THE HARTFORD tLAN.

 Λ NOVEL method of selecting judges for its coming show has been adopted by the Hartford Kennel Chub. The bench show committee have written to probable exhibi-tors, asking them to indicate their "references for judges in the different classes, and stating that the judge receiving the

greatest number of votes will be ap ointed. This plan is entirely new, and it is wholly bad. It is wrong in principle. It is unjust to 'xhibitors, to judges, and to the Hartford Kennel Club. There is nothing to recommend it.

end it. The wrong to the exhibitors $\Gamma_{S}^{(j)}$ in the fact that it gives each one an equal voice in the moice of the judge. That this should be a wrong may at first seem paradoxical, but that it is so will readily appear. The vote of a young fellow who owns his first dog, and who is receiving primary in-struction in canine matters, should not count for as much as that of an experienced breeder, who owns a large kennel of the finest and best dogs. And yet the number of these old breeders is so small that their selection, which is reascably certain to be intelligent, may be outweighed by the voices of a number of unintelligent, however well-meaning, voters. Thus unfit judges may be selected, whose decisions will work great harm.

The wrong to the judges is serious. ' It makes the position one for which votes are to be sought, and there are, no doubt, some people so anxious for the suppositious glory of this position that they will forget their dignity and canvas for votes among their friends. Moreover, every inexperienced exhibitor who has voted for the judge sclected, will feel a sort of proprietory interest in him, and unless he re-ceives what he imagines to be his just dues will forever after be very bitter against him,

But it is the Hartford Kennel Club which must suffer most severely. The attempt to please everybody will result, as such attempts always do, in pleasing no one. They will receive the hearty curses of all the disappointed exhibitors. A bench show committee should know enough about dogs and dog matters to be able to make their selection of judges without the aid of Exhibitors. The number of good judges once of the true feeling of the public on the subject,

in America is not so large that help is required to pick out the best oncs.

The motives of the Hartford K. C. are of the best, we are sure, but we can see that if they carry out their plan as they have begun, they will meet a storm of insinuations of wrong doing, which will certainly be very unpleasant. After the show it will be easy for those who are dissatisfied to say that the votes were manipulated in favor of this or that judge, that pressure was brought to bear on weak-kneed exhibitors to make them change their votes, that the Hartford K. C. had not the knowledge or the independence to select and appoint good judges, and that therefore they called for votes; thus, while as a matter of fact they appointed whom they chose, yet they put the responsibility for the choice of men apparently on the exhibitors. These and such things as these are sure to be said, and though none of them be true, will not make it any pleasanter for the Hartford K. C. when they are said.

In all matters connected with dog shows, the interests of exhibitors arc of the first importance. On the exhibitor the success of shows and so the improvement in form of our dogs depends. If they are not satisfied, if the judges are not men on whom they can depend, if they lose confidence in the management, they will not exhibit. It is eminently proper that they, or some of them, should be consulted on the appointment of the judges. There is a great difference, however, between consulting prominent and intelligent breeders and opening a poll at which the unintelligent public can vote

The Hartford plan ought to be abandoned.

THE ADIRONDACK DEER.

TWO game law bills were introduced at Albany last Tuesday; one in the Senate by Mr. Parker, and the other in the Assembly by Mr., Barnes. Mr. Parker's bill prohibits jack-hunting deer; whether it allows hounding or not we have not been informed. Mr. Barnes's bill allows hounding deer and provides a penalty of \$100 for jack hunting them.

The proposal to forbid the jacking of deer is in itself most excellent. Jacking is an abominable practice. It ought to be abolished in toto. All right-minded sportsmen would rejoice to see a law to that effect.

But while we have the fullest and heartiest sympathy with the proposal to forbid the jacking of deer in the Adirondacks, we understand perfectly the real motive of Mr. Barnes in introducing his bill. It is simply to restore hounding to its It is the final stop in the well-planned scheme of the Adirondack water butchers to harp on the evils of jacking, to concentrate public attention on that one practice, and to so magnify it that the other and actually greater evil of hounding may be lost sight of. So long as the Adirondack guides and sol-disant sportsmen were permitted lawfully to slaughter deer by the hound and by the jack, no voice was raised against jacking. But just as soon as their favorite cruel and destructive method of hounding was put an end to, they raised a great cry in chcrus about the atrociousness The present agitation against night-hunt of jack shooting. The present agitation against night-hunt ing is not undertaken for the purpose of protecting the deer, the aim is to put the hound back.

Every resident of New York who is interested in the right preservation of the game of the North Woods, should understand the true meaning of this Assembly bill, and each one should use such influence as he can bring to bear on the representative of his district at Albany to thwart the scheme of the hounders.

Let jacking be forbidden ; by all means abolish it if pos sible-but not at the expense of the present just and sensible law against the use of dogs.

A DEER LAW PETITION.

ON another page will be found a form of petition to the New York Legislature. It is a request to let a good law remain intact. The petition concerns not only sports-men, but all residents of the State. The interests of the in-dividual deer hunter are merged in the broader interests of the community. The two are identical. For them both the deer of the Adirondacks should be given reasonable protection. This means that the hounds must not be put on their trail to drive them into the water to be butchered.

The form of petition may be cut out and pasted on a blank for signatures. It should then be sent to Albany.

What is done at once is done with double the effect of tardy action. Prompt attention must be given to this matter. The deer hounding politicians are pledging members to vote on their side. The Legislature should be advised at

THE SUSQUEHANNA DODGE. - The Pennsylvania fish wardens, who were appointed to enforce the laws relating fishing with nets in the Juniata and Susquehanna rivers, have faithfully performed their duties-to their own pockets. Their method of letting the fish go to the pot so long as money went into their own pockets was exposed in a New Bloomfield criminal court the other day. In the course of the trial of a man who was accused of unlawful fishing, the charge being brought by Fish Warden Josiah R. Dunbar, the Court was amazed at the production of several receipts for \$5 caeh, bearing the signature of the fish warden, which gave the holders the privilege of constructing fish baskets, etc., in the streams in question. It is alleged that similar receipts to the amount of hundreds of dollars are held by fishermen, and that the law is violated daily during the fishing season. During the last session of the Legislature Representative Sponsler, of Perry, boldly asserted that officers having in charge the enforcement of the fish laws were using their power, not for the protection of the fish in the streams, but for blackmailing purposes.

DAYS WITH THE DEVIL FISH .- The interesting accounts of recent adventures with the devil fish, published in our columns, are supplemented in the present issue by a charm-ing reminiscence of a day's sport long ago. The devil fish is by no means extinct, but the pursuit of it for pleasure may be classed among the amusements of the past. In the palmy days "before the war," when the famous Sea Islands were the resort of a summer population intent on pleasure, the vampire of the ocean was recognized as a legitimate object of pursuit, and many were the exciting adventures of those who engaged in the exhilarating pastime of harpooning the monster. How the sport has been perforce abandoned because of the disappearance of the prey, has already been The devil fish is no longer to be found in its old told. Atlantic coast haunts; but it appears to be fairly abundant in the Gulf of Mexico; and as the Gulf coast of Florida in the winter time attracts sportsmen, as did the Sea Islands in old times, it is possible that the sport of devil fishing may be revived.

JACKING AND HOUNDING .- Which of the two is the more destructive of Adirondack deer? Here is one consideration which is a sufficient answer to that question. The men who are crying out for permission to hound deer are one class of city sportsmen and one class of Adirondack guides. Each of these classes are greedy and improvident; that is to say, they They want all the deer they can possibly kill and kill now. are, therefore, in favor of whatever method will bring them the greatest immediate booty. If jacking would do this, they would cry out for permission to jack. If hounding would do it, they would cry out for permission to hound. As a matter of fact, they do ask for hounding.

THE MICHIGAN SPORTSMEN'S ASSOCIATION will meet at Kalamazoo February 9. The Secretary is Mr. Mark Norris, Grand Rapids. Michigan needs a game warden system. The Legislature of that State is short-sighted in its treatment of the game interests. Petty parsimony is sacrificing the deer to the hide and venison dealers. The Association has tried repeatedly to secure an appropriation to pay for the services of a competent warden, but in every endeavor it has been blocked by the stupidity and penny-wise foolishness of the Legislature.

FLORIDA LANDS .- We have received several letters from Florida correspondents in response to our recent remarks on the sand swindles of that State, the writers urging that no wholesale denunciation of Florida should be made. We know that. Florida has tens of thousands of fruitful acres. But that is no special reason why the paper town lot swindlers should rob the gullible portion of the public. Good land will always find a ready market. Florida cannot be injured by an exposure of the robbers who deal in worthless sand.

THE WEATHER AND THE BIRDS .- Additional reports from the South and West show that a very large number of birds perished in the late cold weather. A correspondent writing from Jewell county, Kan., relates that the market-hunters had a bonanza when the cold wave came and killed the birds; one man went out in the morning and soon returned having two corn sacks filled with the frozen game. A press dispatch from Staunton, Va., reports that thousands of birds were frozen in that vicinity.

JECKYL ISLAND, Georgia, is to be converted into a winter resort for sportsmen,

A LL that night a fierce southerly gale shook the lodge, and in the morning it still blew hard. The waters of the lake were white with foam, and over them the skies hung dark and threatening. An Indian pack-saddle had been borrowed the night before from Back-in-Sight, and having put our blankets and the wagon sheet in a little pack on a spare horse, we set out soon after sunrise for the upper lake. took a sack of bread and a little salt, and I told Yellowfish to tie a quarter of meat on the pack. We were going to a point where, according to my authoritics, sheep were very plenty, but it has been my fortune more than once to travel for a day or two through a country where game was extremely abundant, and yet have no fresh meat to eat, so I thought it well to take some provision of this kind with us.

We crossed the river and turned up the lake, and before we passed the old camp I noticed that there was no meat on the pack, and on inquiry found that the Indian had forgotten to follow my directions about taking it. We had left a few drying fish on a scaffold near our former camp, and two or three of these we took with us. Before we reached the Inlet it had begun to rain furiously, and all the rest of the day this continued. Our progress up the lake on the west side was rapid, for the trail was in many places so good that we could gallop our horses. Now and then, however, we came to streams which spread out in marshy valleys of considerable width, over which grew a thick tangle of tough alders, and through these it was difficult work to force a The pack occasionally gave us trouble. The cinch passage. which held the saddle in place was merely a strip of raw hide a couple of inches wide, tied up by a stout leathern string, and with this primitive contrivance it was impossible to put the saddle on so that it would stay. Moreover the lash rope had no cinch to it at all, and we could not draw it tight without galling the horse's belly. The packing was left to Yellowfish, who tied up the bundle Indian fashion, swung it over the saddle, and then drew the ropes as tight as was possible. We were continually stopping to tighten them, but, as it happened, the only time that the pack fell off was when we were crossing one of those wide marshy valleys among the dense alders. I was riding behind, but could not get to the pack horse in time to keep the load from falling into the water, and so our blankets got wet.

The ridge which runs down from the mountain to the lake was reached not long after noon. Here it was necessary to camp, for there is no grass for the horses for several miles beyond, and indeed it is doubtful if horses can be taken much further up the lake along the side of the precipitous Goat Mountain, which stands next south of Singleshot. We had nothing to eat except our half dricd fish and some damp bread, and so as soon as the horses had been turned out, a fire started, and a shelter built to keep the driving rain from our bedding, we started out to hunt. Yellowfish took the south end of Singleshot Mountain and Appekunny and I the north end of the Goat Mountain. The rain poured down with great violence as we started out to climb the mountains. Not very far from the lake's edge we waded the swollen stream, which pours down through the cañon between the two mountains, and there striking a deeply-worn trail, followed it up the ridge and on to the bench. It is steep, rocky and narrow, practicable for horses, but one would rather do it on foot and lead his animal than ride it. Having reached the top of the bench, we worked our way carefully along over the ledges, which were piled one on top of another until we had gained the forest above. We saw nothing, however, to indicate the recent presence of any game. There were no fresh tracks, and all the sign was that of last winter. Still higher we climbed up on to the mountain, skirting the deep but narrow cañon whose vertical walls dropped off sheer for nearly 1,000 feet, but work as carefully as we might, we saw no game nor any signs of game. At one point where we emerged from the timber, we could look across on to Singleshot, and there a moving object caught our eyes. It was a long way off and at first one of us took it for a sheep, but a short inspection showed that it was our companion moving along up near the reefs in his quest for game.

Three or four hours of this extremely moist and unsuccessful hunting convinced us that, here at least, it was useless to hope to get our supper, and we turned back toward camp.

Down on the first bench above the lake we paused for a while to look about us. Toward the foot of the lake was a veil of driving rain which hid all beyond, but where we were, for a moment the rain had ceased to fall. We could look across the lake and see the sombre gray wall that rose far above us and ended in a snow wreath, and could discern at its foot a curious level platform of rock, partly covered with pines and partly under water, about which there seemed to run a wall of rock separating it from waters of the lake which appeared to flow in and out through a narrow channel close to the shore on its southern side. Up the lake the dim shadows of half a dozen stupendous mountains could be felt rather than seen, and here and there above the water rose little islets, some of them bearing a few trees. Still further up the valley, as the mist for a moment cleared away, we could see that the lake again narrowed, and two slender tongues of land ran out, one from either side, and overlapping, seemed to end this lake, cutting it off from another beyond. This appearance has given rise to the statement, unfounded, that there are three St. Mary's Lakes, On the

west side of the lake, the Goat Mountain, so called because there are goats on its western slope, rises like a wall, and toward its southern end carries a great mass of bluish white which looks like a tremendous glacier. We had gazed but a little while when the rain clouds again lowered and shut out all the view, and we hastened toward camp. Arrived there, we found Yellowfish steaming before the great fire, but no red quarters of sheep hung from the trees. He had been no more successful than ourselves. He had seen nothing, not even a fresh track, and told us what we already knew pretty well, that there was no game in the neighborhood. We all agreed that as yet it must be back in the hills.

We were all uncomfortable enough as we stood about the fire with our damp clothing clinging to us, and gnawed at our unsatisfactory meal of scorched fish and soggy bread, and while we were eating, Yellowfish, after a prefatory speech in which he invoked bitter curses on all our heads for starting out so poorly provided, proposed to return at once and spend the night at the Kootenay camp, which, we had been told, was to be moved up that day to the Inlet flat. I was about to veto the proposition at once, when Appekunny spoke up and supported it. There is nothing that I dislike more than giving up anything which I have attempted to perform, but after thinking the matter over, it seemed to me rather selfish to keep the men out here in this wretchedly uncomfortable situation simply on my account. So, after a little thought, I said "Go," and we started. We rode rapidly, but did not find the Kootenay camp, and reached our own about 9 o'clock at night, cold, wet and hungry, having probably ridden forty miles and walked nearly ten since we started.

The next day was fair, though very windy, and Appekunny, Yellowfish and King went to the head of the lower lake, the two white men to bring down the boat and the halfbreeds to lead back the horses. I remained in camp.

About 4 o'clock I heard shouts, and walking down to the lake shore, saw the boat coming down before the wind at a great pace. In the bow stood Appekunny holding his out spread coat, while King steered in the stern. When they reached the shore they handed out three fine lake trout, one of which weighed nine pounds. They had trolled most of the way coming down, and had had a number of strikes, but in most cases the fish had been lost. One or two very large ones, which they had brought almost up to the boat, had snapped the stout hooks off short.

While dinner was being cooked the wind went down, and an hour before sunset we went out again on to the water. took my trout rod, and as we rowed slowly up the lake in fifteen or twenty feet of water, trailed a piece of the white belly of a lake trout behind the boat. The bait was large, and the hook very small, and when I had my first bite I struck too quickly and lost the bait. The next time I let the fish have it for a few seconds and then struck hard, and a moment later trembled for my tackle. The fish made a wild rush which caused the reel to fairly shriek, and I expected to have the line break, but he stopped before it was all off the spool, and going to the bottom sulked for a while. This gave us an opportunity to bring the boat nearly over him and enabled me to recover my line. Then a few pulls and twitches started him off again, and for a few moments he made lively work for us. Two or three times he headed straight for the boat, but on each occasion Appekunny, who was at the oars, managed to get out of his way so that he was led around the stern. At length the fish began to grow tired and to yield to the constant strain of the rod, and finally he was brought nearly to the surface of the water. But the end was not yet, and frightened at the boat he made other vigorous rushes which again obliged me to give him plenty of line. Finally, quite tired out, he was brought to the snr face, the gaff was put into him, and I had the satisfaction of handling the largest fish that I had ever taken on this little rod. His weight was five and a half pounds.

In an hour's fishing I caught two more which weighed four and five pounds, and lost another which from the strength he displayed I imagined must be much larger than any wo This fish after a few furious rushes sulked on the had seen. bottom, from which I could not sunt him, and devoted all his energies to sawing on the line, which he finally succeeded in cutting.

These lake trout are thought to be the same as the lake trout of the Adirondacks and the great lakes-Salmo namay. cush. I have never seen this species in the East, but Appe kunny, who is familiar with them in the Adirondacks, assures me that they are identical.

The following morning was again pleasant, though at times the wind blew down the lake with great violence, but the sport of the night before had somewhat whetted my ardor, and we were disposed to have a day with the lakers. About 10 o'clock, when the wind went down, we started out. Our camp was on the river, about two hundred yards below the lake, and in the face of wind and current it seemed easier to cordelle than to row the boat up the lake.

So Appekunny got into the craft to keep her off the shore, and King and I took the long line over our shoulders and pulled on it stoutly, and in a short time we had rounded the Then all got aboard, and we pulled slowly up the point. west shore of the lake.

The lake trout lie in deep water, and it is said that the best way to fish for them is by means of a troll with a halfpound sinker attached, so that the bait will be from six to one of these, noting as we passed along the points on the

ten fe below the surface as the boat moves along. Wc found, however, that on a bright day like this the fish readily;ame to the surface for the bait, which being three or fournches long and perfectly white, was easily visible in this lear water. I fished with my rod, but had taken the presution to remove my trout line from the reel, and had repiced it by a somewhat heavier cotton line, for in trying to trout line the night before, after coming in from the fishig, I had discovered that it was somewhat rotten and wea, and I feared to trust it with these monsters of the deep. br, though we had as yet seen no very large ones, yet they lo grow to a great size. The previous autumn Appekuny had caught one in a whitefish net, which weighed airty-five pounds, and there is a tradition of one caught yers ago by a trapper which was so large that when its captoran a stick through its gills to carry it over his shoulder, 's tail dragged on the ground as he walked to camp. F such fish one would need salmon tackle at

For near' a mile we rowed slowly along. The scene was fairly billint. Under the cloudless sky and the bright sun the clear wters of the lake played and sparkled, the foliage the hillides took on its brightest hues of green and gold; the rgged mountain tops, though so distant, showed each rayin and seam in their gray sides, and their mantles of snow they back the sun's rays like silver. It was so lovely and leaceful a scene that one felt like dreaming over it; and yet he air was so fresh and bracing, so full of tonia and vigor, ae hoat danced about so lightly, and the waves leaped an last led so merrily about us, that one could not dream, , a) he would be falling into a pleasant reverie the crest w. we would strike the boat, and its cold spray, dashing it s fa ce, would at once bring him back to the preseut.

We had well perhaps a mile when King, who was in the stern o be boat, gave a wild wave of the arm which held his troung line. It tightened for a moment, and a heavy swir a peared in the water fifty feet in our wake, and then the line suddenly yielded, and came in without resistance. A few seconds later my rod bent, and I struck the fish so had that Appekunny gave a cry of caution: "Look out, o you'll smash your rod." But I had unlimited confidence, born of past experience, in the tough bamboo, and I wanted to set the hook fast. I did so. The bamboo, andI wanted to set the hook fast. fish did not a first make off as they usually do, but remained for a ew seconds nearly in the same place, while he shook himselfso furiously that I feared he would throw the steel out of his jaws. Then he made one or two short, fierce rushes, 'and once broke water, but after that seemed to give up the fight. Sowly I brought him to the surface at the boat's stern, and just is the gaff was put into him, we could see why he had yield is so easily. In his shaking, when first struck, he had $\sqrt{5}$ and the line several times about his head, and his gills $\sqrt{8}$ fast bound down, so that it was impossible for him $\sqrt{5}$ eathe. He was a small fish, only weighing four port the but from his stomach we took a couple of young with five or six inches long, with which we replace our baits of fish belly. And always after that we looked at these fry in the lake trout that we caught, and invariaty 'ound one or more. They are the bese fish that we discovered. most taking bait for The number of these which to destroyed must be something almost incredible. The trout are extremely abundant and voracious, and in they each one must capture at least three or four young whitefish. What the total destruction is it would be impossible po compute.

We had gone but a linet further, when Dick King struck a good fish and hauled 1 pa in hand over hand, in true blueswung him into the boat and cloor. Then he took another in the fisherman style, until slapped him down on it eloor. same way, and then I have a strike, which gave me twentytwo minutes of very ex ing sport, which my companions enjoyed as much as Lef the excited way in which they talked and danced about vas any indication of their feelings. Four times the splendid n a darted off for the middle of the lake with an energy that was truly alarming, and four times, by giving him the butt when the line was so nearly gone that I could see the spool through the strands, I checked him and very gradually brough thim back; a fifth time I tried to do this, but he would not stop, and when tip and butt Lad almust met, and I felt that a pound more would break the rod, I sullenly lowered the tip, deciding that it was better to let him carry away the line than to break the only rod I had. As I did so I found that he had stopped, himself exhausted by the struggle. The fight was a long and bitter one. Often I would get him within sight of the boat, but it was very difficult to bring him within reach. When nearly tired out he would sulk on the bottom, and nothing that I could do would start him to moving again. After a while the strong tension of the bending rod would slowly raise him from his secure depths, but when I tried to bring him to gaff, his rest would enable him to start off with renewed energy. At length, however, he came to the surface of the water, though still back up, and with his sullen, vicious eye glaring feroif he meditated fresh stratagems; but before he ciously, as could put them in practice, King had the gaff in him and he was triumphantly lifted over the side. He weighed just a trifle under seven pounds.

All the morning we fished with varying fortunes. The trout seemed to favor particular localities, and we would row over

shore, opposite which we caught our fish, and, when ten or fifteen minutes had elapsed without a strike, we would turn and row back, often getting as many fish during our second passage as we had the first.

So the day passed until the afternoon was well advanced, when the rising wind drove us to the shore and into camp. A feature of this day was the appearance on the lake of a great number of terns, apparently *Sterna hirundo*. They were seen busily fishing during the morning and evening, and hovered above the stern of our boat, evidently half inclined to make a plunge at the baits trailing in the water behind. Then toward midday they betook themselves to the gravelly points and bars which made out from the shores and sat there on the beach, plump, comfortable looking, and altogether enviable. These brisk graceful sea swallows and the slow-winged gulls seemed to get along very pleasantly together, and fished and rested in company.

Sometimes at night we would row along the shore, and it gave one an eerie, half-uncomfortable feeling to watch these white ghostly, indistinct forms as they seemed to rise out of the water, and then as we approached to see the spirits lightly take wing and for a moment flit about with faint, querulous murmurs, and then vanish away into the darkness Yo.

AT SEVENTY-ONE. BY JEROME BURNETT.

The testimony of a genial angler of three score and ten, out in his boat with rod and line, busy with the bass, and now and then telling of his years from ten to seventy one.

A CHECKERED life has been my share, Tyce had good times as well as care, While honors, too, I've come to wear, And proud with what I'd won; But memory ever brings to view, Whene'er I look my long life through, The years I've fished, as now I do, From ten to seventy-one.

The same glad impulse still I know To go afield, to fish, and row, As when, some sixty years ago, The songs of youth I sung; For though my life may go amiss, And stale become what once was bliss, 'Tis true as truth, in joys like this, My heart is always young.

The shade and sheen of wood and lake, The tangled trait of fan and brake, With hazards and the tests that make The self-reliant man; The out-door world of mountain gleams, Of ocean shores and whispering streams, Embellish still my waking dreams As when my life began.

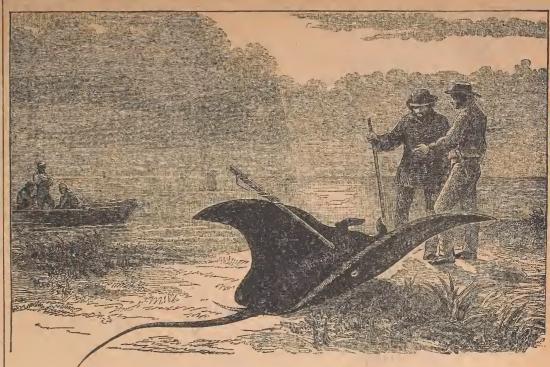

Ah, tell it as you may, my friend, Most earthly jys untimely end, Whatever fate may deign to send Ere Time with you is done;

Whichever way you hold your dish, Whatever you may will or wish, The happiest days are those you fish, Till you are seventy one.

And so I say as now I view The visto of my long life through, In light and shadow, false and true, since I was young and bold. Howe'er my lines have gone amiss, or faith has failed in hope of bliss, The while I live in joys tike this My heart can ne'er grow old.

A DAY WITH THE DEVIL FISH.

<section-header><text><text><text><text>

CAPTURE OF THE DEVIL FISH .---- From the Illustrated London News, 1853.

CAPTURE OF THE DEVIL FISH boat," as they were called, 18x6j feet, with sprit mainsail invested by two hands when necessary; centerboard, and with a good broad platform at bow to stand on. The crew con-sisted of General Elliott, myself, and two hands, Bob and jack. I had quite an affection for Bob, for le had once, at the fish of his own life, saved mine, when a coil of rope accidentally got around my ankle, but for tunately after the fish had almost made his run, and was exhausted. These user centres and the sport as much as we did, and were perfectly familiar with every phase of it. "We jumped aboard, spritled out the sail, hauled up the phapoon and lances. We always made it a rule to have a large supply of these ready. Our habit in striking was one to stand at the head, the other at the stern, both armed with harpoons; the one at the stern steering with his foot, but ready in case of an emergency to strike also. Reaching the mouth of Skull Creek. Which bounds Hilton Head on the store, stowed useless things away, and arranged our weapons to hand, then "lay off" to watch for the fish, which gene-sity showed themselves on the early ob the boat, the mouth of Skull Creek. Can one fond of the water imaginary physing to surpass this? The gentle roll of the boat, the mouth of Skull Creek. Which bounds Hilton Head on the store, stowed useless things away, and arranged our weapons to hand, then "lay off" to watch for the fish, which gene-rish, by this time having increased sufficiently to cap the avares in mid river beautifully, the landscape around pre-forting that peculiar smoky, quiet appearance so charming a June day. Such a situation and sun would, under ordinary circumstances, induce sleep, but our eyes were strik for the one who first saw the fish; they would have anyhow, but it scemed to taste better if they could say. "Endemly Elliott points to the starboard bow." "There is the fish first shows the point of its wing it resembles the fish anyhow, but it scemed to taste better if they could say anyhow, but i

I strike; leave Jack to look after the oars. Steady. Back water." The fish has just turned his gigantic body over, about ten feet from me, the harpoon is raised and driven with all my strength into the center of his white stomach, which is just on the level with the surface. "Good shot!" says Elliott. Before the fish realizes the situation the head of the boat touches him. I reach out, catch the but of the harpoon staff and force it entirely through the body, and jump out of the way of the rope which now begins to spin out with a fearful velocity. "Mind your hands, Bob," for we are now catching at the rope and bending it over the bow whenever the chance offers, thus turning the head in the direction of the fish, assisted by Elliott at the helm. "Come and help us, Jack, for if the rope gets on the broadside we will capsize, certainly." "No danger," says Jack, who immediately adds his bony hands to the work, and although the smoke flies, and I lose some skin from my hands, the boat swings around and we dash away with a speed that almost takes away our breach, the spray pours over us and the head of the boat buries into the waves, seeming sometimes as if it would never rise again. For the time being I can use no other expression

H.—Brom the *Hustrated London News*, 1863. than that we are drunk with excitement, there is nothing to equal it in the line of sport. To relieve the weight at the head Elliott and Jack pass the line down to the stern and sitting there, as we give the word, all haul together, for an-other harpoon must be placed in the fish as soon as his first dash is over. He is then gradually hauled nearer and nearer the surface. Gradually and cautiously we haul as he ap-proaches nearer and yet nearer. Elliott catches up another harpoon, and coming to the head stands ready to hurl it into the fish as soon as it approaches near enough to the surface. We begin to see the black mass indistinctly at first, then more and more visible, until suddenly Elliott says, "Look out!" and lets fly his harpoon. It quivers as the staff is half submerged; and again the fish dashes down and down until eight or ten fathoms are paid out. We then steady him, and begin the bauling again. This time Elliott arms himself with a lance, and when the time arrives plunges it in and jerks it out rapidly. The blood spurts from the wound and we leave a bloody wake behind. The fish gradu-ally becomes more and more feeble. His dashes are less and less violent, antil he at length lies foating alongside gasping for breath. No time is to be lost. Quickly a bight of the rope is passed through a nostril into the throat. My arm is suddenly plunged into the mouth of the fish as he gasps. This feat must be performed rapidly, as it would be danger-ous to have the mouth of the fish close on one's arm in a dying gasp. Then catching the rope 1 bring it out of the mouth. This performance is repeated with the second nos-tril, and we have the fish ready to be towed ashore, present-ing his head to the resisting tide, which is still running ebb.

ing his head to the resisting tide, which is still running ebb. We have time to look around us now. We are about four miles outside of Bay Point, and it will take at least four or five hours to reach shore, notwithstanding the fact that we have a howling south wind to assist us. But we have more sport in storc. The sharks begin to show themselves. These "vultures" of the sea have smelled blood, and their fins are seen flitting around in numbers. One fellow, com-ing up deliberately, takes hold of the thin portion of the wing of the devil fish, and throwing his body entirely out of the water, his tail just missing the boat, he cuts a clean half-moon out of the fish's flap. Our shark lines are rigged, baited with some small fish found in the bottom of the boat or a piece cut from the devil fish, and thrown overboard. They hardly touch before they are grasped as if another man was at the other cnd, and a trial of strength begins. But man brings mind to bear, and the shark is allowed rope, and is played; gradually his strength fails him, and a ten-foot monster is brought alongside. The lance plays a second part in dispatching the shark. We take nine of these fellows before we land, averaging from six to ten feet long. We land at last toward sunset and are met by all on

these tenders denote it ward sunset and are met by all on long. We land at last toward sunset and are met by all on shore. The fish is hauled as near the beach as possible, and when the tide recedes is left high and dry. We measure him and he proves to be 18 feet from tip to tip of wings, 11 feet from nose to base of tail, and 44 feet through. The next day he is cut up and sent to Elliott's place for manure.

manure. We have hunted our old grounds since the war, but find no fish there now, and one of the grandest sports man ever enjoyed is lost to us. If they ever return and 1 am too old to strike, I will certainly go along and teach my boys how to kill a devil fish. H. M. S.

BEAUFORT, S. C.

BEAUFORT, S. C. MICHIGAN ASSOCIATION.—Grand Rapids, Mich., Jan. 13. —The annual meeting of the Michigan Sportsmen's Associa-tion will be held at Kalamazoo, Mich., on Tuesday, Feb. 9. 1886, commencing at 7:30 o'clock, P. M. The headquarters of the Association will be at the Burdick House. A full attendance is requested, as business of interest and im-portance to the sportsmen of the State will be considered. Clubs, members and individuals are requested to send to the undersigned any information they may possess which will aid the Association in its endeavor to save the game and fish of this State from the rapid destruction now menacing it. The secretaries of all auxiliary clubs are requested to send the names of their officers and the number of their members to the Secretary for the information of the Association. Each auxiliary club is entitled to be represented at the annual meeting by five delegates. Individual members and others interested in the objects of the Association, are earnestly invited to be present.—MARK NORRIS, Secretary, 79 Lyon street.

CAMP FLOTSAM.

NIL-CROW LAKE. NIL-CROW LAKE. THERE was every promise that our quest on Crow Lake would be rife with sport. The sky was slightly overcast, and the wind from the southwest was sending a fine ripple over the water. This was not all; here were no fished-out waters, for ours were the only oars which had disturbed the lake in more than a year. The guide was an unknown thing, the hotel strangely absent, and the ubiq-uitous sardine box and tomato can had never been trans-ported to its shores. No one but a woodsman or a camper can appreciate or understand the thrill of joy which so pos-scesses one upon his finding a by-way where he has the forest and lake to himself, where his uprising and down sitting go unnoticed—and where no other craft than his own vexes the waters. In such retreats all about him sings of "Larger constellations burning, mellow moons and happy skies.

"Larger constellations burning, mellow moons and happy skies Breadths of tropic shade and palms in cluster, knots of Para

EVENING HARMONIES.

EVENING HARMONIES. If is proverbial wisdom that to be healthy, wealthy and wise, one must sleep and wake with the birds. The old say is founded, perhaps, on a belief that the lineage of man is traceable through a remote ancestry of feathered bipeds; but granting this to be true, it is not unlikely that the prehistoric one may have bequeathed to us both wisdom and a love of the hours of darkness. Another old proverb informs us that "the early bird catches the worm." A modern reply to of the hours of darkness worm." However, the pro-verb is a true one. He who rises to see the sunshine of a and fore sing morning joyonsly welcomed by all the busy fields and forest, does indeed gain much. But if he goes to his bumbers when the deeper shades of twilight come softly are the landscape, he loses sight of Nature just as she areas erest in mood most bewitcher. The bright sunshine of daytime, the sight is charmed by keenes of every kind, but in the evening the eye may rest, ti s no longer dazzled by brightness; but it throws wide its indows, and the few dim rays which enter form a faint modern are so intent on looking that we forget to use. The me medolies are sweetest when heard in the quiet

is otherwise with nearing. Tright is the anti-trive forget to In the day we are so intent on looking that we forget to listen. Tender melodies are sweetest when heard in the quiet of evening. A swelling camp meeting refrain, echoing through the dark forest glens, sung by a throng of worship-pers in the flickering light of a pine knot blaze. The melt-ing notes of a guitar, coming faintly over the water out of the darkness to the campers on the shore of a mountain lake. In the dimness of evening each sound comes to us, full of its own message. It gently touches the silver cords of life and they echo back the harmony the spirit feels. Our evenings from May to November are a festival of melody. It is one of the first signs that spring has come, the spring of bursting buds and emerald hilkides, when from every marsh and lake the chorus of the hylas arises. That which the reptiles begin the insects prolong, till the final chirp of the last October cricket. A night in dog-days is perhaps best for hearing the insects in full voice. Locusts, grasshoppers and crickets keep up a hum so monotonous that the ear soon ceases to notice it. Innumerable Katy-dids make vehement accusations of Katharine; the only answer to which is the unjust advice from the dark-winged bird rushing around in search of moths, to "chastise poor William."

bird rushing around in search of moths, to "chastise poor William." After a long, hot summer day, everything seems to welcome the approach of night. The toilers in Nature's workshop go one by one to rest, and the nocturnal beasts and birds come forth. They are few in number, however, when com-pared with the bustling life of daytime. One of the first of evening birds is the hermit thrush. When the sun is low in the West, from the deep recesses of the forest comes his sad plaintive notes, so clear, so mournful, and so full of hidden meaning, it seems impossi-ble that it could have come from the throat of a bird. He is not properly a nocturnal bird, but sings at twilight or in the quiet dusk before a rain. He is an instance of Nature's harmony. His song would be out of place in the hot meadow, where the bobolink carols his gay medley; but when the shadows have spread to the hillops and a quiet hush broods o'er the land, when body and spirit, weary with toil, welcome with half regret the twilight's fall, then comes from the enchanted woodland this sweet, sad song, a requiem for the dying day. Far unlike this song is that typical noc-turnal sound, the too-hoo of the owl. It is a low bugle note thrice repeated; and we hear it, now here, now there, as the round-eyed fellow wings his silent way through the forest. With what a down and fluff are the owl's pinions invested! His warfarc is the night attack, and he rows with mufiled oans. To know the full sweetness of the evening hour, one must

as the round-eyed fellow wings his silent way through the forest. With what a down and fluff are the owl's pinions invested! His warfare is the night attack, and he rows with mufiled oars. To know the full sweetness of the evening hour, one must spend it for weeks together in the fields and woods, and make his nightly couch with at most a canvas shelter over him. He who roams about in the dinness of evening finds a new world of sight and sound open to him. The familiar paths and scenes seem strange and uncany. The imagin-ation places beast or bird or reptile in the shadow of every bush. The rustle of a toad is a matter in which we are in-terested; for may it not be an extremely large snake instead of a toad? How surely does darkness beget fear! The most harmless things suffice to give us a little start. One unac-customed to evening strolls, may be quite alarmed to see two balls of fire glaring at him from a thicket and hear the bushes rustled by an unknown beast, just as the sensational story writer depicts it. If he braces up his courage and finds his supposed enemy to be a peaceful calf or a sheep, he is apt not to rehearse his adventure when he returns to camp; nor will his heart beat quite so fast when next he disturbs the repose of flock or herd. When one tires of seeking for Nature's treasures in the darkness, let him recline on some mossy knoll and per-chance they will come to him. A bad may zig-zag over his head; a flock of sharp-winged night hawks hunt moths near by, or a herd of cattle, grazing in the cool of the night, may wander about him, while he listens to the luscious sound of their rough tongues cropping the tender grass. Nor are his eyees and thoughts confined to earth. In the darkets of clear nights, the constellations are celestial eyes returning one's own gaze. To one fond of reveric the sky is always a good place for wool-gathering, but to watch a hunder storm on a dark and sultry August night is indeed much more than wool-gather-ing. The far away flashes over the western hills warn u

Such scenes are deeply, truly sublime; but they are less by pical of the true spirit of evening than the faint mystic succes that come to the listener on the still summer nights-

DECEMBER WOODCOCK.—A correspondent of the Adcer-tiser says he saw a meadow lark about Christmas last sitting near the side of the road back of the Letchworth place. He also knew of a pair of woodcock which remained in this vicinity until the 1st of January. Two of Auburn's sports-men were hunting partridges the middle of December and found woodcock signs which were not more than a day old. So the fall flight in this vicinity must have been very late.— Auburn (N, Y.) Advertiser.

AND STREAM. FOREST

Trecall a sultry September evening, when my hammock was slung on the border of a Green Mountain forest. I was listening to the melting notes of a white-throated sparrow, when my ear caught a far away rushing breathing sound, followed by a smothered thud. I had read with strange fascination, Thorean's account of the fall of a tree on a still night in the forest; but I had never before hear it for myself.
— A weird and strange sound it is, breaking in on the sultry stillness. I fancy that the ponderous hemlock, when smitten with age and decay, scorns to yield to the tempest's fury, with which it has battled and been victorious for a century. But as he feels that the time draws near when his aged frame must yield, his topmost branches wave gently for the last time in the soft breezes of sunset. As the evening hush and stillness fill the air and only the stars look down he relaxes the hold of his gnarled roots upon the soil or allows the decayed fibers of his trank to give way. The great bulk sways, totters, and with a sad sigh goes rushing down to its final resting place in the forest mould. But and noss and orenid.
— The stroller who walks in the darkness must see with his feet to keep from stumbling. He must feel his way slong the path and beware of hills and hollows. But when the falle of the distance, too, are only seen in faiut and uncertain out, the distance, too, are only seen in faiut and uncertain out, the distance, too, are only seen in faiut and uncertain out, the distance, too, are only seen in faiut and uncertain out, the distance, too, are only seen in faiut and uncertain out, the distance, too, are only seen in faiut and uncertain out its may the condight is a picture of a tree or rock appears, the other is hid in mysterious shadow. Objects in the distance, too, are only seen in faiut and uncertain out the distance, too, are only seen in faiut and uncertain out its may be set to be be below and of the road is full of shining dia.

turns the commonest objects to gens. In it every dewdrop is a star, and the sand of the road is full of shining dia-monds. There are lights celestial and lights terrestrial, and though the latter be feeble compared with the former, they are by no means devoid of interest. Camped on the edge of a swamp in early summer, I have watched for hours the fire-flies in their mazy dances; and as far as the eye could reach all was a field of flashing sparks. There is will o' the wisp, too, that strange uncanny phos-phorence that has frightened superstitious people for ages, and given rise to many a gloulish legend or ghostly tale. But while camped with a coast survey party on one of the peaks of the Green Mountains, I witnessed a light whose fairy-like beauty eclipses even the sparkling dance of the fire flies. Three of us one afternoon took a walk to the nearest village for supplies and mail. Our supper we carried with us, and at a point of the road which we judged we should reach by meal time on our return journey, we hid the lunch in a raspberry thicket. Unexpectedly delayed we did not return to the spot till the darkness of a sultry, cloudy, dog day night had settled around us. We knew the locality by the bare branches of a dead tree near by, and now began a hunt for the hidden parcel, but the first one who parted the bushes gave an exclamation of delight. "I have found Fairyland," cried he, and bade us look for ourselves. Down under the rank growth, from decaying branches and twigs and leaves, spartled and shone a thousand little gens of light. So might the lights of a great city appear to the ob-server in a balloon miles above. What possibilities did the imagination conjure up, of elves and guomes, whose haunts we might be viewing, of a microscopic fairyland whose miniature beanties our eyes were too gross to discern. Nor had we perceived all that our eyes were capable of seeing, for now, as we looked closer, we saw that under our feet, all around us, and even in the mud, of the road, the faint lights

and we perceived all that our eyes were capable of seeing, for now, as we looked closer, we saw that under our feet, all stores, and even in the mud, of the road, the faint lights use.
So absorbed were we in this enchanting illumination that for at me our missing package was forgotter. But the had overlooked in his previous search, and by its with the had overlooked in his previous search, and often before on the event deer are the search at the overlooked in his previous search, and often before way to camp we walked upon a luminous pathway, and the thick underbrush about us, millions of glowing highs the thick underbrush about us, millions of glowing highs the thick underbrush about us, millions of glowing highs the thick underbrush about us, millions of glowing highs the thick underbrush about us, millions of glowing highs the thick underbrush about us, millions of glowing highs the thick underbrush about us, millions of glowing highs the thick underbrush about us, millions of glowing highs the thick underbrush about us, millions of glowing highs the thick underbrush about us, millions of glowing highs the thick underbrush about us, millions of glowing highs the thick underbrush about us, millions of glowing highs the thick underbrush about us, millions of glowing highs the search at lights and sound fade to the healthy dweller the tents. Sight and sound fade to dim visions and whise the these all our hopes and wishes, though long since anished in the miss of years, shall come back to us grafted at the tents. CHARLES WHITTNE BAKEN.

WINTER SNIPE IN COLORADO.—Yesterday, while taking a little jaunt on snowshoes with Mr. Slaymaker, a promi-nent attorney of this place, we ran across two Wilson's snipe, both of which we killed. Is it not usual to find them in this section, especially in the winter time when the thermometer ranges anywhere from 20° to 30° below zero? We are located in the heart of the Rocky Mountains, at an elevation of 9,500 fect above sea level. When we first started the snipe they were feeding along the edge of theice on a branch of the Animas River.—R. V. R. S. (Silverton, Col., Jan. 10). [It is not very uncommon to find Wilson's snipe in the Rocky Mountain regions in the coldest winter weather in the adjiborhood of warm springs when there is open water and soft mud in which they can feed. As we have frequently remarked, the birds do not seem to care for the cold if only they can get enough to eat.]

BIRDS AND BONNETS.—Washington, D. C., Jan. 18.— Before furnishing the "Philadelphia correspondent," who "wishes to know of a heronry within 150 miles of that city," with the information which he desires, would it not be well to ascertain the purpose for which he seeks this information? Possibly he may be one of the unconscionable villains who "feather their nest" with heron plumes. I hope to see your editorials, concerning the nefarious business of slaughtering birds for their feathers, extensively copied in the newspa-pers throughout the country, but have little hope that any considerable public sentiment can be aroused against the business.—PATOKA.

ENGLISH SPARROW AS EGG ROBBER.—Shepherdstown. West Virginia, Jau. 20.—*Editor Forest and Stream:* I have taken and read carefully every line you have published since your first issue, and must say that while other publica-tions of the same sort give an outline, you always give us the most complete information in regard to the sports we love so well. Hence I send to you for the information of all sportsmen, the following in regard to the English spar-row: Last spring I found a partridge (quail) nest with thir-ten eggs in it. The old hen was sitting upon her treasures when a colony of sparrows discovered her nest, and it was not six hours before the little scoundrels had robbed the nest of every egg, and not only robbed the nest of its eggs but, under my own eyes, had eaten every one of them. I also witnessed the same flock of sparrows trying to break their way into some hen's eggs that were left in the nest as 'nest eggs," but they were frightened off by the hens, else, I have no doubt, the birds would have succeeded in eating them. I have also seen the rascals wait patiently upon an old hollow pear tree for the northern sap-sucker to leave her nest, when they at once invaded her snug nest and robbed it of its eggs, which I saw them carry to the eaves of our house and devour at their leisure. I have been watching these little robbers for some years, and have come to the conclusion that they are the cause of the scarcity of quail in the Middle States. I would be glad to see some heric measures taken to exterminate them. I am now watching a flock of spar-rows and will let you know how they subsist through the wiuter.—E. D. Bownes.

AN ALBINO QUAIL.—Yesterday Mr. H. C. Davidson re-ceived a white partridge, which was killed last Tuesday near Union Springs. It was presented to Mr. Davidson by Col. D. F. McCall, who says it is the second white partridge killed in the vicinity of Union Springs. The strange bird is perfectly white, without a colored speck or feather. It will be preserved as a curiosity by Mr. Davidson.—Mont gomery (Ala.) Advertiser.

THE MASSACHUSETTS DINNER.

THE MASSACHUSETTS DINNER. A BOUT eighty members and guests of the Massachusetts Fish and Game Protective Association gathered in the large dining-hall at Parker's last Tuesday evening to enjoy their annual dinner, President E. A. Samuels of the asso-ciation acting as master of ceremonies. Among the guests were Lientenant-Goveraor Ames, Hon. J. Q. A. Brackett, Speaker of the House of Representatives; Senator W. H. Tappan, of Essex; Representatives A. N. Doane, of Harwich; C. C. Smith, of Springfield; B. O. Atkins, of Provincetown; Cor-tez Allen, of Westport, and Isaac Young, of Welldeet, and Fish Commissioners George W. Riddle, of New Hampshire; Herbert Brainard, of Vermont; E. G. Blackford, of New York, and E. A. Brackett and E. H. Lathrop, of Massachu-setts.

ier Allen, of Westport, and Isnae Young, of Weilfacet, and Fish Commissioners George W. Riddle, of New Hampshire; Herbert Brainard, of Vermont; E. G. Blackford, of New York, and E. A. Brackett and E. H. Lathnop, of Massachu-etts. The and gine, elegantly served; and its discussion occupied a mage two hours. This address, preliminary to the after-diumer speeches, President Samuels said: Massachusetts, though far in the oright and model for other States in many things, is far in frame and birds. Our people are not yet sufficiently deucated in right and wrong to obey our law, indulgent, too indulgent as it is. The calls made upon us usually demand instant stuffich. The calls made upon us usually demand instant sufficiently deucated in the protection of the protection of the States in says thild with the pro-set in the calls made upon us usually demand instant sufficiently deucated in responding to them we are oblight operating as a low of the state, its even diffusences and the present it from receiving the smells by wholesale; that other prothers in the round of the responding to them we are oblight to spend our money and time without stint. As this work is done all over the State, its revy diffusencess seems to prevent it from receiving the prominence and receive from well-wishers and friends that pecuniary asistance and encouragement which is otten given other based on those as tear has been very considerable. We have done we have done well, and t believe that we have done we have done well, and these beates and birds is a weak one; that section winch relates to our song and insectivorous birds, our approved made birds is a weak one; that section of our game and birds is a weak one; that section winch relates to our song and insectivorous birds, our approve can easily obtain a license to kill these birds, and so that he claims he is dong it for scientific purpose, there is not have the weak of the scientific purpose, there is no thing to his privilege of destruction. It is by these holders of licence, largely,

vision appears in the game laws of almost every State in the Union.

SHOTS AMONG THE PRAIRIE CHICKENS.

<text><text><text><text>

order to get any sport out of it, but they will tery soon any e to moderate their desires and learn to get more sport out of less game. We arrived at Omaha in the evening, and stopping over night were told that a great many chickens had been shot about 100 miles west on the U. P. R. R. We told our in-formant that we were not after chickens that had been shot, in fact we were not in the second-had business at all, but had started for some locality where we could "sit down at the first table." The next morning we took cars and after rid-ing about eighty miles in a northwest direction were landed at the little town of Bancroft on the edge of the Omaha In-dian reservation. A few moments' conversation with the landlord, a Parker gun behind the desk and two Russian setter dogs under the table, satisfied me that we had made no mistake in our location. I being the commissary of the party, was ordered to make arrangements for our supplies during our stay, which I did by saying we should want a team at our disposal which would stand fire, enough to eat and a good bed to sleep on at night. "How long do you propose to stay?" asked the landlord. Our answer was: "Until we get satisfied." The price was named and that settled it. About this time we were called in to dinner, where we

KENTUCKY GAME NOTES.

KENTUCKY CAME NOTES. The past season has been remarkably barren of sports. After a favorable summer and an apparent plentiful-ness of nesting birds, the most inviting covers were drawn black. In few instances were more than two rounds neces-sary to insure an oiling up and "filing away" of guns. The heaviest mast the old-timers ever saw brought not a pigcon nor a squirrel. Streams that a few years ago furnished ex-cellent sport will not now furnish bait. A few sportsmen met in Louisville during the fall and evolved a new game and fish law, which Chairman Barbour has submitted to the Solons now in session at the capital; but precedents forebode trouble if not defeat. Without leg-islation radically different from past enactments, sports in the blue grass belt will soon be an item of pioneer history. Wery few legislators (?) appear to realize that rapid rota-tion is the prevailing practice; and no sooner than assured of their election, all foolishly set about a canvass for re-elec-tion which rarely materializes. Asinine pledges are given during canvasses, and coupled with an equally asinine am-bition tog b back, handicap representatives so heavily that intelligent and imperative legislation in the interest of game and fish is nearly an impossibility. Two or three instances of observance of our fish law of ten years ago demonstrated its wisdom so clearly that not a complaint was heard; but unversal evasions of the penalties and the notorious partici-pation in infractions of the law by officers sworn to encom-pass the observance of that law, soon resulted in a lapse to the old state of vandalism from which we were but tempo-arily lifted. Mather the prosper the efforts of the gentlemen striving

pass the observance of that law, soon resulted in a taple to the old state of vandalism from which we were but tempo-rarily lifted. May the fates prosper the efforts of the gentlemen striving to benefit the ignorant and perverse, and their labors result in a law whose penalties will command its religious observ-ance through a mortal fear of the consequences of violation. During a late horseback trip to the mountains I was in the saddle the greater portion of seven days' traversing a finely timbered section, and though informed by every one that squirrels were plentiful I didn't see one except on the tables at two houses. One large bunch of mallards flying up Cum-berland River and two bevies of quait was all the game that I saw, and every day that I was out was a good day for gunning. I was invited to occupy a deer stand within four miles of a country town, where two of five deer had been bagged a few days before, but business forbade. Within twenty miles of home I was shown the leg of a two year old doe, one of thritten deer started in one drive. A night at Uncle Joe's was next thing to one spent in camp. His reminiscences of large and small game captured within ear shot of the fireside beside which we sat were de-lightful. He told me that there are several bunches of deer in the country, and that on the Tennessee border bears have increased so rapidly as to become seriously destructive of mountain sheep. A little conservatism and concert would soon render the mountains of Kentucky as rich in sports as when Uncle Joe was a middle-aged man and I a boy, thirty-five years ago. CENTRAL KENTUCKY.

THE ADIRONDACK DEER.

THE ADIRONDACK DEER. Editor Forest and Stream: A long letter originally printed in the New York Times has been copied into several of our journals. Its statements are so inaccurate and its reasoning so fallacious that I pro-pose to go through it and show its worthlessness as an argu-ment for deer hounding. The writer says: Every year a larger number of people than went the previous year visit that region in search of health or amusement, or both, but they leave early in the fall, because the game laws are so framed that there is liftle to amuse them after Sept. 1. This may be true of some parts of the Adirondacks, but it is not true with respect to the north side. Parties go into the woods as long as the weather is warm. Only the pot-hunter would stay later. In so large and sparsely settled a region as that under considera-

In so large and sparsely settled a region as that under considera tion no law can be effective which does not appeal to the commor sense of the majority of the resident population, for they and they only, can prevent the violation of the law by irresponsible people and unless they will co-operate with the authorities the State cannol secure gamekeepers enough to prevent the hunters from breaking the law.

the law. That is about so. If gentlemen (?) like "J. T. D." will violate the law, by all means repeal the law. Don't punish the offender because "the State cannot secure gamekeepers enough to do it." Poor little Empire State, how I pity you in your helplessness. It had always been the custom until this year to use dogs in start-ing the deer, so as to drive them past the point where the hunter can get a shot.

It had always been the custom to run the deer to water and kill it with a club.

The deer can easily distance the dog, and by running to some brook r pond can throw the dog off the scent and escape, unless he hap-ens to come to the spot where the hunter is waiting for a chance to hore

The deer can easily distance the dog, and by running to some brook or pond can throw the dog off the scent and escape, unless he hap-pers to come to the spot where the hunter is waiting for a chance to shoot. Yes, the deer can outrun the dog for a short distance. That only. The pure hound is too slow for this business. Guides use a mongrel—just hound enough to follow the scent. A dog that runs fast and gives little tongue is the best for deer. Why don't "J. T. D." describe the "spot" where the hunter waits for a shot? I will supply the omis-sion. It is at a pond or lake on some busby point. His guide is with him; his boat is hidden from sight, but where it can be pushed into the water in a moment. There is not a panther in the Adirondacks but will tree to a good dog in from five to thirty minutes; yet he could easily kill a dozen dogs had not nature given him a mortal fear of that deter-mined animal. So with the deer. In his terror he flies to the water. Perhaps he has had a hard run for miles; per-haps the water is icy cold. There is no tify in the breasts of sportsman (t) and guide who, hidden on that bushy point, are waiting for it. As soon as the deer is out far enough so they can cut him off from the shore, they put out in the boat. What follows is cold-blooded, deliberate butchery. Swiftly, silently the boat approaches the victim. At a dis-tance of ten or filteen rods it is discovered by the deer, that now makes frantic efforts to escape. The powerful arms of the guide soon send the boat to within a few feet of the doomed animal. Then the Winchester is a favorite weapon. If the deer is not killed by the time the magazine is emplied, the guide holds it by the tail while the sportsman (f) heats its brains out with a club (carefully provided by the guide for just such an emergency). Consequently not more than one deer in ten which are started is likely to come within shooting distance, unless the hunting party is

Consequently not more than one deer in ten which are started is likely to come within shooting distance, unless the hunting party is a very large one. Even when the deer goes within shooting distance the hunter frequently misses fire and the animal makes his escape.

the hunter frequently misses fire and the animal makes his escape. The sportsman (?) always employs a guide; the party gen-erally consists of several person⁴. One guide puts on the dogs, and from his knowledge of the country and previous hunts of like nature can tell about where the deer will water, and the rest of the party post themselves accordingly. Prob-ably not one in ten escape.

This kind of hunting gives employment to the greatest number of ment and does as little harm to the deer as any method that is em-ployed

Yes, it gives employment to men, but is that employment an advantage to them after all? The guide keeps a pack of hounds (but no hogs) all the year; neglects all other work for perhaps a month's employment "hounding." As for the deer, it is simply death for it, and after being run by a dog for hours and then plunged into an icy lake, probably death by a club is a relief.

by a club is a relief. In fact, it is well known that every deer killed by hounding costs the sportsman at least \$150 in expenses for camping utensils, guides, pro-visions, etc., but the health and enjoyment derived from a life in the woods amply reply him for the expenses. That is all moonshine. I have known parties to sell ven-tson enough to pay expenses. I have known men who used to make up a hounding party every fall to hunt with hounds for profit.

for profit. The use of dogs, however, makes the deer wild, so that the pot-hunter who is suboring for the market cannot easily make his ex-pense, and therefore last where, by appealing to the sympathies of many members of the Legislature who were not familiar with the subject, some of the pot-hunters' friends procured the passage of a law prohibiting the use of dogs, and what was the result? So FOREST AND STREAM is the pot-hunter's friend, is it? And the thousands who signed its petitions for a non-hound-ing law are all pot-hunters or their friends? So far as I know the result was to lessen the number of deer killed; it gave an outer who wanted a deer for camp a chance to kill it without a dog, and gave some people and papers a chance to howl. to howl,

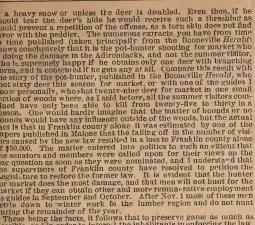

to howl. The guides lost their usual employment is September and October because people did not dare to break the law, but they had to make their living and provide for their families; therefore, they were forced to bund deer and sell the hides to the peddlers, as well as the meat, when they could do so. The hide of a good deer brings \$1.50, and the chance of finding some one to buy it. Of course, at these rates, it takes a great deal of hunting to realize \$2.50 a day that the bunter would have were he acting as guide for a sportsman, feeling sure of first of all tons legal red tape has been plainly shown in the small section of Franklin county with which I am familiar, where up to the latest accounts 65 deer had been killed this fall, as against an average of 35 cas to the logar mode and small deer so plentiful as they were in the fall of 1881.

fail of 1884. Perhaps the guide did lose his usual employment in Sep-tember and October, but then he had a chance to harvest his crops. Does "J. T. D." mean to tell us as an honest fact that but twenty-five or thirty deer were killed each year by hounding in Franklin county? Why I know of a single party killing as many as that in a single hunt on the southern border of St. Lawrence. "J. T. D." "never saw tracks so plentiful as in the fall of "84." Well; when the woods are full of hounds deer will make tracks, and plenty of them, there's no doubt about that. Many mersons sumpse that the deer are caught and torn by the

Many persons suppose that the deer are caught and torn by the dors, but this is a mistake, as a dog cannot catch a deer unless there

[Cut this out, put it on a blank, obtain signatures and send to your Member at Albany.]

A PETITION

sprides in September work in the lumber region and ettle down to winter work in the lumber region and These being the facts, it follows that to preserve game as much as massible, and in order to interest the inhabitants in enforcing the law, bill should be passed allowing deer to be hunded either with or without bounds during the months of August, September and Octo ber. It should be illegal to allow any venison to be sent out of the Adirondacks during the next five years. Such a law would not de-prive the lovers of venison in our large eities of their favorite dish, because there is aiways an abundant supply from the West.

<text><text><text><text><text><text><text><text><text><text><text><text><text><text><text><text><text><text> by the training of the linear scene of the second scenario of the second scenario

For the Continued Protection of Adirondack Deer.

To the Honorable, the Legislature of the State of New York:

· We, the undersigned, residents of County, respectfully petition that the law (Chap. 557, Laws of 1885) which makes it "unlawful to pursue any wild deer in this State with any dog or bitch" may not be amended in any such way as to permit the use of dogs for hunting deer at any time.

(Signed)

The worst hounded venison I ever saw was killed in Novem-ber, with snow on the ground. It was unfit to eat when killed and in twenty-four hours was putrid and had to be thrown away. It is because they cannot endure the race so well that they take to the water so much quicker in cold weather. In view of this fact, if a season for hounding must be tolerated at all, it should not be in October, but the first ten or fifteen days of September. This would accommodate the greatest number of sportsmen, very few of which remain in the woods after that date. If it is later than this it will be entirely to the interest of pot-hunters. Besides, during Sep-tember deer do not take so readily to water and thus the op-portunity for slaughter by this mode of hunting would be entirely avoided.

SHOOTING IN CUBA.

SHOOTING IN CUBA. A BOUT twelve miles due south from Habana and two west from the railroad station at Rincon lies one of the tracts (1,800 acres) rented by the Habana Field Sport Club, and policed by its own special constable. These grounds inclose three large lagoons, favorite resorts in win-ter of coots, teal and other ducks, and their borders are fre-quented by snipe and other marsh birds. Thus they had been hereiofore much visited by local hunters from the club by offering to its members the attention to conduct them in excursions outside of this tract, where good sport could sometimes be had. Some of these reedy and difficult lagoons, and they were consequently invited to have a day with the club in these waters. The morning was cloudy and dark, threatening drizzling rain, which threatening con-tinued to hover over us without, however, coming to a downright rain storm. The visitors were supposed and indeed supposed them-

tinued to hover over us without, however, coming to a downright rain storm. The visitors were supposed and indeed supposed them-selves to be so much better posted in successful methods of the chase in this particular region that they were asked to indicate the most efficacious plan, and were shown the four boats belonging to the club, fitted with racks for blinding, etc. Flattered by such bowing to their superior skill, they were inclined to be a trifle boasful, especially of the superior qualities of their retrievers, which they said would be sure to follow the wounded birds into the most impenetrable reeds; and they chose for themselves to go in the boats. While most of the members present distributed themselvers to favorable positions on shore to intercept the birds in their flight. But in the general eagenees to get into posuion, and the confidence that the visitors were so well versed in lagoon e shooting, we neglected to mention to them that under the administration of the Field Trial Club there might be some slight changes that had taken place since its advent to these waters, for instance, that there were some birds there with peculiarities such as the visitors had never before seen, though they looked for all the world just like those they had so often they looked for all the world just like those they had so often they looked for all the world just like those they had so often they looked for all the boats had to trayers elsolvy and and with this greatest caution, following the signous edge of its

reedy shores, a favorite method of these parties being to creep stealthily upon the game, and a shot at a tempting group like that in view would amply repay them for an hour's tug-ging at the muffled oar. The boat of the club was to them also a novel method of approach, and novelty always has attractions of its own.

like that in view would amply repay them for an hour's tug-ging at the muffled oar. The boat of the club was to them also a novel method of approach, and novelty always has attractions of its own. The creeping movements of the boats was keeping some birds in motion from one lagoon, giving the members stationed about an oceasional shot, but the parties in the boats were inclined to burn no powder upon the birds passing over them so intent were they upon the large bag to result from a single broadside into the tempting flock nessiling in the edge of the reeds ahead of them. They had tugged at those oars until their arms were breaking, they had erouched down in the boat until the muscles of their lower limbs were cramped into hard knots, but they had arrived almost within shooting distance and were full of anxiety lest the game should flush at the last moment before they were at the desired distance. Five yards nearer and their labors would be rewarded by with desire to demostrate to the eity sportsmen as the *size you non* for these lagoons. In vain small groups of birds would pass over, and temptingly near to them. In vain *Rallius elegans* would fles in ecouples and quadruples before them in near proximity, when an effective broadside was so soon to fill their bags to overflowing with *Quergue-dula discores.* In vain also *Parnas gymnostoma* railed at them its angry protest against their presence in its favorite haunts, thus proclaiming it to the coveted game had they been of more timid stuff. Several pairs of wicked eyes were now the wen expectation of the sport about to begin and almost in the dab birds. What a proud stations on shore in keen expectation of the sport about to begin and almost in the deab birds. What a proud mount for these two rustic sportsmen to show off their superior tacties. to their either them, for a second and a third volly was poured in the boat and Bose and Fetchum were launched out to gather in the deab birds. What a proud mounent for their pride of great experience in the ways

Bilectually exposed their ignorance of modern methods which had demonstrated their effleacy upon themselves in a striking manner.
Though no members of the club had sat behind the stools on that day, still they had made a fair bag, which was duly divided among all, their visitors included. Of course they were profuse in regrets that they had forgotten to mention to the visitors the little circumstance of the presence of decoys in the lagon, as they supposed they knew all about such little incidents of duck shooting, and the visitors were as fluent in their protestations of sorrow at their blundering destruction of the property of their entertainers, which had at least been deteriorated by the numerous discharges of large shot. They were freely forgiven in consideration of the lively entertainment the incident had afforded, and which will long hereafter be remembered as a charming reminiscence of the association, furnishing, as it did, long and agreeable exercise to the diaphram and abdominal museles of its members. NEMO.

HABANA, Cuba, Dec. 26.

PASSAIC COUNTY ASSOCIATION. Editor Forest and Stream:

I have read with very little satisfaction the proceedings of some of the game protectors against violators of the law in New York State. I should think that these paid officials ought to have made a better record, considering the facts that they have a large area of country to look after and that the reports were for a whole year. Compare their reports with the following, the record of the Passaic County Fish and Game Protective Association for the last month, December:

with the forwing, the feeded of the fassice could y Fish and Game Protective Association for the last month, December: Abraham Terhune and Thomas Finnegan, fishing with net, \$20 each and costs. Edward Ryerson, shooting black bass, \$20 and costs. Jacob Ryerson, maintaining eel weir, thirty days in jail. James Ryerson, fishing with set lines, prose-cution abandoned on account of sympathy for family. Frank Kastell, same offense, thirty days in jail. Thomas W. Gar-rison, same offense, thirty days in jail. Thomas W. Gar-rison, same offense, thirty days in jail. Thomas W. Gar-rison, same offense, prosecution abandoned on account of in-sufficiency of testimony. Barney Palm and Mike Helson, maintaining eel weir, \$20 each and costs. John Milligan, same offense, prosecution abandoned on account of sym-pathy for family. Whitfield Little, John S. Schulster and Thomas Van Orden, unlawfully killug rabbits, \$20 each and costs. William Snedeker, trapping quall, \$20 and costs. In the cases of the cel weirs mentioned the weirs were all destroyed. The fines were not collected in every case, but none got off without paying at least the larger portion of the costs.

In addition to this the Association has almost perfected arrangements for stocking Greenwood Lake and other Passaic county waters with alewives, and has discussed plans for the improvement of the shooting and fishing in the county. This is one month's record, and December was by no means an exceptionally good month. The Association consists of fifty-five members who pay fifteen cents a month as dues, and nearly all the business of the Association is transacted by the secretary. One association of this kind with a few live members and a handful who pay dues is worth a half a hundred hired game protectors. Still, sports-men do not seem to see the benefit—I may say necessity—of organizing. A little energy and a little money go a great way when properly applied.

INITIATION.

INITIATION. Editor Forest and Stream: Time has dealt kindly with me, and I am almost aston-ished that it has me hovering around in the vieinity of fifty. It seems a long, long time since I shot and killed my first deer, when I was about fourteen. It was in the mountains of Huntingdon eounty, Pa., and not more than two and a half miles from where I was born, and I have been shooting ever since. How vividly we remember important boyhood cxploits. It seems like an oeeurrence of but a few weeks ago. I remember it all—How I coaxed my father and uncle Sam to go along and how I rubbed up the old smoothbore shoot deer with; the sleepless night before the start; the early start; the hunt begun along the south side of Tussey's Mountain; how I watched the man above me and the one below me more than I watched for deer, afraid of getting lost; how while looking for the hunter below me I saw a magnificent buck loping along not thirty yards down the mountain; how I yeled like a Comanche, and how the man below me. Sam Styker, eame up, tried to shoot him in the head to save the skin and venison, and instead shot him in the nostrils, and how the buck made off down the mountain; how I watched to follow him, with my gun way discharged and whe the smoke eleared away I had a palpitation of the heart and found that the buck was wounded; how I yeled like a Comanche, and how the man below me. Sam Styker, eame up, tried to shoot him in the head to save the skin and venison, and instead shot him in the nostrils, and how the buck made off down the mountain; how I wanted to follow him, with my gun with my father and unele Sam eame to us, when we all went in search of his buckship, there being no snow, no dog—and publek until his skeleton was found nearly a mile from the scene of the traggedy the following summer. Oh, how well remember how I mourned the loss of that deer. It is head to snoothbore after that day's hunt than I ever did be-tore. Since those days I have hunted in Michigan, Minnesota, baba

fore. Since those days I have hunted in Michigan, Minnesota, Dakota, Iowa and Pennsylvania with varied success, but none of my many outings ever gave me as much pleasure and sorrow combined as the first deer hunt on Tussey. SHONGO.

THE DUCKS OF THE PACIFIC.

<text><section-header><section-header><text><text><text><text><text>

waxed fast and furious. Shoemaker held his own royally, and I did the best shooting I ever did in my life, scoring thirteen straight without a miss. We left that snipe ground thoroughly satisfied, and all our hunting was done inside of three aeres of ground. It was the best snipe ground I ever saw, and I think my friend S. will say the same if he reads this letter. As the afternoon was waning we took the road toward home, and after getting into two or three more coveys of quail and filling our coats we reached San Diego about 8 o'clock in the evening, thoroughly satisfied with ourselves and the day's sport. We brought in somewhere near 150 pieces of game, num-bering duck, jacksnipe, quail, dove, rabbit and jack rabbit. Our game this season is fine. Ducks and quail are here by thousands, and we anticipate many a day of fine sport among the geese, which do not arrive here until after the New Year. Three market-hunters, located twelve miles from town, are shipping on an average seventeen dozen quail daily, and still they seem to be as plenty as ever. Black braut are not so plentiful on the bay as last year, and the duck erop I think is hardly as large, but we are having glorious sport nevertheless. AD. B. PEARSON. Say Diego, Cal., Dec. 18, 1885. SAN DIEGO, Cal., Dec. 18, 1885.

MICHIGAN DEER.—Eseanaba, Mieh.. Jan. 16 —My in-formant was mistaken about Lud Leopold shooting a man at work. He raised his gun to do so when his hunting partner stopped him; Leopold thought it was a bear. Not long after that Leopold shot his hunting pard and killed him. When arrested he waived examination and was tried in Circuit Court and found guilty, and was given one year or two hundred dollars fine. I hear he paid the fine. Cheap, Two years ago next month I saw 1,400 deer skins at Eseanaba, some red coat, some blue, some heavy gray, some of the latter quite green, a large share of them killed out of season. One week later 1,400 more of the same kind were brought in and shipped away. All of them came from Manistique. This fall I tried to get two deer heads for a friend in Buffalo but could not get them as the hunters only bring out the saddles as a general thing.—BLANK.

FOOLED BY A GREBE.—One day I was rowing leisurely, when I saw a red-neeked grebe. The grebe appeared to be pretty far off, but I thought I would risk a shot, so I blazed away, and the shot took effect. I paddled up and secured the bird and haid him on the bottom of the boat. He was a fine specimen, and I was glad to get bim. Then I turned the boat toward home. I had got about half way there, and had turned half round in my seat to see my way among the rocks, when I heard a splash. I looked round just in time to see that grebe's tail disappearing in the briny deep. I never got him again. He conducted his operations very well indeed, and I supposed he deserved to get away.—J. WENDELL, JR.

VIRGINIA.—Lynchburg, Va., Jan. 20.—The weather with us was open and beautiful until the 8th inst.; indeed we though we would have no winter at all. But on the 8th a snow storm and the cold wave struck us at the same time, and for a week the mereury was at and below zero. It was the coldest weather experienced here for a long, long time. From the most authentic sources I learn that the game, and specially our partridge (guail), escaped and are now doing well; but it is reported that in other portions of our State near Staunton the game birds fared badly. Bob White is a sturdy little fellow, and if given half a chance will come out all right.—W. A. S.

CORINTH, Miss.—I left New York on the evening of the 10th inst., and did not reach home until Wednesday at 7 o'elock A. M., nearly twenty-four hours behind time. Was stuck in three drifts before I reached home. It was fear-fully cold, and we had a very disagreeable trip. The weather was 6° colder here than it ever has been within the memory of the traditional "oldest inhabitant," or any other man. Ice six inches thick. The cold wave reached this place Thursday morning and New York Friday night about 11 o'elock, as I can testify. Has been cloudy with a cold rain almost every day since last Thursday, and fearfully muddy. —GUYON. -GUVON

KANSAS RABBITS.—Paola, Kansas, Jan. 15.—One of the late hunting and trapping books says that in hunting rabbits the runways should be manned, the hound turned loose and silent watch kept for the rabbit. This may do very well in some States, but in Kansas all that is required is a small dog, a good hickory club and two or three inches of snow and a person can return at the end of an hour with fifteen or twenty rabbits.—R. H. C.

NEW YORK ASSOCIATION FOR THE PROTECTION OF FISH AND GAME.—The officers for 1886 are: President, Robert B. Roosevelt; Vicc-President, Benjanin L. Ludington; Sec-retary and Treasurer, Thomas N. Outhbert; Counsel, Charles E. Whitehead; Excentive Committee, Stephen A. Main, Alfred Wagstaff, Henry N. Munn.

STONEHAM SPORTSMEN'S CLUB.—Stoneham, Mass., Jan. 21.—At our regular meeting, Jan. 7, the following officers were elected: President, P. H. Horne; First Vice-President, Elbridge Gerry; Second Vice-President, A. O. Emerson; Sec-retary and Treasurer, H. P. Brett; Trustees—Geo. Coburn, W. P. Howe and H. H. Dane.

THE FOREST AND STREAM'S GRIZZLIES.—Santa Barbara, Cal., Jan. 11.—Put 'em (the grizzlies I mean) in Central Park garden with FOREST AND STREAM tag on them, and like designation prominently on their house (or den). You can-not make a better contribution to curiosity and popular in-formation.—W. N. B.

PROGRESS, N. C., Jan, 22.—We have been having some very bad cold weather here, but it is fine now. I have carc-fully examined the grounds in this vicinity, and am pleased to find the birds all right. I have a couple of basset hounds, and they are having lots of fun with the cotton tails.—T. M. ALDRICH.

BLOOMING GROVE ASSOCIATION.—Officers for 1886: H. W. Nason, President, 74 Broadway; Spencer M. Nash, Vice. President, 23 West Thirty-third street; A. J. Post, Treasurer, 103 Broadway; N. S. Smith, Secretary, 95 Nassau street.

TRAJECTORY TEST. -- The shop number of the Bland rifle tested at our rifle trajectory tests was 10,263.

LAWRENCE RIVER WORK.

<text><text><text><text><text>

<text><text><text><text><text>

In my work during the year, I have invariably and at once

In my work during the year, I have invariably and at once investigated any complaints, rumors or information as to nets. You can readily understand that much work was per-formed in this way of an entirely useless nature. Some one would say that there was a net in such a place. It might be honest information, or an honest belief, but it has not al-ways been so. When there have been no complaints to in-restigate I have created work by visiting suspected places. All of which is respectfully submitted. W. M. STRELE, The Utica Observer say that Commissioner Sherman is ex ceedingly well pleased with the above report in form and substance. It shows what he particularly wishes to demon-strate—what thorough work may be done when sportsmen boldly and actively take hold of the work and thus strengthen the hands of the law and its officers. Special Protector Staring will continue to labor with State Protector Steel this scason, under the employ of the Anglers' Association. Dr. Sargent, of Watertown, President of the Jefferson County Fish and Game Association, Captain Tyler, of Henderson Harbor, and others interested in fish protection in the harbors of the lake, are hard at work and will complete the chain of fish protection on the St. Lawrence and Lake Ontario in this State, this year. Fish thieves will have but little confort in 1886, or later, with all these active men watching them.

FISHING AT KEY WEST.

state, this year. Fish theres will have but little comfort in 1886, or later, with all these active men watching them. **FISHING AT KEY WEST.** It is a cold day in Key West; and when I say cold I mean if, although were I to give the exact height of the mer-cury, I doubt very much If you good people in New York and further north, who are toasting your toes around the chereful holes in the walls and floors, through which the hol air pours, would agree with me. It is just 50° Fah., with a thirty-mile-an-hour zephyr coming straight from the Arctic circle, a cloudless sky and a bright sun, in which, screened from wind, the thermometer I have just had put out to try it, soars upward to 70°. It all depends upon the route by which you reach a temperature, whether it shall be consid-round it a little coolish at 50° and warm at 82°; the former in lots of places all over the world, in Woosung and Wham-pou, China; in Batavia and Slagapore, India; in Bahia and Rio, South America; in the Red Sea and in Aden, Arabia, where for days at a stretch—and nights too, for that matter —a thernometer whose marks stopped at 100° would be use-less; I have found the latter in our own temperate zone, in a sweet village, in a valley, which honored me by allowing me to be obru there, a New York Central village, which possesses, according to the statement of the oldest inhabitants, "the finest climate in the world, sir." So at Key West where as general thing the winter weather is just right for out-dor life, in autuum clothing, for one extreme, white pants and staw hats for the other. When the day, our winter years ago, the thermometer marking 44°, established for it a part she old day has furnished an incident very much out of the day one winter weather is rough, and it is Sun-day, fishing is going on at a very lively and successful rate, and by a method differing from all accounts of "Al Fresco." Henshild, "Nessmuk," and other Florida anglers, whose on the starge fish to more, and one dute right a some not at alife of the former

whey, and my bath tub this morning, an hour after being half filled, had a bottom deposit of fully an eighth of an inch of sand. The cause of this unusual state of affairs is a strong norther, which, beginning on Christmas morning at about 2 o'clock, gradually freshened into a strong gale, which just now is moderating after over sixty hours of stirring up things. Although called a norther, the gale has been actu-ally from northwest, gradually hauling to north, where it now is, and dying out; and, except for the force of the wind, roughness of the sea and fall in temperature, which before was well up in the seventies, more beautiful weather could not be conceived of. There is one peculiarity about these northers; no two are alike, and no description of the approach of one would give any valuable data by which to recognize in time that of another. The oldest pilots and fishermen admit that the times are out of joint. Previous to this year they could foretell with considerable certainty the weather. This year all signs fall. During the first fortnight of our stay we were hardly free from one of these storms, our heaviest being the storm of Nov. 2 and 8, which wrought such havoc at Aspinwall, when with us the wind got up to fifty miles an hour. That began, as this one did, at the northwest, hauled just the same, but instead of the bright, beautiful, dry weather of this one, it was accompanied by the usual weather of a storm—clouds and drizzling rain. Another came on us in a calm, the air hot, sultry and laden with moisture, from a black bank to the north northwest there sprung one single, intense flash of lightning, accom-panied, not followed, by a tremendous thunder blast, and in ten minutes a gale was blowing, the thermometer dropped tan degrees and a perfect deluge of rain fell for several hours, with no nore electric display. This was the last one of any weight for over a week, and it seemed as though that shower have had fine wenther. These northers seriously break up fishing for amusement. One does not care

and into the gulf stream to keep warm; but to-day's experi-ence teaches that certainly a great many remain and become more or less torpid; and even were they here in plenty and vigorous, the water is so discolored that a trolling bait is probably invisible to them as it is to us dipped an inch under. We have not been entirely deprived of the amusement. There have been some good days, and we have made the most of them. Anchored anywhere on the reefs with rock bottom and no grass below us, fishing is made easy, too easy in fact, for there is but little of the element of chance and none of that of skill in it. Baiting with "sardines," crawfish, conch or corned kingfish, named in the order of their value, little time is lost, and a bucketful of delicious pan fish is soon obtained. In order of value for the table there are pompano, grunts (called hogfish in the Chesapeake), snappers, groupers, porgies, yellow talls, and now and then a hideous yellow and black spotted eel, with an enormous mouth garnished with many sharp teeth. Now and then a young shark interrupts the proceedings. I don't know what the fish called here sardine is. They are in myriads in all the shoal quiet spots near shore, and are the young of some one species. With a mosquito bar net we catch all we want easily, and cooked as whitebait, they are not bad. They would elsewhere be termed minnows, of from one to three inches in length. What I describe may be called home fishing. Anywhere

What I describe may be called home lishing. Anywhere, within three hundred yards of the ship is far cancing to go, and seldom brings to hand any lish of size; nearly all range from one-half pound to two pounds. By going live or six miles to the outer edges of the recfs and fishing. In from ten to twe try tathoms, larger gropers, snappers, with occasional channel hass, are found. We find them ensier in the market. Mongide of the wharves as soon as the mullet get to running, which desirable event is promised soon. As yet there are very few mullet and no tarpon. The second point of the second point of the second point of the second point of the second point. The second point of th

now "à la Henshåll." I am aware that a high grade multi-plying reel, costing about fifteen dollars, will give satisfactory results. I would like to know if there are any lower grade reels that will do the work fairly well, and answer its pur-pose as well as a one dollar reel does in fly-fishing. Could not a plain reel be manufactured, without click or multiply-ing mechanism, that would answer the purpose? If not, in what important particular would it be lacking? E. A. LEOPOLD.

NORRISTOWN, Pa

THE STRIPED BASS LAW.

In our last issue we stated that in the Senate of New York Mr. Pierce had introduced a bill to exempt striped bass from the provisions of the law which was intended only to apply to the little fresh-water fish which bears the same name locally. Our readers will remember that at the time of the passage of this law we strongly objected to it and our objection brought out the fact that the framers of the law did not intend to include the *Roccus lineatus*, the "striped bass" par excellence, but meant an insignificant lake fish, the *R. elrysops*. We commended on the mischief resulting from people med-dling with what they did not understand and suggested that all laws relating to fishes should be submitted to the Commis-sioners of Fisheries for their approval, before going to the Gaugemon Governor.

sioners of Fisheries for their approval, before going to the Governor. The law of New York referring to striped bass, passed May 9, 1885, reads as fellows: "No person shall catch, kill or expose for sale, or have in his or her possession after the same has been killed, any black bass or striped bass weigh-ing less than one-half pound, or less than cight inches in length from end of snout to end of caudal fin, at any time. No person shall expose for sale or have in his or her posses-sion after the same has been killed, any black bass, Oswego bass, striped bass or muccalonge, save only from the twen-tieth day of May to the first day of January. * * * Any person violating any of the provisions of this section shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penaly of ten dollars for each fish." The objection to the law was the dates during which striped bass must not be sold, and by this name we always understand the salt-water fish, and this time is the season during which the fish from Southern waters come into our markets and are consumed in great quantities during the Lenten season. Fish is an article of food to a greater extent than game, and the great supplies should not be cut off in their proper scason by any considerations of sport. The sale of brook trout, if stopped entirely, would not seriously affect either the market or the tables of the poor, for the number of pounds is small; but the consumption of striped bass is great, as is shown by the following petition, which was signed by most of the wholesale fish dealers of New York: "To the Legislature of the State of New York: The peti

<text><text><text><text><text><text><text><text><text><text><text><text><text><text><text><text><text><text><text><text><text>

twentieth of May, would be to deprive the people of a large quantity of valuable and important fish food, especially during the Leuten season, when nearly all kinds of fish are scarce. This would result in largely advancing the price of all other fish at the time when the demand for it is the greatest. In my opinion, the bill prepared by your committee, which ex-cludes the salt-water striped bass known as *Roccus lineatus* should be immediately passed by the Legislature, in the interest of the entire people of this State." With these arguments in its favor we hope the new bill will pass and correct the blunder perpetrated by those who may have meant well but who only knew of one striped bass.

may bass

TWO WEEKS WITH A FLY-ROD.

THIS is not written for those who had "just as soon catch files as fish," still less for those who think "fish-ing is done with a rod with a fly at one end and a fool at the other," but for those who find their reward, not so much in the value of their catch as in the exercise of their skill, and in the health and enjoyment that come from a life in the open air.

and in the health and enjoyment that come from a life in the open air. There never was a sportsman worthy of the name who did not find in nature a constant delight, and who did not feel in her companionship a sense of enjoyment which aloae was a goodly measure of recompense for all his labors. A patch of bright color in the woods, a roaring brook tumbling over a cascade into a pool below, the various notes of birds, all bring with them a thrill of pleasure the "fry catcher" will never know.

of bright color in the woods, a roaring brook tumbling over a cascade into a pool below, the various notes of birds, all bring with them a thrill of pleasure the "fry catch-r" will never know. The number of people of sedentary habits who are learning that country air taken in liberal measure, with rod in hand, is better than medicine, and far more pleasant, increases each year, until good sport has become scarce, and can no longer be found near this section, as a rule. There are grades of expertness in the art of fishing (for it is an art, and a fine art, too), as in other things, but fly-fish-ing must be acknowledged to stand at the head. The man who can cast a fly straight as an arrow for eighty or ninety feet with a fly-counce rod, may well feel ab we him who can "sit like a bump on a log" and fish off a dock. With two congenial spirits I started about the middle of September for a little vacation in Maine, where all sports-men hope some time or other to go. It seemed asthough we covered a great deal of country, but when I look upon the map and see how insignificant a space it occupies there. I realize that Maine is a great State. We staid a night in Boston, reached Farmington, Me., late the next day, where we changed cars for the Sandy River R dirond. I had never heard of this rond before, and I shall never hear of it again without a smile. The gauge of the track is only twenty-four inches, and caus and engine are on a similar scale, so that the whole thing looks like an ordinary train viewed through the wrong end of an opera glass. A man standing in the aisle, and extending his arms, can touch both sides of the car at once. Each passenger has a whole seat to him-self. The little engine starts the train of one or two cars, as travel may demand, at full speed, and makes its run of eleven miles to the other terminus, uphill and down, for the track is laid with almost no attention to "grades," "cuts" and "fills," and the engine whirds the train along regardless of such trifles, and makes very decent time t

the time would quickly pass until we could return. A. G. MCKEE. MINDLETOWN, COMP. December, 1883.

G.A.K., under whose auspices his funeral was held. TIP-UP FOR PTCKEREL.—*Editor Forest and Stream:* Say to your correspondent "Pickerel" that of all the forms of tip-up that I have ever used to signal a bite when fishing through the ice, there is nothing like the jumping jack of the toy stores. I buy fifty at a time and stick them up over the holes by suspending them with a stout twine leading from the head to a slanting tick wedged into a hole in the ice. The line then leads to the stick, so that in case of breakage the fish is not lost. The chances of breakage are very great, and it might be well to have them specially made for the purpose. The fun of seeing the mannikin spread himself in a most frantic manner is simply "immense."— LIMBER JIM.

LAKE ONTARIO.—A bill has been introduced at Albany by Mr. Kilby to prevent the taking of fish, except by ang-ling, in the waters of Lake Ontario adjacent to Jeffe rson county.

fishculture.

THE MASSACHUSETTS COMMISSION.

THE MASSACHUSETTS COMMISSION. We have the twentieth annual report of the Commissioners of Inland Misheries of Massachusetts for the year ending Dec. 81, 1885. The fishways are in good working condition except the one at Bolyoke which will require some repairs in the spring. All applications for the construction of new fish-ways have been considered, and such as have been approved of have been built, except that at Hamblin's mill at Acush-net. By delay of the law, no decision has yet been reached in this case. At the fishways at Lawrence, a record of the fish ascending has been kept. The following species were observed: Alewives, May 6 to June 18; red-fin shiners, May 21 to May 22. Two black bass went up in June, five in August and one in September. One salmon went up in May, ten in June, three in July, one in August and five in October. Five shad were found in the fishway in June, 14th to 19th. The suitable for them when planted, but which were stocked at the solicitation of trout has been increased and next spring be suitable for them when planted, but which were stocked at the solicitation of their owners. There has been an in-reased run of salmon in the Merrimac the past year. A few have been killed at the dams during low water, but the most serious depredations were committed near Haverhill where dead salmon were found with spear marks on them. Eggs of the salmon were found with spear marks on them. Eggs of the salmon were found with spear marks on them. Eggs of the salmon were found with spear marks on them. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription \$1.50, Address "American Kennel Register," P. O. Bo. 2832, New York, Number of entries already printed **31355**.

THE A. K. C. CHAMPION RULE.

THE A. K. C. CHAMPION RULE. Editor. Forest and Stream: Mr. Smith is in error, I did not "impugn his motives," I said that unless explained, there could be no other conclusion but that the proposed amendments were inspired by personal motives; the time at which they were made, and the fact that Sensation won at these two shows, pointed in the strongest manner in this direction. By reading between the lines of Mr. Smith's letter, I think it is clear enough, that the reason griding him in these proposed amendments, was the previous practice of the W. K. C. and other show clubs, and not the wish to affect the standing of Sensation, and this is just the arowal I called on him to make. It is always agreeable to have a suspicion of interested motives removed and I cannot but think that the W. K. C. in general would be wiser in trankly meeting cases apparently against their good intent on and matters. Treally fail to see where my inconsistency was. I wanted a list made of shows characterized by good classes, good man-agement and good judging, and I cannot agree that the Bos-tor and St. Louis shows were anything remarkable in this inc. Certainly neither of them approached either the Wash-ington or Breeders' shows in either point, and if I mistak not, the Ottawa and Toronto shows were either of them aneed of those Mr. Smith selected. Tenden state may case stronger than I did by selecting the shows, and again I would urge on the A. K. C. the vital necessity of getting rid of the narrow exclusiveness that so pisons its whole body politic, and or which Mr. Smith's letter is so striking an instaw. The pred upon it, the breeder or dog owner does not care a may react whole did the dog beat, how good a class way present, and who did the judging, and even the A. K. C. will wore stand exhibitors, that they will presen. I cannot see why there should be any difficulty in chubs arriving at a stisfactory conclusion as to what shows were proper. I cannot see why there should be any difficulty i

at it. It is with great regret that I find myself obliged to hold away from the fight that I see impending over the A. K. C. in general, but oculists will take no denial, and I make this final effort, partly to do the justice to Mr. Smith that he has not thought fit to do to himself, and partly to add a last word of urgent entreaty to dog show clubs, not to ruin themselves by the hide-bound exclusiveness that has done so much to bring them into public contempt. W. WADE. Hurors Pa. Jan 22, 1850. HULTON, Pa. Jan. 22, 1886.

IS THE A. K. C. TO LIVE?

<text><text><text><text><text><text><text><text><text><text>

The service of the strength and the New England Kennel Chub saying, "We have no protest before us and can do nothing," On the other hand, the Philadelphia Kennel Club disqualified the Sans Souci kennel, and at its last monthly meeting expelled Hext. M. Perry from the club, this action of course preventing him from taking further part as an exhibitor at shows held under A. K. C. rules. The A. K. C. cannot afford to allow this Sensation blot to remain any longer, even if the Westminster Kennel Club thinks that an ostrich-like blindness out its part will prevent outsiders from seeing it. So much for what the A. K. C. must do to preserve purity among its own members.
The application of the New York Fanciers' Club for admission as a sample. This application was presented at the meeting of Dec, 16, and referred to the Committee on Credentials. A month has elapsed and yet no advance has been made. When the application was read I was allowed permission to say with regard to it that an early answer was specially to be desired, as the club proposed giving \$500 in prizes, and it was anxious to announce at as early a date as possible its being a member of the A. K. C. by its restrictive champion class gualifierence it would make to the strength and control of the A. K. C. by its restrictive champion class gualifierence it would make to the strength and control of the A. K. C. by its restrictive champion class gualifierence it would make to the strength and control of the A. K. C. by its restrictive champion class gualifierence it would enable the club to grasp the control of all shows, while at the same time it is not essential that the control body should be swamped by an excessively large membership, if that is what the committee objects to: It is in the facing such as the foregoing and the action the grasp the control of all shows, while at the same time it is not essential that the control body should be swamped by an excessively large membership, if that is what the committee objects to: It is in the facing

voting upon a club's application which belongs to the com-mittee.

voting upon a club's application which belongs to the com-mittee. As I told Mr. Child personally, the A. K. C. is chipping away at its platform until it is a little upturned box 2x114 on which is seen the sorry spectacle of a few clubs trying to find stand-ing room, and holding on to one another as people do on the rear platform of a crowded car. By and by some of them will get tired and drop off, just such a dropping off will be seen when the sixty days' grace for paying the now pending \$10 assessment expires. No, that is not the kind of club we want, but a strong, liberal organization, limited in its actual membership if you please, but not in its control, which should embrace every show held under its rules with but one proviso, and that the number of entries. The management and the judges have hothing to do with shows of the future. Exhibitors are wide awake now and have nearly all the shows necessary. These and all future ones to succeed and obtain entries must be well managed and have good judges. The "Sensation amendment" is of no account compared with the problem of future show recognition which the A. K. C. must face and that promptly. JAMES WATSON.

ANCIENT AND MODERN SETTERS.

ANCIENT AND MODERN SETTERS. Editor Forest and Stream: As I write I have before me a photograph from a picture by Francois Desportes, a French artist who was the greatest de-lineator of sporting dogs of his time. I have not my books of reference at hand to give the exact date of his death, but it was before the middle of the last century. The picture in question is a portrait of three setters, all pointing. They are in every respect like our best kennels only that the tails are curiously trimmed, the feather being closely copped save at the tip where a short paint brush shaped tuff is left, just as is commonly done with mules' tails. To those who think that setters were spaniels only a short time back, and that our crack field trial winners are triumplis of modern invention in breeding, this picture is, to say the least, instruc-tive.

who think that setters were spaniels only a short time back, and that our crack field trial winners are triumphs of modern invention in breeding, this picture is, to say the least, instruc-tive. The uniform lesson of old pictures is that our best types of setters existed as long ago as any record can be traced. Here is one painted when guns had not been perfected so as to en-tirely supersede the net in field work with setters. Yet the dogs are just as we see them now. One peculiarity in the prin-cipal dog of the group is of great interest to me. The fore leg which is lifted in pointing is not bent at the pastern joint, but the foot is pointed straight out at the birds. This seems un-natural, yet the first setter I ever saw in my life would do just that way. I was but a little boy at the time 9 years old. I lived at what was then called Western New York, now Dwight, Illinois, and there were very few people besides our own family living anywhere within twenty miles of there. I remember that there were on a beautiful map of our "city" exhibited in Chicago by the land agents) avenues, parks, city hall fourtains and even zoological gardens, all laid out in most enticing colors. But the city at the time 1 speak of consisted of a stake with a rag tied to its top, and there was a smart little house in sight unless the alowly rising frame of our own might be counted as one. An Englishman connected with the survey of the Chicago and Alton Railroad, brought to our house a setter bitch and left her for some time in our charge. She was a smart little field. I remember seeing her point with her foot held straight out to the front, and I believed she was showing us the birds just as a man would point with his finger. I remember dis-tinctly to have seen her do so twice, and my general impres-sion is that she did so quite often. I have seen nothing of the evidence of the work defects are those resulting from out-servidence of the work defects me those conting the birds just as a man would point with his finger. I rememb

THE NEW YORK DOG SHOW.—Editor Forest and Stream: The Westminster Kennel Club will hold their tenth annual bench show of dogs at Madison Square Garden, May 4, 5, 6 and 7. Premium lists and entry blanks may be obtained at 48 Broad street, room 14. Post-office box 1812.— JAS. MORTIMER, Supt

ENGLISH KENNEL NOTES.

<text><text><text><text><text>

To COLLIE EXHIBITORS. To COLLIE EXHIBITORS. Those who are fond of coincidences will find it curious to observe the following: That Messrs. Boddington, Thomson and Pirie, collie judges, and Mr. Krehl, collie exbibitor, are all members of a club called the "Crich-

the following: That Messrs. Boddington. Thomson and Pirie, collie judges, and Mr. Krehl, collie exbibitor, are all members of a club called the "Crich-ton."
That the last named three should be proprietors of the Stock-Keeper, a weekly paper clicify devoted to dogs.
That two of the four Thomson and Pirie) form a majority of the prize committee of the Collie Club, thus increasing their strength. That when one judges the others generally exhibit, and very suc-cessfully.
The RESULT.—That at Sheffield show, where the prizes are good, there should only have been eighteen entries of collies at the time of closing entries, Sept. 30.
Verbum sup.
This circular contains a criminally ingenious blending of truth and falsehood. Mr. Boddington is a shrewd and clever fancier, he exhibits the best dogs, in consequence he wins with them and sells them right and left all over the country. This must naturally make less successful breeders envious; but with so many jaundiced eyes upon him that nothing has been discovered against his character is proof positive that nothing exists. If he makes money out of his kennel, many hundreds a year, it is said, then he succeeds in doing what everybody else tries to do.
As for the other three—Thomson, Firie and Krehl—well, all can say is, they are public characters in the kennel world and their names have never been associated with a dishonor-able action. It is only pen and ink curs of gangrened imagi-nations and besmirched reputations who would try to drag down into the gutters of filth that public opimon has kicked them into, the men who can face the light of day and walk in the middle of the road. I regret to understand that Mr. Thomson intends to resign the club, and I hope his two friends may not be influenced by his example. Their duty is to stand by their club until the honorable majority have had an opportunity of purging from their midst a cowardly few. "The result" mentioned in the circular was a lying f

The final sharp not be inductive of the example. Their duty is to stand by their club until the honorable inajority have had an opportunity of purging from their midst a cowardly few. "The result" mentioned in the circular was a lying forecast, as the Sheffield show opened with fifty-two colles on the bench.
The only public notice taken of this outrage was in a rigmanole cycle the collection of the Colle Colle Colle Colle Colle opened. "The result" mentioned in the circular was a lying forecast, the served of the Sheffield show opened with fifty-two colless on the bench.
The only public notice taken of this outrage was in a rigmanole cycle the leaves of Wr. Samuel Butler and smiled when I came over the leaves of Wr. Samuel Butler and smiled when I came for time this year. It was varing to me that I could only got there the last day of the show. Although the buches with the feeling that things were not quite what the old days knew. I had a good look at the what the old days knew. I had a good look at the what the old days knew. I had a good look at the what the old days knew. I had a good look at the what the purge of wales' attention. He bought one for tang guines, and I an told he went to the show for that purpose. What the purper days the benches with the feeling that things were not quite what the old any knew, such and a loop are seened. The vitality in this club is most remarkable and commendable. There hundred entries and many refused is something to be proud of. The public bowed down to limitmon, but the gender down at limit of the prove it in the days. The Stock-Keeper scored a crueit runnph over it in the St. Bernard show week. The two penny paper presented its readers with a brilliant lifelike portait of the talk of the hour, Plinilimon, and a speaking it be given to the stock was attree what a sequent of the St. Bernard show week. The two penny paper presented its readers with a few collines and a crueit runnph over its in the St. Bernard show week. The two penny paper pres

In the Sporting Life forwarded to me through my editors I found the following paragiaph marked : "A friend asks me to mention that the gift of 'Lillibulero' to the American-English Beagle Club which consisted of a pretty engraving of two beagles, is so highly valued by the club that it now 'adorns the window of a little store in Market street. Next time I travel Market street I will look for it.—Poncuprus." A correspondence has been raging in the Stock-Keeper, arising out of Mr. F. Adocck's challenge to show his bull bitch Acme against Mr. Sellon's Queen Mab, for £100 aside. As Mr. Adocck insisted upon naming the three judges, from whom his opponent was to choose two, the matter rather naturally fell through. The discussion that began in the above manner is finishing up with an attack upon the judges named, a relation of Britomaritis's werits and a bogus inquiry into the identity of Gaudifer, whom some half-wited groundings have and, akark naked truth of that business is not difficult to reveal.

sagely endeavored to connect with the winness is not difficult The naked, stark naked truth of that business is not difficult to reveal. Grave charges have been brought before the Kennel Club against Mr. Vero Shaw. I should be loth to publish this fact did I not know that it has been allowed to openly court the notice of the members in the club, they have carried the news on, and it is now everybody's property that Mr. Shaw has been accused of this, that and the other. It is more than weeks, it is months since this first became known, and I trust my noticing it will induce the committee to disclose what has been done in the matter. There have been rumors that Mr. S. W. Smith's St. Bernard Merchant Prince was being nibbled at by an American buyer. I hear the bargain is struck. Liter the harge there notes will dash the only drop of consolation from the lips of their owners who have anugly been assuring themselves that among the muzzled was yours to command, with a happy new year all round.

FIELD AND COCKER SPANIELS.

FIELD AND COCKER SPANIELS. Editor Forest and Stream: Tear, hear! "Let us know where we stand," as "Raven" says in your last issue. I am glad to see my letter, written a few months ago to you on this subject, has at last elicited an answer, or rather another interrogation on the part of "Haven," who we all know is a judge of what a spaniel should be. His remarks anent Pluto at Philadelphia fall show are well taken, and only strengthens what I said in my last letter, that practically, to all intents and purposes, there is abso-lutely no difference between a cocker and a field spaniel-except the weight. Now the question is, who is to decide the marks and only strengthens what I said in my last letter, to be the weight. Now the question is, who is to decide the weight. Now the question is, who is to decide the weight. Now the question so, who is to decide the weight. Now the question so, who is to decide the weight. Now the question so, who is to decide the weight. Now the question so, who is to decide the weight. Now the question so, who is to decide the south of the country model that it would have been decided ere this by the American Spaniel Club acting on my letter to subject. But my "coundrum" did not apparently have any interest to them in any shape or form. — Most of the country has not had a date fixed, and I would like to see the manages of said show take the sinitative in this matter and I feel sure the other kennel clubs would with-ut doubt follow suit at their future show. — Therefore, as a breeder and exhibitor, respectfully ask the worker from their future and exhibitor, respectfully ask the worker from their future show. — Therefore, as a breeder and exhibitor, respectfully ask the worker from their future show. — Therefore, as a breeder and exhibitor, respectfully ask the worker from their future show. — Therefore, as a breeder and exhibitor, respectfully ask the worker from their future show. — Therefore, as a breeder and exhibitor, respectfully ask the wor

Cooker From Field Spaniels under 28lbs. (any color), dogs or for field Spaniels ander 28lbs. (black), dogs.
Field Spaniels under 28lbs. (black), bitches.

Field Spaniels under 28lbs. (any other color), dogs or bitches.
Field Spaniels over 28lbs. (any other color), dogs or bitches.
Field Spaniels over 28lbs. (any other color), dogs or bitches.
Field Spaniels over 28lbs. (any other color), dogs or bitches.
Field Spaniels over 28lbs. (any other color), dogs or bitches.
Field Spaniels over 28lbs. (any other color), dogs or bitches.
Field Spaniels over 28lbs. (any other color), dogs or bitches.
Field Spaniels over 28lbs. (any other color), dogs or bitches.
Field Spaniels are not practically the same breed, why do all the bench show premium lists put cocker and field spaniel puppies in the same class? They might put as well English, Irish and Gordon setter puppies in one class. In fact it would be a great deal more sensible, as the puppies mentioned are all setters, while in the other case some are cockers and some are field spaniel bitch from the other side as a cocker, and when he got her hefound she exceeded the limit that a cocker should be, and consequently the bitch alluded to has been shown in the field spaniel leas and won prizes.
I repeat my "conundrum" given in my former letter, viz.; If a champian cocker happens to grow fat in spite of the best efforts to keep him below the limit weight, what is he? We will say he gets to be 20lbs. Can he be shown in the field spaniel loss and won prizes.
I repeat my like to hear what the American Spaniel Chab have to say on the matter.
CAYE CAYEM.

THE "AMERICAN KENNEL REGISTER" ENTRIES new number 3,185. The current number is the first of the fourth volume. The *Register* is published monthly at \$1,50 per annum.

ONE OF THE VERY BEST BOOKS we have ever seen on the subject of Dog Training, is that of Mr. S. T. Ham-mond, kennel editor of the Forest AND Stream. It is the best, not only because it is carefully written and with an elabor-ation of detail which we have never seen in any other book upon the subject, but because all the author's suggestions are based upon actual experience. He believes that, with patience and kindness, a dog-and especially a pointer or setter-can be taught anything it is at all important for them to learn, and he thinks training better than breaking. In other words, he thinks kindness better than cruelty, and in this any reas-onable man will agree with him. Mr. Hammond's experience with his dog Trim is a very interesting sketch, and cannot fail to encourage the owner of a dog to be patient with him, and give him a full and fair trial. We received the book some weeks ago, but being quite busy just then, mislaid it and determined to say nothing about it until we could read it. Having now done so, we recommend it unqualifiedly.--*Southern Reporter, Sardis, Miss.*

LARGE LITTERS.—Denver, Col., January 22.—Editor Forest and Stream: I notice a recent article boasting of pups, and it concludes "who can beat it?" That bitch—a red Irish setter—had either 13 or 15 puppies. Kittie, belonging to Mr. Miers Fisher, of Denver, whelped in November, 1885, 17 as handsome pups as any one ever saw. She is a beautiful red Irish, and the sire of these pups is also a red Irish. This is her third litter, her first she had 18, second, 16; this, her third, 17, or 46 in three litters. I don't know what she may have next time. Several prominent sportsmen saw this lit-ter, the pups were all handsome and perfect.—DENVER.

THE NEWARK DOG SHOW.—Editor Forest and Stream ; Mr. J. F. Kirk has consented to judge the Chesapeake Bay dogs in addition to the other classes in his charge; and Mr. E. S. Porter, of New Haven, Conn., will judge bulldogs and bul-terriers at our Newark show. Through mistake the rules pub-lished in the premium list are not the revised rules of the A. K. C. as was intended. A circular will be sent to each recipient of the premium list with an explanation to this effect. —A. P. VREDENBURGH, Sec'y.

THE FANCIERS'SHOW.—The entries for the third annual dog show of the New York Fanciers' Club far exceed the ex-pectations of the committee. The indications are that there will be about three hundred dogs present. The mastiff and St. Bernard classes will be a grand lot, nearly all of the prom-inent kennels will be well represented. Many of the other classes will also make a good showing.

BOUND BOOKS OF KENNEL BLANKS.—We have bound books of kennel blanks, each book consisting of 200 blanks of a given style, and can furnish these (postpaid 30 cents) for the convenience of those who have occasion to use a large num-ber of blanks. In ordering be careful to state what particular series of blanks is desired, *i.e.*, whether Names Claimed, Sales, Bred or Whelps.

THE AMERICAN KENNEL CLUB.—Editor Forest and Stream: The committee on credentials of the A. K. C. have reported unfavorably on the application of the New York Fanciers' Club for admission to the American Kennel Chub.— G. EDW. OSBORN, Sec'Y A. K. C.

STANDARD COMMITTEES.-If the standard committees who have not reported as yet will be kind enough to do so they will greatly oblige G. EDW. OSBORN, See'y A. K. C.

KENNEL NOTES.

KENNEL NOTES. KENNEL NOTE BLANKS.—For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." All Kennel Notes must be sent to us on these blauks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them.

" No Notice Taken of Anonymous Correspondents LST AU AUDICE TREEN OF Anohymous Correspondents. C. R. HODE, Manchester, N. H.—Setter dog, apparently healthy, appeitic good, skin all clean with the exception of a little candruff, is afflicted with an itch; all the time scratching and bling himself; has no fleas. Ans. Wash the dog with Glenn's sulphur scop or carbolle scop, and give five drops of Fowler's solution of arsenic in the food twice daily. Send us some of the dog's hair for microscopical examin-ation. 127

A SUBSTITUTE FOR SENSATIONAL TRASH.—Pigeon, P. Q., Jan. 11.— Editor Forest and Stream.: Inclosed please find two dolars to renew my subscription to FOREST AND STREAM for six months. I have been a reader of FOREST AND STREAM for six months and the fill the vacancy turned to FOREST AND STREAM and with one short interval have been a reader of your excellent paper ever since. Thus say that your paper is if possible, more interesting and fascimating, with each year. Though at present, we have two feet of snow, still with the help of your puper we can go with the Goot and Stipperk. to those warm seas of which we read, where 'Nessmuk'' now sojourns; or go yachting along the coast in the Pilgrim. But when I look outside it makes me tired,—G. B.

RATING CANOES FOR TIME ALLOWANCE.

Editor Forest and Stream: Editor Forest and Stream: I have followed with great interest the discussion on wide versus narrow cances in your columns, and have just read your leader of Sist December on the classification of wide cances. Will you allow one at present a stranger to your boats, but who hopes soon to be better acquainted with them, to make a suggestion? My cance, the Pearl, has raced a great deal against larger boats, under a rule of measurement allowing time for size, the size being ascertained by an measurement roughly stated-area of midship sec-tion multiplied by half length. This rule has been found to gauge fairly well the sizes of boats of various types, time being allowed in accordance with the following scale:

LARGE CANOES IN THE A. C. A.

<section-header><section-header><text><text><text><text><text><text><text><text>

CANOE CLASSIFICATION.

CANCE CLASSIFICATION. Editor To rresenting the article on classification of sailing cances in The presenting the article on classification of sailing cances in for a presenting the article on classification of the present rules and to prove that feature of the meet. The classification the present rules the article of the present rules and to present rules and the present rules and to the present rules the article of the present rules and to present rules the article of the present rules and to present rules the article of the present rules and to the present rules the article of the present rules and to the presence, and inferent localities require different types of should provide sailing rules broad enough to classify all cances within the cance and have the closest take to the meet the cance the cance and have the rules of a sail the the trapes the take and have the rules of the sail the trapes of the should be wish to es. The sail the members of the A. C. A. "A fee candidy admits all the rules the and second the present rules delate the sail the members of the A. C. A. "A fee candidy admits all the rules the and accounties the bias for classifies and the sailing cances the sail the members of the A. C. A. "A fee candidy admits all the sail the members of the A. C. A. "A fee candidy admits all the sail the members of the the rule. What has become of all the sail the members of the the rule. What has become of all the sail the members of the rules the the traines the addition of the sail the the sail the rule. What has become of all the sail the members of the rule. What has become of all the sail the members of the rule. What has become of all the sail the members of the rule. What has become of all the sail the members of the rule. What has become of all the sail the members of the rule. What has become of all the sail the members of the rule. What has become of all the sail the members of the rule. The the sail t

there in the second sec

heavier of our members and those whose only sailing privilege is on the open waters of our lakes? It is not every member that can afford or cares to have one cance for home use and another for the A. C. A. med. "The further acknowledgment that "the object of the present rules is not to afford a race to every possible size of cance that may present itself" completes the confession. While the present rules may pro-vide for the cances in attendance at the meet, and, while the leading cancelists may be contented with the rules as they now are, neverthe-east they are unfair and unjust because they dictate the cances that shall have the privilege of sailing in the races of the A. C. A. Is it probable that a member of the A. C. A. will transport to the meet from a distance a proscribed cance? Is it not probable that some say away for this very reason? (Lange the rules so that all cances within Association limits may enter the sailing races on more even terms and the result may surprise you. Certainly no harm will be load. "The asynchic and by so doing distribute in a better way the same number of prize. Certainly the proposed O class would lengthen the programme; and how about that 'senior class'' that is knocking at the door! The classification proposed by me will accom-motale all on as nearly even terms as can be obtained without com-puting a the allowance, which is no praceited. "The rune task is dance." I will asy that in any classification there will be cances that will nearly approach the limit on both sides, and will be rance allowance, which is no praceitable. "In conclusion, permit me to ask why do not rules which neither most even terms will of conrise be the best, as it will encourage more class." There must be a division sore there, as which ashes, and will be cances that will nearly approach the limit on both sides, and will be transe rules and offer yeas of any particular size of cances billy of winning. In conclusion, permit me to ask why do not rules which neither entrise in the races. Nothing so s

17ft. in length, of symmetrical proportions, and capable of being effi-ciently paddled by one man, as I know to a certainty? Echoing the sentiment of "Hal," "fair play all around and no favor," is all that is desired by LONG SHANES, CLEVELAND, O., Jan. 18, 1886.

SNEAKBOXES AND CRUISERS.

SNEAKEOXES AND CRUISERS. Editor Forest and Stream: There just finished reading the articles, and comparing the designs of the three sneakboxes given in the issues of Jao. 7. 14 and 34, and and at a loss to know why, in discarding, as in the last design, some of the duck-shooting features of the craft, you still tacitly r-commend the duck-shooting features of the craft, you still tacitly r-commend the duck-shooting features of the craft, you still tacitly r-commend the duck-shooting features of the craft, you still tacitly r-commend the treentlon of such a peculiar characteristic, the bow. As it is not a thing of beauty, why retain it Has it any advantages over its adaptability for hunting purposes that it should be retained in the purpose as the one presented in the design? B. K. B. It has been attempted in the design given to retain the peculiarities for the additions of stern and freeboard above water. The bow of the sneakbox model, and the beotion is practically the same, except for the additions of stern and freeboard above water. The bow of the sneakbox is very convenient for beaching and hauling up in cruising, and hetter for that purpose than a boat's bow. A boat is now huild ing for the owner of the Bojum from a design by Mr. W. P. Stephens, in which the bow is carried out as in an ordinary sail boat, in other mooth water salling. Is 18ft, over al, 16ft, ow waterline and 5ft, 4m. beam, with one large lug and a balanced rudder. How sho evil pre-form with the other boats described-remains to be tried this season.]

LIGHT-HANDED.

<text><text><text><text><text><text>

A CRUISING AND RACING CANOE.

A CRUISING AND RACING CANOE. The introduction of the Average Record system in the Association races, and the few changes made in the rules in 184 have checked the tendency to build larger cances and also to build cances specially for sailing or padding, and have fostered two sizes of boat, one in Class A and one in Class B. The former, 14 to 15ft, by 28in. Is not built to the limit of 16ft, as it would, while improving the pail ding lines and making a faster boat when sailing with sheets off, make her too unveildy for transportation, slow in macking, and heavier. The favorite length promises to be 15ft, as giring the best ransport. Of course a 16x9 cance would have an advantage in a paddling race, especially over a straighthway course, and on any occasions she would bave a similar advantage over two legs of the A. C. A. course in Fel Bay, but neither of these would compensate for the sacrifice of all-around omilities and speed to winter dw avail themselves of the extra 15gn, of heam or foot of length, at ex-perience has thus far proved that the smaller hoats, such as Dot, have and their class, can outsail the larger cances in most weathers. The fight between these cances and the sare advantage of the 24 or not said that the racing that far in America and have outambered the ordinary 14 or 15x80 cance, with a moderatic amount of ballast, and in many cases unballing for the most part, and have outambered the ordinary 14 or 15x80 cance, with a moderatic amount of ballast, and in many cases unballing for the most part, and have outambered the ordinary 14 or 15x80 cance, with a moderatic amount of ballast, and in many cases unballing the target in anose to be aver and the the part bey are faster in most weathers. That they are lease outsill be leaver in anose of the leaver onose is they have become popular. The near future will in all probability see the balled, parts, and these many reverse the results of the previ-tout he fast A a more powerful had could be built by going to the pa

As in Class A, a more powerful noal could be muit by going to the full limit allowed, hut all considerations, weakt, quickness in stays, easy paddling, convenience in transport, control under padole, cruis-fing and special work in rapids, etc., dittate 15x80 as the desirable mean. For a 15ft, cance a limit of beam of 31½in, has been established for Class B. A 15ft,x81½in, cance is quite a large boat, comparatively speaking, and for every purpose, excepting sailing races, such a cance is less convenient than a smaller and lighter one, and bowever good the iarge one may be in the regular sailing races, she cannot hope for a place in the averge record, as her weight and beam will in most cases handicap ber in paddling. After the A. C. A. '84 meet there was a marked tendency all along the line to build larger cance's approaching the limits more nearly on the average than any year previously. The Sunheam was a result of this movement. Though not bil tup to the limit—on account of the paddling difficulty that would result—this cance was designed to get the most out of a 15ft, x301c. cance. The stem and stern were plumb with a full body amidship and aft, and deeper draft than formerly, got by a decided deadrise to the floor. A season's use has pretty well proved that she is a fast cance under sail and an excellent sea boat. A light-weight ma must needs carry considerable ballast in a San-beam, however, to get stability down the wind—one hun ired pounds is not too mucb to get the cance down to ber true lines, and more can be carried to advantage often. The Lassle was designed as an attempt to get good speed, close windward work, a fairly light and small cance to carry a modera'e amount of ballast—al-ways a heavy load to handle—not be water and ashore, amply large enough for a man of medium neight and weight, and needs but 75 pounds of ballast at the most; with all this she is very steady before the wind. She is a Class A cance, hut al-lowed in Class B races, and just comes within the initis of Class III, paddling. T

THE CRUISE OF THE PILGRIM .- V. BY DR. W. H. WINSLOW.

D ENOBCSOT Bay

BY DR. W. H. WINSLOW. D ENOBCSOF Bay (s, in my opinion, the hest and most interesting cruising ground upon the Atlantic coast, but there is not a yacht h from Whitehead to Mt. Desert, except one lately formed at Rock and A chain of small mountains lies along the western side from orthport to Rockland, a distance of about Sixteen miles, and there are umerous high promontories upon the eastern side antil the eyes stupon Green Mountain, the highest portion of that magnificent land, Mt Desert. It is not doserted as the French thought. There e many \$400,000 villes at Bar Harbor, and deer have been shot in is foresis this senson. There are hundreds of pretty wooded islands, worth from one plar apace to many thousands, in the lower bay, and many of them as bought up by city men for summer homes. There are any of the cutest little coves, harbors and camping places along the shores that one can conceive of the water is deep and the shores to bld for the most part; low tide uncovers flats in which one can glarge, sweet, tender clauss by the bushel, and the line of high tide is by ered with great quantities of dry drift wood, the refuse of bigh tide is by ered with great quantities of dry drift wood, the refuse of bigh tide is by end but erivers, which will get up a good hot bed of boals for elambake in the shortest possible time. Flounders, tommy-cod elambake in the shortest possible time. drift wood, the refuse of the many get up a good hot hed of boals for ble time. Flounders, tommy-cod frisky sculpin are there in abur-ks, snipe, partridge, squirtel and sep the gans from rusting. There-anty worth visiting, and a few of int and Castine are the most cele-verywhere, one can find cities or newspapers and supplies. Every-ple are kind and hospitable, there everythere, and al laws except

COMPARATIVE POWER OF LARGE AND SMALL VESSELS.

Editor Forest and Stream: I have read with much interest the discussions and the various schemes that have heen devised for equalizing the advantages which the larger vessels have over smaller ones in yacht racing. But it appears that a clear idea of the "What is it," that gives this advan-tage is not fully comprehended by all the managers of yacht racing, and that the law by which this advantage of volume varies with in-crease of the dimensions of the vessel, is not well digested by the average vachtsman.

average vachtsman. Volume of displacement, being a function of four factors, vlz.: leugth, hreadth, depth, and a coefficient of form—usually called the coefficient of finencess of displacement—if any one of these factors is taxed, volume is sure to come out under the other factors. The secret of this element—volume of displacement—lies in the fact that it grows, with the increase in linear dimensions of the vessel, laster than does the corresponding resistance. An example will il-ustrate.

faster than does the corresponding resistance. An example sum instrate. Suppose we have two vessels of precisely the same model and loaded to the same per cent. of their depth. As the two vessels are alike, and loaded alike, their coefficient of flueness, or displacement, will he the same, and we may throw this factor ont of the calculation. Again, as the two vessels are alike, their lineal dimensions all vary by the same ratio, whence we may compare them hy means of this ratio; and for simplicity of calculation we will call this ratio 2. That is to say, we will suppose all the linear dimensions of the one, as length, depth, draft, length of spars, and hoist and spread of sail, to be twice as streat in one as in the other. city of calculation pose all the lin length of spars, one as in the oth

ars, and house and their respective other, are as the squares of their respective surfaces of the one, as wet surface, surfaces of the one, as wet surface, Immar surfaces are as the squares of their respective , all the similar surfaces of the one, as wet surface, tion, upon which the resistance chiefly depends, as , are four times as great in the one as in the other, similar solids vary in their volumes, as the third their similar lineal divension, the volume of one is go as that of the other. That is to say, the larger-as much tonage to the yard or foot of carvas, or wer to the pound of resistance as has the smaller power, eight tin vessel b ch power to the

vessel. The same relation is shown by an expression much in use by naval architects, viz.:

D³⁷ which D represents the volume of displacement in cubes of some neat unit-usually a foot. As this expression may not he readily understood by those not amiliar with algebraic notation. I will explain: The denominator of he fractional index signifies that the cube root of the volume D is to e taken, while the numerator, 2, signifes that this root is to be quared; and the expression shows the surface of one frace of a cube, hose volume is equal to the displacement. And though this surface there there there of the reselfs, it is a surface that varies e ratio as does the and, therefore, it is Moreover.

In these surfaces in different vessels. Moreover, the denom-galdes that the volume varies as the cube, while the numer-we that similar surfaces on the vessels vary as the square of a dimensions. be asked, If the power of the vessel to hold sail up to the reases faster than does the resistance, why not put on more

This would give us the sail area exactly, but it would get us into thereby increase the healing moment of the wind, diminishing the stabilized in the event of the resident of the sail area in the would soon the sail area on the larger vessel according to the increased tomage, i.e., eight times as much sail as is on the smaller vosel, then we must multiply the dimensions of all the smaller vosel, then we must multiply the dimensions of all the smaller vosel, then we must multiply the dimensions of all the smaller vosel. This would give us the sail area exactly, but it would get us into thereby increase the healing moment of the wind, diminishing the stability of our vessel undury. the bridge bulkheads braces will lead the line up and over, similar precaution being adopted at all the payed overflows, Inding stages, etc. The Cost, being so light, did not tanten her towline, which dragged along the edge of the bank but did not catch once. There is not much to learn about navigating a causi, but what there is must be classed as all-important. The greatest draft per-mitted to pass is, I learn, 7ft. din. A friend tells me that he brough his keel sloop drawing 7ft. through in safety, though she was often in the mud. This, being very soft, did not even interfere with her speed. It is the rule that boats of the greatest draft keep mid-channel, the lighter ones passing inshore over the towlines of the former, which are slacked up for the purpose. In taking a keel reach the state would judge a small yacht to draw less water than himself. He yould keep midchannel and collision would be the result, or the yacht might be forced to sheer into the bank and pround or chafe against the stone facing. The canaller should bo water before answering their helms, and have an awkward way of sheering across the channel. Besides, they do not fully appreciate the nicer construction and plant of strange vessels, which they are apt to treat as roughly as one of their own sort. At the bridges and entrances to the locks the canal at a herein the bridges and entrances to the locks the canal have an awkward way of

ics the canal narrows, so that a leep draft boat have such places all to herself, stopping the tow-ad, as you cannot reverse the long-earcel engines. nuld be assured to prevent steamers overhauling ordraft yacht-or, for that matter, any kind of difficult, as the steamers are slow, scarcely going on a slow tot. which ins croules by the routside, leaving in for long periods. A For one thing, theroughly protect the cally if short-handed. A plank lightly about the waterline, and a buffer made twe and slung around the sides will save paint and seams. Let the towline be as a pull as nearly fore and aft as may be, at night, according to law. It is better e moon be shining bright. Drivers and er boats.

able, to orning the put as nearly the cording to law. It is better tright unless the moon be shining bright. Drivers and eepy aboard other boats. turnouts at the various stations, into which you can haul here for the night. Find out from the locktenders just is up a betth, as your judgment may be at fault. The solution of the steamer has a barge in tow. A void locking store in a, if the steamer has a barge in tow. A void locking re boats. Having paid "entrance" money you are entitled to fail the locks and bridges the same as any canaller, n will serve to call out the tenders if your approach has the device the dot of the ground. The drivers seem to store the intervent one or more days' work. The teams day companies on the ground. The drivers seem to turally. A peculiarity about the canal is that nobody hing about it and nobody volunteers advice. You are o be familiar with the customs; and if not, you must scover them by dint of sad experience, which, of course, the harm has been done. Upon arriving at a canal, sail oidly up to the first lock, mass through into the inner ribor for a safe betth, and then make your arrangements the. You are entitled to this much without any ques-asked. Keep clear of the towpath side and also ahead of the duril the carried aboard during the passage. A of New Jersey will help to make out objects of interest uut. For 7ft. draft there is a deep bash just beyond the in which you can moor at the upper end of New Bruns-ingston, about half way, you will find a gap with more imoored bow and stern. At Trenton there is no good iton and usually a jam of boats of all sorts. This city asked as a possible and no stop made till clear of the ordendown. No salis are allowed to be hoisted in the orner boats with housing topmasts and reefing bowsprits in smuch as possible; and if the main boom can be orner beats with housing topmasts and reefing bowsprits in smuch as possible; and if the main boom can be proved bow and stern. At Trenton there is no good iton and usually a jam of boats of all sorts.

FOREST AND STREAM.

SHARPIES AND DORIES.

SHARPIES AND DORIES. To mager a response to "Pisentor'el' proposal for a discussion of the merits of the sailing dory. Linow what the dories carried by fishing vessels, and fitting one into the other, are like, but I can hardly see any real difference between the salling dory and the sharple. I claim to know something of the latter, as I have designed and had one built, 251. L. W.L. She is about equal in speed to an 18th. keel boat (of her own displacement, with some outside ballast) going to windward, and much faster on any other point of salling, her quickness and certainty in stays is quite phenomenal. In most such boats, by reason of the angular bilge, more liable to be "tripped" by a beam sea than round bilged boats? These are the dimensions of an American salling dory, one-third the real size, taken from a model exhibited at the Fisheries Exhibiton, London: Length over all skin.; beam extreme, 20in. Draft amidships, Sin.; at bow, 14in, it stern, Tim. The last three measurements taken from the floor on which the model stood. Rake of stem, 12in.; of stern, Sin. Deck extending the nodel stood.  Methods and the second stress of the second stres of the seco

THE VEST POCKET NAVIGATOR.—Under this title Capt. How ard Patterson has i-sued a little pamphlet for the use of yachtsmen containing some of the simpler problems of navigation, the rules of the road, boat service and similar useful memoranda. Capt. Patter son is still at the head of the Navigation School, 20 Burling Sip, New York.

AMERICAN Y. C.—The annual meeting of the American Y. C. was held on Jan. 19, at the club rooms, with Com. De Cordova in the chair. The treasurer's report was read, showing a balance of \$7.430 on hand and no liabilities. A committee was appointed to select a sile on the Bay for a club house and anchorage. The limit of time for pro-tests was fixed at five days after the race. Five new members, Messra Eugene V. R. Thayer, Charles Gibbons, Jr., William S. Alley, Royal Phelps Carroll, and George H. Robinson, were elected. The officers elected for 1856 were: Commodore, Joseph C. Hoagland, of the Lagonda, Vice Commodore, Arthur E. Bateman, of the Loanda, formerly the Promise; Rear Commodore, Charles H. Osgood, of the Ville; Secretary, Henry A. Taylor, Treasurer, William B. Dowd, Fleet Surgeon, Thomas H. Balley, M.D.; Measurer, Chas H. Has-well. Trustees: Join P. Kennedy, of the Viola; Henry A. Taylor, of the Sphayx; Frank R. Lawrene, W. E. Connor and William B. Down. Regatia Committee; Geo. W. Hall, Thomas Manning, Thomas J. Scovill, Rdward S. Innet and Ezra S. Connor. The proposed de-sign for the international cup was exhibited. It is reported that at least two English yachts will cross to compete for it. A.NEW MOTOR FOR STEAM YACHTS.—The well-khown builders

sign for the international cup was exhibited. It is reported that at ieast two English spachts will cross to compete for it. A NEW MOTOR FOR STEAM YACHTS.—The well-known builders of Racine, boats and cances, Thos, Kane & Co., at Chicago, III, and Racine, Wis, are very busy building steam yachts from 18 to 30ft. iong, for delivery the coming scasen. Water gas is used for fuel, the burning being regulated automatically by a very ingenious device, which can be easily set to keep the pressure at any desired point. As the water feed is also taken care of automatically the machinery requires little or no attention, so that any yachtsman can be his own engineer. Their high-speed two and three cylinder yacht engines can be instantly reversed when running at full speed without shut-ing off steam, by simply pulling out reversing rod, as they dispease with the usual link reversing gear. Since the engine and boiler are very light and compact, and the fuel does not occupy valuable space, the yachts are comfortable as well as clean and speedy. STOVES AND LANTERNS.—I think gasoline is dangerous in rough stilted. In the top of this I kept a cork when not burning, though this was not uccessary. This improvement entirely prevented slop-ing or leaking. The reservoir was a square tube around a hollow ube around a hollow square, into which projected two tubes, hold-ing the burners, which were §in long. One burner was often enough for cooking and heat. The tubular lantern will blow out, and so a failure as an anchor light. Can and will some cruiser name a better.—W.

better?--W. SOUTH BOSTON Y. C.-This club will have a new house, to cost \$3,000, ready by spring, on the site of the old structure. It will be 30x40ft, and two and a half stories high. The lower floor will be fitted with lockers, while the upper story will make one large hall. In front will be a large piazza, with lockers undermeath. A SCHOOL OF YACHT DESIGNING.-This school, established in 1872 at East Boston and afterward moved to Charlestown, has now a class of twenty students under the instruction of Frot. John L. Frisbie. The school is open from 7:30 to 9:30 P. M. on Mondays, Wednesdays and Fridays.

give prices. We do not know where the pear shaped curves can be had. H. T. F., Wezt Acton, II.—It has not been satisfactorily proven that the influence of previous sires extends to offspring by other sires. A careful study of the matter has so far failed to convince us that the theory is correct. Anoto AmenterAs, Hartford, Conn.—What opening would there be in the Bermuda Islands to start a poultry farm, or at least what small business could be started to advantage by an old colonial man like myself, understanding agriculture well? Is it healthy all the year round? What is the cost of living there? Is the shooting and fishing good? Ans. We should not think well of starting a poultry farm in Bermuda. You would be too far from your market. The climate is delightful in whiter, but in summer the intense damp beat affects some people very upleasantly. Living is said to be very cheap. There is but little shooting, but plenty of sea fishing. The clief in-dustry of Bermuda is the raising of early vegetables, and we should imagine that to know to what uses turkey crops can be put.

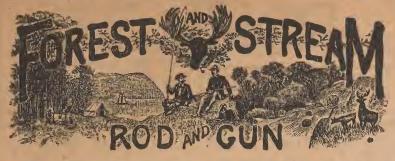

THE NEXT MAN TO DIE is just as likely to be yourself as any of your neighbors, and unexpected death is continually happening, fake a combined life and accident policy in the Travelers, of Hart-ford, Conn.-Adv.

ABBEY & IMBRIE, Manufacturers of Every Description of Fine Fishing Tackle, 18 Vesey Street (Fourth door from the Astor House), New York.

With the approach of a new year it is not necessary to announce any change in our manner of conducting this journal. Just what the FOREST AND STREAM has been in 1855 we hope to make it in 1856. It will be run on the same old principles, tested by experience and approved by prosperity. It will be just as entertaining, just as instructive, just as frank and outspoken, and just as helpful. We are sometimes asked to explain the reason of the FOREST AND STREAM'S constantly widening influence and prosperity. Well, there is no

Trade-Secret

about it, and we do not mind telling you. It is this: We have not expended our energies in preposterous spread-eagle proclamations of tremendous attractions in the dim and distant future, but have pinned our faith to present performance, each week, and fifty-two weeks in the year. This in the kind of journalism that is bound to succeed. Nothing very occult about it, you see. Another element of strength is the jealousy with which we have maintained the inher-ent dignity and entire respectability of the pastimes discussed in these pages, and the extreme care we have taken to keep the tone of the columns such as renders the paper fit for any man to receive into his family. We are assured by men, whose good opinion we value, that they do not think it necessary to make

A Weekly Scrutiny

of the contents of the FOREST AND STREAM before venturing to lay it on the family table, We determined, years ago, that a clean paper must win its way among sportsmen (not "sporting men"). The fact that it has done so is now cited, not that we may boast of our own prescience, but as a most gratifying evidence of the high standing of the field-sports to which this journal is devoted.

In other words, the reason why the "Forest and Stream" is liked by sportsmen is that the "Forest and Stream" is the kind of paper that sportsmen like.

GOOD THINGS IN STORE FOR 1886.

THE MAINE HOUSE BURNERS.

ONE common protection of the classes who violate the game laws is in their standing threat to poison the live stock and burn the barn of any one who dares to give evidence against them. Scores and hundreds of outrageous acts have gone unpunished because no one in the community had backbone enough to risk the vengeance of these fellows. Just now the Legislature of New York is asked to modify one of the best game laws of the State out of deference to the demand of Adirondack dwellers, who threaten, if the law is not changed, to slaughter the game out of pure revenge.

In most instances this fear of vengeance is without any adequate foundation. The grouse snarer may proclaim that if "peached on" he will burn barns, but as a matter of fact he is a cowardly fellow, brave enough in setting snares, but lacking courage to apply the incendiary's match. The way to treat him is to go ahead with his indictment and punish ment. In nine cases out of ten no barn burning will follow. In the tenth case, where the law breakers are actually so de praved as to execute their threats, there is but one course of action, as in the other nine, namely, to prosecute. Then if the barn incendiarism follows, punish that too. At all hazards take away from such dangerous members of society their defense. Break up the reign of terror. This is just the condition of affairs they have had to contend with in Maine.

Last March one J. W. Day, of Wesley, Me., was prosecuted by detective Pettingall for having killed deer contrary to law. Day believed that Game Warden Munson, of Wesley was responsible for his arrest, and he made the customary threats of revenge. He belonged to a clique known as the "Shacker Boys," Shacker being a local term for deer. The Shackers resolved to "clean out" Warden Munson. Among other devices to accomplish this end, they set a dead-fall for him, but this he escaped. Then Day announced that a match was waiting for Munson's buildings as soon as the hay was in. At last on the night of July 17, Day poisoned Munson's cow, emptied a can of kerosene in the barn and house and set fire to them. Both were totally destroyed. Six weeks after that others of the "Shacker Boys" stole into the parn of Game Warden Samuel Cushing, cut off his horse's

head and burned the barn and all its contents. The incendiary Day was arrested for his crime and lodged in jail. Then letters were sent by the Shacker gang to six other persons who had been prominent in enforcing the game laws, among others to Dr. Sam. B. Hunter, of Machias. These cheerful missives threatened fire, poison and death. Day also sent out from his cell poetical effusions bearing upon his crime and arrest. One of these compositions was produced at his trial as an evidence of the law defying char-acter of the Shackers. It is an illiterate mess of doggerel beginning:

It was in the town of wesley It was in the town of wesley as you shal understand thair lived a croud of young men thay was cald the shackr band and thay was accused of menny a bad deed let them be guilty or not but they hunted deer the year around and for the wardens make it hot. thair was one young man among them the wardens all knew well for by this devels rifi thair had menny a poor deer fel he hunted on old stream I would have you all to know and he sed it was one place the wardens dast not go

Day was brought into court Jan. 23, and the case went to the jury on Monday of last week. He was convicted of arson and sentenced to State Prison. Next April, it is confidently hoped, at least one more of the Shacker band will The Maine authorities have adopted the join him there. only adequate policy of dealing with these characters; they are pursuing that policy with a decision and a vigor that cannot be too highly commended, and by the time they shall have finished, it will be understood, in that part of the State at least, that prosecutions for game law offenses are not to be avenged by poisoning cows, beheading horses and putting the torch to barns and dwellings.

KANSAS GAME NEEDS.

THE members of the Leavenworth Gun Club have addressed a memorial to their Senator, asking for much needed changes in the law for the protection of game birds. quail and grouse are shipped to market in such quantities that, though the open season for them is right, the two species are sadly harried and their extinction only a matter of time, Another evil which has been developed in Kansas is the side hunt. Competitive shooting leads to the killing of unreason able bags. Game is destroyed not for the inherent sport of shooting, nor because the birds themselves are desired for food, but only to make a score which shall "beat the other fellows." The petitioners ask that exportation of game may be stopped; that Kansas game may not be dumped into the Chicago and St. Louis markets. They also ask that local game killers may be limited by law to twenty-five birds each in one day, These demands are reasonable. Senator Lowe will serve the true interests of his constituents if he will secure the game legislation they ask.

THE ALBANY DEER BILLS.

TWO of the bills relating to the hounding of deer have been reported upon by the Assembly committee, and were put on the files last Monday.

The first is No. 107, introduced by Mr. White. It makes the deer killing season from Aug. 15 to Nov. 1; allows jackhunting from Aug. 15 to Oct. 15, and dogging from Sept. 15 to Oct. 15; allows possession of venison from Aug. 15 to Nov. 15, and the sale of venison from Aug. 15 to Nov. 1.

The second is No. 108, introduced by Mr. Barnes. It makes the deer killing season from Aug. 15 to Nov. 15; permits hounding from Aug. 15 to Nov. 1; forbids jacking at any time; and forbids the transportation of venison out of any of the counties of the State (save Queens and Suffolk) except that from Aug. 1 to Nov. 15 two carcasses may be transported if accompanied by their owner.

Both of these bills contains some good features, but each one has a vast preponderance of unmitigated evil, and the amendment of the present law as Mr. White proposes it, or as Mr. Barnes proposes it, would be nothing less than a public calamity. Mr. Barnes's clause restricting tranporta-tion of venison to two carcasses accompanied by the owner, is a capital provision, or it would be but for the idiotic proposition to legalize the transportation of dead game fifteen days before it is lawful to kill that game.

Mr. White and Mr. Barnesare posing under false pretences as apostles of game protection. The milk in the cocoanut is the deer-hounding clause. These bills have been prepared Pensacola. Th and are now being: pushed solely with a view to restoring deal of interest.

Adirondack deer-hounding. The good non-jacking clause, the good non-transportation clause, the good shortening of the season clause—each is only a sop to make us forget the true nature and intent of the bill. Either bill, if it became a law, would mean the deplorable destruction of Adirondack Mr. Barnes is working only for a small class of imdeer. provident hotel keepers, stage drivers and guides. time-serving policy of grasping all they can to-day without regard to certain ruin to-morrow, is directly opposed to the true sentiment and interest of the intelligent residents of the Adirondack counties.

Every citizen of this State should concern himself to work for the defeat of the Barnes bill and the White bill, and all other bills intended to restore hounding.

We repeat the warning already given. If the deer law is to be maintained it must be by immediate, earnest and persistent action by individuals, each one doing his share. Elsewherc we reprint the petition given last week; and we urge every reader of the FOREST AND STREAM in this State to secure signatures to this and forward it to his district representative in Albany. This must be done now. The deer-hounders in the Assembly boast that they will carry the day. If their designs are thwarted it must be by prompt work.

THE REVENGE ARGUMENI.

ONE argument upon which the advocates of shooting exhausted deer in the water lay much stress is the revenge argument.

There are a number of men and their families in the North Woods who depend for a livelihood largely upon the wages paid them by rich city sportsmen who hire the guides and their hounds to drive deer into the water for the sports-men to butcher. The hounding advocates aver that the guides of this particular class are a miserable, poverty-stricken lot, continually upon the verge of starvation. They drag out a wretched existence through the winter, barely subsist ing upon what provender they have secured with their deer-hounding revenue and with what venison they kill in the Were hounding allowed the winter-killing of deer by snow. these half-starved guides would he limited to their actual present needs; they would crust-hunt only enough deer to do them and their dogs through the winter, and would carefully protect the rest as material for the profitable summer and autumn water-killing. But-this is the argument-if hounding be forbidden, and this source of revenue cut off, the guides will be compelled to kill more deer in winter; and, more than this, will crust-hunt by the wholesalc and destroy the game out of pure revenge; and their revenge will not be sated save at the sacrifice of all the deer they can butcher.

Briefly put, the contention is that the deer must be hounded to death by sportsmen in order that they may not be crusthunted by the guides. Paddle up to them in the water and cut their throats in August to save them from having their throats cut in the snowdrifts in February. The hounders who make this plea doubtless think that they have for it some foundation in fact. If there are shiftless, lazy, half-starved Adirondack dwellers who will butcher deer out of revenge, they certainly are not representatives of the decent class of North Woods guides. They are not the sort of citizens whose threats should coerce the Legislature into making a law for their benefit.

To the tender-hearted water-butcher of Adirondack deer it may appear a harsh sentence, but most other people will agree with us that if these men cannot make a living as guides in the North Woods under present laws, they ought to kill their hounds, engage in some legitimate labor and earn their bread and butter as other folks do.

MASSACHUSETTS SUNDAY SHOOTING.—A petition was presented to the Massachusetts General Court, at Boston, last week, praying for the repeal of the "Blue Laws" of that State, among them the statute which forbids shooting game State, among them the statute when the the reasonableness on the Sabbath day. Whatever may be the reasonableness or unreasonableness of the other laws included in the petition, this one is perfectly right and proper. The prohibition of Sunday shooting should be maintained; to repeal its provisions would be most unwise.

CODFISH FOR THE GULF OF MEXICO .--- Professor Baird is engaged in an attempt to acclimatize codfish in the Gulf of Mexico. A million eggs from the station at Wood's Holl in Massachusetts, will be put into the waters of the Gulf at Pensacola. The experiment will be watched with a great,

TO THE WALLED-IN LAKES.

THE wind, which rose again as the sun set, was cold, and as soon as dinner was over we took refuge in the lodge. Stieks were thrown on the smouldering coals of the fire, and Yellowfish, seizing the axe, went out and eut a couple of armfuls of wood, which he brought inside and laid by the door. By this time the pipes and cigarettes were all aglow, and the fire gave out a cheerful warmth, which made the howling gale without, a thing to be laughed at. lay back on our comfortable beds, with our feet stretched out toward the fire, and were just lazy and contented. It was too soon after dinner to talk, and we quietly enjoyed the warmth and listened to the raging of the wind, and the rattling of the lodge poles and the flapping of the smoke shield, and sent up clouds of fragrant tobacco smoke. The lines of fishes drying above our heads swung backward and forward as the gale increased, but we felt nothing of its fury.

"Wind Maker is hard at work to-night, Appekunny," said T.

"Yes," he replied, as he glanced toward the half breed, "he lives up here in the Upper Lake. Does he not, Yellowfish?" "Ah," replied the Indian, who was staring hard at the fire

as he sucked at his pipe. "It is rather curious," continued Appekunny in an aside to me, "that the Pegunny seem to have placed the cart before the horse in their belief with regard to this god. You know that Wind Maker lives under the water, at the bottom of lakes." Then louder, "The Pegunny say that when he wishes to make the wind blow, he first makes the waves, and that as they roll along they make the wind. Is it not so, Yellowfish?

"Ah," said the Indian.

"He is strong in these mountains," said I. "All the time the wind blows. We have very bad luck. Our medicine is not strong. Tell me, Appekunny," I continued, "about the Medicine Rock on the Marias. How far has it moved since you have known it?"

"Once," he replied, "it was at the top of the bluff, but that was many years ago. Since I have known it, it has only moved two or three feet. Some years it moves more than others. It all depends on how fast the bluff wears away in the weather. The slope being gradual, the rock moves slowly. The Pegunny think that it is alive, and, as you have seen, make presents to it."

We had passed this rock on our way from the Marias a huge, reddish boulder of sandstone, two-thirds the way up the face of a sloping hill on the north bank of the Marias River, and strewn on the soil about it were the decaying remnants of presents that had been made to it in the past. Near it I had picked up a pair of brass earrings, a steel finger ring, a little medicine bottle, and an old war eagle feather, the most recent of the offerings.

"Down on Milk River," said Yellowfish, "behind Lee ofl the Sweet Grass Hills, is another Medicine Rock Tt. looks like a person sitting down on top of a bluff. The Pegunny worship it. Always when they go by it they give Sometimes they give it a shirt, and put it on it presents. the rock, and then when you look at it it seems more like a person than ever. Over in the mountains to the west there is a pine tree in which is grown a sheep's horn. It is a very pretty horn. Not so very long ago-may be when my father was a young man-the tree was small, so that a man on foot could touch the horn without lifting his hand above his shoulder. But [as the tree grew] it got higher and higher, until it could hardly be reached by a man on horseback. All Indians gave presents to it whenever they went by, but one day a Ncz Percé got mad at it and shot it, and pretty soon afterward he died. Some of the Pegunny have seen this horn, and maybe these Kootenays know about it, too." "Speaking of religious beliefs," said Appekunny, after a

little pause, "reminds me of what old Red Paint said to the priest over at Birch. The priest had just come into the country, and one night he asked a lot of the Indians over to the chapel on Birch Creek to have a talk with them. He wanted, he said, to get them to tell him some of their religious beliefs, and then he was going to tell them about Jesus Christ and try to convert them. He could not speak Piegan, and asked me to come over and interpret for him, instead of the regular interpreter, so that there would be no misunderstanding of any kind.

I went over at the appointed time with a lot of the and more came after us, so that the chapel was Indians, pretty full, for, you see, they all wanted to hear the stories that the priest was going to tell. It was the famine winter, and the people were glad enough of any kind of an excitement to keep them from thinking of their starving wives and children and of their own gnawing hunger. Among those present was old Red Paint. He is a pretty good talker and has always something to say.

"After a little preliminary talk the priest asked them to tell him some of their traditions, for he wanted to find out something of what they believed. 'And afterward,' said he, 1 will tell you of my God, and His power and goodness.

"Upon that old Red Paint got on his feet and told the story of the bad man who once cached the buffalo and the other game. He said:

"'What I tell you now happened long ago.

"In those days the people were hungry. No buffalo and antelope were to be found on the prairies. The deer and elk trails were covered with grass and leaves; not even a rabbit to eat, and your people are, as you say, starving, you have

could be found in the brush. Then prayed the people, say 'Oh, Old Man! help us now or we die; gone the ing. buffalo and deer; uselessly we kindle the morning fires; use less are our arrows; our knives stick fast in the sheaths.

""Then went Old Man to find the game, and he took with him a young man, the son of a chief. For many days they traveled the prairies and ate nothing but berries and roots. One day they climbed a high ridge, and when they had reached the top they saw, far off by a stream, a single lodge. ""What kind of a person can it be," said the young man, ""who camps there all alone, far from friends?"

" "That,' said the Old Man, "is he who has hidden all the buffalo and deer from the people. He has a wife and a little son.4

"Then went they close to the lodge, and Old Man changed himself into a little dog, and he said, "That is me.' Then he, the young man, changed himself into a root digger [a carved and painted stick about three feet long, shaped like a sacking needle, used by women to unearth roots], and he said, 'That is me.'

"Now, the little boy playing about, found the dog, and he carried it to his father, saying, 'Look what a pretty little dog I have found.'

'Throw it away,' said his father, 'it is not a dog.' And the little boy cried, but his father made him carry the dog away. Then the boy found the root digger, and again pick ing up the dog, he carried them both to the lodge, saying, 'Look mother, see the pretty root digger I have found.'

"Throw them both away,' said his father, 'that is not a stick, that is not a dog.'

"'I want that stick,' said the woman, 'let our son have the little dog.'

"''All right,' said her husband, 'but remember, if trouble come, you bring it on yourself and on our son.' Then he sent his wife and son out to pick berries, and when they were out of sight he went and killed a buffalo cow and brought the meat into the lodge and covered it up, and the boncs, skin and offat he threw into the creek. When his wife returned he gave her some of the meat to roast, and when they were eating the little boy fed the dog three times, and when he gave it more, his father took the meat away, saying, 'That is not a dog, you shall not feed it more.

"In the night, when all were asleep, Old Man and the young man arose in their right shapes and ate of the meat. You were right,' said the young man, 'this is surely the person who has hidden the buffalo from us.' 'Wait, Old Man, and when they had finished eating, they changed themselves back into the stick and the dog.

"In the morning the man sent his wife and sou to dig roots and the woman took the stick with her. The dog followed the little boy. Now as they traveled along in search of roots they came near a cave, and at its mouth stood a buffalo cow Then ran the dog into the cave, and the stick, slipping from the woman's hand, followed, gliding along like a snake. In this cave they found all the buffalo and other game and they began to drive them out, and soon the prairie was covered with buffalo and deer. Never before were so many seen.

"Then eame the man and he said to his wife: 'Who now drives out my animals?' and she replied: 'The dog and the stick are now in there.' 'Did 1 not tell you,' said he, 'that those were not what they looked like? See now the trouble you have brought upon us!' and he put an arrow in his bow and waited for them to come out. But they were cunning, for when the last animal-a big bull-was about to go out, the stick grabbed him by the hair under his neck and coiled up in it and the dog held on by the hair beneath, until they were far out on the prairie, when they changed into their original shape and drove the buffalo toward camp.

When the people saw the buffalo coming they made a pis-kan and drove a big band of them into it, but just as the leaders were about to jump off, a raven came and flapped its wings in front of them and croaked, and they turned off another way. Every time a band of buffalo was driven near the pis-kan, this raven frightened them away. Then Old Man knew that the raven was the one who had kept the buffalo eached.

"So he went and changed himself into a beaver and lay stretched out on the bank of the river as if dead, and the raven who was very hungry, flew down and begau to pick at him. Then Old Man grasped it firmly and ran to camp and all the chiefs came to decide what should be done with Some said to kill it, but Old Man said 'No! I will punish it. it,' and he tied it over the lodge, right over the smoke hole.

"With the days the raven grew poor and weak and his eyes were blurred with the thick smoke, and he cried con-tinually to Old Man to pity him. One day Old Man untied him and told him to resume his original shape, saying: 'Why have you tried to fool Old Man? Look at me! I cannot die. Look at me! Of all people and tribes I am the chief; I cannot die. I made the mountains. They are standing yet. I made the prairies and the rocks. You see them yet. Go home, then, to your wife and child, and when you are hungry hunt like any one else or you shall die.'

" 'And now,' concluded Red Paint, 'the white men have cached the buffalo, just like this bad man of whom I have told you, and we have nothing to eat; we are starving. Oki, [that's all], and he sat down.

"The priest had listened attentively, and he now rose and said: 'My brethren, your condition is a very hard one, and I am heartily sorry for you; but although you have nothing still Jesus Christ, and I am here to tell you about him.' I interpreted this, and as I finished old Red Paint sprang to his feet, and, raising his hand to enforce silence, he said, sternly, 'That ain't grub,' and stalked out of the room. was a good while before I could get my face straight enough to tell the priest what he had said, and when I did so he seemed to feel mighty badly about it."

It was impossible not to see the comical side to this story, and we roared over it until our shouts of laughter drowned even the noise of the wind without. Then I proposed to Yellowfish to tell us another story of the Pegunny, and asked him to relate it slowly, so that Appekunny might translate it literally as it was told, and I could take down the words just as they were spoken.

In his interesting papers on "Life Among the Blackfeet" Mr. Schultz has indicated the position in the mythology of this people occupied by Napi, or Old Man. This deity is the most powerful of the Blackfoot gods after the Sun, but is at the same time so malicious, and so short-sighted and foolish that he is continually doing mean things to those with whom he comes in contact, and is forever getting himself into scrapes. A little persuasion induced Yellowfish to comply with my request, and, laying aside his pipe, he sat up and prepared to talk. I give his stories as they fell from his lins. He said:

"That I told you about, far behind. That Old Man. Long ago women told me; long ago they were apart, women one Old Man went about. place, men another. First place, many men they stayed. He went, Old Man. Found two women, go to buffalo piskan. He found those women. Their lying down. He come there, those two women. Lying down, those two persons, women. He come one woman, take her person. One woman, he take her. When run, hit him nose. Much blood. Other woman run coulée. Far off, let fall one woman. Much hurt him nose, Old Man. When let go one woman hunt other, Old Man not Say 'Again lie as before those two women.' Big fool find. Old Man. Oki."

This is a free translation of the story as told: "What I tell you happened long ago. This story is about Old Man. Long ago the women told me that in ancient times men and women were apart. The women lived in one place, the men in another. Old Man was traveling about, and first he came to a place where many men lived and stopped there some time, and then he went on his way. 'As he was going along he saw two women going to a buffalo corral. When he came near them they [were very much frightened, probably they had never before seen a man and] lay down flat on their backs. Old Man came up to them and found them lying so and supposed them dead]. One of them he took up in his arms and carried with him. [She was limp with fright and] as he ran along her knees flew up and struck his nose, and Old Man bled a great deal. When he went away the other woman got up and ran off into a coulée. When Old Man had gone a good way, he let fall the woman he was carrying, for his nose hurt him very much, and went back to get the other woman, but he could not find her. Meantime the one he had been earrying had got up and run off. So he lost them both. Old Man said, 'Just you lie there again you two women, and see if I don't get you both.' So Old Man was made a big fool. That's all." Yellowfish seemed to greatly enjoy the discomfiture of Old Man and we laughed in sympathy with him as he chuckled over the god's misfortunes. After a little he continued:

"Going along Old Man came to big lodge, woman's home. Went in. Said women, 'Do you think you have man for marry [us]?' He said, 'Who is chief here?' Woman said [pointing], 'That woman behiud, chief.'' He said, 'To-morrow come coulée those women. Will be in coulée that Piegan, fine wearing apparel his, like weasel skin trimmed leggings, very handsome his wearing apparel." woman, 'Wait. I first chief woman, I first take chief man.' That woman not nice her person; make dried meat; all bad her wearing apparel. That woman come coulée. Many men. Old Man in middle, fine dressed, weasel skin leggings. That chief woman sees Old Man, she let go, went back women. Said, 'Those persons' take; fine dressed man middle, not take, him mine.' Fix nice wearing apparel that woman. Nice her wearing apparel. Went coulée. Went look for man those women. Old Man stay far back. Those women take men, take all men their lodges. One stop yet, Old Man. That chief woman said, 'Old Man, think I fool. Now we make buffalo piskan Old Man, going to [be] pine tree. Now he is fooled Old Man, not woman! When first that way, before find women men, men make buffalo shank moecasins. When women theirs, then make men all good wearing apparel. Oki.'

Turned into the vernaeular this story is as follows:

"As Old Man was going along, he came to a big lodge which was the woman's home. He went in. The women said to him, 'Do you think that you have men for husbands for us?' He said, 'Who is chief here?' A woman replied, 'That woman behind is chief.' He said to the chief woman, To-morrow let those women come to the coulée. A Piegan will be there, finely dressed, with leggings trimmed with weasel skin; very handsome is his wearing apparel.' The chief woman replied, 'Let the others wait. I am first chief woman, I will be the first to take a husband.' Now Old Man wanted very much to have the chief woman for his wife, although she did not look nicely. She had been mak-

ing dried meat, and her hands and arms and clothing were covered with blood and grease. The next day the chief woman came to the coulée, and there she found many men. In the midst of them was Old Man, splendidly dressed, with weasel-skin leggings. As soon as she saw him, the chief woman recognized Old Man, so she let them all go and went back to the women. To them she said, 'You can take any of these men except the finely dressed man who stands in the middle. Do not take him, for he is minc.' Then she put ou her best apparel and went to the coulde. The women went to look for husbands. Old Man [who wished to be chosen by the chief woman] stayed far behind [so that he should not be taken by any of the others]. All the women chose husbands and took all the men to their lodges. One man was still left unchosen. It was Old Man. The chief woman said, 'Old Man thought I was a fool. Now we will make a buffalo piskan, and I will change him into a pine log and we will use him for a part of the feuce. So Old Man is the fool, and not the woman.' In old times before men had wives they made moccasins out of buffalo shanks, but when they got wives then men had them make good wearing apparel for them. That's all." "Old Man had pretty bad luck," said I.

