a paddle or in some similar unsportsmanilke manner. * * The legislation that we do need, if any, is to compel a more vigorous enforcement of the law as it stands." (Letter of Feb. 15, 1856.) [Ex. 24.]
Suorn statement of Elijah Simonds: "As long as they allow hounding and keep dogs in the woods, they won't have any deer. If you want to keep the deer, you must cut the dogs' neads off or get rid of them." [Ex. 21.]
Statement of Mark Smith, of Number Four, Lewis county, N. Y.: "I think if we can prohibit hounding deer say three years longer and prevent killing until the list of August, and give them a chance to increase, I think it will be best for us all." (Letter of March 1, 1886.) [Ex. 84.]

Statement of John Hitchcock, Petrie's Corners: "If the present hourding and crusting law is enforced there is no mistake about the increase of deer, as the guides and hunters will assist in protecting game and will assist the game constables in their duties." (Letter, March 8, 1836.) [Ex. 40.]

Statement of Sam Dunning, Essex county [March 12]: "Deer will in-crease, m spite of the still-hunters, in the rougher parts of the Adj-rondacks, but the dogs can drive them out of these places easily." [Ex. 2,]

THE LAW'S REPEAL WOULD BE DISASTROUS.

Its repeal would be the license of a mode of hunting so destructive in character and so disastrous in effect as to practi-cally nullify the purpose of game legislation. After a short scramble for the game while it lasted, the end would be ex-

tinction; the Adirondack deer would follow the Adirondack elk and the Adirondack moose.

Statement of P. R. Leonard, Game Protector, Seventh District: "If its repealed it will make it very hard for the State Game Pro-tectors to protect the deer successfully." (Monthly report (Feb.) to Com. R. U. Sherman.) [Ex. 36.]

Com, R. U. Sherman.) [Ex. 36.] Statement of E. R. Wallace, author "Wallace's Guide to the Adiron-dacks:" "If the bill hecame a law it would sound the death knell and mean the total extinction of the deer. * * * If hounding is again legalized the entire extinction of deer. will be a matter of only a few years." [Ex. 20.] Statement of D. W. Cross, author of "Fifty Years with the Gun and Rod." "Hounding can only be advocated as the shortest and easlest method of slaughtering and finally exterminating this noble game."--(Letter of Feb. 1886.) [Ex. 10.] Statement of John Hitchcock. Petrie's Corners: "The State could not exterminate the deer quicker if they offer a bounty for each deer of \$5 than they will by hounding again, for all the huuters will take their last chance, as I have heard many of them say." (Letter, March 6.) [Ex. 40.]

March 6.) [Ex. 40.] "International and a many of them say." (Letter, Statement of Prof. E. L. Richards, of New Haven, Conn.: "If kill-ing deer by the aid of dozs is to be allowed to any extent the deer are bound to go." (Letter, March 6.) [Ex. 1.] Statement of David Baird, of Crogban, N. Y.: "To pass a law for dogging deer for two months I consider an outrage, and will be the means of exterminating the deer in five years. I am a hunter and will do all I can to protect deer from slaughter." (Letter, March 6.) [Ex. 18.]

THE DESTRUCTIVENESS OF HOUNDING.

It is more destructive than other methods, because by the use of dogs the game is more surely found. The dogs penetrate to the deepest coverts and drive out the game which would be perfectly safe from the efforts of man unaided by the hound. It is the only method of hunting that is success-fully practiced at all times, in all kinds of weather, wet or dry, warm or cold, whether the day be noisy or still, on leaves, on bare ground, on snow. Other methods require peculiar conditions and are restricted by unfavorable cir-cumstances.

peculiar conditions and are restricted by unfavorable cir-cumstances. Sworn statement of Samuel Dunning, of New Russia, Essex county, N, Y.: "Deer will increase in spite of the still-hunters in the rougher parts of the Adirondecks, but the dors can drive them out of these places ensily. * * * There are five killed by hounding where there is one killed by still-hunting." [Ex. 2,] Statement of William Hulbert, of Petrie's Corners, Lewis county: "Have been a hunter and trapper for 40 years. I think there are more deer killed and destroyee by dogs than by floating and still-hunting." (Letter of March 4.) [Ex. 30.] Statement of Robt Griffith, Sr. of Petrie's Corners, Lewis county, N. Y.: "I have have hunted in Lewis, Herkimer and Hamilton coun-ties for forty years. * * 1 negard to the most destructive way of killing deer, it is by the use of dogs." (Letter, March 6, 1886.) [Ex. 19]

[Ex. 19]" Hounding is more sure in results, because its success de-pends on the certainty of the deer's obedience to the instinct which prompts it, when pursued, to take refuge in the water. Once in the water its capture is easy. Water-killing is the mode of hunting asked for by the advocates of the law's re-peal. (Oral testimony of Dr. Samuel B. Ward, in reply to question by the chairman of your Committee, hearing of March 16.)

Statement of Wm. R. Smith, fifteen years a guide [supra]: "I don't hunk there is one in twenty that gets away after the hound ouce gets he track." (Letter of March 19.) [Ex. 4.]

Hounding is destructive because the decr is given no chance of escape, through any lack of skill on the part of the hunter. Water-killing calls for very little or no skill, It is practiced with equal success by the professional hunter and by the inexperienced tourist.

and by the inexperienced tourist. Statement of E. R. Wallace, Syracuse, author of "Wallace's Guide to the Adlrondacks': "For twenty-five years that * * region has been * * my careful study and exploration. I have wit-nessed the killing of deer by every mode practiced, and have ob-served that none is so effectual as that of hounding." (Letter of March 12, 1586.) [Ex. 20.] Statement of Wm. R. Smith, fitteen years a guide [supra]: "1 know of men killing five and six a day with dogs, when the same men could not kill one a year in any other way." (Letter of March 19.) [Ex.] Statement of Sam Dunning, Essex county [supra]: "There are five killed by hounding where there is one killed by still-hunting. There are very few men that are good still-hunters. Any one that has a hound can get one now and then, when deer have been run hard.' [Ex. 2]

hound can get one now and then, when deer have been run hard." [Ex. 2] Statement of E. R. Wallace, of Syracuse, N.Y., author of "Wallace's duide to the Adirondacks;" "If hounding is again legalized the entire extermination of deer will be a matter of only a few years. Have hunded wenty-fre years and observed that no way was so effective as hounding." (Letter, March 13) [Ex. 20] In its effect upon the deer supply the killing of one doe is estimated to be equal to the killing of four bucks. (Dr. S. B. Ward, in letter in FOREST AND STREAM Feb 18, (886) Hounding is indirectly more disastrous than other methods because of the deer killed by it a large proportion are does and fawns. This is consequent upon the nature of the method, which consists in tiring out the game so that it shall plunge into the water; the does and fawns being sooner ex-hausted, sooner seek refuge in the water. The bill now be fore you contemplates the hounding of does when burdened with the cares of their mothers. Statement of Sam Dunning, Essex county [supra]: "Dogs will fol-

fawns deprived of their mothers. Statement of Sam Dunning, Essex county [supra]: "Dogs will follow a doe at any time as well as they will any deer. My dog started a deer that was with her fawn. It was too young to run, and 1 picked it up and carried it home. There are more does killed in August than any other month." [Ex. 2.] Sworu statement of Sam Dunning [supra]: "My dogs have driven very young fawns into the water. I have got them that would not weigh over twenty pounds alive and sold them. Most any dog can catch a deer when he gets tired from a long race. * * * When the deer was tired I have knowu deer driven into the water by dogs that could not stand up when they got ashore." [Ex. 2.] Hounding is now more destructive then from as then formerable (i. i. in

could not stand up when they got ashore." [Ex. 2.] Hounding is now more destructive than formerly (*i. e.*, in proportion of game killed to game supply) because of the confined range of the game. By the extension of railroad and steamboat lines, growth of settlements, multiplication of hotels, felling of forests, clearing of woodland coverts, de-nudation of some feeding grounds by fires and freshets, and desolation of others by "back waters" of dams and reser-voirs, the range of the game had become year by year more narrow.

narrow.
For removal of foresis and extension of denuded and water-killed areas see Report of Forestry Commission [Ex. 35].
Statement of Prof. E. L. Richards, Yale College, 25, years a visitor to the Adirondacks: "If, as was the case before the woods were so much frequented as they are now, an occasional pond only was watched when the dogs were out, there might be some reason in allowing a few days others who are lying it wait for him. * * If the New York Legislature allow the deer to be killed by dogs in obteliance to the senseless clamor of a few dog keeping guides and hotel keepers, they may enable said guides and hotel proprietors to take in a little money for a few years. But after a very lew years the woods will be deserted by sportsmen because there will be no deer to kill, -(Letter of March, 1855.) [Ex. 1.]

(185.) [EX. 1.] Sworn statement of Elijah Simonds [supra]: "It is the practice of some hotel heepers to get up a big hun; fake thirty or forty dogs and ten or fifteen guides, watch all the ponds and lakes, scatter the dogs through the woods and scoop in deer by the wholesale," [Ex. 21.] Hounding is more destructive than other methods because the system ontails the slaughter of game all the year around by the hounds, unassisted by human agency. The hounds

when put out for sport often overtake and destroy game without the hunter's knowledge; and in the close season they hunt and kill deer on their own account. This destruc-tion is inseparable from the maintenance of hordes of ill-fed deer dogs in a deer country. Statement of Gen. R. U. Shorman: "A strong effort will be made at the present session of the Legislature to open a season for hound-ing, a season not as long as the old law provided, hut yet one that will warrant guides and camp keepers in keeping hounds; and while hounds are kept it is not to be expected that very close adhesion will be made to season." (Letter of Jan. 19, 1886.) [Ex. 11.] Statement of O. A. Batcheller. Commander U.S. Navy: "The own-

be made to seasons." (Letter of Jan. 19, 1866.) [Ex. 11.] Statement of O. A. Batcheller, Commander U.S. Navy: "The own-ers of hounds * * as a rule make no altempt to keep their dogs confined during the closed season. * * Any one who knows any-thing of the hound knows that they will hunt by themselves. The result is too often shown by carcasses found rotting in the woods." (Letter of Jan. 29, 1855.) [Ex. 16.] Statement of R. M. Shutts, of Franklin county: "Hounds are allowed to run the year round. There is not a month in which you canoot hear the hounds baying; if not with a hunter, they are on their own hunt" (Letter.) [Ex. 15.] Statement of R. M. Shutts, of Franklin county: "Hounds are (Jan. 15] Was shown the carcasses of two deer that were frozen in the ice near Raiph's Hotel. * * They had beeu driven in by the hounds. * * Three years ago I saw an immense huck driven hotel yard at Ralph's and into the marsh where I could not get to drive him to dry land. He died in less than an hour."-(Letter as above.) [Ex. 15.] Sworn statement of Elijah Simonds, near New Russia, Essex county:

hotel yard at Ralph's and into the marsh where I could not get to drive him to dry land. He died in less than an hour."--(Letter as above.) [Ex. 15.]
Sworn statement of Elifah Simonds, near New Russla, Essex county: has hunted deer 40 years; has kept hounds and used them: "In travel im one-half mile on Cold Brook, I counted nine deer killed by hounds in March. Another time my dog got away from me, and in two days in March. In my trapping excursions I have seen hundreds of hounds after deer in the whiter and spring. These hounds were mostly hunting on their own hook. * * As a general rule, after the lakes are frozen over the dogs catch and kill most of the deer that they start. Owners of hounds that tie up their dogs have to let them loose once in a while for exercise. As soon as pring. I have found dead deer killed hy dogs in North Hudson, Elizabethlown, Blue Alountain Lake, Raquettes, North Elba, Trapper's Lake, Lonz Lake, Saranac, Boreas Kiver." (Sworn to before A. R. Dudler, N. P., March 13, 1886. [Ex. 21.]
Sworn statement of Sam Dunning. New Russia, Essex county: "I have been in the woods a put different degit and hunting cat he got a many hounds. I once yot a hound that * * caught and killed five deer witho. Law have he her heing about one huch of snow on the ground at the bounds. I aloe yot a hound that * to day and hunting on the fore hey got to water, even in September. * # That night the dog came beack. In the wood is take track and hour the view dead on a mountain. The oo: had eater what he wanted from the bindquarters. Some dogs will eat a meal from the hans of a how deer the out-start was a moutain. The oo: had eater what he wanted from the bindquarters. Some dogs will eat a meal from the bans of a how deer the out-skirts of the village and succeeled in catching it new tode and hunting on hey hounds. To meas yot a wound the deer the other stere the out-skirts of the ville eater what he wanted from the bindquarters. Some dogs will eat a meal from the bans of a how deer cade

hay internoon hound drove a two-year-bin deer through the out-skirts of the ultage and succeeded in carching it near the St. Law rence Marble Co.'s quarry." (Voucned for by Prof. M. R. Sacke [Ex. 4.2] Statement of Bainbridge Bishop, Essex county [supra]: "I found three carcasses of deer that were driven into a small stream in March and April. I have seen dors after deer at all times in the spring and winter. Most of the poole who keep hounds in this part of the Adi-roundacks make a practice of letting them run lose in the winter and spring." (Letter, March 12) [Ex. 8.] Statement of A. C. Cliffon, of Warren county [supra]: "Last week in Feb.] a neighbor of mine, while visiting his fox iraps, came upon the trail of a bleeding deer which had evidently been followed by two dogs. Taking the trail he scon found where the final struggle had occurred. * * Near the center of the circle was the half de-vourd carcass of a large doe. * * I would like to show to every member of our Legislaure the frozeu body of this doe, as it lies with its two like fawns disclosed through the gaping wounds, already member of our Legislaure the frozeu body of this doe, as it lies with is a set of irresponsible persons that own hounds, and some of them ex-pect them to get mose? (Ex. 2] Statement of Squire Wilcox, an old resident of Indian River, Lewis county: "Have lived in border of wilderness for over 40 years, and while traveling through the woods in different parts, we have found numerous carcasses of deer that have been killed in this way of hunt-ing with dogs * * M yons * * come across two dogs with a deer in the road; the dogs had catent the deer's hams nearly all out and the deer was still alive. * * A short time since we found a large, noble huck * * that was killed by dogs, lay rotting." (Letter of Dec. 29, 1855, in Lowville Republican, vouched for by Ed. Rep. [Kr. 17] Statement of J, H. Rushton, Canton: "The still-huuter kills deer, the jack-hunter kills deer, the nounder kills deer, but neither jack or cun will go hunting o

the dog eats his victim alive. (Letter of March 1, 1986). [Ex. 5.] The numerous deer thus sacrificed to feed starving hounds are not the only ones that are wantonly wasted. Scores of carcasses of "run" (é. e., hounded) venison are necessarily thrown away as unfit for food because of the diseased and poisonous character of the meat. Sworn statement of Samuel Dunning, of New Russia, Essex county. New York: "When deer have been run hard, the venison won't keep." [Ex. 2.] Statement of Mark Smith. of Number Four. Lawis county. New

[Ex. 2.] Statement of Mark Smith, of Number Four, Lewis county, New York: "I have winnessed large parties in the woods who were taken sick from eating hounded venison, and one man from Syracuse said he would give \$500 if he could be at home where he could see his friends once more and physician." (Letter of March 1, 1686). [Ex. 33.] Statement of William Huhert, of Petrie's Corners, Lewis county, N. Y.: "Deers drove by dogs and hit, the meat is dark colored and is not so good as still-hunted venison." (Letter of March 4, 1886.) [Ex. 30.]

Not so good as summanical vehicol. (Letta of match 3, noss) [Distrophy and a second second

THE ARGUMENTS ADVANCED FOR THE LAW'S REPEAL.

REFEAL. The arguments advanced to justify the repeal of the anti-hounding law are here alluded to for the purpose of sub-mitting such considerations as, we suggest, afford a sufficient answer to each. *The "Sportsmanship" Argument. a.* Advocates of hounding urgs that it is "the historic and most sportsmanlike method of hunting deer." Duer hounding *a accelerative in the Newth Works* is not his

was in favor of hounding and that it was objected to only by those pot-hunters and still-hunters who desire to kill the most deer in the shortest possible time, for the few paltry dollars that their flesh and hides may bring. (Dr. Samuel B. Ward, in pamphlet sent to the Legislature, p. 5.) Those who at first advanced this argument have since found ample reason for its withdrawal. If any doubt as to the character of the opposition to hounding still exists it may be removed by reference to the subjoined list of mdi-viduals and societies who hold the conviction that the repeal of the anti-hounding law will insure the early extirpation of the deer of the Adirondacks. [Exhibit 44.] A canvass of the members of the Eastern New York Fish and Game Protective Association of Albany has shown that the members of that society regard hounding as follows: <u>Have no opinion . 6</u>

Have no opinion	6
Uncertain	1
Decline to vote	1
In favor of hounding	6
Opposed to Hounding	58°

nembers, 128. For mode of conducting canvass and for the returns, see Exhibit 27.

The "Shy" Argument.

The "Shy" Argument. c. That hounding was necessary to make the deer shy so that they might not fall into the hands of market still-hunters. This position also has been abandoned. The facts are that the deer is naturally shy, that the use of dogs makes it not more, but less, shy of man; that in a country where deer are hounded, still-hunting can be practiced more successfully than in a district where dogs are not employed; and that pro-fessional market-hunters hound in the hounding season and then still-hunt on the same ground in the still-hunting season.

Iterstoual mikele-dunters hound in the hounding season and then still hunt on the same ground in the still-hunting season.
Statement of M. L. Feuton of Jamestown, N. Y.: "My camp [in the Adirondacks] was surrounded last kovernher by men that hounded all summer long and had taken out of the woods several loads of deer driven to water by their dogs and killed. But they all stayed and still-hunted through the last month just the same for all that. * * They were good still-hunters and barged a samany deer as the best of hunters. That is just the mode adopted by the hounding fraternity rears are by those that followed it years ago in the State of Pennsylvania. They always hounded through the summer and fall months, elaiming it (Letter in FOREST AND > TRANAL) [EX. 86.]
John Dean Caton, L.L. D : "The great characteristic of the Virginia deer is its natural wildness." ("Antelope and Deer of Am Proa.", p. 300, Dr. C. Hart Merriam: "A deer is always on the alert, the system of an unusual degree." ("Waamnals of the Adirondacks," p. 112.) J. Anoubon: "The timidity of the deer is such that it hurries away even from the sight of a child." ("Vivaparous Quadrupeds of North America," p. 22.) Charles Hallo k: "Deer statking is simply man before he can lay low the deer, who is possessed of a moto frames of the alert, the suce syster or more difficult of approach by the still-hunter." [EX. 31.]
Morn statement of Hunders advest a deer shorer of rour of segment of Houn degree. " we speet, excessivener ovus organizatoo, and is every on the alert to errounter: "Now let me tell you a little incident that huppened to me. * * A party of four or five gentlemen went to the upper Chateaugy Lake; on a little siland of approach by the still-hunter." [EX. 31.]
Statement of Hon. Geo. W. Pahmer: "Now let me tell you a little incident that huppened to me. * * A party of four or five gentlemen went to the upper threak track indices we shut up. The error to seare the shore soft and that a dozen boats, an

not." (Letter of Feh. 24, 1886), [Ex. 23.] Statement of Chas. H. Smith, Petrie's Corners; "I hear they claim deer are made shy by hounding. Once when I was driving the dogs drove a fawn into the water. The dogs swam after the fawn. I rowed up to it and caught the fawn and put it in the boat, and I drove them off and [went] to shore with fawn. I let the fawn on the shore and kept back the dogs. The fawn instead of running away followed me to camp. The dogs were put away. and after a while the fawn left. (Letter of March 13, 1886) [Ex. 6].

left. (Letter of March 13, 1886) [Ex. 6]. Statement of Bainbridge Bishop, New Russia, Essex county: "I have spent most time still-hunting, but I killed double the number before dogs that I did still-hunting. There is not more than one year in three in which still-hunters can work to advantage, and only a few days in that year at the most." (Letter of March 12, 1886.) [Ex. 8,] Sworn statement of Sam Dunning, Essex county, guide and hunter ince 1840 [supra]: "I do not think that dogging deer makes them more shy or difficult to be killed by the still-bunters. * * 11 is a good time to still-hunt when the hound is in the woods, hecause the deer are watching for the dog and do not notice theman." [Ex 2,]

The "Market of 1885" Argument.

d. To support the "shy" argument it was alleged that an unusual number of deer were sent to market last season, so that the markets were glutted and the price was lower than

that the markets were glutted and the price was lower than usual. This argument also has been perforce abandoned. The carefully ascertained facts are that the supply of Adirondack venison in market last season was less than usual. Urnca.-The 8 leading dealers received 59 saddles in 1885 against 82 to 92 in 1884. [Ex. 26.] Swacuss.-Andrews Bros.' coutract price Adirondack venison in 1884, 10c. per lh.; in 1885, 12%c. Thos Whitbread & Co, report "no material difference in prices" for 1884, 1885. W. J. Fage paid in 1883, 15c. [Ex. 12.] New York.-D. Keerr, Washington Market (largest dealer in venison in city), not more than 14 the amount received in former years. Adirondack venison in lots of 25 to 50 satdles; received at no one time in 1885 so many as 55 total receipts very small. The firm would cladly see a law passed forbidding absolutely the transportation to market and sale of any venison kiled in New York State at any time. French & Co., 180 Reade street, received no Adirondack venison at 11 in 1885. Knapp Van Norstrand, 260 Washington street, report "none on the market this season to speak of, and we never want to New York meat." E. G. Blackford (State Fish Commissioner), Fullon Market, reports as a his observation, less in market than ever before. [Ex. 18.] Market, [Ex. 13.]

g. It is alleged that more persons may participate in the hounding of deer than in the capture by any other method.

<text><text><text><text><text><text><text><text><text><text><table-row>

' From the Utica Herald, March 19.

a. Advocates of hounding urgs that it is "the historic and most sportsmanikk method of hunting deer."
Deer hounding, as conducted in the North Woods, is not his toric, and the general sentiment of American sportsmen condems it as unsportsmanike and indefensible. A discussion of this point is out of place here. The economic phase of the subject is of graver importance than its ethical side. The av does not concern itself with a consideration of the sportsmanship of any mode of capture; it does concern itself with the preservation of an unimpaired deer supply, of which the citizens of the State, now and in the future, may eujoy the usefuels to the methods as may be compatible with the preservation of the parent stock. The "Pot-Hunter" Argument.
b. It was alleged that the general sentiment of sportsmen
b. It was alleged that the general sentiment of sportsmen

only what a pot-hunter would do, and what a real sportsman would disdain to do. There is necessity for protective legis-lation, if we intended to protect the game and make the persuit of it possible in our game preserves for years to come. There is a spirit among real sportsmen which looks be-yond the present, and that is bighly creditable to them. It is hoped that this sensible view of the subject will serve as a foil against the attacks of the hungry crowd who wish to secure to themselves the butchery of game at the expense of true sport. If the Adirondacks are to be regarded as mere cattle yards for the kceping and slaughtering of venison, then let the scheme of pot-hunters go through. But even then a little common sense would suggest that some means be restored to keep up the supply, instead of using the chief means of extermination. The FOREST AND STREAM, a paper always found on the side of the sportsmen's true in-terests, eloquently defends the present law, and sounds a note of warning which it will be well to heed. It is not without significance that the oldest and wisest guides of the North Woods are so strongly opposed to the efforts which would result in depopulating the forests of their most graceful as well as their most valuable game. The cut on our sixth page handsomely Illustrates the situation which the deer hounders would bring about, and to which the opponents of the repeal of the present wise law are opposed. They are against slaughter of the deer, as such, in every form. There is a difference between hunting and slaughtering.

HUNTING AT ARMY POSTS.

Editor Forest and Stream:

HORTING AT ARMIT POSTS.
Editor Forest and Stream:
Having had a longer experience with the game in this vicinity than any other officer at this cantonnent I have been requested to reply to your inquiries.
No large game ean be said to be abundant within less than fity miles of this place, except during October, when hundreds of nule deer are crossing the Uncompany Valley within a mile of the post on their migration from the high mountain ranges forming the continental divide east and north of us. They are driven from the higher country by the first snow storms in October, and cross this valley by regular trails which date back to the time that this country has a occupied by the Ute Indians. As proof of this, several Indian "platforms" are still to be seen in piñon trees overhanging these deer trails in the foothills on both sides of the valley. Most of the deer cross the open valley at night, consequently not very many are shot while erossing. A few small bands of deer remain in the wooded foothills within five miles of the post during the whole year, and some fifteen or twenty are killed every year within these limits by officers and enlisted men from the post.
The Springfield and other .45 calibre rifles are used for donly method in use here. The mule deer's senses are very keen –especially his sense of hearing, and few men can hunt with sufficient care not to startle him by some unusual noise before getting within range. Consequently among our numerous excellent target shots who hunt deer very few are successful.
There are no whitetail deer in this vicinity. Judging from old antlers found in the foothills, elk were once common here. They are now extinct in all the country nearer that hunter's paradise, the Grand Mesa, fifty miles north of us.

mon here. They are now extinct in all the country nearer than that hunter's paradise, the Grand Mesa, fifty miles north of us.
A few grizzly bears, called here "silver tip," have been killed within fifteen miles of this post, but they are rare. I have not heard of any of them exhibiting any special ferocity.
Two "mountain lions," that is the high sounding title given to the common American panther in this land of exaggeration, have been killed within fifteen miles of here in the past eighteen months. They seem, from the tracks seen, more numerous than the hears.
Mountain sheep, now protected by law, are found in the mountains thirty miles south of us. They are said to be quite abudant.
Antelope are said to be found about Grand Junction, seventy miles northwest of us, I have heard of none nearer. Of small game only cotton-tail rabbits are abundant. The Springfield 20-gauge shotgun (61-caliber and not .20-caliber as some of your articles have made it appear) is well adapted for rabbit shooting, and many rabbits fall victims to it almost daily, from July, when the young rabbits are old enough to eat, until April, when they begin to bree. These rabbits, with an occasional deer, constitute the only noteworthy addition to the food supply of the command that is contributed by the game of the vicinity.
Jack-rabbits of Colorado seems to be the same as the great northern hare. It is gray in summer and white in inviter, a very different animal from the jack-rabbit of California that remains brown at all seasons. Unless one can appreciate a strong wild flavor he had better not attempt to eat a jack-rabbit.

appreciate a strong which are a brown duck of undetermined eat a jack rabbit. Ducks, mallard, teal and a brown duck of undetermined species, pass over in autumo, and a few small flocks stop on the river near the post. Some are killed, but no large bags are made. The Springfield shotgun is a poor gun for ducks. The more successful duck huntrs use 10 and 12 gauge double guns. Sandhill crane and a few English snipe are

double guns. Sandhill crane and a tew English single sometimes seen here. The only other game birds are grouse. These are meremarkable for variety than numbers. They are rapidly or creasing. Sage grouse have been shot occasionally within few hundred yards of the post, but they have become version. These are more within a

few hundred yards of the post, but they have become very scarce. Ruffed grouse, also called pheasant grouse, are occasion-ally found in pairs in the piñon and cedar woods on the foot hills near the post. Willow grouse are more abundant. They are found on the higher grass-covered slopes from ten to fifteen miles from the higher grass-covered slopes from ten to fifteen miles from the higher grass-covered slopes from ten to fifteen miles from the higher grass-covered slopes from ten to fifteen miles from the space. Blue grouse, called also spruce grouse, spruce partridge, Canada grouse and, in Utah, for heas, are found on in the spruce timber in winter. This is decidedly the finest table bird of the grouse family, but it should be drawn instantly on being shot, otherwise it acquires a disagreeable flavor from the spruce needles in its grop and gizzard. The sage flavor of the much underrated sage hen can be almost entirely prevented by the same pre-caution. This bird, by the way, has no crop, but its large gizzard will be found stuffed full of sage leaves so-called, the "sage bush" is really a wormwood. Ptarmigan, called here mountain qual, are shot in the high mountains around Ouray thirty miles south of us. A

very few upland plover are shot here in the spring. This about completes the list of our game birds. I have not heard of any wild turkeys being seen nearer than Fort Lewis, ninety miles north of us; nor of any quail in Colorado except where they have been introduced in the eastern part of the State. There are no prairie chickens in Western Colorado.

castern part of the State. First and the first and the second sec

CANTONEMENT ON THE UNCOMPANGRE RIVER, Colorado, March 11, 1886.

CLUB RULES.

FOLLOWING is the organization of the Beaver Dam Ducking Club: Its purposes are to afford opportunity to its members for healthful recreation and occasional relaxation from business care and pursuit, and to cultivate gentlemanly intercourse and pleasant social relations.

preasant social relations. I. The domicile of the club shall be in the city of Mem-phis, Shelby county, State of Tennessee; its club house or shooting lodge on Beaver Dam Lake, Tunica county, State of Mississippi.

Its membership shall be limited to thirty-eight active

and five honorary members. III. The officers of the organization shall be a President, Vice-President and a Secretary, who shall act and discharge

the duties of Treasurer. IV. There shall be an Executive Committee, consisting of the officers and two members, elected at the annual meeting of the club.

the officers and two members, elected at the annual meeting of the club. V. The President shall preside at all meetings of the club, call special meetings at the request of three members, or when, in bis judgment, the interests of the club require it, and he shall also exercise a general supervision over the affairs of the club. VI. It shall be the duty of the Vice-President to discharge the duties of the President in his absence or at his memory.

VI. It shall be the duty of the Vice-President to discharge the duties of the President in his absence or at his request. VII. It shall be the duty of the Secretary to keep a record of all meetings and transactions of the club; collect dues and assessments; keep and have possession of all papers, funds and property of the club. He shall pay all bills, when ap-proved by the President, conduct all correspondence, and as the agent of the Executive Committee employ, control and discharge all employes of the club. VIII The Executive Committee shall alone authorize the expenditure of the funds of the club (except the ordinary current expenses), employ and discharge the assistants at the club house; and make such club house rules as may be neces-sary, which shall be posted in a conspicuous place in the club house.

Sary, which shall be posted in a conspicuous place in the club house. IX. It is the duty of members to attend all meetings of the club, and to observe all rules while at the club house and shooting grounds; report derelictions on the part of em-ployes to the officers; pay promptly the club house charges, and manifest due consideration for the pleasure of the less 'experienced members. X. Honorary membership shall be conferred on those only who have become distinguished in field sports, or have made liberal donations to the club, and they shall be elected by a unanimous ballot.

experienced members.
A. Honcrary membership shall be conferred on those only who have become distinguished in field sports, or have made liberal donations to the club, and they shall be elected by a unanimous ballot.
XI. The privileges of the club may be extended to persons who have placed the club under obligations for favors, courtesies, etc., and to ministers in charge of congregations. The entry of the club under obligations for favors, is a second to the club and the place, by ballot, at the annual meeting, on the first Monday in September.
XIII. The Executive Committee shall prepare and submit to the club an estimate of the annual expenses, each and every year, at the annual meeting in September, and no other assessments shall be made during the fiscal year for which the estimate is made, unless authorized by a majority vote of the active members of the club.
XIV. No member shall have any right to or ownership of the property of the club, and on termination of membership, all his rights, privileges, etc., shall cease.
XV. All applications for membership shall be indorsed by two members of the club.
XVI. The initiation fee shall be \$100.
XVII. Failure to pay dues or assessments, after thirty days notice by the Secretary to each membership, withour further action of the club.
XVIII. The privileges of the club can be extended only to non-residents of Shelvy county, State of Tennessee, except as her clubfortor of the club, and off a so cond violation of the Executive Committee shall have the same forse and effect as if ordered by the Executive Committee, or for any conduct unbecoming a guileman and sportsman, a fine of twenty-five dollars shall be indored by the shall center and effect as if ordered by the club, until rescided by resolution of the club.
XII. The Executive Committee shall have the same forse and effect as if ordered by the same forts and the basts secure and indered as a regular meeting in specific privil

the conduct and expenses of their groups when the house. XXV. It shall be the duty of the Executive Committee to prefer charges against any member for a violation of the rules of the club. XXVI. A register shall be kept in an exposed place at the club house, in which all members and guests shall register their names, date of arrival and departure. XXVII. The election of persons to membership in the club, or for the expulsion of a member, shall be by secret ballot.

XXVIII. No member shall claim or have exclusive use of

any convenience or fixture on or about the lake; except, that he may provide his own boat. XXIX. ORDER OF BUSINESS. 1. Roll call. 2. Reading minutes of previous meeting. 3. Reports of committees, 4. Miscellaneous business. 5. Election of officers. 6. Adjourgment.

XXX. These articles may be altered or amended at any meeting of the club by a three-fourths' majority of those present

present.
HABTS OF THE RUFFED GROUSE.—Brookfield, N. Y.— Before market hunting became profitable and the sportsman, so called, became the "pot-hunter," grouse were of the more stay at home kind, inhabiting the same thicket year after year; or you could always flush him down near the swamp where the young cedars and hemlocks are the thickets. I have crept up quictly and cautiously, parting the branches noiselessly, have seen the grouse in its home just in front of me on the south side of an old rotten hemlock log, half buried in the soft, rich brown decayed bark and wood, basking in the mellow summer morning's sunshine. I have watched the mother grouse with her covey of thirteen, unconscious of the picture she formed. For three consecutive seasons an old ruffed grouse reared her brood in the same place. Could I be mistaken in the identity? I think not, so many times have I flushed her, always within a few yards of the decayed hemlock, just thirty-six paces from the spring-hole. You may ask if my gun ever came into position—but fingers that were trained to unloose those hammers became motionless. Hunting one day in the vicinity I came around to that charmed spot. Down near the spring-hole in the soft ground were the foot prints of man and dog. Too well I knew the story.—A. C. M.

SWANS IN THE NIAGARA RIVER.—Ten large wild swan were discovered swimming in Niagara River, just below the falls, at an early hour yesterday morning, some of them apparently in a wounded condition. Mr. Frank Nasoiy, Jr., of this village, succeeded in capturing one of the beauties.— C. E. LEWIS (Suspension Bridge, N. Y., March 21).

A WHITE QUAIL.

with my prize. MARSHALL COUNTY, Miss., Feb. 24, 1884.

01 -

A MODEST WOLF STORT. -Lawrence, Kas. March S -Re-cently a farmer living in the southern part of this county came into the city with the report that he had discovered a cave on his farm that was inhabited by prairie wolves, and from what he could find out they amounted to about 300. He had killed a rew, but they would not come out, and he was afraid to enter the cave. Preparations were at once made to raid the den. A large party arrived at the place made to raid the den. A large party arrived at the place made to raid the cave, and were at once torn to pieces. A force of men then began operations and in a short time had a hole into the cave, back of the wolves. Two men entered, and all the dogs that could be found, and advanced on the rear of the mass of animals, who had by this time assembled in the front part of the caver. The dogs became frightened and beat a retreat, and the men, after firing a few shots also got out. After an all-day's skirnish, the hunters decided to make a dash and drive out their prey and kill as many as possible. All drew back from the front and kept quiet, and two men again entered in the rear. This time they succeeded in causing a stampede, and in a short time the cave was empty. The shootsrs did some good work, and by the time they were through about 100 dead wolves strewed the ground. The others scaped, and the party returned minus four dogs. A grand hunt is proposed. It is supposed the animals wintered in the cave.

NEW ENGLAND ANGLING.

<text><text><text><text>

this week. They will go by sleigh, not to fish, but just for the novelty of riding down. Oquossack to the camps, on the ice. By the way, the rebuilt Upper Dam puts the flowage of Mooselucmaguntic Lake some four feet higher, and some of the camps are being moved back. The most of the camps on that lake, however, will be "high and dry." What the new flowage will do for the fishing is a question. At Trout Cove it will doubtless be better, since it has always required moderately high water to bring success at that well-known point. When Richardson Lake—the lake below the Upper Dam—was raised eight feet by the rebuilding of the Middle Dam six years ago, it was followed the second and third years by remarkably good fishing. It is concluded that flowage creates use feeding grounds for trout, but breaks up spawning beds. At the Upper Dam itself there has been no fishing for two seasons. The repairing, begun one year ago, caused the drawing off of the water and the shutting of it off by coffer dam at Trout Cove, so that visitors there last season found the bottom dry where the rushing pool used to be, and a lot of logs, dry enough to burn, at the very spot where the celebrated eleven-pound trout, the largest true *Salmo fontinalis* on record, was taken six years ago. A recent letter from the superintendent says that the re-pairs at the Upper Dam will be about completed, and the water, unobstructed, turned on by the beginning of the fish-ing season. What the long-continued holding back of the water at this point has done for the fishing remains to be told. One experienced sportsman suggests that since "trout always go up stream in the fall and down stream in the spring," there will be no fishing below the new dam, but it will be as good as ever above it. Another theory is that the trout will follow the minnows up from Richardson Lake be-low the same as usual, but that there will be no fishing above the dam. Probably the true position is that the trout have been driven away and much disturbed by the long absence of wat

spring. The popularity of steam launches on the Androscoggin lakes is great. Capt. Fred Barker adds a new steamer to the Mooselucmaguntic fleet this year. Messrs. Betton & McKane have put a nice little steamer on Richardson Lake. This makes five steamboats in all on that lake—three private boats and two public. Alas! for the march of improvement. It builds dams and cuts down the forests. Row boats are too slow, and the camp must give way to the hotel and the summer cottage. This march of improvement is like the coming on of old age. Both are determined to end our sport-ing days, and it is sometimes a question which will first succeed. SPECIAL.

A LARGE TROUT.

<text><text><text><text><text>

keeping up a steady strain on the line, the fish began to show signs of weariness from its great efforts. I had a landing net ready, and as soon as the fish approached the boat, I slipped it under him, and came near going into the water in-stead of taking the fish out. The battle occupied fully fif-teen minutes at least, although it seemed to be much longer, and Mr. Greene was in a violent perspiration. After the capture he took the evening boat for Buffalo, which in those days occupied much time on the trip, and as there was no ice at the Sault, I had fears that the trout would not reach New York in good condition. If Mr. Greene is still living, I'am in hopes he may see this article. P. R. Hov, M.D. RACINE, Wisconsin.

RACINE, Wisconsin.

ANGLER, GUIDE AND TROUT.

ANGLER, GUIDE AND TROUT. A NEW YORK man went with his guide to Brandy Point in 1885 to catch trout. After much laborious sitting still the guide managed to hook on the end of a hand line with a struggling worm for bait, an enormous trout which weighed ten pounds and a quarter. When the fish had been safely landed and incontinentally knocked in the head with a club, the unsuccessful but ingenious angler looped a gaudy "toddle bug" fly upon the end of his line, and fastening the hook in the mouth of the gasping fish, he bent his rod double by the strain he put upon it. Upon reaching the Mooselue-maguntic house where he lodged for the time, the angler told how the big trout had been caught upon the toddle bug fly and had bent double the pliant rod, but he did not re-member the guide nor the handline nor the worm. When, however, the New York angler had returned to his home and had put the big trout and the toddle-bug fly in a glass case, the guide remembered the rest of the story and made merry over it. merry ove er it.

merry over it. This fable teaches us how New York can give points to the rest of the country in capturing big Rangeley trout, but it also teaches us that the angler should first set it up with the guide before extolling the gaudy fly at the expense of the humble but industrious red-worm. A. MORCE.

A GAME CATFISH.

A CAME CATFISH. Editor Forest and Stream: I have just been reading the "Adirondack Fishes" and the work has interested me very much. I must differ from Mr. Mather concerning the edible qualities of the black bass, as I am fond of them, but no two persons agree upon tastes and relative value of foods, yet I appreciate with him the com-mon catfish of the East, Amburus catus. There is one of the cats, however, which is very much better; this is the Southern channel cat, Ictalurus punctatus, of the South, west of the Blue Ridge—not to be confounded with the catfish, also called "channel" found in Pennsylva-nia, Virginia, etc., I. albidus. The punctatus loves clear running streams and likes a bottom of stone or gravel. It is an excellent table fish, and I think is one of our most val-uable fishes. It is very gamy and rises spleadidly to the dy, and shows, I think, as much and even more fight than some trout. Many, I may say most, people in the Eastern States do not know that this is a first-class game fish, and by first class I mean one that takes the figh finely and fights well. Though mostly fished for with bait, these cats rise splendidly to the fly and are full of game. I have heard of many being caught in Texas with the brown hackle, but I have never been successful with it and have always found a gaudy, bright black bass fly was better. The best fly for these cats is made with a white body. A fly which I have never been able to find in tackle stores, or in dealers' lists, but which is used in the South as a home-made article, is one of the best flies for this fish. It has red wings, white body, white backless (deer tail hairs) and a black head, like the heads on some of the salmon flies. The cat in question I believe grows to the weight of thirty pounds—Jordan says twenty to twenty-five pounds – I have

Ridge, that is, in the streams flowing into the Tennessee, and so eventually into the Gulf. East of the Blue Ridge another genus of cats—the *Amiuri*—takes its place. This genus is very different, however, in its habits, haunts and value, either for food or game. Like many other fishes the channel cat is generally fished for with bait, by those who know of no other way, but it is a first-class fish for the fly-fisherman, CYRTONYX.

BLACK BASS ANGLING.

DEACK BASS ANULING.
ENDIFICIENT AND CAST MULTING.
A provide the advance of the second of the advance of the second multiple of the second of second years of the second years of the

THE CATFISH AS GAME.—We have on several occasions printed letters-from correspondents which stated that a cat-thish had taken an artificial fly. This was regarded as a sort of accident, or in the light of unusual conduct on the part of the catty, whose instincts seldom incline him to such trivial things as flies, but rather incite him to search for both dhe early and the late worm upon the bottom. Now comes our valued correspondent "Cyrtonyx," who tells us, in another column, of a genus of catfishes which rises like a trout to the lure and fights like a black bass. We know that the writer of the article is an accomplished fly-fisher, who sel dom or never uses bait, and is possessed of more ichthyologi-cal lore than most anglers dicam is known to any man, for the average angler is content to angle and to know a trout from a bass by its general appearance, without burdening his head with such triffes as which has spinous flues or teeth like buistles. Therefore, we commend the observations of "Cyrtonyx" and indorse him as one who knows of what he speaks. By a happy coincidence, Mr. John Daridson, of Mooroc, Mich, dropped into the office while we were read-ing the letter referred to, and began relating what a beauti-hi, gamy-looking catfish he saw in Spring River, south of Kasasa, in the Indian Territory, while down there working bis dogs recently. He said that he saw many caught by boys with bait in clear, rocky streams, and that the fish was as shapely as a mackerel and looked as gamy as a trout. His description of the spotted sides agreed with that of *I. punc-taus*. Here is a chance for fishculturists.

LARGEST RANGELEY TROUT.—Boston, March 20.—Editor Forest and Stream: In your issue of March 18, George Wild calls upon "Stephen Morse, Lawrence Sargeant, Marshall Whitney, and all good honest guides" of the Rangeley Lake region to send in their records as to the largest trout (Salmo fontimatis) ever taken in Rangeley waters. In this connec-tion I would like to say that one of the Rangeley guides, Capt. Barker, well-known in Boston for his annual visits and his addresses before the boys of the Chauncey Hall school, gave an address one evening in the winter or spring of 1885, before the Appalachian Mountain Club. At that meeting, in answer to a question from me as to the very largest square-tailed or speckled trout ever taken in Rangeley waters, he stated that the very largest of which there was undoubted record weighed thirteen pounds and some ounces. The ex-act ounces I do not remember, but am positive that the weig't was over thirteen pounds. Will not Capt. Barker repeat his statement to FOREST AND STREAM for the benefit of Mr. Wild and all interested?—C. H. AMES.

THE NIAGARA COUNTY ANGLER'S CLUB has been organ-ized at Lockport, N. Y. The officers are: President, David Millar; Secretary, Wash. H. Cross; Treasurer, J. E. Emer-

fishculture.

SHORT LOBSTERS.—Recent developments show that the coast have really got themselves into deeper trouble than at truck shows that the fines imposed upon one man in Portland mount to over \$1,000. That number of lobsters under 10% of the max where the fines imposed upon one man in Portland or to over \$1,000. That number of lobsters under 10% of that State Imposes a fine of \$1 each. This man swore that of that State Imposes a fine of \$1 each. This man swore that or the lobsters in it. But the commissioners say that they shall have no difficulty in proving that the key to prove the short lobster business. At this end of the head or do not be and they say he will have to give up the short lobster business. At this end of the fine a phoyed, and as the appropriation by the State is insufficient, the Massuchusetts Fish and Game Protective Association is paying the bills. Its members are determined that he head was that the the experiment it is lawful to take lobsters where the property of the statute at least. But the waste from canning is the work feature. In Maine it is lawful to take lobsters where the the experiment of the statute at least. But the waste from canning is the work feature. March 19. FISHCULTURE AT BLOOMING GROVE PARK.—Editor Forest and Stream: The club here has about twenty miles of good trout streams, such as Shohola, Blooming Grove and Taylor's creeks, and some others. Leaving the railway station we drive up the mountain seven miles to the club house, along the Blooming Grove Creek most of the way from Millville. All along here are found spring tributaries suitable to deposit trout fry in. Ample provision has been made to protect these streams as well as the lakes belonging to the association, by the employment of guardians who also look after the hunting grounds. These men are invested with power to arrest tree-passers by the charter of the association given by the State of Pennsylvania. In a former letter, published in your issue of March 11, I gave an account of the hatchery and the fish now in the troughs. Lakes Laura and Giles abound in black bass, but for some reason they will not take any lure in the latter although it has been repeatedly tried. The frv in the hatchery are doing well and will be planted in the streams next month.—WHITE MILLER.

A FISHERMAN'S ASSOCIATION.—A meeting of fisher-men and citizens of Duluth, Minn., was held on March 13, and au association was formed. An address on tishculture was made by our correspondent, W. D Tomlin, Esq., in which he showed how the fishermen should work with the fishculturists for common good. He referred to the millions of whitefish fry being turned out yearly by Mr. Frank 'N. Clark at the U. S. hatcheries at Northville and Alpena, Mich., as showing what can be done at little expense and advocated the establish-ment of a hatchery at Duluth. Mr. Tomlin quoted a fishcul-turist as saying that spawn taken from fish found dead in the nets can be hatched. This is an erior; the eggs die shortly after the fish dies, perhaps in a few minutes. A committee was appointed to draft a constitution to be submitted at a future meeting, and the following officers were elected: Martyn Wheeler, Chairman; W. D. Tomlin, Secretary; Capt. E. Smith, Treasurer.

SUNAPEE TROUT,—This fish. which has attracted so much attention lately, notices of which have appeared in our last two issues, has yielded its eggs to Mr. Hodge, Commis stoner of Fisherics of New Hampshire. It is no doubt a form of the Salvelinus oquassa. or blue-backed trout of Maine, which grows to a larger size. Mr. Hodge has presented to Mr. Fred Mather, Superintendent of the New York State Hatchery on Long Island, 1.000 eggs of this fish and some hy-brid eggs. One lot of the latter are Sunapee eggs impregnated by brook trout, and the remainder are brook trout eggs im-pregnated by the salbiling, Salvelinus salvelinus, a fish im-poited from Germany some years ago.

THE UNPAID SPECIAL AT CHICAGO.

THE UNPAID SPECIAL AT CHICAGO. Editor Forest and Stream: In your paper a short time ago appeared an article entitled "Unpaid Special at Chicago." and that the same was paid by the donor into the treesury of the Illinois Kennel Club; also that said amount (\$16) was never paid to the gentleman who won the special. I therefore offer this explanation, and am willing at any time to substantiate the same by oath: That I do not know Mr. Waters: I never asked him for a special: he never paid me any amount of money, nor was the same paid into the treasury of the Illinois Kennel Club by Mr. Waters or any other person; that I never had anything to do with Mr. Waters's special or any other special connected with the Illinois Kennel Club bench show, nor did I know anything of such special until my attention was called to the matter, and by referring to the catalogue I found a special offered by Mr. Waters for the best pair of American standard black coekcrs. I write this in order to place myself properly, and innocent of having anything to do with this or any other special at the Illinois Kennel Club show. As the letter by Mr. Wade may be taken and understood as reflecting on me, or that I had some hand in the matter, I hope you will insert this at your earliest convenience; and other proof that may be required by the public I will gladly submit in order to learn my character from any stain. Jonn K. Navroa, Sec.Treas. Illinois Kennel Club.

Sec.-Treas. Illinois Kennel Olub. Curcaso, Ill., March 13. CANINE LORE. Editor Forest and Stream: The New Jersey Kennel Club have offered one hundred dol-lars reward for a living dog with the rables. About every dog that is now taken sick, the cry is raised (not only by the urchin in the street, but in the many sensational newspapers now published), mad dog; and as the members of this club know that the disease now raging among the dogs is a malig-mant form of distemper and not rables, the club has taken this method to counteract and allay the public excitement over this med dog scare. I do not believe there is any such disease as rables. Dogs, like all other animals, must pay the debt of nature and die from disease. A dog's brain may become affected from a disease, and when so affected the animal may even bite his own master, but if the wound is properly treated by a physician, no bad effect will follow. History teaches us that for thousands of years the dog has been domesticated and has become the almost constant companion of man. That man has made the most extensive use of this animal in every way, and I now think it is time we should begin to give the dog his dues, and do justice to him and his race. I find that David was among the first to show his aversion to the dog. "For dogs have compassed me, the assembly of the wicked have enclosed me. They pierced my hands and my feet." Psalm 22nd, 10th. Now, widently, in the days of David they had dogs and dogs would then bite. Yet we will find upon examination of the traditions and writings of the ancients that the disease rabies or hydrophobia is never mentioned. Yet we do find that in the case of persons afflicted with sores it was a trended to heal and soothe the angry flash, and even to this day in country places where the mad dog cruze has not ponetrated, you will find the same custom Whenever a dog has a sore or wound on his body he will lick it, and it is a very common saying "the lick of the dog is good for the bite."

No, the disease called rabies is a modern disease created by superstition and kept alive through the influence of sensational newspapers. The first authentic case of rabies I find is recorded by Plu-tarch in his tract on superstition, in which he says that "A risto-demus, the King of the Messenians, was in the war which he maintained against the Lacedemonians so alarmed at the dis-mal demunciations of the prophets when the dogs howled like wolves, and a wild herb had grown near the hearth of his house that he laid violent hands upon himself in a paroxysm of despair." Evidently in the days of the ancients the only rabies they dreaded was created out of the "howl" and not ruled the world and governed the actions of men. In Stehelius's rabbinical literature on the traditions of the Jews contained in their Talmuds, and other mythical writings, we are told the two following passages give a very curious rabbinical account of the different behavior of dogs in a to wn, sometimes grumbling and howling, at other times gamesome and full of play. "Our rabbins of blessed memory have said when the dogs how then cometh the angel of death into the city," and in rabbi Menechem Von Re Ranats's exposition on the same books it is said, "Our rabbins of blessed memory have said when the dogs howl then cometh the angel of death into the city," and in rabbi Menechem Von Re Ranats's exposition on the same books it is said, "Our rabbins of blessed memory have said when the angel of death enters into a city the dogs do howl," and I have seen it written by one of the disciples of rabbi alpenda the Juct, that upon a time a dog did howl and elapped his tail between his legs and went aside for fear of the angel of death, and somebody coming and kicking the dog to the place from which he had field the dog presently died." Le Bruyn says dogs seem to have been looked upon among the Jewin A insagreeable light; yet they had ther in consid-erable numbers in their cities. They were not shut up in their

houses or courts, but seem to have been forced to seek their food where they could find it. Busbequius says that the Turks reckon a dog an unclean and filthy creature, and therefore drive him from their houses; that these animals are there in common, not belonging to any particular owner, and guard rather the streets and districts than particular houses, and live off the offal which is thrown out.

out. In Morocco, says "Host's Travels," there are dogs in abund-ance, and as the greater part of the Moors have scarcely enough to live on for themselves, much less to feed dogs, they suffer them to lie about the streets so starved that they can hardly hang together, and almost devoured by fleas and vermin.

suffer them to be about the streets so starver that they can hardly hang together, and almost devoured by fleas and vermin. Poiret, in his "Travels in Barbary," says the dog loses in Barbary, as in the East in general, a part of those social qualities which make hun the friend of man. He is no longer the domestic, mild, instinuating animal, faithfully attached to his master and ever ready to defend him, even at the expense of his life. Among the Arabs he is cruel, bloodthirsty, always hungry and never satisfied. The Moors grant him a corner of their tent, but this is all. They never caress him, never throw him anything to eat. To this treatment, in my opinion, must the indifference of the dogs toward their master be ascribed. Very often they have not even a master. They choose a tent as a place of refuge, they are suffered to remain there, and no further notice is taken of them. Refuse, carrion, filth, everything is good enough for them if they can but appease their hunger, and they are lean, emaciated, and have scarcely any belly." Mow, in these Eastern countries we can see the dogs under the most unfavorable circumstances. Dog pounds do not ex-ist. There is no general killing of dogs. They go on from year to year fighting for life, and usually die from starvation. Yet, in these countries the cry "Mad dog" is never raised, and they have never had a case of the rables. Now, does it not seem strange that it is only in the civilized countries we find the existence of the dreaded disease, and does it not seem that it is only where the dogs are well housed and fet that we find it? An urchin in the street sees a dog attacked with a fit (pro-duced by worms or distemper), the boy shouts "Mad dog,"

find it? An urchin in the street sees a dog attacked with a fit (pro-duced by worms or distemper), the boy shouts "Mad dog," some enterprising reporter gets hold of the item, which is produced and reproduced by the many sensational papers now published. Is not this the true story of the mad dog scare?

<text><text><text><text><text>

dreaded discase. Pasteur says he can create, produce and reproduce the rabies by injecting some kind of virus into the brains of a dog or rab-bit. I think if the French Government would inject some of the same virus within this Prof. Pasteur's skull, mankind would be greatly benefited C. J. PESHALL,

THE PITTSBURGH DOG SHOW. [From our Special Reporter.]

[From our Special Reporter.] UP to the latest hour at which FOREST AND STREAM could be advised by telegraph of the progress of the Pittsburgh dog show the regular class judging had been nearly completed. The telegram containing the awards made up to midday, on Wednesday, March 17, also stated that the attendance so hours later the remark respecting the attendance would have been very decidedly changed. In the afternoon the people passed through the doors in steady streams and the accommo-dations for visitors at the Central Rink were taxed to their uttermost until the doors were closed at 10 clock. On Thursday and Friday the attendance was also large and the result undoubtedly must have been satisfactory to the club. Judging was continued up to 10 o'clock on Wednesday might, by which time all but the impossible-to-decide special prizes had found happy owners. These special prizes are beed coming an incumbrance at many shows, and in place of assisting in the finding out of the best dog of the several breeds, are in many cases so offered as to become a gift to one animal and that the one meant by the donor, while in other instances they are the vehicle for a little chaap advertising. At Pitts-burgh there were about eighty special prizes offered and not over a third of these were of any practical value as a guide toward designating the best of the breed. Many of the specials were not awarded and the judges might very properly have declined deciding several others. Comment on the judging was last week contined to Mr. Mortimer's classes, finished on the first day, and in resuming the subject Major Tarybor's classes will first be passed under review, beginning with pointers. The only entry in either of the pointer champlon classes

<text>

The Gordon setters escaped general condemnation by the appearance of Royal Duke, who here won his birst champion ship besides the special. Irish setters were also indifferent classes, in which the bitches were the best. In toxhounds, Major Taylor discarded the English type for the natives. Squire Handle's hounds were, however, rather a mixed lot, with a touch of the pointer in the looks of some of them. As is was, we preferred Kiser to anything shown by the Squire, while better than any of them was Dan O'Shea's Hanger. The beagle classes were well filled and the quality is still on the improve. Lee is not entitled to rank in the champion class, though he was entered and shown as such. Rattler, however, beat the old dog, as well as Bannerman. King Pat, a very smart little hound, was first in the dog class. He talls of in muzze and is inclined to be bitch headed. Dandy is a weedy dog and was placed too high. Banker, though not up to the O'Shea's thand and head, should have been second, while for third we fancied G and Duke, who is of the right size and is good everywhere except in his short head. Driver is far too long in couplings, and we could see no merit in any of Mr. Durgey's entries. The bitches were placed to our liking, and in the puppy classes there were one or two of good promise. Mr. Krueger won the kennel prize with a very sorty lot of five.

THE NEWARK DOG SHOW.

THE NEWARK DOC SHOW. The first dog show of the New Jersey Kennel and Field Trial Club, held at Newark this week, was a first-class show. There were 546 dogs entered and nearly all of the m were present. The judging did not commence very promptly on Tuesday, but very good progress was made, and all but the collie pupy classes and the miscellaneous class were fuished on the first day. The dogs were well benched, but the build-ing is not quite large enough for the number exhibited, and in consequence the space for visitors was rather limited. The show was well managed and the dogs well cared for. Many members of the club devoted their time to the care of the dogs and visitors, and everything connected with the show ap-peared to run smoothly. The attendance on Tuesday was very good for the first day, and on Wednesday the building was lincomfortably crowded a portion of the time, making is almost impossible to get near the dogs. The club are well satisfied with the success of their this attendance of the classes there was not a poor one in the lot. A great deal of interest was manifested in the judging for the large pointer special. The contest was between Beaufort and Graphic, and when Mr. Davidson, atter a long and very careful examination, handed the riblot to Beaufort, the long-continued applause from the crowd around showed that the decision was well indorsed. WASTIFFS,-CRAMION list Willawn Kennels' Prusian Princess.

WORMS IN PUPPIES.

WORMS IN PUPPIES.
 Editor Forest and Stream:

 For the benefit of fellow sportsmen and lovers of the dog, I wish to give a little of my experience in doctoring for worms. These pests have been the bane of my most cherisbed hopes and ambition in breeding fine setters; my choice pups, evenly marked and best of form, were sure to fall victims of these fell destroyers. I have used most every worm remedy with little success, except one, this remedy in most cases proving as fatal as the disease, my pups often dying after the worms were discharged, and on a postmortem I found a high state of inflammation with effusion of blood throughout stomach and intestines. The remedy referred to is Dr. C. MoLane's vermifuge, which I think the great panacea for worms, and with which I have had grand success. I am satisfied many pups could be saved by treatment such as here related. Two of a last litter in my kennel, while in fine form and condition, were suddenly taken with spasms, the fits following in quick succession until they were perfectly prostrate and lay apparently unconscious, my bope of saving them was so slight that I ordered my man to chop off their heads to end their suffering. He begged to be excused the uopleasant task, and I confess I hadn't the courage to do it myself. I had, however, given each a small spoont of McLane's vermifuge, and as I left for my office I remarked, "Well, let them live, they will be dad before night any way." On my return I found them living, the spasms had ceased, no worms had been ejected and they were ejected. In less than forty-eight hours they were on their feet, and are living to-day, fine, healtby dogs. I believe if the above remedy was given in small doese when pups are but two vecks old, before these pests get such head way, very few pups would die with worms.
 Mathematical material export results. If you can't get the vermifuge, and I try and report results. If you can't get the vermifuge, your druggist, send to Flem

THE CALIFORNIA KENNEL CLUB,—At a meeting of the Executive Committee of the California Kennel Club on Feb. 4, it was decided to report to the club a recommenda-tion that a bench show be held in this city in May next. A resolution was adopted that any member losing a dog shall advertise same in a daily paper for three days, after which the Executive Committee will take the matter in hand and offer a reward of \$50 for the arrest and conviction of any per-son stealing a dog, and \$100 for the arrest and conviction of any person who has poisoned any.—San Francisco Call.

THE HEMPSTEAD FARM COMPANY.—New York, March 18.—*Editor Forest and Stream*: The Hempstead Farm Company, Limited, of Hempstead, L. L, of which I am presi-dent, and A. D. Lewis, Esq., of this city, secretary and trea-surer, has purchased my entire kennel of collies. It is a com-pany incorporated under the laws of this State, its busness being the raising and sale of the higher class of farm products, and the breeding of thoroughbred live stock.—THOS. H. TERRY.

NEW ENGLAND KENNEL CLUB.—Boston, March 24.— Editor Forest and Stream: The entries to the coming show of the New England Kennel Club closed with 625. Many re-turned coming after the 20th. Everything promises a suc-cessful show. The quality of those entered is of the highest standard, and Mechanics Hall a magnificent building with every convenience.—JOHN READ, Supt.

CLEVELAND BENCH SHOW.—The judges are: English setters—B. F. Wilson, Pittsburgh, Pa. Irish and black and tan setters—Maj. J. M. Taylor. Cleveland O. Pointers—Judge to be announced. Mastiffs. St. Bernards, collies, hounds, fox-terriers, spaniels, and all other non-sporting dogs—John H. Naylor, Chicago, Ill. The entries close April 17.

[MARCH 25, 1886.

Bifle and Tray Shooting.

Address all communications to the Forest and Stream Publi RANGE AND GALLERY. REST SHOOTING. THERE is a good deal more in rest shooting with a ride than one the st chance would suppose. There is no question that it) the first chance would suppose. There is no question that it) will apply the knowledge, and a refinement of nervel. If a riflem ing to off hand predice with the rifle, he will become a better sho the crack shots in the city are trying it. It will be seen from the try gets below, which are basis string measure, that ten shots in he made not measure shots string measure, that ten shots in the rest shooting is the old time style, and when Mr. Conlin issued to refer the off the lew programme he induced one of the NY York artists who frequent the shooting gallery to add to the attra-tion should be avery to a shot artist booter, no less personage than Rip Van Winkle, of Catskill goolin fame. Old its REST SHOOTING. in such plat "Vat vas dat"!

78865537

11.1	BOSTON, March 20.—The riflemen met at Walnut Hill to-day. The attendance was very good, and the weather conditions, aside from the rain and fog, were fair. Captain Souther and Captain Davis chose trom among the riflemen present and shot a team match, in which the former won.	THE TRAP. Correspondents who favor us with club scores are particularly re- juested to write on one side of the paper only.

Summerson won bie. NEWARK, N. J., March 20.-The annual crow shoot of the South ide Gun Chub was held this afternoon at the club grounds, near the oal dumps, with a full attendance of the members. Over 300 crows, apped on the shotes of the Delaware, near Trenton, were on hand champagne baskets. They were rapidly placed in the trap at 25yds. se. Their sable plumage and lumbering flight made them easy ising anote than 1 birth disses were made. Fully one-half of he members made clean scores in the 5-bird sweepstakes, and few issed more than 1 birth dead crows. The cost of the birds was con-derably less than that of pigeons, and they were placed in the traps to the means at the work of the dead crows. The cost of the birds was con-derably less than that of pigeons, and they were placed in the traps to the members at twenty cents each. The few that escaped struck beeline for Trenton,

CRUEL HANDLING.—A special correspondent from Reading, Pa., lisa a backing story of crueity practiced by L. B. Campbell, a well-nown New Jersey pigeon shooter, noon the birds trapped for his ponent. He was accused of pinching off the toes and bilinding one the eyes of each bird to make them ity to the left and in a frenzied anner. The report stated that he was incarly mobbed when the ick was discovered, and then he was finally arresided and taken to net house. It also said, that the match was stopped at the action house. It also said, that the match was stopped at the nath bird, but later reports gave the Reading man credit for killing burds and the Monmouth county man 37, showing that the match as concluded. The fact cannot be disguised that misguided men ractice many cruel irieks upon pigeons hefore placing them in the ight. Observation shows that it is a fallacy, and that no matter how to birds' feathers may be pulled out or trimmed off, the result can-ot be foretold. Piecon shooting in itself is cruel, but there is no crues whatever for breaking the birds' tocs, pulling til feathers, ijecting turpentine or peppermint under the skin, or sticking tooth-icks through their nostrils.

CINCINNATI, March 12. — Weekly shoot of the Price Hill Gun Chub. Teather all that could be wished. The club trued their new plan of aving two sets of traps going for singles and doubles; it was a de-ided success, and none were kept walting as is generally the case. If , J. E. Miller broke 30 cut of 100 singles and doubles. Match at 20 ingle American clay birds; J. E. Miller 20, O. Sopf 17, J. Maynard 15, Dreste 12, Judge 12, Bing 12, Chick 16, D. Bemis 14, C. THE YACHT CLUBS OF OHIO.—The formation of the Inter-Lake Yachting Association promises to unite all the clubs of Ohio at least, and to benefit greatly yachting on Lake Erie Last season the Ohio Y. C. was organized at Toledo and new has 164 active members, the newly incorporated Toledo Y. C. has 120 members, the Cleveland Y. A. has now H2 members, the Puritan Bay Y. O. has 35 members, and the Michigan Y. C., of Detroit, Mich. has 151 active members. All of these organizations are interested in the new Inter-Lake Y. A., and will aid in making the meet of 1856 a success. CYTHERA.—This yawl, with Mr, and Mrs. W. A. W. Stewart and and Mr. C. S. Lee on board, left Wivenhoe on March 10 for Gosport, where she will take on some sails before leaving for Madeira. Mr, Stewart has purchased the Cythera, a yawi 84t, on waterline and 17t, beam, and will sail her across after a visit to the Mediterranean. Captain S. D. Porter is in command as navigator. SMALL LAUNCHES.—Messrs. Kane & Co., of Racine, Wis, are now building several small launches in which water gas is employed for fuel. They have now in hand one 25t, long, 4ft, beam, 2din, ex-treme draft, for Mr, Will Wood, of Racine, Ste will have a 3-cylinder valveless engine of a new type, and a porcupine boller, burning water gas.

valveless engine of a new type, and a porcupine boller, burning water gas. THE CUP RACES.—A meeting of the Cup Committee of the New York Y. C., was held lask week. The artangements for the races will probably be the same as last year as regards courses and other de-tails. Mr. J. F. Tams has been requested by Mr. Beavor-Webb to act as Galates's representative.

YACHT STOVES.

YACHT STOVES. Editor Forest and Stream: Having read with interest the communication of Mr. Chas. L. Work, published in your issue of March 11, on gasoline stoves for yachts, and also the reference which Mr. Kunhardt makes to kerosene stoves in his "Cruise of the Coot," I am led to conclude that my own experi-ence may be of service to some of those, who, like myself, love a boat. My only knowledge of gasoline stoves is what has been gained by observation. With kerosene stoves for coolding purposes I have had au experience of ten years, and during the last five ycars have neither changed my stoves nor the method of using them, notwithstanding ms cruises have aggregated hundreds of miles. I have two little cast iron kerosene stoves, with two burners each, known as the Whitney Hot Air Blast. They are made in Philadelphia, In appearance probably the least attractive of any on the market. There may be others as good or even better, but I have never had any serious trouble, either from smoking or odor, and the two together will cook a good meal for five men in the time it takes to the tow of stove, say in about thirty minutes. My method is to place the two stoves side by side, in a zine-lined wooden box, constructed as shown. It will be observed that the top

Scale: 1/8" = 1"

of the box lifts off, and the front lets down by means of hinges placed three or four inches above the boltom, which leaves a reservoir suf-ficiently large to hold and confine any of the oil that may escape from the stoves, or any particles of grease that may be thrown off in cock-ing

the stores, or any particles of grease that may be thrown on in cover-ing. When sailing to windward in an open boat the front or drafts of the stores are placed to leeward, and are thus protected from too strong a current of air by the back and sides of the box. When not in use for ecoking, the whole is closed up, and the top of the box affords a very good seat or a place to deposit temporarily some of the many necessary articles in constant use on board of a crowded little boat. At the time of cooking, the front, when let down to a horrzontal position, offers a convenient place for putting the dishes in waiting to be cooked, or those ready and waiting to be served. Thus the whole arrangement will be found to be a very convenient one.

Thus the whole arrangement will be found to be a very convenient one. Besides the advantages so far stated there is another and probably a greater one. Science has conclusively shown that the most perfect combustion in a flame is obtained by heating the air just before igni-tion. This is partly accomplished by confining at least a portion of the radiated heat around the flame. An advantage is gained by laaving two small stoves instead of a large one. The space which is left between the burners of each stove enables the cook to place the pots or pans directly over the flame, which gives a quicker result than when crowded to the sides, as would be the case with a three-burner stove with two pans or a pan and a coffee pot over the flame at the same time; and again, about one half the time a single small stove will do all the work that is needed, saving thereby a large percentage of oil. [The other cuts represent "Piscators" stove, described in the Fon-EST AND STREAM of Dec. 17, 185.]

[The other cuts represent "Pisc EST AND STREAM of Dec. 17, 1885.]

Editor Forest and Stream: I see by an article upon yacht stoves by "W.," in the paper of Marcu 11, that he claims as an advantage for gasoline stoves, that gasoline when upset or spilled. Will burn quietly if lighted, leaving no trace of its overflow. In burning it is liable to set fire to surrounding object, however, regard this a disadvantage rather than an ad-vantage. For looking at this fact in a scientific sense the superiority of kerosene is seen at a glance. It is a fact well known by all chemists that kerosene of high fire test, will not unite when a flame is applied unless it be heated to a temperature high enough to vaporze some of its taken in the filling of them. When the oil gets low the heat from the wicki vaporizes some of the oil, which vapor filling the empty space mixes with air, forming an explosive compound which is ignited by destrose, Mass.

CRUISING YACHTS. - The schooner Norna collided on March 4 with the Norwegian bark Guldfaxe, bound from St. Pierre, Martin-ique, to Pensacola. The yacht was bound from Mobile to Havana, and was about 40 miles from the former port at the time. The bark struck her on the starboard quarter, cutting down below the water-line, and carrying away her mainmast and mainsail. The break was stopped temporarly, and the sea being calm she made her way safely to Mobile. The Guldfa xe lost her jibboon, cutwater ann topmast. Mr. Leith has libelled her, as the collision is laid to her. Montauk was at Fortress Monroe on March 18. Her owner left her there, re-turning to New York by rail. The steam yacht Ibis was lately at Key West. Atalanta was at the same port on March 10. Gitana was triends going ashore on a hunting trm. She will soon return North. Montauk and Atalanta both arrived in New York on Tuesday. CAPOU NA Y. C. -The mees of the Cambina Y. C. hest season

Montank and Atalanta both arrived in New York on Tuesday, CAROLINA Y. C.-The races of the Carolina Y. C. last season, proved so pleasant, that the coming summer bids fair to surpass any of its predecessors. The four new yachts built by McGlehan last summer have proved themselves very speedy and their work this year is looked rorward to with great interest. The Mascotte, the ehampion of '84, was prevented from competing last season, but is now being refitted and made ready for this summer's work. The Vixen and I/ler (McGlehan's boats) will not have the walkover which they had last summer. New boats are being built, and the first re-gatta, which takes place on the Cape Fear River in May, will be the start of 1866. The club now registers twenty six yachts and the ques-tion now to be solved is who will be the champion. THE NEW YACHTS - Work is going on ramidly with both of the

THE NEW YACHTS...Work is going on rapidly with both of the new racers, and they will, in all probability, be finished in good time. The Atlantic is now planked up, with trunk completed, and deck frame, clamps, ceiling, etc., in place. Work on the sails, rigging, jonerwork and ironwork is going on at the same time, so that all will be ready when the hull is ready for launching. Similar progress has been made on the Mayflower. Lawleys are busy with the end desting. The frames of Mr. Fay's 49ft. yacht are also ready at the new yard.

CRUISE OF THE COOT. XVII.

THE Coot was the only one to fetch to windward across the mouth of the Patapsco. But this feat was attended with a risk of being swamped, and scores of hair-breacht bescapes from heing rolled over in the tripping sea. Prudence would have counselled going round with the smack to the northward for the land west of Pool's Island, but having underestimated the capacity of the Patapsco, that river was well opened hefore I rued the venture. Having started in, how-ever, the Coot proposed fighting it out to the last moment. Matters would not have been so had had the hoat not failed in windward qualities in rough water, and substantiated to the extreme all that has been said acainst shoal, beamy craft in critical situations. The wind was blowing N.W. by N., yet the best the Coot would lay was V. S. W., or seven points from the wind. The chart will show that, from black huoy No. 1, below Pool's Island, where the reefing was done, such a course would have lead well under shore in smooth water up to North Point, the opening of the Patapsco, and given me the choice of anchoring under a weather shore. But to such an ex-tent did the Coot chop off in the sea that she made good nothing higher than S. W. ½ K., or nine and a half points from the wind. This was not very efficient and would easily have been surpassed by a keel boat of the cutter kind, to say nothing of the total immunity from capsizing. Finding the Coot folling to leeward so fast, I made a short hitch or two up to the land, but these awailed so little that she weather shore to the southward. This took the hoat far ou side of from knew Lizh, of Craigbill Channel, and even below the Seven Foot Knoll Light, exposing her to the full hrunt of sea and wind, and yorst of all, carrying her plump across the boat of sea and wind, and yorst of all, carrying her plump across the S and Eff. lumps on the exposing her to the full hrunt of sea and wind, and ing her plump across the 5 and 6ft. lumps on the

Front kanze Lish, of Craigfill Channel, and even below the Seven Froot Knoll Light, exposing her to the full hrmst of sea and wind, and worst of all, carrying her plump across the 5 and 6ft. lumps on the Front Shou. The boat had to be carrying her plump across the 5 and 6ft. lumps on the her boat had to be carrying her plump across the 5 and 6ft. lumps on the boat had to be carrying her plump across the 5 and 6ft. lumps on the boat had to be carrying her plump across the 5 and 6ft. lumps on the boat had to be carrying her plump across the seas knocked down time and spin till the vater rushed in over the cockpit coaming. She had to be lufted and sheet let go by the run to save her from falling over. Headway, which was scant at hest, would be lose altogether and shemboard invationally whethen was at all times none too certain, which to the pitching and the way the boat was jifted bodly to lec-was finither to consiste uppermose, but for the most vigilant at can be imagined the probabilities of fetching across the river did to be encouraging. The not wester also frought with it a frigid temperature. It was burrels full aboard and huckets of salt water luio my face, down my big rubber hoot, down my neek and up my sleeves, assisted to make the situation trying to the last degree. The cockpit was speedily alont and the bilge water sloshed about ahove the cabin floor in an immous way. The Cock was setting and heroening dull. My fliggers had frozen and steering had to be done with one arm, the she of ten spipping frough the river and a raft of huge logs which had got approximg for what I was point. The and textup her drift on improvise sea anchor till I could puacquained with the pilotage of the sands in the river and not. How many the elear, warm up below and study the chart, being wholfy the bucket water was bailed out at odd times from the cock could be maneuvered as a last resort, that idde was abandoned. With the bucket water was bailed out at odd times from the cock could the maneuvered as a last resort, that idd

LICENSES FOR SMALL LAUNCHES.

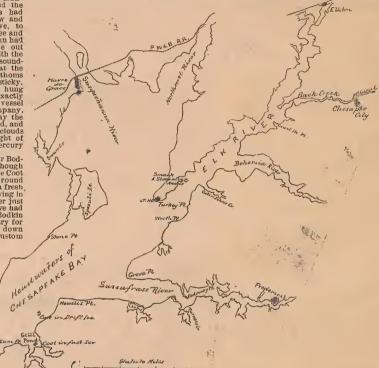

LICENSES FOR SMALL LAUNCHES. Editor Forest and Stream: In two recent numbers of the Scientific American I have noticed answers to inquiries relative to the licenses required for steam numches. That journal is evidently of the opinion that launches under five tons measurement require no licenses, either for boat or crew. I am the owner of a 20th launch propelled by a Sbipmau oil engine, and I have been informed by both the Shipman Engine Man-flatting Company and the Customs officer at Socus Point, that the ordinary yacht license is required. Also that there must be a licensed plot and engineer aboard. Now, as the Customs efficers are not always posted in yachting matters, and as small single-land launches are rapidly comma find from along the great lakes. It would be a matter of considerable interest to many yachtsmen and pleasure sekers to know exactly what the regulations require. I am nov per-mitted to run my launch on Great Sodus By until the holier has been tested by the supervising inspector and a license issued by the local board. Of course I never use her for other than pleasure purposes, and then only when lack of breezs keeps my sailing yact at ber moorings. keeps my

A CHALLENGE FOR THE CUP.

THE secretary of the New York C. C. has lately received the fol-lowing letter from the secretary of the Royal C. C.: 11 BUCKINGHAM STREET, LONDON W. E. March 8, 1886. Chas. J. Stevens, Esq., Secretary New York C. C.: Sin-The Royal C. C. begs to enter for the challenge cup of the New York C. G., in accordance with the conditions contained in your letter of Jan, 19, the date of the race to be fixed at a time most convenient to the N. Y. C. C. after the A. C. A. meet. I remain, sir, yours truly, T. G. F. WINSER, Secretary R. C. C.

THE A. C. A. TROPHY.

THE A. C. A. TROPHY. Editor Forest and Stream: Ne letter in your issue of March 11 was not in answer to one in your issue of March 4, signed "S.," nor was it suggested by that letter. It is a merely my view of this trophy business, and as "S" has got very the stream of the strophy business, and as "S" has your is very the strong impressions from it (see his letter in last week's num-business and the strophy business, and as "S" has your a strong impressions from it (see his letter in last week's num-business and the strophy business, and as "S" has your a strong impressions from it (see his letter in last week's num-business and the strophy business, and a see the strophy in all the strophy must be a domation to the A. C. A., flags only are offered a source to the Regatta Committee for a special race and it must in all therefore. The Regatta Committee is responsible for all raceing muters, and they report to the Executive Committee. If the Regatian committee accept the trophy when it committee argete to this, then the winner, and the Executive Committee argete to this, then will be constitutional and no one can object -except on the strong of the strophy any say as the what it was for or what it should be and what hould be done while and the tradent will make and "A and the function of the strophy, "I mean should be done while and the strong in your subscribers to the key any right of experise an opinion till it is should be and what hould be done while the strong in your subscribers to the Regatian should be done while and the tradent will make and the stream and the function for a special race to a splicit at all, and it can't be donated till thas an existence. This splice and the stream of the stream of the stream of the stream should be done while the should be done with the last paragraph of the "S" we official tall, and his cance would run four subscribers to the stream should be done with the should run should the stream the should surely turn this and the stream the st

A PLEA FOR THE HEAVY CANOES.

A PLEA FOR THE there on the data of the problem of the consistence of the canoes. The only of the canoes is under a superared in the FOREST AND STREAM, all of them casting discredit on such craft. As the owner of one of these despised canoes, and a member of a club, the majority of the sailing members of which believe in such craft for their purposes, I claim permission to say a few words in de-

As the owner of one of the despised times, and a member of a shub, the majority of the sailing members of which believe in such reaft for their purposes, I claim permission to say a few words in delete in the first place it may be well to ascertain why the members of the forout of . C. first built such canoes and still continue to do so. In 1851 we found our then cance too small for our rough waters, and lecided to have something larger. Looking around for information, we found the following in a price list issued by W. P. Stephens, then me of the leading cance builders. In describing the Pearl, he says: Besides rating, her owner has cruised in her through the season, and she is thus far the best cance built for racing and open-water sailing. She can sail in water that no other cance would venture out n, and is the best boat for the great lakes and the bays and open-water for the descriptions of the flittings of such cances. About two years ago, the Forestra AN STREAM had an editorial of nearly a page on Pearls, oralising them highly. Now I am still quite satisfied with such cances if I ordered a new cance to our members have since ether cances of the reat alters is correct. Some of our members have built other cances, if a restrict a new cance to intromy, she would be—not necessarily a 2earl of the 12S1 model—but a large cance with a heavy centerboard. If stephens's assertion that such cances are built ofter cances, if is indered a raid way bays of a stephene is a set ther changed or beavy board or intend doing so. Now I have is ince either changed or beavy board or intend doing so. Now I and without heavy boards, but they have since either changed or beavy board or intend doing so. Now I have to are acrievance that was the best all rourd cance, and ret our cances were in 'S at least—practically barred from outer the propose of finding out what was the best all rout cances, and the reace programme to single them out from other tances there changed in a othere. Our cances are built to or as tas eason or get new

season. If any of the A. C. A. crack sailors scnt a challenge to a heavy C. B. and ballast man. such as Messrs. Tredwen or Powell, would they think of stipulating that their opponents should sail with a 15-pound board and no ballast? I don't think they would; but if such was done, the challenged person would be quite likely to demand that if he

FOREST AND STREAM.
Accepted such conditions he should also have a race in his way, viz., beth to sit on the floor of the cance.
The A. C. A. have a Class B For saling cances. Such cances are dearly defined in all particulars; then let each man—so long as he remains within such rules—sali his cance in the way which he considers best. Surely the men who have lately been crying out for recognition for larger craft than the present A. C. A. The ealow. Thus to be the each man—so long as he may that we were allowed in one on even terms; practically barred from the second, and handicapped by limited sali area in the third. Id on to so much object to the 75tt, but I do object very strongly to the light board and no balast rule.
The Connocist poes on to ask—almost in a triumphant sort of way, as if a favorable answer could not be green—if cruises have ever been and in such cances. Therember read ug in the London *Field* that they are to be shade in such cances. A remember read ug in the London *Field* that have. Possibly some of your readers may be able to quote the exact statement. I think such a statement proves that these cances can be proven. It is such a statement, I think such a statement proves that these cances can be adjuded at a fair rate of speed. As to cruising quite as effectively as the same or out club (or even the old Boreas) will get over in a bay quite as much water as the cance mentioned. When her board is out she will weigt ho more, possibly less, and in the question of the state of a cruises uch a cance as the sampline of nor club nor be the slightest difference. Members of dour club (or even the old Boreas) will get out to be able to under the deviest cances core of the slightest difference. Members of the daviest cances of our flet. During the past season five of work, as splinke of all couses that the same place. We slight stone of a cruises and in the question of the stone daves are acces of our flet. During the past season two ip adding there was the more for a cruise su

POT LUCK FROM EXCHANGES.

London Truth says: Here is an advertisement from the Cork Constitution. Is it not monstrous that thousands of sea-gulls should be made victims of fashion and woman's whims? Wanted-1,000 dozen sea-gulls; 4s. per dozen for clean birds. "William Kinmonth, egg and poultry merchant, Western Road, Cork."

The authorship of "The Old Canoe," which has been so often attributed to General Pike, is now ascribed to a young man from Pittsburg named Shepherd, who some years ago drifted to New York and became an occasional contributor to the press of that city. He is said to have given high promise as a poet, but died early, leaving only a few fugitive pieces as his legacy, and these not always easy to identify.

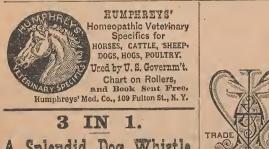

The Italian Ministry of Agriculture has just undertaken an interesting experiment. Half a million of fish eggs were artificially hatched, and the young brood has been distributed all over the center of the Lake of Como. If the experiment succeeds fairly well, it will be taken up on a large scale, and the department will undertake the restocing of the Italian waters. Efforts will be made immediately to revive and ex-tend the rearing of lobsters.

A naturalist in the West has concluded either that owls are without memory or that they do not mind going about with owl traps fastened to their legs. He set a trap to catch an owl, and it mysteriously disappeared. He set a heavier trap, and caught in it an owl which had the first trap attached to one of its legs. The phrase "stupid as an owll" seems a fitting reflection upon a bird which would set about making a collection of owl traps in such a manner as this.—Harper's Weekly.

The call of the data of the first pripe attached to be of its legs. The primes "stupic as a novell" seema it iting reflection upon a bird which would set about making a collection of owl traps in such a manner as this.-*Hurper's*. *Weekly.*The death is announced of Count Emeric Sommisch, a traordinary hatred of horses. This aversion amounted to a tradingry hatred of horses. This aversion amounted to a tradingry hatred of horses. This aversion amounted to a tradingry hatred of horses, asses and mules may call of the set of the tradingry hatred of horses, asses and mules a man of sound idea at an advanced age on his testate in Sclavonia. He was a distinguished agriculturist, an excellent landlord, and on all subjects but that of horses, asses and mules a man of sound idea the would not allow any animal of the equinc kind to come upon his lands, so that visitors who rode or drove to see him had always to alight at his park gates. He himself for may years used a vehicle drawn by trained deer, but latterly he went about his estate in a carriage with a team of oxon. His borr of horses is said to have been innate, as there was a could not allow any animal of the equine kind to come upon this lands, so that visitors who node of rove to see the hole words to say to his professional burethere. There is one particular phase of personal journalism that deserves especial attention. I refer to the habit which editors have of abusing one another in their respective papers. What shall verticate attention. I refer to the habit which decides have of abusing one another in their respective papers. What shall we resting a stose of family or professional quarrels. There are few American cities which have not been the scenes of oncounters between rival editors, growing out of these little plausanties. There are few American cities which have not been there, the value, you whow you give the add wenonous reptile. Judge Noah also spoke thands the there that been inducing in sone shigh the there and venonus reptile. Judge Noah also spo

But know not what's resisted." Often we do not say half we might—half we might and tell the truth. The best way is to keep out of newspaper fights as long as possible, but when once in them it is right to hit as hard as you can, always remembering that it is facts and not words that count. The man who is best armed in journalism, as in war, is least annoyed. It is all right to hit the heads that need hitting; to fight the good fight and fight ithard. Serve your conscience and your people. Davy Crockett's rule— "Be sure you are right, and then go ahead"—is the best pre-cept in a few words.

OVER ONE MILLION OF MEN have held the accident policies of the Travelers, of Hartford, Conn., and over one in nine have received each benefits on them. -Adv.

RAILROADS IN THE PARK.

THE Yellowstone National Park is a beautiful reservation which belongs to the people of the United States. Each citizen has in it certain rights which are equal to those of every other eitizen. At various times in the past, individuals and corporations have endeavored to secure in this public reservation certain exclusive privileges, which cannot be enjoyed without detriment to the rights of others. Such attempts to infringe upon the rights of the people have hitherto been prevented. A bill now before Congress, and favorably reported by both Houses, gives to a private corporation the right to build a railroad through this Park. The building of a railroad means introduction of settlements, destruction of the forests, driving off of the game, interference with the natural wonders of the reservation. Even more important than this, it means the building of other railroads in the Park, so that the natural beauty of the region

will be utterly destroyed forever. We believe that the people will not submit to this. We believe that this continent is long enough and broad enough to accommodate its population without encroachment on this little spot, which has been set aside as a park, in which every American man, woman and child, and the children of our children, have an equal right.

The bill granting the right of way to a railroad through the National Park has been sent back by the Senate to the Committee on Territories, to which all matters concerning the Park have hitherto been referred. This committee knows something about the Yellowstone Park, and may be ex-pected to take an intelligent view of the matter. Senator Manderson, we are quite sure, understands the situation, and the deep interest which he is known to feel in the Park justifies the belief that he will give the subject a thorough investigation.

The report of the House Committee on Public Lands, who reported a substitute for the original House bill granting this right of way, is almost precisely similar to the Senate Committee report on which we commented last week. The two documents furnish abundant internal evidence that if they were not prepared by the same hand they were at least in-spired by the same head, and that the information which they purport to contain came from one source. The same foolish and untrue statements are made in both, the same testimony quoted and the same conclusions drawn. The projectors of the Cinnabar and Clark's Fork Railroad seem

to have prepared both reports, and both are so weak as to show conclusively that no good reason can be furnished for asking for the railroad.

The fatuity of the statements made is utterly in-comprehensible. It is distinctly affirmed that there are no objects of interest, nor any timber, nor any game along the line of this proposed railway. Now, every one at all familiar with the Park knows perfectly well that on the line, as proposed to be run, there is at least one great body of timber along the East Fork; that Soda Butte Springs, an exceedingly interesting group, which flows an effervescent a locality unequaled of its kind for interest and extent anywhere in the world, is on the line where the proposed railroad is to run; that one of the most important bands of bison in the Park ranges between Slough Creek and Specimen Ridge, or in other words on both sides of the proposed railroad line.

It will not be forgotten that about a year ago, when the report reached Livingston that the Vest bill had become a law, there was a rush of land claimants from that town into the Park, and that one of the first claims taken up was Soda Butte Springs. It will also be remembered that it was stated at the time that plans had been laid by which all the great body of timber on the East Fork would be taken up by a corporation. These steps sufficiently indicate that there are some people who believe that there are objects of interest, game and timber, in the region through which this railroad is to run, and this may furnish a hint as to the eagerness of its projectors to obtain their right of way.

There is good reason for believing that a railroad cannot be built through the Third Cañon of the Yellowstone. This great trough is about 800 feet deep, and is cut out of rock which is in part voleanic and in part granitic. Its sides are in many places almost vertical, it is tremendously rough, and if it be practicable to build a roadbed through it, this can be donc only at vast expense. This may not be known to the projectors of the Cinnabar and Clark's Fork scheme, but it is the fact.

On the whole it seems probable that these people desire to obtain a right of way for their railroad in order that they may be able to take up under cover of this grant certain extremely desirable locations within the Park, from which after three years' occupancy-when, the railroad not having been built the right will lapse-they can only be expelled with great difficulty.

It is curious and interesting as showing their methods of work, to note the attempt made by this corporation to get all that they can in the way of a grant. The House bill, introduced and referred Jan. 7, 1886, provides that unless the road be constructed and in running order within one year from date, the franchises granted by the act are hereby declared to be forfeited. The Senate bill, introduced Jan. 11, declares that unless the road be completed and in running order within two years, the right of way shall be forfeited. And the third bill, recommended Feb. 23, 1886, by the House Committee on Public Lands, and favorably reported by the Senate Committee on Railroads, provides that the right of way shall be forfeited unless the road is completed within three years. Given a session of reasonable length, and these people would introduce bills enough to give them a quarter of a century in which to complete the road. This would, perhaps, be equivalent to a twenty-five years' lease of Soda Butte Springs and the fossil forest, to say nothing of other points of interest.

One more point deserves attention-a point which bears directly on the whole question of railroads in the Park. Section 3, after declaring that the right of way shall be forfeited after three years in case the road shall not be completed within that time, continues:

Provided, That the grant hereby shall not be held or construed as exclusive, so as to prevent the allowance of the locating other roads along the valley or route adopted under this act, under such grants and regulations as Congress may make and provide and the courts equitably administer.

This clause is susceptible of more than one construction. It may either mean that other railroads are to be permitted to penetrate the Park, or it may be a practical nullification of the time limit on the building of the road. It was probably introduced with a double purpose. Those who framed it can point to it with an air of conscious virtue as evidence that they are not monopolists, that they ask for no exclusive privileges; and if the bill passes and the road is not com-pleted within the time specified in the act, they can then form another corporation, have another bill passed giving it a right of way over this line, and can then turn over the property of the Cinnabar and Clark's Fork Railway Com-

property of the company to-themselves. The Park grabbers, as we have abundant reason to know, are shrewd. They will bear a lot of watching.

WHY NOT WAIT?

W E have come to the flayed end of another winter The earth's white carpet is worn to shreds, and nature is making ready to weave her a new one of green, with all sorts of flower patterns that ought not to "fail to please the most fastidious." Some of the bluebirds have escaped the guns and snares of the milliners' collectors, and are with us again, the return of the robin has been announced, and the song sparrow is tuning up his pipe for the spring concerts. The crystal hatches will soon be off the streams, and the fishes will once more get a look at the sky, and at the angler, who is now beginning to overhaul his tackle in anticipation of the opening day of the season.

The ducks and geese and snipe and shore birds will presently be on their way to northern breeding grounds, and too many sportsmen are making ready to give them a most inhospitable greeting as they pass or tarry for a few days of rest. Too many sportsmen will be ready with the old and poor excuse for this wrong doing, "If I do not shoot them, some one else will," which is worth nothing, for it is not at all certain that some one else will kill the bird that you spare, and that it will not go safely to its breeding ground and return to pay ten fold interest in the fall for the lease of life you have given it. You would recoil with horror from the thought of killing a doe beavy with young, for you are an honorable and conscientious sportsman. And yet, all the females of these birds of passage are earrying eggs more or less developed, the hope of the abundant continuation of their species. And your example is worth something, as every man's is, yours perhaps worth far more than another's. If you did not get shooting in the spring, it is not unlikely that some one else would stay at home, simply because you did.

Another excuse and a no better one is, "If we do not shoot ducks and geese and snipe in spring, we shall have no shooting till summer woodcock shooting comes," which ought not to come at all. Why not wait till autumn for sport worth having, and concerning which one need have no qualms of conscience? Is not sport, like love, "the sweeter for the trial and delay?"

Let the gun rest for a few months longer, and then when the steel blue skies of autumn endome the bluer waters and the varied hues of frost-painted woods and russet marshes, you shall reap your reward if it is no more than the consciousness of having faithfully done your duty. It is some-times nobler sportsmanship to spare than to kill. Assuredly it is so at this season.

SHALL SELFISHNESS WIN?

THE eitizens of this State are awaiting with much solicitude the action of the Senate at Albany with respect to the bill repealing the anti-hounding law.

The principles involved are clearly defined; the issue is well understood. The advocates of the repeal at first posed as philanthrophists, desirous only of preserving the deer from the market pot-hunters, and contending for the privilege of hounding, only that the deer might be made "shy" and their salvation from the still-hunter thereby assured. The shy theory has been exploded, and by the hounders perforce abandoned. The market still-hunter has been proved a bugaboo and the hounders have practically given him over. From concealment behind one false pretense and another they have been driven to finally avow their true purpose to be present gratification of their own desire to hound deer.

The issue is one between individual selfishness and publicspirited concern for the true interests of the State. The question for the Senate to decide is whether it will grant to the hounders temporary gratification by permitting them to put the dogs on the trail and exterminate the deer, or whether the deer shall be preserved for the people of the State, a perpetual source of wealth and public benefit, to be used and enjoyed in any manner compatible with its wise conscrvation.

On the side of the present wise law is public economy, present and future. On the side of repeal of that law are improvidence and selfishness. Between the two the Senate ought not long to hesitate. The bill to repeal the law should not pass. Selfishness should not win the day.

THE RECOLLECTIONS OF A SPORTSMAN, of which the first paper in the series is given in our Shooting columns to-day, will cover experiences in New Jersey, New York, Ohio, Vir. ginia, North Carolina, West Virginia, Wisconsin, Minnesota, Iowa, Missouri and Texas. They are written by a gentleman whose wide acquaintance among sportsmen will make these reminiscences doubly interesting.

A BIRD PROTECTIVE BILL.—That rising young states-man of Franklin, Mr. Floyd J. Hadley, introduced in the New York Legislature on Tuesday a bill to prohibit for five years the killing of "any bird of song, or any linnet, blue bird, yellow-hammer, yellowbird, thrush, woodpecker, catbird, pewce, swallow, martin, blucjay, oriole, kildee, snow-bird, grosbeak, bobolink, phœbe bird, humming bird, wren, robin, meadow lark, or starling;" but especially exempting from this protection the English sparrow. The effect of the bill is to forbid the killing of certain birds, as the robin and meadow lark, which are at present legally regarded for a month or two as game birds. It is a pity that Mr. Hadley's bill had not taken the form of the one recommended by the Amagican Ownithelicity. American Ornithologists' Union, but even in its present shape it will do good by calling attention to the growing evil of indiscriminate bird slaughter. If the graceful eloquence of that old practical hunter of forty years' experience. Mr. Palmer, the silver-tongued orator of Clinton, is not heard in support of this bill, we are much mistaken in our man. It is hoped, too, that Mr. Barnes, of Essex, may for the moment arouse himself from the contemplation of his diseased cat on the back fence, and make a sturdy fight for the birds.

SPITTING ON SHOT FOR LUCK .- Our correspondent, "Bedford," relates that when he was a boy in Middlesex county, N. J., it was considered the proper thing to spit on the shot for luck, just as an orthodox bait-fisherman spits on his bait. We never heard of this before, though familiar with some of the other more or less superstitious but commonly accepted beliefs and rites connected with loading a gun effectively.

The Sportsman Tourist.

SALMON FISHING IN SWEDEN .--- II.*

SALMON FISHING IN SWEDEN.--11.* "THE prince of good fellows is Baron Oscar Dickson." So shouled I as I finished reading a polite little note from him, generously placing his far-famed salmon river--the Atran-at my disposition for the first half of July, 1885. Stockholm was getting hot and becoming deserted; most of my friends had already betaken themselves to their sum-mer villas, and I was longing for the green fields, the salt sea breezes, and the foaming *fosses* of the west coast. So this kind invitation of the Baron was, of all things in the world, just what I most wished for. I took the night train from Stockholm to Gothenburg. Next morning at So'clock I was on board the superb steamer Halland, coasting southward through the labyrinth of rocky islands that form the Swedish Skärgard. At noon westeamed after a hasty lunch at the hotel, I jumped into an ancient but comfortable, and no doubt honorable carriage, and rattled away over the rough stone flagging of the village streets. Soon we were driving through the green fields of the open country. It was a warm, still, hazy, lazy summer's day, this 2d of

Soon we were driving through the green fields of the open country. It was a warm, still, hazy, lazy summer's day, this 2d of July, 1885. The blue Catiegat lay sleeping to the right. The tall winter rye moved slowly and majestically in the soft breeze, larks soared from the meadows and poised on high, with quick-beating wings poured out their little souls in song, the driver beat time with his cracking whip, our little north-ern ponies trotted sturdily along the dusty highway, and I dozed away on my comfortable seat and fell into sort of a half sleep, through which I saw everything as in a dream. I awoke as we rattled into the pretty little village of Falk-enberg.

<text><text><text><text><text><text><text><text><text><text><text><text><text>

* For the first paper, see issue of Aug. 28, 1884.

but drinking a bowl of milk hurry back to the stream. The salmon are still rising, and I land five more before sundown. Then a group of villagers sauster up the Doctor's way by the river bank to see me fish. I put on a large "silver doc-tor," and land yet two more salmon before darkness gathers over the turbulent river. Thirty salmon. A good day's work. More than I ever event the form

salmon. A good day's work. More than I ever before. More than 1 ever expected to catch in one caught before.

over the turbulent river.
Thirty salmon. A good day's work. More than I ever caught before. More than 1 ever expected to catch in one day.
Next day I took it easy, landing two salmon in the morning and three at evening. At noon a man drove me two miles over a winding road, through fields of waving rye, to a little bath house at the seaside. Here I took a plunge into the Cattegat and washed the sweat and tire of salmon fishing out of me. I had a neat little room to dress in, clean towels and every attention, and the price was 12 öre, or 3 cents of our money. Wonder what our fashionable bathing places on our Atlantic coast would think of that?
Sunday came round and I was glad to give my rod and myself a rest.
The inn I am stopping at is over 200 years old. I have a large how studded sitting room, 22 feet square, and a bedroom opening out of it. The sitting room looks on to the paved street, but the window of the bedroom opens out upon a large flower garden and orchard, which slopes down to the river. Climbing rose bushes are trained up the walls of the house, and my window is embowered with white and red roses in full bloom. The summer wind drifts lazily in, cooled by the river and perfumed by the flowers. Then I walk in the garden, I find a hammock hung between two trees and lie and swing in it. It is noon; too hot to walk with comfort in the sun, but lying here in the shade, swinging between a maple and a cherry tree, the temperature is perfection. The sound of the rivpling river just reaches my ear, a bee dronces among the flowers hard by. I would like to stay here forever. And where else, pray, can I catch thirty salmon a day, or get a good sea bath for 8 cents? A cevening I rambled over the river to a little centery I had seen on the upland, attracted thither by a rude granite shaft that stood like an ancient Rune stone.

His epitaph is touchingly simple and beautiful. On the rough granite is chiseled:

"Här holler läkuren och meniskovännen.

His epitaph is touchingly simple and beautiful. On the rough granite is chiseled: "Hir holfer Väkuren och mentskowinnen." "Here rests the physician and the friend of mankind," For ten days longer I had all the salmon fishing my heart could desire or my hands accomplish. The weather was hot, sky clear, sun bright the whole time. The river was low when I arrived and it grew smaller and smaller with every day; rocks showed themselves out of water that had not been seen for many years, but the fishing continued good every day. The salmon left the upper pools, how-ever, but the deep pools at the foot of the falls were full of them. One day some friends fishing on the Nissa River at Oscarström, drove across country and dined with me. I passed my rod to one of them as he came down the bank and he hooked a salmon at the first cast. On Thursday, July 9, I was very early at the river. All up and down the stream as far as you couid see, salmon were leaping incessantly. They were all bright fish, evi-dently a new run come in during the night. There had been no rain, no rise of the river, no wind and no cause for a run as far as we knew, but here were the fish nevertheless. They rose splendidly. At 9 o'clock I had landed ten salmon. The fay was overcast, and using a very small Fairy, the fish rose well, even at noon. At three in the afternoon I had landed in all thirty-one fish. I rested fifteen minutes, at a light luncheon Carl had brought me and whipped the stream again. But the salmon were not so eager; they rose more warily. At 9 o'clock I had landed thirty-seven and not another rise could I get. There was a bit of swift water half way from the falls to the village, where I had frequently seen the fish jump, but where I had never succeeded in catching any. Now, we pulled down to this and running the bow of our punt on a rock that was just awash and, slipping on a silver doctor I wound up the day with four more salmon, taking the last one when the clock was nearly at eleven and making

Hatural History.

THE AUDUBON SOCIETY. New York, March 9, 1886. Editor Forest and Stream:

Editor Forest and Stream: My reply to your favor of the 18th ult, has been delayed by the pressure of numerous engagements. I heg you, how-ever, to believe that you have my heartiest sympathy in the proposed organization of the AUDUBON SOCKETY. I am of the opinion that you deserve thanks for bringing to the notice of the community the extent to which the slaughter of American birds is going on, a fact which I think few realize. The success of your society will also tend to refine the public taste. Our savage ancestors decorated themselves with the practice of wearing the stuffed skins or the plumage of birds in a hat is perhaps less barbarous, but is after all inspired by the same primitive fancy. Very truly yours, FELIX ADLER,

Editor Forest and Stream: Though somewhat tardily, I nevertheless cordially indorse your worthy movement for the salvation of the birds. I should never dare face them again without the consciousness that I had enlisted my name upon the toll of those pledged to protect them Sincerely yours, with congratulations and hopes of success for the movement, W. HAMILTON GIBSON. AUTHOR'S CLUB, New York.

hopes of success for the movement, W. HAMILTON GIBSON. ACTINON'S CLUB, New York.
Mr. George T. Angell, president of the Massachusetts Society for the Prevention of Cruelty to Animals, and editor of Our Dumb Animals, is rendering "yeoman's service" in the interest of bird protection.
In the April number of that periodical there will appear a very powerful appeal to its readers, to read the collected statistics of the heeatombs of "bright spirits of the air." annually sacrificed to the fashion, and the impression this heartless sacrifice of innoceut life makes on thinking men and women, whose utterances on the subject are quoted; and then join in one universal demand for the legislation seked for in the body of resolutions and petition, prepared for presentation to the Massachusetts Legislature, and having for its object the compulsory introduction into the Massa-clusetts schools for systematic instruction on the economic importance of protecting insect eating birds and their nests, and the general importance in its influence on character of treating the lower animals kindly, together with some knowl-edge of the State laws for bird protection.
That the Legislature may have some expression of public opinion to guide it in its consideration of the proposed act, Mr. Angell addressed the collective bodies of the Congrega-tionalist, Baptist, Episcopal, Methodist and Universalist clergy of Boston and its vicinity, the Massachusetts Horti-cultural Society, the Saturday meeting of farmers at Massa-chusetts Hall, and the Unitarian elergy, all of whom passed unanimous resolutions in favor of the movement; the Epis-copulian clergy dissenting only to the extent of preferring a similar resolution in the form of a petition to the Legisla-ture.

copatian clergy dissenting only to the extent of preterring a similar resolution in the form of a petition to the Legisla-ture. A second section in the proposed act provides "that all fines collected upon, or resulting from, the complaint or in-formation of an officer or agent of the Massachusetts Society for the Prevention of Cruelty to Animals, for violation of the laws of Massachusetts, relating to the birds and their nests, shall be paid over to said society in aid of the benevolent objects for which it was incorporated." The Society hinting what it will do, if it succeeds in get-ting both sections of the act passed, leaves it to be shrewdly inferred, that whatever of taint of inherited destructive im-pulse or passionate lust of vengeance the president and members of the Society may have received from savage ancestors or leaven of the old Adam, shall all be concentrated on the offenders against the laws for the prevention of cruelty of animals or the protection of birds of importance in the general economy of nature.

SPRING BIRD NOTES.

SPRING BIRD NOTES. LOCKFORT, N. Y., March 22.—A large flock of wild geese passed over this city, going north, between 7 and 8 o'clock Saturday morning. The first robin and bluebird were seen a week earlier, and to day I saw a number of male robins, but no females. The first purple grackle (crow blackbird), was also seen on Saturday last, and to-day quite a number were seen. We also had severe lightning and thunder on Friday evening, which is very unusual at this season of the year.—J. L. DAVISON. March 24.—About two years ago I reported to the Fornest AND STREAM that a Mr. Pomroy, residing about three miles from this city, captured a baker's dozen of wild geese on their being enticed into his barn during a storm by his tame geese—with which they mated and bred—and he now has a flock of about fifty of the original wild and mixed breed. I was informed last evening that for the past few days there had been a flock of about one hundred wild geese feeding on and about Mr. Pomroy's farm—probably this is the same flock that I reported to you on Monday as passing over the city on Saturday morning last.—J. L. D. Mrogwar, Pa., March 22.—Robins, bluebirds and yellow-birds are here. Many flocks of wild pigeons have been seen on their way north, also wild ducks and geese. There are but few pheasants left and they are very wild. A few deer and bear were shot during the past season, but are not as numerous as they were four or five years back.—X. Tear-ores. CENTRAL LAKE, Mich. March 18.—Robins first seen to

PORE.

PORE. CENTRAL LAKE, Mich., March 18.—Robins first seen to-day. The first crow of the season appeared on the 15th, and audibly expressed his opinion that spring was at hand. Weather mild, up to 50°.—KELPIE. NEWFOUNDLAND, N. J., March 22.—A dead woodcock was found to-day near the N. Y. S. & W. R. R., about one-half milc from here. Supposed to have been killed by flying against the telegraph wire. It was in fair condition and a full-sized bird. Saw meadow lark March 20.—S. S. W. HORNELLSVILLE, N. Y., March 21.—Bluebirds arrived March 11; robins, 15; red-wing blackbirds, 19. I believe Meadow larks have been here all the winter.—J. OTIS FEL-LOWS.

LOWS.

A HAIR SEAL UP THE HUDSON.—Cheney A. Burhans, of this place, had the good fortune to shoot a fine specimen of the hair seal yesterday morning. Mr. Burhans was hunting ducks on the river opposite Barrytown, when he saw the seal on a cake of floating ice, and had no difficulty in get ting within gunshot. The animal weighed 65 pounds.— HOWARD BURHANS (Flatbush, N. Y., March 24).

GROUSE IN THE SNOW.

CROUSE IN THE SNOW. Editor Forest and Stream: Ever since the day, away back in the ultima Thule of my memory, when I ran into the first flock of grouse and got my first surprise at the flying powers of grouselings the size of two-day-old chickens, no bird on the whole "check list" has possessed for me so much interest, or come in for so large a share of my observation. Therefore, when I read the com-munication of "Dry Snow" to-day, in your issue of 18th inst., Ithought that perhaps a word from me would be "in senson." First let me say to your contributor that I come not in my war paint, but as a brother woodsman who has spent the major portion of his life within sound of "the soughing of the pines," and whose woods-lore is not in any way commensurate with his woodland experience. If when we are through with this, we still differ, let us do so in the kindly spirit of fellow-sportsmen, giving each other credit at least for honesty. I preface with these remarks, because I must necessarily show that some of the reasoning in the com-munication referred to is somewhat illogical, and I thought I detected in it a slightly sareastic undercurrent, which might come to the surface when the author's opinions were con-fornted with rebutting testimony. I never trail the tail of my coat on the ground ehallenging some one to tread on it; but I have sometimes tried to make it interesting for the man who raised his foot high enough to reach it when in its ormal position. "The Show's' letter gives no clue as to the part of the

who raised his foot high enough to reach it when in its normal position. "Dry Suow's" letter gives no cluc as to the part of the continent from which he writes, or which is covered by his experience, but were I to hazard a guess, I would say: Some part to the south of this and far removed from the sea-board. He has evidently never seen one of our northern "ice "Dry Slow"" letter gives no cluc as to the part of the continent from which he writes, or which is covered by his experience, but were 1 to hazard a guess, I would say: Some part to the south of this and far removed from the sea-board. He has evidently never seen one of our northerm "ice storms," loading every tree with tons of ice, and bending some of the more pliant clear to the ground. There is just a breath of wind from the "noath east," the thermometer stands at about 15". First come four or five inches of the light "goosefeathers," then the snow becomes finer and more heavy; next a few inches of hail. Then there is a lul, the wind shifts a point or so to the east, and a dash of rain strikes, every drop freezing the moment it touches, and it keeps on till it forms a hard smooth crust, from the thick-ness of a window-pane (and almost as sharp) to the strength and solidity necessary to bear a loaded team. Now suppose a grouse dives into the light snow before the rain comes, what then? He is scaled in like an oyster in a ean. If the erust be thin enough for him to break, all right; if not he must die. (Begging 'Dry Snow's' pardon, a grouse's head is not near the surface when he burrows in the snow, for I have put my snow shoe over them many a time; they take their oxygen through two or three inches of light snow.) "But 'East, 'Dry Snow,'' have you any evidence?" Only a little. By referring to my books, I see that Fridry, Jan. 29, 1886, treated us to just such a storm as described obove, the snow/fall being about ten inches with five inches of hail above that. At 8 P. M. my week's work was pre-cically over, and I was six milles from home and snowshoes. I started to tramp it through the sand like hail. At 4 P. M. it commenced to rain, every drop that touched my rubber oreat freezing as it struke. Five P. M. found me still a mile from home, on a much used trail leading between two popu-sus settiments. I was six miller show in the middle of the road, right at my boot-toc. The next morning we skated anywhere ov

escape. Whether the fox scenard the offor of recognised the mark, I can only conjecture.
Thave snowshoed thousands of miles through the woods, and even now I am lame from an cight-mile tramp yesterday in a rain storm, when the snow accumulated on the rearpart of the shoe, till its weight reminded one of the proverbial 'leaden heel of justice.'' I once worked six months, and the gross amount of my wages was just ten cents a mile for the tramping done between 'stations, and I had to work thirty-five hours per week besides. So I am not speaking rashly when I say ''thousands," and the above is all the direct evidence I have collected. To some it may seem like the 'Behold this walrus tooth," of Othere, the Saxon discovere of the North Cape but to me it is conclusive. We should remember that if we knew the remains of a grouse were in a certain plece of woods an acre in extent, we might have touble in finding then. Anyway, it goes a long distance to show that a man may spend the greater part of his life in the woods on that particular morning when a boy, and been traveling at an unseemly time when a man, it would have been all supposition with me.
(P) Obes Nature make any such blunders?' In my opinion Nature never blunders. Every one knows that the due is and geese sometimes get ''frozen in," but are these to be stamped as 'blunders' of Nature, or exceptional misapplications of the instinct that Nature gave these birds? To me ''nature'' in the above connection simply means God, who, the poet tells us, ''moves in a mysterious way his wonders to perform.'' He gives His dumb creatures a good general fund of instinct; but He doesnot fortify them against exceptional circumstances. He would not leave the grouse liable to be erusted in at every thaw, but He would permit them to perish in an occasional sleet storm, coming once in seven or eight years, and as well might He do so, as to allow them to fall to the gun of some sportsman or in the snare of some porthunter.

(3) "If the snow is dry can a crust form over it?" Yes, see above.
(4) "The exact number that came under your observation?" Also answered above.
(5) "How many hens did you ever see go in swimming?" Though the last eounds strangely like what the late lamented "Josh Billings," the prince of phonetic spellers, would call "sarkasm," I will do my best to answer. I can't tell the exact number, but I assure your correspondent that I have often seen them do it—not the mud-hen either, but the common domestie fowl. However, it was like the grouse being frozen in—they had no vote in the matter. Perhays your contributor would'say it was because Nature had "blundered" in not either paralyzing the arms of sundry small boys and old women, who put them in "to take the set out of 'em;" or giving said individuals bmins enough to know better than to adopt such a course.

or giving said individuals bland cover to adopt such a course. So in my misty mind melt the arguments of "Dry Snow," and with a hearty parting shake of the hand I will let my-self down on that last sentence by quoting a remark from the immortal Mrs. Edgar: "Sure we be till be havin' our tokes." L. 1. FLOWER. JEMSEG, N. B., Canada, March 25.

TAXIDERMISTS AND MILLINERS' AGENTS.

TAXIDERMISTS AND MILLINERS' AGENTS.
Editor Forest and Stream:
Thave cut the inclosed article from the Boston Globe of recent date, and forward same hoping you will insert it in your columns. It is from the prominent axidermist in Bos-posed to be 'dead set' against protection, but it is also the 'ground ticr' of the Massachusetts Association of Taxider-mists and Ornithologists, a society recently formed, and which includes every taxidermist in Boston but one, and one out of town, besides numerous true sportsmen:
T'would like to say a few words in defense of the taxi-dermists, and show that they are not such a class of bird destroyers as Fish Commissioner Lathrop and others tried to make them appear before the Fish and Game Committee at the State House, on Wednesday last. The bill presented by the Massachusetts Fish and Game Association, for the better preservation of onr singing birds, is a good bill, and all egitmate taxidermists are in favor of doing what they can to have a stop put to the wearing of birds on hats or any part of a lady's dress. I, for one, would like to see the abide sidesontinue the use of birds as dress trimmings; if they will do this, there will be none do make laws to pre-serve our birds, as there would be none killed by men who now make their living by collecting birds for the filliners; and, as birds increase very rapidly, the loss of the few used in business in Boston for the past seventeen years; have had a permit to collect birds, and the largest number collected in one year was some thirty-six or thirty-seven specimes, out enduce game birds killed in open season. Now it is a well-known fact that the sparrow hawk, sharp-shinned hawk, iven souty off our small song and insectivorous birds, and when it is computed that every pigeon and sharp-shinned havk kills on an average at least two birds per day (and they hut Sundays as well as week days), it will be seen in business and Ornithologists vishes the public to understand, and that is the difference between a

dorsing them. KAYMOND LEE NEWCOME, SALEM, Mass. SPARROW VS. ROBIN.—*Editor Forest and Stream:* In your issue of the 18th inst., my attention was attracted to the clipping from the Boston *Advertiser*, in which they venture "to say that not one among ten thousand pretended friends of our birds ever saw an English sparrow kill or maim a native songster." This calls to mind a tragedy I witnessed while in Eric, and one that was looked upon by a score or more of other people: The trees in the park have a number of boxes for the birds, all of which the sparrows have taken posses-sion of. One afternoon while sitting there, I noticed arobin singing on a tree. Soon a sparrow stuck his head out of a box and began scolding. Finding that did not stop the song, he sounded his war cry and was soon surrounded by others of his clan, when a pitched battle was immediately engaged in and earried on with such vigor that thcy drove the robin to the ground, and by picking and flying against him from all sides soon reduced him to submission. When we drove the sparrows away the robin was so badly used up he could neither stand nor fly, and was carried off by one of the spec-tators. On another occasion I heard a great commotion among the sparrows in our yard, and looking out saw them attaek one of their own species that had a broken leg and pick it to death. I am much pleased with the stand the FOREST AND STREAM has taken in regard to bird protec-tion, and hope the Audubon movement may go on until the slaughter of birds for their plumage is abolished.—ONE oF THE TEN THOUSAND. THE TEN THOUSAND.

THE SPARROW HAWK IN WINTER.—Washington, D. C., March 27.—*Editor Forest and Stream:* In your issue of March 25 Mr. Henshaw says of the sparrow hawk after twenty years study of birds, "He lives almost exclusively on grasshoppers and crickets." What does he do for grub in the winter time? Does he keep a silo or a cannery? About here there are some seven months in twelve when there are a few classic "crickets on hearth stones" around and nary "brown old grasshopper." What does poor sparverius do then? Hop in the barn to keep himself warm, and hide his head under his wing, poor thing? I merely ask for information.—M. G. ELLZEY, M. D.

A WOODCHUCK IN THE SNOW.—East Auburn, Me., March 22.—Is it not uncommon for woodchucks to come out of their holes when there are two feet of snow on the ground? Some children sliding on the crust near this place found one on the snow, and tried to kill it by crushing it under their sleds.— W

THE TRAJECTORY TEST.

THE full report of the FOREST AND STREAM'S trajectory test of hunt-ing rifles has been issued in pamphlet form, with the illustra-tions and the tabular summary, making in all 96 pages. For sale at this office, or sent post-paid. Price 50 cents.

RECOLLECTIONS OF A SPORTSMAN.-I.

CANNOT begin these reminiscences better than by quoting from the much worn "Old Oaken Bucket:"

"How dear to my heart are the scenes of my childhood,

1 quoting from the much worn "Old Oaken Bucket:" "How dear to my heart are the scenes of my childhood, When fond recollection presents them to view." Only I should substitute the word boyhood for childhood, for it was in boyhood that my natural fondness for field sports became a passion, that led me to study the habits of birds and animals as a naturalist, as well as a sportsman. I took delight in watching the qual pair, nest, and raise their young; and spent hours of moonlight nights in the early spring, during the first flight northward of the woodcock, quietly watching them feeding, pairing, and performing their interesting gyrations, as from the time they left the ground whistling upward, until they reached the desired elevation to perform the "chip, chip" act in mid-air; then drop-ping suddenly to the ground, announcing their arrival by the usual guttural note. The whole process of nesting, hatch-ing and raising their little brood was of great interest to me. To learn the call notes of varions birds until I could almost call them at will; to witness the battles between the red and gray squirrels; their loves and jealousies during the breeding season; performing of a delicate surgical operation by the old males upon the young ones, was the delight and pastime of many an hour. The study of wooderaft, the locatiou of animals' dens, squirrel and bee trees, were not so well known to any boy of my acquaintance. Yet, I doubt not, many of your readers have found amusement and instruction in the same way, and perhaps obtained greater proficiency. Such will agree with me in believing, in spite of the eroaker's and money-grubber's cry of wasted time, we have what many of them would like to buy, but eannot, what nature gives to her ardent admirers—contentment and a field for enjoy-ment beyond the comprehension of those whom nature has not taught. It was in boyhood, in the year 1861, that I first became

and alternative terms of those whom nature has not taught. It was in boyhood, in the year 1861, that I first became possessed of a double barrel gun-muzzleloader of course, as it was before the days of breechloaders—an English gun, costing fifteen pounds sterling, handsomely ornamented in German silver. Shortly afterward I secured a fine double-nose English pointer, Dash by name, a dog of large bone and musele, great endurance and untiring energy. From that time I have unblushingly acknowledged myself a sports-man. Previously, my proclivities in that direction had been limited to a narrow field, bounded on all sides by the fears of my parents, and securely fenced in by my inability to command the necessary amount of currency, then known as shinplasters, to gratify my desires. My experience, there-fore, had been much the same as other boys with a single barrel gun and an inborn love of sport. First firing at the ice house door from a rest, feeling proud to find it hit fair and square. Next firing from a rest again into a flock of blackbirds, being delighted to see five fail to the ground, only one of which proved to be dead, the wounded ones ap-pealing strongly to boyish sympathy. It was easy merely to pull a trigger, dealing death and suffering to a number at one stroke, but when it came to picking up the wounded, and putting them out of misery it could hardly be called pleasure. Then came the delights of squirrel hunting. I use the

puint a trigger, texting teach and suffering to a hunder all one stroke, but when it came to picking up the wounded, and putting them out of misery it could hardly be called pleasure. Then came the delights of squirrel hunting. I use the word hunting because there is more of hunting than shoot-ing in this sport, the pitting of cunning against conning in stead of skill in the use of the gun. I shall never forget a certain wood in Middlesex county, N. J., containing a large number of shellbark hickory trees, where I killed hundreds of squirrels. I would rise before day and quietly creep to a good position among the shellbarks, generally near cross fences, and silently wait until just as day was fairly break-ing, I would suddenly hear and see a great commotion in some neighboring treetop, when it took but an instant for me to change my position to within gunshot, as silently as an Indian follows the trail. The next moment the report of my gun would echo and re-ccho through the wood, break-ing the profound stillness of early morning. A squirrel, sometimes two, would come tumbling through the branches, catching and hanging for a second or two, falling limp and dead to the ground, the victim of a charge of No. 4 shot, which had been carefully spit upon "for luck." There was an ancient tradition among the boys of Middlesex that to spit on the shot made it earry closer and stronger. At any rate my old single barrel, after I adopted this practice, got into the habit of "fetching" almost every time she spoke. I might, however, qualify this assertion by saying I had not then attempted wing-shooting, and thought it a great demon-stration of skill when I killed a squirrel jumping irom tree to tree or running along the fence. There was also in the wood I speak of a number of tall dead trees, famons resorts for high holders, or flickers, many of which found their way into my game bag. As I have already said, I started on these hunts before daybreak, usually remaining in the woods an hour or so, returning home in time to

average. I soon contracted the habit of keeping my gun always near me while at work about the farm and firing at robins, crows, doves, etc., as they happened to fly within range. I soon had the satisfaction of being able to make certain wing-shots with great accuracy. This knowledge I kept to myself, fully realizing that until I could stop quail, woodcock and grouse I had better keep quiet. I frequently tried them, but as such birds were generally in the thickest cover, my gun long and unwieldy. I never got a feather, and seldom even a chance to shoot at the revelation of brown streak before it had dis-appeared. appeared.

appeared. I was invited on several occasions to join hunting parties who had fine dogs and guns, whose bags of game made me almost green with envy. I always declined, determined not to be laughed at, secretly believing were I as well fixed as they I could soon learn. I had one great advantage over them; I could always find the game, even when dogs had

hunted the ground and failed. This came from having many times followed hunting parties, learning to mark, and noticing where the birds took refuge. I knew every thicket and little piece of "cat brier" swamp, almost the number of woodcock and where they sat. All the logs where grouse drummed, and the proper time of day to find them home. They seemed to have but little fear of mc or my gun, and always whirred "good-bye" to me in a most sarcastic way. This was why hunting parties wanted me with them. I knew it, and didn't go.

hunting parties wanted me with them. I knew it, and didn't go. One day one of these parties got into my favorite covey of quail and killed thirteen of them over single points before my eyes. I couldn't stand it any lorger. A double-barrel just formed this determination, I was sitting on the fence sadly ruminating on the havoc made in my quail, when I heard one of the payty calling up some of the others as two dogs were pointing in thick undergrowth. I mechanically cocked my gun, when I heard a tremendous whirr, and bang went four shots at a spleudid cock grouse, which came toward nue like a streak of "greased" lightning. As I had a cl ar space, I took deliberate aim along my little 16-bore single burrel, held well ahead, and fired. The heavy thud of my first grouse striking the ground sent a thrill of enthusi-astic delight and triumph to my heart which could not be excelled.

excelled. Two of the men saw the bird fall. One of them rushed toward it and told his dog to fetch. I sprang for the bird just in time to kick the dog off and secure it, when the man excitedly demanded to know why I kicked his dog and violently claimed the grouse, which he said he had hit. In an instant my gnn was clubbed and its stock splintered, the bird thrown to the ground, as I had no pocket to put it in. When the third party stepped in as an arbitrator, I wanted no arbitration; I wanted that grouse, and I got it. When it was picked I found only No. 4 shot in it. My gun had been loaded for squirrel.

was picked I found only No. 4 shot in it. My gun had been loaded for squirrel. Thus far I have traveled backward in my recollections, but in future articles I propose to narrate occurrences from the time I came into the possession of Dash and a double-barrel gun up to the present time—an experience of about twenty-five years in the field, woods, and on the water. BEDFORD.

BEDFORD

THE ANTI-DEER HOUNDING LAW Editor Forest and Stream.

Editor Forest and Stream: I am very much amused when reading about the benevo-lent and easy-going dogs that the deer hounders use in the Adirondacks. The advocates of deer hounding would have us believe that the hound is a slow-going animal that cannot get up to a deer, and would not bite it if he could. Hounds have been bred within rifle-shot of my residence and used all about me

Bet up to a deer, and would a solv-going animal interchands is the period. Hounds have been bred within rifle-shot of my residence and used all about me.
In have repeatedly heard guides and hunters discuss the training of deer dogs and the best crosses for practical use. The full-blooded hound for deer is not very highly prized here, as they are not fast enough. A deer for some time will not take to the water before a very slow dog, but plays around on the hills and knolls and listens and watches for him. Some so-called still-hunters take one of these dogs into the woods to stir up the deer and are often quite successful in getting chance shots. All hunters agree in saying that the faster the dog and the harder the deer is pursued the quicker it will take to water. The dors most used in the Adiron-dacks are a cross between a cur and a hound; but the best dog, and the one of the fact of the death. It has speed to overtake it, and ferocity enough to catch and kill or cat it alive, which it often proceeds to do.
There are two ways of training deer dogs. One is to put out a young dog with an old one and let it learn by example; but the best training and one that makes the most valuable dog, is done in this way: In February or March, when the snow is deep and crusted, the trainer takes the young dog into the woods and finds a yard of deer. As soon as the poor deer leaves the yard it founders helplessly in the snow. The trainer then sets on, and encourages the dogs and the age at a slow agint it is only necessary for the hunter to open the deer as soon as killed and give the dogs at a slow agint, its head down, its tongue hanging out and its mate the white its trainer then ago on other leaves the poor thing loging along at a slow agint, its head down, its tongue hanging out and its not a pleasant sight. I must say it is anything but the best the white hear to and one of these dogs and the age and solve and and poing along at a slow agint, its head down, its tongue hanging out and its not a pleasant s

BAINBRIDGE BISHOP, NEW RUSSIA, ESSEX County. N. Y., March 22, 1886.

Editor Forest and Stream: The Massachusetts Fish and Game Protective Association held their regular monthly meeting Wednesday evening at the Parker House, full thirty five members being present. Thirteen new members were elected, and also three proposals were presented, speaking well as an indication of the pros-percus condition of the association. Sympathy for the opposits of the deer hounding bill in the New York Legis-lature was expressed and the following resolution was adopted:

adopted: Alter was expressed and the following function adopted: Resolved, That the association express its appreciation of the good work of FOREST AND STREAM in its opposition of the hounding of deer, and its hope that those efforts may not be made in vain. The prospect for successful legislation in our own State were discussed, but as a game bill had not as yet been re-ported by the committee, no definite arrangement can be de-termined upon. It can be said, howeven, that the prospects are decidenly better than for a year or two past for the enact-ing of a better law than is at present in force. H. J. THAYER, Secretary. Denset Mass. March 24.

The advocates of the repeal of the anti-hounding law began their campaign by misrepresenting facts, and they seem determined to carry these tactics through to the bitter end. Mr. H. J. Cookingham, of Utica, writes to the

Herald of that city: "Every market man is opposed to it the bill of repeal], and wants the law to remain as it now is. The chief, yes, almost the entire opposition to the bill comes from that source." In reply to this Mr. John D. Collins says in the Herald that Mr. Cookingham's statements are "buncombe." B-u-neco-m-be is a roundabout way of solling it, but it is more subscription. are "buncombe." B-u-n-c-o-m-b-e is a roundabout way of spelling it; but it is more euphemistic and less harsh than the commonly accepted characterization of statements not in accord with the truth.

MR. GEORGE W. PALMER, who made the funny "shy" speech in the Assembly, is jealous of his fame as an old practical hunter, and resents the imputation, in our issue of March 18, that he did not know whether deer were hounded by day or by night. According to the stenographer's report of the oration of the silver tongued orator from Clinton, Mr. Palmer said: "I assert here that a party of six gentlemen going into these forests with half a dozen dogs, two or three nights on an average, every deer they bring out costs them more than one hundred dollars," Mr. Palmer thisks that he must have said days instead of nights. We take pleasure in taking this occasion to correct the erroneous impression conveyed by the stenographer's report of Mr. Palmer's speech. MR. GEORGE W. PALMER, who made the funny "shy

From the Utica Herald, March 23.

From the Utica Herall, March 23. An esteemed correspondent sends us what seems to be a very honest and straightforward appeal for the deer hound-ers. While admitting that he has never hunted deer with hounds himself, he declates that his sympathics are on that side, and proceeds with several ingenious arguments in favor of the repeal of the present law. His appeal is largely based ou the theory that if the hounding of deer was likely to be the cause of their speedy extermination, the hotel keepers and guides would not favor the repeal of the present law. He intimates that the sentiments expressed in the Herald have only represented one section of the sportsmen, and do not represent the regions further north. He alleges that there is a chivalric spirit among the guides, hotel keepers, proprietors and sportsmen, which will and has preveuted the slaughter of deer, and the use of hundai is no more cruelthan them. He urges that the number killed that way is no greater.

e shall endeavor to treat these suggestions in the same spirit of fairness in which they have been offered. There is an honest difference of opinion among genuine sportsmen in regard to the matter, though from published evidence the majority against hounding deer is large and eminently

in regard to the matter, though from published evidence the majority against hounding deer is large and eminently weighty. The argument that the hotel keepers of the Adirondacks and guides always do what is for their highest interests, is unfortunately not proved by the general experience of human nature. As against their true interests in the future, to favor their present interests, they are apt to choose the latter. The extermination of the game in the course of twenty years is a matter of no special moment to the present proprietors, many of whom look at that result as a matter of course undr any system. If the principle here laid down by our co-respondent held good, what would be the necessity of legislation against taking fish in nets, setting weirs in the streams, and of making laws for the preservation of the forests from ruthless destruction by the lumbermen, whose interests it is supposed to be that the forests be conserved as long as possible? It is evident that all proprietors or all sportsmen can not be trusted to carry out the very chivalric but somewhat too optimistic theory of our correspondent in the treatment of game. Moreover it will be seen by a glance at the petitions submitted against the repeal of the anti-hounding law, that those guides aud sportsmen who are regarded as best representing the interest of the game, are found favoring the present law. The hunters of the whole State, and not of any section, must have their interests consulted. This opposition to the repeal of the law is not gotten up by those who know what they are talking about. The articles published in this journal have been written by practical hunters and sportsmen, who have hunted deer and who regard them as game, and not as so much venison running wild. Now as to the final argument of our correspondent, that the hunting of deer with hounds is no more cruel than still-hunting, we readily admit that, when hounding is properly carried on, it is a legitimate and exciting sport. And has received the sanction of ages of spo

New York was still part of a boundless wilderness, with an unlimited supply of game, the situation would be such that no restrictions of this kind would be needed. But such scenes as pictured in last Friday's issue^{*} are not the mere results of an artist's lively imagination. The hunter of to-day is not always as chivalric as he might be. The possible escape of the coveted game is now too much of a stake to hesitate long at using very unfair and unsportsmanike methods of capturing it. As to the number of deer killed when both methods of hunting are allowed being less than when only one, that of still hunting, is used, the absurdity is apparent. Is not an army with both cavalry and infantry more effective than an army with infantry aloue? Which will cause the most destruction? Which will most rapidly annihilate the enemy? The opponents of the repeal law believe that in so doing they are not only serving the best interests of the sportsmen, the tourist and the proprietor, but are also showing a humane and chivalric spirit toward the noblest, and what would soon become the rarest of our native game. native game

*The "Hounding a Deer" illustration, from the Forest and Stream March 11.

WILDFOWL IN IOWA.-Burlington, Ia., March WILDFOWL IN 10wA.—Burlugton, Ia., March 23.—The spring shooting, which commenced at the grounds of the Crystal Lake and Eagle Grove Club grounds about the 15th, has not proved to be as good as was expected. When the ducks came up from the south they found no water in the swamps and no feed. The ice is now out and the spring rise has come, but too late, for the ducks are gone. The game register of the Crystal Lake and Eagle Grove Club was opened on the 15th by Mr. Goldthwaite, with a score of 18, 2 mallards, 1 canvasback, 1 redhead, and 14 blackjacks. From the 15th to the 23d but 373 ducks have been shot on the club rrounds, an average of 5 guns shooting each day. From the toth to the 25d but 573 ducks have been shot on the club grounds, an average of 5 guns shooting each day, not a very good showing. Camp hunters in various parts of the State and on the islands have made very poor scores. Parties who were out from one to two weeks bringing back all the way from 50 to 100. In one instance a party of four, and they are all good shots, who were out two weeks, got only 150,--C. L. E. G.

RIFLES AND BULLETS.

RIFLES AND BULLETS. Editor Forest and Stream: Mr. Van Dyke is quite right when stating, in your paper of Feb. 18, that "J. J. M." "certainly will not assert that a bullet whose axis of rotation is correct up to 40 yards could, without touching anything, begin to wabble before it reach 100 yards;" but I do assert that a bullet may be so slightly tilted sideways when leaving the muzzle, that its deviation from accuracy is hardly, if at all, perceptible at 40 yards, and yet very evident at 100. At extremely short ranges, the great rate of the spin keeps the point of the bullet nearly as straight as when starting, but when the spin becomes slower the pressure of the air forces the point more and more aside, causing a rapid increase in the curve from the true line of flight.

<text><text><text><text><text>

gauge by employing explosive shells, but they often exploded before penetrating to a sufficient depth, and it was soon found that the bullets were much more effective when the hollows were filled with beeswax or plugs of wood. The powder charges have been increased since them to 50 grains in the .86, 80 in the .40, 125 or even 150 in the .45, and 165 in the .500 breechloaders. This is, I believe, the real history of the discovery of the modern express rifle. J. J. M. Lonox England March 15 186

LONDON, England, March 15, 1886

Editor Forest and Stream: I was very much interested in your trajectory test. The result rather surprised me in several instances. I wish to ask some of your correspondents who have had experience with muzzleloading rifles to please come out and tell for the benefit of tenderfeet like myself how to load and manage that arm

benefit of tenderleet nike injsen as a tent that arm. I have always had a great liking for the muzzleloader, so last spring when I was in St. Louis I hunted the city over for a good one. At last I got hold of one, it was a 42-inch barel 10-pound gun, very well put up and was evidently a doughn, but the bullet mould was not good. I have made a vand have accomplished some very good shooting, but serged as I think the rifle is capable of. Will some statisme what kind of a bullet to use (the gun shoots to the pound) and how to load the gun to get the best results.

use a .45-caliber Pacific Ballard for deer and find it an excellent gun. As far as accuracy is concerned I think it good enough for anything, but the charges cannot be changed to suit the game as I like to do. C. L. S. FORT CLARK, Texas.

ONTARIO GAME SEASONS.

A NEW law of the Province of Ontario (to take effect July 1, 1886) provides the following open seasons: Deer, elk, moose, reindeer or caribou, Oet. 15 to Dec, 15. Grouse, pheasants, prairie fowl or partridge, Sept. 1 to Jan. 15 Woodcock, Jan. 1 to Aug. 15. Snipe, rail, golden plover, Sept. 1 to Jan 1. Swans or geese, Sept. 1 to May 1. Ducks and all other water fowl, Sept. 1 to Jan. 1. Hares, Sept. 1 to Mar. 15. Beaver, mink, muskrat, sable, martin, otter, fisher, Nov. 1 to May 1. Quail protected to 1888; wild turkeys to 1889. Imported game may not be shot with-out consent of land owner. Unlawful to kill dcer, clk, moose, reindeer and caribou for exportation.

New BRUNSWICK GAME.—Campbellton, N. B., March 25. —Winter still retains its icy hold here, the snow lies deep over the land and the ice remains firm and strong on the lakes. A few caribou have been killed in this vicinity during the past season, but no moose, so far as we can learn, has been bagged. One party claims to have caught a moose in a caribou snare, but he proved a tartar, smashed things up, broke the rope and escaped, a wiser and madder moose. Quantities of fine trout are brought in here, which are taken through the ice on the small lakes in the interior, by the Micmaes. The catch of fur-bearing animals has not been a large one, which proves that they are also decreasing in numbers. Wild geese have put in an appearance down the bay. A woodcock was seen on the 22d near St. John, N. B. — STANSTEAD.

JEXYL ISLAND CLUB,—The Jekyl Island Club is in the nature of a hunting, fishing and yachting establishment on Jekyl Island, on the coast of Georgia, off Brunswick. A meeting of the club was held recently in the Fifth Avenue Hotel, in this city, and the following gentlemen were eleveted directors: Gen. Lloyd Aspinwall, New York; Erastus Corn-iug, Albany: Wirt Dexter, Chicago; Judge Henry E How-land, New York; Commodore R. L. Ogden, San Fiancisco; O. K. King, Wm. B. DeWolf, Thos. W. Pearsall, Lewis Edwards and L. M. Lawson, New York, John Eugene du Bignon, Georgia; Franklin M. Ketchum and N. S. Finney, New York.

Long IsLAND SNIPE.—The text of Section 2, Chapter 485 of the Laws of 1885 reads as follows, the counties designated being Queens and Suffolk, which comprise the shoot-ing along the Atlantic coast: "Section 2. No person shall, in said counties, kill or have in possession any bay snipe, sandpiper, shore bird or plover, from the first day of January to the tenth day of July in any year, or any rail bird, or meadow hen, from the first day of January to the first day of September in any year, under a penalty of ten dollars for each bird killed or had in possession."

EMMETSBURG, Ia., March 22.—Geese are just commencing their flight. Only one has been killed that I know of so far, but as soon as the weather opens there will be plenty of hunting. Ducks have not made their appearance yet. We had quite a fall of snow on the 20th, but nearly gone to day. Prairie chickens have wintered well in this section, and the shooting promises well the coming scason. Cotton-tails are abundant, with an occasional lone jack. Wolves have not been hunted much on account of the deep snow this winter. —E. H. S.

GAME IN SULLIVAN COUNTY — Monticello, N. Y., March 22. — Foxes and wildcats have been very plenty the past win-ter. Rabbits and squirrels are too numerous to mention. Ruffed grouse have wintered finely and in good numbers. The male grouse are now drumming in every direction. To the many gentlemen and sportsmen who have hunted here with me for the past twenty years, I will say that the pros-pect for next fall's shooting is better than for many years.— HARLES F. KENT.

A therefore the two presences of the second second

MAJ, W. D. FULLER.—Sedalia, Mo., March 25.—Editor Forest and Stream: Major W. D. Fuller died at the Sicher House, this city, March 11, of heart disease. I have no doubt but that this notice will meet the eye of some old comrade who may be at a loss to know what has become of an old friend. His effects, which are valuable, still remain at the office of the hotel awaiting the claim of legal owners.—Occr-DENT.

MAINE RUFFED GROUSE.—East Auburn, Mc., March 22. —I feel quite sure that our ruffed grouse didn't suffer as much from the severe ice storm (that formed an icy crust an inch thick) we had in February, as many of our sportsmen feared. I saw four a short distance from my house since the crust that were lively enough, and my neighbor only a few rods from my house saw three budding his apple trees in his garden a few evenings since. I hope many more escaped.—W.

A DUCK ASTRAY.—Brooklyn, N. Y.—The other morning Mr. Bahr, a butcher, at the head of New York avenue, Brooklyn, saw a large bird on the telegraph wires, opposite his shop. He got a shotgun and killed it. It turned out to be a duck about as big as onr common ducks, but with a long sharp bill, plumage black, rather long wings. Nice place to shoot ducks.—E. K. L.

WESTCHESTER COUNTY GAME AND FISH PROTECTIVE Association, organized in 1886, has the following officers: President, Frederick G. Leroy; First Vice President, W. E. Warren; Second Vice-President, Wesley H. Wood; Sccre-tary, George Laick, Tarrytown, N. Y.; Treasurer, William E Tompkins; Counsel, George C. Andrews; Special Game Constable Oscar Purdy Constable, Oscar Purdy

CALIFORNIA LAWS.—We have received from S. P. Maslin, Esq., of Sacramento, a compilation of all the California laws relating to game and fish. The compendium is com-prehensive, well arranged, fully indexed, and a model in its way. It is published under the authority of the State Board of Field Compensioner. of Fish Commissioners

MR. XENOPHON CLEVELAND, of Waltham, Mass., has sent to us for exhibition a number of crayon and oil pictures of fishing and camp scenes.

VIVA LOS GACHUPINOS (March 18).—For "Harpads" read Harpado; for "Algara" read Algava.—Kelpie.

ENGLISH SNIPE have been killed the past fortnight on the Newark meadows.

TROUT SEASON OPENS.

California, April 1; Colorado, July 1; Connecticut, April 1; Dakota, May 1; Iowa, Feb. 1; Maine, May 1; Maryland, April 1; Massachusetts, April 1; Michigan, May 1; Minne-sota, April 1; New Brunswick, Feb. 1; New Hampshire, May 1; New Jersey, March 1; New Mexico, May 1; New York, May 1 (in Queens and Euffolk counties, April 1; not to be transported into other counties); Ohio, March 15; Ontario, May 1; Oregon, April 1; Pennsylvania, April 15; Quebec, Feb. 1; Rhodc Island, March 1: Vermont, May 1; Virginia, April 1; West Virginia, June 1; Wisconsin, April 15; Wyoming, June 1.

BOSTON'S TROUT DISPLAY.

BOSTON'S TROUT DISPLAY. To follow the growth of fishing tackle, from the juniper pole, cut green, stripped of the bark and nailed against the woodshed to season out the crooks, up to the beautiful split bamboo rod, is an interesting study. Thirty years ago a few fish rods—stiff bamboo poles or heavy rods of ash— were kept in the country store; but to day the fishing tackle store is one of the most novel and interesting within the limits of our cities. Indeed, his outfit has come to be one of the angler's chief sources of pleasure, and his eye is open for every novelty, and they are numerous, both useful and pleas-ing. But the tackle window, always attractive to the passer-by, has come to mean something more. Messns. Appleton & Litchfield, No. 304 Washington street, Boston, have institu-ted a new departure in the display they opened on the morn-ing of April 1, the beginning of the trout season. Their entire window is a scene from nature. There is the rushing stream, the pool containing live brook, rainbow and Lake Superior trout, with the lake and the forest be-yond.

At one side is also an aquarium, in which trout spawn is shown in every stage from the time life begins up to the

fingerling. The entire window is novel and artistic, and shows a genius in love with its calling, which must have been moulded by the magic touch of the departed Prouty.

NEW YORK BASS LAW.

NEW YORK BASS LAW. TO-DAY I notice for the first time—simply because I have been obliged to put my FOREST AND STREAM one side of late, to be read at a more convenient season—that FOREST AND STREAM of Feb. 25 purports to give the provisions of the Husted bill. You have been led lato the same error that was committed by the Albany Argus. Journal, Express, Troy Times, and a dozen other papers. The Husted bill made no change in the open season for black bass. The season for this fish opens in Lake George and Brant Lake July 20, not July 13; in St. Lawrence, Lake Erie, etc., May 20, not May 13. Bullheads from Lake George shall not be exposed for sale before July 1, not July 18. In short, the only change made by the Husted bill is to permit having in possession of salt-water striped bass. In Section 21 the words "firesh water" are inserted in two instance before the words "striped bass."

water" are inserted in two instance before the words "striped bass." The clause reads thus: "No persou shall catch, kill or expose for sale, or have in his or her possession after the same has been killed, any black bass or fresh-water striped bass weighing less than one-half pound or less than eight inches in length frem end of snout to end of caudal fin, at any time." This clause is then repeated, except for "black bass or fresh-water striped bass" read "salt-water striped." In the next clause "fresh water" is inserted before "striped bass," and again in Section 24 "fresh water" is inserted be-fore "striped bass." I wrote an article for a local paper, quoting the law as you have it. Then followed, in other country papers about here, the greatest rubbish of fish laws that were ever put on paper, so that the people were all at sea.

when in Albany I saw the original draft of the Husted bill and got a certified copy of the law from the Secretary of State. A. N. CHENEY. GLENS FALLS, March 26.

BASS FLIES.

BASS FLIES. Editor Forest and Stream: In notice in this week's FOREST AND STREAM one of your correspondents seeks information on the subj-ct of killing bass flies. I have not fished in Minnesota, but I have had twenty-five years experience in fly-fishing for black bass, and rarely take them any other way. Bass are much more particular than trout in taking flies; often what is good in one water proves useless in another. I would advise your friend to get one or two of each of the following flies: Bass grizzly, match wing ibis, bass miller, Lord Baltimore, Hol-berton, Whitney, post jungle, St. Patrick, bumble bee, Gov. Alvord, Lottie, turkey. The a nine-foot slugle leader with any two of the above flies, which should be on single gut snells, double at the head. Cast as far as possible and let the fly sink well under water. Then move the fly slowly a foot at a time. Cast near the shore or over reefs, always remembering that hass mer very shy fish, and if you get near enough to see them they also see you, aud will refuse the most attractive bait. Let him try these different flies; and find out which is the most taking. New York, March 25.

TROUTING.

<section-header><section-header><section-header><text><text>

THE SUNAPEE TROUT.

THE SUNAPEE TROUT. Editor Forest and Stream: Will you allow me a word in regard to the Sunapee Lake trout? The specimen that I sent to the National Museum at Washington, and which was at first pronounced a com-mon brook trout, but is now decided to be a gigantic speci-men of Salvelinus of the Oquassa or blue-back type, and identical with the little 3-ounce or 4-ounce blue-back of Rangeley, Me., is in no way connected with the plant made by the Commissioners in 1870. These fish are natives of the lake, and were known to have been there over forty years ago. It is an impossibility that in six years the little Rangeley trout would reach a weight of 10 pounds. Such a radical charge in size and habits, merely by its transfer from the Rangeley to the Sunapee waters, would imply a deviation from well known and fixed laws in nature. E. B. H.

