From this brief statement it appears that Michigan has industry lakow that they need care. Forty years ago at one of the seine fisheries on Detroit River the number of whitefish constituting a fair catch was from 90,000 to 115,000 fish, averafing in size about four pounds. That fisherly has been abandoned for more than fifteen years, and the last vestige of docks, houses and pounds have rotted away. Another fishery having as fine a plant as any on the lakes, about nine miles below Detroit, as late as the fall of 1883 had over 12,000 white fish were taken there by actual count. This we know, for we bought and handled the entire each to take the eggs for the State hatcheries. At many points on Lake Michigan Amdreds of thousands of whitefish under one pound in weight, one, two, or three years old, which have been planted, have been each of as herites and worthe and whendled the entire catch to take the edgs for the state hatcheries. At many points on Lake Michigan Ham.
But there is not space here and now to multiply examples and by nearly every dealer who handles Michigan ths.
But there is not space here and

asked of the State Fish Commissioners by the representatives of the people every year. Has artificial propagation then been a failure! No, for it has not had a fair chance in several ways. "First-It has not been conducted upon a scale adequate to accomplish the results." "Where we are hatching about fifty millions of whitefish we need from six to eight times that number every year to restore the wasted and deserted grounds, as also to repleaish and keep up the stock in others yet productive. Numerous early experiments were made of planting whitefish fry in interior lakes of various sizes, where we now know they will not thrive because the conditions of food and temperature are not favorable. This could not be known without trial. But it does not follow that the experiments should not have been tried. It was no waste of time or money. The lessons learned from such failures are perhaps more valuable than constant successes. There are large and deep lakes in the interior of Michigan and other States where the whitefish are indigenous. In such lakes they ean and should be grown to the utmost capacity of the food supply. Such lakes we have in Michigan, and we are planting them now as preserves from which to draw a future stock of breeding fish to furnish eggs for keeping up the supply for the industrial fisheries of the draw a future stock of breeding fish to furnish eggs for keeping up that be white this they once the planting the summer months at points where that plenomenon had never before occurred within the memory of the oldest fisherman. That they were the planted fish is beyond question, as it is not doubted by the practical fisherma and others who have examined them, that these young fish are identical with the Lake Erfe fish, that being the source whence all our or takes. It is only within the first few years of the second decade of fisheritme. In my own State it souly within that time that where its only within the time the sub or source also the most exace its only within the first few years of the secon

am informed the same is true of almost all the States, because we have lacked proper municipal regulation of the fishing industry.
It is not enough the State Commissioners should be able, at very moderate cost, to hatch and release in the lakes enough young fish to take the place of adults captured and marketed. The young fish so hatched and released in the waters must be protected until they come to maturity and are marketable; otherwise the wasteful fishing which has once depleted the waters stocked by nature will do the same thing, only more surely and speedily for the waters replenished artificially.
So the two things must go together. Artificial propagation cannot do it alone; municipal regulation cannot do it alone; must concur to assure valuable or lasting success. In the combinations of these two conditions we have the orguments which logically flow from them to support the arguments which logically flow from them to support the anonly point out generally that municipal regulation.
I can only point out generally that municipal regulation, to be of value in saving or extending the operations of the industrial fisheries of the great lakes, must cover these points, namely:

be of value in saving or extending the operations of the print, namely:
(a) The sizes of the meshes of the nets to prevent the destruction of immature fish.
(b) Market restrictions as to the size at which various kind of fish may be handled or sold.
(c) Prohibition of inshore fishing during the season or at the points when the young fish are running in to feed.
(d) Discretionary authority to allow the use of nets below standard size at certain times, in certain localities, for certain kinds of fish.
(e) The demarcation of spawning grounds and their absolute rest from fishing at the spawning season; or, if that is impracticable, a "close season" at spawning time.
(f) Inspectors and wardens of the fisheries with ample means and powers to enforce all regulations, whether of apparatures, fishing operations, packing or marketing.
(g) A reasonable and equitable system of license which will furnish the means to pay the cost of inspection and regulation.
There is one more requisite which cannot be provided by statute law, the spread of reliable information of ur pur-

(f) A reasonable and equitable system of license which will furnish the means to pay the cost of inspection and regulation, and also of replenishing and keeping up the stock by artificial program. There is one more requisite which cannot be provided by statute law, the spread of reliable information of our purposes and operations among the fishermen and fishing communities, which will create a healthy public opinion in support of the laws and their strict and just enforcement. The been urged that this whole business of fishery regulation should be undertaken by the Federal Government, so far at least as the fisherles of the Great Lakes are concerned. Is there any reason why the Federal Government should undertake the establishment and enforcement of fishery regulations in the States bordering the Great Lakes are concerned. Is there any reason why the Federal Government should undertake the establishment and enforcement of fishery regulations in the States bordering the Great Lakes are concerned. The supplies of fish in the same waters? The reasons for this course or the desirability of it are not to my mind clear. The subject of fishery regulation is one, even if it were a new and open question, which seems from the very necessities of the case to be so local, domestic and municipal in its character as to fall naturally within the police power of the soveral States, and not within any defined powers of the Federal fursidiction, legislative or judicial. But it is no longer an open question. It has been passed upon by the Supreme Court of the United States. And this view seems to have been adopted by all the States that have established fishery regulations in superior of the soveral states. Are this view seems to have been adopted by all the States that have established fishery regulation, however meagre and insufficient, as well as by the Supreme Court of the United States. And this view seems to have been adopted by all the states and the respressible of the Great Lakes? What promise does it give which will

FIGH FOR THE UPPER HUDSON.—On April 28, 1886, the fry of 30,000 lake trout, 20,000 Penobscot salmon and 8,000 brown or European trout reached Glens Falls, N. Y., from the Cold Spring Harbor station. These fry were from one-half to one and one-half inches in length, and had made the journey with very slight loss. The lake trout were planted in Lake George, being the first of this kind brought to this locality, at a place called the Calf Pen, opposite Dome Island, where there is the deepest water of the lake. The brown trout fry came from spawn presented to Mr. E. G. Blackford and Mr. Fred Mather by the German Fishery Association, and are the first of their species planted in this vicinity, being put in the Clendon Brook. This species is common in suitable European pounds. It is said to grow faster and be more hardy than our native trout. The salmon also were planted in Clendon Brook, from which it is hoped they will stock the Hudson River. This is the third consignment of salmon to the Glendon Brook in three consecutive years, and makes about 140,000 of this fish that have been planted there; and it is hoped that some of the earlier plantings will return this year for the purpose of spawning.—*Glens Falls Republican, May* 4, 1886.

THE NEW YORK FISH COMMISSION.—The Supply bill, as passed by both houses of the New York Legislature, has been sent to Governor Hill, and he has vetoed some items. Among these are the following: "For the purchase of land adjacent to the Caledonia Fish Hatchery, \$3,000. The Appro-priation bill contains an item of \$26,000 for fisheries, which should be sufficient. For establishing a fish hatching station in Jefferson county, \$4,000. Objections same as above."

The Kennel.

Nov. 8.—Second Annual Field Trials of the Western Field Trials Association, at Abilene, Kan. R. C. Van Horn, Secretary, Kansas City, Mo. Nov. 32.—Eighth annual field trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Ooster, Secretary, Flatbush, Kings county, N. Y.

DOG SHOWS. May 18, 19, 20 and 21.—Third Annual Dog Show of the St. Louis Gun Club, St. Louis, Mo. Geo, Munson, Manager. May 25, 20 and 27.—First Dog Show of the Ninth Regiment, Wilkes-Pa. W. H. Tock, Secretary, Wilkesbarre, Pa. July 20, 21, 22 and 23.—Milwaukee Dog Show. John D. Olcott, Man-ager, Milwaukee, Wis. Sept. 14, 15, 16 and 17.—First fall dog show of the New Jersey Ken nel Club, Waverly, N. J. A. P. Vredenburg, secretary, Bergen Point, N. J.

A. K. R.-SPECIAL NOTICE. THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is pub-lished every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries "American Kenuel Register," P. O. Box 2892, New York. Number of entries already printed **3689**.

EASTERN FIELD TRIALS DERBY ENTRIES.

FOLLOWING is a complete list of the entries for the eighth annual Derby of the Eastern Field Trials Club, to be run at High Point, N. C., commencing Nov. 22. All were whelped in 1885.

Macklin)-Liver and white dog, March 32 (Bang Bang-Grace III).

THE ENGLISH FIELD TRIALS.

THE National Field Trials were held at Shrewsbury, Eng., commencing Tuesday, April 28. Following is a summary of the several events: POINTER PUPPY STAKES.

First, F. Lowe's liver and white Duke of Hessen, 11mos. (Luck of Hessen-Blarney); second, C. H. Beck's liver and white Rapid Ben, 15mos. (Naso of Kippen-Venus of Braun-fels); equal third, A. Richard's orange and white Lolo, 14mos. (Drake IL.-Fairy), and Barclay Field's liver and white Busy IV., 13mos. (Young Dick-Belle of Bow).

SETTER PUPPY STAKES. First, C. Wace's lemon and white Sandy, 12mos. (Bluecoat Boy—Minnie); second, J. H. Platt's black, white and tan Brave Prince, 15mos. (Brave Tom—Bouny Bevis); third, Elias Bishop's lemon and white Royal Dash, 11mos. (Royal Prince– Nellie).

Acton Reynald Stakes for all-aged pointers and setters, eight pointers and four setters. D. R. Scratton's liver and white pointer Hero, 5yrs. (Bang-Hebe), won first in pointers and prize for best of either breed; H. Lonsdale's black and white setter Jovial won first in setters, and M. A. Richard's black, white and tan setter Rose, 3yrs. (Diamond-Minnie) won second.

CLOVERLY STAKES.

CLOVERLY STAKES. Pointer and setter braces, George Pilkington's liver and white London, 2yrs. (Lake—Dingle) and liver and white Lark-spur, 2yrs. (Lake—Dingle), won first in pointers and prize for best of either breed. Mr. Heywood-Lonsdale's liver and white Bruce, 2yrs. (Barou—Norah) and black and white Jovial, 2yrs. (Barou—Joan) won in setters, and Prince Solms's liver and white Naso of Kippen, 4yrs. (Naso II.—La Vole) and liver and white Jilt of Braunfels, 4yrs. (Darwin—Young Jilt), point-ers. won second.

The Kennel Club Field Trials were held near Holyhead, the first week in May. The Derby had a hundred and twenty-seven nominations, with sixteen starters. Rapid Ben, win-ner of second in the National Pointer Puppy Stake the week previous, won the stake, Prince Solms's liver and white pointer bitch Lady of the Reid, 12mos. (Sir Naso--Hertha), winning second.

ALL-AGED STAKES.

ALL-AGED STAKES. There were thirteen entries in this stake—eight pointers and five setters. The stake was won by M. A. Richard's setter Rose, winner of second in the Acton Reynald Stake the pre-vious week. Second, Sir T. B. Lennard's liver and white pointer dog Polites (Priam—Duchess). Third, R. G. Mawson's lemon and white pointer bitch Quit's Baby (Prior—Quits II.).

IRISH WATER SPANIEL SPECIALS AT CLEVELAND. -La Salle, Ill., May 9.-Editor Forest and Stream: Upon looking over your very excellent report of Cleveland show I was very much pleased with it. But I must ask you to kindly make one correction for me. It is this. In your account of specials won you mention that Patsy O'Connor won the special for best Irish water spaniel bred in America. I am pleased to say that it was my Count Bendigo that should get the credit for that honor. My Little Sioux beat Patsy for best dog or bitch in open class.-T. DONOGHUE.

THE ST. LOUIS DOG SHOW.

THE ST. LOUIS DOC SHOW. [Special Dispatch to Forest and Stream.] Sr. Louis, Mo., May 19, 1886. THE dog show opened yesterday at the Exposition Building with fine weather. The attendance has been very good. The average quality of the dogs in the sporting classes is good. Following is a list of the awards up to noon to-day: <u>AWARDS.</u> POINTERS. LUGE COUNTED.

THE NEW YORK SHOW.

THE NEW YORK SHOW.
 Editor Forest and Stream:
 In your report of the New York show you do me a grave injustice. You are well aware that I never complain of criticism by newspaper reporters, and if opinions differ as to merits of dogs, why should not the press reporter differ from the judge as to the awards? That is all right, and I am content to allow all reasonable freedom in showing up what is thought to be my mistakes. I always, however, reserve to myself the right to consider my judgment at least as likely to be correct as that of the reporter, owing to the more favorable means of comparison a judge possesses over an onlooker. But I will not allow a slander on my character, or motives other than those of an honorable man to be imputed to me with impunity. Disappointed exhibitors are only too ready to seize any excuse for finding fault with a judge's unpalatable judgments, and I regret that your reporter should aid and abet then in the cry that I awarded prizes at random in my hurry to get through quickly.

 May our reporter been in my ring and seen me doing my work, he would never have perpetrated such a slander. The ostively affirm that my awards were as deliberately and coily made and represent my clearest judgment just as much as if I had studied each class for a week. The only hurry there was, was that of getting the dogs in and out of the ring. You may criticise my judgments, but pray don't impute moview. J. F. KIRK.

TOEONTO, May 15, 1886. [As Mr. Kirk disclaims having hurried through his classes and awarded the prizes at random, we cheerfully tender him an apology for making the assertion. We wrote as we did, believing that this was the only possible excuse he had for placing some of the dogs as he did. We sincerely regret to learn from him that the awards were the result of his delib-erate judgment.]

erate judgment.] THE WILKESBARRE DOG SHOW.—Wilkesbarre, May 10. —*Ekitor Forest and Stream:* The committee having charge of the Wilkesbarre bench show have decided to offer two special prizes of \$25 each, to the best kennel of four sporting and non-sporting dogs respectively. A mistake in proof reading has done us much injury in Sk. Bernard classes. The prizes for St. Bernards should be \$10 for first and \$5 for second prizes, in-stead of \$7 and \$4, as in premium list. All express companies will return dogs free of charge. Full power will be given the judge to award such prizes as he thinks fit in the miscellaneous classes. The object for which this show is given appeals to all military men, the receipts going to the fund to build an armory for the Ninth Regiment; and further than that, if the show is reasonably successful it will result in the formation of al breeds throughout this entire section.—W. H. TUCK, Secretary. Secretary.

Secretary. BEAGLE AWARDS AT THE CLEVELAND SHOW.— Wrightsville, Pa., May 15.—*Editor Forest and Stream:* In your list of awards of the special prizes at the Cleveland show you wrongly gave my Fairy as the winner of the two special prizes offered for the best beagle bitch in open class. These prizes were awarded to my bitch Dot (Bannerman—Floss). Your list of the awards in the beagle classes is further incom-plete, as you passed over the open bitch class (over 12 inches) entirely. The awards in this class were as follows: Open, over 12 inches—Bitches: 1st, A. C. Krueger's Dot; 2d, E. E. Shaner's Piney. Very high com., Mrs. Geo. H. Hill's Minnie, High com., A. C. Krueger's Maida and C. W. Fromm's Stella.--A. C. KRUEGER.

Stein, -A. C. KRODER. SMOTHERED.—Portland, Me., May 10.—Editor Forest and Stream: It grieves me to annoance the death of my two pointer puppies, Mikado and Belle of Woodford's, by Graphic out of Zitta. The puppies were smothered while en route to the New York bench show. Their loss can only be attributed to gross negligence on the part of the express messenger be-tween Portland and Boston, as we learn that they were re-ceipted for as dead at Albany, and we have reason to believe were smothered directly after leaving Portland. The brace-as is usually the case—were the pick of the litter, and were to have gone from New York to Virginia to be trained for the field trials. They were entered in the Western Derby, and I had every reason to believe would have made a splendid brace of field dogs.—F. F. HARRIS.

WHAT THEY THINK OF THE "RECORD."—La Salle, III.—I have received the "Kennel Register and Account Book for Breeders," and I can assure you I am more than pleased with it. If I had known it was such a valuable book, you may be sure I would never have been without it so long. It is just what breeders want, and I cannot see where it could possibly be improved. Every breeder should have it.—T. DONOGHUE. [Specimen pages sent free on application]

SPECIAL PRIZES AT NEW YORK.--The following awards of special prizes at the New York dog show are additional to those published last week: Best greyhound (two) W. H. Huntington's Louisette; best brace, same owner's Harlequin and Louisette. Best bulldog, J. E. Thayer's Bellisima. Best King Charles spaniel, J. Marriott's Clifton Belle.

DOLLY.—Burr Hollis of Wellsville, N. Y., who has had the misfortune to lose his hotel by fire, sends us a touching account of the death of his black and tan terrier, Dolly. The dog, having run back into the burning building, was seen on the piazza of the second floor, where she set up a cry almost human. One of the firemen turned the hose on to her, to keep her from burning, until a ladder could be brought for her rescue; but when the stream struck her she ran to the end of the piazza, leaped off into the flame, and with a piteous cry disappeared.

DEATH OF MEERSBROOK MODEL.—Editor Forest and Stream: Last Sunday 1 had the misfortune to lose the best fox-terrier in my kennels, Meersbrook Model. She was killed by a huge mongrel cur which suddenly pounced upon her, killing her instantly. Although never shown in this country, her record abroad was a brilliant one. This is the second ter-rier I have lost in the same way, Raby Tyrant being killed by my deerhounds.—JOHN E. THAYER, Hillside Kennels, Lan-caster, Mass.

KENNEL NOTES.

KENNEL NOTE BLANKS.—For the convenience of breeders we bave prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales," All Kennel Notes must be sent to us on these hlanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them. Sets of 200 of any one form, bound, for retaining duplicates, sent postpald, 20 centr. 30 cents

KENNEL NOTES.—A number of Kennel Notes recently received have been lost. Correspondents who may have sent Notes which have not appeared are requested to repeat them.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club scoretaries.

Correspondents who favor us with club scores are particularly re-quested to write on one side of the paper only.

guestea to write on one side of the paper only. SAN FRANCISCO, May 1.—A party of Eastern tourists went over to Bird's Pol¹ t. Alameda to-day to try their skill at sbooting a few pigeons. To make the affair somewhat interesting, a sweepstake, §5 entrance, was shot off at 15 single birds. 30yds, rise, Hurlingham rules. Folitzer was the lucky man, and took the pool of §15 with 13 good kills. Armitage came next with 12, and 5 men killed 10 each. Below are the scores: Morris.....0110001111110-10 Fowler.....1110110010101101-0 Politzer....0111000111111-0 Nogales....01100111011101-10 Politzer.....0011001111111-13 Elder......01100111011101-10 Preston00011001111101-32 Adeler......01100111001101101-10 Preston000110011101101-9 After the main shoot scome practice at double birds were indulged n, and some very fair shooting was done.

match in the near future, and there is some tark of the permanent organization of a ladies' shooting club. The second of the menthly medal shoots of the California Wing Club took place to-day at San Bruno. It did not call out a very large attendance, and from the present aspect of affairs it would seem that the members of the club have lost much of their former enthr-sissm, as in former years fifteen to twenty men would always come down to the grounds, while to-day there were only five members present, one of them having but lately joined. The cause of this decline of attendance is attributed to the unwillingness of the mem-bers to compete in pool shoots with Crittenden Robinson, whose far-and-away superiority leaves but little chance to others for winning first money. It is also said that no less than ten members have re-signed during the season, and though there is some talk of founding another club, yet no work has been done toward its formation. The shoot to-day was an accellent come. Windy San Bruno seems to be losing its reputation for hurricane ahot of the first, second and third club medals, Crittenden Robinson taking the first, second and third club medals, Crittenden Robinson taking the first, second and third club medals, Crittenden Robinson taking the first, second and third club medals, Crittenden Robinson taking the first, second and third club medals, Crittenden Robinson taking the first, second and third club medals, Crittenden Robinson taking the first, second and third club medals, Crittenden Robinson taking the first, second and third club medals, Crittenden Robinson taking the first, second and third club medals, Crittenden Robinson taking the first, second and third club medals, Crittenden Robinson taking the first, second and third club medals, Crittenden Robinson taking the last hot, and tied with Slade for second place with 10. On the trial shoot of 4 he secured the coveted position. The match was for 12 birds, 30yds. rise, 80yds, boundary:

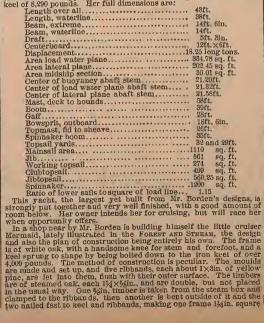

the increase. STAUNTON, Va., May 10.—At a meeting of the Staunton Gun Club on the 7th, we reorganized with the following officers: C. MeN. Whittle, President; W. F. Summerson, Vice-President; C. Bargamin, Sceretary and Treasurer and twelve others. As there are many clubs organiz-ing in the State we are in hopes of forming a State association. There will be a big prize match at our fair next fail and we hope to have every city in the State represented. We will shoot our next match on the 20th of this month with our new traps.—C.

Hachting.

IN AND ABOUT BOSTON.

In Ann About Source of the second sec

The rubballs, other many after the frames are in the yacht planked and celled io the usual manner. She will be used for crr ing about the Rhode Island coast. Mr. Borden has also designed steam yacht named Baypoint that is just completed for Mr. Swift, Fall River. She is 52t. over all, 45tr, waterine, 20tr, over guar 10ft, diameter of wheels, 8tr. feathering paddles and of 18% tons d ed for cru

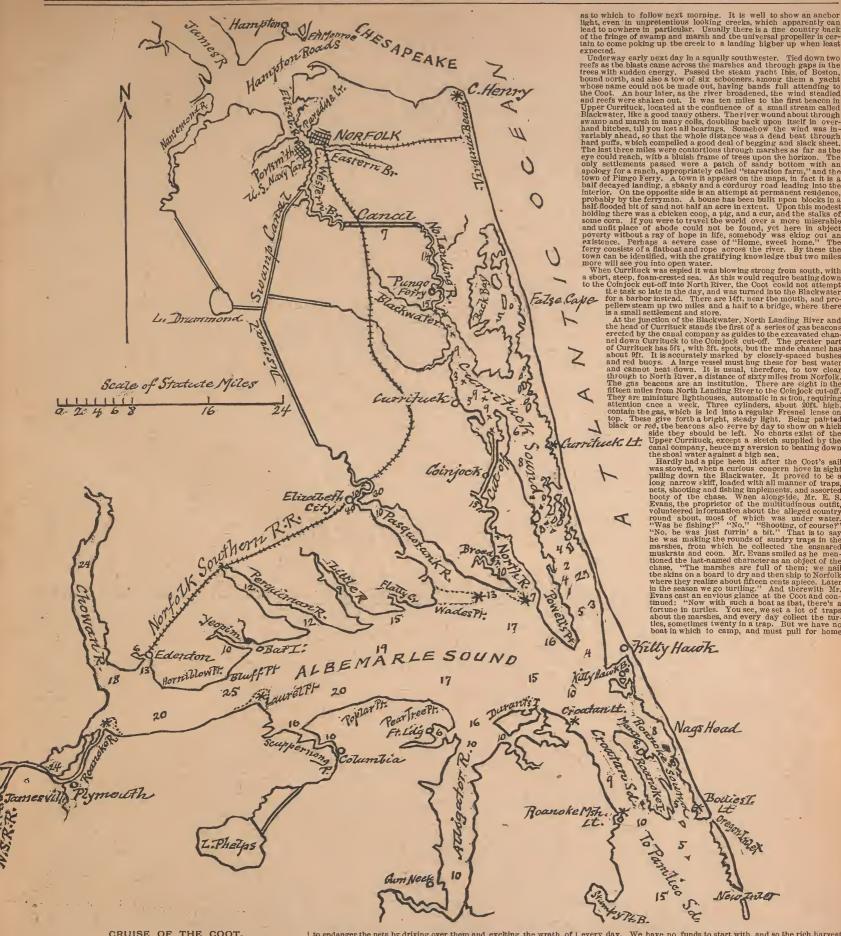

ment. th Boston is beginning to assume its wonted nautical appear and the fleet, large and small, is anchored off the point, while and the fleet, large and small, is anchored off the po ards are busy. Williams bas the little Pilgrim haule well worth a careful study. Her good qualities commu-s to the eye and are fully vouched for by the cruise s eason along the Maine coast, which appeared in the FK and early this year. She has all the essentials of a little works and ship in any waters, but the last season along the Maine coast, which appeared in the STREAM early this year. She has all the essentials of sturdy little cruiser, safe and able in any waters, bi development of the type has not yet been reached in her room for increased accommodations and a more fuished The cabin floor is high, considering her draft, and migh by altering the design a little, while her triangular cou-excellent from a sailing standpoint, might easily be have the eye. Williams is busy now with a keel catboat of sin but with a large occinit and spue

From for increased accommodisitions and a more finished appearance.
 The cabin foor is high, considering her draft, and might be lowered by altering the design a little, while her triangular counter, though excellent from asselling standpoint, might cashy be handsomer to but with a large eockpit and snug little cabin.
 Af smith's yard fluron has received nearly of tons of lead on her keel, increasing her draft slin, so that she was launched with great difficulty. Larrels were lashed under her to foot her, and two tugs were required to tow her off. Thetis bas also bad some repairs made there. The 19th, cat, mentioned last week, bas been launched, and the tags one is well advanced. Hera is also hauled up at Smith's and is scraping and painting.
 Lawley's old yard is being emptied rapidly, a number of boats going off last week. Hutchins & Prior are busy with some open boats, of which they make a specialty overhauling and fitting them out. Dinsmore launched on MKY is has sent a way the Hannlel. Mr. Ford's steam yacht, and Wood Bros. bave finished the Aurora, Mr. Pickman's steam yacht, and Wood Bros. bave finished the Aurora, Mr. Pickman's stead and bit off. Lawror and 5th draft. Lawlor and Corta in South's and sister with a some one a steamer 70ft. over all, 60ft. waterflue, lift, beam and 5th draft. Lawlor and Story, in adjoining yards, are about to commence the two rival tishermen, the former from Mr. Lawlor's design, the latter from Mr. Burges's. Gitana has been out at Simpson's Mry dock, and has her racing sticks up; she will commence have been were shall for the Mystic wharf. Tak steam yach, mad Active are still at Mystic wharf. In Steams and the draft. Lawlor and story, in adjoining yards, are about to commence the two rival tishermen, the former from Mr. Lawlor's design, the latter from Mr. Burges's. Gitana has been out at Simpson's Mry dock, and has her racing sticks up; she will some water than and stick draft. Lawlor and story in adjoining yards, are about

sonadoy. Bayanere is also for each since in the bay solution is bought puritan, and Meusiana will probably be sold, as her owner is too life to use her. All of these yachts are new and of excellent construc-tion, notably the Bayadere, which is expensively finished and fitted out. At Beverley the big Fortuna has fitted out and is about ready, and lying beside her, at Foster's wharf, is a sight to make glad the heart of the cuiter man, after the cold winds of last seeson. Eright as paint and varnish can make her, with clean taper spars and white deek, is Clara, Mr. Chae. Sweet's handsome twenty. Last year she arrived here too late for much racing, but still showed what she could do in the cruise of the E. Y. C., and notably in the Bennett and Douglas cup race. This year she is in the same hands, with Captain John Barr, who handled Neptune so well in her contexts with Verve some years since, in command. He will sail her in all the races of the eason, which promise, by the way, to be among the most interesting contexts known for years in our waters, and we look to her and him to make a good score for the cuitters in 188, though they will have to work for all they get. In this class the new Chiderella stands a good chance, to judge from her looks, and will make a big bid for prizes, representing the new type, with outside lead keel shaped to hull, and useless, also Vixen. Regina, Rover and Einterprise are also elegible for this class, Oriva will possibly be in, and Fanita has her old laurels to look to, so it behorves her to enter in defense of them. There are still two boats we sbould like to see entered, the Bayadere, mentioned above, and Isis, now for sale, as her owner thas bugut Priscilla. The latter is well and favorably known in her class for the narrowest of the owner and designer, and would make a good fight for first. It is a great pity that Fife's little beauty, a cuiter of moderate width dy beausy should lie die at Naushon, with all this fun going on There should be plenty of ambitious young Corinthians

are accustomed to in others of her class. The waterline is full, it even looks a little convex at the bows, l the entire side to the rail has the same casy, graceful flow, end aft na light and narrow counter, without a suggestion of flat in below is a sourd cabin and forecastle and aft is a large oval sail hat making a cockpit for the steersman. The most curious point ab-her is the position of the main sheet kevele, bolted to the timbers cash side of the cabin, just above the lockers. The ends of the sh is done in the steersman is a straight of the sail hatch, and in a j the oraw get in the sheet form the cabin, out of the way of the sw ing boom and avoiding any disturbance on deck. Shona will 1 plenty of smart keels and centerboards to race with about Beve and Marbiehead and her performance should throw much light the question of wide and narrow beam in small yachts. Ar Salem Meduxa is haulted up, and Stranger is fitting out with mu by McManus. Col. Hugh Cochrane's schooner Tioga is at Sall the, on waterline. Her keel will be increased to 20m., and 30 to the about present from. At Marbiehead, Mr. Eddy, who has bought out Mr. Keating, if the mable loads and the key will be uncreased to 20m., and 10 tons the dual marbiehead, Mr. Eddy, who has bought out Mr. Keating, insided an able looking cathoat, and is with repairs and fitto or a hable hoat, somewhat, similar to the well known Witch, built

on a numb

CRUISE OF THE COOT.

The one thing to be dreaded is the appearance of a timber raft in the one thing to be dreaded is the appearance of a timber raft in the one thing to be dreaded is the appearance of a timber raft in the one thing to be dreaded is the appearance of a timber raft in gh, and in the turns of the creeks swing from shore to shore, along along one bank first and then over to the other. Whichever so the raft you choose, there is a chance of getting squeezed beten it and the bank, as the towing steamer has no control over its g tail. The Coot secaped the quandary by sheering into a small te and holding on to the bushes upon one occasion, and in another lowing her own judgment in opposition to the signals from the steamer. His raft edged across stream in response her wind blowing, and had I followed the pilot's injunctions to keep leeward, the Coot secails and rock.

Series of the series of swamp-inter creaks are generally and by, bere of projecting points, it's not safe to approach them in strange ters on account of enlarged tree stumps and sunken trunks, ook out for stumps, capitain' is a common injunction when a ive wishes to the mouth of the Scuppernong River right in the enarts to the mouth of the Scuppernong River right in the way of 15th Loggs adrift from the tows, with one end shot into the d and the obser barely discentible above water are frequently enintered as well as much drifting rubbish, so that a walchful eye eads is at all times necessary. Creaks leading through marshes are ariably deep and bold, often deeper than the main body into loth they flow, and frequently obstructed by a narrow bar. In sucyed regions, the tatives generally have stakes planted to guide b harbor where the channel is torkuous. The greatest outsance in ememale and Famileo Sounds is the mass of old pound net stakes chains a wide berth and forfeit the benfus of a weather shore. a whole beach is a confusion of stakes, and where the nets or

-

to endanger the nets by driving over them and exciting the wrath of the fishermen. Local boats of little draft pass over the leads anywhere by crusbing them under without harm. A native tried this nece with the Coot after tricing up the centerboard, with the result hat the boat got hung up on the net for balf an hour and open war was threatened by the fishermen. Hugging the shore at night is also

A strong westerly breeze was on name to blow the Cool through ble in-mile canal connecting the headwaters of the Elizabeth with those I North Landing River. The lock tender had the gate open and uickly dropped the boat the few feet down to the canal level. This bek, which is granite-faced, 240ft, long and 40ft, wide, is the only one a the route south. Seven feet can de carried clear through the varius links in the chain connecting Albemarle and Chesapeake, hereby some 1.800 miles of navigable interior waters have been rought within direct reach of Norfolk. Baltimore and northern

n 1818 the famous Dismal Swamp canal was cut into the heart of great swamp to open lis vast wealth in pine timber to the world. e son of the projector of this work, Marshall Parks, Jr., conceived d executed the new line of communication with the South, the inuable results of which are now fully demonstrated in the fresh to and growth of North Carolina's lowlands. The new canal was tavated entirely by steam power, the dirt being thrown up on each e. It runs almost due east and west, averages 80ft, in width and excellently maintained. Owing to the high banks and trees it was ther slow work getting through in the Coot, despite the strong at blowing. Four bours were occupied in the transit and an ends amount of jibing made it a matter for congratulation when the trh Landing bridge beneve in sight and the inspector's pass was deered to the bridge tender, who poked out a long pole with a slit in

end into when the document was inserted. Synd the bridge there are two miles of crocked creek and then a broader reaches. Four miles down the creek forked into two ches, equally attractive, and not being certain which one to take Coot was brought to an anchor as the evening shades began to The traffic up and down one branch soon settled the question every day. We have no funds to start with, and so the rich harver slips by." A turdle trap, as I found out, is much like an eel baske Two barrel hoops serve to distend the funnel-like ends of a ne which lead through small apertures into a cylindrical middle in whic the bait is hung. Once in, the turtle cannot reach the small ho outward, but climbs to the top of the net for air. Hence they mus be set between stakes several inches clear of the water. If the win plles up the water higher than the net the confined turtles drown. Mr. Evans had a high opinion of the business. Some Africans fron Ore Sound had come up and caught \$75 the first night, when th natives drove them off as foreigners. An unwritten law in this par of the world consigns the game to the inhabitants of the region, an strangers are promptly resisted. Thus Mr. Evans was original from Powell's Point, about twenty miles below, but in the eyes of th Blackwater people he might have come from the statute books, bu endtakets. Mr. Evans knew no such law on the statute books, bu ritack. His capital was invested in four nets, valued at \$1.50 each with proportionately medest returns. If he had a hoat like the Oor and thirty nets, a fortune was certain to come unbidden, always sur posing the turbles to do the right thing by bim. Thus we calculate the number of purch and lars and cents, until appalling riche were heaped up, and the only remaining difficulty was how to spen work heaped up, and the only remaining difficulty was how to spen ture by sticking to the cruise of the Evolutions in it. But the turble had not signed the contract yet, and that is probably where the gli hard not signed the contract yet, and that is probably where the gli hard not signed the contract yet, and that is probably where the gli hard not signed the contract yet, and that is probably where the gli hard not signed the contract yet, and that is probably where the gli hard not signed the contract yet, and that is probably where the gli hard not signed the couts of the Coot, and promi

ss of only half

perimented with one o od for thirty days, at a

ying up." The fish caught include perch, mullet, chub or big-ad bass, all being plentiful. According to Mr. Evans no wild rere to be got above the lower Curritack, and even there they becoming very sly and scarcer every year, except in the advection of strict game laws, the natives hunt by night and ght" the ducks, so filer give Currituck the go by and winter in ound in great, numbers. On the "Yankee marshes" proper tion is extended and shooting is still good. At the time of my systemal cases were pending in Currituck court against offenders spassers. These proceedings by the Northern club men are i with favor by the better native element, who realize that it is me the laws were enforced if Currituck wildfowling is not to e a thing of the past. If northerly wind bowled the Coot down Currituck, holding with a propeller bound South. Beacon after beacon was and passed. Once the boat was sheered away from the line of but the breaking of the past. If northerly wind bowled the Coot down Currituck, holding a with a propeller bound South. Beacon after beacon was ind passed. Once the boat was sheered away from the line of but the breaking of the past. South a steered up Coinjok Bay to the short-nal of five miles length. This is a wide cut and can be sailed h without much trouble. Half way along there is a sawmil, tores and a few houses on high ground, known as the village ijock. A good deal of thinber is got from the neighforing for-The drawbridge was opened by a kick and the usual questions the Coot rapidly sped down river, several elbows of constantly ng water leading finally into the lower reach of Noth River. "It from the canal is marked by a white gas beacon at the f a fine, broad reach, with 12ft. of water. With a following and company"s supervision and the Government chart of and company"s supervision and the Government chart of and with a speet of a small sea, seven miles long and vide. A second white gas beacon here marks the termination canal company"s supervision and the Government chart of ande waters com drying up." The fish caught include perch, mullet, chub or big-thed bass, all being plentiful. According to Mr. Evans no wild were to be got above the lower Currituck, and even there they

INTERNATIOAAL RACING AND THE Y.R.A. RULE.

<text><section-header><text><text><text>

g the Y. R. A. tonnage rule would réquire to be suspended, in to have a classification by length, to render the comparison al. between a hundred feet Julianar and a hundred feet nua. . have many times asserted that the establishing of fixed ton-classes had a vory prejudical influence on racing between to of forty tons and under, but we are included to think that a fiberiton by length, such as the Royal Victoria Yachi Olub ex-rented vitansome thirty pears ago, would have a beneficial effect acht racing. The classes might be ninety feet, seventy leet, ive feet, forty-five feet, thirty-five feet, thirty leet, and twenty-ect, or some other similar arrangement with sail tons rating; or, ferred, a rating by Y. R. A. tone, There is no doubt that the co of any restriction on length in the classes had the fuevilable of bringing about the extinction of competition, and perhaps e the greatest possible length for any given tomage had been ted to. The owners of old yachts, which by comparison were cy than the last vessel built, "hoisted the broom," and usen who inclined to build, said "What's the use, when our turn to be ill will surely come next year?" It is much to be deplored, no , as at one time the racing in the forty tons and twenty tons as was the strong feature at every rogatta; and, as helore said, aluk it night have been preserved had there been a restriction angth in cach estima. . Ince that as omany men now build steam yachts will to a very derable extent alter—in tack has altered—our yacht racing; but ove of match shifting is as strong as every and there, and weatvo me-ser and yeo phead in 184 that we years honce American tame would build four large centerboard enters with heavy keels. Steam is being rapidly introduced there, and yacht rac-due and most entirely conflued to sloops mostly under 60f. ne and yet men now come forward and build neaver on-there the schoner (ever ynich set in here after the appearunce of a site "big cutters," then, alter about sixteen years. In and the Arrow d as the "big cutt

called on to defend the cup again, and outside of the four of her class we have no vachts to send. Even it our old sloop class, the 70-footers, had not almost disappeared, there would be none of them fooli-enough to risk a transatiantle passage, and we must look to the "large centerboard cutters with heavy lead keels" to cross for this one in the scatter of the suscent

THE LAKE Y. R.

THE LAKE Y. R. A. THE third annual meeting of the Lake Y. R. A. was held on May 8 at Oswego, with Mr. John T. Moit, Oswego Y. C., the president of the Association, in the chair. The various clubs were represented as follows: Royal Canadian. Toronto, Com. Leys, Beverly Jones, Robert Mills; Bay of Qunue, Belleville, Capt. Hostage, W. H. Biggar, R. M. Ray; Toronto, Com. MeGau, Capt. Evans, Mr Dixon; Kingston, Com, Carruthers, Col. Campbell, Dr. Garrett; Oswego, Com. W. B. Pholps, Jr., J. B. McMurrieb, John T. Mott. Several changes were made in the rules, no yacht being allowed to enter in the Association races unless owned wholly or in part by a member, and shifting bal-sats being prohibited in the third class. A committee composed of one member from each club was appointed to arrange for an Asso-f-tion trophy, to be beld by the yacht making the best record for the season. The officers elected for the present year are: President, W H Biggar, B. Q.Y. C., Yice-President, Col. Campbell, K.Y. O.; Second Vice-President, T. McGaw, Com. T. Y. O.; Secretary and Treasurer, Geo, E. Fevans, Captain T. Y. O. The fixtures for the season's cruise are; July 30, Belleville; Ang. 2, Kingston; Ang. 6, Oswego; Aug. 10. Toronto. The meeting of 158 will be held at Belleville, Out, on the second Saturday in May. After the meeting adjourned a dinner was given by the Oswego Y. O. to the irg guests, at the Dooltitle House. On the following day all hands were out for a stall on the Atlanus. YACHTING NOTES.-Norma, schooner, is fitting out and setti g

Torono. The moeting of 1957 will be held at Belleville, Ont., on the second Statuday in May. After the meeting adjourned a dinner was given by the Oswego Y. C. to their guests, at the Doolittle House. On the following day all hands were out for a sail on the Atlanta.
 YACHTING NOTES.-Norma, schooner, is fitting out and setti g her racing rig, after the winter's cruising A. E. Smith, of Islip, has begun a certerboard yncht for Mr. Those. B. Assen, from a model by Mr. Philip Ellsworth. She will be 35t, over all, 3ft. waterline, 12t. Sin, beam and will be used on the Indian River, Fla. She will have a trunk cabinCaptain Lou Townes is building an open boat 26ft. Jorg, 10t. Deam, and 4ft, Gin. deep, for Mr. D. E. Robbins, of New York. She will have a cabin and will bertb four... Mr. N. L. Munro has purchased the Yacsemite of Mr. John Roach, but the report is not confirmed..., Nelle.-A catboat of this name has been lately finlshed at Newport for Captain Low Townes will sail her at Greenwich, Conn. Athis summer.... Norseman, schooner, arrived at Greenwich, Conn. May 14. She left Newport on April 20... Sirene.-Dr. Doremus, of New York, has purchased this use wopen si oop, built by HeGichant this winter. His sons will sail her at Greenwich, Conn.... Captain Jesse Clock, son of Captain Clock, of the Mischief, will contained Missing spars. The interori is nearly fieldsed off. There is a large cabin aft, two staterooms to starbaord, a passage to port, with three smaller staterooms and pantry, etc. opening on i. The sing are plain aft, two staterooms to shaltaker, and even the shalt will be start on the southwest corner of Muum's basin, her torgens, total and neat. Six tons of lead have theen cast and fitted inside and she still foats very higb. Twenty tons more will be stowed, making a total of 60 cons of balaks, and even the water of this her and set of the southwer six and the cabe she she will be stowed were the Alantic Committee to intit Maydower, Furitan and Priseilla to enter the cl

THE EASTERN Y. C. REGATTA -The correct date for this event is June 23, all entries closing on June 23, 2 P. M. The Eastern yachts-men are very desirous that the large yachts from New York should exter, as Mayflower and Puritan will be in.

First, the city, the city, strotch salls, ones are not yea, are out. Resolution, her owner has refearing, so on be ready; Ray is orn on a court, required and a rear main and truth, preparatory to a see. It has been recaulted and a rear main year to a strong a sall her not been word to a strong and the set of the second to a second shape for racing as sall her not been word to a strong and the second to a second and truth, preparatory to a second and truth, preparatory to a second and truth, preparatory to a second the second to a second to a second to a second to a second and the strong and the second to a second to a second and cross the Alastic in the fail, on a long cruther. Thus, also be at the line in some of the races, and it looks like a schooner racing. Miranda, too, is to come out to Americ to sair, though her new owner is as yet niktown be device a strong the second to a second to a meric to sair, though out and Becomport, from which place the lately come. The big shop Whitewing is fitting out argan the off ittle of ittle of the back of the second to a second to a second to a second the the second to a second to a second the second the the second the second to a second to a second to a second the the second to a second to a second to a second the the second the second to a second to a second to a second the the second to a second the second to a second to a second the the second to a second to a second to a second to a second the the second to a second to a second to a second to a second the the second the second to a second to a second the second to a s FITTING OUT ABOUT NEW YORK.—Most of the yachts be eily are now in commission, and a good many had a char retch salls and gear in the wind of Sunday. Some of the nes are not yet in commission, but Atlanta and Electra of the sta

with wo tons of lead under her. But few yachts are yet at and tif Staten Island, but the fleet of the S C. Y. C. willsoon gather the in readmess for Decoration Day. Clytic and Missehief will be mis-thfs year, but Pricella will add materially to the dignity of the fi LAUNCH OF THE FEDALMA.—Since February last there has be building on the pier af the foot of East Tweirth street, a steam ya for Ex-Com. Brown, former owner of the Nirvana and Psyche. 7 Fedalma, as the new yacht is named, after a ginzy queen, s modeled by Mr. Philip Ellsworth, but the face bow of the origin of the dimensions of the yacht, which is intended mainly purned. The dimensions of the yacht, which is intended mainly for the dimensions of the yacht, which is intended mainly purned. The dimensions of the yacht, which is intended mainly for make about Long 1sland Yound, are: Length over all, 100 beam, 20ft; hold, 10ft; dualt, fit. The engines, designed by Mr A. Wilson, and huilty the Quintard from Works, are 14 and 24 by compound, with a tour-bladed wheel, 6ft, diameter, and 10ft, pit to make 175 turns per minuts. The porcupine boller carries 100hs steam. The keel, stem and sternpost are of Ohio cak, siding 71a. moulding of the keel being 12in, and the sitem and sternpost 11 The frames are of backmatack, sided din, and moulded 7 and 4 spaced 20in, centers. The keelson is of yellow pine, are 4x6 to planksbeer, white oak, is 24x14in, and the deck plank 21a. 7 planking, of oak and yellow pine. is 2m, thick. The yacht will schooner rigged, ber bowspril beine 11ft, ontboard. A number yachtsene were present on May 12 to witness the launch. A P. M. the carpenters began to weige up, but it was over an hour 1a before the keel blocks were out and the yacht rested on her cradl A 5:05 the shores were knocked away, and after some blows on in this point the starboard cradle gave way, but she continued 1 motion and was soon afloat, little Miss Emily Brown breaking a bo over her bows. The tug Indian took her in tow to the foot of T teents street, where she wil

N. Y. Y. C. ... Jewel, sloop, has been sold to R. Ellingham Law N. Y. Y. C. ... Jewel, sloop, bas been sold for \$3,250 to Mr York ... Zingara, steam yacbi, has been sold for \$3,250 to Mr Sammis, of Fire Island.
SEAWANHAKA C. Y. C. -. The programme for the Decorati-sail has been sent out. As last year the sail will be a race classes of cabin yachts, a prize of \$3 being given to the win-each class. No entries are necessary, but yachts intending 4 must carry their private siznals at the main peak. Profession be allowed in the crews, and boats may be carried at will. A start will be made at 11 A. M. or as near that bour as possible, being fired from the tagship Priseilla and five minutes later : to start, the times being taken from the latter gun. The club the flaxship Priseilla and a stakeboat ancbored off Tompki Londing, S. I., to Huoy No. 10 on the S. W. Spit. keeping it opt hand, thence to and around Buoy 84, keeping it on the hard, and return over the same course. Hows N, Sit, keeping it on the swill rendezvous off Staten Island, and the captains after the ra-ynchis will rendezvous off Staten Island, and the captains after the ra ynchis will rendezvous off Staten Island, and the captains after the ra ynchis on each second class gracht. The old basin between kinsville and Stapleton has been leaded by the dlab. The club Venture, will soon be in commission.
NEWARK Y. O...The flagship of like Newark Y. C., Sea schooner, has been disposited by the club. The club venture, will soon be in commission.
NEWARK Y. O...The flagship of like Newark Y. C., Sea sin, over all, 107th fin, waterline, and allow for in a part payment. The Tala Wave was built in 1870 for Own sized, but wave, so well known about New York, giving the Sea in part payment. The Tala Wave was built in 1870 for the dis-singled for on Decoration Day. On May 10 hirdeen of the M yachts opened the season with a run to Hay Ridge, wher unchored and their crews visited the Allankic. In the after blew quite heavily coming in puts and s

was too light to make the rate within the car to take place this A $(\Delta TAMARAN RACE - A$ race is talked of to take place this month between several catanarans that have previously raced to-gether. The stakes will be a sweepstakes \$100 each, and the course will be from Bedloe's Island around Buoy 16 and back. The Duplex, Messrs. Longstreet & Orden, Cyclone, Mr. Frank Curtis, and Agir, Mr. Jesse Hugbes, will enter and probably the Nemesis. Mr George

ACH TO SHO DAY OVER TAISED SHI. UDIS SEASON. ACH TS.—The success of the little schooner Whim Ridge, after a winter about the Florida coast, has ir a larger boat for coast cruising, the dimension by 21ft. on waterline, and 7ft. draft. Mr. A. Cary her, and she will be built of steel or iron, and rigged Solid his at work also on another design, 55ft over a 18t. beam, 2ft. 9in, freeboard, and 9ft. draft. led to an order for being about 78 by Smith will design I for cruising. Mr. 1 all, 46ft. waterline,

all, 46ff. waterline, 18ft. beam, 2ft. 9in. freeboard, and 9ft. draft. MUMM'S YARD.-Mr. John Mumm has completed his contract work on the Atalanta and has leased his yard for five years to Messrs. Costigan & Guion who will continue the business. The sloop Dare is now hanled ont to be lengthened about 10ft. in the bows; the entire bow has been cut away and a new seem and fore and of keel put in. The Natiluis, submarine boat, is hauled out. Fanny will coon go on the ways for painting.

500-MILE CRUISE ON THE RIVERS OF NORTHERN CALIFORNIA. BY MORRISON F. PIXLEY AND E. RUSSELL COOPER

ELECTION OF OFFICERS —San Francisco Y. C.—Commodore, I. utte; Vice-Commodore, J. Merry: Donahne; Secretary Charles Q. 'ale: Financial Secretary, W. C Gibbs; Treasurer, T. Bangs; Direc-ors, W. Letts Oliver, C. W. Kellogg, J. W. Peer, Charles Chettsenc, else-commodore, J. Meréyn Donahne; Scerelary Charles G.: Financial Secretary, W. C. Gibbs; Treasurer, T. Bangs; Direc-W. Letts Oliver, C. W. Kellogg, J. W. Peer, Charles Chettsen-Louis Sloss, Jr. Toronto Y. C. – Commodore, T. McGaw; Vice-nodore, G. P. Reid; Captain, Geo. E. Evans; Hou, Secretary, W. Son; Treasurer, W. H. Parsons; Measurer, Fulford Arnoldi-mittee of Maaagement, J. W. Morse, Hume Blake, N. B. Dick A. G. Mcffat, Kingston F. C. – Commodore, J. B. Carruthers: Commodore, C. Hamilton; Rear-Commodore, John Strange ; Surgeon, Dr. Curtis; Treasurer, J. McK. Robertson; Secretary.

. Strachan. GALATEA.—Lieut, Henn's cutter comes out this week for a fal, with her load restowed nearly a foot lower, a smooth bot nd while topeides, and a new rig, the area being the same as ear, but with less weight aloft. Her mainsail at present is lace he boom by way of experiment. Galatea will meet Irex and I rie on June 5 in the New Thames Y. C. match to Harwich. fill sail her last race on June 15, Royal Thames, Nore to Dover, ill leave shortly after for America, arriving by the last of J he late report that she had started and put back was without f

tion. WORK AT LAWLEY'S YARD.—The new schoner is well ad-meed and will be haunched ahout June 15. It is reported that her rms will be Sachem. Mr. Fwy's yacht is finished outside and her ars aud salis are ready. She will go overboard about June 1. The arvard launch struck a pile in one of the Charles River bridges as e was on her way to the boat house, and sustained some damage hich has since been made good. Most of the yachts at the North d South yards are heing painted and launched as rapidly as pos-ble.

d South yards are heing painted and fainched as rapidly as pos-le. CRUISE OF THE WANDA.—The steam yacht Wanda, Messra CRUISE OF THE WANDA.—The steam yacht Wanda, Messra todward and Stillman, made an excellent run from New York to impton Roads lately. The changes in the motive power made last inter have improved her greatly. Last week she was on the Poto-ac in fulfilment of a promise made some time since, to take Presi-nt Cleveland for a short trip. SANDY BAY Y. C.—Mr. Andrew J. Forbes has given the Sandy iy Y. C., of Rockport, Mass., a miniature yacht valued at §300 and tup valued at §30, to be sailed for hy all comers on July 17, off uam Light, Ipswich Bay. The classification will be as follows: rst class, all yachts theween 20 and 26ft, waterline, exclusive; see-d class, all yachts under 20ft. LAUNCE OF THE AVELON —On May 13 Dr. Vallette's schoouer

First class, all yachts hetween 30 and 361, waterline, exclusive; sec-ond class, all yachts under 2011. LAUNCH OF THE AVELON.—On May 13 Dr. Vallette's schouver yacht, Avelon, was launchen at Smith's yard, Islip, L. I. The owner and a party ef friends from Philadelphia were on hoard, and in spite of had weather the launch was quite successful. The yacht will be fuished this week, and Dr. Vallette, with a party of friends, will take her to Philadelphia at once. YORKVILLE Y. C.—The annual open regatta of the Yorkville Y. C. will be sailed on May 23 instead of May 16, as first announced. All boats under 33ft, are eligible. Those desiring to enter will please notify Mr. C. S. Marshall, Secretary Y. C., One Hundred and Fourth street and First avenue, New York. QUINCY Y. C.—This club propose to huild a club house costing \$1,500, at Quincy Point, near the huffs, where they have leased land for 10 years at \$50 per year, with the privilege of removing the house or of selling it to the owners of the land, at an appraised value, should the latter di-pose of the property. INANDA.—The steam yacht Rival, lately purchased by Mr. Field, has heen completely rehulls in her upper works, and her name has been changed to Inanda. Sne will sooth for painting. ONEIDA.—Mr. E. Y. R. Thayer's steam yacht, formerly the Uto-wana, was hauled up last week at East Boston for painting. She will soon he in commission, with her anchorage of Beverly. Captain Lockwood will have charge of the this year. THE N. Y. Y. C. CUP COMMITTEE,—Mr. E. K. Willard having re-signed from the Cup Committee, his place has heen filled by Mr. A. M. Canone.

PORTLAND Y. C.—This club will start on a cruise on May 29 Potts Landing being the first port. They will return on June 1,

ganoeing.

<text><section-header><text><text><text>

ALBASY, May 14. R. S. OLIVER, Captain M. C. C. NAMES OF NEW A. C. A. MEMBERS.—Deseronto, May 8.—It should be the special duty of club officers to see that canceists pro-posing to join the Association should forward their names to the Secre-tary as early as practicable, to order that their uames may appear in the A. C. A. book for 1880; that they may have the henefit of the record of crul es, camp rules and programmes about to be distributed to the members of the Association; and also that an Association num-ber may be assigned to them, as such numbers must appear on the sall of every cabue contesting in races at the annual meeting. Such action will simplify the work and greatly assist the officers of the Association. -F. S. RATBUCN, Commodore A. C. A. YONEBERS C. C. CRUISE.—Yonkers, May 6.—Editor Forest and Stream: A ta regular meeting of the Yonkers (C. O. held May 4, ti was resolved that the club take a cruise on May 81 up the Hudson as far as practicable and return the same day. We most cordially havite any four brother canceists, who can, to participate with us. We will leave Yunkers at 7. M. sharp.—H. L. Qoros, See. A. C. A. MEMBERSHIP.—Meessrs. R. P. Wakeman, of Southport, Conn., and C. C. H. Smith and S. C. Cook, of St. Paul, Minn., are papadidates for membership.

BY MORRISON F, PIXLEY AND E. RUSSELL COOPER. Next morning we were up bright and early, and after the conven-tional breakfast of hot cakes and coffee, continued our ascent the along the had now become very difficult to follow on occount of the numerous branches that often led us a long class, only to end in some shallow pond. Our guns were now kept handy, for at every turn we made we were almost certain to start up ficks of waterfowl, and not a few fell victims to our bad ain. The Slough grew wiker and shallower, and by noon we had nothing to steer by but the Mary ville Buttes, which rose per endicularly from the plant, while far in our rear we could just distinguish a green heit of trees that marked the distant river, but these could only he seen by stand-ing up in the cauces, as the ruskes reached above our heads. There heing no evidence of any *terra firma* except hy sounding, we had to take our lunch on the water. It consisted of hard tack and four cold flap-jacks saved from breakfast. Ou the strength of this turnst in forcing our way through beds of rushes in a vain attempt to reach the open water again. This continue'l Alhor and the uncer-tanty of our position so delayed us that when dusk came on we were toot more than twelve miles from our camping ground of the night here the open water again. This continue'l alker, we lasked the mist portent han twelve miles from our camping ground of the light here than twelve disy of nish went we alshed the unside deges to gether, thereby making one large one, and leaving room on the two portents and each on having his own, we lashed the unside deges to a provide each one having his own, we lashed the unside deges to protent extra baggage that was in the way of ourgleeping arrange-mets. For supper we had to satisfy ourselves with havitack and hot coffee, prepared to lay-to for the night. In setting our tents, nated of each one having his own, we lashed the unside edges to prove the extra baggage that was in the way of ourgleeping arrang

<text><text><text><text><text><text><text>

prepared the fatter, more than thirty yards away officially which me mush and stand not more than thirty yards away officially which me hat they might learn too much about the noble art of flapjack mak-ing. I rose to get my gun, which was leaning against a log a few feet away, but they anticipated the danger to come and immediately va-cated the premises. I had just taken my seat and put three spoolfuls of hatter on the griddle when I saw two more guail come down and balt in the same spot. Waiting until I got them both in line 1 dropped them. Leaving them where they fell, I once more hrought my mind

turned there were nine quail laying within a circle of as many feet, all shot without my having once moved from the side of the free. Talsman soon joined me and hetween the two of us we managed to get away with six of the birds, and contrary to my expectations and greatly to my benefit he cleaned out the whole pie. [TO BE CONCLUMED.]

ROYAL C. C.

PROYAL C. C. O' Saturday last the second match of the cosson was salled on the medon Lake, and gave as fine a piece of sailing throughout as on the besired. The wind was of whole sail strength, from about the treatment of the second provided and the second results of the well-ties of the well-tried Pearl of 1855, and Nina, a new cance, which in the previous race had held Pearl of 1855, and Nina, a new cance, which in the previous race had held Pearl of 1855, and Nina, a new cance, which in the previous race had held Pearl of 1855, and Nina, a new cance, which in the previous race had held Pearl of 1855, and Nina, a new cance, which in the previous race had held Pearl of 1855, and Nina, a new cance, which in the previous race had held Pearl in a strength of the well-tried Pearl of 1855, the the the with the gun, and Pearl hearing away across a couple of seconds later. The wind at the starting 'hue being twisted in strength on start' A flying start was made at 320 P. M. Nuttlus strength on start in the wind the strength of the new heing twisted in the previous and the strength of the true down wind Pearl gained nearly a minute, but Nautlus gained min. 20sec. on Diamond. In the heat how far primated strength of one mile, the round being twistes, the wind wind Nautilus's finished at 335.00, Fearl 5.3900; the rest not timed, the wind Nautilus in the start was strength of the strength of the strength with a fair put. The previous the strength of the strength of the strength with the starts whe there and a varied in strength of one mile, the round being two miles, the strength of one thus o behave. An utilus starts, when we have the model the strength of one thus o behave and the starts when the strength of the start starts the start starts are the strength when the lines on behave of the start starts. A shautilus, the starts were the start and the starts the start starts are start and the starts are starts and the start the start starts of the the vore differ considerably. Fearly starts

THE ROYAL C. C. CHALLENGE CUP RACE. The sailing championship race for 18% was held on May 1 on Hen-don Lake, near London, and after a keen and close contest was won by Nautilus, with Pearl second. The course was five rounds of the R. C. C. triangular course, mak-ing two miles per round or ten miles in all. With the wind at about east, the first side contained a short run and a reach; the second side from north to west marks was a dead run, and the third from west to east marks, a dead heat to windward of one mile as the crow flies. The prizes were the 550 R. C. C. challenge cup, with presentation prize of £5 and the champion flag of the club added.

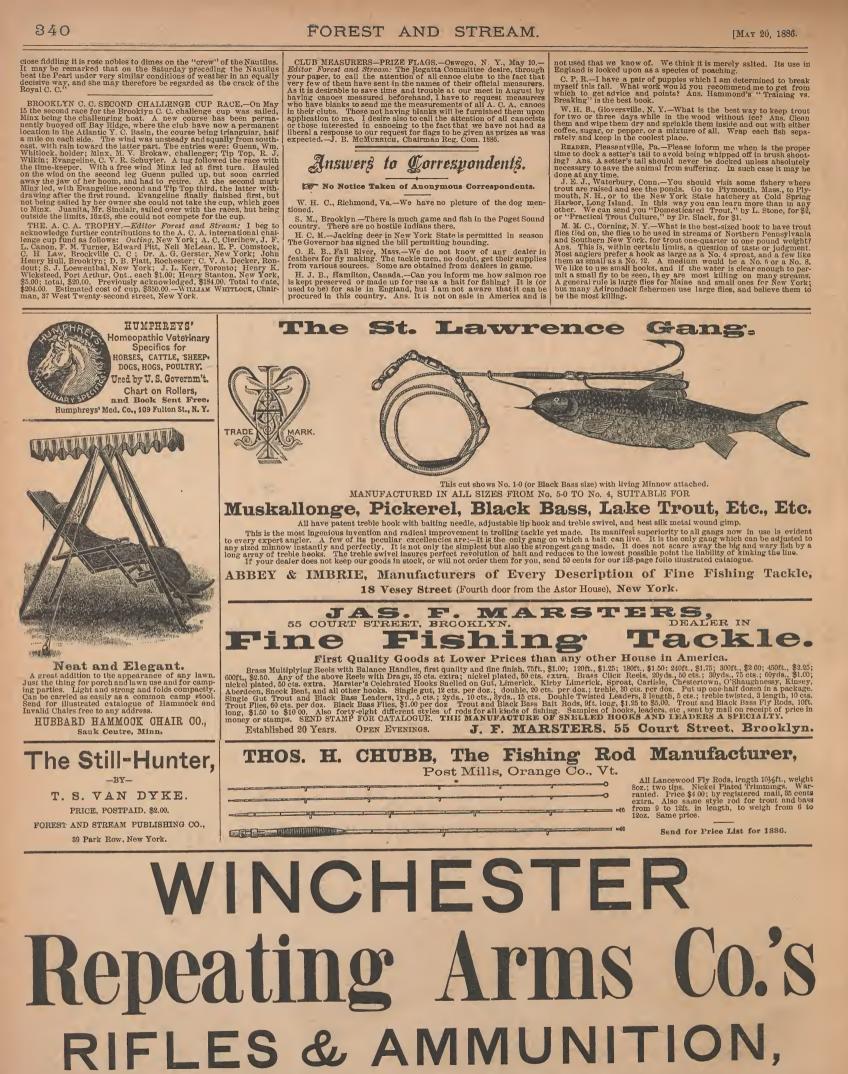

The entries were:
Pearl
Nautilus
Diamond
Minnie (PearlNo.6).14 ×83A. Tredwen
Nina
Kitten
Sabrina 14 ×31R. Turner 1 plate.
Nina and Kitten did not start, their owners being unable to attend.
Pearl and Minnie are, of course, genuine Pearls, and Nautilus,
though of usual shape and up to full dimensions as to beam and
length, is considerably shallower than any of the others, except
Sabrina, which is uncommonly like the Snake (published in the FOREST
AND STREAM). The Diamond carries the full depth allowed, 16in. at
her ginwale having a flat deck, therefore she is shout as doos and

Sabirina, "which is uncommonly like the Snake" (published in the Tronsfor AND Strakav). The Diamond carries the full depth allowed, 16 in, at her gunwale, having a flat deck; therefore, she is about as deep and her gunwale, having a flat deck; therefore, she is about as deep and her gunwale, having a flat deck; therefore, she is about as deep and her gunwale in the built under the rules. Moreover, she carries a gun metal plate of some 120 pounds, as against the 60 pounds of the Pearl's and 55 pounds of Nautilus's plates. Nautilus carried a com-paratively snug sail plan, Pearl having apparently more in both maln and mizzen, and Minnie considerably more sail. Diamond had about the same as Nautilus. The wind during the first three rounds was neither steady in strength nor in direction. The start was almost in a calm, and this was followed by a savage putfi after the first buoy had been rounded; Pearl and Minnie rolled along in the burst, Nauti-breze caught her, these three being close together and dead before the wind. Minnie, after a couple of violent lurches from side to side, capsized, and put an end to her chances of racing by quickly filling; int boats arrived in time to save her from sinking. Pearl, under whole sail, ran away from the reefed Nauthus and kept ahead in the beating was done, and then under whole sail appeared to pick up somewhat of vindward, her heavy plate lifting her out well. She was close np to windward, her heavy plate lifting her out well. She was close np to Nautitus, but the wind ligbtened up to almost a calm and took hold of the competing craft by turns from different quarters, giving one and then another a lift along. Thus went the second round. The third round Nautitus gotto windward of Pearl, inter weat have the wind was now piping up and the two leaders should have reefed for the beat to windward hu either would do so while the other diff tand so they cracked on making a splendid match of it. Nau-tilus on the third hoard got to windward of Pearl's weather, and so sailed tack aft

As yet the deck sitting pother earl and Minnie had fittings for deck tillers. Side flaps to their decks exist in Pearl. Minnie and Kitten, and ap-pear to give considerable stability when in use by the skipper helng enabled to sit close up to the weather gunwale. Nautilus has plain side decks, but her owner was heard to threaten that unless the club put a stop to these contrivances, which weaken the cance hut at same time give great advantage to the skipper, he should fit side flaps. Perhaps, however, the deck sitting position for saling will, eas the season advances, he more tried and followed by the English canceits, in which case the deck flap will die a natural death, it being by no means popular as it is. The tendeucy in England is evidently toward less hallast and centerplate or 150hs. In shot hags, may consider the craft some-what heavily ballasted, yet comparatively ballast is on the decline, as a couple of seasons ago 500 or 350hs. was a not uncommon amount.

The Land and Water of May 8 bas the following comments

The Land and Water of May 8 bas the following comments ou the the set of the Royal Cance Challenge Cup was sufficient with additional interest, as two aspirants for international honors figured among the entries, to wit, Mr, W. Baden fowell'snew Nautilus and Mr. E. B. Tedwen's Pearl of 1885. There were three other competitors, but the affair was virtually a match between the two craft named, and a splendid struggle it was. Saturday was beautifully fine, but early in the afternoon the breases on the faintest of zepty salternating. At the outset of the race this state of things prevailed, and a fast traveling volley capsized the Minnie-the Pearl of 1885 under a new name. From the middle to the faintest of zepty is alternative, and the faintest of zepty is alternative. At the outset of the race this state of the race the breaze was, however, true and steady, and the faintest of zepty is alternative. At the outset of the race the state of the race the breaze was thoroughly reliable test of merit of the two loads. The Nautius won by 60sec, and it may he said that she is the fastest craft on a wind that has yet been huilt. On the other hand, the Pearl is the bury with a neasy sheet and also at dead running; yet this uperfortly may be the later tis by furk, of Kingston, from a design of her owner's, and in the latter is by Turk, of Kingston, from a design of her owner's, and in the latter is by Turk, of wingston from a design of her owner's, and in the latter is by the lateration of sobap thas heen a forward move, teast, de after body show the least holow, while the hull is smaller in which as sailing over smooth water with a full whole sail in the sate sailing over smooth water with a full whole sail in the sate sailing over smooth water with a full whole sail in the sate satiling over smooth water with a full whole sail in the sate satiling over smooth water with a full whole sail in the sate satiling over smooth water with a full whole sail in the sate sate of the pathty with her reset field down and a short head c

LAST. PERFECTION

THE BRAY FLY BOOK.