"Yes," replied the Indian, "plenty trouble he had. Some time I tell you more about him."

As he spoke, he rose and put some more wood on the fire, and then, taking off his coat and moccasins, prepared to turn in. The others had by this time settled themselves in their blankets, and I prepared to follow their example. filled and lighted a final pipe, and, with my covering partly drawn over me, smoked and stared at the fire. The wind still roared over the lake, and whistled through the willows, and shook the smoke shield. Gradually the fire burned Objects lost their distinctness. From the shadowy down. piles of blankets about the walls came deep, regular breath-ings, showing that my companions slept. Under the ashes of the fire lingered a dull glow, and a slender white thread still rose above them. Through the smoke hole a bright star looked down into the lodge. Now and then from some smouldering stick a jet of flame shot up for a moment and illumined the scene. Then the gloom settled down again.

Dreamily my thoughts went back over the years to other nights, spent in other lodges, with other companions, and memories of brave, tried friends of former days crowded thick upon me. I remembered lodges pitched on the plains -camps by the Republican, the Platte, the Loup, the Running Water, the Missouri-where with those friends, red and white, I had hunted and feasted, and fought the Dakotas and their allies; 1 thought of lodges in the mountains, on the fragrant sage plains, or high up beneath the snows, where, by the hurrying streams which pour into the Green and the Grand, with one companion I had trapped the beaver for a season; of months spent in the lodges of my brothers the Panis, and with the kindly Utes, and of camps scattered far and wide over the West.

Then I see pass before me, as in a vision, the forms and faces of grave, silent, gentle men, whom once I had called my friends.

They have fired their last shot, they have kindled their last camp-fire, they have gone over the Range—crossed the Great Divide. "There were giants in those days," and of that heroic race how few are left alive! Lingering illness, the storms of winter, the pistol ball of the white man, the rifie shot of the savage, have sadly thinned their ranks. And none have risen, nor can arise, to fill the places left vacant. The conditions which made these men what they were no longer exist.

Musing or dreaming, I know not which, I live over again scenes of the past, until, roused by the chill air, I draw my blankets over my head and fall asleep.

CAMP FLOTSAM.

XXII.--- A BIG TALK DAY.

<text><text><text><text>

sct out to find the formitain head. A quarter of a mile back we found it, an ozer, miry spot, the first sight of which put block of quenching our thirts at rest. A few yards below the stream gathered itself in a store basin, but the water was warm, and we returned to the boat, preferring to have our chances on lake water. A thick growth of water weeds beamed in the outfield of the filte stream, and on the outfield eige of these we took a good sized base on a Lord balance, and, failing to find the bary of which we were a the choren cet of a pictof perch. A lift further were beam and the stream of the bary of which we were a search, we took advantage of the breeze to hoist the sail down the lake, and, failing to find the bary of which we were a search, we took advantage of the breeze to hoist the sail and mak our way homeward. The search we took advantage of the breeze to hoist the sail and mak our way homeward. We we the same should be took of the island, where we not our opining. If was intensely bot on the water, and having no spinded the next two days the case we well developed, be for a week we tould all percent which the lake was about to undergo the percival sail the lake was about to undergo the percival sail the sail the sail was the case well developed, be for a week we found the brook in front of the tents lake they store, and a consequently our sport. This state of upped by a store, in which we calce the day or two the water should be abord to inder the sail blar in the present of a store to any or the water and back to the soft as the same instate, and failed we adapt the boot the state and back and the store of the secarce and of the secarce and a span of the secarce and a span of the secarce and span of the secarce and a span of the secarce and span of the secarc

The cart, which turned out to be too much of a camper, will appear hereafter. During these days of loungings in camp, while waiting for the water to clear, the woods were well explored. In one place we found a profusion of blackberries near the camp and theneeforward many were the dainty desserts which they afterward furnished for the table. Much prospecting was also done to find a spring nearer than the outlet, but in this land of granite, water, save as found in the lakes, was a rare article, and our search was not successful. There was a tra-dition of good springs on the island below the camp, less than half a mile away, but vigilant reconnoissances failed to bring it to light, and Lost Spring Island thus received its name. Across the lake wc came upon a deep bowl in the hillside, into which the water ran in a tardy sort of way from a fissure in the rocks, which proved a fairly good spring. On the afternoon of the finding we had been cruis-ing along the shore when George's quick eye 'ell upon the green spot about the spring, and landing, he handed down a cup of the water for our judgment. Then returning, he emptied can after can of the fluid down his throat, while we sat and looked on in amazement. Had it not been for his color one could well have believed that the heroic Klugfisher stood before us plying his summer vacation, and, with a dearth of spring water about us, we thought with a shudder stood before us plying his summer vacation, and, with a dearth of spring water about us, we thought with a shudder of the possibilities were the great Templar added to the camp, WAWAYANDA,

p. 169, is only to be identified by the title which appears under it.

under it. It was inevitable that in a work planned and carried out on so large a scale, errors should occur, and perhaps as few as could have been expected are to be found in the pres-ent work. The plan of having each author sign his contribu-tion, thus making him personally responsible for the material which he bas furnished, is a guarantee of the care and accu-racy with which the work has been done. "The Standard Natural History" will prove a useful work and will do much toward popularizing science in America.

TWO YEARS IN THE JUNGLE.*

<text><text><text><text>

*Iwo YEARS IN THE JUNGLE. By William T. Hornaday. New York: Charles Scribner's Sons, 1885. Price, \$4.

for fifty families, all of whom meet together in a common hall on amicable terms—conditions often difficult to be caried out in the most civilized society. Says Mr. Hornaday: "In hospitality, human sympathy and charity the Dyaks are not outranked by any people liv-ing, so far as I know; and their morals are as much superior to ours as our intelligence is beyond theirs. If happiness is the goal of human existence, they are much nearer it than we."

the goal of numan existence, only the land we." Less than fifty years ago these amiable people were a fero-cious race of pirates, who infested all these seas, slave hunt-ers and head hunters; but by the firm, judicious and benev-olent government of two Englishmen, Sir James Brooke and his son and successor, Charles Brooke, nothing now remains of this piracy, rapine and bloodsbed, except a few heads of slain enemies hanging up in the houses of some of the chiefs. All this Mr. Hornaday acknowledges, which goes to show that civilization does not always bring misfortune in its train.

The book is furnished with suggestive and graphic if not highly finished illustrations, and is, in our opinion, an orig-inal and valuable addition to the library of the naturalist and sportsman. S. C. C.

Notes and sportsman. S. C. C. Notes FROM MAINE.—Smyra, Me.—In your issue of D.c. 31, "H. R." gives an account of a supposed otter chas-ing a bare. My experience in trapping and of observations of the habits of the otter are that it lives entirely on fish. I think that "H. R.'s" otter must have been a fisher, as his description of its quick, clean jumps would indicate, and at the distance from lim to one uot fumiliar might easily make a mistake. Having caught many of the latter I have bad a chance to study their habits. Your correspondent, "J. G R," in Jao. 14. explains it very well I think the hare is not the fisher's favorite repast, but the Canada porcupine is its best dish. I have found the quills repeaterly in its skin and body; and the porcupine makes the best bait for the fisher of any-thing I ever tried. There are many crews of lumbermen in the woods here, and when a crust comes, woe to the deer and mose. The loggers arc mostly Canucks, who do not care for the game laws, but kill everything they can to supply the camps with meat. But if some poor native kills anything out of season to keep his starring family in meat, then the valiant game wardens will pounce on him if they can get any information. It is right that the law should be enforced, but let the Canuck lumberman suffer as he deserves. Last spring one team carried out two moose hides on top of the load, through the county seat, across the line to their home in the Province, and not a word said. The same has hap-pened in a great many places on the border.—SPRING POLE.

pened in a great many places on the border.—SPRING POLE. REPORT OF THE NEW YORK FORESTRY COMMISSION.—The first annual report of the Forestry Commission details the action taken as to organizing the Commission, the amount of splarles paid, etc., and show that the amount expended on Jan. 1, 1886. was \$536.89, leaving unexpended an available balance of \$14,413 11. It has not been possible for the Com-mission to do more than familiarize themselves with their duties, and to acquire knowledge as to the wants and dangers of the forests through the intelligent exertions of special agents under their direction. The Commission asks time to prepare and present a further report, and in connection there-with recommend certain amendments to existing laws, such as the prevention of forest fires, trespassing on forest lands of the State, and the removal of timber, the injury of forests through the operation of railroads, and a provision for the conveyance of certain lands now forming part—but it is be-lieved by the Commission erroneously—of the torest preserve. The Commission consists of Townsend Cox, President; Sherman W. Knevals and Theodore B. Basselin.

Suerman W. Knevals and Theodore B. Basselin. ELK IN THE ADIRONDACKS.—Chauncey Hathorn, in a letter to Mr. E. R. Wallace, dated at his forest home in the solitudes of the North Woods (Baquette Lake), give the fol-lowing items of information: "I am enjoying myself greatly in my 'winter palace;' although mercury has sometimes fallen forty degrees below zero. Deer are very plentiful bere now—much more so than they were five years ago. And what is very surprising, the elk has again made its ap-pearance in this section. A large one was recently killed at Long Lake, It is a mystery to us all, where this mammoth creature—so long a stranger in this region—hails Irom." Mr. Hathorn doubtess refers to the American stag (*Eluphus canadensis*), an animal which, says Mr. Wallace, I believe has not been seen in the Adirondacks since 1836, when Mr. Beach—an intelligent hunter then located on Baquette Lake —shot at one near Rainbow Lake.—Syracuse Journal. [The presence of an elk in the Adirondacks would be a 'mystery," but It is important that the identity of the animal shuld be established on something better than hearsay.]

HAND-BOOK OF THE NATIONAL MUSEUM.—We have re-ceived a Hand-book of the National Museum, which gives a brief history of the origin and progress of this offshoot of the Smithsonian Institution from its inception to the present time, and a somewhat sketchy account of the vast mass of material gathered here for exhibition. The little pamphlet of 110 pp, contains a good deal that is interesting and useful, and the cuts with which it is illustrated add to its utility. The pamphlet is not a guide to the Aluseum, as its title might imply, but is rather a book to be read previous to a visit to the collections. As such it is not without a certain value. We understand that it is for sale at the National Museum and at Brentano's, in this city. The pamphlet is by Mr. E. Ingersoll and the cuts chiefly by F. H. Taylor.

CARDINAL BIRD IX NEW YORK IN WINTER.—Is it not unusual to see a cardinal bird in this part of the country at this season? I saw a fine specimen on three occasions in the Central Park last winter, and last week on a very cold morn-ing 1 heard and saw my old friend again near the lower lake. It makes a preity sight to watch this active and beautiful bird in a country while with snow.—C. P. (New York, Jan. 15). [Occasionally we see cardinal birds here in winter, and there are a number of recorded instances of their appearance on Manhattan Island at this season of the year.]

SPORTING EXHIBITION.—An international sporting exhi-bition will open at Rouen on Feb 18. The exhibits will in-clude horse and dog specimens from England, Spain, and Switzeriad. There will also be a good show of hunting equipments, and a musical competition of hunting horas. The organizers also promise a "rato-piage." or rat-destroying department. The miscellaneous part of the exhibition will be made up of velocipedes, rowing boats, fishing implements, balloons, etc. The exhibition will last until the end of February.

A CAMP HUNT IN MISSOURI .- I.

Editor Forest and Stream: Editor Forest and Stream: With your approval I propose to fulfill a promise made to some camping companions during a most delightful camp hunt enjoyed by us this fall in the wilds of Southeastern Missouri. The promise was to give to the lovers of field sports and camp life, in a series of letters, a glimpse of the real enjoyment and invigorating recreation enjoyed by a few business men during a sojourn of ten days or two weeks in the wilderness.

real enjoyment and invigorating recreation enjoyed by a few business men during a sojourn of ten days or two weeks in the wilderness. Our party, eleven in number, with two servants, one a good cook, (quipped with every convenience and comfort for a camp hunt in the woods, left Nashville as soon as the October frosts had tinged with brown the antumn leaves. Our destination was James's Bayou, in the wilds of South-eastern Missouri. The party was chaperoned by Mr. Isaac T. Rhea, of the great grain house of B. S. Rhea & Son, and his untiring energy and intelligent forcthought had left nothing to be de-ired. He was ably seconded in his efforts to make the occusion a success by the coöperation of Mr. Dan Bailey, the veteran sportsman, of the wholesale grocery house of Bailey, Davis & Co., and by Mr. W. K. Puillips, the handsome junior member of the wholesale grocery house of Pailips, Jackson & Co. Fully armed and equipped for a deadly raid upon the wild ducks, wild geese and wild turkeys, and a possible deer or black bear, we took our leave of the loved ones at home and boarded a train of the St. Louis Division of the Nashville, Chattanooga and St. Louis Railroad, with hearts beating high in anticipation of the sport that awaited us. We had heard favorable reports of the abundance of game in our chosen hunting grounds, and every man was eager to test for himself the verity of the reports.

<text><text><text><text><text><text><text><text><text><text><text><text><text><text><text><text><text><text><text><text>

of its capture, that one wild turkey is counted equal to ten wild ducks or three wild geese. Any sportsman who knows how to shoot can easily approach a flock of feeding ducks in a pond or stream by taking advantage of the banks and other obstructions, or he may stand in some fovored spot where ducks and geese are passing on their way to and from their feeding grounds and shoot them as they pass; but the man who makes a success of hunting wild turkeys has to study their habits and use all the skill at his command. At the opening of the hunt some of the party seemed to think that your correspondent was laboring under a slight disadvantage because he had lost his right arm near the shoulder. The work of the first day, however, convinced them that this was a mistake. Mr. Coger and myself, after a hard half day's hunt, returned to camp for dinner with two turkeys. Both had fallen before my hammerless. The duck hunters capie in with a load of ducks and geese. We were now assured that our hunt would be a success. We had game already enough to last us several days. After dinner we set out for explorations in new and different directions. Some three or four of us started out to investigate a forest back of our tents and away from the bayon and ponds. We had searcely entered the woods before one of the party exclaimed, "Look at those deer!" as two fine deer bounded away from us and in a moment had disappeared in the thick underbrush. Had we been aware of their presence, or even expecting to see them, they might readily have been shot. We then separated and breasted through the woods, hoping in this way to discover any game that might be concealed in the thick and tangled brush. Altead of us ran my magnificent setter dog Io. I heard a

game brush

We saw them no more. We then separated and breasted through the woods, hoping in this way to discover any game that might be concealed in the thick and tangled bush. Anead of us ran my magnificent setter dog Io. I heard a of urkey shot from one barrel and substituting a charge of No. 7.1 was preparing to shoot the squirrel, when just and of the advancing line I heard the notes of consternation uttered by a flock of wild turkeys as my dog dashed into the midst of them, without warning, and scattered them in every direction. In an instant I was on the alert. A moment later and a splendid young gobbler, fat, black and gives, came flying past. Shooting too hastily, I missed him with the first barrel, but dropped him becutifully with the second, nearly fifty yards away, with the No. 7 shot. In the meantime I could hear the other sportsment alking they advanced, and could see the turkeys that had taken for the trees, flying from tree to tree abead of them. One hen turkey, scared by them, flew too the top of a monster tree and the first barrel, but dropped him becutifully with the second, nearly fifty yards away, with the No. 7 shot. In the trees, flying from tree to tree abead of them. One hen turkey, scared by them, flew too the top of a monster tree and the free with the second by a well directed shot brought the track to the ground. By this time the other hunters were out of hearing. I quicity selected a position and after wait-ing long enough for the suspleion of danger to pass, gave a jumping upon a log about fifty yards distant, straight-ened his tail black body and neek. for a survey of the isitua-tion. A puff of smoke from the muzzle of my gun hid him answer, and ha a few minutes a fine young gobbler came, and jumping upon a log about fifty yards distant, straight-more doing then to the log upon which the young gobbler stood when I shot I found him lying dead behind the log. Tow fourt myself alone, in strange woods, a mile from any with four turkeys, and night approaching. I con-cluded 1 did not want any

in every quarter of his camp, and on the side was a beaver skin, and a very large one it was, Amasa told us. Amasa's welcome was, "Woll, boys, this is about as good a thing as I have seen lately. I will allow that I was thinking about going out of this; but after I run my talking machine a little while I guess can stand it till the 1st of December." It began to rain and snow a little, and the next day we found about three inches of snow, which froze up hard the next night and put an end to still-hunting, and we only got one shot, and even then scored a clean miss. The Diamond is one of the best streams for trout in Northern New Hamp-shire, with plenty of game, and it promises to be one of the centers of sporting. One wisbing to make a trip can find guides at Colebrook or at Magalloway. ALBERT C. WALLACE. COLEBROOK, N. H.

COLEBROOK, N. H.

"FOREST AND STREAM'S" GRIZZLIES.

"FOREST AND STREAM'S" GRIZZLIES. I HAVE just received a communication from Mr. J. P. Squibob, who writes me while in camp at Polikoschnitz-kewrskaia, and after a long conference with General Gourko, Mr. Squibob and the General are firm in the opinion that the future destination and mission of the FOREST AND STREAM'S grizzly bears should be of a national character, and have requested me to lay before the President and Cabinet their views upon the subject. As these officials all take, or should take, the FOREST AND STREAM, your publication of the scheme will save me a journey to Wash-ington. I will only remark that if any portion of the plan proposed seems inapplicable to the methods of our Republic, it is because a lengthened sojourn in the dominions of the Car has produced its natural effect upon the mind of Mr. Squibob.
10 A park or corral, containing several—or more—acres and fenced in with a stone wall fifty-six feet high, provided with peep-holes and one gate of entrance only, shall be established near the White House. Over the gate a legend shall read, 'Office-Seekers' Reposc."
(2) The bears shall be placed therein and provided with rocks, brushwood and other lurking places.
(3) All office-seekers shall be compelled by law to pass through the gate of this park when on their way to the powers they seek, or shall receive not less than 500 strokes of the knout.
(4) All laws conflicting in any manner with the above

THE TRAJECTORY TESTS.

ARE TRAJECTORY TESTS. Editor Forest and Stream: Notwithstanding the very considerable amount of com-mendation of which you were made the recipient upon the publication of the results of your rifle trials, I desire to ex-press, as one of the many who have followed the reports with pleasure and profit, a sense of obligation to those through whose enterprise the tests were brought about. In investigation the results of the result about.

<text><text><text><text><text><text>

JANUARY REFLECTIONS.

JANUARY REFLECTIONS. Editor Forest and Stream: It seems perfectly natural, even in the absence of a written law, that the sportsman should have his decided and instinctive feelings as to when the season for hunting should close. He has his unwritten laws, equally as sacred as his duty to observe those of his legislature. How naturally this seems to be the beginning of a new year. The man of busi-ness, who simply makes sport a recreation, feels that the time for his recreation is ended, and that it is better luck to resume his serious labor with the beginning of a new year. time for his recreation is ended, and that it is better luck to resume his serious labor with the beginning of a new year. To have a good conscience, it is advisable that one should consider that his sport is not contravening his legitimate business; for without a good conscience, a peaceful mind and a light heart, sport is not a pleasure, but becomes a sneaking, time-killing occupation. We look upon the man who loves field sports as being a whole-souled, brave and honorable gen-tleman, for it secms that it is these qualities that plunge him into a sport that creates the feeling of boundless freedom and innocent unrestraint which the fields and forests themsclves present. It is difficult, therefore, to see how such a character can do violence to his own humane ideas as to the fitness of seasons.

<text><text><text><text>

tancy dog, but is every inch a business dog. With every point he makes his position is a surprise, one never looks like the other. As the tainted air, at long range, from the bevy meets him, his high point, lithe stride and stealthy step is the warning. When plunging along, you would think wild, and his keen nose detects the single sulking bird, he will fall, spread like a feather. Poor old fellow! When he grows old and erazy and useless, perhaps I'll wish I had seen him fall headlong from the steep cliff, as he roaded the wild pheasant through the low ivy on the mountainside, or had gone under, not to rise again, as he heedlessly plunged into the mad flood to bring me the duck. Then I could have re-membered him as the brawny and brave young hero, instead of the lame and suffering old creature that he may be. Don't you remember how we always wish we could have auother just like our old one? GRAEME. Southwest Virgenza.

THE ADIRONDACK DEER.

THE ADIRONDACK DEER. Exitor Forest and Stream: In the published proceedings of the Board of Supervisors of the county of Essex, assembled at Elizabethtown, I find the following items: "Mr. Powers presented and moved the adoption of the following resolution: Resolved, that our Senator and member of Assembly are hereby instructed to use all legal means to secure the repeal of Chapter 557 of the Laws of 1885, entitled 'An act for the better preservation of wild deer,' etc. A vote being had, it was carried unanimously." I cannot see how the honorable Board of Supervisors could conscientiously place themselves on record in this light, for they must know the consequences of encouraging the breading and using of hounds in a deer park or range like the already. The law these gentlemen wish repealed was passed expressly to preserve the Adirondack deer from extermin-tion, No doubt the supervisors have been influenced by a certain sct of men who call themselves sportsmen; men who go out to have a good time and take things easy; nen who go out to have a good time and take things while they sit on some runway waiting, in the meantime solacing them-selves with the contents of their pipe and bottle. Along comes the frightened deer, fleeing from his worst enemy, the hound, and in passing gets riddled by a handful of shot from and ("scatter-gun," provided the shooter has not indulged to of.

sit on some runway waiting, in the meantime solicing them-selves with the contents of their pipe and bottle. Along comes the frightened deer, deeing from his worst enemy, the hound, and in passing gets riddled by a handful of shot from an old "scatter-grun," provided the shooter has not indulged too often. There is another set of men who call themselves sports-mem-men whose strongest "holt" is the 'tail-hold"-whong of the hounds, grip it by the tail and whack it over the head with a club until it gives up its life. Or, perchance, the oarsman will hold him steady by a grip on the tail while the shooter kills him by atining at his head only a few feed sawy. These men theng or out among civilized people and brag of their provess in deer hunting. They call themselves sports-men. God save the mark! There is one point in regard to hounds and deer that is not sufficiently known, and that is the tcrrible destruction of deer by hounds when running at large. Having lived in the Adirondacks nearly all wy life 1 think 1 am qualified to speak in this matter, and I will give you some facts that have come to my knowledge. Mr. Elijah Simonds, an old trapper and hunter, well known in these parts, and whoese word can-not be impeached, tells me that about forty years ago be hear reports of moose signs near Dirk's Peak, and taking natcher man and a hound with him went in there to investi-gate. On the way the hound slipped away from them a number of times, and he told me he counted screateen deer that he knew his hound killed in the two days theing pro-tat he knew his hound killed in the two days theing pro-tat he knew his hound killed in the two days theing pro-ta Saraac hotel keeper, went into the woods and staid two months, hunting on their own hook. In going up Cold Brook one-half mile he counted nine deer killed by three dogs. One had got into a hole where the dogs could not get at is head or throat and they had cent off its hind parts. It had just life enough to crawl up on the bank as he came along. He afterward caug

A man who was drawing logs in that section told me that while looking out a lumber road he found eleven dead deer killed by dogs on less than two acres of ground. The deer, being unable to resist or run, heing hopelessly mired in the stiff snow, the dogs could butcher them at their leisure.

Samuel Dunning, an old Adirondack guide, tells me it is nothing uncommon for a hound to go into the woods and he gone a month, hunting on his own hook. I once went on a fishing excursion to Moose Lake; went into the woods at Arayville, North Elba, and in traveling through the beautiful woods, six miles or more, I was surprised at seeing no deer signs, and but very few about the lake. On coming out I made some inquiries at the house of Mr. Morbous, a backwoods farmer. I asked if there had been much hunting in that section the last year, and was told, not more than usual. I also asked if there had been any stray hounds around late in the winter, and he said a bound came there in March; used to sleep in his hog-pen nights and went off hunting in the woods daytimes. The snow was three or four feet deep, with a crust that would bear a dog, and he stayed about there two or three weeks. He said. "It was a blanked good looking hound." Just so, it was a "blanked" good-looking hound. Just so, it was a "blanked" good-looking hound. Just so, far and near. He probably stopped when there was no more deer to be slain, and then departed to "fresh fields and pastures new" to carry on his budy of a deer in the water, pleasant to come across the body of a deer in the water, driven in and killed by dogs in March or April. I have seen a doe, heavy with fawn, running before a hound in May, but then, "it was a blanked good-looking hound," as the man in North Elba said. One thing is certain. Every effort to have the deer hound.

a doe, heavy with fawn, running before a houte in study, it then, "it was a blanked good-looking hound," as the man in North Elba said. One thing is certain. Every effort to have the deer hound-ing law repealed, and every vote cast for that purpose is a direct effort and vote for the extermination of the deer in the Adirondacks. This will take place sooner than they think if the law is repealed. Look at Vermont: not a wild deer known to exist, and the Green Mountain region should be a well-stocked deer range, and would be at this day if the domestic wolves, the hounds, had not been allowed to chase, worry and slaughter deer, right and left, until the last one is gone.

Solution of the finding of a number of the Forest AND STREAM of the finding of a number of skeletons of deer sup-posed to have been killed by wolves. Query--Were they not killed by domestic wolves, who knows? Now, it is my belicf, that the only way to preserve the Adirondack wilderness as a well-stocked hunting ground for the people of the State of New York, is for the Legislature to define and locate the boundaries of the deer range of this region, and then pass stringent laws, giving a bounty of fifty dollars for the head of every hound caught or found at any time within these limits, the same to be assessed on the owner of the hound. New RUSSIA, N. Y., Jan. 28.

deliars for the head of every hound "angle or found at any other with these limits, the same to be assessed on the variable of the hound." Barnsmittee Brance. New Ressia, N.Y., Jan. 28.
deliars for View and Stream:
As have been in the habit of hunting deer in the Aditondacks more or less every year for the last forty years, I feel that I have a right to have my say with the rest. A proposal to amend the present game law comes from Boowille and was published in the Utica Morning Herald, Jan. 21, in the form of a memorial to our Legislature recommending opening the season Aug. 1 and closing Oct. 15, and to repeal all restrictions as to the mode of hunting during that time. The list of signers is headed by State Game Agent Brinkerhoff, with twenty-three others, all Fulton Chain botelkeepers, guides or stage proprietors interested in conveying people to and from the woods. The memorial states that the present season has been very destructive to breeders, and that four-fifths of the deer killed of October and the whole of November be cut old, is also a guide, in his report published in the Utica Morning Herald, Jan. 28, with the has kept a record of the deer killed by fouring the saws that kept by him of the pass teven years, and gives a proportion of one buck to ten does, and most of the shouth well work well known Bisby guides, told him they had founded this season some twenty fue or thirty carcasses of the that y rotting near the banks of the Calishegala stilling the saws of the Calishegala stilling the sawn and were never found. Deer killed by dogs of y still-hunting are seldom lost. It this is approved this season some twenty were and in these theight done, and anost other the south Barnson of Moose River. These deer, it fout is season some twenty were and in these monthals the part of the south branch of Moose River. These deer, it fout is season that streagth enough to zet a short dister that any rotting near the banks of the Calishegala stilling the sawn the mare to thow of a fack during the

KANSAS GAME BIRDS.

Editor Forest and Stream:

KANSAS CAME BIRDS. Editor Forest and Stream: I give you a synopsis of a recent communication by the Leavenworth Gun Club, addressed to Senator P. G. Lowe of this place in relation to the destruction of our quail and prairie chickens which are really our only game birds of note. Our Kansas law is sufficiently strong and stringent so far as shooting seasons are concerned, and protects the birds from unseasonable attacks; but no law as yet has been able to prevent the wholesale slaughter of birds in the lawful shooting scason, hence our birds are becoming scarce. In the prairie chicken and quail seasons, birds by the hundreds and thousands are daily offered for sale, and there are many men who make money by slaughtering our birds and send-ing them to our river markets where previous arrangements have been made with dealers to receive them. We submit the following points for legislation: — Tirst—Make it a criminal offense for any person to kill more than 25 quail or prairie chickens, or part of both, in any one day from suntise to sundown. This section puts an carry more than 25 birds in one day. — Second—Make it a criminal offense for any person to offer for sale, barter or trade in Kansas, any prairie chicken or quail killed in Kansas, and join with the seller any person the possession of the year; and the possession of such birds for marketable purposesshall be *prima facie* evidence of any evasion of the law, and the burden of proof must rest with the possessor. This section closes up the avenues of such birds for marketable purposesshall be *prima facie* evidences of the possessor. This section closes up the avenues of such birds for market at a criminal offense for any epress company, railway company, or any common carrier, to receive for supportable. — Third—Make it a criminal offense for any express company, railway company, or any common carrier, to receive for support and transportation at any point in Kansas, any print in Kansas, any

birds profitable. Third—Make it a criminal offense for any express company, railway company, or any common carrier, to receive for shipment and transportation at any point in Kansas, any quail or prairic chicken. The above section does not pre-vent any common carrier from shipping into Kansas any game birds, and the second section would not prevent per-sons from buying birds from outside of Kansas, only they must have the bills, bills of sale, etc., properly authenti-cated that such birds were not killed in Kansas. These look like extreme measures, but it requires ex-tremes to reach a proper mcdium, and a little extreme legis-lation would break up the pot-hunting business, just as President Cleveland's extreme measures are breaking up the cattle ring business. Do you know, Mr. Editor, that during the prairie chicken season, hundreds of men from Missouri and other neighboring States, go on to the prairies of Kansas, and ship in thousands of chickens to the dealers on the Mis-souri River, and even to Chicago? The stopping of trans-portation breaks up that kind of business. Will you please give publication to this as I expect it will bring criticism, and thus help to open the way to such state legislation as shall be uniform, or as nearly so as possible, in protecting our birds from pot-hunters who kill for the money the birds will bring. Tuos, MoonLight, President. LEAVENWORTH, Kansas, Jan. 27, 1856. The third annual election of the Lavenworth Gun Club, Ian A was as follows: Thomas Moonlight President A

The third annual election of the Lavenworth Gun Club, Jan. 4, was as follows: Thomas Moonlight, President; A. O. Girard, Vice-President; Henry Laintz, Secretary; Geo. W. Goff, Treasurer. Board of Managers, W. C. Hinman, Frank C. Patton, Wesley C. Gordon.

MIDWINTER PERILS.

<text><text><text><text><text>

drift. There is one habitation only on Moose River, the cabin of Tom Willer, and this Allison knew, but he did not know how near he was to it. At length, wearied out, he was about to lie down in a snowy grave, when, almost without hope, he shouted for help. There was no answer. It seemed like shouting to the winds. He called again, and there was a faint echo. He was near Tom Willer's. Willer came out on the bank, but the ice between him and the freezing sports-man was thin, and had not two Bangor woodsmen bravely exposed their lives by going out through the thin ice to their necks in water, pushing an old flatboat before them, young

A PETITION

For the Continued Protection of Adirondack Deer.

To the Honorable, the Legislature of the State of New York:

FOREST AND STREAM.

County, respectfully petition that the We, the undersigned, residents of law (Chap. 557, Laws of 1885) which makes it "unlawful to pursue any wild deer in this State with any dog or bitch" may not be amended in any such way as to permit the use of dogs for hunting deer at any time.

Mr. Allison would never have seen New York again. He was kindly cared for at the cabin, and was soon in Bangor, healthy and well, having, thanks to his snow baths, suffered no serious injury from freezing. "Do you see that hat?" he asked, pointing to an old derby on the table. "Well, I wore that hat in camp, and thought it would hardly do to go home to New York in, but I took a notion to bring it along as an old friend. Well, I probably fell into the water fifty times, but every time I clung to the old hat, and once in my despair found myself talking to it, as a madman, and asking it not to desert me."

as a madman, and asking it not to desert me." The Godbout hunter, Napoleon Comeau, whose name is familiar to our readers, had a hard experience last week. A dispatch from Montreal, Jan. 30, reports: In the tempest which prevailed some ten days ago all over the Gulf of St. Lawrence, four hunters of Godbout had a miraculous escape from death, having drifted for some ninety miles during forty hours on a piece of floating ice. Napoleon Comeau, his brother and two of his brothers-in-law, went out from Godbout River in two canoes to hunt seals and dueks. Two of the men were engaged in killing a seal upon a field of ice, when the animal fiercely turned upon them. Napoleon Comeau, who is a telegraph operator at Godbout and one of the best shots and most noted hunters in the country, went to their assistance with his brother. After killing the seal they were drifted so far out into the gulf that they were unable to return. A merciless storm raged around them and soon they were thirty miles from either shore. Three of the men became badly frozen and would have perished but for Napoleon Comeau, They had nothing to eat but two frozen ducks and had frequently to take to their canoes as the ice broke away beneath them. After drifting for ninety miles during forty hours, they managed to land upon the south shore of the gulf, near St. Annes des Monts. Then they were drive to Metis, a distance of fifty-six miles, it being impossible for them at this season of the year to cross the gulf. From Metis they reached Quebec by rail.

A FLORIDA YARN.

A FLORIDA YARN. Editor Forest and Stream: T send you a copy of a letter received by a little boy at the North from a Florida darky with whom he struck up an acquaintance last winter. The letter is dated at Mandarin, Jan. 15, and reads as follows: Harty, you will remembers. I am down here among the aligators—that is, in their home. When I first came down last November I took a hunting excursion down in the swamps. I was out two days and one night. I took a fellow along who is a native, and two old army muskets, and ammunition, and a bag of grub, which consisted of cheese, crackers, cold tongue ond peanuts. We traveled about ten miles. Night came on; then came the tug of war. Nowhere to sleep, no blankets, ten miles out in the woods. We were close by a muddy stream or river. We stacked our guns and hung our grub on the guns. So I climbed up a big live oak tee and got in the crotch for the night. It was pretty warm and I felt comfortable, all things considered, according to the situation. Just before daybreak highd hog after our grub; he had knocked down the guns and was cleaning us out. While so doing up comes an old aligator out of the swamp and tackled the hog, and such squealing that I thought the whole place alige. To void wild cats smelled blood and came on the spot. I tell you, Harry, I felt shaky. I called to the fellow. He had gone to pot the tree. The wildcats, alligator, wild hog fighting like Old Nick below and both of us up the tree, the guns on the ground; what to do I could not tell. I can tell to the odo alligator was boss of the fight. He ate up the ten here the spite of the back align to the in the thought to the me do alligntor was boss of the the here. I do not the ten here mell of blood kard the here here and the the

guns on the ground; what to do 1 could not tell. I can tell one thing, my eyes were as large as moons—at least I thought so The old alligator was boss of the fight. He ate up the hog. The smell of blood kept the infernal old wildcats around till sun up. Finally they left. I came down. The guns and ammuniton scattered over the ground, the grub all gone. I got the fellow down and prepared to leave, but to my surprise, about fifty feet, looking up a tree, was a wildcat licking his chops. I filled the old gun a quarter full of bucksbot, not so much powder, and brought him down. In the meantime I sent the fellow down to the stream to get a bottle of water. He did not see the cat. I was afraid to tell him for fear he would run off and leave me alone in the swamp. So while he was gone, as before stated, I brought the old fellow down, cut off his head, threw it away in the bushes. When the fellow returned I told him I had shot a raceoon; I had him almost skinned. The fellow looked at it with suspicion, as he knew more about a coon than I did. He almost caught me in my little game. He said to me, "Where is the tail? You see, all coons has long talls and wildcats has short tails." "Confound it", I said, "I shot it off." We struck up a fre and broiled that did tomcat for breakfast. I tell you, Harry, he tasted equal to venison. After breakfast we started to look for the old alligator; found him on the bank of the stream asleep or sunning himself. Put two full charges under his flank. He keeled over. We cut him open. We found the hog, one of him, a bulhead and three ducks. I concluded to return home. On our way back, succeeded in bagging two rab-bits, four squirels, one opossum and some small birds, Very well satisfied, but no more all night in the woods for me, ROMERT HAZEL/TON,

ERRATIC BULLET FLIGHTS.

ERRATIC BULLET FLIGHTS. Editor Forest and Stream: Reading in your issue of Jan. 21 of the "Dido of a Spent Bullet," it brought to mind several episodes which have occurred in my own practice. One occurred about forty years ago. From boyhood I was always tinkering with rifles whenever opportunity offered. I made very numerous cxperiments with hunting sights. That which gave best results for all work is well illustrated in the Whitney-Kennedy rifle shown in the advertising columns of FOREST AND STREAM. My front or muzzle sight, which shows white in the engraving referred to, was made of ivory. A gentleman in our neighborhood employed me to mount such a set of sights upon his hunting rifle. I had finished them and loaded the rifle to see if they were properly centered. Our folks had just moved the old house from over the cellar, preparatory to building a new one on the site. Picking up a half-brick of bright red color, I blackened with powder a spot in its center about the size of a twenty-five cent piece and placed it in an indentation of the lumber pile, about thirty yards distant. Stepping down into the old cellar, then half filled, I rested the rifle upon the embankment and fired. In an instant there was a sharp whizz by my left ear and a slight disturbance of my hair, lust over the ear, and at the same time a sharp thud in the old chimney stack a few steps to the rear. In one second my eyes were in that direction, where I saw a little puff of brick and mortar dust rising from a crevice. Stepping to the spot, I found the larger portion of the bullet I had just fired. I twas a narrow escape. Had it gone an inch above it would have damaged my old hat. The hard-wood lumber was simply sawed "through and through" but not "edged," the one-inch boards being left

escape. Had it gone an inch above it would have damaged my old hat. The hard-wood lumber was simply sawed "through and through" but not "edged," the one-inch boards being left full width for roof purposes, to lay shingles upon. The boards were piled in same order as sawed, in what sawyers call "stocks," It was what was termed a three-stock pile. In "sticking up," long, narrow strips bound the piles together. Upon one of these strips, at an indentation of the pile, I placed the brick. I fired at this, striking the upper part of it, cleaving off about one-third of the brickbat and deflect-ing the bullet directly upward, it striking the wane cdge of the board above and giving the bullet a return motion. It next struck the projecting stick above, giving it the direc-tion back again, as I have related. MILTON P. PEIRCE. PHILADELPHIA, P.A., JAL 26.

THE MUTUAL LIFE INSURANCE STATEMENT.—The statement of Mutual Life Insurance Company, published in another column, shows a remarkably prosperous condition of affairs. abont. He wanted more breakfast, for one thing; and the mother wouldn't stand still. She moved on continully; and his weak legs were tangled in the roots of the narrow deer path. Bhordy came a sound that threw the doe into a panic of terror,—a short, sharp yelp, followed by a prolouged how, acaught the and re-echced by other bayings along the mountain side. The doe knew what that meant. One bound had caught the trail, and the whole pack responded to the 'view halloo." The dang-r was certain now; it was near. She bould not erray to in this way; the dogs would soon be upo them. She turned again for flight; the fawn, scrambing fifth with the fawn was impossible. The doe returned and tood by it, head ereet, and noetrils discuded. She stood prefectly still, but trembing. Perhaps she was thinking. The fawn took advantage of the situation, and began to faw his luncheon ratios. The doe seemed to have made up the mained. She let hin finish. The fawn, having taken al to adway, and in a moment was lost in the forest. She went in the direction of the hounds. According to all human calculations, she was going in the strandt, lay down contentedly, and the doe ficked him for a moment. Then, with the swiftness of a bird, she elsh. She kept straight on, hearing the baying every mo-ant until she reached the some open forest of hard wood, it was free going heera, and the or of the pause. He is addid way, and in a moment was lost in the forest. She was fue going heera, and the ory of the pack eached more esonndingly in the great spaces. She was going due east, hee jaws of death. So he was; all human calculations she was fue. He is addid way, and the ground the shard the stream. When she had gone a couple of mice she heard the sound, the lounds were to far off, hough they were still hidden by a ridge) she turned short way to the morth, and kept on at a good pace. In five minutes more she heard the shard not ago do the wood. He was althe conting of the river thor the foudes of in the stream. When she need of the bounds. The doe she mother worldn't stand still. She moved on coutinually; and his weak legs were tangled in the roots of the narrow deer path. Shortly came a sound that threw the doe into a panic of terror,—a short, sharp yelp, followed by a prolonged howl, caught up and re-echoed by other bayings along the mountain is deer that and the whole pack responded to the "view halloo." The dang-r was certain now; it was near. She ould not crawl on in this way; the dogs would soon be upon after her, tumbled over, and bleated pitcously. The baying, emphasized now by the yelp of certainty, came nearer, Flight with the fawn was impossible. The doe returned and stood by it, head erect, and nostrils distended. She stood perfectly still, but trembling Perhaps she was thinking. The fawn took advantage of the situation, and began to a stood by it, head erect, and nostrils distended. She stood perfectly still, but trembling Perhaps she was thinking. The fawn took advantage of the situation, and began to a stood by it, head erect and nostrils distended. She stood perfectly still, but trembling Perhaps the wantig taken all for a moment. Then, with the swiftness of a bird, she asked away, and in a moment was lost in the forest. She canding to all human calculations, she was going into the jaws of death. So she was; all human calculations are fished. She kept straight on, hearing the baying every mo-ment more distinctly. She descended the slope of the mou-tain until she reached the more open forest of hard wood, it was freer going here, and the cry of the pack echoed more resonningly in the great spaces. She was going into the short he north, and kept on at a good pace. In five way to the north, and kept on at a good pace. In five mustes more she heard the sharp, exuitant yelp of dis-ponies had struck her trail where she turned, and the fawn way to the north, and kept on at a good pace. In five mustes more she heard the sharp, exuitant yelp of dis-ponies had struck her trail where she turned, and the fawn way to the north, and kept on at a good p

POREST AND STREAM. not bad, and she felt the exhilaration of the chase. For the moment fear left her, and she bounded on with the exalta-tion of triumph. For a querter of an hour she went on at a slapping pace, clearing the moose bushes with bound after bound, flying over the fallen logs, pausing neither for brook nor ravine. The baying of the hounds grew fainter behind her. But she struck a bad piece of going, a deadwood slash. It was marvellous to see her skiin over it, leaping among its intricacies, and not breaking her sleader legs. No other living animal could do it. But it was killing work. She began to pant fearfully; she lost ground. The baying of the hounds was nearer. She climbed the hard-wood bill at a slower gait; but, once on more level, free ground, her breath came back to ker, and she stretched away with new courage, and may be a sort of contempt of her heavy pursues. — After running at high speed perhaps half a mile further, it west, and, by a wide circuit, seek her fawn. But, at the moment, she heard a sound that chilled her heart. It was the dry of a hound to the west of her. The crafty brute had made the circuit of the slash, and cut off her retreat. There was nothing to do but to keep or; and on she wet, still to the north, with the noise of the pack behind her. In five minutes more she had passed into a hill-ide clearing. Owns and young steers were grazing there. She heard a tinkle of bells. Below her, down the mountain slope, were other clearings, broken by pitches of woods, Fences intervenced; and a mile or two to a merciful heart in all that lovely valley. She hesitated; it woods, stipped. What was that? From the val-swet only for an instant. She must cross the Slide Brook Valley if possible, and gain the mountain to the cluster of it wooden spire. The doe did not know that it was the spire wooden spire. The doe did not know that it was the spire wooden spire. The doe did not know that it was the spire wooden spire. The doe did not know that it was t of the hounds. "The hounds are baying on my track; "The hounds are baying on my track?"

of the hounds. "The hounds are baying on my track; O white man! will you send me back?" In a panic, frightened animals will always flee to human-kind from the danger of more savage foes. They always make a mistake in doing so. Perhaps the trait is the survival of an era of peace on earth; perhaps it is a prophecy of the golden age of the future. The business of this age is murder: —the slaughter of animals, the slaughter of fellow-men, by the wholesale. Hilumous poets who have never fired a gun write hunting songs,—*Ti-ra-la*: and good bishops write war songs:—*Ave the Caer!* The hunted doe went down the "open," clearing the fences splendidly, flying along the stony path. It was a beautiful sight. But consider what a shot it was! If the deer, now, could only have been caught! No doubt there were tender-hearted people in the valley who would have spared her life, shut her up in a stable, and peticd her. Was there one who would have let her go back to her waiting fawn? It is the business of civilization to tame or kill. The doe went on. She left the saw-mill on John's Brook to her right; she turned inte a wood path. As she ap-proached Slide Brook, she saw a boy standing by a tree with a raised rifle. The dogs were not in sight; but she could hear them coming down the bill. There was no time for hesitation. With a tremendous burst of speed she cleared the stream, and, as she touched the bank, heard the "ping" of a rifle-bullet in the air above her. The cruel sound gave wings to the poor thing. In a moment more she was in the opening; she leaped into the travelled road. Which way? Below her in the wood was a load of hay; a man and a boy, with pitchforks in their hands, were running towards her. She turned south, and flew along the street. The town was up. Women and children ran to the doo. s and windows; men suatched their rifles; shots were fired; at the big board-ing bouses the summer boarders, who never had anything to do, came out and cheered; a camp-stool was thrown from

west, crossed the stam again, left Panther Gorge on her right, and ran on by Haystack and Skylight in the direction of the Upper Ausable Pond. I do not know her exact course through this maze of mountains, swamps, ravines, and frightful wildernesses. I only know that the poor thing worked her way along painfully, with sinking heart and unsteady limbs, lying down "dead beat" at intervals, and then spurred on by the cry of the remorscless dogs, until, late in the afternoon, she staggered down the shoulder of Bartlett, and stood upon the shore of the lake. If she could put that piece of water between her and her pursuers, she would be safe. 'Had she strength to swim it?' At her first step into the water she saw a sight that sent her back with a bound. There was a boat mid-lake; two men were in it. One was rowing, the other had a gun in his hand. They were looking towards her: they had seen ber. (She did not know that they had heard the baying of hounds on the mountains, and had been lying in wait for her an hour.) What should she do? The hounds were drawing near. No escape that way, even if she could still run. With only a moment's hesitation she plunged into the lake, and struck obliquely across. Her tired legs could not propel the tired body rapidly. She saw the boat headed for her. She turned toward the center of the lake. The boat splash of the water just ahead of her, followed by a roar round the lake, the words "Confound it all" and a rattle of the oars again. The doe saw the boat nearing her. She turned irresolutely to the shore whence she came : the dogs were lapping the water, and howling there. She turned again to the center of the lake. The brave, pretty creature was quite exhausted now. In a moment more, with a rush of water, the boat was on her, and the man at the oars had leaned over and caught her by the tail. "'Knock her on the head with that paddle!' he shouted to

and the man at the oars had leaned over and caught her by the tail,
"Knock her on the head with that paddle!" he shouted to the geuleman in the stern.
The geuleman was a gentleman, with a kind, smoothshaven facc, and might have been a minister of some sort of everlasting gospel. He took the paddle in his hund Just then the doe turned her head, and looked at him with her great, appealing eyes.
"I can't do itI my soul, I can't do it!" and he dropped the paddle. "Oh, let her go!"
"Let H. go!" was the only response of the guide as he slung the deer round, whipped out his hunting-knife and made a pass that severed her jagular, And the gentleman at that night of the venison.

The buck returned about the middle of the afternoou. The fawn was bleating pitcously, hungry and lonesome. The buck was surprised. He looked about in the forest He took a circuit, and came back. His doe was nowhere to be seen. He looked down at the fawn in a helpless sort of wav. The fawn appeared for his snpper. The buck had nothing whatever to give his child, _nothing but his sym-pathy. If he said anything, this is what he said: "I'm the head of this family; but, really, this is a novel case. I've nothing whatever for you. I don't know what to do. I've the feelings of a father; but you can't live on them. Let us travel."

The buck walked away: the little one toddled after him. They disappeared in the forest.

The buck walked away: the fittle one toddled after hin. They disappeared in the forest. POINT OF BEACH.—New Year Day was so pleasant and warm, that a few of us thought that if Saturday was as pleasant we would make one more trip to the mill. Friday night found us cleaning guns and loading shells prepanatory to an early start Saturday. Early Saturday morning the horses were hitched up and T., Joe Miller and the writer were aboard the surrey. bound for the mill. We were driving up Nostrand avenue (Brooklyn). Miller's dog, a superb pointer, tried to get into the surrey when it was in moton, only suc-ceeding in getting his hind toe run over by the rear whel. Duke, we thought, was not hurt much and so we wouldn't take him in the wagon. He, however, thought otherwise, and jumped on to a car that was going our way, stepped inside and seated finself on the cushion, looking out of the win-dow toward us. When we reached the car stables he changed cars and got into the little one-horse concern that turns toward the park and showed such a desire to rule that Miller had to get ont and haul him out of the car. We carried him the rest of the way. My little cocker spaniel ran all the seven miles and scemed to enj-yi i. When we reached the mill we got the little 14 by 4 skiff and dropped down the creek for the end of Barren Island, called Point of Beach. Some time since one of your correspondents wrote quite a long article about the bad smells of this place. Now I have been down at all times of the year and never experienced such ill effects as he mentions; and at the same time I have shot lots of bay birds, and in the fall a good many black sea-ducks and English sipe. Arrived at the beach, we walk up near the water, around the island nearly, Miller getting a couple of butterball ducks. We saw no songe of any kind, though the season had been so very mild. There were quan-tifies of gulls, crows and helldivers, and some old sportsmen whom we met said that some geese and braut had poen bot the channel and offered to row any on

THE HOUNDERS' CONFESSION.—The deer hounder rings the changes on the destructiveness of jacking, except when he forgets himself and inadvertently shows what he really thinks. Thus the editor of the Booaville Herald, who is a rabid advocate of the hound and club, commenting on Mr. White's bill to allow jacking in August, and hounding not until after Aug. 15, "gives himself away" by saying: "This bill is not what is wanted by the true sportsmen. It does not allow the use of dogs in August, at which time the greater number of tourists are in the woods, and in order to get a deer they will have to float night after night for it or go without. The deer of the voods are for the sportsmen who go to the forests for rest and recreation, and dogs should be allowed to run as much in August as S-ptember." "Float night after night for it." That is to say, jacking is harder work and a less certain method than hounding. Is that not a fair inference from the words?

SAGADAHOC ASSOCIATION.—Bath, Me.—This association elected the following officers for the ensuing year: Presi-dent, Dr. Charles A. Paekard, Bath; Vice-Presidents, A. Q. Goud. Topsham, James H. Millay, Bodowinham, Ex-centive Committe, S. W. Carr, Bowdoinham; A. Q. Goud, Topsham, G. H. Nichols, A. Hatch, Bath; A. S. Alexander, Richmond. Secretary and Treasurer, Geo. E. Newman, Bath. A committee of three were appointed to consider the best method of prosecuting violators of the game laws, and an offer of a reward of \$10 was voted for proof sufficient to on a fourishing condition, and much good has been done here during the few years of its existence. Sewall's Pond, in Arrowsic, Campbell's Pond, West Bath, and Nequasset bimited extent, and the latter being thought particularly welk whited for the purpose, it is proposed to deposit there early best method of presenses connected therewith freely out of hard in their experiment with the Messina qual, and in socking the waters in the vicinity with trout and black bass, and prove the senses of the song and insectivous birth and be abeter state of public sentiment in regard the game of our forests, and the song and insectivous birth song hirds for mere sport, or kill our partidges and the time is not far distant when these laws will be re-biented the time is not far distant when these laws will be re-biented by all, and when it is hall be considered not only beautiful song hirds for mere sport, or kill our partidges

MIGHIGAN NOTES.—If the deer in northern Michigan don't become extinct in a very few years, it will be something wonderful to relate. During the year 1855, 1,130 carcasses were shipped from Alpena alone.—William McKeeson and Lewis Ingersoll were bunting deer (out of season) in Pioneer township, Missaukee county, near Lake City, when Ingersoll shot and kill(cd McKeeson, nistaking him for a deer.—H. H. Warner, of Rochester, N. Y., who owns Mai-on Island in Saginaw Bay, intends to have Congress pass a bill, if possible, giving him the marshy portion between the island and the main shore, on the ground that it is part of the island and a recent accretion. While this property would seem to be of no great importance to any one, even to Mr. Warner, it is in reality a valuable territory. It comprises the Wild Fowl Bay hunting ground, and therefore is valua-ble to the sportsmen of this section of Michigan. At the last Congress a similar bill was offered, and by the strenuous opposition of the Lansing Gun Club, was defeated. It now behooves sportsmen to use their utmost exertions to oppose the bill if they desire to hold possession of the property. If it passes into the hands of Mr. Warner he can arbitrarily prevent any one frem shooting on this ground, thus reserving it for his own use. As Wild Fowl is the principle ducking ground on Sagnaw Bay, the sportsmen who annually visit it will readily understand the importance of bringing their influence to bear in opposition to the Warner bill. MICHIGAN NOTES .--- If the deer in northern Michigan don't

GAME BILLS INTRODUCED AT ALBANY are as follows: (1) Mr. Huntling's, to protect deer, European hares, gray part-ridges and English pheasants on Long Island for five years. (2) Mr. Parker's, to prohibit jacking deer. (3) Mr. Barnes's, to make open season for deer Aug. 1 to Nov. 15; allows hounding Aug. 15 to Nov. 1; forbidis jacking at any time; limits transportation of venison to two carcasses accompaned by owner, and legalizes shooting dogs when in violation of the law. (4) Mr. Pieree's, repealing the deer hounding law. (5) Mr. Wemple's, permitting deer hounding in Fulton and Hamilton counties during September and October. (6) Mr. White's, permitting floating from Aug. 15 to Oct. 15; hound-ing from Sept. 15 to Oct. 15; sale of venison Aug. 15 to Nov. 15, (7) Mr. Peart's, to forbid woodcock shooting be-tween Jan. 1 and Sept. 1.

Foxes ARE UNUSUALLY NUMEROUS in the neighborhood of Morsston, Sullivan county, N, Y.—or at least they are bolder than ever in depredations on the poultry. The local hunters and trappers have had great sport hunting foxes, and there is searcely a barn in the region that has not at least one fox pelt nailed to its door. The extraordinary number of foxes in the county and their unusually bold manner of operating can be explained in no other way than by the theory that the wild animals and birds on which they depend for food—rabbits, partridges and other small game— are for some reason not to be found in their usual haunts, thus forcing the fox to resort to heroie taeties to obtain necessary provender.

FORT BOWIE. Arizona. Jan. 21.—Q'Iail are very plentiful, so are cotton tail and juck rabbits. Deer are getting scareer every year, although I have killed two in the mountains just back of the ranch within the past three weeks, going out and getting back the same day. There are plenty of ante-lope in the valleys. Now and then a bear is killed in the mountains. Blacktail deer are searcer than the whitetail; oecasionally a small band comes in here in the winter time. In some localities within a few miles of here good deer hunt-ing can be had. There are some turkeys on the summits of the mountains. Antelope hunting is the most exciting sport I know of.—J. C. H.

HIGHLAND PARK, Ill.—What little cover we have left is pretty well beaten over by hunters who come up from Chicago and elsewhere. When I first came up bere to live, in 1869, there was fair shooting just on the outskirts of the village; but the growing timber has been eut down, hard winters have killed the quail, and too much shooting has done the rest.—HARKY HUNTER.

TEXAS —El Paso, Jan. 23.—I admire your position toward non-hounding deer laws, the rigid enforcement of game pro-tective laws, etc. There is no protective law in El Paso county, and the evil is being felt already. Our Legislature does not meet until next January, so there is no relief until then, when our gun club hope to bring this county in.—R.

MAINE MOOSE — Two of the Kineo guides at Moosehead Lake recently shot a pair of moose within three miles of the hotel. Leaving the carcasses in the woods and returning the following day to bring the meat home, they encountered on the way and shot another of the monarchs of the forest. All were of very large size.

581.

The contrasting black neek of the sight gives the sportsman a clear white bead, which can be seen distinctly against any object, in the woods or in bright sunlight. The contrasting black neek of the sight makes the bead all the more prominent. The construction is strong and the sight durable. It has been tested and is highly endursed by the best known rife shots. Mr. Otto Wilkfes, of Kent. Ohio, well known as a splendid wing shot, who uses the Lyman rear sight for all his smooting, saws of this front sight: "I am of the option that this front sight is about as perfect as it is possible to bullets in a way that would surprise some of our older and more experienced rife shots. In my wng shooting it shows up so plan and distinct, that it is quite an eavy maiter for me to int glass balls thrown up at from 25 to 50yds, which is as you know, a milch more difficult feat than at 161t, which is the distance some of our cham pion wing shots shots. "--...du.

WATTRPROOF CARTRIDGES.—Windsor, Conn., Jan. 23.—U. S. Cart-ridge Co., Lowell, Ma-s.—Gentlemen—Thinking it might be of much interest to you, we take pleasure in informing you of the success which your mrst quality waterproof shells have achieved. During the past two weeks the U. S. Goverannent have been testing in every manner possible, one of our shotguns, which has resulted in the gun accomplishing all it was asked to do, with no fallure in anything. During the test your shells, among others, were used, and the Board of Officers, who had charge of the trial soaked in water for forty-eight hours some of your first quality waterproof shells (paper) and at the expiration of that time, these shells were put hitto the magazine of our gun and were manipulated through the gun and fired without a catch or failure.—Truly yours, SPENDER ARMS CO.—Adv.

Sea and Biver Hishing.

FLY-FISHING FOR SUCKERS.

A PARTY of us were in camp on our favorite ground at M. Pond, in the latter part of August, 1885, for a week's fly fishing for trout. The fish had been rising quite freely night and morning for the first three days, and I had taken from twenty to thirty in perhaps three hours' fishing each day. But now, for some reason known only to them-selves, they had stopped rising, and after a morning's fishing with only two trout to show for it, we began to talk of try-ing another pond.

selves, they had stopped rising, and after a morning's fishing with only two trout to show for it, we began to talk of try-ing another pond. During an excursion to this region in 1883, in passing along the shores of a pond about one and a half miles to the east-ward. I had seen fish rising; in fact, the pond seemed fairly alive with them, and they appeared to be of large size. I had fished it several times with indifferent success, but as it was quite a distance from where I was camping I had never cast a fly on its waters after sunset. So now we con-cluded to try it under different conditions, for I was certain that it contained an abundance of trout. Taking supplies for two meals, our rods and landing net, we started at about 4 o'clock for the pond. Following an old tote road, partly overgrown with bushes, in about an hour we came to Long Pond. This contains twenty-five or thirty acres, is oval in shape and twelve or fifteen feet deep, and is situated on a divide between two mountains, being fed entirely by springs. It was a clear day, and the surface of the pond, unbroken by a ripple, mirrored the mountains, with all their rugged outlines, on either side. A pair of hawks wheeling in eircles overhead, a pileated woodpecker calling to its mate on the opposite mountain side, and once in a while a flyeatcher, leaving its perch on some limb overhanging the water, would secop up a fly from the surface before it had time to dry its wings and fly away, were all the signs of life to be seen. An old raft was anchored at the slow near by, but from its appearance httle fishing had been done here this season. "If trout were very plenty here," said Jim, "I should not suppose the flycatchers would be allowed to have all the fun." "Wait till sunset and perhaps there will be a change in

"If trout were very plenty here," said Jim, "I should not suppose the flycatchers would be allowed to have all the fun." "Wait till sunset and perhaps there will be a change in the programme," said I. "But meanwhile I will try what virtue there is in an angleworm." So putting together our rods we pushed the raft out a few rods from shore and began still-fishing with worms. Once in a while a fly would come to the surface of the water, cast its skin like a mos-quito, and float on the surface until its wings were dry enough to use, when it would rise in the air only to be got-bled up oy the nearest flycatcher, as though it had been hatched for his especial eating. Do all fishermen know that the flies that trout like the best come from the water like mosquitoes? In the best natural trout ponds you will find their east-off coats floating in great numbers, and in some of the larger varieties of flies nearly an inch and a half in length. I was watching a fly fluttering along the surface of the water trying to rise into the air before its wings were fairly dry, when it was sud-denly taken by a trout that I judged would weign at least a pound, and making a splash that fairly made us jump, and might have been heard twenty rods. "Earefully moving the raft within easting distance I cast the bait across the wake, and letting it sink below the sur-face it is quickly taken, and with a few minutes' play I have him in the net. "A pound and a half?" "No, pound and a quarter," said I. Just then another rise at the opposite side of the pond, and as the sun sank behind the mountain tops, leaving the pond in the shade, it became fairly alive with fish, all apparently of large size. After catching two more with bait I take off the bait hook and put on a couple of flies, and making a short cast aeross a big swirl wi.him fifteen feet of the raft, a big one took the tail fly nearly as soon as it touched the water. Turning him as he started, bringing the dropper perhaps three inches from the surface, it was taken by an-other fish; t

bend almost double when they would both start in the same

THE STRIPED BASS LAW.

THE STRIPED BASS LAW. Editor Forest and Stream: In your issue of Jan. 28 you advocate, under the caption "The Striped Bass Law," the revision and modification of the present law in regard to the close season on striped bass (Jan. 1 to May 19). It seems very strange to us that you (who, of course, know, that the close season now named in the law, barely covers the period during which the striped bass are running up the Hudson, spawning and returning to salt water) should seriously lend your influence in the direction of the extermination of our great game and food salt-water fish. Any of our old Hudson River anglers can remember when splendid takes of bass were made up the river, especially at and near Sing Sing. And every one knows that the fishing through the ice and netting in the early spring has about destroyed any hope of ever getting any more bass up the river, and made the fishing for them miserable in our bays. There is just a chance lets in the main-taining of the present law. The fish mongers may say that the bass sold in our markets come mainly from the South. So the gume butchers say the qual sold here come chiefly from the West. But this is no reason why—for the sake of their making a few dollars just now—our game fish and birds should be storminated. MEW YORK, Feb 1.

New YORE, Feb 1. [The fact is that the season named does not cover the whole New York, Feb 1. The fact is that the season named does not cover the whole season of the striped bass in the Hudson, for small ones are found spawning occasionally until the middle of June. No one knows where the large bass spawn within the limits of the State of New York; if any one does know the locality then that person has kept the secret well, for our fishcultur-ists and fish commissioners have sought this information in value. On two or three occasions a small striped bass has been found with ripe eggs, in the month of June, or late in May, as high up as Catskill or Castleton, by the men em-ployed in the shad hatching for the State, and a few eggs have been hatched. The large bass of thirty pounds and up-ward often go up the Hudson and winter under the ice in the vieinity of Tarrytown and here they are caught by nets set or hauled under the ice. They do not go far up theriver and leave it early in spring. They are found in salt water about Montauk Point, the eastern end of Long Island, in April and May, full of eggs, but seldom with ripe ones. It may be fairly questioned whether they spawn here or not as a rule. The only spawning grounds of striped bass that have been found are in North Carolina. We have advo-cated the repeal of the bill because outside of the fish taken under the ice in the Hudson and an occasional one along the coast of Long and Staten Islands, there are no bass taken in the State, the most of them coming from the South, and it has not been shown that their capture in Southern waters has threatened the supply of this valuable food fish. It has seemed best to repeal the law before passing another one on the same subject, and if this were done in the present case we could then join Messrs. Abbey & Inhorie in ad-vocating the passage of one which prohibits the netting of striped bass under the ice in the Hudson.]

COOKING A TROUT IN CAMP.

<text><text><text>

upon and ruined his pitcher-plants, and we were thereby saved a lecture on the family Surracenta, for which Jack aucibly cypressed the thanks which the rest of the party relt.
A noisy kingfisher flew up and wound up his reel on a hin, disappointed at the result of its last dive, and a shout from the Doctor proclaimed that he had a strike. After a long, quiet reeling in, the fish made a fair struggle for freedom which ben the short, stour rod and caused the Doctor proclaimed that he had a strike. After a long, quiet reeling in, the fish made a fair struggle for freedom which bent the short, stour rod and caused the Doctor form e anxiety lest the line should pass under the boat and get for a general difference or a splendid five-pounder was lid be for us. The kingfisher also saw it, and chirred his disapprobation of the invasion of bis formation at the capture of a his greater than he could master. "Now," said the Doctor, exultingly, "we'll have the fish for supper and save the ham and canned goods for some other time, perhaps when we can't do better." He looked around definally, as if challenging opposition, his face still suffused with a flush of victory, by finding none he subsided, and his smile it up the cedars and the rocky shores of the island and was reflected by the white birch at the landing, and then audibly picked up in a weight manner by a solitary loon whose. "In ha", as he dove startled the kingfisher into agin winding up his reel as the Colonel and the Doctor sator a log by the open front of the only he weight he had struck a yearling trout. A few minutes later the Colonel and the Doctor set on a log by the open front of the inside arrangements are shrivelled up to not ing. The fish is cooked in its own juices, and is not dried up. "And he smacked his lips at the thought. But I had so the dover it and the chick carrangements are shrivelled up to not ing. The fish is cooked in its own juices, and is not dried up. "And he smacked his lips at the thought. But I had son the size of this onew

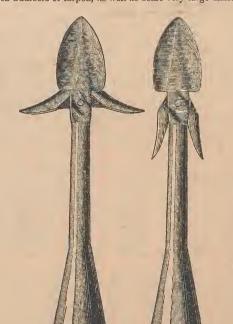

Romans—" "Hang the old Romans," said Jack, "how do you know whether they ever slept out over night or not, and a man who never did knows nothing of camp-cookery. What did a Roman cook know of Lake Mergauser and a trout cooked over birch twigs? Not more than a French *chef.*" They appealed to me, and I intimated that if there was plenty of it and it was ready that moment I could eat it with salt, ashes, or sand, either on the outside or on the back-bone. I spread a blanket on the boughs and stretched full length on it. The sun was nearly down, and a wood-thrush poured forth its short, sweet notes in the thicket, the crickets

chirped below the bed of balsams, and the bacon sizzled. The Doctor and Jack went for some light-wood to make a cheerful fire, and the Colonel fussed around muttering some-thing about salt, and then went to the spring for water. Jack came in, threw down his wood, and asked if there was any pepper in camp. I told him there was, and he went hunting for it. Presently the other two came in, and after a glance at the fish the Doctor pronounced it done, took it from the fire; opened the salt-box and sprinkled the fish lightly, saying: "You'll say that this beats the world." "What have you been doing with the salt-box?" asked the Colonel. "Salting the fish, to be sure," was the reply. "I salted it while you went for wood," said the Colonel, "and put on plenty, too." "So did I," said Jack; "I salted it and peppered it well. Guess we've got it salt enough." "Well," sighed the Doctor, "you've got it to eat, or no supper. There is one good thing—the spring is handy; but the next time I cook a trout I want you to let it alone." An early-rising owl asked "Who, who?" and the Doctor looked up but answered not. The last rays of the fast-declining sun illumined the clouds until their tink rivalled the Doctor's face. His good_nature got the better of his disappointment, and anxiously watched, as only hungry campers could, the slow process of dividing the fish. I tasted, and rested. The Colonel tasted, and looked at me. We in turn looked at Jack, who had a large piece on his fork which his open mouth would soon engulf. He bit it, jumped, and ran to the spring. By this time the Doctor was ready to sample his. One taste, and he knocked the bread into the fire as he rose, say-ing: "I expected any quantity of salt, but—" Here a coughing-fit seized him and he stopped. "Jack," called the Colonel, "what did you put on his fish." "Nothing but salt and pepper," answered he. "Where did you we get the nemper?"

"Jack," called the Coloner, what the year fish?" "Nothing but salt and pepper," answered he. "Where did you get the pepper?" "Out of the brown paper by your tackle-box." "Good grief! The .Scotch snuff I brought up to give Uncle Ben to kill fleas on his dog?" The pink rays of the dying sun set the kingfisher out in bold relief as he chattered furiously, and a loon on the op-posite shore laughed a scornful, jeering laugh. An audible silence hung like a pall over the camp for half a minute. "If there was a gun in camp I'd kill that loon in the morn-ing," remarked the Doctor, and each sat awhile wrapt in thought, contemplating the beauties of nature. "FRED MATHER.

HARPOON FOR BIG FISH.

THE diagrams shown below are drawn from a pattern from which a number of steel heads have been manu factured for use in Florida. This harpoon with movable ears was invented, we believe, by a Massachusetts gentle-man, Mr. W. R. Tompkins, who spends a considerable part of each winter in Southern waters. His account of the capture of a devil fish with one of these weapons appeared a short time ago in FOREST AND STREAM. With the same weapon he has taken numbers of tarpon, as well as some very large sharks.

The harpoon head requires little explanation, for the draw-ing tells the whole story. Into the socket the staff fits, but it is not attached to it. The line is looped about the slender part of the shuft of the head and the swell of the socket keeps it from slipping off. The ears are, as can be seen, movable. When the harpoon is thrown they lie close to the shaft. After it has entered the fish, and as the pull comes on it, the ears are thrown out and it is impossible for the head to draw out. The cutting edge is very keen and should be kept so, and the weapon kept free from rust. One of those shown us by Mr. Tompkins was nickel-plated.

OFF FOR FLORIDA.—On Saturday last a very jolly fishing party from Syracuse, N. Y., left by steamer Saratoga for Havana and from there to Key West and Florida. They are all sportsmen and trout fishers who find that the Adirondack whiter is too long and does not promise them any sport before the middle of May. The party consisted of the Hon. James Geddes, R. W. Jones, Dr. O. C. Potter, F. B. Klock, Burnet Forbes, Jacob Krouss, John Moore and John Blanch-ard. We personally know most of them and truly believe that no jollier party of anglers ever cut bait. They are mostly fly-fishers, and will try their lures on the salt water inhabitants before they tempt the alligator with a brown hackle. We hope to hear from them.

TO CARRY A LANDING NET.

Editor Forest and Stream: Having lost two or tree nets when wading, the necessity of a fastening which is secure and at the same time from which the net may be casily disengaged, resulted in the method described as follows: To the pin of a large "shield pin," such as is used for horse blankets, solder a pin of about half the length of, and bent so that it will be about §in. from and parallel with, the first. Put this near the collar in the back of any coat worn when fishing, and it will stand out from it, being so held by the second pin.

first. Put this near the collar in the back of any coat worn when fishing, and it will stand out from it, being so held by the second pin. To the handle of the net fasten, either by screws, rivets or lashing with fine fishing line, a strip of German silver or spring brass $\frac{1}{2}$ inches to project beyond the end of the net handle; bend this piece of metal into a hook, beginning about $\frac{3}{2}$ of an inch from the end of the handle; bend it over on the side of the handle opposite from that where it is fastened. Take hold of the net anywhere and its hook may be caught on the loop made by the pin in the back of the coat. By hooking it with an upward motion and by then giving the net a toss back it will there remain until it be lifted up and unhooked by pushing it down. This may appear a very complicated operation at first, but if once tried it will prove the contrary, and there will be no nets lost in the future. Another advantage of the arrangement is that by the hook the net may behung on the creel strap, in the opening of a pocket, or a buttonhole of the coat, without being obliged to hold the net in any particular place to so fasten it, which is sometimes guite a convenience when unhooking a fish, after which it may be hung again on its loop behind. C. G. LEVISON. BROOKLYN, Feb. 1.

BROOKLYN, Feb. 1. [The model of this has been left at our office by Mr. Levison, where it can be seen for the next month.]

The model of this has been left at our office by Mr. Levison, where it can be seen for the next month.] A CURIOUS SALMON CAPTURE.—Albany, N. Y.—Editor Forest and Stream: Last summer, while on a trip on the Upsalquitch River, which is a branch of the Restigouche, I had with me only a trout rod and some trout files, and becoming very tired of salt pork and beans, I determined to try for one of the many salmon which sported themselves every cvening in the large pool (Fork's Pool) in front of my camp, even at the risk of my last tip. I cutered the canoe at just about sundown, and paddled to a place where I had seen about an eight-pound salmon rise. The very minute the fly touched the water the salmon rose and took it, and such jumps as he made could only be equaled by a cir-cus aerobat, but when he got through jumping I commenced to reel in, and the fish came in just like a log of wood, which is not the way that salmon usually come. When I had him in close to land, I saw that he was coming in tail foremost-and acted as if he were almost dead. I then laid the rod down on the shore and took the line in my fingers and pulled it in very slowly. Now, as I had no gaff, I was in a rather bad position, and I determined to try and catch him by the tail and yank him on shore. I tried this once, and just as I got my fingers on his tail he gave a swoop with it and covered me with water, and ran out about ten feet and then stopped. I repeated this operation four times, and with the same result each time, till at last the fish "bellied up." and then I knew he was mine; so the next time I took the line in my teeth, my right hand took him by the tail, and with my left on his side I succeeded in scooping him ashore, where I immediately jumped on him with both knees, and killed him with a stone. As soon as he was entirely dead I got off and examined him, and found that in his first jumps he had tied two half hitches around and made one around the small part of the tail, and the reason he gave in so quick was that his gills and mon

and Upsalquitch rivers, who will prove it.—PETE. TIP-UP FOR PICKEREL.—Editor Forest and Stream: In your last issue "Limber Jim" tells of using the jumping jacks of the toy shops to signal when a fish takes hold while fishing through the ice. All the toys of this kind that I have seen appear too frail for this use, and a fish of three pounds would, in my opinion, smash one every time. No doubt these "jacks" could be made strong enough for this purpose if one made them himself, but it would be something of a task to make a lot of them, for one man often cuts as many as fifty holes, if the ice is not too thick, and puts a line in each hole. Years ago I did some of this kind of fishing, and then thought it sport, and this is the way we boys used to improvise "tip ups." We laid a round stick across the ohele, fiat on the ice, and then cut a slick with a crotch in it, one limb of the crotch about six or eight inches long and the other a foot in length. To this longer one the line was at-tached and the crotch was put over the round stick, the long but laying out on the ice with a dark rag tied to it. When a pickerel took hold the flag went up, the crotched twig standing upright. Several kinds of tip-ups may now be bought in the tackle stores, more or less ingenious and ef-fective. I should like to see "Limber Jim's" face when a big fish smashed his toy jumping-jack, and hear him whisper softy to the west wind his blessings on the man who put a frail tow-string inside it, or hung the legs on a frail sliver of pine.—PORE-O.MONSHIKE. [We alsue several communica-tions on this subjeet which are unavoidably crowded out this week.] MENHADEN FISHERIES BILL.—Washington, Jan. 25.—The

MENHADEN FISHERIES BILL. — Washington, Jan. 25.—The Senate Committee on Fisheries this morning agreed to report favorably Senator Sewell's bill for the protection of fisheries on the Atlantic coast. The bill in its present form prohibits fishing for menhaden and other oil and fertilizer and pro-ducing fish within three miles of the coast, under penalty of forfeiture of the fishing outfits. It does not apply to the use of nets having meshes of nine inches or more.

STRIPED BASS.—A large striped bass (Roccus lineatus) was caught off Fire Island last Monday. It weighed fifty-five pounds and was displayed at Mr. Blackford's in Fulton Market. This is the largest fish of this kind we have knowl-edge of this season.

PROVIDENCE, R. I.—With two friends I went to Kingston one day last October and found perch, pickerel, bass and trout fishing there. We stopped at the Knowles House.— BASU.

DESTRUCTION OF FISH IN LAKE ERIE.—Erie, Pa., Jan. 26. —*Biltor Forest and Stream:* The fishermen here ran their steam fishing tugs up to Dec. 20, with large catches. The bay is frozen to a depth of about ten inches, and fishing through the ice for perch is in order, and good catches of large fish are made daily. The State hatching house is finished here and I believe is in operation; what for I cannot tell, surely not to stock these waters. All laws as far as the lake is concerned were repealed last summer and pound-nets are all along the shore wherever a stake can be driven, scoop-ing in any and everything. Men who have boats to hire catch bait with seines from forty to one hundred feet in length and scoop up all the young whitefish fry; fyke nets have captured of faking sixteen or twenty black bass on an afternoon's fishing, as my fishing chum and I used to, we trid eight or mne afternoons during the past season and only got one between us, and that not over three pounds. It is a shame that a few hogs, for the sake of dollars, should rain the sport of thousands. We cannot even buy them at a reasonable price, for they freeze and ship them, or hold for higher prices. The amount of fish taken at this port the price tons daily. The men who own the boats will not give correct figures and the truth will not be known; but from ten to thirteen steamers and about thirty sailing craft are onesh in their nets are telling the take. It is only a matter of time, short time too, when hawks and eagles will have to employed every scason with constantly diminishing size of mesh in their nets are telling the take. His only a matter of time, short time too, when hawks and eagles will have to employed every scason with constantly diminishing size of mesh in their nets are telling the take. His only a matter of time, short time too, men hawks and eagles will have to employed every scason with constantly diminishing size of mesh in their nets are telling the take. His only a matter of time, short

emigrate or starve.—HEADLIGHT. WILLMANTIC, Conn., Jan. 28.—P. W. Turner, of Turnerville, owns the lands surrounding North Pond, and has always claimed that he had a right to do as he liked with the pond, under a law which makes private any pond that is surrounded by land that is owned by one person. But in 1875 the people of Hebron had a law passed exempting Mr. Turner's pond from this private pond statute and placing it under State control. Mr. Turner has long wanted to test the constitutionality of the law, and a few days ago invited Frank Fowler, Will Alpaugh, Edgar Burnham, John Lin-coln and Henry Edgarton, of Willimantic, to visit him and ish. They caught a fine string of pickerel, perch and trout and felt under great obligations to Mr. Turner for the day's sport. While they were enjoying it many people from Hebron watched them. The five young men were exhibit-ing their, catch in Willimantic yesterday when Sheriff Fil-more, of Hebron, arrived with warrants for their arrest for violating the fish laws, North Pond being forbidden ground from Nov. 15 to April 15. The Sheriff awaited the pris-oners at the depot, but they thought it was a joke and did not appear. He then went to their places of business, took them in custody, procured a wagon and the party drove in a drizzling rain twelve miles to Hebron. Lincoln and Burn-ham were fined \$2 and costs and the others were discharged because the Hebron people had not seen them make any catches. catches.

catches. Bass Frins.—*Editor Forest and Stream*: I have been studying up the question of bass flies this winter and devis-ing new forms. I send you specimens. I want to go for the big oncs. You know that most of the black bass taken with the fly are what are called "shore bass," *i.e.*, those which run from a pound to a pound and a half, with an oc-casional larger one. My idea is this: Take flies like the sample inclosed, any color you like, place lead enough on the net to keep them well under water, let out twenty or more teet of line and troll for the bass instead of casting for them. There will be just as much sport if you use the same rod and and that you would in casting the fly. I was out fishing one day last season and let the fly sink in about eight to tea half pound bass had taken the fly that was hanging still in the water and near the bottom. I then made up my mind that the way to use the fly for bass was to let it go way down below the surface. I did not have time to test my theory that season, but will do it next year, and now write it out in order to let others try it. If they have any success with this method I will be pleased to hear from them.—N. W. A. The flies were brown and ginger hackles tied on a No. 4 sproat hook with a short hook at its back placed half way up the shank.] **Stightrulture**

THE ADIRONDACK HATCHERY.

ng to. THE ADIRONDACK HATCHERY. Here of a state in the Adirondacks on which is located the new State fish hatchery, heretofore known as Little Clear Fond, has been rechristeued by the Fish Commission and will henceforth be called Lake Brandon. It is a beautiful body of varier, covering some 250 acres, and its elevation to the dignity of a lake is but justice. The lake is named Brandon after the two systems is but justice. The lake is named Brandon after the system is but justice. The lake is named Brandon after the two systems asys that 60,000 infant salmon trout, all in good con-dition, have been taken from the hatchery and placed in the lake. Many of the small fish at the hatchery were killed at the time of the recent break in the dam; some by the stoppage of the flow of water for 24 hours and others by the sond which atterward washed in. A number of Ladlocked salmon from food Spring Harbor will be deposited in Lake Brandon this spring. The work of repairing the break in the dam will be commenced as soon as the weather will permit. It has been spring the danger of another washout. It is proposed during the coming summer to construct twole stood boyds as the from of water for the ground. The work of repairing out the timbers to be used in subliding these ponds, and work on them will begin as soon as the washiding citizens from the new hatchery, and deploring the losses it has sustained through the main the stopped at the subthery to receive from the new hatchery, and deploring the losses it has sustained through the main deploring the losses it haves taken up the cudge in its back. Over 100 of the most prominent residents of Saranaco and Bloomingdale villages have signed a paper plediging the somal bloomingdale villages have servent dutier depredations in the the power to prevent future depredations and bloomingdale villages have servent dutier darge hows have the hatchery, and encourage in every way the work of the maters in the Saranac region, like all others in the futun

Lake House has two hundred guests the year round, and the hotels at Chateaugay Lake also do a heavy business. In years gone by the game laws have not been well observed in that part of the wilderness, but last season a marked change for the better was noticed. The hotel proprietors are beginning to realize that the chief attraction for sportsmen is the fish and game to be found in that region, and unless proper pro-tective measures are taken there will ere long be little induce-ment for the tourist to patronize them. Other business men are awakening to the fact that it is time to make a move for game preservation, and School Commissioner Wardner, of Rainbow Lake, a man who is well-known and popular in Franklin county, is taking the preliminary steps for the or-ganization of a fish and game protective association. He is are that a strong society will be formed within a few weeks. PORTSA.

UTICA, N. Y., Jan. 27.

FISHCULTURE AND THE FISHERIES.—A large octavo of 680 pages with the modest title of "Handbuch der Fisch-zucht und Fischerei" has been issued from the press of Paul Parey, Berlin. For those who read German, it is a most valunble work. Ichthyology, embryology and anatomy of fishes are well described by Dr. B. Benecke in 200 pages; lish-culture in its various branches, apparatus, enemies of fish, aud protection, is ably treated by the celebrated fishculturist, Herr M. von dem Borne. The sea fisheries, boats, implements, etc., are described by Herr G. Dallmer. The work is pro-fusely illustrated with well drawn figures in all the depart-ments, aud is a highly creditable volume. The illustrations alone are instructive.

NOTES FROM ENGLAND.

NOTES FROM ENCLAND. J PROMISED in my last to say something about special clubs; that is, clubs each of them devoted to the interests of one particular breed. This country swarms with them. The two oldest are the Bulldog and the Dandie Dinmont Ter-rier clubs, and of the latter I do not know whether there are now two or three in existence. The Fox-Terrier Club and the St. Bernard Club are much the strongest, and there are prob-ably twenty distinct fox-terrier clubs, independent of each other and of the original club, but accepting the same stand-ard for the dog and conducted much on the same lines. The Collie Club has drawn up the most extraordinary description of that dog that was ever published, and it yields conclusive proof that it was the work of anateurs, who know nothing practically of the sheep dog and his work. The Mastiff Club is largely worked by men of no knowl-edge of the breed except what they catch up in the reverbera-tions of dog-show chatter. Of course the club is not entirely composed of such; there is enough of the salt of intelligence to keep it from rotting, but it has exhibited putrefaction dis-arreading. The Great Dane Club came with a boom, the new name

tons of dog-show chatter. Of course the out is not entirely composed of such, there is enough of the sait of intelligence to keep it from rotting, but it has exhibited putreflaction disagreeable to honest nostrils ere now, and it sadly wants vitalizing.
 The Great Dane Club came with a boom, the new name took, and despised German boarhounds are worshipped under the new title, to which, however, their claim cannot be proved. But it is not a bad thing for those in the swim when quotations rise from £10 to £100.
 Of other terriers than those mentioned, the Bedlington, the Airedale, the black and tan, the Irish, has each a club to look after its interests, and if the so-called Welsh terrier has not an infant club to take care of it, then after all the Welsh gutterals in its praise and English protests that the dog is not Welsh, it has been "wrecked in Babbycombe Bay," while, so far, at least, its congeners "ride safe at Port Natal," I cannot say they ever venture to leave their anchorage or do much actual work. Most of our clubs are more like boys "ipaying at ships" on a pond for their own amusement than undertaking any-thing useful. The two other foreign breeds, each having a club, are the dachshund and the French basset hound, the latter of which is limited, as these quaint-looking cripples do not take with English sportsmen, who seem to have lost their old love for slow, musical hounds, preferring the dash and endurance of our modern toxhound, who with increased speed has lost much in tongue but nothing in nose. We have also a Pug Club and a Toy Spaniel Club, principally under the guid-ance of ladies, assisted by, as I have heard them inreverently called, "old women of the other sex."
 Tastly, we have the Irish Wolfhound Club, or what I call the Resurcetionists, the men who propose to "make from sand a solid rope, French bread of rubble." The Scotch deerhound and the German boarhound-or Great Dane, so called—are being crossed to resuscitate the Irish wolfhound. I

or working qualities due to clubs fostering unimportant fancy points and exalting them above essential qualities. Another very grave charge brought against these clubs is that they, however honestly founded under the impulse of admiration for the breed and desire for its improvement, many of them degenerate into cluques and are worked for the benefit of the members and not to the advantage of the breed of dogs.

of dogs. This last evil is effected by the influence of the prizes the clubs are enabled to offer to show committees, and these prizes are, in the large majority of cases, given with the understand-ing that the donors shall name or select the judges. As this almost invariably means the appointment of one of themselves, the unfairness to outsiders is evident, and this leads me to refer to the much lauded and greatly over-estimated special index

almost invariably means the appointment of one of themselves, the unfairness to outsiders is evident, and this leads me to refer to the much lauded and greatly over-estimated special judge. It is evident that these clubs have a strong interest in getting men holding the same views as the club supports to judge their dogs, and such men are certainly most likely to abound in their own circle than out of it. But they go too far, and especially through the *Stock-Keeper*, which aspires to be the mouthpiece of the special clubs, claim that only men who have confined themselves to one or two breeds are fit to judge these breeds. This is a monstrous claim, the absurdity of which defeats itself. In our gardens one sees numberless species and varieties of flowers, and some men are famed for their roses, for their chrysanthemums; but should we call them flowers as not to be able to separate the good, bad and indifferent? The man who has a good map of the carnivora in his mind will the more readily distinguish between the relative fitness of the able to separate the good. bad and indifferent? The man who has a good map of the carnivora in his mind will the more readily distinguish between the relative fitness of the individuals forming each class. But the special judges of the day are for the most part not the best informed, or men of practical experience in the working of dogs, but those who by the accident of their wealth or from having been fortunate as exhibitors, and having learned their lesson in the narrow school of the clubs, are promoted through the influence of their fellow club men to the position. Here is a sample of how a specialist judge and public writer deals with fox-terriers; he says, "Seven or eight years ago such terms as 'torrier char-acter,' expression' and 'liberty' were unknow...' And I think when I have quoted this specialist's definitions of these terms, all true lovers of the terrier will agree with me that it is a pity we were not left in the darkness and ignorance of seven or eight years ago.

Well, there are definitions more difficult to understand than the most formidable propositions, and I take that to be one of them. Our specialist judge then goes on to say: "But character it is almost impossible to deline; a dog's stern has much to do with it, and one of the changes we hail with the utmost satis-faction is the perpendicular carriage of the stern, that is now acknowledged to be the correct thing." Could any one but a specialist judge write such balderdash? Our cows carry their tails perpendicular, but it was left to the modern product of special clubs to discover the close analogy in the caudal appendages of the cow and the fox-terrier. "Now come we to the quality of "liberty," and your readers must be prepared for enlightenment, for our sage tells us it "Liberty in its true sense is only found in a few specimens. * * * Long-backed dogs have liberty of a sort, but the liberty that conduces to speed at the expense of stamina is wrong. * * * Liberty simply means an aptitude to gallop; but it must not be thought that this means that a dog must be long in the back and loin to possess it; far from it. * * * A narrow-chested and long-legged dog cannot possess liberty, from the very fact that his conformation makes it impossible for him to take a long, raking stride with his forelegs, simply because their fuictrum, the shoulder blades, are blocked and restricted in their action by the shape of the chest." But enough, I am of the benighted ignoramuses of the dake tages of more than seven or eight years ago, before these terms were "known and understood," at least in a specialist judge's sense of them, obstinately hold that a greyhound can gallop and stay better than a bulldog, and that the former shows wuch greater liberty of action than the latter; and in the old benighted times the greyhound was the long-legged and narrow-chested dog, and the bulldog the comparatively short-legged and wide-chested one; but of course we must all bow to the modern specialist, whether he understands the terms he uses o

beinghted times the grey holding was the bolk-negged and wide-chested one; but of course we must all bow to the modern specialist, whether he understands the terms he uses or not.
In my opinion the evil inherent in the specialist judge is the narrow views that a funcier of one variety insensibly cultivates, and the almost certainty of exaggerating some one or more points desirable enough where normally developed, and not at the expense of the general character. In mere fancy articles like toy terriers this is of less consequence than when applied to dogs for use; but even in toys it is dangerous, and among other evils leads to the development of those hideous skulls which Professor J. Woodroffe Hill properly ridicules as hydrocephalous.
There is also the danger that members of a special club elected to judge will be, almost unconsciously, perhaps, influenced by esprit de corps, and thus do injustice to those who are not of the privileged judge electors, which common fairness seems to indicate all exhibitors should have an equal voice it.
I told you last month how serious the hydrophobia scare is with us. We are muzzled up to the eves—that is, our London dogs are—but had the muzzles been applied to some editors of the daily press and a multitude of foolish letter writers therein, the stamping out of rabies could have been carried out more effectually.
I thought we had succeeded in putting into type the most utter nonsense on this subject that same men could compile, but a friend has sent me a big bundle of cuttings from the New York *Herald*, and after reading them I think our London press may throw up the sponge. How such a busy people as you appear to be can find time to read such trash is a marvel to me; but I suppose it is read. I looked in vain through the waste of words for a title of evidence that the Newark dog was rabid, but could find none. It is otherwise with us; we have no less than twenty-six deaths from hydrophobia following the bites of mead dogs in Lo

At the Dogs' Home, London, there has within the last few months been about 10,000 dogs destroyed—all are destroyed after three days that are not claimed or suitable permanent

homes 'found for. In one district of London 500 summonses were issued against people for not having licenses for their dogs that had been 'run in' by the police. Most of these people were, I am informed, of the well-to-do classes; people who apparently thought they were too respectable to be sus-pected and might therefore cheat the Revenue with impunity, and they certainly would but for the action of the police in seizing all dogs unmuzzled or unled since the hydrophobia scare set in

The behavious the base base of the construction of the police in series all dogs unnuzzled or unled since the hydrophobia series all dogs unnuzzled or unled since the hydrophobia series all dogs unnuzzled or unled since the hydrophobia series all dogs unnuzzled or unled since the hydrophobia series all dogs unnuzzled or unled since the hydrophobia series all dogs unnuzzled or unled since the hydrophobia series all dogs unnuzzled or unled since the hydrophobia series all dogs unnuzzled or unled since the hydrophobia series all dogs unnuzzled or unled since the hydrophobia series all dogs unnuzzled or unled since the hydrophobia series all dogs unnuzzled or unled since the hydrophobia series a curious and instructive little episode of the opped into the subject in the most natural manner, and an indiscrete ditor in his zeal for special clubs and specialist udges, has cut the encysted tumor, and like that slice of St. Medard's kulfe in the Devil's fardel on the Red Sea shore, he has let out more than he will catch 'one while.' Mr. Pybus-Sellon si the honorary secretary of the Bulldog Club, and acted as judge of the bulldogs at the Crystal Palace show, July, 1885. In the open bitch class there were nine comporters, and Mr. Pybus-Sellon as of that class in a report he wrote for the *Kennel Club*-" This (the bitch) class was the best of any. I gave Acme first honors as she has wonderful ribs, short back, is well out at have commended cards, and wrote of the class is a 'have to commended cards, and wrote of the class have here the fore the kennel trace. This is the describes the delays in which the proves of the effect that judges should not write reports or their for has an argument, or the semblance of one, upon it, which effect that judges should not write reports or their for has an argument, but he emports of the diless ower their on the same bitch deces on the which the will sit on, he has also had the opportunity of explaining the abartet in landing Acme so orry highly when he disparaged her, or vice very hi

1: 15 Correct, except that pigs and Mexican harries are added to the classe assigned to Mr. Mason. Mr. G. Edward Oshorn is superintendent. The secretary's address is Mr. S. R. Hemimway, Boy 1225, New Haven, Com. Entries close March 13: THAT IRISH SETTER SPECIAL. —Progress, N. C., Jan. 21, 1856.—*Editor Porest and Stretum:* In your issue of the 14th, under the head of "irish Setter special" over the signature of L. W. White, f find what he terms an answer to my question in yours of Thi inst. but what sceenes to me to be anything but an answer. It seems to me rather a queer combination to be called an answer to deg shad won a heat. I must confess I fail to see that a l claim I have the right to look after the Interest of is yres of 1 should get it into the hands of the relative the right to look after the Interest of the yre of the look, as I never saw anything madd at it, but if I should get it into the hands of the elub that was to make the award as soon as possible, and then I f they failed to give it to the dog it is not the maids of the elub that was to make the award as soon as possible, and then I f they failed to give it to the dog it belonged to it would be their fault, not mine. I cannot see why Mr. White should make so much ado about my not contributing to an Irish apecial, as I never here an its not contraining the an firsh apecial, as it to to the dog it is so for a common dog breaker, to give it to the dog it was for the say thind. Now as to the prove the signature of a common dog breaker, to give of mad that it was for dorge mathing sort as to coud to be decided by the judges as to which, red dog had done the best work. This I objected to, but he say it was for dorge mathing sort as to ead the dive on the yrad been called such haves. Blarney was the its revering a down while heat. Elcho, Jr., and Kose of Killarney did not start was for dorge mathing sort and on the second all way and the special already won, according to beleve that I had the special already won, according to the way the wore th

In trials?-T. M. ALDRICH. HYDROPHOBIA. - Editor Forest and Stream: Your editorial entitled "Hydrophobia versus Delirium Tremens" reminded me of a circumstance which occurred a few days before. For some weeks I had been the victim of a serious abscess which had deprived me of the use of one of my hands, and somehow-without the slightest foundatation in fact--it was rumored about that the touble was caused by an injury received from one of my dogs. On the occasion referred to I was in conversation with a physician of my acquaintance, when a person noted for his prochvity for something stronger than water came into the store where we were sitting, and evidently at the time a little under the influence of his imubibitions, addressed me somewhat rudely as follows: "I inderstand you have a bad hand. What is the matter--hydrophobia?" After my reply the physician said to him: "No, it is not hydrophobia, but there are a number of cases of that in this town. Hydrophobia is defined as a disease in which there is an aversion to water, and there are quite a number of persons in this place who are so afflicted." My questioner had sense chough left to feel the thrust, and I scarcely felt sorry for him, as I thought him rather impertionent in his manner. Perhaps, after all, there are some cases of hydrophobia at Newark.-D. G. J.

THE BOSTON DOG SHOW.—Boston, Feb. 1.—Editor Forest and Stream: All indications are very favorable to a great success at our coming show of April 6 to 9 next. We have secured the immense hall of the Mechanics' Charitable Association, which will enable us to have our benches, judg-ing rings, etc.—everything, in fact-on a single well-lighted floor. We have contracted with Spratts Patent American Limited to feed the dogs, providing everything, while Mr. John Read, who was our superintendent last year, will act in the same capacity this year. Our premium list, which will be very full, will be ready for distribution about the 15th inst. —EDW. A. MOSELEY. Secretary.

RED IRISH SETTERS IN THE FIELD TRIALS.—Phila-delphia, Pa., Jan. 28.—*Editor Forest and Stream*. I should like to make a suggestion to those interested in red Irish set-ters. At present it seems like wasting money to run them in competition with English setters at field trials. Would it not be vell to have a stake open to reds only, run in connec-tion with, say, the Eastern Field Trials Club! To do this it would be necessary to raise sufficient funds to defray the expense and provide necessary prizes. It this is done, i trust in a few years the reds will be able to hold their own in any company.—W. H. C.

THE HARTFORD DOG SHOW.—Editor Forest and Stream: Referring to your aditorial headed "The Hartford Plan" we thank you kindly for the following: "In all matters connected with dog shows, the interests of exhibitors are of the first importance." * * "It is eminently proper that they or some of them should be consulted on the appointment of the judges." The above is just what we have done and we are glad that you support us. We shall announce our list of judges before we issue our premium list, so that exhibitors can act understandingly. The beagles will be judged by the American English Beagle Club's standard, and by one of their members. We also claim April 13, 14, 15 and 16 for our show instead of April 14, 15 and 16. Following is the list of judges appointed for the Hartford dog show: English setters, Mr. J. O. Donner, New York; Irish setters, Mr. W. H. Pierce, Peekskill, N. Y.; Gordon setters, Mr. H. Clay Glover, New York; pointers, Mr. J. M. Tracy, Greenwich, Conn.; field and cocker spaniels, Mr. A. C. Wilmerding, New York; beagles, Mr. N. Elmore, Granby, Conn.; all other classes, Mr. James Mortimer, Babylon, L. L.—HARTFORD KENNEL CLUB (A. C. Collins, Secretary). THE NEWARK DOG SHOW.—We are informed by the

THE NEWARK DOG SHOW.—We are informed by the Secretary that entries for the Newark dog show are coming in finely, and that many requests for blanks are received daily. The show will be held under the rules of the A. K. C. as revised at the last meeting of the club. A letter has been received from Mr. Whitehouse, expressing regret that he will not be able to act as judge. There will be a meeting of the club to night to appoint judges for the unassigned classes, a list of whom we hope to be able to give next week.

BOUND BOOKS OF KENNEL BLANKS.—We have bound books of kennel blanks, each book consisting of 200 blanks of a given style, and can furnish these (postpaid 50 cents) for the convenience of those who have occasion to use a large num-ber of blanks. In ordering be careful to state what particular series of blanks is desired, *i.e.*, whether Names Claimed, Sales, Bred or Whelps. The arrangement of the blanks is such that a duplicate record of each note sent for publication may be retained for future reference.

THE AMERICAN ENGLISH BEAGLE CLUB. - Editor Forest and Stream : The following officers have been duly elected for this year: President, Dr. E. C. Nichols; Secretary and Treasurer, W. H. Ashburner; Executive Committee, W. F. Streeter, A Winsor, Herman F. Schelhass. The amend-ment to the by-laws having been adopted, the annual dues are now \$1.-W. H. ASHBURNER, Secretary.

INDIANAPOLIS DOG SHOW.—Indianapolis, Ind.—Editor Forest and Stream: As I am the owner of the English setter dog Change, winner of first at our late bench show, will you please receitly the mistake of your reporter in giving the name of Socroie as the owner of Change.—S. H. SocwELL.

PREMIUM LISTS.—We have frequent calls for premium lists and entry blanks of the different dog shows. They are often wanted at the last moment before the closing of the entries. Dog show managers should bear this in mind and cond us a supply entries. Dog show send us a supply.

KENNEL NOTES.

KENNEL NOTES. KENNEL NOTE BLANKS,-For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." All Kennel Notes must be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them.

Iz-dio arrange a match or a series of matches with the raima cauo of Jersey City.
BULL'S HEAD HOTEL.-New York, Jan. 22,-Regular weekly shoot, 12-ring, possible 120: G. Zimmerman 118, C. Rein 114, E. Hoiz man 112, J. Snutz 108, E. Scaneckenberg 80, M. Dortler 117, D. Louitzki 108, H. Wasmuth 104, C. F. Gensch 109, J. Scharder 112, L. Flach 117, D. Holland 98, H. Gunther 114, A. Liss 103, Jan. 29; J. Scharder 115, H. Wasmuth 100, J. Shuiz 110, M. Dortler, 148,-A. Longer, Sceretary.

NEWARK, N. J.—The first competition of the E-sex Rifle Club for the gold medal took place on Monday, Jan. 22, and very fair shooting resulted. Mr, Dutcher led the score with 49 out of a possible 50, and the other leading scores were: R. Marshall &, A. Lake 48, Charles Cooper 49, Jonn H. Huegel 47, F. Helms 47. The club will shoot a match with the Palma Club of Jersey City. TOPEKA, Kas., Jan. 21.—The regular weekly gun trial of the Topeka Rifls fram, canne off to-day on their range, southwest of the city. With the following aggregate of three scores, possible 225: J. L. Palme 207, C. C. Tumuer 71. J. F. Williams 124. J. H. Leonard 193, Robert Thompson 206, George E. Morrison 105, G. I. Royce 197, Reed McCarter 123.

THE TRAP.

Correspondents who favor us with club scores are particularly re

	quested to write on one side of the paper only.
	THE TRAP AT FOLEY'SA very enjoyable time, barring the weather, was had at Foley's Grove on Friday last. A dozen members of the Jersey (ity Heights Gun Club were the gnests of Capt. roley having been especially invited to his retreat for a fish chowder, us
	concomitants, and a friendly shoot. Everything was good and s rved out right generously, some 150 sportsmen putting beaud their vests
	as good a chowder as a spoon ever stirred. Col. Endicott, member of the Aquahouga, the Stapleton, the J. C. H. and something like thirty or forty other gun clubs, to say uothing about his ubiquit as lo ful-
	lowship with fish and yacht clubs too numerous to speak of, prestued at the stand and also the head of the tanle with his danal grace and felicity. Spreches were made by the Colonel, br. Yerrington prest-
	dent of the J. C. H; Al Heritage, Harry Jones, Geo. Eaton and others, after which the shoo mg at sweeps was resulted and continued until
	a late hour. First sweep, 18 entries, \$3 each, was won by E. Canill. Second sweep, \$24, won by Outwater, madicot and Polworth dividing second money. Frevions to the dnuer the following mach, the
	second money. Previous to the dinner the following match, the feature of the occasion, was shot by three members of the J. C. H. G. C.; 15 olids each, 35yds. rise, one barrel, gun below the elbow nutil the bird was on the wing, for 550 each;
ł	J Maher
	J 11 Outwater
ļ	M. Caulti acted as judge for Maher, E. Collins for Herbert and J. Morau for Outwater; Quantau, referee; Geo. B. Eaton, official scorer, Articles were drawn up and \$25 forfeit posted for a materion reb, 4,
	between J. H. Outwater and M. Cahil, for \$100 aside, to be shot at Foley's Grove, under Staten Island rules. Afterward sweep will be openJACOBSTAFF.
	SAN FRANUISCO, Jan. 22.—The Yuba City Gun Club held a pigeon tourunnen Jast week, wincu was largely attended. The flist match was at 6 birds, 21yas;
	H Brittan
	Brittan and Robinson snot off at double birds, Brittan
	Weddrein
	In shooting off the ties at three pair of double birds, Weddrein won first money with 5 birds, Joe Clements second money with 4 birds, and Ed. Clements and Brittau divided third money on three birds
	each. The third match was at 12 birds, 21yds, rise; H Brittan1111111111111-12 J McVey11111111111100-10
	Boase
	menus divided second and third on 11 birds each. McVey killed his last bird, but if reli just outside the boundary. The founta match was at three donue burds, Hyds, rise;
	$ \begin{array}{cccccccccccccccccccccccccccccccccccc$
1	Boase

Sam Castle and J. Ryan were judges, and Jonn Ero referce. WELLINGTON, Mass. Jan. 30.—There was a good attendance at the regular weekly shoot of the Welnington Gun Chub to-day. The winners in the soveral sweeps were as follows: 1. Five clay pigeons — wardwelf first. 2. Five blackburgs—Stanton first. 3. Five pigeons Samton and Shattick divided first. 4. Five blackburgs—snaborn first. 5. Five blackburgs—Adams first, 6. Five slay pigeons—shattings—shattick divided first. 7. Five blackburgs—Shattings—Shattings—Shattings—snaborn and Adams divided first. 7. Five blackburgs—Shutmway, Fond and Samborn divided first. 8. Three pairs clay pigeons—Shutmway first. 9. Five blackburgs—Swift, Wilson and shutmway outded first. 10. Five clay pigeons—Swift, Wilson and shutmway outded first. 11. Five blackburgs—Shattings—shatting Five clay pigeous—bdoty first. 13. Five blackburgs—Shattings—shatting and datas. Fits. 15. Five blackburgs—Shattings—that and Edsworth uivided first. 14. Five clay pigeons—Swift and Shanton aud effict. 15. Five blackburgs—Shattings first. 16. Five blackburgs— Wardwelt first.

Wardwell first. = 10RONTO. Jan. 27.—The sweepstakes[sbot at/Canadian blackbirds, heat to-day at Oulcot's, Eglington, attracted a good number of sports-nen. There were two events. In the first the competitors, of whom there were nine, stot at 15 birds each, with the following result: Win. Felsted 12, G. Thomas 11, T. London 10, T. Sawdon 8, W. Mo-Jowall S. Sawdon and McDowallishot, tipree birds each, the former-winning and taking fourth money. For the next sweepstakes there were nive entries, seven birds each. It resulted as follows: T. Lou-don 6, E. Reid 6, W. Flested 5, W. McDowall 4, F. Tambly 4, Loudon and Reid divided first and second money.

ENGLAND'S CHAMPION SHOT.-Graham the English shot sailed r'home on Saturday last, having failed to make any definite arrange-

ENGLAND'S CHAMPION SHOT, --Graham the English shot sailed for home on Sahuday last, having failed to make any definite arrange-ments for a meeting with the crack shots here. Just before bis depart-ine, "speakture of his plans Mr. Graham sail: "I have'been champion matches with Captain Bogardus or auy one else, as follows: --Match No. 1-To shoot at 100 pigeons each 14 50 yards rise. Match No. 2-To shoot at 100 pigeons each 16 os tand at 24 yards and my opponent at 30 yards, I to 'use one hand only against his two. Match No. 3-As a special inducement to Captain Bogardus I will shoot thim a mich at 100 pigeons each; I to stand at 24 yards and my opponent against his two, if he m this mutch stakes \$500 to my \$250. The first two matches for \$500 a side. The Harlingham rules, under which offer to shoot all these, I find are the ones adopted by the leading American gun clubs, with whom it has been uny pitvillege to shoot during my suort stay here. I have had a plaesant time here, find american gun clubs, with whom it has been uny pitvillege to shoot during my suort stay here. I have had a plaesant time here, find american gun clubs, with whom it has been uny pitvillege to shoot a big money match and will return in the next steamer." MIDDLESEX GUN CLUB.--A meeting of the Middlesser Gun Club variay evening last, and lual arrangements perfected whereby the forganization became complete. Changes have been made in the Board of Directors, which now consists of the following named gentlemen: Messrs. E H. Robinson; A. Worden, of Dunellen; F. R. Stevens, Chas. R. Theirs, Geo. P. Suydam, S. G. Smith, Dan Terry, of Plainfield John D. Voorhees, Sound Brook; John Dury, Jersey City; M. W. Malford, Treasurer, freegre P. Suydam. The huilding will be erected at Dunellen; A the dat the dollars with fifty cents monthly dues. Life members are con-sportsmen have already be ome members. THE STATUS OF GALATEA.

SINCE it has been decided that Galates will come out next year to Sail for the America Cup, her challenge having heen duly accepted, the question has been raised in some quarters as to her claims to be a representative British yacht. In the *Field* of Jan. 9 the following letter appeared:

Sin-I sontends ra

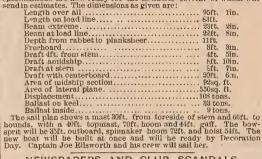

The representative British yacht. In the *Field* of Jan. 9 the following ster appeared: SIn-I see is reported in Tuesday's *Times* that the owner of Galatea arends racing for this Cup, and bas already issued a challenge. This ourse all yachning men must deprecate, for, though we know that ny one has the right to challenge for this Cup, it must be borne in ind that as the race is more or less regarded as an international one, ae yacht sent over should at least have some pretensions to being a trize winner in home waters. I think something should be done this year to retrievo our lost urels, and with the view of avoiding the blunder made last year in ending out an untred yacht (it seemed madness to send Gene, to out for such inportent alterations, without a trial). I would suggest hat the various yacht clubs contribute to a prize to be sailed for nder the same conditions that the winner goes to New York as our persentative yacht. If this course were adopted, I think \$1,000 yould be easily raised. A week later three more letters appeared, which we give with the ditorial comments below, two of them being in answer to former stiters: Sin-I sincerely trust you will use your influence and write strongly gains the absurd match proposed to take place with the Americans. I sonthing but courting defeat. A yacht should be built specially or the purpose.

And - A showed is that is the proposed to take place with the Americañs. It is nothing but courting defeat. A yacht should be built specially for the purpose. Srn - As to the salling capabilities of Calates, I think "John" is at easts a little promature. Last season can hardly have fairly tried her, is she salled in so few matches, and, like Irex in her second season, may yet be a prize winner. I think it is a pity that cold watershould be thrown on the sporting endeavor to regain the America's Cup. No loubt, if any yacht owner (doubting Calatea's powers) may still de-mise to enter for the Cup, the N.Y. Y. C. will, as last year, accept two entries. We have yet to see the two distinct types in a seaway; so may a here all its orget's cross is flown under the burgee. JACK (AID). To save trouble to our readers, we may mention that Irex started in twenty-nine races the first year she came out, and won eight first and two second prizes, amounting to 5600. The Galatea started in fifteen races, and won two second prizes, value 250.-Eb.J Sin-Your correspondent "John" has made the statement that Genesta went to America an "untried yacht." Will you allow me to appear to understand that his statement is incorrect, inasmuch as she was tried both before and after hee 'important' alterations. Possibly, judged hy his incorrectness on this one point, "John" may be incorrect also in his knowledge of these alterations, terms of the 'de datae to New York to compete for the America Cup-and no doubt some very strong opinions are likely to be expressed about it-there can be no douht that the Genesta had nuexceptionable creden-ing the Galatea to New York to compete for the America Cup-and no doubt some very strong opinions are likely to be expressed about it-there can be no douht that the Genesta had nuexceptionable creden-ing the Galatea to New York to compete for the America Cup-and no doubt some very strong opinions are likely to be expressed about it-there can be no douht that the Genesta had n

In so that as dediced is not such a vessel as will make a assumption that Galatas is not such a vessel as will make a light for the Cup, and that her qualities are not such as to by the expense and trouble to which the holders will be put, is on the summary of her season's work as concisely stated , two seconds to lifteen starps and a total of only 50 prize , "This in truth is her record, and if it were all there might be

some reason for the complaints made against her posing as a cham-plon: hut to those who have followed the season closely and who are familiar with all the his and outs of Galakea's work this year, there is really n ground yet lor condemning her, or for asserting that she races will show that a better place next season. An analysis of her races will show that a very fast boat improved by a season's trial and the alternation of the performance of the principal to the other that the loss whell it suggested. Undoubledly Galatea, from the time of her thas whell it suggested. Undoubledly Galatea, from the time of her thas been to remedy it, and thus far at least it is too soon to proceed the season of the principal trouble is known and steps are now being fast to remedy it, and thus far at least it is too soon to proceed the season of the principal trouble is known and steps are now being fast or the or principal trouble is known and steps they account of the principal trouble is known and steps they account of the principal trouble is known and steps are now being fast or the only fist. She was built with the object he view of receips for the built of the cost him little and the alternation to the other than the best of the principal trouble is known and steps are now being fast of the principal trouble is known and steps they account of the principal trouble is known and steps are now being fast of the principal trouble is known and steps are now being fast of the principal trouble during the state and the events are account of the principal the state and the state of the system of the state of the principal trouble during the state of the expense on the default of the currenting, and whose prestate is farged involved in the result of the the tring, and whose prestate is than to the system the state of the state of the tring the state is a failer. INTERIOR OF THE CUTTER MELUSINA. Grube fect contained within the ceiling and below the deck of a rank, the problem is how to dispose of it so as to secure the greatest mount of room for a man. It matters little how wide it may he if it has not beight, or how long if it is too narrow for comfortable move-ment. On shore the architect starts out with at least 6 or 7t, in every direction, but the navel architect is taramelled and bound down by the absolute necessity of limiting himself to a hull whose dimensions are dicated by many other considerations besides the personal com-tent of the dwellers therein, and who has not the resource of his proteer the form of hull in which it is exercised. His work must be all of by one unit of measurement, the height of a man which will be absolute necessity of limiting himself to a hull whose dimensions are dicated by many other considerations besides the personal com-tent of the dwellers therein, and who has not the resource of his prother ashore of putting on a hay window here or a mansard root manother place. He is confined to a very contracted space, and the results of his planning depend party on his individual skill, but still more on the form of hull in which it is exercised. His work must be all off by one unit of measurement, the height of a man, which will be about def, and the space to be distributed is valuable or otherwise as the contains this factor. If the height is less than this a man cannot while less breadth may give passable accommodations if coupled while less breadth may give passable accommodations if coupled while less breadth may give passable accommodations if coupled in each side, and a passage way hetwere. The aboat of 14 or 16ft, beam for instance, drawing under fst, and with he ordinary low freeboard, and centerboard truth a midships, when the required with on each side of the truth is laid off the hoor lines has been resides on high that to obtain any head room a high about has been resides on high the to than any head room a high about has bee INTERIOR OF THE CUTTER MELUSINA

divided into small portions of awkward size, one under the floors and a small triangular space in each wing, none of them of much use. The fore and aft disposition is still worse. No room in the fore peak, a height of alg to aft, only in the galley, the center of the boat taken up with the centeroord trunk, the main cabin forced art, cutting out any after stateroom, and a damp and ill space hole under the cockpit, difficult of access and when reached of limited capacity. Besides these are the wings already mentioned, and small space suder fdek alongside the cockpit, sometimes utilized for stowage. The main cabin bort deck, dignified by name of berth. Aided even by the state or deck, dignified by name of berth. Aided even by the extra space stolen from above by the cabin trunk, the accommodations of the ordinary centerboard sloop are nearly always of a makeshift and unsatisfactory character. The space, no greater in cubic feet than in the former case, is now in the form of a solid, approximately right, and keeping these dimensions for a length of three or four times the measuring unlet—say 26t, with large space beyond at each of this space, creet and with arms extended, and the division of it that would naturally suggest itself would be: One length, sny fit, state room, one length, fct, cahin, and the remaining length added to the principle of how in the form the decomparing unlet—say 26t, with large space beyond at each or duits space. Free and with arms extended, and the division of it that would naturally suggest itself would be: One length, sny fit, state proom, one length, fct, cahin, and the remaining length added to the protion at the bow, for gailey and forecastle. THE CRUISE OF THE ZIMMERMAN.

THE CRUISE OF THE ZIMMERMAN. "I URRY up, boys!" This was the skipper's first order, which was prompty obsered. Water, wood. e. al, small boals, sea s ores, oil-skins, gum boots, shore toggery, etc. had been properly stoxed, and we were waiting for Morits Clark and his nsual hene marke loat. That worthy put in an appearance just as the yacht sailed down stream, and with a fresh southerly breeze we bade our friends good by. The night was dark and rainy, wind fresh-ning and hauling to the cools trick in the start of the stream in the share the shift was dark and rainy, wind fresh-ning and hauling to the cools trick in feet out of the companion way, reporting that the shift was dark and rainy wind fresh-ning and hauling to on his head, argument was not aumissible. Directly another "hard on "jumped in; the m ste, who was lifting the jib at the the, hard went overboard, crushing down the staving on that side, and every-thing to starboard left us. By request of the cools, we stopped for the night. As an honest recorder of facts, I must say thas lifting the shift was the result of Clark's practical joke. He's a oud m, aldown the bud By request of recorder of fr mactical is to starboard here the starboard line of the starboard here result of the starboard line. The starboard line is the starboard line

Two water parrels are on a flush deck at for the abin, and when the yeach canted to an excessive angle of heel, the weight of water so high could not be kept in position, though carefully lashed in the chocks. Next day was foggy. Beat down to deep water point, where we fell in with the steam yacut Comet at anchor; the value and triends just returned from a trip South, and bound to New York and Long Island Sound. Went on board and had a gool time. When altreast of Fort Delaware wind suddenly shifted to vorthweet, hlowing hard, came to, ship rolling badly, and anchor light dancing a jig. Morning

s clear, but a heavy bank in the west indicates bad and whidy her. We are content to haul out two reefs in the mainsail-e to at Cedar Creek 12 M. Report ducks scare. advail de alm throughout the day. Anchored at Billingprot at down prospects of a N.E. storm before morning. Daylight; our his doif pier best to keep on too. Bota an thors Jown, with a scope of chain. Yacht Tacie dragged into us, and for a time though on the beach, the sea breaking clear over her. Hoisted a greefed mainssil, and with boom triced to statoord succeeded eting the anchors, and slowly clawed off a lee shore, withe was langerous proximity. Beat up to Hog Island, where we lay com-atinvely easy. Our cook says i

A STEERING GEAR FOR ICE YACHTS.

A STEERING CEAR FOR ICE YACHTS. Editor Forest and Stream: When twoke up this morning and found several luches of snow over the beautiful ice I lett at dark last evening, and all my auticipa-tions of another glorious day on my ice yacht spolled, I felt. thoroughly disgusted and out of humor generally, so thought the best thing to do to recover my equalinity would be to drop you a line on the subject of ice boats. There been an ice yachtsman since 1855, in which year I owned my first ice boat. Up to 1898 I did my suiling on the frozen waters of the belaware, and since there I have been ice yachting on Maryland waters, or rather ice. They seem strange to your readers that an article on ice yachting food be written by one reading so far south as Maryland, but fact is we have first-class facilities for the sport on our creeks and rivers, which generally freeze over smooth own to their sheltered stuation and slow running tides. Then, too, we have much less snow that f ther north. When we get a good thick coat of ice on our waters and then have a few hours rain, afterward turning cold, we have a sbeet of ice that cannot be surpassed for ice yachting, the even waters and then have a few hours rain, afterward turning cold, we have a sbeet of ice that cannot be surpassed for ice yachting, the surface. All the above may seem a needless preamble to what I had to write

sh water freezing on top giving a particularly smooth and even frace. All the above may seem a needless preamble to what I bad to write out, which was my manner of steering my ice boate, but it seemed cessary that I should give some reasons why one living so far south I do should know something of what I was writing about. In my long experimenting with ice boats is the semed rerent kinds of runners and rudders for these boats, but my present more of steering I think has advantages over the tiller, which latter bink is the method almost universally in us. from the usual position of the helmsman-riz, lying nearly on e side, with he ut doward the bow off an ic boat may be said to vs any, resting ou one elbow or shoulder-to be a very constrained d thresome one, and dangerous from the fact that when going very st a small push or pull on the helm makes the hody swerve, when a haler is apit to be pulled to one side, making the boat change her .rso.

s follows. I use a double set of runners for the rudder, are set under a piece of timber about 3xin, which is after end of boat (Hoclos rough drawings of runners, a yoke extending across the block, to which runners n is as follows.

iled about 4ft. long. I make my yoke lines fast to ends of theu carry them forware, pass each through a single block, or dder, on either side of yacht, and back to the heimsmau, who mething like a driver in a troting suiky, except that instead ong forward as many of them do, he reclines agalost a back. In this position you will see that he is firmly brazed, having rest for each foot; and sluing as he does, facing a back, sould on the yoke lines and bracing his feet against the foot rest. Ution to the back rest I have two side pieces just wide enough insmu to recline against. These prevent any possible side a when the boat is going fast, or in case of a slip of the rodder iners which will occasionally take place in the best regulated tay.

nears which will occasionally take place in the best regulated its. small boats a modification of the above steering gear may be as follows: The yoke is fitted as before, but instead of passing iness through the single blocks bring them forward to a bar do in the boat just under the knees of the helmsman, pass the m gu holes in the bar and ne; then, sitting in the same position as , put a hand on each side of bar and steer. This is a good by gear, but best suited to small yacht. I do not see why the system of steering would not do for the single rudder as well a duble, metely substituting a yoke for the tiller. I have ed the double rudder, as I think I get more pixed than with the soury rivers and elsewhere. Over a measure! course we all that we go very fast, but how fast we do go I think it would be sting to not. I will say, while on this subject, that the best have taken with my boat has been 30 yds, measured, in 10 is, and 60 yds. in 23 seconds. The time in both cass was taken stop watch and this, but the times have not been taken. be way, how hard it is to convince the lyman that you can go than the wind while sailing on the isa. I have be down that have often soury rivers and elsewhere. Ower a measured, in 10 is, and 60 yds. in 23 seconds. The time in both cass was taken stop watch and distances accurately measured. It was made that the wind while sailing on the isa. I have taken stop whard hat is to convince the lyman that you can go than the wind while sailing on the ics. I have taken with so woll known to ice yachtsmen, and the causes that lead to shall be well known to ice yachtsmen, and the causes that lead to swill known to ice yachtsmen, and the causes that lead to swill known to ice yachtsmen, and the causes that lead to swill known to ice yachtsmen, and the causes that lead to swill known to ice yachtsmen, and the causes that lead to swill known to ice yachtsmen, and the causes that lead to swill known to ice yachtsmen, and the causes that lead to swill known to ice yachtsmen, and the causes that

is an old idea of mine, but I never could got the speed with them in light win is, nor make them steer steadily, although I have placed the mast 4ft, ahead of the runners. For speed and easy steering in an ico-boat the center of effort and center of lateral resistance must be close together. SINKBOAT.

ELECTIONS OF OFFICERS.

Boston Y. C.-Jan. 27.—Commodore, Jacob Pfaff: Vice-Commodore, J. B. Mear; Rear Commodore, Washington E, Counor; Secretary, Thomas Dean; Treasurer, Augu-tus Russ; Measurers, D. J. Lawlor and J. B. Smith; Trustees, Benjunin Dean, Ebea Denton and Thomas Manning; Rezata Committee, J. P Phinney, J. A. Stetson, L. S. Jor-dan, G. R. Howe and W. L. Wellman; Menhorship Committee, J. B. Mear, Charles H. Pimpton and D. B. Curdis. Busker Hull Y. C. Commodore, Geo. T. D. Willcox; Vice-Commo-dore, J. H. Porter; Elect Capitain, W. H. Webber; Sccretary-Treasurer, B. F Undertill, Jr.; Fmancial Secretary, Geo. W. Abbott; Measurer, Harry L. Johnson; Trustees, John W. Rich, William H. Tolman and George M, Barrows.

BUILDING NOTES. – F. Joyner, of Glens Falls, has lately built a handsome httpe steam launch for Mr. E. E Williams, of New York, for use in salt an i fresh water. The boat is 25th over all, with 5th beam, of cedar, fluished in oak and buttonwood. If has air tanks below deck and a tank for oil in the bow, the motor being a Shirman hand bilge syphon discharge under the conuter. ... Messrs. Bor, and the dig symptom discharge under the conuter, ... Messrs. Bor, and the dig symptom discharge under the conuter, ... Messrs. Bor, and the order of the distingt of the same plate which will be built his winter. She will be 48ft over al, with full be built his winter. She will be 48ft over al, 14ft fan, beam, and 5th draft, with an irron keel of 4 tons and 3 tons of lead inside. The cabin will have 6ft, head room and will be fluished in cherry. ... Mr. J. F. Powell will continue the business at Wankegan, Hi.
A NEW CUTTER FOR AMERICA. – Mr. M. Roosevelt Schuyler, former owner of the Y 1 ande, has lately purchased the five tonner brift a fairly in this winter, all built who being the fairst. Her dimensions are 83 fet, on the fairst, end the distribution of the stars, with a fairlie in 1854. The same year she won 15 prizzs out of 17 stars, all but who being first. Her dimensions are 83 fet, on the fairlie in 1854. The same year she won 15 prizzs out of a stars, all but who being first. Her dimensions are 83 fet, on the fairlie in 1854. The same year she won 15 prizzs out of the stars, all but who being first. Her dimensions are 83 fet, on the stars and the subler ones, soure of our sallor man will have to look sharp for cups next season.
XACH CUSHINS. – A correspondent asks for the addresses of maters of seats and cu-hious for yachts, odd no for wand hair.

WIDE AND NARROW CANOES.

<text><section-header><text><text><text><text>

equals it). But the true paddled, carried and lower of the nutive size enabling it to be paddled, carried and lower of the same size and the same site and the same site and the same size and the same size and t

wagons, is qualified to dispute the popularity of the cance. But any-thing which claims all these things with fifty per cent, more beam or a budred per cent. more trueboard or anything per cent, more stability, we cancelsts know to be a mistake. A bigger boat weighs more or it is supernatural, and as for deep bouts we blohlcans would make it less it supernatural, and as for deep bouts we blohlcans would make it less it we could. And hashy, to wind up the yarn and douse the glin, let me point out that the favorite size of cances is not that at which the A. C. A sets the Class B limit, but smaller, and that these favorite cances are built, not for for the races where sailing prizes are most freely open, but that the favorite the A. C. A. is not regulating this favor, and the Class A cances are growing fewer, although a good sailor in a Class A cance has three times the chance of prizes that he would have in Class B, therefore something stronger than A. C. A. rules is setting the tide in favor of certain sizes with the verage at about 14ft fin. to its fit, length and 30m. or little more of heam, with 10 or 11m. depth at ways. Are we A. C. A. men behind? We don't want more freeboarity and the flast or of or hear than our muscles and railroad porters and arifis, and sambasks and rocks and shoal landings will allow us, with good temper and to protainly. And for this self-denal I for noas while I sit on the. But I should be glad indeed if they all would come to camp and rule is set they ordered real cances and advertised their stops for sale, or when they ordered real cances and advertised their stops for sale, or when they ordered real cances and advertised their stops for sale, or when they ordered real cances and advertised their stops for sale, or when they ordered real cances and advertised their stops for sale, or when they ordered real cances and advertised their stops for sale, or when they ordered real cances and advertised their stops for sale, or when they ordered real cances and advertised their stops fo

our advertising columns. T. M. D. --If you wish to do accurate shooting you must use a cart-ridge shell fitting the chamber. Storn, Cockeysville, Md.- The legs of the puppies will probably come all right as they get older. INQUINER.--Stamford, Conn.--I saw a few bluebirds yesterday (Jan. 23) while on the street with an old genuleman, who gave me a point on a habit of this bird, which being new to me. I thought might also be new to others, so I will give it. He says "the buebird to essent migrate as our other song birds do, but they conceal themselves in not holes of trees and fence rils, where they pass the whiter in a sort of lethargic state." He claims to have observed them in this state during whiter, and gives this as a reason of their being the earliest bird in spring. Ans. The old gentleman was gulling you with imaginative nonsense.

The set of d in spring. Also, the out generating wis guing you with imaginative nonsense. KENSICO, Chappaqua, N. Y. --Will you kindly give the common and scientific names of ine fiss which I send to you by this post? It is a fair specimen of thousands recently taken in bait nets or cast up dead along the shores of the reservoir pond at Kensico, and is chiefly remarkable for the fact that the species seems quite unknown to the fishermen and sportsmen bereabouts. Nowe of the local fishermen many seasons of whiter fishing through the ide. The specimen sent has seen anything like it in the neighboring ponds or lakes during many seasons of whiter fishing through the ide. The specimen sent herewith was taken from the stomach of a pickerel. Those captured in bant nets invariably died almost immediately after being taken youth and dried condition defles a correct diagnosis. It may be a shad or an alewife (herring)--the saw-beily teils this much. If you can send a larger specimen, without its being dried up, we may decide. R. J. NEW ENGLAND FOX HUNTING.

THE morning breaks dull and lowering. Moisture is in the air and an inch of new snow covers the old and crusted mantle which lics upon the ground. Fetters of frost bind the earth, and the feathered game is protected by law and by the conscience of each right-minded man.

Is there then no use for the gun and the dog at this inclement season? The old fox hunters of New England will laugh at you if you ask this question. It is now that they take their pleasure. No matter how ardent they may be in their pursuit of birds during the season, it is to the fox hunting that they look forward all the autumn, and upon its delights that they reflect after the snows have melted and the waters have burst their icy bonds.

On a snowy winter's day, when the white flakes are softly falling, the old fox hunter is uneasy. He takes down his gun more than once during the day, counts his cartridges over and over, and looks over old Drive and Dame and the pup to see if their feet are right. If there should be an abrasion between the toes, or if the hard crust of a previous run has cut a pastern, he bathes the spot well in old beef brine. Probably he finds the dogs all right, for the foxhounds of New England as a rule are a tough and hardy race, and take good care of themselves. Game they are too, to the backbone, and we once knew one to run for half an hour with a steel trap fast to his hindleg. But he never left the track, nor complained, and when released followed on as cheerily as ever.

The morning breaks, the old pung is at the door before light, and the hunters with guns and dogs are soon off for the well known grounds where reynard during the night has been hunting. Before the old horse is fairly tied and blanketed, the mellow notes of Drive, and the shriller notes of his consort, mingle with the excited yelps of the pup, and we know that a track has been found.

Why speak of the remainder of the day; of the exhilarating music which salutes the ear, now loud, now faint, some-times passing entirely out of hearing, again drawing near, until while we listen entranced, the fox leaps the wall within twenty feet of us and vanishes from our startled sight before we can raise the gun. The dreamer will not make a successful fox hunter. Why speak of all the winter sights successful fox hunter. Why speak of all the winter sights and sounds of the fields and woods, sights and sounds that are seen only by him who goes a-foxing. He can tell you

how the chickadees and the kinglets swing in the branches of the cedar, how the black snowbirds and the tree sparrows tear at the heads of the weeds and squabble over the seeds that fall on the snow from the spreading panicles of the tall-stalked weeds; how the nuthatch corkscrews his way up the trunk of the tall forest trees, and what queer rolls the woodpeckers drum out on the dry branches. He knows too where the cunning old gray squirrel has buried his store of nuts, and understands the curious chuckling conversation which the bluejays carry on when they think they are quite alone. It is no use for us to tell of all these things, because all the old fox hunters know about them, and those who are not fox hunters won't understand them.

THE AUDUBON SOCIETY.

VERY slowly the public are awakening to see that the fashion of wearing the feathers and skins of birds is abominable. There is, we think, no doubt that when the facts about this fashion are known, it will be frowned down and will cease to exist. Legislation of itself can do little against this barbarous practice, but if public sentiment can be aroused against it, it will die a speedy death. The FOREST AND STREAM has been hammering away at

this subject for some years, and the result of its blows is seen in the gradual change which has taken place in public sentiment since it began its work. The time has passed for showing that the fashion is an outrageous one, and that it results very disastrously to the largest and most important class of our population-the farmers. These are injured in two ways; by the destruction of the birds, whose food consists chiefly of insects injurious to the growing crops, and of that scarcely less important group the Rapaces, which prey upon the small rodents which devour the crop after it has matured.

The reform in America, as elsewhere, must be inaugurated by women, and if the subject is properly called to their notice, their tender hearts will be quick to respond. In England this matter has been taken up and a widespread interest in it developed. If the women of America will take hold in the same earnest way, they can accomplish an incalculable amount of good.

While individual effort may accomplish much, it will work but slowly, and the spread of the movement will be but gradual. Something more than this is needed. Men, women and children all over our land should take the matter in hand, and urge its importance upon those with whom they are brought in contact. A general effort of this kind will not fail to awaken public interest, and information given to a right-thinking public will set the ball of reform in motion. Our beautiful birds give to many people a great deal of pleasure and add much to the delights of the country. These birds are slaughtered in vast numbers for gain. If the demand for their skins can be caused to fall off, it will no longer repay the bird butchers to ply their trade and the birds will be saved.

Statistics are as yet wanting to show the proportions to which this traffic has grown in North America, but we know that it reaches well into the hundreds of thousands. Some figures published in FOREST AND STREAM of Aug. 4, 1884, showed that in a three months' trip a single taxidermist collected bird skins to the number of 11.018, which, including specimens too badly mutilated for preservation, and skins spoiled in the making, would perhaps represent a destruction of 15,000 birds. This same person states that he handles annually about 30,000 bird skins, almost all of which are used for millinery purposes. A single middle man who collected the spoils of the shooters in one small district, brought to the taxidermist's in four months about 70,000 birds.

The birds of the fields, the birds of the woods, the birds of the marshes, and those of the sea, all suffer alike. It is needless to repeat the oft-told story of destruction. How can we best go to work to combat this great and growing evil, what means can we best employ to awaken at once popular feeling against it?

We desire to enlist in this work every one who is interested in our birds, and we urge all such to take hold and assist us.

In the first half of this century there lived a man who did more to teach Americans about birds of their own land than any other who ever lived. His beautiful and spirited paint. ings and his charming and tender accounts of the habits of his favorites have made him immortal, and have inspired his countrymen with an ardent love for the birds. The land which produced the painter naturalist, John James Audubon, will not willingly see the beautiful forms he loved so well exterminated.

We propose the formation of an association for the protection of wild birds and their eggs, which shall be called the Audubon Society. Its membership is to be free to every one who is willing to lend a helping hand in for-warding the objects for which it is formed. These objects shall be to prevent, so far as possible (1), the killing of any wild birds not used for food; (2) the destruction of nests or eggs of any wild bird, and (3) the wearing of feathers as ornaments or trimming for dress.

To bring this matter properly before the public at large, we shall employ every means in our power to diffuse information on the subject over the whole country. Those who are willing to aid us in our labors are urged to establish local societies for work in their own neighborhood. To such branch societies we will send without charge circulars and printed information for distribution among their neighbors. A little effort in this direction will do much good. As soon as the association shall have a membership and shall be in position to organize and shall have attained an existence, we will hand the books and any funds which it may have, over to its members, who will thereafter take charge ot it.

The work to be done by the Audubon Society is auxiliary to that undertaken by the Committee of the American Ornithologists' Union; and will further the efforts of the A. O.U. committee, doing detail duties to which they cannot attend. Those who desire to join the Audubon Society, established on the basis and for the purpose above set forth, should send their names at once to the FOREST AND STREAM, 40 Park Row, New York.

A SUPERINTENDENT OF PROTECTORS.

THERE are sixteen State Game and Fish Protectors in New York. They are subject to the supervision and direction of the Commissioners of Fisheries. The Commissioners are required to receive from each of them a monthly report of all his official labors, and are further required to certify to the Governor the proper performance of the duties of each protector as well as to report the delinquencies of each. This involves a vast amount of labor, which falls on the secretary of the Commission. It consumes his time. For it he receives no compensation whatever, save that he is paid by generous abuse whenever the public imagines it has a ground of complaint.

The present secretary is Gen. R. U. Sherman. With hightest appreciation of his faithfulness, public spirit, the and efficiency, we suggest that he should be relieved of the care of superintending the protectors, and that that duty should devolve upon an official expressly appointed to the work and paid for doing it. Such a special man could give his whole time to the cares of the office-and they would demand all his time-and his duties being confined to this single branch of the public service, hc could more effectively direct the protectors, watch them more closely, and double their efficiency.

The next important step in game protection at Albany should be the passage of a bill creating the office of State Superintendent of State game and fish protectors. Then put in a man known to have a deep interest in the cause of game protection, and possessed of energy, integrity and executive ability.

Assemblyman FLOYD J. HADLEY, who was sent to Albany on the platform that the hounding law must be repealed, is making an active effort to please his constituents. He attended the monthly dinner of the New York Association for Protection of Fish and Game in this city last Monday evening, and over the champagne talked the club into an endorsement of his efforts to repeal the law. He did it by making them believe the silly statements that more deer have been killed by still-hunters this fall than in former years by still-hunters and hounders combined. If the members of the society had any intelligent conception of the condition of affairs in the North Woods, they would not have lent them selves to such a pernicious scheme as the restoration of deer hounding.

THE REPORT ON THE YELLOWSTONE PARK .- The Secretary of the Interior sent to the Senate on Feb. 1 the report of Mr. W. Hallett Phillips, who was last summer appointed special agent of the Department to inquire into the condition of the Park. As our readers will remember, this report was published in FOREST AND STREAM of Dec. 3, 1885.

ADIRONDACK DEER .- It has been suggested that those who are interested in preserving the Adirondack deer from the dogs should send to their members at Albany marked copies of the FOREST AND STREAM and other papers which print matter relating to the subject.

TO THE WALLED-IN LAKES. X .--- UP SWIFT CURRENT.

THE morning brought more wind, but the sun shone bright and clear from a sky whose brilliant blue was patched here and there with white clouds.

We were to-day to start on a two days' excursion to the Swift Current Lakes, and having seen them and the mountains about them, to return to St. Mary's and then to depart for the Agency.

Our scanty outfit was speedily collected and put on the pack horse. Blankets, bacon and bread, with a frying pan, bucket and a tin cup or two made up the load, and we were soon stringing out over the level plains toward Swift Current.

Something has already been said about this rushing torrent. Although neither very deep nor wide, it is not always an easy stream to ford because of its swiftness and the character of the bottom. Over the great smooth boulders, about which the waters foam, a horse has to pick his way with great care if he is to keep his footing, and the rider expericnces a feeling of relief when his animal, after slipping and staggering through the flood, gets his forefeet on the dry gravel of the bank.

It happened that I rode down last into the water and just before me was the pack horse, which Yellowfish was lead ing. The bank on the other side was almost a cut bluff for twenty or thirty feet, but there was an easy trail leading up I was close behind the pack horse, which hung the bluff. back, and rode out of the water above the trail, rather than keep my horse standing in the stream until the way should be clear. Just as I had got clear of the water I saw the pack horse rear as if to put his feet on the bank and then fall over backward, nearly pulling Yellowfish out of the saddle. The beast fell squarely on the pack and the force of the current swcpt him along, rolling him over half a dozen times, giving him another turn every time he tried to regain his feet, until at length, exhausted, he lay still, with nothing but his head and half the pack out of the water. By this time we were all off our horses and down by the water's edge, and Yellow fish ran into the stream and caught the lariat and we dragged the dripping beast to shore and up the bank. From every corner of the pack the water was trickling in capacious streams, and it was plain that our bedding was well soaked.

While we apostrophised the unlucky author of our misfortune in no measured terms, the pack was jerked off the saddle and its contents exposed. The blankets were wrung out and spread in the sun to dry and the damp bread treated like fashion. Then we sat down and while the horses fed and the blankets dried we grumbled.

Yellowfish said: "Some person is doing this. First rain all the time, then fall in the creck. Bad.

"If that is so," I said, "let us make a present to some god. which one shall it be, Appekunny?"

"The Sun, I suppose," he replied.

So we took a couple of the damp biscuits, and I gave Appekunny a picce of tobacco. Then he sang a little song in which he magnified the Sun, and prayed, saying: "I yu I yu Napi, Kim-o-tit, Kim-o-tit. Hear Sun, hear Natose, Old Man, pity, pity. Look down. Many days ago we started out, and all the time we have had bad luck. First plenty of rain, then fall in the creek; misfortunes all the time. Have pity, Sun. Give us good. Take care of us. Let us make a lucky journey and kill plenty of meat. Pity. Pity." And we all murmured Kimo-tit Kim-o-tit. Then Appekunny put the presents up in a little tree and came back, and wc smoked and waited for an hour or two longer, when the things, having become a little dry, we packed up and started on.

The way is merely a hunters' trail leading into the mountains; but it shows a good deal of use, and the Kootenays had evidently been trapping here recently, for their fresh horse tracks were often seen. Two or three miles above the Kootenay camp we saw where some Canadians the previous year had cut a large quantity of timber which, during the high water in spring, they floated down to the St. Mary's River and so over the line. A United States Deputy Marshall was sent after them, when the Piegan Indian Agent learned what these men were doing; but before he reached the spot they had gone. It is said that they took out many thousand feet of timber, to which, of course, they had no shadow of right. Where it comes out of the hills the valley of Swift Current is wide, though it has no true bottom, the terraces or benches extending quite down to the water's edge. It is fitly named Swift Current, for its fall is very rapid, and there are no quiet pools or reaches of water near where it pours into the St. Mary's. The water is cold as ice.

Six or eight miles from the stream's mouth we entered the gateway of the mountains which it drains. Hitherto the ridges which bound the valley had been rather low and rounded and timbered to their summits; but now we passed on the north a long, knife-edged mountain, showing on the side toward us only a bare pink and gray rock slope. This was immediately succeeded by one much more lofty and covered in part with snow. On the south side of the valley rosc one equally high, but showing little snow on its exposed slope.

Before we could see these mountains to their bases, however, we rode over a little ridge in view of the lower of the Swift Current Lakes. These lakes were discovered a few years ago by a hunting party, and have been visited only once or twice by white men. They have been reported as

being five in number. The lower one is perhaps a mile in length and quite broad. Those above it are smaller, but still quite considerable.

The water of Swift Current is markedly different in one respect from that of most mountain streams. These are usually pure and as transparent as crystal. Swift Current, however, though by no means a turbid stream, is still somewhat roily, or at all events very far from clear, and where the water is a foot or two deep it is impossible to see the bottom. The color of the water is pale greenish, and its aspect, by the time we had reached the lowest of the lakes, led me to suspect the existence of glaciers at the head of the stream

The bed of the stream is on the south side of the valley, which is here rather broad, and on the mountains which rise above it, the spruce timber comes down to the very edge of the water. To the north of the stream the slope is much more gradual, and there is at first but little evergreen timber, its place being taken by quaking aspen and cottonwood brush. Above the lower lake the immediate shores of the stream are low and marshy, and overgrown with high grass and clumps of willows-fine feeding ground, one would imagine, for moose and white tailed deer.

As we advanced, the confines of the valley drew closer and closer together, and the mountains became more abrupt. Finally on the north they became mere vertical walls of from three to four thousand feet in height, with a talus of fincly broken rock at the base perhaps 500 feet high. At intervals of a mile or less, narrow cañons opened out from between the mountains, leading back into wide amphitheatre-like basins scooped out in time long past by the action of the ice. On the south side of the stream the mountains, though seemingly less steep, were higher and-because we could see more of them-more grand. Here on the northern slope of the mountains snow was much more abundant, and from every drift fell a long line of white waving mist, marking the course of some cascade down the nearly vertical side of the mountain. A few black pines clothe the lower half of the talus slope, but higher up nothing grows save occasionally in a ravine, worn out by some torrent, a few stunted willows maintain themselves, and here and there in a crevice of the rock a spruce strives to draw sustenance from the flint.

Ice is present in many of the ravines, but nowhere along the lower lakes did I see any that appeared permanent. As we advanced, however, and could see further up the valley, a superb glacier came into view. It lies on the south side of the stream and forms the source of a sixth lake, which is an arm of the fifth, which has, until now, been considered the uppermost of the Swift Current Lakes.

We made camp below fifth lake, in a little patch of green timber, it being thought that further up the stream there would be found no grass for the horses. Near this point was an old Blood camp of three lodges which had been deserted about six weeks ago. The bones about the camp showed that they had killed some sheep and goats, and not far off was a spot where, from the great quantity of hair scattered about, we saw that they had been tanning sheephides.

Before doing anything else, Appekunny and I went up the trail to see the falls at the outlet of fifth lake, for we had heard them described in glowing terms as being one hundred feet high and of great beauty. We were greatly disappointed in them. They consist of a series of broken cascades, each about twenty-five feet high, the stream itself being about twenty feet wide and flowing between vertical walls of rock. The lake itself, walled in as it is by lofty mountains, is very beautiful. From an elevated point we could see something of the sixth lake, the greater part of which, however, concealed behind a great mountain. The waters of this lake are green and milky-true glacier waters, in fact-and a well defined line in the fifth lake shows where its clear waters and the milky ones of its arm come together. Very impressive is the superb mountain which lies between fifth and sixth lake, and partially conceals the glacier which gives origin to the latter. Its base in sections is triangular, two of its sides facing the lakes being cut away vertically. Its acute angle is directed a little south of east. Along its lower third it is thickly clothed with brush, willows and alders and aspens. Above this is a narrow belt of evergreens. Still above, rise a series of narrow ledges one above another, and on each grow a few pines. These ledges indicate the different strata of rock which have weathered off from above. These rocks are all dark in color, black and dull green and dark red and hur white snow, gave the mountain a most varied aspect. Behind this mountain and over sixth lake the glacier was visible. We could see at least a mile of its width, and how much was hidden from view we could not conjecture. Its course, if uninterrupted, would make it a part of another great glacier which lies at the head of the main chain of Swift Current Lakes. The thickness of this mass of ice we cstimated at several hundred feet, but as our efforts to reach it were unsuccessful, we can only guess at this. It extends back a long way on the mountain side, quite to the summit, in fact, and is broken in two by falling over a termendous cliff, the height of which is greater than the thickness of the ite, so that the face of the rock is visible. We spent a long time examining the mountain sides, on which we detected many little white dots, which we thought might possibly be goats, but we could discover no motion in any of them. Our fire that night was built in a little opening among the spruces, and as it burned high after dinner, the tips of the spruces, and as it burned high after dinner, the tips of the spruces, and as it burned high after dinner, the tips of the spruces, and as it burned high after dinner, the tips of the spruces, and as it burned high after dinner, the tips of the spruces, and as it burned high after dinner, the tips of the spruces, and as it burned high after dinner, the tips of the spruces, and as it burned high after dinner, the tips of the spruces, and as it burned high after dinner, the tips of the spruces, and as it burned high after dinner, the tips of the spruces, and as it burned high after dinner, the tips of the spruces, and as it burned high after dinner, the tips of the spruces and as it Above this is a narrow belt of evergreens. Still above, rise a series of narrow ledges one above another, and on each grow a few pines. These ledges indicate the different strata

overhanging boughs crackled sharply in the heat. On sticks set in the ground about were our damp garments smoking in the warmth. The tent, swung on a rope between two conven-ient trees, stood a few yards back from the fire, and as I surveyed the camp from my couch of dry pine needles on the opposite side of the fire it had a wonderfully comfortable and homelike aspect.

Even an old dweller in camps like myself is sometimes surprised by the very little it requires to make a comfortable home in the wilderness. Blankets and fire are all that is needed. You can really carry your home about with you on your saddle. The old camper instinctively selects the place which each picce of his camp furniture shall occupy almost before he has unsaddled his horse. The fire must be there because there is no chance of its spreading and there is a convenient log or rock where he can place his dishes while cooking. Here is the place for the bed, a smooth spot and level and near the fire, and he rides up and unsaddles there so that he will not be obliged to carry saddle and blankets from one place to another. His slender stock of "grub" is placed among the branches of a tree out of the way of any prowling fox, coyote or skunk that may visit camp during the night, or if no tree be at hand, is put under his head, so that if it is disturbed he will be likely to know of it. The water bucket has its place and so with every article he possesses. If he has to find anything in the dark he knows just where to put his hand on it. Needless to say that he takes good care of and keeps close watch over his horse, on whom his very Usually the animal is allowed to wander life may depend. hobbled or with his picket rope dragging until the approach of darkness, and then he is brought as close to camp as possible and picketed, if the surroundings will admit of it, where the grass grows thickest and best.

One wants to be as comfortable as possible at all times, and I have not the slightest sympathy with those who delight in making hardships for themselves. But when it is necessary to travel light, to go insufficiently provided, to sleep with a single blanket, to eat meat straight, or to get along for days or weeks on bacon and unleavened bread, a man, if he only looks on the cheerful side of things and laughs at hardships, can have a lot of comfort and can take a vast amount of pleasure out of this life. But I do hate to have to travel at night and to lie by without a fire during the day. However, those days are about over now.

Our talk that night was of the superb mountains about us, of the great ice masses that furrow their side, and of the possibilitics of meat for the morrow. As we talked, the wind howled down the valley and made curious sad murmurs through cañon and ravine, while the tops of the spruces tossed themselves to and fro sighing in an undertone that was but faintly heard; but our fire burned bravely upward, for where we were the wind could not reach us, and it was warm and bright and pleasant. The pipes kept going well, there was plenty of wood, and we lounged about and chatted or dozed, until at length one by one we crept into our blankets and the wind sang our lullaby. Yo

XXIII.—AURI SACROFAMES. L OAFING about camp, picking berries and spring hunting water showed no signs of a let up and we were obliged to content ourselves in idleness. One night, just after sundown, we tried the white flies in the creek, but there was not a breeze stirring, and while we had a few small strikes from haby bass we had larger ones in the proportion of about six hundred to one of the former, from the mosquitoes from the marsh. It would have been an interesting spectacle from the shore, had any one been there to see, as we made a cast with one hand and at the same time a slap on the face with the other, then shifted the rod to the left hand to crush a patriarch which had settled on the off side and again dropped the rod altogether to smite the hoardes upon our hands. It was too much to be enjoyed at a single sitting, and we got out of the creek into the lake as rapidly as pos-sible.

"That reminds me."

180.

180. DOCTOR R and myself were duck shooting from a double battery under the north shore of the Great South Bay, near Patchogue. The Doctor observed a single broad-bill coming up from the leeward and said, "Lie low and see your uncle roll this fellow over." On he came and at the same time came another on my left which the Dector did not see. I killed the one on my left, while the Doctor emp-tied both barrels at the one he was to knock over. Recover-ing from his surprise at seeing his bird rapidly disappearing and seeing the water covered with feathers, he slapped me on the back and said, "Look at the feather bed I knocked out of that fellow." Imagine his surprise and consternation when I pointed to my dead bird and told him that was where his feather bed came from. S.A. NEW Yorm W YORK

181.

181. "Governor" David S. Crandall, formerly editor of the Lockport Courier and for many years well known in Western New York. used to tell a story of the great meteoric shower, which fell, I think, in November, 1833. He was at that time living temporarily upon a farm which he had purchased, lying at a few miles' distance from Lockport; and among his dependents was a chore boy twelve or foorteen years old. On the night referred to Mr. Crandall was engaged in writing after the rest of the family had retired, and saw through the window the shower of meteors. He aroused his wife, and then the boy, requesting them to come to the door, where the boy was at first struck dumb with astonishment, thinking that all the stars in heaven were falling throuch space. After a little he turned to the North star, and his courage returned. "By gosh!" he shouted, "the old 'dipper' hangs on yet, don't ste?". KELPE.

WILD ANIMALS IN CONFINEMENT.

Notes that the series of the series and series for the first series of the series of t

"Do you think it possible to wholly change the habits of any wild animal by captivity so that in the course of time they will become thoroughly domestic in all their character-ities?" istics

any wild hear of coroughly so mate in all their characteristics?"
"It has been done in the case of the fallow deer, but I am inclined to think that it was an easy matter to do so. They are essentially a park deer. From time immemorial they noblemen in Europe. I fancy it would be difficult to find out anything about their habits in a wild state, if in fact they ever were in that condition. Our native deer do not take kindly to captivity any more than do grizzly bears, wholes, panthers, and other animals of very wild natures. Another peculiarity about deer that I have noticed is they do not breed as readily in captivity as they do in their wild state. Observation has taught us that this is the fault of the bucks more than the does. The former seem to lose their amative spirit. Still we succeed in breeding a good may deer. A doe in captivity will generally produce one fawn at a birth when she is three years old, and two frequently thereafter; when wild, they breed at two years of age, but this is rarely the case when in captivity. Experience has shown that a doe is not strong enough to be allowed to breed at two years of age. If allowed to, she would undoubtedly drop a weak fawn—one not likely to be not strong affection for her young, and she will defind it will great energy. Just before the birth of the fawn she will get energy. Just before the birth of the fawn she will be seems to take a fiendish deltach in trampling and goring it to death. At the end of about four months, if the fawn sher wills, and they readily succumb to civilizing intulences. All will defind it will devel the dimense that the eard of about four months, if the fawn sher will defind the they do death. At the end of about four months, if the fawn sher the young fawn as soon as it is born if he can get at it, be young fawn as soon as it is born if he can get at it, be young fawn as soon as it is born if he can get at it, be young fawn as soon as the solar in the menagerie. They young that haves been on root the fawn sher they all defi It has been done in the case of the fallow deer, but I am

ing, as far as we know, on a very slim allowance of food. While under our care they lose that habit, and feed right along all winter as voraciously as any of the rest of the ani-mals. Little difference is made in the habits of wolves, foxes, coons and such animals. Foxes and wolves born in captivity, however, seldom thrive well. Rarely one of them is born without some disease, the most prevalent form being that known as rachitis. Even it they are not afflicted with this disorder few are perfect in their formation, being knock-kneed and otherwise deformed. Those born with rachitis, which, by the by, is a scrofulous affection of the spine, "arely attain a full growth. The disease is generally fatal."

A CAMP HUNT IN MISSOURI .- II.

<section-header><section-header><section-header><text><text>

<text><text>

camp fires that night we enjoyed no little sport at the expense of Mr. Burton and his quinine remedy for buck ague. By the way, the party got the laugh ou your correspond-ent on one occasion. There was a general dread among the less experienced of the party in regard to getting lost in the interminable swamps where much of the hunting was done. This feeling was not shared by me, as a long experience had made me feel pretty safe in the woods, particularly as I make it a rule, in unknown woods, to hunt by courses and landmarks. We were camped near a road that ran almost due north and south for many miles and was the only road of any consequence in the country. I boldly asserted that no one need fear getting lost if he would hunt in reference to that road. If he was to the west of the road, by traveling directly east he would certainly strike the road, and if hunt-ing on the east of the road. A compass, the sun or the stars would readily give one the points of the compass. It fre-quently happened, however, that night and darkness would overtake belated numbers of the party out hunting, and sig-nal guns were fired at camp for their benefit. Two of the party lost their course one night, and the Mississippi River only convinced them they were traveling east instead of west They got beyond the sound of our signal guns. The party accused me of making my gun hotter one evening firing dis-tress signals than I ever made it shooting at game. Three of us had gone up the road about three miles from camp one cold, cloudy afternoon, on a turkey hunt. Leaving my com-panions near the road, I followed a dim path down into a dense forest to the west of the road. This forest was known to extend, without a human habitation, for ten or fifteen miles. After following the path about a mile, my dog struck the trail of a flock of turkeys, as I supposed, and ran off at right angles to the path I was following. In momen-tary expectation of getting as that the turkeys, I followed the course the dog had taken for some distance, and no

seeing them, I turned to retrace my steps to the path I had left. It was getting late, and thinking I could save time by it I turned my course so as to strike the path some three or four hundred yards nearer the main road than where I left it. Owing to the darkness of the evening, the dimness of the path and the fresh fallen leaves that covered it in places. I crossed the path without knowing it. I had failed to take a compass with me and the sky was obscured by thick clouds. It was cold and night rapidly approaching. In my search for the path I had left I came upon a trap set for wild hogs. Despairing of finding the path, I set out for the road where I had left my two companions. I knew I was about a mile or mile and a half west of the road and chose, as I supposed, a course due east. After a rapid walk of half an hour as near due east as I could judge without compass or sun or stars, I found myself back again at that identical hog trap. I had made a circuit of perhaps two miles and came back to the very spot I started from. I recognized the situation at once. I was not lost; of course I was not. I knew right where I was, but concluded I would let my friends know also, and I wasted more ammuni-tion right there letting my friends know where I was than I wasted in all the hunt besides. A cold rainy night in an un-known swamp, miles from any human habitation, is not an inviting prospect. I did not venture into that swamp another cloudy day without a pocket compass.