Editor Forest and Stream: In April, 1878, the New Hampshire Commissioners planted in Sunapee Lake 3,000 fry of blue-back trout, the eggs hav-ing been obtained from the Rangeley Lakes through the courtesy of the Maine Commissioners. It is probable, there-fore, that the variety of trout recently obtained from the lake by Mr. E. B. Hodge, and identified by Dr. Bean as oquassa, is not indigenous to those waters, but has been in-troduced from the Rangeley Lakes. This, it will be remem-bered, was mentioned as their probable source by Mr. Samuel Webber, late Fish Commissioner of New Hampshire. X.

WASHINGTON, D. C., March 24.

LARGEST RANGELEN TROUT.—A letter from Con. H. O. Stanley, of Dixfield, Me., to Com. Stilwell, Nov. 19, 1834, con-tains the following note which we are permitted to copy: "In regard to the big trout you want to know about, I cam-not vouch for the truth of it, yet I think it is correct. They were caught after I came away. I made arrangements with Frank Hewy to take some blue-backs' eggs for me. He caught the fish with a large landing net attached to a long pole. Ue was dipping them from under a jum of cedars be-low the dam on the Rangeley stream, and could not see un-der the jam. He first dipped the big fish (a female). It was so large that he had the curiosity to weigh it. It weighed 12 pounds. A few minutes later he dipped a male of 10 pounds. Both were ripe fish. He put them back in the pool below the dam. I am inclined to believe this, though, of course, I cannot vouch for it."

ILLEGAL FISHING.—We have two complaints of illegal fish-ing in the State of New York, both relating to the same waters. One writer charges a State officer with participa-tion in the work of unlawfully taking fish; but as neither of these correspondents has complied with our rule of requiring name and address to be signed to letters, we cannot publish the complaints. We require this as an evidence of good faith on their part, and with no intention of publishing their names if they desire to use initials or any other signature. They can thus see why no attention is paid to their questions and complaints,

A TRIP TO THE INTERMEDIATE LAKES. A TRIP TO THE INTERMEDIATE LAKES. I was in the fall of 1854 that Charley A., from Columbus, O., came to visit me in my new home in Missouri, bringing a rifle, shotgun and fishing tackle with him. Qual, prairie chickens and other small game were abundant, and a part of each day when the weather was good, we spent in hunting. The FOREST AND STREAM came to us every Mon-day evening, and one or the other would read aloud every-thing contained in its pages. The reader was often inter-rupted with "What a scandalous lie," "I should say it was a remarkable shot," and similar remarks. It was during these fall and winter evenings that we planned a trip to Michigan for the coming summer, and it is about this trip that I am going to write. I shall leave out poetry, Indian legends, and what the natives said about the game and fish laws.

<text><text><text>

<text>

APRIL 1, 1886. the log camp, which is about a quarter of a mile below the State road bridge and a few yards from the river. On arriving at camp we were told to put the baggage in the hall and make ourselves perfectly at home. It was now 10 c'lock, and we set up our rods and started for the river to catch our dinner; in two hours we came back with a nice lot of trout. The Captain would not allow us to get our own dinner, made us sit down with them. We were awful hun-gry and enjoyed the pork and beans immensely, and it is as-tonishing how much a man can eat when he is roughing it in the woods. We are both good feeders, but to-day we ex-celled ourselves, and when we pulled out from the table the Captain said, if we did as well every meal he would have to send to town for more supplies before Sunday. The Captain told us we need not bother with cooking our meals, but should eat with them. We did not like to accept so much; however, if he would board us we would keep the table sup-plied with trout. The Captain laughed, and said it was a bargain. Anxious to make our word good, we struck out for the river. The Captain laughed, and said it was a bargain. Anxious to make our word good, we struck out for the river. The Captain went part of the way with us and showed us a road leading through the woods, which we followed and came out about half a mile above the State Road Bridge. At first we thought we were not going to get enough for seven men, but as trout after trout came to the creel, that fear vanished, and we felt sure our part of the bargain would be Sept. We reached camp at half past six with eighty trout, The Captain and the boys were surprised at our getting so many. We had cleaned the fish at the bridge, so they were all ready for the pan. In a little while supper was called, and we sat down with the crowd to trout, bacon, pork and beans, fried onions, potatces, bread and but-ter, stewed prunes, but otherwise we thought it a royal feast. The trout was a treat to the men; f

who had never seen trout but once and had never caught any. That night we slept under a roof for the first time in two weeks. The next morning I was up at daylight, and got a couple of hours' fishing before breakfast, for a mile below the log caugh the river is very rapid, and two years before I had eaught the most and largest fish here, one of them a grayling, weighing twenty-four ounces. So to-day I thought I would try some of the old places, and see if I could hook another grayling. I took a lunch with me, intending to stay all day, but by noon my creel got so heavy I had to return to camp and empty it, returning at once to the place, I continued to fish until night. There is one place a half mile below camp where a big log lying across the river forms a dam. The stream here is quite narrow, and the water runs over this place like a mill race, scooping a hole ten feet deep just below the log, and making as pretty a place as any trout could desire. I took nine out of this hole, two of them weighing twelve ounces each, and lost several flies and also several trout while trying to pull them up over the log. Those lost I imagined weighed from one to three pounds each.

<text><text><text><text>

Mullen's Mill and stopped for dinner. While 1 picked berries Charley got a three-pound bass in shape to eat. It was necessary to make a carry here, and McMullen's ox team, cart and boy conveyed our boat and traps to the head of Six Mile Lake, a half mile below the mill. The cart was nearly in pieces, and the oxen became frightened when we put the boat on the cart and came near running into the lake. We began to think we were not going to make it with that team; but the boy was confident that he would get us through all right, and he did, for in half an hour we were once more afloat at the head of Six Mile Lake. We pulled down the lake a short distance, and set up our tent in a clearing on the edge of the lake and close to a pretty little stream that ran down from the hill. After arranging camp we went fishing in the lake, and came back in an hour with four good-sized pickerel. We would not eat these ourselves, so Charley took them to a farmhouse near by, and while there the laky of the house told him of a trout stream a mile from the house. To have a trout stream so close and not visit it was not to be thought of. Mext morning we struck out across the country in the direction the lay, bad told Charley to a.

have a trout stream so close and not visit it was not to be thought of. Next morning we struck out across the country in the direction the lady had told Charley to go. The woods were beach, maple and elm, and were quite clear of underbrush. In a short time we came to a small stream which we thought must be the one we were in search of. It was such a little brook we thought it could contain only small fish, but con-cluded to try it before going further. Hastily jointing our rods we began to fish. I had gone but a few yards down stream when I came to a little fall with a dcep hole below. I put on a sprightly grasshopper and dropped it just below the fall. With a rush it disappeared, and I got a tug that almost paralyzed me. I was expecting a fingerling and got a twelve inch trout. I hooked another good-sized one out of this place, and then moved on down stream. Every few rods I came to one of these little falls, and got one or two trout from each place. We returned to camp at 11 o'clock with a fine lot of trout, some of which were prepared for dinner. At 9 o'clock we put our traps aboard and pulled on down the lake, arriving at the head of St. Clair's Lake at 6 o'clock. The tent was put up in a grove of beech trees, near a fine spring of water. In the evening we called on Mr. St. Clair, who lives near where we had camped. Mr. St. Clair is an old resident, and his stories of deer and bear hunts are quite interesting. After a pleasant chat of an hour we went back to the tent, rolled up in the blankets and were soon fast asleep. In the morning the wind was in our favor, and our square

is an old resident, and his stories of deer and bear hunts are quite interesting. After a pleasant chat of an hour we went back to the tent, rolled up in the blankets and were soon. The second set the provided of the plank of the second set of the second second set of the second second set of the second se

dinner we had pipes and tobacco, then our friends bade us good bye and good luck. In the evening we moved down the lake and Intermediatc River to Bellaire, made the carry around the dam, and camped just below the bridge. We stayed here three days. The first two we fished in the Cedar, having fine sport and taking 150 trout, one of them the largest caught on the trip; it was 13 inches long and weighed 17 ounces. On the third morning we got up bright and early, and after a hasty break-fast struck out on the Mancelona road, following it for three miles. We came to Shanty Creek, which empties into Grass River a little above Cold Creek. This is a pretty little stream and fairly alive with trout. I believe that this and Cold Creek were the only streams where we found the orange-colored trout. At 3 o'clock my creel was nearly full, so I reeled in and went back to the road and found Charley stretched out on the bridge fast asleep. I sat down and cleaned my fish and put them in the creel, fastened the bid down and sinking it in the creek. By this time Charley was awake, and after filling up with berries we sat down on the bridge to wait for the stage from Mancelona, which was due here at half-past 5. The stage arrived on time, and we were soon on our way to Bellaire. The driver was or had been a great hunter and fisherman, and in that three-mile drive we learned some remarkable things about deer and

trout that we never knew before. Thit evening while eathors, support we were surprised with a big pan of pork and given them trout several times, and here was a present for the antice the strength of the storkeeper's wife had send us. We had given them trout several times, and here was a present for the transman, and the transman and transman and the transman a

As soon as dinner was over Charley went to get a team to take us to Traverse City, and by the time he returned I had our goods all packed for moving. The team was to come at 4 o'clock, so we had three hours to put in trout fishing. I went to the old mill and fished down, and Charley started in at the bridge to meet me. It was a lovely afternoon, the fishing fine, and the time passed quickly away—too quick for us, for we would fain have had the afternoon drawn out

a few hours longer; but 'time waits for no one, and with regret we reeled in for the last time, and walked back to eamp. The team was waiting for us, and when everything was in the wagon we took a last look across Elk Lake and away beyond to the north where we had spent so many happy days, jumped into the wagon, and were driven rap-idly away. Two miles from Follet's we passed the pretty little village of Williamsburg on our lett. Six miles further on we came to Acme, a little town on the east shore of Tra-verse Bay. The drive from here to Traverse City, eight miles, is the finest in the land. The road is perfectly level, hard, smooth gravel, and runs alongside the bay and through groves of evergreen trees almost the entire distance. A more beautiful drive could not be imagined. We arrived in Traverse City at 7 o'clock and stopped at the Oceidental Hotel, where we had left our trunks. We gave the 'proprietor of the hotel some fifteen or twenty pounds of trout, which we had brought from Sutberland's and Follet's. As soon as we got our store clothes on and had supper, we went up street to get our hair cut and faces shaved. It scemed real awkward to get on pavements again, and we went stepping along like a blind horse in high oats. At 11 o'clock P. M., we took a sleeper for the south, reach-ing Chicago the next evening at 7; we stayed here until the following evening, arriving in St. Louis Sunday morning, and California at half past two the same day; a twelve-mile drive and we were once more at home. We had been gone just six weeks and twelve hours. How Powr, Missouri.

OUR BIG BASS.

WE were camping on the Juniata that summer. We had camped on the Susquehanna several times and also on the Yellow Breeches and Conodoguinet creeks, but we were all agreed that along the Juniata River was to be

We were camping on the Juniata that summer. We had camped on the Susquehana several times and also on the Yellow Breeches and Conodoguinet creeks, but were all agreed that along the Juniata River was to be found the most sport. We were lying stretched out in front of our tents. The hot August sum shone flerely down on the open river in front of us, but searcely penctrated the thick foliage of the trees under which our tents were pitched. Right at our sides bubbled up Poorman's Spring, pure limestone water and as cold as ice. In front of as flowed the beautiful Juniata, its usually placid current broken at this point by a jagged mass of rocks which extended clear across the river, and over which the water dashed with a ceaseless rore. Below the fails the water was very deep and afforded excellent fishing. But that afternoon we were lay and somewhat lived, for in the morning we had climbed four miles across the mountains to visit Simon Girthi's cave, which it is said to have been that famous renegade's retreat. "Hole, obys!" came a voice suddenly from behind us. "Why ain't you out on the rocks pulling in the bass?" "Hole it's more comfortable here in the shade." "Well, it is nice and cool here. Dave wants to go out to the falls a while. It seems like a good afternoon for bass." "Any one going along?" called out Dave, who was a farmer living along the mountain a mile below our camp who supplied us with fruit and vegenables, and coecasionally a melon or a young clicken. Dave Hard ywas a vertable love flasherman, and he possessed the rare patience common to that class of individuals. The second day in camp we had noticed him at daybreak fishing below the falls. A thoone, we were corsing the river to clook for flint arrowheads, which were quite plentiful ta along the shore, be still sat there with his rod. "What luck?" I inquired. He shook his head slowly. "They don't bite well to day. The water is too cloudy." They could the obse, the were the posse toward shore. He had been a frequent vision a cony, and is the obse

he replied. "You don't mean to say you fish with bait of that size," I exclaimed.

exclaimed. "Yes," said he, "I don't use any other kind. If you want to catch big bass you must use large bait. I hooked that fish out there on a larger chub than either of those," We stared at him in amazement. Fish of that size for bait! Why they would have almost made a supper for the

crowd.

orrowd. "I'ves," resumed Dave, "there's big fish out in that deep "Yes," resumed Dave, "there's big fish out in that deep water. Go down along shore here and catch some big chubs. Then go out where I was and fish. You must have patience, though. They won't bite as soon as you throw in." By this time we had reacheed camp. The boys had pre-pared supper, and the loss of the big fish certainly did not impair our appetites. After supper Charlie and I slipped off from camp, and going down the river a short distance suc-ceeded in catching half a dozen large chubs, put them in a small fish box and placed the box in the river near camp. "Now," said Charlie, "we'll see to-morrow how Dave's style

<page-header><text><text><text><text><text><text>

his cunning. HARRISBURG, Pa

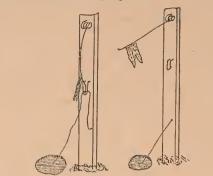

A CLOSE COUNT.

A CLOSE COUNT. On a fine ould day of 'SI my friend H. and myself started into wade the forks of M—— River, for a day's sport with the wary trout. He took the right branch and I the ky wending our way leisurely down the purling stream, which was at times darkly shaded with overgrowth, again dashing over its pebbly bed in the sunshine, with here and there deeper water and dark pools wherein the larger of the finny tribe love to linger. It was a haleyon day and an ideal trout stream. Words, or the limner's art, but inadequately depict the glories of a typical stream and its surroundings, with its lights and shades, its rippling and dashing waters, or recall the trill of the forest bird, and the pertume from the pines and wild meadows along its course. It was an e.m.c.m.c.m.c.m.c.m.d.we enjoyed it to the full. But all good things must have an end; and as the day ware sand we are but mortal, we must be fed. So we retrace the larget to the appointed rendexous and the lunch basket first. Arriving there before my friend, the contents of sizetched upon the grass, with a post-prandial cigar, my hypineses was complete. His first remark was, "Well, B. Have you this time." He had been endexoving for some time to get even with me. I had my deubts, but simply is figured 119. Mine footed up 120. He used four flies, where the relied on a single fly and a picbian worm. He assured to that at one time he had hooked three trous at one cast. B. Bass vs. Pickernet.—Hamburg. Conn.—A few years are

me that at one time ne had hooked three trout at one cast, B. BASS vs. PICKERFEL.—Hamburg, Conn.—A fcw years ago the State stocked Rogers Lake and also Hog Lake with black bass and then protected them by laws for three years after. It was at first regarded as an excellent move as it would in-crease the fish and afford those who to a very great extent depend on what these lakes produce better opportunities. It has been demonstrated, however, that it was a very dis-astrous step. Previous to that time pickerel and perch were very plentiful and any one could go almost any time and get a nice string of them, but the bass have proven very destructive to the original inhabitants of these lakes and seldom can one get many of these. They are admired by professional sportsmen for they are a very game fish and afford much sport when one is fortunate enough to book one. But the poor people regard it differently, as they find more sport in eating the fish than they do in catching them. Jas. A. Bill, one of the fish commissioners, worked hard for their introduction into our lakes, believing as he did that it would be a great benefit; but we regret that such is not the case.—Middletown Herald.

TIP-UPS FOR PICKEREL

INP-OPS FOR PICKEREL. IN our issue of March 4 we gave several illustrations of the contrivances in use to signal the fact that a fish had taken the bait when several lines were set by the fisherman through holes cut in the ice. Here are a few other forms: *Editor Forest and Stream*; I send you herewith a model of a pickerel trap which I think the best I have ever seen. It may be a common style but I have only seen four dozen made by a friend and my-self. All that is needed for the construction is a bundle of laths and a pound of brass spring wire.

To set the trap bend down the flag wire through the brass wire loop; then take a loop in line the depth you wish the bait to hang. Pass the loop of line through wire loop over flag wire and it will hold it down until the bait is disturbed when the flag will fly up and Mr. Pickerel will have a lot of spare line to swim round with, giving him time to get the bait well swallowed before his suspicions are aroused. This model is about one-quarter size. A lath cut in two being what we have used. They are easy of transportation and easy to set, just laid flat on the ice. The way that little flag will get in its work when anything touches the bait will more a heavy pair of overshoes with a fat man in them over the ice at an astounding rate. A. A. D. Bosrox, Feb. 27.

BOSTON, Feb. 27.

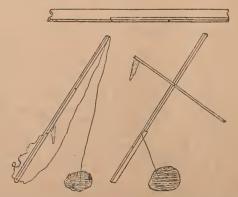

Editor Forest and Stream: I send you a drawing of tip-up and reel which 1 think your correspondents will like. It is made of either pine or white wood, 20 inches long and $\frac{1}{4}$ inch thick; wire of iron or brass $\frac{3}{32}$ of an inch; balls 15 to the pound.

The drawing shows the position when set and also when F. H. K. Sprung. West Gardiner, Mass.

Editor Forest and Stream:

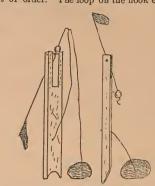

Editor Forest and Stream: I fish through the ice occasionally, and have tried differ-ent ways to tell when a fish took hold. First I tried tying the line to an oak bush, expecting to see it move up to the hole when a fish was on. This did very well on a still day, but when the wind blew, the bush would travel off and take the minnow out on the ice. I then tried the most common method in use at the present time, called a tip up, made of a prece of shingle or thin board, with a hole through it near the end, to which the line was fastened. Then putting a rod through the hole in the tip and laying the rod across the hole in the ice did very well. but I have often, in going around to the lines, taken off a 5-pound pickerel and the tip would lie down just as it was when the first bait was put on. When a bait was taken off down went the tip, and unless you saw it tip just the moment the fish bit, you would not know any-thing about it. I bought a dozen small bells and tied one to the end of a line. That worked like a charm, and it was really exciting to hear the bells tinkle along up to a stick over the hole; but my novel idea was soon frustrated. The first snow that came filled the bells, and I heard no more of the merry jingle of the misused sleigh bell. Then I made a set of sticks, and when Mr. Pickerel ran off with the min-now the little flag went to the top of the stick, and there it stayed until I took off a pickerel or put on a new bait, as the case might be. case might be

This is the way I now fix my lines: Take of any tough elastic wood a piece 3 feet long, 1 inch wide by $\frac{1}{2}$ inch thick at one end by $\frac{3}{2}$ inch wide by $\frac{1}{2}$ inch at top. Make a small hole through the top and a saw cut in top and bottom, 1 inch in depth to wind the line on when not in use. Stand this stick upright, near a hole cut in the ice to fish through.

Take an axe and strike a few blows in the ice, put the butt end of the stick in the cut thus made, scrape in snow and ice and pack down with foot. Then tie on, or do it before you leave home, a strip of black or red cloth on one end of the line, put on a good lively minnow, and let it down under the ice. Put the end of line through the hole at top of stick and put the cloth at bottom of the stick and when you see it at the top, run for a pickerel. T. F. G. DAVISBURO, Mich.

Editor Forest and Stream: I send you by mail a sample of the kind of "tip-up" that I use in fishing through the ice, a sport I very much enjoy. They are the best for all round kinds of weather of any I have ever seen or used. They are simple, durable and can-not get out of order. The loop on the hook enables one to

take the hook off the line when through fishing, and thereby to wind up the line without rusting the same by contact with the hook. After finding the depth of water with the sound-ing lead, the loop on the line is affixed, thus bringing the bait at the right distance from the bottom, and always show-ing just how deep the water is. A. FIN. PROVIDENCE, R. I.

We have a few more letters on this subject which it will not be necessary to publish, as they describe apparatus already illustrated.

not be necessary to publish, as they describe apparatus already illustrated. THE HOPATCONG LAKE OUTRAGE.—In answer to a politely-worded petition, signed by a large number of residents and interested persons at Lake Hoptacong, President De Castro, of the American Forcite Company, has written a letter in which be claims that the escape of acid into the lake was the result due to floods and heavy rains. He says that precau-tions have been taken to prevent its recurrence, and that any suggestions made by those interested in the lake will be ac-ceptable to the company. The Dover *Iron Era* takes a queer stand on the subject of the pollution of Lake Hopat-cong by the Forcite Company. The gist of the argument appears to be that the powder company pays more wages and spends more money in the vicinity than the anglers do, and it contends that the powder company pays more wages and spends more money in the vicinity than the anglers do, and it contends that the powder will be ac-ceptable. Now, the money spent by the people who go to Hopatcong every season, attracted by the angling, cannot fall short of twice or thrice that amount. Even if the anglers only spent \$10,000 at the lake, is there any reason that the powder manufacturers should be allowed to openly violate the laws, with the tacit indorsement of the news-papers? Why cannot the company continue to pay its 100 men and yet give the anglers, as well as the poor men of the nighborhood, a chance to catch bass and pickerel? What it to prevent the construction of cesspools or cisterns to ab-soft he waste of acid. It certainly would be cheaper to do this than to pay a few fines such as the law provides for the offense that they are said to be committing daily.—New-ark (N. J) Call.

MASSACHUSETTS SMELTS.—The fish and game protective laws are not all well obeyed. March 15 is close time on smells in Massachusetts waters, and yet the Fish and Game Protective Association of this city has a complaint from reliable sources setting forth that 10 tons of these fish were dipped, by means of a purse seine, from Weymouth River recently—since the close season—and have been shipped to New York by the Old Colony Railroad. The State does not appear to have any money to enforce the fish laws, but Deputy Shattuck has put detectives at work upon the case. They report the smelt seiners a hard lot to catch. There is little chance to lie in ambush, and the law-breakers threaten violence upon any one caught watching their operations. Recent letters from the Maine watens state that the short lobster stealers have taken alarm, and have given Boston the "go-by," and are taking their illegal booty to New York for a market. That State also has a 10j-inch law, but only poor enforcement is rife there. But a few detectives will be put to work in that city. The Maine commissioners have information against two or three smacks and schooners which have sailed either for Boston or New York with short lobsters. Close watch is being kept here, and any such lobsters. Close watch is being kept here, and any such lobsters at low the forwarded to New York with short will be seized.—Boston Herald.

CHATHAM, N. H., March 24.—One day last week Mr. E. B. Hodge, Commissioner of Fisheries, was here and in Con-way and had three men arrested and fined for catching trout out of season. One was fined five dollars, one twenty dol-lars and one twenty-five dollars. This makes some twelve or fourteen convictions which Mr. Hodge has made in Con-way and Chatham within the past four weeks.

THE SONG OF ROLAND.—We have heard with interest Mr. B. Robert's unpublished song descriptive of Roland and Olivier in the pass of Roncevalles—a composition of much merit. The words are by Auguste Barbier. The subject which Mr. Robert has chosen is a grand one and the treat-ment of the theme skillful and finished. The martial pre-lude and opening movement carry us into the rugged and forest-clad mountains, and lead us gradually through more stirring passages to the noble finale. The composition brings out effectively all the energy and fire of the incident, and yet a half-hidden strain of sadness seems to run through all the theme, prophetic of the melancholy sequel to the story. The composer has thoroughly entered into the spirit of his subject, and as we listen to its music we seem to hear the horn of Roland echoing through the glens of Roncevalles.

THE NEWARK DOG SHOW.

<text><section-header><text>

catalogue. The owners of the animals protested placed in the hands of the committee a record of their winnings, and as this was satisfactory the protests were not sustained. Ex-hibitors should carefully study the rules, which are intended for their protection as well as the Association, and comply with their requirements. There was also a protest lodged against the award of the special prize for the best cocker stud dog with one of his get on the ground that it was judged in the absence of the competitor, and that the puppy taken before the judge was not the one he intended to show; but the matter was amicably arranged, and will be decided at Boston where all the competing dogs are entered under the same judge. Following is a list of the judges: Mastiffs, St. Bernards, Newfoundlands and Grcat Danes, Mr. Edward Dudley, Camden, N. J.; deerhounds and grcyhounds, Mr. H. W. Smith, Worcester, Mass.; pointers and setters, Mr. Ed-ward Porter, New Haven, Conn.; collies, spaniels, foxhounds, basset hounds, dachshunde, Chesapeake Bay dogs, wire-haired, Irish, Scotch, Skye, Bedlington, Dandie Diumont, black and tan terriers and miscellaneous, Mr. J. E. Kirk, Toronto, Can.; beagles, Mr. J. A. Stovell, Philadelphin, Pa.; fox-terriers, Yorkshire terriers, pugs and toy dogs, Mr. James Mortimer, Babylon, L. I.; poodles, Mr. John G. Heckscher, New York; veterinary, Mr. H. Clay Glover, New York. The dogs were fed by Spratts Patent. In commenting upon the dogs were fed by Spratts Patent. In commenting upon the dogs were have avoided repetition of description of well-known animals except in case such description is needed.

MASTIFFS-(MR. DUDLEY).

animals except in case such description is needed. MASTIFFS-(MR. DUDLEY). In the champion class Nevison was absent and Prussian Princess had a walk over. She was looking well. In the open dog class David was selected as the best. He is nuch too small to win in good company with such a head as he has. A dog of his proportions must be exceptionally strong in head properties to successfully compete with fair-headed specimens of good size. Second went to Dread, in elegant condition. He is far removed from first-class form, being faulty before the eye, short between the couplings and cow-hocked. Hector, placed third, is well known, and so is Hildebert. The latter is still leggy and faulty in muzzle. Boss, hc., was much the best dog in the class. He is a large, well-formed dog, and has a good skull, fairly good cars, and stands well on his feet. His fault is in muzzle which is not square enough. While he is not a crack, he is a much better specimen than David, and we shall expect to see the decision reversed under other judg-ment. Of the three bitches shown, Queen II., although faulty in muzzle but too small, came next, with Nana, faulty in head, muzzle and feet, third. This was a poor class. Hanni-bal, noticed in our report of the Fanciers' show, was again to the front in the dog puppy class. He will not develop into a winner in good company. Dread, Jr., has a long face and a domed skull of little volume. Rad, vhc., is very faulty in head, eyes and tail, and should not have been given a card. Young Nevison, although much younger than his opponents and faulty in ears, was our choice for second place. The bitch puppies were a very ordinary lot. The winner is domed in skull, has heavy ears and a long face. Beatrice, placed second, is heavy in ears. Madge is not a mastiff. ST. BERNARDS-(MR. DUDLY). These classes were well remersented and made a very grand

<text><text><text>

light all over, and has an abundance of dew lap, which is very objectionable. Cafe-au-lait, a fairly good specimen on the small side, was second, and we liked him better than the winner. We did not see Major. Duchess is small and not of correct type.

GREYHOUNDS-(MR. SMITH).

GREYHOUNDS—(MR. SMITH). There were no entries in the champion class. In the open dog class Pembroke, weak in muzzle and badly shown, was the best. Cz.r. leggy, shallow and faulty in eyes and stilles, was placed second; he is not a show dog. Rex and Don are heavy in head and weak in muzzle, neither was worth a card. Paris was absent. This was a poor class. There were no entries in the bitch class. Pembroke had an easy win in the puppy class. The highly commended Theo was next best. Dixoy, placed second, is faulty in head, muzzle, eyes and in ears. It would have been better to have withheld second money for want of merit, as Pembroke alone will be heard of in the future, and he not in the first class. We were sorry to see the classes so poorly represented. DEERHOUNDS—(MR. SMITH).

DEERHOUNDS-(MR. SMITH).

DEERHOUNDS-(MR. SMITH). There were only six entries in the three classes and Mac, a useful but not first-class specimen, was well aliead in the champion class. Chieftain fairly smothered Heather in the open dog class; he is a magnificent specimen and can win in any company; his head is as near perfect as anything we ever hope to see, and ho has great size and rare quarters, good shoulders, chest, legs, feet and coat; his ears are a triffe large and he would be improved by more strength of forearm. Heather, just a fair specimen, was his only opponent. Wanda, a grand and gome looking bitch, won very easily from Mercia, who was scarcely worth a vhc, card in such company. company,

<text><text><text><text><text><text><text><text><text><text>

BLACK AND TAN SETTERS-(MR. DAVIDSON).

BLACK AND TAN SETTERS-(MR. DAVIDSON). Only twelve black and tan setters were entered, all were present except champion Turk, his death was published last week. Argus consequently had a walk over in the champion class. In the open dog class first went to Don, winner of second at the recent Fanciers' show. Buck, winner of second, is obje coarse dog with a heavy head and light cye, whe would have been plenty for him; neither of the others de-heave been plenty for him; neither of the others de-perved notice. Baron, third, is a very ordinary dog with no hite on class to say nothing of his white feet. Boy, c., is a proper specimen with a very slack back and without tan mark-hards on the to blich class was much better. First went to Nora, winner at Philadelphia last fall; she was looking vecond, is of the heavy Gordon type; she probably has been a proper to Maud; she has a good head but is leggy and they. Cremorne, vhc., has a good head but is leggy and the she was short body and head coat, but is weak in head and has poor markings. Heather Lass, he, was too fat; she has a short body and head coat, but is to isadvantage. There was but one puppy show, he is a but and the spoor markings. Heather Lass, he, was to isadvantage. There was but one puppy show, he is a but and the spoor markings. Heather Lass, he, was the short body and head but is leggy and bas and bas poor markings. HEIN SETTERS-(MR, DAVIDSON).

IRISH SETTERS-(MR. DAVIDSON).

IRISH SETTERS-(MR, DAVIDSON). The Irish setters in the aged classes were a good lot. There were thirty-eight entries with only one absentee. Chief was the only entry in the champion dog class. We never saw him looking better. In the corresponding bitch class Faun carried off the honors. Lady Clare was much too fat. In the open dog class first went to Blarney. He was not in his usual good form, but well deserved the place. Bruce, looking well, was second, and Tim was third. He has improved since we saw him last. Patsey, vhc., is a nicely-made little dog, and were it not for his plain head and high tall he would have undoubt-these; we thought them well placed. Molly Bawn rightly won in the bitch class. Next to her we preferred Miss Nellie Husted, but she has not quite bone enough to please the judge, who placed both Yoube and Jessie over her. There was noth-ing else in the class calling for special mention, although sev-eral of them were fairly good. There was but one dog puppy shown, a big fellow with immense bone. In the bitch class, Nanon, rather a pretty bitch, was the best of an ordinary lot. IRISH WATER SPANIELS-(MR. KIRK).

IRISH WATER SPANIELS-(MR. KIRK).

Thism WATER SPANIELS-(MR. KIRK). There were two dogs entered in this class. First was with-held and second given to Onomoo. He has a poor head and was far from good in coat. Prince was c. This would have been well enough had he been in the miscellaneous class, where he belonged, but in this class the card should have been withheld.

SPANIELS-(MR. KIRK).

where he belonged, but it this class the Card should have been withhed. SPANELS-(MR, KIRK). The field and cocker spaniels were out in force. There were for the spaniels were obsent. The quality throughout was excellent. This was evidently the opinion of the judge, as with the exception of about half a dozen, all in the open classs; irst went to Newton Abbot Lady, Black Beau Jr. coming second; we liked him as well as Lady. He is a very typical specimen, long and low with a beautiful head and good coat. Lad o' Devon, winner of third, looks a workman all over, but he is a bit too short in body and stands too high. The others were all noticed except on the second is a class. In the obsen class, is the obsen class, low with a beautiful head, were than we remember to have seen at the tail end of a class. In the champion cocker class, Compton Brahmin scored a win. He was well shown. The open dog class, liver and black, brought out a clinker in Black Peter He has a beautiful head, except that there is a fulness about the eyes, his muzzle is much better than we often see. If he does not grow too large, he will make it hot for the best of them. Obo Jr. won second over Young Obo. The latter is botter in head, and much better in fore legs. We thought that the yshould have changed places. Durobin, he, and the bitch class, first went to Shina; she deserved the place North, which is her only selicus faulty be a second, is a very nice puppy of good type. She is slightly undershot, which is ther only selicus faulty be a stand store class of the second prize winch were scened the place and easy to the second will undoubtedly be bar a distingt of the second prize winch second, but were solved, he were solved, the puppies were a capital lot, the first and second prize winches been also with the aged classes. In the class for "any other color," Little Red Rover scored an easy with the second prize winches been also be addited where here were spectively first and second, prize winches being also winches and second prize winches b

Only four of the foxbounds entered were shown. Vinegar, looking well, won in the champion class. In the open dog class Truman won first; he is getting old and his mouth is bad. He is more the type of the English foxhound than his competitor Ranger, although the latter is much the best look-

ing animal. There was but one entry each in the bitch and puppy classes; both were absent.

ing animal. There was but one entry each in the bitch and puppy classes; both were absent. COLLIES-(MR. KIRK). Ben Nevis, Robin Adair and Jersey Lass represented the champions. Ben scored an easy win. Jersey Lass is short in coat and faulty in head. In the open dog class Glengarry, a well-bred youngster, was the best in the class. His head is not clean enough. He has a good coat, but he gets his tail up too high. Roy Boy is not so good in coat as the winner, but he has a better head and frill. His ears are a bit heavy. Bon-nie Scotland, placed third, was a peg or two higher on the list than he ought to have been. He is faulty in brow, ears, coat and tail, and moves with his hocks too near together, theather, a litter brother to the winner, was our choice for third prize. He is quite as good in head as Bonnie Scotland, and better in coat and legs. Clipper, from the same litter, should beat Heather when in good condition, but he was out of coat, Surbiton is too thick in head, and has a Pomeranian expression that we do not like. He would do with more coat, especially in the quarters. Laddie, c., is short in coat and plain in head. Lady of the Lake, a nice bitch, scored an easy win in the bitch class. She is nicely put together and has a good head. She was short of coat and she gets her tail up too high. A daugh-ter of Rutland came second and Lass o' Lowrie next. We liked the vhe., Gem, better than Lass o' Lowrie. The former is faulty in muzzle and ears, whereas the latter is soft in coat and faulty in mead. Hengarry and Bonnie Scotland were first and second in the dog puppy class. Gifford and Heather are bit heavy. She was in splendid condition, and has a capital coat and a head above the average. Lady Ellis, a sweet. Hitle bitch, was our choice for second prize. Lutte, awell-bred one, is a bit off at both ends. Annie Laurie is round in eye, heavy in ears, and faulty in muzzle. Bonnie, heavell-bred one, is a bit off at both ends. Annie Laurie is round in eye, heavy in ears, were twenty-one heades or trize. Lutte

n ears, and faulty in muzzle. Bonnie, hc., is too soft in DEAGLES-(MR. STOVELL). There were twenty-one beagles entered and the average quality was good. Bannerman, looking well, won in the champion class. In the open dog class, over 12 inches, Little Duke, in good condition, was placed first. Next came Rattler III., also looking well. The two others we thought properly placed, although we expected to see Trille higher up, as he more nearly resembles Bannerman than any of the others. The bitch class was good. They were well handled, except that Chase and Trinket might have been given another letter each. The class under 12 inches was not large but quite good. Mr. Stovell judged by points and took a great deal of time and pains to place his dogs, and made few mistakes. BASET HOUNDS AND DACHSHUNDE-(MR. KIRK). These classes were better represented than we have seen in some time. Mr. Gilbert was well to the front with Bertrand, and we fancied Canace, from the same kennel, for second place. There was nothing first-class in the dachshund class, but the eight entries were above the average we generally see exhibited. Mr. Mortimered.

place. There was nothing first-class in the dachshund class, but the eight entries were above the average we generally see exhibited. FOX-TERRIERS-(MR, MORTIMER). The Mortimer worked hard, but failed to get his dogs right. His awards were badly received in more thau one instance. Belgrave Primrose, the only entry in the champion dog class, has grown very checky; he was in poor condition. Diana, a good bitch, had to succumb to the peerless Richmond Olive in the corresponding bitch class. Delta was absent. In the open dog class the Messrs. Rutherfurd were again successful with Splauger, a very ordinary specimen, failty in skull, muzzle, eyes, ears and loin. There were at least half a dozen better specimens in the class. General Graut was much the best dog in the class. He is at present a little light before the eye, but is a terrier all over. Earl Leycester, hc., should have been ago than the winner. The others in the class, excepting per-haps Oranze Pippin, are well known. He is wide in front and faulty in feet. Cornwall Duchess won in the bitch class. She is rather long cast and is faulty in loin, muzzle and coat. Nina is full at the brow, but in other respects is the better terrier. Warren Winsome is too long, Lady Winnie is also too long and light. Clover Fidget is wide in front and faulty in ears, Clover Bell is long cast and round in skull. There was only one entry in the class for wire-haired. He will be heard from again. How Cocaine ever came to win first in the dog puppy class is more than we can say. His ears are badly carried, he use full at the best of the bitch class. She is faulty in skull and muzzle, and is long and shallow in body. General Grant, vhc., is worth a hundred such as he. Nutmeg III., a well-bred one, shows character, but is much too large and leggy for a puppy. He is a big dog now, although entered as seven months old. He should not have received the vhc. card. Filt was the best of the bitch pupples. She is too full in brow, has beautiful ears, and stand

BULLDOGS-(MR. PORTER). Only five dogs were entered in the bulldog classes, so that Mr. Porter had an easy task set him. Bellissima was all alone in the champion class, and Remus outclassed Brimstone in the open dog class. We liked Bellona better than Hespian; the latter is very pinched in muzzle.

latter is very pinched in muzzle. BULL-TERMERS-(MR. PORTER). There were thirteen entries all told, and Grand Duke sus-tained his reputation by beating Dutch, Jr. and Victoria. The latter was badly shown. Grand Duke has grown very cheeky of late, and must scon give way to better and cleaner-headed specimens. In the open class, Count, the best dog before the public, scored an easy win over the thick-skulled and lippy Judas. We would have placed Jack second; he is better in head and muzzle than Judas and as good 'n body. Little Nell, looking well, was alone in the bitch class. The puppies were a very ordinary lot. Anthony is too wide in skull for a puppy and is long cast and coarse in tail. Alice is cheeky, faulty be-fore the eyes and coarse in tail. Alice is cheeky, faulty be-fore the eyes and coarse in tail. Alice is cheeky, faulty be-fore were but three entries in this class and the prizes were withheld for want of merit. This was a mistake, as Spirite is above the averagein good looks. HISH, BEDLINGTON, DANDIE AND SKYE TERMERS-(MR. KIRK).

Sprite is above the average in good tooks. RISH, BEDLINGTON, DANDIE AND SKYE TERRIERS--(MR. KIRK). These classes were badly filled and only one of the exhibits will leave a mark in good company at future shows. Norah, the winning Irish terrier, is soft in coat. Binnie, the first prize Dandie, is faulty in head and coat. Sentinel, the winner in the Bedlington class, is a good dog, albeit too low on the legs for our fancy. Touzie, the winning Skye, is faulty in ears. He has plenty of length and will improve in coat.

He has plenty of length and will improve in coat. PDGS-(MR. MORTIMER). We were surprised to find but eleven entries in the four classes, and of these two were absent-Master Tragedy and Miss Ruby. Bradford Ruby, shown in elegant condition, was alone in the champion class. It would be no easy task to beat this typical little dog when shown as he was on this occasion. Young Toby had the open dog class to himself until Dick was transferred from the pointer class. The latter is faulty in skull, muzzle and ears. Miss Kitty, well known, scored an easy win in the bitch class after having been transferred from the champion class. Is it not about time exhibitors were held responsible for blunders of this kind? YORKSHET TERMENS-(MR. MORTIMER).

were held responsible for blunders of this kind? YORKSHIRE TERLERSS – (MR. MORTMER). There were only four entries in the two classes, and all were from one kennel. Bcn, short in coat, was the best of the lot. TOY TERLERS THAR YORKSHIRE—(MR. MORTMER.) There was only one entry, Tiney. She was fully described in our report of the last New York show. TOY SPANELS—(MR. MORTMER). Of the three entries in the King Charles class Nellie was

placed first. We are pleased to notice that the judge has reversed his decision made at the Philadelphia October show, where Pitou was given first. Duke of Edinburgh is a better dog than either Nellie or Pitou, and we shall expect to see Mr. Mortimer reverse his decision if these dogs ever come under his judgment again. King Victor was properly placed over King Pippin, his only opponent in the Blenheim class. ITALIAN OREYHOUNDS-(MR. MORTIMER). No entries.

POODLES-(MR. HECKSCHER). These classes were not well represented. Sabot and Jet II. re moderate specimens.

MISCELLANEOUS-(MR. KIRK). In this class prizes were awarded to Vixen, a Dalmatian, faulty in head, bone and markings; Black Bess, an English retriever, faulty in head and tail, and to Barry; we did not ascertain what breed the latter represents, although he is said to be a Leouberg. Charley, a Prince Charles spaniel, is faulty in head and lacks in bone and feather, but he was as good looking as anything in the class.

ascertain what breed the latter represents, although he is said to be a Leonberg. Charley, a Prince Charles spaniel, is faulty in head and lacks in bone and feather, but he was as good looking as anything in the class. SPECIAL FRIZES. There were 55 special prizes awarded. In many cases the awards followed the decisions in the regular classes. The event of the show was the coming together of Beaufort and Graphic, to decide which should carry off the honors as the best large pointer. Both were in elegant condition, and the contest between them was watched with absorbing interest. Many intelligent admirers of each dog, while claiming supremacy for their favorite, freely admitted that there was not much to choose between them, and that the victor would by no means have an easy win. Two years ago we said of Beanfort, "He is without doubt the best large pointer we have." We have seen nothing since causing us to change this opinion, although we confess that the first glimpse we caught of Graphic at Phila-delphia last fall led us to think him the better dog, but a care-ful examination and comparison of the two showed Beaufort "still the king." Beaufort has the advantage of Graphic in muzzle, beauty of eye, in skull and set of ear. Graphic has a little the best of it in neck, it being better arched and free from throati-ness, while Beaufort is somewhat throaty, although his neck is not so thick as Graphic's. In shoulders, chest, back and forelegs both are grand. In loin Beaufort is well arched, while Graphic is comparatively flat. In quarters and stiffe Beaufort is the best, and much the best in second thigh, and has by far the best tail. There is not much difference in quality of feet. Beau-fort has the largest, but the toces are well arched and the pads are firm and of good thickness. Graphic is just a bit too short coupled, while Beaufort is the sorme and Graphic in the latter. On Thursday evening, in the former and Graphic, in the advan-tor while Beaufort in the special for the best pointer. She has not so good

AWARDS. In Newfoundlands, Major, high com., was a mistake, as he was ab-sent. In deerbound bitches, 2d was withheld. In champicn pointer dogs under 55lbs., Robin Adair won. In small pointer bitches, very high com. was won by G. W. Mitte's Polly instead of Keswick II. In the open class for black and tan setter dogs, C. W. Tutle's Don won ist. In field or cocker spaniel puppies. J. W. Kelly's Woodstock Norah and Little Red Rover were 1st and 2d, W. H. Tuck's May Obo and B. J. Rae's Young Belle were very high com. The only entry in foxhound bitches and puppies was absent. In collie bitch puppies, Bonnie won first. SPECIALS. SPECIALS.

forhound bitches and pupples was absent. In colle once pupples, Bonnie won first. SPECIALS. The remainder of the special prizes were awarded as follows: fest smooth-coated St. Bernard Ia open class, W. W. Tucker's Apollo. Best kennel of pointers, Graphic Kennels, Best kennel of English setters, Kamapo Kennel. Best kennel of Irish setters, Max Wenzel. Best kennel of collies, J. D. Shotwell. Best bengle, A. C. Krueger's hound, C. D. Wilbur's Pembroke. Best bull-terrier, R. W. Living-ston's Grand Duke. Best pug. City View Kennels' Bradford Ruby. Best heavy pointer dog. C. H. Mason's Beaufort. Best light pointer bitch, Graphic Kennels' Meally. Best collie, J. D. Shotwell's Lady of the Lake. Best bulkdog, J. E. Thayer's Bellissima. Best English setter, F. Windholz's Rockingham. Best collie, J. D. Shotwell's Lady of the Lake. Best bulkdog, J. E. Thayer's Bellissima. Best English setter. P. Windholz's Rockingham. Best pointer bitch, Graphic Kennels' Glengary. Best picturer puppy, G. Davey's Tory. Best dog, the get of Jimmie, G. W. McNeil's King Dan, Best bitch, V. M. Haldeman's Leda. Best descendant of old Phill, O. J. Peehall's Jimmie. Best peico flier, C. W. Rodenburg's Chip. Hest bitch the get of Dashing Monarch, P. C. Ol's Juno. Best English setter brood bitch that has been placed at a field trai, with wo of her progeny, Ramapo Kennels' Besie with Prince Imperial and Princess Helen. Best beager over 18 inches in open class, A. C. Krueger's Pet, Best under 18 inches W. F. Streeter's March Forg Ish satter in open classes, Rinnapo Kennels' Lady Suffern. Best Springer, A. C. Wilmerding's Newton Abbot Lady. Suffern. Best pringer, Sheat Pete, Best retrieving spanel, A. C. Wilmerding's Black Prince Best black and tan setter, H. Clay Glover's Mora. Best pringer (Wool, Grashic Kennels' Lady. Suffern. Best pringer, A. C. Wilmerding's Sewton Abbot Lady. Suffern. Best pringer, A. C. Wilmerding's Sensation's Lad. Best heavy pointer bitch, Grashic Kennels' Revel HI. Best strade of pointers, Grashic

NEW YORK DOG SHOW.

THE NEW HAVEN SHOW.

THE NEW HAVEN SHOW. The third annual bench show of the New Haven Kennel Club opened Tuesday, March 30, with 400 and odd entries, and is now in progress, closing to-morrow evening. The ex-hibition is in the drill room of the Second Regiment Armory, a building which is unsurpassed by any other outside of New York for bench show purposes. The quality of the dogs is very good; they are well benched, and the management is excellent in every respect. The rainy weather interfered with the attendance on Tuesday, but a fair number were present. The judging progressed through nearly all of the classes Tuesday, and was completed yesterday. A list of the awards is given herewith: MARTIFTS-CHAMPION -DOG; Winlawn Kennels' Homer. Bitch: Winlawn Kennels' Prussian Princess-Opten-Dogs; est, Ashmor Kennels' Llord Cromwell; 21, E, H. Moore's litord Caution. Very bight com., Wm S. Johnson's Dread and Winlawn Kennels' Heetor; Com. J. A. Hawarth's Cedric's Gurth. Bitches, No entries. Pup-pier: Withled. ST. BERNARDS-Rough-COAFED - CHAMPION: Dog; Hermitage

Dies: Withheld.

Dachs-hunde, 10. Collies, 41. Fox-terriers, 23. Black and tan, 8. Skye, 9. Yorkshire, 11. Scotch, 3. Dandie Dinmonts, 5. Irish terrior, 1. Bedlingtons, 4. Bulldogs, 14. Pugs, 20. Toy terriers, 15; King Charles, 13; Blenheim, 2. Italian grey-hound, 1. Poodles, 5. Mexican hairless, 5. Miscellaneous, 9. 1 also inclose additional special prize list. Our entries exceed those of last year, and we look forward to a very successful show. EDW. A. MOSELEY, Secretary.

THE IRISH SETTER CLUB.

THE IRISH SETTER CLUB. A Ta meeting of prominent breeders and owners of the Irish setter at the Continental Hotel, Newark, N.J., on March 29, a club was organized for the purpose of improve-ment of the breed and the development of their field quali-ties. Following is a list of the officers: President, William Dunphy, Peekskill, N. Y.; Vice-President, Max Wenzel, Hoboken, N. J.; Secretary, Luke W. White, Bridgeport, Com.; Treasurer, I. H. Roberts, Morristown, N.J. A com-mittce on constitution and by-laws, consisting of Dr. Wm. Jarvis, Claremont, N. H.; F. G. Leroy, New York; H. T. Hen-shaw, Brooklyn, N. Y., and W. H. Pierce, Peekskill, N. Y., was appointed. The initiation fces were fixed at \$5, with \$5 annual dues. Twenty members subscribed, and undoubtedly many more will join. The meeting adjourned to meet at New York May 5, at 8 P. M.

AMERICAN KENNEL CLUB.

New York May 5, at 8 P. M.
AMERICAN KENNEL CLUB.
A MEETING of the executive committee of the American Kennel Club was held at Newark on Wednesday, March 24. The clubs represented were : New Haven, by L. L. Morgan ; Westminster, by T. H. Terry; Cleveland, by C. J. Peshall ; fproxy); New Jeresey, C. J. Peshall; Hartford, E. K. Sperry; Philadelphia, W. H. Child. Elilot Smith, President; E. Comfort, Treasurer, and G. E. Osborn, Secretary, were also present. The minutes of the previous meeting and the treasurer's report as chairman of the committee on discipline, relating his difficulties in getting any business done. The executive committee then took up the St. Elmo and Miro protests. In the former case St. Elmo was disgualified as winner of first at New York last year, and First Choice was declared the winner in the open St. Bernard class. The Miro protest was not allowed.
M. Smith being unable to remain longer, Mr. Childs was elected chairma.
The following resolution, proposed by Mr. Peshall, was passed unanimously: "That when a protest has been decided by a club, it may be then and there appealed to the local member of the A. K. C. "
Mr. Wade preferred charges against the Illinois Kennel Club for non-payment of a special prize. As the club had been expelled the papers were ordered placed on file.
Mr. McAlees presented a complaint against the Western Pennsylvania Society for transfer ing a puppy entered in the open class to the puppy class. The secretary was instructed to three be apolitien to catalogue' be added to Rule S.
Moved by Mr. Osborn and carried, that a committee of the case of the securize of the A. K. C. rules.
Moved by Mr. John M. Morgan and carried, that a committee of the securize to the notice of the committee is Elliot Smith, C. J. Peshall and L. L. Morgan.
The watson brought to the notice of the committee is Elliot Smith, C. J. Peshall and L. L. Morgan.
The Max bo brought to the notice of the committee was with drawn by Mr. John W. Musson without any authority whatever. The committee having no a

DANDIE DINMONTS AT PITTSBURGH.—Editor Forest and Stream: I see in your last issue that you have got James Rice vhc. in the Dandie Dinmont class, with Bobbie Burns and Cleg II., at Pittsburgh, which should be James Rae vhc., with Habbie II. and Cleg II., as Bobbie Burns met with an accident and I sent Habbie II. in his place. I wrote to the secretary, informing him to that effect, thinking that he would see that the names of the dogs would be corrected.— JAMES RAE (402 Clinton street, Buffalo, N. Y.).

SPANIEL JUDGE AT HARTFORD.—Hartford, Conn.. March 30.—Editor Forest and Stream: Mr. James Mortimer, of Babylon, L. I., has very kindly taken the cocker, Clumber and field spaniel classes for our show.—A. C. COLLINS, Sec'y.

NEW JERSEY VETERINARIES.—Dr. Lowe, of Paterson, State Veterinary Inspector and secretary of Veterinary Medi-cal Association of New Jersey, announces that the next meet-ing will be held at Morristown on Thursday, April 8.

THE CLEVELAND DOG SHOW.—We have received the premium list of the Cleveland Bench Show Association for their third show, to be held in the People's Tabernacle, Cleve-land, O., April 27, 23, 29 and 30. The judgess so far as appointed are: English setters, Mr. B. F. Wilson, Pittsburgh, Pa.; Irish and black and tan setters, Major J. M. Taylor, Cleveland, O; mastiffs, St. Bernards, hounds, fox-terriers, spaniels, and all non-sporting dogs, Mr. J. H. Naylor, Chicaeo III, The judge for pointers has not yet been appointed. The premium list gives S15 in the important champion classes, with \$15, \$10 and diploma in each of the dog and bitch, and \$7 and \$3 in the puppy classes. In some of the less important classes the champion prize is \$10, and the open classes have \$10 and \$5. There are \$9 classes in all. There will also be a large list of special prize. The entries close April 17. The secretary is Mr. C. M. Munhall, room 25, Washington Building, Cleve-land, O.

BENCH SHOW RECORD IN CATALOGUES.—Editor Forest and Stream: I have a query to put to you which, in the present season of bench shows is, I think, decidedly perti-nent. In many catalogues of the dogs entered the perform-ances of some of them are given in full. Now, it is undoubt-edly in the discretion of the club, whether they shall print these or not. But is it in their discretion, in ordinary fairness and justice, to print the list given of performances of one entry and to omit those given in another? Has not every exhibitor the same right in this respect? I know of three instances where this has been done, and I wish to know if it is right.—T. B. DORSET.

BELGRAVE PRIMROSE.—New York, March 27, 1886.— Editor Forest and Stream: We hear that at the Pittsburgh show it was asserted that Belgrave Primrose was not eligible for the champion class. We had not noticed that it was necessary to put the winnings in the entry form. We beg to state that his winnings in this country are: First, open class, New York; first, open class, Philadelphia, 1884, and first, open class, Non-Sporting show, New York, 1885.—L. & W. RUTHER-FURD.

AMERICAN SPANIEL CLUB.—March 24.—Editor Forest and Stream: Through an oversight the Cocker Produce Stakes for 1887 have not been duly announced. Members will please take notice that entries for the same will be accepted by the secretary for pupples whelped between the 1st of Jan-uary, 1886, and date of this announcement if mailed, with entry fee of \$2 for each bitch, not later than the 7th of April next.—J. F. KIRK, for Committee.

THE SPECIAL POINTER PRIZE AT THE ALEXAN-DRIA TRIALS.—Editor Forest and Stream: In your report of the Alexandria field trials it was not mentioned that the special prize of a \$25 silver collar to the pointer displaying best natural qualities was won by Mr. Amory R. Starr's black pointer Wat (Bronco—Fan II.), who also won second in All-Aged Stake. Will you kindly make this insertion?—J. R. THORNTON, Secretary Alexandria Rod and Gun Club.

PRICE PAID FOR GRAPHIC.—New York, March 27.— Editor Forest and Stream: You will greatly oblige me by in-forming me what Mr. Charles Heath paid Mr. Anthony for the imported pointer dog Graphic. I have been informed that he paid over \$2,700 for it. Am I correctly informed?— GEO. T. LEACH. [Mr. Heath informed us at the time of the sale that the price paid was \$2,000. See FOREST AND STREAM Nov. 19, 1885.]

AN ABSENTEE,—*Editor Forest and Stream;* I see that the daily papers and you, in your last issue, give my Major as having received hc. at the recent Newark dog show. The dog was somewhat out of condition just previous to the show. and I did not send him to Newark. He could not, therefore have been passed upon by the judge.—W. BURKE (New York, March 27). I see the y Major as The

THE HEMPSTEAD FARM CO. —We understand that the Hempstead Farm Co., which was noticed last week as having purchased the collies owned by Mr. Thomas H. Terry, will pay especial attention to the breeding of these animals, and that no expense will be spared to procure the best, and to maintain the high reputation of the kennel.

THE HARTFORD DOG SHOW.—We are informed that the prospects for a good show at Hartford are very flattering. Intending exhibitors should bear in mind that the entries close to-morrow, April 2.

Rod and Gun Club, of Springfield, Mass., and the Rifle Club, of ska, Kan., was won by the former by 16 points.

THE TRAJECTORY TEST - Editor Forest and Stream: In your ssue of the 4th inst., "D. W. Z." commenting upon the late trajectory ests between the .40 60-310 Winchester, and the .40 70 230 Bullard, latins that the latter, owing to its sharp twist-one turn in twenty necks-made the flattest trajectory at 200%, "each being loaded practically in the same proportion." I fail to see the point, as the sharb ways of lead to 1 of powder, while the latter only here 3½ grains of lead to 1 of powder, while the latter only here 3½ grains of lead to 1 of powder, while the latter only here 3½ grains of lead at a stream of powder, with shells unlike in sharb hare. The only gun tested that came near the Winchester in length of harrel, powder and lead-as I view the report-was the Whiney-tennedy .40-60 240 with one turn in 23 inches, hut which failed to nake as flat a trajectory by more than half an inch as did the Win-hester at 200 yards. So far, therefore, as a settlement of the question whether a quick twist is superior to a medium one-for 200 yards at east-is to my mind an open questiou shill, and to be fully settled only y testing several arms of like alther, loading both with ammunition from the same box, practically alike in every espect except the twist.-CAP Lock (FrewShurg). PLAISTED VS. ZEUGNER.-New York, March 22.-Contest at

be ammunition from the barn of Frewshurg), spect except the twist.—CAP LOOK (Frewshurg), PLAISTED VS, ZEUGABR.—New York, March 22.—Contest at eenfield Schuetzen Park. \$100 a side, between George Plaisted of e famous Zettler Rifle Club of New York, and August Zeugner of Greenfield Rifle Club. Many rifemen were present; C. G. Zettler fereer; conditions, 25 shots, German ring target, 200 yards off hand, y rifle; Geo Plaisted—21, 24, 25, 29, 21, 18, 10, 20, 19, 22, 16, 18, 24, 24, 25, 22, 21, 17, 19, 22, 20, 25, 24, 16; total. 217. August Zeugner-16, 10, 18, 17, 21, 16, 11, 16, 32, 12, 18, 22, 18, 23, 28, 20, 21, 20, 17, 24, 20, 22, 22; total, 466. After the shooting the marksmen and in-superhead to the Belvidere House, where a fine collation A soo. After the shooting the marksmen ched to the Belvidere House, where a fine c: Mr. Kattenstroth as host. Speeches wert d guests. The next match will probably feither Riffe Club against ten of the best rifle Jersey, for \$500 a side.-G. W. B.

LAWRENCE, March 27.—The Lawrence Press Rifle Club chal-mgred the Lowell Press Club to shoot a team match on Fast day, and le latter has accepted. The conditions of the shoot are: 200 yards, Y hand; team of eight men. five shots each; Creedmor target; ditary rifles allowed two points in score. The prize is a silver cup, inches high, lined with gold, presented by Bicknell Bros. of this t, to be held by the winning team until won back by the opposing am, and to be shot for annually.

 MIDDLESEX GUN CLUB, Dunellen, N. J.—This new shooting club numbers about 60 active members, with Mr. E. Robinson as the president of the shooting ground is only a short distance from Dunellen station, nlcely laid out with a new club house, which will be inclosed by a high board fence, making one of the best shooting grounds in this State. The club will soon issue a challenge to the crack Jersey (It's Height Gun Club to shoot a friendly team match, 15 or 20 men a side. 10 birds each. Shooting meetings are held every Saturday at live birds, glavs balls, or clay birds. Appended is to-day's score at live birds shoat fines and out:

May May June July Aug, Sept. Sept. Sept.

Sept. 18-Connecticut Meet, Sailing Races. Sept. 18-Connecticut Meet, Challenge Cup. WHAT THE TORONTO C. C. ARE DOING. THERE is great activity among the members of the club as the spring approaches, and many are the alterations taking place in last year's craft. It is runored that a number of the members are in-vesting in new hats, their present ones being too small to hold the big expectations that are daily accumulating in their upper stories. This activity is not due so much to the outlook for the A. C. A. as for the club races which of late have become very interesting, and the sum-mer of 1886 will find a fleet of fifteen cances that will enter in all the sailing and combined padding and sailing races of the club, besides the half dozen or more that turn up for the padding events. The following are a few of the many alterations going on at present arrives 051t, nainsail, but he has come to the concusion that since every one is getting in two boards, hell polish up his aff board, add 20ft of canvas to his mizzen, and still hang on to that sailing cup which he has won three times already. The vice-commodore, Fred W. Mason, is having a brand new set of Mohican sails made for the Whinbrel, and is thinking of putting a moderately heavy plate board into her. With these alterations he will show up well in the principal club races. The secretary-treasurer has English, of Peterboro, building a new reaft for him 15x3t, with a brass plate board of about twelve poinds, that he work be at the tail end of sailing races either. D. B. Jacques has grown out of the open Peterboro and lateen sail and this season owns the Wenona, the best general purpose cance in the club, built by English in 1855, 15x3t, decked, boxwood, Atwood own ble sate house for the amount of canvas he intends to hoist over the searce to the det into the same set general purpose cance in the club, built by English in 1855, 15x3t, decked, boxwood, Atwood owned set a the tail end is specific specific allocations from avhiches he or the hardest workers in

a wholesale house for the amount of canvas he intends to hoist over her. J. L. Kew, one of the hardest workers in the club, being a married man, is very fond of taking things easy while out satiling What be has not tried in the way of centerboards is not worth mentioning. His first cance had an iron keel, then he purchased the Ada K. with an Atwood board; as he carried ballast he soou tired of this and in-vested in a Radix. After a few months' trial be had the Ada K. on dry dock and a plate board of 50 pounds put in her, this he found very comfortable; then there was only one thing that marred his happiness while addat, it was that beastly sharp combing on his cockpit, that made him squander twenty-five cents in St. Jacob's oil to anoth thinself after an afternoou's racing; he has had side flaps cut in his craft and is going to have a season's sport with solid com-fort.

cut in his craft and is going to have a second of the fort. Arthur H. Mason has disposed of the Evora to his brother, W. G. Mason, who will in future command her helm. Arthur has purchased a new cance from Clendenning, 14.6×334, She will carry a 55 pound centerboard, and balance lug sails of about 110sq. ft. He thinks the close of '50 will see his room decorated with more silver ware than it contains at present.

centerboard, and balance lug sails of about 1069, ft. "He thinks the close of '86 will see his room decorated with more silver ware than it contains at present.
W. A. Leys, the wielder of the double blade, is getting one of Rushton's fastest boats, 15/80, Radix board and drop rudder, sails of 75 and 15 sq. ft., and is the promising novice of the club for the A. C. A. J. W. Bridgeman, with his 14.6%81%, is not a racer. He carries a bopound board and sails of 85 and 15sq. ft, still he likes to make fast time occasionally, and is going to add a few feet to his mainsail.
Robert Tyson, cance Isahel. Business will prevent him from taking as active a part in the affairs of the club as formerly, bat when he does not turn up at the races you may calculate he is either very sick or out of town.
F. M. Nicholson is wishing he could run across some one who wants to huy a good cance with a dagger board. The probabilities are that the Saile N. will be on the dry dock shortly and have a 50-pounder in her hull, and then "hurrab! look sut for your places in the club. Rusines, will st season in the carder you in '610 miner, solid eas and three, solid eas and three howed shorts in '610 miner at the Saile and paddled away from the whole club one day last season in the could not sway his open basswood for the best clinker built boat he ever saw; no wonder he loves the homely Kate, he has to take her tenderly up in his arms so often (when portaging).

clinker blint boar he renderly up in his arms so often (when portaging).
A. B. Eadie is getting a big set of sails for the Nautilus and will make things very lively in the sailing race.
F. M. Johnson. A murmur comes from Ottawa, where he is at present, that he will get one of the longitudinal strip cedar cance and make things warm in the padding line.
W. B. Raymond thinks he can get all the exercise he requires out of his open Peterboro.
F. E. Parsons will paddle his Rob Roy for another season.
Major Leigh, the veteran canceist of the club, can be seen almost any warm summer evening gliding quietly along in a little open cance, propelled by his skilfur single blade. The Major has used the outy means of traveling, and would not give up his single paddle for the house, with their lines, reefs, centerhoards, hatches, rudders and all the "truck" connected with them.

TRIP TO UNKNOWN LAKE.

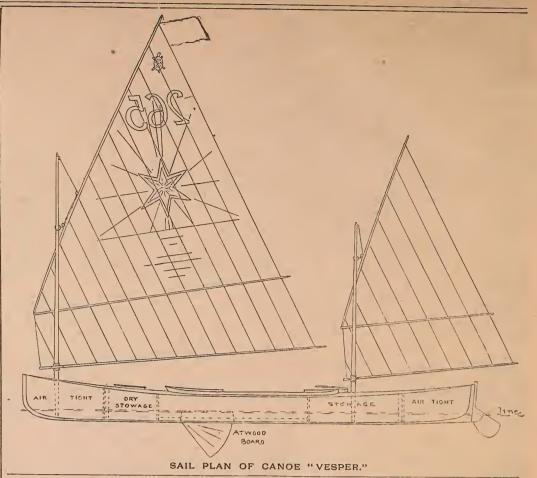

<text><text><text><text><text><text>

<text><text><text><text><text><text><text>

"Yes," says another, "that proves that we didn't go far out of our way." "Kick him out," says Boston, "he's too cunning for anything." But here we are at the camp. It really looks like bome. There is no trace of frost here, save in the water maples, and they have im-proved with its touch. And so the time passes away, and all too soon we have to skow the cances for the homeward trip. This is the saddest part of outloc, hreaking camp; hut it must be done. We have no time for regrets. Blankets are rolled, tents struck, cances lanched, and with a last look at the now forlorn spot we are of. A few hours' paddle, a short carry, and we are at home, with only the memory of our trip to Unknown Lake. TARPON.

anoes for the noneward trip. This is the saddest part of outlog, reacking camp; but it must be done. We have no time for orgents, slankets are rolled, tents struck, cances launched, and with a last carry, and we are at home, with only the memory of our trip to folknown Lake. The struck, cance annothed, and with a last carry, and we are at home, with only the memory badle, a short other of the Greeke, Mr. B. W. Richards, of Brockville, is muthed in the same built another boat. The new reart, 1547, 11in, 2509, 11i, 11in, 2509, 11i, 11in, 2509, 11i, 11in, 2509, 11i, 11in, 2509, 11in, 2500,

 July 3-Bulfalo Y. C., Annual Cruise.
 MR ISELIN'S NEW YACHT.—This yacht is now partly planked, the deck frame laid and cockpit floor and sills of the cahn house in place. Those who are interested in the very important questions of yacht construction will fird much that is worthy of a careful study in this card, as her framing has never heer equalled in any yacht of the kind built about New York. If some of the "experts" to whom in their own estimation the yachting world owes so much, were to visit her now they could gather many good ideas to be palmed off some day as original inventions. There is really nothing specially novel or amazingly ingenious in her construction, but every part to visit her now they could gather many good ideas to be palmed off the quarter timbets and general construction of the stern, the use of hackmatack wherever possible, the through fastenings of corpora and the conspicuous absence of galvanized spikes and wooden treenails, as well as the shaping of the floor and hanging knees, forget to a correct shape instead of being bent out of plain bar iron.
 SEAWANHAKA CORINTHIAN Y. C.—The Seawanhaka C. Y. C. held a meeting at Delmonico's on March 20, with Commodore Canfied in the chair. Mr. Frank S. Lawrence, of the sloop Vixen, was elected vice-commodore. In place of Mr. W. E. leslin, who has declined to serve. The secretary read his report showing that notwithstanding the late differences in the club it is still in a prosperous condition. The present membership is 122, compared with 212 at this time last year. The date of the spring regata will be sether as the height at the by acht Yenture will soon be in commission for the use of members. The date of the spring regata will be sether at helpfor the use of m

Mathematical and the name Andrea and a seven decided upon. YACHT AND CANOE FITTINGS.—Messers. Topping & Fox. 66 Chambers street, have now a large stock of ship hardware of all kinds, including hlocks, chains and anchors. Their stock of brass goods includes many handsome patterns of rowlock and other boat and canoe fittings, and they are adding to the latter to meet the wants of canoe fits.

of cancelsts. A NEW STEAM YACHT.--Mr. John Harvey has just completed the design for a steam yacht 52ft, over all and flt. 6in, beam, drawing 3ft, 6in. The yacht, which will be planked with mahogany and proh-ally double-skinned, will be built by John Mum. The Westinghouse Co. are the owners and will fit her with one of their engines. <u>AMERICAN STEAM Y.C.-Messrs. Frank R. Lawrence</u>, W. B. David and George W. Hall have been appointed a committee to ar-range for an international race of steam yachts. Designs for the A. Y. C. Cup have been presented to the club.

 CANCE * VESPER.*

should like to see the Admiralty authorities give the Howder searching trial and make known the results to the shipping: *The Shipping World*. GENERAL PAINE'S YACHT,—The new yacht is plank decked and the joiners are busy inside. The mainsail will hy J. H. McManus & Son, while the jib, jiptopsail and staysay made by Wilson. General Paine is now on a visit South. Th will be ready for the launch by the latter part of this month.

CRUISE OF THE COOT.

NYIII. THE contemplated run for the Coot this day was the short distance of fitteen miles round Sandy Point, up the Severn to Annapolis the capital of Maryland. The day was fine for a wonder, with a moderate wind from S.W., which made it a comfortable full and by lown to the shoal, which makes out three-quarters of a mile from sandy Point. A new screw pile lighthouse, while light varied with red fashes, has been erected on the extremity, the old tower still stand ing on shore as a landmark. The Coot passed inside the light and found spots several feet shoaler than figured on the chart. Two miles above this point you pass the narrow mouth of the Magothy River an estuary in which öystering is carried on extensively. The entranceis buoyed. After passing in, Deep Creek, on the port hand, afford anchorage, with the wind from E. round to W., while Dobhin's Island ne large bight on the starboard hand, acts as a breakwater for everything from W., N. and E. There are also many other coves and long and a mile wide, with two fathoms of water and nine feet on the har hetween buoys. The shores are bold buffs, alternating with low ground, and very attractive. This confluent itself, though hut on ut of scores of similar stretches connecting with the Chesapeake will supply weeks of interesting cruising and sport to a cattoat likk the Coot. In local vernacular the river's name is pronounced Mag goty, with the stress on the first syllable. The wond and provide the const line there is many count and the the stress on the first syllable.

rends away southwesterly to Hackett's Point, which you give z bile berth if bound round into the cove, with Mill and White preeks at the head for snug anchorage. But if hound for Anies, you hau lup to S. W. for Greenbury's Point across the cove the headland, the northern extremity of the Severn River, there is all lighthouse, with building attached, and a clump of green With less than 7ft, draft, give the point a fair berth and cu is to pick up the channel huors, which will lead you up to the If drawing 7ft, or more, keep well out coming from Hackett's nake the red can huoy off Greenhury to starboard, as it marks here hand, as there is 16ft, inside of it for some distance before i ther hand, as there is 16ft, the thermid heading to the south

stretched well across to Kent Island from Sandy Point, then round for the harbor, with the dome of the historic old State ol towering majestically above the town clustered beneath and in the sun In the many-colored tints of its houses. Prominent is, familiar objects, met the gaze ahead. Right up the channel, l'eiw, the trim park of Uncle San's far famed Naval Academy and public editices, piers, fort, armories and gunnery ships, did in fresh paint, spoke of the care and solicitude bestowed by at nation upon this seat of nautical training and instruction, e the sight was one of utmost gratification. It was fifteen years, to the tune of "The Girl Left Behind Me," we "broker ranks" the final dress parade on the sward facing the Admiral's quaranid cheers we rushed for our quarters to don full regimentals, tail coats with gold lace and shoulder knots, gorgeons swords a parchment certifying our grand old "class of "0" armed a parchment certifying our grand old "class of "0" armed a parchment certifying our grand old "class of "0" armed swords from the grand chieft on the stards of General Grant ad received these documents, in person, with a few commendatigh Uncle Sam's both batty, but as the generous-minded soul had graticular quarrels on hand, we drew our pay with utmost pithude lastead. As the Coot approached and the ports of the anter could be counted, the very muzzles of the guns which had a taitee such be counted, the very muzzles of the guns which had a taite start was the worker model and the guns which had a taites out a way command to my "division," peered from the a taites out which had be out of the guns which had a taite at any command to my "division," peered from the

ever to their fold. One by one objects of great interest were t. A whole row of buildings was gradually opened, then a ur dwelling, then a particular door, and last, a particular with which I had for years a most intimate acquaintance: v on the ground floor which served me well, from which you mp when belated to slip unobserved into the rear rank of the 't'formation' hefore the roll call had reached your name; short-could be defily purloned from 'Freuchy.' wich had lege from high quarters of wheedling us out of spare pennice is dainty sweets piled on top of his basket, which was, of eyes would catch the officer of the day on his rounds and ai till the noisy tumult within and send us flying to our books the stern official's 'inspection'' with the looks of innocenn unleless as the angels above; a window from which the hen passing to and for; from which fair damsels could be a

The Severn River extends miles in a northection, ending in Round Bay, a mile and a half diameter, are hold, prefix bluffs and unbulgting country You

re bold, pretty bolds and undilating country. You of fathoms clear up to the head, and 15t, in the lateral ys gone by we used to work the Dale, an old-time slooperigged, all the way up to Round Bay for practice, so formed of the magnificent and imposing nature of the tributary arms, to which Long Island Sound pales by There is no such cruising water as the Severn any-Yew York or Bosten short of the Maine coast, and that ek bound, blustering, uncongenial and forgy, except t months in midsummer. Yet in the Onesapeake, what oncerning the Severn applies with equal force to hosts arises bays, rivers and so-called creeks, cruising being, oyable all year round, unless an exceptionally severe e one just passed, should be experienced. O casional y cause a few days' interruption, but the way is always e in the south. Still these latitudes remain practically

the largest "fore-and-aft port" in the country, won bits by the hundred, and that Norfolk would count be least. With the exception of the Chesapeake Y. C., r mized by a few gcutlenen of the eastern shore, the clination whatever on the part of men to the manor hor be water, and they are ignorant of the splendid opportun in their way. Ferhaps with the fashion once set by th and papearance of yachts from the North, the discover been so far missed will be made, so that the Chesapeal

quant little toy towu, which appears to have bee present age out of the basket of bygone times, na remnant of Washington's era, sud contrasts mully with the huge planning we are accustomed i ra descent. Evidently Annapolis grew and got rip 's team. It represents habor by hand from cellar i es stoop to carved dormer window. It is neat, fid and tidy because nothing is going on to keep ti ying betweeu the identical stone pavements whic

cornice of its little but very complete buildings. They show hy their ornamentation in brick and wood that once a fashionable class ruled from the streets converging at the capitol, and no doubt with all and more of the imperiousness, cabals, vanities and competition that characterize the *nouveaux riches* of New York's pet Murray Hill. Once upon a time Annapolis had its 'up town' and 'down town,' its 'west end' and its 'city.' But in these days of big distances and things, it does not even rank a mule-car line, and scarcely rises to the dignity of more than a village. The old dwellings have become stores, and small stores with a small assortment of goods. Some have degenerated into boarding houses, though where the legislative sessions bring a few stragglers from the country, and the Naval Academy furnishes the basis of some support. The State capitol, a fine structure even in the eyes of the present generation.

The have represented such an enormous effort and prodigal outlay hen first planned, that the handiwork of our worthy sires must ammand respect, though the town itself fails to arouse admiration, he capitol is situated on an elevation in an open circle, recently arred by a stupid attempt at modernization, totally out of harmony the building itself. From it radiate the streets, arenues of the capitol is situated on an elevation in an open circle, recently arred by a stupid attempt at modernization, totally out of harmony the building itself. From it radiate the streets, arenues of the control of the points, Minetta lanes and Baxter streets of a century to, the reveling hordes of which were also prohably a source of pustant anxiety to the one hown watchman, with his strends of a century on lance ratle. The capitol is replete with historic memorials and lices. It is enough for me to remind the reader that Washington the annoral resigned his commission as General of the Revolutionary rmy in this same huilding. For further information let him come disce himself, as it is not a guide book 1 am writing. In rear of ne capitol stands an ugly mansard-roofed "mansion" of modern ate. already out of date, flopped down among the remnants of an theresting past, an uninteresting reminder of the insipid taste and let's of conception characteristic of our own years. Then there are one very respectable church edifices, one solitary dwelling of the invertical Queen-Anne. Swiss Chalet-Pagoda-Rhine Castle conlome sort, a bahy gas works, and a very few fairly commodious nodern residences of some of the old "first families," left hebind. Authors & Chois Railroad for the transport of troops. When hands ad heen clasped across the charm, it had to he sold. Somehody was ash enough to buy it, As I knew the road, it still retained the old rails of aboriginal device, or what was left of them, and the conumptive engine of two cars totering to the grave. A shanty or two assed for depots, and one lonesone-looking side track of a few ards len

A general renovation has overcome the road and now the bold negine, with a flerce headlight, sweeps into the new shed at a twonile rate, whistling loud and long for the crowds to make way, whereupon the single small urchin within hearing walks off the track with his hands in his pockets. A steamboat also makes daily connecion with Baltimore. Industrially considered, henplase wald hally a small country store but for the trade in oysters, which has summed considerable magnitude. Socially considered, the place has ome of them held by wealthy men from Northern cities. The country stery healthy, and along the shores excellent and romantic sites for wellings are plentfull. I know several gentlemen from the North the have settled here to escape the rigorous wheres of higher latiudes and to pass their age in quiet contentment and fresh supplies eaped from a small patch of ground, chickens, cow and oyster heds, port is good, birds and fish plentfull. From a purely yachting point it were place can surpass or even equal the regions about Anapolis. Sheltered or open water, with all the variations lmaginable, whe hards and fish plentfull. Throw a variations lmaginable, port is good, birds and fish plentfull. Throw a variations lmaginable, which harbors in every direction, with shores clad in sylvan eauty, with harbors in every direction, with shores and water at wat and the route to the North or to the South open as you like, rith Baltimore and Washington within handy reach for metropolitan amad in honor of Queen Anne a charming and inviting headquarters or yachting purposes. I did grafif ym Jonging eyes upon one nice tite hlack cabin sloop of about 2017, called the Elfin, belonging to a entelman owning a farm on Hackett's Bay. She is the sole repreentative of the sport for many a mile around.

ands the lion's share. Within the high walls of the Government rounds is a city by iself, half milinary, half civic in character; a ity in which dwells refinement and intellect of the highest degree. Alf that is agreeable in the amenities of social life, all that is attracwe to the student of the art of warfare or of the sciences of peace is ithin easy reach through the iron gateway granting admission. The buildings situated in a well preserved park, engineering and gunery establishments, museums, libraries, laboratories, observatory, nodel rooms, collections of great historic value, armories monu-

118. churches, hospitals, public music by the most profident banc merica, the fine arts.—all are well represented and accessible in form or another, with scholars and experts and specialists preeg. Practice ships for drills, including frigates, a monitor, tor oes and steamers, a steam fire engine, gas works, and all the enda of a community upon the highest plane of civilization go to see up the institution which has long been a pattern to all other ons. The flash of nobby uniforms, the parade of the smart ets, the soldierty marine corps, the fashionable fair sex, form an endarrow the institution which the second second second second second ons. The flash of nobby uniforms, the parade of the smart ets, the soldierty marine corps, the fashionable fair sex, form an upon which the amateur mariner, fresh from a great city, can feast his eyes without stint as a relief to his rough roaming at sea. The Coot swung round her anchor for three days, during halmy weather and light southerly winds, which were an unmatural but welcome break in the monotony of winter gales for which she subsequently paid dearly. Provision for two weeks were laid in, a masf coal was tacked about the wedges to keep the water from penetrating helow, and sundry old jobs performed. New oars for the skiff were purchased and the water breaker refiled. To a light northwester she got under way the morning of the fourth day and sailed out past the Herreshoff steamer Gleam and the gunbat Gor, McLane, of the Maryland oyster police. The Coot was bound south for a harbor as far as wind and weather would permit.

NEW JERSEY Y. C.-The annual meeting of the New Jersey Yacht Cluw was held at their club house foot of 10th street, Hoboken, N. J., on March 25. Commodore John H. Longstreet presiding, forty nembers heing present. The reports of the various officers were read, that of the Treasurer heing the most important, showing the club to have a large surplus on hand. Mr. Cluarlest, Rogers, in his innual report stated the amount of cash on hand at the beginning of the past year, and the amount at the present time, and said that the club to mave a large surplus on hand. Mr. Cluarlest, Rogers, in his inne, since its organization in 1873. The trustees in their report through their charman Com Dilworth, spoke of their improvements made in the past year and of those contempleted, and said that on or shout May 1 the ferry from 14th street. New York, to 14th street, Hoboken, will be in operation, and will he a great convenience to he electric light that had been placed at the entrance to the club grounds, at the request of one of the trustrees. After concluding his report, on a motion to that effect, the trustrees. After concluding his readle, and by the eradle a hoat may be moved anywhere on the grounds. It is calculated that the ways will have a truck and bardle out over rollers. The proposed ways will have a truck and trudhe and by the cradle a hoat may be moved anywhere on the following gendlemen elected for the ensuing year. Commodore, Henry K. Ogden, Duplex (catamaran); Necording Secretary, William S, Charles I. Rogers; Financial Secretary, John D. Goetschius; Measurer, Charles I. Rogers; Financial Secretary, John D. Goetschius; Measurer, Charles I. Rogers; Financial Secretary, John D. Goetschius; Measurer, Charles I. Rogers; Financial Secretary, John D. Goetschius; Measurer, Charles I. Rogers; Financial Secretary, John D. Goetschius; Measurer, Charles I. Rogers; Financial Secretary, John D. Goetschius; Measurer, Charles I. Rogers; Financial Secretary, George L. Gardand; Treasurer, Charles I. Rogers; Financial Secretary, Joh

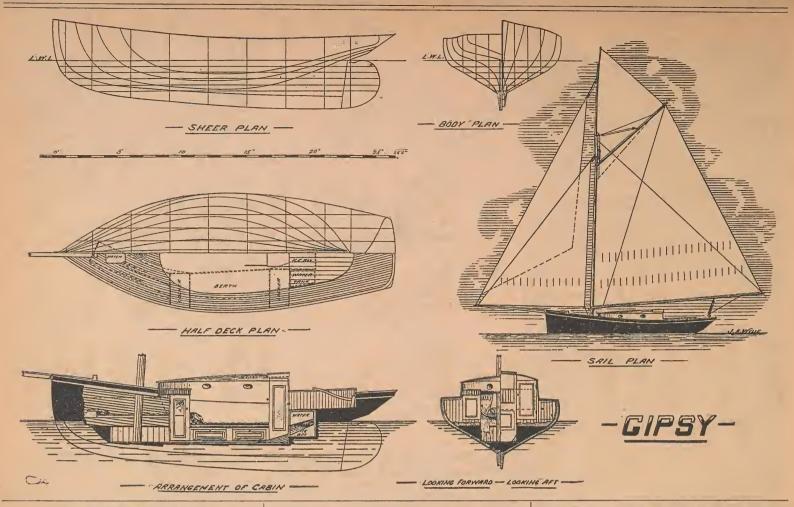

after an absence of three years from the chair, and being heartly interested in yachting, and all that pertains to it, will infuse new blood into the club. The fifteenth annual regutta will be sailed on Monday, June 14, over the club course, starting from Bedloc's Island, to buoy, 13 and 16 (red can off Coney Island), leaving both to port, passing to the westward of buoy on Robhins Reef going and coming to place of starting. The committee talk of chartering one of the Iron boats, for the guests of the club. The fail open race will prohably he sailed the latter part of September or first part of October, but the fate will depend in a great measure on the cup races. The regignation of Mr. Abram Hennin was undarinously elected an honorary member. Mr. Hennin was unanimously elected an formerly the owner of the sloop yacht Estelle. He is the first honorary member that has been elected in about ten years, and it is only on rare occasions that one is elected.

eed and accepted. A telegram was received from the Hon. Perry Belmont, announcing that the Sub-Commutee on Commerce and Navigation had reported favorably on the hill relating to steam yachts and pilotage. The Regatta Committee reported that a letter had been seut to Lieut. Henn, giving the same terms and conditions to the Galatea as were accorded to Genesta last year, namely, three acces over the same courses. The following memhers were elected: **7**. A. Schermerhoru, George L. Ingraham, Richard Henderson, J. Gyvolo, D. A. Levy, George L. Ingraham, Richard Henderson, J. Gyvolo, D. A. Levy, George L. Ingraham, Richard Annan, C. C. Marsh, W. K. Vanderbilt, John F. Lovejoy, Charles W. Chapin, Thomas A. Young, Jr., Effingham Lawrence. The list of yachts now neluces 60 schooners, 50 sloops and cutters, 55 steam yachts and 10 sureches

BURLINGTON ICE Y. C.—The third regatta of the Burlington Ice 7. C. took place Saturday, March 27, and the prize was a year's subcription to the Forest AND STREAM, offered by W. B. McKillip, a noninent member of the club. The pennant was sailed for on the 8d, and as no cash prizes are allowed the club, the FOREST AND TREAM seems very appropriate. The Mudjekeewis, owned by T. P. V. Rogers, took the prize, covering the course in 14min. The course ras 2½ miles to windward. Distance sailed about 9½ miles. Wind V. by N. and rather light.

ucket has lately been devised by a yachtsman for use about yachts. Is made entirely of ruhher, the outside being protected by three south hoops is in square in sectious. The hall is also of ruhber, very rougly made, and is fitted with a galvanized thimble. The makers re the Goodyear Ruhber Co., 508 and 205 Broadway, New York. A NEW IRON SCHOONER — The little Whim, designed last year y Mr. A. Cary Smith, has proved so successful that Mr. Smith has ow an order for a large schooner of similar design. 80t, on water-

[APRIL 1, 1886.

A HANDY KEEL SLOOP. THE accompanying drawings, for which we are indebted to Mr. J. A. Wylie, of Newhurgh, N. Y., show an excellent hoat of moder-ate proportions that will commend itself to many who desire a keel craft, but who hold initial stahility and moderate draft as of the first importance. The accommodations are very good for so small a craft, while the draft, 4ft., is not too great to permit a very wide range of cruising. The centerhoard is entirely dispensed with, and the space is increased largely in consequence. The headfroom in the cahin is good and the galley is very fair. The Gipsey was built in the winter of 1884 5 hy Daniel C. Bernard, of South Brooklyn, for Mr. Theodore C. Hall, of Newhurgh, N. Y., and her dimensions are as follows:

ows:	
Length on deck	26ft. 6in.
Length on lcadline	23ft. 0in.
Beam (extreme)	9ft, Uin.
Draft	4ft. Oin.
Least freehoard	1ft. 8in.
Ballast (iron cast to fit)	5.000 lhs.
Mast, deck to hounds	25ft. 0in.
Boom	27ft. 0in.
Gaff	14ft, 2in,
Bowsprit, outhoard	12ft. 0in.
Topmast, above masthead	11tt. 0in.
Hoist of mainsail	22ft. 0in.
Jib on luff	29ft. 0in.
Jib on foot	16ft. 0in.
Area of lower sails	749 sg. ft.
the out of the construction of the second se	

Area of lower sails or the same of oak, the keel heing idin.x6in.; frames hent 2/522in at neels, and 2x13/in. at deck, spaced 12in. he-ween centers; floors of haskmatack, natural growth; bilge strake inside) of white pine, 1x4in.; deck beams, 2x24/in.; wales of Georgia of 14/in. thick; planking of cedar 14/in. thick; deck of white pine lyin.square. The cabin slide and runners, cahin doors and cockpit using the floor.

tween centers, noors or naekmatack, natural growth; buge strake (inside) of white pine, Ixán; deck beams, Sztkán; wales of Georgia pine 1½(n. thick; planking of cedar 1½in. thick; deck of white pine 1½(n. squere. The cabin slide and runners, cahin doors and cockpit rail are of cherry. The interior which is finished in clear pine with cherry trimmings and varnish, is unusually roomy for a boat of this size, there being 5(f. in, headroom and 8ft. of floor between the transoms, which is all arailable as there is no centerhoard trunk to cut it up into two narrow alleys. The achin is arranged with a view to accommodate two, and there is a herth forward in case a hand should be shipped for a long cruise. There is an ample supply of locker room, the benefits of which will be appreciated by all who have cruised in a small yacht. There the cockpit and accessible from the cahin oy a sliding door, is the refrigerator, 2ft, square, and each slide of this is a water tank, the two tanks being connected by a galvanized iron pipe, in which is placed a cock, so that the water may be kept from running all to leawar off for use. The two tanks hold thirty-five gallors. Mat the after end of the cabin on each ide is a locker tish. long without shelves, hut provided with hooks so that clothing and oilers may he hung at full length. Eack of these colority, and as the cock-pit floor runs all the way out to the planking of the boat and hack to the arching stanchions, hoat hook, mony, broom, etc. which are stand to dires under the deck on each side is a clothing out off the so chard, this makes a narrow closet about 8ft. long, suitable for awing stanchions, hoat hook, mony, broom, etc. which are from to fue lockers, which, being hinged, let down, opening outward into the cabin. Forward of these herths on each side is a closet with shelves for the reception of crockery, glass and silverware, bed and into the cabin. Forward of these herths on each side is a closet with shelves for the reception of crockery, glass and silverware, bed and t

The forecastle also has ample locker room, income a the eyes. In the after end of the cockpit floor and just forward of the rudder trunk is a small hatch leading to a large open space under the cock-pit and aft of the refrigerator and water tank, where may he stored spare anchor and cable, extra sails, awning etc. The Gipsy has proved a weatherly and alhe hoat and in the matter of speed, in hoth light and heavy weather, has also proved herself exceedingly satisfactory to her owner.

xceedingly satisfactory to her owner. TORONTO SKIFF SALLING CLUB.—This club has opened its iaving left our several bay weeks earlier than last year, the ice iaving left our several bay weeks earlier than was expected. Several nembers have been out satling already, and it is proposed to have a lub cruise on Saturday, March 27, which in all prohability will open kiff salling on our hay. Several are having new hoats built this pring which they expect will leave astern everything else in the lub, but there are some good boats in the club yet, which will make ear at annual meeting, which will take place on the 6th prox.— LAMLIND S. HALL, Sec'y-Treas.

THE White Mountain Hammock Chair is a useful article for camp e in the woods, as well as for the house or lawn. It is self-adjust-g to any position, and the weary sportsman can rectine at full geth, or sit upright as in an ordinary chair. It is strongly made, id can be stowed in very compact shape. See advertisement in other column.—*Adv*.

. E.—See Shot columns. QUIZ.—For Long Island snipe law see Shot columns. H. F., City.—The gun can undoubtedly be so altered. Y., Belleville, Ont.—Write to J. C. Greeley, Jacksonville, Fla. E. S.—Le Page's Liquid Glue will probably answer your purpose. H. Easthampton.—Try a heagle; see advertisements of breeders

W. E. S.-Le Page's Liquid Glue will probably answer your purpose.
T. H., Easthampton.—Try a heaple; see advertisements of breeders elsewhere.
J. D. G.-The diameter of a "10-inch circle," as understood in target shooting, would be 10 inches.
H. F. M., Quebec.—The .32-caliner will do, though if you have the choice, choose a larger one.
Droc, Patterson, Ont.—Long's "American Wildfowl Shooting" is a good hook on the subject. Price \$1.50.
Stransers — 1. There is no law on snipe. 2. The season for summer duck in New Jersey is Sept. 1-Jan. 1.
A. B. H. St. Mark's.—Norris's "American Anglers' Book" is best suited to your needs. Nee price elsewhere.
C. M., Dauphin, Pa. —The trap may be ordered through any of the gun dealers; we do not know address of makers.
B. C. W. —Spring snipe shooting is forbidden in Suffolk and Queens connities, N. Y., by the law which is given in our Sh to clumas R. W. R., Boston.—Call on E. M. Messenzer, Bronfield House, Boston, and he will post you on the angling waters you wan, G. L., Tarrytown, N. Y.—You can probably procure the jack rahbits upon application to Chas. Reiche & Bro, Chatham str..et, New York.
J. B. B.—The county supervisors of New York State have authority J.

R. W. R., Boston. --Call on E. M. Messenker, Bromheld House, Boston, and he will post you on the angling waters you wan.
G. L., Tarrytown, N. Y. --You can probably procure the jack rahits upon application to Chas. Reiche & Bro., Chatham str.et., New York.
J. B. B., --The county supervisors of New York State have authority to increase the close season of any game fish, bird or animal, but not to decrease it.
A. P., Louisiana. --A special rubber cement is supplied hy dea'ers in rubber goods. You can order it through any of the sportsmen's goods' dealers.
G. H. T., New York. --There are trout streams on Long Island. Ferch may be caught in Croton Lake, has in Greenwood and Hopatong lakes. To be taken in proper season.
G. P. - Either one of the rifles you name is an admirable arm and will give you satisfaction. The Lyman sight will answer better than any other for the work you contemplate.
E. P. L.-1. "Jackhag" means hunting with a jack-light to show presence of game by reflection of eyes, or fishing with a jack-light to reveal the fish in the water. 2. No law on pickerel in this State.
A. K. T.-Mooge rut in September and Octoher. The does hring forth in May. Caribou nut in September and Octoher. The does hring forth in May. Caribou rut in September and Octoher. The does hring forth in May. Caribou rut in September and Areatment in diseason.
G. B. -1. -1. Ashmont's hook has some useful hints on care of dogs, but the bulk of it refers to management and treatment in disease. Hammond's "Training vs. Breaking" is the hest in its field. 2. The rife will do well for deer.
J. N. P. Springfield, Mass. -Can you inform me of any one who owns a good saluon stream that would rent it in the season to a smalt party for a week or the days? Ass. We do not know of any strates the stream of the shorter. The does hold out is the stream of the shorter. The does hing for the shorter.
T. N. P. Springfield, Mass. -Can you inform me of any on

not what to mangie your game beyond an region any too inform me ing. J. H., Charlestown, Mass.—Will you be kind enough to inform me if the black hass can he found in Greenhrier county or in Mecklen-hurg county. Virginia, also what files or hait are proper to use in that section, what other fishes are to he found (or caught) in Virginia, and what tackle you would advise taking. My primary object in going to Virginia is to drink the spring waters, hut I wish also to put in some days or weeks of fishing. Ans. Black bass may be found in the Greenhrier River, West Virginia, and also in Mecklenburg county, Virginia. There are also brook trout in the streams of Greenhrier

county. You will cometimes find that black bass are called "chub" in that region. Fike, locally called "jack." are found in Virginia. Take a trout rod and tackle and an assortment of hass and trout files. If you use baits you will get them there. Wooncocx. Bridgeport, Conn.-Please inform me what time of the year is hest for planting small trout in foroks and where I can get the trout? Ans. This is the proper time or as soon as they begin to take food. It is possible that the Connecticut Fish Commission may have them to spare. Write Dr. W. M. Hudson, Hartford. If they have none you may purchase of Mr. W. L. Gilbert, Plymouth, Mass.; Lwingston Stone, Charlestown, N. H., or James Annin, Caledona, N. Y.

have none you may purchase of Mr. W. L. Gilber, Plymouth, Mass.; Livingston Stone, Charlestown, N. H., or James Annin, Caledonia, N. Y.
P. D. D., St. John county, N. B.-1. Probably the hest course is to send the gun to a reputable firm and have the locks repaired or entirely replaced. Correspond with the gunsmiths who advertise in the Foazer AND STREAM. By application to your customs officers you may learn what will be required in the way of honds to pass the gun into the U. S. and hack again, duty free. 2. The shells are not. diff-ult to reload, and the manufacturers will famils the necessary ap-plances; send to them for descriptive catalogue.
VIRGINA.-TO waterproof a silk line, Mr. H. P. Wells, in "Fly-Rods and Fly-Tackle," says he has personally used with success 2 parts boiled linesed oil and 1 part best coach-body varish mixed together and warmed until it will singe a feather. Soak twice and ruh once, the mixture being at a temperature not exceeding 100° Fahr. Flinish and polish with parafiline candle (page 50). But it is suggested that the better and far more satisfactory way to secure a waterproof line is togo to a reputable dealer and buy it already prepared. For first-class rod makers consult our advertising columns.
H. B., Jr., New York.-I. Is there any good map of the interior of Newfoundland? 2. Is a license required to shoot in Newfoundland?
What is the fastest rate of speed made by any bawk? Ans. 1. There are vast tracts of unsylored country in the barrol of Newfound-land. The usual map has "conjectural mountains and hypothetical lakes," A you may find some help in the British Admiralty chart of the is is not known.
G. W. B., New York.-Our gun cluth hy-laws allow both barrels to a hawk. We have seen it overtake the passenger pigeon, hut how fast it the sis not known.
G. W. B., New York.-Dur gun cluth hy-laws allow both barrels to a hawk. We have seen it overtake the passenger pigeon, hut how fast it more progressive than the ordina

MARK.

DASS.

Brother angler, do you want to know where to chase a fine hand-made fishing rod, with numer improvements not found in any other rod mantcured, and at a lower price than a machine rod 1 be purchased? Send for price list containing

n selecting a rod. EDWARD SMITH, Pittsford, Rutland Co., Vt. The Open Shot Regulator,

Round Section Bamboo Rods.

Having been the pioneers in the manufacture and introduction of Section Bamboo Rods, we have always taken great pride in securing and perfecting every improvement in order to maintain our position as the makers of the very best rods. Knowing not only theoretically, but also by long experience, that a properly made round rod is the only absolutely perfect rod, we have invariably refused, and still do refuse, to put our name on any but our "Best" round section rods. While our prices for these round rods are only a trifle more than the prices asked by any other makers, the rods are widely known to be *incomparably superior* and *guaranteed* in the most liberal manner.

We have just finished and put on the market a *new caliber* round rod, 10 feet long, and weighing with the solid reel seat only 7 ounces. This rod has stood the most severe tests, and found capable of killing the largest black. The many expert anglers who have handled this rod pronounce it the *best balanced and most perfect rod* in the market.

Second target represents 5 consecutive shots made by J. D. Marks, June 24, 1885, at Springfield, Mass., 200 yards, with rest, using a Union Hill, .32-caliber. The entire five shots are inside of a 1§-inch circle. The cut is full size.

This style of Ballard Rifle and the "Off-Hand" are the standard guns for target shooting, carrying off nearly all the prizes. Send tor Catalogue: THE MARLIN FIRE ARMS CO., New Haven, Conn.

Neat, clean and easily applied. Contains NO TAR, will not stain cor injure the skin, easily washed off, may be carried without danger of leaking or spilling. Price, 25 Cents Per Box. NEW YORK AGENTS: ABBEY & IMBRIE, 18 Vesay Street.

65 Fulton Street.

HEBE, Forest and Stream onder. TO MAKE ROOM WE WILL SELL AT LOW figures the following: Pointers-Bitch Belle-garde, 3d, Philadelphia, aud com., Pittsburgh, and dog pup Beauseant, hy Beaufort ex Lady Maud, very high com., Newark. Collies-Bitches, Lady Ulias, by champion Lorne ex champion Lassie, 2d, Toronto, 3d, Ontario Club show: Edgewood Jessie, Tweed II. blood and broken on cattle; dog pup, by Rokeby ex Jessie. Fox terriers-Bitch Surrey Nan, by Flippant ex Jill. Full pedigree. SURREY KENNELS, Ellicott City, Maryland. apr1,2t

F OR SALE. - AN EXTRA FINE PAIR DACHS-hund pups, out of imported Gretchen, ist prize, New York, 1884 and 1885, by Freizel, Jr., 24 prize, Newark, 1886, Price 25 each. Also a 2yr, old English setter dog, hunted last fall. A No 1 retriever from land and water. Price 35 THEODORE MEYER, 318 Eighth street, Jersey City, N. J. It

FOR SALE.-FIRST-CLASS CUCKER SPANIEL dog, perfect beauty, 7 mos. old; only \$6. K. M. FRANK, Worcester, Mass. apri, 1t

Foxhounds For Sale.

Twenty-six dogs and bitches, comprising on the best packs in Pennsylvania, a few bitches bi in whelp by champion dogs. Address Box West Chester, Pa. jau28, Box 1684 jau28,tf

N est Oneser, r.a. Jusse, fi FOR SALE - ENGLISH BEAGLE HOUND pups of good working stock and several months old. GEO. L. BARNES, Tyringham, Mass.

FOR NALE, A NUMBER OF WELL BRED AND well broken pointers and setters, also dogs boarded and broken, satisfaction guaranteed. Ad-dress H. B. HOLHIOND, Lakeville, Mass. Sept22, tf

A LITER OF LARGE, WELL MARKED ST. Bernard puppies, wbelped Jan. 13, 1886; sired by champion Duke of Leeds; dam Hero (see March No. A.K.R.). A. C. SPOTT, Stottville, N. Y. HIGH BRED POINTERS AND SETTERS -WE breed and dispose of nothing but tirst-class broken and unbroken dogs and pupples. Address ELM GROVE KENNELS, South Norwalk, Conn.

FOR SALE.—THREE DOG PUPS, SIRE CHAM-pion Pete, Jr., dam Minnie, whelped Oct 30, 1855. For particulars address G. H. WALTON, Peabody, Mass. mch18.4t

reabody, Mass. mch18.4t FOR SALE CHEAP.-FINE SETTER BITCH out of the best stock. Address H. B. BRACK-ETT, Littleton, N. H. FOR SALE - HANDSOME BEAGLE BITCH Katie (A.K.R. 1722), in whelp. She is by cham pion Rattler out of Baker's Pannie. Her sure and dam have won more prizes on the bench than any other dog or bitch in the U. S. Apply to Box 472, Pittsburgh, Pa.

A NITALIAN GREYHOUND, FEMALE, 6 MOS, old, for sale cheap. Full pedigree. Address HEBE, Forest and Stream office. It

THE AUDUBON SOCIETY.

THE interest in the movement to put an end to the slaughter of song and insectivorous birds is increasing every day, and the work is constantly gaining momentum Local secretaries have been appointed in many cities and towns, and the membership is already large. The plan of effort is very simple. There are no elaborate forms of local organization to cumber and hamper. The Society seeks to accomplish its end by moral sussion and the creation of right sentiment. It does not work in a roundabout way.

The hearty enthusiasm with which the plan of the AUDU-BON SOCIETY has already been received and the activity displayed by friends of the birds in different localities give abundant promise of the achievements sure to follow the efforts now put forth. The extent of the evil sought to be remedied is of such startling magnitude that the bare statement of the actual facts is sufficient to command attention to the movement and win approval of the methods adopted. After a vexatious delay the certificates of membership are almost ready to be issued.

Circulars of information and pledge forms will be furished upon application. As the ultimate success of the Society will depend largely upon the extent of its member-ship, it is hoped that every reader of the FOREST AND STREAM who is concerned for the welfare of our birds, may actively co-operate in the effort and either act as a local secretary or bring the matter to the attention of some one else who will.

THE DEER HOUNDING BILL.

THE Senate Committee on Game Laws favorably reported the bill to repeal the non-hounding deer law, and the measure was made a special order for yesterday; owing to the protracted discussion of other bills, however, it was not reached. It will probably be voted upon this week.

The full text of the bill is given in another column. The Senate Committee amended the hounding clause so that the season contemplated will be from Sept. 1 to Oct. 5. A fortnight more or less of lawful season will make little practical difference. If hounding be permitted for a month only, that will mean the maintenance of deer dogs all the year through to kill deer at all seasons. Nothing short of absolute pro-bibition of hounding will secure for the game the protection

essential to its conservancy. It is only a question between deer and dogs.

The provisions against marketing venison are plausible, but the good to be achieved by them is purely imaginary. Venison bounded in September and October is not fit to market. So long as the law permits city "sportsmen" to water-butcher deer in September and leave the carcasses to rot in the woods, legislation against market-hunting is foolishnes

In like manner the shortening of the season is only a pretext. The number of deer saved by this provision will amount to nothing compared with the numbers destroyed by the hounds. These clauses are offered by the hounders only with the deliberate intent to mislead the Legislature if it is in earnest in its purpose to properly protect the game, or to furnish it an excuse if it is more eager to heed the clamor of the water-butchers than to consult the true interests of the community. The real purpose of these agitators is not to secure any better protection for Adirondack deer. They are eager only to gain permission to pursue their own selfish sport, to be let alone in their indecent scramble for the game while it lasts, and to enjoy their brief term of hounding and exterminating.

CANADIAN SALMON RIVERS.

THE transfer of the salmon rivers from the Dominion, or general, to the Provincial, or State, governments, has proved very unfortunate as regards their protection and improvement. A gentleman residing in the Dominion, and who is exceptionally well posted in this matter, tells us that, with the exception of such streams as have fallen within the private control of moneyed men, chiefly Americans, the rivers are rapidly deteriorating. The local, or provincial, authorities confine their efforts to collecting rents from them, without making any adequate provision for their protection and guardianship. In fact, their limited funds will not allow them to do this. At various times we have heard reports that in consequence of this state of things all the old and destructive practices are reviving with marvelous rapidity with fatal effects.

We remember that this is just what Mr. W. F. Whitcher, late Commissioner of Fisheries of the Dominion, predicted would follow the changes made by the Hon. A. W. McLean, late Minister of Marine and Fisheries, who turned a deaf ear to all the suggestions of Mr. Whitcher, who was perfectly familiar with all the facts, and had labored to build up the system of protection which worked so well under his fostering care. Mr. McLean let slip the command of the resources from the rivers, and to this may be attributed their decline. This is much to be regretted, but whether it is past remedy by legislation or not, we cannot say. Certain it is that with the exception of a few rivers which are under private control, the salmon streams of Canada are failing fast.

SPRING SHOOTING is now in order wherever the wildfowl can be intercepted on their way to the northern breeding grounds. One by one the different States are coming to see the folly of permitting the untimely destruction of breeding creatures. The New York law forbids snipe shooting on Long Island; the same prohibition ought to hold all along the Atlantic coast and on all inland waters. It was hoped that the new Ontario law might stop spring shooting, but it did not.

No Soul IN IT .- The daily press reporter who is detailed to write up the "opening of the trout season" may make a readable story of it, and pack it full of information; but did you never note that there is no soul in such an article? For the true afflutus one must write of angling *con amore*; and a simple bit of actual experience told in plainest words by an angler is worth more than all the gaudy rhetoric of the space-writer.

BEARS.—Harper's Weekly of April o, nes a project of trations of the Central Park bear pit, the pride and glory of STREAM's grizzly cubs. The bears and their fame are growing daily; iron bars contain the one, but a continent's range is limit all too pent for the expansion of the other.

IN A NUTSHELL .- "I've had lots of fun in the Adirondacks myself, and when my boy is old enough I want him to have some deer hunting there, too. That's why I'm op posed to the repeal of the anti-hounding law." This was This was said to us by a Syracuse gentleman last week. It states the whole case in two sentences.

RAILROAD ROUTES TO COOKE.

THE results sure to follow the building of a railway in the I Yellowstone National Park will be most disastrous to that reservation. On this point there is but one opinion among those who are familiar with the region, and whose knowledge best qualifies them to pass judgment on the subject. The Park has been set apart as a pleasure ground for the people, and to devote any part of it to commercial pur-poses at this time will be to do a grievous injustice to all for the benefit of a few.

We have more than once pointed out the evils which would follow the construction of any railroad within the Park, and have shown how it would neutralize all the benefits which are certain to follow the wise action of Congress in setting aside the reservation, and the efforts which have of late years been made in the direction of a proper conservancy of this wonderful region. The inestimable economic importance of the forests about the headwaters of the Yellowstone and Snake rivers, the popular and scientific interest in the preservation of the various species of wild animals and of the natural curiosities of the region have been sufficiently insisted on, and are generally understood. They furnish the strongest possible reasons against the building of a railroad in the Park.

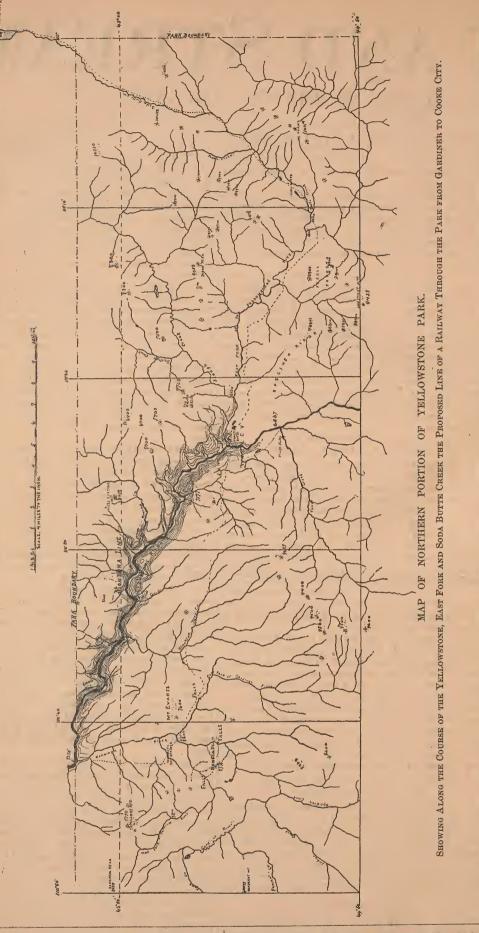

On the other hand we have the urgent demands of certain mine owners, interested in the development of a mineral region, situated in the mountains, in which rise Soda Butte Creek, Clark's Fork, and Stillwater Creek, for a railroad which shall enable them to bring their ore to a point where it can be reduced at comparatively small expense. These mine owners assert that a line up the Yellowstone, the East Fork and Soda Butte Creek is the only one practicable for a railroad. We have already shown that such a route presents enormous engineering difficulties, and have the testimony of reliable engineers to prove that there are other routes running up the streams which flow down the eastern slope of the range which present fewer difficulties of construction, lighter grades and less rock work and which do not infringe upon the territory set apart by Congress for the people's pleasure. Cooke City is not, as it is supposed by many, the center of this mining camp. It is on the extreme southern border of a mineral region, which extends about fifteen miles to the north and northeast. The only mines of any importance near to the town are the Great Republic and the Iron Clad, early discoveries of the region. The natural center of this district is some miles east of Cooke, in a little park on the head of Clark's Fork, a basin through which passes all the traffic from the east to Cooke and to the mines at the foot of Henderson Mountain. From this little park there are practicable wagon routes to nearly all the mines in the district.

There are three possible ways for a railroad from the Northern Pacific to the Clark's Fork mines, none of them crossing any portion of the National Park. These are (1) from Billings up Clark's Fork; (2) from Park City up Clark's, and then up Rocky Fork to a point near its head, thence across by a tunnel to Bear Tooth Creek to its head, thence across to Davies' Ranch and up Clark's Fork, and (3) from the mouth of the Stillwater up that stream to a point three miles above the upper west fork, where a considerable group of mines have been located. These routes have not been made the subject of detailed railroad surveys, but each of them has been carefully gone over by a civil engineer with a view to the possible construction of a railroad, and each one of them is pronounced perfectly practicable.

The Stillwater route is about the same length as the Cinnahar and Clark's Fork: but it is an easier one, and, as we have already shown, entails but little heavy work. The Clark's Fork route is longer, and there is but one difficult piece of work on it. This is at the cañon. By commencing to climb the hill some distance before the cañon is reached, however, it is practicable to reach a point some three hundred feet above the water and above the cañon, where a roadbed could be built along a steeply sloping, grassy hillside, which further up the stream runs into a flat bench. From this point to the head of the river there appears to be no difficulty in building a roadbed. About the Rocky Fork route less is known.

If there is any practicable way for a railroad to the Cooke City mines without infringing on the Park, Congress has no business to grant permission for a tie to be laid within that reservation. That such routes do exist on the eastern slope of the range can be easily shown, and until the most searching investigation has demonstrated their impracticability, Congress should refuse even to consider the proposition to lay rails within the Park.

There is a hidden motive for the eagerness with which this grant is sought; a motive that has not yet been acknowledged. has probably to do with the natural wonders which lie along the proposed line, and which may be included in any grants of land which may be made to the Cinnabar & Clark's Fork Railroad for stations and other purposes. We notice among the names of those who urge the granting of this right of way that of C. F. Hobart, who has before this right of way that of C. F. Hobart, who has before reached out an eager hand for the National Park, happily without much success. An inspection of the map will show that the proposed line would pass close by Soda Butte Springs and not very far from the wonderful fossil forest.

We print this week a map, carefully compiled from the best sources, which shows the falsity of the statement made by two committees of Congress, that the proposed railway line which follows the Yellowstone River and Soda Butte Creek will only pass through the Park for twenty-five miles. If any one cares to take the trouble to measure the Yellow-stone River from the point where it leaves the Park up to the East Fork, and then up that to and up Soda Butte Creek to where the latter enters the Park, he can readily calculate for himself what distance will be traversed by this line.

Lieutenant Daniel C. Kingman, Engineer-in-Charge of the Park, has been quoted in committee reports as favoring the railroad line up the Yellowstone. Let us see what he says

about it: HEADQUARTERS DEPARTMENT OF THE PLATTE, LNOINEER'S OFFICE, OMARA, Neb., March 25. } Editor Forest and Stream: Your favor is received. I am surprised that my report of 1883 should be quoted as in any way favoring the construction of railroads for any purpose whatever within the Yellowstone National Park. I think this must be a mistake. I have always been opposed to the construction of railroads in the Park. I have given this subject the most careful thought and study, and I should regard their introduc-tion as the most serious injury that could be inflicted on the Park. And the construction of the Cinnabar and Clarke's Fork Railroad would be specially deplorable because it seems so unnecessary. There is every reason to believe that the route up the Stillwater (yring wholly outside of the Park) is a better one for a railroad to the mines than that via the Yellowstone River and Soda Butte Creek, DAN C. KINGMAN, First Lieut. of Engineers, in charge of Improvement, Yellowstone National Park.

SIGNS OF SPRING. [From Mrs. Huldah Lovel's Rag Bag.]

MORE'N a month the crows ha' ben a jawin' Where they'd her corn planted; Naow they've got it settled wi' their cawin', An' appears contented.

- Snow banks is a gittin' siled an' gritty All along the fences, Au' the bluebird 'long the stakes his diity In these days commences,
- The phebe on a mullein sets a-watchin' For the fust flies a-wingin', Frequent 'twixt her frequent scoops o' ketchin', Tew short notes a-singin'.
- The woo'chuck's top o' the world agin A-thawin' aout his whistle, A-wishin' the clover's growth to begin As spry as the thistle,

The pussy willers where brooks is runnin', An' a-prattiin' busy, Is yallerin' some, an' their tails so cunnin', Is a gittin' fuzzy.

From his ellum I hear the high-hole's cackle,

I s'pose he calls it singin', n' in alder swamps the sputterin' crackle, O' the frogs is ringin'.

The maples their slow sweet rain is drippin'

Int'one dish or number. When the blankit of the snow is slippin' From last year's leaves o' luther.

Onkiv'rin' logs for the patridges' drummin', An' liverworts a-blowin'; Where sunshine's sot wild bees to hummin,'

A-comin' an' a-goin.' O, spring hes come! The long days o' wishin Is ended fairly,

If the wind is saouth I'll go a-fishin' In the mornin' airly

to be on the point of sailing. At Garden Key the whole island is covered, or rather inclosed, by Fort Jefferson, a Cyclopean structure of concrete faced with brick comprising an area of about six acres, of which the sea wall outside the most has a length of nearly seven-eighths of a mile. The edifice is in the form of a hexagon, with towers at the angles, and consists of three tiers of casements (only the lowest one of which has been completed), and is surmounted by a para-pet. Within are two large brick bdildings for the quarters of officers and men. As the foundation was laid on piles, the fort is settling in many places, and its unfinished condi-ing ruin. The roofs of the buildings within are also out of repair, and the floors are rapidly decaying with the conse-quent leakage. At a distance the great inclosure looms up, a monument of apparently misdirected energy, as it is im-possible with the unaided, vision to determine why such an immense fort should ever have been deemed necessary to protect so insignificant a harbor. The Tortugas have long been noted as a collecting ground for corals and breac output is a restinged yearly to dealers

that it was owing to a volcanic eruption in the Everglades, which had caused the swamp water to flow into the gulf and poison the fish. The well-known citizen referred to on being asked his opinion replied, with a sententious air, "Gentle-men, there's no doubt but what Mr. B. is right, and there's been a *vulgar corruption* in the Everglades." F. J. H. MERRILL.

KEY WEST, Fla., March 12.

Hatural History.

THE AUDUBON SOCIETY.

THE AUDUBON SOCIETY.
W F had thought that Boston and Philadelphia were the chief centers of extended work for the AUDERON SOCIETY, but Buffalo, N. Y., bids fair to rival these larger cities in the interest which it shows in the movement. At a meeting of the Buffalo Field Club, held on Friday last, Prof. Linden read a report on the proposition to join or otherwise cooperate with the New York AUDURON SOCIETY, and the following was adopted by the club:
"The Buffalo Field Club declares its unqualified indorsement of the announced aims and purposes of the Audubon Protective Bird Society, and pledges hereby its hearty cooperation in any case that the same is requested for the furtherance of any legal measures which may be adopted to prevent the reckless decimation of our useful birds. Their sixins or feathers are still permitted to be exposed abroad like any other legitimate article of commerce, or are freely sold in the home market by unscrupulous venders for exclusive purpose of ornamentation, and in open defiance to the true spirit of existing legal restrictions which are on our statutes to insure the protection of our useful native birds." On Saturday Dr. John Parmenter delivered a lecture before the Woman's Union, at the close of which he devoted some time to our cause. His hearers were greatly interested and were almost unainous in their wish to support the movement. This was no small triumph and a great compliment to the powers of the lecturer, for the majority of the audience were bird wearers. The greatest energy is being displayed by the Buffalo members, who have before them always the destruction of birds constantly taking place at Niagara forornaments From all over the country warm expressions of interest are beard, and many thousands of pledges have been sent out in response to letters and store the movement and all are agreed that the birds must be saved.

people give most cordial support to the movement and all are agreed that the birds must be saved.
Editor Forest and Stream:

Ido not think that the milliners' assistants have invaded this region yet, but no one can tell how soon they may, if the abominable traffic is not presently checked. I think the effect of the ruthless slaughter elsewhere is noticeable here, however. Orioles were scarcer last season than for many years.
Forty years ago it was something worthy of note to see a "hang-bird" about, but they kept increasing in numbers, and till last summer, almost every roadside and door yard elm had one or more of their hammocks swung in it. And bobolinks grow fewer ycar by year; and so do mendow larks, though perhaps "sportsmen" are partly to blame for the falling off in the number of these.
This winter there have been no chickadees about our house, when for many winters past they have come in dozens to be fed with scrape of fat, along with many nuthatches and woodpeckers are daily visitors, but not one chickadee. This might be attributed to the English sparrows that are becoming altogether too plenty; but in a long tramp in the woods a few days since 1 heard but two of my little black capped friends, when in to day of any other winter do I remember going without having an inquisitive company of them about me every time 1 halted to light my pipe, or took my stand upon a runway. I heard and saw a few nuthatches and two or three bluejays, but these were noticeably scarce. Our farmers have a foolish prejudice against the jays, but to ral that these been sluck of snow buntings, and that flock but once. In past winters hardly a day, certainly not a week, went by that a flurry of these birds did not drift over the fields, or settle on the tops of the dend weeds. The Canadians have been slughtering these winter visitors for years for market. A friend told me that he saw strings of them six feet long in the Montreal markets last winter. Such as they or there is heads thavor

we can to help. In the "woods loafing," before mentioned, I saw three ruffed grouse, and the tracks of four more, a pretty good showing, I thought, for this season and these years. AwaHSOOSE.

FERRISBURGH, Vt., March, 1886.

Editor Forest and Stream:

Editor Forest and Stream: Your letter with accompanying circulars of the AUDUBON SOCIETY, has been received. I took the papers home to din-ner, and while disposing of my rations, discussed with the mistress of my affections and household, the tenor of three pledges submitted for signature. Main is the solution of the submitted in the submitted for signature. Said I: "I don't wish to kill any 'wild birds not used for food,' in fact I haven't done such a thing in a long time. You remember when, last summer the blackbirds were devouring our corn, and I charged the little muzzleloader and went forth to sweep them from the face of the earth, and when they rose in a mass from the corn and settled in the dry top of a tree and when I had walked up to a point distant about thirty yards and cocked both barrels of little Jenny, the impertinent things just sat there and chipped and glittered and flourished their tails, as if to say, 'Shoot if you can,' and—well I couldn't. I just stood there looking at those birds, and I suppose looking like a fool to my neighbor Watts who, with his myrmidons, stood glowering oper-mothed across the fence, and wondering why I didn't cut a swath right through the flock. I do not think it would have been an easy matter to explain to him just why I low-ered the hammers and stalked back to the house, and my reputation for possessing some skill with firearms must have made the thing seem all the more odd." "I don't like to have the birds killed," said the lady, "and

1 think that we can manage to protect our crops more easily without a gun than without the birds. I do not see how I are manage to sign all the pledges just yet, though, for my hat has some feather ornaments on it and I must wait until to an get a new one. There shall be no wild birds' feathers on that; but you know that if I were to tear the trimming of this hat it would look awfully."
"Yery true," said I; "and now I come to think of it, I seeted that hat myself. The feathers seem to have belonged to some wild bird, though of no variety against which I ever pointed gun. The hat does not trouble my conscience, however, but there is one point on which I feel a little like kicking." Do you remember when we lived on our old place, Riverwood, that a great hawk one day made a descent upon our chickens, and that you came running out of the nouse will my old 12-pound deer gun in your hands, just in time for me to catch the piece and take a snap shot at the ploteer as he sped away through the trees in the direction of the river? Three feet tea inches was the distance across that fellow's wings. It does seem to me that the A. S. might let up a little on birds of prey. However, I am going to whack down my autograph beueath the three pledges, and let this matter take care of itself. When your new hat I have repeatedly paddled for many miles without seeing a single song bird, hawk or owl. I hope ere long to see the day when stringent laws shall teach the wanton butchers of surfaced friends to seek some substitute for any pleas, they port to bring these neatures before the public for ungent laws to be indense to east, the pore excuse of a scanty pecuniary compute, for which they protect to bring these medium of our local press, and shall feel obliged our local press, and shall f

CENTRAL LAKE, Mich., March 28.

NORTHAMPTON, Mass., March 15, 1886. Editor Forest and Stream: Being at home only for a moment, I have but scant time to say that I am heartily in sympathy with your AUDUBON Sourcew

Being at home only in sympathy with your AUDUBON to say that I am heartily in sympathy with your AUDUBON SOCIETY. I offer but one limitation; the wearing of feathers as or-naments may be indulged in, if I am not mistaken, to some considerable extent without blame. For example, ostrich plumes, got from ostrich farms do not, I believe, stand for any suffering inflicted anywhere. Cock feathers, worn as military or millinery adornment, are not evidence that any creature has suffered appreciably in yielding them. The wearing of hawks', jays', owls' and other predatory birds' wings, I see no more harm in than in sporting a belt or pair of slippers made of snakeskins, or a tiger-skin saddle cover. But the use, for ornament of person or drawing-room, of feathers, wings, heads, etc., cruelly got from harmless birds, I think should be discountenanced everywhere as unworthy of any people professing to be humane. I have five little daughters—quite an AUDUBON SOCIETY in numbers, and avowedly so in their intentions—to wage war against no innocent, and make peace with no harmful, practice. Yours truly, G. W. CABLE.

Frank Leslie's, of March 27, had an effective full-page illustration, entitled "Slaughter of the Innocents." It showed a gunner shooting song birds, and a corner sketch illustrated the bird feather hat ornamentation of the day. The page tells its story very effectively.

WILD CELERY.

HAWKS AND GAME BIRDS.

HAWKS AND CAME BIRDS. Editor Forest and Stream: In your number March 25 I carefully read "Food Exam-inations of Hawks." Thinking the matter over I concluded by the test was not a fair one for this reason: During the summer months frogs, snakes, field mice and insects can be caught by the hawks more readily than birds. But during where and cool weather, my opinion is, they live almost point of the stream of the stream of the stream of the stream where the stream of the stream of the stream of the stream worth forty hawks. To illustrate, while I was walking over a wheat stubble a year or so ago, a terrier dog started a covey of small quai, one attempted to hide and he caught it, and before I could stop him maimed it so it died. I noticed that is little crop was very full, and taking it to the house I ex-mined it. To my surprise I did not find a grain of wheat, but (if my memory serves me) some fifty or sixty insects of small size and different kinds. Since then knowing hawks to be their greatest enemies, I have waged war against them. I have yet to see semething more to change my lews. B. B. D. SUFFOLK, VA.

SUFFOLK, Va.

A HAWK-CATCHING DEVICE.—Take a pole 12 or 15 feet long and about 3 inches across at the top, bore an inch hole through about two inches from the top; set the pole firmly in the ground near where the quail feed. Get a light ladder

which can be kept near at hand. Take a common steel trap, one with the spring working under the jaw preferred; set it on top of the pole; pass a strap or cord through the lower part of the trap and through the hole in the pole, and fasten it. A farmer to whom I told this plan caught six hawks after the snow came, by setting traps on top of his stack poles. The quail came there after grain, and the hawks would alight on the poles to watch for them.—X. (Smith-burg, N. J.).

would alight on the poles to watch for them.—A. (Smith-burg, N. J.). As To CRAWFISH.—Looking over a file of FOREST AND STREAM the other day, I ran across the following in "Habits of Crawfish," by Ralph S. Tarr, printed in the issue of Oct. 22, 1885: "In New England there are none (crawfish) except in a river in the north of Maine, where one kind is found. That such a large area should be uninhabited by these ani-mals, while the much less favorable place, the Mammoth Cave, has a peculiar blind kind of fits own, is certainly re-markable." It was, I think, during the summer of 1884, that a number of specimens of *Cambarus bartoni* were taken from a cold spring in Grafton, Mass., and placed in the museum of the Worcester Natural History Society, where they now are. This is, I believe, the only capture in Massa-chusetts on record, though of this I am not positive, being too far from books to verify the assertion. The crawfish were found, as before mentioned, in a spring at the head of a small clear brook, in a similar situation as the "brook species" Mr. Tarr refers to as being found in Virginia. I have found one species of *Cambarus* here in Florida. It was taken from a "sink." and is pure white and nearly three inches in length. Of its habits I know nothing. I kept it alive for some time, but could not see that it took any food, although I placed several small water beetles (*Dytisoidae*) in its globe. I do not know to what species it is to be referred, though it is probably not the *Cambarus bartoni*. I hope this will meet Mr. Tarr's eye, for, though the capture was pub-lished at the time, he evidently has not seen it.—HENRY A. KELLY (Belleview, Fla.). BREEDING OF THE BRANT.—Sackville, New Brunswick.

BREEDING OF THE BRANT.—Sackville, New Brunswick. —Can any of your readers tell us where brant breed? They leave here about June 10 and return Sept. 1 with their young fully grown. Old salts who have sailed as far north as the southern coast of Greenland claim that the brant go further north than that point to nest.—STANSTEAD. [The brant breeds in the far north, and their nests have been found by the naturalists of various polar expeditions. Messrs. Evans and Sturge found it breeding on the island of Spitzbergen, and it was also found breeding by Sir James Ross's expedition at Parry's Island in latitude 74° and 75°. During the British arctic expedition (1875-6) Mr. Fielden reports finding a nest with eggs in latitude 82° 30' N., and subsequently many more were found.]

ALBINO GROUSE. —A friend writes me that R. B. Millard, of Cornwall Bridge, Conn, caught an albino partridge last fall, which he had mounted, making a beautiful specimen. A hen, and by the way, are not albinos usually females? —C. [Albinism is not known to be more common among females] than males.]

WOODCOCK IN THE CITY.—A woodcock flew against a fele-graph wire in New street, just back of the Stock Exchange, New York city, last Thursday afternoon, fell to the street stunned, was captured, put into a basket and exhibited in a restaurant; lived a short while and died.

HANOVER, N. H., April 4.—Cedar birds, robins and blue birds have arrived in considerable numbers, although the snow has not entirely disappeared. Crows spent the winter with us, a rare incident.—E. C.

Game Bag and Gun.

THE TRAJECTORY TEST.

THE FURSTEOR THE TRAJECTORY TEST. THE full report of the FOREST AND STREAM'S trajectory test of hunt-ing rifles has been issued in pamphlet form, with the illustra-tions and the tabular summary, making in all 96 pages. For sale at this office, or sent post-paid. Price 50 cents.

country are found; and many an old grizzly, both mountain and valley, have I made to chew the dust with my Wesson rifle, caliber .45, 810-grain ball, 120 grains powder. F. WESSON. WORCESTER, Mass., March 15.

WORCESTER, Mass., March 15. Editor Forest and Stream: Since the publication of the results of your recent tra-jectory tests the trouble with our .45 caliber Marlin rifle, which you experienced at that time, has been the subject of much comment, both in private letters to ourselves from as far away as India, and of articles in the sporting papers. As this apparent inaccuracy of the rifle was entirely be-yond our comprehension, we have submitted the identical arm, No. 9,449, to Mr. George Joiner, of Brooklyn, a well-known marksman, and requested him to give the rifle a fair, impartial trial. Accompanied by Mr. Henry Vetter, an ex-pert gunsmith and also an excellent marksman, he proceeded to test the gun on Jan. 8, 1886, using the .45-85 cartridges manufactured by the U. M. C. Co., being the same ammu-nition as was used in your tests. He returned the rifle to us (it is now in our sample rack) with the following communication: BROOKLYN, Jan. 10,-Marlin Firearms Co.: Gentlemen-I

with the following communication: BROKLYN, Jan. 10,—Marlin Firearms Co.: Gentlemen—I have made a trial of rifle No. 9,449, as you requested, and I re-turn the rifle with some targets made at 200 yards, at the Union Hill range on the 8th inst. The rifle was to my notion one of the best shooting sporting rifles I ever had to my shoulder. The day was quite gusty and unfavorable for very accurate shooting. The ammunition I used was .45-85 cart-ridges of U. M. C. Co. make, which I took from a case of the same standing in Schoverling, Daly & Gales's stock. If I could have loaded them myself I am certain I could have kept them in a four-inch eircle. Truly yours, Geokge Jonnez. New YORK, Jan. 10,—I was present at the testing of the Marlin rifle referred to in above letter of Mr. Joiner, and cer-tify that the shooting was done with factory ammunition, .45-cailber, 35 grains of powder, 285 grain bullet, at Union Hill, Jan. S last, at 200 yards range, and that the targets to which I have put my name were made by Mr. Joiner as stated.— HENRY VETTER.

We mail you an electrotype made from one of these targets and respectfully ask, in justice to ourselves, that you publish this communication and accompanying target. The MARLIN FIREARMS Co.

NEW HAVEN, Conn., March 30.

THE MARLIN FIREARMS Co. New Haves, Conn., March 30. [It is entirely possible that the rifle may have acted well at Union Hill. It is certainly true that it acted in the man-ner described at Creedmoor during the tests. No rifleman of any experience would jump from an isolated case of this sort to a condemnation of a class of rifles. Our report of the trial was one of facts only. The experiments at Creedmoor were open to all, and invitations freely extended. Many who were present saw the stubborn Marlin .45; several tried it a few rounds, but it seemed entirely out of sorts, and we were regretfully compelled to contont ourselves with a single round for the trajectory figures. We regret that there are not more data about the Joiner test; whether the shots shown in the cut are consecutive, and whether the circle shown is the bullseye fired at or only a circle struck about a group of shots, and what scale the cut is made to. We give space gladly to the further report on the arm used in the trials. It simply shows that after all there is a good deal of intelligent cussedness about pieces of machinery at times, and a rifle is no exception.]

A TURKEY AND CHICKEN SHOOT.

<text><text><text><text><text><text><text><text><text><text><text><text>

Then came the crowning efforts—the shooting at turkeys at 175 yards, any rest. I shot 20 shots and got 4 turkeys, each weighing from 3, to 34, to 44 pounds only. The 20 shots include 6 or 8 sighting shots. I did not get my sun trained for good work until toward the last; I was shooting a little too high every time and made the feathers fly, and they said, "If you can bring feathers do not alter things," but I soon found that to get turkeys I had to get down to the finest point, even below the pin feathers, which I did at last. This fine work was in my fourth and last small turkey. At this very time the turkey man and my brother were near the turkey and marking my shots, he saw the bullets fall a little lower at each shot among that deceifful bunch of feathers, and very much feared the next shot. Behold it came certain and sure when I centered the poor bird, and it gave one grand spring and lofty flop into the air and was dead. I had, you see, finally found the center of this flax-seed figure below the pinfeather, and I was now ready with my muzzlelonder to proceed to business. The turkey man saw this, for he had been at the turkey stand watching my progres.

saw this, for he had been at the three since of some series. Sequel. — When he saw the last shot, and witnessed the last jump and flop of that little turkey, he said, "I'll be hanged if I put up any more turkeys for that rifle." "Then you rule it out, do you?" "Yes." "All right. I have nothing more to say, except the maker (when I bought if) said it had been to one turkey shoot, where it was ruled out, and so it happens you are only following the fashion in ruling it out again." Nine turkeys in all were killed this day, and I got four of them while shooting my strange rifle. This will do for an unfashionable weapon, and one rejected by the modern tyro.

it out again." Nine turkeys in all were killed this day, and I got four of them while shooting my strange rifle. This will do for an unfashionable weapon, and one rejected by the modern tyro. I left the others shooting at this same turkey; they brought it up nearer for three times, when one fellow finally got it. It cost him \$2.60 and it dressed 44 pounds. The others got no turkeys at 175 yards, but four at 50 yards. The trouble was their rifles were too fashionable, and scattered too much. I beat them all with mine, and mine was a second-hand one, which had been exchanged with the maker by the fashion-ables for a more fashionable one. You see the man of fashion must have a fashionable gun, and no old-fogy muz-zleloader will do for him. All right; the world moves, and some go empty-handed while others reap. I forgot to say my brother shot my file 60 cents worth (10 cents a shot), and he took it all out, much to his mortif-cation, in feather. He is a kind of mathematician, and can find the center of this bird was too much for him, he did not get down below the pin feathers. The other shoot-ers full of pluck, banged away until near dusk, as fast as they could push in the loads, but all this to little effect. The proprietor of this shoot cleared \$23 as his profit, be sides entertaining his good friends. You see the breech-loaders contributed more than their proportion to the \$23 and may he long live to give us many other good shoots in the coming years. But leave the muzzleloader at home. While I consider my report now ended, yet many of your readers will no doubt take an interest in a little more detail. The breechloader men marked the striking of their own bul les. I could see them throw the mud at 175 yards plainly, they all used fixed ammunition, except they loaded the wither good M. L. that was stolen, but never returned. He is to not want nor will own an unsteady and weak-shooting sider of far more importance than fashiog. Leing to ex-true in any reffe. Where game is so somall as it generally is in thi

rifles. A majority of the elongated bullets fired from American breechloaders have more or less a gyratory flight, and hence they cannot hit the object aimed at, but fly around it or the line of sight from the beginning to the end of the range, and consequently we cannot hit what we aim at even by chance. My caliber is .42, length of barrel 38 inches, barrel of iron, twist increasing, sights peep and globe, metallic bullet starter, bullet conical-shaped, weight only 230 grains, with but two-tenths inch pull (displaced), lead bearing in barrel and only eight-tenths of an inch long. The breechloaders of this caliber cannot shoot such a short bullet from the shell with any degree of satisfactory accu-racy.

The breechedate with any degree of satisfactory accu-bullet from the shell with any degree of satisfactory accu-racy. I used about 55 grains of FFG powder at the turkey shoot. I will simply say I have got as good a "crow gun" as I want. It has got a marvelous way of shooting; not up to the fashion of these dude times, but as formerly, when accuracy was regarded as paramount to convenience or fashion. It does not give the wild, corkscrew motion to its bullets, but sends them with great velocity just where they are wanted to go. Proof positive; read the correct result of its shooting at this turkey shoct. Witness how I was ruled out just when I had got the rifle fairly ready, to prevent my "wiping out" the man's turkeys. I was willing to stop shooting, for I did not wish him to lose his turkeys; besides, I felt sad for the other shooters and wished to give them a full chance to get a turkey to carry home to their families. Lesson.—To get small game or turkeys at 175 yards you must have a good rifle. One that scatters its bullets will not begin to answer, nor can any amount of fashion make it answer. WAUKESHA, Wis., March, 1886.

answer. WAUKESHA, Wis., March, 1886.

MAINE DEER IN MARCH — William Crocker and Charles Beatham, of Chester, and George Kinaball, of Woodville, were found guilty of hunting, killing and destroying one deer on the 9th day of March ult., and Matthew Spencer, of Chester, was acquitted. Hon, Thomas W. Vose, of Bangor, appeared for State, and Alexander McLain, of Mattawam-keag, game warden, was the complainant. Jere E. Estes, Esq., of Winn, appeared for the defense. Crocker, Beatham and Kimball appealed to the August term. The parties were fined \$40 and costs. The deer was put into Charles Beat-ham's barn and died, as claimed, a short time afterward from exhaustion. John B. McAlpine, of Winn, was brought before the justice, with the same counsel, for simply hunt ing and capturing a deer alive. He was found guilty, fined, and appealed. The deer captured was released some time since,

A STUDY OF BULLETS.

A STUDY OF BULLETS. Editor Forest and Stream: My memory and knowledge of gunpowder projectiles extends back to the days of the finitlock musket of old Revo-hutionary fame, the old-fashioned single-barreled smooth-bore, designed primarily to shoot a single patched ball, but used occasionally for shot. In those palmy days the musket did duty on "general training" days, and roared its ancient patriotic salute on every Fourth of July, and couldn't get over the habit as long as it lived. The shotgun was exclusively a boy weapon, to be left behind when the youth had passed the period of adolescence and the suspicion of down had appeared upon his face. Then the smooth-bore, with its single ball of lead, was to be taken up, to be laid down no more till old age forbade its further use. But the love of the tried and true old piece lived in the warm heart of its owner, though the arm had grown weak and pal-sied and the old eyes too dim to see the dust gathering upon it. The old gun still lay in the hooks when the old man was laid away, and ever after reverently and tenderly cared for as it descended from ity. There are a few of those old guns in the country to day which a million couldn't buy. But the spirit of improvement and pro-

Ity. There are a few of those oil gins in the country to-day which a million couldn't buy. But the spirit of improvement and pro-gress was abroad in that day as now, and one fine day along came a man with the smooth-bore, rifled with a twisting cut, and as he beat them all shooting at the paper pinned against the trunk of the beech tree, the innovation took and spread. With the experimenting in guns com-menced the experimenting in projectiles, and it is not done yet. It was natural that the primitive form of bullet should be that of a sphere (1) for obvious reasons. The earth is spherical, falling rain drops assume the same form; besides, the ball was handy to charge and always right side up, and even to this day there has been found no truer or more deadly projectile for its range than the simple sphere of lead. It was not long before the devotees of the rifle began to experiment to reduce the number of corooves and the result was the

true or more deadly projectile for its range than the simple sphere of lead. It was not long before the devotees of the number of grooves, and the result was the production of a bullet (2) in the form of the planet Saturn – a bullet with a belt around its middle which should engage with the two grooves. No great advantage was gained by the use of this bullet, and in time it was practically abandoned as not being quite so easy to load with. The next attempt was in producing a bullet (3) which would increase in range though using the same quantity of powder. Then the conical bullet came into existence. The rifle, with its twist, made it possible. The men who designed this form of bullet had used wedges in splitting rails and sharpened the prows of clipper-built boats. They judged correctly that air was more easily divided than pushed. Some of them got to thinking that it might be possible to shoot a conical bullet from a smooth-bore and cause it to revolve on its own axis by means of a saw-toothed rifling on its outer side (4). But the attempt was abandoned and they returned to the plain conical. There was a great increase in the range of the bullet, but a decrease in its killing power. The cone gave no such paralyzing shock to large game as the sphere, and the latter is still preferred by many old hunters in hunting in dense forests. A twig will not turn a ball out of its course, but the same cannot be said of the cone. In those years there was another, though obscure, attempt to increase the range and penetrating power of the conical bullet. It was cast with a long lead neck or stem, solid to its base (5). The powder charge surrounded this neck, and upon its explo-sion broke off the neck just at the base of the cone and sent it out with terrific force. It was said that one-fourth of adram of powder had sent one of those cones out of a Harper's Ferry rific entirely through a solid piece of hemiock timber twelve necks square. The breech pin had been short-ened to make room for the flange of the stem.

a bed to make room for the flange of the stem.
b by this time the attention of the Government was drawn to the new form of bullet, and experiments were tried which caused the adoption for a while of the Minic pattern, with some modifications (6). This form is cylindro-conical, with grooves around its cylindrical part, and with a hollow butt, in which was sometimes placed as abot. Being a heavy projectile, it could be dropped down the muzzle of the gun on to its powder charge, and when fired the base of the bullet expanded so as to fit the proves tight, and the projectile would have no windage. It was used on both sides, but our humane English cousins of the Alabama variety sympathized so tenderly with the failing fortunes of our Southern bethere that they supplemented the Minie with another which would present an unsolvable problem for the surgeons. It was a cylindro-conical bullet (7), composed of the to stay together, the proble had a job together the problem had a job together the or willison, of Creston, Ia., now has one

of those beauties which he picked up on a battlefield South.

of those beauties which he picked up on a battlefield South. But, as if that bullet was not infernal enough in its ingenu-ity, a further present was made to the South by the same benevolent hand of another more deadly still. This bullet (8) was constructed with a tapering plug fitted into its base, which was to be driven home by the explosion of the powder, causing an enlargement of the body of the projectile and thus swaging it into the grooves of the gun. The conical end of this innocent little thing was hollowed out to form a receptacle for poison. To the eternal honor of the South be it said, that the instances were exceedingly rare of its ever having been used in that way. The attempt to use an explosive bullet was accompanied with so much trouble and danger that it was soon abandoned. One of the simpler forms (9) was that of a hollow, elongated cone, charged with a low grade of fulminating powder, and fired by a common cap placed on its point. With the advent of the breechloader, the changed condi-tions seem to have resulted in the adoption of a new set of projectiles, the best the world has ever seen, for special pur-poses. For long-range target shooting, the long heavy, exlinded

projectiles, the best the world has ever seen, for special purposes. For long-range target shooting the long, heavy, cylindro-conical bullet (10) is found to be the best, theoretically and practically. Its weight gives it an irresistible momentum in the air, its conical front meets with the least resistance, and its flattened point insures the greatest accuracy. For high speed, a very flattened trajectory, and great par-alyzing, killing power in the pursuit of large game, the cylindro-conical express bullet (11) has no superior. More humane than this, the Government has adopted for its service the cylindro hemispherical form (12), which stuns and wounds or kills without barbarously scattering fragments of ragged lead where it strikes. Its killing space is not so great as the sporting bullets, but owing to its form it is not so easily turned out of its true course. Recognizing the fact that it is better to wound men than to kill them to insure the winning of a battle, it is likely that the caliber of the pro-jectile will be reduced and its trajectory thereby decreased. COMMON SENSE. WASHINGTON, D. C.

WASHINGTON, D. C.

DEER HOUNDING.

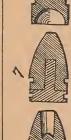

FOLLOWING is the full text of the deer hounding bill now before the New York Senate:

An act to amend chapter five hundred and thirty-four of the laws of eighteen hundred and seventy-nine, entitled "An act for the preservation of moose, wild deer, birds, fish and other game," and to repeal chapter five hundred and fifty-seven of the laws of eighteen hundred and eighty-five, entitled "An act for the better preservation of wild deer."

The People of the State of New York, represented in Senate and Assembly, do enact as follows: SECTION 1. Section one of chapter five hundred and thirty-four of the laws of eighteen hundred and seventy-nine, en-titled "An act for the preservation of moose, wild deer, birds, fish and other game," is hereby amended so as to read as fol-lows:

<text><text><text><text>

5

allowed by this act and not transported contrary to the pro-

allowed by this act and not transported with the seven of the laws of SEC. 4. Chapter five hundred and fifty-seven of the laws of eighteen hundred and eighty-five, entitled "An act for the better preservation of wild deer," is hereby repealed, and all other acts or parts of acts inconsistent with the provisions of this act are hereby repealed. SEC. 5. This act shall take effect immediately.

Set. 5. This act shall take encee inductately. Editor Forest and Stream: Your discussion of the subject of deer hounding reminds me of the method adopted by an old friend of mine, who settled in Michigan many years ago, to prevent deer hound-ing in his vicinity. Settlers at that time were few, and deer being plenty afforded them much of their animal food. Late in the fall his quiet and solitude were broken for several weeks by the bellowing of two hounds in pursuit of deer, and the frequent sound of the shotgun as it beleded forth its charge of buckshot, generally wounding but seldom killing its game at once. By chance meeting the owner of the hounds one day in the woods, he quietly told him that he did not like the hounding of deer in his neighborhood, but the man indignantly replied that he should be there again the next fall. The settler quietly told him that he-would get more deer if he left his dogs at home, and they parted.

Would get more deer it he left his dogs at home, and they parted. When the season came round, sure enough, the woods again rang with the baying of the same hounds. Hearing them coming one day in his direction, he took a station, rific in hand, and in a few minutes the deer swept past within twenty yards of him. The deer had not been long gone when the hounds came up on the trail, and when the first one reached the opening he leveled his rifle and shot him dead. The other one turned and retraced his tracks, and he never heard his voice again or saw his owner. He said he hated awfully to shoot the dog, but he wanted to stop deer hounding in some way, and that scemed to be the only way for him to do it. This was nearly fifty years ago, when such a thing as a game law was unknown in that country, except the law of necessity; and while no one would advocate such a course in a law-governed country, it worked well in his case, and the dog. dog. CHICAGO, III.