It will be gratifying to anglers to know that there is at last a perfect Fly Book in the market one in which flies may be attached as quickly as they could be thrown into an ordinary envelope, being at the same time perfectly secure, and may be as readily detached. The snell, regardless of its length, is at all times kept straight (the advantage of which no angler need be told), and each fly stands out so that one can see in an instant his entire assortment and select the one he desires.

THE CURSE OF POLITICS.

THE land is cursed with politicians as the frogs covered Egypt. The malignant plague poisons all branches of the public service, from the polluted fountainhead of legis-lation down through the entire system of the law's execu-tion. It is a shame and a disgrace that in any part of this country a branch of legislation apparently so disconnected with politics as that providing for the due protection of the wild game in the woods and the fishes in the waters should be hampered and botched by political schemers, traders and tricksters. This is the condition of affairs in more than one State, but nowhere is the system more rotten than in New York. The Legislature which has just adjourned, whereupon the people breathe more freely, gave striking evidence of how the public welfare is deliberately ignored, in order that bargains and deals may succeed.

Take, for example, the course of Assemblymen Erwin and Tuck, of St. Lawrence county, with respect to the deer hounding bill. These two politicians understood perfectly well what their constituents wished and expected of them in the matter. The people of St. Lawrence were overwhelmingly in support of the anti-hounding law, not for their own county alone, but for the entire Adirondack re-Yet because of the exigency of political shifts, Erwin gion. Yet because of the exigency of political shifts, Erwin and Tuck, while openly advocating the retention of the general anti-hounding law, were secretly against it, and used their active influence to secure its repeal. They reasoned that it was better that all the deer should perish than that their man should fail of his berth in the United States Senate. A pretty pass it is when the deer in the forests are at the mercy both of the clubs of bloodthirsty physicians and the entangling wires of truckling politicians. If the laws are determined by political deals, no less is the execution of them hindered by like influences. The New

York system of game protectors is only another series of spokes in the machine wheel. We understand that the only consideration entertained by the Governor of a candidate's will be of a political nature. The heeler who has "the pull" will be of a political nature. The heeler who has "the pull" will get the appointment. The entire machinery of game protection is to be prostituted to advance a politician's indi-"ings after place. vidual

olation for the failure of the bill to

provide for the appointment by the Governor of a superin-tendent of game protectors. The value of that office would have depended altogether upon the character of the man appointed to fill it. So far as may be informed from the nature of other appointments, there is every reason to believe that Gov. Hill would have regarded the new office only as a rivet to securely fasten the game protector wheel of the machine; and instead of having a person fitted by his natural tastes and interest in game to acceptably discharge the duties of the place, we should have been saddled with another political tool, not to enforce the game protective laws, but as a heeler to boss his subordinate heelers.

When political dickerings rule the hour, it is folly to ex pect other than clumsy and pernicious legislation with respect to game and fish, or to hope for satisfactory exccution of the laws.

THE VEST PARK BILL.

THE Senate Committee on Territories has reported, substantially without change, the Park bill recommended by Senator Manderson and commented on in these columns a few weeks ago. To-day we print the full text of this bill, so that our readers may see just what it proposes. Its main points were summarized in our issue of May 6, and we need say little more upon the subject here except to urge upon Congress prompt and favorable action upon the meas-ure. The bill is in many respects a good one, and, needless to say, is a great improvement on the present absence of any law whatever. The most important feature of the new law is the increase in the size of the reservation, and after that come perhaps the provisions which relate to the Superin-tendent and the Park police and their powers in the matter of making arrests. The absurdity of appointing police without giving them the power to arrest, without warrant, persons taken in the act of violating the law or the regula-tions, has always been obvious, and has rendered vain the best intentions of the assistant superintendents.

The bill also settles the question of the jurisdiction over the Park, a matter about which there never should have been any dispute, but which has been in doubt ever since the reservation was set aside in 1872. The subject was recently brought prominently before the public by the action of the Territory of Wyoming in claiming this jurisdiction. There should be no more question about this matter than there is with regard to any United States fort.

It may be said of this bill that while it leaves much to be desired, it is, so far as it goes, a measure deserving hearty approval. The benefits which it will confer on the reservation and so on the whole people are positive and unques tioned. Its faults are minor ones and such as can be over-come by careful and honest officials, working in accordance with the spirit rather than the letter of the law. Thus, while it is by no means perfect, it is an earnest of far better government for the Park, and as such it is to be hoped that it may receive the approval of Congress and become a law.

CORRECTION .- Through an error in the transmission of our despatches from the West last week a statement was made in these columns which was inexact. We spoke of the sale of the property of the National Park Improvement Company at Evanston, Wyoming. As a matter of fact the sale covered the great hotel at the Mammoth Hot Springs. The Improvement Company, therefore, still own a consid-erable amount of property within the Park, consisting of hotels at different points with leases for ten years from 1882 for the grounds on which they stand, or should stand, large quantities of supplies and tent properties, and as it is believed, franchises.

LINGERING SUPERSTITIONS.

THE sun of the nineteenth century is thought to shine with This shift of the infected of exactly is a functional with the infection of the infection o spite of the materialistic spirit of the times. Odd phases of belief, survivals of old-time notions, crop out here and there, and one need not go far from home to find them.

The yachting men are preparing for the coming renewal of international contention for the championship of the Atlantic. Four boats are in course of fitting out for the trial races, the Puritan, the Priscilla, the Mayflower and the Atfantic. The customary method of determining the relative fitness of each would be by practical test in trial races; but along comes a genius who writes to the World that the Atlantic is already out of the race, for her name bodes no good. Craft named after any one of the oceans, says this wiseacre, are bound to be ill-starred; witness the fate of the Collins line of steamships, all having borne ocean names. Other superstitious wights are earnest in the declaration that the Mayflower is also foredoomed to disaster, for at the launch she stuck in the mud, and that no boat that does this can ever be successful is one of the tenets of the knowing men of the sea. The brain of the average sea goer is as full of curious superstitions as ever a topsail of wind; and though the landman affects to ridicule sailors' superstitions, he is pronc to indulge in his own dreams of the uncanny and gruesome. His stock of common sense is just about large enough to suffice for the ordinary familiar happenings of every-day life; but let him suddenly encounter some extraordinary manifestation of nature or some extraordinary action of a harmless bird, and he immediately puts away his philosophy and falls back on superstition.

In the neighborhood of Athens, N. Y., a short time ago, several persons driving on a lonely road encountercd a ruffed grouse, which in the simplicity of its heart attempted to make friends with them. They naturally whipped up their horses and fled in superstitious fear from what they were pleased to term a "spook" grouse. A dozen men put to flight by a bird! And yet the author of "The One-Eyed Grouse of Maple Run," after pursuing that feathered spectre, confesses "A strange, unearthly feeling of awe crept over me, my hair commenced to rise, my knees knocked together, and I felt that I was indeed in the presence of something supernatural."

The daily papers are constantly chronicling the obedience of men and women to the superstitious maxims of old saws; as the other day a Newark man, bitten by a dog thought to be mad, took pains to secure some of the brute's hair and apply it to the wound, for "the hair of the dog is good for the bite." The boycotted Widow Gray in New York city entertained a stray black cat, being firmly convinced that the feline brought luck; and for luck, too, did not a Georgia political enthusiast send to Cleveland a potent rabbit's foot?

DYNAMITE FISHING.

THE practice of fishing with dynamite cartridges appears to be on the increase. It is confined to no special locality, but is naturally most prevalent in mining sections, where the use of dynamite is familiar. Western Pennsyl-vania is especially cursed with dynamite fishermen, and there are sections in Nevada and California where no one pretends to catch fish in any other manner. The use of dynamite for this purpose is generally forbidden by the statutes, but such laws are in effect dead letters unless the sentiment of the community supports them.

It is very difficult to detect and punish the dynamiters, since their neighbors are content to eat the fish without asking any foolish questions about the legal or illegal mode of capture. A dynamiting excursion is not an affair altogether void of excitement. The usual method is to sink the cartridge in the water and then, from a safe distance, explode it by means of an electric wire. There is an ever attendant possibility that the cartridge may go off while in the boat or in the hands of the fisherman, in which event he is with more or less celerity blown to kingdom come.

The press dispatches yesterday reported the deaths of two men in Western Pennsylvania who were last Sunday dismembered by the premature explosion of a cartridge.

The effect of dynamite fishing is particularly baneful be-cause it destroys not only the large fish fit for food, but all fish, large and small. It cleans out all the fish, annihilates the stock, and utterly destroys the fruitfulness of the water.

NATURAL HISTORY ON THE FISH HOOK .- In default of luck, the contemplative angler may find solace, profit and pleasure in study of the animated lure on his hook. How wonderfully wrought is the wriggling worm is told in entertaining fashion by a contributor in another column.

THE MAINE SALMON ANGLING is attracting great attention in New England. The people of the neighborhood who are reaping some of the profits are naturally much elated over the great run of fish. Such an occurrence is worth a whole volume of argument in favor of fishculturc.

THE HOLYOKE SHAD FISHING .- Mr. Thos. Chalmers, of Holyoke, Mass., advises us that the fly-fishing for shad is over. The net has been put in place, and the angler must look elsewhere for his shad.

The Syortsman Tourist.

DAYS WITH THE BARMECIDE CLUB.

W HOEVER first selected this site for a camping ground knew whereof he selected. Whoever built this sharty, comfortable to the last degree, was an expert with the axe, for every stick is cut and placed where it will do the most good and every sheet of bark overlaps its rear neighbor as shingles on a house, and you can confidently rely on its power to shed water where it will not annoy you. It may have architectural deformities, but it would surely please the are of an artist or angler.

<text><text><text><text><text><text><text>

"Come deaf or come blind or come cripple, Or come ony ane o' them a',

I don't believe I would murmur; but this morning's sport— and I call it sport understand—reminds me of the beautiful lines of Tennyson:

- "And the handsome trout dart down To their shelter beneath some rock, But oh, for the sight of a trout on the feed, And the sound of a trout on the flop.

Or, as Rabelais would say, 'Jau le suila teausau de viessa etait.'"

The state of the set o

And to our viands fell not seemingly, But with the keen dispatch of real hunger;

But with the keen dispatch of real hunger; and guide found that his carefully prepared dinner was fully appreciated, for we made a clean sweep. Dinner looked as though it had been trying to pass a looomotive on the same track. We came back with good appetites and spent the afternoon in making some inprovements in camp. We built an outdoor cooking range, or perhaps it might more properly be called an underground cooking range, and we found it by far the best and most convenient ever intro-duced, at least for pleasant weather cooking. It can be made in less than ten minutes on an average. It is simply a hole in the ground about seven or eight inches deep, one foot wide and three feet long. The fire is built in this hole, and in a few minutes you can have a fine bed of coals, which can be replenished as needed from your camp fire or by the addition of any small chips which are handy. The dishes while cooking are supported by iron bars long enough to reach across the range, say fourteen or fifteen inches. About four of these bars are sufficient for all one wishes to cook at one time, as they will support half a dozen different dishes

and add no material weight to the kit, and on a pinch might perhaps be dispensed with. This range requires but little wood and then only the smallest chips, as there is no waste of fire and every degree of heat can be utilized. Dishes are not required to be continually watched, as there is no more danger of their tipping over than there would be on a Charter Oak stove, and no matter how hard the wind may be blowing there are no wild unmanageable flames to contend with, as they are confined, and besides as you have no side logs to burn away and perhaps dump a mess of trout or a pot of coffee into the fire, you will have one care less. Toward evening Roy tried the outlet of the lake, and re-turned with trout enough for our supper and breakfast. Meanwhile Storm superintended the bean business, following the directions in "Woodcraft." Was it a success? Oh those beans. Yes, as four hungry men can testify. Boston can't beat it, Mr. "Nessmuk." One Monday morning a country girl wrote a letter to her sweetheart something like this: Dear George-Ma has just called me, and I am yendering it you

Dear George-Ma has just called me, and I an wondering if you love me as much as you did at twelve o'clock last night, when we kissed each other good-night at the gate. Oh, if I only knew for cer-tain that you did, George, dear, you don't know how it would encour-are ne to go down and tackle them cold beans for breakfast. Yours, AMANDA.

You can accept it as an assured fact that Amanda's ma didn't know how to handle the bean question as Mr. "'Nessmuk" does, else her daughter would not have required the stimulus of George's love to assist her in tackling her brackford.

the stimulus of George's love to assist her in tackling her breakfast. As the gray of twilight slowly turned darker and darker and night came tripping on with noiseless feet, the fireflies commenced their brilliant dance, striking their lucifers at every step, as if they feared to lose the time and tune. The moon with its stronger light was paling the stars and silver-ing the edge of the ripples, which chase each other with monotonous murmurings. The mountain across the lake looms up vague and indistinct in the moonlight, and the great pines on its summit silhouetted against the sky assumed fantastic forms. The birch logs on our fire sizzled and snapped and the dashing flames cast long lines of resitless radiance far out on the water. The shrill cadence of the crickets, the humorous concert of the owls, the friendly croaking of the sociable frogs, the distant gushing sound of the falls all tell us it is good to be here, for this makes old hearts young again and young hearts rejoice. MILLARD. CHEVEENE, Wyoming.

THE MUSKOKA COUNTRY. FIRST PAPER.

THEST PAPER. THE maxim has become fully established that no one should go near the water till he has learned how to swim. Following the same course of reasoning, no one should ever fish in waters that are strange to bim, or if he does he loses a deal of pleasure. The greatest delight in hearing a fine opera is that which grows out of having heard it before, and the highest enjoyment in a fishing trip comes from retracing the course of last year (and haply the year before), living over the former contests and successes, reviv-ing scores of pleasant reminiscences, whose impalpable shapes have haunted the air and waited for your coming. A favorite fishing ground revisited is like a last year's suit, already adjusted to your figure; like a friend who lends you money when your credit in bank has gone; and when you can nurse that mild but comfortable feeling of superiority that comes from you introducing some fellow fisherman to your chosen resort, your cup of bliss is indeed full. And with all these conditions favorable we began last August to arrange for our annual "farewell" trip to the Muskoka comtry.

with all these conditions favorable we began last August to arrange for our annual "farewell" trip to the Muskoka country. Detroit, as usual, was our port of final departure. There is quite a convenience in making a double start on a fishing expedition. After you have pulled yourself together and cut loose from the five hundred "last things" that require atten-tion, it is a great comfort to stop just beyond the clutches of the butcher and baker and the man with a little bill, and take a full breath and an account of your kit. For no matter how carefully you may have replenished your stock, in the hurry of departure there is always something overlooked or omitted. This time it was only a few yards of heavy braided sash cord (for maskallonge stringers) and a spool of No. 22 copper wire. The uses of the latter are numerous, the most important being to make leaders for maskallonge fishing. And he who has added to it two spools of button hole silk, a bit of shocmaker's wax, a fine half-round file and a small pair of pliers, laughs at calamity. Our route this time lay over the Great Western division of the Grand Trunk Railway from Detroit to Toronto, via Hamilton, and as it gave us a daylight ride over some of the finest country in the Province of Ontario, we were not sorry for having chosen it. Not the least attractive feature of the descent from Lake Huron to the level of Lake Erie is quite marked, and as the road crosses the water shed at an approxi-mate right angle, the effect on the view is very pleasing. All the towns along the route have a conservative, yet prosper-ous look, and the long-settled farms of Lower Ontario will compare favorably with the best agricultural portions of the States. Arriving at Toronto in the evening, we found that the great annual Agricultural and Mechanical Exposition was

Arriving at Toronto in the vest agricultural portions of the States. Arriving at Toronto in the evening, we found that the great annual Agricultural and Mechanical Exposition was trembling on the verge of culmination, and that the farmers and country storekcepers and officials, with their wives, daughters and sweethearts (not forgetting the volunteer com-panies of Her Majesty's horse), had come in and overflowed the town. And we, who had heretofore regarded Toronto as having been built especially for our benefit, wandered dis-consolately from hostelry to hostelry till at the fifth (in grade as well as number) we sank to rest upon a melancholy bed, and in the morning were summoned to a breakfast whose meagerness would delight even the frugal soul of "Ness-muk,"

muk," But when we safely landed on the morning train of the Northern & Northwestern Railway for Muskoka wharf, all these things were as though they had never been. For when we are fairly under way on the N. & N., with its baggage checks in our pockets and the conductor's "trip slip" in our hals, then and not till then are we saturated with the con-viction that we are fairly and finally "en route," and that everybody on the line from this onward is a sympathizing well-wisher, who is not only willing we should have a good time but will help us if he can. Why is it that tourists, hunters and fishermen in traveling gravitate together? Possibly aside from the subtle and mys.

in Canada is that you can pick out a man from "the States" half way across a "concession," as the Canucks have it. Suf-flee it to say, we had not been in the car fifteen minutes till we drifted against a man who had just been to Maskallonge Lake the week before, and who, with his partner and guide, had killed a black bear. The story of the conflict was graph-ically told, and with various side excursions into kindred topics, served to while away the morning hour very pleas-antly. At Rosseau the next day we met the "partner" and were favored with his version of the death of bruin, and a few days later with a modified and reconstructed version as detailed by the guide. We did not obtain the story of the bear for obvious reasons. But I venture to remark that if these three stories could be printed in parallel columns rhey would afford entertaining and by no means monotonous read-ramed witn a. 47-caliber 65-280 rifle that three an indefinite number of balls at an incredible velocity (and low trajectory) the weapon got out of order at the critical moment and the fatal missile came from a shotgun. Isn't there danger that our repeating rifles maybe made too effective? All along Muskoka and Rosseau lakes as the little steamer plunged her way northward that afternoon, we found the summer boarders at Beaumaris, Port Carling, Windemere and other points packing up their effects and preparing for their homeward journeys. Toteno, O, April 27.

TOLEDO, O., April 27.

DEATH OF BURR H. POLK.

DEATH OF BURR H. POLK. O'CASION has been had before to say something of the more than formal relation existing between the FOREST NN BYREAM and many of its correspondents. Here and here, in every State of the Union, are men whom the editors are never personally met, yet have learned to esteem with a regard like that which comes of long friendship; and a better written by another, announcing the death of such a one, the message is received as would be that of the loss of a friend. With such regret have we learned of the read of the familiar to the read-set of this journal as the author of a number of brighty written sketches of sport and adventure in Mississippi, and in more recent years the West. These papers were charac-teristic chiefly by reason of the all pervading and abounding good humor and philosophy which triumphed over every disadvantage and drawback, and found pleasure where appreciative estimate of Col. Polk's character is extrated in a Lincoln paper:

from a Lincoln paper: "For several years Col. Polk has been an honored citizen of Lincoln, and the unexpected intelligence of his death will bring pain to all who knew him. He was a modest and unottrusive man and few persons knew him intimately. But those uniformly regarded him with a feeling of affection like that of close kinship. He was a man of ability. As a business man he combined enterprise and conservatism in a happy and successful manner. He had accumulated a hand-some competence and had laid his plans for a life of healthful leisure. His word was always as good as his bond. Social and kind-hearted, without a particle of malice or envy or hardness in his composition, liberal to the core in word and deed, there are few such men, and the loss of one is severely felt.

hardness in his composition, liberal to the core in word and deed, there are few such men, and the loss of one is severely "Col. Polk was born at Taylorsville, Ky., January 15, 1835. He obtained a liberal education and had embarked upon the practice of law at Princeton, Ky., when he married Miss Eliza A. Montgomery, at Petersburg, Ind., March 2, 1855. He continued to make Princeton his home. In September, 1861, he entered the army as captain in the Thirty-third Indiana regiment, serving with the regiment through all the arduous campaigns in which it took part until April 23, 1864, when he was promoted to be adjutant general with the rank of major. In all capacities he was distinguished for coolness and courage, and was twice brevetted for gallantry on the field, the last commission being that of colonel and bearing date of March 13, 1865. "At the conclusion of hostilities Col. Polk was offered a first

and was twice brevetted for gallantry on the field, the last commission being that of colonel and bearing date of March 13, 1865. "At the conclusion of hostilities Col. Polk was offered a first lieutenancy in the regular army, but he preferred -although he had developed a strong personal military feeling-to take up a life that would be more agreeable to his family. In 1868 he removed to Vicksburg, Miss., and engaged in business of various kinds, cotton factoring, contracting and other ex-tensive operations. In these a boother shared and the ventures were quite successful. He also served a term as mayor of Vicksburg by appointment from the governor of the State. "Having acquired what he deemed an ample fortune for his liberal but not extravagant taste, Col. Polk resolved some six years ago to abandon active business and lead a retired life, devoted to his family and friends and such pursuits as were adapted to simple enjoyments. He came to Lincoln shortly afterward and bought a charming residence on L street in the most desirable portion of the city. He was soon surrounded by a congenial circle of friends. But the seeds of disease had been sown in his system, and as long as two years ago he dis-covered that his heart was affected. All was done that could be, but nothing availed. He sank steadily into further weak-ness, and when he reached home a few days ago from spend-ing the winter in the South, he was compelled to take his bed. The end came speedily, and yesterday morning at 9 o'clock he ided. He was in full possesion of his fauctities to the very last and met his end with undisturbed composure. "Col, Polk's estimable wife and three children survive him. It is hardly possible to state the personal character of Col. Polk without the appearance of fulsome eulogy. He was nonest, brave, true, modest, genial, able and whole-souled. All these in a practical, unromantic way that the casual eye might not see, but none the less actually. There are men who might be more widely missed, but none whose departure wo

Mr. T. G. Dabney, of Memphis, Tenn., writes: "Col. Polk was a sportsman in the truest sense, a thorough gentle-man, always mindful of the courtesies due between sports-men, and a whole-souled companion in the field. Col. Polk's career as a sportsman presented the unusual spectacle of a man who had never handled a gun until after he was forty years old, and who then took it up, and by persistent and systematic effort characteristic of the man, soon became a very expert wing shot and skillful sportsman. He was a fluent and very interesting writer, the author of a book en-titled, 'The Great American Caravan,' detailing the experi-ence of a party of American tourists in Europe; and also of many interesting communications to FOREST AND STREAM, over the signature B. H. P. Col. Polk died of heert disease, from which trouble he had suffered for some months past, and which caused him, with much regret, to lay aside his gun during that time and content himself with reading of the exploits of others in the columns of his favor ite journal, FOREST AND STREAM. His untimely death will be severely felt by a large circle of warm friends, and the fraternity of

Hatural History.

EARTHWORMS.

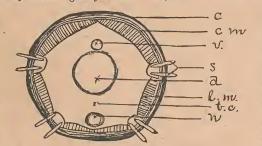

har do. **EXAMPLY NET ALL AND ALL AND**

part of its diet is the mole; this creature data muss sharp pointed nose to some purpose here; for he burrows ind their holes and devours the worms in their own retreat. He is iscredited with thus serving a useful purpose in stirring up the soft. The earthworms themselves live chiefly, if not entirely, upon vegetable food. They are said to cantiously extend a part of their body out of the holes, move it about in search of a leaf or twig and, having found one, draw it after them into their burrows. In this way they lay up a store of food, eating it when it has undergone partial decomposition. In structure, the earthworm, as any one can see from an examination, is made up of a large number of rings placed behind one another. Of these rings, in a large specime threads where the rings unit are continued inward to form septa, so that the body of the worm is made up of a series of chambers corresponding in number to the rings. The chambers, of course, communicate with one another ing and forming the upper lip. All the others are complete. The mouth, situated under the upper lip in the second ring, opeas into a pretty capacious chamber are complete. The mouth, situated under the upper lip in the second ring, opeas into a pretty capacious chamber are called the buceal pouch. This pouch is reversible, by turning it inside out, the aniand can not only empty it of buyers as a sucking organ. By passing the fingers for ware along the anterior part of the body, a worm may be made to ever its pouch. This pouch is reversible, by turning it, inside out, the aniand can not only empty it of the back of onsal surface of an earthworm can always for earding dust and the also of a large specient of the body, into an organ corres, sith diggestive or aligned at the where the two it does allowed. All we way the anister of earding the second ring, the ventral of a paler hue. Every one may be a store of the back of a nearthworm shows it does allowed and left a two hours. It is unde course, it worm has beingerstored, toot, that the body of

rings of the head and the last one of the tail, each is provided with four pairs of these bristles, so that in a full grown worm of 150 rings there are between eleven and twelve hundred walking organs. Each bristle has muscle attached to it, by the contraction of which it is made to move forward and backward, and thus the progression of the worm effected. However, the animal is not entirely dependent upon these organs for locomotion. On level surfaces progression is effected chiefly by serpentiue movements produced by the contractions of strong lateral muscles. It is when the worm climbs inclined and perpendicular surfaces that the bristles gome into play. That they are able to climb at such angles is shown by the fact that they are often found in situations which they could only have reached by ascending steeply in-clined surfaces. Of eourse, I am here leaving entirely out of account their ability to climb perpendicularly in their holes.

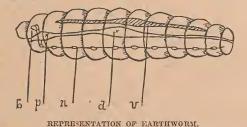

of account their ability to climb perpendicularly in their holes. There is a popular notion that earthworms possess a re-markable power of resisting mutilation; that a worm may be eut into pieces and each piece will grow into a new worm. It is quite true that this animal is able to suffer the removal of the posterior part of its body without any apparent per-manent injury, but it is equally certain that if the anterior portion be eut off both parts perish. In the anterior third of the body are situated all the principal vital organs, the stomach, liver, "brain" and reproductive organs. It is certainly not to be supposed that a part of the body deprived of the body posterior to these organs can be removed without destroying the life of the anterior part. I have just referred to the "brain" of the earthworm. It is at least true that this humble animal possesses an organ which is fairly comparable to the one which is highest and ehiefest in the more advaneed members of the animal king-dom. It consists of two small oval-shaped masses of nerve matter situated in about the fourth or fifth ring above the alimentary enaal. Each one gives off a nerve cord which, encircling the alimentary tube, unite below in a ganglion from which nerve cords are again given off to supply all parts of the body. From the fact of its possession of a fairly well developed nervous system it may asfely be reasoned that it gives the creature some pain when the sharp-pointed hook is passed through its body.

is passed through its body. The organs of respiration in the carthworm are very curi-ous. In each segment or ring is a pair of organs which, for want of a better name, are simply called segmental organs. They consist of greatly twisted tubes, one end of each of

foot and a half and is as large around as a man's little finger. As far as I know, earthworms are found in all temperate and tropical regions. The approach of winter they go deep into their holes and, passing into a dormat condition, remain until they feel the warmth of the spring sun. According to the observer we whom I have quoted above, their holes are sometimes six feet deep. The deepest part is set with small stones, about as large as a pin's head, which are placed there by the worm used. "The delieate rootlets of plants also often run through the whole length of the holes, forming beautiful webs along the walls." The delieate rootlets of plants also often run through the whole length of the holes, forming beautiful webs along the walls." When it is remembered that the growth of plants is depend-when it is remembered that the growth of plants is depend-ing the supply of nitrogen contained in the surface soil to regain it only by lying idle for a while, it is seen how in-ordinat work in a side the streaked surface soil to regain fertility. Besides this, it is probable that all soils, when dry, sandy ones, are encided by being passed through the violes. Then there is the fact that, by their constant urrowing, the soil is rendered loose and porous, so that air may deducted whether there are many other animals which have played so important a part in the history of the word as have these lowly-organized real." Mares Strotler.

JAMES STOLLER.

THE AUDUBON SOCIETY.

THE AUDUBON SOCIETY. The following account of the Smith College Audubon Society was written by one of the lady professors of the College for the Rulland Herald. It is in itself interest-ing and is of value also as giving excellent suggestions for the work of local Audubon everywhere: "About two months ago a few of the students of Smith College felt that the time had eome for some definite expres-tion of the interest that had long been felt in the cause of our native birds and for some organized effort for their pro-teating that resulted is not necessary; it is enough to any that the students decided to form a Smith College branch of the AUDUBON SOCHEY. "Enthusiasm for so righteous a cause could not but be fortheoming and in abundance, but zeal should be according to knowledge, which was conspicuously laeking. With the best wills in the world, it soon became clear to the directors of the society that only the merest beginning had been ac-complished, when two-thirds of the students had given up wring birds on their bonnets, that the praetical and theo-retied bearings of the subject are by no means easy to get, for unless one is near an ornithologist or a good collection, it view of these facts a eareful subdivision of work was charly necessary to success. At the regular meetings of the members will be constantly increased by lectures from men-who have given time and skill to the study of everything onneeted with birds—from their habits to the ethics of their treatment by man—by papers setting forth the results of in-prestigation or collation on the part of members, themselves,

who have given time and skill to the study of everything connected with birds—from their habits to the ethics of their treatment by man—by papers setting forth the results of in-vestigation or collation on the part of members themselves, by the reports of the field work done among the members. These regular meetings are thus to serve a double purpose, in spurring the members on to new efforts and in recording what has been accomplished. "A committee has been formed, to serve for one year, having in eharge the careful oversight of these meetings and the making up of their programmes. They also appoint other committees to take charge of the field work which is organized, in general, as follows: Three parties are to set out from the college on different days of the week, due notice of the hour and destination being posted in some designated part of the building. Each party is to be under the guidance of a person sufficiently experienced in field work to be of practical assistance to the beginners who may join the ex-pedition. The work will consist of observation of birds, efforts to learn their habits, song and distinguishing marks, of the practical study of botany and meteorology, and in short of that careful, discriminating tracing of nature's workings that makes vital the dead words of text-book in-formation.

short of that careful, discriminating tracing of nature's workings that makes vital the dead words of text-book in-formation. "The leaders of these parties will at first be obliged to in-struet somewhat larger audiences than are convenient, but it is believed that as the information is diffused, the parties can break up into smaller groups, helping out their knowl-edge by the use of keys and text books and gaining much more freedom as regards time and strength. The leaders of the parties will also teach the members efficient ways of re-cording their observation and will see that the work is put into proper shape for report to the society. "The main committee will have charge of whatever work may seem practicable in the way of interesting the public in any of the aspeets of their subject. The eirculars of the AUDUBON SOCIETY, of the American Ornithologists' Union, the numbers of FOREST AND STREAM, are fast enlightening people's minds; but there remains a wide field for local societies in interesting the children of public and private schools, in teaching them to hunt birds 'without a gun,' in making them increasingly intelligent and merciful. The committee hopes to be greatly aided in its efforts by the oeeasional presence of specialists who will accompany the parties and direct their observation. With all these aids the work will go on slowly at first, but it is believed that the patience and industry will yield even richer returns here than is their wont." is their wont.

SMITH COLLEGE, Northampton, Mass., May 18.

ONE FOOL COMMENDS ANOTHER.—The Lake Charles (La.) Echo says: "Mr. R. A. Sibley, of Edgerly, is shipping about 2,500 bird skins per month to Newark, N. J. This is an in-dustry which has lately been inaugurated in these parts, and promises to be of some importance. Mr. Sibley ships the skins of the jay, lark, snipe, erane hawk, owl, black and other birds. The prices range from 5 to 12½ cents each. Our readers are aware that of late years bird feathers are being used much more than formerly for trimming purposes, hence the increased demand. As these birds are very de-structive to the rice crops in injuring the stands, it is not such wanton waste as it would be were they killed alone for their plumes."

FOREST AND STREAM.

DEATH OF THE "SPOOK" GROUSE.—Toledo, O., May 3.— Editor Forest and Stream: With much regret I am com-pelled to announce the death of the famous "spook grouse" of Athens, Greene county, New York. Mr. Brady, its owner, kindly consented to loan me the bird, which he sent by express on the 27th ult., and he arrived in Toledo the evening of the day following. The bird appeared sleepy and stupid on arrival, but the following morning was placed in an outdoor coop, where he still appeared to feel dull and sluggish. The next morning, Friday, on going out to the coop I found him (I think it was a male) lying on his back dead, having been in my hands alive barely twenty-four hours. The body was returned to Mr. Brady with the request that he would send to you for examination. While I deeply regret that the bird died on my hands, he did not seem in good health when received, and his head had a wound on top not fully healed, indicating some previous con-finement. He weighed at death but fitteen ounces, and was so thin that the skin had worn off the point of the breast bone. I am very anxious to ascertain, if possible, the cause of the bird's death. I cannot think it possible he died through anything occurring in the short time I had him.— JAY BEEE.

INVEIGLING A GOBBLER.

<text><text><text><text>

who has been fooled a time or two and shot at. To his dying day he will bank largely on discretion. To him galantry henceforth becomes a secondary consideration. He will auswer your call, but will march off in an opposite direc-tion, gobbling as he goes, as much as to say to the supposed hen, if you would like to see me you can follow me. -Or, as sometimes hapnens, he will quit gobbling and will make a dreutl around you, and before you know it he has taken a view of you from the rear, and his put, put, put as he rapidly disappears notifies you that you have been outwitted. — The old gobbler that I brough to bag a few days ago was one whose education had not feen neglected by local sports-men, and I think I gave thim a lesson myself once before that he had not forgotten. Myself and a fricted had stared out before daylight. The morning was calm and bright and balmy and beautiful. Everything was propitious. Standing in the deep, still forest when the first gray streaks of the agobble near a mile away. Off we started as fast as the circumstances would permit. But we were impedied by the tangled brush and by branches and aloughsof water, and our progress was slow. Every now and then I hear the noles of the dol bird in the distance, and on we press. Plainer and plainer come the sounds, and directly we are near enough to be cautious. The daylight is full upon us. My friend goes to the right and I to the left. We are going to take double chances on him. As 1 approach my place I hear him fly to the ground, some hundread and fitty yards away. The woods are very thick with vines and brush and logs, and one can see but a short distance. In a few minutes I venture a yelp or two on the call and the old fellow nawers me with a lusty gobble, and I distinctly hear the strut of his wings. In a few minutes I yelp again. Another gobble and struts in response. An old gobbler is like a man, in that he has a high regard for modesty and doesn't like an over-anxious sweet-heat. So I deal cautiously and garningly with my call. The ol

WILDFOWL OF WESTERN STATES.

WILDFOWL OF WESTERN STATES. Editor Forest and Stream: My article in your issue of Oct. 1, 1885 on wildfowl in domestication, having brought me inquiries from the East in regard to the identity and local and technical names of some of the species therein mentioned, I will submit to your readers a short description, from the hunter's standpoint, of each variety known to the West. In this I shall endeavor to confine myself to my own experience or that of my friends and those hunters whom I am personally acquainted with. As sportsman, hunter and amateur naturalist I have paid particular attention to the waterfowl of this section for many years, and while my field has been limited to the Illinois River and adjacent lakes and tributaries, yet those are as good hunting grounds as can be found in the West, and it is safe to say that any species of duck not met with there is not likely to be found within the Mississipi valley. The impression seems to prevail among some sportsmen, and expecially those in the Eastern States, that most varieties of ducks common along the seaboard are not found in the West, or at most but rarely. While this is true of the scoters, etc., it does not by any means apply to the majority of the more edible species; hence the division by some writers into the two classes, inland and seacoast, or fresh and salt water brids, is manifestly incorrect, as the two classes are found here in about equal abundance at the proper seasons. From a hunter's standpoint, I like Long's classification into deep and shoal water ducks better. The deepwater birds dive a consequently, as a rule, longer than those of the deep-water the. Then the market shooters and game dealers have another

vater tribe. Then the market shooters and game dealers have another

System of division by which envasbocks, rethreads, mailarch quoted by its proper mane; teal coastitute a class by this ough herer than once may the ges as "small ducks" out of the properties of the propertie

DEVICES AGAINST MOSQUITOES.

Editor Forest and Stream: Your London correspondent, "J. J. M.," in the last num-ber of your paper recommends a muslin tent for protection against mosquitoes in an outing, and gives a method of mak-ing it

Your London correspondent, "J. J. M.," in the last number of your paper recommends a muslin tent for protection against mosquitoes in an outing, and gives a method of making it. This is unnecessary, particularly for this country. The outer who goes for a prolonged stay by lake or stream side or in the woods without an ordinary mosquito bar, as it is made in the United States, is a new and green hand, or fears the additional three pounds' weight in carries more than he values his peace and quietness at night. The ordinary bar with folding top, with ring for suspension, can be used inside or outside of an ordinary tent. I have found it necessary for solid comfort to see that it was well tucked in at the head and face. Uncivilized mosquitoes have long bills, and they insert them through the interstices of the blankets, and that it be kept well away from the head and face. Uncivilized mosquitoes have long bills, and they insert them through the interstices of the bar if it is near blood. Since my first season's camping out on Lake Superior, many years ago, I have never been without a bar suspended from the tent pole. That season I realized the insecurity of a bar across the tent door, for it was not always practicable entirely to close all the openings at the bottom of the tent on rough or rocky ground. Since the I have never lost a night's sleep from mosquitoes. The bar is no protection, however, from sandflies or "nose eems" and the black fly. But good judgment as to camping ground will in a measure be a security against the former, and the latter ceases its ravages at sunset. But to reduce or sketch with or without a bar where the black fly is numerous, without smoking in the daytime is impossible. I have found some preparations of 'dope' the only resource, frequently in reading, fishing or on carries. Certainly without some of them there can be no such thing as loafing. If here are such things as degrees in mosquitoes I reached there one night in the twilight. Outside the bar the world was full of rabid ones.

THE FIELD SPORTS CLUB of Havana, Cuba, is a new organ-ization, established for the promotion of outdoor recreation and the protection and introduction of game. Protective lawshave been secured, and being something new naturally provoke opposition from the classes accustomed to shoot in season and out of season. The Field Sports Club, however, proposes to see that the laws are respected, and some pro-gress in this direction has already been made. It is the pur-pose of the club to introduce some new game to the island. They are now seeking communication with parties who can supply American game (other than quail) for restocking.

Авкальзая GAME GROUNDS.—Clarendon, Ark., May 18. —There are very many squirrels here. We have no game law here except for ruffed gronse, quail, deer and turkcy. The law on them was like locking the door after the horse was stolen; it came far too late. Many beautiful songsters are slaughtered by indolent negroes and other thoughtless persons just for "fun." Many sweet mocking birds are ruthlessly slaughtered just to see 'em "fall." The law pro-tects buzzards, but not the sweetest of bird songsters. Quail are plentiful here. Very few deer and turkey. Bear tracks are slaughtered just to see 'em "fall." The law pro-tects buzzards, but not the sweetest of bird songsters. Quail are plentiful here. Very few deer and turkey. Bear tracks are slaughtered just to see 'em "fall." The law pro-tects buzzards, but not the sweetest of bird songsters. Quail are plentiful on the "dump," an embankment thrown up a mile in length in the river bottom between here and Grand Prairie. But nobody hunts them here at this time of the year, as they are poor as a snake. Mr. Alf. Daniels, a hun-ter here, killed seven bears six miles from town up in Cache River bottom. (Cache and White River meet here). Mr. Bob Bobo, who lives opposite here in Mississipi, killed forty black bears last winter. His post-office address is Sunflower Landing, Bolivar county, Miss. Mr. Daniels kills all his bear with two. 44 Colts revolvers. He wants no other bear gun, as it would be unbandy getting through the thick, heavy eane brakes. Mr. Bobo does his hunting with .44 repeating rifle. This is a sportsman's paradise from New Port, 150 miles above here, clear on down to New Orleans, La., especially so in the winter time, when ducks, geese and swam are plentiful from Indian Bay, forty miles below here, clear on to the mouth of White River, 150 miles. There is no human habitation except of raftsmen, trappers and hunters. You can see there must be some good shooting. Of course, the prairie is thinly settled, but it is five to e

While River.—CAVALIER. While River.—CAVALIER. TARGETS vs. GAME.—A somewhat noted rifle shot here, who has a number of badges and medals as proofs of his prowess at the targets, related an exploit, which he seems to enjoy telling as much as his hearers delight in his narration of it. Like Alexander, he was not content with owning the world of targets, his soul was possessed with a yearning to distinguish himself on game. Fired with this ambition, he shouldered his trusty repeater—he is an excellent gummaker himself—and started for haunts where the deer family are known to abound. He had not proceeded far down an old corduroy road, ere a lordly back stepped forth from the leafy wood on to the road, where he stood complacently eying his would-be slayer, with feelings in which curiosity was evidently predominant. The gallant hunter raised his deadly rifle, pressed the fatal trigger once, twice, thrice; in fact, kept on pressing it till his magazine was empty of some dozen shots. The "antlered monarch," no doubt wondering what all the racket was about, having satisfied his curiosity, quietly walked across the road into the forest and was seen no more. The dazed and breathless hunter stood glued to the spot, with wild eyes fixed on the place where the deer had been but was not, for some seconds, when his wits re-turned, and shouldering his rifle took the direct road home, where he recovered sufficiently by the next day to relate his experience; and it will be some time before the boys forget how "X." shot his first and last deer, for he declares that paper game is good enough for him, and hereafter he will attempt no harm to the wild wanderers of the woods.—C. J. T. (Detroit). AboutsH ALL SPRING ShootING.—Editor Forest and

ABOLISH ALL SPRING SHOOTING.—Editor Forest and Stream: I have just received a letter from E. A. Jackson, a long Island gunner, concerning the new spring snipe law. He says: "The spring law is just the thing. It works well. Hundreds of snipe are seen daily. Yelpers are counted by fifties and hundreds, also robins and plover are as gentic as chickens. I hope that the law will extend from here to Maine." Let us hope so, too.—J. W. JR.

COLEBROOK, N. H.—The ruffed grouse are more abundant than I have ever seen them in spring here. I cannot learn of the crust-hunters doing any harm on the headwaters of the Connecticut River this spring, unless words count after a hard day's snow-shoe tramping after deer that could dis-tance them easily. Nature bcats law.—NED NORTON.

THE NORWAY CUSTOM,—Out in Norway, Menominec county, Mich., when local bruin exploiters go for bear meat the sawmill steam whistles are set to blowing, and all the town turns out to make a din until the lost hunters, guided by the sound, find their way back again.

A SPRING POEM.

N^{OW} the adolescent homo Seeks Lumbricus in the shade, Toiling in paternal garden, Defily turning earth with spade, While the Harporbynchus rufus Chants his lay in yonder glade.

In this phrase I seek to tell you That the boy is digging bait For Salvelinus fontinalis Near his father's garden gate, Heedless if the school-bell ringeth Or the teacher marks him late.

But I see that I've neglected Adding foot notes to each term, Hence I'll try to be explicit, And call on science to affirm That the Latin name Lumbricus

Is another word for worm.

Salvelluus fontinalis— There is not the slightest doubt Boys from Maine to California All would join in mighty shout, Laughing at your lack of knowledge, If you don't know that's a trout.

And, likewise, the Harporhynchus, Which is singing in the bush While his mate is incubating, Pouring fourth his soul in gush, That's another patronymic For our brown, our native, thrush.

Hence I only meant to tell you

In the plainest sort of terms, That this is spring and thrushes sing 'Mid nature's budding germs, And boyish thought turns toward trout

And agile angle worms. FRED MATHER

CAMPS OF THE KINGFISHERS. CARP LAKE, MICHIGAN.-XIII.

CAMPS OF THE KINCFISHERS. CARP LAKE, MICHIGA.—XIII. THE rain crow certainly "had a skunner agin us," for when we got out late next morning the rain was com-fishipper to retire behind old Dan's tent for another talking when we are seeded. There breakfast the question was what to do with ourselves. We could not take the girls out to fish in such villainous, ough, rainy weather, and the only thing left for them was to take to the big tent and talk, read, suck maple sugar and head of fish when sunshiny days did come. Dan and Muller could ait humped up over the crib or checker board into a seeded at meal time. Jim and Mother Jim did not seem to be in pressing need of companionship or conso-tion sets the first of the tent and never find out it was raining when sets the first of the tent and never find out it was raining when ealled at meal time. outgineralin' James Mackerel that I forgot to light my pipe. "When I came to the little five-rail fence at the lower end o' the field I was a-rollin'so high that I stepped clean over it without techin' a splinter, and when I got into the main road I reckon the steps I took wouldn't average more'n two to a rod till I clim' the fence back there by the woods in sight o' camp, an' then I slowed up considerable fur fear I'd git a-goin' so fast down the grade that I couldn't stop when I came to the lake. When I got nigh the big tent I sneaked up an' poked the trout 'round in front where they could all see it an'-but I'm gittin' powerful dry talkin' so much; guess I'll go after a bucket o' fresh water, an' some o' the gals kin tell ye the rest." "Yes," chipped in onc of the girls as Ben started with the bucket, "We didn't know he was anywhere near until we heard him say, 'Hello in there! Gaze on that, will ye? James-Mackerel's--trout. What'll he say to that?" " And then they told how the old loon daneed and hopped around the fire, with old "quintessence" and the fish held aloft in either hand, and from the description I imagined the per-formance was much after the manner of the ludicrous antics of a sandhill crane when in a hilarious mood. The taking of that trout was a mine of fun for old Ben, and there is little doubt that not an angling friend of his but has since heard the story of how he "outgineraled ole King-fisher an' ketched his trout that he'd left in the dcep hole to git ripe." Kit and I fished the same stream a week after as far up as

isher an ketched his trout that he'd left in the deep hole to git ripe." Kit and I fished the same stream a week after as far up as the deep hole, but got "nary nibble," much to Miss Kitty's disappointment, as she had evidently made up her mind to show her father a few tricks in trout fishing that he'd never heard of. Not even the big trout near the school house could be induced to show himself, although she spit on her bait in a manner that no susceptible and well-regulated trout might well resist, and fished for him with due diligence and great expectations for a good half hour, her paternal parent not far off meantime struggling under ninety-pound pressure of suppressed laugh at her earnestness, and the anxiety she seemed to be laboring under lest she would run out of charmed bait before his troutship found out she was fishing for him.

charmed bait before his troutship found out she was fishing for him. But the day was not without its pleasures after all. It was a big treat to her to "go trouting with papa," even though she "didn't stir a fin" (this was imparted to Bob with a patronizing air of superior attainments in the art gentle that would have floored an older angler than Bob), and her heart was made glad on the return to the boat, which we had left a short distance above Horton's Bay, with an apronful of rsrely beautiful ferns, a wreath of "squaw vines" with their bright red berries, a bunch of wintergreen and a few sheets of "natural writing paper" peeled from a birch sapling near the water, to say nothing of a bouquet of wild flowers half the size of a camp kettle; and we pulled down to camp with the boat freighted with about as much happiness as it could well float under. But once more has the tale of a trout caused a divergence from the trail.

from the trail. As we sat around the big fire after supper talking over the day's events and listening to the sweet refrain of the multi-tudinous musquito, the first signs of a break in the weather appeared in the west and south, and by the time we were ready to beat a retreat from our enemy and seek refuge in the tents, numerous rifts in the slowly moving clouds dis-closed patches of blue sky dotted here and there with a bright star blinking and smiling at us a promise of a fair morn. KINGFISHER.

HOW SILKWORM GUT IS MADE.

NEW YORK FISH LAWS.

<text><text><section-header><text><text><text>

pond with Assembly bill No. 609, bearing the impress of being championed by Hadley, of Franklin county, made chairman of the Assembly committee on game laws by the Speaker, a professed sportsman, of which committee Berry, of Fulton and Hamilton, and White, of Oneida, are members. This is all that is known of its origin, history or proting

Berry, of Folion and Hamilton, and while, of Olduk, ale members. This is all that is known of its origin, history or motive.
 It may be presumed that these men, as others aiding to pass it, have correctly represented their constituents and will return home at the end of the session in the glory of their efforts, their salaries in their pockets and decorated with the title of "honorable" to their names. Be it so, while the public must submit to the law and individuals condole themselves with their own private opinions upon the event of their work, for so is the law.
 It will take years, however, if it ever can be, to repair the benefits which this change has undone. Under the law of \$855, the efforts in time and money to re-stock waters the past year have been more than doubly increased over previous years upon the faith of that law. The coming year will, most likely witness its relapse or abandonment—a theart. It looks, and is doubtless intended as the first step toward repeal of all laws protecting fish and game in the interests of the great marts of trade. Whether so or not, it will have a most depressing influence npon all further efforts by the treatment it has received at this legislative session. The other defects and changes need not be noticed.
 Mother specimen of the same kind is the bill (by Hadley) professing to protect song birds for "five years," only with an exception that it should not apply to those who kill them to study their "habits or history" without limitation. Of ourse, all who kill song birds can say they are studying habits and history. Hence the law would be nugatory. Jonx D. COLLINS, Secretary.

UTICA GAME AND FISH PROTECTIVE ASSOCIATION, May 17.

LARGE AMERICAN TROUT IN ENGLAND. A^N enormous American trout has recently been taken in England, as will be seen by the following letter to Land and Water:

SIR—A pond trout of 9¼ pounds may well make a troller's mouth water. Yet this was the weight of a "trout," 2 feet 1 inch long by 7 inches deep, which was captured in the ponds of Mr. Basset, of Tchidy, near Camborne, just a week ago. I nave seen the fish and identified it as a specimen of the American lake trout (Salmo fontinalis), with which Mr. Bas-set stocked his ponds some nne years since. This one was taken on a ground line, but the fish is said to show excellent sport when taken on a trolling bait, and it is an exceedingly voracious feeder. I apprehend, however, that its presence in a pond probably means the extermination of all common trout in it. THOS. CORNISH. PERVANCE. April 26.

PENZANCE, April 26.

PENSANCE, April 26. Although Mr. Cornish speaks of it as a "lake" trout, by which name we know the *S. namagetsh*, this is no doubt a slip of the pen. The editor of *Land and Water* appends the following to the above letter: "Mr. Cornish's information will be of the greatest interest to fishculturists, both in England and America. In America, where the *fontinalis* is indigenous, the weight recorded is rarely exceeded; and recent investigations have tended to show that the largest ever captured weighed 12 pounds 2 ounces. The fish is commonly called a brook trout, although Mr. Parker Gillmore has contended in these columns that it is a char; and the knowledge that it can attain so great a size in a mere pond in England will doubtless be a surprise to the majority. The big American fish referred to above was caught in the Rangeley Lakes, noted waters for producing large *fontinalis*, which are widely known as Rangeley trout in the States. We note that the fish took nine years to attain to the weight of 94 pounds; it would be interesting to learn how large the fish were when placed in the pond. We read in FOREST AND STREAM that an Oquassa trout is said to have grown 10 pounds in six years."

BRANDY POINT TROUT.

BRANDY POINT TROUT. Editor Forest and Stream: In reading over Capt. Barker's letter on the above subject in your issue of April 22, it occurred to me that a short his-tory of Brandy Point might be interesting to at least a por-tion of your readers, especially to those who visit the Rangeley lakes. Away back in the forties this point was known as a famous Indian camping ground from time to man unknown.

<text><text><text><text><text>

After my party left the lakes, I introduced Gen. Hubbard and his friend from New York to the Point. They were stopping at Camp Kennehago, and they had such good suc-sess that they came the next year and camped twenty days on the Point, but that year the trout did not come on until October, when it was close time. While at the Point with Gen. Hubbard, a gentleman from Philadelphia, with a lady for a guide, came down from their camp on the Cupsuptic and fished a day or two, and while there the woman caught an eight-pound trout and played him very handsomely, and reeled him in and netted him alone. These trout were very highly colored and very gamy. They were coming on to their beds to spawn. The beds are formed of pebbles collected together by the trout themselves, in a surface several feet across: and every year they come on and clean off all moss and sediment that gathers there dur-ing the past year some time before the spawning season arrives, and at such times they will readily take the fiy. All the trout I have ever seen taken at Brandy Point were taken legitimately—with fly hooks only. Beamers running up and down the Mooselucmaguntic pass very near the point and parties can send and receive their mails daily, and the scenery from this place is the finest on the lake, and being only five miles from Captain Barker's camps at Benis stream, a party might occupy one of his beautiful camps and go daily for a fishing excursion to this place and return in season for tea at camp. The fishing grounds are sufficiently extensive to give plenty of room to several boats and on certain days large catches are frequently made. The name "Brandy" Point is very suggestive to gentlemen

The name "Brandy" Point is very suggestive to gentlemen the 'old school," but nowadays the State laws prohibit andy. I. G. R. of the ' brandy. BETHEL, Me.

KINGFISHERS GETTING LOST.

<text><section-header>

THE TRAVELERS, of Hartford, has no empty "classes" to cheat its policy-holders; it has \$\$,055,000 assets and \$2,059,000 surplus for their protection—dw.

BLACK BASS PROTECT THEIR NESTS.—At Newton Center, Mass., about seven miles from Boston, there is a handsome sheet of water called Crystal Lake, which was stocked with black bass some years ago. This season a pair of these fish chose a spot where the village boys bathe as the proper place for them to make their nest. Last week one of the boys stripped and walked in at the customary place, but had not gone far before his companions heard him scream and he rushed ashore with a bleeding toe. Investigation showed that the toe was lacerated with fine scratches, and while the boy claimed to have been attacked by a snapping turtle, the others ridiculed the idea and suggested that he had been scratched by a brier. Another boy tried the place with the same result and declared that something had bitten him and had tugged away at his toe. A council of war was held and three boys ventured cautionsly into investigate. Hand in hand they went, peering anxiously into the water, when they saw a rush and the two outside boys were bitten while the middle one escaped. One of the bitten boys fell flat on his back, and as his feet went up a large black bass came to he view of his comrades on shore and the mystery was solved. The boys having found out what sort of an enemy they had to deal with now take in sticks and drive the fish from the nest before venturing in. As the teeth of the black bass are like minute bristles no serious harm was done, but three boys were badly scared for a while.

THE WORCESTER FISH DAY.—Worcester, Mass., May 22 —On Tuesday evening the Worcester Sportsmen's Club held a special meeting, at which the subject of the annual fish day was discussed, and sharp criticisms were made of the manner of making returns on the part of some of the mem-bers. A motion to substitute a field day with trap shooting was laid on the table. The committee, L. G. White, G. J. Rugg, David M. Earle, E. S. Knowles and A. B. F. Kinney, were instructed to draw up strict rules and regulations, and to rule that a man's returns of fish shall be looked upon as honest only in accordance with his ability and reputation as a fisherman. The contest will be for honors only, and each man who attends the supper is to pay for himself. The committee yesterday reported in print, as follows: "The committee spointed by the Sportsmen's Club to make arrangements for the annual fish day decided upon Thurs-day, June 3, for the fishing and the following evening for the supper. With regard to the day, a radical departure from that of former years is proposed by the committee to a fishing trip for individual honors and records. It is hoped by the committee that every member will join in the sport. A first class supper is to be furnished, and a good social time is promised.

KILLING A SALMON.—One evening W. J. Florence, the actor, sat in the club room telling of his exploits on a salmon river in New Brunswick. "How many salmon did you catch?" a visitor inquired. Florence nearly fell from his chair at the ignorance displayed in the question. "Fisher-men, sir," said he, with freezing hautcur, "never use the word catch as you apply it. They kill salmon. They never catch them." The rebuked listener turned scarlet, but made no response. A moment alterward Lawrence Jerome, the uncle of Lady Randolph Churchill, and an excellent story teller, began to talk of his adventures on a salmon stream. He was describing himself as standing on a bank at daybreak whip-ping a "Jack Scott" over the water, when he hooked a big salmon. "I was so excited," he said, "that I dropped my slungshot into the water and lost the fish." "Dropped what?" Florence asked in open-eyed astonishment. "My slungshot at such a time?" Florence inquired. "Best thing in the world to kill a salmon with," Jerome said, go-ing right on with his story while everybody roared.—*Phila*

SALMON ANGLING IN MAINE.—We have lately published several accounts of the capture of salmon in the Penobscot with rod and reel, and in consequence of these reports Mr. Thomas J. Conroy concluded to try his flies in those waters. Mr. Conroy had never killed a salmon, but had east with a salmon rod in the annual tournaments of the Rod and Reel Association and had carried off some prizes for his skill. He left for Bangor on the evening of the 18th and three days later took a twenty-pounder, which we saw on Saturday last at 65 Fulton street. He writes that there were twenty rods on the river that day and that six flash were hooked, but only two were brought to gaff. His fight lasted one hour and twenty minutes and the fish led him nearly a mile. Mr. Conroy thinks that it will pay the angler to go there about June I and try his skill. It is gratifying to know that the stocking of the river is beginning to bear fruit.

THE TROUT IN THE MILK CAN.—The Bangor (Me.) Com-mercial tells this pretty little sequel of the trout in the milk can story: "A few days ago the New York newspapers published the story that a milk dealer of that city had found a trout in a can of milk which had been shipped from the dairies of Capt. J. W. Benedict, of Warwick, N. Y. Now Capt. William Hobson, of the Seventeenth Maine Regiment, and Capt. Benedict were in the same army corps during the war of the rebellion. They became the warmest of personal friends, but were separated in 1862, since which time neither had heard anything of the other. Two days after the ap-pearance of the trout story Capt. Benedict received a letter from Capt, Hobson. The latter had read all about his old comrade's trout in the milk can. The result has been the opening of a warm correspondence between the two veterans and the arranging of a pleasant reunion at an early day.

MICHIGAN ANTI-SPEARING LAW.—Editor Forest and Stream: Permit me, through your columns, to acknowledge the receipt, through the mails, of a copy of the seventh annual report of the Michigan Sportsmer's Association, and to call attention to the absence from its synopsis of our fish laws of the Statutes of 1872, Section 2,191, making it unlaw-ful to take fish, except with hook and line, in the counties of Mecosta, Newaygo, Osceola, Wexford, Manistee, Grand Traverse, Leelanaw, Antrim, Emmet, Cheboygan, Macki-naw, Charlevoix and Barry. I am not aware that these laws have been repealed. They are embodied in a "warning notice," a copy of which I inclose, which was trafted by two of the lawyers of this county, and was intended to prevent spearing.—F. H. THURSTON (Central Lake, Mich., May 19, 1886).

ARKANSAS.—Clarendon, Monroe County, May 18.—White River is one of the prettiest and best fishing streams in the United States, and contains many kinds of fish, from the long gar pike, some of which weigh 150 pounds, to the game and numble trout and bass; also four or five kinds of perch, and the much talked of and dreaded catfish. Have seen cat-fish caught here that weighed 100 pounds. All we have to do to catch "catty." is to suspend a line 150 to 200 feet long from the Texas & St. Louis Railroad Bridge which crosses here. The 15 to 25 large hooks on the line are baited with almost any kind of fresh fish or meat. Crayfish or crawfish, of which there is an abundance, make fine bait for perch and catfish.—CAVALIER. catfish .- CAVALIER.

ADIRONDACK PRESERVE Association.—A new organiza-tion under this title has secured possession of the old Rhine-lander estate in Hamilton county, N. Y. The property eu-braces 22.000 acres, with trout streams and lakes. The Association will crect club bouses, engage game keepers, and otherwise improve and protect their possessions. Mr. J. L Marvin, No. 14 Cedar street. New York, the active organ-izer, is enthusiastic in his estimate of the advantages the new club will offer its city members. The officers are: Henry C. Squires, President; James L. Marvin, Vice Presi-dent; W. E. Freer, Secretary; Geo. W. Shiebler, Treasurer, The membership will be limited to 200, shares being \$100.

FUX-FISHING FOR SHAD —Baltimore, May 24.—Editor Forest and Stream: You are in error in asserting that shad may be successfully taken with the fly only in the Connecti-cut and Housatonic rivers. Whether they may be success-fully taken anywhere is, I think, debatable; but that shad do rise to the fly in the Chattahoochee River, at Columbus, Ga., is a fact. In proportion to the number of fishermen who try for shad with the fly at Holyoke and Columbus, I feel con-fident the result is decidedly in favor of Columbus. Shad also rise to the fly in the Patapsco, at the Relay House, B. & O. R. R.—CHES, A. PEAKE.

TROUT FROM A POND.—Detroit, Mich., May 21.—I re-ceived from my brother, now in Muskegon county, this State, per express yesterday, a dozen fine trout, taken from a pond that was stocked five years ago; and as they have not been disturbed, there are now some excellent fish in it. One, that was 18 inches long, was taken by hand on a flume recently built. Those I had were all taken with the fly, but the worm is preferred, it is said. The latter are only ob-tainable some four miles distant.—C. J. THOMAS.

MARYLAND, —Amateurs at Port Deposit and Lapidum are having fine times trolling fer rockfish. One day recently Oscar Morrison caught 73 and George Stephson 40, with hook and line, in a few hours. They were small, however, weighing from three to four pounds. Some very large ones have been captured by gillers and seine-baulers, one Saturday fully three feet long. Black bass fishing will also soon com-mence in the Susquehanna, and parties from the cities are already making fishing arrangements with our local boatmen.

A MONSTER SALMON —Last Tuesday an enormous salmon arrived in New York from the Columbia River, Oregon. It lay on the slabs of Commissioner Blackford, in Fulton Mar-ket, and was labeled, "The largest salmon ever caught" It then weighed 64 pounds, but is said to have weighed 72 when caught. Many people estimated its weight above these figures.

New HAMPSHIRE NOTES.—New London, N. H., May 24. —Editor Forest and Stream: The big trout of Sunapee Lake and the landlocked salmon are beginning to take hold, but very little fishing has been done so far. One hundred thou-sand brook trout fry and 30.000 landlocked salmon fry have been successfully hatched and liberated.—SUNAPEE.

STRIKES AND RUMORS OF STRIKES have filled the columns of the daily papers for weeks and months. The business man who reads FOREST AND STREAM finds there too a good deal about "strikes," but his spirit is not perturbed thereby

RED BANK, N. J., May 19 — Took five bass yesterday P. M., first of the season. Water too thick for good trolling. Prospects good for bass this summer.—WILD.

ROBERT BRYANT, of High Bridge, N. J., publishes an attractive catalogue of rods, reels and anglers' supplies manufactured by him.

THE WORLD'S PASTIME EXPOSITION, a display of all classes of goods relating to different pastimes, will open in Chicago, July 3.

CHAUTAUQUA LAKE, N. Y., is cursed with a set of dyna-mite fish killers, who are rapidly cleaning out the bass and pickerel.

SAN LUIS OBISPO, Cal., May 4 — The fishing is better at Sancho Poho than at any other part of this section of country.

WORK AT COLD SPRING HARBOR, N. Y. BY FRED MATHER.

[Read before the American Fisheries Society.]

BY FRED MATHER. [Read before the American Fisheries Society.] THIS station of the New York Fish Commission, of which I am the superintendent, is on the north shore of Long Island, and is intended for both salt and fresh water fish. Some work is also done for the United States Fish Commission, and the expense of this is borne by the general government, and the fish hatched are mainly distributed within the State. These latter fish are mainly salmon, land-locked and lake trout. In some cases, such as the whitefish and shad, the eggs are given by the United States, and are distributed by the State, an arrangement of great value to the latter. During the past season we have had 262.000 trout fry at the station. Of these there were 40,000 eggs taken at the station, 112,000 eggs bought by Mr. John D. Hewlett, of Cold Spring Harbor, from James Annin, Jr. and W. L. Gilbert, the fry from which went into the waters of the north and south sides of Long Island, and 110,000 fry were received from the New York hatchery at Caledonia, in charge of Mr. M. A. Green. We have on hend at present writing 3,000,000 eggs soft the Northville, Michigan, station, of the U. S. Commission, under charge of Mr. F. N. Clark, by order of Prof. S. F. Baird, have been hatched and distributed to Great Pond, near Riverhead, Long Island, and to Lake Ronkonkoma, a large lake in the center of the island. Previous plantings have been made in these lakes, but we have been unable so far to learn the result of them. It is hoged, however, that this fish may find a suit-able home in these waters. On this subject the County Treasurer of Suffolk county writes me from Riverhead, under date of Jan. 30, 1856, as follows: *Fred Mather, Esg.*: Deak Sn-I will be very glad to assist you in any way. I have two parties out brying is get a specimen of the

writes me from Kiverhead, under date of Jah. 30, 1550, as follows: Fred Mather, Esq.: DEAR SIR-I will be very glad to assist you in any way. I have two parties out trying to get a specimen of the wiltefish for you, but have failed so far on account of the iee, but will give it a thorough trial when the ice is gone and report to you. I am having a net fixed now to try to catch one or more. There is a pond one and a half miles long just above Riverhead, good running water, which I hired two men to clean out of all worthless fish, such as catish, suckers and what we call "roach." They caught about two and a half tons of turtles, which we carted off and burled. I was in hopes to get some black bass to place in this pond, and would like some whitefish for it now. We have a good place for lake trout, and if you will send us some and let us know when they will arrive, I will take especial pains for their care. Perhaps the brown trout might do well here. (Signed) J. HENRY PERKINS. In the salt-water department, we have a sometimes called on the coast, frost fish, a small relative of the cod which seldom exceeds a pound in weight but is quite an important little food fish in our harbors. In January we had some 2,000,000 codfish eggs of which a very fair percentage were developing, until a blizzard blew through our old dilapidated shanties, which we use for hatching houses, and froze up the pipes and the eggs in the jars. We had watched the development of these eggs daily under the microscope with great interest and of the brown trout, which by the way I believe to be the

<text><text><text><text><text><text>

PROTECTING MACKEREL.—A bill to prohibit the cap ture of mackerel during the spawning season has been before Congress for some time, and on Monday last the House spent the day in considering it. Mr. Hewitt (N, Y.), in opposing the bill, said there were three results that would follow from its passage: First, it would deprive a very large number of people of cheap and nutritious food; second, it would deprive more than two thousand fishermen of employment between the months of April and June; third, it would confine mackerel ishing to the States of Massachusetts and Maine. The mackerel arrived on the coast about the end of March at the mouth of Ckesapeake Bay and proceeded northward, reaching Massachusetts and Maine in the month of June, at which time the operations of this bill would cease. He denied that spring fishing produced fish of an inferior grade, and he quoted from a letter from Prof. Baird to the effect that that gentleman could see no beneficial results that would come from the bill. The spawn of a single mackerel produced 500,000 eggs, and it was impossible for man to destroy these ocean fish. A fisherman had told him that he had met a school of mackerel seven miles long and two miles wide, so densely packed that it seemed as though the water had no room among them. Mr. Miliken (Me) said the same argument that was made against this bill had been made against the proposition to re-strict the catching of menhaden. It had been said that men-haden could not be destroyed by man, but for the past few years menhaden had been so scaree of the coast of Maine that the fishermen could not catch enough for bait. The same was to each fish the lobster fisheries. When he was a boy he used to catch plenty of lobsters one and a half and two feet long. To day they were not only scaree, but so small that they secured to have hardly left of their swaddling clothes before they were daught fresh mackerel, as they would be under this bill, They wanted fresh mackerel, as they would be under this bill, They wanted fresh ma

ST. LOUIS DOG SHOW.