NASHVILLE Tennessee

HUNTING AT ARMY POSTS.

HUNTING AT ARMY POSTS. A BOUT a month ago a brief note was sent from this office to several of the outlying posts of the regular army, asking for information about the use of the Spring-field shotgun, which is issued for use by the men in their leisure hours. The object of the inquiry was to see how far these guns were successful in the purpose of their mannfac-ture and issue in keeping the company and post larder well supplied with game delicacies in season. The responses from the army posts have been general and prompt, and show that the members of Uncle Sam's scat-tered frontier patrol force have not failed to take advantage of the opportunities for field sport thrown in their way. The leiters speak best for themselves, and the few we are enabled to give in this issue show that from the Canadian to the Mexican border there is always some manner of healthful exhilarating sport to be had: *Editor Forest and Stream*:

The letters speak best for themselves, and the few ver are not headed to give in this issue show that from the Canadian to the Mexican border there is always some manner of healthful exhilarating sport to be had:
Editor Forest and Stream:
The work the more energetic of us manage to make fair bags in a senson, this can hardly be called a game country. The hole vast expanse is prairie, more or less broken with cover for game only in the sparsely timbered bottom of the Misson available these timbered bottoms with the habits of a rabbit, lying perdu all day, feeding at ingit, not when disturbed running away with rigorous bottom do the Misson of the same of the starbed transity of these are brough to bag, though some of our indefatigable youngsters actually well to the another of the starbed transity of these are brough to bag, though some of our indefatigable youngsters actually well them down where the same sit or when distarbed running away with rigorous braceoons offered for sale by Indians, but these predatory and skunk, and I have (seen the skins of one or two reaccoons offered for all by fullians, but these predatory in which it have ever served. We have but one indigenous game bird, the sharptailed grouse (Pediacetes phasianellas). In August and September it gives the most prefect sport, lying well to the dog and acting in all respects like the score it grows they are great perchers and hearly all that are bagged are ignominiously potted from trees. Yes, I do the the redus defaused down are very wild and will not be reduing season. In 1885 my bag was 76 and in my hunting book is this note: "It is estimated that over its thousand grouse were killed by the troops at fort Sally between Aug. I and Dec. 81. The company hunters are in usnally with a round." The shore the dore and the buds of the stars the shore of their number. The S5 was a bad we are they dort away like individuel to 358 and the company hunters are in usnally with a round. The veloped them acting the trea drows down in the resolute they dort away

Forr SULLY, Dak. Ter., Jan. 81. Editor Forest and Stream: In answer to your letter of Jan. 9. I will state that I have only been here since the 14th day of June last, the garrison now here relieving that of the Twentieth Infantry on the date given, and consequently am unable to give as correct and detailed account as I would wish. Early in the season I made an endeavor to find out all I could about the game in this vicinity in order to write to a friend in Chicago that it would pay him to make me a visit, he was anxious to know all about the larger game. I could not find at that time that such game was in sufficient quantities in the immediate vicinity of the post, to warrant my writing him that a suc-cessful hunting trip, such as he wanted, could be made near this place. During the winter several hunting parties have been out, but with little success. One man though, belong-ing to Company I, Eighteenth Infantry, who either under-stands hunting deer or is more fortunate than others, has been quite successful so far, killing seven deer. Citizens who live at a distance from here have kept this place very well supplied with venison. Wild turkeys are found in large quantities at a distance from the post, but seem rather hard to get as the supply has not been well kept up. Chickens this year are very scarce, none been brought in that 1 know of, nor have I seen one. Ducks are plentiful here and many have been killed. Quail are in abundance. The slotguns referred to in your letter, so far as my com-pany is concerned, are in constant use, and much of the smaller game is bagged with them. CARNOLL H. POTTER, Captain 18th Infantry, Commanding Post. Fort Gueson, Ind. Ter., Jan. 34.

FORT GIBSON, Ind. Ter., Jan. 24.

Editor Forest and Stream: I take great pleasure in replying to your request of the 9th inst., but as I have only lately been assigned to this post my information is derived, not practical. My first hunt is to take place day after to-morrow. The men inform me that there is quite a large supply of small game here. The list includes quail, both California and Messina; plover, meadow lark, curlew, rabbits, cotton-tailed and jack, etc.; and in large game we have deer, black-

FOREST AND STREAM.

tailed and white-tailed; antelope, mountain lion, black hear,

tailed and write-tablet, anterope, international trained and write-tablet, anterope, international wind pig, etc. South of us, ahout seventy miles, is a mountainous "no man's land," through which Indians from both sides of the Rio Grande huut; and although dangerous to hunt there in small parties, it pays very well to do so, provided, as above hinted, you can protect yourself. We have a party out there at the present time. I notice you wish a statement as to merits of the Spring-field shotgun. It is a very good gun for a single-loader, but in our troop not much used, as we have four double-barrelled guns of good make, which the men prefer to use, as a general rule.

refled guiss of good make, where a solution of the solution of

('AMP PENA COLORADO, Tex., Jan. 26.

Editor Forest and Stream:

Editor Forest and Stream: In reply to your communication of the 9th inst., I would respectfully state there is an abundance of deer, turkey, geese, ducks, blue quail, etc., around here in their scason, and the shotguns referred to are used extensively by the whole command. E.H. LISCUM, Captain 19th Infantry, Commanding.

FORT RINGGOLD, Tex., Jan. 23.

Editor Forest and Stream: Your letter of the 9th inst. has just been received, and in reply I have the honor to state that game—wildfowl and quail—is plentiful in this neighborhood, and the men in spare time bring in a good quantity. The Springfield shot-guns are used when double-barreled guns of larger bore can-not be obtained. The guns issued not carrying sufficient charge. J. H. BRADFORD, Captain 19th Infantry, Commanding Post.

Fort BROWN, Tex., Jan. 28.

Forr Brows, Tex., Jan. 28. Editor Forest and Stream: Your note of 9th inst. is at hand, and in reply would state that the large game, such as deer and antelope, have almost entirely disappeared. A few deer have been killed in the vicinity of the post, and they by hunters and trappers. The only small game we have are ducks (mallard and teal) and the willow grouse. The ducks are not very plenty, and we only get them during the fall flight south. The grouse are with us the year round, and occasionally give good sport. This part of Nebraska is filling up so rapidly with settlers and farmers that I believe the grouse will increase. The corn, wheat aud outs fields give the young hirds cover from hawks and other destroyers of small game. The Springfield shotgun issued by the Government to the troops is used by the enlisted men almost exclusively, and with fair success. For a person who has been accustomed to an S¹₂-pound Scott double gun the Springfield would not be a success. The Springfield is a hetter gun for the enlisted men, for the reason that few of them are good wing-shots. Jack rabbits and the small bush rabbits are found in some places along the streams. The bush rabbits are plenty. There are no quail in this part of Nebraska. D. Fort ROBLYSON, Neb., Jan. 26.

FORT ROBINSON, Neb., Jan. 26

Editor Forest and Stream:

Leditor Forest and Stream: Replying to your letter of 9th inst., I would state that there is plenty of game to be had in this region, such as deer, prairie chicken, wild geese and ducks. The Springfield shot-gun is much used, and is good at short distance only. The rifle is mostly used in deer hunting. Supply of deer and chickens unlimited. J. N. G. WHISTLER, FORT BUFORD, D. T. Jan. 28. Colonel 15th Infantry, Com'd'g.

 Editor Forest and Stream:

 Yours of Jan. 9 to hand this morning. There is no game on Mackinac Island, or in the immediate vicinity of this post.

 GEO. K. BRADY, Brevet Lieut.-Colonel.

 FORT MACKINAC, Mich., Jan. 20.

Editor Forest and Stream: The commanding officer directs me to acknowledge the receipt of your communication of the 9th inst., and in reply to say that the supply of game in this immediate vicinity is limited to a few rabbits, and in the spring and fall to migra-tory ducks. The Springfield shotguns are used frequently by the men, and they seem to meet with fair success in their use. First Lieutenant and Adjutant, 9th Infantry.

FORT D. A. RUSSELL, Wyoming, Jan. 21.

Editor Forest and Stream: In reply to your favor I would say that game in the neigh-borhood of this post consists of deer (common red), antelope, jack rabbit, cotton-tail rabbit (a variety of hare), geese, ducks, prairie chickens, plover and snipe. Elk and buffalo have practically disappeared. In their season ducks, prairie chickens and plover are abundant and furnish sport and an agreeable change in the army ration for all. Wild geese in immense numbers frequent the wheat fields of Burleigh county, on the east side of the river (we are on the west side) and a few drift over the post during the fall auonths.

uonths

the west side) and a few drift over the post during the fall numbe. The Springfield breechloading, single-barrel shotgun has been furnished to the enlisted men of the army for hunting purposes, and they do good execution. The Parker, how-ever, is the general favorite among sportsmen out this way. The writer has used a number of different makes, hut has found the Parker the most satisfactory for general shooting. Setters are generally employed—Gordons, red Irish and English. A good retriever is a necessity in duck season, and is often extremely convenient during the early chicken shooting, as the wounded birds can readily conceal them-selves in the thick prairie grasses found everywhere in the cooleys, ravines and dry creek hottoms, which are the haunts of the coveys in the early autumn. Later in the season the chickens frequent wheat stubbles and "sod" cornfields and the berry patches along creeks and springy runs. The writer was surprised one day last autumn, while wading through a recedy hayou (an old bed of the Missouri River), by finding evidence of beaver. Afterward several houses, with a winter's supply of food piled up in the creek near by, were found. Very few of these animals are left in this section of the country. Raccoons are beginning to put in an appearance, and an attempt has been made to introduce

quail. It is very doubtful whether they can survive the

quall. It is very doubtful whether they can survive the severe winters. Owing to the thick growth of willows along the banks of the Missouri River, it is very difficult to get at deer, and if dogs are not used, they will probably be abundant for many years to come, though high water is apt to drive them to the hluffs in the spring, and they are then an easy prey for law-less pot-hunters. It is to be hoped that with the admission of the Territory as a State, more stringent game laws will be adopted and faithfully executed. — Ducks and wild geese are shot in passes generally, though often boats are used on the lakes and wading done in the wet marshes. Mallards, teal, widgeons, scaup, redheads, spoonbills and other varieties are met with, but the two first named make the longest stops with us and afford the most sport. Marvelous stories are told by many of our sportsmen of the wagonloads of ducks killed every fall at Long Lake, which is about thirty miles southeast of the post; but the writer not being a wagonload sportsman cannot speak of his own knowledge on that subject; he can vouch, however, for the satisfactoriness of the early fall duck shooting in this neighhorhood. The air is dry, clear and bracing, the scenery yaried and enjoyable, the birds plenty. What more could be desired? — Witer Norther SABE.

FORT ABRAHAM LINCOLN, D. T., Jan. 25.

THE GAL FOR ME.

DANVIS, Jan. 3, 1836.—Editor Forest and Stream: Mrs. Lovel's rag bag lately gave forth the inclosed. S. L. appears to have been singing with some rhyme and more reason, to himself in the woods, for the lines are scrawled in pencil on the margin of a crumpled copy of the Vermonter that he had evidently carried in his pocket for gun wadding. Yours truly, H. MUMPSON.

THE gal that treats my dawg aright,
- On, she's the gai for me:
When I come off the hills las' night,
Consid'able tired, for me.
And my dawg, the same was he,
I saundered into Pepperells'
An' sot ri' daown mongst supper smells
To rest me for awhile.
'Twas there the slickest gal I see
An' she hed jes' the cutest smile!
An' she shed it onter me.
On ter the crane the samp pot hung
A bubblin' merrily,
An' as towards her it she swung
So low an' sweet a rhyme she sung,
A kitchin saint seemed she,
With lips an' cheeks like piny blows,
An' hair like yaller silk,
An' pas' describm' eyes an' nose.
An' when she fed me samp an' milk,
Till heart and stomerk was full 's a bee
O' sweets in a July basswood tree,
Then thinks sez I to myself sez I,
"You air the gal o' the world for me!"
Jes' then ol' Drive come sneakin' in, An' curled hisself the fire beside,
An' she commit'a weeked sin—
She kicked him with her pooty foot
An' cried, "Git aout, you nasty coot!
Haoun' dawgs I never could abide."
0
Kicked the dawg 't hes fellered wi' me
Till it ain't me an' him, but we!
Then thinks sez I to myself sez I,
"You ain't no gal for me. Good night!
If we was wed an' hed some chicks
You'd be a givin' them yer kicks
When you wa' n't kickin' of my haoun';
An' if he an' them wa' n't handy raoun', Like 's not you'd be a cuffin' me.
The gal that treats my dawg aright,
Oh, she's the gal for me."

THE LYMAN SIGHT.

THE LYMAN SIGHT. Exitor Forest and Stream: The your paper of Jan 21 "Backwoodsman" has said a fitte more about the middle sight, and has given a rule for sign my rear sight. I have said enough on the middle sight question in the Forest AND STREAM of Dec. 81, but I must object to this rule. "Backwoodman's" system of a ining and only apply to rifles of the flattest trajectory, and with any rifle it would not give very accurate results at short distances. The center of the aperture of my rear sight has a degree of light which is about the same as the light which is present outside of the sight. This light gradually dimin-ishes as the rim of the sight is approached, and quite near the rim the light is rather poor for aiming purposes; so that a partridge is to 'lose his head' the chances are that the shooter will have to fire more than one. The center of stronger light partly explains why the eyer the rim the light is partner than down. The ordinary small peep sight gives a degree of light which several shades dimmer than the existing light outside of the sight. In the Forest AND STREAM of Dec. 31 Mr. "L." wight which I was pleased to see, and it is, no doubt, the eyer period of fague from the 3^t of an inch, which is the full size of the sight to the center of the aperture might, however, mislead. His mathematics are correct, but it will of the of gure from the 3^t of an inch from the full size of the soft to the event the 3^t of an inch from the full size of the soft to the event of the head of the front sight, and her trying "Backwoodsman" method at fifty yards, by aiming from one extreme of the aperture to the other, the bullely be only about three inches apart. In other words, with the fixed purpose of getting as far away from the bulls or and site to the sevent the sight on, one cannot place the bullets further than about one and a half inches from the cure of the will be only about three inches apart. In other words, with the fixed purpose of getting as far away from the

eye as possible with the theorem and a half inches from the bullets further than about one and a half inches from the center of the bullseye. As regards the point blank range for a hunting rifle I think that from fifty to sevently five yards, depending on the tra-jectory of the rifle, is far enough for ordinary hunting. Now, with any rifle sighted with a bead front sight and my rear sight and no middle sight in the way, shooting becomes a simpler matter than many suppose. All that is required is to see that the front sight is on the object and up to seventy yards no allowance need be made. For a longer shot hold the front sight a little high, and as the neck of the sight is not as wide as the bead, this sight will not cover enough of the object to interfere with the aim. For a long shot which is occasionally needed in hunting, elevate the rear sight by turning the knurled sleeve, which, if one is in a hurry, can be done instantly and without looking at it, or if there is time to look at the graduated sight stem any exact distance can be obtained.

THE WEATHER AND THE BIRDS.

THE WEATHER AND THE BIRDS. COLD weather and driving storms I am afraid have killed off the few quail that were left hereabouts last fall: Never during my shooting experience have I found so few of these birds as last season; the year before, a drive of a few miles would take me to fields where I could any day find several coveys; during two days hunting in November two of us with three good dogs found hut a single flock after a faithful tramp over this same ground; so too in Maryland and Delaware; a week's shooting did not give us as many birds as we often hagged in a single day; how are we to ac-count for this? The winter of 84 and 85 was not a severe one and a number of coveys were fed and cared for by my "game keepers"—the farmers boys—and came out all right in the spring; what became of them and their broods I can-not tell. Many wild turkies were killed and more seen than during any former season. The timber men tell me that there are a great number of grouse in the woods. SPICEWOOD.

SPICEWOOD. CENTRALIA, Pa., Feb. 6.

Editor Forest and Stream:

Editor Forest and Stream: Editor Forest and Stream: Farmers in this vicinity report the finding of whole coveys of quail frozen stiff, in some instances they say a half hushel measure could be filled without moving out of their tracks, showing that entire flocks must have been destroyed. Prairie chickens began flying south from Northern Kansas and Nebraska much earlier the past season than common, and the flight lasted much longer, showing that an unusual hard and cold winter could he looked for. A passenger reports seeing 2,500 sheep in one pile frozen to death, near Coolidge, in the western part of this State, also states that he saw 500 head of cattle frozen stiff in one cañon close to the Kansas line. When the cold weather annihilates stock in such numbers as the above, there is little hope for the small game. Farmers from Missouri report the quail all right where they have shelter like underbrush or timber, but those in hedges or caught on the prairies are all frozen. The bliz-zard has been extremely severe with us in this part of the Missouri Valley, and the ice is over two feet thick on the "Big Muddy," and teams, sleds, etc., have heen crossing for three or four weeks with wood, freight, etc. The jack snipe season generally opens here ahout the 20th of March, but it will be much later this scason on account of the large amount of frost in the ground, and no sign of a let up. The writer will forward you a sample of the new Leaven-worth pizeon, now being perfected and pronounced the grandest flying target of the age, by all sportsme who have examined it. W. C. H. LEAVENVORTH, Kan, Feb. 6.

LEAVENWORTH, Kan., Feb. 6.

Editor Forest and Stream: Quail were very plenty last fall, but owing to the severe winter so far they arc suffering badly. I have as yet found none frozen to death, but know of several coveys that have been materially diminished in number by something. Chickens are more numerous than ever and are living fat on the corn still in the fields. Rabhits plenty but snow too deep to hunt with any satisfaction. Sportsmen in this part of the State are not in favor of abolishing spring shooting. C. B.

<text><section-header><text><text><text>

with as much courtesy and kindness as among those whose ways of life were less rough; but the would "have no use" for any one who "put on style" or acted as if he felt above them. On May 24 we started from the Arkansas River and drove north, crossing the Smoky Hill fork of the Republican at Fort Wallace, Kansas. Not having found any buffalo, we drove northwest from that point toward the headwaters of the Republican. The summer of 1874 was very hot, and it was one of the great grasshopper years. It was also a year that a general outbreak among the Indians was expected, but fortunately for us that did not occur. On the afternoon of June 4, just as we were making up our minds that it was time to camp, and all were on the lookout for signs of water, that great n accessity and also great rarity on the plains, we saw a wagon coming out of a little draw and rapidly ap-proach us. We halted, and presently two men drove up. One of them informed us that he and his partar rwere lost. They had left camp several days before, and had been unable to find the locality again. As they had only started for a day's humt, expecting to make camp at night again, they had not taken any grub with them, and all they had bad was "Tresh hump," which, while it would keep them from starv-ing, they did not relish as an all round diet; "and say, part mer, if you have any bread or bacon we will buy it of you. We hain't got no money, but have powder and lead and som bides." We specify assured them they could keep their powder and lead, and as we had some bread left from dinner, they were welcome to it. Each man was soon munching bread and raw ham with much gusto, and as I sat and watched the great slices of raw ham disappear, 1 little thad finished their lunch, and concluded that they could "find camp the next day, and if we would go with them we only find it is good place for permanent quarters, as there was a spring hole near by, and the buffalo were feeding near they bad finished their lunch, and concluded that they could "find camp the ne of the situation and camped.

It was hardly daylight the next morning before we were all stirring, and our simple breakfast of hot bread, bacon

and coffee was dispatched, wagon loaded, horses saddled, and outfit moving. I rode a black pony, a very good buf-falo horse, as he had been on the range before, and had also been used as a "cow pony." One of the hunters of our outfit The borse, as he had been on the range before, and had also been used as "cow powr," One of the hunters of our outil' rode a small Indian pony, the other drove the wagon, Twas prospecting abead of the outilt, and had just reached the loop of a little rise when I saw, several mile abead, a herd of black objects moving along quite rapidly, but at right angles to our course. I did not require to be told what they were, and putting spurs to Nig, was soon at the wagons reporting. One of my comrades was for going for the herd, as it was our first chance, and he did not want to let the opportunity silp by. The rest proposed to find camp first. We compromised. J. and I were to go on a camp. We were to take a general direction north, as the herd was going that way, and in returning strike southwest, which the hunters thought would bring us near them. J. and I stopped only to fill our belts with cartridges, but very foolishly did not take any "grub." As the buffaloes had a good start of us and were not feeding much, it was quite line in the forenoon before we were near enough to "stake" the ponies and try for a shot. We had a long walk after leaving the ponies, and the sun dravorable, and though, it now being in the hest of the day, the herd was not moving or only doing so lowly, we could not get nearer than at least at: hundred yards. There ware several old bulls in the rear, evidently suspicious of the cawling objects they saw in the distance. We were now an our hands and knees, and I was beginning to think that there was not as much romance in hunting buffalo as 1 had read of, especially when I would plamp my hand down on secture within one or two hundred yards, so as to make a sure raths of the first were and struct. We were now no us hands and knees, and Jying still a somethy the set would be our prey: but look was agains the distance and struct struct they walk at the gave the saw its were not set as the ponies and those in the rings of the struct. A general were that the set was not as moving or only doing the set

course as to strike comewhere near where camp ought to be; but "there's the rub," we did not really know where camp was. Mounting our tired ponies, we rode as rapidly as possible in the supposed correct direction. The sun was sinking lower and lower and soon put his great fiery head beneath the horizon. The evening shades were just appearing when J, who was a little in advance, stopped and waited for me to approach. "Look there," said he, "there goes our supper and what is as essential, our bed." I glanced in the direction he pointed and there I saw two buffalces moving along slowly. They were about a thousand yards away, and it behooved us to hurry and make some effert to get nearer, or it would soon be too dark to shoot. A low place in the prairie favored us and we ran our ponies for several hundred yards. J. then sprang from his pony and started to sneak nearer. The old bulls, as we could now see they were, kept on slowly. I picketed the ponies and crept up on to a little rise to watch J. From the lay of the land it was impossible for him to get nearer that six hundred yards, but with day-light to aid him he would have been reasonably sure of a hit as he was a splendid shot. I lay waiting anxiously the event, for much was at stake. If he got a buffalo we would not go supperless to bed, and then the hide would serve as some protection as a covering. Neither of us had coat or saddle blanket; each was clothed only in pants and shirt. If an earnest desire for a person's success would be of any avail I felt J, would succeed. It seemed to my overwrought senses a tremendously long time before he fired. I could not see him but could see the bulls as they kept moving and knew he must soon shoot. Presently a sharp report rang out in the still evening air. Then I heard the bullet sing as it speeded on its way, and then, oh j-y I came the spat of the ball as it struck one of the bulls. Again and again the old Sharps' spoke out, but, alas, either the balls were placed too far back or did not strike any vital point. They

hump to-night." I heaved a deep sigh and whispered, "The saddest words, etc." As our ponies were pretty well fagged out, as we were ourselves, it was concluded to give them a rest and let them pick a little buffalo grass; so we took off the saddles and stretched ourselves on the ground. I was very tired and very hungry. I had only been out on the plains about ten days, and had come directly out of an office where the most laborious duty I had was that of wielding a pen. Not being a very strong man physically, the hard day's ride and excitement had made an impression on me; and an empty stomach did not help matters.

* Buffalo "chips" were the only fuel to be found on the plains, ex-cepting near the water courses.

NEW YORK PROTECTORS.

A LL of the State game protectors except Seymour C. Armstrong, of the fifth district, who is sick, have handed in their annual reports to State Fish Commissioner R. U. Sherman. The following abstracts, in connection with those already published, complete the list:

those already published, complete the list: FIRST DISTRICT. George W. Whitaker, of Southampton, protector for the first district, devoted considerable time last year to watching the markets. In May he seized two fyke nets and turned them over to a police officer. Soon after he sent a game onstable to destroy them, but he was arrested, charged with having stolen the nets. He was afterward released on his own recognizance, and asked to assist in arresting Mr. Whit-aker. A criminal complaint was made against the protector, but was afterward withdrawn. Many song birds were killed in the first district, but the protector was unable to obtain withinker says: "The game laws are more popular in this district than they were two years ago, and are more gener-ally respected. I would suggest the wisdom of amending section 26 of the laws of 1879 so as to prohibit the use of nets in the waters of Long Island the meshes of which are left meshes. There is a elsuse in the section permit-ting the use of nets with small meshes in taking menbaden. Menhaden are caught in all the bays of Long Island, and they are set for menhaden. Hence the restriction as to the size of the meshes of the nets should be made uniform, or no with 24-inch meshes would take all the menhaden that should be taken at present. The fishing interests of Long Island, and they are set for menhaden. Hence the restriction as to the size of the opinion that the game and the haves should be allowed in the waters. I think a net when het should be allowed in the waters. I think an et-ting the use of ressel, et as in my case last summer, The word withulf y should be estricken out of section 11 of the word withight y should be estricken out of section 11 of the word wither the size for blue as the water of the opinion that the game and fish laws should be taken at present. The fishing interests of Long Island they are set for sale, etc., will, I am afraid, prevent my be taken at as possible. I think the game protector the be taken SECOND DISTRICT.

A PETITION

For the Continued Protection of Adirondack Deer.

To the Honorable, the Legislature of the State of New York:

We, the undersigned, residents or County, respectfully petition that the law (Chap. 557, Laws of 1885) which makes it "unlawful to pursue any wild deer in this State with any dog or bitch" may not be amended in any such way as to permit the use of dogs for hunting deer at any time.

(Signed)

their living by fishing with nets. It has been estimated that until the St. Lawrence Anglers' Association commenced its work, and prior to my service under the instructions of the commission, there were over 1000 tons of fish taken from the river annually. But this is a thing of the past; nets and netters are rapidly disappearing. I believe that the law passed during the last session of the Legislature which for-bids the having in possession black bass and other game fish, will be of very great benefit the coaling spring and until the time that the close season ends. The Canadiau authorities have taken up the matter of protecting game fish of the river from capture in nets, and have greatly improved their laws and increased their protective service. There have been large numbers of nets destroyed on the Canadian side of the river by their officers and sportsmen. I think we can feel sure that entire co-operation from the other side of the river will be accorded us. With the work that is now being done, it can hardly be otherwise than that the fishing in the river will become even better than it has ever been before." Protector Steele acknowledges having received valuable assistance from Daniel Staring of Alexandria Bay, agent of the St. Lawrence River Association, and H. R. Clarke of Jersey City, N. J.

A LONG ISLAND GAME PRESERVE.

A LONG ISLAND GAME PRESERVE. Editor Forest and Stream: The week or so ago, I inserted an advertisment in your paper suggesting that those sufficiently interested in the formation of a gunning and fishing club on Long Island, should address themselves to me at my hotel. I received in reply quite a number of answers. The subject seemed to create so much interest, and the matter being now to a cer-tain extent under way for the formation of a club, Ithought that some of your readers would be interested in a more de-tailed account of the proposed club. Tou recently suggested that many acres of land in the sector portion of Long Island were lying idle; that the sec-tion was not of a character to be farmed to advantage, nor suited for manufacturing purposes. It was thought possible that this land might be controlled cheaply, and be stocked for the benefit of sportsmon generally, with game, but more cspat, deer have made their home upou Long Island, and during the time when the law was off, from Nov. 1 to the 15th, have been killed in comparatively large numbers con-sidering the small space of ground. They have existed on Long Island in spite of pot-hunters and hunting out of season. My idea was, that as land on Long Island could be purchased at \$10 or \$15 per acre, as it was entierly impos-side to get good sport without going long distances and putting up with inferior accommodations, it seemed that this was just the place for such a club. For instance, if wenty gentlemen of means were each to take a share of \$20,000 to work with; 500 acres to start with would cost \$5,000. A club house would cost as much more. Birds, deer, and all necessary game would cost about \$1,000. A keepers would by for bally be \$3,000. The wages of four game-a tak done acching the sublest could be broken and trained on the ground, and accommodations for members themselves in a club house, run for what could be braken and trained on the stocked with accommodation for members themselves in a club house, r

to feed in. A thousand acres would of course bebetter than 500 acres; and 3,000 acres better than 1,000 acres. Still, for a commence-ment, 500 acres with the privilege of purchasing four times that amount, would do very well. In this way, it seems to me, that one of the most satisfactory gunning and fishing clubs in the country could be started and maintained in ex-cellent style. I have a place at I-slip on Long Island, and know all about the land in that region and further east; know just what wages men would expect for the work as suggested, and know about the class of game that abounds there. there

five times the original amount invested in them. Indeed I think, in that time, a forced sale of the land itself would bring enough money to reimburse all the members. SILO. GEDNEY HOUSE, New York.

A FIRST EXPERIENCE.

In genouch money to reinburse all the members. Since thorse Horse, New York. **A FIRST EXPERIENCE.** A Since an sometimes be made to appear perfectly ridiculous when he has his wits about him. My only der slaving is stored in my memory in just such an association as that. It was a number of years ago that a party of us visited the Adirondacks to get such game as we could, and such experience as we couldn't help getting. We were four in number, and engaged at one of the most celebrated hotels in the woods, the c guides to help ns ou a camping out trip. The names of two of them I have forgotte, but the mane of the third, ou whom this story turns, was Lovell Newell. He has since died but his name will awaken many associations in the minds of some of your redders, who in remembering their own experiences, will doubtless take some pleasure in hearing of this one of mine. We started out on a misty moroing in three boats, and pased without special incident to the pood where we intended been used as a camp before, and the labor of pitching a camp was greatly reduced, by the labor already made be there in setting up rude tables, fireplaces and laying out bakes for bods. Others may have found that a ready made be in the woods means work after you get into it at night, as when you pitch tent. It witch ald any to or appreciation of the spot chosen to be obliged to clear the spit for bods. Others may have four dual waken us the wore obliged to clear the spit so that we had o so realizing, as one of on party remarked that this was a part of the experience that we had four in the morning "to go out for deer," it is well enough to mention our breakstat. This meal was served on the flat is four in the morning "to go out for deer," it is well enough it bouchs to all outs, and so she pless that there was no med of the surface. He olives don the dation of the spot chosen to be colliged to clear the provide of a single slab which extended the length of the camp. The more for all of us, and so she pless that there was no med of the

on the bank over half a bushel of trout as large as any I had caught. Whe called a halt, and gathered ourselves up for the trip home. Newell took me along rapidly, until we had gained quite a distance on the others, when he showed me deer tracks, and said the deer came down to the water at that time of day, and I had "better look out." I carried his gun in the bow of the boat. He paddled in the deit noiseless fashion of a good guide, and I wasn't long ia working up to the proper pitch of excitement for the second time in one day. In this somewhat intense state I remained during sweep after sweep past dark pool and shadowy turning, until I was tired with the strain.

past dark poor and shadowy curling, that i has inter the the strain. Then I began to take in the situation. We were returning over the same route that we had noisily taken only a few hours before, and though I hadn't noticed the fact sooner my companions were within a few rods, making noise enough to scare tame cattle, and occasionally shouting and lauguing. I couldn't feel delighted at the "take in," but I never betrayed the slightest doubt by any action or word that I had lost faith I f I couldn't do anything any better, I could make a subject for Newell's story to his next party, and I wonder that i never have heard of the episode since trom any returned sportsman tourist from the Adirondacks. J. D. P.

Prode, and in December to West Chazy and Rome's Point Only two suits brought by me are now pending—Philip Saryer, indicted in the Court of Oyre and Terminer in Clin. DAY WITH THE GOLDEN-EYES.

A DAY WITH THE COLDEN-EYES. O f all the sports within reach of the votaries of the gun, in this little province by the sea, the one that has the most decided charm for me, is the shooting of the whistler or golden-eye duck. This bird, by far the most beautiful of any of the duck family, and whose name has always been a synonym for elusiveness, is, even now, considered so well qualified to take care of itself, that so far as I know, no law exists on our statutes giving it the slightest protection. Last winter our Législature gave us a common sense ruffed grouse season (Sept. 20 to Dec. 1), and enacted a stringent non-ex-port law that will effectually crush out the slaughter of game for the Boston market. Shooting over decoys is little practiced here, and as the golden-eye can find plenty of shallow lakes and bars on which to feed where an unscen approach is impossible, he is, for the greater part of the year, master of the situation. But in the early spring, before the dead water thaws out, and again in the late auturn, for two or three days after it freezes over, he is obliged to feed close to the banks of the deep creeks, and then the sportsman goes for him. The man who tries to pot the whistler by a water shot will get left ine times ont of ten, but he will be liable to think many times of the scriptural passage, "A little while ye shall see me and a little while ye shall not see me," and perhaps in this way be benefitted. I shall always look back with pleasure on the days I have spent in trying to circumvent this way bird, and prominent among these memories is a day in 188a. I had agreed to join Arch and Ferris in a hunt in the vicin-

In this way be benefitted. I shall always look back with pleasure on the days I have spent in trying to circumvent this wary bird, and prominent among these memories is a day in 1883. I had agreed to join Arch and Ferris in a hunt in the vicin-ity of Little Musquash Island, on the River St. John, and a certain Saturday, about the 17th or 18th of April, was the appointed day. Arch's home was our base of operations, and to reach it in time to get a square start with the rest it was necessary for me to make an eight-mile journey Friday evening. I found the major part of the population of the village gathered for a sort of farewell turn at "the mazy," and was casily persuaded by my prospective hunting com-putions to join them. It was 1 A. M. on Saturday morning when our heads sought and found their pillows, a circum-stance that should be considered before judging our shooting too hastily. It is always amusing to see the malicious pleas-ure that the seniors, who stay at home, take in rousing out the juniors who have been out the evening before, and the alacrity with which the latter respond, in order to throw out the inpression that they were home on schedule time. These motives, working together in pleasant concord, were instrumental in starting our hunting party before dawn; but not before justice had been done to a good, warm breakfast, and the old gentleman had assured us that a team would be at the shore in the evening to hail our game to the house. Musquash Island is at the mouth of Washademoak Lake, the waters of which swirl around it in deep, narrow creeks, that seldom freeze over; and should they by accident be betrayed into any such indiscretion, the slightest relaxation of the cold will clear them of ice with startling rapidity. The siland has a lake in the center, which is connected with the St. John by a deep creek thirty feet wide. Twould that m gloves were needed, yet the snow which still enveloped the ground, and the ice in the marshes and on the lake were as solid as in January, apparently boom

Inforce in the information of the cold, sleet and slush of the previous winter.
All our early morning attempts to corner a whistler, were fruitless. Sometimes it would be the crunching of the snow, then the flying of a wary old drake that would betray us. At last, a muskrat out for his morning plunge, was compelled to heave to by Arch's old muzzleloader, in the hands of our bow-paddle. One of our party climbing a tree, located a flock of whistlers in the outlet of the little island lake. The creek being far below the level of its banks, we had no difficulty in getting within 150 yards, and then on the author of this sketch devolved the duty of taking a "peep." Removing his cap, he slowly raised his head till four black dots showed against the snow on the opposite bank; and when they disappeared in quick succession we covered the distance with an energy that would have been no discredit to a winner in the Olympic games. A "she-whistler," as the boys contemptuously called her, came up, and as she winged her way down the creek, a furrow in the water a little ahead, told how 1 came to miss her. A second ran the gauntlet of both of Ferris's barrels, without the loss of a feather. A big drake came up, and with a gleam of defiance in his bright yellow cye, he dashed into the air, but at the crack of the old muzzleloader, his light was snnfted out so suddenly that he never moved after he touched the water. I walked down to the point of the island. Cautiously looking over the bank I saw the head of a splendid drake cooly ont to within twenty feet of where he went down. Where error sounded forty yards down the bank and I give to him full in the back. The dull "wop" of the shot on his feathers came distinctly to the ear, but he sailed on, only to be discovered later in the day completely devoured by crows. Hardly had I pulled trigger when I knew I had been fooled and the one marked down came up and went "his several ways," while I was encregically trying to get a shell into the gun butt end foremost. O for a dou

out all the moning and got noise and bother, arrived and the prospects for a lively morning increased considerably. George walked to the cance and picking up a duck, said with an innocent air, "Where did you find this, boys?" then tossing it to Scott with a well simulated look of contempt,

"See, it has been shot a week." "Wouldn't eat it for faw ty dollahs," returned Scott, who, it should be explained, has been to Boston, and to quote one of his reviewers: "Failin' to strike a banana, and not bein' indispensable to the exist-ence of the commonwealth," returned to his native land minus \$150 and the sharp corners in his vernacular. "Get outly ou nineteenth century Sancho Panzas," replied one of our party, "you should not always look at the situation from your own standpoint. What's the reason you got none? did the shooters at the head of the island retrieve all their wounded, or had some darky skimmed the pot before you this morning?" "We didn't get any for divers reasons," said George, dryly. We had such a good time that it was late in the afternoon before we again embarked. The first event on the afternoon's programme was some rifle practice at a flock of geese, floating down the river on a cake of ice—no damage done. In speaking of the next incident, I could borrow a part of the language of the Hibernian, who sat down on a hornets' nest and becoming aware, in some mysterious manner, of the sort of cushion he had, got up and trampled it to pieces in his rage. "It was mesilf that didn't like it, and the hornets didn't like it, but it was darn fine fun for the boys." A single bird was before dos far away that he took no notice of our cance; and the boys put me ashore on the ridge, with orders to go up and rake him in. By a series of maneuvers similiar to those

and the second secon

"We hunted and we halloaed till the setting of the sun, And we had nought to bring away when the hunting day was don Then one unto another said, 'This hunting does not pay,' But we've powdered up and down a bit, and had a rattling day."

in the summer, for the skin had been some time at the tan-ner's. The sight of that enormous head reminded me of the expe-rience of a chap from Boston. He went down to Parma-cheene, Me., and hired a guide to "call" a moose for him to shoot. As he told the story himself. "The guide kept up an unearthly roar on that old birch horn. It was about as dark as pitch. All at once I heard a crashing, when down came a giant beast close upon me. His head was in the air aoout twenty feet. His horns were ten feet broad, and knocked the spruce limbs into kindling wood. His eyes were as big as saucers, and from his nostrils came two streams of fire as big around as my arm! As for me, I dropped that little shotgun and ran!" I learn from good authority that the case of the New Haven gentleman, who, after having been prosecuted for killing a deer at Rangeley, Me., in June, two years ago, began a suit against Commissioner Stillwell for \$1,000 dam-ages, has been settled. I understand that the jury gave him \$1 for damage to his reputation. This is the first case of the kind in my recollection, and shows how juries regard the game laws. SPECIAL.

SAVE THE ADIRONDACK DEER.

Edilor Forest and Stream:

SAVE THE ADIRONDACK DEER. Editor Forest and Stream: Sportsmen, of all men, are prone to hobby riding. This one advances the true theory perhaps. If you investigate you will probably find that his theory is the one he rinds most successful in practice. It might not suit the next case at all. It is just as absurd to say which method of hunting deer is least destructive to the game as to say which is the best gun. It all depends. Deer vary in habit in different localities; the locality often deterngines the method of taking him. Given the nature of the land—whether level, rolling, or mountainous; whether well watered or dry, timbered or open—and the hunter will adopt the method so as to make nature serve him in the pur-suit of his quarry. In the high dry lands of Western Virginia I suppose the footing would be poor, and because of the absence of large bodies of water, hounding becomes in such sections an alto-gether different thing from hounding in New York. What I have to say in this article has reference solely to the methods n vogue of capturing deer in that most charming spot for an outing, the Adirondack wildernes. The principal methods obtain therc—floating, still-hunt-ing and hounding. The first is possible only during the months of summer, and cannot always be depended upon even in September. The second is practiced by the native hunters only, and not to any extent until after the first snows-have fallen. The third method is possible any time, and cam-be successfully carried on by anybody who can buy a dg. Now what are those aiming at who write for your valuable paper? It is to be hoped that the great army of sportsmen are not taking this means to assist cach other to knowledge which may enable them to kill more deer, but to, if possible, find out how to get the maximum of hunting and the mini-mum of killing, i.e., to have the most sport possible, and give the deer as many chances for his life as possible. Can we agree upon the above? Now I am bound to work for th

In the first place we need to keep on foot as muny deer as can be; the time is coming, all too fast, when there will be only hunting and no finding in the great northern forest. The woods will breathe their odorous balm, the delicious water bubble from the rocky crevices, the air will come laden with the incense of the pines and the balsams just the same decades hence, but the deer, the chief charm to many, will be gone if great care is not taken for their preservation. Now, what does hounding enable a man to do? It enables a man to put out a dog to get verison every time. With the intersecting streams, the thousands of lakes, deer hunting can be reduced to a science and a certainty with dogs.

deer hunting can be reduced to a science and a certainty with dogs. Suppose you wanted to procure twenty-five deer, for no matter what purpose, in a given time. You go up to the borders of the woods and find your "old guide," tell him your mission and ask if the thing can be done. Does any woodsman doubt what he would say? He would say, "We might float for 'em and have good luck, we might still-hunt, but we would run a good many chances; give me the dogs and we'll do it." Dogs will and can hunt deer in all weathers, the exceptions

FOREST AND STREAM.

A MISLEADING DOCUMENT.

THE members of the Legislature at Albany have received copies of a pamphlet entitled, "The Preservation of Deer in Our Northern Woods." It purports to be sent to them by the Eastern New York Fish and Game Protective The introduction embodying the argument is Association. by Dr. Samuel B. Ward, the president of that association. We print this argument in full:

by Dr. Samuel B. Ward, the president of that association. We print this argument in full: At a meeting of the Eastern New York Fish and Game Protective Association, held on Jan. 13, 1986, the President stated that soon after the organization of the Association the attention of the Executive Committee had been directed to correspond with well-known residents of the North Woods and others—those who were most in the rested in the success of that district of the State, and knew most about it—and ascertain what their views were on this subject. A part of the letters, extracts of letters and documents which follow, were received in reply. It is to be repreted that lack of space pre-vents the publication of them all in full. Concerning the number of deer in the Woods now, as compared with five and ten years ago, two or three correspondents think that they have diminished; the very large majority think they have decidedly increased in number. In other words, it is clear that the provisions of the law of 129 were, on the whole, wise and good, and resulted in permitting the deer to increase and multiply. Neverthe-less there were many who thought that it would be a great improve-ment to forbid entirely the sending of deer to market, and not a single correspondent objected to this additiou to the law. Those who objected to the hounding of deer at any season based their opposition on the fact that so many of these creatures were killed late in the season for market, and it is believed that the proposed law, which will be round further on, will fully meet this objection. As to the most sportsmanike manner of hunting deer, opinions were neally equally divided between hounding and still-hunting, with a small preponderance in favor of the former method. Those who objected to hounding of a striven them to weter, And it is very difficult to understand how the deer has any better chance against the water he had on chance to get away. In the first place, many deer do get away after the dog has driven them to water. And it is ver

Interproper Season, submitting calme of course be so address
So gluted the market as to bring the price of venison down to tencents, and in come localities to four cents a pound, when hounding was forbidden.
As to jack huming, not a single correspondent had anything to say in its favor. The objectors to it were very numerous; first, because many deer are wounded and drag themselves off in the woods to die for every one that is recovered and used; and, second, because it is very difficult for the hunter to tell whether he is shouting at buck, a doe or a fawn. Certainly no one can claim that it is sportsmanike to be noiselessly paddled up within a few feet of an unsuspecting doe or fawn and blaze away, very much at random, with a double-barreled shotgun, loaded with buckshot.
With one single exception the correspondents were all in favor of resonding the law of last year and of permitting the hounding of deer for a proper length of time, about the duration of whice there was some difference of opinion. Those who preferred only a short season for the use of dogs, assigned as a reason that so many deer were killed for market in this way late in the autumn, the proposed manner of meeting which has already been stated.
The Excentive Committee having attentively considered all the suggestions made in the various communications received, instructed their coursel to draw up a bill to be introduced into the Legislature at as early a date as practicable, which should embody the views of as many intelligent and interested persons, and antagonize as few as possible.
The provision that no deer shall be sent to market from the Adiron facts was considered an absolute necessity by almost everybody was satisfied with it and the deer had increased under it in a more of serving and the the preservation of the Woods; where they had diminished it was due to hunting for market. A larke number of persons thought that he season was too long and, therefore, the proopsed mer law close

guides will be gone, and the city will be no better on taken under exproposed law. The talk about its being unsportsmanhike to follow deer with hounds, bred and trained for the purpose, is all nonsense. In all ages of the world, iu all countries and climes, from time immemorial, it has always been, as it still is, the most exhilarating, exciting and sportsmanlike manuer of hunting deer. It is one of the least destruc-tive methods: very few deer, if any, are wounded and lost; and in this State it is objected to only oy those pot-hunters and still-hunters who desire to kill the most deer in the shortest possible time, for the few palry dollars that their flesh and hides may bring. SAMUEL B. WARD.

ALBANY, N. Y., Jan. 25, 1886. The remainder of the document consists of letters giving the views of a number of advocates of hounding. These views are stated to be "virtually epitomized in the above remarks" by Dr. Ward.

This pamphlet goes to the Legislature with the sanction of the Eastern New York Fish and Game Protective Association. It is put out as the result of an investigation undertaken by that society. When an association professedly working for right game protection institutes an inquiry into a subject of such grave concern as Adirondack deer hounding, it is bound by the professions of its title to conduct that inquiry fairly, without prejudice, and thoroughly. When it makes a statement based on the result of that inquiry and intended to influence legislation in the direction of right game protection, that statement should be fair, unwarped by prejudice, and candid, giving the truth, and basing arguments and conclusions on well determined facts. The document now before us is not fair. It is not unprejudiced. It is not candid. It eonceals the truth. It suppresses the facts. Its arguments are based on mis representations. It is not a safe guide for legislation in the interest of game protection.

1. It is misleading and deceptive because it purports to be the result of an honest inquiry by a game society. As a matter of fact, it is a collection of arguments gathered by

decr hounders to bolster up deer hounding. The president states that he was directed to correspond with well-known residents and others interested in the North Woods. By the further statement that with "one single exception," his correspondents were all in favor of rescinding the law of last year, he virtually confesses that only those persons were written to who were known or believed to be advocates of deer hounding. The "one single exception" was a mistake on his part; he had misjudged his man. The officers of the association, themselves deer hounders, instead of conducting an impartial canvas to truly determine public sentiment, constituted themselves a partisan committee to drum up ammunition for their cause. Mr. W. W. Byington, the association's secretary, wrote some of these letters of inquiry, and one of the published replies comes from the Boonville Herald editor, a pronounced advocate of dogging deer. This is the way the reply begins: "Yours at hand. I am exceedingly pleased to find that our ideas are alike on the deer-hounding law." Had Messrs. Ward and Byington, as private individuals, gathered this material for their purpose and presented it to the Legislature on their own responsibility, that would have been perfectly proper; but to presume to offer it on the pretense of its being a game society's publicspirited action is a different thing altogether. If the Eastern New York Association was not organized by active deer hounders for the express purpose of conjuring with its name at Albany to help their cause, the members owe to the public a disclaimer of this pamphlet sent in the society's name to the Legislature.

2. The document is misleading and deceptive because it pretends to represent public sentiment. After such a onesided inquiry as this was, the result of necessity cannot in any way reflect public opinion. The compilers of the pamphlet studiously avoid giving the side (which in point of number and character is by far the most worthy of being heard) opposed to their own private dogging interests. They suppress the other side entirely, even when pretending to give the views elicited by others. For example, on page 14 they profess to give the views contained in the correspond-ence published in the Glens Falls *Republican*. But among the diverse views expressed there, they select and print only two letters, one written by S. J. Palmer, of Indian Lake, who wants the deer hounding law repealed because certain lawless rufflans in his neighborhood persist in slaughtering deer with hounds; and another from Oliver St. Marie, a store keeper of the same place, who trades supplies to these deer butchers in exchange for deer pelts. Now, if these pamphlet compilers who pose as game protectionists, honestly intended to give the Legislature a fair statement of public feeling on this question, why did they not print the letter from A. C. Clifton, of Hague, published in the Republican of Jan. 8. Mr. Clifton wrote:

Clifton, of Hague, published in the Republican of Jan. 8. Mr. Clifton wrote: "Mose and beaver were natives of the Adirondacks and no volce was raised to prevent their destruction. Our rivers swarmed with another of the structure of the adirondacks and no volce the structure of the structure of the adirondacks and no volce was raised to prevent their destructure. Our rivers swarmed with another of the structure of the structure of the structure of the particle of the structure of the structure of the structure of the another of the structure of the another of the structure of the st

This eagerness with which everything in favor of hounding-no matter how false or preposterous it is-is seized by the pamphlet compilers, and the equal zeal with which they seek to conceal the actual sentiment of the great majority of intelligent and unselfish citizens, lay bare the covert purpose of the society's officers and stamp the document as untrustworthy, even though it bears the pretentious sanction of a 'game protective association." No honest attempt at wise game protection ever yet demanded such perversion and suppression of truth to accomplish its ends—and never will.

3. The pamphlet is further misleading and deceptive when it states that hounding "is objected to only by those pot-hunters and still-hunters who desire to kill the most deer in the shortest possible time." The truth is that the most intelligent and public-spirited sportsmen recognized the imperative necessity of a law against hounding, worked to secure it, have been hearty in their support of it, and now demand that it be retained. To cite a few names—Hon. O. B. Matteson, of Wilmurt Lake, wrote to Governor Hill last.

to this are not worth mentioning. The dog will run an old doe with young as eagerly as a buck in the short blue. Hounding enables the rich sportsman to monopolize as large a tract of country as he pleases. Hounding does not favor sharp shooting nor quick shooting. The deer is not killed on the full jump, but on the full swim. Hounding makes all other methods practically impossible, by driving the deer from their watering places, and making them too shy for successful still-hunting. Hounding allows the sportsman little exercise of skill, as the deer is shot in the water at short range; the skill is on the part of the guide, who works on to fur hout \$2.50 per day. When the question comes, If this method of taking deer is mafair and ought to be unlawful, what methods are fair? than hounding. He whe thinks that to kill a deer by means of a jack light is the same thing as seeing him, has had no ecome to know the meaning of the light very quickly, and often all the intimation the hunter has of the presence of panishing hoofs in the darkness. To carry a lamp on one's head, sit still, aim the gun accurately enougli while trying to deer, knowing full well that what is done must be done quickly; all these factors supply an element of uncertainty waves after a deer run to water by dogs never has to take into account. There is something so weird and strangely bewitch.

GOUVERENELS, St. Lawrence County, N. Y. Editor Forest and Stream: Last month in the northern part of Oneida county I met a number of sportsmen, and found by conversing with them that nine out of ten were opposed to turning the dogs loose again. If the Boonville Herald would print the whole of the correspondence sent to it instead of suppressing a large part, as they have done, then perhaps there would not be as many supporters of dogging as there are now. I think most of the cry for dogs we see in the Boonville Herald is self-in-terest. The owners of teams who carry the dog-hunting deer-slayers live in Boonville. All supplies that are not taken with parties from home are bought in Boonville. Some of the guides live there, and most of the hotels on the Fulton Chain get their supplies in Boonville. Is it anything strange then that the Boonville Herald and most of the people of the place should be in favor of dogging deer, when it brings so many sportsmen their way, besides all the pot-hunters? If more men went still-hunting than dogging deer, 1 have no doubt the same Herald would be as anxious for the law to remain as it is as any one. There is no doubt but self-interest has a great deal to do with the stand the Herald takes on the dog law. I am willing to admit self-interest has a bearing with all of us, and in many cases too much. The sooner our lawmakers make laws to protect the game regardless of self-interest the better. Call off the dogs. C. D. F. LITTLE FALLS, N. Y., Feb. 4.

LATTLE FALLS, N. Y., Feb. 4.

self-interest the better. Call of the dogs. C. D. F. Inttle FALLS, N. Y., Feb. 4. MARKETING MICHIGAN VENIEON. — The Marquette, Mich., Mining Journal has already called to the attention of sports-men and others interested in the preservation of the game in this peninsula, the urgent need of a more vigilant enforce-ment of the laws, and of further protection for the deer in our forest. The figures then given were surprising to many, who had not supposed that such a wholesale slaughter of deriver was going on, and the figures given related only to the ingle station of Munising, on the D. M. & M., at that. A letter written to a prominent sportsman of Marquette now is before the writer; it gives the number of pounds of height station of Munising. On the J. M. & M. at that, and the vicinity is thought to be about 14,000. This means that in the vicinity of Floeter alone between Aug. 15 and Nov. 15, about 1,150 deer were killed; estimating the aver-gewight of a saddle as 70 pounds it would give 1,147 killed, of which record was kept. I to does not require much in the vicinity is the parts the state, our boasted hunting will be a thing of the past. Such has been the experience in the favorite haunts of game where such indiscriminate shap the favorite haunts of game where such indiscriminate weight prominent sportsmen in Marquette to whom the adapter has been practiced, and such will be the result beer would be a thing of the past. Such has been the experience to the favorite haunts of game where such indiscriminate adapter has been practiced. Were killed; estimating the aver-gent of the past moment, to have it in their power to bring will be a thing of the past. Such has been the experience to adapter has been practiced, and such will be the result beer provide haunts of game where such indiscriminate adapter has been practiced. THE TRAJECTORY TEST.

THE full report of the FOREST AND STREAM'S trajectory test of hunt-ing rifles has been issued in pamphlet form. For sale at this office, or sent post-paid. Price 50 cents,

May urging him to sign the bill against hounding. Is Mr. Matteson a pot-hunter? Gen. R. U. Sherman, secretary of the Fish Commission, is on record in these words:

"The number of deer wantonly killed by hounding by far exceeds those killed out of season, and the slauphter of the animals for more sport is an evil which demands prompt attention. Men seem to have just found out how easy a matter it is to get deer in this way. I am of the opioion that running deer with dogs should be prohibited, as there seems to be no other alternative."

Does Dr. Ward presume to class Gen. Sherman among the pot-hunters? Among the subscribers to a fund to pay a special officer to enforce the law against hounds in the Beaver River district last summer were Hon. Lansing Hotaling, of Albany; Prof. E. L. Richards, of Yale College; Dr. Spencer M. Nash, of New York city, and Charles Fenton, of Number Four. Does Dr. Ward mean seriously to tell us that these men are pot-hunters? Mr. Edward C. Litchfield, of Brooklyn, is strong in his condemnation of the injury of hounding. Does Dr. Ward class Mr. Litchfield among the pot-hunters? We might fill a column with such names as these, but it hardly seems worth while gravely to consider this silly and preposterous pot-hunter pretext.

4. The pamphlet is misleading and deceptive when it de-clares that "to follow deer with hounds" is a historic and sportsmanlike method. What if it be so? That has noth ing to do with the Adirondack style of hounding. In the North Woods the sportsmen do not follow the hounds. They sit on the bank or in a boat and wait to be rowed out to within arm's length of the exhausted deer swimming in the water. There is nothing exhilarating about the waterbutchery of deer until the butchers have become abnormally hardened to it. Ninety-nine deer out of every one hundred killed by hounding in the North Woods are killed in the water. Only the hundredth is killed on a runway, after the manner of hounding as practiced elsewhere in this country. To call this water-butchery historic and sportsmanlike is grotesque.

5. The pamphlet is misleading and deceptive when it rep. resents that the welfare of the North Woods guides and hotel keepers depends on hounding. Of a thousand Adiron-dack tourists, less than one hundred go to hound decr. The nine hundred would gladly see the hounds kept out. The guides are not dependent on the hounders; they can find abundant employment in other ways. The most intelligent guides recognize that hounding destroys the deer supply and is opposed to their true interests. Many of these guides petitioned the Legislature last year to pass the hounding law. They have not since then changed their opinion of the wisdom of the measure-statements in this pamphlet to the contrary notwithstanding. We challenge the compilers of this document to name one man whose opinion is entitled to re spect, who was last year in favor of a non-hounding law and is now opposed to it.

6. The pamphlet is misleading and deceptive when it argues that the dcer supply has increased within the past "five and ten" years. The exact opposite is the truth, and no onc knows it better than the dogger. It was in fact the alarming decrease of deer that started the friends of game protection to work for the abolition of hounding, the most destructive method of hunting the deer in the Adirondack region, and one which, if persisted in, means the extermination of the game.

7. The pamphlet is misleading and deceptive when it avera that hounding "is one of the least destructive methods" of hunting decr. Of all the modes employed in that region it is only less destructive than crusting, and crusting is very properly forbidden by the present law. Hounding is more destructive than floating or still-hunting, because more sure. It can be practiced—and in fact is practiced—at all seasons. It requires no experience nor skill. The deer is driven into the water and the hunter is rowed within short range. It is a common thing for the guide to hold the deer by the tail while the "hunter" shoots or clubs it to death. Just because it is so sure and so easy it is clamored for by one class of guides and one class of tourists. By it they have killed 75 per cent. of all the deer killed in the North Woods. These classes are now clamoring for a law against floating. Why? Not because they believe that it will save the game, but because they hope thereby to regain the privilege of houncing. Why do they want to exchange jacking for hounding? Because by the latter method they can get more deer. Jacking is uncertain, often barren of result. Hounding is sure four times in five. They want the sure method. They demand that the hound be again put on the track of the buck and the doe and the fawn. But the men who ask for hounding are only a small class compared with the whole number of Adirondack guides and visitors, for-

8. The document is misleading and deceptive when it states that more deer were killed last season by still-hunting and floating than in any recent previous year by these methods and floating combined. The statistics given in the pages of the pamphlet and quoted from the Boonville Herald are wholly without foundation. They are not authenticated by any responsible person. Nobody but a highly constituted idiot would believe them nor expect others to believe them. Moreover, jacking was practiced last June, hounding was extensively practiced last summer, and crusting has been practiced this winter. By these three illegitimate methods, it is fair to presume, as many deer were killed as were taken by lawful jacking in the open scason and by still hunting. If venison was cheaper than msual, it was water-killed venison and crust-killed venisonas set forth in the pamphlet, pages 14 and 17-both methods are forbidden by law and meat so obtained is contraband.

9. The document is misleading and deceptive in the plea that deer must be hounded that they may be made shy Hounding docs prevent the taking of deer by still-hunting. It does not prevent it by making the deer shy. It prevents it by killing them. A deer driven by hounds into the water and clubbed to death in August cannot be shot by a still hunter in the autumn. That is exactly the way hounding works. If dogs are used no deer will be left to be taken by any other method whatever. The pretext that hounding is preservative of the deer is rubbish. The men who dog do not dog for the purpose of protecting. They dog to capture and kill. And they do kill. They exterminate. One of the professional gentlemen whose letters are published in this pamphlet has made it a custom for years past to dog deer by the whole sale, to kill more than could be consumed as food, and to leave the carcasses to rot in the woods. That is the sort of making shy the hounders call for and that is the way they practice it.

The excessive killing by still-hunting, it is admitted by the hounders, is the work of market-hunters. The way to stop this is to cut off the market. Forbid the transportation and sale of game. For years the FOREST AND STREAM has urged such Every sportsman would rejoice to see that provision on the statute books. We strongly urge the passage of a bill to that effect by the present Legislature.

But to make such a law at the sacrifice of the present non-hounding statute would not save the game. The repeal of the present law, on any pretext whatever, would mean the doom of the Adirondack deer. The hounding law is wise and beneficial. Let it stand. Enforce it. The State of New York cannot afford to repeal it. The community cannot afford to put the hounds again on the track to drive deer into the water. It would be sheer and irreparable folly and improvidence to sacrifice the game supply of the Adirondacks to the selfish, time serving and greedy clamorers for permission to hound.

improvidence to sacrifice the game supply of the Adirondacks to the selfish, time serving and greedy clamorers for permission to hound.
TFTY-ETGHT FORES, FOUTEEN DOGSAND TWO ITALIANS, Hawley, Pa., Feb. 8.—About twenty years aso Randall Kellum, of Kin,bles, Pale county, five miles below this place, on the Honesdale branch of the Eric Railway, purchased a horse for which he paid \$90. He worked it daily on bins farm multi one day last week when the horse dref. The neighborhood of Kimbles, and in fact all through that part of the country, has been literally overrun with foxes this season. As has been the case in Sullivan county, across the Delaware River, the farmers have lost hundreds of chickens and other poultry by the bold raids of these usually timid animals. Farner Kellum hit upon a plan that he though might destroy a large number of the thieving pests, and that was to put strychnine in the carcass of the old horse, and place the body in a spot where forces would be sure to flock to it. The deadly drug was accordingly placed plentifully in the flesh of the dead horse, and the voods, two or three miles from Kimbles, and left there. The next morning Kellum went carly to the woods to see if his plan had worked successfully. He found Jying sentered about in all directions, and none of them far away from the poisoned horse, 89 dead foxes. How many more managed to get to their holes or hiding places before they died was of course unknown. Mr. Kellum had the loxes taken home, and the norse during the previous night had been suspected of hight's work was regarded as an excellent one. The follow: any more managed to get their holes or hiding mains. What we low as structure found at the secen of their feast. With barely an exception the dogs were animals that had long been suspected of hight's work was regarded as an excellent one. The follow: any more managed to get the structure was one of their flash. Which they had focus over a fire and eaten from the woods, some distance of the his gight from the ford. K

JUDGE CATON'S HOUSE BURNED.—About midnight of Feb. 8 the house of Judge J. D. Caton, at North Bluff, Ottawa, 111., caught fire and was burned to the ground. No lives were lost. Judge Caton and his family were not at home, and only the servants occupied the house. Judge Caton's library and his large collection of natural history specimens were destroyed. Among the books burned was a complete set of Audubon's works, and many other valuable volumes.

"A CURRITUCK DUCKING SCORE."—It is suggested that the above heading in this column last week may convey the erroneous impression that the scores then printed were made on the grounds of the Currituck Club. As a matter of fact the shooting was done by the members and on the grounds of the Narrows Island Club, of Currituck Sound.

KENT COUNTY SPORTSMEN'S CLUB.——At the annual meeting held in the office of Dr. E. S. Holmes Feb. 3 the following officers were elected: President, Dr. E. S. Holmes; Vice-President, H. Wildlicomb; Secretary and Treasurer, N. Fred Avery; Directors, L. D. Follett for one year; A. C. Horton for two years; T. Stewart White for three years; A. B. Richmond for four years, and W. C. Denison for five years. The President was authorized to make application for membership in the National Sports-men's Association, The following were elected delegates to the State Association, which meets in Kalamažoo on the 9th inst.; A. B. Turner, A. B. Richmond, L. D. Fol-lett, F. E. Blakely and N. Fred. Avery.

SNIPE SHOOTING EXTRAORDINARY.—Portland, Ore., Jan. 30.—Dr. Jessup, the distinguished dentist and sportsman of this city, reports that on the day following a recent snow storm, he, with a common parlor rifle, from his parlor win-dow, shot and killed eleven English snipe which had gath-ered on the lawn in front of his residence; that he fired only thirteen shots, and that each bird was shot through the neck, and not elsewhere. Ought the club to question the truthfulness of the statement?—C. T.

VIRGINIA COLD AND GAME.—Richmond, Va., Feb. 6.— We are having now the coldest weather ever experienced here. The thermometer registering Thursday morning five degrees below zero. In addition to this the enow is about eleven inches deep. From information gathered from far-mers in the counties of Henrico. Chesterfield and Hanover, I am afraid poor "Bob White" has been effectually "cleared out." Whole conveys are reported as found frozen to death. —W. H. C.

COLD WEATHER IN MAINE.—A Portland (Me.) correspond-ent who was compelled by the recent cold weather to sban-don his fox hunting, writes that upon visiting a known grouse cover he discovered two of the birds frozen to death and covered with ice; the inference is that the ice storm was very destructive of the grouse in that section.

A TAME Moose.—Burlington, N. J., Feb, 1.—Ex-Con-gressman H. B. Smith, who announced some weeks ago that he was to establish a paper here has changed his mind. He has a pet moose from Canada, and, eschewing politics, is now putting the fleet animal over the road in high glee.

ATLANTICVILLE, L. I., Feb. 7.—One gun, three days, recently secured fifty ducks, mostly broadbills and whistlers, at the inlet on Shinnecock Bay.—J. W.

TAUNTON, Mass., Feb. 3.—We have organized a gun club here and own several good dogs among us.—So.

Sea and River Hishing.

THE STRIPED BASS LAW.

THE STRIPED BASS LAW. *Editor Forest and Stream:* We thank you for the prominence which you so kindly gave our communication of the 1st instant, and the very courtcous editorial comment on same. It is quite true that the present law ''does not cover the whole season for striped bass in the Hudson.'' It is qually true that the present law ''does not cover the whole season for striped bass in August. If a law order the time during which the large majority of any specific class of fish spawns, it does not seem to us that the fact that a close season is too short is a good reason for making it still shorter. Bo long as it is generally conceded that the chief, if not the streams is to spawn, and so long as it is true that in the case of all those anadromous fish, with whose habits we are any-thing like familiar, the period covering their ingress and cyress covers their spawning season, it seems to us to be wise to protect them during the greater portion of the time they are in our rivers. Though no man can prove that all of the fertile bass which run up the Hudson do spawn during the present close season, yet no mau will presume to deny that may of them do spawn then and there. Nor would the opinion that the constant and permanent supply of striped bass in our waters does not chiefly depend upon river spawning the. What you say about the propriety of cnacting a law against

Iffe. What you say about the propriety of cnacting a law against dragging nets under the ice is most pertinent in this connec-tion. But we believe that so long as there is no hav against the sale of bass during the season at which this abomination is possible, this thing will continue. The pullanthrope fi-h mongers say in their petition, "To fairly [fairly seems hardly a proper word under the circumstance] prepare for Lent, our cold storage warehouses should be filled immediately during the present cold season, when the supply is readily obtained." In their eagerness to secure striped bass for the Lenten season they may not have time to find out whether obtained. In their engences to secure since bass for the Leaten season they may not have time to find out whether the bass were caught under the ice. And this, besides en-couraging law breaking, would be a constant source of remorse to an excellent and necessary class of people. ABBEY & IMBRIE.

NEW YORK, Feb. 8.

New Yons, Feb. 8. Tour correspondents are reminded that the season named in the law, i. e., Jan. 1 to May 19, is not known to cover any portion of the season of spawning of the striped bass in New York waters, for, as we have pointed out, but little is known of their spawning habits, and the few eggs which have been taken from them in the Hudson. Our main reason, how-ever, for urging the repeal of the striped bass law, was be-cause the framers of the law did not intend to protect this fish, but meant it for a small fish found in Lake Ontario, and in consequence of this the State Game Protectors were in-structed by the Fish Commissioners with the sanction of the President of the New York Society for the Protection of Game, of which Mr. Imbrie is a member, not to take notice of this law or begin any prosecutions under it. The law be-ing a dead facter not because of any lack of enforcement by subordinates, but because the authorities so declared it—we think it better off the books than on it. As for the prohibi-tion of netting under the ice in the Hudson, we believe it possible to stop it if a law to that effect is passed. That kind of netting is done out on the ice in full view of citizens along the bank and of passengers in the cars which run on both banks of that river.].

TROUT OF SUNAPEE LAKE.

IROUT OF SUNAPEE LAKE.

short a time?" Now I am equally puzzled with my friend Powers. We know that the landlocked salmon which we placed in Suna-pee Lake, from eggs procured at Grand Lake Stream, have attained a weight of over twelve pounds, though the Grand Stream fish seldom go over two or three pounds, and the same season's fry distributed in Squam Lake have gone up to fifteen or sixteen pounds. This I attribute to the fact of their finding plenty of fresh-water smells for food, for one reason, as well as to the fact that we usually find the size of the fish to correspond in some degree with that of the water from which they are taken.

taken

taken. This discovery is a very interesting one, and having found a possible raison d'être for equassa trout in Sunapce Lake, I send it you in hopes that some other correspondent may be able to throw some light on the matter, and solve Mr. Pow-ers's queries as to the possibility of such rapid growth and apparent change of habit. CHARLESTOWN, N. H., Feb. 2, 1886.

A WINTER CHAT.

A WINTER CHAT. Beiter Forest and Stream: "Little Sandy" is sad, and why not? Information has just reached us that the Legislature has repealed the State law to prevent seining, etc., in the waters of K-ntucky. Tor years we have been trying to effect a change in our community by distributing some of the wholesome teachings of Fornest AND STREAM to show up the evil effects of sein-ing and kindred devices for catching fish. The State passed a good effect. Last spring we appealed to the ever gallant and generous Dr. Henshall to furnish us, through your col-umns, with a description of suitable by tackle, by which our sport might be heightened and made more interesting. We were congratulating one another a few days ago as a small nucleus of the "new fangled fishermen" (as we are some-times ironically called) had met around a plowing fire to tak of the Legislature. While we grieve we have much to be tankful for. To find the seven ounce lancewood fly-rods, reels, lines, flay, show are secreted under hock and key so that no un-hallowed eyes might pry into those precious packages, for it had already been noised about that my friend Skill (may he som be released from his snow-bound situation and find a fair market for his mules) and I were going to use horse firs and gnats for our fishing baits instead of minuovs the coming season. That night we were children again, it re-minded me of the Santa Claus days. We put the rods to store or Strode's Creek, where we might rig our first east typishing was well enough up North or out East where fish are plancy, but fish had too much sense to bite ast a feathered by the same bid been told wis really true, "that typishing was well enough up North or out fast there fish are plance, then the Orvirs reeks, these (at first) low.

quite a number who are devotees of the fly-rod and have enjoyed its reductive pleasures. I received a letter from your correspondent "Vox," from Mt. Sterling, a few days ago, saying that "I have just received a split-bamboo fly-rod. I want a few instructions. Come np and spend a day with ne. It would be like an experience meeting of old Metho-dists."

I want a few instructions. Come up and spend a day with me. It would be like an experience meeting of old Methodists." On the following day my genial friend E. P. B., treasurer of the Bourbon Gun Club, met me. "What say you on going to Mt. Sterling to-morrow?" 'I can be ready by 8 o'clock." The next morning turned out to be one of those cold, disagreeable, misty days, the ground all eovered with snow and slush, but just right to talk fly-fishing. We arrived at Mt. Sterling early, and as we suntered into the office we found "Vox" in his little workshop at the end so busily engaged that he was tinaware of our presence. I knocked on the door, and turning he hid something which to me looked like a dy-book. And with that whole-soul senile which characterizes him above all good fellows, 'hail friends well met." introduced us to the Rev. Mr. S., formerly Fish Commissioner of Tennessec. After a hearty greeting he imformed us that they had just been engaged in a con versation on the subject of fishing. Cremonics were cast aside. My friend B, excused himself, having some business in town, which left the happy clover leaf in its glory. The rods were brought out and I soon ascertained that ''Vox" had it bad. Fortunately the ''weather conditions'' were such that it kept all the toothache pathents at home, which fet prevents one of those pleasant *tick-ai-tic* the the overhead cast *comme if faul*, but taking off the but joint we managed to lay out (an imaginary) line fairly well. Thrice the dinner bell rang before we could find a convenient stopping place. After dinner followed a long discussion on the action of legislators, which closed with the hope that the Senate would be awake to its duty and surely ''kill the bill " We cast our gives across to the court house clock whose hour hand ahready pointed a little after five and bade our friends a reluctant *au revoir* with the promise that as soon as the water was in tight condition when spring has asserted her rights again I would telephone them when they would meet me to

but the fish. NORTH MIDDLETON, Ky.

but the fish. LITTLE SANDY. NORTH MINDLETON, KY. ANOTHER WAY TO CARBY A LANDING NET.—Centralia, Pa, Feb. 6.—Any plan or arrangement that adds to the pleasure or comfort of a sportsman's "outing" I think should be common property, so let see tell of a contrivance that helps to keep this necessary but cumbersome article ont of the way while always ready for quick use. I take it to be the invention of a friend, one who can entice more fish into bis net with the gentle persuasion of his springy greenheart rod than any other fisherman I know: Fastned securly to the short handle of the net is a loop of say four feet of the very best elastic web, three-quarters or one inch wide; this is worn around the neck and when not in use is thrown so that it hangs down the back; when wanted and your fish is ready to be landed taking the handle the web will stretch as far as you can possibly reach; when the two pounder is taken care of a toss puts it back over your shoulders ready for the next one. In my early fishing days I was sorely bothered with the corkscrew twist that was always in my six foot leaders as I took them out to replace one that my *largest* fish had carried off; it was only after some minutes drawing through the water and making every trout in the pool think more about a water snake than of the white winged coachman, that it straightened out for business; now when starting on my trips I take a common tin oval tobacco box, one that can be handliv carried in the pocket; then dampen a heavy piece of cotton flannel that has been cut the width of the box and twice its length, laying it in I place the leaders on it then fold the end back over them; very soon they are as soft and pliable as if they had been soaking in the water and are ready for immediate use. Both of these plans may be nothing new to most of your readers, but perhaps it may to some one of them save a taugled line or another fish for his creel. —Spricewoon. -SPICEWOOD.

one of them save a tangled line of another han for his creel. —SPICEWOOD. ADIRONDACK FISHES.—I will again appeal to the kindness of friends and ask them to send me such notes on the fishes of the Adirondack region as they may have. The few hun-dred copies of my "Memoranda" for Mr. Colvia's forthcom ing Report of the Adirondack Survey, which were issued in advance of his report, are nearly exhausted, and it is proposed to extend the report on fishes. The following note, which is just at hand, explains it: "Albany, Feb. 4, 1886. Mr. F. Mather, Dear Sir: I think that you can rely upon having fully six months in which to get in all the addenda. I shall use every effort to make your report as perfect as possible, even if we have to cut the electrotype plates. Sincerely yours, VERPLANCK COLVIN, Supt." My collecting tour was a hasty one, and it is very probable that I missed some species; in fact, I inserted the "Miller's thumb," *Uranidea*, on the authority of Dr. Merrian, as I could not find it. Some of the sticklebacks may also be found there, and then we want specimens of those "Morse Lake minnows," and "Seventh Lake minnows," which are mentioned, but which, owing to their decayed condition, could not be identified, and which Prof. Jordan thought might be new. Hadit not been for the good friends who helped me out in making out the list of the distribution of species this portion of the work would have been omitted. This is a very important portion of the work will be thankfully received.—FRED MATHER (Cold Spring Harbor, N. Y.). FLORDA FISH KILLED BY COLD.—St. Augustine, Fla., Law 21. Law at the start setured from a fibing cruise to the

Spring Harbor, N. Y.). FLORIDA FISH KILLED BY COLD.—St. Augustine, Fla., Jan. 31.—I have just returned from a fishing cruise to the head of Matanzus River. The sight that I saw was enough to make the heart sick. Hundreds of large sea trout and channel bass were lying dead along the shore, killed by our last cold snap. One can understand how the sea trout were caught in the shallow water and frozen. But my surprise was great when I saw many sheepsheads among them, as they are fish which usually seek deep pools and channels. The buzzards are so full they will hold no more, and such a mass of decaying fish certainly will not be conducive to the health of the country. In spite of this wholesale destruction I had very good sport with rod and reel. And many a fine fish was replaced in his native element for fear of killing more than I could use. The nights have been rather cool of late, and I have been glad while sleeping in my boat to have my second sleeping bag around me, —WINDWARD.

BISBY CLUE, --Utica, N. Y., Feb. 3. -- The eighth annual meeting of the Bisby Club was held here to day, and the fol-lowing trustees chosen: Gen. R. U. Shermon, Hon. H. J. Cockinham, H. Lee Babeock, O. J. Childs, Thomas R. Proctor, A. G. Brower. At a subsequent meeting of the trustees the following officers were elected: President, Gen. R. U. Sherman; Vice-Presidents, Christopher Roby, W. W. Snow, D. W. Cross, Thomas R. Proctor; Secretary, Henry H. Thompson; Treasurer, S. F. Sherman; Legal Counsel, Hon. H. J. Cookinham. The club passed a resolution de-claring against floating for deer, favoring the limiting of the shooting season beginning Aug 15 and closing Nov. 1, and advocating hounding from Sept. 15 to Oct. 15.

NOT AN UNCOMMON CASE — "Got any fish?" "Nary fish." "Got any bites?" "Nary bites." "Got any bait?" "Nary buit." "What are you doing there?" "Fishin'."—Texas Siftings.

THE FULTON CHAIN HATCHERY.

THE FULTON CHAIN HATCHERY. Editor Forest and Stream: At the annual meeting of the Boonville Sportsmen's Club, held at the Hurlburt House, Boonville, recently, the following officers were elected: President, L. W. Fiske, Boonville : First Vice-President, S. T. Miller, Constableville; Second Vice-President, H. G. Emms, Turin; Treasurer, C. W. Colton, Boon-ville; Secretary, G. A. Willard. Boonville. The report of the committee on the new fish batchery just completed on the Fulton chain of lakes, was read by Hon. H. Dwight Grant. The report stated that the hatching house was located near Cold Spring Camp, on Fourth Lake of the Fulton Chain, on the recommendation of State Fish Commis-sioner Sherman. The site was selected for the purity of the water and its convenience as a central poirt for procuring and distributing trout fry. The plans of the building and plant were made and furnished by Mr. Sherman on the most ap-proved methods for hatching. The dimensions of the build-ing are 20x86 feet. It is boarded and battened on the outside, and has a plain, tasty cornice and gabled roof covered with good pine shingles. It is lighted by S windows of 12 lights each, 9x14 inches, and bas one door. The inside walls are lined with building paper and covered with matched spruce ceiling. The rooms are also coiled overhead with spruce. Water is conducted to the building through a 3-inch main 128 feet in length from a reservoir built for that purpose. The in-side reservoirs and hatching troughs are on the ground ready for setting up. Necessary wire cloths for hatching trays has been purchased and the frames are in process of construction. Owing to late commencement of operatons on the building and the early forming of ice on the lakes, the managers were unable to transport and set up the hatching appaiatus until atter the time that the spawn had reached maturity, thereby making it unsafe to remove them from the State hatchery. The committee recommends that the apparatus be set up in early sp

cepted. Hon. H. Dwight Grant, Geo. H. Beck, John Brinckerhoff, F. A. Barrett and C. W. Colton were elected managers. L. W. Fiske was delegated to go to Albany to confer with represent-atives in regard to securing aid for the new hatchery and to voice the sentiments of the club on the proposed changes in the game laws. PORTSA.

UTICA, N. Y., Feb. 3, 1886.

BLACK BASS IN GERMANY.—We have received a pampulet of eight pages from Herr Max von dem Borne, on the black bass. This gentleman, it will be remembered, has introduced the two species of bass into Germany and has sent us accounts of his success in breeding them. He has called the small mouth *der Schwartzbarsch*, and the big-mouth *der Forellenbarsch*, *Forelle* being the German word for tout. The great success in breeding these fish, together with their growth and game, qualities, causes Mr. von dem Borne to value them highly, and to recommend their introduction into suitable waters in his country.

Yearly subscription \$1.50. Address "American Kennel Register," P. O. Bo. 2833, New York. Number entries already printed 3185.

EASTERN FIELD TRIALS CLUB.

EASTERN FIELD TRIALS CLUB. THERE was an important meeting of the Board of Gov-ernors of the Eastern Field Trials Club at the St. James Hotel on Tuesday evening, Feb. 9. The Treasurer's report showing a balance in favor of the club of \$328,60 was accepted. Messrs. J. L. Breese, New York; C. L. Dick, Pittsburgh, Pa.; O. H. Denny, Pittsburgh, Pa., and J. T. Perkins, Brooklyn, N. Y, were elected members. The conditions of the Meinbers' Stake were changed so as to allow any member to fiandle a dog owned by another member. The committee on running rules reported several amendments which we shail publish next week. The date of birth of entries for the Derby of 1886 was changed back from May 1 to Jan. 1, the entries to close May 1, with \$10 forfeit and \$10 additional to starters. The stake will be \$700, with \$400 for first, \$200 for second and \$109 for third.

THE FANCIERS' SHOW.

THE FANCIERS' SHOW. THE dog show held in connection with the New York Fan-ciers' Club opened on Monday last, and closed Wednes-day evening. The entries numbered 307, and the quality of the dogs was very high. The show of dogs appeared to attract more attention than any other of the exhibits, and the crowd about the benches and about the judging ring was often so great that it was very difficult to obtain anything like a satisfactory view of the animals on exhibition. The judging was conducted in a ring at the east end of the build-ing, by Messrs. C. H. Mason and Jas. Watson, and gave gene-ral satisfaction. In the case of the contest between the rough-coated St. Bernards Otho and the newly-imported Merchant Prince there was room for an honest difference of opinion, and we presume that in the opinion of the judge the bad condition of Merchant Prince gave Otho the first place. POINTERS-(MR, MASON). The pointer classes were not well filled. The average qual-

POINTERS-(MR, MASON). The pointer classes were not well filled. The average qual-ity, however, was very good. In the doc class, Beauvoir, win-ner of first, is a good young dog, with a fair head, good loin, quarters, legs and feet. He is a bit throaty and is too wide in front. Second was properly withheld, Corney, the only other in the class, showing more greyhound than pointer character in head and neck. The bitch class brought out two new ones. Faustina, winner of first, is a nice white and liver ticked. She is faulty behind. Dawn, winner of second, is not so good as the winner. She has a fair head, good loin and legs, but is throaty, too wide in chest and has poor feet. In the puppy class, Beauvoir, the winner in the aged class, had to make room for his litter brother, Beau Brummel, a nice young dog, with good shoulders, back quarters, legs and feet. He is not quite clean cut enough in head. Vic, winner of third, was out classed. ENGLISH SETTERS-(MR, MASON).

ENGLISH SETTERS-(MR. MASON).

ENGLISH SETTERS-(MR. MASON). Foreman scored an easy win in the dog class. He was look-ing well, except that he was out of feather. Fairy King won second. He won second in the puppy class at Philadelphia last May. He is a nice little dog; his ears are set on a triffe high and he is a bit slack behind the shoulders, but may im-prove in this respect with age. Four of the others were given head, but is faulty behind, and was in bad condition. Tip has not improved upon his puppy form; his head is of the Clumber spaniel type, and he is faulty in quarters. Sussex Tramp is a bitch easy, tirst went to Pet Berwyn, rather a nice little heavy in shoulders. Second went to Alice Dale. We rather should head, shoulders and legs, and a nice coat. She is to long-coupled and has flat, open feet. Neither of the two puppies were first-class. IRISH SETTERS (MR. MASON).

IRISH SETTERS (MR. MASON).

IRISH SETTERS (MR. MASON). In Irish setter dogs Tim won first. He has greatly improved and fairly won his place. Chip, second, was looking well. Glen, third, is a fairly good dog, but he was badly shown. Leo, hc., is too heavy in head and light in loin. He is also straight behind and has too much white on chest. Champion Rory O'More was on exhibition only; he carries his eleven years bravely. There was nothing else in the class worthy of notice. The bitches were better than the dogs. Mollie Bawn won first. She has greatly improved since we saw her last. Second went to Miss Nellie Hustead. She won first in the puppy class at Philadelphil hast fall. We then said of her that if she went all right she would do to show again. She is not yet fully mature and if she develops the proper amount of muscle she will hold her own in good company. Third went to Yoube; she was looking well. Fame, vhc., is only a fair Specimen, with not mmch to choose between her and Katie GARDON SETTERS—(MR. MASON). BORDON SETTERS—(MR. MASON).

GORDON SETTERS-(MR. MASON).

GORDON SETTERS-(MR. MASON). Only three of the seven entries in the Gordon classes were shown. Argus had an easy wm in the dog class. Don, his only competitor, winning second. He is rather a well formed little dog with a nice flat coat. His color is not good and he has light eyes. The only entry in the bitch class was absent. Jess, the only puppy shown, was very lucky to receive first. She is fairly well formed, but has a poor head and a curly coat

CLUMBER SPANIELS-(MR. WATSON). Mr. Richardson was the only exhibitor in this class. Tyne was out of condition, and in consequence only received third. FIELD SPANIELS-(MR. WATSON).

RIELD SPANIELS—(MR. WATSON). Newton Abbot Lady, winner of first, was the only entry in this class, but a miscellaneous spaniel or we should say a spaniel from the miscellaneous class was added and given second. He is a very handsome animal and the first field spaniel of the kind that we have seen. COCKER SPANIELS—(MR. WATSON).

COCKER SPANIELS—(MR. WATSON). In the cocker spaniel class for black or liver, Miss Obo II. had an easy win. She has a good head, which is a trifle too large. She is well formed and has good legs and feet; her coat is not quite so straight as we like to see, but take her all round, she is a very nice bitch. Pearl Lake Obo, the winner of second, is not square enough in muzzle and is too light in middle, too high up, and has a long up-turned tail. In the class for 'any other color,' Marion won first. She was much the best. Hornell Nance was second, and Wanda T, short of feather, was third. In the pupp class, first went to Newton Abbott, and second to Lady Abbott, his litter sister. Neither are quite right in head, but may improve with age. Third and body both. DEERHOUNDS—(MR. MASON). Bran and Lorna, both well known, were respectively first

Bran and Lorna, both well known, were respectively first and second; both were in good condition. GREYHOUNDS-(MR. MASON).

GREYHOUNDS-(MR. MASON). Mr. Huntington entered Hawthorne Belle, but changed the entry to her litter brother Harlequin; but the correction, through mistake, was not made in the catalogue. He won first, and is a nice dog, with a beautiful head and neck; he is a trifle light in bone and might be better in feet. Second went to Begonia. She was looking well. Maud, winner of third, is rather a nice bitch, except that she has bad feet. Bouncing Boy, vhc., we preferred for third, notwithstanding his flat back.

BEAGLES-(MR. WATSON).

Only four beagles were shown, all good ones, we thought them properly placed. Rye, winner of second in the aged class, was wrongly entered in the catalogue as Ringwood. DACHSHUNDE-(MR. MASON).

DACHSHUNDE-(MR. MASON). Three only were shown. The two that were placed were fair specimens. Both are too tight in skin. The winner is faulty in color, and Badger is deficient in crook. ULMERS-(MR. MASON). Cafe-au-Lait was the only one shown in this class. He is better than the average and appears to have the best of dis-positions. MASTIFFS-(MR. MASON).

positions. MASTIFFS-(MR, MASON). There was a fine collection of mastiffs. Ilford Caution took dirst. He was in excellent condition and form. He is still weak behind, but his wonderfully good head (barring the ears) carried him through. Homer, second, is not so good in head and is small. Hector, faulty in muzzle and lacking

size, took third. Ned is bad in head. Shylock was trans-ferred to the puppy class. He is, bad in legs, houndy in head and is of bad color. In bitches Prussian Princess, looking very well indeed, took first. She has recovered from a stiff-ness behind which she formerly had, and moved very well indeed. She beat Rosalind in muzzle, and in that only. Both are very good bitches. Chinalette, thurd, is too long in the face, carries her ears badly, and has faulty feet, but is of good size. Juno has a long, light head. Browning's Lucy is crooked on forelegs. In puppies Hannibal has a fair good body, legs and feet, but has not sufficient width of muzzle, and his eyes are light in color. A jax, second, is of good size, has good legs and feet, but is too long in head. Nadine was transferred from bitch class to puppy class. She is bad on the forelegs, of a bad color and houndy in head. Leonidas is too long in head. Major has a bad head and bad feet. ST. EERNARDS-(MR. WATSON).

ST. BERNARDS-(MR. WATSON).

too long in head. Major has a bad head and bad feet. ST. EERNARDS-(MR. WATSON). The display of St. Bernards was very fine. In fact, they were the feature of the show. In the rough-coated dog class. Otho, looking better than we have ever seen him, carried off the honors. The celebrated English winner Merchant Prince, recently imported, came next. When we first looked over Merchant Prince we were of the opinion that Mr. Watson had made a grave mistake; but a closer inspection and com-parison of the two dogs showed that there was room for a difference of opinion. As we have before said, Otho is the grandest dog in front that we have seen. He is very straight behind and weak in quarters, but his increased weight, in a measure, improves his appearance behind, and he moves much better than one would expect, although his gait is far from perfect. Merchant Prince is an immense dog, but he has not much the advantage over Otho in this respect. His head is not so good, and his chest is decidedly inferior; his forelegs come out close together, and when the two dogs are placed side by side Otho shows up by far the best. Prince is much the best behind and moves nicely, both carry their talls too high and both were off in coat, Prince having the worst of it in this respect, his hair standing all the wrong way. He is but just off ship and should not have been shown until in good condition. Upon the whole it was rather a close thing between them, although we thought Otho a little bit lucky in beating his formidable antagonist. Schoonhoven, the dired nd furnada scored a win, beating such well-known pool ones as Millicent IL, Empress, Stella, and Baroome, re-spectively second, third, vhc. and hc. Miranda, with the ex-section of rather a weak muzzle, is one of the best we have seen. In the puppy class, although over age, Julien won first, he was also vhc. in the aged dog class. Second and third wents to Fleur-de-Lis and La Duchesse, litter sisters, both are promis-ing pupies. SMORH-COATED ST.

SMOOTH-COATED ST. BERNARDS-(MR. WATSON)

SMOOTH-COATED ST. BERNARDS-(MR. WARSON). The smooth-coated St. Bernards were a good lot. St. Botolph, first, is a grand fellow, and we regard him as very cheap at his catalogue price. Ernst is plain in head, and has a bad expression. His tail is bad. Turk has a fair head, but is faulty in muzzle. In the bitch class Flora II, is good in head, as our smooth-coated St. Bernards go, though even in her we look in vain for the typical head and the grave, majes-tic expression which should characterize these dogs. She is faulty behind and is light of bone. In puppies, first and second were taken by two of St. Botolph's get, and third by Thuna, imported. She is snipy and light of limb.

NEWFOUNDLANDS. It seems remarkable that so little interest is taken in this fine breed of native dogs which have so much to recommend them. Most of the specimens seen at our shows are very in-ferior. There were seven Newfoundlands entered. Of these Major took first very easily. He is not very large, but is fairly typical of the breed. If he were a little latter between the ears we should like him better. Juno, second, is on the small side, and her head is faulty between the ears and in muzzle. The others call for no special mention. COLLES-(MR, WATSON). There were some nice collies in the bitch and puppy classes, were properly withheld. Lady of the Lake, winner of first in the bitch class, we have not seen since the New York non-sporting show in 1884. We then wrote of her as one of the most promising young ones that we had seen and predicted that if she went all right she would eclipse some of the cracks Dot, the winner of second, has improved since the Philadel-phia show. Ruth deserved her third, although she was out of coat. Gilford, in the puppy class, has a nice head and is very promising. Second went to Dandy. He also has a good head and coat. BULLDOGS-(MR, WATSON). In this class the arguments on the second here and predicted that be winner of second.

BULLDOGS-(MR. WATSON). In this class the winners are all well known. Bill was ex tremely lucky in getting first over Tippoo. He is in better condition it is true, but the latter is so far ahead in head and shoulders that we think he should have won. In bitches both Bellissima and Britomartis, the latter looking well, showed up, and we think the two were well placed. BULL-TERRIESS-(MR. MASON).

up, and we think the two were well placed. BULL-TERRIERS--(MR. MASON). The dog class introduced a good terrifer in the recently im-ported Count. He is a capital dog all round. He is a triffe checky, and would be improved with a bit more length in muzzle. Judas, winner of second, is rather coarse, with blunt muzzle and faulty in shoulders. He is also checky and carries his tail too high. Little Nell won first in the bitch class. She is also recently imported. She is a nice little bitch. Her chief faults are too full an eye and poor feet. Second went to White Rose, winner at Philadelphia last fall. Genesta, win-ner in the puppy class, is a nice puppy, with a coarse tail. FOX-TERRIERS--(MR. WATSON). In this class Richmond Jocky, first, is a little checky, but is after all a workmanlike-looking terrier. Rustic Flash, second, has a sour expression and is thick in skull, but has excellent legs and feet. Regal, third, is snipy and checky. Smash is legzy and light in body. Swipes has a bad head and shoulders and is too wide through the chest. In the bitch class Rich-mond Ohve won easily. She was by far the best fox-terrier in the show. She is, however, becoming thick in skull as she grows older. Lady Wunnie, second, is snipy, light of bone and faulty in feet. Shame, third, has a bad head. Di, vhc., is be-coming coarse in head. In puppies, Spot, Jr., second, has a poor head and is heavy in shoulders, but has a nice small ear. Gypsey is round in skull and carries her ears badly. Raby Jack, third, is a little round in skull, as is also Nina, first, who s besides checky. Lulu and Ouda are both faulty in head and ian. WIRE-HAIRED AND IRISH TERRIERS-(MR. WATSON).

WIRE-HAIRED AND IRISH TERRIERS-(MR. WATSON

WIRE-HAIRED AND IRISH TERMERS—(M. WATSON). There were two good wire-haired fox-terriers in this class. New Year's Day was the best of the lot. Nailer, placed second, is an Irish terrier, fairly good, but not so good as his kennel mate, Molly Bawn, given vhc. Tiny Todger was placed third, she is a nice little bitch. SKYE TERRIERS-(MR. WATSON).

Only two Skyes were shown. Nettie, first, has a soft coat, and Nypp a bad head and ears. They were well placed. TERRIERS, ANY OTHER BREED-(MR. WATSON).

This class was made up entirely of black and tans. Vorti-gern was placed first; his mouth is gone and he should give place to younger animals. Second went to Britt, smuthy in tan, full in eye, and shallow in chest. Queen, placed third,

was the best in the class; she has a good head, properly marked, and is of good color, she is a trifle light just below the eye.

PUGS-(MR. WATSON).

PUGS-(MR. WATSON). There was not a large collection of pugs, but the quality was good. Bradford Ruby, looking better than we have ever seen him, won over Young Toby, placed second. Dick and an unnamed entry were given equal third. Dick is faulty in head and ears, and is smutty; the other we could not see out of his cage. In the bitch class, first went to Beauty. She has a bad tail and carries one ear badly. Tra-la-la is round in skull. In puppies, Zoe, first, is round in skull and not very good in color. Jumbo and Fly are small in eye and faulty in head.

YORKSHIRE TERRIERS-(MR. MASON).

YORKSHIRE TERRIERS—(MR. MASON). This class was divided into over and under seven pounds. In the large class first went to Ben, a nice little dog of good color, but short of coat. Second went to Young Hero, better in coat than the winner, but faulty in tan and not blue enough on back. In the small class first went to Ben, entered as three years old. He looks much older, and is short of coat. Second went to another of the same name. He is undershot and too long in back. Raggs, placed third, is faulty in color. Both of the bitches shown were off in color. Lillie, placed first, is not good in head and is too long in back. Viola was bad in coat.

KING CHARLES SPANIELS-(MR. WATSON)

KING CHARLES SPANELS-(MR. WATSON). Duke, the winner, is well known. We thought him well placed. Charlie, placed second, is faulty in head and coat. The others were perhaps as well placed as possible. BLENHEIM SPANELS-(MR. WATSON). King Victor won handily over King Pippin in this class. He is a bit too large, but much the best.

TOY SPANIELS-(MR. WATSON). Some pretty toys were shown. We thought them well placed.

ITALIAN GREYHOUNDS (MR. MASON). There was only one Italian; a fair specimen only, as it is too large.

too large. MISCELLANEOUS (MR. WATSON). In this class first went to Mouton, wrongly printed as New-ton. He is a very fair white poolle. Second to King Guide, a well formed foxhound, and third to Black Bess, a black curly retriever, fairly good in coat, but faulty in head. Fol-lowing is a complete list of the

POINTER SWEEPSTAKES AT PITTSBURGH.

POINTER SWEEPSTAKES AT PITTSBURGH. Editor Forest and Stream: In addition to the large number of specials already offered by the Western Pennsylvania Poultry Society, the following sweepstake classes for pointers have been arranged by the society in answer to Messrs. Anthony and Munson's letters, under the following conditions: All dogs to be entered in the regular classes before competing in the sweepstake class, each entry to sweepstake to be \$10, the society to add \$10 to each sweepstake class. Two competitors in each sweepstake class required to fill. Entries to close March 8, the entrance money in sweepstake class and money added by society to go to win-ner. Following are the classes: Best pointer dog over 551bs.; best pointer bitch over 501bs.; best pointer dog over 551bs.; best bitch under 501bs.; best pointer dog or bitch in the show; best brace of pointer dogs or bitches as a brace; best kennel of five pointers, dogs or bitches, owned by one person, kennel or club. C. B. ELBEN, Sec'y. Priversone, Pa., Feb. 1, 1886. NEWADIC SUGW Large CT. But A. DW

owned by one person, kennel of club. C. B. ELBEN, Secy. Pritsburgh, Pa., Feb. 1, 1886.
NEWARK SHOW.-Jersey City, Feb. 6, -Editor Forest and Stream: Owing to the refusal of express companies to make satisfactory arrangements for transporting dogs to and from our show, we have adopted the following plan, for the benefit of exhibitors: The Penn, R. R. and branches; N. Y., Lake Erie & W. R. R., Lehigh Valley R. R., N. Y., Susquehanna & W. R. R. and Philadelphia & Reading R. R. will carry free both ways, all dogs when accompanied by their owners or care takers. The club will provide wagons to call at all of the depots in Newark during Monday, March 22 and Tuesday morning March 23, to transfer dogs erriving on the above roads, to the Met-opolitan Rink, and will return them the day after the show closes to the depots, without charge to our exhibitors. At our last meeting the club made four extra classes, by dividing the dogs and bitches, in the mastiff, rough-coated St. Bernard, smooth coated St. Bernard and collie puppy classes, making Class 4, mastiff puppies, dogs, 510 and \$5; Class 11, rough St. Bernard puppies, bitches, \$10 and \$5; Class 12, smooth St. Bernard puppies, bitches, \$10 and \$5; Class 12, smooth St. Bernard puppies, bitches, \$10 and \$5; Class 12, smooth St. Bernard puppies, bitches, \$10 and \$5; Class 12, smooth St. Bernard puppies, bitches, \$10 and \$5; Class 12, smooth St. Bernard puppies, bitches, \$10 and \$5; Class 12, smooth St. Bernard puppies, bitches, \$10 and \$5; Class 65, collie puppies, dogs, \$10 and \$5; Class 65, collie puppies, dogs, \$10 and \$5; Class 65, collie puppies, bitches, \$10 and \$5; Class 12, smooth St. Bernard puppies, bitches, \$10 and \$5; Class 65, collie puppies, dogs, \$10 and \$5; Class 12, smooth St. Bernard puppies, bitches, \$10 and \$5; Class 65, collie puppies, dogs, \$10 and \$5; Class 12, smooth St. Bernard puppies, bitches, \$10 and \$5; Class 65, collie puppies, dogs, \$10 and \$5; Class 65, collie puppies, dogs, \$10 and \$5; Class 65, collie puppies, dogs, \$10 an

JUDGES AT NEWARK.-Mr. John Davidson of Monroe, Mich., has been invited to judge the setters and pointers. Mr. J. A. Stovell, of Philadelphia, will judge the beagles.

DEATHS. Collette. On Jan. 15, the English beagle bitch Collette (imported Chanter-Dr. Rehwinkel's Beauty), owned by N. Elmore, Granby, Conn. She was killed by a coon dog (half buil and half hound), and after killing her he partly ate her up. Is it not a very singular tuing? Coon dog was in perfect health and had meat daily, and had been kept with another bitch most of the time and had always been kind to them,--N. ELMORE.

KENNEL MANAGEMENT.

197" No Notice Taken of Anonymous Correspondents. E3" No Notice Taken of Anonymous Correspondents. W. S. D., Baltimore, Md.—My heagle dog, three years old, carries his head close to the ground and is continually shaking his head, which clips small pieces out of his ears. The lining of the ears is neither swollen nor inflamed. Have been treating him for canker un-der Stonebenge directions, but he does not seem to improve. Please advise me what tod of or him? Ans. One of the ears is affected either inside or out. Examine carefully. Look at the corners where the ternal opening. If you elicit signs of pain the dog has canker. Use the following, a few drops of which may be used morning and even-ing dropped into the ear: Of hormor chloral and of laudanum each one drachm, of water six onnces.

one drachm, of waters ix ounces. G. A. T. Newmarket, N. H.-For the last three days my dog (3 years old) has refused all food, seems extremely duil and lifeloss about the bouse. Has slight cough nose at times dry and hot. Be-guas to stagger a little, I suppose from lack of nourishment, Last inght I gave about a tablespoonful of castor oil, this morning a quinine pill of 8 grains and am to follow it with 5 drops of Powler's solution every 3 hours; am I doing right? Ans. We should say that your dog has an attack of distemper. It may be a light one. It is best to isolate bin from others: give him dry straw bedding and renew it twice weekly. While the fiver is present give 3 drops aco-nite tincture every 4 hours. If he seems very weak you must sustain him with brandy or whiskey given in tablespoonful does three or four times daily. You must give the most concentrated nourish-ment, in the form of milk and beef extract without fat. Spraying the throat with two per cent, solution of the hydrochorate of exactly in the best manner.

RANGE AND GALLERY.

WORCESTER, Mass., Feb. 4.—Within a few weeks there has been a decided movement in this vicinity to revive the interest in the rifle. The first event of the week was the first of a series of six consecutive meetings at the Sonth End Gun Club range, The-e meets are on Tuesday afternoon; at each meet there are to be five rerular events as follows: 5 glass balls, 5 Macomber targets, 5 blackbirds, 3 pairs doubles, 5 clay pigeons. The club offer 10 cash prizes that agregate \$100, also a special prize of one-half keg of powder. The arrangements are in the bands of Corren Doone, E. F. Swan and A. B. F. Kunney. It is the interion of the committee to keep the individual score as near a secret as possible unfil the end; in that way it is hoped to increase the interest. This week the contestants were: Albert Hougiton, Cyrus Holden, Gorren Doone, R. Joues, W. R. Dean, Wm. L. Davis, B. Franklin, M. D. Whither, J. B. Jongos, H. W. Webber, E.T. Smith, M. D. Gilman, E. F. Swan, C. H. Farker, R. S. Knowles, C. S. Day. It is generally understood that the best store was 21 out of a possile 28, mixed shooting. At the meet to-day of the Worcester Rifle Association at Pine Grove Range the wind was unfavorable and very cold. The American stand-ard target was used: Record Match.

HAMILTON, Feb. 2.—The pigeon shooting tournament, under the auspices of the Wild Fowlers Gun Club, was opened at the Halfway House, Dundas road, this morning. Over a hundred sport-men attended. The weather was very cold, and the experts needed all their enthusiasm to carry them through. The shooting was at 21 birds each, and the men divided into squads, occupied two days in dispos-ing of the match. The record stood: "First Squad.—E. M. Moody (Lockport) 14, W. H. Case (Lockport) 7, J. A. Andrews (Lockport) 12, Wallace Price (St. Williams) 15, I. Koch (Buffalc) 16, O. Bessor, Jr. (Buffalo) 6, Alf. Downs (Buffalo) 11, E. Smith, (La Salle) 13. Second Squad.—C. Carter 14, C. M. Stark 10, D. R. James 11, A. Garner 4, W. S. Perry 15, W. Schiebert 12, W. Carrothers 5, J. Town-send 13. "Dirid Squad.—C. Carter 14, C. M. Stark 10, D. R. James 11, A. Garner 4, W. S. Perry 15, W. Schiebert 12, W. Carrothers 5, J. Town-send 13. "Dirid Squad.—E. T. Hetherington (Toronto), 7, retired; H. Graham (Hamilton, 2, retirred; G. Harrison (St. Catharices) 6, Fettred; NeFar-lane (Huron, Dak), 10; T. Westbrook (Braatford), 11; Chapman (Syra-cuse, N. Y), 11; C. Hunt (Hamilton), 12; Squirte (Luckson, Mich), 11. Fonth Squad.—E. Hetherid (Carton West), 8, retired; C. Smith Al-gonac, Mich.), 9, retired; Harwood (Woodstock), 7, retired; Ward (Dundas), 14; Williams (Rochester) 12; Luther (Syracuse), 15; Neff (Port Colborne), 16. "Sixth Squad.—Eheridan (Sayre, Penn.), 8; Wilhelm (Buffalo), 5, re-tired; Crooks (Hamilton), 7, retired; Gurtney (Syracuse), 16; N. Ff (Port Colborne), 10; Jones (Buffalo), 5, retired. "A sweepstakes match, 10 smoked glass livids at 15yds. rise, was won by F. A. Crowell and C. Gregory. NATIONAL GUN ASSOCIATION TOURNAMENTS.—Special Notice.—Mem-bers desirous of organizing tournaments in their vicinity, under the auspices of the Association, are requested to notify the undersigned. All the expenses of the same will be paid by us. Make your arrange-ments for 1886. We propose to establish a circuit of tournaments annually. Claim your dates now. General office and beadquarters, Macon. Ga.—MATT R. FREEMAN, Vice-President and General Manager; F. C. ETHFIDGE, Secretary, Macon, Ga. Send 10 cents for hand book containing rules, constitution, etc. "Fairly started and its future depends entirely upon the manner in which the sportsmen throughout the country respond."—C. M. STARE, April 18, 1885.—Adv.

Address all communications to the Forest and Stream Publishing Co.

CANOEISTS are invited to send us notes and full reports of cruises, club meets, information about canoeable waters, and other commu-nications of interest.

Secretaries of cance clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signals, etc. of their clubs, and also notices in advance of meetings and races, and reports of the same. Canceists and all interested in canceing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

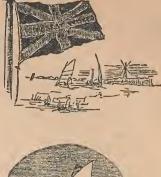

S ECRITARY-Dr. C.A. Neidé. Schuylerville, N.Y. Candidates for membership must lorward their names, accompanied by the re-commendation of an active member of the A.C.A., together with the sum of \$3 for initiation fee and first year's dues, to the secretary, who will present the names to the commodore. Money should bu sent by registered letter, or money order on Saratoga Springs, N.Y.

WIDE OR NARROW CANOES.

MUDE OR NARROW CANOES.
Particular description of the second of

ROSLYN, L. I., Feb. 6.

"KATRINA'S" NEW CANOE.—Mr. Ruggles, of Charlotte, New York, has lately shipped a new cance to Mr. R. W. Bailey, 240, of Pittsburgb, a modification of Rear-Commodore Andrew's Sofronia, jut with a flatter floor. She is 15t. long, 369/sin. beam. depth at gun-wale, 10% in., and at fore end of cockpit, 14in. Just forward of the cockpit is a hulkhead with Imass door fastened with a thumbnut. Forward of this bulkhead about 17in. is a centerboard trunk, and in the stem is another, the after trunk is a metal air tank. The boards are each of 1-16in. Imass, hung like the Lassle's, and weigh under 6 pounds. The boat is built after Mr. Ruggles's system of smooth skin and parrow plank and presents a very handsome appearance. She is not yet named. Mr. Ruggles is now at work on Commodors Bath-hun's flagship.

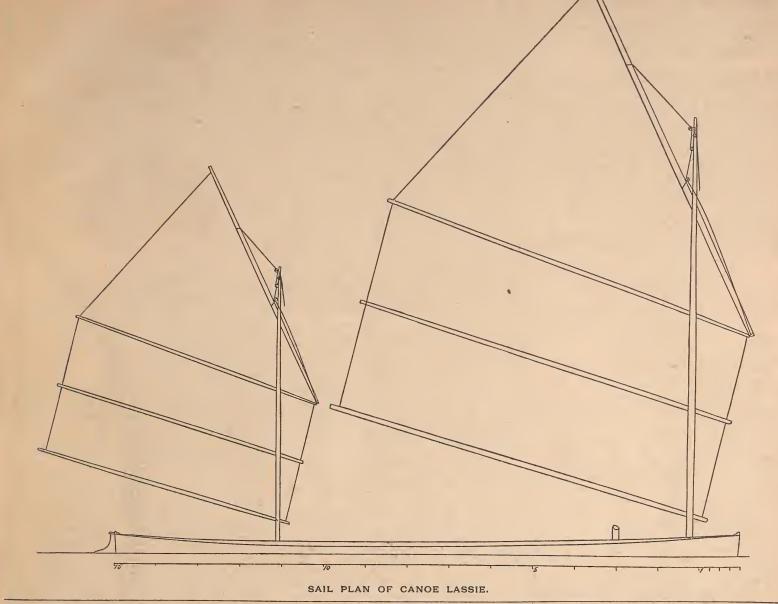

A WINTER EVENING'S REVERIE.

A WINTER EVENING'S REVERIE. WINTER is the time to gather in the memories of the senson, and gather them with the accoundated stores of a docsn years of boating reminiscences. Reposing in my armcheir with the pipe of peace, I have but to look around my room for inspiration. A momen's glance would pro-claim the tastes of the occupunt. Models of favorite cances pic-tures and photographs of cances and cancemen recail many a joyous cruise and many a friendship conceiver and matured on home and foreign waters. Here we see a group of the hold paddlers of the Mersey, a fitting pendant to a similar picture of the Citdesmen and their craft. There a bookshelf full of boating literature, from Tay-for's "Verle Merrie Werrie Ferre Voyage, 'the first account of a genuine pleasure trp.-for it is some three bun tred years since Taylor first set out-to the McGregors, Bishops and Stephensons of the pres-ent time. Then there are the charts and mans, the accumulation of many a

encircling trees. aull is the one spot in the neighborhood where the hand of pro-

SAIL PLAN OF CANOE LASSIE. gress has not been busy. No pretentious villa residences dot its breezy slopes, and as yet no one has thought of improving it into that abomination—a modern sensite resort. At one time the Dock Company threatened its peace of mlnd and spoke of fish docks, etc. and the lovers of the quiet old world spot tembled. But the peril passed and the docks went west instead of east and Pauli was left to slumber in peace once more. But evening draws on, and the hanks grow dim and objects become mysterious and vague in the twilight. It is time to come to anchor somewhere for the night. The merits of various adjaceut creeks are discussed as we run along the Lincolnsuire coast. In the darkness it is difficult to detect the entrance of the desired creek and a sharp lookout is kept ahea i. The mate's eves are the sharpest. "Here we are at the SkitterHaven. Luff up!" and obelient to be rheim the little boat glides into the haven whose quiet waters are a strange con-trast to the chopy waters outside, which we can hear chafing and roaring outside the spit. "Let go mainsail, up centerboard!" and after answering asfar as possible the question "How shall we lie at low water?" "How shall we get out to morrow morning?" "How much cable does she want?" the anchor is let go, a shore line is run out and sails made snug for the night. Then up goes the tent over the well, and the riding light shows what is, if a limited, at least a snug inferior. Soon the stove is burning hrightly and coffee bubbling, while the Mate is laying the table for supper. We have grown fastidious in these latter days and must needs have a table cloth, and from deep recesses are produced various necessities and not a few of the luxur-ies of life. The plast awake perhaps field is as we repose side hy side, each with his title pannikin of grog on the little shelf by his side (we are great at shelves), and pipe in mouth, we dascues the events of the day and the plans of the morrow. Then lights out and good nig

with the noise of the drowsy senses. OAKLAND C. C -On Jan. 23 the Oakland C. C., of California, effected an entire re-organization, starting anew with fifteen mem-bers and ten cances, the latter as follows: Length Beam. Fr. In. Build. Owner. F. Gonzalez.

Harvey Darneal, The club is col-nia canoeists, and has in view a State iddling and sailing races. The club irters of the Mystic Boat Club on Oak-oni room 18×40ft, a meeting room square, and a workshop. Races are club promises to be the nucleus of a here is

<section-header><section-header><text><text><text><text>

are 75 and 35sq. ft., with another of but 18ft. and one batten. In cruising or in heavy weather racing the 35ft, sail is stepped forward and the 18ft. sail aft, giving a very safe and snug rig. This season the Lassie will carry a mainsail of 60ft. with a mizzen of 25, a total of 85ft. for the regular races, reefing to 60ft. and 15ft., or 75tt. in the A. C. A. limited race. The large rig will be retained for special races in very light weather. In actual use, with a strain on the sheets, the sails will sag aft and the boom and peak will really be much lower in sail-ing than they appear in the drawing, hut this allowance is necessary in all rigs with long, light spars and no stays or shrouds

Il rigs with long, light spars and no stays or shrouds
THE A. C. A. TROPHY.—Editor Forest and Stream: -I beg to cknowledge through Dr. Parmele, of Hartford, the following sub-cryptions of one dollar each to the A. C. A. cup. Rev. Francis boolwin (790). E. G. Quggle (827), C. E. Forrest (793), Col. Jacob L. Neen, 791, L. Q. Jonce (357), J. Hart Fenn (H. C. C.), W. B. David-on (855). Also through Mr. Johnson, Brooklyn C. C., S3. Previously eknowledged, 599; total to date, 510, -W. W. MartLock.
CANVAS CANOES.—Boston, Jan. 30.—Editor Forest and Stream: see among your Answers to Correspondents one to J. H. Stagg, to he effect that no regular builders of canoes make canvas canoes. I would state that Messrs. Thos. Kane & Co., of Chirago, make canvas anoes ranging in price from \$24 to \$24 c. \$24. W. Corrwatchetr, Ja.
RUSHTON'S CATALOGUE.—We have received the new catalogue ust issued by Mr. J. H. Rushton, of Canton, New York, the largest nd most complete list of boats and canoes yre published. We shall once the attention of all canoeists.
MONA.—Mr. B. W. Richards has his new canoe Mona well along, and rockville, is building her. She wilb be 15t. 11½in.×30in, n the same lines as Mr. Stephens's Hermit, hut lengthened It. Both oards wilb eo f brass.
ANOTHER CRUISER.—Mr. Rushton has sent us the lines of a new ruiser, a sucabors, built up higher and with a stem like a canoe. He now a seakbor, built up higher and with a stem like a cance. He now a seakbor, built up higher and with a stem like a cance. He new heatbord.

THE CRUISE OF THE PILGRIM .- VII.

THE CRUISE OF THE PILGRIM.-VII. BY DR. W. H. WINSLOW. THE month of September had been flue for salling, and I had made for most of it. The boys had gone home to school. If was time for me to think of my business and waat I was to do with the yacht. I hought of my business and waat I was to do with the yacht. I thought of my business and waat I was to do with the yacht. I shore afforded a snug berth. I did not do it. If I had, she would have been washed from her cradle and probably been very much damaged hovernher, or, escaping this, have been burned with the wharf and ware. I decide to take her back to South Boston, the home of yachts, where the builders know how to haal them out and take care of them. Capital McDonald was intending to visit Boston and sail he would oportunity for observation of the salling qualities of his latest cutter. All the necessary arrangements were made, farewells were sail to protunity for observation of the salling qualities of his latest cutter. All the necessary arrangements were in definited half sailed all and protunity for observation of the sent in orthwest wind. Method the late the the dot of the interflow the califorpsail and friends and relations, the anchor was lifted half sailed all and then the interflow of the gatitopsail and the protuct way and put in to Camden at dark, built were obliged on which the tender in order to get up to an anchorage to the left of the sale bost wharf at the mouth of a creek and inside Negro-tion. The now is situated at the foot of the imountains, which run par-

and reets in the lower course, torus paint a paintain of deignitin views insurpassed anywhere in unity, variety and beauty. Thesday began with a light northwest wind; we weighed the anchor after irreakfast, hut could not stem the flood tide and had to drop it again. We started again about 11 o'clock and worked our way down to Fort Popham and were about to anchor for lack of wind, when it suddenly came out from the south-ast. The tide was now slack, and making long and short legs, we finally weathered Fond Island and kept off hefore the wind for Fuller's rock. The sea was very heavy: we rolled a great deal, and to add to our disconfort the sky heeame cloudy and sullen and a cold drizzling rain began to fall. We drew slowly by the rocky dangerous shore and spent the whole afternoon running to ne to two knots an hour toward Mark Island monument, which was a long time ahead of us. It was nearly 6 o'clock and getting dark when we arrived there and the sea and tide nearly set us upon the point, which makes off shallow and rocky toward Haskleel's Island and is no so shown upon the chart. Mulliams thought we had hetter put to sea, get hold of Half Way Rock light and nake our way into periess as we were, even if we could do no better than run at hazard up Harpswell or Broad sounds. I kept on past Haskell's, holding the tiller in one hand, the chart in the other with the rain pattering upon it, soon recognized Eagle Island, then Upper Flag Island, and hegan ub breathe freer, for beyond it we could see the clustered lights of a settlement. It was getting dark and thick this time, but we were just a sub to get hold of the steanhoat wharf of Potts Harbor. The was an arrow escape from misery and perhaps shipwreek, and, if we had heen fifteen minutes later we would have had to have gone it blind. 1 would advise amateursaliors not to take the risk of running a course in strange waters without a large margin of time. Let us see what followed. We celebrated our good luck by a hot full meal, itstened to the patter of the rain a h

"What is the matter with you, Mack? What are you going to do' lasked. "Do' I am going to let go the heavy anchor. I don't feel comfor-table wi h only one hook in the mud and it blowing great guns like "That's what is the matter with me, hut we have not drifted any yet. I can see the scow's light and some lights ashore. The wind has hauled, but it is still raining." We put on heavy coats and rain hats and went on deck. Phewi how it blew and how cold it was. The heavy anchor and riding rope were unlashed and cleared, the yacht was hauled up to the other anchor, then the large one was cast broad off the bow, and about twenty fathoms of cable were paid out on each. The graft went astern and brought up head to the wind at the apex of a triangle of which the ropes formed the sides, and rode easily the remainder of the night.

THE NEW ATLANTIC.

THE NEW ATLANTIC. THE committee of the Atlantic Y. C. to whom the huilding of the new sloop is entrusted, Messrs. Fish, Lawton and Maxwell, have sent out specifications to the various huilders, and after receiving their estimates have awarded the contract to John Mumm, of Bay kidge. Work is to be commenced at once, and the yacht is to be in commission by Decoration Day. The yacht will be built of wood, in the strongest possible manner. The specifications call for a keel of while cak, 24x2im, taperling to 0x3im, at ends; a stem sided Sin, and mouided 14im; and a sternpost sided Sin, and mouided 10in, both of white cak. The frames will be of oak and hackmatack, the latter at heads, and spaced 26im, centers. At the ends the siding will he of 'he latter at each frame. The planking will be of pue or cedar 24/sin. The kinghtheads will he of locust, sided Sin. Tron floor straps 4x14/sin. Will he used, those abreast the trunk running up the side of 'he latter at each frame. The planking will be do pue or cedar 24/sin. thick with wales ot Sin, oak, tapering to 1½/sin at bow and stern. The fastening will be of copper and locust receasils. Hold will be four bilge streaks of 0x3in, yellow pine on each side, with ceiling of the same Sin, thick. The shelf, 12x4in. the clamos 12x5in, and tho deck becams will be of vellow pine. The latter will vary from 5 to 51m, siding, and 5 to blin, moulding. The centerboard trunk will be of oak and yellow pine, 4 and Sin, thick, and will he from the toxis will be of least white pine 25x25/sin, with oak rail 6x5kn. The faster-ings for the lead keel will be 21m. Muntz mut holts. All haster-ings for the lead keel will be 21m. Muntz mut holts. All haster-ings for the lead keel will be 01 oces dowr. The interon funk will be plain and neat. The spars will he 00 of ocegou pine, hut ap room has been made to furnish a holtow hoom and bowspirt hund of plate

CRUISE OF THE COOT.

THE CODT. III. A daybreak the yacht was hailed. After despa breakfast my newly found friend and his frisky m way at a slight tot, the driver being quite an improve first and inclined to converse as far as the distance wot weather had cleared, broad red bands ahove the land advent of the snn in a bright crisp atmosphere will winter. The landscape was dreary enough. Bare, ga-late looking fields and dry brocks with forbidding dw their gray shingle roofs against the sky on the hiltopy pround was undulating, and but for the season wo picturesque with the light of fields of golden core and torests interspersed. Some of the farms were on a betokened wealt, many fine heads of cattle and sheepy lands near the river whose bends the contal was follow Kingston, a tidy small country town is situated half New Brunswick and Bordentown. Here the coupon on delivered to a representative of the level heing a cut with hist occasional trois by a sury driver. took the Coot oo nous haud, a large portion of the level heing a cut with high that only occasional glimpses of the surrounding be had. The afternoon wore on with clouds rising, thil the rays of the sun, bringing with them a chill nori graat strength. At times the Coot would be sailing be faster than the mules were traveling. The reaches in very long and straight, sometimes as far as the eye corisoned true a propeller nad ber coming up in our wok very slowly. The driver sought to kee pahead by the the team, but to no purpose. Stupposing he knew hit very long and straight, sometimes as far as the eye coul some time a propeller had been coming up in our wake very slowly. The driver sought to keep shead by throw the team, but to no purpose. Supposing he knew his best let him have his way, but not without misriving peller finally overhauled us and sheered to one side to pe stupid driver would not allow. He whipped the animals aloneside. Through a bridge we hoth squeezed with sca spare.

the team, but to no purpose. Supposing he knew his own busines best 1 let him have his way, but not without missrings. The purpeller finally overhauled us and sheered to one side to pass. This his situpid driver would not allow. He whipped the animals and we key aloneside. Through a hridge we hoth squeezed with scarce an inch t spare. "This sort of thing was not to my liking. The driver never looke astern to see what he was doing. For ten minutes we key no. The as the mules slowed up, the steamer sought to pass. At that no ment we had reached a bend in the canal, and to my horror three reat lumbering boats were seen coming head on full tilt. They were loaded with iron pipe and of course would hold their way, as it way impossible to check them. I yelled to the driver to slack up and le go, so the Coot could drop astern of the steamer, and not bring ut all abreast with almost certainty that the yacht be crushed to atom between her weight fellow travelers. But the fellow paid no attern to met we end the canal hoats drove in between the steamer an the Coot, the latter heing compelled to sheer in to lie hank so clost that such early of high regardless. As the last canal hoats queeze through, the man at her clumsy helm raised lis cap with the word? "Cap, I did the heat could for you." And so he and the rest certainly had. But for their cool heads and accurate judgment the Coot with the part could for you." And so he and the rest restainly had. But for their cool heads and accurate judgment the Coot with a prevent restal during the scared lis cap with the word? "Cap, I did the heat four her, crossing more or less from site of the sature and her could for y accurate yind were the state of the steamer's walled the steamer's while the herm at the for their cool heads and accurate judgment the doed the steamer and the context of the steamer's were the state and head on the rest certainly had. A HOMILY ON BIGNESS.—It is annonneed that Mr. W. K. Vanderbilt is going to build the biggest steam yacht in the world. As the meril implied in that characterization has heretofore been the chief dis-tinction of Mr. W. Astor's yacht, the latter construction will now be obviously n. g. anathema maranatha, Ichabod —the glory is departed. The origin and evolution of this seeking for the biggest object in every category are easily traced, and have been publicly exemption in the erection to Wasbington of the biggest planet, and in the formation. every category are easily traced, and have been publicly in the erection to Washington of the bizgrast monume planet, and in the formation of a committee to erect a one to Grant. The tendency is undeniable. Its working It remains for the scientific observer to surgest means to expenditure of effort for the best advantage of mankin princely yacht owners, in the pursuit of the bizgrest on and a striving after wind or stean, as the case may be, money, any one can make a bizger yacht than the bizge ence, and while the process is going on, a factilious imp given to shipbuilding, but no good end will be served dozen or more men who by common consent are fairly claim the bizgest yacht on earth, ought to combine a commissioners and a pooling agent. These functionare powered and will secrecy enjoined, could investigate npout the claims of each, and decide upon the exact bast acht while the purces is contained up to the served pass into ming furces, a common unit of size should be i that each might have the bizgest on earth without inter the others or causing unnecessary waste. These valu-tions are made gratuituously, and in the interest of ecc suggentable, its working inexora server to suggest means to utilize best advantage of mankind. Now pursuit of the biggest on record, s each others' yachts solely in din will soon find their labor but van tean, as the case may be. Given bigger yacht than the biggest in ex-going on, a factitious impulse may o good end will be served. The in-terment of the served. The served. The served. The served. The served is the served of the served. The served of the s

Dat each might have the biggest on eart of one should be assigned, so the others or causing unnecessary waste. These raluable suggestions are made gratuitously, and in the interest of economy, and with the hope that, when adopted in yachting, they shall gradually find their way into other departments of human activity, and thus we shall come to have in view objects that are pretry big, but yet not, too big, only just big enough.—*The Commercial Advertiser*. ICE YACHTING.—The shorewsbury boat Scud has been at Poughkeepsie for some time, waiting for the championship race for the pennant, but the weather has not been suitable for racing, so her sail has been stored and her crew have goue home for the present. All the large yachts are ready and their owners are waiting anxiously for suitable ice and wind. On Thursday last a race was sailed at New Hamburg for a cup and a pair of Arctic boots offered by Com. Grinneli as prizes. The course was two and a half miles up the river and return, with a very strong wind blowing down. Two boats, the Puff and Teaser, started at 11:43. Puff turned first and came in at 12:01. The afternoon the Puff race was also sailed at Carthage on Tuesday, the course being 15 miles, one hour time limit. The Mischief sailed the course in 1h, 13m, and the race was also sailed at Carthage on Tuesday, the course being 15 miles, one hour time limit. The Mischief sailed the course in 1h, 13m, and the race was also sailed scale care ease one exesting her yurakta Reindeer broke through, and some time was lost in getting her out. Mr. Sandford's lateen Aralancbe also caused some excitement by throwing him out and running away, sailing down the river at a bigh speed and fibing as though some one was steering her. Finally she struck a snow hummock which caused her to luff up and stop. Two races for non-active members and for Second class boats were sailed in the morning, the Puff beating the Teaser in the first, and the Mischief sailed.

winning the second. Owing to a lack of wind the big race could not be salled. THE NEW YORK Y. C.—The differences which have existed for some time in the New York Y. C., culminated last week in an actively contested election, in which, contrary to usage, there was an opposi-tion ticket in the field, which ticket was finally elected. The younger and more active element of the club favored a change of officers and put forward the following successful ticket: Commodore, John G. Barron; Secretary, John H. Bird; Treasurer, F. W. J. Hurst; Fleet Surgeon, Morris J. Asch, M. D.; Measurer, John M. Wilson; Re-gatta Committee on Admissions, James D. Snith, John S. Dicker-son, Heory C. Ward, Edvard E. Chase, Frank T. Robirson and E. A. Willard; Committee on Admissions, James D. Snith, John S. Dicker-son, Heory C. Ward, Edvard M. Brown and Chester Griswold; House Committee, Thomas B. Asten, E. A. Houghton, B. C. Cleeman and S. T. Lippincott. The large steam yacht Electra now becomes the flag-hip of the club, while the Vice-Commodore owns the scboouer Cru-sader, and the Rear-Commodore the sloop Athlon. The new Regatta Committee is composed of active yachsmen and experienced saliors. Xincteen new members were elected and the date of June 17 was fixed for the annual regatta. The non-yacht owners have heretofore been denied any volce in the elections and they have lately demanded greater privileges. In answer to this movement, a committee of five, Messrs, Dickerson, Sinkih, Morgan, Minton and Bird, were appointed to consider an amendment to the constitution, allowing nou-owners to vote for some or all of the officers. Mr. Oglen Goelet again offered for the fifth time, cups of \$1,000 for schooners and \$500 for sloops, to be raced for at Newport during the cruise. YACHTING NOTES, –The schooner Coronilla of Boston has beeu sold to Mr. Clarence Putnam of New York, and will be taken to the

or oue tot some or all of the officers. Mr. Ogden Goelet again offered for the fifth time, cups of \$1,000 for schooners and \$500 for sloops, to be raced for at Newport during the cruise.
 YACHTING NOTES. -The schooner Coronilla of Boston has beeu sold to Mr. Clarence Putnam of New York, and will be taken to the latter port as soon as possible.... At Cambridgeport, Mass., Mr. Dimsmore is building a 21ft. cutter from Mr. Burges's designs and also an open boat similar to the Cruiser, from a model by E. A. Wills.... The keel stoop Breeze will come out witb a new keel, an iron sboe of 3 tons, and new rait and bowsprit. The steam yacht Emu has been sold by A. Barney to J. E. Pietcher of Providence, R. I. ... The steam yacht C. C. Green, ashore on Pingleton shoal, Pamlico Sound, bas not been hauled off yet. but is in little danger at present. Mr Burnham of the schooner Mohican will be absent for several mouths the Europe, and the yacht will not be fitted out unit his return....E. A. Wilks is building a sloop for Chas. Armstrong of Cambridge, Mass., to be 27tt, over all, 24ft, waterline, and 10ft, beam to shave both sloop and cat rig. Wills has also an order for a cathoat for F. L. Dunne of Boston, owner of the east Tartar and Nicbe, for a cathoat 19ft. 11in. long, Another hoat which the same builder has in hand is an open sloop for Mr. W. S. Alley of the Larchmont Y. C.... Mr. E. A. Stevens, N. J. Y. C., has sold the cutter Petrel to Mr. Hall of New York, and will huid a 45tt, yacht.
 THE DEATH OF MR. GEORGE LORILLARD.—The news came by cable last week of the death of Mr. George Lorillard at Nice, France, on Feb. 3. Mr. Lorillard was for many years one of the best known of Americaa yachtsmen, and the owner of many celebrated yachts, built the Schoner Matec, and in the latter year he sold her and built the Challenge schooner and after wards lost of the best have.
 Mr. Bornliard was also known as a patron of otherest poent in 1853 he oward was also to note of the perest an

Suffeter: CHESAPEAKE BUCKEYES.—Nr, W. H. Weed is at Hampton in the CHESAPEAKE BUCKEYES.—Nr, W. H. Weed is at Hampton in the bound further south for general cruising and will leave for Albe-marle Sound with the return of warm weather. His brother, Doctor Weed, will probably accompany him. The Walters is a genuine Maryland buckeye, built in Chrisfield. She is a very smart boat, es-pedally in beavy weather and the light seas of the lower Chesapeake Her beam is 14ft, and draft 3ft, without board. Carries 7 tons rock balast. Mr, Weed and a small boy sailed her with ease at all times. Her rige consists of two trysalls and narrow jib, the foretrysall being much the largest sail. OFE FOR THE WEST INJEE _0 Monday last the schooner.

bullas. Ar, the step of two frysalls and narrow only the right of the schooner being nuch the largest sail. OFF FOR THE WEST INDIES. -On Monday last the schooner Ambassadress sailed from Boston for a cruise to the West Indies, her first port being Bermuda. Her owner, Mr. Nathaniel Thayer, has expended nearly \$15.000 on her since she was purchased from Mr. Astor, in refitting and furnishing. With Mr. Tbayer as his guests are his brother, Mr. Bayard Thayer, and Jessers. Eradlee and Ogden Codman, Capiani John Taylor commands the yacht. On Saturday the schooner Nokomis, Mr. Royal Phelos Carroll, sailed from New York schooner Nokomis, Mr. Royal Phelos Carroll, sailed from New York schooner Nokomis, Mr. The steam yacht. Vedette will also leave this

week for the South, and the Nooya will soon follow. SNFAKBOXES,—Mr. Tryon of the Soldiers' Home at Hampton, Va, bought a sneakbox from the captain of a schooner who had picked her up as a derelet off the coat. She is 136, long, with the slovel nose Trun out inne into a stern and a raking counter and is rigged as a cat with small board, 18in, long just abaft the mast. Her owner speaks highly of her performance and general utility. She is smart and handy, practically uncapsizable and will go through very rough weather. He sails her in the open roads, un the Lames Broom

easily and is quite a sightly craft. AN IGE YACHT IN VIRGINIA.—During the recent cold wave the first ice yacht was lauuched upon Virgiula's focaen waters. She was built by Mr. E. Diestel of Fortress Monroe and sailed on Mill Creek to the rear of the fort. Built on the usual plan of a backbone and runner plank with two runners and one shoe for steering at after end. She is rigged with leg of numbers and one shoe for steering at after end. She is rigged with leg of numbers and one shoe for steering at after end. She NOISCO—Vaebting is still very quier on the Pacific coast. Aggie will have ber bottom coppered before fitting out, Lurine is still laid up at Antioch, and Haleyon has come down from the latter place to Beutcia.

GEN. PAINE'S NEW YACHT.—The new Boston yacht is well under way at Lawley's, the keel being ou the stocks and the stem and stern post in place. Beneath the keel, which is a very wide piece of oak with a slot 23fL long and 6in, wide, one piece of lead is already in elece and the two others will soou be ready. The frames of oak and hack natack will be sided 5ins, moulded 6in, at heels and 5in, at heeads i ue yacht is to be completed by her builders by June 1. BUGTOS OF JOR VACHTS. We here received from Mr. NAG PHOTOS OF ICE YACHTS.-We have received from Mr. N.¹ G tebbins, of Boston, some very fine photos of the Hudson River ice achts.

J. B. R., Springfield. Mass.—It would make no difference with a od judge of the breed.

good judge of the breed.
E. W. T., Bridgeport, Conn.—Morford's Dou was by Shipman's Joe (Bob II.—Nelly) and out of Gypsey (Frank—Dell).
E. B. E., Raleigh, N. O.—1 Consult Fixtures at the head of kennel department. 2, We can send you points for judging. Price fifty

cents. J. V. S., New Haven, Coun.—Wishing to stock some streams in my vicinity with young trout, to whom may I apply for same. Ans. Apply to your Fish Commissioners. They are: Dr. W. M. Hudson, Hartford; R. G. Pike, Middletown, and James A. Bill, Lyme.

Apply to your Fish Commissioners. They are: Dr. W. M. Hudson, Hartford; R. G. Pike, Middletown, and James A. Bill, Lyme. O. H., East Greenwich, R. I.-Three prizes are shot for; two men-tie and make the highest score. Must they shoot off for the first or can one take first ank the other second? Ans. If you were shooting under class-shooting rules the two who iled on highest should have shot off and the winner taken first, the other nothing. The second prize should have gone to the mau whose score was next to the two who tied on highest. If it was not class shooting the two should shoot off for first and second. A. G. McK., Connecticut.-The black bass laws of New. York are very good, as a rule, and may serve as a model. In the waters of Lake Mahopac or of Columbia county, Schroon lake or river, or Paradox Lake in Essex or Warren counties, or in Friend's Lake in Warren county, they may be taken from July 1 to Dec. 31. In Lake George and in Brant Lake, in Warren county, the season opens on July 20. In other waters of the State the lawful season is from June to Dec. 31. None may be caught under Jglo. weight They may not he netted in any waters except Lake Outarlo, the Hudson River helow the dam at Troy, and the Walkill Kiver in Ulster county. A movement is on foot to change the date for waters where the season opens June 1 to one day earlier so as to include Decration Day.

DEER HUNTING IN THE FOREST OF NASSAU.

By the set is not easy earlier so as to include Decoration Day.
DEER HUNTING IN THE FOREST OF NASSAU.
A full here's a spot where the forester has given us a rendeative the is dressed in a tunic of green turned up with gray, and he carries a short double-barreled gun slung across his arm. With a long free step he leads the way through the thickets of firs, up the steep side of a hilly wood. Tresently here step is to seal along on oal flours, and now he begins to seal along on tool almost on all fours, and now he begins to seal along on food almost on all fours, and now he begins to steal along on food almost on all fours, and now he begins to steal along on food almost on all fours, and now he begins to steal along on food almost on all fours, and now he begins to steal along on food almost on all fours, and now he begins to steal along on food almost on all fours, and now he begins to steal along on food almost on all fours, and now he begins to steal along on food almost on all fours, and now men foldow, closely sheltering urselves from tree which says, as plainly as can be, that if I dared do anything to the stem to the ost is now my life I cannot. "Shoot we men foldow, closely sheltering urselves from tree stem, to tree stem until in a few minutes we came up to the other of the same of the dors." The light air breathing in our faces is now the is crouching at my ellow with his own piece at an too the the opening are glided in the same of failed to hit. My eyes are wide open, and I see these and pines on the further edge of the opening are glided in the max mane. The high air breathing in our faces is now my make audible sound that is sure to frighten them at the own with the sound and the short or sen of the dors at a spiele high. One two of the dame do the dors, we we that all the and the ford, or the dot all not make a dible sound that is sure to frighten them, at a spiele high. One two of the dot all the down down all not the short dots in the tway moment step between us and here ford, or

slept as quietly as if in my own virtuous bed at Paris.—Con-respondence Boston Herald. POT LUCK FROM EXCHANGES. SCHUYLKILL CO. P.A.—Now and then hunters in the woods of this and adjoining counties of Pennsylvania come across wild, wolfish looking dogs in isolated mountain regions, but the brutes have always managed to disappears ognickly among the rocks, on being discovered, that none have ever been killed. They are supposed, with good reason, to be descendants of a wolf and a mongrel dog, which were bred together in 1825. Wolves were becoming scarce in the region sixty years ago, but a few lingered in the woods, and were a great nuisance to the farmers, making frequent raids on their sheep pastures. In 1822 one wolf in particular made great inroads ou the farmers' sheep, and defied all efforts to catch it. There was a super-sition among the pioneers of the regiou that there were such things as "were-wolves," wolves that bore charmed lives, and possessed the power of roaming about without leaving any trail by which they could be followed. Tom Ballard was a famous hunter of the day. He was entreated by the farmers who had been losers by the raids of the mysterious wolf, to hunt it down if the thing was possible, although many be-lieved it was a were-wolf. Ballard started ont in the spring of 1823 with his dogs and gun for the purpose of killing the wolf. He roamed the wildest part of the woods for several days, but out find no trace of the animal. At the end of the fifth day, he came to a crevice in the rocks on the southern edge of a hill known as Mount Plisgah. There was no outward evidence that it was a wolf's den, but he resolved to enter the cave and fud out. He crawled on his hands and knees and found two wolf whelps a week or two old. He wrapped them up in his blanket and quickly withdrew from the cave. He did not mones. He placed them in his wood house. Three nights later he heard a great noise in the yard. Looking out he saw an old wolf trying to get into the wood house. It was the mother

of the whelps. Ballard shot her. She was an unusally large one, and as no more raids were made on the sheep pastures of the region it was believed that she was the one that gave them so much trouble. The whelps grew up in captivity. They were both females. In 1824 Ballard sold one of them. The next year the other one was bred to a mongrel dog. She gave birth to a litter of whelps resembling their mother. After becoming a mother the wold, which had never been flerce, changed to a most ferocious animal, and no one dared to gonear her. Her offspring early developed wild and vicious characteristics and it was though best to kill the whole family. One night before the decision was carried into effect the wolf and her half-grown hybrid whelps took to the woods. They were followed, and the mother and one or two of the young ones were killed. The others escaped and have bred among the rocks ever since. *Exchange*. A young lady whose fataer is one of the wealthy men of the city, went abroad last summer in company with two rela-tives. They sailed from this port and returned hither. They allowed their general baggage to be inspected without pro-test. The young lady carried a diminutive pug dog in her

arms. The animal was particularly ill-natured and vicious, but the young lady appeared to be very fond of the brute and carried him in her arms all the time. He wore a blanket and a collar around his ueck. I got close enough to see that the blanket was a mass of expensive lace, tacked on to the blan-ket to enable her to evade duty on it, and that the collar was Interally studded with diamonds. What could we do? If we held the dog there would have been a great howl over the in-dignity, and the girl's father had influence enough to have us all discharged. We consequently allowed the \$10 pug with his \$2,000 blanket and his \$10,000 collar, to pass free of duty.— *Philadelphia Times*.

"I hear of a woman of fashion." says London Truth, "who has ordered a dress to be trimmed with canaries. It would be well if the crack-brained votaries of such detestable inno-vations were to be boycotted in society. If any woman tries the experiment of going to court ornamented with singing birds, I will venture to predict that she will be ignominionsly turned back, as the Queen strongly objects to all such bar-barities."—Evening Post.

TO

PUBLISHER'S DEPARTMENT. IT PROMPTS THE MEMORY.—Erie, Pa, Jan. 26 —Inclosed please find \$4 for another year's sport with FOREST AND STREAM. That's about all the sport I have now adays; but each number of your paper is so refreshing that after perusing its wages I call on my old chum and "swap shooting and fishing lies" for an hour or so, and feel a good deal better.—F. CANNOT Do WITHOUT IT.—I may as well say here that the FOREST AND STREAM is gaining in favor every week. Our friends all say it has very much improved and is by all odds the leading sportsmen's journal in the country; they cannot do without it. G. E. N. (Bath, Maine).

CHEAP AND EFFECTIVE.

THE sub-committee of the House Committee on Indian Affairs is reported to have agreed upon the sum to he appropriated for the support of these people during the coming year, The estimates called for \$6,052,259. The committee cut this down \$525,806, and the bill as now framed calls for \$5,526,453, being \$67,642 less than the bill of last year.

Such devotion to economy is most laudable, but it is not unexampled. We have seen it before when there was question of appropriating money for some worthy object, but it is apt to be lost sight of when a measure like the Arrears of Pensions bill comes up. Then a little cheap political capital is to be gained, then the soldier's vote is to be captured, and the people's money is squandered. Congress has blundered over the Indian question quite

long enough, but its experience has not been wholly wasted. At last it has hit upon the true solution of the problem. This is to cut off the Indians' supplies. The solution is startling in its simplicity, and it costs next to nothing. Besides, the development of the country has made all the conditions favorable to the success of the plan. In many cases it can be carried out without the slightest expense. In others it may perhaps cost a few white lives and a few hundred thousand dollars. This first outlay, however, will be all the expense connected with it. After that there will be no need to vote further appropriations for the Indians.

The large game of the West is exterminated in many localities. It is especially rare in the neighborhood of Indian reservations. The wild creatures whose flesh used to sup-port these people are gone. A few prairie dogs and birds alone remain. The Indians' food is now what the Government gives them.

This food has never been enough to keep the Indians alive. For years they refused the Government rations. Then came a time when the rations and what game they could kill supported life. Lately they have often starved on Government rations alone.

The course adopted by Congress is simply to decline to longer furnish these supplies. Having nothing to eat, the Indians will in due course give up the ghost, and when they have done so, the Indian question is settled. These people will give no more trouble. There will be no more discussions about keeping the whites off their reservations, no more : as surely,

Indian appropriation bills, no more plans for civilizing them. A lot of trouble will thus he saved. And then it is so cheap! There are some localities where this course may cause a little annoyance. Where cattle ranges border on a reservation, the Indians may perhaps kill a few cows, but when the starving people do that, they can either be killed themselves, or if apprehended can be sent to jail for ten years, as was done the other day with an Arapahoe boy. Or it may happen that in some places the desperate, hunger-stricken men may sally out and kill a few whites. If they should do this we hope that they will he sternly and successfully dealt with.

The Congressmen probably think that the cows can be paid for, and the white lives do not count for much. Con-

gressmen do not live near Indian reservations, as a rule. Is it not best that the Indian question should be settled in some such way as this? It is scarcely to be expected that the Indians themselves will regard it exactly from the white man's point of view; but from the truly philosophie standpoint, is it not hetter that these people, their wives and their little ones, should perish now from off the face of the earth, even though it be by the lingering torture of starvation Then, at all events, their troubles will be over, and gnawing hunger will no longer, for half the year, make their lives miserable. And it certainly will be a great saving to the country.

Congress will then have deserved the gratitude of the American people for cutting down their expenses, and for ridding the public conscience of the burden of the Indian question.

THE AUDUBON SOCIETY.

N our last issue we briefly outlined the plan of the Audubon Society, which we hope may result in the protection of our birds. It is only within a few years that such protection has been really needed, for it is only recently that any wholesale slaughter of these innocents has taken place. Nevertheless, the sentiment which calls for the preservation of these species from wanton destruction is no new thing, for laws having this in view have for many years been on the statute books of most of the older States. Such laws, however, in most cases are wholly inoperative, since there is no public sentiment on the subject which insures their enforcement. Unless such a public sentiment shall be awakened, unless the laws which we have shall be enforced, and new and more perfect ones enacted, we may make up our minds to bid a long farewell to our beautiful songsters.

The hirds have indeed a hard time. Men and boys scour a district during spring, summer and autumn, killing off all the permanent residents and a large proportion of the migrants. In and near the cities and towns, where the human killers have less liherty to destroy, the pestilent English spar-row quarrels and fights with the native species, and what is worse, destroys their eggs and tears to pieces their nests. Add to these agents of destruction the cats, weasels, skunks and snakes, and the hawks and owls, and it will be readily seen that the checks upon bird increase are very great.

The common remedy proposed for the protection of our hirds from these human enemies is the enactment of new and more stringent laws, but at present it is hopeless to ac-complish anything by this means. This is beginning at the wrong end. Let us rather try to induce people to live up to the laws now on the statute hooks. After they have been educated up to that point it will be time enough to make the protective laws broader and more stringent. Who ever heard of any violator of the small bird laws being punished? Who ever heard of such an one even being arrested? One such instance is related in another column, but they are very unusual.

The remedy for the deplorable state of affairs now existing with regard to our birds must he looked for only in such a general and popular awakening as we have indicated, and this awakening must take place soon, if it is to serve any useful purpose.

The history of the extermination of North American game shows this. For many years the slaughter of the buf-falo went on unchecked, and to the demand for protection, and the statement that unless the slaughter was ehecked the species would be exterminated, came the reply that there were millions of them, that they blackened the plains, and could never be killed off. A few years went by, and one day the dwellers in the buffalo range awoke to find that there were no more huffalo. A year or two later the information spread through the country at large. As with the buffalo, so with the elk and the antelope and other large game. It is being destroyed, if not so swiftly as were the buffalo, at least

No serious results to the country at large are likely to follow the destruction of these large species of animals. It is melancholy to see them become extinct, but the feeling is at best but a sentiment. The case will be very different when the consequences of a continuance of the present destruction of our small birds make themselves manifest. The punishment for our neglect of these species will surely make itself felt, and in a way that will affect every class of our community.

Armies of noxious insects will attack the growing erops of the farmer, and his year of work will be lost. A failure of the farmer's crops means that he can buy less of each of the commodities sold by the merchant, whose trade must thus fall off. It means that the railroads will have less freight to move, less grain to carry to the monetary and manufacturing eenters, less manufactured goods to transport to points of distribution. The railroads, having less freight to transport, must cut down expenses and so must reduce the wages of employes, must purchase less rolling stock, do less repairing, discharge men, give out less work. On every hand receipts of eash will he diminished. Every one will feel poor. Times will become hard.

Does any one fancy that these are great results to follow the killing of a few small birds? The picture is not over drawn. Of all the perils to the farmer's crop, there is none which is so much to be dreaded as insects. The Eastern drawn. farmer as a rule knows little about this danger, though there be some who have fought the army worm, but let the farmer of the East consult one of the West. He who has dwelt in Kansas or Nebraska or Dakota or Minnesota during a grasshopper year can tell a moving tale, if he will, of the utter devastation and ruin which a single species of insect has wrought in a day.

It is not improbable that the next season may witness the beginnings of such calamities as we have foreshadowed, for the number of our hirds slaughtered during the past five or six years has numbered hundreds of thousands each year. Such destruction, together with the diminution of the production of young, which must result from it, cannot fail to exercise before long a very marked effect on the insect life of the sections where the birds, once numerous, now exist only in small numbers. The reproduction of insect life goes on at such a tremendous rate, and the multiplication of individuals is so enormously rapid, that this great decrease in the number of their enemies is sure to be followed by a much more than corresponding increase in their numbers. The number of insects seen during August, which have sprung from the comparatively small number of individuals which survive the winter may give us a hint of what this increase is. The danger is a real and a pressing one, and measures should be taken to face it at once. The only successful way to do this is to foster and encourage the natural cheeks upon this insect life.

This is the purpose of the Audubon Society, and to assist in this good work we desire the aid of all. Even if one can do no more, he can at least lend the influence of his name against the wholesale slaughter which is now going on. We have already received a number of letters warmly commending our plan and expressing a strong desire to aid in carrying it out. Let every one who is willing to help send in his name and those of any whom he thinks would take hold.

THE PROPOSED NEW STANDARDS .- We have published some of the standards recommended by the standard com-mittees of the American Kennel Club and others may be found in the kennel department this week. The remainder we presume will be forthcoming shortly. It is not our pur-pose at this time to criticise the work of the committees, but to draw the attention of our readers to the fact that the different standards are placed before the public for the purpose of obtaining the views of all parties interested in the improvement of the different breeds of dogs, as to the advisability of the adoption of new standards, and also for the purpose of eliciting from them their opinions as to what changes they may deem desirable. We sincerely hope that no one inter ested in the matter will neglect the opportunity thus offered and that we shall have a full expression of opinion upon all points from all who have the future welfare of the dog at heart. There is not the slightest danger that the American Kennel Cluh will adopt any standard that is objectionable if hreeders throughout the country will come forward and freely give their opinions upon the matter. It is perhaps needless to say that the columns of FOREST AND STREAM are open, and we hope to see a full discussion of every point that may affect for good or ill the future of the different breeds of dogs.

NO RAILROAD IN YELLOWSTONE PARK.

TWO bills for a railroad through Yellowstone Park are now before Congress. They are essentially the same in character and provide that a right of way shall be given the Cinnabar and Clark's Fork Railroad Company across the northern portion of the Yellowstone National Park between Cinnabar and the Clark's Fork mines. The route somewhat vaguely indicated is up the Yellowstone to the East Fork, up that to and up Soda Butte Creek, and thence to the headwaters of Clark's Fork. Both bills provide that the location of the right of way shall be approved by the Secretary of the Interior, and that if the railway be not completed in the course of one year (in the case of the House bill) or two years (in the case of the Senate bill), the right of way shall be forfeited.

The present bills are an attempt on the part of those interested in the Clark's Fork mines to get railroad communication from Cooke City to the outer world. And the route specified is chosen by them as the best for this purpose.

No railroad should ever be allowed to penetrate the Yellowstone Park. If one is built there it will be the signal for a dozen other companies to force their way into this region. which should be sacred. It is not generally known that the Park has already been overrun by surveyors, acting in the interest of various railway companies. Their stakes may be found in the most secluded valleys, and if all the railways that have been surveyed there should be built, the delightful quiet of this now peaceful region would be gone forever. Δ population would follow the railroad and settlements would spring up along the track. Sparks from the locomotives would fire the prairie and the forests, and the visitor would see only blackened wastes, hillsides bristling with dead burned timber, and mountain tops shrouded in smoke. The shriek of the engine and the rumble of the train would drive away the game, and the beautiful and wonderful Park would become commonplace and unattractive.

If the Cooke City people wish to reach the railroad there is another and easier route which they may choose, but they must leave the people's Park undisturbed. There is a good way for a railroad to the Northern Pacific without passing through the reservation, and we insist that the rights of the whole Nation shall not be encroached upon to please one corporation.

No. No railroads in the Park. We have fought toohard for its protection to see such a backward step taken. The region is now in good hands. Public interest on the subject has been awakened. Each season more people visit it, and no one comes away without feeling a deep interest in the region and its wonders. No one who realizes what the Park is and what its future is to be would willingly see a railroad enter its boundaries. Let it be carefully protected. Railroads within it mean forest fires, game destruction, and a host of other evils.

GAME IN THE YELLOWSTONE PARK .- Reports of the abundance of game in the Yellowstone Park continue to come We have many times urged, and the event has proved the truth of our statements, that protection within the Park was all that was needed to make game abundant there. The varied natural features of the reservation render it both a winter and a summer range for game. We understand that a band of about two hundred head of elk have wintered in the vicinity of Swan Lake, which, as many of our readers will remember, is only five or six miles from the Mammoth Hot Springs, and in full view of the road. We have recently conversed with a gentleman who has resided for the last three years continuously in the Park. He states that the game seems to know that within the reservation it is safe, and that if a band of elk get out of the Park and near its borders are shot at or disturbed, they head directly for the Park, and soon after crossing the boundary line seem to lose all fear and stop to feed or lie down. We have no doubt that this statement is exact. The wild creatures have learned, as we long ago said they would, that there is a place where they are safe from molestation, and having learned that lesson, they may be depended on to keep within this refuge or near to it. With this continuance of the protcction will come a great natural increase in the numbers of the game, and this increase will overflow from the Park into the surrounding region. In the time to come we look to see the vicinity of the Yellowstone National Park the great hunting ground of the United States for elk, deer and mountain sheep, just as it will be the only place in the world where one can hope to gct a shot at the almost extinct bison.

A SUPERINTENDENT OF GAME PROTECTORS.—A bill has just been introduced in the Legislature at Albany authorizing the appointment of a superintendent of game protectors. The text of this bill we have not seen and we do not know its form; but we understand that it is framed to meet needs that we have already alluded to as pressing, and of which we spoke last week. Mr. Floyd J. Hadley has done a good work in bringing this matter before the Legislature, and we commend this action as much as we condemn his introduction of that other bill to legalize again the water-butchery of deer. If Mr. Hadley's superintendent bill should fail to pass, the State protectors of the Adirondack region will have their hands full, and it will be a very excellent

thing to have some reliable, energetic man behind them to spur them on to greater efforts. In case these bills are acted on in this way the number of game protectors ought to be increased, for all the Adirondack waters should be watched. Then, when the hounding season is over, we may expect to see the game protectors concentrate and form a kind of body guard about the solitary still-hunter of the Adirondacks, of whom Dr. Ward, in another column, tells us.

THE PERILS OF ANGLING have another illustration in the case of the English tenor, Mans, whose death was the immediate result of his love of angling. While suffering from chronic rheumatic gout he went a fishing at Christmas time, and paid the penalty with his life.

TO THE WALLED-IN LAKES. XI.--A PORTENT OF EVIL.

L ONG before the sun had made his appearance over the high mountains we were astir. Our simple meal was soon finished, and Yellowfish at once started off on foot alone. A little later Appekunny and I departed up the trail, and the camp was left in charge of the dogs and horses. I was extremely anxious to get to the ice on the other side of the stream, but my efforts in this direction were not successful.

Following the trail to the fifth lake we went down to the water's edge, and scanned the landscape to see how most readily we could reach our goal. By crossing the creek just back of camp and clambering for several miles along a rough and precipitous mountain side, we could reach fifth lake at a point where only its width would separate us from the great glacier which overhangs it, but it seemed very doubtful whether we could get around the lake, which appears to run far back into a deep gorge in the mountains. By following the trail, on the other hand, it seemed likely that we might find some spot where it would be practicable to cross the creek and thus approach the northernmost of the two glaciers. We did not yet know what the stream valley contained above fifth lake. Just as we were about to turn away from the spot two tiny white moving objects were seen on a green slope in a ravine half way up the great mountain to the south of our camp. For a little while watched them as they moved along up the slope, now clambering quickly or again stopping for a short while, and satisfied ourselves that they were goats, a mother and her kid, for one was much larger than the other.