MANAGEMENT OF MUZZLELOADING RIFLES.

Editor Forest and Stream: Your correspondent, "C. L. S.," of Fort Clark, Texas, asks for information upon the above subject from those hav-

asks for information upon the above subject the ing experience. Your correspondent says he hunted St. Louis over for a good muzzleloading rifle, and finally obtained one having a 42-inch barrel. Now if "C. L. S." will excuse my modesty and accept my advice, it is this: Go at once to a good gun-smith and have just 12 inches of his rifle barrel sawed off, send the piece to me by express at my expense to remember him by, and I will fit up a rifle from it to carry in my valise. If "C. L. S." does not find himself well paid by the im-proved shooting qualities of his 30 inch barrel rifle, I will pay all damages. Now, premising that "C. L. S." will follow my advice

If "C. L. S." does not find himself well paid by the improved shooting qualities of his 30 inch barrel rifle, I will pay all damages. Now, premising that "C. L. S." will follow my advice true this rifle for small game at short range, have the gunsmith turn off the sharp corner of the bore at the muzzle to the depth of the grooving in order to facilitate loading with a round ball. Have a beavy builtet mould made of brass or gun metal. Have the bullet fit so tightly that when it is driven through the rifle barrel the grooving will be well defined upon the bullet. Use pure lead for the bullets. Heat the moulds quite hot before casting any bullet. This will insure a full flow of lead into the mould. Use cutting nippers for clipping off the bullet necks and clip all close to the bullet. Use the Hazard FG Sea Shooting rifle powder. For ordinary ranges, a quantity which will fairly cover the bullet mets ad, do not chuck the powder violently into the share, but let it run in and fill gradually. For patches, use the finest quality and most even texture of brown Irish theor. Cut them with a No. 18 wad cutter upon the same bore. Place the bullet mould. To use the border, it upon it, neck down, and placing the order in contact, keep it there and force the bullet down gently upon the powder; stop as soon as it touches the powder. The end of the rod should be burred half round with the same bore. Way, and especially at long range, then the barrel should be bair used for the bullet mould. Success gunsmith can fully explain and prepare for him. The bullet mould should be thickness of 24 calibers of the rife. The shape of the projectile which has given the best results with me (and I have tried all in use during the past forty years) is defined by the following cut:

It is two calibers in length. The base fairly fills the grooves and at once tapers to receive the folds of the patch. It is east from the point, the neck being cut squarely off with hippers. For fine work I always leave the neck full in trimming, and then with a sharp knife trim all to a uniform weight by a delicate scale. In selecting linen for patches I always use a magnifying glass, and I do not find one piece of linen; in twenty-five sufficiently even in texture for re-liable patches. In forcing the projectile down the barrel I am always especially careful to let it barely touch the pow-der. When commencing the firing of a string of shots I take a pencil and run a mark around my loading rod where I have seated the first projectile, and watch this mark every time I load. I use a small, long charger, filling it with powder poured gradually without shaking until heaped, then in the charger to an angle of forty-five degrees and let the secure in this way the same uniformity as by weighing. I pour the powder into the rife through a long funnel. I use a hair-trigger delicately set, and I would as soon do without a rife as without a telescopic sight, whether for target or general game shooting. I have had over forty years' experi-ence, have attended innumerable "turkey shoots" and other

matches, and have never been beaten. I credit my success to the above stated practices and the non-use of liquor and tobacco. MILTON P. PEIRCE. PHILADELPHIA, Pa

Editor Forest and Stream: For use in his muzzleloader let "C. L. S." try the 32-caliber bullet made for the Smith & Wesson revolvers of that size. I think his 42-inch barrel will burn about 40 grains of pow-der. Use a chamois or kid patch, $\frac{1}{2}$ inch in diameter, well greased. The 32-caliber bullet is the closest fit he can obtain ready made. If the above is not satisfactory, a well-made mould and swedge for a bullet of about 90 grains need not cost more than \$4.50, and will add much to his pleasure in using an M. L. rifle. J. S. D. BETHLEREM, PA.

BETHLEHEM. Pa.

SPRING WILDFOWL.

HARRISBURG, Pa., March 30.—A flock of about twenty swans was discovered early yesterday morning on the river opposite the town. Four of them were bagged by local sportsmen. Ducks have not been coming in any great numbers, but quite a number of snipe have been killed the past week.—B.

Bast Week.—B. SACKVILLE, N. B., March 27.—Wild geese have arrived here and the booming of ducking guns is now heard along the line of the north coast, and many a mother goose and festive gander have, within the past few days, been laid low. —STANSTEAD.

KANKAKEE SWAMPS.—La Fayette, Ind., March 29.—A party of four of our local sportsmen returned yesterday from a two days' hunt in the Kankakee Swamps, near Beaver Lake, this State, bringing with them 250 ducks and six very large swan. They report hunting very fine.—W.

SHINNECOCK BAY.—March 30.—There are very many ducks—broadbills, redheads, sheldrakes and whistlers—on Shinnecock Bay; also a few geese and brant, but they are very shy. Was out all day Saturday and shot nothing. No snipe have come along as yet.—J. W.

ANOTHER CLUB CONSTITUTION.

RTICLE I.—This society shall be known as the "West-chester County Game and Fish Protective Association

A RITCLE 1.—This society shall be known as the "West-tion." ART. II.—Sec. 1. This society has been formed for the stocking of farms and streams of Westchester county with game birds and fish, and for the enforcement of the game laws of the State and county. ART. II.—Sec. 1. The officers of this society shall consist of a president, two vice-presidents, secretary, treasurer and counsel. Sec. 2. There shall also be two vice-presidents in each town of the county, who, with the other officers shall constitute a board of directors. Sec. 3. All officers of the society shall be chosen by a ballot at a regular annual meet-ing. An annual meeting of the members of cach town shall be called by the vice-presidents for the next ensuing year for said town. The officers shall hold office for one year. ART. IV.—Sec. 1. In the absence of the president from any annual or special meeting of the society, the first or second vice-presidents, and in the event of their absence, the secretary or treasurer shall call such meeting to order. In the absence of the president from any meeting of the board of directors, the senior member of such board aball act as president, pro tempore; neither the secretary nor the treasurer, however, shall so preside. ART. V.—Sec. 1. The society shall hold an annual meeting which shall be called by the president from any meeting of the board of directors, the senior member of such board shall act as president, pro tempore; neither the secretary nor the treasurer, however, shall so preside. ART. V.—Sec. 1. The society shall hold an annual meeting which shall be called by the president, between the first and fifteenth day of Jannary of each year, and the vice-presidents of each town shall be and act as delegates to said meeting, for their respective towns. There shall also at such meet-ings be held the regular annual election of officers for the next ensuing year, and a distribution of game and game fish, and such other buisness as may properly come before the society. ART. VI.—Sec. 2. Special meetings o

ART. VI.—Sec. 2. Special meetings of the society may be called by the president, when he shall deem the same ne-cessary, and shall be called by him, or by a vice-president thereof, in the event of his absence or failure to act, upon the written request of any nine members of the society. And at such special meeting, vacancies in office may be filled by election. Sec. 2. The secretary shall give the vice-presidents of each town at least ten days' notice, in writing, of any meeting to be called. Attr. VII.—Sec. 1. A list of membership will be in the hands of each vice president of each town, and any person wishing to become a member can do so by applying to said vice-president, signing the list of membership, and paying dues.

wishing to become a member can do so by applying to said vice-president, signing the list of membership, and paying dues. ART. VIII.—Sec. 1. The annual dues of this association shall be two dollars in addition to an initiation fee of one dollar, to be paid on or before the first day of January of each year in advance. ART&IX.—Sec. 1. Officers shall hold over in office until the election and qualification of their successors. ART. X.—Sec. 1. The society shall have power to make all by-laws necessary or proper to the carrying out of the pro-visions of this constitution or the purposes of the society, which by-laws shall be of equal binding force with the con-stitution, except when in conflict therewith; and such by-laws shall not be altered or amended cxcept at a meeting of the society, nor upon less than a majority vote of all of the members present and voting in person, provided, that no alteration or amendment of the said by-laws shall be made except upon notice thereof, given at a preceding regular meeting of the society. ART. XI.—Sec. 1. Each town shall select one or more of the members of this association to be appointed by the sheriff or board of supervisors as special game constables for the county, with full power to enforce the game laws of the state of New York and Westchester county. ART. XII.—Sec. 1. The president shall cause to be pub-lished in all newspapers published in Westchester county, a full copy of the game laws of the state of New York and Westchester county, at such time of the year as the president may deem proper. Also any changes that may be made in said laws. ART. XII.—Sec. 1. Each member of the society shall pledge himself to give the special game constable, for the borefit of the society, any information he may have of the

said laws. ART. XIII.—Sec. 1. Each member of the society shall pledge himself to give the special game constable, for the violation of any of the game laws of the state or county. Sec. 2. The special game constables shall receive from the association, five dollars for each and every person arrested and convicted for such violation of the laws. ART. XIV.—Sec. 1. At a regular or special meeting of the

association, five members shall constitute a quorum to transact any business which may be brought before them. ART. XV.—Sec. I. Persons may be proposed and elected as honorary members in this association by any member thereof, and honorary members so elected shall be exempt from the payment of any initiation fee or annual dues, but shall not be entitled to fill any office or vote at meetings of the association, and shall not be deemed as forming any part of a quorum at any meeting. ART. XVI.—Sec. 1. No person, residing in the town of his predecessor, shall be eligible to fill any office until after the expiration of three years, except in the case of vice presidents and two constables. BY-LAWS,

his predecessor, shall be eligible to fill any office until after the expiration of three years, except in the case of vice presidents and two constables. BY-LAWS. Sec. 1. At the time appointed for a meeting of the society the president, or in his absence, the first or second vice-president, the secretary or the treasurer, shall, in the order named, call such meeting to order as soon as a quorum shall have appeared. Sec. 2. At the annual meeting of the society the order of business shall be as follows: 1. Reading minutes of previous meeting. 2. Reports of officers. 3. Re-ports of committees. 4. Reading of communications. 5. Deferred business. 6. New business. 7. Election of officers, 8. Adjournment, and such order shall not be departed from, except by the unanimous consent of the members present. Sec. 3. The presiding officer at all meetings of the society shall be the president, or in his absence the first or second vice president, the secretary or the treasurer. The presiding officer shall have no vote, except in case of a tie, when he shall have the casting vote. Sec. 4. All money shall be first paid to the secretary, who shall keep a book, in which he shall at once record the receipt of all moneys to the treasurer, within one week after receipt thereof, and to take from the treasurer a proper voucher therefor. It shall be the duvy of the society io draw all orders for the payment of bills contracted by or under the direction of the society or the board of directors, and by them or either of them ordered to be paid; to keep a list of members in a book properly bound and arranged for the purpose, with the place of residence of each member and the date of his election, and a suitable space for the entry of general remarks. He shall give ten days notice of all meetings of the society. He shall make an annual report to the society of his acts as secretary, and of the transactions of the board of directors, giving such details as shall be ne-ceesary to show the financial and general condition of the society. H

office. Sec. 5. The treasurer shall receive from the secretary all moneys belonging to the society, and shall upon receipt thercof give to such secretary proper vouchers therefor. He shall pay out all moneys of the society, but no such moneys shall be by him paid out except upon the written order of the president, drawn and signed by him, under and in pur-suance of a resolution of the society or of the board of direc-tors. He shall make an annual report to the society showing the amount in detail, of all moneys received and disbursed by him

the amount in detail, of all moneys received and disbursed by him. Sec. 6. The counsel to the society shall attend to all the legal affairs of the society, and shall under the direction of the board of directors or the proper committee, bring prompt suit against all offenders against the provisions of the game laws of the state and county. He shall report to the board of directors upon request, and to the society at its annual meeting, all of his acts and proceedings as such named, and should pay over to the secretary all fines and penalties by him collected or received, after deducting his necessary dis-bursements.

meeting, all of his acts and proceedings as such named, and should pay over to the secretary all fines and penalties by him collected or received, after deducting his necessary dis-bursements. Sec. 7. The annual dues shall be two dollars for each year, to be paid by each member in advance, the first such pay-ment to be made upon the application for certificale of mem-bership, and subsequent payments to be annually in advance upon the commencement of each succeding year of member-ship; and in case of non-election such first annual fee shall be returned forthwith to such applicant. Sec. 8. No member or officer shall be expelled or removed from office except at a special meeting of the society, called to act upon the question of such explusion or removal; and whenever any such meeting shall be called for any such pur-pose, it shall be the duty of the secretary to forward to the member or officer to be proceeded against, a copy of the otages to be tried, which copy and specification of the charges to be tried, which copy and specification shall be sent to said member or officer at least ten days before the convening of such meeting. At such meeting testimony may be taken to prove or disprove the charges to be tried; the presiding officer shall he upon the admission or rejec-tion of evidence, and shall be entitled to consult with the connsel upon such points; no vote of removal or explusion shall be taken until all proofs offered in support or disproof of the charge to be tried shall have been duly considered. Sec. 9. The executive affairs of the society shall be man-aged by the board of directors, who shall meet at such times as shall seem proper. The board of directors shall have the power to appoint all proper committees, and to do all acts and pass resolutions necessary or proper for the conduct of the affairs of the society; which acts and resolutions shall be binding, except when in condict with the constitution or by-laws of the society. Sec. 10. Whenever the funds of the society shall permit, the boa

AMENDMENTS. Sec. 11 of the by-laws amended so as to read: Any person who will pay into the treasury of the society one hundred dollars shall be elected by the directors a life member, which said life member shall thereafter be exempt from all dues.

WELLSVILLE, O., March 29.—The Amateur Sporting Club of this place have elected officers, as follows: President, E. K. Taylor; Vice-President, Wm. Stevenson; Secretary and Treasurer, C. R. McDonald. They anticipate going into camp this fall on Cheat River, West Virginia. Any of your readers who are familiar with that section of country and can designate a good location, or other information, will con-fer a favor in so doing. Game in Eastern Ohio is becoming very scarce. Quail almost extinct.—Bvz.

BRAINERD, Minn., March 30.—A number of gentlemen met Monday evening and took initial steps for the organiza-tion of a sportsmen's club. There were about fifteen pres-ent. The meeting organized by clecting Mr. A. J. Halsted as chairman, and Mr. W. S. McClenahan was called upon to act as secretary. Dr. J. L. Camp, who had taken a prominent part in bringing about the meeting, explained at some length what was sought to be accomplished by the organization, the prime object of which would be the pro-tection of game and fish in this vicinity, and the enforce-ment of all laws relating thereto. The wholesale destruction of game and fish in Northern Minnesota is becoming alarm-ing, and acitve and vigorous measures should be taken to cleck it. Therefore the Doctor thought a strong organiza-tion should be effected, and every possible effort made to enforce the laws and bring the guilty parties to justice. The existence of such an organization, he believed, would be detected by a organization in regard to prominespond with other associations of the kind, for the progenization, by laws, etc.; also to arrange for another meet-ing, to be announced in the newspapers, together with an upper request for all citizens of the county interested in the object of the association to be present. The chair appointed progenization, by laws, etc.; also to arrange for another meet-ing, to be announced in the newspapers, together with an upper tracture for all citizens of the county interested in the object of the association to be present. The chair appointed prominest committee Messrs. Geo. Keene, Dr. Camp, Wm. Selve, S. H. Relf and A. A. Greene.

Seelye, S. H. Relf and A. A. Grcene. ANTRIM COUNTY SOCIETY.—The Bellaire, Mich., Breeze re-ports that the citizens of Antrim county, Mich., propose to organize "the Antrim County Society for the Preservation of Fish and Game, and that the movements and aims of this society shall be in the direct interests of the farmers and other inhabitants of this county. The society shall take every means in its power to enforce existing laws looking to the protection of our fish, game and birds, and endeavor to procure the passage of other statutes looking toward the same ends. It shall use its best efforts to discourage and prevent the wanton waste by tourists and others, who have repeatedly made our shores offensive with the tons of valu-able food fish they have left to rot near their camps. It shall see to it that every bucher who, out of season, shall slay his scores of deer in the deep snows, shall not get off scot free, as in times past. It shall endeavor to stop the hounding of deer, and shall seek to obtain information to guide its actions as best it may in all kindred matters looking to the benefit of the inhabitants of Antrim county. Twenty-five persons gave in their names as desirous of being cnrolled as members of the association, and a committee was appointed, consisting of F. H. Thurston, Secretary, of Central Lake: Robert R. Wilkinson, of Eastport, and Roswell Leavitt, of Bellaire, to draft a constitution and by-laws, and give public notice of the time and place of a future meeting, at which the organization of she society may be perfected."

GEORGIA DOVE SHOOTING.—Columbus, Ga., March 31.— The finest dove shooting of the scason has just taken place. A party of gentlemen, consisting of Messrs. O. C. Johnson, Kyle Nuckolis, J. S. Wilcox, Fred Gordon and Henry Burrus, went down into Alabama on the McMillan planta-tion last Thursday afternoon, where they were royally enter-tained by Mrs. McMillan and family. The party was joined by Mr. Will Nuckolis and Mr McMillan, who, with some of the neighbors, took part in the shooting. It must not be overlooked that all the participants are amateur sportsmen, as the party made no pretensions whatever to shooting. The total number of doves which were actually bagged, as far as can be recollected, is 783. There were only ten in the party. The most remarkable feature of the occasion was the shoot-ing of Mr. Kyle Nuckolis, as it was his first attempt. Of the total number of birds killed Mr. Kyle Nuckolis killed and bagged 174. The whole party was surprised and dumb-founded, and are very much inclined to think that this champion shot was playing off. The party did credit to themselves and are to be congratulated on having made what the *Enquirer-Sun* says is the finest record of the sea-son.

Son. CASPAR MOUNTAINS.—In November, 1884, I met at the forty-two mile crossing of the Little Medicine, a government outfit of mule teams, besides pack mules, from Fort Russell, loaded down to the guards with elk hindquarters. Last No-vember, while in camp at the same place, in the Caspar Mountains, Wyoming, we discovered that a large band of Indians were camped just over Mud Mountain engaged in killing clk and deer for the hide. We were informed by some ranch men that these Indians were from the Pine Ridge Agency. Caspar Mountains are the best place for grouse I ever saw, have seen more than one hundred in a bunch, mostly willow grouse. A great deal of game is annually destroyed in these mountains by hunters going in there too game spoils. I saw last fall a large number of elk hind-quarters that had spoiled, but this is done mostly by tender-foot hunters; the old hunters know better how to save their game. I have hunted there for the last three years, about three weeks in October or November of each year, and have never lost any meat yet, except by bob cats or mountain lions.—ELK. ColorAddo,—Berthoud,—In this country game is tolerably

nons.—ELL. COLORADO.—Berthoud.—In this country game is tolerably plentiful. Blacktail deer can be found in a half day's drive. Ducks and geese are very plenty. In a radius of five miles of my house are fifteen small lakes or reservoirs for irriga-tion, ranging from five to one hundred acres each, and in these the ducks and geese have a picnic. Jack rabbits arc also abundant. Most of our lovers of the camp and gun have their regular fall hunt in Northwestern Colorado or Wyoming. Some three years ago North Park was a great resort for antelope hunters. I have seen many a wagon load of from 50 to 100 antelope each brought out from there to be shipped from Larima City to Denver; but that is now a thing of the past. The elk and antelope are fast following the buffalo. One good thing I can say for the Rocky Moun-tain hunters, they don't hound the game "to make them shy."—ELK.

JESSE CONKLING'S BURNED.—"Castle Conkling," one of the old and popular resorts on the Great South Bay, was struck by lightning Wednesday morning, March 31, and burned to the ground. For the past twenty-five years "Jesse Conk-lings" has been a household word with the lovers of the rod and gun. It was situated on Whig Inlet, not far from Sam-mis's summer hotcl on Fire Island and Havemeyer's on Creektree Island. For two generations the Castle has been a landmark, and few sportsmen will hear of the destruction of the old place without regrets. The loss was about \$\$,000.

WISCONSIN GAME BIRDS.—Black River Falls, Wis, April 2.—We have good prairic chicken shooting through this country in season. By traveling considerable quite large bags, as well as fine sport can be had. I have to-day talked with a party who is traveling through the country almost every day surveying, and he tells me that he has not seen prairic chickens so plenty at their season in years as they are this spring. So we anticipate finc shooting the coming sea-son. He tells me he flushed a nice flock of quail of some eighteen or twenty one day last week. He also raises many partridges in his travels. All this goes to show that not-withstanding the very severe weather and unusual large fall of snow, game birds of all classes in this vicinity have win-tered unusually well, and if nothing happens from now out shooting will be good this fall.—G. J. S.

FISHER'S ISLAND HARE HUNT.—Hoboken, N. J., April 4 — Editor Forest and Stream: You will oblige us by pub-lishing in your next issue an invitation to all the friends of the club members, and also to any of the gentlemen of the Eastern Field Trial and Westminster Kennel clubs to join the members of the Fisher's Island Club in a grand hunt for the two breeds of European hares, which we are obliged to exterminate on account of their interference with garden crops. We will leave New York city, April 14, by the 8 Å. M. train, N. Y., N. H. & H. R. R., and go aboard boat at New London, 12 M. —MAX WENEL, See Y F. I. Club.

GROUSE IN WISCONSIN.—Egg Harbor, Door County.— Having occasion recently to visit the resorts of the ruffed grouse I find they have wintered well, notwithstanding the cold days and deep snows of January and February, and if they are not molested during the breeding season by men and boys who care little for the future of this noble bird, we can look for good shooting next fall. Robins and meadow larks have made their appearance, which indicates that spring with us is close at hand.—CORONA.

BRIDGEPORT, Conn.—A new club has leased grounds, 1,500 acres in extent, for a term of years, and already 200 quait have been turned down, and a like number will shortly be added. The land will be strictly preserved, and none but members allowed the use of it.

RANGELEY LAKE LARGE TROUT.

RANCELEY LAKE LARGE TROUT. Editor Forest and Stream: Twas very much surprised to notice in the last issue of foresst AND STREAM, Mr. Ames's statement quoting me as saying that a trou of thirteen pounds or over was ever taken, to my knowledge, in Rangeley waters. It is surely a mis-take, Either Mr. Ames misunderstood me or I said what I had no intention or remembrance of saying, and if the mis-take is on my side I am very glad of this chance of correct-ing it. In speaking in Boston of the catches of trout that have been made at our lakes, I have no doubt referred to what has been done at one cast, but I am very sorry if I worded my remarks so as to give any one to understand that the weight of trout landed at one cast meant the weight of my one trout. As far as I know the large trout taken near the Rangeley Dam a few years ago, by the men fishing for proceding purposes, still stands at the head of the list of our have been done at one cast. A birch bark cut of the fish with the weight marked on it adorns the wall of one of the swith the weight marked on it adorns the wall of one of the swith the weight marked on it adorns the sull of one of the swith the weight marked on it adorns the sull of one of the swith the weight marked on it adorns the wall of one of the swith the weight marked on it adorns the sull of one of the swith the weight marked on it adorns the sull of one of the swith the weight marked on it adorns the sull of one of the swith the weight marked on it adorns the sull of one of the swith the weight marked on it adorns the sull of one of the swith the weight marked on it adorns the sull of one of the swith the weight marked on it adorns the sull of one of the swith the weight marked on it adorns the sull of one of the swith the weight marked on it adorns the sull of one of the swith the weight marked on it adorns the sull of one of the swith the weight marked on it adorns the sull of one of the swith the weight marked on it adorns the sull of one of the swith

THE TROUT OF SUNAPEE LAKE

THE TROUT OF SUNAPEE LAKE. Editor Forest and Stream: Mr. Livingston Stone, whose name is well-known to all your readers, called to my notice a day or two since, a letter from Dr. C. A. Kingsbury, of Philadclphia, in which he pronounces my suggestion, that if they be Oquassa trout, which have been lately discovered in the Sunapee Lake, they may be the descendants of the plant of 4,000 fry of that vari-ety made by Mr. A. H. Powers in Junc, 1879, when we were both members of the N. H. Fish Commission, as "quite im-probable, if not absolutely impossible." Also another letter from Mr. John D. Quackenboss, of New York, who has had for a dozen years a summer cottage on the shore of the lake and is well versed in its inhabitants and who warmly in-dorses my suggestion, for which I hereby return him my thanks. Now, Mr. Kingsbury's statement as to the impossibility of

<text><text><text><text><text><text><text><text><text>

Ethilate Forest and Stream:
The pounds in six years is certainly a phenomenal? The capacity of a yoong trout for digesting and assimilating food is so great that it is hardly safe to set a limit to it anywhere. When a trout breeder has six boxes of young trout fry to feed, the first lot is hungry and ready to feed again by the time the sixth lot has been fed, so that the breeder could use a single fash that had had enough food to satisfy it.
This digestive power of a trout is something marvelous dits or apiloly destroys the animal tissues that have been fake in its is to rapidly destroys the animal tissues that have been dit so rapidly destroys the animal tissues that have been fake in its is something marvelous.
The more the fish eat, the faster they grow. Indeed the anothing one resembles that of fire than anything one would expect from any kind of organic action.
Tow, the more the fish eat, the faster they grow. Indeed their amount of growth seems to be in direct ratio to their amount of growth seems to be in direct ratio to their amount of food, other things being equal, and this is particle and yoorly fed ones is sometimes so great as to be almost incedible, and 1 can testify from personal experience that fave seen many a well fed yearling trout that could and would eat for his breakfast a dozen poorly fed trout, such as a have also seen. of his own age.
That it is impossible for an Oquasas throut to get a ten pound from the second be fort to get a ten pound for the second be discusted and growth in six years? May it not be possible after all that is provenable circumstances which would enable the first to accomplish this growth in the time given. My first ha trout's prodigious capacity for eating and growing, there may be favorable circumstances which move the fish to accomplish this growth in the time given. My first ha trout is prodigious capacity for the would enable the fish to accomplish this growth in the time given. My first ha trout is prodigious capacity fore

for this extraordinary growth of ten pounds in six years and has made it possible, if anything can make it possible. Col. Webber says that fresh-water smells have been plentifully planted in Sunapee Lake. This being the case and the in-troduction of smelts being supposed to be a success, I can hardly imagine anything more likely to furnish for the trout planted in Sunapee Lake. This being the case and the in-hardly imagine anything more likely to furnish for the trout in the right kind of food to give them a rapid and extraor-dinary growth. The smelts hatch out just enough later than the trout and are just enough smaller to provide the trout in the trout and are just enough smaller to provide the trout in the trout and are just enough smaller to provide the trout in the trout and are just enough smaller to provide the trout in the trout and are just enough smaller to provide the trout in the trout and are just enough smaller to provide the trout in the trout and are just enough smaller to provide the trout in the trout and are just enough smaller to provide the trout in the trout and are just enough smaller to provide the trout in the trans any other similar periods of their lives. If after than during any other similar periods of their lives. If after this they have all the food they want, and if smelts are abun-dant in the lake, I do not sthink that any positive evidence in favor of the Oquassa theory should be set aside, or would be even much weakened by any *a priori* argument based on the supposed impossibility of the alleged growth, it being generally conceded, I believe, that *a priori* argument can be fairly used yet in the present state of this good-natured coor to are set to me that the alleged impossibility can be fairly used yet in the present state of this good-natured coor to the appearance of the new fish. The other hand there appears to be, from Mr. Hodge's statements, conclusive proof in his possession against the opuass theory, viz., evidence that the fish was caught in the lake before the

CHARLESTOWN, N. H.

TROUT ANGLER'S FIRST SALMON.

<text>

and made a last desperate dash out to the middle of the river. My hands and arms by this time had become fairly sore from the long strain, and it was really hard work to reel him in again across that strong current. But this time Pete was successful, and as he thrust the gaff in the water, bubbles and blood came up and the pressure was taken off the rod. He raised the struggling fish from the water, and I would not let him stop until he had taken the salmon full twenty feet from the shore. And now I had killed my first salmou! Time fifty minutes from strike to gaff. The scales were brought out and the fish found to weigh twenty-four and a half pounds. I took my salmon over to the shade of a tree and told the men I had had all the fishing I wanted for that morning, although it was then only half past seven. I lighted my pipe, and throwing myself on the grass, "visited" with my beautiful prize until I knew every inch of him from head to tall, and if I had been an artist could have drawn his portrait from memory. On the trip I struck altogether 28 fish, saving 19 of them ; the largest weighed 32 pounds, the smallest 8, and the aver-age was 17 pounds. I made up my mind that a trout fisher-man could readily learn to kill salmon, even on such a rush-ing, tumbling stream as the Sainte Marguerite is the whole forty miles from Upper Forks to the Saguinay. GARD. Osweoo, N. Y., March, 1886.

Oswego, N. Y., March, 1886.

DEATH OF IRA WOOD.

DEATH OF IRA WOOD. We are pained to chronicle the death of our friend and companion of boyhood, Ira Wood, the well known angler and genial sportsman. Mr. Wood died very suddenly of bilious colic at Albany, N. Y., on Tuesday last. He was born at Greenbush, opposite Albany, about the year 1893, and was consequently close to his fifty-third year. While yet a boy his family moved to Syracuse, where for a long time Ira was chief of the fire department of that city. He served with credit during the war, and a few years ago returned to Albany, where he was in the employ of a large house deal-ing in stoves. Within a month he opened a store for the sale of fishing tackle, and hardly a week ago he was in our office, cheery as ever, and with bright hopes for the future. Those who met him at the recent fly-easting tournaments in this city were impressed with his manly, straight-forward way, and the unselfishness with which he coached anateurs and helped his opponents when their lines bucame tangled. Mr. Wood was a brother to the late Reuben Wood, so re-normed as an angler. He leaves a family.

To A FIRM in Gloucester, Mass., who have named a new schooner in his honor, Mr. Whittler has sent a note in which he writes: "I have always been interested in the New England fisheries, and am glad you have honored me by giving one of your schooners my name. I thank you for the some send you my unasked-for autograph on the sheet inclosed." On the sheet inclosed he had written: Luck to the craft that bears this name of name, Good fortune follow with the golden spoor. The glazed hat, and tarry pantalon: And whereso'er her keel shall cut the brine, Cod, hake and mackerel guarrel for her line. Shipped with her grey, whatever wind may blow, Or tides delay, my with with her shall go. Fishing by proxy. Would that it height thow At need her course, in lack sum star, Where ucbears threaten, and the shar rest sare; Lift the blind togs on Antocobs and star. More der and where port for her sea found for and warms. Break the long calms, and charm away the storms. Break the long calms, and charm away the storms. Jonx G, Whirriner.

OAK KNOLL, 3d mo., 1856.

WHAT FISH HAS THIS HABIT?—*Editor Forest and Stream:* For several years, in my fishing tours around Montauk Point, Oyster Bay, Sea Cliff, and several places about Long Island Sound, I have noticed in small fishing that I would catch two fish on one hook, the cause of which I attributed to their being frightened by larger fish of prey. So last sesson I determined to find out, in order to be sure that this state-ment would be right. I was accompanied by an angler, and by careful watching came to the conclusion that, seeing one of their school taken in an opposite direction, they take hold of the unfortunate's tail to keep him back from a supposed current, as they are used to this habit in streams of opposite currents; and after being out of water, exhaustion causes them to tighten the bite, thus enabling the angler to land them. I would like older anglers than myself to publish their experience of this.—E. FRANK Ross.

MASKINONGE. — Editor Forest and Stream: I see that I am quoted as using the spelling "muscallonge," but in the manuscript of my article mentioaed (see FOREST AND STREAM, Vol. XX., page 490), I certainly wrote maskinonge, but the printer made it read muscollonge. In the Province of Que-bec there is a Maskinonge county, also several villages, rivers and lakes by the same name, and as it is to be sup-posed that they there have the correct pronunciation of the word, its glossic is as follows: M_{+4} , s+k+1, m_{+4} , m_{+5} , k-k(the sign + stands for the glide from the sound of a letter to the next following). Some years ago I attempted to learn the origin of the above word, and after most diligent inquir-les among the best informed habitants, I could only learn that it was the Indian name for the largest of the pike fam-ily, *Esor nobilior*.—STANSTEAD (Sackville, N. B).

BASS FLIES.—Will Mr. Holberton give a little information about the dressing of the bass flies he mentions as taking ones in a late issue of FOREST AND STREAM, if it is not ask-ing too much, so that we will know what to purchase or how to tie? He speaks of a "bass grizzly" and a "bass miller." Are these any wise different from the regular grizzly king or white miller, save that they are tied on hooks of a size suit-able for bass? And wherein doesa "match-wing ibls" differ from the red ibls, so well known? And will he give the tying of these flies that he mentions—Holberton, post jungle, St. Patrick and Lottie? These may be common species, but there is such a woeful looseness in fly nomenclature, that they, in name at least, are new to me.—PERCYVAL.

An UNIQUE ANGLING WORK —For the past three years Mr. Wakeman Holberton, well-known as an accomplished angler and artist, has been engaged in writing a book on his favorite sport. The volume is entirely engrossed by Mr. Holberton's pen on vellum. The illustrations are in pen and ink and in water colors, while the initial letters are illumin-ated in mediæval style. It is calculated that three more years will be required to finish this volume, which will be a treat to those who are so fortunate as to see it.

FISH AND GAME IN THE ADIRONDACKS —Mr. A. R. Fuller, of Meacham Lake, Franklin county, writes: "The winter has been a good one for game. My deer have wintered well, and we saw two of them a few days ago, near my log house at the other end of the beach. They did not look thin, and could run well. We see partridge (ruffed grouse) often, and a few days ago I saw three foxes at one time. I cannot hear of any killing of deer in this section, and think there has been nonc. There has been no fishing. The new fish law for the Adirondacks I think is a good one. We have just finished getting in ice, which is about 22 inches of solid blue, and our next job is to get in wood, and then we are ready for the fishers."

TROUTING ON LONG ISLAND.—Comparatively few trout have been taken on the island during the first week of the open season. Cold northeast storms with rain have pre-vniled, and but one decent day occurred in the week. This was on Friday, the 2d. At the South Side Club many mem-bers have been waiting for better weather, while a few have fished. At times the wind has blown a gale in which no fly-fishing could be done. But few fish were taken on the south side of the island and few or none on the north side. There are plenty of trout in the streams and ponds, which will rise to the fly when better weather comes.

TIP-UP FOR PICKEREL. — "Awahsoose" sends us a modifi-cation of "Yager's" tip-up, illustrated in issue of March 4: "Here is a rough sketch of a 'jack' or 'tip-up,' which I think is more convenient than any of those you gave. The two pieces pivot on a screw, and can be folded into very compact shape for carrying. The end of the upper stick that rests upon the ice may be painted black or red to make it show plaiply when raised by a fish biting. 'W. J. C.'s' slot might casily be adopted, and would doubtless be an improvement, Any stake arrangement seems troublesome and unnecessary."

MOOSELECMAGUNTIC LAKE.—I think your correspondent, "Special," is mistaken about the new flowage on the Moose-lucmaguntic Lake. I have it from good authority that there will be no new flowage this spring. When the wings of the new upper dam are finally completed, as I understand it, there will only be two feet and three inches more water on the lake than there has been for the past two or three springs. —CAPT, BARKER.

KEUKA LAKE.—Keuka Lake has just received into its deep waters 500,000 Halsey trout and 80,000 black basss which were placed therein by Jack Sheridan, of Penn Yan, State fish protector. The trout are from the spawn of trout taken by the late Wm. L. Halsey from the mountain lakes of Oregon, and given to Seth Green to propagate.—*Elmira Gazette, March* 27.

PENNSYLVANIA TROUT SEASON will open April 15, as stated in list of seasons at head of this column last week.

RESTOCKING WITH SALMON.

Editor Forest and Stream: I wish to obtain answers to the following inquiries: (1) Has the planting of salmon and trout eggs in any of the Maine rivers resulted in a commercial success; that is, has a river from which the fish had been exterminated, been re-stocked so as to afford good sport again within, say five years, at a reasonable figure? (2) What is the cost of eggs and young fish per 1,000 of calmon, trout and landlocked salmon and where can they be obtained? (3) Is it better to turn in mature fish ready to snawn young

(a) Is it better to turn in mature fish ready to spawn, young fish or eggs?
(b) What are the best practical works on fishculture?
(c) What are the best practical works on fishculture?
(c) What are the best practical works on fishculture?
(c) What are the best practical works on fishculture?
(c) What are the best practical works on fishculture?
(c) What are the best practical works on fishculture?
(c) What are the best practical works on fishculture?
(c) What are the best practical works on fishculture?
(c) We want to have been abundant, but are completely exterminated at present, all obstruction being now, however, removed and ample spawning grounds. Would the expenditure of a sum of money in fish or eggs be likely to result in a success financially in the sale after a few years of fish or fishing privileges?
(c) We will answer the questions hoping to hear from others treating the subject at greater length.
(c) We cannot give cost of eggs or fry, write to Mr. Charles G. Atkins, Bucksport, Me.; Mr. E. M. Stilwell, Bangor, Me.; or Mr. Henry O. Stanley, Dixfield, Me.
(c) We will be subject at the subject at young fish just ready to feed.
(c) We will be the U. S. Fish Commission, some twelve volumes.]

umes.] BROWN TROUT EGGS IMPORTED.—This spring, Herr von Behr, President of the German Fishery Association, made a shipment of 64,000 eggs of the brown trout, *Salmo fario*, to be divided between Prof. S. F. Baird, Mr. E. G. Blackford and Mr. Fred Mather. This lot was a total loss on arrival. A second shipment of 40,000 from Herr von Behr to the same persons arrived in good order. The steamer Elbe, of the North German Lloyds, will bring a further shipment of 50,000 from Herr Max von dem Borne, the well-known fishculturist, to Messrs. Blackford and Mather, but by agreement will be divided with Prof. Baird. Some of the eggs already received were sent to the U. S. Stations at Northville, Mich., and Wytheville, Va. Mr. Frank N. Clark, in charge of the former hatchery, reports their arrival in good order. Some 30,000 eggs are now in the troughs at Cold Sprine Harbor, L. I., and are doing well. Mr. W. L. Gilbert, of Plymouth, Mass., has imported 25,000 eggs of this fish from England, and has sent some to the Blooming Grove Park Association of Pennsyl-vania, and to other places, reserving 5,000 for himself. The merits of this fish are rapidly becoming known to our anglers and the fry are in great demad.

THE ADIRONDACK HATCHERY.—Some time ago we published a pledge signed by one hundred guides, hotel-keepers, and others, condemning the depredations of the vandals who cut up the nets of the Fish Commission at Little Cedar Pond (now Lake Brandon), and agreeing to sustain any efforts to bring the offenders to justice. We have now re-ceived from Mr. J. M. Wardner, proprietor of the Rainbow Lake Hotel, a printed list of as many more names from St. Regis Lake, Bloomingdale, and Loon Lake. Mr. Walters, the superintendent of the hatchery, is now at Cold Spring Harbor, Long Island, hatching land-locked salmon, lake trout, brown trout and smelts, for the Adirondacks, in consequence of the breaking of his dam. He will return with these fish in May.

SHORT LOBSTERS SEIZED.—Damariscotta, Me., March 30.—Fish Warden John L. Thompson seized about 1,000 under-size lobsters in Boothbay and Bristol vesterday. He chartered a small steamer and took the cannung factories by surprise.

FOREST AND STREAM.

SHORT LOBSTERS.—The Rockland (Me.) Courier-Gazette reports: "Fish Warden Thompson made a seizure of three barrels of lobsters consigned to parties in Boston at the steamboat landing at Wiscasset, Tuesday. Forty out of the two hundred and forty lobsters were found to be less than the law allowed. The seizure has made a great stir among the fish dealers in that vicinity. Warden Thompson is too much for them. The short lobster business has cost a Portland man \$1,300, according to Deputy Fish Commissioner Shattuck of Boston. It is claimed by friends of the lobster law that the lobster fishermen are coming to the commissioners with con-gratulations on their success in stopping the short lobster business. They say that if it is kept up for only a few years longer the lobster is saved. They appear to be in favor of protection—the great majority of them—and they would be willing to furnish evidence to convict the few who persist in retaining lobsters forbidden by law, but for the fact that their entire property and living is in their lobster pots, and they dare not offend the law breakers. In the case of the Portland man who swore that a car containing short lobsters was the property of the man who had loaned at to him, and that he had ho knowledge of the lobsters in it, the commissioners say that they shall have no difficulty in proving that the key to the car cases against him, and they say hc will have to give up the short lobster business. Fish Commissioner Counce, fish war-dens Thompson, of Newcastle, Nichols, of Winnegance and Despreaux of Brunswick, and others, held a private meeting in Batk, Tuesday, and action was taken concerning the future course to be pursued by these officers of the law. It was the decided expression of all to push things to the fullest extent of the law.

The Bennel.

FIXTURES. FIELD TRIALS.

Nov. S.—Second Annual Field Trials of the Western Field Trials Association, at Abilene, Kan. R. C. Van Horn, Secretary, Kansas City, Mo.

City, Mo. Nov. 32.—Eighth annual field trials of the Eastern Field Trials Club at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings county, N. Y.

DOG SHOWS.

April 6, 7, 8 and 9, --Second Annual Dog Show of the New England Kennel Club. Edward A. Moseley, Secretary, Boston, Mass. April 18, 14, 15 and 18. First Annual Dog Show of the Hartford Kennel Club. A. C. Collins, Secretary, Hartford, Con. April 13 to 18.-Bench Show of the Buffalo S, F. P. O. A., Main Street Rink, Buffalo E. H. Rounds, Secretary, Tö White Building. April 27, 28, 29 and 30, --Third Dog Show of the Cleveland Bench Show Association. C. M. Munhall, Secretary, Cleveland, O. May 4, 5, 6 and 7.-Tenth annual dog show of the Westminster Kennel Club, at Madison Square Garden, New York. May 18, 19, 20 and 21 --Third Annual Dog Show of the St. Louis Gun Club, St. Louis, Mo. Geo. Munson, Manager.

A. K. R.-SPECIAL NOTICE.

A. K. R.-SPECIAL NOTICE. THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is pub-lished every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription \$1.50. Address "American Kennel Register," P. O. Bo. 2832, New York. Number of entries already printed **3481**.

of entries already printed 3481. THE NEW HAVEN DOG SHOW. THE third annual dog show of the New Haven Kennel Club, held at New Haven last week, was a first-class show. Although there were not so many entries as last year, the average quality was much better. The management was as good as we have ever seen; everything in connection with it ran smoothly, and the exhibitors were warm in praise of the manner in which the show was conducted. There is a genuine ring to the words of welcome with which the New Haven boys greet their visitors that makes them feel at home. There has always been at the New Haven shows an *entente* cordiale among the visitors that renders the reunions there very pleasant. At no show has this been more apparent than at the one just held. The armory of the 2d Regiment, in which the show was held, is very roomy, well lighted and well ventilated. The dogs were confortably benched, and there was ample room for visitors. The attendance was here of the first two days, and we have ne doubt that the receipts of the show will exceed the expenses. The judging in nearly all of the classes was satisfactory, although some mistakes were made. We are pleased to record that not a single pro-test was made. The performance of the trick dogs was eagerly watched by delighted crowds. Nep, one of the per-formers, is a nondescript terrier possessed of wonderful pow-ers. He performed many difficult and pleasing feats, display-ing in some of them a degree of intelligence that was astob rishing. His owner informs ns that Nep has been trained en-tirely by the humane method, and that he has not been struck a blow.

isling. His owner informs ns that Nep has been trained entirely by the humane method, and that he has not been struck a blow.
 Spratts Patent had charge of the feeding of the dogs, although the club furnished free to those who desired it any description of food called for. We questioned many of the exhibitors in regard to Spratts biscuit, and found that those who had not previously used them complained that they physicked their dogs, and consequently they were not favorably disposed toward them. On the other hand, we found many that feed them at home who like them. One of our most prominent kennels makes a practice of feeding the biscuit for at least a week previous to attending a show, and the kennel man in charge strongly recommends this course, and says that if this is done nine dogs out of ten will thrive on the food. The judging ring was in the center of the building. It was commodious enough to allow the largest classes ample room. The judging commenced on Tuesday and was completed on Wednesday at noon. We published a list of the awards last week. The list was more accurate than could be expected. The corrections will be found below, together with the remainder of the specials. The judges of the different classes were as follows: English setters, black and tan setters, Irish setters, and pointers, Mr. John Davidson, Monroe, Mich. Mastiffs, spaniels, greyhounds, deerhounds, Newfoundlands, bull-terriers, pugs, Yorkshire and toy terriers, toy spaniels, talian greyhounds, Mexican hairless and miscellaneous, Mr. C. H. Mason, Bay Ridge, L. I. Beagles, Mr. L. D. Sloan, Philadelphia, Pa. Forkhounds, Messers. Sloan and Davidson.
 St. Bernards, collies, bulldogs, poodles, fox-terriers, basset hounds, dachshunde, black and tan. Bedlington, Irish, Skye. Daadie Dinmont and rough terriers, Mr. Ronald H. Barlow, Philadelphia, Pa. Trick dogs, New Haven, Com.
 MASTIFFP- (MR. MASON).
 There were istreen entries in these classes, and the quality was decidedly good

MASTIFFS-(MK. MASCA). There were sixteen entries in these classes, and the quality was decidedly good. Homer, looking very well, represented the champion dogs and Prussian Princess and Rosalind the opposite sex. The judging of the next class was eagerly watched by admirers of the breed, and both the llfords found numerous friends. Caution's beautiful color and excellent condition were not of thouselves sufficient to outweigh the turner lines of Cromwell. The latter is a truly formed dog,

<text><text><text><text><text><text>

GRETHOUNDS—(MR. MASON). Bouncing Boy, looking well, scored a bloodless victory in the champion class. In the open class Hawthorn Belle, a racy little bitch, not quite stout enough for our liking, beat Harlequin, whose worst faults are in feet and back. Fido would have been higher on the list but for his plain head and light eyes. He stands on capital legs and feet, has good pro-pellers, and was well shown. Hush Money was badly shown, and has not improved on his puppy form. The special prize offered by the club for the best greyhound bitch was a splendid trophy, and fell to the share of Hawthorn Belle.

<text><text><text><text><text>

ENGLISH SETTERS-(MR. DAVIDSON). Rockingham and Plantagenet graced the class for champion English dogs. Plantagenet being out aft oast left his formid-able opponent to score an easy viotory. There were no entries

THE TROUT OF SUNAPEE LAKE.

Editor Forest and Stream: Mr. Livingston Stone, whose name is well-known to all your readers, called to my notice a day or two since, a letter from Dr. C. A. Kingsbury, of Philadelphia, in which he pronounces my suggestion, that if they be Oquassa trout, which have been lately discovered in the Sunapee Lake, they may be the descendants of the plant of 4,000 fry of that vari-ety made by Mr. A. H. Powers in June, 1879, when we were both members of the N. H. Fish Commission, as "quite im-probable, if not absolutely impossible." Also another letter from Mr. John D. Quackenboss, of New York, who has had for a dozen years a summer cottage on the shore of the lake and is well versed in its inhabitants and who warmly in-dorses my suggestion, for which I hereby return him my thanks.

and its well suggestion, for which I hereby return him my thanks. Now, Mr. Kingsbury's statement as to the impossibility of my suggestion, seems to be rather an ex-cathedia assumption inasmuch as the landlocked salmon from the Schoodic eggs have increased in weight from two to twelve pounds by the same change of habitiation, and as I now believe that what I first suggested as a possibility is extremely probable. I will give my reasons for such faith. In the first place, let me premise that I was born and brought up in this village within thirty miles of Lake Suna-pee, and although I went away from here, when seventeen practicable made an annual visit of more or less duration to my birthplace. When a boy I was familiar with the Suna-pee trout, and have seen them of three or four pounds weight, which was considered very large and was, I think, as large as they used to grow in those days. When Mr. Stone handed me these papers, he asked me, "to what cause do you attribute this abnormal growth of these fish in Sunapee Lake?"

<text><text><text><text><text><text><text><text><text>

for this extraordinary growth of ten pounds in six years and has made it possible, if anything can make it possible. Ool. Webber says that fresh-water smells have been plentifully planted in Sunapee Lake. This being the case and the in-inordy imagine anything more likely to furnish for the trout introduction of smelts being supposed to be a success. I can hardly imagine anything more likely to furnish for the trout introduction of smelts being supposed to be a success. I can hardly imagine anything more likely to furnish for the trout introduction of smelts being supposed to be a success. I can hardly imagine anything more likely to furnish for the trout introduction of smelts being supposed to be a success. I can hardly imagine anything more likely to furnish for the trout in the trout and are just enough smaller to provide the trout in the trout and are just enough smaller to provide the trout in the trout and are just enough smaller to provide the trout in the trout and are just enough smaller to provide the trout in the trans any other similar periods of their lives. If after than during any other similar periods of their lives. If after this they have all the food they want, and if smelts are abun-dant in the lake. I do not see why they should not. Then I cannot help thinking that it is still an open question about the extraordinary growth that is claimed for the Oquassa plant. At all events I do not think that any positive evidence in favor of the Oquassa theory should be set aside, or would be even much weakened by any *a priori* arguments are at best extremely hazardous and fragile weapons against evi-dence resting on established fact. Mote on the and there appears to be, from Mr. Hodge's statements, conclusive proof in his possession against the fully used yet in the present atta to fulls good-natured cor-troversy against the advocates of the Oquassa explanation of the appearance of the new fish. The other hand there appears to be, from Mr. Hodge's statements, conclusive proof in his possession

CHARLESTOWN, N. H.

A TROUT ANGLER'S FIRST SALMON.

<text><text><text><text><text><text><text><text><text><text><text><text><text><text><text><text><text><text><text><text><text><text>

and made a last desperate dash out to the middle of the river. My hands and arms by this time had become fairly score from the long strain, and it was really hard work to reel him in again across that strong current. But this time Pete was successful, and as he thrust the gaff in the water, bubbles and blood came up and the pressure was taken off the rod. He raised the struggling fish from the water, and I would not let him stop until he had taken the salmon fall twenty feet from the shore. And now I had killed my first salmon! Time fifty minutes from strike to gaff. The scales were brought out and the fish found to weigh twenty-four and a half pounds. I took my salmon over to the shade of a tree and told the men I had had all the fishing I wanted for that morning, although it was then only half past seven. I lighted my pipe, and throwing myself on the grass, "visited" with my beautiful prize until I knew every inch of him from head to tail, and if I had been an artist could have drawn his portrait from memory.

tail, and if 1 had been an artist could have drawn his portrait from memory. On the trip I struck altogether 28 fish, saving 19 of them; the largest weighed 33 pounds, the smallest 8, and the aver-age was 17 pounds. I made up my mind that a trout fisher-man could readily learn to kill salmon, even on such a rush-ing, tumbling stream as the Sainte Marguerite is the whole forty miles from Upper Forks to the Saguinay. GAND. OSWEGO, N. Y., March, 1886.

DEATH OF IRA WOOD.

DEATH OF IRA WOOD. We are pained to chronicle the death of our friend and companion of boyhood, Ira Wood, the well known angler and genial sportsman. Mr. Wood died very suddenly of bilious colic at Albany, N. Y., on Tuesday last. He was born at Greenbush, opposite Albany, about the year 1853, and was consequently close to his fifty-third year. While yet a boy his family moved to Syracuse, where for a long time Ira was chief of the fire department of that city. He served with credit during the war, and a few years ago returned to Albany, where he was in the employ of a large house deal-ing in stoves. Within a month he opened a store for the sale of fishing tackle, and hardly a week ago he was in our office, cheery as ever, and with bright hopes for the future. Those who met him at the recent fly-casting tournaments in this city were impressed with his manly, straight-forward way, and the unselfishness with which he coached amateurs and helped his opponents when their lines became tangled. Mr. Wood was a brother to the late Reuben Wood, so re-nowned as an angler. He leaves a family.

To a FIRM in Gloucester, Mass., who have named a new schooner in his honor, Mr. Whittier has sent a note in which he writes: "I have always been interested in the New England fisheries, and am glad you have honored me by giv-ing one of your schooners my name. I thank you for the compliment, and send you my unasked-for autograph on the sheet inclosed." On the sheet inclosed he had written: Luck to the craft that bears the name of mne, Good fortune follow with the golden spoon. The glazed hat, and tarry pantaloon: And whereso'er her keel shall cut the brine, Cod, hake and mackerel quarrel for her line. Shipped with her crew, whatever wind may blow, Or tides delay, my wish with her shall go. Fishing by proxy. Would that it might show At need her course, in lack of sum and star. Where icebergs threaten, and the sharp reefs are; Lift the billof fogs on Anticosi's lee And Avalon's rocks: make populous the sea Round Grand Manan with eager funy swarms. Break the long calme, and charm away the storms. JOHN G. WHITTIER. OAK KNOLL, 3d mo., 18:6.

OAK KNOLL, 3d mo., 1886.

WHAT FISH HAS THIS HABIT?—Editor Forest and Stream: For several years, in my fishing tours around Montauk Point. Oyster Bay, Sea Cliff, and several places about Long Island Sound, I have noticed in small fishing that I would catch two fish on one hook, the cause of which I attributed to their being frightened by larger fish of prey. So last season I determined to find out, in order to be sure that this state-ment would be right. I was accompanied by an angler, and by careful watching came to the conclusion that, seeing one of their school taken in an opposite direction, they take hold of the unfortunate's tail to keep him back from a supposed current, as they are used to this habit in streams of opposite eurentis; and after being out of water, exhaustion causes them to tighten the bite, thus enabling the angler to land them. I would like older anglers than myself to publish their experience of this,—E. FRANK Ross.

MASKINONGE.—Editor Forest and Stream: I see that I am quoted as using the spelling "muscallonge," but in the manuscript of my article mentioned (see FOREST AND STIERAM, Vol. XX., page 490), I certainly wrote maskinonge, but the printer made it read muscollonge. In the Province of Que-bec there is a Maskinonge county, also several villages, rivers and lakes by the same name, and as it is to be sup-posed that they there have the correct pronunciation of the word, its glossicies as follows: $M_{+4}+s_{+}k_{+}i_{+}a_{+}a_{+}a_{+}g_{+}e_{-}c_{+}$ (the sign + stands for the glide from the sound of a letter to the next following). Some years ago I attempted to learn the origin of the above word, and after most diligent inquir-ies among the best informed habitants, I could only learn that it was the Indian name for the largest of the pike fam-ily, Esox nobilior.—STANSTEAD (Sackville, N. B).

BASS FLIES.—Will Mr. Holberton give a little information about the dressing of the bass flies he mentions as taking ones in a late issue of FOREST AND STREAM, if it is not ask-ing too much, so that we will know what to purchase or how to tie? He speaks of a "bass grizzly" and a "bass miller." Are these any wise different from the regular grizzly king or white miller, save that they are tied on hooks of a size suit-able for bass? And wherein does a "match-wing ibis" differ from the red ibis, so well known? And will he give the tying of these flies that he mentions—Holberton, post jungle, St. Patrick and Lottie? These may be common species, but there is such a woeful looseness in fly nomenclature, that they, in name at least, are new to me.—PEROYVAL.

AN UNIQUE ANGLING WORK —For the past three years Mr. Wakeman Holberton, well-known as an accomplished angler and artist, has been engaged in writing a book on his favorite sport. The volume is entirely engrossed by Mr. Holberton's pen on vellum. The illustrations are in pen and ink and in water colors, while the initial letters are illumin-ated in mediaval style. It is calculated that three more years will be required to fluish this volume, which will be a treat to those who are so fortunate as to see it.

FISH AND GAME IN THE ADIRONDACES —Mr. A. R. Fuller, of Meacham Lake, Franklin county, writes: "The winter has been a good one for game. My deer have wintered well, and we saw two of them a few days ago, near my log house at the other end of the beach. They did not look thin, and could run well. We sce partridge (ruffed grouse) often, and a few days ago I saw three foxes at one time. I cannot hear of any killing of deer in this section, and think there has been none. There has been no fishing. The new fish law for the Adirondacks I think is a good one. We have just finished getting in ice, which is about 22 inches of solid blue, and our next job is to get in wood, and then we are ready for the fishers."

TROUTING ON LONG ISLAND.—Comparatively few trout have been taken on the island during the first week of the open season. Cold northeast storms with rain have pre-valled, and but one decent day occurred in the week. This was on Friday, the 2d. At the South Side Club many mem-bers have been waiting for better weather, while a few have fished. At times the wind has blown a gale in which no fly-fishing could be done. But few fish were taken on the south side of the island and few or none on the north side. There are plenty of trout in the streams and ponds, which will rise to the fly when better weather comes.

TIP-UP FOR PICKEREL, — "'Awahsoose" sends us a modifi-cation of "Yager's" tip-up, illustrated in issue of March 4: "Here is a rough sketch of a 'jack' or 'tip-up,' which I think is more convenient than any of those you gave. The two pieces pivot on a screw, and can be folded into very compact shape for carrying. The end of the upper stick that rests upon the ice may be painted black or red to make it show plainly when raised by a fish biting. "W. J. C.'s' slot might easily be adopted, and would doubtless be an improvement. Any stake arrangement seems troublesome and unnecessary."

MOOSELCEMAGUNTIC LAKE.—I think your correspondent, "Special," is nistaken about the new flowage on the Moose-lucmaguntic Lake. I have it from good authority that there will be no new flowage this spring. When the wings of the new upper dam are finally completed, as I understand it, there will only be two feet and three inches more water on the lake than there has been for the past two or three springs. —CAPT, BARKER.

KEUKA LAKE.—Keuka Lake has just received into its deep waters 500,000 Halsey trout and 80,000 black basss which were placed therein by Jack Sheridan, of Penn Yan, State fish protector. The trout are from the spawn of trout taken by the late Wm. L. Halsey from the mountain lakes of Oregon, and given to Seth Green to propagate.—*Elmira Gazette, March* 27.

PENNSYLVANIA TROUT SEASON will open April 15, as stated in list of seasons at head of this column last week.

Mishculture.

RESTOCKING WITH SALMON.

Editor Forest and Stream: Editor Forest and Stream: I wish to obtain answers to the following inquiries: (1) Has the planting of salmon and trout eggs in any of the Maine rivers resulted in a commercial success; that is, has a river from which the fish had been exterminated, been re-stocked so as to afford good sport again withm, say five years, at a reasonable figure? (2) What is the cost of eggs and young fish per 1,000 of salmon, trout and landlocked salmon and where can they be obtained? (3) Is it better to turn in mature fish ready to spawn, young fish or eggs?

(3) Is it better to turn in mature fish ready to spawn, young fish or eggs?
(4) What are the best practical works on fishculture?
(5) What are the best practical works on fishculture?
(6) What are the best practical works on fishculture?
(7) I should further be glad of an expression of opinion from experts on the following question: Given a river in which salmon are known to have been abundant, but are com pletely exterminated at present, all obstruction being now, however, removed and ample spawning grounds. Would the expenditure of a sum of money in fish or eggs be likely to result in a success financially in the sale after a few years of fish or fishing privileges?
Jock Scort, (We will answer the questions hoping to hear from others treating the subject at greater length. 1. Yes. 2. We cannot give cost of eggs or fry, write to Mr. Charles G. Atkins, Bucksport, Me.; Mr. E. M. Stilwell, Bangor, Me., or Mr. Henry O. Stanley, Dixfield, Me. 3. Young fish just ready to feed. 4. The Reports of the U. S. Fish Commission, some twelve volumes.]

umes.] BROWN TROUT EGGS IMPORTED.—This spring, Herr von Behr, President of the German Fishery Association, made a shipment of 64,000 eggs of the brown trout, *Stilmo fario*, to be divided between Prof. S. F. Baird, Mr. E. G. Blackford and Mr. Fred Mather. This lot was a total loss on arrival. A second shipment of 40,000 from Herr von Behr to the same persons arrived in good order. The steamer Elbe, of the North German Lloyds, will bring a further shipment of 50,000 from Herr Max von dem Borne, the well-known fishculturist, to Messrs. Blackford and Mather, but by agreement will be divided with Prof. Baird. Some of the eggs already received were sent to the U. S. Stations at Northville, Mich., and Wytheville, Va. Mr. Frank N. Clark, th charge of the former hatchery, reports their arrival in good order. Some 30,000 eggs are now in the troughs at Cold Spring Harbor, L. I., and are doing well. Mr. W. C. Glibert, of Plymouth, Mass., has imported 25,000 eggs of this fish from England, and has sent some to the Blooming Grove Park Association of Pennsyl-vania, and to other places, reserving 5,000 for himself. The merits of this fish are rapidly becoming known to our anglers and the fry are in great demand.

THE ADIRONDACK HATCHERY.—Some time ago we published a pledge signed by one hundred guides, hotel-keepers, and others, condeming the depredations of the vandals who cut up the nets of the Fish Commission at Little Cedar Pond (now Lake Brandon), and agreeing to sustain any efforts to bring the offenders to justice. We have now re-ceived from Mr. J. M. Wardner, proprietor of the Rainbow Lake Hotel, a printed list of as many more names from St. Regis Lake, Bloomingdale, and Loon Lake. Mr. Walters, the superintendent of the hatchery, is now at Cold Spring Harbor, Long Island, hatching land-locked saimon, lake trout, brown trout and smelts, for the Adirondacks, in consequence of the breaking of his dam. He will return with these fish in May.

SHORT LOBSTERS SEIZED.—Damariscotta, Me., Mareh 30.—Fish Warden John L. Thompson seized about 1,000 under-size lobsters in Boothbay and Bristol yesterday. He chartered a smell steamer and took the canning factories by surprise.

SHORT LOBSTERS.—The Rockland (Me.) Courier-Gazette reports: "Fish Warden Thompson made a seizure of three barrels of lobsters consigned to parties in Boston at the steamboat landing at Wiscasset, Tuesday. Forty out of the two hundred and forty lobsters were found to be less than the law allowed. The seizure has made a great stir among the fish dealers in that vicinity. Warden Thompson is too much for them. The short lobster business has cost a Portland man \$1,500, according to Deputy Fish Commissioner Shattuck of Boston. It is elaimed by friends of the lobster law that the lobster fashermen are coming to the commissioner Shattuck of protection—the great majority of them—and they would be willing to furnish evidence to convict the faw who presist in retaining lobsters forbidden by law, but for the fact that their willing to furnish evidence to convict the faw who presist in retaining lobsters forbidden by law, but for the fact that their and who swore that a car containing short lobsters was the property of the man who had loaned it to bin, and that he had no knowledge of the lobsters in it, the commissioners say that who the possession of the man under arrest. They have other cases against him, and they say he will have to give up the short lobster bissioners. Fish Commissioners of the Portland mas Thompson, of Newcastle, Nichols, of Winnegance and pospereux of Brunswick, and others, held a private meeting in Bath, Tuesday, and action was taken concerning the future cores to be pursued by these officers of the law. It was the action to be the start and others, held a private meeting in Bath, Tuesday, and action was taken concerning the future course to be pursued by these officers of the law. It was the action to be the start of the push things to the fullest extent of the law.

A. K. R.-SPECIAL NOTICE.

A. K. R.-SPECIAL NOTICE. THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is pub-lished every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription \$15.0. Address "American Kennel Register," P. O. Bo. 2832, New York. Number of entries already printed **3481**.

THE NEW HAVEN DOG SHOW.

THE NEW HAVEN DOG SHOW. The third annual dog show of the New Haven Kennel Chub, held at New Haven last week, was a first-class show. Although there were not so many entries as last year, the average quality was much better. The management was as good as we have ever seen; everything in connection with it ran smoothly, and the exhibitors were warm in praise of the manner in which the show was conducted. There is a genuine ring to the words of welcome with which the New Haven boys greet their visitors that makes them feel at home. There has always been at the New Haven shows an *enlente* cordiale among the visitors that renders the reunions there very pleasant. At no show has this been more apparent than at the one just held. The armory of the 2d Regiment, in which the show was held, is very roomy, well lighted and well ventilated. The dogs were comfortably benched, and there was ample room for visitors. The attendance was fairly good at all times, notwithstanding the disagreeable weather of the first two days, and we have no doubt that the receipts of the show will exceed the expenses. The judging in nearly al of the classes was satisfactory, although some mistakes were made. We are pleased to record that not a single pro-test was made. The performance of the trick dogs was agerly watched by delighted crowds. Nep, one of the per-formers, is a nondescript terrier possessed of wonderful pow-ers. He performed many difficult and pleasing feats, display-ing in some of them a degree of intelligence that was aston-tishing. His owner informs us that Nep has been trained en-tishing. His owner informs us that Nep has been trained en-tishing. His owner informs us that hen as not been struck a blow.

ishing. His owner informs us that Nep has been trained entirely by the humane method, and that he has not been struck a blow.
 Spratts Patent had charge of the feeding of the dogs, although the club furnished free to those who desired it any description of food called for. We questioned many of the exhibitors in regard to Spratts biscuit, and found that those who had not previously used them complained that they physicked their dogs, and consequently they were not favorably disposed toward them. On the other hand, we found many that feed them at home who like them. One of our most prominent kennels makes a practice of feeding the biscuit for at least a week previous to attending a show, and the kennel man in charge strongly recommends this course, and says that if this is done nine dogs out of ten will thrive on the food.
 The judging ring was in the center of the building. It was commodious enough to allow the largest classes ample room. The judging commenced on Tuesday and was completed on Wednesday at noon. We published a list of the awards last week. The list was more accurate than could be expected. The corrections will be found below, together with the remainder of the specials. The judges of the different classes were as follows: English, setters, black and tan setters, Irish setters and pointers, Mr. John Davidson, Monroe, Mich, Mastiffs, spaniels, greyhounds, Messre. Sloan and Davidson, Milder, Staulan greyhounds, Mesican hairless and miscellaneous, Mr. C. H. Mason, Bay Ridge, L. I. Beagles, Mr. L. D. Sloan, Philadelphia, ?Pa. Foxhounds, Messre. Sloan and Davidson, St. Bernards, collies, bulldogs, poodles, fox-terriers, basset hounds, dachshunde, black and tan, Bedlington, Irish, Skye, Dandie Dinmont and rough terriers, Mr. Ronald H. Barlow, Philadelphia, ?Pa. Trick dogs, Messre. A. H. Wakefield, Providence, R. I., and Jas. Lindsay, Jersey City, N. J. Veterinary, Dr. Edward C. Koss, New Haven, Com.

nary, Dr. Edward C. Koss, New Haven, Conn. MASTIFFS-(MR. MASON). There were sixteen entries in these classes, and the quality was decidedly good. Homer, looking very well, represented the champion dogs and Prussian Princess and Rosalind the opposite sex. The judging of the next class was eagerly watched by admirers of the breed, and both the lifords found numerous friends. Caution's heautiful color and excellent condition were not of themselves sufficient to outweigh the truer lines of Cromwell. The latter is a truly formed dog.

longer and stouter than his opponent. He stands on the best of legs and feet, moves well, and has plenty of bone. He is rather long from eye to nose and lacks depth of muzzle, and his eyes are not the correct color. He is above the aver-age in skull and has small ears. Caution has plenty of skull, and it is inderhung more than we like to see. He would do the standerhung more than we like to see. He would do faulty conformation. Hector and Dread took the vhc. cards, and they were looking well. Hector is the truer-formed dog of the two. Boss was absent. Cedic's Gurth is a big, long-legged dog, short between the couplings and faulty in head, muzzle, ears and feet. Maidus is faulty in head, muzzle, eyes, art, size and color. Court is leggy, light of bone, shallow in body, houndy in head, and faulty in ears and feet. Lavlass is head, size and color. Hamibal was looking so tucked up that the prize was withheld from him in the puppy class. Dread yr, in the same class, shows little mastiff character. There was a sharp tussle between Hford Cromwell and Prussian princess for the handsome prize offered by Mr. Wade, and after a very careful inspection of the two dogs the blue ribbon was handed to Cromwell's owner. Princess has the uset of it in muzzle, wrinkles and eyes, but in other respects Cromwell is the better dog. He stands over more ground, is much truer formed in body, and has by far the best limbs. The judge better well to type, and disearded houndy specimens. ST. EENARDS-(MR. BARLOW).

and discurded here best limbs. The judge kept well to type, and discurded houndy specimens.
 ST. BERNARDS-(MR. BARLOW).
 Bonivard and Rohna were the entries in the champion classes for rough coats. The former is a most typical dog. In the open dog class First Choice was selected for premier honors. We cannot indorse the decision, and would have given the pride of place to Merchant Prince. These dogs have been fully described in our previous reports. Rudolph II., not looking so well as he did at Newark, deserved his card, and the others were well placed. Miranda was well selected as the pick of the rough coated bitches. She is a good one, but was not in full coat on this occasion. Stella was overrated. St. Bride, c., should have been second. Venus is sour in expression and lacks the necessary markings. Lady Athol and Margery were absent, as was also Loyal, only entry in the puppy class. There were no smooth-coated champions, and in the open dog class Rigi was placed over Apollo. Rigi is a very little dog of good type, but he lacks bone, is not sufficiently square in muzzle, and has a badly-carried tail. Apollo is too houndy in head, but should have been first. Mt. Velan is faulty at both ends and lacks character. Bernice was absent from the corresponding bitch class, leaving Aima II, fully described in our Newark report, to win. Lodi was alone in the puppy class. Ince Well. NEWFOUNDLANDS-(MR.MASON).

NEWFOUNDLANDS-(MR. MASON). Bruno, looking well, scored an easy victory. Major, placed second, is faulty in head and coat. Joe is a long way removed from bench show form, being faulty in head, coat, limbs and tail.

GREYHOUNDS-(MR. MASON).

tail. GREYHOUNDS-(MR. MASON). Bouncing Boy, looking well, scored a bloodless victory in the champion class. In the open class Hawthorn Belle, a racy little bitch, not quite stout enough for our liking, beat Harlequin, whose worst faults are in feet and back. Fido would have been higher on the list but for his plain head and light eyes. He stands on capital legs and feet, has good pro-pellers, and was well shown. Hush Money was badly shown, and has not improved on his puppy form. The special prize offered by the club for the best greyhound bitch was a splendid trophy, and fell to the share of Hawthorn Belle. DEERHOUNDS-(MR. MASON). In the champion class Mac, looking well, beat his old op-ponent Bran, who, as usual, was short of coat. The open in this country. Chieftain, a magnificent specimen, remarka-bly good in almost every point, was first, and his kennel com-panion Wanda, a great blich, was properly placed second. Ignorant persons have stated that Chieftain's head is too thick. I'ris sufficently wide at the base to prevent the dog from slip-ping his collar before he is sent out of the slips, and this is just what it should be. Heather, a fair specimen, took the reserve card. He is much below the winners in good looks. Mercia is far too small at d is faulty in head, ears, and coat. The win-er in this class took the special prize for the best dog or bitch entered in the classes judged by Mr. Mason. PINTERS-(MR. DAVIDSON). There were thirty pointers encirered, with five absentees.

of t of course covers a great many matters of detail not par-interesting to readers of FORESTAND STREAM, but the re-accompanying criticisms upon the arms and ride practice bodies of State troops are worth reproduction in a com-

bodies of State troops are worth reproduction in a com-. Drum calls the special attention of the Secretary to the in general report, saying: invite your attention to the subject of the obtolete arms nition in the hands of the State militia or stored in the attention and the share the store of the state the dis-ther. 30 Springfield rided musket, for which it is difficult artifages, and some of the reserve annumition bears the substantiation in the second store of the state as it is net and it would seem a most wise measure if, at the ap-session of Congres', a general act was passed providing change, when requested, of all obsolete arms now in the emittian of the several States for improved Springfield ber .45, and appropriate annumition therefor. Should however, not deem it advisable to pass a general act look-absolute exchange of obsolete weapons in the hands of . for improved arms and ammunition, I beg earnes/ly to

From Alabama Capt. Powell reports that "a number of the com-anles were supplied with the Springfield safety notch rille, and these fere, as a rule, in excellent crief, A majority of the companies rere. however, armed with the old riles, model of 1573, and though erviceable, were not in as good condition as they might be. But here is an excuse for this; opportunities do not present themselves there is an excuse for this; opportunities do not present themselves o these men for any extra care of arms, almost all the time that they an be spared from their respective professions teing consumed in erfecting their drill." There was no mention of any rifle practice there at the camp or otherwise. The New Hampshire report by Major Jackson says of the arms and peir use: "The arms are Springfield breechloaders, caliber 45, with us slungs; the carridge box is of the or soleke pattern (the inside a lock of wood with holes bored in it for the reception of the carridge). The New Hampshire practice, voltch is now neckeded a nonsequence of the want of ranges and annunition, should, in my pinion, be begun at once. I was informed that rigrorus efforts are be made in this direction before the next camping season." Mississippi makes tu a poor showing, according to the brief report Coult and by the State. Their arms were the Springfield rifle, cali-er, 45, late model, and the accouterments were of the regulation attern. Athe inspection may of the guns were found to be some that rusy, but their ceneral condition was toleraby fair. No target nactice was attempted, nor drill as skirul hers, it having heen ascer-ined that no attention had ever been paid to these important atters.

practice was attempted, nor drill as skirni bers, it laving hean ascer-tained that no attention had ever been paid to these important matters." Minnescta makes a much better showing than the last-named State, and Capt, Lawson says, under head of arms: "Spriggfield rifte, cali-er 45. With but few exceptions the guns are old aud badly cared for some baving been in use for five years, and have the appearance of having been kep th a dark room or cellar." Touching the 2d Regiment Minnesota militia, the same officer says of thaving been kep th a dark room or cellar." Touching the 2d Regiment Minnesota militia, the same officer says of the string been kep th a dark room or cellar." Touching the 2d Regiment Minnesota militia, the same officer says of the string been kep th a dark room or cellar." Touching the 2d Regiment Minnesota militia, the same officer says of the corsone years. Two of the Mirneapolis companies (A and B) ad these guns. It is rather discouraging to a soldier who prices him-ie for some years. Two of the direction of Lieutenant (or Doeter) skinuer, the instructor of muskerly for the regiment. The Doctor is an enthusiast on the subject, and had everything pertaining to the auge in fine coudition. He bas a system of signaling from the firing boint to the range by means of a uniror set in a frame between the occurs at the firing point. Some large numbers are painted on car-argets at the pit, and be target turned dowr examiled, and signaled. Hark No. - ' when a man near the box displays a fut to corte-monds with the target he wishes examined. The number is instantly even at the pit, and the target turned dowr examiled, and signaled. have seen the system work as far as 500 yets, and this well. The histance fired was 100, 200, 200 and 500 yards. Are to did well. The listance fired was 100, 200, 200 and 500 yards, and this well. The histance fired was 100, 200, 200 and 500 yards, and this well. The histance fired was 100, 200, 200 and 500 yards, and this well. The listance fired was 100, 200, 200 and 50

in carringe muscle, for which it is difficult, in carridges, I found the State reserve of it lie stamp of manufacture in 1871—mater-bis combersome. In all other respects well uing, this fue division of troops is in a situ armed with clubs. It's remarkable how, ns, they have attained the creditable record ice. In one regiment I found a company in zeneral assured me that every man was a ile in aucher company of the same regi-tain to be a retired colonel of cavalry of the emerged from his well-earned repose, at the rder to give them the benefit of his military 9.

in other to gate these troops would discourage the med as are these troops would discourage the f the Regular Army; and in view of their possi-day to the general government, it would seem it, at the approaching session of Congress, a providing for immediate exchange, when re-te arms now in hands of National Guards of Springfield (caliber .45) ritles and appropriate a most wise measure general act was pass guested, of all obsol States, for improved ammunition therefor "I have been infort were on hand in the V 125.000 Springfield r

States, for improved Springfield (caliber .45) filles and appropriate ammunition therefor. There even informed that st the close of the last fiscal year there were on hand in the United States Ordnauce Department inward of 125,000 Springfield rifles, caliber .45, and thet about 36,000 of these guns are manufactured annually: while on June 30, 1865, over 5 000, - "iff, nowithstanding the forecoing exhibit of facilities for replen-ishing the national reserve of ordnance, Congress should not deem it advisable to pass a general act looking toward absolute exchange of obsolete weapons in the hands of the militla for improved arms and annunition, perhaps authority might be granted for returning to the United States, at a fair valuation, all obsolete guns in hands of States, the money value thereof to be placed to their credit and to be drawn against in form of issue of improved weapons. Until this otherwise efficient National Guard Grand Grand all better armed han it is now, its usefulness in either State or national emergency impaired by the great disadvantage under

75." North Carolina Col. Black reports and says: "They are armed pringfield rifles, caliber .35, safety notch, which are in good ion, highly prized, and ready for any service. They have 2,000 with full sets of accouterments for the same. There was no ractice during the encampment. L'ttle or none this year, ions provide, and they hope to indulge during the coming

year," The Rhode Island militia were inspected by Capt. Egan, and he re-ports: "There was no target practice. There was no range or time tor it; nor is a brigade encampment of a few days, where the more-ments and combinations of large bodies of troops should be of the first consideration, the place for it. Though its importance is thorougbly realized, the brigade is helpind other States in shooting. It had to be neglected (reason, no money to pay its expense); hut last y realized, the brigade is hehid other States in shooting, he neglecied (reason, no money to pay its expense); hut last 0 wes appropriated for target practice, a State ranze was 4, and all the companies, under the instructiou of Capt. experieuced Creedmoor sharpshooter, had one day's prac-man firing five shots. Tuis year the same or more practice 1, and gallery practice introduced. The muckets the latest improved ones, and are all in go

nuon." ne Massachusetts troop went into camp at several points. At th Framingham Maj. Pennington found the First Brigade, and of

Says: Larget practice received no attention in the camp of this brigade, part the officers of one of the regiments were permitted to trice at their own request. There is a fine 200yds, range, wich live iron targets, near the camp, but, inasmuch as the companies e ample opportunities for practice at home stations (the law re-ring the towns where companies are located to provide a suitable ge), it was not regarded as important that time should he taken n other duties for this purpose. Target practice receives con-rable attention in the multia of this State, as is attested by the moment of marksment's and other hadres worn by members of .45, and are in good serviceable con

he Lake Chehaco camp Maj. Pennington found: rget practice was indulged in every day until the whole com-had been at the range and each mau had irred his score." Vern ont Lieut, Miller does not find things in a very encouraging He reports: e arms were of the old 50 calutor ford

He reports: he arms were of the old .50 caliber, Springfield pattern, some of rist that were altered from the muzzle to the breechloader. The blue boxes and belts were also of a very old pattern. I under that the companies have only one or two rifle ranges that they see. Target practice appears to be almost entirely neglected in State, and a large majority of its National Guard know little or

themselves with ranges and the target practice and matches" would be a useful feature of the muster. Onto National Guard are Springfield rifles, ised in the United States army," im found much to report upon. He found outhwest end of the encampment was the giving a range of 200yds, one way and a le lower end of the 200wd men come in for inspection by Col. caliber .45—the oldest model of this caliber. They were clean, with some exceptions, and free from rust, but are very old, rauch hatfered and bruised, and appear at some time, perhaps while in store, to have been injured by rust. "Some target practice was had, but it was not general, and there appeared to have been no regular or systematic instruction in this important branch of a solider's duty. It is recommended that an inspector of target practice be appointed, who should visit periodically yevery arroutice regular system or arroury instruction and practice, which should be required of every soldier in addition to the practice regular system or arroury instruction and practice, which should be required of every soldier in addition to the practice regular system or arroury instruction and practice of the should be required of every soldier in addition to the practice regular system or arroury instruction and practice share all been very rusty at some time. and show signs on their exterior of effort on the part of the soldier to get them clean. In inspection shower, however, more or less rust still inside the bore. A few guns were exceptionally well cared for, but the large majority were not entirely free from rust, and yet would be called serviceable." A number were 'unserviceable' from various causes, and some had already been condemned by the inspector, but were still in use for lack of better ones to replace them.
"There was no target practice during this encampment. The Kergular allowance of the Nebraska nonoid Guard,' published in 1883, provide an allowance of the rounds ger mouth to each man, and that a resport of such practice shall be made to the regimental commander. I an informed that at the encampment in 1850 prizes were olfered and to compaction to the place under the supervision of the commander. The supervision of the commander of the neucampment in 1850 prizes were olfered and acompaction to the place under the supervision of the commander. I and informed that at the encompacet the supervision

competition took place under the supervision of the commanding locr." owe had a number of camps, all inspected by Lient. Clarke, who ys of the 3d Regiment. "The regiment was armed with the Spring-id rifle-oue company with caliber .45 and seven with caliber .50, 1 pattern, all breechloaders; they were in good condition. having t recently returned from Rock Island Arsenal, where they had en undergoing needed repairs." Of the 5th Regiment he says: "This regiment is armed with Spring-id rifle, breechloader, two companies having caliber .46, the re-sining six being armed with caliber .50, ol-pattern Springfield ms in splendid order, particularly the caliber .50 rifles, they hav-been but recently received from Rock Island Arseual, where they d been sent for repairs." About the 6th Regiment, at camp near Clear Lake, Lieut. Clarke YS:

is target range had been selected, although suitable grounds d easily have been found for one. The uniform was the full-s United States regulation, witbout helmets, as in the other regri-ts. The regiment was armed with caliber 50, old pattern Spring-breechloaders, which were in fine condition, having but recently e from Rock Island Arsenal, where they had been undergoing irs."

Fild Dreedinoaders, which were in the contribut, naving our treensy pairs." In the 4th Regiment be found that two companies were armed with the Springfield .45 breecbloader and six with the .50 caliber old patrix. Arms in good order, most of them just from the Rock Island rsenal, as in the other regiments: "A range of 2007ds, had been laid off and targets provided, under se supervision of the major of the regiment. The hest five shots one each company were selected as leants, the one making the jabest score to be known as the 'regimental team,' every one of its remembers being entitled to wear agold medal as long as his team ore should be ahead of all others in the regiment. Five sliver liver medals, very neat in design, were also offerred for the best corseponding number of individual scores." "I am informed that most of the companies have facilities at home r target practice, and tbri, as a consequence, many good shots are ready to be found in the guart. The State allows 1.000 rounds of munifilon a year for this purpose. I earnestly recommend that is he increased, and that proper attention be paid the subject at all neceding encampments." "The supply of blank ammunition is fixed at fifteer rounds per man for use on the range, forty rounds per man of ball cartridges are twisted. Most, if not all, the regiments bought out of their own nuds ammunition in addition to that issued by the State, and it would see as though a larger supply could very profitably be used, twas the intention for the State to hold in reserve at least half a alignor rounds.""

ould seem as though a larger supply could very profitably be used, was the intention for the State to hold in reserve at least half a illion rounds. "The New York National Guard are armed with the 50-caliber Rem gton. It will be made to correspond in caliber with the United tates system when that shall have heen finally decided upon. "The work done and the results gained on the rifle range in continu-tion of the experience at Creedmoor and at the various regimental mories deserve special commendation, as might be readily inferred om the presence on the field of such men as Col. Bodine and Gen. Oherts, the Inspector-General of Rifle Practice of the State. He as assisted by Col. Beal, Col. David, Major Fox and the different gimental instructors. "There are ranges for 100, 200, 300 and 520 yards, with seven No. 2 d seven No. 3 targers of the Brinton make. The men are divided to three classes, the third comprising such as have had no practice, the latter distance, and who, when they have completed a score of a taboth these ranges there no bene marksmen, and a score of 42 arpshooters. In addition, there is required volley firing of five unds at 1009ds, as follows: By company, two rounds; by rank, he round the rank in front kneeling; by company, he round rear rank in front kneeling; and also five rounds in the ounds at the sone first the sone when the seling the rounds in the ounds at 1009ds, to 50 yourd there in rounds there rounds in the ounds at 009ds.

The round rear rank in front kneeling; and also five rounds in the kirmish drill, advancing from 250 to 50 yards three rounds, and two in the return." Col. Closson does some fine writing in winding up his report and umong other things says: "A hody of men who can go through the manual with all the uniformity of a die might certainly amuse, but could hardly obtain that respect from the mob that is felt for a shooter known to be good for rows. Exact alignment and unvaried like-ness of step and wheel are well enough, and probably under the cor-oral's stick, reached a hirker point of perfection more than a hun-ited years ago among old Frederick's grenadiers than they have since iteriminated in favor of the the man taught how hest to protect himself n disposing of his enemy and who has learned how nost completely vhose reliance is not so much upon the touch of his neighbor's elbow is upon his own efforts and experience. If we have not time for whose reliance is of the utmost importance and men should be kept the drills is of the utmost importance and men should be kept the truth they have lost all fear of the piece, are perfectly familiar "The fire drills is of the utmost importance and men should be kept the conditious given to our present life, powder will have is much to do in bringing about any millennium as philantrophy; and the more terrible is possibilities, the greater the need for intrus-ng them only to men of trained intelligence, special capacity and ride character."

SIR HENRY ST. JOHN HALFORD. A CABLE dispateb on Monday brought the brief announcement, "Str Henry Halford is dying." To the rifemen of America he will be remembered as the hero of several well-fought matches, and either as victor or vanguished was always the same courtly gentle man. For years he had been a leader among the advanced riffemen at Wimbledon, and from the start he took the liveliket and most h-telligent interest in the international matches. He entertained Col.

Gildersleeve and his men on their visit to Great Britain in 1873, and the American gentlemen shot over the private range of Sir Henry ai, Wistow Hall. In 1877 he captained the British small hore tean to Creedmoor and took defeat gracefully. In 1882 he brought over a team of military shots and administered a sharp knockdown to Col. Bodine and his team of militä shots, and when in the year following Col. Bodine peacefully invaded Wimbledon the defeat was repeated and emphasized.

ZEUGNER VS. PLAISTED,-George Plaisted, of the Zettler Rifle Club, of New York, and August Zaugner, of the Greenfield Rifle Club, shok a match for \$100 a side at Greenfield, Monday, March 25, The conditions were 25 shots each. German ring target, 2009ds., off-hand, any rifle. The match resulted in favor of Zeuguer by a score of 51, to Plaisted's 406.

THE TRAP.

Correspondents who favor us with club scores are particularly re-quested to write on one side of the paper only.

Scores for publication should be made out on the printed blanks repared by the Forest and Stream, and furnished gratis to club

A MAGAZINE TRAP.—The Rauh trap would seem to reduce the question of a flying object as a target down to the minimum of trouble and expense. The cut will give an idea what the trap is like, it consists of a cylinder into which a number of cardboard disks are inserted and fed up to a slit by a spring. A lever arm sends the num-bered disks whirring up in the air, and when the score is slot out they are picked up, and those showing slot marks are scored as hits. Mr. Raub claims for his invention that it can be used in shooting

ery and field with equal success. Can be adjusted to throw er to right, left, or perpendicular, and at any angle required. beight of fight target can be regulated by the simple adjust-tof the spring. The targets are three inches: in diameter, and ch ½ ounce. Twenty-five can be thrown from the trap in 5 sec-sor as rapidly as required and can be used many times, thereby sing the shooting very inexpensive. The trap is arranged to be er obled to the box in which it is packed, to a stake in the ground, e the floor when used in shooting galleries. Each trap is som-ly packed with 500 targets in a well made wooden box. The tar-are made of a composition of hard clay and straw board, colored ton one side and dark on the other, and can be thrown with er side to shooter. The trap is arranged to hold 25 targets aun-ed from 1 to 25 to correspond with score sheet accompanying each . The trap throws but 1 target with each full pull of the cord, can be operated either by the foot of shooter or by an assistant. trap, packed m box with 500 targets, scores, cord, etc., complete, gis but 23 pounds. Hardley & Graham have taken the wholesale ney of these traps, and report a satisfactory sale since their re-t introduction upon the market. UNELLEN, N J. April 3.-Middlesex Gun Club match at live

JAMAICA, L. L.-There- are few clubs on Long Island where as much intellect, wealth and sociability exist as in the Kod and Riffe Association of Jamaica. This fact is made only the more interesting when it is known that eyery member is a resident of the village in which the beadquarters are situated. The name is indicative of the intentions of the original members, but these intentions have almost been forgotten. The rod has given way to whist and the rifle is only spoken of as an ornament to the walls of the clubroom. When first organized this association bad an elegantrifle range in the rear of some very creditable shooting has been done by the members. The range now is a thing of the past, but the love for the rifle still exists among a few of the memoers, who take advantage of every oppor unity to indulge in one of their favorite pastimes. While nearly every member swears by either rod or gun, they find more pleasure in bunting or fishing in couples, than the trying conclusions with teams from similar organizations throughout the State, at the tar-gets. The club rooms are situated on Fulton street. The hunding is of brick, wi h brown stone trimmings, and is one of a row of four and on every side is evilence of the taste of the men who spend their evening to the Herritan extete. Inside it is handsomely fitted up, and on every side is evilence of the taste of the walks, canvas-back ducks, storks and in fact all species of birds and game that have been hunied by the gentlemanly sportsmen adom the walks, occupy intrackets in the corners and crop out in every direction the twistor looks. Cards, chess, dominors, checkers and billards are among the political chances of some candidate, probably oue who is a member of the club.

FIXTURES.

CRUISE OF THE COOT. The Crulse of the Coot will be continued in our next issue.

The Crulse of the Cool will be continued in our next issue. A CLASS FOR THE LARGE SINGLE-STICKERS — If there was any doubt as to whether the older boats would save their time over the new and larger class, it was dispelled very early in the first trial race, when Puritan and Prisella paired off, leaving Bedoulin and Gracie together astern. Since then it has been perfectly evident that the present time scale left the 70th, boats out of the race, and to propose to follow their example at the meeting this week and to establish a similar class of over 70th. The New York Y. C. propose to follow their example at the meeting this week and to establish a similar class of over 70th, making the second class to include Gracie, Bedouin and Mischief with others of their size. The yachts then building, and it was generally considered that the large yachts then building, and it was generally considered that they were too expensive to be kept up, and would be converted into schooner. Now two more are building and the fatherless Priscilla bas at last found a real owner, and it looks as if the class had come to stay, even after the cup race of this year is concluded. The outlook for the 70th, class is much less promising, and it wall muster only two boats in found a real owner, and it looks as it the class had collect start, et after the cup race of this year is concluded. The outlook for the 70 class is much less promising, and it will muster only two boats New York and probably three in Boston. The smaller class, under 550 is filling up in away that is suggestive, and it promises to take t place in popular interest so long filled by Gracie and her sisters. OSWEGO Y. C.--This club will cruise to Charlotte on July 3.

LAKE ONTARIO YACHTING.

 BELEFULE, Out.
 ONONDAGA Y. C. - This club, organized last Novemker, now has a member hip of "3; it was incorporated Feb. 6, the incorporators being Puilip A. Barker, Dr. Vistor, M. Smith, Wm. Weecot, Charles D. Dibhle, Charles N. Brown and Frank L. Stevens. The fleet now numbers seven sailing ead four steam yachts, and there are about thirty sailing skills, cances and nowboats owned hy members of the club. It is expected that the mumber of yachts will be increased duing the coming season, several members having expressed the intention of buying yacbts. The club is building for the use of its members a sectional boat house, 60/2016. It is being built in sections so it can be removed in the fall to the club's winter quarters, the low, marsby shores of Onondaga Lake being submerged in the fall and spring two feet at least, and a permanent structure would be crushed in the fee in the spring. The club had an offer of a tract of land hy the present owner of the Geddes Pier, on the westerly side of the lake, free of tharge, on which to erect its club and boat house, but as at least two-thirds of the members of the club live on the easterly side, it was decided that on account of the incovenence the kind offer could not be accepted. The management of the saina Pier offered the club at most be club securing a tract of land also, but demanded a yearly rent of \$100, which the members unanimously refused to pay as they deem the price too exorbitant. The matter has been scilled by the lis is samplet of general or obtains the club science and has ample depth of water at all tunes to accommodate the fiele. The unlooked for oposition of the matager of Salina Pier is a subject of general comment both by members and outside parties, and their unfavorable action toward the club site ondemmed on all sides. Every obstack has so far been overcome, and every member is working for the success of the club. The opening day and first regatta w

THE COLLAPSE OF THE CUTTER BOOM.

<text><text><text><text><text>

since to be the hest that we could produce, and consequently far superior to the yachts of any other nation. To-day they have prac-tically retired from racing, leaving the field either to the genuine Eng-lish cutter or to a mongrel production whose salient features are as much English as American.

<text><text><text><text><text>

that has been lessened; while our boats are far deeper than of old ex-treme depth we have rejected from local considerations; while for the same reasons the centerboard is retained. With these innova-tions we have thrown aside old rules that compelled the construction of certain types, and with a foresight and a comprehension of the entire question of the developement of yachting which the British yachtisma has not seen fit as yet to follow, we have enacted fair and just regulations that hear as equally as any rules can on all types. This has been done here since the imaguration of the "cutter boom" and largely hy the "cutter fiends" and "cutter cranks," who have been so hearthy abused. The results are plain and plabable in the present state of American yachting, and no better evidence can he had than the common verdict which halls as an American sloop, a vessel that only a couple of years since would have been ridiculed by all as an English cutter. Now let our British confreres profit by our example with henefit to themselves, while they can still do it tracefully; for another victory for the American yacht will probably put a quietus to the present measurement rule of the Y. R. A., and the advent of a thoroughly well built yacht of the Puritan type in English waters, after a successful passage across the Atlan-tic, will compel a recognition of centerboard yachts in spite of the scolding of that inascible old lady, the Saturday Review.

C. A. MEMBERS AND A. C. A. MATTERS.

C. A. MEMBERS AND A. C. A. MATTERS. A an organization such as the American Canoe Association, in which the members are scattered over a very large territory so ta general meeting of a majority is impossible, it must be more less difficult to secure the views of all and to legislate in accord-te with them. True, a general meet of the Association is held at the amp in August, but it is attended by less than one-sixth of the ole number of members. To remedy this disadvantage and to the other of members are acoustic a complete a representation as sible to each section, taking leading men who are well known in air respective localities for the officers and members of the Execu-ter of the officers of the officers and members of the Execu-ter of the sociation and its individual members is through the when the Association and its individual members is through two shall be on an equal footing, and have an equal voice in all deliber-ons and voing. In the case of yacth and canoe clubs this is easily to and can be promptly summoned to a meeting. In the case of A. C. A. it is of course impossible to secure a majority of the mem-shall be on an equal footing, and have an equal voice in all deliber-ons and voing. In the case of a scatt and canoe clubs this is easily out critical in portname that every mem-shall be on an equal footing, and have an equal voice in all deliber-ons and voing. In the case of a scatt and canoe clubs that a man-uid entirely lose his voice in the proceedings hecause he canoot the a long jurnery to the meet. As a substatute for such personn invalue the great y meeting, but it is not just that a man-ter of the comment and discussion as they week with the official of as well as the general news of the association, and open to more such comment and discussion as they may choose to make-this means every member may know long in advance of any pro-ed action or change in the rules, and may express his objections to prowel to as large an audience as he would have were

for sites contracting in the rules, and may express his objections is action or change in the rules, and may express his objections is action or change in the rules, and may express his objections is derived to a large an audience as he would have were the sub-ider discussion at a meeting. The Forest and Stream is ready if and the rules of the anime of the writer he sent to the editor. Serving only the right to reject anything mainfestly improper-ondense letters of too great length. This gives every opportunity is a thorough and complete discussion as should precede a e up the right to reject anything mainfestly improper-ondense letters of too great length. This gives every opportunity in the rules or constitution, and the officers would gladly en-e such an expression of the general opinion as would ald them ere such an expression of the general opinion as would ald them ere such an expression of the general opinion as would ald them ere has heen a very important subject under consideration. Leading English cancels to use our columns for a free discussion 2. A matters has heen extended for some time. How has the eworked? Since the Executive Committee meeting in Novem-ere has heen a very important subject under consideration. Jeating of a trophy on the occasion of the coming visit of some leading English cancelists to ure August meet. The Executive ittee resolved to offer such a trophy, to become the property and to purchase the trophy. Since this resolution has heen d the opinion has heen widely expressed that the offering of a ble prize would not he in consonance with the aims of the or if won hy our visitors, to he raced for abroad under similar tions. Certainly such a cup will effect the desired end better a prize given as a challenge cup, to be raced for each year at the or if won hy our visitors, to her raced for abroad under similar tions. Certainly such a cup will effect the desired end better a prize given outright, hut whether or no a change in the con-sis desirable is not the question at issue j

apsed it has failed to awaken any response, and canceists ted a complete indifference to the matter. A short time hhished a complaint concerning last year's races. The was made out and published long in advance, and was a subject for criticism by all interested, and any weak eing revealed, would probably have been changed. No vere forthcoming at the time, however, though it now ap-erious objections were held by some canceists to the races he programme for 1868 will soon appear in our columns, prunity will be given for fair and intelligent comment.

This matter, with the trophy and many others concern directly every member of the Association, and if any disapprove, it is their duty to make public their objections. By this course only can the Executive Committee be guided in its efforts to govern the Association fairly and agreeably to all. Every member should feel that he has an im-mediate interest in all measures presented to cr by the A. C A., and that if he fails to record his objection at the appropriate time, he must not complain or rebel when the proposal has become a law.

A law, THE WATERS OF THE TOOTH-PICK STATE. Now that each season the waters of lake and river, from Maine to Florida, are cleft by the sharp prows of the cruising cances, and the glancing paddles and miniature sails of the adventurous glancing baddy of Waters," it is stress bestow a thought upon the thy the sharp prows of lake and river, from Maine to s and miniature sails of the adventurous canoeists the placid bosom of Superior and the turgid waters of Waters," it is strange that no one has cared to to pon the almost unknown streams of the "Tooth-their romantic scenery of mountain and lowland cive courses. party of well-informed sportsmo-

glanning paddles and ministration of the stand chalos. Into the glann silks offer the place bosom of Superior out the turgid waters of the "Dady of Waters," it is strange that no one has eared to bestow at hought upon the almost unknown streams of the "Toothplet" State, and their romantic scenery of mountain and lowland along their respective courses. Occasionally a party of well-informed sportsmen will visit the swamps of northe-starent Arkausas for a few weeks spent in slaughtering the game with which our forests term, but as they generally come and go in the bleakest season of the "Pear, they see hull little of the beauties of nature that can be beld at more tavorable seasons and more desirable localities. It is an unaccountable but at the same time an indisputable fact that, by the generality of the reading public, less is known of the haff settled regions of this State than of the fuelyses, alligators, and their hold-stained and scaly second could be desperado. To the sign of a state weath of the state of the sign of our base stares of a start water so the and proves, alligators, and their hold-stained and scaly second could be fuely second most waters of gold, slive or classifying to his heart's content; or the ardent fuely weeks the approves the objects to cour pine-clad hills and genetal weeks builds. Here and here are were, resent swamles bridge way with constant whacking on attractive boulders; and honeys gold, sliver of a water to constate wheeking on attractive boulders; and here all states the again of the sever-present swamles bridge way with constant whacking on attractive boulders; and hourses of sold, sliver of a kushon or a Powell and Douglas can the hardreds, yes, thoused and they see the attractions of fuely sold waters of the state I should naturally place the Arkansas first on the large of row the state of all and the ses attractive than many of the same all allerges to allowed and prove the and they are and of the sestions of fuely stream of the state of the sesting water to the set wore

sweeps gran fly through the horders of Missins easy of Fayetteville, as weeps gran fly through the horders of Missinsippi, would no doubt offer Arkansas for a 600-mile run to the Mississippi, would no doubt offer as great attractions as the rivers of Maine, if the canceists were only aware of the fact. Certainly few rivers east of the Rocky Mountains traverse so rugged a region as the White proper and its tributary the Buffalo, and few rivers, even in the swampy South, can show a wilder stretch of overflow lands than the White from Batesville to its mouth. Classified as mountain streams we can append the Upper Washita, with its gold specked hars and bluffs rich in the purest of crystals; the little Cossatot, trickling down from the mountains of the same mame; the Little Missouri, the Little Saline and the three forks of the larger stream of that name; the Antoine, Caddo, Mulberry, Little Red, Petit Jeau, Fourche le Fare and others; while the wilderness of swamps border the lower waters of a few of those named, and the endire length of the S. Francis, L'Anguille, Cache, and various creeks and bayous, all swarming with the finest of game fish, and most of for exploration. Can some tell me why it is thus neglected? BEEDE, Ark. S. D. BARNES.

Perfection at Last.

THE BRAY FLY BOOK.

It will be gratifying to anglers to know that there is at last a *perfect* Fly Book in the market one in which flies may be attached as quickly as they could be thrown into an ordinary envelope, being at the same time perfectly secure, and may be as readily detached. The snell, regardless of its length, is at all times kept straight (the advantage of which no angler need be told), and each fly stands out so that one can see in an instant his entire assortment and select the one he desires.

Leaves to which flies are attached are of flexible metal, and of a composition that will not rust. Extra leaves of waterproof leather covered with felt for a dryer. Pockets for extra hooks, leaders, etc. You should see it.

Size No. 8. MESSRS, A. G. SPALDING & BROS., CHICAGO, ILL.: GENTLEMEN—Agreeably at your request I tried your new "Hammered" Spoon Bait at Gogebic Lake, where, from the scarcity of live bait of any kind, a trolling spoon becomes almost a *sine qua non* at such times when the bass refuse to rise to the fly. The "Hammered" Bait is a happy idea, for it is hardly possible to devise a more attractive lure, as all who have used it can affirm. It is well and carefully made, has good, strong hooks, and well deserves the great popularity it has so soon acquired. Very truly yours, J. A. HENSHALL.

Hammered

The "GOGEBIC" Trout and Bass Reels.

The Spalding

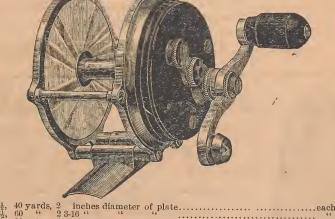

241 Broadway, N. V.

Light, Handsome and Durable, and compares favorably with higher priced reels

In presenting this line of Reels to anglers, we call attention to the moderate price and practical value over the majority of reels, as are pointed out in following description. They can be changed at will from trout click to free-run-ning bass reels. The large diameter of spool makes the multiplication equal to any quadruple reel made, and the open

side disks permits a free circulation of air, which dries line quickly on spool, and is of great practical value in keep-ing any line in prime condition, thereby pre-serving it from rottenpreness, which often occurs on the old style closed disk reels where line is left on wet.

"FOX LAKE" BLACK BASS REELS. Rubber and Nickel, Multiplying Steel Pivot, with Adjustable Click.

2 3-16 " " a " each, \$4 00 28 " " 4 25 Can furnish above with back sliding click at same price. " 4 50

THE WATER-BUTCHER WINS.

THE clamor of the few has prevailed over the interest of L the many. Selfishness has carried the day. The water-butcher has won. Yesterday the Senate of New York passed the bill to repeal the anti-hounding law. The bil was passed as given in our last issue, save that the amend-ment was adopted limiting the number of deer killed by one person to three. An amendment forbidding the killing of deer in the water was voted down. St. Lawrence and Dela. ware counties are exempted from the dog scourge. The measure now goes back to the Assembly for its concurrence in the amendments, and then to the Governor, who will promptly give it his signature, and the dogging and waterkilling of Adirondack deer will have the sanction of the law of the land.

The result was not unlooked for. It had been practically a foregone conclusion from the beginning. As explained in these columns two months ago, the conditions at Albany this year were peculiarly favorable to the elique of individ-uals who had declared their purpose of overthrowing the deer protective law. The Speaker of the House, Mr. Hus-ted, a deer hounder, was opposed to the law because it in-terfered with the sport of himself and some of his cronies; and it was understood that he would use the influence of his position to secure its repeal. Several of the members of the Legislature, as Barnes, Hadley and Palmer in the Assembly, and Kellog in the Senate, had been directed by the June mountain mutton hotel keepers to repeal the law; they had practically no volition in the matter; they were told what to do, and when the time came they obeyed orders and did it. Mr. Husted took care to appoint the right kind of a game committee. It was a body made up of wax-noses, and their plasticity was something astonishing. It was equaled only by their avidity to be humbugged. That the hounders had taken an accurate measure of these men, was proved by the character of the misleading and deceptive document they sent to the Legislature. This was prepared by an Albany doctor, who gave it out as coming from the Eastern New York Fish and Game Protective Association. In its ostensible origin, its contents and its purpose, it was a humbug; and naturally had weight with the committee and the Assembly. As had been antici-pated, when the bill came up in the House, the members, cager to curry cheap favor with Speaker Husted, rushed the measure through and sent it to the Senate.

In the several hearings before the Senate committee the humbug was stripped off. The defenders of the bill were compelled to recede from their stand as game protectors. They were forced to acknowledge, one after another, the ridiculous nature of their pretenses, and to own up that all their hue and cry were solely with purpose to secure to themselves present gratification. The selfish character of their efforts was clearly proved. The committee fully understood this and knew that the bill ought to be killed; but surrounded as they were by the persistent doggers and hampered by entangling alliances, they lacked the moral courage to do what they knew to be right, and sought a way out of it by "compromising"-the customary makeshift of weak men. (It should be stated that Senator Vedder, of the committee, intelligently and consistently opposed the measwhich had been favorably reported by ure) The bill, the pliable Assembly wax-nose committee because of deficiency of brains, was approved by the Senate committee because of a corresponding lack of back-bone.

In its final form the bill does not give the hounders all they at first asked, but it gives to the selfish clique for whose special benefit it has been passed, about all they want. These men go to the woods in September. Lawful hounding will be limited to that month and the first five days of October, a period suiting their convenience. The evils attendant upon the system will, however, not be confined to that season. The destruction of deer by dogs will, in the future as in the past, go on at all times of the year. All the abuses and abominations incident to the maintenance of hordes of domestic wolves in the Northern Wilderness will be perpetu. That an Albany doctor may take the President of the United States on a deer dogging expedition in September, the dogs will be fed on February killed does heavy with the dogs will be led on rebruary kinet does have his September fawn. That a Peekskill politician may have his September sport, the young deer dogs will be "blooded" with the blood of deer run down in March snows. That a New York physician may gratify his propensity for butchering deer and leaving the carcasses to rot, the Adirondack woods must witness the hounding to death of the mother doe in July. That the members of the Bisby Club may dog deer in September, fawns must starve to death in August. That Paul Smith may feed his guests on "run" venison, running and clubbing and drowning must be waged from Jan. 1 to Dec. 31. The so called "compromise" is such only in name. Hounding one month means hounding twelve months. Killing with dogs in September means killing with dogs in June and January. There is no such thing as a compromise between dogs and no dogs.

Temporarily, then, the hounders have gained what they sought. Temporarily—because in the very nature of things their extraordinary privileges cannot be lasting. They have obtained permission to destroy. They have added celerity and certainty to the approaching practical extermination of Adirondack deer. When they have enjoyed for a short while this license to destroy, they must perforce come to a halt. The supply cannot last. The end will come when the deer are gone.

It may come before. With a Legislature less in awe of millionaire deer doggers, less susceptible to humbug, less eager to please eliques, less forgetful of their obligation to the community, it may be possible to save the dcer from the fate certain to overtake them if hounding continues.

The deer doggers have gained their point, but it is most certain that they have lost something as well. The discussion has not been altogether fruitless. It has thrown a flood of light on the motives of the advocates of deer dogging. It has torn from them their mask; laid bare their motives. They can never again pose as philanthropists and game protectors. The thorough selfishness of their demands has been made clear. The next time they appear at Albany it must be in their real character, not as seeking game con-servancy, but as putting in a special plea for personal privileges of game destruction at the expense of the public.

Moreover, a brand has been put on the forehead of the water-butcher. The prowess of hounding "that buck when I was in the Adirondacks" will not be as great in 1886 as it was in 1884. The same old dog and guide and boat and magazine rific and club performance will be repeated as of yore, but it will not be so generally sanctioned as in years Mr. John T. Denny and other water-butchers of deer past. past. In: John T. Denny and other water-success of deer may be rowed out by their oarsmen to the animal and bravely slaughter it, but they can no longer prate of their philanthropy in "pumping lead" into the struggling crea-ture to make it "shy," so the cruel still-hunters may not get it. Such valiant exploits will be put down for what they are. The public now has a pretty clear notion of what Adir-ondack deer hounding means. It will have a still clearer notion in the near future. The time is coming when the antlers of an Adirondack buck killed in the water will be about as much of a trophy as the horns of a Texas steer killed in the abottoir. That time is not far off either.

THE FOLLY OF SPRING SHOOTING.

WE presume that in the ordinary affairs of life the sportsman conducts himself much as other men do-Why then in matters connected with his recreation should he show himself a fool -a selfish fool? If he be a farmer he does not send to the butcher cows that are about to calve, nor does he kill the ewes just before lambing time. He knows that to do this would be to bring upon himself loss, that he would lose two animals while receiving the price of but one. When it comes to shooting and fishing, however, the average man seems at once bereft of intelligence and foresight. reasons with himself that the game and fish are something elusive, here to-day and there to-morrow, if one man does not take it another may. The future may look out for itself. So he starts out in the spring and butchers, or tries to butcher, the snipe and the ducks and the geese which are passing on to northern breeding grounds, but many of which, if undisturbed, would stop with us and rear their brood, where they used to in the old days before the greed for blood had become universal throughout the land. Each year the killing goes on and every year the birds become fewer in numbers.

There are localities, of course, such as Currituck Sound for example, where the fowl are more plenty now than in former years, but this is because a certain amount of protection is afforded them on these waters, and having been driven from others on which they were formerly scattered, they have concentrated in such places, leaving their former homes tenantless.

Every female killed in the spring is so much taken from next fall's shooting, and in these days when game is so scarce and good shooting so hard to find, it ought not to be difficult to make the sportsman realize that it is for his interest more than for that of any one else that this abominable, selfish and and wasteful practice should cease. The fact that the birds are in such wretched condition in spring would, furnish to the minds of many a strong argument against the practice. They are lean, often rank in taste, and frequently affected with parasitic worms in the flesh, which certainly arc not pleasant to see, however innocuous they may be to the eater.

It is high time that spring shooting were abolished. We have more than once made strong efforts to bring about such a change, and a few years since came near seeing the passage of a bill in New York State entirely forbidding shoot-ing after February 1. The selfishness of certain New York sportsmen, and of the keepers of Long Island shooting resorts, defcated the objects we had in view.

It is time that the sportsmen of the country awoke to the importance of this matter. If any change is to be made it must be donc by agitating the subject in earnest, and arousing a public interest in the matter.

The birds are becoming fewer and fewer. The old shooting resorts are giving out, there are no new ones to go to, for the whole country is covered with shooters. If we are to have any game left we must more closely restrict the killing, and the most effective way to do that is to cut off the murders of the mother in the spring.

THE NEW ONTARIO LAW .- By the omission of a word in reference to the new Ontario game law last week an erroneous impression of the clause relating to spring shooting was given. By reference to the full text of the law, as printed in another column, it will be seen that the killing of swans and geese is forbidden between May 1 and Sept. 1; of ducks and other water fowl between Jan. 1 and Sept. 1; and snipe, rail and golden plover between Jan. 1 and Sept 1. A correspondent suggests with good reason that the laws of the several States should be changed so that the protection given to migratory game may not be limited to the line between the United States and Canada.

MICHIGAN'S NEED.-The Michigan Sportsmen's Association members have before them the task of awakening public in-terest in their cause. The effort will be made at the next session of the Legislature to secure a State game warden. The Association cannot begin too early a systematic campaign to prepare the way for securing what the people of the State so greatly need.

SOME POINTS IN WOODCRAFT.

Editor Forest and Stream: Perhaps it is a little late to answer a critique printed last December in FOREST AND STREAM. But as there are some points in it that may mislead the general reader, I beg to

December in FOREST AND STREAM. But as there are some points in it that may mislead the general reader, I beg to answer briefly. "Wawayanda," under date of Dec. 31, "begs to inform the father of the craft, before whom we are all but as dust." etc. It is answered that "Nessmuk" does not assume any such paternity; that he is only one of an army of outers who love the forest and spend much time therein, with small profit in a worldly point of view. That he gets more com-forts aud woodland conveniences into a fifteen-pound knap-sack than the average outer gets into a dry goods box may be true; and he does not go into the woods to rough it, but, as claimed in "Woodcraft," to smooth it. We beg to inform "Wawayanda" there is no such dissimi-larity between us on the "shirt" and "soap" question as h is pleased to assume. We use both—in moderation; and we may here mention that, on a week's recent outing with a couple of gentlemen who came into camp with a skiff-load of dufte, the knapsack of "Nessmuk" furnished forth the only piece of soap in camp. As to the piece of soap and towel that were carried for seven weeks in the North Woods without being once used, the critics and cavilers remember to forget that it is stated in immediate councetion that clear water was used, and that at intervals of two or three days woodland hostleries were reached where a thorough ablution could be had, to re-establish the anti-black-fly glaze on once more taking to the wods. "Wawayanda" doesn't understand why one should "pre-

establish the anti-black-fly glaze on once more taking to the woods. "Wawayanda" doesn't understand why one should "pre-fer an open brush shanty for a two-months' outing when a tent that will close is obtainable," etc. This is bedging the question with a vengeance. "Nessmuk" never recommended or used the brush shanty when anything better was to be had. But it is well for the outer to know how. As a dernier resort, one can be comparatively comfortable in very bad weather with only a brush shanty for shelter. Let "Waway-anda" read just what is said in "Wooderaft" on the shanty question. As to "a tent that will close." I recently spent a week in one on a louely spot up the coast, and found it very light, airy and pleasant. I wish I could always have one when camping out. But I cruised there in a ten pound cance, and if the tent were cut in two in the middle the little Rush-ton could not carry one-half of it. What she does carry is che oblong square of cotton drilling described in "Wood-craft." It is 7x9 feet, and when skillfully put up and stretched at a pretty sharp angle, makes a sufficient shelter. If intended for more than one night, the sides are closed in with the large fans of the cabbage palmetto. I have lived a good deal in such a camp during the last fourteen months and found it, even during the northers that prevail here, entirely satisfactory. It is intended for two, but will shelter three very well. As to that "extra shanty" for outdoor cooking in rainy

<text><text><text><text><text><text><text><text><text><text>

smouldering watch-fire. Down came Billy, pale with ex-citement.

citement. "Did you hear the shot?" he asked wildly. "Well, I thought I heard a shot. Sounded as though it was near your runway." "My runway? I should say so. May I never breathe or speak again if that shot wasn't made at me. Yes, sir, missed me by an inch or two and hit the br'ller. You ought to see it. It's just a tangle of twisted wire. Some of these Babbs Creek sneak hunters did it. Crawled along the bank in the high laurel and took a standing shot at five rods. It's a cold-blooded attempt at murder, and it's a miracle how I escaped."

In the ngh hatter and took a standing shot at hve rods. It's a cold-blooded attempt at murder, and it's a miracle how I escaped." "Well, if any sneak hunter in these woods has really missed you at five rods it is a miracle. Looks to me as though some feller had been trying his sights on that br'iler." A light seemed to break in on him. His under jaw dropped, he looked me steadily in the eye for a full minute, and then said in tones of mingled reproach and entreaty: "George, if you did it, don't tell the boys." There was uproarious fun and laughter in camp that night. We hung the demoralized "br'iler" in the light of the camp fire, and I told the story as well as I could under the circumstances. Billy also gave his version, and he had wit and good sense to get as much fun out of it as any man in camp, while returning to sound woodland principles in the shape of a three-pronged birch fork. And there is no moral that I recollect. The little wagon-wheel made as good a "br'iler" as the birch fork, but no better. And it was a ridiculous piece of hunting kit to carry into the woods.

better. And it was a ridiculous piece of hunting kit to carry into the woods. By the same token, I have no doubt the old stove-top answers the same purpose as two small logs placed side by side on the ground as a cooking range, after the manner described in "Woodcraft." But it is no better; and if there be any significance in the fitness of things, one would be more apt to look for it in a camp of gypsey tinkers than In a camp of hunters. Nevertheless, I have no disposition to "pay out" on "Camp Flotsam," and none but genial feelings for "Wawayanda." I am about done with Florida for the present; and I half promise myself another cruise across the Northern Wilderness in a very light cance. I think Camp Flotsam is on Long Lake, not far from Mitchell Sabattis's landing. If so, I am likely enough to paddle in on it some pleasant July evening, and take a (kuife and fork) shot at that old, old stove-top. NESSMUK. P. S.—"Kingfisher" alluded to me a long time since with some mild criticism, but so gentle and genial withal that it is without sting. And his conclusions are sound, *i. e.*, to take all the comfort you conveniently can when going to the woods, but go. Would that I might cruise in on a "Camp of the Kingfishers." The liberal and free-hearted mauner in which I would wade into their 11 cwt. of groceries should convince them that I am not so prejudiced against weight after all—when some one else carries it. N—K.

<page-header><text><text><text><text>

THE A. O. U. CHECK LIST.

THE A. O. U. CHECK LIST. THE A. O. U. CHECK LIST. A The first session of the American Ornithologists' mittee was appointed to consider the question of a Re-vision of the Classification and Nomenclature of the Birds of North America. This committee, which consisted of Messrs, Allen, Coues, Ridgway, Brewster and Henshaw, reported to the Union at its second meeting in October, 1884. The report was accepted, adopted and referred back to the obmittee, with instructions to complete their work and und adopt the report and to publish it in the name and under the aspices of the A. O. U. The Council accepted the re-port in April, 1885, and it is now issued in its completed form. The volume, which is handsomely printed on laid paper, motion at 00 pages. Of these seventeen are devoted to an istorical introduction, in which is briefly set forth what has been done in zoological nomenclature up to the present time and Recommendations." The principles are fire in number, and Web briefly stated, are quite fully explained in the re-matic heasis upon which its principles are fire in number, and which accompany them. The fifty-one canons come is no order and are also fully annotate. The Check List proper completes the volume, and to those who have not altogether kept up with the progress of modern is so a nomenclature and classification, it will be a surprise. It is an absolute overturning of old methods, the order of the profiles in order, while the higher oroes bring up the rear. This is, of course, the natural order, and the one which has ng been followed in all groups except birds, and why the desirability of such an arrangement has never before oc-curred to ornithologists is one of the mysteries that will per-has never be solved. As soon as the idea, was suggested, it are not the Lonoring the Tubinares. Steramonodes and Ar.

thigh never be solved. As soon as the idea was suggested, it at once commended itself to every one; but it was long in coming.
Beginning then with the Pygopodes, the List takes us through the Longipennes, Tubinares, Steganopodes and Anseres, the trumpeter swan cading the true swimming birds. Then follow in order Odontogiosse, Hcrodiones, Paludicola, Limicole, Galline, Columbe, Raptores, Psittaci, Coceyzes, Pici, Macrochires (goatsuckers,) swifts and humming birds, and finally Passeres.
Recent investigations into the nomenclature of our birds has brought about many changes of names, and old and well-known titles have disapeared to give place to others, older, no doubt, but not as well known. Thus, the loon is no longer Colymbus torquatus Brünn., but Urinator imber (Gum.), and the red throated diver is U. lumme. The black-headed gulls, long generically separated from Larus under the name Chroicocephalus, now return to their former place. The generic name Platis has biculate the old genera Anas, Chaulelasmus, Mareca, Netlion and Querquedula; Aythya includes the old Aythya, Fulix and Fuliqula. The name Changida is no used for the old wife or long-tailed duck, once Harelda. A long list of these important changes might be given, but they would not supply the place of the volume itself, which must be in the library of every working ornithologis.
A number of doubtful species have been thrown out of the list, so that it uow numbers but 768 species as against nearly 900 (878 to be exact) in the last edition of Dr. Couce's Key. Tollowing the Check List is a Hypothetical List of twenty-

six species, which consists of "species which have been re-corded as North American, but whose status as North Amer-ican birds is doubtful, either from lack of positive evidence of their occurrence within the prescribed limits of the present Check List, or from absence of satisfactory proof of their validity as species. This includes such species as *Xema furcata*, doubtfully N. American; *Chen cerulescens*, probably only a color phase; *Spiza townsendi*, still a mystery, and others. A list of forty-six fossil species, most of them made known by Professor Marsh, and, as to one group, fully described and figured in his superb monograph on the Odontornithes, or birds with tecth, completes the Check List, to which is of course added an excellent index. The volume represents the best work and the most earc-ful thought of our foremost ornithologists. As the exponent of this thought and work it will earry great weight, and will be gladly received by workers in this field at home and abroad.

THE SPARROW HAWK IN WINTER.

HOUSES FOR BIRDS.

<text><text><text><text><text>

æsthetie, artistie, pice and exquisite in all their tastes and habits as are our native wild birds. They seem to have an instinctive knowledge of the propriety and fitness of all things, never breaking up nature's harmonious color plan, but always falling in with it. My father, some years ago, fastened a number of flower pots against the side of a briek house. The holes at the bot-tom of the pots were made large enough for wrens and too small for bluebirds, as a battle between these two species had been raging for a number of days over the possession of the only bird house on the grounds. I have since used flower-pot bird houses very extensively. The simplest method of making them is to fasten a five-inch pot against a stone or

HANGING OR STANDARD FLOWER-POT BIRD HOUSE.

<text><text><text><text>

holes to allow the plaster to pass through and clineb, as it will not adhere to the smooth surface of the tin. The pan is to be filled with earth, in which may be planted *Tradescantia*, German ivy, or moneywort, which will droop over and twine in the branches of the "cat sereen." Some of the more hardy succulent plants, such as house leeks, creeping Charley, *Sempervirum*, etc., do well in dry loca-tions.

This bird house can also be fastened to a standard pole, as indicated by the dotted lines in Fig. 2, when it is not desiaed to suspend it. The cat screen is intended to prevent cats from passing up the pole and also to break the otherwise stiff and ungraeeful lines, and as a trellis for vinesto entwine on after having climbed or been trained up the standard pole. The cat screen is made of the branches of the black alder, or birch, which are firmly bound to the picket or standard pole, some two feet below the bottom of the pan, against which they press and radiate out as shown in the figure. The best and most ornamental woods for making the screens are red birch with the eones on, spruce with its rich buds, and sweet gum with its eurious corky bark. A. W. ROBERTS.

A LEAST BITTERN'S NEST IN A TREE.—Newport, R. I., Feb. 28, 1886. Editor Forest and Stream: It was on the 19th of June, and a finer morning I don't believe eould have dawned, that I left the house about 8:30, taking a good lunch, and went out to a place called Hanging Rocks, to see if I could see any new birds or find any new nests. I hunted about until noon, and then I ate lunch under a large oak tree. While I was sitting there a chickadee came and lit on the tree. He lit about ten feet over my head, but in a very jittle while he worked himself down withiu about three feet and there he sat for a minute or so watching me with a kind of a what-do-you-want air, and then flew off. I then started off for Southwick's Grove, and on my way I went through many orchards. I remember one of them very well, and I think I will never forget it. It was G. A.'s, as the boys called it, meaning George Anthony's. As I walked through it, watching the wood pewees, the least flycatchers and many other birds, my attention was attraeted by the noise the robins and redwing blackbirds were making. I stood still for a moment, and a male blackbird eame and lit on a little bush not over six feet away. He did not see me, and as I knew he didn't, I pieked up a rock and sent it at him. And now comes the surprising part of my day. On missing the blackbird the stone went tearing through a pear tree, and to my utter amazement a least bittern (*Ardetta exilis*) flew out. I ran quickly to the tree that the bittern flew out of, as-ended, and there, in a very shallow nest, composed of first a layer of twigs about the size of an ordinary lead pencil, nexi a layer of smaller ones, and lastly a lining of moss and a few bits of straw, lay one egg of a very pale bluish white, without spots or any markings whatever. I left the nest and pretured on the 21st. This time I found three eggs in the nest, as it was too frail to take from the tree. I was again in the orehard some time afterward, but the nest was gone, the bird having broken it up, or it having fa

I hope some of your correspondents will relate some of their experiences with this bird.—F. L. T. ANOTHER TAME PARTRIDGE.—The Athens "spock": bird has been captured. On Tuesday evening last, reports the Hudson Republican, April 6, as Deacon Gordon W. Brady was returning to his home in Athens from Catskill, he observed the partridge running beside his horse. Mr. Brady alighted and attempted to eatch the bird, elasing it around the wagon a couple of times, but the bird managed to keep out of reach, until finally Mr. Brady stopped and made motions with his hand as if to strike the bird, when it immediately turned on him and fought his hand, striking with his feet, rooster fashion. Mr. Brady eaught it. The partridge made no resistance when captured, not even flut-tering. It seemed perfectly docile. Mr. Brady rode home with the bird, in high glce. The news soon spread, and scores of citizens flocked to see it. The partridge, unlike other birds of it's species, shows no signs of fear while being handled, not even a single heart patpitation, which is so pronounced in all avoid it, submitting to stroking on its head and breast with indifference. Many people in Athens entertain a superstitions fear of the *rara azis*, asserting it to be the "ghost" of the murdered Waltz, who was hung in Catskill some years ago for the killing of a scissors grinder named Hultz. Others again feel anxious to possess the par-tridge, offering large prices for it. Many strange stories are related of this partringe. Early last winter, while a sleigh-load of men were returning from Hamburg, where they had been working on the ice, the partridge flaw from the hillside in through the sleigh, and passing out between the heads of two men. Two days later the partridge; it alighted on the patertide alighted upon the back of his horse, he being com-pelled to use the whip in order to drive it away. Next George W. Loud met with the partridge; it alighted on the path was not at all superstitious, but he hoped the par-tridge would not bother him again

SALEM, Mass., April 12.—Cedar birds have been in flocks and plenty of them this year. I understand two Lynn parties whose names are known have been buying them from boys this season for seventy-five cents a dozen. If either of them see this mention I hope they will set a better ex-ample to minors. A few seattering Wilson's snipe have been shot and woodcock are along. Swallows (*T. bicolor*) and purple finches are about, and the frogs are piping merrily. Bluebirds are nesting and several other species are mating. —X. Y. Z.

BUFFALO.—A correspondent reports a herd of 400 buffalo. The residents are not killing them, except occasionally one for food, and they are increasing. They will have to move soon, however, as the ubiquitous wire fence is encroaching or them on them.

HUNTING TRIPS OF A RANCHMAN.

UTILITY OF THE SPARROW.—At a council meeting of the Royal Agricultural Society of England, Miss Omerod, in her report on injurions insects, maintained her indictment against the sparrow as a mischievous bird, and repeated her advice in favor of checking its contants increase. She said: "We do not find from examination of their contents that they feed on corn red-maggot, corn-thrips, corn-aphis, or any other corn insect; nor have we any observations of fields infested by these huge flocks being freer than other places from insect attack. From careful observations in different places, extending over a period of from one to fif-teen years, we do not find any diminution of insects round the farm buildings where the sparrows greatly resort, but we find they have been observed, in many cases, to drive away true insect-feeding birds. The State Entomological Returns from the United States confirm these views, and likewise in-formation forwarded by Mr. A. Molineux, member of the Committee of Agriculture of the Royal Agricultural and Horticultural Societies of South Australia, relatively to the English spurrow, as observed by himself at Adelaide, South Australia. Sparrows can and do cat some amount of insects if other food is short, but by choice I consider it to be proved that they are almost wholly corn and vegetable feeders. The matter being of much importance, I have collected informa-tion from known observers on the subject, of which I give the main points in my own forthcoming report."

MCLELLAN'S POEMS.*

Drinking of the protein of the prote

bear The tribute of affection's tear,

her the the poet of the poet o

regret that his ability to describe does not equal his power to enjoy the delightful pastimes of the gunner and the angler. "The author, in preparing a work that might perhaps be styled a book of natural history, has not confined his pen strictly to descriptions of birds, fish and animals that are con-sidered as game, but has included many others that have no claim to such title. In the present volume he has sought to reproduce, as far as possible, his collection of sporting poems bot in a recent disastrous fire in New York, viz., the burning of the Potter Building on Park Row, attended with grievous loss of life and property. "Since this volume was commenced, several years ago, a great number of sporting associations have been formed in the country, consisting of gentlemen of leisure, intelligence and high repute, who are interested in field sports and the pre-servation of fish and game, and to gain their brotherly favor would be honor indeed. So what poems we have been able to save from the wreck we hope may find favor in their sight. There has always been a degree of friendly brotherly feeling among sportsmen, and this has encouraged us to offer this work for public notice, and above all, to brother sportsmen, to whom it is respectfully dedicated. If we meet with fra-ternal approval at their hands, we shall feel rewarded for the labor of many years in trying to produce something accepta-ble to lovers of the rod and gun." For autobiographical notes by Mr. McLellan see Vol. XXV. page 444.

On first appearance we took pleasure in calling attention to the me of this volume, which is both happy in its conception and excell in its execution. In all respects it is a delightful book, full of breexy freshness of the plains, and teiling graphically and enterti-ing the story of the simple life of the cow camp. It gives, too great deal of information about the various species of our la same which are passing away at so rapid a rate, and which nuter of a few years hence will find only in the few preserves thave been or may be established in the mountains. In our previ-notice we called attention to one or two points on which the auti-generalized from insufficient experience, and also to two of the il trations which were unsatisfactory. These last we afterward lear-were prepared during the author's absence in the West, and w-not seen by him until after the volume wais issued from the pru-In the present edition all these matters have been put right, there is now nothing to be said save in praise of the book, wh although much less elaborate than the Maiora edition, is still a has some volume. It lacks the etchnigs and the rubricated title and initials, but has all the engravings, and considerable additional re-ing matter.

RECOLLECTIONS OF A SPORTSMAN.-II.

RECOLLECTIONS OF A SPORTSMAN.--II. I WAS in the early autumn of 1861. Foliage was still on. Farmers were cutting and shocking corn. The buckwheat had just been cut, and much was yet in the fields in little heaps ready to be hauled to the thrashing floor; when I decided, as my work of this kind was well in hand, to spend the afternoon with my new gun and dog. "Bob White" had long since ceased to call his name, and only used the call note when his family had become scattered, or at evening when going to roost. Dash had never been with me in the field before. However, I had the most implicit con-fidence in him, as I knew his former master never kept a poor dog. He had brought Dash across the water because he considered him the best dog in his kennel, one of the finest in England. Dash seemed to have as much confidence in me. When I threw my gun on my shoulder and whistled him up, his very look and action spoke most eloquently of the fun we were going to have in each other's company. I began to wonder if Dash would think as well of me when we returned.

him up, his very look and action spoke most eloquently of the fun we were going to have in each other's company. I began to wonder if Dash would think as well of me when we returned. We took our course down a little brook that ran mostly through a narrow wood into a large millpond. On the south bank was a farm on which I knew were two coveys of quail, well grown and strong birds. Along the brook were many patches of cat brier and alders. In one of these Dash came to a beantiful point, a picture of grace and beauty that would charm the eye of an artist or stir the soul of a sportsman with delight. I walked in, expecting to flush a woodcock, but up jumped a rabbit right in front of the dog and went of shaking his bunch of cotton at me in such a tantalizing way I fired both barrels at him, apparently without effect, except to increase his speed. I had scarcely emptied my second barrel when I saw a woodcock disappearing through the alders. Dash was still pointing, though it seemed to me he had changed his position slightly. I could flush nothing in front of him, so tried to call him off, but could not. I was about to collar and lead him away, supposing he was pointing where the woodcock had been, when up got another woodcock behind the dog. I wounded it with my second barrel, followed up and secured it by another shot. I con-sidered it a serious defect in my dog that he should be liable to point at cither end. This, by the way, reminds me of an incident that occurred in later years, that may bear repeating. I was once return-ing from a little hunt near the city, with my gun and dog, carrying a small bunch of game in my hand. My outfit and rig would not indicate to the average feminine mind, accus-tomed to city habits, a high idea of gentility. As I was crossing on a Pulton ferryboat, standing in front of the ladies' cabin, I noticed two ladies watching me, evidently admiring my birds. Presently they stepped up to me, and one of them asked how I sold them. Treplied that I did not usually deal in birds as merchand

ately asked if my dog would bite. I assured them he would not, and called their attention to the fact that he was very tired, already being coiled up close in the corner under my feet fast asleep. The idea that a dog ever got tired was new to them, and they wanted to know why. I explained to the best of my ability, and by way of illustration made old Bob get up and straighten himself. I stroking his tail, mak-ing him assume the position of pointing as nearly as possible. Both ladies exclaimed, "Oh, isn't it wonderful! Yes, thanks, we understand," one saying to the other, "Don't you see, my dear, nature has so adjusted the creature that he points with his tail."] I was quite uncertain for some time at which end of the

AN UP AND DOWN SHOT.

AN UP AND DOWN SHOT. Editor Forest and Stream: Toget the head of "Erratic Bullet Flights" you have re-cently published two communications from me giving inci-dents in my own experience where life was endangered by singular and unlooked for bullet flights. I will now give another incident in my practice which, although not quite so singular, was really attended with more probable danger. It occurred within half a mile of the scene of my duck shoot-ing adventure, published by you. I was hunting black and gray squirrels in the adjacent forests; I had that very com-mon run of lucks oo fite experienced by the solitary squirrel hunter, namely, of having the squirrels lie close to and on the opposite side of a horizontal limb. Finally I tried the bark. This caused the squirrel to stretch its neck and look down over the side of the limb, exposing most of its head, which in those days I rarely missed, whether firing perpen-dicularly or otherwise. I had in this manner killed two or the opped at my feet. As I was raising my flak to the muzzle of my rifie there was a whiz and a sharp crack, partly behind and within three feet of me upon the ground. As I turned my head quickly I saw the extreme ends of aty limb about one inch in diameter and six or seven feet feet long just falling upon the ground. An examination revealed the fact that the bullet having expended its force vertically in the air, had returned, and striking this stick guarely midway between the ends had partly cut and partly bullet mark was plainly defined nearly through the stick. This ended my vertical rifle practice. MICTON P. PEIRCE. MICTON P. PEIRCE.

PEILADELPHIA, Pa.

MECHANICSVILLE, N. Y., April 5.—A Rod and Gun Club was organized in this village last week. The object is the better protection of game and for trap shooting. You will hear from us in the future concerning the club's improve-ment. The members are all true woodsmen, and I think the club will be a success. We are watching the deer bill with interest. Ice is going fast and the fisherman is varnishing his rod and inspecting his lines for the spring fishing. Boys are having fine luck catching the river fish.—A. C. J.

THE ONTARIO GAME LAW.

<section-header><section-header><text><text><text>

Following is the text of the Ontario law:

Following is the text of the Ontario law: Whereas, It is expedient to ameud the law respecting the preservation of game and fur-bearing animals in Ontario; therefore, Her Majesty, by and with the advice and consent of the legislative assembly of the province of Ontario, enacts as follows: 1. The act passed in the forty-third year of Her Majesty's reign, and chaptered 31, is hereby repealed. 2. None of the animals or birds hereinafter mentioned, shall be hunted, taken or killed within the periods herein-after limited:

shall be hunted, taken or killed within the periods herein-after limited: (1). Deer, elk, moose, reindeer or caribou, between the fifteenth day of December and the fifteenth day of Oetober. (2). Grouse, pheasants, prairie fowl or partridge, between the first day of January and the first day of September. (3). No quail shall be hunted, taken, or killed, during the years 1886, 1887, and no wild turkeys during the years 1886, 1887, 1888, and in each case thereafter not between the fifteenth day of December and the fifteenth day of October following

1887, 1886, and in each case therearer not be owned a set of fifteenth day of December and the fifteenth day of October following.
(4). Woodcock, between the first day of January and the fifteenth day of August.
(5). Snipe, rail and golden plover, between the first day of January and the first day of September.
(6). Swans or geese, between the first day of May and the first day of September.
(7). Ducks of all kinds, and all other water fowl, between the first day of September.
(8). Hares, between the fifteenth day of Mareh and the first day of September.
(8). No person shall have in his possession any of the said animals or birds, no matter where procured, or any part or portion of any such animals or birds, during the periods in which they are so protected; provided that they may be exposed for sale for fifteen days, and no longer, after such periods, and may be had in possession for the private use of the owner and his family at any time, but in all eases the proof of the time of killing, taking or purchasing shall be on the person so in possession.
4. No eggs of any of the birds above mentioned shall be taken, destroyed or bad in possession by any person at any time.

tion 7 of this act, by a fine not exceeding \$25, nor less than \$5, with costs, for each offense. (d) In case of other breaches of this act, by a fine not exceeding \$25, nor less than \$5, with costs. 9. The whole of such fine shall be paid to the prosecutor unless the convicting justice has reason to believe that the prosecution is in collusion with, and for the purpose of benefiting the accused, in which ease the justice may order the disposal of the fine as in ordinary cases. 10. In all cases confiscation of game shall follow convic-tion, and the game so confiscated shall be given to some charitable institution or purpose, at the discretion of the con-victing justice.

tion, and the game so confiscated shall be given to some charitable institution or purpose, at the discretion of the convicting justice.
11. In order to encourage persons who have heretofore imported or hereafter import different kinds of game with the desire to breed and preserve the same on their own lands, it is enacted that it shall not be lawful to hunt, shoot, kill or destroy any such game without the consent of the owner of the property wherever the same may be bred.
12. It shall not be lawful for any person to kill or take any animal protected by this act by the use of poisou or poisonous substances, nor to expose poison, poisoned bait or other poisoned substances in any place or locality, where dogs or cattle may have access to the same.
13. (1) No person shall at any time hunt, take or kill any deer, elk, moose, reindeer or caribou, for the purpose of exporting the same out of Ontario, and in all eases the onus of proving that any such deer, elk, moose, reindeer or caribou, as aforesaid, so hunted, taken or killed, is not intended to be exported as aforesaid, shall be upon the person hunting, killing or taking the same, or in whose possession or eustody the same may be found.
(2) Offenses against this section shall be punished by a fine not exceeding \$25, nor less than \$5 for each animal.
14. No owner of any hound, or other dog known by the owner to be accustomed to pursue deer, shall permit any such hound, or ther day from the fifteenth day of November to the fifteenth day of October, under a penalty on conviction of not more than \$25 nor less than \$5 nor each animal.
15. It shall be lawful for the council of any county, city, thereof

owner of any such houud or dog shall be deemed the owner thereof.
15. It shall be lawful for the council of any county, city, towu, township, or incorporated village to appoint an officer who shall be known as the game inspector for such county, city, town, township or incorporated village, and who shall perform such duties in enforcing the provisions of this act, and be paid such salary as may be mutually agreed upon.
16.—(1). It shall be the duty of every such game inspector appointed as aforesaid, forthwith to seize all animals or portions of animals in the possession of any persou contrary to the provisions of this act, and to bring the person in possession of the same before a justice of the peace, to answer for such illegal possession.
(2). It shall also be the duty of every such game inspector to institute prosecutions against all persons found infringing the provisions of this act, or any of them, and every such inspector may cause to be opened, or may himself open in ease of refusal, any bag, parcel, chest, box, trunk, or receptacle in which he has reason to believe that game killed or taken during the elose season, or peltries out of season, are hidden. hidden.

hidden. (8). Every such inspector, if he has reason to suspect, and does suspect that game killed or taken during the close season, or peltries out of season, are contained or kept in any private house, shed, or other buildings, shall make a deposition in the form A annexed to this act, and demand a search warrant to search such store, private house, shed, or other building, and thereupon such justice of the peace may issue a search warrant according to form B. 17. This act shall come into effect on and after the first day of July next after the passing thereof.

A GOOSE SHOOTING MATCH.

A COOSE SHOOTING MATCH. Editor Forest and Stream: The turkey shoot described in your last issue by Mr. Mer-rill, reminds me of a goose shoot in which I participated about five years ago. I used a Pheemix single-barrel breech-loading 12-gauge shotgun, made by the Whitney Arms Co. The barrel is steel, 23 inches long, and the entire gun weighs six pounds. A few days previous to the match I targeted the gun at 40, 50 and 60 yards. While shooting at the latter distance, two of my brothers expressed the opinion that they could excel my shooting, they to use their old muzzleloaders. Their challenge was promptly accepted. A new target was put up. One of my brothers fired at it. I was standing near the target, and noting the effect, told him to try the other barrel. The other barrel was fired. My younger brother then toed the mark and fired a heavy charge of No. 12 shot from his long single barrel. A new target was put up and I fired one shot at it. The number of pellets in each target were then courded, and it was found that in one shot 1 had exceeded their three shots by about 40 pellets. This experiment, and numerous others, convinced me that the new gun was good enough to shoot for geese. I even went so far as to bargain with a neighbor that if he would give me twenty cents to pay for two shots, I would bring him bene the day for the match arrived I hitched up Prince

The proof is in possible. The proof is the proof of any of the proof of a general proof of the sector of the solut anisot or brids, except the anish and the does heavy charge of No.
The proof is contrivenees in the solut anisot or brids, except the anish and the does any charge of the solut and the charge of the solut

GAME PROTECTORS' REPORTS.

Editor Forest and Stream: Fred P. Drew, Special State Fish and Game Protector, has made the following annual report to the State Fish Com-

Editor Forest and Stream:
Fred P. Drew, Special State Fish and Game Protector, has made the following annual report to the State Fish Commission:
To the Commissioners of Fisheries:
GENTLEMEN—In submitting for your consideration my second annual report, 1 am reminded that the protection of game and fish, like the stocking of our lakes and streams, does not in a single season display all the results that might be hoped for or which a later examination may develop.
My duties, as you are aware, have been largely of special and detective nature, and a great part of my scrvices have been rendered pursuant to the orders of the Commissioners outside of the district to which 1 was assigned. The information 1 have obtained on special trips has been mostly of a kind that could not be made public without detriment to the objects in view, and therefore will not be recapitulated in this report, having already been communicated to you either in verbal or written form. I have, nevertheless, rendered some important service in my district, and especially in the counties of Broome, Cortland and Otsego, localities in which, till very lately, the game laws have been a dead letter. Trive suits successfully prosecuted in Broome county, for spearing fish in the Susquehanna River, resulted in securing a pretty general observance of the law in that county.
Ma the fourth district for violation of the first section of the game laws 1 commenced proceedings in county court, which were promptly settled by the defendant pleading guilty and paying the penalty and costs to the district atorney.
A suit is pending in Gortlandt county for yiolations of the law in that event were ported to may and have begun eleven suits for violations of the law in the same county of Otseco I have endeavored to make a very thorough examination into all offenses that have been reported to me and have begun eleven suits for violations of the law in the same county, which will be placed in the hands of th

for years frequented the northern wilderness each season, and with scarce an exception they fully approve of the law, at the same time being cognizant of the fact that it has not had a fair test. From my own observation and information obtained from guides and sportsmeu while they were en-gaged in hunting deer in the counties of Herkimer and Ham-ilton, I think it but fair to attribute much of the success of the still-hunters during the past season—which we are asked to believe was unprecedented and will exterminate the deer faster than they cen be bred, even with the aid of such pow-erful auxiliaries as juck lights and hounds—to the fact that dogs were running in every direction during the open season at least. A single instance, the truth of which cannot be disputed, illustrates this. A well-known still-hunter in October last shot a deer, but had hardly dressed it when two valuable dogs came baying on its trail. He secured both, and they were soon subject to your orders. This is not an exceptional ease, as one of my special reports will show, and for this reason we fear the fate of the deer of the Adiron-dacks is foreshadowed by that of the buffalo of the Western plains. The argument that outweichs all others in the minds of

dacks is foreshadowed by that of the buffalo of the Western plains. The argument that outweighs all others in the minds of many opponents of the present law for protecting deer may be briefly stated thus: It helps the hunters who are endowed with more money than skill in hunting, for they can, by a lavish use of the former, secure the services of a half dozen or more guides and a full pack of hounds, who will drive the game to water, where, if needs be, they will hold it till the valiant modern Nimrod succeeds in killing it—with their assistance perhaps at that. Is it to be wondered at then that these persons should join with the pot-hunters in the ery that went up in olden time: "Our craft is in danger to be set at naught." With your permission I beg leave to offer a single sug-gestion regarding the distribution of trout spawn for restock-ing public waters in the settled portion of the State. A pre-requisite to granting every application should be the existence of an active protective association, some of whose members reside in the neighborhood of the waters it is proposed to restock. All of which is respectfully submitted. *FRED* P. DREW. Special N. Y. S. Fish and Game Protector, 11th District.

Special N. Y. S. Fish and Game Protector, 11th District. WASHINGTON MILLS, N. Y.

HUNTING AT ARMY POSTS.

HUNTING AT ARMY POSTS. Editor Forest and Stream: Toy letter of Jan. 9, 1886, making inquiries in regard to grame in this vicinity, also with what success the Government Springfield shotguns are used in improving the company's mess, has just been handed me by the commanding officer with request to answer. Whitetail deer can be found within five miles of the fort, but mule or blacktails are further off, about forty miles. Last fall a black bear cub was killed on the prairie within fifty yards of the guard house. Elk can be found thirty miles away, 'and mountain sheep seventy or eighty miles. Sharptail grouse, sage hens and blue quail are abundant. I saw but one ruffed grouse during the hunting season last year. A species of jack rabbit, here called "black tail," are very plentiful; a short time ago they were such a nuisance that the county paid a bounty for their ears. Sixteen years ago some gentlemen of Boise City imported to this county or valley a lot of eastern quait (Bob Whites) and urned them loose, hoping for fine sport within ten years. An act was passed by the Legislature protecting these birds, but the pot-hunter has left but few. — With regard to the shotguns, I consider them but little wean possibly get any other kind. But little game was killed by the men of my company last year, but the previous year to for Lapwai in this Territoy: they killed a good many. — C. A. DEMPSEY, Capt. Second Infantry. Bors BARACES, Idaho, March 28.