ST. LOUIS DOG SHOW. [From a Special Correspondent.] THE third annual dog show of the St. Louis Gun Club was held in the east nave of the Exposition Building May 18, 19, 20, and 21. The entries numbered 881 and but very few were absent. The judges for pointers, English setters, beagles, dachshunde, greybounds and deerbounds was J. M. Tayfor of Cleveland, Ohio; Irish and Gordon setters, Mr. W. H. Pierce, Peekskill, N. Y.; Dandy Dinmonts and Scotch and hard-haired terriers, Capt. C. W. Bellairs, St. Louis, Mo.; St. Bernards, collies, fox-terriers, spaniels and all non-sporting except as above, J. H. Naylor, Chicago, Ill. The judging gave general satisfaction, and the local visitors as well as those from a distance, expressed themselves well pleased with the ex-hibition. The prizes in the regular classes were liboral, and the specials were very numerous, amounting to 114. As has been stated in these columns before, special prizes are becom-ing a nuisance at shows, and in place of assisting the finding out of the best dog of the different breeds are in many cases so offered as to become a gift to the animal. The manage-ment, especially Mr. Geo. Munson, worked hard to make the was warun, in fact we might say on Friday it was too warm for the real comfort of the dogs, and there was a falling off in the attendance during the afternoon. The quality of the dogs m most of the non-sporting classes was good. *POINTER*

POINTERS.

Description of the field of the setter classes was poor, while that in the pointer and most of the setter classes was poor, while that *FOINTERS*. For large dogs, and he was absent. There were no entries in the heavy weight bitch class. In the open class for large dogs, eight faced the judge and they were an excellent lot. Young Meteor, placed first, is an exceedingly good one, back of his neck which is too short, his head is a trifle coarse, and his ears are placed too high. Second went to Gypsy, a good or with the exception of being very throaty. Third went to Sweep, coarse in head and a trifle weak in stifles and hocks, therwise a good one. In the open class for heavy weight bitches first, went to New to your readers. Second went to Xixen, a very large bitch with the lumber about her, except for her bad ears, and being a trifle long in barrel, we like her very much. Third went to Nellie, af air bitch, plain in head, short in neck and light in stifles and hocks, and received the award. There were three dogs shown in the open class for light weights, and received the award. There were three dogs shown in the open class for light weight, such excepted in both, also shown in bad coat, he is a bitch or her was alone in the bitch charmer of the short in head, short in neck and light in stifles. Krupps litter brother Rod, also shown in bad coat, he is a bood all round dog and we liked him better for first. In the open class for light weight bitches, he was shown to your readers. Second went to bell were to be also for high weight bitches are not as good as we would like the show were the delet in the dose of heavy weight bitches here are not as good as we would like the show and here class for light weight bitches. Second went to Mission weight bitches and cheet, he is a trifle chroaty for a puppy strong in bone, he is a trifle chroaty for a puppy, and bood puppies faced the judge. First went to Mission, a big puppies faced the judge. First went to Mission weight by the puppies faced the judge. Third went to the bi

ENGLISH SETTERS.

There were two dogs shown in the champion class, Paul Gladstone and his illustrious sire old Gladstone, for exhibition

only. He was looking remarkably well and is exceedingly active for a dog nine years of age. Paul received the award. He was shown in grand shape and was as hard as a rock. The more we examined him, the more we word impressed with him. He is a small dog of great substance, and is so exceed-ingly well put together that it is difficult to find many faults in him. His head appears much better than when we last saw him. Juno A. was first in the champion bitch class, she is a fine bitch and is well known to your readers. In the open class first went to Mandan, a description of him will be found in your report of the New York show. His condition has much imporved. Socoud went to the well known field trial winner Roderigo. His bench show form has improved since we last saw him, and it takes a good one to beat him. Third went to Bridgeport, a well made dog with but few faults. He is of a heavier type than Major Taylor likes. In the bitch class eighteen faced the judge. First went to Dixie, excellent in head, chest, shoulders, legs and feet, she is a trifle sway-backed and long between the couplings. Second was given to Vixen III., a description of her will be found in your report of the late New York show. Third went to Haidee, a sweet little all-round bitch, we think her good enough for any com-pany. In dog puppies first went to Goldstone, a very promis-ing youngster. He is a trifle hight in muzzle and long in the back. He will be heard from again. Second went to Dashing Prince, a fair puppy well put together. In bitch puppies first went to Darkness, a fairly well made one. Second went to Fawn II., a very nice all round bitch, we thought her fully cqual, if not better, than Darkness.

cqual, if not better, than Darkness. BLACK AND TANS were a weedy lot; Nora, the only entry in the champion class, was absent. In the open class for dogs first was withheld, and second went to Don, a poor specimen. In the open class for bitches the best bitch was Patti, in fact she was the only good specimen shown, and through the careless handling of an at-tendant, who brought her before the judge, she would not stand on her feet to be looked over, and Nellie, a bitch, weak in stiffes, hocks, pasterns and too long in the body, was given the place. If Mr. Pierce had seen Patti on her limbs as he did later, she would have been given the place, as he is a very symmetrical bitch, with capital limbs; Nellie was the better in head and feathering, and the tan was much better in color be-hind. Nellte was also given the place for puppies. Second went to Nell, poor in head, legs and feet, and a trifle weak in back.

The to Nell, poor in head, legs and feet, and a trifle weak in back. IRISH SETTERS. Elcho, Jr., was the only entry in the champion class for dogs, and he was awarded the prize. Faun, alone in the class for bitches, received like honors. In the open class for dogs, and was properly placed. Second went to Patsy, he is put together for work, his plain head is his worst feature. Third went to Frank, a racy built youngster with lots of substance, but shown too thin. In the open class for bitches Laura B. was properly placed first; she is a symmetrical bitch with rare substance and quality, we might add that her head is a trifle to much of the English setter type. Second went to Grace Glencho, a new bitch, she is of the true frish type all over, combined with substance; if shown in condition she will be heard from again. Third went to little Lorna; her faults which are few are well known. In the class for dog puppies two poor specimens were shown, first was withheld and second was given to Bob White. In the class for bitch pup-pies, first was given to Bridget D. IL, a fair specimen but not first rate in color. Second was withheld. A full list of awards in the regular and special classes will be found below. AWARDS.

MARDS. MASTIFFS.-CHAMPION-No entries. OPEN-Dogs: 1st, E. Mans-ela's Ashmont Sam; 2d, W. F. Suda's Challenge, Very high com., C. Cook's Cæsar II. Bitches: Prizes withheld. Very high com., F. Suda's Beauty. Puppies: 1st, E. Mansfield's Ashmont Sam; I. A. J. Pierce's Queen Victoria. Com., G. P. Jones's Beech Grove neep.

2d, A. J. Pierce's Queen Victoria. Com., G. P. Jones's Beech Grove Queen.

DEATH OF LANG.—Blairsville, Pa., May 21.—Editor For-est and Stram: All dog fanciers who attended the recent bench show at Pittsburgh will remember R. W. Wehrle's Gor-don setter puppy Lang. This dog attracted considerable attention from the fact that he was one of the most promising puppies of his class in Western Peensylvania, and we might add the entire State. His owner received several very good offers for the purchase of the dog, but refused them all, in the idea that by keeping him in this section of the country and under his own control he would be enabled to do some-thing toward the introducing and maintaining of a pure and the breed of dogs of this sort. Shortly after Lang was brought home from the Pittsburgh show his owner noticed that be seemed to be affected by a lung disorder, and this soon developed into quite a serious trouble, but by good manage-ment and careful treatment it subsided. A few days ago the same trouble in an aggravated form made its appearance. All was done for his relief that possibly could be done; but to no avail, and Lang ''passed in his chips'' The primary in-tention of this communication is to call the attention of man-agers of bench shows to the fact that they should exercise great care in excluding from the show all dogs who have the slightest indication about them that they are suffering from this sore. When Lang was at the Pittsburgh show his owner noticed that in the same kennel with him was a dog affected with sore eyes and whose general appearance indicated that he was diseased, and Mr. Wehrle feels confident that dog is the innocent cause of Lang's death. Until a few days after the pittsburgh show Lang was in the best of health, and there is no doubt in the minds of those conversant with the affair that had the diseased dog been excluded from the show Lang would to-day be alive. It cost Mr. Wehrle 5500 to learn this lesson, and managers of ben

THE BEAGLE BITCH TRINKET,—Editor Forest and Stream: Recently Mr. A. C. Krueger reported the beagle Trinket (Flute-Queen) as bred to Bannerman. In reply I stated that a party in Pittsfield, Mass, advertised a beagle bitch for sale. He wrote me that he would sell her for \$12, and added, "I have her pedigree which I will let the man have that buys Trinket." Knowing Trinket as a show winner and the dam of show winners, I was suspicious regarding her identity. And although I replied at once that if his bitch was the original (Flute-Queen) Trinket, winner at Meriden, I would take her, he did not reply until some weeks later, when he wrote that she was, and had won two prizes at Meriden, but that be had sold her. Trinket won one prize at Meriden; she was bred by N. Elmore and sold to Mr. J. W. Marroway, and I bought her from bim. Mr. Krueger has probably been im-posed upon regarding the breeding of the bitch and I requested the use of another name. I claimed priority of name, which it is customary to acknowledge, particularly as my Trinket is a show winner, and registered in the American Kennel Register. Notwithstanding, Mr. Krueger nurther advertises the beagle Trinket for sale in the FOREST AND STREAM. After the publi-cation of my former letter I feel compelled to state that I an the owner of the beagle known to the public as Trinket. As I showed that the Pittsfield party gave aftitious show record for his hound, and also claimed her to be the same name and breeding as another well known one, Mr. Krueger certainly should have taken time to investigate the breeding of his hound, which is doubtles ifettious.—H. F. SCHELIMASS (Brooklyn, N. Y., May 18). CHANGED NAME AT SHOWS.—New Haven, Conn., May 82.—Editor Forest and Sfream: ' have a dog that won first

(Brooklyn, N. Y., May 18).
CHANGED NAME AT SHOWS.—New Haven, Conn., May 22.—*Editor Forest and Stream:* 1 have a dog that won first in a puppy class at New York in 1884, and was commended at the last show. I have la'ely changed his name and have registered him in the A. K. R. Would his A. K. R. number be sufficient identification in entering him at future show, or shall I have to give his former name as well.—E. S. PORTER. The A. K. C. rules say: "2. All dogs entered for competition or exhibition only shall be entered in the name of the bona fide owner. Such entry must be identified by the name of the bong in duber of birth, and, if known, the name of its size, dam and breeder; otherwise, if must be entered 'pedigree unknown.' If the name at clag which has won a first prize has been changed, its name at time of winning any and every such prize, and the place thereof, must be given. 3. If a dog is entered without being identified, as directed in Rule 2, it shall be disqualified from competition."

be disqualified from competition." AN UNFAILING REMEDY FOR ALL SKIN DISEASES. —Editor Forest and Stream: Take train oil, one quart; petro-lium oil, one gill; turpentine, one-half gill; sulphur, one pound; mix to the consistency of cream; then dress the dog all over with the mixture, rubbing well in with the hands un-til every part of the dog is saturated; allow to remain for a week or ten days, then wash off with strong solution of soda, warm water and softsoap. If the dog licks off the mixture, all the better, it will help him. The only medicine (if needed) is a dose of salts twice a week for a fortnight or three weeks. A few weeks after the above treatment the dog will look like a new animal with a fine healthy coat. If very bad case of mange repeat dressing, but it is seldom necessary. I have cured the very worst cases possible, including a noted stud setter now in Canada. Joun R. ROBINSON, representative of the late E. Laverack (Sunderland, Eng., May 12). POINTERS FOR CALIFORNIA —Editor Forest and

POINTERS FOR CALIFORNIA.—Editor Forest and Stream: A. B. Truman, the well known dog man of San Francisco. has received two very handsome lemon and white pointer pupples from the kennels of Dr. J. B. S. Holmes, of Rome, Ga. These pupples are very fine ones, and are a great addition to the pointer stock of the Pacific coast, and will be of great interest to all lovers of the pointer. Their sire is Sensation, and their dam is Seph G., winner of the first prize, open class, Westminster Kennel Club. Everything goes to indicate that they will make grand dogs to hunt the California quail.—FRIAR TUCK.

THE TEXAS FIELD TRIALS CLUB.—The Texas Field Trials Club was recently organized at Marshall, Tex., with the following-named gentlemen as officers: President, Mr. Amory F. Starr; Vice-Tresidents, Messrs, J. D. Rudd and W. M. Robertson; Secretary, Mr. J. F. Sharp; Treasurer, Mr. Edmund Key. The Executive Committee consists of Harry Blocker, C. B. Cock, Jr., S. H. Green, Frank Y. Hall, Edmund Key, W. H. Pope, W. V. Richardson, W. M. Robertson, W. J. Rosborough, Jr., J. D. Rudd, J. F. Sharp, Amory R. Starr, A. B. Waskom, W. E. Winston and E. P. Womack.

D. WASKOM, W. E. WINSTON AND E. P. WOMACK. ST. BERNARD AWARDS AT NEW YORK.—Editor For-est and Stream. My bitch Belleric II., open class smooth St. Bernards, was awarded yhe, at the recent Westminster Ken-nel Club show. This award does not appear in the published list, as it was made after the first day of the show. Through an oversight on the part of Mr. W. W. Tucker, the judge, he did not notice her when in the ring. The award was after-ward duly recorded in the judge's book.—K. E. HOPF.

SPANIEL SPECIALS AT NEW YORK.—Editor Forest and Stream: In your list of specials at New York, you omit the one for best liver and white field spaniel won by Dash IL (A, K, R. 3009). E. M. OLDHAM. [There was no special of the kind in the published list, nor did the secretary mention it the additional list sent us and published last week. Will the W. K. C. kindly explaint]

POINTER IMPORTATION.—Lad of Bow, Beppo III. and Lass of Bow, the property of the Graphic Kennels, of Jersey City, reached Hoboken on Saturday last on the German steamer Eider. They arrived in excellent condition, and the owners are greatly pleased with them. Lad and Lass of Bow are heavy-weight pointers, and Beppo III. is a light weight; all of them are liver and white. Lass of Bow won second prize at the recent field trials in England.

TOM BALL.-May 12.-Editor Forest and Stream: I notice in your issue of April 22, that "Lillibulero" states in his letter of March 27 that my buildog Tom Ball could be purchased for 2100. This is not correct. I refused 2100 for him four times and sold him for more.-J. C. LYALL.

IMPORTANT SALE OF GREYHOUNDS.-Mr. H. W. Smith, of Worcester, Mass., has disposed of his kennel of greyhounds, with the exception of Friday Night, which he will keep.

MR. WM. TALLMAN has bought out the Blackstone Ken-nels, comprising Foreman, Plantagenet, Mack B. and some very nice Laverack bitches, and is now the owner and manager.

A NEW ONE.-England is to have a *Pet Dog Journal*, to take special notice of ladies' pets. It will be published at 211 Cardigan Lane, Headingley, Leeds.

KENNEL NOTES.

NELVICE WARNAUENENT.
 KENVICE WARNAUENENT.

rects, and if your dog is not better let us know. C. F. L., Haverhill, Mass.—1. One of my four weeks old pointer pups is swollen up to nearly twice his normal size. Was all right until ten ays ago and growing as well and as ragged as any in the litter; he oes not appear to be in much pain and ents fairly well. I treated im for worms and he passed a large quantity. 2. One of the same ter had an atchess form and break ton uis belly just inside bis hind leg; keptit clean with water and carbolic acid, it has healed all right, ut has lett a small bunch, looks like a rupture. Can the trussed any 'ay so as to reduce it? Aus. 1. You must rid the dog of the worms

nd he will recover. After dieting for twelve hours give twenty rains of powdered areca nut, and follow this with hrisk purpe (one r two teaspoonsful) of castor oil. Repeat this if necessary twice in ne week; give powder mixed up with lard or butter. 2. Consult eterinary. If it is a rupture it may be cured at this age.

I. S. W. New York.—My setter has a black that age. I. S. W. New York.—My setter has a black hunch (I think it is a art) on the under side of one of his ears. It seems to bleed once in while. It is growing larger all the while. Ans. It all depends on hat the bunch is. If a solid tunor it can he cut out. If an abscess can be incised and cured; if a nævus or bunch of dilated veins which we suspect) it might he operated on with success. A veteri-ary or sufgeon can tell you.

or surgeon can tell you. J., Dover, N. H.—Beagle pup limos. old, constantly discharges, ir from her mouth. Is growing worse every day. He hreath smells much. I have given her castor oll and washed her under jaw a weak solution of carbolic acid. Ans. Your bitch has either a grenous inflammation of the mouth or gangrene of the lungs, wing distemper. You had best concult a veterinary. Inspection it to decide what the trouble is. After a diagnosis is made we labe glad to prescribe.

E. J. M., Washingtonville.—I have a spaniel that has a breaking th around his head. About one eye the halr has come out, and ere are spots on the neck where the halr is coming out. On his ad there are dry scales; he scratches the spots some, hut appears ight other ways. Ans. Your dog has scaly eczema. Dust pow-red calounel on the parks every other day, and on the alternate wys rub in some balsam of Peru ointment. Give five drops of Fow-r's solution of arsenic twice daily in the food.

r's solution of arsenic twice daily in the food. M. H., Philadelphia,—I have an old collie bitch who has bred, off nd on, for years: a severe cough. It does not affect her health or ppetite, apparently. As she now has a litter, however, it seems to orry her more. I have only tried glycerine. Ans.—Chronic coughs re very hard to cure. Syrup of wild cherry with some opium in the orm of laudanum or paregoric will ease your animal. Let a tea-poonful of the syrup contain twenty drops of paregoric or ten drops f laudanum, and give a dose three t'mes daily. Tablets containing , fifth of a grain of sulphate of codine can be substituted for the hove.

Addanum, and give a dose three times daily. Tablets containing ifth of a grain of sulphate of codine can be substituted for the ove. P. H. A., Brooklyn.—If you have space please answer at your diest convenience the following query: How sball I treat my collie p, aged 9 months' She has shown irritation of the skin, scratch-her back for the past two weeks, hut I pail little attention, think-it was caused by fleas. About four days ago noticed a circular ich about size of silver dollar on back, and just at the root of tail ere the har had come out; patch was red and inflamed, and cov-d in part with a brownish scal, scemed rather sore to the touch, i just where the hair had been the thickest, so that it was con-led and might have been there some time. Inflammation seemed extend down to root of the tail, and dog manifested a desire to rub scell against chars, etc. Hair around patch was not altered in y way, and there is no odor about the sore. Puppy has no appetite its fat and in most excellent spirits. Does not seem to answer to y description of mange in 'Hallock's Gazetteer." The rest of her tits in pod condition. I wash the spot with castile soap and rm water, and then anoint it three times a day with sulphur olut-nt, which she immediately licks off. How can I prevent this? I re her a laxative of senna and olive oil, and bathed her thoroughly th Ricksecker's and Spratts dog cakes; she has always been a dainty er, and I am afraid has had too much meat. Would iron and inhe or arsenic be good for her, and a mercural oliment, also shing with carbolic acid? I have cleaned her hed thoroughly is dear fully and dry before applying salve. Use carbolic soap, re five drops of Fowler's solution of aleate of mercury. If the skin is she carefully and dry before applying salve. Use carbolic coap, re only a little cooked meat and mix this with holed corn meal or tab, Keep the bitch muzzled for two hours after applying oint-int.

So easy to row with Allen's bow-facers. Catalogue free. Oars complete, \$8 per pair. Fred A. Allen, Monmouth, Ill.-Adv.

$\begin{array}{c ccccccccccccccccccccccccccccccccccc$	THE BUFFALO TOURNAMENT. Buffeld, May 18.—The three days' shooting tournament opened auspiciously to-day at the Driving Park. Peoria hiackbirds are used, and prizes aggregating \$900 are being contested for. Two con- tests are on the programme for eack day. The tournament bas brought together many of the best shots in the country, including most of those who were present at the State shoot of the New York State Association for the Protection of Fish and Game held in Buffalo in September, 1834. Among those who contested to-day were H. B. Whitner, of Phelps, Y. Y. "the boy wonder," who won the Pierce diamond badge in 1884, D. M. Lefever, C. Wagner, and A. Baker, of Rochester; Eugene Smith, of La Salle, W. H. Fleischer, of Ironde-	much money out of it. In the first contest Wagner took first, Richmond, Scool, Luther third, Chamberlaiu fourth and Perkins fifth money. The score follows: A Baker

through it at a time, will find himself in the position shown in Fig. 1; and if he does not want to swim, he is in a very good position for merely floating. If, on the other hand, he is not acquainted with the proper way to get into a circular life huoy, he is pretty sure to make a mess of it and his mode of setting to work will at first cer-tainly result as shown in Fig. 2; but finding the result the reverse of

Fig. 2. will speedily change to the position depicted lu' Fig. 8, difficult position to maintain if there is no motion in the ell night an impossible one if the sea is running rough. The man who cannot swim will pull the buoy over him just old in Fig. 2; hut, unlike him, will not be able to regain unless he leave go the buoy; in either case it is not diffi-ell what his fate will quickly be if not rescued. The swim-3 must he a very handy man in the water, or he never

Eq. 3. Could have attained the position in which we see him; he is in fact performing a balancing feat, combined with one of strength, for every one who, when immersed, endeavors to holst binself up the side of a boat, raft, or other large floating object, or tries to draw himself over or upon a smaller one, which at the same time he is forcing down beneath him, is in a less degree going through the same muscular exerction as the man has gone through who, starting with his chin level with his hands, has raised his body thto a vertical posi-tion on a horizontal bur. The man in the water has the disadvantage of a movable object to struggle with and hoist himself upon, and if dressed the extra weight of his clothes covering that part of his hody which he raises above the water as against the diminished weight of the submerged portion of his body due to the buoyancy of the water. On the other hand the man on the bar has the alvantage of a rigid which he raises above the water as against the diminished weight of the submerged portion of his body due to the buoyancy of the water. On the other hand the man on the bar has the alvantage of a rigid where there in any desided position is still more so; in fact, to stay there et all, I have already explained, is a matter of impossibility to a persou about to be immersed are only a means of drowning him at the surface instead of at a creater depth. Let us suppose a ship's deck to be plentifully provided with patent life saving composols, sease, hashis, hashocks, hen coops, huckets, hatches, etc., while bebos, sease, hashis, hashocks, hen coops, huckets, hatches, etc., while bebos, are life-asyning cushious and mattresses galore, when suddenly there arises urgent need of these supposed means of safety. Imagine, too, that there is absence of panic, and therefore the women and, these

men who cannot swim are first thought of, and each has one of bhese various life-preservers lashed to them in the manner which scenas best to those who undertake the office, viz, either at one side, in front or hehind. The vessel then sinks or goes to pieces, and they are all left floating about, it is true, hut with sleader chances of sur-viving the first ten minutes. A swimmer could manage fairly well in still water, whether the float was lashed back or front; if at one side, he deserves greater sympathy; although he might prefer heing with out either, and more especially the latter. We have only to look at the three next figures to see how the non-swimmer would tare under 27 FIG. 4

these trying circumstances. To any one altogether unused to the water, it would matter very little under which arm the float is lashed, for he will very soon drown. In Fig. 5, we see how, after fruitless and desperate efforts to

ric. o. maintain the position shown in Fig. 4, ti called life preserver asserts itself. and face upward and infallihly perishes. a somewhat better chance, at all eve only push vigorously with the palms of 4, the floating power of thes the unhappy castaway turns The subject of Fig. 6 has nts for a time, and if he will hls hands, and allow his feet

<text>

FIG. 7. look particularly cheerful, but he is safe for all that, and the more he presses his shoulders and chest over and against the spar, the less his feet and legs will tend to rise under le; moreover, he can always relieve the strain upon bis arms by placing one foot over it. This position is the natural one adopted by all human beings when en-deavoring to climb up or look over a wall, and as such cannot fail to recommend itself to non-swimmers as well as swimmers; while it has the merit of being more within the compass of the former than any other position involving more advanced gyunastics. These few illustrations will suffice to prove to most people that where patience, practice or skill is required of a good swimmer effect, it follows beyond doubt that contrivances of the kind can only

be snares to those who cannot swim, and as such deserve the fullest condemnation. Having finished with floats of various kinds which are not stitached to the hody, we come to those which it is usual to so attach, and which are hy no meaus so numerous. Of these it may he sold that none of them are objectionable, excepting in matters of detail, such as convenience, mode of attachment, etc., for all, pro-viled they he of proper floation, will support a man whether he can swim or not, and are therefore entitled to the name of life preservers, Having tested every known kind, both as recards variety of make and means adopted to obtain power of floation, I am in a position to speak positively as to their respective merits and dements. Some consist of two large blocks of cork or tin canisters attached to the hody at the back and chest. A more usual plan is that where the blocks of cork, instead of heing two are six or eight in number, and are placed all around the body; and this form is what, with very slight improvements, has for upward of tweiry years here known as a cork facket, and until quite recently was in fact the only life helt-s state of things which we may all congratulate ourselves is now changed. During the last ten years efforts have been made to increase the

slight improvements, has for upward of twenty years heen known as a cork jaket, and muld quite recently was in fact the only life helt-a state of things which we may all congratulate ourselves is now 'anaged. The provide the state of the state of the state of the let-a state of things which we may all congratulate ourselves is now 'anaged. The state of things which we may all congratulate ourselves is now construction in the size, and increa-e in the number, of the pieces of cork naturally necessitated the area over which they are spread being considerably extended, and this has at length resulted in limings for coats being now obtainable of such a moderate thickness and ex-cessive flexibility as neither to inconvenience nor disfigure their wearer which these ame time they are more than equal to the task of floating him. The vast importance of knowing how to swim it is impossible to overate, and here I may define the knowledge of swimming, as gen-really accrited to represent ability to keep afloat when full wdressed, in fresh water, for a limited period. I do not care how incorrectly a man or wormau may move their limbs or how slowly they may pro-gress in the water; neither does it matter for my purpose how timid independs on perseverance and practice, as well as on per-sonal characteristics, such as courage and physique. All that is necessary for the purposes of self preservation from drowning is, hat man, woman, or cuild should be sufficiently at home in the water, that the fact of immersion should not deprive them of their presence of mind, and that they should possess the power to more their limbs in such a manner as to turn in any desired direction, and keep their sastated at the heritaming of Chapter I the more their limbs in such a manner as to turn in any desired direction, and keep their set he approved and correct movements to he observed in ordinary of mind, and that they should possess the power to more their limbs resistance to the water, vit, horizontal and the head for

What there and straightened to their fullest extent, wide apart. The beginner is now in the position to make the stroke. Th done by sweeping the arms apart horizontally beneath but near surface, to a position where each has described three-quarters semi-circle, and simultaneously hringing the legs rigidly toge until the feet touch: the inside surface of each leg is thus the f in contact with the water, and not the back and sole of the foo is the case with many less correct ways of making the legs sta What I have described constitutes the leg stroke, and from this it to not he limbs are drawn up again as quickly as possible to cramped attitude first described. It will be noticed that at the legs are extended apart, while at the end of the stroke the arms extended apart, and the legs are extended in contact. The m thus is there-fold—the recovery or contraction preparatory to the stroke, and the stroke is the stroke, and the st

The following directions for restoring the apparently dead, either from drowning or other suffocation, or from narcotic poisoning, are recommended by the Royal Humane Society. Send immediately for medical assistance, blankets and dry cloth-ing, hut proceed to treat the patient instantly, securing as much fresh air as possible. The points to be aimed at are: First and immediately, the restora-tion of breathing; and secondly, after breathing is restored, the pro-motion of warmth and circulation. The efforts to restore life must be persevered in until the arrival of medical assistance, or until the pulse and breathing have ceased for at least an hour.

The efforts to restore life must be persevered in until the arrival of medical assistance, or until the pulse and breathing have ceased for at least an hour.
 TREATMENT TO RESORE NATURAL BREATHING.
 Rule 1.—TO maintain a free entrance of air into the windpipe: Cleanse the mouth and nostrils; open the mouth; draw forward the patient's tongue, and keep if forward; an elastic hand under the chin will answer this purpose. Remove all tight clothing from ahout the neck and chest.
 The 2.—To adjust the patient's position: Place the patient's control of the state and under the chin will answer this purpose. Remove all tight clothing from ahout the neck and chest.
 The 2.—To adjust the patient's position: Place the patient on his hack on a flat surface, include a little from the feet upward; raise and support the head and shoulders on a small, firm cushon or folded articles of dress placed under the shoulder blace.
 Rule 3.—To imitate the movements of hreathing: Grasp the patient's arms just ahove the elbows, and draw the arms grant have the lings), and keep the arms in that position for two seconds. Then turn down the patient's arms and press them gently and firmily for two seconds akainst the sides of the chest (this is with the object of pressing air out of the lungs. Pressure on the breated perseveringly fifture times in a minute, until a spontaneous effort to respire is perceived, immediately upon which cease to on and warmth (as below). Should a warm bath be procuralle, the movements of hreathing and proceed to induce circulation and warmth (as helow). Should a warm bath be procuralle, the warm bath longer than five or six initutes. But tis preferable that artificial respiration and friction of the limbs and body with dry framed or clothes should be first thad recourse to, and had body with dry framed or clothes should be first thad recourse to, on that the warm bath should not be employed till there is proof of respiration having been restored.

hash should not be employed till there is proof of respiration having been restored. The 4-To excite inspiration: During the employment of the above method excite the nostrile with suff or smelling saits, or tickle the throat with a feather. Kub the chest and face briskly, and dash cold and hot water alternately on them. TREATMENT AFTER NATURAL BREATHING HAS BEEN RESTORED. Rule 5.-To induce circulation and warmth: Wrap the patient in dry blankets and commence rubbing the limbs upward, firmly and encretically. The friction must be continued under the blankets or over the dry clothing. Promote the warmth of the hody by the appli-cation of hot flannels, hottles or bladders of water, heated bricks, etc., to the pit of the stomende, the armolis, hetween the thighs, and to the soles of the feet. Warm clothing may generally be obtained from bystanders. On the restoration of life, when the power of swallowing has returned, a tea-poonful of warm water, small quantities of wine or coffee should be given. The patient should be kort in bed, and a disposition to alege necouraged. During reaction large mustard plasters to the chest and helow the shoulders will greatly reheve the distressed breathing.

APPEARANCES WHICH GENERALLY INDICATE DEATH. There is no hreathing or heart's action; the eyelids are gen half closed; the pupils dilated; the jaws clenched; the fingers contracted; the tongue appearing between the teeth, and the r and nosirils are covered with a frothy mucus. Coldness and of surface increases.

OBSERVATIONS. On the restoration of life, a teaspoonful of warm water shou given, and then, if the power of swallowing be returned, small of tities of warm wine or weak brandy and water, warm; and pi should be kept in bed, and a disposition to skep encouraged, e; in cases of apoplexy, intoxication, and sunstroke. Great is requisite to maintain the restored vital actions, and at the time to prevent undue excitement. The treatment recommended by the Society is to be persever for three or four hours. It is an erroneous opinion that person irrecoverable because life does not soon make its appearance result even after five hours' perseverance—and it is absurd to pose that a body must not be meddled with or removed withou permission of a coroner.

FOREST AND STREAM.

NEW JERSEY Y. C. 15th ANNUAL REGATTA.

NEW JERSEY Y. C. 15th ANNUAL REGATTA. THIS season the New Jersey Y. C. have decided to throw open their spring regata on June 14 to the yachts of all organized yacht (lubs, and have arranged their programme so as to induce as many entries as possible from other clubs. No entrance fee will be charged and a prize will be given in every class in which two or more yachts start. The classes are as follows: — Tass A. catamarans, 30t, and over. Class B, cabin yachts, 3ft. and over. Class C, cabin yachts under 3ft. Class D, open yachts, 26t, and over. Class C, open yachts, under 3ft. Class D, open yachts, 26t, and over. Class C, open yachts, under 3ft. Class D, open yachts, 26t, and over. Class C, open yachts, under 3ft. Class D, open yachts, 26t, and over. Class C, open yachts, under 26t. and over 2ft. Class F, open yachts, under 2ft. — The following conditions will govern the race: The start will be a trying one from a line between the dock on Bedloe's Island and a stakeboat anchored off the same. The signal to get ready will be iven at 0.20 A. M. ya blast from the steamboat's whistle, and five movering of the club flag on the steamboat. Five minutes later a blast of the whistle and the hoisting of the club flag will handicap all boats not then over the line. Course for Class A will he across an imaginary line between stakeboat and dock on Bedloe's Island to uoys 9 and 18 in the Lower Bay, leaving on port hand, to south and west of Robbins' Reef houy 17, bassing to west of same, thence to and around uoys 9 and 18 in the Lower Bay, leaving on port hand, to south and west of Robbins' Reef houy 17, bassing to west of same, thence to and around uoy 18, leaving on port hand and return south and west of Robbins' Reef houy 17, passing to west of same, thence to and around uoy 18, leaving on port hand and return south and west of Robbins' Reef buoy 17, passing to west of same, thence to and around uoy 18, leaving on port hand and return south and west of Robbins' Reef buoy 17, passing to west o

C. ength on waterline and half the overhang will be taken as the ling length, the allowance being in classes A and F, one minute to foot; other classes one and one-half minutes to the foot, any heat shifting ballast will be disqualified and considered out of

Any host shifting ballast will be disqualified and considered out of the race. The following sails may be carried: Catamarans, jib and mainsail; shin sloops and cutters, jib (or jib and staysail), jiotopsail, mamsail and working topsail; open sloops, jib and mainsail; catboats, main sil only. Stormjib may be used in place of jib, fi necessary. One and to every 5tt., and one additional for the fractional part of 5ft. ill be allowed. Numbers must be carried conspicuously on the ainsail, as the time will not be taken for boats without them. Num-ers, not delivered before, can be obtained at the stakeboat, which ill be anchored off Bedloe's Island on the morning of the race. rizes will be delivered at the first regular meeting of the club fol-wing the regata. The steamer Blackbird, with judges and guests, will leave Fifth reet dock. Hoboken, at 9:30 A. M.; West Twenty-scond street, N. ., at 9:45 A. M., and Fier S, foot of Rector street, N. Y., at 10 A. M. The entries can be made up to Jume 7, to W. H. Dilworth, 563 Green-ich street, N. Y.; Geo. E. Garlland, 11 Wall street, N. Y.; Join Cur-n, 98 West street, N. Y.; M. Y. B. Evesson, 106 Garden street, Hoboken, en; H. F. Ogden, N. J. Y. C. House, foot Tenth street, Iloboken.

INSPECTORS AND STEAM LAUNCHES.

<section-header><section-header><text><text><text><text>

THE FOUR LARGE YACHTS.

THE FOUR LARGE YACHTS. The spirited action of the Seawanhaka Corinthian Y. C. in offering a valuable prize for the four large yachts, offers an incentive that will probably hasten still more the fitting out, and bring all of them out on the Bay in regatta week. Should they enter for the S. U. Y. C. Oup, they will probably enter as well for the two preced-ing races, and we shall see rare sport from such a quartette. At-lattic Is nearly ready for a trial trip, and will be under sail this week. The lead is still being piled into her, 65 tous being now in and under her, while an unknown quantity is still needed to bring her down to the load line. Comparisons are odious, but a heavy dis-placement 'lead mine' like denesta or Galatea carries only 70 or 72 tons, while this American centerboard sloop carries 65+X tons. Also the 'complicated' cutter rig of Mayflower calls for 118 blocks, while the simple American rig of Atlantic swings 120. Priscilla left Wil-mington, Del, on Saturday mornling, and, beating down from New-gasule, ran up the beach, arriving here on Stunday, with Com. Can-field and Messrs. Center, Tams, chubb and Leunoyne on board. She is now at Poillon's yard. Mayflower will bend sails this week for a trial trip. Puritan has been out at Kelly's railway, East Boston, for a thorough cleaning and a coart of bronze paint. Her rudder has been widened Iin. with new hacking, and her peak, throat and sheet under bline with new hacking, and her peak, throat and sheet shows the beach line and sheet on the sheet beach for a thorough cleaning and a coart of bronze paint. Her rudder has been widened Iin. with new hacking, and her peak, throat and sheet shows the beach up and a coart of bronze paint. Her rudder has been widened Iin. with new hacking, and her peak, throat and sheet shows the beach up arger ones.

THE LOSS OF THE OONA.

THE LOSS OF THE OONA. The English mails bring the news of a most unfortunate and fatat the fact to the new outer Ona, by which five yachtsman includ-for the transfer to the new outer of ona, by which five yachtsman includ-for the transfer to the new outer of ona, by which five yachtsman includ-transfer to the new outer of ona, by which five yachtsman includ-transfer to the new of the carry of the transfer of the second and a crew of three, one of them the mate of Tars. She called a three to be 5th, and after leaving there encountered a very what have of the covers. Mr. Plunkett, her designer, Mr. Platon, and a crew of three, one of them the mate of Tars. She called three the provide the full particulars are not yet known. Mr. Wm. Vans Paton was a young naval architect of rare promise, well have a ble designer of Oga, Currytush, Luath and other success-tal back and his dett is a serious loss to yachting. Until furthers weat is are known it is in possible to assign the cause of such a disaster, built deseessors, was an extreme racing machine, and from lightness of uild and size of ing dual to a greater extent than any of the suc-tion of the set on any other work.

ON THE DELAWARE RIVER.—Editor Forest and Stream: Dela-ware River sailors do not propose to be left this season, and all the clubs have imangurated a scries of races that in completeness excel former years. From the 80 pound cance, grading through the tuck-ups, 15it. to 20t. open boats, until reaching the 70t. sea-going schooners; all are getting their supps in the very best order. New ones have been built, and the stock on hand have been improved in model and rig and thoroughly rejuvenated. The Trenton, Riverton, Pennsylvamit, Southwark. Cooper's Point Cance, and Corinthian (15 to 16ft.) and the gueker City clubs are all in first-rate condition. Mr. O. Middleton, schooner yacht Helen, has presented to the Q. C. Y. C. a valuable and autustic challenge cup, designed by the donor, for first class folops. Dr. Vallette, schooner yacht Avelon, has also pre-sented an elavorate and very beautiful cup for second class sloops. The Agile (Thomas) in this class, won Commodore Bancroft's challenge cup three times in succession after a six years' fight. Dropping local matters, let me bespeak for the Atlantic first choice to meet the Galatea to defend the America's Cup.—R. G. WILKINS,

GREAT HEAD Y. C.—An open regata of the Great Head Y. C. will he sailed on June 5, off Winthrop, Mass., starting at 11 A. M. the ourses being as follows: First Class—From judge's boat of flag loat moored off Revere Beach Ferry. East Boston, leaving it on port, hence to judge's boat, passing between judge's boat and flag boat. Distance, 9 miles. Second and Third Class—From judge's boat to Black Buoy No. 5, off Jeffries' Point, East Boston, leaving it on port, black Buoy No. 5, off Jeffries' Point, East Boston, leaving it on port, island, leaving it on port, black to judge's boat, on dige's boat off Cottage Park, leaving it on port, thence to and around Snake siland, leaving it on port, black to judge's boat, leaving it on port, wiles over, finishing between judge's hoat and flag boat. Distance, 7 miles. Fourth Class—From judge's boat to fifts. The position of the judge's hoat and flag boat. Distance, 7 miles. Fourth Class—From judge's boat of flag boat off Cottage Park, leaving it on port, thence to and around Snake siland, leaving it on port, back to judge's boat, leaving it on port, wice over, finishing between judge's hoat at liable to be changed out ide of Snake Island for the finish. The classes will be as follows: First, 21 to 26tf., second, 19 to 211t; third, 15 to 10ft. fourth, under 15tf. All will start from an anchor, as follows: A preparatory gun will be fired from the judge's boat at 11 A. M. for the first class to come into line. At 11:15 A. M. a second gun will be fired for the second class to start and the third class to storm into ine. At 11:45 A. M. a gun will be fired for the third class to store and ourth class to start. One man may be carried for every 5tf. of waterline or fraction thereof. Sloops may carry jib and mainsail, cathoats minesail only, with no limit to sail or ballast In the fourth lass. The rules of the N. E. Y. R. A, will govern the race. The en-arce fees will be §t in the first, §t in the second and third, 50 cents n fourth. Prizes will be given in each class. Mesers. Peleg Ab

QUINCY Y. C. OPENING REGATTA.—The opening of the season by the Quincy Y. C. on May 22 brought out fifteen hoats, all but one, the Mabel, going over the course. Mabel carried away her peak halliard block and did not start. Rocket parted her bobstay, but continued the race. The wind was fresh from the southwest. The

THE AGGIE-JURLINE MATCHES.—San Francisco yachismen have heen exclued intely over a match race between Agrie, a center-board schooner, 70x29 ft, on loadime, and 5ft, 5in dreft, and Lurline, a keel schooner, 70x29 ft, on loadime, and 5ft, 5in dreft, and Lurline, a keel schooner, 70x29 ft, on loadime, and 5ft, 5in dreft, and Lurline, a keel schooner, 70x29 ft, on loadime, and 5ft, 5in dreft, and Lurline, a keel schooner, 70x29 ft, on loadime, and 5ft, 5in dreft, and Lurline, a keel schooner, 70x29 ft, on loadime, and 5ft, 5in dreft, and Lurline, the furnity miles out in the Pacific Ocean. On May 2, the first at-tempt, the two started at 10 A. M, the line being from Point Bonita to Point Lobos, the wind very light W.S.W. and Lurline leading. About 1:30 the wind increased and shifted toward S., leaving Aggie in a good weather berth, so that she was soon the leader and rounded the outer mark 32m, ahead, in a very light suggie about 10m, astern. On May 9 the match was resailed, Aggie going away first at 10:10:43, and Lurline soon began to make up the loss at the start, and ate well up to windward, though Aggie forereached on her and gained some in the focting. At 5:01:30 Lurline turned, with Aggie at 5:21. Lurline led all the way home, finishing at 5:29:40, with Aggie at 8:50:02. On May 16 the race was sailed again, Aggie winning by 2m. 46s.

2m. 46s.
STEAM LAUNCHES AND SAILING BOATS.—A new catalogue of hoats and canoes has lately been issued by Mr. F. Joyner of Glens Falls, N. Y., in which is included a new steam launch 25x57, 6in., fitted with the new foston pattern Shipman engine. The hull is built of cerar, copperfastened and varushed, and is very handsomely finished. The propeller may be futed so as to swing to either side for steering, by means of a flexible joint, or a rudder may be used. A smaller boat, 18x47, 6in, is also built. Mr. Joyner has also several sizes of his sailing and rowing boats of the Irene model, fitted in various styles. The catalogue contains detailed descriptions of many varieties of boats, club girs and barges, cruising and coasting cances of the celebrated Dimond model, huming boats and of cance sails, drop rudders and fittings of all kinds. The agents in New York are Messrs. Adams & Yong, 470 Broadway, N. Y.

or the celeorated Diamon model, minning Douls and or Canoe Salls, drop rudders and fittings of all kinds. The agents in New York are Messrs. Adams & Young, 479 Broadway, N. Y. NEW YORK Y. C. -On May 21, the third regular meeting of the N, Y. Y. O, was held. The date of the annual cruise was fixed for Aug. 4, to rendezvous at New London. The regulation prohibiting the use of clubtopsails on the cruise was reconsidered, but no action was taken. The following members were elected: Messrs. J. W. Thompson, Newbold Edgar, George A. Cormack, W. Seligman, Tar-rant Futnam, James Brown Potter, Joseph Hurchinson, A. M. Hunt-ington. W. Leggett Brown, Dr. E. L. H. McGinnis, Frederic Gebhard, Charles D. Owen, P. H. O'Hara, Richard P. Lounsberry, George E. Chisholm, John W. Masury, S. R. Finckney and James M. Motley. YORKVILLE Y. C.-On May 28 the Yorkville Y. C. started to sall its 6th annual regata over a course from One Hundred and Fourth stretes the energy of the starter of the Starter Starters being Eclipse, Goodenough, Traveler, Benzine, Captain, Harry C., Little Dean, Little Bear, Molly McCarthy, Emma B., May-gena and Emily B. The wind was so light that but 5 boats completed the course, Little Dean, Goodenough, Captain, Benzine, Traveler, Traveler wius in class D, time 5:14. REVA.-The new Reva, Mr. Pierre Lorillard's twin screw steam yacht, went on her trial trip on May 22 down the Sound, after two unsuccessful attempts previously. She was traveling at a good gait wen she passed Whilestone. The boats at her davits prevent her from heing mistaken for a harbor tug. LARCHMONT Y. C.-The annual spring regata of this club will take place on June 5, starting at 10:45 A. M. Achallenge pennant will be awarded in each class, with a prize if three yachts start and a second prize if five start. CORONET.-On May 22 the new schoorer Coronet started on a trial rip, running out arcund the lightship and back with her owner and a large party on board. She bedaved very well and fully comes up to the expectations of her owner.

GRACIE.—The alterations to the hull of the Gracie were completed last week at Pepgrass's and she was launched from the railway. Her spars will be stepped at once. TOLEDO Y. U.—The date of the second pennant match has been changed to July 3 in place of July 5, so as not to conflict with the Inter Lake Y. R. A. at Detroit.

CARLOTTA .- Mr. Belknap's schooner arrived at New York on May 22 from Florida.

DON'T twist your neck off, but use Allen's bow-facing cars. Little satalogue free, Fred A. Allen, Monmouth, Ill. -Adv.

The series of th

Secretaries of canoe clubs are requested to send to FoREST AND STREAM their addresses, with name, membership, signals, etc., of their clubs, and also notices in advance of meetings and races, and reports of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

S ECRFTARY-Dr. C. A. Neidé, Schuylerville, N. Y. Candidates for commendation of an active member of the A. C. A., together with the sum of \$3 for initiation fee and first year's dues, to the secretary, who will present the names to the commodore. Money shelld be sent by *registered letter*, or money order on Saratoga Springs, N. Y.

A 500-MILE CRUISE ON THE RIVERS OF NORTHERN CALIFORNIA. BY MORRISON F. PIXLEY AND E. RUSSELL COOPER.

(Concluded).

<section-header><section-header><section-header><text><text><text><text>

put into three gallons of cold muddy water and boiled for three hours, after which the heads are chopped off and the meat and fat taken out; next take a dozen pieces of hardtack, half as many pota-toes and an equal number of onions; inix well together, being sure not to disturb the weevelles in the hardtack for far that they may escape; this is then to be stewed for five hours with the turtle meat, and some Chile peppers and wine added. It is then far superior to anything that comes out of a hash mill; and on one occession I have to more alisisman to wrap himself around one gallon of the article and then do a good day's work afterward. However, he was only allowed to make it once as long as I was chief cook and pot-washer. The 20th day of May found us at the mouth of the great father of mud and gold dust, the American River, which in comparison with the now muddy Sactamento, looks of m liky blackness. When we had passed under the railroad bridge it was commencing to grow and passed under the railroad bridge it was commencing to grow and passed under the railroad bridge it was commencing to grow and passed under the railroad bridge it was cost of the river, we kept on, from minute to minute expecting at each turn to see some place where we might camp for the night. As I was crossing the mid-channel I feit a slight shock as though the keel had touchd bonil offering his way up stream. The wind and current bad both augmented in strength, so that will the baddle that uses I fell another scrape on the keel similar to the first, and then another. On making a more careful investigation relight. Talisman called from gromes the river to tell me that he passed on har just as I fell another scrape on the keel similar to the first, and due narother. On making a more careful investigation relight, Talisman acalled from assing over them. Talisman having released binneel from the bar where be had grounded, came across her rives, and we determined to pick our clus about that he river's bed was a series of waves of sand, the cr

<text>

FINE

Here I leave you, hoping that if you have had the patience and good nature to follow us through the description of our cruise in the far West, that you will not be satisfied by simply reading of such trips, but will go and do lkewise, when grim winter has released his icy hold upon your rivers and lakes. On this cruise we made 500 miles by our cances alone, and by cance and steamer the distance of 1,000 miles. Our vorge is ended, the cances hauled up on the heach of time to wait the flowing fide, each gentle ripple slowly encroaching on the sandy shore, till step by step they once more surround our crafts to float them on its watery deep. So 'twill be with us as the years drag slowly by, each one helping to lessen the allotted limit of our lives, when that is reached we will be launched on a different course, one where each cruiser must paddle his own cance. And the lift stems when we have passed them by, will but sink to rest, till other hands and other minds shall softly part their leaves as they voyage in the wake we have left.

they voyage in the wake we have left. CANOEING AT LYNN.--What little canceing has been done in this vicinity has heretofore been by the unorganized efforts on the part of a dozen or so of "terrified amateurs," only to or three of whom are A. C. A. men. Their field was restricted to Flax Pord until last season, when they ventured upon blue water and partici-pated in the city aquatic event of July 4 This year a serious move-ment is made toward a beginnng, and a club has been organized and steps taken to move the house to a good place on the harbor front. increasing therehy the chances for salt-water cruises and the induce-ments for new members to join. The following preamble to the rules is adopted: Whereas, Believing from our individual experience that the pastime known as canceing has claims upon the attention of many persons who, while in need of an active outdoor exercise, are as yet inwaver of the merits possessed by this safe, healthful, inter-esting and inexpensive sport; that it is full of complete diversion from the ordinary pursuits of life; that it requires activity sufficient for physical development and recuperation; that it is replete with oppor-timutites that are conductive to sentiment of a healthy and inspiring. sort by reason of the very nature of its pursuit; that it fosters an in-their rule cance, modified and improved, which is the medium of our sport, and although there is a wide gulf between their simple padde or pole and the patent appurtenances of to day, and from the hash in the bow to the cloud of muslin spread by ballasted Pearls, we believe the cance is still potent to imhue much of the independence and simplicity which characterized its originators; and, whereas, we believe that in organizing as a club our ability to pursue the sport and to promote its claims, to which we invite the attention of any person, will he largely increased; therefore, we adopt the following constitution and bylaws: Article 1. This club shall be known as the Saganore Canco

cancel in the club house. The club is to be represented at the Spring-field meet. --CLARENCE MURPHY, Purser. KNICEKRBOCKER C. C.-Sixth annual spring regata, May 22, at 152d street, New York. First race called at 3 o'clock. Every event was open to cancelsts from any club. The weather was perfect; a good strong breeze from the south blowing agamst the first of the ebb tide made it possible for all cances to get over the course in young ladies, friends of club members, and they all got good views of the races from the pier mear the club house, where came chains were provided for them. Flags were given as prizes to the first and second cance in each event having three or more starters. A 3-mile saling race came first, twice around a triangular course: Stag, E.W. Brown; Fox, C. B. Vaux; Yvonne, Wm. Whitlock; Evangeline, C.V. R. Schnyler; Guenn, M. V. Brokaw; Lorelei, E. C. Griffin. Stag, Fox and Lorelei, of the K. C. C., and Yvonne, Guenn and Evangeline of reefs. Fox rounded the buoy first and her solok out a reef. losing the lead to Stag while doing it. Lorelei dropped out. Stag keept the lead to Stag while doing it. Lorelei dropped out. Stag keept the lead to Stag while doing it. Lorelei dropped out. Stag keept the ead to Stag while doing it. Balor, Stor is same size, same board-one large plate-but with a flat floor, and though and flow and lorele race with board up, as the tide helped on the two windward legs of the course. Yvonne salled her maiden race with a very small spread of canvas. A half-mile paddling race weak won by Foster in Lasata agamst Evangeline (Schuyler), Yvonne (Whitlock), and Lorelei (Grif-h). The combination race was left out and a vistor's salling race substituted, once around the course: Yvonne (Whitlock), Guenn (Brokaw) and Evangeline (Schuyler). The boats got off almost ex-actly even and kept very close together all round the course. Evang-gene with board up, as the tide helped on the two showed legs of the course. Vyonne salled her maiden race with a very small spread of canvas. A ha

active seen and kept very close together all round the course. Evangeline winning by a length the better of Guenn, Yonne a few seconds behind Guenn.
MOHICAN RACES,—The montbly race, unlimited as to sail or ballast, for the club champion badge and pennant was sailed over the club course, 3 miles, on Thursday, May 20. Entries: Thetis, P. M. Wackerbagen, senior; Amio G., L. Thomas, senior; Marion B., R. Oliver, senior; Arno, H. C. Cushman, junior. A strong northwest wind was blowing with frequent squalk, and the boats were close reefed carrying an average of 60ft. of sail. Start was made promptly at 5:30, the competitors getting well together. For the first mroot fourth. Then Thetis shook our the reef in her math in spite of frequent knock downs from the squals, and passing to windward for fourth. Then Thetis shook our the reef in her math in spite of frequent knock downs from the squals, and passing to windward for Marion B. rounded the 1½ mile bioty just Site, both carrying reefed dandles about 15ft in addition. The race basing her on the second index on heck for home, the Marion B, steadily clemaniling the Thetis, and finally getting to windward and passing her on the squals coming thick and fast and the wind wering about close the gap hut in van, as the Marion H. bet and the rate. And earny the eap hut now, as the Marion H. bet and the still be the spite the the spite them the set of the darion determined. The Vesper was not entered, as her eap hut in van, as the Marion H. better Anton and the exclusion the extra the start of the dario of the darion H. better on the start. Annie 0. An induce the gap hut is the onder. 'On Thursday next, May 27, the 60 humi race for the Oliver cup will be sailed.--Roment Shaw OLIVER, Capitan M. C. O.
A. C. A.-Mrt, M. E. Graves, of St. Paul, Minn, is a candidate for membership. Secretary Neidé writes us from St Paul that he had ende to so. The will make a cruise, with a friend, down the Cannon or Brule Rivers, on May 29.

OAKLAND C. C.-A new cance, the Spray, 15×26in, has lately been added to the fleet. Her owner and builder is an anateur, Mr. Geo, Engelbrecht. She will have a Radix board as soon as one can be had from New York; meanwhile she bas a Sin. Keel. The club now numbers 19 with 14 cances, and several more boats will soon he added, including two from Russion. The club house is well fitted with kitchen, dressing room, pantries and meeting room. The pro-gramme for Decoration Day is as follows: First race, at 9:30 A. -Rowing in single sculls, by members of the Columbia Rowing Club. -Rowing-Four-öared shells, two crews from the Columbia Rowing Club. Second race-Paodling in cances-Class one, two men, three entries: Class two and three, one man each, six and eight entries. Third race -Rowing, Four-öared shells, two crews from the Columbia Rowing Club. Fourth race-Sailing, rawis-Nettle, Bonita. Mosquito, Skiffs -Mattie, Rush, Dannites, Tift race-Class one stilling race, Class one -Rowing, Four-öaret shells, two crews from the Columbia Rowing Club. Fourth race-Que Mou. Class two-Water Lily, Shadow, Belle. Columbia, Shadow. Class three-Volante, Undire, Black Dwarf, White Cap. Class two starts three minutes after Class two grane for the proze penpanto-Entries, the winners of the fourth and fifth races, the winning race. The first race will be alled a 9:30 o'clock sharp. Mr. C. Yale will act as referee, and Marcus P. Wiggin and Marcus D. Hyde as judges and starters. MRTFORD C. C.-*Editor Forest dnd Stream*. The regular May have been shift bone ad lexic and starters. MRTFORD C. C.-*Editor Forest* dnd Stream. The regular May beneficient the admission of several new members there was a repering the Marcus D. Hyde as judges and starters. MRTFORD C. C.-*Editor Forest* dnd Stream. The regular May brouse, and after the admission of several new members the looks of regiones in the house. Several of the Cances have just come from rowating shops and are looking fluely. All have wintered well and our members are already planning was alaed i

COMMON SENSE GAME CLUBS.

A TTENTION has been called to the success attending A the formation and maintenance of game clubs which lease the shooting privileges of tracts of land. The system is one which is found to work well, and it offers a solution of the vexed problem of local game conservation. The form of organization may be very simple, little machinery is required. The results attained are more satisfactory than those attending any other form of game protective effort, aside from the actual possession of the protected territory. One such organization is the Middlesex County Associa-

tion, with headquarters at Middleton, Conn. This society, which has been described at length in these columns, has steadily won its way in the respect of the community, and has accomplished much in creating and fostering a general regard for game laws and the principles of game protection. Its membership is open to reputable persons of 18 years of age and over, the annual dues are small, and there is a considerable tract of country preserved for the exclusive shooting and angling of the members. The association has for four or five years devoted some effort to the restocking with trout of streams in the neighborhood, and the improved fishing has tended to increase public respect for the principles and practices of the society.

Elsewhere are printed the rules of the Easthampton Game Club, of Easthampton, Mass., which is now in its third year. The club has acquired exclusive shooting privileges over a number of adjoining farms and tracts of land. this territory the club maintains signboards warning off trespassers. The signs read: "Hunting or being on these grounds for any purpose prohibited. — Owner." Each member is provided with a card, on one side of which is the membership certificate: "Mr. — is a member of the East-hampton Game Club for the year ending Dec. 31, 188 —. — Sect'y." The other side of the card is ruled in columns for memoranda of date, number of grouse, woodcock, quail and gray squirrels killed, and name of owner on whose land the game is taken. Members are required to record all game killed, with the particulars of date and place, and on Jan 1 to report to the treasurer of the club, paying a fee of ten cents for every bird and squirrel killed. The treasurer then in turn pays each landowner for the total amount of game taken on his premises.

The membership of the club is open to persons above fourteen years of age. The annual dues are \$1. Strict compliance with the rule against killing game for the mar-

ket is exacted. When the club was projected, it naturally incurred the opposition of the market gunners, who had pretty well cleaned out the game of the vicinity; and it was also looked on with disfavor by some of the local sportsmen, who resented the notion of having their free range restricted. The market gunners the club could well afford to displease and oppose; the others have subsequently seen the excellent working of the plan and have become members.

The scheme is thoroughly satisfactory in practice. Game has increased since the new order of things. The members, at slight expense and trouble, have reaped decided rewards. The land owners are more than satisfied. They have been relieved of the invasions of irresponsible gunners, market hunters and hoodlums, who formerly tore down their fences, let down the bars, trampled the fields, and now and then left a charge of shot in a cow or horse. They now rest secure in the assurance that if trespassers invade their fields the offenders will be prosecuted by the club, one of whose committees has this special work in charge.

The revenue derived from the club members in fees for game killed is inconsiderable, but the freedom from irresponsible trespassing gunners is a decided gain, and few of the farmers now leasing their lands to the club would be willing to go back to the old disorder of things.

Such organizations should multiply and extend all over There would then be less clashing of interests the land. between farmers and sportsmen; for their interests are in reality identical and should be recognized as such.

THE CONDITIONS OF THE CUP RACES.

ON Tuesday last a reply was received by the Cup Committee from Mr. Beavor Webb, to their letter of April Now that the veil of secrecy is finally withdrawn from this important epistle, it is more difficult than ever to under stand why it could not be made public at once, and what reason there was for surrounding such a simple matter with unnecessary mystery. The substance of it is that the committee decline, to sail a race at Newport, they adhere to the race over the New York Y. C. course; and they decline to accept a mean of the N. Y. Y. C. and Y. R. A. time allowance. A concession is made in the second condition, in barring out Flynn's Knoll for the course, as requested by Mr. Beavor Webb last year.

In regard to the first condition, it was hardly to be expected that the club would consent to sail any of the matches so far from home, as the trouble and cxpense is considerable even in New York, and would be much greater at Newport. Of course the waters are better there, but to sail the races in August would necessitate holding the trial races at a very early date, and before the four boats have been thoroughly tested, while to go to Newport in September, perhaps for eight or ten days, is manifestly inpracticable.

In the second condition we believe the committee have made a mistake in sacrificing an outside race over a fair course, for the sake of a mere club pageant which in all probability will be unfair to one boat or the other. The concession in regard to Flynn's Knoll is unimportant, the real fact is, as was apparent to every one who saw the final race last year, that no fair race can be guaranteed over such a course, when the importance of the race is so great and the interest in it so general. It is very easy now to promise to prevent interference by outside bonts, but such a fleet as accompanied the race last year is utterly beyond human control, and partakes of the unwieldy nature of a mob in the street. The channel is narrow at the best for a duel between two big boats, one drawing 13ft., and with hundreds of steam and sailing craft rushing about as they please, no open course can be guaranteed, and a carelessly handled tug or lumbering coaster may put a sudden end to the race. Of course, under the deed of gift, the club has the right to sail one race only over this course, but it does not follow that, under the peculiar conditions of this race, such a proceeding is in a true sporting spirit. The Eastern yachtsmen would prefer an outside course, as fairer to both competitors.

As to time allowance, it was not to be expected that the committee would accept a rule which, like the Y. R. A., is really based on the assumption that Puritan, for instance, is 22ft. 7in. wide, and 11ft. 3in. deep, while Galatea is 15ft. wide, and 7ft. 6in. deep, which is virtually what the rule does, making Puritan 140 tons compared with Galatea's 90. Were the rule different and less severe on the wide boat it would be a fair proposal to average it with the N. Y. rule, but under the circumstances their decision cannot be questioned. In his reply Mr. Beavor Webb suggests that the at Chicago next Tuesday in its first annual gathering.

actual sail area be taken, in place of the approximate result, and there seems no reason why this should not be done as being really a fairer method. As we have not the actual sail arca of Galatea it is impossible to tell just what the difference would be, but the method commends itself as a more accurate one and better suited to gauge the contestants in such an important race.

ABOLISH SPRING SHOOTING.

COMETIMES trifling indications may give us a notion of \bigcirc how a law works, and a word or two from a distant locality may awaken a train of reflection, which will teach a valuable lesson. Such a lesson comes to us in a line or two from a correspondent in Long Island, who tells us that the beach birds have not for years been so abundant there as this spring, and that some of the larger species are even breeding there.

The reason for this is obvious. The law forbidding the killing of these birds in spring is said to have been pretty generally respected in most localities. The birds when they reached Long Island shores were not at once pursued with shotgun and driven away. Finding quiet spots where food was plenty, they have lingered and have become very gentle. No doubt some of them will breed, and as a result the beach-bird shooting in August and September will be better than it has been for years. Every State in the Union ought to pass a law forbidding the shooting of birds of any kind after

the first of January. To match the line from Long Island comes word from a correspondent in the lake region of Minnesota that the red-heads and bluebills are nesting in good numbers there this spring, and that the chicken crop promises to be good. If people can only be induced to protect birds of all kinds in spring, and to make the shooting season short, a beneficent Nature will fill up the gaps made by the sportsman in the ranks of the game birds, and he will have shooting-good shooting-for all time. But the carnival of wasteful destruction which has been going on for so long must cease, and men must learn to enjoy in moderation the good things which the wood and the waters provide.

WAKING UP AT LAST.

THE project to permit a railway to run through the Yellowstone National Park has been before the people for several months. It has been the subject of investigations before several committees of Congress, whose reports have been published and are accessible to the public. Many of these documents have been printed in FOREST AND STREAM, and have been duly commented on. Up to the present time, however, the great daily papers have had hardly a word to say on the subject. Within the past few days the New York *Herald* and *Times* have each spoken about the railroad, the Herald having had a column despatch from Washington, made up from the minority report of the Senate committee on territories, published in these columns three weeks ago. The following day the Times published an editorial called out by the Herald despatch, in which the railroad project was denounced as a job, and the strength of the lobby which is working for it was pointedly referred to. Both of these articles take the right side of the question, and we trust that although the interest which is displayed is rather late in manifesting itself, it may not be without its effect.

The statement that two roads are being surveyed to the Clark's Fork mines, neither of which roads will infringe upon the Park, is true, but the surveys are not being con-ducted by the Northern Pacific R. R., though, if the roads are built, it may be done by that corporation.

THE NATIONAL RIFLE CLUB MEET at Vernon, Vt., last week, was a most enjoyable affair for the veterans who form what deserves to be called the old guard of muzzlc shooters. In our rifle columns will be found a very full and an appre-ciative account of the meeting. The presence and participa-tion of some of the representatives of the modern breechloading rifle added zest to the competition.

THE DIDN'T-KNOW-IT-WAS-LOADED GENIUS is regularly reported in the daily papers, playing his (or her) usual pranks with rifie, shotgun and pistol, which are usually loaded just enough to kill the unfortunate victim of this fatal idiotic playfulness.

THE NATIONAL SPORTSMEN'S ASSOCIATION will convene

ROCKY MOUNTAIN RESORTS.

ROCKY MOUNTAIN RESORTS. Editor Forest and Stream: There have appeared in your paper from time to time inquiries and articles about good points for summer recrea-tion for business and professional men whose general welfare requires rest from indoor duties, and whose inclination is to spend such time in bunting and fishing because their object is more perfectly attained in those health-restoring pursuits. Some of these inquiries are directed toward the Rocky Moun-tains, and I am quite confident that if those desiring such recreation hut realized onc-half the enjoyment to be found in that region, tot ovly in the pursuits named hut in the built of the secric wonders which there abound, hundreds would go there instead of lounging about the hotel wow that some who do go to the region named are as to the game and fish more or less disappointed. Not because they are not there, but because of unwise selection of time or place.

They are taken by the second summer in these mountains or place. Having spent a portion of each summer in these mountains (in Colorado) for several years past, especially searching for the best game and fish regions. I venture a few suggestions, hop-log they may serve to assist those who in the absence of friends there in whom they can rely as to these matters might be disappointed.