Appekunny was much excited, and was for at once going back to camp. crossing the stream and climbing the mountain to try to get a shot, but I persuaded him to continue up the trail until we could determine whether it was possible to cross over to the ice, to reach which just then seemed to me much more important than to kill a goat. We therefore kept on up the trail until we had gonc some little distance beyond fifth lake, and then taking a game trail which branched off toward the stream, followed it in the hope of finding a crossing. It soon turned back toward the mountain, however, and we were forced to keep to it, for the timber was so thick that it was very difficult to force a way through it. We tried a number of trails, but all of them sooner or later turned toward the hills, and we finally gave up the attempt to cross here, and breaking our way through the timber and underbrush, made what speed we could toward the higher ground.

After getting out of the timber the hillside was terribly steep and slippery, but we worked our way slowly up it, and crossing a mountain torrent which rushed down the slope in a symmetrical, clean cut trough scooped out of the shale, found ourselves not far below the first ledge.

All through the morning the skies had been growing darker and more threatening from hour to hour, and now as we looked up the valley, angry clouds were seen rushing forth from the black-mouthed cañons at its head. The sombre mountains were soon hidden by shects of driving rain, which now and then changed to snow, and rushed down upon us before the driving wind. Before we had reached the ledge the storm was upon us, and we took shelter behind a low spruce bush, where, muffled in our rub-ber coats, we waited for a lull in the storm. This This came in half an hour, and we continued the ascent. The climbing was difficult, for the ledges rose one above another in a seemingly interminable series. We would clamber up one, almost hand over hand, and then, having reached a little bench, follow it until some place was found where the next wall above us could be scaled. Sometimes the course of a tiny brooklet would furnish a way up over the rocks, at others a series of projecting knobs would offer foot and hand hold. Less often a slide, where the rock had slipped away and exposed a shelving mass of loose shale, gave an insecure footing for a quick scramble upward. About every half hour it would rain or snow with great violence, and during such times we would shelter ourselves as best we could beneath some projecting rock, and start on whenever the rain stopped. All the while the wind blew most furiously, and on this account the climbing was not altogether Much of the walking was along narrow ledges only a safe. foot or two wide, and when a violent gust of wind struck one on these narrow places there was always a possibility of its throwing him off. On one side there was nothing but the smooth rock to cling to, and on the other side there was

At one place where a gust rushing down a narrow gorge caught me I positively flattened mysclf against the rock. Appekunny had seated himself after a bit of rough scrambling, and I had gone on along a ledge to see what it led to. This ledge was only ten or twelve inches wide, and beneath was a drop of perhaps forty feet, while my shoulder brushed against the cliff that towered I knew not how far above me. A sheep trail followed the ledge and led me to hope that the way would be an easy one to ascend. After going thirty or forty yards, I came to a narrow gorge only six or eight feet wide, and the trail turned sharply at right angles, about a projecting point of rock, the path being so narrow that 1 had to exercise a good deal of care to turn the corner without falling off. As I rounded it the wind caught me with a violence that for a moment sent my heart into my mouth. Back from this corner ran a deep narrow chasm or cañon, cut out by a small mountain stream, and twenty feet in front of me the ledge on which I was walking ran out, and the sheep trail crossed the chasm. The distance across was only four or five feet-an easy leap for a sheep or for an ordinarily active man-but the landing place on the other side was on another narrow ledge about eight or ten inches wide and broken down on its outer side for several inches into a sharp slope to the edge of the cliff. Forty or fifty feet below I could see the gleam of the stream, and in the lulls of the wind hear the tinkle of its waters as they fell from rock to rock. The jump might wellenough be made in the excitement of pursuit or flight, but I did not feel like attempting it in cold blood. One would have to alight on his feet just rightly balanced. If he went too far he would strike the cliff with his body and might rebound and fall off; if he did not go quite far enough, of course he would lose his balance and fall. I looked at the jump for a moment or two and then very gingerly turning myself about,. went back to look for an easier way.

The rain and the snow and the fog continued, and often it was impossible to see any distance, while at short intervals the blinding sheets of rain descended with such violence that we had to stop where we were and wait for the storm to abate. We climbed in this halting way nearly to the top of the mountain, and at length found ourselves on the upper edge of a grand amphitheater of rock, whose back and opposite side were formed by a mountain considerably higher than the one on which we were. The red, purple and green shales which formed its floor and side were wholly without vegetation, and were tilted at an angle of 45 degrees, and thus being about at right angles to the surface of the ground at the back of the amphitheater; but the side opposite to us was very nearly vertical. Down through the midst of this great basin, which was a mile in length and nearly as wide, foamed a great torrent, the sum of a thousand springs which trickled from the rocks, and as many rivulets, which crept out from beneath the snow banks, which lay in all the ravines and sheltered spots. Everywhere over the shale ran sheep trails, and fresh signs were abundant; but the almost continuous rain and fog made it impossible to see far, and we could detect no living thing.

During a lull in the storm and a gleam of sunshine, we had from the highest point which we reached, a fine view of fifth lake and those above it. Counting the four which were not in sight, there are at least twelve in the chain, of which eleven are in a continuous series, and one, as has been said, is an arm of the fifth lake. From this point we had also an excellent view of the glacier at the head of the lakes. In character it is very similar to the one to the south of the stream, and like that, it falls over a great cliff, which shows through it. It seems thicker, however, and is beautifully fluted on its vertical face where it breaks off to make its plunge downward. It is quite possible that these two apparently distinct ice masses may be merely the two extremities of one glacier of great size; but this point can only be cleared up by some one who shall visit this interesting country properly equipped with a pack train, so as to reach the iee.

The green color of the waters of the glacial lake is due to the grinding to powder by the slowly-moving ice mass of the green slates, shales and schists which form so large a proportion of the mass of these mountains. This finely comminuted rock is carried down by the water of the meltingglacier and for some little time held in suspension by it, giving the water its peculiar tinge.

During this short brightening of the skies the mountains: about the lakes were spread out before us in a wonderful way. They are incomparably ragged and inaccessible, and seem all to be knife edges or pyramids or cones. It is unusual to see one that is square or round-topped.

Up here on Swift Current, where it is so much higher and colder than at our permanent camp, the foliage has changed much more than about the St. Mary's Lakes, and the combination of colors that we looked down on was startling in its variety and its magnificence. An artist's palette, splashed with all the hues of his color box, would not have shown more varied contrasts. 'The rocks were of all shades, from pale gray, through green and pink, to dark red, purple and black, and against them stood out the pale foliage of the willows, the bright gold of the aspens and cottonwoods, the vivid red of the mountain maples and ash, and the black of the pines. In the valley were the greens of the deciduous shrubs, great patches of the deep maroon of the clanging lobelia, lakes, turbid or darkly blue, sombre evergreens; on the mountain sides foaming cascades, with their white,

whirling mist wreaths, gray-blue ice masses, and fields of gleaming snow. Over all arched a leaden sky, whose shadows might dull, but could not efface, the bewildering beauty of this mass of color.

Down the mountain side we slowly picked our way, and at dark, tired, hungry, wet and without game, reached the camp. There we found Yellowfish, who had been in since noon. Soon after starting out, he said, he had got among goats and had shot away all his ammunition, twenty rounds, at them without getting one. He said that they had been very plenty, and it was very amusing to hear him tell how, when he would shoot at one it would jump down out of sight behind the rocks, and another would pop out from bchind some other point to see what the noise was about. He said that he had hit several, but all too far behind, so that they got away among the rocks, and he could not find them

"Some one," he said, "is surely doing this" (*i. e.*, bewitch-ing us) "first we had rain, then we fall in the creek, now I can't shoot. Some moons it is so—a man cannot shoot and when it happens so, one knows that the medicine is bad and some of his relations are going to die. Then the people make many sweat lodges and they get well."

Although we nodded gravely as the Indian made these statements, accepting them without question, as we did almost everything that he told us, no doubt Appekunny and I smiled inwardly at the crude superstition of the savage who thus expressed to us an article of the Piegan faith. We do not believe such things, we intelligent white men; to us signs and portents are nothing. We jeer at those who fear the ticking of the death watch or the howl-ing of a dog and believe that they foretell some direful event. But it did seem just a little queer, when we got back to the agency, to learn that a young man, a relative of Yellowfish, who had been off on a horse stealing expedition, had been killed by the Crows, and that the news reached the Piegan camp just about the time that we were up on the Swift Current. A coincidence you will say. No doubt, no doubt. But you would find it a difficult matter to persuade an Indian that it was merely a coincidence. It was certainly odd and worth making a note of.

We are disbelievers in this age, agnostics we call ourselves, perhaps without very well knowing what we mean by the term. Is it not possible that we disbelieve too much? I have seen so many mysterious and altogether inexplicable things during my wandering among the Indians that I am slow to believe or to disbelieve anything. Some day I purpose giving for the benefit of the readers of FOREST AND STREAM a little exposition of the things that I have seen and those that I have heard from thoroughly reliable sources. The history of the medicine workers among these people has never been written, and, indeed, never can be, for in many cases their wonderful practices have been abandoned and almost forgotten; but the feats that were accomplished by some of the Indians of the Southwest, by the Panis and Rees of the Missouri River region, would be simply incredible to one who has not seen them.

It seemed curious that the Indian should have made such wretched work of his shooting. He has the reputation of being one of the best hunters in the tribe, and is said to be a good shot as well. We were interested in his story, for we needed meat, as our rations would only suffice for one more meal; and desirous as both Appekunny and I were to get a goat, its meat was even more important to us than the satisfaction of killing a new species of game. Our provisions consisted of a small piece of bacon and four biscuits, and unless fresh mcat could be obtained on the morrow, we should be obliged to return to the St. Mary's.

Soon after supper my companions turned in, but I lay long by the fire, watching through the branches the stars in the sky, and listening to the soft whispers of the wind in the treetops and the distant murmur of the rushing stream. Yo.

CAMP HUNT IN MISSOURI .- III.

A CAMP HUNT IN MISOURI.-HI. The two members of our party who lost their way in re-turning to camp after dark, and who brought up on the hississippi River, fell in with a most remarkable character, his neare was Cassius Crossthwait, familiarly known as been and thicket in that country, and traveled by night as by day. He could not read, but knew the langnage of every with animal and bird in the woods. Could, with his mouth, hister with wonderful precision the signal, or call of any brid or animal you can mention. We engaged his services for the rest of the hunt, very much to his satisfaction and or the rest of the hunt, very much to his satisfaction and thicket in that record as a "masher" on "Ward's have a home, but soon concluded his gun was not a suc-ber day with me in paying our respects to the wild turkeys, he day with me in paying our respects to the wild turkeys and have the tail trees of the dense forest mad a have the tail trees of the dense forest mad a have the tail trees of the dense forest mad a have the rest of the sign as the proved to have ne day with me in paying our respects to the wild turkeys, he favorite haunts of our chosen game, we emerged into the our day with hese after a deer, burst neon our earns. A wall as it were, on either side. Just them the note of a soment's listening satisfied us that we were in the line of the dense of the day with hease after a deer, burst neon our earns. A soment's listening satisfied us that we were in the line of the dense of the day were the statisfied us that we were in the line of the dense have and as we stood expectant and ready to give the deer

FOREST AND STREAM. a warm reception, a flock of wild turkeys, startled by the approach of the dog, ran into the road some two hundred yards above us and came running down the road directly toward us. They soon rose to wing and came flying straight down the road between the walls of forest trees on either side. The sight was a beautiful one, but it was too much for Mr. C. He unfortunately had no quinine and Mr. Bur-ton was not within reach to supply him, and before the near-est urkey came in range of our guns his excited nerves got the better of his judgment and he fired both barrels, and lost as fine an opportunity as be will ever have to bag a brace of wild turkeys, right and leit. His firing caused the flock to separate and take to the woods on either side, but still pass-ing in range I killed one, but missed with the second barrel. Mr. C. had in the meantime reloaded and gave them a part-ing shot, but without effect, as they passed. The first may of a ran one inter and he fored both barrels, and lost as one an opportune of the down he soon got the scent and after a chase of two hundred yards, cuught and killed it. A young man on borseback, coming along the road soon afterward, kindly consented to take the two turkeys to the cam for us and Mr. C. concluded he had enough of turkey huning for one duy, left me and went back to camp. After remaining quiet for a time, I succeeded in calling up one more of the flock, which I killed. The others would neither and were hore come to call. Returning that afternoon toward cam through the same woods we had hunted unsuccessfully. The morning, my dog flushed and scettered a duet. Secting a place near where they were flushed, and re-mining quiet for half an hour, I had the pleasure of calling ya may as I wished to carry, I concluded to try an experi-ment. I stood the three dead turkeys up at a convenient is down the wood show and hunted unsuccess for yoa and got neither. After carrying the three aheady killed others had escaped. The f

general rainbow mixture. He had never encountered a flock of wild turkeys before. Thus the time passed rapilly; every day adding to our game supply, while around the camp-fire at night the incidents and jokes of the day added zest to our enjoyment of the occasion. At the end of two weeks we broke camp, having bagged four hundred ducks, thirty wild turkeys, seron wild gese, squirrels without number, and one enormous pelican, measuring eight feet from tip to tip of its wings. The pelican resembles the swan in general appearance, and is a very rare bird in this part of the country. Its general color is white. but the wing feathers are tipped with black, and so are the wing coverts, or small feathers on the butts of the wings, giving it a beautiful appearance. The di-tinguishing feature of this bird is its pouch, or food sack. It has a beak about eight inches long, from which depends a platele and self-ad-justing sack, composed of skin resembling india rubber. It is capable, when distended, of holding as much as a pint or more of food. When empty, the pouch contracts so as to be scarcely noticeable. The breast of the bird was covered with a coat of soft feathers and down much thicker than that of a swan. It was a great pity that so fine a specimen could not have been preserved. Rarely did a hunting party ever enjoy an outing more, and we left our happy hunting grounds with a resolve to repeat our visit with the next autumnal frost. H. E. JoNES. NASHVILE, Tenn.

CAMP FLOTSAM.

XXIV .- THE RETURN OF THE PRODIGAL.

<section-header><section-header><text><text><text>

had regular features, an olive complexion and soft, dark eyes, and bade fair to be a beauty. The former was the Madame's guide and was competent to take care of her mis-tress in any emergency; beside her other accomplishments, she was a most successful fisherman.

There was mode sincessful faberman. There was a mode sincessful faberman. THE COON'S HAUNTED HOME.

THE COON'S HAUNTED HOME. No one had been in Burton's Woods at night, but once— and that was at the beginning of the war—since old man Burton died some fifty years ago. It was the one place in Old Virginia that had supported through half a century of peace and prosperity and war and privation an aristocratic ghost and its long line of pale-faced descendants. Exactly what old man Burton had done to oblige him and his deceased olive branches to haunt the forest, no one ever could tell, but if what both the white and colored folks said was true—and most sincerely they believed it was—the woods at night were filled with spectre Burtons most terrible. Now I myself don't believe that old gray-wooled Uncle Jordan, the oldest slave on the plantation, who started the story, ever saw the spirit of his master come hobbling along with his ghostly gouty foot through the old woods. But Uncle Jordan came one night into the store at the head of the Neck, as if he had been shot out of a cannon, and almost scared every darky there white for life by shouting out: "Fo' de Lor', chil'en, if deole man Burton ah com' tu right smart, I seed 'im mesel a-shinen wif de blue flame bic' in de ole woo' so'?"

always in the low ground became damp and mouldy and tail thank grasses and cance fringed its briery outskirts. The most did the booching of the ace against a hollow with the stand the rumbling of the wood cart avaken the short to listen to the quaint carroling of the light-hearted wood choppers. The forces was as silent as the grave, save which some rogue of a fox barked on the track of a cotton that to the dasks. The when the whutting all days on the the tail, dead casks. The when the whutting the days on the provide subject was as choos the rowing of the distants arts of course under subtle when the whutting which below, the provide subtle when the shore which below, the provide subtle was all from the tracking pot-tant days and the source and the source of the distants arts of course when the saves came the qualt huddled or shelter in the brush heaps safe from the tracking pot-tant days and the one of the tracking pot-tant days and the course subtle courses in Barrion's woods. Why, they would almost so that the family of course like and prospeced as all well-regulated coon families do. The wood had come to be dreaded with such an overwhelming receives. added untold loveliness to it, but both could have been more easily dispensed with than Bob. The first genuine quail hunt I ever had seems still the brightest because all was so new and wonderful and the dogs behaved so well. I was a mere child of twelve, and though for two or three years I had been worrying squirrels and rabbits, robins and high-holders with a long single-barreled gun. I had never seen a pointer or setter work in the field, and the few quails, wood-cock and "pheasants" that I had started were always gone before I could recover from the surprise caused by their sudden burst from cover.

Sudden burst from cover. It was the first of November, and as the sun's first rays began to kindle the russet tops of the white oaks and shine on the bare twigs of the red oak, we started out over the fields. Along a tangled wood that sloped away toward a little brook where I had speared many a sucker, lay an old field overgrown with weeds and briers, where I had shot at many a rabbit, and part of this was now a buckwheat stub-ble sparkling with frost. The action of the dogs changed at once upon reaching the field. There was no more of the wild exuberance of joy with which they started from the house. They no longer raced and barked and tried to jump over their masters' heads; but with noses raised to the breeze and tails carving elliptical cones out of space, they settled each to a rolling canter, beat-ing from side to side, crossing each other's track at quite regular intervals, occasionally slackening speed and taking a delicate snift of the breeze as they approached some clump of briers.

FOREST AND STREAM.

Old Sanch stood between two bunches of long grass on the border of a bit of swampy ground, looking very intently first at one bunch and then at the other. It was evidently the old story of the ass equally distant between two equally tempting bundles of hay. Dogs generally solve this prob-lem as speedily as an ass does the hay question; but old Sancho with body and tail motionless turned his head from one bunch to the other several times as if undecided which was the finer flavored bird. A kick into one of the bunches started nothing but Sancho, who moved up a foot or two closer and looked wild with ex-citement. Another kick, and still nothing moved but Sancho, who ran around to the other side of the bunch of grass and crouched low to the ground, with head bent at right angles and the tip of his nose only an inch or two from the grass. Another kick, and the dog, unable to contain himself any longer, pounced upon the grass, running his nose half way through it. Out from the other side went a quail, curling upward among the treetops, with one barrel of my friend's gun roaring harmlessly in its rear. But just as it went wizzing away on a straight course the dead leaves flow from a white oak sapling in the line with its course and down came the bird with a broken leg and wing, falling directly in front of Don. He cast a wistful glance at it as it nobled away, but still kept his point. Sancho quickly transferred his attention to the other clump of grass, over which he stood looking down into it with an air of intense curiosity. At the first kick into this out darted a bird, and in a twinkling vanished in a thicket near by, with a charge of shot scattering the blackhaws in line with it; and a faint thump in that direction made my friend look at me and smile with satisfaction as he pulled out his fask to reload.

by, with a charge of side scale spectra direction made my friend look at me and smile with satisfaction as he pulled out his flask to reload. Meantime the other gentleman flushed the bird upon which Don was pointing. Swiftly upward and away went the dim line of whizzing brown that marked its course among the yellow leaves of a little grove of hickory saplings, but turned as quickly castward at the report of his guu. When ordered to retrieve it, Don refuees and disappears in the brush in the direction pre-viously taken by the wounded bird. He remains so long that we have to go to look for him, and a few moments' search re-veals him in a clump of cat briers some fifty yards from his former point still as a statue. In his mouth is a live bird ap-parently as contented as if on its nest, its neck projecting from one side of the dog's mouth with head erect and bright black eyes calmly sur-veying us. It is evidently the wounded bird that iell near him, and having picked it up he has evidently met the scent of a well one on his way back with it. That performance struck me then as wonderful, but since

he has evidently met the scent of a well one on his way back with it. That performance struck me then as wonderful, but since then I have seen enough to sat-isfy me that a dog could point a new bird with one perfectly unharmed in his mouth. It is marrelous enough how quickly a dog distinguishes between a well bird, a wounded one and a well one. But still we can understand this. But can you understand how a dog can stand in the midst of half a dozen closely lying pinnated grouse or even lie down among them and do nothing but turn the direction of his nose from one to another when told to go on after the guns are loaded? Or can you understand such a trick as I saw old Sancho do two or three years later, stand immovable when a bevy of quail had risen before him and three or four had fallen before the guns, and refuse to stir when told to retrieve them because another quail remained hidden there—a thing that very rarely happens? There are dogs enough that would point the remaining bird, but how many would do it without breaking the first point and making a new one? And how does a dog know how many have risen? As we came up to Don three quail rose from the briers in front of him. But at the report of one gun one of them escond another rose towering fifty feet in air, folded his wings and sank stone dead, while my gun belched innoc-uous thunders at the third, giving me intense satisfaction to think I had mustered sufficient courage to shoot at him at all. The rest of the flock were soon found. Some spun away in safety through the hyme, while others whizzing through

The rest of the flock were soon found. Some spun away is nafety through the brush, while others, whizzing through a material sufficient courage to shoot at him at all.
The rest of the flock were soon found. Some spun away is nafety through the brush, while others, whizzing through a material sufficient courage to shoot at him at been well directed charge of ahot.
The we then went through a mile or more of the autumn scenery that has furnished such everlasting grist for the sapings. Don suddenly came to a point among some crimson maples. Before we were quite up to him a dark brown bird from the dead leaves in front of the dog, and came in a moment whirling down again, stopped in its swift career among the treetops. No game ever made such an impression on meas that, the first woodcock I had ever seen dead. The rose wood colors of its back, the large, lustrous, black eye set far transfer the stockings, all made me feel that I was in the breach of the distant tree trunks. Bang, whang, bang with roaring wing a large brown bird, vanishing like a rocket among the distant tree trunks. Bang, whang, bang with roaring wing a large brown bird, vanishing like a rocket among the distant tree trunks. Bang, whang, bang with the tries of brush. We followed in its course, and sancho soon began to creep and in a moment more brought in a dead ruffed grouse. As I surveyed its crested head, its

swelling breast, black glossy ruffs, and the banded fan that formed its tail, I felt my young sonl swell with pride at the thought that I had shot at it. From this delightful stand-point it was quite easy to jump to the conclusion that I had killed it. Though it went into the netted game bag of one of my companions, the item

panions' guns spattered fierce destruction among the dead leaves along its path, and I could not resist a chuckle of satis-faction when it faded darking into the back ground of tree trunks and brush. It was evident enough that grouse were not going to drop much that day without my aid. Harbor-nig no hard feelings toward the dog because his master took my "pheasant," I remarked that he "did that mighty well." But Sancho, quite insensible to flattery, went on, passed right over the place where the grouse rose and went on as cautiously as before, while Don stopped there but a second, gave a transient and dubious sniff at the ground and sur-rounding air, and resumed his march in the procession with an air of wisdom that plainly showed that meeting the grouse was quite accidental, and that other game was on foot. Some sixty yards further on Sancho stopped again suffed the air with great caution, then crept a few steps with stealtby tread, and stopped again on the side of a life of the trembling of his tail with his efforts to hold it still showed that the trail was ended at last. Tarly in the Eastern States can one see quait upon the sound, especially at this time of year; but upon a little sand bar on the side of the brook, some twenty yards ahead, was a medley of little blue tails, speckled breasts, white and yourg as I was, I had already heard that the "true sports-ma" never shoots game on the ground. Imagine then my surprise to see the man who had pockced the grouse raise is gun at the quait. Imagine next his surprise when my gun went off first. If there is anything I ever was good at it was a "pot shot," and a marvellous aptitude for quick and comprehensive work in this line was developed in advance of most of my other faculties. Only two or three birds flew away, and these he missed in his wrath with both barrels, while nine or ten lay dead in a heap upon the sandy bar. It is almost needless to remark that that was my last hunt with those two gentleme. Too my there faculties. Too work for the surprise the

"hand barrows," but the egg cases of the spotted shark with its curious curling tendrils (see illustration), are called "mermaids' purses," "sailors' purses" and "sea purses." I

have never found or known of an egg case of any of our sharks or dogfish to be found on our neighboring coasts, though in Europe they are very common. Mr. Mather informs me that when visiting the Southport Aquarium, he witnessed a spotted shark attach or entangle to a mass of alge, the curling, tendril-like terminations of one end of her egg cases before the egg had been entirely ex-truded; but that as soon as the tendrils became fastened to the mass of alge she moved along, thus causing the egg to be delivered from her ovarium. During the winter months, after a severe storm, I have often gathered numbers of the fruifful egg cases of both the "barn door skate" and the ocellated ray, which were very interesting studies in embryology during their development in a self-supporting marine aquarium. In England, Scotland and Ireland, the fesh of the skate is highly prized and is eaten both fresh and salted, but in this land of abundance only a few Scotchmen ask for it. A. W. ROBERTS.

only a few Scotchmen ask for it. A. W. ROBERTS. HERBERT'S LAW TO PROTECT BIRDS.—It may not be gen-erally known that "Frank Forester" prepared the first effect-ive law for the protection of insectivorous birds passed by the New York Legislature in 1858, and that this law, with a few trifling amendments, is still in force. This enactment, known then as the "Herbert law," was prepared by him only a few weeks before the tragic death of the great sporting author, and therefore was among the last productions of his pen. Through the courtesy of our correspondent "Canoni-cus," who has the original manuscript in Herbert's charac-teristic chirography, we recently had the pleasure of exam-ining the historic scroll, which fills ten pages of foolscap paper. "Canonicus," who was active at that time in urging the necessity of a law to protect songsters and insectivorous birds, submitted to us his correspondence with Henry Wil-liam Herbert, Hon. O. B. Wheeler, Senator (the late Gen-eral, killed at the Wilderness, May, 1862) Wadsworth and others in regard to the subject and the absolute necessity of the law. The original MSS. of the Herbert law would prove most interesting to all, and any devoted admirer of the late "Frank Forester." Our correspondent desires us to say that inasmuch as the law is in such shape as to be divided and then mounted and framed, he would be glad to have it become the property of some club. In order to meet this idea he is willing to part with it at a low figure, so that the pare souvenir may meet more generally the public eye. Ad-denses W. T. Evers, this office. A GOOD EXAMPLE.—Many persons when they see birds

A GOOD EXAMPLE.—Many persons when they see birds destroyed wantonly by boys, or for mercenary purposes by men, feel convinced that the law ought to be enforced, but rarely take the trouble, or have the courage, to act up to their convictions. I am glad to be able to say that there is in Delaware at least one man who protects the birds under any and all circumstances. In a recent letter regarding the heronry mentioned by him in the FOREST AND STREAM of January 21, Mr. R. B. Gilmer, of Wilmington, states, "The birds return every year, and apparently in increased num-bers. I do not think the place has been destroyed to any extent, save by boys of the locality, who at one time were wont to destroy the whole heronry. I succeeded in scaring them away and in having some of them placed under bail for their good conduct. The heronry has been kept intact for several years and I do not want it molested by skin hun-ters." Let others follow the good example of Mr. Gilmer.— WILLIAM DUTOHER, (of the A. O. U. Com. on Protection of N. A. Birds). A. Birds)

AN ULSTER COUNTY WILDCAT.—Flatbush, Feb 6.—I have just received for mounting a very fine specimen of wild-cat or bay lynx from Mr. J. O. Beers, of Surgerties, Ulster county. The cat is the largest I have ever seen, measuring nearly six feet in length. He was killed by a boy fourteen years of age. The boy being armed only with a club, had a tough fight of it, and was well scratched about the arms and breast.—H. B.

How Do THEY GET THERE?—Suspension Bridge, N. Y., Feb 14.—Whenever we have a very dark and stormy night at this season of the year, we find on the following morning dead and wounded ducks in the river just below the falls. I have seen nearly a wagon load picked up in one morning, usually just after a blinding snow storm. Now, the question is, are they ducks that have come over the falls or did they come from down the river and fly into the sheet of water?— C. E. L.

BLUEBIRDS.—Salem, Mass., Feb. 16.—Some bluebirds (*E. sialu*) were seen at Everett, Mass., just before the last severe cold snap.—X. Y. Z.

Gamp Hire Hlickenings.

"That reminds me." 182.

182. MY friend, Dr. E. Bradley, of New York, told me of a little fishing incident which came under his observa-tion. An eight-year-old son of one of his friends was out with the party on a fishing trip, and on returning to the hotel rushed in to his mother, exclaiming, "O, mamma, I caught the biggest fish you ever seed. He was longer'n my arm, and you'd just ought to have seen bim, for you never did see such a big one." "Well, where is it, Charlie," asked the mother, "didn't you bring it home with you?" "No, I didn't bring bim. He bit and I pulled as hard as I could, but when I got him most up to the boat, he just unbit and div." F. M.

THE WEATHER AND THE BIRDS.—Huntingdon, Tenn., Feb 10.—For a week the snow has lain upon the ground to the depth of twenty two inches, something remarkable for this latitude. The lowest temperature reached 16° below zeto. A few coveys of quail perished, but the most of them have come through in a depleted condition, the survivors hardly able to fly. Squirrels are scarce. Since the snow fell a number of our young men have enjoyed the sport of tracking up raccoons, cutting down the trees in which they den, and letting their dogs to them for a fight. In Beaver Creck B thom, which lies adjacent to our town, within a radius of one mile square, they bagged about forty coons, in some instances finding as many as four in one tree. As they are useless and pestiferous vermin such great destruc-tion is looked upon as beneficial rather than otherwise.— L, L. H.

<text><text><text>

The next morning we had less difficulty in crossing the marsh to our boat, as we had beaten down a good path, and we then crossed the ice, (which had now become some three or four inches thick), to the island we could not reach before. It was still intensly cold, and the birds were everywhere in undiminished numbers. On roundingt he point we saw ahead of us a large air hole filled with birds, the ice in the vicinity being also covered with them. As we approached the fowl all took wing with a deafeening uproar. It was an impressive sight, for there were many thousands of them. They scat-tered about seeking other openings in the ice. Fortunately this air hole was close to the island, so we were able to make our blinds of reeds on the bank, and set out our decoys in front of us. We had but few of them, their weight pre-venting us from carrying them. We had hardly got our-selves into position, when the warning "there they come" was uttered, and a small bunch were seen approaching the decoys.

Iron of us. We had but few of them, their weight preventing us from carrying them. We had hardly got ourselves into position, when the warning 'there they come' was uttered, and a small bunch were seen approaching the decive.
Canvashacks are precular among ducks for the boldness with which they approach the stools, if they intend to come in, for they seem to pay no attention to anything gles ave their wooden representatives. No duck, however, on being alarmed, can recover ifs speed and get away more quickly, and on account of their size, the novice is very apt to be deceived as to the rapidity of their flight, ingtiniar it to be much less than it really is, and therefore shocks behind. To stop them cleverly and neatly, it is necessary to hit them in the head, neck or crop, for if struck behind, their vitality is ogreat that they are almost certain to escape. In water of any depth, it is useless to follow a wounded canvashack, for on discovering that he is pursued, he will oive, and likely as not, he will never appear again. The brids that were heading for us rapidly approached, and as they were coming against the wind, it was not necessary for them to swing around, so they set their wings and threw their boics partially upright, preparatory to descent among their supposed kindred. We were watching them closely, remaining perfectly motionles, and as they cane to what we demote the proper distance, a low "now" was uttered, and we rose to our feet, each selecting the seleces instally the survivors with apparently untiminished speedbastened to juit the dangerous nighborhood, but were obliged to leave one more of their number with the drakes upon the ice. And almost without intermission the birds kept coming throughout the day, singly, in pairs, or in small bunches, until at one time we had fifty coavashacks bying upon the ice in front of us, besides many in the quen water. Nearly all were discharged by a flock of geese would fit nears. Their freaks and we result at the same is on the decives. Their great

pects to recover in about six weeks, and he says that he shall then return to Brassua and go into camp again. He certainly has an unlimited amount of pluck." Isincerely hope that no one, on reading this, will be de-terred from going into a winter camp if he feels so disposed, as I can assure you that some of my pleasantest camping days were spent in Camp Annie during last December and January. One thing I will urge, however-never go into camp, winter or summer, alone. I camped once before by myself in Colorado, during the winter of 1869-70, fifty miles from the nearest known habitation, for five long winter months, and I then was deprived by an accident of the use of my left arm, and was obliged to snowshoe those fifty miles alone in search of help. So you see I am fairly able to judge of the disadvantages of camping alone. Theorem Alt the to mention here the exceeding kindness I re-ceived from all with whou I came in contact in the woods, and I take this opportunity to thank them for all favors ex-tended toward me. To some of them I undoubtedly owe my life. I hope that our experience may serve as a lesson to others to be careful while in the woods, and that FOREsr and STREAM may have no more "Midwinter Perils" to chronicle. To the source the second second to the second to the second second second second to the second second to the second second to the second second to the second sec

A -PETITION

For the Continued Protection of Adirondack Deer,

AGAINST WATER-BUTCHERY.

To the Honorable, the Legislature of the State of New York:

County, respectfully petition that the We, the undersigned, residents of law (Chap. 557, Laws of 1885) which makes it "unlawful to pursue any wild deer in this State with any dog or bitch" may not be amended in any such way as to permit the use of dogs for hunting deer at any time. The present non-hounding law is absolutely essential to maintain the supply of deer in the Adirondacks. The use of dogs and water-butchery would surely cause the extinction of the game.

(Signed)

a fair charge of powder. The combination of accuracy with tip-top speed was the great point in the old muzzleloader, and it will be a few days yet before it is beaten. Nor bas "J. J. M." any real ground for surprise at the statement of "Mississippi Lowlands" that two of the leading American breechloaders missed a 2½-inch disc at 40 yards, the one five shots out of ten, the other three shots out of ten, while a muzzleloader that was older than any of us hit it every time. That is just exactly the trick that a breech-loader can play, while a muzzleloader carefully loaded, never does. Either of those breechloaders might at the next ten shots hit it every time. But you can't depend upon their doing it as they would if they were loaded as muzzleloaders. Another trick that a rifle can play when the ball is started below the grooves instead of in them is that played by the .30 express that "J. J. M." mentions which shot several balls accurately at 40 yards, yet would not be accurate at 100. Those balls at 40 yards must have been rotating a little off the true axis, and their grouping in the mark may have been necidental, a thing that wild bullets will often do, or else he 40-yard target was exceptional and could not be repeated. "J. J. M." certainly will not assert that a bullet whose axis of rotation is correct up to 40 yards could without touching mything begin to wabble before it reached 100 yards. A small round hall may do it, but any hall long enough to make a good 150-yard target at all, if rotating on the proper axis at 40 yards will still be there at 100 yards, unless de-flected by something. These same principles will explain the accuracy ascribed by "J. J. M." to smooth-bores. I used to see plenty of what

small round hall may do it, but any hall long enough to make a good 150-yard target at all, if rotating on the proper axis at 40 yards will still be there at 100 yards, unless de-deneted by something. These same principles will explain the accuracy ascribed by ''.J. J. M.'' to smooth-bores. I used to see plenty of what were once called ''smooth-bores. I used to see plenty of what were once called ''smooth-bores. I used to see plenty of what were once called ''smooth-bores. I used to see plenty of what were once called ''smooth-bores. I used to see plenty of what were once called ''smooth-bores. I used to see plenty of what were once called ''smooth-bores. I used to see plenty of what were once called ''smooth-bores and the wild balls will do fine shooting. But they work just like the breechloaders of fifteen gears ago, throw so large a percentage of wild balls that they are unreliable. They may also act like a good rifle defectively loaded, throw a majority of the balls fairly in the center and the rest far enough off to miss an elk at 100 yards. All such work may be tolerated, provided we can get nothing better. but only on such conditio. The FOREST AND STREAM deserves the sincerest thanks of all riflemen for the careful, exhaustive aud impartial nature of this trajectory test. Its results will stand for many a year as the arbiter of all disputes and the hasis upon which the trajectory of any new rifle may be very nearly calculated without actual trial. The most important of its lessons is, however, one that is liable to be wrongly read by many, to wit, the effect of low velocity in hunting or shooting at un-known and ever-varying distances within such range as one is likely to get a shot at any sort of game. The outbe quite natural for one who gave little thought in the fuss that has been made over i, and that on the first and last part of the course the difference of a few inches in the height of the curve at 100 yards would be but a small matter, eassly remedied by holding a little lower and on tworb half bard of it. On the contary, it is full of apologies and cylandidos, but the muzzleloaders don't seem to need any of them.
But in reality the muzzleloaders was far ahead of this Bahmad file, the difference to a sourcey. The Nomer rife made at the contemptible, and by no means balancing the per se, a difference to about 4%, inches less than the Balmad. 40 70. The principal part of the colain always made by the old fogies was that no Ameriaan breechloader could show the file. Such persons figure in longing into the old muzzleloaders by those who knew how to load them. This claim is fully subtantiated flanything is. That carries all else with it, for if anything is. That carries all else with it, for if anything is. That carries all else with it, for if anything is. That carries all else with it, for if anything is. That carries all else with it, for if anything is. That carries all else with it for long range, for which the inter with sence through the good should by your London. The function of the here all objects between a solar of hunches to bigh, some is thould bar striking 6. 8, 10, 13 and 14 inches to bigh, some many and always be sufficient.

Editor Forest and Stream: I have taken great interest in the trajectory tests conducted by the Fornest AND STREAM this winter. The reports there-of have helped me out with one idea which I had spent some thought and experiments upon before, but never with the facilities you had. That is the gyratory motion of some bullets. I had heretofore formed the idea that the more twist there is to the rifling the greater the danger of bullets taking this motion, and your reports coufirm me in that opinion. But I cannot coincide with "Common Sense" in his reasoning as to the cause of this eccentricity in some bullets. I think the real cause lies in the fact that through

The second secon

HUNTING AT ARMY POSTS.

[Continued from Page 45.] THIS week we print another batch of letters from our friends at the army posts, giving interesting bits of information about the sort of game prevalent and the use of the army Springfield shotgun: Editor Forest and Stream:

Editor Forest and Stream: In reply to your note received yesterday I forward the in-closed from Major Kellogg, U.S.A., concerning small game. Of the larger sort there are a few antelope still left, very few indeed compared with the vast herds that roamed on these plains some years ago. Buffalo, once numbered by the hundred thousand, have wholly disappeared from this sec-tion of country. A few straggling buffaloes, remnant I pre-sume of the old southern band, were reported near the upper Cimarron during the summer. I have not seen nor heard of an elk since our arrival at Fort Hays last June. Onr larder at Hays is helped out by precisio which

Fort Hays last June. Our larder at Hays is helped out by prairie chicken, quail and a very small amount of antelope or venison, each in its season. J. J. COPPINGER. Season. Fort HAYS, Kan., Jan. 22.

Reason. J. J. COPPINGER. For HARS, Kan, Jan. 23.
My dear Colonel:
As a reply to the note from FOREST AND STREAM, which you referred to me, my short residence at this post would lead me to make these remarks:
There is no large game in this section. A few antelope are sometimes seen, but a hunt for them would seldom be successful. We have geveral varieties of game birds, some of them—the pinnated grouse and the quail—in sufficient numbers to make their pursuit good sport. Local sportsmen sy that waterfowl shooting is sometimes tolerably good in the autumn, and usually fine sport in the spring when the pond holes are full of water. There is no close season for these birds. The pinnated grouse are becoming more numerous each year, and during the first half of the open season, which is from Sept. 1 till Dec. 31, a fair shot can make a good bag of them. The open season for quail is from Nov. 1 till Dec. 81. But few of these birds can be found within a radius of five miles from the post; but beyond that distance, on Big Creek (running through the reservation), on the Saline River, on the north fork of Big Creek, and probably on every stream in this vicinity, they are in such numbers to thirty or more in a day's shooting. Occasionally a bevy may be found a few miles from any stream. The mol fitten to thirty or more in a day's shooting. Occasionally a bevy may be four a great measure of success in the pursuit of Bob White this year.
The midden at a few snipe can be obtained during the fast mutor during the first balf of the open season for indicating the first balf of the open. The standard during the start where have had during the astroney days have doubtless killed great numbers of these birds, and I scarcely hope for a great measure of success in the pursuit of Bob White this year.
The minded that a few snipe can be obtained during the start who days have doubtless killed great numbers of these birds, and I scarcely hope for a great measure of success in the pursuit of Bob White

FORT HAYS, Kan., Jan. 21.

Editor Forest and Stream:

Editor Forest and Stream: In answer to your queries addressed to the commanding officer of this post, I was requested by him to reply, and it lesired. The supply of game, both large and small, is abundant. Black tail deer and antelope are found, not, how-were, in the immediate vicinity of the post. Hunting parties are compelled to go aboue fifteen to twenty miles away; this is owing to the fact that immediately surrounding the post and goats which roam around, followed by herders and dogs, which cause the game to keep further away than otherwise. There are stationed here 300 troops of the 3d Cavalry, headquarters and band of the regiment. From these organi-ations frequent hunts are made, the parties numbering from thering in a large supply of deer and antelope meat. As a sample of what was done here lately, I will take the hunt of four bandsmen, all excellent shots. They left here on a and New Year's; they succeeded in bagging five large deer and twenty-two antelope. This was also accomplished by hunting the three troops, with quite if not equal success.

FOREST AND STREAM.
The men reported the deer and antelope "plenty," and could have killed many more, but having plenty to supply the wants of the garrison for some time, refrained.
There are among the enlisted men here a great many ardent sportsmers, sportsmen in the true meaning of the term, who deprecate the wholesale slaughter of game for the sole purpose of killing and letting their carcasses rot on the prairie, which I am sorry to say is being done by hunters in the West for the 'hide," and by hunters from the East for the gune sake of killing, which work, if allowed to continue without let up or hindrance, will soon result in the extermination of the elk, deer and antelope as the buffalo has been exterminated. So much for the large game. The blue quali is plentiful around here, and one occasionally meets with the black or Messina quali, a most beautiful bird, which is not numerous and is very hard to find. Ducks, the malard, blue-winged teal, the hooded merganser were met with in the ponds and on Lympia Creek in the earlier part of the winter, and a great number were killed, but there seem to be none here at present. Curlew were plentiful last summer, as were the mountain plover. We have had a surfeit of quali; the officers are continually out hunting them. For two hours' work, twenty would be considered good shooting; occassionally one can take a dog and gun and stroll out from the post a short distance and get a few quali, but for good shooting, four to five miles must be traveled in order to rach good shooting ground. The enlisted men do not seem to take so much to shotgun shooting as they do to shooting with the rifle or carbine, probably because they are more familiar with the latter arms, and cannot get the time or lack facilities, but small game shooting is almost entirely confined to the officers. There are some men in each organization here who use the shotgun and or hunting frequently and are very seldom a new face appears, but there are always plenty of volunteers for large gam

serves of the pleasure. I can bear testimony to the uniform excellence of the Springfield shotgun and of the excellent results from the use of them by enlisted men, and they admirably serve the pur-pose for which they were designed. Of course, the ambition of most of the good hunters among the men is to own a double-barreled shotgun. Fort DAVIS. Texas. Jan. 22. First Lightness et al. Course, the state of the second course of the second second second second second second for the second s FORT DAVIS, Texas, Jan. 23. First Lieutenant 3d Cavalry.

Edilor Forest and Stream: In reply to your letter of the 9th inst., in reference to game in this vicinity. I have to say that deer can be found in abundance not very far from here. About 100 have been brought into the post during the winter. Mountain sheep and goats are found about 100 miles from the post, but it is very difficult to get them. Bears can also be found from 50 to 100 miles from the post. Prairie chickens (*i. e.*, sharptails) and blue grouse are very plenty all around us. Large numbers of them are brought into the garrison in their season. There are also some ruffed grouse and a very few sage hens about here. The Springfield shotgun does some good work. Deer improve the post larder somewhat. Small game does not amount to much in that direction, except in officers' messes. Fort Spokane, W. T., Jan. 27.

FORT SPOKANE, W. T., Jan. 27.

Editor Forest and Stream: Your note of the 9th ultimo came duly to hand, and I submitted it to Major Jackson, of my regiment, for reply. He made the following note on its back, which I send for your information:

your information: "There is no game other than willow grouse in the imme-diate vicinity of the post. From fifty to one hundred miles south-southwest and southeast, game, large and small, can be found, consisting principally of willow grouse, ruffed grouse and blue grouse, deer, elk and bear. Antelope and huffalo are about extinct. "The comments the trunce are used considerable built

buffalo are about extinct. "The company shotguns are used considerably by the enlisted men, and they vary their diet in some small degree by the grouse and ducks killed with them; but the extent to which they are turned to profitable account is not appreci-able." N. A. M. DUDLEY, Colonel 1st Cavalry. FORT CUSTER, W. T., Feb. 1.

Forr CUSTER, W. T., Feb. I.
Editor Forest and Stream:
Yours of the 9th inst, just received. In reply thereto, would state that game has almost disappeared from this vicinity. When I came to this post (1881) game of some varieties, as turkeys, deer, quail, plover (upland), was very abundant. In the spring and fall geese and ducks were to be found in numbers sufficient for rather good sport. Game continued to be quite abundant until the winter of 1884.
Since that time it has decreased in quantity very rapidly. This is due, I think, to the unusual cold winters and the presence of large herds of cattle held here for grazing purposes. Moreover, during the years 1884.5, much of the country has been burned over in fall and winter, destroying the food supply. Last year and the year before, turkeys in large quantities migrated, going toward the south and east. This occurred late in the fall of those years and they have not returned. Last year the quali were almost all destroyed by the extreme cold weather and want of food. Coveys of twenty and then a few scattering bunches.
In regard to the shotgun referred to, I consider it a perfect failure. It might be used in killing tomtits, I presume. Many of our men own good double guns, generally of gauge No. 12, and use them with effect.
I was out early in last month with a party of one offloer and some enlisted men and Indian scouts-eight. Wort south to the main Canadian, some sixty miles from this post. We found some deer, killed all the turkeys wanted on the same ground. This year all the country had been burned over and the game have have left.

FORT SUSTLY, I. T., Jan. 28.

Editor Forest and Stream: The commanding officer has requested me to answer for him your letter of Jan, 9, knowing that I have been here longer and that I am better acquainted with the subject of your letter for that reason. Last winter at least 400 wild turkeys were eaten at this post, this winter about 225 have given us a rest from the

beef of this region. At least four-fifths, I believe more, of these turkeys were killed by double-barrel shotguns, the re-mainder by the company shotguns, rifles and carbines. The proportion given will hold good with the other game we kill here, but the wild turkey, from Sept. 1 to April I, is our principal game, ducks and prairie chickens coming next. Deer and antelope have become very scarce indeed. I have never fired the Springfield shotgun, but have been out hunt-ing a number of times with good hunters who had then and have seen those same men with the double-barrel shotgun, and in comparison with the average double-barrel shotgun, the Springfield "company shotgun" stands a poor chanee. It is only a makeshift better than a rifle or carbine, which would mangle the game so as almost to render it worthless for table use. I believe the cartridge of the company shot-gun will not hold a load large enough for turkey hunting. C. J. CRANE, First Lieutenant 24th Infantry. Four SILL, I. T., Jan. 30.

C. J. CRANE, First Lieutenant 24th Infantry. Four SILL, I. T., Jan. 30. Editor Forest and Stream: In reply to your communication of the 9th inst., I have the honor to inform you that no regular account of bag, ex-cept in one or two cases, has been kept; but as near as we can figure up we find our killing for the past season about as follows, viz.: Deer, 1; ducks, 163; geese, 2; chickens, 1,053; snipe, 50; rabbits, 40. About two-thirds of the above game was shot by three officers at the post with double-barrel guns; of the balance, probably one fifth was procured by enlisted men with the Springfield shotgun, which, while very convenient and ser-viceable in the early season for young birds, is not strong enough for waterfowl or late chicken shooting, and the men then generally resort to their rifles, in many cases using re-loaded shells with reduced charges and round bullets. We have chickens and rabbits in abundance in the vicinity of the post, a fair number of geese, ducks and snipe in sea-son; but their feeding and breeding ground is principally about fifty miles north of this place. We have few or no deer in the immediate vicinity of the post, having a large Indian camp that keep them hunted out; but they are rea-sonably plentiful forty or fifty miles from here in the hills between this and the Yellowstone. No regular hunting camps have been out from this post this past season, and our shooting has been principally confined to ordinary day spot-ing, except in one or two instances during duck season. The Indians destroy considerable small game—chickens and rabbits—during the winter months, shooting the chick-res from the trees, but do not exert themselves much in hunt-ing large game. There are few or no buffalo or clk in this part of the coun-

ens from the trees, but do not exert the later of the coun-ing large game. There are few or no buffalo or clk in this part of the coun-try, all killed or driven out. W. T. HARTZ, Captain 15th Infantry. Самр Рорьак River, Mont., Jan. 26.

Editor Forest and Stream:

Editor Forest and Stream: Your communication of the 9th inst, to the post command-ant has been referred to me and I take pleasure in replying to your inquiries. The supply of game, both large and small, within reach of this garrison is practically, so far as our own desires are con-cerned, unlimited. In the immediate vicinity of the post the variety of small game embraces willow grouse, geese, brant, ducks, sandhill crane (the young ones being quite edible), plover, curlew, robins, meadow larks, sage hens, snipe and vast numbers of doves. We have good duck shooting all the year round, while the best season for small game in general is from March to October 1. Within a few miles of the post, representing from one to two days' journey, we find deer, antelope, mountain sheep, etc. The season for large game shooting is from October to March.

two days' journey, we find deer, antelope, mountain sheep, etc. The season for large game shooting is from October to March. In the above enumeration I neglected to mention the hare (jack rabbit) and the cotton-tail rabbit. The former are so numerous as to be termed a nuisance, while there are but few of the latter. The jack rabbits afford us much valuable practice with the ride, but except just at the present scason it is never found on the white man's table, although the Indians cat them at all times. The Springfield shotguns are capable of good execution and for a single barreled gun are very satisfactory, but as there are but two issued to a company they are but little used, as every man who is at all fond of hunting owns his gun, and as a result the Springfields fall to the lot of the oc-casional hunter and poor shot, and consequently do not add much to the company larder. We have the finest kind of trout fishing, and, I may add, both the hunting and fishing is all that the most enthusiastic sportsman could desire. As to the extent to which the snpply is laid under tribute to enrich the post larder I have to say that it is limited only by the desire of the sporting portion of the garrison to go out and bring it in. As for myself I never let a week go by without going to the meadows, and one month I hardly missed a day. There are nine shotguns in the post and many fine shots with rifte and gun; you can imagine the result. In conclusion I will write you the result of our latest

missed a dity. There are think enough an imagine the many fine shots with rifle and gun; you can imagine the result. In conclusion I will write you the result of our latest hunts in Steen Mountain, Oregon. Party of eight hunting four days, killed 15 deer, 3 antelope, 5 coyotes, 1 badger, ducks, geese, sage hens, willow grouse. Other party of four hunting three days, killed 11 deer and 1 antelope, with smaller game. The first party killed about 50 jack rabbits, with the rifle only, at range from 50 to 300 yards. As for the small game, 109 sage hens represent one day's shooting, party of ten, and same number have brought in 160 ducks, the result of one day's shoot. The highest catch of brook trout was 123 in one day, by two of our crack fishermen. We have a fine trout stream running through the post which affords good fishing for miles up and down. Ten-Mile Creek is a still better stream, while McDermit Creek, at Disaster Peak (twenty-three miles), cannot be excelled in its number or quality of fine gamy trout. With abundant transportation and every facility for camping out, a distance of twenty-five or even seventy-five miles, only add pleasure to our sport, and I venture to say that there is no finer hunting on fishing in the country than that within easy reach of this garrison. But hunting and fishing is about all we do here, as eighty miles of sage brush desert separate us from "civilization and the railroad." W. A. MERCER, Lieut. 8th Infantry.

SOUTHERN ILLINOIS SPORTSMEN'S ASSOCIATION.—Du Quoin, Ill., Feb. 11.—Editor Forest and Stream: The sixth annual meeting and tournament of the Southern Illinois Sportsmen's Association will be held at Du Quoin between the 15th of May and 15th of June.—C. P. RICHARDS, Secre-

THE ADIRONDACK DEER.

<section-header><section-header><section-header><text><text><text> Editor Forest and Stream:

better posted now and will be on the lookout for such chaps next season. This is one of the many dodges resorted to by pot-hunters to obtain a supply of deer for the market, and there is no doubt but that hundreds were killed in this manner lastyear. It is a conceded fact that hounds could be heard running in the woods every day last fall, in the vicinity of lakes or large streams, but it was an extremely difficult matter to find a man who would confess to owning one. The opposers of the anti-hounding act are strictly non-committal on this subject, as they are seeking to make it ap-pear that the still-hunters killed all the deer. I am indebted to one of this class, however, for the facts concerning the ruse adopted in the Moose River region. PORTSA. Utrica, N. Y., Feb. 12.

UTICA, N. Y., Feb. 12.

<text><text><section-header><text><text><text><text>

of course, desirable to enlist, and whose support would be enlisted if they were convinced that their own ultimate in-terests required a restriction to be put upon deer shooting. The State has two interests in the Adirondacks. One— the most important—is to prevent the wanton destruction of timber, and the other to prevent the wanton destruction of game. When the timber is all cut and the game all exter-minated the region will be almost entirely worthless. It will be difficult to attain either object so long as the lands are held by private owners. The oftener the question comes up and the more it is discussed, the clearer it appears that the acquisition of the tract for a State park is the ultimate solu-tion of the problems that arise with regard to its treatment by the Legislature.

[From the New York Evening Post, Feb. 12.] Dr. Samuel B. Ward, who is President Cleveland's camp-ing companion in the Adirondacks, has written an argument in favor of the repeal of the anti deer hounding law by the New York Legislature. FOREST AND STNEAM takes up this argument and disposes of it very effectively, going so far as to charge, point by point, that Dr. Ward's statements are "misleading and deceptive."

[From the New York Sun, Feb. 14.]

The Adirondack woods should be preserved, and so should the Adirondack deer. To that end the present law forbid-ding the hounding of deer should stand.

The following was published in the Times of Feb. 14: "I am very sorry to see the stand your paper takes on the deer hounding question. I, for one, wish to be put down as a sportsman that does not favor the hounding of deer. I am an old sportsman and know a great many who are opposed to changing the law. In fact I am happy to say that I do not knowa a single genuine sportsman that favors driving deer in that manner. What sport there is in hound-ing a deer to the water and then either clubbing him to death or blowing bim full of buckshot while the guides hold him by the tail, I fail to see. As a member of the Society for the Protection of Game of this city, I wish to correct the statement you make, that we favor a change of the law. I was present at the meeting when this was brought up, and we were decidedly opposed to it and sent a resolution to that effect to the Governor at his request. Hounded venison is not fit to cat; it soon turns black and will often cause sick-ness. Would you like to eat beef that had been driven for hours before being killed? I do not understand why, if so many more deer were killed under the new haw, these poople wish it changed. I should like to see a law passed forbid-ding the use of shotguns in deer hunting. Many deer are wounded that escape to die, where if a rifle was used they would either be killed or missed. Cockney sportsmen need hounds and clubs and buckshot to kill deer, and do so kill them out of mere wanton love of killing, leaving them to rot where they fall. True sportsmen can kill them, at least enough for food, without these aids.—W. HOLBERTON (New York, Feb. 8)." The following was published in the Times of Feb. 14:

In a misleading and deceptive pamphlet recently sent to be Legislature by the deer hounders were the following statements:

statements: "I have talked with Mr. Roosevelt and Mr. Henry Bergh, who neither of them fully understood the case last year, and I do not think they would object this year to the modifica-cation of the law that I propose." "I have also seen Mr. Henry Bergh, and I think he is con-vinced now that hounding is not as crucl as he supposed. Very truly yours, • JOHN T. DENNY."

Mr. Denny's evident purpose was to put Mr. Henry Bergh into the position of an advocate of deer hounding. What Mr. Bergh really thinks of deer hounding in the Adirondacks is shown in the following letter:

THE AMERICAN SOCIETY FOR THE PREVENTION OF CRUELTY TO ANIMALS, Headquarters, 4th Ave., cor. 22d St. NEW YORK, Feb. 12, 1886.

Editor Forest and Stream:

I am in receipt of two letters from you in relation to the hounding of deer. You therein refer to a pamphlet which has been sent to the Legislature—and which I have not seen —citing me as being in favor of the cruel and unsportsman like practice. How such an inference could be drawn from any conversation I ever held with any one on the subject is actonible.

<text><text><text><text><text>

THAT MISLEADING DOCUMENT.

Editor Forest and Stream:

THAT MISLEADING DOCUMENT.
Editor Forest and Stream:
My attention has been called to an article in your issue of Feb. 11, entitled, "A Misleading Document," which is itself so full of misleading statements, that I must ask a little space, in common fairness, to reply. If we must differ in opinion as to the propriety of hounding deer, let us do so honestly and honorably. I am willing to grant that you really believe that to take deer by hounding is a very destructive and unsportsmanlike method of so doing, and am entirely willing to listen to any arguments that you may bring forward in support of your views, always remembering that misrepresentation and abuse do not constitute argument. Please believe in return that I, in common with a great many others, find more pleasure in taking advantage of the instinct which the Creator has implanted in dogs in following deer, than in any other mode of hunting them, and also that I honestly believe that the majority of men who are familiar with the Adirondack region, know that it is the least destructive method at present in use.
Now as to your objections to the pamphlet referred to:
1. You charge that the circular of inquiry was addressed ony to those persons "who were known or believed to be advocates of deer hounding." This I deny squarely. When the circulars were sent out I was as ignorant as you are to half of those to whom they were mailed, like Mr. C. E. Fenton, at Number Four, were opposed to hounding. I confess that I was amazed at the almost entire unanimity of the various modes of hunting law of last year repealed, and having been reediby informed that you had already declined to publish letters on that side of the question, we thought that it was usinely safe to trust you had already declined to publish letters on that side of the question. We thought that it was an induced that you had already declined to publish letters on that side of the question. The meeting was and thereby became familiar with the recepislature all the letter

regularly called by the secretary and what occurred is dis-tinctly reported. 2. You ask why we did not publish a letter from Mr. A. C. Clifton, addressed to the Glens Falls *Republican*. Our reason for not publishing it was that we had never chanced to see it. Besides, while I have no doubt that Mr. Clifton's pathetic report of a very sad incident is entirely true, I re-spectfully submit that such occurrences are far too rare to be used as a legitimate argument against hounding, and this exact occurrence might just as well have taken place by the accident of a dog's getting losse without his ever having been intentionally put on the track of a deer at all. In fact there is not a particle of evidence that this dog had been "put out" that day. We might just as well refuse to ever read another newspaper because typographical blunders occasionally lead to entire misstatements. You would not expect a reply to your courteous characterization of the facts which we present as "false and preposterous" or "the perver-sion and suppression of truth." 3. You find fault with the scatence which reads that

The second problem is the second programmed to the procession of the facts which we present as "false and preposterous" or "the perversion and suppression of trut."
The second second preposition of the facts which we present as "false and prepositions" or "the perversion and suppression of trut."
The second secon

The set of the second secon

the because the price of venicon went so low that the sums received would not pay for the labor. Allow me to suggest that you dispose of all these statements also by simply characterizing them as untrue, in fact I see no other course. Two have al-o, my dear Mr, Editor, a very fascinating and movineing way of arpening, by attributing motives to your opponents other than those which they themselves honestly set forth. For example, you say that we are elamoring for a law against floating, "not because they lwel believe that it will ave the game, but because they lwel believe that it will ave the game, but because they lwel bolieve that it will ave the game, but because they lwel bolieve that it will ave the game, but because they lwel bolieve that they lwel can get more deer." Now, I object to this, We don't say of you that you esponse the anti-hounding law in order to sell your paper, biccuse we find at the bottom corner of pare 41 a suggestion that those which you statement that we are actuated by the moving search and probably untrue. But it would be non-ore intures and probably untrue. But it would be non-ore intures which you attribute to us. We have given the reasons why we object to jacking. Why don't you show that it is perfectly easy to select your rame and let the does go, as we do in hounding? Why don't you show that the killing of a bot's. Why don't you show that the killing of a bot's. Why don't you show that the killing of a bot's. Why don't you show that the killing of a bot's. Why don't you show that the killing of a bot's. Why don't you show that the killing of a bot's. Why don't you show that the killing of a bot's. Why don't you show that the killing of a bot's. Why don't you show that the killing of a bot's. Why don't you show that the killing of a bot's. Why don't you show that the killing of a bot's. Why don't you show that the spirit of a main the could be founded. No one with the spirit of a main the could be founded. No one with the spirit of a bot's that a statistics 'united by precham

and throw off a dog in ten infinites any time take he is siten of the race. In the same interview, please reassure Mr. Bergh also on the sanitary question. Tell him that you have it on the au thority of a physician of more than twenty years' practice, that even if a dog were excited, yes, "intensely excited," so much excited that he could catch a deer and bite it, so ex-cited as to be really "rabid" when he bit the deer, that even then the flesh of that deer could be cooked and caten with entire impunity; that while the flesh of a deer killed after a long tun in warm weather may not keep very well, it is perfectly harmless while it does keep. At the same time whisper quietly in Mr. Bergh's ear that if this physician is mistaken, and the meat is, under these circumstances, deadly poison, so much the bettr. You will soon be rid of these cruel brutes of "sportsmen" off the face of the earth, and they are perfectly willing to take all the risks. BAMUEL B. WARD. ALBANY, N. Y., Feb. 15.

ALBANY, N. Y. Feb. 15.

The shrawdness, wit and incisiveness of Dr. Ward's reply combine to make it forcible, and we presume that no one who has read it enjoyed it more than we did. It is charm-ingly ingenuous, The injurch tole is always to fective. To appear to have been abused and misrepresented is always to win sympathy for one's cause. We have so high a regard for Dr. Ward's personal sincerity in this matter that we feel sure that he would regret, even more than ourselves, should

FOREST AND STREAM.Sympathy for him as an injured being blind the Legislature to the real points at issue. Dr. Ward will agree with us that it is of much more importance that the truth about deer hounding should be clearly presented, than that he should receive the sympathetic regard always accorded to injured innocence. Dr. Ward will therefore understand our motives when we firmly butkindly point out to him that this position is untenable, and is likely to mislead. We did not call Dr. Ward a linz, we called his document misleading and deceptive. Dr. Ward, in the third line of his letter, calls our statements misleading. We do not, therefore, imagine that he intends to abuse us or to call hard names, and we shall not seek to pose as maligned and insulted. We are much more concerned that the truth about der hounding shall not seek to pose as maligned and insulted. We are much more concerned that the truth about der hounding that the intends to abuse us or to call hard names, and we shall appear than about anything else in this matter.
The Yard would perhaps think it scarcely fair if we were to point out to him that their are many men who "find more proposed of introducing his points could be used in more ways the node of using these animals. If we were to make this ungestion it would only be to show that his graceful method of introducing his points could be used in more ways the were to make the severbion, we are confident that in this cooler moment he will see what must be patent to every one else, that we not show that he here applied to the pampliet itself, and the truth alb busker. They may be insecuoas. Dut are they fair.
The Ward acknowledges that, of the replies received in winforming up the points of Dr. Ward's reply we will endeavor to show him in language very mild and out at all abusive to the some resons of the suppression does not discussed the points of the suppressed the portion which here have severely on the is letters of inquiry, he suppressed the portion of the reaso

Eastern Association, we simply intimuted the subjection, which Dr. Ward's acknowledgment goes to confirm as a fact, that the association was shewdly organized by active deerhounding advocates to influence the repeal of the present wise law.
We cheerfully accept the explanation of the omission of Mr. Cliftou's letter and are willing to make the same excuse cover the tolire ondision—from a pamphilet purporting to represent public option—of every written and printed statement of fact and option adverse to the cause of the hounders. The fact remains that there was such an omission, and for this reason again—however ingenuous the action of the compilers —the document was misleading and deceptive as an exponent of public sentiment.
If Dr. Ward i anguines that this incident of a doe being dround alive by a bound is one of similar 'occurrences for too rare to be used as a legitimate argument against bounding," we congratulate him on his ignorence of one phase of the subject; but again, without meaning any offense, we auggest that however bissful that ignorance may be to its possessor, it is unbecoming in one who undertakes to instruct the Legislature on the subject of Adimodak deer hounding. Perhaps the dog was not 'put out.'' It is well known that dogs go off "by accident' to pull down venison for themselves; but is that any valid argument for maintaining a horde of half-starved houndin it he North Woods?' We do not expect any reply to our characterization of the statement as issee and prepositrous, for we honestly believe that there is no reply to be made to it.
We do not expect any reply to put characterization of the statement adise and propositorus. for we honestly believe that there is no reply to put ritends, dear Dr. Ward asys it was "a httle sweeping.'' For Messus. Sher man, Houling, Richards, Litchfed, and the others who my chardwards, who while active the out has the highest respect. Do you commonly show your respect for your friends, dear Dr. Ward, by dubbing them pot-hun

Dr. Ward argues that the anti-hounding law should be repealed because he has discovered that Gen. Curtis who introduced the bill last year is not a sportsman. Will Dr. Ward ask us to repeal all our game laws if it shall be dis-

<text><text><text><text><text><text>

self? There is more fascinating ingenuousness in Dr. Ward's evident endeavor to put the FOREST AND STREAM an ong the advocates and defenders of jack-hunting. If among any of his acquaintances there happens to be one who has read this journal for the past six months, we beg of him to inquire respecting our allitude, past and present, on the jacking question.

this journal for the past six months, we beg of him to highly respecting our altitude, past and present, on the jacking question. That Dr. Ward may have no further misconception on this point, we make what seems to us to be a perfectly far proposal, viz, if the members of the Eastern New York Fish and Game Protective Association honestly wish to prohibilt jack shooting in order to protect the deer, and not simply to trade off jacking for hounding, they can readily show this by causing to be introduced a bill for the total abolition of jacking—but not giving permission to bound. We here pledge ourselves to support that bill and to work for its passage; we also pledge to its active support most of the advocates of the present law with whom we are acquainted; and if the Eastern Association will do their share we think we are safe in promising that the bill shall pass. If they refuse to do this, they cannot reasonably object to the charge that in their present efforts they are less anxious to forbid the jack than to replace the hound on the trail. It is unfair to attempt to blind the Legislature by the flare of the destructive jack-light. 8. Dr. Ward is aggrieved because we do not accept the

or the destructive jack-light.
8. Dr. Ward is aggrieved because we do not accept the ridiculous assertion that more deer were killed by still hunting last fall than in former years by still-hunting and hounding combined. If the Boonville statistics are not without foundation, will Dr. Ward kindly inform us if he knows who avows their paternity? And will he tell us whether he accepts the proposition they are intended to bolster up?

avows their paternity? And will he tell us whether he ac-cepts the proposition they are intended to bolster up? 9. Ingenuous again. We did not deny that deer are made shy by hounding. On that point there is absolutely no dif-ference of opinion between us and Mr. Fuller and other woodsmen. We do differ from Mr. Fuller in his notion that the deer is such a tame creature and so sure to rush, from afar off, into the arms of the still-luuner, that hounds and guides and boats full of "sportsmen" equipped with maga-zine riftes, and repeating guns loaded with buckshot, and oar butts and clubs and sheath knives must be employed to make this abnormally tame creature 'sby." That is where we differ. And of the letters the FOREST AND STREAM did not publish, and out of the refusal to publish which Mr. W. Denny and Dr. Ward have made so much capital, one was from Mr. Fuller, of Meacham Lake, submitting this "sby" argument, and the other from Mr. Denny repeating the same "sby" argument. We do not question that these men may honestly believe what they say, but how can they ask us or anybody else (except a pampheteer trying to "sweep" the Legislature) to print such stuff? That they are even so honest in their conviction as to put it into practice, we do not deay. The spectacle of Mr. Jno. T. Denny, in a boat on Meacham Lake, pumping bullets out of a Winchester magazine rifle at a deer

"AN OFFICIAL SLAUGHTER."

<section-header><section-header><section-header><text><text><text>

Sourthers Shooring PRESERVES.—For all the purposes of the hunting of the most favorite game there is no place on the Atlantic coast like the islands of South Carolina, and especially those in the vicinity of Charleston. It is gratify-ing to know that interest is being exhibited in fields so abounding in game and fish of the choicest description, and it must appear a matter of surprise that so little is known out-side the borders of the state of its conspicuous advantages in this line. Every year hundreds of sporting men and others in the pursuit of the pleasures of field exercise and sport go either to Canada and the Northwest and to the prairie lands, where as a general rule the enjoyment of the season is marred by the intensity of the cold. One of the advantages of the climate of South Carolina will recommend itself to all lovers of sport under the best of conditions, and that is the equable temperature of our hunting season. It may be said, however, that a very rigorous climate is necessary for the appearance of the best qualities of game. This is not true to an extent that would in the slightest degree interfere with the fact that ordinarily cold weather is sufficient to sought in more distant regions. For instance, the appear-ance of the woodcock and snipe begins early in the winter on our seacoast, and they remain during the season unless the winter is phenomenally mild, which does not often occur. The rice fields on the coast are always in the proper season stocked with snipe, and the breaks and thickets near and in marshy grounds are alive with the splendid and delicious bird, the woodcock. The low country of South Carolina is SOUTHERN SHOOTING PRESERVES .- For all the purposes

known the world over to be the finest hunting ground for the deer and wild turkey. From September until March the partridge is found in abundance, and the wild duck in end-less variety flocks to the inland rivers, the rice fields and the estuaries along the coast. The whole of the ocean front of the State is dotted with islands, and on many of these all the kinds of game that have been mentioned exist plentifully. There is scarcely a plantation on the coast of Souh Carolina which does not embrace in its extent lands on which high land and lowland game may not be found in the winter season. Nearly every one of these plantations, in fact, is composed of highlands and marsh or rice lands, and, indeed, the sites of these old-time domains were selected with a view of comprising such qualities of land. The fishing along the coast, in the inlets and along the banks near Charleston, is well known to be of the most profitable and attractive kind, including the most favorite qualities and species of fish. There was scarcely a homestead, either on the islands or inland near the coast, which did not have its avenue of live oaks, and in many instances these alone remain to tell of the former glory of plantation life and to mark the spot where the "Memorial hall" once stood. The oaks have not lost any of their beauty by the lapse of time, and it would be casy to restore even on a grander scale, one of these homesteads to its original attractiveness and interest.— *charleston News and Courier*.

these homesteads to its original attractiveness and interest.— charleston News and Courier.
AN ADIRONDACK WOLF.—It was reported last Monday that a pather had been seen near the Rome and Floyd town line, and that a number of hunders were in pursuit of the animal. The panther turned out to be a wolf. It was killed about 3 P M. on Monday in Bentley's swamp, in the town of Floyd and brought to Rome this morning by David Car-penter. It is a large and fierce looking male. The woll's tracks had been seen by different persons for several days. On Mouday morning a party of hunters turned out with shot guns and titles prepared to do or die. The party was made up of William Kilbourn, H. Parsons, Eugene Cleve-land. Thomas Bennett, Welcome Carpenter, W. Hogle, and D. C. Carpenter. The latter has a good fox dog which he put on the scent, but the animal refused to follow it. The hunters ran the wolf about ten miles in the woods and fields. Kilbourn got the first shot at him with a shotgun. Thomas W. Bennett had three or four "cracks" at him with a sbotgun and one with a rifle. Then he crossed Hogle's path and was made the target of a shotgun. Then Bennett got bead of the animal again and fired three times with a shotgun. Eugene Cleveland next had a chance at bim with a rifle. The wolf ran through the door yard of a man named Murphy and he fired a revolver at him. Hogle next tackled the beast with a shotgun. It is not positively known that any of the shots hit the wolf up to this time, for he ran just as though nothing had hap pened. He became very tited, however, and finally crawled under a bush to rest. W. Bennett found him there and, having no annunition, called his brother Thomas, who went very close to the volf and let him have a charge of buckshot in the head, killing him instantly. Thus ended the only wolf hunt that has taken place in these parts in years. It is supposed that the animal strayed away from the North Woods. He had been subsisting on the carcass of a cow that laid in the woods. The dead

Sentiael, Feb. 10. New JERSEY QUAIL.—It was only a few years ago that the FOREST AND STREAM went to the trouble and expense of making a c mplete canvass of the State of New Jersey as to how the qual had fared during the winter. Such a canvass had never been made b fore in this country, and it proved to foreshadow the coming shooting season with wonderful accu-racy. Were such an investigation now to be prosecuted the re-sult would show that since the first of the year the destruc-tion of qual has been very great. This was due to the great and sudden fluctuations in temperature, deep snows and their immediate crusting, and the intensely cold weather. At the beginning of the last open season in New Jersey there was an abundant crop of quail in both Warren and Sussex counties. The birds had been favored with a fine breeding year, and the crop was an unusually healthy one. In almost every case the bevies were full ones and well grown when the shooting began. Taking it as things go nowadays, they were not harassed as much as one would suppose, and when the season drew to a close there still remained a goodly showing of birds on the sunny side of the brush-covered hillsides. Then came the terrible cold weather, and now the sportsman hears on all sides that the birds have perished while being protected from want of protection. The shoot-ing outlook is the most gloomy we have had for years.

RUMSON NECK GAME ASSOCIATION.—A number of promi-nent business men in New York city, who own property on Rumson Neck, a long stretch of land between Seabright and Red Bank, N. J., have banded themselves into a game pro-tective society, which hereafter will probably be known as the Rumson Neck as Game Association. It is their intention to stock Rumson Neck with quail and then protect them as much as possible. To effect this Mr. David Keeler, of Rum-son Neck, has at present over 650 qualt in his barn, and he has ordered 1,000 more quail from the West. The birds will be liberated when the spring has fairly opened. Prior to brush their fences to afford cover for the birds. They will also, later on, plow a ten-foot-wide furrow along the fences, which will be planted with wheat and buckwheat, and remain uncut throughout the season. This, it is thought, will provide ample food for the birds. Six keepers will be engaged to exterminate hawks, cats, foxes, and to warn off all shooters. In fact, everything that can be will be done to protect Mr. and Mrs. Quail and the Masters and Misses Quail-ina. It is only by such determined efforts as these that the shooting can be restored in this vicinity.

AMESBURY, Mass., Feb. 9.—Owing to the unusual severity of this winter, the birds are having a hard show to find food to rotain life, as the woods are covered with such a coating of ice and snow as was never seen by the oldest inhabitant. While driving to Haverhill Sunday, I saw a flock of eight quail feeding in the road on the droppings of horses; they were as tame as chickens, and only hopped on the wall to get out of the way.—J. O'L.

THE ACCIDENT POLICIES of the Travelers, of Hartford, Conn., in-demnify the business or professional man for his profits, the wage worker for his wages, lost from accidental injury, and guarantee principal sum in case of death.—Adc.

CEDAR STREAM.

<text><section-header><text><text><text><text><text>

musical tinkle from the top of a "poke stalk," in the adjoin-ing meadow. The tastes and habits ingrained in boyhood hold through life, and so it is that, although I like to feel the pull of a big fish at the cud of a light rod, still "it is not all of fishing to fish;" and the leisurely sauntr by the swift rippling waters, the song of the birds, the sunshine and the dowers, have charms which more than compensate for the lesser weight of the basket at the end of the day. I like the free use of my legs, too, and they are too long to be confortable when cramped up to a small boat, and so, after mach preamble, I come to my text again.

legs, too, and they are too long to be confortable when cramped up in a small boat, and so, after mach preamble, I come to my text again. I had been fishing for a week at Second Lake, when a message was brought in to me requiring my presence as a witness at court in Concord the next day. Dropping every-thing, I walked out through the woods to First Lake, got a horse and wagon, and drove down to Colebrook that evening so as to take the stage at four the next moning, catch the first train at North Stratford and reach Concord early in the afternoon. The case was on trial, and my evidence short, and the next day I returned to Colebrook, and the following one to First Lake, where Mr. Snoppe, the landlord of the Lake House, informed me that my son, who I had left at Tom Chester's camp, had come "out" the night before with a young Iriend from New York to altend a dance, and that they had gone that day to Cedar Steam with the intention of coming back at night, and going "in" to Tom Chester's in the morning. I therefore decided to wait for them, and just after dark they appeared, with two baskets full of trout, besides a "string" on a willow branch about two feet long, and the report that they had given away another string of seventy-five trout to the man who had taken care of their horse. To be sure the trout were small, from six to eight inches long, but they said that they had gone far up the stream to begin, and by the ime thry got down to were they had no room for any more; it was almost dark, and my son Bob had changed places with the fish, and been to the bottom of the deepest hole they had found. The next day was Sanday, and we went leisurely in to

it was almost dark, and my son boo natronages in the fish, and been to the bottom of the deepest hole they had found. The next day was Sanday, and we went leisurely in to Second Lake again, where we staid a few days longer, and when Bob had to return to his business Joe and I came out to the Lake House with him and staid there a few days to try that neighborhood. Joe earnestly advised me to try Cedar Stream, beginning where he had left off, and a young man employed about the hotel said he had been up on Sunday and caught 400. Of course, I discounted that a trifle, but determined to give the stream a trial, and Joe, who was not very well, said he would drive me down the river road to a point opposite the mouth of it, and call for me again at night, which he did. The stream iss in the hills south of Connecticut Lake, and after a course of six or seven miles empties into the river road to allow up the side of the stream rises in the bus to follow up the side of the stream, but soon had to give it up and take to water. The old spruce forest had been cleared many years ago, and the new hardwood growth of birch, maple, poplar and alder was so dense as to render the bed of the stream prefile. At places I found gravel beaches on alternate sides of the stream, all marked by the tracks of the yeung man

Who had been up on Sunday, and sometimes the shallow stream filled from bank to bank, with scattered stones sticking their heads above the water here and there.
Up the stream I kept, crossing from side to side to take advantage of the beaches, for I was equipped with canvas shoes and long stockings, until I came to a pool perhaps 100 yards long and ten wide, with a beach sloping up from one side and a rocky ledge on the other, with a slight fall at the upper end, where the water came in. Here the foot tracks stopped, but I decided to go on a little further, and soon eame to another and higher fall of about twelve or fifteen feet into a deep pool, with steeply sloping roeks on each side. Here I put my rod together, and climbing up on the rocks to the foot of the fall, I saw a series of scratches on the rocks leading down to the water, which were the made his plunge the week before.
Thing a seat on the edge of the rock, my first cast was followed by an instant pull, and before leaving my seat I so that pool. I then determined to look a little further, and climbing up through the brush around the fall, for the rogek was impracticable. I found where two streams came together, the one red from the cedar swamp from which it came, the other beautifully cold and clear. Following up this, which went back to the water again. I looked at my wate, and found it was 1 o'clock.
Mallen birch by the side of the stream furnished a convertise was no room to cast a fly, it suddely stopped on the ideal swamp from which it do a pocket cup and "Kingfisher's" beverage, and my for the water again. I looked at my which went back to cast a fly, it suddely stopped in mid eurrent just in a rift in the rock where the two streams came together, and a gentle twiteh resulted in a vigorous pull which went back to the water again. The stop of the stream furnished a convertise was no room to cast a fly, it suddely stopped in mid eurrent just in a rift in the rock where the two streams again to a moche in the addition of a

One or two smaller ones were taken from the larger brook

pull, which ended in the addition of a half-pounder to the basket.
One or two smaller ones were taken from the larger brook, and I then returned to the large pool, where I got but one small one; it had evidently been pretty well cleaned out on Sunday. Then I struck back toward the river, keeping always in the water, and floating a line the length of my, rod ahead of me, with a single No. 2 shot on the upper end of the gut, to keep the hook steady in the swift currents.
Toold usually keep in water not over ankle deep, letting my bait down into the deeper currents and around the big stones and under the fallen logs on the back; and the function of hooks, and when I went down to court had bought a dozen No. 3 Sproats at a country hardware store, and the three bigger fish I hooked on my way down were lost, hook and all, before they were fairly lifted out of the water, by the trying slipping on the gut. This caused more or less delay, and at 6 o'clock, when I had promised to be back at the river. I had not got half way there.
There were, my basket, a ten-pound one, was full, literally 'jammed full,'' so that I had to keep my thumb in the opening to keep the fish from getting out, as I slipped about over the smooth stones, which were also somewhat slimy and slippery at times; and I willingly unjointed my rod and make the best of my way to the river, with a load of trout ranging from two to eight ounces can.
Wating the river again, the wagon was waiting, and I was soon back at the Lake House, and enjoying a trout super. I do not know whether I tramped two miles or four, I only know that I had a glorious day, caught as good trout as there were in the brook, and enjoyed it far better than I should have done broiling in a boat, with my legs cramped under me, and holding a band-line with a minnow on the end of it, waiting for a four-pounder to happen my way, for that is the. W. N. H.
CATFISH AS SPORT AND FOOD.

CATFISH AS SPORT AND FOOD.

CATFISH AS SPORT AND FOOD. Editor Forest and Stream: The ave been much interested in reading of the catfish fullhead) as a food fish in the report on "Adirondack Fishes" and it suggests a little incident. First, however, I is to say that I have been greatly interested in that por-tion of the work relating to the Salmonida. The portion relating to the differences between Salmo and Salvedinus has been particularly instructive to me, as there had been some confusion in my mind regarding them until I read the des-cription (p. 20) of the difference in shape of the vomer and the arrangement of teeth on that bone: The to the builheads. As for their being better for the table than trout surprised me at first, but on reflection I have every summer become tired of thout, but never had a sufficiency of ullheads; to be sure I never tried to eat as many of them, and this reminds me of the incident I started to H. Thie making a trip through the Adirondack finderness in company with a friend and two guides, we fought at "Ke" Komels' on Requette Lake for dimer. My guide, "the" Komels' on Requette Lake for dimer. My guide, "the" Stone, and I, were standing on the wharf prive anxious to get away, when a boat came to the landing more by a guide while a gentleman was scaled in the ster. The batter said to a clergyman standing near: "Come prother —, get your tackle ready, I've found where we can to some sputhed fishing. A guide thinks we can catch in speaks of the "splendid fishing" at Requette Lake every ind speaks of the "splendid fishing" at Requette Lake every ind speaks of the climax. He never smile agar, "clome is a speak to de climax. He never smile agar, "clome is a speak softhe "splendid fishing" at Requette such every is a speak of the clima to as a Requette, and the "splendid is novation of cottages in the wildeness, had been easi at the time I was at Requette, and the "splendid is nova the term I was at Requette, and the "splendid is nova the term I was at Requette, and the "splend

NEW YORK, Feb. 1.

LARGE PIKE-PERCH.—Randolph, N. Y., Feb. 9.—Editor Forest and Stream: I send you by United States Express this day (charges paid), one fish head which please name in your next paper, as there is considerable difference of opinion here as to what kind of a fish it is. The fish was speared in the Conewango Creck; none like it ever caught there before. The stream has yellow bass, pickerel, or muscallonge, and wall-eyed pike. This fish was 81 inches in length, 8 inches wide and 6 inches thick, and weighed 144 pounds. Yellowish brown, with scales; there were about 34 pounds spawn about half grown.—C. M. [It was a large pike-perch, Stizostedium vitreum, called also wall-eyed pike, and when large, yellow pike.]

FOREST AND STREAM. The OUTRAGE AT LITTLE CLEAR POND.—Shortly after the nets of the N. Y. Fish Commission—which were set to capture spawning fish—had been cut, the following notice was posted throughout the Adirondack region: "Pledge of Saranac hotel keepers and guides. Saranac Lake, January 1, 1886. We, the undersigned, hotel proprietors, guides and residents of the Adirondacks, having learned with regret that some vandal has been committing depredations upon the State Hatchery property at Little Clear Pond, do most heartily condemn such a dastardly outrage, and do pledge ourselves to use every lawful means to bring such per-petrators to speedy and condign punishment: Milo B. Miller, proprietor Saranac Lake House; H. H. Miner, taxidermist; L. Evans, boarding house; John Eyglefield; F. G. Hallock, guide; Geo. W. Musson, guide: Aaron Golchhmitt; R. E. Woodruff, proprietor the Berkeley; Horace Peek; Stephen Merchant; Wm. A. Walton; Dan MetKillip, Geo. E. John-son, guide; R. M. Banker; Edwin Goodell: Aaron Hays, miller; Philip McMannis, guide; John Bergen; Geo. W. Fayzett, guide; Latour & Platto (stage line); F. M. Bull, drugzist; A. S. Wright, builder; S. C. Martin; Geo. Neise-reu; Orlando Blood; Ryland Blood; J. P. Blood; Geo. A. Berkley; T. N. Spaulding, merchant; Peter Seguu; C. H. Kendall, proprietor Riverside House; James B. Miller, stage line; Andrew J. Baker; Jason Vosburgh; Rant Reynolds; J. A. Morhous; Chas. Manning, Sylvenus Marrou; E. L. Trudeau, B. Woodruff; C. M. Walton; Reuben Reynolds; R. A. Morehous; Joseph B. Lamoy, guide; Edgar Trembley; Thomas Dewey; Z. A. Wilson; John W. Slater, guide; A. W. Dudley, guide; C. P. Wicker; Edwin E. Sumner, guide; H. Peek, Millard F. Otis, guide; Fayette Moody, guide; H. Peek, Millard F. Otis, guide; Fayette Moody, guide; H. Peek, Millard F. Otis, guide; Fayette Moody, guide; H. Bassett; Wm. P. Moody, guide; House, John K. Slater, guide; Maoning; M. J. Notron, proprietor Adirondack Cot-tages, Saranae Lake, N. Y., Pat Carey;

LARGE RAINBOW TROUT. - On Monday last we saw a rainbow trout weigning 5 pounds 14 ounces, at Mr. Black-ford's in Fulton Market. The fish came from the ponds of the South Side Sportsman's Club of Long Island and was five years old. It had died and was sent for exhibition to show the great growth. The fish was a female and had not yet spawned, but the great mass of eggs which were displayed on a platter looked to be nearly ripe.

NEWPORT FISH AND GAME ASSOCIATION.-Newport, R.I. NEWPORT FISH AND GAME ASSOCIATION.—Newport, R.I., Feb. 13.—At the annual meeting of the above association the following officers were elected for the ensuing year: Presi-dent, J. P. Cotton; Vice-President, Rev. F. F. Emerson; Secretary, F. H. Wilks; Treasurer, W. H. Hammett; Direc-tors, Thos. Burlingham, W. P. Sheffield, Jr., E. S. Ham-mond, S. E. Greene, B. M. Thurston,

THE OTHER DAY a fish peddler's horse balked on the street and refused to budge an ineh. The vender began to belabor the beast with a stick, when an old lady thrust her head out of a window and exclaimed: "Have you no mergy?" "No, ma'am," replied the peddler, "nothing but mackerel" mackerel."

ng Co. WORK IN MAINE.—The hatching station at Grand Laka Stream has a good quantity of eggs of the landlocked salmon. This station, under the charge of Mr. Charles G. Atkins, one of America's best fishculturists, is operated jointly by the State and the United States, each bearing a portion of the expense. The work here is almost entirely with the land-locked salmon, at present there are now in the troughts 50,000 eggs for Moosehead Lake, 25,000 eggs for New York waters, 50,000 for New Hampshire and some for Europe and other parts, as well as 200,000 eggs of the sea salmon, the fry from which will be placed in the St. Croix River. At the hatchery at Orland, the United States has a large number 'of eggs of the Penobscot salmon which are developing and will be dis-tributed to State waters. Many have been sent to New York and other places. At the State hatchery at Cold Stream, Enfield, there are now 700,000 eggs of the sea-salmon which will be used to stock the Penobscot. The work in this State has borne good fruit in the way of restoring salmon to the exhausted streams, many having been caught during the last season with the fly, while the nets yielded a supply for the markets far in advance of the catch during any season for the past twenty-five years.

A PET BEAR ON A TEAR.—The Ashtabula *Record* says: Some time ago Councilman Manning, agent of the Lako Shore Company at the Harbor, bought a cub bear and kept it near the Harbor depot. On Friday the bear escaped from its con-finement, and going over into the road on the east side of the river proceeded along it until the farm of Albert Fields was reached. Here it turned off, and going to the house, of which the doors were left open, proceeded to take possession. Mrs. Luce, the wife of the tenant of the farm, was alone in the house, and one can imagine her astonishment and feeling at seeing a half grown bear walk in. The dinner table had not been cleared away, and his bearship at once took control of matters, getting upon the table, and after eating everything within his reach demolished most of the dishes Evidently entering heartily into the spirit of demolition, he next tackled a sewing machine, which was soon in ruins, and then chairs, stands and other furniture went down under his paws, until in a short time the interior of the house looked as though it had been struck by a cyclone. During this time Mrs. Luce was, of course, unable to prevent the doings of Mr. Bruin, and just as she was giving up in despair her husband returned and succeeded in cornering the bear, which, though young and destructively mischievous, was not savage. A visit from a live bear is an extraordinary occurrence for this section, and, judging from this one, is not very desirable.

EASTERN FIELD TRIALS CLUB.

EASTERN FIELD TRIALS CLUB. The report of the Committee on Running Rules, which was unainously adopted, is as follows: Rule 4. Is striken out entirely. Rule 10. To read: Dogs shall be drawn by lot and numbered in the order drawn. Each dog shall run in the first series as a brace with the next available dog in that order, and the winners run in heats again in the order so obtained, except as hereinafter provided. Any dog absent during the first series more than twenty minutes after his number is called, shall be disqualified from further competition. Rule 11. If two dogs owned or handled by the same person should come together in the first or any succeeding series, the second dog so owned or handled in the order of running. If after the first series such separation is found to be impracti-cable or without benefit, the running together of two such dogs may be permitted. Rule 12. If in any series of heats there should be a natural by such by estall run with the winner of the first heat of the perious series as the first brace of the next series. Rule 13. Each dog must be brought up in its proper turn without delay; if absent for more than twenty minutes, its concent shall be eatitled to the heat. Subject to Rule 10. Rule 14. Strike out the sentence: "In Members' Stake a dog may be nealled by its owner." The handled by its owner." The the Audied by its owner. The demining the holding of a trial after such dog or dogs have been allotted a position in any heat or race without the ownithdraw his dog or dogs from a stake on the field or at part the during the holding of a trial after such dog or dogs have been allotted a position in any heat or race without the consent of the governing committee on the grounds. Any such owner or handler withdrawing his dog or dogs rithout the consent of this governing committee may be debarred to withdraw his dog or be penalized at the discretion of the to any further trials or be penalized at the discretion of the to any further trials or be penali

A dog may be withdrawn with the consent of the governing committee on the ground. A mendments to instruction to judges: The fifth section was stricken out and the following substituted; "Judges are re-quested to avoid as far as possible holding a dog so long on a point for the purpose of securing a back or otherwise, as to enable the birds to run." Dogs should be brought up to back only when opportunity offers, without interfering with the pointing dog. A dog drawing on or pointing game shall be afforded ample oppor-tunity to locate the game. without competition, it being left to the discretion of the judges to direct the opposing dog to be held in check.

THE POINTER STANDARD.

THE POINTER STANDARD. THE committee on the pointer standard recommend that Stonehenge's description of the pointer remain intact, but they advise that the division of points be changed by taking five from the head. Our remarks upon the proposed of the head of the English setter will apply with equal for the head. We do not believe that either of the gentlemen on the merely suggest that less value should be accredited to the head. We do not believe that either of the gentlemen ownprising the committee would award a prize to a pointer with bull-terrier lips, pig yees and Spitz ears, no matter were he perfect in all other respects, yet under the standard they propose, such an animal would score ninety-seven out of a possible hundred points, unless the judge saw it to out him for symmetry. The improvement of the dog is a most worthy object, anything that tends in the opposite disastrous results are sure to follow. To take from the value of this most important indicator of pure treeding is cer-tainly a step in the wrong direction.

STANDARD COMMITTEE REPORTS. BLACK AND TAN SETTER STANDARD.

STANDARD COMMITTEE REPORTS. BLACK AND TAN SETTER STANDARD. Skull should not be so heavy as in the Gordons, should be clean cut, with occiput well defined, and good stop. Length of skull from eye to occiput, not less than five and one half inches. Free of top knot. Muzzle should be straight from eyes to nostrils, without coarseness, should not be less than four inches in length; nos-trils should be rather full and black in color; jaws should be exactly equal in length. Lips should be dark brown in color without the outer yel-low circle so ofteu seen in Gordons; should be of good size and mild in expression. Ears should be setlow on the head and lie flat to the cheeks; should be rather longer than the English setter's and well coated with fine silky hair, which should be straight or shoulders to head, and slightly inclined to arch; should not be throaty, but is not expected to be as perfectly free of leather as a pointer's. Shoulders due day and showing great liberty. Chest should not be wide but deep; ribs well sprung back of the shoulder but do strong and strong, not so heavy as the Gordon's, and showing great liberty. Chest should not be wide but deep; ribs well sprung back of the shoulders but at some as to make the animal appear round in barrel; should extend well back toward the quar-ters. Back and Loins should be strong and slightly inclined to

the shoulders but not so much as to make the animal appear round in barrel; should extend well back toward the quar-ters. Back and Loins should be strong and slightly inclined to arch, a tendency to sway-back being objectionable. Quarters should be well muscled but not lumbery, muscles extending well down toward the feet. Legs. Fore legsshould be straight, with elbows neither stand-ing out nor under the chest; should be long from point of shoulders to elbows; should be well feathered to the feet. Hind legs should be long from hips to hock joints; stifles fairly well bent. Hock joints neither bending inward nor out, the former being the most objectionable; feather should not be extended below the hocks. The Feet should be round, hard, arched, and somewhat padded with hair between the toes; should neither point in-ward nor out, the latter being the most objectionable. The Stern should be son in proper place; should have a fine, straight, silky flag, any inclination to curl or ropiness being objectionable. The Coat should be deep plum black, with rich tan mark-ings clearly defined, and without admixture of blacks, showing on lips front of cheeks, throat, over eyes, on front of chest. ou feet and legs, also at vent, but should not extend into the flag more than four inches. Auy white is objectionable, but a small spot on the breast should not disqualify an otherwise good dog. Symmetry and Quality.—The general character and form of the black and tan setter should be very similar to that of

Similar store and *Quality*.—The general character and form Symmetry and *Quality*.—The general character and form of the black and tan setter should be very similar to that of the English setter, possibly a shade lighter throughout; very blood-like in appearance, and combining great symmetry and conditioned the state of the symmetry and setting the symmetry and settin quality

IRISH TERRIER STANDARD.

The Irish Terrier Club's scale of points, and description of the true Irish terrier: NEGATIVE POINTS.

POSITIVE POINTS. Head, jaw, teeth and eyes. 15

50 100 Disqualifying Points.—Nose cherry red. Brindle color.

DESCRIPTIVE PARTICULARS.

100 cherry red. Brindle color. DESCRIPTIVE PARTICULARS. Head.—Long; skull flat, and rather narrow between ears, getting slightly narrower toward the eye; free from wrinkle; stop hardly visible, except in profile. The jaw must be strong and muscular, but not too full in the cheek, and of a good punishing leugth, but not so fine as a white English terriers. There should be a slight falling away below the eye, so as not to have a greyhound's appearance. Hair on face of same description as on body, but short (about a quarter of an inch long), in appearance almost smooth and straight; a slight beard is the only longish hair (and it is only long in comparison description as the strong and level. *Teeth.*—Should be strong and level. *Lips.*—Not so tight as a bull-terrier's, but well-fitting show-ing through the hair their black lining. Nose.—Must be black. *Eyes.*—A dark hazel color, small, not prominent, and full of life, fire and intelligence. *Ears.*—When uncut, small and V shaped, of moderate thick-mess, set well upon the head, and dropping forward closely to the cheek. The car must be free of fringe, and the hair thereon shorter and generally darker in color than the body. *Neok.*—Should be of a fair length, and gradually widening toward the shoulders, well carried, and free of throatiness. There is generally a slight sort of frill visible at each side of the neck, running nearly to the corner of the ear, which is loolzed on as very characteristic. *Backe and Loin.*—Body moderately long; back should be strong and straight, with no appearance of slackness behind the shoulders; the loin broad and powerful and slightly arched; ribs fairly sprung, rather deep than round, and well ribbed back. *Hind Quarters*—Wel under the dog; should be strong and muscular, the thighs powerful, hocks near the ground, stiffes

Arched russ tamy spring, rather deep than round, and weil ribbed back. *Hind Quarters.*—Well under the dog; should be strong and muscular, the thighs powerful, hocks near the ground, stiffes not much bent. *Stern.*—Generally docked; should be free of fringe or feather, set on pretty high, earried gaily, but not over the back or curled. *Feet and Legs.*—Feet should be strong, tolerably round, and neither turued out nor in; black toenails are preferable and most desirable. Legs moderately long, well set from the shoulders, perfectly straight, with plenty of bone and muscle; the elbows working freely clear of the sides, pasterns short and straight, hardly noticeable. Both fore and hind legs should be moved straight forward when traveling, the stifles not turned entward, the legs free of feather, and cov-

ered, like the head, with as hard a texture of coat as body

eren, like the head, which as hind a baseline of softness or silkiness, not so but not so long. *Coat.*—Hard and wiry, free of softness or silkiness, not so long as to hide the outlines of the body, particularly in the hind quarters, straight and flat, no shagginess, and free of lock or curl. *Color.*—Should be "whole-colored," the most preferable being bright red; next wheaten, yellow and gray, brindle dis-qualifying. White sometimes appears on chest and feet; it is more objectionable on the latter than on the chest, as a speck of white on chest is frequently to be seen in all self-colored hreeds.

POINTER STANDARD.

G. Edw. Osborn, Esq., Secretary A. K. C:

follo

G. Edw. Osborn, Esq., Secretary A. K. C: The committee appointed by the A. K. C. on a standard for judging pointers, beg to report that so far as they have been able to learn the opinions and wishes of prominent breeders of pointers, there is no general desire to change, materially, the standard as laid down by "Stonehenge."
In the opinion of your committee, the description of the pointer as given by Mr. Welsh is satisfactory, but they think that in the division of points, too much has been accredited to the head—the division as given by "Stonehenge" being: Skull, 10; nose, 10; ears, eyes and lips, 4; in slort, an allow-ence of one-fourth the full pumber of points for head alone. We recommend that five points be taken from the number heretofore: allowed for head, and transferred to those parts to which it is thought not a sufficient number of points have been allowed by "Stonehenge." We recommend that the points of the pointer should be as follows:

е	recommend that the points of the pointer shoul	a be	a

THE MEMBERS' STAKE RULES.

THE MEMBERS' STAKE RULES. The adoption by the Eastern Field Trials Club of the rule allowing a dog entered in the Members' Stake to be handled by a member not his owner is certainly a step in the wrong direction. The spirit of this rule is unquestionably opposed to the principal object had in view when this stake was inaugurated. As its tille implies, it is exclusively for the members of the club, and its main object is to foster a spirit of generous rivalry among them, while contesting for its honors, for the purpose of improving their skill in handling their dogs in the field. The winning of this stake should carry far more honor than the mere ownership of a winning dog implies. Any one with plenty of money can own a good dog; but hard cash, although a very desirable adjunct, can never of itself constitute the sportsman. It should be the aim of the club to enhance instead of depre-diate the value of honors won at their field trials. The Eastern Field Trials Club was not established for the sole purpose of improving the pointer and setter. There was still another object in view, and that was to increase the interest in legiti-mate sport with dog and gun. The best manner in which to accomplish these objects is a question that should be carefully considered by the club before deciding upon any matter that may come before it. With earnest, well-directed effort to accomplish these objects the club has grown from year to accomplish these objects the club has grown from year to accomplish these objects the club has grown from year to accomplish these objects the club has proven from year to accomplish the pages of its history. EXCESSIVE TAXATION.—Cohocton, N. Y.—Editor For-

EXCESSIVE TAXATION.—Cohocton, N. Y.—Editor for-est and Stream: I write to ask, if, in your opinion, there is any honorable and legitimate way for any one wishing to establish a breeding kennel to avoid paying the excessive taxes that the laws in most counties of this State impose. The law in this town, for instance, levies a tax of fifty cents on a dog, and three dollars on a bitch; for each additional dog or bitch the amount is doubled, one dollar for the second dog, two dollars for the third, etc. At this rate a kennel containing, for ex-ample, six dogs and six bitches, would have to pay au annual tax of \$22,050. Now this is manifestly au unjust law, and I would like to know if you or any of your readers who have been obliged to grapple, with the question can state any means by which it may be honorably avoided.—STEUBEN. [We should labor with the county supervisors to chauge the law, which is manifestly harsh and unjust.]

THE NEWARK DOG SHOW.—New York, Feb. 12.— Editor Forest and Stream: The following gentlemen have kindly consented to judge at Newark: Mr. John Davidson, Monroe, Mich.. pointers and setters; Mr. James Mortimer, Babylon, L. 1., fox-terriers, Yorkshire terriers, pugs and toy dogs; Mr. J. A. Stovell, Philadelphia, Pa., beagles, judged by the American English Beagle Club standard. The Philadelphia & Reading Express Company has issued an order to carry dogs baced from all P. and R. points to the Newark show at regular rates, and will return them to points of shipment free of charge.—A. P. VREDENBURGH, Secretary.

BOUND BOOKS OF KENNEL BLANKS.—We have bound books of kennel blanks, each book consisting of 200 blanks of a given style, and can furnish these (postpaid 30 cents) for the convenience of those who have occasion to use a large num-ber of blanks. In ordering be careful to state what particular series of blanks is desired, *i.e.*, whether Names Claimed, Sales, Bred or Whelps. The arrangement of the blanks is such that a duplicate record of each note sent for publication may be re-tained for future reference,

THE AMERICAN-ENGLISH BEAGLE CLUB.—The beagle club have sent the following circular to members:—Dear Sir: To more fully carry out the objects for which we are organ-ized, it seems only proper we should work together to ac-complish them. It is advised that all our members give their support only to those beach show managers (by exhibiting their dogs) who will or have granted our requests by giving the classes named in our constitution, accepting our standard, and allowing our club to appoint (through the president) a judge of beagles. That our requests are not unreasonable is found in the fact that the Hartford K. C., New Haven K. C., New England K. C., New Jersey Kennel and Field trial Club have given us the classes asked for, accepted our standard and have allowed our club to name the judge for beagles (from among our members) at their coming shows. By their doing so we have met with success, and what they have done others can do also. In order to secure our just claims we should withhold our support from all bench show managers who will not do the same. We cannot accomplish our object in any other way and we being the ones most directly interested in having proper classes and awards made according to our stan-dard, and by those who are members of the club, we hope you will give us your full support by not entering your dogs at those shows whose managers will not grant our request. In conclusion we advise the club to donate special prizes at all shows whose management are in accord with us, and set forth in this circular. We remain, very truly yours, Dr. C. E. Nichols, Chairman, W. H. Ashburner, F. W. Streeter, A. Winsor, Herman F. Schellhass. Executive Committee.

Winsor, Herman F. Schellhass. Executive Committee. THE ST. LOUIS DOG SHOW.—St. Louis, Mo., Feb. 13.— Editor Forest and Stream: The St. Louis Gun Club's third annual bench show of dogs will be held in Exposition Hall, May 18, 19, 20 and 21. This will give a rest of nearly two weeks after the New York show. The entrance fee this year will be two dollars, the admission at the door twenty-five cents, and the price of the catalogue ten cents. These are three important changes from last year. The premiums will probably be the same as at the New York show. We are range ours. It is too early to promise anything definite about specials. We are promised valuable assistance in this line, however, and we believe our list this year will be attractive. No details whatever have been arranged as yet. We only de-rided yesterday to hold the show. As soon as we have any information to impart we will send it to you. We shall try to procure able judges for all the classes, and we hope owners of dogs will help us out with entries. St. Louis ought to be able to secure a very large number of Western dogs alone, and we expoct some Eastern entries—if prizes worth winning will bring them. May is a very pleasant month to visit St. Louis, and Exposition Hall is one of the best in America for a dog show.—GEO. MUNSON, Manager. THE PITTSBURGH DOG SHOW.—The twelfth annual

THE PITTSBURGH DOG SHOW.-The twelfth annual dog show of the Western Pennsylvania Agricultural Society, to be held at Pittsburgh next month, promises to be a success-ful one. In addition to the liberal premium list a large num-ber of special prizes will be given; among them are two of \$50 each for the best kennel of mastiffs and the best kennel of St. Bernards, each to consist of three or more. Mr. B. F. Wilson and Major J. M. Ta-lor will judge all setters, Major Taylor the pointers, foxhounds and beagles, Mr. James Mor-timer taking the remaining classes. The entires close March 8. Mr. L. F. Whitman will superintend the show. The sec-retary's address is Mr. C. B. Elben, Lock box 303, Pittsburgh, Pa.

BOSTON TO FALL RIVER, SAILING DIRECTIONS.

BOSTON TO FALL RIVER, SAILING DIRECTIONS. Editor Forest and Stream: "W" can get the most correct information by obtaining the coast survey charts of the route mentioned, together with the "Coast Pilot," by Geo. W. Eldridge, and the tide tables, also by him. They are to be found at Negus's navigation depot, New York. One should not attempt to go through Wood's Holl without some one who knows the way, as the current is very rapid, except at slack tide, and the channel narrow. He should stop at a little harbor just to the westward of the light, if he wishest to go through that way. But if he should continue on up the Sound to the westwardsome eight miles, he then could enter Buzzard's Bay by way of Quick's Holl, which is a passage way for the largest vessels. All the other parts of the route are perfectly feasible, if he studies the charts, the Coast Pilot and tide tables, and is, as a matter of course, a good boatman. Any other information that I can give him, or questions he may wish to ask, will command my attention. VINEYARD HAVEN, Mass.

Wish to take, with column in y attention. Joint Holzies.
 VINEYARD HAYES, Mass.
 Editor Forest and Stream:
 Imade the passage from Boston to Fall River two years ago, starting from Boston on the 10th of April in a keel sloop 24t, long, draft df. fm. I do not think the extre 8m. would bother you.
 We started on a pleasant day and got as far as Boston Light with a southeaster blowing and rain falling. Decided to put into Hull, Started from there at 12 A. M., good moou, ran out to Boston Light and then laid our course for Provincetown.

 Started from there at 3:30 P. M., worked off Race Point about a mile, and from there to Mononoy Point I do not think we varied one, half mile from shore. There are no rocks. When we were off Chathan Lights we struck some pretty rough water on account of its bechart, but there is plenty of water and room, and by going through that way I should think it saved very nearly twenty miles. After preting through they cause for the next dy there on the site of values and on a strick to curse for the head of Burgard's Bay. I should not advise any one who is not acquainted to try tog ot brough Wood's Holl, for it is a very had place to get through for a stranger even with a far wind and tide, but keep on up the Sound and go through Wood's Holl, which is a good wide passage with only three rocks in it which are well marked.
 If you are going to New Bedford or Newport it is not very much for an ergoing to New Bedford or Newport it is not very much for an ergoing to New Bedford or Newport it is not of April, hough and it had hout had bab is given shoe on her, hould not had take blow with a big iron shoe on her. Three are and the abord for the next form a great del safe.
 Brown and and to the orbugh wheth a big iron shoe on her. Three and and it had not thad a keel boat with a big iron shoe on her. Three are shown and the abord had bab to by the should how thad thad bab is gord.
 Brown and

SOME HINTS ON TOWPATH SEAMANSHIP.

SOME HINTS ON TOWPATH SEAMANSHIP. Editor Forest and Stream: Mr. Kunkardt's mishaps in the Ravitan Canal lead me to give a few points on caual work which I helieve will be useful to other yachts-men who may venture upon these troublesome waters. The mode and place of attaching the tow line is of the greatest importance, for upon this the safety of the yacht mainly depends. If (as is usual, the line is usual fast to the bits; it will be found that the vessel's head is constantly drawn toward the bank, and also, the power being applied so near the bow, that the influence of the rudder is seriously inter-fered with. Another objection to securize the line in this position is a single hand craft like the Coot, where it is out of the skipper's con-trol, as was finely illustrated by Mr. Kunhardb's experience. Mell worth the attention of all causing yachtsmen. Enough line is paid out to the driver to allow the craft to be veered freely in the solid out to the driver to allow the craft to be veered. Freely in the shead fast to the low block of the halliard; the block is now hooked one the hight of the cause. The thront halliards are then un-hooked from the gaff, and a loose strap is put around the mast and and to the hight of the or block of the halliard; the block is now hooked one the hight of the or block of the hallingt; the block is now hooked one the hight of the or block of the hallingt; the block is now hooked one on the hight of the or block of the hallingt; the block is now hooked one on the hight of the or block of the hallingt; the block is now hooked one on the hight of the or block of the hallingt; the block is now hooked one on the hight of the or block of the the hallingt; the block is now hooked one on the hight of the or block of the hallingt; the block is now hooked one on the hight of the or block of the hallingt; the block is now hooked one on the hight of the hall one of the height on block of the hall hall box is now hooked one on the hight of the how here, and it i

holder from ball, and note that in the problem block is now hooked on to the hight of the tow line, and it is hoised up clear of the deck. The advantages of this arrangement are: 1st, the side pull, or turning force of the line acts at the mast, much nearer the center of lateral resistance than the bits, and the power of the hell is consequently much more effective and quicker of action. 2d, the line can be cast off instantly by the helmsman in cases of necessity, and sliding through the hook of the halliard block, leaves the yacht entirely free. If the shore end of the life is cast off it sinks under the bows and

FEB. 18, 1886.]

ften seriously interferes with the steerage of the craft, and in some stances is liable to get entangled with some passing craft, to the erious injury of our vessel. 3d, the line can be raised high enough o pass over instead of under a passing canal boat or other consider-ble obstruction, a great convenience which in many cases allows one is choice of waters. building a great convenience which in high descentions due rrangement of this kind is indispensable in a single-hander, wild lorger crews is also useful, as the man at the helu is on the alert whatever the other hands may be doing, and in full control of the yachts at all times. If out of locks, Mr. Kunhardt experienced the usual diffi-account of the bow of the Goot being drawn in against the ore the boat acquired steerage way. To obviate this I would a addition to the above plau as follows: Make a light spring the tow line near the bow, and lead it aff outside of the rig-ne tow line near the bow, and lead it aff outside of the rig-bile the boat lies in the lock haul this spring in sufficiently se strain of the line when the team starts. The power now yiel at the steru, the bow can be shot well away from the the steru, the bow can be shot well away fr ater, when the spring is eased off and the town

bardl's suggestion of a running fender of boards is most or ordinary fenders are of little avail, and it there is an un-pool it is sure to be found out in a canal. Auother good et an old hawset of the junkman and sling two burns en-al the yackt about midway between planksheer and water will be found very effective, and, at the end of the voyage in be sold ways for means the sure of the voyage

This will be found very effective, and at the end of the voyage ope can be sold again for nearly its cost. Isting that my long yaru will prove useful to some of our enter-near cruisers, I will belav by hoping that the Coot, whose adven-tinspired these lines, will survive her long voyage and turn up ug in the spring. As for her wide awake skipper, I think we have no fears for bim. H.

The subplied to bese findes, will survive her long voyage and turn up that might in the spring. As for her wide awake skipper, I think we ad have no fears for bim.
 LABCHMONT Y. C.—The annual meeting of the Larchmont Y. C. as held at Delmonico's on Feb. 10. with Com. Munroe in the chair. leven ucw members were elected, Messrs, Harry Flagter, DeLancey, Kane, Heury Adams, Ir. Harold Forwood, Gyrus W. Filed, Jr., K. Beddall, Charles Sweet, W. S. Badger, Henry L. Backus, Franklin owner and Geo. D. Lerch. The officers elected for 1886 were: Comologre, W. S. Alley, Schemer; Vice-Commodore, Charles Stevenson, Olande: Rear Commodore, Gerard M. Barrette. . THER CRUISER.—Mr. Rushton has partly fluished a new of cruiser, the sneakbox bottom carried out into a boat's how, es also being raised several inches. The dimensions are 15% fft., lete are two centerboards, the larger forward and the smaller leadwood aft. The model affords large space for dry stowage bulkheads and small shelves around the side decks to add the The sleeping space, owing to the board being well forward, is arge. lite large

DLUB FESTIVITIES.—The ball of the Royal Canadian Y. O. at ronto, was a great success. We have received invitations to the neert of the New Haven Y. C., and the annual ball of the Yorkville

Lanoeing.

Address all communications to the Forest and Stream Publishing Co.

A WINTER EVENING'S REVERIE. (Concluded.) DERHAPS we do dream that we are cansizing or that the anchor has dragged or that some other calamity has happened. So I has dragged or that some other calibrang or tout toe anchor strong is the illusion that it is incumbent upon the skipper to put his need out of the tent. All right; its only the moroing tide which has ifted the boat and runs merrily by with a sort of articulate morning receiting as it ripples along the side of the hoat and plays with the ightening cable. Another hour may safely be devoted to Morpheus, and this time it

ening cable. other hour may safely be devoted to Morpheus, and this time it mate who walkes, and, sitting up, exclaims, "Hello, tide's up!" severely to bis superior officer, "Get up, or we shall be neaped; going down." "Aride be _____!" Lengthened suore. "Do get if you do. Fil make a cup of coffee for yon." "Oh, thanks! me a cup of coffee and Fil get up." "No. Get up and Fil make

essions down. "The beam of coffee for yon." "On thanks is the me a cup of coffee and I'll get up." "No. Get up and I'll make a." is added to a set of coffee and I'll get up." "No. Get up and I'll make a." is added to a set of coffee and I'll get up." "No. Get up and I'll make a." is added to a set of coffee and I'll get up." "No. Get up and I'll make a." is added to a set of coffee and I'll get up." "No. Get up and I'll make a." is added to a set of coffee and I'll get up." "No. Get up and I'll make a." is added to a set of coffee and I'll get up." "No. Get up and I'll make a." is a set of the s

arrings of prominent landmarks, excite ourserves about one bouts of this or that buoy, and pride ourselves generally ou g strictly to ship tracks. • approaching Spurn we come to anchor for a bath and dim-en luxuries of various sorts grace the board (N. B. Tinned elickeu, nost excellent). Then with a view to call on old at the Point, some little finish is made to our toilet in the way

of collars and cuffs. The mate, even on one occasion, produced from his diffy bag a white waistcoat, a set off. no doubt, to the skipper? blue serge coat and bronze buttons, the uniform of the Danish Yach

his ditty bag a white waistcoat, a set off, no doubt, to the skipper's blue serge coat and bronze buttons, the uniform of the Danish Yacht (Dub). By this time we are running under the Spurn Point and can hear the rollers of the North Sea breaking outside. The anchor is let go with a tripping line attached, which is taken ashore, and we leave the cance to swing to her anchor, the stream keeping her off the shore. We bave time before the tide turns to pay a visit to all old friends, for ten years of Humber canceing has made us intimate with Spurn society, and a warn-hearted, kindly set of people too. They are but a bandful. The hiteboat crew, the lighthouse kcoper and the landlord of the little inn. The memory of many a happy hour comes across the skipper as he pays bis round of visits. Over a pipe enjoyed with the captain of the life boat in bis snug little house, he recalls that never-to be forgotten night when two wreeks were ashore, and the ifeboat, fater battling all night with the wild sorth Sea, brought in the two crews safe and sound. The we have time to mount the lighthouse, Smeaton's time-worn old tower, and look down over the far stretching ocean, with many a gullant ship with suif salis making for the furnber, and the smart mail steamers with their decks crowded with Swedish emigrants. From this point of observation we note the peculiar conformation of the long, geutly curving spit of sand forming Spurn Point, with the sandy waves over the site of the unried city of Ravesupting. Afternoon tca with the bead light keeper and his amiable family, pleasant reunions, which on one occasion kept us op leasantly en-gaged that the tide had turned and covered the shore line, compelling the skipper to swind mid—clobes and all, for the eyes of Spurn and us wife were upon him—to the anchored cance. Me find ourselves once more in the Hull Roads, this time in dark-wes. But the ordinary perils of the deep are increased by the maze of lights, riding lights, town ligbts, dock-gate lights, and side lights, looking it k

cherob" extends his protection to us as worn as provide and ready for the week's work. But my pipe has gone out during this long reverie and as I sit in my afm chair, I pass in review many a pleasant memory, such as has been described, perhaps too discursively, but given apet subject, re-straint is difficult. Alasi many a month must elapse before the Ægir ploughs the waves again, and in the uncantine she lies in dark scelusion, shrouded in her cover, a very chrysalis, to burst out, if all goes well, into a butterfly existence as soon as she feels next summer's balmy breath. Our latest cance, 18ft. \Sft. Sin., being too large to haul up, must perforce, lie afdoat, and her owner, muffled in all his jerseys and all his coats, may be seen buffeting the wintry waves of Humber while the rest of the world is skating. Werly the boating spirit is not quite dead and our American broth-ers may rest assured that their canceing aspirations find an ecbo in the good wishes of the boating spirit still lives and where its vota-ries feel that they in some sense inherit the adventurous spirit woich led the Vikings of old to these very shores to plant their names and memories in the quiet villages of Humberside. *Æ* or a

We remain sincerely and firster-terson support and explaines ton prove encou

hany yours, hawn howier, com, henry Stanton, Lafayette W. Seavey. Committee, " Though the prejudice against cances that at one time existed gen-erally among rowing and yachting men has largely disappeared, there is still prevalent a feeling that canceing is only boy's play and not to be compared with other varieties of sailing. Nothing will do more to correct false impressions and to disseminate correct ideas of cance-ing than such a public exhibition as is proposed, and it may be made of sufficient interest to attract all classes of boating men and pleasure sailors. There need be no difficulty in finding material for a very large display that no cance man need be ashamed to acknowledge, even in the presence of the sailors of large eraft. Though the mover in the matter is the Knickerhocker O. C. . it is in every sense a me allors. There need he no difficulty in finding insterial for a very arge display that no cance man need be ashamed to acknowledge, ven in the presence of the sailors of large craft. Though the mover the matter is the Knickerhocker O. C., it is in every sense a na-ional affair, and deserves the aid of every cancelst in America. We hall give the full particulars of the meeting.

RONDOUT C. C. —This club now has twenty-set large fleet of cances, to which several new boats season. The club is about to build a new and he

RUSHTON'S ANNUAL CATALOGUE.—No betterindex can of the growth and present standing of cancelug in America the new catalogue for the current year, issued by Mr. J. H. Rusht Canton, N. Y. Half a dozen years since a small folded circula tained all the needed information about the builder's boat cances, while now the same information fils a large pampt sixty page, a third being devoted to cances and their fitting rowboats. Mr. Rushton is still building the same large variety the steady improvement in build and model whice boas me widey-spreading reputation. The cance list this year is a gre provement in every way on the preceding ones, as the boats a ter, the solid of greater variety, and the list of fittings has heen bl engthened by special devoces and novelvies. Perhaps the gr advance over former years is the discarding of a number of of models and the corresponding simplification of the list to an that makes it easily comprehensible to the novice. The great ber of various models has in the past been very confusing to ners, owing to the small nomits of difference. In the presentar ment, the Springfield, Shadow, St. Lawrence and 14ft. Jr Tandem Princess and four Mohean cances. The latter are the interesting, and promise to become the most populat models.

hnear $T_{\rm error}$ are the lines of the famous Snake nave $T_{\rm error}$ are the lines of the famous Snake nave $T_{\rm error}$ are the holtow lines of that boat buving been filler on $T_{\rm error}$ sign, the holtow lines of that boat buving been filler on $T_{\rm error}$ holtow lines of that boat buving been filler on $T_{\rm error}$ are $T_{\rm error}$ or $T_{\rm error}$ bas discrete thus include the original Snake size, a cancor eneral cruising, a larger boat built to the full limits, for sailing, a or "average" boats, Class B and Class A. making a quartetle frich a good cance for almost any purpose may be selected, pecial feature of the book is the long list of fdtings of all kinds 'pecially brasswork. Mr. Rusbion has lately made a special the latter, manufacturing it himself, and he has devised a number of y convenient fittings. At present he has a force of seventeen loyed on boats and cauces, and at this date is not up to bis orde BUFFALO C. C. -1 he annual meeting of the Buffalo C. C. held on the evening of Jan. 25, at the home of Mr. R. L. French purser of the club. A large number of the members were prevind considering the leebound condition of the canceist's n alcment, could erable enthusiasm was manifested on all sides. Question of classifying larger cances in the A. C. A. was discrepted to reach usit will not have a tendency to incomply, the members being about evenly divided in eobions, with a doubtful balance against the proposed new e the active server and the spring. A new club signal was propose in the here the fleet in the spring. A new club signal was propose

Charlesed Very unravorator, and in View of advices received from tother clubs, it is feared that it will not have a tendency to increase the membership of that body. The purser reported the club's tinnatical affairs in a flourishing couldiion, and several new eraft will be added to the fleet in the spring. A new club signal was proposed and adopted, disposing of a subject which the members have been wrestly in with all the previous summer. The following offiers were elected for the year 1586: Caotain. William Lansing; Mate, Edwin L. French; Purser, Henry L. Campbell. The club then adjourned to meet at the home of Mr. Lansing on the last Wednesday in February.-H. L. C.
 AN ONTARIO CANOE ABROAD,-"Two in a Tub" is the title of a charming little log of a canoe trip down the Danube, Moldau and Elbe, made by two English canceists in 1884. The enooe was an open Outario, 1833ft, 6in., fitted with one sail and propelled by single paddels. The cruise lay through a novel constry, and the rivers were obstructed with wers, 'dams and rapids, giving plenty of variety to the work. The authors, 'Bow' and 'Steersman,' are close observers, and their little book is not only very interesting, but is so exact in details as to make a valuable guide to others in the same waters.
 SPRING REPAIRS.-A short time uow will bring warm weather, and the haste to get afloat that always one which it. Is your canoe weady or is she still stored away to be hauled out and rigged in a burry! If she is, get her out now, refit, varnish and rig her, and of staying ashore to varnish.
 THE A. C. A. TROPHY.-Editor Forest and Stream: I beg to achieve this week for the A. O. A. International Cup Fund as follows; Dr. H. T. Groesbeck, \$1: Dr. A. E. Heighway, Jr., \$1; Mr. J. O. Sbiras, \$1: all of the Miami C. C. Chicinnati, O. Previously acknowledged, \$109. Total to date, \$112.-Ww. Whrtnook (New York, Feb. 15).

PUBLISHER'S DEPARTMENT

SALE OF SPORTSMAR'S GOODS.—Mr. Benjamin Starks offers this week, at an assignee's sale, a large assortment of guns, rifles, fishing tackle and other sportsmen's equipments. An inspection of the can-alogue of this sale shows a large number of weapons, many of them by well-known makers, at prices which appear to be low. It is never safe to buy an article without seeing it, but the list of goods described in this catalogue would certainly seem to include some decided bar-gains.—Adv.

in this catalogue would certainly seem to include some decided bar-gains.—Adv. TAKE CARE OF THE DIMES, AND THE DOLLARS will OARE FOR THEM-SELVES.—An Older and wiser saying can rarely be found. It has made the fortune of more people than can well be numbered. Not that the dollars do not need care, but the hahit formed in saving the dimes excludes to the dollars, and they are saved without care. The whole matter resolves itself into habit, the formation of the habitual though, and manner of the man. Some men become rule by accident, but the real ruch are made so by habit. For the maaner holds good in a thousand things. The waste in cents and dimes extends to smoking, drink, food, clothing and amusement, time and opportunity, health and life itself. The saving in the little is the making of the much, and in the sum of life is the difference between wealth and poverty. Who wastes the little must spend the much to balauce it, and to is poor. He who constantly keeps well has no doctors' hig may do as thousands are doing by using Hunphreys' Homeopathic por pleurisy or rheumatism, the biliousness that brings pneumonia so all through, you cure the little illnesses, and the big oues are cured biles to pay, or wasted do consumption, the chill that brings pneumonia or pleurisy or rheumatism, the biliousness that brings they posh, and so all through, you cure the little illnesses, and the big oues are cured biles to pay or any hatched.—*dur*.

 KENNEL. THARPER'S CATALOGUE, comprising the sitles of between three and four thousand volumes, will be sent by mail on receipt of ten cents. 1 1 75 30 50 00 25 75 00 PUBLISHED BY HARFER & BROTHERS, New York. GUIDE BOOKS AND MAPS. NEW RIFLE SIGHTS. \$1 00 1 00 The Kind They Have Been Looking For. 1 00 50 50 50 FOR 111 and racing, with their sail plans, rowing sailing boats, large cance yawls, and various boats for special purposes, such as guinning boats, yacht boats, and the widely known sneaktox. The cance yawl, a boat between a cance and a yacht, is illustrated by examples of various craft from 17 to 201t. long, and suitable for a crew of two or three on a cruise. This class of boat, while little known among us as yet, is admirably fitted for cruising, and will meet the wants of many who object to a cance as being too small, and yet desire a beat with the same excellent qualities. The boats and cances illustrated are in all cases among the best of their class, the list of cances including Eng-lish, Scotch and American craft, and are all drawn 50 50 25 50 1 00 50 2 50 Front and Rear Sights are patented to F.W. Freund. A production of years of patient and thorough study in the field and shop. This sight bas met with great success East and West. It shows what perfection has been attained in open sights for muning, sporting and target rifles. They give ex-cellent satisfaction when used under unfavorable conditions of light or defective sight, and are, on account of their fine workmanship, an ornament to any rifle. RAILROADS AND GAME.

THE rapidity which large game is disappearing in the West is so startling as to be almost beyond belief. Old timers, who have been in the East for two or three years, go back to their former hunting grounds, and find that the place of the deer and elk and antelope have been taken by cows, horses and sheep. Nowadays one does not know where to look for large game. The hunting grounds which have been the least frequented

are along the line of the Northern Pacific Railroad, and to this region the sportsman must turn if he hopes to succeed in securing a fair share of the great game which in the old days was so plenty, and is now so scarce in the Rocky Mountain region. But the sportsman after all has little chance of success as compared with those men who make a business of hunting for the meat or the hide market. His outing is at best but a short one, and so bitter ard relentless is the pursuit of the game that its feeding grounds change from year to year and the man who starts out from the East to hunt, must seek each season fresh fields in which to look for the objects of his search.

A blindly foolish and short-sighted policy has been pursued by many of the railroads leading into the game countries of the West. They have sought eagerly for the transporta tion of meat and hides from the regions where they were killed by hunters, forgetting that by thus encouraging the slaughter of this game, they were cutting off one of the greatest attractions to passenger traffic over their lines. Thus for the few present dollars received for freight they have thrown away the certainty of receiving vastly greater sums for the transportation of passengers.

In sharp and striking contrast to this mistaken policy is the far broader one adopted by the Northern Pacific Railroad. For a long time parties in the neighborhood of Lake Pend d'Oreille have been making application to the freight department of this corporation for special rates on wild meat by the car load from the lake to the East. These applica-tions have been turned over to Mr. Chas. S. Fee, the General Passenger Agent of the road, who has given directions that all such applications for special rates shall be denied. In giving his reasons for this course, he recites that to a very considerable portion of the traveling public, the game and

fish of the region traversed by the Northern Pacific consti. tute its chief attraction. This large and ever increasing class of travelers are well-to-do people, who have money to spend, and are thus desirable patrons of the road. Any course which will decrease the supply of the game which they seek will tend to reduce the travel over the road by this class, who will go where they believe game to be most abundant. For this reason, if for no other, the Northern Pacific Railroad desires to preserve, by every means in its power, the game which is so great an attraction to a large class of travelers. It will not give special rates on wild meat by the car load, nor by the hundred pounds. It will discourage, so far as it can, the shipping of such wild meat at all. It will, so far as lies in its power, preserve the game.

Looked at simply from a business standpoint, this is a wise course; and yet how few communities, corporations, or individuals have the foresight to recognize this, to see that in no way can the game be made to pay so large a return as by preserving it, so that outsiders, who will pay liberally for the privilege of pursuing it, shall be attracted from afar and pay their dollars to the people who live where the game does Usually it is a headlong race to see who shall get the most game in the shortest time, and very often the railroads are not far behind in the general scramble for a share in the spoils. It is encouraging, then, to see a great corporation like the Northern Pacific Railroad taking a firm and determined stand for game protection in a region where game protectors are most needed. Its example should not be without its effect on others.

THE DEER HOUNDING BILL.

THE bills for the repeal of the present wise anti-hounding law have been consolidated into one bill which repeals the present law prohibiting the hounding of deer; provides that the hunting season shall open Aug. 15, and permits the hounding of deer from Sept. 1 until Oct. 15. The transportation of venison is prohibited except from Aug. 15 until Nov. 15, during which time two carcasses of venison may be transported, provided, however, the venison is accompanied by the owner of it. Violation of the provisions of the bill is punishable by a fine of \$100. The bill will be voted on to day. The purpose of such a law as that contemplated by the

bill is to license the outrageous slaughter of deer in the Adirondacks by rich city sportsmen, whose taste for butchery is developed to an abnormal degree. The effect of such a law will be the speedy extermination of Adirondack deer.

The bill provides for hounding in the nursing season, and will legalize the atrocities inseparable from the dogging of does and fawns in summer.

The hounders have given up the clause forbidding jack ing. They do not want more protection. They ask only for greater license to destroy. Months ago we foretold that their course in regard to jacking would be just what it is now.

The prohibition of marketing game is a good one, but it can work no possible benefit to compare with the bad results of hounding. Market-hunting has not depleted Adirondack of hounding. Market-hunting has not depleted Adiron deer; hounding has done it, and if legalized will do it.

To check market-hunting make it unlawful. But to do that it is not necessary at the same time to make hounding lawful.

That to right one wrong it is necessary to sanction another and a greater one, is not the logic on which sensible legislation is founded.

The members of the Legislature have been grossly misled and deceived by false reports of a great slaughter of deer by still-hunters last fall. They are actually asked to sanction hounding on the plea that if the deer are not made shy by hounding the poor things will fall an easy prey to the market still-hunters. The hounders resent any imputation of questionable motive, but it is difficult to contemplate their "shy" argument without a feeling of impatience that they can successfully impose such stuff on the gentlemen whose votes will decide this question. It is a disgrace that the merits of a subject of such grave moment as the perpetuity of the Adirondack deer supply can be covered up and hidden by the misstatements and fallacious reasoning of selfish and greedy deer killers.

In the use of these tactics and the employment of manufactured statistics to carry their case to-day, the advocates of deer hounding studiously ignore the consideration that the effect of game laws is not limited to one single year. The results of present legislation, good or bad, will concern the citizens of the State in future years. Those who come after us will hold responsible the Legislatures of the present. They cannot shirk that responsibility. A law to sanction

the extermination of Adirondack deer by hounding and water-killing may not be fully understood by the public today, but in a few years its effect will be patent beyond the possibility of concealment by misleading "shy" arguments. Then, too, the wisdom and motives of the men who to-day are working for or against the present bill will be clearly exposed by the irresistible logic of facts. To that final judgment the supporters of the present anti-hounding law may, with all confidence, appeal.

NEEDS OF THE YELLOWSTONE PARK.

N another column we print an important letter on this subject from Mr. Arnold Hague, of the U.S. Geological Survey, to Senator Manderson. The letter is important because it is written by a gentle-

man thoroughly familiar with the National Park and with that region to the south and east of the present boundaries which it is proposed to add to the reservation. He has also traveled long and extensively in the West and is familiar with the various industries of that great and growing Understanding mining, acquainted with the needs country. of the stock grower and the agriculturist, his opinion on the possibilities of the region to be added to the Park is the highest authority we can have on the subject, and should be convincing to every intelligent man.

Mr. Hague points out, as we have done, that the preservation of the forests about the headwaters of Yellowstone, and of Snake River, and the tributaries of both, must be carefully looked after if the arid regions, away from the mountains, which are watered by these streams, are to be of any value to their inhabitants. He gives facts and figures bearing on the rapid destruction of these forests and recites the cvils which must follow any extensive timber cutting in the region in question.

The subject is one which will interest every practical man and which has an especial and particular meaning for all those who live on the plains, to the east or to the west of the Continental Divide.

It is to be hoped that the suggestions contained in Mr. Hague's letter may be regarded in the final reporting of the bill, and that this clear exposition of the requirements of the Yellowstone Park may be read and comprehended by every Senator and Congressman.

HE WRITES FEELINGLY.—The subjoined extract is from the Boston New England Farmer of Jan. 23. We have heard it hinted that the editor, himself an accomplished sportsman, missed a bevy of quail which he had fondly imagined no "other fellow" knew of; *hinc illæ lacrimæ*: The Massachusetts Fish and Game Protective Association had its

The Massachusetts Fish and Game Protective Association had its annual dinner in this city a few days ago. After the dinner was over, addresses were made by several gentlemen, lamenting the weakness of the game laws of the Commonwealth. As far as that goes, we en-tirely agree with the speakers, that more stringent laws for the pres-ervation of birds, their nests and eggs, are imperatively demanded; but we do not by any means agree with the speaker who said opposi-tion to such laws "comes largely from the farmers who own the soil and who argue, not logically, that because they own the land they own the game " We do not consider this a fair statement of the ar-gument of the farmers: they are so far as we know anything about gument of the farmers; they are, so far as we know anything about it, as well convinced of the necessity of protecting the birds as any sportsman can be, but they do want the right to keep outside sports-men from wandering over their fields and through their woods, and shooting off the game which they themselves, the owners of the soil, have been watching and protecting during the close season. It is precious poor satisfaction for a farmer who has known of the exist-ence of a bunch of quail within half a dozen rods of his door all sumence of a bunch of quart within hair a dozen rous of his door all sum-mer, to find that on the first day of the season, before he has had a chance to shoot the birds, even if he has wanted to; some lazy fellow from the city, with nothing better to do, has turned up with a dog and gun and cleaned out the whole bunch. The sporting gentlemen may rest assured that the farmer is not going to be "educated up" to the point of protecting game birds on his own land for them to have the fun of shooting.

A CONVICTION FOR TRESPASS .- Recently at Patchoguc, Long Island, Howell D. Smith, of Sayville, was convicted for the purpose of shooting on the lands of Mr. A. A. Frazer, of the same place. The case was tried before Judge John R. Smith and a jury, and District Attorney Wilmot S. Smith was the prosecutor. The conviction cost the defendent \$20. This is an advance on any previous attempts at game pro tection by means of the trespass law on Long Island, Usually the jury give the plaintiff six cents; sometimes when very liberal they raise the sum to a quarter of a dollar. The conviction in the present case was largely due to the energy of District Attorney W. S. Smith, who is very much in earnest in his efforts to see the law enforced.

THE FOREST AND STREAM'S GRIZZLIES were "at home" to thousands of visitors on Washington's Birthday. They They are the favorite quadrupeds of the entire Central Park collection.

TO THE WALLED-IN LAKES. XII.-GOAT HUNTING AND GRUMBLING.

THERE was little to be done about the camp next morning. There was nothing to eat, and the preparations for breakfast consisted in whittling up a pipeful of tobacco apiece. While smoking, we changed the horses to fresh grass, and then shouldering our rifles started off for Yellowfish's hunting ground of the day before. It was but a short walk to the rocks. At the foot of the talus slope, beneath the vertical cliff north of camp, we saw by the fresh tracks and other sign of goats that these animals had been down into the valley to feed during the night, and we at once began to scramble up over the rough and steep ascent. We had got about half way up the talus, when I heard Yellow. fish call out, Amo! Amo! (there, there) and looking in the direction in which he pointed, I saw a goat and her kid walk out from behind some brush on a ledge far above us. As fast as I could. I ran up the slope for fifty or a hundred yards, and at length paused, entirely out of breath, and as the ani. mals stopped to look at us, tried to shoot. I was so breathless that I could not hold my gun steady, and the slope was so steep that I could not kneel and rest my rifle on my knce, I threw my sights up to 300 yards, and tried to take sight at the game, but I could not steady the rifle, and when I fired my ball struck a foot or two to the left of the animal at which I had aimed, the female. The distance was well enough estimated, but I failed to hold on. At the sound of the report the two goats disappeared behind the rocks, and began the ascent of the cliff, clambering up an almost vcrtical and extremely narrow ravine, in which they were always hidden by the rocks and brush. Once or twice we caught a glimpse of them for a moment, but they immediately disappeared again. At length they showed themselves for the last time about seven or eight hundred yards above us, but it was useless to shoot at them at that distance.

We kept on our course, and, half a mile further on, entered a short cañon which led into a basin somcwhat similar to that seen the day before, but less regular, being crossed near its head by several very high ridges of red rock covered with snow, and on which grew a little low pine timber. Through the midst of the basin flowed a considerable stream tumbling down in a series of falls over the successive walls of rock which crossed the valley at right angles to its course. These vertical walls soon barred our progress, and we had to climb them-a task of no little difficulty. Appekunny, who had set out with rubber boots on, was obliged to give it up and turn back. Yellowfish and I kept on and did some of the most difficult mountain climbing that I have ever under Often one man would stay below on a narrow ledge taken. holding both guns, while the other would climb up six or eight feet, take the guns and hold them until his companion had passed him and got up to a point where he could take the guns and wait for the other to gain a few feet. Often we would have to ascend a vertical rock-face fifteen or twenty feet high, on which the only foot or handhold would be little inequalitics in the rock about as large as a hen's egg, barely wide enough to support one side of the foot or one joint of the finger. In some of these places, which were so nearly vertical that it seemed impossible for any four-footed creature without claws to ascend without falling over back ward, the little knobs of rock to which we clung were worn round and smooth by the hoofs of the goats.

After we had clambered with the greatest difficulty up the first of these walls, we passed along over a steep half frozen slope of shale where the walking was very laborious, and then followed the stream for some little distance. Pretty soon we came to another wall of rock over which the water tumbled in a forty-foot fall. Then we had to clamber up the shale slope, and again to look for a place to pass up the This time a crevice was found in the rock, just wide wall. enough for a man to work himself up by means of his hands and knees, much as I should faucy a man would climb up a narrow chimney. Now and then there were little steps or projections of rock on which we would rest; the, one below passing up the guns to him in front, for here there was no The top gained, we went on to the next pass. This was repeated a number of times, so that to rewall. count the sorrows which we underwent would be weari-The climbing was exceedingly difficult, and either some. from this cause or else because I had had nothing to eat that morning, I became very tired.

At length we found ourselves on a little bench, half a mile deep and twice as wide, on which was a beautiful little Alpine lake, surrounded by a great field of snow, dotted here and there with stunted pines. From here we could see that, after surmounting two or three more steps of the series of cliffs, we would be at the foot of a steep, high ridge, which gave a gradual ascent to a high saddle, not much below the summit of the mountain. Yellowfish, who is indefatigable and seems never to tire, pointed this out and suggested that it was a good road, and that we should go home that way. I was about doue up, but determined that I would follow where he might lead, as long as I could put one foot before the other, and so, after sitting down and smoking a pipe, I told him to go on. He trotted off and I followed at my best pace, which was, after all, a pretty slow one.

By the time we had reached the level, snow-covered flat, which led up to the foot of the high ridge, I was fairly tired out. It was not—ss is usually the case with me when ex-hausted by climbing—that I could not get my breath, but my legs from the waist down seemed almost incapable of

motion. Even when walking on comparatively level ground I could advance only a few steps at a time without stopping and resting. I began to think that I should not reach the top of the mountain, and seriously to wonder how they would manage to get me down to camp if I should entirely give out. Curiously enough the locomotion which was least difficult for me was the clambering over the rocks, the stepping from one to the next one above it. The gradual ascent was much more difficult than the rougher, more broken part.

Here, on this highest bench of all, we passed over another lake, this one frozen and its clear surface swept bare of snow by the bitter wind which was blowing. Before we had made half the ascent to our present altitude it had begun to snow hard, with a furious wind, and it was bitter cold. My shoes, much dilapidated by contact with the rocks, had gone to pieces during the morning, and when my weight broke through the crust of the snow field over which we were passing the ice cut my feet.

Very slowly and painfully I made the ascent of the last ridge, creeping, not very carefully, over the steeply sloping ice-covered rocks, but as we neared the crest of the mountain I made better progress, for the fact that the top was so near put strength into me.

At last it was accomplished, and wc stood on the very crest of the mountains and looked directly down on the valley and the lakes and the stream. We could see none of the lakes below the fourth, but every one above that was in view. Down in the valley the sun was bright and clear, and the stream gleamed and shone like a broad band of polished metal. The descent was so sharp that it seemed almost as if one could pitch a stone from where I stood down into the lakes. For a few moments we sat and rested, while the wind whistled about us, and the hard pellets of sleet and snow rattled on our coats as against a window pane. great flock of grav-crowned finches were feeding along the ridge, cheery and comfortable looking as they always are, and fluttered and hopped about us in the most confiding way. What they could find to feed on I could not tell, for there was nothing on the ground but snow and ice, with here and there a red rock projecting above the white covering. But the little finches seemed to like it.

The descent was over a steep slope of snow-covered sliding shale, here and there interrupted by vertical ledges, down which the climbing, though sometimes slow and difficult was not dangerous. Going down hill seemed easy work and though my legs were not under very good control, the falls that I got were not serious. On the way down after we had got below the snow, we walked up a couple of blue grouse, one of which flew a few yards and alighted on the bare rocks, and the other went into a little clump of pines. The former Yellowfish killed, the latter we could not dis The bird was carried down to camp, and long before it was cold, was roasting over the hot fire, and was soon devoured. There being nothing more to eat in camp we packed up our possessions and started for the St. Mary's Lakes. we rode down the valley in the bright sunlight I turned back for a last view of the stupendous mountains, which we were leaving, but the dark snow clouds hung heavy over them and their rugged magnificence could not be seen. Again, as I crossed the last ridge going down the valley, I looked back, but saw only the black clouds and the whirling snow.

We reached camp about 5 o'clock, and found three or four Blood Indians from Fort McLeod making themselves very much at home there. Villainous looking rascals they were and the one with the most forbidding countenance of all had been engaged, as I afterward learned, with a half-breed in the murder of a white man, whom they had killed for his money. The half-breed had been duly hung, but this Indian had in some way escaped punishment.

The following day was occupied in fishing for lake trout and lounging about camp. We had a pleasant visit from old Keh-Ko-witz-Keyucla and half a dozen of our Kootenay friends, who appeared, by comparison with the Bloods, like polished gentlemen.

That night, as we sat about the fire in the lodge and talked over our bad luck, Yellowfish said: "My medicine is bad, and we shall have no luck this time. The last time I was here it was not so. Then, plenty of meat was in the lodge. Then, every day we climbed the mountains, plenty of Eh-mahfound and killed. In one place where we kee-kinny wc first climbed the mountains, I killed that time seven sheep. Beyond, on the big square [Goat] mountain, we killed Apomah-kee-kinuy, may be five or six, not more. This time not good. Plenty rain and snow and fog. Can't see good. To-morrow I go back to the Agency. Bad luck is coming."

"What Yellowfish says is true," said Appekunny. "I was here then and we had plenty of meat. A fat sheep was always hanging in the camp. All over the mountains about these lakes, where we have found nothing and no fresh sign, the tracks were very plenty and the place smelt like a sheep corral. Where is the game now? There has been no hunting done here except by these Kootenays, and there has been nothing here on the North Mountains this summer.'

"What time of the year was it that you were here?" I asked.

we could not go about in our shirt sleeves with comfort. We had no bad weather, only one little storm when an inch or two of snow fell. Mild pleasant days were the rule, but it

almost always froze during the night." "Well," said I, "it seems vcry clear to me what our trouble has been. The sheep are back in the mountains, and there they will remain until some heavy snowfalls take place to drive them down toward the lakes. Then when the snow becomes deep on that portion of the range where they are now feeding they will draw down toward the valleys and on to the steeply sloping southern hillsides like those of Singleshot and Goat mountains, where Yellowfish got so many last autumn. If this were November instead of September, we might have done as well as he did then. But we have not come properly prepared for the conditions which we find. To get back to where the game is now we ought riggings. Then we could pile on them cnough stuff to last us a week or two, and could get back to a hunting ground. If we come back here again, we will know how to go to work to make a successful hunt. The country is a good for sheep, and we have seen with our own eyes that there are goats here. As for the other game I do not believe it is present in any very great quantities, though there are bears enough to satisfy any one. You can see from the hides in the Kootenay camp that they depend altogether for their meat on sheep, and that a moose or an elk is killed only by accident."

"And to get sheep," said Dick King, "you ought to go and camp right with 'em. Pack your blankets right up to the rocks and sleep there, so as to get at the game early in the morning.

"Right you are," said I, and then turning to the Indian,

added, "Before we go to bed, Yellowfish, tell us a story." "Well," he replied, "one," and sitting up and putting aside his pipe, he said: "That Old Man. Walked around that Old Man. Came to where still dancing those ground squirrels. Dancing about fire all those ground squirrels. Behind sit that ground squirrel big with young. Old Man cry [wept.]. Say, 'Let me by that fire, too.' Ground squirrel say: 'Come on, Old Man, sit here, too.' 'When come there, Old Man,' he say, 'Me first by fire sit.' Man take ground squirrels, hold back by [close to] fire. When ground squirrel say sk, sk, then Old Man take another squirrel, hold by fire. Old Man make same noise, sk, sk [mocking them]. Old Man tircd, say, 'All be in fire, too many you.' Throw all in fire. That one, big with young, go in hole. Old Man say, 'Let be that way. Make ground squirrels more you.'

'Rest in fire, went away Old Man [to] make willow basket [to] cook those ground squirrels. Eat some, rest not cooked. Say to nose, 'Sleepy me. [If while] I sleep, there is traveling about something, holloa out.' Now sleep, Old Man. Nose Wake Old Man. Many times. Some above bird holloa. cry.

Old Man say, 'Above bird nothing,' sleep again. ome bobcat. Nose snore many times. Make Old Man "Come bobcat. jump, so high, many times. Not wake up, Old Man, Bobcat eat all ground squirrels. Nose snore. Old Man high jump, fall. Wake up, him mad. Take fire, burn nose. Say, 'You fool, not wake me up.' Look for bobcat. Find tracks. All grease, tracks. See bobcat [on] rock. He sleep. Walk softly Old Man, catch him bobcat. Old Man pound head [nose] on rock, make short face, pull [body] out ong, fix hair on face, pull off tail. That's why bobcat, short face, long hair [on it], long body, short tail.

"Now, Old Man nose burn like fire. Think wind good. Hold nose wind. Wind blow [him] far off, pretty near blow in creek. Catch hold blackthroat [birch tree]. Wind blow here there, still hang on Old Man. That's the way survive Old Man. Wind over, mad Old Man. Hit birch many times. That's why birch [bark] now looks like much cut. Oki."

The story told and duly applauded, we turned into our blankets and were soon asleep. Yo.

A FAMOUS FISHING POND.

THE well-known fishing pond of the late Royal Phelps at Babylon has been purchased by Mr. Whitehead, the counsel for the Society for the Protection of Game, and a club has been formed to hold it. The terms of the new corporation as filed in the office of the Secretary of State We trust it may long maintain the hosare given below. pitable fame for which "The Reel" has been so celebrated:

pitable fame for which "The Keef" has been so celebrated: "We, Percy R. Pyne, William E. Dodge, Jr., Charles E. Whitehead, cleveland H. Dodge and Percy R. Pyne, Jr., being all of full age worthy citizens of the State of New York, and of the United States of America, do certify, intending thereby to form a corporation under the name of the Rod and Reel Society. That the objects of the corporation shall be simple, social, country life, and improvement in the gentle art of fysshynge as practised by the goodly Izsak Walton and Dame Juliana Berners, and also man-taining a fysshynge lodge and waters. The number of the Trustees shall be five, and those for the first prear are to be the above named corporators, and the chief place of pusiness (fi dileness can be a business) shall be the Fysshynge House in the town of Huntington and Country of Suffolk heretofore known as "The Reel"

as "The Reel." The shares of this corporation shall be twenty-five, which shares shall be unassignable either by voluntary sale, or process of law, except by the written consent of all the other sharehelders, and at the death of any shareholder, his share shall belong to the survivors upon such terms and conditions as may hereafter be provided by the by-laws saving only his widow, if any, may enjoy the same for here if a

CAMP FLOTSAM.

XXV.-THE AFTERMATH.

<text><text><text>

however, had not been without its sport, and not in the lament, but it was the inglorious end of our fly-fishing for the season. Tired and disgusted, we determined to fish no more, but in the waning days of the camp the Madame entered, heart and soul, into bait-fishing, and there was no rest for the weary. With the Princess for oarsman and guide, she succeeded in bringing in daily strings of bass, their joint catch, which put us to the blush, and we were nightly taunted with our ill luck and indolence. One afternoon, during the last week of the camp, while we were loafing, as usual, about the tents, the two set out on their daily quest. They had been gone for an hour when we started on a trip to the outlet. Midway on our course we heard a faint shout from far down to the right, and saw our camp signal hoisted from a boat. We suspected at once that some surprise was in store for us, and we turned the boat in the direction of the white flag. Ten small-mouths, not one of which was under two pounds, were lying in the boat. "See what we have got," cried the Madame," and here's another," she shouted, as she landed a mate to the rest, "wait and see us catch them." We waited. In a moment each of

the feminine anglers had landed another. Then, as the Indian girl baited afresh and cast out, there was a mighty surge on her line, and she rose to her feet and lifted with main strength. A splendid bassleaped from the water along-side, the pole of the girl broke, but she grasped the line before the fish was fairly out of sight. Dropping the oars, George leaped into their skiff, caught the line from the girl's hands and two ounces. The Madame hurrahed and clapped her hands, but the Princess neither spoke nor made a sign of ex-ultation. We stayed alongside until they had taken four or five more, and then, after they had put their catch in our best fishing that we had seen during our outing, and in it we had had no part. Yet it was with no little pride that we showed the string and related to the two or three to whom we gave them, the story of the long fight which we had with that four pounder.

we gave them, the story of the long fight which we had with that four pounder. The Madame and her guide never faltered in the fishing but kept it up to the end. We could not understand the reason why, but they brought in nightly scores such as we had never made, and we were soon satisfied that it was neither tackle, bait, skill, nor knowledge of the grounds that gave them the lead. It was all lnck. We could understand now why it was that we used to sit the afternoon through, under the big tree by the mill pond, without a bite, while our companion truant from school would land fish after fish; it was pure, simple luck. We philosophized in valn, the Madame had the biggest and we were grasping after the un-attained. But our fishing had been done almost entirely with the fly and in casting. In this our success had eelipsed everything in our experience, so far as small-mouths were concerned. As to the big-mouth, the time has come when we feel called upon to answer the demand of the author of the Bigosh papers, made both by letter and in the columns of FOREST AND STREAM, that we speak of its readiness to take the fly, as compared with the other variety. Truth compels us to write that we have never found it behind the small-mouth in this respect, and, as a rule, the catch, so far as weight went, has generally been in favor of the big-mouth. We will not dispute our field's proposition that it excels the small-mouth in this respect, nor do we doubt it. One day, during the last week in camp, was spent in a supreme effort to rival the Madame's score, and we struggled from Burnt Point to the Narrows, from the Narrows to Griffin Island—and got letf. When we displayed our catch with a three-pounder at the lead, the Madame had one which weighed close to four pounds to show against it and we sur-rendered. Again we made the run to the bridge—this time for a fare-well—for the day which we had so long seen like a night-

<text>

muskets, bayonets and sabres, mementoes and souvenirs of incidents and men in times when nations have betaken themscives to the last great argument. In the Battery stable, is cruel and should be condemned and effectually by him in the field; while in the yard, each chained to a gun carriage, was another of his prizes, a team of immense Indian dogs with wolf-like heads, trained to sledge work and eapable of carrying over a hundred pounds of baggage apiece upon their backs. From the Barracks we were carried by the Colonel to his home, where the remnants of the camp fraternized through the afternoon and around the nospitable board viewed the memories of the jovial hours on Loughborongh.
By 4 o'clock the spires of Kingston, the fort on the hill,

and the towers along the city front were drifting out of sight as we plowed down the river, and thoughts of the nether shore began to thicken about us. An hour and a half later and Uncle Sam's officials were engaged in examining with much admiration our assortment of well-worn camp truck. And now we bring to a close the record of another outing. Began with the Christmas days it has outlived the winter and closes as the spring tide is about to dawn upon the earth, and the heart warms and the pulse beats high in ex-pectancy of a glorious to come. If its recital has brought a moment of relaxation to a brother whose longing for the camp, the lake and the wilderness has gone ungratified, to such an one we say that our pleasure is no less than his. For him we have written, and for him we wish in the coming season an outing which will compensate for all that he has been denied. And to 'Jay,'' 'Norman,''our old friend of the Bigosh, and the other brothers of the angle, whose appreci-ation of our Camp Flotsam has been so generously expressed in FOREST AND STREAM, we extend our hands in greeting, to their encouragement is due all that has been written of the Anabasis of 1885. WAWAYANDA.

THE AUDUBON SOCIETY.

THE AUDUBON SOCIETY. THE encouraging letters which we receive in regard to the establishment of the AUDUBON SOCIETY are most gratifying, and are an carnest of the widespread interest taken in this movement to protect our birds. To make it general, and to enlist the aid of every individual who has a love of nature and admires the beautiful birds, is now our object. There is no one whose influence cannot do some-thing to forward this good work. We desire the co-opera-tion of every reader of the FOREST AND STREAM, and again invite all who are interested in the subject and willing to lend their influence to communicate with us. Circulars of infor-mation, with full details of the work contemplated, will be sent to any address, without charge. No expense whatever will attach to membership in the AUDUBON SOCIETY. It would be impracticable to publish all the letters that we have received on this topic since the plan of the AUDU-NO SOCIETY was first outlined in these columns. We may give three or four as indicating the ground occupied by some of the leaders of modern thought: BEOOKLYN, N. Y., Feb, 20, 1886.

BROOKLYN, N. Y., Feb, 20, 1886.