BOISE BARRACKS, Idaho, March 23. ONONDAGA SPORTSMEN'S CLUB. — Syracuse, N. Y., April 7. — At the annual meeting of the Onondaga Sportsmen's Club last evening Mr. Howlett was elected President; Z. C. Smith Smith, Vice-President; John Stedman, Scoretary; Harry Ayling, Treasurer; George Palmer, Financial Secre-tary; Wn. Prettie, James Montgomery and Daniel LeFever, Executive Committee. There scened a disposition on the part of the old heads to make the younger members officers. A. G. Courtney was chosen attorney of the club amid great applause. G. W. Dakin moved a vote of thanks to Thomas Kimber for his faithful performance of the duties of treas-urer for the ten years he has held that position. The motion was carried with enthusiasm. The treasurer turned over \$894.77 to the new treasurer. F. M. Eams, Edward Hud-son, Jr., and Charles Castle were elected members of the club. It was voted that article 17 of the constitution shall be rigidly enforced, and all delinquents in dues should be blackboarded. Jefferson Hopkins, of Cauchdenoy, asked the club to give lim a letter to Assemblyman Nutling, stating that the members do not oppose the people of that vicinity having eel weirs for catching eels in the Oneida River, not interfering with game fish. It is understood that an effort is to be made to have a law pass the Legislature forbidding eel weirs in that river. The club voted to give Mr. Hopkins a letter to the effect desired. There is talk of holding a cele-bration on the twentieth anniversary of the establishmeut of the club, Sept. 29. 1886. n on the twentieth anniversary of the establishment of the club, Sept. 29, 1886.

"WONDERLAND, or Alaska and the Inland Passage." By Lieut. Frederick Schwatka. With a description of the country traversed by the Northern Pacific Railroad, by John Hyde. This is a beautifully illustrated pamphlet of a hundred pages describing the scenic beauties, attractions and resources of the Northwest. It relates to a portion of the United States which is every year visited by larger and larger numbers of tourists, and which would attract thous-ands more were it better known. Those who are thinking of a trip to the Yellowstone Park, to the Pacific Coast, or to Alaska should, before leaving home, provide themselves with this work. It is sent free on application by Charles S. Fee, Gen. Passenger Agt., N. P. R. R., St. Paul, Minn.

THE BOSTON DUMPING GROUND.—Chicago, Ill., April 6. —Editor Forest and Stream: I desire through your widely circulated paper to ask if the sportsmen of Massachusetts will not at once set about having a law framed and passed by their Legislature, making the close seasou for game to begin the same as in most of our Western States, Jan. 1 of each year, so as to prevent the trapping and killing of prairie chickens, grouse, quail and decr in the West all winter. The best way to stop this illegal killing and shipping out here is to close the markets for sale of game.—M. R. B.

A BOLD RUFFED GROUSE.—Cortlandt, N. Y.—Occasionally a remarkable iustance of boldness of the uaturally timid ruffed grouse is related. Two wood choppers stated to me that while they were felling a tree in the woods last winter a partridge, which had from some cause been startled from its hiding place in the cover adjoining, alighted in the tree they were chopping down and remained there until the tree commenced to fall. From observation and reports of others more ruffed grouse were found in this section last season than have been noticed for a number of years past. Evidently the hunters have not caused the destruction of these game birds to such an extent as the foxes, hawks and owls.—MIG.

SAN LUIS OBISPO, Cal.—We are about forming a sports-men's club, as game and fish receive little or no protection in this county. I have been agitating this for a year, as I have seen the wanton destruction of game and fish in the State of Colorado. Many are out every day murdering the trout now, and as we have no organization, I am powerless. Quail are now mating. There are but few out with guns, but they, I fcar, respect nothing.—C.

SPITTING ON THE SHOT FOR LUCK. —Ferrisburgh, Vt., April 7.—*Editor Forest and Stream:* If it is worth noting, you may say in FOREST AND STREAM that when "Awah-soose" was a boy, it was a common custom with our gunners to wet their shot with spittle, not for luck, but from the idea that it made them carry closer. But we always used to spit on our baits of worms for luck, and nothing else. Some-times it brought it.—Awahsoose.

NARROWS ISLAND CLUB — The annual meeting of the Narrows Island Club was held in this city ou Monday, April 12. The following officers were elected: President, Mr. D. G. Elliot; Vice-President, Mr. J. A. Howlett; Sccretary and Treasurer, Mr. C. T. Barny; members of the Governing Committee in addition to the above, Messrs. H. Sampson, W. G. Dominick and B. Dominick.

New JERSEY.—Smithburg, April 8.—Since my last re-port 1 have been out looking after the birds, and find quail in fair supply. Started one covey of about 18 or 20 birds. Woodcock are quite plentiful now, but they seldom remain here until the shooting season opens.—W. L. B.

TEXAS.—Midland, March 31.—Plenty of prairie chicken and curlew here, but their flesh is strong, owing to their eating grass and weeds. I have seen but two antelope since Jan. 1.—D. H. K.

THE CHAMBERLIN CARTRIDGE LOADING MACHINE is on exhibition at Messrs. Tatham & Bros.' establishment, No. 82 Beekman street, this city. It is worth going to see.

ANGLING GUSH.

ANGLING CUSH. If may not be amiss thus early in the season to give some angling impressions. In the first place, it is wonderful to note how the interest in the rod and line has increased during ten years even. It is also amusing to notice the way different individuals are affected by the mania; for mania it is with one whole class of anglers. Indeed, anglers may be separated into three distinct classes—viz, the staid and true anglers, the gushing anglers, and the selfish anglers. The true anglers have been in the profession for years. They go to the lakes and streams annually, as regularly as the sun rises, and if they fish from sunrise to sunset without a single rise, they return to camp satisfied; they have spent another day on the beloved waters; they have tried the trout, but wait till to-morrow for success. Do black flies bite or mos-guitoes trouble, it is all the same. The disposition is un-tomorrow and try the trout again. To this class success and pleasure always come. It would almost seem as though the ig to the is class. Chester A. Arthur is another. May heaven restore his strength for other campaigns in the foresits and on the waters! There are many others in Boston, in your own city, good FOREST AND STREAM—scattered all over the world; but their native modesty forbids a roll call in puelle prim. — But for the gushers—What shall be said of them? They

forests and on the waters! There are many others in Boston, in your own city, good FoREST AND STREAM—scattered all over the world; but their native modesty forbids a roll call in public print. But for the gushers—What shall be said of them? They feed upon gush until the season opens, and they are carried away by gush. Their files "lightly kiss the surface, as smooth as a maiden's cheek." Another dextrous cust, and the tinsel-orunamented lure falls as lightly as a summer zephyr; when the sheen opens, there is a mighty swirl of a really pretty tail! The water boils and eddies as the pliant rod bends and buckles, but the angler is as true and steadfast as gush can make. The struggle lasts one mouth, if a mosquito with a big bill does not happen along and send Gusher to camp. A—what—"speckled beauty" is caught, just tipping the scales at 5–10–1,000 pounds. Plain trout is not a name good enough, and greeny always selects "speckled beauty," because that name is new—to him—and not a bit sill." Mow, if all this could have happened under cover, with the trout in a pool before an open window, it would have been better, and less tircsome, you know. The placeshould also be heated with steam and well lighted with gas, and there should be an admiring audience. Here is a sample of what catches Gusher. It is from the Boston Sunday Herald: In the show window of a store on Washington street is a pabout three dozen of the finest trout that ever gladdened the eye of an angler. Over this miniature pond stood Manager Soden yesterday evening. His eyes had a turnstile twinkle as he gazed upon the "speckled beauties" gracefully moving about in the limpid waters. Turning to an attaché of the place, he said: "I' wonder if they would like a fly?" "You may try their hands of the astute manager of the Boston Base Ball Club. With a graceful move of the right arm the fly was thrown in true angler style, and it fell within an inch of the nose of a queenly fish. But much to the suprise of the nodead-head-ticket-this-season manager, the piscato

coquette, and again the arm was lifted and the fly sent to another point on the trembling surface of the little lake. It dropped as lightly as a baby's kiss immediately over the heads of half a dozen finny Yum-Yums, each one of whom, as soon as the tidbit struck the water, gave a gentle movement of the tall, and departed for new quarters. The fifty cent admission manager looked up with surprise at this second refusal to bite at his freelunch. At this time a large number of men and boys had collected in front of the window, and were eagerly watching the performance of the far-sighted director of the Boston league team. Not realizing, in his eagerness to demon-strate his skill as an angler, that he had so large an audience, he hastily withdrew to the rear of the store, and remarked that he was more successful in catching subsidiary eoin than hooking trout.

that he was more successful in catching subsidiary coin than hooking trout. What twaddle! The light of a fact or two is too plain. The "improvised rod" was the tip of a lancewood pole. The flies had both hooks broken off. The cast into the "little lake" was about as much "in true angler style" as a lady's smile is like a dump cart. The audience was the usual one which throngs any show window or street fight. Such literature disgraces the profession. It might do for base ball, but never for the true angler. The plain congratula-tion of an angler of thirty years' every season at the Andros-coggin Lakes, told the true story when he beseechingly said: "I wouldn't worry the poor trout with that stick" the improvised rod of the base ball manager; then bowing and shaking hands with Mr. Litchnield, he quietly said, "Let me congratulate you on a good show of trout." The third class of anglers must not be omitted, but they too take more pride in their profession. To call them the "meanest men on earth" might be too much of a compliment. They fish for numbers, and count their trout as does the bucher his meat—by the pound. The selfish anglers have depleated our lakes and streams till we tremble for the should go to make up the sport of their brother anglers. I have a case in point. The selfish angler came from the Quaker Citv_-thet all

Depended out lakes and streams till we tremble for the residue. In their greed they steal pounds of trout which should go to make up the sport of their brother anglers. I have a case in point. The selfsh angler came from the Quaker City—that all Quakers are not like him, is doubtless true. He arrived at the Upper Dam early in the season. He hired a guide—only for a day or two. It did not take long for him to find out, through his guide, that by standing down on the pier of the old apron and casting a line down the rushing torrent, baited with a live minnow, trout might be caught about as fast as the hook could be baited and returned. This was the spot for him. He had found the Meecea of his dreams. With his guide, he plavted himself on the end of that pier—about wide enough for two persons. The guide dipped up the live bait and the Quaker City man slew trout. Did another person attempt to drop a line? That person was quickly reminded that the position was occupied, and that no gentle-man would ever interfere with an angler's pre-empted posi-tion. They kept that position till the next day at uoon. When the Quaker man went to his meals at the camp, the guide held the position, then the guide would go to dinner. But the second day, when the guide would go to dinner, the assembled sportsmen could stand 'it no longer. They made a rush for the position with baited hooks; throwing their lines over the Quaker's head. He frowned; but when two other lines were hooked to his on which he was drawing in a trout, he saw the point and quictly wound up his tackle. He called his guide and together they proceeded to dress off the catch. They had 350 trout. The largest weighed 44 pounds and the smallest probably not less than 1 pound. The fish were packed in a big box, and the next morning the Quaker City man paid his guide and started for home with his catch. It was before the 50-pound law of Maine, or he would have been stopped. He was a true specimen of the selfish angler. The question is, How much true sport with the fly, l

THE TROUT OF SUNAPEE LAKE.

THE TROUT OF SUNAPEE LAKE. Editor Forest and Stream: I have read the views of your different correspondents on the identity of this fish and am very anxious to learn how the vexed question will be settled. Mr. Hodge claims that this fish has beeu in the lake for perhaps centuries, while Mr. Quackenboss, Mr. Webber and Mr. Stone incline to think it a recent importation of *S. oquassa* from Maine. I, being merely a monad from Monadnock, have no theories to con-firm nor to condemn, the facts will be entirely sufficient, if they can be obtained. If all your correspondents can look at it in this light and feel as Dr. Bean did when he said to Mr. Hodge, after pronouncing the fish a *fontinalis*, "you were right and I was wrong," then we may hope to see the question settled. I must confess to feeling a little doubt about the possi-

were right and I was wrong," then we may hope to see the question settled. I must confess to feeling a little doubt about the possi-bility of a fish of small breed, whose ancestors never meas-ured more than ten inches, reaching a weight of ten pounds in new waters. This doubt is based on the fact that there are certain limits assigned by nature to all forms of life which, while they may be occasionally exceeded by individ-uals, or even by many, under different conditions, are con-stant even in the exceptions. For instance: The average weight of a man is about 150 pounds, the world over, but in-dividuals have been known which reached upwards of 400 (outside of dime-museum weight) and there are countries where the average is 160 pounds or above, but none where this average reaches 200 pounds, or one-third more than the average for the whole world. Again: An individual ox might weigh 2,500 pounds, or about three times the average of his race, still we would doubt that one eculd weigh 240,-000 pounds under any conditions. In this case it would be forty times the average of his race, placing this average at 6,000 pounds. Now take a blue-backed trout which does not average a quarter of a pound in his native waters, in fact one rarely reaches that weight, and then imagine him to grow ten pounds in some new lake because there was plenty of food there! Food is a great factor, but it cannot make an elephant out of a mouse because the material is not three, the ancestry is

Food is a great factor, but it cannot make an elephant out of a mouse because the material is not there, the ancestry is not there, and ancestry is as important as food. The THIRSTY PELICAN.

MONADNUNCKEWUNK, Ap. il 10.

BASS FLIES.—New York, April 9.—Editor Forest and Stream: The flies mentioned by me were Post, and Juugle St. Patrick—not Post Jungle. Your correspondent will find these flies, with the exception of the Post, on the hand colored plate of standard black bass and lake flies, pub-lished by Messrs. Abbey & Imbrie of New York, and often advertised in your paper. The Post has wings of wild turkey, salmon colored body, black hackle, and tail of scarlet ibis and yellow, mixed. The St. Patrick is also known as the Alexandra.—W. HOLBERTON.

conce and a good breakhast on the emperior the party.
Long faces shortened up, an air of good humor diffused itself through the camp, and every one scemed determined to make the best of an uncomfortable position without grumbling.
A rousing fire was built directly in front of the big store tent, the flaps tied back, and into this the happy family gathered to chat, read, amuse themselves, and wish for pleasant weather.
Sunday should be a day of rest in a camp, and I had promised myself to stay in as a shining example to the others, but when the spirit begins early in the morning to wheedle one into going a fishin', it's not much use in trying to hold out against it, and accordingly between 9 and 10 o'clock the inclination prevailed. I bailed out one of the boats, put in a bucket of frogs, bait box of worms, the old bass rod and a short stiff one, handy to get along with in the brush, and headed up shore to find a trout stream which one of the Horton boys had told us about, that came into the lake a couple of miles above camp.
Mother Jim and her sister Famy having been brought up in the rigid old mossbacked Seotch Presbyterian faith, were no doubt horrified at this move; but as the sin of fishing on a Sunday is probably not greater than that of loafing in camp and thinking for net a brave, strong fish the whiles, I settled with my conscience in this view of it, and, bending to the oars, was soon out of sight around the point above Horton's, looking for the landmark by which I was to find the mouth of the stream. The others scened to have caught the spirit of goodness pervading Mother Jim, or perhaps they did not care to brave the discomforts of the cold wind and rain, and I was to have the day to myself.
I failed to find the landmark or the mouth of the stream, as it was lost in a maze of swamps and dead trees, killed by the backwater, that extended back I could not tell how far in the direction of the hills, and I had a pull of nearly a mile further before I

a landing—at Alexander's Point, full three nines are a landing—at Alexander's Point, full three nines are camp. Here the lake takes a turn in a southwesterly direction, and from this point to the head is about four miles. The wind had veered around since my leaving camp, and was now blowing down this long stretch with a force that kicked up white-capped waves three or four feet high and rolling and tumbling, quartering down the lake till they spent themselves with a roar and a cloud of spray against the further shore. Directly across from the Point is a big steam sawmill and a small hamlet (Bingham P. O.), and, as a matter of information for the brethren, I may note that it is about nice milts from Traverse City by wagon road, and that Mr. B. J. Morgan a livery man at Traverse, has a boat house here and boats to hire to any one wishing to drive out for a day's fishing.

miks from Traverse City by wagon road, and that Mr. B. J. Morgan a livery man at Traverse, has a boat house here and boats to hire to any one wishing to drive out for a day's fishing. As it was useless to think of making headway against the heavy wind and sea, sweeping by only a few rods away, I pulled the boat up under the shelter of the point, hid the bass rod in a handy pile of logs, took the other one and worms, and crossing a field of growing peas, struck into a road, which I followed back till I found the trout stream, a puny affair a yard or two wide and slightly discolored by the heavy rain of the previous night. There are trout streams and trout brooks, and this was perhaps one of the latter, but it took another and equally as bad a day to establish the fact that there were some good trout in i, of which more anon. This dreary Sabbath day I fished for a goodly distance down and up, through an open field and up into the woods into a dripping tangle of "breah," floundering over logs and fallen trees, crawling under them when I couldn't crawl over, nearly stuck fast once in a treacherous swamp, and ever fighting sketers; all this without catching sight of a solitary fin. There is a good deal of straight fun in fishing an average Michigan trout stream in its wild state if you know just how to do it, but it requires long practice and a thorough train-ing in all the grades of true goodness to do it without drift-ing into protanity. I've tried it week days and Sundays, and always with results bordering more or less on a failure. It is no place for an average church deacon, for he would backslide to the level of an ordinary, every day sinner before he had fished and 'fit muskeeters' five rods. I worked back suit of the tangle into the road, hot and tired, and trudged back to the boat filled with disgust and disappoint-ment, for I wished very much to treat the girls to a trout supper as a peace offering, a bribe, so to speak, to go easy on the skipper in the matter of the scoring they were certain to have la

XiV., July 16, 1885. Old Ben sug spell between drinks, the 'Jone: breth in' an' ask 'em all into the The apology and invitation are mily' had better apologize to the rely' had better apologize to the rent to hev a drink—o' water." reby tendered.—K

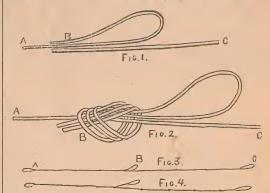

with the wind for the further shore with the swiftly-revolv-ing spoon trailing 200 feet astern, a tempting sham for any bass, pickerel or maskalonge that might mistake the glitter-ing, quivering thing for a new-fangled bug that he had not sampled.

bass, pickerel or maskalonge that might mistake the glitter-ing, quivering thing for a new-fangled bug that he had not sampled. It was a wild ride for three-quarters of a mile, first on top of a big wave then bow buried in a roller with stern high in air, raising the line clear of the water with a jerk that caused the troller to skip from the crest of one wave to another like a bright-winged insect full of life; again stern down and bow high out, pitching and rolling we went, the boat and I, over the curling waves till, when near the middle of the lake, a savage tug tightened the line like a bow string, and before I could free the reel handle and snatch the rod from under my leg, the strain eased, and a glance at the sagging line and "feel" of the reel handle told the tale; the troller was gone, and with it, of course, the mightiest pickerel or maskalonge in the lake. I felt sore over the mishing, but then, one always does lose his biggest fish, simply, I believe, because he is big and strong and powerful enough to break ordinary tackle. If inadvertently the slightest advantage is allowed, and I consoled myself with a quotation, slightly altered, from old Ben: "Any fool kin ketch a pound bass, but it takes science to ketch a big muskylunge, espeshally ef he slips up on ye when ye ain't a lookin"." Besides, had I been attending strictly to business instead of gaping around over the lake enjoying the blow, I would have lost him anyhow, for the water was so rough and I was going at such a pace that I would not have been able to handle boat and rod at the same time. There's nothing like a good excuse for losing a big fish, and the brother that can't make peace with himself for his awkwardness by framing a plausible and satisfying reason that will cover all the weak spots in the case, had better not go afishing. When I found out it was not my fault—and it is surprising how easy a conclusion of this kind is arrived at -I felt easier; but I did not feel like telling the camp of the adventure, and being laughed at as

The philosopher had told us of a trout stream coming into been a thirty pounder. The philosopher had told us of a trout stream coming into the lake near where I then was, out of which he had taken over 70 trout a couple of days before we arrived, but there was such a dense growth of deadened trees standing in the backwater along here for half a mile and extending back further than I could see through the network and tangle of dead trunks and leafless branches, that I looked in vain for the mouth of the stream. There were more days left, however, and the stream could be more easily reached by an old road beginning at the water at a point opposite camp, and the signs were not good for trout that day and 'the Jonses wasn't used to hevin' trout o' Sundays nohow," all these trifling drawbacks making a most gratifying excuse for not taking any back to camp.

old road beginning at the water at a point "oposite camp, and the signs were not good for trout that day and "the Jonses wasn't steed to hervit trout o' Sundays nohow," all these titling drawbacks making a most gratifying excuse for not taking any back to camp. The steed to hervit from a live kicking frog and at a point where the shore sweet back, forming a little bay, soon for-sor all about tangles and trout streams in a lively fight with a big-mouthed bass of quite three pounds. In less than an hour five more were on the stringer shedding fresh water is veral encounters with a speedked frog with a fishhook in bis mouth, when, as six bass were enough for supper and beckfast the boat was headed for camp, now in plain sight, to tars and stripes whipping in the breeze, a mile or more down the lake, but I may say (this for the especial eye of other after the fash had quit sting wearing an aspect of "subdued cheer fulness" that said plainly they are all glad the dismal, gloomy day was about draw-ing to a close. I fancied, too, I could detect in the reproving the odout merited (tor not bringing in a mess of trout), and to dout merited (tor not bringing in a mess of trout), and to dout merited (tor not bringing in a mess of trout), and to dout merited (tor not bringing in a mess of trout), and to dout merited (tor not bringing in a mess of trout), and to dout merited (tor not bringing in a mess of trout), and to dout merited (tor not bringing in a mess of trout), and to dout merited (tor not bringing in a mess of trout), and to dout merited (tor not bringing in a mess of trout), and to dout merited (tor not bringing in a mess of the striper basing advantage of the hitrity Top and I repaired to the boat to look at the bass, the others following shortly, whother Jim with the rest, so innucle shore desire in us all to the trophies of a eportsman's skill with rod or gun, even though killed on a dwith should be devided to better pur-tist. But if Sunday fishing is a sin, it is easier to be a sind. the to a sonamed old

ATTACHING DROPPERS.

Field. Field.

OPENING THE SEASON ON GREEN CREEK, L. I.—*Editor* Forest and Stream: I opened the ball on Green Creek with the best day's fishing I ever had there. A friend and I killed 98 trout, weighing in all 41¹₄ lbs. We did not strike any very large ones, the biggest of the lot being only 1¹₄ lbs. I lost one fish that may have been bigger, but I am rather wary about estimating size of lost fish. I would rather be-lieve a poor pair of scales than George Washington. The greater number of fish were just about ¹₄ lb. each, a very nice size for light tackle, and especially considering the unusually fine condition the fish are in for the season. The trout are about as far advanced as I generally find them the latter part of April. They are round and full of vigor, take the fly on the surface and give great sport in handling. Used hooks about two sizes smaller than I am accustomed to fish with April 1. The best patterns of files were Abbey, Gnuzly King, Lowery and Professor.—CHAS. F. IMBRIE.

NEVERSINK CLUB.—New York, April 9.—The third annual meeting of the Neversink Club took place at the office of D. W. James, Jr., April 5. Alfred Roe was re-elected president, and W. Holberton secretary and treasurer. The club is in flourishing condition. Unusual care will be taken the coming season to guard the stream against poaching. Since the last annual meeting the club has purchased most of the property they formerly leased.—W. HOLBERTON, Sec.

Two bills for the benefit of the trees have passed the Con-necticut Senate. One exempts from taxation for twenty years land not worth over \$25 an acre on which 1,200 trees to the acre have been planted and have reached the height of six feet. The other, to prevent forest fires, visits severe penal-ties on those who kindle fires in wood land. There is to be an arbor day.

Yearly subscription \$1.50. Address "American Kennel Register," P. O. Bo. 2832, New York. Number of entries already printed **3481**.

THE BOSTON DOG SHOW.

<section-header><text><text><text><text><text><text>

MASTIFFS-(MR. MORTIMER).

MASTIFFS—(MR. MORTIMER). There were thirty-one mastiffs entered, with four absentees. In the champion dog class Homer was placed over Hero I., a decision that we cannot indorse. Hero was sick and in poor condition, but he was not near so badly off as to deserve a beating by Homer. Prussian Princess and Rosalind were the only entries in the champion bitch class; both were in excel-lent condition, but only the former was brought before the judge. In the open dog class Ilford Caution was placed first and Boss second. While recognizing the many good qualities of Caution we cannot ignore his serious faults, and should place him behind Boss. Three dogs received vhc.; of these Dictator is much the best, although he is too small. Dread, hc., won second at Newark; he got all he deserved. Thor,

also hc., is a large dog and not yet developed. His muzzle is too long and pointed, and he is deficient in bone. Gripp, c., is a promising puppy, and bids fair to turn out something good. Ashmont Prince, also c., did not show at all well in the ring. Had he shown up as well as when we examined him he would undoubtedly have received at least another letter. The remainder of the class were sadly wanting. In the bitch class only four of the seven entries were shown. Hilda V., looking well, won first, although she was closely pressed by Nellie, winner of second, a nice broody bitch with a good head, ribs well rounded, broad and deep loins, good legs and feet and plenty of bone. She carries her ears badly. Tannira, whc., is a nicely made bitch on the small side. Her head is too long and pointed at muzzle and she is rough in coat, Freda, also vhc., is of good size and has plenty of bone. She is also too pointed muzzle and carries her ears badly. In the dog puppy class Hannibal was placed first. Monarch, the winner of second, an promises to make a winner in good company when mature. Dolly Varden was alone in the bitch class. She is litter sister to Monarch and is a fairly good specimen. ST. BERNARDS-(MR. MORTIMER).

16.0 abrarch and is a tairly good specimen.
S.T. BENNADE-(NR. NORTHER).
The were 50 SL Bernards entered with only two abies, the barning well, we alone, and therite also had a walk between the special over Duke of Leeds for the best of albor breed, but the special over Duke of Leeds for the stress in the special over Duke of Leeds for the stress in the special over Duke of Leeds for the best of either breed, the same judge. We are guide to the special over the precial over the special over the

Was consequently alone in the champion dog class: he was another first, making five in all, or two more than necessary to qualify him for the champion class. Some of the exhibi-tors grumbled at the working of the rule which should be changed so as to count all winnings up to the date of any show. Second went to Premier, rather a taking looking dog, with capital shoulders, good legs and feet, nice color and coat. His head is a trifte heavy and plain, owing somewhat to bad tan marking. He is also long in back and lacks quality. We preferred Gus Boudhu, vhc., for the place. He was shown a trifle too fat, but was looking as well as ever we saw him. He is a rare bred one and shows it in his looks. Mack B captured the reserve. There was not much to choose between him and Premier. Draco, hc., is rather a nice dog and deserved his card. Roy, c., we did not find in his stall. Old Coin showed want of grooming, as did Glen Rock, both unnoticed. The judge was sparing of his favors and several dogs that were worthy of mention received no notice. We do not believe in an indiscriminato of deserved favors is not out of place. In the bitch class there were no flyers, although there were several very good speci-mens. First went to the well-known Dashing Belle and second to Vixen III, winner of same position at Pittsburgh this year. She is plain in head and too wavy in coat, otherwise she has no bad faults. We liked Peck's Bad Girl, vhc., better for the place. She was about as good as any in the class. She is the best mover of any of them. Lallu received the reserve ard she was looking well. Bessic, vhc., is a nice bitch with a fair head. Her coat is almost curly and she was shown too fow in flesh. Katy Berwyn and Alice D., both hc., are good with the exception of plain heads. Katy is not quite straight on her fore legs. The dog puppies, with the exception of the winners, were an ordinary lot. In the bitch class first went to Princess Novel, a very nice puppy with alain head. Julu winning second. Bess, whe reserve, was very baa

GORDON SETTERS—(MR. TRACY). GORDON SETTERS—(MR. TRACY). The premium list called for Gordon setters instead of black and tan. There were eighteen entries with four absences. Argus was alone in the champion class. In the open dog class, first went to Tom II., a fairly well made deg of good cot and color, and better hind legs than we generally see on a Gordon. He is rather plain in head and his ribs are not well sprug. Second went to Jack. He has a good head and have undoubtedly won; he was shown too fat and in bad coat. Gyp, the., we liked; he has a fairly good head, is well put together, has a good coat and markings. Trim, he., is rather coarse and has a weak head. Dash, c., is a cobby little dog, with fair coat and markings. In the bitch class, the well-known Heather Lass was placed first. Second went to Jessica; she is a well-formed light-weight, with a weak head and light eye. Vic, whe, was sursing a litter and not in form; her weak in head and poorly marked. The prizes were properly withheld. IRISH SETTERS—(MR. TRACY).

IRISH SETTERS-(MR. TRACY).

weak in head and poorly marked. The prizes were properly withheld. IRISH SETTERS—(MR. TRACY). There were 61 Irish setters entered with 7 absentees. In the champion dog class, Elcho, Jr., was the only one to compete. He was in better form than we have ever seen him. Old Elcho was not for competition in this class; he carries his twelve years lightly, and was looking better than when we saw him three years ago. In the bitch class, Noreen, in ele-ter was absent. The open dog class was a red hot one, and the unnoticed ones would have made a very good class of them-unnoticed ones would have made a very good class of them-unstitution of the source of the source of the distribution of the source of the class that received a card looking for a poor specimen to place his dog alongside, thinking that the contrast would help him, but after a careful search he gave up the job in disgust. The bitches were not so good as the dogs, still there were several very fine animals in the class. Lorna, the winner, is well-known, she was in beau-tiful condition; she showed up very stylish in the ring. She is symmetrical and well formed, her head is clean cubid that refer to where disgraced the three letters, and Mona, unnoticed, de-served mention. The winning dog puppy, Thaddeus, promises well. The bitch puppies were well placed. Sonsie, the win-ner, will do to show again. SPANIELS—(MR. KIRK). The spaniel classes contained fifty-two entries, the same

well. The bitch puppies were well placed. Sonsie, the winner, will do to show again. SPANELS-(MR, KIRK). The spaniel classes contained fifty-two entries, the same number as were at New Haven. The Irish water classes did not fill well, and with the exception of Mollie, did not amount to much. She has a good head and topknot. Black Prince was alone in the champion field class. He was looking well. In the open class for dogs, Black Bean, Jr. was rightly placed first. He is a good dog with few faults. A little more depth to the muzzle and thickness through the pads would improve him. He is also a bit high, and will lower down with age. Bean, second, is good in body and coat, but as wretched forelegs, as crooked as a dachshund. His muzzle should be heavier. Black Dandy, hc. is short in body and head, and a little high on his pins, but has a very good coat. He is of the cocker type. Newton Abbot Lady headed the class for bitches. She was in good form. Onyx, second, is high on her legs and light in eye, but otherwise good. She will show better after breeding. Critic, also light in eye, and more of the cocker type, received hc. The champion cockers were divided by sex. In consequence Helen and Brahnin did not meet as at New Haven. Each had a walk-over. Helen was vasily improved from her Newark form, though her coat is still not right. Brahmin was in good condition. The open class for liver or black dogs, though containing but five entries, proved a hot one. Black Pete, feeling a little dumpish, ledt he string, with Young Obo, Obo, Jr., Kobo and Ned Obo following in the order named. It was a close null have enslowed from her as was been and were y well judged. Shina got the blue ribbon, with Dido W, second. They are good ones. Black Peter, the. The bitch lass was the site of the site in ethics were were, is poor in head. Pauline Markham, vhc, is much improve a from her last year's form. Alice Obo was not shown well. She is light in muzzle and lacks substance. She does not improve as we expected she would when we saw h

put togetner; she is decidedly cross-eyed. Mr. Tracy handled the classes very well and his decisions were well received. ENGLISH SETTERS-(MR. DONNER). There were 57 English setters entered, of which only Rock-ingham, Modesta and Lady Rock were absent. Plantagenet

champion dog class. He was drawn a bit fine, but was look-ing well. Mother Demdike, in capital condition, was also alone in the bitch class. In the open dog class, first went to Stranger in White. He looked soft but felt hard and good. Second went to Stag, a fair-looking animal with a broken toe. Sir Ben, vhc., was not looking his best. Jack, c., has too heavy a head and too bad feet to receive notice. In the bitch class, first went to Sister in Black, looking well. Sorceress, second, is a nicely formed animal of ligh weight, with well developed quarters. Sept. 20th, the winning dog puppy, is a large dog and not yet developed; his ears are a bit large. Silver Bells, the winning bitch, is a fair animal in bad con-dition. is a lar Silve

DEERHOUNDS-(MR. PIERSON).

DEERHOUNDS-(MR. PIERSON). The display of deerhounds was much better than we have ever seen, nine of the thirteen entries are owned by Mr. John E. Thayer; nearly all of the winners are well known. Bran and Lorna were the winners in the champion classes. In the open dog classes first went to Chieftain, and second to Brian, the winner at New York last year, both were looking well, as was Duncan, vhc. Torrum, also vhc., was badly shown. Wanda won in the bitch class, with Heather Belle second. Belle is a large bitch with a good head; she carries her ears badly and is straight behind; she was not in good condition. Only two puppies were shown. They are from the same litter; both are of good size and promising; they are some-what lacking in length of skull. They are not yet a year old, and if they improve as they should they will be found among the winners when mature. FOXHOUNDS-(MR. KIRK).

FOXHOUNDS-(MR. KIRK).

FOXHOUNDS-(MR. KIRK). Only five foxhounds were shown. Boxey had a walk over in the champion bitch class. In the open dog class Ranger had an easy win. Zip, second, has a good head and is very fair all round, except that he has open feet. Lady Stewart, the only entry in the bitch class, is more of the English type than any of the others; her very small ears will always keep her back in good company. BEAGLES-(MR. ELMORE).

BEAGLES—(MR. ELMORE). With one exception all of the beagles noticed at New Haven were at Boston. In the champion class the decision at New Haven was reversed and Mischief was placed over Bush by four points; we have not the figures made at New Haven but to the best of our recollection they were two points in favor of Bush. This is a matter that should be explained as exhibitors do not understand how so great a difference can exist. In the open dog class the awards were the same as at New Haven, except that Trifle received one letter less. In the bich class Chase was placed over Twinkle, again reversing the decision at New Haven. Chase also beat Little Duke for the special; both of these decisions we must dissent from. Mr. Elmore is a painstaking judge and examined his dogs very carefully, and with the exception of placing Chase too high, he handled them yery nicely. In the class under 12 inches, Fair Maid won first, second went to Bramble, a very nice puppy that will do to show again. The two winning puppies are also very prom-ising.

Ising. BASSET HOUNDS-(Mr. KIRK). Nemours in the champion, Bertrand in the dog and Canace in the bitch class were all that deserved notice. All are well known. The two others showed more of the harrier than basset.

basset. DACHSHUNDE—(MR. KIRK). There were ten dachshunde, all but one of them receiving notice. Two or three different types were shown and nearly all of the animals were above the average of previous years. We thought them well placed.

There were ten dacbshunde, all but one of them receiving notice. Two or three different types were shown and nearly. COLLES-(M. MOTIMEN).
COLLES-(M. MOTIMEN).
There were 40 collies entered with six absentees. In the thick class, Winnie won. She was looking well, except that she has a new coat that is not fully grown. She was the best colles shown and should have had the special, which went is the bitch class. He was in good form and well deserved that she has a new coat that is not fully grown. She was tooking well, except that she has a new coat that is not fully grown. She was tooking the special which went is the bitch class. He was in good form and well deserved in the open dog class. He was in good form and well deserved is best, and should have given place to Killmanock Bruce, while the special well deserved and the special well deserved the reserve card, he was looking faily well, ship the short in body and too light in eye. Joker, hc., has in proved since last year, but is still far from perfection. There was nothing else in the class, first went to Daisy pean, a beautiful animal, fairly good all over, except pean, a beautiful animal, fairly good all over, except between all could have exchanged places with Kilmarnook for east, was not in first-class condition. In the do and soft in boat, and should have exchanged places with Kilmarnook for east and should have exchanged places with Kilmarnook for east and a bit heavy in ear. Euse, second, is also vell an invest in first-class condition. In the disc benefit were specified and she is a bit high behind. Daisy Oneen, winner is second in the stands a bit high behind. Daisy Oneen, winner is second and was shown very thin, the stands well deserved to first was the day and to places with Kilmarnook first, we show the age of head, places with the form the opin also the special should have been described before, There were head entered a well extends a bit high behind. Daisy Oneen, winner is a soft the fisle heat and a bit heavy in ear. Euse second, is also vela

All of the bulldogs in the aged classes have been often de-scribed, and as they were placed right no comment is needed. First was withheld in the dog puppy class and second given to Doctor, not a good specimen. Atossa, in the bitch class, was deserving her first.

neserving her first, PUGS—(MR. BARLOW). The pugs were not out in force, only nineteen were entered. The winners in the champion and dog classes are well-known. Only two bitches were noticed, both are very fair specimens, Only one of the four puppies suited the judge; she is quite promising.

TOY TERRIERS-(MR. BARLOW). The toy dogs had but one representative, Bootless, a nice Maltese not yet in full coat. In the bitch class first and second went to two very fair black and tans,

KING CHARLES SPANIELS-(MR. KIRK), There were fourteen King Charles spaniels entered with two

absentees. This is more than twice as many as were shown at New Haven, and much the best display that we have seen. In the dog class Duke of Edinburgh should have been placed first, with Milwaukee Charlie next, and Pictou, vhc., and in the bitch class Nellie and Dolly should have exchanged places. Our reasons may be found in former reports. Nearly all of them were in bad coat. There was only one Blenheim shown, Joan of Arc, winner of vhc. at New Haven. ITALIAN GREYHOUNDS-(MR. PIERSON).

There was only one in this class. She was too large and had b be content with second prize.

POODLES—(MR. PIERSON). There were three entries in the dog class. Beauleau, win at New York last year, was the only one worthy of not Both of the bitches shown were awarded prizes. They fair specimens. MEXICAN HAIRLESS-(MR. PIERSON).

Me Too and Mide, both well-known, were respectively first ad second.

MISCELLANEOUS-(MR. BARLOW).

THE HARTFORD DOG SHOW.

THE HARTFORD DOG SHOW. [From a Special Correspondent.] THE first dog show of the Hartford Kennel Club commenced at Hartford on Tuesday. The number of entries is 869, of which about 300 are present. The quality in many of the classes is much below the average. The building is well adapted for a small show. Judging has progressed fairly well. The show is well managed so far with the exception of unnecessary delay in bringing dogs into the rings. The attend-ance to-day has been only fair. Below is a list of the awards;

ance to-daý has been onlý fair. Below is a list of the awards; AWARDS. MASTIFFS.—CHAMFION—Dog. Winlawn Kennels' Homer, Bitch; Winlawn Kennels' Prussian Princess.—OPEN—Dogs; 1st, E. H. Munsell's Gyp.-SMALL-1st, J. R. Gildersleeve's Charlie; 2d, L. Struck's Cuckitt.

EASTERN FIELD TRIALS CLUB.—There was a quarterly meeting of the Eastern Field Trials Club at the St. James Hotel on the evening of March 13, Vice-President J. O. Donner was in the chair. The other members present were Messre. F. R. Hitchcock, Bayard Thayer, H. E. Hamilton, A. E. God-effroy, D. S. Gregory Jr., 2d, and W. A. Coster. The rule allow-ing members to handle other dogs than their own was re-scinded. There was not a quorum, under the rules, to act upon the proposed amendment-abolishing the initiation fee. After the open meeting adjourned the Board of Governors convened, It was voted that every member of the elub in good standing be allowed to enter one dog in the Members' Stake free, and that for each additional dog an entry fee of \$10 shall be re-quired. Several names were proposed for membership. The next meeting will be held the first week in May.

THE HOSPICE KENNELS.—Mr. K. E. Hopf has removed his kennels of St. Bernards from Newark to Arlington, N. J. Arlington is on the New York & Greenwood Lake Railroad, seventeen minutes from Jersey City.

DISQUALIFICATION OF THE SANS SOUCI KENNELS. -Editor Forest and Stream: The New England Kennel Club have disqualified H. M. Perry, proprietor Sans Souci Kennels, from exhibiting dogs in their show, -G. E. OSBORNE, Sec. A. K. C.

BEAGLES AT PITTSBURGH.—Wrightsville, Fa., April 9. —Editor Forest and Stream: I thought Mr. Dorsey was aware that although his dog has won three first prizes, the same do not count under the A. K. C. rules. Now as to Banerman's winning without competition, and his eligibility to the cham-pion class. Bannerman has beaten the following champions and first prize winners in open and special competition, not counting the numerous lesser lights which he has defeated: Rattler, Mischief, Bush, Little Duke, Rattler III. Bonnie. Pet, Chase, Rena, Marchboy II., Fair Mail, etc. (Some of above mentioned dogs have on different occasions turned the tables on Bannerman.] Is this what Mr. D. colls no competi-tion? If so the owners of the above named dogs must indeed deel flattered. As to entering Bannerman in the champion class for over 19-inch beagles. I only did so once, at Phila-delphia, 1885, where my dog was disqualified. My entering him as I did has been fully explained in these columns. Can Mr. D. mention another instance? Mr. D. admits that Ban-nerman is a champion under 12 inches; he (Bannerman) must therefore be considered a champion when no size is men-cioned. When the premium list reads "champions," with no clause regarding size attached, then an under 12-inch cham-pion has as good a right in such a class as the larger one. I am aware that a number of beagle extilibitors would like to see the clause "over 12 inches" inserted in the champion class. This and no champion class for under 12-inch beagles would bring about theresult disred by them, viz: Bannerman, who has proved a dangerous opponent, would be kept from compe-titon, as they could protest against him in the champion class, and exhibitors in the open class under 12 inches could protest on the ground that he has taken three first. Mr. D.'s instauation that the under 13-inch classes were made for Ban-nerman is, to say the least, a slander on the American English Beagle Club, on whose suggestions alone these classes were DEATH OF FIRE FLY.-Dr. Wilson, of Havana, Cuba, writes that his well-known red Irish setter bitch Fire Fly died on March 20 from abscess of the liver. TOPEKA VS. TRINIDAD, April 8.—The Topeka Rifle Club shot the following match with the Trinidad Rifle Club, of Colorado. The wind blew a perfect gale from 12 o'clock, making very unsteady holding. The Trinidad Rifle Club shot while it rained and snowed with change-able wind: KENNEL MANAGEMENT. Topeka Team J L Paine. Top Robt Thompson . G E Morrison . J H Leonard. . J T Williams. . F H Martin .  Extra for open sights..... Bifle and Grap Shooting. BRATTLEBORO, Vt., April 10.-The Brattleboro pese scores to-day at the Oak Grove range, at 200yd Address all communications to the Forest and Stream Publishing Co. RANGE AND GALLERY. Begle Chib, on whose suggestions alone these classes were made.—A. C. KRUEGER. SPRATTS PATENT.—April 9.—Editor Forest and Stream! We observe that in notice of New Haven dog show you say exhibitors complained that our biscuits "physicked" their dogs. On this side of the water nonsense of this kind has ap-peared in the papers with reference to Spratts dog biscuits. Knowing, as we do, the reputation that our food has, and that 00,000 dogs consume 200 tons of it every week in England, that we never have complaints of "physicking," and knowing also that there is nothing in the biscuits which can possibly physic a dog, we can only suppose that the nonsense above alluded to proceeds from the splenetic envy of those other makers of dog ford and their friends, who, not content with having imitated our patents and trade marks, even condescend to the putting forth of false statements to try and injure us. It very likely is the case, that, as Spratts biscuits are not largely used in this country as yet, the change from a soft diet to our food under the excitament of a show may have had a relaxing effect upon certain dogs which may have been in a state of great excite-ment, or may have been relaxed before they came to the show, but that surely cannot be a sufficient reason for saying that Spratts biscuits physicked the dogs. All I can say, fit this be true, is what becomes of the health of the 90,000 dogs who cat no other food? I think no further answer is necessary. The advocates of soft food for dogs are continually urging that dogs eat their food readily and at once, while they some-soft and out of condition by the constant feeding on soft food, could only at first be got to eat Spratts biscuits with difficulty, especially if the dog was getting on in years, but this may be, and we know that it is, rather an argument in avor of the hard and against the soft food. We make a wholesone food for dogs and one which any healthy dog likes, relishes and digests.—G. G. CLEATHER, Manager for the A NEW REST TARGET. M. CONLIN has invented a new target, ten bullserss on one sheet of paper, all numbered. By this target every shot can be oc-urately measured. Every one has often beard big stories about be formed of the accuracy of such shooting as has been done in recent be formed of the accuracy of such shooting as has been done in recent to have done this are, of course, long since dead. Some notion may be formed of the accuracy of such shooting as has been done in recent to have done this are, of course, long since dead. Some notion may be formed of the accuracy of such shooting as has been done in recent to have done this are, of course, long since dead. Some notion et al. The eye must calculate a variation of less than the use without the variation of the target against the or the eye must be without the variation of less than the one hundredth part of an inch. Then the application and pressure upon the trigger, at the supreme moment, must be as true and unmistak-the target and rifting of the guns must be perfected nuministak-the target with the the handling and shooting of this favorite as othat taking all into consideration these tests prove that a great the one base been made in the handling and shooting of this favorite. The following is a list of scores made up to date with prize winners, the one second prize; Mr. Skidmore, winner of one second, Mr. Course, winner of first prize; Shr. Doublitle, winner of all course to that support for the date scores in the base of all the shous to the second prize; Mr. Skidmore, winner of one first, Course, winner of the date from course to show. In measured from core of bulks. Mr. Markel Show. Mr. Markel Show. Mr. Deluting. Mr. Delutin A NEW REST TARGET

Lewis Darling... M J Murpby. T W Lane. O E Ballin... Edward Bartlett... THE INTERNATIONAL MATCH.—The Volunteer Service Gazette, speaking of the American invitation to a match this year, says: "The American papers tell us that the directors of the United States Ride Association have determined to invite the volunteers of Great Britain to shoot another match with military rifles at Creedmoor, in the automu of the present year. We are quite sure that if the challenge should be given there will be every disposition on the part of the council of the National Rifle Association to accept it. But it is no easy matter to find a sufficient number of our good military shots who can spare the time for a holiday on the other side of the Atlantic, and it will, perhaps, be stull less easy to raise the necessary funds for such an expeditiou." NEW JERSEY KENNEL CLUB.—Editor Forest and Stream: At the annual meeting of this club, held the 5th inst., the following officers were elected for the ensuing year: President, Chas. J. Peshall; Vice-President, K. E. Hopf; Secretay, A. P. Vredenburgh, Treasurer, E. R. Hearn; Board of Governors, G. L. Wilms, J. Lindsay, Max Wenzel, A. C. Wilmerding, J. N. Lewis, J. D. Shotwell, Chas. Heath, Chas. Bassini, H. Pape and L. F. Brigham. The name of the club was changed to the New Jersey Kennel Club. The protest made at Newark against the San Souci Kennels' entry of Ben Nevis, was not allowed and the prize was ordered paid.—A. P. VREDENBURGH, Sec. NATIONAL RIFLE CLUE. Editor Forest and Stream: On the last Wednesday in May, at Vernon, Vt., will be held the spring meeting of the National Rifle Club, one of the oldest, if not the oldest club of its kind in existence in this country, and I think in the world. This club baools exclusively muzzleloaders, hair higgers, telescopic sights, at 40 roots, string measure; 10 per cent, odds are allowed to parkles shooting from the shoulder with only a muzzle rest, and an extra 10 per cent, to those who also use open sights, i.e., other than telescopic or magnitying. It is hoped that the advocates of the present and shoot, Frys, klabbeth, Hinman, Gould, May rad, and Frank Wesson, of Worcester. I give you a most cordial invitation to be present and shoot if you feel disposed to do so, and would be present and shoots of the date at and the string. Thirty shots will be frank three strings Thiedday, one at about 10 A. Mi, the other about 2 F. M.. Verman is readed by New London Northern & to the track River Todd, a niter distance from Greenfield, Mass, and Brattleboro and Bellows Falls, V. Frictaner, Mass. HILLSIDE (MASS.) CLUB.—The Hillside Club shot there tele-NATIONAL RIFLE CLUB. WILMINGTON, Del., April 12.—At a meeting held this evening, the Wilmington Rifle Club was organized with the following officers: President, William F. Seeds, Vice-President, John Franz; Secretary and Treasurer, Howard Simpson; Firing Captain, Charles Heiml, Sr.—Howard Simpson. PUPPIES AT NEW YORK.—Editor Forest and Stream: As it is likely that some exhibitors may be deterred from mak-ing entries in the puppy classes by unfavorable conclusions arrived at by reading the communications of your correspon-dents "E.T. S." and "H." in your last issue, allow me to say that at the Westminster Kennel Club's coming show, all classes provided for puppies are for those under twelve months, and that there is a class made for beagle puppies as heretofore,—JAS. MORTIMER, Supt. $\begin{array}{c} \text{Sr.}-\text{HOVARD Subsets}, \text{ April 8,} -\text{At the Fast Day shoot at Pine Grove} \\ \text{Range to-day, under the auspices of the Worcester Rufle Association,} \\ \text{the results were as follow:} \\ \text{A C White.} \\ \text{A C White.} \\ \text{A C White.} \\ \text{Becord Match.} \\ \text{A C White.} \\ \text{Becord Match.} \\ \text{C Becord Match.} \\ \text{C B$ A C White. BOSTON, April 8.—Tbe range at Walnut Hill to-day was occupied by a large number of riflemen, anxious to enjoy Fast day, including detachments of militia, who shot at 200 and 500yds. The weather conditions were excellent. Appended are the results of the winners of the matches which closed, also the scores of the day, all at 200yds. T C Sheppard (mil.)	of gunpowder without their being properly marked. It was discovered in the depot in this city by some of the railroad hands in handling the trunk. They found powder sifting out on the floor. They at once notified the fire marked and the police. There were about 30 pounds of powder in the trunk, enough to have gutted the building had it ignited. The penalty for this offense is not more than \$10,000 fm or five years in State prison. WINCHENDON, Mass. April 9.—The Winchendon Gun Club held its annual meeting this week and elected the following officers: President, James Suthriand, Jr.; Vice-President, P. S. Davis Scoretary and Treasurer, J. G. Henry: Directors, F. F. Hopgood, A. H. Felsh, L. E. Martin, P. S. Davis and F. E. Mann. [To BE CONTINUED] THE CANOE EXHIBITION. ANOEISTS who are willing to lend plans or drawings of cances for the exhibition will confer a favor by sending them to W. P. Stepheus, care of Foncest ARD STREAM, 30 Park Row, New York, not later than Thursday, April 22. They will be carefully handled and constitutions, and any description of cance literature will be accepta-le. We have received the following request from the committee on secontions: Editor Forest and Stream: This respectfully requested that secretarles of cance clubs will kindly collect from members all prizes that they will be will be will kindly collect from members all prizes that they will be willing to loan to the exposition, and forward them to the undersigned, at 24 west Fortieth street, New York. It is also urgently requested that secretaries and members will aid us by sending prize flags, club hur-rees and saling signals, private signals and totems, and anything in the way of club regula and solves and totems, and anything in the way of club regula and solves and the Alligator will here enjoy contrils and zolgela fellowship. For General Committee, R. B. BURCHARD, Com, on Prizes and Trophies. New York, April 5, 1885. THE SEPLING MEETE

THE SPRING MEETS.

THE SPRINC MEETS. The connecticut River and Hudson River meets, at Calla Shasta frove and Coddington's Dock. The former, under the active direc-tion of the Springfield and Hartford Clubs, promises to be much larger than in previous years, and it is hoped that cancelsts generally througbout New Encland will attend. Circulars bave been sent out, th is desirable that notice be givent one of the committee. The pro-gramme is as follows: Saturday, May 29, selecting camps and election of officers; Stunday, May 30, religious exercises at 11 A. M.; Monday, May 31, races, to laclude both paddling and sailing; filumination in the evening; Tuesday, June 1, breaking up of camp. Shelter will be transited to a limited number who find it impossible to come provided with tents. A catter will also be on band to furnish at a snall cost meets to those who wish them. Such supples as milk, eggs, etc., can be procurred at a store in the vicinity. Committee: The George L. Parmele, Press; John D. Parker, Sec., William B, pavidson, Treas, Itartford, C. C. C. W. Bliss, Capt; E. C. Knappe, Lideu; G. M. Bar-mer, C. M. Shedd, F. A. Nickerson, F. D. Foot, Springfield C. C. The Mason River meet will be held at Coddington's Dock, four mill aestore Briday, May 28, at the camp. A large attendance from paper on Friday, Nay 28, the camp. May of Mohicans will also the and the same date for a week's cruitse down the Susquenama. THE A. C. A. TROPHY.

THE A. C. A. TROPHY.

Start about the same date for a week's cruise down the Susquehanna.
THE A. C. A. TROPHY.
Editor Forest and Stream:
The perpoach you make in your issue of the 8th seems a just one, but there is another side to the question. The active men in any association are usually the ones to whom necessary work is portioned out from headquarters, the officers being sure of their interest and cooperation. That heing the case, it is ease all the hard to be rate they for not rushing into print on every occasion, considering that they done private correspondence on canceing matters, they dense private correspondence on canceing matters, they dense by the correspondence on canceing that they done with your correspondence 'S.' in March '9 on all points, and 1 infer that his letter convinced those interested in the matter, and that from that cause and not from want of interested of the Trophy Committee are and how great scope their authority gives them. The members themselves understand that they are not purchase the cup and present it to the Regata Committee, and that form the cause and hour line conditions for holding, cup, their flaal report being made to the Regata Committee are and how great scope their authority gives them. The members themselves understand that they are to matter, who can either adopt or reject their ansolute dutine conditions for holding cup, their flaal report being made to the Regata Committee, are suitable do a Friday preceding the race will be held. A. C. A. mene, who may not have seen the published and the first percentily to the scene the seen the rade of the first percent. It will probably be sailed on Friday preceding the race and the first percentily the seen the published and the first percentanee to the active the committee, and the they they eave at a comparise the seen the published and the first percentanee. We were not distributed to a first percentanee. We were not of indicate they and when the system and we they are event the condite and the duth we were not made t

and responsibility are heavy, but if all will take hold the practical working of the Association will be improved and the work involved lessened each year.]
Editor Forest and Stream:
In your last issue you refer to the "indifference" of A. C. A. members to Association matters, instancing the fact that only one side of the question, which has been raised concerning the trophy to commemorate the first visit of foreign canceists, has been discussed in your columns. Perhaps the explanation of this is that those who think the conditions, as first proposed, should not be changed, have so strong a case that they consider it superfluous to discuss it, for certainly the case is a strong one.
The executive board have asked and received contributions for an explicit object. How can they take that money and devote it to an enlifely different purpose, without the express consent of each subscribert. And if they had such consent, and changed the prize from individual to challenge, what a position the A. C. A. would be in next it was gotten up in honor of your visit, and expressly for you to compete for. But after five or six months we changed our minds, and now you can take it home and show to your friends, but you can't keep it permanently. It must be returned to the A. C. A. next year for competition." You must excusse us, but we should rather not be placed in that position.

majority among those who take part in the races) would be induced to build cances expressly for sailing, to the deriment of padding qualities, and all that the record system of the past two years has begun to build up would he swept away at once. We should have always before us an expensive trophy to contrast with our modest flags, and it would be only a short time before there would be a de-mand for more valuable prizes. No! Far hetter have this thing ended at once and forever, with the full understanding that there is to be nothing like it in the future. Another demand for change in the original resolutions, which has been made by an usually level headed member, is, that the whole matter of conditions of contest be put in the hands of the Regatta Committee. This seems very innecessary in view of the wording of Rule V.: "Prizes donated for special races or competitor; may be accepted," etc. This surely does not mean that the donor must give up all right to specify how his gift shall be competed for, hut just the opposite. Hence, it is most proper to have a special com-interested that there are some in the A.C.A. who view the matter in a different light from the two who have written on the other side, and that we do not stand alone we know from private letters from various localities. Severat prover the or prise resonance is the and that we do not stand alone we know from private letters from various localities. Let form must be an every support the prise we have any anterested that there are some in the A.C. A. who view the matter in a different light from the two who have written on the other side, and that we do not stand alone we know from private letters from various localities. Let form in we indow whill along the private letters from the head there are in the other more we show from private letters from various localities. Let form in we indow while we will have we show the order side the the private private private the in the intervence. The standalow we show the order we show for your shore the we sh

and that we do not stand alone we know from private letters from various localities. Several Pyrtskurdners. MOHICAN C. C.-The flowers that bloom, &c., are not visible yet in this northern clime. I see from my window that snow still covers the towering (sic) heights of the Heiderbergs, but the Turtles feel that spring is near at hand, and at last night's meeting resolved to have a paddling parade during the coming week. Twenty cances ought to the out, and would make a brilliantichic for the watery spring man or the sporting waterman. Captain Oliver has infused, so to say, new life into the club hy proposing that every Tursday far-noon during the season of 1880 the members of the M. C. C. have races, saillag or paddling. The Susquehanan cruise is a resolved fact, not yet an accomplished one, and the rural towns along that them at the end of May and heginning of June. The kindly in tha-tion of the Rondout C. C. will, however, not be neglected, and there to the Rondout C. C. will, however, not be neglected, and there to the Turtle flag will show up. The dispute about the clowing motion: "That the M. C. C. recommend that the A. C. A. cup low in preparation for the meet at Eel Bay in August, 1886, he made a per-petual challenge cup, and that the committee authorized to produe four to ver for that purpose to the regatia committee A. C. A. "-Fron DA LICE (Albany, April 7). THE ONTARIO CANCE CO.-The peculiar huild of cance made men, especially those who prefer an open or partly decked cance, and this preparating demand. Owing to the large number of models which they build after, it is impossible to keep a full stack made up but they have always a large stock on hand to choose fitted it is a good ching to have two cances, an all around craft for sailing for raling. Many cancelists have of late comes to the conclusion that it is a good ching to have two cances, an all around craft for sailing for sailing. Many cancelists have of late comes to hee conclusion that it is a good ching to have two cances, an all around cra

pamphlet, contains a list of several short cruises in the vicinity of Peterboro. SHATTEMUC C. C.—The Shattemuc C. C., of Sing Sing, have more than kept alive the interest in canceing this winter by a series of entertainments which have been attended by many who are not yet cancelsts. The most instructive and entertaining of these series was held on Mar. 28, at the residence of Mrs. Carpenter, the subject for the evening heing a talk on cances by the Rev. W. R. Eversts. Mr. Everst' cance, Winnakee, was placed at one end of the parlor, and served to illustrate the lecture. The speaker described the cance and its advantages, and compared it with other boars. At the conclusion of his lecture sails were set on the cance, the tent was plitched over it, the store was set up and a meal cocked, after which the canceist made up his bed and his assistant turned in. A sectional cance, composed of a dozen pleces, was also exhibited and put to gether. The evening was passed very pleasantly, the entertainment heing the most successful yet given. THE SUBSCRIPTIONS TO THE TROPHY FUND.—Editor Forest

gether. The evening was passed very pleasantly, the entertainment heling the most successful yet given.
 THE SUBSCRIPTIONS TO THE TROPHY FUND.-Editor Forest and Stream: I beg to report subscriptions to the A. C. A. Interna-challenge cup fund as follows: Hugh Neilson, W. A. Leys, Torontoo, H. T. Keyser, New York; E D. Jennison, Guy C Baser, H. C. Cushman, Dr. W. Masten, W. Howard Rrowne, H. R. Pierson, Jr. F. L. Mix, B. Fernow, Myron Smith, P. M. Wackerhagen, W. B. Wackerhagen, W. Masten, W. Howard Rrowne, H. R. Pierson, Jr. F. L. Mix, B. Fernow, Myron Smith, P. M. Wackerhagen, W. B. Wackerhagen, W. Bakewell, B. Campbell Bakewell, Allan C. Bakewell, Thomas W. Bakewell, B. Campbell Bakewell, George A. Howe, G. Harton Singer, William W. Lawrence, Join J. Lawrence, Jr., W. Howard Nimlek, Reade W. Baily, Charles F. Hold, Ship, Alex, K. Nimilek, Willam G. Woodwell, George Shiras, 34, T. Howe Childs, all of Pittshurg canoe clubs \$1 each. Previously acknowledged, \$116. As a hove, \$31. Total to date \$146. - Wa. W. HITLOGE, Chairmann (37 West Twenty-second street, New York).
 PITTSBURGH C. C.-At the annual meeting Reade M. Bailey was elected Captain, T. M. Bakewell, Mate, and W. W. Lawrence, Pirser, A resolution was passed that hereafter the purser pay the A. G. A. annual dues and subscription to the Canocis for each member from the club funds. Arrangements were made for a regata on Decoration the club capta.
 PACIFIC COAST.-A cruise to Clear Lake is proposed by the Oak-and C. Wang, Marker Marker, Marker and C. K. Shin Leys.

lenge cup. PACIFIC COAST.—A cruise to Clear Lake is proposed by the Oak-land C. C. to take place in June. The fleet are out frequently for short cruises. We have received a sketch of the camp on Goat Island, with eight cances hauled up.

NATIONAL YACHTING ASSOCIATION.

Not re-llowing letter explains and the matter has never ba-mational association has been urged before has never ba-me has not heen ripe for it, and the matter has never ba-ill earnest. Last season's races and the immediate pros-ill earnest. Last season's races and the inset powerful im-yachting, not only along the Atlantic seaboard, hat in all yachting, not only along the Atlantic seaboard, hat in all America, and this season will, beyond doubt, eelipse every s year of our yachting existence. Since the idea of a national for was last hefore pachtsmen a great change ints taken New York and the East have become more thoroughly united has grown greatly in the intermediate has grown greatly in the intermediate has could be a counter the search of the second with a decider has counter the second base of the second bas following letter explains itself fully, and hardly needs an in oduction to the favor of American yachtsmen. The neces a national association has been urged before in our columns

for Galatea coming to this country this sum-lly less, we hegin to look round for the next se, and we find innumerable races will take Florida during the coming season. he advisahility of forming in America a graad on, one that would not only rival, but par es

he verging together of the statem, Atlantic, Bosto to the New York, Eastern, Atlantic, Bosto stor, Hull, New Haven and Lafrehmont yach ices extending over say three days, and held a rendezvous for hoth the Eastern and New

e as a rendezvous for hoth the Eastern and New York gbt! 'Twere fit for a king! With the cracks of New York is the dyers from Down East! What an array of types uld come forth! What a chance for a decided study and individual ability in hlow and in calm, in rough and iu er, where cutters could safely meet their old rivals, the is, without fear of a mill pond race (as they have been all some of the New York Bay regatus), for I would sug-support, being accessible from both New York and Boston equal ease, and having the advantage of a good harbor ty of shore accommodation, would be the most desirable d a national regatta. Newport's lower bay is so situated acing course is always ready for the larger classes, there-xpenses in the matter of stakeboats. Then again, in the e formation of a National Yacht Eacing Association, the to coarse is always ready for the larger classes, there-nses in the matter of stakeboats. Then again, in the mation of a National Yacht Racing Association, the owners would be enabled to make their cruises more without douht, the races funder the management of would do away with many of the smaller home races yacht clubs, besides giving all yacht owners a grand

ld the same. rent gentlemen, who have so kindly in the past me prizes and purses would without doubt aid the

cia.

I have been requested to write this article by owners of different r such an association by the ge chts, hut who are deeply inter ith a little of the spirit of 1776 s the gentlemen who are not only owners of interested in the different types and rigs. 1776 shown for this undertaking we could rican National Yacht Racing Association d

one in the world. such an array as the following, all equipped and manned t talent obtainable arrayed against each other in their re-sees and tell me if it would not be worth a day's journey all buried to their lee rails, struggling for the supremacy t reging world.

Il buried to their learnis, stronggling for the supremacy racing world: rayling, Mohigan, Fortuna, Gitana, Dauntless, America, s, Phantom, Foam, Halycon, Fleetwing, Agnes, Fearless, ytie. Atlantic, Priscilla, Furthan, Mayflower, Gracle, ra, Mischief, Huron, Fanny, Crocodile, Fanlia, Yıxen, ren, Maggle, Daphne, Athlon, Isls, Wave, Mistral, dow, Hera, Lille and hosts of others, all fast and ahle ccome world renowned. Not only would an association racht racing, but a yearly convention could be held say at which the various new points always arising in this d he discussed, and the much vexed question up to the of racing measurement could be argued fully by advo-all sides, and without doubt, before a full house, some asurement to suit all might be creached. There can be now, in my fellow yachtmen's minds that such an Asso-lude to would he productive of the gratest good. We notify points as regards yachting which have been dis-en members and also before the clubs, where one party far in the minority, and in another club the same, but if was held at which all our prominent active workers and all or prominent active workers and the different clubs as one hody, there can be no doubt is factory conclusion would soon be reached, and many repervent, where tuby could address the prominent all the different clubs as one hody, there can be no doubt is factory conclusion would soon be reached, and many ryeny wisely on certain subjects would see matters in a , Grayling, Moligan, cortian, ress, Phantom, Foam, Halyco Clytie. Atlantic, Priscilla, Jara, Mischief, Huron, Fann Syren, Maggle, Daphne, Shadow, Hera, Lillie and hos de those that might be attra

tery wisely on certain subjects would soon be reached, and many light. benefits, than those already mentioned, can also he ob-way of prizes in each class to be offered for the best in a race, also to skippers for the best sailed yacht, result in training men to proficiency in sail handling, t needs far more attention in this country. Our differ-ire all, taken as a whole, fully as sharp and quick as nut a handsome purse to a skipper who has sailed his true, alkhough not necessarily to a successful finish, t fair compensation, to show a just appreciation of his has strained and pulled outch apper who has sailed his rily to a successful finish, 'a just appreciation of his bether amateur or profes-k, and with precision, with-uld help build up a class hard to equal. use can be said of a crew, whether amateur or profes-h has strained and pulled quick, and with precision, with-error. All this and more would help build up a class which other nations would find hard to equal. siou I would say that it would seem that such an associa-include all yachts over 20tt. on load waterline, as yachts ize would find it very unsafe outside of Point Judith or eef, should they he caught in a sudden breeze of wind.

ns or their f any of my brother yachtsmen have is to make to the above, I should be pla on, April 12, 1886.

AN INTERRUPTED CRUISE.

ntia was first proposed I hoped to start southern port and finish the trip in her, Feb, Swe had no news from her and had a had gone to Davy Jones's locker with o an untimely end in some mysterious were thinking of engaging the services were thinking of engaging the services whitpary and have it filled in with Forest and Stream: the cruise of the B to join her at some lonsters of letter from

POINT, Old River, S. C., March 13, February and have laid l ind I are to attend court l ses in a case of slander, be int-eved bully. We were text Thursday. I don't kn up

since I have been here and if I do not get away after the case is tried you can bet there is something up, I think it will be my hair, for I arm getting lost in love and if any d-d fool goes to kicking he will find me gunning for him as I am so mad. I may get matried before long and hring a wife North with me. Hoping this will find you in good health, I remain very truly ----, " In writing the valcdictory of the Bonita, I may remark that balf the dangers of a trip to Florida have not been told, nor does the chart marked alone on our southern coast, but are like the islands we hear of from truthful Jack that rise from the depths of the ocean in places marked deep water on the charts, and I shudder when I think how near I came going on the same trip, and also I feel sad to think of so many more perlis that are open to the Coot besides the dangers abe crosses the line and enters warmer climes, and hears the songs of sirens, who lead one on and on. That which is started as a crulse to show how ensily and cheaply it could be done, comes preaturely to an end after showing a moral and pointing the uncertainty of mun-dame matters, and despahr sits on the brow of one who in the interest climer, and active as a criat which started as a criat which started as a criat which be done, comes premating the uncertainty of one who in the started of one who in the started sta

CRUISE OF THE BRUNHILDE.

COLOMBO, Ceylon, Feb. 14.—During the afternoon of Jun the schooner yacht Brunhilde, of the New York Y. C anchor for Cowes, Isle of Wight, on a voyage around the w crew consisted of the captain, two mates, a boatvwain, two a cabin boy, and eight men before the mast, while in the c une 29, 1885, C., weighed world. Her o stewards, cabin were t with much Egypt, with iable boy, and each of Yale. After five months speak system, is recent graduates of Yale. After five months speak system, with easure aftoat and ashore, the party arrived at Suez, in Egypt, with estimation of the great belt of calors, the adverse currents, the intrary winds and daugerous recfs. In consequence of this the patient made arrangements with the agent of the Clan Line of eamers to tow the yacht by one of their vessels to the port i Aden, distant 1,600 miles. At noon of Nov, 22 the Clau Buchman ock the Brunhilde in tow, and she went merrily along at the rate of n knots an hour through the Gulf of Suez. She passed Mount Shal iring the night, and was in the Straits of Jubi hy 6 o'clock the ext morning. In the afternoou she was in the Red Sea with every cospect of a prosperous voyage. After running through the great calm belt, and having Jiddah, the end wind which increased to such an extent that the steamship was mopelled to reduce her speed. At this point the captain of the enamer such a message in a botte attached to a long line asking if the american bot reduce her speed the state of a long line asking if the and the state of botte at a captain of the

After the sacred town of Meeca, bearing that the steamshift was head whold which increased to such an extent that the steamshift was compelled to reduce her speed. At this point the captain of the steamer sent a message in a bottle attached to a long line asking if the two stout cables by which the yacht was being towed were well parceled; also expressing some doubt of their strength to tow in the heavy seas which were there running. O at the morning of the 29th of November the seas had increased to a great height, and although the steamer had slackened down to two knots per hour, waves were constantly hreaking over the bows, till one sea larger than its fellows buried the bows completely. There was a shock and a crash—the fibboom, howsprit, and foretopmast broke off. The cables snapped like threads, while the stays and cordage tenaciously held the broken spars which bumped against and gnaved the hows of the good yacht as she pitched and rolled in the anery waters. The captain of the steamer, as soon as he discovered that the Brunhilde was adrift, rounded his ship, and came as close na she dared to tell us that it would be dangerous to take us in tow. He then steamed off. All hands worked like beavers to clear away the wreckage from the bows, which we not only succeeded in accomplishing hefore might came on, but also had a jury rig forward, and thus handi-capped we had before us the prospect of sailing without a pilot, in the worst season, in a sea which has been the dread of navigators of all ages, and where resiling vessels are rarely seen in the hest season. After spending a most anxious alght of beating against a head gale, during which we more arrity expected to hear our keel crunch on one of the sunken reefs which abound here, we were able to anchor under the lee of Jabel-Sognair, a volcanic island of barren aspect, on which several rocky eminences, rugged and of fanciful shape, rise to considerable height. We determined to remain here until we could get the yacht in some condition for beating against a

s wind is a curious pheuomenon. It is caused ny the son striking the high land of Atrica, which turns it then it is contracted by the mountainous funnel-like about half a mile off shore, in fifteen fathoms of ay here the wind rushed through the jagged peaks turns nides of the island, driving before it a fine hlack ering the water between us and the shore so rough re seemed hazardous. In the afternoon, however, we try it. Accordingly, clad in only a pair of light urclothes, a few trinkets, our guns, revolvers, and efully wrapped in waterproof covers, and strapped to ent loss in case of capsizing, three of us started for ve had gone a hundred yards we were all thoroughly falling spray. As we neared the island we discovered water. As we lay here the wind r and down the barren sides of the is sand and rendering the water b that a trip ashore seemed hazardo determined to try it. According pajamas, with our clothes, a few amnunition carefully wrapped in v the hoat to prevent loss in case of shore. Before we had gone a hund drenched by the falling spray. As that a barrier reef was lying about th was a deep-looking pool backed it as to jump out of the boat and dh heyond, the water in which we foun the beach we found it composed of which contributes crafts of various 1, we noticed the curious hermit craft Hastily dressing and taking our beach, a goodly number of which ine fishhawks, while one of our m with his rifle, reburned with a gaz moved down the heach and saw proached these we were met by a clad in a small piece of cloth. He s hut we soon allayed his fears hy m empted to talk with him in the sig women and children were dodgin sight of us. Our attempts to talk w cessful. We visited the huts and primilive construction, consisting ards we were an unoroughly ared the island we discovered teet off shore, while heyond ine heach. As we drew near ow smoother, which enabled over the reef into the pool o to our necks. On reaching ten coral and coral sand, on sixty fe shoal and grow and drag it ove we found un osed of

drag it over the ret into and the product of the pr of us. Our attempts to take when it. We visited the huts and found tive construction, consisting of four visit with grass r

the utmost square. It is gave use on them it was a succeeded in We remained at anchor here for several days, and succeeded in making the boat shipshape forward, with the hope that she would keep so till we reached Perim Island, distant 100 miles, at the lower entrance of the Red Sea, in the Stralts of Babel-Mandeb. We beat against a strong wind and head sea for three days, and finally anchored safe off the island, *—New York Times*.

THE N. Y. Y. C. AND THE PURITAN.—The following resolution passed by the N. Y. Y. O. has been engrossed and a copy sent to each of the owners of the Puritan by the Club: At a general meeting of the N. Y. Y. C., held Tuesday, Oct. 22, 1885, the resolution was un-abimously carried: "That a committee of seven, to include the flag officers of the club, be appointed by the chair, with power to express to the owners of the Puritan the appreciation of the club of them nimously carried: "That a committee of seven, to include the flag filters of the club, he appointed by the chair, with power to express the owners of the Puritan the appreciation of the club of their pirited and sportsmanlike action in building and racing that vessel is the representative of the N. Y. Y. C. in the recent contest for the ossession of the America's cup," and the undersigned were ap-ointed as the committee. They desire, on behalf of the club, to pave to the emergency call, good judgment and true yachting birt characterizing their action in conceiving and carrying out to a meet by the Genesur, and as an earnest of the desire a permanent manner, the anting the accompanying September, 1885. 1 indentation ont of fifty connecting with one river out of fifty flowing mo the Chesapeake. Place obscure plebeian Smith's Creek in the Sound and its glories and praises would be heralded lar and wide, till the New Yorker actually believes that Smith's Creek is the eighth wonder of the world and the 'finest yachting waters on earth, sir." But of Smith's Creek a few miles away from his stock-ticker or dry-goods box he wots not of. The Coot sailed in among systemen tonging from cances much to their astonishment. She bronght up in a suug little round hole before an expedition to the post office was set on fool. Some sus-pleiou attached to her character. She was supposed to be a police boat bent on excluing offenders of the rigorous syster laws, and was eyed somewhat asknuce. Gradually the conviction gained that 'he was a New Yorker just pleasurin' round." C. P. K.

A HANDSOME STEAM YACHT.

was a New Yorker just pleasurin' rohnd." C. P. K.
A HANDSOME STEAM YACHT.
A HANDSOME STEAM YACHT.
The accompanying illustrations show the lines and plans (with a few alternitions) of a small steam launch, now being built in the yards of R. J. Douglass & Co., at Wankegan, In, for Mr. Jas. Alexander Kirk, of Chicago, III, for ness on Pine Lake, Wis. Her length is 45t, beam, 9t, if arit of water aft, 36io. The keel is of the finess selected white cak 6×8, with jstem, sternpost and deadwoods of the same. Her frames are of oak, sided 2m, moulded 4m, at heeds, with Jarvanized wrought from floors on each, fastened with \$\frac{1}{2}\$ (m. copper holts. She is planked with olear white cader 14/in. tobick, copper fastened. The garboards, sheerstrake and keelsons urder boiler and lengtine being oak for good fastening. Her decks are laid in white pine with oak covering board and partner for holy stone finish, and ber inside finish will be solid mahogary.
The oddity of her arrangements from a first observation is a little puzzling, but a closer study will disclose its advantage. From the gangway is shown between two dog heads on the orass railing. From the gangway is a step of 10h. Into the cockpit floor, where there is only one seat on either side for the helmsman (never having any person sitting in the passage way). From the cockpit one can pass into the accommodation proper, between two upholstered mahogany seats on either side. There is cominor table seating capacity for 25 persons. Passing from the after accommodation to the forward, with the extra beam for a hoat of her dimensions. The canopy is supported with carved mahogany stanching (interpret) between two upholstered mahogany, sein the ordinary launch of her length, there is ample room to pass around the boiler, not having a lady climbing over coal bunkers, sin the ordinary launch of her dimensions. The canopy is supported with carved mahogany stanching (interpret), etcles, cleats, rudder head, flag vatary launch of her dimessing over

DORCHESTER Y. C.-Officers for 1886: Commodere, Henry W. Savage; Vice-Commodore, W. D. Hodgkins; Secretary, Henry B. Callender; Treasurer, Samuel G. King; Measurer, Hartford Daven-port; Assistant Measurer, William L. Dearbora; Directors, W. H. L. Smith, C. H. Nute, Coolidge Barnard; Regatta Committee, Louis M. Clark, Erastus Willard, William B. McClellan, Herbert S. Carruth and Frank Gray.

Frank Gray. THE BOSTON SCHOOL FOR YACHT DESIGNING.—An exhibi-tion of the work of the students of this class will be held in the Bird school at South Boston on April 21-52. Besides yacht designs there will be exhibits of freehand and mechanical drafting and clay mod-elling. The school has proved very successful this year and will be continued next seeson.

QUINCY Y. C.-Officers for 1886, elected April 10: Commodore, C. F. Adams, 3d; Vice-Commodore, H. H. Sheen; Fleet Captain, C. H. Porter; Measurer, A. B. Lelois; Sceretary and Treasurer, Henry M. Faxon; Regatia Committee-G. W. Morton, E. W. Baxter, G. G. Sa ville, W. T. Babcock. The subject of erecting a club house was agritated, and the following gentlemen were appointed a committee to procure plans, etc., and report in two weeks; E. W. Baxter, Geo, W. Morton, G. G. Saville, C. F. Adams, 3d, H. M. Faxon. Seven new members were admitted. Dates for the season's regattas will be decided upon later. CLEVELAND YACHTING ASSOCIATION.-The annual election of officere was beld on April 3, the following officers being elected: Commodore, Geo. W. Gardner; Vice-Commodore, Percy W. Ricc; Rear-Commodore; Charles W. Kelly; Søcretary, J. Geo. Downie, 8S Euclid avenue; Treasurer, G. W. Lucitkemerger; Measurer, H. Ger-lach; Assistant Measurer, H. D. Moran; Surveyor, H. C. Rettger; Director. Charles W. Kelly; Regatta Committer, K. E. Mix, Chair man, L. H. Ware, C. C. Goodwin, P. A. Mettiling, H. Riebter. Three new members were admitted, and the club is in a flourishing condi-tion.-J. GRO. TORONTO SKIFF SALLING CLUB.-On April 6 a special meeting

tion.-J. GEO. TORONTO SKIFF SAILING CLUB.-On April 6 a special meeting was held at which several amendments to the by-laws were made, and a committee was appointed to revise the classification. The re-port of the secretary showed the club to be in a prosperous condition. A meeting to elect officers will be held on April 15 at the club bouse. An "At Home" will be given in May. Races will be sailed every Saturday through the season.

Saturday through the season.
 COLUVBIA Y. C.—At the annual meeting, April 6, 1886, the following officers for the ensuing year were elected: Commodore, R P. H. Abell; Vice-Commodore, Geo, R. Stone; Secretary, C M. Armstrong; Treasurer, Joseph A. Weaver; Measurer, A. Fowler Gore; Steward, Chas. H. Knubel; Fleet Surgeon, Henry Grisvold, M. D.; Regatta Committee, A. M. Everett, Chas. Dietz, C. T. Will, L. D. Urban, W. J. Greazen.
 A NEAT TURNBUCKLE.—A new style of turnbuckle for yacbts is now made by R. Mitchell & Co., of Boston, the body being asleeve of round brass with a right hand screw in one end and a left band in the of her. One screw is finished with an ope and the other terminates in a sbackle, so that the treacherous hook usually employed is dispensed witb. They are made in various sizes.
 SHIF AND YACHT HARDWARE.—We have received from L. W Ferdinand & Co., 267 Federal St., Boston, their new catologue of filtings of all kinds for yacbts, boats and large vessels. They deal in everytbing required by builders and yachtsmen, including cordage blocks, paints, oils, and brass and from goods.

blocks, paints, oils, and brass and fron goods. THE CRUISE OF THE ANBASSADRESS.—The schooner Ambas-sadress, Mr. Nathaniel Thayer, arrived in New York on April 7, and reached Boston on the 18th, after a cruise in the West Indies, visiting Bermuda, St. Kitts, Martinique, St. Thomas and Cuba. The voyage was a very pleasant one, but without special incident. SOUTH BOSTON Y. C.—Officers for 1886, elected April 7: Commo-dore, Henry Hussey; Vice Commodore, W. J. Crcutt; Fleet Captain, J. Bligh; Treasurer, Thos, Christian; Scretary, John C. Merry; Measurer, James Bertram; Trustees—C. McKenna, Charles Griffin, F. E. Colley.

easurer, E. Colle

NEVER HEARD THE "MIKADO,"-The Field notes the lannch of a new 5 tonner on the Clyde, named Pitti Sing, "after an African river."

HULL Y. C.—The club will probably offer substantial prizes in the large class, 26 to 40ft., to encourage entries this season. SEAWANHAKA C. Y. C.—The annual regatta this year will be sailed on Saturday, June 19.

to his neck and make him wear it as a badge of disgrace. This has worked well in some cases, where other devices have failed. INQUERER, Stamford, --Is it rare to find the great white egreat as far north as this? A very fine specimen was shot near this place April 2. Ans. Quite unusual so early in the season. The species only occurs in Connecticut as a rare accidental visitant. F. C., Madison Ave., N. Y.-Being anxious to have some snipe-shooting-English snipe preferred-and not having the time to travel any great distance, I thought you might be able to inform me of some place within one or two hours ride from city where if possible one cango and come the same day. Ans. There may he some place that will fill your requirements, but if there is we do not know of it.

Will nil your requirements, but if there is we do not know of it. W.A. B. Spring Hill, Conn.-Please state through your corre-pondent column whether water draws a bullet or not when fire across it. Ans. Water "draws" a hullet just as land "draws" bullet, no more, no lees. A bullet will fail the same distance in th same time, whether it be shot over water or over land, in obedienc to the law of gravitation.

o the law of gravitation. L. E. P., Greenfield, Mass.—Is Sunapee Lake, N. H., a desirable place is camp out? Is there good trout or bass fishing and how large do hey run? What files are used there for bass in August? Ans. Ex-ellent camping place, on shore and islands. Take train from Clare-nont to Newbury station, on Concond and Claremont branch of Joston and Lowell Railroad. Steamers leave there for all parts of he lake. Good bass fishing, up to ölhs. in weight. Trout up to 6 or lbs., the latter in deep water in August. Usual hass files, ihis, Jenshall, oriole, silver doctor, Prouty, etc. Write A. H. Powers, Irantham, N. H., for further particulars.

A Senate committee has acted unwisely in favorably re-porting a bill for the extension of a railroad through the Yellowstone Park. It is said by the supporters of the bill that such a road is needed for the accommodation of miners at the Clark's Fork Mines, in Montana, not far from the northeast corner of the park, but it is stated by others that a road can be built directly from their mines to the Northern Pacific. The Yellowstone Park should be preserved in a state of nature. It is proposed that the road shall pass through one of the most interesting regions of the reserva-tion, in the valley of the Yellowstone River. This road or any other would go far toward destroying the beauty and charm of the park. It would tend to destroy the game. It would necessitate the establishment of settlements on its line. Its construction would be followed by the destruction of many trees, felled by the axe or swept away by fires. There are almost innumerable arguments against the building of such a road, and we can find none in favor of it.—*New York Times, March* 26.

[APRIL 15, 1886.

SCHOVERLING, DALY & GALES.

Charles Daly Hammerless. THE BEST HAMMERLESS GUN IN THE WORLD.

THE PECULIAR SYSTEM OF BORING, CHOKING AND CHAMBERING gives the maxim result in closeness of shooting (this, however, can be done by any one), combined with PENETRATION. This latter is the great point. Ask any one who shoots a Daly and they will tell you they "Kill dead."

WHY.

THE GREAT SUPERIORITY IN ACCURACY OF THE FITTING AND CLOSENESS OF THE WORK makes the guns last a lifetime. Large numbers of DALY GUNS have been in use a score of years, and are as tight to-day as when first made. The workmen who make these guns are all "ARTISTS IN IRON AND WOOD." We confidently assert that no better or closer work can be found in the world, whether it comes from a Purdy, a Grant, or a Westley Richards.

THE BARRELS AND LOCKWORK ARE MADE OF FIRST QUALITY MATERIAL. One of the great points in a gun is the accuracy with which the barrels are put together. It costs more to put a pair of barrels together properly than it does to make an ordinary gun out and out. DALY GUNS have no superior in this respect.

THE ANSON & DEELEY SYSTEM, ON WHICH THESE GUNS ARE MADE, is the best ever yet put on the market. It is the same system as used by Westley Richards, Harrington & Richardson and many others. The only objection has been that the forearm of the frame is rather short. We have, however, overcome this difficulty, and a DALY HAMMERLESS ANSON & DEELEY SYSTEM WITH LONG FOREARM IS THE STRONGEST HAMMERLESS IN THE WORLD.

THEY ARE BEAUTIFUL IN OUTLINE, ARTISTIC IN FINISH. THE STOCKS HAVE HANDSOME FIGURE. They are stocked for use, "come up" properly. It is a pleasure to handle them, and to look at them is like viewing a handsome picture. A DALY is A "THING OF BEAUTY."

THE RIBS ARE HAND MATTED (not machine work which does not give the best effect) and give a perfectly dead surface to sight over.

PROOF.

While in sales every other Hammerless Gun has fallen off at least 50 per cent. this season (which has been a dull one in gun trade) the DALY has increased 50 per cent. Everyone who has one is enthusiastic in their praise.

SCHOVERLING, DALY & GALES, 84 & 86 Chambers Street, New York.

Manhattan Three Barrel. This Gun has met with an unprecedented sale for an arm of this kind-far beyond our expectations. In order to get them it is

necessary for the present to enter orders in advance. They are made with fine Damascus Shot Barrels, Best Steel Rifle Barrels. Matted Rib, Locks and entire work of the very best quality. Pushing the Top Lever to the left, the rifle barrel is fired by the right-hand lock. This mechanism is very simple, but effective

and durable, and does not admit of any mistake being made. A Folding Peep Sight throws down flush with the tang of the frame; a hinge back sight is placed on the barrel, which is flush for shotgun use and can be turned up for rifle use.

Price, with Sights Complete, \$85.00.

SCHOVERLING, DALY & GALES, 84 & 86 Chambers Street, New York.

A NATION'S HONOR.

FAR away in the northwestern corner of Washington Territory is a little reservation occupied by the Puyallup Indians. They number 560 individuals, and the reservation covers about 18,000 acres of land, so that they have about thirty-two and a half acres apiece, or not far from a quarter section-160 acres-to a family of five per-These people are entirely self supporting and derive four-fifths of their living from the cultivation of their farms. These have been allotted to them on the reservation, and they hold them solely by allotment certificates issued by the Government in the year 1881.

The Puyallup Indians are to all intents and purposes civilized. They are farmers, mechanics, laborers. They earn their bread by the sweat of their brow like other men They Two-thirds of them have made valuable improvements on their lands, cleared off heavy forests, built houses, cultivated lands, provided homes for their families. Besides this they have, without assistance, purchased an eight horse power thrashing machine, seven mowing machines, sixty-eight horse rakes, ninety-three wagons, and all that is necessary for farming in the way of plows and smaller tools. They have teams and eattle, their lands are fenced, they are a well-to-do farming community. Their children, to the number of sixty or eighty, attend the school at Puyallup, which is within one-half mile of the limits of Tacoma.

Almost without help these Indians have raised themselves from a condition of barbarism to one of civilization. They are constantly improving. Each year the attendance at the school has grown larger, and it was never so good as last year.

One thing they have to fight against, one thing discourages them in their attempts to make their farms valuable, leads them to feel that it is useless to work hard, paralyzes their industries. They do not own their lands.

The allotment certificates recite that a certain man is entitled to a certain specified tract of land, and that he "may take immediate possession of said land and occupy the same, and the United States guarantees such possession and will hold the title thereto in trust for the exclusive use and bene-fit" of the Indian named and his "heirs, as long as such oc-cupancy shall coutinue." The certificate then goes on to state that it is not assignable, except to the United States, or to other members of the tribe. There is nothing in it, however, which gives the holder any reason to believe that he has any right to occupy this land permanently. He is a tenant at will. At any moment he may be evicted at the pleasure of a Government officer. At any moment he may

be expelled from the home which ne has expended on it. losing it and all the labor which he has expended on it. These Indians are deeply attached to their land. This time immemorial been their home. Here their fathers were born, lived and are buried. Here this generation have passed their childhood and their youth. Here their children were born. It is their home. On these lands this simple people carried on the great struggle which has lifted them from barbarism to civilization. They cleared away the virgin forest and fenced in the wild land. Their hands subdued the stubborn soil; their labor converted it into fertile farms. Once barren it is now productive; once worthless, it is now valuable. By every tie of sentiment and affection they are bound to these homes; by every right which patient industry confers, these lands are theirs. To take from them these farms, with the improvements which they have made on them, would be injustice, would be outrage, would be robbery. This is just what the United States tried to do.

The agent for the Puyallup Indians, knowing the attach-ment that they feel for their lands, knowing that they had all made their locations, built houses, and made some improvements on their allotments, and that they are intensely desirous to obtain patents for their lands and would by no means consent to sell them, sent on to the Interior Depart-ment a statement of the condition of things at the agency and urged the prompt granting of the patents to the people. This is the reply he received :

This is the reply he received: DEPARTMENT OF THE INTERIOR, | WASHINGTON, D. C., March 3, 1885. | Sir: I have your telegram concerning the patents to the Pu-yallup Indians. I do not think it for the interest of the In-dians to have the patents issued. The land they occupy is valuable for farming and town site purposes and ought to be sold and the money used to establish them in another place. I shall therefore decline to allow the patents to issue, hoping Congress may make suitable provision for their removal and the sale of their land and the investment of the money for their benefit in some other place. Yery respectfully, H. M. TELLER, Secretary. MR. EDWIN EELLS, U. S. Indian Agent, Tacoma, Wash.

MR. EDWIN EELLS, U. S. Indian Agent, Tacoma, Wash.

Their homes were to be taken from them and sold and they with their families were to be moved off to some desert place, and having been located there were to be encouraged to become civilized, to become self-supporting. This is the Government method of encouraging the Indians to follow the white man's road.

The robbery thus contemplated was never carried out. Secretary 'Teller went out of office before this could be done, and the present administration has recommended the grant ing of the patents to the Puyallup Indians. But the action of this Cabinet officer is a fair example of the shameful course of fraud and oppression carried on by the Government toward the Indians.

THE INTERNATIONAL MATCH.

THE letter from the National Rifle Association here to the Association in Great Britain has up to this writing brought no response. This is not surprising, since it is a matter not to be lightly decided, and besides the lapse of time has hardly been great enough to permit a reply to reach our shores. There is considerable doubt whether or no a match will be held this year. With Sir Henry Halford lying at death's door, the American marksmen lose the ser-vice and active aid of one who has borne almost the entire burden of organizing and carrying out previous matches between the two countries.

The Council will in due time consider the American letter and do what they can to bring about a contest. It is not at all unlikely, however, that the response will come in the form of a counter proposition for a match to be fought on British soil. The victory now lies with the foreign team. We are a defeated company, and the most natural way would be to send a challenge for the championship and follow it up with a strong team. It may strike the British riflemen as smacking somewhat of presumption for a de-feated team to send over an invitation for the victors to come and give a chance for reclaiming the lost laurels.

The great Wimbledon meeting is a fixture. An American team going abroad may be sure of finding the very pick of the marksmen from the entire Kingdom gathered there, and a victory over such a team on such a field would be one of two in the bush.

which the Americans might be justly proud. Such a step would be the natural one to take, and thus the onus of get-ting back their laurels would rest on our foreign cousins. We regret that they show no disposition to take away our small-bore honors, and our regret would be more than doubled if the great army of Volunteers should ever follow the example of their small-bore, long-range comrades and rest quietly in the ranks of the defeated. At present we on our side the water have but a partial victory to our credit. We know we have the better long range weapons. We are certain that we can make the better military rifle, and find men to shoot them, too. Let us do it, and in a manly fashion, too, by going over with a strong team, armed with home-made weapons, loaded with home-made ammunition, and fighting both the British weather and the British shooter.

Just at present there does not seem to be very much excitement anent the proposed renewal of international hostilities, but then we have a way of jumping in with a rush, getting ready for victory, getting the victory, and getting back to business again, which is peculiarly our own. If an American team is to be organized, a good percentage of it ought to come from other than the vicinity of New York. Boston and the West ought to contribute men. The Pacific slope keeps up a great deal of shooting of a sweepstake sort. Let a few of the California shooters come over and gain the skill in long-range work they have in short-range shooting, and there will be no trouble about satisfactory results.

SPRING WOODCOCK .- A gentleman who recently returned from Washington, informs us that woodcock are now being served up there at certain restaurants. He was told by John Chamberlain, that he was receiving about 25 woodcock The idea of serving up nesting birds-as woodcock daily. killed during the month of March certainly are-is sufficiently shocking and calls attention to the miserable in-efficiency of the game laws of the District of Columbia, and the equally miserable inadequacy of their enforcement. It is a shame that the seat of the United States Government should be the scene of such an abomination as eating breeding woodcock. The sportsmen of the District of Columbia are entitled to some consideration at the hands of Congress, and a suitable game law ought to be introduced and passed without delay. _

INITIALS ARE NOT NAMES.—If every correspondent who writes to the Forest and Stream on business should sign his bare initial instead of his name, the paper would shortly suspend. Some stupid folks do send in such semi-anonymous letters, and they are always a source of bother and vexation of spirit. Sometimes such letters contain money; sometimes the writers want something sent to them; sometimes the letter relates to a sick dog. There are all sorts of demands, requests, inquiries, written by people who do not know enough to sign their names. It takes all sorts of people to make up the world. Even fools have their place in the economy of human nature, for as said the Elder Cato, wise men may learn from them.

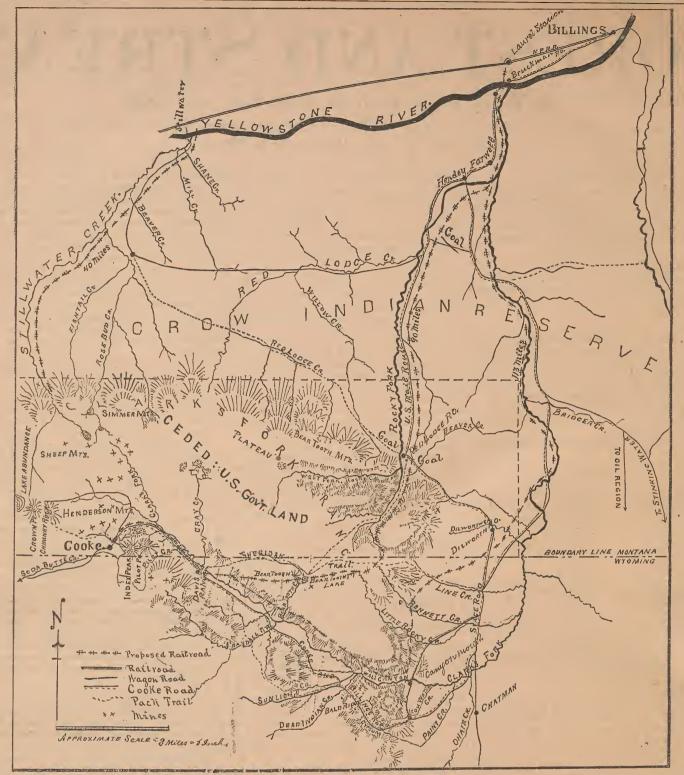

SPRING SHOOTING .- A correspondent suggests that the speediest way to legislate against spring shooting would be to secure the enactment by Congress of a law forbidding the spring killing of migratory birds. Unfortunately, however, Congress has no jurisdiction in the matter; it can only legislate with reference to the game of the Territories. The stupid and bungling fashion in which Congress handled the buffalo question a few years ago, showed that little intelli-gent game conservancy is to be expected from that body, even where it has jurisdiction. The abolition of spring shooting must be secured by State legislation.

CHICAGO HAS A QUAIL NET FACTORY, Quail nets are more familiar institutions in the South and Southwest than in other parts of the country. Their use ought to be forhidden everywhere. The only mitigating feature of the netting business is that some of the live birds are bought by sportsmen to restock depleted game grounds.

THE YACHTING SEASON of 1886 promises to be more active than that of 1885. The canoeing season will be made notable by the international races.

RAILBOAD ROUTES TO THE CLARK'S FORK MINES

A BOOM FOR COOKE CITY.

THESE are great days for Cooke. That inconsiderable: and almost wholly undeveloped mining camp is brought into undeserved prominence by the project to build a rail-road to it from Cinnabar, the end of the Northern Pavific Park line, up the Yellowstone River to the East Fork, and up that and Soda Butte Creek almost to the divide. What the mines at the head of Clark's Fork may contain poliving man knows to day. We have seen specimens of ore, said to be from this region, that were enormously rich, but whether they came from these mines or not we are unable to say. Ore specimens arc not difficult to obtain in the Western country, and there never was a prospector yet who lacked specimens to show that his mine was one of the most valuable ever discovered. Cooke City has been fortunate in that a number of prominent men are interested in the mines on the head of Clark's Fork, and they have brought to bear on Congress influences which have resulted in a favorable report by committees in the Senate and the House of Repreentatives on a bill to grant the right of way to a railroad through the Park. The rights of the people are thus most seriously threatened,

The practicability of this route is not, so far as we have been able to learn, vouched for by any disinterested person. On the other hand, we have the testimony of Mr. Arnold Hague, of the U. S. Geological Survey, who has examined the Third Cañon of the Yellowstone River, that it is extremely rough, and that the construction of a railroad through it would be attended with very great difficulties. Such a road even if constructed would be a mere side line; having no traffic except what it might draw from the mines; and it is as yet wholly uncertain whether this would be much: or little, whether it would or would not justify the constructtion of this line.

So far as actual business possibilities go, any one of the routes on the east side of the range, i. e, the Stillwater, the Rocky Fork, or the Clark's Fork lines, is much more favorable. The Stillwater route would tap the mines at the foot of Henderson Mountain, would open up a fine grazing country, and a region producing coal, marble and gypsum, but would not for the present have much local traffic. The Rocky Fork route would develop a coal region and would tap all the mines of the district. The Clark's Fork route, after running for about eighty miles over a level prairie where the cost of construction would be very slight, would turn up the river, and, passing above the cañon, proceed to the mines. From this it would bring down their ore, and it would be an easy route for the tourists who might wish to visit the wonderful Hoodoo country. It would open up a great stretch of valuable agricultural and grazing country anto which settlers would pour as soon as permitted by the Government. A spur to Rocky Fork would develop the excellent coal mines of that region. Another spur to the south would reach the new petroleum fields of Wyoming, whose development promises such rich results. The road would not be dependent on the possible results of mining at the head of Clark's Fork. It would have a far more certain, substantial and enduring source of revenue than this.

General Anderson, of the Northern Pacific R. R., is quoted as stating that there is no practicable route to those mines from the east side of the range; but General Anderson has never in person been over the ground referred to, nor, so far as we can learn, have any of his subordinates. The U.S. topographical surveys have been over the ground and their reports speak of slight divides or easy passes between the heads of Soda Butte Creek and Clark's Fork, and the same is true of the heads of Soda Butte and of Stillwater.

We print this week another map of the region under dis-

cussion, showing the results of rough surveys of the three routes on the east side of the range, with the approximate lines to be followed and the length of each. As we have already pointed out, the Stillwater line can be still further extended up that stream to the foot of Henderson Mountain. These plattings are the results of a careful examination of the ground, and will be found to be approximately correct.

There seems to be a very fair prospect that a road up Clark's Fork will be built, whether the Cinnabar & Clark's Fork Railroad obtains its right of way or not. Articles of incorporation for the Billings, Clark's Fork & Cooke City Railroad were recently filed at Billings by Messrs. Thomas Hanlon, Philip M. Gallaher and Geo. B. Hulme, of Billings; Geo. V. Sims, of New York, and Henry Kelley, of Phila-delphia. The capital stock of the corporation is \$1,000,000 in 10,000 shares of the par value of \$100 each. This corporit is stated that the work will be pushed forward as rapidly as possible. Another road is projected up Stillwater, and surveyors have been at work along this line.

Under any circumstances, therefore, it seems probable that Cooke will have its railroad, and on this point the capitalists of that district and their friends in Congress may feel easy in their minds. The development of the region does not call for the giving away by Congress of a portion of the people's pleasure ground. That must not be tampered with, must not be taken away from those to whom it belongs, to put dollars into the pockets of a few men. The region must not be thrown open so that, as was the case last year, a lot of people can rush in and stake out coal claims all over one of people can rush in and stake out coar cannot all over one of the most beautiful and interesting portions of the Park. The game and the timber, now so abundant along the East Fork, must not be handed over to the tender care of the hide hunter, the tie chopper and the charcoal burner. The Park must be preserved,

The Syortsman Tourist.

A SLICE OF LUCK: Why fully, as he easts a retrospective glance over the wanished years, the hunter realizes that there are days how and have. Days when, in spite of all his ingenuity and per-very and unsuccessful, or days when, with the minimum of effort, a Bodj min's portion fell to his lot; when the us-strange of the shades of high turned his steps homeward, vir-there are an any source of the steps of all his ingenuity and per-ter of the shades of high turned his steps homeward of effort, a Bodj min's portion fell to his lot; when the us-strange of the shades of high turned his steps homeward, vir-there are of the shades of his presence, or when the steady and how on the dask and eddying gitsts carried to remotest hiding her the fack and eddying gitsts carried to broken twis at when the the the minimum of the trange of the day, or when the ascendari; again, when, worst of all, the humeward his star of huck was her not matter whether noisy or still, his star of huck was her not matter whether noisy or still, his star of huck was her not matter whether noisy or still, when the stardy and her not matter whether her of the day. to permit memory to linger on the cheering reminiscences of the lacky ones; so I now recall what was, taking all things into consideration, the most fortunate hunting experience of my life. I was living at the time on Grand Prairie, a small settle-ment situated some thirty or forty miles southeast of Kam-loops and eighteen or twenty from the nearest accessible point of the present Canadian Pacific Railway. In spite of its pretentious name the prairie is only a narrow valley a couple of miles or so in width, and probably three or four times as long, with a small stream, dignified by the tile of Salmon River (I suppose on the lucus *a non lucendo* princi-ple, for, so far as my observation goes, it is destitute of salmon), winding through it. The trend of the valley is covered with a luxuriant growth of fir and pine, running up to meet the precipitous heights that cap the mountains. Here and there the ruddy volcanic chiffs rise almost directly from the grass-covered plain without any intervening slopes, and from their crowns a further stretch of rolling, timbered ground leads to the uppermost tier of rocks. Along the mountain breast, with its dark, deep gulches, its grassy and brush-dotted slopes, its tiny, rippling, crystal streams, that are sucked up by the thirsty hand before they can reach the prairie, the deer wander in happy and safe seclusion, save when the Shuswap Indians, with whom this is a favorite into a while to enrich the family larder with a fat buck. In the winter of 1881–2, a number of Indians were camped on the prairie, and they several times told us, during their horts which they had occasionally seen on their hunting expeditions but had failed to capture. Now a genuine Rocky Mountain sheep was game of a class I had hitherto had no opportunity of hunting, and I felt proportionatoly aryous to try my luck, though it scened almost absurd to were separated from the Rockies by at least two minor but far from despicable chains of mountains, the Selkirks and urichity for a number of years. While hes

forty deer and the coveted sheep—the latter leisurely pick-ing his way along a rocky sidehill half a mile or so from him. This news decided me, and 1 prepared for a hunt on the morrow. When morning dawned I took my rifle and a lunch in case of any delay and started up the mountain. Very for-slight snowfall during the night, and as I toiled upward 1 noted with hopeful satisfaction the excellent tracking and the noiselessness of my steps. The whole mountain was familiar ground, for I had killed deer in almost every part of it, so there was no difficulty in selecting the proper course to pursue to crach the place where the sheep had last been seen. Straight upward till the base of the highest line of cliffs barred further progress in that direction, and then I produce where a state of the highest line of cliffs barred further progress in that direction, and then I there was a solitary downward track that set my pulses throbbing tumultuously, for, though I had never seen a mountain sheep's hoof prints before. I knew I saw them then. With watchful gaze and ready rifle, step by step, I followed down the mountain. Down went the track lower and lower, over grassy slopes, where the mildness of the morning was already wasting the new-fallen now; shrough bets of fir and pine, where my senses needed to be doubly on the alert. Onward and downward the sheep had gone, never stopping to alible the grass or to crop the tury shoots of the underbrush, but ever pressing steadily downward. Downward till I knew that I was nearing one of the points where the lower cliffs directly overlooked the prairie; down-ward, till my heart began to sink and my mind to be filled with misgivings lest the game had eluded my pursuit by crossing the valley to the possibly more congenial, because more inaccessible, heights to the sout. Were the southern edge of the last narrow fringe of tim-ber that lay between me and the front of the mountain, the shirecturess of his march, and had zigzagged in and out a little among the brush. By this time the s

yards from where I stood. The brush was so dwarfed and small as to seem quite incapable of concealing any animal as large as the one whose trail I had been following; but as it was the only spot of cover within sight, I watched it much as a cat would watch a mouse-hole. As I stood, with rifle cocked and half raised, debating in my mind what course to pursue, a movement behind the juniper brought the rifle to my shoulder just in time to cover the shoulder of the ram as he rose quictly from his resting place, and ledisurely stretched himself, apparently quite unalarmed, but with his head half turned toward me, a clean broadside shot. The low bush concealed his legs, and thus prevented me from appreciating his appearance properly; but I must confess that my first feeling was one of keen disappointment, for he looked squat and ungxinly to eyes accustomed to the more slender and graceful deer. His head, too, surmounted by its monstrous horns, was seemingly so utterly out of propor-tion as to largely chance the first impression of his ungainli-ness.

its monstrous horns, was seemingly so utterly out of proportions as to largely enhance the first impression of his ungainliness.
How long I stood in that fashion drinking in every detail of his appearance—and I am candid enough to admit that his style became much more striking as our acquintance progressed—I don't know, possibly not more than two or three seconds, though it certainly scemed as many minutes. A slight motion on his part suggested meditated flight, so I pressed the trigger and assisted him to make up his mind a triffe more promptly perhaps. Half a dozen rapid bounds to the left carried him to the brink of a steep cleft in the rocks down which he literally slid on all fours. There was no snow and on the bare ground I could not see a drop of blood. I ran to the edge of the gulch so as to get another shot if he attempted either to run down to the prairie or to climb the optotem of the ravine, however, on a patch of snow which the sombre shade of the sheer clift had preserved, was a long streak of red. It was unterly out of the question to follow his short cut to the bottom, so I climbed back up the mountain till I could manage to scramble into the gule with sfety. Carefully following it down to the prairie, I presently spied the rawine. I was morally certain he was stone dead, but, to remove all doubt, I gave him another and the rocky wall of the ravine. I was an oble one, and to-day graces the dining room of a Spalluncheen friend. The baare ground the successful shot even if he was started, the fortunate snow fall which just lasted long enough for the needs of the occurry of even striking his track, the strong possibility of not getting a successful shot even if he was started, the fortunate snow fall which just lasted long enough for the needs of the occurry of even striking his track, the strong possibility of not getting a successful shot even if he was started, the fortunate snow fall which just lasted long enough for the needs of the occurring as a huge slice of luck.

THE AUDUBON SOCIETY.

Ing the second secon

Dr. I. E. Nagle writes of the bird destruction in Florida: "What a sad contrast to all that is the present condition of things. So-called hunters have shot out and frightened away all of the game and singing birds in the State, except those which hide in the almost inaccessible portions. And though it is almost as rare a thing to see a bird in a day's travel as it is to find a hen's tooth, yet the hunters go tramping in search of the poor birds, which they call game. It is a pitiful and pitiable sight indeed to see a big overgrown lout of a fellow, after being out all day with a gun, come home in the gloam-ing, toting a tom-tit as big as one's thumb, and act as if he

had done a great thing in shooting away a pound or two of shot to do the deed of killing. The noise that such shooters make with their guns, popping all day long, frightens all song and plumage birds so that not a chirp or chirrup, except what comes from the pugnaclous and fearless spurrows, are heard in the land. So if you want to hear a mocking bird or red bird, you have to go to some barber shop or drink shop or clsewhere, where the 'critter' is kept prisoner in a cage. The past cold winter and the shooters have almost annihilated the birds in this section, and if there ever was a time that demanded a cessation of such wholesale slaughter of the poor birds, now is the time, and we carnestly hope that the gun inflict the most stringent punishment against these promiseu-ous and abominable gun snappers and powder-burning wretches."

Wretches." On page V. is printed the pledge blank of the AUDUBON SOCIETY. Those of the readers of FOREST AND STREAM who are interested in the work of the Society may cut out this pledge form and return it with signature; and receive in return the certificate of membership to which its signer is entitled. Where no local secretary has been appointed (the Society wishes to have one in every town), applicants for membership may send their pledges directly to the Society. In no case will a certificate of membership be issued before the receipt of the signed pledges. The signing of any of the pledges will qualify one for membership in the Society. It is earnestly desired that each member may sign all of the pledges. Beyond the promise contained in the pledge no obligation nor responsibility is incurred. There are no fees, no dues nor any expenses of any kind. There are no con-ditions as to age. Address THE AUDUBON SOCIETY, No. 40 Park Row, New York city.

ANGLERS AND BIRDS.—Editor Forest and Stream: The dis-appearance of our native song birds and those that are purely ornamental when alive, and not so when dcad, is a matter that is deplored by anglers as much as by any other class. You know my belief that it's not all of fishing to fish, and the birds contribute not a little to the sum total of pleasure in a day's outing. One can lay on his back in the green grass, snift the odor of the pine, listen to the murmur of the brook and the songs of the birds, and return home feeling that the day has been one of joy, even if there is no fish in the crecl. The birds are part of an angler's day out, and I trust your efforts may result in righting this great wrong to our friends, the birds. My wife, daughter and self wish to be enrolled as members of the AUDUBON SOCIETY.—A. N. CHENEY. CHENEY.

PRAIRIE Dog's HABITS.—Philadelphia, Miss.—We have a pet prairie dog, brought from Wise county, Texas. It drinks water.—S. P. NASH.

LINES

ON FLUSHING A QUAIL IN THE CITY STREET. on FLUSHING A QUALL IN THE CITY STREET, $A^{\rm H!}$ whistling whose with startled rush, I hear your flurry at the flush; To hear thy drumming pinions raise, Here in the dust of city ways, Brings back the "flight" of other days— The field, the hollow and the swale, Where erst I knew thee, royal quail.

Hath fright then wak'd thy whirring wings From silent sylvan woods and springs, To linger 'mong the haunts of men, From field and wood, the copse and fen, Where grieves disconsolate thy hen— Her truant love, her mate, her male, Her royal master, Bob White quait?

Make haste then "Rob" and fly the town, And seek thy bonny mate of brown; Take on again thy household cares, Rear well thy brood, avoid the snares; Rear goodly bevies from the "pairs," And next October, without fail, I'll see you, royal Bob White quail.

CLEBURNE, Texas.

THE DEER HOUNDING BILL.

FOLK

THE DEER HOUNDING BILL. A CORRESPONDENT who was present when the bill soon be loose again. Senators Vedder, Fassett, Raines, and Hendricks made a hard fight, but the Senate writes: The dogs will soon be loose again. Senators Vedder, Fassett, Raines, and Hendricks made a hard fight, but the Senate was fixed. All the New York and Brooklyn senators were against us. I believe they are inspired to this by the Governor and by the promise of help from the Republican members of the House who favor the uill. Still it took over two hours to pass it, and it only passed by the united efforts of Messr5. Erwin, Tuck, Barnes, Palmer and Hadley, all of whom were on the floor of the Senate holding up Senators who had promised to vote for it or could be induced to do so. The singular spectacle was presented of the sergeant-at-arms of the Assembly actually circulating among senators and soliciting votes.
Senator Fassett moved to obstike out the lines allowing the use of dogs. A long discussion followed. This and the motion against water killing, offered by Senator Hendricks, were defeated. It was agreed that St. Lawrence should be exempt. Senator Marvin asked that Delaware be also excepted. This was at first refused, but to conciliate matters, agreed to. Then the three-deer clause was moved. This was then moved to progress the bill. Hon. Senator Vedder again renewed the motion. Senator Raines also addressed the Senate. For a few moments it looked as though the thing would carry, but the vote stood twelve for and sixteen against the amedment. The bill was then read a third immed and passed. McMillan spoke briefly. Wemple said nothing, but worked the Democratic side of the house.
So ends the fighting of '86. We have had great odds against us all the time. ALBANY. *From the Albany Evening Journal, April* 14.
The media of the senate was the deershounding the there.

The special order of the Democratic side of the house. The order of the fighting of '86. We have had great odds against us all the time. ALEANY. From the Abany Evening Journal, April 14. The special order of the Senate was the deer-hounding this but two hours were given to general business before if was reached. Then Mr, Hendricks offered an amendment which probibits wounding or killing deer while in the water. He denounced as brutsl and cowardly the methods of jack-hunting and Mr. Fassett joined in this opinion. Mr, Kel-logg protested against attempts to load down the bill with amendments with a view to killing it in the Assembly. This was done at the instigation of a member of the Assembly. Men were opposing the bill who had no knowledge of the subject. Mr. McMillan said the bill was the result of the best thought of the committee and it ought not to be amended as proposed. Jack hunting was restricted by the bill. Mr, Yedder said no one could defend jack-hunting. All that could be said for it was that it was good for eity consump-tives to sit about on a log, hear the baying of dogs, and shoot the deer while they were helpless in the water. The amend-ment was lost, ayes 9, nees 15. Mr. Marvin moved to ex-cept Delaware county from this act. They had a few deer down in that county and they wanted to keep them. Mr. Kellogg said that this was another attempt to kill the bill. Mr. Fassett maintaned that each amendment should be treated fairly. Deer hounding was brutal butchery, and if Delaware county wanted to be excepted it should be. Mr. Kellogg declared that it was true that a member (referring to for, Curtis) was on the floor trying to beat the bill by induc-ing Senators to offer amendments. Against his judgment Mr. Kellogg said he accepted Mr. Marvin's amendment. Mr. Fasett moved to amend by prohibiting deer hounding in any of deer could be prohibited for five or ten years. Deer hounding was prohibited last year and there was no reason why it should now be permitted. Mr

driven in the water these city sportsmen can then kill it with a shotgun if the guide holds it by the tail. It was absurd to say that the deer are protected by being made shy by the hounds. As well say that cats protect mice, and wolves pro-tect sheep. If the city sportsmen want to hear the baying of the hounds he suggested dragging the anise-seed bag in the North Woods as Long Island and Newport sportsmen do. Mr. Smith believed that no harm could come from deer hounding during September. Mr. Sloan believed that prac-tically deer hounding was no more cruel than still-hunting. He believed the encouragement of tourists in the North Woods would put to check the extermination of deer, as deer killing was not then left the only means of a guide's livelihood. Mr. Wemple declared this game bill was the best ever introduced. The only manly and humane way to kill deer is by hounding. Mr. Fassett's amendment was lost-ayes 6, noes 18. Mr. Vedder moved to amend by prohibiting persons from killing more than three deer in a season. Ac-cepted. Mr. Vedder renewed Mr. Hendrick's amendment which prohibits killing any deer in the water. Replying to Mr. Vedder, Mr. Kellogg held up a picture from Foreser AND STREAM, and declared that is representation of men in tall silk hats mounted on horses showed all it knew of deer hunting in the Adirondacks. Mr. Kellogg said that Mr. Fassett's position was not a surprise to him. He had been on the "off" side of everything this winter. Mr. Vedder's amendment was lost, and the bill was paseed-ayes 21, noes 8. [Kellogg was mistaken about the picture. That should be credited to Dr. Ward. The FOREST AND STREAM picture was of Mr. Kellogg's friends with the club and the "tail holt."]

Following is a list of the members of the New York Senate with their votes on the deer hounding bill:

Following is a list of the members of the New York S te with their votes on the deer hounding bill: VOTED IN ITS FAVOR. Fagan, Dem., Maspeth. Pierce, Dem., 7 Montague terrace, Brooklyn. Worth, Rcp., 182 Graham avenue, Brooklyn. Murphy, Dem., 481 Washington street, New York. Bally, Dem., 35 Ridge street, New York. Daly, Dem., 230 East Twelfth street, New York. Smith, Rep., Morrisville. Walker, Rep., Batavia. McMillan, Rep., Buffalo. VOTED AGAINST IT. Marvin, Rep., Bullalo. voteD AGAINST IT. Marvin, Rep., Walton. Hendricks, Rep., Syracuse. Barager, Rep., Candor. Fasset, Rep., Elmira. Raines, Rep., Canadaigua. Pitts, Rcp., Mcdina. Vedder, Rep., Ellicottville. Griswold, Rep., 43 Fort Green place, Brooklyn.

DID NOT VOTE. Connelly, Rep., Kingston. Low, Rep., Middletown. Traphagen, Dem., 14 East Sixty-third street, New York.

The bill again passed the Assembly last Friday by a vote of 99 to 11.

From the New York Times, April 15. The bill passed by the State Senate yesterday in respect to the hunting of deer in this State took a very unsatisfactory shape. Mr. Fassett's amendment preventing the running of deer with dogs should have been adopted, as necessary to preserve the deer. There was no argument against it. The plea that a consumptive might soothe his declining years by setting dogs after deer was as nearly worthy that name as anything that was said. If a wisc system of game laws had been adopted fifty years ago, the extinct animals of the Adirondack wilderness, like the moose, might still be found there and be hunted under suitable restrictions. In spite of the restrictions contained in the Senate bill, it is to be feared that if that bill becomes law, sportsmen already elderly will see the time when there is not a deer left in the North Woods.

The Legislature does well in shortening the deer hunting season, and in virtually stopping the slaughter of deer for market by the provision that no person shall send game out of the forest or bring out more than one carcase; and in re-storing to hunters the privilege of hounding it thinks to save the deer by preventing still-hunting, which last year proved very destructive. But last season was exceptional, and after a study of the testimony of sportsmen on both sides, we reached the conclusion that hunting with dogs is not less de-structive than the rival method. Aside from other consider-ations the practice of hounding is abominably cruel. Persons of much refinement know that the deer should not be hunted at all and the slaying of these animals in the State Park should be prohibited; but the entire public is not yet enlight-ened on this subject.—Syracuse Standard, April 16.

VICTORIA, TCXAS, April 10.—Editor Forest and Stream: I inclose you a clipping from a Southern newspaper: "A wild hog in Northern Alabama has become the acknowledged master of a large tract of wooded country. Hunters give the place a wide berth. A few days ago the animal lacerated a pack of hounds so badly that they will never be of service again." If the New York Legislature repeals the non-hound-ing law, how would it work to capture this animal and turn him loose in the Adiondacks?—C. S. W.

APRIL DEER HOUNDING.—Chateaugay Lake, N. Y., April 12.—Deer have wintered nicely in this part of the Adiron-dacks. I saw the tracks of at least thirty different ones in a walk of eight miles last week. Grouse very scarce. No end of foxes and rabbits, for we never hunt them. Fish are very plenty. We catch large quantities of whitefish or shad, weighing from one to four pounds. Salmon are very plenty on the shoals where we fish for shad, and are often hooked, but are lost through using too light tackle. The hounds were out yesterday and killed a nice doe on the lower lake. —R. M. SHUTTS.

THE UTICA ASSOCIATION.

THE sixth annual meeting of the Utiea Association for the Protection of Fish and Game was held April 14. President I. J. Gray presided and John D. Collins acted as secretary. President Gray read his annual report, which was as follows:

was as follows: To the Members of the Utica Fish and Game Protective Association: The report of our treasurer shows a balance on hand at the close of the year of \$48 35, and that we have expended during the year the sum of \$84 85. That the amount ex-pended in but a small degree indicates the work performed by the officers of the association, is shown by the report of our secretary; indeed it will appear that the board has been more than usually active, while it has kept in view the greatest possible economy, I am gratified to be able to say that the members of the board of directors have each and all shown much zeal and considerable self-sacrifice in behalf of the cause.

I think I can safely say that this applies with much force I think I can safely say that this applies with much force to our scoretary, as the excellent and convenient synopsis of our game laws—almost entirely his work—and drafts of new game laws and amendments of the old, newspaper discus-protective measures and an extensive correspon-

to our scretary, as the excellent and convenient synopsis of game laws and amendments of the old, newspaper discus-sions of protective measures and an extensive correspon-dence will prove. Much of the work of the association, from its very nature, can not appear on the surface to give proof of its extent and value. Much has been accomplished—but infinitely more re-mains to be done, and as the people become awake to the need and value of protection, we must become more aggres-sive. The unprincipled market hunter, increased faelities for killing wild animals, the destruction of their haunts by the agriculturist and the manufacturer, all combine to diminish the domain of the sportsman; and he alrendy dreads the coming of the day when he will "feel like one who treads alone some banquet hall descreted, whose lights are fied, whose garlands dead, and all but he departed." The time has come when we should demand that our game animals should be exempt from slaughter for gain. We can not begin the agitation of this subject too soon, and I hope this association will take the initiative here and now. I must not close this communication without again making an appeal for a large increase of membership. Can the that the interest of the eitizens of Utiea and vicinity is to be measured by the pittance of less than \$100 of dues annually paid into the treasury of the association for fish and game protection? There should be at least \$500 collected an-nually in dues alone. The State protectors are doing much, but they can not cover the ground. We need private de-tective work. They are not sufficiently mobilized, nor are they in sufficient numbers. Every man in Utica who is in-terested in the cause of protection should become a member of this association, and pay his dues promptly. Our battle is going on bravely, but we need, and must have, reinforce-ments.

The report was adopted and ordered placed on file. Sec-tary Collins then read his annual report, which was as retary C follows:

<text><text><text><text><text><text><text><text><text><text>

<text><text><text><text><text><text><text>

any be left. The pre-

of ladies who wear the plumage of birds we will wonder that any be left. The prevailing fashion in this respect is one of giddy thoughtlessness, of the fact that every birdskin or wing worn upon bonnets cost the life of a bird. The avarice of mer-chants knows no bounds in supplying them to all who have money to pay for them. As a consequence we may soon ex-pect insect ravages only equalled by the grasshopper plagues. The combined efforts of community are needed without delay, to discountenance this dangerous fashion, worse than folly, and to teach our ladies the direful consequences of thefr indulgence in this sort of decoration. Another form of destruction is by parents allowing their boys to have guns, and who go about the fields on holidays killing every bird they meet. If the small boys must have guns they should be taught to spare the birds. Ladies are cordially invited to eo operate with us in this work, as it must be from their influence and example that practical benefit must come. The following resolution was adopted: Resolved, that the thanks of this association and of its members be ten-dered to the Utiea Morning Herald, the Utica Daily Observer, the Daily Press, of this city and to the FOREST AND STREAM of New York city, for their efficient aid to the efforts of this association and in behalf of the preservation of fish and game. The following officers for the ensuing year were unani-

game. The following officers for the ensuing year were unani-mously elected: President, Colonel I. J. Gray; directors, I. C. McIntosh, John D. Collins, Frank I. Meyers, W. C. Harris, W. K. Gilmore, Dr. C. M. Hitchcock, William Townsend. The vice-president, secretary and treasurer are appointed by the board of directors.

The FOREST AND STREAM takes strong ground against the building of a railroad through Yellowstone Park. A committee of the Senate has reported favorably on a bill granting the right of way, and the FOREST AND STREAM tears the report into shreds, and shows that there is nothing in it except a mere pandering to rich monopolists. This is about the way such things are generally done. It is not a difficult matter for rich capitalists to lobby any scheme through Congress. We are sorry to say it, but it is so neverthe-less. Yellowstone Park is too far away for us to feel any interest in this particular case, but we are opposed to it upon principle. The public lands belong to the whole people; to the poorest as much as to the richest man in the country and should not be surrendered to the speculators and grasping monopolist to be despoiled.—Sardis, Miss., Southern Reporter.

SPRING WILDFOWL SHOOTING.

SPRINC WILDFOWL SHOOTING. Editor Forest and Stream: Occasionally the suggestion is made that there ought to be a national prohibition of spring wildfowl shooting; but, so far as the writer is advised, there has been no general agita-tion of the subject. With all due deference to the men who have so ably and gracefully conducted journals especially adapted to the tastes and interests of the sportsman in this country, it does seem that this is one important subject that has not received the consideration its importance merits. It is a well-known fact that on some of the migratory lines of duck, geese and brant more birds are killed in the spring than fall. When it is considered, first, that the killing of one wildfowi in the spring is equal to the destruction of from two to a half dozen in the fall, there is good and sufficient reason for asking that the spring slaughter should stop. When the further argument is added that the spring birds are comparatively unpalatable, there is really no reason why any sportsman should shoot them. — Or course the pot-hunters and keepers of spring resorts will oppose any legislation interfering with their trade. But the spring of the year. National legislation is the only way to reach this matter. It is useless for Indiana, for in-stance, to prohibit the shooting of duck in the spring would be complete. Its effects would soon be apparent. In less than four years the number of wildfowl in this country would be complete. Its effects would soon be apparent. In less than four years the number of wildfowl in this country would be complete. Its effects would soon be apparent. In less than four years the number of wildfowl in this country would be complete. Its effects would soon be apparent. In less than four years the number of wildfowl in this country would be complete. Its effects would soon be apparent. In less than four years the number of wildfowl in this country would be counded, and with thereafter twice or three times the fall duck shooting

abundant. This is a matter worthy of the serious attention of sports-men and of the journals devoted to their interests. It is also a popular movement. A well-known and widely-circulated journal like the FOREST AND STREAM can render sportsmen a real service by taking up this matter, pressing it upon the attention of Congress and securing the passage of an act preventing the annual spring slaughter of the wildfowl in the United States. NEW ALBANY, Ind., April 12.

GROUSE AND THE SNOW CRUST.

he United States. New ALBANK, Ind., April 12. CROUSE AND THE SNOW CRUST. EXAMPLE AND THE SNOW CRUST. EXAMPLE AND THE SNOW CRUST. EXAMPLE AND THE SNOW CRUST. The control of the opposition to his conclusions. That ruffed grouse do perish, and in no inconsiderable numbers, from being crusted in the snow, is to my mind beyond question. I know it. I know it because I have found them beneath the crust dead; found them beneath the crust alive. dug them out and secured them alive. Let me relate my first experience in this matter. My boyhood was passed in Ossipee, N. H. The winter of my thirteenth year, early in January, there was an exceptionally heavy fall of light, dry snow, followed, however, by hail and two hours of pouring rain late in the evening. The next morning there woods with my father after a load of fuel. Near a grove of small hemlocks my dog commenced to bark, and made frantic endeavors to dig down into the snow. Going to him we could discern a dark object beneath the crust, and a few blows of the axe brought to view a dead ruffed grouse. A few yards away we dug out another, which was alive but so nearly starved that it died before I could get it to the house. That same day, under a low, bushy pine, where the erust and not formed so solidly, we found yet another grouse which had picked its way up through the crust and a few blows of the axe brought which the bird had thrust its head, and there, unable to withdraw its head or further use its beop risoner's head was sadly bruised, and remember that the port stainal had in formed so solidly, we found yet another grouse which had picked its way up through the crust and the grouse. That same day, through which the bird had thrust its head, and there, unable to withdraw its head or further use its beop risoner's head was sadly bruised, and remember that the port stainaly he is not a New Englander, or has lamentably failed to see all there was in the woods, for I have found Maine, New Hampshire and Massachuest. THE TURKEY SHOOT.

<text><text><text><text><text><text><text>

GEDES, N. Y., April 16.
Editor Forest and Stream:
There are turkey shoots and turkey shoots. Reading with much interest Mr. Merrill's account of turkey shooting, in FOREST AND STREAM of April 8, I feel constrained to give a short description of the only turkey shoot I ever attended. This occurred some eight years ago and being at that time a mere boy, I took no part in the shooting, but remained a deeply interested looker on.
Although young, I was familiar with muzzleloading rifles and a tolerable shot at short range. The turkeys were set up on a box, distant 275 yards from the shooters (here in Ontario turkeys are never shot at distances less than 250 to 350 yards), with a background of running water.
The day was cold with a moderate wind blowing across the range from the left. The rifles used were as follows: Two muzzleloaders (mounted with globe and peep sights), weighing respectively, 21 pounds and 10 pounds, the heavier of the two being a cosily guo, made by a reliable maker of turkey rifles. The breechloaders comprised two .46-caliber R. F. Kentucky Ballards, with coarse open sights, and two or three Shider-Enfeld rifles used by Canadian volunteers.
I will speak now of results. After an half day's bombardment the twonty-one-pounder secured three or four birds. It scattered its pellets on all sides, and there was no talk of ruling it out. The light muzzleloader did very well, securing a very fair proportion of the birds killed. The winning gun, however, was a 46 R. F. Ballard, which secured about a third of the birds killed. The other Ballard and the Shiders compared very favorably with the light muzzleloader turkey mangeting avery moderate price for his fowls.
Why does Mr. Merrill imagine that after killing four turkeys in twenty shots he was about to "whe oeut" the man's turkeys in such deadly style? He does not tell us whether the other rifles were mounted with aperture or sporting sights.
My does Mr. Merrill imagine that after kill

W. C. F., mounted with Lyman sights. I have killed crows with this ritle, off-hand, at 200 yards, and consider that it takes a "putty tolluble" good muzzleloader to beat it. RAMROD.

TRENTON, Ont., April 15.

TRENTON, Ont., April 15. MINNESOTA GAME NOTES.—Ruffed grouse wintered well and are more numerous than I ever knew them to be at this season of the year. The indications are favorable to extra fine sport in that line this fall. This immediate locality has never been considered promising pinnated grouse territory, but there has been a wonderful multiplication of the numbers of this game bird within two years. Hereafter they will afford prime sport. Though the streams are nearly all open, and the weather is so warm that seeding is in full blast, but few ducks have arrived. Full battalions of them will prob-ably be along soon. The last open season for deer was an unusually poor one for hunters, owing to the want of snow, and as a natural and desirable result a good stock of this noble game is left over. Four deer, all apparently in excel-lent condition, were discovered rubbing against a wood-pile near this village yesterday. Fish are beginning to "run," and already the murderous, barbarous, and altogether abom-inable spear is thinning their ranks. Lovers of the rod and gun who are easting about for a place to spend their vaca-tion cannot, I believe, do better than come hitherward.— J. F. L. (Pillsbury, Minn.).

SEASONAL CHANGE IN RUFFED GROUSE.—Attention is called by our correspondent "Jay Bebe" to the fact that recently the naked superciliary strip in a ruffed grouse in his possession has become vivid orange red. Two other birds, known to be fersales, show no change of color. Our cor-respondent suggest that the bird is probably a male, and that the change is due to the approach of the breeding season.

"THE YEAR'S SPORT,"-We are advised by Messrs, Worth-ington & Co., the American publishers, that the price of "The Year's Sport" is \$6 and not \$2.50, as stated in our issue of the 15th inst.

CAMPS OF THE KINGFISHERS. CARP LAKE. MICHIGAN.-VIII.

CAMPES OF THE KINGFISHERS. CARP LAKE, MICHIGAN.-VIII. IT was still raining when we got out in the morning, and it kept coming down steadily until near the middle of the afternoon, when Jim and I concluded to cross the lake and hunt up Al's trout stream (Maybert's Creek), and try for a "mess o' them spotted minners," to quote Ben, as our trout tooth had began to be a trifle bothersome after nearly a year's disuse. But we misunderstood the directions somehow, and wandered up the road and through the woods hunting for the trail and the stream till too late to do but little fishing had we found it, and we were glad enough to get back to the boat and camp with the last glimmer of daylight. We went to bed that night with the trout tooth unappeased. More rain in the evening and during the night and all next day, but we were accustomed to it, "fur the Joneses never was used to the very best o' weather, nohow," In the after-noon, however, Dan and I made a short run down the lake, struck a couple of fish but lost them because the wind blew such a gale. I could not hold the boat even for Dan to handle a fish, and it took nearly an hour of hard work to get back to camp, leaving behind us a blue streak of anathemas on the weather, with which we were overcharged. But under all these trials and discomforts we had not lost our spirits nor our appetites, and we enjoyed the supper Prince Al spread for us that evening with a relish and a "capacity" that would have an average tea-and dabby-cake-for-supper boarding-house keeper feel discouraged. In look-ing over an old memorandum book found in the tray of the "camp trunk," I find, in Kit's handwriting, the following "programme" for supper on that identical evening, which is herewith presented: Fish. Fried. Yould Ham. Poachoes (m jacket). The determined the struct on the tot to the supper Prince Al spread to: Sida Mest

Fish, Fried.	Poached Eggs.	Pickles.
Cold Ham.	Potatoes (in jacket).	Cheese.
Side Meat.	Onions (raw).	Bread.
		ricots (in can).
Roly 1	Poly. Raspbe	erries.

(Mosquitoes, 14,000,000.)⁴ The above may serve as a sample of scvcral other "pro-grammes" I find in the same old book, varied frequently with some additions as trout, biscuits, cake, "corn pone," etc., and "lunch" at alarmingly frequent intervals. I am a little inclined to think, however, that Kit put rather a high estimate on the number of "skeeters" engaged for the chorus that evening, as I have been thinking it over quite scriously since looking over the old book, and can only recall about eight and a half millions of the melodious pests as being present on that particular night, and as the "old man" has had considerably more experience in estimating skeeters than Kit has, she is evidently in error by some millions. As to "roly poly." I give it up; it's a new kind of dish on "the skipper."

The day was cold with a moderate wind blowing across the range from the left. The rifles used were as follows: weighing respectively, 21 pounds and 10 pounds, the heavier of the two being a cosily gun, made by a reliable maker of turkey rifles. The breechloaders comprised two. 46-caliber R. F. Kentucky Ballards, with coarse open sights, and two or three Snider-Enfield rifles used by Canadian volunteers. I will speak now of results. After an half day's bombard-ment the twenty-one-pounder secured three or four birds. I will speak now of results. After an half day's bombard-ment the twenty-one-pounder secured three or four birds. I will speak now of results. After an half day's bombard-ment the twenty-one-pounder secured three or four birds. I will speak now of results. After an half day's bombard-ment the twenty-one-pounder secured three or four birds. I will speak now of results. After an half day's bombard-ment the twenty-one-pounder secured three or four birds. I will speak now of results. After an half day's bombard-ment the twenty-one-pounder secured three or four birds. Stattered its peletes on all side, and there was no a tak to ruling it out. The light muzzleloader did very well, secur-ing a very fair proportion of the birds killed. The other Ballard and the Snidlers compared very favorably with the light muzzle loader in the number of birds secured, although they were heavily handicapped by using open sights against aperture sights. About thirty-five birds were killed in the afternoon, the turkey man getting a very moderate price for his fowls. "Wy does Mr. Morrill unsparingly condemns all breechloading riffes; that he is in error, see account of turkey shoot No. 2. I have used a number of muzzleloaders, but never saw one which surpassed in accuracy my 84-pound Colt, .44 caliber

shower of water on us, till we thought we had certainly trav-eled a mile instead of the ten rods haid out for us. We stopped a few minutes while Ben wasted a dozen matches before he succeeded in firing the briar root, after which we went ahead again for the stream. Ben remarking as he straddled over a rain-soaked log. 'Hickory, ef any-body was to offer me ten dollars fur it, 1 don't b'lieve I could find that ole stump agin in this durned—cuss a fishpole that's always a ketchin' yer line on to somethiu' when ye don't want it to,'' with a savage yaak that stipped the leaves from a green twig on which the line had caught as he dragged his rod after him through the bushes. He was so mad that he let the pipe go out, and while he stopped to relight it he for-got all about the stump. Moving on, we came to a less dense place in the woods

Moving on, we came to a less dense place in the woods that had rather a familiar look and directly we were in the same old trail, and as we turned a slight bend in it, there was the same old stump, the same old decaying chips, the remains of the dead trunk and limbs off to the left, from which we had taken our bearings three quarters of an hour before before

before. "Not so hard to find the old stump after all, eh, Ben?" And Ben's answer as he took the pipe from his mouth to give due force to the brief sentence, "Well, I'll be durned!" or words to that effect. And then we stood there in the rain and laughed, ashamed to look each other in the face for our stupidity, and wondered—I speak for myself, at least— what Jim and Dan and Muller and the girls would say, could they peer through the bushes and see how sheepish we looked.

stupicity, and wondered—I speak for myself, at least—what Jim and Dan and Muller and the girls would say, could they peer through the bushes and see how sheepish we looked.
Two smart old woodsmen, we. We had gone chattering heedlessly through the woods, avoiding a fallen tree here or a dense group of bushes there, always bearing to the right, as it proved, till we had made a complete circuit and came back to exactly where we had started from. No wonder that we were ashamed of our woodcraft and tried to laugh it off, and charge it to the rain and cloudy weather, and half a dozen other causes that might be accountable for our blunder. Tell it not to "Yo" nor yet to "Appekunny," lest they smile a "vorifcrous snicker" at us for a pair of tenderfeet. I record this brilliant maneuver of ours only to show how easy it is for even those who are usually clear-headed in the woods, to get turned around and lost on a cloudy day if they don't pay close attention to the course land out and read aright nature's handwriting on the trees.
We started again, and Ben said: "Keep yer eye on the south end o' the needle in that compass, an' ef ye come to a tree don't go 'round it, jest climb it an' come down on tother side an' holler, an' I'll come around."
By the exercise of a little common woods sense, and without he aid of the compass we soon found the stream, not more than seven or eight rods from the old stump. It proved to be a small brook not more than four or five yards wide at any place we found, and oftener barley two yards, and shallow except for frequent deep holes from a foot to three and four feet in depth. The tangle through which it flows is not quite so dense a stat along Cedar River, Cold Brook, or Shanty Creek (from this "Norman' can form an exasperating limb overhead; a convenient fallen trees and limbs covering it except at infrequent intervals, the low banks overhung with trees and "inves." Out down how the dead spikes through which to flounder and shallow except for minutes to

I wortied through that day, and Mayder's Creek is one of the easiest of Michigan trout streams to fish, but then "the Jonescs never was used to the very best o' trout streams nohow." Finding we could do nothing with our flies on account of the overhang, and the logs and limbs infesting the stream, we fell back on our reserves, the time-tried, regulation trout persuader—plain "fish worm." "Speakin" o' fly fishin'," said Ben, as he impaled a squirm-ing worm on his hook and "spit on it for luck" (so tea-ciously do the teachings and superstitions of boyhood cling to us). "some feller hes wrote that fly-fishin' is the poetry ov anglin'; but, as I don't go much on poetry, a chapter er two o' plain prose is good enough fur Ben, an' that I kin git out o' wurms an' clams an' bacon an' equir'l meat, an' sech, to say nothin' o' hitchin' on a cricket er a grasshopper once 'n a while for a chanze." Here he stood his rod up against a bush and proceeded leisurely to fill and light the briar-root, talking the while, as he wasted three or four matches search-ing for the right kind of a dry spot on which to scrape tiem. "T'd like to see ye git any poetry out ov a limber fly-rod an' a whole hatful o' artificial flies along a branch like this er the Cedar [the memory of Ben's first trip up the Cedar River and the swarms of black flies that made life a burden to us that day seemed yet fresh in his mind], where the bresh is so thick that a groun' squir'l would git lost and forget the way back to his hole." The briar-root finally under headway, he took up his rod, and, tiptoeing stealthily to within a few feet of the bank, dropped the bated hook into the water with, "It's a heap o' sport to handle a fly-rod where ye hev room to cast yer fly without gittin' hitched on to a limb or --some-thin' like that cussed thing up yander." This explosive finish to the sentence was caused by a bite and a jerk that wrapped the line around a twig on a bush hanging over the water a few feet above hin. Stepping cautiously back, he pulled the bush

I was not over four or five inches long, not up to the law-ful length of six inches, and after carefully extracting the hook he returned it to the water with, "Shucks, ye ain't big enough for good bass bait; hie off under yer log an'stay there till ye git big enough to make a smell in a fryin' pan." He took a couple more of about the same size and then moved on up stream muttering something about "an old erank a-ktechnir minners with a bass rod." We fished the creek for balf a mile or more, counting in the "kinks." Ben ahead and out of sight most of the tune and found it literally swarming with trout, but of small size. In one pool, however, where the water was near five feet

swarming with trout, but of small size. In one pool, however, where the water was near five feet deep and almost hidden by closely packed drift and logs, I saw four or five good sized ones—a half to three-quarters of a pound in weight perhaps—lazily fanning the gravelly bot-tom with their fins, all unconscious of my presence, for I had walked softly out on one of the tree trunks lying clear across the stream to where I could see the bottom through the only opening in the mass of drift that promised room to lower the hook into the water. Moving cautionsly back a step or two and "skortening" the rod I dropped the baited hook through the opening till it struck the water, when it was instantly seized with a furious jerk that made my hair bristle, and in a twinkling I had a splendid dark backed fel-low half out of water through the rift, but a flirt of his tail against the log tore the hook loose and he went out of sight in a fash. He must have left a streak of information after him as he darted under the bank, warning his mates of the narrow escape he had made, for a half hour's patient and persistent fishing failed to "restore coufidence in the pool."

pool." A cautious look through the opening revealed nothing in sight but the crystal water and I took my way up stream after Ben in the tangle and drizzle with a heart bowed dowu with disappointment and defeat. We left the stream about the middle of the afternoon with fifty six trout, a few of them quarter-pounders, and we had besides put back in the water nearly as many more that we thought were under the lawful size of six inches. I recall the score from the mental notebook: Hyperboler twenty-nine, Hickory twenty-seven, but the chief glory of the day's sport rested with Hickory, for he had "lost the big one."

The problem of the pr

with it? Somebody show us the way out of the fog. But after all I don't see why trout fishing is to be classed as the sport *par excellence* for the angler, although there is a fascination in it not to be accounted for, and I am not ready to admit that a six-inch trout is superior in game qualities to a six-inch small-mouthed bass. If there is more sport in handling a pound trout than there is in handling a bass of the same weight with the same tackle—and I deny it—it must be solely because he is a trout and not a bass, and be cause he has the "priority" over the bass in the matter of a fighting record. *Micropterus dol.* (the latest name out I be-lieve, but it is getting a trifle old) is building up a reputation, however, as a fighter of many parts, and he has come to stay.

however, as a fighter of many parts, and he has come to stay. And while in a fighting vein it might be mentioned that a six-iuch "blue gill" will kiek up a fight with great celerity, and to my notion is about as tough a customer to handle as a trout of the same length, though not so long-winded, and when you have taken one you can hold up your head and exult over the victory, and not feel that you are a culprit in the eye of the law, as you do after subduing a fingerling trout. Old Ben says, "There's jest as much fun a flippin' out good big chubs an' shiners as there is in ketchin' them little sucklin' trout;" and I am inclined to fall in with Ben's way of thinking, even at the risk of having a figurative rock shied at me for an old fogy who believes there are some other good fish besides trout, and that plain bass fishing with fly, and even minnow and frog, is "good enough for the Jonesce." As we stepped back in the boat to start for camp Ben tied the tront over the side to "freshen 'em up like," as he said, and after bailing out a few gallons of water with an old peach can, said with his usual gravity of speech, "Hickory, 'pears to me we've struck on to a new kind o' trout in that erick. What's the matter with eallin' iem Sal-mo infantalis, an' gittin' Jim to publish it in his paper fur a new species discovered by his nibs, Professor Hyperboler Jones?" And then the old bronze-back scraped a match and hovered over it to keep the wind from blowing it, chuckling to himself, I fancied, at the neat manner in which he had relieved him-

<text><text><text><text><text><text><text>

shoot a timid mother doe with a week-old fawn pulling at the teat. At breakfast next morning the trout were so toothsome that Ben was moved to say: "Ef there's ary fish that has more of a flaver to it than another, strikes me it must be a trout; beats side meat clean out o' sight," and as he deftly extracted the backbone from his second one and dropped a section of the savory flesh into the rift in his countenance, he added, with a glance up and down the table, "guess James Mackerel an' me'll hev to slip over an' ketch another mess o' them minners in a day or two," and then, as Kit turned to help Mother Jim to another "minner," the old sinner bastily gathered all the fish bones within his reach and furtively deposited them alongside of her plate. When she faced around to replace the trout dish (a tin pan), she discovered the sudden accumulation of bones, but aside from a flash of color in her face and a quick glance at the old cul-prit, she showed no sign of anything amiss. Ben stirred his coffee in an absent-minded sort of way, meantime delighting little Top with a yarn about "a famous place jest around the pint, where he would take her some fine day when it quit rainin', where she could hev dead loads o' fun with the sunfish." As the yarn was finished, he solemnly passed the trout pan to Kit with: "Utit" 's tronishin' what Michican eit ar' to the

As the yarn was finished, he solemnly passed the trout pan to Kit with: "It's 'stonishin' what Michigan air an' a few days' campin' out'll do in the way o' creatin' an appytite fur fish in some gals. Ef Miss Kit keeps on the way she's started in an' don't git a backset, it'll keep her daddy an' me a hust-lin' aroun' to ketch trout enough fur her from the look o' that pile o' hones." lin' aroun' to ke that pile o' bones.