Ing they may serve to assist those who in the absence of friends there in whom they can rely as to these matters might be disappointed.
A recent communication in the FOREST AND STREAM says that fi-h abound in all the streams of Colorado west of the main range of the mountains. In a certain sense this is true, any yet the individual who, relying on that statement, should go there before the 15th of July, would fail to each a fish, especially along the railroads and in the larger streams. There is no doubt but Colorado affords the best hunting and fishing to be found on the continent easily accessible by rail, and yet there are times and also places when ueither can be successfully done.
I have always endeavored to find places where both can be had within a reasonable distance of the camp, and have invariably been obliged to go from ten to twenty-five miles away from the railroads, although fishing alone can often be had along the railroad lines, especially beyond the main range in the waters running to the Pacrfc.
For hunting to kill quantity, of course fall is the best time. But it has its snow-torms and cold. But for al-around pleasure in camp, July and the first half of August is the choice time. The fi hing is then at its best, while the young mountan grouse and other small game is good size, and the males and young of the malers and young of the maler and the like, are in good condition. Of course no sportsman would kill more than was required for camp use, and never an old or breeding femate. The climate of Colorado and an outdoor cemp is preasant as May in the East. The larger streams, which remains until the middle or last of July usually, do not get clear enough before that time for good fishing; but the small r ones, especially up in the mountains where the beds are rocky, are generally in good condition by July 10. The game at that season has also retreated to the higher altitudes, so that the proper combination is found only in thoses regions. Polsonous reptiles are unknown in

so that the proper combination is found only in those re-gions. Poisonous reptiles are unknown in central Colorado, while in that altitude the nights are too cool for mosquitoes, which, with an occasional cinnamon or silver-tip bera and mountain hon, are the only ravenous beasts which live in

that region. A day or so of a drive with teams from the railroad will reach these favorable spots, where, with a fair camp outfit, more real enjoyment can be had than at any other place that I know of on the continent.

A day of so of a drive with teams from the rainoad win reach these favorable spots, where, with a fair camp outfit, more real enjoyment can be had than at any other place that I know of on the continent. A camping party may "rough it" and live on bacon and hard bread and sleep under a dog tent if they desire, but I bave never thought it very beneficial or pleasant for those who have but a short time to spend in trying to get used to it. Neither is it necessary to have loads of cots, silverware, etc. The sensible way is to have a good, sizable tent, the necessary camp cooking utensils, with plenty of canced fruits and vegetables, even if it requires an extra team or two extra pack animals to carry them. Thus equipped a party will be contortable, a very necessary condition to rest and enjoyment. The additional cost amounts to but little, and the larger the party the less the proportionate expense. After years of experiment in camp methods I have settled on the medium standard of equipment as far preferable to either extreme, where recreation is the prime object. The expense of such a trip, say for thirty days, in the Mody Mountains, is much less than is generally supposed. I have made them repeatedly from this place inside of \$150 have made them repeatedly from this place inside of \$150 have made under the point a trip, say for thirty days, in the Mower via the Denver & Rio Grande Rainoad to Manitou, wounding natural wonders, equaled in a similar space nowhere in the world; thence through the Grand Cafon of some town in the Gunnison country, where teams and out shall Pass (10,552 fret clearation); bence to Gunnison or some town in the Gunnison country, where teams and out shall Pass (10,552 fret clearation); bence to Gunnison or some town in the Gunnison country, where teams and out some town in the Gunnison country, where teams and out some town in the Gunnison country, where teams and out some town in the Gunnison country, where teams and out some town in the Gunnison country, where teams and out some town in t

points and previously made arrangements brought the expense somewhat below what it would be for a party of strangers going for the first time; but by judicious management it can be done at the price named. These summer trips have become regular annual events with some of ns who prefer recreation in mountain camps to any other, and finding them so enjoyable, have been enlarging our circle from year to year, until last year our members came from five States, even so far away as Alabama, and several of whom we never met until we came together by previous appointment at Denver. We have learned that a camp of strangers get along better generally than one in which the members are too well acquainted, and some of the most pleasant friendships of a lifetime were formed in a Rocky Mountain camp. And so this yearly trip has come to be what horsennen would call a sort of "free for all," the fact that an applicant was a reader of some such paper as the FOREST AND STREAM being regarded as *prima facie* evidence of respectability and a sufficient pasport for admission. A true sportsman secures to himself an additional pleasure when he can assist others to participate in the pleasures of the camp and chase. We will make our start this year about the usual time-July 1—and if any reader of the FoREST AND STREAM should the linelined to join us and will write me, I will cheerfully give bim further particulars. The precise camping ground is not yet determined, and probably will not be until after our arrival at Denver, to be then governed by game reports and the condition of the streams. DAVID C. BEAMAN.

OTTUMWA, Iowa, May, 1886

A CARBERRY DEER HUNT.

A CARBERRY DEER HUNT. THE readers of your most interesting paper are regaled weekly with stirring accourts of bear and deer hunts. in which celebrated hunters have, by wonderful feats of woodcraft and daring, redoubled their claims on Nimrodian fame, and it strikes me that it will afford a contrast and per-haps amuse by its novely, if I, a povice, recount my own experience in the hunting of my first deer. This to me most intersting event took place near Car-berry, Manitoba, in the fail of '84. Carberry is a vitlage on the south edge of the Big Plain. East, west and south of it is a vast region of sandbills. In the sandbills to the south is a popler bush about sixteen miles long, within this a spruce bush, and in the middle of the last is a tamarac bog, the source of the Pine River. The deer have nearly all heen ex-terminated in this region; they are so scarce that a white man hardly thinks of going out for a deer hunt, yet an old elk

were flying for safety. Higher and higher they rose each time; gracefully their bodies swayed inward as they described a curve along some bold ridge, or for a long space the white bannerets seemed hanging in the air while these wingless birds were really sailing over a deep gully. I stood gazing until they were out of sight, and it never once occurred to me to shoot. When they were gone I went to their trail where they had appeared to be rising and falling over the same place. Here was one track, where was the next? I looked all around, and was surprised so see a blauk for fifteen feet; I went on—another blank, and again and again. The blanks increased to eighteen feet, then to twenty and then to twenty-five feet. Each of those playful, effortless bounds covered a space of eighteen to twenty-five feet. Ye gods! They do not run at all, they fly, and once in a while come down again to tap the hilltops with their dainty hoofs. Later on in the day I saw three more and fired two charges of buck-shot at them without securing any. During the whole of the next day I traveled without see-ing anything.

not run al all, they fly, add once in a while come down again to tap the hillops with their dainty books. Later on in the day I saw three more and fred two charges of bucks, shot at them without securing any.
During the whole of the next day I traveled without see.
To the eighth day I went again with some computions. Saw onthing all day. As we were going home, James Duil go with bim for another look before we gave up. We went to the woolded shores of what is three plendid deer. They ran pass us a distance of about one hundred yards. We both fired. One of the der was wounded but they all went away, fieely bounding over the hills. We followed the trail at a run, overjryed to see a slight drip of blood at each bound. Before stepping on to the top of each bill, we looked carefully lest the deer should be in the holiow. After traveling several miles, as we rose to be top of a hill Levered over, then sank back to the show, crying under my breath. 'Here they are.' We both crawled to the hore of a hull, and there, forty yards away, strod to be down of the hill, and there, forty yards away, strod to be slighted tips of blaced away with no better luck, and as the deer turned to begin the playful bounding, lesent another useless ball after them. I simply felt sick to think of what we had done: if we had had the slightest effect. The deer stood gazing at us. In furious haste we releaded, and playering in every limb with the "buck ague," we blazed away with no better luck, and as the deer turned to begin the playful bounding, lesent another we also done: if we had had the slightest depres doculers, we would have been sure of two fore doer.'' We badd that the deer were lying. It was dark we had one: if the had in the slightest depres to be badd were to be down. Then we cance upon an Indian who was ericently here, it was dark and turned them, and then with the "tuck and a certain aniout of freedom from gories ruces will 'fill the bill.'' have certainly seen asked the were misled at evert the anothin

has occasionally been seen, and the Indians sometimes bring a few jumping deer (*Cariacus macrotis*) into the village, while on rare occasions they kill a moose within twenty miles of the settlement

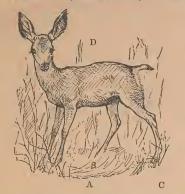

<text>

I met Chaska in the afternoon, we were both running on the same trail. I said to him: "Why did you take our

deer?" He said, "How your deer?" "Because I put the first ball into it." Then he said, "Who owns wild heasts? The man who kills them owns them, and I killed those deer." It was evidently no use arguing with him, for he has possession, but I made a note of it for future reference. We bunted together all that afternoon and I got from bim a lot of bints and instructions in deer-stalking. He was really a splendid fellow. I found that, like most of the In-dians, he was a very poor rifle shot, and but for his skill and experience in woodcraft, would have fared no better than ourselves.

During the afternoon my companions drove home. De-termined to hang on to the last, I hunted till dark and walked

During the whole of the next day I transed mutual and wanted home. During the whole of the next day I transed about alone. On the next I went witb James Duff, who alone of my com-panions seems gifted with any degree of perseverance. We saw nothing and I had both my feet slightly frost-bitten. On the twelfth day, in spite of my injured feet, I started off alone. Started three deer; followed them in vain lor filteen miles. On the next day my brother drove with me to where I quit the trail the day before, and after following for two hours, we came across two deer which we tracked in vain for five miles. Then we went back to camp for dinner. My brother was disgusted, and after resting, drove home. I

Doff is the fastest man with whom I have hunted, and often I have to wait for him to catch up. (I'm bragging now.) Fifteenth day.—At length feeling my knee fully recovered I once more started off, and my friends smiled derisively as they saw "yoong hopeful" start hunting again. In the hills I met Duff with three others. Altogether now five in number, we set off in line to beat the woods. Par-ridges and hares enough came to hand, but I carried the ritle and cared for none of these things. The line had trav-eled about three miles, when I struck a fresh deer trail; this was late in the afternoon, but away I went on it until dark. Mr. Gordon Wright had arranged to drive in with the sleigh and so save us walking home. At the time appointed all were at the tryst but myself; all were agreed that it was no use waiting for that fellow; he had likely struck a trail and might be twenty miles away. So they drove home and left such long, toilsome tramps, but none of them realize what a glorious enjoyment it is to me to feel myself so independent in my strength. Ten miles is to me now no more than half a mile to most persons. I ean run all day and come home fresh; and always when alone in these lonely places I feel running through me so strong a gush of glorious exhifaration that no trouble in my mind can stand before it; and since a man's troubles are nowhere but in his mind, my troubles all are bolted out and my happiness complete. "Why do I undertake these toilsome, fruitless tramps?" Surely it is worth it to be perfectly happy, to foreknow that

dim land of the idealist's dream, where sorrow is unknown and whence misery is banished forevermore. The trees are riven around me by the intense cold; my food is spent; the farmers on the plain are glad to stay indoors, but the feeling of this place, the delight of freedom and the fire of health suffice to keep me all aglow; and so I can afford to smile at my companions, driven home in the sleigh, shivering yet nitiving me.

of this place, the delight of freedom and the fire of health suffice to keep me all aglow; and so I can afford to smile at my companions, driven home in the sleigh, shivering yet pitying me. A blood red sun was sinking when I crossed Kennedy's Plain, the snow was dyed red, agolden moon was rising through the eastern pink. The endless forest of poplars stood with their marble columns supporting a wide purple roof of thickly interlacing branches. It was so perfectly beautiful and so unmarred by the settler's axe that I almost wished I were not soon going home to Ontario. Then as I went on more glad still after what I had seen. I more than once fairly shouted for very wildness. The road lay for three miles through a dense wood, and as I was nearly through I thought I heard my comrades shouting back to me. I was surprised as it was now night and late; I made the woods echo again with a shout, and then listened for the response. A long melancholy howl, and another, and another and another. "Wolves" I thought, and I micmicked their howling and noted by the sound that they were gathering together, doubtless hunting. Then as they responded to my howls, I noticed that they were rapidly coming nearer. "H'm," I thought. "It's me you're hunting, is it?" I was just leaving the woods and as the sounds bore down nearer on my trail, I turned and stood perfectly still, thinking: "Well, if those wolves are foolish enough to attack a man armed with a Winchester rifle, just let them come on." And so I waited. Nearer and nearer they came until I heard them at the edge of the timber only fifty yards away. They must have seen me then; there was a low growl, a snarl or two, and all was still. I heard them no more, but after a little turned and went on my way. Mext day I tramped twenty-five miles alone, with the waid dues still. I heard them no more, but after a little turned and went on my way. Mext day I tramped twenty-five miles alone, with the waid luck. On the next (the 17th day) I went in anew di-rection, into the spruce and tam

Now here is the place of another bait, and fox tracks come and go, And the bait is gone and the fox is gone, but with shortened steps and slow.

I follow and scan as I onward run, and take in the tale of the snow, To the nearest cover, the dotted guide, and just by the bushes, lol There's a yellow fur—See! the crafty beast is stark and dead in the

snow. From a high limb the yellow eyes take in the scene below, And bide till the carrion furless lies and is left alone in the snow; And bide till the hunter takes up his spoils, and takes up his gun to go. This is the chance that he longed for so when he followed me over the snow.

This is the chance that he longed for so when he followed me over the snow. Time was wearing on, my deer was not yet killed, and I for the the season would close ere I had fulfilled my forw, therefore I resolved to lose no more time in returning each evening. So taking three days' provisions in a sleigh, I drove to the bush with Mr. Gordon Wright. On the road we ealled at Mr. James Duff's, and having added his provisions, he joined us. After a two hour's drive we came to a sandy hill in the woods, it was covered with spruee trees, and well sould for a camp. In the center of the thieket we cleared a space, and then made a wind screen of spruce boughs. Ordon then left us. There having dined we set out for where I had seen the fresh moose tracks two days ago. These we followed, and dense poplar bush. Presently we came on the place where they had lain all night, and the signs began to be fresher, but they had so crossed and re-crossed their trail that it be-tare almost impossible to follow or distinguish the most recent tracks. There wasting about three hours in fruitlessly trying to follow agreed that it was unlikely they would continue in this begand whistles to each other, our best plan would be to make a circuit about the whole grove to pick up the trail where it went out. This involved a journey of fully two miles, and the trail, and returned to the camp. The the trail when hight came on. Accordingly we let off after having gone around three sides, without striking it, did not sleep much, but kept the freshed about midnight. Duft, being less used to roughing in the trail and returned to the camp. The set to and made a poor be again, and must we set to and made a set to and made a hard ty breakfast. After hong waiting in vain for dawn, I wen to sleep again, and must have set to and made a heat tho use hours benear morning, and we set to and made a heat tho resen th

"A GREAT RUSTY RED BEAST CHARGING THROUGH THE BRUSH."

What a fascination there is about tracks in the snow; what

What a fascination there is about tracks in the snow; what endless stories one will read and learn from the telltale snow; there is something fantastic about the thought that just at the other end of that row of dots is the beast that made them, and it is only a question of time for one to overtake it. The record of every movement is so perfect that it affects one most strangely. I remember long ago writing down a day among the tracks, at a time when I was less accustomed to them, and therefore more impressed than now. Here it is in doggerel for which the writer's then youthfulness must be the apploave. be the apology:

The white owl sits on the low snow drift and thinks that the time flies slow, Ere the door of the sharty is opened, and forth to the trapping we go

Over the rolling prairie deep in snow, over the highest ridge into the

poplar scrub below,
 Reading as I run the tale of the tracks in the snow, Here runs the straight fox trail;
 Here one foot reised, he sniffed the light wind I trow;

There's where he struck the hare track fresh, and the fox tracks fol-

lowing go-And I think of the meeting those trailers will have, a mile away or so. Now here are the chains of the grouse's trail, they turn and they wind

And I crouch low down and peer around, for new are the tracks in the snow. Then I crawl along, till with a loud whirr the pack for safety go. Save two that fall at the "bang" of the gun and flecked with blood is

his greatest safety.

What thousands of thoughts of moose-killing rushed into my mind as I crouched on the snow, right on the trail, right in the path of the maned monster, that was tearing through the timber toward us. It several times occurred to me that it was most likely he would kill me, but I lay and bode my time. Then, just as he was within twenty yards of tramp-ling on us. I sprang to my feet, shouting: "Now Jim!" With two awful snorts that I shall not soon forget, the moose sprang to one side, and for a moment stood and stared, uncertain what to do. "Bang, Bang!" With a plunge the monster started off again, crashing through the woods. My heart sank terribly as I thought how like this was to my former failures. But strange to tell, the moose came to a dead halt only eighty yards away, in full view, and again stared at us. Then in an imploring voice of terrible earnestness, I heard Jim behind me: "Oh, Emest! be careful this time!" I took steady aim for his shoulder and fired; then as he again went off at his former furious pace, I sent a third ball whisting after him. With feelings of mingled hope and fear we crossed over to his trail, and there—ohl savage glee, at every stride was a jet of blood. What a thrill of hope and triumph. "Our moose, Jim, if I have to follow to Brandon!" 'Not so far as that," said Jim, pointing to the crimson splashes. And away we ran on the trail like wolves, fairly gloating

And away we ran on the trail like wolves, fairly gloating over the continued jets of blood.

- Continued jets of blood. There are glorious dyes in the sunset skies There's splendor in heaven's fair bow, There's noblest color in beauty's bright eyes, To kindle our feelings, I know. But to stir up the inmost soul of a man, And to fire him with frenzied glow, To double his manhood, yet prove him a brute, There never were richer, brighter dyes, Than the spotless white where it crimsoned lies, With a life being spill on the snow.

I had read so much of the tremendous distances that a moose will travel, even with a mortal wound, that I was pre-pared for a ten mile run, but to my surprise, before we had run four hundred yards, Jim shouted "Here he is."

"Here he is." Sure enough, there he lay, with his knees doubled under him, like an ox in pasture. As we drew near he looked back calmly over his shoulder. "Guess we better bleed him," seid lim said Jim.

"Guess you better look out," said I, "I'd as soon go near a wounded lion as a wounded said

"Well, let's give him a couple more balls." So we both fired into him without the slightest visible

<text><text><text><text><text><text><text><text>

of "Wah nich seechy" with such energy that I was afraid he meant something uncomplimentary, but I afterward found that this meant only, "No, brother, you are very bad." Of course, I was unwilling to resort to violence, but he saw that I was going to hold on to the deer at any price, so he changed his aspect and made show of dividing, and each taking half. To this anniable suggestion I replied with an energetic "Kawaiu," which literally means "vcto," but with my strong inflection meant, at least, "you can bet your life I won't." I was hungry now, and having my dinner with me I sat

energeue "Aswaid," which interally means "veto," but with my strong inflection meant, at least, "you can bet your life I won't." I was hungry now, and having my dinner with me, I sat on the moose and ate it, all the time holding my rifle ready, pausing now and then to veto by a large majority all the motions for equitable division brought forward by the mem-ber for Dakota, for he kept up his speech most of the time. Finally, having finished my meal, I laid my head three times on my hand, and pointing to the moose, described a tortuous course in the air, then tapped my rifle and clapped my hands five times, which in English means: "Tor three days (sleeps) I followed that moose; I killed him after five shots, so he's mine and you may as well clear out." At this he drew himself up to his full height (he was about six inches taller than myself) and informed me that he was a Sioux, and that there were four more like him at the camp and they would come. Whereat I thought, "If there are four more as ugly-looking specimens as yourself, the sight of the gang should be enough to scare all the Powers of Darkness into hunacy;" but I could not translate the sentiment to him. So with another look of bewitching tenderness, he strode off to bring the other braves. Meanwhile I paced up and down, hoping my companions would come soon, but determined to hold the moose at any cost, if the Indians came in force to take him. For five hours I paced up and down, then I heard guns, then an axe and a dog, and in a few minutes Jim reappeared with Gordon Wright and two others in the bob-sleighs, and soon we were all aboard triumphant and merry, and arrived in Car-berry about seven o'clock, to find that already word of our success had gone before us, and over a dozen of the neighbors came down to Wright's that night to see the moose and con-gratulate us.

After everything had been snugged up for the night, we entertained and weated each other with recitals of experi-ences of forest and stream, some perhaps truthful, some prob-

ences of forest and stream, some perhaps truthful, some prob-ably otherwise. "Speaking of bears," says Storm, "yon have noticed, all of you, that bears in a state of captivity have a great fund of humor. They do many little things which show their appre-ciation of a good joke; but it was once my good fortune to witness the quaint humor of one which was not only wild but had sufficient reason to be mad. I was hunting between the timbered hills on Cold Springs, in Northern Wyoming. My companion was a dizzy tenderfoot, named—well, call him Ferguson, who actually didn't know tall grass from short timber. He once asked me, in all seriousness, if there wasn't more land to the acre in Wyoming than in New York. We were after white-tailed deer and jumped a bear. My companion shot at it and must have merely stung it some-where, and not seriously. My rifle, a repeating one, had just that moment got out of order, and was of no present account.

White, and how schools, the state of order, and was of no present account. "The bear came for us and we lit out. Ferguson was too speedy for me and soon reached the nearest available tree, while I did my best to get there, encouraging myself by say-ing, 'Go in legs; if body wins you shall have half.' I reached the tree which Ferguson was hugging, but standing on the ground. 'Quick, Storm,' he said, 'climb right up behind me,' He was either pleading the baby act, insanity, or some defense of that kind, and it proved as good as an alibi. I had barely time to secure a safe position up above, when bruin arrived and halted to survey the indiculous scene. Ferguson had braced his feet on the ground and was clasping the tree in his closest embrace. Evidently the bear enjoyed the picture, for casting a pleasant look at me and a pitying glance at Ferguson, and saying, as near as I could understand him, 'Well, that fellow just downs my compre-hension,' he turned and lumbered away." POREST AND STREAM. Passing along the walk among the paddocks occupied by the camels, the cattle of various breeds and the deer, one cannot but observe the limited accommodations allotted to them and the utter absence of any green thing on the ground, for the grass has long since been destroyed by the ceaseless tread of the poor beasts, and only the hard, bare, parched clay remains. It was not always so, for in years gone by the Central Park had a finc deer pasture on the meadow where now the Art Muscum stands, and the elk and the deer could then be seen there almost as in nature. The bears have the best accommodations of any of the ani-mals in the park, and they repay the expense attending the erection of their quarters by the interest which they excite. At all hours of the day the cage is surrounded by a crowd of persons of all ages, who seem never to tire of watching the antics of the animals. In one division of the large cage are two Polar bears in good condition, and in the other three black bears and the two Foresrs AND STREAM grizzlies. The latter are most mischievous and full of fun, and spend almost all their time—when they are not begging dainties from the spectators—in playing with each other or with the black bears. They wrestle and box and chase each other up and down over the rocks in very amusing fashion. During one of the warm days we have had recently, the female–Known as The Kisser—has spent a great deal of her time in the water tank, where she bathes in most luxuriant fashion. We do not know on what the bears are ripe, his food consists very largely of roots. So the bears should now have roots given them. A bushel of mixed carrots, turnips and pars-nips would go as far as a bushel of bread, and would cer-tainly cost no more. Stale, worthless fruit might be given them in considerable quantities and would cost no more than so much bread, while it would be vastly relished by the ani-mals, would make them healthy and improve their coats. Bears will eda anythi

Bear's will eat anything, and a variety of food should be fur-nished them. An interesting inclosure is the onc which contains the prairie dogs. These little rodents do not seem to be in good condition. They have not shed their winter coats, and yet on some of them appear bare patches where the hair has entirely dropped off, as if they were afflicted with some skin disease. Moreover they scratch themselves continually as if greatly troubled with vermin. In their inclosure we saw a heap of corn, on which, we presume, they are ex-pected to subsist. There seems no reason why they should not have an armful of freshly cut grass thrown to them three times a day. It would certainly improve their appear-ance and their health. Some plan ought to be devised for moving their inclosure from time to time. The labor of making fresh burrows would be good for them, and the change would in a measure rid them of the fleas, which ordinarily trouble them. Space does does not permit us now to call attention to other matters where beneficial changes might be made. We are sure that no one regrets more than Mr. Conklin, the wretched parismony of the city government, which for-bids him to expend money for the benefit of his collections, but the suggestions which we have made could be carried out without cost, and the trifling labor involved would be a very small price to pay for the improved condition of the animals.

animals.

FLORIDA MOCKING BIRDS.

FLORIDA MOCKING BIRDS. *Editor Forest and Stream:* I inclose you an editorial from the daily *Times-Union* of this city, which voices the sentiment of ninety-nine-hun-dredths of the liberal and enlightened people of this State. It applies not only to our sweet-throated songster, but to all of our song and forest birds. Our State has been ravaged the past whiter by the taxidermist and millinery butchers, until longer forbearance has ceased to be a virtue. Our beach and shore birds have almost entirely disappeared; our bluejays, cardinals and mocking birds are rarely seen. We are determined to put a stop to this. I am now preparing a game law, which we trust our Legislature will pass in Janu-ary next; and if so, you may rest assured it will be enforced, at least in this portion of the State. The great work of the AUDUBOR Societry came none too soon. Through their agency alone will the depopulation of our woods and fields be stopped. Let them persevere. Public sentiment all over the country is coming to the rescue, and a grand triumph awaits them. SPORTSMAN.

JACKSONVILLE, Florida.

The Times-Union says: The destruction of our song hirds has been so great of late years that we have found it our duty as well as pleasure to protest against it and to urge that legal measures should be taken to prevent their extermination. Prominent among the feathered choir we have mentioned the mocking bird-the prima donna of the Southern field and grove. The de-struction of which we have spoken has been wanton; it had no aim save to destroy something, or to get a subject for the taxidermists, or for those horrid milliners who decorate in-describable bonnets with the remains of feathered beauties, whose natural plumage they debauch with their abominable analine dyes. But it seems that there is another class of people who war against the birds, and particularly against the mocking birds. Mr. Kennard, of Waldo, sends us the following letter: WALDO, FIA., April 29.-To the Editor of the Times-Union: Having

The informing brids. In the final of the times-Unitor, both the table following letter: WALDO, Fin., April 20.—To the Editor of the Times-Unitor: Having seen several pieces published asking to have a law passed to protect the mocking bird, I, for one, heartily protest against any such law. I consider the mocking bird one of the greatest pests that we have. We have to depend for support in a great measure on raising small truits, and no one knows but those thus engaged the amount of dam-age done by this same curse. And now to have a law passed not gir-ing me the right to protect my own interest! what next? No sir; I say the mocking bird must go. Very respectfully, SAM. J. KENNARN. Oh, no, Mr. Kennard; the mocking bird must not go. You will feel differently on the subject after you have reflected a little on the cruel sentence of extermination you have pro-nounced. We don't dispute the declaration of your bill of rights; you have a right to protect your property and your erops; so has every American citizen. But how? If your mule should get hingry and break into your cornfield, you surely would not kill him; you would not even "wallop" him; you would get him something to eat; you would— "Put him in the barn and give him some hay.

"Put him in the barn and give him some hay, And say, Gee, whoa! Come up, Jerry."

At least that's what we think you would do, for it is what we should do under like circumstances. Now apply this principle to the mocking bird. He is one of your scavengers; he eats twice as many insects as he does berries, and he is

worthy of his hire. Instead of spending money for powder and shot and losing valuable time in gunning for him, plant an extra patch in berries for his use and let him eat his fill of the succulent fruit. He will vary his diet with bugs and worms and insects galore, all of which are destructive of your berries and your erops. The idea that birds are a nui-sance because they eat a few herries, is a relic of the un-thinking and ignorant ages when the peasant thought the goatsucker bird really milked the goats instead of catching the flies and vermin that were continually pestering the ani-mals. mals

the files and vermin that were continually pestering the ani-mals. The mocking bird must not go. Look at the trim, saucy fellow as he sits swaying on the topmost bough of the watcr-oak, gazing brightly up into the clear empyrean, the liquid trills, erescendo, diminuendo and staccato notes pouring from his throat with a spontaneity that tells of his content-ment with this world and all that is therein. Note the air of abandon and reckless glee with which he gives the whistle of the quail, the piping of the thrush, the scream of the jay, and the softened sweetness with which he cxecutes the trills and quavers of the smaller of his feathered brethren. The Northern bobolink and robin, the English lark, the tuneful linnet, and the pet of the drawing-room, the canary, are all rivaled at once in his delirious song. He is emphatic-ally a Southern institution. The clash of arms and the roar and smoke of battle did not change him in the least. The sounds of strife and the discordant echoes of brother cursing the brother whose blood he sought added not a single piece to his repertoire or a new note to his song. As he was in the beginning he is now and ever shall be, world without end, the most glorious and truest-hearted songster of the Southern woods. He never has been and he never need be-reconstructed. O no, Mr. Kennard, the mocking bird must not go; plant him a new patch of berries and let him sing and eat and asing until the long moss ceases to wave and bird songs melt into the song of the angels at the hast day. A NOTE ABOUT AUDUEON.—A Springfield, Mass., corre-

melt into the song of the angels at the last day. A NOTE ABOUT AUDUBON.—A Springfield, Mass., corre-spondent sends us this extract from a letter written by Lewis Warriner, Jan. 2, 1841, Audubon being at that time a guest of Rev. W. O. B. Peabody, the Unitarian minister in Spring-field: "I saw Mr. Audubon, the illustrious ornithologist, the other day, a noble specimen of our fallen race, firm figure, tall, something like S. V. S. Wilder, but with nothing of his important air. "A man of great simplicity," Mr. Peabody remarked to me, He is fifty six years old. His hair is long and almost white, and he has an eye of uncommon brilliancy. I venerate him more than almost any one. His love of nature is so strong that he is going to start for the Rocky Mountains on the first of May next, to be gone five years. I heard him say that he with his wife and two sons chased a wren fifteen hundred miles and that the wren cost him one thousand dollars. Mr. Howard told me that Mr. Andubon was at a dinner party at Mr. Th. H. Perkins's in Roxbury when he heard the note of a bird he had been looking for a long time, got excused for a moment, took his gun which he always carries with him, slept in the woods that night, and did not return for the days, when he found the bird, having been in the meantime on foot to Sandwich on Cape Cod."

HABITS OF THE EAGLE.—East Toledo, May 15.—Editor Forest and Stream: The young eagle hatched April 26 is now about the size of a full grown barn pigeon, and is growing yery rapidly. I have closely observed the habits of the eagle for many years. The pairs select their location for nesting generally in the top of a white oak tree and as far from the ground as possible. They nest in the same tree as long as the tree stands, and then select a tree as near by as possible. Their nests range from ten to fifteen and twenty miles apart. They lay out their fishing and hunting grounds, and no eagle is allowed to encroach on another eagle's ground; if it does there is sure to be a fight. As soon as the young birds are old enough to take care of themselves. In the month of November the eagles have a grand rally and are seen high in the air for several days, when the majority go South, but many remain at home select.

Hew Unblications.

"OUR NEW ALASKA."

"OUR NEW ALASKA." "OUR NEW ALASKA." It is always pleasant to read a book written by Mr. Charles Hallock. His writings are always vivid and full of life, and convey a striking pleture of the scene described. To the sportsman his books have an especial charm, for in his travels Mr. Hallock is sure to dis-cover something that is worth telling about the fish or game of any region he visits, and to tell it in his own entertaining way; a way which sportsmen have learned to love. It is with great satisfaction that we announce the coming publica-tion of Mr. Hallock's new book on Alaska. That far off corner of the globe, so long neglected, is rapidly coming into prominence in our national affairs, and after having been neglected ever since the date of its purchase, is now attracting the attention of tourist and capi-talist, and of trader, miner and fisherman. The Governor of Alaska is now in Washington, urgiug upon Congress the importance of or-ganizing the Tercitory, a work which is Imperatively demanded by its growing commercial importance. The most beautiful scenery in America—if not in the world—is to be found in the rock-faced fords of Alaska and along the coast to the south of it, and the charms of a journey tilther need no descrip-tion to the many travelers who have visited it since it was made so easily accessible by the opening of the great Northern highway across the Continent. Nowadays the stream of teurist travel tends strongly toward that northern region which has always been so distant and is now near. *Omme janchum tron maching*, and the far off has

easily accession of the opening of the great voitable in may across the Continent. Nowadays the stream of tourist travel tends strongly toward that northern region which has always been so distant and is now so near. *Omne ignotum pro magnifico*, and the far off has indeed a wonderful attraction. Mr. Hallock's personal investigations in Alaska have resulted in the collection of a great amount of material on a variety of topics. He treats of the country—its past and present; of its resources—its timber, its mines, its fisherles and its fur trade; of the Indian question, of the government, of its natural history, the scenery and of sport. The old Russian days, the subsequent period of stagnation, and the present one of activity are fully discussed. Of Alaska's future Mr. Hallock speaks in very hopeful terms. The book is one which will find its way into the hands of every one who has followed the history of Alaska since it became a United States Territory, and besides these all who expect to visit the region will look eagerly for its appearance. The volume will be a handsome erown octavo, of about 250 pages, beautifully illustrated from sketches made on the spot, and a map covering all the points of interest along established lines of travel. It is now in press and will be published about July 1, by the Forest and Stream Publishing Company.

THE ELUSIVE BLUE GROUSE.

I.--IN THE SHADOW OF SHASTA.

<section-header><section-header><section-header><text><text>

or at least they may be, and you hear others in all directions in general, and no direction in particular, and then you be-gin to think you are drunk—if it is at all possible that you may be so. But you want a grouse, and the woods are full of them, drop on the set of provide the least the loudest. He is in a big fir 200 yards to the left, and you start for him, when a small twig drops from the tree under which you have been standing, and look-ing up you seem to see something. As you look you see the head and neck of a small bird, apparently, away up the tree to for from the ground, the neck grows larger and a dull heavy grunt booms directly down the trunk. You strain your eyes but you can see nothing distinctly, but you fire at head at once make for others and hour and you have him! You are surprised somewhat, and think of firing up the tree in hopse of doing it again. You know now how to do it, and at once make for others and locate a great many which are not there, and find about a dozen which you never see, finally giving up the sport with a stiff neck and titred legs. Toruse are still drumming all around, but you start for amp. Suddenly as you stride carelessly along, a grouse whirs away from your feet, and watching it, as it is out of nage before you can shoot, you mark it down or rather up in the did not leave the tree and you see an apparent knot near a limb. You are wise and fire straight and true, and await the com-motion as before. But nothing commotes, and on closer by the did not leave the tree and you see shore have a view and his head alone discloses his presence. You biase away, and this time he comes, and is a beauty. They are both cocks, and the brace will go six pounds. Going to anyou flush a couple of hens, and find a next with an egg to the cocks, and the brace will go six pounds. Going to anyou flush a couple of hens, and if a beauty. They are both cocks, and the brace will go six pounds. Going to anyou flush a couple of hens, and if a beauty

SHASTA, California.

WILDFOWL OF WESTERN WATERS. (Concluded from page 348.)

(Concluded from page 348.) Of the ducks to be found in the West the mallard (Anas boscas), sometimes called greenhead, is our staple, all ings considered. Some other kinds arc more nun-cous, while two other species bring a better price in market, but is latter arises largely from prejudice, as a plump, fat ustand, especially if corn fed, is as fine eating as any duck to the fall of the year mallards are generally found about while the marshes or at their roosting ponds, and vast withers are killed before cold weather closes the waters and bottom lands are overflowed, and the water is a foot or two deep in large tracts of pin-oaks, soft maples and other kinds are suited at such times are almost past. — The man, during the mild winter of 1877.8, killed over first thousand of this species, the water being up in the pay timber nearly all that season. As a matter of curios, it is in which to mention that this man once killed a mallard,

which was to all appearances a female in every respect ex-cept the head, which was green like a drake's, thus furnish-ing a parallel to the bearded woman or an anticred doe. THE BLACE MALLARD (*Aras obscura*), formerly known as the black or dusky duck, is not plenty here, but some sea-sons there is a notable increase in the numbers, although compared with other kinds they can never be regarded as numerous. They are known only as black mallards in the West, under the mistaken impression that they are only in-stances of melanism in *Aras boscas*. Their haunts and habits with us are very similar to the latter, but they are an entirely different species. I am glad, however, that the authorities have accepted the Western name, as it is more distinctive than black duck, which might apply to any species of dark plum-age.

black duck, which might apply to any species of dark plum-age. GADWALLS (*Chaulelasmus streperus*), locally known as gray duck, cannot be called plenty, yet when shooting other va-rieties of shoal water ducks which inhabit rather open water, the bag will usually show a fair sprinkling of them. PINTALLS (*Dafila acuta*), known universally in the West as sprigtails, sometimes sharptails, and rarely as water-pheasants. These birds for some unknown reason are usually scarcer in the fall, both relatively and absolutely, than most other species, although a good many are killed. But in the spring when the country is alive with countless millions of wildfowl of every kind known to the West, I think I am safc in saying that pintails outnumber by far any other one species. Im-mense quantities are killed, and were it not for the fact that the market-hunters do not carc particularly to pursue them owing to the low price, the numbers shot wont be much greater. The pintail crosses rather frequently with the mallard, producing a hybrid partaking of the character-istics of both in about equal degree. This is the only hybrid I know of whose existence is at all common in a state of nature. There is occasionally a peculiar coloration of the pintails which I have never seen mentioned in any work or writing on ornithology. In this case the feathers of a drake of being pure white, as it should be in the regulation plumage, is a rather bright brick-dust red. I am satisfied it is not due to age, season or condition, neither is it anything like the dull gray of the summer plumage. When the sun shines fairly on the breasts of a flock of these reddish sprigs they present a very queer appearance. BALDFATE (*Mareca americana*).—Generally known here as

it is not due to age, season or condition, neither is it anything like the dull gray of the summer plumage. When the sun shines fairly on the breasts of a flock of these reddish sprigs they present a very queer appearance. BALDPATE (Mareca americana).—Generally known here as widgeons. These ducks are somewhat more plenty than gadwalls, and considerably more of them are killed, as they decoy better and are apparently not so sharp-sighted and sus-picious, still some other kinds are so much more numerous that widgeons do not seem to constitute any considerable portion of the masses. THE SHOVELLER (Spatula elypeata) always called spoon bill here, is fairly well represented at times, and seems to sell as readily as other "small ducks." yet few care to make any special effort to get them, and they are looked on with a good deal of contempt. BLUE-WINGED TEAL (Querquedula discors) are at times very plenty in the fall, especially in certain localities which seem to have peculiar attractions for them, and as they pack close together in large flocks and require such a light blow to kill or disable them, very many are often killed at a single discharge and large bags made. Both kinds of teal bring the same price, though by the knowing ones this species is regarded, fancifully I think, as superior on the table to the GREEN-WINGED TEAL (*Querquedula cyanoptera*) I have never seen and believe it never visits these parts, although the appearance of one flock on the Illinois Bottom was re-ported to me some years ago by a man who might possibly have been mistaken, albeit he claims to have killed one. Wood DUCK, SUMIER DUCK (*Aix sponsa*) is the only species which breeds in this immediate viciuity in any con-siderable numbers. When they arrive in the spring they are almost always paired off, and commence nesting from the latter part of March on through April. By the first of July many broods can fly, and all are able to take wing by Aug. 15, when the open season commences. About the middle of September the most of them have be

species, representing them as if seen from above. The nos-trils arc not shown. Fig. 1 is intended to represent he bluebills's bill, the

but one of them I know to be one of the best hunters on the river. REDIFAD (*Atthyja americana*), occasionally called redneck. Usually very plenty in spring and very many are killed, especially by those shooting bluebills with which, and also ringnecks, they frequently travel in the same flock. BARROW's GOLDEN EYE (*Clangula islandica*).—Not at all common. My hunting partner killed one in the spring of 1881 and I had it identified by Prof. S. F. Baird, who stated that it was a northern species, not often found so far south, except in the higher Rocky Mountains where it breeds, but that its presence in Illinois had once before been reported from the Wabash River by Mr. Ridgway. AMERICAN GOLDEN EYE (*Clangula glaucium americana*).— Generally known here as the whistler, but often called big ice duck, big river duck, big butterball, and sometimes big shellduck, from their feeding on shelfish, etc. While not plenty, yet seldom a senson passes without more or less of them making their appearance, but their feeding grounds are generally different from those of the ducks pursued for profit, and therefore they are only killed when they come in the way. BUTTERBALL; BUFFLEMEAD (*Clangula albeola*).—Also vari-ously known as little whistler, little ice duck, ctc. This beautiful little fowl is usually moderately plenty, but not a grent many are killed, for the same reason given for the whistler. "The RUDDY DUCK (*Erismatura rubida*), called in the East "stiffati"." "spinetail" and "rook," so far as my informa-

whistler. THE RUDDY DUCK (*Erismatura rubida*), called in the East "stifftail," "spinetail" and "rook," so far as my informa-tion extends, is of such rare occurrence here as to have no local name, nor indeed any name at all, though specimens are sometimes secured. The three species of fish ducks (American sheldrake [Mer-gus merganser americanus], red-breasted sheldrake [Mergus serrator] and hooded sheldrake [Lophodytes cucultatus]) all visit this section, but are never pursued by the regular bunters

EASTHAMPTON GAME CLUB.

FOLLOWING are the by-laws and the form of agreement entered into by the members of the elub and the land owners from whom they rent shooting privileges:

BY-LAWS.

The name of this organization shall be the Easthampton Game Club, of Easthampton. Mass.
 Its officers shall consist of a president, secretary and treasurer, and such other offleers as the association may deep neascone.

8. There shall be three standing committees called the land committee, the prosecuting committee and the posting

deem necessary.
There shall be three standing committees called the land committee, the prosecuting committee and the posting committee.
4. The duty of the land committee shall be to negotiate with land owners for the exclusive right of this association to take game on their grounds for such consideration as may be agreed upon between the parties, giving the association the right to prosecute all trespassers under the statute. The area of territory hired for such purposes shall be left largely to the discretion of the committee, but all acts of committees shall be subject to the approval of the association.
The duty of the prosecuting committee shall be to keep careful watch of the premises courrolled by the association and to prosecute all violations of the trespass act when in their judgment the case demands it.
The duty of the posting committee shall be to post such lands as are reported to them by the land committee as being under control of the association.
The above-named committees shall consist of three members each, and shall be elected at the annual meeting of the association.
The resident, secretary and treasurer shall be elected at the annual meeting of the association.
The election of all officers and committees may be by nomination and view vere vote of the association.
The annual meeting of this association shall be held on the first Wednesday of July, and special meetings, by prosecuting committee and paying fees. Any member found violating these by laws and so reported ean be expelled at may a fee of two dollars on admission to the association. Any citizen of Easthampton may be admitted a member by being recommended by prosecuting committee and paying fees. Any member found violating these by laws and so reported ean be expelled at my meeting duly called.
All members will be required to take game for the market. To guard against fires, all members will be required to take game of two dollars on admission t

and see that they are not disturbed of made dusate thereby. 15. It shall be the duty of the treasurer to pay over to the owners of land, each his share of all dues at the close of the season, *i. e.*, on or before the tenth day of January each year. 16. It shall be the duty of the secretary to record the pre-ceding articles and the following form of agreement, leaving space for signatures in a record book kept for that and other purposes connected with this association.

AGREEMENT.

AGREEMENT. 17. We, the undersigned, agree to abide by the above rules and regulations, and will use our influence to sustain them as long as we are members of this association. The undersigned land owners hereby lieense and grant to the members of the Easthampton Game Club, the exclusive right to hunt upon our respective lands, and allow them to post necessary notices, upon condition that they or their dogs are to do no damage to fences, crops or other property on our respective lands, and that for each partridge, quail, twoodeoek or gray squirrel killed upon our respective lands, the owner of the land on which the same is killed is to receive ten cents from the club. We, however, respectively reserve the right to hunt and allow any guest to hunt on our own lands, and also reserve the right to revoke this license and annul this agreement, as to the club or any of its members by giving written notice to the secretary of the club.

A TAME PEFP.—Chelsea, Mass.—While gunning one morning in the fall of 1884, on a marsh in Everett, I shot a ring-necked peep whose tail feathers were firmly tied to-gether by a piece of eotton cord. The bird was tame and had evidenly escaped captivity. The bird calmly peeked away while I emptied three eartridges at him. This is some-thing unusual for a shore bird to do. Perhaps by an allusion to the foregoing in the columns of the FOREST AND STREAM the ownership of the bird might be brought to light. In ex-planation of my poor marksmanship, I would say that a run in rubber boots just before the shooting had shaken my nerves eonsiderably.—W. H. W.

DISMAL SWAMP BEAR PROMISE.—Belvidere, N. C., May 24.—A very destructive fire has been for some time raging in the eane brakes of the Dismal Swamp, and the bears and deer are coming out near the shore, where the fire has not burned. Three fine deer were seen last week at play in a field near the swamp, and the bears have begun eating the farmers' pigs. The boys put the hounds in a few days ago and succeeded in killing a very fine young bear. We are looking forward to plenty of sport next fall hunting bruin, as all the back swamp has been thoroughly burned and the berry lands near the shore are still unburned, with the prom-ise of plenty of fruit, and these, with an oceasional fat pig, will be sufficient to entice bruin from far and near,—A. F. R.

WHICH IS THE BEST WAY OF PRESERVING BIRDS IN WARM WEATHER?—In Minnesota, during August and Sep-tember, huntsmen draw prairie chickens and wild ducks as soon as possible after shooting them, and fill in the cavity with grass so as to prevent their spoiling. At Cobb's Island, where almost thousands of beach birds are, or used to be, shipped in the hottest weather to Alexandria, Baltimore and Washington, the old gunners will tell you that birds will keep longer undrawn and unpicktd than in any other way. And in the markets of New York city you see all the poul-

try pieked, but airtight, as they eall it. "Old Timer" is glad Dr. Ellzey has no faith in the scent-suppression notion; but he wishes your compositor would follow "copy," and not print fanciful thing for fanciful theory, or slosh for slash. In Virginia a slash is a piece of wet ground on which briers, huckleberry bushes and the like usually grow, thus forming a good hiding place for partridges. And so the slashes of Hanover, historic as the birth place of Henry Clay, is a section of country famous for its yearly crop of frogs, mosquitoes and huckleberries, coons and possums.—OLD TIMER (Hanover county, Va., May 26).

A BLACK FOX.—Escanaba, Mich., May 27.—To-day I saw a young black fox here that was captured a few days since. I should think he is about one-half grown. The tip of the tail is white. He is rather woolly, as the long hair is not yet tail is white. I out.—A F. Y.

CAMPS OF THE KINGFISHERS.

CARP LAKE, MICHIGAN .- XIV.

CAMPS OF THE KINGFISHERS. CARP LARE, MICHIDAN.—NIV. If which is the first gray of the morning to find the promise made good with a cloudless sky of spangled have paling at the approach of the glorious sun, who here added his coming by a few faint streaks of light, diverging beyore the treetops across the lake, and soon a rim of fin-beyore the treetops across the lake, and soon a rim of fin-beyore the treetops across the lake, and soon a rim of fin-beyore the treetops across the lake, and soon a rim of fin-beyore the treetops across the lake, and soon a rim of fin-beyore the treetops across the lake, and soon a rim of fin-beyore the treetops across the lake, and soon a rim of fin-beyore the treetops across the lake, and soon a rim of fin-beyore the treetops across the lake, and soon a rim of fin-down the lake, rejoieing, I had a conceit, in the fulness of is beart at the glorious morning following the change of across of green-clad by the clear, tremulo laugh of a loon away of the across of the placed lake with its back. The others were missing all this fresh morning are and the of thought and were rendering up our homesor to do with nature's deficest touch; a picture to feel thanks of for and the loon and I had seemingly drifted into the same the others were missing all this fresh morning the changes the others were missing all this fresh morning the three Postered' tilt hey agreed to get out as the least of two revisand receiving as many bleesing () in retur, hey acro and the going in the stores and preparations for breakfast under way. Then old Dan and Ben were repared by the harmless invention that breakfast was pot and the get up, not, however, without suddry grows and receiving as many bleesing () in retur, hey are noticed to get up, not, however, without suddry grows and receiving as a many lessing () in retur, hey are noticed to get up, not, however, without suddry grows the divention, seemingly as a ''llow off' to his overwrought the air with ''Hooray, Damy,

or the informal and the entertainment was postponed to another their minds, and the entertainment was postponed to another day. This first appearance of the sun for a week worked a marvel-ous change in the eamp, and when all had taken the regular morning wash at the stand near the water and Ben had again yelled breckfust, we gathered around the table with light hearts and smiling faces, the girls looking as rosy as the morning itself, as happy a lot of "old children" as ever surrounded a camp-fire. Even old Dan was overheard humming fragments of an ancient ditty as he sat at the head of the table stirring his coffee and beating time against the sides of the china tin cup with his spoon. This unusual burst of melody from the old meadow lark so astonished the family that the table chatter stopped, and as he looked up to ascertain the cause of so much silence, he was overwhelmed with confusion by a peal of laughter and a clapping of hands that fairly turned his head; but old Ben, always loaded for fun, knocked all the music out of him and started the hilarity afresh by remark-ing, in his dry way, "Who ever heerd ov a pelican tryin' to sing before?"

ing, in his dry way, "Who ever heerd ov a pelican tryin' to sing before?" The philosopher, too, seemed to have struck a better streak in his cookery than usual; the biseuits were lighter, the cof-fee had a more "sarchin' an' appetizin' odor," and the corn bread, baked with an eye to tiekling the palate of ye skip-per, was a marvel in its way, albeit the surroundings were not just at hand to give it the true "Texas flavor," to which old Ben laid the affliction of his watery eyes. Breakfast over, the first thing necessary was to stretch a couple of clothes lines, a supply of which is always to be found among the "calamites," and give the bed clothing a sun bath and a thorough airing, a part of camp work that should be done every day, "'ceptin' when it rains." A little care in this direction will, as old Ben apty puts it, "keep yer

<text>

There had been no word spoken while the fight was going on, but now when the bass was led alongside, she said with the deliberation of speech that was always a reminder of old Ben, "There, James Mackerel! if you can't catch fish, you can be of some use to Kit and me by getting them in the boat and taking them off the hook." The "sass box!" but that bass managed to even things up as he was lifted in the boat by giving his tail just the required flint to dash near a half pint of water over Miss Bob, at whiteh James Mackerel consoled himself in a quiet chuckle while bending over the fish to release the hook; but Bob seemed to have a suspicion that he had a hand in the shower of water that doused her, and I have a dim recollection that she was not far wrong. However, Bob was not an old enough angler to have learned the old freaks hass will sometimes get into their heads in

the matter of throwing water as they are lifted into a boat, but when she reads this she will doubtless make up her mind which was the offender that day and have another score to settle with James Mackerel.

which was the offender that day and have another score to settle with James Mackerel. The skipper was again made to be of use by putting a fresh frog on her hook and we went on our way. Twice before reaching a point opposite the "oil well" (the oil well will be spoken of further on) he was of use taking in a fish, one for each of the girls, his own frog trailing away astern on the outside, attracting about as much attention as a "bound boy at a corn huskin." As we passed under the bridge at the head of the narrows Kit was impressed with the notion that there might be another bass lurking around the raft of logs where she had taken one a week before, and she laid herself out to perfectly astonish Bob and the skipper by one of her famous "wood-chopper casts" that would drop the frog within a couple of feet of the raft at the exact spot desired. But the best laid schemes o' mice and girls, etc. In her anxiety to acquit her-self with credit in "Papa's eyes" she put "a leetle too much vehemence in the cast" and brought the frog down on the outermost log with a whack that knocked him as limber as a wet rag, at the same time the hook caught in the bark of the log and refused to let go, and the fair expert in overhand casting willed down on the seat utterly demoralized and "bilin" over" with disgust at the unlooked for result of her pet cast.

were rap, at the same time the nook chught in the bark of the log and refused to let go, and the fair expert in overhand "blin" over" with disgust at the unlooked for result of her pet east.
Miss Bob and the skipper smiled, cautiously at first, then site and the flair got that lasted till some time after the boat was been during that has the dill some time after the boat was been during that has the dill some time after the boat was been during that has the dill some time after the boat was been during and the hook released. The frog had no more life left in him than an old rusty railroad spike.
This ended the fishing for the down trip and we pulled down to the landing and walked up to the store, to be contailly greeted by neighbor Couturier and treated to a hunch of cheese, crackers, cakes and maple sugar, for it was not put the dinner hour, with a draught of cool water from the pump, after declining an invitation to step down in the collar and sample a glass of his "old port" manufactured doubtless somewhere in the wilds of Chicago or St. Louis. Trieds at home had not forgotten us and we found in P. M. Couturier's receptacle for all classes of mail matter (the dawer under the counter) letters for nearly all in the party, "detorial amenities," politics personals, and base ball scores. We loafed around the store till the afternoon tri-weekly mail came in from Traverse City, which brought another batter one from "Old Knots," saying he would be with us on the following Wednesday, and requesting me to "amounce the following Wednesday, and requesting me to "amounce on the following wednesday, and requesting me to "amounce on the following Wednesday, and requesting me to "amounce the following Wednesday, and requesting me to "amounce the following Wednesday, and requesting me to "amounce on the following Wednesday, and requesting me to "amounce on the following Wednesday, and requesting me to "amounce the following Wednesday. The sate has each were the was to the day bas ball socots. The moster has

very forcible "goodness," with the accent about an on the ness. When the applause at this feat had subsided and the dam-aged thumb repaired with a piece of court plaster and duly kissed to ease the hurt, as in the long gone by days when she was a "toddler" (and it is surprising how bad a hurt a kiss will heal) we swapped seats and again the oars fell with lazy sweep and noiseless stroke as the boat was brought to her course and headed on the last short stretch for camp. It may be chronicled that we took five bass to camp, besides a couple of goggle-eyes that showed their lack of discretion in trying to swallow Bob's frog, and the skipper's bait was as dead as a pickled herring and without an abra-sion or toothmark. Bob's wish had been gratified; I hadn't caught a fish the whole day, but I was in a contented frame of mind at having ministered to the happiness and enjoy-ment of the two girls, and this was in the nature of a recom-pense for a duty performed and a claim on a sound night's rest.

pense for a duty performed and a claim on a sound night's rest. The others were all in and arranging the tents for the night, after having enjoyed to the full the bright and beauti-ful day. Each boat had brought in a string of fish with Mother Jim at the head with a bass of over four pounds and old Dan and Ben at the tail with a "lawyer," which Ben tried to palm off on the girls for a "newfangled lake trout," or "to speak more proper," he said with a flourish, "it's a kind ov a summer speshles o' the canine namycoosh, which is never knowed to bite less ye affer 'em somethin' to bite at an' spit on yer bait." After supper the home letters were read over again to make sure nothing had been missed, papers looked over to see what had been going on back in the busy world, and when darkness fell the camp-fire was kindled to repel the thickening shadows, and by the time the experiences and pleasures of the day had all been told over around its cheer-full blaze, little Top was in the land of dreams and it was creeping well on to the turn of the night before the circle was reeady to break up and exchange good nights. KINGFISHER. (TO BE CONTINUED.)

(TO BE CONTINUED.)

RANGELLEY, Me.—The following catches of trout are re-ported from Capt. Barker's Camp Bemis. First two days' fishing—Catch of A. Houghton, of Worcester, Mass., 5 pounds and 104 pounds. Catch of C. H. Fenally, of West-boro, Mass, 44 and 5 pounds. Catch of Mr. Rawson, one 6 pounds. Catch of Mr. Burton, one 84 pounds. Catch of C. W. Fisher, North Attleboro, Mass., one 7 pounds. Catch of B. F. Quimby, of Worcester, Mass., 44, 5 and 6 pounds. Catch of Holley Harrington, 34 and 54 pounds. Catch of H. M. Dudworth, 44 pounds. Catch of Mr. Houghton, 44 pounds; Mrs. M. A. Whittier, 34 pounds.

NEW ENGLAND TROUT WATERS.

NEW ENGLAND TROUT WATERS. There is the provided of the temptation is greater to be there, is the trout waters, and the temptation is greater to be there. To store gentlemen begin to be seen on the street with faces turned quite a nut brown, and the happy look they wear is to be found only in the eye of the returned and successful sportsman. Will they tell you all about it? Oh, yes! If you only have the time, they will talk you blind about that trout or landlocked salmon; for the landlocks have actually become a feature in the angling in Maine waters. No very large 'red spots' have been heard from yet, but good sportsmen are very enthusiastic over the landlocks they have caught. One veteran trout fisherman, who took four landlocks at Rangeley the other day, neither above three and a half pounds, says: "Give me a hadlocked salmon before all the other fish. Have ever caught. There is more life in one than in two trout. It took me fully twenty minutes to land my largest one—only about three and a half pounds." But it is anticipated that the landlocks fashing will drop off as suddenly as it begun; that is, if it follows the principle known in other waters, where the landlocks begins. The smelts when they seek the streams and shallow water to spawn, and then the fun with the landlocks begins. The simelts when they seek the is the and locks have been the for that season. In the Androscoggin waters, where the fault landlocks are done for that season. In the Androscoggin waters, where the fault the landlocks have not be the fact in these comparatively new waters for these fish, and their friends may be happily disappointed. At all events the showing up of landlocked salmon in the Androscoggin lakes this spring, has established a happy fact for anglers, and a triumph in fish propagation very gratifying to everybody, and more especially to the worthy fish commissioners of that State, who have labored so arduously in that direction. Commissioner Stanley himself, a very successful and an enthusiastic fly-fisherman, is st

JULIO T. BUEL.

JULIO T. BUEL. Who that has used "spoon bait" does not know the name of "Buel" as stamped upon the silvery spin-ners offered to the bass, pike, and maskinonje? As the first man in America to take out a patent for trolling and spinning bait, his name became famous among anglers who fish with these implements, and his death at Whitehall, N. Y., on May 18 will be widely regretted. Mr. Buel was a man with a wide circle of personal friends because of his upright life, public spirit and kindly humor. The following notice of him, written by Mr. W. H. Bodwell for the New York San, is so complete and truthful that we republish it entire:

with a wide circle of personal friends because of his upright ife, publics spirit and kindly humar. The following notice of him, written by Mr. W. H. Bodwell for the New York Sta, is so complete and truthful that we republish it entire.
"Julio T. Buel, who died in Whitehall on the 13th inst., was probably better known, through his fishing tackle, to the lovers of the piscatorial art than any other main in the country. He took out the first patent in this country for truining and spinning bait, and was the first to engage in its manufacture. Born in Vermont nearly eighty years ago, in lover so in the art of the State, he early familiarized himself with the habits of the trout, and before he was filteen years of age he was known as the most skill full fly-fisherman of that region. It was in Castleton Pond, when in about his eighteenth year, he made his first experince with a trolling bait. It was a crude affair indeed compared with the beautiful and artistic bait he turned out in fater years, samples of this country and Canada. It was a for early spint, the counter part of the bowl of a large spoon, made of heavy fit. One silves a printed a bright as the traditional New England milk pan. To the smaller end was a ttached the hook, and to the other the line. Young Buel's first effort in Calleton Pond with this rude contrivance was a revelation of all the fishermen of that country. The size and number of fish he took from the depths of the pond had never before been approached. In fact, many of the old resident shore was the fishing and devising attractive baits. Only six mile area was at lace be devising attractive baits. Only six mile area he made upon the devising attractive baits with which to a stampting to a true fisherman that more of his time was yiven to fishing and devising attractive baits. Only six mile area was at lace Champlain, in the vicinity of Whitehall, was fished with the working of one he would take him tho the very her at of the Adirondacks, the lakes and rivers where theso him thad b

very little, and less than a oear ago it became plain to him and his friends that he must give up. No man stood higher in the confidence and esteem of his neighbors than Julio T. Buel. For several years he was deputy collector of customs for the district of Champlain, and he also filled various local offices. He had an inexhaustible fund of stories of his fish-ing experiences, and had an entertaining way of telling them."

SOUTHERN TIER ANGLERS.

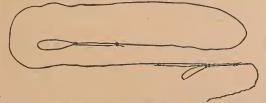

AST evening train No. 2 on the Frie road brought back Association, who were returning from their second namal excursion to the trouting streams of Potter county, Pa. Ihrough the courtesy of John N. Abbott, general passenger agent, and Superintendent Cable, of the Eric road, a hand-ome special car was provided for the excursionist. It was instelly trimed with flags and bore an inscription which idd what was going on in it. Train No. 29 drew it useshay morning to Addison, where it was side-tracked, and the ingers betook themselves to the special train provided by Frank M. Baker, superintenne in the Addison and North-med with days, and the big black-card end cars were tri-mer was transferred from the Erie car to the main coach Additions to the party were made at several points, and when all annes were on the list it read as follows: W. W. Fish, J. S. Bast, C. H. Gridley, George A. Robinson, G. H. Parkhurst, G. W. Treadwell, Ray Thompson, D. Atwater, J. S. Bast, C. S. Slavmaker, R. J. Knox, Elmira; the Hon, William Smythe, Judge C. A. Clark and H. Austin Clark, Waergoi. C. S. Mather, R. J. Knox, Elmira; the Hon, William Smythe, Judge C. A. Clark and H. Austin Clark, Waergoi. C. S. Mather, J. Wartons, Waverly J. F. Parkhurst, and C. L. Patitison, Elkland i Colonel J. M. Jones, New Yorki, W. A. Bayliss of the Erie Editor Roberts of the Addison Advertiser and the inderating able, increasulatible and justy popular superintendent of the A. & N. P. milkway, Frank M. Baker. The rain which ful-haring sciencer, which makes the line of the A. & N. P. famous as one of the most picturesque in America, was fully uployed. At Elkland the mires the line of the A. & N. P. famous as accepting the prents began. As the trin stop-pol ab yo in fantastic fishing gear came aboard, called oudly for a well known begistator and the protoping t a string of chub, as if filling an order. The laughter over this had scarcely died away, when a nother stop Drought a string of chub, as if filling an order. The laughter over this had scarcely di

[&]quot;WOODCRAFT."—When a man has spent a great many months in the woods, he presumably has learned something which other folks of less experience might find it worth while to know. After you have camped out as much as "Nessmuk" you yourself may gather as much woods lore as he has; but it will be rather a sensible thing for you now to secure his book "Woodcraft," and from its pages gather a score or two of hints which will add to the comfort and pleasure of an angling or shooting or camping excursion.

<page-header>June 2, 1886.]

what was not cause, who oping of root hand balance hor both states fishing will be recorded as a dismal failure.
CHATEAUGAY LAKE, Adirondacks, May 20.—For the trolling season this lake is unsurpassed by any lake in the State of its size. In 84 days I caught 21 salmon trout, besides a good many brook trout, the salmon going from 3 to 74 pounds, the speckled from 4 to 14, although very early for brook trout. Others have done as well or better. Altogether about 200 salmon trout were taken this season, which is as good as any lake in the State can furnish for the same area. In the summer we have the best of fly-fishing, trout been caught weighing 54 pounds, salmon tipping the beam at 22 pounds. Not a bad record for a small lake. One afternoon 9 salmon were taken which dressed 65 pounds. Indian Point is a gleasant house on the lake, the proprietor, R. M. Shutts, is a genial sportsman and host and has had thirty years' experience in the Adirondacks, and is a perfect puide either in pursuit of deer or the speckled beauties of the water.—E. W. Coox. The season opened two weeks earlier than usual here. We had a good eatch of salmon, running from three to fifteen pounds. The trout season opens fair with good eatches. Decr are all around us, and are robbing my cow of her pasture, but thanks to our legislators, they will soon be more "shy."—R. M. Shutts (Chateaugay Lake, N. Y.).

ATTACHING DROPPERS.—Centralia, Pa.—Editor Forest and Stream: I inclose a cord tied so that you may see how I attach droppers to the leader. No doubt your readers will

understand it without a long description. If droppers are not to be used and only the stretcher fly attached, then omit the first loop and you have a straight leader. I think this a better arrangement than the one illustrated by "Percyval" in your issue of April 15. The leader ean be shortened or lengthened at pleasure, and the droppers can be placed at any distance desired.—Spicewoop.

any distance desired.—Sprcewoon. LAKE ST. JOSEPH.—Editor Forest and Stream: I noticed a paragraph in a late number of your valuable paper, relat-ing to Lake St. Joseph, near Quebec, Canada. This lake is a very fine, but by no means a new one. But the Quebec & St. John Railway is now opening out some splendid fishing grounds in that direction. There is good trout and black bass fishing in the lake, also large 'Innge or great lake trout are sometimes taken. The Messrs, Watters and son wish to pose as great fishermen and arc frequently informing the public, through the press, of the wonderfully large fish they catch, but never relate that they take them off night lines at the wee sma' hours of the morning and not in the "after-noon," as stated. As this style of fishing is illegal, these quarter of an inch thick, with some fifty or sixty hooks and ten pound sinkers attached, were seized and exhibited in Quebec with the owner's name placed on them. It is said that these splendid 'lunge can always be obtained fresh at the hotel from 'en to fifteen eents per pound; therefore strangers need no ropes nor get up at uncarthly hours to procure these fish. It may not be sportsmanlike, but they need not return home with empty baskets,—VERBUM SAP.

THE "SUN'S" FISH YARNS,—Editor Forest and Stream: About two weeks ago there appeared in the Sun an article in regard to the trout fishing in Eastern Pennsylvania, which was calculated to make any decent trout rod jump out of its ease, put itself together, thrust itself into the hand of its owner, and drag him willy nilly to the scene of such astound-ing piscatorial exploits. Now, I do not mean to contradict, impugn, or even question the strict accuracy of the state-ments in the article aforesaid, notwithstanding the result of previous investigations of such matters. All I wish to say is this: I sent a copy of the newspaper, having marked the article with red ink (it was so ink-redible, you know), to the proprietor of a certain village hotel in the heart of the Mon-roe county trout region, and asked him to tell me what he knew about the alleged facts concerning the capture of so many one, two and three pound trout in his vicinity. Here is his reply, received to-day. Neither his grammar nor orthography is as good, perhaps, as that of some of your deer hounding legislators at Albany, but he always tells the truth: "Dear scr, I recieved yours and aboute the fishing up thair I dont now, that seams like a big fish story I would like to se you a gain. Yours truly —."—K. (Perth Amboy, N. J., May 28). FLY-FISHING FOR SHAD.—Holyoke, Mass., May 31.—

N. J., May 28). FLY-FISHING FOR SHAD.—Holyoke, Mass., May 31.— Nothing new on last week's report of shad fishing. On Friday, 28th inst., they ran the net all day; result, two shad. Up to noon to-day, four shad. Fishing not a shadow of its former self. Unless the Massachusetts Commissioners of Fisheries commence hatching here again through August and September, the shad industry of this place is done. Anglers will have to try the Housatonic; Chatahoochie at at Columbus, Georgia. If taken at Columbus in deep water, why not in the Hudson and other streams where the shad abound? It is all folly, a scientific stick in the mud, to say shad don't feed in fresh water. All nature proclaims against such a theory, at the very time when all their powers are called into the most active exertions, going up stream against strong eurrents and turbulent waters, and reproduc-ing their species, the most eventful period of their watery lives, unless it is out of the water into the frying pan.— THOMAS CHALMERS. THOMAS CHALMERS.