Editor Forest and Stream

Editor Forest and Stream: I am heartily in sympathy with your purposes for the pro-tection of birds, and should be glad to contribute any influ-ence that I can to that end. If there were no purchasers there would be no demand, and no reason for slaughtering these winged gems. But as only women create a demand, it rests upon them to stay this wanton destruction. I am sure that it is only necessary to bring before American women the cruelty of this "slaughter of the innocents" that fashion is carrying on to secure a re-nunciation of this ornament and the salvation of birds. On this subject the kind feelings, the taste, and æsthetic sympathy of the whole community are on your side, and if you persevere you will assuredly win, Yours, HENRY WARD BEECHER.

OAK KNOLL, Danvers, Mass., 2nd mo., 20, 1886. Editor Forest and Stream: I heartily approve of the proposed Audubon Society. We are in a way to destroy both our forests and our birds. A society for the preservation of the latter has long been needed, and I hope it is not too late for the accomplishment of its objects. of its objects

of its objects. I could almost wish that the shooters of the birds, the taxi-dermists who prepare their skins, and the fashionable wear-ers of their feathers might share the penalty which was visited upon the Ancient Mariner who shot the Albatross. Thy friend, John G. WHITTIER,

ANDOVER, Mass., Feb. 21, 1886

ANDOVER, Mass., Feb. 21, 1886. Editor Forest and Stream: I am in carnest and indignant sympathy with the motive of any society organized to prevent the murder of birds for decorative purposes. If you will put into my hands all the statistics you can command on this subject, I will try and write something about it—somewhere. Very truly yours, E. S. PHELPS.

"MURDER MOST FOUL."

"MURDER MOST FOUL." A few years since I was driving over a country road in early April. An exceptionally forward spring had stirred all nature from its sleep, and the grass and the leaves, as well as the birds and insects, had begun to make the earth bright and cheerful. In an orchard, hard by, my attention was called to a man who, with a gun in hand and two small boys "at heel," was skulking from tree to tree as if in quest of a goodly "quarry." I drew rein and became a keen on-looker to see what game he was stalking so earnesity, well knowing there was none to stalk. Ere long a few bluebirds and robins took wing and flew to a tree within the range of the would be shooter. He leveled and discharged his piece, but with no visible result. I could not allow this outrage to go on, and was soon on the ground and over the fence with a challenge of "Hold hard, there!" I bridled my tongue and in quiet tone asked the man if he knew he was liable to a fine of \$10 for every bird he shot. He said no. I told him such was the law, and advised him to amuse his boys by shooting at a mark rather than at the innocent birds. He said he would fire at no more birds, so we parted and I resumed my drive. I cite this instance as one of thoughtless and ignorant transgression, of which there are doubtless many, but the cases of willful murder of the "innocents" are exceeding many.

are supposed to be of gentler and more refined natures than men and their sense of injustice and cruelty should be keener than their more brutal (I speak "by the card") brothers and "natural protectors."

than their more brutal (I speak "by the card") brothers and "natural protectors." The display (outrageous, flaunting and incongruous as it is, void of taste and of beauty as a warrant for its adoption) of heads and wings, and often of entire birds on hats; and of farthers, made up into dress and mantua trimming, would go far to make one doubt their superior and gentler natures. How can these, seemingly so dormant, be aroused? What honest and tender-hearted sportsman will write a pointed tract to couvict them of the error of their ways, and make them eschew and forsake such gaudy and tasteless and bar-barous adornment, and cease to be abettors of this "most foul, strange and unnatural" murder? The AUDUBON SOCIETY has a chivalric field before it, and I hope that many will be interested in joining in a crusade against this cruel war upon the birds and the ghastly use of their beautiful skins and feathers. At any rate, let us who love the fields and woods and all that dwell therein, cease not to strive to arouse a public opinion that shall at once and forever damn and consign to utter desuetude a custom more honored in the breach than the observance. O. W. R.

Editor Forest and Stream: The annual tinkering of the game laws comes up on March 3. One of the most important things to do is to suppress the slaughter of our birds, but we have to strike fairly or not at 811

all. Stop the bat bird business or rather stop the skin collector who goes for numbers, whether to sell as ornaments for mil-inery or for so-called science. It is not he who has the big-gest collection of skins that is always the best ornithologist or the closest student of nature. We need our birds more as insect destroyers alive than as food for insects. Give the poor man a show too, perhaps he loves sport afield as well as his more wealthy neighbor. Love of these things is born in us you know

bis more wealthy neighbor. Love of these things is both in us, you know. One thing more. It was said, I think, by speaker Brackett at the Massachusetts Fish and 'Game Association dinner that "taxidermists ought to be primarily" and I infer summarily dealt with. Again I say strike fairly or not at all. I mean discriminate fairly between a legitimate taxidermist and the skin collector. This latter class are like the unlicensed dogs, they bring good ones into bad repute. I refer particularly to the millinery skin hunter and bird destroyer. Deal with this class "primarily" and there will be birds enough for all. I might add and possibly with much force, let us enlist our "sisters, cou-ins and aurts" in the good work of refusing to wear birds as ornaments, and the battle would be ours. X, Y. Z.

BIRDS AND BONNETS.

BIRDS AND BONNETS. Editor Forest and Stream: In view of the fact that the destruction of birds for millin-cry purposes is at present attracting general attention, the appended list of native birds seen on hats worn by ladies in the streets of New York, may be of interest. It is chiefly the result of two late afternoon walks through the uptown shopping districts, and, while very incomplete, still gives an idea of the species destroyed and the relative numbers of each. A SENSIBLE GUNNER.

The following opinion of a professional gunner regarding shooting game birds in the vernal season, and other birds to supply the demands of fashion, is worthy of record as

shoothing game ordes in the vertiant season, and other order of the subscription of the vertiant season, is worthy of record as sound common sense. Eugene A. Jackson, of Atlanticville, L. I., in a recent letter to the subscriber, expressed himself as follows: "There is now a law against spring snipe shooting; I think it is a good thing, as there are hundreds shot here every spring. I have shot as many as eighty-five large snipe in one day.

Those shot while on their way to the breeding grounds of the North, cannot reproduce and return in the summer or fall with their offspring. The result is that the snipe shoot-ing is not as good as it was ten years since. I presume that the subject of bird protection that is now agitating the public will take effect in the shape of a new law. The ladies, poor things, will then have to try and find something else to wear on their hats. It is an astonishing thing how many birds' wings they can get on one hat. I think if it were the fashion they would wear an elephant on their heads. I, for one, like the idea of protecting the poor little birds, that are destroyed by the thousands, just because it is the fashion for women to wear them on their heats. I should think it no harm if they wore wings of game birds that are shot, and would be otherwise thrown away, or of birds that are a nuisance (English sparrows); but when they shoot every song bird or other kind of bird, that does no larm, it is simply wicked." Regarding spring shooting and bird protection, Mr. Jack-son now has sound views. Let us hope he will try to extend them among the fellows of his craft. WILLIAN DUTCHER, Of the A. O U. Com. on Protection of N. A. Birds.

Half a dozen bonnet shooters who left some time ago for Florida to slaughter the birds there and to follow up the bloody work as the migrating army moved north, have returned disconsolate. The late bitter cold weather drove the birds from Florida to the islands and even to the South American coasts, so no butchery could be done.

A BILL FOR BIRD PROTECTION.

American coasts, so no butchery could be done. A BILL FOR BIRD PROTECTION. The Committee of the American Ornithologists' Union have prepared a pamphlet containing a great amount of in-formation on this subject, which will soon be published. Among other things which this committee have done is the drafting of a general bill for the preservation of birds and their nests and eggs. This bill they recommend for adop tion by every State. It is the result of a great deal of earn-est thought and hard work by the committee, and certainly will commend itself to all. It is as follows: Ax AF or ATE PROTECTON OF FIRDS AND THEIR NESTS AND EGGS. Sec. 1. Any person who shall, within the State of ______, kill any wild bird, other than a game bird, or purchase, offer, or expose for sale any such bird, after it has been killed, shall for each offense be subject to a fine of five dollars or imprisonment for the days, or both, at the discretion of the court. For the purposes of this Act the fol-lowing only shall be considered game birds; The Anatide, commonly known as rails, coots, much hens and gallineler: the Limi-colle, commonly known as rails, coots, much hens and gallineler; the Raillide; the discretion of the court. For the gays or birds, shall be sub-let for each offense to a fine of five dollars or imprisonment for ten as walls turkeys, grouse, prarite chickens, phesaants, part-ridge and quals. Sec. 3. day person who shall, within the State of ____, take or medlessly destroy the nest or the eggs of any wild bird, shall be sub-persons. I at the discretion of the coults or in section 4 of this Act. The C. 4. Certificate giving the right to take birds, and their nests and eggs, for scientific purposes, as provided for in section 4 of this Act. The role thereof to collect birds, their nests or upward, permitting the power to grant sall 2 of this Act to grant such certificates the ap-plicant for the same must present to the person, or persons, having the power to grant sall certificate, wr

able. Sec. 6. The English or European housesparrow (*Passer domesticus*) is not included among the birds protected by this Act. Sec. 7. All acts or parts of acts, heretofore passed inconsistent with or contrary to the provisions of this Act, are hereby repealed. This Act shall take effect upon its passage.

SPARE THE BIRDS.

[Inscribed to the Audubon Society, New York.]

 $\mathbf{Y}^{\mathrm{ES}}_{\mathrm{When}}$ in the hard to the Andredown bound, the ground, when in the shady hollows the pink anemones abound, For then they are in sweetest voice, their souls are full of song; Their softest notes, their loftiest notes they all the day prolong.

Yes, spare the birds, the lovely birds, the birds of light and air, The little feather'd minstrels, whose chants ring everywhere: Yes spare as in life's journey thou would'st be spar'd from death, When belms are clove and plumes are shorn and fails the gasping breath breath!

When new the morn salutes the air with all that's fresh and sweet, Ahl let the wine that fills the air thy quicken'd senses greet; Then full of joy the brown thrush sings upon the garden hedge, The sweallows twitter on the eaves of the old barn's mossy edge, The speckled meadow lark upsprings upon its joyous wings, And, sweeping the salt meadows, its endless praises sings!

The sweet-voic'd, gay-dress'd emblems of innocence and love Are surely sent to bless us by the Creative Hand above! To charm us with their plumage, delight us with their airs, And sing away our sorrows, anxieties and cares.

The apple trees are white with bloom, a wreath of rich bouquets, The peach is pink with color, the llac blue with sprays, These are the honied haunts of redbreast and of oriole, And now they strike their silver barps and pour the liquid soul.

I do not know a sweeter gush than blackbirds' mellow strain, Whether they skim the daisles or sweep the yellow grain, But ahi the richness of the notes, the blazon of the plumes, May naught avail to rescue from the bird butcher's dooms!

There is a little sprite, the tern, the white gull of the main, That whistles by, that flitteth by, along the sandy plain. And yet these little spectres, as spotless as the snow, Are slaughter'd -to be toss'd in pride o'r snowy breast and brow!

Yet all this cruel slaughter of these children of the air, Goes on, year after year, and few to say, forbear! For long as youthful beauty will wear her bird-crown crest The sordid gold will end the life in every downy breast. GREENPOET, L L. Feb. 15, ISAAO MC

A PET SQUIRREL. ONE of the brightest and most interesting pets I have ever seen, is domesticated in the family of a friend in this county. It is a red squirrel which was found when an infant in arms, and unable to see its captors, who were present at the demolition of a woodpile where had been the little fellow's ancestral home. It nearly perished from want of the maternal fount, and until a man of genius hit upon the idea of feeding it with a "medicine-dropper," its case was considered hopeless. Then came to the family tabby an involce of fresh-laid kittens, and the little squirrel was duly installed as one of the tribe. "Mew!" said the old cat, and the rodent was forwith recognized as a *Felis domesti-*cus, with all the rights and privileges to such status apper-taining.

A PET SQUIRREL.

and the focult was forwith felogineer as a *fews unhear* cus, with all the rights and privileges to such status apper-taining. The squirrel grew and thrived, and was and is as free from fear as the least timid among its foster brethren. When I saw it, it was several months old, and as it was then a little after 6 P. M. (at which time it always takes a siesta), it was taken from its little bed and laid in my hand, where it lay for some minutes without motion. "He'll wake up, wont he?" said I. "Oh, yes" was the reply, and sure enough, in three minutes the little fellow had circumnavigated—if I may be permitted the word—the whole room, in all directions. He ran into pockets, and over pictures, and only stopped at a cedar pencil, which he at once proceeded to reduce to fragments, leaving the lead intact.

over pictures, and only stopped at a cedar pencit, which he at once proceeded to reduce to fragments, leaving the lead intact. This squirrel has many playful ways, such as slyly enter-ing the pocket of its master, and in default of nuts, taking therefrom his porte-monnaie. Itusually has a store of apples etc., hidden behind some bric-a-brac on a corner bracket. It has endeared itself to its possessors, who would be sorry to lose it, and it has really done but little mischief, but alasl it did bite the baby; why I know not. At the last accounts, it was proposed to obtain for it a very tough cage, its incis-ors having proved quite equal to the demolition of any ten-der specimen of that article. What may be its future lot, who can tell? Did I relate that it jumps upon the back of its foster-mother, and merrily rideth thereon, to Tab's dis-gust? This it does, and many things besides, yet the old cat, is more patient with its antics than would be many a human mamma. Long may the little squirrel wave his tail, and wind his clock. KELPIE. CENTRAL LAKE, Michigan.

CENTRAL LAKE, Michigan.

MOOSE IN THE ADIRONDACKS.

MOOSE IN THE ADIRONDACKS. A PROPOS of a correspondent's plan to stock a tract of land on Long Island with deer, I would like to suggest the idea of bringing back the almost mythical moose to the Adirondacks of New York. If we can keep the non-hound-ing law upon the books and enforce it, and then do away with jack-hunting, I see no reason why a few moose could not be set free in the more unfrequented portion of the woods, with a fair prospect of their being allowed to multiply. If would be, of course, necessary to enact a special law for pass, and he would be a brute indeed who would violate such a law. I would go a long way even to see a moose. A score of this vanishing race would give an added charm to our grand forest. If such a plan is not feasible now, the plan to sate the wilderness a State park is feasible and should be cated upon. With the forest under the control of the State, game now extinct in the region could be introduced with the cated upon. With the forest under the control of the State, game now extinct in the region could be introduced with the set of every lover of sport and of the beauty of the Empire trans. In the Door Luxacy —Our well-known correspondent

State. NTTRAM. THE MAD DOG LUNACY.—Our well-known correspondent "S. C. C." writes from Marietta, Ga.: I agree with you wholly in your exposure of this senseless papic about mad dogs. There seems to be no proof that the Newark dog or dogs were mad, though it is evident that the people were, and until that is proved, of what worth are the French pro-fessor's experiments? I have bred and owned dogs all my life, say for seventy years, and cannot say that I ever saw a mad dog, though I have seen many put to death on that sus-picion. There may be such a disease as rabies or hydro-phobia, but if so it is extremely rare. Perhaps most of the so-called cases are really caused by fear or alcohol, and Goldsmith's lines are as true to-day as when written: "The man recovered from the bite, The dog it was that died."

NORTH CAROLINA.—Progress, Feb. 15.—Woodcock and snipe have begun to come on their way north. Bluejays and robins in great numbers have been here over a week, besides a great many little birds I do not know. The weather is fine. Peeping frogs are at work in all directions. Quail are quite plenty since the last blizzard, but it did look bad for them at one time, as everything was covered with ice and the mercury below zero, which is very severe for this country.—T. M. A.

EXHIBITION OF AMERICAN HUNTING TROPHIES.—Editor Forest and Stream: I regret to have to inform you that the American exhibition has been postponed until 1887, in defer-ence to the opinion that it would interfere with the Colonial Exhibition. The proposed loan collection of hunting trophies must therefore be adjourned for the present, but we hope to make it still more complete at the time named.— GERALD BUXTON (Knighton, Buckhurst Hill, England).

Gamp Hire Hlickerings.

"That reminds me." 183.

183. A BOUT twelve or fourteen years ago Colonel D. and Doc-tor T., both Clevcland gentlemen, were shooting ducks near each other in that "duck heaven" the Sandusky marsh. The blue-winged teal were flying pretty lively, and the Colonel, being a good shot and "to the manor born," was knocking them right and left; but the Doctor, being an expert with the scalpel but not with a gun, was banging away at a great rate without killing a bird, and very much excited of course. Finally he shot at a flying duck, and missing it as usual, to his horror he noticed he had shot almost directly toward the Colonel, about 100 yards distant. He immediately called out, "Halloa, Colonel, did I hit yer" "Oh, no; no," the Colonel replied. "Well! I can't hit anything!" A true bill. TRUMBULL COUNTY, O.

THE TRAJECTORY TEST.

THE full report of the FOREST AND STREAM'S trajectory test of hunt-ing rifles has been issued in pamphilet form, with the illustra-tions and the tabular summary, making in all 96 pages. For sale at this office, or sent post-paid. Price 50 cents.

HUNTING AT ARMY POSTS. [Continued from Page 68.]

FROM other of the posts where portions of the army are stationed come additional reports on the prevalence of game, and how the officers and men in blue avail themselves of their surroundings. We quote from letters as follows:

of their surroundings. We quote from letters as follows: Editor Forest and Stream: Fort Bowic is situated in a saddle of the Chiracahua Mountains, fourteen miles south of the Southern Pacific Rail-road and about twenty-six miles west of the New Mexican line. A few Messina quail are found in the hills about the post, while the foothills and arroyos running into the San Simon Plain abound with the blue scale quail and California. There were plenty of deer within a few miles of the post, but during the summer and fall of '85 so many Government Indian scouts have been camped near Bowie that large num-bers have been killed. Within a day's easy ride, however, plenty of deer can be found; the small, whitetail deer being the most numerous, the mule or moose deer being scarcer. The Springfield shotgun does very good work and is much used by the men. E. B. BEATMONT, U. S. Army. Foar Bowre, Arz., Jan. 29. Fort Bowie, Ariz., Jan. 29.

L. B. BEADMONT, U. S. Army.
Fort Bowre, Ariz., Jan. 29.
Editor Forest and Stream:
The reply to your note of the 9th, which has been delayed by the snow, I will give you as full an account of the game around Union as a year's experience goes. Of large game the antelope alone is plentiful enough to pay to hunt, and the nearest point some twelve miles from the post. They are yearly becoming scarcer, owing to the cowboys continually shooting at them; there is one small bunch within a mile of the post, but very wild. Blacktail deer can be found some thirty miles from the post, north, but, owing to the number of Mexicans living in the mountains, are scarce. Bear can also be found occasionally in the same locality. Of the small game the mountain grouse (blue) are run into while deer hunting, but not plentiful enough to make them a special object; the meat is very while and edlicious; live in the deepest pine forests, feeding in the openings. A few coreys of Massena quail are within a mile of the post, and while they last afford good sport; and blue quall (scaled quait) are found south of post ten miles. They were, a few years ago, very plentiful, but two hard winters killed them of . Swans are very scarce; I killed one last fall. Geese rather plentiful; killed upward of twenty since I have been stationed here. Ducks are very plentiful, from the canvasback and redhead to the teal. Of course the water being scarce they are obliged to concentrate, and good shooting is the result. With one man I have killed upward of seventy in the afternoon and morning shooting. This was at the tot Almos Lakes (artificial), about twelve miles from post. Good ducking also at La Quarec Lake, some ten miles of; also geese. English snipe few; no suitable ground. From the folth of August until the last of same month we have the best pland plover shooting i think in the courty, barring twas and the Indian Territory. During their flight last of same are as safe in a buckboard, jump out, and as they get up indecising a st

Editor Forest and Stream: In reply to your favor of the 9th inst I respectfully state that there is a fair supply of all kinds of ducks, and good pickerel and pike fishing, but neither make any particular impression on the "post larder." I give my command every facility and opportunity I can to hunt and fish. The Spring-field shotgun issued is not a success. The men use them when they can't do better. F. MEARS, Major 25th Infantry. FORT SISSETON, D. T., JAN. 24.

Brans, Major 25th Infantry. Torn SISTING, J. Jan. 24.

Part Sisteron, D. T., Jan. 24.
Part of the post, has been reterred to me for reply. As I post, desiring information about the game, etc., in the vicinity of the post, has been reterred to me for reply. As I understand you to want facts and not an elaborate article for publication, I shall devote myself to briefly answering the questions contained in your letter. The large game in this vicinity is such as is found in this entire Rocky Mountain region, and comprises elk, bighorn, mule deer (here called biacktail) and antelope. The first two are mostly found in the foothills when the snowfall in the mountains is forther hopst, and in the fall they come down much nearer. A large number of deer are killed and brought here for sale professionals or rather pot-hunters every season. I am hanting parties and generally have fair success. Antelope are to be found in small bands on the prairies, but they are yre wild and hard to get at. The principal small game is afford fine sport for about two moths. They lie well to a dog when young, and as a table luxury are unsurpassed, we have a flight of ducks in September and October, but the store and induct to rapid for good duck shoot, but they are yright here a wild goose is killed, but they dy this way rarely, the latted is is should be under and teal. Now, and them a wild goose is killed, but they dy this way rarely, the latted is killed (so I have been told); I never say one. There was a genuine woolcock that fed along the say and the sage here, the same is killed (so I have been told); I never say one. There was a genuine woolcock that fed along the say and the say a genuine woolcock that fed along the say and say a stable is a stable wool for the say and the say a single is killed (so I have been told); I never say on the say and the say a genuine woolcock that fed along the say and then the say and the say

stream that flows through the post all last fall. I saw him several times—always single—and I presume there was but one. He remained till the stream froze up. Jack rabbits are plentiful and there is a small cotton-tail under almost every sage brush, and it is upon these latter and the sage hens that the soldiers use the Springfield shotguns and often make good bags, but not having dogs (I mean good dogs) they hunt for meat alone and most of their birds are killed in their tracks. I have never shot one of these guns and I never will. I don't consider them safe enough for me, but I have heard those who have used them say that they are good strong shooters. There are two furnished to each company and during the shooting season are pretty gener-ally in use. I succeeded in getting the post Council to sub-scribe for the FOREST AND STREAM, which is now received regularly, and from the manner in which its are worn I judge it is pretty well read. L. W. CRAMPTON, Ass't Surg., U. S. A. FORT BRIDEER, Wyo., Jan. 24.

FORT BRIDGER, Wyo., Jan. 24.

FORT BRIDGER, Wyo., Jan. 24.
Editor Forest and Stream:
Tore letter of 9th ult, to commanding officer, Fort Custer, inquiring in regard to the hunting in this vicinity, and specially in regard to the Springfield shotgun, has been handed to me with a request that I answer it. The only game we have near the post is chickens, and for a short time in spring and fall ducks and a few geese. By going thirty-five or forty miles into the mountains we find deer, bear, etc. Game is an uncertain and almost inappreciable element in the post larder. Individual sportsmen get some game for their own use but none to supply post needs.
Torobably go out after game oftener than any other officer here, but as I have never used the Springfield I can give no opinion as to its merits. One officer with whom I have hunted a good deal uses the Springfield, single-barreled, such as is issued to troops for hunting purposes. He complains a good deal of the gun, thinks its range is too short, and it is not a good shooter. As he is not a skilled wing-shot, but a new beginner, I tell him, and believe, the trouble is in the man and not in the gun. Some of the soldiers have used the Springfield to good advantage. A couple of men a few weeks ago got seventy-three chickens in an afternoon, which does not speak badly for the Springfield is of importance to you, it might be got by referring a paper to the company commanders who could inquire of the men who use the springfield. No officer at the post owns one, and they are used only by officers who have no guns of their own.
C. E. PRICE, Assistant Surgeon, U. S. A. Fort Custer, Mont, Feb. 2.

Editor Forest and Stream.

Editor Forest and Stream: In reply to yours of the 9th inst., received yesterday, re-questing information concerning the supply of game about the post, I would remark that, so fari as big game—such as antelope and deer—is concerned, that is very scarce. Last fall season some hunting parties were sent out, and, after having gone some 75 to 100 miles, they found but few deer. This being a large Indian reservation accounts for the scarcity of such game. In fact, the whole country out this way is filling up so fast with settlers that all game is being driven off in the confines of the mountains. Prairie chickens, snipe, curlew, wild geese and ducks are found in great numbers in the proper scason. Last fall our tables were abundantly supplied with chickens and ducks. The Springfield shotgun, for a sporting arm, is very much liked and does good work with the proper ammunition. As it is, the ammunition furnished by the Ordnance Department does not give satisfaction only at very short range. The charge of powder is too light, the shot too small, and in no way suitable for good work. The gun itself, being only of one barrel, is somewhat of a drawback in being of much service for a sportsman. Buffalo have left this entire country. None can be found short of the regions north of Monlana over in the British line. MAJOR JAS. S. CASEY, U. S. A. FORT YATES, Dak, JAN. 23.

FORT YATES, Dak., Jan. 23.

Editor Forest and Stream: Referring to your letter of Jan. 9, asking as to the supply of game about this post, etc., I have the honor to state that quail are very abundant. Prairie chickens have made their appearance in considerable numbers during the winter, but root not have come to stay. Turkeys are very scarce. Deer appearance in considerable numbers during the winter, but may not have come to stay. Turkeys are very scarce. Deer are plentiful, but very shy. Only very skillful hunters get them, as a rule. Some hunt for bears, but not often with success. Hunting is a pastime, and is often very successful in securing game; but is not resorted to to any great extent as a means of furnishing the post larder. The Springfield shotgun is not very much used and is not much in favor. Private shotguns are used mostly. C. H. SMITH, Colonel 19th Infantry.

FORT CLARK, Tex., Feb. 5.

FORT CLARE, Tex., Feb. 5. Editor Forest and Stream: Tours of the 9th came this evening, probably delayed by snow blockade. The Springfield shotgun furnished companies is in constant use by the soldier. There is much small game in this neighborhood. Officers use good double-barreled shotguns. Grouse are plenty. The spruce or Canada, pin-nafed sage hen, ruffed grouse. The ptarmigan (willow grouse) furnishes best of this sport, as they lie to a dog when young in August and September, come out of the willow covers into stubble and grass, and are equally good shooting with the prairie chichen. Of ducks we have the teal (green-wing), spoonbill, wood duck, bluebill, bufflehead, butter ball, spirit duck; possibly canvasback (a redhead mixed sil-very and black), quite enough in the way of birds. The Big Horn Mountains contain large game in abund-ance, though the frontier hunters consider it scarce and have sport. The time to hunt is in October, last of September, The grizzly can readily be found, elk, deer and mountain sheep. Buffalo were killed three years ago; it is reported small bands are yet running in the mountains. Our people, however, have not seen any, though we arrived here the last of August, and were so occupied until November with mili-tary matters no one of the garrison had time to visit the mountains for hunting until November, when I organized a hunting party, taking four or five men from each troop. These men were not all hunters; some teamsters, packers, orks, etc. The only really excellent hunter with me was Frank Gerrod, scout; at that time the snow had begun to fall heavily. I had one officer in the party, Lieut. Finley, 9th Cavalry, an excellent shot and ardent hunter. The heads

of the many tributaries of Powder River were first visited, when it was apparent the game had been driven out of the high ranges to lower ones. As the object was to supply the garrison with game it was necessary to follow it; continuing to follow it through what was known as the Pine Mountains, crossing the Platte River, we came upon excellent hunting grounds in the Caspar Mountains, stopping a few days to hund antelope in the Bad Lands. By this time we were one hundred and fifty miles south of our post, meeting every-where large bands of Crows, Arapahoes, Cheyennes, Sioux, Shoshone Indians in hunting parties. The game was, there-fore, very wild. The entire month was taken up in hunting, half of it too stormy to leave camp. The result, however, shows conclusively that it is a wonderful game country. More game could have been killed; the wagons of the train had all that they could move. Loading six six-mule wagons, 72 elk, 102 deer, blacktail; 45 antelope, foots up the total. Hunters who are willing to work hard, will find all the game they wish to kill. Gerrod, the scout, is the best hunter I have ever had. Not that he kills the most game, but his excellent judgment in directing parties and instructing men how to hunt is invaluable. Should any of your friends be desirous of hunting grizzly— mest amateurs are desirous of doing son. Trecommend secure

Should any of your friends be desirous of hunting grizzly— most amateurs are desirous of doing so—I recommend secur-ing Gerrod. He is cool, quick and a dead shot, all necessary qualities for that kind of work. We are always happy to see parties who are fond of sport. The coming year the railroad will reach Fetterman, quite near an excellent hunting region. Any one fond of iunting, willing to ride, walk and rough it, as the cavalry officer will upon our hunts, can have all the sport he desires. Should any of your people come out, shall be glad to see them. EDWARD HATCH, Colonel 9th Cavalry.

FORT MOKINNEY, Wyo., Jan. 26.

THE MICHIGAN ASSOCIATION.

Editor Forest and Stream: The Milchigan Sportsman's Association met in eleventh annual scssion at the Recorder's court rooms, Kalamazoo, Feb. 9. After the appointment of a Committee on Creden-tials and the election of a number of individual members, the meeting adjourned until the following morning. The next morning the report of the Committee on Creden-tials showed delegates present from the Battle Creek, Grand Rapids, White Pigeon, Jackson, Kalamazoo and other clubs, and the presence of a considerable number of individual members, among them Dr. J. C. Parker, of the Fish Com-mission. mission.

members, among them Dr. J. C. Parker, of the Fish Com-mission. The president's annual address was a plea for the better enforcement of the game laws, and as a means to that end he advocated the appointment of a game warden, and urged upon the Association the necessity of directing all its efforts in that direction. Our laws are good enough until the means of enforcing them are provided. Mr. Nichols, of Battle Creek, in discussing the address differed from the somewhat pessimistic views of the chair in regard to the progress of public opinion in the matter of the game laws, and cited the many good laws passed of late and the successful efforts of the Association in obtaining modifications of old and the passage of new laws embodying the latest and best knowledge upon their respective subjects. The Committee on Law presented its report, giving a sum-mary of the new laws passed at the session of 1885, and ex-plaining their relation to the old laws. It also urged that the united efforts of all members of the Association be directed toward spreading the idea that a game warden was a necessity, and that that idea be specially impressed on all candidates for the Legislature who were to be voted for this fall. The Committee on Enforcement made a report giving

candidates for the Degistratic who have to be report, giving, fall. The Committee on Enforcement made a report, giving, among other things, the following estimates of deer killed in Michigan during the past season, based on facts obtained by the chairman from personal visits to the regions mentioned:

Deer killed in Lower Peninsula......4,000 Deer killed in Upper Peninsula......4,000

IN MICHIGAN WILDS .-- 1.

IN MICHIGAN WILDS.—1. THE Hoosier Hunting Club consists of a small company of amateur sportsmen, who take annual excursions into the trackless forests of Northern Wisconsin or the peninsula of Michigan to find relief from the exactions of business, to incite new energy by quaffing the pure waters and yet purer air of that exhilarating climate. We hunt deer and cast lines for bass and trout also; but these are but a tithe of the game we take. The genuine sportsman returns from such a tour laden with a wealth that no guos or rod can bring to camp. The forests and streams invite him to the most royal of feasts; they bid him enter their secret halls, feast upon their richest viands and be thrilled by their most tender melo-dies; all their joyous birds will join the chorus, the winds will deftly touch æolean harps, and myriad leaves will elep their hands in happy welcome. He who is sick will here find a panacen for every ill, and the nervous will be given a tonic from Nature's faultless and exhaustless laboratory, more effective than all the nervines of all the medical schools.

more encetter into an the nervices of all the metrical schools. The club of which mention is now made, have caught muscalonge in the lake region of the upper Wisconsin river; black bass from lake Gogebic in Michigaa a little to the north; and captured spotted beautics from the silver ribbons of brooks singing their way to the icy bosom of Lake Su-perior; and meanwhile have still-hunted that wariest of wild animals—the red deer. This particular region is specially the paradise of all lovers of the rod and reel. It surpasses any yet visited in wild, picturesque scenery, and in exhaust-less cance routes. The Eagle River chain of lakes have a shore line too extended for any one season's sport, and their finny riches will not be diminished for a score of years. This country is reached by the Milwaukec, Lake Shore and Western Railway, and its officials excel in extending cour-tesies to tourists.

<text><text><text><text><text><text>

though not many of the party would care to duplicate the experience. The picture of the terrific conflict of mad waters and resisting rocks as witnessed that day will remain with the actors through life. While our blood was yet hot with the excitement, and before we had untied our guns from their fastenings—which we did to save them in case of capsizing—the boys called from the boat in front, "What is that?" They were just rounding a sharp curve, and we in the rear boat could see our comrades frantically jerking at their guns, all too securely ticd. "It's a bear!" we heard Major G. call out, and this sent us for our guns; but bruin was just enter-ing the dense underbrush as the first guns gave him a parting welcome. We landed, rushed through the tangled under-brush for a mile or more on his trail, while one boatload went further down the stream, hoping to head him off. The old fox was too smart for us, however, and soon left us far behind. If the reader has ever had a like experience he will remem-

If the reader has ever had a like experience he will remem ber what a fund of jokes such an event always provokes. Then, too, every fellow is sure to detail how nearly he came getting a bead on him. "If"—ahl that if saves hundreds of "the biggest bucks in the woods" or "an enormous bear." That bear was the cause of no little merriment after we were safely huddled in our small tent the first night on the Michi-razio. gania

safely huddled in our small tent the first night on the Michi-gania. The next morning the old trapper was dismissed, and after spending a few hours in prospecting without finding much sign of deer, we loaded boats and were again gliding down the tortuous but swift current. Here was enjoyment that will make glad the heart of every member of that little company while life endures. A soft haze filled the cope of the heavens above with that dreamy light so delicious to lovers of nature; the boats rocked and swayed in a motion as gentle and delicious as the airy flight of circling swallows in the summer sun; the river sang a ceaseless song, sweet as the dream of childhood, while the tall pines and denser cedars gave answer in a chant low and weird. We seemed to be in a land of enchantment or a pleasant dream. Mile after mile not an oar was struck. Only the man in the stern used an oar to guide our course. We passed what is called by the lumbermen of that river "flood wood." At some time the entire river bed for a mile or more was completely blocked by the densest, most com-pact drift that could be imagined. With incredible labor this had been cut away by the numerous lumber companies owning pine lands above and along the river. At this point Major G., who is the hunter of the club, anchored his boat and went ashore to look for sign. Our boat passed on down some distance before stopping. The Major found abundant sign, and we attempted to row back, but the current was too swift for our awkward hands, and we were compelled to pass on. Our camp for the second night was about a mile up a swift

pass on.

Switt for our awkward hands, and we were compende to Our camp for the second night was about a mile up a swift stream called Fence River. This stream is crowded with trout. Immense numbers of the largest size have been taken in proper season by the few bold sportsmen who have pene-trated these wilds. Although we were not prepared for taking them, we caught some handsome strings. As deer hunting was our special mission, the next morning found all out with the guns, except the writer, who impro-vised a line and pole and had some rare sport in having the trout leap at a red flannel lure. The result of the day's hunt was a spike buck, brought down at full two hundred yards by Lew, and a fawn dropped by Major. Lew also had a splendid shot, at a dead rest, at a doe, with three shots while running, but scored clear misses. He is a crack shot and we twitted him over the blunder. blunder.

blunder. Venison tenderloin steaks, golden trout and fawn's heart for supper was a feast fit for a prince. What a jolly time was had that night in recounting the mishaps and jokes of the journey. But the editor and reader as well must not be imposed upon further at present, and the remaining experi-ences must be reserved for a future number. CASEY.

SHOOTING IN CUBA.

SHOOTING IN CUBA. What has become of the snipe and teal which have not this winter? Heretofore the Siempre Fiel has been particu-larly favored by their winter migration, and the sudden sus-pension of these favors gives us great anxiety lest they have been receiving inspirations from the New York Chamber of Commerce. Oh, dearl oh, dearl has it come to this pass that even the game birds have been infected by the hated political ideas of the Yanks and turn away from us to more congenial feeding grounds in the Central American republics? Well, plenty of "lame ducks" are herestrewn along the tracks of the tax gatheres. But, though we have been slighted this winter by the game, revery steamer is now bringing to us large and increasing flocks of the genus *homo*, though these are not quite homo-geneous in all respects. The new route by the Florida Southern Railroad, connecting with steamers at Tampa, is open and brings us an inflowing tide twice a week, repre-senting nearly every State east of the Rocky Mountains by individuals and families coming in to us out of the cold. The population of the United States is the most mobile and docile in the world, and is catching ideas even from the feathered bipeds; that, among others, of when they are cold they go nearer to the source of all light and life, and imbibe the genial, health-giving influence of the sunbeams. In looking over the hotel registers here is pictured to the forida representing the narrow part to which the winter travel from all parts of the north, east and west is tending toward the attractive force above indicated, and whether it be that the *Herald* exposé has knocked the bottom out of the Florida peninsula or not (it may have been a false bottom), the fact remains that the winter travel is reaching us here in increasing proportions. Here the sunbeams offer a still more cheering welcome to

The fact remains that the winter travel is reaching us here in increasing proportions. Here the sunbeams offer a still more cheering welcome to those seeking their kind protection, flowing in upon the mind and body through all the senses, both directly and indirectly through many of its charming elaborations of varied vegeta-ble forms and verdure, and juicy, luscious fruits. Here, too may be studied by those philosophically inclined, the vestiges of a past civilization and a dawning new one. Mais, recen-ons a nos moutons. All acknowledge this to be an incom-parable winter climate. From November to March the ther-mometer ranges between 70 and 80 Fahrenheit, within which period arc usually interspersed three to five terms of three days each when a cold wave from the north forces it down to 60. This winter has been the only exception to this rulc which I have known in a twenty years' residence here. This winter we had the mercury down to 60 during fifteen

days in December, and during several of them down to 55; but we are always beyond the reach of frosts and snows. For the information of those who are projecting trips to this island, and are including quail or deer shooting among their expectations, I will state that they will be required to take out a license to carry their gun, which costs \$11 gold, and if they should wish to shoot the quail or deer on sight, they will require a second license for that purpose, costing another \$11; total, \$22 per annum. Thus game protection here, being one of the devices of the tax gatherer, is likely to be persisted in. The shooter furthermore requires a writ-ten permit from the owner of the fields he desires to shoot over or to accompany some party who has such permit. These, however, are trifting drawbacks, as a few green-backs will rapidly smooth the road before the visitor. Hav-ana, besides its wonderful climatic attractions, has many others usual to large cities, and great novelty to the Anglo-Saxon in almost everything. It is destined to soon become famous as a winter residence for North Americans of the mobile classes. It is perhas not strange they should, in their mobility, be drawn toward the sources of the most exductive luxuries of their home breakfast tables—luxuries which have now permanently established themselves there as prime necessities. Besides it is here that the noxious but seductive weed, the most persuasive solace alike of the man of leisure, the banker, the poct, the philosopher, the theologian, the physi-cione its many worshippers. Well, let us enjoy its solace "while we may, old time is still a flying," and while human nature is what it is many will yield to consoling influences of different kinds, and when Boreas blows his wicked blasts many will also try to get in out of the cold. NEMO. HATANA, FED. 4.

WITH THE QUAIL IN VIRGINIA.

not relificent kinds, and when Eoreas blows his vicked biasis may will also try to get in out of the cold. NEMS. HAVAN, Feb. 4. NITH THE QUALL IN VIRCINIA. In the dozen of the best counties of that State, with a bott dozen of the best counties of that State, with a bott dozen of the best counties of that State, with a bott my usual measure of success. The birds were more plenty than I have seen them for twenty years, lot very much larder to get. Every year it is becoming more diffected to get. Every year it is becoming more diffected to get. Every year it is becoming more diffected to get. Every year it is becoming more diffected to get. Every year it is becoming more diffected to get. Every year it is becoming more diffected to get. It is a non-or two high to take his preakfast until the sum is an hour or two high to take his preakfast until the sum is an hour or two high to take his previous years. A sum of the analytic to the same among the reacting the Forkers AND STREAM advertisements of sports proved guns that shoot often enough, without reloading, to hundred day-pigenes. Englishmen who, with one hand it is and hour or two high the morning that shoot often enough, without reloading, to hundred day-pigenes. Englishmen who, with one hand it is and hour to meet it is vident. It used to ben y straight in the direction its head was pointed, depending on taraphild flight for safety. Now they run before the dogs and get up clear out of range, or if caught in close quarters, and equits hour the same stubble of the twenty and it haves do to be the safe to the pair in stubble or they straight in the direction its head was pointed, depending and get up clear out of range, or if caught in close the dogs and get up clear out of range, or if caught in close that dogs and get up clear out of range, or if caught in close the dogs and get up clear out of range, or if caught in close the dogs and get up clear out of range, or if caught in close the dogs and get up clear out of range, or if caught in close the dogs and get

raised. The best shooting I had during the scason was in this body of woods, where I could start from ten to fifteen covers in a day, finding them in the neighborhood of branches, where they ied on berries and wild grapes, or about old "plant beds" and negro cabins, where patches of rag weed had been allowed to grow. This, however, was no fit ground for dude sportsmen. None but stout, active legs and lungs with plenty of wind could stand the hills and ivy cliffs. One word more before I stop. It is very unwise for sportsmen, non-residents, when they make big bags to carry

all their birds in view; it arouses the jealousles of local hun-ters and sends more sportsmen to the ground, which gener-ally ends by closing it to all. A string of thirty quail is as much as any sportsman, after the fatigues of the day, should carry. Never strain yourself. I would rather be commis-erated on having thirty birds in three days 'shooting, with the invitation, "Come back, old fellow, and try it again," than to have every one in the place at the depot to see "those men who done killed all the partridges in the contry." Don't string your birds so that fifty will look like 157 (that is the regulation lie) and hire two darky boys to carry them on a pole, or you will be sure some time to be obliged to come home on the owl train and sneak around town some back way without a feather. BEDFORD.

ERRATIC BULLET FLIGHTS.

THE UTICA ASSOCIATION.

<text><text><section-header><text><text><text><text><text><text><text><text><text><text><text>

prehensive notice and consideration to the great diversity of opinion among citizens as to the utility of the law against bounding, now in force. They give all due weight to the arguments for its repeal. The result of their investigation is this, viz., that all the opposition to this law grows out of pure selfish desire on the part of individuals clamoring to accomplish their own personal ends and conveniences, and partakes not at all of any real or honest preservation or protection. No better evidence of this is needed than the very fact that in all their plans for proposed legislation on the subject, protection and preservation are asked for with special privileges, which are not protective, in the very fact of the conceded dangers of total extermination. The ream of the modes thereof, in which all interested citizens should util, concur and observe for the general good. The way to protect is to limit and restrict the killing, and is quite inconsistent with teo great destruction. They further report that up to within the past past three yars the laws which have been liberal have been practically ample, but that the recent change of conditions necessitates greater limits of both season and the number to be killed. They recommend the following law to be passed, which, after a reasonable trial, they think will obviate what will otherwise become necessary, viz., the necessity of a law which will prohibit for a term of years all killing in this state.

State. In respect to game birds: Your committee are of the opinion that the open season should be made uniform and limited to the autumn months of September, October and November, as being most consistent with due regard to pro-tection. We think August woodcock killing quite out of season as well as destructive; of partridges and their broods, both should be killed at the same time. The month of December killing is very destructive of partridges from the fact that then they mainly are trapped by experts. Under the present laws there will be few, if any left to protect in a very few years hence. They recommend an amendment as now before the Legis-lature, introduced in Senate by Mr. Coggeshall, proposed by the secretary.

They recommend at the py Mr. Coggeshall, proposed by lature, introduced in Senate by Mr. Coggeshall, proposed by the secretary. In respect to song birds of all kinds, your committee are of the opinion that all small birds, other than such as are in-jurious to husbandry, or such as prey upon or destroy the insectivorous species, such as butcher birds, crows, owls and hawks (other than night hawks), should not be allowed to be destroyed in any manner, or at any time, or for any purpose whatever, within this State and should be prohibited. Your committee are informed that very large orders are being constantly sent out by jobbing houses for the skins of small birds of various kinds to supply the trade, and fashion-able demands for ladies' bonnet trimmings, whereby they are being greatly depleted, to the detriment of husbandry and in derogation of public delight. Such practices should be dis-countenanced by all good citizens as abhorrent and repulsive in the extreme and totally without sense or palliation. *I. C. MCINTOSH*, *JOIN D. COLLINS*, *GUSTAVUS DEXTER.* PROPOSED AMENDMENTS.

respects said act is to be construed in line hereof.

 C. McIntosh said that the limitation of three deer to each person was copied from the Maine law.
 The report was adopted and a committee of two, D. Col-lins and I. C. McIntosh, named by the chair to go to Albany and attend to the introduction of the bill and endeavor to

and attend to the introduction of the bin and endeavor to secure its passage. Mr. McIntosh reported that he had ordered for Jock's and South lakes 50,000 salmon trout from Caledonia, Mr. Green writes that he wanted them to be taken Feb. 28. The fish were to be taken from Prospect or possibly Remsen. A. D. Barber, Jr., had been written to, but, though he expressed interest, he said he would be unable to take the fish to Jock's Lake.

Market, Mr. Collins moved that Mr. McIntosh's committee be con-tinued and instructed to attend to getting the fish and getting them into the lake. There was some informal discussion as to the best method of getting the fish to Jock's Lake at this time of year. Mr. McIntosh said he thought 75,000 could be secured. The members present all signed the petition issued by the FOREST AND STREAM, protesting against the repeal of the anti-deer bounding law and the Association adjourned, sub-ject to the call of the president.

THE MAINE DEER LAW.

THE large game of Maine is recognized as one of the valuable natural resources of that State. The laws have been most carefully framed for the proper preservation of the deer supply; and—so great is the importance attached to these laws—special officials are intrusted with the duty of supervising the enforcement of the statute by the game wardens. The Maine game law forbids absolutely and at all times the use of does for hunting deer. The working of this anti-

The Maine game law forbids absolutely and at all times the use of dogs for hunting deer. The working of this anti-deer law—whether it be for good or evil—is full of instruc-tion for the other States which are now considering the same subject. It is worthy of remark that the enactment of the Maine law was bitterly opposed, as was the law itself at first, on the identical grounds now urged by the opponents of the New York anti-hounding law. The following official reports of the effect of the law, and the testimony of well known Maine sportsmen are sub-mitted:

 CÓMMISSIONERS.
 STATE OF MAINE,

 E.M. STUREL, Bangor.
 COMMISSION OF FISHERIES & GAME,

 Divided.
 DIXFIELD, Feb. 14, 1886.

 Editor Forest and Stream:
 Dixfield.

 You ask for my opinion as to the working of the anti-deer hounding law in Maine. I can give it in a very few words.

 That law in my opinion, is the very best one we have on our statute books for the protection of our deer in the Maine forests. If hounding were to be allowed, it is my belief, that in five years from now few deer would be left in our State.

 To the enforcement of this law I attribute the increase of the game, that has filled our forests with deer as they are to-day. Repeal this law and the track of the deer would disappear from Maine.

 H. O. STANLEY, Commissioner.

[From Commissioner E. M. Stilwell.]

COMMISSIONERS. STATE OF MAINE, E. M. STILWELL, BARGOR. COMMISSION OF FISHERIES & GAME, HENRY O. STANLEY, BANGOR, Feb. 16, 1886. Dixfield. BANGOR, Feb. 16, 1886. Editor Forest and Stream: You ask me the question of our success with the Maine anti-hounding deer law. My reply is that we could have achieved nothing without it. There is no such thing as deer protection, there is no such thing as deer propagation with-out that law. The only question is between deer and dogs. You cannot have the one without stringently enforcing the law against the other. There is no such thing as a com-promise between the two. Since the passage of the amended dog law in 1883, the deer of our State have more than doubled.

dog law in 1883, the deer of our State have more than doubled. To claim that still-hunting is more destructive than hound-ing is utter nonsense. Hounding permits no sanctuary, no respite for the deer. They are driven even from their new-born and suckling young into the lakes to be shot. The still-hunter can practice his craft only after the leaves have fallen, after the fawns are weaned, the venison fat and in condition, and fit as food for man. E. M. STILWELL, Commissioner. P. S.—I send you also letters from Mr. John Shaw, the well-know shipbuilder; Dr. Samuel B. Hunter and C. B. Donworth, Esq., all of Machias, and Manly Hardy, of Brewer. Messrs. Shaw, Hunter and Donworth are sports-men of large experience, who have been for many years practically familiar with the Maine game question and inter-ested in the due protection of the great resource of our State. Mr. Hardy is a dealer in furs, has an almost univer-sal acquaintance with the hunters of the State—whites and Indians—is a keen observer, accomplished sportsman and naturalist, from whose opinion on this question there is no appeal. You are at liberty to publish the letters if you see fit.—E. M. S. [INCLOSURES.]

[INCLOSURES.]

MACHIAS, Me., Feb. 15, 1886. E. M. Stikeell, Com. Fisheries and Game: DEAR SIR—You ask my opinion about the anti-dogging deer law of this State in relation to its saving the deer. I will say that I think it is the greatest protection to the deer that we have. Yours truly, JOHN SHAW.

BREWER, Me., Feb. 15, 1886.

Hon. E. M. Stilwell: DEAR STR—In answer to your question as to my opinion of deer increasing where hounding is allowed. I have to say that my belief, backed by a long experience, is that they will be exterminated in less than half the time where hound-ing is allowed that they will where only still-hunting is done. People hound because they can get more deer in that way than by still-hunting. If this were not so no one would care to keep hounds. In the months of September, October and November, when there is no snow, the best still-hunters can kill but few, so those who wish some easier way ask for hounding. I believe deer can be killed fast enough by fair still-hunting without being murdered by hunting with hounds. Very respectfully, M. HARDY. Hon. E. M. Stilwell:

hounds. Very respectfully, M. HARDY, M. HARDY, MACHIAS, Feb. 13, 1886. Hon. E. M. Stilaell, Com. Fisheries and Game: Stu-In answer to your letter of inquiry as to the result of the law prohibiting the use of dogs in hunting deer, I will say from personal knowledge, the increase is perfectly aston-ishing, especially when the law is well enforced as in Wash-ington county. It has been proved here that the use of hounds by sportsmen cannot be allowed at any season, not only because of its destructiveness, but it so frightens the game that it leaves the hunting grounds. When hounds are used the residents provide themselves with that nondescript class of curs known as deer dogs, and allow them to hunt as they please, take them into their camps, hunt on the crust in the spring while the does are weak and the fawns are young, and in summer while the fawns are yet too young to care for themselves. In order that the law shall be effective it must include all kinds of dogs, for we often find the common cur the equal of the wolf. Since the close of the war I have lived in this town and have been greatly interested in the protection and in the in-crease of game. My business keeps me upon the roads the greater part of the time, besides I annually take my fall hunt. I find that since the enforcement of the anti-dog law so apparent is the increase of the deer, that the citizens now watch for the dece dog, which is hated as the farmer hates the sheep-killing cur. The wardens find no difficulty in getting information when any one undertakes to violate this most beneficial law for the preservation of game. For three

years the increase has been more marked in this country, for the law has been quite well enforced. At the time this law was enacted there were but few deer remaining in the State, the dogs and crust-hunters had nearly exterminated them, but the efforts of our Commissioners of Game, aided by the local protectionists, have restocked our forests so that we now can boast of one of the finest deer parks in the United States. As a sportsman I do feel thaukful that we have this most humane law prohibiting the use of dogs in the hunting of deer. If we kill the deer, let us do it deceutly, not torture, mangle and frighten to death. The law prohibiting the use of dogs is now one of the

mangle and frighten to death. The law prohibiling the use of dogs is now one of the factors of game protection, without it we should be dis-couraged and feel our foundation was gone. Game in Maine cannot be preserved without it. Yours, SAM. B. HUNTER.

Office of C. B. DONWORTH, ATTORNEY AND COUNSELLOR AT LAW. MACHIAS, Me., Feb. 15, 1886.

C. B. DONWORTH. ATTORNET AND CONSELLOR AT LAY. MACHTAS, Me., Feb. 15, 1836. Hon. E. M. Stilvell: My DEAR SIR—AS Commissioner of Fisheries and Game you ask my opinion of the results of the anti-deer hounding law in this section; and you are good enough to suggest that my anxiety for the preservation of what I consider to be one of the great sources of wealth of our people, and my experi-ence and observation as a lawyer, fit me to make such a re-port. Washington county, as you know, affords peculiar opportunities to measure the wisdom and efficacy of the sev-eral provisions of the protective system. The time is within wholly disappeared from our forests, owing to the lake of a statutory restraint upon the improvident hunter, but as soon as a wise policy of protection was introduced a marked increase was immediately apparent. The law, how-ever, in its earlier stages was found to be painfully lacking in the use of dogs was to be allowed on the chase. The lawmaking power soon became cognizant of the desideratum, and quickly engrafted on the law the provision prohibiliting tact moose, deer, caribou and all the larger space do that at mose, deer, caribou and all the larger game began to increase with astonishing rapidity, until now our forests are terming with animal life. The soon may well contemplate with satisfaction, and still more the fact that owing to its great abundance dogs are no onger necessary, nor even desirable, for the capture of this kind of game in reasonable quantities. You may thus ready inderstand why the opposition to the auti-dog law has been withing only the opposition to the auti-dog law has been withing only the opposition to the auti-dog law has been a completely and so effectually silence. Markerstand why the opposition to the auti-dog law has been a completely and so effectually silence. Markerstand why the opposition to the auti-dog law has been the second the sile and so effectually silence. Markerstand why the opposition to the auti-dog law has be

THE ECONOMIC VIEW OF DEER HOUNDING.

HOUNDING. G AME LAWS are not based on sontimentality. They are economic. Their purpose is to maintain the game supply. To accomplish this they must forbid all modes of killing which are destructive to game beyond its natural in-crease. If experience shows that by the practice of any one mode of capture the number of deer annually killed is greater than the number of deer annually born, that method must be forbidden. Otherwise the stock will diminish and the end will be extermination. On this principle the law for-bids crusting and trapping. On the same principle and for the same purpose—because by hounding the annual destruc-tion of deer has been proved by experience to exceed the annual increase—the use of hounds for the pursuit of deer in the Adirondacks is forbidden. On the same economic ground the law against hounds should remain as it is. The evonditions have not changed. They remain the same. The aw should stand. To repeal it, under any pretext, or with the substitution of any other protective measures, will be to sanction the extermination of the deer from the Adirondack wods.

sanction the extermination of the deer from the Adirondack woods. Without basing any argument upon the unsportsmanship and evident brutality of the practice of deer hounding, we submit the subjoined statement of facts, as bearing ou the economic view of the question. As conducted in the North Woods, hounding consists in driving the deer into a lake, pond or stream, and killing the game while it is helpless in the water. A huut is usually participated in by several individuals. One man takes the dogs away from the lake and puts them on a deer track. The rest of the men remain at the lake, two in each boat, at points where, with the aid of a field glass, the whole lake can be watched. When a deer enters the water to escape from the dogs, it is allowed to swim out, and then the nearest boat is rowed so as to cut the deer off from shore, and as it swims for some landing, the boat is sometimes run so as to force the deer's head under water, and when it comes to the surface, half strangled, a charge of buckshot, bullets from a repeating rifle, or blows from an oar or club, soon finish the work.

hold the struggling creature by the tail while the "sports-man" shoots it or clubs it with oar or bludgeon. The ease and certainty of hounding invite to indulgence in it numbers of summer tourists, who have no special taste for hunting, are absolutely without any hunting skill, and could kill a deer in no other way. With dog, guide (*i. e.*, oars-man), boat, and rifle, sholgun or club, they are sure of a deer if a deer is in the neighborhood. They kill principally because it is quite the correct thing to tell of having "shot that buck when I was in the Adirondacks." No question of their perfect right to this privilege would be raised, provided they could all kill deer and a proper supply of the game still be left. But they cannot. HOUNDING EASTER THAN STILL HUNTING.

they could an air decr. and a provide the second and they could an air decr. Any one can kill the poor, tired creature in the water. If he can't shoot well enough, his guide can row him up near enough so he can beat his brains out with an oar. The victim stands no c'ance whatever for its life. In still-hunting the hunter may break a twig with his foot; a quick motion of the hand or a puff of wind may give the deer its life at the last moment. It is only a few days at most between Nov. 1 and Dec. 1 that the still-hunter can follow a deer with any degree of success, and those days are when the ground is covered with wet leaves, or when the ground is covered with snow and upon leaves not frozen, and those are the exceptional days. Still-hunters do not kill a large number per man, but from one, two or three, and, in rare instances, five or more deer to each grun or sportsman in camp, during the fall. days. Still-hunters do not kill a large number per man, but from one, two or three, and, in rare instances, five or more deer to each gun or sportsman in camp, during the fall. But, on the other hand, the hounders—say three in a party, with as many dogs—kill two or three deer each day, not being confined to particular days. The hounds will drive a deer on frozen leaves, in dry or hot or wet weather, all the same

same. HOUNDING IS EVEN MORE DESTRUCTIVE THAN CRUSTING. The law forbids crusting. On the same principle it should forbid hounding. Hounding and crusting are very similar. Crusting means killing deer when there is a crust on the snow, through which the deer breaks, but which sustains the man. The crusted deer is killed when, floundering per-fectly helpless in the snow, it is easily approached by the man on the snow and clubbed or its throat cut. The hounded deer is killed when, floundering perfectly helpless in the water, it is easily approached by the man in the boat and clubbed or its throat cut. Crusting is destructive, water-killing is more destructive. One is just as bad as the other in principle, in actual practice water-killing would destroy more deer than crusting. HOUNDING DESTROYS THE DOES.

killing is more destructive. One is just as bad as the other in principle; in actual practice water-killing would destroy more deer than crusting. HOUNDING DESTROYS THE DOES. The proportion of does to bucks killed by hounding is fully 3 to 2. The reason of this is not at all difficult to explain. The doe is weaker than the buck and when hounded will sconer take to the water. Through the season when the voice of the hound is heard in the woods, the does linger in the vicinity of streams, ponds and lakes to be near their water refuge. The guides know this; they put out the dogs in the same vicinity, and the natural result is that more does than bucks are driven into the water. Some hounders' profess to discriminate and not to kill does; but the doe that is permitted to go free is the exception. The common practice is that when a deer—male or female— takes to the water it is considered legitimate game. Wet does, heated by a long run, are killed by the sudden chill to their lacteal glands, before the Legislature provides for the hounding of does in the uursing senson. When it is remembered that the killing of one doe is equal in effect on the future supply to the killing of four bucks⁴, it will be seen that in this respect hounding is especially ruin-ous of the game supply. The proportion of does to bucks killed by still-hunting. A record of deer killed by a party of four still-hunters for six seasons (1879-85) shows a total of 55 deer, of which 9 were does, a proportion of does to bucks killed must be added the number of does rendered barren by the practice of hound-ing. In this respect hounding is peculiarly atrocious in its effect upon the natural increase of the game, by preventing conception. Guides and old visitors to the North Woods say that the proportion of barren does to house with fawms is constantly increasing. To-day the relative number is very greatly in excess of what if was ten years ago. This is due to hounding. Hounding is practiced in the breeding eason. The does are in a state of constant ex

cavil that the barren does are increasing, and equally beyond question that the practice of hounding is responsible for it HOUNDING DESTIOYS THE FAWNS. To the sportsman in the boat on the lake "the enchanting music of the hounds" is just as pleasing whether the dogs be chasing an "antlered monarch of the glen," a nursing doe or a fawn. Because weaker than the old deer and less able to care for themselves, many fawns are caught by the dogs and killed (often without the knowledge of the hunter). Some are driven into the water and killed by the sportsmen. Some die of exhaustion. Others perish of starvation when the mother does have been hounded to death. [Others may be poisoned by the milk of hounded does which have escapel. This is pure conjecture. We can only base it on the fact that hounded does have been tracked by the bloody milk dripping from their dugs and leaving a trail on the lichens of the rocks over which the creatures staggered.] Without any allusion to the ethics of "the historic and most sportsmanlike method" of hunting deer, is it not per-tinent to inquire, If the does and fawns are to be hounded to death, what is to become of the deer supply? DOGS KILL DEER IN THE WOODS ALL THE YEAR AROUND. The fawns killed by the hounds and not recovered by the doggers are only a small proportion of the total number of deer killed in the woods by the dogs without the doggers. Hounds kill deer at all seasons in every county in the Adi-rondacks. The statements by Mr. Bainbridge Bishop, of New Russia, recently published. described what is going on to day in Essex county. mather it is a common expedient to turn the hounds out to hunt on their own account. Under certain conditions of have letter of Dr. Samuel E. Ward, in FOREST AND STREAM Feb. 18, two to the surface, half stranged, a charge of buckshot, bullets from a repeaking rife, or blows from an our or club, soon in the work.
 To metimes the pursued deer is killed on land as it runs by a bunter posted on a "runway," but in the North Wood his style of killing is the rare exception. The rule is that her posted on a "runway," but in the North Wood his style of killing is the rare exception. The rule is that her and the present bill desire. They want it because it is a more successful method than any other and it is a more successful method than any other and the seases the dog penetrates to the deepest cover and not ecore which could not be approached by a mann prese spuce and balasm swamps, fallen timber, dry bursh to cold aleam swamps, fallen timber, dry bursh to generate the dog ean timber, dry bursh to cold deer and killed off the method does have been hounded does have been hounded does have been tracked by the bloody milk drypping from their dugs and leaving a trail on the lichens of the rocks over which the creatures staggered.
 Because the dog can be successfully used at all time and in all weathers. No matter what the day, whether hot could, wet or dry, when the bound is put out the deer unation of the counds of the present body of water, where the locality, no matter what the day, whether hot could ago it will for the nearest body of water, where the sortsman is walting for his vicit...
 Because the dog can be successfully used at all time, and go it will for the nearest body of water, where the sortsman is walting for his vicit...
 The daw and the bounds. Does decays or shore, but death at the hand of the man in the board.
 To water kill deer requires absolutely no skill nor experience. The only requisite is money enough to bire signate it is a common the index of the same is soon. Sortsman is walting for the bood.
 To water kill deer requires absolutely no skill nor experience. The only requisite is money enoug

the snow dogs can easily catch and kill the deer, which at that time are often weak. The destruction of deer by dogs goes on through the twelve months of the year. If hounding be permitted at all—no matter how short the prescribed season— that will furnish an excuse for keeping packs of hounds. If hounds are kept, they will be used to destroy deer the year around. No legislation will be effective to preserve which does not absolutely prohibit the use of the dogs at all times.

WHAT ARE THE ACTUAL RESULTS OF ANTI-DOGGING LAWS. New York is not a pioneer in prohibiting the use of dogs in deer hunting. The same law has been successfully en-forced elsewhere. Some years ago, when the deer supply of Maine had been depleted by the doggers, that State passed an anti-hounding law, and this was made more stringent in 1883. The results are told elsewhere by the State Game Commissioners

Commissioners. A similar law obtains in Pennsylvania. In Potter, McKean and Cameron counties deer had in 1878 become practically extinct. The act of June 3, 1878, contained the following provision: "* * No person shall pursue any elk or wild deer with dogs in any part of this State, or shall kill in the water any elk, wild deer or fawn which has been driven thereto by dogs. Any person offending against any of the provisions of this section shall be deemed guilty of a misde-meanor, and shall be liable to a fine of \$50 for each elk, wild deer or fawn so killed, or pursued, or trapped. * * * Any dogs pursuing elk, wild deer or there town official may kill any dog that habitually pursues elk, wild deer or fawns." The result has been a great increase in the game. Deer are still-hunted there two and one-half months, and the supply is reported by old hunters to be as abundant to-day as it was in 1860.

The result has been a great increase in the game. Deer are still-hunded there two and one-half months, and the supply is reported by old hunters to be as abundant to-day as it was in 1860. It many portions of the Adirondacks the New York law was not stringently enforced last season. Some of the city sportsmen who are now asking for the law's repeal violated it last fall. But where it was enforced the result was beneficial beyond all question. Prime B, LicoXanD, State Game Protector for St. Law-rence and Franklin contiles, says: "In its working there can be no question but the law prohibiting dogging has saved large numbers of deer. Instead of the open and declared preparations and practices, we have now the secret and covert methods pursued by the doggers. With such efforts as the game protectors and game protectionists are able to make, the practice has been much abtated. With continued efforts, it will be suppressed, except as isolated cases shall occur beyond the reach of virilance to prevent, and to be classed with other erimes that, to an extent, always have and always will baffle the best police." Joint LIBERTY, State Game Protector for Essex and Clinton foundies, says there have been many undetected violations in his district, and adds: "Notwithstanding, I think the law has saved a great many deer in my district, and wherever I to the undications are that deer are very plenty. What hounding has been done was away from the settlements, and there very sly!" Mere Hamilton counties (himself an advocate of hounding, reported adversely to the working of the law because he could not enforce it. But the Beaver River country, in Brinkerhoff's district, was watched by a special constable paid by the hotel keepers, guides and visitors. Here is a report of the result, written by Mr. Chas. Feuton, of Number Pour. "The Heesver river country not less than 260 deer were tilled in the season of 1884; 200 were killed by driving into the water with hounds and about 60 by still-hunting. Last fall dies than dy deer in a

"The men who are not pleased are the ones who have "The men who are not pleased are the ones who have rented a hotel for the year and want to kill the last deer be-fore the year is up; also the outsiders who have to go into the woods in the fall and camp out for a couple of weeks, and with the aid of a dozen hounds kill or drive every deer

the woods in the fail and early out for a couple of weeks, and with the aid of a dozen hounds kill or drive every deer off the range. "None of the old-time hounders have indulged in the pas-time here this season. I don't think a dozen races were made at this lake the past fall, and we have seen the good effect of it. The deer come to the water late as well as early, and are now yarding within a mile of where I write this at my office desk. "This season has been the best one for still hunting we have known for a score of years, and yet very few deer were killed—only twenty at Chateaugay Lake, and these by five different hunters; three were killed from this house, two from the Merrill House and fifteen from a hunting camp four miles south of here. "If there is any legislation this winter in regard to the game of our State, let them provide a game protector for each town where needed, appoint good men and true and pay them for their services. If they serve the State, keep them; if not, discharge them and appoint others. Keep a good man at each game center and game will increase.—R. M. Snurrs."*

"THE UNION LEAGUE CLUB, New York, Feb. 15, 1886.—Editor Forest and Stream: In reply to yours of the 18th inst., desring my opinion of Richard M. Shutts, of Upper Chateaugay Lake, I would say that after many years of experience hunting in the North Woods, and know-ing many of the guides in that region. I know of nome more efficient and conscientions. He knows the country for miles around. His testi-mony as to the prices in law regulating the killing of deer I consider hundra is the present law regulating the killing of deer I consider would be more sport in the North Woods. Very truly yours. Samuel, C, REED.

The following statistics are also given on Mr. Shutts's au-

The following statistics are also given on Mr. Shutts's au-thority: "To get at the exact number killed by those who dog is next to impossible, for they are got through a longer time and by many from a distance, who carry them away, and there is nothing known about them. Not so with market still-hunters; the time is generally short in which they hunt, the weather cool, and they keep the deer they kill until they get through, and then take them to market. There has been as close an estimate made by guides as could be of the num-ber killed by doggers in the vicinity of Meacham Lake, Plumador and Duck ponds, Deer River and that section in 1884, and they make out 169; in the same section in 1885 by still-hunting, with a little dogging, 69. In the section around Wolf Pond and State Dam in 1884, by dogs, 40; in the same section in 1885, still-hunting, 17. It is worthy of note that there has not been so good weather for still-hunters in thirty years as the last fall has been. These are facts that can be proved beyond doubt."

THOSE "MARKET STILL HUNTERS" LAST FALL.

THOSE is the first of the solut."
THOSE "MARKET STILL HUNTERS" LAST FALL.
Reports of an excessive sharphter of Adirondack deer by market still-hunters last fall have been industriously circulated. The Fornest AND STREAM has taken pains to investigate these stories and finds them totally without foundation. They are put forward by the advocates of hounding purely for the purpose of misleading and deceiving the Legislature with respect to the results of the anti-hounding law.
Much stress has been laid on the market glut of venison fast season. To reason that the Adirondack still-hunters caused that glut is all nonsense, as may be shown by the statements of the hounders themselves in the pamphlet recently sent to the Legislature. The introduction to that pamphlet says, and very truly:
"To prevent the sending of venison to market from this fregion is a hardship to those only who do not live in the words; and it will be very little injury to them since it is estimated that in the large cities of this State not less than ninety per cent. of the venison comes from outside the State.
This leaves one-tenth to come from the Adirondacks. They importe that the markets of this State were glutted by the magnitude of this one-tenth of all the venison in market. They make no account of the other nine tents. They ippore the fact that venison from the West is always cheaper than Adirondack venison shipped in 1885 from the one State of Michigan alone. Another reason why the market could not have been glutted by Adirondack venison last eason is that only a small quantity of venison reas shipped to the one state of Michigan alone. Another reason why the one state of Michigan alone. Another reason why the market could not have been glutted by Adirondack venison last eason is that only a small quantity of venison reas shipped in the store of the other market from the North Woods.
To stop market-hunting, forbid marketing game. But to forbid marketing game, and at the same time to permit hou

IFrom the New York Times, Feb. 21.] The bill introduced at Albany for the protection of deer is a good bill in so far as it restricts the transportation of veni-son from the Adirondacks to two carcasses for each sports-man, to be accompanied by the sportsman. It is a bad bill inasmuch as it permits six weeks of hounding deer, and those the six in which more deer are likely to be hounded than in the other ten months and a half. For a consider-able term of years, at least, hounding should be pro-the disonder which more deer are likely to be hounded that in the other ten months and a half. For a consider-able term of years, at least, hounding should be pro-tected. The protection of the game is the prime consideration, since the Adirondack venison would under any circumstances be but a small portion of the venison that comes to the New York market every winter.

THE UTICA REPORT ON HOUNDING.—The Utica Associ-ation's report on the deer hounding law is another evidence of public sentiment on the subject. A member of the Asso-ciation tells us that the report was made after "a long obser-vation and collection of facts by our Association, which have been carefully and impartially weighed and considered. From all Lean hear, it speaks the honest sentiment of people in this section who feel the necessity of restrictive measures, and that personal ends must give way to the public advantage, selfish people to the contrary notwithstanding." The entire report is given elsewhere.

report is given elsewhere. CHOICE OF HUNTING RIFLE,—*Editor Forest and Stream:* I am done with repeaters, and give my reasons. They won't always repeat. Last winter one cold December day I was close on a large flock of caribou, yet went to camp without meat, as the magnzine was frozen solid. Practically I had no gun. This season it was one day reduced to a single shooter in consequence of an obstruction, a small spruce spill, in the magnzine. No repeater balances as well as a single-shooter. Given the same weight of gun, length of barrel and caliber, and a single-shooter will have a larger per cent. of metal in the barrel, where it will tell in accu-racy of holding and power of execution. I have used a rifle over fifty years, having owned a great variety of make, and purchased a late model repeater, mainly to show my brother hunters that I was not "set in my way" in preferring a single-shooter. It is a first-class gun, good as new, of a make that was in the front rank at the trojectory trial, and can be bought low. I go back to my first love. With a single-shooter I can bag as much large game here in the Maine woods as the law allows or a fair-minded hunter de-sires.—OPEN SIGNT (Camp Cosy, Mainc, Feb. 6). NORTH CAROLINA.—Belvidere, N. C., Feb. 15.—Although

SIGES.-OPEN SIGHT (Camp Cosy, Maine, Feb. 6). NORTH CAROLINA.-Belvidere, N. C., Feb. 15.-Although the weather has been extremely cold and we have had heavy sleet, still I find the birds have wintered well and are coming out into the fields now in force. In fact I find more birds now than at any time during the season; coveys of from fifteen to twenty-five and even more are now feeding where there were none during December and January. They have learned to protect themselves by retiring to the depths of the thick woods while hunting is at its height, and come up smiling and fat in the latter part of the season and early spring. During a two hours' tramp, a few days since, I found eight large full coveys, numbering in the aggregate not less than 150 birds. One would have thought a month since had he hunted our fields that Bob While nad played out, so scarce were the birds. It certainly seems a pity to shoot them so late in the season, but our best shooting after November is in March. The birds are then fat and finely favored, and strong enough to test the marksmanship of the shooter, as they can then fly at a lightning-like speed. As a rule they do not commence pairing off before the last of April or tst of May.-A. F. R.

FLORIDA GAME.—Enterprise, Fla., Feb. 15.—The hunting around here is unusually good this year. Mr. Couzens, of New York city, brought forty-three quall in last Friday, and reports large numbers of snipe and turkeys in the Lake Harney region, a few miles from here. Ducks are scarce on Lake Monroe, but a few can be found on the small ponds near here. Mr. Benson, of Brooklyn, N. Y., who spends his winters here, is a great fisherman and has splendid success with the rod and the. He seldom comes in at night with less than fifty pounds of fish, and often up to 200 pounds. The weather is delightful, and all sportsmen able to be out are reaping a harvest.—G. G. J.

COLORADO —Silverton, Col., Feb. 2.—In our immediate vicinity there is little or no game, and although almost every man you meet is armed, there is no shooting done except when some ambitious individual undertakes to paint the town "red." There is then the liveliest kind of shooting. Within seventy-five miles of us, however, almost in any direction large game can be found in abundance. A number of parties have been out from here, going over the range to the headwaters of the Rio Grande River, and all of them have had very fine sport with elk, blacktails and bears, both silver tips and black.—S.

AN UNSAVORY SUBJECT.—Brooklyn, L. I.—In FOREST AND STREAM OF Feb. 4 is an article signed by "Cocker," who says the "odors from Barren Island were not perceivable by him." The reason was the wind was from the west, and in consequence blowing in opposite direction from the point he was on If he had been to the east of Barren Island, where I was on the same day, he might have had his full benefit for the balance of the winter.—American.

KALAMAZOO, Mich.—At the annual meeting of the Kala-mazoo County Game and Fish Protective Association, the following officers were elected: President, Hon, T. S. Cobb; Vice-President, J. F. Cowgill; Secretary and Treasurer, Dr. J. A. Partridge; Executive Committee, George Winans, H. F. Badger, Dr. W. T. Stilwell.

PENNSYLVANIA.—In answer to "R. J. D.," I would advise him to write to some hotel in Hawley, Pike county, Pa., where he will find all he asks for. It is one of the best places for large game so near New Jersey. It is recom-mended by some of our very best sportmen.—E. F. K.

GREAT SOUTH BAY OPEN.—The ice has disappeared from the Great South Bay and the ducks are beginning to arrive in considerable numbers. Quite good shooting has been had at a number of points, and a large bag was made a few days since near Sayville.

NEW JERSEY. — Smithburg, Feb. 18. — Game in this section was more plentiful the past season than for several years back, and a great many quail and pheasants were left over. We do not think that the game has suffered much.— W. L. B.

MR. HAGUE ON THE PARK.

THE following letter, recently written to Senator Mander-son, of the Committee on Territories, deserves the careful attention of all who are interested in the Yellowstone National Park. No such clear and convincing statement of the injury which will be done to a vast tract of our country by the destruction of the Rocky Mountain forests has ever been printed:

been printed: UNITED STATES GEOLOGICAL SURVEY, YELLOWSTONE NATIONAL PARE SURVEY, WASHINGTON, D. C., Feb. 4, 1886. Hon. Charles F. Manderson, U. S. Senate: STR:-A hill for the protection and better regulation of the Yellow-stone National Park has recently heen introduced by Senator Vest into the U.S. Senate. Knowing your keen appreciation of the Yellow-stote National Park has recently heen introduced by Senator Vest into the U.S. Senate. Knowing your keen appreciation of the value of the Park. I desire to call your attention to one or two points which seem to me of the utmost consequence in carrying out the purposes for which the Park was originally set apart and has since been main-tained.

of the Park. I desire to call your attention to one or two points which seem to me of the utmost consequence in carry lng out the purposes for which the Park was originally set apart and has since been main-tained. In order to accomplish these purposes the most essential features in the new bill are those which relate to the enlargement of the Park and the sharper definition of its boundaries. In the original bill creating the Park the boundaries are loosely stated. A better ac-quintance with the country enables us to say more intcligenly where the boundaries should he drawn, while experimce shows that, to avoid encroachments on the reservations, they should be more sharply defined by law, and the lines accurately run. In this respect the present bill meets all the requirements of the Park. For the purposes for which the Park was set aside the present area is far too small. In my opinion the object of first importance in maintaining the Yellowstone Park is the preservation of the forests. The question of timber preservation is one which is gradually attracting more and attention in all the more settled parts of the country. The necessity for some procer restrictions, firsidy enforced, is now very generally admitted. In the far west, where such immense tracts of country are recless areas, it is all the more necessary that some carefully con-sidered restrictions should be placed upon the indiscriminate cutting of timber from the public domain. It seems equally necessary that certain areas, favorably situated for the growth of trees, should be country, owing to the many conflicting interests, proper protection by peristative is a matter of great difficulty. It is sufficient to call your attention to the struggle going on in New York State in the attempt to preserve, by legislative endement, the forests of the Adironaleka. That, there should be some additional restrictions in the cutting of moder has here very generally admitted, but to control the matter with due regard to the rights of all is 'n on means easy

drain into the Missouri and Columbia, have their sources here on the plateau, the former in Yellowstone Lake, and the latter in Shoshone Lake. Yellowstone Lake covers nearly 125 miles of surface, while Sho-sbone, with very irregular outlines, measures more than six miles in length. Hundreds of smaller lakes is escattered over the plateau and mountains, and innumerable springs feed these lakes and rivers. Ver 3,000 thermal springs are known within the Park. No recion in the Rocky Mountains is better favored in its supply of water, the rair and snowfall being unsurpassed in any area of equal extent. Nearly all precipitation between the middle of September and the first of May falls in the form of snow which lies upon the ground well into the summer. This broad, elevated mountain mass is so situated as to gather the storms which center in the norther. Rocky Moun-tains, and the topographical structure of the region enables it to re-tain the waters. For the storing up of thus water and regulating its dow, the foresits are of immense value. It is unceressary here to center at length into a discussion of the multenee of the foresits upon the supply of water. In a few words the gate and the boroky largely protected from the direct rays of the sum and sheltered from the dry winds blowing from the west ward. In consequence the snow melks gradually and the water per-colates through the scill and vegetation, slowly randing its with the

winds would take up the snow, precipitating the moisture further to the eastward over country already supplied. Without the trees the old would soon be washed away, learing the country unfit for vege-tation. The report of the recent Forestry Commission of the State of New York says "that the summer flow of the Adrondack rivers has decreased within the memory of men now living from thirty to fity per cent. Many of the small streams, which a quarter of a scentury gow were abundantly supplied with water during the entire summer, are now dry during many months." In my opinion, owing to the dryness of the Adrondack Forestry around the sources of the Mirsouri and Columbia would cause, rela-tively, a far greater diminution in the flow of water than that observed part the sources of the Mirsouri and Columbia would cause, rela-tively, a far greater diminution in the flow of water than that observed part the sources of the Mirsouri and Columbia would cause, rela-tively, a far greater diminution in the flow of these great rivers seading their waters to the Atlantic and Pacific. If is the turure the lower values to use a sto include the linear yours decable population, they of preserve the natural reservoirs of these great rivers seading their waters to the Atlantic and Pacific. If is the furure the lower values do as to include the linear the area of the Park should be preserved the advantery of the parks within the limits of the parker do as as to include the linear the area of the Park should be care area my drainng hito Yellowstone Lake, the East Fork of Yellow-tone flow, is one of the most alpha end rugged regions of the Yellow to the dowly do a single rount in range of the parks issue from the dowly down the strater of the present boundary of the Park weight he adding the easter of the present boundary of the Park weight he adding the easter is for the remeting trans-tion to the destry of great natural beauty, hat u-less for the Rocky Mountain system. FLORIDA BASS.

<text><text><text><text>

Ish, and although the water was at least ten feet deep it was so clear I could see his motions when he darted forward and closed on it. The reel buzzed and my rod bent double, but at last I suc-ceeded in stopping him, and then with a splash he cleared the water, making a clear leap. My nerves were all on edge and I settled to work, but he was not very gamy and soon gave up. He tipped the scales a triffe under six pounds. I was satisfied to let Sam use up the balance of the bait, which he did and caught a fish with every one. While he was fish-ing a shower came up and the surface of the lake fairly boiled with the splashes of the bass. I quietly put on a leader and a fly made of the breast feathers of the wood duck and commenced casting and caught two or three small ones but was not satisfied. I made Sam row the boat slowly whill I trailed the fly about twenty-five yards behind and we had not gone far when I hooked into a 'gator but the unext lungc was too quick for anything but a fish and I knew he was a big one.

<text><text><text><text><text>

It was stormy and warm and just my favorite time and I boasted a little that I would show them all the fish they wished to catch, and I did. I never saw the fish bite as they did for the next three hours, and they were large ones. One person rowed while two fished and when we counted up at five o'clock we had sixty-five bass that would average two pounds apiece, ranging from one to seven pounds, and this can be proved also. At Sam's request I gave him a fly, and the next day I found him diligently fishing with a float on his line and the fly on for bait; he gave it back to me that night saying he could not catch anything with "dem feders." feders

feders." If you have not be taken any birds with the feders." I do not like to see a man struck when he is down, and Florida has received a severe blow in the last cold wave, but all its enemies cannot hurt it one iota or keep it from being the delightful winter resort that it is for sportsmen. I speak as a sportsman and not a land speculator. It is true, one cannot sit on the hotel steps and catch fish as in Bermuda, or kill wild turkey out of the window, but good fishing and shooting can be had even in Florida. And a better place for a cruise in a canoe a canoeist could not wish for than is found in Charlotte Harbor or any other inlet or river south of Tampa, on the Gulf Coast. Ask Nessmuk. F. P. S.

WIND.

WIND. MAY books on angling contain explicit directions con-cerning the proper weather for fishing, and especially which way the wind should blow to secure success. These have been copied one from another, and have become so im-pressed upon the literature of fishing as to have become part and parcel of the creed of many who seek recreation by lake and stream. These maxims are, almost without exception, taken from old English books, and no doubt had a very re-mote origin. These older books have been made accessible to the modern angler by the most excellent reprints of Mr. Thomas Satchell, without whose researches and enthusiasm few of us would ever have had the pleasure of beholding their pages; the originals in many cases being confined to two or three copies, which are treasured in public or private lifetimatics and are without price. In days when these weather-wise sayings were recorded, the English angler was, owing so the difficulties that attended travel, mainly confined to the waters of his district which could be reached in a day, either by coach or on foot; and therefore a saying regard-ing the wind, in which he found some truth, may have been so the difficulties that attended travel, mainly confined to the waters of his district which could be reached in a day, either by coach or on foot; and therefore a saying regard-ing the wind, in which he found some truth, may have been soute ble with a there or the state where the island where the same und blew up the stream. This subject has been brought to notice by a correspondent in a Western State, who writes, asking if there be any trutts "When the wind is in the north, The skillful fisher cores not forth:

"When the wind is in the north, The skillful fisher goes not forth; When the wind is in the east, It is good for neither man nor beast; When the wind is in the west, Then it is at its very best; When the wind is in the south, It hlows the bat it the fish's mouth " It blows the balt in the fish's mouth.

I answered him that the last couplet probably contained as much truth as the remainder of the stanza. His query set me to looking up what some of those old authors have said on the subject, and while there has much been written on the weather in general, I will quote only a few things which relate more particularly to the wind. In an old notebook of mine the following occurs, copied years ago from some source now forgotten:

"Whanne ye west wynde it schall blowe Fort ye fischer he schall goe; Yet if to eastward it schall change, Furder ye fischer schall not range; Whanne from ye nort ye wynde schall come, Ye wisest fischer stayeth home. But if to southward it schall veere, It hymroseth to ya fischer schaer." It bryngeth to ye fischer cheer

The Germans say: "Bei Ostwind und glänzendem Sonnenschein Beissen die Fische nicht, das präge dir ein ; Doch fragst du, welch' Wind dem Angler am besten, So sage ich, der von Süden oder Südwesten."

This may be translated:

When the wind is east and the sun shines bright Bear this in mind, the fish won't bite. But if you ask, 'What wind is best?' I'll answer, 'From either south or southwest.' '**

Damc Juliana Berners [1450] says: "And if it be a cold, westeling wynde and a darke, lowryng day, then will the fysche commonly bite all day. * * Ye shall angle, as I said be for, in dark, lowryng wedur when the wyndc blow-ethe softly, and in somer scasen when it is brennyng hot, It is from September unto April and in a fayr sonne day is good to angle in, and if the wynde that seasen leave any part of the oriente northe, the wetur then is good, and wen it is a greate wynde, it snowyt, reynet or haylyth, thonderyt or lightneth or also minynge [sweltering] hoyt that is not to angle."

lightneth or also minynge [sweltering] hoyt that is not to angle." Note now how Master Leonard Mascall [1590] bodily steals from the Dame, not troubling himself to change her phrase-ology, rightly thinking that in those days a book one hun-dred and forty years old was'out of print and unknown to his generation. Collectors of angling books were rare in his day, and Mascall might have thought that he was alone in the desire to preserve such as he could find. Certainly he did gather and unblushingly appropriate their contents and pass them off as original, not dreaming or caring that a Thomas Satchell was to arise who would not only ransack the libraries of the world for old fishing books, but would actually reprint them verbatim for anglers nearly three hun-dred years later, and that the literary angler of that remote period would be able to judge how much of a work was original, or what portion the author had seen fit to—

*Since the above was written I have come across the following in Salter's "Angler's Guide;" "When easy wind blows or sun shines bright, Then don't expect the fish will bite. I ask'd, "What wind suits angling best?" I ask'd, "The south, or southwest."" Whether Salter took this from some old German saying, or whether some German translated if from him, is beyond my knowledge. In the language of the showman when asked, "Which figures in the painting represented Daniel and which the lions?" I can only say: "Which ever you please my little dears, you pays your money and you takes your choice,"

"convey, the wise call it." What he borrows from Dame Juliana on this subject is (note the almost identical lan-

Juliana on this subject is (note the almost identical ian-guage): "Here ye shall vnderstand in what wether ye shall best angle as aforesaide in the darke louring day, when the winde bloweth southly from the south or west; in the summer sea-son when the sunne is very hote, it is then naught to angle, but from September vnto Aprill, it is then good in a fairc sunny day, the winde being then good; if it haue any part of the Orient or east, it is then naught to angle, for they will not byte, or when it is a great winde, snow, raine, or haile, or in a great tempest of thunder, or lightoning, for it feareth them, or els in a swooly hote wether, all these times are not good to angle for to take fish." Dr. Edward Hamilton tells us: "Recollections of Fly Fishing for Salmon, Trout and Grayling," 1885; in comment-ing on Walton's "Dark Day and a Right Wind?" "A dark day and a right wind no doubt is every fly-fisher's wish when he goes a fishing—but which is a right wind? "When the wind is in the south It blows the the bait in the fish's mouth." "Others are loud in the praises of a westerly wind, but to

It blows the the bait in the fish's mouth.' "Others arc loud in the praises of a westerly wind, but to quote from the 'Compleat Angler' again, Walton hits the mark in the following passage: 'And yct, as Solomon ob-serves, that 'he that considers the winds, shall never sow,' so he that busies his head too much about them, if the weather be not made extreme cold by an east wind, shall be a little superstitious, for as it is observed by some, there is no good horse of a bad color, so I have observed, that if it be a cloudy day and not extremely cold, let the wind set in what corner it will, and do its worst, I heed it not." John Dennys [1613], who in rhyme tell us the "Secrets of Angling," gives such directions that if one relies upon his minutc instructions, he need only consult "Old Probabili-ties" twenty-four hours in advance, in order to foretell what sized creel he need carry. He warbles:

- "But if the weather stedfast be and cleare, Or ouercast with clouds, so it be dry, And that no signe nor token there appeare, Of threatening storm through all the empty skie, But that the ayre is clame and void of feare Of ruffling windes or raging tempest hie, Or that with milde and gentle gale they blow, Then it is good unto the brooke to goe.

 - When faire Aurora rising early shewes, Her blushing face beyond the Easterne hills, And dyes the heauenly vault with purple rewes, That far abroad the world with brightnes fils,

 - The meadowes greene are hoare with siluer dewes, That on the earth the sable night distills, And chanting birds with merry notes bewray, The neere approaching of the cheerfull day.
 - The nerve approaching of the cheerful day. Then let him goe to river, brooke or lake, That loves the sport, where store of fish abound. And through the pleasant fields his lourney make, Amidst sweet pastures, meadowes fresh and sound, White swift Hyperion runnes his circle round; And as the place shall to his liking prove, There still remaine or further else remove, collur heild, it down to this:

And finally boils it down to this:

- All windes are hurtful if too hard they blow, The worst of all is that out of the East, Whose nature makes the Fish to biting slow, And lets the pastime most of all the rest;

- The next that comes from countries clad with Snow, And Articque pole is not offensive least, The Southern winde is counted best of all, Then, that which riseth where the sunne doth fall.

And Articque pole is not offensive least, The Southern winde is counted best of all, Then, that which risets where the sume doth fall. In my own experience and from that of gentlemen with whom I have fished, I incline to relegate all this weather wisdom to the books of nursery rhymes and fairy tales. If it were true that such formulas could be laid down, they would apply only to particular streams. The youthful angler who burdens his mind with these quaint old sayings and allows them to control his judgment in the selection of a day when he may sally forth, "armed and equipped as the law directs," will forego many a good day's fishing. I remember in particular one morning in the Adirondack region before the month of May had advanced into its teens, when a young friend who had camped with me over night and was filled with the knowledge that comes from such sources as I have mentioned, rose and looked out of the tent and said, "There is a raw east wind and it is not worth while to go on the lake to-day." I decided to go, after arguing the question with him a little while, but he staid in the camp and read during the morning. I had three hours of most excellent fishing; The fish rose to the fly freely and on my return to camp I brought him thirteen as fine trout as the lake produced, averaging nearly a pound cach. I have fished with him many times since and to-day it is amusing to hear him scoff at the precepts which he had formerly regarded as being part of the fundamental rules to be observed by an angler. With doubt a strong wind blowing directly up or down the stream may at times affect the fishing; it is probable, however, that the temperature of the water in hastening or retarding the developement of the inscet larva and causing them to rise speedily and take the winged state or to remain at the bottom, has more effect on the appetite of trout than the direction of the wide. Sir Humphrey Davy says: "We cannot' judge of the senses of animals that breather water—that separat

to air." There seems to be more good sense summed up in that sentence than all I have quoted before. I have spoken mainly of trout, and if any of our fishes are affected by slight changes of temperature which affect the motions of their delicate insect food, the trout would seem to be the most susceptible of these influences. I very much doubt whether pike are influenced by the wind at all. It is pos-sible that they, like the trout, are inclined to take the lure more or less freely as the sky may be overcast or clear. But I doubt if many other atmospheric changes have any in-fluence upon them.

fucnce upon them. My own rule is to fish when I feel like it and to take the weather as it comes; and I have never been able to forecast my catch by a glance at the sky or by the movement of the treetops. I have made good catches on most unlikely days;

FEB. 25, 1886.]

I have gonc forth on the most promising of mornings and come home empty-handed, and the sum total of my knowl-edge of the influence of the wind upon a day's catch is that we can't tell anything about it. FRED MATHER.

FISH LAWS OF NEW YORK.

<section-header><text><text><text>

MY FIRST BASS.

<text><text><text><text><text><text><text><text>

In the tent. By 12 o'clock the two in the wagon came to the conclusion that their quarters were more romantic than comfortable, and were very glad to accept the hospitality of the tent.
The one unrolling from my blankets next morning I was surprised to see several other tents which had sprung up like parties who had come to spend a day or so at the pond. After a meagre breakfast we easily obtained boats and tackle, but it took a considerable bargaining before we could buy even a few minnows for the party, but while this bargaining was going on one of the boys, unseen by the owner, had succeed in emptying part of the contents of the pail into a time an which was then secreted beneath a seat.
We find the spots to which our friends at "Camp Do-little," (a very appropriate name, by the way) had directed us, all lines were overboard. Then came suspense. Who was to catch the first fish. I had arranged my bait with particular care and had strong hopes of being the first, but alas far my hopes, Grib was the fortunate one. His line was the last one out and the first one in, but we had little reason to envy his conquest, for it was an exceedingly small one, but—hold on, what have I got on my line? Whew! I never knew a pike or a prech to pull that way. I knew nothing at that time about striking or playing a fish but I did know enough not to yank.
Men I feit sure that the hook was secure, I pulled gently, for mind him that I had an engagement with him, but here ded no such reminder, as he was soon tearing around at a farful rate of speed, while I was so excited that I could scareful rate. One or twice he leaped clear of the water. My heart ran and fell with his movements. Now he would har under the boat greatly endangering my line, then the way beart would first to the highest pitch of expectation; but there is an end to all things and there was a disastrous one or boy struggle with that bass. The other boys had been as interested in the performance as I, but suddenly Ed. was brought to his senses b

his surprise and excitement he leaped to his feet rocking the boat fearfully. I who was standing up in an inclined po-sition at that moment, lost my balance and pitched headlong into the lake. When I came up I seized one end of my rod and Milt the other and without much trouble I was dragged on board.

and Milt the other and without much trouble I was dragged on board. Notwithstanding my sudden bath I felt no less anxious to land that fish. I picked up the pole and found that he was still hooked to the other end but was completely exhausted and made no further resistance. Oh! wasn't he a beauty as he lay there upon a bed of water lilies which had been gathered on the way out? How his dusky scales glistened in the sun. I was so intent upon watching this, my first bass, that I completely forgot my wet garments. He weighed over a pound; not a very large catch perhaps, but was the first one whose size would war-rant any boasting. Thus ended my first experience with black bass, but that day is one of the never to be forgotten days of my life. Our luck varied somewhat through the remainder of the day, but nevertheless we had a fine string to carry home with us that night. CLEVELAND, O.

BLACK BASS IN LAKE ERIE.

CLEVELAND, O. BLACK BASS IN LAKE ERIE. Editor Forest and Stream: The laws of Ohio which were passed to protect the black bass are practically obsolete. They say: "Whoever shall, at any time of the year, in Lake Erie, in the vicinity of the islands thereof and in the bays tributary thereto, upon the shoals and reefs therein, by means of any device whatever, fish for or catch any fish, shall be guilty of a misdemeanor, and on conviction shall be punished, etc. * * And, provided further, it is hereby made the duty of the Fish Commissioner, on complaint of any person or otherwise, to prosecute all violations of this section." Last October I saw from fifteen to twenty pound-nets set near the islands, with their fences or leaders extending over the above mentioned shoals and reefs, and one day while fishing near one of the pounds, saw it lifted and over two hundred pounds of black bass, and other fish taken from it. Some of these fish were quite small, not over five inches long, and should have been returned to the water, but they all went to market. That this kind of fishing is illegal everybody knows but no one attempts to stop it, as far as 1 can learn. A fisherman told me that the small bass were shipped to distant points south and west, and were not sold in Sandusky and Toledo. I went up to the lake for a week's fishing on the old grounds which I used to visit wenty had, but returned disappointed. If the people living about the lake do not see that the bass are going because the small meshed nets do not allow them to mature, then they must be blind. It seems criminal to allow a few men to spoil the fishing about the islands, where the bass congregate on the shousiness. It was hinted to me that the Fish Commissioners author.

Shoals, in order that they hay interview the activation of the business. It was hinted to me that the Fish Commissioners author-ized, or at least allowed, these nets to be set during a great part of the year because the Commissioners could get the spawn of the whitefish from the nets in the fall, but where their authority comes from for such a bargain I do not see. As they pay the fishermen for the privilege of handling the fish and taking the eggs it would seem to be a stroke of policy for the Commissioners to own nets and set them at such times as the whitefish are spawning and release all other fish. We should have laws to prevent the extermina-tion of our fishes and they should be strictly enforced. Arkon, O., Feb. 15. S. R.

A BASS FISHING REMINISCENCE.

pounds, saying nothing of those that took flies and leaders, and I think we lost ten of the former. It's no easy job to handle two large bass at once when they are of different minds. Well do I remember one big fellow who was so sur-prised to see my companion just ahead of him that he "lit out," and as he passed between my legs and the second fly caught on my pants it gave him the best excuse in the world for going on, and he did, too. * The next week I started for Gogebic, but the memory of that trip was too fresh in my mind to fish for the noble bass with a spoon, and I did not. During the two weeks there I took but one. But the trout. Sufflee to say I got there. NIMROD.

NIMROD

NIMEO. THE MUSKRAT AS A GAME FISH.—Editor Forest and Stream: Having fished a number of years through the ice for pickerel, and in a number of ponds in New England, both large and small, I wish to be advised relative to a very singular affair that happened to a party of gentlemen on Jan. 16, 1886. We fished upon a pond in Plymouth county, of this State (Massa-chusetts). The lines were left in over night, and upon visit-ing them next morning, on one of them that was set in sixteen feet of water and at least twenty rods from the shore, we found a live muskrat. He had taken the bait and was securely hooked through the upper lip. When pulled out upon the ice he was as lively as a cricket, and had to be killed before being unhooked. Will you please inform me if this is not a very unusual occurrence? I have not been able to find a person who ever heard of such a thing. Should like to hear from some of the winter fishermen, who are readers of your valuable paper, if this kind of fishing has-ever been duplicated, and if so under what circumstances. This pond is quite a large one, some fourteen miles in cir-cumference, and in it the cels are very plenty, and bite at our bait just the same as in the summer, and I have caught them at midday, and lines left in over night are sure to have some on in the morning. Is this not an unusual matter? Hoping to hear from the fishermen, I remain, CHARLES W. DYER. DYER.

DYER. New JERSEY SEASONS —Secretary's Office, The New Jer-sey Game and Fish Protective Society, Plainfield, N. J., Feb. 17, 1886.—Editor Forest and Stream: The trout law for New Jersey has not been changed by the Legislature, nor is there any bill before it at present to do so. The law remains as it has for years—open season from March 1 to Oct. 1 inclusive. The black bass law has been amended so that the open season commences on May 80 (Decoration Day). The Governor has signed the bill. An effort is being made to extend the season to Dec. 1, instead of closing it, as at pres-ent, Nov. 1. The law would then conform with New York and Pennsylvania. A number of bills are before the Legis-lature to alter and amend the game laws, but I don't think they will amount to anything. The laws are good enough as they now stand.—W. F. FORCE.

SOUTH SIDE CLUB. —Election of officers of the South Side Sportsman Club, of Long Island, Feb. 15, 1866: President, Roland Redmond; Vice-President, Charles Banks; Treasurer, John Benjamin; Secretary, Francis O. de Luze; Counsel, John E. Develin; Executive Committee. H. H. Hollister, H. B. Hollins, Francis O. de Luze, J. H. Purdy, Wm. B. Ken-dall. For honorary membership, James Benkard.

TROUTING IN CANADA.—Mr. John G. Manning writes that he knows of a route for cruisers where he has taken trout that averaged 2[±] to 3 pounds, and even as high as 5 pounds, and estimates a willingness to impart his knowledge to approved parties.

ANOTHER WAY STILL TO CARRY A LANDING NET.—Hang it on your hat or cap, and let the handle hang down behind you. Bother your "hooks to hang it on, say I.—LEVI

Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription \$1.50. Address "American Kennel Register," P. O. Bo. 2833, New York. Number of entries already printed **3333.**

FOUR-FOOTED ACCOUNT OF IT.

<text><text><text><text><text>

Off again, ranging over the fields, but much to my surprise, the birds were not followed into a pine wood. I could have found, no doubt, and I know that at home, when for-tunate enough to find a covey early in the day, we do not soon forsake them for the uncertain prospect of finding more birds. What's this trail my nose is on? Zip! Off goes one of those hitle brown rabbits. Away go the dogs in full chase after him, notwithstanding the yells of their masters, accompanied by stronger expressions than were current in the New England hamlet where I was reared. Soon they give up their chase for fur and go to work again. I will not weary you with a repetition of this experience. We found no stubble fields such as I am used to at the North, but the resorts of the birds appeared to be in large fields where the partridge, pea or rag weed had followed the crop, or in the brown staw or came brake. One has constantly to be leaping the ditches which cross the fields, and often we find the birds on their edges. What strikes the setter family as a drawback to the shooting here is the pesky sand burrs. How can a dog give his mind to hunting with a burr under each shoulder, and a half dozen at the root of his tail? After nearly biting off said appendage, I gave it up and approached my master to let, him try his hand. I will remark, *en passand*, that men are intelligent in comprehending our wishes, if we are only reasonably patient with them. It took my master a half an hour at the end of the day's shooting to rid me of the burrs.

The set a har borns. At the close of the day we found that we had started twelve coveys of birds. Our bag to four guns was—but I forbear, lest I cause my Northern brethren to view with dis-satisfaction their own achievements in the field. Another reason for my forbearance is that at my time of life it has be-come apparent to me that such reports are strangely inaccur-ate. I have been out with parties shooting when, at the end of the day, the bag would grow larger at every inquiry as we drew nearer home. The first time that this occurred I thought that I had made a miscount, but later the sad truth of man's mendacity came home to me. I am, therefore, con-vinced that my simple statement would seem incredible, and that it would be believed that this human weakness had been imitated by your obedient servant. DASH. WHAMSETON, N. C., Feb. 6.

THE UNPAID SPECIAL AT CHICAGO.

WHAINSTON, N. C., Feb. 6. THE UNPAID SPECIAL AT CHICACO. Editor. Forest and Stream: The above case has been known to me. In common with all your readers, I knew that the Illinois Kennel Club had failed to pay all the premiums won at their recent show, and heard in a general way that special had followed the fate of regular premiums. I knew valso that some exhibitors, men of wealth and influence—one a director in the Pittsburgh club— had promptly received their premiums, while certain needy ones were left in the lurch. All this was very disagreeable, but it is nothing to the full facts of the case. It appears that a gentleman of Chicago (or near by) gave a special of \$15, which money was paid into the treasury of the club. The prize was won by a particular friend of the donor, but was never paid him. If this does not surpass in—well, plain English serves the purpose best, and I will say dishonestly, anything that has ever transpired in connection with dog shows in this contry. I challenge the production of its equal. The non-payment of regular premiums to be paid out of the revenues of the club is bad enough, but after all, I would have sympathy with the directors of a show, who after weeks of hard work and neglect of their own private business, find to functing their hands in their pockets and making up a loss, no fault of theirs, and I think the proper thing for the exhib-proportion to the club's losses. Atthough I am fully aware that use a low we fagland, New Haven, Westminster, New Jarsey, Philadelphia and Pittsburgh, would scout such a pro-portion to the club's losses. Athough I am fully envery and conversion," and to the lary mind it is simple embezzle-ment, et to call it by the harsher name of robber. The the is matter pass by in silence. The offender is your follar" show. To take money given them for a special definite purpose and diver it from the plain purpose of the donor, whose trustee the club is, my lawyer friends tell me is "trover and conversion," and to the

disgrace. Will you, gentlemen, tolerate "trovers and conversionists" W, WADE.

THE ALEXANDRIA FIELD TRIALS. [From a Special Correspondent.]

[From a Special Correspondent.] ON Tuesday, Feb. 16, the first trials for amateurs of the Alexandria Rod and Gun Club began with the Derby. A very fair attendance of spectators were present at the trials and the utmost goodfellowship prevailed. In conse-quence of the probability of several sportsmen arriving after Monday, the day on which entries closed, the time of closing the entries was postponed until 9 o'clock on Tuesday. The Derby was the first stakes run, and had only three entries. Knight Gladstone, Capt. Craig and Reveille, first, second and third respectively. The winner, Knight Gladstone, is a medium size, compactly built dog of approved field trial type, and showed himself to be a puppy of merit. Capt. Craig is style. Reveille is a large dog, but appeared to be off in his work. The country is finely adapted to a field trial, and a heartier welcome and greater hospitality is not shown any-where. A very fair degree of skill was shown in the manage-ment and handling, considering that trials are a new institu-tion in this section of the country. The judges were Mr. Amory R. Starr of Marshall, Texas; Judge J. M. Thompson. of Covington, La, and Judge John Clegg, LaFayette, La Mr. Starr had an entry in the stakes, and when he was hand-ling, Mr. J. W. Prescott acted in his place. A start was made at 1030 to a plantation about one mile from town, where the bard to a plantation about one mile from town, where the trials were begun. *THE DERBY.*

THE DERBY.

There were only three entries for the Derby, which were drawn and run as follows: KNIGHT GLADSTONE AND CAPT. CRAIG.

There were only three entries for the Derby, which were drawn and run as follows: INIGHT GLADSTORE AND CAPT. CRAID. AND CAPT. OR M. J. ALL AND THE ADDITION AND CAPT. CRAID. CRAID. AND CAPT. CRAID. CRAID.

the heat. Down one hour and noe minutes. KNIGHT GLADSTONE AND REVEILLE. A rest of twenty minutes was allowed. At 12 o'clock Knight Gladstone and Mr. John H. Renaud's (New Orleans, La.) black and white English setter dog Reveille, whelped March 17, 1885 (Gladstone-Flossy), handled by Mr. Henry Fontaine, were cast off in the heavy weedlield where the last brace was taken up, and worked down wind to birds that had been marked down. Reveille started off very slow, and in

fact he hardly left his handler for some time; but after get fing to the open cornfield he got some faster and showed a tranger, and showed better style in heavy weeds. Reveille fushed single birds and was steady to wing. Moving on to directly the direct and located his bird in good style, holding his horse to cross the direct and located his bird in good style, holding his horse to cross the direct and located his bird in good style, holding his horse to cross the direct and located his bird in ally flushed wild, and Knight was steady to wing. He deserves a great deal of some distance across the water in thick heavy case. Going on packed. Knight discovered his error and roaded on some di-saked. Knight discovered his error and roaded on some di-saked. Knight discovered his error and roaded on some di-saked. Knight discovered his error and roaded on some di-saked. Knight discovered his error and roaded on some di-saked. Knight discovered his error and roaded on some di-saked. Knight discovered his error and roaded on some di-saked, thight backed well. Fontaine, to order, flushed a single bird, shot and killed. Both dogs broke in and dropped to divide the ake a good roase or this pointed a small bird. Going on some distance, drawing cotton, weeds and cornfield blank, hight made a varie cast across the cornfield to a little ditch and madred yraving both what time enough to go over was pointing small birds, ordered him on, which order he was pointing small birds, ordered him on, which order he was pointing small birds, ordered him on, which order he was pointing small birds, ordered him on, which order he was pointing small birds, ordered him on, which order he was pointing small birds, ordered him on the weed bield heav by was the bevy, losing the wind of them, made a show or was pointed it. Robinson, to order, flushed, shot are been hight soon pointed it. Bobinson, to order, flushed, shot are been was been the dogs were ordered up at 1.50. The heas was been the dogs were ordered up at 1.50. The heas billed

REVEILLE AND CAPT. CRAIG.

REVEILLE AND CAPT. CRAIG. At 1:40 this brace was cast off in a cornfield and worked on some scattered birds marked during the last heat. Reveille made game on a ditch and Fontaine pressing too closely, the birds flushed on the edge of the ditch down wind. The dogs then worked in a cornfiel that was drawn blank, then in some sedge Rev flushed some scattered birds and was steady to wing. Birds being very hard to find not much more work was done. The dogs were ordered up at 2:20 and the heat and second place was awarded to Capt. Craig and Reveille was declared winner of third. Following is the summary:

First Series. Knight Gladstone beat Capt. Craig. Reveille a bye.

Second Series

Knight Gladstone beat Reveille and won first.

Tie for Second Place.

The for Second Place. Capt. Craig beat Reveille and won second place, Reveille winning third. At 37d Mr. Avent, at the request of several prominent sportsmen, gave the celebrated field trial winners, Roderigo and Paul Gladstone and Mr. Amory R. Starr's black pointer Watt were cast off together. Paul took a great cast and displayed his great pace, range and style. Watt dashed out and be-haved magnificently, ranging wide and well, but was eclipsed by the range of Paul. Watt soon found a bery in a thick growth of weeds. Paul was lost, but had pointed some run-ning birds of the same bery further ahead and was found on a point. He made several points and displayed his emi-nent qualities in the best manner. Then Roderigo and Tangi-pahoa were put down. Roderigo started at his tremendous pace, and covered the largest fields in a few minutes. For fire and dash, wide and fast ranging, it was conceded by all that is surpassed anything in their experience. Tangipahoa showed herself a very fast tield performer and would have shown up a formidable competitor in any other company. After Roder-igo had made several points on bery, and seattered birds in his guick, resolute and precise manner, the dogs were taken up and the parity started for town to draw the order of run-hing the All-Aged Stake for the next day. THE ALL-AGED STAKES,

THE ALL-AGED STAKES,

[Special dispatch to Forest and Stream.] There were twenty entries for the All-Aged Stakes, which were drawn and run as follows: TRIGG (W. Flower, Alexandria, La.), orange pointer dog (pedigree unknown),

against

NELLIE B. (W. F. Gray, New Orleans, I.a.), black and white English setter bitch (Rake-Mag Merrilies), beat PATTIE (E. W. Condon, Houma, La.), black, white and tan English setter bitch (Duke Gladstone-Grace Darling).

MINGO (W. B. Wells, Chatham, Ont.), black and white Eng-lish setter dog (Druid-Star), beat DOLPH (C. E. Bringhurst, Alexandria, La.), black, white and tan English setter dog (Cyrus-Belle Gladstone).

MARKTWAIN (Judge J. M. Thompson, Covington, La.), black, white and tan English setter dog (Coleman's London-Tom Laverack), beat

HURRICANE (H. L. Daigree, Alexandria, La.), orange pointer dog (Pious Jeems-Kate), withdrawn. Mack and Hurricane were both withdrawn and Kink ran against and beat Trigg.

Boyp (J. K. Renaud, New Orleans, La.), black and white English setter dog (Brussels-Iowa Queen). beat RIP (E. F. Hunter, Houma, La.), black, white and tan English etter dog, pedigree unknown.

WATT (A. M. Starr, Marshall, Tex.), black pointer dog (Brancho-Fan II.) (Braucho-Fan II.) beat CUSTER (L. B. Reynaud, Alexandria, La.), blue belton Eng-lish setter dog (Blue Dick-Buckeye Belle).

Second Series. Nelly B. beat Mingo. Mark Twain beat Crisp. Prescott beat Tangipahoa. Boyd beat Watt. Kink a bye.

Third Series Kink beat Nelly B. Mark Twain beat Prescott. Boyd a bye.

Boy L Boy L Boy L Boy L Mark Twain a bye. Final Tie for First Prize.

Boyd beat Mark Twain and won first prize. Tie for Second Prize.

Watt beat Mark Twain and won second prize. Tie for Third Prize.

Mark Twain and Custer divide third prize.

Tie for Third Prize. Mark Twain and Custer divide third prize. IMPORTANT IMPORTATION OF ST. BERNARDS.—New York, Feb. 18.—*Editor Forest and Stream:* I have completed the purchase of Mr. Henry Schumacher's kennel of St. Ber-nard dogs, and I can honestly say I have acquired some of the purcest strains of St. Bernard in existence. The president of the St. Bernard Club in London, Mr. Arthur Carter in Turin, also Vice-President Betterton in Woodville, and Mr. J. H. Murchison in London, who know Mr. Schumacher's dogs, cen-sider them the purest and finest specimens of pure-bred St. Bernards in existence, and distinguished for their colossal heads and limts. There are some eleven in all. Among them are the grand dogs (winners of many prizes in Switzerland) Apollo, 32½ inches at shoulder, a large dog for a smooth-coat, very symmetrical, elegant in carriage, rich in color and mark-ings--the best dog in all Switzerland. Rigi, a young dog, sired by Apollo and out of Bernice, considered by Mr. Schu-macher to be the most perfect specimen he has ever seen, except in size. He is 30 inches at shoulder, which I consider a gowd-sized dog, quality and character weighing much more with me than over-grown, clumsy animals without much of anything else but size. Mount Velan, Sultan and Barry are other flue specimens. In females, Bernice is a beautiful bitch, full of character, the dam of many noted Swiss prize winners. Genme, Diana and Flora are all handsome ones. Each have their certificate of breeding, etc. Mr. Schumacher turns over the whole lot to me with medals and other prizes won, also his good will; and, in fact, gives up the breeding of St. Ber-nards, as far as selling to America is concerned. I shall try and exhibit most of the dogs at the prominent shows, and will be glad to correspond with any who are interested in this breed that may wish to learn particulars about them. Only a fam do thibit most of the dogs at the prominent shows, and will be glad to correspond with any who are interested in this breed them the inte

the true type according to the very best authorities.-W. W. TUCKER. WAR DOGS.-The German war office, ever ready to adopt any scientific or other device which may by any possibility be of advantage to the troops of the fatherland, is trying some experiments in training dogs to act as sentries. The idea seems to be that dogs would help sentinels by prowling round and seeing if any eneny were creeping up unobserved through the bushes or behind rocks. In course of time they might be-come so acute that they would guard a sleeping camp by themselves without requiring any human help. At first, how-ever, they would only be assistant sentries, so to speak. In our own recent campaign in the Sondan an incident occurred proving how valuable canine intelligence might be in warning a camp of the approach of hostile spies; and it shows with what care and attention that eventful war was followed at Berlin that the present experiments of the German war office are directly attributed to our Soudan experience. If the German staff finds dogs capable of being trained systematic-ally for sentry duty/there can be little doubt says a London paper, that the innovation will spread to all the armies of Europe. English soldiers would take with particular readi-ness to this plan of putting animals to real use, because they are well known to have a strong liking for dumb brutes as camp followers. A sentry's duty is exactly that which re-quires a quick ear and eye, and many good men and true have bit the dust because they happened to be inattentive just when a surprise party of the enemy were about to make arush. The Arabs round Suakim gave our camp endless trouble in this way, crawling over the sand on their belies until they got within striking distance of unsupecting Thomas Atkins. There is every reason why dogs, if they can only be educated into perfect obedience to orders, should have protection duty given to them, seeing that they are much better able to per-form it than men, and that their lives are considerably less valuable. I

has not been attempted long ago.—*English Exchange.* JUDGES AT THE BOSTON DOG SHOW.—The following named gentlemen will judge at the dog show to be held in Boston in April! Mastifis, St. Bernards and collies, Mr. Jas. Mortimer, Babylon, N. Y. Pointers, Irish and black and tan setters, Mr. John M. Tracy, Greenwich, Com. English set-ters, Mr. J. Otto Donner, New York. Bulldogs, bull-terriers, fox-terriers, wire-haired and Irish terriers, Yorkshire terriers and pugs, Mr. Ronald H. Barlow, Philadelphia, Pa. Spaniels, Skye, Scotch, Bedlington, Dandie Dinmout and black and tan terriers, foxhounds, bassets and Newfoundlands, Mr. J. F. Kirk, Toronto, Ont. Greyhounds, deerhounds, Italian grey-hounds and poodles, Mr. J. R. Pierson, Brooklyn, N. Y. Beagles, Mr. N. Elmore, Granby, Conn. Dr. Geo. Walton, veterluary; John Read, superintendent.

HORNELL JOCK.—Hornellsville, N. Y., Feb. 14.—Editor Forest and Stream: I wish to say through your columns that the dog Hornell Jock exhibited at the Fanciers' show was Jock, Jr. our kennel man shipped Jock, Jr., and Nance at midnight Saturday, and I did not find out his mistake until Monday afternoon, when it was too late to telegraph. I knew it could do no harm, for Mr. Watson judges the dogs and not their owners, so Jock, Jr., was not noticed. I wish to say also that the Fanciers' is the only show that ever re-turned our dogs free, although they all have advertised that they would do so.—J. OTIS FELLOWS, Supt. Hornell Spaniel Club.

THE PITTSBURG DOG SHOW.—There is a special prize of a finely finished Winchester sporting rifle, valued at ±45, for the best setter, dog or bitch, in the open class. An entry fee of \$2,50 will be charged for this special, five entries to thil. There will also be prizes for the best kennel each of knglish, Gordon and Irish setters, pointers and dachshunde. The sec-retary writes that the entries are coming in finely, and that the prospect is good for the largest show ever held by the society. The committee have added classes for Great Danes, with prizes of gold and silver medals for dogs, bitches the same. A gold medal will be given to the best St. Bernard under one year old.

BOUND BOOKS OF KENNEL BLANKS.—We have bound books of kennel blanks, each book consisting of 200 blanks of a given style, and can furnish these (postpaid 30 cents) for the convenience of those who have occasion to use a large num-ber of blanks. In ordering be careful to state what particular series of blanks is desired, *i. e.*, whether Names Claimed, Sales, Bied or Whelps. The arrangement of the blanks is such that a duplicate record of each note sent for publication may be re-tained for future reference.

IMPORTANT SALE OF ENGLISH SETTERS --Mr. C. Fred Crawford, of Pavtucket, R. I., has sold the well-known English setters Foreman, Plantagenet and Mack B. to Mr. Fred E. Lewis, of Tarrytown, N. Y., for a long price, we are not at liberty to state how much. The dogs will, as hereto-fore, remain in the Blackstone Kennel, under the care of Mr. fore, rem Tallman.

GOOD FOOD FOR DOGS.—Editor Forest and Stream: I have recently learned, much to my surprise, that both my cat and my dog are extremely fond of squash, and as this infor-mation may be of service to some among your readers. I ven-ture to send it you for publication, especially as this sort of food seems perfectly to agree with the animals.—KELPIE.

THE HARTFORD PLAN.-Editor Forest and Stream: Let us have the "Hartford plan" rather than the star chamber plan of a few club members getting together, selecting a judge, and then showing under him. Give the single dog ex-hibitor a fair chance. The most popular judge will always be the one who has made the fewest blunders.-V. M. H.

THE NEWARK DOG SHOW.—The prospect for a good show at Newark is brilliant, entries are coming in much bet-ter than is usual at so early a date. The managers assure us that the arrangments made for the transportation of dogs will be carried out. The senseless mad dog scare appears to have died out and probably will not affect the show.

KENNEL NOTES.

KENNEL NOTE BLANKS,-For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." All Kennel Notes must be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them. NAMES CLAIMED.

KENNEL MANAGEMENT.

KENNEL MANAGEMENT. BY No Notice Taken of Anonymous Correspondents. N. V. K., Sarannah. –A. cocker spaniel bitch is at times trouhled the aspasmolic cough with efforts to throw off something, but with-surveys. About a year ago (she is fifteen months old), she had a ght ditack of distemper, and i thought this cough might proceed on boat, but sometimes she is free from the cough while at others is very trouhlesome. If you can suggest a remedy you will oblige. So, Give your dog five drops of tincture of nux vonica, with two ops of dilute hydrocyanic acid in a teaspoonful of sweeteened water o or three times daily. The trouble is a chronic bronchidis, proha-y the result of the distemper. H. C. W. Brooklyn. –A pointer has mange. Have used Glover's ange cure with good effect, except upon hip, where there remains w and indianed spot about the size of a half dollar, which she con-mesto hite. Have used plentifully of ahove lotion without appar-time protent. Have also given two doeses compound carthartic lay with calonel powder every other morning. On the intervening ys apply the balsam of Peru ointment to the raw spot. Keep this attent to part is post is head. You may be obliged to muzzle e dog to keep him from hiting himself. C. P. Paterson, N. J. –Your dog seems to be suffering from some rin of chronic myelitis or meningetis, or inflammation of the spinal the muscles, lack of sensation in the parts below, trouhles with urin-fon and the bowels. Has your dogs these symptoms? Also upon press-atom at present? If you find such spot, shave the hair over it and or apply the state of the discus of shave the hair over it and phy afty bister which your druggist will make up for you. For tern and the bowels. Has your dogs these symptoms? Also upon press-re or four times daily. Keep the dog quiet and in a dry warm are present? If you find such spot, shave the hair over it and phy afty bister which your druggist will make up for you. For tern at medicine we would advise hromide of potesh in te

The or four times daily. Keep the dog quiet and in a dry warm place away from noise or excitement. Report in ten days again. T. C. WILLAMS, Germantown, Pa., -My setter pup, seven months old, had the distemper slightly in the beginning of the fall, but he seemed to have recovered entirely from it. About a moth ago he had a slight attack of mange. He is constantly vomiting and has an intense thirst. His bowels are loose, but regular. He is very lively at times, hut sometimes will stop in the middle of a romp and shake his head violently. At first I thought it might he canker and treated him with a solution of nitrate of silver and water as given by "Stone-tenge." Ans. Be very careful of the diet. Give chiefly fluids, milk with imewater, soups without fat, etc. Give a little finely chopped two meat mixed with the white of a raw egg. For medicine give a two grain citrate of iron and strychnine pill three times daily. You can conceal the pill in a small morel of meat. If the dog has canker drop the following into the ear twice daily: of bromo chloral and udanum each a dram, of water six drams. Mix. C. T., Mendon, Mass.—I have a pointer dog eight years old, weighing the last of the season all four of his feet were quite sore, the hair wore off the outside toes and then festers came. I thought that after he stopped hunting they would get well. I took him out today to exercise him, and when he came in his feet looked as had as ever, this is the third time he has been off the chain since Jan. 1, and then only for a short run. I think he must have a humor. I feed him on your dog' feet in strong solution of sait water, or him weak ammonia water, night and morning. Do not do this lithere are running sores thus ush short from only out of mere what two for him Sa. Wash part dog is feet in strong solution of sait water, or him weak ammonia water, night and morning. Do not do this lithere are running sores but use hashes of Peru onlinement until the sores are headed and then apply the above.

RANGE AND GALLERY.

CORSICA, Pa., Feb. 9.--I was using a .85 Winchester and a .28 Winchester and a .28 Winchester at 126yds. and found that with the Rocky Mountain sights elevated to the full limit (300yds. elevation for large calibre) our halls carried up to the 8-inch bullseye, penetrating it (heavy card-board) and heavy field in the sone we found our halls near to the sine board, and heavy field the sone of the board and heavy field the sone of the board and heavy field the sone of the board and heavy field the sine board s, striking a snow hank some 70 paces heyond. Shooting over the snow we found our halls near together at 425 paces from the point of shooting, and penetrating about 12 inches along in the snow crust. One of the balls had out a brier stalk, yet reached the distance of the other halls. This we supposed to be caused by sighting less finely. Our marksmen here think them remarkable shois for so small a calibre. I deem them remarkable shois for so small a calibre. I deem them remarkable shois for so small a calibre. I deem them remarkable shois for so small a calibre. I deem them remarkable shots for so small a calibre. number of witnesses not heing present, a score could not be allowed, but E. M. Rockwell has made a score of 91, which can be claimed as a score. QUEER PRIZES.—The Volunteer Service Gazette has been at pains to make up an account of the novel prizes frequently offered by the Britist tradesman anxious for the advertisement of the rifle range. Four Lancashire barbers offered as prizes for the winners in a recent military match a "shampoo for twelve months," while a fifth tonso-rial artist added, as an incentive to excellence in shooting, a year's shoeing. The local dentist, not to be outdone in generosity, contrib-nated one half set of artificial teeth for the best marksman. Other instances of recent prizes from a farriary was one service of horse shoeing. The local dentist, not to be outdone in generosity, contrib-ined one half set of artificial teeth for the best marksman. Other instances of recent prizes from Eritish sharpshooters, collected by the same authority, are "a fish supper," from a farliary of another corps won a prize in the shape of a pint of a daily, to be drunk on the premises. In one of the local volunteer companies of Worcester was a most curious conglomeration of articles—such as a pair of braces and a hed quilt; while potatoes, hig loaves, shirts, coal, wall paper, plum cake, etc., are presented, along with the usual supply of spirits and heer. But to crown all, a corporal in the corps hecemes the winner of a fring pan. A RIFLE CLUB LEAGUE.—The Boston Herald says: "Rifiemen or the sping, summer and autum of the present year. The shor-ing is to be done upon home ranges, and sufficientumher of matches to be shot to determine the amount of skill possessed by the serveral clubs. The general adoption of the standard target by most of the club by the country makes it possible, for the first time, to bave com-parisons of skill. A WRONG CONCLUSION,—The riflemen of France and Belgium par ioning in lavely discussion as to the

arisons of skill. A WRONG CONCLUSION.—The riflemen of France and Belgium rre indulging in a lively discussion as to the amount of practical nowledge to he gained by long-range military rifle contests. A ma-iority seems to favor confining the matches to those in which the national military arm may he used, calaming that the skill ohtained with the regular arm will prove of far more value to the soldier than i knowledge of how to procure finer work with a superior but less ractical weapon.

practical weapon. BOSTON POLICE CLUB.—A number of officers of the police force of Boston are excellent rifle shots, and an effort is being made to in terest a sufficient number to organize an association similar to the one now in existence in San Francisco.

THE BRITISH RIFLEMAN is having a glorious time writing grum-bling letters about the change of caliber in the army rifle,

THE TRAP.

Correspondents who favor us with club scores are particularly re-uested to write on one side of the paper only.

INDIVIDUAL CHAMPIONSHIP CONTEST.

THIS celebrated diamond badge, originally donated by the Ligowsky Clay-Pigeon Company, made by Tiffany & Co., of New York city, was first won at the first international clay-pigeon tournament, Chi-cago, Ill., May, 1884, by C. M., Stark, of Exeter, N. H.: secondly, by Beaj, Teipel, of Covington, Ky., at the second international clay-pigeon tournament, New Orleans, La., February, 1885; thirdly, by Mr. Brewer, Philadelphia, at the tournament of the National Gun As sociation, at Springfield, O., May, 1885. With the view of keeping

as an annual trophy before the American sportsmen, the L y Clay-Pigeon Company, of Cincinnati, O., has resolved to the diamond badge, April, 1857, for \$250; that said badge ted annually as the U. S. championsbip at clay-pigeons, un-inted for redemption, that a new badge he purchased with t int, for a similar annual donation; that the management of its be given to the National Gun Association excetutive commit its be given to the National Gun Association excetutive commit ay will accept the same; that a series of 12 telegraphic match onth, shall be arranged the Association excetutive commit its dation of the Association, including the amended r of the National Gun Association at Springfield, O. M. viz.; that all confestants shall be divided into three classes, y e., Class B at 19yds, Class C at 18yds; each class shooting a licep of Syds. less for doubles. Any contestant sbooting hefi leap has been assigned to bim, shall shoot at 18 for singles and doubles." The General Manager may at any time change a c in throm one class to another. Any contestant shoot in n these only if he sees fit, or, if he shoots in twelve matches be in this match layses (class C at the shoots in twelve matches be in this in highest scores; that each contestant sbooting hefit to pairs of Ligowsky clay-pigeons No. 1; that no entrance ever be charged by the L. O. P. Co.; that the only charge alo be fity cents yeary, payable to the National Gun Association r expenses of printing, etc., to be paid by those who are heres of the Association; that "they simal shoot at no entrance heres of the Association; the "they is mall shoot at a boot an ever be charged by the L. cents yearly, payable to the Na ses of printing, etc., to be pai the Association; that "ties" sha ad places as the National Gun As

Association, and of the shoot in suit the shooters shall have been a intressed by at 1

he published monthly. That contestants can shoot their score any place on the day fixed therefor, monthly. The score must bu-warded per mall to "Judge M. R. Freeman, Manager National Gir sociation, Macon, Ga." The latter is authorized to change the day the shoot in any section to such day as may more conveniently it he shootrs in sail section, provided that a general tournamen all have been arranged for said place and date. All scores must be nessed by at least two of the judges and referees present at the oting, who must certify that the scores were made according to rules of the National Gun Association, Should other prizes be red for this contest the shooting shall be "class shooting" —ties to determined at a general meeting to be held at such place and time the General Manager of the Association may fix. The contest shall open to any *boan fide* resident of the America nontiment. ach contestant shall pay for bis own clay pigeons; addition experts any bark formed hetween contestants shooting ether.

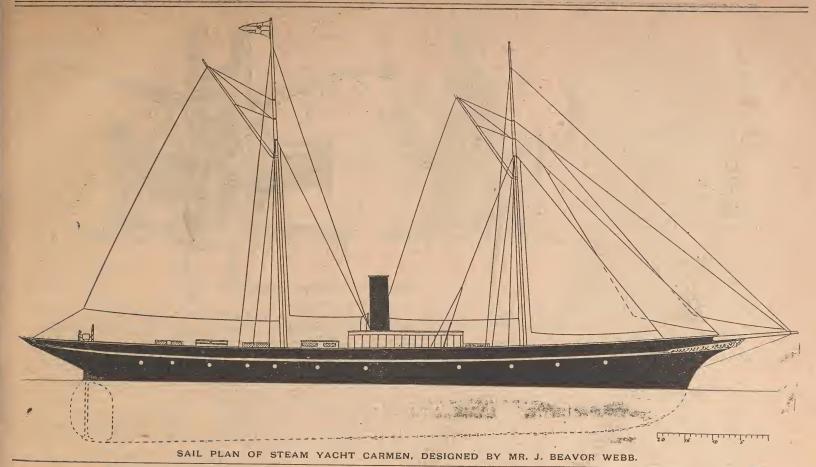

Each contestant shall pay for bis own clay pigcons; additional sweepstake purses may be formed hetween contestants shooting together.
 When any one desiring to contest has through lack of information or any other reason abstained from entering the various matches, he may, with the consent of the executive committee, shill enter within three months of the close of the contest, when the executive committee shall far mine distinct days upon which he may make bis scores to be transmitted to them.
 Every contestant should notify the general manager National Gun Association that he has entered the contest even though he only shouts once; this will enable him subsequently to challenge the winner during the ensuing year.
 The executive committee of the National Gun Association shall be the fual judge as to whom is the winner of the medal; if, in their estimation, there bas been any frand or unfair conduct, or hreach of the herdial; fin their estimation, shall he fairly entitled to thes ame.
 When the medal to the next hignest contestant, who in their estimation, shall he fairly entitled to the will be dial give a bond to the National Gun Association, shall be will except a challenge; under the following; under the following; under the following conditions: That be will accept a challenge; under the following conditions; That be will accept a challenge; under the following the must name the time to he within 80 days of the date of the challenge; or within 80 days of his last acceptance; and that at sald contest any other challenger shall he allowed to contest; though he meed not admit more than ten, such all notes of the oss. I or 2, National Gun Association rules. The challenger on works icallenged thim at once of the ease in curve such when fixed.
 Each contestant must shoot at 30 singles and 35 pairs double than once also the due of the contest when fixed.
 Each contest ane there the contest when fixed.
 Each contestant m

The winner islall send the scores made to the general manager of the Association, as also to such sportsmen's papers (at least one) as he sees fit. Only those who have entered the championship match can challenge the winner; another entrance fee of \$1.00 must he paid to the National (gun Association by all challengers, who are not members of the Association (though one entrance fee only need be paid for the entire year). Whoever whis the greatest number of times during said year or less, when the medal is open to challenge, shall he entitled to the medal and the title of "American Amateur Champion Wing Shot for the year (2857)." the original winner need not surrender the medal until April 15, 1538, (and subsequent winners one year thereafter); at this date he must forward the needal for redemption C. O. D. per express, with the privilege of examination, to the Ligowsky Clary prigoon To. Chicfmati, Ohio, the original donors, who will redeem it for \$250, to be transmitted to the successful challenger or party who has fairly won it from the original donors, who will redeen the should the ultimate winner prefer to keep the medal he can do so, when the Ligowsky Company will at once order a duplicate to be by him forwarded to the new winner of the previous year. N. B-Organizers of tournaments are advised to embody this match in their programmes yearly, as this will doubtless prove a valuable feature to all shooters.

BERGEN POINT, N. J., Feb. 18.—A series of pigeon-shooting matches were decided this atternooon on the Carteret Gun Chub grounds at Bergen 'Point. The contestants were Messrs. Gladwyn, James and Williams. The pigeons were fast flyers and hard to kill, The setter Ralph gave a fine exhibition of bis skill at retrieving. The conditions of the matches were 10 birds each, handicap rise and 30 ⁻ /yd houndary. Gladwyn was successful in the first, fourth and seventh matches, James won the second and Williams the third, fifth, sixth
matches, James won the second and williams the third, fifth, sixth
and eightb. The scores follow:
Gladwyn-1111111011-9. James-1101011111-8. Williams-1101111101-8

Low Inst. THE NIMROD CLUE.—About two years ago several gentlemen who were interested in rifle and shotgun shooting, organized a club for the purpose of participation in these healthful and exhilarating sports. The club secured a shooting ground in the vicinity, and for

nearly a year and a half have held rifle and glass-hall shoots monthly. The membership of the club steadily increased, and a headquarters was secured at 46 Bloomfield avenue, Newark, N. J., consisting of a large room (15xd), which has heen appropriately furnished for a club room. A well-hult rifle range, 70ft. long, has been put up, which is in constant me by the members of the club. It is intended very shortly to improve this range by various additions. The club has recently purchased two Ballard rifles, one for gallery and one for out door shooting. Our monthly dues are very small, and the initiation is only \$2. We believe that a club of this character is of great hene-fit to young men, as it affords them a place in which to spend their leisure time, as well as various kinds of amusements, thus doing away with all desire to resort to places of a compromising character in order to seek amusement. Believing that this novement to unite with is in making it a success. Any further information can be had of the secretary, Mr. Frederick Klein, 39 Warren place, or of any mem-ter of the club.

her of the club. FOUNTAIN GUN CLUB, Feb. 17.—The regular shooting under Hurlingham rules of the Fountain Gun Cluh, of the Long Island Sportsmen's Association, took place this afternoon at the Prospect Park Fair Grounds, and was remarkable for the fine showing made hy the memhers. Out of 84 pigeons shot at only 81 got away, and some of those were hard hit. In Class A, L. T. Duryea killed 6 out of 7 from the 28-yard mark. In Class B, from the 24-yard mark, C. Chappell killed 7 straight, and in Class C, from the 21-yard mark, T. Stewart killed 6 out of 7, and won the club prizes.

"THE YACHTSMAN'S GUIDE."—The New York Navigation School is so widely and favorally known among yachtsmen that they will be pleased to hear that its manager, Captain Howard Patterson, has lately prepared a new hook for yachtsmen, covering the same sub-jects that are included in the course of study of the school. The book is what its tile proclaims, a yachtsman's guide, treating clearly all principles of navigation, as well as the details of every day work, with which both owners and masters should he familiar. The first portion of the hook deals with the principles of navigation, and the second portion with their application in practice. The third portion, on yacht dicipline, contains much valuable information on signals, rules of the road, boat service and similar matters, and will prove of preat value to amateurs and novices. A compendious dictionary of nautical terms is added. The book, a very neatly bound octavo yolume, is published by the New York Navigation School, No. 36 Burling Slip, N. Y.

THE NEW STEAM YACHTS. ThE present activity in huilding extends to steam as well as sailing craft, and a number of new hoats will he added this season to the steam fleet, hesides some like the Polynia and Nooya, that will be practically new. The largest of the new yachts will he built on the belaware, for Mr. Wun K. Vanderbilt, from designs by Mr. St. Clare J. Byrne, of Liverpool, designer of the Namouna, Amy, Sunbeam, Ino, Maritana, Lancashire. Witch, Jason, Gitana, Cuhona, Garland, Far-nese, Gaviota, Dobhran and other steam yachts. Mr. Byrne arrived in New York lately, and has since visited the larger shipbuilding es-tablishments on the Delaware. He has brought with him the plans of a steam yacht 360ft, long, ahout 30ft, heam, and 17ft, draft, The motive power will be a triple expansion engine, and she will be square rigged on the foremast like the Sunbeam. The details of con-struction and arrangement and the huilders to whom the work will be intrusted, have not yet been fully decided on. The engines will be built here from English designs. Another new stéam yacht is now building at the foot of East THE NEW STEAM YACHTS.

built here from English designs. Another new steam yacht is now building at the foot of East Twelfth street, New York, by Theodore Durand, for Mr. E. M. Brown, N. Y. Y. C., late owner of the old sloop Julia, now the schooner Nir-vana. She will he of wood, 106ft. over all, 20ft. heam, and 7ft. draft, with engines 24 and 14×20in. and a tubular holler. The working pres-sure will he 15 pounds, and the engines, will make ahout 200 turns. The screw will be four-hladed, 6ft. 6in, dlameter and 10ft. pitch. Ac-commodation is the main object in view, as the boat will he used for summer crulsing. The cabins will be aft of the engine space, a main saloon 14×12ft., and two staterooms 9×11ft. The stem, stermpost, and rudderpost and keel, of white oak, are sided 7in., the latter mould-ing 12n. The frames, of hackmatack, are sided 7in., thel sterm, sided su, and moulded 10in, the hile streaks 65/3in., shelf 5×4in, and clamps 10×2in. are of the same material. The oak planksheer is 14× 2/4in., sprung on in long lengths, the white pine deek heams are sided 6in. and moulded 4/4in, and the deck plank is 2in. square. Garboards and topades will be of oak, and the rest of the bottom of yellow pine 2/4in. Schooner rigged, with only a pilot house on deek. Still another steam vacht will be huilt be Maryal & Co.

will he schooner rigged, with only a pilot house on deck. Still another steam yacht will be hullt by Marvel & Co., successors to Wood & Stanton, at Newburgh, N.Y. This yacht, for Mr. C. D. Miller, will be of steel, 110ft. over all. 95ft. waterline, 16ft. beam, 8ft. draft, and 93/4 tons displacement. The angle frames will be 3×3/3 in. and the plating 1/3 n. steel from Pennsylvania. There will be four transverse bulkheads and five compartments. The engine will he 18 and 10/3×18 in., with a tuhular boller, working pressure 120 pounds, 200 turns of screw. The latter will be four-hladed, 6ft. 6in. diameter, 10ft. pitch. The owner's quarters will be aft and the crew's forward. The yacht will he schooner rigged, and will have only a chartroom and steering bridge above her flush deck.

10ft. pitch. The owner's quarters will be att and the drew 5 107 ward. The yacht will be schooner rigged, and will have only a chartroom and steering bridge above her flush deck.
The curious yacht huilding by Mr. Samuel H. Pine, at Greenpoint, for Mr. Pierre Lorillard, former owner of the Radha, and launched this week, will soon depart for Florida, where her owner will join her. The boat has heen designed with two ends in view, a light draft and the greatest possible room below, and to these all other considerations are subordinate. Looked at from forward as she lies on the ways, no peculiarity is noticeable except a tull huft how above, which gives plenty of deck space; but from midship aft she differs greatly from the usual form, thougt the idea is by no means a new one. The extreme length is 11ft, heam 20ft, and draft fft. At a point about 40ft, from the how the bottom is quite flat, with a Th. keel and a round hilge. From this point aft the keel rises quite rapidly, and the whole bottom forms an arch, the span of which is equal to ahour about ally increasing thickness until it grows into a bige keel 7n. square, running borizontally fore and aft. The atter body of the exprese lis formed of two hulb shelow water, huilt on these two keels, a usel is formed of two hulb shelow water, huilt on these two keels, and surieed one to each of the hulls. The steel shaft is Sin. diameter, the four hild cary 150ks, working pressure. The steel shaft is Sin. diameter, the four hild cary 150ks, working pressure. The rate surface is 42ft. And the heating surface 1, badden at the displacement work. Soft, Mr. W. Soft, Mr. M. W. Yott, and fine at the displacement will be 850 norms of the same material. The eak sligs will cary 130ks, working pressure. The grade surface is 42ft, and the basing surface 1, badden at the displacement will be strake at e of 50 fellow pine, and the shelf Strif and than moulded 5 and 34gt. The hottom is plate for your pine, the square, the fraues are of hackmatack, down wilb athe strake with b <text><text><text><text><text><text>

The inner skin runs diagonally and the outer fore and aft. All will be well fastened with copper. Both hull and engines will be as light as practicable. CRUISE OF THE COOT.

be well fastened with copper. Both hull and engines will be as light as practicable. **ICRUISE OF THE COOT.** ISIN A Tree being hung up on the mud for twenty-four hours, the fasten out astern. The wind was stiff from the northwest and the river pretty clear of ice. Under whole sall we got a way and at 9 A. M. were ahreast the southern point of Newbolds Island. On the chart this is marked as mud, but I found it well covered with hushes. This flat stretches clear across the river, forming a bar with 7ft, at low water. Beyond it deepens suddenty to 17ft, with the exception of an 8ft, spot just outside the locks at Bordentown. You can carry ifft, al tow water to the bar at Newholds Island, the river them takes a bend to the W. N. W. and navigation becomes intricate to a stranger. From the point on Newbolds, sheer for a hrick yard some distance ahead on the southern bank, at the foot of some high hilfs, give the yeard a betth and gradually turn up under the huids, which hak may be hugged quite close, the northern shore heling a wide flat with some dry spots covered with light growth and grasses. Keep works on the point ahead. Nearing these yon may take mid-river again and at the point, chose over to the northern of Pennsylvania hank. The next bend down to Burlington Island trends nearly south. The channel is two thirds the width away from the Jersey shore. When the island is approached, keep the Pennsylvania side close ahoard, then mid channel past the island, while will bring you out with the clip of Burlington over the port how. From there the show to the first buoy met with since leaving Bordentown. It is a black spar, No. 37. Leaving it to starboard you will pass through a to 01ft the channel is wide and deep, averaging four fathoms. At so the channel is two usdenly if not familiar with the place, as a black spar, No. 37. Leaving it to starboard you will pass through a to 10ft channel. Kuif you buy the Jersey shore you can find 5ft, a thoty dege over to the aorthern hask which is qui

reaches. Below Philadelphia the Delaware is as clearly marked by all the aids to navigation as any one could wish. Range lights give

<page-header><page-header><text><text><text><text><text><text><text> And the second second second H COMBINED YACHT WINDLASS AND PUMP.

A COMBINATION PUMP AND WINDLASS.

A COMBINATION PUMP AND WINDLASS. A VERY compact and serviceable combination of two essentials on weary ressel is shown in the accompanying cuts of a pump and windlass in one. One casting carries a heliow vertical pillar, the top of which forms two hitts. A bracket arm on one side of this pillar is transverse direction carries two revolving heads, either gipsy or windlass in the construction. A larger shaft passing through the pillar in transverse direction carries two revolving heads, either gipsy or windlass insple construction, piped to take water from the bilge or from outboard, and fitted with two nozzles for hose. Beside the ordinary purposes of a bilge pump it can be used for washing down decks, fire, etc. The pump is connected by a rod to an arm on the short shaft which which operates in the usual manner, turns freely on the shaft, hut when it is desired to use the pump a pin is inserted in a hole through the brake and the shaft, as shown in the cross section, rigidly con-necting them. A special feature of the arrangement is that in heaving in a chain by pump may be kept at work, throwing a steady stream of water over the cable and anchor until they are clea. The Manton Windlass and Steam Steerer Company, of Providence, are the makers.

are the makers. **REFAIRING AN OLD BOAT.**—Just when it is worth while to repair an old boat or when it is better to dispose of her enthely and build have, is a question that yachtmen are often callel on to consider. If the boat is old or weak it is seldom worth while to undertake more is like that of a correspondent of the *Model Yachtsman*, who tells his story as follows: "Last summer I took up an old boat I had a great affection for, to put new decks on her. When arranging that I thought This boat has heen deficient in freeboard, so I will give her siz inches more.' That necessitated a new sternpost, which is any case it was well to renew, as the old one was shaken. Minterial wa betaned, work commenced by two carpenters, when I thought I had better give her a new keel and put all the balast thereon, giving I have but a clums joo. So I resolved to give hers steel angle floors; when making the old floors, but on coulsileration I thought this would be to a clums joo. So I resolved to give here lated always been making the old floors, but on coulsileration I thought this would be to a clums joo. So I resolved less hollow than the old ones. This necessitated new floor planking, and I had only thought of new garboards when I determined to give her a new keel—the old planking of planks on each hilge. With the new floor planking of course the hew saterline, so I filed it out and ended by planking of course the model, as floor, bow, and run aft were all altered. You will say after this list a faiture, thut, strange to say, I had not. Sho hollow above the waterline, so I filed it out and there for how row of the low at how model, as floor, bow, and run aft were all altered. You will say after than index floor, bow, and run aft were all altered. You will say after that failer the trans that experiments, as the final result was satisfactory; but in most cases a large stua is expended with very was assout as inde experiments, as the final result was satisfactory; but in most cases a large stua

Address all communications to the Forest and Stream Publishing Co.

CANCELETS are invited to send us notes and full reports of cruises, club meets, information about canceable waters, and other commu-nications of interest.

Secretaries of cance clubs are requested to send to Forest AND STREAM their addresses, with name, membership, signals, etc., of their clubs, and also notices in advance of meetings and races, and reports of the same. Canceists and all interested in cauceing are requested to forward to Forest AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

S ECRFTARY-Dr. C. A. Neidé, Schuylerville, N. Y. Candidates for membership must forward their names, accompanied hy the re-commendation of an active member of the A. O. A., together with the sum of \$3 for initiation fee and first year's dues, to the secretary, who will present the names to the commodore. Money should be sent by registered letter, or money order on Saratora Springs, N. Y.

THE A. C. A. TROPHY.

<text><text><text><text>

FOREST AND STREAM

While this may happen at times it is probable that the cop sheld in America are greater portion of the time, and would valuable feature of the yearly racing. The matter may amended uow by the Executive Committee it is proved to do so, and we invite a full discussion by cauceists in the

AND STREAM.
Forest and Stream:
Id beg to call your attention [and that of the members of the A. to a resolution passed at the last meeting of the A. C. A. tire Committee at Oswego, N. Y., regarding the trophy to be for at the August meet and which was adopted in view of the I no ur country of the British gentlemen who are to compete s. I don't know if any discussion was had over this matter the committee met, but from observations then made, I judge was not. The trophy decided upon by the committee was to resontation cup or a prize to be raced for once. I think that if phy is made to be a challence prize it will better meet the decode optimer to he above optimer in New York and vicinity and he above optiming the matter in proner shape before the Executive title, so that the resolutions might be correct, in accordance the views of what appeared to make the major is be the main of the orden who are solutions of the work or a mend the above divide the resolutions might be correct, in accordance the views of what appeared to make the major is be deviced at the orden who are solutions the view of what appeared to make the major who are solutions the moder the above divide what or many since a resolution the orden we have the above divide what appeared to be a the majority, I sent to mandore a few days since a resolution to wince. rest and Stream interporte a new days since a resolution to amend the above ixiting out the words "to become the property of the winner." will leave the question whether the cup shall be challenge or tation with the Cup Committee, whose members can safely be decide it in accordance with the best interests of the Associ-as they, with the Commodore, represent four of the more enent racing centres. The full vote on up resolution has not been polled, however, and I would suggest that the subject is the discussed in your columns with advantage. Fraternally right he discussed in your columns with advantage. Fraternally R. J. Wilkin, Vice Commonors.

SOME QUESTIONS FOR CANOEISTS.

OOKING over the new cances now building, one inquiry comes very forcibly to mind; why are we huilding double centerboard ca-sof How many cancelsts can answer the question? The double or her the centerboard arrangement is no novelty here. It has been common use in England for nearly a dozen years, it has been d in the United States since 1880, and in Canada a number of there the centerboard arrangement is no novelty here. It has been common use in England for nearly a dozen years, it has been de in the United States since 1880, and in Canada a number of norists have used it for nearly the same length of time, while it has enfrequently described in Forest ANN Brackard. American canoeists, werer, have declined to have anything to do with it, or even to con-erseriously its advantages and defects. Late lat season a well own cancelst adopted the system in a new cance which though she been very successful, has been sailed only for a short time and has t had the opportunity to make a premanent reputation; and now any every important cance building must have two boards. Will use of the many who have experienced this hasty conversion tell us y they have adopted the double-board system now; why, if it is had they have not adopted it before; whether they think as highly it this year as they did of another centerboard last year; whether, ne of the leading cancelsts was to put in three boards instead of o, all the rest would not at once follow suit; and finally, whether posisis are not much like a tlock of sheep? The moral of this ug of questlons is very plain, and every cancels can lay it to rements, and also the many ideas and derices, new and old, that current among cancemen. When you adopt or discard any ture, do so not because the owner of the Spot has it, or because was tried and abandoned on the Snarke, but because is does or so to suit your special purpose. If you are in doubt, wait until have some data by which to decide, before wasting money in pruder, aggravated by a patent clutch tiller. There are many disioned them are allos of from \$5 to \$15. The same pride, aggravated by a patent clutch tiller. There are many do points about book, and they are valuable additions to some try case isoarded them at a loss of from \$5 to \$15. The same plies to many other devices, and especially to the double boards, man who cannot tell why be waits them should put them in , and e dos it without

THE RULES OF BOAT RACING.

-(Old No. 10.) 9. It shall be considered a foul when, after -(Old No. 10.) 9. It shall be considered a foul when, after as commenced, any competitor by bls oar, boat or person, contact with the oar, boat or person of another competitor the opinion of the umpire, such contact is so slight as not to the race. (Old No. 9.) 10. No fouling whatever shall be he boat committing a foul shall be disqualified. The umpire ing a race, caution any competitor when in danger of commia race, caution any competitor when in danger of commit-12. The umpire [when appealed to] shall decide all quesas as to a foul. 13. A claim of foul must be made to the judge or the pire by the competitor himself, and, if possible, before getting out of boat. 14. In case of a foul, the unpire shall have the power—(a) place the boats, except the boat committing the foul, which is qualified, in the order in which they come in. (b.) To order the is engaged in the race, other than the boat committing the foul, ow over again on the same or another day. (c.) To restart the

The place the boats, except the beat committing the foul, which is disgualified, in the order in which they come in. (b.) To order the boats engaged in the race, other than the boat committing the foul, or ow over again on the same or another day. (c.) To restart the qualified boats from the place where the foul was committed. Account of the same or another day. (c.) To restart the four the same or another day. (c.) To restart the race, a boat while on its own water shall be interfered with dy an outside boat, the unpite may order the race to row dover. If, in his opinion, such interference materially affected its chance of winning the race. Assurtance. -17. No boat shall be alloyed to accompany a competitor for the purpose of directing just direction or asistance shall be disqualified at the discretion of the unpite extends over the race is specified to startund lis final termination, and his decision in all cases shall be declared by the decision, or to follow the directions of the unpite, shall be disqualified. (Old No. 19) 20. The unpite, if the thinks proper, may reserve his decision, provided that in every case such intervals and or the funce. (An ew rule.) 18. The judge at the finiting to a bide by the decision, or to follow the directions of the unpite, shall be disqualified. (Old No. 19) 20. The unpite, if the thinks proper, may reserve his decision, provided that in every case such textants rowing a dead heat shall compete again after such interval as may be appointed, and the contestant refusing to so row shall be adjudged to have lost the race.

THE NEW CANCES OF THE YEAR.

THE NEW CANOES OF THE YEAR. THE stimulus given to canocing by the increasing competition of the yearly meets and this season in particular by the coming in-ternational races, is already visible in the number of cances now uniding for prominent canceists, and also in the care that has been taken in the designing of the new boats. The matter is no longer left to the builder with an indefinite order to build a cance like some one else's, or merely so long and so wide; but every detail, lines, dimen-sions, material, con-truction, fittings and rig. is a subject of careful study and consideration by the owner, and the question of more or less dearfise, or an eighth of an inch more or less sheer is for the time of far more importance that such trivial matters as business, pleasure, dress or similar vanities. One noticeable point this year is the number of canceists who have taken up the study of drating and who have employed their leisure in a study of the lines of their old boats and the planning of new and improved craft. The origin of this new idea may be ascribed to "Cance and Boat Building," where such elementary instruction as the novice requires is clearly given; and, as proved, in a way to interest many. The results we may look for in the future in haudsoner, better, and faster boats as each railor learus to put to a practical use the results of his experience and ob-servation. First amore the new cances comes the flagship. Liftx 30h... of Rne-

and, as proved, in a way to interest many. The results we may look for in the future in haudsoner, better, and faster boats as each saior learus to put to a practical use the results of his experience and ob-servation. First among the new canocs comes the flagship, 15ft x30in, of Rug-gles's build, the details of which are as yet a secret. Another boat from Canada that promises to be a dangerous one in Clars B is Mr. Richard's new Mona, 15ft. 11in.x30in, hull by Sauve, of Brockville, from a design by Mr. W. P. Stephens. With two boards and a good rig she should make a good showing with the 15ft.x30in. boats. Mr. Vaux's cance, though built and saited late last year, has never en-tered an A. C. A. race, and will be practically new this year. She is 15ft.x38in., with a depth of 11kin. at ginwale, much deadrise, aud two centerboards of sheet brass, about 19bs, and 61bs. Her rig, 85ft., will be of the same cut as last year's sails. The shake will rest this season while her owner tries a new boat built from his own designs by Mr. Rushton, the detail of which have not been made known, and Marion B. will be succeeded by a boat of which nearly the same may be said, designed by her owner, built anew Ruggles cance, and Mr. Andrews another, while the builder has several more orders. Class a will be recentified by a duplicate of Lussie for Com. Munroe of the N. Y. C. C. while Mr. Burchard will have a sister boat, both by Ever-son, and from Newburgh will come Mr. Grant Edgar's new one, 15ft, x28in, two boards, hull by MacWhirter, from Mr. Stephens's designs, a deeper and longer Nirvana. The latter gentleman will have a new 15ft x00h. cance, also of his own design, and with some poculiar features of boards, hatches and other fittings, and another Class A cance will be added to the N. Y. C. C. by spring. Everson is busy with a lot of new work, for the Knickerbockers a new Ideal, 15x30 and 114/in deep, for Com., Fowler, with a 12 and a b pound brass hoard. Mr. Stauton will have a large plate board of prass in the old Fift, a

brass hoard. Mr. Stanton will have a large plate n the old Filt, also a new Ideal with two boards for rac r Ideal with a Radix board for cruising; a pretty good

brass in the value of the second seco Ished, stretcom has a new cubies in with two bords for com. An man, Brooklyn C. C., boards 15 and 6 pounds, au Ideal for Mr. B dington, boards 12 and 6 pounds, and will begin at once a 16×30 ca with one large brass board aud a 15×28 with two boards, both signed by Mr. John Hyslop, for Vice-Com. Whitlock, who will s keep the Guenn. Mr. Carter, of Trenton, has a new Ideal with a Ra board in Everson's shop, and there are also two Sunbeams there stock. All the builders are full of orders, and yet more are coming every day as spring approaches.