Inf aroun to ketch trout chough fur her from the look o' that pile o' bones." Top clapped her hands and laughed in great glee (Top had suddenly become Ben's fast crony on account of the prom-ised frolic with the sunfish), and her happy laugh seeming to be infectious, the whole camp "jined in," even the usual gravity of old Dan's face relaxed into a broad grin, and Kit was forced to follow the example of the others to hide her confusion. A morning or two after, however, Ben inadvertently sweetened his coffee with salt in place of sugar, and as he emptied the cup behind him after the first taste, he looked at Miss Kitty, who sat opposite, and remarked, without the twitch of a muzzle in his mirth-provoking old face, "Must a some o' them trout bones got into that coffee from the taste of it," and we knew that retribution had overtaken him at the hands of Miss Innocence across the table, who was de-murely stirring her coffee with a complacency that be-tokened a keen satisfaction in getting even with "Hyper-boler."

boler." Miss Top felt it her bounden duty to laugh at about every-thing "Uncle Ben" said, and when she bubbled over it started the others, older heads and all, and merriment and hilarity reigned in the Kingfishers' camp despite the rain, that kept up a steady, monotonous patter on the canvas overhead. But it takes little to make one laugh in the woods, when all the cares and worries of life have been left behind. A whole camp will roar at an asinine remark that ought to be the death warrant of the perpetrator. Old, stale jokes that have been worked over and done service for years, that

have lost all their edge and brightness from oft recurring use, are brought forth and burnished up in the light of the camp fire till they are almost as good as new and we laugh at them aud enjoy them with the same keen zest that we did a score of years gone by. Some one has said all this before, and I quote it, in effect, only because it is so true. The camp in the woods, too, is a great equalizer. The clerk stands as high as his employer, the owner of a block of bricks; the shover of the plane sleeps and snores under the same blanket with the dignified judge; the undertaker eracks business jokes with the dispenser of phy-sic; the sun-browned follower of the plow ranks equal to the M. C. 'from the flat-rock deestrick," and all partake with equal relish of the same stew concocted in the same old blackened and battered camp kettle that has weathered half a score of rongh campaigns. In the woods social distinctions are lost sight of; no lines of caste are there to mar good fellowship, albeit lines are often east, and all the certificate required for admission to the eircle around the camp fire is a love of rod, gun and the woods, and to be possessed of the instincts of a sportsman, which are always gentlemanly; and I am going to record it that I don't take any stock in the terms true sportsman and gentleman sportsman, for I take it a sportsman can be nothing but a gentleman, however, a gentleman may not be a sportsman, but ''sportsman'' covers the whole ground, whether he be a respected Governor of a State or the humblest woodchopper in the pineries. But the trout bones have led into a digression. KINGFISHER, CINCINNATI, Ohie.

KINGFISHER. CINCINNATI, Ohio.

THE TROUT OF SUNAPEE LAKE.

Editor Forest and Stream: Food makes trout gro

<section-header><text><text><text><text><text><text><text>

Editor Forest and Stream:

Editor Forest and Stream: I have lately noticed in the FOREST AND STREAM remarks on the different species of trout in Sunapee Lake, N. H. I will say to the readers of FOREST AND STREAM, and others, that I began fishing for trout in that lake in 1857, and have fished every year since, more or less, therefore am able to state to you the different varieties of trout in the lake. When 1 first began to fish for trout in the lake there was but one epecies of trout in it and that was the native speck-led trout. We have at this time four different varieties of trout in this lake, viz., the speckled trout, the white trout, blue-back trout, and landlocked salmon. The speckled trout sometimes weigh 5 or 6 pounds; the white fish average a little more than the speckled trout; the landlocked salmon average 8 or 10 pounds, and the blue-back not so much. As to the white fish being a species of the speckled trout I should say they were not, but are a species of the real St. John River trout. These four varieties of trout are caught in great abundance. JACOB R. HUTCHINSON NEWPORT, N. H., April 6. in great abundance. NEWPORT, N. H., April 6.

BIG TROUT.

Editor Forest and Stream: Having read in your always truthful journal several ac-counts of very large trout which have been caught in various places and at recent dates, I trust you will not object to pub-lish, and thus perpetuate, an account of the biggest kind of a trout, although caught "in the days of long ago." While sojourning on Long Island several years ago I became conversant with the following facts—I say facts, because there are living witnesses enough who were per-sonally cognizant of them to establish their truth in any court:

sonally cognizant of them to establish their truth in any court: In June, 1822 or 1823, a trout was caught in Carman's River, South Haven, L. I., below the mill dam and about three miles from the South Bay, which weighed 14 pounds. When discovered in the "mill hole" a strong net was stretched around it, and after having been kept in confine-ment for some time was killed and sent to New York to some noted fishermen of those days, who sent in return a check for \$100 to its captors. Daniel Webster and other noted sportsmen of the old school were often guests at Carman's celebrated hostlery, and enjoyed fishing in this stream. Trout of three and four pounds' weight were not uncommon there at that time. The waters of this stream, at the time I was there, were, and 1 think are still, controlled by the Suffolk Club, a party of gentlemen and true sportsmen. The following named gentlemen are now living who saw this wonderful fish, and declare it to have been a genuine brook trout—viz., Nathaniel Miller, Joseph Carmana and D. M. Clark, men of undoubted integrity, who can be found at Brook Haven and South Haven, L. I., to verify the above statement. A heiter account of this trout may have been published at

A better account of this trout may have been published at the time it was caught. I hope so, and that this mention may be the means of reviving it. If no account was ever published, I am sure you will deem this worthy of the space it requires. A. CHICAGO, III., April 13.

VARIATION OF BROOK TROUT.

Editor Forest and Stream: Seeing a communication from Mr. Webber, ex-Fish Com-missioner of New Hampshire, in which he says that perhaps the trout in lower Diamond' Pond are identical with the blue-back-trout in the Rangeley Lake, reminds me that some time ago I thought of writing an article for FOREST AND STREAM in regard to the variation of the brook trout in our different waters.

STREAM in regard to the variation of the brook trout in our different waters.
But the execution was for some reason delayed, until the discovery of the new variety of trout in Sunapee Lake by Mr. Hodge again brought the idea to mind.
I am pretty familiar with nearly all the trout streams and ponds in Coos county, N. H., and excepting the lake trout (Salmo namaycush), found in First and Second Connecticut lakes and South Pond, in Stark, I think we have but one variety of the Salmo family native to our waters, although they vary much in their general appearance as well as habits. The causes of some of these variations are still a puzzle to me, and a discussion on this subject will be of great interest to me and I think to many others.
I will state some of the differences in size, shape, color, habits, etc., of trout caught in different localities, and perhaps some one will tell us the cause. Of course there is a reason why the trout in one pond scarcely ever attain a weight of 4 of a pound and never exceed 1 pound each, while in another only a short distance from the first and connected by quite a large stream, they are often taken weighing from 2 to 3 pounds each. This is the case with the trout in the Diamond Ponds near Colcbrook. In the lower pond I have never seen a trout taken that would weigh more than 4 of a pound, and a native fisherman who has fished it every season for over 30 years, told me that he had never caught one larger. The Swift Diamond (the outlet of the pond) is a very prolific stream, and small trout are continually running into the pond during the summer season, and they are certainly genuine brook trout when they enter the pond, and I think they still remain the same, although they gradually change their habits and appearance. Their food is not so abundant in the lower pond as in the upper one, but is that the cause or one of the causes of the difference in size of the fish "

the cause or one of the causes of the difference in size of the fish? Another common difference in trout taken in the same pond, and fed and raised under the same conditions, is that one specimen has white meat and another red, but outwardly they are the same. Are they the same variety, and if so what causes the difference in color? Where trout have an abundance of food they grow faster than where their food supply is scanty, but in the pond where the food supply is the best of any pond that I know they never exceed 2 pounds in weight, and the most of them go from $\frac{1}{2}$ to $\frac{2}{2}$ of a pound each. Another pond where the fish have a different appearance from the ordinary brook trout is North Pond, in Stark. They are quite long for their weight, light colored below, and average $\frac{1}{2}$ of a pound each. The pond is fed by mountain streams and springs, but the natural food supply is small and the native fish is small although of fine flavor. Good fishermen who have fished there for years say that they never caught one there that would weigh more than a pound. The waters discharge into the Ammonosue River, where formely large numbers of trout weign weight. In Big Dummer Pond, the trout caught will average 2 pounds each if caught in deen water.

formerly large numbers of trout were caught of 3 and 4 pounds weight. In Big Dummer Pond, the trout caught will average 3 pounds each if caught in deep water. I caught one a few years ago that measured 214 inches in length and was 184 inches in circumference. They are of almost a bronze color and scarcely ever rise to a fly. In Greenough Lake some of the fish arc of the same color, but they are not as large. There is a small pond in Errol, of probably not over sceen or eight acres in extent, that contains very finely flavored trout and of very good size, and they are the gamiest fellows one would wish to find. A dish of these fish baked in cream at the Errol House, some time during the summer of 1884, is often spoken of by the participants as something to be long remembered, and the gastronomic gymnastics of Clark, the Magalloway stage driver, were something simply wonderful for so large a man. At Success Meadows is the junction of two streams called respectively Black Strap and Silver Stream, together with the outlet of Success Pond, forming the Chiekwoncepy River which empties into the Androecoggin at Milan, N. H. In Black Strap the trout are very dark colored and thick-bodied and in the other they are long and slim, and almost as silvery as a true salmon. A greater contrast in trout found in different streams whose waters unite is probably not found in the State.

In Mill Brook in Stark the trout in the upper part of the stream are orange-colored on their sides and bellies, and I have noticed that they were exceptionally fine-flavored, but they are of small size, scarcely any weighing over four ounces each. But the best of all our trout are those found in Little Millsfield Pond. Probably hundreds of small fry run up into the pond every year, but after they have been in the stream to be brothers. Their change of food and habits make a wonderful difference in the appearance of the fish. So much so that Dr. Elmendorf, of Brooklyn, N. Y., threw away a half pound specimen caught in the stream below the pond, because it bore so little resemblance to those we had been catching from the pond that he thought there was something wrong about it and so threw it away. These trout have the smallest heads of any trout in our waters and a gamier trot's never rose to a fly. They are very dark-colored above and white beneath, and take a fly very readily. There is a great uniformity in the fish after they have been in the pond for some time, but once in a while I have caught small ones that were like those in the stream below. I have enumerated some of the peculiarities of the trout found in our waters, the cause of which I will leave to be explained by some one with more knowledge on the subject that myself. There must be a cause for all these variations, but some of the miscen very singular. There mathe above this article has reference only to fish native to Coos county. Our waters can only stand the great drain on them by restocking by the State. But let them be stocked with front, for black bass are a poor substitute for our beautiful brook trout.

NEW ENGLAND TROUT STREAMS.

NEW ENGLAND TROUT STREAMS. THE Massachusetts trout season has not yet been very pro-ductive, though the snow and ice are about out of the way, even in the western part of the State. There is a com-plaint that favorite trout streams are not "panning out" very satisfactorily, even to the annual visitor for many years. The dealers in the Boston market are much dissatisfied. They claim to be able to obtain a fair supply of trout, but the demand is small. This they attribute to the law, which prevents their selling trout in winter. "It is so long between seasons," they say, "that the public lose the taste for trout." If they could be allowed to sell Canada trout in winter, there would be a good trade in native trout in the spring, and thus a good deal of moncy made. This is their argument. It sounds as reasonable as that of the boy who desired to be fed on strawberries in January, simply because he was fond of them. These marketmen imagine that because they can get all the trout they can now sell from Sandwich and other towns on Cape Cod, that a continued supply could be kept up, the same as in codfish or mackerel. They desire to make a market fish out of what must be regarded as a rarity. Baides, the privilege of selling trout from the Provinces in winter would simply mean more smuggling from the Maine waters at that season; and the marketmen are well aware of it. One of them recently confessed as much to me. He also further remarked that the whole fish protective laws of New England, Maine especially, were non-constitutional; that he had the money—made in the fish business—and had he the time and the desire to go into the courts, he would drive the trout and salmon laws from the Maine statuto bocks and the fish commissioners and wardens out of busi-ness. Truly it is the marketman that the angler has to fear, as well as does his fellow sportsman with dog and gun. It gives the angler the leartache to see such a strong desire for traffic in that which is so dear to him, and that w

spite of all protection has done, is yearly growing more and more scarce. Recent letters from those familiar with the Maine waters suggest an early clearing of the icc from the lakes, though this is probably based chiefly on theory. The snow has been very deep late in the winter, causing thinner ice and rapid melting from below. The trout season promises well. The law has been well obeyed, as to close time, and rough weather and deep snows have prevented residents from fish-ing since Feb. 1, to the extent they otherwise would have done. All this is favorable to the angler. So far as the big catches through the ice are concerned, the Maine papers have told of but very few this spring. It is to be hoped that another session of the Legislature of that State will repeal the law which allows residents to take trout and land-locked salmon through the ice after Feb. 1. The law is abused. Non-residents only have to go to "the holes" and "watch the residents fish," to get all the trout they want. Commis-sioner Stilwell put the matter in its true light when he told the Legislature of that State that her fish and game were worth as much as her lumber—that her fish and game drew in millions of dollars every year from summer visitors who come into that State for no other purpose than for fish and game. But year few fresh salmon have yet heen received in this

game. But very few fresh salmon have yet been received in this market. Two from the Penobscot came in Tuesday, and sold at \$1 per pound. It is a pity that the *Salmo salar* is not better protected by law below tide water in the Penobscot River. That river is now known to be the last resort for eggs of the true salmon for propagation, and yet the parent fish are the prey of the marketmen, till the arrivals from the Provinces bring down the price to where it no longer pays to net the Maine salmon. SPECIAL.

CRAWFISH.—H. A. Kelly's note in your last issue reminds me that after R. S. Tarr's paper on crawfish, I wrote you that he was mistaken in saying that they were found in only one locality in New England. When I was a boy, we used to find them often in a brook on my father's farm, and it is not more than ten or fifteen years since I saw one in the same brook, but have seen none there since. Then the brook was perennial, or at least, there was always water in the deep pools. Now, in summer, its bed is as dry as the highway. I am told that in some of the brooks emptying into Lewus Creek, crawfish are yet to be found in considerable numbers. Thompson's "Vermont," 1842, says: "It is very common in many of the small streams in the western part of the State." —AWAHSOOEE (Ferrisburgh, Vt., April 10).

MINNESOTA BASS FLIES.—Hastings, Iowa.—In reply to H P. Ufford, would say that I found the grizzly king the most attractive to the bass last summer. Will some of your cor-respondents in Colorado, along the Denver & Rio Grande Railroad, please give some information as to trout fishing localities, etc., and whether streams have to be waded or fished from bank, also flies used?—Hollow Rib.

THE BRANDY POINT TROUT.

CAMP BEMIS, Rangeley Lakes, April 6.

CAMP BEMIS, Rangeley Lakes, April 6. "A TRIP TO THE INTERMEDIATE LAKES."—Your corres-pondent, "J. O. S.," in issue April 1, is substantially correct in his statements, so far as I can remember. He and his friend did call on "Kelpie"—how they found him I know not—probably through some process of generalization and deduction, for there was no sign out. He says that one of 'em looked like the Old Scratch, and the other still worse. If by the O. S. is meant the devil, I believe that authorities differ as to his appearance. If we accept the Japanese ideal I should say that "J. O. S." did himself and friend less than justice, though they did look rather the worse for wear. If 1 had known that they were man hunting I might have been ready with a rifle; as it was, when I overheard them wondering whether their rags would hold together until they reached Traverse City, I thought of offering one of them my other suit (consisting of an old jumper and overalls). I did not act on this benevolent intention, partly from native modesty—I am a very modest man; partly because the O. S. aforesaid could not have told which of the twain was the hung about them an indescribable something which to a close observer indicated that they thoroughly enjoyed the situ-ation, were having a glorious vacation, and asked no odds or favors from anybody. It was a surprise to me to learn that I had been "interviewed," but the crisis is past, and here f am. They were visitors of the right sort, and I shall be glad again to greet them when next they visit the Inter-mediate Valley.—KELPIE (April 10).

THOSE LONG ISLAND TROUT.—The bill relating to trout illustrated, in the engrossed act as filed in the Secretary of State's office, the value of punctuation points. The first section sets out to amend Section 19 of the laws of 1879 so as to have it read as follows: "No person shall catch, or attempt to catch, or kill, or expose for sale, or have in pos-session after the same has been caught or killed, any speckled trout, brook trout, salmon trout, landlocked salmon, or Cali-fornia trout, save only from the first day of May to the first day of September in each year, except in the counties of Queens and Suffolk, where it shall be from the first day of

April to the first day of September in each year. And such speckled trout, brook trout, landlocked salmon and Califor-nia trout taken in said counties of Queens and Suffolk during the month of April may be had in possession in other coun-ties of the State, but shall not be exposed for sale. In the counties included in the Adirondack preserve, established by Chapter 283 of the laws of 1885, it shall be lawful to catch, expose for sale, and have in possession after the same has been caught, speckled trout, brook trout and California trout from the first day of May to the fitteenth day of Sep-tember, and salmon trout and landlocked salmon from the first day of May to the first day of October." The engross-ing elerk overlooked the period after the words "shall not be exposed for sale." By omitting to put in that point and by beginning the word "in" with a small i the law virtually reads, "But such speckled trout," etc., "shall not be exposed for sale in the counties included in the Adirondack preserve." That is to say, the whole intent of the act, so far as prohi-iting the marketing of trout caught in Queens and Suffolk counties within the period during which they are allowed to be equelt, is changed to mean that they may be marketed in every county of the State except in the counties of the Adir-ondack region, wherein the State has a preserve.

OPENING OF THE MAINE TROUT SEASON.—Recent letters from the Androscoggin Lake region in Maine give it as the opinion of the guides that the lakes will clear of ice by May 1 or a few days later. This is especially true of Oquossoc or Rangelcy Lake. The weather has been unusually warm down there for April, and the guides claim that the ice is rapidly melting. May 1 would be very early for these lakes to clear; the average date for the past eight or ten years has been May 14. There is very much of uncertainty about the matter, however. When the ice goes the trout season begins, and the event will be hailed by sportsmen ready for the annual fishing trip. Indeed, one or two parties propose to leave Boston a day or two before the telegraph brings the news of departed ice, in order to be on the ground for the first trips of the little steamers to the fishing grounds.— SPECIAL.

WHITEFISH AND GRAYLING.—Timber Line, Montana.— Editor Forest and Stream: In the Yellowstone River, and in the Madison, Gallatin and Jefferson tivers, which unite to form the Missouri, there is a fish which tises to the fly, and which is called the grayling or whitefish. An old Scotch-man living in the camp says they are the same fish in every respect which he had caught in Scotland, and were there called the grayling. Last summer I showed some of them to a gentleman from Michigan, who said they were not gray-ling. A day's catch in the Yellowstone shows about two-thirds trout and one-third "grayling," so called. In the Gallatin the catches average about one-half trout and one-half grayling.—F. M. H. [Both whitefish and grayling are found in these streams. The latter have distinct teeth and a dorsal fin of seventeen to twenty rays. The whitefish have no teeth and a dorsal fin of ten to twelve rays.]

BASS FLIES — Athens, Pa. — Editor Forest and Stream: I see that some of your readers want to learn how some killing bass flies are made. I will give you a description of my favorites: Dark orange body, with gold tinsel, red and yel-low tail, einnamon brown hackle, and the rayed feathers of the mallard colored yellow for wings. This I find the most killing fly for all times, dark or bright days, early or late in the season; that is, in the Susquehanna, Chemung and Clyde rivers, Canandaigua outlet and the lower lakes. My next is all black (crow's wings), hackle black, with silver tinsel, tail black. Next is the hackle fly, which is the same as the first, without any wings. Next is the Reuben Wood and scarlet ibis, with orange body and gold tinsel. I also use the For-guson; but the first one, the yellow one, "takes the cakes."— E. W. DAVIES.

THE AMERICAN FISHERIES SOCIETY.

<text><text><text><text><text><text><text>

Colonel McDonald would be at the meeting. The following letter was read by the secretary: WASHINGTON, D. C., April 10, 1886.—Sir: I am requested by Col. McDonald to inform you that his baby died this morning. and it will be impossible for him to attend the meeting of the Fisheries Society, which he exceedingly regrets. I send you by to-day's express a package of papers, minute book, etc. Very respectfully yours, J. J. O'CONNOR. Letters of regret were read from Mr. E. G. Blackford, Mr. A. N. Cheney, Dr. R. E. C. Stearns, W. V. Cox. Geo. Shepard Page and D. H. Fitzhugh. The morning attendance being very light, Dr. Hudson sug-gested that it would be well to get through with such routine work as was necessary, and leave the reading of papers until the afternoon session, when no doubt the attendance would be better.

work as was necessary, and leave the reading of papers that the atternation session, when no doubt the attendance would be better.
During the meeting the following new members were eleated : S. P. Bartlett, Quincy, III.; J. H. Bissell, Detroit, Mich.; C. C. Hinchman, Detroit, Mich.; Dr. S. C. Adams, Peoria, III.; Herschel Whitaker, Detroit, Mich.; Walter D. Marks, Paris, Mich.; N. K. Fairbank, Chicago; A. Booth, Chicago; Dr. E. S. Holmes, Grand Rapids, Mich.; J. N. Dewey, Toledo; Dr. R. O. Sweeney, St. Paul; W. D. Tomlin, Duluth, Minn.; James Nevin, Madison, Wis.; Philo Dunning, Madison Wis.
The chairman gave notice that during the meeting the following papers would be read:
"Oyster Culture," "Smelt Hatching" and "Work at Cold Spring Harbor, New York," by Fred Mather.
"Hisheulture as a Practical Art," by J. H. Bissell.
"The Michigan Grayling," by Herschel Whitaker.
"Dee Sea Dredging on the United States Steamer Albatrosa," by F. L. Washburn.
"Transportation of Fish in the British Islands," by W. V. Cox.
"History of the Leed Fish and the Frozen Fish Trade of the

"Transportation of Fish in the British Islands, ", Cox. "History of the Iced Fish and the Frozen Fish Trade of the United States," by A. Howard Clark. The following gentlemen were then appointed by the chair as a committee to nominate officers for the coming year, to be elected on the following day. This committee consisted of Messrs. May, of Nebraska; Butler, of Michigan: Bartlett, of Illinois; Sweeney, of Minnesota, and Downing, of Wisconsin. The meeting adjourned until 2:30 P. M. A full report of the meeting will follow.

ENGLISH KENNEL NOTES.

<text><section-header><text><text><text>

were not thoroughbred; after that fooling looking in the dog's mouth to estimate his breeding by the color of his palate is comparatively quite sensible. The Airedales showed up re-markably well. Among them was a very fair second rater entered at £3; from the opening of the show to the closing hour this terrier furnished a deal of hard labor to the frantic clerk in the oflice, as everybody who saw the price rushed with the speed of a writ-chased debtor to claim the good thing.

entered at £3; from the opening of the show to the closing how this terrier furnished a deal of hard labor to the frantic elerk in the office, as everybody who saw the price rushed with the speed of a writ-chased debtor to claim the good thing. Bu what a wanderer I an, I hadn't done with Hanley and here I am in the Aquarium; well, back to Hanley for a few words. When you are in Rome, do as the run 'uns do—so did the Hanley exhibitors. They went to the circus and stopped the performance, they went into the street and stopped the procession, and generally continued to behave themselves "as sich" with contentment to themselves and to the well expressed contempt of a population not over nice in their manners or appearances. It was playing it a few notes too low down. The smouldering ill-feeling azainst the ubiquitous all vic-torious Mr. S. Boddington at Hanley, Just into a vicious flame. The unbroken successes of his kennelhave long soured his rivals and competitors. "He is always on the make," they exclaim, "dogs are not his hobby, he makes a business of them; he's a poi-thunter-look at his prize record; he's a mug-hunter—look at the sales he effects. Oh, this sort of thing won't do for us, its nothing but 'our Mr. Boddington' who travels for Collie, Collie & Co." Translated this carping reads thusly: Mr. B. has judgment and money, by the ex-ercise of a deal of the first and the outlay of a little of the latter he contrives to secure the best dogs which he wins with and sells to a profit, and there is not one of the grunblers who would not do the same if he got the chance. I don't think the progress of the breed much troubles Mr. Boddington, but I do think he involuntarily advances it all the same by putting decent dogs into circulation. His last offense consists of having "picked up" a good dog at a fair price (250) that was in a subordinate position at the crystal Palace. At Hanley this dog beat the C. P. winner, The Squire, and the latter's owner, Mr. Charles, made a scene in the ring and swore the dog was

DOG SHOW SECRETARIES AND "SPECIALS."

DOG SHOW SECRETARIES AND "SPECIALS." Editor Forest and Stream: "Y. M. H." lately gave some very sound advice on the first of the above subjects, using the late Pittsburgh show as a text, and I feel like enlarging on the same matter. We will all admit that the exhibitor is responsible for the correctness of his entries, that on him rests the onus of seeing that all is in accordance with rule and letter; but does this absolve the sec-retary from all responsibility? For instance, the premium list clearly sets forth that three wins at shows given "under the auspices of clubs members of the association" are required to qualify for entry in the champion class, and gives a list of clubs members of "this association." It was painfully evident at Pittsburgh that not the least attention had been paid to this by the authorities; entry after entry appeared on the catologue that did not show sufficient wins to qualify. In one of the champion fox-terrier classes neither of the competitors were eligible! — Mow will it be contended that it is simple honesty for a plath to take the money for an entry when the entry form plainly shows that the animal is not eligible under their own rules! and does it help the honesty of the transaction to accept thy refusing the protest that follows, as was done in the St. Bernard puppy class? In other words, are dog show clubs under any obligation of treating exhibitors their plain rights

under any obligation of treating exhibitors with common honesty? I was speaking with the brains of the Pittsburgh Club about their folly in so curtly refusing exhibitors their plain rights to a hearing, when he said, "The right thing to have done was to refuse an entry that was wrong, and not to take a man's money and then beat him out of his winnings." "Brains" is nearly always right, and he was not far from it here; but he fails to recognize the rights that a protesting exhibitor has. I thought there was a purpose to punksh Philadelphia exhibi-tors for their upsetting the show last fall; at all events, I heard more complaints from Philadelphians than from all others. Your remarks;on specials were to the point, but you might have written a book on the ludicrous aspect of the phenom-enon. Just think of an Irish water spaniel winning a cooking stove! I twice noticed a fine, jolly looking gentleman study-ing that wonderfull cooking stove that was stude up on stilts at the entrance to the show in the most prominent position that could be had. After conjuring over the cause of his deep interest in a very small and common looking stove, I came to interest in a very small and common looking stove, I came to set right on this before the show closed, by learning that he was set right on this before the show closed, by learning that he was

wondering what in the world he was going to do with that store. Then the wonderful variety of articles that foxhound owners had to compete for. I wonder what our jolly squire did with that silk dress, barrel of Rhine wine (made on Troy Hill, Alleghenv county), cast of "merline" beer, etc., that he wond The sillness of offering cooking stores, castors, per-fumery bottles, bnd cigars, etc., as dog show prizes, does not seem to strike the authorities, as "getting specials" seems to be the height of their ambition. The donors of these wonderful collections are not responsible for the foolishness of it, as they are simply dunned to "give a special" and they give something in their line as a bit of cheap and very poor advertising. Surely no exhibitor sends a dog four hundred miles on the inducement of winning a cooking stove, a black silk dress, a cask of "merline" beer (what in the world is that Å, a box of tollet soap, one of five ice cream sets, a meerschaum pipe, a brass sconce, a lady's umbrella, a piano cover, a horse blanket, a shooting suit (si's of these were offered). — Ma word, is it not a trifle silly, to call it by the "most tend-erest" name, to have 110 classes and 84 specials' or are exhib-tors still the fools of yore to be humburged ad libitum? Of course when I use the word "secretary" I mean the cler-rical officer or officers of the show, be he secretary, superintends enter or plain clerx. W. WADE.

HULTON, Pa., April 10.

THE HARTFORD DOG SHOW.

<section-header><text><text><text>

Mr. H. C. Giover. MASTIFFS—(MR. MORTIMER). There were fifteen entries in these classes, three of which were absent. Homer, Rosalind and Prussian Princess repre-sented the champions. The winners in the open dog class are well known and were properly placed. Odin, vhc., is just a fair specimen, deficient in head, feet and forelegs. Adyk, placed second to Bal-Gal in the bitch class, is a lengthy speci-men of fair type. She is light in bone, faulty in eye, and lacks depth of muzzle. Tamora, the other entry, was absent. The class was correctly placed. Hannibal, looking better than he did at New Haven, but still very light and tucked up, was first in the puppy class for dogs. Guess, placed second, is a very poor specimen, not worth a prize in any company. He has a long, houndy head, a peak that would do credit to a bloodhound, crooked forelegs and faulty ears. Rex. c., is faulty in head and ear, light in bone, leggy and lacks sub-stance. He is quite as good as Guess. There were no entries in the bitch class. ST. BERNARDS—(MR. MORTIMER). Don II. and Leila were alone in the chaw pion classes. Mr.

in the bitch class. ST. BERNARDS-(MR, MORTIMER). Don II. and Leila were alone in the chan pion classes. Mr. Tucker was the only exhibitor in the open dog class. His dogs were properly placed in order of merit, although Mt. Velan and Seeldan are far behind the others. Flora I., the only entry in the bitch c ass, is faulty in head and lacks bone and substance. Lodi had the dog puppy class to himself, and Gemme was equally fortunate in the bitch class, but the prize was withheld ior want of merit. Duke of Leeds and Gertie represented rongh-coated champions, and in the open dog class Merchant Primce was properly placed first. He lacks character in head and is faulty in expression. He is a big, fine dog, not good either in markings or coat, and he stands badly on his forelegs. Bosco II., second prize, was fully de-scribed in our report of the Newark show, as was Rudolph II, vhe. Monk Detrica, c., is faulty in back and stilty behind. Loyal was absent. Miranda, Lady Athol and Stella were properly placed in the bitch class. The other entry, Rarone, was absent. Morenda, in the open dog class, was given first prize in the class for dog puppies, and the bitch class did not fill. We have previously expressed our opinion as to how the dogs that were entered in these classes should be placed, so that it would be egotistical to say they were well judged. NEWFOUNDLANDS-(MR. MORTIMER). There were no entries in the champion class, and of the three in the onen class we failed to tind Tom. and Prince was

NEWFOUNDLANDS-(MR. MORTIMER). There were no entries in the champion class, and of the three in the open class we failed to find Tom, and Prince was transferred to the puppy class, leaving Carlo to score a blood-less victory. He is faulty at both ends, but has good body, legs and a fairly good coat. Prince, the only exhibit in the puppy class, was given first prize, and he is evidently a lucky dog.

DEERHOUNDS- (MR. MORTIMER).

DEERHOUNDS-(MR. MORTIMEE). Mac, as usual, beat Bran in the class for champion dogs, and in the bitch class Lorna II. was alone. The magnificent Chief-tain proved an easy winner over Bevys III. in the next class, although the last named is by no means a poor specimen. He is too straight from the hocks down, and is not nearly so good as Chiettain either in head, expression, neck or in quarters. Bras, vhc., was badly shown. His ribs are not well sprung, and he is faulty in shoulders and hind parts. His head is farly good. Bruce, hc., was not worth a card in such com-pany. He is very small and has no coat. Duncan was absent. Of the two bitches shown, Wanda was much the best at all points. Blithe, small and lacking in character and short of coat, was not worth the second prize. There were four entries in the dog puppy class. Braie, given first prize, is not very good in head and his pasterns are light; he may, however,

improve in the latter. King of the Forest is a fairly good puppy; he stands on the best of legs and feet, and is above the average in head, body and coat. Braco, vhc., is faulty in head and rather light in body. Lancer III., he, is faulty in coat, color and eyes. Ramona was alone in the bitch class. She was on the sick list, but if all goes well with her she will be heard from again. She is a big bitch, of good quality, fairly good in head, body and coat, and excellent in legs and feet. These classes were well judged.

GREYHOUNDS-(MR. MORTIMER.)

GREYHOUNDS-(MR. MORTIMER.) Memnon and Mother Demdike were the entries in the cham-pion classes. Harlequin, described in previous reports, was first in the dog class, Stranger in White coming second. His head is fairly good, but not first-class, he has a good neck and shows his good breeding. He is light in bone and failty in feet, shallow in body and rather heavy in ears. Notwith-standing the fact that old Ben has been knighted, he was not worth a vhc. card. His mouth is gone and he lacks power at all points. Jack C. is leggy and shows little true greyhound character. Hawthorne Belle, the New Haven winner, wa s first in the bitch class, followed by Sister in Black. The lat-ter, a racy looking one, is not very good in shoulders, loin, pasterns, or feet. Borceress, vhc., is a bit light in bone, plain in head and straight from the nocks down, but she is a grey-hound. They were properly placed. Stranger in White and Sister in Black took the prizes in the puppy classes, and had no competitor.

POINTERS-(MR. TRACY).

Sister in Black took the prizes in the puppy classes, and nau no competitors. POINTERS-(MR. TRACY). We were much disappointed with the display of pointers, the more so because we had been given to understand that the pointer men would be out in force. Thanks to the Graphic Kennels, four good dogs were shown. There were no entries in the champion classes for heavy weights and in the open dog class Graphic fairly smothered the rest of the class. Tammany was second, There is a wear-and-tear look about him that we like, but he is not quite up to first-class form. Duke of Bergen was absent and Captain Fred was not for competi-tion. Sport, Prince and Shot are not show dogs. In the bitch class Revell 111. was much the best. She was described in our Newark report. We saw her gallop at Hartford and did not like her shoulder action. Nell, winner of second, is well-known; Topsy, vhc., lacks character. Robin Adair, the only entry in the champion light weight class, was absent at the time of judging, but came later and was given the prize by the com-mittee. The next class was a very poor one and we agree with the judge that he would have been justified in withholding the prize for want of merit. Bracket scored a one-sided vic-tory. This is a good dog; the best light weight in America. We like him better than either Donald II. or Rust, although he is not so good in tail as either of these dogs. Fritz, Sancho and Game are not show dogs. Only three bitches were shown. Meally's good body and excellent legs, feet and shoulders placed her much ahead of Happy Medium, who is very faulty in legs and feet. Phyllis, vhc., should have been second. She was fully described in our report of the New Haven show. There were only three puppies in the two classes and they are not show dogs. ENGLISH SETTERS –(MR. DONNER).

There were only three puppies in the two classes and they are not show dogs. ENGLISH SETTERS -(MR, DONNER). These classes were very thin and the quality was below what we have ever seen at a kennel club show. There was not a good one shown in the open classes, and we never re-member having seen such a lot of puppies at any show. Rockingham, not looking quite so well as he did last year, was again placed over his old opponents, Plantagenet and Foreman. Modesta, badly shown, was alone in the champion bitch class. Her forelegs are growing more crocked, and sha is wider in front than she was. The quality of the next class may be estimated when we say that Mack B. Scored an easy win. We sympathized with the judge in his endeavors to find a decent looking specimen for second place, but we can-not indorse the award in favor of Pride. He is a big, coarse, heavy dog of Gordon type. heavy in head, checky, throaty, faulty in shculders, straight from the hoaks down, very bad in stifles, and almost as curly in coat as a retriever. Dan, chained next to him, although not noticed, is of the same type and is quite as good. Spot, vhc., should have been second. He does not stand straight on his forelegs, but is better at other points than Pride, and shows some quality. Dashing Prince Regent, faulty in eyes, straight behind and long in loin, was third best. We did not see Lamani's Dan. Vixen HII, a strong bitch, plain in head, and faulty in ears and eyes and curly in coat, scored an easy win in the bitch class. Belva, placed second, must be a good fielder if she finds a purchaser at catalogue price, 850. Sho is snipy, out at the elbows, crooked in forelegs and faulty in ears. Lulu, vhc., was described in our New Havenreport. Mistletoe, c., should have been higher on the list, although she was shown much too fat. We will not attempt a criticism of the two dog pup-pies. The prizes should have been withheld. We likad Lulu, in the bitch class, better than Countess Helen, Both were shown at New Haven. Pansy, the best of the three, d

ies. The prizes should have been withheld. We fiked Luh, is he bitch class, better than Counters Helen. Both were shown at New Haven. Pansy, the best of the three, did not compete ... ININ SITTEN-(M. PIERCH). These classes were well represented, and Mr. Pierce, who made his debut as a judge, handled them in a masterly manner. We were unable to detect a single error of judgment, and the classes were better handled than we have seen in many years. Eleho, Jr., looking fairly well, was alone in the the classes were better handled than we have seen in many years. Eleho, Jr., looking fairly well, was alone in the the classes were better handled than we have seen in many years. Bleho, Jr., looking fairly well, was alone in the the classes were better handled that the dist. Noreen is not nearly so good in front as she with the last is a trifle light between the couplings and not so good on stilles and thighs as we would like to see: she is also a pit to straight from the hocks down and would do with more bone. She has a nice clean head, straight legs and good feet, entire in the open dog class, one only was absent. Gerald was orrectly placed at the head of affairs. He is a big, fine, up standing dog with rather too much daylight under him, and although his head is above the average, he is rather too fait in your of or inprovement. His legs, feet, back, loin, coat and cold are reported by the was shown in superb condition. Hencaire was not for inprovement. His legs, feet, back, loin, coat and cold are reported with and standy much has a moderate head and style. Eco, whe, was not well has was indered and is faulty in back, then we have a shown in east and better the head of rates. Lorend weak behind in the chore's down than we like to see. In other respects he wild, do emtohy show, He is defined in the value wild was the which and has a moderate head and style. Eco, whe, was not well has well. We like and has a moderate head and style. Show how in these to or unch das a ber kennel companion, Noreen, and shallow in chest.

Mickey, placed first, has not improved since he was first shown. He is pretty good in head and bone, but is light between the couplings and faulty in color. Fritz, placed second, is faulty in head, coat and color. This was a poor class. Madcap was much the best of the two bitches shown. Her faults are in muzzle and stop. She is above the average in body, coat, color, legs, feet and strength of limbs. GORDON SETTERS-(MR. GLOVER). There were no entries in the champion bitch class, and in the dog class Royal Duke was properly placed over Argus. The former is a good dog; he is rather cheeky, lacks depth of muzzle and is too heavy in neck; he stands on the best of legs and feet, is fairly good in body, and exceptionally good in quarters; in coat, color and markings he will do for any com-pany, and he carries himself very gaily. Flash, winner in the open dog class, is faulty in head and tail, but showed more character than the balance of the class. Gift, second, is of different type; he occupied the same position at New Haven. The others were a poor lot. Gordon Chloe, first in the bitch class, is a fairly good one, but not a crack; she is faulty in muzzle, stop, color and tail; she was shown much too fat. Heather Lass, vhc., is well known. Maud, he, is much too far Mienter Lass, who is the list of the exception and light, and is faulty in color and quarters; her fairly good head won her the card. Two puppy classes failed to draw more than one entry, a very seedy-looking specimen, faulty in skull, muzzle, body and bone. With the exception of an unnecessary distribution of cards, these classes were well handled. SPANELS-(MR. MORTIMEN). The classes were provided for these dogs, but only fifteen were shown, and the quality was much below, the average.

well handled. SPANIELS-(MR. MORTIMER). Mine classes were provided for these dogs, but only fifteen were shown, and the quality was much below the average, two classes were provided for Clumbers, but there were no entries. Newton Abbot Lady was alone in the champion class for field spaniels, and in the open class Black Beau, Jr., who took first, was opposed by three mongrels, and the other prizes were withheld. Shina was opposed by Brahmin in the cham-pion class for cockers. The bitch scored an easy win. Brah-min should be relegated to the field spaniel class. He lacks cocker character. There were two entries in the open class for dogs and Young Obo won, second prize being withheld. The bitch class was even worse, and of the three entries Miss Nance was the only one present. She is well bred, but is a long way removed from high-class form. The two dog pup-pies are not up to show form. Three bitches made a better class, and Black Flash was much the best. He is fairly good in body and legs, but might be improved in head and eyes, bot, bc., was not worth a card. She is a weedy specimen, faulty in head and ears. The judge could not have felt com-plimented by the entries in these classes. FOXHOUNDS-(MR. MORTMER).

FOXHOUNDS-(MR. MORTIMER). Five foxhounds were shown and all received notice. Lady Stewart was placed first. She is not so good Racket, winner of second. The others are good looking animals, but not of the type called for by the standard. All of them are heavier than the average New England hound and all looked like workmen. EEAGLES-(MR. ELMORE). There were twent, cons heavier and with only one ab

EAGLES-(MR. ELMORE). There were twenty-one beagles entered with only one ab-sentee. Little Duke was alone in the champion class over 12 inches. In the open dog cl-ss first went to Trailer. This dog was ruled out at Phildelphia last full as being over 15 inches. Mr. Elmore, however, after m-asuring him, decided that he was within the limit. As we have before remarked of him. he is a useful-looking, well made dog. He was not in the best of condition Leader, placed second, was the only one in the class that is unquestionably under 15 inches. Tony Weller, vhc., looks decidedly above the limit, he is also too long in body and light in muzzle. He stands straight on the best of legs and feet. Flute L., he., is nearer 17 than 15 inches. He is fairly well formed. In the bitch class the decision at Boston was properly reversed and Twinkle won over Chase. Silver received the same award as at Boston while Vixen received the dog class under 12 inches. In the bitch class first went to Magnet, a very pretty little bitch, with the sweetest head that we ever saw on a small beagle; she is a trifle out at elbow, a bit long in body, and has flat open feet, for this reason we pre-ferred Ruby for the place; she is not quite so good in head and is also a trifle out at elbow, but she has a good body with capital legs and feet and a good tail. In the puppy class first went to Snowflake, a nicely n ade puppy, her worst fault is a much too line muzzle. Belle, winner of second, has a good head and is well formed, but she is not quite straight on her forelegs. DACHSHUNDE-(MR. MORTIMEE). There were but two dachshunde shown . Bubentain the

forelegs. DACHSHUNDE-(MR. MORTIMER). There were but two dachshunde shown. Rubenstein, the winner, is a long way ahead of anything we have seen recently; he is fit to win in any company. Judy, placed second, had the same position at Boston.

BASSET HOUNDS-(MR. MORTIMER). The only entry, Canace, was absent.

second, had the same position at Boston. BASSET HOUNDS-(MR. MORTIMER). The only entry, Canace, was absent. FOX-TERRENS-(MR. MORTIMER). The judging of these classes caused much disstification mitted at any previous show. Fennel scored an easy win over the spitz-headed and woolly Felgrave Primrose, and in the bitch class Richmond Olive had a very easy win, being better than Diana in coat, back, loin, quarters, legs, feet and bone. The open dog class was a fairly good one and the judge placed upon his book the following rather astound-ing statement: "An exceedingly fine class. Probably no-where in England has so much quality been seen in one class." We can assure the judge there was a better class at Birming-ham more than ten years ago when Tyke was first and Poiler second. Splauger could not be compared with either of these dogs and could not ave taken a card in such company. This dog is sally over have taken a card in such company. This dog is sally over the easy and in a savery ordinary specimen. He is faulty in muzzle, ers, skull, eyes, ribs, back, ioin and quar-ters, and is very deficient in terrier character. Bacchana, placed second, is a terrier all over and was much the best dog not her class. We are not at all certain that Richmond Olive can beat him and must reserve our opinion on that until we see the dogs side by side. Shovel, vhc., should have been second. He is a bit theeky and wide in front and his ars's do not lay close enough to the head, but he stands on capital legs in fits proper place. Valet, whc, is a good terrier and deserved his card. Stableford Joe, hc, should have been whc, and Nick vhc, got more than he de-served. He is fairly good in legs and feet, but is light in inthe bitch class, should have been fits. Marguerite, placed fits, is not nearly so good looking as we expected to find her. She is oo checky and runn in skull, wide in front, does not carry her ears very well, and would do with more boose. Cornwall Duchess, second prize, was fits at New

puppy. Allspice was much the best of the bitches, but Blem-ton Marigold, placed second, should not have been noticed. She is a monkey faced specimen, with prick ears, and is faulty in quarters; her legs and feet are good. Blemton Thyme, c., is better than Marigold. These dogs are owned by Mr. August Belmont, Jr. Blue Belle, vhc, should have been second. She is fairly good in head, has plentv of bone, and is above the average in body. She does not stand quite straight on her pins, but will improve in this respect. Peep Bo, hc., is also better than the second-prize winner. Her faults are in head, ears and legs. Of the ten bitches entered in this class six only were shown. Trophy was the only wire-haired terrier entered. He is a fairly good dog, raiker wide in front and light in hone, COLLES-(MR. MORTIMER).

were shown. Trophy was the only wire-haired terrier entered. He is a fairly good dog, rather wide in front and light in hone. COLLIES-(MR. MORTIMER). In the class for champion dogs, Ben Nevis was very proper-ly placed over Roy-boy. They are well-known. Lady of the Lake was alone in the bitch class. The open dog class was a poor one. Bonnie Dunkeld, the winner, is a useful looking dog, not quite up to first-class form in head, body, coat, legs, feet or tail. Oscar II., second prize, is faulty in eyes, ears. hocks and shoulders. King Bruce, vhc., is faulty in ears and tail and nis coat is not straight. Rab, hc. is not worth a eard in any company. He is bad at almost every points and it was with difficulty he moved around the ring. Lass O' Lowrie, faulty in head, ears, tail and coat, was first in the hitch class. The others did not deserve notice and are not show dogs. A had lot. Two dog puppies were shown. Tramp. awarded fart prize, was purchased by the judge for the Hempstead Farm Co., before the class was passed on; at least we were so informed by the person in charge of him. He is faulty in head, eyes and shouders. Frank, second prize, is faulty in head but has a better coat than Tramp. Four bitches were shown, and of these Janet was correctly placed first. Popsie, vhc., is rather soft in coat, but is a better bitch than Gladys, winner of second. Madge, c., is a very poor specimen, not worth a card in any company. BULDOGS-(MR. MORTIMER). These classers were well corresponded and.

BULLDOGS-(MR. MORTIMER). These classes were well represented, and the prize winners are all known to our readers. The classes were well handled.

are all known to our readers. The classes were were bandled. BULL-TERRIERS—(MR. MORTIMER). Victoria and Grand Duke were the entries in the champion class for heavy weights. The prize was given to Victoria, but we think Grand Duke the better dog. There were four entries in the open class, and Count again took the blue ritheon. Grand Duchess, placed second, should have been first; she is better at both ends than Count, and, barring a trifle too much length in body, not much fault can be found with her. The others were outclassed. Little Maggie, ratherstouter all over than Little Nell, beat her; it is a close thing between them; both are faulty in head and eves, and Maggie has the best of it in legs and feet, while Neil is much the best in tall. White Violet, first at New Haven, was the only puppy shown. BLACK AND TAN, ROUGH-HAIRED, DANDIE DINMONT. IRISH, BED-

Violet, first at New Haven, was the only puppy shown.
 BLACK AND TAN, ROUGH-HAIRED, DANDLE DINMONT, IRISH, BED-LINGTON, SEVE, YORKSHIEE AND TOY TERRIERS— (MR. MORTIMER).
 There was only one entry in the black and tan terrier classes; a moderate specimen that was described in our New-ark report. The prizes were withheld in the rough-haired terrier class. Two Dandies were shown and were placed as at New Haven. The only Irish terrier entered was absent. and there were no Bedlingtons on view. Of the four Skress entered only one, Highland Nellie, was deserving of notice; she is faulty in head, ears and coat. Five Yorkshires were shown in the two classes, but none of the winners are good in either coat or color. Brighty, one of Mr. Dan O'Shea's half Irish and half Scotch (a good cross) was the only entry. PUGS-(MR. MORTMER).

Irish and half Scotch (a good cross) was the only entry. PUGS-(MR. MORTIMER). Bradford Ruby, in grand trim, was alone in the champion class. Four of the five entries turned up in the open dog class, and a poor lot they were. Mr. Mortimer got things badly mixed. Puck, the first prize winner, was catalogued as weighing 20 pounds. We should say he weighed nearer 30 pounds. He does not show the slightest particle of pug character, has a long, wolfish head, and stands like a bull-dog in front. He should not receive potice in any pug class. Dude, placed second, is a much smaller dog, although he is catalogued as weighing 20 pounds. He is a plain animal, faulty all over, and block hor have been noticed. Thun-der, vhe., and Dick, hc., were the only pugs in the class. Dick was second at Newalk. TOY SPANELS-(MR, MORTIMER).

TOY SPANIELS-(MR. MORTIMER). King Pippin was alone in the class for Blenheims, and Roscius had the King Charles class to himself. These dogs are well known.

MEXICAN HAIRLESS-(MR. MORTIMER). Me Too, Judge and Nellie were the entries in this class, and they were placed as at New Haven.

and they were placed as at Were the entries in this class, MISCELLANEOUS-(MR, MORTIMER). Four equal first prizes were awarded in the heavy weight class to Sir Lucifer, an English bob-tail sheep dog (first at New Haven), Black Bess, a poor specimen of the English retriever, Nestor, a bloodhound (first at New Haven), and Mollie, a fair Irish water spaniel, faulty in eyes. Onomoo, another Irish water spaniel, faulty in eyes. Onomoo, another Irish water spaniel, may be the the the the the the Mollie, a fair Irish water spaniel, faulty in eyes. Onomoo, another Irish water spaniel, was given vhc. This dog is faulty in head, tail and forelegs, and has some white on the chest. Gyp, hc., should not have been noticed. He is a very poor specimen, and a class was provided for mastiffs. There were two entries in the light weight class. First was given to Charlie, a Prince Charles spaniel, faulty in muzzle, short in coat, feather and frill, and too heavily marked. Cuckitt, placed second, should not have been noticed in this class. He is a toy terrier, and a class was provided for the breed. ITALIAN GREYHOUNS-(MR, MORTIMER). Minnie, placed first and catalogued as weighing 74 pounds, is too heavy, and is faulty in body and quarters. The New Haven winner was second. The others were outclassed. SPECIAL PRIZES.

Haven winner was second. The others were outclassed. SPECIAL PRIZES. Several mistakes were made in the distribution of these prizes. We have alwayssaid of Merchant P.ince that he is a good dog, but be is not nearly so good as Duke of Leeds. The latter shows much more character, has a much grander head and expression, stands better on his logs, and is infinitely superior in coat. color and markings. Merchant Prince stands a trifle higher at the shoulder, and carries his tail better, but such points should never he allowed to outweigh the more important characteristics of the breed. We feel sure that if the judge will again examine the two dogs, he will agree with us that Duke of Leeds is vastly superior to Merchant Prince. Memnon begins to show age, and we agree with Mr. Mortimer in placing Mother Demilike first. The deerhound puppy prize should have gone to Ramona instead of Braie. Lady Stewart was not the best foxhound shown, and Grand Duchess should have gone to Bacchanal. Mr. Thayer and Mr. Elemont showed better kennels than the Messar, Rutherfurd. ADDITIONAL AWARDS. Rebin Afair won champion prize in small pointer dog class. The prise shoul the he hat published jast were should

ADDITIONAL AWARDS. Robin Adair won champion prize in small pointer dog class. The ish setters that came first on the list published last work should be read, "Ited Native Setters" In foxhounds, F. C. Clark's Tip is very bigh com., F. W. Rossiter's Rock, Jr., and Pinto were bigh m. and com.

om. and com. BEAGLES, OVER 12IN.—CHAMPION: A. H. Wakeheld & Co.'s Little Duke.—OPEN—Dogs: 1st, H. F. Schellhass's Trailer: 2d, A. H. Wake-leid & Co's Leader. Very high com., W. H. Child's Tony Weller. Lign com, E. E. & H. W. Loro's Flute L. In pug pupples, first prize was given to E. C. Wander's unnamed, a basset hounds, Canace, the only entry, was absent. In miscel-

laneous large class, F. R. Gildersleve's Black Bess was equal first in-stead of S. Scoville's Jack, and W. Ehlers's Onomoo was very high com. In the small class, Cuckitt was first and Charlie second.

SPECIAL PRIZES. Best kennel, Winlawn Kennel. Best pair, Homer and cess : best American bred, Homer ; best dog or bitch

SPECIAL PRIZES. MASTIFFS.--Best kennel, Winlawn Kennel. Best pair, Homer and Prussian Princess: best American bred, Homer; best dog or bitch, Prussian Princess: ST. BERNARDS.-Rough-coated; best dog or bitch, Merchant Prince; best bitch, Mirauda; smooth-coated, best dog or bitch, (two, Leila; best puppy, Loil; best in open classes, Apollo. Best King Charles spaniel, Roscius. Best Skye terrier, Highland Nellie. Best retriever, W. Tailman's Flash.

THE BUFFALO DOG SHOW.

[From a special correspondent]. Editor Forest and Stream. The dog show held here this week under the auspices of the Society for the Prevention of Cruelty to Animals, has been a great success financially, and the Society have realized a agreat success financially, and the Society have realized a management was first-class. The weather was delightful, and immense crowds attended the show. There were 235 entries; many of them were ordinary specimens, although there were quite a number of fairly good animals shown. There were some fair mastiffs, a few middling St. Bernards, one good Newfoundland, a few fair setters, two or three good pointers and two nice collies. There was a fine display of greyhounds and toxhounds. The terriers were a mixed lot with few well-bred ones, except two good Dandies. The judges were Messrs. John Davidson, Morroe, Mich., and John Hammond, Thorald, Ont. Following is a list of the AWARDS.

AWARDS.

ST. LOUIS DOG SHOW.—Editor Forest and Stream: The judges selected for our show are: Major J. M. Taylor, Clevo-land, O., pointers, English setters, hounds and beagles; Mr. W. H. Pherce, Peekskill, N. Y., Irish and Gordon setters; Mr. J. H. Naylor, Chicago, Ill., all other classes. The entries are conting in fast. We have nearly one hundred special prizes so far, with more coming in daily. Please announce that en-tries close May 8.—GEO. MUNSON, Manager.

was undouhtedly suggested by a judge of the breed just after deciding upon the merits of a well-matched brace.

ENTRIES FOR THE NEW YORK DOG SHOW,—The entries for the New York dog show number 995. The differ-ent classes are represented by 45 mastiffs, 85 St. Bernards, 12 Newfoundlands, 14 Great Danes, 25 greyhounds, 15 deer-hounds, 85 pointers, 98 English setters, 37 black and tan set-ters, 65 Irish setters, 77 spaniels, 15 foxhounds, 27 heagles, 4 basset hounds, 7 dachshunde, 86 fox-terriers, 100 collies, 21 bulldogs, 24 bull-terriers, 6 black and tan terriers, 2 hard-haired, 3 Dandie Dinmont, 4 Irish, 8 Bedlington, 7 Skye, 19 Yorkshire and 8 toy terriers, 22 pugs, 16 King Charles, 3 Blen-heim, 5 Japanese, 10 Prince Charles and ruby spaniels, 6 Italian greyhounds, 15 poodles and 18 miscellaneous.

DOG SHOW AT WILKESBARRE. — Wilkesbarre, Pa., April 20, 1886.—Editor Forest and Stream: The Ninth Regi-ment, N. G. F., have decided to give a bench show of dors in connection with their fair, to be held in this city May 25, 26 and 27. Entries to close May 15. Mr. James Watson has kindly consented to act as judge, and will handle most of the classes. It is expected that Mr. W. F. Streeter, of Lehigh Tannery, will judge some classes, and that R. M. Lindsay, Esq., of Scranton, will also officiate. Although rather late in the season, it is hoped that this show may receive such support as will contribute to the increase of the armory fund, and encourage the admirers of dogs in this section to make it a permanent institution.—W. H. Tuok, Secretary.

VERERINARY MEDICAL ASSOCIATION OF NEW JER-SEY.—At a meeting held a few days ago at Morristown, Dr. Wm. B. E. Miller, of Camden, was re-elected president, and Dr. Wm. Herbert Lowe, of Paterson, State Veterinary Sur-geon, was re-elected secretary. The Association is incorpor-ated under the act of the Legislature for the promotion of veterinary science and art, and has already done much in ad-vancing the interests of the profession throughout the State of New Jersey.

BEAGLE SPECIAL AT PITTSBURGH.—Cleveland, O., April 15.—Editor Forest and Stream: In your list of awards of the Pittshurgh show you give champion Bannerman the prize for the best beagle under 12 inches. Will you please cor-rect that, as Mrs. C. E. White's beagle bitch Bonnie won'it.— MRS. C. E. WHITE.

SETTER DOG LOST.—Strayed or stolen on March 30, a large white and orange English setter dog. Orange head and ears, large orange spot on hack and small one on side. A liberal reward will be paid for information that will lead to his return. Address C. A. Tuttle, Newmarket, N. H.

THE CLEVELAND DOG SHOW.—There are three hundred and forty entries for the dog show to be held at Cleveland next week.

KENNEL MANAGEMENT.

IST No Notice Taken of Anonymous Correspondents. No Notice Taken of Anonymous Correspondents.
G. T. R. --I have a beagle dog that soratches its neck a great deal and groans when scratobiug or shaking his head. On the lower jaw and down on his neck the skin is very red and looks chafed and is sore. Will you please to tell me what to do for him? Ans. Get two drams of powdered calomel and dust the surface affected every other day. You can accomplish this best by doubing a piece of note paper into a V-shaped furroy, by hlowing along this the powder will be dusted over the parts. On the alternate days rub in gently some balan of Peru oltiment with the fliggers or hand.
I. C. S., Alabama.-A pointer dog one year old is troubled with sear then to shake his head, which he does contunally now, as though to get rid of something which troubled but there. Lately I noticed a very dart, dirty-looking matter which flows from his ear. It has become sore as to cause pain to touch It. Ans. Wash the ears carefully with warm water and castile soap twice daily, using a fine sponge fastened to a small stick. Get the following: Of bromo chloral and of laudanum each one drachm, of water six ounces. Mix. Drop in the ear.

shouse lastened to a small shek. Get the following: Of bromo cilloral and of laudanum each one drachm, of water sk ounces. Mix. Drop in the ear. C. F. H. E., Greenfield, Mass.-My setter dog got bodly cut on barbed wire about two weeks ago, and I was compelled to have him tetberized and sewed up. Since which time he has been in low spirits and shows no desire to eat. There has also from that time commenced an enlargement of the zland, apparently on what we call "Adam's apple" and it has assumed the size of a hen's erg already. I desire your opimon about it and also what to give him to tone up his sys-tem and stop the growth of, and remove the enlargement? Ans. The growth is probably an enlarged lymphatic gland, the enlargement depending upon the absorption of septic matter (decomposed pus) from some of the wounds which was suppurated and retains its discharge. If such is the case the wound should he opened and allowed to drain freely and be treated antiseptically, a good anti-septic dressing is halasm of Peru onitment and idodform. C. F. L., Haverhill, Mass.-I have a litter of pointer pupples, whelped April 7. The morning of the 9th went out and four done dead. The 10th another was lying on his side just alive. Took him into the house by a warm fire and gave him ahout five drops of alcohol diluted with water. In the afternoon he was as well as any of them apparently. The next morning he was dead. I lost another one under the same circumstances, and opened him and made a burch about as large as half a pigeon's egg on his belly, just the body and the center of bis helly. Please give me some advice in the about a lattes forward of his left hind left, heyney where it joins the body and the center of bis helly. Please give me some advice in we cannot from this distance. The treatment would, of course, depend upon the diagnosis of the case.

500-MILE CRUISE RIVERS OF THE NORTHERN CALIFORNIA.

A 500-MILE CRUISE ON THE RIVERS OF NORTHERN CALIFORMIA. (Continued from page 28.) THE next morning at 7 we boarded the steamer Dover, and as we had stowed the cances the day before there was nothing for us to do not to est breakfast and enjoy the scenery. After breakfast we lay profit the breakfast and enjoy the scenery. After breakfast we lay profit the breakfast and enjoy the scenery. After breakfast we lay profit the breakfast and enjoy the scenery. After breakfast we lay profit the breakfast and enjoy the scenery. After breakfast we lay profit breakfast and enjoy the scenery. After breakfast we lay profit breakfast and enjoy the scenery. After breakfast we lay profit breakfast and enjoy the scenery. After breakfast we lay profit breakfast we lay before ns. The prospect was certainly lovely, the morning was perfect, and everything was calculated to heighten our enjoy may befreet, and everything was calculated to heighten our enjoy and bar it is own sediment until the obstracted waters gather strength to sweep the obstraction away. Twenty miles above Scenared on the two thich has bitber to been as yellow as clay can make the Feather, although far less in volume than the Sacramento, impart to ta color scarcely less than their own. But before they mix thory output yer y roll along side by side for some little distance, presenting a very marked contrast. The next seventher the plot honse. Massive trunks of sycar wore and coton wood trees rise to a heighth of fifty or sizify feet bay boy to be baaks, crowned with magnificent masses of foliage and apport its goot the space. This continues the waters and the only sign of the water's dety. This continues with unvarying and yet inter- sting monotony on either side of the river's out read there et a the prior bay where some a stock waters is to a height of fifty or sizify feet bay boy to be baaks, crowned with magnificent masses of foliage and apporting connues in unverse of wild grape and other trailing vines where some stock raiser has here and there et at any pr

The down do that have to be able in the down and withink with a companiate of a tropical evening, and after a vain attempt to accompaniate into a tropical evening, and after a vain attempt to ist up in the pilot house and watch the itver's course, we at last succembed to the soportice effect of the warm, perfame laden air and retired to our be that to determ of future glories to be achieved in the crising line. The next morning the scenery had changed, the fringe of tropical very dure had disappeared and in its place were fera-covered banks, expend with a growth of smaller trees. Below each point was a bean tifue bean of sand or gravel, covered on the top with a generons altowance of driftwood and behind it a small sort of bay which seemed the deal place to harbor a cance. The deal place to harbor a cance and the decimation of the steamer. We at once proceed to embark in our cances, and free receiving the good wishes of our friends, the officers of the steamer, and a welcome present in the shape of a supply of fresh meet from a point above the tow. Here we made our first camp for the season, and doubless every cancels and viewed the pleture made by our two cances, as they lay on the shelving beach, their glossy sides nesting in the sand with which we stood and viewed the pleture made by our two cances, as they lay on the shelving beach, their glossy sides nesting in the sand with which we had shored them, and the tents giving promise of huxurious confort when we should be snugly esconce therein. Higher on the bank burned a high the laternoor of stown in sub and with which we had shored them and the heat sittermoother show and with which we had shored the the statement of stown in sub and with which we had shored the the daternoor stown in sub shore to the aching the mode is our two and with which we had shored them and the daternoor stown in the site of a stand of Jacksonian model, with lots of room for stown in sub addition of backsonian model, with lots of any one thing the stow should be any shore the town i

<text>

Lash proceeders of a cloud in the south warned us to prepare for a thunder storm. Our arrangements for the night were easily made. I unpacked the cances, made the beds in them and set the tents in them, while Undine made a fire, boiled coffee, fried bacon and eggs and cooked hot cakes. Then, by the time I had laid a piece of tarpanlin on the ground and set the ind lishes on it, we were both ready for our dinner, which seldon, took the cook more than half an hour to prepare. The dinner over, I washed the dishes in the usual way and hung them up in the sack to dry. Scarcely had I finished when a few large drops of rain fell, and we noticed that the black cloud had spread itself nearly over us, and its fury on my devoted head. Borrowing his rubber blanket, I tied it fury on my devoted head. Borrowing his rubber blanket, I tied it for y fur the the edges of his tent, and then ran guy ropes from the mainmast to the edges und fastened them tory of the gale. No sooner were my arrangements completed than we heard a tremendous roaring in the trees

Dachting.

ck of Hs. Ere I could get under shelter a gust of wind tossed my finto the river and sent me under my tent in a hurry, without time to see what was coing to come next. It seems to us as we k back that everything came next-tornado, hall, rain, with fiv-sitcks and leaves, in a way that would amive fulfill the alarming genetications of a dyspectic weather prophet. The cancer norked and fro as though it was thinking of starting off to five, built a spile the violence of the cust there was not a drop of wet that cutered are nor of the cancer; and Undine, at the risk of having his seals word, start was inside, and then proceeded to enjoy a smoke, to wither I ampreciated my immunity from the attacks of the ele-nost, studies and until the proceeded to enjoy a smoke, to wither I ampreciated my immunity from the attacks of the ele-nost. Undine followed my example, as I could see by the smoke to cored out from the eracks of his fent. I opened up one corner a conversation quite easily through us, it ceased as suddenly as it commenced, and we gladly erayled out of our nests, to make a and get something warm in our stomachs. The sand and gravel is o moisture and was dry almost as soon as the rain ceased to . Nor did the driftwood seem to be affected by the rain that hat her hail that sent a chill through as the chared at arge store of the and after we had heated some coffee, niled up the fire nuiti if initated the whole ecame; which had hear gradually swallowed in the eathering darkness. Having dank our offee. Undine de-mets for wontrast with the leaden sky that hung over us like a males done, mmiffing all sound. We gathered a large store of the and after we had heated some coffee, niled up the fire nuiti in the would ne unable to obtain any for the next few days. I must dot which the atternoon. There he set the traps in the at likely classes, and then came heak to eram to bake hread, as he is had early induced in a rate store of the starks in the there hevely interseted in the bread making moreess as I knew in about it

when the tot much the second s fo. fare getting h auty of the itoes to re by squiroes to inflict themselves inon its, was eabouth to spe done by them. Without walling to dress we got up The storm of the day before had cleared the air and ery leaf, while the birds, appreciating the heatriful re had assumed to greet them with, same their earnest beaufy of the river, combined with the Increasing sum, was too much to be resisted, so fossing off our ne into the river simultaneously, and there swam and other like two schoolboxs. The sun had heen up for lefter we were willing to leave the weter, and it was as to cet under way, unless we wanted to be roasted by an allowane of coffee in a bottle and some cold quali in a handry place in the cance, as this was to consti-, thereby saying one stor. There being not the slight-of a breeze, we nacked all sails and spars below and has dav's pydding, as it was our intention to make hose that inclut, and the order to do it we would have to v's p'ddling, as it was our intention to make night, and in order to do it we would have to

LENGTH AND BEAM IN YACHT DESIGNING.

LENGTH AND BEAM IN YACHA. Editor Forest and Stream: Since we have yachts to represent every proportion of to beam and draft, with and without boards, frou the d Fanny to the deaver-shaped Redouin, it seems to me the mas yacht designing might give us a standard rule for centerboarr and for entiers to guide amateur yachtsmen in the dimens those they have built. Every designer and builder has bis o model to which he conforms the boats which he builds. Eve having a boat built has certain usilons of what he would it unless he has studied the subject well, and sometimes, after done so, he does not have such definite opinions of the main sions as would lead him to resist the predilections of his it The consequence is that boats are put affort every year t stow, faulty, and even dangerous in stormy weather. The k ones see the errors of dimension, and the owner finds them o awhile, but having no guile, he plunges into others by rea. I to which he conformed to which he he have and the conformed to which he he have the conformed to which he have the conformed to which he have the here the conformed to which here the here the conformed to which here the here the conformed to which here the here there the here the here the here the here th

tempt to depart from the beaten prooves and to essay somethin beyond the ordinary line, without the requisite knowledge and es-perience, is almost invariably costly and unsuccessful. Whether de-perding on himself or on a builder, there is always one point to b-kept in view; that a harmony of design is absolutely essential. Ju-man of moderate ability may plan and carry out successfully a ver-good design while if attention is paid to the dictum of every self an pointed expert, an incongruous botch must result. With a thorough consideration of the requirements and ends in view, a study o similar vessels and a enterluly matured plan that when once made will be rigidly adhered to, a fair amount of success may be expected and while the boat may not be a second Puritan, she is not likely to prove a mortilying failure.]

CRUISE OF THE COOT.

xx, WHEN about showing off for a large, rambling white building, at the head of Smith's Creek, which had been pointed out to me as a store, a belltose volce halled me with, "Watcher going to do?" "Come abore," I said, "mail some letters and get some of your kero-sence," this latter as a peace-offering to the store keeper's temper sence, the some reason seemed ruffled at the Coots appearence upon as a peace-offering to the ason scemed ruffied at the ured at me from the beach w th from one who ought to s sake Stepping from the n as a sign that I meant h ave no karpsene excert scene. He glat ption. I though r pocket-book's

Be proves that can then the state of the cabb. Once round Smith's Island, the obb set its strength and the Coot let go her anchor, alter grounding, aving missed the best water, which runs close along the back of the Island and also along the mainland, the shoals being in the shifts, carrying out an anchor and hualing the boat of at high allast, carrying out an anchor and hualing the boat of at high rater, so as to be sure of a start early next day when the tide would

be on the eDU. There was an absolute calm at seven A. M., and the Coot slaggislity dritted out to sea on the tail end of the cbb. Off Smith's Point, the anchor was let go and a breeze whistled for. It came not. But hi due course of events it once more turned ebb, permitting the Coot to resume her drift southward. Light airs finally assisted her rouge the red can off Floet's Point, and a few board's took her into Cockle' Greck for the night. On the way down a youngster in a dilapilated yawl boat iron a small schooner gave chase and ran alongside First he asked for a mess of meat. My stock had ran alongside First he asked for a mess of meat. My stock had ran alongside antridiges. So the bow took it out in admiring the yacht as "duneatest thing he ever did see" and scalled back to his skipper empthhanded, The schooner never offered oysters in return, but took f as a matter of course that i would fork over for the asking. In Cockles Creek, there was a good deal of life. Oysters were the main stay of the population. Schooners had scores of cances about then and were holisting in the coveted game by the bashel. Substantia houses crowned the tops of the hillocks along the shores whill bares with stacks and kettles and haltors gave notice that yill stenches would pervade tho whole river reigon, as soon as the meanaden fishery opens in sprine. Nearly all the rivers and haven south of the Wicomleo suffer from likepollution. There is a country store atter the asain pattern on the north bank of the first brance on the eastern shore of Cockle's Creek. This same branch afford

lect to clear ou olight northerly alrs. Around Fléct's Point these orsook us entirely and an adverse tide unde further progress impssible Meanwhile a heavy bank of clouds had risen in the southsat and the snu was reduced to a red spot through the dump atnosphere. The skipper of a schooner at anchor was huiled to tol me what day and date it was, as I had lost my reckouing, having one what day and date it was, as I had lost my reckouing, having orised to read the Coot's huiling port mder her stern and still more so to hear where she was bound. "This looks threatening np there it is no kind of weather to leave port." So I thought too, as the sky had assumed a very ngly look, though not a breath was stirring browned of scenery alter the abortive attennt of the day to make any southings. It was well she lay in a sing berth, perfectly protected Ere midnight the gale swooped down with a great din. For nearly sixty hours the music was kept up in the rigging. No until noor outside to coutinne her voyage, and this under two recis. The wine line as whole sail was made, Then a caim ensued and some horn Marsh whole sail was made. Then a caim ensued and some horn Marsh whole sail was made. Then a caim ensued and some horn Filteen in at drilting. Siddenly a fresi breze struck aeross the Chesapeake from N. E Siddenly a fresi breze struck aeross the Chesapeake from N. E Siddenly a fresi breze struck aeross the Chesapeake from N. E Siddenly a fresi breze struck aeross the chesapeake from N. E

citizen ninntes later the Cook was rounded up and the second wingle hauled down. The breeze was quartering and the second wingle hauled down. The breeze was quartering and the boat tore long in good hashion. Iliting her haunches to the flowing sea which was rupidly rising. Prased Dividing Creek we flew with a boiling wake, then hauled onr wind a bit to weather the lorizontal stripe uoy aniking the Bluff Point shoals. From here we squared away lead before it and ran in for Little Bay. Until North Point was ounded, there was a constant danger from jibing, as the boat rolled and dipped her boom into the sea. Fetched round North Point and tood in to the Horsepen, pleking a way between a maze of stakes and abandoned nets. Anchored in 6t. An invitation from the arrly skipper of a pungy, jumping in the middle of Little Bay, to ie to his stern for the night was declined. The run for the afternon was about fifteen miles.

During the ment the wind substance, but piped up fresh again on gelling underway next morating. Antepoloson Creck is the all shelter sought at the head of Little Bay. A nortbwesterly not necessitated a few hoards to weather North Polist on the ssage out. After jibing to port the Coot had it quartering down the light house on Rappahannock Splt. Seven leter can be carried if way between the light house and the shore, but the red light of array Splt, across the relyer must be left to starboard. The Raphannock has the reputation of being a breezy and boisterous er. More than one yacht has come to grief while crossing uts atthe light house on Rappath control of the river than some distance out the Bay. When the Coot had opened Mosquito Polit and quit a greater strength drawing out of the river than some distance out the Bay. When the Coot had opened Mosquito Polit and quit protection of a weather shore, she found set and wind in dead most and I was glud that the two refs of the night had not been then a wallowed heavily in the trongh and shipped much ter in the weather roll. But after experiences in the Patapseo, roogh passage across the Rappathannock was by comparison not forsa. Constant luffing to puffs worked the Coot ont above tho nave due sore spile structure pretty close and swapped greetings the the Hight house keeper who remarked it was a rough day and then the to coot bechavior intently.

the the Coot's behavior intentity. entrance to Plankatank river is well buoyed and easily made the in the dark a strauger would not be likely to give Stove a wilde enough berth. The usual anchorage is in Fishing Bay d thils long projecting tongne. The Plankatank has become or less celebrated ou account of some bold Amazons of the r facet who are said to have tripped anchor and sailed merrily from pursnit by a State governor in an armed vessel on the at for infractions of the oyster laws which prohlibit dredging giula waters. The river is pretty and invites the cruiser to in some of its numerons branches and uttractive covers. It was ng cold again, so the Coot was pushed south instead and ran lift's Bay in search of the obser eutrance to Millford Haven. Ight house keeper, who had launched his boat from lofty davits e the coot a brush, had, by cutting across lots, gained on me lerably, so I hove to for directions. He was bound into by S Creek, but pointed out a schoner in the southwestern bight. Diversion of the vater for. Nothing but low sand being e the got a brush, had. Nor utting across lots, gained on me lerably, so I hove to for the rate at which she was driving overlaps the entrance to Milford so as to hide it mill nearly st. You then thru up, pass through a gut and suddenly open initative luland sea. Near the entrance is a lump with but I to ereon It is marked by a brush. You may pass either side, or distance lurthor is another and larger lump marked In the way. Plenty water on each side. Beyond that the Haven is and deep with 10 to 161t, and good holding ground. In the for any boat. The Goot rounded up to leeward of some eners and stowed canvas in time to escape the rapidly increas-

NOTES FROM THE DELAWARE.—For the first time the Quaker fity Y. C. will have a race for large schooners, as two, the Helen and velon, are now owned in Philadelphia, and will meet in the regatt in June. The Helen, Mr. C. D. Middl-ton, is 70ft, over all, 62ft, water ine, 21th beam. 64t, 51n, hold, and 5ft, draft. The Avelon is now ultiding for Dr. W. H. Vallette, and is 70ft, over all, 62ft, water oft. beam, 64t, 51th Both are modeled and built by Alonzo E. mitb, of I lip. The sloop Ventzie bas had a new overhang put on ad is now 59ft. 7in. over all, 53ft. 4th. waterline, 13ft, fin, beam, and ft din hold. A new sloop, 33ft. over all, bas been built at Trenton, and is now 59ft. 7in. over all, 53ft. 4th. waterline, 13ft, fin, beam, and ft din hold. A new sloop, 33ft. over all, 50ft. 100, water een enrolled in the club; she is 33ft. 7in. over all, 30ft. 100, water ine, 14ft. 4in. beam, and 3ft. 114jin, hold. The sloop Cherie has had new keel and fastenings, with a larger mainsail. The Ln. fine will ome out with new sails and spars, and the Foam has receives a conner 3ft, long. The prizes given by the Q. C. Y. C. this year will e compasses, logs, and similar articles, in place of the flags preiously given.

Editor Forest and Stream: Your correspondent has just returned on a visit to the Sound, eight miles from Wilmington, where he und all of the fleet belonging to the Carolina X. G. Great preparions are being made to have each yacht in perfect order when the ason opeus. The yachts Mascotte, Idler, Visen, Rupple, Lillianorenee, Loulie and Restless, are ready to be launched and look very ndsome. The others are undergoing repairs. The first meeting of is club will be held on the first Monday in May, when all the races Il he arranged and officers for the coming year elected. It is prosed to extend an invitation to the Charleston fleet to visit this eity, d have a regatta on the Cape Fear River. There is great interest anifested in these races, and the all-absorbing topic of conversation the yacht racing this season. It promises to he the most excitting ason ever had by the club. We hear of new boats being ordered om Northern builders, which will add wonderfully to the interest in e club.-X.

ar club.-x. AT THE WHEEL.-Captain Joe Ellsworth will, of course, sail the flantic this season...Captain George Cooley, of Red Bank, the ice oat sailor, and for some seasons captain of the schoouer Cly ite, will all the Priscilla, the Clytie being Iald up, as her owner, Mr. Anson nelp- Stokes, will go abroad...Captain B.V. B. Stone will probably all General Fame's new yacht...Captain Gibson, last season in the riscilla, will nandle Gracie this year...Captain George Pettuck is ow fishing out Bedouin, and will sail ber as usual...Captain James let'ormack, who has safled Gracie for two seasons, since Captain fater's death, will probably command the Crusader...Captain Barr

early of the Yosemite, will said the Visiou, sloop, this year... tain Tban Clock, so long known as the successful skipper of the chief, will probably command the new schooner Avelon, of Philablief, will probably command the new schooner Avelon, of Philaalls for the Portlan and is busy with much out, a work. The is a ng the sails for Burgess's new schooner, a mainsail for Gen. Paracht, a full suit for Mr. Fay's yacht, one for George Lawley'ss Sdoa, for Mr. Fort's steam yacht, the yacht Windward, the scho ketea, Mr. Haskin's Louette, Mn. Drikcoll's 25th. catboat, Mr. 1 hard's cathoat and the cutter building for the Neptune Club, for hoderson's cutter, and has much repair work besides. It is repuhat Puritan wilt nave her flush deck cut and a cockpit out in teason by Smith. Covers will be fitted for use in racing... Havin iscooner, the handsome little yacht designed two years since by M. Cary outh, has been sold to Mr. H. B. Russell of Providence, Mr. Burgess has also disposed of the sloops Countess and Ethe Neptune Club.—This club is a fishing club only and not a yacht the they have. however, had a yacht built for the use of the mem oy Thos. Eddy, of East Boston.

Huron has been hau up at Smith's for more lead on her keel ... Wide con, sloop, has be sold by Mr. John Dimon to Mr. L. W. Parker, of New Bedford, Oetopus, yawl, is fitting out and will be ready by May 1 with new sai At Plepras's yard Mr I selui's new yacht is planed and painted, h ironwork is on, and she is ready for the water. Her mast and spi are completed, and the sheer legs are in place to step the form before she is launched. Plumbers and joiners are at work below. Planking is of yellow pine, and nside a new struk et of celling 24, 12h. has been euliely removed, and nothing remains of the e boat but the frames and the bottom planking. As soon as she is the ways the steam yacht. Sapph will be hauled up for alteratioAgatha, Gen. Franklin's steam yacht, is now in frame, fiding the lower floor of Smith's shop. Though a comparatively sm in appearance. A novel point in the construction is the use of a har water knee for both sternpost and horiting remains of the c partice is to be seen in the oak wale, which is yello thicker th the upperstreak about it, so that all the timbers are let into the was stealying their heads and stiff-ning the frame. ... Puzzle, Mr. J. I rillard's yacht, slying in be upper end of Waterstreet, the huit bei panted, the three-bladed propeller m place, and the yacht ready ri launching. ...Reva, M

ay at Mumm's yard. With her launt sparse, her outside weig of sufficient to keep ber on an even keel ... (Htana, schoon um, Weld, arrived in Boston on April 19, after an absence of a hree months. It is reported that she is improved by the lengt f last fall. Smith will refit her at once and her summer rig ut on her. CUTTER, MEN IN THE YACHT CLUBS.—The statement

London Field that the New York, Atlantic and Stawanhaka yacht clubs had turned out of office all the cutter men, with the idea of giving the American type of yacht "at least a fair show." is hardly borne out by the facts. It is true that Eibridge T. Gerry, who succeded James Gordon Bennett as commodore of the New York Y. C. is not known as an advocate of the cutter, hut neither was Mr. Bennett. Both of these men prefer large and elegant yachts to any other. A Cass Canfield, the commodore of the Seawanhaka Club, is well known as one of the most intelligent and consistent of cutter men. He not only sells a cutter, but he designed a most oxcelleng suspicion of cutter blood in it, and the question of cutter or sloop, never entered into its politics. The only serious blow that cutter' interests have received at yacht club elections recently was the elecdon of F. C. Lawrence as vice-commodore of the Seawanbaka Club, is as held fiftee in the sloop Vixee, and the fine qualities of his sloop have made bim prejudiced in favor of this type. But Mr. Lawrence has held office in the Seawanbaka Club herce, and has never weaned the organization from its ancent faith in the cutter. As a matter of fact, the question of type has had noting to do with recent yacht club elections. *They* have turned, unfortunately, on less sportsmanlike questions. *M. Y. Tribune*.

The cluster of the second problem of the se

A FINE CUTTER FOR SALE. - Over a year ago Mr. J. Malcolm Torbes ordered the cutter Bayadere from young Fife, and she was hipped out here last spring. Since her completion she has laid idle, her owner being interested in the Puritan, which he now owns and fill sail this season. The Bayadere is offered for sale in consequence, he is a fine fittle vessel of 45ft. loadline and 10ft, beam, very strongly ult and hardscorely fitted inside. GEN. PAINE'S YACHT.—It is not yet decided to christen the new acht Maytlower, and her owner may select some other name. The lowspirt and spreader are shipped, and the chain plates and other ronwork are fastened. The topsides have been painted white and he bottom has had a coat of red. All the work inside is well ad-ranced, the opars and gear are ready, and as soon as a comfortable erth is dredged out for the yacht to lie in, she will be launched, robably about May 1. Wilson has completed her head salls and deManus is finishing the mainsail in the Navy Yard sail loft. Me-fanus will also make the sails for the new schooner, now said to be or a Boston owner, not Providence, as at first reported. This yacht, ow heing planked, has a clipper stem, hut in other respects resembles her Paine's boat. She is intended for racing as well as cruising. Ier sails, which will be ready hy June 1, will be of the canvas speci-ily woven for the Portian. Mr. Fay's yacht is partly planked up at awley's.

Gen Paine's boat. She is intended for racing as well as cruising. Her salls, which will be ready by June 1, will be of the canvas speci-ally woven for the Puritan. Mr. Fay's yacht is partly planked up at Lawley's. AN ENGLISH STEAM YACHT.-ON April 8, at the yard of Ram-age & Ferguson, Leith, was launched an auxiliary steam yacht, designed by Mr. St. Clare J. Byrne, for Sir George Curtis Lampson. Commodore of the Royal London Y. O. The hull is of steel, 1387t, between perpendiculars, 24ft, heam, and 15ft, 6in. moulded depth. The deck house is of steel plating sheathed with teak, and fitted inside vith rosewood and tapestry. The dining saloon forward is fitted in mahegany and old gold, the cabins and staterooms being fitted in mahegany and old gold, the cabins and staterooms being fitted in mahegany and old gold, the cabins and staterooms being fitted in mahegany and old gold, the cabins and staterooms being fitted in mahegany and old gold, the cabins and staterooms being fitted in mahegany egar. The boliers have fox's corrugated flues. There are sixty electric lights throughout the vessel. She has been maned Miranda, after the famous schooner huilt for the late Sir Curtis Miranda Lampson, father of Sir George Lampson. ALVA.-This name has heen selected for Mr. Vanderbilt's new yacht. Her machinery will be made entirely by her builders, the flartan & Hollingsworth Co. The main engines will be inverted direct acting compound, with one high and two low pressure cylin-ers, 23 and 55in, by 24 mit. Stroke. The high pressure cylinder will be in the center, with a low pressure on each side. Joy's patent valve condenser will be fed by a circulating pump with an independent engine with another for the dynamo. The air and faed pumps will be attached to the main engine in the usual anxine. There will be the sumal auxiliary engines for the cepstans, steering gear, ash holsters, ice machine, etc. Steam will he provided by two horizontal tubular bolers, each 19ft. long and 17ft. diameter, with Fox's corrugated furnaces. The w

lytie, will command her this season. A BOOM IN CATBOATS.—About the middle of last season a new thoat, the Wraith, designed by Mr. Burgess for Gen. Paine's sons, ade her appearance in the races of the new Corinthian Y. C. at arblehead, and astonished her rivals by the way in which she, a zep keel boat, defeated all comers, especially the centerboards, er success has led to a demand for similar boats, and Mr. Burgess as been called on for a number of designs. One of these is a keel bat for Philadelphia, hesides which are three or four others for the civity of Boston. Mr. McManus, the sailmaker, will have a center-bard cat 18ft. waterline and 28ft, over all, to be built by Lawley, and other centerboard 28ft. 6in, long has just been designed by Mr. urgess for a western gentleman. FAST FISHING VESSELS.—Boston is building up a fleet of work

Surgess for a western see the song mas just been designed by Mr. FAST FISHING VESSELS. Boston is building up a fleet of very ast fishing vessels, and considerable interest is felt among the wners as to the swittest of these new craft. One has lately been unched at East Boston for Mr. P. Whelan, and Lawlor, of Chelsea, i to commence another at once for Mr. Sylvester Whelan. Mr. argess has also been called in, and will design a similar craft for a arty of fish dealers, with whom is associated Mr. J. H. McManus, torey, of Essex, has taken the ground adjoining Lawlor's yard, and atelline, 24ft. heam, 10ft. hold, and will carry 15 tons of iron out-de, with more stowed inside.

de, with more stowed inside. A NEW CRUISING YAWL --On April 8 the Dove, a yawl of 39 ons, was launched at Fay's yard. Aouthampton, where she was hult pr Mr. 1. Moss, of Weston Grove. She is 55ft. 6in, between perpen-iculars, 12ft. 6in, beam, 10ft, draft, and 59 tons displacement, this i tons of lead on her keel. The fittings below are excellent forta-uising hoat, 7(L. head room under the heams, from forceastle to fast, two radio and ladies' cain. The latter has two heds, two Mas, two wardrobes and washstand. The cabins are fitted with pitch ine, trimmed with teak mouldings, and all fittings on deck are also other the ironwork and fittings are very complete, including a nucle capitan. CORINTHIAN Y. C.-This club has taken in 45 name mould be

antelo capstan. CORINTHIAN Y. C.—This club has taken in 45 new members this ear, making a total of 155, while it is not yet one year old. A club ouse, to cost \$500, will be erected at once at Marblehead, the money eing now subscribed. It will be fitted with sleeping accommoda-ons for the members. The sum of \$300 has been devoted hy the lub to the regular races, while \$100 extra tacs been subscribed for n open regatia outside the harbor. A new classification has been dopted, as follows: First class, \$25 to 306t; second class, \$21 to 25ft; intri class, 16 to 21ft. The races this year will be started shortly fter the arrival of the noon train from Boston. There will be three hampionship races, with cash prizes of \$10 and \$5.

TORONTO SKIFF SAILING CLUB.—On April 15 a meeting of the club was held at which the following officers were elected: Commo-dore, J. Walker Dick; Vice-Commodore, J. B. Kilgour; Captain, Percy A. Both; Secretary and Treasurer, Hamilton S. Hall (re-elected); Anditors. T. P. Cowan and H. W. Pringle, and a committee consisting of Dr. B. L. Riordan, Evelyn Macrae, F. W. Brown, N. Macçae, J. T. G. Boyd, F. W. Green and J. Deany. The committee on classifica-tion of skiffs and also the committee on accommodation presented their reports.

tion of "skifts" and also the committee on accommodation presented their reports.
PELIHAM Y. C. — A meeting was held on April 16, at which the following officers were elected: Commodore, J. M. Waterbury: Vice-Commodore, Sidney Chubb, Rear-Commodore, Geo. C. Foster, Secretary, F. H. Ballard; Treasurer, T. D. Feiton; Governing Committee, W. F. Van Pelt, Phillp Cross, Thos. E. Brown, J. T., J. Trank Patterson, F. P. Walter and Wm. G. Wilmerding. The constitution and by-laws were amended to meet the increased growth of the club. Several new members were elected.
BOSTON Y. C. — The fixtures for 1886 include races on June 23 and July 22, m each of which there will be three classes, schooners, 381t. and over, aloops, 381t, and over, aloops, and an offer store by either in order to retain it. Viee Com, J. B. Meer offers two once more by either in order to retain it. Viee Com, J. B. Meer offers two silver cups, one for first class schooners and one for sloops, to be won twice, besides which cash prizes will be given.
NOTES FROM NEWARK. — The dates for the Newark Y. C. fixtures are May 16, opening seli; May 31, club regatat; July 3-12, cruise in bouving topmast and her bottom has been planed. Emma U. has a new bowsprit and has been painted white.
QUINCY Y. C.—This club has taken in 16 new memhers lately and isnow in a prosperous condition. They propose to erect a club house and have appointed a committee to consider the matter, Races are are anged as follows: May 21; 32) P. M., Hough's Neck; June 22, 2 F. M., Germantown Point; July 8, 3 P. M.; July 24, 3 P. M.; Aug. 7, 3 P. M.; Sept. 5, open P. M.

3 F. M.; Sept. 3, 1:30 P. M. ADELE. - A steam yacht of this name has been built this winter at the foot of Twentieth street, South Brooklyn, for Messrs. Boyer, from a design by Mr. Jas. Kaine. Sbe is 37ft. long, 8ft. beam, 4ft. hold, 2ft. 4lu. draft, with a hull of teak, copper fastened. The engine is 4 and 7½in.×Gin., with a return tubular boiler, 5ft. long and 3ft. diameter, carrying 250 pounds. The little vessel is very handsomely finished throughout.

Our Hartford Report.	ANSWERS TO CORRESPONDENTS,

SOME POOR MEN'S RICHES.

THERE are many who have inherited the hunting instinct A and were born too late to find game enough in the region of their birth to make hunting worth while for the game that can be got by the most persistent seeking, and who have not inherited wealth, nor the faculty of acquiring it, so that they may go for a week, or month, or more of a year, to places where game is still abundant. Some of these sometimes wonder whether this inheritance, come down to them through a thousand generations from wild ancestors, is not under such conditions an entailed ill-fortune, a whole-some desire, given without the opportunity of satisfying it, a purse of gold that one must always carry but never spend.

Most assuredly it is an unprofitable dower if it leads one to too continual pursuit of what at best he can get but little of, mere game. But if it takes him to the woods and fields for that reasonable share of recreation which belongs of right to all, rather than to questionable pastimes among ill-assorted associates, then it is something to be thankful for. With a gun to excuse his day's outing he goes forth. His wits are sharpened to find the haunts of the infrequent woodcock or quail or grouse, that should of right be in the swamp, or field, or copse that of old their tribes possessed. All these he must search, and study how changed conditions have wrought changes in the habits of those few survivors. Their wits, too, are sharpened. The woodcock does not wait till the dog's nose is almost above him before he springs up with a twittering whistle, but flushes wild, and alights afar off. The scant bevy of quail goes off out of gunshot in a gray flurry to the mazes of the woods. The ruffed grouse tarries not to cry "quit! quit!" nor strut along the dim aisles of his woodland sanctuary, but hurtles away unseen, almost out of ear shot. If by good luck one of these falls to the unaccus. tomed aim, if a woodcock tumbles in a shower of leaves to the ferny carpet of the swamp, if a quail drops to the earth out of a whiff of feathers, if a grouse slants from his arrowy flight and strikes with a fluttering thud upon the fallen leaves, or a woodduck started from a willowy bend of the river, splashes back into it before the powder smoke has unveiled him, how the heart is warmed with a thrill of the satis-faction of well-doing!

Without even this appeasing of the sportsman's gentle blood thirst, there is more and better to be got of a day's

NEW YORK, APRIL 29, 1886.

wandering with the helping burden of a gun. The com. panionship of Nature, the cavesdropping and spying to catch her secrets, the studying of the ways of all the little wood people, not worth, or inestimably more than worth, powder and shot. Who has ever heard the last word the jay has to tell him in her many voices? or who has tired of visiting with the chickadees, or of watching the nuthatches creeping headlong down the mossy tree trunks, or the squir-rels' saucy tricks, or the ways of strange woods plants growing and blowing and seeding, and the odd freaks of trees growths, and no end of things that he would never have heard or scen if it had not been for this wooden and iron excuse that he lugs about with him? Thanks be to its first inventor, in spite of all the woeful mischief it has wrought. How many happy days it has gone to the making of, from boyhood to old age, in the lives of those who love it. What a comfort is the ownership of a good gun, though one seldom shoots it. What a pleasure its owner has in those seasons when it cannot be otherwise used, in putting it in order for the days fondly looked forward to-days when the woods have put on their last and bravest attire of the yeardays when they have cast it off and all the landscape is veiled in the gray haze of Indian summer, and days when all the fields and frozen waters are white with the first snows and the wild music of the hounds stirs the woods.

When these days have come and gone and winter winds are howling, who so much as he, born to the love of field sports with small opportunity of enjoying them, delights to read by his cheerful fireside what others more fortunate have written of their outings, and to share with them in spirit the happy hours in camps by wild lakes, the tramps in primeval forests, and hunting tours in far away lands that he may never see.

THE SENTIMENT ON SPRING SHOOTING.

IT is an encouraging sign of the times that the sentiment f of the West, where spring shooting is chiefly carried on, is changing on this subject. It was formerly as much a matter of course to kill ducks in the spring as in the fall, but of late, individuals in great numbers, and in some cases the press, are protesting against the scandalous folly of this vasteful practice.

The Milwaukee Wisconsin of April 17 says:

The annual spring slaughter of ducks in Wisconsin and other Northern States has begun rather earlier than usual and appears to he pursued with more than common energy. Thousands of ducks are being killed daily. The Oshkosh Northwestern states that the birds which are heing killed in that vicinity are "mere skeletons," This is usually the condition of ducks in the spring, and for that reason alone the shooting of them should be forhidden by legal en-actment. But another and still better reason is, that each pair of birds killed would raise a large brood during the'summer if they were unmolested now. Thus every duck destroyed stands for several which might live. There are a few hunting clubs in the State which have bought or leaged tracts of marsh where the ducks are allowed have bought or leased tracts of marsh where the ducks are allowed to live through the summer and breed without molestation. This plan makes the best of shooting in the fall at those places, and but for them the ducks would be nearly exterminated in Wisconsin.

Comparatively little spring shooting is done along the Atlantic seaboard, for the very excellent reason that there are few places where birds are to be found, and few birds to shoot, but in the West the case is different. The experience of a number of clubs in Western States has shown conclus ively the advantage which may be derived from the prohibition of shooting at this season over limited areas. On the grounds of the Winous Point Club ducks are protected in spring, and as a direct result of this protection, the birds are wonderfully numerous and tame in the autumn.

It is, perhaps, hopeless to think of inaugurating the abolition of spring shooting in the East at present. The miserably foolish and short-sighted action of the Legislature of the State of New York on the deer hounding question, recently, shows how narrow and petty is the view taken by our legislators on the subject of game protection. Still, people are being educated, though very slowly, and we trust that a few years more will see game of every kind protected everywhere for all the year, except a short period in autumn and early winter. The recent change in the Canadian game laws, and the change of sentiment among sportsmen, point to an awakening on the importance of a general alteration in our laws, and as soon as the shooting public begin to think seriously on this matter it will certainly be brought to the notice of the different State legislatures in a way that will compel their attention.

MAINE AND ADIRONDACK WATERS will soon be open for the angler, and many gentlemen are anxiously availing the telegrams which shall announce that the ice has gone out.

VOL. XXVI.-No. 14. Nos. 39 & 40 PARK Row, NEW YORK.

FOREST PROTECTION.

T is well understood that whatever the damage done by the reckless cutting away of our forests, this injury is inconsiderable when compared with that caused by forest fires. Those who are familiar with the mountains of the Far West have seen the fearful havoc there wrought by fire, and know a long way off the cause which gives to many a lofty mountain its curious silver-gray appearance. For years after being burned over, the dead and bleaching tree trunks stand as witnesses of the terrible destruction brought about by carelessness or malice. The loss of life and property caused by forest fires in Michigan is too recent to have been forgotten.

The importance of this matter has long been appreciated by those who have to do with large forest areas. One of the principal duties of the police of the National Park is the guarding against the spread of forest fires, and the value of their services is shown by the fact that in the Park, a country especially liable to this scourge, there were last year no forest fires of any considerable magnitude.

The New York Forestry Commission recently adopted a series of rules and regulations for the protection of the Adirondack woods, which are as follows:

First. All persons having occasion to hurn a fallow or start a fire in any old chopping, wind slash, bush or berry lot, swamp, "vlaie," or beaver meadow, for the purpose of clearing or improvement, shall give five days' notice of such intention to the nearest fire warden, forester, or agent of the Forest Commission. He shall also give

previous for agent of the Forest Commission. He shall also give notice to any neighbors who may have fields or woodlands adjacent and liahle to injury at least one day previous to the setting of such fires. Such fires will be permitted only when the wind is favorable, and competent persons must remain on guard until the fire is com-pletely extinguished on the surface and in the "duff." Second. All hunters, fishermen, loggers, guides, tourists and others lighting fires in or near the forest for cooking, warmth, insect smudges or other purposes, must clear away all combustible material from within six feet of the place where the fire is to be kindled, and must thoroughly stamp out, drench, or otherwise extinguish any such fire upon leaving it either temporarily or permanently; and hunters using firearms with inflammable wadding are hereby cau-tioned against allowing fires to start from such causes. Third. Smokers are cautioned in regard to fires arising from any carelessness of theirs, and their attention is called to the penalty for negligence in causing fires. Parents and teachers are respectfully requested to instruct children to avoid lighting fires in the forests or

requested to instruct children to avoid lighting fires in the forests or

Fourth. Peeling standing trees of their hark for covering camps or sharties is hereby prohibited. For such purposes the tree must be felled, and all the available bark removed therefrom before another tree is cut down. The trees thus felled must be utilized for firewood, and such fallen timber as lies in the vichity of the camp must also be used for firewood before any green standing timber is cut for that purpose.

The fourth of these rules implies a measure of license inconsistent with any high standard of forest conservancy; and although, so long as no market exists for the timber, it would perhaps be a dog-in-the-manger policy to impose severe restrictions on the utilization of forest products by camping parties, it is desirable that restrictions be imposed on the barking or felling of pine or spruce for any purpose. Camping parties should bear in mind, too, that the sanctions implied in this rule cannot extend to forests in private hands, the owners of which have a right of action for damages for any tree felled on their property. These regulations should be carefully read and remembered by all those who contemplate camping out in the Adirondacks this sum-mer, and advantage should not be taken of the liberal spirit in which the fourth rule is framed to perpetrate reckless waste. Sound growing timber, so situated that there is room for its development, should never be felled, for although it have no immediate market value, it may be in active demand in another decade or two.

It is well known that careless hunters start a comparatively large number of the fires which spread and involve large areas, and too much care cannot be exercised with regard to the proper selection of the spot for the fire and its thorough extinguishment before leaving it.

IN ANOTHER COLUMN will be found that portion of the report of the New York State Fish Commissioners which relates to the protection of fish and game in this State. The document is an important one and contains many suggestions and recommendations which deserve the attention of our legislators. The position taken by this report on the deer hounding question, shows that the Commissioners hold sound views on this subject. The recommendation for the appointment of a Superintendent of game protectors is in line with what we have strongly urged. The report may be read with profit by all who are interested in game and fish protection, and it deserves the prompt attention of the New York Legislature.

The Sy rtsman Jourist.

DAYS AMOI.G THE ALLIGATORS.

<text><text><text><text>

whenever we got nearer than he thought conducive to his safety, would lower himself under the water and come up again in a short time further off. After making several in-effectual attempts to get near enough for a shot, I adopted a strategy that worked finely. Padding the boat toward him-mutil he went under, we rowed rapidly some distance beyond where he was last seen and remained quiet, with rffle cocked and ready. I had heard they could only be killed by a shot in the eye and I wanted to be near enough to hit that organ. We had waited but a few minutes before he rose to the surface, in thirty yards of the boat, and just where I was looking for him. Before he could get his head under again I fired at his eye. He was lying broadside to me. In an instant there was a wild commotion and churn-ing of the water into form. In a few moments he ceased his contortions, and sank quietly to the bottom. Approach-ing the place we could discover ari bubbles rising rapidly from the water over the place where he lay. There was in the boat a stout fish gig used for gigging the huge bufflo fish that were found in great numbers in the lake. It had three strong barbed iron prongs and a stout handle about the feet in length. With this I felt about on the bottom until I touched the body of the alligator. The water was about eight feet deep. He did not move when I touched him and I soon discovered I was in a very combarnssing predicament. It became at once a serious question whether it was best to turn him loose or far he would in his contortions upset the bottom of the laikc and the boat. Fortunately he soon ccased his struggles, but not until my hand was bilstered in holding the handle of the gig. We succeeded in towing him to the okan and found that the rifte ball had struck him in the eye, and plouging through from side o side, had put out the other eye also. He was still not dead, but make our further resistance. More four or give miles down the lake for a hige and to add as a struggles, but not until my hand was bilstered

in front of them. The ball striking this will be almost sure to glance and leave the alligator unharmed. I had several times noticed an unusually large one in my trips to the lake that, in swimming on the surface, exposed almost the entire length of his body above the surface, exposed almost the entire length of his body above the surface of the water. He was so wary that I had found it impossible to get in rifle shot of him. I had only an old-fashioned squirrel rifle. Every time he caught sight of me, if two hundred yards away, he would move off to safer quarters. I determined to get him if possible, and arranged a drive for him. Taking my stand cautiously on a point of land and behind a large cypress tree, on the bank of the lake, about three hundred yards below where I saw the old fellow float-ing on the water, I sent a negro man, whom I had taken along for the purpose, in a boat several hundred yards above him, with instructions to approach him very slowly and carefully from a point opposite to the place where I stood. As soon as the alligator discovered the negro approaching in the boat, just as I expected he would, he began to move in my direction. He seemingly suspected the trap set for him, however, for he soon got in the middle of the lake, which was about two hundred yards wide at the place, and putting on a full head of steam came down the lake like a young steamboat. When he got opposite to me I fired, and he quietly sank under the water. I was satisfied I had not hurt him, and yet, from the fact that the ball did not strike the water, I felt confident I had hit him. The bank here was high and tolerably steep with a number of old cyprost trees standing on the slope. I had a companion with me, and we selected a place about half way up the bank and sat down on a log to eat our lunch. We were screened from the lake by the truuks of two or three large trees. Immediately below us the water was deep and it was a favorite place for alligators to float. The weather was

Hatural History.

THE AUDUBON SOCIETY.

The AUDUBON SOCIETY during the past week has been one of steady and gratifying progress. Additional secretaries have been appointed, and those already the week has been one of steady and gratifying progress. Additional secretaries have been appointed, and those already at work have been steadily increasing their membership. Additional secretaries have been organizing their forces for the directing of public attention to the movement, the clergy have responded warmly to the appeal for co-operation where of the fair hearers with a sense of the enormity of the appeal for co-operation where the consequences of which they had never before given a passing though. The Movement, and a few schools have been canvassed; in all cases with results indicating that the pupils were very generally impressed with the prostile institute, this State, heads the weekly list with a contribution of a hundred and twenty-six members, mostly pupils. Certificates of membership have been issued at an average rate of two hundred daily, and being really attable, course has been adopted; attention has been directed adormand in the artistic evidence of it. With the more advanced students of our colleges a different, but equally uitable, course has been adopted; attention has been directed adormanet, and to the Adubon movement for its subversion, and the students instructed to study the problem, and make it the subject of competitive themes or command adorment, and to the Adubon movement for its subversion, and the subject of scores total absence of small bird plungage is due to a charge of sentiment on the part of their customers. There is a general unanimity of assertion have since been countermanded. In the smaller towns the millinery have been interviewing the Autoruous secretaries and very spreading over the whole mation, success will follow in an ever accelerated ratio. The best people of the farber of the general interest anoused by the movement, which we since been countermanded. In the smaller towns the millinery bave been effect the i

MORE TRUTH THAN FIGTION.—Seene in court—A small boy, caught in the act of shooting birds, has been arrested for truancy. Officer—"This, your honor, is the young truant and bird shooter." Judge—'1 am deeply distressed to see you, so young a lad, so cruel. Do you not attend hoth day and Sabbath school, where you sing beautiful songs about the lovely birds and their little nestlings? And does not your own mother teach you when you say your prayers at night, how wicked it is to shoot the dear birds?" Small boy—'Yes, sir." Judge—''Then you must be depraved in-deed! Your extreme youth would certainly demand clem-ency. If you were an outcast, an orphan I—" Small boy— ''Then, judge, I wouldn't ha' done it. "Twas for mother's hat. That bird was ten times prettier 'n the one in your wife's bonnet, 'cause I seen it last Sunday in Sunday school. She's my teacher." Judge—'Oh! Oh! yes! A case of necessity, I see. You were not shooting in mere, wanton sport; discharge the boy and bring on the next case."— *Portland Transcript.*

THE SPARROW HAWK'S SERVICES. Editor Forest and Stream:

Editor Forest and Stream: I perceive that Dr. Elizey is somewhat incredulous as to the exactness of the information I gave him in the last issue of the FOREST AND STREAM relative to the grass-hoppers of this locality, but as he intends to seek counsel of an expert and to put "Professor Riley on the stand," I am quite content, and willingly leave him to the care of the Professor, trusting that the pupil may prove worthy of so good a master. If he will apply also for information to Mr. Theodore Per-gandie, Prof. Riley's assistant, who is particularly well posted on the Orthoptera of this vicinity, he will, I think, find the statements made in my letter fully corrobo-rated.

ted. As the Doctor is on the right side of the sparrow question,

ind the statements made in my letter fully corrobo-rated. The bottor is on the right side of the sparrow question, or as he correctly terms it, the "sparrow nuisance," I shall be able to forgive him even if he guest a strain on his inclina-tion and "forces me to the walt." The value of the sparrow hawk did for a living in winter about Washington prior to the advent of the English spar-row, I am unable to say of my own knowledge, as that period preceded my residence here. What evidence has the port of that the sparrow hawk wintered here in those by-gone days? If he did—a point I am doubtful upon—I wish I could believe he lived entirely on mice with an occasional grasshopper thrown in, and that his taske for small game to be ound about here in winter in the shape of tree sparrows, field sparrows, snowbirds, etc., and a sparrow hawk ambi-tions for such dainties would have had little difficulty in gravitying his preference. The bould only be too glad to accept Dr. Ellzey's statement forbid it. Too many sparrow hawks have been scen to pounce upon small birds, and too many have been shot with the remains of various species of birds in their stomaches to remains of various species of birds in their stomaches to remains of various species of birds in their stomaches to remains of various species of birds in their stomaches to remains of various species of birds in their stomaches to remains of various birds. Let me hasten to add that the destruction of insectivorous birds, by the sparrow hawk is, so far as I have been able to ascertain, an inconsiderable in the statement with the good it does, and that in making in the sparrow hawk lives more or less upon field mice I have freely admitted, and the farmer ought to remember the fast to the bird's credit, since there can be no doubt of the fast to the bird's credit, since there can be no doubt of the fast have been able to assertian, an inconsiderable in the sparrow hawk lives more or less upon field mice I have freely admitted, and

Justify a statute of the new statute of the period as the sparrow hawk.
It is well known that in fall, owing to a scarcity of food, birds leave their summer haunts and winter South or where food is abundant. Mice cannot be said to migrate. They are as abundant in the North in winter as in summer, and form a very considerable part of the food of several species of owls, whose especial value to the farmer is due to the fart that this warfare against mice is not intermittent, but persistent. The owls keep watch and ward when other natural checks upon the mice, as the snakes and most of the hawks, are off duty. One of the hawks, however—the rough legged —stands nearly or perhaps quite at the head of the list as a check to the increase of mice.
If, then, mice form the chief dependence of the sparrow hawk, as Dr. Ellzey asserts, will he explain why it is that the great majority of sparrow hawks leave home—which birds rarely if ever do so long as food is plenty—and go South to winter? If so large a bird as the rough-legged hawk, one of the largest of the family, finds mice enough to live. upon far north of the winter home of Sparreerius, why should not the sparrow hawk? The truth is, the majority of Sparrerius go far enough south to find plenty of their favorite fare at home.
I have no doubt that were grasshoppers abundant about twashington all winter—which I stated they were not, though some are to be found every month in the year—the sparrow hawk would be a common winter resident here instead of being, as it is, a rare one.

though some are to be found every month if the year-ade sparrow hawk would be a common winter resident here in-sicad of being, as it is, a rare one. Dr. Ellzey appears to overlook the important fact that from an economic point of view, the destruction of grass-hoppers entitles the sparrow hawk to the gratitude of the farmer no less than does the destruction of mice. This is not the case, of course, in the East, where the grasshopper is not seriously destructive: but it is the case in the West, where the insects have proved a veritable plague, and it is precisely in the grasshopper-infested portions of the far West that this little hawk is most numerous, more so than it is anywhere east of the Mississippi. In many sections of Col-orado, Arizona and New Mexico, for instance, the sparrow hawk is found, or perhaps I should say was found, in sur-prising numbers, and rarely indeed are they to be seen feed-ing upon anything but grasshoppers and crickets. The number of insects destroyed by these hawks and by their young—for I have seen them feeding their young with grasshoppers—is simply beyond calcula-tion. Notwithstanding this fact, and the no less important one that when grasshoppers are abundant the large Swainson's hawk also feeds almost exclusively upon these insects, the Legislature of Colorado passed a law a few years ago offering a bounty on hawks without discrimination of species. The result was that in 1883 I found that the spar-row hawk had been almost exterminated in districts where several years before they were exceeding thousands of dollars to exterminate birds whose value to agriculture is almost inspecies of hawks destroy more or less insectivorous birds, game birds and poultry, there is no room to doubt that the economic value of the hawk tribe as a whole is very great. In one part or another of the country the various species of hawks and owls are busy the year round in checking the increase of mice and grasshoppers. In this silent and ill-requited service of man the little sparrow hawk play

spicuous part, and, as Dr. Ellzey says, it is shameful folly to destroy them. A. W. HENSHAW. WASHINGTON, D. C., April 24, 1886.

WASHINGTON, D. C., April 24, 422 Editor Forest and Stream: I notice that Dr. Ellzey is inclined to doubt the exist-ence of warm sunny days around Washington during Jan-uary and February, and especially the presence of grasshop-pers thereon, as asserted by Mr. Henshaw. He asks, sar-castically, how many grasshopper days there are between Dec. 1 and May 1, and announces his intention of calling Prof. Riley to the stand. I have a record in my note book under date of March 18, 1983, of finding three grasshoppers, of the species Acridium alustaceum, in lively condition, while passing through an open field near the Aqueduct bridge. At the same time there was ice under the shadow of a rock in Spout Run. One of Prof. Riley's assistants was in our party. While I have no other record, I am sure that I have scen grasshoppers in February. HENRY LITCHFIELD WEST. WASHINTON, April 23, 1836.

HENRY LITCHFIELD WEST. WASHINTON, April 23, 1856. AN OLD AND VEXED QUESTION.—When I was a boy, a long time ago, I read in the brilliant pages of "Frank For-ester" that the partridge could withhold his scent at will, and I thought to myself how much more F. F. knows about huuting and shooting than any other man in the world. Lewis and Hallock repeat the same thing; and, in my humble opinion, a more fanciful thing never took hold of men's minds. It is about on a par with the idea that at the first white frost the sora, every one, turns to a frog and lives in the mud all through the winter. I have never seen a covey of birds settle and marked the spots at which they alighted with accuracy that I did not find all or nearly all if I went straight after them. But whenever I have waited to give them time to let go their scent, which I have frequently done in close cover in order to take advantage of good hunt-ing ground between me and them, I have always been left. Like the Arabs they have folded their tents and silently stolen away, knowing full well that that is the sensible thing to do. It may be true that from excessive fright the par-ridge will press his feathers so close to the body as to sup-press all exhaltions, but I doubt it. I have and my life been hunting with intelligent huntsmen (who, however, were not up in sporting literature), and I have never yet seen one who would cave a flock of birds that had been flushed and marked down and go off after another flock so as to give the other follows time to let off the effluvium. The truth is, hardly half of the men who hunt partridges are good at marking them down. They see 'em flying in a certain direc-tion and imagine they are going to alight in a particular swamp or slock to rbush. Off they go and fail to find. Then they say they have all corked up their scent bottles, justas "Frank Forester" tells us is their habit. I would like very much to hear from Dr. Ellzey on this subject. He is not only a gentleman of culture and scientific information, but withal

SPRING NOTES.—Salem, Neb., April 16.—Cranes arrived here March 18, killdeer plover March 19, golden-wing wood-pecker April 3, blackbirds and robins about a week earlier, bluebirds (*Sialia sialis*) have been here nearly all winter. I saw the first turkey buzzard this season April 9. There is another bluebird sometimes seen here that is smaller and darker blue than *Sialia sialis*. What are they?—J. F. L. [Perhaps *Sialia arctica*, a common species in the mountains to the west of you, but only accidental on the plains.]

THE TRAJECTORY TEST.

THE full report of the FOREST AND STREAM'S trajectory test of hunt-ing rifles has been issued in pamphlet form, with the illustra-tions and the tabular summary, making in all 96 pages. For sale at this office, or sent post-paid. Price 50 cents.

GAME AND FISH PROTECTION,

class of offenses, but as obedience brought unpopularity rather than profit, there were few arrests and fewer punishments.

ments. Game laws were regarded as infringements upon natural right, and until the rapid disappearance of game from the forests and fish from the waters awakened the attention of thoughtful economists, the laws were violated with impun-ity. In some places the choice of game constables was made in good faith, and the enforcement, which followed, of laws long set at maught, gradually led to a more wholesome pub-lic sentiment. It was to this sentiment that the passage of the law was due, creating the office of game and fish pro-tector and the amendatory act increasing the number and making them accountable to the Fish Commissioners was the result of the defects discovered in the first three years' working.

the result of the defects discovered in the first three years working. The monthly reports in full of the protectors would take up too large a space and furnish more of detail than is ne-cessary in a document like this. The Commissioners have, therefore, called on each protector for a summary of his work for the last year, which will be found at the proper place in the appendix. A statement of the nnlawful devices seized and of the penalties recovered during the last year, is furnished in the following tables: NETS AND OTHER ILLEGAL DEVICES DESTROYED IN 1885.

Tenth District.— All that part of Onelda lying north of the south lines of Verona, Rome, Marcy and Deerfield, all of the county of Lewis lying west of the west lines of Diana and Croghan, and all of the county of Herkimer lying south of the south branch of Moose River. Nathan C. Phelps, pro-tector, Remsen, Onelda county. Eleventh District.—The counties of Otsego, Chemung, Broome, Cortland and Tioga, and all the towns of Onelda county lying south of the south lines of Verona, Rome, Marcy and Deerfield. Frederick P. Drew, protector, Wash-ington Mills, Oneida county. Twelfth District.—Jefferson and Oswego, except Oneida Lake. William N. Steele, protector, Clayton, Jefferson county.

County. Thirteenth District.—Madison, Onondaga, Cayuga, Wayne. Seneca, and the waters of Oneida Lake in Oswego and Oneida counties. W. H. Lindley, protector, Canastota, Mad-termenter

Fourteenth District.—Sch kins, Steuben and Allegany. Yan, Yates county. -Schuyler, Yates, Chemung, Tomp-ny. John Sheriden, protector, Penn

ns, Statter and Frieger an, Yates county. Fifteenth District.—Monroe, Livingston, Ontario, Wyo ing. Genesee and Orleans. Geo. M. Schwartz, protector,

Filteenth District—Monroe, Livingston, Ontario, Wyo-ming, Genesee and Orleans. Geo. M. Schwartz, protector, Borfaol, S. A. Roberts, protector, Buffaol, Eric conty.
The terms of office of all except Mr. Stele, Mr. Brunckar-bof and Mr. Drew expire on or hout July 20, 1886; these three hold nutil May 12, 1887. The term is three years, unless a removal is made meanwhile for cause. In one respect, but in this only, can the protector system be said to have worked contrary to its purpose. It was not intended that this system should supplant all others having the same object, but that the State force should work, co-ordinately with the local officers already provided. There is much of the work that any be done more promptly and at less cost by the regular officers already provided. There is much of the work that may be done more promptly and at less cost by the regular officers already provided. There is much of the work that may be done more promptly and at less cost by the regular officers already provided them imperatively to take notice to seed the couplaint has been made to them of violations of which the law required them imperatively to take notice to the detection and punishment of officers, and the adverted the search of the law required them inperatively to take notice to early the order to the protector. We this the second for the detection and punishment of officers, and the detection and punishment of officers, and the detection and punishment of officers already to rable, reproduct of the service of protectors. If a partridge be trapped, or a pick-reproduct of the district, the has one may be done more year years and the protector and the services of deer shaughter or robbery of spawning bed is reported from some other part of the district, he has on one near to pay bia type and the services and the protector for the refer any expanse. If the group refers the splith, were in cases when his host is the principal beneform some other part of the district, he has no lay reprives a large scleady near

Of this class there are many in the State. It would be in-vidious, perhaps, to name any particular one as an example, but they are known to the public by their works. They are increasing in numbers and usefulness, and are doing more, perhaps, than any other means to promote a healthy moral scntiment in support of the game laws. They are the co-ordinate remedy which the Commissioners recommended in all places where other means have been found insufficient for local protection. Our letters of instruction to the pro-tectors have enjoined on them the importance of these so-cieties and of their keeping in active working relations with them.

Them. If the honest, law-respecting people of any locality in the State, will unite in an organization, pledged to support the game laws and to stand firmly by each other and by the law, without fear or favor, there will be no barns burned, or boats destroyed in that locality, by poachers.

Of all classes these are the greatest cowards, except those who are afraid of them, and they will yield always before a

bold front. Wherever there is a determination on the part

bold front. Wherever there is a determination on the part of good men to give the laws honest and brave support, public sentiment will not lag behind. Not all of the professed protection societies are of the class described. There are some with good purposes but without efficiency, and others whose objects, whatever their profes-sions, are wholly selfish. Beyond the protection of the par-ticular game they covet, they have no interest. There are still others which under cover of specious titles are the shield of other law breakers, or are themselves law breakers. These organizations are best known by their high pretensions and small performance.

get his suits before the courts. In such cases, though he may succeed in getting trials and verdicts in his favor, it is uncertain whether he can hold his claim for moities of the penalties, which arc so necessary to make up the shortage of his expenses. If the game laws are to be enforced, it is important that the district attorneys cooperate promptly and efficiently with the protectors. The law does not excuse neglect in a prosecuting officer any more than it does in a protector. It is useless for the latter to spend time and money in getting up cases that are never to be tried, or are put off till the chance of conviction is lost. The ingenuity of the practical poacher in dodging the penalty of the law makes it doubly necessary that the prosecuting officer any watchful. Cases occur where the shrewdest are outwitted. One is reported from Steuben county where the protector detected a man in unawful fishing. He lost not time in bringing suit, but before process could be served, the poacher had procured a friend to complain to a neighboring justice. The willing defendant pleaded the justice's judgment as a bar. Though it was apparent from the evidence that the proceedings were not only collusive, but otherwise irregular, with a strong suspicion of fraud, the court held for the defendant ingument sus taken to the General Term, where the judgment was, strangely enough, affirmed, the court sustaining the technicality and overriding the merit. This was a faster to the district attorney performed his duy at y and faithfully. It was not his fault that "the law's an ass," but it was the misfortune of the people of the county, who a distribution of the uponts.

<text><text><text><text><text><text><text><text><text><text><text><text><text><text><text><text><text><text>

The guides say, "Give us a limited hounding season and we will aid you against the poachers. Deny this and we are no longer your allies." This is the case as it stands. The pretext—it does not deserve to be called an argument—that deer may be best preserved by running them with dogs, is too shallow to be worth scrious notice. It might be as well claimed that the best way to keep ducks on their feeding grounds would be to turn loose upon them each day a bey of hawks, or that to make trout plenty in the streams it would be useful to put in a school of pickerel to keep them stirring. A further sequence to this claim would be that the farmer or eattle grower desiring to increase his stock should turn into his pasture a pack of dogs to keep the cattle ively and put them in good multiplying condition! There can be no doubt that if all the interests concerned would unite in modes, the deer would lose their extreme wildness and be accessible to the hunter at any time during the season when to the fash is suitable for food. But, unfortunately, it is one of the failings of human nature to see things, each man for himself, in the light of his own interest. In this case the public interest conflicts too much with selfish interests to courage hope of unanimity on any measure. They be that less deer will be unlawfully slain if the gives them at other times. It is no uncommon thing in modern legislation to set aside principle for expediency. The caysiature will judge for itself whether such a course would be useful principle for expediency. The them to secure the observance of any enactment the Legislature will go for itself whether such a course would be the to be set aside principle for expediency. The caysiature will go the subject.

ECHOES FROM THE PACIFIC.

<text><text><text><text><text><text><text><text><text><text><text><text>

thirsty as we were. (How would you like to spend an hour or two of each day's hunt in such a place, where you would have to steer your way through rows of vines above your knees, bearing their loads of from three to five tons of lus-cious grapes to the acre? You could do it in this part of the State and never be ordered off the place.) Well, when we were about to go the owner expressed surprise that we had found no birds; for, he said, he often encountered them in the vineyard, and the darned things had even gotten away with tons of his grapes. We told him that we had seen evi-dences of ravages among the vines, but thought he must be mistaken about the quail—that we did not believe they were the cause of it. It happened that when we left the house to prospect the vineyard, a greyhound sneaked out and fol-lowed us until we returned. He paid no attention to our dogs, but seemed to be on the lookout for harcs. These being scarce, he put in his time tearing off bunches of grapes and cating others from the vines. We watched the brute with some interest, and found that within an hour he had de-stroyed not less than one hundred pounds of grapes; and doubtless this was a part of that hound's daily business on the ranch. His owner, when informed of the above fact, said he had seen the dog occasionally eat a few grapes, but had no idea he was so destructive; and, finally, he admitted that between the various kinds of birds that frequented the vineyard, the hound, and the rabbits, the damage to his grapes might be accounted for. Now, this was his first year in the country; he had bought the vineyard from the origi-nal owner, and knew nothing whatever of the habits of quail or other residents of the forests about him, but had accepted without hesitation the opinions of ignorant neighbors to the effect that all injuries done to vineyards are chargeable to the quail.

without hesitation the opinions of ignorant neighbors to the effect that all injuries done to vineyards are chargeable to the quail. These are the kind of people who influence legislation in matters of this kind. Ooly a few years ago some game butchers got around a board of supervisors in one of the mountain counties and induced them to pass a local ordinance extending the open season for deer shooting beyond Nov. 1 and up to Jan. 1. They found an old and obsolete provision in our codified laws, which—by a far-fetched construction— seemed to give them the power to do. The object was to enable parties to slaughter deer in the deep snow, when the poor things could not get away. The cue was taken in other counties, and deer were killed openly, in defiance of the general State law of 1881, all through the foothills. The infection spread like cholera, and it looked for a time as if every county in the State were going to have its own game regulations, or, rather, that each was trying to outdo the State. I fought the efforts of these creatures from the start through the public press, despite the opinions of some lawyers, who held that local boards of supervisors had the right to suspend the State law. Local journals in these mountain counties sided with "the boys" of their respective villages, and denounced me personally, and at least one of the San Francisco dailies, which gave some attention to

Finally we ensconced ourselves in the batteries and waited for the birds. The first lot that came along were broadbills, and when our guns spoke, four dropped among the decoys, and the rest, with hurried flappings, winged their way to the westward. Then came some coots, then some redheads, and we had good sport. "Here comes a single broadbill," said Harry, "you take bim"

him

ABOLISH SPRING SHOOTING.

ABOLISH SPRING SHOOTING. Editor Forest and Stream: It is not my intention to overload the waste basket that leads me to write you again, but knowing that your good paper is always in the lead in pushing any cause that is for the interest of our true sportsmen, I wish to ask if you will not lend a helping hand in stopping spring shooting of all kinds. I have just returned from a four days' pleasure trip, and will own that I was guilty of shooting dueks, but let me add that the bag made by two of us in the four days was less than that made by many in three-quarters of a day. I realized more fully than ever before the harm done by allowing the war on our game to go on in the spring. I know that the pot-hunter will object, but what of that; he would shoot the mother duck while feeding her young, or steal the eggs and sell them before they were hatched, but I am sure that every true lover of the sport will gladly put his shoulder to the wheel and help along so noble a cause. Let us hear from our brother sportsmen from all along the line, and see if there is not some way to check this growing evil. It is folly to argue this question in the least. If spring

The, and see it ther is not some way to check this growing evil. It is folly to argue this question in the least. If spring shooting continues we will soon have no shooting at all. What stronger or more foreible proof does any one want than the lesson taught by allowing the theres to trap and slay our pigeons? Yet the war goes on, and in a very short time that splendid bird will be numbered among the things of the past. Look at the game markets in our large cities to-day. Count the dozens of ducks that come in, and then count the thousands of poor birds that are allowed to spoil and find their way to the dump pile. But I have said enough; let others better fitted to do the cause justice come to the front and help to keep the stone rolling. I am sure we are in the right, and have on_our side the God of justice and humanity. BATAVIA, III, April 13. BATAVIA, III , April 13.

FLIGHT OF BULLETS.

EATAVIA, III, April 13. FLICHT OF BULLETS. Editor Forest and Stream: The adding of the erratic flight of bullets brings to my mem-ory an incident in my own experience. In my youthful loading shotgun, 'Indian Chief' we used to call it. It had been changed from flint lock to a percussion cap gun, and many a day's sport did I have with it. In an unfortunate moment one of my younger brothers suggested the idea of getting a pair of moulds and casting some bullets for it. The moulds were procurred and the bullets cast. They wighed about one ounce each. Wishing then to test the powers and accuracy of the old Chief, we set to work and made a target, which consisted of an inch pine board marked off with circles and a bullseye. We do that time in the village of H., and were sur-rounded by neighbors, the nearest of which, on the right, was a Dr. V., whose house was only a few feet distant. After finishing the target I went out behind the coach house and placed it against a small building. A large garden and lawn separated us from our neighbor on the lett. I roaded the Cuief with the usual quantity of powder, and arammed the big bullet down good and solid, then stepped across the lawn and garden, aimed at the bullesyee and lath the bullet would more than pass through the target. I crossed to examine my target, and was rather surprised to for rubbist. Upon tracing the bulget's flight found it had passed through two sides of the bogshead, thence through a building, behind which stood a bogshead used as a receptacle for rubbist. Upon tracing the bullet's flight found it had prize to find that it had passed through the side of the doctor's kitchen and saw the bullet hole there, and then I legged it for the house with my gun, told my brothers to prive to find that it was invited to accompany the doctor's. The my hair began to rise. I examined the side of the doctor's voice inquiring from my mother of her hopeful's white house had entered having gassed through the side to the doctor's voice picket it.

It did not need the doctor's lecture to thoroughly scare me and impress on my mind the criminal foolishness of target practice within the bounds of a village. AL, GRAVENHURST, April 19.

of dogs. Since the construction of the New York, Philadelphia & Norfolk Railroad through our county, its accessibility is as convenient as could be desired. Eight hours from New York and six from Philadelphia, with fast express trains each way three times a day. MAPPSBURG STATION, Va., April 7, 1956.

MASSACHUSETTS POACHING.

<text><text><text><text>

The Massachusetts Fish and Game Protective Association The Massachusetts Fish and Game Protective Association has been asked to send detectives to eatch these smelt poach-ers, and men might readily be found who could apprehend them; but the task is a costly and thankless one where the offender when caught must be allowed to depart in peace, because hc is not worth a dollar. SPECIAL,

BAY COUNTY SPORTSMEN'S CLUE.—Bay City, Mich., April 20.—Editor Forest and Stream: About six weeks ago the Bay County Sportsmen's Club was organized, and the 12th inst. the first annual election washeld, when the follow-ing officers were elected: T. F. Shepard, President; J. R. Hall, Vice-President; F. H. Durell, Secretary: L. R. Russell, Treasurer. Directors: T. F. Shepard, President; F. H. Durell, Secretary: Benson Conklin, H. P. Warfield, C. A. Eddy. The club starts off with a membership of 175, and with every prospect of success. Had trap shooting practice last week under national rules. Have a fine boat house in contemplation.—F. H. D.

Goose AND TURKEY SHOOTS.—In your issue of April 15 a correspondent gives his experience and success with a light you. The methods used at that match were the same that were in vogue in this section, although I never heard of such until about two years ago. Last Thanksgiving ten turkeys were advertised for a shoot under rules similar to those detailed by your correspondent, except that a small circle—about two inches in diameter—was pinned to a board, the pin being placed in center of paper, and the pellet nearest the pin won. Our experience in loading was different from that mentioned, as we used four drams of powder and one and one-fourth ounces shot, in a 10-gauge L. C. Smith gun, and that proportion seemed to work well as we—a friend and myself—won seven of the ten turkeys. After the ten were shot off a gentleman offered to put up a turkey at a certain gap in the fence—afterward found to be fifty-fire paces—at five cents per shot. A gentleman handed me a charge of No. 4 shot, and the first fire killed the turkey. Then an envelope was put on the snow, and three pellets of No. 4 were put in it at the same distance. Two years ago this method—shooting at paper targets—was much in use here, and at first a large number of guns attended, but, as your correspondent states, the numbers soon dwindled. There of us, by taking only two chances on each turkey. You quite a large number, and after eating and dividing with neighbors, we had enough to get up a shoot, and de-clared quite a dividend on the investment. I never went to a shoot but that I did well, although I tried several guns and arying proportions of powder and shot. These shoots oc-visor, while in the field one Sunday, saw a great comution of the season and to furnish a topic for discussion. Game here is scarce, even the hawks seem not always particular in phoice of food, as last fall Mr. P. S. Thornton, ex-super-visor, while in the field one Sunday, saw a great comution among the crows, and going there, found a hawk cating a cumstance unusual? I never hear

CELLUS. SPITTING ON THE SHOT.—Umpqua Ferry, Ore., April 13. —I see by FOREST AND STREAM of April 1 that "Bedford's" style of bringing good luck—spitting on the shot—is some-thing new to you. I can't say who taught it to me, but I practiced it when a boy and saw others do it. When hunt-ing quirrels with a smooth-bore yager, if I failed to kill the first shot I always spit upon the shot before loading for the second, and imagined the slaughter was more bloody for so doing. But if I thought the load would remain iu the gun for any length of time, I refrained, for fer of rusting it with the wet shot.—YAGER. Mansüeld Valley, Pa., April 21.—I did not spit on the shot to make it throw close, but in muzzleloading days we used to oil it. It would make 'em stick together "closer than a brother." but would bunch them, sometimes seven or eight pellets striking in the same place; and it was sure death to anything a bunch like that would hit as they would separate as they struck, the result being much like an explosive ball. —J. H. B.

How THE BIRDS WINTERED.—Salem, Neb., April 16.— Quail fared badly here last winter, particularly along the hedges on the prairies. The snow drifted so that they had to get out, and then, being scattered and no cover, dozens of them were frozen. Prairie chickens came through all right; they had plenty of feed, as a good deal of corn was left in the fields over winter, some in shock and some stood out ungathered.—J. F. L.

COMING OF THE GEESE.—Campbellton, N. B., April 19. —Editor Forest and Stream: The wild geese have thus far failed to make their appearance here this spring, except a stray one seen flying past now and then. The sportsmen have their ice houses and decoys in place as usual, but have not bagged one yet. Other seasons at this date scores were shot.—HERMIT.

CAMPS OF THE KINGFISHERS. CARP LAKE, MICHIGAN .-- IX.

THE rain held on that particular morning till near noon when it eased up to a steady drizzle; but the lake was too rough to fish, and the only haven of comfort to be found for the girls was inside the big tent, in front of which a good fire was kept going. Here also the cribbage war was re-sumed, the opposing generals snugly ensconced in a corner out of the wet and cold. The note book (mental) records, that this headly months

sumed, the 'opposing generals snugly ensconced in a corner out of the wet and cold. The note book (mental) records that this beastly weather prevailed till nearly the end of the week. Cold wind and rain every day and night, with only an occasional let up of a few hours at a time, and in consequence there was hitle fishing done in the lake; only enough to keep the camp "sortin' bones" and prevent a "side meat odor" from getting a too firm grip on the frying pans. But in face of all these drawbacks the girls were cheerful and happy, which was a great comfort to us, for we had rather looked for some grumbling and a fit of homesickness to attack some of them; but I am constrained to say the growling was mostly confined to Hickory and Hyperboler, and the growls were mainly directed, in a general way, at the weather clerk. After dinner (we had appetites if nothing else, and took three square meals a day, to say nothing of lunches), Ben cast his weather eye up and down the lake, fidgeted awhile on his seat, and beckoning me to follow said, as we left the shelter of the fly: "Hickory, I've got to do a leetle plain cussin' or bust. Le's go out behind Dan's tent, where the

gals can't hear us, an' hey a private cussin' match to our-selves on account o' the existin' state o' this weather." It is needless to chronicle the remarks made behind Dan's tent, the conference ended in our going back to where our rods stood on the dry side of the big popple tree, selecting two for our purpose, and with a box of worms strapped to our side taking the road up lake along the hills for the trout stream near Alexander's point. We splashed along through mud and puddles of water, stopping here and there to pick a handful of luscious red raspberries more tempting than their fellows, that seemed to grow along the road in inviting clusters for the sole purpose of beguiling us from our mission, till we came to the stream, where it flowed through an open field and out through the deadened swamp into the lake. A few rods from where we stopped to bait our hooks was the "deestriet school house" standing on higher ground back from the stream, and while cautiously fishing a couple of small pools as a "feeler," the master, a big, full bearded, sorrel complected, pleasant-faced man, dismissed his four tow-headed unchins for a recess, and came down to have a chat and to show as where he had seen a big trout dart under the bank as he crossed the stream that morning on his way to the arduous duty of trying to keep awake during the tedious school hours of the drizzly day. No wonder the such slim attendance, but this, he explained, was owing to the bad weather and the near close of the term. Besides this, as we learned in a ten minutes' talk, his instincts were falong a trout stream, even on a rainy day, than to be penned up in a little, cheerless or commissioners of the Civil service. He knew every trout stream along the lake and every hole wherein lunked a big trout, and was never so happy as

<text><text><text><text><text>

without "ketchin" on to a root," but I wass o "flustrated like" and nervous that it was five minutes—it seemed au hour— before I could feel steady enough to steer it safely through the opening again. Talk about "buck ague," I've had it, but it wasn't a marker to what I went through that day, standing there in the drizzle waiting for my heart to stop trying to "knock the chaw tobacker out o' my mouth" (old Dave Edwards). But the nerves finally braced up to their accenstomed relia-bility, the heart ticked off its usual number of beats, and I dropped bait and hook through the opening again without a tremor. I scarcely dared hope he would rise again, but with the same sudden dash the big fellow took it, and at the same instant another one that looked almost as large, darted alongside of him from somewhere under the bank and tried to take the coveted worm from his mouth, but I gave them no time to advance any views as to a proper division of the morsel or to get into a wrangle over it. A quick upward stroke, and then "seeh thrashin' an' twistin' an' wrigglin' au cavortin'," and such furious plunges and surges to free himself from the deadly barb, were never seen, I have a notion, by mortal man. But in whatever direction he plunged, the almost invisible thread of the finest twisted silk pressed against a root woven over the pool a foot or more from the water, preventing him from getting under the bank, and the very same old rod with which Jim worked a five pound pickerel out from under the boat by main strength in 1880, on Central Lake, was working at him with the same tenacious, soul-harrowing pull, that wore the life out of the longface on that memorable occasion. To what seemed a half hour, but in reality it was, perhaps, not longer than a half minute, the un qual fight went on, but there was no more buck ague, we were having it out in deadly strife, and the least quiver or false move on either side would quickly decide the battle. The warrior at the tip end of the rod seemed utterly at a loss to understand how a

as quiet and steady as a rock, but not over-confident of the outcome. Once the old fellow took a turn around a sleuder root hanging loosely down in the water, and I felt a chill of defeat sweep up my spinal column, for I felt sure the frail thread of a line would part, but the next contortion worked the line clear and he came head up and open-mouthed to the top of the water, materially assisted by the spring of the staunch old rod. This instant that he forgot his wariness lost him the battle, and his life. With a quick pull that must have tested the little line to its utmost, 1 lifted him straight up through the opening without touching a root and swung him around over the grass back of me, where, with a violent wriggle he freed the hook and fell with a splash into the rain puddle near his mate. I say nothing about the unsportsmanlike manner of his taking, if it were unsportsmanlike, or of the 'science and skill' displayed in the struggle; let the brethren who read this settle that to their own pleasement. I will only say that after he was once fairly hooked I was dead bent on taking him to camp or 'bust the tackle.'' There was no time for parleying; no room to let the reel whiz off ten or fifteen yards of line and then work him back with sundry flourishes of 'science.'' and over the landing net. There was no room to use a net, besides I had none to use, and at no time during the brief controversy was there three feet of line out from the root tip. It was a square country fight from the start, where main strength was the only factor to win, and I got him out of the pool in just the only way he could have been taken out.

where main strength was the only factor to win, and 1 got him out of the pool in just the only way he could have been taken out. Considering the line and hook used—a No. 10 salmon-trout hook and a No. 1 twisted silk line—it was a famous achieve-ment, and I felt more elated over it than if I had struck him with a "killing fly" in fifty yards of open water, and led him over the landing net with a \$50 split bamboo. Ifad I been using a limber fly-rod this tale of the big trout would never have been written. And he was a glorious trout, too, for such a tipy stream; just seventeen inches long as he lay on the table at camp, and the most brilliantly colored fish I have ever seen taken from any waters. Dark backed with clean cut carmine spots dotting his sides, the whole belly, and on a line as high as the base of the pectoral fins of the types have made me say in a former number of these letters, page 409, line 40 from bottom of page), and pectoral fins and red, he was indeed a living poem of glowing colors. Sitting here now writing of the splendid old fellow, with the old "calamity box" within reach of my foot under the table, and the same old rod, with three of its slenderer com-panions standing in the corner under my eye, it comes back to me that as I stood watching that trout, who with his mate was beating the water of the little puddle into a foam, I felt I weighed within a few pounds of as much as I did after I had fought, conquered, gaffed and dragged the big maska-longe over the side of the boat on Bower's Lake, and on that occasion old Dan said I must have weighed upward of a too.

The provided and a start of the provided and the provided

it up. I knew he was in there and not further away than I could reach with the tip of the rod, for the whole pool might have been covered by a pair of goat blankets, but the mys-terious disappearance of his mates was doubtless connected in some fishy way in his mind with the squirming worm, and he was probably all the time peering at it from a secure nook away under the bank with, figuratively, a grin of de-rision on his usually pensive countenance at my blundering efforts to lure him from his hiding. Or he might have been in a fit of the sulks and waiting for a little more artful coax-

ng. But trout are much like some petulant beauties of our wa kind—when they won't they won't, and the more you wax 'em, the more they won't. ing. coax

own kind—when they won't they won't, and the more you coax 'em, the more they won't. Wishing to take my prizes to camp alive, if possible, I took the lace cord from my overshirt, after searching all my pockets in vain for a piece of string and with it tied them to a twig overhanging the water and left them trailing in the current while I fished the stream up through the tangle of dripping woods for forty or fifty rods without, however, see-ing or 'feeling' another trout. It was near an hour before I got back to the pool, but the coveted fish was still in the sulks, and would look at neither a fat worm nor a bright-colored fly that had fortunately not been torn from its place in my hat band by the 'bresh.'' and I left the creek with the other two and took the road at a brisk walk for the camp. As I lifted them from the water, I could scarcely believe they were of the same family of fish. The larger one was a dazzle of brilliant hues, while the smaller one was a dirty blackish brown, even to the belly, and only relieved by the carmine spots on the sides. The fins, too, were of nearly the same color as the belly, with no special marking of bright color like the other one, and was withal an unattractive fish, except in plumpness and beauty of form. Yet they were both taken from the same. Little pool where they had been together, without a doubt, during the entire season, feeding on the same kind of food, sheltered and shaded by the same roots and banks and bushes—for it was a place the sun would not reach only for a short time in the moming—and passing their lives, from day to day, in exactly the same manner, with all the conditions of exist-once alike. Writers tell us that the waters in which the trout live have something to do with their color; that certain kinds of food

and sindled by the shife roots and only a for a short time in the morning—and passing their lives, from day to day, in exactly the same manner, with all the conditions of exist-cnee alike.
 Writers tell us that the waters in which the troutlive have something to do with their color: that certain kinds of food brighten their hues; that shaded pools and overhanging banks give their markings a dul cast, and so on, but must it be a condition that the dul, dirty colored fish pass all its life away under the glood of the bank, and feed on other dict than his brighter colored brother, in order to be dull and dirty? Must the other one—scenningly of the same spawning—select other food and stay out from under the shadows and in the glare of the sun, that it may be clothed in gorgeous colors?
 Teonfessi it is a "category" that I can't see my way out of, nor cau I quite follow the "food and shade" theory that seems to satisfy some of the better informed of the bretter. Let us have a better reason for the different shades of color and markings of trout of the same stream, for I am inclined to think, with duc deference to the "theory" that it has not yet been found out why one trout's belly is a bright red and nonother's a lusterless brown. And it may be that some of the scientists who make life a burden to plain anglers by hunting up new names (with "priority" to 'em) for old fish, can tell why a black bass, which, when taken out of the water, was a dirty cream-white all over, could change its color within five minutes to a bright beautifully mothed green; the change so thorough and wonderful that one might sway received with a sort start. Any yet define the water shale it comes to me.
 That's my creed for the woods, and I get large dividends of sport and enjoyment and solid comfort out of it with a very small investment of capital.
 This may be charged up as another digression.
 A lusty yell or two near where I had left Ben failed to get a response, b

another joke on "old Hickory" by stealing the trout and "hiein" "back to camp, and claiming that he had caught it misself. "But ye kin bet yer life," as he hunted a dry place on his breeches and scraped another match, "that when I saw ye a comin' I'd a hied off somewheres an' hid till ye got over yer mad, fur it would hev bin a mighty onhealthy place to be a lingerin' around," and then he chuckled again in an ab-sent-minded sort of way till the burning match, which he i had forgotten to apply to the pipe, nipped his fingers, caus-ing him to drop it with surprising celerity. "That reminds me," as he stooped and dipped the scorched finger in the water to cool it, "that I didn't light my pipe at jest the right time." Rarc and incomparable old Beu! may he live many years yet to "hev his fun," even at the expense of old Hickory. With a wistful look at the trout, a look that I fancied would read if put in print, "now there gees a fool for luck," and a pleasant good day to us, the master struck off in the brush on his way home somewhere back in the woods, and shortly after Ben and I stole quictly into camp and laid the fruits of our wet tramp on the table before any of the happy family were aware of our presence. Then we called them out to sce "the biggest trout taken in that neighborhood that season," so the master had said, and Ben was soon tangled up in a graphic and side-splitting the store the little branch, winding up with a solemn wink at Kit and the query, asted with a most innocent and matter-of-fact expression, "How much, James Mackerel, did you say you paid that country boy for them two trout." (I have been at some pains since that day trying to convince little Miss Top that I actually caught those two trout myself, but

I am not quite sure that I have made any noticeable headway. The skin of the big trout was carefully taken off and pre-served for an angler friend at home; the peeled frame, with the smaller one, went to the frying pan to furnish a taste around for the girls at supper, while the others of the Jones family looked on with watering mouths, busy, however, in satisfying the cravings of a camp appetite with fried slabs from the side of a pickerel, side meat, eggs and other deli-cacies usually found in a well regulated camp. KINGFISHER.

CINCINNATI, Ohio.

BLACK BASS RIG.

"HOW do we fish for bass?" That depends. In the waters accessible to Toledo we get three dis-tinct kinds of black bass fishing, and the rig employed is

FLORIDA GAME AND FISH.