THOMAS CHALMERS. LAKE DRUMMOND. Belvidere, N. C.—The skipper of the Cool, in his map of last issue, does not give "Lake Drum-mond" sufficient prominence. In accordance with his scale, he makes it only about 3x4 miles, while in reality it is 6x7 miles and a most picturesque piece of very deep and elear "juniper water," with excellent bass and perch fishing for those who know the ropes—no "greenies" or "faney fisher-men" need apply—only those "to the manor born" can suc-ceed there, i. e., only those who have had experience, or have an experienced guide, ean do enough to pay for the in-convenience of getting in and out. The Dismal Swamp canal was eut for the purpose of getting at the Valencia eypress and juniper timber of that region and not the pine, as repre-sented by "C. P. K." although much pine is now raited through the various canals, from the highlands of the differ-ent easterns counties of North Carolina.—A. F. R.

Notes FROM New ORLEANS.—The waters in the bayous of the Mississippi Sound are fast clearing and settling. Silver fish have been seen round the Rigolets, and fishermen are preparing to go out to capture them.—A new sporting club has been formed at Look Out. It is composed of twelve members, comprising the leading businees; men of the city, and is called the Pearl River Club.—There is on the tapis a pegging fish match. In this cach contestant is tied to a pcg on the border of a stream and fishes there a certain length of time. The one eatching the least number of fish pays for the dinner.—Quite a crowd assembled in front of Branch 27, at West End, yesterday, to view the big eatch made by Sam Merlin. It was the biggest thing of the kind ever hooked in these waters, the monster garfish weighing 150 pounds and was fully six feet in length.

A NORTH CAROLINA BASS .- Belvidere, N. C., May 24.-A friend of mine caught a bass of the big-mouthed persua-sion last week which pulled down the seales at ten pounds strong two hours after being caught. The fish was caught in a millpond near this "hamlet," and was a "fighter from away back."—A. F. R.

DR. J. A. HENSHALL is making an extended pleasure trip up the Mississippi River in company with Judge Longworth, of Cincinnati. The party are on Judge Longworth's pleas-ure yacht Co, specially built and fitted up for such cruising. Dr. Henshall's address is care Geo. B. Ellard, Esq., 158 East Third street, Cincinnati.

COLUMBUS CASTING TOURNAMENT .- The anglers of Co lumbus, O., are talking of a fly-casting tournament. Persons interested should address Mr. W. H. Miller, Box 245, Columbus, O.

EVERY pair of Allen's bow-facing cars warranted. Send for httle catalogue free. Fred A. Allen, Monmouth, III, -Adv.

ffishculture.

ROTECTING NEW YORK OYSTER BEDS.—Fish Com-missioner E. G. Blackford has appointed Joseph W. Mersereau of Staten Island, State Oyster Protector. The bill creating the office provides that it shall not be lawful for any person or persons, corporation or corporations, to place or cause to be placed in any waters within the furisdiction of the State, any sludge acid or other refuse matter, resulting from the manufacture or process of manufacture, or treatment of orude or refined material from any oil refinery, or oil works, any sugar refinery or sugar works, or from any gas house or building or buildings used for the making of gas, or to deposit in the waters any substance infurious to oyster culture. The aw further provides that it shall not be lawful to throw or cause to be thrown from any boat, scow or vessel whatsoever into the waters of Long Island Sound, or into the bays or harbors opening into the same west of a line drawn from Eaton's Neck due north to the boundary line between New York State and the State of Connecticut any cinders, ashes, refuse or garbage. The Fish Commissioner is authorized by the law to appoint a person, who shall be known as the State Oyster Protector, whose duty it shall be to patrol under the directions of the Fish Commissioner is an old oyster planter, but of late years has been in the employ of the Pennsylvania Raitended Company. His application was in-dorsed by the oyster growers of Staten Island, and the dealers at the foot of West Tenth street. He will enter on the dis-charge of his duties at once.

PACIFIC COAST DERBY.

PACIFIC COAST DERBY. Editor Forest and Stream: I send you herewith a correct list of the entries for the puppy stake at the next meeting of the Pacific Coast Field Trial Club, to be held in December next. Somehow the num-ber of eligible youngsters is very small this year, but there are scores of little fcllows whose owners expect to be heard from next year. It would not surprise me if the list of puppy entries in 1887 would number forty to fitty. It will be noticed that there is a preponderance of pointers this year, but the California Kennels (Post and Watson), of this city, have now one litter of pups from Janet (Count Noble–Dashing Novice), by their Harold, litter brother to Gath's Hope and Gath's Mark. Their Sweetheart litter sister to Janet's hay event dome from her long trip to Tennessee, whither she went to visit Sportsman. In about a week she will add several youngsters to increase the stock of pure bred dogs in this State. These blue blooded setters will come in contact next year with young pointers sired by Vandevort's Don, Cosby's Bow, Jr., Bar-mey's Tom Pinch, and the Bassford Kennels. There is a pros-peet of this year's trials being held in the San Joaquin Valley, where birds are plentiful, the ground level, and the cover more like that where the Eastern trials are run. It is of no use to attempt to have field trials in a chapparal thicket. The great trouble here is to get for judges men who have had experience at field trials. Many members of the club hope this year. The entries closed May I, with a forfeit of \$5 and \$15 additional to fill. Fifty per cent. of the cutrance money goes to the winner, thirty per cent. of the cutrance money goes to the winner, thirty per cent. of the cutrance money goes to the winner, thirty per cent. of the cutrance money goes to the winner, thirty per cent. of the cutrance money goes to the winner, thirty per cent. of the cutrance money goes to the winner, thirty per cent. of the cutrance money goes to the winner, thirty per cent.

goes to the winner, thirty per cent. to second and twenty per cent. to third. POINTERS. FRAIL (J. M. Bassford, Jr., Vacaville, Cal.)—Liver and white bitch, age not stated (Lemmie B.—Beautiful Queen). CLIMAX (E. W. Briggs, San Francisco Cal.)—Lemon and white dog, one year (Bang Bang—Bellona). JATBIRD (E. R. Robbius, Sacramento, Cal.)—Liver and white dog, nine months (Bow, Jr.—Ashe). FLEET (H. A. Bassford, Vacaville, Cal.)—Liver and white dog, age not stated (Lemmie B.—Beautiful Queen). BEN COTTON (H. C. Brown, Sacramento, Cal.)—Liver and white dog, five months (Bow, Jr.—Jessie Belle.) PRUDE (H. C. Brown, Sacramento, Cal.)—Liver and white bitch, five months (Bow, Jr.—Jessie Belle.) VANEAUX (G. T. Allender, Marin, Cal.)—Liver, and white dog, ten months (Glen R.—Josie Bow). PROFESSOR (G. W. Bassford, Vacaville, Cal.)—Liver and white dog, ten months (Glen R.—Josie Bow). SANCHO PANZA (N. E. White, Sacramento, Cal.)—Liver and white dog, nine months (Bow, Jr.—Ashe). ENGLISH SETTERS,

ENGLISH SETTERS.

SHOT (Chas. Kaeding, San Francisco, Cal.)—Black, white and tan dog, nine months (Regent—Fannie). MAR (E. G. Eastman, Oakland, Cal.)—Black, white and tan bitch, thirteen months (Regent—Sybil II.). N. E. WHITE. SAGRAMENTO, Cal., May 11.

DOG SHOW SECRETARIES.

Better the only using for him to do is to pull the hole in after him.
Editor Forest and Stream:
On the above subject I would like to say that I find that I have been unjust to the Pittsburgh committee in my strictures on their refusal of the protest in the St. Bernard puppy class. In common with many others, I had got the idea firmly fixed in my mind that the puppy class was restricted to twelve months and under. The fact is that by the most marveilous blunder I ever saw in a premium list, the ages for puppies were not given in several classes, among them mastiffs, St. Bernards, and Newfoundlands. (As the Pittsburgh club is death on setters, they got this fixed at eighteen months.) Now what a committee ought to do under such circumstances, I confess, is a little too deep for me. All other exhibitors in the mastiff and St. Bernard classes had taken it as under twelve months, and with the exception of the vinning puppy, all were under that age. But when a committee does not specify the age of a puppy class, what is the right thing to do is somewhat of a puzzler.
Mow how as apparently in good faith, that the club would not act on protests, was simply the most atrocious piece of high handed injustice I have ever yet known in connection with bits knowledge, and if he has proof of it, he certainly owes it to the dogry public to give it. I trust, however, for the sake of so old a show as Pittsburgh. Wat there has been some mistake about it.
Wu WADE.

HULTON, Pa., May 24, 1886.

ANNUAL MEETING OF THE A. K. C.—The annual meet-ing of the American Kennel Club which was called for the 29th ult. at the Hoffman House, was not held. Another illustration of this organization's way of doing things. This was an important meeting of the most important club in the country; yet, there was no quorum. Provies were in abund-ance, but it was unamoniously decided, by those present, that the proxies could not be counted as club representatives, un-less there was a quorum, as Section 3 of Rule 10 stipulates that "At any regular or special meeting of this Association, five members in person shall constitute a quorum." As it was, there were only three. L. L. Morgan of the Hartford Club, J. O. Donner of the Westminster, and C. J. Peshall of the New Jersey Club. Mr. Vredenburgh was at his post, but he acts as secretary only. The Hartford, National Field Trials, Montreal, Cincinnati and Pittsburgh clubs had not even the courtesy to communicate with the secretary, and state their inability to send a representative, or to mail their proxies. The meeting is adjourned to Thursday, June 10, at 8 P. M.

SP. M. SPANTEL JUDGING AT NEW YORK.—"Senex" used to charge the Hornell Club with "selling the little ones for cock-ers and the big ones for field spaniels." If his shades could revisit this earth, how they would haunt the spaniel judge at the late Westminster show for awarding a prize to Brahmin as a cocker, and also a prize to his son Banditas a field spaniel ! These awards suggest a few queries. Does Mr. Kirk consider a field spaniel and a cocker spaniel as the same except as to weight? If so, why does he not exert his influence to have the 'tooker' class abolished, and the field spaniel class made into two divisions for large and small dogs respectively? If Mr. K. does consider the cocker a distinct type or breed, it certainly would seem that the prize should have been with-held from one of the dogs mentioned on the ground of being cross-bred.—BRINDLE.

DOG LOST.—Stolen about May 10, the all black Newfound-land dog Major. He is rather small, flat-coated, carries tail low. About four years eld. His front teeth are a good deal worn down from carrying sticks and stones. He is believed to have been sent to some other city. Any one who may recognize him will confer a favor by communicating with William Burke, FOREST AND STREAM office.

KENNEL NOTES.

KENNEL NOTES. KENNEL NOTE BLANKS.—For the convenience of hreeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." All Kennel Notes must be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them. patching and loading, with all that care and deliberation when the char-acterizes the typical muzzle-man. Let us take our friends in order, beginning in that far away corner where a portly gentleman whose clear eye in a measure belie the slight tinge of gray in his hair. He is Mr. R. C. Cressy, of Brattle-boro, Vt. His arm is of Brockway make, with an octagonal barrel, and comes just within the 151bs, standard 28in, barrel. It has a cali-ber of .39, with an even twist of 1 turn in 16 inches, 8 grooves. The hullet is of Brockway make, forced out cold inder a 40-tou pressure into long rods, then cut off in lengths and again swaged to shape. They have a uniform composition of 1 tim to 20 lead. The powder which Mr. Cressy uses is Hazard FFg. A bullet picked up from his

NEWARK. May 20. —On Monday last Mr. Godfrey Snellen, of the Essex A. R. C. shot a match for \$50 with Mr. Lever of Elizabeth, at the Essex range. The match was shot under rules of the N. R. A. at Zettler ring target. Mr. Snellen won the natch with the score of 1,141 points, to Mr. Lever's 1,100 points, out of a possible 1,200. Another match was arranged between the same parties, for the same amount, for an early date at Elizabeth, Mr. Snellen to give Mr. Lever 20 points. Mr. Lever's 1,100 points, out of a possible 1,200. Another match was arranged between the same parties, for the same amount, for an early date at Elizabeth, Mr. Snellen to give Mr. Lever 20 points. Mr. Lever's 1,100 points, and the Protection of Game and Fish will be held at Burlington, Iowa, June 15 to 18, Inclusive. The association has made every effort to make this the most successful meeting ever held in the State, and judging from the numerous as- surances received, the managers believe the attendance will he duble that of previous years. The grounds selected are very fine, buildings commodious, and the comfort of visitors has been carefully looked after. The committee promise lots of live hirds, and alm ost every variety of inanimate targets; and four shoots will be carried on	to
avoid those long waits between shoots. There is a large number of extra prizes, some of them very valuable, and a large editems' purse, also a novely shoot, which will be very interesting. WORCESTER, Mass., May 27.—Battery B. of the State Militia, is located here, it is the only organization that has a Gathlag gun con- nected with militia. This week it went to the State grounds. It had two objects in view, practice and to meet the joint standing committee on military affairs of the Legislature. The result was a surprise to all, it being the first time the men had used the guns with annunition The distance was 200rds. The target was four by six feet with an eight inch bullseve. Out of a possible 25 the work of each man was as follows: Capt F W Wellington	

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. secretaries. Correspondents who favor us with club scores are particularly re-quested to write on one side of the paper only.

510. NEWARK VS. ELIZABETH.—The Southside Gun Club, of Newark, sustained its first defeat on Thursday, May 20 at the hands of the Elizabeth Gun Club. Teams of 9 men shot at Lockport 'bats,' a new form of 'crockery birds.'' Each man shot at 21 in the match and the clubs tied on 118 broken. The tie was shot off at 3 birds each and Elizabeth men broke 21 out of 27, while the Newarkers only smashed 8, making the total 139 to 136.

shion of lying down full length in the bottom steering by the i , midway, the Pearl plan of sitting up against the weather sid cans of a side-deck thap. It was pretiy generally concluded ting on deck in the circumstances would have been a sign build bave liked to see, especially some of the competitors and ofessional boat keepers (they do not get a chance of a bit of the work of the).

professional boat keepers (they do not get a chance of a bit of sal-vage work often). On the whole, Hendon Lake, though the races have this season been set a good bit too early, has produced some very good racing; and has shown that, though Nauthus comes out of it with first prize for each start, and Pearl close up, the other cances, notably Nina and Diamond, are by no means out of the running, and Sabrina, for the "second-class" matches on the Thannes, will start the favorite with a great number on the home waters. A pudding race came off at Kingston on Wednesday last. The distance was half a mile, and the competitors, G. J. B. Porter, E. W. Lewis, and H. K. Bridger, were started by Mr. A. B. Ingram at 7 P. M. Porter at once showed in front, and was never headed, eventu-ally winning easily by several lengths; Lewis second. There will be a mile race in second class Rob Roys on Wednesday next, the 20th inst.—*The Field, May* 15.

IE A. C. A. TROPHY.—Editor Forest and Stream: I heg to towledge contributions to the American Canoe Association inter-onal challenge cup, as follows: James K. Hand, Shattemuc C. C., "60." \$1, Hy. N. Sweet, Boston, \$1; Frauk Brewster, Cleveland, W. P. Couch, Dubuque, \$1; J. M. Glidert, Halifax, \$1; Walter It Palmer, Albany, \$1; Reade W. Bailey, Pittsburgh, second sub-tion, \$5; J. T. Hubbard, Clayton, N. Y., \$1; A. Bain, Clayton, ...\$1; F. R. Webb, Staunton, Va., \$1; W. B. Lesslie, Kingston, \$1; Brinlle Ruff, Dubuque, Ia., \$1; J. P. defferson, Warren, Pa., L. Weller, Brighton, Ont. \$1; Will Brooks, San Francisco, Cal., previously acknowledged, \$204; total to date, \$225.-WM. WHIT-, Chairman (37 West Twenty-second street, New York, May 1).

previously acknowledged, \$204; total to date, \$225.-WM. WINT-CR, Chairman (37 West Twenty-second street, New York, May 1). SSEX BOAT AND CANOE CLUB.-The first annual regatta of the sex Boat and Canoe Club, will be held off the club house, Passaic rer, north of the Eric Eridge, on Salurday, June 26, 1886, at 2 P. M. e programme is as follows: Paddling classes, 3 and 4; sailing sess, A and A; tandem paddling classes, 3 and 4; uset race, tub sess, and A; tandem paddling classes, 3 and 4; uset race, tub re. Suitable prizes will be given for each race. Geo, 0. Totten, na, II, Hiltier, A. W. Evenden, Regatta Committee. AKE ST, LOUIS C. C. OPENING CRUISE.-The Lake St. Louis C. enjoyed a very exciting ran on May 25, down the Chatenaugenay rer. A party of thirty-four went to Huntington by rail, with their noes, and starting on Monday morning ran down the river for a tance of 75 miles, shooting eight rapids iu which many canoes me to grief. Besides a thorough wetting and some damage to the ast, no harm was done and all enjoyed the trip. "CANOE HANDLING."-If foolish, go it alone, experiment, and rn the ropes by main strength. If wise, equip yourself with Yaux's ok and study if. It won't make you a canoeist before you go on to a water, but you will be surprised to find how simple a thing it is master canoeing, when tutored by so adept and accomplished a aster as "Dat." "CANOE AND CAMP COOKERY" is a collection of the recipes epared by "Seneca" and published in convenient form for all outers to have occasion to do their own cooking in camp or on a cruise. dollar cannot be better expended in the way of outfitting than en put into this useful manual. THE LOSS OF THE OONA.

THE LOSS OF THE OONA. The details of the sad accident by which five lives were lost, are ingel, with the accompanying cuts, in order to correct the false in-restores on a second by the first garhled reports here of the "capsize of the second second second second second second second second first reported and it is evident that she was in very heavy weather, d while it may be that a racing yacht of here construction is not the set and of other types would have fared no better. In these days here the lead fever has fairly set in here there is a valuable lesson of the target of the types would have fared no better. In these days here he lead fever has fairly set in here there is a valuable lesson would did the at very large number of them are very weak and. Owners and builders are most duredly interested in this to a did's the late Mr. W. E. Paton was an "amateur yacht de-gner," but so far from this heigh the strength in the floors they and the lead fever a speared in the calculated to convey the pression that the late Mr. W. E. Paton was an "amateur yacht de-gner nametas have supparent until fails consequences are at and theoretical training for his profession such as no other days and theoretical training for his profession such as no other day and theoretical training for his profession such as no other day here huilders, Glasgov, for some years, and then went through a prac-tice years course of study at the Koyal Naval College. Greenwice, the the invitation, we believe, of the present Chief Constructor to the

2 411 BAV Hoskin's MALAHIDE Patch Old D Castle *SONA* Wreck Imiralty, who at the time was manager of the Elswick works. He obably would have remained at Elswick had not his fondness for chts and yacht sailing turned his thoughts solely to yacht design-g. His first notable achievment in the way of designing was the ident, 5-tonner, which he hull for himself and sailed during his sign was worked out, with all the care as to weight of materials d stahility. bestowed on ironclads, and she proved a successful at the next designed the 5 tonner Olga, also while at Greenwich, r htr. J. M. Heyn, and it will be remembered that she was sumk Kungstown liarhor by a small steam yacht, owned by Mr. Talbot iver, after a remarkable series of victories. She was covered by Mr. Power, who had her repaired, and after lishing up a successful season, he sold her to Mr. G. B. Thompson in 84. While in the bands of the fatter geniteman she was opposed 'Shona and Delvin, and was finally again sumk in the Mersey by a eamer, but bas since heen again raised and repaired. During Mr. iton's stay at Elswick he also designed the credet care than Olga, d last year in the turned out the Luath for Mr. G. B. Thompson. His test effort was the Oona, and she is numbered as 'No. SX design" his own handwriting on the plans. It may be concluded from the regoing that Mr. Paton was in no sense an "amateur" designer; on e contrary, he went through a very arduous and quite exceptional

training for his profession, and had achieved such success with smar-racing yachts, that his career was full of promise. He had may many friends, and his gentlemanly manner and modest bearing cou-not be otherwise than attractive. The news of his sad fate was hear by all who knew him with genuine sorrow, and every one regretic that a life which promised to be so useful should he swept away r his very opening. In speaking thus of hir. Paton we must not forg his friend Mr. Plunket, whose death excited no less sorrow among large circle of friends. The master of the yacht, E. Porter, leaves widow and five children to mourn his loss, and, as they are total ection of the Oona, it will

to the fund. From the drawing be seen that she has flatter and straighter or four are a very ne ractically no blige, her underwater form heing than any other similar yacht, although three r approach to it. Besides the fact that, in de-sailing yacht, the lead keel must be of great i dea that, by doing away with the blige he

would get rid of some of the enormous transverse wave-makings to which these craft are prone; but whether he succeeded or not in reducing the wave-making, the features of the design bad nothing "hatever to do with the loss of the yach: a 'most elahorate specification, drawn hy Mr. Paton, wherein the whole of the construction, and your hy Mr. Paton, wherein the whole of the construction, and your hy Mr. Paton, wherein the whole of the construction, and constantly visited the yard to see that his instructions were faithfully carried out. He fixed the sizes of all fromwork, and was most anxious to keep everything as light as possible consistent with strength, so as to throw his calculations out. H is only right to say that both Mr. Paton and Mr. Plunket ex-pressed themselves highly satisfied with the manner in which Messrs. Fay had carried out all instructions. The following condensed ex-tracts from the specification of the yach: "The builders to supply and fit a lead keel of 9 6 tons, to be cast from a pattern, the latter to he most accurately moulded from the drawings, and if when cast it is found short of the calculated weight to the extent 'of more, say, than 2cvt, as much as possible of the difference is to be made up by a thick layer of white lead between the wood and lead keels, the former of which may be gouged out a liter on the under surface, so as to retain more white lead. "The sub sto he firsh oak, fin. side." "Max 'all, spaced 'Aff, so as to divide the length of L.W.L. into ten for information to the say that the builders substituted steel for iron for these frames and the flow so the sizes stipulated to row and read keels on the index with the substituted steel for iron for these frames and the flow so the sizes stipulated to row the spacing framing to consist of eight frames of L iron 21m. X in X-34 (5, spaced 344, so as to divide the length of L.W.L. into ten effort on the set frames and the flow so the sizes stipulated to row in the drawings, and edition 14, fut, un on of the larger and "Max 'a

e, and support or plates. Three of the heavy ben-or plates. Three of the heavy ben-ed with kjin. Iron floors, 2in ×2in ×3-16in., iron floor plates a heavier of the cabin, as shown in the drawing, the remaning nine be 6in, deep. The three lower strakes of the planking to be of American rock elur; croand 14in. thick. The top strakes to be of cedar in. thick, and or eremainder of the plank yellow pine lin. thick when cleared off, are to be taken that it does not exceed this. Decked covering board be 6jn, thick. There are to be six galvanized iron beams, 2in.×134in.×3-16in., at-ched at the ends of the frames with rivets and to the L iron angle nees, forming beam arms, the latter to be through bolted to side of acht and shelf. Special attention to be given to the hanging knees it the two mast beams and frames, where they are to be kneed along be beams there ahout if t. and securely attached thereto, and kneed hown the frames to the depth that the chain plates go. Wood beams own the frames to the depth that the chain plates go. Wood beams is the two mast beams and frames, where they are to be kneed along to the thore and the adding right of the specific the sp h, 3in,×134in. h, 3in,×134in. hounds. Standing rig-ron, 1ft. 3in, in widtb. abstract of the specifi-materials used; and so down the frames to between the iron, 23 Mast 7/gin. diame ging of steel wire. It is evident from cation that no fault

of the

lasted the yacht exactly to the designed load waterline, layer of white lead was not needed; and it workline, the practice of multimeters the practic keel and a that it may

that it may work out, and thus give play by use to the course everything depends upon the thickness of the where in, might be most objectionable, there would perhaps in $\lambda_{\rm din}$. It will be seen that the weak place in the construction is the floor and frame connection with the keel, the oul being two bolts through the eleven $(2n, \times 3-16n)$ flanges knee floors, pierced for $\beta_{\rm din}$ bolts, and there was no di to make this connection with the knees or throats of fla practically the first strain of the heavy lead keel was it replayed a place in the floor fastenings were a consider bically the mission of the foor faste out of strakes, as the floor faste out he edges of the keel; an olts would soon wrench out of idd out go through the flange il plates. Whether the garbo har afterwards, it is now im ick, or afterwards, it is now impossible to say, bu ad keel and wood keel-came bodily away from the bare planking and framing only were washed unption that the keels broke away hefore the yacht ent with the statement of two specitators that they size. On the other hand, the fact that the mast br id leads one to think that the mast first went, and ht drove ashore. The fact of a mast falling over y magine for the moment that the vach camized.

capsize. Capsize. capsize the necessity of having "everything as light the construction of a racing yacht, and to use as lit possible, there car be no doubt that Oona was weal citre point of view. She ought to have had bilge str al braces outside the frames to keep such a deep 1 at the weight attached to it. However, these p sesses do not appear to have in any way contributed to the there is little doubt that the hull was not one to sta and tear any more than some of the other lightly but

wear and tear any more than some of the other lightly buil craft do. Mr. G. B. Thompson who naturally has taken a great intere event and who has designed and built yachts for himself, h ished us with some particulars after vision the wreck, from we gather that the deck is perfect, but the hatches have go stem is perfect up to the scarph into wood keel. The stemp place, but the rudder bas gone. The sides are perfect dow garboards. The angle steel frames (galvanized), with steamed hetween, steel deckbeams joined to steel frames—all the ang joining these are gone in the throats. The two steel frames of mast and at the runners are, however, complete, inclu plates across the floors. The floors dropped out everywhere both wood and lead keels have gone. The mainsheet borso i small and broken two-thirds in from one end. One trysail si gone. The runner plates on port side have both gone where the spider band so that caught that casual observers said it had b through, but JR. Thompson says that it is without a doubt a '' break. The clew of the trysail is torn out from the close ree Mr.Thompson says that it is with clew of the trysail is torn out fro

Interpret of the ATT Thompson says that it is without a doubt a "carrety" break. The clew of the trysail is torn out from the close reef cringle downward. The yacth apparently made Lambay at about 10 A. M. on Wednessday, May 12, with the wind—the hardest gale since Boyd's storm—nearly due east, an hour or so before low water. She was seen by a coaster and two smacks, who were at anchor off Little Harbor, Lainbay, Gee the sketch here annexed, but not to scale.]
Mr. G. B. Thompson saw Mr. Jones, the master of the coasting schooner frospect, which was at anchor in Lambay when the Oan made her appearance round the south end of the island, hut some distance away. She hauled up on shriboard tack, and fetched to within 400 yards of the schooner, and could bave laid there at a shear of the school and the south end of the island, hut some singet to starboard again, but did not fetches of far to wind wit as she did the first time. She went out again on port tack toward last as the first time she stood out on port tack. This time, howere she allo some hands forward, and then her yacth was lost slight of, as she was the did not frest way says and the probability is that she struck the shoal, loosened her lead keel, or the latter came off, and so she became the manageable. The trysail was noticed to be closed reefed, and may near got torn when the mast went overboard. She drose and badde over fault hand so wer found near the ground nearly half a mile from Old Casile, near Malbide (see sketch), and, as she drove in, bumpad her keels out, if was correspondents of the *EVID* when the the she drose her keels out, as she wer to be also she become than answer by the heavy sea, which swert beom and all hands over houst have the tround nearly half a mile from Old Casile, near they half and the provide take the she drose earls the she stould be the search was the she stould be she become an early and the she beat the she drose certain that she actuard the she at the sh

they had not previously left her. It is not certain that she actually was very hollow. Two correspondents of the *Field* add the following letters : In justice to the designer of the above yacht, who unhappily is not here to answer for himself, I trust that you will allow me to contra-dict the extraordinary statement made in the ""Late News" of your last week's issue. Having seen the Oona, both at Southampton before she was "annched and also her wreck on the beach at Malabide, the day after the accident, I am in a position to state that there is not the slightest evidence to show that there was anything wrong with her previous to hor being driven on the beach, when she, of course, worked her reace, as far as can be gathered, seem to be these: The yacht was seen about 9 a. m. standing to the northward inside Lambay Islaod under refet trysail and refet foresail, going well; the crew, ap-parently, not being sure of their position (owing to thick wenther, and being strangers to that part of the coast), failed to hault their wind in time, or they might have anchored in Lambay Roads, where to loeward, they endeavored to beat hack to the roads, and for a crease of wind and see, or some slight accident to sheets, &c., were malted hold their yest and there was the about, all drout 1 p. m., when he boy was washed ashore on a lifebuoy; tut evidently the chain had parted, and they got among the breakers, which are fully one the boy was washed ashore on a lifebuoy; tut evidently the chain had parted, and they got among the breaked with a batchet ; they then appear to have attempted to form a raft, as the mast and other tryspars were found labed together, and dowing from the wreek by the right, but at he same time strong, as steem so doubt very then appear to bave attempted to from a raft, as the mast and other tryspars were found labed together, and lowing from the wreek by the right, but at the same time strong, as stee was largely used in her construction, and some idea may be formed of the

The natural conclusion to come to seems to be that ing made a had landfall, got embayed, and, owing to and heavy gale, was unable to get an offing, and so of weather, was literally blown ashore. The heavy become embedded in the sand, and the sea would b uil, which eame ashore, leaving behind the parts to

ted. Uteman of experience in ship and yacht building exam soon after it came ashore, and could find no appearan g or other defects—just what might he expected of a Fay without regard to cost, and designed by Mr. Paton straining or other defects—just wha built hy Fay without regard to cost, naval architect so well known in yac My object in writing to you is to con ferred from a notice in your last designed hy an "amateur," and was weather on account of the lightness tion. ing circles. et what might possibly b sue, that the Oona had nahle to withstand any h JAMES A. M. HEY BELFAST, May 19

BELFAST, May 19 GALATEA.-On Saturday next Galatea makes a the New Thames Y. C. match to Harwich, sailin farjorie, and from her performance on that occ like to form some idea of the value of the alte vinter. There is no doubt but that she is a very di vosudering her nearness to Irex even in the fork repr acl of it

Answers to Correspondents.

127" No Notice Taken of Anonymous Correspondents.

D. R. S., Bridgeton, N. J.-The New Jersey open seasons for oodcock are July 1-31 inclusive, and Oct. I-Dec. 15 inclusice. E. E., Danville, Ind.-Junc is as bad a month as any for black iss in Northern Indiana and Michigan. The fish spawn in May, as rule, although a few may be found attending to their nests by the st of June.

ist of sume. Partnerson, Ont.—Are the "compressed fluid steel" barrels made y Greener superior to the best Damascus barrels and why?—Decov, ns. Only advantage is in their lightness, being much lighter in eight than taminated or Damascus.

eight than laminated or Damascus. WATERTOWN, N, Y.-I should like to ask if the conical bullet caps, lyreritsed in your journal, can be used in a Ballard rifle.22-caliber ithout injury to the same? I should very much like to use them if can do so without injury.-W. Ans. Yes, if barrel is wiped out

<text><text><text><text><text><text>

parts. Can you give his name and occupation, and where he came from? Ans, The specimen is a *Belostoma grandis*, a water beetle guilte common and very destructive to young fish and fish eggs. It passes the day in the water, but leaves it at night to take long passes flights.

flights. Vioassume, Miss.—You will oblige me by answering in your next issue the following questions, viz: 1. What material advantages have metallic shot shell over those made of paper? 2. Are cardboard wads better than felt for over shot in a full choke gun? 3. Is there any machine in use for crimping metallic shells without injury to the shell? 4. In loading a No. 10 metallic shell with No. 8 wads for a full choke gun, will any injury to the gun result?—P. Ans. 1. No advan-tage. 2. Yes. 3. No. 4. No, if the barrels are of proper thickness and strength.

and strength. MANIFOWOC, Wiz,—In your issue of the 8th inst., Mr. Milton P. Peirce, of Philadelphia, says: "I would as soon do without a rife as without a telescopic sight, whether for target or general game shoot-ing," etc. Would you please inform me where such sights for hunting purposes can be obtained. To avoid any misunderstanding I would say that I do not mean telescopic sights for stationary tar-get or turkey shooting, but such as are "practical hunting sights."— A. W. Ans. Only one kind of telescope sights and they extend the whole length of barrel, and are intended to magnify the object. "Practical hunting sights" do not magnify. Both kind can be pro-ured at 178 Broadway. Nonwice Comp. __there une there.

A. W. ABS. Only one kind of lenseope signs and they excelled the whole length of barrel, and are intended to magnify the object.
 "Practical hunting sights" do not magnify. Both kind can be procured at 178 Broadway.
 Norwtor, Conn — Inform me through your columns how much more, if any, a pair of 10 gauge barrels would weigh over a pair of 12, both ordered to be made up into an 81b gun, barrels to be of same material and length. 2, If I had a single barrel 12 gauge borred out so as to make the interior diameter equal a 10, how much weight of metal would be cut away 53. Could I easily get a barrel heavy enough to have it experiments will weigh over a pair of 10 gauge barrel out so as the mater of a same length, but how much less can't say. There are plenty of 12-bore barrels blick enough to bore out to 10, but would be cut seen barrels will weigh to bore out to 10, but would be cut set is specially ordered.
 SEA ROOTS. — We have your inquiry for tackle and baft for rock bass. Please tell us what waters you fish in, and we can judge what fish you refer to. In explanation we would say the "rock bass," Seranus clatheratus, of the Pacific coast. Again : the "striped bass," Roccus lameadus, of the Alantic ceast is called "rockfish" in the South, and in intermediate places the names are combined and it is known as "rock, or," or "rock bass," The fish can be taken with a trout rod and fy, or with minnow or worm bait.
 CENTERVILLE, Ontario. — Is it necessary to reduce or crimp rifle cartidge shells around the builter in order to give god results' poes a set of reloading tools usually include a shell reducer.
 FEATHERS FOR FLY MAKING.—New Haven, Conn., May 26—O E. B. Fall River, Mass. - Indiced vore, in for the SETAND

1. Alls The billet should be negliging in the shear. Deter because tools does not include shell reducer. FEATHERS FOR FIT MAKING.—New Haven, Conn., May 26— O. E. B., Fall River, Mass.—I noticed your inquiry in FOREST AND STREAM, May 20, about procuring feathers for fly making. As I have had some difficulty that way myself, I thought perhaps you would like to have one or two points I have found out. Feathers of the turkey, dove, hen, partridge, etc., are not hard to obtain; in the fall you can easily get them in the markets. As to hackles a good point is this. The Jeannese stores are now selling for from 10 to 20 cents aplece small dusters entirely made up of hackles of all the natural colors. A couple of these will fourtish all you will want for anateur work, and they are in my experience 100 per cent. cheaper obtained in this way than through the dealors. If you hap-pen to be in New York at any time, you can get them at Yan Tine's, on Broadway, but almost any store that sells Japanese goods has them, in any large eity. You can got stores ther, in any large eity. You can you want for fly making of A. B. Shipley & Son, 503 Commerce street, Philadelphia,

Penn. Send for catalogue, 10 cents. These dealers are excess high priced, however, and you are not always sure of getth actly what you want, but you can get hose things from ther you can't elsewhere. As to dyed feathers, blue, green, yellow etc., for wings of files, the best plan I have found is to go warehouses of the wholesale feather dealers. There are ple them in New York, if you should happen to be there. To find consult a business directory, Andrade is a good one. I can't to other places; you can get what you want there for a son one place I picked up enough scattered feathers from the file file files for several years. You may also at some of these place dyed hackles, but not always. The millinery stores are good to runmage, in for these peneocks' feathers; you can get what of these places, going a support of the some of these place did hackles, but not always. The millinery stores are good nouses, or at stores where they sell fance yoods. In could allow use to recommend keeping camphor with your feathers or the moths will play havoe with them. - PERGYVAL. CAPE COD. - There is no process by which lines werkened I with a salmon, a modern water-proof silk line is smoothe throe-pound weight of the floor with them, with play hor word, are liable to be serviceable, but test them. If you can three ond weight of the floor with the with life the floor the moth the rings to the red, you may consider them fit to hn three pound weight of the floor with them, with the line ru three pound weight of the floor with them with you free word, are liable to be serviceable, but test them. been kept. If you have a rod maker hear you, ict him ic them. GREENHORN.-Opelika, Ala,-There is a pond in this vield is teeming with black bass, locally called tront, that with th tive method used are very hard to capture. A few are can minnows, but this kind of bait is hard to procure and kcop. want to know if you can tell me how best to fish for them, at would be the best artificial lure to use. I have never seen fishing done, nor have ever even seen a fly. Ans.-Exan stomachs of the fish, and learn what they are feeding on. I ficial baits or flies write to our advertising tackle dealers. not recommend artificial baits but small "spoon hooks" may the grandest sport, however, is with the artificial fly, if cast it. We advise that yon get a stont fly rod, say about long and from sto 10 ounces in weight, a click reel, not a mu a slik line and leader, and a few flies and learn how to cas will need a landing net also.

A pet deer in a Sacramento saloon, being frightened, jumped out through a pane of glass 7 inches wide by 15 inches long. The spectators looked on in amazement, it seening impossible that so large an animal could pass through a hole so small.—San Francisco Alta.

Impossible that so large an animal could pass through a hole so small.—San Francisco Alta. Mr. Barnum says that he has wasted \$5,000 on boomerang throwers. "You've heard of Australian bushmen," he said, "who have a weapon made of a bent stick that they throw with wonderful skill, hitting the prey unerringly, the boom-erang returning of itself to fall at the feet of the marksman? I had an agent to go from London to the wilds of New South Wales; but he writes me that the accounts are two-thirds lies; and the remaining third isn't worth bringing away. The boomerang is a fact, and the native Australian savages fling it at game—missing about as often as hitting; and it will re-turn, if it strikes nothing, to somewhere near the starting point, but with no sort of certainty. My man searched thoroughly, and witnessed the feats of the best experts to be found, but they amounted to nothing in particular. The famous boomerang is practically a myth."

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERME, \$4 A YEAR. 10 CTS. A COPY. }

NEW YORK, JUNE 10, 1886.

VOL. XXVI.-No. 20. Nos. 39 & 40 Park Row, New York.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertain-ment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be re-garded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents. ADVERTISEMENIS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 25 cents per line. Epecial rates for three, six and twelve months. Reading notices \$1.00 per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted.

SUBSCRIPTIONS

SUBSCRIPTIONS May begin at any time. Subscription price, \$4 per year; \$2 for six months; to a club of three annual subscribers, three copies for \$10; five copies for \$10. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Samp-son Low, Marston, Searles and Rivington, 188 Fleet steet, London, Eng. Foreign subscription price, \$5 per year; \$2.50 for six months. Address all communications, **Foret and Stream Publishing Co.** Nes. 39 AND 40 PARK ROW. New York City.

PAUL SEES A GREAT LIGHT.

THE forest warden of the Adirondacks, Mr. Samuel F. Gorman, who has made an investigation of the woodlands of that region, reports to the Forestry Commission that a vast amount of the State's timber has been and is now being "converted to the use of private persons," which is a polite way of saying stolen by timber thieves. Forester Gorman's inspection also developed the interesting fact that the Northern Adirondaek Railway Company has trenched upon the State's land in Township No. 14 of Franklin county and has cut off the woods. The Forestry Commission has brought a suit against the Northern Adirondack Railway Company for \$25,000 damages. This railway, which now extends from Moira to St. Regis Falls, has been authorized to extend its line twenty-four miles further to Buck Mountain. It is purely a timber road. Its contemplated extension is for the purpose of opening a tract of dense forest of 30,000 acres, which is to be cleared. The construction of such a road means that the woods will disappear before it. Whatever the lumberman leaves is destroyed by fires set locomotive sparks. A timber railroad converts the land into a desolate waste. The effect, if less speedy, is as sure as that of a forest fire. The result of the Northern Adirondack Railroad lumber operations will be a curse to the region. Even so mentally myopic an individual as Paul Smith has at last come to recognize this.

Smith is a typical North Woods landlord. Last winter, when the deer hounders were working to bamboozle the New York Legislature, they brought him down from his Adirondack hotel and put him on exhibiton on the floor of the Assembly as a North Woods sage and philosopher. The members were given to understand that Smith, who is reputed to own everything and everybody-men, souls and bonts, in his Adirondack bailiwick-was in favor of hounding, as a potent means of deer preservation. The stratagem had the desired result. Members who would not know deer from a hedgehog were so impressed by the sapient air of the gray-headed wise man of the North Woods that they voted clubs every time by an overwhelming majority; and Smith went home to put his vassals in trim for the next dog campaign. The deer in his region are so nearly extinct that the "sports" who patronize his house can get venison by no

other mode than dogging, and Smith with characteristic logic reasoned that if hounding would only bring more pa-trons to fill his till this year, the last deer ought to be clubbed -for after Smith the deluge.

When the forest destroying railroad was projected, inasmuch as it would bring tourists almost to his door, the thrifty sage of the St. Regis was delighted. The certainty of the desolation to be wrought disturbed him never a tittle; the road would bring grist to his mill; if it ruined the country, well and good—after Smith the deluge. But the desolation has come before the arrival of the guests. ruin is already being wrought. The forests are thinned out. The witchery of the woodland is gone. The hills are shorn of their glory. And Smith is bewailing. He is reported to "groan every time he hears of the progress of the road." His hounding philosophy has failed him. As a sage he would now pose in sorry plight for the in-struction of Assemblymen. Paul is beholding a great light. It is not a miraculous manifestation from above like that which shone about Saul of Tarsus on his way to Damascus, but a feeble glimmering of common sense admitted by the clearing away of the trees about the famous Adirondack hostelry. Possibly when the last deer has been clubbed and the last tree felled, every Adirondack Peter Simple may have profited by the new dispensation of unobstructed sunshine and sense.

A NEW USE FOR DOGS.

Some individuals value dogs as pets, friends and companions; some maintain them as guardians of life and property; others as useful auxiliaries in the field; in some part of Europe dogs are used as draught animals and beasts of burden; eertain Indian tribes eat dogs; among some savage nations the dog is worshipped; in other lands dogs are looked upon as materalized souls of the departed; the Supreme Court of the State of Maine holds that dogs are wild beasts, feræ naturæ, and as such may be lawfully made war upon and exterminated; city dog catchers regard dogs as the ligetimate plunder of highway robbery at thirty cents apiece; and the pound man reckons up their value when after drowning they are sold to the offal gatherers; fashionable ladies wear small or large dogs, just as they assume or put away new styles of headgear; Dr. John Brown made use of a dog as the subject of a literary effort which - as such things go—is immortal; circus clowns train troupes of trick dogs; blind men are led about by dogs to beg; some dogs are life preservers, rescuing human beings from watery graves; in Damascus dogs are protected as seavengers; ir London dogs are cut up alive by viviseetionists; the "best dog in the world" is used chiefly for brag; and again, in every part of the world there are dogs which are good for nothing save drowning in a bucket before ever their eyes

open to give them a glimpse of the world. A New Jersey doctor, Beriah A. Watson, has discovered a new use for this creature. He had the genius to recognize in the dog an animal possessing a spine, which might, by a proper device of a devilish trap, be broken for experimental 'The doctor is an "expert" employed by the Pennpurposes. sylvania Railroad Company in accident damage suits. An expert is a man who is employed to go on the witness stand and swear to the best of his knowledge, belief, medical skill and conscience, in defense of the side which retains him. The Pennsylvania Railroad Company has been annoyed by suits brought against it by persons who claimed to have received spinal injuries in railroad accidents. The Jersey City doctor, being employed to give his professional aid and comfort to the railroad as defendant in such suits, conceived the brilliant notion that by subjecting a few hundred dogs to prolonged torture he might gain some data that could be worked to the pecuniary advantage of his employers. By carefully noting the death in life of a sufficient number of brutes whose spines had been broken in his trap, and making detailed memoranda of the successive stages of their agony, he hoped to save to the Pennsylvania corporation the few hundreds or thousands of dollars it might otherwise be compelled to disburse; and thus conscientiously earn his wages as its servant.

The doctor at once became a dog fancier. He developed a great taste for dogs. He liked them—that is, he liked to break their backs in his trap and then study them as they staggered about or fell down and died. Forty-one dogs, gathered up by newsboys, had been led into the doctor's barn and put through the trap, and their living and dying duly recorded, without anything of material benefit to the railroad "expert," when the Society for the Prevention of Cruelty to Animals stepped in and put an end to the abom-ination. There is every prospect that the doctor will be last week. It is reported in our angling columns.

denied any further watching of broken-backed dogs If he longs for new scientific fields to conquer, there is an opening up on the Northwest coast. The Kootenai Indians of British Columbia have a cheerful custom of earrying the helpless old people of the tribe to re-mote localities and there abandoning them to die. Science might profit by a minute and faithful record of the successive stages of the subject's symptoms, as observed by a dispassionate and coldly professional student. The savages probably would not interfere, and the doctor, baulked of fame and fortune from his investigation of broken-spined dogs, would have the field of lingering Kootenai dissolution all to himself.

POLLUTING NEW YORK HARBOR. -- Few persons are aware to what an extent the waters of New York Harbor and the western end of Long Island Sound have been polluted by the oil refineries at Staten Island and Hunter's Point. These refineries have for years poured a substance known as "sludge acid" into these waters, and this has settled all over the bottom, making a sticky mass which has destroyed the oysters, lobsters, crabs and the smaller life which attracts fish, and has also left a scum upon the surface which is offen-We have repeatedly called attention to this matter as sive. an outrage upon the people, and now that the bill which was introduced into the Assembly by Mr. Doyle has become a law we hope to see it enforced. We referred to this in our fishcultural columns last week, and now that Commissioner Blackford has appointed a man to enforce this law, we hope that the big oil refineries will be made to take care of their refuse. The new law makes it unlawful for persons, corporations, oil refiners, etc., to cause any refuse matter to be placed in any of the waters within the jurisdiction of the State, under a penalty of \$1,000 for each and every offense; and also forbids the throwing from boats, seows and any vessels whatever, of ashes, cinders, refuse or garbage, into the waters of the Long Island Sound, west of Eaton's Neck, or into any of the bays or harbors opening into the same, under a penalty of \$500 for each and every offense. Although intended primarily to protect the oyster beds, it is just what is needed for the fishing interests of the harbor and Long Island Sound. We hope to hear that the great "Standard Oil Works," which has so long made a sewer of Newtown Creek and the harbor, will be asked to step up and pay some heavy fines.

SALMON IN THE HUDSON .- Another triumph has been scored for fisheulture. Salmon have been taken in the Hudson this season to the number of perhaps half a dozen at present writing. They are all recorded from Troy, below the State dam, with exception of one taken in Gravesend Bay which we noticed a few weeks ago. In former years an occasional stray salmon has been captured in the river at rare intervals, but these fish, coming just four years after the first stocking of the river, point to the planting of 1882 as the source of In that year a small plant was made for the their origin. U. S. Fish Commission, from the hatehery of Mr. Thomas Clapham, at Roslyn, Long Island, by Mr. Fred Mather, who has since continued the work on a larger scale, from the station of the New York Fish Commission, at Cold Spring Harbor, under orders of Professor Baird of the U. S. Fish Commission. State Commissioner Blackford is making efforts to get all the information possible concerning the capture of salmon in the river, and we shall, no doubt, hear of others being taken. The eggs from which these fish were hatched came from the U. S. station at Orland, Me., in charge of Mr. C. G. Atkins. The Hudson may yet become a salmon stream. Put up the fishways now and pro-tect the fish which have escaped the meshes of the innumerable shad nets of the lower river, and give them a fair chance.

A TYPICAL CASE .-- The effort now being made by the citizens of Antrim county, Michigan, to put a period to the netting and spearing of the remaining fish in their waters is a typical case. The illogical views of the spearers, the apathetic attitude of the average citizen, the difficulties, oppositions and hostilities encountered by the reformers, all have their counterparts in every locality where similar reforms have been attempted. The success of the Antrim County Association—for it is backed by men who know how to achieve success-will be an encouragement for other like movements in Michigan.

THE LARGE TROUT RECORD.-The record of brook trout which weigh 10 pounds or more, now includes a fish of 10 pounds 10 ounces, caught in Lake Mooselucmaguntic, Maine,

Address all communications to the Forest and Stream Publish-ng Co.

- THE TROUT STREAM THAT NOBODY KNOWS. HAVE you heard of the trout stream that nobody knows Stenling silent and sheltered 'neath o'erhanging trees,
 - While out through the meadows it ripples and flows, Kissed by the grasses, caressed by the hreeze?
 - Seciuded it wanders unheeded by man Unknown to the angler, sectre from his wiles, And the trout, unmolested (no fear of the pan), Leapand dart and bask safely in nature's sweet smiles

 - I heard of a trout stream that nobody knows (A friend (?) told it me and I vowed I'd ne'er tell). The world after that had a couleur de rose, And my dreams were of trout creels, rods, reels aud-well,
 - I resolved to explore this wonderful stream

 - To enjoy a day's outing alone by its side, nd so, by the virtue of stage coach and steam, I arrived like a bridegroom equipped for his bride.
 - For no bridegroom adjusted his nuptual day tie More deftiy than I tied my leader that day; I tested my reel and the shade of each fly, And trembling aud eager went forth to the fray.

 - I followed directions and soon found the stream-It was sparkling, pellucid, than crystal more clear But what is that signboard. Great Scott! do I dream? "No fishing or hunting allowed around here."

 - Like most of the craft, I discarded the sign, And made a deft cast o'er a black darkling pool. A rise, a strong tug and a quick straight ning line, And I landed a chub!-less than six by the rule.

 - Down a well-beaten path I encountered a boy With a twig for a rod and a pail for a creek; His face was all radiant and shining with joy,
 - For his pail held a sucker, two chubs and an eel.

 - He offered the lot for a broad silver half, And remarked. "They are better than nothin', you know." But I spurned his kind offer, demurred at his laugh, And wended my way to fresh pastures below.

 - Encouraged, I worked as I ne'er worked before, . Tried new flies, luscious worms, every art I possessed. But I got not a rise, and met anglers more Than I'd any idea the whole country possessed.
 - At last I departed disgusted and sore.
 - At last I departed disgusted and sore, With a hearty consignment to deepest of woes Of that friend who had put me (he's my friend no more) On the banks of that trout stream that nobody knows. H. W. D. L.

BIRDS OF CENTRAL PARK, NEW YORK. A PRELIMINARY LIST, BY LEWIS B WOODRUFF AND AUGUSTUS G. PAINE, JR.

The non-enclature and classification are those of the American Orni-thologists' Union "Check List." For some valuable additions to this list credit is given to Mr. E. T. Aduey.

Larus marinus (47) Great Black-backed Gull.-Winter visitant; rare. 2. Larus argentatus smithsonianus (51a) American Herring Gull.—Winter resident; abundant. 3. Aix sponsa (144) Wood Duck.—Summer resident; not

3. Aix sponsa (144) Wood Duck,—Summer resident; not common.
4. Branta canadensis (172) Canada Goosc.—Rare; generally observed during migration.
5. Botaurus lentiginosus (190) American Bittern.—Rare.
A specimen was observed May 10, 1886, by E. T. Adney.
6. Ardea virescens (201) Green Heron.—Summer resident; not common.
7. Nycticorax nycticorax nævius (202) Black-crowned Night Heron.—Summer resident; not uncommon. A specimen has been observed in December.
8. Fulica americana (221) American Coot.—Spring and fall migrant; common.
9. Actifis macularia (263) Spotted Sandpiper.—Summer resident; common.

9. Activits macularia (263) Spotted Sandpiper.—Summer resident; common.
10. Ægialitis væifera (273) Killdeer.—Rare. Observed by E. T. Adney, Sept. 3, 1884.
11. Uolinus virginianus (289) Bob White.—Resident; not common.
12. Bonasa umbellus (300) Ruffed Grouse. Resident; not

common.
13. Accipiter velox (332) Sharp shinned Hawk.—Rare.
Observed by E. T. Adney.
14. Buteo borealis (337) Red-tailed Hawk.—Resident; most common in fall.
15. Halicetus loucocephalus (352) Bald Eugle.—Very rare.
A specimen remained two months in the Park during the fall of 1866.
16. Pandion haliaëtus carolinensis (364) American Osprey.—
This species is not rare in the vicinity of Riverside Park, and occasionally is observed flying high over Central Park.
17. Syrnium nebulosum (368) Barred Owl.—Winter resident; common.
18. Nyetala acadica (872) Saw-whet Owl.—Resident; not common.

common. 19. Megascops asio (373) Screech Owl.-Resident: not

common.
19. Megascops asio (373) Screech Owl.—Resident: not common.
20. Coceptus erythrophthalmus (388) Black-billed Cuckoo.
—Summer resident; rare. E T. Adney.
21. Ceryle alcyon (390) Belted Kingfisher.—Summer resident; not common.
23. Dryobates rillosus (373) Hairy Woodpecker.—Resident; not common.
23. Dryobates publicsens (394) Downy Woodpecker.—Resident; common.
24. Sphyrapicus varius (402) Yellow-bellied Sapsucker.—
Migrant; not common.
25. Melanerpes erythrocephalus (406) Red-headed Woodpecker.—Resident; common.
26. Colaptes auratus (412) Yellow-shalted Flicker.—Resident; not uncommon.
27. Antrostomus coefferus (147) Whip-poor-will.—Summer resident; rare. Observed by E T. Adney.
28. Chordeiles virginianus (420) Nighthawk.—Summer resident; very common.
30. Chedura pelagica (428) Chinney Swift.—Summer resident; very common.
31. Trochilus colubris (428) Ruby-throated Humming Bird.<—Summer resident; common.

30. Trochius coutors (425) Kuby-throated Humming Brd.
-Summer resident; common.
31. Tyrannus (yrannus (444) Kingbird.—Summer resident; very common; breeds.
32. Myiarchus crinitus (432) Crested Flycatcher.—Summer resident; rare. Observed by E. T. Adney.
33. Sayornis phabe (456) Phoebe.—Summer resident; very common; breeds.
34. Contopus virons (461) Wood Pewee.—Summer resident; common.

common. 35. Empidonax flavicentris (463) Yellow-bellied Flycatcher. -Rare. Observed on Sept. 19-Oct. 10, 1885, by E. T. Ad-

ney. 36.

ney. 36. Empidonax minimus (467) Least Flycatcher.—Summer resident; very common; breeds. 37. Alauda arcensis ([478]) Skylark.—Six pairs were let loose in the Park by Mr. J. R. Jones in 1867. The experi-ment could not have been a success, as there is no sign of their having become naturalized. 38. Cyanocita eristata (477) Blue Jay.—Resident; not common.

common. 39. Corvus americanus (488) American Crow.—Resident;

b). Ognitativ brackit (111) Enter obj. Francher, Edit common.
39. Corvus americanus (488) American Crow.—Resident; common.
40. Dokichony.c oryzicorus (494) Bobolink.—Summer resident; not common.
41. Molothrus ater (495) Cowbird.—Summer resident; common, breeds.
42. Agelatius phanieuus (498) Redwing Blackbird.—Summer resident; not common.
43. Sturnella magna (501) Meadow Lark.—Summer resident; common, breeds.
44. Icterus spurius (506) Orchard Oriole.—Summer resident; common, breeds.
45. Icterus galbula (507) Baltimore Oriole.—Summer resident; common, breeds.
46. Scolecophagus carolinats (509) Rusty Blackbird.—Spring and fall migrant; common.
47. Quiscalus quiscula (511) Purple Grackle.—Arrives first of March and remins till December. Abundant; breeds.
48. Carpodacus purpureus (517) Purple Finch.—Summer resident; not common, breeds.
49. Loaia curpivostra minor (521) American Crossbill.—Winter resident; rate.
50. Spinus trisilis (529) American Goldfinch.—Resident; abundant.
51. Spinus pinus (533) Pine Siskin.—Spring, fall and winter visitant; not uncommon.
53. Ammadranus sandwichensis savannu (542a) Savanna Sparrow.—Summer resident; common.
54. Zonotrichia leucophrys (554) White crowned Sparrow.—Summer resident; common.

FOREST AND STREAM.

55. Zonotrichia albicollis (558) White-throated Sparrow.— Spring, fall and winter resident; abundant. 56. SpizeMa monticola (559) Tree Sparrow.—Winter visitant; not common

57. Spizella socialis (560) Chipping Sparrow.—Resident; abundant in summer; breeds. 58. Spizella pusilla (563) Field Sparrow.—Summer resident; common; breeds.

common; breeds.
59. Junco hypemalis (567) Slate-colored Junco.- Winter resident; abundant.
60. Metospiza fasciata (581) Song Sparrow.-Resident; abundant in summer, breeds.
61. Metospiza georgianue (584) Swamp Sparrow.-Summer resident; not common.
62. Passerella iliaca (585) Fox Sparrow.-Migrant; abundant. A few remained through the winter of '84-'85.
63. Pipilo erythrophthalmus (587) Towhee.-Summer resident; common.

67. Piranga erythromelas (608) Scarlet Tanager.—Summer resident; abundant; breeds.
69. Tachycineta bicolor (614) Tree Swallow.—Very common in spring and fall.
70. Clivicola riparia (616) Bank Swallow.—Summer resident; common.

ident; common.

ident; common.
71. Ampelis cedrorum (619) Cedar Waxwing.—Resident;
most common in summer:
72. Vireo olivaceus (624) Red-eyed Vireo.—Summer resident; common; breeds.
73. Vireo gibrus (627) Warbling Vireo.—Summer resident;

Vireo olivaceus (624) Red-eyed Virco.—Summer resident; common; breeds.
 Vireo giluxes (627) Warbling Vireo.—Summer resident; not common.
 Vireo giluxes (628) Yellow-throated Vireo.—Summer resident; not common.
 Vireo noveboracensis (631) White-eyed Vireo.—Rare summer resident. Observed by E. T. Adney.
 Minotilla varia (636) Black and White Warbler.—Summer resident; common.
 Helmitherus vermivorus (639) Worm-eating Warbler.—Rare summer resident.
 Helmitherus vermivorus (639) Worm-eating Warbler.—A very rare summer resident.
 Helmithophila pinus (641) Blue-winged Warbler.—A very rare summer resident.
 Helmithophila chrysoptera (642) Golden-winged Warbler.—A very rare summer resident.
 Helmithophila ruficapilla (645) Nashville Warbler.—Spring and fall migrant; very common.
 Compsothlypis americana (648) Parula Warbler.—Chiefy spring and fall migrant; very common.
 Dendroica carulescens (654) Black-throated Blue Warbler.—Spring and fall migrant; very common.
 Dendroica carulescens (654) Black-throated Blue Warbler.—Spring and fall migrant; very common.
 Dendroica carules (655) Myrtle Warbler.—Spring and fall migrant; very common.
 Dendroica carules (655) Myrtle Warbler.—Spring and fall migrant; very common.
 Dendroica carulea (655) Chestaut-sided Warbler.—Spring and fall migrant; very common.
 Dendroica castanca (660) Bay-breasted Warbler.—Spring and fall migrant; not very rare.
 Dendroica estinat (661) Black throated Green Warbler.—Spring and fall migrant; not very rare.
 Dendroica virenta (661) Black burnian Warbler.—Spring and fall migrant; very common.
 Dendroica estinata (661) Black burnian Warbler.—Spring and fall migrant; very common.
 Dendroica virenta (661) Black burnian Warbler.—Spring and fall migrant; very common.
 Dendroica virenta (667) Blac

Warbler.—Spring and fan migrant; common.
94. Seiurus aurocapillus (674) Oven Bird.—Summer resident; common.
95. Seiurus novebracensis (675) Water Thrush.—Chiefly spring and fall migrant; not uncommon.
96. Seiurus moducilla (676) Louisiana Water Thrush.—Rare. Observed by E T. Adney.
97. Geothlypis trichas (681) Maryland Yellowthroat.—Summer resident; very common; breeds.
98. Icteria virens (683) Yellow-breasted Chat.—Summer resident; not common.
99. Sylvania mitrata (684) Hooded Warbler.—Very rare. A male specimen was observed on May 11, 1886. The movements of the bird were watched for more than an hour.
100. Sylvania canadensis (686) Canadian Warbler.—Spring and fall migrant; not common.
101. Sylvania canadensis (686) Canadian Warbler.—Spring and fall migrant; common.
102. Setophaga ruticella (687) American Redstart.—Summer resident; very common, breeds.
103. Minus polyglottos (703) Mockingbird.—This species has been repeatedly observed, but under conditions that render it probable that the specimens were escaped cage birds.

Instructure

common.
112. Regulus satrapa (748) Golden-crowned Kinglet.—
Spring and fall migrant; common. Occasionally seen during the winter.

116. Turdus ustulatus swainsonii (758a) Olive-backed Thrush.—Spring and fall migrant; not common. 117. Turdus aonalasehkæ pallasii (7590) Hermit Thrush.— Spring and fall migrant; common. 118. Merula migratoria (761) American Robin.—Summer resident; abundant; breeds. A few winter. 119. Stalia sialis (766) Bluebind.—Summer resident; com-mon mon,

120. Passer domesticus (----) House Sparrow.---Resident; very

abundant; breeds. 121. Carduelis elegans (---) European Goldfinch.--Resident;

THE AUDUBON SOCIETY. THE AUDUBON SOCIETY. THE ditor recently suggested that those who favor the objects and aims of the AUDUBON SOCIETY should do their best to help it along, and if necessary smother their pet aversions to any unfortunate class of birds which may have incurred their displeasure, until the objects aforesaid shall have been accomplished. I consider this position a sound one and hope that it will be generally so regarded. I am reminded of a man who the other day in speaking of our new fish and game protective association, said to me that had we inserted in our constitution one article which had been omitted he would join the society. This was, he said, a clause discountenancing the catching of fish on the Sabbath. "My dear sir," said I, "if you had attended the meetings and helped to organize the association, you could have pro-posed that or any other article you chose, and it would have been put to vote. As it was we hacked your valuable assist-ance and had to do the best we could without it." This man will reap the benefit of our labors in the increased supplies of fish at his door; and those who do not join the AUDUBON SOCIETY because they want to shoot hawks or some other feathered creature will nevertheless profit by its efforts and the result of its work. May 31. The "Hoor SNAKE" MYTH.—Logansport, Ind., June 4.—

efforts and the result of its work. KELPIE. MAY 31. THE "HOOP SNAKE" MYTH.—Logansport, Ind., June 4.— Editor Forest and Stream: Tally one more in favor of the hoop snake question. I clipped the following from the Peru (Ind.) Sentinel.—KANKAKEE. The inclosure reads: "Most all our renders have heard of the hoop snake, but comparatively few, if any, have seen one. Indeed, many are inclined to doubt the existence of it, but all surmises are set at rest, as James Nolan, living on O. P. Webb's farm one half mile south of town, killed one Monday forenoon. He discovered it in a ravine and when it saw him it rolled up in the shape of a hoop, but he struck it with a club and disabled it. Mr. Nolan had never seen a hoop snake, but had heard of it and noticed that when he touched the body with a stick the tail at once struck the stick with considerable force. He experimented some time until thoroughly convinced that he had found the genuine hoop snake. After it was entirely dead Mr. Nolan cut off the needle in the end of the snake's tail and now has it in a bottle where all can see it who are disposed to make the trip to his residence. The needle, or sting, is seven sixteenths of an inch long, looks like a thorn from a locust tree and is of a black color. Showing golden as it moved. The under surface of the monster was a dirty yellow. The remains are still where the snake was killed and can be seen by all who are curious to look at a genuine hoop snake. Mr. Nolan is a truthful man and there is not the slightest doubt that he killed a hoop snake, as both the snake and stinger can be seen. We believe it is the first instance of the kind in this county." GAME BREEDING IN CONFINEMENT.—Osakis, Minn., May 30.—Edilor. Forest and Stream: For the benefit of your

Gounty." GAME BREEDING IN CONFINEMENT.—Osakis, Minn., May 30.—Editor Forest and Stream: For the benefit of your readers I note the breeding of wild game in captivity. T. B. Johnson, our leading merchant, has his yard inclosed with wire netting, the meshes small enough to hold quail. In the yard he has a happy family, consisting of two ante-lopes two years old (the female of which threw two fawns about a week ago), rabbits of several kinds, California quails, Bob Whites, pairots, and several cages of native birds. The Bob Whites he has had two years. The first season they laid, but the nest was destroyed by a cat; last year the hen bird laid, and after sitting about a week, was killed. The cock bird then took the nest, hatched out the young and reared them. The flock of eleven has dwindled down to five, two of which are now laying. The California quail, of which he has ten, are dropping their eggs around the yard, but so far do not make any nests. They are all very tame, so much so that they hardly get out of the way of even a stranger.—S. W. S. THE TOLEDO EAGLET.—Mr. Emory D. Potter, of Toledo,

stranger.—S. W. S. THE TOLEDO EAGLET.—Mr. Emory D. Potter, of Tolcdo, O., writes to Dr. E. Sterling, of Cleveland, under date of June 2, of the Toledo eaglets: 'I visited the birds and found the woolly head as lively as a cricket. The old ones will allow no one but Mr. Hulce, who feeds them, to come near the cage. I never heard before of eagles breeding in con-finement. The young one is growing nicely. Mr. Hulce has bred quail, blackbirds, robins, ring doves and several other kinds of wild birds in wire cages. The eagle laid one egg last year (at five years old) but it did not hatch. I see no reason why he may not stock the whole country with eagles and the singing birds of our forests.—E. D. POTTER."