SOUTH BOSTON C. C.-Editor Forest and Stream: A cann has been organized here under the name of the South Bosto The club was organized at a meeting held on Jan. 1, and the j ing officers were elected: Commodore, Joseph A. Frizzell; Vic modore, William J. Martin; Secretary and Treasurer, James dock. There are six members, all of whom have been canoe some time, but from various causes deferred organizing ti winter. Several short trips were made by members of the clu the commodore and secretary made a week's cruise on the C. River last summer. We have two boat bouses, one of which and Treasurer, James (hom have been canoeist deferred organizing till by members of the club, for the cances, and the other is reserved for a club house. ' consists of six members, and we have four sailing and p cances. A new sailing and paddling cance for the secretary under construction, and six lizht piddling cances are to be spring, in which the club propose to make a two weeks' erul the Charles River in July, shipping the cances to headquar cruising down stream. The paddling cances are to be dist-bility it with the structure of the secretary decks. We favor this style of cruising cance to headquar promises to he very light, strong and inexpensive, as the cost events, as the rather trying experience of the conmodore secretary during their week's cruise on the Charles last su the commodore's double centerboard, lapstreak, Class I demoustrated to them at least, that a cance of the weight an sions of a Class B is not just the thing for river work where a numerous. So it was proposed to build the light cances for ing summer, to be used on the N-ponset and Charles, and

g summer, to be used on the Appointer and of moes reserved for sailing in Boston harbor. wi r open water cruising. The club also intends i ip on the Nepouset May 30, and another on the Annock, Secretary S. B. C. C.

trip on the Neponset May 30, and another on the 4th of July -JAMES CRANDOCK, Secretary S. B. C. C. PRIZES FOR 1886.—The Regatta Committee have sent out the following circular, requesting flags for prizes: In arranging for the prize flags for the Regata of 1836, the committee venture to hope that it may not be necessary to present any factory-made articles They believe that many members and friends of the A. C. A. will gladly send flags which will be doubly prized as being at the same time Association trophirs and personal favors. The committee therefore, ask yon to fill and return the accompanying blank promising for yourself or for a friend a contribution to the list. The tages should be of silk, painted or embroidered, of any size from A. C. A. regulation upward. Contributors may of course designate to face for which the flag is offered, and the committee will arrange as far as possible upon such suggestions. The name or the initials of the maker or designer will add to the value of a flag. Flags not par-ticularly designated will be marked for appropriate races by the committee. The big appreciation of the prizes heretotore given by friends (by ladies especially), lead the committee to expect a ready response to this append. The prizes should be scar to any of the committee mentioned below, hefore the 1st of July. The promises should be given as soon as possible.—J. B. McNurrich, Oswego N. Y., Lt. Col, S. G. Fairtlough, Kingston, Ont., Reade W. Bailey, 134 Water St., Pittsburg, Pa., Regatta Committee 1886.

Konoka, has 16 rays in the and fin, the rainbow trout, S. *irideus*, has 10 rays in that and fin, the rainbow trout, S. *irideus*, has 10 rays in that and dilbert. It is builten of the U.S. National Museum, No. 16 and was published under direction of the Smithson-ian Institution.

POT LUCK FROM EXCHANGES.

Two Japanese sailors died from cholera during the short journey from Kobe to Nagasaki. Their dead bodies were thrown overboard. The Japanese authorities immediately forbade fishing along the coast.

The birds and the flowers have always gone together as types of innocent loveliness, and partly on that account have always found congenial friends in women. But of late the birds have found this attachment fatal. The fashion of wear-ing feathers and whole birds as as head-gear has led to such an enormous slaughter of the birds that nature cannot make good the waste. Why will the women be so impatient to assume their wings? As it is, the pretty birds are becoming alarmed, and, in the true American way, have formed a com-mittee and issued an address. It is to be hoped that "anti-bird-wearing leagues" will now extend and flourish in the land, and that the woods and meadows may have rest from the relentless emissaries of fashion. The simple and unassisted resources of nature gave out long ago in the attempt to keep pace with women's desire for flowers. And, perhaps, unless the fashions change, we shall have aviaries, as we have con-servatories, where birds of striking plumage will be cultivated for market,—Dubque (lowa) Trimes.

DESTITUTE FAMILIES are saddeningly plentiful; but they would be nuch fewer if the fathers while living had invested a few dollars in be ife and accident policies of the Travelers, of Hartford, Conn.-

SOREW PLATES, TAPS, DIES, ETC., FOF guasmiths and amateurs. Send for lilustrated catalogue to S. W. CARD & CO., Mansfield, Mass

Having been the pioneers in the manufacture and introduction of Section Bamboo Rods, we have always taken great pride in securing and perfecting every improvement in order to maintain our position as the makers of the very best rods. Knowing not only theoretically, but also by long experience, that a properly made round rod is the only absolutely perfect rod, we have invariably refused, and still do refuse, to put our name on any but our "Best" round section rods. While our prices for these round rods are only a trifle more than the prices asked by any other makers, the rods are widely known to be incomparably superior and guaranteed in the most liberal manner.

We have just finished and put on the market a new caliber round rod, 10 feet long, and weighing with the solid reel seat only 7 ounces. This rod has stood the most severe tests, and found capable of killing the largest black pass. The many expert anglers who have handled this rod pronounce it the best balanced and most perfect rod in the market.

The Seven Advantages

OF THE

New York Life Insurance Co.'s

NONFORFEITING-TONTINE LIMITED-ENDOWMENT, POLICY.

FIRST ADVANTAGE.—Insurance for a definite amount, or for an amount increasing with each premium paid, as desired.

- amount, or for an amount increasing with each premium paid, as desired.
 SECOND ADVANTAGE -A Definite Cash Endowment, and a Tontine Dividend, to Policies in force at the eud of Endowment and Tortine periods, which periods correspond, and may be either Ten. Fifteen or Twenty Years.
 THIRD ADVANTAGE.-Insurance for the full amount of the Folicy, extended for as long a time as the value of the Policy will carry it, within the Eddowment period. In case of discontinuance of payment of premiums after three years.
 FOURTH ADVANTAGE.- Orace of one month in the payment of premiums, during which time the policy holder's security is unimpaired.
 FIFTH ADVANTAGE.- Protee valuable options, including each value, to policy-bolders who survive their Tontine and Endowment periods and keep which respect to occupation, residence and travel.
 SIXTH ADVANTAGE.- Practical freedom of action with respect to occupation, residence and travel.
 SEVENTH ADVANTAGE.- The payment of death-claims immediately upon the approval of the required proofs of death.

Do not insure until you have seen full particulars of this Policy. Do not fail to write the nearest Agent, or the Home Office, for such particularsat once. THE NEW YORK LIFE INSURANCE CO., 346 & 348 Broadway, New York City.

CANOE

THE third edition of "Canoe and Boat Building" is now ready. The additional matter includes description and working drawings and sail plans of the Barnegat Cruiser, Sunbeam and Lassie canoes, and sail and rigging plan of canoe yawi. This makes the book comprehensive up to date. The author is W. P. Stephens, canoeing editor of For-Est AND STREAM.

makes the book comprehensive up to date. The author is W. P. Stephens, canoeing editor of For-EST AND STREAM. For writing such a book Mr. Stephens is pecu-liarly fitted, beginning as an amateur, and having after a long experience of the difficulties attending a learner, taken a prominent place among canoe builders, due both to the model and workmanship of his cances. Realizing fully the difficulty of ex-plaining to a novice an art in itself far from easy,

AND

and with which he is entirely unfamiliar, the book begins with a description of the various classes of cances in general use, with their main features and dimensions, and definitions of the terms used in con-nection with them. Numerous examples of cances are given, and in connection with them, such plain instructions in designing as will enable the beginner to select intelligently the proper craft for his pur-

BOAT

pose, and to plan her dimensions, details and fit-tings. To this end designs of all classes of cances are given, with full dimensions and details. The object has been not merely to enable the tyro to build one boat as described, but to teach him the principies of designing and building in such a way that he may construct such a craft as he desires, rollowing the chapters on designing, the construc-tion of a cance is taken up in detail, the tools and appliances being first clearly described, as well as the various materials, after which follow sthe actual work of building. Every operation is taken up in order, from the selection of the keel to the varish-ing of the finished boat, and illustrated with numer-ous diagrams.

ing of the finished cost, and indicates the varieties in ous diagrams. A chapter on sails describes all the varieties in use by canceists, down to the new Mohican settee, will directions for making, rigging and measuring them, while the method of proportioning the sails to the boat is clearly explained, all the calculations sering

BUILDING

being worked out in detail. The many minor points of a cance, paddles, steering gears, rudders, aprons, and camp eufit are also described at length, while a chapter is devoted to canvas cances. The subject of boat building is fully treated, a rowhoat of the usual construction being taken as an example, and described in all its parts in such a manner as to make clear the principles involved, and their application to any form of boat, either tapstreak or carvel build. Each of the numerous technical terms belonging to the subject is defined clearly when it first occurs, and as the index is full and complete, the book is in itself a glosser. The addition to the numerous diagrams in the body of the work, twenty-nine large plates are printed on bond paper, containing the working drawings of cances to make the subject of the working

FOR

and racing, with their sail plans, rowing sailing boats, large cance yawls, and various boats for special purposes, such as gunning boats, yacht boats, and the widely known sneakbox. The cance yawl, a boat between a cance and a yacht, is illustrated by examples of various craft from 17 to 20t. long, and suitable for a crew of two or three on a cruise. This class of boat, while little known among us as yet, is admirably fitted for cruising, and will meet the wants of many who object to a cance as being too small, and yet desire a beat with the same excellent qualities. The boats and cances illustrated are in all cases among the best of their class, the list of cances including Eng-lish, Scotch and American craft, and are all drawn

to scale, so as to be available as working drawings The plates, for convenience in nsing, are placed loose in a tough manilla envelope and accompany the book. Pp. 192, with 29 plates of working drawings Price \$1.50. Address,

THE NEWARK PANIC.

THE scare is over. After having been nursed along for many weeks by ignorant medical men and fostered by newspapers eager for a sensation, the bottom has finally dropped out, and the senseless, inexcusable folly of the craze stands confessed. The seven dogs bitten by the original Newark mad dog, and since that time kept in confinement, have shown no signs of disease, and are at last to be released from their imprisonment. The veterinary on whose respon-sibility the original dog was pronounced rabid, and who gravely announced that one of the bitten animals would become mad within twenty-four hours because, forsooth, it would not drink water at his bidding—this veterinary has acknowledged that these dogs are healthy.

During the prevalence of the New Jersey insanity we declined to refer to it further than to deprecate it, and to state that it was merely a panic without any foundation whatever. Now that this panic is over, and that those who originated it have acknowledged it to be without foundation, we speak of it only to condemn those who are responsible for having created it.

The outrageous story of this mad dog scare is well known, but all the harm done by it can never be told. The accounts of streets filled with mad dogs, and of, police practicing at them with revolvers, while the bullets were flying through the air were positively terrifying to women and children. little ones dared not venture out of doors; they were afraid to go to school; their parents endured agonies of anxiety. Nervous women and girls suffered untold tortures from fright.

Of the brutalities enacted under the influence of this insane terror, set on foot by wickedly foolish men for their own base advantage it is needless to speak. The tales of horror that have come to us from Newark and Jersey City within the last two or three months have been enough to excite the indignation of the most cold-hearted of men.

The responsibility for originating this mad dog craze lies with two or three feather-brained medical men of New Jersey, and the New York Herald promptly took the matter up and worked the sensation as long as there was anything in On these men and on this journal must rest the onus of the great wrong done to the community at large and to the brute creation, a wrong which cannot be too severely condemned.

There is not, nor has there been, during the whole course of the craze, one particle of cvidence published to show that any one of the New Jersey dogs was rabid, and yet these doctors and this newspaper, to advertise themselves, to increase their business, to bring to their pockets a few more dollars, to get themselves talked about, did not besitate to frighten almost out of their wits-perhaps in some cases to frighten literally to death-human beings, and to cause hundreds of dogs to be put to a torture which was wholly with out justification.

The Newark dog scare had its origin in the grossest ignor ance and in a great journal's avidity for sensationalism, for-gctful of its plain duty to the community. Such ignorance and such carelessness are wholly without excuse.

TROUT LAWS OF NEW YORK.

LAST April a law was suddenly passed by the Legislature of New York which closed the season after it had been legally opened on April first. The law for years had permitted trout fishing throughout the State on that day and while many anglers were on the streams, suddenly and without warning, the new bill passed about April 15 and became a law, forbidding the capture of trout until May 1 in any portion of the State except the counties of Queens and Suffolk. We referred to this in our issues of April 23 and May 7, 1885, and showed the injustice of the measure. The argument that anglers who had gone forth in the belief that they could legally capture trout in April is not applicable now, but the other objections still remain. The two counties which are excepted form the eastern end

of Long Island, are, with the streams of Sullivan and Ulster counties, the favorite resorts of anglers from the city. The trout rise to the fly freely in these waters in April, and have entirely done with the work of depositing their eggs. The fish are ready for the opening season, and the anglers are anxious for it, and only the law keeps them from obeying their instincts and coming together. Yet the city anglers their instincts and coming together. Yet the city anglers-and most of the men who fish Long Island streams are from the city-members of clubs or not, can go down and capture trout to the extent of their ability, but dare not take a fish across the East River to their homes. To the clause forbidding fishing for trout through the ice there can be no objection from men who capture them fairly in open water, nor should this class of anglers object to that part of the new law which forbids the capture or sale of trout which measure less than six inches in length; but the opening season, as now fixed, is at least one month too late for some parts of the State, especially the southeastern portion.

There is no doubt whatever that the first of May is soon enough to open the trout season in the Adirondack region. where the ice often remains on some of the lakes until the middle of that month; but under these very different conditions of climate it seems absurd to make a law which shall place the whole of the State under a restriction which is only proper to that elevated mountain region where winter reigns supreme until about the first of May or later. We have no doubt that the new law would have covered Long Island also but for the fact that Senator Otis was chairman of the Committee of Fish and Game last year, and tacked on a clause exempting Queens and Suffolk counties from the operations of all bills of a general nature. He did so when the bill forbidding the hounding of deer came up, and a law was passed forbidding the chase of deer by hounds in all parts of the State except on Long Island, where, of all places, the few deer that are left should be rigidly protected.

If the trout law could be amended so as to allow trout fish-ing on April 1 south of the Mohawk River from Utica east, and from thence south of the New York Central Railroad, or other near boundary, and prohibiting it until May 1 north of that line, it would no doubt cover what the framers of the last law desired, the prevention of all ice fishing and the pro-tection of trout until nature opened the season in the Adirondacks. Or, if it should be thought that this line is too far north, let it be brought down to the forty-second parallel, which would leave the counties of Suffolk, Qucens, Richmond, Kings, New York, Westchester, Putnam, Dutchess, Rockland, Orange, Sullivan, and parts of Delaware and UL ster below it, and in which fishing for trout could begin on the first of April. By a glance at the map it will be seen that this line forms the southern boundary of the State west of Delaware county and separates New York from Pennsylvania. Either of these lines would satisfy most of the anglers who live below the last one named, and would not interfere with trout protection in the northern part of the State

UNDER this general term may be found grouped a most heterogenous lot of mankind from the simple boatman on Greenwood Lake, who aspires to the name, to the thorough woodsman who can take a tourist many days' journey through a dense wilderness and bring him safely to his des The perfect guide is one who to a perfect acquaintination. tance with his region has a familiarity with all those forest signs, camping, cookery, and the generalities of all that varied knowledge which we sum up in the term "woodcraft." Added to this he is sober, truthful, active, strong and self-reliant. Possessed of these qualities he is naturally quiet, willing, respectful and companionable. Such men are by no means rare, but in the host who style themselves 'guides" there are many who fall far short of many of these qualifications; yet they pass themselves off on strangers as first-class men, and demand wages as such. The Adiron dack region has plenty of both classes; the first being, as a rule, the "independent" guides, as they call themselves, and the latter are more frequently found attached to some fashionable hotel, their knowledge being mainly confined to one lake and the management of a boat.

GUIDES.

Some years ago one of these self-styled guides betrayed his trust and committed a crime which cost him his life, and when the newspapers spoke of him as an Adirondack guide the well-known and respectable guides about Long Lake denied that he had any claim to the title; that he was a sawmill hand who had gone in and taken up the profession without any special knowledge of the woods, merely know-ing how to row a boat and where a few of the carries in his immediate vicinity were to be found. The affair cast discredit on many good men whose reputation is their capital, and such men should protect themselves from the possible recurrence of such a thing in future by having some sort of an organization from which any who are proved to be guilty of dishonorable practices should be expelled. This would tend to their advantage in many ways. We personally know of Adirondack guides to whom a man might leave uncounted gold, his family and all that he values, and trust them to go through the woods for weeks without fear for their safety, and these men owe it to themselves to see that all "scalawags" are kept from classing themselves with them by as-suming the name of "guide."

While it is true that the guides are as a rule trustworthy, they are not all expert, first-class woodsmen, and perhaps the average tourist or sportsman does not require this qualification. Nothing is more common than to hear some third-rate guide cracked up by one whom he has served once or twice but who knows nothing of the woods himself. To the green sportsman, the little knowledge of woodcraft which his guide has seems a perfect marvel of wood lore, because it happens to exceed his own stock of forest wisdom, and he not only marvels at it, but his "guide" becomes a hero whose praises he is disposed to sing on every possible occasion, little dreaming that if once off the carry, or the beaten track, his famous "Natty Bumpo" would be lost.

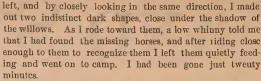

SHORT LOBSTERS.-Mr. F. R. Shattuck, who is the treasurcr of the Massachusetts Fish and Game Protective Association, and also a deputy fish commissioner, has been giving his attention to the detecting and punishing of lobster fisher-men who deal in "short" lobsters, that is those which are under the size prescribed by law, ten and a half inches exclusive of claws and feelers. Mr. Shattuck's vigilance and activity in the important public work are crowned with success, and he is doing much to correct this great abuse. It is a curious but not at all unusual commentary on the shortsighted spirit of the fishermen that they would, if not checked by the public-spirited intervention of gentlemen like Mr. Shattuck, actually bring to a speedy end their own occupation by marketing baby lobsters and once and for all destroying the stock.

THE DEER HOUNDING BILL.-The Assembly passed the Deer Hounding Bill by a vote of 93 to 23. We hope that for its own credit the Senate may refuse to concur in approving the bill. The Assembly plainly ignored the merits of the question. If the Senate follows suit, we have much mis-taken the spirit of its members. Elsewhere we print Mr. Hadley's speech in the Assembly. His whole argument is based on statements which have absolutely no foundation in fact; they are, on the contrary, so absurd that the Assembly might justly have resented being called upon to listen to them at all.

TO THE WALLED-IN LAKES. XIII.-"PLENTY HORSES STOLEN.

THERE were signs that the party's bad luck would cause its disruption. All the morning Yellowfish, Achilleslike, sulked in his tent, aud a little after noon he saddled his horse, forded the river, and disappeared over the bluffs on his way to the agency.

We spent the morning on the water fishing for lake trout, of which we caught fifty or sixty pounds' weight. In the afternoon we rode out north across Swift Current to get a nearer view of Chief Mountain. It is a grand needle of rock, standing far out upon the prairie, away from its fellows. Its connection with the range is by a narrow, knife-edge mountain, which runs back from it to the main chain; but the crest of this ridge is so far below the mountain itself that, at a distance, it seems but little above the prairie. made a rough sketch of its profile as seen from the southeast at a distance of about ten miles. The mountain at this distance is dwarfed by the extent of country seen to the east and west of it. No picture of Chief Mountain that I have seen shows this view of it, which is far more impressive than one from the north. This rough outline is seen below.

The next day we said farewell to the Walled-in-Lakes, and leaving Dick King, the sole white inhabitant of the beautiful vallev set out across the river and up the steep bluffs. Light though the wagon was, the pull up the long steep hill was a hard one, and it was afternoon before the last rise had been surmounted, and the team trotted on over the level prairie which forms the divide between the waters flowing into the Arctic Ocean and those which empty into the Gulf of Mexico. Soon after crossing the river, we met three halfbreeds driving a pack pony, one of whom stopped to talk with mc. He said that he and his comrades were hunting for some horses thought to have been stolen by the Piegans and inquired the way to the agency. He said they had avoided the wagon road from St. McLeod, because they were afraid that the police at the boundary might make them

SEEN FROM THE SOUTHEAST ABOUT TEN MILES DISTANT 1. Level of the prairie, 2. Crest of knife-edge mountain running back to the Range.

For an hour or two we sat on the hills admiring the trouble. I did not understand at the time what he mean t, majesty of this Western Matterhorn. Its sides seem verti--sometimes even overhanging-and utterly impracticable from the south and east. If there be a way to its summit, as the Kootenays say there is, it must be on the northwest. At all events, to give the mountain a trial would require no little time and labor.

On returning to the camp we turned out the horses, and after dinner I did some fishing in the river for trout. I caught a few, and some very good ones, but nothing above two pounds and a half, although they are said to run up to five pounds and over. In dressing these fish later we found that their food consists very largely of meadow mice (Arvicola). From one fish we took five of these, and from a trout weighing three and one-half pounds, which became entangled in the whitefish net, we took no less than eight of these mice. The discovery of this diet greatly disgusted Appekunny, who foreswore trout from that time, and spoke of them thereafter in most indignant and contemptuous terms.

This was to be our last night on the lakes, and it was marked by an incident which, for a short time, caused us some little uneasiness. I had been ferried across the river and left there to fish, and before I had been at it very long, some one called across that two of the horses had disap-peared and could not be found. I should back that they were no doubt feeding somewhere in the brush, and went on with my fishing without giving the matter much thought. As the sun set I went back to a point opposite camp and asked if the horses had been found. Appekunny replied that he and King had hunted everywhere but could not find them, and that they had probably been stolen. Here was a pretty Jerry was in sight, and the missing animals were mess. those of the men who had been looking for them. I called to Appekunny to set me across the river, and when he had done so, I jumped on Jerry and set out to look for the missing beasts myself. By this time it was quite dark, but the great full moon which had just climbed up over the eastern hills, cast over the plains a flood of white light which, while it made objects near at hand distinctly visible, threw over those more distant a curious veil of magic, which made them secm strange, unfamiliar and different from what they were. first made a circuit of the open plain, where, however, I did not expect to find the animals, as, if they had been there, they would have been discovered by those who had looked for them before it had become dark. Several times, thinking I had found them, I rode up to little clumps of brush, which, in the mysterious moonlight, took strange shapes, and sometimes seemed even to move. Next I passed through the brush on the edge of the hills, and then turning back to camp made a systematic search among the willows where I knew the horses were accustomed to feed. It gives one a curious feeling to ride through the woods or the brush in the moonlight. In the open spots it is so bright, and in the thick places so utterly dark. The straggling moonbeams which penetrate the foliage and lie on the ground before you pro duce many curious effects, and you imagine that you see bogs and ditches and little streams of water, and all sorts of impediments to your further progress. In riding about, I depended much more on my horse's than on my own senses, and beyond keeping him in the general direction I wished to follow, interfered with him very little. I knew, too, that if we passed near the horses, he would discover them long be-I could, and so I watched him for a sign that he saw something. I had got within a couple of hundred yards of any when I saw Jerry's ears prick and his head turn to the came to a little creek, already mentioned, in which were a

but when we reached the agency it was explained to me. appears that these nien were refugees from the half-breed rebellion, and as they did not know how the feeling was on this side of the line, they were traveling quietly and striving to avoid observation.

We jogged along briskly until nearly dark, I riding ahead to select a road and Appekunny following with the team. Twice we stopped, once to collect some wood for the campremembered that there is no wood on Milk fire-it will be River-and again to pull the wagon out of a ditch in which it had become fast, and just before dark made camp on a bluff on the river, about five miles above the red cliff under which we had camped on our outward journey. Late in the afternoon 1 had killed one of two sharp-tailed grouse that had shown themselves above the grass, and at dusk, while we were unharnessing, three mallards alighted in the pool our feet, and Appekunny very cleverly brought one of them to bag, so our supper and breakfast were provided.

How the wind blew that night! It was a difficult matter to put the tent up in the face of the gale, and after it was up, I changed the position of one of the corner pins, so that the strain on the ropes might be more evenly distributed. Then came the work of cooking supper and the feeding of The team horses and Appekunny's riding anithe horses. mal were hobbled and turned loose, but I thought it better to picket Jerry out, for it is often a convenient thing to have at least one horse where you know you can put your hand on him if you want him in a hurry. We were on the road home, and it was quite possible that the animals might take it into their heads during the night to strike out for Cut Bank, or to wander back to the Lakes, or, if they did neither of these things, to stray off into the hills, or up or down the creek, and should any one of these things happen, we would want a horse to ride when looking for them. So, using the end of an old lodge pole for a picket pin, Jerry was staked out not far from the wagon, where the grass was thick and good, and then we went into the tent for supper.

During the night the wind blew furiously, and some time before day a loud crash aroused us from our slumbers. tent had blown down, and the noise was made by the stove pipe rattling against the stove. Luckily the fire had gone out, and the stove was cold, so we did not bother to raise the tent, but slept under it until gray dawn.

When we turned out, the only horse in sight was old Jerry who was gazing anxiously down the valley, as if looking after his companions which had gone that way. My heart misgave me a little, for I thought it quite possible that the stock had gone into Cut Bank, and if they had, this meant a long, solitary ride for me to gct them and bring them back. Appekunny hinted at horse thieves, but I gave it as my opinion that no well regulated horse thieves would have driven off three horses and left the fourth. While my companion started his preparations for breakfast, I saddled Jerry and rode off to look for the horses. A ride of a mile or two down the valley revealed no fresh tracks, and I rode up to the top of a high hill, from which I could see ten miles down the stream. Nothing was to be seen. Then turning north, I rode through the hills back of camp, and at length, from the top of a bluff far higher than any of its fellows, I espied the truants in a little coulee less than a mile back of the tent. Going down to them I freed them from their hobbles and drove the horses to camp, where they were soon caught and tied up. We started about 7:30, and had a long, quiet,

great many ducks. Here Appekunny left his team in my charge, and had some very pretty shooting, killing in a short time a dozen or fifteen teal, shovellers and mallards. On the divide between this stream and Cut Bank I saw three antelope, almost, if not quite, the first that I had observed during the trip. They were very wild, and at once loped off out of sight.

When we reached Cut Bank, we found it for the time quite a busy place. Mr. Kipp, Major Allen, the Doctor, Mr. McGonigle, and two or three others had come out from the agency to have a day's fishing, and were just going back. The latest news from the States was given us, and pretty soon the teams drove off, while we made ourselves comfortable in John's cabin.

The next morning, after fruitlessly fishing for an hour or two, we started for the agency. While still some distance north of Two Medicine Lodge Creek, we noticed several single Indians, riding about over the prairie as if looking for a trail. At length one of them (Many Tail Feathers) rode near enough to us so that Appekunny made to him the sign of interrogation, what is it? or what is the matter? the Indian replied by partly extending his arms with the hands opened and the fingers spread and partly curved, then moving his hands and arms down bringing them near together at the end of the motion, and then suddenly raising them nearly to his breast, as if making the motion of scooping up a great deal of something in his hands. This signified "plenty" or "mauy." Then he held his left hand in front of him, the thumb upward, the outstretched but closed fingers pointing away from him, and placed the first and second finger of his right hand astride the forefinger of the left. This is the sign for "horse" or "horseman." Then he brought both closed hands together in front and a little to the left of his breast, and suddenly drew them apart with a quick motion, moving the left hand but little, but seeming to pull violently with the right. This sign meant "stolen." His reply therefore was "Many horses stolen."

Presently the Indian came up so that we could converse with him, and told us that during the night some Indians had run off 150 to 200 head of horses from the camp. Lone Person, who was a great friend of Appekunny's, and the richest Indian in the tribe, had lost 100 head. All the Piegans who had any horses left were now out looking for the trail, so as to pursue the thieves. He asked for a piece of tobacco which I gave him, and then rode off. A little later as we were descending the bluffs into the bottom of Two Medicine, we saw about twenty-five Indians, riding in body on the crest of the ridge on the other side of the valley, and inferred that they had found the trail. Just after crossing Two Medicine, we met Lone Man, who looked very unhappy, and much as if he wanted to cry, as indeed there is no reason to doubt he did, poor fellow. He tried to borrow a rifle for one of his party, but we had none that we

could lend him, and he role off again on his foaming horse. On reaching the agency, we learned that the thieves had been very bold, coming up to the very gate of the stockade, and taking two horses tied there. Opinions were divided as to the tribe to which the robbers belonged. Some thought they were Assinaboines, and other Gros Venties, but the majority believed that they were Crows. The opinion was freely expressed that they would not be overtaken. They had twelve hours start and had all the best horses in the camp and a never ending series of remounts. Besides, if the Piegans should catch them, it was thought very doubtful that they could recapture their property, for the Crows are well armed, while the Blackfeet are not, many of the latter still being without guns. It was thought that the chase would be fruitless, and that if the Piegans got their horses back at all, it would be by starting off quietly on foot, and stealing them again.

That night we spread our blankct's in the trader's store and enjoyed the kind hospitality of Mr. Joseph Kipp, while with Mr. McGonigle—a friend of many years' standing—I talked over the days and the mcn of early times. Yo. Mr.

The Sportsman Tourist.

SILVER FIELDS.

A FTER many downfalls of snow by night and day, some futtering down and silently alighting like immense flocks of fairy birds; others as silently, like the continuous falling of a gray veil, shutting one in from all the world lying further away than his nearest outbuildings, and yet others blown by howling winds in long slants to the earth and whirled and tossed along the fields, blurring their surface in a frozen crust; everything of lesser height and sheer uprightness than buildings and trees is buried in the univer-sal whiteness.

uprightness than buildings and trees is buried in the univer-sal whiteness. Then comes a day when the wind quits buffeting the snow from this side and that and stands still, debating which way it shall blow next, while the sun burns into the cold blue sky's eastern rim, runs its short course over the dazzling northern fields, and burns its way out behind the glorfield western mountains. When the sun is highest the air bites cheeks and noses and fingers with a sharp chill, and one feels its teeth gnawing his toes through his boots if he does not bestir them. At nightfall the smoke of the chinneys leans toward the North Star and by the next morning the wind comes roaring up from the south, armed with swords and spears of cold that no armor of wool or fur can ward off, and from every vantage ground of ridge and drift stream the white banners of snow. Then clouds come drifting across the sky, first a few, then so many that they get into a jam against some star or mountain somewhere to the northward,

of the night has regained his woodland haunt, his hollow, storm-foreboding hoot is heard resounding through the dark aisles of the forest. All sounds are at one with the hour and season. The snow crust cracks in long but almost imperceptible fissures, the ice settles to the falling level of the brooks and ponds with a sudden resonant crash, the frozen trees snap like the ineffec-tual princrs of an ambushed foe. All are winter's voices, as ancient as hoary winter's self, and that only emphasize the silence out of which they break. The jingle of the sleigh bells along a distant road, the crunching of our foot-steps, and their sharp, short echoes, are the only sounds that betoken any human presence in all the wide glittering ex-panse, with its blotches of woodland and dots of sleeping farmsteads. But we are not the first explorers here even this winter. A fox has left the record of his wanderings, exaggerated like many another traveler's accounts of himself writ on a more enduring page than this, for if you will believe this fellow's tracks made before the thaw, he was as big as a wolf, and formidable enough to raise a hue and cry in the township against him. The hare might be frightened to see the print of his own pads, now grown as big as the tracks of his enemy, the lynx. A skunk was warmed up into such activity as his short legs could compass and made his mark in the soft snow, unmistakable, though almost big enough for the track of the enautered abroad from his burrow are none but his, whereto is added proof of his sometime presence in a spicy wait of the air. The regular parallel dots of the weasel's track make a great show where he came to the surface abroe bis regular unway along the buried fence. He and the fox, though un-seen, are as wide awake this cold night as ever, but they and all later travelors are modester now, and set down naught of their journeys.

furry form, elad for such weather, so aglie, nolseless and wild, would fit the seen, and we oright to see eac, for this little basis, mimed with the rough hile on the cast ide and on the others with low ridges, is a favorite spot with forces, provided the spot where forces, shanks and the tail wild grass hardsons may field unice. Moreover, reynard offor gets a provide of barryle, added borse or cow is not hauded to this out of the way spot where forces, sknuks and crows find cheap and specify expularer for everything but the bones. It was you are control the Indian, for on the southwest bank are to be found pelory of find chips of the old arrow makers. Only a little brook trickles through it now, complaining with a faint multer white results and babbling in a feelbe voice of the diminished strength and babbling in a feelbe voice of the chain for there, just out of the shadows of the hill, sits on sone untoached by the hand of the craningest energy by you can see. If your get are sharp concept, the slight motion of his ears as be pricks them toward us, as his neer through and the slight motion of his ears as be pricks them toward us, as his neer the out the slight breeze sets from him to us, and, I fauer, touches our back slight will uncessant churk. Now he more shadow of the hand of the craningest energy by you can see the care of this back, his furfy to 'ly trig along the save-the contained the site of other stands. The slight motion of his ears as be pricks them toward us, as his neer the stands thows, but more light is a port revealer of colors the phase and the save that and babbling in a feelbe and we supplicate the save that the save that and the save the save that any the save the save that the save that and the save t

there is where the travelers are modester now, and set down naught of all later travelers are modester now, and set down naught of all is proven by the travelers are modester now, and set down naught of the woods to be scared by 6wis. The the proventions for the travelers are go, when on a Thanksgiving bar was one, two or three years ago, when on a Thanksgiving bar was not, two filted free Mountain boys, partridge hunting in a thicked of bar gone down like mullein stalks, and there he set his caudidor for a dinner pall while he lighted his pipe. How could so f a dinner pall while he lighted his pipe. How could so f a dinner pall while he lighted his pipe. How could so small a blaze as that little burned out match afforded ever have fired his furnace of a pipe! Yet from these dropped fragments of home-grown tobacco, I conclude that our giant was only an ordinary little Frenchman whose feet caught the trick of his tongue.
The packed snow resisted the thaw more than that which lay as it fell, so that beaten paths that were sunk below the surface are raised causeways now, a narrow slippery fooring that no one tries with all this wide pavement to choose from.
Now if we might have the luck to see a fox, how well his

Let us sound a retreat and set our faces toward the gray steeps of Split Rock Mount and the piled up blue and white Adirondacks, and get back on to the silver fields, brighter than ever now, as we march abreast of our northward slant-ing shadows, and the moon. now well up above the world, we fancy that one-half of this northern half of the earth out-spinos her.

ing shadows, and the moon, now well up above the world, we fancy that one-half of this northern half of the earth out-shines her. Silver fields is not a good enough name to-night for these shining farms, the creek unmarked uow but by the fringe of wooded bonks, the broad lake quiet uuder ice and snow, but never when tossed by autunnal storms so white as now and scarcely brighter in the glare of the summer sun. If you have a newly-minted silver coiu in your pocket, cast it before you and see how dull a dot it is on the surface. It would heatten a greenbacker to see how poor a show the precious metal makes to look at, hardly worth picking up out of acres of brighter riches that rust doth out corrupt and that shall be stolen by no meaner thief than the sun, the south wind and the rain. The roofs of gray old homesteads out-shinc the lights in the windows, and we wonder if any of the inmates are aware how royally their houses are tiled. Doubt-less not one of them thinks of it, or if at all, only as protect-ing the many shingles from the sparks of the rousing winter fires, or as so much filling for the cistern when the next thaw comes; nor, as compared with it, do the interiors, the low, whitewashed ceilings, rag carpets, creaking splint bottomed chairs and deal furniture, seem mean to them or unfitting their fine, perishable covering. For ourselves, we begin to entertain most kindly thoughts of such in-door homeliness and desire the comforts of us barboring, and presently shut ourselves in from the blue sky and shining moonlit outer world, tired and content to smoke a restful pipe by the fire-side. RowLAND E. ROBINSON.

Hatural History.

THE AUDUBON SOCIETY.

IN a supplement to Science, recently published, the Ameri-can Ornithologists' Union's Committee for the Protec-tion of North American Birds have published a great amount L can Ornithologisis Union's Committee for the Protec-tion of North American Birds have published a great amount of interesting matter on the slaughter of our birds. Papers are contributed by Mr. J. A. Allen, President of the Union, on The Present Wholesale Destruction of Bird Life in the United States; by Mr. William Dutcher on the De-struction of Bird-Life in the Vicinity of New York, and by Mr. G. B. Sennett, chairman of the committee, on the De-struction of the Eggs of Birds for Food. Other articles, un-signed, though furnished by members of the committee, treat of the Destruction of Birds to Agriculture, and of Bird Laws. There is also contained in this supplement An Appeal to the Women of the Country in Behalf of the Birds, and an account of the A. O. U. Committee on the subject. This paper will be issued separately as Bulletin No. 1 of the Committee, and will contain in its new form a brief account of the plans and purposes of the AUDUBON SOCIETY. To review, however briefly, the subject matter of this ad-mirable pamphlet is impossible, but it may be well to note one or two points made. It is frequently charged that much of the destruction of our birds is due to the collecting by ornithologists. As to this point Mr. Allen says: The scientific collector, as already intimated, is charged, in some

by of memory less. As to this point an, Anter says, The scientific collector, as already intimated, is charged, in some quarters, with the "lion's share" of the responsibility for the decrease of our song birds; with what justice, or rather upjustice, may be easily shown, for the necessary statistics are not difficult to obtain. The catalogue of the Ornithological Department of the National Mnseum numbers rather less than 110,000 birdskins. The record covers nearly half a century, and the number of specimens is four there execute then the to four other museum in this country, while covers nearly half a century, and the number of specimens is four times greater than that of any other museum in this country; while the aggregate number of all our other public museums would prob-ably not greatly exceed this number. But to make a liberal estimate, with the chance for error on the side of exaggreration, we will allow 300,000 birds for the public museums of North America, one half of which, of nearly one-half, are of foreign origin, or not North American. To revert to the National Museum collection, it should be stated that, while only part of the specimens are North American-say abont two thirds-they represent the work of many individuals, extending over a third of a century, and over the whole continent, from Alaska and Huson Bay to Mexico and Florida, and from the Atlantic to the Pacific. Furto Mexico and Florida, and from the Atlantic to the Pacific. Fur the more, this number --110,000, more or less --is not the number now in the national collection, which is far less than this, thousands and thousands of specimens having been distributed in past years to other museums in this country and abroad.

musenms in this country and abroad. So far the public museums: now in relation to private cabinets of bird skins. Of these It is safe to say there are hundreds scattered thronghout the country, containing from 300 to 500 or 600 specimens each, with a few easily counted on the fingers of the two hands, if not on a single hand, numbering 5 or 6,000 each, with possibly two approaching 10,000 each. Probably 150,000 would be a liberal esti-mate for the number of North American bird skins in private cabi-nots, but each to throw the error on the side of error ensurements. Let us

not on a single bank, handering boto byto byto what possibly two approaching 10,000 each. Probably 150,000 would be a lineral esti-mate for the number of North American bird skins in private cabi-nets, but again to throw the error on the side of exaggeration, let us say 300 000, not however, taken in a single year, but the result of all the collecting up to the present time, and covering all parts of the continent. Add this number to the number of birds in our public museums, less those of foreign origin, and we have, allowing onr exaggerated estimates to be true, less than 500,000 as the num-ber of North American birds thus far sacrificed for science. The faw thousand that have been sent to other countries in exchange for foreign birds can safely be included under the above estimate, which is at least a third above the actual number. We have now passed briefly in review all the agencies and objects affecting the decrease of our birds, save one, and that the most im-portant—many times exceeding all the others together—the most heartless and the least defensible, namely, the sacrifice of birds to fashion, for hat ornamentation and personal decoration. Startling as this assertion may seem, its demonstration is easy. In this country of 50,000,000 inhabitants, half, or 25,000,000, may be said to belong to what some one has forcibly termed the "dead bird wearing gender," of whom at teast 10,000,000 are not only of the bird-waring gender," of whom at cass vary greatly in their ideas of style and quantity in the way of what constitutes a proper decoration for that part of the person the Indians delight to ornament with plinnes of varions kinds of wildfowl. Some are content with a single bird, if a large one, mounted nearly entire; others prefer several small ones-a group of three or four to half a dozen; or the head's and wings of even a greater number.

dyed and bespingled, or a wreath of grebe "fur," usually dyed and not unfrequently set off with egret plumes. In the average, however, there must be an incongruous assemblage made up of parts of vari-ous birds or several entire birds, representing at least a number of individuals. But let us say that these 10.000/00 bir wearers have but a single bird each, that these birds made over so as to do service for more than a single season; and still what an annual sacrifice of bird life a sential ad. Con it hone birds then 5 00 00%, the times bird life is entailed. Can it be placed at less than 5.000.0 '0?-ten times more than the number of specimens extant in all our scientific collec-tions, private and public t sgether, and p obably a thousand times greater than the annual destruction of birds (including also egg-) for scientific purposes

scientific purposes. Fortunately, perhaps, the supply of birdskins for decorative pur-poses is not all drawn from a single country, the whole world being laid under tribute. The ornithologist recognizes in the heterogeneous groups of birds on women's hats, met with on every hand, a great preponderance of N:rth American species; but with them are many of the common birds of Europe and a far greater variety from South America and many (non Africa Anstrale New Guines and India America, and many from Africa. Australia, New Guinea and India. But on the other band it is well known that our own birds are ex-ported in imm ns numbers to Europe; but, whether the exportation exceeds the importation, it is impossible to determine from lack of proper statistics.

Some of Mr Sennett's observations on the islands and shors of the Gulf of Mexico reveal a frightful story of destruction of bird life, not to be matched anywhere except p rhaps on some of the islands of the North Atlantic coast, which have been despoiled by egg gatherers and by the fish-ermen, who use young birds for bait. Mr. Sennett says:

In 1877, and also in 1878, while studying the birds about Corpus Ohristi Bay, Texas, I examined a low grass flat called Pelican Island, so named on account of the numbers of brown pelicans that had for years taken it for their breeding place, to the exclusion of all other species. Here many thousands of these great birds were tending their eggs and young, breeding in such numbers that one could see prediction and the prediction of all other states that one could see the prediction of an event. or jump from next to next, over nearly, if not quite, every square yard of the island. Four years after I cruised over the same course, and noticed that the pelicans had deserted this grassy island entirely. and were scattered, in diminished numbers, on other islands which were not occupied by them when I made my former trips. On in-juiring into the cause of this change, I learned from promuent citizens, that two or three enterprising (?) men had conceived the quiring into idea of making their fortunes from pelican oil, and had erected "trying out" shanties on the mainland. They went to the island in quession in large boats, and carried off cargoes of young pelicans in all stages of growth, and boiled them up for their oil. The only the men could not sell the oil, and had nothing but their nefarious labor for their pains.

That a great interest is felt in this subject of bird preservation is shown by the cordially appreciative letters which we are receiving and the applications for membership in the AUDUBON SOCIETY. In several towns branches of the Society have been formed, and there is no doubt that this association

have been formed, and there is no doubt that this association is destined to do a great work. The importance of the subject is appreciated by all think-ing people, and pulpit and press will unite in urging it upon the public. Ouly last Sunday Mr. Beecher preached a scr-mon in which this subject was treated at length, and the papers of all sections seem at last to see the danger which threatens us. Of the many encouraging letters which we have received we have space only for a few.

160 W. 59th STREET, NEW YORK, Feb. 20, 1886.

140 W. 59th STREET, NEW YORK, Feb. 20, 1886. Editor Forest and Stream: No one wno will take the trouble to give the matter a few moments' seitous consideration can be in doult, I think, as to the wisdom of organizing the AUDUBON SOCIETY, and I am thankful that such a step is contemplated. There is an element of savagery in the use of birds tor personal decora tion, which is in grotesque contrast with our boasts of civili-zation. But even the savage stops short, as a rule, with the featherts. It is ouly Christian people who think it worth while to hutcher a whole bird to adorn their head gear. I am sure, however, that this is largely from that unreflecting habit which is a leading vice in people who follow the fashions. But it is a vice; as Hood sang, when he wrote: For evil is wrought

For evil is wrought By want of thought

As well as by want of heart.

If the ATDUBON SOCIETY can trach men, and especially women, to think on this subject, half of the battle will have been won. Sincerely yours, HENRY C. POTTER. been won.

WEST PARK, N. Y., Feb. 28, 1886.

WEET PARK, N. Y., Feb. 28, 1886. Editor Forest and Stream: I scaledy need assure you that your undertaking to form a society to the protection of our wild birds against the ravages of the milliners and the sham scientific collectors has my warmest sympathy and approval. It is a barbarous taste which prompts our women and girls to appear upon the street with the ir head gear adorned with the scales of our songsters; and it is more vanity and affectation which prompts so many persons to make up cabinets of the nests and eggs of the same. The destruction of our birds from their natural enemies is immense, and this craze of the collectors, and folly of the milling and their customers in addition, threatens their serior id diminution. I hope you may succeed in creating so strong a public sentiment upon the subject that the collectors of skins and eggs tor the unworthy purposes of fashion or to indulge the vanity of pseudo-naturalists may suddenly find their occupa-tion gone.

gone, lease add my name to the list of the members of the DUBON BOCIETY. Very sincerely, JOHN BURROUGHS. AUDUBON SOCIETY.

CORNWALL-ON-HUDSON, N. Y., Feb. 22, 1886.

CORNWALL-ON-HUDSON, N. Y., Feb. 22, 1886. Editor Forest and Stream: You have indeed my hearty sympathy in every effort to prevent the slaughter of my innocent httle neighbors and friends, the birds. In the destruction of forests and birds the people of this land are inviting very great evils and in-flicting wrongs on posterity which scarcely can be measured. The press should render it impossible tor women to sin thoughtlessly and ignorantly in demanding little birds for their adornment. The evil should be brought home so fully to the knowl-dge of all, that the continued wearing of our useful little birds should become the badge and indication of a callous, vulgar nature. When birds and feathers bave this significance, milliners will sell but few even in the Bowery. You are doing a humane and patriotic work in exciting

public aversion to one of the most cruel and stupid wrongs of the age. Respectfully yours, EDWARD P. ROE.

OFFICE NEW YORK Times, Feb. 25, 1883. Editor Forest and Stream: While thanking you tor your gracious communication in regard to the AUDUBON SOCIETY, I take the occasion to say on my own behalf how much needed is such an organization. The wholesale slaughter of the small birds of this country is one of the worst features of what is improperly called civili-zation. To go out and kill for food is a painful necessity of man, but to slaughter for the fove of the deed is abhorrent to the well regulated mind. The uses to which the small birds of the land are put is also, to my mind, doubly evil, the creatures being used largely for milinery decoration. Every time a woman's hat or bonnet is trimmed or deconsted with birds or feathers, a working girl is wronged. The manufacture of artificial flowers and fruits being a business suitable for young girls and women, the use of birds depresses the other branch of decoration and decreases the scope of woman's work. Wish-ing you all possible success in your praiseworthy endeavors, I have the honor to be your obedient servant. MIDY MORGAN.

THE AMERICAN HUMANE ASSOCIATION, MINWAUKEE, WIS., Fob. 23, 1836. } Editor Forest and Stream: I am rejoiced to see that your paper is moving for the making of public opinion on the present lamentable destruc-tion of our birds. Fashion is so imperious that it leads the best hearts astray. If the women could only know what the y are doing! They don't know, and hence they carry and flaunt, as a decoration, that which is destined before long to mark the commission of a crime against the Nature we all love. There is such a thing as a crime against the Order of the World, and women are not often irreligious in this sense. Your AUDUBON SOCIETIES, for the protection of our birds, will enroll many thousands of women as ardent bird protec-tors, who are now, unconsciously, accessories in the waiton,

tors, who are now, unconsciously, accessories in the wanton, wholesale and most disastrous destruction of the most beau-tiful denizens of our fields, orchards and woods. What will the forest and stream be without the birds that

What will the forest and stream be without the birds that carol and peep and nestle and dip and chatter there? So the FOREST AND STREAM must defend its own citizens against the murderous bands of bird butchers that have already decimated the fair country of both plumage and song. For when you rifle the feathers for the milliner, you strangle all that rush of happy song which has made glad the hearts of a thousand generations of men. Euroll me in the parent ACDUBON SOCIETY. G. E GORDON, President A. H. A.

The plan of the AUDUBON SOCIETY is heartily approved by the A. O. U. Committee on Bird Protection, and they have recently appointed one of their number to supervise the formation of AUDUBON SOCIETIES wherever practicable.

BLUEBIRDS AND ROBINS.—Newfoundland, N. J., Feb. 23.—Blueburds and robins have wintered here this winter. Saw bluebirds to-day and robins have been around the resi-dence of Mr. L. Davenport all winter. 'This seems very strange, as the thermometer has been as low as 14° below zero.—S. S. W._____

IN BURTON'S WOODS.

IN BURTON'S WOODS. Editor Forest and Stream: I have been much interested in the account of Burten's Woods, given in your current issue (Feb 18). Possibly a little story of what has happened there in later years may be a fitting sequel It is no wonder that after being shunned for so many years Burton's Woods should have become the paradise tor coon-hunters described in your last issue. The courty round too was so abundantly supplied with game, and the bays and marshes with wildfowl and snipe, that a tew years ago a party of Nothern sportemen bruggt up a large tract of land in the victinity on which they eracted a club-house. The members were all prominent and distinguished men in the cities in which they reside, and over the whole country tor the matter of that. To see them in the Senate chamber at Washington, on the bench and in their effices in Wall street, and in other high and lofty positions, not one per-on out of a clytul could even imagine that those dignified and sedate-looking personages could even smile, much less unbend. The idea of their going coon hunting on a dark night, in a hammted forest, tumbling over logs and poking pine conces in their eyes, of course, would be too ridiculous for, any same person to suppose, but yet, the Senator, Judge, Mayor, mer-chants and bankers were known to go out cooming in old man Burton's Woods and have the jolliest time, and this is how it all came about. An old erary coon, who was supposed to be the great-grand-

chains and binkers where known to go out cooring in out man Burton's Woods and have the joliest time, and this is how it all came about. An old gray coon, who was supposed to be the great-grand-father of all the econs in Virginia, was known to have his sunggery in the bauuted woods. Now the stately party I speak of did not care a rap for all the ghosts in the universe. The mighty Judge actually hollowed with delight when he heard about the old coon, and said it made him feel like a boy again to think of seeing one treed. The Senator sail he used to know all about coons, but had lost track of the kind referred to of late. But whe ther they knew anything about coons or not, every one talked coon scientifically, just as if it was the most wonderful animal in the world. How the coon tribe would have snickered and felt complimented if they had heard them! At last it was all settled that on the first good coon night, when the stars were obscured and a thick sea fog made it impossible to see your hand before your face, the old grandfather coon should be routed from his lair. your fa his lair.

The night came at last, and with it half a dozen neighbors, each of whom brought with him "the best coon dog in Virginia."

honored with a visit from so many distinguished people.

MAINE GROUSE.

GREENLEAF. MAINE CROUSE. THE winter has been an unusually severe one for the grouse in Maine. About the middle of January, there was a fall of light snow; and later, an icy crust form d which must have crusted them under. On January 28 came the most severe storm of sleet ever known. It exten-ded over the whole southern portion of the State, and into New Hampshire and pottons of Massachusetts. The rain left in the afternoon and evening, and frize to the limbs and twigs of trees in such quantities as to twist and break them off. The clms suffered the most; many branches of the tonghest elms a foot through were snapped off like pipe stems. In passing through the woods, I noticed the limbs of hornbeams twisted and broken off. I weighed somo pieces of nee two inches through or more, attach d to twigs not over one quarter of an inch in diameter, which would weigh one pound to the linear foot. These trees had in addition to their own weight, tons of ice to hold up. Many fine trees in the cities are completely ruined. The birocos bent tucit leads to the earth, and in places whole acres were laid dat, every twig and bud were covered with ice, and for about the days it remained so. The ground was covered deep with snow with an icy frust over it, and the trees were so covered with ice that the prouse could not get at the buds, th ir regular tool in winter. Hundreds of these noble birds must have perished of starvation; I found sizes of their presence only in the interest swamps. One gentleman in Cumberlaud county found a flock of about twenty visiting his cattle yard, near the hoase, searching for food. The birds did not run from hum until he approached within the feet. He scattered grain about, and place d several bushels along the edge of the words that they inhabite. I notice d last fall that grouse were reported searce in other States, but in the southern portion of this State they were, and their transportation to market is doing well its vork, and their transportation to market

principles. BATH, Me., Feb. 15.

A WEST VIRGINIA STEP AHEAD.

A WEST VIRGINIA STEP AHEAD. Editor Forest and Stream: I inclose a slip from our local paper that explains itself. Sportsmer here will job Mr. Wirehester in this work; "Nortice —It is not hawful to kill, or pursue with intent to kill, any deer in this State between the 15th day of Janu-ary and the 1st day of September; to kill quail or Virginia partridge between the 1st day of January and 15th day of October; or any wild turkey, ruffed grouse, pheasant, pin-nated grouse, between the 1st day of Felunary and 15th day of between the 1st day of April and the 1st day of November, Notice is therefore given that any person violating the ahove or any other provision of chapter 89, Acts 1883, will be prosecuted.—C. H. Scorr, Prosecuting Altorney, Reward.—I hereby author.z= C. H. Scott and E. D. Talbott to pay a reward of \$50 for evidence or in-formation leading to the conviction of any person for viola-tions of the game haw of this State within the bounds of any lands owned by me in Raudolph or Pocahontas counties.— A. H. WINCHESTER."

bon tribe would have snickered and felt complimented if hey had heard them! At last it was all settled that on the rst good coon night, when the stars were obscured and a lick sea fog made it impossible to see your hand before is lair. The night came at last, and with it half a dozen neighbors, the of whom brought with him "the best coon dog in irginia." The start was made and no coon that ever lived was ever

tion. The tributaries of Cheat, Elk and Greenbrier, which but a few years ag swarmed with trout, are now almost destitute of that game fish, except a few meagre fugerlings. Potting, liming, suaring and shooting on the spawning beds have completed the eruel work. It is time to call a halt, or the healthful toil of the sportsman will cease to be a pleasure; a pursuit unrewarded, neglected and forgotten. But a few years and our children will point to it with about as much interest as we now take in "kuight ernauty." BAGEWOODS.

THE DEER HOUNDING BILL.

<text><text><text><text><text><text><text><text><text><text><text><text><text><text><text><text><text><text>

eess, but with mighty and consuming strides. (k) The in-habitants of the mountainous portions of the Adirondack counties are many of them galdes, whose only means of liveli-hood is the income which they receive from the thousands of tourists who annually visit that delightful region for recre-

bood is the income which they receive from the thousands of tourists who annually visit that delightful region for recreation and sport.
(!) "The present law, discriminating as it does, against true sportsmen, has driven many of them to other sections of the country, to Colorado and the Western Territories, or to Canada, where they are permitted to hunt in a sportsmanlike way, untraumeled by senseless and vicious laws. (m) As a direct result of this, hundreds of Adirondack guides, being deprived of their only and long accustomed means of support, have been comp lled by the extgencies of the case to hunt and kill deer for the city markets, to keep their wives and children from starvation. This is the secret of the terrible slaughter of deer in the Adirondacks during the past season, and it will continue as long as there is a deer left in the northern forests, if the present law is permitted to go unrepealed. Any law which antagonizes the interests of a large portion of the inhabitants of the Adirondacks, as this law does, must necessarily and inevitably result disastrously to the game 1 therefore denounce the present law as destructive to the deer which it is intended to protect, and I urge npon you the imperative necessity of its immediate repeal."

(f) An anti-deer hounding law has been in operation in St. Lawrence county for more than six years, and it has not exterminated the game there; witness the shipment of the 123 carcases from Canton last season.
(g) The does are not rutting in November. They never rut. Nor are they then gathered in herds which the buck visits. On the contrary, the bucks(traveling at a rate beyond the power of any man to keep up with them) do pursue the theeing individual does. These facts are perfectly familiar to all deer hunters and to naturalists. John Dean Caton, LL.D., recognized as the highest authority on the subject, says: says

Snys: The pursuit of the doe by the buck commences before her season has arrived, and hence for two or three weeks sac remains as secluded as possible. He follows her track with his nose to the ground, and when started from her bed the race is very splitted. No attempt is made by a buck to her the does, as is the custom of the elk, and but few of these deer are found associating together during the rutting scason.—ANTELOPE AND DEES (F AMERICA, page 307.

(h) The expert still-hunter is not led to the herds, for there are at this time no herds for him to be led to. He does not strike and destroy the herd; there is no herd for him to strike and destroy.
(i) Deer ordinarily and always are alarmed at the discharge

(a) Deer ordinarily and always are alarmed at the discharge of a gun. Before they were exterminated, the elk of the Adirondacks would stand in bewilderment (as Mr. Hadley says the deer do) at the sound of the gun; but the deer—hounds or no hounds—never do so.
(j) It is just because of all these lakes and ponds and "in-numerable streams crossing and inter-crossing it in every direction" that the Adirondack region is one where hound-log is more sure and more destructive than any other method of deer killing. In these innumerable waters the game—obeylog its instinct—takes refuge from the hounds and "guides" (*i. e.*, boatmen) are not dependent wholly on hounding. Adirondaek tourists are not all deer hounders. The thousands go, some for angling, some for health, some for simple out-door camp life, some because it is fastionable—in short for the same various reas asons that these same thousands go to the White Mountans, the Catskills and Saratoga. Some of us can remember when deer used to be driven by hounds into Saratoga Lake and killed there, but though deer hounding has long since ceased in that region, we are not aware that Saratoga hotel interests have suffered. The fashionable througs who every summer fill Mr. Paul Smith's parlors and verandahs will not desert that famous Adirondaek house, even though waterbutchery of deer cease forcver, and no one knows this better than Mr. Smith himself.
(*i*) The "true sportsmen," driven to Colorado, did not hound deer there, for they don't do it in Colorado, nor in the "Western Territories."

hound deer there, for they don't do it in Colorado, nor in the "Western Territories." (**) The guides did not achieve a "terrible slaughter of deer" by still-bunting, for (1) they have not the skull to do so, and (2) there was no terrible slaughtr. If they were killing deer for their starving families they would not have left the carcasses of "nearly a hundred deer" to the birds and wolves. The starving wives and children belong to Aoiron-dack mythology. Unless Mr. Hadley's statements respect-ing them are more reliable than his other statements in the speech, it is not worth while seriously to consider them in legislating about game.

HUNTING AT ARMY POSTS. [Continued from Page 85.]

A NOTHER batch of letters received from the officers. statuced at the outlying army posts makes interesting reading. We give several below. There would seem to be abundant game of various sorts in the diff. rent sections, and some of the criticisms go to show that it would be an excel-lent move if the Ordnauce Department could be induced to issue something better than the petty .30 caliber Springdeld now sent out now sent out.

Editor Forest and Stream:

Editor Forest and Stream: In reply to your communication addressed to "The Com-mandant, Fort Selden, New Mexico," dated Jan. 9 ultimo, requesting information regarding supply of game about the post and as to the action of the Springfield shotgun issued for company use, I have the honor to state that such game as duck, quail and rabbit are abundant. The ratio Grande River and adjucent ponds are covered with mallard and teal duck from early in the fall until late in the winter, and afford fine sport to the ambitious or hungry hun-tr. The Springfield snotgun is in constant demand and attains fine results, as I have known of six or eight teal to be killed at one discharge, and five fine, large mallards to be bagged at a single snot. For duck shooling we use No. 4 shot, and the army shotgun kills reacily at from 25 to 30 yards. Our quail are of two varieties—the California or topknot quail, which are found on the prairie and along the bottom

Our quail are of two varieties—the California or topknot quail, which are found on the prairie and along the bottom tands, and the gray or mountain quail (by some called mountain grouse), which are tound in great abundance in the hills and mountains. The mountain quail is much larger than the California variety and appear to travel in much greater numbers to the flock. They live almost en-urely among the rocks, and, while they fly but short dis-tances, they are swift runners and rapid clumbers, and make thresome work for the hunter. The Springfield shoring answer to good advantage in quail shooting, and has achieved great results in the humes of

The Springheid shotgun shows to good advantage in quan-shooting, and has achieved great results in the hands of some of our sportsmen. In two days' hunting (using the army shotgun) two members of K Company, 18th Initantry, whiled 185 mountain quail, firing only ninety shots. At a single shot from the army shotgun ten quail have been killed, and it is a common thing to kill from five to eight at one disconners. O til are easily killed at from 50 to 85 yards, No.

and it is a common thing to kill from five to eight at one discnarge. Quil are easily killed at from 50 to 85 jards, No. 8 shot being used. The rabbits are the cotton-tail or bush rabbit, and the long-legged, long-caucd, swift-running jick rabbit. The anny storgin readily brings them down; and so much interest is evinced in hunting by the men of this command that the table is constantly supplied with luscious and toothsome game. gam

The army shotgun is 20 gauge, and metallic reloading shells are used. In loading the shells we use from 85 to 90 gratus of powder and filt up the vacancy with shot. The powder is rammed hard and closely packed, as this gives both more power and a greater space tor shot. The great objection, and about the only one, is the small-ness of the bore and shortness of the barrel of the gun, for if the Springfield shotgun was made 10 or 13 gauge and a tew inches longer I magine that great results could be accom-plished, and in a country like this, where game is abundant,

there is no telling the amount that could be daily added to the company larder. Without doubt a most useful and desirable article was given the companies when the Spring-field shotgun was issued.

WM. B. LEWIS, Sergeant Major. FORT SELDEN, N. M., Feb. 12.

Editor Forest and Stream:

But reports and Etream: In response to your inquiry respecting the game of this is have the honor to make the following reply: The game and teal. The sharp-tailed grouse is found everywhere, i. e. in the Black Hills proper as well as on the praines outside while they are in reality in considerable numbers and can be found in packs of a high as fifty brids in the winter time; yet during the proper season for hunting them, they are scattered over such an immense territory that it is seldon that be Black of a high as fifty brids in the winter time; yet during the proper season for hunting them, they are scattered over such an immense territory that it is seldon that been the experience that these brids in Minesota and Eastern Dakota disappear gradually before civilization, be-ing replaced by the pinnated grouse of Illinois and Wiscon-in. It will be interesting to watch these birds here, as the country is fast settling up, and indeed, the valleys are about all taken up and farmed now, and the Black Hills are separ-tited from the divilized and farming country of the east by the wide belt of country in the Sioux reservation; there is no evidence at present that they are disspoaring. The west-report of the mountain sheep or much valued grouse of the East, of which this is said to be a variey, and in my es-timation is the most dicticious meat found in the Vest, and targes by a vifie ball when the bird was so close to the gan as to be burnt by the fash of the dischare, and I have also seen the willed with sticks. They are hunted but litle, yet they fly of them in a residence here of over three years. A few found care early in the spring and late in the fall for a few days, and a very few bread to a degrwater duck having been iffy of them in a residence here of ower three years. A few found here early in the spring and late in the fall for a few days, and a very few tread of a deery water duck aving been in the snow and shot, but are seldom seen when snow iffy of them in a residence

FORT MEADE, D. T., Jan. 23.

Editor Forest and Stream: Your letter of Jan. 9 mislaid. Please accept my regrets for not answering before. The supply of small game is scarce in this locality, prairie chickens and ducks being the only birds hunted with shot-

guns. Antelope and deer are reasonably abundant, and during the season we are well supplied with them. The soldiers hunt with the Springfield shotgun consider-ably, and while they bring in a few birds each, often none. I should say that the use of it is not attended with great success. In fact, it is not an effective weapon, but seems to serve their purposes well enough. CHAS. O. WORDEN, 1st Lieut. 7th Infantry.

FORT LARAMIE, W. T., Feb. 5.

 Edilor Forest and Stream:
 I reply to your three inquiries. First—As to supply of game about this post. There is very little game in the immediate vicinity. A few sharptail grouse breed here, and there in whiter seek shelter in the brush on the small streams near the post. There is not enough water to attract many waterfowl, though a little very good duck shooting was had here. One must go a long distance to find large game. Second—Extent to which game is laid under tribute to
 Form BLISS, Tex., Jan. 25.

 Editor Forest and Stream:
 The Springfield shotguns in Company D, 10th Infantry, are used constantly by the men of the company with considerable success. Blue and mountain quail and rabbits are secured in fair quantities, enough to feed those using the guns and a few others. L. H. LEACH, 1st Sergt. Co. D.

uphold the standard of the post larder. To a very limited

uphold the standard of the post larder. To a very limited extent here. Third—To what extent and with what success are the Springfield shotguns used? There is very little opportunity to use them here. I shall give the result of my observations at a post where game was more abundant. While stationed for nearly four years in the Indian Territory 1 observed that the Springfield shotguns (two to each company) were in almost daily use during the game season, with the result that many chickens, ducks, quail and rabbits were brought to the table. The gun is strong and serviceable, and, when properly loaded, makes a good pattern and has good penetration. Some of the men made good wing-shooting with it. But 1 also ob-served that the men particularly fond of wing-shooting gen-erally went to the expense of securing double-barreled guns of larger caliber. J. C BATES, Major 20th Infantry. FORT ASSINTBOINE, M. T., Jan. 30. FORT ASSINNIBOINE, M. T., Jan. 30.

FORT ASSIMUTED TO . IN TRANS MILLION FORT ASSIMUTED TO . IN TRANS MILLION TO LEAST ASSIMUTED TO . M. T., Jan. 80.
Editor Forest and Stream:

It affords me pleasure to reply to your note of Jan. 9, which was delayed nearly a month on the road by snow blockades.
The Springfield double-barrel shotgun answers its purpose very well; it shoots strong and close. The soldiers use it hunting the jack rabbit and the cotton-tail, both varieties being numerous here. Grouse come down from the mountains late in the fall and disappear with deep snows; quite a number of them are shot here from day to day during the season, but they are not plentiful by any means.
Deer are more abundant, and soldiers generally prefor hunting with the Springfield rifle, with which arm they have become quite expert owing to the interest taken in target practice of late years. It has not been unusual the past season for small patties to bring in seven or eight deer at a time, keeping the messes well supplied with venison until the snow got so deep that all kinds of game disappeared. In several directions within fifty miles of the post different species of bears are found in sufficient numbers to satisfy the most venturesome of sportsmen, and wild turkeys breed within one or two days' march of us; but it is unlawful to kill turkeys in Colorada at present.
Beautiful clear running streams of cold water from the mountains carry trout, some silvery with black speckles, and others red speckled and gold or salmon-tinged, affording best of sport to the angler, and the rod and line are as much in requisition as the gun.
Fort Lewis ison one of these streams which well deserves its mame, La Plata, so extremely clear and brilliant as it courses along with a fall of one hundred feet to the mile, that one is struck with its silvery appearance. The aggregate of trout taken from this stream is large, though individual counts are nothing to brag of, owing to the fact that there are so many soldiers and

nothing to brag of, owing to the fact that there are so many soldiers and settlers who daily whip the stream during the fishing season. Better sport can be obtained by driving to camps on other rivers, such as the Dolores, Mancos, Los Pinos, Piedra, etc. The writer, with four others, drove forty miles last August to the junction of the Via Cita with Los Pinos; arriving in camp at 6 P. M., we fished until supper was ready and all next day. Owing to heavy rains in the mountains some of the channels were muddy the first night and following mom-ing, nevertheless the party caught 125 trout. The honor of catching the largest trout ever brought into Durango fell upon Mr. Kephart, of that place, on this occasion. With the smallest of flies he hooked him, bringing his head to a gravel beach, when another of the party came to his assistance, wad-ing behind the fish and litting him out with both hands. This trout weighed five pounds, was just twenty-four inches long and well tucked away inside of him was found an entire frog the size of the hand of an ordinary full grown boy. This trout was exhibited for an hour or so on the marble slab of the counter in Mr. Ambold's market at Durango, drawing crowds to view it. I have read of single trout from lakes weighing three or four times as much, but this moun-tain trout 1 presume may be classed among those of maxi-mum size.

FORT LEWIS, Col., Feb. 8.

Editor Forest and Stream: In reply to your letter of inquiry dated on the 9th ultimo, I would say that there is very little game of any kind in the immediate vicinity of the post—say twenty miles—save quail, of which there is a greater abundance than I have ever wit-nessed before in any part of the United States. They breed here two or three times in the year, and as the settlements increase and the wolves disappear they appear to be multi-plying more than before. Morth of us, in the mountains and timbered country be-tween this post and Fort Apache, thirty or forty miles, there are deer and turkeys, and plenty of trout in the mountain streams.

we have also the salmon trout here in the Gila, sometimes weighing thirty pounds. If the grouse or prairie chicken were introduced here I think it would, like the quail, flourish better than anywhere else in the United States. As to the Springfield shotguns, my opinion is that they proved a failure generally, the caliber being too small and too difficult to keep up a supply of ammunition, most of the shooting here being done with 10 and 12-bore guns. Perhaps I am prejudiced against the Springfield, however, as it has long been my opinion that it would have passed out of use even by the conservative army, as it did long ago with everybody else, but for the all-powerful influence of the Ordnance Corps. FORT THOMAS, Ariz., Feb. 15.

FORT THOMAS, Ariz., Feb. 15.

Editor Forest and Stream: The Springfield shotgun has been much used by the men of the company in hunting during the last year, and is con-sidered by them a very good gun. The only game about this post are blue and mountain quail, jack and cotton-tail rab-bits. A large number of quail have been killed by the men during the past three or four months, and also a large num-ber of the jack rabbits, all of which assisted the company mess. PHILE WHEELER, 1st Sergt. Co. H., 10th Infantry.

GRIZZLY HINTS FROM SHASTA.

CRIZZLY HINTS FROM SHASTA. Editor Forest and Stream: I may be a little slow about it, but I'm a long way from headquarters and I desire to tender my advice in regard to the disposition of the grizzlies. I owned a bear for six months. He was a small little bear when I got him, but he grew and grew. Before six months he was quite a big large bear. He did not look so large as he really was. There was as much of him as I wanted. He was rugged and healthy from infancy, his teeth and to enils were always in an advanced stage of development, and he evinced great dexterity in the manipulation thereof. He looked like a small young bear, but when you came to feel of him you would be astonished. He felt like a swarm of young bees on a keg of hot nails, or something equally vivid. One trouble with him was his peculiarities. He wouldn't do anything except make trouble around, and when I chained him up he squalled. When he squalled he disturbed the enfire population and created excitement. Crowds congregated, horses ran away and small boys yelled "fire!" He squalled as an animal much older and larger than he was ought to squall. But I merely refer to him casually to assure you that I know something of con-sequence concerning bears. Although my experience was confined to one bear it is sufficiently vast and comprehensive. One bear is as good as a dozen. One bear in the bushes is as good as two on hand, that is, of course, unless you have them in a cage. I gou have two bears, and have them caged, why of course you have got them. If, however, you have two bears and

One bear is as good as a dozen. One bear in the bushes is as good as two on hand, that is, of course, unless you have them in a cage. If you have two bears, and have them caged, why of course you have got them. If, however, you have two bears and they are not caged, I don't know whether you have got them or not. If you have, I don't want them. Of course bears are bears, especially grizzly bears. The Folkest AND STREAN's grizzlies are real, genuine bears beyond question. They are tangible taxable property, and if any one came along and desired to buy them you could sell them if you wanted to. You need not sell them, however, unless some one wanted them, and, of course, no one is expected to buy them unless you desire to sell them. That is, if you wish to sell the bears, and will do so, and some party desires to, and does buy them, the transfor of the property may be made if it or they are caged. But as you have the bears now I would suggest that you keep them until you can dispose of them. If you do not desire to keep them so long you could let them out. Perhaps if you keep them you may get others and then you would have several. After a year or two, if the bears thrive, they will be larger and probably older. The older and larger they become the more will they re-semble larger and older bears. Then you could dispose of them either as suggested or as you might then desire, if you had the opportunity. But really if the bears were mine, and I had them, and they were caged, I would sell them if I could, if I wanted to. ENAU.

SHASTA, Cal., Feb. 14.

SHASTA, CAL, Feb. 14. THE TRAJECTORY TEST.—Editor Forest and Stream: The London Field of the 13th inst has a very excellent and ex-haustive report of your late rifle trials. It embraces also many new things about the London Field trial in 1883. The report is made by "T." and when all things are taken to-gether, as in the article, it becomes a very interesting and instructive one, and indeed nearly as much so as your own very fine report of this trial, which has everywhete among riflemen been read with so much interest. May I therefore ask you to re-publish in full the London Field report. I am sure the article will be read with eagerness if re-published. I have omitted to say that all riflemen and riflemakers should not fail to purchase one of your pamphlet reports of this trial, as it is much more correct and complete than as pub-lished in FOREST AND STREAM. It affords me much pleasure to indorse it as a work well executed, and very much wanted at this time to settle matters. Great credit is due to FOREST AND STREAM for this very valuable contribution.—MAJ. H. W, MERRILL. [The report will be given in an early issue].

A Rosy GAME REPORT.—Pomons, Fcb. 20.—The draw-ing on foreground of this sheet shows the nature of our forest, the large tree shown in back ground being the only one in 90,000 acres. Game in this section is unusually abun-dant, two cotton tails having been seen suce Jan. 1, and a track, which experts have, after much discussion, decided to be that of a gray fox instead of a cat, having been seen on the "Dights tract," which embraces but 30,000 acres of land. In November 1394, a deer track was seen that had certainly been made during the previous summer; and the man is still living who knows of a swamp in which a bear once was. The most enthusiastic and successful sportsman of this vicinity has not a fox must at least have been Valater's cat. Wood mice are also plentiful and tomitis remain in abundance not-withstanding the severity of the winter. There will be no scarcity of fish if the carp cultivators are'sufficiently success-ful to raise a bountiful supply.—C. ScuL.

QUALL IN VIRGINIA.—Frederick's Hall, Va., March 1.— 1 am gratified to be able to report that the partridges in this region were not hurt by the recent very heavy snow. I have made diligent inquiry as to the counties of Louisa, Gooch-land and Spottsylvania, and have not heard of a single dead bird, but on the contrary many coveys have been seen alive and strong since the snow. They were more numerous last season than for many years, and the stock left over for next year's breeding is larger than I have ever known. They sub-sisted during the snow (which was from twenty to twenty-four inches deep) principally on cedar and dogwood berries. This present abundance is in a very great measure due to the fact that the freedman can't kill a partridge on the wing. The game law as to them is very generally respected by the sportsmen.—P.

sportsmen.--P. FORESTY CONGRESS REPORT.--We have received advance sheets announcing the Report of the American Forestry Con-gress of its Boston meeting, to be issued shortly. The statis-tical parts of the volume and the general demands made for forest preservation, together with papers on utilization of timberman's waste in manufacturing charcoal, and the more novel proposition to use it as a fertilizer, and the discussion of means to diminish losses by fire, demonstrate that economy with present forest resources is first of all to be attained. The encouragement of the aims of the Society in this respect may well be considered a patriotic task. Requests for advance sheets or subscriptions of one dollar for the volume should be sent to B. E. Fernow, Secretary 13 Burling Slip, N. Y.

TIP-UPS FOR PICKEREL.

THP-OPS FOR PICKEREL. THE request for information on the mode of constructing "tip-ups" for signaling to the fisherman on the ice the fact that a pike (pickerel) has taken his bait, which appeared in our issue of Jan. 21, has brought us many notes on the subject. We will say for the benefit of those who are ignor-ant of this mode of winter fishing, that one man often cuts from ten to fifty holes in the ice at some distance apart, often in different portions of the lake or pond, and baits his lines, usually with a live minnow, and sets his tip-ups to notify him when his presence is needed at some particular hole. Here is the primitive tip-up of our byhood:

We give below some other, and improved, forms used by ur correspondents: our correspondents: Editor Forest and Stream: In reply to the inquiry of "Pickerel" in a former issue, I would respectfully submit that the most simple, quickly pro cured, and effective tip up we have ever seen used were those taken from the tops of saplings. Where three sprouts spring out straight from the top, cut them off about 2 inches below the joint, lop off one branch about 18 or 20 inches above the joint, the other two 9 or 10 inches. The last mentioned will then form the legs or base. The line is tied to the extreme end of the long sprout, and of course a pull will set the crotch straight up in the air on the ends of the short legs

court was affirmed.—Plainfield Constitutionalist. WORK OF THE NEW HAMPEHIRE COMMISSIONERS.—North Conway, N. H., Feb. 22.—Albert Swanton. Richard East-man, Joel Clay, Mortimer Bürnham, J. A. Waterman, Elisha Dinsmore, Malven Dinsmore and Jake Day, all of North Conway and Jackson, Carroll county, were arrested on com-plaint of Fish and Game Commissioner E. B. Hodge, Feb. 15 and 16, and fined \$25 and costs each. Warrants were taken out for several others, but they got wind of what was going on and left for Maine. There have been 150 der killed in Carroll county during the last six weeks. Most of the guilty partics are too poor to pay a fine, and if sent to juil their families must go to the poorhouse. While the Commissioner was here he made complaints against several parties in Chatham for catching trout in Mountain and Province Pond during the close season. Complaints were also made against parties in Maine for the same offense, some of whom, from the high position they bold in public and legal affairs, should have known better. It is to be hoped that they will be brought to justice, for there is no reason why a good man should pay a fine out of his hard earnings, while the rich law breakers go free. Both committed the some offense, with this difference—one violated the law to obtain food for his family that they stood in need of; the obtain food for his family that they stood in need of; the other, that he might display his trophies to his legal friends in Portland.—KIERSARDE.

New JERSEY'S NON-RESIDENT LAW.—A decision has just been rendered by Justice Dixon of the Supreme Court, interesting and important to game protective societies of this State. On the 28th of November, 1884, a trial for violation of the State game laws came before Justice V. W. Nash of this city. The complainant awas Lewis Wyckoff, who charged William L. Allen, an alleged non-resident, with shooting quail out of season. Jackson W. Coddington ap-peared for the complainant and Corporation Counsel Craig A. Marsh for the defendant. A law of April 4, 1878, enacts that non-residents of the State of New Jersey must comply with the by-laws of game protective societies of the State before they are allowed to kill game or fish within its limits under a penalty of fifty dollars fine. In the above case the jury rendered a verdict of guilty and a fine of fifty dollars in accordance with the evidence adduced. Defendant's counsel appealed the case on the grounds of unconstitution-ality of law, and the matter came before the Supreme Court for argument on Feb. 18 last. Justice Dixon in delivering the opinion held, "that the act of a non-resident of the State killing game on the property of persons who have formed an association under the laws of the State for the protection of game on their own property." The judgment of the lower court was affirmed.—*Plainfield Constitutionalist.*

"UNCLE FORDY."—William F. Barnes, or, as he was better known to all ducking men from Baltimore, Philadel-phia and New York, "Uncle Fordy," dropped dcad on Mon-day night Feb. 22, at Havre de Grace, Md. He was one of the charter members of Venus Council, No. 44, O. U. A. M., and had taken a very active part in their debates of last evening. He left the council in apparently the best of health. Mr. August Allen, on his way home about eleven o'clock, found him dead on the street nearly in front of Capt. W. E. Moore's residence. He had been stricken down with heart disease. He was in his seventieth year.

WAHOO, Neb. 27.—In coming from Omaha yesterday over the Union Pacific Railroad we noticed large flocks of ducks while crossing the Platte River. These are the first I have seen in this country this season. To-day we have a snow storm, which may delay their flight, but it won't be long now before there will be an abundance of ducks in that neighborhood.—C. E. F.

THE IRON CLAD ANTI-HOUNDING BILL.—At Albany last Tuesday Senator Coggeshall introduced an iron-clad anti-deer hounding bill. It is the one prepared by the Utica As-sociation and was printed in these columns last week. It fixes the open season from August 15 to October 15.

SHINNECOCK BAY.—Just received advice from Atlantic-ville that gcese have made their appearance on Shinnecock Bay.—J. WENDELL, JR.

NAME OF TAXABLE PARTY.

The above illustration will make the idea more clear perhaps to those who may never have seen this form. Another very simple device is a piece of pine board, say an inch thick and 18 inches long, tapered from 3 inches to 1 inch. A trifle nearer the small end than the middle a 4-inch hole should be bored, and the large end painted red for about 6 inches of its length, to be seen the more readily. When in use a small sapling is cut and run through the hole with each end resting on the ice. The line is, of course, tied to the small end. We believe these simple tip-ups will give

better satisfaction than any more complicated ones can do, especially on long lines, where an accidental springing of a trigger or any similar contrivance would prove a grievious annoyance if at any distance from the operator and no fish was booked. was hooked. AMERICUS.

Editor Forest and Stream: In your issue of Jan. 21, "Pickerel" asks for instructions in making tip-ups. This is the way I make them: For the standard take any good stiff wood 14 inches wide, $\frac{1}{2}$ inch thick and 2 feet long, make a slot in one end 6 inches long and $\frac{1}{2}$ of an inch wide. One inch from the end bore a small hole to take the wire on which the tip-up swings. For the tip-up take a piece of wood 14 inches wide, $\frac{3}{2}$ thick and 11 inches long, and shape it as shown in the accompanying drawing. Have it $\frac{1}{2}$ inch wide at the small end. Three and a half inches from this end cut a slot 3 inches long and $\frac{3}{16}$ wide, notch this small end to hold the line, paint the large end and put a pin through the hole in the standard and the slot in the tip-up, and all is ready. Here it is:

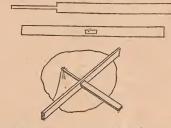

Set the standard in the ice at an angle of about 45 degrees, draw back the tip-up to the end of the slot, make a loop on the line and hang it on the notch, bait your hook and drop it through the hole already cut and you are ready for any-thing that comes along. When a fish takes the bait it pulls the loop from the notch and leaves the tip-up hanging per-pendicularly, the line being fastened to the standard. If "Pickerel" does not understand this, let him come up and I will show him how to make them and how to each the fish. As he does not live very far away, I more than half believe that he is fitting out for a visit to our town, for it is a favorite fishing ground for Springfield fishermen. W. J. C. BECKET, Mass. BECKET. Mass.

Editor Forest and Stream:
Editor Forest and Stream:
The cheapest and best tip-up I ever saw (and about every fisherman has a style of his own) is made out of an oak strip, say 6 feet long and 1⁸/₄ wide by ⁸/₄ thick); now bore ⁴/₄ holes at 50 every 22 inches. The strips will make three traps; saw so as to have half of the hole on the ends of each trap. Next saw off a strip ⁸/₄ wide two thirds the length of the strip, saw 50 fit he strip on an angle, so it will turn only one way, saw in a slit at the lower end for the flag and a short slit at the upper for the line. Flag to be fastened on with small tacks, a washer or burr between the strap and the main piece will make it much better. If properly made and set up at an angle of 45° can be seen further than any trap I ever saw.

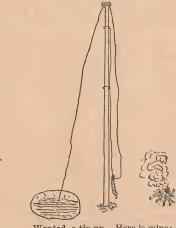

I have just finished fifty which make me an even hundred now, now will "Pickerel" tell us where to get the fish. SOUTH SHORE. SOUTH DUXBURY, Mass.

SOUTH DUXBURY, Mass. Editor Forest and Stream: Please say to your Springfield correspondent that the tip ups used up here in fishing on the headwaters of Lake Cham-plain are made about as follows: Take four pieces of $\frac{1}{2}$ inch spruce or pinc, board (spruce is the better as it is stiffer) about 12 inches long; in the center, on one of the edges cut a square notch $\frac{1}{2}$ inch wide and deep. Take another piece of the board $\frac{1}{2}$ inch square and 24 inches long and put into the notch so as to form a cross; fasten with a small brad. Have the crosspiece two thirds of the distance from one end, fasten the line to the short end and place over the hole and when you get a bite it will tip up. The way we like best is to make a common recel 16 inches long out of a piece of board 2 inches wide and $\frac{1}{2}$ inch thick. After attaching the line place across the hole, leaving some slack loose on the ice. Then get a limber twig about 2 feet long and stick up be-ide the hole, make a loop in the line and hang it over the end of the twig in the loop, put a piece of colored cloth (I use red flannel, as it shows well against the ice and snow) and when the ish bites he will pull the signal off the twig, and there being a plenty of slack line he is not likely to get off. NED.

Editor Forest and Stream: In looking over the paper I observed an article on tip-ups, by which, I suppose, the writer means an arrangement for fishing through the ice. The simplest and only kind that I ever saw is composed of two pieces of wood, a piece of red cloth and your line. Cut a piece about 1 inch by $\frac{1}{2}$ and 15 inches long, if the hole in the ice is 5 inches across, or make them in that propor-tion. Now, in the center cut a hole $\frac{1}{2}$ of an inch or so; cut another piece about 15 inches long and about 4 or 5 from one end. This piece should be about $\frac{3}{2}$ of an inch square. Cut this down to $\frac{1}{2}$ inch square for 4 or 5 inches from one end. Have fit tight in the hole. The following shows the two pieces and also the manner of setting them across the hole in the ice. the ice.

It will be seen that when the fish bites he will pull the sticks over, and if a red flag is attached it will be more readily seen. YAGER. RACINE, Wis

Wanted, a tip-up. Here is mine: A stake, a ribbon, a spool, a line, A bit of tough and sturdy wire, A hole—and near a crackling fire. JOHN PRESTON TRUE.

[We have more communications on this subject.-ED.]

EARLY OBSTUCTIONS IN MAINE RIVERS.

EARLY OBSTUCTIONS IN MAINE RIVERS.
Editor Forest and Stream:
Inclose a suggestive extract from an address delivered before the Genealogical Society at Portland, Me.:
"In 739 the Indians were troublesome. Polin, the chief of the Presumpscot tribe (who was killed by one of the anarystop of the Presumpscot tribe (who was killed by one of the anarystop of the State that in consequence of improvements on the Presumpscot River they could not pass down in their cances with ease to get rum, and his tribe was threatened with starvation because fish could not pass up the river to the lakes."
Think of the antiquarian importance of this recorded fact, that the aboriginal Indians so long ago as A. D. 1738, began the protest against the principle of prohibition right here in Maine and complained to the General Court—"that in consequence of improvements in water ways, they could not pass down with ease to get rum"—and then note the better wisdom of the Indian when he complains that the fish could not passing easily down stream to rum, should have originated brands of circumstances that here close to the home of the stranger still that it is only within a few years that the imported white man has awakened to the wisdom of the savage of 7808, and provided a way for the fish "to pass up the river (Presumpscot) to the lakes."
This has the day there are no Indians on the lakes to come found bot the fish can rum up to the lakes, and the obstructions of 1739 have been surmounted by various ways. "There is nothing new under the sun." Mac.

TRIP TO THE CANADIAN LAKES.

<text><text><text><text><text><text>

<text>

water four inches deep continually running through it. The need of this is evident, for if the logs were allowed to go over the falls they would split and break to pieces. For our amusement a dozen or two were shot through, but the time they took to come down is not worth mentioning. An hour was spent there very pleasently and it was with reluctance that 1 departed. The falls and all connected with it belong to the Canadian Government. Our drive back to the inn did not take long and not many hours after tea we were fast asleep. All of the next day was employed in getting to Montreal, which place was reached by midnight. Monday at 10.30 A. M., we stepped on the platform at Highgate Springs, having been gone just seven days and two hours. G. F. BLANDY.

READ IN A FLY-BOOK.

G. F. BLANDY.
READ IN A FLY-BOOK.
HOW pleasant it is of a wiuter evening while the storm dashes against the pane without, by the light of the lamp, fire burning brightly. to get out one's tackle and look it over, a pipe showing in its smoke wreaths pictures of hard won fights on lake and stream. How often has this been repeated in angling literature and yet what a comfort to repeat it again.
But of all these winter pleasures the gratest of all is, I think, that of looking over one's fly-books. To me they are not only a book for keeping flies, but one in which I can read many past adventures, many hopes and fears, some gone, some yet present.
Ilere, as I turn over the leaves, I see with a smile my first attempt at fly-tying. A bungling monstrosity, in green, red and gold. A pair of wings that would cause a decent fish to go into convulsions. Sadly was it tucked away, never has it been removed. Yet it still remains a landmark from which one can see the length of lis journey.
Then here is the first fly on which I ever caught a trout. An alder, with wings bedrabbled and gut all worn and roughened with hard service. Well did that alder serve me, one cloudy July morning, breaking into vivid flashes of sunlight which checkered the woods with the delicate tracery of the forest leafage above. How the spotted deniz, us of the brook leaped to its coy advances and how proudly I placed the first captive in the creel, a victim to my at from typing the fly to the cast. All the angler who never makes any of his own tackle loses half the joy of the gentle at. What hopes and fears are then woven into rod, leader and fly and what a double thrill of joy attends a capture.
Then here is a fusty red ibls which took the first bass that that morning I turn over another page of the old book and note witd satisfaction the stretcher that went with it. And thisking further I recall what a splendid double these two files took for me that day. How they fought and leaped, and how

anchored near. How aggravating it must have been to have seen these two fish taken from almost under their noses by a stroller com-ing idly along, when they had waited patiently with little

fish taken from almost under their noses by a stroller com-ing idly along, when they had waited patiently with lattle luck. And here in a corner I find nothing but a gut loop to tell me of that splendid fish who leaped into the air and then dis-appeared, carrying the fly streaming from his month to some dark rocky haunt beneath the wave. And here I turn to another fly-book, a present from an old angler, one who has fished with. Webster and has seen some of our most famous augting clubs in their faintest infancy. It is an old English book of many veltum leaves and pockets, all stout and meant for service, no modern clips or springs. It is too bulky for the pocket, and one should have a keeper or gillie to carry it. And as I turn over its pages, I note with wonder the myrind delicate flies, on gut almost invisible, tied in many and delicate flies, on gut almost invisible, tied in many hope for the future. Here are drivens of duns and midges and spinners of varied line and size. And now I turn again the pages of another book and note with delight the varied colors, the straight and slender gut held by the clips. And here I see my latest efforts and my hope for the future. Here are a row of coachmer, when I tied them I had glimpses of a tumbling 1apid, shaded by the declining sunlight into the dusk of a summer evening. I saw the trout leep as they skimmed the rippling water. And heres As the feathers turned beneath my fingers I saw the sun-light shining on the stream. The water was quiet, save where some veteran fish rose beneat the bank and sucked in an unsuspecting fly with a gentle dimple of the pool. And here are pages of glowing crimson, yellow gold and shining green, which seem to tell me of sparkling waves along the lake and some bronzed-back bass leaping madly above the water he so gayly cleit a moment before. More thus I go on turning the pages and recalling a thon-sand incidents by field and flood, many faces of familiar friends and all the old associations that double and endear the pleasure of an an

MILL, LOG, SAW, BASS.—In a mill at Miltow, Pa., on the Susque hanna River, Sawyer Hasler saw a fish in a hollow, water-soaked log, just as it was being pushed to the saw. Eight large bass were found in and taken from the log.

CANADIAN FISH LAWS.—The Canadian Sportsman publishes the followir g items which may be of interest to our readers. The last one bears upon this question of concurrent legi-lation between the State of New York and Canada and deserves to be considered: "The Dominion Government has issued an Order in Council amending the fish laws as follows: No person shall fish for, catch, kill, buy, sell, or poscess any pickerel between April 15 and May 15, both days inclusive in each year; nor any bass or maskinonge between April 15 and June 15, both days inclusive in each year; nor any bass or maskinonge between April 15 and June 15, both days inclusive in each year; nor any bass or maskinonge between April 15 and June 15, both days inclusive in each year; nor any bass or maskinonge between April 15 and June 15, both days inclusive in each year; nor any bass or maskinonge between April 15 and June 15, both days inclusive in each year; ot the same day as for pickcrel, viz., May 15. We have put ourselves on record many times within the past five years to the effect that a change was desirable, but we do not think it was necessary to prolong the close season for bass and maskinonge up to the 15th of June. In twenty years experience bass and lunge fishing we have, of course, like every other old inherman, found fish on their spawning beds later in some seasons than others, but we cannot remember a single season when it would not have been proper to fish on the 14 of June. By reference that we have, we regret to see that he has made exceptions of the State of New York has also ordered certain changes in their fishery laws, and in looking over the provisions of the new law, we regret to see that he has made exceptions of the one to New York has also ordered certain changes in their fishery laws, and in looking over the provisions of the State of New York has also ordered certain changes in their fishery laws, and in looking over the provisions of the new law, we regret the see proper low fisher in during the softene diver your of t

STRANGE FISH.—Monakawaye, Conn.—Editor Forest and Stream: A weck ago I shot a fish which I mistook for a duck. It was about 250 yards off and its fios were above water. I fired two rifle shots at it and both balls lodged in its back. It is a very peculiar looking fi-h, and we have never seen one like it. The color is dark brown; light fawn eyes as large as a call's; mouth 14 inches wide and in shape of a borse-hoe; a row of ivory white teeth all around and a row down the middle of the tongue. It is 4 feet 6 inches long, has a small fin of 5 inches on back, and two paws like hands; arms, 4 inches; weight, 96 pounds. What is it?— A. R KYLE. [The description lacks uany important par-ticulars, such as scales, present or absent; character of fins and their polition; comparative length of jaws, etc. It may be the "angler" or "fishing frog."]

GOOD FISHING IN MAINE .- Some of the favorite resorts GOOD FIGHING IN MAINE.—Some of the favorite resorts of Maine's summer visitors enjoy two seasons a year. The second one is now at its height. Around the lakes in the center of the State the cotages and hotels are occupied by fishing parties, who find good catches and lots of fun. If any body is cheri-hing the delusion that Maine, like Ceres's daughter, is underground half the year or buried under a snowdrift, he ought to take a trip to some of the busy places just now. Malne is not only a summer resort but a resort in winter.—Lewiston (Me.) Journal, Feb. 25.

fishculture.

Address all communications to the Forest and Stream Publishing Co.

ng Go. AN OLD CARP.—The following from the Fischerei Zeilung, Stettin, tells of a carp which slould have been retured on had pay long ago. The account says: "On the evening of Jan. SI, so says a reporter, the brothers Damhaus, fish masters, caught a mighty carp by the Kurtiftsten bridge, Berl n. On the under jaw it carried a ring on which was found an inscription. With oifficulty there was deciphered through the rust the statement that this carp was liberated at Hazelhorst in the year 1618 and was consequently 260 years old. The fish weighed 50 pounds, was 100 cent meters (39 inches) iong and 78 cent-meters (3) mches) in circumference. The fish was living at Lipp-Srestaurant at the mill dam long enough for all to see it who wished, free of charge. The ring which the carp carried was deposited in the Markischen Museum." We regret having to accuse this reporter who wrote the above a could of eleat-ing this aged carp out of two years which rightly belonged to it. According to our figures the fish had lived 268 years after being planted, and as there is no way of telling how old he was when he was deposited in the waters at Hazah ost we are inclined to be liberal with him and allow him 100 years more, we are not inclined to be ungeaerous to a poor old carp in the matter of a century or two.

THE AMERICAN FISHERIES SOCIETY.—At the last meeting of this society (late the American Fishcultural Asso-ciation) a committee was appointed to decide upon the time of the next meeting, which was voted to be held in Chicago, and to make such other arrangements as might be neces-say. This committee, of which Mr. Frank N. Clark is chairman, have decided to hold the meeting on April 13, 14 and 15, in that city. The United States Fish Commission will have one of their transportation curs there on exhibition to show how whitefish and other tish are moved. The Michigan Commis-sion will have a display of hatching apparatus in the exposition building, where other fishcultural exhibits will be open to the public. An interesting and important meeting is promised.

THE COLORADO COMMISSION.—Interest in fishcu'ture in Colorado is rapidly awasening. Besides the State hatch-ery there are the following private oues: Land's hatchery at Nathrop, Chaffee county: Grant's, Smelter, and Bogart's, Cen-tral Park, besides four that are owned or controlled by Gen. John Pierce, the Commissioner of Fisheries for the State. These hatcheries have in the aggregate 1, 40,000 brook trout eggs, and one has a few eggs of the lake trout. Many carp have been introduced by the U. S. Fish Commission and are doing well. The State appropriation is small, but much good work is done by the Lake Archer Fish Company and by indi-viduals.

Over ELEVEN MI LION DOLLARS has been paid to its policy-ho'ders s the Travelers, of Hartfo d. Conn., sin e its organization. Present ayments are over a million a year. - Adv.

A. K. R. SPECIAL NOTICE. THE AMERICAN KENNEL REGISTER. for the registration of pedigrees, etc. (with prize lists of all shows and trials), is pub-lished every month. Entries close on the 1st. Should be in early. Entry blanks sent on rec. ipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription \$1.50. Address "American Kennel Register." P. O. Bo. 2832, New York. Number of antime lenged x prived 2922 of entries already printed 3333.

THE ALEXANDRIA FIELD TRIALS.

[From a Special Correspondent]

IFTER ALEXANDRIA FIELD TRIALS. [From a Special Correspondent 1 A LEXANDRIA is located on the south side of Red River, in the midet of a fine section of country, which justly might be termed a bunter's paradise. In the pine wool's opposite Alexandria we found an excel-lent country for field trials, slightly rolling, with sufficient undergrowth to furnish cover for the birds, and yet not so heavy as to interfere with the dows at work. The interest in well-bred and fine field dows has received quite an inmetus from this meeting, and grad results may be looked for in the near future at their annual trials. While this was an anateur meeting, yet it developed an unlooked-for knowledge of dogs and understanding of first-class field work that was surprising an i would reflect credit much prai-e cannot be accorded. But one of them had ever attended a regular field trial, yet their decisions were most can due to falsatery. Our week of pleasure was tastly rounded off with a grand banquet on Saturday night, given by the Alexandria Rod and Gun Club at the Exchange Hotel. The first prize was won by Master Knight Renaud's black and white English setter Boyd. He is a go-d sized dog, weithing about 50 pounds, with good speed, range and bottom. The second prize was won by Mr. A. R. Starr's black pointer

bottom.

weiding about 50 pounds, with good speed, range and bottom.
The second prize was won by Mr. A. R. Starr's black pointer dog Watt. He is of medium size, and will compare favorably with any pointer I have seen in field trials.
The third prize was divided between Judge James M.
Thompson's black, white and tau English setter Mark Twain and Wr. S. Culleu's black, white and tau and be and or prescott. Mark Twain is of medium size and a very handsome dog, with fine style and dash on game. Prescott has good style and action.
The first consolation cup was won by Mr. W. B. Wells's lemma and white setter Kink. He is a large, fine-looking dog, with a belendin dose.
The second consolation cur was won by Mr. L. B. Baynard's blas balton dog Cuter. He has good style.
In the heats where Judge Thompson's dog ran Mr. J. M. Avent judged in the place of Judge Thompson. In the heats where Judge Thompson. In the heats a bate, attendance was was ware budged in Mr. Start's place.

place. The attendance was very large throughout the entire trials.

place. The attendance was very large throughout the entire trials. PATTI AND NELLIE B. At 9:50 Mr E. W. Conden's black, whice and tan setter bitch Patti (Duke Gladstone-Grace Darling), handled by his owner, and Mr. W. T. Gray's black and white setter bitch Nellie B. (Rake-Meg Merrillies), handled by Mr. Henry Fontaine, were cast off in a confield and worked toward a thicket. In speed, name and quartering Nellie B, had the advantage, but in style Patti was superior. Working the corn and cotton blakk to the thicket a beyond in open sedge grass. Mellie moved on. Patti, coming around only a few yards from where the bevy flushed, pointed several outlying birds, which flushed wild. Fontaine shot but did not kill. Patti broke shot. Nellie B. stady Following birds marked down in the edge of bires and sed e. Patti d awing too close to a single bird, flushed it and we strady to wing. About the same time, just above her Nellie made a good point on a single bird, which flushed it and was strady to wing. About the same time, just above her Nellie made a good point on a single bird, which flushed it and she dropped to wing. Working on down through the sed re several birds were flushed by the judges and specta-tors. They were then worked up on level ground, where Nellie pointed and Patti backed. Fontaine to order flushed, shot and killed. Nellie diopped to shot. Patti broke shot and killed. Nellie diopped to shot. Patti broke shot and thade a fair retrieve. The dogs were then ordered up at 10:40, Nellie bairg awarded the heat. Down fifty minutes. MINGO AND DOLPR.

nade a fair retrieve. The dogs were then ordered up at 10:40, Nellie being awarded the heat. Down fifty minutes. MINGO AND DOLPH. At 10:50 Mr. W. B. Wells's black and white English setter dog Minco (Druid-Start), handled by his owner, and Mr. C. E bringhurst's black, white and tan English setter Dolph (Cyrns-Belle Gladstone), handled by his owner, were cast off in an open sedge field. Minco was much the fastest and widest ranger of the two, but before the heat was ended Dolph got much better and Minco slowed down somewhat. Mr. Wells just arriving from Canada with his dogs, which were entirely out of condition, not having had any work this season until a few days before the trials, which made there show up quite sore, still they made a gume nace and proved dangerous com-petitors. After working about three quarters of a mile larough open confields down the bayou without finding birds, the brace were taken across the bayou and worked up in open sadge out into the corn where Minro made gams but failed to locate and was sent on by his hardler. After drawing a weed-field blank, the dogs were then worked bays to the confield, where Mingo made game before. Working on the open weeds near by, Mingo, drawing down wind, flushed two birds and dropped to wing, and the remainder of the bay lished wild. They were marked down in briers and thicket, which was so dense it was almost impossible for any dog to point scat-tered birds. Working the dogs in the thicket after them, Doph made two flushes in rapid succession and chased eact one. A little further on two birds flushed, one near each dog. Moving on slowly, Mingo flushed a single bird and was stready to wing. Working back to where the first birds were found, Mingo indee a very stylish point on a single bird in very heavy to wing. Working back to where the first birds were found, Mingo indee a very stylish point on a single bird in very heavy to wing. Working back to where the first birds were found, Mingo inde a very stylish point on a single bird and was stready to wore.

so in good style. Going on, Mingo made an excusable flush in briers down wind and was steady to wing. They were then worked out in open again through corn, cotton and sedgefield, ing game. The dogs were then ordered up to cross the rai-road and bayon, where the dogs were again put down in a cottonfield and worked through burnt weeds and's adgefield to heavy cover in a bottom, which was so deuse that it was un-comfortable to ride through much less to work good dors in. Going on some distance in this thick cover, the judges ordered the brace up until they could get around the thicket and cross the ditch into the road. Just a few minutes after they were ordered up and while Mingo was at heel. Dolph found and pointed a bevy in briers on the roadside; as the dogs were ordered up this point was not allowed. Mingo was ordered down for a back, but as the cover was so dense, it was impos-sible for him to size the pointing dog. which he passed and located some of the same birds in good style about forty yards further on. The handlers were then ordered to flush birds; both shot and both dogs were steady to shot. One bird was killed and Dolph was sent to retrieve, but failed to flut, the work. The dogs were then putdown. Dolph soon made a flush for the sour the accusable; Mingo found and retrieved the winged bird. The dogs were then worked to where two blrds had been marked down in thick weeds and briers, which was es high as our heads on horsehack. It was thoush timpossible for dogs to point in such a place, but Mingo found and pointed a single bird in good shore. Wells flushed but did not shoot; Minen steady to wing. The dogs were then ordered up at 12:45 and the heat awarded to Mingo. Down two hours. MARK TWAIN AND BARON BLUE.

The high as our heads on horseback. It was thought impossible for dogs to point in such a place, but Mingo found and pointed to fing or down to hours.
INTER AT NEADOR DELTA.
INTER AT ANDIA DATA THANKANA ANDIA AN

CRIST AND LUFRA.

Twain. Down two hours and thirteen minutes. CRIST AND LUFRA. At 4:10 Mr. L. W. Murdock's black, white and tan Gordon setter dog Crist (Nix—Disy) and Mr. John W. Prescott's black, white and tan setter bitch Lufra (Cyrus—Belle Glad-stone) were cast off in a large open cornfield. Lufra had the advantage in pace, range and style. This was one of the most anusing heats that it was ever our fortune to witness. Both dogs were handled by their respective owners. Mr. Prescott is an old gentleman whose head is as white as snow, kuick-named by his personal friends as Father John. He is by far the youngest member of the club judging by the great activity with which he pushed his competitor in this heat. It was mutually agreed that they should ride and handle their dogs. After the dogs started off through the cornfield the judges gave Father John permission to "go as you please." Knowing the locality of all the bevies on this ground, he soon had his old gray horse in a fast trot, distancin, the judges and his opponent. It afforded much amusement to see the old gen-theman so much excited that the jud es did not stop his gais, but told his competitor to keep up if he could. Fai ing to tind birds in the cornfield, Father John pointed to a thicket about a quarter of a mile off, saying that they would be sure to find a bery there. He started in that durection across a good corn-field for birds, and soon had his horse in a gallop heading for the bevy, his dog following and leaving his opponent handler about seventy-five yards in the rear, followed by the judges, reporters and spectators at full speed to see what Father John was going to do. Sure enough, wene he reached the thicket, Crist going in flushed a large bevy and dropped to wing. The bevy was marked down only a short distance in a rag weed field. Father John dismounled and followed very quickly.

beautiful style. Father John turned to the judges and claimed a point. While his back was turned she sprang at the bird, put it up and had a lively chase. Finding that she could not catch if up and had a lively chase. Finding that she could not catch if she came dashing back and jumped on another point in grand style with head and tail well up. Again Father John turned to the judges and claimed a pout, when the birdh re-peated her former performance. Just then a bird was flushed by one of the judges which flow past Mr. Murdock, who shot and kille it. Crist to order retrieved well. The report of the gun made Lufra turn back to see what had happened. She again made a beantiful point, Father John being only a front to flush. Then she made a jump, but failed to flush it and wheeled to a point. Father John then flushed the bird, shot and missed it. Lufra broke shot and chased. Working on down the slant in heavy weeds, Crist point-d; Lufra brough around to back, not seeing Crist went in foort of him and also pointed. The birls flushed wild and Lufra chased. Crist was a little unstendy to wing, but dropped to oder. The dogs were then ordered up at 4:45 and the heat awarded to Crist. Down thirty-five minutes. Father John looked very much disappointed to think his favorite dog would so back on him so completely, and to my great surprise he did not even ava a harsh word to her, but at once tried to explain to the behaving so badly. If Father John will break his bitch prop-erly for next year's trials I think he will turn the hashit of behaving so badly. If Father John Will break his bitch prop-erly for next year's trials I think he will turn the laugh on some one else. <u>ENGIPAIOA AND JACK.</u>

crly for next year's trials I think he will turn the laugh on some one else. TANGIPAHOA AND JACK. At 4:50 Mr. Henry Fontaine's black, white and tan English setter bitch Tangipahoa (Gladstone-Flossie) and Mr. M. F. Smith's liver and white pointer Jack (pedigree unknown) were cast off in an open weedfield, where the last brace were taken up. Tangiphahoa had a great advantage in speed, range and style; in fact, she is a very fast bitch. Worked around in a large weedfield back to the thicket without finding. The spectators finshed several birds of the last bevy, and the dogs were then ordered up to get out of the thicket. When the dogs were again cast off Jack soon made an uncertain pont. His handler, not thinking there was anything there, o dered hum on, and he flushed a single bird. He made a little cast and flushed again, and was steady to wing each time. Tangi-pahoa made a cast across the branch and pointed in the briers. Jack was brought around to back, but refused to do so; went in and flushed the birds; both were steady to wing. They were again cast off in the thicket, Jack making two flushes in rapid succession. The dogs were then ordered up a 5:08 and Tangipahoa awarded the heat. Down eighteen minutes. HARRY AND PRESCOTT.

HARRY AND PRESCOTT.

HARRY AND PRESCOTT. At 5:10 Dr. J. S. Fish's black and white English setter dog Harry (pedigree not given) and Mr. S. Cullen's black. white and tam English setter dog Prescott (Gyrus-Belle Guadstone) were cast off in a thicket down the branch where the birds were marked. Prescott had the advantage in speed, range and style. They were about equal in quartering. Working across the road, Harry pointed in sedge grass and Prescott hacked. The judges asked Dr Fish to flush and kill. He thushed the bird, raised his gun, but did not shoot. Both dogs broke in, tut dropped to order. The Doctor's excuse for not shooting was that he had rheumatism in his finger and could not pull the trigger. Working on in open sedge grass, Prescott pointed and Harry backed. The handler to order fl shed, shot and missed. Prescott broke shot. Harry remaining steady to shot and wing. Working around the hill the han-lers flushed several birds. We then went back into the field where several birds had been marked. Prescott made a good point and Harry backed. The handler flushed, shot and missed the bird. Both dogs boke shot. Harve remaining steady to shot and wing. Working around the hall the heat her flushed several birds. The handler flushed, shot and missed the bird. Both dogs boke shot. The dogs were then ordered up at 5:45 and Prescott awarded the heat. Down in all thirty-tive minuter. This ended the day's sport. The next brace in the order of running was Boyd and Rip, but the handlers not being up with the dogs, the next brace was called. WATT AND CUSTER.

WATT AND CUSTER.

WATT AND CUSTER WATT AND CUSTER At 9:05 Mr. A. R. Starr's black pointer dog Watt (Bronco-Fan) and Mr. L. B. Baynard's blue belton dog Custer (Blue Unck-Buckeye Belle) ware cast off in a large open cotton field where both dogs showed good range and speed, Watt having the advantage; they were about equal In style. The handlers worked this brace from horseback, at d in this heat will plainly be seen the evil effects of such handling. After draw-ing several corn and cotton fields blank, we worked toward a hedgerow, where Custer made a point. His handler rode up to him and stopped, and did not seem inclined to flush the birds, whereupon Custer jumped in and flushed but stopped to order. Going on to the single birds marked in some briers, he pointed a single bird, which "ashed wild, and he was a little unsteady to wing. At about the same time Watt pointed in the edge of the thicket. and Custer was ordered to back, but .refused, went around him several times and finally stopped to order. Watt also flushed a single bird and was steady to wing. Working around in the same place, Cust r pointed and Watt backed, and several birds flushed wild. Moving up Custer flushed a single bird and dropped to wing. We then worked across open county about a half a mile without finding birds. Going into a bier tuicket a bey of birds was seen to flush, but the cover was so heavy it was im-possible to see the dog. Custer being the ouly dog in the vionity, it was natural to suppose that he put them up. These birds were not followed. Going west some distance, Watt pointed on the edge of the ditch. Custer refused to back and went in ahead, flushed and chased, Watt steady to winz. The dogs were then ordered up and the heat awarded to Watt. Down, one hour and ten minutes. BOYD AND RIP. At 10:20 Master Knight Remaud's black and white English

Watt. Down, one hour and ten minutes. BOYD AND RIP. At 10:20 Master Knight Renaud's black and white English setter dog Boyd (Brussells-Iowa Queeo), and Mr. E. G. Hunt-er's black, white and tan English setter dog Rip (Cyrus-Belle Gladstone), were cast off in a large rag weed field where they had opportunity to show their speed and range, both being about equal. Boyd had a little advantage in quatering and largely the advantage in styla. After a long tramp we tward without finding game, we worked toward a heavy thicket, where Rip made a very stylish point. Boyd refused to back, went on and also pointed. The birds were running in the briers and both roaded on some distance before they were flushed. Font ine shot and missed. Rip broke shot but stopped to order. Boyd steady to shot; both dogs were allowed a point. The birds were marked down only a short distance in the edge of a thicket where Boyd pointed a running bird, which his handler fai'ed to flush. Ordered on, Boyd roaded some distance and located the bird. which flushed wild. Boyd steady to wing. About the same time Rip pointed a single bird in the briers, which flushed wild. Several birds were hen flushed by the hand ers and judges. Moving on, Rip flushed a single bird and dropped to wing. A little further on Boyd also flushed in a brush pile. Working on through a cornfield, Boyt make a point on a single bird and Rip bocked him. Mr. Fontame going in to flush Rip broke in and ran around Boyd false-pointed in a brush pile broke in and ran around Boyd false-pointed in a brush pile broke in and ran around Boyd furt stopped to order. Forta he has avarded to Boyd. Down owere then ordered up and the heats avarded to Boyd. Down one hour. **ENE AND TRIGE**

KINK AND TRIGG.

At 11.25 Mr. W. B. Wells's lemon and white setter dog Kink (Druid-Star) and W. P. Flower's orange pointer dog Trigg were cast off in the thicket to work on scattered birds. In speed, range and style Kink had the advantage. They were about equal in quartering. Kink flushed a single bird and

dropped to wing. A little further on Trigg also flushed a single for down wind and moving on scored another flush. The toward the edge of the thicket both dogs flushed and were start with a single bird and dropped to wing. On some distance flushed a single bird and dropped to wing. On some distance flushed a single bird and dropped to wing. On some distance flushed a single bird and dropped to wing. On some distance flushed a single bird and dropped to wing. On some distance flushed a single bird and dropped to wing. On some distance flushed a single bird and dropped to wing. On some distance flushed some near a hedgerow the handlers flushed several birds which Trigg had passed. The dogs were then dushed by the mose whatever. Several birds were then flushed so there flushed a single bird and Trigg backed him. To order Mr. Wells flushed, shot and failed to kill, both dogs steady to shot. Moring on Trigg scored two flushes in rapid succession. The dogs were then ordered up at 11:58 and Kink awarde the flushe bird about dinner time were the alck to town. It was bout different ground, the pine woods being selected to finis different ground, the pine woods being selected to finis different ground, the pine woods being selected to finis different ground, the pine woods being selected to finis the bird and the second series should be decided by running different ground, the pine woods being selected to finis

Second Series.

After dinner we crossed the river, going north about a mile and a half from town, NELLIE B. AND MINGO,

After dinner we crossed the river, going north about a mile mile a half from the mile mile provided to the set of the road in open prine woods. Nellie had the advantage in speed a canze. They were about equal in style and quark they both open end in open prine woods. Nellie had the style and quark they both open end in open distance over several hills they both open end of anze. They were about equal in style and quark they both open end of anze. They were about end to him several minutes to recover so he could go to him do. Just before he prot to her she moved around in a new place and your pointed again. Mingo came up and pointed the birds that it took him several minutes to recover so he could go to him dog. Just before he pot to her she moved around in a new place and your pointed again. Mingo came up and pointed the birds that Nellie had left and they flushed wild. A number of birds then flushed wild, Going on up the thicket Mingo flushed a single bird and stopped to ming the she moved around in a new place and your brane the she moved stady to wing. A number of birds then flushed wild, Going on up the thicket Mingo flushed a single bird and stopped to ming the she moved around in a new place and your for about five minutes. Were again cast off, when Nellie B. soon pointed at the pointed, moved up and flushed a single bird and stopped to wing. The dogs were then ordered up for about five minutes they were again cast off, when Nellie B. Soon pointed at the pointed, moved up and flushed his bird, and dropped to wing. Mingo soon flushed again and was steady to wing. The birds were apointed, moved up and flushed his bird, and dropped to wing. Mingo flushed wild in front of her. The udges along the strate to a pointed, where they could show their speed and range to a pointed, moved up and flushed his bird, and dropped to wing. The birds were apointed in a position to see her when here the dogs were deven the strate were apointed, where they could show their speed and range to poin

MARK TWAIN AND CRIST.

ARR TWAIN AND CRIST. Judge Thompson, one of the judges, owned and handled Mark Twain, and Mr. J. M. Avent judged in his place during that heat. At 4:10 dogs cast off in pine woods. Mark had a decided advantage in speed. range, quartering and style. Working around the bill in sedge grass Mark pointed. Crist was brought up to back, but Mark not being in a good place to be seen. Crist was stopped by his handler. Judge Thomp-son flushed a large beyy, shot, but did not kill. Mark dropped to shot. Crist broke in but dropped to order. Following the wing Mark then pointed, discovered his error and moved on. Several birds were flushed by the handlers. They were then worked back across the branch again, when one of the handlers flushed a single or dare ground and was steady to wing. Mark then pointed, discovered his error and moved on. Several birds were flushed by the handlers. They were then worked back across the branch again, when one of the handlers flushed a single bird that flew over Crist, and he broke after it but dropped to order. Immediately after Mark made a flush in open ground and was steady to wing. We then had a long bunt, crossing the road on the east and back before finding. Mark made a beautiful point in sedge grass. Crist refused to back, went in and took the point. Judge Thompson flushed a nice beev but did not shoot. Mark dropped to wing and Crist was a little unsteady. They were then ordered up at 5:25 and the heat awarded to Mark Twain. Down one hour and fifteen minutes.

TANGIPAHOA AND PRESCOTT.

then ordered up at 5:25 and the heat awarded to Mark Twain. Down one hour and fifteen minutes.
TANGIPATIOA AND FRESCOT.
At 5:28 Tangipahoa and Prescott were cast off. Tangipahoa for a decided advantage in point and range; they were about for any style and quartering. They were worked down the hillside where a bety had been marked down in sedge grass some time before by the spectators. Both dogs did some beautiful roading and both established independent points at about the same time. Birds flushed wild in front of both dogs. They were works to the steady to wing. The dogs moved on, and Prescott som made a beautiful point on a single bird that was left. Tangipahoa backed. Mr. Cullen flushed, shot and killed the bird. Prescott broke shot and made a very poor retrieve. Tangipahoa backed. Mr. Cullen flushed and the scored a false point. Prescott, swinging around the hill in the sedge grass about 75 or 100 yards above Tangipahoa and made a beautiful point. Mr. Fontaine claimed that it was the bird hillside the bird. Tangipahoa thocked the or allow and dracked by Prescott broke shot. Tangipahoa and made a beautiful point. Mr. Fontaine claimed that it was the bird hilled the bird in the sedge grass about 75 or 100 yards above Tangipahoa and made a beautiful point. Mr. Fontaine claime dhat it was the bird hilled the bird was pointing and ordered her on. She made a cast and backed prescott broke shot. Tangipahoa broke in but stopped to ordere. The dogs were then worked across the dirch; Tangipahoa pointed a sgood point on a single bird that was fushed by Fontaine but not shot at; she dropped to wing. Prescott, in the meantime, had point dual done some and a cast and pointed the ead bird, the moved on and retrieved it well. The dogs were then acts off up the hill. The handlers then separated. Tangipahoa about for 0 forescott. We cannot agree with the induces in speed and range; they were about equal in style and quartering. Tangipahoa made two good points, no flushes, one false point, two break ins and a

be work for the day. WATT AND BOYD. Friday was beautiful and clear. The middle of the day it vas rather warm. The character of the work throughout the

<text><text><text>

twenty minutes. Kink having a bye, this ended the second series. Third Series. INK AND NELLE B. At 12:50 Kink and Nellie B, were cast off to work on scat-tered birds. Failing to find any of them they were worked back toward lunch. Nellie B, had a decided advantage in speed and range. They were about equal in style and quar-tering. After working some distance Kink made a wide cast and flushed an outlying bird of a bevy and stopped to wing. The remainder of the birds flushed wild, he still remained steady, working where the birds were supposed to be we failed to find them. The dogs were ordered up at 1:07 for lunch. After lunch, at 1:45, they were cast off on the west side of the road. After working about half a mile through over another large bevy they also flushed and were marked down in pine woods near the branch. Following the birds, Nellie flushed a bevy and dropped to wring. Then guite a number of birds flushed wild. Moving on Nellie pointed. Fontaine to order flushed, shot and killed. Nellie dropped to shot and retrieved well to order. Working on down the branch, Kink flushed a single bird and dropped to wring. Then they worked across the branch, where Kink made a good point. Nellie backed for a short time, then cast off, went around bim and was stopped by her handler. Mr. Wells flushed, shot and missed, both dogs steady to shot. After working around some distance in the pine woods with-out finding, they were worked up the branch toward the road where a bevy had been seen running on the ground. The judges told both handlers they would give them just fif-ter minutes longer and then they would decide the heat. They worked around, giving the dogs the beneft of the wind. Nellie flushed the tevy up wind and dropped to wing. Fol-lowing the birds down the branch. Melle bust did not shoot, Kink dropped to wing. The logs were then ordered pat at 2:25 and the heat awarded to Kink. Down in all one hour and seventeen minutes. We were very much surprised at the work of Nellie B.

work of Nellie B. in this heat. She had lost her nose entirely. It was expected by nearly every one that she would be one of the winners. MARK TWAIN AND PRESCOTT. At 3 o'clock Mark Twain and Prescott were east off on the west side of the road in open pine woods, where both had an opportunity to show their speed and range. They were about equal in speed, range and quartering and both were very stylish on point, Mark having a slight advantage in style. Prescott made a good east and made a beautiful point on a little mound, Mark backed. The handlers flashed a small bevy, but did not shoct. Prescott broke in but stopped to order, Mark remaining steady. The birds were not followed. The dogs were then worked north, across the road. After working them without finding, one hour and twenty minutes, the dogs were apparently getting very trued, the judges ordered them up and asked Mr. Avent to furn Paul Gladstone loose to see if he could find a bevy for them. After about teu min-utes' rest Paul was brought up and the three dogs were cast off together in open pine woods. Paul started off at such a rate of speed that it seemed to excite the degs and put new life in them. He made a very wide east over a bill and was found pointing. The dogs were ordered around to back. Mark coming around behind him caught the wind of the birds and drew up to a point with Paul Prescott swung around in front and also pointed. It was a beautiful sight to see, three dogs in such grand style all pointing stauchly at the same time. Avent went in to flush, but the birds were some distance aivay and he ordered Paul on. As soon as the order was given Paul went on as fast as possible about sixty yards to a log and

pointed again, Mark and Prescott did not move. Avent then flushed, shot, but did not kill. All of the dogs dropped to shot. Nothing was allowed either dog as they were ordered around for a back only. Paul was then put on chain and the dogs were cast off and worked up where birds had been marked down in light sedge grass. Mark pointed. Prescott refused to back, went in and was stopped to order. Judge Thompson flushed the bird, but did not shoot. Prescott broke in and Mark was steady to wing. Moving on a single bird flushed wild between the dogs. Mark then pointed and roaded and pointed again, but the bird flushed wild and he was steady to wing. They were then worked down where two birds had been marked. Prescott pointed a sparrow in a brush pile. Moving on birds were flushed by the handlers. The dogs were then ordered up at 5 and Mark awarded the heat. Down one hour and fifty minutes. This ended the third series, Boyd having a bye. *Fourth Series.*

Fourth Series.

Fourth Series. EOYD AND KINK. At 5:20 Boyd and Kink were cast off on the east side of the road. They were about equal in speed and quartering. Boyd had a little advantage in range, Kink a little iu style. Boyd pointed, Kink coming up also pointed. Both then roaded down wind some distance. Kink, crowding the birds too close, they flushed down wind. Both were steady to wing. Follow-ing the birds across the branch to edge of a thicket, Boyd flushed a single bird and stopped to wing, then moved up a few feet and pointed. In the same thicket Boyd made two points in rand succession. The birds then flew across the road to an open pine thicket. Following them, Boyd pointed, Kink refused to back, weut in and flushed. Both dogs steady to wing. They were ordered up at 0:03 and Boyd awarded the heat. Down forty-three minutes. This ended the fourth series, Mark Twain having a bye. *Final The for First Prize*. BOYD AND MARK TWAIN.

BOYD AND MARK TWAIN.

<text><text><text><text><text><text>

<text><text><section-header><text>

the heat and second prize was awarded to Watt. Down fifty

Me heat and second prize was denined as Mark Twain and Custer were the only two dogs beaten by Watt, divided third prize. The handlers and owners mutually arreed that the judges shou'd select the two best dogs for the Consolation Cups. First was given to Kink and the second to Baron Blue. This ended the All-Aged Stakes with the following result: Boyd won first. Watt won second. Mark Twain and Custer divided third.

KENNEL RECORD AND ACCOUNT BOOK.

KENNEL RECORD AND ACCOUNT BOOK. THE KENNEL RECORD AND ACCOUNT BOOK consists of a series of carefully prepared blank entry forms for the use of the breeder. Pages are devoted to the registration of pedigrees, the record of stud visits, whelps, sales, prize win-practical utility and permanent value of which are recognized by every experienced breeder. Ample provision is also made for recording other minor transactions, which may at the time appear trivial, but afterward prove of highest import-ance. There are few breeders, even among those most systematic in preserving records of their kennel transactions, who have not repeatedly felt the need of just such a detailed series of memoranda as that provided for in the Kennel Record. In the preparation of the blank forms, and in the arrange-ment of the book, special care has been taken to facilitate con-renience both in making the entries and in subsequent reference to them. It is hoped that with such a book at their command, hreedors may generally adopt a more careful system of record that they have been accustomed to preserve. 200 pages (size at 114 in.), price 33. Sent postpaid by the Forest and Stream Publishing Company.

COCKERS AND FIELD SPANIELS.

COCKERS AND FIELD SPANIELS. Editor Forest and Stream: If you will allow me to say a few more words on this sub-ject, I shall he obliged. Just as if to strengthen the position I have taken in this matter, I received from England a few days ago a marked catalogue of the Crystal Palace bench show of the E. K. C., held this month. giving all the entries, winners, etc., and on page 88 I was more than pleased to read: "Class 116. Cockers and other small field spaniels (dogs or bitches) not ex-ceeling 25lbs." This to my mind, is proof positive that the English Kennel Club and the spaniel breeders of that country have at last come to the conclusion that a cocker is a small field spaniel and nothing else-just what I have always claimed. The above-mentioned classification is entirely new, as on referring to the catalogue of the last Crystal Palace bench show held in July last year, page 64, it merely says: "Class 90. Cockers." In their July show they had no class for either field spaniel

The abovementation characterization of the last Crystal Palace bench show held in July last year, page 64, it merely says: "Class 99. Cockers." In their July show they had no class for either field spaniel or cocker puppies. In their show this month they have "Class 119. Spaniel puppies, any variety." It would appear from the foregoing that the E. K. C. has discussed the matter most fully, and that they have made the change simply because they had to. After this I trust we shall hear no more nonsense by self-constituted judges of field spaniel's about this or that dog's head being too much like a field spaniel's bobut this or that dog's head being too much like a field spaniel's to be a good "cocker," etc., when, as a matter of fact, they are all small field spaniels and nothing more or less. While I am on my feet, as it were, may I ask whether it is right for the Pittsburgh people to alter the classification of cockers and field spaniels as regards weight in the rather arbi-trary maner they have done? They have said (through their premium list) that a "cocker" must be under 25 pounds in weight. I would like to know what a cocker that has won prizes at 26 pound's weight is to do, supposing his owner desires to exhibit him. By entering him in the class above 25 pounds does he there and then acknowledge "he is nothing but a field spaniel anyhow," and forfeit the right to enter in the cocker classes at other shows, all of which place the limit at 28 pounds? I think it would have been much better that a change regarding such an important matter as to weight should have been initiated by the A. K C., and then only at the request of the American Spaniel Club. CAVE CANEM. THE BOSTON DOG SHOW,—Following is the premium

of the American Spaniel Club. CAVE CANEM. THE BOSTON DOG SHOW.—Following is the premium list of the dog show of the New Englaud Kennel Club, to be held at Boston, April 6 to 9: Champion prizes of \$10 for dogs and the same for bitches; and in the open \$10 and \$5 for dogs; the same for bitches; and in the open \$10 and \$5 for dogs; the same for bitches; and the open \$10 and \$5 for dogs; the same for bitches; and the open \$10 and \$5 for dogs; the same for bitches; and the open \$10 and \$5 for dogs; the same for bitches; and the open \$10 and \$5 for dogs; the same for bitches; are offered in the following classes; Mas-tiffs, rough-coated St. Bernards, smooth-coated St. Bernards, Nowfoundlands, large pointers, small pointers, English setters; Gordon setters, Irish setters, greyhounds, foxhounds, collies, fox-terriers, black and tan terriers, large bulldogs and small bulldogs and pugs. Following classes are the same except that there is only one class for puppies: Irish water spaniels, fox other color; Skye terriers, Yorkshire terriers over 5 pounds, Yorkshire terriers under 5 pounds, Soche terriers. The remaining classes are as follows: Great Dane dogs \$10 and \$5, bitches the same; Clumber spaniels, the same; Chesa-peake Bay dogs, the same; champion beagle, \$10; open dogs, \$10 and \$5, bitches, the same; beagles under 19 inches, dogs and bitches, the same. Deerhounds, the same. Wire-haired fox-terriers, the same. Bedlington, the same. Toy terriers, the same; Bl'nheim spaniels, the same. Champion King Charles spaniel dog, \$10; bitch, the same. Champion King Charles spaniel dog, \$10; bitch, the same. Champion King Charles spaniel dog, \$10; bitch, the same. Champion King Charles spaniel dog, \$10; bitch, the same. Champion King Charles spaniel dog, \$10; bitch, the same. Champion King Charles spaniel dog, \$10; bitch, the same. Champion King Charles spaniel dog, \$10; bitch, the same. Champion King Charles spaniel dog, \$10; bitch, the same. Scalelaneous, over 25 pounds, the same; under 25 p

25 pounds, the same; under 25 pounds, the same. THE NEW HAVEN DOG SHOW.—The New Haven Kennel Club offers a stud dog prize of \$10 each for pointers, English setters, Irish setters, black and tan setters, spaniels, beagles, fox-terriers, mastiffs, collies, bull-terriers and pugs. Follow-ing are the conditions: Dog to be entered in the regular class —not necessarily tor competition—with not less than four of more bitches. The prize to be awarded for general excellence and uniformity of type in the progeny witbout regard to the individual merits of the sire. If deemed advisable, other classes will be added. A number of valuable special prizes rumored that there is quite a feeling of rivalry among the pointer men, and it is expected that the showing of this breed will be especially fine. It has been intimated that some of the owners are afraid to risk defeat and therefore will not exhibit. We do not beliove this to be the case, and shall look to see the classes well filled. The entries close on Saturday, March 13. The services of Dr. E. C. Ross have been secured as veterinary for the show. THE NEWARK DOG SHOW—Editor Forset and Stringer

THE NEWARK DOG SHOW.—Editor Forest and Stream; Mr. H. Clay Glover has been appointed the veterinary surgeon of our Newark show. Kindly call attention in your paper in reference to certificates issued by us being required by rail-road companies if exhibitors wish to carry their dogs free.— A. P. VREDENBURGH, Secretary.

3333 entries in the pedigree registry of the American Kennel Register.

WESTERN FIELD TRIALS ASSOCIATION. — Editor Forest and Stream: At a meeting of the executive committee of the Western Field Trials Association held at the office of James A. Bolen, 1st Vice-President, Feb. 25, 1886, the following programme for the second annual trials of the association was adopted. The trials will be run on quails at Abilene, Kansas. beginning Nov. 8, 1886, and will comprise the first annual Derby and all-aged stake, the all-aged to be run first. The stakes will be as follows: Derby-Open to all pointers and setters whelped on or after Jan. 1, 1885. Purse \$500; \$250 to first, \$150 to second and \$100 to third. All-Aged-Open to all pointers and setters not winners of first prize in all-aged stakes of Eastern, National or Western trials of previous years. Purse \$500; \$250 to first, \$150 to second and \$100 to third. Nominations for Derby will close May 1, 1886. Fee for nomi-nation \$5, \$15 additional to start, Nominations for all-aged will close Oct. 9, 1886. Fee for nomination \$10, \$15 additional to start. Blanks for making nominations \$10, \$15 additional to start. Blanks for making nominations \$10, \$15 additional to start. Blanks for making nominations will be turnished on application to the sceretary and treasurer. For all informa-tion in regard to the trials, address R. C. Van Horn, Secretary and Treasurer, Kansas City, Mo.

CHOREA. - Editor Forest and Stream: My liver and white spaniel bitch had distemper very bad last summer (I had six dogs down with it), and she finished up with chorea as bad as could be. She was tumbling about in every direction, every part affected apparently, for weeks and weeks, during which time she was treated for both distemper and chorea, to no effect. Finally Mrs. "C. C." suggested giving her a hot sul-phur bath, which was done, and the change in the bitch within one hour after the bath was most remarkable. She seemed a different animal, scampering about to the best of her ability, when for weeks before she had been a miserable looking ob-ject, only fit to be shot at, as one of the most noted dog men (a neighbor of mine) said. We gave her at intervals more suphur baths, and she quickly got well, and to-day there is not a trace of chorea about her. This may be a "chestnut," if so I apologize; but it is a discovery home, and I would like to have it tried on dogs similarly affected and result reported. -CAVE CANEM.

IMPORTATION OF ST. BERNARDS.-Newark, N. J., Feb. 27.-*Editor Forest and Stream*: As it is now generally known that Mr. Henry Schumacher, of Hollingen, near Berne. Switzerland, the celebrated breeder of St. Bernards, has closed out his kennel of smooth-coated dogs and disposed of them for breeding purposes in this country, I may as well inform you that I have secured from him for my own kennels, two of the handsomest specimens, viz., the dog Hector. 3 years old, and the bitch Tony, about 16 months old. Hector is Apollo's best son and stands 79 centimetres at shoulders to Apollo's S1, being but 4-5 of an inch smaller than his sire. He is a well marked typical dog of the orthodox color. Tony is also by Apollo out of Bernice, same color and markings as Hector. They are on the way now and are expected to arrive in a few days.-K. E. HOFF.

THE PITTSBURGH DOG SHOW.—Editor Forest and Stream; The Pennsylvania Railroad has agreed to take all dogs in kennels accompanied by their owners or care-takers over their roads free to the West Pennsylvania Poulbry Society dog show, March 16 to 19, show to close March 19 at 6 P. M. Every-thing indicates that we shall have a large entry of Eastern dogs. Mr. H. W. Lacy will take charge of any dogs going to Pittsburgh show.—C. B. ELEEN, Secretary. Editor Forest and Stream; Owing to a typographical error in our premium list, the limit of the weight of cocker spaniels reads 25 pounds. It should read 28 pounds. They will be judged under the stan-dard of the American Spaniel Club.—L. F. WHITMAN, Super-intendent. intendent.

THE NEWARK MAD DOG SCARE.—A Newark doctor who has kept watch over some dogs bitten by the same rabid creature that snapped the children who were sent to Paris to be treated by Pasteur is prepared to swear that the cur was not mad at all. His bitten dogs have grown fat, and have thus far shown no signs of rabies. This is unfortunate for Pasteur, whose theory was supposed to be undergoing a grand test, but we congratulate the children, who had a delightful trip to Paris.—New York World.

BOUND BOOKS OF KENNEL BLANKS.—We have bound books of kennel blanks, each book consisting of 200 blanks of a given style, and can furnish these (postpaid 30 cents) for the convenience of those who have occasion to use a large num-ber of blanks. In ordering be careful to state what particular series of blanks is desired, *i.e.*, whether Names Claimed, Sales, Bred or Whelps. The arrangement of the blanks is such that a duplicate record of each note sent for publication may be re-tained for future reference.

THE AMERICAN KENNEL CLUB.—Birmingham, Conn. March 2.—Editor Forest and Stream. There will be a meet-ing of the executive committee of the American Kennel Club at Newark, N. J., on March 24, the second day of the dog show, at 2 P. M. The committee on credentials have reported favorably on the application of the Hartford Kennel Club for membership. I have received the resignation of the Baltimore Kennel Club as member in the A. K. C.—G. EDW, OSBORN, Secretary.

THE BEAGLE CLUB.—There will be a meeting of the executive committee of the American English Beagle Club, at Newark, N. J., on March 23, the first day of the dog show. The committee extend a cordial invitation to all interested in the beagle, to meet them. Any one desirous of joining the club should communicate with the secretary, Mr. W. H. Ash-burner, 27 North Thirty-eighth street, Philadelphia, Pa.

THE HARTFORD DOG SHOW.—Editor Forest and Stream: Our premium list will be issued Monday, March 1. Every in-dication points toward our show being a great success. There has been a great demand for premium lists and entry blanks. The puppy classes in mastiffs, St. Bernards, greyphounds, deer-hounds, setters, fox-terriers, collies and pointers will be divided into dog and bitch classes.—A. C. COLLINS, Secretary.

THE SPANIEL JUDGE AT HARTFORD -- Mr. A. C. Wil-merding informs us that it will be impossible for him to act as judge at the Hartford dog show.

KENNEL MANAGEMENT.

No Notice Taken of Anonymous Correspondents. NONAROR. Savannah, Ga - To get rid of the worms in the pupples feed them plenty of thick sour milk.

J. H., Steelton.-A setter dog about three years old has shoe last fail had three fits, Ans. Look for some cause for the tits. Has the cog worms, are his towels in order, has he recently had the dis-temp-rf. Give him 10 grains of the bromide of putsh three times daily for three weeks.

ily for three weeks. Young READER.—Ans. Give the puppy a terspoonful of castor oil. eq no meat. Feel milk with two trappoonfuls of lime water to the int, also beef tea with bits of toast in it. Give no fatly food. Use me Presian figa powder for the fleas, but do not use too much. atch his stools and convince yourseld whether he has worms or

.. Bowton.-In the case of canker in the ears is it advisable to e canker cap? The dog is a beagie and has had canker some began ireaument a week ago, using sulphur of zinc and green of mercury every third day. No external some, Ans Syringe r with warm water and soap, dry carefully, and drop a feo of the following into the ear twice daily; Of bi comochioral and adapum, each one drachm; of water, ix ounces; mix. Apply

arm: C. A. T., New market, N. H:-I wrôte a faw weeks ago about my ster dog baving distemper and treatment I gave him. The distem er has apparently left him, and for the last week he has appeared jeely and had a raveboux appritie; but he now seems unwell gath, its symptoms now are cent just shaking of the bead and scratching f 1r eart by the use of his bindlegs, and he drocks continuously. The have an acta that it is cather in the ear, and should like to know

what ireatment to now give; and does the Fowler's solution which I hove been giving have a tendency to drive any lutnor which he may have to the surface? Shail continue its use? Ans. You had better stop the Fowler's solution. Use the following wash for the ears: Of bromo chloral and landanum, one drachm each; of distilled water, six ounces. Mix. Drop in the ear twice or three tims daily. If you have been giving the arsenic for more than three weeks, it is the cause for the drooling.

[•]NEVADA V3, CALIFORNIA. - A long anticipated interstate mil-tary rife match between the Caro neam of Nevada and the Gali-fornia Schuetzen (lob took pl ce Feb. 21. The former club shot over the range in Carson City and the Cstlifornia team roused the echoes in Schuetzen Fark in Alameda. The conditions of the match were twenty shots, twenty men, 200 yards, military rifles. Colonel Pa ker of the Carson team was present during the shoot in Alameda and, acted as judge for his aversaries. He shot over the same range with them and scored \$4 rings. The shoot lasted during the entire afternoon, but just before its conclusion a dispatch was received from Carson amouncing that the team in that city had scored J.602 Jacoby, Johnson and Kuhnle. The chub scored 1, 760 yust bacoby, Johnson and Kuhnle. The chub scored 1, 760 yust \$59-30, which is said to be the best on record. The 'aliformi score is as foll over: Strecker 87, Ladd 92, Rachman 53, Robilf's 81, Kahnlyer 7, Lehma 143, Sinith 85, Robertson 55. NEW BEDFORD, Mass., Feb 22,--Kifte teams representing a bat-

RANGE AND GALLERY.

o bird." In each and all such cases another pair of birds must be of st. Rule 17. The Shooting.—All tics shall be shot off at the original sance and at the number of birds agreed on by the contestants. however, the contestants cannot agree promptly on this point, referes shall far the number, and has decision shall be final. The less prescribed for single and double bird shooting shall prevail in shooting. about the contract of single and double one should be onsidered unless the present of the should be able to be

ELIZABETH. N J.—The Ebzabeth Gun Club have lately procured ermanent shooting grounds and have just completed the erection of chub house. The grounds are conveniently located, about be min-test walk from the depot. The club had their holiday shoot on Vashington's Birthday. The targets used were "bats," made at ockpurt, N. Y., and the unanimous opmion of the club is that they be tagets in use for trap-shooting. The club have used every kinds of targets during the past eighteen months, but they refer the basts to any other target. Our shoots are held every Thurs-ay afternoon and on every holiday. I send you the scores made by he club:

THE A. C. A. TROPHY.

THE A. C. A. TROPHY.
THE A. C. A. TROPHY.
The sport of invitation in this week's issue I would like to easy a few words in regard to the A. C. A. Trophy.
The reports to your invitation in this week's issue I would like to easy a few words in regard to the A. C. A. Trophy.
The sport of the general character of the A. C. A such as athletic and boarng clubs are governed, and their oculated outlined and directed, by a very small proportion of the total number of active members, who often obtain such control that they are able to carry through any measure which they favor, even when such measures may be detrimental to the best interest. Ot the club.
There are various reasons operating to bring about this state of things. It is fair to presume that in many cases the use who get control are those who exhibit the most abulity, but a very frequent cause is sporthy of a large majority and another reason is, that after a certain set have become established in power, it often happens that they form a clupe which by unneed effort can defeat the will of any unorganized opponents.
The sended to the writer that it was a contridiction of the reachings and most of the canceling literature. You, the Editor, have very, ably on more than one occasion exposed the datager to be appetended in warding prizes which should be valuable enough to perver a contest for than the sociation appear head not of offer a generous privary and surgerous board and most of the ecaneding strangers might wint. baylug once established a procession is expectional, and that is would make the Association appear head not of offer a generous privary to one of the visiting strangers might wint. baylug once established a precedent of this stind, how to we know how offer a very ably indice have here offer a very montain the season, and the dour was presented to be competed for the soft by prizz as trophese, would be they be they be they be than the they achilde they are they are they are they be they be they be a precedent of this stind, how one whow offer a vere

injur it.

lajurit. The proposition to make the trophy a challenge prize, seems to me to be the only way to put the Association in a position consistent with former professions of its aims and objects, and I hope your m-vitation will call forth so strong au expression of opinion in this direction as will leave the officers of the Association in no doubt as to the feeling of the members at large, and as a consequence of their plan duty in the premises.

TLORIDA.-Dr. Neidé writes us from Jacksonville as follows: ' We have just returned from a iong trip in the Aurora from Mosquiio In-let up the Hillsboro River, throngu Mosquito Lagoon, the Hanlovs Canal and down the Iauian River to Indian River Jolet, thence back to Hockledge and made the carry of three m.les over to Lake Poin-sett, and then making the run down the St. Johns River to Sanford. I have seen drooked rivers in my day, but never anything to guite equal the upper St. Johns. We encountered a bear and alligators in-nia.erable while on the river. Deer are plendiful, and we troiled some venison over coals made from wild orange wood. Millions of dead i-h lie slong the shores of the beautiful Indian River, having been killed by the sudden change in the temperature of the water during the 'Florida freeze.'"

THE CANOE EXHIBITION.

A NUMBER of canocists were present at the Harvard rooms on F-b 2), pursuant to the call sent out by the Knickerbocker O. C. Com, Fowler was chosen chairman, and the meeting was called to order with Mr. Brown us the secretary and Mr. Stanton treasurer. It was decided to hold an exhibition of cances and all pertaining to canceing at the Harvard rooms. on April 24 next, the expenses to be shared by the K-it verbocker, New York and Brooklyn club, if the receipts are not suff itent. The score of the propeer deshibition is shown by the foll wing lite of nepartments and committies, Arricles

shown by the following II-t of nepartments and committees. Articles may be sent direct to the gentlement in charge of the section for which they are intended: MANAOING COMMITTEE Folwin Fowier, chairman, Harcard rooms, 729 Sixth avenue, New York; L. W. Seavey, 81 Washington Place; Henry Stanton, 34 Nassau street TREASTER, Henry Stanton, 34 Nassau street (to whom subscrip-tions should be sent and bill rendered for settlement).

tions should be sent and blil rendered for settlement). SUB-COMMITTEES. 1. SAILING CANOE, fully rigged, one or more models—C. Bowyer Vaux 24 Cortlandt surrer. 2 PANDLING AND RACING CANDES, fully requipped: Ontario, Peter-boro. "Ne samuk." bitch, etc., with specimens of different paddles— M. (4. Foster, 84 Fullon street; Mr. Cox, Newark. 3 CRUISING CANDE, with full outfit-E. W. Brown, 17 West Thirlieth street.

CANOE ARRANGED FOR SLEEPING, with tent, bedding, night and ng lamps, etc, also shore tent suitably fitted up-J. F. Newman,

A. CANOE ANRANCED FOR SLEEPING, will tent, bedding, night and riding lamps, etc., also shore tent suitably fitted up-J. F. Newman, 19 John street. 5. "THE BOY'S FRET ('ANOE''-J. L. Greenleaf, 60 Park avenue. 6. CANOE AND CAMP COOKEPY: Camp kit and utensils, food in bulk and pucked as for sulling. Illustration of cooking on board by atco-hol lamp. Various modes of preparing camp-fires, with stones, crotchest sticks, "Nessmuk" logs, etc. - Capt. Natk Smith, NewFurgh; w. Dormitzer, 27 East Seventy-fourth street; O. V. R. Schuyler, 80 Broadwar. 7 CANOE COSTOME: A fully dressed caroelst, with beit or scarf, knife, by club members and officers-S. V. Hoffman, 420 West Twenty-third street. 8. ('ANOE INVENTIONS, APPLIANCES AND ETTINGS' F. g. Contarboard.

hughe snit of olikins, toal cape, etc., isleo the various badges worn by club members and officers-S. V. Hoffman, 420 West Twenty-third street.
8. (tanoe Investmons, AppLances and Firmtons: E.g., centerhoards, blocks, orop rudders, cleats, silding gunzer, etc., labelet with name of inventor and date of inventon-R. P. Martin, 437 West Twenty-second street: k. A. Renton, Wilham-burth.
9. Recarra AND (LUE TROPHIES: Chollenge cups at dmodels, prizes, club torenus, flags, signals, commental publies, badges, etc., prop-erty labeled - K. B. Burchard, 24 West Portleth street.
10. MANUPAOUTRERS' AND GLUDERS' EXAMPTS: Various models and etyles of building, "wetterughts," sails, appliances, catalogues, busi-ness cards, sto.
11. CANOF FINOTOGRAPHY: Cameras and outfils, photographic views and groups, bused on A. U. A. (local and club m-ets, cruises, typical models, etc. Stereopticon views of same with illusing its photographic views and groups, bused on A. U. A. (local and club m-ets, cruises, typical models, etc. Stereopticon views of same with illusing, works, and stores and Stereopticon views of same with illusing, stores, eanolog, artholes, etc., works, and models of boats, hooks on cruis-ing, building, etc., canceling arbeles and indels, books on cruis-ing, building, etc., canceling arbeles and Hustrations, volumes of Forest and sording of place. Is required).
14. ALUMENT OF SPACE AND FLOOR (COMITTEE, with power to ap-point ushers, receive applications for and assign space to exhibitors J. L Greenleaf, 60 Park av-nue.
15. HARL DEGORATIONS: E. C. Delavan, 33 Nassan streets-B. H. Nadal 35 Leximizen arenne.

HECEPTION OF EXHIBITS AT THE HALL-Edwin Fowler, 723 Sixth avenue. Clubs or individuals who have anything of interest to exhibit are earnesely requested to communicate with the gentlemen in charge of the special department to which it would helone, or if rotincueded under any of them, wite the chairman of the Manazing Committee. Such exhibits should be fully labeled with the address of the sender and any information of interest. Every care will be taken of them and they will be duly returned after being exhibit ed. Applications for tick is and programmes should be sent to the Invitation 'Om-mittee. Each sub-committee is requested to send in its exhibits, if balky, on Taureday, April 22 (after 3 P. M.) or on fildar, \$5; if small they may be sent at any time. They are also requested to have their depariments in good order for the publis expo-ition on the afternoon and evening of Skurday, April 21, a..d to remove them not later than Monday, April 26.

A SUMMER CRUISE IN LONG ISLAND SOUND.

Constitution we left it. On Friday we were joined by a friend from Hartford, who was to camp with us, and in the after noon we received our large wall teat whore was set up. That night our new camp mate H. slept in the tent, while we slept in our cances rigged with. Mudican lents. The next day we went to work to build our beets. First we got a bundle of hay and laid is in the teat about one foot thick, after which we laid our miber blackets over this, then our woolen blankets, making our hets over this, then our woolen blankets, making In the afternoon the owner of the Maud wont he

Dachting.

On Monday, Aug. 8. the wind was southeast, which told us a storm as coming, and about 10 o'clock it did come. That night a furious under storm came up, which caused our tent to leak a little, wet-

about 10 o'cloce it une convert to leak a little, wet-me up, which caused our tent to leak a little, wet-clithes. he Maud and G. in his own cance, the Arrow, with to Pawson's Park and Double Beach for the day, orning we had some paddling races, which were we stood up and paddled, jumped out into the water

ug. 5.—H. in the Mand and G. in his own canoe, the Arrow, with ne others went to Pawson's Park and Double Beach for the day. In Saturday morning we had some paddime races, which were then back again. Useday, Aug. 11, needing a good many provisions, we rode over to inford Point, and returning we took a sail to New Haven Light-ise and hack. The owner of the Mand not feeling very well, went pend a few days in New Haven with friends, H. therefore hecom-the erew of the Mand of red solt could not be used, in order to go to Branford Point in afternoon. We had a fair wird hoth ways, which made it much re enjoyable. Our cances being 28in, and rather heavy, it is no padoling them any great distance. Ing 14.—We were up earlier thone usual, as there was a fine sail-niced to breach the sound as some races sometime, de-mined to bave them to-day. The course was out around a small were only to leave again for Harford, at he was not well ugh to remain, leaving his cance in care of H, who kindly con-ted to sail his canoe home to Harfford, W. arrived in the after-end rather is find and the signal we spun across the lis cance. It was a gree find is cance at Pine Orchard. at and y, Aug. 15.—We were up rather early, and at 8 o'clock red for Pine Orchard, were to prather early, and at 8 o'clock red for Pine Orchard, we sail fa sa yacht; was rigged h the latees aslis of 53 and 187. We sailed back in about an hour, m Moday, Aug. 17, at 7 o'clock. P. and W, in the Cricket, G. in Arrow, and H. in the Maud, left for New Haven. By the aid of strong hreeze which was holwing, we reached M. H., 7 miles, in is fhan an hour. The N. H. Y. C. received us kindly by taking care our cances and offering us sleeping accommodations. uesday, P. aud W. stated for camp at 10 o'clock, G. and H. soon owing. It was rather a rough trip coming home, but the cances own fished the without an accident. The denseday, P., W., G., H., in the three cances, started to spend the strong hreeze which was holwing, we reached M. H., 7 miles, in is fhan an hour. The W

Messrs. Forn and Ingraham, who were cruising up the river in cance Ramhler. diresday, started at 10 o'clock and made a short cut through the twater at Saybrook. Having a head wind we tacked up to e, where we laid up for the rest of the day. The crew of Arrow we d a hot supper, so he went to the Bacon House. The others snpper in the usual way. We then took the cances out of the r and repacked them in readiness for the boat, which arrived at ursday. Aug. 27.—Arrived home 7:30 A. M., having spent a most pable summer. We were none the worse for our trip, and fully mined to go off next summer, with an addition to our party. SAUNDERS AND GILBERT.

THE HUDSON RIVER MEET. —We have received the following ther from the secretary of Rondout C. C. —Editor Forest and tream: The annual Hudson River spring meet will be held at Cod-ington's Dock, a private landing four miles north of Rondout, on the name of the Hudson, under the auspices of the Rondout C. C., nay 29, 30, 31, 1866. Sufficient seclusion, a fine beach and excel-ant camping grounds make this point particularly adapted for the unpose. It is easily reached via following routes: By steamer Mary owell from Vestry street pier, or night hoats from piler 34 N. K. (ew York to R ndout, thence by sail or naddle or towing by little assenger yachts at small cost; by New York Central and Hudson tiver Railroad to Rhinebeck or Barytowa: by Hartford & Conn. Vest Railroad to Rhinebeck, or by steamers Treuner and Martin of the Albany and Newhurgh line direct to landing. Fassenger yachts unning at frequent intervals during the day place Rondout within asy access of those wishing to Porcure supples, A cordial invita-ion is extended to all cance clubs and unattached canceists to be egladly furnished by F. E. Hibbard, Secretary. WESTERN AMERIOAN CANOE ASSOCIATION.—A meeting of the Gibson House, Chicninati, Messrs G. Harry Gardner and C. F. ennewell, of (leveland; O. A. Woodruff, Dayton; Chas, Melville, andusky; H. D. Crane, Geo. D. Ellard, Dr. H. Greeseker, Nicholas ongworth, J. O. Shiras W. W. Hite and Wm. Greenwood, of Cincin-ati, being present. Twenty-one new members were elected, and applications were received from others. The programme of the Rogat and presents. Hue, Green wood and Groevedeek, a committee of design a flag. The meet of 1866 will be held at Ballast Island. TORONTO C. C.—The annual meeting of this club was held on be abard and sec. The elided will be held at Ballast Island.

Design a flag. The meet of 1886 will be held at Ballast Island. TORONTO C. C. --The annual meeting of this club was held on eh. 22, at the club house, sixteen members attending. The follow-ing officers for 1866 were elected: Commodore, Hugh Neilson; Vice-ommodore, Fred W. Mason; Secretary-Treasurer, W. G. McKen-rick; Excentive Committee, John L. Keirt and D. B. Jacques. The lub resolved to attend the A. C. A. meet in a hody this year. A new lub house will probably he hult shortly. Mr. Baden Powell was lected an honorary member. A resolution was also passed disap-roving of the increase of the A. C. A. dues, and suzgesting that the etailed accounts of the Association should be published each year.

ed accounts of the Association should be published each year. NNECTICUT RIVER MEET.—Messrs, Bowles and Knappe, of pringfield Club, and Abbot, Parker and Parmele, of the Hartford made a cruise (on foot over a muddy road) to Calla Shasta grove spirngfield, on Wa-hington's Birschdar, to look over the site of roposed three days' meet of New England cancelsts. Springfield lartford are working up the details with 'great enthusiasm, and is no doubt that it will be a grand success. Full particulars one he anounced.