FLORIDA CAME AND FISH.
Editor Forest and Stream:
The for Florida hast October weighing about 126 pounds, with little or no appetite, a severe cough, night sweats, etc. A far spending a month or more in different places without much benefit to my health, and with very little hunting and fishing. I wound up at Capt. J. F. Tucker's, about seven miles northwest of Brooksville and a few hours' drive of the Homassas River. Here is the best fishing I have ever had the pleasure to indulge in. I had a couple of 11-ounce recollect of having to wait over ten seconds at any time for a strike. Never have I seen such fishing. Two gentlemen, neighbors of Capt. Tucker, in one hour caught more fishing grounds were where the salt and fresh waters meet, and the best place to study the habits of the different seconds of fish that I have ever seen. The water is as clear as crystal and you can see your bait distinctly at a distance of \$20 feet in 10 feet of water. The fish are so numerous that they do not appear to notice you, and if they should their fright is soon over. Our catch consisted of black bass, we found the sheepshead of the guilf coast to be hard fighters, and enjoyed catching them more than any other. A 5 pound black bass. They bite so rapidly that you soon tire or out way to the river I have seen as many as tweite.

sheepshead in these waters will fight as long and nard as an Spound black bass. They bite so rapidly that you soon tire of catching them. On our way to the river I have seen as many as twelve deer at one sight. This was on the Sand Hills pine growth where they can be seen at a long distance. Captain T.'s residence was on the border of the famous Annuttaliga Hammock, a large portion of which he owns. It is very productive and is covered with a heavy growth of oak and hickory, and it abounds with deer, wild turkeys, ducks, squirrels, wild hogs, and a few panthers and black bears. We killed quite a number of wild turkeys, deer, ducks, and hundreds of squirrels. Willie T. killed two fine deer in one morning—one weighing 130 pounds minus the entrails. I shall not go into details as to my deer shooting, for I disgraced myself by my numerous misses. Willie T. offered to accompany n.e in the hammock with a weil-loaded shotgun, to prevent, as he expressed it, my bring hurt by those horned animals. I had killed a number of deer, and certainly did not have the "buck fever," though I made no defense on that line, for circumstantial evidence was against me. I carried my setter Duke with me and had all the quail shooting I cared for. When I left Captain T.'s for home I weighed 146 pounds, had a splendid appetite and little or no cough. I expect to make the same trip again the first oppor-tunity. Kaces. Ga. April 14. MACON, Ga , April 14.

THE FIRST SALMON.—Ottawa, Can.—Editor Forest and Stream: First salmon taken on La Have River, Lunenburg county, Nova Scotia, with fly, was March 18. Several have been taken since. Early for fly-fishing.—F. H. D. V.

THE MAINE ANGLING SEASON.

THE MAINE ANGLING SEASON. BY the time many of the readers of the Forest and STREAM have seen these lines, the Maine trout and and Jocked salmon season will have opened—May 1. Prospects on the streams in that State are earlier than usual. The very warm weather for a week past has dissolved mountains of snow and ice, and put the trout streams in good condition for the early catch. Such weather was uncorported and the season promised to be late; but even in the lakes now locked in ice, the chances are for a very early opening. One-letter, from good authority, suggests that the ice will be all out of the Androscoggin lakes by May 10. This is remarkably early. But such prospective clearing of the will go to the fishing grounds as soon as steam and stage can take them; others will go beforehand and be ready of the first trips up the lakes. One Boston sportsmen, bound to eclipse all the rest. He has canned for one or two seasons at The Narrows of Richardson Lake, a celebrated thing ground with those who know it. This year he sent public ook stove and blankets a month or more ago, to be left near his camping ground by the lumber teams. He will as his own departure in a day or two, or has already taken it, in order to go up on the ice before it be comes too rother. At his camping ground he will wait for the ice to leave, or his brother sportsmen can reach him and give him fluesport and and the sport and the sent of the Marrows to clear some days before his brother sportsmen can reach him and give him fluesport the stream ing the club better is acting hungry trout with worms just released from a six-months ice prison, than and club the the ocean voyage would be the more satisfactor. In Weld Pond, in the town of Weld, Maine, some remarkable and come can be at the sea of analy have here mark and here at the sea of and how more better is a calon in a way be marked to be the sea of the days before the sport shorts at the sea of the days before the sport shortshere sport shortshere here the cealers on the state and here the

is deep sca fishing for cod or halibut? If pounds of fish are wanted, then the ocean voyage would be the more satisfac-tory. In Weld Pond, in the town of Weld, Maine, some remark-able good catches of land-locked salmon have been made this spring. Alas! through the ice. Salmon as heavy as ten pounds have been taken. This is all the more remark-able when it is considered that only a few years ago—the dates are not at hand—the first salmon fry were put into this pond; a tangible proof of the value of fishculture. This spot is a particular pet of onc at least of the able Fish and Game Commissioner of Maine—Henry O. Stanley. He owns a camp there, which he eojoys in summer with his friends. It is fast getting to be understood that land locked smelts— have I coine! a term?—are the best, if not the natural food of the land-locked salmon, just as the minnow or dace, so well-known and so abundant in the Androscoggin Lakes, is the natural food of the speckled trout. In conversation the other revening, Commissioner Still well remarked that "ene of the first conditions of successful fishculture is food, and without food there is no success. In the Rangeley—or better, the Androscoggin Lakes—there are minnows by the million, and there we get the monster speckled trout or red-spots. The Sebago waters are renowned for land locked smelts, and there we get the largest land-locked salmon or black spots in the world. In Weld Pond the smelts are abundant." The sea salmon are putting in quite a remarkable appear-ance in the Penobscot, just below Bangor, this year. On

Sintels, and there we get the ingest inholocide sample of the samelts are abundant." The sea salmon are putting in quite a remarkable appear-ance in the Penobscot, just below Bangor, this year. On Friday, April 9, there were taken from a weir two salmon which weighed 374 pounds. Four more of good size were taken on the following Tuesday. On Monday the 12th one was caught at Verona weighing 18 pounds, and the same day one of 224 pounds. These were all taken in weirs and sent to the Boston market. Oh! for some force to stop this were fishing. But a Maine paper says the "salmon fishery is an important industry on the Penobscot and is the source of quite a handsome revenue to down-river people." They buy them off and pension them to let the salmon ance in-creasing in the Penobscot, even under the poor protection the law affords in allowing of no fishing near the dam at Bangor nor at any time above the dam with nets or weirs. Last year an unusual number were caught with the fly above the dam, and there are strong hopes of this season. Salmon anglers went all the way to New Brunswick waters for no better sport than was enjoyed not far from above the dam at Bangor, Maine. Besides the waters are free to every fair angler, royalty having no rights to sell. Perhaps, under protection, the Penobscot above the dam may yet become the Meeca for the fly-fisherman. This can all be done under so good a form of protection as the Commissioners of Maine have organized for moses and deer—only two or three salmon to each sportsman in a season, to be taken with the fly only. How will that do, brothers of the salmon angle? Not enought Then make it four or five, but stop fishing for numbers and for the market. SPECIAL.

for numbers and for the market. SPECIAL. BASS AND PICKEREL.—Amboy, III., April 14.—Editor Forest and Stream: It is very interesting to read the experience of anglers in taking bass, and reports of big bass in FOREST AND STREAM. It is surprising to see so much piejudice ex-isting against bass in some of the Eastern States, and the statements that they are driving all other game fish from the waters where they have been planted. I have failed so far to find any logic or good proof to sustain any of those argu-ments. We are fighting hard here for the propagation of bass, both the large and the small mouth, considering them not only the gamiest fish for sport, but the finest for food that the waters in this State will produce. Our Fish Com-mission in Illinois amounts simply to no commission at all and reel to have that name changed to a set-still committee. I will give my reasons for thinking that pickerel at least pre-dominates over bass. I have never yet found any pickerel fry in the stomach of a bass, but have often found baby bass in a pickerel's stomach. I have carefully examined the digestive soman of many bass for the purpose of finding their food for the sate of procuring bait suitable to their tastes, for sometimes they seem to be quite dainty. I have often found in the stom-asomal minnows. In the white bass seldom anything but flies, bees and minnows. In the white bass seldom anything but flies, bees and minnows. In the white bass seldom anything but flies, bees and small minnows. In pickerel I believe I have found every species of fish that inhabits the waters of this State, and some not very small either, with occasionally a green or River one of the party caught a five-pound pickerel fury fliver one of the party caught a five-pound pickerel fury induces long, and inside of that one was a pickerel fury fully two inches in length. On one other occasion a gentleman named Barr took a twelve-pound pickerel in Rock River, near Dixon, and in its stomach was a small snake

PENNSYLVANIA.—The trout season opened in Pennsylvania on April 15. The following is a condensation of the Statclaws: Sunday fishing and bunting are offenses punishable by \$25 fine. Trout fishing is legal from April 15 to July 15, but only with rod, line and hook. Bass, pike and other game fish can be caught from June 1 to the end of the year, but with rod, line and hook or troll only. Set and tyke nets (the latter a small hoop net) can be legally fished with in March, April and May, and in September, October and November, but must be placed in the open stream and not under a dam, wing, wall or sluice of any kind. Any game fish caught and retained renders the party liable to the fine. Nets found set in the water from June 1 to Sept. 1 can be taken up by any one, their contents put back in the water and the net or nets held until the owner calls for them. Dip-nets for catching bait are legal, and larger dipnets for suckers, etc., will be tolerated so long as their use is not abused. The only nets recognized by the law are set nets as stated above, dip nets for catching bait and catching fish to stock other waters, and the warden will act accordingly. Outline fishermen who raise their lines do so for the purpose of catching bass and other game fish and are liable to the fine for so catching them. Nets and outlines have no business in the waters on Sundays. They come under the law of Sunday fishing and the owner is liable to the fine of \$25. Laying up new or repairing old fish dams is illegal under a heavy fine. There are other violations which the laws condem, so well known that they need not be referred to. It is unlawful to kill web-footed wildfowl, such as geese, etc., between May 1 and Sept. 1.

etc., between May 1 and Sept. 1. BLACK BASS AT PELEE ISLAND.—This famous fishing ground in Lake Erie belongs to the Dominion of Canada, and lies near to the mouth of the Detroit River. On Tues-day, April 6, a public meeting was held on the island to protest against a recent law, or order-in-council, which changed the close season by making it unlawful to take pickerel from April 15 to May 15, and black bass between April 15 and June 15. The meeting was well attended and was appointed chairman, and J. H. C. Atkinson, secretary. A committee was appointed to draft suitable resolutions ex-pressing the sentiments of the meeting. The preamble and resolutions of the committee, which were unanimausly adopted, set forth that to enforce such an order would vir-tually be a prohibition of spring fishing, as by far the most valuable of the spring catch were pickerel and bass, and the close season for these covers the whole fishing season; that this would not only injure the business and capital of the numerons persons engaged in pond fishing there, but would injure the business of the whole island, and stop the running of a steamer. to the island, which is now mainly supported by the fisheries. While the meeting approved of the pro-tection of fish, such as existed under the old law, it was con-sidered that the change would work to the advantage of the Americans, because the island was so near the boundary of the two countries, being within six miles, and that as the Americans had no such close time they would catch all the fish. A petition to restore the old law was numerously signed. SIZE OF THE CHANNEL CAT.—"Cyrtonyx" says that he has

SIGRED. SIZE OF THE CHANNEL CAT.—"Cyrtonyx" says that he has never seen a channel cat that weighed over eighteen pounds. When fishing in the Missouri River with trot lines, on a hard, sandy bottom, in a stiff current, we catch channel cats much larger than those he speaks of. One morning about eleven years ago I took from a trot line that had been baited with paw-paws three channel cats, aggregating 170 pounds. The largest one weighed 90 pounds and was 5 feet 4 inches long, and when dressed weighed 60 pounds. They are the same fish, so far as I am able to see, as the smaller ones that we catch in the small rivers tributary to the Missouri. If the large ones I speak of are not channel cat, what are they and what is the difference between them? We never catch any channel cat in an eddy in the Missouri River.—J. F. L.

CALIFORNIA NOTES.—The Petaluma Argus says: "After Thursday next it will be lawful to catch trout—but there will be none to catch except in out-of-the-way places. The boys in several places that we could mention have already taken out about all the trout that are large enough to eat. They say that they are tired of protecting the fish until the first day of April for the benefit of the San Francisco sports-men, who swarm along the banks of the streams and take the mall out in a short time." The Sacramento Bee makes the following excellent comment on the selfshness embodied in the above, as follows: "The old story—there's always some excuse for violating laws designed to protect game and fish. If everybody acted upon the theory of these boys, there would soon be no fish left in any stream."

ffishculture. Address all communications to the Forest and Stream Publishing Co.

is Capt. Z. L. Tanner, U. S. N., and she is officered by lieu-tenants of the navy. Mr. J. E. Benedict is the naturalist in charge, and there is generally associated with him on board a scientific staff of two or more to assist him in obtaining data and preparing speci-mens

or more to assist him in obtaining data and preparing speci-mens. The ship is admirably planned and constructed. The cap-tain's cabin occupies most of the after part of the deck, is spacious and well furnished with everything necessary for the commander's comfort. This cabin contains two staterooms, and is lighted during the day by port holes on the side and a skylight above on the poop deck. The officers' ward room is below this, having seven spacious staterooms, a bathroom, and other conveniences not generally found on steemships. The ship is lighted throughout with the incandescent electric light, which not only makes the wardroom particularly cheer-ful in the evening, but also illuminates the entire deck, so that at night the vessel, as seen from the shore, looks like a brilliantly lighted ballroom. Another thing rendered possible by the presence of the electric light is surface collecting at night.

ful in the evening, but also illuminates the entire deck. so brillantly lighted ballroom. Another thing rendered possible or bit the other of the electric light is surface collecting at night. Mr. G. W. Baird, chief engineer of the ship, is the inventor of a cable to which heattenes ascreen-covered electric light. This, when the vessel is at anchor, can be lowered into the water just below the surface, and the numerous young fish, marine worms, squids and shrimp, attracted by the brightness for the light, are captured by means of a hand net and transfered to the laboratory table for examination. This laboratory is allower the collections. Here are really two laboratories, an upper and lower; the first furnished with working tables, a sink, allbrary of books for reference, a microscope and convenient tanks of alcohol; the second, called the 'lower laboratory, is below this, has benches for chemical work, and opportunities for general cargentry and work connected with ecollections. Here guns are clanet and mended, and here to containing the larger fish and specimens are stored. Benati these drawers are large metal tanks illed with alcohol, for containing the larger fish and specimens whose size prevents them from being stored in the small gass jars. Blow this second laboratory, in the hold of the vessel, is still a third store room, of much the same nature and used for much the same parts to for deep sea sounding, which is placed on the yort bow, consists of an easily running wheel supported in a frame. Over this wheel runs a steel pino wire from a sounding is to be made, a brass cup is attached to the ead of the wire to catch and bring up some of the botton, that is omore the which records the temperature of the deep water. To the above mentioned cup a heavy shot is fastened to accelerate the downward motion. When a sounding is to be made, a brass we be strated at the wire so catch and bring up some of the botton, that is another, and sonte entities the yield the indidet. The work is a sthey more accelerate the

large net, scraping up mud or sand and rocks, thus relieving the meshes of the net from a strain which would be too heavy for them. Everything being ready for dredging, and soundings having first been taken to ascertain the depth, the net is lowered carefully into the sea, the progress of the vessel being stopped. If the sounding gave 1,200 fathoms, then 1,700 fathoms of dredge cable has to be let out, or even more than that before bottom is reached. This has to be done slowly and necessarily takes a long time. Sometimes when the water is 3,000 fathoms deep, as is often the case, four hours are consumed in one lowering and hauling. This process is also called "trawling." When the bottom is reached, the dredge is dragged slowly along for half an hour and then hoisted on board by means of the donkey engine, at first slowly, then, as it gets clear of the bottom, very rapidly. It is an exciting moment when the huge net and canvas hag emerges from the water and hangs dripping over the deck. The net is then opened at the bottom and its contents allowed to roll out into tubs, while mud and sand and rock in the can-vas bag are emptied into a large sieve on the forward deck, then to be carefully washed and examined for small marine animals. The contents of the net which have been emptied into tubs

In the second three second t

do nothing more than refer to it here. It consists in dragging a large but fine-meshed net from the end of a swinging boom along the surface and through the water just below the sur-face. It is often done on the port side while dredging is going on on the starboard side. This secures all the surface life found in the seaweed and just below the surface of the water. Varieties of *Tentennarius*, a little, brown-mottled fish fre-quenting the masses of seaweed, are caught thus in large numbers, as well as small crebs, which also live in the sea-weed; a great many marine worms, various kinds of mollnscs and other forms lower in the scale of life. Washington, D. C. WASHINGTON, D. C.

WASHINGTON, D. C. PACKING EGGS FOR FOREIGN SHIPMENT.—Mr. W. Oldham Chambers, secretary of the National Fishculture Association of England, in lish istory of fishculture, Land and Water, March 27, says: "We may well take a lesson from the American system of packing, which is very simple, but most efficacious in attaining the desired end, which is to diminish as much as possible the rate of mortality through injury. In the first place, the ova are placed into trays, consisting of are deposited one above the other in the center of a large box, each tray being interlaid with moss. Around the pyramid of preserved, serving as a receptacle for ice and sawdust—two most important factors in transmitting ova. On arrival at their destination the eggs can be readily unpacked by remov-ng the trays from the box, clearing away the moss between each, and turning the ova *en masse* by means of water into the hatching tronghs. The originator of this capital method is, I believe, Mr. Fred Mather, of New York. I am able to testify to the fact than not more than thirty eggs out of every thou-pand sent me at various periods have perished during the the skill displayed in packing them.

OUR HARTFORD REPORT.

<text><section-header><text><text><text>

and truthuiness, should strive to disconrage. JAS. MORTIMER, New Yonk, April 23. [Although Mr. Mortimer has been connected with dogs and dog shows for some years he does not appear yet to have learned that the judges and the animals on exhibition are learned that the judges and the animals on exhibition are learned that the judges and the animals on exhibition are for the subjects for criticism. We are not singular in our opinion of Splauger. At the Hanley (Eng.) show last year, where there were 774 entries, with nineteen in the open dog fox-terrier class, Splauger did not get a mention. The well-known judge, Mr. L. P. C. Astley, awarded four prizes, six vhc. cards and three hc., but gave nothing to Splauger, the winner at Hartford. As we have stated, the open dog class at Hartford was a fairly good one, but by no means deserved Mr. Mortimer's extravagant praise. Our statement about the colle puppy bought by Mr. Mortimer appears to have been inaccurate only in alleging that the dog was bought for the Hempstead Farm Company, whereas he was bought by Mr. Mortimer for himself and afterward sold to that company.

Our authority for our statement was the owner of the dog, Mr. Smith of Hartford. We have refrained from expressing our views on this transaction, but if Mr. Mortimer desires them they are quite at his service. We are quite ready to leave the public to pass on the motives which prompt our re-marks on dogs and dog shows. They need no defense or ex-cuse.] of the expression or desires

NORTH CAROLINA AMATEUR FIELD TRIAL CLUB

Editor Forest and Stream: A desire for better dogs, and more especially better trained dogs, has induced several of the leading sportsmen in this State to organize an amatenr field trials club, open to all non-professionally trained dogs; the object being to induce our sportsmen to learn how to train and handle their own animals. The organization of this club has not yet been per-fected, but the chief matters of importance, such as seenring hunting grounds, posting it and stocking it with birds, have been attended to and everything will be in order for the trials next fall, just after the Eastern field trials close at High Point, N. C. The land of the North Carolina. Field Trials Club is situated

next fall, just after the Eastern field trials close at High Point, N.C. The land of the North Carolina Field Trials close at High Point, N.C. The land of the North Carolina Field Trials Club is situated north and northeast of Raleigh, N.C., beginning about four miles from the city, and runs along and between several small streams, including much of the very best shooting ground within reach of the city. It contains in all from 3,500 to 4,000 acres of old field and stabible. This tract of land has always been considered the best hunt-ing ground in our vicinity, and now that it has been thoroughly posted, planted with small patches of peas, wheat and oats along the creek banks, and nearly two hundred quail put on it, we expect in a year or two to have the finest field trial grounds in the South. Our sportsmen are beginning to appreciate a dog with a pedigree, and are learning to breed dogs with an eye to speed, nose, endurance and style. Formerly a dog was only required to find birds and remain steady until you came to him. Now we have inaugurated a different school for the dogs and we are determined to have them well trained. With our small beginning we intend to push on each year, adding to our prounds and bettering our dogs, and before long we will ex-tend an invitation to our Northern friends to eome down and try dogs with us. RALEDER, N.O., April 17. RALEIGH, N. O., April 17.

SPRATTS BISCUITS.

Restor, N. O., April 17. SPRATTS BISCUITS. Editor Forest and Stream: The letter of Mr. Cleather in the last issue of FOREST AND ment with which he finds fault. Mr. Cleather, like a good many of my countrymen when they first arrive on this side of the Atlantic, proceeds to air his superior knowledge and alleges that American dog owners are ignoramuses. I rather doubt the good policy of a person in his position taking this step, but that is his lookont. FOREST AND STREAM in report-ing New Haven show drew attention to the effect Spratts biscuits had on the dogs, and I for one was very glad to see the remarks. Mr. Cleather pays FOREST AND STREAM the very high compliment of insinuating that the remarks re-ferred to were dictated by rival manufacturers. Those who those hoses dogs suffered, as mine did, cannot but thank you for running your editorial department entirely free from con-siderations affected by the advertising department. Perhaps we do not know when a dog is purged in this country, and even if we do make a correct guess we are such complete notices that we cannot tell the cause. That is what we are to uncer any or editorial department entirely free from con-siderations affected by the advertising department. Perhaps we do not know when a dog is purged in this country, and even if we do make a correct guess we are such complete notices that we cannot tell the cause. That is what we are to uncer. Mr. Cleather's letter: The Hull my experience with Spratts biscuits. The dhem for gover and how long a time he spent at Newark show. We haven and how long a time he spent at Newark and New Haven would be fed on these biscuits inported by that the dogs I proposed exhibiting at Newark and New Haven would be fed on these biscuits inported by with these biscuits. I ought to say that my dogs were per-period of probation, and in that condition and ing the method of feeding as is customary when feeding with these biscuits. I ought to say that my dogs were per-period by the the s

you. Now that Mr. Cleather has opened the door for a relation of American dog owners' experiences with Spratts biscuits, I hope that the subject may be well ventilated. JAMES WATSON.

A DOG OF ROMANCE. -New York, April 19.—Editor Forest and Stream; In Mr. F. Marion Crawford's recent novel, "A Tale of a Lonely Parish," one of the leading char-acters is the dog Stamboul. He is said to be a Russian blood-hound, taller than the tallest mastifi, of a slate color, with closely cropped ears and a fine, smooth coat. He is also de-scribed as following with great speed a trail twelve hours old, baying sonorously, and killing a man so quickly as to leave it doubtful whether he "hurt him much." Now I should like to know if there is any such dog in the world. I seem to recog-nize the slate color, huge size and cropped ears as belonging to the well-known Siberiaa or Ulm dog, commonly called "bloodhound." But was that dog ever known to follow a cold trail, or to bay after the manner of a true hound? The book is, of course, interesting and well written; but novelists ought to be very careful to get the details of their work tech-nically correct. The late George Eliot, for example, used to submit the law of her novels, before publication, to "coursel learned in the law;" whereas Anthony Trollope evolved his short of this standard.—S. H. [The advice of our correspond-ent to novelists is most excellent; but we very much fear that "poetic license" in the future will still continue to override both common law and common sense.]

PEDIGREE BLANKS.--We have prepared two series of duplicate pedigree blanks, one blank providing for pedigree to fith generation, the other to third. The former fills a page size of Kennel Record Book page; the latter, same size page, with four on. Price of each, twenty-five cents per dozen pages. The blanks will be very convenient for furnishing pedigrees with sales, etc.

The CLEVELAND DOC SHOW. com., J. B. Bosworth's Dinah. High com., G. M. Hubbard's Belle. Com., W. O. Meyer's Topsy. DOG SHOW SECRETARIES AND SPECIALS.—*Editor Forest and Stream:* Mr. Wade, while commenting npon'the above subjects last week, re the late Pittsburgh show, asks: "Does it help the honesty of the transaction to accept the entry and then shamefully deny their own published rule by refusing the protest that follows, as was done in the St. Ber-nard puppy class?" The facts are more damaging to the club, Mr. Wade, than you have stated. The owner of the St. Ber-nard dog did not enter him in the puppy class. He brought and showed the dog to Mr. L. F. Whitman, who purposely put him into the class where he would most lightly win. President Gregg made himself a party to this brazen fraud by telling Mr. Hanford, the representative of Mr. Tucker, "This is a poor place for protests; we will have nothing to do with them." "When the superintendent and president 'stand in' to beat an absent exhibitor, what is he going to do about it?" This pertinent question was propounded as we traveled East after the show. The answer was, "Stay at home." I assure you, Mr. Wade, it is not so easy to "punish" Philadelphia ex-hibitors. We are like the proverbial Enhiadelphia lawyer— sharp. We fight with facts ou our side, and when the lie is passed, as it was at Pittsburgh, the Philadelphian proves it on the other man. A word about the indisoriminate accepting of use to gives to certain dogs really without com-petition. It is a growing evil and should be stopped at once. It gives judges, reporters and all concerned twice the amount of work, besides bringing into prominence for the moment worthless dogs that as quickly sink into oblivion.—V. M. H.

worthless dogs that as quickly sink into oblivion.-V. M. H. WILKESBARRE DOG SHOW.-The premium list of the Ninth Regiment's inaugural bench show of dogs has been issued. The show will be held at the armory. Wilkesharre, Pa., May 25, 26 and 27. The entries close May 15. The judges, as indicated last week, are: For mastiffs, St. Bernards, New-foundlands, greyhounds, collies, bulldogs, bull-terriers, fox-terriers, pugs, foxhonnds, toy terriers, miscellaneous, spaniels and others, Mr. Jas. Watson; pointers and setters, Mr. R. M. Lindsay, of Scranton. Pa.; English and Irish setters, Mr. W. F. Streeter, Lehigh Tannery, Pa.; beagles, to be judged by the A. E. B. Club standard, Mr. T. W. White, Wilkesbarre, Pa. The premiums are \$10 and \$5 for the more important classes, \$7 and \$4 for St. Bernards, spaniels (field, black and \$5 and \$3 for pointers, English and Irish setter puppies, and for fox-terriers, bulldogs, all other terriers and pngs. The Adams Express Co. will return all dogs free that are sent by their company. The committee have decided to make a class for Italian greyhounds.-WILKES.

for Italian greyhounds.—WILKES. ENTRIES FOR THE NEW YORK DOG SHOW.—Editor Forest and Stream: I am sorry that the list I gave you of the dogs at the coming show was hardly a correct one; this is partly excusable from the fact that it was hastily and roughly estimated. Following is, I believe, a correct list: Mastiffs, 44: St. Bernards, 81; Newfoundlands, 11; Great Danes, 11; grey-hounds, 24; deerhounds, 15; pointers, 97; Euglish setters, 102; black and tan setters, 33; Irish setters, 67; Chesapeake Bay dogs, 1; Irish water spaniels, 1; Clumber spaniels, 5; field spaniels, 18; cocker spaniels, 59; foxhounds, 14; beagles, 31; basset hounds, 4; dachshunde, 10; fox-terriers, smooth, 81; wire-haired, 8; collies, 100; bulldogs, 22; bull-terriers, 5; Islack and tan terriers, 6; hard-haired, 2; Dandle Dinmont, 2; Irish terriers, 5; King Charles spaniels, 13; Blenheim span-iels, 3; Japanese spaniels, 5; rubys and Prince Charles, 8; Halian greyhonnds, 6; poodles, 15; miscellaneous, 18.—JAS. MORTIMER, Supt. POOR OLD FELLOW.—Cleveland, 0., April 23.—Editor

MORTIMER, Supt. POOR OLD FELLOW.—Cleveland, O., April 23.—Editor Forest and Stream: I have an old black and tan dog with me now which has reached the remarkable age of twenty one years. The usual evidence of old age, viz., failing eyesight and hearing and a general feebleness. His teeth are worn away even with the gums. One peculiarity is very marked, when he sits npon his haunches his back assumes that semi-circular form peculiar to the cat when in the same position. Old Prin, as he is called, survived a severe attack of mange the past winter and really appears to be gaining strength every day. Is not this a rare instance?—WATT.

every day. Is not this a rare instance?-WATT. NEW POINTERS COMING.-New York, April 26, 1886.-Editor Forest and Stream: The Westminster Kennel Club have purchased from Prince Albert Solms the well known light weight pointer Naso of Kipping. Naso has been very successful on the bench and in the field, having won four first prizes at the Crystal Palace, and several first prizes in field trials. He has also proved a successful sire, his son, Naso of Upton, having won first prizes at Burmingham and Crystal Palace, Eng. They have also purchased the heavy weight bitch Kate VIII., in whelp to Priam, and Glauca, by Flnke-champion Glee.-JAMES MORTIMER, Superintendent.

ST. LOUIS KENNEL CLUB.—Graphic will not be shown at St. Louis and the club will therefore enter for competition their pointer dog Robert le Diable. It was their intention to have entered him "not for competition" had Graphic put in an appearance. as under Major Taylor, who judged at Pittsburgh, and is to officiate at St. Louis, Robert won over the Graphic Kennels' entry. Entries for St. Louis close May 8 and not May 2, as incorrectly stated. Entries are said to be coming in very satisfactorily.

"HISTORY OF THE MASTIFF."—Mastiff lovers will re-joice to learn that copies of Mr. Wynn's "History of the Mastiff" are now accessible to book buyers on this side of the water. We have received a small consignment of this ex-cellent work, which is for sale at this office at \$2.50 cach. We shall review the work at the earliest moment possible.

IMPORTANT SALE OF COLLIES.—Editor Forest and Stream: I have this day sold my enture kennel of collies, in-cluding champion Lady of the Lake and Glengarry to the Hempstead Farm Co. Parties who have corresponded with me in regard to the above are kindly referred to the new owners.—J. D. SHOTWELL (Rahway, April 24).

BEAGLES AT PITTSBURGH.—Wrightsville, Pa., April 28. —Editor Forest and Stream: Your list of awards in the open bitch class at the late Pittsburgh show is wrong. My bitch Pet won second, Krueger's Myrtle vhc. and Maida hc. Please make the correction.—A. C. KRUEGER.

THE F. & S. AND THE A. K. R. are separate concerns, and kennel notes intended for one cannot be transferred to the other. If it is desired that a note appear in both, it must be sent to both.

KENNEL MANAGEMENT.

127 No Notice Taken of Anonymous Correspondents.

EV No Notice Taken of Anonymous Correspondents.
E. S. C., Medbury, Idaho. – Piease tell me what I can do for a rou. Scotch terrier dog whose foot for the last three weeks has been in had state. It has gathered and hroken in three different places on t inner side of the foreigr just above the large pad on the foot a once between the second and third toe. The skin round the sore is a blackish blue spotted appearance, and there is a bad discharge matter; otherwise the dog seems to be in good condition aud spirit may mention that he and a hitch of the same breed have only be out from Scotland about six weeks. Ans. The dog is probably sa foring irom some form of scurry resulting from the sea voyage a food. Give mixed diet of meat and vegetahles. Get a prescriptic sal follow: Of the circate of from and anmonia, I ounce; of Fowle solution of 'arsenic, 2 ounces. Mix. Give four drops three tim daily with he food. Dress the sores twice daily with halsam of Peolinement.

Ontment. C. B., Mississippi.—I have a spaniel dog that has the mange very had. Will you please tell me what to do for him? Ans. Wash the dog twice weekly with warm water and carbolic soap. Get a hox of powdered calomel aud hismuth in equal parts and dust the affected surface with the powher once daily. Give five drops of Fowler's solu-tion of arsenic twice daily in the food.

Rifle and Tray Shooting.

TARGET TALK.

<text><text><text><text><text>

Editor Forest and Stream: Inote in your issue of April 5a partial description of the Eames standard union target. It has several features of great merit, and if it is not "featrully and wonderfully made," like the standard Amer-ican target, it is probably quite as good as anything yet offered. I understand that the standard American target has been accepted in some quarters "without the fractions," whalever that may mean-is all fractions, and it is "standard," the other has no fractions, and it is also "standard," but the two cannot resemble each other. If the several dimensions of the Eames target cannot be measured by any one who is not provided with instruments fine enough to meas-ure fractions as small as one one-hundredth of an inch, then there be more than ten thousand target shooters in the United States who will care nothing about it. E. A. L. Norkulstrown, Pa., April 14, 1886.

THE TRAJECTORY TRIAL.

THE TRAJECTORY TRIAL. A CORRESPONDENT of the *Rifle* has arranged an interesting exhibit of the results of the late rajectory trial conducted by the Fonest AND STREAM, incorporating with them a half-dozen of the fiftes tested on a previous occasion by an Eastern rifleman and printed in the paper from which we quote; the correspondent who, writing from Frovidence, R, I, over the initials T, F, S, says: Tor covenience, I have arranged the recently published results of the trajectory tests in tabular form, with like calibees in the same group. For each caliber seven columns are devoted: This Column..."No."-shows the number of the test. Those "That Rifle are numbered in Roman numerals. Some, however, that are upon the same rifle and charge as those made by Fonest AND "Trand S's." all of which are denoted by italies corresponding to the "F and S's." all of which are denoted by italies corresponding to the "B and S's" counters of the tests. The column..." (Charge reduced to . 40-caliber."-This means "This Column..." Charge reduced to . 40-caliber."-This means

Sectional country, aliber, weight of powder in grains, and weight of bullet in grains. Third Column-" Charge reduced to .40-caliber."—This means merely what the charge would be if magnified enough or reduced enough, as the case may be, so that the bullet would be of '40-caliber. This Increase or diminution of course takes place hoth in length and diameter in the same proportion. Thus, if we "increase" a .22-caliber bullet to .44-caliber, we double its diameter and douhle its length, and also double the breadth and depth of its grooves, keep-ing its point sharp to the same angle; so we bave a bomologous body, of just the same shape as original, but of larger size (40-cali-her). The same is true in case of reducing a bullet larger than .40-caliber. It is evident that the weights of like-shaped bullets vary in proportion to the cubes of their respective calibers. When it is re-quirted to reduce a bullet or bullet for corresponding to the origi-nal caliber, and dvide this product by the factor corresponding to the caliber desired. For any future use, the following decimal fractions are given, with explanation:

Johanation: reduce .50-caliber to .40-caliber, multiply by..... 4. 45 4. 44 4. 42 4. 44 4. 1.17 1.95 6 01

This column is inserted and explanation given because by "reduc-gy" all of our cartridges to .40 caliber (any other one caliber would o, hut this was taken as a medium one) we have a more comprehen-ve way of comparing the relative strengths of the various charges. Fourth Column - "Ratio"-gives the ratio between the weight of ad and the weight of powder used. Bith Column - "1004, trajectour at 50 vis"-explains itself. It is

Fourth Column-"Raito" gives the ratio hetween the weight of Fourth Column-"Raito" gives the ratio hetween the weight of Fifth Column-"1004, trajectory at 50yds."—explains itself. It is the only one-the central trajectory height-on the 100yd. train that is was worth while to insert. Sixth and Seventh Columns-"200yd, trajectory-at 50yds, and at 100yds."—also explains itself. The other heights of the 200yd, tra-jectory are not considered. To make the matter more simple, the minute details of powder and hullet are left out of consideration. The weight of the bullet is its principal character within certain limits; but it is true that its gen-eral shape and its own peculiar form have considerable influence to hear. But it is out of the question to take all these points into ac-count.

column 3) as a larger caliber give the same result as to flatness of trajectory? column 3) as a larger caliber give the same result as to flatness of trajectory? Let us glance at our tables. But before so doing it is worth while to hear in mind that the pressure of the atmosphere as measured by the harometer-aic the direction and force of the wind-at the time the shots were made, all have their bearing upon the resulting tra-jectory beights. A low barometer is favorable to a flat trajectory, in one sense-the resistance is less in the same proportion nearly. Moreover, from the same cause we would expect a flatter irrejectory with the same charge at places situated 2,000ft, 3,000ft, or more above the seallevel, where the air is rarer, than at points near the sea level. Hence it won't do to draw too fine a line between this and that kind of amunition, unless we care to undertake the laborious task of correcting all these tests to standard condition; and by carefully studying the tables we find it to be a general rule that each time we diminish the ratio of lead to powder we obtain a flatter trajectory, providing, however, that we do this by increasing the powder. It is true that if we diminish this ratio by cutting down on the lead we do sometimes get a flatter trajectory, but generally not to 250 grains. If you cut down the lead less than above stated, we get a flatter trajectory, only on very short distances, as 5', 100yds, but not on a 200 yard target. (3) If will be seen, by comparing trajectories of the various call-

of the builet "reduced" to ,40-cal., comes less than 230 to 550 grains. If you cut down the lead less than above stated, we get a flatter trajectory only on very short distances, as 5', 100yds, but not on a 200 yard target. (3) It will be seen, by comparing trajectories of the various call-hers, that whenever the proportions are kept the same, i.e., when-ever the various cartridges reduced to 40-callber are the same, the small callbers have practically the same heights of trajectory as do apply to ordinary callbers (23 to .50, or hetter, perhaps, 33 to .45). It must not be supposed that we can reduce a cartridge from one callber to another at pleasure without affecting results. The pene-tration may differ; the destructive power may differ greatly: but if the large est is not too great we are reasonably certain of affecting the trajectory and accuracy to no very great extent. In speaking of the influence of the resistance of the air, according to its density, upon the flight of hullet, it is evident that the light influence of the direction of the resistance of the air, according to its density, upon the flight of hullet, it is evident that the light influence of the direction of the resistance of the air setsance than is the heavy long-range bullet. The rame is true regarding the influence of the direction of the wind. For fairly heavy charges the above points are hardly worthy of consideration. TABLES OF TRAJECTORIES.

ECCENTRIC FLIGHT.-Pittshurgh, Fa, April 19.-Editor Forest and Stream: The experience of Miton P. Petrece on an erratic bullet flight, as related in FORST AND STREAM of April 15, reminds use of an incident which happened to me about nine years since, and which almost sent me to "the happy huntleg ground" I was standing in a large apple orchard situated on a farm two miles from the town of Muncy, Lycoming country, Pa., firing at a thick oak plank, in the center of which was a solid, hard knot, the surface of which was even with surface of the plank. The weapon used was a Coll navy revo-ver, 44-cal, and the distance at which I shot was about 20yds. With the plank inclined agrants a tree at an angle of about 45 degrees, I had fired, I suppose, about ten shots, hitting the knot several times without any startling results, when upon firing again I was suprified to see the branch of a limb not more than three feet above my head drop to the ground. To say I was suprised would not express my feedings; I was completely dumbfounded. On examination of the heative right of a bullet's passage. The fact that a bullet would

the latter had been cut off cleanly through the center, bearing unalis-tanknie eridence of a bullet's passage. The fact that a bullet would glance from an oak knot does not, in itself, seem remarkable; hut that one could possibly glance taking an almost spopsite direction to the line of fire, and this yet with force sufficient to cut an apple tree limb almost an inch in diameter, is one of those mysterious events which i, for one, will never be able to explain.—C. A. R.

[APRIL 29, 1886.

RANGE AND GALLERY.

E REMINGTON FAILURE.—A Utica dispatch, of April 22, s that "Judge Williams, of Watertown, has granted the motion or for the dissolution of the corroration of E. Remington & Sons, ion. Addison Brill and A. H. Russell were appointed receivers, rs were filed in the County Clerk's office of Herkiner county on day, and soon after the individual and partnership assignment hilo and Eliphalet Remington to Charles Herter, of Hion, was filed. This arrangement is understood to carry down the Rem-on works, of which the Remingtons were the chief backers. There heen little work done there for some time and there are said to be chments upon much of the pronerty. In the carbon built has the back for the dissolution of the corroration of E. Remington & Sons, a. Addison Brill and A. H. Russell were appointed receivers. swere filed in the County Clerk's office of Herkimer county on y, and soon after the individual and partmenship assignment to and Eliphalet Remington to Charles Herter, of Ilion, was ed. This arrangement is understood to carry down the Rem-works, of which the Remingtons were the chief backers. There en little work done there for some tune and there are said to be ments upon much of the property in the agricultural works. The armory works, where the business of cartridge making, machine manulacture, and type-writer manufacture was also don, there are understood to be no nourgages or llens of any the judgments secured against the corporation are less than 0, and it was to stop these piling up and to give all the creditors all showing that receivers were secured. The receivers are emporary appointments by the Court. Upon filing a bond for they are subhorized to lake possession of the works and wind business. The 'order system' has long prevalled in Ilion, and ared that many of the store keepers there will go down with provation, which has supplied almost all of the business of that'. "The failure seriously affects not only Tlion and the adjacent ", but this city as well, where large amounts of their paper are the suspension has been inevitable for a long time. When mingtons had large contracts for arms everyhody made money or prosperous. The liabilities of the concern are about \$1,000,000, prosperous. The liabilities of the concern are about \$1,000,000, prosperous. The liabilities of the concern are about \$1,000,000, prosperous. The liabilities of the concern are about \$1,000,000, prosperous. The liabilities of the concern are about \$1,000,000, prosperous. The liabilities of the concern are about \$1,000,000, prosperous. The liabilities of the concern are about \$1,000,000, prosperous. The liabilities of the concern are about \$1,000,000, prosperous. The liabilities of the store see develops an cts, and, as is well known, money has alway

about prospects, and, as is well known, money has always been te on these."
TEXAS OPINION.—Fort Clark, Tex., April 14.—Editor Forest Stream: I wish to thank your correspondents Milton P. Peircest ("J. S. D.," for their prompt response to my letter of April 1. I elf think that 42 inches ia too long a barrel, hut the gun mentioned the only well-made gun of the kind that I saw, and I had to take none. I wanted a rife of somewhat larger hore and shorter bar-but found none except cheap filmsy things. I am not now in a e where I can have it altered, so will have to let it remain as it is, rays thought that kid made the hest patching because, when i, it stretches around the ball and leaves no wrinkle or folds. I that "J. S. D." agrees with me. I see that the muzzleloading iget another send off in your issue of April 8. Think that your espondent goes in rather strong for his favorite. I don't pre-to say that the breechloader is a necurate as the muzzleloader, ny else target shooting, for I don't know; but I do know that shallard rithe will bit turkeys at 1759ds, or turkeys' heads at 509ds, will shoot into an Sin. bullseye at 200vds, and it is a mightly turkey that lets much of an Sin. Icricle show round him. I am ed to helleve that the fault was in the men, not the breechloaders will shoot into an Merril seems to think. He says that the ST AND STREAM trajectory tests showed that the breechloader strom spoiling the targets for close measurement. Not so very or "wild shooting guns," is it? He also says that a, 42-caliber inhoader will not shoot accurately with a short a halt as 280 s. I know that a.45 with a 300 grain hall half in the shell and uns of powder, will shoot accurately mit as short a halt as 280 s. J know that a.45 with a 200 grain hall half in the shell and ubno of owder, will shoot accurately with a short a halt as 280 s. J know that a.45 with a 200 grain hall half in the shell and ubno of powder, will shoot accurately with a short and and s. Cranzus L. Surry.

ader as well as most men, hut I want to give the breechloader its ie.—CHARLES L. SMITH. NEWARK, N. J. April 24.—The match between teams representing ewark and New York is likely to fail through, as the New York arties have stated that under no circumstances will they shoot in is city, claiming that they were never fairly treated when they did toot here. A meeting of riffemen was held at the Pseex range last onday evening, with J. Danity chairman and John H. Huegel sec-tary. A committee, consisting of J. Coppersmith, F. Snellen and C. Neuman, was appointed and instructed to arrange a match for 0a side; ten men per team, twenty shots per man; one-half the ore to he shot on a Newark range, and the other half on a New ork range, the side scoring the greatest number of points in the or shoots to take the stake. This ihe New York people thought fair, preferring to keep all the advantages of range, etc., on their vo side. Having been heaten twice hy a Newark team is probably e reason for their declining to shoot here again. They informed atch could he arranged without necessitating their coming to this sever range to hear a further recopen, and if the ones who were traise to hear a further recopt of the committee. In the competition for positiou on the Newark team, which was gun last evening of the riffemen interested will hake lat the user range to hear a further report of the committee. In the competition for positiou on the Newark team, which was gun last evening at hengel's range, John Goopersmith scored in n targets 49-115, 50-117, 49-116, 49-114, 49-116, 50-114, -115, 50-118, atotal of 493 Creedmore, or 1.128 ring count. Godfrey lellen scored 49-113, 50-118 and 50-134 in three targets. The compet-ion will be continued on Monday and Friday evenings, until each the argets mpetitor has shot ten targets. All riffemen are invited to compete. FHE INTERNATIONAL MATCH.—Gen. Wingrate talking with a morter says of the prospects for the British market.

impetitor has shot ter targets. All riflemen are invited to compete. THE INTERNATIONAL MATCH.—Gen. Wing ate talking with a porter says of the prospects for the British match: "We have com-unicated with the British Association, asking them to send over a an this summer, and have received a reply formally active g its receipt, but that is all. I hardly think we will succeed in inging about a other contest in 1886. There is no doubt that since e last international contest, a marked improvement has here made this side of the water at the 800, 900 and 1,000-yrad ranges, and ampionship. Already from all parts of the West the tortain the grange are hard at work getting in condition for the best shots at grange are hard at work getting in condition for the best shots at new will take the lead in high scores, but no doubs. The West-n men will take the lead in bigh scores, but no doubs. The only online in the way of a match is the apparent leak of the and.

MANCHESTER, N. H., April 17.—The most successful and interest. g regular shoot which Manchester rithemen have held for months ok place at the range this afternoon and indications point to a rely season for the sport. The day was bright with half a point of ind blowing from the west. The following scores were completed, though they do not represent the whole number of rithemen in tendance:

The deck by finished, but the appearance of the bottom be shapes of the planks, which are such as to show the all to poor advantage. The rig of this boat, which is Budding; on, B. O. C., is of the Mohican pattern, 75 and

very finely finished in all parts. Near by is a large case of brass work of all kinds for eauces, making by far the most complete assortment yet shown. Among other novelities are several varieties of blocks and brass bands for booms and yards, and a new and ingenions holder for a pennant, allowing it to turn freely without fouling. All of these very finely finished in all parts. Near by is a large case of brass work of all kinds for cances, making by far the most complete assortment yet shown. Among other novelities are several varieties of blocks and brass bands for booms and yerds, and a new and ingenions holder for a pennant, allowing it to turn freely without fouling. All of these are made by Mr. Rushton from his own designs. Two other boars in the same exhibit were shown on the east side of the room, 10 and 30-pound samples of the light weight cances for which he is so famons. The first, white light and strong, is fitted only for such work as it would receive at the hands of an experi; but the 20-pound board of the same size, may be used by any one for gunning, fishing or exploring, and is still so light as to be easily carried on the shoulders. With the cances were shown some single and double paddles of Mr. Rushton's make. Down stairs were two more from the same builder, an open rowing and sailing boat and a Mohlcan No. 1 cance, both of the usual fine finish. The former was rigged with one boom and gaft sail Next to the Idlewild is Com. Fowler's new Ideal, the Yiking, fresh from Everson's shop. This new model is one of the bandsomest in appearance that Everson has yet turned out, and with lines full rather than holiow, but very clean cut, she promises to become more popu-lar than any of his previous models. The present boat is shown as the "Married Member's Cance, "and attracts general notice by her sails. These two cruising lateens are of a bright Turkey red, orna-mented with a white sea horse. Though novel, the effect is not dis-pleasing for varlety, though nothing can exceed the effect of a pure white sail on the water. The cance is very confortably equipped with cushions and ruzs, a seat being made forward for a lady. For cruising and racing, which form part of her intended use, she is fitted with two plate-brass centerboards. The next encore in the rows is the Inertia, exhibited by ber owner, Mr. E. W. Brown, K. C. C. She is fitted wit

am's. T llght in

without jie. The actual oak is very light in construction, weighing hut 125 pounds. In the center of the hall is a large showcase containing an exhibit of silverware by the Gorham Co., with some badges and trophies by other makers. The Pittsburgh, Hartford, Rochester and other cups are shown; but the most prominent features of the exhibit are the large cups designed by Mr. Geo. Marcus and made by the Gorbam Co. for the New York and Brooklyn cance clubs, the latter of which we have previously described. The former is in the form of a pitcher, the leading idea of the design being the life of the American Indian. The snape is not graceful, following closely the squat and bulky form of ancient ladian pottery: but in the originality of its treatment and its departure from the conventional, the effect is very pleasing. Around the top is worked a bent withe of hickory, lashed on with leather thongs in true Indian fashion, while the handle is a branch of arture from the conventional, the effect is ver i the top is worked a beat withe of hickory, last thongs in true indian fashion, while the handle is Around the bowl is shown a pine forest, rising shi up which a fleet of tiny birches is paddling, while a ground, is the inscription "New York Cance Clu Dallenge Cup." With the cup is a bag of tanne ented with Indian symbols and totems, in keepin estant.

biacked fround, is the inscription "New York Canoe Club, International Challenge Cuo." With the cup is a bag of tanned deerskin, ornamented with Indian symbols and totems, in keeping with the inflat in design. The set of the cup is a bag of tanned deerskin, ornamented with Indian symbols and totems, in keeping with the inflat in general arrangement to the old, but much improved in detail. Near it is Mr. Stoddard's new mizzen, used in 1885, another variety of the gunter. A small working model of Mr. Stoddard's first sail is also shown.
 The set is the set of the s

THE ASSOCIATION CUP.

THE ASSOCIATION CUP. The following circular has been sent out by the cup committee, following the amendment by the executive committee of the original resolution. The fund up to date is but \$140, and a considera-low amount is still needed. Subscriptions have come in slowly owing to the misunderstanding which has prevailed, but now that all is finally settled there is no doubt but that the defired amount will be soon subscriptions of over \$1. All American cancelsts are con-cerned in the success of the trophy, and now that its object is fully metric to be first raced for at the approaching A. O. A meet, on the cocasion of the visit of the accretified representatives of the flow of the importance and exceptional nature of the occasion, and invited the importance and exceptional nature of the occasion, and which the matter has been before A. C. A. meeters the subscription were originally invited to the flow of and that amount is now solicited from you. BRITISH CANOEING IN 1886.

IN the Field of March 18, I cruised over the history of canceling in the past and its general condition at this season, looking at the subject chiefly from a cruising point. It is now my intention to con-aider the sport and pastime of canceling as forsbadowed for 1886 in the ranker space.

sider the sport and pastime of canoeing as forsballowed for 1886 in its racing aspect. The governing idea in the programme set out to canoers for 1886 is undoubtedly the attempt to so balance the patronage of the sport that all kinds of cances and all conditions of the men have a fair chance of enjoyment in camps, cruises, or meets, and in prize win-

Chance of enjoyment in camps, or mees, or mees, and in price ning. In regard to prize winning it would appear that everything been done to bring forward "new blood," one of the oldest and successful prize winners having brought in and carried a rule "any member who has won three first prizes in club races same denomination (viz., "salling' or 'padding and salling') sho considered a 'senior, 'and shall thereby become inhelible to tak prize riven by the club in 1886, except in challenge cmp races, race of the same d-momination as that in which he is a 'senior, prize given by the club going to the 'juniors'. The senior wit the race, however, takes a sikk flag in memoriam. Thus the blood has a certainty of cmp-winning, and it is only a questi-number of races among them as to wiping of the 'junior' i senior."

blood has a certainty of cup-winning, and it is only a question of namber of races among them as to wiping of the 'junior' into a ternior." Whether this act of self-denial on the part of the leading suiling racing men will produce the boped for large entries remains to be seen. It only affects the sailing races; why, one cannot say, but the paddlers would have none of it. However that may be, there is this peculiarity about cance sailing—that I know of in no obler aquatio peculiarity about cance sailing—that I know of in no obler aquatio peculiarity about cance sailing—that Show on the same two men, "Nautilus" and "Peart," have been first and second and second and first whenever they raced, with but one or two exceptions; and neither Scotlaud, Ireland, or any part of England, has ever sent a successful competitor to the looyal C. C. natches. It is somewhat peculiar that in the dub likelf some cruising genius should not ere now have sprung up to lower the "red and yellow cross" and the "blue with white diamond;" ont it is still more curious that with a 450 challenge cup, and ounercous other prizes of value, open to cance clubs, no competitor of merit should have been found in the length and breach the programme has beeu expanded, with the nope of inducing cances from all or any parts, In any kind of cance, to compete in the R. C. C. races. (In the of of builting a competition between small, medium, and large cances, even Mersey sailing cances and Humber cance yaws. If any skipper with a belief in himself and his cance, wasts "a fair field aud no favor." The cances will probably remain there kill Whitsunden Lake. There and swill remain there kill Whitsunded and the visit fold of cance, it is conserved in the starts at the cance wasts a fair hed aud no favor." The cances will probably remain there kill Whitsunde, with sweepstake and other races if entries turn up. The cances will probably remain there kill Whitsunded with in that respect as can be; the Midiand Railyng station is of the lake, and the Royal C. Carat

for a fe ton on

lon is within 500yds. of the lake, and the koyal U. C. rattisot ample ize. Hendon racing being over the cances are carted to the Thames, or a few shillnrs and then races and camp take place at Tedding-on on June 12, 19, 25 (camp and "camp fittings competition") and 26 ergatta; and finally July 10, sailing race for "every description of anoe." A further feature of attraction is, that in hope of seeing competitors from the colonics or abroad, two special prizes of 425 ach are offered for their competition. The club further holds an autum cruise and camp meet on the forfolk Broads in August. No doubt this should and will be popular, specially with the cruisers' are a separate class, whereas n truth the racing men' and "cruisers" are a separate class, whereas n that the racing men are almost to a man, the most expert cruisers or baye.

We have. In America and Canada canceing has grown in a mary ner, and its burning life flame is objectly fanned by camp races. In the autumn of this year two "international m for valuable trophies, are to be sailed in America, besid club challenge oup races, and four, if not more, of the f cance sailors are going over to compete; and it is much that, by the time the party starts in August, there will be the best bands from the Clyde, the Mersey, the Humb Forth.

with. Meantime there is open competition enough for the racing, and the boat and yaobt sailors generally n tempting a competition in which the whole work, und, devolves upon the one man, making bin and sponsible for failure or success. There are men wh rious parts of our country who are competent to ght, and who, by modesty alone, have hitherto beso contenents of the suit the clark of our country ho

hard, devolves upon the one man, making bim and his craft slove responsible for failure or success. There are men who sail cances in various parts of our country who are competent to race in the first flight, and who, by modesty alone, have hitherto been deprived of the pleasure of winning and the plory of carrying bome to their club the challenge cup of the Royal C. C. A noticeable feature in the cances of the South for this year is the general reduction in the size of sails both on the Thames and at Hendon Lake. The tendency is evident in the direction of less sail and ballast; and, mided, in one new cance-the Nautilus-the size of hul has also been considerably reduced. Of novellies thus far disclosed-that is, us to alterations or novel-ties in fittings-the deck yoke and hand tiller on the Pearl is an in-genious construence. Mersey cances, no doubt, had a hand in tring-ing to the foront this mode of "tiller and yoke" steering, and it has lately become almost unversal in America. The Nautilus has gen-erally had a "deck yoke," but forward of the well; in the new craft this does not appear to exist, but some arrangement of "hand tiller" (as yet dart) acting as a supplement to the foot steering gear, is said to be in process of creation. Some seven cances are on the club raft at Hendon, and several were out for a trial spin last week, among them the Dilamond, a rather large cance with a very heavy plate, did some remarkably good sailing in company with the craet cances of the day; appar-ruider, reminds one at a distance as if a toy yaobi bad got foul of the Pearl's ruider, it being but three or four square for the others.

PUZZLE. For some time past Mr. Samuel Ayres has been busy at his upper shop on a steam launch for Mr. Jacob Loriliard, from the latter gentleman's designs, and on Ayril 23 the boat was taken on roliers to the foot of Corlears street, and lifted off the dock by the large derick of the marble yard mear by. The Puzzle is a shoal draft yacht, in-tended for speed, and is very fine in her lines below water. The stern is square, and the horn timbers show an ugly curve that spoils the appearance aft. The bulwarks are about 18in. high and form an ellipse aft, above the square stern. On deck for ward is a wheel house, abaft which is a low caun trunk, with gangways 3ft, wide between li-which point the cabin top extends into a flush deck from rail to real, giving head room for the full width of the boat in the cabins. The length over all is 66tt, waterline 96ft, beam 10ft, deptb 6ft 6in, and draft 4tt. Her frames are double sawn, of hackmatack, sided 2in., moulded 3/2 and 2/2, spaced 18in. The cedar planking is double, laid diagranity, the inmer skin heing \$6tn, and the outer \$6tn with curvas laid in paint between. The plank fast explankings are of copper. The engine, an inverted compound, is now ready, and will he put ahoard at the foot of Firlt street.

THE NICE RECATTA. THE Nice regata of 1886, sailed on April, 7. 8 and 9. was much less brilliant than in former years, being confined entirely to French and Italiant shalts of moderate tonnage, of which a fcw were of English build. None of the English and American yachts were pres-ent, and there was no steam yacht racing. An easterly storm, which provailed for several days, prevented the attendance of several and there was no steam yacht racing. An easterly storm, which provailed for several days, prevented the attendance of several and there was no steam yacht racing. An easterly storm, which provailed for several days, prevented the attendance of several and over, was wonby Pieramosa, a yavi of French build but of the Frag-tish type. She defeated Coralia, Maria and Magail. In the second and over, was wonby Pieramosa, a yavi of French build but of the Frag-less, 61 to 20 tons, Rigoletto won first prize and Miss Mary second. In the third class, 5 to 10 tons. Bonita was first and Aleyon second, on the third class, 5 to 10 tons. Bonita was first and Aleyon second, on the third class, 5 to 10 tons. Bonita was first and Aleyon second, on the third class, 6 to 10 tons. Bonita was first and Aleyon second, on the starting. The fourith class, 2 to 5 tons, had five starters, the second day the wather was quite calm, with a little wind three starting. The fourith class, 2 to 5 tons, with a little wind the second day the wather was quite set on the sailed for which fitteen entries, the winners being Rigoletto, Fitters. The final race, on April 9, for the Union of Nautical Societies of the dedilerinean, was wou by Fitamosa. The racing was successful at were good sport to all present, though not to be compared with the tormer year. THE INTERNATIONAL RACES.

PUZZLE.

The ollide of the latter and the following lefters were read. It was resolved to reply at once to the lefter of Mr. Webb, hut the decision of the committee on the various points was kept private. The correspondence is as follow:
NEW York YAGHT CUR, March 12, 1886.
Lieutenant W. Henn, R. N., London:
Dearo Study and Arter Start, Control and Start Start, Start S

York Y. C. shall nave the unit necessary in the Galatea to have the same privilege. All minor details to be arranged hetween you and your representa-tive and the committee, and any differences that may arise to be set-lied by them. Referring to the suggestion made in one of Mr. Webb's letters that there should be four races, and that two of them should take place off Newport, the committee instructed me to say that from the ex-perience of last year It was found that that he dealy that may possibly take place, the time required for three races is as much as an generally be given to the purpose, and that that number is con-sidered sufficient to test the ves-els. I am instructed by the committee to sy that should your yacht be in these waters at the time of the annual cru'se, which will take place in August, the club will be most happy if you will join, and that all facilities that con be offered by the club will be placed at your servece at all times. I am, dear sir, your ohedlent servent, No. 02 Wall street, New York. 18 ChANLEY GARDENS,

IS CRANEW GARDENS, IS CRANEW GARDENS, LONDON, S. W., April 18, ISSG. J Acknowledge the receipt of your letter of the 12th uit. It is no doubt within the knowledge of your committee that at an interview I had last autumn with several members of the committee, of which Mr. Tams was chairman, a desire was expressed that Lieur. Henn's collenge of last year, which circumstances prevented his carrying into effect, should continue to stand and he brought to a conclusion this year. I pointed out then to those members of the committee that it would be agreeable to Lieur. Henn if the first race could he sailed at Newport during the annual cruise of the New York V. C.

could be salled at Newport during the annual cruise of the New York Y. C. This arrangement would place Galatea and her owner en rapport with American yachts and their owners at an earlier date than would be the case if the races were all sailed at the time mentioned in your letter of the 12th ult, and would admit of the Galatoa taking part in any races held during the cruise to which she might be admitted by the courtesy of the New York Y. C. Mr. Tams was suggested as Llout. Henn's representative in case it should be of any convenience to your committee with reference to this arrangement is accepted it will alter the date of the first race in conformity with the date of the New York Y. C. cruise. With regard to the other courses Llout. Henn thinks that as the New York Y. C. course is not an open sea course, but is encumbered with should be affording an advantage to a vessel capable of reducing her draft at will-as instanced in the case of the Puritan standing over Flynn's knoll last year-the other races should be started out-side Sandy Hook Point. This is the more necessary, as your commit-side sandy Hook Point. This is the more necessary, as your commit-should be glad that the method of determining the time allowances should be glad that the method of determining the time allowance should be glad that the method of determining the time allowance and Gen esta was about si seconds. He cannot consider this a suffi-cient allowance between the observed to a source for the same propertion.

and Generata was about 31 seconds. He cannot consider this a suffi-cient allowance helween two yachts one of which carries a mainsail 35 per cent. larger than the orber and a topsall in much the same proportion. Licutemant Henn therefore suggests that it will be apparent that two yachts huilt to sail under widely different scales of time allow-nace cannot compete on equal terms if only one of such scales of the same allowances be obtained by the New York Y. O., and that the Yach and Generata Henn feels that will be adopted. The holders of the cup receive such noice of the name and rig of the chailenging yacht which gives them time to build a vessel to heat year, Lieutenant Henn feels that with the additional advantage of the other. Galatea would not compete on equal terms; and as he feels hops that Mr. Schupter will be appointed the unpiter, as last year, and that he will be good enough to accept the task. To the proposed number of races, as well as the length of the course, Lieutenant Henn accepts your proposal on these points.

Time of making races and all other minor details Licutenant Henn wisbes to remain the same as last year. I am to thank you for your invitation to join the New York Y. C. eruise, which Licutenant Henn would have great pleasure in doing, but it would only be practicable if the first race for the cnp takes place as suggested, and it would greatly add to the pleasure of his visit to America. I am, my dear sir, yours faithfully. Deavor WEBB. TO WILLIAM KREES, HONORABLE Secretary America's Cup Committee.

chance and the training the product have prever present of normalized priors and the shared of the second of the out of the second of the

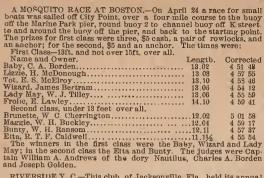

<text><text>

The rudder stock works through a large brass tube, making a water-tight job. Around the cockpit on deck is a curved oak rail, enclosing a part of the deck as a seat. The fulsh is excellent throughout, and bespeaks the thorough workman. The sails are by Sawyer, the jib being fitted to set dying or on the stay. The Nanita will be used for cruising, but it is probable that if the model is capable of any speed her owner will soon discover it, as his reputation as a bold sailor is well known above the Gate.

THE NICE REGATTA.

THE INTERNATIONAL RACES.

AN answer was received last week from Mr. J. Beavor-Wehh, in A behalf of Lleut, Henn, to the letter sent on March 12 by the New York Y. C., in regard to the terms of the coming races. A meeting of the committee was called on April 21 to consider the letter, hut owing to the absence of ex-Com. Smith, it was postponed until the 20th. On Monday afternoon, Com. Gerry, Vice-Com. Haight and Rear-Com. Barrow, with Messrs, Krebs, Dickerson and Smith, met at the office of the latter and the following letters were read. It was resolved to reply at once to the letter of Mr. Webb, hut the decision of the committee on the various points was kept private. The corre-spondence is as follows: New York YAGHT CLUR, March 12, 1886.

RIVERSIDE Y. C.—This club, of Jacksonville, Fla., held its annual eeting on April 16, electing the following officers: Commodore, W. Wightman, Vice-Commodore, John P. Varnun; Secretary and reasurer, L. D. Hosmer; Fleet Captain, W. L. Davids; Flag Officer, V. Wightman. Executive Committee, J. H. Stead, H. B. Wood-ard, Geo. L. Drew. The by-laws, sailing rules and constitution will e carefully revised at once, and the club house will be much im-roved. The next meeting will be on April 30, at 7:30 P. M.

MIRAMICHI Y. C.-A new club with this name was organized pril 12 at Newcastle, N. B. with 30 members, the officers being pilows: Commodore, J. C. Miller; Vice-Commodore, J. L. Stewar ear Commodore, C. J. Butcher; Secretary-Treasurer, F. Kenned rustees, J. C. Miller, James Miller, G. Watt and P. Wheeler; Mer rer, T. Orimmen. The burgee is of blue and white, with letters . C. A club book will soon be issued.

NEWARK Y. C.—The opening sail on May 16 will be to Bay Ridge inspect the Atlantic. The fleet will leave Newark at 9 A. M., and ere will be a scrub race each way. Most of the yachts are ready, I the cabin sloops being painted white this season. A SHOALSLOOP.—A centerboard yacht 30ft. long, 11ft. 2in. beam Id 15in. draft, is now building at Canarsie from designs by her wher. Mr. Samuel Robbins, of New York. She will have both jib d mainsail and cat rigs.

KNICKERBOCKER Y. C.—The yachts are being lauuched and ted out rapidly. Last week the Whim and John Demarest were t afloat. A large number of the club fleet have had iron keels ided this season.

The season. EW JERSEY Y. C.-June 14 has been named for the 15th annual sta of the club. Com. Dilworth has lately added to the fleet the t Wayward, late of New Haven, purchased by him from Mr. C. 'arner.

NEWARK Y. C.—Three of the boats of this club, the Vixen, Smury C. and Winifred, are ready to race any three yachts of an-ther club of 26 to 25ft., an average of the times of each trio to lecide.

CYTHERA.—Mr. Stewart's yawl was spoken on April 4 in lat. 43 north, long, 11 west, by the steamer Roslin Casile. On April 9 she arrived at Funchal, Madeira, after a passage of 19 days from Eng-land.

Iand. ANOTHER PROPOSED CRUISE.—The New England Y. R. A. are talking of a large cruise from City Point this summer, visiting Marblehead, Rockport, Portsmouth, Newburyport and Isle of Sheals. THE SALE OF "243,"—The large steam yacht, built by Cramp & Sons last yea", and known only as No. 246, has been sold to Mr. S. V. Harkness, who will use her on the lakes.

GEN. PAINE'S YACHT.—All is ready for launching, the painting and gliding is completed, and the yacht will be launched about May 6. The name will probably be Mayflower.

THE GOELET CUPS. - Mr. Ogden Goelet has notified the New York Y.C. that the cups offered by him will be ready by July 1. They will be raced for at Newport, as usual. MUMM'S YARD, - In consequence of ill health. Mr. John Mumm has leased bis yard and business to Messrs. Guion & Costigan for five wear.

SHONA.—Mr. Sweet's new purchase arrived in Boston last weeks and is now at Beverly. She will race in Boston waters this year. NORTH END Y. C.—Boston is to have a new club with this name It starts with a good fleet of small boats.

THE NEW PARK BILL.

IN a bill, reported by Senator Manderson on Friday last, we have an outline of the action recommended by the

Senate Committee on Territories with regard to the Park. This bill (S. 101) was introduced in the Senate Dec. 8, 1885 and was read twice and referred to the Committee on Territories. In its original shape it was imperfect, and we called attention then to some of its faults. It is now reported by Senator Manderson with a number of provisions struck out, and with several important additions. In this form it is recommitted to the Committee on Territories for further con sideration.

When it is reported in its final shape we shall lay before our readers the full text of the bill, but for the present the following abstract is enough.

Section 1 defines the boundaries of the Park, and author izes the boundary lines to be surveyed. They are to be as follows: Beginning at a point on the forty-fifth parallel of north latitude, where that parallel is intersected by the western boundary of Wyoming, thence due east to its point of intersection with the meridian of 110° west longitude; thence due south five miles, thence due east to the meridian of 109° 30' west longitude; thence due south along said meridian to the forty-fourth parallel, thence due west to its point of intersection with the west boundary of Wyoming, thence due north along that west boundary to the point of beginning.

Section 2 is wholly new and treats of jurisdiction, providing that the Park shall be under the sole and exclusive juris-diction of the United States; but that, if any offense be committed in the Park, punishment for which is not provided for by any law of the United States, or by any regulation of the Secretary of the Interior, such offense shall receive the punishment provided by the laws of Wyoming for a like offense in that Territory, and that for the present the Park shall constitute a part of the Third Judicial District of that Territory.

Section 4 sets aside the territory embraced within the Park as a public pleasure ground for the benefit and enjoyment of the people of the United States.

Section 5 authorizes the Secretary of the Interior to make and publish such rules as he may deem necessary for the preservation "of all timber, mineral deposits, natural curi-

osities or wonderful objects within said park, and for the protection of the animals and birds found" in it. Section 5 prohibits the hunting, killing, wounding or capturing of any animal or bird, except dangerous animals, when it may be necessary to prevent them from destroying life or inflicting injury, and the capture of fish except by means of hook and line. It provides penalties for violations of the act, makes possession of dead bodies or parts thereof prima facie evidence of a violation of the act, provides that persons or transportation companies receiving for transportation game or fish which they know or have reason to believe were taken in violation of this, shall be deemed guilty of a misdemeanor.

Section 6 authorizes the Secretary of the Interior to lease Section 7 authorizes the President to appoint a "Commis-Section 7 authorizes the President to appoint a "Commis-

sioner learned in the law," who shall be the judicial officer of the Park, and shall hear and try cases of violation of the law or of the regulations of the Secretary of the Interior, and gives him power to hold persons charged with the commission of felony. The Superintendent and the Park police are vested with the powers of U.S. marshals, or deputy marshals, and are also authorized to arrest, without process, any person taken in the act of violating the law or the Government regulations.

Section 8 provides for the payment of costs and expenses incurred under this act, makes the violation of the regula-tions established by the Secretary of the Interior a misdemeanor, and establishes penalties.

Section 9 anthorizes the erection of a jail within the Park. Section 10 authorizes the appointment by the President of a superintendent, and the appointment by the superintendent, subject to the approval of the Secretary of the Interior, of fifteen Park policemen, defines their duties and powers, provides that no growing timber nor hay shall be eut without the written permission of the superintendent, specifying time and place where it may be cut, and the amount.

Section 11 authorizes the appointment by the Secretary of War of an officer of the Corps of Engineers, who shall have charge of the improvements in the Park, and provides that all sums received by the Secretary of the Interior from rents, or from fines and forfeitures for violations of law and regulations, shall be applied to these improvements. Many of the provisions of this bill are excellent, and it is

by far the best and most intelligent attempt at improvement in the government of the Park yet brought forward. It is not without grave faults, but it is a great advance over pre-It is so difficult in the present confused state of vious bills. things in Washington to obtain consideration for any bill in which there is neither money nor politics, that we may think ourselves fortunate if so good a bill as the one recommended shall pass. This bill, we understand, is in some sense a compromise, efforts having been made to conciliate all opposition.

The bill still contains a clause which virtually permits transportation companies to traffic in illegally killed game and fish without punishment. The words in lines 26 and 7 of Section 4, "Knowing or having reasonable cause to believe that such animals, birds or fish were" destroy the whole force of the prohibitive clause, and, as we have before remarked, will prevent the conviction of any one under this act. If the clause read, "Any person or persons, or stage, express or railroad company, receiving for transportation any of the said animals, birds or fish killed or captured in violation of this act, shall be deemed guilty of a misdemeanor," etc., the transportation companies would be forced to know that the game or fish which they took was legally killed, so that if questions were asked they could show them. selves free from blame. They would therefore accept no meat about which there was a doubt, and the violators of the law would soon lose their market. We reserve any ex-tended comments on the bill until we see it before the Senate in its final shape.

The enlargement of the Park, the definition of jurisdiction so far as it goes, the prohibition of hunting, the appointment of a Commissioner for the Park, the increase in the number of the police, and the enlargement of their powers of arrest, are all excellent provisions, though in many cases the act fails to satisfy those who are best acquainted with the Park, because it does not go nearly far enough in the direction of protection and improvement. At the same time it must be acknowledged that the recommendations of the friends of the Park have been patiently listened to and in many cases adopted.

It does not seem likely that any very serious alterations will be made in the bill in committee, and we hope before

LONG ISLAND STREAMS.

THE famous trout streams of Long Island are threatened with extinction. The bill before the New York Legis-lature to tap the brooks and sink wells in the counties of Queens and Suffolk threatens, if it becomes a law, to dry up the streams which give value to the surrounding property. We have before referred to the fact that they have taken the fountains which supply Lake Massapequa, one of the most famous trout waters of the island. We now learn that Mr. Pearsall Dorlon, of Hempstead, has begun an action against the city of Brooklyn for \$3,000 for damage done to his property through the draining of a trout pond by the Brook-lyn Water Works Company, which has driven a well and established a pumping station near his pond.

There is no doubt that the growing city of Brooklyn needs water, and there is just as little doubt that the trout streams of the south side of Long Island will be but a temporary alleviation of the city's needs, and that, within five years after consuming all the brooks on the south shore, Brooklyn will then invade the north side of the island with its driven wells and pumping stations. This would bridge over the difficulty for perhaps five or ten years, when there would be a cry for more water, just as has been the case in the city of New York, which has absorbed the streams of Westchester county and now is wondering where the next supply will come from. Eventually these cities must be supplied from the Adirondack region at a great cost of labor and time. This work, if begun now, would require eight or ten years to complete, but would furnish an unlimited supply, especially if taken from those streams which flow into Lake Champlain and the St. Lawrence.

The worth of Long Island trout streams can hardly be computed in money. Much of the value placed upon some of the most beautiful lands on the island is based upon the spring brooks which flow through them. Some of these are owned by clubs and others by individuals, who would regard their property as practically ruined if these streams were di-verted from their natural courses. If the evil ended there it would be great enough; but the great number of fishermen and oystermen in Great South Bay would find their occupation gone when these streams ceased to flow into the bay. The large oyster beds which give employment to hundreds of men, and have made a name for themselves all over this country and in many parts of Europe, would be things of the past. The Great South Bay itself without the supply of fresh waters which now flow into it, and swell the receding tides which keep its only inlet open, might be closed up, as Shinnecock Bay has been, and become a stag-nant pool. After all this ruin has been effected, Brooklyn will then find her increasing population still thirsty and will be sighing for other streams to conquer.

Now is the time, before Long Island is ruined, to consider plans which will furnish a supply of water sufficient for a city of three times the size of Brooklyn. At its present rate of growth that city may reach those dimensions during the lifetime of men now mature.

RIFLE AND TRAP SHOOTING.

FROM here, there and everywhere over this country come indications of a very lively season before the butts and before the trap. Dozens of traps are upon the market and each maker reports a heavy sale and still heavier demand. Flying targets to be hit by the marksmen are put forth in a score of forms, while every little village and large town maintains its coterie of shooters, or better still a few clubs, ready to push this delightful outdoor sport through the medium of rivalry.

In the rifle field the attention paid of late years to the proper arming and drill of the State troops has its natural result in calling the attention of many men to the attractions of ball practice at the target.

The fact is that in the growing American love for field sports, for the reinvigoration which comes to those who get out into the open air and away from the brain-racking turmoil of the shop and office, in all this new life the merits of the shotgun and the rifle has been recognized. They afford a gentlemanly sport, free from many of the associations which make not a few of the open-air pastimes obnoxious to lovers of fair play. The man who takes his rifle for a short or long-range practice gets a delicious breath of fresh air. He may spend an afternoon free from any violent effort, yet with just enough of muscular exercise to send him home with a keen appetite, a bright eye and an assurance of a good night's rest. He knows that his success depends on the care with which he maintains a clear head ready to guide and direct a steady hand. This means care in his

habits in eating and drinking, of working and sleeping. Very soon he finds that he is enjoying better health, that he can despatch business with greater ease and yet find time for an occasional run out to the range. Such time spent is not time lost, and every year more and more of our citizens are making this discovery for themselves and acting upon it, hence the growth of the gun club and the rifle club, until our columns, crowded with the brief returns from many points, tell how many there are already in line for the season's sport.

With the prospect of having no great international rifle match during this year to overshadow all the smaller efforts, the present attention to the art of precision in firearms is all the more noteworthy. It is not in the line of a sudden fever or spasm, fanned up by the efforts of the newspapers, rather it is, as we have pointed out, the due development of the idea that it is good to have sport, and for men of sedent ary habits beyond the age for active athletic endeavor, the use of the rifle or the gun completely fills the bill for a rational outdoor pastime. Nor is it a mere relaxation for the body. There is a wonderful interest readily excited in a thinking mind in studying out the cause and effect, the effort and result in all matters of marksmanship. A man may grow in skill, and this growth and improvement may be assured to him who will exercise care and thought in all his efforts. Every one may not become a leader in a certain line of sport. There is a natural aptitude or physical formation which marks certain ones as champions. Not so in With good weapons, proper practice, compelling shooting. success to spring from failure, there is no reason why any man should not rise into the front rank. If he does not it is generally because he will not.

A CENTURY OF EXTERMINATION.

T seems quite probable that this Nineteenth century may L be unpleasantly memorable in centuries to come as that in which many species of animate and inanimate nature became extinct. It has witnessed the extinction of the great auk, so utterly swept off the face of the earth that the skin, or even the egg, of one is a small fortune to the possessor and it is almost as certain as death that in the less than a decade and a half that remain of it, the last wild bison will have disappeared. Reduced from the hundreds of thousands of twenty years ago to the single thousand or so of to-day, it needs not a third of the time to compass their complete It is not improbable that the elk and the annihilation. antelope will be overtaken by almost as swift a fate, and have passed away before A. D. 1900. The skin hunters, and, impelled by quite as ignoble and a more savage impulse, the game butchers miscalled sportsmen, are making almost as speedy way with them as they have with the buffalo.

In the untamable wilderness of the north, the moose and caribou may endure for many years to come, but this hope can hardly be entertained for the common deer, hedged as they are within their narrowing ranges by civilization, and mercilessly hunted by all methods in all seasons. They may outlast the century, but they will have become woefully scarce at the close of it, even in such regions as the Adirondacks, that seem to have been set apart by nature especially for the preservation of wild life, unless some better and more unselfish feeling takes hold of the people who should be foremost in protecting them.

The wild turkey is passing away, and it is a question of but few years when he shall have departed forever. In some localities the next noblest of our game birds, the ruffed grouse, has become almost a thing of the past, and in some years is everywhere so scarce that there are sad forebodings of his complete disappearance from the rugged hills of which he seems as much a belonging as the lichened rocks, the arbutus and the wind-swept evergreens. Out of all New England but one little island, and out of all the Eastern States, the besom of destruction has swept his kinsman, the pinnated grouse.

The woodcock is being cultivated and improved and murdered out of existence with clearing and draining and summer shooting, and unseasonable shooting is doing the same for many kinds of waterfowl. In the Eastern States a wild pigeon is a rare sight now, and has been for years; the netters and slaughterers have done their work too thoroughly.

And now gentle woman is making an end of the song birds that she may trick her headgear in barbaric and truly savage fashion. The brighter plumaged small birds are becoming noticeably scarce even in those parts of the country that the milliners' collector and the pot-naturalist have not yet invaded, and such as the scarlet tanager, never anywhere numerous, are like to be soon "collected" out of living existence. If they are to be saved, it is by no dallying, nor slow awakening of popular feeling in their behalf.

There will be pine trees, no doubt, for centuries to come but who that live twenty years hence will see one of their grand monarchs of the woods towering above all other forest growth, or see any ancient tree, however historied or precious for its age and beauty and majesty and mystery of long past years, if it is worth the cutting for timber or fuel? An old man may be glad that his eyes are not to behold the coming desolation, but he must be sad when he thinks of the poor inheritance of his children.

THE DOG SHOW SEASON is drawing to a close. It has been a very successful one.

The Sportsman Tourist.

A NIGHT AMONG THE KEYS.

A NIGHT AMONG THE KEYS. A NIGHT AMONG THE KEYS. If WAS early, very early in the morning, when the for'ard hands, acting as cook for the time, turned out, and, in bare feet and with no unnecessary noise, proceeded to make a fire in the sand-box on the lee quarter of the sharpie, and brew a pot of strong coffee. For Captain Tarpon, after the manner of those who have lived long in the tropics, winds thimself up for each day's run by a small cup of black coffee, taken the first thing in the morning. Lacking this, he is apt to get in a snarl and run down before night; and the coffee was ready, hot and black. Then he went below, where the captain was sleeping soundly, and sang out "coffeee." At the word Captain T. opens his eyes, stares around vaguely, and finally, getting his bearings, reaches for the coffee and the tobacco bag with brown sugar in it and a tin spoon stick-ing out of it. Swallowing his coffee at a temperature that would skin an ordinary mouth, he follows the cook on deck, casts an eye to windward, to leeward and overhead, gets a pull on the dandy sheet, and hoists mainsail and jib; and, by the time the cook has swallowed his coffee, is walk-ing the sharpie up to her anchor. The tide is full, the light breaze lair, and the upper rim of the rising sun is fata-sto given the cook as swallowed his coffee, is walk-ing the sharpie up to her anchor. The tide is full, the light breaze lair, and the upper rim of the rising sun is fata-tarts the entrance to Big Pass, five miles distant. There is no need to follow the tortuous channel with its pole that the jib might fill, while the crew takes the wheel to gressented by a crooked live oak stick), and the sharpie begins to go as she looks, straight toward the tall tipod that. marks the entrance to Big Pass, five miles distart. There is no need to follow the tortuous channel with its pole becomes an indispensable nautical instrument when siting atmay of tipods, red boards and black crosses, which often fog even old coastars,

on this coast is a yacht owned at Manatee. She is 19 feet long and has 10 feet beam, works well to windward and is very fast. An hour of smooth sailing took the sharpie past the tri-pod at the entrance of the Pass. Fifteen minutes more and she swung to her anchor at the head of the Pass, with her stern line fast to the last mangrove at the outer end of the Pass, where there was a broad. Free outlook over the crisp salt waves of the Gulf and a clean white beach within step-ping distance of her starboard gunwale. The tide was flow-ing through from seaward, and large schools of mullet were swarming in to feed on the flats, carrying a visible wave ahead of them as they came, and constantly leaping out of water to escape the redfish and tarpon that prey on them night and day unceasingly. And these, too, have their turns at areal gymnastics when the sharks, that attend on every school of mullet, make an indiscriminate dash at the whole array. The leap that a tarpon will make with a shark after him is almost marvelous; and I think he generally gets away, leaving his enemy to take it out of redfish and mullet. As the intention was to spend an entire day and night at the Pass, stores were landed, and the captain volunteered to get breakfast while the crew took a plunge in the bright, clear water that was bubbling past the beach. "Don't go out in deep water, and keep an eye to windward," said the captain. "These passes are the hunting grounds of sharks." The crew "shucked" himself and plunged under the counter of the sharpie, came up, shook the water out of his eyes, and struck out. Then he altered his mind suddenly—and struck out for the beach at his best speed and with much splashing withal. For he had seen the black, sickle shaped iin of a man-eater coning his way swiftly, and he is a man who has a high respect for his legs, depends a good deal on them, in fact, so he landed rather hastily, and as he turned to look, there were the ugly jaws and cruel eyes of a shark within a yard of the beach. The crew muttered "da

made life a burden grievous to bear. Lastly, that unhappy cook tried swathing himself head and ears in his blanket. This was more nearly effective than anything else, but when the blanket was drawn snugly enough to keep out the insects breathing became very difficult, and at the least opening for air they swarmed in with fresh vigor. The cook wilted. "Captain," he said, "I think I am beaten."

The cook willed. "Captain," he said, "I think I am beaten." And the skipper responded, "I told you so," a phrase that has comforted the afflicted since the days of Job. All night that miserable cook sat on the port quarter of the sharpie, swabbing himself with strong brine and smoking strong tobacco. His only consolation was in watching the countless schools of fish that were every minute leaping and slapping about the vessel; and this soon became monotonous; it was the same thing over and over again; first, a slowly advancing, phosphorescent wave, suddenly breaking into thousands of glinting, shining white sparkles as the redfish charged the mullet, the tarpon made a dush at both, and the slarks wound up the confusion by dashing at the whole on general principles; then silence. "And this," mused the cook, "is going on this very hour all along the gulf coast, and has been going on daily for God knows how many centuries. And yet, the mullets kept their numbers good until the arch destroyer—man, the white coast will testify that the supply of mullet has diminshed more than one-helf, and there is no more need of the law against using the mullet as manure. The difficulty at present is to get sufficient for the food supply; and the coast fisheries often fail in that. And like the salmon and brook trout of the East, or even the mackerel and lobster, the mullet must go. "It is not that the strong devour the weak, or the big fish

spanse using the milet as menore. The difficulty at present is to get sufficient for the food supply; and the cosst fisheries for a fail in that. And like the salmon and brook trout of the food supply; and the cosst fisheries is the fisheries and lobster, the multet must super the sufficient for the food supply; and the cosst fisheries for the filte ones; that is Nature's law of compensations, and her the little ones; that is Nature's law of compensations, and the moraling factor, and the woolfolk and water kelpies keep their numbers good for long centuries—until civilized merone to the front, and then? They vanish like the mists of the most part on fish and game, but Nature counts him in as a tending factor, and the woolfolk and water kelpies keep their numbers good for long centuries—until civilized merone to the front, and then? They vanish like the mists of the most part devoured the Weak,—and—damit," he interjected, as a black cloud of mosquitoes fresh from the nearest key swept into his face. "the weak have had their innings about as often. But like and frogs are respectable compared with key mosquitoes. I wonder is the afterguare realer all explores that wonderful blanket with the blue check and they inning shout as often. But like and like the ends of the device of the same strends of the most ready strends on the startiget like an Indita. "When the is sufficiently seplyxited," muttered the cook." The shipper had swather with the blue check and prepared using the work where and another may have the end on the same she to emerge a free weak and prepared to get the sharple under way, where the a firsh work is the shift of the same she to emerge a more, incluse the and the same before a faint rosy glow have. The har arcs like a glam refreshed, folded the may stress of sufficient a firsh the same before a faint rosy glow have. The har arcs like a glam refreshed, folded the may stress of sufficient the same thead is the same the same the same the same

can canceing." "H'm-m," mused the cook, "He and I, the Head and the Tail

"Very good; but it must be 'wery self denyin' o' you,' this constant allusion to yourself as 'The Tail,' my dear

this constant allusion to yourself as 'The Tail,' my dear captain." Clearwater has natural advantages which render it very popular as a winter resort, not only for Northerners, but for Southern people as well, who come there from malarial dis-tricts to recuperate. It is high, dry, healthy, and has the unnsual advantage, for a gulf coast town, of being easily ac-cessible by water. It is handy to some of the finest kcrs, and also to good shooting for beach birds. But the hunting for deer, turkey and even quail is poor. There are two good hotels and—high prices. A well-known Boston yachtsman sums up the advantages of Clearwater Harbor about like this: ''I like Clearwater be-cause it has the finest outlook of any town on the coast; there is capital sailing, either inside the keys or on the open gulf, and it is a place you can always get away from."

Late in the day the skipper and cook met on board the sharple and prepared to stand up the coast with the flood tide. The former had visited all his Clearwater acquaint-

ances; the latter had buttonholed every old coaster, wrecker and sponger at all available, and had listened to some strange yarns; what is more, he had believed them. As a rule, the old coaster is the most prosaic, matter-of-fact, unimaginative being you can meet on the outskirts of civilization. Mud flats, mangrove swamps and saw-grass marshes are not con-ducive of romance. It takes a mountain man to develop a grand lie. The ghost of Munchausen dwells in the Rockies. As the sharpic glided quietly along the coast while the sun was making a very creditable exit behind the tumbling breakers beyond the keys, the skipper asked with a grin: "And where shall we anchor to-night?" And the cook answered, sadly: "Anywhere, anywhere-off from the keys." TARPON SPRINGS, Fla., Aug. 25, 1885-April 10, 1886. keys." TARPON SPRINGS, Fla., Aug. 25, 1885-April 10, 1886.

And a maiden came, demurely, To the woody way securely, As in cloister walks the nun, And she heard with no evadence Every tril and every cadence, 'Mid the shadows falling dun.

Plaintive grew the wilding note From the pretty singer's throat, Pensive grew the maiden's mien-Now she paused with look aghast, As the startled bird flew past And no more was heard or se

From her head a branch had riven, And a vengeful tos had given, Hat on which a bird was placed: Bird like that whose vesper song Lured her feet thus far along-Stood the maiden as disgraced.

For she reck'd the cruel fashion, That with her had grown a passion, Thus to wear the sweet birds slain, And by contrite pangs reproved, Tenderly the bird removed From the hat where it had lain.

Then a grave she deftly made it, And within she gently laid it, In the silent sylvan shade. And returning thence she pondered Of the lives her sex had squandered, Of the desolation made 1

Prithee, women, look and listen Where the dew-sprent daisies glisten, Where the woodland shadows fall! Miss ye not the flash of wing, Miss ye not the gladsome ring Of the birds' entrancing call?

Pitful and plaintive note Ye may hear from bermit throat— 'Tis the requiem for the lost! O forsake thy cruel quest, Spare the burds and guard the nest, Or ye cannot count the cost.

of our birds, with all that is involved in so serious a disturbance of the balance of life. It is not merely that ten millions of birds will cat billions of birds will cat be presented as a serie of the problem for which the present is the object of the ADDUDAT Socurery, which are uterly on meanly annihilated. To arrest this destruction of our birds is the object of the ADDUDAT Socurery, which are uterly on all who have hither boen thought-lessly contributing to bring about a condition of things, the evis of which are inestimable-to pause before it is too late. The greatest drain upon our birds is for feather millingry. Excepting only the oxiton on a other ranks to a pause before it to a output a substitute could be provided, and the yearing of which is encouraged by the ADDUDA Socurery, as tending to anyon our birds is for feather millingry. Excepting only the oxiton and other rufficial substances, and the produced which the produced with the produced with a just retribution for reckless disturbance of the economic haves of nature. To the egg collectors for scientific purposes we asy: Do your part to arrest the threatened wholesale destruction is to arcset the grove as the grove as the grove as the recent earth of a change of fasion before the accounty birds, stud on somewhat different regrond from hard the run or and the run earth of the grove as the recent earth of the conomic haves of nature. The destructure of no scientific purposes we asy: Do your part to arrest the threatened wholesale destruction in the while is preserving. To a very limited extend this is true; but while the evil these birds predictions are of no while intervent the scientific purposes we asy: Do your part to arrest the threatened wholesale destructure of the conomic harves of the scientific purpose we are mainly be added to submotify and an added to a somewhat different reground from the accentery. The

Editor Forest and Stream: I desire to be secretary in the village of Elmwood if no one else has applied for that position. As soon as I have finished this letter I will burn up all the feathers I have. BERTHA PAINE.

P. S.—My mother and I have stripped our hats and bon nets of feathers of every kind and burned them. B. P. ELMWOOD, Mass., April 13.

Editor Forest and Stream: Having seen so much in the newspapers this last few months about the AUDUBON SOCHETY and the cause for which they are working, I resolved to give up collecting birds and their eggs. So, after consulting some of my com-panions, we resolved to try and become members of your Society and to aid in trying to protect our birds. So please send me circulars of information and about one dozen pledge forms. forms. BLoomsburg, Pa., April 26.

BLOOMSBURG, Pa., April 26. A meeting of the Sorosis was held on Monday last at Del-monico's. The chairman, Mrs. S. E. Youmans, introduced the question for discussion which read as follows: *Resolved*, That the destruction of the native birds, for which women are largely responsible, is an injury to the welfare and beauty of our country. A report of the meeting states: The first paper was by H. H. Miller (Olive Thorne), "June with the Birds," which was an earnest protest against the sacrifice of bird life. The next paper was "A Birdless World," by Hester M. Poole. Mrs. Poole offered the following resolutions: *Whereas*, The destruction of our native birds, largely for purposes of adornment, has reached an extent calculated to alarm the lover of nature and the agriculturist, be it *Resolved*, That the undersigned members of Sorosis and their friends pledge themselves not to use the plumage of native birds in any manner whatever; *Resolved*, That we forward our names to the AUDUBON

SOCTETY to be enrolled among the members of that society. This bird-killing question was agitated in Sorosis two months ago, and many availed themselves of the opportu-nity of signing these resolutions. A letter was read from Miss White, an officer of the AUDUBON SOCTETY, in which she said if no more birds were killed in this country it would take four generations to replace the birds that had been destroyed in the last four years. The ladies condemned the English sparrows as foreign intruders and a nuisance.

A TAME SQUIRREL.

A TAME SQUIRREL. "K ELPIE," who writes of pet squirrels, brings to my mind the hours of real enjoyment I have had with the king of all pets, a tame gray squirrel. When a boy, my brother and I caught one about half grown, and after a few weeks' confinement we allowed him to come out of his cage and play in the kitchen, first making sure that all doors and win-dows were made fast. It was not long before he became quite tame, and would allow us to handle him without show-ing any resentment. As winter approached be discarded bis quite tame, and would allow us to handle him without show-ing any resentment. As winter approached he discarded his cage altogether, and it was amusing to see him demolish old newspapers to make himself a nest in a large kettle which was kept under the sink in a back room. Boy like, I imagined he would sleep cold, there, so after much coaxing my mother consented that I might take him to bed with me, and from early winter till the warm days of April I did not retire for one night without my Curly nestled by my side, warmly tucked under the clothes. If by chance his inclina-tion led him to take a run about the farm house chamber, he never forgot which side of the bed I lay on, and always came creeping under the clothes and remained till I was dressed, and then would perch on my shoulder for me to take him down stairs. Then the music would commence. First the dog and cat

and then would perch on my shoulder for me to take him down stairs. Then the music would commence. First the dog and cat had to be looked after, and I doubt if ever any poor dumb animals lived in more mortal terror than did that dog and cat. Many were the times I have taken the part of poor Tabby as Curly would be running her in the back room, over the sink, around the big arch and oven, over the big cupboard, till the poor cat would be nearly winded. If, per-chance, poor Major so far forgot himself as to go to sleep by the open fire, his dreams were always haunted by the spirit of a wicked squirrel, and he would always awake with a yelp, and the shadow of a tail as it flitted under the table told the cause of his troubled dreams. If we had company Curly did not need any introduction. He would take his stand of observation, and after a thorough inspection his first thought would be to show them what he could do. Talk of the spoiled child of the family, that squirrel was master of that house and yet as gentle as a kitten. No animal lives, I believe, so playful and that shows so much cunning. Pumpkin seeds were his weakness. If I wanted him to go to the barn with me, a few seeds closed in my hand furnished an attraction which he could not resist. The old ink peddler who was showing his samples on the kitchen table was sur-prised to hear a crash and to find while his back was turned that his squirrelship had made love to the choicest sample, and only failed of capturing it by it being too heavy for him to carry. Of all my pets, of which I have had many, none will ever

to carry. Of all my pets, of which I have had many, none will ever take the place of that squirrel. As the warm days came, and the snow disappeared, with windows and doors thrown open, he would get lonesome, and would try the wood pile, then the fences, always being careful to see that the coast was clear for a shelter in the house, should danger approach, but he gradually went further till he would be gone an hour, then a half day, then all night, at last he was gone a week, and when he returned he showed that the natural in-stincts of his animal nature was fast developing and it week, and when he returned he showed that the natural in-stincts of his animal nature was fast developing and it seemed too cruel to confine him again, so we let him go, and it was not until late in September that he came back, per-haps to take up his abode with us again. But the mis-chievous curiosity of a tame crow was more than he could stand and he disappeared again only to be seen thereafter occasionally in the woods. MILL,

EELS IN WATER PIPES.—*Editor Forest and Stream:* While looking on at the flowing of a street hydrant, corner Broad-way and Walker street. I was much amused by seeing an eel over two feet long make its appearance, and squirm up Broadway in the company of cabs, trucks, etc. It was finally captured by a laborer, who carried it off in triumph. Has this fish attained its growth in our water pipes? If so, how could it manage to exist on our clear, clean Croton?— Ennest F. THOMAS. [Eels have been known to live in water pipes for a long time and to have grown while there. They love to hide and can find food in the dark.—ED.]

TAME RUFFED GROUSE.—Morris, Ill., May 1.—I saw a pheasant or ruffed grouse on the 25th of last month at the farm honse of S. Hage, in our township, 'that has been a frequent visitor in the door yard for the last three years. The bird has become so tame by kind usage that it will take food from the hand and jump up on the lap of a person without any apparent fear. It is not so familiar with a stranger, however. It is without doubt a female, for the black feathers on the neck are wanting. In the hot season and when its food is plenty it absents itself for months at a time.—M. H. CRYDER.

SPRING NOTES.—Fairhaven, Vt., April 5.—The season here is very far advanced, being fully three weeks carlier than last year. Robins made their first appearance on the 16th of March, about dusk. Crows, ravens, bluebirds and blackbirds are all here, making the barren woods and marsh ring with their notes. Ducks and geese have been goin north for over two weeks. Only one duck was shot that I know of and that was a fish duck and had a young sucker over seven inches long in his throat.—NED.

THE TRAJECTORY TEST. THE FURSTERS AND STREAM'S trajectory test of hunt-ing rifles has been issued in pamphlet form, with the illustra-tions and the tabular summary, making in all 96 pages. For sale at this office, or sent post-paid. Price 50 cents.

IN THE WILDS OF ARKANSAS. [Extracts from a letter written by a sportsman to a sportsman and here printed for other sportsmen.]

[Extracts from a letter written by a sportsman to a sportsman and here printed for other sportsmen.] ON Thanksgiving Day, Nov. 26, a party of sixteen, in-cluding two cooks, boarded the 4 o'clock west-bound train at Eikhart, Ind., bound for Brinkly, Ark. There were two cut-in-two boats, six tents, boxes and barrels of provisions, guns and dogs. And such a lay-out of dogs onc does not see a second time in a lifetime! Three setters in which setter blood predominated, though mine showed unmistakable signs that some of his ancestors had been badly frightened by a pointer; a half-bred spaniel bitch, a French dog of unnameable breed, two hounds, and a "fice." We arrived in Weiner, Poinsett county, Ark., on the 28th, in time for breakfast. I had been told at Cairo by the agent of the Texas & St. Louis Railroad that the fire had trav-eled over hundreds of miles of prairie and forest, includ-ing the territory about Weiner; also that a deputy sheriff had been collecting \$12.80 from every man who landed there with a gun, as a license fee for non-resident shooters. On arrival I immediately interviewed the constable, who was at the same time the station agent and postmaster, in regard to the license; looked over the law in his book where the page showed unmistakably that he had showed it to several before. He said he could see no way to avoid pay-ing the fee. I bired a mule team and lumber wagon drove fourteem

regard to the license; looked over the law in his book where the page showed unmistakably that he had showed it to several before. He said he could see no way to avoid pay-ing the fee. I hired a mule team and lumber wagon, drove fourteen miles across country to Harrisburg, where I met the sheriff, who, in Arkansas, is the collector. He appeared to be a pretty good sort of fellow, listened to my arguments on points of law, then gave me a written statement over his odicial signature, that in his opinion only those who followed shooting, etc., for profit, and not those who came in for a few days' sport should be made to pay a license fee. We were never molested. When I got back that night I wrote a long letter explaining the matter to the General Passenger Agent at Texarcana, and simply suggested that should the railroad company see fit to discharge their agent at Weiner, Mr. George Phillips—a native—would fill the bill. When we came away Mr. Phillips was the station agent. Sunday we went into two camps about a half mile apart. Queil were to be found in fair numbers, but the dear people who reside on the edge of the prairie had put out strychnia (a native called it "strike 9") to poison wolves, and as it was put where the quail were, our dogs were in danger of getting it, and so we decided to move camp. K. and C. went to find ducks, as there was no water, consequently no ducks, where we were, while Tom and I, taking blan-kets and provisions, shouldered our guns and made a break eight miles into the woods, where deer and turkeys were said to be very plenty. We started after dinner following the "blazes" and along toward night arrived at a clearing of perhaps forty acres; there dwelt in primitive style Mr. M. S. Cox, formerly a captain in the Confederate army, an Ala-bamian and jolly good fellow to boot. Adjoining him was Philip Hanes and his sixteen-year-old son, who had come from Ohio a year before on a hunt, found good land cheap and had never been back. The two lived in a crude log but, doing their own work,

ground with his old hat, initiating the noise made by them while fighting. He carries a .45-75 Winchester and doesn't need a rest to shoot it, in fact he is old "Deer Slayer" him-self. About this time you are saying, "Why in thunder don't he get down to hunting?" Well, hold on, I cannot put the top rails on the fence first. That night H. steered Tom and me to a place where deer sometimes passed, but they didn't pass then. On our way back to H.'s, Tom, who was a few rods to my right, called out, "Come here, Doc, quick, and see what I have found." Sure enough, he had found—C., on a stub ten feet from the ground, where he too was looking for deer, and K. was near at hand. They had started for the St. Francis region, but hearing from a reliable source that there were no ducks there, and that we had gone where game was plenty, concluded to join us. They stopped with Cox, while Tom and I spread our blankets in Hance's bunk on a pile of millet straw, and slept the sleep of tired hunters. Tarly the next morning, after a brief breakfast, we followed H. three miles N.E., where he perched me on a bent hickory, ten feet from the ground, and Tom about forty rods a way, while he, bidding us keep still and look out sharp for deer, loped off into the slough (slew in the vernacular) just to see if there were any turkeys about. Standing on a log in mid air with nothing more exciting than expectation is not calculated to unstring one's nerves very much, and so when, after a half hour's waiting, I heard H.'s Winchester crack, I was all eyes and ears. Soon I saw four big tur-keys flying toward me, but they turned off and lit within riffe range, too far away for my open bore slotgum. While I was debating whether to get off my roost and attack the turkeys on their's, Hanes's gun spoke again and another bird came toward me. Hastily changing shells in my right barrel, 5s for solid ball, I caught her away above the tree tops. Not a fatal shot I feared, for she lit on the first limb in her way, and whether her teetering motion meant fa

appeared with two nice birds, one a gobbler. He was some-what surprised at seeing the fruits of my firing, but not as much as was Tom, who eame up then and wanted to know what we were wasting ammunition on. He hadn't seen any-thing to shoot at but squirrels. Then H, took us into the slough, where K, and Charley Cox joined us, the latter with a fine gobbler he had shot only a few minutes before. H, placed us in ambush and began 'yawping.'' Yawp answered. Bang! bang! from K.'s gun, and we were all on hand to witness the death of two more, and K. said: "There they are. Killed one with each barrel. Take 'em if you want 'em, Tom. Twe no use for them." But "alle samee," he was ready to lie low again while H, called. This time the bird came shyly toward me, and as he presented his breast, I gave him a charge of five's at forty yards, and such a flopping and pounding as he made! A good twenty-pounder with an elegant beard—a noble bird! This ended the hunt for the turkeys, and no more game came to bag that day. But how tired aud hungry we were when we got back to camp! I had diued on three little crackers and a few per-simmons, and when Hanes said supper was ready, Tom, K., and I were not long in responding. "Now about that supper in the log hut. Our, friends say that hunger had so sharpened our appetites that anything would have relished—allowed. But I leave it to you to de-ied if we did not have a good meal. H, skinned the tur-keys, cut out their breasts, sliced them across the grain like steak, rolled them in flour and fried them in butter. Thaked backwheat cakes (Hecker's self-raising flour) and Tom made coffee. A can of nice peaches furnished dessert. There! What matters it now that we had no snowy linen spread upon the rough boards that formed our table? That our chairs were made from ''shakes'' and our coffee cups and plates were tin' What mattered it then? I have eaten a Christmas din-ner at the finest hotel in London I have dined at your finnous Palmer House, I have eaten old-fashioned New England dinner

meal before. Even now my mouth waters for the savory viands. The next day we sent Charley Cox down to our camp, carrying three turkeys to the boys with word to get a team and join us, which they did the next day. Two tents, twelve feet apart, facing each other, a fly stretched overhead be-tween them and a smaller tent just to west of the fly, formed kitchen, bedroom and hall. Just east of the fly was an enormous white oak stump, against which we built our camp fire. Fuel was abundant and dry, so we did not lack for a cheering fire. Near by was a shed partly filled with corn fodder, on which lay our dogs, a good well of water near by was a valuable adjunct to our happiness, and when the shades of evening came and supper was over we would light our pipes and tell yarns around the camp-fire. or in-dulge in a friendly seven-up till time to retire. For beds we had laid poles on the ground, on these put thin shakes left by the lumbermen, over these constalks, then millet straw and topped off with straw ticks ard woolen blankets. Not a bad bed, especially to a fellow who had tramped all day. day

The first with the further mean system of these constalles, them milles is first ward topped off with straw ticks ard woolen blankets. Not a bad bed, especially to a fellow who had transped all day.
The this time we gave most of our attention to deer which were very planty. Our shotguns were not just what we nearly ended for them, but we managed to get in one or more nearly every day, while a big wolf and a couple of wildcats on the floor of our parlour for rugs and all out many questions regarding the trip. The day the wolf was killed. C and 1 were still-hunting for deer. Or hards or so, as he had seen it run, but had been mable to get in a abot owing to the thick black spice brush. He suggested that we should separate a few rods and keeping a sharp lookout would probably get a shot. S., moving noiselesly along we not oc, the got her, 'he shouldered his gun and started far ward. Next I heard him say ''No I haven't either. There he goes now." But he coulda' get in his work then as the joice was too thick. Where she fell was a big puddle of hood, and at every jump the blood had spured. We had to a the sould is spice around and knocked her in the ead with a slick while I slipped around and knocked her in the ead with a slick while I slipped around and knocked her in the arout a big she wolf, too weak tor urang training to the theore of the there's camp, and that we should so of signs, but did not raise hair or feathers again tarties and to this day when a group of the boys get to eather the stories are told over, jokes cracked, and all agree and to this day when a group of the boys get to eather the stories are told over, jokes cracked, and all agree there the stories are told over, jokes cracked, and all agree there the stories are told over, jokes cracked, and all agree there were may, engli times for us were and otter were the stories are told over, jokes cracked, and all agree there were the and the bloog had spice of his own to array the which and some particular experience of his own of the arbit

IT IS A LIBERAL EDUCATION.—While I had a lame back I availed myself of my enforced idleness to faithfully read the back numbers of FOREST AND STREAM since Sept. Some-times they accumulate as in this instance, but sooner or later I read them from cover to cover. I am more and more im-pressed with the value of this paper, which I have taken since its first issue. It contains a world of information for the scientist and the layman; its character is of the highest order, making it, aside from being the best paper for the American sportsman that is published on the globe, an ex-cellent family paper, as an educator of the young. In fact, t one reads it faithfully "and understandingly, he or she will receive a liberal educator, "Yo" and Nanny are par-ticularly happy in their present series, but one cannot dis-eriminate where all are so good.—C.

Game Bag and Gun.

sorry to see as go, for we had dwelt in harmony. Cox was almost inconsolable. A dozen letters from there since our return have proved their sincerity. K. sent the little girls flannel dresses. I added a big package of picture cards, Edgerly a suitable remembrance for Cap, Turner, and we feel sure of a hearty greeting when we visit their clearing again. Several invite us to come right into their cabins, and it is doubtful if we take tents again. I met Mr. J. O. Pelton at Caito on our down trip who was on his way to Reelfoot Lake, Tennessee. He would have joined us had he not made arrangements that prohibited. He wrote me in Janu-ary, giving a very fine description of the place. He is still there. Quail and ducks are very plenty, and good board can be had at the hotel for \$16 per month. F.

A FIRST OUTING.

TT is on the 14th of August, the eve of the opening of the

T is on the 14th of August, the eve of the opening of the duck shooting, that we hurry our traps into the cances, and after putting our dogs on board, embark ourselves. How long and expectantly through the dark winter eve-nings we had dreamed over the open grate fire of the de-lights of that day? How anxiously had we wondered how the new guns would shoot, how the young dogs would work, how the new cance would "rnn" with a load, and how the new tent would suit? And at last the longed-for time had come and we were off. It was a stormy evening, and not without miscivings for

come and we were off. It was a stormy evening, and not without misgivings for our safety did we east off from the boat house floats, and dip our paddles for the start. The boat house bay, sheltered by high bluffs, was calm enough; but on passing out into the stream, we saw that it would be "touch and go" on the trip down down.

stream, we saw that it would be "total and go on the tag down. For the first three miles the wind was almost right abead, and only by working with might and main, could we induce our craft to make way against it. But the river taking a turn brought the wind nearly astern, and hoisting our bal-anced lng we flew before the breeze. A few minutes brought us to the end of the island which had been partly sheltering us, and on getting into clear water below, the wind lulled for a moment, but only for a moment. In the distance we saw the waves flattened by a squall, and the water turning black as night. Hale, seeing the danger in time, hurriedly let go the halliards, stowing the sail just as the squall struck us. Over! over! went the canoe, and for a moment we thought our last moments had come; but luckily the squall blew past as suddenly as it had come, leaving us none the worse, with the exception of badly demoralized rigging and a shock to the nervous system.

blew past as suddenly as it had come, leaving us none the worse, with the exception of badly demoralized rigging and a shock to the nervous system. For several miles we trusted solely to "elbow grease" for motive power, still feeling rather shy of the sail; but as the wind moderated we again hoisted it and scudded along at a great pace. "speeding" a little with the paddles. In two hours we reached the first opening of the L— Islands, our destined shooting ground, turned in, and paddled down the "channels" to "the old camp ground." How lovely was the secne! The setting sun cast a gelden light over the thickly wooded islands, among which we swiftly glided, enjoying an ever varying picture. The Laurentian Mountains to the north, tinged with blue, form-ing a majestic background. Verily it was worth coming far to see.

wading is very heavy and the water comes alarmingly near the tops of my wading boots. At last I step into a hole and go in up to my arm pits, wetting all the cartidges in my vest. What is to be done? They are paper shells and sure to be spoilt. But remembering that it's "no use crying over split milk," I try to put on a cheerful face and trudge along, no longer caring how deep the water is. The mist is so thick over the marsh that I cannot see two yards ahead, and in vain try to sight several ducks whose quacks I hear as the dogs put them up. Suddenly I see two fashes at the other side, and Hale's hanmerless speaks twice and he whistles for the dog to retrieve two ducks which he has shot. The mist seems now to be doubly dense, and though the ducks are flying about in numbers, we cannot see to shoot at them. At last a flock alights in the pond in front of me, first I snap one hammer, theu the other, but with no result. I try two more cartridges, but it is "no go." The flock, tired of waiting, I presume, continues its flight, leav-ing, as I supposed, one of the number. Quickly slipping in two new cartridges I aim with deadly intent. This time the cartridge did explode and I have the satisfaction of hlowing to pieces a stump, which in the uncertain light I

the cartridge did explode and I have the satisfaction of hlowing to pieces a stump, which in the uncertain light I had mistaken for a duck. Remarks, more vigorous than complimentary, are hurled at me from Hale's side of the marsh, and I pocket my morti-fication, vowing vengeance on ducks in general, always supposing the cartridges to be "so dispoged." After several disappointments from misfires, and after slaughtering but one more duck, which fell to Hale's fire, we take our way down the marsh again, the dogs working as before, I helping them, being as wet as mortal man can be. Soon the dogs put up a bird, "snap" goes the first, but "bang" says the left, and over topples the duck. Further on another flush, and another disappointment. Poor Hale is in great distress, as all the birds seem to get up near me, and I am unable to shoot them. shoot them.

as all the birds seem to get up near me, and 1 am unable to shoot them. It is now growing late, so we return to quarters. Wc find the other camp tenantless, its occupants being still absent. Before getting breakfast ready, I cannot resist working a marsh to the left of the camp, in the midst of the thick woods, so call the dogs and go to it. The dogs immediately begin working with a will, and soon put up a duck from a pool at long range. I pull on him, but both cartridges miss fire, and he goes off unharmed. I now notice that the dogs are working very excitedly, and run back into the woods; the cause of their anxiety, a fine black duck, comes flying out. Snapl goes the right barrel, but the left does its duty, and over topples duckey among some thick bushes, from which Johnny dislodges him. He was a huge fellow, and I felt proportionately elated. The puppies now strike another scent and again follow it into the woods, I unwisely following them. Soon I see it fly off, out of shot. I had hardly censed anathematizing the bird, when a huge blue heron sailed majestically over my head. I pull on him and he drops into the water, when the dogs retrieve him. Blue herons are so destructive to fish that we kill them whenever we have an opportunity. I now work down the other side of the marsh, but without success, so leave it and go back to the canoe. Seeing Tyler and his chum across the channel I maddle over to saver

the dogs retrieve him. Blue herons are so destructive to fish that we kill them whenever we have an opportunity. I now work down the other side of the marsh, but without success, so leave it and go back to the cance. Seeing Tyler and his chum across the channel, I paddle over to swap yarns. They had had bad luck, only having bagged one duck. I succeeded in wheedling half a dozen cartridges out of Tyler. Just as he handed them to me I heard Hale from the camp point shout, 'Mark, duck,' so slip in a cartridge as I see a duck flying past. Snapping the breech, I cut loose at very long range, and have the gratification of seeing him drop into the water with a broken wing. He dives im-mediately, so I take the cance and paddle after him. When he comes up I fire again, fairly burying him with shot, but he seems to bear a charmed life, for down he goes again. He leads me a dance for a quarter of an hour, when I lose patience from the effects of wet and hunger combined, and paddle back to camp. A huge meal is soon disposed of, and I take off my wet things and have a lay off. After a rest of an hour we again dress and start out in search of birds, this time in the cance. On pushing of from the landing Hale saw a duck in the water where I had shot the one before break-fast. We paddled up, and a dose from the Greener put an end to its carcer. It was the one I had wounded, We pad-dled about for two hours without getting a shot, and then returned to camp. On landing I took the dogs-back into a cover where cock are often shot. For some time they bustle about without getting a scent, but at last I saw from their excitement that they had found something. The "some-thing" in the shape of a fine cock was soon flushed and "grassed" with the first barrel. This good fortune added inew vigor to our energies, both canine and human, and we worked all the covers but without putting up any more birds. I then went back to camp and found Hale lying in the tent feeling very seedy. The great heat had affected him. Thinking it best to leav <text><text><text><text><text><text><text><text><text>

swift. We had paddled down the previous evening, as has been related, in two hours and a quarter, had sat up till half past two the past night, had had one hour's sleep, and then gone out for the hardest kind of shooting, *i. e.*, marsh wad-ing, and had been at it till four that afternoon, so it will be seen that we would have done a good deal in thirty hours by the time we reached home.

scen that we would have done a good deal in thirty hours by the time we reached home. After going eight miles or more we landed, had a snack, and laid off for an hour, when we re-embarked and con-tinued our journey. It was a lovely evening. The broad river, two miles wide in parts, was smooth as glass, and the white *habitan* cottages on the north shore, with their back-ground of blue mountains, formed a picturesque scene. Paddling steadily, we reached the boat house at 9 o'clock, and two weary sportsmen and two not less weary dogs, trudged home through the deepening twilight and hurried to their ''downies'' with as little loss of time as possible. F. M.

OTTAWA, Canada.

FIELD NOTES FROM GEORGIA.

FIELD NOTES FROM GEORGIA. Matter Forest and Stream: Beliving that sporting items from away down south in "Dixie Land" might be interesting to some of your Northern readers, I have, in the language of the Georgia Crackers, concluded to "drop you these few lines" in relation thereto. The hunting season for all game, with all true sportsmen visited this immediate section during the season, and they were well pleased with the sport, the climate and our people. We had large quantities of quail and doves, and while a quantity work killed, there are many now mating here. We had at all, our dogs not being trained for them. Your correspond-ent could in the early spring hear the bating of snipe and woodcock any night from the piaza of his dwclling, and saw several woodcock that had killed themselves in dight moderate quantity of ducks in the streams here during the past season, and consequently only a few were killed. When we do have ducks, and especially in the Ogechee and Sa-vannah rivers, it is our finest shooting, and they are huated in this way: The Central Railroad of Georgia runs up the ber of miles, and sportsmen send their small cances up on the cars and float down the crooked, narrow and swift flow-ber of miles, and sportsmen send their small cances up on the cars and float down the crooked, narrow and swift flow-tore mater in local sportsmen, Col. Dick Berrien and Col.

ing stream and shoot the ducks ou the wing as they rise from the water. Two of our local sportsmen, Col. Dick Berrien and Col. Bunnie Bell, of Miller, Ga., took a shooting trip of this kind down the Ogeechee from Miller, Ga., to this place during the cold spell of weather in January last; they killed fifteen ducks and one otter that they got, and say that they killed thirty-five ducks that they could not get owing to the thick-ness of the ice near the banks of the river, a very unusual thing in this climate; the time consumed in this hunt was one day and the distance floated down the river about 45 miles. miles

The Savannah River is accessible in the same way by steamers. We have a few deer and wild turkeys in the river swamps. We have only one gun club in the county, the Scriven County Gun Club, Col. N. P. Wade, Sylvania, Ga., President; its membership is small, but is made up of gen-tlemen. Your correspondent was never at any of their prac-tices, but is informed that the members shoot well. We also have many sportsmen who are devotees of the chase and have many packs of the finest foxhounds in the State, and reynard is run to the death when once they get straight after him; running wildcat in the jungles of the swamps is also a favorite sport. Fishing in the Ogecchee River with nets for white shad.

There is the table of the symmetry is also a favorite sport.
Fishing in the Ogecchee River with nots for white shad, suckers and a fish called here red horse is the only sport at present. The river is well stocked with the following named fish: Rockfish, trout, jack, grindel, blue bream, redbreasted perch, speckle perch and catfish. The season for pitching (I believe you Northern sportsmen call it casting) for trout, red-breasted perch and blue bream opens here about the 1st of May, and we have very fine sport indeed. These are game fish and the fluest table fish in the world, except possibly the rockfish. We catch trout by bobbing, as we call trolling—a mctallic bait with a short line on the end of a stiff fishing cane. We do not use a wooden fishpole, as you do in the North. We use either a Bermuda cane or a large cane cut from the carebrakes in the Savannah River swamp. We capture the rockfish, the king of all fresh-water fish, either by fishing with a large live perch as a bait or by spearing them in the carly fall, when the rivers are low. They can be seen plainly with a light at night, and many of them weigh as much as 40 pounds.
The fame of our rivers for fish, the accessibility and nearness to the railroad stations, telegraph and mail facilities and means of obtaining ice, sends us in the summer many disciples of Izaak Walton from our Southern cities. And many no doubt would come from the North were they not driven off by the scarecrow of grown people, imaginary malaria. We have no malaria here; we have the brightest skies, the fairest women and the bravest and most generous of the planet. Life, liberty and property are protected and respected, and any white person, be he bent on sport with rod and gun, or pleasure, or business, can pass at will through and over our lands and highways with every assurance of security from violence or insult.
We wish our Northern friends to visit us on sport, pleasure or business, they will be kindly and cordially received and we willl Fishing in the Ogecchee River with nots for white shad.

ROCKY FORD, Ga., April 12.

How SHALL I LOAD.—Rome, N. Y., April 29.—Through your columns I would like to have the opinions of different sportsmen on the subject of walding powder in shot shells, and to be definite I will put the question thus: Which will give the best penetration and pattern with least recoil, a shell loaded with 3 drams powder and 1 of shot, with 2 pink-edge wals on powder and 1 card board on shot, or a shell with same amount of powder and shot, wadded with one § felt wad on powder and 1 card board on shot? Colt and Parker advise 2 pink edge on powder and 1 on shot, while the best English gunmakers use one § felt and 1 card board on each side of it and a card board on shot.—C. C. G.

<text><text><text><text><text><text>

etc.; but these self for them. FIFTH WARD

FIFTH WARD. HARD TO KILL.—Tallahassee, Fla.—A short time ago, while driving through the pine woods near this place, I dis-covered two red foxes that had been driven from their home by a fire which was raging through the woods. It was the work of an instant to slip a couple of shells in the No. 10. One was loaded with 12 small buckshot, and the other with 10 ounce of No. 8. Reynard stood about 30 yards distant watching the process of loading with the utmost composure. At the report of the gun and on receiving the contents, he tore through the woods at fearful pace apparently unlurt. After running 300 yards he sprang several feet in the air and fell dead. On examination, it was proven that the humerus of the right front and the femur of the left hind leg was shot entirely off, and two more shot had passed entirely through his body. His matc, after receiving the charge of shot, went like a flash, and as a friend remarked at the time, is probably going yet. It seems wonderful that any animal should be able to run such a distance after being so badly shot.—H. A. KLIME. A REMINISCENCE.—Ashtabula, O.—Editor Forest and One was loaded with 12 small buckshot, and the other with 1 ounce of No. 8. Reynard stood about 30 yards distant watching the process of loading with the utmost composure. At the report of the gun and on receiving the contents, he tore through the woods at fearful pace apparently unlurt. After running 300 yards he sprang several feet in the air and fell dead. On examination, it was proven that the humerus shot entirely off, and two more shot had passed entirely through his body. His matc, after receiving the charge of is probably going yet. It seems wonderful that any animal should be able to run such a distance after being so badly shot.—H. A. KLINE. A REMINISCENCE.—Ashtabula, O.—Editor Forest and Stream. I find many things that are useful in your valuable paper. I try them when I have an opportunity and retain those of value, discarding the rest. The shotgun has long wing when but few shots of the kind were in the country, I have followed it more or less for years, and could tell of many a bag of "Bob Whites" which would make lovers of wittes" and impart the "combination" that led to the sugar

the gun and dog eager to imitate, and when the first fall of snow comes and whitens the ground, I would with some chosen few hie off to the mountains and in our snug cabin that we had built in the fall away from the haunts of men and the trouble and turmoil of the busy mart, seclude ourselves, and each night bring to camp the trophies of the chase, and after supper with pipes aglow would hunt the forest over again. There is music in the deep and silent forest which none but they who love it know. There is but little game where my lines of life have now been cast. The quail have all disappeared before the murderous pot-hunters, a few squirrels in the interior of the county, very few ducks and an occasional grouse, and to get trout we go to the tributa-ries of the Alleghany River, where they are fairly plenty yet, by going back from the haunts of civilization. We will soon have fair fishing here at the harbor and out in the lake, and next month black bass will be on hand. I look for the return of snipe every day if the weather holds, and then I will see what virtue there is in powder and shot. It will soon be time to overhaul my tent and traps to see if they are in order for the summer camping.—G. in order for the summer camping.-G.

in order for the summer camping.—G. NORWICH ROD AND GUN CLUB.—Norwich, Conn., April 29.—Editor Forest and Stream: The Norwich Rod and Gun Club was organized March 18 under very favorable circum-stances. Its object is the protection of fish and game and rifle and gun practice. The following officers were elected: J. D. T. Blackstone, President; Archibald Mitchell, Vice-President; Z. R. Robbins, Treasurer; A. M. Cutler, Secre-tary; L. B. Aling, Jas. H. Arnold, Frank E. Patterson, Directors; Frank T. Brown, Attorney. The club started with 75 members and has now 125. They have secured ample grounds, conveniently located. Thursday is the club day, and as they have the most approved traps for ball and 500 yards, they are prepared to extend a cordial invitation to the members of other clubs to join them in shooting on any Thursday during the season. They also ask the co-operation of other similar organizations in the enforcement of the game laws, the protection of game and fish being the main object of the club.—J. D. T. BLACKSTONE.

Sea and River Hishing.

CAMPS OF THE KINGFISHERS.

<text><text><text><text><text><text>

During the "rainy season" when the girls could not fish, this performance took place with frequent regularity, twice a day or oftener, besides the three square meals, and the keeper of the fryin' pans was kept busy hustling around to meet the oft recurring demand for "lunch." But Al was good-natured and obliging, and with all the trouble the tor-ments pit him to he was always ready to open his depart-ment and wait on them with cheerfulness. "Tell ye what, Hickory," said Ben, and then he stooped and pulled a burning splinter of wood from the fire, with which he proceeded leisurely to light his pipe, blinking solemnly at each puff as though weighing in his mind some-thing of great import; "tell ye what, ef them gals keep on destroyin' grub like they hev in the last few days, you an' me'll hev to take a couple o' boats an' go down to did Cootereyc's (Couturier's) after some more provender, or git him to move his grocery up here where it'll be a leetle more handier. When one of 'em hollers lunch the rest' pears to git hungry in less'n a second, and they make a raid on the suffer. But, bless their hearts"—here another raid was made on the fire for a burning brand, as the brier root had gone out while he was talking—"it does me good tosee the Joneses a-livin' so high, fur they never was used to the very best o' everything nohow," and the twinkle in his old eyes pro-claimed that all the solemn blinkings and deliberate puffings at the "source o' comfort" were only premonitory symptoms of a mild attack of "the Jones family," these attacks, however, always taking a new form. "The girls were having a merry time over their lunch under

claimed that all the solem bilishings and deliberate puffings at the "source o' comfort" were only premonitory symptoms of a mild attack of "the Jones family," these attacks, however, always taking a new form. The girls were having a merry time over their lunch under the big fly; Jim had struck a balance between matrimony and politics and gone to sleep; "it's a go," came from the seat of war at the crib board in Muller's baritone, and Hyper-boler and the skipper stood around the fire in the rain, with watery eyes, changing places frequently, that neither might get more than a rightful share of the suffocating smoke that pursued us no matter on whichever side of the fire we might come to a temporary anchor. The chatter (or chir-r-r, as brother "Bigosh" writes it) of a kingfisher bowing to us from his perch on a limb of one of the birches hanging over the water a few yards above the camp, seemed to start Ben on a new trail, and as he dodged a puff of smoke from the fire he opened on it with "Hickory, 'pears that you an' me haint got sense enough to go in out o' the wet, an' as it looks like wc're about the only two old loons in the camp that's tough enough to shed rain, 1 move we go a fishin." As a scnsible motion of this kind was never lost in a camp of the Kingfishers for want of a second it was at once before the house and carried unanimously, and there was no need to resort to the "Cincinnati method" of counting votes, as there was noly two to count. While Ben bailed out one of the bats I got the rods and a bucket of frogs, hastily collected a few scraps of cold comfort from the provender box for a lunch, and we were off up the lake before the Jonesse were fairly aware of what we were about. As we pulled away from shore we heard Bob say, "there they go again, two of the biggest old fish cranks in Michi-gan," and Ben in his dry way, as he reached for the frog bucket, "'stonishin' how near the truth that gal kin come once in a while when she's away from home." We took a short cut across Horton's Bay, and when

there a 'demasticatin' that frog to git the taste o' sunfish out o' his mouth." As I pulled the boat out in the lake two or three lengths, an advisable move always when a fish is struck near a belt of weeds or grass, Ben lot the line run free till the fish started again when he brought ''ole quintessence'' around with a sweep that must have loosened all the joints in the fish's frame, and the fun began. He came to the surface with a great swirl and started straight down the lake toward camp, but Ben's dander was up, and jamming his hat down on the back of his head that the wind might not get a lift on it, he set to work in dead vice, 'You'd better wait a while ole hoss, fur the Joneses aint a lookin' fur company jest now." A stroke or two of the oars sent the boat further out, and with a pull that caused "quintessence" to take the shape of a new moon, the fish was pulled up and swung around away from the big weeds and "musrat grass," heading in our direction at a pace that took the liveliest kind of turning to keep the line tight enough to be sure he was still on the hook. When near the boat the sight of Ben seemed to herrider

keep the line tight enough to be sure he was still on the hook. When near the boat the sight of Ben seemed to bewilder him and instead of going under it, as Dick M. says "they almost always invariably do," he sheered off and went for the grass inshore and quintessence was again called on to avert a catastrophe. And the rod was equal to the emer-gency—a sprout of Japanese cane nine feet long, tough as a splinter of swamp hickory, jointed in two piece and weigh-ing about nine ounces; the best of all rods, as I believe, for honest reliable work on bass, pickerel and maskalonge that was ever fashioned. I have one of the same material under my eyes as I write this, weighing but five ounces, that I would not hesitate a moment to risk in a clear, square fight ("bitin' an' gougin' barred") with a forty pound maskalonge, and be reasonably sure of coming out on top. But there are rods and rods, the pliant wand to flip the feathered sham when trout are sought; the twenty-foot cane pole, beloved of the pensive catfish slinger; the native rod, the sapling of un-graspable but, the dude red, the Henshall rod and a score of others—and every angler to his own notion. As the fish went by we caught a glimpse of him, but he was swimming so deep and the water was so rough that we could not make out whether it was a pickerel or maskalonge but sure it was not a bass. "Like as not it's the same feller that walked off with the ole mossback's whole outfit the other day, an' he's swallered the float jest to keep frum towin' it around," said Ben, as he straddled the after thwart and balanced himself for the coming struggle. When a strong fish makes a rush for a bank of weeds a

coming struggle.

When a strong fish makes a rush for a bank of weeds a cool head at the butt end of the rod is better than main strength, and as the tip of old quintessence came down alarmingly near under the unusual strain, Ben said quietly, "Yank the boat up the lake a piece, Hickory: so's I kin git a

THE TROUT OF SUNAPEE LAKE.

<text><text><section-header><text><text><text><text><text><text>

THE OPENING OF THE TROUT SEASON.

THE OPENING OF THE TROUT SEASON. NOT within thirty years has the ice left the Adirondack lakes as early as it has this spring. Gen. R. U. Sher-man reported the ice off the Bisby Chain nearly a month ago. Mr. F. A. Walters, superintendent of the Adirondack hatchery of the N. Y. Fish Commission, reports that the oldest inhabitants do not remember an earlier season. Mr. A. R. Fuller reports Meacham Lake clear of ice and fishing begun on May 1. All this may mean a longer season for good fishing, which usually begins in the Adirondacks from May 15 to June 1. From Maine we learn from Major Lovejoy, of the hotel at Bethel, that the ice is out of Umbagog Lakes and Richard-son Narrows, and will be out of the South Arm before the 10th, and that fishermen are going to Middle Dam by way of Bethel and Upton, while the steamer will move by the 4th. Now that New York State has two opening days, one for

way of Bethel and Upton, while the steamer will move by the 4th. Now that New York State has two opening days, one for Long Island and one for the rest of the State, there has been no customary display in the markets. The dealers all had some fish and Mr. Blackford had a few flowers and trim-mings, but nothing like what he has treated the public to in previous years, when he has given up his whole business to show trout from all parts of the country and even from Europe. He had a lot of sixty live trout from a private pond on Long Island, twelve of which averaged two pounds each. At Washington Market, Messrs. Knoll & Prichard had an exhibit of trout and some paintings of fish by A. Wy-derveid. At midnight before Saturday there were 10,000 pounds of trout coming into the city by express. They were mainly from the preserves of Long Island and Rhode Island, with a few frozen Canadian fish. The dealers in fishing tackle are very busy fitting out ang-lers for the woods and in filling orders for country custom-ers, and all things point to a large catch of trout this season.

FISHING AT NIPISSING.

<text>

city on Montreal train after business hours (4:30 P. M.) on a Saturday and arrive at Montreal about 9 Sunday morning. Leave Montreal Sunday morning about 9 and train reaches North Bay late that night and you can go into camp Tues-day. At North Bay stop at Snyder's hotel, which is the best. Do not expect too much of a town but two years old, but you will find the people jovial and pleasant. This re-gion was all a wilderness about two years ago, and settlers are not very thick yet. R. B. Jessup, of Trout Lake (his post office is North Bay), has boats and canoes, tent blankets, etc., and could probably be engaged as guide. B. AND H.

TARPON FISHING WITH ROD AND REEL.

TARPON FISHING WITH ROD AND REEL. Editor Forest and Stream: The tarpon, or silver king as it is commonly called, may justly be described as a tropical fish, though found in a semi-tropical climate and waters. In substantiation of this propos-ition, I may state the fact, which came under my own observation, that the cold snap of last January which did so much damage throughout the South to the fruit, also killed or was the immediate cause of the death of thousands of these fish. I did not visit the scene of this devastation until about March following; but at that time I counted hundreds of the carcasses of this fish upon nearly every beach I visited, strlpped of their flesh by the buzzards, hawks, coons and other animals and birds that seek the shores for their food. The tarpon are found in nearly all the waters of Southern and Southwestern Florida and the keys and waters of the Gulf of Mexico, are found in the more southerly portions thereof, where the waters are warmest, early in the spring or throughout the winter, and migrate into the more interior waters as the warm weather approaches, and in summer swarming in all the rivers and bayous of the Gulf and Flor-ida coast.

Clinic of a texture, are transmiss, early in the spring or throughout the winter, and migrate into the more interior waters as the warm weather approaches, and in summer warming in all the rivers and bayons of the Gulf and Florida coast.
This fish is said to grow to a very large size, though my own experience did not carry out the fables told of them as to size and weight. I had the experience did could be right and of seeing and estimating for myself some ten or twelve others which I hooked but did not capture; and as a result of this observation I am led to the belief that from six to seven feet is about their maximum length and that about 150 pounds would be their maximum length and that about 150 pounds would be their maximum length. They for the source and test as I have feit, them hooked on the ordinary capture can usafely the satisfactory to any of our expert striped-bass anglers if they could but see, as I have seen them hooked to take the bait; with a ordinary care can easily be induced to take the bait; which shows and feet, as I have feit, them hooked on the ordinary the striped bass of our Eastern waters, can readily hooks them well, and the satisfay the critic of nor striped-bass takes, which is of the induced to able or striped-bass takes which is of the striped bass, and to see if patience, skill and perity, power and endvance. This I have soccessfully consisting of Nos. 9 and 24 bass, and to see if patience, skill and perity, power and endvance. This I have soccessfully consisting of Nos. 9 and 24 bass lines, the ordinary full-lize bass reads, which is of the lightest with a societ and interset as fishermen, consisting of Nos. 9 and 24 bass lines, the ordinary full-lize bass reads, and the onsy to have associated one size for convenience, simply to accound date an increased size hait.
The mould use distriped bass fisherme, consisting of Nos. 9 and 24 bass lines, the ordinary full-lize bass reads, and the onsy to have associated one size for convenience, simply to accound date an

for table, and where I had the good 100 hours, and in not attendance good. The fishing is done from boats, and in not very deep water. The flesh of the tarpon is good to eat, and I am informed that in some cases the beautiful scales are manufactured into very handsome and pleasing jewelry ornaments. A pre-served specimens of the largest of my captures can be seen at Edward vom Hofe's, 97 Fulton street, New York. BILLY BOWLEGGS,

PUNTA RASSA, Fla., April 12.

MAINE TROUT SEASON.

<section-header><text><text><text>

FISH SLAUGHTER IN VERMONT.

<text><text><text><text>

FISHING IN THE POTOMAC.—Washington, D. C., April 22, —From observation and reports received, I am able to state that better bass fishing was never had in the Potomac than sportsmen are having now. Strings of from five to fifty are now brought in from Little Falls and Great Falls and other points, while further up, at Point of Rocks, Harper's Ferry, Sir John's Run and other well-known places, the catches have been something remarkable, both for number and size. A letter just received from the south branch of the Potomac states the bass never were more numerous, that bait is very scarce there in consequence, and that anglers must come well prepared in this respect. Small catfish seem to be the most taking, but chubs, smelt, canal minnows and other small fry are used with success. Have not heard of any flyfishing. The catch of Potomae shad is very large and the fish are unusually fine. Herring are also reported as good as usual in size and quality. Striped bass are running up, and sports-men are taking them at various favorable points with excel-lent luck.—BURNETT. lent luck .-- BURNETT.

SALMON ANGLING IN MAINE.—A Maine paper says: "A few days ago Mr. Henry A. Wing caught a fine salmon in the Mattawamkcag River. The fish was taken with a small rod, and is the first of the kind which has been caught here in a long while. Salmon are moving up the river in large numbers, and the prospect is that many will be taken with rod and line. The people feel much gratified to think the rivers are once more becoming populated with the 'king of fish.'" We also learn from good authority that a twenty-four pound salmon was taken with a rod in the Penobscot below the water works dam of Bangor, last week, by Mr. Fred Ayer. Beside the fish taken by Mr. Ayer, we learn that two more were taken on Friday last, three on Saturday, and one took the hook but was lost.

FISHING IN FLORIDA. — Cedar Keys, Fla., April 11. — Editor Forest and Stream: I have been here for some time with a friend from Canada, and we have kept the hotel in fish ever since we came. We have had lots of fun catching sheepshead. I suppose they took this name from having a mouth like a sheep. On April 11 three of us took a sail out to Snake Keys, an island five miles from Cedar Keys. We sailed a mile further in the Gulf, and I noticed trout about us. As there was a piece of mullet in the bottom of the boat and I always carry my line in my pocket, I thought I would try a cast. Well, I made a cast of fifty feet out, and the bait had only struck the water when something took my bait. I let the fish have some more line and then checked him, and had fine sport pulling him in. It was a trout of about 34 pounds, a beauty. My friend could not stand the temptation, so he felt for his line and found he had one in his pocket; but he lost a nunber of fish, as his line was not heavy enough and would break every now and then. For two hours we had lots of sport, but then had to take up auchor and start for Cedar Keys, as there was a storm com-ing up. We hated to leave, as they were still biting freely. The wind blew very hard and the Gulf got very rough and ugly; but we had only one thing to do, and that was to keep on, for the longer we stayed out the more likely we were to be swamped. We had to keep bailing all the time. We got in safe and carried our fish to the hotel and took the house by surprise, showing sixty-seven trout and one bluefish. They weighed 1374 pounds. That was the best sport in fish-ing I ever had.—H. A. B.

ing I ever had.—H. A. B. COIL LEAD OR SHOT.— Ashtabula, O.—Editor Forest and Stream: Living as I do among the fastness of the everlasting mountains of the Alleghanies, where their evergreen tops pierce the blue vault above, where the bounding deer roam at will, and where in the deep valleys the pure mountain streams rush headlong on their way to the mighty river, it has been my solace and joy to spend many weeks in decoying to my line the speekled trout, which it is the delight of all lovers of sport to lure to their hand. I see in the issue of March 18 some one advocates coil lead instead of shot for sinkers. I cannot understand why an idea so long abandoned should be again brought forward. I used it for years, until I tried the shot, since then I have never returned to that primi-tive mode of sinkers. My reasons for not liking it are many. It is not decided enough in its action when casting my hook. When trying to place the line at a given point the lead is so distributed that the wind will take it from the place in-tended, whereas the shot has less surface for the wind to act upon, and therefore your cast is more perfect. I used to stantly getting off from my line, or becoming foul, and when on the line it made a stiff and unpliable spot where I wanted the most elasticity. I always put the shot above the loop on the hne, which leaves to the leader and hook, with a gut, a free action, while the line is held at will by the shot. In swift running streams I seldom use a sinker, I think the fly has more of its natural appearance than when held under water, the current being sufficient for all purposes.—G.

Water, the current being sufficient for all purposes.--G. FISHING FOR LAND-LOCKED SALMON.-Bucksport, Me., April 27.--Editor Forest and Stream: The question, what is the best fly and bait for land-locked salmon, also season and time of day? may be answered thus: For a fly the silver doctor is the greatest favorite. The butcher is another that some have found successful; also an unnamed fly of private make, with a yellow body and a gray mallard wing, and another called Montreal, but not the original Montreal-nearer a goldon pheasant. There is a great variety of opinion as to bait. Fly-fishermen do not like to talk about bait. though the fact is the most of the fish taken at Grand Lake Stream and all those now taken at Sebago are victims of bait. The natives at Grand Lake use a piece of pork rind. Some use a shining and tough piece cut from any fish. If smells run in the stream where land-locked salmon are ex-pected, a small smelt or piece of a large one is recommended. The season of fishing is from the breaking up of the ice till some time late in June. The April and May fishing is mainly trolling with fly or bait, mostly the latter. Whip-ping is not very successful until after the cherry is in bloom and the black flices bite vigorously, at Grand Lake Stream fiter the lats of June generally, say from June 5 to 20. There is some fishing in September, which is best in case of high water in the streams, but this rarely compares well with the May and June fishing. As to time of day, carly morning and late afternoon are best. Some find the silver doctor best in the morning and a gray miller in the evening.---C. G. A. C. G. A.

C. G. A. THE LARGEST TARPON.—Mr. W. H. Wood, who took the first tarpon with rod and reel one year ago, has been at it again. He has recently sent one of these fish to New York which measured 6 feet 5 inches and weighed 140 pounds, and the mounted skin is now in the window of Thomas J. Conroy, 65 Fulton street, where it attracts crowds. This, largest of all game fishes, was taken a few miles from Key West, Fla, on 900 feet of 15-thread linen line, an O'Shaug-nessy knobbed 10-0 hook, a 3-foot link chain, a 5-foot bamboo rod and a "Silver King" reel. The great strength of the fish compelled Mr. Wood to lift his anchor and let the boat follow the fish. A similar rod, reel and line are in the win-dow at Conroy's.

CENTRAL NEW YORK.—Syracuse, May 3.—Last week Game Protector Lindsay pulled twenty two trap nets out of Oneida Lake in twenty-four hours, a good day's work. Mr. Henry Loftie caught twenty-two brook trout on the opening day which weighed five pounds. He says he lost one that would have weighed two pounds, but does not understand why the boys grin when he states this fact.—SALINE.

HATCHING SHAD.—The United States Fish Commission's steamer Lookout arrived in the Delaware River off Glouces-ter City on May I, to commence the work of artificially hatch-ing shad and stocking the stream with them. The Fish Hawk, a larger steamer, commanded by Lieut. Pietmeyer, of the Navy, which did the work last year, will arrive in a few days to relieve the Lookout, and will femain up theriver until after the close of the season. It is proposed to place fifty million young shad in the river from these vessels. The Lookout already has one million cggs in the incubators, and the first spawn will be liberated in about four days. The eggs are ob-tained from the largest and finest female shad just as they are drawn from the vater in the big seine net at Thompson & Guy's fishery. The Government officials have the first pick and pay a stipulated price for each fish used. The hatching process consists in placing the eggs in jars containing water heated above the normal temperature of the river, and keep-ing them constantly in motion. In from four to seven days the young shad break through the eggs and are placed in the river to start on their perilous journey to the sea.—*Philadel-phic Times*.

THE CLEVELAND DOG SHOW,

THE CLEVELAND DOG SHOW. Third dog show of the Cleveland Bench Show Associ-ation was held at Cleveland, O., last week. Previous shows at Cleveland have proved very satisfactory to the ex-hibitors as well as the association, and we are pleased to note that this show will compare favorably in this respect with any that has been held. The Tabernacle, in which the show was held, is of good size and well ventilated, but is badly lighted. The benches were well arranged, and the manage-ment was first-class, except that there were not attendants to do the necessary work in its proper time. The dogs were well cared for, and the exhibitors warmly praised the manage-ment for the care taken of their interests and for the efficient and cordial manner in which their wants were attended to. There were 365 entries, with 30 absentees. The quality in most of the classes was good, the English setters being re-markably tine. One of the local papers solemily announced that "taking all things into consideration there is not a poor dog in the show." We have no knowledge of where the re-porter draws the line, but presume that it is at the "yaller dogs that made their first appearance in public. Some of them ande the knowing ones open their eyes, and we have no doubt that this operation will be repeated if these dogs put in an operance at future shows, no matter how hot the com-nany. The did not commence until 2 o'clock on Tuesday, and

The number of the second se

ENGLISH SETTERS-(MR, WILSON), ENGLISH SETTERS-(MR, WILSON), There were many very fine animals in the English setter classes, and several of them are good enough for any company. The judge did not handle them at all well. He let no bad ones into the money, but some of the best were entirely overlooked, and others were rated below their merits. We are sorry to

<text><text><text>

IRISH SETTERS-(MAJOR TAYLOR).

IRISH SETTERS-(MAJOR TAYLOR). The Irish setters, as a whole, were the poorest lot that we have scen at any show this year. In the champion dog class, Etcho, Jr., had an easy win over Brush. Zella (Henduft, lock-ing well, had a walk over in the bitch class. There were only five shown in the open dog class. They were properly placed. Wickey C., placed third, except for a broken foot, was the best of the lot. In the bitch class, first went to Laura B, a very nice big bitch with plenty of bone. She is very well made, but a little too much of English type. Cora, winner of second, is a very promising puppy, but not good enough to beat Lorna, placed third. Noreen IV., vhc., was looking well, and deserved the place. Clara Belle, also vhc., received all she deserved. She has a short head and is too heavy in body. Her good coat and color gave her the place. Nellie C, is a fair little bitch shown out of coat and feather. The dog pup-pies were nothing extra. Frank, the best one, is just a fair puppy, with too much white on chest. In the bitch class, first went to Cora, winner of second in the open class. There was nothing else in the class that we fancied. BLACK AND TAN SETTERS-(MAJOR TAYLOR).

BLACK AND TAN SETTERS-(MAJOR TAYLOR).