CROW CATCHING MINNOWS .- Richardson Lake, Me., June Chow CATCHING MINNOWS.—Hichardson Lake, Me., June 2.—Editor Forest and Stream: I saw a somewhat curious feature in the crow line to day while I was looking upon the lake, which I never saw before, but may be common enough for all I know—that of a common crow striking for minnows in the water. After two unsuccessful efforts the crow car-ried off from the surface of the water in its bill a minnow about three inches long. It was in quite plain sight, and evidently taken from a school of small fry about 100 feet from the shore.—J. P. W.

from the shore.—J. P. W. RECENT ARRIVALS AT THE FHILADELPHIA ZOOLOGICAL GARDEN.— Purchased—I black-headed lemur (Lemur brunneus), I Mona mon-key (Carcopithecus anona), 6 Rhesus monkeys (Maccause scythreus), 2 Hamadryas baboons (Cynocephalus hamadryas), 1 Diana monkey (Carcopithecus adiana), 1 black-handed spider monkey (Ateles mela-nochir), 2 Gillespie's hair seals (Zalophus gillespit). 1 Peruvian Jay (Xanthoura ancas), 1 yellow-winged sugar bird (Careda cyanea), 1 European wax-wing (Ampelie garrulus), 2 Egyptian geess (Chelano per cef. priaca), 1 ground dove (Chamapelia passerina) and 2 two-lined pythons (Python bivittatus). Tresented—1 wildcat (Lynx urpus), 1 opossun (Didelphys wirginiana), 1 woodchuck (Arctomys monax), 8 yellow birds (Chrysonitris tristis), 2 crows (Corvus ameri-canus), 5 crow blacktorids (Quiscalus gurpureus), 1 preat-horned owl (Bubo virginianus), 8 scree ch owls (Scops asio), 1 nobin (Turdus mi gratorius), 4 aligators (Calligator mississippinesis), 1 nie snake (Pi-tyophis menanoleucus), and 1 red-bellied terrapin (Pseudemysrugoso). Jorn - 8 prairie wolves (Caris Larans), 1 bactrian camel (Canelus bactrianus), 5 prairie dogs (Cynomys Iudovicianus), and 1 elk (Cervus canadensis). Exchanged—2 golden eagles (Aquila chrysaetus).

THE TRAJECTORY TEST.

THE full report of the FOREST AND STREAM'S trajectory test of hunt-ing rifles has been issued in pamphlet form, with the illustra-tions and the tabular summary, making in all 96 pages. For sale at this office, or sent post-paid. Price 50 cents.

TURKEY SHOOTING FOR A HAT.

A BOUT the middle of April myself and three others planned to go to the woods and spend a week after tur-keys, so one Monday morning we packed a tent and camp equipments and some provisions into a wagon, and drove to the woods where we proposed to camp. We arrived at our destination a little before dark, and after pitching the tent and making some hasty arrangements for the night, atc our supper and turned in, planning to be up early in the morning, there being a prize of a new hat awaiting the man who should kill the first gobbler. The hat was to be paid for by the other three.

there being a prize of a new hat awaiting the man who should kill the first gobbler. The hat was to be paid for by the other three. Our camp was situated near the line between Garland and Perry counties, in a very mountainous piece of country, being on the watershed between the waters running south to the Washita, north to the Fourche la Fave, and east to the Saline. The teamster who had brought us out was to return nome in the morning and come after us again at the end of the week. Our party consisted of, first, Mr. P., a man of somewhere near fifty years of age, who belongs to the legal profession. He had acquired some experience in woodcraft previous to this trip. He used a breechloading gun of Colt's make. Second, Mr. L., of about one-half the age of the former, of mercantile pursuits, a genuine lover of the woods and the gun, and who never lets a chance of enjoying them go by unimproved, his gun was a Parker. Third, Joe A., a native of this State, also a half centenarian, and who had spent probably one-half his life-in camp among the forests and mountains of the frontier. He still sticks to the old muzzleloading rifle, and says he would not give it for any of the new-fangled perpetually loaded arrangements of the present day. Every one to his notion, you know. Lastly, the subscriber. My gun on this trip was a .38-cal. Ballard rifle.

<text><text><text>

388
one evidently left for a safe country as I heard nothing more of him. I took my dead turkey and went off is the direction Mr. P. had taken. I soon met him coming toward me. He said he had heard a turkey gobbling near him, but could not call it up as he was a poor hand at calling. We moved off across a hollow and over the wet ridge, when we heard another gobbling off to the south of us. We went around the point of a hill toward him, and having the hill between us and him we succeeded in getting near enough for him to hear me call, so we prepared ourselves for him and I undertook to call him up so that Mr. P. could get a shot. After answering me several times he seemed to be coming nearer, and finally we could hear him strut and drag his wings just around the point of the hill from us. There was an old pine turned out by the roots not more than thirty yards before us and soon he stepped out from behind this root into plain view. Mr. P. fired one barrel and the turkey rolled over, but got his wings spread and started to fly, the steep hillside giving him a good start. But Mr. P. gave him the other barrel before he had fully got under way, and he fell and coled and flopped down the hill to the bottom, where we found Mr. L. with a fine gobbler hung up before the tard the get it. He said the turkey managed to go fa a little piece, but he had him in hand when he heard asked if he killed his turkey outright or if he had tor mit down before he got it. He said the turkey managed to go fa a little piece, but he had him in hand when he heard the off off a little piece, but he had him in hand when he heard the south off a little piece, but he had how the hast by about the saiting some time for Joe ate our share and put his by the fire to keed warm. Joe did not return until nearly 10 o'clock, and we had become really concerned about this, was a stot at anything. "But," said he, "I'll get even with the rest of you before the week is up," which prediction he fulled to his satisfaction. We spent a portion of each

hunting, aside from our morning's trip, but the woods were so open that we were not very successful in getting any game in the daytime. Thursday morning was clear and still and delighfully warm, and every gobbler in the woods seemed determined to make the most noise. At one time I could hear four differ-ent turkeys gobbling in as many different directions. I suc-ceeded in calling up and killing one before the sun was fairly up; then changed my position, so as to call for Mr. P. again. I commenced to call and two came from opposite directions. I fixed myself to shoot one and Mr. P. the other. Mr. P.'s came within shooting distance first and he fired, killing his. The other turned to run and I fired, but missed him. He arose and flew across a hollow in front of us, alighting on the other side, and started to run up the hill. I had another cartridge in the rifle by the time he struck the ground. He was fully one hundred yards away, but could not run very fast up the hill. I fired again, hitting him in the back, and he came tumbling down the hill toward us. Joe came into camp this morning also bringing two turkeys. Mr. L was the uniucky one this morning, he having got a shot, but did not kill his turkey. Triday morning was cleaved and we made preparations for our last hunt in the morning. Saturday morning was clear and still. Joc and Mr. L. each got a turkey. Mr. P. and I di not meet with success this morning. We did not hear but one gobbler, and he had found ether company before we got near enough to him to call. We got within sight of him and a hen, but they saw us and flew before we were within shooting distance. The proceeds of our hunt were eleven turkeys, Joe killing four, Mr. P. and Mr. L. two each, and I three. LEW WILLOW.

ARKANSAS

THE ELUSIVE BLUE GROUSE.

IL -IN THE THICKETS OF THE MUSSELSHELL.

THE SUPERING THE CHICKETS OF THE MUSSELSHELL. THE sup's first rays, peeping through the open door of our log cabin, banished all thought of sleep for that day. Jack Miller and I hastily pulled ourselves together, and our boots on the wrong feet, of course, as we always did when in a hurry. After an exchange of prisoners had been effected, we finished our simple toilet, and raced over to the cabin scrving us for a kitchen, dining-room and drawing-room combined.

As we ran the keen, bracing and invigorating air made us feel like race horses with sinews of steel, while the thick October frost was ground into diamond dust by our heavy

riding boots. Bursting into the kitchen, we found cook busily making baking powder rolls and frying salt pork and potatoes, which merrily sputtering over the fire strongly appealed to my

bairing into the kitchen, we found cook busity making baking powder rolls and frying salt pork and polatoes, which merrily sputtering over the fire strongly appealed to my ravenous appetite.
Jack and I were spending a year on our Montana cattle ranch. This ranch is situated on the Musselshell River, and consists of four roughly-built cabins with a stable, all having mud roofs, and a few miles of superb pasturing land under fence. We had about eight thousand cattle on the range, and eighty horses for round up purposes and daily use.
The penetrating smell of breakfast soon brought out of their shack our six men, but half awake, with tousled heads and towel of which the ranch could boast, soon transformed them into as many handsome cowhoys, all perfect specimens of their class. They were each known by some curious soubriquet, and were quite a peaceable set of fellows when not full of bad whisky.
Tishing a meal of a size to make an Eastern man pale with horror, one of the boys rode after the horses feeding in the pasture a little distance away. He soon appeared, driving them before his circling lariat into the corral. There we lassoed and saddled our favorite retreats of mountain or blue grouse, as they are sometimes called, are thickets of young winds of berries and roots. The young birds, fully fledged by this time, become very fat and juicy, affording excellent sport for both gun and palate.
The was a large tract of and covered with these thickets about seven miles down the river from the ranch; for this we now set out. A pleasant ride brought us to it, and selecting a promising spot, we picketed the horses with a lariat.

Our grouse is a noble game bird. It is about twice the size of a partridge, much swifter on wing, and more deli-cately flavored. Their plumage assumes a dull gray tint at a little distance, corresponding so closely to the color of brush that it is almost impossible to distinguish them until they dart from under your very feet. In summer, when flushed, they go but a little way and then settle down until again disturbed later on. However, a mile is no long flight when they are thoroughly frightened. Some of their habits resemble very closely those of the domestic fowl. They are extremely fond of rolling and scratching in loose earth, and always cackle when excited exactly like a hen. It is terri-bly anonying to hear them all around you and not to be able to catch the least glimpse of one on the ground. I had scarcely form my way through a thickly woven mass of wild currants and rose bushes, when whirr—whirr— whirr.-r., up darted five grouse. Quickly throwing up my gun, I emptied both barrels at this covey, and had the satis-faction of seeing two of them fall. Securing these I slipped a couple of fresh shells into my smoking gun and pushed ahead. About this time Jack made a very fine shot, deserving

laction of seeing two of them fail. Securing these I slipped a couple of fresh shells into my smoking gun and pushed ahead. About this time Jack made a very fine shot, deserving mention, as it is seldom accomplished. He was alittle ahead and about fifty yards to the right, when three birds were flushed. Killing two with the right barrel, he dropped the third with his left, in very pretty style. Shooting a good many grouse on the way we finally emerged from the tangled undergrowth, to find the Mussel-shell rippling at our feet. A herd of deer drinking from the shelving bank opposite vanished like phantoms through the brightly tinted bushes, leaving no proof of their reality, save delicate prints on the yielding sand. The sight that met our eyes was too beautiful to describe. Like a band of burnished silver, winding in and out between bristling cliffs and spurs of the ancient mountains, ran our tiny river. Here and there, dotting its placid surface, lay flocks of ducks and geese, welcoming each newly arriving comrade with wild and musical cries of delight. Tall cotton-wood trees lined either bank, over the tops of which could be seen the white-haired Showies, seemingly separated from our touch by a light veil of haze. The impatient neighing of our ponies dispelling a reverie which had stolen over us, we snatched up our game and took the shortest cut to them, finding they had eaten up everything within range. Springing into the saddle we went to another place also frequented by grouse. There we found them in abundance, and shooting until ammunition gave out suspended operations for the day. We must have presented a funny appearance riding home with necklaces of grouse, gamebags full of grouse, and grouse hanging from every conceivable place. Our bag was as follows: Jack's shooting 21 birds and 1 25 made a total of 46 grouse.

46 grouse. Arriving home before dinner time, we dressed half of our game, and had a hard time to get them all in the oven at once. The reader will not believe me when I say those 46 grouse disappeared in three meals. W. S. S.

NOTES FROM THE NORTH WOODS.

<section-header><text><text><text><text>

try it

try it, I am glad to learn through your valuable paper that the Rhinelander estate has got into hands that will help enforce our game laws. I do not believe in large estates in Amer-ica, but the good results of Dr. Brandreth's owning a six miles square township north of Raquette is known to all familiar with the Woods. I have fished and hunted all over the Rhinelander estate, and know that if in the right men's hands it is a grand thing for the south part of Adirondacks and a sure place for sport for its owners. We all feel that we have secured a new lease of life by our trip, and that with renewed energy we can in business

easily make up for the time spent so gloriously on the lakes and streams of the North Woods. M. S. NORTHRUP. JOHNSTOWN, N. Y., May 31, 1886.

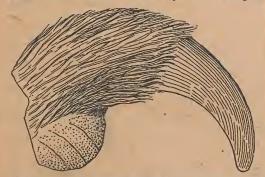

Mr. P. H. Apgri, of Syracuse, who has been an annual visitor to the North Woods for thirty-five years, writes from Number Four to a home paper: "Governor Seymoor was veliknown to many people here, and his sudden death was a shock to them. Years ago he was a frequent visitor to the Wilderness, and he could tell many tales of his adventures during these excursions which were always made in the winter season. He used to say that the winter months were the best time to see the Wilderness; that then there was far more to be learned of the habits and character of the animals than in summer, that the proper time for hunting and trapping was after the enow fell. He had to passion for angling, and was no expert hunters. He would occasionally shoot a deer, and once killed a moore, said to have been the last one ever seen in these woods, although hunters thereabouts claim to have crossed their tracks within the last five or ten years. "What remained of the moose were mostly, if not altogether, destroyed by the last generation of hunters, and the deer with the stremainted of the should cocasionally shoot and provide the set of the present generation, if the Legislature continues to play with this question as it is now doing. A year ago it passed an at prohibiting the hounding of these animals at all sensors, this session it so anneded the act as to legalize the practice between the ist of September and the 5th of October. Other parts of the act are so framed as to give the houndars a trial hunting". No deer can be killed in any way after Nov. 1, and this is also a prohibition spinst. "still-hunting, for deer seldom come to the water at so laye the drivers complete masters of the field, will be or render the drivers complete masters of the field, will be or render the drivers complete masters of the field, will be or render the drivers complete masters of the field, will be or render the drivers complete masters of the field, will be ordered by hounding. The passet and moset effective means of destruction yet inverted the d

boats." MONTREAL, June 1.—The Fish and Game Protection Club of the Province of Quebcc, which was organized in February, 1859, has just been incorporated. It is admitted by all that it is one of the strongest organizations of its kind on this continent, and country. The act of incorporation reads as follows: Granted under the provisions of the Act 48 Vic, chap. 12, cnitled "An act to facilitate the forma-tion of Fish and Game Protection Clubs in the Province." By virtue of an order in Council No. 192, approved by His Honor the Lieutenant-Governor of the Province of Quebec, on the 20th day of May, 1886, M. M. George, H. Matthews, John Nelson, Jr., William H. Rintoul, Louis Alphonse Boyer, William H. Atwater, Edward B. Goodacre, George U. Ahera, Hubert Root Ives, Isaac H. Stearns, Jas. Slessor, Ernest Lacroix, Andrew Dawes, H. W. King, Thomas C. Brainerd, C. de Salaberry, Robert McKay, A. N. Shewan, all of the city of Montreal in the said Province, and others marked in the schedule hereto annexed (over 300). And all other persons who are now or who may hereafter become members of the club incorporated in virtue of the sald order in Council, are hereby constituted a body corporate and politic under the name of "Fish and Game Protection Club of the Province of Quebec." The act of incorporation was obtained through the indefatigable exertions of Mr. Selkirk Cross, who spared neither time nor labor in his endeavors to place the Fish and Game Protection Club of Montreal upon a sound and legal basis.

A WINTER HUNT.

<text><section-header><text><text><text><text><text>

FORECLAW OF THE BIG GRIZZLY.-Editor Forest and Stream: I send you an exact size sketch of the foreclaw of the big grizzly which "P.," your most able correspondent and Rocky Mountain hunter, killed, and a full account of which ap-peared in your columns in the Christmas number. "P." sent me this claw just before the time of your publication, as a gift and curiosity. It is referred to in his article and I think a published sketch of it will prove interesting and

furnish an item of authentic history for the naturalist. The boys and the beginners with the rife and at hunting will look upon it with a kind of cold shudder, and the city and village "expert" will have to admit that there is no "tender-foot" about this bear nor about "P." either. I offten see, Mr. Editor, your two young half-grown grizzlies in the Central Park menagerie. In their new iron-grated cage they always attract crowds to see them. There are other species of bear mixed with them, but there are none whose claws seem more striking than theirs. As they have access to a hole in the rock for sleeping, and the privileges of clinb-ing the rock by day, it is presumable they sometimes imag-ine they are in their native mountains themselves, and thus for the moment they appear to be as "happy as two young cubs."—MAJ, H. W. MERRILL.

MR. PRINGLE'S SNIPE SCORE.—A correspondent wishes full details of Mr. Pringle's famous snipe score in Louisana some years ago. Can any of our readers furnish the inforsome years ago. mation?

THE STANDART SHOOTING CLUB, of Denver, Col., is an organization of sportsmen, who have secured the exclusive shooting privileges on certain lakes on the land of J. W. Bowles, Esq., about one and one half miles west of Littleton, Colorado. The club has erected a comfortable, commodious club bouse, with bunks and bedding and necessary kitchen utensils, and sufficient stable room; has planted wild rice and erected blinds, and has decoys and other accessories. The lease of its lakes runs for five years from 1884, with privilege of extension for a like term. While the house and grounds are neither large or elegant, they are comfortable and sufficient, and while it is not believed the game will be seriously depleted by our members, a great deal of genuine sport is afforded. The club as an organization, and its in-dividual members, have materially aided in securing proper game laws, and insisted upon their strict enforcement.

How Long Do Foxes AND Hounds Run?—A New York for hunter has printed a statement that red foxes in his sec-tion run before their best hounds from twelve to forty-eight hours. Pray, how fast can any animal run after he has been running forty-eight hours? In Virginia all the fox hunters who catch red foxes will tell you that if a pack of hounds fail to run into reynard or to run him to earth within six hours of constant running he goes cott free that day. Some-times an old red will run straight away thirty or forty miles and tbrow out all the huntsmen and all the dogs except a few of the stoutest and fleetest; but you can never prove by any one that that fox was caught. A long fox chase, that is to say, a chase of twelve hours, means slow dogs, and they can't catch a red fox unless a load of lead is tbrown into him; and any fox hunter who in this Statc would swindle a fox out of his life by shooting him would be inexorably taboged by all the fraternity. But no fox and no hound ever ran forty-eight hours on a stretch.—Red Eve (Virginia).

QUERIES ABOUT MOUNTAIN SHEEP AND GOATS.—Rocky Mountains, Montana.—*Editor Forest and Stream:* Very little is known abont our bighorn (*Ovis montana*) and our goat (*Aplocerus columbianus*). Now cannot some of your many readers tell us something about their habits? Following are a few questions I would like answered: Are the summer and winter ranges of each different? Which side of the mountains do they stay on most in winter? Which in sum-mer? When does the rutting season begin and how long does it continue? About what time are the young born? What is their principal food? Do they eat much grass? What quadruped is their greatest enemy?—GREENHORN.

GAME PROSPECTS IN TEXAS.—Edna, Tex., May 21.—We are having an exceptional dry season this spring, and the prospect for chickens and quall is very fine. I came a dis-tance of twenty-five miles this morning by rail, and saw two broods of chickens in the road, they were about the size of quall and could fly nicely, while the pairs of quail flying up along the road bed were innumerable. Wish you could come down here this fall, I could give you all the turkey sbooting you wisbed, and throw in deer for good measure.—LEX.

THE BEST READING FOR CAMP.—Aroostook County, Maine, May 30.—Editor Forest and Stream: I start to-mor-row for a summer's outing in the wilderness—upper St. John and its main tributaries. I shall divide the season into several trips, coming down each trip for a recruit; and copies of the paper will be so nice to take along for reading. I had no reading on my trip up there last summer. I go where 1 will meet none others, roughing it in its fulllest sense (just what I like), my one poler the only companion.—MAINE.

[•] APPLETON, Wis., May 31.—There are a number of ruffed grouse left over here; I saw six different ones in a few hours stroll a few weeks since; one of them was drumming. They were not at all wild. I think deer had a pretty hard winter on account of deep snow. A large herd wintered within five miles of town, but few people here knew of it, and none were killed illegally I believc.—Fur.

"The ENCHANTED SUMMER-LAND" is the apt title given by the Chicago and Northwestern Railway to the favored country reached via their line and its connection. A hand-somely printed pamphlet bearing this title and descriptive of the summer resorts, angling and shooting points, is sent out by R. S. Hair, General Passenger Agent, Chicago, Ill.

SULLIVAN COUNTY, N. Y.—Monticello, June 7.—Young partridge and woodcock are very plenty and good shooting can be had in this vicinity next fall. Deer are also quite plenty five miles south of this place on the barrens. Good bass fishing can be had here any time during the summer; all the lakes are well stocked.—C. F. KENT.

CLUB RULES.—We have frequent calls for copies of club rules, by-laws and constitutions. Secretaries of gun clubs, angling clubs and game protective associations will oblige us by sending spare copies of their printed rules, that these may be in turn sent to organizers of new clubs.

TENNESSEE.—Nashville, May 21.—Bob White can be heard in all directions. With a favorable summer sport will be good here next fall.—Rex.

PUBLICATIONS RECEIVED.

DUBLICATIONS RECEIVED. Through the Yellowstone Park on Honsenach is the title of a pleasing little book by Gen. George W. Wingate, just published by the O. Judd Company. It is an account of a trip made last summer by the author, in company with his wife and daughter. Instead of fol-lowing the ordinary route of tourist travel, the party went to Boze-man, there produced guides, wagons and animals, and made the trip to the Park on horseback, a method which gave them great satisfac-tion. The party visited the Mammoth Hot Springs, the Geyser Basins and the Canyon, returning to Bozeman by way of the Madison Basin, Thee (here curiously spelt Targees) Pass and Henry's Lake, here had a delightful trip, a number of adventures, such as losing their horses and meeting "bad men," and good fishing. After pass-ing out of the Park General Wingate killed a few elk. The book is pleasantly, written and the story is told in a simple, attractive fashion. The principal merit of the marative is that it gives in great detail just what the parky took with them, what they found useful and what superfluous. Ik will, therefore, prove a useful book of ref-rence to those who propose for thermselves a similar trip through this region. The chapters on game and on the flora of the Park are by far the least suisfactory in the book, and coutain many erroneous statements. That on the ritle, on the other hand, is very useful, though we can by no means agree with all the author's conclusions.

THAT OLD BOAT.

<text><section-header><text><text><text><text><text><text>

sit down. Finally the duffle is aboard and you are off. Then you notice those little eccentricities that I mentioned above. The you notice a thin thread of water creeping along the side of bottom. She leaks never mind, we can keep it un-der with the bailer. About this time you get a fish. This raises your hopes to fever heat. He is small, but the big fellows will be along in a minute. He is quickly taken from the hook and thrown into the bottom of the boat. He re-wards this attention by getting into that wet spot and flap-ping his tail in a way that sends a shower bath over you. Compelled by this annoyance to stop fishing, you hastily kitch him up under the forward thwarts and hope he will die there peacefully. For a time all seems well, but soon he is back there again and the process is repeated. This time you kill him and decide that henceforth you will be humane and kill mand decide that henceforth you will be humane and will mand the process is repeated. This time you will him and the process is repeated. This time you will him and the process is repeated. This time you will him and the set set well save that the water in everything else are getting yery wet. You grun feet and everything else are getting yery wet. You grun feet and everything else are set thing thirs thilling him. This time the effect is tremendous. There is now so much water in the bottom that as soon as he strikes it a regular rain commences over every one. In catching him you get wet all over. And thus the time goes on and mayhap you will have good luck as the time goes on and mayhap you will have good luck as the time goes on and mayhap you will have good luck as the time goes on and mayhap you will have good luck as a possibly not, but whether you do or not you will be sure to execute that old boat. In concluding I cannot help relating an incident that hap-party of us were out bass fishing. We had precisely such a boat as 1 have described above. It was divided into three elaked very badly, and there were about five inches of water

as a youngster of twelve. The last of our party was in

<text><text><text><text><text>

TROUT FISHING ON CEDAR RIVER.

[The following relation takes the place of the "Camps of the King fishers" this week. After reading it, the reader will perhaps reflec that in no respect was the composition of the camp more felicitour than in its possession of two such chroniclers as "Kingfisher" him self and "Snake Root."]

that in no respect was the composition of the camp more felicitous self and "Snake Root."] I HAD never creeled a trout. Bass I knew and salmon I had worried to the death. The silver perch, rock bass, the naughty pickcrel and the whole horde of mongrels, to say nothing of the sucker tribe, were familiar to my hook; but trout—the beautiful trout—was with me a stranger. Hence, when Jeems Mackrel, the mighty "Kingfisher," quietly remarked one night by the camp-fire that there were trout in Cedar, I mentally concluded the day was not distant when Cedar and myself would become acquainted. The opportunity was not delayed. We had encamped last August—eight of us, including the cook—on Central Lake, Michigan, at the mouth of Sweeney's Creek. At fishing we were a dismal failure. Neither hass nor mascalonge noticed our presence. We caught pickerel, and even deigned to watch the blue gills and rock bass swallow our bait, for we were getting desperate. Old Knots swore once or twice in a moment of absentmindedness, a thing so unusual with him it startled the boys and caused Uncle Dan to lose his balance on a log and fall over backward. The old "Suckerer" was an Alderney cow. You see Bill is a cattle raiser. Another one of the party lost his appetite feeding on pickerel in the side, and suggested that "to-morrow would be a good time to try the trout on Cedar." He swallowed use the bait. "An trippid" said he, "we'll get up early, gather a-nice lot of clams for bait and be off."

<text><text><text><text><text>

believer in Jecms Mackerel as a "born fisherman." The tacit recognition of his proficiency in that line, whether perceived in my retort or not, at least silenced his batteries. Half an hour after sunrise we glided down the lake, skirted the wooded points jutting the swamp where the eagles built their nests, rounded the three pretty islands below, threaded the patches of weeds that grew thickly in the shallow waters adjacent, entered the mouth of Intermediate River, and glid-ing rapidly down its crooked stream, soon landed a half mile above Bellaire, at the head of the rapids. This growing village we reached after a few minutes walk, and at once began inquiries among its inhabitants touching Cedar, its troat qualities, and the best place to strike it. Sifting the information gained, we concluded our best course would be to reach the coveted stream at a point some three miles away, at the intersection of the township road, then follow its meanderings until close to Bellaire, by which time we estimated the sun would be low and our creels heavy. As we left the village by a road that led straight away to the east, piercing the center of a broad avenue cut through the dense forests, we fell in with a brother angler, a native, hastening in the isme direction. A glance at his outfit sent another shock to my notions of trout fishing. A bamboo pole, fully seventeen feet long and an ineh and a half at the butt, lay on his shoulder, and we judged its elasticity as scarcely discounting a good-sized fence rail. The line attached to its small end scemed large enough ad strong enough to haul a cow out of a sink hole. Matching this for-midable equipment was a stont canvus bag slung from the shoulder, close and compact, and capable of hiding a bushel of trout. ""Say, Kentuck, how's that for high?" said my Kingfisher

enough to haul a cow out of a sink hole. Matching this for-midable equipment was a stout canvas bag slung from the shoulder, close and compact, and capable of hiding a bushel of trout. "Say, Kentuck, how's that for high?" said my Kingfisher comrade as we closed up on our new friend. "Well, I should say nearly twenty feet," I replied.• "Do you think he can travel on Cedar with that rig?" "Oh, yes. You see he takes all the stiffenin' out of the trout when he jerks 'em with that pole. Just breaks the spinal column at the first snatch, and saves any further killin'. And then, you see, when the stream is too deep to wade, he just lays his pole down, one end on each bank, and snakes across to the other side. Bet yer life, though, that canvas bag will cook his trout before night." The explanation and prediction were hoth satisfactory, for if there is anything Jeems Mackerel can't explain, or any aching void of human inquiry he can't fill, and do it in a way that fills you chuck full of satisfaction, it is not going to be found lying loose around camp. Overtaking the angler with the big hamboo, we suggested inquiringly that "perhaps he was going fishin'-perhaps not." "Well, I reckon perhaps you are right," said he, "least-ways I calculate on ketchin' a few trout out of Cedar before I get back." "Thar ain't nothin' like tryin'," said Jeems Mackerel (who had a way of dropping naturally into any style of vernacular that he chose-a peculiarity that more than once upset the gravity of the camp of the Kingfishers, "for if old Bill Hess's adventures (unknown probably to Hess himself), Jeems Mackerel relapsed into silence. I looked away through the woods at something that wasn't there, and our new com-rade, after waiting apparently te hear how Hess got away with the cat, wisely concluded the matter was postponed, and changed the subject. "Thar's a friend of mine going to jine me out here by the Fair Grounds, and we are goin' to fish together. Three other fellows," he added, "went troutin' on Cedar early this mornin'. Gness

"That's a friend of mine going to jine me out here by the Fair Grounds, and we are goin' to fish together. Three other fellows," he added, "went troutin' on Cedar early this mornin'. Guess they'll get the best of the luck before we have a chance."
By this time we reached the inclosure denominated the Fair Grounds. Two or three acres of weeds and stumps, surrounded by a plain board fence, and supplemented by a few board shanties, it had more the appearance of a descrited clearing than a spot dedicated to an exhibition of the products of industry. At the further end of the inclosure our new acquaintance raised a loud hello, which was quickly answered from the other side of the clearing, and his expected friend was seen wading across the field. A half mile further on they turned sharply to the left, and bidding us good bye disappeared in the thick woods.
The sun was now getting hign in the tops of the trees above us, and not yet having compassed more than half the distance, we fell into a long Indian lope and "lit out" for our destination. Jecms Mackerel is long-winded and tough, and despite that constitutional weakness for water that prevented him from passing a brook without imbiling a goodly portion of the crystal fluid, he managed to keep a good second. A half hour more brought us to a point where we detected a faint path, nearly obscured by fallen leaves, diverging to the left. As we had been instructed to follow the left fork of the path about this distance out, I halted, and studying the "lay," asked Jeems Mackerel what he thought adout it. Circling round and examining the faint traces of travel, then taking an observation by the sun of the directran, whose instinct was equal to the secent of a deerhound, and seldom was a fault in an emergency, finally remarked, "Well, I guess we'll take the left hand path. It aims right anyhow, and a feller that aims to be right and fails, ain't to be blaned much."
"Mice and much."
"Is conclusions were right, for the path proved

if ish t big enough to furthsh a dup of the second process of the second proces

his hook, and cautiously slipping to the edge of the bridge, dangled the bait temptingly on the surface of the water just under the shadow of a clump of bushes. There were no trout there or they were not hungry, for none sprang to the feast. Changing to the lower end of the bridge, he tried the eddy for only a second, when the quick jerk upward of rod and line indicated that something had been developed. "There I had a bite."

<text><text><text><text><text><text>

FOREST AND STREAM.

face of the pool. "Virtue has its own reward," and so had Jeems Mackerel. A trout instantly took the bait, and a sec-ond later was dangling at the extremity of the short line. Jeems was now in "hockety." The limbs were too thick to recover the fish properly, and his hold too precarious to go fooling round. The old fish hawk seemed to study a bit, and then just slid the rod backward between his legs, keep-ing the tip slightly clevated until he could reach the wrig-gling trout, which he took off and slid into his breeches pocket for safety. Then fingering his clam box with his left hand, he rebaited the hook, and bless my eyes! if he'didn't actually spit on his bait and again drop it in the pool for another bite. "Superstition and raisin' is stronger than edi-cashun," says "Old Knots," and after that feat of Jeems Mackerel, I don't doubt its truth. The trout wouldn't take the bait any more, so Jeems Mackerel backed bimself down to solid earth as a bear would back down a tree-stern foremost. Gettting upright on his hind legs, the old fellow caught sight of me. Giv-ing a self-satisfying chuckle, and dropping naturally into one of his vernacular styles of expression, he remarked: "Snake Root! yer'll have to do a heap more things than skinnin' a log if yer goin' to circumvent trout on Cedar. Yer can't tell always when or whar yer goin' to ketch 'em, or what kind of bait they'll tackle. They are just like wimmen-monstrous fickle and onsattin' when you want 'em most."

<text><text><text><text><text>

roots, darting under banks of green mould and behaving like a genuine forest torrent. This was Cedar River itself, and we had simply been spending hours in fishing a tributary of that famous stream. Jeems Mackerel ought to have known better. If he didn't, he might at least have suspicioned that something was wrong, for it wasn't the first time he had trouted on Cedar. How-ever, we forgave him freely for two reasons: First, because we have no doubt the old fellow was actually lost, and sec-ond, because Cedar River didn't afford any more trout than its tributary. As I looked at the little string of fingerlings that dangled on his twig, I could not repress a pang of sor-row that the poor things should be weaned so soon.

The old "Kingrisher" never second to tire nor grow impatient. One minute he would be astride a swingring limb, and, with one hand childing a branch overhead, he would strain his back trying to drop his hook under an opposite to back, just where the vare pussed a minute to enjoy the rest to could find nowhere elss. Then he would stain out on a log and imitate bis namesakes by sitting motionless for an indefinite period, under the delusion that the tront bernaft would first papelined. With the zeal of a disciple and an implanted love of nuture in her orlinal robes. I stuck closely to the practices of the verteren fisherman, and with a little more than equal lack of success. "A study deepend and gathering clouds warned us of rain ahead. We burried along as rapidly as it was possible, for a night passed in the swamps of Cedar, with its millions of flies and mosquitoes, and its damp, chilly a timesphere, was a prospect too gloomy to contemplate. We had only time to pause now and then to try some pol more inviting than the rest. Travel as we might, there was no moment too pressing for the old "King-fisher" on the calculate strain the stand wallova a mouthful of the ded that periods under the top the strain the second strain the stand wallova a mouthful of the ded that periods under the robot nature beside his path, wherever his footstops may tread in the generic path, with their poetic imagery, the wearing the calculate gath of the post of the cooling gath and the stand that ourselves as free gifts of nature beside his path, wherever his footstops may tread in the generic path, and by cutting off the saphings two or three in a sort of path, made by cutting off the saphings two or three in a sort of path, made by cutting down and ward the uneverse and there. This at least infinited the shorts way out, and there. This at least infinited the shorts way out, and there a hour the rain had increased to a steady fall that be okceed to betting the weak sast of the cooling strain the stead stark the conte of the path of the s

man, "sams peur et sans reproche." The thought excited my risibles until, laughing outright, the old snipe heard me and looked around inquiringly. "Nothin', only laughin' to keep up the circulation." He knew that was a whopper, but reserving his wrath, he turned his face to the front and pushed on. It was getting dark when we reached the boats. The "Kingfisher's" fond-ness for rowing (he resents any interference with his prerog-ative as chief oarsman) served him a good turn on the back-ward trip up Intermediate River and Central Lake to camp. While the exercise kept him warm, I sat in the stern and shivered with wet and cold. I fancied the old rascal/Geens is a shade under seventy) enjoyed my discomfiture. I after-ward got even with him on a tour to Six Mile Lake. Our arrival in camp was hailed with such a degree of wel-come that we almost forgot the troubles of the trip. I am not sure, though, that the prospect of a change from pick-rel to trout for breakfast didn't have something to do with that welcome. "Old Knots" said that on this special occa-sion there would be no harm in breaking the rule of abste-miousness and swallowin' a dose of "opodeldoc" to drive chills and rhcumatiz from the system. Uncle Dan removed his pipe from his mouth and suggested that "all things were made for some use, and as we might hev been snake bit un-beknownst, there was no harm in vaccinatin' against the pizen." As "Suckermoogen Bill" added his approval with

the sage observation "that there was but one time to die," I felt my strength as a cold-water disciple oozing out my finger ends, and with desperate resolution was about to submit to the infliction, when Jeems Mackerel concluded the inquest by icily remarking, "When a fellow wants to go to the cir-cus, it's wonderful how anxious he is to have the children see the animiles, and how much natural history thar is in a Bengal tiger, a spotted hyena and a monkey." I timply believe Jeems Mackerel will become a confirmed cold water inebriate. I had my satisfaction, however, for while he was satisfying that enormous appetite of which he is almost sole possessor, he attempted to drain the bottom of a can of peaches, and a humble "yellow jacket" that had gone to sleep in the bottom touched the hot end of his body to Jeems's tongue, and for ten minutes I thought he was trying to exhibit that circus, "natural history" and all. "Suckermoogen Bill," a splendid cattle doctor, spent two days treatin what he called a "ginooine case of black tongue." Uncle Dan thought it was small pox and wanted to inoccu-late. I suggested that Furr and Snyder might go around the neighborhood and collect up the children and bring 'em to camp to see "the evil effects and witness the awful exam-ple of indulging too much in cold water as 'it comes spark-in' and bubbih' fresh out o' the ground.'" When the old Kingfisher got well of that "yaller jacket," he spent most of his time persuading the boys not to mention the subject outside of camp, and specially not to let his wife know anything of the circumstance, "for," said he, "she always did vow that men had more tongue than wimmen, specially if Jeems Mackerel was around." We never told anybody about the affair, and don't expect to, as wc consider this little episode "don't count." FRANKFORT, Ky.

FRANKFORT, Ky.

THE NEW YORK TROUT LAW.

THE NEW YORK TROUT LAW. THE laws regulating the capture of all kinds of trout, have again been amended by the Legislature of New York, and the bill has been signed by the Governor. In our issue of May 27, Mr. John D. Collins complained of errors in the law as it stood, and on the 25th the bill introduced by Mr. Doyle to correct these errors, had passed. The Gover-nor has signed it, and we notice that the date of capture for brook trout is restored to April 1, except in the counties included in the forest preserve, and that the new brown trout are protected. We regret that the clause restricting the capture of brook trout under six inches in length, was left out. Perhaps this was "done in the engrossing" where it is claimed that the error in the former law occurred. We give the law in full: AN ACT to amend chapter one hundred and twenty-four of the laws

the capture of brook trout under six inches in length, was left ont. Perhaps this was 'done in the engrossing' where it is claimed that the error in the former law occurred. We give the law in full:
As Act to amend chapter one hundred and twenty-four of the laws or orthon of moose, wild deer, birth, sik and other game."

THE NORTHERN LARES OF CANADA are described with routes, guide to best camping, fishing and shooting localities, hotels, cost of travel, etc., in a 200 page guide book prepared by Barlow Cumberland, Toronto, Canada. There are maps of the Muskoka Lakes, Simcoe and Couchiching, Georgian Bay and other waters. The book is crammed full of useful information, designed to point out the way and make it easy for tourists, pleasure seekers, sightseers, anglers, shooters, cancemen and all the other wings of summer outers in the Dominion. The maps are of special value, being drawn on the panorama plan,

SALMON IN THE HUDSON.

TROY, N. Y., June 7.—*Editor Forest and Stream:* Several salmon have been taken below the dam at this city within the past week. There are known to be four and there are rumors of others. The largest one which we have any positive record of weighed 14¹/₂ pounds, and it was a fine plump fish. The salmon are now stopped at the dam here and are being taken in nets. This should be stopped at once and fishways should be built to allow them to reach the upper river where they can spawn. The fact that there are are salmon in the Hudson should arouse anglers and game protectors to see that the first crop is not destroyed.—J. H. R.

Mr. H. P. Schuyler, of Troy, has written to Mr. M. M. Backus, of New York, that on Monday last a 144-pound salmon was caught at the State dam, making the third within a werk whose aggregate weight was 35 pounds. Mr. Backus writes to Mr. Blackford that there is an impression at Troy that a few years ago the State Legislature made an appropriation for a fishway at Troy, but it never has been built. Mr. Schuyler says that the fish referred to will be the last onc killed, as "a few knights of the angle intend to take matters in hand," and that his brother has notified the bishermen'that allfish taken in future must be returned to the water, and adds: "I believe the waters in the vicinity of the dam are swarming with salmou that are unable to get above the dam."

TROY. N. Y., June 7.—Editor Forest and Stream: Two salmon have been taken here. These must be fish that were planted three or four years ago by the U. S. Fish Commission from the Long Island hatchery. I saw the first shipment taken to North Creck by Mr. Mather in 1882 while they were on the platform at Saratoga, and expressed my opinion to him that it was doubtful if they would ever return, because they were so small. I am prepared to believe that more will come.—D. Y. SMITH.

¹ TROY, N Y., June 4.—On the second day of June some fish-ermen took from the waters of the Hudson, just below the State dam at this city, a strange fish, some ten pounds in weight. They presented the fish to their employer, who was also ignorant of its proper name and species, but found it very good eating. Yesterday another of the same fish was taken at the same place. It was brought to the city and in the evening I had the pleasure of inspecting a fine male salmon, which measured 28 inches in length, 16 in girth, and weighed 10 pounds 8 ounces. Did not the Legislature pro-vide for the construction of a fishway in the above-mentioned dam? If so, let us have it at oncc.—SEYMOUR VAN SANT-VOORD. VOORD.

EYED HOOKS.

EVED HOOKS. The second sec

for sea-fishing and night lines for eels; their apotheosis in the dress of a quill-gnat floating fly had not yet been accom-plished. — At last, about five years since, the disciples of the floating-fly school of up-stream fishing for trout, beginning with those fishing the English Itchen, Test and other Hampshire he chalk streams, found that the drying of the fly in the air cracked off so many flies—aided by the gossamer gut which is used of necessity—that some remedy, partial or entire, be-came imperative. The needle-eye hook was first tried and found undesirable because the eye cuts the gut, and finally, Messrs. Bankart and Hall—two justly esteemed premier the fly-fishermen—after countless experiments and failures, suc-ceeded in devising the turned up eyed hook which, as to bend. they decided, after the most exact and carful trials, bo it remembered, should be a modification of the Sneck and Limerick. I have fished with these hooks over the shyset of English trout—those of the Itchen—and can indorse the rat they were and are "about perfect." That was the gen-eral verdict. They hooked the fish with certainty, showing that a rigid gut snell was not absolutely necessary at the end of the shank; their penetration and holding power were con-ceded to be in advance of the Sproat or round bend, and their fouling quality, by reason of the "Snecky" side twist, was *par excellence* all that could be desired. "The force of nature could no further go," was opined by all who thought about the matter. In a word they were "about perfect." The spisation of a very high character. In it we find that he had undoubtedly written the best books on pike fishing, substi-tuted six typical and supremely bizarre compilations of feather, silk and tinsel for the thousand and one flies of the entomologist angler, with which he proposed to slaughter all the members of the family *Salmonida*; and that his is the distinction of having advised down-stream fly fishing, with-standing to the face that prince of trout fishers, Stewart, aut

Gracechurch street, London, and the bend of the hook is precisely that of the old Limerick. It is amusing therefore to read Mr. Pennell, writing (*Fishing Gazette*, April 3), ''I am advised that the sale of these hooks under my name by un-authorized firms would be contrary to law.'' How sublimely modest in the gifted author of ''Puck on Pegasus!'' To advert, however, to the practical utility of the eyed hooks generally, it seems to me that their chief merit lies in their being less liable to break off in casting, and in the ready changeability of which they are susceptible. Still fn this regard their benefit is like every good thing in this ''best of all possible worlds,'' not unalloyed. When fishing a cold mountain stream in a chilly wind—not by any means an im-possible conjunction of events—with numb fingers, the tying of even the ''gain knot'' (Mr. Pennell's again, though as old as the first bit of string) is fraught with difficulty, and I know by experience that the tiny fly may more easily slip from the fingers than the old-fashioned snelled hook, and that the eye of the hook to this short sighted generation of neuresthenic and over-worked money grubbers is often pro-vokingly indistinct, and as evening gathers round and the fish hasten to make the most of it, this is to say, the least of it, like Lord Palmerston's world, ''a fortuitons concatenation of incongruous'' circumstances against the enjoyment of the eyed hook, whether its eye squints up or dow. J. HARRINGTON KEENE.

MANCHESTER, Vt.

ANTRIM COUNTY ASSOCIATION.

ANTRIM COUNTY ASSOCIATION. A T a meeting of the Antrim County, Mich., Game and Fish Protective Association at Central Lake, the fol-lowing officers were elected: Roswell Leavitt, of Bellaire, President; George M. Clow, of Central Lake, Vice-President; F. H. Thurston, of Central Lake, Secretary; Thomas M. Rushton, of Central Lake, Treasurer; George W. Albrecht, of Bellaire, Vice-President for Kearney township; Jesse A. Cary, of Central Lake, Vice-President for Central Lake town-ship.

F. H. Thurston, of Central Lake, Secretary: Thomas M. Rushton, of Central Lake, Treasurer; George W. Albrecht, of Belläre, Vice-President for Kearney township; Jesse A. Cary, of Central Lake, Vice-President for Central Lake township.
Mr. Leavitt moved for a voie to see whether, as a society, the association will exert its influence to enforce the present statute laws of this State for the protection of game and fish. In response every member voted "yea."
The following explanation of the spirit and purpose of the association is given by the secretary in the *Breeze*: "The following is intended to explain the motives and intentions of those who have organized the Fish and Game Protective Association: They believe that among our inalienable rights are life, liberty, and the catching of fish. Life and liberty we have, but how to catch the fish? I used to be called a good fisherman, and settled on these lakes expecting to have all the fishing I wanted. In the past three years I have not eaught ten pounds, and I think it useless to try with the only legal means—a hook and line. Some say: "Spear them —net them—shoot them—blow them up with dynamite." In answer it may be urged that such methods are lifegal. But we are told to pay no attention to the laws, that obody minds them, and that we can' get fish unless we break these statutes, or buy from those who do. Now there are those among us who, while quite willing to fish with spears, are not prepared to defy the law, and who believe that disregard of existing statutes of any kind is a very bad sign. If A breaks or heads. Our association mean to try its best to learn the reasons why the supply of fish in our waters, once bountiful, has in most of the lakes so failen off the we can hardly get a 'mcs' of bass on pickerel unless we break these to learn the reasons why the supply of fish in our waters or eare those and even by such means only in spawning time. Such is the general verdici. If this is the fact, and if we wean the eadful work done, and give the

others, have joined hands and made a move in what they believed to be one of the real interests of the people of Antrim county. Will not others, no matter what may be their occupation or possessions, assist us by joining the Antrim County Fish and Game Protective Association, and help secure ϵ qual rights for all? F. H. THURSTON."

DECORATION DAY AT BLOOMING GROVE

help secure equal rights for all? F. H. TNURSTON."
DECORATION DAY AT BLOOMING GROVE
THE special car attached to the 4:30 P. M. train on the
Erie road on Saturday, May 29, contained thirty-three
members and guests on their way to the club house of the
Blooming Grove Park Association, to pass Decoration Day.
At the house were already twenty-seven guests, and the newcomers swelling the number to sixty, it took the superintendent some little while to arrange accommodation, but all
were provided for.
Supary, May 30, bright and warm, a beautiful day, was
passed in various ways, some starting early for the Blooming Grove and Shohola fishing, others rowing on Lake
Giles, no fishing being permitted there until July 1.
Others walked over to the breeding park, to see the trout
hatching and the new fish ponds. In the hatching troughs
were upward of 75,000 fry, some hatched from eggs
brought from the Michigan State Hatchery, some from
England, and some from eggs taken from the club's own
breeders. In one of the raceways were 250 breeders all
from the Shohola, as fine trout as one would want to see.
Besides stocking its own streams the club will soon be in a
position to supply the market with eggs and fry. One of
the prettiest sights was to see the deer in the breeding park,
an inclosure a milesquare, come up to the salt lick. Timility
they step along, until at a word or a movement of the body,
though you are standing 300 yards from them, away they
dash out of sight. In this park are upward of 300 deer,
and none are allowed to be killed, except in the fall, bucks
may be killed still-hunting. Sunday was a quiet day though
the members and guests were all enjoying themselves. In
the evening, in the large parlor around the piano, the whole
party of sixty joined in Moody and Sankey hymns, and later
camp meeting tunes and some secular music. All seemed to
catch the pirit of the day fixed for the serveral contests. Ann
nexed arc the scores, and it will be seen that they are scores
to be proud of. There were several private co

JUNE 10, 1886.]

THE FLUTTERING FLY.—We give herewith a cut of a new fy, invented by Mr. Wakeman Holberton and patented by Mr. Charles F. Imbrie, of the firm of Abbey & Imbrie, New York. A glance will show that the head of the fly is near the bend of the hook instead of at the end of the shank, in fact it is turned com-letely about. It is claimed that the new fly offers less resistance to the waiter in game more resistance to the waiter in trawing it in, thereby giving it a flutter-ing diffelike motion, in fact appearing more like a natural insect than the old patterns whose wings close when being carwn through the water. Mr. Holberton tering motion adds very much to its at-trative qualities, its great merit lies in its superior hook-ing qualities. A fish cannot nip at the wings or tail, but swallows the hook before any part of the fly. In five days fishing this season I caught sixty-six trout, losing only three that were hooked, an unusual small percentage, as very angler must admit."

Every angler must admit." HOOKED IN THE GULLET.—The fight of a hooked trout depends much on the way in which it is hooked. A Detroit correspondent who sends a drawing of a 174 inch, 24-pound trout, says: "My brother writes from Muskegon county as follows: 'I inclose a life-zize drawing of a sockdollager (trout) that I caught out of the pond near the dam; was just about to draw up my line and go home when I felt a slight nibble, and drew up promptly but no game. Dropped in again and felt the same, but left the bait (the tail of a min-now) to allow the fish to gorge it; and sure enough he did, and when I pulled he came to the surface with a rush, and Paul, who was standing near, said, 'Brose, you have got a whale this time sure.' The hook had caught in his gullet and the strain caused him to keep his mouth open which soon drowned him. He didn't make half the fuss in conse-quence that a smaller one would have done caught in the lip. I finally drew him up on the shore of the dam, and Paul grabbed the line and flung him out, and you bet we just enjoyed the sight of so fine a fish, the largest caught in the treek so far, and a beauty in shape and color. Since then have caught a few; have taken forty-two in all.'"—C. J. T.

ANOTHER BIG TROUT.—Mr. Thos. B. Mills, of Wm., Mills & Son, No. 7 Warren street, N. Y., sends the follow-ing communication, describing a large trout just taken "in out of the wet" at Rangley: Oquossoc Angling Association, Indian Rock, Me., Camp Kennebago, June 5, 1886.—Dr. Charles Haddock, of Beverly, Mass., George Oakes guide, took off Sandy Point, Lake Mooselucmeguntic, a trout weighing 10% pounds. The weight was taken nine hours after fish was caught, and must have been at least 11 pounds at time of capture. Length, 284 inches; girth, 164 inches.— CHARLES G. WHITE, F. H. LOVELL, THOS. A. PERKINS, THOS. B. MILLS.

SUSQUEHANNA BASS.—Athens, Pa., June 7.—Bass fishing on the Susquehanna promises to be good here this summer, as they are taking the fly quite readily now as bait is not obtainable yet. The largest bass caught this season weighed 4 pounds 9 ounces and was taken by Mr. E. W. Davies on a black fly. A few others have been caught, but none as large as this. "The Six" have just returned from a trouting trip to Pine Creek, Potter county, with a fine mess of trout and all of good size.—P.

A SALMON YARN.—Now that the Atlantic coast rivers are being stocked with salmon, the hardy seafarer is gradually turning his inventive faculties from sea serpent yarns to stories of big salmon seen at the mouths of the stocked rivers and in the harbors. Capt. Studwell, of Babylon, L. I., is ahead with a tale of a salmon eight feet long observed last Friday evening in the Great South Bay.

THE DETROIT LAKE, ST. LOUIS, ST. PAUL AND MINNE-APOLIS FISBING AND SHOOTING CLUB issues for the bene-fit of members of the club and their invited guests, round trip tourist tickets from St. Paul or Minneapolis to Detroit and return, good until Oct. 31, following date of sale, at rate of \$6.

CLUB RULES —We have frequent calls for copies of club rules, by-laws and constitutions. Secretaries of gun clubs, angling clubs and game protective associations will oblige us by sending spare copies of their printed rules, that these may be in turn sent to organizers of new clubs.

ALLEN'S bow-facing oars, \$8 per pair. Fred A. Allen, Monmouth, Ill.-Adv.

fishculture.

Address all communications to the Forest and Stream Publishing Co.

SHAD FOR THE HUDSON.—Two car loads of shad have been sent from the central hatching station of the U. S. Fish Commission at Washington for the Hudson. They were offered to the New York Commission and accepted by State Commissioner Blackford. The first lot of 1,000,000 was planted at Troy and the second shipment of 500,000 were put in a Cats-field. These with the 250,000 from Cold Spring Harbor, planted at Greenbush, makes a total of 1,750,000 already planted. As the shad of the Potomac sparw before those of the Hudson these fry get an earlier start. The New York Commission usually begins hatching about Catskill in June.

SALMON FOR THE ANDROSCOGGIN.—Beifast, Me. June 3.—The Fish Commissioners of this State have placed one hundred thousand salmon fry in the tributaries of the Androscoggin River. The fry are strong and healthy and promise well.—H.

FISHWAYS FOR NEW YORK RIVERS,—The Governor of the State of New York has signed the bill providing for fishways in the Schoolic and Mohawk rivers in Montgomery and Schoharie counties.

The so-called "trout" of South Georgia and Florida is not a trout but a black bass. Our perch are not perch but sunfish. A jack is a pickerel. Catfish are not all catfish; some of them are bull pouts. Our red-finned pike is only found in Southern waters and near the Gulf. Our war-mouth perch is a rock bass.—Quitman (Ga.) Free Press.

No entries inserted unless paid in advance. Yearly subscription \$1.50. Address "American Kennel Register," P. O. Box 2833, New York. Number of entries allowed prize 20200 of entries already printed 3689.

IRREGULAR BENCHINGS AT DOG SHOWS,

IRREGULAR BENCHINGS AT DOG SHOWS, Editor Forest and Stream: In your report of the recent show held by the W. K. C. your reporter complains of the manner of benching the dogs, those belonging to one exhibitor all together, regardless of class, offering as his objection, the trouble visitors and reporters ave in finding certain dogs, the same of the attendant when required to take them into the judging ring. It is true this trouble exists to a small extent, but there are greater conveniences to the exhibitor than he mentions, "a few steps in caring for them and the pleasure afforded in seeing them together." The time is past when the "intelligent" exhibitor will put his dogs into the show to be cared for and shown by the regularly employed assistants of the club, knowing well the great dis-advantage they will be under in the charge of a stranger, one almost always ignorant of what is fully required of him. The feeding, watering, and exercising is not all, particularly a young or inexperienced animal, wants. Then the pulling or kicking into the rings often seem (the superintendent cannot be every-where at the same time) and placed behind his (the attendant's) legs. We saw Mr. Donner send a well known handler for a which that was treated thus at the above show, and she really descred her he., which, under some hands, would have been everloked. Then, how many dogs are groomed by the asistants?

used bet det net, only many dogs are groomed by the assistants? You may say this is foreign to the subject. What is desired to be shown is of much greater importance to the exhibitor than you intimate—to have his dogs together that he may personally (or by proxy) groom, feed, water and generally care for them—the unobstructed view of each other, the smelling, an occasional caress; the presence will assist the dogs in enduring their confinement, there will be less noise, less nervous excitement, no fighting round the corners or over tops of the stalls, and last, but not least, far less cause of disease so prevalent and so much feared at shows. I have never had a case (or had one reported me in those I have sold) of distemper from attending the shows, and I attribute it in a great measure to training my dogs, young and old, within see-ing and smelling distance of each other. I think this greatly overbalances the slight inconvenience the visitors and the few reporters are put to in finding and comparing certain dogs. For the latter there are ample oppor-tunities in the judging or exercising ring, upon the floor, etc., during the four days (it should be three) of the show. Doubless the management you complain of was the result of the gentlemanly superintendent or the club listening to the other sold exhibitors and waiving any desire or pride they may have had to have seen the numbers run with the cata-logue. As an exhibitor, I know its value and am for it all the time;

logue. As an exhibitor, I know its value and am for it all the time; if I cease to exhibit I will not decry it, having "been there." Ask the owners of the dogs, from two to six in number, on the open benches in the show, and see if they do not say there is even much more than has been stated above in it, and surrely they, as the foundation, should be convenienced as much as possible with consistency. E. W. JESTER, Sr. Gronge's Del ST. GEORGE'S, Del.

DOGS OF THE OCCIDENT.

Sr. Grooze's, Del. DOCS OF THE OCCIDENT. Editor Forest and Stream: Being a constant reader of your valuable paper for the past soveral years, and deriving great pleasure from reading it, I desire to correct a few misstatements in the interesting com-munication from Col. Stuart Taylor, published in your issue of May 13. He cannot be very well posted on dog matters, nor can he be very well acquainted with many of the dog fanciers or sportsmen on this coast; if he were he would know that your paper has many subscribers here, also that there are many fine bred dogs of various breeds owned by gentle-men in the Far West. The Colonel is known to be an impul-sive man, and without a doubt has rushed into print on the impulse of the moment regardless of facts, of which he could have convinced himself if he had conversed with any of the many gentlemen who take an interest in kennel matters or this coast. I will, with your permission, mention a few of the many noted dogs that are owned here. Bentor Geo. Hearst imported to this coast the red Irish a setter bitch Kate II. (E.K.S.B. 11,552), bred by Capt. J. H. O'Brien, Dublin, Ireland. She is by Sandy, dam, O'Brien's champion Kate, She took first prize at Belfast and Porta-down shows in 1882. She was exhibited at Crystal Palace of the M.C. N. Post, of Sacramento, is the owner of a fine Irish set ter bitch named Dido, bred by Capt. J. D. Brown, of Missour Walley, Ia., one of the prominent breeders of the West. Dido was sired by champion Ben, dam Jessi, by imported Grouse of out of imported Gipsy. Dido is a very fine bitch, but is strongly marked with white. A number of nue lrish setters tare owned by Mr. A. B. Truman, of this city. The most prominent are Lady Elcho T. (A.K.R. 2777), Mike T. [A.K.K. 2779), Neno T. and Bob T. Lady Elcho is by champion Elcho out of othare different occasions was direct to tom many noted dogs for me to enumerate. Mike T, is by Nemo out of Nida, Nemo by Larry out of Quail III. Mid Ma by Larry out of Red Bees

Kennels, of Peekskill, N. Y. Last, but not least, the grandest dog that I ever saw (and I have seen quite a number of them) is Truman's Bob T., sired by Willard's Bob out of Senator Geo. Hearst's imported Kate II. I have in my possessiou a photo-graph of J. A. J. Sprague's champion Brush, which I have shown to a great number of my friends, and they one and all pronounced it the photograph of Truman's Bob T. This dog is as intelligent as he is beautiful. Mr. Scott is the owner of three very fue red Irish setters, Jerry, Lena and Pat O'More. The above mentioned are very fine spectmens of their breed and were purchased in the East by Mr. R. H. Neil. Chas. B. Keating, the well-known gunsmith and sportsman, is the owner of a very fine Irish setter, sired by Colgate's Pat out of Howe's (Hiry, is the owner of a full brother to Truman's Mike T. and there are a great number of the strain owned by R. H. Neil in this State. This is as far as my limited knowledge extends of the Irish setters on this coast. In regard to other breeds it will afford of them to your valuable and interesting paper, from time to tocast the full brothers and interesting paper, from the to tocast the full brothers and interesting paper, from the to tocast the full brothers and interesting paper, from the to tocast the full brothers and interesting paper, from the to to dege in the United States. This a settled fact that the California Bench Show and Field Trials Club, of San Francisco, will give a bench show, com-mencing on the last week of July next. It is to be hoped that pot occupied too much with the ardnous duties of his itdering of the forestrany Straken, when I will endeavor to cop-tion the lost week of have him call around and see my file of the Forestrany Straken, when I will endeavor to cop-tion the forestrany Straken, when I will endeavor to cop-tion the heaven to inform your readers of the quality of pointer stock on the Pacific coast. Now Porut. Saw Francisco, Cal, May 25.

THE A. K. C. AMENDMENT.

Editor Forest and Stream: At the last meeting of the A. K. C. the following amend-ment was adopted:

"The champion rule was amended so as to authorize show commit-es to transfer a dog from open to champion class which had be-me qualified subsequent to the date of closing of entries."

<text><text><text><text><text><text>

THE BREEDING OF TRINKET. - Editor Forest and Stream: In reply to Mr. Schellhass regarding his beagle bitch Trinket (Flute-Queen), let me say that when his first letter appeared in which he drew my attention to the doubtfulness of the beeding of my bitch. I immediately sent a reply, which appeared May 25, and which read as follows: "For his note of May 8 concerning my beegle bitch Trinket, allow me to thank Mr. Schellhass for drawing my attention to the matter. My Trinket is the same bitch he alludes to as being advartised some time since by a Pittsfield party. Mr. Schellhass missed a very good chance to procure a first-class fielder for \$12. The price asked me for this bitch was \$25, and L consider her worth double that as a hunter alone. I shall investigate the correctness of her breeding and inform your readers of the result of my investigation, assuring them at the same time that it was far from my intention to misrepresent anything in connection with my dogs. Should this meet the eye of D. J Aquith of Pittsfield, Mass., from whom I purchased Trin-ket, I hope be will see the necessity of explaining the matter." Since then I have investigated the matter to the best of my ability. I wrote to Mr. Elmore, whom Mr. Jaquith gave as the breeder of this bitch. This gentleman seems to know with Mr. Jaquith's failure to reply to any of my letters re-cently written him in regard to the full pedigree of the bitch, which he had promised to send with her, but failed to do so, leads me to believe that the breeding of the bitch has been misrepresented to me, and I am therefore under the circum-stances perfectly willing to withdraw any cdams made by me ingnonance of the facts, for this bitch. In regard to my ad-vany one can construe this as a misrepresentation; besides and I had sent the copy of my advertisement to the Foreas and the sent the copy of my advertisement to the Foreas and the sent the copy of my advertisement to the Foreas and the sent the copy of my advertisement to the Foreas and the sent the copy of my ad

MASTIFE JUDGING.

Editor Forest and Stream: I could not possibly get a mention in the class for logic that you would win first in, but then, it would be the logic of the collegian in the old song:

"Ohl logic, logic, not the shallow rules Of Lockes and Bacons, antiquated fools; But wit's and wrangler's logic."

<text><text><text><text><text>

winner, and it did have lots of layback, if not as much as the mastiff. The fact is, that the amount of rot and humbug that has crept into dog matters, particularly as to judging, is tremendous. Only a little while since, as sensible a man as "Porcu-pine" asserted that the puppy type of a collie was the correct one. Now remember that fashion can make enormous fools of us all, but the reign of the jade is only temporary, or rather the slut only sticks to one thing for a moment's time; and when you say that "a walk like a broken-legged grasshopper" is no demerit, you are bidding very high for the hussy's favor, and may get it, but don't you forget it, she will spill you very suddenly, and you will look very pretty in the fine muchole she will land you in. I am sure I am very willing to "go before the country" with you on this bare issue as you state it, that a lame dog can be a good specimen. W. WADE.

you state it, that a lather do gene be a globe spectry. We ware it has a state it, that a lather do globe spectry we will bright and the state of the spinal column, the space between the two points however, in this communication that and cannot be a globe spectry with a communication that and communication that and cannot be a globe spectry with a spectra contempt would be a spectra bit is a waske on the more, and a late to show with a strengt fashion has been followed? With a vengence, we may show that the had not seen her move, and consequently we may show that the had not seen her move, and consequently we may show that the fault of lameness was not under distingthe and offers to throw himself, dog and and the fault of lameness was not under distingthe the work of the fouring in that the real to under distingth the dotter has a light at the real a consequently we have that the real of second the difference of the spinal and offers to throw himself, dog and and the fault of lameness was not under distingt the law of the fault of lameness was not under distingt the law of the fault of lameness was not under distingt the second it to the real and a use and that the second of the fault of lameness was not under distingt the second it to the second it to ill second the second it to ill second the second it to ill second the fault of lameness was not under distingt the second it to the real and a use a light at the real at law of the second it to HULTON, Pa., May 28.

it takes years to alter the character of the head. That the standard, although in accordance with the ruling fashion, is too lenient with radical faults may be true. We tried to show Mr. Wade that his mastiff standard does not take due cogni-zance of what may be grave faults. We cited as an example the broken-legged grasshopper-gaited specimen described by our correspondent, and pointed out to him that under the standard such a specimen might win, for the greatest number of possible merits forfeited by the lameness would be, under that standard, only 3½ out of a total score of 100 points. By proving this we were not in the least defending lameness as a desirable or even tolerable quality of a mastiff. On the contrary, we consider it a fault so grave that we think the standard ought to provide for positive de-merits for the infimities of the broken-legged grasshopper specimens. Nor does it follow that, since the standard per-mits such things, the judge or critic who impartially applies its rules as a test of the contrary, but enough his superior at occasionally a "good all-round dog" gets beaten by a competi-tor worse than him at some points, but enough his superior at others to win the place. If Mr. Wade will use the flood of eloquence and ink at his command in giving practical lessons of instruction to breeders, showing them just how they can produce grand-headed specimens that are perfect in other re-species, instead of wasting his energies in waging Faistafian warfare, he will both deserve and secure the sincere thanks of every lover of the noble breed.]

SPANIEL JUDGING AT NEW YORK.

SPANIEL JUDGING AT NEW YORK. Editor Forest and Stream: What is "Brindle" trying to get through himself? In last week's Forest AND STREAM he tells us of things that didn't happen at the recent New York show, and endeavors thereby to cast discredit on Mr. J. F. Kirk as a judge of spaniels. He states that Brahmin and Black Beau, Jr., won! The latter won, although he-does not improve as he once gave promise to, and always will lack substance and be light of muzzle; but where did Brahmin win? Certainly not at New York, where he had competitors. There were two there better than he in lis class, and I am not quite certain but three. "Brindle" asks, "Does Mr. Kirk consider a field spaniel and a cocker as the same, except as to weight?" Certainly not, "Brindle," certainly not (though I hardly know the gentle-man, I think I can answer for him. The field spaniel is a heavier headed, coarser dog all over than the cocker, with more lumber, but at the same time a most useful dog in the field, while the cocker is "eminently a well built, graceful and active little dog, showing strength without heaviness or clum-siness," etc., etc. (Vide American Spaniel Club Standard.] A winning cocker cannot be fatted up and be made a good field spaniel; nor a typical field spaniel be reduced and made to wan in the cocker class. Sabe? We might breed two cockers and get both good field and cocker spaniels in the same litter. Why is it so? Because from time immenorial our predecessors. The English breeders, have bred cockers and field spaniels together, and our dogs to-day throw back. Whether it is ad-visable to alter this, or if it can be done, I am not prepared to sys. However, "Brindle," be more careful next time you write for the public weal (?) and read up on spaniels before-hand. "EXPERT" IN CRUELTY.