"Hariford are working up the details with "great enthusiasm, and re is no doubt that it will be a grand success. Full particulars soon he announced. ARRISBURG C. C.—This club will celehrate the first anniversary is organization on March 1. at the residence of one of the mem-s. The programme includes the election of officers, the reading his ory of the club hy Mr. W. G. Spicer, a song by the club. a tation by Mr. Frank H. Davies, a reading by Mr. Wm. W. Say-i, another song hy the club, and in conclusion, the club prophecy, Mr. Geo. G. McFarland. The club now numbers fourteen mem-s

C. C.-Mr. Byrnes has sold the Hattie Bell to Mr. Me-Francisco, a new memher; and Mr. Wright, of Ala-ns the White Cap. The Zoe, Man, Mystie and Zephyr, pleasant cruise about Alameda and San Leandro Bay, rday afternoon and Sunday afloat.

A FFRRY TO GRINDSTONE.—The Chicago Granite Quarry Co. are considering the question of running a small steamer hetween Clayton and their quarries on Grindstone Island. A. C. A. MENBERS.—Mr. Chas. M. Whitelaw, Montreal, and W. E. Hart Fenn, of Hartford, Conn., have been proposed as members of the A. C. A.

THE A. C. A. TROPHY.-The amounts received since the last notice are: C. A. Shedd, No. 178, \$1; W. H. Hillier, \$1; Robert Ty-son, \$1.

9 tons. 42 tons.

waterline but ift, while below it rounds into a well ent up fored and rather streight keel helow. The sheer is fair, but turns up rat quickly aft, and the counter is a marked modification of the model peculiar style. Looked at from astern it shows the same fami triangle, but in this case very much smaller than usual, as the wi-at the archinard is extremely narrow. Looked at in elevation shows almost a fair line from tuck to archboard, the angle at wh the triangular face meets the lower line of the counter being y acuts, muching almost a tari the strength of the counter being y and usual, and the form tuck to archboard, the ar alar face meets the lower line of the count ing almost a straight line, and lessening the nuce. In fact all the lines of the after body, to ble ender,

making almost as at the lines of the after body, below and on earance. In fact all the lines of the after body, below and on sk, converse so rapidly that a few more feet would make the double ender. nidship section starts out with a broad base of 18m., the lower the lead keel, which is here 8ft. deep, and rises with an easy o a point above the rabbet, beyond which point the floor rises at a sharp angle, almost a V, until it meets the easily curved which lies near the loadline. Above the water the sides rise a easy round, the increased hread the bing but 8in, on each side most the loadline is nearly 40 per c nt. from the on appearance. In fact all the lines of the after body, or the deck, converge so rapidly that a few more feet would boat a double ender. The midship section starts out with a broad base of 18 in side of the lead keel, which is here 8t, deep, and rises w, curve to a point above the rabbet, beyond which point the straight at a sharp angle, almost a V, until it meets the ee bilge, which lies near the loadline. Above the water to be the straight at a sharp angle, almost a V, until it meets the ee bilge, which lies near the loadline is nearly 60 per c-fore end, and all the lines of the forebody are very fine aftrbody is fined away also to a much greater degree other borts. The midship section has a strong rake, and t buttock lines show up very easy and fair in the drawing. noticeable feature of the model is the manner in wrich it at all points, every line being fined out to the extreme long easy bows of the Elsworth mo tels are no new thing, present boat the departure from the old landmarks is v all parts, the whole style of the boat is in a null rely new will take a wise man new - thouch every fool will know it feather to first of Mr. Burges's experiment, and Purt ide the beading to first, but there are still further from the established models which can only be regarded ments. The specifications of the yacht have head rawing. These had the lumbering construction usually followed mans. The specifications of the yacht have head rawing the same that has long here known here through Wr. Ken and which has here largely followed in Rossion and also mans. Strike strength and ther New York boats, the old plank keel of the exterefue and other New York boats, the old plank keel of the exterefue and other thouse the stars, the old plank keel of the conterboard boat or the edgek, the word and lead keel the southere of the butt. In over the word and lead keel is southing the shape of the hull. In out who has been largely followed in the design as an in

thus, but the stem, a very wide keel of wood is used, form siding with the stem, a very wide keel of wood is used, form siding with the stem, a very wide keel of wood is used, form siding with the stem, a very wide keel of the rabbet, while bel wide mass of lead also taking the shape of the hull. In other the wood and lead keel is considered in the design as an integr of the boat on which its shape depends, and not an extrance thre which may be cut away or adde it to at will. The fair su the hull begins at the bottom of the keel, extending up to th and the position of the rabbet is dependent only on the w lead desired and the width of wood k-el obtainable; it may out two inches above the lower side of the keel or offt, if wide timber can be had. In the old methods the position of the was of course rigidly dictated by the siding of the keel, whele or edge. The width of the main section of the wooden keel and such a stick of timber 60tf. long could not be had in York market; in fact it was with difficulty that two eacb 2ft; square, were procured as substitutes. These hogs will he laid side by side and well bolted together, the main part of the keel, which will be dt. wide a deep. The centerboard slot will be cut through the two the line of the joint. At eacb end a piece of oak will complete the side market he two main longs, its upper side conforming jower, all being fastened with 3i. Munz metal bolts. A se jection to this construction is the number of pieces require heing four in the keel tissif with a longitudinal joint and tw vere ones, all being weakened by the inherent faults of a board coustructions. To compensate for these, heavy fra intervent will be used, and in addition a system of the rods

lower, all being fastened w jection to this construction heing four in the keel tsei-vere ones, all being weak board coastructions. To 4×14/in. will be used, and running through the keel sides of the trunk, each precautions have been tai when the immense later: welzh to keel and the c structure nece-sitated by the danger of straining is keel is built up of four or have been provided for, hu of still greater importance The steen, of white oak, i heads of fin. locust. and smells in the cahin. On each side of the companion way will be very large and roomy clothes lockers in which to bang outside cloth-ing. On entering the cahin one will he impressed by the amount of light as well as room. The large panels in the trunk sides will he of glass and made so as to open, the ohj-ct heing both light and venti-lation. The beight under the carlins will be 5ft. 10in, and the dis-tance between lockers for sleeping, but shall stretch my folding bunks, which will be of heavy canvas and be stretched tight by lan-grards drawn through heavy eyebols at the outside corners, the itner sides heing hooked in the bilge behind ornamental curtains. These latter will be raised at night on making the beds, but during the day will be dropped in front of the folded bunks and hedding. When the lockers are in use as heds, these folding hunks will be attached fin higher, making two tiers for sleeping. In the cabin bulkhead will be a portice instead of a door, the passage ueing ätt wide. By drawing this aside at night I shall ontain as good ventilation as though there were no bulkhead. From the drawings, armely, the hatch just for-ward of the mast. This will be ample in size to pass down into the forecastle large bundles. It will also he used in dipping the spinna-ker boom and for ventilation. A hatchway forward near the bowspirit bits will be finded will be finished in hard woods and the forecastle in cypress. The rails, deck and trummings will be finished bright, theres biloks the ungelint used in size for the mast and Babhitt brass blocks throughout. The boat is roomy, safe, comfortable, and cheap withal. She can be built and sold complete for from \$1,000 to \$1,500, according to fin-ish and material used for ballast, and will be really a poor man's block. How will be finished to heap withal. She can be built and sold complete for from \$1,000 to \$1,500, according to fin-ish and material used for ballast, and will be really a poor man's boat.

She will be called Mermaid, and we hope to show the prettiest, nicest little mermaid in the whole sea. J. BORDEN, JR.

MAYFLOWER.

MAYFLOWER. GENERAL PAINE has decided on the name of Mayflower for the bolted englamba, the base here in frame and the lead keel bolted englamba, the beams and garboard strakes are also fastened and the planking still scone be completed. We core the following de scription and specifications from the Boston Globe: — "In the first place, the lines of the Puritan have been pretty gear-ally followed, and the difference in dimensions from last year's pro-ductions, the Puritan and Priscilla, is slight. The new Boston yacht will be plainly fuitshed, both ourside and inside. Costly decorations and elaborate fixings are not called for by its owner, but speed, the smodels the new sloop bids fart to trial her last year's sister, both in symmetry of lines and qualities that iend to speed. An easy en-trance, a remarkably handsome and clean run and clearance are very marked in the model. In the following table to to speed. An easy en-trance, a remarkably handsome and clean run and clearance are very marked in the model. In the following table to the mailons of the New York sloop Atlautic are given for the sake of comparison: — Puritan, Mayfin-wer, Atlantic, — Her, In, Ft, In, Ft, In,

January 12.-Wind N. and moderate, with heavy sea; set the main-sail. January 13.-Made Bermuda at 4 P. M. This record tells its own story of the behavior of a shoal boat in a see-unmarageable. Gek s washed and caoin flooded, and only by good luck reaching a place of safety, having male acour 700 mil-photoweeks, at d betug almost as far from har destination as when she started That she finally brought up somewhere instead of dis-appearing entirely as others of her kind have done hefore, is evi-dently due in no way to the qualifies of the vessel but to a happy of the searcing powers of a shoaldraft centerhoard boat. On her arrival at Bermuda she was vitually a wreck, sails and rigging gone, bulwarks smashed, hoats store in and cabin badly damaged and half full of water. After flye days spent in repairing, she put to sea again and on Jan. 30, one month out from New York, she made Nas-sau, her original destination.

cuo. **EEY WEST.**—A correspondent in Key West writes us that there are uo pleasure craft to be nad uber, and no yachts are owned in this city of 15.0.0 inhahuauts and surrounded by water. The schoorer Whin, of New York, arrived early in kebruary, and on the arrival of her owner, Mr. Chester Uhapin, acc-mpanied by his friend, Mt. Chas. Miller will soon return to New York and Mrs. Chapm will join her husband on the yacht for a cruise along the west coast and then to Jacksonville. On Feth. 16 two smirtl scoops from Boston, the Uswo, Cap. Barker, and Mamie, Capt. Robbins, put into Key West. The Uora, Mr. Morris, also scopped the elatedy.

Cora, Mr. Morris, also scopped the elatedy. CRUISE OF THE CARLOTTA. - After her departure from New York for St. Kitts on Feb. 10 the Caylotta met with a curious misnep, her capted becoming deranged when only a few hours at sea, and being violent and unmanageable. The owner, Mr. H nry Belkusp, took command, out his troubles were increased up the seasictness of the erew and the approach of bad weather. The Carlotta was ost for a time in the for, but finally she made Fenvice's Island, and on the 14th anchored at Delaware Breakwater. One of the owner's Irlends blougat the captain to New York and returned with Captain Reuben Kieg, once of the schooser In.repid, and the yacht satied again on her cruise.

THE BOSTON YACHT DESIGNING SCHOOL, -This school in a prosperous condition, heng supportent out of the Hawes left to South Boston for educational purposes. It has now bi three pupils, and many more applicates for whom there is u room. The school will be open on The days and Thur days fir. 9 P. M., until Apvil. Any scholar ausent for three evenings w good cause will lose his place in the school. Next year it is ex-ued one for beginners. The attendance at present includes yachtsmen and several builders.

A NEW CENTERBOARD YACHT.—The yacht that Mesers. Borde & Wood, of Fall River, have designed for Mr. C. W Antmony, is n building by Read Bros. of Fall river. Son is 43%, overail, 34%, wate line, 14%, oin, beau, 5%, 6%, and carries an iron keet 22%, lon-and 18m, deep of 5.2% pounds. Her wood keef is 18m, wide, iron logs 12×13%, and 25%, long, single streamed framesshee 28, n, condu-logs 12×13%, and 25%, concerts. Yellow pine plank 15% n. The cabi-will he 17%, long.

will be 17it, long: A MUTINY ON A YACHT.-Captain Geo. T Thorp, master of the steam yacht C. G Green, Jr., lately arrived in Philadelphia, and s uses that his crew mutinied ou account of the coid weather and refused to work the yacht, in consequence of which she ran aground. C. plain Thorp lived on board mone after the crew deserted for eight ays without money to secure nelp and with little food. The yacht was finally rescued. The curcumstances have not yet been to estigated.

Inally rescued. The Circlingsings have not yet open investigated. LAUNCH OF THE REVA --The low ides of Wednesday prevented the fainch at the time appointed, although all was ready, but on Thursday last at 8 P. M. it took place in a neavy rule storm. As she left the way - Mis Emily Pine, a dice of the builder, book the wine bottle and christenen her. After the launch, which was very success-ful, two turgs towed the yacht to East Fifth street, New York, where she will receive her engines.

PHILADELPAIA TUCKUPS,-Editor Forest and Stream: Your orre-pondent is right as to numbers, construction, etc., of "tuck ps" on the D-laware. I have counted 130 sail pass up stream by open's Pour in less than 15 minutes, most of them 15t. fyers. I iso purticipated in a regatta in which over 60 of these tiny craft tarked from buoys reaching from Philadelphia to the Cove Channel Chere is no doubt these boats are the speedlest in the world, going over a course in a race of 35 miles in almost the rough st kind of weather. They are man killers all the same.-R. G. W. (Camden, N. J., Feb. 13 1886).

NEW FISHING SCHOONER — A new fishing schooner of "wing dimensions is now building at Essex, Mass : 85ft in le n to sternpost, length over all 100ft., beam 20ft bin., depth 12ft. bin., sharp V.shaped bottom with V-shaped quarters n, width of stern 12ft., draft aft 11ft, 6in., mannmast 74ft, st 72ft., bowsprit 20ft. outside knighthead«, foremast is 21ft.) seem and there will be 20ft. 6in. between the masts, maint ; in length.

FO3D Y. C - The offleers for 1883, elec' dore, Frederick Swift; Vuce-Commodore, Jorre, E. B. Hammoud; Secretary, Joh Hanley Wilk; Directors; E. S. Brown, Ge Williard Nye, Jr., Sorace Wood, J. C (E. Swain, Nathaniel Hathaway, William ker. NE V BEDFORD Y

YACHT CRUISE ABRO VD.-Mr. W. A. W. Stewart, of the and Mr. C. S. Lee, of the Oriva, lately left New York for a se, goi.g. to Encland by stearner, where they will char oner yacht and sail for the Mediterranean, visiting liter they les, and probably New York. Capital Porter accompanies is

H. No Notice Taken of Anonymous Correspondents.
H. P. S. - The arm is accurate. It will kill at half a mile range if you can hit anything at that distance.
G. S. S. Chicago, III - Mr. Joseph Bardwell, 676 Thirteenth place, Chicago, can give you full particulars.
A. J. B., Ogden burg, N. Y. - Can you inform me what preparation is used on inside of aquariums which is waterprooff I have a large one, bottom covered with zinc and stopped with white lead; this I covered with sealing wax variable, but it does not give satisfaction, as it gets soft and peels off, result, dead fish. If you can inform me what preparation or stay there and resist action of water I will be greatly obliged. I have a constant stream of water passing in and out, but Reee losing fish, and attribute to poison from zinc and lead, no withstanding there is nearly three inches depth of sand and gravel on bottom. Ans. We would advise that all the zicc and white lead be taken out and the glass set in aquarium, wink good re-ulis, in all the tanks. The frames of these were of i on, slate. or Portland the stops are then enches depth of sand and gravel the tanks. The frames of these were of i on, slate. or Portland the stops are then and rosin, wet with himsed oil. This further cement to stop of your tank is of wood try pitch on it.

OUR READERS will confer a favor by sending us the name of such of their friends as are not now among the subscribers of the FOREST AND STREAM, but who would presumably interested in the paper.

POT LUCK FROM EXCHANGES

POT LUCK FROM EXCHANGES. A photograph of a tiger in the act of seizing his prey has, by a lucky accident, been made by an Englishman in Madras. The camera was focussed on a buffalo tied to a stake at a dis-tance of 60 feet, and had just received a dry plate, when a typer leared from a jungle aud struck down the buffalo with a single blow. The operator kept his presence of mind and released his shutter before taking to his heels. The negative showed the relative attitude of tiger and buffalo fairly well, and confirmed the generally accepted opinion that the tiger, with his knock down blow, endeavored to dislocate the neck of his victim. Monoster elk was sighted in the Ward River Mountains by a hunter, says the Salt Lake Tribune, and the hounds sent after him. A long chase of two hours led to the base of Sable Mountain, one of the loftiest of the range, up which the mon-arch of the forest darted as his final refuge. The ascent was steep, but the hunter and his dogs followed. Soon the elk was brought to bay. As the foremost of the dogs sprang full at the throat, the branching antlers were suddenly lowered, and keen tines pierced from side to side, and thestanch hound was thrown high in air, and fell far down the steep incline. Nothing daunted, the remaining hound, too, made its fierce spring, and shared the fate of its comrade. The animal then rished at the hunter, who fired, but the next instant was whirled aloft on the broad antk rs. His stout buc skin hunt-ing shirt turned aside the sharp prongs, but they had become fastened in the garment, and he bade fair to be thrashed to death. As for a second time the elk dashed him to the earth he managed to catch hold of a bush. and kept his grasp loog enough to draw his revolver and send a ball crashing through the brain of his gallent foe.

THE DEER HOUNDING BILL.

THE Game Committee of the New York Senate gave a hearing on the bill to repeal the anti-hounding law last Tuesday. A brief report of the meeting is given clsewhere. No new arguments were advanced by the advocates of the repeal. They repeated their stock plea that the deer must be hounded to be made shy, so that the still-hunters cannot get them. The real motive of these men being selfishness, they studiously conceal this by pretending that they want only to protect the game. Notwithstanding that their asser-tions of pretended facts have been exposed in these columns as preposterous and intentionally misleading statements, they stick to the "shy" argument on the principle that it is "a good enough Morgan until after election." They back up their side by the most grotesque assertions. For instance, last Tuesday one man stood up and actually told the committee that the unarmed still-hunter sometimes went out into the woods, and coming upon a deer, eaught it and choked it to death. It is allowable to fight the devil with his own weapons, but with what weapons, pray, can one combat an advocate of deer hounding who talks in that fashion?

There is one point which all the hounders who spoke last Tuesday studiously ignored. They told about the poor invalid sitting on a log forgetful of his bodily ailments while listening to the enchanting music of the hounds; but they failed to tell what happened when that music suddenly ceased; they drew the curtain before the final act; they tricd hard to concentrate sympathetic attention on the poor inva. lid on the log, and to divert it from the deer being butchered in the water. They dare not face the facts. They do not and cannot meet the proved fact that the end of a chase by dogs is the death of the deer-driven into the water and shot at close range, clubbed or drowned. They dodge the proved fact that deer are surely killed in this manner, in localities where they could be taken in no other way. They dodge the fact that hotel keepers like Paul Smith advocate hounding at the instance of and for the benefit of rich city guests, who could get venison in no other way. They dodge the fact that the dogs are employed as a sure thing, *i.e.*, sure to get venison. And they rant about making dcer "shy." They pose as philanthropists, spending their time and money in chasing Adiron-dack deer to make them "shy." They purposely confound still-hunting with crusting and killing deer in yards. They

talk about the unlawful butchery of deer by crust-hunters and the unlawful killing of deer in their yards in winter, and attempt to bamboozle the committee into believing that this is still-hunting. They harp on the terrible results of jack-shooting, but studiously avoid the fact that they have expunged the very good anti-jacking clause from their bill, because they hoped thus the more readily to get their hounding clause through, and because they really do not care whether jacking is forbidden or not; but are more than glad to make a bargain with the jack-shooters, whereby the latter may have license to get all the deer they can in the first part of the season, provided the hounders can get what are left. In short, it is by one pretense and another, the hollowness of which is perfectly evident to every fair-minded man who knows anything about the Adirondacks and deer hunting, that the advocates of the anti-hounding law repeal are mak ing their campaign.

Another hearing will be given by the committee in the Senate Chamber Tuesday afternoon, March 16, at 3 o'clock. We take this occasion to warn those who are interested in preserving the deer of the Adirondacks, that unless they take measures to provide incontrovertible evidence to dis. prove the statements of the repealers, which will be made at that meeting, the deer law will be repealed. The clubs and associations which have taken a stand against the repeal, should send representatives to the hearing with such statistics and facts as they may command.

There is abundant sentiment in favor of the present law to defend it, could that sentiment only be expressed to the Committee and the Senate. The advocates of the repeal are working assiduously because they want to have deer hounding next season; they must be met by a like activity unless the people of this State are content to let the case go by default.

THE MASSACHUSETTS ASSOCIATION.

THE Boston game market is the "dumping ground" for most of the game left on the dealers' hands at the close of the season in other States. The Legislature of the Bay State has for years been under the domination of the market moneyed interests of Boston whenever game legislation has come up. The Massachusetts Fish and Game Protective Association has made repeated attempts to secure more sensible and more just laws, but they have been balked every time by the dealers. So we still have the beautiful spectacle of the market men gathering in great stores of game, trade in which is declared to be illicit by some of the States whence it is shipped; and holding this game at such prices as may suit their fancy. Because of the better laws of neighboring States the Boston men have a monopoly of the trade. They can be extortionate if they choose, for they are not controlled by any competition. They cannot make a pretense that their game supplies benefit anybody except the rich. They can not plead that public good demands the present outrageous law, for the only part of the public now deriving any good from the extended game season is made up of rich gourmets, who willingly pay extravagant prices for grouse and venison.

In the report of a recent meeting of the Association, given elsewhere, it will be seen that the society is persisting in its efforts to secure better laws. The plea that the extraor-dinary privileges now granted are in direct violations of inter-state comity is worthy of consideration; it is not one that will appeal very strongly to the class of customers who now support the game dealers; but if properly presented to the people of the State at large it ought to have some weight, especially when it is demonstrated to the dwellers in the country that along with the game from the West, sold in the protracted open season, are scores and hundreds of ruffed grouse snared in Massachusetts, and quail from their own tields.

The principle of the Golden Rule is less powerful than that of self-interest. Let the voters of every county in Massachusetts understand that when they make Boston and tributary markets the dumping ground of western game, they put a premium on their own game birds. This rule which has been demonstrated over and over again.

FIRE BUGS .- We recently reported the conviction of a Maine incendiary, who had poisoned the cows and fired the barn and house of a game constable. This was his way of taking revenge for prosecution as a deer hounder. State Game Protector Armstrong reports a similar case of revengeful incendiarism by an Adirondack deer hounder. This is the class of North Woods residents who demand permission to hound.

SONGS OR FEATHERS?

T was a very pretty lady who sat one June day on the porch of an old gray farmhouse. The hop vines were well on their way up the strings of pack-thread to the low eaves, the lilacs brushed the windows with cones of blossom, and the greensward sloping toward the road was dotted with the golden disks of dandelions in full bloom and the misty bubbles of those that bloomed a week before. She was a kindly-looking lady, too, as well as a pretty one, and one might well guess from the soft and tender expression of her eyes that she would not purposely harm one of the humblest earth's creatures. A city-bred lady, one might bc sure, of by the unsunned white and damask of her fair cheek, and the fresh, half-surprised pleasure with which she listened to the merry jingle of the rout of bobolinks in the meadow and watched the orioles building their nests in the branches of a great elm, flashing up with long streamers of fibrous bark and shreds of ravelled yarn trailing behind them to weave the coming babies' cradles of. How much a part of the perfect summer day these joyous singers and happy workers seemed! She could no more imagine a June without them than a June without leaves and flowers.

 Λ year from that day she was sitting there again. The same blue sky bent over her, with the fleecy flocks of clouds drifting across it. The hop vines were crawling toward the eaves again. The scent of the lilacs was in the air, the dandelions starring the sward with gold, and the silver balloons ready to sail away on the first breeze. But where were the birds? Only two or three bobolinks scattered their song over the wide acres of the meadow, and one oriole, atilt on the swinging limb where the weather-beaten, tattered nest of last year dangled, sang a heartbroken call over and over again for the mate who never came,

"What can have become of all the birds?" she asked her

husband, who came strolling out with his book and eigar. "The birds? Ah! Well, my dear, I think I saw one of them on your hat last winter, two or three score of them on the hats of your friends, and ten times as many in the milli-ners' shops. And you miss them? Well, 'you cannot have your cake and eat it.' If you must wear birds' skins in your hats, you will have to do without their singing and their pretty ways, for all that I can see."

And he fell to reading and smoking and she to thinking.

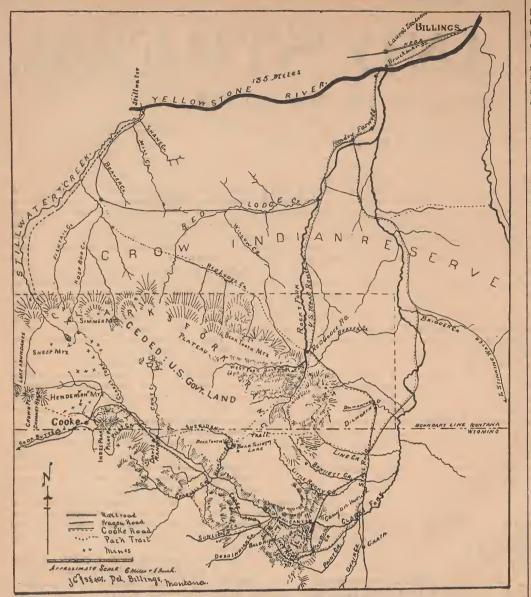

A RAILROAD TO COOKE CITY.

TO permit a railroad to enter the Yellowstone Park is to overthrow all the good work that has been done toward protecting that beautiful region. Its lands have been reserved from settlement by private individuals. Are they now to be thrown open to enrich a corporation? We have pointed out the evil results which are sure to follow the building of a railroad in the Park: Scttlements within it, the game driven off, the forests burned, the brooks and springs dried up, and the volume of the rivers diminished.

These are serious, they will be deplorable, calamities. Are we prepared to face them? Certainly not, unless some great public benefit is to be gained in return. There is in the pro-posed Cinnabar and Clark's Fork Railroad no advantage to the public which is at all commensurate with the inevitable cvils which will follow its construction. There are other routes, far easier and better, which will give the mine owners of Cooke City and Henderson Mountain a ready way to the Northern Pacific Railroad.

The route from Ciunabar up the Yellowstone, East Fork and Soda Butte Creek will be a difficult one to build. An enormous amount of rock work will have to be done, for the soft sliding tufa which constitutes a great deal of the cañon walls is treacherous material, and is likely at any time to slip down in vast masses and destroy a great deal of com-pleted work. There are also heavy grades on this line, which can only be overcome at great cost. The road can be built, no doubt. In these days of engineering triumphs almost any thing is possible, but it will be a vast undertaking, will be slow and enormously costly. On the other side of the range there are three practicable

routes from the mines to the Northern Pacific R. R. One of these is down Clark's Fork, another down Clark's Fork for part of the way, then crossing over to Rocky Fork, and down that, while the third is down Stillwater. The first two are long as compared with the third, and in one or two places present heavy grades. That down Stillwater, however, pre. sents such striking advantages that there can be no doubt as to its desirability over all others. With the town of Still-water as its initial point and Henderson Mountain as its terminus, the length of this railroad would be only fifty-six miles. There will be on it no very heavy rockwork, and the

RAILROAD ROUTES FROM BILLINGS TO COOKE CITY.

gradients and curvatures will be light. The average cost per mile should not be more than \$5,000. There is only one point at which there will be any heavy work. This is at the cañon, forty-one miles from the mouth of the river, where there will be a rock cutting of perhaps four thousand cubic yards. From the mouth of the river up to this point there will be only light work, and while, for the remaining fifteen miles, there will be some little rock work, there will be nothing which can fairly be called heavy work. For the first forty-one miles, that is from Stillwater up to

For the first forty-one miles, that is from Stillwater up to the mouth of the cañon, the grade will not exceed eighty feet to the mile. From the cañon to the Forks, it will not be over one hundred feet to the mile, while from the Forks to Henderson Mountain it will somewhat exceed this. This last grade may be in a measure avoided, however, by lengthening the road a little, and first running up the East Fork a short distance, and then doubling back and running up the West Fork.

An important point in favor of this route is that the topography of the valley is such that at all of the points along the route, where the snow drifts, the road can at very small cost be kept above ground, thus avoiding all danger of snow blockades. There being no divide to cross, the grade will all be one way, and therefore all the road's heavy freight its carloads of ore—will be hauled down hill—a great saving.

The Clark's Fork route is, as we have remarked, longer, and there are one or two places where the grades are heavy. The route keeps well back from the cafion, however, and except at the point between Dead Indian and Iron Water Creek there appear to be no very serious obstacles to be over. come. We print a sketch map of the region under consideration, in which the three routes named are roughly delineated. The Clark's Fork route follows pretty closely the wagon road; the Rocky Fork route follows the U. S. Mail route to Red Lodge and then follows the dotted pack trail, while thc Stillwater route follows up the valley of that river to Henderson Mountain. Some one of these three should be chosen, for no railroad should ever be allowed to penetrate the Yellowstone Park.

The projectors of railroads cannot plead any reasonable necessity of invading the Park, and endangering its forest preserves.

DR. W. H. WINSLOW, of Pittsburgh, Pa., whose "Cruise of the Pilgrim" has furnished such acceptable reading in our Yachting columns for several weeks past, is the author of a book which is a story of the late war, entitled "Cruising and Blockading." It is a book for "boys both young and old."

TO THE WALLED-IN LAKES. XIV.-A BEAR PIPE DANCE.

I HAD not forgotten that I had a vow to pay. Once the Sun had been kind to me, and though I bore him but slight good will, I felt that I must give the Bear Pipe a dance, as I had promised.

The morning after our arrival at the Agency, therefore. we sent over to old Red Eagle, the most potent of the medicine men of the Pegunny, to ask him if he would unwrap the Bear Pipe for us. Red Eagle is a relative of Appekunny, and for this reason it was hoped that his reply would be We were not disappointed. Word came back favorable. from the old man that three hours before sunset he would be ready for us. We therefore sent to his lodge some tea, bread and tobacco, together with a large bag of dried sarvice berries, these last being in some way "medicine" and an indispensable accompaniment of this ceremony. Then toward 3 o'clock Mr. Kipp, Appekunny and I drove over to Two Medicine, where Red Eagle's camp was. As we passed down into the bottom and pulled up near the lodges, a pack of about forty dogs of all sizes, colors and ages, dashed out from the brush and the lodges, and with furious barkings, snappings and snarlings, rushed upon us like a whirlwind; but their bark was far worse than their bite, if, indeed, they had this last at all, and when they got within a few feet of us, all their clamor changed to welcoming tail wags, and they seemed very glad to see us.

We found that Red Eagle's preparations were not completed, and while waiting we strolled over to the spot near the camp, where in ancient days the Pegunny used to jump the buffalo off the cliff. This is a high sandstone bluff, which was once a vertical cliff rising fifty feet above the valley, but it has now weathered down so that there are two benches, each one about twenty-five feet high with a very steep slope beneath each. The ground at the base of the bluff is liberally sprinkled with minute fragments of the bones and teeth of buffalo, but parts which are still recognizable are rare. Occasionally a badly-decayed vertebra may be seen, or rib, or fragment of a leg bone which had been covered up by the soil and so preserved from the general de To the Indians the place is still sacred, and to mark cav. it they have built up and keep in repair a pyramid of buffalo This memorial is about three feet in diameter and a horns. foot or two high. It was once much larger, for the soil about its base seems entirely composed of fragments of decayed horns. All those which now compose the pile are very old and rotten, but the Indians still give the heap attention, [MARCH 11, 1886.

piling it up whenever it is blown down or knocked over by the horses, which like to feed at the base of this cliff, where the grass, nourished by the decay of thousands of buffalo carcasses, is luxurlantly thick and green.

We looked in vain for arrow points or stone implements of any kind. For many years, sand and stones have been washing down from the bluff in the rain and the wind, and any articles that were once lost here have long since been covered up.

Returning to Red Eagle's lodge, we found that the prepa rations for the ceremony were not yet completed. down on a log near the lodge and began to make friends with the small children, who were nearly as numerous as the dogs. There was one little fellow about two years old who quite won my heart by his genial smile and general air of cordiality. His clothing consisted of several strings of beads, a buckskin thong about the neck to which was attached a medicine stone, and an extremely abbreviated shirt, which came down just to his lower ribs. The rest of his person was covered only by a thick coating of mud. He had evidently been playing in some half dried up puddle. young savage marched up to me in the most confiding way, and after shaking hands in a matter-of course fashion, quite as if we had been equals, he clambered up on my knee, and, having inspected my watch and chain and notebook until satisfied, sat there blandly watching the antics of his seniors. It appeared to be a favorite amusement of these children. from five to ten years of age, to surprise the unhappy dogs when asleep by the lodges or playing near them, and beat them with long twigs and pieces of brush wood until the wretched curs took refuge in the brush with most melancholy howlings, while the young Indians screamed with dclight. I found that my tiny friend was very much such a child as a white infant of the same age would have been, and was amused at the same things; but he was far better able to take care of himself than a white child of three times his vears

At length Appekunny called me, and with him I entered the lodge, in which were already seated a number of Indians. Red Eagle sat at the back, with the fire between himself and the door, and at his left was a space, where—in the place of honor—we seated ourselves. The lodge was quite full. Several of the women had their babies, either on their backs or between their knees. On the right of the Bear Man was his wife, the Bear Woman.

Red Eagle was a large, fine looking man of majestic presence. His massive face, which had a kindly benignant expression, was framed in his long gray hair which hung down over his broad shoulders. He is one of the oldest men in the tribe, and is now quite blind.

When all were seated there was a little pause, and then the Bear Woman took up a dried willow branch, which had two parallel twigs close together, to answer for a pair of tongs, and lifted from the fire a live coal, which she placed on the ground before the Bear Man. The latter then began to sing a low monotonous chant in a minor key, in which, after a few moments, all the other Indians joined. The song was very plaintive and melancholy. While singing Red Eagle interrupted himself every now and then to exclaim, Nī-ai', my shelter or robe, the other Indians continuing to After a few moments he reached his hand under sing. blanket on which he was sitting, and drew forth a small pouch, which he passed to the Bear Woman. She slowly untied it and took from it a pinch of the dried needles of the sweet pine, which she held over the coal. Then the Bear Man sang four times, and as the music would rise and fall the Bear Woman's hand would rise and fall over the coal. At the end of the fourth song the Man stretched out his hand and made a downward gesture, as if placing on, and the Bear Woman let fall the incense on the coal. mediately the fragrant perfume of the burning leaves filled the lodge. The singing continued a little longer, but at length there was a pause. Then, both Bear Man and Woman stretched out their hands over the smoke of the burning sweet pine, and rubbed them together. Then they took smoke in their hands and rubbed it over their wrists and forearms, and afterward, taking more, passed it over their heads, shoulders and upper arms. They also took handfuls of the smoke and seemed to eat it, so that they might purify themselves without and within.

Then raising his face toward the Sun, the Bear Man prayed, saying:

"Hear, Above People, hear, Thunder, those animals [i. e., his secret helpers or medicine animals] hear too. Kim-o-tit, Kim-o-tit, Kim-o-tit. Pity us, pity us, pity us. Let us live, let us live. Give us full life. Let us [become] old. Listen. Appekunny, let him survive. In his wandering about, let no danger befall him from bad beasts, or dangers that are on the trail. Let his wife and boy that child with hair like the sun, live to be very old, and have plenty of everything. Joe, let him live. Keep him when he is traveling. Protect him from all dangers, from perlls from animals, and from all dangers on the trail. Let his wife and child live and have abundance. And their young brother, let him survive. Care for him and keep him safe from danger, everywhere he may he

"All people let live. Oh, Creator, have pity on the people, so that they may live well, free from danger. Oh [pipe] tell them [*i. e.* all Above People] have pity on us. May all people have full life. Give everybody heavy bodies. Let the young people grow; increase their flesh. Let all men, women and children have full life. Harden the bodies of the old people so that they may reach great age

When he ceased all the people uttered a long-drawn Ah-h-h-h [Yes].

The earnestness of the petitioner was indescribably touch ing. This was not a droning, perfunctory prayer, whose object seems to be to convey as much information as possible to the deity. Here was a priest who reallydesired what he asked for. He threw himself on the mercy of this god and would not let him go. He implored, he urged, he insisted he would not be denied; and as I saw the great beads of sweat stand out upon the old man's brow, I thought of another struggle of long ago, when, at the ford Jabbok. another patriarch wrestled through the long night with his God and prevailed.

The prayer caded the singing was resumed, Red Eagle starting it, and the others, after a little, joining in a plaintive refrain. Presently the Bear Woman again took from the sack some of the sweet pinc needles and sprinkled them on the coal, and as the white smoke curled upward both Man and Woman again took it in their hands and as before, purified themselves by passing it over their arms, heads, shoulders and breasts. After they had done this, they took handfuls of it and held this up under a large package, attached to a beautifully ornamented pack saddle, which was tied to the lodge poles above their heads. This package contained the Bear Pipc. The singing continued, and now the Bear Woman chewed some of the sweet pine, and then spitting it into her hands, spread it over herself as she had done the smoke, and rising to her knees very slowly and reverently untied the package from the saddle and placed it on the blanket between the Bear Man and herself.

The Bear Man now began a new song—one which was more lively—and he and the Woman moved their hands through the smoke, and then holding their hands over the package moved them alternately up and down in time to the music. At first the hands were closed except as to the forefinger, which pointed straight out, and the up and down motions were quick and dainty, to represent the sharp rise and fall of the feet of the antelope when walking. Then at a little change in the air, the fingers were all bent, but the hand not closed, and the up and down motions became deliberate and heavy, to symbolize the slow tread of the walking bear. At another slight change in the air the old man raised his hands partly closed, the forefinger extended, pointing upward and slightly bent inward, to the sides of his head, and moving his face this way and that as if looking about him, called out in a shrill voice, "Hoo." The hand sign meant "buffalo" and the head motion "look out." This sign is related to the word Ni ai, often used in the song, meaning my shelter-covering-robe-buffalo. Then fol lowed up and down (walking) motions in time to the air, all the fingers being extended forward, symbolizing going to war, and the danger, or lookout, signal, forcfingers pointing straight up to and raised to the sides of the head like a pricked ear, with startled expression of countenance and the watchful look.

This song ended, Red Eagle slowly and carefully removed the wrappings from the package at his side, the singing not being interrupted at all, though the air was changed again to the slower, more monotonous chant. The braid string being untied from the double-mouthed red cloth sack, which formed the outer covering of the pipe, he drew forth a long bundle, wrapped in silk handkerchiefs of various colors. One by one he took these off until ten or twelve had been removed, and the Bear Pipe was revealed.

It was a handsome stem, about four feet long, wrapped for a part of its length with large, handsome beads, and profusely ornamented with white weasel tails and feathers. which depended from it in thick bunches. Near the lower or pipe extremity was a spread plume of twelve tail feathers the war eagle, each one having its extremity wrapped with red or yellow horse hair, which hung down in a long tuft. Below this plume the stem was tied with red, green and yellow ribbons, and again below this was a cluster of brightly burnished hawks bells. The whole stem was very handsome and heavy.

When the coverings were removed, the old man for a moment bent in silence over the pipe, and then raised it slowly and tenderly to his face, making a cooing, caressing sound, such as a mother might make to her infant. He pressed it to his lips and whispered to it ecstatically, while his sightless eyes looked toward the Sun, as if they could pierce the covering of the lodge and behold some Presence invisible to our grosser vision. After a wrapt silence of a few moments, he again spoke in a low voice to the pipe, and passed it over his arms, shoulders and both sides of the head Then he sang again, shaking the pipe in time to the music. Then again he prayed loudly and impressively, and said "Oh, Sun, Old Man and Stars, pity us, pity us. Look down. My dream told me that those Crows [who stole our horses] will not survive if they [the Piegan pursuers] over take them," Then followed again the substance of the first Then followed again the substance of the first prayer, and he ended with this petition, "Little Plume, lct him survive; Tcaring Lodge and Double Rider, let them survive, and bring the heads [i. e., scalps].

Then turning to the left, he passed the pipe to Appekunny. who spoke a few words to it and handed it to me. I held it to my face and made a short prayer to it, and then passed it to an old blind warrior who sat next to me, and who prayed to it fervently and long, and then handed it to his neighbor.

And so it went round the circle, each one who received it prayed to it most earnestly. I was anxious to hear what the people said in their prayers, but they spoke in low tones, and the only words I could catch were now and then *Kim o tit* and Nam. It was touching to see the young women who had babies with them, after praying to the pipe, pass it up and down over the bodies and heads of their little ones, and to see upon their faces the expression of lovc and faith that one sees nowhere save on a woman's countenance.

Meanwhile Red Eagle had taken a medicine rattle made from the dried scrotum of a buffalo bull, in which were a lot of small round stone, and again began to sing, shaking the rattle in time to the music.

At length the pipe had passed round the circle and was handed by the Bear Woman to Red Eagle. He took it and said rapidly twenty or thirty times, "Pity, pity." Then rising to his feet he began a new song, and danced, toward the east, and then, turning about, toward the first west. The people accompanied him with their voices in a new but equally plaintive and musical minor chant. After he had danced he faced about, and sitting down prayed again, repeating what he had said in his first and second prayer, and concluding with these words: "Let the Sun shine upon us and our lives be without shadows." At the end of the prayer all the people said, "Yes, have pity, have pity.

Then he made a sign that the ceremony was over, and we filed out of the lodge. Yo.

descent; so we took a bee line for camp without getting a glimpse of his bearship. Perhaps it was just as well for the bear, and better for us. After supper we were informed by the camp keeper for the day that our stock of bacon was a store and been bagged it looked as though we should soon have to be put on short allowance. If was up early the next morning and while taking a wash for of the party who used a shorgin. I started immediately to follow up the grouse by the sound. This requires much a ground, but will perch ligh up amid the thick foliage of the ground, but will perch ligh up amid the thick foliage of the minutes with a deep, guttural grunt that can be heard from a long distance. They are very shy and will stop calling at the slightest strange sight or sound, and when quiet it is impossible to locate the the ene on which they rest, and even when located, it requires the keenest eye to detect them. If of kopping occasionally and waiting for a repeat to be sure of my course, until I had gone more than half a mile. At last head him located in a tall pine tree; he had heard or seem here looking it over from every point, gradually and rowing the isopher occasionally and waiting for a repeat to be sure of my course, until I had gone more than half a mile. At last head lime located line, they for the vertically I saw his head and neek when looking up almost vertically I saw his head and neek when looking up almost vertically I saw his head and neek when looking up almost vertically is an vision for the party the ground with go to the tree min here the ground here the ground here the same head from the tree and locating it over from every point, gradually marrowing the interest as levinced in looking to the party tor. The one the tree amid the forest was my golden opportunity, and that I could get but his was my golden opportunity and rapid as possible to prove the same the difficult tast of get when looking up almost vertically I saw his head and neek when looking up almost vertically I saw h

feet perch, and fairly bounced when he struck the ground. Gathering my bird I hastened to camp, receiving a vote of thanks from the party for the royal breakfast the ground. We had decided to move our camp some six miles up the mountain to an old deserted hunter's or miner's cabin which one of the party had discovered in his tramp; but when we seen preparing for the move, two of the party had discovered in his tramp; but when we head track for home; so the three of us having 'enlisted for the war,'' or rather the week, turned backs on them and started up the mountain for the deserted cabin which we had track for home; so the three of us having 'enlisted for the war,'' or rather the week, turned backs on them and started up the mountain for the deserted cabin which we also the three heads track for home; so the three of us having 'enlisted for the war,'' or rather the week, turned backs on them and started up the mountain for the deserted cabin which we should return at 3 o'clock. When we returned before noon, and leaving G. to fit up camp, I and Jerry started out in different directions with an understanding that we should return at 3 o'clock. When we returned shout three miles to the ground I mounted old Bob and started. Reaching the summit of the ridge, which was about three miles to the ground I mounted to Bob and started. Reaching the summit of the ridge, which was about three miles to the snow and selecting my cover in a clump of chapparal prepared myself for watching and waited till the shadows had grown yobservation; so breaking cover I started for old Bob and found hin turning and twisting around, shivering with cold and impatience. Leading him to a fallen tree I made a spring for his back, and as he started at the same time I struck and impatience. Leading him to a fallen tree I made subtrees of thes so as to guide or stop his wild flight; and several times I came very near being brucked of the is back by the low branches of trees. Something had to be done with the troos dispatch, or old Bob would go i

with our languler till the echoes came back from the sur-rounding forest. The next day being Saturday, and the limit of our time, we made an ample breakfast from the hare, and packing our blankets and campstools on old Bob, reluctantly turned our backs on the camp and magnificent forests in which we had spent a charming week, although a dry hunt. A.

THE SPRING FLOWER SHOW. A FLOWER show will be held at the Metropolitan Opera House, in this city, March 24, 25, 26 and 27, to be open from 11 to 11 o'clock each day. The show will be managed by Mr. C. F. Klunder, the well-known florist, whose successful engineering of previous shows all who love flowers will remember. This one will be on a larger scale than any previous exhibition, and will far exceed anything of the kind hitherto known in America. The enormous cost of the exhibiton is guaranteed by a number of well-known and wealthy ladies. Some idea of the magnitude of the work involved can be had when it is stated that it will take 150 men four days and nights to place the decorations. Among these will be a miniature *Are de Triomphe*, formed of flowers, on the stage. Among the interesting exhibits will be a number of orchids growing on an old oak tree trunk as in nature. The roses will be superb.

on an old oak tree trunk as in facture. The loses will be superb. Mr. Klunder is so well known for his excellent taste and his passion for flowers, that every confidence may be felt that under his charge the management and the arrangements will be all that could be desired. The news of this flower show will interest a great number of people both in city and country, and it is said that parties are already being made up to come from a distance to visit it.

Hatural History.

THE AUDUBON SOCIETY.

THE strength which the movement in favor of protection for our birds is developing is really surprising. We had supposed that many people were interested in this sub-ject, but until the establishment of the AUDUBON SOCIETY we had no idea how many such there were, nor how deep was their concern. Editor Forest and Stream:

Editor Forest and Stream: By a resolution of the A. O. U. Committee for the Protec-tion of Birds, I am authorized to communicate to the AUDU-BON SOCIETY our approval of its plan and the sanction of our authority in the work it undertakes. As you are so gener-ously bearing the expenses of organizing the AUDUBON SOCIETY, and are giving so much time and space in your col-umns to the society's interests, I venture to take the liberty of expressing the wishes of the committee through your paper

of expressing the wisnes of the commutee through your paper. The object of our committee is to present the birds' side of the question. As experts, we feel warranted in giving our time and knowledge freely, and in suggesting means for the protection and preservation of our beautiful and useful birds; but must depend largely upon philanthropists, socie-ties and individuals to circulate all good suggestions and to distribute the facts pertaining to the heedless destruction now taking place. taking place.

distribute the facts pertaining to the needless destruction how taking place.
An AUDUBON SOCIETY in every township of our land would bring about the three results aimed at, viz.: First—No bird would be used as food that was not strictly a game bird. Second—Nests and eggs would be kept inviolate, and children would no more think of stoning birds and nests than they do now of horses in the streets. Third—Birds would be preferred by all women as live pets rather than as dead ornaments. Such a change in public sentiment would soon be followed by a correspondingly delightful and gratifying change in our parks and gardens.
Our committee will be glad to render the AUDUBON SOCIETY all assistance in our power.
Marcon for the Protection of Birds, Am. Mus. Nat. Hist., City of New York.

Nat. Hist, City of New York. Nat. Hist, City of New York. Editor Forest and Stream: The suggestion of "X. Y. Z." in your last issue, to "enlist our sisters, aunts and cousins in the good work of refusing to wear birds as ornaments" is an excellent one, and truly germane to the subject. Let us try it and even extend the contrest to the nearest acquaintances whom we choose to see in the "borrowed feathers," which are so suggestive of cruelty and barbaric taste. The wearers of feathers cannot be reached or enjoined directly by any legal enactment, but many will give heed to kindly speech, and an earnest showing that they are to blame in the matter, and be led to renounce the evil and so stay the red-handed slaughter of the innocents. Mext, or rather at the same time, we have to do with the bonnet shooters and the taxidermists. Moral suasion, 1 am aware, will be of little use with many of this class, and to aid the cause we must see that just and stringent laws are made to save the birds, and not only insist they be made, but strictly and impartially enforced. The "Bill for Bird Protection," printed in FOREST AND STREAM, Feb. 24, is a good one, and should be made a law in every State. I would suggest that the AUDUBON SOCIETY prepare a circular to be read and permanently posted in every school house in the land, to instruct and warn every boy and girl, every youth and maid, in the interests of bird preserva-tion, and the nipping in the bud of cruelty of every kind. It is while at school that the young idea is taught to shoot very differently than the poet intended, and it is a sad sight to see the boy trying to kill or frighten every living, wild or domestic, thing he dares level gun or missile at. Whittier truly says, "We are in a way to destroy both our forests and our birds," and to save the remnant and as far as may be to restore both forests and birds is the bounden duty of every lover of nature. Let us be determined and persisti-ent in the work we have chosen. It is high t

BOSTON. March 3, 1886.

BOSTON. March 3, 1886. Editor Forest and Stream: I assure you of my hearty sympathy with the members of the AUDUBON SOCIETY in their efforts to prevent the waste of these beautiful, happy, innocent and useful lives, on which we depend for a large share of our natural enjoyment. I am myself more than tolerant of the somewhat intrusive intimacy of the English sparrow. No other birds outside of the barnyard let me come so near them—not even the pigeons. If I may change the lines of Cowper a little:

They are so well acquainted with man, Their tameness is charming to me.

Their tameness is charming to me. But still more am I indebted to the gulls and ducks, who during a large part of the ycar are daily visitors to the es-tuary of the Charles, on which I look from my library win-dows. I wish they could be protected by law, and if law cannot, or will not do it, that public opinion, under the lead of your society, would come between them and their mur-derers. Not less, certainly, do I feel the shame of the wan-ton destruction of our singing birds to feed the demands of a barbaric vanity. If it would save them from destruction I would say good by to the woodcock and sigh a long fare-well to the canvasback. Yours truly, O. W. HOLMES.

KEY WEST, Fla., March 3, 1886.

KEY WEST, Fla., March 3, 1886. Editor Forest and Stream: I am interested in the matter of the AUDUEON SOCIETY, for I have long watched with deep grief and intense indigna-tion the wanton and thoughtless destruction of birds now going on in all parts of our country. My personal knowledge of the matter is limited to what is taking place in Florida; but, through the columns of your most admirable paper, I learn that the same deplorable state of affairs exists every-where. Although I am cognizant of many scenes of bird slaughter in Florida, and know of the shipment of many thousands of bird skins and plumes from the State, I have not any reliable statistics of the trade for present reference.

I will, however, make it my business to obtain such, and will forward them to you as speedily as possible. The instance that came under my observation last winter made my blood fairly boil. It seems that the slaughter of birds for millinery purposes has stimulated those brutes, whose debased passions are fed by the sight of blood and suffering, to renewed efforts in the line of butchery to such an extent that nothing living is safe from them. For many years there had been a flourishing pelican rookery on a small island at the lower end of the Indian River. About a year "sportsmen from the North," visited this peaceful island one might, and with clubs and knives killed or sorely wounded and mutilated every bird on it; broke all the eggs they could find and destroyed the nests. They afterward boasted of this exploit, and remarked that that den of fish thieves was broken up at any rate, and they proposed to treat every other rookery they could find in the same way. They must have killed over a thousand birds in that one night. I know of one skin hunter now at work, who, under the mame of "maturalist," has destroyed between four and five thousand birds this winter. He is operating on Biscayne Bay, and I will try to ascertain more about him. May of the Florida papers. Please enroll me as a member of the AUDUBON SOCHTY, and count on my hearty ecopera-tion with you in the noble work of proteetion to bird life that you have undertaken. I never in my life killed a bird, ex-cept when forced by hunger to do so, and I hope I never shall. NEW YORK, March 1, 1886.

NEW YORK, March 1, 1886.

NEW TORK, MARCH 1, Editor Forest and Stream: Your earnest and intelligent efforts for the protection of birds is awakening a widespread interest in the cause, and is leading to a serious study of the best means to prevent the barbarous practice of destroying birds for gain. You have my warmest sympathy in your work, and I am confident that you will have the co-operation of the thinking part of our people. W. A. CONKLIN.

Chapter D, No. 818, Agassiz Association, of Newark, N. J., will hold its first annual celebration at Library Hall, on March 13, at 3 P. M. At a recent meeting of the Chapter it was decided to join the Δ UDUBON SOCIETY and try and advance its commendable purpose.

TALLAHASSEE, Fla., March 2.—The first purple martins arrived from further south to-day. There were nine in the flock, and one killed proved to be in excellent condition. Several thousand breed in this city every summer in the nooks and corners of the old buildings.—H. A. KLINE.

ALBINOS.—In Germany an unusual number of white varieties of animals have been noticed this winter. A white chamois was shot in the Totengebirge, a white fish otter was caught near Luxemburg, white partridges were shot near Brunswick, and a white fox was killed in Hessen.

RECENT ARBINALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN,— Three pumas (Felis concolor), one great normel owi (Bubo virgini-anus), two European waxwings (Ampelis garrulus), one larger hill mynah (Gracula intermedia), one raccoon (Procym lotor), one opos-sun (Didelphgs virginiana), two Virginia quali (Ortyre virginianus), one turkey vulture (Cathartes aura), one red tailed hawk (Buteo bo-realis), two Carolina doves (Zenaidura cardinensis), one barn own (Strix flammea americana), one screech owl (Scops asio), two red-winged blackbirds (Agelacus phoniceus), one alligator (Alligator mississippensis); born in the garden, two Carolina doves (Zenaidura carolinensis).

THE FURTHER TRADECTORY TEST. THE full report of the FOREST AND STREAM'S trajectory test of hunt-ing rifles has been issued in pamphete form, with the illustra-tions and the tabular summary, making in all 96 pages. For sale at this office, or sent post-paid. Frice 50 cents.

ANTELOPE HUNTING IN DAKOTA.

this office, or sent post-paid. Price 30 cents. ANTELOPE HUNTINC IN DAKOTA. The falling snow is being rapidly driven before the fury for the latcly arrived blizzard; the mercury is dropping fore the blazing fire in my library calling to memory inci-dents and scenes of many a hunting expedition, my eyes fall prove the blazing fire in my library calling to memory inci-dents and scenes of many a hunting expedition, my eyes fall prove the opposite wall recalling the day when in far off Dakota he fell before my rifle, and I thought perhaps an account of that hunt might be acceptable to your readers. The as toward the close of a warm day in the middle of last September, that four men were busily engaged pitching from the open prairie, about thirty miles north of the line of the Northern Pacific Railroad. Four horses were picketed a short distance away, and three dogs, a setter and two col-lies of fine breeding, were lying near by, intelligently watch-ing the proceedings. The party consisted of two sportsmen not unknown on the Atlactic scaboard, and their guides Jack and Tom McGregor, the first an old buffalo hunter who had done his share in the extermination of the noble bi-son, and the latter his bröther, much younger in years, but a skillful and experienced hunter. It was a weird yet beauti-ti he short buffalo grass, bounded on one side by a ravine or coulde, through which a clear, cold stream flowed, while the top the travine and gave a leafy background to the bright frame and sparks that leaped upward into the air before the four of the tent. The other side of the plateau rose rapidly prairie beyond them. The party had driven about twenty miles that day through the Bad Lands, and it was plain to see the guns had not been idle on the way by the pile of sharptail grouse placed on the ground not far from the tent and which the dogs scemed to consider as under their es-pecial charge. The air was growing chilly, and as the sum snuk behind the buttes that stood in myriads of fan

creature sat motionless and gazed at the party about the fire. "Look! get your gun" said Jack, "a jackass rabbit makes a first-rate stew." A shotgun lying by was seized, aud a cartridge hastily inserted, and although the darkness pre-vented accurate aim, it was evident when the report broke the silence of the uight, that the animal was wounded, as it made hut a few jumps before it stopped. The dogs, all un-conscious of the vicinity of the rabbit, had lain quiet until the report of the gun aroused them, when eatching sight of the creature as it bounded into the air, they gave chase and soon compelled pussy to exert herself to the utmost to effect her escape. Round and round the plain they went in ever increasing speed, the rabbit doubling at critical moments and using all her stragedy to throw off her pursuers, but the wound prevented the creature from availing itself of its ac-customed fleetness, and soon she was overtaken and seized by one of the collies, who, in spite of the plaintive cry which all rabbits utter when in immediate danger, soon dis-patched her. She was carried in triumph to the camp by Jack, and prepared for dinner of the following day. The evening meal having been dispatched, and the pipe of peace smoked, the party bade the world good night, as they knew a hard ride was before them ou the morrow. The sun was not an hour bigh the next morning when our party were mounted and on their way to the prairie. At this time of the year the autelope seldom eutered the Bad Lands, but staid out on the open prairie, and as it was the rutting sea-son, the bucks were engaged in colleeting their harrems, and fighting away any other buck that approached too near their braine, only the summits and hog-backs of the buttes rising

Son, the backs were engaged in contention that approached too near their little troupe of wives. Leaving the Bad Lands which generally lie below the prairie, only the summits and hog-backs of the buttes rising above its level, the party commenced a search for sign. Tommy was by mutual consent placed in the lead, as the most skillful of the hunters, but although tracks and beds were frequently seen, the animals who made them did not come into view. We rode for hours over the rolling land-scape, expecting at the summit of every rise to certainly see our game. At length, when almost despairing, we caught sight of a small band in the far distance, but almost immed-iately they saw us, and started off at that swift run that has made these animals famous. We watched them until they disappeared over a roll of the prairie, and then prepared to follow them, hoping that they would stop when out of sight of our party. We had gone but a short distance when Tommy, who was in the lead, suddenly reined in his horse and turned about saying in a low tone, "Goats." Although we had seen nothing we followed his example, and he then explained how there was a small band of antelope lying down around a knoll to our left, but he was afraid he would not get near them. However, we decided to try, and dis-mounting we left the norses in Jack's eare, and prepared to stalk the goats. Flat upon our bellies we erawled to the summit of a knoll, when the animals came in view. They were in a swale, a long way off from any of the ridges of the position we were in, and decided to retrace our steps and endeavor to get nearer from the other side. We made a long detour and then crawled to the top of another ridge, and came upon the band in the rear, but we were no eloser the before. "You must shoot from here," said Tommy, "ean't get any than before.

You must shoot from here," said Tommy, "ean't get any

and came upon the band in the fear, but we were no closer "You must shoot from here," said Tommy, "ean't get any nearer." "It will not be of any use," I said, "can't hit them at this distance unless by accident, it's over two hundred yards, but we'll try." The was agreed that my friend and myself should shoot to-gether at the word. Neither of our guides carried guns, as we were hunting for sport, not for count. The antelope that were lying down did not look larger than rabbits, half hidden as they were in the long grass, but on either side of hand, the two were still standing as sentinels, looking away from us over the prairie. "Ready, one, two, three, fire," said Tommy, and both rifles cracked, the object selec-ted being the two animals on guard. At the report the whole band started like one creature, on the full run. It was marvelous to see how quickly they could rise to their fat also joined the fleeing throng, and all were soon hidden behind a rise in the prairie. "Though disappointed we were not surprised, as we did not expect to make a sure shot at the distance under the circumstances. We rode on throughout the aftermon, but although we saw several bands of antelope they were too wary to per-ming a hunter had done before, minus our game. My friend dated d that the next day he would go after mule deer with pathelope again. So, soon after surrise, we were en route for the prairie, but this time decided to go north of the grounds having reached a favorable spot for a stalk, we dropped they would not go away from the spot, and erawled to the top of a neighboring ridge overlooking the place where we had seen plenty, until suddenly we eame in sight of two feeding in a sum whough which the bed of a stalk, we dropped they would not go away from the spot, and erawled to the top of a neighboring ridge overlooking the place where we had seen the antelope. No animal was in sight of two feeding in a sum of the proses' heads and left them, knowing they would not go away from the s

"Wen' tohing," them?" "Don't think it any use," he replied, "they saw us." "Well, it is not far and I am going over to see if I can find where they went to," I answered, "you go and bring on the horses"

find where they went to," I answered, "you go and bring on the horses." So I started for the other ridge. As I drew near the top, I laid flat upon the ground and pushed myself along, shov-ing my rifle ahead of me. Peeping over the top, I found the ground sloped away for a long distance, giving me an ex-tended view, and about one hundred and fifty yards from me were a band of antelope eonsisting of thirteen does and one splendid buck. They were seattered about feeding, but the buck seemed very restless, and kept a sharp eye over his wives, and also the surrounding landseape. I crept baek u nder cover of the ridge, and signalled to Tommy, who was eoming on with the horses, to leave them and join me, and then returned to my post of observation. Soon I heard a

<text><text>

antelope still resting. They all lay with their noses to the leavard, the buck in the rear, gazing intently down the glade through which they had come. "You will never get nearer," said Tommy, "try the buck." I took aim, but lowered the rifle, and replied, "It would be of no use, I could only hit that buck by the merest scratch shot. He don't look as big as a rabibit over my sight. Try the flag again, but stay close by me." Tommy raised the red handkerehief upon my shotgun, and we watched the effect. None of the animals appeared to see it, but all kept their gaze steadily down the valley. At last one of the does rose and stretched herself. The buck thinking possibly she was about to stray away, also got up and turned, when his eye caught our fluttering signal. Immediately he started for it, galloping up the slope, and increasing his speed every mo-ment. I erouehed lower and brought my rifle to bear on the spot where I expected him to come. As he drew near Tommy lowered his flag so it could not be seen so clearly, When the antelope had approached within forty yards he turned to make a eircle and get our wind, passing directly in front of me. I had brought my sight to bear on him and as he was going by at full speed, pressed the trigger. I heard the bullet strike with a strong, dull thud, and immediately the animal turned and began to descend the slope toward the bullet was well placed and he had received his death stroke, for after running about fifty yards he rolled over on his side. The does had huddled together while the above seene was being enacted, but when the buck fell, they started off on a swift run and were in a moment hidden be-hind a rise of the prairie. I did not want them aud let them go, but walked down to where the buck was lying. He'was indeed a fine specimen of his race, with wide branch-ing hores, the hooks being of unusual length. The light had not entirely left his eyes, which still shone with the bright hues of life, but as I gazed at him their colors rapidly changed and faded away befo

HUNTER'S PARADISE.

A HUNTER'S PARADISE. HAVING had our fill of the mast fed white meat of the wild turkey, near Desputanta Station, Va., the judicial-minded Miller and J. M. S. concluded we would again test and enjoy the boundless hospitality of Richard D. Sharp, Eq., who lives the life of an elegant and hospitable planter and farmer on his thousand-aere plantation, Laurel Spring Farm, in old Surry eounty, Virginia. Mr. Sharp's farm takes its name from a clear and gushing water, as clear as Helicon and as cold as the St. Lawrence in mid-winter. The home of our generous and courtly host, who is, in fact, one of Nature's noblemen, is a large, ante-bellum, Virginia man-sion, with an ample hall at least fifteen feet wide, with open fire places in each room, where the blazing logs give out a seductive flame and heat which in the cool November even-ings make one forget the existence of such "uccessary evils" as lavyres and creditors. Mr. Sharp is a single man, who, with the help of old Unele Joe, a seventy-five-year old Scipio Africanus, who for good horse sense and a keen sense of humor lays over the deck and ranks as a domestic institution, dispenses here a truly princely hospitality. Joe is as straight as an arrow, as lithe as a middle-aged Apollo, and loves the sound of a gun and even the sight of a firearm as well as the sleuth hound loves, by sure tracing, to overtake the bound-ing stag. Old Joe is the happy possessor of an old Queen Anteor Harper's Ferry misket, and there is no finer sight upon an Easter day than to see old Uncle Joe, with his forsty prow white as the driven snow, adorn himself with an antique hunting eostume older than Light Horse Harry, shoulder his musket tenderly, and prepare for the slaughter of the innocents. When the Judicial Mind praised the bur-nished barrel of Joe's gun, the latter smiled a smile like the sourd of a sun and the martined proves of fine to is sure to sared rites of matrimony not needful to bind him to his dusky and voluminous wives. "Don't bodder li

we wants to." In the morning we breakfast on delicious coffee (no matu-tinal cocktail needed), corn bread, roast shoat, broiled veni-son (killed by ourselves) and currant jelly, the product of our host's garden currants. As we smoke our "Lone Jack" on Sharp's ample piazza, old black Joe shambles up, deferentially doffs his battered tile (hal), and says: "Boss, got no toddy for ole man dis yer mornin'?" "A ducat to the beggarly denier," to the man who could refuse the warm-hearted old African one single nin! nip

Directly fronting the piazza the gray squirrels frisk around the oak trees within fifty yards, unsuspicious of dan-ger; and Bob White wistles a welcome to the rising sun. "You can't knock the head off that squirrel," said J. M. S. to the Judicial Mind.

The squirrel was one hundred yards off in the top of a big

The squirrer was one function of the second state of the second s

Then the huntsman's horn sounded, and the dogs began to eaper about the house, snuffing fun and frolic in the westerly

when the third hill, out due battered his brains out on the side of the big oak.
Then the huntsman's horn sounded, and the dogs began to exper about the house, snuffing fun and frolic in the westerly wind.
The inevitable Harper's Ferry musket gleamed on the old negro's off shoulder, and the party was made up: Our host, Amos Cole, a jolly good man and a boniface, from Harrington, Del.; Edward L. Rice, Jr., Geo. Ellison, Austin Ellison, Judge R. T. Miller, J. Sharp (our host's brother), a good man and true, Chas. Ellison, Chas. Crafford, of wild turkey fame, and last, your scribe, J. M. S.
We had three dogs: One half hound and half terrier, old Joe's Cap'n, as he called him, Sharp's hound Fox, and Dave Harrison's hound Hike.
One might naturally think himself in South Jersey, betweeen Dennisville and Tuckahoe, Cape May county, for the serub oak abounds and the roads are so numerous that six men can strike and cover all the deer stands within two miles of the Sharp plantation, and we kill all our deer within this distance of home. We go on the old Petersburg road, leaving the Sharp farm where coton and 'peas' are raised in abundance, for the latter name is given to the fragrant peant or 'gooder.' as it is called in North Carolina. It was a glorious day, only a little too warm for comfort, and the heat made old Joe pufilike a Cape May porpoise in one of Capt. Cock's nets. I asked old Joe if he didn't want a horse to ride to the hunt. He gave me a half indignant look as he said: 'Dis ver nigga' don't want no hoss. W'at he want hos for? Deer 'fraid of old Joe when he make track frou' dem woods yonder. Joe whoop 'em up, de deer in de bush,'' and off he ambled ahead of the party, the happiest hunter in the crowd. Joe Sharp, one of the big Injuns of the hunt, who knew every stick of timber within twenty miles of the plantation, rode Charley Crafford's horse called Dor Tanner, because he looked aif he had fasted forty days. But Doc Tanner, abeit he looked like Don Quixote's Ros

bach i rve got him down. He ran in that thicket, but 1 heard him bleat." Old Joe began to laugh, and first removing his hat, defer-entially said: "Boss Riee, no meat drapped dat time, for de deer may blate down in Del'war' in November, but dey don't do dat, not down yer in Ole Virginny!" The laugh was on Rice and a solemn conelave met to de-termine whether in eonsonance with the old Surry county custom, the luckless missing hunter's shirt tail should be amputated. On account of Rice's extreme youth this usual formality—when a man missed a deer—was omitted, only in this single instance. Rice looked lugubrious and did not use the word "blate" any more that day. By order of Generalissimo Joe Sharp, we all sought new

stands. We turned away from the James River, only fourteen miles away, and Rosinante—Doc Tanner—coming up like a war horse, when old Joe blew the cow's horn, with a mouth like the Mammoth Cave or cornet à piston, to call the degs off and in to change the huntsman's venue. The writer and the Judicial Mind were posted on a pretty little knoll on the old Petersburg road, and the dogs, at 10 o'clock, began to give tongue like mad and I saw a light come into Miller's eye, like that judicial light which shines there when he gives a verdict for the plantiff in the district court. "Down on your knees," I said, and down on his marrow bones he went; and breathless we waited for the bounding buck to come our way, for the quick, deep yelping of the hounds told us of the near approach of the venison. Both of us turned our eyes at the same instant, and there was Nimrod Rice down on one knee, shotgun pointed at some-thing in the bushes, and quicker than I can write a line, out came a one hundred and seventy-five-pound buck running like a Camden cyclone, erect and beautiful, with slender nostrils distended, head well up in the air, apparently leap-ing, at every bound, over the top of the small serub oaks. The deer left the dense thicket with the baying dogs close behind in hot pursuit. He reached the middle of the old road. Rice was twenty-five yards away, well concealed from the vigilant but terrified eye of the beautiful animal, so lithe and graceful, with the delicate completeness and in-comparable neatness of limb, round, yet slim. Rice's gun was 14 inch gauge, 64 pounds weight, 28 inch barrel, 44 drams Dupont's best powder in each barrel, loaded with 13 No. 1 buckshot.

ams Dupon's best powder in each barrel, loaded with 12 o. 1 buckshot. He fired the right barrel, and a two-year-old buck dropped his tracks about the middle of the road. * Off went the second barrel, when old Joe eame bounding it of the brush, and exclaimed: in

out of the brush, and exclaimed: "Boss Rice, de Nimble Rod (Nimrod) what you shoot dat deer two times for done kill him fust shot." Then the negro began to whoop and yell like a wild Comanche warrior. "Well," said Rice, "old man, I meant to shoot as long as the deer's ears moved." "Boss," said old Joe, "You 'deemed (redeemed) you'self dis time. Meat drapped dere, too, as if old Harper Ferry hisself done it." out of the

hisself done it." Crafford's horse Doe Tanner came cavorting like a Ken-tucky racer down the road, trying to throw his rider, and prancing wildly as soon as he smelled blood. In vain did the gallant rider, Joe Sharp—all in a glow, looking like the ancient Cœur de Lion-endeavor to bring Rosinante-Tanner to the front, so as to saddle the horse with the saddle of venison. Sharp was considerably nonplussed, not being familiar with Doe Tanner's ways, for the horse stood there foaming, 'rock-ribbed and ancient as the sun," and refused to budge.

foaming, "rock-ribbed and ancient as the sun," and refused to budge. "Get off, Joe," said the smiling Crafford, for all were hilariously joyful, and it was what the great Conkling calls a "halcyon and vociferous occasion," old Joe doing most of the vociferating. Charley Crafford went up to Tanner, trembling in every limb, put the flat of his hand tenderly on his Rosinante's neck, and said soothingly, "Tanner, what ails you? Let me whisper in yer year! I want no more of this nonsense." The horse, figuratively speaking, melted, became as gentle as a lamb, and the deer was quietly slung across the bow of the saddle. It was nearing 12 o'clock, but Director General Dick Sharp said we must have another deer. I began to think the woods were full of them, and I was nearly right. — Sharp the elder jumped on his old bay mare and was soon scurrying through the bushes, and in fifteen minutes we the deer were running away from our stand. The Judge looked disgusted and all forlorn, as he did the day the 80-pound red drum broke away from his Cutyhunk line at Anglesea, N. J., when I was one big fish ahead. Sharp had driven three deer from the bushes fifteen minutes after pardless of danger or the dogs. — Sharp's old mare made a good record as to speed across the barrens, and taking a cross cut, he caught sight of a fat

had uriven three deer from the bushes fifteen minutes after he started, where they were enjoying a matutinal nap, re-gardless of danger or the dogs. Sharp's old mare made a good record as to speed across the barrens, and taking a cross cut, he caught sight of a fat fawn at the corner of a "goober" field, got in a first shot which made the fur fly, then gave chase, still on horseback, and at the corner of the negro grave yard gave the fawn her quietus with his left barrel. Here was glory and game enough for one day. And these gentlemen sportsmen, for such they all were, did not desire to depopulate the forests. We had game enough for the table for a week, and some to send to our homes in the Jerseys. Old Joe was wild with joy. If he had brought along his dilapidated fiddle he would surely have stopped along the roadside to play "Leather Stockings," or danced a Virginia breakdown on the amply-shaded piazza at home as he gazed with irrepressible emotion at the glossy hides of the two big bueks and a fawn triumphantly hang-ing in a row near the kitchen. It was one o'clock P. M. when we reached the house, tired but happy huntsmen. At sharp two P. M. the cooks gave us a dinner which Lucullus might have envied, and over which, if now alive, Sam Ward, the literary gournet of the lobby, would have smiled his blandest benison, and as Sam's diletanti stomach distended, he would have rendered with a grace all his own, his best Rabelaisian stories. The presence of some of the brightest and wittiest of the sex, kept us on our dignity between the wine and the walnuts. The scribe feit that sense of fullness so aptly described by Washington Irving, when Mynheer Van Tassel, having dined volumin-ously, tumbled over asleep on the greensward, while good digestion waited on appetite. Old Joe was a never ending source of wit in others and of infinite amusement to him-self. He explained to us how his wives left him, post-bel-hum, when, as he tersely expressed, "Massa Linkum freed the nigga' man."

self. He explained to us now his wives let him, post-out-lum, when, as he tersely expressed, "Massa Linkum freed the nigga' man." "Nimrod" L. Rice was the hero of the hour, and did not hesitate to declare that he was exceedingly glad that he had killed his first deer and on that particular humt had carned the right to wear his undiminished "phylactery" or shirt. Oharles Ellison, who mourned because we could not each get one deer on the same day, and who is the crack shot of Surrey, coaxed the Judicial Mind to take a shy at the quail, and when Richard sees a gun or a game bag or a hound dog, it does not require much blandishment to get him out for a shoot. It is a case of the war horse who snuff-eth the battle from afar. So, before the November sun had found his "bath beyond the western stars," or black night had dropped her curtain over our joyous but tired party, they bagged and returned with two dozen quail. It was Keats who told so charmingly how his (or some-body else's) sweetheart slept on the eve of St. Agnes. But she never revelled in balmy sleep with half the joy that gladened our tired sportsmen, whose dreams were filled with jack rabbits galore and turkeys innumerable, while the deer

roamed the happy hunting grounds of sleep, thick as stars in the Milky Way. What would civilization be without a gun and a dog, and, if you please, lacking the quaint humor of poor old Joe, who deserves in the great hereafter a home where his Harper's Ferry musket will be ever bright. That merry party will not soon forget the days "we went gypsy-ing" through the balmy woods and over the fertile "goober" fields of old Surry, nor will we ever cease to remember how our hearts warmed before the open fires of our generous host, and how glad we were made by the open-handed and large-hearted hospitality on Dick Sharp's plantation in Surry county, old Virginia, in November. J. M. S. CAMDEN, N. J.

STATE GAME PROTECTORS' REPORTS. Editor Forest and Stream:

<text>

"I have sufficient evidence to warrant the prosecution of quite a large number of persons for hounding deer. I vis-ited Indian and Blue Mountain lakes in December to look up additional evidence. I returned home Dec. 24 and have been confined to my house and bed with pleuro pneumonia

up additional evidence. I returned home Dec. 24 and have been confined to my house and bed with pleuro pneumonia much of the time since. "I have been particularly interested in the case of an Albany gentleman who hired the game constable as one of his guides to put out dogs. They killed several deer between Oct. 9 and 16. I presume he can give the dates, if not I can inform him

genterman who hired the game constable as one of his guides to put out dogs. They killed several deer between Oct. 9 and 16. I presume he can give the dates, if not I can inform him.
"The suit against Wescott is still pending. Lately I have discovered the witness upon the testimony of whom Wescott was indicted is the very man who killed it. Wescott and the witness divided the venison.
"Several suits are still pending, though it is through no fault of mine. I have done my best to push them along, but find I cannot hurry the court. The above report contains an account of only a small part of the work performed. I have done all in my power to see that the law was enforced. I have investigated every complaint made to me. Sometimes there is not sufficient evidence to warrant prosecution and sometimes no offense is committed, complaint being made by a party ignorant of the law.
"I suggest that protectors should be allowed to appoint deputies. In some towns they purposely elect game constables who will not qualify. One half of the fines should go to the protector and half to the informer.
"The law should allow the destruction of pickerel in any manner and by any device. They are destroying the trout in the Hudson River and its tributaries.
"The game protectors should be allowed to read the evidence in game cases before the Grand Jury, in order that they may know it is all given. Much time is now spent in collecting evidence never used. Sometimes it is purposely omitted.

they may know it is all given. Much time is now spent in collecting evidence never used. Sometimes it is purposely omitted.
"I can assure you that I was much pleased to receive your in which I have performed the duties of protector since my appointment. I have done my best to merit your approval and that of all who desire to see the law enforced."
Matthew Kennedy, of Hudson, State game protector for the third district, in his annual report states that he was employed 63 days last year and that he traveled 3, 604 miles. He prosecuted 22 persons for violating the game laws and all but two were convicted. Fines aggregating \$255 were receivered. He has two suits still pending. Mr. Kennedy says: "I would recommend a change in section 4 of Chapter 534 of the laws of 1879. The provision relates to the shooting of wildfowl, and says, 'any person who shall at any time kill any of said birds between sunset and day light, or pursue or fire at any of said birds with the aid of any light or latern, shall be deemed guilty of a misdemeanor,' etc. It is very difficult for me to fasten violators of that part of the section in October, 1854, and the district attorney could not hold them for the reason that the justice held that as the parties did ot have an artificial light they were not liable. It is a custom for Troy and Albany parties to come here on afternoon trains and not attempt to do any shooting until fast sums, when they go among the birds on the feeding beds. Shooting is done in the vicinity of Coxsackie and Stockport. If the section read 'to pursue or fire at any of said birds they were a read and the words relating to artificial light were omitted, it would be an easy matter to dectect and convict offenders." Porrsa.

VIRGINIA GAME SCORE.

ter to dectect and convict offenders." PORTA. A VIRCINIA CAME SCORE. Since of this cold February evening before an old fash inducable billing in the place, with dry logs piled up high naturally fell into a meditative mood. My two red Irish setters Nemo and Uno, and a pointer pup, lemon and white, looked from one to the other my thoughts reverted to the shooting season just passed, and the many haleyon days I ion save the Irish setters. Partridges were very pleutiful the past season, and I think I did fairly well as to the num-ber killed. I kept a diary of each day's shooting, and look-ation save the Irish setters. Partridges were very pleutiful the past season, and I think I did fairly well as to the num-ber killed. I kept a diary of each day's shooting, and look-ation save the Irish setters. Partridges were very pleutiful the past season, and I think I did fairly well as to the num-ber killed. I kept a diary of each day's shooting, and look-ation over a shooting together that two men elaim the same score. My setters are both good retrievers, and I cannot now recall but one single bird that I shot down and they it this after noon I he contrary can recall many birds withed but for the sagaeity of my dogs. There is one fact in yo other way except; by the head. If the bird is only mouth he manages to get it by the head, and brings it to me with only the head in his mouth and the body of the bird any other way except; by the head, and brings it to me with only the head in his mouth and the body of the bird any dogs, it is the first time I have ever seen these two are the past season one deer and half a dozen wild turkeys, and hares by the quantity. Now that the scason for shoot-get game is passed, I am turning my attention to the first on the same dog. In addition to the 760 birds, I also in the past season one deer and half a dozen wild turkeys, and hares by the quantity. Now that the scason for shoot-ing game is passed, I am turning my attention to the setter of the prot

DELRI SPORTSMEN'S CLUE.—At the fourth annual meeting of the Delhi (N. Y.) Sportsmen's Club the following officers were elected; President, R. F. Mitchell; Vice-President, D. L. Wight; Treasurer, G. E. Maxwell; Secretary, E. L. Hitt; Directors, G. M. Harby, F. H. Griffls and D. A. McNee.— F. L. HITT, Secretary.

HOUNDING AN ADIRONDACK DEER To Make it "Shy"---so that the Still-Hunters will not get it.

THE SENTIMENT AGAINST HOUNDING.

THE SENTIMENT AGAINST HOUNDING. THE strength of public sentiment against deer hounding in the Adirondacks is becoming daily becoming more manifest. Opposed to the selfish individuals, who by mis-representation and forged statistics are trying to mislead the Senate into serving their greedy purposes, the great mass of the sportsmen of the State are showing themselves to be on the side of the present law. The Onondaga Sportsmen's Club Syracuse, and the Monroe County Club of Rochester have of sent to Albany resolutions indorsing the anti-hounding bill. SYRACUSE, N. Y., March 3.—Editor Forest and Stream: The Onondaga County Sportsmen's Club held a meeting last night to protest against the repeal of the anti-hounding law. These resolutions were unanimously adopted: Whereas, An effort is now being made in the State Legisla-

These resolutions were unanimously adopted: Whereas, An effort is now being made in the State Legisla-ture to repeal the act of last session prohibiting the running of deer with hounds or dogs in this State; therefore Resolved, That it is the sentiment of this meeting that said act and its rigid enforcement are necessary for the protection and preservation of game. Resolved, That in our opinion said law has already produced beneficial results. Resolved, That we ask the Legislature of the State to defeat any act repealing or in any way detracting from the force of said act of last session; and Resolved, That these resolutions be properly engrossed and signed by the officers of this club and delivered to the mem-bers of the Legislature from this county, and copies sent to the city press. Action was also taken relative to the fitting up a club

Action was also taken relative to the fitting up a club house north of Onondaga Valley.—ONONDAGA.

Rochester, N. Y., March 5, 1885.—Editor Forest and Stream: At a meeting of the Monroc County Sportsmen's Club held last night, the following resolutions were adopted unanimously, and it was resolved to send a copy to the Governor:

Whereas, The Assembly has passed a bill repealing the law 1885, prohibiting the hounding of deer in the Adirondacks

The reast into this ounding of deer in the Adirondacks, and Whereas, The law which it is proposed to repeal is a just one, called for by the dictates of humanity, common sense and the permanent interest of the State; therefore, Resolved, That we invoke the Governor to veto the repealing law, if it should pass the Legislature. Resolved, That the game on the public lands of this State should be preserved and perpetuated for the whole people and not be given up to immediate or rapid extermination in the temporary interests of professional hunters, hotel keepers, gourmands or others who will not hunt if fairly. EDMOND REDMOND. EDMOND REDMOND.

New York Fisherr Commission.—New York, Feb 27. —Editor Forest and Stream: Venison has been scarce dur-ing the past season, as compared with previous years. A very small percentage of the supply is Adirondack deer. Fully 80 per cent. of the venison consumed in New York comes from Minnesota. There has been a smaller quantity of Adirondack venison in market during the past season than ever before. This is the result af my own observation, and you can confirm it on application to any of the large poultry and game dealers.—E. G. BLACKFORD.

Hounding must be prohibited absolutely and at all times. If the practice be permitted at all, the destruction of deer by dogs will not be confined to the hounding season; it will be continued the year around. This has been abundantly de-monstrated. The Adirondack deer dogs are maintained on

game killed out of season. Here is another recent case in

game killed out of season. Here is another recent case in point:
Builty Three and Stream:
Builtor Horest and Stream:
Takes week a neighbor of mine, while visiting his fox traps, came upon the trail of a bleeding deer which had evidently been followed by two dogs. Taking the trail he soon found where the final strunggle had occurred. The snow was trop had dispeared. The doe was with faw.
This is one of the evils of keeping and using hounds of which I have before spoken. This deer and her fawns have had supparently been done the day before and the dogs had dispeared. The doe was with faw.
This is one of the evils of keeping and using hounds of which I have before spoken. This deer and her fawns have here been sacrifieed. In the next town where dogs are out the region where any deer are to be form.
I would like to show to every member of our Legislature to forze the oby of this doe, as it lies with lis two little fawns disclosed through the gaping wounds, already half way on the tozen budy of this doe, as it lies with its two little fawns disclosed through the gaping wounds, already half way on the tot better to risk it on the side of humanity than otherwise?
The Albany men, not one of whom would be seen leading non as coming from a partisan source, and the truth is hard to better to risk ut on the side of humanity than otherwise?
The Albany men, not one of whom would be seen leading a wound so the sectes of the city, are working only for their own protection. The welfare of the deer is ended, turn on the protection. A week or two in the woods at the end of summer teaches them all it is necessary to know, and they are able to discourse knowingly of woodcraft, and especially of the fawns who is unwilling to give up any part of his pleasure when necessity demands it, is unworthy of the mane. The time has come when to prevent extermination, we will all make some concessions. We have asked the pose double at mounding, knowing that practice to be the greatest e

HAGUE, N. Y., March 2, 1820. The remaining Adirondack deer are not so numerous that the State of New York can afford to maintain hordes of hungry hounds in the North Woods by feeding them on February killed does heavy with young.

A hearing was given by the Game Law Committee of the New York Senate on Tuesday last on the bill to repeal the present non-hounding law. Senators Vedder, McMillan and Wemple were present. The hearing was opened by those who desire the repeal of the present law. Mr. Foster led off, and was followed by Mr. Richardson, of Lewis; Mr. Barnes, of Essex, and Mr. Palmer, of Franklin. The arguments ad-vanced were those that have been heard before, that bound-ing made the deer shy and so protected them from the still-hunter. The speakers were evidently not practical woods-men, and all their remarks showed that they were quite ignor-ant of the habits of deer. They also professed great bitter-ness against the jack-shooters. Mr. Van Santvoord opened on the side favoring the pres-

ent law, and made a capital speech, in which he took the ground that if the bill now under consideration was brought forward in good faith the supporters of the measure ought to have in some way limited the killing of the deer rather than to urge the opening of an additional method of killing. He stated that the opponents of the new bill were willing to give up jack-shooting or to give up still-hunting, for they want to protect the deer. As showing the destructiveness of hounding in comparison with other methods, he instanced a county in Florida where ten years ago, although still-hunt-ing and fire-hunting were both practiced, the deer were still plenty until hounds were brought in, when they began to diminish in numbers, until now they are no longer found within the limits of the county. Mr. Sprague, of New York, followed, showing that hound-ing deer was the method followed by city sportsmen and dudes, hy men in other words who had neither the skill nor the endurance to match their powers with those of the wild animal whose senses are keen and which is ever on the alert.

wild animal whose senses are keen and when a alert. Mr. Erwin, Senator from St. Lawrence county, made a few remarks in which he stated that he had no intention of going into the merits of the question, but he desired to say that the people of St. Lawrence county felt very strongly on this subject and asked the committee as a favor that what-ever action they might take on the bill as a whole, they would not force hounding upon that county, as his constitu-ents by a very large majority were unalterably opposed to it. Several other gentlemen from St. Lawrence expressed simi-lar views.

ents by a very large majority were uninterative opposed to the Several other gentlemen from St. Lawrence expressed simi-lar views. Mr. Rushton, of that county, made a telling statement of fact in support of the existing law in which he exposed the falsity of many of the statements made by the supporters of the bill under discussion. He showed that whereas it had been stated that 260 deer had been shipped from Canton during the past season, as a matter of fact only 123 had been sent from there, and that the number was to be accounted for by the fact that a new stage line had recently been opened from Canton leading twelve miles back into the woods. These deer had been bought up by the merchants at a number of outly-ing villages and sent to Canton as a shipping point. He said that the sportsmen and guides of St. Lawrence had had twelve years experience of a non-hounding law and that they knew that under its provisions the deer increased. They were prac-tically unanimous in support of the law as it stands to day. General Curtis made some remarks advising the opponents of the present law of the points which would be made against them at a subsequent hearing. The committee then adjourned to meet in one week in the Senate Chamber at Albany for a final hearing in the matter.

Still-hunting is the most legitimate as it is the most diffi-cult method. * * * Hounds are also employed to drive the deer to runways or to water. It requires no very great degree of skill to shoot a deer as he runs by within thirty or forty yards, and even less to kill one when swimming in the water but a few feet from the boat. The latter method is therefore in high favor with the average summer tourist, who cares nothing as to how his game is secured, provided only he can truthfully boast that he has killed a deer.— *George Bird Grinnell in "Sport with Gun and Rod," p. 152.* (New York: The Century Co., 1884.)

THE OLD TRICK —J., B. and myself were hunting ducks on Thompson's Lake last fall. One morning, seeing some ducks about 200 yards out in the lake, I began firing at them with a .40-caliber rifle. After three shots we discovered that they were decoy ducks. I left at once for the tent. While I was gone the owner of the docoys came up and asked J. and B. if they were shooting rifles. They told him they were not. "Wel," said he, "somebody has shot my decoys all to smithereens with a rifle." While this may speak well for my marksmanship, it speaks badly for my judgment of ducks.—Ex Am.

MASSACHUSETTS ASSOCIATION.

THE regular monthly meeting was held at the Parker House, Boston, March 1. Forty-six members present, and as invited guests Mr. Wm. H. Parker, of the Fish and Game Protective Society of Montreal, and Ned Barber, from Rangeleys. Two members were elected and thirteen propo-sitions for membership presented. The prosecuting attor-ney of the association, Mr. J. Russell Reid, was elected an honorary member. There was considerable discussion in regard to pushing the work at the State House regarding the game bill prepared by the association, and the following resolution was unanimously adopted:

PREAMBLE.

PREAMBLE. The existing game laws of this Commonwealth are in the opinion of the members of the Massachusetts Fish and Game Protective Association and many others who have given these laws an intelligent, impartial and unselfish study, the weakest and most absurd of any in this country. In almost every other State in the Union, the close time for the sale of game is the same as the close season for field and market are identical.

the sale of game is the same as the close time for the killing, or in other words the open and close season for field and market are identical. In every other State in the Union, except New York and Missouri, it is most stringently forbidden by law to buy, sell or have in possession any Virginia partridge (commonly called quail), or pinuated grouse, commonly called prairie chicken, after the first day of January. In New York, dealers are given the month of January to close out all stock of these birds they may have on hand, but after the first day of February they are forbiddeu under heavy penalties to have these birds in their possession. In Massachusetts, game speculators are by our present law allowed until the 1st of May, or three months longer than in any other State, to buy, sell or have these birds in possession. This absured provision of law, this association claims, works greatly and directly to the detriment of the people of this Commonwealth; for it authorizes the game speculators to keep at will from the market, and thus from the people, all the supply of these two kind of game birds which come to this State, and permits them to hold for a rise in price greatly in excess of what is just and fair. The supply from outside the State, both legitimate and illegitimate, must stop early in February, and this being the fact the speculators secure the eutire stock, and hold it in freezers for a fourth part of the year; thus keeping from consumers an important and wholesome article of food, doling it out in quantities to suit themselves, and at most ex-tortionate prices. Such a thorough monoply of any article of food should not, in the opinion of this association, be conntenanced by the laws of this Commonwealth. The existing law also encourages and stimulates fraudulent and surreptitious dealings; for a large proportion of the sup-ply of these two kinds of game birds that comes East is sent here illegally.

The states which furnish about all the quail and grouse brought here are Indiana, Illinois, Michigan, Minnesota, Iowa, Wisconsin, Missouri, Kansas and Nebraska, and from a majority of these States all persons, express companies and other transportation companies are forbidden by the law under heavy penalties to transport or carry these birds out-side the borders of those States. All quail and grouse, therefore, that are shipped here from those States are absolutely contraband; they are sent here in defiance and violation of the law. Can Massachuetts longer countenance such a monoply as the game speculators now enjoy? Is it wise policy to protect and encourage a specula-tive business whose foundations rest upon a questionable basis?

basis?

Dasis? The association believes it is not, holds that the time should no longer be deferred for the observance of decency and a fair regard also for inter-state comity in our game

and a fair regard also for inter-state comity in our game laws. The provision by law for the protection of our native song and insect-eating birds is lamentably and miserably weak, and as a result, hundreds of thousands of them are slaughtered annually for millinery purposes. In conse-quence of this wholesale slaughter, noxious insects, the far-mer's worst enemies, are increasing to a most alarming extent, and crops which were formerly protected by these birds are now almost impossible of cultivation. This is not the only evil, for many of our native songsters, particulary those of bright plumage, those beautiful denizens of our woods and fields, are almost entirely exterminated, and unless a quick remedy in law is found we shall lose completely some of our most valuable birds. This association has tried, in vain, for several years to secure a better law, and believing that it is its duty to try again, makes still another effort. We again call upon the Legislature for the enactment of a good and strong law which will serve to stop the merciless destruction that is so con-stantly going on.

stantly going on.

RESOLUTIONS.

RESOLUTIONS. It is therefore by the Massachuetts Fish and Game Pro-tective Association: *Resolved*, That the Legislature of this Commonwealth be and is carnestly requested to cnact a new and more wise and just code of laws providing for the protection and sale of game birds, and for the preservation of our native song and insect-eating birds. *Resolved*, That an appeal be, and is made by this associa-tion to the clergy of this Commonwealth, the various "Bands of Mercy" and other bodies formed as bird protectors, the public press, the farmers and horticulturists and all others who love our native birds and wish to protect them, to, without delay and in the most earnest manner, urge the Legislature to enact a better law than that how existing, a law that will give protection and which can be enforced.

CLUB RULES.

THE following are the by-laws of Delhi Sportsmen's Club: ARTICLE I. Name. This club shall be called the Delhi

ARTICLE I. Name. This club shall be called the Delhi Sportsmen's Club. ART. II. Object. The object shall be to promote gun prac-tice, and the protection of fish and game. Order of Business. Reading minutes of last meeting. Col-lection of fines. Reports of committees. Balloting for can-didates. New Business. Adjournment. ART. III. Officers. The officers shall consist of a president, vice-president, treasurer, secretary and board of three directors. ART. IV. Duties of "Officers. Section 1. The president chall preside at all meeting of the club or board of directors. Sec. 2. The wice-president shall perform the duties of the president during bis absence. Sec. 3. The treasurer shall

collect and have charge of the funds of the club, and pay such bills as have been approved by the directors, and at the annual meeting shall make a detailed report of all funds col-lected and disbursed by him during the year. Sec. 4. The secretary shall keep a record of all meetings of the club and board of directors, and notify each member of all meetings, by mail or otherwise. Sec. 5. The directors, together with the president, vice-president, treasurer and secretary (who shall be directors ex officio), shall have charge of the manage-ment of the club and club property. ART. V. Membership. Any person wishing to become a member may do so by notifying the sccretary and receiving a majority of the votes cast, at any meeting of the club, and the payment of §1. ART. VI. Meetings, Sec. 1. The annual meeting shall fall on the first Wednesday of March in each year. The regular meetings shall be held on the first Wednesday of each month, and special meetings may be called by the president and board of directors, or upon the written request of five mem-bers of the club. Sec. 2. The officers shall be elected at the annual meeting, by ballot, for one year, and should any vacancy occur during said term it shall be filled by the board of directors. Sec. 4. No meeting shall be called except on a previous notice of two days to each member. Sec. 4. Five members shall constitute a quorum. ART, VII. Kees. Sec. 1. Initiation fee shall be §1. Sec.

of directors. Sec. 3. No meeting shall be called except on a previous notice of two days to each member. Sec. 4. Five members shall constitute a quorum. ART. VII. *Fices.* Sec. 1. Initiation fee shall be \$1. Sec. 2. If, at any time, the funds of the club shall be \$1, Sec. 2. If, at any time, the funds of the club shall be \$1, sec. 2. If, at any time, the funds of the club shall be \$1, sec. 2. If, at any time, the funds of the club shall be \$1, sec. 2. If, at any time, the funds of the club shall be \$1, sec. 2. If, at any time, the funds of the club shall be exhausted, an equal assessment shall be made upon all members of the club, and in no case shall the assessment amount to more than five dollars in one year. ART. VIII. *Fines.* Section 1. If any member refuses to pay an assessment or fine, he shall be suspended or expelled from the club. Sec. 2. Any member pointing his gun at another member, whether gun is loaded or not, shall be fined \$1 for each offense. Sec. 3. If any member shall be proven guilty of violating the game laws, he shall be fined by the club \$5. Sec. 4. If any member knowing of the violation of the game laws by another member, and fails to report the same to the club, he shall be fined \$2. Sec. 5. It shall be the duty of each and every member to report any violation of the game laws to the club, and the president shall appoint a committee of three to investigate the case, and if they find a just one it shall be the duty of the club to prosecute said parties. Sec. 6. Any member divulging any of the private business of the club shall be furthing any of the distance. Sec. 3. Sec. 2. Any member using intoxicating liquors before or during any match or practice, shall be debarred from shooting on said day. Arr. X. These by-laws may be amended at any regular meeting, notice of the same being sent to each member of the propose change.

AMERICAN RIFLE TRAJECTORIES.

<text><text><text><text><text>

28in. long, weighs 8lb. 6oz., and in the latter the barrel, 27in. long, weighs uo less than 114lb. In several other instances the barrel alone weighs from 6lb, to 7lb., whereas in the English .450 rifle that took part in these experiments the weight of the pair of barrels is only $5\frac{1}{2}$ lb., the full weight of the rifle being 8lb. 13oz.

and English .400 rine that look part in these experiments the weight of the pair of barrels is only 54b., the full weight of the rifle being 8b. 13oz.
In the Putney trials there were half a dozen expresses of .577-bore; but the largest size used in the American trials was .500-bore and the smallest .200. The particulars of weight and length of barrel are given in the following list, where the rifles are classified according to bore and the names placed in alphabetical order; and there are also added along side for the purpose of comparison, particulars of regists rifles at the Putney trials. The numbers '.50-15-350,' or similar figures after the names of the rifles denote the ammunition used, according to the American mode of notation, this meaning ''50-bore, 115 grains powder, 350 grains bullet.'' Of course, where the decimal point is visible, it is immaterial whether the diameter of the bore is printed .5, .50 or .500, and I have seen these three ways in different pages of the same book; but in England, where many rifles are made of .577 or other calibers that cannot be lessened in number, it is found more convenient to name other bores likewise by thousandths of an inch; and this, at all events, prevents the misunderstanding that may possibly arise between the 4-bore, 40-bore or other raubter that means so many splicical balls to the pound, and the .4-bore, .40-bore or other caliber that denotes a fractional part of an inch. Hence I have headed the following divisions in the ordinary English way, although the American notation is followed in respect to the particulars of ammunition:
We omit the list of rifles entered.—Eng. F. AND S.]
The weight of these weapons of diminutive canber is especially noticeable, seeing that here is a .220-bore, single barrel, having a charge of only 5 grains of powder and 40 grains of lead. One may readily believe that very steady shooting at short ranges can be obtained from such ponderous toys.

primes of lead. One may readily believe that respectively shooting at short ranges can be obtained from such ponderous toys. The English rifle affords a convenical means of comparison between the American rifles shot at Creedmoor and the English weapon tried at Putney. At the latter trials Messrs. Bland's rifle made the best target at 50 yards in the .450 class, but was defeated at 100 'yards and 150 yards by Messrs. Holland's rifle, which carried a somewhat heavier projectile, that showed much greater steadiness at the longer distances. The trajectory ranges at Putney and Creedmoon uot being the same, an exact comparison cannot be made; but judging from the 150 yards records, it may be inferred that the rifles of .400, .450 and .500 bores tried at Putney would vary very little from the Bland rifle shot at Creedmoor—some probably having a slight advantage or disadvantage at the longer range, and others at the shorter, according to the weight of the bullets and charge of powder. The proportion of powder in Holland's .400-bore was about 1 to 2 6; in Bland's .450-bore, 1 to 2.7; and in Holland's .450-bore, 1 to 2.9; while in several rifles not tried at the trajectory screens it was 1 to 2.3 or 2.4. The fact that the American rifles (with the exception of the two inuzzleloaders) showed, in the majority of cases, much higher trajectories than the English Express, is what might be expected from their comparatively small charges of powder. Except in a single instance, with a very light hollow bullet, not one of the American boot 1 : 9 and even 1 :10. In the muzzleloaders, on the contrary, the proportion of powder than it to 3; for the most part they varied in the larger tores from about 1 : 9 and even 1 :10. In the muzzleloaders, on the contrary, the proportion of powder was greater than in any of the English rifles mentioned above, being 1 to 2 in Major Merriil's rifles ment its respective bullets at distances 50 yards apart in the 200 yards range. These heights are the average of five shots each, as a rule, althoug

the nearest hundredth of an inch. [We omit the tabulated results copied by *The Field.*—ED. F. AND S.] In the unmerous trajectories here given, there are, as may meedily be imagined, various irregularities, which depart more or less from theoretical accuracy. If bullets would always spin quite evenly, and the successive cartridges give exactly the same amount of speed, and if the atmospheric conditions were uniform throughout the trials, then one might expect the results to be regular; but, considering the numerous incentives to variation, the wonder is that the records come out so closely as they do for the most part. Instances of irregularity in cases of this kind may often be traced by taking half the height of the trajectory midway in the 200 yards range, and deducting it from the 50 yards height in the same range, when the height at the middle root 100 yards should be obtained; or, conversely, half the 100 yards height in the long range may be added to the 50 yards height in the short range; and similar methods might be adopted for other distances whenever there is a foundation to work upon. If such a process be applied to the trajectories of the Bullard rifle that appear at the top of such alter of .500-bores, it will be found that with the solid bullet there is an appreciable difference between the actual and calculated results, but that with the hollow bullet the figures approach very much closer. This may in great meas-ture be explained by the fact that the atmospheric conditions, while the solid projectiles were being fired in the 200 yards. The temperature alone there was a difference of 90 degrees, busides changes in wind and humidity, which altered the re-gistance of the atmosphere, and thus founded to increase or diminish the normal retardation of the bullet. On the other whand, when the hollow bulkets were tried at the long and the short range, the differences of atmospheric condition were so small as to be immaterial. The careful manner in which this trial wa

the proposed change.

(3 rds.) 1 6 sin.2.80 m.2.62 m.1.73 m.2.22 m.1.85 m.It will be seen by the minus marks (-) prefixed to two shots of the Whitney-Kennedy, that they dropped so much after 25 yards that a horizontal line drawn from the muzzle of the rifle to the target would actually have been higher than these bullets were at mid-range; but they rose again between 50 and 75 yards, and must have risen still higher before they completed the 100 yards. Casting out the two most irregular shots with both rifles, there is not a vast deal of difference between the averages of the three remaining rounds; but only one of the bullets from the Whitney-Kennedy can be said to have had a fairly even flight. It is not easy to say what could be the cause of this difference in performance with the same annunition unless it were the difference in the rifling. Both were 6-groove rifles, but the winchest one turn in 60 inches, the rifling with the formar being also twice as deep as the latter. It is evident, therefore, that mere rapidity of spin does not secure accuracy of the shorter of the two, while experience seems to show that these vagaries are of most frequent occurrence with bullets which are very short in comparison with their caliber.Manney the about the very short in comparison with their caliber.Manney the action paid for any traces of leading in the barrel, but now was several times cleaned, and particular attention paid for any traces of leading in the barrel, but now low, in every and various directions." There was fortight later, it was the doil the schert range, only one shot could be got upon the target; so that to one shot in each range the record is confined. The Bullard repeater, with

Right barrel average Left barrel average	50yds. 4,94in. 5.14	100yds. 7.47in. 7.59	150yds. 5.83in. 5.75
General average	5.04	7.53	5,79

This general average is the one entered in the above table for the 200 yards range; and for the shorter range, with both solid and nollow bullets, only the right barrel was used. As at Putney, there was some little irregularity of gyration ex-hibited by this rifle, two of the bullets being higher at the last screen than they were at the middle, but it was only to a small extent. One curious fact, however, remains to be

stated. Five shots were fired from this rifle at 100 yards, the barrel being wiped out after each round; and five other shots were fired without cleaning. The trajectories were lower in the uncleaned rifle, the average being as follows:

50vds. 1.46in. 1.33

This result may possibly have been due to the lubrication left in the uncleaned barrel lessening the friction of the bul-let, which consequently started on its flight with a higher velocity.

velocity. The two muzzleloaders of .420 bore gave remarkable re-sults, but, as previously stated, the proportion of powder was higher than in any of the other rifles, and the trajectories were correspondingly low; but again evidence was given of the corkserew gyration, as will be seen by the following fig-ures with Major Merrill's rifle: Round

Round, 1, 2 3 4 5	1.239 1.038 1.170	50 Yards. 1.373in, 1.498 1.399 1.051 1.210	75 Yards, 1.270in. 1 205 1.419 1.051 1.421	
Average, Do, (4 shots)	1.130	1.306 1.370	1.273	

Average.1.1301.8061.273Do. (4 shots).1.1211 3701.285It will be observed, on examination, that only one of the
five bullets flew with strict accuracy, although most of the
divergencies are comparatively trifling. In the second round
the bullet at the third point is lower than at the first, instead
of being higher; in the next the bullet is higher at 25 yards than at
the two next screens; and in the fifth round it is much lower
at 50 than at 75 yards. Omitting this last round makes a
marked change in the center and renders the proportion
more correct. These statements, however, are only given in
illustration of the previous recorded facts, and the observa-
tions are not intended to depreciate Major Merrill's rifle,
which is an admirable weapon of its kind; and I imagine the
defect must have been in the bullets. Shortly before this
trajectory trial, Major Merrill, who is a staunch defender of
the merits of muzzleloaders, gave in Fonest AND STREAM
lengtby details of the shooting powers of this rifle, accom-
panied by diagrams of the targets made with spherical balls
and charges of equal weight of powder and bullet (1 to 1).
The accuracy of the shooting was remarkable; and
Major Merrill challenged the world to produce
any breechloader that would equal this performance when
using powder and bullet in the ratio of 1 to 1. The chal-
lenge was not accepted, as may be readily supposed. It is
easy enough for muzzleloaders to use any proportion of pow-
der whatever; but breechloaders are not so accommodating,
and they are not usually chambered for such a ratio as 1 to 1.
With a lesser proportion of powder, however, quite as re-
markable shooting was made by breecbloaders at the Putney
trials. Jeffries' .500-bore, with the same number of shots
at 75 yards made an average of .696in. But, to return to
th

longing to his friend, Mr. Romer, was brought for the second test. With respect to the smaller bores, I must leave the records to speak for themselves for the most part. It may be said, however, that they generally shot with greater steadiness than the larger bores—owing, in all probability, to the bul-lets being longer in proportion to the caliber; and some of the very best results were given by rifles of .400 and under. The Bullard .300-bore was not shot at 100 yards, owing to its action getting out of order. The so called "Hunter's Pet" (.320-bore), was the lightest rifle in the trial, having a skeleton stock and a barrel only 18in. long. It gave a great deal of trouble in testing, as the shots flew so wildly that about a score bad to be fired before five could be got through the screens on to the target at 200 yards; at 100 yards there were similar divergencies, though fewer in number. Those bullets that were got on the target showed satisfactory regu-larity; the trajectory, however, was the highest of the whole series, but, as the proportion of powder was only about one to ten, the result is not very surprising. In conclusion, I can only congratulate your American contemporary on having brought its self-imposed and most troublesomet ask to so highly satisfactory an issue. T.

WOOD POWDER.—When the advertisement of the Ameri-can Wood Powder Company was brought to us by Mr. Elliott Smith, the president of the company, we accepted it upon that gentleman's representations respecting the mode of manufacture and the safety of the product; and, further, with the express stipulation on our part that the advertise-ment should remain in the FOREST AND STREAM only pro-vided that Prof. Henry Morton, President of Stevens Insti-tute, to whom we would submit samples of the powder, should report upon it corroborating the representations of the manufacturers. We at once sent some of the powder to President Morton for analysis. His report was expected immediately, was delayed, asked for from time to time, and has never been received. Considering the time that has clapsed, we can hardly be expected to bold the matter longer in abeyance, and it can be taken as no injustice to the manu-facturers to refuse a further publication of their advertise-ment until we secure from Prof. Morton a report which would warrant its insertion.

MISSISSIPT.—Aberdeen, Feb. 27.—The quail scason has pretty well closed, although the law in this county allows them to be shot until March 15. The birds have stood the cold well and we bave a fair number to carry over to the next season. If the spring proves dry we will have a fine stock for the next shooting season. Some snipe have come in and a few small bags have been made; but our best shooting occurs in March. During the severe weather in January a great many ducks were in the river, principally mallards, and several large bags were made. This was an unusual occur-rence for this locality, as ducks have been very scarce for several years past.—WILL.

ADIRONDACK FISHES.

Editor Forest and Stream: My note in your issue of Feb. 11 has already brought a valuable contribution to my work on the fishes of the Adir-ondacks. I could not find a specimen of the little miller's thumb, Uranidea gracilis, and inserted a description on the authority of Dr. C. Hart Merriam. A few days ago a pint fruit jar filled with them came to me from Malone, Franklin county, N. Y., and suspected that they came from Mr. A. R. Fuller, of Meacham Lake, to whom I wrote and received the following very valuable contribution regarding their habits:

MEACHAM LAKE, N. Y., March 1.

habits: MEACHAM LAKE, N. Y., March 1. Friend Mather: I write to-day because I can write and may not be able to write a word for a week. When I sent "my thumbs" I could not write, but I thought you would know where they came from. I hope the package reached yon safely and that you were able to identify the fish. I did not find as large ones as I have seen, but did get larger ones than we generally see in the brooks. I have no doubt they can be found in nearly every pond and stream in the Adirondacks; but they are so very insjinificant that nine out of ten persons would never notice them. The little light brown or spotted ones look something like a sculpin; we find them in great numbers in this lake and in all the streams about here. The larger dark ones with red mane and tail I have never seen in any other water but the little brook from which I took the lot. I have seen them there at all seasons of the year. I wish I could sit down with you for an hour or two and go over your re-port. I find several things which I think I can help you to describe better. In May, 1871 I met Louis Agassiz at his home in Cam-

seen them there at all seasons of the year. I wish I could sit down with you for an hour or two and go over your re-port. I find several things which I think I can help you to describe better. In May, 1877, I met Louis Agassiz at his home in Cam-bridge and we talked fish for three hours. He asked me about this fish which I called miller's thumb; he had never seen it in America, and he said no one knew much about its habits, how or where they spawned or how long it took the eggs to hatch. I told him I had seen the eggs quite often, and when I got home I took several lots into the hatching troughs and hatched them, and kept the little chaps about ten days. They dig under a stone and fasten the eggs to the under side in a pile bottom side up, or like a conical pile of shot turned over, point down; the cones vary from a quarter to one inch in diameter at the base, and are about the same distance from base to point. I put six or seven of the cones into the boxes, and kept watch of them. It was fifty days from the time I put them in until I saw the first fish, and the little chaps kept their sack of grub three to five days; they were about three-eighths of an inch long. The eggs are about the size of No. 8 shot, the temperature of the water was 45 to 47. I was somewhat surprised that it took so long for the eggs of warm-weather spawners to hatch. You can separate the eggs from the stone and they will still keep the form of the cone; the pile is well stuck together. I once put a large thumb into a pail to take to the house, and also caught a newt like the one I put in the jar. In a few minutes on looking in the pail, I saw the thumb had the newt by the middle, and after a long struggle the newt went down my thumb, and when the lead came to the thumb's gill, the newt shid out, and I sat down and laughed. I thought it about the neatest escape I ever heard of, and I expected to see the thumb try it over, but he did not. A. R. FULLER. The jar has not yet been opened, but seems to contain fifty or sixty specimens from on

THE TROUT OF SUNAPEE LAKE. X

CONCERNING the notice of the "sun trout," or charr, Concerning of New Hampshire, which appeared in our editorial columns of Jan. 14 and was further commented upon by Mr. Samuel Webber in FOREST AND STREAM of Feb. 11, we are now enabled to lay before our readers the decision regarding its species which has been arrived at by Professor Baird and Dr. Bean. The following correspond-ence, which we are permitted to publish, explains the matter in full: in full:

ence, which the series in full: Editor Forest and Stream: I send you with this Dr. Bean's last report on the Sunapee Lake trout. In some respects I am surprised at the conclu-sions he comes to. It seems strange to me that he finds no difference between these fish and the blueback trout of Maine, as I believe I can show trout as many pounds in weight as he can show me a Maine blueback in inches in length. Again, the Maine trout seek the streams for the purpose of spawning; the Sunapee trout do not, they are lake spawners. I do not doubt that they belong to the Oquassa type, but that they are identical with the blueback trout of Maine I do. I have not time to write you more at present. You will please return me all the papers at an early date. Yours very truly, E. B. HODGE.

E. B. Hodge, Esq., Plymouth, N. H.: DEAR SIR-I beg to inclose herewith a final report from Dr. Bean in regard to the trout from Sunapee Lake, and would suggest your having it published in FOREST AND STREAM. Yours truly, SPENCER F. BAIRD.

WASHINGTON, Feb. 17, 1886. Prof. Spencer F. Baird, Director U. S. National Museum: STR-I beg leave to offer herewith a report upon some trout of Sunapee Lake, New Hampshire, which were re-ceived from Mr. E. B. Hodge, the first and largest on Nov. 3, 1885. It is a male twenty-two inches long and weighed six pounds. It is catalogue No. 37, 357. Three additional examples arrived on the 9th of January, 1886. These are catalogue Nos. 37,408, 9 and 10. The first two being females and the last a male. The smaller of the females is about twelve inches long. I find that these trout are identical with the blue-back trout of Quassa, the Rangeleys, and other lakes of Maine. The same species also occurs in the township of Pepalonnes,

Province of Quebec, in a lake just below Lac Sac A Comie, which is situated about seventy miles east, and about forty miles north of Montreal. A specimen was caught in this lake by Mr. C. H. Simpson early in the present month and was brought here by Mr. E. G. Blackford on the 10th inst. It is catalogue No. 37,670. The blue-back trout is described in recent ichthyological works under the name of Salmo, or Salvelinus, oquassa. The same species also occurs in Labrador and in Greenland, in which countries it reaches an immense size. Mr. L. M. Turner sent from Labrador a number of very large examples, much larger than any other specimens of Salvelinus to be found in the museum. One of these specimens (from Turner) is twenty-six and one-half inches long, and, in its present condition, weighs seven pounds, after lying in alcohol two years.

Condition, weight seven pounds, after lying in alcohol two years. The oldest available name at present known to me for this species is stagnalis, of Fabricius; and our species should stand as Salvedinus stagnalis. I can find no difference of specific importance between Mr. Dresel's Disco Island speci-mens, Mr. Turner's Labrador examples, Mr. Hodge's Sun-pee Lake blue-backs, Mr. Simpson's Quebec specimens and the *oguasa* of Maine.

pee Lake blue-backs, Mr. Simpson's Quebec specimens and the oquassa of Maine. Among the characters which I take to be of specific value are the following: Proportions of the various parts of the body, length and number of developed fin rays, size and number of the scales, shape of the caudal fin, number and size of the gill-rakers, shape of the gill-covers, character of the dentition of the hyoid bone, size of the eggs, number of the pyloric excea and general features of coloration. I find for example that none of the charrs, in which the hyoids are specially developed, have mothed fins, such as are always observed in the com-mon brook trout, S. fontinalis. It is highly desirable to obtain from Mr. Hodge a full ac count of the feeding and breeding habits of this blue-back trout of Sunapee Lake. Our knowledge on this subject is very limited. It is highly desirable also to secure additional specimens of the blue-back from Maine, and these should be as large as possible. There is not now in the Museum a single individual from Maine that will reach twelve inches in length. Very respectfully yours, T. H. BEAN, Curator, Dept. of Fisheries.

It has formerly been supposed that the range of the blue-back trout was confined in the United States to a few lakes in Maine, and that it was a fish of very small size. It will be seen from the above correspondence that its habitat is not as restricted as has been thought, and that its size is sufficient to command it to the notice of anglers. Mr. Hodge says, 'he can furnish even larger specimens than those which he sent to Professor Baird. When we saw the small speci-men from Canda, at Mr. Blackford's in Fulton Market, we said, "If the fish had come from Maine we should think it could be nothing else but a blue-back trout." Its graceful shape, forked tail, absence of mottling on fins were sufficient to show that it was neither our native brook trout nor a salmon; yet its coloration did not seem to be so decided a blue as specimens we have seen from Maine.

BLACK BASS vs. PICKEREL.

BLACK BASS vs. PICKEREL. The second second

"The black bass furnishes good sport with the rod?" "Oh, yes." But a little of it has satisfied all the sportsmen near the waters in Maine best stoeked with them. Lovers of the rod who dwell on the banks of the Sebago waters or the Win-throp ponds, drive thirty or forty miles to trout streams and ponds. They take their annual trips to the Androscoggin Lakes. But they do not "tackle up" and fish for the black bass which are often within less than a mile of their doors. The most of them have tried the bass fishing; a few catches was cnough. Says one gentleman: "I caught a savage, call-looking fish, but his ungainly carcass was destitute of all the lines of beauty which go with the fresh-caught trout or salmon. A pickerel is king to a bass in the way of looks. Then when I had caught my row of ugly, black gudgeons, what was I to do with them? They are no good as a fish to eat. We left our catch of bass to rot, and I learn that every other sportsman, who has tried them cooked, does the same."

same." Who has ever seen a black bass in market? Perhaps a few might find their way there, but a very few would block the way ever afterward. Not so the pickerel; he is a good mar-ket fish. Thousands of pounds find their way into the Bos-ton markets every year. It is too bad to take so much poetry out of what has been written concerning the black bass as a game fish, but to eat his warty, wormy hide is too much. The fact that he is of no earthly use when caught, helps to kill the glamour of catching. In some of our inland, muddy waters the bass may do, but to the sportsman who can reach the clear, sparkling trout waters, he is of no account. account.

account. The people upon the bass waters of Maine will probably ask their next Legislature to do no more protecting of black bass, and possibly to make some law against his further en-croachments. In several sections of that State the people wished the black bass in their waters, but they now more heartily wish him out and even the pickerel back again. The white perch is a far better fish, and he might have been The white perch is a far better fish, and he might have been the might have been the people upon the bass waters of Maine will probably the people upon the prove of the prove of the people the people upon the prove of the people the people upon the prove of the people the people upon the people upon the people of the people the people upon the prove of the people the people upon the people upon

propagated in many of the ponds now given up to black bass. But both white and brindled perch are fast disappear-ing from waters where the black bass reigns. There are a plenty of Maine sportsmen who seriously blame the prime movers in introducing black bass, because they did not look more thoroughly into the habits and value of those fish before putting them into waters where there was any hope of even pickerel. MAINE.

THE SAME OLD STORY.—One of the chief attractions of Lake Hopatcong as a summer resort is being rapidly de-stroyed by the waste from the Forcite Powder Works being allowed to run into the lake. A party from this town went on Wednesday to the beautiful inland sea for a day's fishing through the ice, and after fishing for several hours and not catching anything, they moved on up the pond to a place where a party of men, who reside along the borders of this sheet, were fishing, and found empty creels there also. Upon inquiry as to the probable cause of the fish not biting, one of the natives volunteered to show our townsman where the trouble lay, and going to where the ice was clear he told him to look through and in doing so innumerable dead fish were seen floating away under the ice. The gentleman fur-ther said that if a live bait were sunk down to within a foot of the bottom of the lake, it would die in a minute, and he believed that the mortality was caused by the discharge of the waste acids into the lake by the powder company. In walking a mile our informant counted over a thousand dead fish of all varieties. The matter should be looked after by the proper authorities, and sportsmen who are interested in preserving the lake as a fishing resort should make an effort to let the authorities know that danger of its entire ruin exists. If the fishing is ruined, the popularity of Lake Hopat-cong as a summer resort will be short-lived.—*Hackettstoren Gazette.*

Gazette. A NUISANCE AT HOPATCONG.—Morristown, N. J., March G.—*Editor Forest and Stream:* Lake Hopatcong, lying in the hills of Northern New Jersey, is suffering from the poisonous refuse of a powder factory which is drained into the lake. The lake has been a favorite resort for ang-lers for some years past and the black bass have been in-creasing in its waters since they were planted there some ten years ago. This winter thousands of dead fish have been seen through the ice, lying on the bottom of the lake and the natives about the shores claim that they were killed by the acids or other material discharges from the powder works. Cannot something be done to stop this?—G. B.

THE NEW YORK TROUT LAW.—As the law now stands, all fishing through the ice for brook trout is forbidden at any time. Trout may be taken in the counties of Queens and Suffolk from April 1 to Sept. 1, but in the rest of the State the lawful season is from May 1 to Sept. 1. We learn that Senator Traphagen has introduced a bill which provides that trout legally taken on Long Island, in the counties mentioned, may be held, but net sold in other counties. This will permit anglers who fish on the island to bring their fish to their homes in New York or Brooklyn, and will remedy one of the errors which we have pointed out. We think, however, that a bill which opened the sea-son south of one of the lines mentioned in our editorial last week, on April 1, would be more satisfactory all around, as many anglers wish to fish in other waters near the city besides those of Long Island. It was manifestly unjust to allow fishing on Long Island and then forbid the angler, who in nine cases out of ten came from the city, to bring his trout to his own table.

MORE MUSKRAT FISHING.—Manistee, Mich., March 1.— In your issue of Feb. 25 I read with interest Mr. Dyer's account of catching a muskrat through the ice on a pickerel hook. In the winter of 1800, while fishing on Charles River, near West Newton, Mass., with a friend, we had almost the same experience. Running to one of the lines which wa down, I pulled out a dead and limp muskrat securely hooked in the side of the head near the mouth. As the bait was missing, we at once concluded that, while trying to secure the shiner or minnow, the muskrat had hooked himself and immediately drowned. It is singular that the one Mr. D. speaks of was alive when taken out, for when fast or caught under the ice they soon lose their breath and are drowned. So it is probable that the one he refers to had but just been hooked. It is evident that muskrats sometimes feed on fish. I have caught them in traps set for mink and bailed with fish.—E. H. B.

ST. LAWRENCE RIVER FISHING.—The Utica Association for the Protection of Fish and Game and the Anglers' Asso-ciation of the St. Lawrence River have adopted the follow-ing resolution: "Resolved, That these associations approve the extension of the close season for bass and muskalonge from May 15 to June 15, as recently made by the depart-ment of marine and fisheries at Ottawa, and heartily recom-mend that the close season in the State of New York, and particularly in the St. Lawrence River and Lake Ontario, be extended to the same date, as the best means for protect-ing the fish while on the spawning beds."—PORTSA (Utica, March 6, 1886).

THE BASS AND MUSCALONGE SEASON in the St. Lawrence, Clyde, Suncea and Oswego rivers, is from May 20 to Jan. 1. In other words no black bass nor muscalonge can be caught in those rivers, or had in possession, or sold, only from May 20 to Jan. 1, under a penalty of \$10 for each fish so killed or had in possession. This open season is generally understood, and accepted and respected, and it is that there may be no mistake about the time that I send you this note, writes "Old Sport" to the Syracuse Journal.

THE SUSSEX ANGLER'S CLUB has just been organized and has purchased Grant Lake, on Pochuck Mountain, near Deckertown, N. J. The lake covers fifty acres, and is so liberally supplied with bass that it will not need stocking. The officers are: Cyrus C. Force, of Brooklyn, President; Schuyler B. Jackson, of Newark, Vice-President; Howard Littell, of Deckertown, Treasurer, and Theodore S. Morrell, of Newark, Secretary. The preserve cost \$5,000.

HERRING IN THE AIR.—A correspondent of *Nature* gives some instances of herring jumping out of the water when frightened. He says that he has observed whole shoals of this fish, in their anxiety to escape when pursued by whales, piled up above the surface of the sea to a height of from three to six feet. On one occasion the fish formed a mass even with the top of the mast of a fishing boat, viz., about fifteen feet, and had part of this mass fallen into the boat it would doubtless have sunk.

FISHCULTURE AT BLOOMING GROVE PARK.

FISHCULTURE AT BLOOMING GROVE PARK. Editor Forest and Stream: The Blooming Grove Park Association now have a hatchery in their extensive grounds in Fike county, Pa. The selection of the site was determined some two years ago through the enterprise of Dr. Spencer M. Nash and others, who obtained the services of Mr. Fred Mather to examine the different springs and streams, and also to plan the hatchery. This winter it is in full operation. Mr. Hardy, one of the direct-ors, has presented the club with over a thousand eggs of the brown trout, obtained in England. and which arrived in good order and are now on the trays. The native spawners did not yield many brook trout eggs; it seemed to be an off year with them, and but a few thousand were obtained. From the U. S. Fish Commission the club received 15,000 brook trout eggs, and 50,000 eggs and 25,000 fry have been purchased from Jas. Annin, Jr., Caledonia, N. Y. All the eggs are looking well, the water is cold and the development goes on slowly, which is understood to be best for the young fish. WHITE MILLER. BROOKLYN, March 3.

LAND-LOCKED SALMON IN NEW YORK.

LAND-LOCKED SALMON IN NEW YORK. A Sour readers are aware the land-locked salmon of Maine A has been successfully acclimated in that portion of the fair as to live there and to be occasionally captured. We now far as to live there and to be occasionally captured. We now for the club, Gen. R. U. Sherman, who is also one of the State commissioners of Fisheries, who, in a letter dated March 3, and says that he took at Woodhull dam last fall a male haddocked salmon which tipped the scales at ten pounds. The hand-locked salmon which tipped the scales at ten pounds. The state of the club sales one of the State state of the same set on the sloping wall of the dam has tall to spawn. This wall is laid at an alge of forty-five state tall to spawn. There are open spaces between the heres spaces where they would be secure from depredations. My Stell took also several female fish which he stripped and independent the lake. The fish work it here are very the stude with a worm. The fish took the hook, apparently to here the declear rather than as food. The large salmon was probably from the original plant made in 1879. There have be one hand plant made in 1879. There have here have plants made since that time, one in 1882 of 10,000 from the hatchery at Cold Spring Harbor, and 10,000 in 1883 hatched at the Bisby Club hatchery from spawn furnished hardended salmon ever taken in this State."

SHORT LOBSTERS.

largest land-locked salmon ever taken in this State."
SHORT LOBSTERS.
OME persons may think that a short lobster is as good as a first of hong lobster is alread. Now this 's just where the law tops in a theat of the able crustaceans are becoming extinct the noble crustaceans are becoming extinct first on constant and unremitting fishing. In order to give the obster time to grow, and prevent the taking of a three up to site, the outper crustaceans are becoming extinct for bis weight, the Legislatures of Maine and Maximum and Legislatures of Maine and Legislatures of Maine was calculated and being sold 'on the sig." He also became satisfied that one or two parties, at least the owners of smaines, were in harbor, buying the short lobsters off the lishermen, putting Boston and New York under cover of night. Commissioner F Maximum and New York under cover of Legislature, putting them to Boston and New York under cover of Legislature, and his detectives on the warde hor certain vessels expected with short of bosters. One schoner arrived the other day, and was arribed by Mr. Shattuck and his detectives, but no short bosters from one William Tree and hew York under cover of night to Commissioner or boston, or the matter with bis usual earnesses. He put B. W. Courge, the Maximum and New York under cover of night commissioner of sea and shore fisheries, of Thomaston, on the york. One Warden Johnson also came to Boston, other york the intention of putting Deputy Shattuck and his detectives on the watch for certain vessels expected with short obsters. One schoner Arrivee the other day, and was another baut dand enother suppeed cover

PORTLAND, ME., March 3. William S. Trefethen was before the court this morning charged with having in his possession 1868 lobsters less than $10\frac{1}{24}$ inches in length. He was found guilty and was fined \$1,868 and costs.

FISHCULTURE IN NEW HAMPSHIRE.—A large amount of work is being done at the State hatcheries at Livermore Falls and Sunapee Lake. There are now in the hatchery at Livermore Falls 500,000 eggs of the whitefah, 750,000 Penob-scot salmon eggs, 90,600 lake trout eggs, 330,000 brook trout eggs. Quite recently 250,000 brook trout eggs have been sent to Massachusetts, and 10,000 rainbow trout eggs from Baird, Cal., and 125,000 landlocked salmon eggs will be received this week from Grand Lake stream. At Sunapee Lake hatchery are 100,000 brook trout.

THE AMERICAN FISHERIES SOCIETY.—We have before stated that the annual meeting would take place in Chicago on April 13, 14 and 15. We now learn from Mr. F. N. Clark, chairman of the local committee, that the meeting will be held in the dub rooms of the Palmer House, which will seat 400 people, and that it is proposed to make an exhibit of fish in aquaria, specimens in alcohol, apparatus, etc., in the Exposition building. The printed invitations are not yet issued.

A. K. R.-SPECIAL NOTICE. THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is pub lished every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription \$1.50. Address. "American Kennel Register," P. O. Bo. 2832, New York. Number in close developed 2481 of entries already printed 3481.

THE CRYSTAL PALACE DOG SHOW.

<text><text><text><text><text><text><text><text><text><text><text>

by picture of the stand his dam was purchased by Mr. Nach aver the dog's home. Mastifis had a good entry in the challenge class, King Canute winning also the cup for the best in the show. He is a grand dog and well known, yet he is quite lame and we always ex-pect him to be so. Montgomery came second to him, beating Pontiff and Maximilian, who was in form, but behind the others in head. Open dogs saw the Scotch representative first. He was in fair condition, but evidently suffering from skin disease. Two equal seconds went to young dogs rather plain in type. We preferred Bismark, who is rather light in eye-but of good type, and has plenty of size. Imperial Chancellor,

FOREST AND STREAM. although long in face and not the best behind, we think ought to be further up in the company. Prussian Prince is too small in head, he is good in body but lame. The winner in bitches is a good one and was well placed. Vivian is not the best be-hind the shouldors and her ears are on the large side. Prin-cess Ida, well known, is longer in face and large in ears, and not good enough for a massive body. First in dog pupples is a fine puppy; he was in good condition, but is very throaty and is rather low in front. There were only two bitch pup-pies; the winner is much the best. The challenge class for St. Bernard dogs Plinlimmon won wolly one entry in the challenge class for bitches and she did magregor, a good sort of dog with plenty of bone and sub-stance and shown in good form; his ears are a trifle too large. Shit, second, is rather long in face and weak in front of eye, but a good showy upstanding dog. Kastlehorn is another havy-bodied dog, too large in ear. Scotch Bonivard, a strong large dog, is too long in face. Bitches as a class were smaller than the dogs, but were good, all the winners showing orsiderable quality. We thought them correctly placed. The feature of the Show was the young bitch, first in pupples, which beat her sire Plinlimmon, and although a grand birdr, we crainly consider her long in face and large of ear. How-ver, at the same age her sire possessed the same faults equally are unch as she does and it was a great performance beating for when more matured. The best team we have seen from one kennel. Lord Nelson we think won correctly in the challenge class. In the chal-lenge class for other than blacks, Trafalgar won well. In the bass for black dogs there was a good collection of typical specimens. Hanlan we considered made a good first. A diminal Bruce equally as good as the third prize winner. In bitches the winner is a grand specimen; very good in ear and coat, also with a good tace, with a rather short tail. Some fancied the se

<text><text><text><text>

ears, her feather was too light in color. In sheep dogs, challenge class dogs, Dublin Scot, coming into good form, won somewhat easy over Sly Fox. In bitches Peerless, in good form, won well over Peggie II. In rough dogs The Squire just managed to come to the front. We have always liked him, and think him a dog full of quality and of the correct type, but always scarce of coat. However, he is gaining in coat, but there is room yet for improvement. We find Bister, one of the best dogs in the class, unnoticed. He

is good in coat and has good ears, with good feet and legs, but seems short in face and body. The second prize, Motley, is very moderate. Sky Blue is a good collie with a good coat, but he requires more quality in head. Second, Filbert, red in color, is coarse for a young dog, and we certainly think him too thick in skull. Rob Roy McGregor is a good black and white, but just on the coarse side to please some of the club men. King of the Glen, c., bar his tail being gaily car-ried, we liked as well as any in the class. He is a beautiful rich red tawny dog, with a very handsome head and ears, good in coat and frill, with the best of feet and legs, and is a well-made dog all through. Paramont is a real good sort, too weak in face and light in bone. In bitches first went to Gipsy Queen, a good collie, but small and light in bone. Lady of the Lake, winner of fourth, is just soft enough in expression. Daty, third, is too small in face. Subeam, c. only, we think one of the best in the show, but she was just out of coat. Tippet Craig, vhc., is also a nice bitch; she was heavy in whelp. In dog puppies we fancied the third prize, Sydney. He is a good, slashing young dog, with plenty of coat and character. Yankee Jaek, whc., is of very good style, but is too fine in face. The bitches were only moderate. Taken as a whole we think there was a very large percentage of mod-erate animals. In the Irish water spaniel challenge class Young Hilda was

In the frish water spaniel challenge class Young Hilda was rst. The open classes were moderate, as has been usual

THE BEN NEVIS SERVICES.—*Editor Forest and Stream:* The following questions having been submitted by the Foress AND STREAM to the undersigned committee for examination and report: Whether Ben Nevis was competent to line a bitch? What bitches, if any, did he line after July 1, 1855? The committee having been attended by numerous witnesses on both sides, and having heard all the testimony submitted, are of the unanimous opinion that Ben Nevis served the fol-lowing bitches on the following dates: Beauty III., on July 11, 1855; Meg Merrilles, on July 13 and 14, 1855; Jeanne II., on Sept. 8, 1855; Nelly Grey, on Sept. 10, 1885; Jeanne II., on Sept. 8, 1855; Nelly Grey, on Sept. 10, 1885; Jeanne II., on Sept. 1, 1855; Disy, on Nov. 13, 1885, Respectfully sub-mitted, EDWARD DUDLEY, WM. H. CHILD, A. H. MOORE (Phil-adelphia, March 4, 1856).

THE TOTAL number of entries in the American Kennel Register are 3451. The Register is booming.

NEW HAVEN SHOW SPECIALS.—The following specials have been provided: Chas. H, Mason, a piece of plate, value \$55, for best dog or bitch in classes judged by him. Best ken-pel mastiff \$25. Best mastiff stud dog, \$10. Mr. Wade for best mastiff \$25. "Ashmont's" "Diseases of the Dog" for best bitch in open class, best dog pup and best bitch pup. Best kennel rough St. Bernards, \$20; smooth \$20. Best smooth St. Bernard dog, bitch, dog pup and bitch pup. "Ashmont's" "Diseases of Dog." Best kennel greyhounds, \$10. Best grey-hound, clock (New Haven Clock Co.). Best kennel pointers, \$25; pointer stud dog, \$10. Prize, value \$25, for handsomest setter or pointer ever run in public field trials. Spratts Patent, Spratts patent collar and 100lbs, biscuits, for best pointer. Best kennel English setters, \$25; English setter stud dog, \$10; pair pure Laveracks, dog and bitch, \$10. Prize, best English setter bitch with field trial record. Spratts Patent offer Spratts patent collar and 100lbs, biscuits, best setter. Best black and an setter stud dog, \$10; kennel Irish setters, \$15; prish setter bitch with field trial record. Spratts Patent offer Spratts attent collar and 100lbs, biscuits, best setter. Best black and an setter stud dog, \$10; kennel Irish setter, \$15; coster spanel best and \$0, \$10. Winohester rifle, best Irish setter, \$15; coster spanel best and dog, \$10. Winohester rifle, best Irish setter bitch American Spaniel Club, silter cup for best beagle over 12 inches; silver cup for best beagle under 12 inches. Arm chain, best pair basset hounds. Best kennel collies, \$15; coster spaniel, \$10; for test collie. Best bundt. Best kennel collies, \$15; doek of the Dog" for best collie. Best bundt. Best kennel collies, \$15; best beagle over 12 inches; silver cup for best beagle under 12 inches. Arm chain, best pair basset hounds. Best kennel collies, \$15; best beagle over 12 inches; silver cup for best beagle under 12 inches. Arm chain, best pair basset hounds. Best kennel collies, \$15; bout be the bage? for best collie. Best bu

IMPORTANT SALE OF ENGLISH SETTERS.—Mr. E. J. Martin, of Wilmington, Del., has sold his kennel of English setters, formerly known as the Goodsell Kennel, to Mr. Fred E. Lewis, of Tarrytown, N. Y., proprietor of the Blackstone Kennel. The sale includes the well-known pure Laveracks: Prince, Don Juan, Petrel III., Fairy II., Fairy III. and Daisy Laverack, as well as several puppies of the same breeding. Queen Petrel was included, but had strayed or been stolen and has not yet been found. This purchase will materially add to the strength of the Blackstone Kennel, which, as heretofore, is under the charge of Mr. Wm. Tallman.

AMERICAN-ENGLISH BEAGLE CLUB.—Editor Forest and Stream: The club will donate two silver cups, one for the best beagle dog or bitch in open classes over 12 and under 12 inches at the following shows: Hartford, New Haven, Bos-ton and Newark. These specials are given to the open classes as most specials have heretofore been awarded to dogs in the champion classes, and by that means one or two dogs have won most all the prizes, which is unfair, as there is honor enough now, as a dog has to win three times before he can enter the champion class.

PUPPY GIVEN TO DR. GARDNER —Editor Forest and Stream, During the winter of 1882 (possibly 1881) a person who imported sporting dogs gave to Dr. Gardner (of Canal street, New York city), in part payment for the latter's services, a black and white English setter bitch puppy. At the time of the transaction the bitch was so sick that it was doubtful whether it would live or not. If any one can give the address of the importer or of any one who knew of the transaction, he will confer a favor by addressing H. J. PIERRE (Winsted, Conn.).

BOUND BOOKS OF KENNEL BLANKS.—We have bound books of kennel blanks, each book consisting of 200 blanks of a given style, and can furnish these (postpaid 30 cents) for the convenience of those who have occasion to use a large num-ber of blanks. In ordering be careful to state what particular series of blanks is desired, *i.e.*, whether Names Claimed, Sales, Bred or Whelps. The arrangement of the blanks is such that a duplicate record of each note sent for publication may be re-tained for future reference.

HARTFORD DOG SHOW.—The following railroads have offered to carry dogs free for our exhibition: N. Y., N. H. & H., New York & New England, Hartford & Conn. Western, and Hartford & Conn. Valley. The Adams Express Com-pany will charge double merchandise rates both ways, but we have made arrangements with other express companies, and special instruction cards will be sent exhibitors at their request.—A. C. COLLINS, Secretary. (Hartford, Conn., March 5, 1886).

ST. BERNARD IMPORTATIONS.—The Hospice Kennels have imported Mr. Henry Schumacher's smooth-coated dog Hector, whelped Feb. 20, 1884. Color, tawny with white markings; sire, Apollo. He was accompanied by a young bitch for Mr. W. W. Tucker, in whelp to Hector. The bitch Tony, from the same kennel, will leave Bremen on the 10th inst., consigned to the Hospice Kennels.

IRISH SETTER BITCH LOST.—A dark red Irish setter bitch, eight months old, with a little white on breast and a small showing of white on head, and a small scar near right eye, strayed or was stolen on Feb. 20. Any information that will lead to her recovery will be remunerated. Address R. Woodman, Faulkner Station, Malden, Mass.

NEW ENGLAND KENNEL CLUB.-Boston, March 8.-Editor Forest and Stream: Everything looks very favorably for our coming show. Entries close the 20th inst. In addition to our other deerhound class we have made Class 88A, deer-hound puppies, dogs; Class 88B, deerhound puppies, bitches. -E. A. MOSELEY, Secretary.

NEWARK SHOW.—New York, March 5.—Editor Forest and Stream: Owing to new business connections, Mr. A. C. Wilmerding will be unable to officiate as judge of the spaniel classes at Newark. Mr. J. F. Kirk has kindly consented to act in his stead.—A. P. VREDENBURGH, Sec'y.

THE TOTAL number of entries in the American Kennel Register are 3481. The Register is booming.

KENNEL NOTES.

KENNEL NOTE S. KENNEL NOTE BLANKS.-For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." RANGE AND GALLERY.

BOSTON, March 6.--The attendance at the range at Walnut Hill to-day was fair. During the day a strong 11 o'clock wind prevailed, which made shooting difficult. During the day a friendly match was shot between the members of the Massachusetts Rifle Association, all shooting at 200yds:

THE TROPHY AND A. C. A. DUES.

Biltor Forest and Stream: A principle that has been put forward first, last and all the time by the officers of the A. C. A. Is that no prizes of money value shall be officred. The rules state that A. C. A. prizes shall be flags, Every effort has been made in the past to prevent "mug hunung," An A. C. A. prize certainly means one that the Association pays for. The Association has not paid for the tropby. Perhaps a hundred mem-bers have subscribed, and two hundred more may send in §1 each. Even then the tropby will be paid for by a minority of the members, and why should those who do not subscribe have any claim on the trophy?

bers have subscribed, and two hundred more may send in §i each, Even then the trophy will be paid for by a minority of the members, and why should those who do not subscribe have any claim on the trophy? It is proposed to have a valuable prize presented to the Association for a sailing context. The Association of course can and did appoint a committee to look after the matter, and it has a right to say under what conditions the prize shall be raced for if a accepted'. It would he foreign to the policy of the Association to decree that this prize shall be awarded to the winner of the first race-or any race or series of races-to become his personal property. By a rule of the Association donations for prizes are placed in the hands of the regatat committee. Why should any exception/be made in the case of the trophy? The regatat committee's actions are all subject to the approval of the Association as represented by its executive committee. I submit the above for consideration since a member of the exceu-tive committee's actions are all subject to the approval of the Association as represented by its executive committee. I submit the above for consideration since a member of the exceu-tive committee's autraction to the programme (an extra race or races in which they can take part), a few members of the A. C. A. Charles and what the dassociation has to do with it. Three gentlemen from England are expected to be at the meet next the facts. Why is the regular procedure in such cases not now fol-proposed that such members as wished to should subscribe for a tu-phy to he put up as a prize for such a race, leaving to the Association ton, very property, the labor of naming the conditions. These are the facts. Why is the regular procedure in such cases not now fol-held responsible for the result. "Too many cooks," etc. Mother A. C. A. matter has come to my notice. Several clubs have the latter course. As only a small minority of the members can attend a meet, and as those who were absochation for increasing its dues

C. BOWTER VAUX. CAMBRIDGE C. C.-Editor Forest and Stream: The Cambridge C. (Cambridge, Mass.), organized June 9, 1885, held its fourth quar-erty meeting for the election of officers on March 4. The officers for he following term are: Commodore, John B. Jacobs; Vice-Commo-done, Clarence F. Glovci; Secretary and Treasurer, Rupert M. Gay. Che chub signal is a pointed burgee, with blue field, white center and call letter C. We have had our headquarters at the Riverside Boat house during the past season, but are now thinking of building a louse of our own. Several of the members it tend to make a cruise poor the Charles River this summer. We have all had some experi-ance with heavy cances on the numerous dams in our vicinity, and igree with heavy cances on the numerous dams in our vicinity, and gree with heavy cances on the numerous dams in our vicinity, and gree with heavy cances on the numerous dams in our vicinity, and igree with heis boate Boston Club in wanting lighter ones. Three of the members bave concluded to build new ones for river work, 10ft. Jubis in the vicinity to carrange for cruises and holiday trips. All communications should be addressed to R. M. Gay, 107 Washington theet, Boston, Socretary C. C. NEW YORK C. C. OHALLENGE CUP.—The secretary of the N. Y. C. C. has received the following letter in regard to the coming races: 12 Manz LANZ, E. C., Feh. 17, 1856. Data Sin –Your latter of Jan. 19, containing modified conditions of the proposed international cance aree has been duly laid before my committee and approved. It is most probable that three of our members will attend to compete for your Oup in the latter part of August, but I shall not be authorized to send you a formal challence until after the spring meeting of this club on the 23d inst.,-T. G. F. WINSEER, Sec'y R.C. C.

THE ROYAL C. C.—The spring meeting took place on Tuesday last at the Caledonian Hotel. Much regret was expressed at the retire-ment of J. W. (Cayton from the mateship, and a vote of thanks was passed for his kindness and liberality to the club during his term of office. Mr. Baden-Powell was unanimously elected to the vacant post, and the following list of fixtures were made for 1886; April 17, Hendon; sailing race; sail area limited to 75 of ff. April 24, Hendon; first class sailing. May 1, Heudon; challenge cup. May 19, Kings-ton; half-mile padding. May 26, Kingston; one mile padding. June 5, Kingston; two miles padding. June 19, Teddington; fast class sail-ing. June 19, Teddington; June 19, Teddington; sailing; any eanoes; girth measurement. June 19, Teddington; sailing; any be held in the vicinity of Teddington Reach on the Friday hefore the react, with Canoe, exhibited on this occasion. On the metion of T. J. Holding, a sub committee, onsisting or R. B. Prothero, W. P. Shad-bolt, Major Roberts and T. H. Holding, was appointed to collect in formation for the furtherance of cance cruising appli-ances, with Canoe, S. Howas also decided that a challenge should be at once sent to the New York C. O. to race for the handsome inter-national cup offered by that club, and the meeting of the stational cup offered by that club, and the meeting of the furtherance of the theore for the fundom field, *Peb*, 21.

of cruising appliances. Iswas also decided that a challenge should be at once sent to the New YOR'C. C. to race for the handsome inter-national cup offered by that club, and the meeting then closed.— London Field, Fiel, 87. THE WESTERN CANGE ASSOCIATION.—A meeting of the Ex-ceutive committee of the Western Canoe Association was held has week in Clincinnali, when the arrangements were perfected for the meet at Ballast Jsland, Luke Erie, begtoning July 1 and continuing to July 26. The Lake Erie yachts will rendezrous at the island during the meet at Ballast Jsland, Luke Erie, begtoning July 1 and continuing to July 26. The Lake Erie yachts will rendezrous at the island during the meet at Dalod their annual registra under the auspices of the Cleveland Y. C., whose commodorc, Mr. Geo, Gardner, is also com-modore of the W. C. A. The Inter Lake Yachting Association, which met at Toledo on the 6th inst., with representatives from Buffalo. Erie, Cleveland, Sandusky, Detroit, Chicago and Miiwaukee, will probably hold their regata off Ballast in the middle of July. The western Amatour Rowing Association will, it is expected, accept the invitation of W. C. A. to have their races at the same time and place, so that the prospects for a brilling gathering of sails, cars and pad-dles are very encouraging. The W. C. A. has now on its menhership lat nearly one hundred names, which will no doubt receive large additions as July approaches. A pamphlet containing the programme of the meet, lists of classes, races, anuswents for each day, etc., with full information respecting accommodations and the best means of reaching the island will be published in a few days. OAKLAND C. C. CRUISE.—While Eastern canceists were skating and coasting their luckier brothers of the far West were enjoying a couple of miles. With a good breeze Goat Island was reached at a to functing the island will be published in a foul tide and head wind made it impossible to reach there, and the flee theaded for Hunder's Point, reaching it at 11 A. M. Embarkin

clubs compete, special prizes will be offered. SMOOTH SKIN CANOES.—Captain Ruggles, of Charlotte, is busy with a number of orders for bis carvel built cances. Com. Rathbun's new boat will be 15ft, 8in, by 30in. Sofronia will have an after hoard added this season. Prof. Mellen will have a new cance, and Mr. Ruggles is also huilding one for Mr. D. C. Platt, one for Messrs. Walters and Stewart, and one for Mr. W. A. Borden, hesides some open cances and rowboats. BUCKTAIL CANOES.—We advertise in another column a duplicate of 'Nessmuk's' famous cance, which he is now using in Florida. The boat is a new one and has never been used.

PEARL-Mr. Baden-Powell, of the Nautilus, has laid up his 175 ton yawl Peart at Shoreham for the season as he will visit America with his canoe this year.

Hachting.

MORE YACHTS FROM BOSTON.—It is time that New York looked to her laurels if she is to retain the place she has so long claimed as a leader in yachting. Hitherto she has had little to fear from East-ern yachts, hut last year the Puritan's success gave all the fame of the races to Boston. This year she is launching out for further vic-tories. Besides Puritan and the new Maydower another large yacht is now promised, a schooner from Mr. Burgess's designs, for a gen-tleman in Provinence. This new boat will resemble the other two in model, being 1081t. over all, 86tt. waterline, 22tt. beam, with lead keel and centerboard. Lawievs will build her, and she will be ready in tume for the Newport races. The same firm will also build a third class sloop for Mr. J. S. Fay, of Boston, from Mr. Burgess's designs.

YACHT STOVES

PACHT STOVES. Editor Forcest and Stream: T was the original "W," who wrote in favor of a gasoline store. A stand prepared to prove to any one that the gasoline store will pro-duce four times the beat an oll store will and that it is less liable to accidents, and that those accidents which do occur are less serious in their results. It is prohably not known by most people that it gasoline be spit on a floor and ignited it will burn up the same as alcohol and not leave a trace of the liame. Will the stove I use an accident is impossible, and is a wood jacketed can is used for storing hade from patterns of my own design for my own use, a gasoline store perfectly adspited to single hand craft. The kind before described in these columns was designed for heating irons, not for costing. Mine is made for cooking only more water which I have eruised a number of times. The annoy store water which I have eruised a number of times. The annoy there are ad with much interest the cruise of the Coot, because it stores waters. I fear that the effect of reading the cruise will deter to there from Philedelphia to Trenton is from one-half to a mile whee statified annog eastern waters. I wish to sty here that the pelaware from Philedelphia to Trenton is from one-half to a mile whee ad that there is a fift, channel to Bordentown and 5ft. to Tren-to the water. A boat drawing 8ft, do water needs no chart. There are only two bars of any importance to such a boat, one oppo-tive Torence and the other at the more in the same as a our western rivers. When I state that can schooners carrying 300 tons of coal navigate that the triver is lighted by heacons the same as our western rivers. When I state that can schooners carrying 300 tons of coal navigate the river at all tides, in all which, and by any and night, it hink that is out. Worker. A boat drawing 8ft, outs one coal meaving the river at all tides, in all which, and by any and night, it hink that is out. Worker.

ATLANTIC.

DATABANCIE: THE extreme cold weather of last week was not favorable for out-floor work in shoch an exposed piace as Bay Ridge, but consider-able progress has been made in the new yacht. The two main keel ledges of the trunk tolled in place; the several pleces forming the provide the trunk tolled in place; the several pleces forming the nearly to the after end of the trunk above the main keel and to each other, and aft the main keel pieces have had a short piece soreming the part of the trunk tolled in place; the several pleces forming the nearly to the after end of the trunk above the main keel and to each other, and aft the main keel pieces have had a short piece stare bound and a heavy oak deadwood or keelson, running from the sterupost place on the sterupost, the rudder stock is out, a fine stick of locust, and all the frames are bolked together. The easting of the keel heing an last Sturday. A box was made of kin, plank, the inside heing an each counterpart of the lead keel. This box was lined with sphead to receive it. The keel structure was then made ready, the run thereds heing driven through from helow, ready for the turn-huckles, the composition screw bolts being also driven, projecting below, and a number of blind boits, also of composition, being driven trow below, with their headed ends left to project into the lead. Was hen placed over the Head stort by wedges, tolding hoth together, the gore side of the keel thus forming the top of the hox. The gates of goring the lead were about the upper durity and no blocks head were land keel and set up hy wedges, tolding hoth and the keel was hen placed over the the soft was placed in the mould and the keel was hen placed of the keel thus forming the top of the hox. The gates of goring the lead were about the durity and the bolance on how that the lead was poured in Statu and poured in the bolance of the how alter being and the keel to the calldron of the head and here and here and solid. Men were sets to youd to be in excellation of the indameter, suppo

THE PHILADELPHIA TUCK-UP.

Editor Forest and Stream: The numerous Inquiries I have received about the Philadelphia tuck-up, again compel me to have recourse to your columns. It is very evident to my mind that there is a demand for a larger hoat for cruising purposes than the cauce, and while I am not pre-pared to say that the tuck-up is the coming hoat, I will say that so far as my experience goes it is the most roomy and comforfable boat yet brought out, and I have neverly opened the subject hoping that it would bring out others whose experience had been greater than mine.

far as my experience goes it is the most roomy and comfortable boat it would bring out others whose experience had been greater than mine.
As you know, I an not a boat huilder, neither am I interested in pushing any manufacturer; therefore, whatever information I may give must not be taken as authoritive, but simply as my individual experience, growing out of the ownership of perhaps a dozen of these boats build only for local use, and the boats are usually turned over to the owner in the wood, i. e., not nained.
As to cost, the builders of these boats build only for local use, and the boats are usually turned over to the owner in the wood, i. e., not nained. I will mention, however, what I have paid to have the boats completed.
The cost of the hull, specified, no knots or butts in planking; whenever any two pleces of wood are placed together, they to be first painted over; copter riveted and no ron to be used on hull, combing of wainut fastened on with nickel plated screws, 375. If no stress is laid on these specifications, 365 will buy the hull.
Panting the hull and polishing combing is worth \$5, the hrass work for hull and rigging is worth, if polished, \$16, and if nickel-plated \$20, 513. (7, 901c, \$6, running rigging and making boat ready for use, 35, making a total for the finest class of hoat, with two sets of salls, of \$180. Of course only one waits is necessary. The 156t, \$10, 190. (5, 001c, \$6, running rigging and making boat ready for use, 35, making a total for the finest class of hoat, with two sets of salls, of \$180. Of course only one waits is necessary. The 156t, \$10, 180. (7, 500.

MYSTERIOUS DISAPPEARANCE OF A SHARPIE.—The visitor to Mumm's yard at Bay Ridge will find on the railway a curious oraft, whose huld is enough to puzzle even an expert. A schooner-rigged craft of ahout 60ft. over all and 14ft, beam; she is noticeable for her flat floor, round barrel sides, flat run, and very deep keel of about 8ft. A striking peculiarity in build is also observable, the planking on her flat bottom runs thwarrship, while that on her sides runs fore and aft in the usual manner. A look at the name on her sides runs fore and aft in the usual manner. A look at the name on her sides runs fore and aft in the usual manner. A look at the name on her sides runs some one in the secret, will convince the inquirer that this verified with the secret will be remembered as a sharple of the usual hult, with a centerboard and also a keel of lead 2ft. deep and weighing four tons. After being in service for a part of the season she was hauled up at Mumm's for two more tons of lead on her keel and the removal of her centerboard. This winter (1864-85). The opened near the hottom, regular frames were inserted and bolled to the bottom, making a round bilge and slightly flaring side, and these something that is neither sloop on cutter in model, an anomaly that it would be very hard to class. By the change have been secured in-tices and be very hard to class. By the change have been secured in-topmast heing substituted. The builder have boom secured have no deek. The rix will also be changed, a larger mainmast and mode a very good joh. There are various ways of building a yacht, and this is one of tues. Of course the outary over such haphazard experiments is considerable, and the final results are certain to be unsatisfactory; but if the owner is suited it is no one else's business.

CRUISE OF THE COOT.