BLACK AND TAN SETTERS—(MAJOR TAYLOR). There were no entries in the black and tan setter champion classes, and but two in the open dog class. Both of these were winners of first and second here two years ago. They have fallen off from their form then, and the judge withheld first and placed them second and third, their relative position two years ago. Dash, placed second, has grown coarse and wide in front, aud is out at elbow. Mr. Brown was much too fat. He has grown throaty and wide, and shows age. In the bitch class, first went to Lottie, a very nice bitch, with rather a plain head and poor tail, but otherwese very good. Second went to Jess II., a fine big bitch with a fair head, and of good coat and color. She is not quite straight on her fore-legs. Duchess C. has an Irish head, and is of Irish type. Bell, unnoticed, deserved the two letters. She is a fair light when the two much tan on head. First was withheld in the puppy class, and second given to Dash. We failed to find him in his stall. He should be much better than the remain-der of the class to be worth the place. POINTERS—(MR, DAVIDSON).

der of the class to be worth the place. POINTERS—(MR, DAVIDSON). There were forty-two pointers entered and all were shown except five of the Graphic Kennels and Jetsam, the Pittsburgh winner. Taken as a whole, the quality was above the aver-age. Robert le Diable was entered in the champion class over 55 pounds, but was not for competition. He has improved since we last saw him. In the corresponding bitch class Lady (roxteth, looking well, was alone. In open dogs first and second went to Pap Smizer and Kingshot, litter brothers. They are very well made with good legs and feet, both are a triffe weak in head. Sweep, vhc., we failed to find in his stall. Young Meteor, he. is rather a nice puppy, but too wide in front. Planet, c., was in bad condition. He appears to be a good dog. His worst fault is his open feet. In the bitch class first went to Romp, sister to Lady Croxteth, but a year younger.

She is nearly as good as Lady. Second went to Lass, well known. She was much too fat. Diana, vhc., is quite a fair bitch, except that she is too snipy and a bit straight in stifle. There was one cutry in each of the small champion classes and both were absent. In the open dog class first went to Tippe-cance, a taking looking dog with fair head, neck and chest, good loin, quarters, tail, legs and feet. His ears are up a bit high and he is a trifle wide in front. He might be better in shoulders. Second went to Rumpty, a well put together dog of considerable quality. He has a fair head that would be improved with more stop. Don and Doncaster, both vhc., deserved their cards. Le Roy, hc., is a taking looking dog with good neck, shoulders, chest and tail. He is weak in head and light in bone. Bull's Eye, also hc., is a fair dog, a bit leggy. Spot, unnoticed, deserved a card for his good body, capital legs and feet. In the bitch class first went to Keswick II, winner of second at Pittsburgh. She isquite a nice bitch. Her worst faults are a flat skull, not depth enough in chest, and a bad gait behind. Lillie Bang, winner of second, is a nicish lemon and white; she deserved the place. Fan, vhc., looks, like a good one, but she was too fat to show. Daisy Donald, hc., was nursing a litter and not in form. The dog puppies were a poor class. Young Meteor, the winner, was much the best. He was hc., in the open large class. The others were not very promising. The bitches were better, although we noticed nothing likely to win in the future in good company. <u>SPANIELS-(MR. NAYLOR)</u>.

SPANIELS-(MR. NAYLOR).

STANELS—(MR. NAYLOR). There were seven Irish water spaniels shown. Count Bendigo was alone in the champion class. He was looking well, In the open dog class first went to Patsy O'Connor, a rangy, workmanlike-looking dog, with good head, ears, topknot, legs and feet; his tail has been hurt, which will account for its bad carriage. He also has a large white spot on chest. Second went to Champion, of good shape and a nice head; he was off in coat. Onomoo, the, is well known. O'Duff, he., is fairly well formed, but is too leggy and shallow and was short in coat. In the bitch class first went to Little Sioux, a nice bitch with a good head. She is a trifle shot in body and was off in coat. Gypsy, winner of second, is well formed. She has a mustache and considerable feather on her tail; her coat was also ragged. There were no entries in the champion field spaniel class. In the open class first went to Hornell Mikado, one of the handsomest black and whites that we have seen. He is fair all round, except that his tail is carried too high. This was lis first appearance. He is to be at New York to take the measure of the cracks. Second went to Feerless Gloss, a very nice dog of cocker type. Rocco, e., has a good head, coat, legs and feet, but is too short in body. Bob S., unnoticed, is of fair type and deserved a notice. The gnawed a hole in his thigh the first day and was not shown. Hornell Silk, looking better than at Newark, was alone in the champion cocker class. In the open class for other than black first went to Vic. She is faulty in head and ears and too short in body. Hornell Belle II., winner of second, has a grand body and a beautiful coat. She is a triffe faulty in head and has chorea, but for the latter we would place her first. Hornell Nance, vhc, is faulty in head, but has a good body and the best of legs and feet. The two others were not worthy notice. Kino, winner at Pittsburgh, was first in the class for blacks. He is a nice little dog, a triffe too short in body and stand

FOXHOUNDS--(MR. NAYLOR). In the champion foxhound class Roxey II, was alone. In the open class Ranger was first, and Abe, a handsome black and tan with white feet, was placed second; he is too leggy and is rather shallow. We preferred Leader, vhc., for the place, he is better all round, except in beauty. The others were a workmanlike looking lot. There was no uniformity of type in the class, and not one that approaches the type called for by the standard. BEAGLES-(MR. NAYLOR).

type in the class, and not one that approaches the type called for by the standard. BEAGLES-(MR, NAYLOR). There were nineteen entrics in the beagle classes, with only one absentee. In the champion class Bannerman, looking well, beat Mischief. The open dog class brought out a capital hound in Racket; he was bred by Gen. Rowet, and has a grand head and an immense chest; he seemed to be slack be-hind, which is perhaps owing to his thin condition; when in good form he will undoubtedly be a hard one to beat. Driver, placed second, is a workmanlike looking dog, but not of so good type as Bob, yhe. Bob is a bit leggy, and might be better in muzzle, otherwise he is good. Banker, also vhc., is rather coarse. Boxer, c., might be improved in coat, brush and muzzle; in other respects he is quite good. The bitch class also brought out a new comer in Dot, the winner. She is an excellent bitch. Her worst fault is a trifle too much length of body. Piney, placed second, is a serviceable looking bitch, also a little too long in body and out at elbow, and is light in eye. Minnie, vhc., is very pretty. She is weak in muzzle, and might be better in brush. Queen Bird, hc., is well made, with a good body. She lacks in muzzle and ears. Millie, also hc., is an excellent bitch. She is somewhat snipy and a bit out at elbow. Maida, c., is a little long cast, and a trifie out at elbow. She also lacks in coat. Stella, also c, lacks quality. In the under 12 inch dog class, Marchboy II, was alone, the other entry being trans-fered to the large class. Marchboy should have been entered in the champion class, as he has won three first. He has lost flesh during the campaign, and this magnifies his worst fault, lacks of substance. There were but two shown in the bitch class. Fairy, placed first, we did not like so well for the place as Magnet. The latter is bad in forelegs and feet, but better than Fairy in all other points. Maida II, was the only pupy shown. If she gets a good coat and brush with age she will do to show again. Boli of the pac

The one placed may construct the maximum and the set of the placed may construct the maximum and the set of th

Was whill be the second, given to Lert, been withheld also. GREYHOUNDS-(HR. NAYLOR). With the exception of first and second there was nothing worthy notice. Belle, the winner, is quite a nice bitch, with a fair head, good neck, chest and loins, and snows quality; she is too straight behind and her feet might be improved. Major, second, is well known. DEERHOUNDS-(MR. NAYLOR). There were only two deerhounds shown. Fly, placed first, is just a fair specimen. Garfield, given second, looks the bet-ter of the two, but his ugly disposition prevented examina-tion, and he was properly placed in the rear. MASTIFIS-(MR. NAYLOR). The only entries in the champion classes, Homer and Rosa-lind, were absent. The open dog class brought out a very fair

dog in Baby. He was much the best in the class. He is too long in head and light in bone and might be bet-ter in feet. He has a good body, which would be greatly improved with more flesh. He is evidently well bred, althouch unfortunately his pedigree is missing. Cæsar H., placed second, we do not like. Captain, vhc., is a very dark brindle, almost black; he is of fair type and immense bulk. Prince, hc., should have been second. He is not first-class, but much above the average, and the best red we have seen for a long time; he is rather light and leggy, and could be im-proved in head. In the bitch class Bal-Gal and Ilford Cambria had a very close thing of it. Bal-Gal's good coudition pulled her through, but she did not have much too spare. Ilford Cambria is litter sister to the well-known Ilford Caution. She has a fair head and is well-formed. She was not shown in good condition, being much too thin. There was only one puppy worth notice, Ashmont Tiger, a nice brindle, much like his sire Ilford Crom-well. He is not quite deep enough in muzzle and has a ring tail. He is rather timid and did not like to go into the ring, whereupon Mr. Fellows, of spaniel fame, who had beccome somewhat acquainted with him, took him in charge and showed him nucely. When the ribbon was handed him, Mr. Fellows very blandly remarked to the judge, "If you are as good a judge of spaniels as you are of mastiffs, I am all right." It is perhaps unnecessary to add that he retired amid the plandits of the audience. ET. EENARDS-(MR. NAYLOR).

<text><text><text><text><text><text><text><text><text>

GERMAN MASTIFFS OR GREAT DANES-(MR. NAYLOE). Six good animals were shown in this class. Cæsar, placed first in the dog class, is an immense brindle, one of the best we

have seen. He is a trifle straight behind, which is his worst fault. He would show better with more flesh Second went to Nero, an uncropped blue, but little behind the winner in merit. General, vhc., was transferred from the miscellaneous class where he was entered as a Russian bloodhound. He is a fair specimen, a bit wide in front and weak in muzzle. Co-lumbus, c., would have been better placed but for his de-formed forelegs, caused by being broken. Pluto was absent. In the bitch class Flora was absent and Lady Gray, a very nice blue, was alone. Barring a weak muzzle she is a very nice specimen. Below is a full list of

nice specimen. Below is a full list of

THREE-DAY DOG SHOWS.

S. S. Hajör's Refine and S. P. Chapter, P. Matter S. S. Hajör's Refine and S. P. Chapter, P. Matter S. S. Hajör's Refine and Stream: The Set and Stream: I beg a little space in your columns to, call attention of all "whom it may concern" to the advisability of curtailing the duration of kennel shows, i. e., making the time three rather than four days as the limit. I am convinced that three days is long enough to subject our dogs to the wearying trial of exhibition and its attendant "wear and tear" on the nervous system, as well as the general health of our pets. I think that all breeders and exhibitors are with me in this matter, and I respectfully commend it to the careful consideration of all clubs and associations under whose auspices and patronage the bench shows are held. The dog is of an extremely nervous organization, and the continued strain of a four-day exhibition is too much-just "one too many"—for the long-suffering animals. It is quite evident that the fourth day is added for the purpose of swell-ing the receipts of the club promoting the exhibition, but it is a moot question if it really pays. All bona fide dog lovers and fanciers are to the fore when the dogs are fresh and in best condition to be seen, and on the fourth day neither the ex-hibited nor the exhibitors are in any mood to be admired, or to hold speech with. The number of bench shows are indreas-ing so fast that it is even more desirable that the limit of each should be three days. I think if this rule were adopted it would be very advantageous, and if shows were duly prepared for and properly managed the three days' limit would be, in sure it would to the dogs, and they surely ought to be con-sidered, as of what possible use is a show without well-con-ditioned dogs to show? I hope this expression of opinion may call out others of those who are interested in the subject and who love and adimire dogs. DEATH OF THE FIELD SPANIEL BENEDICT. — Editor Forest and Stream. In the death of champion Benedi

who love and admire dogs. O. W. R. DEATH OF THE FIELD SPANIEL BENEDICT.—Editor Forest and Stream: In the death of champion Benedict, killed recently by the D. L & W. Railroad, the spaniel men have sustained a severe loss. He was the property of Mr. Albert E. Foster, of Mountain Station, near Orange, New Jersey. The recent, but now subsiding, craze for small spaniels has heretofore quite thrown the merits and superior usefulness of the large spaniels in the shade. His death is most untimely, as the Spauiel Club were about taking up this type of the breed, to lend them a helping hand and encourage their breeding and training, and several well-known bitches were soon to be bred to him. By reference to No. 61 in the initial copy of the American Kennel Register, we can see that lis breeding was of the best, champions figuring liberally on both sides. He was bred by Jacobs, Wolborough House, Newton Abbot, Devonshire, Eng, and was sent to this country in 1880. His winnings were as follows: First New York, 1881; champion Cleveland, 1882; first New York and Pittsburgh, Lötzer, and Philadelphia, 1854; champion New Haven, New York and Philadelphia, 1854; champion New Haven, New York and Philadelphia, 1854; champion New York, New Haven and Boston, 1885, and many specials.—SPANIEL THE MANITOBA FIELD TRIALS CLUB.—Winnipeg,

THE MANITOBA FIELD TRIALS CLUB.—Winnipeg, Man., April 24.—*Editor Forest and Stream*: At a meeting held in this city this evening an association was formed for the purpose of improving the field qualities of pointers and setters, by holding field trials in this vicinity. The name adopted is the Manitoba Field Trials Club. President, Mr. Alexander Logan; Vice-President, Mr. Thos. Johnson; Secretary and Treasurer, Mr. C. A. Boxer. A board of directors was elected and quite a number of members enrolled. It is the intention of the club to hold a field trial next fall and to offer liberal prizes. Those desirous of joining the club should address the secretary, Mr. C. A. Boxer, 4 Portage avenue, Winnipeg.— POINTER.

FOINTER. "GLOVER'S ALBUM."—This is the title of a treatise on canine diseases lately published by Dr. H. Clay Glover. It touches on most of the troubles peculiar to dogs, clearly and briefly giving symptoms and treatment for the same. The author's ideas differ in many respects from those of the old English writers. One particular merit the "Album" possesses is that of being written in plain English, care being taken to avoid technical terms. It is nicely gotten up, containing pic-tures of a number of prize winning dogs, and will prove a valuable little book to all dog owners.

SALE OF THE SHOTWELL COLLIES.—We learn from outside but authentic sources that the price paid by the Hempstead Farm Co. to Mr. Shotwell for his kennel of collies was \$1,000. The two old dogs, we understand, were sold for \$400 each and the three puppies for \$200.

KENNEL MANAGEMENT.

KENNEL MANAGEMENT. IN the second state of Anonymous Correspondents. F. P. Q., N. Y.-Do not continue arsenic more than three weeks without an intermission of ten days. Give her a little meat cooked with ocra meal. You should wash her with warm water and carbolic soap once weekly. Dry her thoroughly afterward. M. T. Clotter, N. J.-L have a hound two years old that is troubled with a cough. It has been annoying him for about two weeks; he will cough and then appears to gag or choke; he is in good flesh and his appetite fair. I also have a Gordon setter blich six months old that was taken in the same way that the hound was, only she has not been troubled so long. Eyes do not run much and nose clean, but by spells warm. I thought at first it might be distemper. I have had a number of does that had the distemper in its different forms, but this following: Of the muriate of ammonia, ½ ounce; of water to make a 4-ounce mixture. Mix, Give a teaspoonful four times daily. Give the pub halt this does.

Wild cherry, 1/2 ounces; of paregorie, ½ ounce; of water to make a duonce mixture. Mix, Give a teaspoonful four times daily. Give the up halt this doe.
Constant Readers, Boston.—My Gordon setter, are nearly three years, was run over by a wagon some four weeks ago, one wheel search receiver drive on lamenes, but has developed within a week a choking courd which I can only describe as having the appearance of an effort to vonit. Nothing is courded up and he has no symptoms of a cold, and seems, aside from a nemers, out has developed within a week a choking courd which I can only describe as having the appearance of an effort to vonit. Nothing is courded up and he has no symptoms of a cold, and seems, aside from a drive what course to pursue! Ans. It is quite probable that any connection exists between the accident and the course, or can you advise what course to pursue! Ans. It is quite probable that some of the nerves of the larnyx were irritated or injured by the accident. We should think that he will recover without treatment. Probably only of the nerves of the larny were irritated or injured by the accident, we should think that he will recover will like advice as to treatment. The following case: I have two mastif dog pups now seven for the following case: I have two mastif dog pups now seven for the following case: I have two mastif dog pups now seven any on the following case: I have two mastif dog pups now seven norths old. Up to four months they were fat and plump, legs and so the sides and better, is still a walk to avail the source of a month appetite came back, but pups could hardly walk, and were ecow-hocked, knock-kneed in front and splay-footed all now hocked in one leg and continually breaks out in small sores, on the ack there fight, at the following solution: Of the citrate of row and memonia, one ounce; of Fowler's solution of arsenie, and put a monola on the sides and between foreless. Have given monola in the following solution: Of the citrate of row and were washing the parts with

KENNEL NOTES.

KENNEL NOTE BLANKS.-For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." All Kennel Notes must be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed euvelope. Send for a set of them. Sets of each form (200), bound, for retaining duplicates, sent postpaid, 80c.

NAMES CLAIMED.

Rifle and Grap Shooting.

THE NATIONAL RIFLE CLUB.

Editor Forest and Stream: I read in your April 16 number a card from Mr. W. V. Lowe, who states that the National Rife Cluh will hold a meeting at Vernon, Vernont, on the 20th and 27th of May, 1886. I am pleased to hear that the old cluh is still alive and will do some shooting. As Mr. Lowe states I believe it to he "the oldest organiza-tion of its kind in this country, if not in the world." I have known of its existence for the last quarter of a century. Most if not all of its original founders have passed away and their places are filled hy others.

is existence for the last quarter of a century. Most if not all of its original founders have passed away and their places are filled by others.
I also note he states that a number of crack experts who shoot with breechloading rifes are to he present and compete in the shooting. As the shooting of various members of the club with muzzleloaders has always bearregarded as the highest attainable point of excellence for extreme accuracy up to and at the distance at which they shoot, i. e. 40 rods, it will be interesting to learn whether the impoved modern breechloading rife has been improved sufficiently to beat or even equal the old time gun.
Th. Lowe states that muzzleloaders are used by the members of the law known breechloaders to be used in the past, at the untrobes of the National Club, and also of the New York State Hile Club, an organization similar to it. Thave, however, never known or heard of a freechloader winning first place to orce to at the past, at the distonce a hooting. As the shooting is open to the New York State Hile Club, an organization similar to it. Thave, however, never known or heard of a freechloader winning first place but once in the past, at the interest the organization similar to it. Thave, however, never known or heard of a freechloader winning first place but once in the past, at the forest as the shooting is open to the world, i. e., to any one what hothers who have faith in their pet guns will come forward to take a hand. "From time to time I read articles and letters in the pages of the States that will be hard to exceel with any kind of gun. I am also pleased to see an increasing tendency toward string measurement, as without question it is the only correct way to test the shooting." It was been agriced about, as in all probability, if the weather is adalted. Again, not long since, it was been agriced about a targe that would be choed with a bacoding power of either the rifie or the shooter. "In the recent past of them to a string thad would be ado to cassed b

of these gendemen myself under such conditions. G. J. ROMER. PREMENTLA, N. Y. Editor Forest and Stream: I have read with considerable interest the various articles that have appeared from time to time advocating the respective advan-tages as to trajectory and accuracy of muzzleloaders and breech-loaders. Some of your correspondents are apparently hasing their claims of the superiority of the muzzleloader on a statement of facts and figures that to my idea are not very highly creditable to any hind of a rifle. Mr. Merrill, in your issue of the 6th inst, for instance, tells us that with his muzzleloader and a rest at a distance of 32 rods or 176 yards, he killed four turkeys out of twenty shots, and from this wonderful performance he argues that he would soon have won all the balance of the turkeys. It has been a long time since I was at a turkey shoot, but at the last one, if my recollection serves me rightly, turkeys were put up at 40 rods - 200 yds. - for off-hand shoot-ing, and at 80 rods for shooting from a rest. At the latter distance I is that a common militay Sharps hammeles the distance, and did it with a Sharps breechloader, too. While in Ucah a few years since, I had a cominon militay Sharps hammeles 45.70, costing, I helieve, 184, with which I have frequenily put 6, 7, 8, and in one Instance I consecutive shots in an 8in. bullsey e at 200 yds. off-hand. Think it quite possible that a muzzleloading hand-mader ifle, care-fully rified by hand, and if not found satisfactory, re rifled, loading yeater distance, they will shoot with any more killing accuracy at his and carefully patched bullet will, at a distance of say Soyds, and at a small target, shoot with more accuracy than mest of the factory-made breechloading rifles; but that at this or any preater distance, they will shoot with any more killing accuracy at his patch and the right. Roue, Ga., April 26.

N. Y. STATE PRACTICE. A DIT.GEN. JOSIAH PORTER has issued the orders for the sea perfence of previous years has been utilized in the preparation of the scheme of practice. Forty rounds per man will be used, and a sys-tem of duplicate score cards, one coupon to go to the general in-prepared by Gen. C. E. Robbins, bead of the rifle department, are incorporated in the order, and provide as follows: **DESTIMATION** The third class shall consist of all who do not appear on a range for practice. The second class consists of all present for practices there in this class will be at 100yde, standing; on a third class or No. 3 target, and at 200yds, kneeling, or sitting, on a third class or No. 3 target, and at 200yds, kneeling, or sitting, on a third class or No. 3 target, and at 200yds, kneeling, or sitting, on a third class or No. 3 target, and at 200yds, standing; on a third class or No. 3 target, and in the first class consists of this class will be at 200yds, standing, No. 3 target and at 500yds, lying prone, No. 2 target. A end upward in the first class constitutes a marksman, and and upward in the first class constitutes a target and and marker to receive a silver har. All officers and enlisted men, who practice, unst shoot through the regular classes, and are prohibited for a second or higher score in a class in which they there acted qualified. The record must stand upward in the first class core in a classe, and are prohibited for a second or higher score in a classe in which they there acted qualified. The record must stand upward the record practice, must shoot through the regular classes, and enlisted men, who there is no the stand are prohibited for a second or higher score in a class in which they are there and qualified. The record must stand upward the first quali-tized, unless made at a target to which he has beer regulatives the score made. No score by officer or enlisted man will be record to a score made. No score by officer or enlisted man will be record to a score

FIRST GENERAL PRACTICE.

nized, unless made at a target to which he has been regularly as science, and where his name has heen previously entered on a score blank.
 TIRST GENERAL PRACTICE
 (a.) The practice will commence with class fring in squads, under a competent non commissioned officer or cher duly designated in structor at each fring point, and the whole under the supervision of an inspector of rifle practice, subject to the orders of the command-ing officer present. Five consecutive shots will be fired at each distance. This practice will be continued to the end by all present without reference to the scores recorded, except that those who fail to qualify in the second class may he restricted to two shots for more than five consecutive shots at any one distance on the same class practice no officer or enlisted man will be permitted to fire more than five consecutive shots at any one distance on the same day, except the necessary sighting shots to ascertain elevation, windage and the condition of pieces, which may befired by officers or of rife practice. Trial practice between classes will not be permitted. At the first distance of either class (*i.e.*, at 100 or 200%s.) a score of 12 or upward is considered as qualifying, and second practice may be allower the online statice deems proper. Those who may have qualified at 200 and 500yds, but not at 100 and 200 may make their scores valid by practicing through the second class intont shooting in the first again.
 In regular practice. In that case the man will shoot with the nearest approved piece in the ranks. The trops shall be exercised as skirm is the state state. The trops shall be exercised as skirm is doned with the nearest approved piece in the ranks. The trops shall be exercised as skirm is the following order, the squad or company being or the grand, unless the same is declared imperfect by an inspector of rife practice. In that case the man may shoot with the nearest aproved piece in the ranks. The trops s

Those present will practice, including volley firing and firing second or other the classes to which they respective belong. In other respects the tour of duty will be identical with the preseribed for first general practice, including volley firing and firing as skirmishers.

RANGE AND GALLERY.

IARKHAM, Ont., April 26 — Much talk has finally resulted in the anization of an entimisatic rifle club—about 30 members being eady enrolled—with the object of improvement in the art of sboot-off-band. The target known as the standard American, 26in. In meter, bas been adopted, and is well liked generally, although at yils, some of the old 'uns get a surprise-want to rest on some-ng. The following are the officers: President, C. W. Crawford; "e-President, D. P. Ross; Captain, H. Megill; Secretary, John Mc w; Treasurer, M. Speight.

haw; Treasurer, M. Speight. COLOBADO SPRINGS, COL.—I used several kinds of ammunition last season in Wyoming, in my Sbarp's .45 cal., ranging from 110 grains lowder and 550 grains lead down to a Marlin .15-85 285, including a Orgarain Express ball, and found the Marlin 15-85 to do the best rork, and predicted that that cartridge would show a good record in he test, as it did. You are entitled to grate credit for the good you have done the cause of rifle shooting by this test.—R.

THE TRAP.

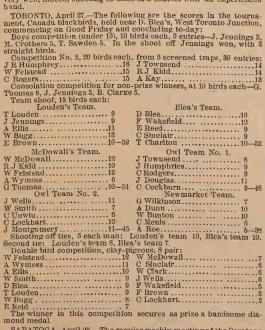

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries.

Correspondents who favor us with club scores are particularly re-quested to write on one side of the paper only.

BROOKLYN, April 21.—The fourth regular shoot of the Fourian Gun Club was held to day at Prospect Park Fair Grounds, and attracted quite a good attendance and a larger number of entries than in the previous shoots. Boudan had again supplied a good lot of birds, allbough some ot them hung in the trap and had to be walked up. The wind was blowing from right to left of the traps, giving the shooters pleuty of time to use their second harrel, and chabled some of them to make good scores. Dr. Weed, who won in Class A, killed 5 of the 7 he was credited with with his second harrel, J, Ratbjen, Styds, killed his 7 straight with his farst barrel, but made sure of one hird by giving it an extra dose with the second. This is Rathjen's second win bis season in his class. W. Stuart, altbough not shooting up to bis regular form, still had no difficuity in defeat-ing bis two moderate opponents in Class C. The following is the full SCOPC:

 big is two inductive opportants in Cass of the following is two holes of the following is the following i

V Stuart, 23rds.......1001111-5 J Sawyer, 21yds.......100100-2 V Lake, 21yds.......0001110-3 WESTMINSTER CLUB.-A small gathering of gentlemen assem-led on the grounds of the Westminster Kennel Club, Babylon, L. I., fay 1, to see the pigeon shoot between Mr. Willam Channeey Floyd-iones and Mr. Pierre Lorillard, Jr., members of the club, for a wager (\$1.000 each. The Westminster Club rules governed the match, ach contestant to supply 100 birds and to shoot at the same num-er, 30yds. rise, both barrels to count. The birds were spring from ive traps. and Mr. Jones won, killing 86 within bounds. Five fell he birds, though tame when they were carried in flew in rather zig-ag shape. Jones took the lead from the first and held it. He wis he favorite in the betting, but notwithstanding bisfact considerable ioney changed hands. After the shoot a dinner was served in the lang-room of the club see the shoot were: Mr. Colman Drayton, Mr. Ioward Jaffray, Mr. De Forrest Grant, Mr. Travers, Mr. Van Buren, Pr. Knapp, the Messrs. Wagstaff, Mr. Charles McAlister, the Pbila-elphia champion wing shot, and Mr. Watson, who has twice been nd takt of matching hut notworks friends are much elated and alk of matching him against either Mr. McAlister, Mr. Drayton r Mr. Edgar Murply Jones. The winner's friends at from this very uccessful sojourn at Monaco. Mr. Lorillard's ifriends think he dri and.

LEOMINSTER, Mass., May 1.—Tbe Leominster Gun Club has been granized by the election of the following officers: President, I. F. crham; Vice-President, C. W. Burbank; Secretary, H. B. Andrews; reasurer, A. G. Powers; Directors—A. W. Woods, E. F. Blodgett id George L. Rice.

WORCESTER, Mass., May 1.—The series of prize shoots at the south End Range, under the auspices of the South End Gun Club, closed this were fix. There were five events, the first was Feb. 2. The events were fix. five glass balls; second, five Macomber targets; third, five blackbirds; fourth, three pairs of doubles, and fitb, dre clay-pigeons, with a possible total of 136. The successful competitiors with the prize and score are as follows: W. S. Davis, 126, prize \$20; E. T. Smith, 118, prize \$16; G. J. Jones, 112, prize \$12; Alba Hough-ton, 110, prize \$10; M. D. Gilmau and Corren. 105, prize divided, \$10; J. B. Tongos, 103, prize \$43; L. R. Hudsön, 100, prize \$7; W. R. Dean, 57, prize \$6; H. W. Webber, 96, prize \$5; M. O. Wbittier, 92, prize \$55; H. B. Franklin, \$2, prize half a kee of powder. The Executive Com-mittce of the club have announced for another series of these meets. The first to be May 11. The prizes, three iu numher, will be divided into three prizes and will include \$30 and the entrauce fee of \$2 re-quired of each shooter who competes. The events are seven glass balls, four Macomber targets, fire clay-pigeons, three pair doubles, thre blackbirds, six straightaway clay pigeons. WELLINGTON, Mass., May 1.—The weckly sboot at Wellington to daw was well attended. The winners of first prizes were: Six pigeons, Adams, Schaefer; 5 bite rock hirds, Stahora, Schaefer ard Sanborn; 6 blackbirds, Jones; 6 pigeons, Sanborn, 6 blackbirds, Stan-ton, Wilson and Schaefer; 5 bite rock hirds, Stahorn, Schaefer ard Sanborn; 6 blackbirds, Jones; 6 pigeons, Wilson; 5 blue rock hirds, Edwards; and Schaefer; 6 bats, Moore; 6 blackbirds, Micoy, Suber ock hirds, Edwards; and Schaefer; 6 bats, Moore; 6 blackbirds, Micoy, Subter ock hirds, Edwards; and Moore; 3 pair blackbirds, Stanborn; 6 pigeons wilson and Moore; 3 pair blackbirds, Stahorn; 6 pigeons, Wilson; 6 blackbirds, micoy, 6 pigeons, file, 5 blac cock hirds, Edwards; and Schaefer; 6 bats, Moore; 6 blackbirds, Micoy, Switt and Stanton; 6 bats, Adams.

Stanton; 6 bats, Adams. NEW ENGLAND CHAMPIONSHIP.—The challenge match for the Massachusetts State Glass Ball Association individual gold badge was shot on the grounds of the Massachusetts Rifle Association, at Wal-nut Hill; May 5. O. R. Dickey, of the Massachusetts Rifle Association, at was the bolder of the badge, and Messrs.W. L. Davis of the Worcester Club, John Buffum, of the Wellington Club, C. M. Stark and E. W. Law, of the Boston Gun Club, and W. H. Allen, of the Broctou Club, challenged him.

coallenged him. HARTFORD, Conn., April 30.—The Colt Hammerless Gun Cluh made the following scores at their sboot to-day, all shooting being done at 187ds: E C Howe.....10101111111111-13 J Melrose.....1010011100100-8 J Howe.....000101110111101-10 J Cook......0010110101101-8 A McMullen....100101110111101-10 W Johnson....010010111010000-5 M Cook010111100110101-9 Mr. E. C. Howe won the club medal.

JOIN THE NATIONAL GUN ASSOCIATION.—Send 10 cents, for handbook giving all information, to the Secretary MATT R. FREEMAN, General Manager. F. C. ETREPIDES, Secretary and Treasurer, Macon, Ga. Board of Directors: Dr. L. E. Russell, Springfield, O.; C. M. Stark, Winchester, Mass.; J. Von Lengerke, New York city; Washington A. Coster, Flatbush, L. I.; Wm. G. Cooper, Savannab, Ga.; E. A. A RACE OF FISHING SCHOONERS.

A RACE OF FISHINC SCHOONERS. Not content with fast yachts, Boston is now looking sharply after the speed of her fisbing fleet. As we bave noted two new ves-sels, expected to be very fast, are now building, and discussions over the merits of the various hoats have become so frequent that it was decided to settle be matter by a race between them. A purse of nearly \$100 was subscribed, partly by leading yachtsmen who felt agreat interest in the race, and Com. Forbes presented a handsome cup as an additional prize. Besides the ten fisbing schoeners that agreat interest in the race, and Com. Forbes presented a handsome cup as an additional prize. Besides the ten fisbing schoeners that agreat interest in the race, and Com. Forbes presented a handsome cup as an additional prize. Besides the ten fisbing schoeners that agreat interest in the race, and Com. Forbes presented a handsome cup as an additional prize. Besides the ten fisbing schoeners that agreat interest in the start ing line between the indge's The converse laid out was from the starting line between the indge's miles' thence north to Half Way rock (a stretch of 14 miles). And minutes were allowed each hoat to cross the line after the signal to start, any hoat falling to cross between the judge's boat and the huoy to be of liged to return and cross the same in order to start. There was no time allowance and the sails were limited to working rig, main-sail, foresail, main gafitopsail, stavsail, jib and flying jib, the Hesper only being allowed to carry a jibtopsail in addition. The entries were: The term and cross the same in order to start.

Hesper, D. J. Lawler. 100 Augusta E. Herrick, W. P. Herrick. 100 Mr. Geo. Goddard, E. Y. C., was the starter. The yachts were all keel except the Herrick, a centerboard hoat from Swar's Island, Me.. reputed to be very fast. The theet left Commercial Wharf about 10:30 and sailed out in company, the wind being southeast by east. in which quarter i held all day. After some scrub racing all arrived off Bos-ton Light, and Mr. Goddard, in the tug Elsie, gave the course and directions to all. At 12:50 P. M. the first whisle was hlown, and at 1 P. M. the second. The fishermen were not used to such work and made a bad figure at the start, two, the Wright and Neale, going to leeward of the starting line by mistake, thus being disqualified. The start was timed thus: Hesper. 10 17 Wm. Parnell O'Hara. 11 40 Garah H. Prior. 11 13 Wm. Emerson. 12 05 Sarah H. Prior. 11 20 Gertie S. Winsor. 12 05 Out to Davis Ledge was a beat to windward, the fleet crossing in the starboard tack. At the line Hesper and McManus had a struggle for the weather herd, and alter some close work Hesper gave way and the McManus weathered her. All sall was set on each boat, the Hesper carrying her big jibtopsail, and soon leading the fleet, with the McManus scond. At 2:33:42 Hesper turned Davis Ledge, while the McManus scientin later. The run to Half Way Rock was made with a quartering wind. Hesper counded the Rock at 4:33:42. Hesper turned basters in the Prior two miles astern. The full fines were: Davis Half-way Lorice Rock to Fisike Finisk Finaned

CRUISE OF THE COOT. XXI.

xxI. Wurder way and proceeded to pick a course through the narrow winding channel leading out of the lower entrance to Millord Haven. By so doing a return over old ground and some seven miles were saved. The Haven itself is broad with 10t of water, but nearing the lower end, the bottom shoals to 1 and 2ft., a narrow guiter like lead with 6 to 10t. Carrying you out to sea through a break in the beach. This is not staked nor defined and the charts are on too small a scale to be of much assistance. A boat drawing over 3ft. should take a local pilot. The Coot maugaed to shoot the entrance after stirring up the saud in some places. At low water the chart indicates only 3ft. ou the bar which would make it 4 to 4 Mt. On the flood. To me there seemed to be rather more water. Once across the bar the depth suddenly increases to 7, then to 10ft., which hence you must give the beach a good bert. Below the light house, which is of the screw pile kind, you can sheer it again in trying for a harbor. Horn Harbor can be entered with 4 to 5ft. and is the proper place to try for, unless willing to round New Point Comfort and asil to entire Most Ray Casis Kiney, where typering fore to any be asreed with Ray for Fast River, where typer is place to harbor. Horn Harbor kas or fast River, where typering for a de to ry for, unless willing to round New Point Comfort and asil

A third harden can be chosen with the other and is the proper to try for, unless willing to round New Point Comfort and sail lies up Mob Jack Bay for East River, where twenty feet can be d been told that Deep Creek, just round the Point could shelter oot, and so when the cold northerly wind failed, boxed about ilm and light alter from ahead all the afternoon seeking to get a doing so a strong flood set into Horn Harbor was encount-abliging a long board out into the Chesapeake. After several of tedious doldrums, the Ooot was coaxed up to New Point lines of tide rips

I. This fed to an investigation system of the castward be bar there was hardly 3ft. As oundings on the chart were twenty-six years ago, this bar ave formed since. It also exclude the westward of the cape, rout to the red can buoy, inch lift, should have been found ling to the chart. There were very shoal imps, over which not could just pass. In mak-fob Jack Bay, the can buoy i be hngged pretty close, and it the water quickly deepens a Coot went away with lifted for her proposed harbor, the ineady having sunk below the in the west.

aiready having sunk below the in the west. proaching the sandy cape the hook was kept going and soon the up 'in 3ft., 'whereupon the y was rounded up and anchored I pulled ahead in the skiff to for a channel. None could be i, a flat of hard sand with 2ft. of extending all along and barring ut into the attractive little cove. darkness upon me and no in-ion to sail five miles up into River and out again in themorn-determined once more to frust River and out again in the morn-lock tor the night and hold on there after close recfing the This was the third time the erate chance of escaping a lee of in a whiter gale was taken for the third time good luck (by the boat. There was a p of lote 25 miles for wind and according to the quarter from h it might come, and the situa-was not nuch relished. Later learnt that some of the creeks e large blight to the northward shelter any draft less than 5ft. his I mention with reservation, knowing how trustworthy the mation. Large boats generally for the Poquesin River in this aborhood, but without wind that and of the question and a harbor would have taken me out of my see. Daylight is necessary to o out the buoys marking the yw cut across York Spit, the ed across the Spit lower down yee, which will be in your course wo fut has been kept close

normality of the second didor and very cont i though very cont i the northward. A haze about sun and mist rising in the south-betokened a change before the was over. This might bring wind aca ahead and leave the Coot in is artis, as the nearest practicable bor would be in Hampton Roads and old Point Comfort, twenty-r miles away. It was needessary, werer, to clear out from the meagre tection afforded by New Point i take chances on slipping into take chances in slipping into the kriver as a last resort. The ange is readily made in moderate ange is readily made in moderate the shoal take chances on slipping is River as a last resort, rance is readly made in mode ther, but in an on shore wir ty sea tumbles up on the sh rounding the tortrous char should you miss the latte all boat like the Coot would self on an ugly ice shore with power of beating of. The neurons the wind weered int

will on an ugly lee shore without power of bieating off. The idea making Back Eliver was soon en up, as the wind veered into N, and came down in hard squalis, ning up a dangerous sea in which d not dare venture inshore. To ke the most way, whole sail was on and the boat went forming boiling on her southerly travels, ying lee waist and flying over the as New Foint's lotty white tower drouged in her wake. or a while everything went well, ugh the hardening of the blow b agale forced me to round up haul out second cringle while sea assumed a threatening as-t. To the southward it looked idedly dirty and had a harbor within reach, the Goot would re run for it might and main-re was no choice but to keep at after getting on to York Spit. The the fourtward it looked idedly dirty and had a harbor mit into towering, curling masses, ap and hollow, which piled after fittle Goot with a roar. To look k as the foam-creased billows we the skift from side to side, nost tossing her bodily aboard. In letting her drop out of sight o the succeeding hollows with a es enap on the doubled painter, senough to make one's head thrue, in low of the water such to make one's head the pithe boat off, let alone running d before the sea without jibling d wrecking the whole rig. At h high roller, the Goot would re whole rig, the whole rig. At re the sea whing the wine till the wine spite of helr the wind was the cost of being and the cost of beard. Barely was ramming the lighthon But the boat was was hel speed all the

rovisions were at a low ebb; so were the fina ment; concluded to eke out an existence on son folk next day where funds were in walting. T miscalculation, for i missed reaching Norfol vard evening the gale abated in short order n set in. This

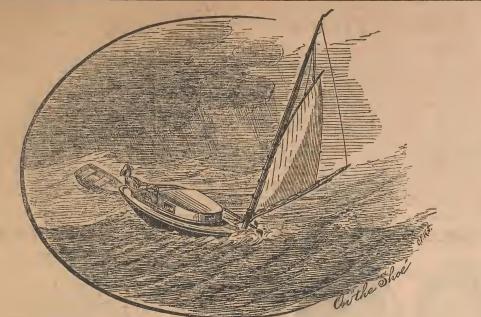

Notice there day whete reaching Norfolk by two roward evening the gale abated in short order and a my roalm set in. At midnight I awoke. The boat was pltching bows un must be a gale from the N.W. as nothing could raise suc turbance. Upon opening the cabin door, the sky was as ol-bell, a howing northwester was in full possession, the Co-lee shore at last, tailing a few lengths from a dock, and wors it was freezing at a great rate, the mercury being down twenties. At daybreak it was blowing a hurricane. Co-communicate with the shore owing to high sea and cold. ot remaining grub were apportioned into homeopathle dose three days the gale held on. The last day I was down to a m of lard, not a drop of oil for the stove and no tobacco. That night the blockade was raised. The wind fell, the ice into the bight and froze fast before morning. The Coot was rall-to, down by the fast and the spray flew aboard the inter solidified it in an instant. In this way layer was impose inaver, till the boat could no longer be distinguished. Sc chopped out first and an expedition undertaken to the shi old Point stores were procured and carried of. Then hatchet I set about entiting the Coot elear of here enumbrance. All was well tor the next tien days, while the ice held fast, itbroke up, the old batile against the drift had to be refoug senree any ress night and day. Lee out of the James river f down and only after four days 'Incessant labor, could I get I underway and sail into Hampton Creek for protection du remainder of the winter. Many vessels dragged ashore dur index and that the Coot with two little rope cables should I caped right alongside the big vessels is owe more marve ornise. She was fearfully cut and wounded in the encoun was about being carried out to sea, when a incky turn in the danger from drift ice ceased. YACHTING NOTES.—Deloin will be shipped for New '

danger from drift ice ceased. **YACHTING NOTES.**—Deloin will be shipped for New York on Monday next...Shona...Mr. Charles Sweet, owner of the Clara, was incorrectly mentioned as the owner of the 5 ton Shona. Mr. Sweet owns only the Clara and is in no way interested in the other oraft... Happy Thought, keel sloop, of New Haven, has been sold to Messrs. Yan Wart, of New York, and will be enrolled in the Knickerboeker Y. C.... Uncas, steam yacht, Mr. J. Buchanan Henry, has been sold to a Boston gentleman for \$1,400. AMERICAN Y. C.—The design for the International Challenge Cup has been decided upon, that offered by Tiffany & Co., being the me selected. It will be 6 for tho yachts of all nations. MAYFLOWER AND PURITAN.-Gen. Paine's yacht will be launched at 11,30 A. M to-day. Puritan has been cleaned of the blacklead and will be painted while again. Her bowsprit has been reduced lin. in diameter at the outer end. She will be fitted out at once.

To a faithful dog belonging to Mr. Schwartz, the proprietor of a jewelry store in Cherry street, Rahway, N. J., he, and his wife and two children, owe their lives in all probabil-ity. Between 4 and 5 A. M. yesterday Mr. Schwartz was awakened by the dog jumping on his bed and excitedly lick-ing his face. He was several minutes before he could realize the situation. Smoke filled every part of the bedroom. Half unconscious from its effects he hurriedly aroused his wife and then ran to the room adjoining, in which his two children were sleeping. He took them from their bed and with great diffi-culty groped his way down stairs and out of doors.

9:00 P. M. The presentation of prizes at headquarters.
9:00 P. M. The presentation of prizes at headquarters.
9:00 P. M. Venetian carnival. Each cancer is expected to bring Chinese laterns with which to decorate his cance, and Roman candles for the pyrotechnic display.
TUESDAY, July 20, and continuing week, general cruising and visiting to the neighboring islands, and general good time.
1. A member of the Executive Committee will be appointed dally, by the Commodore, to act as officer of the day.
2. The occupants of each tent are expected to put their tent and the surrounding space in order hy 9 A. M. each day.
3. No visitors will be allowed in camp before 10 A. M.
1. It is left to each cancer to see that the above rules are carried out. It is left to cance camp. Ballast Island, via Put-in Bay, Ohio.
Pents will be pitcbed to the liking of each hadridual or cub, under the supervision of the Superintendent of Camps. Invitations to the Cancer App will be pitcbed to the liking of each had heir immediate friends. The number of invitations will, of necessity, belimited, and it is septicially requested to the cancers and their immediate friends. The number of invitations will, of necessity, belimited, and it is especially requested to the cancers and heir immediate friends. The number of invitations will, of necessity, belimited, and it is especially requested to the level by those who do not desire to cook in eam.

Triends. The number of invitations will, of netessity, be limited, and the sepacially requested that all who expect to attend will procure that the textes from the Secretary on or before noon of the day of the ball.
Meals can be obtained at the hotel by those who do not desire to conclude the secretary on or before noon of the day of the ball.
Meals can be obtained at the hotel by those who do not desire to conclude the secretary. Camp supplies can be obtained at Puth-In-Bay at moderate prices. Cances will be carried free of cost on the steamers, provided owners are with them. Headquarters, Commodore's tent. Assembly Room, Ballast Island can be reached by daily boats from fue desire to impress upon you the importance of giving nour day of attention of the day owners are with them. Headquarters, Commodore's tent. Assembly Room, Ballast Island club dining room. Secretary's office at headquarters. The Committee desire to impress upon you the importance of giving nour day of attention. The officers for the ensuring year are: Commodore, Geo. W. Gardner, Cleveland, O.; Vice-Commodore, Geo. B. Ellard, Cincinnati, O.; Rear Commodore, Geo. W. Aunger, Chicago, III, 'Secretary and Treasurer, W. H. Eckman, Cleveland, O.; C. Brown, Chicinnati, O.; W. Heephan, Chicago, III, 'Secretary and Treasurer, W. H. Eckman, Cleveland, O.; C. Brown, Chicinnati, O.; W. Heephan, Chicago, III, 'W. H. Eckman, Cleveland, O.; C. Brown, Chicinnati, C. J. W. Heephan, Chicago, III, 'Secretary and Treasurer, W. H. Eckman, Cleveland, O.; C. Brown, Chicinnati, C. J. A. Woodruff, Chicago, III, Regatta Committee desire to the set is also no provision made the the similar classes of the A. C. A., which will disbar any cances shull be noticed that the paddling rules allow one foot more length in the bast and they are handleapped in the same class is a good idea, for the 2% in boats which promise again to become very popular in the bast and they are handleapped in the same class is a good idea, for the 2% in boats which promise again to

A BID FOR AN "ACCIDENT."

re certain that it is of subserverses Idling. not attempt to sail a canoe unless the model and rig have been

approved by a practical sailor, and even then do not go out alon until you have some knowledge of boat sailing, unless you are a goo swimmer and the water is such that no danger from tides or boat need he apprehended. It is generally possible to obtain a little coach ing from an old sailor; if not, take a very small sail in smooth wate and practice with it before trying a larger rig. Do not take a lady even for a paddle, ha very small or cranky cance, and do not attem to move about or to sail with a lady aboard unless under the condi-tions given above. These rules apply as fully to small row and sai boats as to cances, and an observance of them may prevent seriou consequences.

EXPENSES OF REGATTA COMMITTEE, 1885. THE following account of expenses is a copy of the one sent to the Secretary of the A. C. A., by the Regatta Committee of last year. By their request we publish it:

Albany, N. Y., April 19, 1886. *American Canoe Association:* To R. W. Gibson, Dr. FOR DIBURSEMENTS BY REGATA COMMITTEE IN CONNECTION WITH THE REGATA 1885. 1885 \$4 72 6 70 2 40 75 4 75 775 325 $\begin{array}{c} 12 & 00 \\ 14 & 00 \\ 1 & 00 \\ 1 & 85 \end{array}$ Total......\$65 92

building this craft. The kind hear of the ball, field single field is including the search to wand brought it into the jetties, thus saving the lives of four persons who would undoubledly have gone to Davy Jones's locker.—New Orleans City Item.
 A SUGGESTION REGARDING THE TROPHY.—Editor Forest and Stream. The "Several Pittsburgers" in your issue of April 16 do, 1 think, our English friends a grave discourtes yn imputing to nem a desire to hold as personal property our trophy any longer than their cancemanship can so retain it, our would they feel flattered that any member of the A. C. A. attribute their coming to a valuable prize offered at that time. No, they are our own invited guests, honoring us by their presence and honored by us in being permitted to compete for the A. C. A. cup, a trophy that should be heid for perpetual challenge, aud on which it is to be hoped each year a winner's name may be engraved, and to have his name thereon inscribed should be the alm of every A. C. A. sailor (I am a paddler); and here a thought suggests itself and is submitted: That the Executive Committee cause to be prepared an appropriate from which shall be engraved, and to have his name thereon inscribed should be the alm of every A. C. A. sailor (I am a paddler); and here a thought suggests itself and is submitted: That the Executive Committee cause to be greened to the winner of the A. C. A cup when he surrenders it to his more successful opponent. By this method each victor who has held our trophy, upon surrendering it receives undisplied achnowledgment of having done so, carrying with him for all time the full value of his victory to show to admiring and interested friends, and in years to come these badges, if forwarded hy their evenes to the meets, would add a feature thereto.—Yox.
 A SPRING MEET IN CAMADA.—No other feature of canoeing profises to become so generally popular as the local and spring meets, established two years since. Haif a dozen will be held in different localiti

dout, N. Y. THE A. C. A. TROPHY.—*Editor Forest and Stream*; I beg to acknowledge for the A. C. A. challenge cup as follows: Capt. Geo. A. Ruggles. \$1; Daniel Appleton, N. Y., \$; J. B. Ellsworth, Canton, N. Y., \$1; W. H. Allen, Pittsburgh, \$1; Ed. Jay Allen, Pittsburgh, \$1; Wm, R. Farrell, Jr., N. Y., \$1; R. W. Gibson, Albany, \$4 (this is an increase of original subscription to \$3:); total, \$10; previously acknowledged, \$149; grand total, \$150.—WM. WHITLOCK.

THE TRIAL RACES AT THE MEET. - Editor Forest and tream: In reading Mr. Whitlock's letter, I noticed that the Regata ommittee are thinking of having the trial races for the A. C. A tro-hy during the first week of the meet. If this were done, I think it ould be debarring quite a number who are not in positions where ery can take their holidays during August, and who find it very ifficult to get away even for one week of the meet, but who fand it very ifficult to get away even for one week of the meet, but who find it very ifficult to get away even for one week of the meet, but who fand it very ifficult to get away even for one week of the meet, but who fand it very ifficult to get away even for one week of the meet, but who fand it very ifficult to get away even for one week of the meet, but who always mong the principal races of the meet, hecause the trial for a place mong those doughty ten will be well worth seeing, I think the com-ittee should try to arrange the trial races for the race week, it will disturb the entire programme. If any wish to enter the ial races and cannot possibly he present hy Friday, perhaps some ecial arrangement can he made to suit them, hut it is not probable at many will be so situated.] BOSTON C. C. —The Boston C. C., of Boston, Mass., was organized me 30. 1885, and incorporated Dec. 31, 1885. The officers for 1896 et commodore, Arthur J. King, Yice-Commodore, Arthur H. For-tsh; Secretary and Treasurer, Charles H. Worcester; Assistant secretary, Glimer Charles River at Riverside, where they are building a club use and camp.

THE BRAY FLY BOOK.

298

It will be gratifying to anglers to know that there is at last a *perfect* Fly Book in the market one in which flies may be attached as quickly as they could be thrown into an ordinary envelope, being at the same time perfectly secure, and may be as readily detached. The snell, regardless of its length, is at all times kept straight (the advantage of which no angler need be told), and each fly stands out so that one can see in an instant his entire assortment and select the one he desires.

THE RAILROADS AND THE PARK.

THE Senate Committee on Territories has favorably reported the bill authorizing the granting of a right of way to a railway through the National Park to Cooke City. This favorable report is signed by four members of the committee, while a minority report, presented by Mr. Manderson, is signed by three.

The majority report consists mainly of the two favorable reports by committees of the Senate and House, which we have reviewed and shown each to be a tissue of misrepresentations. We remarked weeks ago, that these documents furnish abundant evidence that they were prepared by the same hand, and there seems to be little doubt that this hand be longed to General Armstrong, some time Railroad Commissioner, and now a mine owner of Cooke City. This individ-ual has shown remarkable energy in pushing forward this railroad scheme, and is credited with having tried to bully the friends of the Park into ceasing their opposition to his plans by saying to them, in language more forcible than elegant, "If we don't get our railroad, we'll bust the Park." It remains to be seen whether this magniloquent threat of "busting the Park" will so alarm Congress and the people of the United States that they will tamely submit to see their pleasure ground taken away from them, to see it cut up by railroads, to see it dotted with towns in which are machine shops, dwellings occupied by railroad hands and saloons, to see its forests and its prairies burned off, to see its game destroyed or driven out of the reservation, so that it may fall an easy prey to the hide hunters and meat butchers.

In this majority report the false statements as to the length of the line in the Park are repeated. General Anderson again refers to the difficulties of crossing the range between Clark's Fork and the head of Soda Butte Creek, as if there were a steep divide there, whereas it is perfectly well known that the divides are very slight and easily surmounted. General Anderson has never been over the country, but the members of the U. S. Geological Survey have, and the character of the divides can be ascertained from their reports or action of the involves can be ascertanted from their reports or from the men who made them. Major George O. Eaton, an interested mine owner, says in this report that all that the miners of Cooke want is a railroad, and that one from Bil-lings would suit them just as well as any other. Let the miners of Cooke possess their souls in patience. A road will

be built from Billings, the surveys are being made, and the money for building the road has all been promised. It is a road that does not pass through the Park

The friends of the Cinnabar & Clark's Fork Railroad scheme are evidently hard pushed for ammunition, for they introduce in their report a quotation from a petition signed by sixty-six citizens of Cinnabar, who ask for this railroad To any one who has been to Cinnabar, this is really grant. laughable. Cinnabar has only four or five houses in all. These are the railway station, a stable for Wakefield & Hoffman's horses, a saloon and one or two cabins. Probably there are not a dozen voters in the town, and every rancher, teamster, cowboy, brakeman, and probably woman and child, in the whole region must have put his or her name to the document to make up the "sixty-six citizens of Cinna bar.

The minority report is signed by men who have given themselves the trouble to look into the matter and to take the opinion of those intelligent and disinterested persons, who are best acquainted with the National Park and its re quirements. Against the railroad wc find men like Secretary Lamar, General P. H. Sheridan, Mr. Arnold Hague, Lieut, Dan C. Kingman and Mr. W. Hallett Phillips. Letters from these gentlemen giving incontrovertible reasons why the railroad should not be built through the Park, have been written in support of the minority report, and we print them this week. They should be carefully read by every one who is interested in the preservation of this wonderland.

Recent advices from a surveying party now engaged in an examination of the Clark's Fork route, give a very favorable report of the line along the cañon, the only place on the whole route where it has been pretended that there are any difficulties to be overcome. The practicability of the Clark's Fork route seems thus to be assured. The party, when we heard from it, had been only two days in the cañon, and had already surveyed a line where the grade, for a dis-tance of seven miles only, is 171.4 feet to the mile, with very light work, and there is every prospect that further investigation and the running of other lines will result in the discovery of a much more moderate grade. It is usual in runing new lines through a mountain country to look about for some time before the best and easiest line is found. Suppose, however, that no grade easier than 171 feet to the mile can be found, there is nothing very alarming in this. It is true that it is steeper than the maximum grade on the Northern Pacific main line, but it is 54 feet less than the maximum on the Denver & Rio Grande R. R., and 79 feet less than the temporary line over the Mullan Pass. It is not a heavy grade for a mountain road, and it is less important here, because all the heavy freight to be hauled from the mines will pass down the grade, while only empty cars or very light trains will go up the hill. There seems little doubt that a road from Billings will before long be an accomplished fact, and this being the case, it would be insane to permit a railroad to enter the Park.

The tremendously strong lobby which is working in favor of the Cinnabar & Clark's Fork R. R. has been a good deal of a puzzle to the people who have been watching it, and who are familiar with what it has accomplished.

We have good reason to believe that the strength of this movement, for some time so mysterious, lies in the fact that the Northern Pacific Railway Company is backing the project. We are informed, on authority which we cannot but trust, that this is the case, that this grant will be utilized by the Northern Pacific people to run a line into the Park, so as to secure considerable additional passenger traffic, that there is no intention of building the road to Cooke, but that it is merely the entering wedge to enable this company to gain a foothold for a railway in the Park. Once within the boundaries of the reservation, it is believed that it will be easy to get permission to build a little further in one direc-tion, and a little further in another direction, until the whole Park is gridironed with tracks, and its usefulness and its beauty destroyed forever.

Already this corporation has a strong hold on the National Park. Theirs is the only railway which runs to its borders. A powerful syndicate of its stockholders have obtained leases for hotel and other privileges within the Park. Yesterday the franchise and leases of the National Park Improvement Company were to have been sold at public auction in Evanston, the county seat of Uinta county, Wyoming Territory, and it was the reported intention of the Northern Pacific people to bid them in. These leases include the exclusive transportation privileges in the Park.

We do not at present care to express an opinion as to whether it is desirable to have the national pleasure ground so entirely in the power of a great corporation. But we in-sist that neither the Northern Pacific nor any other corporation shall push a railroad into the Park. Let them be content with what they have, and leave to the people their Park undisturbed by the scream of the locomotive and the rumble of the train. We have already resisted the attempts of monopolists to seize this pleasure ground, and there are more people interested in the Park and ready to fight for it now, than there were when we first took the matter up some years ago.

Congress cannot afford to turn over this Park to a corporation.

A PLEA FOR THE UNPROTECTED.

WHEN one goes out for a day's shooting he is a little apt, especially if young, thoughtless and too ardent, to shoot at many things that when alive harm no one, that when killed are of no worth to him but as proof of his skill with the gun; not even that. Why not spare them? The world is pleasanter for all of us the more happy wild life there is in it. Why kill for the mere sake of killing or the exhibition of one's knack of killing?

When one is duck shooting on inland waters, sitting alert in the bow of the skiff with his gun ready for the expected gaudy wood duck, or plump mallard, or loud quacking dusky duck, or swift-winged teal, to rise with a splashing flutter out of the wild rice, and there is a sudden beating of broad wings among the sedges with a startled guttural quack, and one's heart leaps to his throat and his gun to his shoul-der, and then—only an awkward bittern climbs the Septem ber breeze with a slow incline, there is a vengeful temptation to let drive at the disappointing good-for-nothing. But why not let the poor fellow go? If you dropped him back (as the poorest and most poking shot might) into the marsh to rot unprofitably there, disdained even by the mink, unattainable to the scavenger skunk, what good would it do you? If he disappointed you, you disturbed him in his medita-tions, or in the pursuit of a poor but honest living. Or perhaps a great heron too intent upon his fishing or frogging, or dozing in the fancied seclusion of his reedy bower, springs up within short range and goes lagging away on his broad vans. If you kill him you will take him home to show, for he is worth showing even then. But if you wish your friends to see him at his best, bring them to him and let them see how well he befits these sedgy levels—a goodly sight, whether he makes his lazy flight above them or stands a motionless sentinel in the oozy shallows. The marshes would be lonely without him, or if one desires the charm of loneliness, does not his silent presence add to it?

A kingfisher comes clattering along the channel. As he jerks his swift way over the sluggish water he may test your marksmanship, but as he hangs with rapid wing beats over a school of minnows as steadfast for a minute as a star forever, needing no skill to launch him to his final unrewarded plunge, why kill him! In such waters he takes no fish that you would, and he enlivens the scene more than almost On the uplands, where the meadow lark starts out of the grass with a sharp, defiant "zeet!" and speeds away on his steady game-like flight, remember before you stop it or try to, of how little account he is when brought to bag; and remember, too, how when the weary days of winter had passed, his cheery voice welcomed the coming spring, a little later than the robin's, a little earlier than the flicker's cackle; and what an enlivening dot of color his yellow breast made where he strutted in the duu bare meadows.

In some States the woodpeckers are unprotected, and are a mark for every gunner. Their galloping flight tempts the ambitious young shooter to try his skill, but they are among the best friends of the aboriculturist and the fruit grower, for though some of them steal cherries and peck early apples, and one species, perhaps, sucks the sap of trees, they are the only birds that search out and kill the insidious, destructive borer.

any other frequenter of it, never skulking and hiding, but with metallic, vociferous clatter, heralding his coming. Then his still mid-air poise, the same in calm or wind, and his unerring headlong plunge, that one never tires of watching nor ceases to wonder at.

When one wanders along a willowy stream with his gun, cautiously approaching every lily-padded pool and shadowed bend likely to harbor woodduck or teal, and finds neither, and his ears begin to ache for the sound of his gun-if a green heron flaps off a branch before him, he is sorely tempted to shoot the ungainly bird, but for what? If the

gun must be heard, let it speak to a stump or a tossed chip, either as difficult a target as he, and let the poor harmless little heron live. Uncouth as he is, he comes in well in the picture of such a watercourse, that has done with the worry of turning mills, left far behind with their noise and bustle on foaming rapids among the hills, and crawls now in lazy ease through wide intervales, under elms and water maples and thickets of willows.

In some States, too, the hare is unprotected by any law and it is the common custom to hunt it even so late as April, for the mere sake of killing, apparently, or perhaps the charm of the hound's music, which makes the butchery of Adirondack deer so delightful a sport to some, adds a zest to the slaughter of these innocents-though, be it said, there is no comparison in the marksmanship required. Alive, the northern hare is one of the most harmless of animals; dead, he is, in the opinion of most people, one of the most worth-less. So worthless that hunters frequently leave the result of all their day's "sport" in the woods where they were killed. Yet the hare is legitimate game, and should be hunted as such, and only in proper seasons, and not be ruthlessly exterminated. A woodland stroll is the pleasanter if one sees "Br'er Rabbit" there in his brown summer suit, or white as the snow about him in his winter furs.

Where there are no statute laws for the protection of game and harmless creatures not so classed, an unwritten law of common sense, common decency, and common humanity should rule sportsmen, and be powerful enough to protect al The fox is an outlaw; it is every one's legal right to kill him whenever and however he may, and yet wherever the fox is hunted with any semblance of fair play, whether in New England with gun and hound, or elsewhere with horse and hound, the man who traps a fox, or kills one unseasonably, or destroys a vixen and her cubs, bears a reputation but little better than a sheep stealer's.

A sentiment as popular and as potent ought to prevail to protect those that, though harmless, are as unshielded by legislative enactments as the fox, and much less guarded by natural laws and inborn cunning. The truest sportsman is the most merciful, and is never a wanton slayer.

WILD PIGEONS have been nesting in the woods of Forest and Warren Counties, Pa., this year, and the netters and gun-ners have been reaping an unexpected spring harvest. When the birds appear all the male inhabitants of the neighborhood leave their customary occupations, as farmers, bark-peelers, oil-scouts, wild-catters, and tavern loafers, and join in the work of capturing and marketing the game. The Pennsylvania law very plainly forbids the destruction of the pigeons on their nesting grounds, but no one pays any attention to the law, and the nesting birds have been killed by thousands and tens of thousands. Formerly the usual market demand has been augumented by a large demand for live birds to be shot, for purpose of game protection, by State game protective associations, but of recent years, the birds being un-attainable, the demand for them has ceased, and now the consumption of nesting pigeons is confined to the markets. Had some of our State societies been told of the Pennsylvania nesting, there is no reckoning the tremendous impetus that might have been given to game protection by another Concy Island spring pigeon killing tournament.

THE NEW YORK GAME PROTECTORS .- The bill before the New York Legislature creating the office of chief of the game protectors passed the Assembly last week almost unanimously. The bill in its present shape fixes the salary at \$1,200 per year with an allowance of \$600 for traveling ex-This accords more nearly with the views of Gen. penses. R. U. Sherman, secretary of the N. Y. Fish Commission, upon whose shoulders the burden of supervising the game protectors has fallen, and whose request to be relieved from this labor has been heeded. It is well understood that Mr. A. N. Cheney, of Glens Falls is pressed by his numerous friends for the position, and we do not know of a better man. We hope that the bill may become a law, and that the Governor may appoint Mr. Cheney.

"PISECO."-Capt. L. A. Beardslee, of the U. S. S. Pow hatan, has just returned to the Brooklyn Navy Yard after six months of West India service. Capt. Beardslee's last communication to the FOREST AND STREAM, it will be remembered, was a relation of the Powhatan's rescue of the maroons of Rongador. Soon after that Capt. Beardslee was engaged in the relief of the homeless citizens of Key West at the time of the great conflagratien; and the efficiency with which he performed the difficult task has won for him much praise from the press.

"PUBLIC OPINION" is a new Washington weekly which gives the collected opinions of the press of the country on current events and the questions of the day. The journal starts out well and promises to be a success. It is under the management of Mr. Jerome Burnett and associates.

THIRTY-Two PAGES .- Owing to the demand for space in our advertising columns this week, the present issue con-sists of thirty-two pages. The business-like character of the advertising pages of this journal affords a fair indication of the condition of the trade to-day.

THE REPORT ON THE PARK RAILROAD. VIEWS OF THE MINORITY.

M^R. MANDERSON, from the Committee on Territories, submitted the following views of the minority, to ac-

M. B. MANDERSON, from the Committee on Territories, submitted the following views of the minority, to ac-company S, 980: The undersigned beg leave to dissent from the views of the majority of the Committee on Territories, in reference to S, 980, granting the right of way to the Cinnabar and Clark's Fork Railroad Company. * * Instead of the distance through Ycllowstone Park traversed by this projected railroad being from ten to twenty-five miles, it will be seen, by reference to the letters hereto attached, from those having full knowledge of the facts, that the distance traversed is from forty to sixty miles, and that the probabilities are that the length of the projected railroad will be about fifty-six miles. The undersigned, believing that the construction of this road would be decidedly injurious to the purposes for which the Park was established, and that there are other routes over which a railroad can be constructed from points on the Northern Pacific road to the Clark's Fork mining district, report adversely to the bill, and urge that it be indefinitely postponed; and in suppost of this view call careful attention to leiters from the Hon. L. Q. C. Lamar, Scoretary of the la-terior; Lieutenant-General Sheridan, Major J. W. Powell, Director of Geological Survey; W. H. Phillips, Esq., special agent for investigating Yellowstone Park, of the Interior Department, Prof. Arnold Hague, of the Geolzical Survey; Lieut. Dan. C. Kingman, Corps of Engineers, United States Army, and others having knowledge of the facts. A careful reading of these letters from gentlemen who have personal knowledge of the facts will, we believe, quite conclusively show that it is extremely undesirable that a railroad, as pro-jected, should be permitted to be built. We first attach the letter of the Secretary of the Interior, and the accompanying documents, all of extreme value in the consideration of this bill: <u>Departmenty of the secretary of the Interior</u>, and the accompanying documents, all of extreme value in the consideration o

answer to your inquiry, transmitted through rtance of the mining district in question,

old be "right of way," plain and simple and so circumscribed as uard against peopling the Park in the interest of personal or corpor-gain of speculation; otherwise it will result at an early day in estabgain ay necessitäte automoto of territorna or such a contraction of territorna mahar and Clark's Fork Railroad titons in whose interest their hill ands and settlements in the reser-

are gain of speculation; other wise if will result at an early day in estim-lishing a condition of affairs that may necessitate abandonment of the original theory of a national park or such a contraction of territorial limits as will surrender to the " Clanahar and Clark's Fork Railroad Company," and the other corporations in whose interest their hill practically blazes the way, all the lands and settlements in the reser-vation configuous to their several lines. The demand for grants at depoks and sidings, of tracts 2,000 by 400 feet in extent, representing areas of 600,000 square feet, or more than B acres, in each instance, would, if conceded, enable the company to absorb and control every "oasis" of meadow land through which heir lines can be twisted or diverted; or, cutting these tracts in center, or diagonally, practically possess a larger number of acres than the grants comprehend, hy rendering the other portions of the ralleys useless because inaccessible to others. In fact, it is question-tible whether any of the valleys of the Park will he more than equal to the demand of a general right of way, 200 feet in width, and a right of way of switches of 400 feet in width. The grant sought would include, and may be intended to include and absorb, the best meadow and grazing lands in the Park referred to hy General Sheridan, Geologist Harue, and Special Agent Phillips, in the letters that ac-company this report. Very respectfully. Hou. Charles F. Manderson, United States Senate.

Yellowstone Park for about fifty miles, nearly the entire length of the road. It has heen stated that the mines are all situated on Soda Butte Creek, and to reach them a railway from the north or east would have to cross a high mountain range. This I consider an error. It should he understood that although Cooke City is situated on Soda Butte Creek, it is only a small settlement and inconveniently located for nearly all the recent miring developments of this district. All the more important of the recent developments are situated either on the opposite side of the watersned on the streams tributary to the Sillwater and Clark's Fork, or else within a few hundred feet of the summit of the range. With a railway a mining town would be equally as well situated on either the Stillwater or Clark's Fork. From all 1 can learn 1 am inclined to believe that the route following the valley of the Stillwater will prove practicable. I have not examined it per-sonally, but more accurate surveys have heen made of it than of the other lines. I am told that it is feasible to build the road to within fitteen miles of Cooke Clty. It should he borne in mine that all the newest mining locations are from three to six miles from Cooke Clty, high up in the mountains. The road would be about fifty-four miles in length. Stillwater, the junction of the hranen road with the Northern Pacific Railroad, is about 125 miles nearer Saint Paul than Cinnabar.

Northern Pacific Railroad, is about 125 miles nearer Saint Paul than Cinnabar. I have personally examined the Clark's Fork Valley for forty miles east of Ocote City, and I am of the opinion that if the mining interests femand a railway, a road could be huilt from the mines to Billugs, Mont., which would he far more serviceable than a road through the Park. There is on this route one very rugged place known as Clark Fork Canyon, a deep gorge six miles in length, hut I am told that if is quite possible to avoid it. The route, at least, seems so feasible that accurate surveys should be made before granting a right of way through the Park. I am well acquainted with the country through which the railway would have to pass in going from Cooke City to Cinnabar. My own work has compelled me to study the Third Canyon carefully, and I have no hesitation in saying that it would he a very costly matter to uild the road for 18 or 20 miles from Gardiner to the East Fork of the Yellowstone River. I has heen estimated by the friends of the Cinnabar & Cooke City Railway that this road could be built for \$1,000,000. It seems to me that if the output of the mines at Clark's Fork could stand such an expense, either of the other routes should be chosen. In my opinion there are many persons who are interested in obtain-

Fork could stand such an expense, either of the other routes should be chosen. In my opinion there are many persons who are interested in obtain-ing this right of way through the Park who desire to use the road for the purpose of transporting travelers who annually visit the Park in the summer. Having a right of way, and the only one granted by Congress. Hey anticipate receiving large revenes derived from tour-ists. Upon the completion of the road we should see glowing induce-ments held out to tourists of a railway ride through the Third Canyon of the Yellowstone and the charming valley of the East Fork. The granting of oue or two hundred feet on each side of the track would necessarily include Soda Butte Spring, the water of which is already much sought after hy many people, and the only one in the Park which has yet heen found to posses curative properties. In my opinion it would be a mistake to allow this spring to pass heyond Government control.

Park which has yet heen round to possess curative properties. In my opinion it would be a mistake to allow this spring to pass beyond Government control. I cannot but believe that the establishment of a railway in the Park would prove a permanent injury to the reservation, and tend to sub-vert the purposes for which the Park was originally set apart. The danger arising from forest files would be very great, and the large game would disappear, as it has every where cise, with the appear-ance of railways. With a railway in the Park fifty miles in length, with stations every seven miles, disagreements difficult to settle would immediately arise between a powerful railway corporation and the management of the Park. A railway means the settlement of large number of people living in the Park, over whom the Department would have but little control. It would require constables, justoes and courts, and finally the people wound ask for policical privileges. It should be the siun of the Department to permit as few people as possible to reside permanently in the Park other than those engaged in the accommo-dation of vistors. A railway in the Park is, in my opinion, the be-ginning of the end. The demand of others claiming equal rights would grow with years, and in tume the Park twould have to be thrown open to settlement. By preserving the Park intact for the next ten years it will take the action in here provide the county that the people would have to be thrown

d grow with years, and in time the rate would have to be databa-to settlement. preserving the Park intact for the next ten years it will take a firm hold upon the country that the people will never consent desceration for purely personal ends. It belongs to Mame and da quite as much as to Wyoming and Montana, but in time the r Territories will derive the greatest benefits. In this letter I inclose a communication from Lieut, D. C. King-in charge of the improvements, Yellowstone National Park, letter is addressed to the editor of FOREST AND STREAM, who y furnished me with a copy. A RNOLD HAGUE, Geologist. n. L. Q. C. Lamar, Secretary of Interior.

WASHINGTON, D. C., April 6, 1886, an Sin-Understanding that your opinion has been requested by enate Committee on Territories through a letter from Senator lerson, dated April 3, as to the effect of permitting the Clark's & Cinnabar Railroad to penetrate the Yellowstone National , with your kind permission, I will state in short why, in my ment, the enactment of such a law would inflict a serious blow to the opranic act organizing the D organizing the Park, it was set apart to constl National Park or reservation, for the henefit and

The one scance act organizing the Park, it was set apart to consil-tite forever a great National Park or reservation. For the hencit and enforment of the while people. As expressed in that act, it was to be kept in a state of nature, free from settlement, occupancy, or sale. The only erections to be allowed within its limits were to be such few houses as should be needed for the accommodation of the visiting public. Besides the expressed objects in the act, it is universally con-ceded that the two main objects attained in the dedication of this wonderful region were the preservation of the great forests within its limits and of the large game of the West, which had been almost exterminated everywhere except in the country proposed to be em-braced within the Park.

The objects contemplated by the act have in a great measure been trained. Not only from all portions of this country, but from all ortions of the world, the people have come to behold the wonders of attree contained in the Park and to seek scape from the trainmels f civilized life surrounding them at home. The main wonder and by to them has been to behold everything that was beautiful in the ark in a state of nature; that the fair picture contained no blot of work how?

Late Special Agent for Investigations in Yellowstone National Park, Hon. L. Q. C. Lamar, Secretary of the Interior. We do not attach the voluminous extracts from ForEST AND STREAN, and the maps referred to in the letter of the Secretary of the Interior, fearing that this report may be of too great length, but return them to the files of the Senate that they may be considered and given the weight that their importance demands. We also file ellippings from the *Spirit* of the Times and other newspapers, showing the view taken by an observing public of this projected railroad. Upon the proposition that there is an available railroad route from the Northern Pacific Railroad to the Clark's Fork mining district by way of the Stillwater River, we file with the Secretary of the Senate a map showing that route. This map was prepared by a civil engineer of the town of Billings, Mont., who made personal exploration of the route. From a late letter of the present efficient superintendent of the Park, we extract the following, showing the danger to the timber in the Park from the construction of railroads within its limits: its limits:

Its minutes: Another material point is the spread of fires from the locomotives. This country is so high and dry that it would he impossible to pre-vent the firing of the Park, and in less than three years' time there would scarcely he a green tree on the headwaters of the Yellowstone, to say nothing of the Park. Last fall extinguished sixty odd fires, resulting from the carelessness of campers, and the railroad would be an hundred times worse. To save the timber on the headwaters of the Yellowstone. Missouri and Columbia rivers should be of itself sufficient to prevent the granting of the right of way to any railroad company.

For the numerous reasons herein presented, we believe the bill under consideration should not pass. CHARLES F. MANDERSON. BENJ. HARRISON, GEO. GRAY.

A Hamburg newspaper gives the following account of a curious and exceptional incident which occurred in the collec-tion of a dealer in wild animals in that city. For some time past one of the largest elephants, brought over by some Cin-galese, had showed signs of furious delirium, and it was at length decided to kill the animal, which was valued at 12,000 fr. An Eeglishman had once offered to give 1,000 marks, if the occasion presented itself, for the privilege of shooting the en-raged beast. The sportsman was thereupon summoned by telegraph; but in the presence of the raging animal he became frightened, and gave up the intention of bringing it down with shot. Strangulation was then resolved upon as a means of despatch. Chains were passed around the neck of the ele-phant, which had been bound, and the two ends of the chains were drawn tightly by means of tackle. Ten minutes after-ward the colossal creature had ceased to live.

The Sportsman Tourist.

A WEEK ON MICHIGAN LAKE.

A WEEK ON MICHIGAN LAKE. PRETTY Lac Vieux Desert, the "old deserted planting ground," had been visited by Beecher and myself last year's season. We found it to be the source of the Wiscons, and also that of much pleasure and trouble. We camped independently—independent of several indispensibles, for instance. We carried heavy packs through swamps, between Twin Lakes and the railroad track. We had scandalous fights with mosquitoes. We had "boots that didn't fit," etc., but when after a few weeks our sore heels were henled, we concluded that we had had a jolly time of it and that this summer we would try again. So we did, and the writer yearns to relate about it, although nobody asked him to and nothing happened either. But to write something about nothing has been indulged in and tolerated before this. It was the morning of one of nature's perfect days in August that we three—Hector, Mr. B., and myself—boarded a train of the Milwaukee, Lake Shore & Western Railway, in order to gret to Marenisco, L. S., Mich., the station lying nearest to Presque Isle River and its source, the Presque Isle Lake, which latter was to be this trip's happy hunting ground. To the eye of the land-seeking immigrant the scenery along

ground.

To the eye of the land-seeking immigrant the scenery along this route may present a pleasing change of hardwood tim-ber (indicating fine farming soil) of numberless small streams, winding rivers and bubbling brooks, of prosperous farms, and extensive pine forests, but when after Antigo, the long, narrow aisle begins, within whose limits the train thunders along up to Ashland—the surrounding primeval woods, beautifully interspersed by lakelets glimmering through the emerald foliage of the fragile birch, the stately maple, or the slender pine, and then these erystal depths disappearing like a flaxh, scon to be replaced by others still more fascinating, most of them sleeping in undisturbed seelusion; the heart of the angler and pleasure-seeking sportsman bounds in antici-pation of luck, such as Izaak Walton would have longed to experience.

<text><text><text>

<text><text><text><text><text><text><text>

we measured, hammered, pounded—within an nour we were sheltered. Well, the exuitation. Even old Sol squinted from behind the clouds again. A hearty dinner dispelled the remainder of uneasiness. Then our sylvan residence was furnished in princely style. A floor was laid, the roof was improved, nails were driven whereon to hang pans, tin cups, pails, clothes pouches, guns; colosal amfuls of browse were hewn and drawn to canp. In short, nothing was left to wish for. We could afford it. The rest of the cloudless afternoon was spent in courting a huge fire. One piece of raiment after the other was impar-tially stripped off and dried. Were I afflicted with an irrev-erent, humorous vein, how should I now chucklingly nar-rate about Mr. B.'s singed pants or scorched rubber coat; but charity forbids and 1'll forbear. Toward evening several wall-eyed pike were hooked in the waveless, pine-encircled Scattering Rice. We had not often disentangled our line from the over-affectionate pond likes though, before we heard the dwarfish steamboat Eagle whistle behind us and visitors alighted in the neighborhood. Shortly after a skiff, containing two anglers, floated into the S. R. Interchanging the news of the day with them, fishing was recommenced. Birch-bark cances on different parts of the lake showed that these waters were also frequented by the noble redskin. One of thesesons of the forest I accosted. He went up the Deer Skin Creek that night to kill a deer. On White Eagle, not far from our abode, the steamer anchored, and its occupants, four ladies and two gentlemen, awakened the slumbering echoes of forest, hill and dale, with chatting, singing, shouting, screaming and yelling. The next morning, ere Phebus's golden chariot wheeled into sight, I feverishly pursued the causes of a tickling sen-sation, of which I had zealously but valuly struggled to rid myself since the stars had begun to fade. They relished me extremely, the frisky darlings. They and their scientific name escaped me, but an Indian once described them as "

"no-sec-'ems." They are hateful, detestable, voracious-but why portray them! I went hunting. Discovered a lonely, sinuous, undulat-ing road, from which I could occasionally, where the dense leafy screen permitted, gaze down the steep banks upon the river. Leaning on my trusty breechloader, the faithful dog at my side, the mists that hovered over the pebbly shores sluggishly departing, as the rising sun cast brightness and warmth over the world; the gentle morning wind breathing through the verdant curtains of the white birch; youder, part of Otter Lake's glassy surface shimmering across; afar off, the hoarse notes of the wary loon; around me solitude and serenity. This was the picture on that morning. It will forever form one of the pleasant reminescences of the Eagle Waters. I tried to sketch, but it could not be done; the no-see-'ems were too fiendish. I jumped to my feet and wandered on. wandered on.

When I arrived at home, Mr. B. returned from Deer Skin Creek with one fish. We put it under the planks, break-fasted hastily, and set out trolling. Doubling a certain point we came upon an Indian camp of six tepees. The

bucks sat and smoked, one of the squaws cleaned venison, some pappooses amused themselves with a dog, and on a scaffold was strained a deer skin. Here I actually caught an Indian washing himself. Further on we surprised some woodducks that dallied on a log perfecting their toilet. At our salnte they dropped a courtesy till below the water, and are probably still smiling at our impetuosity. Returning after noon with some pike, we were catertained by one of the campers from yesterday. When preparing dinner we looked for the bass. It had disappeared. My colleague suspected the spaniel, but, having educated that dog myself, I was certain that he wouldn't touch a fish unless it were "well donc." His innocence shortly afterward emerged from the pile of lumber in shape of a black mink. I rubbed the pilter-ing little bandit's skin with salt and delight, and he now adorns my school room in a glass case with tobacco in him, till the moths get him. That's Hector's curse. Toward eventide we were out on another piscatorial ex-cursion and lugged homeward three handsome pickerel. One of them I estimated at eight pound's to please Mr. B., who caught it. (Between the reader and myself, it was a six-pounder). After a delectable repast of tea, conn-cake and pickerel, reclining on the bed of leaves, yarns are ex-changed. This, after a while, ceases. You stare reflectively on the fantastic pictures, traced in grotsque designs on the pile of wood that the greedy element consumes, the eye fol-lows idly the weird shadows dancing on the sombre back-ground while bucks sat and smoked, one of the squaws cleaned venison,

ground while

"Viewless hands the æolian organ play,

"Viewless hands the colian organ play," the scintillating Orion leads to reveries of gas-lighted streets, peace and good will toward all rule the heart; the musing thoughts wander from the melodious lullaby of the waves, splashing against the boat and the stones at the landing, to the music and din of city life; before your mental

arises home. daybreak the chit of the red squirrels and the lance There arises home. At daybreak the chit of the red squirrels and the lances of the uo-see-'ems aroused me. The spaniel flushed partridges twice, while I sanutered along the forest-hidden path, but— they can fly fast, can't they?—but when a third time he treed three more, up to which he looked with great expecta-ing at the nervous excitement of his tail, I satisfied his wish and their curiosity with neatness and dispatch. Toward evening we started for Cranberry Lake. We had read so many glowing accounts of hunting the deer, where these beauties coyly step down to the pellucid shallows to bathe their lithe forms and to nibble of the water lillies, that we made up our minds to secure a look at them. Let nobody be shocked at the idea of a deer hunt out of season. There is no cause for alarm. What is virtue without temptation? We were not tempted. Those deer probably never read those accounts or else must have mi-sed us. When the pennyroyal and other preventives were used up we started for White Eagle and reached our hearth at 11 P. M. While at supper Hector occasioned a noise in the bushes and presently swept down the declivity chasing a muskrat of fenormous siz. As we could not fire during the scramble, for faer of hiting the dog, he had an ugly job of it. Before he was through with her he had quite a lacerated lip him-self. We finished our mead, which had turned cold, and son there reigned at the dying embers the silence of a well-merited repose. Tuesday, at sumrise, we noticed quite a number of fresh

merited repose

merited repose. Tuesday, at sunrise, we noticed quite a number of fresh deer tracks, beginning not thirty rods from camp and con-tinuing for miles along the road. With a rabbit and a raven-ous appetite we wended our way toward our hut. While resting at the wooded slope, with a grand view of White Eagle and Otter, there passed up the thoroughfare a birch back, the individuals in which did not perceive us. Two indian women paddled, while their lords sedulously prac-ticed dolce far niente, and, judging from their laughter, re-lated some good ones.

ticed dolee far intente, and, judging from their laughter, re-lated some good ones. Conformably to previous arrangement we were to leave to day. Our hotel was broken up, and the boards were re-turned. My blanket, care-worn and aged, was suspended to a tree. It has presumably been adopted by the Injuns, and this winter, perhaps, serves another term in the wigwam of the Chippewa. Sie transit gloria mundi, says the Latinist. The capricious White Eagle, the magnificent Otter, the curling expanse of Duck, the attractive Yellow Birch, they were all once more piowed by our keel, and Eagle River station was reached hale and hearty, just in time for the M L. S. that, on wings of steam, brought us back. 793-11.

Hatural Distory.

THE SPARROW HAWK.

IHE SPARROW HAWK. Editor Forest and Stream: I shall have to kill two birds with one stone; all the "scientific fellers" are about to get after me, I perceive. I have discussed the sparrow hawk as I observed him in Mary-land, Virginia and Louisiana, and I have found his habits to be the same in all those places. I have never seen any dif-ference in the numbers. observed at different seasons in either of those States to warrant the conclusion that there is a gen-eral migration of the species in the Atlantic coast States southward in winter. I suspect that I have spent as many days abroad in the field in pursuit of fish and game as any man of forty-seven

I this high of the spectra in the labeled in the southward in winter.
I suspect that I have spent as many days abroad in the field in pursuit of fish and game as any man of forty-seven years of age in these parts. Moreover, I did for years a very large medical practice in Piedmont, Virginia, which kept me in the saddle some part of every day in the year, many times all day, often carrying dog and gun for a shoot going and coming. In reply to Mr. Henshaw's doubt, therefore, as to the sparrow hawk wintering here long before the advent of the sparrow nuisance, I have to assure him of my personal knowledge of the fact, and while I pay due and respectful the two that he is wrong in supposing that the sparrow hawk has not always been a winter resident hereabouts. He asks what evidence I have of it, I reply, my own eyes.
I still adhere to my own opinion that the sparrow hawk feeds in the States named above largely, and well nigh exclusively on field mice. I have, in my personal experience, never scen in my lifetime ten small birds in uo specime of small birds, that the sparrow hawk is now and has been since I was a small boy, a common, and not a rare, winter resident here. I amo for joinion that the grast majority of sparrow hawks do not leave here for the South in winter, as Mr. Henshaw thinks, The sparrow hawk in the grasshopper cursed regions of the West may feed chiefly or almost exclusively

on grasshoppers in grasshopper season and when the snow falls may go to the South, but such beyond question is not the case here.

on grasshoppers in grasshopper season and when the snow falls may go to the South, but such beyond question is not the case here. I beg Mr. Henshaw to understand me correctly as to the utility of the destruction of grasshoppers. The point I make is that of the thousands of millions of them in a given locality, the few that sparrow hawks destroy neither amounts on can amount to a perceptible check upon them. To speak of the number of grasshoppers destroyed by a sparrow hawk as "simply incalculable," is to put it in a manner 'II do not understand," not being a "seientific teller" accustomed to the precise language of science. If the fishculturists can pail of water, an ornithologist ought to be able to "calculate" how many grasshoppers a sparrow hawk will hold and how often his contents change in twenty-four hours. There is no one fact in natural history more apparent to me than that the habits of species vary very widely in dif-ferent and even in neighboring localities, nor has sufficient importance been attached to this fact by professional scien-tists. Due attention to this fact would save us outside bar-barians the mortification of many an exhibit of ourselvcs. Let me say to Mr. Henry Litelificid West that upon his authority I accept the 18th day of March, 1883, as "a warm sunny day in January and February" when brown old grasshoppers" were abroad, if "Acridium diustaceum in a lively condition," be a 'brown old grasshopper," and this I call one grasshopper day between Dec. 1 and Jan. 1, when an "interprising" sparrow hawk may have had "brown old grasshoppers" for dessert. WASHINGTON, D. C.

THE DISTRIBUTION OF SPECIES.

BY DR. R. E. C. STEARNS.

[Read before the American Fisheries Society.]

IAR DISTANDULIENCE OF SPECIES. BY DR. R. F. C. STEARNS. [Read before the American Fisheries Society.] The geographical distribution of species is one of the most inviting fields which nature offers to the student. Once entered upon, every path is found to lead to new and attractive vistas, and to point the way to curious and inter-seting phenomena. At every step we receive delightful im-pressions, and from every side hints and suggestions as to nature's methods. Through the establishment of the United States Fish Com-mission and of Fish Commissions in many of the States, as well as by the organization of societies and various private enterprises, the propagation of food fishes has become an im-portant protective resource, and the economic aspect of ichthyology has been made familiar to a great number of per-sons. Incidentally, too, but to a smaller extent, the scien-tific side has attracted increased attention from a class of performs who would not have become interested in the bio-logical aspect if the latter had been presented to them first. With the selection of species for propagation and distribu-ton, there naturally followed the investigation as to the habits, habitat, etc., of each selected species; and one inquiry led to another, for in order to insure success from the busi-ness standpoint, it is necessary to pursue as closely as possi-ble the various steps, and follow the various methods and order that nature follows. So a knowledge of the character orgen general notice; the laws of the factors or physical character of the region in which it is proposed to make a plant and so on. In this way much special and ab-side the novinement, is made more clearly perceptible and more widely known. It will be seen by the foregoing that it to its environment, is made more clearly perceptible and more widely known. It will be seen by the foregoing that it propagating operations and enterprise, both from the section of species by natural methods, that is to say by the ha

intentional, accidental, or more properly incidental distribu-tion, and see what or where it leads to. The transplantation of animal and vegetable species from their native haunts to some other part of the earth, more or less distant from their indigenous habitat, as an incident of traffic or commercial intercourse and enterprise, has many peculiar and striking illustrations. We have a notable ex-ample in the geographical distribution of the common rat. With the extension of commercial intercourse and interna-tional trade, the brown rat or as it is often called the Norway rat, as a species, became more and more cosmopolitan. At the beginning of the last century this rat, an ative of India, made its appearance in Europe, having stolen a passage on the ships engaged in the India trade. If first appeared in England in 1730, and twenty years later it had reached France. In Europe it drove out the black rat which appeared in that continent during the middle ages; the black rat coming from no one knew where, having previously driven out the native mouse which was the only representative of the family known to the ancients. At the present time the brown rat is everywhere, prety much; on the main lands of the globe and the islands of all seas, wher-ever commerce sends its ships. So too with the cockroaches (*Blata orientalis*), a very cosmopolitan and very disagreeable form of insect life. These two familiar species are exceed-ingly active animals, and make their way on board of vessels or tide in packages of merchandise, and are thus carried on board of ships or cars, their inconspicuous size enabling them. Any seeds contain the grub, maggot or larva of insects forms. If the roots of the trees or plants are protected by a ball of the earth in which they grew, and the earth if pro-tected, by a cover of bagging, from erumUlling away and separating from the roots, a precaution which is usually auford a hiding place for small animals, such as insects (and larwe of insects), worms, slugs and other small forms. If tra

<text>

As proof of the previous non-occurrence of Mya arcnaria on the West coast; it may be well to state that the shore from Cape St. Lucas northerly has been explored by many

Competent naturalists at various times, extending back to nearly the beginning of the present century. Since the American occupation of California, commencing with 1849, several intelligent collectors have resided there, and others have visited the coast. It would have been impossible for so familiar a form, inhabiting, too, the easily accessible lit-toral zone, to have escaped detection; and corroborative of the above, we have the further evidence of the kitchen-mid-dens or shell heaps of the aborigines, many of which have been examined by me without detecting any sign of this easily recognized species. WASHINGTON, D. C.

THE BIRDS OF MICHIGAN. BY DR. MORRIS GIBBS.

(Continued from page 336, Vol. XXV.) Siurus nævius (Bodd.) Coucs. Small-billed water

58.

be. Subrus nærus (Bodd.) Coues. Small-billed water thrush. I have never found this species common in sections where I collected, but it is not rare during migrations in some quarters. Mr. Trombley, of Monroe county, writes me that the birds are abundant in that extreme southern portion of the State during migration, but assents that he has failed to find one by the most vigorous searching during the summer months. Unlike the large-billed thrush which is a very common species in all suitable localities, the small-bill is unevenly distributed and but little known by the average collector. Only a few ornithologists in our State have iden-tified this species and the next, and studied them separately, and therefore reliable information from some sections is wanting. The majority of the collectors of my acquaintance, when laboring under the delusion that only a single species is found with us, have continued to record the water thrush of their acquaintance as the small-bill. The large bill is not recorded. Sager, 1889, in his list of the birds of Michigan, which thrush.

instances have reached me in which the much more abund-ant large-bill is called the small-bill. The large bill is not recorded. Sager, 1839, in his list of the birds of Michigan, which was the first published and may be found in the Geological Survey of the State, records the small-bill and omits the large-bill. Hughes omits both species and thereby at least avoids possible error. Dr. Miles, in the Geological Report, 1860, em-braces this species and the next. Dr. Fox, who published a list, I believe about 1853, and whose original manuscript I have had the pleasure of scanning, embraces the small-bill and omits the other. Boles, in his list of Birds of Southern Michigan, 1875, embraces this bird and says, "summer resi-dent; breeds." His list is based entirely, I understand. on notes taken in our southern counties, and as he omits the large-bill, which is a very common summer resident in all of our southern counties, I judge that he has confounded the two species, for as yet there is not an authentic instance of the capture of a nest of this species in the State. Covert, in 1878, in the Birds of the Lower Peninsula says "rather com-mon; breeds." In 1881, in his list of the birds of Washtenaw county, he modifies his observations to. "Not a common summer resident; breeds," which would indicate that he did not find the species as common in that county as in other parts of the State. Many collectors have recorded the large-bill as the small-bill. One instance, which is certainly sur-prising, is worth mentioning as proof of an error which is often the result of incomplete analysis. It is, however, not strange that when only a single species is known it should be mistaken when identified by book alone, when we consider that many of the older writers were sorely puzzled by the water thrushes, and that Audubon finally, after often com-paring them, confounded these two of the *Siuri* and left them as but one species in his work. The case in question occurred a few scasons back, when a reliable observer offered me

the wrong species for a quarter of a century. Since then he has made every effort to find the small-bill, but to no pur-pose. The small-bill is a rather rare species and but little known. I first met with it May 13, 1875, in Kalamazoo county. Since that time it has never been taken in our county, although I found it not rare during the past May in Van Buren county, twelve miles west. On May 16, 1883, I first became ac-quainted with its song, which was a very agreeable surprise to me from its extreme dissimilarity to those of the other members of the genus. I do not think that Audubon or any of the observers who have confounded the two species would have fallen into so ridiculous an error if they had listened to the songs of the two water thrushes. The notes of the small-bill in no way resemble those of the large-bill, either in tone, continuance or accent, and once heard cannot be confounded with either of the others of the genus. The common song is a bright, animated chatter, and may be expressed by the notes *Otet, chet, chet, chet-er, chet-er-re-re-r.*. Starting in brisk and loud, it ends somewhat lower in a reg-ular chatter, which may be heard several hundred yards dis-tant, if the woods are not too noisy. I picked out my first one from its peculiar notes, among a forest full of jubilant singers, when I was quite two hundred yards away, and followed it through mite holes and over slippery logs for a long time before bringing it to the ground. Again the notes are *Chink, chink, chink, chero werra-chanker*, or again, *Kee-che-chow-chaveellelee* or *Pee-chow-checledee*. The birds while singing—in fact at all times, so far as my experience goes— are extremely shy, and I have found it difficult to secure specimens. As a rule, while singing they perch high up in trees, and I have taken them from the tops of tall leadless trees in spring. Occasionally observed on the ground or skipping about among the stumps, trunks of fallen trees and pools of surface water, similar to the large-bill, but usually they select

59. Siurus motacilla (Vieill.) Coues. — Large-billed water thrush,

thrush, Abundant during about four months of the year. Un-doubtedly our earliest arrival of the birds of this family, although the yellow-rump is generally credited with being first with us. The large-bill often arrives by April 12, and is frequently abundant by the 20th. The birds are musical

on their arrival or soon after, and by May 1 the woods in sections frequented by them are filled with their queer jing-ling melody. This is quite a well-distributed species, but is confined to certain sections from the nature of its habits. It is often unknown by amateur local collectors, whose field of trips are confined to uplands and high oak woods, while its may be very common in some swale within a radius of two miles of our collectors' grounds. It is not only not found on high and dry land during the regular season, but even during migrations it is unusual to take a specimen in elevated sec-tions. It, however, must traverse many parts of the country where there is no low land, rivers or ponds, and as an instance, I would mention the capture of a specimen in a store in the city during April, it undoubtedly having found its way there during its night travels. The large-bill is very much more abundant than the small-

store in the city during April, it undoubtedly having found its way there during its night travels. The large-bill is very much more abundant than the small-bill, and is found much more evenly distributed. It is em-braced by the lists of Dr. Miles, 1860, C. W. Gunn. B. F. Syke, A. B. Covert, Trombley, Dr. Atkins and others. Not given by Steere in his first list, but embraced in his second list, viz., 'Migration of Michigan Birds, 1880,'' Not given by Sager, 1839; Cabot, 'Birds of the Northern Peninsula,'' or Boies. Many have made a mistake regarding the identity of this species, and the last as above mentioned. The first arrivals appear some seasons by April 5, and by the 15th of the month they are usually quite common. I have seen the old birds carrying nesting material as early as May 12, but have never myself found a nest. Mr. Chapin tound a nest in Kalamazoo county near the river on May 24, containing one egg and one of the cowbird. Mr. Trombley, of Monroe county, says that the nests are well concealed and very difficult to find, and are usually near a pool of water or stream. One which he found May 13, 1879, contained four eggs slightly incubated, and two eggs of *Molothrus*. The nest was built into the side of a decayed log, a sort of roof being formed by a portion of the wood covering the nest, which effectually protected it from the weather as well as concealing it from view. It was composed of dead leaves which formed the base, next stems of weeds, black rootlets, shreds of moss and fibrous roots of plants composed the sides and rim. The lining was of coarse grass and fine stems of plants. It was five inches outside by three inches inside diameter, and three inches depth outside by one and three-quarters inside.

<text><text><text><text><text>

within the period of five years, 1874 to 1883 inclusive, em-bracing counties in four parts of the State, ranging quite one hundred miles in longitude and over fifty in latitude. They were first seen as early as May 17, and latest on the 28th of the month. Only one season, 1882, was omitted during their appearance with us, while since the last seen in 1883 two years have gone by without a record. The study of those birds which have increased from the encroachments of civilization on field and forest, offers a wide opportunity for observation, and the facts to be derived from a pursuit of this nature are extremely interesting. It may seem strange to many that more species have been added to our State through the advancement of civilization, than there have been removed from our midst by the many ways of lessening their numbers and thereby driving them away. Perhaps twenty species that were once abundant with us have been removed through hunting and other means of extermination. Many have been totally exterminated in our more populous portions, and this loss is irreparable in many ways as regards our game birds. However, I think I may safely say that where twenty have left us, at least twice as many—probably more—new species have appeared, which visit us as a result direct from our advancement in country improvements. improvements

visit us as a result direct from our advancement in country improvements. a. 61. Oporomis formosa (Wils.) Baird.—Kentucky warbler. This is an extremely rare bird either in Michigan or other States at this latitude, and a record of this nature is neces-sarily unexpected. In 1875, while actively engaged in col-lecting, I secured one day a large number of specimens, and, as the weather was extremely warm, I found it impossible to preserve them all. At the time I was busily engaged in my heated task of skinning, after a hard day's tramp, I was called away, and on my return found several specimens past recall, among them one of these birds, which I examined carefully but could not save. The specimen was poorly marked and I had no others of the species with which to compare it, and doubts often assailed me as to its identity. But after the beginning of my acquaintance with Dr. H. A. Atkins, that true lover of nature, lamented by all collectors in the State, I became convinced that my specimen was the Kentucky warbler, for I found that the species had been taken even north of my own field of labors. The Doctor wrote me that he had taken a male Jaly 24, 1877. At the time he shot it, it kept in the tops of the tamarack trees and receated its curious little notes, whit-ishee, whit ishee. The tops of the tamaracks seem rather against the record, as we might expect this species, like the other member of the genus and as with the yellow-throat and mourning, to confine itself to the underbrush, and this is what shook my confine ce in my own analysis; but with an authority like that of Dr. Atkins, I am now satisfied that the embracing of the Kentucky warbler in our list is proper.

BIRDS AND TREES.

* * * "to muse o'er flood and fell, To slowly trace the forest's shady scene, Where things that own not man's dominion dwell, And mortal foot hath ne'er, or rarely been."

O. W. R.

O. W. R. VORACITY OF THE BLACKENAKE.—Mifflintown, May 3.— Editor Forest and Stream: 1 not only vouch for the truth of the following statement, but can substantiate it by at least a dozen men who were eye witnesses of the fact. On last Fri-day, ex-Sheriff Shivery, who has men peeling bark on the ridge about two miles west of Mifflintown, discovered a large blacksnake on the side of a tree about fifteen feet from the ground, head downward, with the end of his tail in a hole in the side of the tree. He called his men to see the, to bim, singular sight. They eventually killed the snake, and as he was very thick, one of the party suggested that they see what was in it. On opening him, five young gray squirrels and two young flying squirrels were found in his stomach. The gray squirrels had only been swallowed a short time, and in all probability he had found them in the tree that he was on when discovered. This is no snake story, but a veritable fact.—J. E. H.

self on killing a nice lat turkey, in hadr a vispiral visuaggie and recovered sufficiently to fly across the slough and beyond my reach. There was no means of crossing, and I lost my turkey. The next morning, with our party reinforced by Mr. Har-ris and Mr. John Tanner, Jr., of Athens, Ala., we returned to the slough for the double purpose of making a drive for deer and of hunting the turkeys that had been flushed and scattered the evening before. Mr. Richardson was to make a wide circuit with the hounds and drive from below, while the rest of us were to be stationed between the river and the slough to intercept any deer that might be started. Just as we were approaching the place where we expected to make our stands, we discovered ahead of us about two hundred yards the flock of turkeys. Before they could run off in the cane, which was close by, Mr. Harris put his horse to a run and soon had the turkeys scattered in every direction. Sc-lecting our positions we remained quiet for a short time and then began to call for the scattered turkeys. Mr. Tanner

was a young man who had quite a brilliant record as a wing-shot on quail, but had no experience with turkeys or deer. Mr. Harris took him in charge for the purpose of giving him

was a young man who had quite a brilliant record as a wing-shot on quall, but had no experience with turkeys or deer. Mr. Harris took him in charge for the purpose of giving him a shot at a turkey. Boon after we began to call we were answered by turkeys in different directions. In a few minutes the loud report of a gun in the direction of Mr. Harris announced that a turkey had responded to his call. Several others were yelping in different directions and I was in momentary expectation of a shot. Just then we heard Mr. R with the hounds coming up the drive. He had started no deer and I was annoyed to think that he was coming up just in time to spoil our sport with the turkeys. As I was in the act of leaving my place of concealment, thinking my chances for a shot gone, I heard the patter of feet in the dry leaves rapidly approaching. I supposed it was one of the hounds, as they were very near, but just then a black and glossy hen turkey ran out of the switch cane not thirty yards away, coming straight toward me. In a moment it was fluttering in its death struggles on the ground. Before I had time to more a fine young gobbler, flushed by the approaching hounds, came flying by and fell to my second barrel. Mr. Harris and Mr. Tanner then came up with a fine young gobbler, called up by Mr. H. and killed by Mr. T. While to others were resting and eating their lunch, I strolled down into the drive, and in walking an almost perpendicular flight for a few feet, it suddenly ceased its struggles in the air and fell back dead, striking the earth with a heavy thad. There were no ducks in the slough that day and we turned our attention to the squirrels, of which we made a good bag. Early the next morning we were off to the barrens for a der drive. Stationing Mr. Tanner at the best stand, and mysolf at a stand close by, Mr. Harris and Mr. Richardson went into the drive with the dogs. The drive was a short one, and hardly had we hitched our horses and taken our places before we heard the hounds on the trail of a deer. Mr. T. a

brush, and every nerve is the sew ith expectation. Just before they come in sight they turn toward the other stand, and I listen to hear Mr. Tanner's gun sound the death knell of the buck. They have crossed the road and no sound of gun. With astonishment I walk over to his stand and ask him why he did not shoot. Imagine my surprise when he told me he had seen no deer; that the deer had walked out of the drive before we got to the stand, and showed me the track of a small deer that had evidently walked across the road the night before. I told him I had hunted deer a good deal and never heard hounds run a trail that way before. Thinking the deer might return, I went back to my stand just as Mr. Harris rode out of the drive. He was greatly disappointed that we had not killed the deer. I told him what Mr. Th ad sald about the deer walking out before we got there and showing me the walking track. He was too old a hunter to be put off that way, and told me to go back and I would find another track, that those dogs were not running any walking deer. I returned and asked Mr. T. to show me where the dogs crossed the road. He pointed to their tracks, and there in the road, not twenty feet from the tree where we told him to stand, were the tracks where the great, spreading hoofs of an enormous old buck had buried themselves deep in the ground in his headlong flight before the holty following pack. The mystery was explained. Mr. T. had never before seen the branching autlers of an old wild buck coming straight toward him in the woods, and, as he afterward ad-mitted, he "went a piece up the road" about that time. We had no little fun at his expense that light, and promised him that the next morning Mr. Tanner and I exchanged stands and both were fortunate. He killed a small yearling deer and I a very large and fat doe. The third day of the deer driving a joint hunt was ar-ringed between our purty and a number of gentlemen from Athens, Ala, headed by the noble old veteran of the chase, the Konw Knose no eigovment likk th

It was not a flattering prospect. It was a cold, bleak day, and the sun was struggling to shine through the hazy atmos-phere. Wrapping my overcoat about me, I sat down in the leaves on the sunny side of a tree and tried to keep warm. I had been there perhaps an hour, scanning the woods from time to time lest some straggling deer might approach unscen

NASHVILLE, Tenn. DIFFERENT WAYS OF CAMPING. DENVER, Col., April 28, 1886.

Editor Forest and Stream:

Editor Forest and Stream: I have several times thought of coming to the support of "Nessmuk" in his discussion of the camping outfit question. But I do not know that he needs any help. He has so far decidedly the best of it. It is all very nice to go "roughing it" in a palace car or a fifty ton yacht, but "Nessmuk" and I can't go that way, and thousands of others are in the same unfortunate fix. And yet I fancy we can get more real solid enjoyment out of our way of doing it than is realized by our fine haired friends in their buffet coaches and mahogany adoins. They might not enjoy our way so intensely as we do, and therefore we cheerfully concede them the right to carry along a four-post French bedstead and a full service of silverware if they want to. There is a good deal in the spirit and more in the experience to enable the camper to enjoy life.

silverware if they want to. There is a good deal in the spirit and more in the experience to enable the camper to enjoy life. My camping has been more or less for thirty-five years, and reached from Florida to Puget Sound. Some years it has not covered much time, in others it has been most of the year. In it all I have never driven crotched stakes in the ground and built a bedstead thereon, and I have always been firmly of opinion that the fellow who did it was a con-summate fool. Nor will I sleep in a wagon if there is ground under it upon which to spread my blankets. When out doors always sleep on the earth for comfort. Make your bed there as comfortable as time and circumstances will per-mit. If the ground is cold, or wet, or covered with snow, you must provide some kind of a foundation. It may be of hay, straw, weeds, brush, corn stalks or fence rails, but in any event stick to the ground. Don't roost on a perch like a chicken and get every breath of air that blows and chills you from every side. Balsam fir boughs make the best bed of all beds; the tips broken off short and laid shingle fashion, bottom side up from head to foot. All the firs, hemlock, juniper, cedar and pine, may be substituted in the order named as to choice. Cherry, willow, alder or any such shrubs follow next. If the ground is smooth and dry, and it can generally be so found in this western country, it is plenty good enough. Under any circumstances, when camp-ing try to so provide yourself as to sleep warm, and the nearer you get to the ground the easier that is accomplished. With a comfortable might's sleep you can endure almost any that, I was examining the ground for my bed when I found a very small rattlesnake—a young one. That was the only snake adventure I ever had in or about my sleeping place, and I never knew anybody else to have a similar ex-perience.

I found a very small rattlesnake—a young one. That was the only snake adventure I ever had in or about my sleeping place, and I never knew anybody else to have a similar ex-perience. About shelter; a square of canvas sufficient for a "dog tent" is good enough for anybody, though not as handy as a wall tent or a Sibley. Thave lived all summer with nothing better, and other summers with nothing at all. He is a poor quickly provide himself with shelter from rain or snow. It may be of palmetto leaves, of branches of trees, or of bark be found under a projecting ledge or in a shallow cave. A good thing always to carry along is a rubber poncho for each person. It is good to roll around the bedding when en route to protect it from wet and dir; or to put over one's shoulders myhen traveling in rain or wet snow. When night comes, if the ground is wet and the heavens dry, spread it under your bed. If the reverse, reverse it. With two small stakes at poncho, the other two corners being stretched backward and held to the ground by a couple of stones or chunks of wood, a very good shelter is provided for your heads and shoulders. Then another poncho spread over the blankets to your feet, and you two can sleep blissfully through any ordinary rainy might. Use only woolen blankets for camp bedding. Let Arctic explorers have the fur bags and feather ticks. In camp outfit, be governed by your ability to carry it. I have before the fire, but a cup is positively needed for the coffee. Under such circumstances the addition of a frying pan enables positive luxury. In it you fry your meat, bake your bread and can make your coffee. The tin cup is

then superfluous. After the necessities add anything you want and can carry. In provisions, bread, meat and coffee are important though not indispensable. It is more com-fortable to have them, and unless you are a first-rate rustler it is quite essential that you have plenty of something. After a few weeks the more you have of it the better you will be satisfied, and yet it is quite possible to live off the natural resources of the country for a considerable length of time. Indians do it. Indians do it

Indians do it. Again, I have gone camping with wagon trains loaded with luxuries—wall tents, spring mattrasses, arm chairs, cup-boards, four story South African broilers, and china table service, and we had dinners of eleven courses after dark every day—after starving to death all day—and had a high old time generally. This way did seem more comfortable, and stylish, and all that at the time, but the other was decidedly the more satisfactory—after it was over. You have something then to look back to—a kind of triumph over difficulties and hardships overcome, so to speak. Hence "Nessmuk's" great satisfaction, and also that of W. N. B.

IN THE OLDEN TIME.

IN CESSMUK s" great satisfaction, and also that of W. N. B.
IN THE OLDEN TIME.
Editor Forest and Stream:
Tour communication from "Nimrod," of Batavia, Ill., about "Spring Shooting," stirs me to add a word in support of his proposition. Spring shooting is an outrage in every sense, and the worst folly for all who care for the future. To day I was vexed at the appearance on the bill of fare at my favorite restaurant of plover and curlew, and I would not think of ordering either of them were they the most contsome morsels between Boston and Fox Rive:
Twis metaphorically to shake hands with "Nimrod," and to condole with him over the disappearance from his waters of the great flights of fowl, which in the days of my boyhood made the river between Batavia Bridge and Snyder's Dam as fine a reach of water for a day's sport as one could wish for. I wonder if "Nimrod" knew the river then. If was before the timber was cut from the backs and the islands below the mouth of Mill Creek, and before the railroads and exavations of the quarymen had made their havoc.
Would not dare to tell from memory the bags of game made in those days by Mr. Morris, and Tom Meredith, and the Belden boys, and other famous shots; nor even what backloads of greenheads and teal fell to the awkward aim of one schoolboy, whenever he could secure a "Saturday down river."
It was in the days when ducks were sometimes shot flying flow or re Batavia Bridge, when prairie chickens not infrequently alighted on the roofs of the village houses, and when great whirling flocks of the rould be seen in autumn from the doorstep of the school house, and when down river and my river and wolves still occasionally proved on the prairie, would go roaring over, startling us with the hurtle of the rive, would go roaring over, startling us with the hurtle of the rive, would go roaring over, startling us with the hurtle of the rive, would go roaring over, startling

MY FIRST TRIP TO MAINE WOODS.

Bosrox, Mass., May 1. MY FIRST TRIP TO MAINE WOODS. A UGUST 20, 1853, with a relative, whom I will designate as L., Larrived at the Franklin, now American House, Bangor, en route to Moosehead Lake. Here we met Johnny M., who was to be our guide. We tarried over one night and started next morning by wagon, in company with two more wagonloads of red-shirted lumbermen, who were on the way to the upper waters of the west branch of the Penobscot thus early to 'open up' for the ensuing winter's operations. A jolly, roystering crowd they were, shouting, singing, and dancing juba on the wagon floor continuously. We dired at Oxford, if I recollect aright. Soon after feaving the town, and where the road lies at the base of a worded hill, we met several men with guns, who informed ing the hill. Soon after thereport of several guns announced the hotel or its surroundings is remembered. One thing I cheidately next that of Bayard Taylor, one whom I had learned to love for his charming essays and foreign letters. I in-quired for him, and learned with regret hehad just departed. We stayed the following night at the Lake House, Green-ville, and next morning went on board the little steamer Moosehead for passage up the lake. We made a brief stop at the Himes House and warmed ourselves at its large, open for backwoods brica-abrac that pleased our youthful fancy. Most the middle of the afternoon we landed at the foot of the long narrow pier at the Northeast carry. Our duffle way and was-hauled over to the landing on the river by a single ox. Our party kept to the rear. On reaching the stunct growth of timber, but a short distance from the pier, we came upon a large flock of grouse feeding upon the low-rowing raspberries, who paid not the least attention or seemed in the least fraid. This was a revelation. We had often heard of, but never seen the like. L. and I immediately forming raspberries, who paid not the log camp, be min-ter, But the sport soon failed. Gathering up the twenty of birds

At that time one camp was used for sleeping berths, one on each side extending the whole length, with a tall "ram-down" stove in the center of the camp and a deacon seat on each side. Soon after supper the stove cover was used as a frying pan and the catch of trout was cooked and eaten before bed time. The lumbermen were up and away before daylight. Our party enjoyed the novelty of a browse bed,

<text><text><text><text>

as hoppers" in the immediate vicinity of Bangor, but none were found in the vicinity of Moosehead Lake, so I was in-formed, nor were there many caribon. I forgot to state that on the boat, returning down the lake, was a hunter-farmer from 'Suncock, having quite a large bundle of moose hides, a calf moose which he shot that morning in the river just below the "carry" and a magnifi-cent set of antlers which he sold at Greenville for the then munificent price of five dollars. About ten years ago, while camping on the Moluncus, I met Sam Smith, of Veazie, a veteran hunter and lumberman. We swapped yarns, as hunters will, and I related, among other things, my trip as here given, dwelling, at length, on the great number of moose I found. I was some in doubt how he would receive it, but was relieved when he replied, saying, "O, lordy! that's true enough. Why," said he, "I was booming logs that very fall at the head of 'Suncook, and one day in September, when moose were 'traveling up,' I counted fifty-two, and wasn't looking for moose entither." Sam, too, dear fellow, has gone to his rest to the deep regret of many, and none who knew him will doubt the truth of his statement. And what of that noble game? Alas! too, going, going, and soon will be gone. CAMP REYNOLDS, N. B., May 1, 1886.

NORTH CAROLINA DOINGS.

DOT NOT CAROLINA DOINCS. Term and the set of the part season's shooting and outings crowd on the the season's shooting and outings crowd on the season's shooting the and writing them away. The season's shooting has not been much for me to the part season's shooting the shots, though I have to the point of being self-protecting; and this knowledge, of which it avails itself by remaining in thick cover during the best of the open season, when more guns are in the field that any other time (that is during December and January), together with our game laws, which are beginning to have been ended and the best of the open season, when more guns are in the field which it avails itself by remaining in thick cover during the best of the open season, when more guns are in the field have to find the open season, when more guns are in the field have been ended and be book themselves to the depths of the shooting the months of October and November, and some find which at any other time (bat is during December and January), together with our game laws, which are beginning to have been season, when more guns are in the field have yers to come. The birds were seemingly abundant of the field and betook themselves to the depths of the booting the field and betook themselves to the depths of the booting the shoting. Most of our local shots therefore retired from the field, and very few birds were killed. In the months of Cotober and November, and some find works of February and March I only made a fow excursion the field, and very few birds were killed. In the months of the birds, my game bag was but poorly filled; so, with one the birds, my game bag was but poorly filled; so, with one of the birds, my game bag was but poorly filled; so, with one of the birds, my game bag was but poorly filled; so, with one of the birds, my game bag was but poorly filled; so, with one of the birds, my game bag was but poorly filled; so, with one of the birds, my game bag was but poorly filled; so, with one of the birds, my game bag was but poorl

companions. I made a visit across the Albemarle Sound to East Lake for the purpose of deer hunting, with Bill Bass-night, the great bear hunter. We bagged only two deer, but had lots of fun fishing, camping out, etc. It was then too early for bear shooting, so we didn't see Bill in his favorite role. One of our party gave him two fine hounds and I gave him a pup, and in a letter from him some time in December be says he has killed twelve deer and fourteen bears with them already, and begs us to come again. Which pleasure we will probably avail ourselves of the coming summer. During the months of October and November we had some good bear hunting near this place, and killed ten very fine specimens of our common hog bear. But the outing over which I lost most sleep, thinking and planning. was a trip to Currituck Sound for the double purpose of shooting reese, ducks and swan, and coing over to the banks near Kitty Hawk on a deer hunt. Two comeenial spirits from Washington, D. C., met me at the hospitable before retiring that night our plans were laid for the morrow's sport. Thad taken my favorites, Monroe and Crowder, and dong, and it was agreed that, as the wind was quite high forces with Captain Barrett, of Powell's Point, and going forces with Captain Barrett, of Powell's Point, and going forces to Mrs. Gallop's on a two-days' deer hunt, not forgeting to take along old Uncle Jim, an old colored man, who knew every foot of the ground over which we were to bunt, and where lay, to quote Wimsalt, the "big buck of Currituck."

The next morning opened dark and lowering, with a threat, and looking cloud rising and fixing from the southwest, and looking cloud rising and fixing from the southwest, and oceasional mutterings of thunder. However, our plans the fixed from the southwest, and some and the source our plans the fixed from the southwest, and some the capt the area of the source o

left disgusted and took boat for the house. The next day was but a repetition of the first. Never saw so many deer in onc piece of woods, but got none at all. On this last day we concluded to quit about noon, and had started out blowing our horus for the return of the dogs that had gone off after deer, when chancing to look over his shoulder Wimsatt saw a fine deer standing on top of a high kuoll about fifty yards away, and turning quickly he fired. But the deer was too quick for him, and he didn't see her again. He called to me, then on the edge of a swamp, to "look out," but I could see nothing of her until she sprang

in the bushes, when I sent a .38 bullet after her, but guess it was a clean miss as I saw no blood sigus. We were now thoroughly disgusted and concluded to return to Forbes's and have some duck shooting; so returning to the house we found dinner awaiting us, and while the others prepared to pack up, eat dinner and get the boat ready, I struck for the sound, a quarter of a mile away, to try my hand on a swan with my .38 riflc. I soon reached the fringe of bushes grow-ing near the water, and peering through saw several fine swans floating lazily on the water and cackling to each other. Raising my rifle hastily I overshot my mark, and the swans immediately took wing, but having a repeater I kept firing until I cut out two fine ones, the last one being fully a half mile out when shot-accidental shot, perhaps. A couple of boys rowed out and got my swan, and I returned to the house feeling that I wasn't "skunked" after all. After dinner we set sail, bade our hostess adieu, and returned to Mr. Forbes that night. Mr. Wimsatt was completely dis-gusted by this time, so took steamer for home that night. Capt. Gregg and I remained, thinking to try our hand on geese the following day, as Mr. Forbes had some excellent trained decoys; but "man proposes," etc. The following day was so inclement that the professional shooters could not go out, and thus our shooting was not to be thought of. The next day was Sunday, and we sat indoors and listened to the patter, patter of the rain until 12 o'clock at night, when we took the steamer for home, Capt. Gregg leaving me at Elizabeth City, where he took the on thern bound train. We have planned for another excursion next fall and hope to do better, "Wells" had my fullest sympathy in his article on "A Wild Goose Chase." I 'had been thar." A. F. R. BELVIDERE, N. C., April 20.

How To LOAD.—New York, May 6.—In reply to "C. C. G.'s" inquiry in your issue of to-day, I would say decidedly that in most guns he will get better pattern, penetration, and less recoil from two pink-edge wads on powder than from one three-eighths felt wad. This applies to black powders. The reverse is the case with wood powder, provided there is a hard card wad first put in on the powder. This should be done in any case to prevent grease coming in contact with the powder.—BEDFORD.

LONG ISLAND QUAIL.—Quail have wintered well in the neigborhood of Southampton, Suffolk county, L. I., and those in charge of preserves were only obliged to feed twice during the winter.

Sea and Biver Hishing.

HOW TO CAST A FLY.

Dear Uncle: Are you coming up here this summer to fish, because if you are not I wish you would tell me how to throw them fites with which you caught the big trout on the Little Dia-mond. You promised to show me when you came again, but mamma says you are going to Paris this summer and, will not come here. So if you will only write me all about it I will try and learn myself. Your affectionate nephew, WALTER.

Colebrook, N. H., March 1, 1885.

COLEBROOK, N. H., March 1, 1885. My Dear Walter: I am delighted to note that the angling spirit still holds a place in your heart, for there is no recreation that will afford you more innocent pleasure. It will fill your cheeks with nature's signboard of health, make a good man of you and bring you nearer to your Creator. Obey your mamma, Wal-ter, and go a fishing and your mauhood will be healthy, happy and honorable. With the instinct of an angler in your bosom you have only to turn about to gratify your de-sire. A few miles eastward from your house nealle the beau-tiful Rangeley Lakes, from whose waters the largest brook trout known have been taken. Rising in the Notch and tum-bling over a hundred cascades until it broadens into a charm-ing little river that passes at your very door, you have the Mohawk of the north. It is a glorious stream from which vast numbers of trout have been lured. This river shall be your school room in which to learn fly-casting, and the box I send you to-day contains your implements of warfare. On opening it you will find a bamboo rod ten feet long, weigh-ing nearly seven ounces, a No. 1 click and drag reel, a line of silk, made waterproof by euamelling, leaders and a vari-ety of flies. Each is the best of its kind, and with ordinary care will serve you many years. Take good care of them, my lad, for they are worthy of your every attention and affec-tion. When the weather is pleasant and there is no wind, walk

care will serve you many years. Take good care of them, my lad, for they are worthy of your every attention and affec-tion. When the weather is pleasant and there is no wind, walk up the Notch road to Wellman's farm, where the bridge crosses the Mohawk. A short distance above the bridge, in the center of the river, there is a broad rock with a flat sur-face. Wade out to it and rig your tackle. Of course your leader has been scaled in water over night and straightens at once. Loop a fly on the end, which we will call the "tail" fly, and fasten another fly to the leader two feet from the "tail" fly, This we will call the "dropper." Reel out fifteen feet of line and let the swift current float it down stream. When its full length has gone down, raise the tip of your of slowly until the "dropper" just clears the water. There, the whole secret of fly-casting lies in casting your flies so they alight on the water in this position, and but little more line will ever be required to do effective work. You have doubtless read of casting flies eighty or ninety feet, but these long casts are merely for display, and are never used in flsh-ing. If a fish rose at a fly at this distance he would rarely be hocked, and if he were hooked it would be a still more remarkable accident. When the the flies are down stream give your rod a lively in-flination backward until the tip is above and a trifle back of you head. This will shoot straight ahead. Let them fall toward you. Do not let your line touch the water when the flies fall in the forward cast, if you can avoid it, and never, and when you are drawing them toward you do not let the porture any circumstances, in the backward cast. Keep your fles in the air behind you and on the water when the flies fall in the forward cast, if you can avoid it, and never, and when you are drawing them toward you do not let the pof your rod come nearer than an angle of 45 degrees before retrieving and making another cast. If the tip of the rod is over your head and your flies are on the water

you might break the rod. Besides, you cannot retrieve your line to make the next cast while the tip of the rod is above your head. I could write a large volume on this subject, for there are many pretty points in fly-casting; but I will simply advise you to practice daily for a month, watching and cor-recting your errors, and then ask Lawyer S. to go out with you and see how you can cast a fly. He will readily do so, for he is an expert and rejoices at the very sight of a rod. and he will advise and coach you far better in ten minutes' actual work than I could in a dozen long letters. When you have learned to cast flies with some little skill, go over to the Diamonds, get one of Heath's boats, anchor in a good place, and try to catch a trout. You will find that casting flies and catching trout are not precisely one and the same thing. I feel rather sure that some splendid fly-casters whom I have seen would make very tender fishermen. You will read in books that the instant you see a rise, "strike." Don't do it, at least not yet. For the present, when you get a rise, wait until you feel your fish, then a light "strike" will fasten him or her, as the case may be, securely. You are but a beginner and your enthusiasm will very likely cause you to forget the delicate nature of your apparatus. If you "strike" hard you are likely to break your rod, or if the fish is small you are liable to scnd him sailing through the air over into the next county. Therefore "strike" just hard enough to fasten your fish and play him in the water until he turns over exhausted. If the pulls too hard, of course, you will give him line, but make him carn every huch. When he seems very weary you can reel him in, but look out for his last break, for every fish, no matter how tired he may seem, will make a final vicious rush for liberty when it is brought near the landing net, and his capers in this last frantic struggle are dangerous and often end in his escape.

when it is brought near the landing net, and his capers in this last frantic struggle are dangerous and often end in his escape. You have doubtless read of the beautiful and perfect arch formed by your rod while playing a trout in the water. If you desire to make these archese a study fasten your tail fly to a gate post and pull; but if you are fishing don't let the beautiful arch worry you. As long as a fish is hooked and pulls, you will necessarily hold your rod up and play the fish on the rod, and the bend in the rod will remain as long as the fish remains. When the fish escapes, your rod, especially the one I have sent you, will straighten at once. In such a predicament, that is to say, after you have hooked and had lots of fun with a good fish, if he should escape all you need do is to exclaim, "There now!" and continue cast-ing and wait for the next victim. Do not get angry, at least do not display anger. You will be tempted to exclaim "Hang it all" and "Blame it!" and "Jiminy Pelts!" but don't do it. Swallow your bubbling sentinents cheerfully, if possible, but somehow under any circumstances. Pretty soon you will become familiar with the loss of a fish, it will become easier, and you will be master of the angler's great-est virtue, patience. This, with practice, will soon make an accomplished fly-caster, and then, when you start on a day's outing on a stream, diseard your worms, minnows, grubs, grasshoppers, bugs and all the other nasty things, and take only a few pretty and artistic files. You will at once see the great difference between fishing with the fly and murder-ing fish with bait. One is clean and artistic, the other re-pulsive and dirty. At certain seasons the bait fisherman may be more successful, but at others the fly will prove by far the best, if not the only lure, while on the whole, I con-sider it immeasurably the most honorable method of catch-ing trout. Your affectionate uncle, MET CLARKE.

NEW YORK, March 10.

ROCKY MOUNTAIN TROUT STREAMS. DENVER, Col., April 28, 1886.

ROCKY MOUNTAIN TROUT STREAMS. DENVER, Col., April 28, 1886. Editor Forest and Stream: "Holow Rib," of Hastings, Ia., asks for information about trout fishing along the Denver & Rio Grande Railway in this State. He can hardly go amiss of good fishing along almost any of its lines. Taking the main line hence to Salt Lake he will reach the trout country at Salida, and find them plentiful in the South Arkansas and all the smaller tribu-taries of the Arkansas. Continuing west over the main range at Marshall Pass he will reach the headwaters of the Gunnison, and follow down that stream, with good trout streams coming in from right and left every few miles all the way to Grand Junction at the crossing of Grand River. After passing the great valley of the Grand and Green he will find trout in all or most of the mountain streams of Utah to Salt Lake City. Returning to Salida he can turn north up the Arkansas to Leadville, and fish Lake Creek, Twin Lakes, Clear Creek and numerous others. Beyond Leadville he can take the Eagle Rriver branch and go by rail far down that stream, which is one of the bost for trout in the country. Coming back to Leadville he can take the Blue River line to Dillon, at the junction of Ten-Mile Creek, Blue River, Swan River and Snake River, in all of which, and in scores of their tributaries within easy reach, he will find as good trouting as he need ever hope to enjoy. Coming further back to Pueblo he may there take the Slue Grande River along the railway track from Alamosa to Wagon Wheel Gap, to say nothing of South Fork and many smaller tributaries. Having exhausted that field he can come back to Alamosa and take the Durango line, reaching thereiby the network of thoraches and put in an "open season" trouting, and every dy a new stream. It is not necessary to wade to fish any of these streams. Some fishermen wade from choice, and it is occasionally very handy to do so, but I never yet have been obliged to wade a single Colorado stream in trouting. W. N. B.

Editor Forest and Stream: Noticing "Hollow Rib's" inquiry in your issue of the 22d, as to trout fishing localities along the line of the D. & R. G. Railway, I venture to give the results of my knowl-edge on the subject. In the immediate vicinity of Salida are the following, all good trout streams. The South Arkansas, part of which, in the shape of ditches, runs through town, and its branches, Poncha and Silver creeks and North Fork. Above town, thirteen miles distant, is Chalk Creek. and further, at Buena Vista, Cottonwood Creek; Pine and Clear creeks, near Gran-ite and Twin lakes, near Leadville. Crossing Marshall Pass, a trip that should be taken owing to its scenic attractions, with Sargent's as a base of operations, are Marshall and Tomichi creeks. At Parlins, twenty miles below, Quarz, Cochetopa and Tomichi. From Gunnison, the Gunnison

FOREST AND STREAM.

and Taylor rivers; from Sapincro, Sapinero or Soap Creek, a fine stream, and the Gunnison; at Cimarron, both branches of the Cimarron and the Gunnison in the Black Cañon. I. should have mentioned Lake Fork at Sapinero. I have fished all these streams and can pronounce them excellent. The proper time to go is after the spring rise, when the streams are clear and not too full. For flies I would suggest coachman, governor, brown hackle, peacock body; gray hackle, peacock body, in the order numed on small, say No. 8 hooks, except in the Gunnison River, where No. 6 is more suitable. All the streams can be fished from the banks, but your correspondent will find wading more satisfactory. He will find that the officials of the road and especially at Salida, are courteous and accommodating, and will willing!y afford him any additional information he may require. Kokomo. SALDA, Col., April 27, 1886. SALIDA, Col., April 27, 1886.

CAMPS OF THE KINGFISHERS.

CARP LAKE, MICHIGAN .- XI.

A THLL in the rain gave us a chance to shed our hot. rubber coats, and when we had changed place, Ben settled down to the oars and the "coincidence," and I give it in his own words but not in his inimitable manner, as near as I can now recall it. When I had trimmed boat to his liking, he began: "Several years and I got a letter from unlock."

it in his own words but not in his inimitable manner, as near as I can now recall it. When I had trimmed boat to his liking, he began: "Several years ago I got a letter from my brother William that lived in a little town away off in Northern Tcxas, invit-in' me to come down an' spend the winter an' hev some sport a huntin' with my neffew Harry, who had a cow ranch on the Little Wichita River, about 120 miles from the town where he lived. He said there was jest slathers o' deer in the woods along the river an' in the hills not fur from the ranch, an' wolves an' kyotes an' jack rabbits on the perairies till ye couldn't rest. The bait was too temptin', an' I made up my mind to go. "But I'm a lettle ahead o' the houn's-started the story without a preface, ye might say-an' I might as well tell ye what was the main reason that started me. Ye see, the winter afore that I'd got into the habit o' hitchin' a hoss to the bnggy every day or two an' drivin' to town to hev some fun with the boys-ae gang o' town fellers that I was ac-quainted with-an' we ginerally, six or eight of us, got into one pertickelar saloon an' set an' played sell out seven up till we got our hides chuck full o' a mixtur' o' malt lickers an blue ruin. Lots o' times it would be after midnight when I got home, fuller 'n a goose, an' I git up next mornin' with a head on me bigger 'n a country school house, an' several mights, ef my hoss hadn't a had more sense than the driver I'd a failed to show up at feedin' time. Well, the day I got this letter it was late in the fall, the crops was all in and housed, the farm work all over, an' I'd got to goin' to town agin an' tamperin' with the flowin' bowl. Goin' home that night with a lighter head on than usual, I got to thinkin' things over, an' I concluded I'd paid about my sheer to'ards the new house the gin slinger was a-buildin', besides herin' right smart o' stock in the sparkler a-giistenin' on his shirt buzum, an' techn' up the hoss kinder mad-like at myself, I said, 'Ren R., yer a cussed fool fur the

"I her to ten ye an tins active a kinetic and the set of the set o

'Brother Jack an' his wife an' me talked it all over that

"Brother Jack an' his wife an' me talked it all over that mornin', an' as Jack an a hired hand or two that we gener-ally kep' through the winter could git along with the stock an' what little work there was to do about the farm in winter time, they thought it would be a good scheme fur me to go, 'specially if I kep' on 'tendin' the seeances in town. "I went to town that day, an' after paralizin' the boys by refusin' to drink with 'em, I bought some things I'd need, ye see I didn't hey to buy a gun fur I had as good a Win-chester as ever was turned loose, an' next day was off fur the Southwest, dry as a contribushun-box, but feelin' a heap better 'n I expected.

the Southwest, dry as a contribushun-box, but feelin' a heap better 'n I expected. "I reckon the gang an' the head sawyer o' the gin mill missed me from my usual place at the costive board, but I'd had enough o' his buzz saw whisky, an' the move I was makin' would be money in my pocket ef nothin' else, fur yc can bet yer last fish hook, Hickory, that yc never draw out any dividends from money that ye invest in a gin slinger's buildin' associashun; the more ye put in the less yc take out."

The second secon Just here a thoughtless big-mouthed bass interrupted the

for me to make a cast or two inshore at a likely-looking spot, recounting in his droll way the many days of great sport he had with deer, wolf and sneaking coyote, and each day's hunt with any special feature of interest in it was told with such accuracy of detail and with such realistic descriptive power that at times I fancied I was an actual participant in the glories of the day. Then, as we passed a patch of yellow water lilies reaching out into the lake from the grass line, came a sharp dispute with another "snake," which ended disastrously for his snakesbip, in that he was shortly doing a ground and lofty flopping feat in the boat, snapping his vicious jaws together on the gimp, and glaring savagely at us with his snaky eyes. When quiet had been restored by a smart rap of the club, Ben dropped the oars and lighting the brier-root for not less than the twentieth time since leaving camp, he went on without removing it from his mouth. "The leave out several of the least interestin' chapters of this tale, an' jest say that I had more sport there at the cow ranch than I ever had on the face of this livin' earth, 'less it was when I ketched that big muskylunge over in Central Lake last year.

"The leave out several of the reast interant each the at the cow ranch than I ever had on the face o' this livin' earth, 'less it was when I ketched that big muskylunge over in Central Lake lat year. "Deer was plenty, an' it was no trick to go out an' kill more 'n we could use, an' knockin' over a wolf or kyote every once in awhile was worked in as pastime to keep us from killing too many deer; but'--with a solemp blink of his eyes-"but the Injms must a got wind that I was a comin', fur not a solutary one of 'em showed up while I was around, an' I didn't git to use my big scalpin' knife only to peel the hides off the game I killed. "I hunted most o' the best days an' loafed around the ranch in bad weather, and eat deer meat and jack rabbit stews an' slept good o' nights, till I got as fat an' hay as a possum in a paw paw patch, an' afore I thought the winter had fairly set in it was mighty nigh time for me to bustle home an' put in a few licks at the spring work on the farm. "I hadn't brought my trunk nor no dude clothes with me, so I strapped my wardroke on behind the saddle, said good-bye to Harry an' the other fellers, an' one mornin' afore day-light a solitary horseman might hev bin seen pursuin' of his way acrost the perairles, with his cutwater a-pintin' a leedle south o' sunrise. "'Just about dusk, after ridin' between eighty an' ninety miles, I pulled up at the only house between the ranch an' the little town, where I intended to stay all night an' rest myself an' the pony, fur it had bin a long pull on the little feller; but he was a clean stepper and a stayer from 'way back on his gran'father's side, an' hc'd made the whole dis-tance on a few bites o' grass about noon an' a drink o' water once' n a while without turnin' a hair. "I hollered to see ef anybody was at home, an' a woman opened the door an' akked what was wantin, 'an' I told her very politely who I was, where I come from an' where I was goin', an' asked eff could stay all night an' git somethin' to eat for me a' my boss. "She said she co

thing, nohow; but I ketched myser jest in time, in choiced it back, but it was sich a narrer escape that it made me sweat. "After supper, when I was a thinkin' I'd hev to saddle up an' move on, Mister Jones himself come an' I got permission to stay all night. I went out an' hobbled the pony an' turned him loose to rustle 'round after the rest o' his supper, an' next mornin', after walkin' a half a mile after him, I saddled up, thanked the folks fur their hospitality to me an' my hoss, said goodbye an' rode on to the little town before noon "I stayed at my brother's a few days, sold the little hoss, an' then he rode with me to Sherman—at the end of the railroad—to take the hosses back, an' we made the whole distance o' ninety miles in one day. In a few days I was back at the farm wadin' into the spring work like I was a seinin' fur minners. An' the trip done me a heap o' good, only for one thing," said Ben, soberly. Here he removed a pair of blue tinted spectacles from his nose that he usually wore when on the water, wiped his eyes with great delibera-tion with a voluminous silk handkerchief secreted some-where in his overshirt, and after replacing spees and hand-kerchief and picking up the oars, continued, "Ever sence that trip it 'pears like my eyes hev been kinder weak an' watery, an' I reckon I must a strained 'em that night a-tryin' to keep track o' that durned Texas corn dodger." The "coincidence" was told, and could it be told on paper in old Ben's luimitable manner, with his ludicrous motions of shaping the dodger and administering the "southin' surp" to the "little sardeen," and with his serious delihera-tions of speech, the reader would doubtless have occasion to hold his aching sides, as I did, but an effort to do justice to his quaint droll rehearsal of the "fun he had in Texas" would be as futile as an attempt to paint a streak o'moonshine. <u>KINGFISHER</u>.

CINCINNATI, O.

TIM AND THE SEVEN PONDS.

TIM AND THE SEVEN PONDS. TELEGRAMS say the ice has gone from Moosehead Lake. No doubt this is the best lake in Northern Maine for the sportsmen that prefer to fish in deep water or troll for large trout. The steamboat nuisance has not so badly in-fested it as it has the once noble lakes of the Rangeley re-gion; nor have high water and low water, new cams and broken dams, as spoken of by your recent correspondent, demoralized the trout and guides so the fish cannot be found. This doubtless is regarded by the State Commissioners as a grand provision of man and nature to restock these Andro-scoggin lakes. They have become so much depleted they needed rest. needed rest.

item of news. I am informed on good authority that a com-potent man proposes to 1un a stage daily from Kingfield to Smith's Farm. Smith has been ill, but "Ken is himself

Finite's rank, bind has been h, but the main again," From a recent conversation with one of the efficient Com-missioners of Fish and Game for the good old Pine Tree State, I learn that grand sport is promised to the lovers of salmon fishing at Sebago and on the Penobscot, and when the season opens there will be "no end of fun" for those who like myself gain health and happiness in fighting the gamy black bass in the chain of ponds extending from Monmouth, through Winthrop, Readfield and Mt. Vernon, to Belgradc. Manchester and Gardiner have some of the oldest stocked ponds, but are a little off the line I have named. Maine has now great wealth in all which attracts a true sportsman. Later on I may have something to say of ruffed grouse and large game. J. W. T. Boyrox. Mar 5, 1886. large game. Boston, May 5, 1886.

NOTES FROM EAGLE'S NEST.

Bostos, May 5, 1986.
NOTES FROM EACLE'S NEST.
To 'MORROW signalzes the 'trout opening' in this vicin-ity and a hundred rods will bend over the flashing waters of the west branch of the Delaware here, and in over twenty pretty trout streams which are now flashing down our hills close by. For the first time in many years at this date all the snow and ice is gone, the trees are leaving out, the grass is green, the apple trees in blossom and all nature on the production of the Delaware here, and in over twenty provide the snow and ice is gone, the trees are leaving out, the grass is green, the apple trees in blossom and all nature on the production of the provide the major of the manory. Why? The weeks will be reached to-morrow since I have been so near to bliss as I am now, propped up in my invalid chair mean the window where I can look out on my green lawn and see the sparkle of my trout brock at the "Pines." Ten weeks of suffering-lingering between life and death---ill fit me for this correspondence, bui I can't let the season pass without a note to the dear old paper which has cheered me even un my darkest hour. I do not know now when I will be able to get nearer to the bright water to listen to the long cerished music of forest and stream.
And now, I wouldn't 'tell tales out of school' if it was not to prove that our streams, repeatedly stocked by two iterain to wink at the law, brought to my sick room six speckled trout, the largest ten inches long, the smallest six or more inches. It was a fourday feast, yet he caught them within sight of Engle's Nest and in a twenty-minute itera from his store. Eless him for thinking I might love to look on a trout, even if unable to enjoy it. Four days' rations were in those trout, anyway.
Med since this the little luck loving schooloops have sent to 'Old Uncle Ned' proof that the alder rod is an artificial the struck a heave trout that weighed one proond side data.

the split bamboo, and a red worm as potent as an article fly. Dell Maynard, while spearing suckers at night, by acci-dent struck a beauty trout that weighed one pound and quarter and measured near fourteen inches long. It was sont to cheer and strengthen the invalid. I grieved to see sich glorious yellow meat borne away, but I was too sick to eat. I think 'Ned Buntlinc, Jr.,' my little five-year-old, could tell a different tale, for he is a chip of the cld block and likes to catch fish and eat them, too. Now, I have got to hold on. I have written as long as I can hold my peu, aud must fall back on my "beam ends," as the captain of the Coot would say. From all hear-and I have many visitors—fishing has not been so promising for years as it is now in Delaware and Sullivan counties. E Z. C. JUDSON ('Ned Buntlinc'). STAMFORD, N. Y., April 31. DOACCHING IN SARATOGA.

POACHING IN SARATOGA.

Editor Forest and Stream. The following is from a Saratoga paper of to-day:

The following is from a Saratoga paper of to-day: The Schenectady Gazette has the following, which should engage the attention of our sportsmen: "It is reported that parties are illegally catching black bass in Saratoga county. What are our game clubs for? What are State protectors of game and fish appointed for? It is about time something was done to stop the wholesale slaughter of black bass in Sara-toga county by men who use spears, nets and other illegal devices to deplete the lakes and streams in that county of black bass. We are informed that parties have a 'rack' built in the rifts of the creek near East Line and are capturing black bass by the wagon. A few arrests and convictions might prove beneficial." Why don't the town game constables look into this matter?

into this matter? "Why don't the town game constable look into this mat-ter?" Because it is a well-known fact that in many of the towns of Saratoga county no man can be elected to the office of town game constable unless it is well ascertained that he will wink at infractions of the law. I have heard of one who not only does this, but actually engages in illegal fish-ing and shooting. In Saratoga county many trout streams are fished with nots in order to supply the hotels. It is said that in July and August "chicken partridges," the young ruffed grouse, are to be found in the ice boxes of the larger hotels.

ruffed grouse, are to be found in the ice boxes of the larger hotels. And what is to be done about all this? There is no public sentiment against it; it would be next to impossible to pro-cure information or secure a conviction. Each man will say "Well, if I don't do it somebody else will, and I don't see why I should not. And so it goes on. Meanwhile this devil-born selfishness is cutting away the limb upon which it is sitting, for year by year fish and game are growing more and more scarce, not because of the destruction of their habitat, but because of the violation of the protective laws by selfish men and the connivance of those whose duty it is to see the laws enforced. If the local authorities will do nothing, application should be made to the State game protector of this region. If he can-not or will not act, write to Gen. R. U. Sherman, who will eertainly help you if it be in his power. If the bill to appoint a superintendent of game protectors ever becomes a law and a good man shall be nominated for the place, we may hope that outrages, such as those detailed above, will no longer be practiced openly.]

FISHING IN THE ADIRONDACKS.—The Malone Palladium says: "The roads leading from Malone ibit the wilderness were never better at this season than they are this year, and if first reports indicate anything the waters in this vicinity have not been more amply stocked in receut years with trout eager to reward the efforts of the angler. Many parties from Malone and a few from abroad have already tested rod and reel in the neighboring waters, and from Meacham and Chatcaugay Lake in particular come reports of remark

able catches. Two rods at Meacham have taken in five hours full twenty-five pounds of speckled trout. At Chateau-gay Lake the catches have been made mostly by trolling and the salmon taken have been large both in number and in size. One speckled trout weighing over five pounds has also been caught.

TROUTING IN CALIFORNIA.—San Francisco, May 1.— Editor Forest and Stream: But few trout have been taken in our streams to date because but few anglers have fished them because of the high water and discoloration. The streams in San Mateo courty have not been flooded, and consequently fishing has been good. I went down there last week with a party of three, and we fished Tornilas and San Gregorio creeks and filled our creels. These streams are bushy, and fly fishing is difficult and often impossible. These streams are little visited, and therefore they afford better fishing than those which are better known. I learn that Sulphur Creek, in Sonoma county, promises well, but the best fishing near San Francisco is said to be at Crystal Springs, where some of our local anglers have distinguished themselvcs.—San MATEO. of our MATEO.