AN "EXPERT" IN CRUELTY.

write for the public weal (t) and read up on spaniels before hand. BULLDOG.
AN "EXPERT" IN CRUELTY.
AN "EXPERT" IN CRUELTY.
The set of the set of the state of the set of the se

whether a concussion to the spine will, after a lapse of two, three or six months, produce a decrease of vitality or loss of nervous power along any portion of the spinal cord. The dogs are placed under the influence of an anexthetic, and the dog is then subjected to a blow or a fall. The desired effect, a simple concussion to the spine, is not always the result, as an injury to the muscles or tissues defeats the end desired." The members of the New Jersey Kennel Club have interested themselves in the matter, and President Peshall, of the club, held a consultation this morning with President McAneny, of of the S. P. C. A. It was decided that the work of Dr. Watson does not come within the limitation of Section 17 of the act for the prevention of cruelty to animals, which reads as follows: "Nothine in this act contained shall be construct to prohibit or

"Nothing in this act contained shall be construed to prohibit or interfere with any properly conducted sciertific experiments or in-vestigations, which experiments or investigations shall be performed only under the authority of some regularly incorporated medical society of this State."

society of this State." Certain physicians who have been spoken to about the case, say that there cannot be any possible benefit derived in the interest of science, and that the only apparent benefit to be derived from the experiment is to secure expert testimony for the use of the railroad and other corporations in defending suits. Mr. McAneny endeavored to see Dr. Watson, but was unable to do so.

A later report in the Journal says: There is now in the hands of the Society for the Prevention of Cruelty to Animals a book in which the doctor kept a minute record of the features of each case, and a perusal of it may be interesting to the opponents of this system of scien-tific (i) research, as well as to those who are disciples of the practice. It will be seen that these operations, when stopped by the officers of the S. P. C. A., had extended over a period of about four months, commencing on Peb. 9. A resident in the vicinity of the doctor's place said yesterday: "The assist-ants came every other day about 3 o'clock and this is the day for them. Each dog seems to have been designated by a number." Here is a specimen of the records of the tortured brutes: DOG NO. 22.

DOG NO. 22. April 8-Stamp-tailed dog. Dog dropped, apparently stunned for four minutes; pupils dilated. Nine minutes after fail dog got up and walked uosteadity across laboratory floor, and fell slowly. An-swered calls. Forelegs stiffly extended. Saliva flows freely; occa-sional deep sights; when placed on the table the dog expectorated a large quantity of bright red blood, mixed with frothy nuccus. Seven hours after the drop the dog again arose, walked unsteadily across the laboratory floor and coughed periodically two or three times, ejecting with each effort thick bloody sputa. The dog died at noon on April 9, and the splue was preserved for further examina-tion.

tion. It is probable that the Society will bring a separate suit for each case noted in the doctor's record. President Peshall, of the Kennel Club, wished to have the six dogs found in the pen taken from the barn and placed in the care of a competent person, but as the doctor promised that the animals should be well cared for, it was decided to let them remain there. Presi-dent McAneny, of the S. P. C. A., has been the recipient of many thanks for the promptness which he has displayed in the matter, and he in turn feels grateful for the assistance which he has received from Mr. Peshall. The cases will be prosecuted vigorously, and with all the power of the Society.

Dr. Arrowsmith has explained that his expressed opinion of the want of cruelty in the operation was founded on Dr. Watson's untrue assertions to him. A Dr. Cropper, of Jersey City, has been arrested as an accomplice in the maltreatment of the dogs.

WESTERN FIELD TRIALS DERBY.—Editor Forest and Stream: In your list of entries for the Western Field Trials Derby you have Capt. Tucker's "Katarax" a black and white setter dog. It should be black and white pointer bitch. Will you please make the necessary correction.—R. C. VAN HORN.

L. & W. RUTHERFURD'S KENNELS.-Mr. Thos. Daw-son has taken charge of the Messrs. Rutherfurd's kennels at Allemouchy, N. Y.

KENNEL NOTES.

KENNEL NOTES. KENNEL NOTE BLANKS.-For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." All Kennel Notes must be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them. Sets of 200 of any one form, bound, for retaining duplicates, sent postpaid, 30 cents. 30 cents.

KENNEL MANAGEMENT.

No Notice Taken of Anonymous Correspondents. W No Notice Taken of Anonymous Correspondents.
...H., Baltimore.—My English setter is suffering with a sort of hack-couch: For some weeks I have noticed more or less of it. At les he seems to get hetter and then will be worse again, as though had caught more cold. I at first thought he bad a fish home in his oat, but can discover nothing of the kind. He coughs and gars a very anonying manner to day, but otherwise seems in good lth and spirits. He had distemper badly ahout fourteen months b. It is very likely that the dog has taken cold, as I take him out of the country once a week for a run, and he usually fluds a place which to take a swim; however, his cough is dry and seems so ob-late. Ans, Your dog has chronic laryngitis, a very obstinate able to treat. Get the following prescription: Of iodide of potash of carbonate of ammonia, each two dra may also make a sou-in e thiorate of potash, two full tahlespoonfuls to the pun of er, and give a teaspoolial every two bours. Painting the throat h iodine sometimes is of henefit. , Halifar,—I have a medium-sized hlack dog of nearly nine vears

X., Halifax.-I have a medium sized black dog of nearly nine years age. For about a year he has been failing (not in vitality ap

parently). His coat has become gray and thin, and it is quite bare at the back of bis neck, also at his breast and belly. He smells offensively at times and has lately snown one or two small sores. He is also troubled with a sort of dry cough, and I think that he must either have a sore throat or have something wrong with his windpipe. His eyes are bright and healty, and he is as fristly and in as good spirits as when in his 'prime, but he is a wretched looking dog. Althouge berry fond of him, I had quite made on my mind to destroy him, but shall await the advice of Fonesr AND STREAM, with the hope that such advice may assist me in overcoming the extreme measure of destruction. Ans, Your dog is pretky old, and the infirmities of age prohably account in great part for his troubles. Give him Fower's solution of arsemic in five drop doses twice daily in his food for a month; keep his bowels in order.
 J. McHruch, Cranston, R. L. -My Irish setter dog is troubled as follows: Shaking his bead, rubbing his ears with his paws, ears not inflamed the back white coating, and when tied up be runs from the mouth a tough, slimy mucous. When he shakes his head a lot of white stuff drops from his mouth is covered with a thick white coating, and when tied up be runs from the mouth a tough, slimy mucous. When he shakes his head a lot of white stuff drops from the mouth. He is two years old, large and sirong, good appetite and real worked and, Give five drops Fowler's solution of arsenic twice daily. Give five drops Fowler's solution of arsenic twice daily in food.
 J. F. Nova Scotla, -My thoroughbred bull-terrier, three years old, has been afflicted since last fall with a disease in the head causing a running at the ear. The vecterinary surgreon here calls it canker in the ear, and kas prescribed for it, hut so far without success. Is thay your dog has suppurative inflammation of the middle ear. For canker one of the best things is the following: Of thomo chloral and of laudanum each two dran

REGULAR ARMY TEAM.—Orders have been issued from the bead-quarters of the United States army for the contest for army prizes with the rifle, to take place this year at Fort Leavenworth, Kan., beginning on September 29, to be conducted by Lieutenant-Colonel Blunt. The marksmen to compose the army team will be selected as follows; Two from the division of the Atlantic, six from the division of the Missouri and four from the division of the Pacific, with one alternate from each division,

Burns 4 6 10 8 7 9 8 7 6	
Brown	7 - 76

Kapple 6 6 6 9 7 6 5 5 6	8-65
Jones	4 - 54 - 488
Waltham	
MANCHESTER, N. H., May 28 Several riflemen gather	red at the
range on the west side this afternoon and rolled up sat	tisfactory
scores, the weather conditions being excellent. In the medi	al match,

 $\begin{array}{c} \text{sstble 100, the hest scores were as follows:} \\ D \ \text{Palmer} & & & & & & \\ P \ \text{almer} & & & & & & \\ N \ \text{orris} & & & & & & \\ N \ \text{orris} & & & & & & \\ N \ \text{orris} & & & & & & \\ N \ \text{orris} & & & & & & \\ N \ \text{tr} & & & & & \\ N \ \text{tr} & & & & & \\ N \ \text{tr} & & & & & \\ N \ \text{tr} & & & \\ N \ \text{tr} & & & \\ N \ \text{tr} & \$

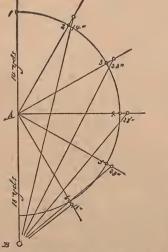

with our Canadian neighnors. BRIGHT SIGHTS.-Electricity has been brought to the aid of the sportsman hy the use of a small lämp for the front sight of a rifle, to render it visible in the dark, or when from any cause whatever there is insufficient light. Toe minute electric lamp is fixed near the muzzle of the gun and shielded by a metallic screen. The current is supplied by a small hattery in the stock. NEWARK, N. J., June 3.-A 100-shot gallery match was shot to day at Elihabeth, between Mr. Lever, of that place, and Godfrey Snellen, of the Essex A. R. C., of this city. Mr. Snellen allowed his opponent 50 points on the total score, hut as the score proved the men were very well matched at even points up, the scores being: Snellen, 1,095; Lever, 1,095+30=1,125. The match was shot on a 126tt. range. Another match will be shot shortly.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. etaries. orrespondents who favor us with club scores are particularly re sted to write on one side of the paper only.

HOLDING ON FLYING TARGETS.

HOLDING ON FLYING TARGETS. Editor Forest and Stream: The secon for game having closed in nearly all the Slates, it is now in order for the hoys to try their skill at the trap. This is a good sub-stitute for field spert and will considerably assist in becoming and re-maining skillful with the gun. Trobably the most perplexing thing for the trap shooter to deter-motion is just how far to aim ahead. Especially is this so with the portsman who shoots only a few times during the season; and even the professional is not always certain just what to do. The same laws which rule in the case of class birds are applicable will impressed, the shooter would in consequence hecome more ex-pert in the field. Te aim that the solution of the question of how to aim ahead is a mathematical one. If the velocities of shot and bird and the distance

bird from the shooter at the time of firing are known, then the outs be held at a certain point in order that the center of the and the hird may meet. 'velocity of No. 8 shot is put down at about 600ft, per second, time ago I made some trains to determine the velocity of clay-nes with the traps set in the fourth notch. My method was some-crude, but the result was probably sufficiently accurate for all iceal purposes. This velocity was ascertained to be about 35ft. zecond, or 1-28 as fast as that of sbot. In other words, while shot moving 32ft, the clay hird would move ift. 'accompanying diagram will give an idea of how far to hold i for the various angles a bird takes in leaving the trap. Let ap he at A and the shooter at B and the angles be taken for each prees which corresponds with the 12 notches in the Ligowsky

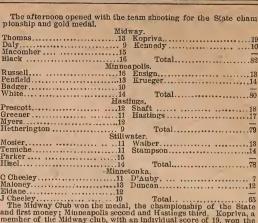

pigeon trap. A1 is a dead away bird, and if it is not caught dodging, a man with average skill can easily demolish 1t when it reaches the summit of its flight hy holding hard on. Earlier the aim must be a little above and later a little below the bird. Next take A4 which leaves the trap on a line at right angles to the sbooter. Let us sup-pose that when the shooter is ready to fire, the hird is livds from the trap, and the position of the shooter is 18yds, from the trap. The distance of the hird from shooter is B4, or say 62ft. While the shot would he traveling to 4 the hird would move on the line A4 nearly gft. further, and while this 34t, was being traveled by the shot would he traveling to 4 the hird would move on the line A4 nearly gft. further, and while this 34t, was being traveled by the shot the bird gets a nice "goose egg" for his pains. The apparent position of the bird now, as viewed by the man at the score, is approximately 28in. to the right of the point where seen at the instant of firing. By the same calculation we obtain that the aim must be ahead for the angles as follows: At 2, 14in, : 8, 28in, : 15, 28in. and at 6, 18in. These calculations assume that the bird mores on a line straight-make a turn to right or left, and this trick of theirs must be watched closely and aimed for accordingly. For instance, tis easy for a bird which leaves the trap on the line A2 (see diagram) to start on a curve to the left about the time the shooter is beginning to press on the trigger, and in a very short time it becomes a straight away hird and must be shot, is always taken into account. It is probably the successful shot, is always taken and on a wholy day the crack shots gen-erally have to make excuses for their low scores. Or course, when the word "pull" is given, and the hird is seen to take bis course, the shooter has no time to figure out the thing ex-actly. There is business to attend to and that quickly, or the thin inrick-colored chap will be seen to settle in the grass without the loss of a scal

FOREST AND STREAM.

CINCINNATI, May 25.—The second shoot for the Bandle Team 'rophy, open to any regularly organized gun club team of five la familion County, took place to-day on the grounds of the Price ill Gun Club, hefore an audience which mmbered in the neighbor-neod of between four and five hundred. The weather was all that could be desired, barring an extremely strong wind hlowing from the orth, which speeded the straight-away hirds to an extent simply wonderful. From the start the race was a hot one, but the Miami-ng the latter part of the contest, when they forket wenty-three out if the last twenty-five birds shot at. This club was looked upon as a uere fill-up, as was the East End, in the shoot hefore; and, strange o say, they made a laughing-stock of the other clubs entered. The winning team is a country fiel-looking set of mea, but, as the shooters erm them, "perfect middlers." Wick, Miler, Schatzman and Cole proved a disappointment to their respective teams. The manage-ment, judge and referee, gave excellent satisfaction, especially the salling of Mr. Corrie, of Xenia, Olio. The next shoot will lake place on the East End (lub 's grounds. Appended are the official scores; National Gun Club-Meyer 8, W. Guhman 13, E. Fey 13, Gerhardt 11, Rust 10, Total 65. described. We go to press Wednesslargs; and if is necessary that matter for publication should be in hand by Monday, or Tuesday at the latest. BROOKLYN, June 2.—The Fountain Gun Cluh members had a reg-ular gala day to-day. Men with gun bags and satchels filled with cartridges streamed in through the gates of the Brooklyn Driving Cluh ground at Parkville, and soon the popping of guns went on at a lively rate. It was the inauguration shoot at the new ground and was the nost successful one the Fountain Gun Club has ever had. 34 members shot for the five handsome prizes which had been do-nated for competition. The terms were 7 birds each, from 5 traps, 5yds.apart. Boudan supplied a very good lot of pigeons, and the shooting was very creditable. The mem-C. Wingert, 23yds., T. Lenngton, 27yds., and M. J. Kearner, 27yds, killed seven straight birds and tied. In the shoot off for choice of prizes 1, 2, 3, Wingert killed three more, and won the handsome silver pitcher presented by Yice President J. H. Swayer. Lenington killed three out of four and took a silver cup, Kearney got the silver gobiet presented by President Crooke. An adjournment was then made to the hotel, where was the inauguration dinner; 54 sat down to it. President A. Crook presided at one table and Vice-President Sayer at the other. Merriment reigned till far into the night. The score is as follows: F Infelix, 97,98... 111011-6 N B Cook, 23dys... 010100-3 A Eddy, 97... 1111110-6 C H Foote, 21... 000100-G A Chappell, 25... 000011-4 JA Carney, 21... 000000. THE CONDITIONS OF THE CUP RACES.

THE CONDITIONS OF THE COP RACES. THE following letter was received on June 1 by the cup commit-tee. The second letter is the one sent hy the committee in April: No. 18 CRANLEY GARDENS, LONDON, S. W., May 22, 1286. MY DEAR SIM-1 heg to acknowledge the receipt of your favor of April 26 last, and to thank your committee for the consideration they have given to the proposals contained in my letter of the 10th April last. I am instructed by Lieutenant Henn, R. N., to say that for the reason given in your letter of April 26 he accepts the decision of your committee, that one of the races must be sailed over the New York Y. C. course and not at Newport, but thinks it would be undesirable Galatee should take part in any races until after one at least of the cup races has heen sailed, as her doing so would necessarily tend to at Newport, but think part in any races un sailed, as her doing so np races has been sailed, as her doing so would necessarily tend to because the interest in them. Lieutenant Hean would be glad if the committee would consider the

advisability of also barring the False Hook shoal in the New York Y. C. course, as with an off-shore wind and sho lide an advantage might be derived by taking a passage inside that shoal. As the committee do not see their way to an alteration in the mode of determining the time allowance adopted last year. Lieutenant Henn will not, under the circumstances, press this point further, but sug-gets that the actual sail area of each vessel should be used instead of the approximate sail area found hy the New York Y. C. rule. Both Lieutenant Henn and myself fully appreciate the desire of the committee to meet his views and so to arrange the races as to insure are made solely with a similar object. We are also fully sensible of the fair and sportsmaniles feeling displayed last year to Genesta, not only hy American yachtsmen, hut also hy the general public of the United States, and nothing shall be wanting on our part to recipro-cate and encourage this good feeling. May the pleasure of meeting them early in July next, when the sug-gestions herein can be discussed, I am, my dear sir, yours faithfully, To William Krehs, Esq., Secretary America's Cup Committee, New York, United States of America.

To William Krehs, Esq., Secretary America's Cup Committee, New York, United States of America. New York, United States of America. New York, United States of America. New York April 28, 1886. J. Beavor Webb, Esq., No. 18 Cranley Gardens, London, S. W., England: My DEAR Sin-I am instructed by the America's Cup Committee of the New York Y. C. to acknowledge the receipt of your communica-tiou of the 10th inst. and to say that its contents have had the com-mittee's most careful consideration. I am further instructed to say that the committee, in their previous communication to you, aimed at offering the same terms for the contents nave had the com-mittee's most careful consideration. I am further instructed to say that the committee, in their previous communication to you, aimed at offering the same terms for the contest and to meet every wish of Lieureanut Henn, they fre unable to make any great changes from the propositions then submitted. Referring to your suggestions in detail, the committee feel that it will he impossible to agree that once of the races shall take place of Newport. New York is the home port of the club, and its large number of members reside here or in the immediate vicinity, and, as you are aware, take great interest in the contest, and the committee feel that it would he an injustice to the members if one of the races should the Galatea, however, be in these waters at the time of the pach club cruise there will be several very important fear. Support with American yacts and owners." For somewhat similar reasons they are unable to leave out alto-and the countiete trust this will meet Lieutenant Hem's wishes in respect to joing the squadron and placing himself 'en rapport with American yacts and owners." For somewhat similar reasons they are unable to leave out alto-and the public are familiar, and in which the greatest interest is felt, and beyond the, it is the course which were out of a failure to mutualy greupon the terms of the contest, he must sail t

The matter of the time allowance was carefully considered last year, and was referred to Mr. George L. Schuyler as unpire, and the committee accept his decision as then made as conclusive upon that subject. In the matter of the unpire the committee consider that the terms of the race should he mutually agreed upon, and it is not likely that a referee will be needed. Should, however, any question arise, such as that of construction of terms, to settle which it would be desirable to appoint an umpire, you may he sure that there is no one whom the committee would prefer to Mr. Schuyler. The committee desire me to assure Lieutenant Henn that in every detail not provided for they will strive in every way in their power to arrange that the race shall be fair and without advantage to either party, and the committee hore that your experience here last year will justify you in assuring him that he need have no apprehension upon this point. I am, dear sir, very truly yours, WILLIAM KREEN, Secretary of Committee, No. 62 Wall street, New York.

A CHALLENGE FOR GENESTA'S CUPS.

A CHALLENGE FOR GENESTA'S CUPS. Thas been a matter of regret among yachtsmen that no chance would he afforded this season to measure Puritan indirectly with rex by means of Genesta, as Sir Richard Sutton did not propose to to ut the latter this year. Now, however, the news comes that Mr, ohn Jameson has challenged for both the Brenton's Reef and Cape lay Cups, and that Sir Richard Sutton has accepted, so that Genesta all fil out at once to meet Irex. The two have never raced together mee the alterations of 1884-5 were made, and as Irex has proved erself the best of the British fleet last year, while Genesta was mug-unting across the Atlantic, another race was necessary to settle the later with were there, and by their performance together we have form last year's trim, and by their performance together in other nace with Puritan, while with Galatea and Irex together in other naches we shall soon know which is the best of the three.

the foot, which has since heen discarded for a jib and staysall. NEW JERSEY Y. C. -The opening sail of the New Jersey Y. C. was held on May 31, but owing to light winds it was merely a drift. A start was made from the club house at about 10 A. M., by the fol-lowing vachts, viz. Charm, E. & W. Ketcham; Meteor, A. Jeannal; Hangle Wing, John Buriton; Growler, Messrs. Bell; Allce, John Cur-tin; Truont, C. Zimber; Ledita, Wm Turner; Catamaran Nemesis, Messrs, Eversron & Reed, and Emity M., L. Alces, The honors were about 20 clock. All arrived back at the club house late in the eve-ning tired and hungry. The sloop Wayward, Com. W. H. Dilworth, Saturday serening was spent lying of Coney Island, reached Gartland. Saturday afternoon for a short cruise down the hay. Com. Dilworth haa as guests Mr. Fred Beltz, Mr. Wm. Letts and Mr. George Gartland. Saturday afternoon hock at the club house late in the eve-man having as lummer residence there). An anchorage was made off the steamboat dock at the Boulex. Sunday was spent quickly tanchor. On Monday an early start was had, when an effort was ioned hy Uice-Com. Ogden in the Duplex. Sunday was spent quickly at anchor. On Monday an early start was had, when an effort was made to get up the Bay to meet the Atlantic Bet, but there being no wind anchor was dropped off Buoy 8, and lines got out for fishing. The Atlantic Y. C. Meet arrived at the Spit about 20 clock, the Way-ward accompanying them up, and although her kites were not set, abe dif very well with some of the orack craft of the Atlantic Y. C. Owing to lack of wind the club house of the New Jerser Cluh was not for the open regatia of the New Jerser Cluh, which was been made off Bay Ridge on Monday morning, an anchorage having been made off as y Ridge on Monday morning, an anchorage having been made off the Stewer J. A. Tuesday morning, an anchorage having been made off as Ridge on Monday night. Entries are rapidly coming in port ho open regatia of the New Jerser Cluh, which will be held

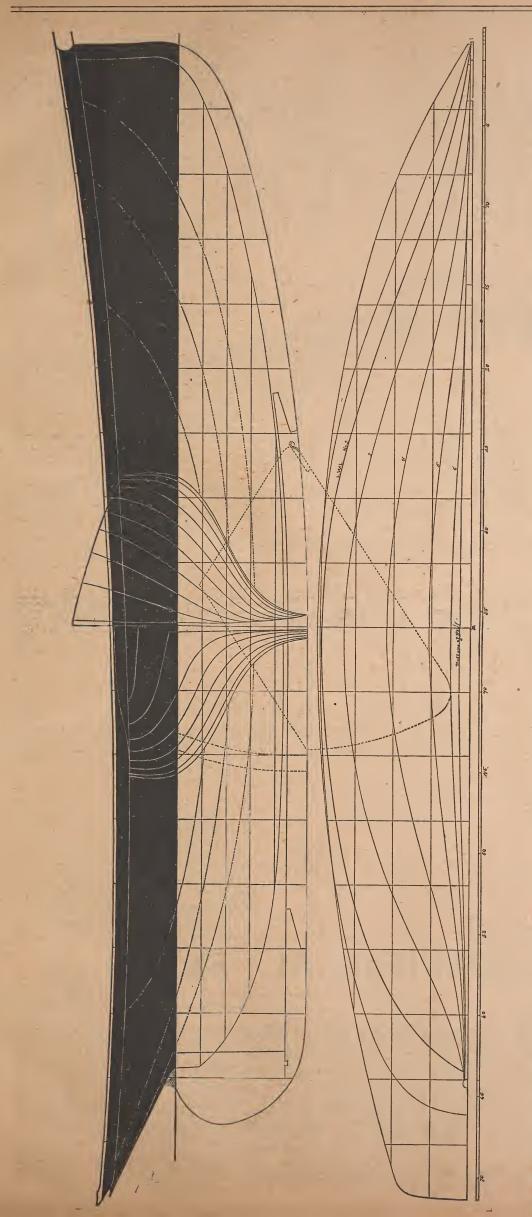

club house, foot of Tenth street, Hoboken. KNICKERBOCKER Y. C. REGATTA, JUNE 5.-The postponed race of the Knickerbocker Y. C., contrary to the usual rule, was a success on Saturday last, as the race was sailed in a good southeast hreeze, making fast time over the 20 mile course around the Gangway Buoy and back. The course gave only about four miles of windward work, the rest beine run under spinnakers or jithopsails, which cut down the chances of the cutter Surt, but even at this work she made a very creditable showing. Lizzle R. man-aged to sustain the prestige of her family by tumhing over and spilling her crew into the drink, but all were safely rescued. Her owner was picked up and completed his voyage on the rival boat, Ananda. An oyster sloop aided in righting the wreck, and the hanch Yeda towed her in. The summary is as follows: CLASS 1-CASIN SLOOPS AND CUTERS OVER 21 FEET.

THE LOCAL SPRING MEETS.

ONTARIO, MAY 22-24.

ONTARIO, MAY 22-24. THE Ontario spring meeting of canoeists took place at Knapp's Point, on Wolf Island, five miles below Kingston, on May 22, and lasted three days. The situation of the camp was as good as could be desired, and a. most enjoyable time was had by the members of the R. M. C. C. C. and their friends, among whom on this occasion could not be num-bered the almost ubiquitous mosquito, the canoeists having got the start of him for once. The weather was fine, the sailing and paddling courses good, and the mess arrangements were very perfect. Commodore Fairtlough and Vice-Commodore Morrow were in com-mand of the camp, and to their exertions is, in a great part, due its success. man of the camp, and to their excitons is, in a great part, due its success. Among the visitors were Mr. J. B. Carnthers, Professor Day, Lieu-tenants Hudon and Cochrane, Cel. Cotton and Messrs. Forsyth and Greet, of Kingston, the Brockville Club being represented by Com. Richards and Mr. F. Turner. At the last moment and after they had their cances ready for ship-ment, Commodore Bathbun, of the A. C. A., and the members of the Deseronto Club were unable to attend. Saturday and Sunday were spent in enjoyment of the first camping out that most of the canceists had had this year, a roaring big fre being made each evening and the proceedings being enlivened by songs, stories and miscellaneous fun. Monday morning set in with a spanking sou'west breeze, which diminished to a zephyr before the races could be started, so the sailing races were a series of drifts with the various boats being be-calmed several times. For the decked cance sailing race there were four entries, and Turner succeeded in crossing the winning line ahead, with Morrow a good second.

mer succeeded in crossing the winning line ahead, with Morrow A of second or the open canoe sailing race there were three entries, and the ee boats kept within a stone's throw of each other up to the finisb o, crossing the line a little ahead of Panet. The single paddle race s won by Turner, who was closely pushed by Strickland, and the dem paddling was won by Turner and Panet, Rogers and Strick-d coming in second. Com. Richards's canoe Mona, designed by pheres and built by Sauve, was taken to camp in hopes of a brush h Com. Rabbum's new Ruggles boat Star. but as the latter was present she did not race. Shortly after the races were over and prizes presented by Com. Fairflough, the camp broke up and always melancholly business of taking down tents and stowing mp material was got through with, while with many a hearty sbake the hand and many a farewell with ''I'll meet you at Grudstone'' led to it, the canoerist separated, some to go beme by steamer and are to cruise to their desituations in their light crafts, all voting the mp a great success and looking forward to all hands meeting ain at the general A. C. A. meet th August.

BROOKLYN C. C. CRUISE, MAY 29-31.

BROOKLYN C. C. CRUISE, MAY 29-31. THAT shall the Alligators do on Decoration Day?" had been a construction of some little moment for us to decide. We had re-red invitations to attend the Connecticut River meet at Calla sta Grove and also the Hudson River meet at Rondout, but as few is could be absent from Saturday morning until Tuesday, we had upon a cruise and camp nearer home, with the hope that to four members would be able to participate than would be the off we went further away. A cruise from the club house to South ch, Staten Island, a distance of aboutseven and a half miles, with day in camp at this place and return on Monday via Capt. Stil-l's at Bath for dioner, was the general programme decided upon-riders were given for members to be in readiness for a start at 5 ock P. M. on Saturday, May 29, each man to be so equipped that sould cruise and camp independent of any one else; but if pre-ed, two men to mess together. At the same time each novice was measure placed under the care and instruction of a more experi-dice-Commodore Wbilock. At the appointed hour the fleet was eadiness, but a strong flood tide and head wind made it evident tomes, the cances would be unable to reach camp confortably to fleer. Mr. Sinclair, made up the first detachment, helieving they dig taround the forts before dark. They were accompanied for ort distance by Commodore Newman in the Sunbeam, Mr. Mesdi-dor the kances would be the subeam. Mr. Messi-m the Berkeley, Mr. Baker in the Judy, and Mr. Dennison in the

Indiget around the forts before dark. They were accompanied for hord distance by Commodore Newman in the Sunbeam, Mr. Messi-in the Berkeley, Mr. Baker in the Judy, and Mr. Demison in the Analysis of the start of the fact, consisting of the flagship one, Vice-Commodore Wnitlock: Evangeline, Mr. Cook; Ganny-de, Mr. Budington; Fagan, Mr. Weeks; Niehe, Mr. Dunnell; Crusce, Thornton; No Name. Mr. Fosdick, and Lone Star, Mr. Schuyter, da most enjoyable sail down the bay, reaching camp at about 10 lock. Tents were pitched in good form, and, with the canoes drawn in line upon the beach, made an exceedingly pretty picture. The warsh ad come prepared with all the necessities, and the novices, owing the proclivities of the Aligator in general, bad come laden the the luxtries of life. The affernoon was pleasantly passed as its suited the different individuals. The Ellin Tree Lighthouse tower of add a pleasant resort for some, while others sailed or dozed, as most agreeable. Later some of the party returned to the city, ter supper the native mosquitos arrived in force, but fortunately ients provided ample protection against his ardent attentions. Moday morning opened with a strong easterly wind blowing, det droke away the mosquitoes. Breakfast of tongue, omelties, oled chicken and coffee was serred. Camp was struck, the cances we also be start for Bath was made. Later on a thunder shower me up which guite wet those unlucky ones not provided with oilers. It has eases had been earried below huoy 16. The crew of the may mede says be is constitutionally opposed to work of any kind to the base is was paddle or Europe. He chose the former, and once was made to paddle. During the morning those unforth-the shows had been earried below huoy 16. The crew of the may followed, crusse, Kelpie and Edna ran down from the club use to Gapt. Stillwell's, where dinner had been carties had arranced for the fact at Bath. Com Newman, in the Sunbeam, accoun-ined by beast. Crusse, Kelpie and Edna ran ad own from the club use to Gapt. Stillwell

 Intersting wind read bott. Solve it to solve the addited in this form to the club house, well pleased with our trip to flunting-don.
 SHERBROOKE BOATING AND CANOEING CLUB.—This club begins its second official season on June 10 with a formal opening of the house, and river illumination. The club is out of delt and owns a good boat house accommodating upward of thirty craft of all kinds belonging to some fifty active members. New members are joining, new boats on the way and altogetber a very successful season is expected. The house is always open and full privileges are cordially extended to visiting strangers were entertained, many of whom were A. C. A. men. who are always specially welcome. The officers for the year are: President, F. P. Buck; First Vice President, A. W. Olivier; Second Vice-President, I. Edgell; Secretary, John H. Walsh; Treasure, W. D. Fraser. Committee—H. R. Fraser. A. T. Winters, W. T. James, J. F. Morkill, F. Hains, C. E. Thornton, M. M. Longee. Commodore, J. G. Walton. During the month of August the club will camp for a fortnight on Lake Memphremagog, where canoeists and there interstanced will be made welcome. The experiences of those who camped there last season encourage us to look for a pleasant time again. Paritulars of camp'and railway rates will be furnished on application to the secretary or commodore.—J. G. W. (Sherbrooke, Quebee, June 4).
 OAKLAND C. C., CLEAR LAKE CRUISE.—The Oakland C. C. started on June 1, on a journey to Clear Lake taking a steamer to Point Thivero, across the bay, thence by freight train to Cloverdale, there targets. Jones X, there by male team across the mountains to Lake Meany. First, Vice Tourne, and there, Surgers, Jones J. a canoe tournament; a saling race, class I; a canoe tournament; a saling race or skiffs and yachts, one for canoes, a mixed saling race for four-oared shells, a paddling race, class I; a canoe tournament; a saling race consolation race, saling; a swimming race, and an inspection of canoes. A gold bave a good many more club cruises during the summer.-FhANCHS H. GEBRENE, Secretary O. C. C.
 NEW YORK C. C. ANNUAL REGATTA.-Tbe club house of the N. Y. C. O. has been hauled out at starin's dock and caulked and sheathed, and is now in position next to the old Sawanhaka C. Y. C. house at Tompkinsville. The annual regata will be held on Saturday next, starting at 3 P. M. The programme includes a sailing race for Classes A and B, sailing together, without limit; a sailing and paddling race, nad an upset race. The prizes will be flags for first and second. Boast for Classes II. and IV. a band-paddling race, nad an upset race. The prizes will be flags for first and second. Boast Com. Diver, Mr. Gloson, Captial Metadle, U. S. A. Messre, Palmer, Cus Busquetanan, having gone by rait to Binghanton ou May 28 and started from there. They were at Wilkesbarre on June 5, with but two capsizes to record.
 TORONTO C. C. A. general meeting was held on June 2, at which the constitution and sailing rules were amended. Nins of the club cruised up the Humber on May 22-24. CRUISE OF THE LAKE ST. LOUIS C. C. THE Lake St. Louis C.'C. taking advantage of the Queen's birthday ars. So on Saturday, May 22, we left with a special car full of anoes for a place named Huntingdon, sixty-five miles from Lachine, si will have to name a few of the members on this voyage partic-larly, it would be as well to introduce the entire party and give the ames of the cances. Our worthy commodore paddled in his old ellable Shawenigeen. in which more cruising and racing has een done than in any cance in the Province of Quebec. Commodore 7. Morris, Vice-Commodore, H. W. Molson, La Fleche; Charles La-ichte. C. D. Monk. Nokomis; A. J. Stewart, Robin Adair, Coquette; 1. T. Wigress, C. T. Christie, Edith; A. T. Kohl, A. Henshaw, Puri-mi; Fred Stewart, A. J. Henderson, Ida; A. Ward, H. S. Huuter, arblow; Forbes Torrance, Alex. Patterson, Vesper; A. Desbarets, and Juris, With The Stewart, B. Stones, H. Laughlan, urline; Robert Ross, I. K. Bruce, Chestnut; C. S. Shaw, A. W. bearwood, Water Lily; Thompson, W. F. Gooper, Bertie; W. Robert-on, Geo, Audijo, Marion L. With this larce party we arrived at mine host "Moirs" at Hunting-on, where we ald our first portage from the car to the hotel. After inner we walked through the town, singing national airs, to the CRUISE OF THE LAKE ST. LOUIS C. C.

CAPTURE OF THE CROW RESERVE.

THE Crow Indian Reservation includes about 4,500,000 acres of land in Western Montana south of the Yellowstone River. Except along the river bottoms it contains little arable land, and nowhere can farming be carried on without irrigation. But the broad prairies, rolling foothills and mountain parks are luxuriant with nutritious grass, and the reservation's advantages as a stock country are unsur passed. This reservation is all that is left to the Crows of the broad lands that once were theirs. Here they live, sub-sisting on what the Government issues to them, for few of have made any progress in industrial pursuits, and there is no game left. Some of the Crows have cows which were issued to them by the Government, and they have a good many ponies, but they have as yet done hardly anything toward learning how to till the ground.

Over the length and breadth of the reservation the cattlemen's herds feed and fatten on the acres which belong to the Indians. The few cows belonging to the latter range with the thousands owned by the whites, and are absorbed by them. It is the old story of the poor man's one ewe lamb which his rich neighbor coveted.

The trespassing of these cattle on the reservation is expressly forbidden by the regulations of the Indian Depart-When the present Crow Agent, Williamson ment. by name, went into office a few months since, he at once ordered all the cattle to be removed from the reservation. The cattlemen were not slow to take the hint, and it is charged that this order was the signal for them to put up money to secure permits to graze cattle on the reservation. Such permits have been issued to a number of firms, and, having acquired this foothold, the cattlemen propose to make still more sure of this great pasture land. They wish to secure it beyond a peradventure and for all time. They wish to see the the fasten their grip upon these lands so firmly that it can never be loosened. This is their plan: They have arranged with the present agent to give them permits to throw their cattle on to the resorve. Having secured these permits from the agent, they have turned in the stock in large numbers and are now taking possession of the best locations. The permits which they have obtained cover the best agricultural and grazing lands on the reserve, and on these lands the cattlemen are building permanent improvements, which will enable them to hold the land, should the reservation ever be

thrown open to the public, and to bluff off actual settlers. Among the firms and individuals who are alleged to have succeeded in getting permits to throw cattle on the reserve are the following: Briggs & Ellis, renewal of permit to graze cattle on the reservation, at fifty cents per head. Hoskins & McGirl permit to graze bulls on the reservation, when not needed with the cows that graze north of the Yellow Ash, permit to graze a small band of cattle on the stone. reservation.

It is believed that there is no law for this permit system which is being carried out by agent Williamson, and that any cattleman has as much right to turn his cattle on the ervation as those who have these permits.

It is stated by those who are perfectly familiar with the reservation that Nelson Storey, of Bozeman, is building a permanent ranch on the reservation near Pryor Mountains, and that he has a permit to graze his cattle on the reserve. Whether he has such permit or not his cattle are there by thousands. So also are those belonging to I. K. Dillworth, making with those of Storey perhaps 20,000 in all. Last and spring they dotted the whole country between Pryor River and the western boundary of the reserve. Storey had then a hay ranch and corrals on Clark's Fork. Several of the cattle men have boasted that they have the reservation securely in their power.

It is not only the cattlemen who are encroaching on the reservation, for Thos. Barry, a sheepman of Rock Creek, stated last spring that he had a permit to graze his band of 6,000 head on the reservation up to June.

On the south, a cattleman of Wyoming, H. C. Lowell, whose stock ranges on Sage Creek and the Stinking Water, takes advantage of his proximity to the reservation to graze his cattle there too. As the case stands at present, the cat tlemen seem in a fair way to gain absolute control of the reservation. This control will not benefit the Indians, who are at present unaware of the state of things, and would strenuously object were they not deceived in the matter, and when the time comes for throwing open the reservation, the desirable locations will be found to be all occupied by the cattlemen, who will find some means of holding on to them. The people and press of the Yellowstone valley are silent on this matter, for the great cattle firms interested have too

much influence to be openly resisted. The greater portion of the reservation is now under the control of the cattlemen. The Crows receive little or nothing in return, certainly not enough to pay them for the risk to their own small bands of cows and horses which are certain to be absorbed by the herds of the white men. The reservation should not be thus taken away from the Indians without their consent and handed over to the control of the rich cattle firms who, if they once fairly become established in it, will with difficulty be removed.

A searching investigation of this whole matter ought to be instituted by the Interior Department. If the agent has any authority for issuing these permits it ought to be known. If he has no authority the cattle ought to be at once re-moved and the agent too.

A CALL FOR MORE POROUS PLASTERS.

THE National American Swimmers' Association for the Protection of Women and Children from Death by Drowning convened in this city on Thursday morning of A large number of delegates from swimming last week clubs and surf associations were present, and there were two members of the Lighthouse Board. The president, in welcoming the members, referred to the growth of the summer picnics, the multiplication of excursion steamers, catboats and "death traps," and the consequently growing field of usefulness for the association. A number of highly inter-esting and valuable papers were read. The delegate from the Wabash (Ind.) Swimming Club, presented a thoughtful essay on the "Impeding Influences of Quicksands in their Relation to Skirts;" and the delegate from the Ann Arbor (Mich.) Swimming Club, followed with a paper based on the researches of Prof. Arnold Guyot, showing that as the waters are gradually receding from the land the ultimate success of the Association was assured.

The secretary then read his report, in which was embodied information collected by the Association since its last the meeting, showing the number of deaths of women and children by drowning in 1885. The total proved to be enormously in excess of the number for 1884. This startling summary had a powerful effect upon the assembly, and it was felt by all present that something ought to be done about it.

The Law Committee reported, recommending that the abolished from every State.

picnic and excursion season be made uniform throughout the States.

Reports from clubs were then in order. These were particularly eloquent and instructive as showing the lamenta state of general apathy of the non-natatorial public regarding the cause of protection from drowning. Some dissension was caused by an inexperienced delegate from Philadelphia who made the point that, inasmuch as in every case of drowning narrated by the speakers and of which they had been eye-witnesses there had been an abundant supply of all sorts of life-preservers, life-rafts, casks, hen coops, feather beds, hatches, oars, cork jackets and patented life-saving devices, the respective women and children would have been saved had the members themselves simply heaved some of these appliances overboard. Another new member some-what incoherently formulated the proposition that in other cited instances, where infants had perished in very shallow water, the stalwart members of the National American Swimmers' Association for the Protection of Women and Children from Death by Drowning might have plunged in and personally rescued the little ones. These novel propositions were quickly shown by the older and more experienced delegates to be puerile and impracticable; and, harmony having been restored, it was unanimously resolved to pass resolutions. A committee was appointed to draw up the resolutions.

As it was now nearly noon and as the convention had before it important business relative to amending the rule of handicapping contestants in its three days' kitten-drowning tournament, the committee was empowered to adopt its own res olutions and send them to the press. After wrangling over the handicap kitten-drowning rules (during which the Lighthouse Board delegates "slid out") and the election of officers, the delegates took the noon boat for Coney Island, where an exhibition was given by the champion of the association, who succeeded in drowning out the ninety lives of ten cats in ninety minutes. The regular contests then began and continued until late Saturday night, the ties being drowned off Monday morning. The resolutions given out by the committee are as follows:

Whereas, The number of women and children drowned in the waters of the United States is annually increasing at a most alarming rate; and Whereas, If the deaths by drowning multiply in the immediate future as they have in the immediate past, there is serious danger that the race may become extinct; and

Whereas, It is the unanimous conviction of this convention that meeting ought to be done about it; therefore, be it *Resolved*, That we, the members of the National American Swim-ters' Association for the Protection of Women and Children from

Death by Drowning, do respectfully petition the Congress of the United States and the Legislatures of the respective States to make suitable provision for the increased manufacture of porous plasters to be ap-plied to the resuscitation of the drowned. =

BEAR MEAT.- "Mountain mutton" is the usual term employed by such of the Adirondack hotel men as serve up venison out of season. Last Monday a gentleman, who has been prominent in organizing a new club in the Adirondacks, was relating to us the wonderful increase of the weight attained by one of the members during a few days stay at the new club grounds, which increase was thought to be due to the wonderful air, the trout and the "bear meat." In the course of the conversation, by a lapsus lingua, it transpired that the "bear meat" was from a May killed buck. hotel keepers of Franklin county may still learn a point or two in culinary phraseology from the club men of Hamilton county.

THE MAINE HOUSE BURNERS. - Another one of the Shacker Band, of Wesley, Me., has been convicted and sent to jail for his part in the burning of Game Warden Munson's house and barn. In another column will be found an account of the reign of terror exercised by these ruffians. It is an extraordinary story. Dr. Hunter and his friends, who have at great personal peril assisted the authorities in the detection and punishment of the criminals, deserve great praise for their courage and public spirit.

ARE THERE DEER IN THE CATSKILLS?-In a report of the visit of Forestry Commissioner Cox to Slide Mountain, in Ulster county, N. Y., it is stated that in that region of the Catskills, bears, wildcats, foxes and deer are still to be found. We should like to have verification of the presence of deer there. Of the bears, wildcats and foxes, no question can be raised.

ABOLISH SPRING SHOOTING .- The Illinois Sportsmen's Association, as reported elsewhere, will endeavor to have spring shooting abolished from that State. It ought to be

A^T the inter-state tournament of the National Gun Asso-ciation, at Tallahassee, Florida, June 21, it is proposed to trap-shoot martins. Such a proceeding ought not to have the sanction of the National Gun Association, nor of the local club, nor of any individual making pretension of possessing the customary modicum of common sense. It is pure, unadulterated, aggravated foolishness.

All other considerations aside, there are abundant economic reasons why these birds should not be destroyed. Martins are insectivorous. That is to say they catch, eat and destroy vast numbers of injurious insects. In one of the volumes of FOREST AND STREAM is given a record by a naturalist, Mr. O. Widdman, of St. Louis, Mo., who watched a nest of a pair of martins sixteen hours, from 4 A. M. to 8 P. M., to see how many visits the parent birds made to feed their young. He found that in that time 312 visits to the four young were made, 119 by the male and 193 by the female. If we suppose only six insects to have been brought at each visit, this pair of birds would have destroyed, for their young alone, in this onc summer's day, not far from 2,000 insects It is hardly necessary for us to begin at the first pages of the primer and laboriously teach that creatures which perform such services for the community should not be thoughtlessly, not to say wickedly, destroyed in trap-shooting competitions. Florida does not enjoy such extraordinary immunity from insect pests that its citizens can afford to make war on martins and other like birds.

The number of martins which the National Gun Association proposes to trap-shoot at Tallahassee may be very small, so insignificant that the actual results of their destruc is not, so has plantally nothing. The harm likely to ensuc is not, however, to be measured by the immediate material result of the proceeding. The National Gun Association and the gentlemen gathered inTallahassee have a certain responsibility, because they will be looked upon as representing the attitude of sportsmen on such questions as this of the destruction of valuable insectivorous birds. If they shoot martins it will be a warrant for others to do the same. If they take a stand against the killing of useful birds, their example will have an influence on others. The proper thing for the Florida members of the National Gun Association to do at Tallahassec is to initiate a movement to secure from the Legislature of the State a law forbidding the destruction of martins and all other insectivorous birds, as well as birds of plume.

SPRING IN THE YELLOWSTONE PARK.

THE latest advices from the National Park, dated late in May, report a mild winter and the spring fairly opened.

Game is said to be plenty and to have wintered well. Elk have been seen in large numbers around Specimen Mountain near the mouth of Slough Creck, and East Fork travelers have reported seeing over two hundred head between Soda Butte and the Mammoth Hot Springs. A good many elk have wintered also in the Swan Lake and Indian Creek country, where they were fairly abundant last August. It is stated that these numbered from three to five hundred.

The usual band of mountain sheep have been seen on the slopes of Mt. Evarts, where they remained until after the lambs were born. Some of these were dropped not far from Gardiner's River.

A small hand of fifteen or twenty head of antelope have been seen near the town of Gardiner, between the foot of Mt. Evarts and the river.

Early in the month of May, Geo. Miller, one of the Park Police, went from the Springs to Soda Butte, and when crossing Specimen divide, came upon three buffalo, a large bull, a cow and a smaller bull. As there was considerable snow the animals kept the road for some time, and when at length they turned off, Miller was only about twenty yards behind them. They did not appear to be greatly alarmed, and stopped soon after he had passed them.

A new road was recently opened from the Norris Basin to the Falls for the purpose of taking in building material for one of the hotel companies. James Blanding, one of Lieut. Kingman's foremen, broke this road, and reports having seen twenty five bison and a great many elk. He did not reach any point where he could overlook the Hayden Valley, which is the great wintering place for game in the Park.

Building by new hotel companies is going on quite vigor. ously in the Park, and by this time the season may be considered to have fairly opened. A few tourists even went into the Park in May.

THE BOSTON DUMPING GROUND.

THE new Massachusetts game law is in many respects an improvement upon the statute it supplants. Its text is the outcome of much pulling and hauling by representa-tives of diverse interests. The members of the Massachusetts Fish and Game Protective Association had as usual the market-dealers to contend against, and as usual the game scllers came out ahead. They still have the privilege of receiving the unseasonable game which can find a market nowhere clse. Western prairie chickens and venison and Eastern quail will find their way to the Boston dumping ground, and if Massachusetts game is not displayed on the same stalls it will be because Providence sometimes overrules the natural consequences of such grossly stupid legislation as the Massachusetts people are capable of perpetrating when game interests are at stake.

DAYS WITH THE BARMECIDE CLUB.

The Syortsman Tourist.

IV. To UR or five miles southeast of Our Lake were three other lakes, all discharging their waters through the oullet of the most southerly of these; and their combined flows, in addition to numerous springs which added their mites, made a large stream, one to fill all the requirements of the angler. It was a wild rough place off the beaten track, and we were one of two parties who had visited it in the last three years. We had to build a raft for our lake tishing, as we found the old one was water-soaked and nearly a complete wreck. If it had ever been "a thing of beauty" it was not "a joy forever," for its beauty, its joy and all its resthetic and use-ful qualities were numbered with the past. The tramp from Our Lake, building a raft and repairing shanty, consumed the greater part of the day, but the time was well occupied and enables us to devote the remainder of our stay to fishing, loafing or ornamenting our residence and grounds as best suits us.

kissing the lily pads as they pass and encouraging you to sleep, while the hedgehog, unable to control his predatory instincts, is sacking your butter pail. However, guide kcep-ing awake late that night, patiently awaited his coming and then shot him, so our account with that animal was balanced

Ing awake late that night, patiently awated his coming and then shot him, so our account with that animal was balanced up to date. We must cease from our angling for a day. We had been here three days, and during each one all the conditions had been favorable for good creels and we had made the most of it. The fourth day we were not to fish, so we slept until it was late, having breakfast at city hours. To many it would seem a very strange statement to make, that having a superabundance of game we refrained from capturing more at present; but such is the sad fact, and many is the time in the woods and on the plains when we have been guilty of the same offense. Many are the smiles and shrugs of the shoulder that have been given us for opinion's sake on this point, but we have been given us for opinion's that caused us to go out with rod or gun. No person loves to hunt or angle more than we, and we claim that the reckless, cruel slaughter of game for simply killing and wasting and throwing away, is a charge which cannot be held against us; and further-more, we claim that our captures have been fair and sports-manike, and that we are in full sympathy with all laws tending to the better conservation of game, the young buck spoken of in the fourth section of this sketch to the contrary notwithstanding. The ills and dangers that nature inflicts are numerous and

The ills and dangers that nature inflicts are numerous and merciless enough, but almost harmless in comparison to the skill employed by even the most honest and conscientious of sportman; but what shall be said of the desperate chances they run when attacked in season and out by the villainous devices of the pot-hunter. "Blessings brighten as they take their flight," and we hope that law will more securely lock the stable door before the horse is stolen. But then we had lots of fun around camp. There was plenty to do. Lots of little tricks to busy about. Glen tied a few flies and repaired a few leaders. Storm was boss and all hands at making some improvements on the raft. We read and smoked and slept, traded experiences and enjoyed to the fullest the three square meals provided by guide and company. It was a holiday for guide, as we chopped his afternoon siesta.

And it was a glorious rest, where every bugle was in per-fect harmony with its neighbor, and if one bugler awoke he was not mean nor selfish enough to repeat the miscrable trick of the would-be funny man of tickling some sleeper with a straw. As well take a cup of water from parched lips. Nor was it indolence, this afternoon nap. It was medicine and good medicine too, and each man partook of it whatso-ever he needed and was content. Full well he knew there would be no stupid finger drumming on the table nor any torturing whistle to disturb the calm. Then we paddled over the lake and visited many a familiar point of old time and present interest only less interesting from the absence of former outers who had in times gone by frequented them with us. MILLARD. CHEFERSNE, Wyoning.

CHEYENNE, Wyoming.

A DAY IN TUSCANY WITH THE QUAIL.

A N early rise, a hasty breakfast in the big kitchen of the "Fattoria," a run to the kennels, a joyous bark at our arrival, and the old gamekeeper and I sallied forth for the lowlands by the Arno, accompanied by a choice brace of pointers.

Reports had come in the evening before of the arrival of Reports had come in the evening before of the arrival of the migratory quail, nearly always quite a sudden event, and a few snipe could always be counted on. The "guardia" and I had loaded a few shells for my gun, a central-fire, which had excited a little curiosity in the neighborhood, as muzzleloaders were the rule, a few pin-fires the exception, and the central-fire an unknown quantity. The prevailing opinion was that it was a good enough arrangement for a gentleman to have, but not of any great advantage save the emolument of gun dealers. This was about twelve years

ago. We walked down the hills, a gentle breeze softly waving to and fro the new-born leaves and tendrils of the vines, gracefully festooning from tree to tree in luxuriant garlands. The dogs were gamboling ahead, now and then turning their heads and looking at us, to make sure whether or not their conduct was open to any criticism, and then resuming their chase through the green, waving wheatfields on either side of the nath.

conduct was open to any criticism, and then resuming their chase through the green, waving wheatfields on either side of the path. The old gamekeeper was a remarkable specimen, a kindly old giant whose huge proportions were well fitted to strike awe and terror into the craven hearts of any trespassers about the preserves. He sported a pair of cowhide boots, rising high above the knce, whose cubical capacity must have fallen little short of a bushel apiece. Deep in these boots were lost the ends of a pair of breeches, once of blue corduroy, but now somewhat iridescent from the play of light upon the many patches. His coat was of a brown canvas-like material, with more pockets than even Upthe-grove & McLellan can ever have dreamed of, and his cap was of the shape and hue of a section about eight inches be-low the end of a watermelon. It was graced by a bit of gold cord and a visor, a cap held in greater reverence and awe than ever was the covering of the tyrant Gessler. His gun would have deserved an engraving in a work upon ancient gunnery, a weapon born as a double-barreled finitlock which, after many years, had been placed in the hands of a cunning artisan, whence it had issued as a percussion gun, to again resume its destructive course. The nuzzle had worn down to an edge as keen as that of many a razor I wot of, and the barrels held on to the stock partly by force of habit, and partly by the restraining influence of a picce of string. The stock was ornamented by a gargoyle which was alleged to present some similitude to the head of a stag, but which reminded me far more of one of those amazing and shapeless monsters we see depicted in the middle-age pictures of the "Temptation of St. Anthony." In the gamekceper's hands, however, it proved itself endowed with wondrous qualities. qualities We so

qualities. We soon reached the marshlaud, and a whistle recalled the dogs to seriousness. They went off ranging over a damp, sedgy field that stretched way off to the Arno, and the old dog suddenly fell on a point, the younger one backing beau-tifully. We advanced, and with a shrill cry three snipe rose. I shot and killed with my first barrel, but missed with the second; the old keeper had killed bis first bird within three feet of where it arose, and downed the one I missed, saying afterward, as he stood reloading bis gun, that he hoped my excellency didn't mind, for snipe were searce and we might

A SWELL bag, all we could. He was quite relieved when I assured that my excellency did not object a bit. A little further on the dogs began to work around very carefully in the grass, the quail had been running around, and it was several minutes before they came to a point. We came up to the dogs, told them to go on, and they crawled up carefully a few yards when two quail arose, both of which I managed to kill. They were the first migratory quail I had ever shot, being birds about the size of a rail. They are very strong on the wing, and make as much noise as our put in arising. They give a strong seent and afford excellent sport, being mearly always seattered singly or in pairs when they have been in the fields for some little time. They give a strong seent and afford excellent sport, being mearly always seattered singly or in pairs when they have been in the fields for some little time. They give a strong seent and afford excellent sport, being mearly always seattered singly or in pairs when they have been in the fields for some little time. We want on further and found that these splendid little frame for the to shoot first, and notwithstanding this he only missed two shots during the whole day, probably wing to the limited range of his gun, as I shot several birds and gy at distances which seemed to him quite extraodiary, for each time he delivered an old Italian saw, to the divert of an hour go by without a good point, and by 4 of clock my fifty shels were exhausted, and we turned to any fifty shels were exhausted, and we turned to any fifty shels were exhausted, and we turned to any fitty shels were exhausted, and we turned to any fitty shels were exhausted, and we turned to any fitty shels were exhausted, and we to extrain the shore or time and they are netted in countless thousand any do so yet for anght I know. AT THE AGENCY SCHOOLHOUSE.

<text><text><text><text><text><text><text><text><text><text>

The school is provided with an organ and Gospel Hymn books. The children have learned to sing a great many hymns and patriotic songs including Yankee Doodle. There are some of them that have excellent voices, which if culti-vated would make their possessors very fine singers. All the boarding school children can read, a part of them quite well. They take a great delight in writing and all write a very good hand. And all this they have learnt within the past year. THEIR TEACHER. BLACKERF AGENCY, MON. Ter., Feb. 1, 1886. ast year. Hatural History.

THE BIRD RANGE INCREASING.

THE BIRD RANGE INCREASING. Editor Forest and Stream: The following notes may for your readers as well as myself possess a certain degree of interest: On the 27th of May, in driving along the road about ten miles north of Elk Rapids in the country, I saw a bird at a distance of sixty or seventy yards, and from its appearance and manner of alighting in the grass, I was sure that it was a plover of some sort; a bird which I have never before seen in this region. This one was about the size of the upland plover of New England, but seemed lighter in color. I heard no note, and circumstances prevented me from ex-tending my investigations. A friend. in whom I have confidence, told me last week that he had seen not far from this village a pair of crossbills, this being the first instance within my knowledge of their appearance hereabouts. My wife, yesterday, saw a brown thrush (Harporkgnchus rufus). These I have never seen here, though others may have been more fortunate.

My wife, yesterday, saw a brown the through others may rufus). These I have never seen here, though others may have been more fortunate. The lady above mentioned was yesterday walking in the garden when a finch alighted on her hat, and after pattering about for a short time took its departure. It may be men-tioned that there were no wild birds' feathers upon the hat and this fact doubtless tended to inspire an unusual degree of confidence in the little creature, which left when it was ready to go and not before. It is told that Robinson Crusoe was horrified by a similar incident in his island experi-ence; but I think there was in this case no feeling of that sort. It shows that we are on good terms with the most of our neighbors.

we have not by a binnar indicate in the island captering of that sort. It shows that we are on good terms with the most of our neighbors.
We have not up to this time been annoyed by the English sparrows, although I think that I have seen them as winter visitants. I am informed, however, that in Mancelona, twenty miles distant, they appeared last year in small numbers, but are now very numerous.
This region has only of late years been occupied by whites, and is even now but sparsely settled, and many birds common to the older communities of our State will, I doubt not, find a home here in time, where as yet they are unknown. I have been surprised that in all my excursions upon the waters of this county, I have never yet seen a bittern of any variety. These birds are so widely distributed, that with the abundance of food and other conveniences which our shores could furnish, it has seemed strange that none should come among us. The common blue heron is frequently to be seen, though they are less numerous than formerly. So with the loons, whose nests are regularly robbed by the raftsmen. I have an egg of this bird. I am glad to say that I did not rob the nest. I also have one of the wing plumes of a condor—a quill of extraordinary size, which, with the egg, has a conspicuous place among various outlandish matters which hang upon the walls of my sitting-room. Query. Is this a violation of the pledges I have given to the AUDENON Socrerr? I don't know. Were it the magnificent plumage of some tropic bird, or even the lustrous skin of a woodduck, I would have pulled them down at once; but that somberhued old plume, with its forty years and more of past associations, still hangs on the wall. I have not been able to persuade myself that it is to be regarded in the light of a "decoration."

persuade myself that it is to be regarded in the light of a "decoration." Although no shooting for millinery purposes has within my knowledge been practiced hereabout, I am persuaded that many of our smaller birds have been killed elscwhere during the migratory season. For example: I am informed by one of the firm of Cameron Brothers, at Torch Lake, that they have always protected the robins, which have heretofore nested in large numbers about their buildings and lumber yards; yet this year they have appeared in numbers sadly diminished. For this no apparent reason exists, save that which I have assigned, and it goes to show that the work of the AUDUBON SOCIETY was begun not a moment too soon. The Florida gentleman who is so anxious to "stash" the mocking bird should remember that there are a few insects left in his State (there were a good many when I was there) and that without the birds there wouldn't be much of any-thing else but "bugs." KELPIE. CENTRAL LAKE, Mich., June 10.

thing else but "bugs." T CENTRAL LAKE, Mich., June 10.

BOYS AND BIRDS.

Editor Forest and Stream:

BOYS AND BIRDS. Editor Horost and Stream: As this is the nesting season of our feathered songsters, fwish, through the ForeEst AND STREAM and with your per-mission, to say a word to parents in regard to their boys in connection with birds and their nests. In many of our Eastern cities and some of our Western cities as well, anti-feather societies are becoming very popu-lar. I am pleased to note this fact, for, as a rule a woman's head-gear is ridiculous enough, but I look with horror upon a hat with a bird on it, no matter how fair the wearer may be. But to the subject. Perhaps it is not very generally known that boys about this time of the year and also later on, form themselves into little bands or clubs as it were, and start off on a crusade against birds and their nests; this is nevertheless a fact, as the writer was an eye-witness to an inventory that was being made by a band of these young robbers who had just returned from a crusade of this kind. One hat, that of the boss robber, contained nearly fifty eggs of various kinds. There were five boys in this gang and all had met with more or less success. Indeed, I was told by one of the boys that he had a collection amounting to some-what over two hundred eggs at home and that his mother took great delight in looking over the different kinds. How-ever, this might not have been true, at least I should hope not. Parents, do your boys belong to a band or club of this kind? If not, see to it that they do not become members. The remedy for this evil, for it is a sin and a shame, must come through the parents, I contend, and if a gentle admoni-tion will not effect a cure, the flat side of a shingle, judiciously applied, will be found to be very efficacious. M.H. CHAMPAREN, BL. CHAMPAIGN, Ill., June, 1886.

CAN A SNAKE POISON ITSELF?—Fort Monroe, Va., May 23.—*Editor Forest and Stream:* Another idol shattered! A newspaper writer says: "Meanwhile the deadly but still pretty creature was writhing about the cane which held It, biting and tearing its own flesh. The strange fact which Dr. Weir Mitchell made known to the world in 1868, that a poisonous 'snake cannot poison itself,' is no less strange be-cause true." If the above assertion be true, what is to become of all of our old stories of teasing a rattlesnake until, in his impotent rage, he terminates his own life with his fangs; or if the blacksnake which, when struck by the fangs of his horrid adversary, seeks the aid of some mysterious weed as an antidote, and soon returns to the fight with fresh vigor! No doubt many of the old woodsmen (?) can disap-prove the assertion of this rash doctor as readily as they can prove that the bullet from their trusty rifle "flies perfectly straight" for sixty or more yards.—A. O. S.

A FLORIDA Fox.—Glence, Fla.—My next door neighbor's boys recently caught a gray fox, which was prowling around their hen coop one night. This is the first time in ten years residence here that I have seen or heard of a fox in this part of the State. They are sometimes found over on the Gulf coast, but it is a great curiosity here. Strange to say, the boys caught it in a common box trap which had been set and baited with cheese for a 'possum. Either the Florida fox is not as cunning and crafty as his northern relation, or else this one was unusually simple-minded. It was a full grown female, but seemed to me to be very small compared to those at the North. Dimensions, total length from tip to tip, 37 inches; body, 23 inches; tail, 15 inches; weight, 7½ pounds. —RED WING.

VORACITY OF THE BLACKSNAKE.—Editor Worest and Stream: In the early autumn of '74. I was rambling among the Berkshire Hills in Western Massachusetts, when about a hundred yards from a mountain brook I discovered a black-snake working its way along with difficulty. Calling my friend's attention to it, we killed the snake, and noticing the unnatural size of its body, opened it and found in its stom-ach a frog nine inches in length. The snake measured three and a half feet. At another time I killed a blacksnake on the bank of the Hoosic River, near Pownal, Vt., that measured four feet and eleven inches, and its stomach con-tained a large rat. Another instance occurred near the same spot.—E. T.

POISONOUS FISH AND FISH POISONING IN CHINA. BY D. J. MACGOWAN, M. D. [From the Chanese Recorder of February and April, 1886, by favor of Prof. S. F. Baird, U. S. Commissioner of Fish and Fisheries.]