<text><text><text><text>

searance. loops are not in great favor above York River, but are more popu-about Norfolk and the James. Catboats are unknown. They re been tried, but were found unhandy and unsafe in the open ters of the bay. On my voyage down, the Coot was the recipient many screastic pleasantries. "Say Cap, what is the matter with r JiL," "Left your jib home to he washed, Cap?" "Stick out your jib why don't you, Cap?" Be it known that half the population in these latitudes answers to the appellation "Cap." To be a man of any account, you must own a boat of some description. Just as the farmer inland must have his wagon and tesam, the boat is in the Chesapeake regions an implement of livelihood quite as essential. To be hoatless is to be without standing. A large fraction of the popu-lation goes through life habitaally in oliskins. A sourwester and rubber boots admit you to good fellowship and full confidence at once, even the extending of credit in the country stores, for a man so apparaled must needs be a "Cap," and that is passport enough for your responsibility. From Elk Point at the confluence of Elk River and the Susque-

HH

ns to Cape Henry, the soutbernmost extremity, Chesapeake Bay nsures 160 nautical or 190 statute miles. From Elk Point to Bod-at the mouth of the Patapsco, on which Baltimore is situated, the ance is 32 usuital miles. From Bodkin to Severn River, upon ch is located Aunapolis, the capital of Maryland, the distance to it 12. From the Savern to mouth of Patuxent 42. Thence to the Raymannock 32. From there to New Point Comfort, known e frequently as New Point, it is 17, and from New Point to Old it Contort, Hampton Roads, 24 neutical miles. The bay is 8 nau-lmiles or 94/2 land miles from Bodkin Foint to the eastern shore, arrows to 6 miles from the Severn across to Keni Island. Off the extent it is again 8 miles; off Point Lookout 14. Below this the tiest width, of 22 nautical miles or 32 land miles. is found. It ows again to 16 off the Rappahannock and to 13 off New Point. Old Point it expauds once more to 17 across to Cape Charles, mouth of the bay is 10 nautical miles from cape to cape. These res hardly give a fair idea of the breadth of the waters, because mouths of the great rivers contribute so much to an increased in for the wind and sea that they must be taken mito account. northeaster, for example, the sweep down the Patapsco, a river three miles wide at the mouth, and across the hay is actually 20 swhere the bay is but 5. A similar wind has a sweep out of the mace and across the bay of over 30 miles. As the Potomac is 7 sacross the mouth, the disturbance out in the bay during a heaster is something never approached in Long Island Sound so during an easterly gale in its widest part. From the head itoblace River, the next harbor on that shore, if you are fami-enough to risk its entrance in the high steep sea tumbling over fas through which the narrow winding channel leads. From h or south, wind and sea are unobstructed for stretches of 75 s. If the Jows from the northward it is 15 miles from New it to Back River, the next harbor on that showed. S. For the Atlan-rolers pour in the capes and 40 miles up th na to Cape Henry, the soutbernmost extremity, Chesapeake Bay sures 160 nautical or 190 statute miles. From Elk Point to Bod-

ice than in the short and hollow chop of the hay, ostensibly shel-dwater. arigating such an inland ocean is serious work compared to ch the backing and filling about Long Island Sound is trivial in-d. Add to this the distance of 15 to 35 miles between available bors in the Chesapeake, and the convenience of a hole to run into y 3 to 5 miles in the Sound, and the risks grow to correspond, existly with a small hoat, to which 35 miles is a good day's run, which could never think of beating to windward half total dis ce against a high sea, and often not an inch in bad weather. Now smpt to navigate the bay in the dead of the winter, the severest wan in thirty years, with ice and cold to hattle against heides, ing an unprecedented period of severest gales, and ty to do that cle handed with nine hours daylight only, and you have the tough the Coot tackled-and accomplished, without serious accident my kind, hut with much hardship, exposure, and considerable guist at the lock of windward powers of a small shoal-bolied beamy at threes, it must be confessed, with immediate fear of a cap-s at times, when it was impossible to round to or to get the canvas

<text>

of FOREST AND STREAM are quite familiar with the lay of the land and can give desired information. In Rothrock's "Vacation Cruies" the shore is extensively described. C. P. K.

MARINE GLUE.—This substance, though little known in America, is in general use abroad, not only about yachts and boats, for which purpose it is specially adapted, but for such purposes as coating galvanic hatteries, and for all waterproof joints. It is used exclusively in England for yachts' decks, instead of white lea1 putty, the advan-tage being that it is elastic, expanding and contracting with the wood, and thus leaving no openings for the water. The deck seams are usually a little wider than is usual here, to allow a good body of linseed oil. The presence of prease on the caulking iron, but in large work the latter may he dipped in naptha, water, or coal oil instead of linseed oil. The presence of prease on the wood will prevent the glue adhering. The method of melting marine glue is as follows: cut the glue into small pieces, melt in a pot or cauldron over any moderate fire, keeping it stirred now and then. When the glue is all melted the heat is about 212 degrees Fahr., it theu becomes perfectly liquid, and should be used as quickly as possible. The glue nerver boils over into the fire like pitch, but the contact of fiame will ignite it, and it will burn entirely away. Should it take fire it may he glue is a largely used for double skin hoats, a layer of multibue the alter entors the two thicknesses of plaks. The makers are Messrs, Jeffreys & Co., whose address may be found in our advertis-ing columes.

The is into largely used to touble share that notates and the series and the set were in the two chicknesses of planks. The makers are Messrs. Jeffreys & Co., whose address may be found in our advertising columas. OSWEGO Y. C.- A meeting of the Executive Committee of the Oswego Y. C. was held Feb. 28. Commodore Phelps appointed July 3 as the day for the start on the annual cruise, and Charlotte as the port of destination. The yachts of the Moyal Canadian and Toronto Y. C. will he invited to meet the Oswego fleet on the one hundred and tenth anniversary of our independence, and the event will he duly celebrated. The utilation was raised from \$10 to \$15. The Commodore Apple and the event will he duly celebrated. The utilation was raised from \$10 to \$15. The Commodore and the event will he duly celebrated. The utilation was raised from \$10 to \$15. as fixed and the committee hope to present such attractions as win draw a full list of entries. YACHTING NOTES. - Oxwego-A new yacht is nearly planked, and bios fair to warm some of the fast ones which generally have things their own way fit the prizes. She will be about 37ft, long and 11ft, beam, Major Burke is her designer and huilder, a guarantee that she will he an nonest hoat ... The sale of the sloop yacht Ariadae, of Cold Spring, which has gone the rounds of the nautical press as being purchased by a party in Oswego. Is regarded as a mistake, as no one willing to shoulder the responsibility can be discovered... Webber, of South Boston, is huilding a keel hoat for Mr. S. J. Wood, of Somer-ville, Mass. She will be 22ft, sin, over all, 19ft, waterline, 7ft, beam and 8ft, draft, with a lifn, keel and a shoe of 560 pounds. She will he sloop rigged z. King Phillip, Dr. C. G. Weld, will go into commission this season... Carlotta, schooner, arrived at St. Kitts on March 6.... Rival, sloop, Messrs. Hope & Copman, Atlantic Y. C. OPEN ROAT SAULNG - Mr. Tyrrell E. Biddle has added another

heen sold to Messrs. Hope & Copman, Atlantic Y. C. OPEN BOAT SAILING.—Mr. Tyrrell E. Biddle has added another to his well-known handbooks on yachts and boats, in a little volume entitled, "Amateur Sailing in Open and Half-Decked Boats." Mr. Biddle has had a large experience sailing, and his book contains much useful advice to the young navigator, and the hints and directions are good, especially in their plain speaking as to caution in sailing. As much cannot be said as to the boats and rigs described and the draw-ings of them, as the former are mostly old-fashioned and clemary, while the cuts give very poor idess of the boats and mais. Mr. Biddle condemns the balance lug, for which we do not blame him if it is rigged as shown in the illustrations; but we cannot, at this time, agree with his high opinion of the sprit. The latter chapters contain useful acceipts for painting, etc., and hints on the care of boats, which will be valuable to all young yachtsmen. The hook is publisbed by Norie & Wilson, London.

Norie & Wilson, London. A RIDING CHOCK FOR CATBOATS.—Saugatuck, Conn., Feb. 37., —Editor Forest and Stream: Many of your readers, myself among the number, are watching Mr. Kunhard's progress with the Coot with a great deal of interest, and an sure tost he carries with him ithe hest wilshes of us all for his success and pleasure. The catboats on Long Island Sound are fitted with a short howsprit, 2 or 3ft. out board, with a bobstay and forestay. Once side an ordinary riding chock is fitted as in most sloops. If Mr. K would use it on the Coot he would have less trouble in getting up his anchor in rough water, and by leading the painter aft to the cockpit could give his boat way to windward and have the fuller within reab. Besides this advantage he will find that the Coot will ride easily at anchor with this rig. Give the Coot a chance, Mr. K., and she will carry you through in safety.—CAT.

afeiy.—CAT. CRUISER.—Mr. Alley is having a small cabin trunk added to the runiser, so that he may use her for duck shooting in the spring and all. The trunk will be ift. high forward, eft. aft, with a good crown and will be about 5ft. long, making a cosy little cabin for sleeping. The sides and top are of half inch pine, covered with canvas, and the nitre affair is so fitted as to be readily removed hy withdrawing a ew screws. A washboard 5in. high has also been added forward, stending about 10ft. aft. McWbirter, of West Brighton, is doing he work. The Cruiser will come out as a cat.

PILGRIM.-Dr. W. H. Winslow wishes to dispose of his cutter Pil-grim, the cruise of which was so charmingly described in our columns. The Doctor was so well satisfied with the boat's hehavior under trying circumstances, that he has decided to build a larger one of the same

A SMALL AUXILIARY YACHT.—A trial has been made at Da mouth during the past week with an Itchen Ferry sailing hoat fitt as an auxiliary, by Messrs. Simpson & Dennison, with a small set their Kingdon's patent compound surface condensing machiner The boat is 20ft. in length, has a beam of 7ft, 6in., and was found have a speed of about five miles an hour. The machinery consists a vertical natural draft boiler, with a diameter of 2ft., and standh 2ft. lin. above the floor boards, the small engine close alongside on occupying a round space of 1ft. 6in. hy 9in., from which it will be se that a very small space is taken up in the well of the heat, and th the whole machinery, cased in, forms in the center a small table abo 2ft. high. without interfering with the accommodation.—The Fiel Feb. 37. A SMALL AUXILIARY YACHT.—A trial has been made at Dat' outh during the past week with an lichen Ferry sailing boat fitte

Feb. 27. NEW SHARPIES.—Mr. Clapham is now building four Nonpareli sharpic yachts. Three of them are each 27\2/t. in length hy about 71t. beam, and will draw 9in. water with centerboard up. All wil have the Roslyn yawi rig. One of these yachts will be owned in Providence, one on Staten Island, and the third goes to Norfolk, Va. Mr. Clapham is just beginning work on a Nonpareli sharpie single hand keel yacht for a New York gentleman. She will be 24ft. if length, and will draw 30in, water. This hoat will be similar to the one illustrated on page 233 of "Small Yachts," except that she will have the Roslyn yawi rig, which itg is becoming a decided favorite when handiness coupled with speed is needed. There is at present a very greatly increased demand for single-hand cruising yachts. ATLANTIC Y. C. —The annual meeting of the Atlantic Y. C. wai

when handiness coupled with speed is needed. "There is at present a very greatly increased demand for single-hand cruising yachts.
 ATLANTIC Y. C.—The annual meeting of the Atlantic Y. C. was held on Monday. in their club rooms, No, 44 Court street, Brookhu.
 The tollowing officers were elected: Commodore, H. Hogins; Vice-Commodore, F. C. Swar; Rear Commodore, E. C. Sterling; Riccording Secretary, R. S. Church; Treasurer, R. C. Field; Measurer, W. C. Laenger; Corresponding Secretary, J. L. Marcellus. Directors, Wm. Peet, S. Lo'nes, N. D. Lawton, J. R. Maxwell, A. H. Farrington and W. H. Thomas. Yacht Committee, J. T. Van Wyck, C. T. Pierce, W. W. Wittingham. Merabership Committee, W. W. Richards, T. L. Arnold, Henry Earle. The annual regata will take place on June 15.
 INTER-LAKE YACHTING ASSOCIATION.—A meething of the Interlake Yachting Association, formed at Ballast Island last July, was held at Toledo. O., on March 6, with Commodore, Gereland; Vice-Commodore, H. C. Hart, Detroit; Rear-Commodore, A. W. Machen, Toledo; Secretary and Treasurer, J. S. Williams, Cleveland; Mice Commodore, H. C. Hart, Detroit; Rear-Commodore, A. W. Machen, Toledo; Secretary and Treasurer, J. S. Williams, Cleveland.
 THREE SCORE YEARS AND HEARTY.—Capt. Coffin, the old ime favorite among the yachting reporters, celebrated his sixtieth birthday on the 8th. He was overwhelmed with congratulation and yod wishes from every side, which the way in which he spliced the main brace from the bumpkin away up to the eyeboll of the uniany ardarm would have turned any saliorman green with envy.

JERSEY CITY Y. C. - At the annual meeting of the Jersey City Y. C. held at their rooms on Tuesday, March 4, 1836, the following officers were elected for the ensuing year: Commodore, H. B. Pierson Vice-Commodore, C. A. Smith, Secretary, C. C. Pierce; Treasurer. Geo, Hawes: Measurer, G. L. Winn,

Geo. Hawes; measurer, G. L. Winn, ICE YACHTS.—Several races were sailed at Hyde Park on March & in a high wind. Com. Rogers sailed the St. Nicholas against be Bessie, three races, each of seven miles, winning every time. ST. JOHNS RIVER TO NEW ORLEANS.—A correspondent asks the best route from St. Johns River, Fla., to New Orleans, in a 22ft, steam launch.

The wonderful growth of athletic sports in this country is well illustrated by the handsome and very complete catalogue of sporting goods just issued by A. G. Spalding & Bros., of Chicago and New York. It is a large size book of 180 pages, and contains over 1 000 separate illustrations of the various articles used by sportsmen, together with a complete description and prices of each article. In addition to its value as a catalogue, it also contains the latest sport-ing rules governing all kinds of outdoor and indoor sports and pas-times, which is well worth the price asked for the book,—Adv.

"FOREST AND STREAM SERIES."

DEER HUNTING. BY JUDGE JOHN DEAN CATON.

BY JUDGE JOHN DEAN CATOM. BY and by it will be time to hunt antelope and deer. It is always time to read about them. Judge Caton's book on the antelope, elk, deer, moose and caribou of America discusses in a readable way the life history of these animals and the methods of their capture. It is the work of an enthusiastic sportsman who has had a wide experience and has devoted the leisure of years to studying these interesting game animals. The volume is very fully illustrated, and is a perfect storehouse of information and entertainment. The first edition was sold by the Boston publishers at \$4. Price \$2.50.

WOODCRAFT. BY "NESSMUK."

BY "NESSMUK." A COMPACT pocket handbook of condensed, boiled-down, concise, clear, comprehensive, sensible, practical camp gumption. "Nessmuk" has been "in the woods" in Michigan, New York, Pennsylvania, and South America, and this is a book for outers, wherever they kindle their camp-fire. The author believes in "smoothing it." He has learned how; now he tells others. It is much easier to learn from "Nessmuk" than from Dame Experience. We should not be surprised if "Wooderaft" completely revolutionized the methods of camp-ing out. If you are going to the woods, read "Woodcraft" before you go. It may add to your trip a hundred fold. Price \$1.00.

DOG TRAINING. BY S. T. HAMMOND.

BY S. T. HAMMOND. H E was a promising puppy, and when you turned him over to the breaker to be educated, you thought he was bound to make "the best dog in the world." And you'll not soon forget how disappointed and disgusted you were when the dog, the breaker and the big bill—all three turned up together, and you saw that the animal's spirit was broken and it would take a steam calliope to make him mind. Now, this could not have happened if you had been wise enough to buy a copy of Hammond's book, and in your odd leisure moments *brain* the dog yourself instead of having him *broken* by some one else. We are selling edition after edition of this book, and it is revolutionizing the system of preparing dogs for work in the field. Price \$1.00.

SHORE BIRDS.

A PAMPHLET for those who "gun" along the shore. Tells of: I. Haunts and Habits—Where the bay birds live and what they do at home. II. Range and Migration—Where they go to breed and where to spend the winter. III, A Morming Without the Birds—An episode of shore shooting. IV. Nomenclature—A list of our American species of *Limicola*, with a description of each species. V. Localities—Where to go to shoot them. VI. Blinds and Decoys—How to shoot them after you have reached the grounds. 45 pp., paper. Price 15 cents.

ANGLING TALKS. BY GEORGE DAWSON.

BY GEORGE DAWSON. A subleta writer of conceded power, Mr. Dawson wielded a trenchant pen; when he terned from the conflict of parties to the praise of the favorite pastime of "simple wise men," his essays, linpid as the crystal streams, are aglow with the soft summer sunlight and melodious with the songs of birds. When angling was the theme, he wrote from a full heart and in closest sympathy with the scenes and pursuits described. These "Talks" are brimful of manly, wholesome sentiment; there is in them all not a particle of reader, and he perforce shares the author's enthusiasm. The effect is magical, like that of the mimic players in Xenophon's *Memorabilia*: he who reads, if he be an angler, must go afishing; and if he be not, straightway then must he become one.—Extract from Publishers' Preface. Cloth, price 50 cents.

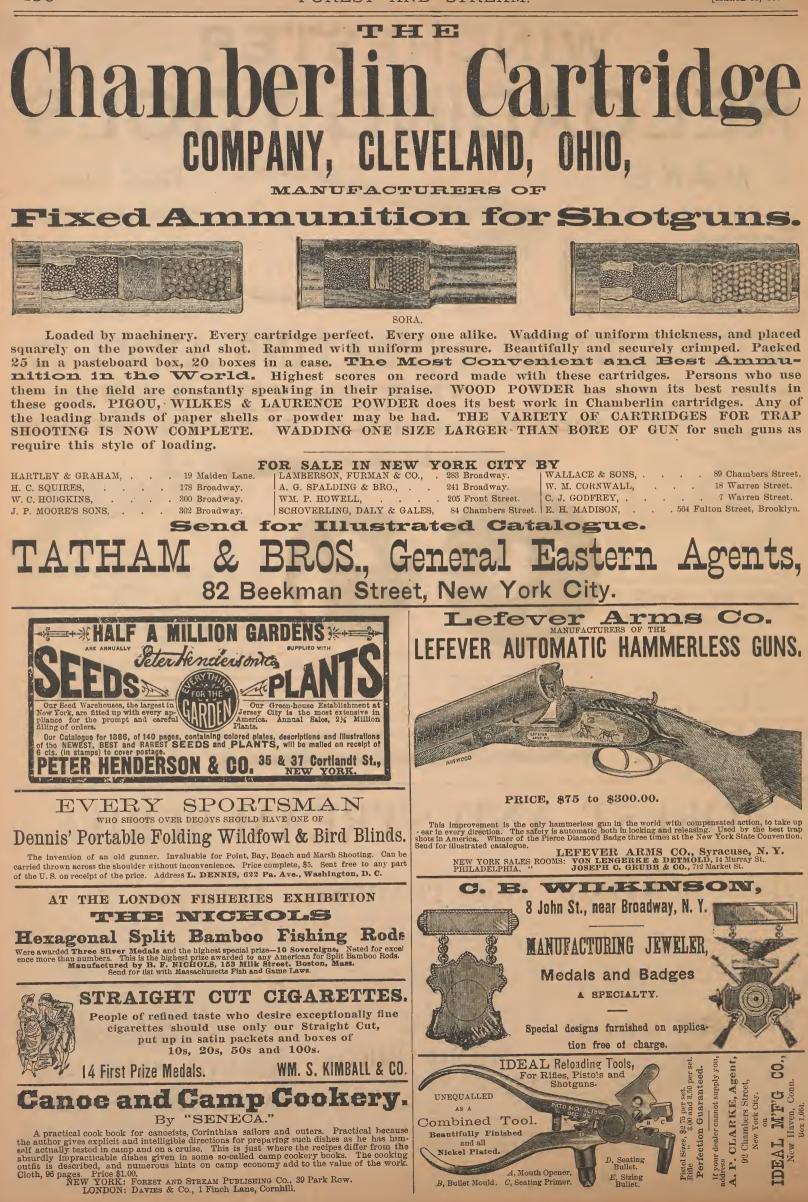

CANOE "AURORA."

BY DR. C. A. NEIDÉ. A CHARMINGLY written and always entertaining account the Ohio and Mississippi Rivers to the Gulf of Mexico, by the Secretary of the American Canoe Association. To read the cruise of the "Aurora" is the next best thing to having made it; and the reading is decidedly more pleasant than would have been participation in some of the misadventures related. 216 pp., cloth. Price \$1.00.

General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Samp-son Low, Marston, Scarles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, \$2.50 for six months. Address all communications. Nos. 39 AND 40 PARE Row. New York CITY.

A SUPERINTENDENT OF PROTECTORS.

THE bill recently introduced into the New York Assembly, providing for the appointment of a superintendent of game and fish protectors, is an admirable measure and should be passed without hesitation. The full text of the measure is as follows: SECTION 1. The Governor is hereby authorized to appoint, by and

SECTION 1. The Governor is hereby authorized to appoint, by and with the advice and consent of the Senate, a person to be known as the superintendent of game and fish protectors, who shall receive a salary of —— dollars per annum, with all necessary and traveling expenses necessarily and actually incurred, not to exceed —— dol-lars per year, to be audited and allowed by the Comptroller and paid by the Treasurer out of any moneys not otherwise appropriated. SEO 2. For the purpose of the more effectual enforcement of the laws for the protection of fish and game, the game and fish protec-tors now or who may hereafter he appointed by the Governor shall be subject to the supervision and direction of the superintendent of game and fish protectors, who shall divide the territory of the State into protection districts and shall assign to each protector his district, and shall have authority also to assign for temporary duty in any district a protector from any other district. The said superin-State into protection districts and shall assign to each protector his his district, and shall have authority also to assign for temporary duty in buy district a protector from any other district. The said superintendent shall require of each protector at the close of each calendar morth a report in writing, and in deta I stating the service performed by each protector during the last preceding month, including an account of the snits commenced at his instance, the disportion made of a y undiposed of; and no payment for services performed, or traviation shall present to the Comptroller, in addition to the usual oath of performance and payment, a certificate from said superintendent that he has made the report required by this act, and has in all other of performance and payment, a certificate from said superintendent of performance and payment, and protector which shall come of dereliction or neglect of duty of any protector which shall come of the knowledge, together with such evidence as he may have touch office any protectors or eported to be delinquent, after giving him an ontice any protectors or ball have authority to remove from office any protectors or peopinted by the Governor, by and with the successors who shall be appointed by the Governor, by and with the successors who shall be appointed by the Governor, by and with the successors who shall be appointed by the Governor, by and with the successors who shall be appointed by the Governor, by and with the successors who shall be appointed by the Governor, by and with the successors who shall be appointed by the Governor, and all vacancies in said office has the next session, for the unexpired portion of the term in which the vacancy occurs.

ment of the game and fish laws of this State, now had and possessed by law by the game and fish protectors appointed by the Governor pursuant to the provisions of chapter five hundred and nhety-one of the laws of eighteen hundred and eighty, and the acts amendatory of the same or supplementary thereto. SEC. 5. Is shall be the duty of the superintendent of game and fich periodeless amonited or who may be appoinded who this set to

SEC. 5. It shall be the duty of the superintendent of game and fish protectors appointed or who may he appointed under this act to supervise and direct the work of the game and fish protectors, to in-vestigate all complaints concerning their inefficiency or neglect of duty, to assign them to duty wherever required, to see that they in all things enforce the laws for the protection of fish and game, and perform all the duties required of them by law. SEC. 6. It shall be the duty of the said superintendent of fish and game protectors appointed or who may be appointed under this act to file in the office of the State Comptroller during the month of December in each year, all reports made to him during the preceding year by the fish and game protectors, and an account stating the ex-penses paid or incurred by him in the discharge of the duties of his office, which account shall be verified by the oath of said superin-tendent that the same is correct and true in every particular, and tendent that the same is correct and true in every particular, and shall make and present, in January of each year, a written report to the Legislature of his proceedings and the nature and extent of the services performed by the State game and fish protectors, together with such recommendations of further legislative or official action as

he may deem proper. Szc. 7. Section four of chapter three hundred and seventeen of the laws of eighteen hundred and eighty-three is hereby repealed. Szc. 8. This act shall take effect immediately.

This supervision of the game and fish protectors is now a part of the duty of the commissioners of fisheries, and the actual labor falls to the lot of Gen. R. U. Sherman, the secretary of the commission. His position is an unsalaried one, the duties relating to the fish commission proper are all that such an unsalaried official could be expected to perform, and it is quite right that he should be relieved of the supervision of the protectors.

The actual working of the proposed system will depend altogether upon the man who may be selected for the appointment. If the new office is to be made a political sop, the system may very readily be botched. If politicians are disregarded and a superintendent appointed because of his known and proved fitness for the post, the office may prove a most valuable one in perfecting the protective system. We know of no one more fitted to take the office and acceptably fill it than Mr. A. N. Cheney, of Glens Falls. What Mr. Cheney's politics may be we are not informed, but he has given repeated and signal proofs of his devotion to the cause of game and fish protection, his information on the subject, practical experience, familiarity with the Adirondack region and known ability, are such as should be possessed by the first superintendent to be appointed should the bill become a law.

THE AUDUBON SOCIETY.

THE purpose of the AUDUBON SOCIETY is the protection of American birds not used for food. To accomplish this purpose it will

1. Secure and publish information to show the extent of the present enormous destruction of birds for millinery, de. corative and other purposes.

2. Expose the outrageous and indefensible cruelty of such wanton taking of feathered life.

3. Point out the damage to the agricultural interests of the land which must certainly follow the decimation of the Insectivores

4. By thus presenting the subject in its ethical, humane and economic aspects, enlist the sympathy and active personal co-operation of a large membership in the effort to check the evil.

Three forms of pledges have been adopted, viz: 1. To discourage the killing of any bird not used for food. 2. To discourage the robbing of any bird's nest or the destruction of its eggs. 3. To refrain from the use of any will bird's plumage as an article of dress or adornment.

The Audubon Society certificate of membership will be issued to those who subscribe to one, two or all of the pledges. Membership involves no expense whatever. There are no fees of any kind. The funds necessary to carry on the work are supplied entirely by voluntary subscription, the immediate expense for organization being borne by the Forest and Stream Publishing Company. The Society has local secretaries in cities, towns and villages. The local secretary will furnish the circulars of information and pledge forms; will receive the signed pledges, keep a list of the members, forward a duplicate list with the pledges for en-rollment and file at the Society's office; and will receive in return certificates of membership, to be filled out and signed by the local secretary and given to the members. No certificate of membership will be issued to any person except upon the receipt of a signed pledge at the office of the Society. Where no local secretary has yet been appointed, individual applicants for membership may address the Society at its office, No. 40 Park Row, New York.

If there is no local secretary in your town, you are invited to act as such yourself. Upon application we will supply copies of this circular and pledge forms. The society furnishes to each member a handsome certificate of membership. This bears a portrait of the great naturalist, John James Audubon, after whom the Society very appropriately takes its name.

MR. PALMER'S "SHY" DEER.

THE strong plea of the deer hounders is—or was, until they were forced to back down from the position last Tuesday-that the deer is such a stupidly tame and donkey-like creature that it must be chased by dogs and clubbed by men in boats to be made "shy" and "preserved" from the still-hunt-ers. The hounders have drummed up all sorts of witnesses to prove their "shy" argument, and among them Assemblyman George W. Palmer, whom the voters of Clinton county saw fit to send to Albany as their representative. Mr. Palmer is fond of posing before the House as an "old practical hunter," and when he gets up to deliver himself of some choice bit of woodcraft his fellow members give him most deferential hearing. Mr. Palmer made his little speech in favor of deer hounding the other day, and told his little story to show how the deer are made "shy" by the dogs. This is what he said:

Six Days of Hounding. Six Days of Hounding. Now let me tell you a little in. The puides said to us. "Put your doss in the kennels, and to morrow twenty-five years ago, on one of twenty-five years ago, one one well have some deer." twe twenty-five years ago, and half a dozen puides. We spent the whole week there with our dogs, every day striking a fresh track--for six long days, and not a deer did we get. To have such a relation of actual experience of this sort is

How it made them "Shy."

To have such a relation of actual experience of this sort is To have such a relation of actual experience of this soft is doubtless very gratifying to the hounders. Here is a "sportsman" of forty years' experience, who gives definite statistics to prove the "shy" theory. His party, he says, hounded deer six days, and having by this time made them "shy," went out still-hunting on the seventh day, and shot down seven of them. Hac fabula docet.

THE HOPATCONG SULPHURIC ACID.

NOTE in our angling columns last week called atten-A A tion to the outrageous destruction of the fish of Lake Hopatcong, New Jersey, by refuse drained from a powder mill into the lake. It is one of a series of hundreds of like and into the fact. It is one of a series of maintenance. Lake Hopatcong, because near New York, has been for some years past a favorite angling resort. The lake was stocked with black bass and these have been a great attraction for anglers from this city and vicinity. With utter disregard of the vicities of others a powder concern has been draining its rights of others, a powder concern has been draining its waste into the lake, and the result is that the fish are dying off in such numbers that their utter extermination is soon to be wrought. The Evening Post reports that a late analysis of the water of the lake, made by Dr. Newton, of Paterson, at the request of the State Board of Health, proved that its waters are highly charged with sulphuric acid, so much so that it is a question of only a short time before all the fish in the lake will be killed. His analysis of water taken from the stream, running through the powder works property into the lake, and also of water taken a mile from the shores of the lake, proves that it contains from forty to fifty grains of sulphuric acid to the gallon. Live fish placed in this water by Dr. Newton died within from six to eleven minutes. So Hopatcong is to be ruined by the stupidity of powder manufacturers who see in that beautiful lake nothing more than a cesspool for the waste from their mill. If 'Jersey justice" cannot remedy this outrage the law should be amended to fit such cases.

A CLEAR CASE.-At a pigeon shooting match in New Jersey the other day, an account of which is given elsewhere, the birds were mutilated in a barbarous fashion. Their tail feathers were pulled out, their eyes were gouged out, and they were otherwise maimed, so that their flight might be erratic and puzzle the shooters. This is a case which we hope to see brought to the attention of the authorities. Every cowardly and brutal fellow responsible for the pigeon torture should be indicted and punished. The open air and sunlight are too good for them. Their proper place is in jail. It is perhaps too much to hope that the richlydeserved punishment will follow. There is too much apathy on the part of officials and too much demoralization on the part of the public.

TO THE WALLED-IN LAKES. XV.-A CHRISTENING.

THAT evening I had some conversation with Major Allen about the management of the agency, and among other things he spoke of the Indian police. Of these there are twenty-three, appointed by the agent, who receive \$8 per month, and wear a uniform and a shield badge. Their duties are to keep order in the camp and to make such ar-rests as the agent may direct. They are chosen from among the best men in the tribe. When enrolled they are made to understand that every man in the service of the United States is obliged to take an oath to obey the laws. This is the form which these Piegans use: "The Sun is good;" as they say this they point to the sun. "The earth is good," pointing to the ground. "I will obey the orders of my chief that I may live long with my family."

Major Allen gave me a detailed narrative of the terrible condition of affairs at the agency when he reached here in March, 1884, some account of which has already been published in FOREST AND STREAM. He speaks of the Indians as now doing well. They are willing to work, but sadly need instruction. A number of competent farmers and mechanics, say one to every twenty-five families, should be appointed to teach these people how to work to the best advantage. Their will is good but they are very ignorant.

The next morning as we were sitting in the trader's store old Nei-su Ki-yu (Four Bears), the camp orator, came in and began to tell us about the pursuit of the horse thieves by the Pegunny. All through the previous day warriors on broken down horses had been coming into camp, some of them driving before them other animals from the stolen herd which had been unable to keep up and been left behind by the thieves. These, of course, were the least valuable of those stolen.

The last Indians who had come in the night before had reported that when they had turned back the trail was very fresh, and that before they were out of sight the fugitives had fired the prairie, and they heard distant shots as if a fight were taking place. All this Four Bears explained at great length and with such expressive gestures that I caught the sense of what he was saying even though I did not com-prehend his word. He is a born orator, has an unending flow of words, a sweetly musical voice, and his gestures are wonderfully graceful and telling. After he had finished telling us about the war party he proceeded to enlarge on the tering is about the war party he proceeded to enarge on the strength of his "medicine" and to explain what wonderful feats of magic he was capable of. He said that if he wanted to he could step out of doors and open his side and have a wagon roll out from between his ribs on to the prairie. "If I go to war," said he, "I cannot be hurt. Even if the bullets hit me they will not go through my skin, they will glance off. I cannot be hurt by them." "Come," hc continued, "I will show you something which

is medicine." He spoke to one of the children, who ran into the living room and returned in a moment with a glass of water and a whistle made from the leg bone of a beaver, and gave them to the old man, who led the way out of doors behind the store. Here he put the water and the whistle on the ground, and facing about, took off his cap and gazed steadfastly at the sun. In a moment or two he began to pray earnestly in a low voice, and presently opening his mouth wide he seemed to breathe in the sunlight and then stretch upward his open hands to grasp the rays of light and pass them over his head and breast and arms. Then he took the whistle in one hand and raising the glass of water to his mouth and immersing the end of the whistle in the water, he blew a few shrill notes. Now putting down the whistle he took a swallow of the water, and then taking a mouthful of it blew it in fine spray toward the sun. Then he made a motion as if vomiting into his hand, which he at once held out to me, open and palm up. It was wet but there was nothing in it. Again he took a mouthful of the water and went through the same performance, and showed me his hand wet, but empty. A third time this was repeated, and I saw something fall from his mouth into his hand, and when he held it out to me there lay on the palm a spherical body perhaps three-quarters of an inch in diameter, which looked like a polished pebble of clouded whitish quartz. After allowing me to inspect it for nearly a minute, he returned it to his mouth, took a mouthful of water, and apparently swallowed it, choking a little bit in the act as if it was too large to pass down easily. Mr. Kipp examined his mouth, and there was no foreign body in it. Evidently he had swal-lowed it. We had been watching him closely for an hour, and he had had no opportunity to put this object into his mouth in that time, and it did not seem that he could have had it there during the whole time that he had been talking to us. He did something very similar to this recently in Mr. Kipp's presence; but in this case the objects disgorged were three or four in number and were much smaller, perhaps one-quarter inch in diameter, and looked like hailston

I thought the exhibition worth a present, and going into the store got a plug of tobacco, which I put in my pocket. As I came out again Four Bears asked Mr. Kipp who I was, and he replied that I came from the end of the world, from the edge of the salt water. After a little more talk Four Bears said, "Come, I will give him a name. Long ago I named White Bull Calf [Mr. Upham], and now I will name my son, your friend who comes from where the world meets the salt water.'

Stepping up to me he took my hand, and leading me out

of the shadow faced me about so that I looked toward the sun. He threw his cap on the ground and I my hat. Then he prayed, saying:

"Oh Sun, oh Old Man, look down. Have pity. upon this my son and me. Let us live. Listen. Many years ago, when I was a young man, I went upon the top of the Sweet Grass Buttes, where all the Indians are afraid to go, and stayed there long fasting. And while I slept my medicine [secret helper] said to me, 'Take the name *Pe-nut*u-ye is tsim-o-kan [Fisher Cap, i. e., a cap made from the skin of a fisher], that is what you shall be called. For many years I bore this name, but now I am getting old, and before long I must die. I do not longer need this name, and now I give it to this my son. Pity him. Give him long life. Keep him from all dangers of every kind. When he goes into battle let all the bullets miss him, or, if any of them must hit him, let them glance off from his body. Care for him and let live. Make him strong. Let his children live very long and have plenty. Hear, Sun; hear, Old Man; pity, pity.

As he began his prayer he stretched out his right hand and made as if grasping the sunlight, which he spread slowly over my head on either side, and down over my shoulders, arms and breast. Then he said to me, "That is what you are called—*Pe-nut-u-ye is-tsim-o kan.*" The prayer was uttered with a fervor and earnestness that quite compelled my respect.

After the ceremony was concluded I gave Four Bears the tobacco, which he accepted very pleasantly, and when, after a little further conversation, he learned that I was going to write down an account of it, he expressed a desire to write his name in my notebook. This he did by making his mark, and I here present the signature as a sort of certificate of baptism from him.

These were busy days at the agency. The last of the crops were being harvested, and all the white men about the stockade and every Indian who could be pressed into the service were busily engaged either in hauling the grain or tending the threshing machine. The Indians work hard and faithfully, but, as might be imagined, they did not always put forth their exertions to the best advantage. Everywhere there was seen the need of more instructors.

After watching for some time the progress of the work, and spending a pleasant hour or two within the stockade at the hospitable home of Major Allen, three of us drove over to the bluffs and the south side of the valley of Badger Creek to look at some of the many graves which stand there. In old times the Pegunny, like many other plains races of Indians, buried their dead on scaffolds placed among the boughs of trees, or sometimes merely raised on poles, as are the graves of the Sioux. Such burial places are naturally most common along the rivers, because it is along the streams that the trees grow. There are many such burial places along the Marias River, and the Piegan name of the St. Mary's River is *Ah-ki-nus-kwo-nā*. This is often translated the River of the Dead; but a better interpretation of it is Many Chiefs Dead. Ah-ki is a contraction of Ah-kwi-im= plenty; nus-kwo-the scaffold or platform upon which the bodies of the dead are placed, and $n\bar{a}$ is a contraction of the word $n\bar{e} nah=a$ chief; so that the full idea of the name would be the place where many chiefs are on their scaffolds.

Efforts have been made at the agency to induce the Indians to give up their primitive mode of burial, and during the famine winter many of those who perished were buried in coffins in or on top of the ground. Often the hole excavated was barely deep enough to contain the coffin, so that its lid was level with the ground. Over some of these two or three inches of dirt had been piled which had been partly washed away by the rain. Here and there skeletons of two or three horses would be seen lying on the ground by the grave of some more important or wealthy man. As a rule these latter were placed on the higher bluffs bordering the valley, and the coffins were placed on the ground, while on them were piled blankets and robes, and in the case of medicine men, their bear pipes and other magical implements.

After death the spirits of the departed-their shadows the Pegunny call them—go to the sand hills. This is a barren, hilly country near Medicine Hat, and beyond that to the northward. Here too go all the spirits of the animals which die, and upon these the shadows feed.

Our stay at the agency drew to a close, and late one afternoon we hade a cordial farewell to all those who had been so kind to us, and Appekunny and I drove off over the level valley, climbed the long hill, and turning, took our last view of the interesting spot. Then a few days later I bade farewell to Appekunny and started for the East.

I had spent but a short time at the Walled-in-Lakes, and had accomplished but little in the way of shooting and fishing, yet I felt that the long journey had been well worth taking. In an experience of the western country extending over many years, I can recall but two trips that were so pleasant and so profitable as this one had been. Of the mar-vellously interesting features of the region I have tried to tell, and if I have failed, it is in part because their grandeur is too surpassing to be adequately treated by my pen.

The last nights in camp are to me rather sad, full of memories in which the bitter and sweet are oddly commingled. There is pain at leaving so much that is delight-

ful, melancholy in the reflection that one more year is taken from the sum of one's happiest days. But the recollection of these days and their joys is full of pleasure. Each year it is harder for me to turn my back on all that is

left of the happy free life of the olden time. The return to civilization is like the return to his dungeon of a prisoner who has been shown a glimpse of freedom. The mountain life of to-day is not the life of twenty, nor even of ten years ago, and now there is mingled with the pleasure of my temporary independence an undercurrent of sadness. 1 regret the changes that have come and others that I see near at hand. It is useless to feel these regrets—still more useless to express them, but old men will still be talking, and you will have but little more of my garrulity to endure just now.

So my camps for another year are at an end. The old rifle has had its final cleaning and is put away, the knife is rusting in its sheath. The story of my summer is at an end, and as I have so often done before, I close the note book and say good-bye. Yo

The Sportsman Tourist.

THE HUNTER'S VOW. THE HUNTER'S VOW. WHERE the peaks pierce the home of the storms, And stretch in their grandeur divine, Tumultuous, mountainous forms Along the Canadian line; 'Mid the hills where the waters divide. Some guifwards beginning their flow, Or on the Saskatchewan's side, Rushing north to the infinite snow, Where lie, looking up to the skies, Blue lakes ringed with precipice walls, Earth's solemn, unchangeable eyes, Earth's solemn, unchangeable eyes, Whose curtaining lid never falls; There, weary of desk and of pen, I wandered the free hills to tread And find, among primitive men, The rest that from cities has fied. The whirling mist had wrapped the peaks. A long day's fruitless labor done Was ended by the angry streaks That showed where sank the stormy sun. My mountain Indian's tireless stride, Hadleft me panting far behind. Hadleft me panting far behind. I shouted. Only rocks replied With echoes drowned by whistling wind. At length I found our upward track, And stumbiling, falling, wet and chill, I traced the faint marks slowly back, Till in tall woods the wind grew still. Only the boughs, swayed overhead, Droned out their deep Æolian air, And startled from his leafy bed, Rustled away some half-seen hare. Then, lightening through the deep rich gloom, Our camp-fice flashed a yellow star, And homely smells. like rich perfume, Our campare hashed a yenow star, And homely smells, like rich perfame, Caught my starved senses from afar. "What luck?" they cried, as I drew near. "Where are the spoils that hunters bring? At least the saddle of a deer At least the saddle of a deer Should answer for your rifle's ring." "I' re fired no shot this live-long day. My gun is clean. My stomach's light, Just pass the venison this way. The game will suffer most at night." The man was feeble, and the jest Was weaker still. They passed it by. And soon refreshed, I lay at rest Watching my space wreaths due an And soon refreshed, I lay at rest Watching my smoke wreaths float and die. Stretched out toward the grateful heat, In broken speech, my half-breed guide Tells, beside many a venturous feat, Fables by long time sanctified. And from his wakened memory pour Grim tales of famine, fight and chase, And fragments of that mystic lore Nurse of the youth of every race Nurse of the youth of every race. Child stories full of shapeless dream, Where homely facts of daily life Flow, mixed with marvel in a stream Of nightmare-like, chaotic strife, Good Indians, skilled in magic rites Still foll by wonder-working plan That wicked King of evil sprites.

That wicked King of evil sprites, The strong, malicious, sly "Old Man." And through the gloom of caverns dark And deserts wild, the story flow's To music of the coyotes bark And rumbling march of buffaloes. And with a moral end his tales: "Make offering to the mighty Sun; The favored bullet never fails, If the All Seer's favor's won "

If the All Seer's favor's won."

The next day opened dull and gray, But scarce our kindling flames arose When a young, stalwart Kootenay Rode up and broke my long repose. Descendant of the Indian horde That ruled this region of the West,

He came as if the country's lord Were honoring the country's guest. And soon, perhaps, to make us feel The more familiarly at home,

He volunteered to share our meal With gesture eloquent, though dumb. His blanket then he backward toesed, And turning to his offered place

He stopped, and reverently crossed His brow and whispered earnest grace. A pagan born, a pagan bred, He cherished still the holy sign Some Jesuit martyr, long since dead, Had taught his sires as rite divine. This symbol of forgotten creed

Surviving still, thus testified To the high hearts whose fearless deed Told unknown tribes how Christ had died. Scanty our intercourse at first, But when he'd breakfasted his fill, Sated his hunger, slaked his thirst, In varied tongues he tried our skill. But most of all his speaking hands, Portrayed his thought to watchful eyes, Till silently one understands Sense the unpracticed ear defles. Grateful, he offered me his aid, To lead me over pathways steep, And zigzag trails through long years made By clambering hoofs of mountain sheep. I took the chance and, while I turned Away a moment to prepare, Amid the hustle, I discerned The muttered chant of savage prayer. My Kootenay, with upturned eyes And waving hands, began his charm, That the hright ruler of the skies Might guide aright and guard from harm.

Might guide aright and guard from ha "Wikard power of rock and forest! Foiler of the hunter's skill! Thou who unseen always warrest For the flocks we strive to kill! Fade before a mightiersovereign, Friend and prop of human kind. Overhead the Sun god hovering Strikes all those who front him hind. Hear our prayer benign protector! Guide our aim to happy chance! And for our divine director, Here we vow a sacred dance."

The dismal strains of worship ceased. We started on our climb, and soon The chill was chased, the toil increased By the high sun of golden noon. We reached our station near the top

We reached our station near the top Of a long, rugged mountain side, And here my Indian bade me stop While he should fetch a circuit wide. I stood alone, yet not alone; Around me crag and jutting peak, In every weathering sculptured stone, Spread storles more than tongue can speak. Far back in geologic time I saw, in mind, the mighty chain Form grain by grain in ocean's slime.

Far back in geologic time

I saw, in mind, the mighty chain

Form grain by grain in ocean's slime,

Then slowly rise to light again.

Still deeper plerced my roving thought,

Till (yet unshaped our spinning sphere),
Save whirling chaos there was naught

But infinite space, black, cold and drear.

The north wind stirs upon my cheek,

And wakes my fancy from its drean.

The rocks, hefore so gray and hleak,

Now catch the sunshine's fiftul glean.

Oh! beautiful the cloud of spray,

That tops the green surf's glassy arch,
And heautiful the cult pay

Of the long rollers' measured march.

But grander, through the ellow gloom,

The hreeze-borne scent of larch and pine.

And far below the river's thread

Through its great dike in silver hreaks,
Churning, along its rocky bed,
The waters of the snow-fed lakes

The nreeze-borne scent of narch and pine. And far below the river's thread Through its great dike in silver hreaks, Churning, along its rocky bed, The waters of the snow-fed lakes. The glacier torrent's turbid green, The dark tall cliffs, that towering stood Somher as death, like death screne, The sinuous ice-field's creeping flood; All this I saw, all this I felt. But some great hand the curtain draws, And veiled in mist, the visions melt Into the valley's darkening jaws. Long, long my watch. But hark! that noise! Down the long glace is rattling fast Roll stones, forced from their trembling poise By some great creature moving past. A moment's pause. Ahove the ledge A head with hroad, curved horns is raised On the great slope's extremest edge, And looks toward me like one amazed. Out on the stillness rings the shot. The rocks reverberating 'round, Send, from long ridge and hollow grot, A thunder of redoubled sound. And the struck beast in wild career Goes plunging down the bouldered steep; Blind with his death wound, mad with fear, Spending his life with every leap. Below I found him stretched out dead, Thrown backward on the bloody clay. Staggering, I homeward on the bloody clay. Staggering, I homeward on the bloody clay. At last the hunter's wish was won. And, thankful for my ended toils, I cried aloud "Strong is the Sun." And round our fire that autumn night, While tremhling flame spires fell and rose, I wend that earnest vows had might On forest game and savage foes.

On forest game and savage foes. The dancet Ah! well the dance was done By worshippers who owned its spel, Though, recreant when the praze was won, I scorned the power that earned it well. But ever in my inmost mind The dry light science gives is dimmed When faintly on the northern wind The Sun god's praise comes rudely hymned. It echoes over bustling streets, Or ln short lulls at parting day, Its monotone my spirit greets With memories of the Kootenay. More in the heart than in the ear The dreaty music strrs again, Bringing the god of nature near, By the strong faith of simple men. H.

H. G. DULOG

ROCKY MOUNTAIN SHEEP HUNT.

A ROCKY MOUNTAIN SHEEP HUNT. I HAVE been a hunter for many years, and I suppose there is to some degree a similarity in the experience of sportsmen. At some period of life there is a ruling ambi-tion to accomplish a certain end, to kill some particular animal, or to succeed in some enterprise. Several times in my life some special desire has been the center of my thought and energy, and during the summer of 1881, which I passed at Wagon Wheel Gap, Col., I had the greatest ambition to capture a Rocky Mountain sheep. Years of success had effectually destroyed the pleasing novelty of killing bear, deer, catamount, *et al.* Here was game I had never seen; and if I could, with the seeiner, succeed in capturing, it would constitute quite an event in my hunting life—it would be a gay feather in my much-worn cap. The proprietor of the hotel (a rude structure, by the way) kept a camping outfit for the use of his guests, and when they started out on a hunt the tent was pitched high up on some mountain, convenient to water and some desirable hunting ground. The blankets, rations, cooking utensils, etc., were packed on burros for transportation, and the little, ingainly animals, with packs double their own size, would safely elimb rocky steeps, that tried the limbs as well as lungs of the men. A certain day we all started out on a deer hunt. Kemper

burting ground. The blanket, rations, cooking utensils, etc., were packed on burros for transportation, and the little, ungainly animals, with packs double their own size, would safely elimb rocky steeps, that tried the limbs as well as lungs of the men. A certain day we all started out on a deer hunt. Kemper McDonald, than whom a better man never lived, and a true sportsman, Jesse C., Toodle and the writer were the hunters, and an Irishman named Charley drove the burros and kept camp. While climbing up a very high mountain, that I might look down and around upon the world, I killed, about timber line, a fine buck, as fat as his hide would hold. When I reached the top I saw, looking north across Bellows Creek, (I had with me a No, 1 field glass) a beautiful hunt-ing country. large parks interspersed with islands of timber, and upon my car there fell a faint sound, much like the elvating of sheep. "It may be an illusion--it may be the ery of Rocky Mountain sheep, "I said to myself. My hopes alternated as that far-away sound continued at intervals for pertaps half an hour. "When we returned to the Gap I gave. Mr. Peck, who had been living here for several years, a description of what 1 had seen, and of course evinced a strong desire to make an effort to get over there. He said nobody lived in that direction, and no white man was ever in the fork of Bellows Creek, but it was a fine country for deer, and he had been told that mountain sheep ranged in that section. That was enough for me. Sampson's green withes and nev cords would have been as powerless with me as with himself. Mr. Peck said I could not get there without going up to either Willow of Sunnyside creek, some ten or twelve miles above, and foluw either one back. Where there is a will there is generally a way, and I determined to take a hunt over there. The project was never out of my mid. A few days afterward I went up Bellows Creek to fish, and found a place where I thought pack animals could climb the mountain. So, early next morning, I gave direc-ti

WASHINGTON DOINGS.

<section-header><text><section-header><text><text><text><text><text><text> them better luck. Mac killed a fine deer and Jesse brought down a fawn. I asked Jesse where he hit it; he said in the hind shoulder.
The timed day I wont up the right prong of Bellows Creek toward the place, as well as I could locate it, where hought I heard the bleating of sheep some days before, and to my great satisfaction I heard the same sound. I returned to camp and told Mac about it. He said he was up in that direction, heard nothing of the kind, but saw where a band of sheep used to feed, about twenty he supposed, and he had determined to capture some before he went down to the determined to capture some before he went down to the fash and of sheep used to feed, about twenty he supposed, and he had been on a mountain six or eight miles distant, and had seen hund return lo camp on foot. The top of the mountain, far above timber line, was admost level, and we made the rest of the wars on foot. The top of the mountain, far above timber line, was admost level, and we made the rest of the wars on foot. The top of the mountain, far above timber line, and a wing to this was travine was very step; and a covering of slide rock rendered it particularly danger ons. A single misslep would hare. Wery score raised his gun to fire. "Pray don't shoot," I said, 'if would be amost impossible to get your grame to camp, be adieds with the same sond feet below, but practice and Providene had made us sure-footed, and liter going down, down, we reached the bestom without harm. Very score are thousing sheep." "Well," he said, 'if it is sheep on thing, you go up the side of the mountain about time sheep and? "Well," he said, 'if it is sheep on thing, you go up the side of the mountain about times there and a live set, 'if liter the sheep here? "Well," he said, 'if would be almost in possible to rendered it the steep mark following sheep." "Well," he said, 'if would be almost in possible to rendered it the sheep here? The same scale is they always do." "The time here had all been burned. It was a hard it won th

passing to the westward it undergoes a variety of modifica-tions in form in the various tribes, until below the peninsula of Alaska near Sitka it becomes an elaborate piece of carv-ing inlaid with shell fragments, and ccases to be of use except as an ornament

as an ornament. Prof. G. Brown Goode lectured before the Biological Society on "The Beginnings of American Natural His-tory," the occasion being the address of the retring presi-dent. Brief mention was made of the earlier English, French, Dutch and Spanish naturalists who visited the country, or whose writings treated of its natural history. The early Spaniards in the capital of Montezuma found large and well-conducted zoological gardens for the instruc-tion and amusement of the people. How humiliating it is that such an extensive zoological garden should have existed in America in the sixteenth century, at the capital of a half-civilized nation, and that no such thing as yet exists at our national capital.

that such an extensive zoological garden should have existed in America in the sixteenth century, at the capital of a half-civilized nation, and that no such thing as yet exists at our national capital. Thomas Jefferson was spoken of in the highest terms as a naturalist. Had he not been so much absorbed in matters pertaining to the State, he undoubtedly would have been a master of science. It is probable no two men have done, so much for science in America as Jefferson and the elder Agassiz, not so much by their direct contributions to knowl-edge as by the encouragement they gave to science by their advocacy. Dr. C. Hart Merriam has presented several valuable papers at various meetings of the Biological Society, entitled. "Con-tributions to North American Mammalogy." He separates the eastern chipmunk into two races, giving the name of *Tamicas striatus lysteri* to the animal which oc-curs in the Adirondack region of New York, Northern New England and portions of Canada, the habitat of the typical *Tamias striatus* being Southern New York, New Jersey, southward to Georgia. In a following paper he described a new and very marked species of the chipmunk, from the Sierra Nevada Mountains of Central California, ten speci-mens of which were exhibited. On account of its long striped ears the appropriate name of *Tamias macrorhubdotes* was given it. The most important paper from his pen was the description of a new spectes of *Show'tl* or mountain beaver (*Aplodontia*), from the mountains of California. The species is much larger and heavier than the Washington Territory species (*A. rufa*), and the hair is of a different texture and color. It was named *A. major*. There are a number of good characters which distinguish the skull of *A. major* from that of *A. rufa*. At the last meeting of the Biological Society Dr. George Yasacy read a paper entitled "New and Recent Species of North American Grasses," and Mr. Charles Hallock pre-sented a paper on "Hyper Instinct of Animals." If space permitted a number of oth

Yellowstone." The following names and subjects have been announced for future lectures: Prof. Wm. Harkness, "How the Solar System is Measured." Prof. T. C. Mendenhall, "The Nature of Sound." Prof. F. W. Clarke, "The Chemistry of Coal." Dr. C. Hart Meriam, "The Migration of Birds," The Cosmos Club, a cluh composed of the scientific men of Washington, recently came into possession of the large and desirable premises on the corner of Lafayette place and H street. The building will undergo many changes, and a large assembly hall or lecture room will be added, which will be used by the various scientific societies as a place of meeting.

The local set of the second a fine shows only as secured at Arlington Heights, Va., and purchased by the National Museum. Ornithologists hoped this owl was a forerunner, and that others would soon appear, but their expectations were not realized.

were not realized. The large harpy eagle which had been so long in the eagle cage at Central Park, N. Y., and was so much admired, re-cently died. It was presented to the Smithsonian Institute, and was mounted by Mr. Marshall the taxidermist.

cently died. It was presented to the Smithsonian Institute, and was mounted by Mr. Marshall the taxidermist. A considerable number of pileated woodpeckers have been observed in the market stalls during the winter. As many as five or six have been seen at one time, all were reported as coming from Virginia. It is strange that crows which are considered as one of the birds possessing the greatest amount of intelligence, should not profit by this intelligence as well as by bitter experience. In the fall and winter they congre-gate in immense numbers in this vicinity, roosting in or near the National cemetery, at Arlington. During the colder weather when the ground is covered with snow, the food supply is limited in the area over which they make daily ex-cursions, so that many are unable to procure sufficient food, hecome enfecbled, and eventually die of starvation. This smaller colonies at some distance apart. Mr. Wm. Hornaday proposes to found in the National Museum a small collection of bird skins, one or two skins to be prepared by each of the more noted ornithologists of this country. Mr. Hornaday mounted a zebra, which has lately been placed on exhibition in the Museum. The general expression of the head aud face, together with the position of the animal, seem perfect, and plainly show what can be done. Dr. Tryborn who was sent by the Swedish Government

done.

done. Dr. Tryb**om** who was sent by the Swedish Government to this country to examine and study into the practical work-ings of the U. S. Fish Commission, expresses himself highly pleased with what he has already seen. During the coming season he will study carefully the different steps essential to the hatching and subsequent care of each species of fish with which the commission has to do. He will shortly start on a visit to several of the hatcheries on the Great Lakes, and later will make a trip to California.

THE PASSING OF THE BUFFALO Editor Forest and Stream:

Editor Forest and Stream: The positive assurance contained in the letter of Mr. Arnold Hague of the U. S. Geological Survey as to the ex-istence of a few small herds of buffalo in the Yellowstone Park, is exceedingly gratifying to ne, and doubtless to thousands of your readers, and you deserve all thanks for your efforts to secure the needed legislative action to secure this noble game from utter extinction. The need of immediate and vigorous action is most urgent. The de-struction of the vast herds which so recently roamed over the northwestern prairies has been so sudden that sportsmen and naturalists have hardly yet awakened to it

The summer before last, during a visit to Winnipeg, I asked the agent of the Hudson's Bay Fur Co. for statistics about the buffalo and was told that the year before he received from the Winnipeg district twelve thousand skins and that year only four! During the same summer I saw in the neighborhood of Lake Minnewakan, Dakota, hundreds of buffalo skeletons bleaching upon the prairie where the ani-mals had been slaughtered only three or four years before, chiefly for their hides as I was told. The pioneer farmers were beginning to gather up the bones and sell them at the railway station for about \$8 per ton, to he shipped to Mis-souri to be converted into fertilizer—a strange product of the soil and one that will never be gathered again. At Winni-peg I was gratified to learn that there was about twelve miles from the city a gentleman who had about fifty head of buffalo in a large inclosed preserve of some eight hundred acres, but that many individuals of the herd were not of pure blood but the result of crossing with domestic cattle. It would be interesting to know if similar efforts are being made elsewhere for the preservation of the buffalo, and in this connection I should like to ask if any one can inform the readers of the FOREST AND STREAM what has become of the two or three fine specimens which were recently ex-hibited about the country by William Cody (Buffalo Bill), in his "Wild West" show, and where they were obtained. Could Mr. Cody himself do a more graceful thing than to give to the FOREST AND STREAM what information he can as to the present existence of the race in the destruction of which he gained his peculiar fame, and such suggestions as he can offer as to its preservation from entire extinction? C. H. AMES. Bostow, Mass.

BOSTON, MASS.

THE AUDUBON SOCIETY.

Editor Forest and Stream: I wish you good speed in the work which you have so ably espoused, of preventing the wanton slaughter of birds. The press of the country generally needs to be awakened to the importance of this subject. Usually questions of this kind are largely discussed only when made popular by ener-getic writers or popular journals. I am glad to note that it is becoming fashionable for the leading journals to discuss this topic. I will give a few recent thoughts on the bird question:

question:

The increase of insects is marvelous. One insect may in

other in check. The increase of insects is marvelous. One insect may one year become the progenitor of six billion descenda Three hundred and twenty-five actual species of insects known, and it is thought that there are as many more spe One insect may in insects are known, and it is thought that there are as many more species unknown. If undisturbed, insects would destroy every green thing upon the earth's surface, and men would perish; but nature has provided enemies, and prominent among them are the birds, which keep the insects in check without cost to the horticulturist. A swallow as it skims through the air on a summer day, will destroy more insects than a farmer in the same length of time sweating over a heavy bucket of Paris green mix-ture.

ture

As the country became cleared of timber and more thickly inhabited, the birds have been destroyed in large numbers and insects have gained the ascendancy. There are birds worn by our city belles that alive would accomplish more good work for mankind than the average fashionahle belle, although she lived for a century. The cyes and beaks of these dead birds cry out in shame against the cruel fashion that causes their slaughter. I once heard an intelligent fruit grower exclaim: "Shoot the birds, they are eating my cherries." Why not as well say: "Shoot the borses, they are eating my oats; shoot the cows, they are eating my hay; shoot the chickens, they are eating my corn; shoot the children, they are eating my bread." If the horses, cows, chickens, and children are use-ful and desirable features of our homes we must not destroy them; neither must we destroy the birds if useful and de-sirable. sirable

sirable.
Five thousand miles is not a long distance for birds to migrate. They often breed in one locality and feast in another. But wherever they go, wherever they alight for a mouthful of food, the gun, trap, cat or robbers await them.
How long will the race survive such treatment? Is not this a question worthy of consideration? CHARLES A. GREEN, Chairman Com. on Ornithology W.N.Y.H. Society.

ROCHESTER, N. Y.

ROCHESTER, N. Y. The lady leaders of the AUDUBON movement should not forget that a prime essential of success is the creation of a new channel for the diversion of the current of prevalent fashion. No old fashion in dress is ever discarded until a new rival establishes its claims to popular favor. Ethical, economic and æsthetic forces hurl themselves against estab-lished fashion in vain. Even the keen shafts of ridicule glance off harmless. Fashion can he successfully assailed by fashion only. The old by the new. Before feathers can be driven out, flowers, or artistically arranged ribbons, or other method of ornamention must come in. Ethical, econ-omical and æsthetic forces are valuable auxiliaries, but the practical husiness of the campaign is to inaugurate a new fashion which can successfully compete with feathers for popular favor. The ATDUBON SOCHETT must resolve itself into a committee of taste, or take counsel with the milliners.

The feather-decked hats reach their highest development The feather-docked hats reach their highest development at the great gambling resort of Monte Carlo, where according to the London World, "the ladies' hats are as high as the play. Three girls, presumably sisters, and undoubtedly Ameri-cans not in society, attract an immense attention by reason of their showy garments. They wear very high conical hats, ornamented in front with large green and yellow par-rots with glaring glass eyes. Each hird is perched on a little bough, and it is impossible to imagine anything more ludic-rous or in worse taste. The girls are incessant talkers, and my correspondent tells me they are known by the nickname of the 'Prattling Pollies.'"

It is proposed to kill off, with poisoned crumbs, the

English sparrows which have bravely weathered the intense cold and deep snows of this unusually bitter winter. Why? Because these pugnacious little scavengers are said to be driving away our native birds. Yesterday an observer counted the remains of over twenty of our most attractive New England hirds sewed to the headgear of the women who were riding into town in a horse-car. Five pairs of woodpeckers' wings and their accompanying tails graced, or rather disgraced, the hat of one of these persons. We venture to say that not one among ten thousand pretended friends of our hirds ever saw an English sparrow kill or maim a native songster. On the other hand, how many women are there in the State of Massachusetts who can say that they have never worn the plumage of one of the birds they profess to love? If poisoned bread is to be fed to the worst enemies of our birds, milliners and their customers would better live on crackers.—*Boston Advertiser*.

The process to love? If poisoned bread is to be fed to the worse benefes to love? If poisoned bread is to be fed to the worse between the one crackers. —Boston Adtertiser.
The humorous writers are poking fun at the feathered fust. "E. R." writes in the Rochester Post-Express:
All the appeals that have been made to the sontimental side of woman's nature, in behalf of the song birds, having failed to induce her to abandon the practice of wearing their dead bodies to deak her gaments. J wish to suggest a way that may be more effective toward protecting the feathered triberom sacrifice on the altar of fashion. The plan is to simply forfore the laws now in existence for the punishment of those who kill, or have in their possession, song or insectivous birds, except for scientific purposes. The state prisons and pointentiaries are occupied by thousands of prisoners who broke laws that are not at all more binding, in a legal sense, that the law for the protection of birds. Every one of the the toward women in Rochester who has a stuffed song bird on her hat is liable to imprisonment for a year or a fine of §25. Some of them wear more than one bird, and they are subject to a double or triple fine or term in prison, for each one of them is guilty of a misdemeanor by the act of having in her possession "after the same is killed," the bird with which she seeks to increase her own attractions. If any wife, daughter, or sweetheart of a lawy er reads this and has to pay a fee, and be convinced that 1 speakt words of trib and soberness. When they realize the danger they are in y appearing hefore witnesses with the proof of their guilt, they may thank me for this warning, and hasten to destroy the poor dumb remains of the beautiful creatures they anew inducted, and resolves not on induce and work again. This scitosity of it, ye fair and genule dames who have these trood of the point with the oyer and Terminer or not elso the beautiful creatures who have the inducted, next on thell in the Oyer and Terminer or n

At a recent meeting of the South Bristol Farmers' Club, the following total abstinence pledge was circulated by Daniel Ricketson, Esq.: "We hereby agree neither to buy nor use, for any purpose whatever, the plumage of birds which have been killed solely for decoration. And we promise to exer-cise all our influence to further the object of this pledge, which is the preservation of song hirds."

SOME QUAIL NOTES.

under his care, follows him about, and is found with him when he stays (as he generally does) at the opposite end of the coop from the rest. That this is one and the same hen is established by the fact that when I first discovered the attrac-tion I marked the hen by tying bits of blue woolen yarn on her legs so that she can always be identified. JAY BEBE. TOLEDO, Ohio, March 11 TOLEDO, Ohio, March 11.

TOLEDO, Ohio, March 11. A PET SKUNK.—Mr. S. was left last summer to keep few months after Mrs. S. left home, Mr. S. was quictly sit-ting by his kitchen fire reading, when he was somewhat sur-prived to see a skunk come in at a small opening in the door which had been left for the accommodation of the cat. The skunk was jet black, not a white hair on him, as far as Mr. S. could see. He first looked sharply at Mr. S., then com-menced to explore the room. After his tour of inspection, seeming to think everything all right, he laid down by the vishing to see what his visitor would do next. Some time after, the skunk, probably thinking that his visit had been forge enough, quietly left the room the way he entered. This programme was kept up for about twenty evenines, not all in succession, however. The coming of the animal got to be so common that Mr. S. took no notice of it after looking up on its entrance, but read until bedtime and then retired. Sometimes he left his visitor in possession of the room. After the the cat did not like the intrusion, but raised her back and sputtered on the skunk's arrival. It gradually got accus-tioned to the visits and paid no more attention to his skunk would finish the balance. After a time the visits cased alto gether, and nothing has since been seen or heard of the skunk would finish the balance. After a time the visit cased alto gether, and nothing has since been seen or heard of the skunk would finish the balance. After a time the visit cased alto gether, and nothing has since been seen or heard of the skunk would finish the balance. After a time the visit cased alto gether, and nothing has since been seen or heard of the skunk would finish the balance. After a time the visit conset of the shurd have jumped up, threw something at the skunk, and then — been sorry for it for several weeks afterward.—RED Wine (Glencoe, Vol. Co., Fla.).

THE TRAJECTORY TEST.

 $T_{\rm ing}^{\rm HE}$ full report of the FOREST AND STREAM'S trajectory test of hunting rifles has been issued in pamphlet form, with the illustrations and the tabular summary, making in all 96 pages. For sale at this office, or sent post-paid. Price 50 cents.

GROUSE IN THE SNOW.

<text><text><text><text>

would be very likely to feel any sudden fall of rain and im-mediately put himself in position to be crusted under rather than over. The above position is taken after many years' careful not-ing of the habits of the grouse. Without boasting I have traveled many miles in the woods on snowshoes where the burrowings of the grouse were very plenty, yet never have I seen the place where I supposed the bird came to his end by being crusted beneath the snow. These burrowings are plainly discernible, especially toward spring when the snow has begun to settle, and if the grouse perished there, the feathers at least would be left. I have found where the partridge has come to his end in the winter, but not gener-ally near any burrow. The owl is a deadly enemy of the grouse, and woe betide him if Too Whoo gets his night eye upon him. Now, in all caudor, will the writers in the FORDST AND STREAM note carefully how many birds come under their observation as actually having perished under the snow crust, and give us the number? From such facts we will measure the prospects of our fall shooting; but give us no more of the old whine that the partridge dives under the wet snow and gets crusted over. And, to wind up with, will they please tell us how many hens they ever saw go in wimming?

HUNTING AT ARMY POSTS.

A FEW more replies from outlying army posts adds to the favors we have received from our friends in uni-form, and our readers, too, are treated to additional notes from men at the front, close up to the ever-retreating game line in our rapidly filling domain.

from men at the Front, close up to the even reasonable of line in our rapidly filling domain. Editor Forest and Stream: A very extended description of this beautiful section of country, with a full account of its resources for sport would be very interesting. But unless one goes some distance from the post, game is scarce—as is usual near military posts whose vicinity is always thoroughly and continuously hunted. Ducks and geese are fairly abundant within six or eight miles. Fish also between ten and twelve, are numerous and large, the sport in the Williamson River—twelve miles dis-tant—being magnificent between May and November. But the "post larder" does not take game of any kind into con-sideration. The Springfield shotgun is excellent—of its kind —and is much used for want of a better; but it is considered even by those who use it as a *dernier ressort*. As double-barreled breechloading shotguns of good make and caliber are issued in some branches of the scrvice, we see no reason why each company should not be supplied with two such guns. A. R. EGBERT, First Lieutenant, 2d Infantry. FORT KLAMATH, Ore., Feb. 15. FORT KLAMATH, Ore., Feb. 15.

Editor Forest and Stream: In reply to your note of inquiry dated Jan. 9, you are re-spectfully informed that large game is not plentiful in this immediate vicinity, particularly this year on account of drouth. Small game-duck, quail and rabbit--is plentiful; also doves, starlings and blackbirds. Of ducks we have a few canvasback, more redhead, a large proportion of green-head, and any amount of the more common varieties. Of quail (Origa californicus) we have the "black plume" and the "white crest," both long winded and very swift runners; when matured will not lie to a dog. The prevailing drouth has destroyed all the ponds on the Texas hank of the Rio Grande, but just across, in the "Land of God and Liberty," the ponds, lakes and sloughs are never failing. So also the ducks.

Inferty, the points, facts and stoughts are defined and the second state of the decks. On several different occasions, during November and Decomber last, the entire garrison was bountifully supplied with ducks bagged by three guns, twice with two guns and once with one gun, the party leaving camp at 9 o'clock A. M. and returned later. Distance from fort to nearest pool seven miles. The officers and several of the men own and shoot their own or their neighbors' guns. The Springfield shotguns issued to troops cannot compete alongside the hard and long shooting double guns, and are not used, so far as my observation extends. The larders were well supplied with duck, quail and rab-bit, with now and then a saddle of venison and large channel catfish. S. B. M. YouNG.

CAMP RICE, Texas, Feb. 28.

CAMP Rice, Texas, Feb. 28. Editor Forest and Stream: The only two species of grouse found in the Puget Sound country are the ruffed and dusky, or blue grouse. The latter are plentiful along the foothills of both the Cascade and Coast range of mountains. Both the Virginia and California quail have been introduced into this part of the Territory, and owing to the mildness of the winters, are increasing rapidly. On some of the islands in the sound a fair day's shooting can be had on this bird alone. The Chinese or Mongolian pheasant, have also been introduced here, but as yet are principally confined to Protection Island, although some have been scen on the mainland. All kinds of water-fowl abound in the waters of Puget Sound. Some of the finest bags of ducks and geese I ever saw were made on Whitby Island, a short distance from Fort Townsend. The country lying between the Straits of Fuca and the Coast Range is, as yet, comparatively unknown. Within the past two years two parties have been scalt from this post to reconnoiter this country. Both parties reported as hav-ing seen large herds of elk near the base of the range, where the timber and underbrush is not so dense as it is nearer the Straits. When heavy snows fall on the moun-tains this animal is found nearer the coast. The white and black-tail deer are plentiful all through this part of the Terri-tory, also a great many black bear and cougar; but owing to the heavy growth of timber with thick underbrush and wind-falls, the hunter finds it more of a task than a pleasure in hunting the large game. Fort Towssen, W. T., Feb. 20. Editor Forest and Stream:

hunting the large game. Browners, W. T. Geban, S. Strand, Strand,

The gun weighs 6 pounds, the length of barrel proper is 29 inches, including the breech block the length of barrel is 29 inches. Take it all in all, I consider the guns satisfactory, and they fulfill the purpose for which they were issued. That is, to give the soldier something to kill game with that is too small for shooting with the army rifle. As to game in the vicinity of post, within fifteen miles there are two kinds of bears, black and cinnamon, two kinds of quail, "whitetops" (*Callippela squamata*) and fool quail (Massena quail of castern writers, *Cyrtonyx massena*), wild turkeys, blacktail deer, panther, wildeat, and two kinds of bares, the "cotton-tail" and *Legus americanus*, var. *Bairdäi*. In the spring and fall a few ducks on the mountain streams, mostly mallard, widgeon and greenwing teal, and the cinna-mon teal. By going some distance you get plenty of ducks and geese and antelope. The bears are very abundant, more so than anywhere I know of. In a range of mountains but nine miles from the post they are plentiful. They are not hunted. Turkeys are plentiful also. Deer are not so com-mon, as they are killed by the Apaches, but luckly these Indians will not eat wild turkey, so this helps to protect them. The Apaches also will not eat trout, which is another blessing, as otherwise they would be exterminated. Bear meat is another food the Apaches are forbidden by their religion or superstition to eat. F. FORT STANTON, N. M., Feb. 3.

THE TRAJECTORY TEST.

Editor Forest and Stream: All sportsmen and riflemen should certainly tender you their warmest thanks for the great trouble and expense you have incurred in presenting them with the valuable informa-tion contained in the results of the famous trajectory test. As you have invited criticism thereon I would make a few observations.

observations. There are three things which influence the trajectories of projectiles, viz.: The initial muzzle velocity, section and weight of the projectile. The first varies with the charge and nature of the powder contained in the cartridge, the second is the caliber of the rifle, and lastly the weight of the bullet. Therefore, to arrive at the correct trajectory of a rifle, all these must be taken into account, otherwise the test is of little value. As the ammunition is the important factor, I would draw the sportsman's attention to the great discrepancy that exists between the "actual" weight of the powder and bullet, and the so called "standard" of the trade cartridge. Noticing some difference I took the trouble to tabulate the "cartridge test" as given in your valued paper, and was much surprised at the result. From the list of weighings I will select those of the am-

at the result. From the list of weighings I will select those of the am-munition used in the two.50-cal. express rifles, the Win-chester and Bullard. When the makers designed these rifles, they, I presume, found after careful experiments, that the best results were obtained with certain weights of powder and bullet, and adopted the following as their "standard charge," viz., Winchester 95 grains powder, 300 grains bul-let; Bullard 115 grains powder, 300 grains bullet. Now the "test" shows that we are paying for the "standard," but what do we get? Winchester, 89 & 89.3, 89.3 grains pow-der instead of 95, and 205.3, 298 & 300.8 grains bullet instead of 300. Bullard, 112 1, 111.2, 110.1 grains powder instead of 315, and 303.6, 303.7, 306.8 grains bullet instead of 300. The powder is reported as in good condition but "pressed hard," which proves that the shells will not hold the standard charge. A difference of 4 grains less of powder will give at least 40 feet less initial velocity, and therefore at 200 yards the bullet will strike several inches lower on the target, which means higher trajectory. These rifles would certainly give flatter trajectories than is recorded were the cartridge up to "standard" instead of an increased weight of bullet and decreased weight of powder, as shown in both cases. In going through the whole list of the ammunition test, the only deduction that can be drawn from it is that there is no ac-curacy in the making of the "trade cartridges," which are used by all sportsmen and riflemen in America. **UVA LOS CACHUPINOS 1** From the list of weighings I will select those of the am-

A DAY WITH THE CORDELIA CLUB. "Height" Thook up and see the joly faces of Char-ley and Cap peeping in at the half-opened door. "Why, of course I want to go." "All right; take plenty of shells and the 8:30 P. M. overland train, and I will meet you at Six-teenth street," says Charley. Accordingly, 8:40 P. M. next bound for Teal Station. Charley swings himself aboard at Sixteenth street, fresh, smiling, and as neat as thoogh just and would fill an ordinary vest pocket. How is it that some people always contrive to travel without being encumbered with any luggage, while I always perspire under the weight of so many traps? Two and a half hours of swift riding en-tivened with pleasant chat, and evening shades beginning to fall, we find ourselves in a marshy country, with ditches and mbankments, and an occasional feeble glimmer of light from some little mud-colored house. Presently, "Here we are," says Charley, and hastily grabbing packages, we jump down from the scarcely stopping train and find ourselves at teal, represented by a diminutive redwood shanty, a concern which any healthy fiteen-year-old boy could easily carry and to the yacht Lolita, which now more nearly resembles hoak are, the deck being housed over from stem to stern, hus transforming the fast little craft into a perfect duck hus transforming the fast little craft into a perfect duck hus transforming the fast little craft into a perfect duck hus transforming the fast little craft into a perfect duck hus transforming the fast little craft into a perfect duck hus transforming the fast little craft into a perfect duck hus transforming the fast little craft into a perfect duck hus transforming the fast little craft into a perfect duck hus transforming the fast little craft into a perfect duck hus transforming the fast little craft into a perfect duck hus of past hunting trips, for you must know that his little past to be year transforming the fast little craft into a perfect duck hus fuely there always is—till presently, we see one big fellow is a con

Great Heavens, who that ever went out to the "early norning's shooting," will forget the diabolical racket raised y that little alarm clock that hangs in the cabin of the Lolita.

by that little alarm clock that hangs in the cabin of the Lolita. "Turn out, boys, half past three o'clock," shouts Cap, tumbling out of his bunk and climbing on deck to see how the weather looks. Charley follows suit, and I make a sleepy attempt to crawl into my clothes, generally getting on a gum boot first and inwardly wishing that something would hap-pen so I could get into my comfortable nest again, and an instant later I thought I was to be so favored, when Cap shouted from on deck, "Boys, it's raining," and so we found it, a cold drizzle, just enough to be disagreeable, but not enough to scare such a couple of old toughs as Cap and Charley. In a few moments breakfast is ready, and alter disposing of a liberal allowance of chops, boiled eggs, toast and strong coffee, we envelop ourselves in our ollclothes and rubber boots and are ready for wet weather. "How many shells shall I take along, Cap?" "Take every shell you have, Andy," But I can't believe I shall want a hundred shells, so ot take seventy. "Come, on Andy, you are always behind," shouts Charley from the skiff. I take my seat and the bow oar and Cap the other, while Charley with a stern counte-nance, as much as to say, "you need not ask me to row your old boat," takes the tiller and we are off for an hour's pull to the Sring Ponds. Soon we come to a ditch and we drag small duckboat from a number we find in the ditch, we transfer our guns and traps to them, each also taking a large sack of decoys and paddle out, Indian file, going through many little ponds and scaring up clouds of mallards, teal and sprigtails. But we don't stop for them, nor they for us, for that matter they know they are not "our ducks." Presently Cap shouts back, "Andy, you go in here, this is the Judd stand." I an tired enough to be glad to come to a stand of any kind, so I hurry and put out my decoys, drag my little poat

us, for that matter they know they are not "our ducks." Presently Cap shouts back, "Andy, you go in here, this is the Judd stand." I am tired enough to be glad to come to a stand of any kind, so I hurry and put out my decoys, drag my little boat ashore and cover it with the long grass, crawl into the little wet blind, make myself as small as possible, and await the ducks. My fingers are numb with cold, and there is always a rascally decoy that wants to stand on its head. The ground is well littered with empty paper shells, showing that the place has been made good use of before. I haven't got into concentent a moment too soon, for the birds are beginning to come back. I raise my head a little, a pair of teal coming. I miss one but drop the other. Then comes a spoonbill and I lay him low, then a succession of misses, and there comes a rush of wings, and a mighty splash, and peeping out I see, not twenty feet away, half a dozen lordly canvashacks swimming about among the decoys. I blaze away but only kill one, as they rise I knock down another. Good enough, a pair of "cans." I am satisfied now, if I don't get another duck. Now comes a lull in the flight, and rising to stretch my legs, I discover a pair of mallards that have swam in from another pond. I drop one dead as a mackerel, the other one comes fown too, but only winged, for he is making for the shore for dear life. I push out the boat and go for him, but he is too quick, and gets away. Thun the low bank over and over, but no use, so I padle back, pick up my five dead birds and get into cover again. Then come more mighty rushes of wings, more splashes, a good many misses, but a good many ducks drop too, and their white bellies begin to make quite a show in the little pond, some are dritting away out of sight, round a point, too, so I push out and gather them in, and am surprised to see what a breastwork of ducks I am getting in front of me. I am also surprised, on taking stock, to see what a small number of shells I have left, and begin to wish I had taken

geese, hying low, came over, and 1 drop two of them. It is getting along toward noon now, warm and pleasant, and I begin to feel hungry; but it is curious how the birds come as soon as I begin to eat my lunch. I finish, finally, and resume business, firing carefully now and taking no long shots, till I fire my last shell and with it get a duck. Then I come out of my hole. There is no use for concealment any longcr; gather up my decoys, wash out my duck boat, and ship my game and traps aboard. But how the ducks

FOREST AND STREAM.

GAME PROTECTORS' REPORTS.

Editor Forest and Stream: The several fish and game agents have filed their monthly reports for February with State Fish Commissioner Sher-man, of New Hartford. Brief abstracts of the reports are

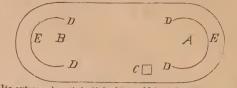

The several fish and game agents have filed their monthly reports for February with State Fish Commissioner Sher-man, of New Hartford. Brief abstracts of the reports are given below: Geo. W. Whitaker, protector for the first district, reports having brought suit against George Hutton and Richard Drake, of Suffolk county, for having trapped partridges in their possession. Hutton was acquitted, but Drake was fined \$5. The protector traveled 178 miles during the month, and his expenses were \$10.65. Joseph H. Godwin, Jr., protector for the second district, in his report says that he has been co-operating with agents of the New York City Sportsmen's Association. But few violations of the game laws have been discovered recently. Sufficient evidence was obtained to warrant the commence-ment of two suits for violation of the fish laws. His ex-penses were \$22.50. Protector Seymour C. Armstrong, of district No. 5, re-ports having begun action in the Supreme Court of Warr en county against John C. Alden and Michael Schrodts for hounding deer. He traveled 405 miles during the month, and his expenses amounted to \$17.93. John Liberty, protector for the sixth district, writes that he visited Nichols Pond, near Westport, to obtain informa-tion against parties accused of hounding deer. The de-fendant paid out \$5.25. Peter R. Leonard, protector for the seventh district, brought suit in the Supreme Court of St. Lawrence county against Walkee McFarland for hounding deer at Tmper's Lake. The case was settled, defendant paing \$75. Pro-teator Leonard also recovered a penalty of \$50, with \$55 costs, in a suit against Darwin Day and others, for killing deer out of season. He traveled 209 miles and expended \$18 20. Speaking of the recent action of the Assembly relative to the repeal of the anti-deer hounding law, Protector Leonard against Warde Moudmard for hounding deer at Tmper's Invang begun suits against W. Dirtser, David Moshier and Edward Spencer, in Fulton county, for disturbing trout on their spawing beds. In the case of

Protector W.M. N. Steele, of the twenth district, traveled fifty miles and paid out \$2. He found no evidence on which to base a suit.
John Sheridan, of Penn Yan, protector for the fourteenth district, destroyed a set line valued at \$5 in Keuka Lake. He traveled 539 miles and expended \$20.83.
Geo. M. Schwartz, of the fifteenth district, brought suit against Wm. Carson, Henry Andrews, F. Ridgeway, Chas. Howard, Daniel Tompkins, Daniel Clump and Robert Scott, in the Wayne county Court of Oyer and Terminer, for illegal fishing in November. During the month he destroyed four fyke nets, valued at \$45, at Long Pond and Irondequoit Bay. The action against the Rochester Paper Mill Company has been settled, the corporation paying \$25 and promising to throw no more refuse in Genesee River. The protector traveled 170 miles during the month and his expenses amounted to \$53.
Protector S. A. Roberts, of the sixteenth district, reports having destroyed a seine valued at \$40, found in Niagara River, Henry and Christopher Miller were fined \$25 each for illegal fishing, and in default thereof were sent to the workhouse for twenty-five days. The protector traveled \$29 miles and expended \$13.80.

[MARCH 18, 1886.

SADDLE SLING FOR THE PLAINS.

HUNTING a great deal in the saddle I was naturally very much interested in "W. E. B.'s" destription of a gun sling, in FOREST AND STREAM OF Oct. 1, and can fully ap-preciate the difficultics one has in managing a horse and carrying rifle or shotgun in their hands. I send with this a pattern of sling which I use on the plains. It is fitted for a Sharps' .45 70, and a regular "cow-puncher's" saddle.

Its extreme length is 15 inches; width, 6 inches; openings at A and B, 24 inches; width from D to D, 24 inches; length from center to E, 7 inches. The square hole marked C is where the rear sight comes when the rifle and sling are fast to the saddle. I do not cut out the openings A and B but leave tongues, the lower one giving a bearing for the rifle against the horn of the saddle and furnishing a smooth sur-face for rifle to be pressed against when in haste to unfasten it from sling, or, in other words, to "draw it." I do not have to pull the rifle out lengthwise but can simply grasp it near the lever, give it a push forward, and the upper half of the sling releases itself. Can draw a rifle as quickly as the typical bad man from Bitter Creek can draw a pistol. Have ridden hundreds of miles and never had my rifle offer to jump the sling, and when properly fitted rides smoothly and does not necessitate ones holding on to it even when the horse is running at full speed. MILLARD. BEAR CREEK, Wyoning.

BEAR CREEK, Wyoming.

A TRAMP FOR MOOSE.

A TRAMP FOR MODEL. HARME hard that a well-known sportsman of the neighborhood had returned from a week's tramp with one mose, I suggested to my friend 8, that we should try we made preparations for an early star to Mondry, the 18th, We hald in a supply of bisouts and taked to have pot of beans, and with some fat pork, etc., got ogether enough to beans, and with some fat pork, etc., got together enough to beans, and with some fat pork, etc., got together enough to beans, and with some fat pork, etc., got together enough to beans, and with some fat pork, etc., got together enough to beans, and we see in meet us on Monday at the house of a farmer named Clark, whose house is the last on the read before taking to the woods. At 7. M. off Monday, we were all equipped, and pack-mise miles from Bear River Village, at 11. A. The In-duas had not yet arrived, so we wailed an boar for them. When they came they told us that there would be too much wate on the lakes and that we had better will till next day. but we hought it better to make the attempt, and so started. Or first lake was Lake Joly, about a mile and a half long. The ice was not very strong, but we manged to get across ino artifies and a sit was freezing hard we anticipated to arther trouble. We next passed in succession ninth, eighth, seventh and sixth lakes, and at the foot of the latter we came to our first in and long this was bright and cold, so that with proto one, but the night was bright and cold, so that with proto of sand bank which runs from the Bay of Fundy right through to the ocean on the other side. It has no treeso it, and long as a sit was freezing hand. This has a fort of and bank which runs from the Bay of Fundy right through to the ocean on the other side. It has no treeso it, and oth a signt latter we came to Moosehead Lake, at the foot of which we intended to camp. This has lake is two and a half miles long. We arrived at camp rather tired to 2 M., and at once started to get dimer rout of the maples. I

join in. For the benefit of those who perhaps have not had an extensive experience in this sport I would suggest the advisability of carrying a light good rifle, as it becomes very heavy carrying after a long tramp. The one I used was a .42 caliber. PEREGRINE PICKLE.

THE DEER HOUNDING BILL.

W HEN the bill to repeal the anti-hounding law was under debate iu the Assembly, the two principal ad-vocates of its passage were Messrs. Hadley and Palmer. The misstatements contained in Hadley's speech were ex-posed and commented upon in our issue of March 4 Self-dubbed "old practical hunter" Palmer's speech is the funniest thing we have yet come across in all the deer hounding dis-cussion. Here is the stenographer's report of what Palmer said:

thing we have yet come across in all the deer hounding dis-cussion. Here is the stenographer's report of what Palmer said: Mr. Palmer spoke as follows: Mr. CHARMAN: It must be evident to the House that my gallant friend from St. Lawrence (Gen Curtis) is not a prac-tical deer hunter; that his knowledge upon this subject is derived mainly from a careful perusal of the literature which is placed upon our decks and sent through the mail for the last two or three weeks upon this subject. He has given us a very careful resume of the objections to this bill contained in this very literature. Now, gentlemen, will you indulge a few moments an old practical hunter on this subject? For more than forty years I have been accustomed annually to go to the Adirondack forests as a sportsman hunting deer and catching speckled trout. It is my deliberate opinion, from my personal knowl-edge of this subject, that the most speedy extermination of the deer in those forests that you can possibly devise will be to forbid hunters and sportsmen the use of dogs in the pur-sui of deer. We all know that the me who hunt deer for market for pay never use or own a dog. The men who use dogs are the sporting gentlemen who go in there for a week or two of amusement. And I assert here that a party of six gentlemen going into those forests with half a dozen dogs, two or three nights a week on an average, every deer they bring out costs them more than one hundred dollars. Hence it is that the men who make a profit in their business, who kill deer to send to the market, never use dogs. They still-hunt and kill the deer by the score and send them into the market. Now let me tell you a little incident that happened to use

hunt and kill the deer by the score and send them into the market. Now let me tell you a little incident that happened to ue about twenty-five years ago, on one of those beautiful lakes that grace the Adirondack region. A party of four or five gentlemen went to the upper Chataugeay Lake; on a little island in the middle we camped. We had half a dozen dogs, half a dozen boats, and half a dozen guides. We spent the whole week there with our dogs, every day striking a fresh track—for six long days, and not a deer did we get. The guides said to us, "Put your dogs in the kennels, and to-morrow we will have some sport and you will have some deer." We followed their advice, the dogs we shut up. The next day we went to the shores of that lake still-hunting, and before noon we bagged seven deer. I know an old hunter who lives in that region, famous all the country through for his success in killing deer. He never owned a dog in his life. He kills more deer than any other man within ten miles around and he invariably kills them by the still-hunting process. He steals noiselessly on the deer when the first enow falls. The gentleman (Mr. Curtis) has read to us something from

around and he invariably kills them by the still-hunting process. He stals noiselessly on the deer when the first enow falls. The gentleman (Mr. Curtis) has read to us something from this literature in regard to various objections to this bill. Impracticable, and most of them utterly absurd, as known by all men at all acquainted with the subject. He says the dogs go out of their own accord and hunt deer through the swamps and mountains. Dogs never hunt deer or forget to follow it. Of course when he goes upon it and gets excited, he concerness ticks to it if he is a good dog. This subject he concerness the set of the subject here is a source of the subject of the set of the

Editor Forest and Stream: I was somewhat surprised when I learned by your issue of March 4 that the deer hounding bill had passed the Assembly by such an overwhelming vote. I had the patience to read Mr. Hadley's speech. It was a filmsy affair, too thin to hang together, and not worth contesting. But what surprises me the most is that ninety-three members of the Assembly of the great State of New York should vote to let loose the hounds, ostensibly for the preservation of deer. I must say that looks like preserving the deer with a vengeance. Was there ever anything more ridiculous. I mean the filmsy excuse.

there ever anything more relations. I mean the inney excuse. The final ending up of the remnant of deer in the south western part of the State was accomplished by hounding several years ago, and the deer in a portion of Pennsylvania shared the same fate. It was hounds from first to last, hounding from beginning to end, that is to the end of the deer, and I am beginning to end, that is to the end of the deer, and I am beginning to end. The same calamity awaits the Adirondack region. It is only a question of time. The deer have something of a reasonable chance among still-hunters, also among wolves, but when a pack of wolves

are on one end of the trail and the water butchers, and the inevitable buckshot gun at the other end, the deer must go. There are some deer hounders scattered over a large por-tion of Middle Tennessee, and I have conversed with several on that subject, and they are (invariably to a man) honest enough to admit the fact that hounding is the most sure and only way to exterminate the deer. They also claim that they are in favor of a law prohibiting the same. But as it is, they reiterate the same old story, that if they don't hound deer somebody clase will. somebody clse will. GRAND VIEW, Tenn., March 13. ANTLER

reiterate the same old story, that if they don't hound deer somebody cles will. ANTLER. GRAD VIRW, TERN, March 13. A hearing as to the proposed hounding law was had on the Senate Chambler, but it was after 4.30 before the hearing was opened in one of the committee rooms. Of the committee, Messrs, Vedder and McMillan were present, and for a part of the time Mr. Wemple. The hounders were represented by Dr. Ward, Mr. Palmer, Mr. Cookingham, Paul Smith, and five or six others. Almong the anti-hounders present were Hon. Lansing Hotaling, Hon. C. L. Merriam, Hon. H. A. Spraue, Messrs. Collins, Yan Santvord, Sytes, Webb, Pardy, Bird, Grinnell, McChesney, Fenton, Smith, Youngs, Mayer and about filteen others. All parts of the State were represented, and the greatest interest manifested. The dis-cussion was opened by Mr. Cookingham, of the Bisby Club, who argued that while floating is permitted the use of dogs does protect the deer; that a deer which had been dogged would not be so likely to let the jacker padle up to it. He did not regard this bill as by any means a perfect one; it had many objectionable features, but he did think it was a fair compromise. He would have deer protected for the sake of recreation and sport. He believed that more deer were killed— in proportion to the number of men engaged in it—by fortion so the number of men engaged in it—by for the deer, the said that most mec cannot still-hunt, hey do not know how. In his experience a dog could not eat have due when there was no somo on the ground. Deer when chased by dogs are accustomed to to to along unco-ceredly, frequently stopping to bathe in the water, and then get up, shake themeslves, rub their heads along the ground, aroused by the voice of the slowly approaching dog. He stated positively that the use of the dogs had broughl back the deer to the grounds of the Bisby Club, Mr. Spraue followed Mr. Cookingham in a speech, whiet hat do his predecessor had more to do with the subject under onsideration. He defined the methods of killing deer and

he shy. more sl Mr. ien

Grant, a guide, who said he had had thirty years Mr. Grant, a guide, who said he had had thirty years' cx-perience, next spoke on the side of the hounders, and was followed by Mr. Fenton, who read a paper on the other side. He brought out two interesting cases to show that deer pur-sued by wolves or hounds became tame, so far as man is concerned. Next came Mr. Barnes, of Essex, known to fame for his touching comparison of a vigorous Adirondack deer to a discased cat on the back fence, and M. W. Youngs and Charles Smith, old guides, both of whom considered dogging the most destructive method of killing deer in the Beaver River region. It was now nearly 7 o'clock, and the hearing was finally adjourned, owing to the engagements of the committeemen. It was a serious disappointment that neither Mr. Hotaling nor Mr. Van Santvoord was heard, owing to lack of time.

MIDDLEFIELD, Conn., March 14, 1886 .- Editor Fores

MIDDLEFIELD, Conn., March 14, 1886.—Editor Forest and Stream: At a meeting yesterday of the executive committee of the Middlesex County Association for the Protection of Fish and Game the following resolution was taken and put on file among the minutes of the meeting: Middletown, Conn., March 13. Resolved: That this association is in entire sympathy with the stand the FOREST AND STREAM is taking against that most unsportsmanlike sport, deer hounding, and we hope and believe that we repre-sent the semiment of all true sportsmen in Connecticut. (Signed) J. C. BROATOH, Secretary. Our president, Dr. Alsop, and secretary, Mr. Broatch, sug-gested that I forward this resolution to the FOREST AND STREAM for publication if desired. We are about to put a lot of young trout in a number of streams in the county and hope to each some of them when they grow up.—MEMBER

The last number of the FOREST AND STREAM contains an admirable cartoon on deer hounding. The artist pictures a doe struggling helplessly in the middle of a lake, with two men in a boat attempting to kill it. One of the hunters is holding the animal by the tail while the other clubs it with an oar. Two other boats are coming down the lake, and on the shore near by are the three hounds which have put the deer to water. The picture illustrates very fincly the method advocated by hounders for making the deer shy so the still-hunters can not get them.—Utica Herald, March 15.

The deer hounder who has decency enough left to squirm while looking at the cartoon in the last number of FOREST AND STREAM cannot relieve himself by calling the picture a carica-ture. It illustrates the alleged purpose of the hounder of our noblest game—''to make it 'shy' so that the still-hunter will not get it'—by depicting an excited hunter in the bow of a skiff, with oar uplifted to beat out the brains of a swimming doe which the guide, kneeling in the bottom of the boat, holds by the tail. The picture would be a gross cari-cature of any possible action of a sportsman, but the North Woods are deplorably infested with mere sporting men. Their method of deer hunting affords one of the distinctions

between the two classes. If the sportsman put hounds on the track of a deer it would be for the chance of a shot at the bounding game on its "runway." Missing the animal, and seeing it fairly in the water, he would be ashamed to use dog and boat in the same hunt. Not so with the sporting man. If he had not before lost all shame, he would lose his head in the excitement of the occasion, and eagerly butcher the game in the manner the cartoon represents. He would not dare to honestly describe his exploit to decent people. The sportsman need never hesitate. FOREST AND STREAM is on the side of the sportsman every time, and it has made many a keen thrust at the mere killer; but seldom has it punctured a victim's hide more shrewdly than with the pencil of its latest artist.—Syracuse Standard, March 13.

Last Wednesday afternoon a hound drove a two-year-old deer through the outskirts of the village and succeeded in eatching it near the St Lawrence Marble Co.'s quarry. A number of the employes of that company thought they would cut its throat and dress it out, which they proceeded to do; on being informed that they would be liable to a fine for having the meat in their possession, they drew off and left the careass. In a few hours it had disappeared, some one having stolen it.—Gouverneur (N. Y.) Free Press, March 3, 1886 March 3, 1886.

March 3, 1886. CRYSTAL LAKE CLUE.—Burlington, Iowa, March 10.—I send you by mail to day copy of the rules and regulations of the Crystal Lake and Eagle Grove Club. This club was or-ganized less than a year ago, and already has a membership of about seventy. It is the intention of the members to pro-tect and encourage the propagation of game and fish, and punish law breakers to the full extent of the law. They have purchased about 2,500 acres of land, the best duck-shooting ground in the vicinity. It includes also Crystal Lake, Lone Tree Lake, Sand Lake and several smaller lakes, as good fishing waters as can be found in Illi-nois. They have also erected on Crystal Lake an elegant club house 30x40 at a cost of \$3,000. It is within about 50 feet of the C. B. & Q. Railroad, which makes it very con-venient, the company having made the club house a regular station. Accommodations are furnished the members at the rate of \$1 a day. There has been some spearing and fishing through the ice this winter, but the catch did not amount to much. Your correspondent and a friend in one day speared about 100 dogfish. The ice is just breaking up at this point, and ducks are beginning to come in small flocks. Prepara-tions are alrendy being made for the Sportsman's Tourna-ment to be held here in June. The early part of this week C. H. Wyman, one of our best amateur rideshots, with a .22-caliber Bullard, broke 471 out of a possible 500 glass balls, at 15 feet.—C. L. E. G. 15 feet.-C. L. E. G.

SwANS IN FLORIDA.—St. Andrews Bay, Washington Co., Fla., March 2.—Editor Forest and Stream: On a trip from Pensacola to this port I spent one night at a farm house on the sea coast. In the morning I noticed what I thought was a swan among a flock of geese puddling in and near the water's edge. Mr. B. (mine host) said he supposed that it was a swan, as he had been so informed by a number of persons. It had come there about three months before, hud "laken up" with his geese, and was now perfectly tame, as he showed me, by calling it to eat bread from his hand. Get-ting my host to catch the bird, I found it to be a whistling or American swan. "Hallock's Gazetteer" says that this species is not seen further South than North Carolina, but Mr. B. tells me that for some years past he has seen them around the salt marshes in his neighborhood. He had shot several, and was positive that it was the same bird. The largest flock that he saw contained six birds. The hunting in this vicinity has been quite good this winter, deer, bears and small game being quite abundant. We have a great many ducks and a few geese on the bay this season, but they have been hunted a great deal and now arc quite shy and keep well out in deep water. The fishing here during the spring, summer and fall months is excellent, there being any quantity of redfish, trout, sheepshead, Spanish mackerel, and other varieties of food and game fish.—W. A. M.

MAINE LUMBERMEN AND GAME. — Editor Forest and Stream: No doubt nine-tenths of the large game are killed by the loggers now in the woods and they rest in assured security. Not a season goes by that the writer does not learn that crews are largely supplied with wild meat. In the fall, before good sliding, the rifles are in constant use. At one camp last fall half a score of caribou and one moose were shot in one day and the supply was so great that one caribou killed two miles only from camp was left to spoil. In the salmon pools dyuanite is the agent used to procure a change of diet. These are cold frozen facts, which the Commis-sioners can easily verily. The works are easily reached by toteroads and once there the evidence is to be found. There is now over five feet of snow in the woods and nothing on legs can escape the pot-hunter. Meat will be plenty in camps not supplied by teams. How long shall this continue?— MATTAWAMKEAG (Bangor, March 2).

New HAMPSHIRE DEER.—Plymouth, N. H., March 3.—A. raid was made last week on the deer crusters in Carroll county by Commissioner E. B. Hodge. He succeeded in convicting eight who were fined \$25 and costs each. Warrants were issued for others but they could not be found. The deer are rapidly increasing in that section of the State and if they could be protected during the deep snows it would soon become one of the best sections for still-hunting in New England, being very easy of access by rail. From Conway or Glen Station, on the P. & O. R., one hour's ride and one hour's walk will land the hunter to the deer resorts. Good guides can be found at Conway or Jackson and the sportsman will have no fancy price to pay for their services.—CARROLL.

WILDCATS IN CONNECTIOUT.—Essex, Conn., March 2.— Wildcats have been unusually plenty in this part of Connecti-cut this winter. In North Gulfford recently Nelson Lane, armed with an axe, killed one in his woodhouse after a long and desperate battle. In Salem a hunter killed another with a revolver. A wildcat is robbing Niantic hen roosts, and has been hunted repeatedly without success. In Killing-worth three of the animals have been killed this season; in North Gulford one, in Chester one, iu Snybrook one, in Niantic and East Lyme three. This is something phenome-nal iu Connecticut hunting annals.

EARLVILLE, Madison Co., N. Y.-Partridges and wood-cock last fall were quite plenty, but our winter shooting is poor. Rabbits are very scarce, and very few foxes have been killed thus far.-G. F. B.

TAUNTON NOTES.—Taunton, Mass., Feb. 20.—The game about here appears to be wintering all right. Many quait and ruffed grouse were left at the close of the season, and if they are not shot and snared during the close season there will be plenty to breed. Game has been very plentiful this fall and winter; in fact, I never have seen as many quait and partridges before. Many very large bags of partridges have been made. Several scores for the season are as high as 125, and one fellow says he has killed 300. He is a market-hunter and went nearly every day. About two-thirds of the game hung up in our markets show no signs of blood or shot and have no doubt been snared. Many large flocks of quait lived through the open season, and we may expect plenty of quait next season. There were no flights of woodcoek this fall. Several pairs bred, but were cleaned out in August; only a very few taken in the fall flights. Rabbit shooting has been as good as usual. Quite a number of foxes have been shot. Our markets are filled with prairic chickens, some of which have been kept several months. A partridge was caught alive in a curious way a short time ago. Two boys in the woods were sitting down to eat their dinner, when a partridge flew by and dropped into some bushes. The boys ran and threw themselves into the bushes over the par-ridge and caught him alive. I saw the partridge in a cage and should say he was a young bird.—CHESTER.

GARDEN CITY, Kansas, March 1.—Game of some kinds is fairly plentiful in this part of Kansas. Antelope are found in small gangs, though scores of them were "butchered" dur-ing the blizzards and deep snows of January, their hunger driving them into the city limits and rendering them bold. I do not hear of the finding of any that were frozen to death, though thousands of cattle and sheep met that fate, their carcasses lining the Santa Fé Railroad in great numbers on the noth, where they had drifted against the fences and dicd. A large flock of geese pussed north last week, and some ducks have been coming into the Arkansas river. Wildfowl are said to come in immense numbers 100 to 150 miles east of here, but I think they will give us the "go by" until we begin to raise erops of grain for them to feed upon. This I hope will be the case this season, so we may have good shooting next fail. At present very little grain has been raised.—VETERAN.

New JERSEY GAME.—Quail have been quite plentiful around Madison, but very hard to find. The shooters have been comparatively few, I am glad to say. Partridges have increased, owing to the very few who hunt expressly for that game, and also to the very thick cover they have been driven to occupy. In November I was told by a first-class rabbit shooter that there was hardly any of that game to hunt, and he owns the best dog in that section, but could not make half the bag he made last year; but I know that rabbits are quite plenty. The last woodcock season was a very poor one, and it will be a poorer one yet next year. If summer woodcock shooting is not stopped, good-bye to woodcock. Wild ducks do not come to the meadows as usual; for what renson I do not know, as there is plenty of food for them.—16-Boke.

"WOODCRAFT" is a manual of camping out and woods life, written by "Nessmuk," for the guidance and instruction of young men who know little of camp life and older men who do not know so much that they are unwilling to learn more. The little volume is not only instructive, but is remarkably entertaining as well. It will prove a companionable book, whether one be going into camp next seavon or for home reading. There is a good deal of sound philosophy in "Woodcraft" and a great deal of mother wit. Published by the Forest and Stream Publishing Company.

VIRGINIA BIRDS.—Partridges (Ortyx virginianus) wintered well. We had two unusually deep snows, accompanied with bitter cold weather, but fortunately they were not of long duration; the first not lasting over ten days, the second not over five. The wild assertions that it was the coldest weather felt in Verginia for thirty years was all bosh. But birds are scarce, and have been for eight or ten years, all north of James River and west of Richmond.—OLD TIMER.

GALVESTON, Texas, Feb. 27.—There has not been very good duck shooting here for some time in consequence of the rainy and windy weather, but I think that after this datc there will be good inland shooting and good shooting over decoys. Jacksnipc have been very plentiful for the last few months, and any one who is a good shot can secure a nice bag in two or three hours by tramping around the edges of the marshes outside of the city.—REDBREAST.

INDIANA.—Packerton.—Our Bob Whites are about played out. I wintered about four dozen for the last three years. Shooters are making away with them. Duck and brant were quite plenty on the Kankakee close by this fall. Prairie chicken gone. Plenty of cottontails. Few pheasants as they are called here. Expect good woodcock shooting in spring. —B. H. W.

ALBANY, N. Y., March 9 — In the court of special sessions at Albany to-day Joseph Clark, a prominent merchant, paid a fine of \$20 on conviction of selling quail out of season. George L. Thomas, also a leading dealer, charged with the same offense, demanded a jury trial.

lowA.-Emmetsburg.-This town is situated on Medium Lake which is about eight miles long by one or two wide and twenty miles from Spirit Lake. We have as fine duck, geese and chicken shooting as any place in the State.-S.

SHINNECOCK BAY. -- Murch 8. -- Broadbills, redheads and whistlers are appearing in pretty respectable numbers on Shinnecock Bay -- J. WENDELL JR.

CANADIAN TROUT WATERS.

neuralgia. OCCIDENT. CANADIAN TROUT WATERS. THE new Lake St. John Railway, which runs north from Quebec, gives easy access to a large number of most excellent trout waters. A correspondent of the Quebec *Chronicle* says: "Not only has the road been completed some 80 miles beyond St. Raymond, but that it is rapidly extending, and in a couple of years the whole road to Lake St. John will be an accomplished fact. The line taken over by the company now extends to Riviere a Pierre, 58 miles from Quebec, and where a year ago nothing but a dense for-est existed may be heard the busy hum of scores of mechanics engaged in the workshops of the contractor, where every-thing in the shape of repairs, etc., are performed in a work-manike manner. From this point to the end of the road at Batiscan River, a distance of thirty miles, the line is operated by the contractor and is already in excellent order. A train leaves Riviere a Pierre daily and reaches the present termin-us about midday, where the traveler can be accommodated with first-class fare at the Windsor. Just imagine, where a howling wilderness existed a few months ago almost cvery luxury can now be obtained, and cvery attention paid to the traveler who may fortunately be induced to visit these parts on business or pleasure. We talk about the land and scenery on the Sagnenay River, but nothing can surpass the beauties all along the route of the Lake St. John railway. Gigantic mountains, nearly equaling in height capes Trinity and Eter-nity, of the far-famed Saguenay, lovely valleys, incandering stars and magnificent lakes are to be seen in succession as as we travel through this interesting country. The railway skits the borders of the beautiful Batiscan River for some of rapids, bays, etc., and studded with islands. An iron bridge is now beirg thrown across the Batiscan River, and it is expreted the road will reach Lake Edward, a distance of 10 miles from Quebec, about two miles broad, and abounds with the finest trout. From t

to get that evening's fishing. The scenery is simply grand, the atmosphere cool and balmy, and for pleasure combined with healing qualities of the air no place in America can sur-pass this new region. As yet man has done nothing to inter-fere with the laws of nature, and for some years to come it will be a perfect paradise for the lover of the rod and gun. In winter caribou are plentiful and there is also an occa-sional mose. I most confidently recommend any of your readers desirous of fine trout fishing to try the Laurentine lakes back of Quebec, and shall be happy to assist them all in my power. in my power.

THE FISH AND FISHERIES.*

THE FISH AND FISHERIES.* THE work now before us is by far the most thorough and important popular work on fishes ever issued in America. It has been published by the U.S. Commission of Fish and Fisherics, from material gathered under its directiou, in conjunction with the tenth census. It comprises two large volumes; the one containing the text covers 850 quarto pages, printed in large, clear type ou good paper, while the accompanying volume of plates give us the finest collection of figures of fishes, mollusks, crustaceans and marine mammals that has ever been presented to the public. While it does not enter into scientific discussions of species, it gives us such information as the average reader will value and best understand.

<text>

FOREST AND STREAM.

salmon which pass the McCloud hatching station in the summer, on their way up the river to spawn, die in the river and never return to the ocean." The chapter on the brook trout of the East is a reprint of Mr. Goode's essay on this subject in Scribner's "Game Fishes of the United States," and contains no new matter. We had hoped to see something said upon the so-called "sea trout" of New Brunswick. New Brunsw Following

New Brunswick. Following the fishes come the mollusks, the crustaccans and the sponges. Taking the work as a whole, we regard it as one of the most valuable popular publications that has been issued under the auspices of the U. S. Commission of Fish and Fisheries, which has published so many valuable works. For some reason the number of copies issued to mem-bers of Congress has been limited to one, and many persons have been disappointed in being unable to procure them. They can, however, be obtained from the public printer at a moderate cost, and the work should find a place in the library of every angler and naturalist.

THE NEW TROUT OF SUNAPEE LAKE.

THE NEW TROUT OF SUNAPEE LAKE.
Editor Forest and Stream:
Thave read with great interest the articles you have published on the new trout of Snnapee Lake, and hold myself some original correspondence in regard to their size and origin. Allow me briefly to express my opinion.
In 1874 I carried my boat seventeen miles over the mountains, and launched her on Sunapee. It was a case of love at first sight. I began my addresses in au humble way as a tent-dweller by its crystal waters; to-day I own three cottages embosomed in its pines, and 14 miles of its shore. During the last twelve years I have industriously prosecuted the gentle art, and frankly admit that I have never hooked or even seen one of these Oquassa trout; moreover, among the lost of anglers and frequenters of the lake with whom I am acquainted I know not one who has. The trout were seen for the first time last October, spawning on my sand shoals, by Colonel E. B. Hodge, our Fish Commissioner, and Mr. A. H. Powers, ex Commissioner. The problem is easily solved: and my esteemed friend, Colonel Hodge, I fear may not figure as the discoverer of a new species indigenous to the lake—an inhabitant of Sunapec's depths from time immemorial, yet never before noticed by any of the thousands of poachers and anglers who have cast fields, fished with worms and salt pork, or swept seines in the lake for a century! Impossible. The new trout are the giant offspring of Hangeley "blue-backs," introduced a few years slice as food for the large brook trout, and furnished in Sunapee with phenomenal conditions, not only for years slice as food send upward; land-locked salmon, twelve pounds (seven years from the ovum); brook trout, six to ine pounds, and black bass the unprecedented weight of the and and black bass the unprecedented weight of the and and a half pounds (two pounds beyond the limit of the canuralist).

naturansu). So the little "blue-backs" of Rangeley have found here the food and water to make them grow as large as their con-geners of Disco Island and Labrador, and even to exceed in which the source patient dark blue addressed in the source of the geners of Disco Island and Labrador, and even to exceed in weight those famous native dark-skinned, brilliant-spotted trout, in pursuit of which the aborigines made frequent journeys to "Sunapee's shore of rock," and barrels upon bar-rels of whose juicy pink flesh have been salted down by the white settlers and their descendants rince the time the coun-try was opened. JOHN D. QUACKENBOS.

 Editor Forest and Stream:

 Editor Forest and Stream:

 The letters of Prof. Baird and Dr. Bean, in the last Forest and Stream:

 Ext AND STREAM, seem conclusive as to the point of the new trout discovered by Messrs. Hodge and Powers, in Sunapee Lake, being of the oguassa type, and I take it were written before the publication of Mr. Powers's letter, which I sent you, giving the date when the genuine Salvelinus oguassa were planted there.

 There is another question which I have had in my mind for a year or two, and that is, as to the exact classification of the celebrated Dimond Pond trout.

 Had I been able to have visited those ponds this summer, it was my intention to have forwarded some of them to Dr. Goode for examination, but I failed to get there.

 Mr. Prime gives a very graphic account of fly-fishing in the upper pond, in 'I Go a-Fishing,'' but I have never been able to take a single fish in that pond in several visits, although I have always taken them, both with fly and bait, in the lower pond.

 When there two years since I whipped the upper pond

although I have always taken them, both with By and bard, in the lower pond. When there two years since I whipped the upper pond faithfully one evening and the next morning, in company with an expert fly-fisherman, who had been very successful a fortnight previous, without either of us getting a rise; but I saw the outline, on a piece of birch bark, of a $2\frac{1}{2}$ -pounder which he took on the former occasion, nalled up against the door post of Mart Noyes's camp. Now, I have never seen a trout over one-half pound in weight taken from the lower pond. The fish there are very uniform in size, from 9 to 12 inches long, round, slender, and with no motiling of the fins and very little of the back (which is dark and bluish), with the red spots very small and the flesh a very deep red, looking when raw like a beef-steak.

steak. These ponds are on the Androscoggin water shed, which they drain into through Dimond Stream; and the trout of the Upper Mohawk, six miles to the westward on the Con-necticut water shed, are white-fleshed, deeper bellied and more distantly monthed

necticut water shed, are white-fleshed, deeper bellied and more distinctly mottled. The tail of the Dimond Pond trout, too, is inclined to be bifurcated, and, in fact, the first time I ever caught one, I was inclined to doubt its being a trout until I found the red spots. I believe that they also belong to the oquessa variety, and should I get up there again shall try and send some to Washington for identification. SAMUEL WEBEER. CHARLESTOWN, N. H.

CHARLESTOWN, N. H. THE SOUTH FORK FISHING AND HUNTING CLUB, of Pitts-burgh, at their last meeting, decided to erect on their property in Cambria county, a large club house or hotel to be used for the exclusive benefit of members of the club, and a limited number of their friends. Plans of the proposed structure have already been prepared. It will be of unique design, three stories high, and will be large enough to ac-commodate 150 guests. It will be located on Conemaugh Lake, a body of water two miles long and three-quarters of a mile wide, situated two miles back of South Fork, on the Pennsylvania Railroad, and about nine miles southest of Johnstown. The club, which has a membership of about sury aubstantial citizens, now owns between 1,700 and 1,800 acres of land in Cambria county.

MASKINONJÉ, MASCALLUNGE, MASKI-NAUGA.

NAUGA. Editor Forest and Stream: I find that I have got into a very serious scrape by writing about the etymology of maskinonje. In a reminiscence in FOREST AND STREAM, of Dec. 31, I made a foot note, in which I called the attention of etymologists to the derivation of the word "mascalonge" and its variations, and drew upou my very limited stock of the Ojibwa tongue, obtained thirty years ago and nearly forgotten. In this I said: "My spelling of the Ojibwa name of pike, Kenoska, is en-tirely phonetic. I have no idea how it might be spelled. Give the o a nasal sound and twist it into 'Kinoje' and it is not a far cry to 'maskinonje,' which most authorities try to twist into a French derivation with 'mask' as a syuonym of 'fnee.' I do not pretend to decide this matter, for I am not learned enough in either French or Ojibwa, and know that the latter tongue has received many additions since the 'Chemokman' came among them. As an instance of this: that the latter tongue has received many additions since the 'Chemokman' came among them. As an instance of this: A poor Indian had begged around camp for some days with more or less success, when one morning he came in and re-quested 'pungee pegushigun.' To my untrained ear this meant 'pungee' (little) 'pequishigan' (bread), and I told him 'gowin pequishigan' (no bread); he insisted, and taking up a gun showed me that 'pegushigun' meant percussion caps for a guu and not bread—showing that he had made a word, or others had, for something new." This was followed by one of your correspondents, who opened up a new field to me, and created a desire to go into the matter further. This correspondent, in your issue of Jan. 7, said:

opened up a new neut to me, and created a new results the matter further. This correspondent, in your issue of Jan. 7, said: "In the foot note to the article entitled 'A New Year Fish-ing Trip,' Mr. Mather ventured an etymology of the word 'mascalonge.' He might safely have gone further. It is hardly necessary to remind so accomplished an Ojibwa scholar that mas means 'spotted' or 'speckled.' Thus: the Nipigon Indians (Chippewas) call the lake trout (Saleclinus namageush) 'namaycush.' the brook trout 'mas-namaycush,' and they assured me that mas had the meaning above given. If the distinct spots of the mascalonge be compared with the broken-line markings of the northern pike, the reason of applying the adjective will be evident. 'Maskinonge' is said by the 'Encyclopædic Dictionary' to be the Algonquin name, and in 'Hiawatha' 'kenozha' and 'maskinozha' are used as synonymous. I can have little doubt that 'mas-ki-nonge' means simply 'spotted pike.' But like Mr. Mather I have learned the difficulty of expressing Indiau sounds in our usual notation.—X."

have learned the difficulty of each our usual notation.—X." An editorial note said: "This opens a new mine for ety-mologists who have always looked to the French and have concluded that the name was derived from 'mask allonge' or long face. It seems more probable that the French twisted the Ojibwa name into their vernacular and made 'maskinoje' into mascallonge, maskanonge, etc. We will be pleased to

The charms have sale. This open a new fille for effy-mologists who have always looked to the French and have concluded that the name was derived from 'mask allonge' or ong face. It seems more probable that the French twisted the Ojibwa name into their vernacular and made 'maskinoje' into mascallonge, maskanonge, etc. We will be pleased to har further from our Ojibwa scholars."
"X." gave me credit for a great deal more knowledge than I possess, for it never occurred to me that 'mas' meant 'spotted or speckled." As he truly says, 'it is exceedingly difficult to express ladian sounds in our usual notation, 'I should have said for red or spotted (?) 'mis,' thus: 'Mis-quah' is red, as I understand their Ojibwa; and 'mis-qua-bo,'' red blood or fluid; 'mis qua-walk,'' red eedar, etc.
To cerured to me then to work this matter up and see hat I could make of this variously spelled name of maskin-onjé or mascalonge and wrote to up old friend, D. H. Fitz-hugh, Jr., of Bay City, and asked him to inquire of our gide, the famous Len. Jewel, how nearly correct this might be as Len spoke the language quite fluendly, and when in the woods with him I have attempted to brush up what little woods with him I have attempted to brush up what little have to depend very largely upon my knowledge of English in order to get along at all. Mr. Fitzhugh kindly replied to my letter, but before its receipt 1 read the obitaury notice of Len Jowel in your issue of Jan. 28.
"Mr. Titzhugh asici." Have maskinonge". Some thirty years ago the question was agitated in *Porter's Spirit*, and the same dis-cussion took place. Genio C. Sott was in correspondence with Mr. W. A. Fitzhugh, a 'cousin of mine, whose gun and tackle fell to will out have asked the Indians they always said ''Mr. My A. Fitzhugh, a 'cousin of mine, whose gun and tackle fell to will an way thought it meant a pike of larger growth, and when have asked the Indian's spotted' or not, I can't inform you—I always thought if meant a pike of larger y

H. FITZHUGH." It will be seen from this letter how difficult it is for a man who has picked up a little lingo in one portion of a tribe which has not preserved its language in its purity to con-verse or even to understand what is spoken by members of the tribe residing at a distance. The admixture of French and English words has tended to confuse the tongues of the

different branches of the same tribe. Thus, while I spelled the word for large "kigee," I find that Longfellow, in "Hia-watha," spells it "gitchee," and in the Ojibwa primer, com-piled by Rev. Peter Dougherty. 1844, kindly sent me by Mr. Fitzhugh, he spells it "geche." As near as I understand the Ojibwa or Chippewa as it has been Anglicized, they have one general name for fish, "kego." While I understand the pike to be "kenosha" or "kinoje" (Dougherty spells it "kenozha") the trout to be "noo-may-gus" (which has been twisted by ichthyologists into namaycush); the black bass to be "oo-she-gun," which I see Prof. Goode makes "achigan" in his "Game Fishes of the United States." In the following I have given all the various spellings that

United States." In the following I have given all the various spellings that I have been able to find in American works on fishes, and whenever an author has attempted to give a definition of the name of the fish, or to trace its derivation, I give his lan-guage in full. Much of the spelling is evidently corrupted, and some instances are no doubt printers' errors. I have also given the number of syllables that should be sounded in the different names, and will say that in every case the g should be soft

given the number of syllables that should be sounded in the different names, and will say that in every case the g should be soft. In Report of the Geological Snrvey of Ohio, Vol. IV., Part I., Zoology, Columbus, 1882, p. 917, Jordan gives: "Esox nobilior, Thompson Muskallonge; Mascalonge, Mas-kinonge, Great Pike. 'Esox masquinongy, Mitchell' (quoted, 'Mirror, 1824, 297,' but it is not there; 1 cannot find the de-scription anywhere)." Hallock, "Sportsman's Gazetteer," 1878, gives "muskel-lunge, mascalonge, and maskinonge," and says: "This fish is known in the laws of Canada as the 'maskinonge,' from the Chippewa word maskanonjé, meaning long nose; but in the States it is called 'mascalonge,' from the French masque and allonge (elongated) longface." I give below, in alphabetical order, such various spellings as I find, and where an author has attempted to trace the derivation, I quote his words: Roosevelt, ''Game Fish of the North,'' Chap. XIV., ''mascallonge, synonyms: *Esox estor*, masqueallonge, musca-nonga." * * ''The name of this fish is derived from masque allongé, long snout, which is a translation from the canadian Indian dialect of musca-nonga, words which have the same signification; and from corruptions of these two designations arise our numerous names. I took great pains to ascertain precisely how the Canadian boatmen, who are a cross of the Indian and Frenchman, pronounced this name, although, in their French patois, he is ordinarily called *Bro-chat*, and the best my cars could make of it was mass or mus-sonorous, expressive, and appropriate name is mascallonge, it is desirable that all sportsmen should employ it." MASCALONGE (three syllables). '''Frank Forester'' (Henry Williom Herbert) '''Fish and

with Frank Forester that the derivation is lost nor that long face or long snout had anything to do with its original Ojibwa name, even though Scott says the same thing. This is an after thought of the Canadian Frenchmen. There is no authority except that which comes from modern use, for either the letters u or l in the name. It may be maskinozha, maskinonjé, or maskinongé, but all such forms as masealonge or muskellunge, not to mention the other outlandish names I have quoted, are corruptions. FRED MATHER.

THE RECORD OF A LINE.

THE RECORD OF A LINE.
The second of the sport, once hooked a large bass while the bait and the second of the sport, once hooked a large bass while the second of the sport, once hooked a large bass while the second of the sport, once hooked a large bass while the second of the sport, once hooked a large bass while the second of the sport, once hooked a large bass while the second of the sport, once hooked a large bass while the second of the sport, once hooked a large bass while the second of the sport, once hooked a large bass while here as busy with the bait, and womanlike, she proposed to let no fish escape—big or little—if a strong steady pull would effect anything. The light rod was making rapid and very profound salaams to the denized the impending disaster to hook the realized the impending disaster to his tackle; and shouting to his "better half" to "let go the reel," which she was holding with a determination known only to woman on such occasions, he dashed to her relief for a brief moment it was a trial of endurance between the fast, the lady and the line, but the calamity was averted by a timely release of the reel, and plenty of line wherewith to divert himself, the gallant fish was soon obliged to succumb. Here, we have how of 13 Bounds and one 17-inch trout the sender of the sport. Twice did the angle fight his way back to his narive element against the utwost endeavors of his captor. A third time was he hauled within desperiation born of a last hope, the angle ry soon over. The weight of this fish some hours after, was 3 pounds 1 ounce. The book was an extremely small one and the least stacker ing would have lost him. The line will be used again this castor. C. A. T.

HAMPTON PONDS.

HAMPTON PONDS.
HAMPTON PONDS.
A SPRINGFIELD paper yesterday morning contained the following item: "A black bass weighing 74 pounds is on exhibition in an Elm street store window. It was caught at Hampton Ponds, and is the largest fish of this kind ever taken there."
That is a monster, indeed, and no doubt the very one so many of us were fishing for last summer. Hampton Ponds afford about the only bass angling to be found in this immediate vicinity. The fishing there is generally nothing to boast of. Every man professes to believe that the waters are full of bass, and excuses for poor success are never wanting. In fact, I have myself seen them jumping in every direction and have not been able to take more than one in all the afternoon. Large fish are caught occasionally, and the parties who keep boats to rent do not fail to give the matter proper circulation.
The first minnow I ever cast into the pond returned me a bass weighing nearly three pounds. I jumped to the conclusion that this was the place I had been looking for for some weighing four pounds caught with a frog, while traditions of six pound fish are current among the employes at the grove, where lores are left and boats obtaine.
This a very pleasant place to spend a day, and Holyoke and Westfield anglers are always well represented when the weather is favorable for sport, while the tents of campers are often seen upon the island. Those who fish the waters frequently meet with occasional good success, and find their scores at the end of the season mode rately satisfactory. One Westfield business man stated in August that he had taken fifty up to that time, ranging in weight from four pounds down. It was reported that on one day in the month of May, 1884, a man filled a clothes' basket with bass from this pawning beds. This and similar practices amply account for the fact that a person may fish all day in July and catch base met. Maximus beds. This and similar practices and place to the pawner from this pawning beds.

beginning of one of the grandest sights I ever beheld. Firs two or three, then a dozen or two, and finally multitudes of trout went dashing up and over the waterfall For a moment I was spellbound. All, however, did not succeed in going over the fall in the first attempt. Apparently exhausted before reaching the summit, some of them fell back into the stream below, but only to renew the attempt again after a few moments of rest. They were moved by a common in-stinct to get back to their native haunts, and no obstacle seemed too great to overcome. For two hours I watched this flight of the trout up and over the sparkling and foaming waterfall, and then reluct-antly left for my boat. I had become so fascinated that while rowing away my eyes were kept fixed on that water-fall till it finally faded from sight. Treturned the next day, and the trout were still leaping the falls, but in lessened numbers. Many a time since, in half dreamy moods, I have enjoyed this scene over again with little loss of freshness from the years that have passed. PETRA.

A DEAD SURE THING.—The member for West Algoma tells a good story about a species of sturgeon from 40 to 60 pounds in weight, which is peculiar to Rainy River and Lake. On a visit which he paid last summer to a settle-ment on the river, he had occasion to visit a young bachelor, who, with true backwoods hospitality, insisted that he should stay for dinner. Mr. Conmee seated himself and watched the preparations of his entertainer. First he set down his home-made bread on the table, with tin mugs for the tea, and then he put a big pot full of water over the fire. When the water came to the boiling point he infused the tea and set it aside. Then he seized agaff about 6 feet long, stepped out-side to the river's edge, which was not over 10 paces distant, and returned in three minutes with a sturgeon kicking on the end of his gaff, part of which was soon cut off and trans-ferred to the pot of boiling water to be cooked for dinner. This is the usual thing up there. They always have the water boiling before they go to catch the fish, and they use only a common gaft.—Toronto World.

Coll of Lead INSTEAD of Shot.—Paterson, N. J.—When fishing in fast running streams split shot is generally used to sink the bait. My objections to using split shot are that when attached it is difficult to remove and in attempting the same the gut becomes frayed. It is difficult to regulate the weight required; sometimes one split shot is too little and two are too much. It also has a tendency to become fas-tened between stones in the bed of the stream. Another de-vice may be of use to your readers who use split shot. Pro-cure a small piece of sheet lead and hammer it until it be-comes the thickness of heavy paper. Cut off a piece the shape of a little worm and coil it around the gut in a spiral snape. The weight of the lead can be altered in an instant without fraying the gut. I carry a little sheet (1x2in.) of this lead in my tackle book and when wanted cut off a suitable piece. The lead that tea chests are ined with will answer the purpose very well.—G. A. M.

JAPANESE TACKLE.—We have recently been shown some dies and artificial baits from Japan, by our correspondent "Petra," whose daughter brought them to this country. The gut to which these flies were attached was two feet five inches long and was composed of five twisted strands and yet the whole of them made a gut length not larger in di-ameter than we ordinarily use. The flies were delicately made, with long black wings and colored wool bodies in closer imitation of nature than we are accustomed to. The books had a sharp bend and a slight beard. A caterpillar was a perfect imitation, even to the feet. "Petra" tells us that his son-in-law has been fly-fishing with Japanese gentle-men and he will try and learn something about their methods.

BLACK BASS IN LAKE CHAMPLAIN.—That small portion of Lake Champlain which extends northward into Canada and is called Missisquoi Bay has been a fruitful source of trouble to those who wish to make the laws of New York, Vermont and Canada establish a uniform time for fishing in the lake. Vermont anglers have complained that they were protecting black bass merely to have them taken on the spawning beds in Missisquoi Bay, and it is said that black bass have been illegally taken in Vermont waters, seut to Canada, and returned through the Custom House as legally caught Canadian fish. Now that the Dominion has passed a law extending the close season until June 15 all such cause of complaint is ended.

would like to see the work of your Commission on which you are spending the most brain and money well exhibited, as we desire to give the people as good an idea as possible of the amount of time, labor and cash being spent in the propagation of food ishes, with a few practical results. Mr. S. P. Bartlett, of the Illinois Fish Commission, will have immediate super-vision of this display. If you send to Mr. Butler, at Detroit, a list of the live fish and anything connected with the propa-gation thereof that you may desire to exhibit, we will in a short time send you explicit directions in regard to shipping, etc. Respectfully, WM. A. BUTLER, Sec. Local Ex. Com. Local executive committee: F. N. Clark, U. S. Fish Com., Northville, Mich.; W. V. Cox, Washington, D. C.; W. F. May, Nebraska Fish Com.; Fred Mather, New York Fish Com.; R. O. Sweeney, Minnesota Fish Com.; Wm. A. Butler, Jr., Michi-gan Fish Com.

THAT UNPAID CHICAGO SPECIAL AGAIN.

THAT UNPAID CHICAGO SPECIAL AGAIN. Editor Forest and Stream: Perhaps you are tired of the above heading, so I will promise not to sing the old song over again; in fact, it is not needed, for all readers of FOREST AND STREAM have arrived at the moral (3) of that transaction. But it comes in very handy to preach a sermon on, about the views different people take of their duties and responsibilities, and also illustrates that peou-liar diseased condition of mind that produces the rabid "anti-kicker." I have been favored with some correspondence on this subject since I first ventilated it in FOREST AND STREAM. One party writes that he is very much hurt at my letter, that he never knew of the special money being paid into the club, that he has tried and tried again to get the club together to meet these debts, etc., and generally expresses himself as we should expect a gentleman—no, I despise that abused name— as we expect an honoroble man to do. For such a man, we all will have sincere commiseration at the unfortunate plight he has been put in.

THE NEWARK DOG SHOW.

THE NEWARK DOG SHOW. THE entries for the Newark dog show number 546. There are 22 mastiffs, 57 St. Bernards, 5 Newfoundlands, 4 Great Danes, 10 greyhounds, 6 deerhounds, 67 pointers, 56 English setters, 12 black and tan setters, 38 Irish setters, 2 Irish water spaniels, 13 field spaniels, 23 cocker spaniels, 14 spaniel pupples, 3 Clumber spaniels, 25 cocker spaniels, 14 spaniel pupples, 3 Clumber spaniels, 7 foxhounds, 56 collies, 21 beagles, 5 basset hounds, 8 dachshunde, 48 fox-terrlers, 5 bulldogs, 13 bull-terriers, 3 black and tan terriers, 1 Irish ter-rier, 2 Dandie Dinmonts, 3 Bedlingtons, 6 Skyes, 11 pugs, 4 Yorkshires, 2 toy terriers, 2 King Charles spaniels, 2 Blen-heims, 4 poodles and 6 miscellaneous. Twenty-five entries were returned, having been received too late.

THE HARTFORD DOG SHOW.

THE HARTFORD DOG SHOW. THE premium list of the Hartford dog show provides for 127 classes, as follows: Champion dog, \$10; champion bitch, \$10; open dogs, \$10 and \$5: bitches the same; dog pup-pics, \$5 and \$3; bitches the same, for mastiffs, rough-coated St. Bernards, smooth-coated St. Bernards, deerhounds, grey-kounds, large pointers, small pointers, English setters. Irish setters, Gordon setters, fox-terriers and collies. Newfound-lands have but one champion, one open and one puppy class. Clumber spaniels, one champion and one open; field spanlels, the same; cocker spaniels, any color, one champion and one open; beagles, over 12 inches, one champion and one open; beagles, over 12 inches, one champion and one open; beagles, over 12 inches, one class; dachshunde, one class; basset hounds, the same; wire-haired fox-terriers, the same; bull-terriers, large, one champion and one open; small, the same; bull-terriers, large, one champion and one open; small, the same; prizes the same. Champion and one open; small, the same; bull-terriers, large, one champion and one open; small, the same; prizes the same. Theysame; Bedlingtons, the same; Kyes, the same; Yorkshires, the same; Gys, the same; puppies, \$5 open dogs, \$8 and \$4; bitches, the same; puppies, \$5 open dogs, \$8 and \$4; King Charles, the same; Mexican hairless, the same; Italian greyhounds, the same; Mexican hairless, the same; Italian greyhounds, the same; Mexican hairless, the same; In addition, there will be a good list of special prizes.

THE ST. LOUIS DOG SHOW.

THE ST. LOUIS DOC SHOW. Editor Forest and Stream: The printer is at work on the premium list and entry blanks of the coming St. Louis Gun Club bench show. I will mail them in a few days, and will be glad if intending exhibitors will write me for copies. The action of the comment of the show. I will mail there in a few days, and will be glad if intending exhibitors will write me for copies. The action of the comment of the animals who have cuts of their dogs will communicate with me promptly. I will be able to ascertain what pictures we shall have and announce it through the press. We have made the prizes so liberal that we believe the dogs will come here. We have left out a lot of useless classes for common in many of the catalogues, classes that either from their very nature can't fill because there are no dogs eligible, or that won't fill because there are so few dogs of the class. Setters, pointers and collies get \$20 cash champion prizes, and \$20 open prizes with us, and all puppy classes get cash prizes. If we can be assured of some mastiff and St. Bernard entries from the East, we will offer \$50 cash kennel prizes, and we hope to be able to offer very handsome specials for kennels of pointers, setters, collies and fox-territer. As there is to be a bench show in Cleveland following ours, and another in Milwaukee later on, we hope some of the prom-ment Eastern dogs will come out to us. The collie prizes will be the handsomest ever offered. There is to be a dog rafiled every day of the show. Each person entering the show will be given a numbered ticket, a dupli-cate of which will be put into a wheel and drawn out at 10 o'clock P. M. of each day, and the lucky number takes the prize for that day. The dogs to be rafiled will be no doubt a collie, a setter, a Newfoundland and a. E. BUTTSBUBGE DOC SHOW

Sr. Louis, March 13.

PITTSBURG DOG SHOW,

GRO. MUNSON, Manager.
Sr. Lovis, March 13.
PITTSBURC DOC SHOW,
The swelfth exhibition of dogs given by the Western Pennsylvania Poultry Society, opened at the Grand Central Skating Rink, Pittsburg, on Tuesday, March 16. The entries, which only closed a week before, were much larger than there was reason to expect, and the disappointed exhibitors who had thought to steal a march on less enterprising owners were found by the dozen long before the judging commenced. The entries, signal groups and allow room for a good sized judging ring in the center. It was not a particularly cheerful building, and except when the sun is shining through the Pittsburg smoke the light is poor. The morning of Tuesday was dull and cheerless, but before judging commenced there was a pleasant change. The delay was caused by a number of dogs being kept back on the railroads, and it was not until after dinner that Mr. Mortimer stepped into the ring, half of which was roped off for his use, while Major Taylor occupied the other Half.
Mr. Mortimer not only began his judging first, but his classes headed the catalogues of that our criticisms will be confined to the work done by lim, reserving Major Taylor's awards for next week, as it was impossible to do justice to the dogs or the judging going on in both rings at the some time. It is only proper to state that excellent progress was made, and if the judging had only commenced at the hour announced it would probably have been all completed in one day. The first of Mr. Mortimer's classes was the mastiff dog champions, for which Homer was unopposed. Rosalind was also alone in the bitch class. Open dogs had four entries and Hero III, won easily the has a filed out very much and has good width of skull and plenty of bone, but is coarse in coat and was in muzzle; he has nice easr. Nero is large but saily beat in works for next week before the eye. Tiger got third, but is hord of which had a beat in the bitch class. Open dogs had four active any fin muzzle, but is v

Ising, the winner mering and a class Mr. Mortimer went astray dog. In the Newfoundland dog class Mr. Mortimer went astray when he gave King Leo first. He is small, has not so much character as either Bruno or Pascha, and has no coat worthy the name. It should have been a clear win for Bruno, whose

coat should, however, be flatter still; there is plenty of it and it is of the right quality. Pascha should have been second. Duke is a weedy little dog, bad all over. The bitch and puppy prizes were properly withheld. The Great Dane judging was well done, Brock being the best of the breed. Old Fan had a walk-over in the champion greyhound class, but in open dogs we think Stranger in White should have won over Paris. The former is a smart young dog and was well shown, while Paris is bad in shoulders. First in bitches went to a nicely-shown black, but the others were not a grand lot hy any means. Deerhounds were drawn blank and then came spaniels. Mr. Olcott won first and second in Irish water span-iels with The O'Donoghue and Mollie, and a fair specimen, Omonoo, was yhe.

spaniels. Mr. Olectit won first and second in Irish water span-iels with The O'Donoghue and Mollie, and a fair specimen, Onomoo, was vhc. The field and cocker spaniel classes were not well filled. In the small other than black class Vie was first, but she was not good enough for such a position as both Hornell Nell and Hornell Nance are lower and better in body and legs. In the large class other than black there was a question as to weight, and the two dogs were sent out of the ring till t was decided. An objection on the same score was also made to Perless Gloss Jr., who was placed over Bonanza. Between Hornell Silk and Keno there was not much to choose, but we differed from the judge, and should have placed Silk at the head of affairs. The small black bitches made up the best class of the breed, and Bene Silk properly won in coat, head and move-ment. Black Pearl was not quite herself and Gipsy Jane is not right in coat. Mayor Taylor completed his pointer, Gordon, and Irish setter judging before he stopped, and if an early start be made to-morrow the judging will be completed in good season.

PITTSBURG, Pa., March 17.—Special Dispatch to Forest and Stream: Another fine day. The attendance is still lim-ited. The committee held a meeting at noon, and decided to allow none of the protests. Judging by Major Taylor and Mr. B. F. Wilson progressed slowly. Mr. Mortimer nearly finished at 1 o'clock, when a recess was taken. We give awards to that time.

For the monthly \$10 gold badge the only competitor, George Brown icg, made the good score of 65 points: George Browning. AN INTERNATIONAL MATCH.—The following formal invitation to a match during the present year was on Salurday last sent to Travland. OFFICE NATIONAL RIFLE ASSOCIATION,)

A BREEDERS' ASSOCIATION. — Editor Forest and Stream: As the breeding of thoroughbred dogs has become a source of wealth and has developed into a business of con-siderable magnitude, I wish, through your paper, to suggest to brother sportsmen of our country a scheme whereby we may establish a large breeding kernel for all classes of dogs, and place ourselves in a position to obtain the very finest specimens of the breed we most prefer, at a moderate figure. Select an island. I have one in view (400 acres), let each par-ticipant either furnish — dollars as a share in the company, or a thoroughbred bitch of unquestionable breeding of the kind he desires, to keep and place on said island for breeding purposes, in the hands of a keeper, and if any owner of a thoroughbred dog let him be allowed to place him on the island for the same purpose, though only one dog of a kind to be admitted and to be the stud dog for that breed for the island. Then gentlemen who have taken the trouble and borne the expense to import or purchase good bitches will have a place to send them, save the annoyance of breeding, and dis-posing of those they may not require. One competent man can be the servant of many owners. Let those who think well of it speak through your paper.—BREEDER.

THE BOSTON DOG SHOW.—Editor Forest and Stream: Arrangements for the transportation of dogs to the coming bench show of the New England Kennel Club, at Boston, April 6 to 9, have been made with the express and railway companies as follows: American, U. S. and Canada, Interna-tional, United States, and New York & Boston Dispatch com-panies have agreed to return to shippers free, all dogs that may be sent to the show (in crates) in their charge, upon which one full rate has been paid. The Boston & Albany, Boston & Lowell, Boston & Maine, Fitchburg, Old Colony and Providence railroads will carry dogs free to and from the show in baggage or smoking cars when accompanied by owner or caretaker paying fare. Railroad companies to be released from all liability from loss or injury. This arrangements with the express companies covers nearly all points in the United States, Canada and the British Provinces, while the arrangements with the railroads cover New York city and points in New England. Entries close March 30.

THE CLEVELAND DOG SHOW.—The third dog show of the Cleveland Bench Show Association will be held at the old Tabernacle, Cleveland, O., April 27 to 30. Mr. L G. Hanna will be the manager and Mr. C. M. Munhall, superintendent. Cleveland has always been popular with exhibitors, and as the management will spare no pains to make this the best show they have ever held, we have no doubt that the benches will be well filled.

MISTAKE IN PEDIGREE.—*Editor Forest and Stream:* I noticed an advertisement of a red Irish setter bitch with a pedigree as follows. "By Dirk out of Mand II.," etc. This is a mistake, for Maud has never been bred to Dirk until within a year, but was bred to Red, the sire of Dirk. I make the correction to save future trouble in tracing the pedigree of the coming generations.—CAL. .45.

NEW HAVEN SPECIALS.—*Editor Forest and Stream:* In specials sent you last week please change greyhounds to read: Spratts Patent, dog collar and 100 pounds biscuit, we will put the clock elsewhere. Spratts Patent has sent us 300 pounds biscuit and three collars which they place themselves.—S. R. HEMINGWAY, Secretary.

THE GOODSELL KENNELS.—The dogs constituting the Goodsell Kennels, that were recently purchased by the Black-stone Kennels from E. I. Martin, of Wilmington, Del., have been replevined by Mr. J. H. Goodsell, who holds a chattel mortgage on them from Mr. Martin.

THE NEW HAVEN DOG SHOW.—There are four hun-dred entries for the New Haven dog show. The display of mastiffs, St. Bernards, spaniels and greyhounds will be the finest ever seen. The fox-terrier classes are also well filled.

THE HARTFORD CLUB has not yet been elected to mem-bership in the A. K. C. This is a matter that should be at-tended to, for unless the club should be elected, the wins at its show could not be recognized.

NEW YORK, March 11.

JUDGES AS COMPETITORS.

Lobders AS COMPETITORS. Editor Forest and Stream: It seems to me that one feature of the Alexandria Field Trials, as reported in your issue of March 4, ought not to pass without censure. I refer to the fact that two of the judges owned competing dogs. It seems to have been thought that so long as these gentlemen did not act as judges in the heats in which their dogs ran, there was no objection to the arrange-ment. All the other competitors may have been quite satis-fied with the way the business was done, but then again they may not, and it is not fair to put upon any competitor the necessity of objecting to improprieties on the part of the judges.

necessity of objecting to improprieties on the part of the judges. The reasons why judges ought not to be competitors are the following: In the first place, so long as a judge's dog is in the race, it is his interest to decide every heat in favor of the worse dog; that is, in favor of the dog that his own would be most likely to beat. Then again, Judge A might easily be tempted to give Judge B's dog every advantage, and indis-posed to judge him with severe impartiality, when it will directly be Judge B's turn to pass on Judge A's dog. It is not a sufficient answer to say that any particular judges are high-minded men who would not let themselves be influenced by such considerations. Honorable men ought not to let them-selves be placed in positions where their interests conflict with their duty. Every competitor has a right to have judges who not only are fair, but also who have no interest in being otherwise. S. H. New York, March 11.

NEW HAVEN KENNEL CLUB.

NEW HAVEN KENNEL CLUB. Editor Forest and Stream: The mat to thank you for the earnest support that you are giving our show this year, as in the past. We feel your influ-ence every year, but never more than this present one, when at least two so-called "sporting papers" do all in their power to injure us, one for no known reason except to keep up its record, and the other, I believe, because we would not accept the judges suggested by the editor. This same paper is also against us because its editor objects to one of our judges; but in a personal letter to me acknowledges him to be one of the best judges in the country, and thinks by another year that he will be acknowledged so by every one, but thinks we would do better to ask Mr. — and Mr. — this year. I think our selection of judges is approved by all true lovers of dogs and men of judgment; at least our entry book proves it to be so to our satisfaction. The classes are fulling up rapidly, and especially Messrs. Mason's and Davidson's. We shall have more specials than ever, and we shall try to make "the boys appopt." If some persons who are working against us on account of not being friendly with Mr. Mason are not careful, 1 shall not feel called upon to consider as condidential some shell give them to the public. We are considering some new videas as to benching and bedding the dogs, but have decided upon nothing as yet. Again thanking you for your endexed shall give them to the public. We are considering some new videas as to benching and bedding the dogs, but have decided upon nothing as yet. Again thanking you for your endexed to ur behalf, I remain, as ever, mer the tower thas the down the down the source. Mr. EDEFERES' ASSOCIATION – Editor Forest and

THE TRAP.

Correspondents who favor us with club scores are particularly re uested to write on one side of the paper only.

BROOKLYN, March 10.—The Coney Island Rod and Gun Club had wo shoots to-day at Prospect Park Fair Grounds. The regular Club hoot in Class A resulted in a tie between A. Eddie, 30yds., and J. chlieman, 27yds., each killurg 7 straight birds. They afterward ivided. In Class B, H. Hayes, 33yds., won, killing 4 out of 7. A pocial pize given by one of the members was won by J. Temple; he likel 6 out of 7. The shoot was remarkable for the fine score of iddie. He killed 13 straight from the 30yd. mark, only missing his ist bird: Class A. H Schlieman, 27yds. L Kane, 20yds. T Grace, 27yds. Schwartz, 28yds. C Defrane, 20 ds. Furman, 82yds. CRUISE OF THE COOT.

Dachting.

Detroited that the provide of the second sec

The winter and the constraint of the return trip, thereby paying all ms expenses. The skipper was decidedly a character. Jovial, wideawake, a cau-tions and clever old fore-and-after, with a fund of droll talk and a relish for humor, and ever ready to do an act of friendship. His son was his right bower aboard ship, quiet and modest, but a smart and experienced hand, who foreswore the farm and threw in his lot with the smack by preference. He, too, had a turn for the funny, and cracked his jokes in a dry way with straight face. Both were the most agreeable companions. The second sail was a much smaller boat. From a distance her white canvas and nativ looks proclaimed her a yacht of some sort. I took her to be some yachtsman's rig from Baltmore bent on a duck-ing humt. It was her owner who had halled and inentified the Coot from the outset. He had with him a band to aid in the avigation and to cook. When these two vescels saw me free from the ice they bore away and we all lifted sheet for the southward. The smack was appoint 90tt, long and the yacht 27th, but the Coot rose materially fr

The above the second se

able security will congratulations upon our near security will congratulations upon out where the security and security and security aris had hy that time, h to our relief, partially cleared the outer waters of the heavy and we got under way. No wind stirring, an ash hreeze had to alled in. Now if there is anything I hate it is such artificial style comotion. The Coot is a heavy thing to scull along and with the est hreath ahead, she could scarce be made to answer the most huous labor at the ten foot sweep. Of course what wind we were hasfed had to come out ahead. There was not room to tack through the narrow waterways we were working, so our whole nee had to be placed upon the wooden implements of torture. The ck got out sweeps and pulled ahead. The surf hoat likewise rowed both dropped the Coot with her single hand plying the scull over stern with the greatest vigor and disgust. Out of our berth we edour way tedlously enough down the coast to Wharton's Point, northern headland of a snug harbor by the same name, some e miles from the anchorage of the previous night, and after plung the same, two miles more stared us in the face to the head re we could fetch into good shelter. Luckly the creek proved enough in and anchors let go near a projecting sand spit, around h we could easily drop into more perfect shelter should it come hard from the northwest. If ice and in due course of time in in and anchors let go near a projec-ould easily drop into more perfect on the northwest.

clear of ice and in due course of time the boats were propelled nough in and anchors let go near a projecting sand spit, around a we could easily drop into more perfect shelter should it come and from the northwest. Trumph the skipper of the smack ran a brand new star spangled er to the mastlead and broke out a variagated assortment of and wind instruments, a hass drum, kettle drum, triangle and als, upon which he and bits son proceeded to regale the neigh-ond for miles around with choice melodies, such as "John m's Body." "Marching Through Georgia," "Red, White and als, upon which he and bits son proceeded to regale the neigh-ond for miles around with choice melodies, such as "John m's Body." "Marching Through Georgia," "Red, White and "wholing up with the "Rebel Charge," in soothing of possibly ided feelings of anti-belium bitrit. Imagine a quiet, peaceful, ing community invaded on a calm forenoon, without warning, the most terrible din, the hanging of a sacorous bass drum, the the strains from a fidle and pling of first, and to po all, waves it estrains from a fidle and pling of first, and to poull, waves it estrains from the ever-popular accordeon, upon which the trasters were interpreted with a license to correspond with the etabout in profusion for an airing, and what else could the ed about in profusion for an airing, and what else could the exibilition produce upoi, the buccolic mind but the feverish inded through the works, and halls, half in earnest, half frac-yrang over the calm waters as our imprompt baad furt face-yrang over the calm waters as our imprompt baad. Inform New y rent the alf with their devotious to the muse of the lyre, in the festivities had finally ceased as wind and muse of the lyre, in the finally ceased as wind and muse of the lyre, in the finally ceased as wind and muse of the lyre, in the finally ceased as wind and muse of the lyre, in the finally ceased as wind and muse of the lyre, in the finally ceased as wind and muse of the lyre, in the finally ceased as wind and muse o

but but vectory direction, ie eastern shore as a refuge sur-ie eastern shore as a refuge sur-ie could joint of the three to fetch into Annapolis roadsteen, is until five days later. could just be laid out clear of Wharion's, when the wind with enough westing to make it a dead beat down with a with enough westing to make it a dead beat down with a beby in prospect. As the moon was near full we passed to stick to first intentions and make for Annapolis, below to escape being frozen in for the season. After the lay is being to escape being frozen in for the season. After the lay is being the season and the season after the lay is being frozen in for the season. After the season are the season as the season are the season are the season as the season are the season are the season as the season are the season are the season are the season are the season as the season are the season ar leapeake Bay and found ourselves well that on bucqueral in the last. The Coot soon had both here friends under her lee, and hi the looth water and smart breeze was working away from them in good ape despite her rough split tered bottom. Suddenly the wind hulled, then shifted into W, and came out with ing sea tossing the Loot about like a little shell. The hreeze had a leep of eight miles, coming out of Middle River. It rapidly in-sand to a mild gaie, and while the Coot was hove into the wind's e to haul down a single reef, it piped out from northwest in a fullm in good

fledged storm, which whistled and shrieted about my head and lashed the waters into furious seas. The balliards were let run aud the close-reef oringle hauled out at once. Tying the points was a difficult job, as it was scarce possible to get along decks, the way the boat was tossing and r-lilling in waves which by this time were almost overpowering to so small a craft. While thus engaged the smack drove by to the northward under bead of her jib, the mainsall hav-ing heen coused in a burry. She lost all the southings we had effected, and in half an bour had cut and run out of sight, probably trying for Gunpowder River. The Long Islander had freed sheet and headed for him no traces were to he seen, though I scanned the sea with my plasses for a long while. Presumably the had lowered away all and his tiny spars were lost to vision. He could not undertake to lav up in the heavy sea, I thought, and had concluded to run to i-eward and hunt shelter around Love Point on the ea-tern shore. In this, I trust, le was successful, for it bowled tremendously out of the northwest of ther seen nor heard anything since, though inquiry was instituted at the ports touched on my way down. een nor heard anything since, though inquiry rts touched on my way down.

A COMPARISON OF TYPES.

Editor Forest and Stream: Last fail, after reading some numbers of your valuable paper, Mr. Robertson, eur builder, and myself, designed two yachts to represent two prevailing types, now attracting the attention of yrothsmen, And this whiter having seen in that wonderful store of information, "Small Yachts," illustrations of some designs similar to ours, we con-

And this winter luxing at the second designs summaries to the second sec

as I wished to compare with the corresponding elements or our own design. With regard to our designs of a cutter, as compared with the Madge, there is nothing novel, further than in our giving some elements not furnished in the hook, but which may he of interest to some of your readers. And with regard to our sloop as compared with the Petrel, we see how a particular characteristic will cling to a particular type, notwithstanding a great disparity in size. By observing the distances of the center of buoyancy and the center of grivity in each, from their respective water lines, it will be seen that these two points are concident in both vessels, showing that though the sloop may laye immense sall-carrying power, st a moder-ate heel its utterly helpless when on ber bear, as then it is without a righting couple. While with the cutter, the center of gravity heads. both vessels, showing that carrying power, sta moder-bear, as then it is without the center of gravit

heel. too, in the comparison of the sloops, the wouderful increase derived from the increase of volume, due to increase of s, when these vary all alike. Thus, the sloop, though only it. greater in its lineal dimensions, has more than four times greater of the state we see in power, dimension 50 per cer the sail-c to the foot of wet surface as the