To Cool. WATER.—In a recent book of African travel, mention is made of a linen bag used to hold water, which by evaporation becomes ice cold. Could any African traveler explain how the bag is made and of what precise material? —X. P. [The principle of cooling water by evaporation is a very familiar one, but we should be glad of any informa-tion as to the particular mode above alluded to. Old army men and campaigners on the plains will remember how often they have cooled water by wetting the felt with which their canteens are covered. So, too, with the porous crockery used in Mexico, South America and India. In the Southern States this method of cooling water is extensively employed.]

WEST CANADA CHEEK.—This once famons trout stream of Herkimer and Hamilton counties, N. Y., still has chances for the angler, owing to repeated stocking by the State and individuals. Mr. John J. Flanagan, president of the St. Lawrence Angler's Association, writes, under date of May 5 from the Mountain Home, that trout are biting lively in the creek and fairly in the lakes. Mr. Flanagan finds Wilmurt Lake too high a climb for his 300 pounds weight, but he has taken several fine trout from the creek. This is a fine stream for both wading and boat fishing, and is easily reached from Herkimer, Prospect or Remsen. Quite a number of anglers are at Ed Wilkinson's, and most of them have done fairly.

How Got HE THERE?—One of the most prominent dairy-men of Orange county, N. Y., has a spring on his farm in which for years he has kept a fine brook trout. The dairy-man is a most upright and conscientious man, and was grieved to get the following note from a New York-man: "The trout you sent me in one of the cans of milk was very fine, thanks; but wasn't that a queer way to send it?" When the dairyman explains it to his neighbors that the trout jumped into the can they grin and say, "O, yee," and this is what puzzles him and us. Perhaps the cow drank the trout, who knows?

SATMON IN THE HUDSON.—A ten-pound salmon was taken last Monday in Gravesend Buy, by John B. Denise, a fisher-man of Concy Island. We saw the fish at Middleton & Car-man's, in Fulton Market, and looked it over carefully to sec if there was a brand of "Cold Spring Harbor" on it, but could not discover it. The fish no doubt is one planted in the Hudson by order of Prof. Baird and was on its way back. It was labelled "The first salmon from the Hudsou and probably the last," but all of the inscription may not be true.

MASSACHUSETTS TROUTING.—Ayer, Mass., April 30.— Some trout have been taken in our neighborhood. I am usually quite-successful, but have not tried them as yet, Partridges wintered finely about here.—W. F. F.

Hishculture.

AMERICAN CARP CULTURAL ASSOCIATION.

AMERICAN CARP CULTURAL ASSOCIATION. THE regular spring meeting of this Association was held at the St. Charles Hotel, in Philadeiphia, on Tuesday, the 4th inst. Universal regrets were expressed because of the ab-sence, for the first time, of the honored president, Judge Parry, by reason of severe sickness. Dr. J. H. Brakeley pre-sided. The following board of officers were elected for the ensuing year: President, William Parry; Vice-President, Dr. J. H. Brakeley; Secretary, Milton P. Peirce; Treasurer, Samuel K. Wilkins; Directors—S. T. Davis, Joseph Pyle, Edwin Tom-linson, George Hamel, Sr., Amos Ebert, Dr. J. H. Brakeley, Dr. E. G. Shortlidge. [The president and secretary are ex-oficio directors.] main anotant resolution was passed respecting the establish-ment of a monthly journal. Thormation having been sought by members of various State Legislatures concerning a close time for carp in public waters, and inasmuch as such waters throughout the country are rap-ify becoming stocked with millions of surplus young carp tom thousands of ponds, and there being as yet no laws regu-lating the same, it was Tere. Aratifies Association respectfully recommend that the taking of carp in public waters, by any process whatever, be prohibited throughout the Northern States between the lasts takes for such longer period as experienced carp culturists takes for such longer period as experienced carp culturists there may deem necessary, probably with the addition of March and the first day of October, and in the Southern States for such longer period as experienced carp culturists there may deem necessary, probably with the addition of March and the first day of October, and in the Southern States for such longer period as experienced carp culturists there may deem necessary, probably with the addition of March and the first day of October, and in the Southern States for such longer period as experienced carp culturists there may deem necessary, probably with the addition of March and

1886. The Association desires it more generally known that they are not a company for speculative purposes, but a national organization for the mutual benefit of carp culturists, their only income being derived from membership fees, the same (and much more in addition) being expended for the issue of documents—no person connected with the organization receiv-ing salary or emoluments of any kind. The membership fee is \$1, and any person interested in carp culture may become a member, <u>MIRCON P. PERCE, Secretary,</u> 44 North Fourth street, Philadelphia, Pa.

A GO LD MEDAL.—Fish Commissioner E. G. Blackford was on Saturday morning visited by a delegation of the mem-bers of the Assembly under the leadership of Hon. E. P. Doyle, for the purpose of presenting a gold medal which had been bestowed upon him by the Department of Fishculture of the Lower Seine, France. This medal was sent by the French Government to Governor Hill, and by him placed in the hands of this delegation to present to Mr. Blackford. The inscription on the medal is, "Mr. Blackford, Commissioner of Fisheries of the State of New York, Departement De La Seine-Inferieure La Commission de Pisciculture, 30 Novembre, 1885."

THE NEW YORK FISH COMMISSION

THE NEW YORK FISH COMMISSION. A MEETING of the New York Fish Commission was held at the hatching house, Caledonia, on Wednesday, May 5. Messrs, R. B. Roosevelt, E. G. Blackford, W. H. Bowman and Gen. Richard U. Sherman were present. The meeting was called for the purpose of considering the report to the Legislature which has been prepared, and also to inspect some hand which adjoins the grounds of the State that have been thought should be purchased in order to get a more conveni-ent entrance to the hatchery. The report was read and agreed to, and it will be presented to the Legislature within a few days. It will be larger than any previous one and will be a valuable document, giving de-values of the work done at all the hatcheries, and will be more than a mere account of waters stocked and a list of shipments of eggs and fry. It was decided that it was inexpedient to purchase the property adjoining the grounds at Caledonia, as the owner demanded too high a price for it. It was also voted to authorize Gen. Sherman to employ a secretary to the Fish-ery Commission. Reports were received from the different hatcheries, showing a large increase in the work. There the business was disposed of, the Commissioners il gged up their rods and tried the wild trout in the stream and took brook trout, brown torut and rainbow trout were afterward cooked and eaten in the hatchery. The Com-missioners expressed themselves pleased at the condition or the hatchery and ponds.

The Rennel.

FIXTURES. FIELD TRIALS.

Nov. 8.—Second Annual Field Trials of the Western Field Trials sociation, at Abilene, Kan. R. C. Van Horn, Secretary, Kausas

Association, at Abilene, Kan. R. C. Van Horn, Secretary, Kansas City, Mo. Nov. 32. –Eighth annual field trials of the Eastern Field Trials Club, at Higb Point, N. C. W. A. Coster, Secretary, Flatbush, Kings county, N. Y.

DOG SHOWS.

DOG SHOWS. May 18, 19, 20 and 21. Mir Annual Dog Show of the St. Louis Gun Club, St. Louis, Mo. Geo. Munson, Manager. May 25, 26 and 27.—First Dog Show of the Ninth Regiment, Wilkes-Pa, W. H. Tuck, Secretary, Wilkesbarre, Pa. July 20, 21, 22 and 23.—Milwaukee Dog Show. John D. Olcott, Man-ger, Milwaukee, Wis. Sept. 14, 15, 16 and 17.—First fall dog show of the New Jersey Ken nel Olub, Waverly, N.J. A. P. Vredenburg, secretary, Bergen Point, N. J.

A. K. R.-SPECIAL NOTICE.

A. K. R. -SPECIAL NOTICE. THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is pub-ished every month. Entries close on the 1st. Should, be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries maerical unless padd in advance. Yearly subscription \$1.50. Address "American Kennel Register," P. O. Bo. 2883, New York. Number de article Register 2009. of entries already printed 3689.

We give below a detailed account of the dogs and the judging MASTIFFS-(DR. PERRY).

The quality of these classes was not quite so good as it was stypear, and, as usual, the best specimens exhibited were red in England. With first-class stock at their disposal, unerican breeders should succeed in producing better speci-

<text>

The target of the server of the server of the server is the server of th

NEWFOUNDLANDS-(MR. KIRK).

NEWFOUNDLANDS-(MR. KIRK). With the exception of the first and second prize winners, the class was very poor. Bruno, placed first, has the best of Major in size and bone, but the latter is of better type and is much better than Bruno in coat, tail and body, and is quite his equal in head and ears. Rocks, vhc., is faulty in head, eyes and ears. Juno II., hc., is faulty in head, coat and eyes; she is too small. Guy, c., is faulty in head, eyes and coat. . GREAT DAMES-(MR. KIRK). The best class we have seen the New York. Tiger, first prize, is much above the average in head, size and limbs, and is a

good-looking dog. Bismarck, second prize, is of fair size, but his head is not nearly so good as the winner's. Café-au-lait, hc., was third best. Tigress, vhc., is a fairly good puppy, but she is much too long and flat in loin, and her feet are faulty. Hector, c., is too small for a show dog. Nero, hc., and Jumbo, vhc., are faulty in head and expression. We did not see them off the bench, and they may have had faults that escaped our attention.

GREYHOUNDS-(MR. KIRK).

scaped our attention. GREYHOUNDS-(MR. KIRK). There were 24 entries in these classes, and the average qual-ity was about the same as at the other spring shows. The two champions, Memnon and Mother Demdike, were in wretched condition, and had we been the judge we would have disqualified both. Harlequin scored a very easy win in the open dog class, and second prize should have been with-held for want of merit. Joe Jumper, placed second, has wretched head and ears, is very straight behind and heavy in neck. He is a big coarse dog, sadly deficient in grey-hound points. Rajah, vhc., and Rawhe, hc., are not show dogs, but they are better specimens than Joe Jumper. Louisette, a black bitch, shown in elegant condition, was first in the next class. She is very faulty before the eyes, straight behind, and too long from the hocks down; she is too stout in body for her strength of limbs, and we would have placed her second. Juno, second prize, is a very poor specime, scarcely worth a commended card; she is weak in muzzle, full in eyes, light in boue, weak in pasterns, has bad feet, and is very faulty behind. Hawthorne Belle, vhc., was just about the best in the class; she was fully described in our New Haven report. Lady Maud, vhc., is pery faulty in head, ears and oyes; she did not deserve a card. Sister in Black that was first at Boston and second at Hartford, was first in the puppy class, and was the best of a bad lot. Dora, second prize, although a poor specimen. The same may be said of Bold Brigand, whc.; he is flat in loin, shallow in body, slab-sided, and very faulty in head and acking in character; ho desorved his card. DELHOUNDS-(MR. KIRK). Chieffain, Rov, Mac and Perth were the entries in the

<text><section-header><text><text><text>

<page-header><text><text>

<text><text>

c ame very close to the winners. Druid's Rock, hc., was shown too thin. Warwick, also hc., is a bit leggy and lathy, but may improve. Shot, c., is a strong coarse puppy. The bitches were few and poor. Vhc. was all that the best one could do. The class for dogs and bitches under 12 months was better in numbers and contained several quite promising ones. First went to Daisy Foreman, greatly improved since New Haven, where she received vhc. Countess Leah, placed second, is a nice bitch, a bit shallow in chest. Reserve went to Chintz, a well built, rather coarse dog, not in good condition. Gath Dale, vhc., promises well and was worth his card. Prince Rockingham, also vhc., was lucky by one letter. He has a good coat, a moderate head, good legs and feet and loin. He is too straight behind and has a broken tail, and wants a year to mature. Lulu also received three letters. She is well known. We liked Rock Glen, hc. He also needs a year to fill out, when we shall expect to see him higher up. There was nothing alse in the class that calls for special notice. BLACK AND TAN SETTERS—(MR, GLOVER).

BLACK AND TAN SETTERS-(MR. GLOVER).

Was nothing also in the class that calls for special notice. BLACK AND TAN SETTERS-(MR, GLOVER). There were 3% black and tan setters entered with three ab-sentees. In the champion class Argus was absent, and Royal Duke had a walkover. The open dog class was a more even looking lot thau we have seen in the ring in some time. Mont, winner of first, is a new comer. He is a nice dog, with a fair head, well put together, with good coat and color and capital legs and feet. Second and third went to Phil and Don, both well-known. They were looking well. Friedlander's Don, reserve, is a fairly well-made dog, with good head, legs and feet. Bruce, vhc.. won third here two years ago. He has grown coarse and his coat was not in good condition. Jim, hc., has a good head and lots of bone. He is heavy at shoulders and out at ellows, and might be better in feet. Dash, c., is fairly good with a sour expression, and a little off in color and markings. Macbeth, also c., is a nice-looking dog with a fair head. He is a trifle shallow in chest. The bitches were uot so good as the dogs. First went to Madge, looking dog with a fair head. He is a trifle shallow win chest. The bitches were not so good as the dogs. Pirst went to Madge, looking dog with a fair head. He is a strifle shallow win chest. The bitches were not so good as the dogs. Pirst went to Madge, looking dog with a fair head. He is a strifle shallow in chest. The bitches were not avery good lot. The winner has a fair head with plenty of bone and good legs and feet. If he goes all right he will do to show agam. These classes were well judged. IRISH SETTERS-(IR. GLOVER).

were not a very good lot. The winner has a fair head with plenty of bone and good legs and feet. If he goes all right he will do to show again. These classes were well judged. IRISH SETTERS-(MR. GLOVER). There were sixty-seven Irish setters entered, seventeen less than last year. All were present except four. In the cham-pion dog class Elcho, Jr. beat Blarney and Chief. All were in good form. The famous Barkley, looking very well, was also in this class, but not for competition. In the bitch class Reeta and Trix were not for competition. In the bitch class Reeta and Trix were not for competition, leaving the battle to Molly Bawn and Faun. The former won and soon afterward changed owners. The price paid was \$400. In the open dog class first went to Bruce, looking his best. Burke, winner of second, has greatly improved since last year. He is a bit wide in skull and lacks stop, but otherwise is quite good. Third went to Tim, notwithstanding his bad condition. We should like to see this dog in good form, as we think him about as good as the hest. Glenchire, vhc., is a grand young dog not yet fully mature; he was several pounds heavier than at Hart-ford, and was greatly improved in appearance. We thought him fully as good as Burke, and had he been given equal second with him, no fault could have been found. He has not quite stop enough and carries his tail too high. Gerald, also vhe., beat Glenclaire at Hartford, but cannot do it when they are in equal condition. Chief II, got all he deserved. He is not quite up to the others. Glencho Boy, he, is better than Chief II, and might have exchanged places with him. Patsy also re-ceived he., just about his place in this company. Gleu Elcho and Pat Glencho, both he., were well placed. In the bitch elass first went to the well known Hazel; she was looking well and deserved the place. Lorna, looking well, was second. Rue, placed third, we thought good enough for second. She has a nice clean cn thead and has no serious faults. She is a little light in color, but as she is o

There was only one entry in this class and she was absent.

<text><text><text><text>

Premier honors went to Doc, Little Red Rover and Hornell Mikado coming next in the order named. They all were in the open classes. Gath we did not think much of, and Romeo might have had another letter. In the bitch puppy class Woodstock Nora won, with Suzette second and Lady Abbot the reserve. They are three nice puppies and were well to the fore in the aged class. Vhc. went to Young Belle. Sho is good in body, but high on her legs and snipy. Juliet, hc., is high, but has a fair head. Vere, c., lacks substance. Taking the spaniels all in all, they were a fair lot, with many individual good ones. The number entered has never been equalled in this country. FOXHOUNDS-(SIR BACHE CUNARD). There were fourteen entries in this class, which was divided

<text><section-header><text><text><text>

DACHSHUNDE-(DR. DOWNY). There were ten entries in this class, which was divided. In the dog class, Rubenstein, the Hartford winner, was much the best in the class. He is a long, low dog, good in crook, bone and skin, and above the average in head. Downy, placed second, is quite a fair dog, too tight in skin. Diana, the win-ning bitch, also won at Newark. The quality of the class was above the average.

bid ship of a big to hear any tools but heaves and a big to be been as the second is quite a fair dog, too tight in skin. Diams, the wina any solution of the average. For the average and the second is specific to be average and the properties of the second is a structure of the second in the second is a structure of the second is a second in the second is a second a second and value there is the second and value there is the second is the second and the second and the second and the second a se

COLLIES-(DR. DOWNEY).

Much dissatisfaction was expressed over the awards in these classes; but with the exception of the absurd decision in favor of Robin Adair over Royboy, we failed to find more

<text>

BULLDOGS-(MR. KIRK).

BULLDOGS-(MR. KIRK). Boz, Ben, Robinson Crusoe and Tippoo made the champion class a good one. We like Tippoo's grand head better than Crusoe's, but the last-named is not so leggy and was in capital condition. Boz is always a hard dog to beat, and holds his own in the best company. Bclisium awas alone in the bitch class. She is a host in herself. Bendigo, first prize iu the open dog class, is not one of our sort. He has bad eyes, terrier ears, and his elbows are not thrown out as they should be. Dick Fuller, was our choice for first, and Hamlet, short in face, but lacking in chop, was about second best. Bellona was about the best of the bitches but she is sadly deficient in volume of skull and muzzle, and is too long in face. Norwich Bess, second prize, is much better in skull than Bellona, but her muzzle is very shallow. Rose, third prize, is a long way removed from first-class form. The puppies were a poor class; every one is too long in head. Boz II., hc., may make the best dog of the lot. BULL-TERRIERS-(MR. KIRK).

BULL-TERRIERS-(MR. KIRK).

every one is too long in head. Boz 11., ne., may make the best dog of the lot.
 BULL-TERRIERS—(MR. KIRK).
 Count and Victoria were the only entries in the champion classes for heavy-weights, and there was nothing very brilliant in the open classes. Earl, faulty at both ends, was the best of the dogs, and Judas, very faulty in head, was second best. Lord Nelson, a patched dog, is faulty in head, was second best. Lord Nelson, a patched dog, is faulty in head, was second best. Lord Nelson, a patched dog, is faulty in head, was second best. Lord Nelson, a patched dog, is faulty in head, was second best. Lord Nelson, a patched dog, is faulty in head, was second best. Lord Nelson, a patched the very second, should have been as apparent to Mr. Kirk as to the lookers on, Modjeska should not have taken a prize. White Violet, second, should have been first. She was described in our New Haven report. White Rose, hc, should have been second. She is faulty in eyes and before them, out at elbows and is not good in tail. Little Maggie was the best of the light weights. Bess, second j, is only eight months old and will be over weight when matured. She is faulty in muzzle and eyes. A Chicago paper has just discovered that bull-terrizes should be narrow in chest, consequently Mr. Kirk's decision in favor of Bess for second prize is certain to be indorsed. Nellie, third, is out at elbows, full in eyes and very faulty before them. bess, second in this class, was properly placed first in a wretched class of three puppies.

is above the average in good looks; she is too cheeky. Brittis too smutty in color and his head is very faulty. SCOTCH, HARD-HAIRED, DANDIE DINMONT, IRISH, BEDLINGTON AND SKYE TERRIERS—(MR. KIRK). A brace of Airedale terriers were shown in the first class; both are faulty in head. Of the three Dandies entered we failed to find a really good specimen, although Badger II, is above the average; his coat is too soft. Kelpie is faulty in head and coat. Irish terriers were badly judged. Sheila, first prize, is very faulty in head, ears, expression and coat, and was not looking well. Evictor, second prize, was away ahead of the class; his head is not quite right, but in coat, color, body, legs, feet, size and carriage, he smothered his opponents and was the only dog in the class with a decent beard. Garryowen, c., has grown all wrong. Erin, hc., is too weedy, but was about second best, and Tim, c., faulty in head, short of coat, and light in hone, was little, if any, behind Sheila. Bentinel, the well-known son of Pioneer and Dušky, was alone in the class for Bedlington dogs, and the same owner's good bitch Tynesider II, was the best of the bitches. Domino, second prize, is a nice bitch, but is not so good as the winner in head, eyes, tuft, bone or shoulders. Cinder, c., was out-classed in such company. Jim was alone in the champion class for Skyes, and Phenix, first at this show last year, was again first in the open class. Topsy, second prize, is short in coat. Teenie, roached in back and faulty in coat, was placed equal with Topsy; we like the last-named better. Chaucer, c., is fluffy in coat. Tanzie, vhc, is soft in coat. Mopsey, hc., is faulty at both ends and is soft in coat. Mopsey, hc., is faulty at both ends and is soft in coat. Mopsey, hc., we were very badly received

PIGE-(BR. KIRK). Mr. Kirk's awards in these classes were very badly received by a large majority of exhibitors. He was evidently in a urry to get home, and the result was injustice to exhibitors and bitter complaints against himsolf. Pugs have never been a specialty with Mr. Kirk, and knowing this, he should have been very careful in handling them; whereas, he rushed his classes, and awarded at random prizes to every type of dog under the sun. Master Tragedr, first prize, although not yet p god condition, was the best dog in the class. He was fully described in our New Haven report. James G. Blaine, second prize, is not a good one. He is faulty in muzzle, wrinkles, ears and color. Sancho, third prize (breeder and pedigree mknown), is not a show dog. Punch Kisteman!s) whc., is not abow dog aud was not worth a card. He is a big, smutty, hadheaded specimen, aud is very faulty in head and ears. Moss, in the next cage, although not noticed, is a better dog, por specimen as he is. Pert, c., is a big, leggy animal, faulty in eyes, ears aud tail. He was not worth a card. Punch (Burke's), c., is another wretched specimen, big, leggy, and head the divert dog than Rob Roy and was about second pery faulty in ears. Punch (Cassedy's), c., certainly is a better better dog than Rob Roy and was about second better dog than Rob Roy and was about second per faulty in ears. Punch (Cassedy's), c., certainly is a better

dog than Kisteman's Punch or Burke's. This must not be taken as a compliment, for he is very faulty in muzzle, wrinkles and trace. Jim Crow, an ordinary specimen, very faulty in head, ears and markings, is a better specimen than several of the more fortunate ones. Scamp, hc., is a better dog than Sancho, third prize, or Punch, vhc. He is faulty in muzzle. What's That, first prizoin the bitch class, was correctly placed, but the balance of the class was slaughtered. Beauty, second prize, is a big, leggy specimeu, faulty in ears and very smutty. Trala-la, hc., should have scored a very easy second. This bitch is well known. Fannie, hc., is faulty in muzzle, eyes, carriage of ears and in trace. Nellie D., e., is a wretched specimen, and is not worth a card in any company. Her ears are as long as a beagle's, she is smutty in color, and has a head more like a fox-terrier than a pug. Mr. Kirk could not be serious in commending such an animal. Flora, third prize, is a very poor specimen and should not have been noticed; she has a bad head, whit + toes, faulty ears, white vent, is leggy and stands badly ou her forelegs. What's That, the first prize vinuer, is faulty in ears, coat, trace and markings. The puppy class contained al to fmongrel-booking animals, and the prize should have been withheld. Tiny was abseut.

should have been withheld. Tiny was abseut. YORKSHIRE TERRIERS—(MR. KIRK). The first prize winner in the class for dogs is neither a blue and tan or a silver; he has white legs, tanned ears, a light face and a blue back. Ben, second prize, is short in coat and faulty in color; he should have been first. Young Hero is rather long in back and is short of coat and light in color; he should have been second. Lancashire Star, third prize, is short in coat, long in back, and faulty in color, too dark on the back, and not rich enough in tan on head and legs. Billy, vhc., is short of coat, and has no head color. Pfiz, c., has a bad head, is leggy and faulty in coat, color and back; he was not worth a card. The winner in the bitch class is neither a blue and tan or a silver, but was about the best of a wretched lot. The second and third prize winners, two poor specimens, faulty in coat and color, should have changed places. TOY TERRIERS—(MR. KIRK).

TOY TERRIERS-(MR. KIRK).

TOY TERRIERS-(MR. KIRK). This class was very badly handled. Frince, first, entered as blue and tan, is a mongrel and the same may be said of Mon-arch, second prize. The last named is a white animal with a round skull, full black eyes and the coat of a wire-haired fox-terrier. We questioned the owner as to the treed of the ani-mal in question and he replied: "I give it it up." So do we. Dot, c., winner of first at Boston and New Haveu, is at least a dog of recognized breed and should have been first. Thos, Moody's highly commended black and tan terrier should have been second, and Dot II., he., was next best. Fanny, vhc., is not so good as the highly commended dog from the same kennel. TOY SPANIELS-(MR. KIEK).

TOY SPANIELS-(MR. KIRK).

TOY SPANIELS—(MR. KIRK). Jumbo II., the well-known English winner, was absent. It was easy to see that of the others in the class, Roscius, hc, was much the best. This dog was first at Birmingham and the Royal Aquari.m show last year, and his successful career was continued at New Haven and Hartford. Clifton Belle, first prize, cannot compare with him in good looks. She is faulty in skull, muzzle, ears and color. Milwaukee Charlie, second prize, was rightly placed. He is not nearly so good, either in skull, muzzle or eyes, as Roscius. Duke, hc, was third best. His hind parts are faulty, or we would place him over Mil-waukee Charlie. It is a farce to place a bitch like Dolly, vhc., over Roscius. She beats him in two points, size and ears. The two Blenheims were properly placed. Jap, c., was the best Japanese spaniel in the class, and in the class for rubys or Prince Charles spaniels, Sister Sally, hc, a fairly good specimen of the former variety, should have won. Lilly, first prize, is a moderate Prince Charles, faulty in head, feather and frill. Nora, second prize, is not very good in head. We like her as well as the winner. ITALIAN GREYHOUNDS—(MR. KIRK).

ITALIAN GREYHOUNDS-(MR. KIRK).

The winner in this class in not an Italian greyhound but a mongrei terrier. Fanuy, second prize, was in wretched con-dition. Zephyr, hc., is a plain white puppy. Dido, c., is as big as a Waterloo cup winuer. The prizes should have been withheld big as a W withheld.

POODLES-(MR. HECKSHER.)

FOODLES-(MR. HECKSHER.) Styx, a very grand specimen, was first in the dog class. This is one of the best dogs we have ever seen. Fritz, second prize, is a fairly good specimen although much below the first-class form of the winner. Jack, vhc., is not close enough in curl. All prizes were withheld in the bitch class. Jet IL, vhc., was good enough for first prize at the same show last year, and we are not aware that she has deteriorated. In the class for poodles other than black there was only one entry and the prize was awarded although the dog is not nearly so good looking as Jet II.

MISCELLANEOUS-(MR. TUCKER).

HISCELLANEOUS-(MR. TUCKER). The judging of these classes was the greatest farce we have ver witnessed. Mr. Tucker, who frankly admits he knows obthing about the dogs exhibited, should not have allowed himself to be prevailed on to judge them. Of the eighteen dogs exhibited, most of which were mongrels, only two were considered unworthy of notice. Sir Lucifer, a bobtail sheep-dog, Kuma, a fairly good Chow Chow, and Belle Tinker, the best retriever we have seen in this country, should have been placed "equal first," and commended cards should have gone to Mr. Brasher's Dalmatians. Don, vhc., is a mongrel mastiff, and should not have been allowed to compete i u the class. Wallie, Bruno and Boz are mongrels, and we venture the statement that neither their owners or the judge can give the statement that neither their owners or the judge can give the statement that neither been noticed the first time he passed on it. We thought that as Lulu, vhc., a poor white English terrier, and should have been able to repeat the victory a few judged she should have been able to repeat the victory a few induced she should have been able to repeat the victory a few predict or which they down awards. SEPCIAL PRIZES.

SPECIAL PRIZES.

Distance realistics of dog show awards. SPECIAL PRIZES. Many of the awards of the special prizes followed the decisions in the regular classes. Our comments upon the dogs will show that some of these decisions were wroug, and con-sequently the awards of some of the special prizes were wrougly given. Some persons not well up in St. Bernards claimed that Merchant Prince should have beaten Duke of Leeds; they were wrong, however, as the latter is much the better dog. Sir Anthony was entitled to the special for the best pointer under eighteen months, and Graphie was clearly the best pointer in the show. — The special for the best English setter belonged to Rocking-man as did that for the best setter of any breed, 'won by Elcho Jr. The latter rightly won over Daisy, but could not have beaten Rockingham. The special for the best fox-terrier went to Diadem. We think it would puzzle the judge to explain why. The fight really lay betweeu Richmond Olive and Bac-chanal and the bitch should have won. Diadem is of better size than Olive and beats her in length and strength of back. Olive has much the best of it in skull, muzzle, eyes, carriage of ear, legs, feet and bone and is undoubteoly the better ter-rier. The special for the best field or cocker spaniel should have gone to Miss Ob I. — We ublished last week a full list of the awards. With the sector of Miss Ob H. — We ublished last week a full list of the awards. With the setter dogs, L. Shuster, Jr.'s Clyde T, washe, In collie bitches, A. R. Kyle's Mavis was com. Iu miscellaneous class over 25 blas, E. Dexter's Belle Tinker was first instead of vhc. In

simall class, N. W. Brönson's Fritz was second and iteme was third instead of vhe. BPECIAL PRIZES.
Eastern Field Trials Club medal for dogs placed at field trials in America. Best pointer dog, Bang Grace; bltch, Lalla Rookh. Best English setter dog, Foreman; bich, Daisy Laverack. Best frish setter dog, Coreman; bich, Daisy Laverack. Best frish setter dog. Consolation. Best English setter Daisy. Best formed and the dot fill. Best black and tan dit not fill. Best blich hopen class, Bacder Aram Co. Best collie blich, Lady of the Lake. Best St. Bernard, Leila.

AMERICAN KENNEL CLUB.

AMERICAN KENNEL CLUB. A REGULAR meeting of the executive committee of the A merican Kennel Club was held at the Hoffman House on the atternoon of May 5. In the absence of President Smith Mr. L. L. Morgan was called to the chain. The clubs re-presented were as follows: New Haven, L. L. Morgan, Philadelphia, W. H. Child; Pittsburgh, W. Wade; Cleveland and New Jersey, C. J. Peshall; Hartford, A. C. Collins. The minutes of the last meeting were read and adopted. The treasurer was not present and had furnished no report. Dr. H. M. Perry having appealed from the sentence of disqualifi-cation passed upon him by the New England K. C., Mr, A. C. Collins was apointed a committee of one to collect the evi-dence in the case and submit it to the A. K. C. at its next meeting. A committee on credentials. Mr. Osborn offered bis negligation as secretary, which was accepted with the thanks of his associates for past services. Mr. A. P. Vredenburgh was elected to fill the vacancy. Mr. Peshall gave notice that at the next meeting of the A. K. C. he would bing forward a motion forbidding the appointent of any person to act as a judge at a show given by the club of which hay dog entered in his classes. Mr. Morgan gave notice that of the winner of the prize. Morgan gave notice that at the next meeting of the extra meeting of the A. K. C. he would bing forward a motion forbidding the appointent of any person to act as a judge at a show given by the club of which hay dog entered in his classes. Mr. Morgan gave notice that at the next meeting of the club he would move that the offices of the scentary and treasurer be combined. The scentary was instructed to notify the N. E. K. C. that no notice had bring form the open to the class of the closing of entries. Muel 2 was also amended by making it read, "And, if known, "ta date of birth," etc. Also the statking out of the word "mew hen a dog's name is changed. The next meeting of the subsequent to the date of the closing of entries. Muel 2 was also amen

SPRATTS BISCUITS.-St. Louis, May 7.-Editor Forest and Stream: I have just read Mr. Watson's letter in your issue of the 29th ult., relating his experience in the use of Spratts dog cakes. For the past three years I have used these biscuits almost exclusively in feeding my dogs, and during that time not one has been in the least degree sick. On the contrary, they are in good condition at all times, and eat their allowance of these biscuits with seeming relish. I regard them as a wholesome, cheap and convenient food, and think Mr. Watson's dogs were sick from some cause other than eat-ing Spratts biscuits.-J. A. Lovo.

EASTERN FIELD TRIALS CLUB.—The regular monthly meeting of the Board of Governors of the Eastern Field Trials Club was held at the St. James Hotel, New York, ou Tuesday evening. Messrs. Chas. F. Watson and John Simpkins were elected members, aud Mr. D. C. Bergundthal was unanimously elected a life member. The names of six other gentlemen were proposed for membership. After mutual congratulations upon the brilliant prospects of the Derby, the Board adjourned to the second Tuesday of September.

KENNEL NOTES.—Owing to the crowded state of our columns during the show season Kennel Notes have accumu-lated on our hands. We hope, however, to be able to publish them all in a short time, and trust our readers will excuse the unavoidable delay.

THE EASTERN FIELD TRIALS DERBY.—The entries for the Derby of the Eastern Field Trials Club number one hundred and four, with probably more to come in later mails. We hope to be able to publish a full list next week.

THE WAVERLY DOG SHOW.—*Editor Forest and Stream:* The New Jersey Keunel Club claim Sept. 14, 15, 16 and 17, 1886, for their fall dog show, to be held at Waverly, N. J.— C. J. PESTALL, President.

HARTFORD DOG SHOW CATALOGUES.—Editor Forest and Stream: On receipt of three cents for postage, we will send catalogue of our late show.—HARTFORD KENNEL CLUB, A. C. Collins, Secretary.

THE ST. LOUIS KENNEL CLUB.—May 7, 1886.—Editor Forest and Stream: The St. Louis Kennel Club is not a mem-ber of the American Kennel Club.—A. P. VREDENBURGH, Secretary A. K. C.

A curious story comes from Toulouse of a laboring woman who, during her work in the fields, was in the habit of leaving her baby in a shady corner, returning to give the child the breast as opportunity occurred. To protect the child from harm, the dog (a bitch) was left in charge. The mother uoticed after a time that the child no longer exhibited the same impatience for the breast as formcrly, although its general condition was excellent, and its indifference could not be attributed to a failing appetits. One day, on returning to take charge of her offspring, she was astonished to see the dog standing tranquilly across the child and suckling it. The mother, who saw no objection to the proceeding, allowed the habit to continue, and the child seemed to thrive on the milk of its novel nurse. The dog exhibited a truly maternai teu-derness for the child, and as the child grew older this ten-derness was heartily reciprocated.

Bifle and Tray Shooting.

RANGE AND GALLERY.

BOSTON, May 8.—The attendance at the range at Walnut Hill to-ay was small owing to the inclement weather. The wind blew from o'clock most of the day. A team match was shot between the rimgton Heights Rifle Club and a team from the M. R. A., which re-ilted in victory for the latter by 18 points. The date of the spring eeting of the M. R. A. has been made June 17, 18 and 0. Following

NORTHAMPTON, Mass., May 6.—The local shooting club bad its first meet at Lookout Range, Smith's Ferry, to-day, ascore of marks-men being present, including members from the Amherst and East-hampton clubs. This is the record of off-hand target shooting in-duled in:

<text><text><text><text><text>

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries.

prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly re-quested to write on one side of the paper only. THE MINNESOTA TOURNAMENT. Withree days shooting tournament, under the anispices of the Withona Sportsmen's Club. The animal tournaments of this club nee days shooting tournament, under the anispices of the Withona Sportsmen's Club. The animal tournaments of the sho-inve carned a great name for themselves in Northwestru sporting circles and this one was anticipated with zeal by lovers of the sho-time of the shooting tournament, under the any sportsment room ont of town arrived last night and to-day, including large delegations from Galesville, Trempelean, La Grosse, St. Panl and other citles, and mury from Jowa and Dakota. Many sportsment room ont of town arrived last night and to-day, including large delegations from Galesville, Trempelean, La Grosse, St. Panl and other citles, and mury from Jowa and Dakota. The tournament was some excellent shooting. The first contest this morning was for a purse of \$150, ten Peoria lackbirds, at twenty-one yds. There were thirty-one entries, in-lideding many crack shots of the Northwest. The score was as follows: Murphy S. Paine 6, Taber, 10, White 10, Madison 6, Becker 6, O'Brier 7, Sisson 6, Schellhouse 4, Stearns 7, Calbeck 5, Schultz 5, Smith 9, Ariz 8, Sexton 5, Paiterson 9, Mills 9, Robinson 7, Paul 6, Plaintiew and Bob White of Ellendale, Dak, were ited for first, neither missing a bird, and decided to divide the purse. Smith of Algona, Lowa, Patterson and Mills of St. Paul, Anoy 2, O'Brier 1, Boltson 7, Sheen 7, Paule 7, Sheen 7, Paule 7, Sheen 7, Sheen

ry, Taper, Becker, Paine, Robinson, Ourant, Paterson, Connect and White, second money; and Pennoyer and Greener fourth Grego Noble

Smith, Pfister, Murphy, Sisson, Holt and Burb dreaters Schults, Noble and White, secoud money; and Pennoyer and Greener fourth money.
 The third and fourth purses were shot this afternoon. The third was §300, fitteen clay pigcons, and resulted as follows: Smith 12, White 14, Taber 12, Millis 11, Madison 11, Stearns 13, Van Slyke 13, Sisson 13, Pfister 14, Muruby 11, Paul 12, Paine 16, Huttenhom 11, Kribs 12, Pferson 8, Kellman 10, Cutter 13, Farrand 12, Greener 7, Robinson 9, Patterson 14, Onrant 14, Section 10, O'Brien 11, Holt 15, Gregory 9, Noble 13, Calleck 12, De Graff 14, N. Artz 10, Schultz 12, L. Artz 14, Scheres 8. Paine and Holt made clean scores and divided first money. White, Durant 14, Section 10, O'Brien 11, Holt 15, Gregory 9, Noble 13, Calleck 12, De Graff 14, N. Artz 10, Schultz 12, L. Artz 14, Scheres 8. Paine and Holt made clean scores and divided first money. White, Durant, De Graff snd L. Artz divided second Stearns, Van Slyke 5, Sisson, Pfster, Cutter and Noble third: and Smith, Taber and Paul fourth. The forth purse for a guaranteed prize of \$100, fifteen Pcoria blackbirds, resulted as follows: There were twenty-live entries, Van Slyke of St. Paul breaking fourteen and vining first money. Phile and Stason divided second money with thirteen birds, Taber, Holt, Stcarn and Artz third money with the eleven. In the anomy set of \$100 end fifteen Colay pigcons and a guarauteed purse of \$100 for fifteen clay pigcons. Interesting as yesterday. The first context, for a purse of \$100 sign, secter 42, Stann, 7, Noble 4, Skinner 4, Taber 6, O'Brien 4, Stann 7, Pfster 7, Mills 7, Paine and Stanner 4, Westerson 6, La Autz 6, O'Brien 4, Sector 7, Pfster 7, Mills 7, Paine and Stanner 4, Westerson 6, Chand 12, Guaras 4, Honma 8, Mann, 7, Noble 4, Skinner 4, Taber 6, Vanite 6, Sisson 7, Holma 8, Mann, 7, Noble 4, Skinner 4, Taber 14, C, O'Brien 14, Straff and 7, Philes 7, Batter 7, Mills 7, Paine and Mann divided first money after the was shot of, Shinth and Mann divided first money

11, Durant 12, De Graff 13, Skinner 12, Sisson 12, Sexton 12, Pfster won the first money; White, Van Slyke and Pratt dividei the second; Smith, Murphy, Mills, N. Artz, De Graff and L. Artz the third, and Stearns, Paine, Durant, Skinner, Sisson and Sexton the ionrth The next purse, ten clay pigeons, 250, presided as follows: Van Slyke 10, Durant 10, Gregory 8, O'Brien 8, White 10, Smith 6, Mills 7, Murphy 9, Paine 9, Becker 9, Mann 9, Blakder 7, Hetherheiron 7, Murphy 9, Paine 9, Taber 9, Pratt 9, Stearns 8, De Graff 10, Hoffman 5, Sisson 9, Barnum 7, Sexton 9, Smith 9, Artz 7. Van Slyke, Durant, Skinner, White and De Graff divided first money. Pfster and Taber second money, Gregory, O'Brien and Stearns, third money, Mills and Blakely of St. Paul, Jourth money. The last purse was a unarinteed prize of 9100 for fifteen clay pigeons, and resulted as follow: Van Syske 13, Durant 13, Murphy 13, Skinner 15, White 14, Paine 13, Sisson 10, Plaster 14, O'Brien 12, Diakey 14, Smith 13, Mann, of St. Paul 11, Becker 7, Taber 13, De Graff 11, Mill 14, Fratt 12, Jowell 10, Stearns 15, Hecherhuston 13, Greener 11, Clarke 18, Gook 7, Artz 18, West 12, Skinner and Stearns made clean scores and divided first money, and Durant, O'Brien and Mills, divided second money. Van Siyke of St. Paul, Phine, Murphy, Smith and Taber divided third money, and Durant, O'Brien, Prat and West divided fourth money.

BROOKLYN, May 5.—The regular shoot of the Fountain Gun Club to day at Prospect Park Fair Grounds was graced by many ladies, who took great interest in the shooting. There was a fairly good attendance of shooters. The birds were not of high class, several hanging considerably in the trap. Dr. Wyne, who won in Class A, in Killing bis six birds used bis second barrel three times. C. S. Kendall won in Class B, after shooting off a tie with C. Chappell. He only used his second barrel to the front in Class C. good performance, W. Stuart again came to the front in Class C. He killed bis 6 out of 7 in workmanike style, using the second barrel three times. This makes his third consecutive win in this class. The full score is as follows: Class B.

JOHNSTOWN, N. Y., May 3The annual meeting of the club wa
largely attended and very enthusiastic. The following officers wer
elected: President, Geo. Yost; Vice Presidents, M. S. Nortorup, S. I
Trumbull, Alf. Newnham; Secretary, James Y. Fulton: Treasure
James Hillabrandt: Executive Committee, L. F. Northrup, Jame
Bania, Daniel McMartin; Captain, James Hillabrandt; Lieutenant, 5 D. Lingenfelter. The champion badge, which was without a winner
at last season's shooting, will again be contested for the ensuin
season upon the same conditions. It must be won at four consecutiv
shootings in order to become the property of any contestant. If no
won in this manner at the close of the season, it will be awarded
the person making the highest average. Members are required to t
present twenty or more times at regular field days. The badge shoo
ing was divided into four classes and the members classified. It
evenutive committee was authorized to procure four badges simila
to those of last year, to be contested for in a like manner. Nationa
rules to govern. The shooting during this month will commence a

NEW ORLEANS, May 2.—To-day some of the members of the Pelican Gun Club shot a match of ten double bats, the score being as follows: Geo. Sougeron 18, J. Ellis 17, S. I. Mitchel 18, L. T. Dugazon 14, F. B. Puig 13, M. Rea 12, P. J. Mitchel 12, T. L. Bayne 12, P. J. Puig 17, F. O. FeGorgne 11. Last summer this club met quite often, with George Sougeron as capitaln, and L. T. Dugazon as scoretary and treasurer. At the first meeting of the club this reason, F. B. Puig was cleeted capitain, and S. L. Mitchel score tary and treasurer.
YET ANOTHER.—James Graham, the English wing shot writes an ent the Bogardus challenge: I have scene a challenge from Capital. A. H. Bogardus, the ex-champion wing shot of America, to shoot scoot a match against America's ex champion upon the f-liowing terms: The stakes to be \$500 or \$1000 as side, each to shoot at 100 birds—pigeons, of course-Blyds, with 12 bore guns not to weigh more than 8 pounds. These terms are fair, and I shall be ready to meet Bogardus any time be chooses to name.
NEWALK N. J. May 4.—The Nimrod Club held its monthly glass hall match on Saturday last for the club medal, which was won by Samel Castle, Jr. This being the third time that it has been won by Mr. Castle it is now his property. The scores were as follows: (Tastle it, got the club this evening there was a large attendance, and after the transaction of routine business the members listened to a far-reading science it. Alto has seen on the regular meet-ing of the club this evening there was a large attendance, and after the transaction of routine business the members listened to a farewell address by Mr. Theo. -

CANORISTS are invited to send us notes and full reports of cruises club meets, information about canoeable waters, and other commu nications of interest.

Secretaries of cance clubs are requested to send to Forest AND STREAM their addresses, with name, membership, signals, etc, of their clubs, and also notices in advance of meetings and races, and reports of the same. Cancel-its and all interested in canceing are requested to forward to Forest AND STREAM their addresses, with logs of cruises, rapps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the spurt.

AMERICAN CANOE ASSOCIATION.

S ECRFTARY-Dr. C. A. Neidé, Schuylerville, N. Y. Candidates for membership must forward their names, accompanied by the re-commendation of an active member of the A. C. A., together with the sum of \$3 for initiation fee and first year's ducs, to the secretary, who will present the names to the commodore. Money sheuld bo sent hy registered letter, or money order on Saratoga Springs, N. Y.

THE A. C. A. TROPHY.

SUBSCRIPTIONS are not coming in as rapidly as they should for the A. C. A. trophy, and \$200 are still needed. While this amount could easily be raised among a few who have offered large subscriptions, the committee would prefer that the cup should come from the great body of American cancelsts rather than from a few. There are over 700 A. C. A. men who have not yet been heard from; now is the time for them to send in their little dollar.

now is the time for them to send in their intre utility. Editor Forest and Stream: I beg to acknowledge further subscriptions for the A. C. A. chal-lenge cup in response to our circular, as follows: Gen. Robert Shaw Oliver (second subscription) S5; Win, G. Abbot, Harthrod, S1; W. G. McKendrick, Toronto, Ont., S1; Jos. G. Walton, Sherhrooke, Ont, S1; G. M. Barney, Springfield, S5; E. H. Barney, Springfield, S5; F. D. Poot, S2; G. fl. Thatcher, Jr., Albany, \$1; Dr. McMarten, Amsterdam, S2; M. G. Foster, S1; J. B. Fosdick, \$1; previously acknowledged, \$.59; grand total, \$184. The estimated cost of cup is \$350. WM. WHITLOCK. 37 WEST TWENTY-SECOND ST., New York, May 7.

Editor Forest and Stream. The trophy question having been finally settled by the Executive Board, no further discussion is in order; but we would thank "Yon" not to misrepresent. Our former communication imputed nothing to our expected visitors from across the water. We were not talking about our visitors, but ahout curselves-the A. C. A.- and about what we considered our plain duty in the matter. Believing that all fair-minded readers will recognize this, we remain, PITTSBURGH, May 7. SEVERAL PITTSBURGHERS.

BROOKLYN C. C. CHALLENGE CUP.

<text><text><text>

hauled up the side of a passing mail boat which rescued her shivering crew. The rest of the race was without incident, as the parting of the main halliard on Mr. Sinclaire's boat threw him out of the contest, and Mr. Prokaw could do nothing to windward in the cross tidal sea running and the Guenn came in alone, having made the course in domin. taking it easy under recefed mainsail, and is now the first cup holder. Next race is on Saturday, May 15.

A SUGGESTION FOR THE TRIAL RACES.

A SUCCESSION FOR THE TRIAL RACES. Editor. Forest and Stream: Thotice that it is proposed to have trial races during the first week for the August meet for the purpose of selecting the contestants in the practicale for some who may desire to compete to come to come perform and tophy race. I question very much whether is will be practicale for some who may desire to compete to come to come perform and the properties of the perform the ensemble of the some of the August meet to phy race. The ensemble of the perform and the some of the practicale for some who may desire to call but the objection has be practicale for some to be be the best men to represent America. How the set of the set the perform the top of the solution to the solution to the top of the set of the solution of the A. O. A. officials and this the emet best to catter only three or four of our best men, why cannot the practical shall be eligible to race for the top by? Why have any other trial races? It has certainly been proven in the past that the best mad at the head of the record. Then the perform the the enderstanding that the requisite number of men thaving the represent and at the head of the record. Then the prace the practical shall be eligible to race for the trop by? Why that the best mad a crowning each event of the meet, and all who the the entries for the regular programme races. I sincerely hope that the best mead are the regular programme race. I sincerely hope that the best mead head and prove the may debar any A.C.A. *Romerer Shaw Outvere*, Captath Mohlence O.C.

500-MILE CRUISE ON THE RIVERS OF NORTHERN CALIFORNIA. BY MORRISON F. PIXLEY AND E. RUSSELL C OPER.

(Continued from page 254.)

A

A BOUT half past 11 we gave up the idea of not making any stop for lunch. While we were looking for a suitable place to land, we came upon an Indian camp situated on a large bar and shaded by towering sycamore trees. The busile that surrounded their camp-fire told us that dinner must be near ready so we at once decided to lunch with them. Our cances were objects of interest to them, and as they do not

rentle breeze blowing and we set mainsail, jigger and jib, booming the latter out on the starboard side to catch the draft that passed the making a good six knote. We were now getting into a more civilized locality, where the banks in several places reminded us that our case while the cances were and the sight of fruit trees projecting over the tops of the hanks in several places reminded us that our stock of fresh vere tables and fruits were occhausted and it was high time that we were getting them replenished unless we wanted to try the nutrilive virtues of river water as a supplement to our diet of game. About noon we came to an orchard where some nusually luxuring the cances to a little landing and went up to the farm house. The owner was sitting in the flower garden in front of the house, while a fommath that played near him could be and from the river bank the cances to a little landing and went up to the farm house. The owner was sitting in the flower garden in front of the house, while a fommath that played near him could be and stock. Nearer the lower were blackberies and other simulation of the second the midday sun, and from the river bank the orchard stretched away as far as one could sec. Nearer the about server side as they did service for their master. Beeing us approach, the gentleman rose and came to meet us. Nothing neuron clothes, he at once recognized us as the cance they did service for their master. Seeing us approach, the gentleman rose and came to buck that the family, the cloth being spread under oue of the trees near the fourth. We at once availed ourselves of hus kind offer and did full justice to the reputation that has been already earned by the appetites of cancelits. Dinner over, we were enticide la stallowing so many glasses of tresh milk that Undine said 1 would probably explode when other shows and were invise and first, were ded into the inversion of the side stands and the said of order the starb and the set and order do the same and in the ones is done to uskind offer and d

care, and he went to some trouble to wrap it inst in time leaves and then in a waterproof cloch, so that it night not melt, placing it under the deck of his cance, where it would he out of the way of the sun's ravs. Two hours hard work brought us to the mouth of Butte Slough, which we decided to ascend a short way instead of making camp at the junction of the two rivers, as our tired feelings prompted us to do Our plan was to follow this slough until we came to its outlet at the west bank of the Feather, and then descend that stream to its minon with the Sacramento, forty or fifty miles below. This idea we were afterward forced to abandon on account of the difficulty of navigating our keels through the mud and tules. The slough where we entered is about fifty feet wilde, clear as crystal and lined with the first time. The sun was lew and the rays striking at hwart glim-mered through the draperies of wild grape vines and threw golden touches on to the granted and mossy trunks of trees that had stood since Columbus landed. Orioles and a crimson-winged variety of woodpeckers darted bither and hilder, giving the scene tropleal touches, sided by the oppressive warnth and relieved by the loving calls of a hery of quali that were settling to their repose on a little knoll to the north of us. As the night came on we selected with hummed and steamed, the usual plate of flap jacks soon cooked, and lundie, thinking to zive an exit a treat, brought out the carefully was depicted on his face as he opmed it and found that his worst enspicients of the oiled cloth into an empty beer bottle wo had pur-chased (the hottle was the thre leaves he carefully poure the contents of the oiled cloth into an empty beer bottle. Supper ver I busied myself in reparing a broken spar, which we had pur-chased (the hottle was the tenge trans. Soon the owis worke up, and with their melianchol Woo-ooo too thowhore o strove to put a damper on our buoyant spirits. FIXTURES.

ACHT DESIGN AND BUILDING IN BOSTON. AFTER taking first place last season in the yachting world, it is very evident that Boston does not propose to accept a second or third, either in home or International yachting, without a lively strug-gle. Important as her victory was last year, it will not stand alone, and Boston yachtsacen evidently realize that they must this season put forth all their strength to prove that chance had little to do with the result, and that they can improve on the work of the past season. It may be that the Puritan is able to do this, but they wisely prefer to have two settings to their bow, and have endeavered to surpass last vear's erack with a still faster craft. After turning out one such boat the scope of rule and compass, a something that males one boat po, while the next, backed by additional experience and knowledge, may purfore greatly inferior, but in the present case, after a careful com-parison of the old and new boats, the observer is pretty sure to give purjan has proved herself in all weathers, and in her younger sister from the previous model, but has sought for improvement in the direction of detail in model, build and balats, thus insuring at least a tar. The two vessels, Puritan and Mayflower, differ chiefly in length, the YACHT DESIGN AND BUILDING IN BOSTON.

The transport of the self in all weathers, and in her younger sister fr. Burges has wisely contented kimself with no marked departure from the previous model, but has sought for improvement in the intertion of detail in model, build and ballast, thus insuring at least a air amount of success. The two vessels, Puritan and Mayflower, differ chieffy in length, the atter being 5tt. longer, or Sött, and in weight of keel, the inter having 7 tons outside, or an excess of 10 tons, or 37 per cent. over Poritars will do, is nonuestionable, as the gain in stability will offset any index strates. Were it a question of ocean cruising there is little loads that this weight with length of 3½ beams, would make a very measy scabadt. If must not be imagined that Mayflower is in any costs will do, is nonuesting the site as strongly constructed as any oral of the cups so pooly defended hast season, but she is built with one purpose oblefly in view, to race in Ahmerican waters, and ere ballst has been stowed for this special end. As the start in the strong of the cups so pooly defended hast season, but she is built with one purpose oblefly in view, to race in Ahmerican waters, and are ball stowed for this special end. As more take and the heel is carried down deeper. The draft at orefoot is the same, that and had been drawn out to a greater hear plan is nearly the same with the exception that the strongost the draft is 500 the owner for a traing the edit of covernelace in Ahmer Meeley is carried down deeper. The draft at orefoot is the same, that and a long straight of the owner for a light of for y but greater are rake, while the center of the out as is contrained. This has been at a start as that a sight rocking. It will be remembered that writam had a slight rocker upward at. This has been removed by dring a foot at the heel, making a long straight defe will a slight rocker while the center of the laters plane eight of straight eegen at a rake, while the center of the laters plane eight of sthe same along the will be endited

planksbeer is of white pine, the stanchions of locust, while the rail, a clean and beautiful piece of oak wilh a perfectly fair curve, is a pleasure to look at. The keel construction differs in detail from that of the new Atlantic, as though both are made of 24in, sticks, they are joined in a different manner. In the Atlantic the two keel sticks lie side by side, the joint hetween them running exactly in the center of the yacht. In the Mayflower the two sticks, of the same size and length, 60ft., are so laid that one end of each overlaps 10ft. beyond the other, while the two are at slight angle with the fore and aft center line, by which means a good shift of butts is obtained, and the other, while the two are at slight angle with a teach end. With a centerboard craft of this size the question of construction is a complicated one, as timber cannot be obtained for a keel in one piece, and the dingenuity of the designer must supply its place with a strong combination of several pieces. The frames are three 1/gin, rods with turn-heckler running from deck to keel, and transmitting the sirain of hallards and purchases to the latter. The work on deck, such as a hatch coaming, skylights and companion, is all very light: "mahogan. Aft it opens into a stateroom 7ft. long, litted with two berths and toilet stand. On the port side of the turns, with two berths and toilet stand. On the port side of the bottme et sno attempt and statepart, and the single. While all is well and nearly finished, there is no attempt at display. Outside the oak bottom is very smooth under its coating of cooper bronze, and the Parked, and the bottme, to bottme, the softer much soft are better than the Purtuan and most other yachts of the starboard side is a large stateroom. The capatin's room is forward or the same side. While all is well and nearly finished, there is no attempt at display. Outside the oak bottom is very smooth under is coating of cooper bronze, and the fush of the bottme, topsides, deck and rall are better than the Purtian and

<text><text><text><text>

Outside the line of sailing yachts Mr. Burgess has designed this winter a steam yacht, the Hamiel, 97t, over all and 85t, on water Boston, and is now nearly completed. The stem is plamb, the sheer guite straight, with a good freeboard, and the long overhang is very handsome. The yacht is provided with a fair allowance of canvas and some results for the Harvard crew, for coaching purposes. She is 60t, long and 85t (in the shear) with double skin, a veritable double-order, and the long overham is planb, the shear guite straight, with a ford far house the skin a veritable double-order, allowed or the skin a veritable double-order, allowed the skin a veritable double-order, allowed the skin a veritable double-and she shear of the boat. The most peculiar feature is a halanced rudder placed forward instead of aft, and directly under the botte. Gott, water line, and 44t beam, with an ion keel.

CRUISE OF THE COOT.

It is a bright city with th future, and in my belief destined to become one of the chief of the contanent. Its prosperity does not depend upon one one, like Charleston upon cotton, but lumber, coal, oysters, fish, ing, corn, wool and manufactures all contribute a fast increas-nots to the trade in cotton. With ample water front and water, perate climate, rich soil and unsurpassed connections by water thing appreciated the world over. Every time I revisit the city evidence of healthy growth presents itself. Were the induce-iof the section of which Norfolk is the center more thoroughly 1 before the emigrant from abroad, I fancy he would not hesi-etween the Arctic regions along the northern boundary with orthory and presents its onthern. The notions that of Mascn and Dixon's line there is no welcome for the settler and scurity and respect for the law is a nonsensical piece of Northern healism which has no foundation in fact. Nowhere have I law and order more scitcity and conscientiously enforced than ghout the Southern. Atlantic States, and nowhere else is the ty of the law held in such respect. It is a relief to the Northern of find a portion of bis country where the best and most re-bible citzens hold office, and where the administration of public is no type. Over to an align rabble.

ecurity and respect for the law is a nonsensical piece of Northern morialism which has no foundation in fact. Nowhere have 1 d law and order more strictly and conscientiously enforced than ighout the Southern Atlantic States, and nowhere else is the Southern Atlantic States, and nowhere else is the stible different attantic states, and nowhere else is the visions and equipments of all sorts are to be had in Norfolk. lames, Chickahominy, Nansemond and tributary creeks, offer y of attraction to the yachtsman and sportsman. Quail, duck, and deer are still pleniful, though the best lands are posted and ission to shoot is necessary. The Chickahominy, 40 miles up, was ted as swarming with ducks last season, and birds and rabbits lenty about the headwaters of Back Creek. York River and horhood also afford abundant sport. Norfolk harbor has good orage for yachts in the Eastern Branch beyond all steamboat c. The Navy Yard in Portsmouth is also an attraction, and fes-es at the great Hygein Hotel at Fortress Monree are within easy . A short railroad runs from the city to Virginia Beach, a ing summer resort on the Coney Island plan. Drummond Lake, e perch abound and the angling in general is good, can be reached anal, and the route south is open into the sounds with their end-nies of rivers and bays down to Beaufort. . QU'EPENE

A LAUNCH AT FALL RIVER. —On May 5 there was launched by Read Bros. the Mable F. Swift, designed by Mr. J. Borden, Jr., for Mr. C. W. Anthony, of Fall River. Her dimensions are: Length over all, 45t., waterline, 35ft.; beam, 14ft. 6in.; hold, 6ft.; draft, 5ft. 6in.; iron keel, 8,390 pounds. The under-water body of the yracht shows a very fair form and promises a speedy hoat. The sheer is noticeable from its lowest point being far aft, with a quick spring to the counter. The stem and sternpost are plumb. The boat is very roomy below, with a large cabin, a stateroom to starboard and plenty of stowage room and pantries, while the forecastle is of a good size. In the cabin four berths can be made up back of the lockers. The interior is finished very handsomely in oak and mabogany. The yacht will be sloop-rigged and will enter the local races this summer. LAUNCH OF THE CINDERELLA.—ON Saturday last, in spite of the rain, the new yacht Cinderella was launched by Mr. Piepgrass, at Greenpoint. On her wet decks were Mr. and Mrs. Iselin. The yacht had her spars and gear in place, topmast on end, and was ready to bend sails as soon as afloat. At 115 P. M. the dog shores were knocked away and she slid rapidly into the water, Mrs. Iselin breaking a bottle of wine over her starboard bow as she left the land. The Cinderella is still at Piepgrass's, but will go into commission as soon as the inside ballast is stowed.

St. Lawrence

Hew Hublications. FRANK'S RANCHE; OR, MY HOLIDAY IN THE ROCKIES.

THE author of this little work, who signs himself E. M. in his dedi-catory letter, is one of those respectable well-to-do citizens of famous London Town, who in common with many of his species carries under his broadcloth an ineradicable taint of the roying blood which, whether interied from the Norsemen or the restless followers carries under his broadcloth an ineradicable taint of the roving hi which, whether inberiled from the Norsemen or the restless follow of Hengst and Horsa, is apt to assert itself most unexpectedly. author appears to have escaped the controlling influence of disease in his own person, only to transmit it in a concentrated fr which necessitated his being sent to the "Far West" for chang air. In both father and son there appears to bave been an abid faith in the old time tradition tbati if one can only get a piece of I to plant money in, it will return to you in time an increase of for sixty, or even a hundred fold, and Frank heing started a farm pupil on a Minnesota farm, both he and his parent we naturally anxious for the time when the young hopeful should prepared to till his own acres. It took six months before Frank : "able to satisfy himself and father that he knew enough of farming give his preceptor "winkles," and the fates willing it, that at to very period a farm of two hundred acres was thrown on the mar a dead bargan, the opportunity was embraced eagerly, and Fr began to plant his father's dollars in improvements. At the closs the first year the return was not quite what was expected, but j then a splendid opportunity occurred for establishing a creamer propilious in turning up at the very moment a man without me but will he expression

Then in promises as a Senatoru tor establishing a creating as propilous in turning up at the very moment a man without means but with all the experience necessary to the working cameery as with a moneyed partner. The band of fate was so distinctly recognizable beers that when the author received a letter intuity recognizable interpretence necessary to the working recommendiated a letter intuity recognizable interpretence necessary to the solution of the solution

CHARLES DALY HAMMERLESS

321

Is the Foremost Gun of the Day.

READ A FEW FRESH WORDS OF COMMENDATION.

No. 1-From the Pacific Slope.

Messrs. Schoverling, Daly & Gales, New York: GENTLEMEN-I have a 10-gauge Daly—the one I ordered expressly for myself about a year ago—and now I want a 12-gauge Daly. It is the best gun in the world. I have had one of the club Medals here ever since I had my Diamond Daly, and still hold the champion medal. I have broken teu out of fifteen clay-pigeons at 75 yards with No. 7 shot with it. C. B. Gould, who holds the first class medal, shoots Daly 12-gauge. J. B. Cline, one of our crack shots, shoots Daly 10-gauge. Frank Day, one of our crack shots, shoots Daly 10-gauge. J. Downey Harvey, one of our crack shots, shoots Daly 10-gauge. Harry Houghton won first prize, Alexander County Sportsmen Club, with a Daly 12-gauge. Martini Chick, the Champion of Southern California, shoots a Daly 10-gauge. We are about making a match for Chick and Crittenden Robinson, of San Francisco, and have got \$500 that says the Daly gun beats him. We have sold all the above and several others. Now I want a Daly 12-gauge, and I want 3 ou to pick me out one which will be up to the mark in outward appearance—a beautiful piece of timber and finely marked barrels. For the shooting part, I have no fear that it will be to my satisfaction. Respectfully yours, (Signed) T. E. WALKER, of Walker & Smith.

No. 2-From the Gulf.

Messrs. Schoverling, Daly & Gales, New York: GENTLEMEN—The Charles Daly Hammerless Gun that I ordered through your house has been received, and to say that I am pleased with it only conveys in part what I think. It has been examined by the best judges in this country, and they say that it is the finest piece of work that they have ever seen: that in fact they don't think the workmanship can be excelled. I have thoroughly tested the shooting qualities, and it comes up to the specifications. I enclose you a slip from the Post. Respectfully yours, (Signed) M. FLOECK.

(SLIP FROM HOUSTON "POST.")

(SLIP FROM HOUSTON "POST.") "A Post reporter while taking in the sportsmen's element of our population this morning, dropped into Mike Floeck's gun shop on Travis street, and there found several of the crack shots looking with a degree of unusual interest at a gun that seemed to be on exhibition. It turned out to be a piece that had been made to order by Charles Daly, and brought on by their Agent E B. Kissam. It is one of the prettest pieces of human mechanism that the eye of man ever feasted upon. The experts in that line, including some of the older members of the Gun Club, were present, and they could not speak its praises loud enough. The beauty and purity of the material, the close-fitting work of the master artist in putting the parts together, the ingenious carving and ornamentation adorning parts of it, with the desirable weight and handiness, all appealed to their judgment in a manner that elicited expressions of unbounded admiration. The barrels are of Turkish Damascus steel, 10-gauge, and finished to the Queen's taste. The stock is of walnut, beautifully finished. The trigger guard, in the height of art and taste, is inlaid with small figures of bags and birds, being a brace of handsome setters on a hunt, a pair of quail about to flush, and a brace of prairie chickens standing as if they had just spied the common enemy. Altogether the gun has not probably an equal in the State, and no superior in the South. It seems to be the perfection of the gunsmith's art."

No. 3-From the Great Northwest.

CHICAGO, May 1, 1886.

Los Angeles, Cal., April 15, 1886.

HOUSTON, Tex., March 27, 1886.

Messrs. Best & Co., Minneapolis: GENTLEMEN-You ask permission to publish the letter I wrote to my friend Mr. C. in reply to his asking my advice as to the purchase of a gun. I have no objection except I request you to leave out the portions in which I have given the bad points of a few well-known makes. I have friends who handle these goods and do not wish to have my comments put in print. Yours truly, (Signed) Comments put in 1886 Снісадо, Аргіl 10, 1886.

We introduce this new aspirant for the favor of the shooting public, with great confidence that before this fall season is over it will have made its mark. Heretofore Hammerless Guns have been used only in the most expensive kinds; all previous attempts to bring out a cheap or medium priced one have been a failure. THE MANHATTAN is a medium priced, well fitted gun, and is equal in work or finish to any American make. Every care has been taken to make of them first-class shooting guns.

PRICE: Fine Damascus Barrels, Neatly Engraved, \$75.00 SCHOVERLING, DALY & GALES,

84 & 86 Chambers Street, New York.

FMAY 13, 1886.

Loaded by machinery. Every cartridge perfect. Every one alike. Wadding of uniform thickness, and placed squarely on the powder and shot. Rammed with uniform pressure. Beautifully and securely crimped. Packed 25 in a pasteboard box, 20 boxes in a case. The Most Convenient and Best Ammunition in the World. Highest scores on record made with these cartridges. Persons who use them in the field are constantly speaking in their praise. WOOD POWDER has shown its best results in these goods. PIGOU, WILKES & LAURENCE POWDER does its best work in Chamberlin cartridges. Any of the leading brands of paper shells or powder may be had. THE VARIETY OF CARTRIDGES FOR TRAP SHOOTING IS NOW COMPLETE. WADDING ONE SIZE LARGER THAN BORE OF GUN for such guns as require this style of loading.

PERFECTION LAST.

BRAY FLY BOOK.

It will be gratifying to anglers to know that there is at last a *perfect* Fly Book in the market one in which flies may be attached as quickly as they could be thrown into an ordinary envelope, being at the same time perfectly secure, and may be as readily detached. The snell, regardless of its length, is at all times kept straight (the advantage of which no angler need be told), and each fly stands out so that one can see in an instant his entire assortment and select the one he desires.

FOREST AND STREAM. A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY. SIX MONTHS, \$2.

NEW YORK, MAY 20, 1886.

VOL. XXVI.-No. 17 Nos. 39 & 40 Park Row, New York.

CORRESPONDENCE.

THE FOREST AND STREAM IS the recognized medium of entertain-ment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be re-garded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENIS.

Only advertisements of an approved character inserted. Inside pages, nonparell type, 25 cents per lhe. Special rates for three, six and twelve months. Reading notices \$1.00 per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted.

SUBSCRIPTIONS

SUBSCRIPTIONS May begin at any time. Subscription price, \$4 per year; \$2 for six months; to a club of three annual subscribers, three copies for \$10; five copies for \$16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Samp-son Low, Marston, Scarles and Rivington, 188 Fleet street, Loudon, Eng. Foreign subscription price, \$5 per year; \$2.50 for six months. Address all communications, Address all communications,

HOW THE CASE STANDS.

N the year 1872 Congress withdrew from settlement, occupancy or sale under the laws of the United States. the region now known as the Yellowstone National Park, and decreed that it should be "dedicated and set apart as a public park or pleasuring ground for the benefit and enjoyment of the people." For a number of years after the passage of this act, small appropriations were made for the improvement of the Park, and as each year more people visited it, the public interest in it increased. Then in the autumn of 1882 a syndicate of shrewd capitalists endeavored to secure a monopoly of the Park for a period of ten years. This attempt was opposed by those best acquainted with the The press at large took up the question, and forced region the authorities at Washington to deny to the monopolists the extraoroinary privileges which they had almost secured. The noise which this contest made awoke the public not only to the importance of the Park as a region of rare beauty and startling wonders, but to its value from an economic standpoint. They learned now for the first time that, in the pine-clad mountains of the Park the sources of two great rivers which water immense tracts of arid desert on either side of the main chain of the Rocky Mountains; that the forests which clothe these mountains protect the stored up waters, which fall during winter and spring, and give them forth all through the summer, thus furnishing an equable flow to these streams; for in the decaying vegeta tation which forms the floor of this forest, the melted snows of winter are held as in a sponge, and springs, rivulets and brooks are supplied. They learned that if these forests should be destroyed by fire or the axe, the rains would soon wash away the forest floor, the waters would no longer be arrested on their way to the streams, but thrown into them at once on falling, would cause at first great ficols, to be succeeded by periods at drought. So the great rivers,

on which so many farmers depend for water to irrigate their crops, would be useless for this purpose. It has been a hard struggle to protect the reservation against the greed of the rich and the stupidity of the foolish, but so far this difficult task has been accomplished.

Now, a new danger threatens this Park, which has been dedicated and set apart for the "benefit and enjoyment of the people." Another attempt is being made to deprive the

people of their rights in this region, and the attempt is so strongly backed that it has been favorably reported on by committees of both Houses of Congress. A bill has been introduced in both Senate and House to permit a railway to pass through the Park. If this bill should become a law, the people's Park will be utterly destroyed. A railroad through it means settlements in the Park, means game destroyed, means forest burned off, means barren deserts along the Snake and the Yellowstone Rivers where they traverse the plains. The Park, set apart for a pleasuring ground for the people, will be swept bare of everything which now makes it attractive.

The danger is a most serious one and it is imminent. It is a matter which concerns each citizen of our country. Shall this Park, which was set apart for the benefit of the people, now be taken from them and be handed over to a railroad corporation? No poor man can go into the Park and build a cabin there to spend a few months in the year, and yet it is proposed to permit this projected railway, which menaces all the objects which it is desired to preserve, to have enormous privileges in the reservation. The plea that the railway is necessary to develop a new mining region is specious, but misleading. It has been clearly shown that railroads can be built to this mining camp without threatening the integrity of the Park, and, therefore, Congress has no excuse to grant permission for any railway to be built within the Park. If the Araerican people are prepared to suffer this infringement upon their rights, we very much mistake their temper.

As stated last week, the property of the National Park Improvement Company was sold on Wednesday, May 12, at Evanston, the county seat of Uinta county, Wyoming Terri-tory. It was bought by Mr. E. E. Thorne, acting in the interest of the Northern Pacific Railroad Company. The price paid was twenty three thousand dollars. The receiver will report at once to the court for confirmation of the sale.

A "SHY" SENATOR.

A MONG those who voted in favor of the law to permit the killing of Adirondack does and fawns with clubs was Senator Cullen, of New York, known to his intimates as "Jack" Cutlen. When Senator Cullen voted for the law which was to legalize clubs and "tail holts," his knowledge of the former was almost wholly confined to them as they app ar when printed on card b ard, and employed in the fascinating but uncertain game of draw. Of the material club he then knew nothing, exc. pt by hearsay. He is wiser A practical application of clubs to his own S natornow. ial skull has entirely changed his views on the subject, and it is probable that should the question of clubs or no clubs ever come up before any body of which "Jack" Cullen is a member, his voice will be recorded in no uncertain tones as against clubs.

The Senator has experienced a change of heart, and this is how it came about. A couple of weeks ago Senators Daly and Cullen and ex-Senator Gibbs were riding down town in a Third avenue car. It was during the strikes on that line, and Cullen, who poses as the friend of the workingman, was inveighing bitterly against the outrages of capital and the wrongs of the laboring man. Either through baulky horses or the interference of another driver, the car in which they were riding became blocked and could move neither for ward nor backward. The delay irritated Cullen, who stepped out on the front platform and began to issue orders right and left in loud and authoritative tones. So noisy did he become that one of the police officers, who was trying to get the car out of its difficulties, took him for a striker, and seizing him by the collar, pulled him off the platform, intending to take him to the police station. The honorable Senator pulled back as vigorously as the officer pulled forward, and finally the latter, whose temper had become somewhat source by sleepless nights and numerous rows with the strikers, lost patience, and raising his club, rained down a shower of blows, beating the unhappy Senator about the head most vigorously. It took but a brief season of this to subdue the bewildered lawgiver, who, hatless, torn and bleeding, was haled to the police station, whence after a short detention he emerged, feeling no less injured in his sensibilities than in his person. It is understood that Senator Cullen has remarked that he has no further use for clubs, though his experience has taught him that their use does make those upon whom they are employed shy. So far, he agrees with Dr. Ward, but he thinks that there are some things more desirable than being made shy just in this way, I for circumventing insect pests.

and he is clear in his own mind that hereafter he shall favor no such methods.

No doubt Senator Cullen, as he was being clubbed in the streets and dragged along to the station house, congratulated himself that in this way he was escaping from the hands of the bad strikers, who but for this might be throwing bricks at him, and in other ways abusing him. And it must have been a great comfort to him to feel, as the club descended on his honorable skull, that it was the club of an officer of the law and not the brick of a striker. Such feelings, we suppose, animate the exhausted Adirondack does when they are being clubbed to death by the "true sportsmen." With their last breath they thank Providence that they are not being killed by bad still-hunters.

THE ENTHUSIASM which has been developed in connection with the AUDUBON SOCIETY shows very clearly that our estimate of American women was correct. The birdwearing craze grew out of thoughtlessness, and now that atten-tion has been called to the evil results sure to follow from it, those who formerly led the fashion are the first to condemn it. The press, the pulpit and the school are helping on the good work. Within the past few days over a thousand certificates of membership have been sent out, and our last order for circulars was for 20,000. The birds will not be slaughtered this year as they were last.

CAPT. CHAS. A. BENDIRE, after more than thirty years of cavalry service in the United States Army, has been retired, and is now devoting his time to arranging and perfecting the National Museum collection of birds' eggs and nests. His own collection, the most complete in the country, has been presented to the museum. Students of oölogy are to be con-gratulated that the National Museum collection has been rescued from the condition of neglect in which it was rapidly depreciating, and has been intrusted to the enthusiastic and devoted care of one so competent as Capt. Bendire.

"DAYS WITH THE BARMECIDE CLUB" is the title of a series of papers recounting the experiences of an angling club during its Adirondack outing. The club's name is t-ken from the "Arabian Nights" story of one of the princes of Barmac, who, being importuned for food by a beggar, reated the hungry man to a feast of imaginary viands. Whether or no the pleasures of the Barm cide Club were in like manner wholly pretended or more substantial, will be disclosed in successive chapters of the relation.

_

_

WILD TURKEYS FOR PRESERVES -It is stated that three pairs of wild turkeys taken from America in 1880 by Count Brenner and let loose on his estate in Austria have increased and multiplied until the number is now estimated at 500, and the count enjoys his shooting very much. This is an example for some of the American game clubs who own preserves adapted to the turkey. No nobler game can be found for stocking island preserves.

NEW JERSEY SPORTSMEN are talking about a convention t Lake Hopatcong next autumn to prepare for the next Legislature a codification of the game and fish laws. The game laws should be made a chapter separate from the fish laws.

CHANGED GAME LAWS .- As changes have been made by the various Legislatures in the game and fish laws, secretaries of game societics and others are requested to notify us of such changes, particularly changes of the open seasons.

REPORTS OF CATCHES .- Anglers are invited to send to us for publication reports of their catches and any information about fishing resorts which is likely to prove of service to others. News notes are always welcome.

ANGLERS ARE FLOCKING in force to the Maine waters; and the reports so far received show that the catches are good. The salmon anglers are jubilant over the restocking of the rivers.

DEER HOUNDING .- The deer hounding bill passed by the New York Legislature having become a law, the practice is now legalized for the season Sept. 1-Oct. 5.

IN TIME OF PEACE PREPARE FOR WAR .- In another column a valued London correspondent describes a device

COOKE AND THE CLARK'S FORK 'MINES.

THE number of untrue statements put forth by the advocates of the Cinnabar & Clark's Fork R. R. is rather surprising. In a case of this kind we are apt to look about for a motive, but here it seems difficult to find one, for these people must have known when they made their misstatements that many persons besides themselves are acquainted with this region, and could at once show their allegations to be false. Perhaps they acted on the old adage that a lie can travel a hundred leagues while truth is putting on his boots. The strongest recommendations of their route came from a man who has never been over it, and who has never been over any other route to Cooke City. The absurd assertions as to the difficultics of crossing the range and the impracticability of building a line up its eastern slope have been pretty well knocked to pieces by articles published in these columns. Among other utterly wild and baseless statements made by the Park Railroad people and repeated in the

favorable reports made by Congressional committees, is the allegation that Cooke City is the central point of the Clark's Fork mining district, the implication being that all the mines are tributary to it. That an assertion so unfounded and so easily disproved should be made, only shows how entircly the promoters of

this railway project rely on the ignorance of Congress, and how much faith they have in their ability to rush the bill through both Houses without any investigation whatever. To hear Cooke City spoken of as the center of a thriving mining district is extremely comical to any one who knows that the town is a collection of twenty or thirty log cabins and canvas shanties of the most temporary kind. It is just such a mining town as may be found in any district which has yielded a few good prospects, but which may be deserted to-morrow for some other site and left to the occupancy of the hawks, owls and coyotes.

COOKE is not the center, geographical or commercial, of the Clark's Fork mining district. The town was located near one of the earlier discoveries of the region, and is on its extreme from the town by an impassable mountain southern border, almost all of the claims and prospects being to the north and separated from the town by an impassable mountain range. From most of the mines the ore would have to be hauled by wagons for a long distance to the south and east to the south branch of Clark's Fork, and then-if the Park Railway should be built and Cooke should be its terminus—up that and over the divide to Cooke. 'I'his would be a great thing for the town, but it would not be so good for the mine owners. A railroad built up Clark's Fork would enable the great body of the mines to get their ore to a shipping point by a much shorter haul than if it were necessary to take it by wagon down to the Billings road and then up the river to Cooke, for of course the ore would be delivered at the nearest railway station A railway terminus at Cooke would benefit chiefly the two mines which lie close to that

place. To most of the other mines some point east of Cooke would be far more convenient, as well as much cheaper. Cooke City real estate owners and the proprietors of the mines adjacent to it will be satisfied with nothing less than a railway to Cooke, but so far as the development of the district is concerned, that small town may be altogether left out of consideration.

A glance at the accompanying map will show the reader more clearly than any expla-nation, the relation which Cooke City bears to the mines of the district. It will be seen that it is just on the borders of the National Park, and quite a distance south of many of the mines. There is no reason why it should be the terminus of the railway.

The projectors of this railway scheme desire a road built to Cooke not because of any

relation which this town bears to the mines, but because it is so close to the borders of the Park that it furnishes them an excuse for urging the building of a road through the reservation. What they want is not to tap the mines so much as to tap the Park; not so reservation. What they want is not to ap the high rule is to a to be in the high high at the much to secure an outlet for the ore as to secure an inlet for passenger traffie in the Park; not so much to establish the industries of this mining camp as to establish themselves in the people's pleasure ground; not so much to develop the Clark's Fork mining district as to benefit themselves. With all the forces to be commanded by money and influence, they are laboring to secure the assent of Congress to the project which they have in view, but they will scarcely succeed so long as the interests of the people are guarded by men like Senator George G. Vest and Senator Chas. F. Manderson.

DAYS WITH THE BARMECIDE CLUB.

<text><text><text><text><text><text><text><text>

Nor shuffling low, I find thee; But stepping straight and cheerily, Thou leav'st the miles behind thee."

"A readster good, und straddling high, Nor shuffling low, I find thee;" But stepping straight and cheerdy. Thom leav's the nulles behind thee."
 Well scanced and hard as ualis, with an etaslicity in their hour without an apparent effort, and pulling up strong ludge, that their conformation was nearly perfet.
 We pulled up toward the midlle of the Alternoon at horseman con-gradge, that their conformation was nearly perfet.
 We pulled up toward the midlle of the Atternoon at horseman con-gradge, that their conformation was nearly perfet.
 We pulled up toward the midlle of the Atternoon at the note on this concerning the scheming on the rapit extinction of our rick, for at this place the road bumped its nose agains the stable and disappeared in a stall. At the tavern was phaces—boys with letters in the post office and "knowledge able" men waiting for havitations to drink. We ind met this amor crow do to offen many places to pay multi-attention to hem. Glen, however, disposed of one of the source familian birds; the publication of our methods and invest horoughly. The fellow remarked to one of his come panions in a way that Glen should hear, "Here's a lot of that ducklet Sitr.connee rods be ding danged! I'll taka among 'em, or I dort wast a ceni. Given methe the isst from the scheming on vin the lease and into source and a lig hook, so I cam make 'em come out of the source and a lig hook, so I cam make 'em come out of the source and a lig hook, so I cam make 'em come out of the source with the end at hey have time to think of lightin". I'd make 'em do all they should hear, 'Here's a lot of hew the woll and a light boods, so I cam make 'em come out of the source and a sight how a came. Given one of the source the seed thus sown broadcast over the mate of a do all their lightin' arter they git in the bask.
 The press has inter they git in the bask they when hight as a they diffused press involving a demand for circulars, pledges and certifica

Of course there was a little flurry and a flaring up on the fellow's part at such plain talk, but Glen meant-business, which was soon understood and acknowledged; and when this little affair was amicably settled we passed a pleasant evcning reviving old acquaintances and forming new ones. It was not absolutely necessary for us to employ a guide, as all of us were fully competent to perform all the dutics of cooking, chopping, carrying and the rest, and familiar with the tangled wilderness through many years acquaintance; but then a good guide is handy to have in the house, and we secured one whom we know well. He was always willing to go with us as he had little trouble, knowing we were workers and he could have some sport on his own account, and we were assured that we would not be subjected to extortionate charges. char

Where assured that we would not be subjected to extortabilite charges. Where the Barmecide Club goeth no man knoweth save those directly interested; and we plead guilty to a certain amount of selfshness regarding it, which searchers for quiet sport might condemn. Some things are said to be too good to keep. Our lake is not too good but just good enough; and it's more than twelve miles from a lemon. When one has had to rustle around pretty diligently in search of such a place he does not want to divulge it to Tom and his partners. Not even our wives and sweethearts knew of our temporary whereabouts and we told them that no news from us meant all was well, and they were reconciled to kissing us good-bye. Guide had arranged for transportation from the hotel to our lake. The distance was about sixteen miles—and miles in the woods at that. None of your common Gunter miles, lad out with mathematical accuracy; but literal ones, where the yards and rods are thrown in with sufficient prodigality to prevent any dispute regarding short measure, and if there is an extra half or three quarters on the last mile there is no charge for it.

be yards and rous are thrown in with sunceent, and if there is an extra half or three quarters on the last mile there is no charge for it. Our traps were loaded on a home made sledge, drawn by a pair of sorry looking bay horses, which resembled the aforesaid miles, inasmuch as there was more to them than appeared at a casual glance, and as our acquaintance with them increased during the day's tramp our respect grew greater. The principal ingredient of their harness was leather, but there was a stroug well-defined suspicion of wire and old rope, and altogether the outfit was about as primitive as you could find in a century's searching, but it was far and away better than it looked. The horses were admirably trained for their duties, and it was an interesting caution, the manner in which they handled that sledge through the pathless entan-glement of the forest; but they had a sovereign contempt for roads and would climb over logs and go through dense un-derbrush aud windfalls without a serious hitch in the pro-ceedings. Our traps were strapped and tied on; and the only things broken that day were our fast and an iron can-opener, though the sledge was turned over a score of times before we reached our camping ground. This was late in the afternoon, but early enough to give us ample time to un-load, cut the night's wood and attend to various details con-ducive to comfort. We launched our boats, which had been cached in a thick growth of young hemlocks some little distance above the shanty. We found them in good order with seats and oars, just as they had been left a year before. The shanty had evidently been tenantless since the previous summer, save for the presence of the hedgehogs which, being unable to write, had made their marks in the old bed of browse car-peting the front and only room in the house. We took the carpet up and laid a new one, so they'll not make their mark on us. That was the only repairing we found neces-sary, and then we prepared to cnjoy our existen

Hatural History.

THE AUDUBON SOCIETY,

THE AUDUBON SOCIETY. O Friday, May 7, at the close of a meeting of the Ladies' Christian Union of New York, held at the Home of the Society, 27 Washington Square, the subject of bird preser-vation was introduced by the president of the Association, Mrs, Thompson H. Hollistr. Mrs. Frank Bottome made a stirring address, calling attention to the wholesale destruc-tion of North American bird life, and to the responsibility incurred by women in regard to this destruction. Her re-marks excited great interest. Mrs. G. B. Grinnell gave an account of the methods of the AUDUBON SOCIETY, and spoke of the great work which it had accomplished, and pointed out the benefits which would result from the spreading of its doctrines among all classes of our people. The addresses evoked great enthusiasm, and Mrs. Skidmore, the vice pres-ident, moved that the Association in a body join the AUDU-box Society, and do what it can to assist its work. The motion was adopted unanimously.

DET STATES OF THE STATES OF

EAGLES BREEDING IN CAPTIVITY.

A VERY interesting case of the breeding in confinement of the white-headed eagle (*Haliaetus leucoephalus*) has re-cently come under our notice and the facts and details are certainly worth recording. The birds are a pair taken from the nest when quite young by Mr. Henry Hulee of Toledo, O., nearly six years ago, and ever since in his possession. Their owner writes us as follows:

owner writes us as follows: Editor Forest and Stream: There has been at Eagle Point, five miles above the city proper, a nest or family of eagles as long as the oldest inhab-itants can remember, and they are there still. They are what we call the true American eagle. Their principal food is fresh fish or muskrats, but occasionally they pick up a lamb or small pig. On June 6, 1880, I captured a pair of young eagles from the nest in the top of a white oak tree, eighty-live feet from the ground. They were probably about four weeks old at the time.

time. The first year their heads were dark in color; the second year their heads began to turn white. At the end of six years their heads are entirely white. Some people call them the bald eagle, but I claim there are no bald eagles in North America. On April 6, 1885, the female laid one egg, but it did not batch

On March 20, 1886, there were two ergs in the nest, and April 26 one bird was hatched, which is eleven days old to day. It shows no sign of feathers, but is covered with a sort of yellow down.

yellow down. I have handled the parent birds ever since they were caught, but they are too proud and saucy now and I dare not go inside the cage. The male bird measures, from tip to tip, six feet eight inches; the female exactly seven feet. HENRY HULCE.

EAST TOLEDO, May 3, 1886.

Another and more full account is given by our Toledo cor-respondent, "Jay Bebe":

Another and more full account is given by our Toledo cor-respondent, "Jay Bebe": Editor Forest and Stream: In June, 1880, Mr. Henry Hulce, of the sixth ward, in this fity, took from a nest at Eagle Point, some five miles above Toledo, a pair of eaglets, then about four or five weeks old. These birds were the American bald or white headed eagle (Halizetus leucocephalus), and are now splendid specimens of their kind, having matured greatly both in form and plumage since I first made their acquaintance, some three years ago. Tor a long time Mr. Hulce kept them in a large cage made of heavy wire, but about two years ago he fitted up in a proch in the rear of his house where he had an eastern ex-posure, a slatted inclosure some six by eight feet square and eight feet high. Near the top of this he placed a box a foot deep and three feet square, to serve as a nest. Last spring to the first time the hen laid a single cgg, and though she sat upon it the full time it failed to hatch. Tast March the female laid two eggs, and on the 26th of April one of them hatched, the other proving infertile. It is worthy of note that, according to Mr. Hulce's statement, they prover, that a single instance could hardly affect the general rate. During all the five weeks the female remained con-stantly on the nest, where she was regularly supplied with food by her male companion. When I saw the eaglet to-day, through the kindness of Mr. Hulce, it had entered upon its second week with every pros-pect of a prolonged existence. The mother remains closely in the nest, and when she was persuaded to rise for a moment saw fresh fish, which the mother tears into fragments small enough for its purpose. An wspaper item recently published here speaks of the hatching of two birds. The facts, however, are as herein stated, and what I have written is the result of personal in-vestigation made to-day in accordance with your suggestion. JAY BEBE.

CRAWFISH.—Woodfords, Me.—*Editor Forest and Stream:* I have never found the crawfish in Maine, but think he must be a resident here. If not, would he be a valuable or other-wise addition to our trout streams? Is he, as I suspect, an eater of trout spawn, and how destructive is he to small trout? Years ago I found him abounding in a small stream

in Quebec, north of the St. Lawrence River, and also abun-dant in the stomachs of trout taken from the stream. The trout were also abundant, so the war between the races was evidently not carried on to the point of extermination of either. The habitants called them "escrevisse," and said they were common in other streams as well as in the one where I observed them. I had always supposed they were a fish of warm latitudes, and was surprised to find them so far north. The soil there was mostly clay, overlying limestone of the "Potsdam" formation. Is Astacus found in Maine, and if so where, and is his other name affinis?—Mac. [We do not think the crawfish a desirable temant of trout streams. They are not wholly scavengers, but catch small fish and fatally pluch large ones. They burrow through dams and are a nuisance about ponds. Years ago they were called Astacus, but now that generic name is only applied to those west of the Rocky Mountains, the eastern genus being *Cambarus*. In the latter are thirty two species. C. cafitais as found in the northeast. None are known to exist in New England except in the western portion of Vermont and Massachusetts, and in the central portion of Maine.]

Massachusetts, and in the central portion of Maine.] CENTRAL LAKE, Mich., May 6.—The Tompkinses are our nearest neighbors. They recently moved into their new build-ing, and have just laid two blue eggs. Some say their name is finch, but we call them the Tompkinses for the sake of brevity. Their home is situated in a Japanese honeysuckle and on the south side of onc of the pillars of our veranda. Our wrens have not yet made their appearance, though we daily look for them. The spring is well advanced and the forests are green. On the 20th of April, in driving along the shore of Grand Traverse Bay, as the ice was breaking up along the shore, I observed a solitary kingfisher peering anxiously into the water streaks among the floating ice. He sent his compliments to his relatives in Cincinnati, and I drovc on. On the same day I saw the golden-winged wood-pecker for the first time. The trailing arbutus was just ready to blossom, and the hepaticas had preceded them by a week.—KELPTE.

BRANGERS IN CITY HALL PARK.—May 11.—Editor For-est and Stream: It was quite curious to-day to watch the crowd at City Hall Park. There were half a dozen brown thrushes and as many catbirds hopping about the oasis of lawn among a hundred or more sparrows, and the people going up and down Broadway would stop and look with open mouth and eyes at these strange creatures, and one had only to stop also and look a little wise to be plied with ques-tions as to what they were, whence they came and whither bound. It gives a person a pretty good idea of how far these birds must have traveled for them to stop to rest and feed in such a place as this and in such company as the Eng-lish sparrow.—J. D. E.

THE TRAJECTORY TEST.

THE full report of the FORSET AND STREAM'S trajectory test of hunt-ing rifles has been issued in pamphlet form, with the illustra-tions and the tabular summary, making in all 96 pages. For sale at this office, or sent post-paid. Price 50 cents.

DAYS OF THE TEXAS RANGERS.

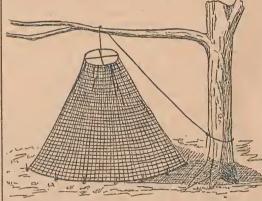

<text><section-header><text><text><text><text>

barn yard are pretty good substitutes, to say the least of them. As long as we have enough of these things, we shall not starve. Indeed, we shall be able to gct along pretty well. Still it is sad to see all these pretty and good things marching away into the dead past, never to return any more

marching away into the dead past, never to return any more. Touching these things that are dying, there is another ex-traordinary thing that is now quietly going on in this part of the world. The prairie dog, which until recently covered this whole country with his millions, is, I an told by coun-trymen from all directions about Abilene, going the way of all flesh without apparent cause. They say that where hun-dreds were last year, there are not now tens, and in some places that only a few despondent-looking individuals are left where there were recently great prairie dog cities. It is not the work of poison; it is simply a natural dying out. Perhaps his epoch has closed, and that the bell is tolling for him to take his departure into the dead past too. He does no good now that we know of, and probably can do none, and therefore he goes. N. A. T. ABILENE, Tex., May, 1886.

A MOSQUITO-PROOF TENT.

A MOSQUITO-PROOF TENT. Editor Forest and Stream: Although some months must elapse before the great army of what "Nessmuk" calls 'onters" will again seek for pleas-ure and relaxation from toil in the American bash. I would like to draw their attention through the medium of your paper to a simple means of lessening the annoyances to which they will be subject from insect tormentors. Oily mixtures such as "Nessmuk" recommends are doubtless excellent for those who care only to fish, shoot or loaf around the camp, but many campers enjoy an occasional read in some interest-ing book, or like to write a journal; others, including my-self, are fond of sketching scenery or making drawings of wild flowers. It is impossible to keep paper clean when ones hands are coated with a greasy compound, and equally impossible to write or draw when they are covered with flies or mosquitoes. For those, therefore, whose amusements sometimes require clean hands, I strongly recommend a kind of muslin screen somewhat in the shape of a bell tent. The

top is formed with a thin cane hoop, about two feet in diam-teter, covered with calico like the head of a drum. Two strong pieces of tape are sewn from side to side of the hoop, crossing each other at right angles, and in the center where they meet is attached a thin rope about ten feet long. To the calico at the rim of the hoop is sewn a quantity of mus-lin, descending so as to form a bell six feet in hight and eight feet in diameter at the ground. Around the lower edge, at intervals of two feet, are small tape loops for pegging out wide when two or three people wish to sit inside. The whole article weighs only about two pounds, and can be folded flat so as to go inside a bag when traveling. When required for use the rope at the top is thrown across the branch of a tree and drawn up just enough to let the lower edge of the muslin rest on the ground. Danger from fire can be avoided by soaking the screen in solution of tung-state of sodium. In 1870, when starting for an excursion in the Hima-layas, where insects are extremely troublesome, I had one made by the advice of a friend, who had, not long before, marched through those mountains into Thibet and back into India through the valley of Cashmere. W. H. H. Murray, in his "Adventures in the Wilderness," recommends campers who are troubled by flics to go inside the tent, smoke them out and drop a piece of muslin over the doorway; but one objection to this is that on a hot sum-mer's day the interior of a tent is stilling. With the muslin screen above described a lady can enjoy the fresh air and read, write or sew in peace; a painter can carry it slung on his shoulder and hang it to any convenient bough when he finds an object worth drawing. The above sketch will give an idea of the shape. Lowon, Nov. 29, 1885. LONDON, NOV. 29, 1885

WAYS OF THE RUFFED GROUSE.

WAYS OF THE RUFFED GROUSE. Of the morning late in September in 1884, just as it began to grow light, I was forcing my way through a dense feet distant. Instinctively my gun came to my shoulder, when just as I was about to "cut loose" at him what was and land upon the ground. I was not quite on the trigger of Iheld my fire, and quicker than thought he recovered and was off again, not, however, rapidly enough to evade the charge of No. 8 which I sent after him and which hrought him again to the leaves, this time to stay, for I had not removed my gun from shoulder, in fact did not have in a so quickly did it all transpire. At first I was at a loss to count for the freak, for the monarch of game birds is so often testify. On examining the ground I found that after he had risen some three feet from his bed he flew attract he had risen some three feet from his bed he flew diameter, which at first yielded to his momentum then sprang back like a bow, when the bird performed the gyration de-stribed. Perhaps his late nap had dulled his faculties, or his may have been his customary manner of taking moring traces an excellent dinner, and that while performed the performed the performed the strather birds performed the strather birds in good health, that he helped to grace an excellent dinner, and that while performed the strather being the song the strather birds in good health, that he helped to grace an excellent dinner, and that while performed the strather being to grace an excellent dinner, and that while performed the strather being to many have been his customary manner of taking moring to grace an excellent dinner, and that while performed the strather being to grace an excellent dinner, and that while performed the strather being to many have been his customary manner of taking moring to strather being the strather being to strather

ONEONTA, N. Y.

NOTES ON QUAIL SHOOTING.

Billior Forest and Stream: As a matter of fact I have never waited on a flock of par-tridges that utter failure did not follow as the result of the experiment. From the fall of '65 to '81 inclusive, I was afield nearly every good day, and generally by myself, which gave the best opportunity for watching the ways of birds. At Sandy Point, on lower James River, I hunted two falls over 8.000 acres of level cleared fields, and have seen a covey of birds hover as though they were in the very act of coming to the ground; then they would seem to take a second thought and fly off at right angles at least half a mile. If you don't note with precision where a partridge or a covey lights, finding them is a very uncertain business. A. VIRGINIA.

Editor Forest and Stream: "Old Timer" is probably aware that the question of the ability of the Virginia partridge to withhold its scent was much discussed in the old American Turf Register and Sportsmar's Magazine, pro and con, and no conclusion arrived at. Experience has led me to the conclusion that there is nothing in it, the nature of the soil, of the air about the spot and of the eover upon it, renders the seent very poor at times, which is all there is of it. Much more frequently men's eyes deceive them as to the spot where the birds actu-ally drop into cover. Fox hunters, coon hunters and all who pursue game with dogs have scent puzzles bottled up in their experience. M. G. ELLERY, M.D. WASHNOTON, D. G. WASHINGTON, D. C.

Editor Forest and Stream:

<text><text><text><text>

point in such rapid succession that we were "bothered entirely."

entirely." I could take up columns of your esteemed paper in citing cases from actual experience similar to the above, but I think the two mentioned sufficient to show that from excessive fright or other causes quail can and do withhold their scent to the utter discomfiture of dogs and sportsmen. W. W. Mc.

SPRINGVILLE, Pa., May 3, 1886.

RECOLLECTIONS OF A SPORTSMAN.-III.

<text>

its head off. As it was going to be moonlight that night, some one pro-posed that we go after opossums, and swing around by the old mill creek and shoot some muskrats, as they now had on their winter coats. It took furs and the like to buy pow-der and shot in those days, when shot sold for twenty-five cents per pound and rifle grade powder at \$1.25 per pound. As my wounds were stiff and smarting considerably and I felt quite sore, I declined, knowing well that there was more fun for me in one of the neighboring farm houses, where dwelt one of the prettiest little Jersey maids to be found in the county. BEDFORD.

ALBINO TURKEY.—A well-known resident of Wolf Hill Prairic, Ind., who goes under the name of "Old Wabash," while looking for some cattle in the bottom land the other day, started a big wild turkey. The bird flew over "Old Wabash's" head and was making for the treetops, when "Old Wabash" fired a stick at him and knocked the turkey down and caught him. It turned out to be a young male bird and a partial albino. A large number of persons have seen it, and it now allows them to feed it out of their hands. Since "Old Wabash's" streak of good luck, a large flock of twenty-five turkeys have been seen in the same bottom, among which, it is said, there is one bird almost pure white in color. Several attempts have been made to shoot it, but, as it is very wary, it has thus far saved its bacon by long flights.

CLEVELAND "GAME."—*Editor Forest and Stream:* A huck-ster called my attention this morning to a "nice lot of game just received from Chicago." The contents of the box I give you as he connted it off. You will agree with mc that the slaughterer brought quite a variety to bag, especially if the work was all consummated at one hunt: Three prairie hens, 2 blue winged teal, 5 scaup ducks, 3 black-bellied ployer, 2 golden ployer, 1 kildeer ployer, 2 Bartram's ployer, 23 lesser yellowshanks, 2 solitary sandpipers, 16 pectoral sandpipers, 2 jacksnipes, 2 meadow larks, 1 bobolink. Sixty-four head in all, mostly male birds in full spring plum-age and poor in flesh. The ornithologist will appreciate all this. In the evening I was informed by Monsieur the Huckster, that he had disposed of the "whole lot" to a Mrs. Dude, on the avenue, who is noted for her swell lunches, local humane and foreign missionary efforts. How nice to see those pretty fingers picking the spare meat off the bones of the innocents. The old black cat that skulks in from the meadow with a bluebird in his maw is to be admired when contrasted with the destroyers and consumers of this lot of birds "fresh from Chicago." Success to your game laws, Andubon clubs, anti-hounding deer laws and your efforts to keep railroads out of the Yellowstone Park; but for my part, I quit, I "throw up the sponge," hoping that the coming man will have only *Passer domesticus* for game and song bird and the European carp for his bamboo rod.—Dr. E. STERLING (Cleveland, O., May 8). CLEVELAND "GAME."-Editor Forest and Stream: A huck-

NEWARK AND BOSTON GUN CLUB.—Messrs. William R. Williams, John Illingworth and Joseph Mundy of Newark, N. J., and Henry A. Priest of Boston, Mass., have taken a five year lease of a large portion of what is known as "Middle farm," on Spesutia Island, Maryland. The organ-ization, which is called the Newark and Boston Gun Club, is limited to the above named members. They are building a beautiful club house which will be well appointed. It faces the famous Havre de Grace flats at the headwaters of Chesapeake Bay, and is the nearest club house to the best canvaback duck grounds. The club is building a large iron steam launch at Newark, N. J., which is to be fitted up with batterics, decoys and boats. Where the club has lo-cated was several winters ago the trysting place for the famous gang of big-gun night shooters. It was on the north shore of Spesutia Island that they met at night at certain periods throughout the year. Fortunately the Maryland ducking shore owners were successful in capturing some of the big-guns and arresting several of the outlaws, as de-tailed at the time in the FOREST AND STREAM. Wash. Barnes, the ringleader, is now employed by Mr. Middleton, who also resides on Spesutia Island.

RNODE ISLAND GAME LAW.—The statute enacted Apri 28, 1886, provides: Section 1. Section 4 of chapter 94 of the Public Statutes is hereby amended so as to read as follows: "Section 4. Every person who shall take or kill, sell, buy or offer for sale or have in his possession any woodcock from the first day of January to the first day of September; any ruffed grouse or partridge from the first day of January to the first day of September; any quail from the first day of January to the first day of October; any Bartram's tattler or upland plover, commonly known in Rhode Island as grass plover, from the first day of April to the first day of August; any dusky or black duck from the first day of March to the first day of September; any wood duck or summer duck from the first day of March to the first day of March to the first day of September, shall be fined twenty-five dollars for each of said birds." Sec. 2. This act shall take effect immediately, and all the acts and parts of acts inconsistent herewith are hereby repealed.

VERMONT.—Rutland county has a new game protective club, with headquarters at Rutland and branches in different towns. The officers are: President, W. R. Dorr; Secretary ann Treasurer, D. N. Baxter; Executive Committec—C. L. Howe, A. W. Higgins, J. C. Dunn, O. W. Sterl, S. E. Burnham, G. T. Loop, A. Kilburn, John P. Hunt and W. L. Ferguson. These vice-presidents by towns were elected: Rutland, W. Y. W. Ripley; Benson, H. S. Howard; Bran-don, E. Thayer; Castleton, H. L. Clark; Chittenden, Edwin Horton; Clarendon, W. G. Marsh; Danby, Dr. Frank E. Whipple; Fair Haven, R. C. Colburn; Hubbardton, Cyrus Jennings; Ira, Simon L. Peck; Mendon, Alonzo Ormsbee; Middletown, C. E. Green; Mt. Holly, Marshall Tarbell; Mt. Tabor, Edward Foley; Pawlet, D. W. Bromley; Pittsfield, Dr. C. W. Brigham; Pittsford, Edward Smith; Poultney, M. J. Horton; Sherburne, D. W. Taylor; Shrewsbury, H. C. Gleason; Sudbury, E. C. Spooner; Tinmouth, I. D. Tubbs; Wallingford, Lyman Batcheller; Wells, R. M. Lewis; West Haven, R. C. Abell.

VIS MEDIOATRIX NATURÆ.—A drake wood duck was shot this spring near Eagle Pond, Ind., in whose under bill there was a large hole, through which its tongue protruded. Evi-dently the hole was the result of an old shot wound. The tongue had become callous and enlarged at the tip and the bird was unable to withdraw it. On the same shooting ground this spring seven jacksnipe were killed marked with old shot wounds. One had a No. 10 shot imbedded in the second joint of one of his legs. Old Western gunners say that there is not a live jacksnipe to-day that has not had at least a score of shots fired at it. It would be interesting to hear from shooting men of experience what they consider the natural period of life of the snipe, woodcock, grouse, quail and other game birds.

A CAPTURED SWAN.—Charles Ross, of Lyons, Indiana, made a lucky shot at swans this season at Bee Hunter Prairie. Three came low down over the marsh. Ross saw them coming, and although a flock of geese passed tempt-ingly within range, hc did not fire at them, and waited for the approach of the bigger game. The swans came head on, and were just about alighting when Ross fired and downed them all with one barrel. Two fell dead, but the other was only wing tipped. He was captured after a long chase, and when Ross started for home he made the swan walk in front of him all the way. The town turned out to see Ross driving a wild swan down the road, and a stranger was so much interested he bought the bird for \$5.

INFORMATION WANTED.—Perry, N. Y., May 13.—We want a place where a party of four or five can find good deer hunting, and would like a few bear also. Give the name of some party near the locality with whom we could correspond regarding guides, transportation (if necessary) etc.—J. L. W.

DIFFERENT WAYS OF CAMPING.—I think "W. N. B." can-not have tried the fur bag or he would not condemn it as he does. After sixteen years given up to wild life and big game hunting in all parts of the world, thirteen of which have been spent in Western America, I find that there is no bed so warm or so portable as a fur bag. Mine will go very easily behind my saddle, including an outside waterproof canvas bag, which entirely does away with any necessity for a poncho or ground sheet. It weighs exactly ten pounds and is warmer than three pair of blankets, which is the usual allowance for a man in the mountains, and these would weigh some twenty-four pounds, besides ground sheet and cover. I always try every new and promising device for camping before condemning it.—C. A. M.

THE NARROWS.—A club, consisting of twenty-two mem-bers, chiefly Newark men, have leased a ducking shore in "The Narrows," which is six miles south of Havre de Grace. The club has purchased a large sloop to carry the game, and is making ready for a big shoot when the season opens. Canvasbacks and redheads are now circulating a notice at their breeding grounds at Alaska, to beware of "The Narrows" next autumn.

FLORIDA.—Jupiter Inlet.—Hunting has been quite good the past winter. Deer have been killed in large numbers, especially by the numerous Indian pot-hunters. Wildcats, panther, bear and other smaller game are numerous. Sea-trout, bass, snapper and other fishing good.—G. G. F.

NEW JERSEY.—New laws prohibit killing red or gray squirrels during months of November and December; im-pose a fine for having in possession any sort of game after the same has been snared; restrict killing European pheasant, partridge or grouse for three years.

A PIGEON STORM.—A Titusville, Pa., old resident recalls that on March 25, 1852, in a tremendous snow storm great flocks of pigeons were blinded and bewildered, and coming to the ground were killed by hundreds.

BUT LOTS OF FUN.-Vicksburg, Miss., May 6.-We had an interesting trip after turkcys, but found the birds "up to snuff," and got only three in a ten days' hunt.-P.

EAST BERKSHIRE, Vt., May 12.—No spring shooting of ducks about here, because they did not come to be shot. Trout fishing has started in fine.—L.

Sea and Biver Hishing.

FLY-FISHING FOR SHAD.

Editor Forest and Stream: The shad scason of 1886 has opened with brighter pros-Editor Forest and Stream: The shad scason of 1886 has opened with brighter pros-pects than the three previous years have shown at the same date. Not having my memoranda with me, I will have to trust a treacherous memory, which reminds me that the sea-son of 1888 opened some days after the 25th of May, with very unsatisfactory results. The scason of 1884 opened about the 1st of June, and for some days the fishermen had to be satisfied with from one to three fish per day; 1885 opened with one shad on the 21st of May and no very per-ceptable increase until June. The three years were un-profitable except in blistered hands from persistent rowing. The season of 1886 opened Saturday, 15th, with seventeen shad, all good fish. To-day, Monday noon, shows consider-able increase on Saturday's catch. How it will continue re-mains to be seen. Let us hope the anglers will find a fcw pleasant hours with the Connecticut River shad. The two scasons of 1884 and 1885 gave the fish a better opportunity to do their own hatching than they have had for the previous eight years. With the exception of three days last summer and about a week of the summer previous, surplus water was running over the dam. Through the close seasons of both years (when out after bass) shad were plenty and good size. One evening in Sentember 1884 I was weding and whin-

Surplus when their fundaming of the fundamination in the seasons of both years (when out after bass) shad were plenty one evening in September, 1884, I was wading and whip-ping the rapids between the bridge and the dam. The fish were so attentive to my personal pleasures I did not notice that a storm was gathering. I was manipulating a 3-pound bass in strong water between the large stones which dot the bed of the river, unconscious of the then raging storm until the fish swam up the rainstorm, passing over my head and seeking refuge in another pool behind me—out of the water into the wet. After he had found his way to the creel the storm was about spent. Making my way across lots for my boat below the bridge, I struck a pool about three rods long and a rod and a half wide, in which were about two dozen shad. They could not get out of it, as there was no flow of water through. The water raised that night and set them free.

Free. Will keep you posted on the prospects for the fly. THOS. CHALMERS.

HOLYOKE, Mass., May 17.

HOLVORE, Mass., May 17. Editor Forest and Stream: In your "Correspondents" column of last week I notice the statement that "the only spot where the fly-fishing for shad it successful is below the dam at Holyoke, Mass." Very fine shad are taken with the fly on the Housatonic River, near Birmingham, Conn. The shad of this river are widely known as being equal in size and excellence to any found in the United States, Formerly they ran up to spawning grounds many miles above Birmingham, and in those days I believe were never taken with the fly, but several years since a dam twenty-two feet in height was built at the place named, and at the same time a huge timber box, so fearfully and wonderfully made that it is a terror to all well-organized shad, was placed in the dam and called a "fishway." The natural result is that all fish now make Birmingham their terminus, and as no sciences or nets are allowed here, the shad congregate in great num-bers, giving much sport to the local tly-fisherman. ROBLYN, N, Y.

ROSLEN, N. Y. [We knew perfectly well that shad had been taken with a fly on the Housatonic, having fished there for them with suc-cess. The omission to mention this locality was au over-sight for which we cannot account. We have always re-garded it as an uncertain locality, however, and have never considered it worth while to send anglers there. We are glad to know that shad take the fly freely on that river.]

TOWING FOR KINGFISH.

DOWING FOR KINGFISH. To Day I have been a fishing, the first time that I have had leisure to do so since the fire (we in Key West date from that event altogether now; it has superceded "befo' the wah." etc.), and I have had so capital a time of it that before I sleep and the nuscles of my pulling-in anat-many get stiff and sore, as undoubtedly they will be to mor-row, I will share my good luck with my Forksr AND STREAM onfrères, and send "A. N. C." to bed green with envy when he compares his biggest bass with my grouper, my kingfish, amber fish and red snaper. Twrote you a letter some weeks ago which you published more the heading of "Fishing at Key West." I had hard work to get that letter up, and had to draw on the catch of others to get a respectable creel cf fish together, my trophies in date in the Foam of the Sea, skipper, Acosta; cook, Gabe; and erew. Charlie, of allof whom I spoke a well-deserved good word. But when I distributed among them some of the field and urged that should try it again. They thought that the history of a day of calm, most of the time passed at action, with no bait that would draw anything but sharks, was bardly a fair description of the average and ordinary events of a day of exist hor beczee from the stat, and a lunging big kingfish landed before we had gone a mile, to be followed during the day with lots more (my own share of the tat there was lots of fun at "towing." Lots of work, too, and I have tied in vain to cipher out how many foet-poinds my arms lifted that day, using as data 22 kingfish form 10 to 16 pounds', eight, a barracouta about twice as heavy, and Spanish mackerel to make up the score, each appring big kingfish landed before we had gone a mile, to be followed during the day with lots more (my own share of from 10 to 16 pounds', weight, a barracouta about twice as heavy, and Spanish mackerel to make up the score, each appring big kingfish landed before we had gone a mile, to be followed 30 yards from boat, and hauled in with h

although judging by sensation, at every yard gain she seemed to go faster. I had a savage pleasure in seeing that big head thoroughly clubbed, for not only did he, with one of his razor-sharp teach, cut my fluger to the bone, but just before, either he or one of his breed, bit in two, as clean as though cut with an axe, a good-sized kingfish I was hauling in. I'm sure that fish must have bad a tail when he started, but he came to hand minus, not only it, but over a foot of his body. King-fish I knew to be like all of the mackerel family, excellent bait, and had often used it, but never before an entire ten-nounder. pounder.

<text><text><text><text><text><text><text>

first opportunity I should fish that bank. That opportunity came to day. Starling with a good breeze we again went as far east as on the first trip, and again failed utterly in that direction. After passing the Pelican, between it and Sand Key, we got three fine kingfish and a couple of large (four and six pounds) Spanish mackerel trolling, and I caught a magnificent amber fish weighing 24 pounds. We still fished off the shoals in from five to fifteen fathoms, but not a fish. Then the breeze dying again, we made for the deep-water ridge, and in five ubnutes from the time we strnck it a 28-pound grouper was on deck. Then came an hour to be re-membered. All hands were fishing, and some one was land-ing a fish all the time. Our catch consisted of red snappers, groupers and rockfish of various varieties. My own catch included a red snapper of 14 pounds and a grouper of 43. I thought sure I had a shark. Several of our lines having been carried off by them, and having but the one gear left, I determined to, if possible by careful handling, get him to the surface and shoot him, hoping thus to save hooks. Pres ently I doubted his being a shark, for he stopped fighting and came up quite easily, and that a shark never does. Iu all respects his action was that of a big codfish, lug back occasionally, then hang. When he came to the surface his mouth was wide open, and he was so far exhausted that there was no difficulty in inserting a gaff hook just opposite to mine, and then three of us lifted him in; then that merry-making became temporarily and literally a symposium, for he was the big grouper of the season. I sent him ashore this evening to a lady, who, since the fre, is compelled to hunt up food for about thirty people; and have just received her note of thanks for that "what shall I call it, young whale?" Having thus placed him on record, I'll turn in. Priseco P. S.—I suppose I ought to interject some useful data. On Plate 94 of "The History Industries of the United States"

Having thus placed him on record, I'll turn in. PISECO P. S.—I suppose I ought to interject some useful data. On Plate 94 of "The History Industries of the United States" are given pictures of the spotted cero (*Scomberomorus regalis*) and the cero or kingfish (*Scomberomorus caballa*). In the text, page 116, describing the two fish, it is said, "It is more than likely that this (spotted cero) and the preceding species (cero) are both included by the Key West fishermen under the name kingfish, the difference in general appearance being so slight that it is hardly likely they would be noticed by ordinary observers." They both are so included. I have caught them both, the most of the catch up to March 10 was of the spotted variety; since then the *caballa* has predomin-ted. Lying side by side, the difference (aside from the markings) between the males and females of either variety are greater than between two of the same sex, different specie. PISECO.

CAMPS OF THE KINGFISHERS.

CARP LAKE, MICHIGAN.-XII.

CAMPS OF THE KINGFISHERS. CARP LAKE, MICHIGAN.-XII. W E pulled ashore to eat our lunch, for we were now just off the Alexander farm, and the wind came sweeping down the lake past the point which sheltered us with a force that precluded the idea of pulling against it and fishing with any comfort. Lunch disposed of, we caught a few frogs in a litlle wet meadow back of us to increase our store of bait, swung out into the rollers and headed across the lake over the same course I had taken the previous Sunday. We put out two trollers, a Hill and a Chapman, but the big pickerel or maskalonge that took my spoon that day had probably not yet digested it, or mayhap he had changed his mind about new-fangled bugs with glittering propellers as an article of diet, and we had no call from hin nor from any of his relations. Down near the point where Maybert's Creck comes in through the wilderness of deadened trees we changed back to frogs, and in a couple of minutes Ben was engaged in a sharp fight with a big-mouthed bass of nearly three pounds, who finally took a position on the stringer under vigorous protest, after vainly trying to smash "ole quintessence" by a sudden dash under the boat. Then in less than fifty yards two more tried to belch up the frog after swallowing it, but Ben's hook had a fashion of "always a ketchin' on to somethin'," and they too we re slipped on the stringer, to end their career in the frying pans of the phil-oopher across the water. Meantime the skipper was not idle; he was holding the boat in proper positon for Ben to handle his fish, e.j ying the fun and waiting for his turn to come next; hut the struggles of the last one seemed to have scared the others, if there were any more, and the turn did not come. We drifted along down with the wind toward the point

We drifted along down with the wind toward the point opposite camp, over a stretch of shallow water, four to eight feet deep, with a sand and mud bottom, with only a stray bulrush nodding in the breezs here and there, and not even a patch of "musrat grass" big enough for a sunfish to hide a patch of in.

in. It may be mentioned here as a matter of possible interest to any of the brethren not used to fishing the lakes of this region of Michigan, that such a piece of water as that is, as old Ben says, "jest the place where ye won't ketch nothin', an'ye might as well reel up or go ashore an' fish in a roz-

old Ben says, "jest the place where ye word' ketch nothin", an' ye might as well reel up or go ashore an' fish in a rozberry paten."
Just off this point the water is shallow for fifty or sixty yards out and then comes a strip of grass and thickly growing bulrushes reaching down the lake for a hundred yards or more, and along the outside of this bank the water deepens straight off till the hottom cannot be seen. This is the kind of water where you may look for fish.
We drifted along down to the lower end of the rushes without taking anylhing, however, but one longface of four pounds, which fell a victim to the rod of the skipper. Here the wind had a fair sweep at us, making the water so rough that it was hard work to hold the boat anywhere, and as we turned to go over the water again along the bulrushes, a rain storm coming down the lake less than a mile away admonished us it was time to get into the rubbers and head across for the caup. Ben said this was "a hoss sense move, fur the fish wasn't a bitin' much nohow, an' he wanted to git ashore where he could rub the knots out o' his legs."
At this point we afterward took a number of fine fish, bass and plekerel, and one day old Danny struck a fish there with such persistent and dogged fight in him that he was preparing, to chuckle over the capture of a big maskalonge, but when it was brought in right and in reach of the gaff, it proved to be a villainous bead-eyet "lawyer" of large size much to the disgust of the old pelican and the hilarity of Hyperboler, who barked and snarled as he jerked the gaff into bim, in derision at Dan's "new style o' muskylunge." We loat the rainstorm to camp by a few munutes, but no sign of life greeted us as we stepped out and pulled the boat up on the bank except five mischierous little pigs that were engaged in an industrious rooting match under the kitchen fly for stray scraps and crumbs that might have fallen from the table. These little porkers, only a few weeks

old, were a fund of considerable amusement for the girls and

<text><text><text><text>

dose at intermittent intervals with very gratifying results to himself. We roused the philosopher out of his dreams, and while he started fire in the stoves and arranged the table. Ben and the skipper dressed the bass for supper and breakfast, leav-ing the pick-rel for any of our neighbors who might drop in for a mess of fresh fish, this being an arrangement that would suit all parties concerned, as we have noticed that the resi-dents along the lakes where we have made our camps and fished prefer the longsnouts to buss, for the reason perhaps that their tastes have been educated on them because of their more easy capture. We went to bed that night not in the best of humor with the weather, and had it not been for the quieting music of the onttering rain on the canvas there doubtless would have been mutterings deep and dismal from the old campers, but this ble-sed rain music of the night is a panacea for most of the ill born of an unpleasant day, and we went peacefully to sleep to the dreamy melody, with a hope that the morn-ing would bring signs of clearing skies and snnny weather. [TO BE CONTINUED.]

[TO BE CONTINUED.] [In issue of April 29, "Camps of the Kingfishers," page 267, first column, eighth line from bottom, read government blankets for goat blankets; line 42 from bottom, second col-umn, read red hoss for red bass.]

EYED HOOKS.

EYED HOOKS. Editor Forest and Stream: Tarly last spring I obtained from England several dozen throughout the season with great pleasure and success, and the gring them a thorough trial I thought them about and those flies which I required of American pattern, I have not those flies which I required of American pattern, I have the to them also. Since April 1, this year, I have used some the to them also. Since April 1, this year, I have used some the to the male. Since April 1, this year, I have used some the to the male. NEW ENGLAND TROUT WATERS

New ENCLAND TROUT WATERS.
The WENCLAND TROUT WATERS.
The work mind to be sure to make a trip to the trout waters this year; to once again drink in the beauties of the trout waters this year; to noce again drink in the beauties of the work and strain of business or professional life. But it is often baryen and strain of business or professional life. But it is often hard to find the courage to start off on what looks to the ordinary mortal like a fooliah jaunt for the sake of a few then, The true and only way is to start when the fever is on. Delays are dangerous; they are more dangerous to our fishmer of the sake of a few the trade and only way is to start when the fever is on. Delays are dangerous; if ador t its, and a ot a faced, annual professional life. Affect this is ossillat changes hinder us. The ise we should bring to bear upon any of the other and the overs on its is that processination which is the thief of the overs of the Maine lakes is being to the adver on greenally propose, and so the trip is loss for want of mere decision with its year than usual. It was not wholly unexpected, and yet the lovers of line and rod were not greenally propose of the same the breaking up of a great many parties; and contaring will stay at home altogether. This is childy true but it shows how slight a circumstance may spoil even and ender whore may be termed the endy rushers, to be sure, but it shows how slight a circumstance may spoil even and commendated trip. It is a fact that the movement to have also the break ing up of a great many parties; suggested from other tradesmen from taking that fishing the same nutries the way and the endy rushers, to be sure, but it is too good to keep—there will be alter the the same nutries is suggested from other tradesmen from taking that fishing the same nutries. Strikes and the uncertainties of the same nutries and the asker is being runch test that is often alter that the movement to have any parties and the endy rushers, to be alter the same nutris suggestion.

we go fishing to the tune of a brass band, and a country band at that? SPECIAL The trout season of 1886 is proving to be one peculiar to itself. The redspots or brook trout are hardly coming up to itme in the record of catebes thus far, but the blackspots, or andlocked salmon, are surprising even their warmest friends. This is particularly true of Weld Pond, in Maine. This pond was first stocked with salmon scarcely more than to perform a very successful trip to that pond with some of the first sportsmen in Maine, and they all express themselves as highly pleased with the success of landlocked salmon. Com-missioner Stanley gives an account of one caught the other day which weighed elven pounds, and I have just taken up a Maine paper, rather given to telling big fish stories, which mentions the taking of a landlock, Friday, weighing four-teen pounds. This last story should be taken with a grain of salt at least till confirmed. But even a salmon of eleven pounds comes with a great deal of pleasure to those most in-terested in the culture of the landlocks in Maine. It must be remembered that this is all the work of ten years, and to fless size. Commissioner Stanley remarks that they are taking fish there from two to five pounds by the thousand. These smaller fish, he remarks, are evidently the work of more recent stocking, since the State has done more for that purpose. As to the growth of these salmon, Mr. Stailey is much pleased, as well as surprised. Together with Mr. Sti-well the Maine Commissioners are now of the opinion that tot, the conditions of food being favorable, grow much faster than many writers have told us. Certainly the results of andlocked salmon in Weld Pond go to prove that they are correct. Speaking of the monster brook trout of the Androscoggin waters, Mr. Stanley does not give them credit

for the great age usually ascribed to them. He finds trout of this class to have grown to six inches in length which he has every reason to believe were only two years old. From that time he believes them to grow very rapidly. The Maine Commissioners may also be put down as fully convinced that fair angling —that is, with single hook and line—can never totally exhaust the trout or hadlocked salmon in any waters. They admit that the fish may be "thinned out," but not ex-hausted entirely. These gentlemen commence this week the work of planting the several quotas of landlocked salmon in the Maine waters. Commissioner Stanley is authority for the fact that landlocked salmon are being taken with the fly this year, a fact heretofore considered doubtful. The latest report also shows that landlocks are at last being taken in Rangeley Lake. An eight pound fish of that species was taken there one day last week and several have since fol-lowed of less proportions. SPECIAL. BOSTON, MASS. BOSTON, MASS.

Bosrow, Mass. Bosrow, Mass. Under date of May 4, Mr, O A. Dennen, of Moosehead Lake, writes to Mr. T. Sedgwick Steele, of Hartford: "The ice left the lake earlier than usual this year, the date of its going out being May 1 and 2. The weather for three weeks past has been fine. Clear, clondless sky, with wind not over six miles an hour. Temperature for the week end-ing May 4 averaged 36 degrees, taken at 6 A. M. Average for the month of April, 32 degrees (taken at same hour). The fur hunters have had a fair run of luck. Two Indians came out of the woods about three weeks ago and received \$735 for their skins, consisting of beaver, mink, sable, black cat, otter, etc. Considerable large game has been killed the past winter, or up to Jan. 1, when the time closed. In the latter part of December, 8 moose were killed on Blue Ridge in sight of the hotel. One cannot, however, go far into the woods without sceing plenty of signs which indicate that moose, deer, caribou and bear are still quite plenty. The fishing season is fairly opened, several parties are already on the ground and the steamers Kineo, Day Dream, Twilight and Ripple are scudding about the lake seeking out the best grounds. Everything indicates a fair season at Kineo. The spring opening about two weeks earlier than usual will be likely to rid us of the black flies early in July." early in July."

Editor Forest and Stream: The ice left the lakes on Tuesday, May 4, and the fishing season was commenced by the guests of the Greenvale House, Geo. M. Esty, proprietor, Greenvale, Me., on Saturday, May 8. At this point the waters of the Sandy River are discharged into the Rangeley, or Oquossoc Lake, and flow through the connected lakes, discharging finally into the Androscoggin River. The best early fishing for the cele-brated Rangeley trout is found here. The record for the first two days is as follows, no record being made of trout under three pounds in weight. Of these smaller trout large numbers were taken: numbers were taken:

numbers were taken:
May 10, 1886, Henry T. Richardson, New York; boatmau, H. R
Fuller, Phillips, Mei, Iand-locked salmon, S pounds.
May 12, Henry Hobart, East Bridgewater, Mass; boatman, Nathan
Elis, Greenvale, trout, 34 pounds.
May 12, Wm. L. Heed. South Abington, Mass.; boatman, Nathan
Elis, Greenvale, trout, S pounds.
May 12, Euzene H. Clapp, Boston, Mass.; boatman, Chas. H. Toothaker, Rangeley, trout, 54 pounds.
May 12, Horace P. Tobay, Boston, Mass.; boatman, Chas. H. Toothacher, Rangeley, trout, 54 pounds.
May 12, C. L. Browning, Milbury, Mass.; boatman, a friend, trout, 694 pounds.
May 12, Geo. E. Keith, Brockton, Mass.; boatman, Ebenezer Hinckley, Kangeley, land-locked salmon, 644 pounds.
The land-locked salmon, 644 pounds.

ley, Rangeley, land-locked salmon, 694 pounds. The land-locked salmon were introduced into these lakes in 1874 by the Fish Commissioners of the State of Maine, and their increasing number establishes the success of their T. undertaking.

SEBAGO LAKE.

<text><section-header><text><text><text>

Schago Lake are at the mouths of Songo and Muddy rivers, both places being at the head of the lake and about two miles apart. At the former are three camps, owned respect-ively by the Songo Club, Robt. E. Edes and Raymond Par-ties. At Muddy River two camps have been erected this spring, one owned by O. B. Gibbs, of Bridgton; the other by Naples parties. Transient accommodations can usually be obtained near the fishing grounds. Guides charge about \$3 per day for man and boat. BLACK SPOT. SERACO LAKE, May 6. SEBAGO LAKE, MAY 6.

THE MONTREAL FLY.

Editor Forest and Stream: Editor Forest and Stream: I have recently received a copy of the work "Fishing With the Fly." Most of the colored plates in the book are correct; but there is, however, one important exception, that is the one of the Montreal fly, which is wrong in several particulars

The Montreal fly has a strong hold on my affections and has for manỳ, many years occupied the most prominent place in my fly-book, being especially adapted for our North-ern waters. It had its origin with my old and lamented friend, the late Peter Cowan, E-q., of Sweetsburgh, Quebec, who first made and used it at least half a century ago. The original and genuine Montreal fly is made with a "red body, ribbed with yellow tinsel, the hackle assorted scarlet and ginger, and a light gray mallard wing." Soon after its first appearance it becaue a standard fly with the English fly-fishers who were in Canada, and through them samples of the fly were sent to England, where they were made for the trade.

Mr. Cowan was one of the most enthusiastic of fly-fishers;

There were sent to England, where they were made for the rade.
The Cowan was one of the most enthusiastic of fly-fishers, fenial, jolly, a true and warm-hearted friend, a good and affectation. He held for many years an important office of the English army officers who were formerly stationed in Motreal; but wee was sure to befall them if they brought their cockney airs out to the trouting grounds. Many a presential joke did Uncle Peter, as he was familiarly called, play at the experiment of the townships, a noted trout region, when we picked up at a small farm house Uncle Peter and a young officer who were returning from dishing, well laden with full creds of *S. fonkinalis*. Uncle Peter's undustriction of the toy of the country of the country of the sector of the country of the town were returning from dishing experiences and discussing the merits of the different waters of that section of the country when the young Englishman, who had been quite silent, apparently in a deep study, suid, "I say, Uncle Peter, I am availy much obliged to you for your kindness, you know. We over it England have a wrong idea of you fellaws out here, but, by Jove, you have taken me down a peg, you for whow, "This brough tout a roor of laughter from Uncle Peter that made the woods ring. The young fellow joined in quite as heartiy, and when their mirth had party subsided, he said: "But, you know, that first morning was a strong. If possible louder and longer than the first."
They were the naives how to be able to part the provide of the introduction, etc. He was clad in the nost noby of cockney the should be an unspirated be worded at the part of while top knee boots, but anderneath this exertion? Uncle Peter saw what he thought would be good estift when the dimy outside was not to the the sage that evening set them down at the door of the introduction, etc. He was clad in the nost noby of cockney hypersed the way to di the a gentl

very much like an oath and exclamation. But we had best drop the curtain and let the reader imagine what followed, and return to our favorite fly. When this fly was introduced to the trade it was called the Montreal or Canada fly, but usually the Montreal fly. I have I believe killed far more and larger trout with this fly than with all others put together. I invariably use three flies, with the Montreal as a stretcher, and use various other kinds for droppers as the water and season require. Bro. E. B. Hodge of the N. H. Fish Commission, who is an old companion of mine, I presume remembers well the big trout (my largest) that I killed on this fly in Hopp's Pond, a small body of water situated near Mount Orfond. This pond was once celebrated for its large trout; but alas, its glories have departed forever, for some contemptible vagabond has stocked it with pickerel. As I now write my thoughts go back to years long past when Bro. Hodge and the Montreal fly" were intimately associated in many a trouting expedition. The catch that we made one afternoon was thirty that weighed forty pounds, at Lake Nick, where H. had a severe headache which spoiled his appetite for the fish which the writer so nicely broiled, but which did not prevent him from casting a fly while the trout were on the feed. It was there that the "big one" came out of the weeds and tried to eat up the two and a half pound fish that H. had hooked and was playing. I afterward struck that big fellow and he turned tail to and dove into the weeds in spite of any strain that I could bring to bear on him with my Norris rod, and in those weeds he remained until he broke or rubbed off the casting line. Then, again, my thoughts delightfully live over again

line.

the pleasures of that morning at that beautiful stretch of water below the old mill near Megantic, where we waded down stream for a short distance and filled our baskets to overflowing with half-pound trout. It was there that we saw the trout jumping and trying to follow up a stream of water that came pouring out from an auger-hole in the side of the flume of the old mill. Some did succeed in going through the hole into the flume, but where one succeeded, many shot out of the slender thread of water and struck gainst the planking and foll back again into the pool below. Then came the red-letter day—that day in June in the Chau-diere rapids at the mouth of Lake Megantic, where we caught one hundred and eighty trout, not one weighing less than half a pound, and from that up to three pounds cach. Our individual scores stood at an even ninety cach. I also remember with a smile how Bro. H., the next morn-ing as we were breaking camp, stole out to the river's side with rod in hand, to catch another fish, so as to go out of the wilderness one ahead, and when given his choice either to unjoint and repack his rod, or take a ducking then and there, he took apart his rod but at the same time emphatically denied our ability to duck one side of him. Ah. H. I you then forgot the little bout in the camp by the still-water of the salmon river where we were deer hunting, when a "hip-lock" stood not the writer's but another's head in the cook's pan of baked beans, while the heads belonging to the indi-vidual who owned that head were kicking out a jig up near the roof of the camp. That was how many years ago? Well, well, how time flies. Though its flight destroys the elasticity and comeliness of the body and brings whitened threads among the brown, may it never change the youthfulness of our spirit, and our love and appreciation for our old and tried friends, and for the gentle art; and neither may it enbed with golden tinsel, hackle assorted scarted and ginger with light gray mallard wings. __________________________________ with light gray mallard wings. MONTREAL, Canada.

with light gray mallard wings. STANSTEAD. MONTREAL, Canada. MONTREAL, Canada. LARE ENTE BASS GROUNDS.—The Dayton (O.) Journal reports: "The Dayton party of anglers, with fair weather, will be bass fishing in East Bay on Saturday, May 15, the day that the open season begins in Canada waters. Veteran Valentine Winters, with Rufus J. King as his boat com-panion, heads the list, the party being paired as follows: Commodore Cooper and G. Shepherd, Captain and Dr. Greenleaf, of the U. S. A.; Major Bickham and Hon. E. Schultz, Benj. F. Kuhns and Hon. John W. Turner, N. Mory and Bert C. Mory, Ed. Best and George Knecht. Dr. McCormick writes that the steamer Louise is now making daily trips, except Saturdays, that frors' legs are ripe, mush-rooms due, gulls are on, and that 'Piscatoria' is open for any and all Dayton gentlemen who may desire to accompany the anglers. Edward Hazzard, of the Dramatic News, of New York, and friend, have registered for the season; Hon. J. B. Battelle, of Toledo, has his kit packed for Pelee, and Dr. O. W. Nixon, of the Chicago Inter-Ocean, will be thre; and Alex. Starbuck and his veteran companion, Wesley Cameron, and Dr. W. W. Dawson, of Cincinnati; Colonel Wallace, of Indianapolis, and Judge Goode and friend, of Springfield, and twenty or more other anglers have their baggage checked for Pelee. The Pelee Club.—Gen. Sheridan, Robert T. Lincoln and twenty other gentlemen, have char-tered the steamer American Eagle, and will occupy their club house at Sheridan Point, Pelee, next Sunday. The Kentucky party that always locates at Smith's Point are en fourier Club, of Cincinnati, are already cnjoying fishing at long Point and Gull Island reefs, off Kelley's Island, and are favorites of John Hardy, of Dayton, and Walter Halde-man, of the Louisville *Courier-Journal*. The Leffel party, of Springfield, and friends from Cleveland, have chartered the steam yacht Henry Douglass, and with Puti-n-Bay as head-quarters, will fish at North and Middle Bass Islands,

Dayton, and probably others will go to Put-in-Bay." Dayton, and probably others will go to Put-in-Bay." THE CLARDON.—The Clarion, Pa., Fish and Game Pro-tective Association, of which Mr. F. M. Arnold is President, has been prosecuting the dynamite fiends. The *Jacksonian* of that town reports: "On Mondy last Daniel Steiner, of Scotch Hill, had a hearing before Esq. Thompson, upon a charge being one of a party of dynamiters who placed explosives in the Clarion River for the purpose of killing fish. The offense was committed on the 19th of April, and was clearly proven, no defense being made. The justice found in accordance with the facts and imposed a fine of \$50 and the costs of prosecution on the defendant, which he paid, the aggregate being \$65.60. Warrants are out for the arrest of two other members of the party, E. D. Steiner and John McClelland, who will doubtless be similarly dealt with when apprehended. The law against placing explosives of any kind in any of the waters of this Commonwcalth is very clear and explicit, and the Clarion Fish and Game Association is determined to bring all violators to punishment. In the instance noted above, the witnesses testified that after the clearing of the was white with dcad fish. Take in connection with this fact the millions of little fish, no larger than "wrigglers," with which the river abounds at this season, that must have also been destroyed, to say nothing of the eggs in the vicinity —and the destruction of the finny tribe caused by one of why the Clarion should not be one of the bost fishing streams in this section of the State, if the laws are complied with, and it is proposed that respect for the protective enactments shall be strictly enforced.

shall be strictly enforced. New JERSEY LAWS.—About twenty bills affecting the game and fish laws, some good, some bad and others radi-cally wrong, were presented for passage in both branches of the Legislature of this State just adjourned. But few of therm passed, however; among those which did was Senate 113, a righteous good bill for the protection of stocked waters. It provides that no person or persons or corpora-tions shall place in any fresh water stream, lake or pond, any lime or other deleterious substance, or any drug or medicated bait, with intent thereby to injure, poison or catch fish, nor place in or allow to flow or be discharged into any lake, pond or stream stocked with or inhabited by trout, bass, pickerel, pike, sunfish or perch, any drug, acid, gas tar or any deletenious substance whatever which will kill or destroy said fish. Other bills passed opens the season for catching black bass with hook and line on May 30 and closes it on Dec. 1 in each year; prohibits the catching or killing of black bass less than seven inches in length, or trout less than six inches in length.—*Plainfield Constitutionalist.*

THE PRIVILEGED CLASSES.—Central Lake, Mich., May 6. —In the neighborhood of the ponds and brooks, I have noted a goodly crop of fish-spears. I am disposed to think that the particular industry of which these are the token, is likely to languish in this region before long. Even now, those that follow it are conscious that they do so by suffer-ance, and though the loud-mouthed among them say that all fish protective legislation is only for the benefit of tourists, and that they will spear as long as they like; it is a fact that there are fewer jack-lights on the lakes than in any pre-vious spring for some years, and one or two prosecutions for violation of existing statutes will practically put an end to the spearing. The gill-nets will still be used, but only for a time, and I think that our waters will yet be restocked with fish in abundance for all. It is comical to hear the netters and spearmen talk of legislation for the benefit of "privileged classes." As I see it, they themselves are the ones who claim exceptional privileges, and by their-exercise in defiance of law, prevent those of us who desire nothing more than equal rights with all, from even securing enough of fish for an occasional meal, to say nothing of the sport. For several years I have told these gentry that the end of these things was not far distant, and behold, it cometh, in the near future, —KELPIE.

TROUT NEAR NEW YORK.—I am somewhat of a sports-man and can readily say that in all my experience I have never before indulged in such sport as during the past week in Sullivan county, N. Y. I took the train at Wechawken for Fallsburgh Station, where Uncle John Waldorf met me, and drove to his Woodbourne House, at Woodbourne. The first day I fished three miles of the Neversink River, and the result was 19 pounds of brook trout ranging from $\frac{1}{2}$ to $\frac{1}{2}$ pounds. The second day I fished over the same ground and realized a like result, and on the third day I tried a smaller stream with flattering success. I am only one among many who has met with the best of luck on this popular trout stream, and I would advise any person in scarch of first-class trout fishing to make arrangements with Uncle John.—A SPORTSMAN.

CANADIAN SALMON RIVERS.—Editor Forest and Stream: With reference to the paragraph, "Canadian Salmon Rivers," issued in your edition of April 8 last. I beg to remark that your assertion, as regards the rivers of this Province, is far from being correct, as almost all, if not all, the salmon rivers of some importance are under private control (see accom-panying report, page 130); and it is expected, from the de-mand for more fishing privileges, that other rivers not hitherto sought after will be taken up, improved and pro-tected. So I hope you will make, in your next edition, the necessary remarks and corrections concerning same.—W. W. LYNCH, Commissioner of Crown Land, P. Q.

THE ENGLISH ANGLING TOURNAMENT.—The sixth inter-national Fishing Gazette fly and bait casting tournament will be held on June 5, on the grounds of W. Cunard, Esq., Or-leans House, Twickenham, within 150 yards of the famous Twickenham ferry. The tournament will be, as before, for the benefit of the Angler's Benevolent Society. The prize list and programme is not yct published. Upon a payment of ten shillings any fishing tackle maker will be allowed to exhibit and sell his stock upon the grounds.

THE SUSSEX ANGLERS' CLUB, T. S. Morrell, Secretary, Newark, N. J., proposes to take up, as its means allow, the numerous bass and pickcrel waters within ten miles of Deckertown, N. J. The club offers very desirable advan-tages to New York city anglers who want fishing near at hand. Properly managed, such a scheme as this ought to insure an abundance of first-class and sure fishing.

EAGLE'S NEST, Stamford, Delaware County, N. Y., May 17,—A. S. Churchill, Esq., just brought me to my sick chamber a speckled trout 14 inches long and 5 inches wide at front fin; weight, 14 pounds. It was caught by his little grandson in Spring Brook, within three rods of his cottage in the village of Stamford. The brook is alive with fish, but few are so large.—NED BUNTLINE.

CANADA. —A good fishing resort, in a comparatively new country, is Gurrie's Hotel, at Lake St. Joseph, Canada, an hour's ride from Quebec. Mr. Adam Watters and son, of that city, one afternoon last season, caught there 19 lake troat, weighing 157 pounds 6 ounces. Sportsmen in Canada can be fitted out with supplies of all kinds by Mr. Watters. See advertisements in other columns.

THE NIPISSING.—Cobourg, Ont., May 13.—Will "B. and H.," who signs the article "Fishing at Nipissing" in your last number, give me further information about deer and partridge shooting, fishing and best month in which to visit Trout Lake. Would I get any lake trout in September and what would be the best bait?—W.

fishculture.

FISHCULTURE-A PRACTICAL ART. BY JOHN H. BISSELL,

[Read before the American Fisheries Society.]

[Read before the American Fisheries Society.] I D0 not forget, gentlemen of the American Fisheries Soci-ety, that I am but a student in the craft which we pro-fess, and for the encouragement of which this society exists; nor that many of you have grown gray in this honorable, nay, may I not also say patriotic, service; and so I should be sit-ting at the feet of some piscicultural Gamaliel, instead of your committee which left me no room for excuses or refusal. A younger generation is now coming upon the field to take its part in carrying forward fishculture, to apply the practical observation and scientific research of the past twenty-five years, to the practical solution of some very important eco-nomic questions that are beginning to clamor loudly for solu-tion.

tion. The question most urgent just now is not, can fishes be arti-ficially hatched and reared, and acclimated in alien waters, but can the fisheries of this country now be saved! That the merest ex-periments. In my own State it is only within that time that we have ever hatched and planted over 15,000,000 of whilefish this society, once called "Fishcultural," may not improperly the society, once called "Fishcultural," may not improperly generation, the pioneers of fishculture, have done their work, as well as of the value of their work and the appreciation in which it is justly held by the people of this country. At former meetings of the society you have been favored by the eloquent speeches of statesmen who judged rightly that

[Mar 29, 1886.
fishculture was worthy the statesmen's consideration.* You have been honored by papers and addresses from men of your own number who have won distinction by knightly deeds—no less knightly and honorable because won in the unromantic armor of waterproof coats and rubber boots—in condict for the secrets of nature, wresting from nature's willing hands the knowledge that practical men have been gathering and storing up against the day when the millions that are peopling and are to people this continent, shall cry out for more and better and cheaper food. You all know the men to whom I refer, so there is no need of mention of their names. I know them, not by personal acquaintance and familiar discourse, but none the less really, through their writings and experiments, which have made it possible for men of the class to which I belong to accomplish something for the States which have honored us with the oversight of their fishing interests. Without the knowledge which has been gained and freely disseminated by these intelligent and devoted men the fishery establishments of many of the States would have no existence, or their officers no reasonable and sufficient as swer to make to their State governments when asked, as they so frequently are, "Can fishculture do anyting worth the expense for the food supply of the people of this State?" Have we then any such answer to make? That we have, that the answer is reasonable and artificient I shall try briefly to show. While we have not learned all there is to know about the culture of fishculture I invite your attention. In using the expression "fishendlure I and to the same extent, a necessary department of the public business. To this practical aspect of fishculture I invite your attention. In using the expression "fishendlure I mean to be understood as including artificial propagation of fish and the protection of them until they are mark to fisher and the protection of them until they are instrable.
Consideration of sinkulture as a depart

gan; but, the state of affairs there is in some measure analogous to the circumstances of other States, and the subject from my point of view may prove of more than merely local interest.
Are our fisheries worth saving?
Michigan has a coast line of more than 2,000 miles in length upon the Great Lakes and their connecting rivers by actual measurement upon the Government charts. Its lisheries produce annually over 13,000 tons of food, the value of which is something over \$300,000 at first cost. The capital invested in the prosecution of this industry is about \$1,200,000, it gives employment to 1,800 men, which means that over 7,000 people are dependent upon the prosecution of the fisheries for their living. The pound nets used in this industry placed end on end will stretch 200 miles, the gill-nets placed end on end wensure 1,588,532 fathoms—over 1,800 miles.