<text><text><text><text><text><text>

4000
withere metics failed to act; both died. In another family a father, mother and daughter died from the same cause. They suffered much pain, with swelling of the abdomen, skin purple and benumbed, with greenish saliva from the mouth. Another case is worth giving, because of the symptons, from a work published in the last century. "A Shanghal graduate when on the eve of departing for the Pekin examination, entertained his friends at a banquet; being hungry, just before the greats' arrival he partook of some porpoise; when his friends arrived he found himself unable to make the usual salutation with his hands, they were paralyzed; soon his whole body became numb, and then his abdomen distended greatly, and he Yangtsze than on the coast, as if the ascent of the great river fraders it is well known that sallors cau porpoise caught at sea with impunity, and islanders, as the Japanese, rarely suffer monopropise eating.
To NotOVS FISH. The Ningpo Gazetteer describes a fish, moties poisonus younded suffer exeruciating and protracted pain, say the propose output will hit, however, Thave not found it hurtful in that maner. Somewhat similar is the "tigerfish," with hedgehogy is poisonous, and so is its flesh. On the coast of Chekiang and tree, will kill it, however, Thave not found it hurtful in that maner. Somewhat similar is the "tigerfish," which hedgehogy is poisonous, and so is its flesh. On the coast of Chekiang and tree, will kill it, however, Thave not found it hurtful in that the the 'swallow red ish'' is found, which resembles the 'ox-tailed fish." It darks with extreme velocity, inflicting poisonous, not meased divers. Yet worse is the poisonous wout did to a species of ray which has three spines in a considered if food for the Emperor, for it considered its color is yellow. Its stench forbids near approach, and is a state to represent the "swallow red ish." is eigeted by costal fisherment, actual to poisonous, not with stading. When here poisonous, not when eviscerated and dried, accuse a

The tedradon, or globe-fish, is rejected by costal fishermen, because it is poisonous, but those globe-fish that ascend the river, or with wild boar or venison. A small species of shark, called "white shark," having a rough skin and hard flesh, is slightly poisonous. Several kinds of eels are represented as hurtful. Some Ningpo people will not eat eels without first testing them. They are placed in a deep water jar, and if on the approach of a strong light they spring up, they are thrown away as not fit for food. There is a kind of eel that has its head turned upward that is not to be eaten. Eels that have perpendicular caudal fins are to be discarded; also, those with white spotted backs, those without gills, the "four-eyed" white spotted backs, those without gills, the "four-eyed" white spotted backs, those without gills, the "four-eyed" white spotted backs. The Pen-ts'ao shows the fallacy of the popular belief that eels spring from dead men's hair, by stating that they have eggs. The "stone-striped fish" is described as causing vomiting. "It resembles the reach (f), and is a foot long with tiger-like markings. There are no males among these fish. According to native report, the females copulate with snakes, and have poisonous roes. In the south these fish are hung on trees where wasps' nests are found, by which means birds are attracted that devour the wasps. They swim on the surface of the water, but on the approach of men dive down." A curious account is given of a poisonous lacertian. "It is analong aid, is seven or eight feet long, and has the cry of a hild, which is indicated by the mode of writing one of its names. It climbs trees, and in times of drough fills its mouth with leaves and grass, expands its jaws. Birds seeing the trop, when they are soon gubped down. The poison that it contains is removed by suspending it from a tree, and beating it until all flows out in the form of a white fluid." Many crustaceans are poisonous-fifteen kinds are enumer-ated-several of them monstrosities. Antidotes for

hurtful betimes n China as elsewhere. POISONING FISH. Allied to the subject of poisonous fishes is that of fish pois-oning. At an early stage of their history, anterior perhaps to the legendary period when it is said the Chinese made the dis-covery of fire, and ere they acquired the art of fishing, they probably found dead fishes floating on the surface of streams, and in the course of time observed that the fall of certain seeds into the water was followed by the rise of fash to the surface. Then commenced the practice, which has continued to the present day, of catching fish by poisoning them. An-other writer, referring to western China, says: "The waters are perfectly clear, and the people do not use nets in fishing; but in the winter season construct rafts and from these throw on the water a mixture of wheat and the seed of a species of polygonum pounded together, which being eaten by the fish, they are killed and rise to the surface, but in a short time they come to life again. This they call making the fish drunk."

they came killed and rise to the surface, but in a short time they come to life again. This they call making the fish drunk." In eastern Turkistan fish are obtained in a similar manner. "In the spring when the melted snow has swollen the rivers the fish are seen swimming about in all quarters. The fisher-men immediately take a solution of herbs and sprinkle it on the water, by which the fish become perfectly supefied and are easily caught. Mahomedans do not eat them to any great extent, except when mulberries are ripe, which are eaten always with them." In this part of China seeds of the *Croton tiglium* are em-ployed very extensively for the same purpose. They are pow-dered and cast into the water, and being, like the polygonum, extremely acrid, speedily kill the fish and crutaceans that appearance discloses their mode of death; they are bought by the poor because of their cheapness. Similar modes of poison-ing fish pervail also on portions of the Grand Canal adjacent to the Yangtsze, which sometimes call for the magisterial in-terdicts because do their 'thunder-duke creeper, which mis-greants endoy for catching fish, terrapins, pravas, crabs and the like, killing them and injuring men." Many centuries before our era, according to the Chou Polity, game laws existed, which interdicted the use of poison in the grouts; poisoning or capturing them in any way being re-strict da add of other animals as welly in the spring months; poisoning or capturing them in any way being re-stricted to autumn and winter, or when the animals attained maturity. Wexnow, January, 1886.

maturity. WENCHOW, January, 1886.

SUPPLEMENTARY.

SUPPLEMENTARY. The I-pan-lu states that on the Yangtsze, where the waters are brackish from commingling of salt and fresh water, the porpoise is delicious food in early spring, but later it becomes rank and poisonous. An interesting fact is added, which shows that animal to be subject to a disease which is manifested by a peculiar erup-

tion on the abdomen, which presents a mottled appearance of various colors, smooth and bright like castor oil seeds, vary-ing in number. In this condition the fish is yet more rank, more offensive to smell, very poisonous, but still most tooth-some. Besides rejecting these as food, reject also such as have two pupils to each eye, or such as show blood in stripes on the back: the female containing roe—all these are to be buried, lest dogs and poultry eat them, which would prove quickly fatal. Males containing a white substance are innocuous and excellent eating.

back: the female containing roe—all these are to be buried, lest dogs and poultry eat them, which would prove quickly fatal. Males containing a white substance are innoccuous and excellent eating. In cooking, remove the prickly skin, cut it up fine and boil together with the other portions. That portion of the tail which has no spines is the best flavored—it merits to be styled Yang-fi's stocking (as the fastup part is called after an imperial beauty of Chinese history). The flesh, liver, gills, fins, are all to be most thoroughly washed before cooking; place lard or oil in the pot and add wine, soy, onions, ginger, sugar, etc. Boil slowly for half a day, for it insufficiently boiled the pot-tage will surely kill the eater. Porpoises disappear with the close of spring. What becomes of them then is not known. In Suchau, every family eats that fish, and for several tens of years I have heard of no deaths therefrom, which is not that as food they are less harm-less, but because they are more thoroughly boiled. Several years ago a friend presented me with two porpoises. I prepared them myself, but after making a meal of their flesh my mouth puckered up, and my hands became numb for a short time, eating the same on the following day, my mouth and hands were affected in the same manner, and I felt gener-ally unwell. I took some olive, canarium, which proved anti-dotal. None of my family suffered from the viand that made me ill, which showed either that I was weak at the time, or had eaten more than they. Some days later, however, those who had suffered from previons disorders, experienced a re-turn of their old affections, as I did myself. I therefore caution those who are fond of porpoise, to partake sparingly of the delicious food. On the Cheh-kiang coast dried porpoise is sold all the year round by fish-mongers. It requires protracted boiling to be-come safe eating. According to the *Dictionaire Coréan-Francaise*, there is in the Korean coast waters a fish entirely round, a sea-toad, which is seldon eateu; i

THE SHACKER BAND.

THE SHACKER BAND. THE SHACKER BAND. Editor Forest and Stream: Last January, Wilber Day, a most notorious poacher of Wesley, Maine, was tried and convicted for burning the house and barn and poisoning the cow, of Fish and Game Warden Fred Munson, of Wesley, in the night time, July 17, 1885. It was proved on Day's trial that there was a crowd of young scoundrels calling themselves the "Shacker Band of Wesley," the name in Indian language meaning Deer Band. This organization has been in existence for over fifty years, but under other names suited to the exigency of the time. The purpose of this organization is to break down all law and restraint that should in the least interfere with depraved tastes. This crowd of young villains had been taught by the example of their parents and older companions, polished by the careful perusal of dime novel literature all their lives, and it is not wonderful that the result should be that they are finished criminals. At the Supreme Court, holden at Calais in April, Dever-eaux Fenlason, another of this band, was tried and convicted for the same offense. The number concerned directly in the burning of Munson's buildings must have been ten or more. I mean the number at the fire the night of July 17, 1885; and at least ten more knew that the building was to be fired. No effort will be spared to bring the whole band to justice. A motion for a new trial was made in each case but was over-ruled by Judge Libby, and exceptions were then filed to the shackers will receive their sentences at the Supreme Judicial Court to be holden at Bangor this month. In case the higher court does not grant a new trial these leaders of the Shackers will receive their sentences at the Supreme Judicial Court to be holden at Machias the second Tuesday in October next. These fellows could not have made such afight had not outsiders helped. We know that poachers and marketmen contributed from all parts of the county; but after the cus-sedness of the crowd was exposed in

<text><text><text><text><text>

The wardens, being well armed, escaped uninjured. These two fellows were arrested, tried before Justice Wilder, of Machias, and put under bonds to keep the peace for six months. This made Fenlason more furious, but his friend left the Shackers. Soon after this a demonstration was made on Munson's house, next his garden was destroyed in the night and his apple trees girdled. Then more threats were made. On July 17 Munson had business at Machias, which would take him from home over night. Mrs. Munson, as usual when her husband was absent, was expected to stop at her father's, Mr. John H. Gray, about one-half mile from her own house. After milking the cow, feeding the pig, and locking up the barn and the house. Mrs. Munson went to meeting and from there to her father's house. This was the opportunity for the Shackers. They put out their guards, and after they were sure all was quiet, Day and Vance broke open the barn, drove out the cow and fed her with Paris green and meal; then left for home, about three-fourths of a mile from Munson's. Then Fealason left his beat and touched a match to hay in the barn; others had previously kerosened the house and shed. It was proven at the trial of both Day and Fen-lason that about one hour elapsed after the fire was dis-covered by the two nearest neighbors before the alarm was given. It is needless to say these neighbors were Shackers of both sexes and nost accomplished lines. While the build-ings were burning, Wilber Day at David Vance's house, as-sisted by Vance, wrote this letter: "Trins Dats—Trite to Inform you we have begun the fun and shall follow our hand on E. M. Smith & Son and Huuter the davail and w. T. and Hill - From A Frano." This note was found the next morning on the doorstep of Warden Zina Pennell, at Whitneyville, sixteen miles from Vance's house. It was proved that Wilher Day wrote this mote, and it is known David Vance assisted and J. W. Day placed it on Pennell's doorstep. After Munson' Sulten a and machas friends assisted by presenting Mrs. Munson wit

GUN SLINGS FOR THE SADDLE.

Editor Forest and Stream: The simple sling for carrying a gun in the saddle which I described in your issue of Oct. 1, 1885, called forth a little later (Nov. 5) two other devices similar to each other in cc-sign and application, but entirely different from the one I

POREST AND STREAM.
wagon and do it with perfect safety, and when I have devised a snap-hook to save untying the saddle strings (which I leave in a bow knot) I can prepare for action as rapidly as I desire. If your gun is too fine a one to be adjusted in this way or you fear dust or rain and have not a full length leather case to hang at the saddle in which to place the gun, put on a cloth or canvas case which will take almost no time to slip off when you unsling the gun. If you use a leather holster leave it in place and withdraw the gun from it when wanted. The first time you try it you may find the gun uncomfortable to your leg, by lengthening or shortening the forward or rear strap. Just what angle the gun will hang at will depend entirely upon the build of your horse. On some animals the stock will have to be entirely below the hip joint and the barrel nearly level. I have to bring the stock up as far as possible, and the barrel well down on my horse for my own comfort and that of the animal. With a proper adjustment of the gun's presence. And if I desire leould an one throw of the gun's presence. And if I desire leould and not know of the gun's presence. And if I desire leould and not know of the gun's presence. And if I desire leould and not know of the gun's presence. And if I desire leould and not know of the gun's presence. And if I desire leould and not know of the gun's presence. And if I desire leould and the bares is at all fractious it makes no difference as far as possible, and the bares is a still another way to carry agen in the saddle I should like to hear of it.
The leouse is provided with a sling that I use when afoot, but I could not be induced to carry agen in the manner of the British mounted infantry with the gun across the back of the head" if the horse should fall. I once fell down a steep hillside with my gun slung to my back, and the bump received when one is shot out of the saddle or the head of a lating horse is commensurate with the one received whello end carry a

THE BIRDS AT SOCIETY HILL.

"The time of the singing of birds has come, and the voice of the turtle is heard in the land."

THE BIRDS AT SOCIETY HILL. "There of the sing of birds has come, and the volce of the truther is heard in the land." In one corner of the room where I write, my guns are standing, bright and clean, inside and out, ready for use when the season for sport shall come round in the cycle of time. Unfortunately, I have too many of them. Most of them are gifts from my friends, and as such, if for no other reason, are highly prized by me. I keep them in good con-dition so that whenever occasion shall require, I will find them fit for whatever field usage may be domanded. At present they serve only to remind me of the pleasures which they have afforded, the kindness of the donors and the hopes which they inspire, when Bob White and his mate have reared their brood and they are strong enough to make the ir resonant with the whir of their wings. Then, if on this is frank, call up Argo and Esk, and range the fields on the basis of the Great Pee Dee or other localities where the prospects of gune arc good, and see whether my vision and nerves are adequate to supply my wants and those of my fundaded, boxed and labeled, and my favorite I-bores white the delicious little bird. Most of my shells are already loaded, boxed and habeled, and my favorite I-bores white the box to localities whether of the prise of the bright days, when white hole on opportunity of showing their qualities. "When my opinter retrieve the fallen bird in galant style. My mem-ory also lords with delight the sayings and acts of my associ-tares. A gentleman living a that plate I had known when he was a boy, living in Fayettville, N. C. but had not and the hospitallities and kindness of my side and have welft. And and myself, that he could fine some excellent for allow they dome we get the creatin we should meet with a have when we reached our destination, late in the afternoon, in the vicinity of Society Hill on the Pee Dee in South and when we reached our destination, late in the afternoon, inselves, horses and dogs wer

<text><text><text><text><text><text><text><text><text><text>

standing the uninviting character of the weather we con-cluded to hazard it, and accordingly, mounting our steeds, we set out for the Marlboro side of the river. After crossing on a bridge, we took up the bank of the stream for several hundred yards following the road, and then turned sharply to the right. Near the point where the road leaves the river stands a monument of white marble-a cenotaph, probably—erected to the memory of Col. Kolb (pronounced Kulp), a partisan soldier of the war of 1776, who was killed at his house near the spot by some prowling loyalists, who had refused to rebel against the Crown and Government of Great Britain. What I thought when I read the inscription upon the marble I will not write. Alast 'Can such things be without our special wonder?" At this point, Teccel and I, with Joe and Argo, turned to the left, while Crickett, who had two dogs, and Mud, who had none, followed the highway. It is useless to go into details. Owing to the high wind the birds were all in cover, or in such close proximity to it as to render sport impossible; we found very few birds. When we reached home that night, I think the trophies of all guns amounted to the fact that when he started out he inconsiderately put in the stock of his hammerless the choke pair of barrels. At all events, such was the result. Mud was in high glee because the Red Rover had borne him to victory over Wells—a glory which he rarely enjoyed. We got back just about sundown, tired and hungry, and

his halmieries the choke pair of barrels. At all events, such was the result. Mud was in high glee because the Red Rover had borne him to victory over Wells—a glory which he rarely enjoyed. We got back just about sundown, tired and hungry, and ready to enjoy the shad whose odor regaled us, even before we entered the dining-room. They were a real luxury—for the weather was cool and the fish were firm and fat. To ny taste there is no better fish than the Pee Dee shad in the month of March. After a "square meal" on the part of all of us— and especially Mud, whose appetite is almost sateless, but whose victuals never assimilate to the production of flesh, so far as we can see—we went to the parlor, and before a blazing fire talked of the past, present and future. The following morning was a lovely one. At an early hour our hostess gave us an excellent breakfast, and had our unch prepared. The horses—including the Red Rover— were saddled and brought out, the dogs lightly fed, having had a hearty meal the night before, and we started off to try our fortune in the bottoms lower down the river. Going along the railroad track nearly a mile, we crossed it, and began to hunt an inviting piece of land. We got up some birds, and Teccel and I klilled three each, neither Crickett nor Mud having had a shot. Still further on another covey was roused, but all of them escaped. Soon after this my companion, Teceel, and I separated, by accident, and did not meet until night. This mishap threw three of us together, a very objectionable number for decent sport. Crickett, Mud and I followed closely down the bank of the stream, desiring to reach some broad bottoms, where, we were told, we could find an abundance of game. The prospect got worse and worse, and atlast, near midday, our road gave out, and we were forced to take the back track. We lunched soon after, and then mounting our horses, changed our course, so as to reach, if possible, a large plantation, the property of Mr. Williams, of Baltimore. We hunted many good looking place

sours is or as to reach, if possible, a large plantation, the focurse, so as to reach, if possible, a large plantation, the group of locking places on our route down the Georgetown road, but failed to find a bird. The that plantation houses and turned into some fields on the feet or eastern side of the highway. Soon we got up some birds and my bag and Crickett's became perceptibly hereine. Poor Mud! He hadn't "toth" a feather in the last baf dozen shots. Soon we could hear the fain thoor of a gun, sometimes in rapid succession, which we suspected to be that of my lost companion. We found several new coverys and got more birds. About an hour before sundown more field, near a pine thicket. A single bird fushed and steled not far off. Supposing, however, that there were others, I moved forward a little and ordered lim on. A fine covery rose, and as I sat on my horse I fired one barrel only, wounding the bird. Then Crickett and with the road with the bridle unfortunately over the pommel of the sold. We put up the birds and Crickett got two, Mud got one and I killed the bird I had wounded ant socred a clean with the thirds. Then Crickett got two, Mud got one and I killed to be done of Frank and left him standing in the road with the bridle unfortunately over the pommel of the sold. We put up the birds and Crickett got two, Mud got one and I killed to be done of Frank and left him standing in the direction of the sold of a supposing lim to belong to a dismounted cavalryman below those finging the direction I soon met Crickett and Mud, and spore and the sold at them, as the first to further source, and a supposing the weat here, as the first to first and supposing the solar dismounted cavalryman below those firing the dat heard, bestrode the horse and to be done of the solar day and the provender at our hose's barn. The prospect of that walk was not very clarming, but I first, weat stated and the direction a dismounted cavalryman below thas the done at a single bird weat the direction a dismounted cavalryman below t

AN ADVENTURE IN THE BURNT LANDS.

<text><text><text><text><text><text>

bur presence was not agreeable, and we each time made guick steps in the opposite direction, feeling that they 'were better missed than found.' "But one day our fancied security received a complete stoat. It was in the second week in July, and I had set out early, accompanied by an assistant, to examine the country to the east and north of our camp. We had pro-ceeded less than a mile when we separated, he to explore south and then westward to camp, while I was to go north to a river and then return. I had with me a light axe, which would weigh about two pounds, called by woodsmen a half axe, and a pocket compass; with the latter I obtained my direction, and with the axe would mark a line when desired. Our purpose not requiring a chain survey, I pro-ceeded on my course, carefully taking and counting my steps, which was our method of measuring distance, and enabled us to readily find the locality of the corners, and in the practice of which we had become so expert as to be able to rely upon not varying from the chain survey in the distance of a mile more than from ten fect to ten inches. I had made over the small body of a tree lying before me, into which I had struck my axe, and was trying to settle the compass needle so as to continue my route, when I was startling sound, neither a bark nor a growl, unlike anything I had ever heard and apparently coming from something near at hand. Looking in the direction whence it came, I was astonished to see an immense she bear but a short dis-tance away making furiously toward me, her glossy brown hair fairly glistening and standing straight out, her mouth what open and viciously red, her whole look and bearing one of intense rage and ugliness, and evidencing intent of the most extreme mischief. To intensify the situation, I at the same moment caught a glimpse of four other bears at a little further distance, and it is not too much to admit that I should have been glad, in contradiction of the usual significance of the open, and while I saw a cluster of trees some rods

<text><text><text><text><text><text>

camp. "In a close encounter with any dangerous or enraged wild animal, I have great confidence in the small axe as a weapon and much prefer it to a rifle, and don't you see good reason

and much prefer it to a rink, such as the most interesting matter why?" The above is by no means the most interesting matter which can be drawn from the anple fund of our friend's ex-perience, and some other day we intend to draw upon it again. F. M. WILCOX. ROCHESTER, Mich., June 7, 1886.

DAKOTA GAME.

ROCHESTER, Mich., June 7, 1980.

DAKOTA CAME.

Addition Forest and Stream:

Tevry orening as I ride over the beautiful prairies of
Northern Dakota, I find many things to interest me. I see
the Eastern farmers and stockmen making new homes and
all happy because they at last had courage enough to quit
the crowded Eastern States and come to as grand a climate
and country as the sun shines on. The untoid thousands of
acres of waving wheat attest the fact of the plenty in store
for all who may come, and the finture for those who hesitate
the trowded Eastern farmers and stockmen making new homes and
all happy because they at last had courage enough to quit
he drowded Eastern States and come to as grand a climate
and country as the sun shines on. The untoid thousands of
acres of waving wheat attest the fact of the plenty in store
for all who may come, and the finture for those who hesitate
but will yet come. Again I see that the crop of prairie
chickens is going to be large, I have not seen so many during
the three years I have been here, and we all look forward to
fine sport after August 15. The plover are here by the
tousands, and we go out and bring in all we wat.

Took a trip out West a few weeks ago. While at a little
town called Dickinson, a large silver-tipped bear was brought
in. He was poor, buil dressed 498 pounds – a monster. Two
cowboys had killed him after a hard fight with nothing more
than their revolvers. They were rising, looking after their
stock; when they were going through a patch of very
high grass and sage brush, this bear, which was eating a
call be had just silled, rose up immediately in front of
them and struck at one of the horses, and had it not
been less frightened or less quick in springing to one sid
and then bounding away, there would have been
rouble. I know that some folks think that a beer cannot
run fast. It may be that he cannot when he is fat, but I
have tatked to reliable hunters in this country who tell me
that a large mountain bear, when thin in the sepring, will
get away from

COLORADO GAME AND FISH.

COLORADO GAME AND FISH. Denview of the second seco

larger streams. They have not ascended the small streams yet. Hunters and frontier settlers also agree in the gratifying information that most varieties of game are increasing since the Indians quit roaming over the country and the enact-ment of our somewhat rigid game laws. It is true the law is frequently violated in respect to both fish and game, but wholesale slaughter, such as frequently occurred a few years ago, is now seldom heard of. The increase is noticeable in elk, deer, bear, beaver, and especially in grouse. The latter is quite remarkable, and this, so far, is an exceptionally favorable season for the birds. Buffalo have almost entirely disappeared, mountain sheep seldom come into the parks but are plentiful upon tbc high ranges where but very few are killed. Antelope are hardly ever seen in either South or Middle Park; a few years ago they were plentiful. A huncr, August Bohm, on Williams Fork, in Middle Park, recently killed two bears in one week—a black and a grizzly—the latter a very large one, and for a long time pre-vious a terror to the neighborhood. W. N. B.

HOW LONG DO FOXES RUN?

HOW LONG DO FOXES RUN? The proving about our New England red foxes. Perhaps a virginia fox can be caught by hounds in six hours, but we have a longer-winded set here in Massachusetts. I have keep foxhounds for twenty years, and always the best I could find, and I never owned nor saw the hound that could the min light snows or in the last of February when the temales began to get heavy with young. But I do not be here the foxhound lives that can catch one in twenty that in this part of the country. Three years ago I bought a pair of pups of Col. Tucker, of Gaston, N. C., as he advertises to hun away from our Northern hounds; but though they are a vittle faster on a snow track they are not able to get away ""Bed My," of Virginia, will come to Massachusetts he will find that his fast dogs won't catch a fox in six hours or six ays running. I have shot one fox that I know had been more than thirty hours, as I started him early one morning and the dogs drøve him steady all day without my pointing a shot. In the atternoon of the second day I made out of gits fe." It is no uncommon thing in good following ut of his life." It is no uncommon thing in good following ut of his life." <text>

Approved June 19, 1850. ABOLISH SPRING SHOOTING.—The New Albany, Ind., Daily Ledger remarks: "FOREST AND STREAM is paying a good deal of attention to the subject of spring wildfowl and bird shooting. Sportsmen will indorse this old and reliable sportsman's paper in its efforts to stop the merciless slaughter of birds in the spring of the year. FOREST AND STREAM de-votes its attention to encouraging State legislation against the nefarious destruction and says that Congress has no authority on the subject. It may be right in this, but that is a question. If Congress would pass such an act pub-lic sentiment would sustain it and the courts would in all probability uphold it. It is worth the trial at all events. It would take a long time to get the necessary laws passed by all the States, while a bill could be put through Congress in a few days. Every man who loves the rod and gun and the buoyant health and genuine sport they afford, will lend his aid to any intelligent effort toward protecting fish and game.

OLD TIME ARMS.—The sale of the B. Homer Dixon cabi-net of arms and armor which was held in this city last week included long-handled weapons, maces, martels, battle axes, crossbows, guns, pistols, locks, powder horns, spanners, bayonets, and miscellaneous objects. A wheel-lock pistol of 1575, bearing several engravings, including three coronets, sold for \$310. A wheel-lock musket of the sixteenth century brought \$51. A match lock caliver with a beautifully inlaid stock, was knocked down at \$115, while a match-lock mus-ket of 1600 sold for \$55. A military flail, or holy water sprinkler, with a chain and a spiked ball attached, brought \$58.

contents (twenty-one small buckshot) into his arm, shooting it almost entirely off and severing the main arteries. Young Tucker very successfully corded the arm and begged Walker to remain where he was very quietly, till he could go for assistance, but this he declined to do, fearing to be left alone. He mounted and dismounted three times on his way home, which loosened the cord and caused him to lose a large quantity of blood, from which he died seven hours after. Now a bit of advice: Should a companion get shot in the arm or leg, do not be afraid to open the wound (it will not cause him the least pain), but go right into it, strip the clothing from around it at once, and possibly you can see the artery, and tie it up. If not, by pressing your thumb about on the limb you can stop the flow of blood, and then put a small pebble in place of your thumb, tie your handker-chief around over the pebble, insert a small stick or pocket knife and twist till the flow of blood has ceased entirely. Many men have lost their lives from not having a proper knowledge of such things.—SIMEPTNEAD.

HIGH BALLISTICS,—*Edilor Forest and Stream:* If a rifle were carried to a great height, say 20,000 feet above the earth's surface, and discharged earthward, the ball would owe nothing of its initial velocity to gravitation and would decrease in speed with the expenditure of the propelling force, until it reached a point at which its velocity would be precisely what it would have acquired in the same distance had it been dropped from the hand. From that point it would be subject to the force of gravitation and increase in velocity until it touched the surface. Its terminal speed would be the same as that of a similar ball dropped from the hand (provided the height were sufficient for the exhaustion of the propelling force) but in consequence of its higher initial velocity it would reach the earth sooner,—ARCHT-MEDES. CAMPS OF THE KINGFISHERS.

CAMPS OF THE KINGFISHERS. CARP LAKE, MICHIGAN.—XY. THE second Sunday in camp was a pleasant contrast to the first one, and it was spent in a bocoming manner, by the girls at least. However, as the evening drew on, some fish found their way to the camp by following a couple somehow beguiled them into paying us a visit, but it is not necessary to these chronicles to point out the Sabbath-break-ing culprits that took their places at the supper table in abashed silence under the reproving eve of gentle Mother Jim. Some trout there were, too, I believe, that were toled aross the lake to camp, but not even these in all their of rightcousness, and the culprits for their offending were spotted glory could gloss over our departure form the trail of rightcousness, and the culprits for their offending were be obted in disgrace. But the morning—and "a mess of the spotted miners"—softened Mother Jim into a forgiting mod, and they were again taken into favor under a promise to do hetter in the future. The promise was given, however, with a mental reservation, and broken the very next Sunday, when be the same result, as Mother Jim into a forgiting mod, and they were again taken into favor under a promise to do hetter in the future. The promise was given, however, with a mental reservation, and broken the very next Sunday, when het he same result, as Mother Jim into a door more approxi-mental reservation, and source of much (dis) provided miners" softened Mother Jim and about made to the same result, as Mother Jim and about made bother for more since were. The beats returned het is in the afternow, each with some

<text><text><text><text><text><text><text>

to help swell the count of the first dude that might chance on the stream. The skeeters bit even better than the trout, but Ben affirmed, after his fashion, that "skeeter bites was a cussed sight more onsatisfyin' than trout bites," and we were glad to get out to the road and back to the boat while the sun was yet a couple of hours above the hills. A hundred yards from where we had left the boat the old road passed through an open spot of an acre or two, on which grew scattered patches of low, scrubby raspberry bushes, loaded with luscious red berries, and while we stopped to pick a few of the most tempting. Ben disturbed a speckled frog in his meditations, and after a fine piece of strategy he was "surrounded" and tranferred to the minnow bucket. Beating around through the bushes we "skeered 'em up," as Ben said, every few feet, and in a short time we had the bucket nearly half full of the "speckled heauties" (new name just dug up for this species of batrachian for "old priority" to scratch his head over), and then we tried to fig-ure out what attracted them so far from the water, away out here in a raspberry patch, where there was little grass and plenty of hot dry sand. Could it be that they had a "fruity tooth" and resorted here to satisfy its craving by scooping in a berry at every flying lega pat the low bushes, or did they come after the bees and flies and the various kinds of winged and wingless bugs that infested the patch? We gave it up, and we didn't have sense cough to open one of them to see what manner of sustenance he had concealed about his per-son, or at least we didn't think of it; and this "didn't think of it" is about the main reason why so many of us go blunder-ing through the woods without secing or learning anything that we can turn to account as a benefit to ourselves or others. But every one cannot be a John Burroughs—may his eye never grow dim nor his pen lose its charm. The little raspberry patch was a mine of comfort to us, for any day that we ran short of bait we could pull acros

ing up of camp. Back in the

LANDLOCKED SALMON IN THE MADAWASKA. — Editor Forest and Stream: The first landlocked salmon known to bave been taken in this river was eaptured at this place a few evenings since in a dip-net that was taking whitefish. This fish is undoubtedly one of the 50,000 fry placed six years ago by order of the Ottawa Government in Temisconatta Lake, the head of Madawaska River, twenty-two miles distant. Five thousand were placed at the same time in Baker Lake. The size of this fish (8 pounds) shows these waters to be favorable. Temisconatta has long been the favorite resort of a few sportsmen for its splendid trout fishing. Doubtless many salmon have been taken there in the past; if so, the fact has been kept very quiet. Sportsmen can find a hotel, guides and boats at the lake, and many routes may here be taken on streams with plenty of trout and large game. Ed-mondston is the terminus of the New Brunswick Railway. From here the route is by team twenty-six miles up the Mad-awaska, a fine drive amid beautiful scenes. P. A. Babin, Esq., of the Babin House, this place, will answer inquiries. WARFIELD (Edmondston, Madawaska county, N. B., June 7).

How TO CAST A FLY.—Paterson, N. J., June 11.—Will some of your readers kindly explain how a fly is tied? I have consulted various angling books as to fly-tying but could not comprehend them. In these books fly tying and casting the fly are so treated that it only explains the author's method, taking it for granted that you know something about the subject. The only comprehensive article on fly-casting that has been my good fortune to read appeared in the FOREST AND STREAM MAY 8; through the medium of this article and the help of a coach I learned to cast a fly to my own satisfaction.—G. A. M.

MINNESOTA FISHING.—Pillsbury, Minn.—During the past month fishing in our many lakes has been exceptionally fine. Large catches and large fish have been the rule. I went out last Wednesday in compeny with W. L. Hall and O. M. Langly, of Wadena. We left my house at 1:30 P. M., re-turned before dark, and brought in 101 pounds of fish, mostly wall-eyed pike. We practiced still-fishing, using minnows for bait. Excellent reports are brought in from Long Lake, Big Swan and other noted resorts.—J. F. LOCKE.

AN INTERNATIONAL PLEASANTRY.—Mr. Billy Florence, the justly celebrated and world-renowned actor, is a guest at the Windsor Hotel. He is on his way to the Restigouche for a month's salmon fishing. He was seen by a friend buy-ing a spade in the city, and on being asked the cause he said he was going to test the right of the Canadians to prevent a free American citizen digging his own bait! We wish our genial friend a pleasant trip.—Montreal Herald.

SHAD IN THE OHIO.—New Albany, Ind., June 5.—Editor Forest and Stream: Did the U.S. Fish Commission place any shad in the Ohio River or its tributaries? For several years the net and seine fishermen here have taken a few shad occasionally and this season a number have been on the market. Fishermen and others pronounce them Potomac shad. If they are how did they get here?—JAP. [The U. S. Fish Commission has for several years stocked the Ohio and its tributaries with shad].

ROUSE'S POINT.—A picturesque and pleasant resort for anglers, within easy reach of New York, is Rouse's Point, on Lake Champlain. Here is combined the pleasure of good fishing, black bass, pike, pickerel, etc., being abundant, with comfortable living at the hotel, located on the western shore of the lake. See advertisement in other columns.

OSAKIS, Minn., May 29.—Pike are now biting nicely in the lake, thirty to fifty being caught to a line in an after-noon. Bass are also beginning to bite. Redheads and blue-bills are nesting in good numbers here this season. The chicken crop also promises good.—S. W. S.

SHRINKAGE OF WEIGHT.—Bridgeton, N. J.—A drumfish weighed sixty hours after capture cighty-four pounds. What was its approximate weight when landed?—F. S. J. C. [Probably ninety to ninety-five pounds, according to the state of the atmosphere.]

So easy to row with Allen's bow-facers. Catalogue free. Oars complete, \$9 per pair. Fred A. Allen, Monmouth, II.-Adv.

SMELT HATCHING.

BY FRED MATHER.

[Read before the American Fisheries Society.]

<text><text><text><text><text><text><text><text>

any kind and let them stick to anything, he will find glass the best of anything. At that time I made a box for hatching on glass. It was a small trough, with places in the side for the glass to slide down. One glass went to the bottom and the top was half an inch under water. The next glass stood half an inch above the water, like that so on down through, keep-ing the eggs that stuck to the glass on the side toward the water, so that the water passed up right by the eggs, and in that way we succeeded in hatching a better percentage than in any other way. I should think it would be well to try experiments with the smelt the same as they do with the wall-eyed pike, which I think Mr. Nevins and others have tried. I have, and I think the Michigan Commission has tried the same thing.

that vay we succeeded in 'natching a better percentise that in any other way. I should think it would be well to try experiments with the smelt the same as they do with the wall-yeed pike, which I think Mr. Nevins and others have tried. I have, and I think the Michigan Commission has tried the same third. Mr. MATHER-Mr. President, I would say in connection with the herring and thought that his arrangement of glass slides was an excellent thing. As I understand it, that is for hatching in tronghs, we have put them on the inside of a jar, as I have described, keeping it whining and letting them adhere on a thin layer. I have now a theory, which of course remains to be proved, that it is the light that is fatal because we find where those eggs adhere in masses, perhaps the size of a hickory nut or larger, that all the outside ggs become bad after a while and are covered with fungus, but you take hold of this mass and break it open and you will ind the hitle fellow inside there all right, protected not only from the action of the light, but from the water. I don't understand how water can get into this mass. If I had been ging to hatch them in troughs I should certainly have used the apparatus that Mr. Clark devised, and which I clink is an exceedingly good thing for that mode of hatching.
Mr. BissELI-I would like to say a word about that smelt would not the light affect them in the natural conditions in a mall stream? May it not rather, or more likely be, the motion of the water? I have been told by our men in the Michigan Fish Commission that one of the reasons that brook trout eggs hee worked of the sizes of handling the trout gras they might be put into the jars and run in great numbers, and then as the bad eggs were worked off, place them upon rays and batch them there—he said no, that would not hey were them the eggs are case.
Mr. MATHER-As regards brook trouts in asses on each it. Bayself was the sub off eggs were worked off, place them upon rays and batch athe estis much more like

Interview of the top rayer of our eggs and had their sour interview. MR. CLARK—I would like to ask Mr. Mather a question. What percentage did I understand you to say—that you had forty to fifty per cent. of good eggs? MR. MATHER—That is about what we have now. MR. CLARK—Well, Mr. Chairman, I don't think, with any adhesive eggs that were ever hatched, where you leave them to adhere, I don't think there is anybody over hatched any-thing better than 40 to 50 per cent. of any kind, and I don't think they ever will. We don't with the herring, and we call it good.

think they ever will. We don't with the herring, and we call it good. Dr. SwRENEY—It seems to me that from all the eggs that are supplied in the spawning of these fish whose eggs are glut-inous or adhesive, there is a provisiou of nature that the outer layer of the eggs act as a protective coat to the inner mass, and as the gas permeates through the tissues and the air reaches the eggs on the principle of displacement, as the in-ternal layer of eggs consumes the air, it is resupplied from the outside, and this putrid mass of eggs on the outside which seems so unproductive, may be in part as a defense also against animals, and is not the experience of Mr. Mather go-ing to show that these eggs that seem to be spoiled on the out-side, work no detriment to those within. That may be the principle, that the adhering mass of eggs is a protective coat to the inner stratum. It may be the eggs through the outer stratum.

GOLD MEDAL FOR PROFESSOR BAIRD. A GOLD MEDAL FOR PROFESSOR BAIRD. PROFESSOR BAIRD, U. S. Commissioner of Fish and Fish-eries, has recently received from the Department of Fish-culture of the Lower Seine, France, a gold medal as an ac-knowledgment for some valuable sendings of fish ova. The medal was designed by Oudine. On the obverse is represented a female head bound with a chaplet of cereals, Legend: "Republique Francise." On the reverse is inscribed "M. Spencer F. Baird, Commissioner of Fish and Fisheries," and the legend "Departement de la Seine Inferieure. La Commis-sion de Piscientlure, 50 Novembre, 185," The medal is about the size of a double eagle. It will be placed on exhibition in the north hall of the National Museum.

The north hall of the National Museum. THE NEW YORK FISH COMMISSION,—The last Legis-lature refused to pass the bill creating the office of Chile Game Protectors, which was designed mainly to relieve Com-missioner R. U. Sherman, the Secretary of the Board, from the burden of looking after the protectors and doing the drudgery of the Fish Commission, which had somehow fullen upon him. In consequence of the failure of this bill, which Gen. Sherman hoped would remove a load of thankless labor by him gratuitously performed to the shoulders of a paid offi-cial, the Commissioners of Fisheries at their last meeting authorized Mr. Sherman to employ a secretary to attend to all the work which fails to such an officer. He named Mr. H. H. Thompson, of Brooklyn, a gentleman well known in angling circles and one who is every way qualified for the place by both knowledge and disposition. The other members of the Board have indorsed the nomination, and we hope that Mr. Thompson will find it convenient to accept the duties.

A. K. R.-SPECIAL NOTICE.

A. K. R.-SPECIAL NOTICE. THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is pub-lished every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription \$1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **3810**.

HORNELLSVILLE DOG SHOW.

HORNELLSVILLE DOG SHOW. Editor Forest and Stream: We have been solicited to give a bench show of dogs in con-nection with our exposition to be held Sept. 7 to 10. To as-certain definitely whether such a show would be acceptable to the leading dog fanciers of the country or not we addressed personal letters to nearly all of them. Their replies and promises to exhibit have led our board of directors to believe that such a show will be not only acceptable to the breeders, but a grand success for all interested. We shall issue a liberal premium list at once which may be had by addressing C. W. ROBINSON, Secretary. We claim the dates Sept. 8, 9, 10 for our dog show to be held here in conjunction with the Farmers' Club fair. Our club is a regularly incorporated institution under the New York State laws, and all premiums will be paid. We will have good classes, good judges, good premiums, good at-tendants, and exhibitors will not have to run the show, but it will be run for them. J. OTIS FELLOWS, Supt. Dog Show. HORNELLSVILLE, N. Y., June 8.

HORNELLSVILLE, N. Y., June 8.

DOG SHOW NOTES.

DOG SHOW NOTES. A S we were busy taking notes along came an individual whose jerky gait and unhappy expression of countenance plainly betokened that something was wrong, in his estima-tion at least. Halting in front of us he surfily demanded: "Which of these dogs won the prize?" Before we could answer him, a young fellow, who appeared to grasp the situation, pointed out as the winner one of the worst specimens in the class and warmly praised it for the many good qualities it possessed, searcely looking at the animal. Our disgruntled friend exclaimed, "That is the worst specimen in the show by all odds." We then pointed at the winner, when he gave a glance and caustically remarked, "That brute! Why he is a great deal worse than the other, only look at lim." Just then a well known fancier passed by, led by a wild-eyed exhibitor who yanked a dog off his bench, and placing him in front of the winner's stall, struck an attitude, the very personification of supreme contempt, and in a withering tone demanded to know if such an outrage was ever known. The fancier glaeced at the dog, and in a tone indicative of surprise, said: "Why, your dog is the biggest." "Yes," said the owner, with an im-patient gesture, "but the judge didit's see it." "And," con-tinued the fancier, "has the longest tail." "I know it," said the owner, violently swinging his arms, "but why didit the indge see it?" Stooping down the fancier examined his feet, by dig see it?" Stooping down the fancier examined his feet, the looking up with wide open eyes exclaimed, "Why he he is got the biggest feet." This capped the climax. Wildly ges-tionating and stamping his feet, the irate owner burst out, "T mew it all the time, but the blankety blanked judge never looked at his feet."

MEETING OF THE AMERICAN KENNEL CLUB.

MEETING OF THE AMERICAN KENNEL CLUB.
THE adjourned annual meeting of the American Kennel
Club was held at the Hoffman House on June 10. There were present Messrs. J. O. Donner, of the Westminster Kennel
Club; C. J. Peshall, New Jersey; G. Edward Osborn, New Haven, and following gentlemen holding proxies: A. P. Yre-denburgh, Philadelphia; A. C. Wilmerding, Cleveland; A. E. Rendle, Hartford, and J. O. Donner, Pittsburgh. Mr. Donner was called to the chair. The regular order of business was gone through and the following officies elected for the ensuing year: President, Mr. Helliot Smith, Westminster Kennel Club, re-elected; First Vice-President, Mr. G. Edward Osborn, New Haven, Kennel Club; Second Vice-President, Mr. W. H. Child, Philadelphia Kennel Club; Secretary, Mr. A. P. Vredenburgh, New Jørsey Kennel Club, re-elected. Upon the proposed amendment to the constitution being adopted, making the office of secretary and treasurer one, Mr. Vredenburgh New Jørsey Kennel Club; A. Donner, Mr. Yredenburgh New Jørsey Kennel Lub, A. H. Edid committies are to hold over.
At the meeting on May 6 Mr. Peshall gave notice that he would offer a resolution at the annual meeting to the effect that no member of a club should officiate as judge at a bench show given by his own club. Mr. Peshal duly offered this resolution, but after a lengthy and generall discussion of the subject, he withdrew it.
The committee on credentials reported favorably on the application for admission of the Rhode Island Kennel Club, but only in the way of the committee asking for more time.
Mr. C. J. Peshall was appointed a committee of one to draw up a code of proceedure to govern all cases of appeal that may be brought before the club in the future.
A protest was made by the Brooklyn Kennels against the awards in the Miscellaneous classes at the late. New York show, on the grounds that the winners were not of recognized preceds. On motion it was referred to the Westminster Kennel Club.

show, on the grounds that the whiters were hold of recognized breeds. On motion it was referred to the Westminster Kennel Club. The secretary was instructed to communicate with the two dog registers published in this country with the view of secur-ing control of them in the interest of the A. K. C. The question as to whether champion light-weight dogs should go into open or champion heavy-weight classes was generally discussed and finally laid over until the next meet-ing for further consideration. The committee appointed to investigate as to the wins of which clubs giving shows prior to the establishment of the A. K. C. should be recognized by the club, reported progress. The meeting was adjourned, subject to the call of the Presi-dent.

THE THREE THOUSAND EIGHT HUNDRED AND TEN PEDIGREE REGISTERS in the American Kennel Register include interesting, incalculable, inexhaustible and invaluable information indispensable in intelligent infor out breeding.

FOREST AND STREAM.

FOREST AND STREAM.

AMERICAN SETTERS.

<text><section-header><text><text><text>

SCOTCH TERRIER LOST.—Editor Forest and Stream: On May 25 my Scotch terrier Neil Gow strayed away from my kennels at Mount Forest, Ill., and I have been unable to find any track of him. This is the dog spoken so highly of by your correspondent at the Cleveland bench show. Neil Gow is of a sandy color with slight brindle markings, ears erect and sharp pointed, covered with short, velvety hair, head long, eight inches from nose to occiput; eyes small, hazel color; coat rather short and hard; forelegs slightly bent; body moderate in length; ribs flat; tail not cut and carried a little above the level of back, not hound like. Should any of your readers see or hear anything of this dog, I would be thankful it they would inform me.—JOHN H. NAYLOR, 3183 Archer avenue, Chicago, Ill.

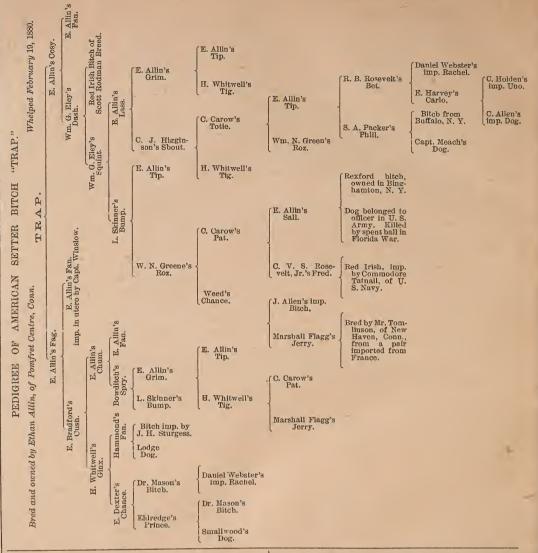

THE NEW JERSEY DOG CRUELTY.—The case of Dr. B. A. Watson, of Jersey City, for maltreating dogs for alleged scientific purposes, came up in Justice Lane's court, Jersey City, on Thursday lat. There was a large array of counsel on both sides. The defendants waived examination, and the case will come up before the Grand Jury. Mr. C. J. Peshall of the New Jorsey Club was one of the prosecuting attorneys, and many other prominent dog men were in attendance.

ST. LOUIS DOG SHOW.—Editor Forest and Stream: In your list of awards in the Newfoundland classes of the recent St. Louis show, an error occurs in the curly-coated class in giving Carlo first and Prince Albert second. The latter, owned by Mr. John H. Holmes, of this city, was awarded first prize by the judge, Capt. C. W. Bellair, as the official records show. Carlo took second. Kindly make this correction.—GEORGE MURSON MTINSON.

THE AMERICAN KENNEL REGISTER for June has 121 entries, making the total number of pedigrees registered 3810. There are also in the June number the record of 31 breedings of registered stock, the record of produce of registered stock, etc., and the prize lists of the New York and St. Louis shows. This number completes the first half of the fourth volume.

BROWN BETTY'S PEDIGREE.—Salmon Falls, N. H., June 8.—*Editor Forest and Stream:* In your issue of June 3, under Whelps in your Kennel Notes, appears the name of Brown Betty (A.K.R. 3608). Allow me to state to you, as I have also done to *A. K. R.*, that this pedigree is false.—J. P. WILLEY.

A young Swede makes a living in Boston by washing dogs. He goes from house to house in the fashionable quarters, and for fifty cents or seventy-fire, according to the size of the dog, gives the pets thorough baths. It is said that the plan was the thought of a well-known and charitable woman. She wanted to help the young fellow, who was out of work, and interested her friends in the scheme, and now he has about all the dog washing he can attend to.

KENNEL NOTES.

KENNEL NOTES. KENNEL NOTE BLANKS.-For the convenience of breeders we bave prepared a series of blanks for "Names Claimed," "Wbelps," "Bred" and "Sales." All Kennel Notes must be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them. Sets of 200 of any one form, bound, for retaining duplicates, sent postpaid, 20 centic 30 cents.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE NEWARK TOURNAMENT.

MESAth annual festival of the Newark Shooting Society was a great success at the shooting park on South Orange avenue dur-g last week. Monday, Thesday and Wednesday were the shooting yes, and except for a tricky wind on the afternoon of the last day, e weather was satisfactory. There was a noticeable gathering of arksmen, a half dozen States were represented and the competition tween the muzzle and breechloaders was very frisk indeed. All the ooting was at 200yds, and included the ring and man target, the ilseye target and a team match with a half dozen skillful teams in ise fight.

iliseye target and a team match with a half dozen skillful teams in see fight. The leading match was upon the ring target, shot under the follow g conditions: Open to all comers, Ring target, possible 75 on 3 ots. Prizes: 1st \$50, 2d \$10, 3d \$30, 4th \$25, 5th 20, 6th \$18, 7th \$16, b \$15, 9th \$14, 10th \$11, 11th \$12, 12th \$11, 11th \$10, 15th \$40, th \$3, 26th \$3, 27th \$3, 28th \$2, 20th \$2, 20th \$2, 30th \$2, 22th \$2, 22th \$2, 22th \$2, 20th \$2, ht. ading match was upon the ring target, shot under the follow litions: Open to all comers, Ring target, possible 75 on 1

MOHICAN C. C. ANNUAL RECATA.

NEW YORK C. C. ANNUAL REGATTA.

NEW YORK C. C. ANNUAL REGATTA. THE open roof halcony of the yacht club house at Tompkinsville, S. I., was crowded on Saturday with the members and friends of the New York C. C. gathered to witness the annual spring regata of the club. The floating club house is now moored beside the yacht club house in an excellent location, and the courses were arranged so as to be in view from hold places. The first race, for the Commo-dore's trophy as well as the regular club prizes, was called at 3 g. M. the course as iaid out being around a large slip at anchor off Clifton, then op and around the schoener Dauntless, moored off the club house and home, making a beet down against the tide, and a short leg across wind and tide. A good hreeze was blowing in from the start the first mark was taken in tow by a tug and beaded for New York, so the course was changed, a barkentine near by heing taken as the first mark. The starters were: Nethla, Com. C. K. Muuroe; Sea Bee, C. B. Vaux; Tramp, C. J. Stevens; Minne, E. D. Delavan, Jr.; Siren, R. B. Burchard; Sea Urchin, B. S. Nada!. Be Bee went off with a lead at the start, with Tromp and Nethla in chace, the others losing time in getting away. Sea Bee corked short toxs will in shore and was soon fur abaded, while the other two sailed very evenly. Off Clifton Tramp missed the markhoat and re-urned without completing the course. Sea Bee came down the wind very fast but failed to turn the last mark, and Nethla took first prize n her maiden race. The next race was for small canoes, paddling, the starters belma

The maid of the race. The next race was for small cances, paddling, the starters being essrs. Yaux, Drake, Paine and Seymour. Mr. Paine paddled a gethen folding cance, with mahogauy deck, a very compact and indsome boat. Mr. Yaux won, with Mr. Drake second. In the paddling race for larger cances, the entries were: Lasata, G. Foster; Nethia, C. K. Munroe. Lasata won after a close con-et.

sailing race over a short course, three rounds, followed, the tesheing: Sea Bee, C, B Yaux; Tramp, C. J. Stevens; Nethla, Murroe; Mime, E. D. Delavan, Jr.; Sea Urchin, B, S. Nadal; n, H. B. Burchard. Sea Bee led the race and won easily, with

hand paddling race proved very amusing, the contestants hand paddling race proved very amusing, the contestants g in their boats, their bodies bent close to the deck, while addled with hands only. Mr. Foster won, with Mr. Munroe

econd. The last was an upset race between Messre. Munroe, Paine, Delayan and Foster, won by Com. Munroe. The prizes given were silk flags, faces for the commodore's trophy will be held through the season, and the fall regatta will take place on Oct. 2.

LEND ME FIVE DOLLARS.

LEND ME FIVE DOLLARS. THE Hartford Courant last Saturday, June 12, had this item: "Yesterday a mac callug himself Amsheld, who was baarding at the Allyn House, called upon Dr. Parmele of the Hartford Canog cancelsts who were at Windsor Locks waiting to come down here the next day. Making an uppointment for the alternoon, he wontto Bristoi to see Commodore Louis Jones, Hc showed there a letter from the Boat and Yacht Uhub of Chicago and he repeated the Wind-sor Locks story and said he had slept all the hight before on the river bank at the Locks. Incidentally he asked Mr. Jones to help him get a check cashed at the bank, but that idl not work. Mr. Jones telephoned in to Mr. Davidson, also of the club, and he insti-tuted inquiries which showed that there were no cancelsts at Wind-sor Locks and that the gentileman who said he had slept on the river bank had really slept at the Allyn Homse. The opinion prevails that he is a swindler and there is a rumor that he is the man who swindled bigoglists in a similer way a while ago. If he is homse the has queer ideas of truth."

It is a namet way a wine ago. If he is noises to has quotient of truth." Parmele sent this item to Mr. C. B. Vaux. of this city. Mr. had just read it, when in walked a man calling himself Bemis, presented that he was one of twelve members of the Farragut and Canoe Club, of Chicago, who were stranded down at New wick. He presented the following letter: Recenture, Chicago, June 10.–C. B. Vaux, Eeq.—Dear Sir: arragut Boat and Canoe Club beg to introduce Henry R. Bemis s company of this membership. They are making the tongest ken canoe journey that has been attempted in this country.

There are twelve of them starting. They hope to reach New York in time to enter for your club races. The Farragut Olub commends them to your favor. Mr. Bemis, who is our Commedore, will ask for our fresh-water sailors. Our club would be glad to reciprocate favors you may show our wanderers.-GRO. R. Wnionr, Pres't. Mr. Yaux, with the bospitality that distinguishes him, invited the whole kit of the Farraguts to call at the club house; but with the caution which also distinguishes him, be politely refused to loan the needy stranger the ready cash asked for. - Mr. Farragut Mansfield Bemis is presumably still in distress.

Mr. Farragut Mansfield-Bemis is presumably still in distress. BROOKLYN C. C. CHALLENGE CUP, Status Data and the distress of the strophy came off, the balder, Mr. Brokaw, being challenged by the donor, Mr. Buding-ton. An encouraging feature of these contests is the large entry and good positions taken by the younger members of the etuh, who do not feel unduly handlenepped by the sail area carried by some in the a good whole sail breeze from the south, the course three miles, thi-angular, once around. The following started and crossed the line to a bad start in the order named: Yvonne, Wm. Whitolet's Miux. M. V. Brokaw (holder); Lone Star. C. V. R. Schuyler; Sunheam, J. F. Newman; Niente, A. R. Dunnell; Ganymede, T. B. Budington (chal-lenger). The last wohandicapped nearly 7048. The Guenn, also, was sailed over the course with 5%t. rig by Mr. Sinclaire, but owners only being allowed to compete, was not in be race. The first leg was a run with hoorns to port. The Yvonne increased fyronne, Minx, Lone Star, Guen, Sunbeam, Niente and Ganymede. This last boat here withdrew, having broken drown through haste in rigging and consequent imperfection in luportant details, and some gueer antics were shown by the Niente but no accident occurred. Yvonne mistook the course, not having ascelland where the buoy lay, a careless error which had fatal result in this case, as the ground this lost, put her third round the seeond huoy. There Sunbeam showed in front, followed very closely by Minx, Yvonne, Guewn (not competing), the others close up. For the heat bome excellent judg-ment was shown by Miux, who kept on a long leg down the Bay clear of the crowd of yachts which ladies' day at the Atlantic Y. C. at-tracted, and also held a better wind, the breeze heing off shore; she finally scored a win and retains the cup. Yvonne two seconds behind her, and also held a hetter wind, the breeze heing off shore; she finally scored forwed, of which hadies' day at the Atlantic Y. C. at-fracted, and also hel

Tracted, and also held a hetter wind, the breeze heing off shore; she finally scored a win and retains the cup. Yvonne two seconds behind being measured.
A padding race followed, of which the following is a summary: Course from Sixty-sixth street dock to A. Y. C. Basth, half mile adding, for a special prize offered by the Ontario Cance Company, second; d. P. Weekes, Pagan; C. O. Bahmano, Eda.
Bautoma and the second of the course of the course

THE MEET AT CALLA SHASTA.

The which use less open water cance.
OUENA.
The Animoter of years the Hartford and Springfield cance clubs we held a joint meet on Decoration Day, one year near Hartford and the alternate year near Springfield. In 1855 the Springfield spine the further the search and the se

and a jolly time was had around the first camp-fire telling stories and singing songs. Baturday the tents for visiting canceists were pitched and camp officers elected. As every canceist guest landed, he was presented with a pretty hadge of bull satin ribbon bearing the words, "Caila Sbasta 1886," and beneath these, the tolems and flags, tastefully ar-ranged, of the Hartford and Springfield Clubs. The H. C. C. and S. C. C. hadges were the same as the guest badges, with a small flap of blue ribbon bearing the word "member" and the initials of the club. Saturday night ahout fifty cances were drawn up on the beach and double that number of men were gathered around the camp-fire, while Billy the janitor, the jewel of the Springfield Club, lent a weird charm to the scene in the first first with his red shirt, bare arms and silk bat. The camp-fire was Billy's especial pride, and it was only on such occasions that be dreemed if fitting to wear the ping hat which he kindly donated, as a parting pift, to the Hartford Club at the breaking up of camp. At a meeting held in the parilion, George L. Parmele was chosen commodore of the camp and Rev. W. H. Larom, chaplain. The subject of a New England Association

NOTES FROM LOWELL. -For the annual regata of the Vesper Boat Club, to heid June 24, but one cance race, landem padding, is announced; but this must not be taken as indicating a lack of cance interest in the club. Since last season quite a salling hoom bad heen developed and nearly all of the open paddilar cances, so largely used here, have been fitted with one or two sails apiece; some of them pretty large spreads, too. Among the new crait added to the navy are a Stevens build, 25-inch sailing come with heavy lead keel, owned by John Walsh, and a heautiful 14 63:0 open Peterboro, with sail, just received by Malph F. Brazer. Several new boats have also heen received by unatached canceists and the New Wamesit Club, organized by Messrs, Rolfe and Hunington, have built a small foat-ing hoat house at the cemterey crossing on the Concord River, which shelters upward of half a dozen craft. Three of these are cr-ditable home-made canvas cances of simitar model to Vice-Commore Buller's Blanche, which won two saling prizes at Calla Shasta. One will have two boards, placed well forward and aft. There will probably he no general Merrimack Kiver meet this year, but the Vesper boys have already taken their usual number of one-day trips on neighbor-ing streams. Several Lowell representatives may he looked for at Grindstone in Angust, and two of the local breturen contemplate spending next winter canceing in Florida.-F. H. P.

 Spinnakers, clubtopsaits and halloon jibtopsaits went quickly aloft, and in a few minutes all were spread across the Bay, a host of lofty white triangles showing in the misty distance.
 The sum meanwhile had come out a little and the air was warmer, nut the wind had not increased.
 Puritan and Thetis still held along lead, with Priscilla next and Atlantic sill among the ruck. At 11:30

 all were outside the forts, the three leaders well ahead. The wind now went around to the North and 10:41 Atlantic jibed her boom to port, Priscilla doing the same at 10:32 and most of the fleet following.

 Betore noon the wind dropped perceptibly, and Puritan and Thetis soft Buoy 6 were nearly hecalmed. Thetis drifted up on the white hoat, however, and seemed vary close to her. At 11:50 Puritan jibed, again, and Priscilla foll at lowed at 12:23. All were now nearing Buoy 6, where hem arkhoat was stationed, about

Salmon Fishing in Canada.

We have the largest stock in America of Forrest : Son's celebrated Salmon Flies, Hods, Reels, asting Lines, etc., etc. We have everything in ishing Tackle for the successful capture of Sal-ion and Trout in Canadian waters. American nglers can ohtain their complete outfil from us ar below New York prices. Spliced Salmon and rout Rods a specialty. Salmon and Trout Rods tade to order and repaired. W. W. Greener's uas Eley Bros. Ammultion, Curtis and Harves's iamond Grain Powder, Clay Pigeons, Blackbirds, end stamp for 42-page illustrated catalogue. T. W. BOYD & SON, 1641 Notre Dame st., Montreal, Canada.

"Murcia" Silk Worm Gut. FISHING AND SURGICAL USE.

In lots to suit, all grades and lengths, "Extra Heavy" to "Extra Fine," Assorted thousands, ten lifferent grades, including "Extra Long," put up for country trade and clubs. Prices, \$5 to \$15 per 1000, Assorted thousands, \$7.50. Address LATASA & CO., P. O. Box 2,708, Washington Building, N. Y.

All Modern Improvements. Automatic Safety Pistol Grip. Double Bolt, Rubber Butt Plate, Full Choke, Blued Frame, with Twist, Laminated or Damascus Barrels.

12-GAUGE NOW READY.

Weight 6½ to 7 lbs.

The Top Snap is utilized as the lever for cocking the hammer as well as breaking up the gun. The leverage is so adjusted that the gun is broken up and hammer cocked as easily as an ordinary gun with simple top snap is broken up. By the same movement of the top snap the safety bolt is forced under the forward part of the trigger, locking the latter firmly into the bent of the hammer. The Safety Button is located just in front of the trigger, and is fully protected by the guard (as shown in cut). Pronounced by the trade and sportsmen generally the Finest Single Gun Made. INTERCHANGEABLE RIFLE BARRELS OF ALL CALIBERS furnished for these guns if desired. SEND FOR CIRCULAR.

Manufactured by THE STRONG FIRE ARMS CO., New Haven, Conn., U. S. A.

SCHOVERLING, DALY & GALES.

APPLICATION OF A STATE OF A STATE

Charles Daly Hammerless.

THE BEST HAMMERLESS GUN IN THE WORLD.

WHY.

THE PECULIAR SYSTEM OF BORING, CHOKING AND CHAMBERING gives the maxim result in closeness of shooting (this, however, can be done by any one), combined with PENETRATION. This latter is the great point. Ask any one who shoots a Daly and they will tell you they "Kill dead."

THE GREAT SUPERIORITY IN ACCURACY OF THE FITTING AND CLOSENESS OF THE WORK makes the guns last a lifetime. Large numbers of DALY GUNS have been in use a score of years, and are as tight to-day as when first made. The workmen who make these guns are all "ARTISTS IN IRON AND WOOD." We confidently assert that no better or closer work can be found in the world, whether it comes from a Purdy, a Grant, or a Westley Richards.

THE BARRELS AND LOCKWORK ARE MADE OF FIRST QUALITY MATERIAL. One of the great points in a gun is the accuracy with which the barrels are put together. It costs more to put a pair of barrels together properly than it does to make an ordinary gun out and out. DALY GUNS have no superior in this respect.

THE ANSON & DEELEY SYSTEM, ON WHICH THESE GUNS ARE MADE, is the best ever yet put on the market. It is the same system as used by Westley Richards, Harrington & Richardon and many others. The only objection has been that the forearm of the frame is rather short. We have, however, overcome this difficulty, and a DALY HAMMERLESS ANSON & DEELEY SYSTEM WITH LONG BODY IS THE STRONGEST HAMMERLESS IN THE WORLD.

THEY ARE BEAUTIFUL IN OUTLINE, ARTISTIC IN FINISH. THE STOCKS HAVE HANDSOME FIGURE. They are stocked for use, "come up" properly. It is a pleasure to handle them, and to look at them is like viewing a handsome picture. A DALY is A "THING OF BEAUTY."

THE RIBS ARE HAND MATTED (not machine work which does not give the best effect) and give a perfectly dead surface to sight over.

PROOF.

While in sales every other Hammerless Gun has fallen off at least 50 per cent. this scason (which has been a dull one in gun trade) the DALY has increased 50 per cent. Everyone who has one is enthusiastic in their praise.

The Rapid Machine Loader

For which we are sole agents will be ready fer delivery July 1.

We have just received a model of the Loader, and we are satisfied that it is vastly superior in simplicity, compactness, accuracy and durability to any machine of the kind ever made before. Mr. C. E. Overbaugh, who is thoroughly practical, has had years of experience in loading shells, and is a first-class mechanic, examined it and tested it exhaustively, and said "it is the best loader ever made."

The RAPID will be adapted to all gauges, viz.: 10, 12, 14, 16 and 20. Additional cost for more than one gauge, \$1.00 per size. To change the gauge it is simply necessary to exchange shell barrel and plunger head.

Capacity of Charges 2½ to 5 Drams. 1 to 2½ Ounces. Price of Loader, \$12.00.

low, and the cattlemen may have reason to give over their boast that they have the Crow reserve in their power.

THE PARK RAILROAD JOB.

THE bill to grant a right of way to the Cinnabar & Clark's Fork Railroad Company through the Yellowstone National Park came up in the Senate last Monday, on motion of Mr. Butler, of South Carolina, the champion of the railroad schemers. Mr. Vest made a strong speech in opposition to the bill. "He denied that the road was intended in good faith to reach mining property. Why had not at least a pre-liminary survey been made? He would not appeal to men who thought the Mammoth Cave and Niagara Falls should be transferred to commercial use, or that the Great Geysers should be devoted to laundry purposes and dished out to Chinamen for dirty linen. But he would ap-peal to Senators to preserve at least one spot of beauty from the rack and roar of commerce and the greed and avarice of selfish men. The railroad company's object was not to get to a mine but to carry passengers to and through the Park. The construction of this road, Mr. Vest asserted, would be the destruction of the Yellowstone Park. A former officer of the Interior Department had haunted the Senate in the interest of this bill. Some sug-gestions had been made to the effect that Mr. Vest and other Senators who opposed this bill were the tools of the Northern Pacific Railroad Company. Any statement of that kind was utterly and infamously false. No man connected with that company had ever darcd to approach Mr. Vest on the subject. If the Northern Pacific Railroad Company had any interest whatever in the matter it was that a road through the Fark should be built, as it would form a branch of that road."

The question went over for a future consideration.

SONG BIRDS AND STATISTICS.

A CINCINNATI gentleman has been entertaining the Society of Natural History of that city with some statistics to prove, theoretically, that the possible destruction of song birds by milliners' agents and other wholesale bird hunters can have no appreciable effect upon the grand sum total of the birds, which for the three Americas he puts at 3,000,000,000, including all the feathered species. His conclusions are (1) that the great bulk of millinery feather goods are from other than song birds; (2) that song birds are in little demand because of their plain plumage; (3) that the birds of brilliant plumage utilized by the miliners are of South American and other foreign origin; (4) that the destruction of harmful species compensates for that of useful species; (5) that even if all the birds so destroyed were song birds, the reduction in numbers from this cause would still be inappreciable in its effects on the fauna of the country at large.

Figures may, under skilful manipulation, be made to prove anything. But no manipulation of figures in the millions and billions can restore to the gardens and orchards and meadows and pastures and woods the birds which have been destroyed to adorn women's headgear. No arithmetician with his addition, multiplication and progression can hclp the people of this country to see birds where there are no birds. Figure as one may, the incontrovertible fact re-mains that the song birds have been destroyed in such vast numbers that the effect is appreciable; it has been seen and lamented by men and women in widely separated localities. There is no imagination about it. Those who have under-There is no imagination about it. Those who have under-taken the task of awakening public sentiment to make an end of the song bird slaughter are not engaged in combating an imaginary evil. They are contending against a folly whose actual material evil results are perfectly plain to every one whose gaze is not confined to theoretical expansions of the multiplication table.

THE FIRST TEN THOUSAND ROLL OF AUDUBON SOCIETY members will be reached and passed this month. New members are enrolling at the rate of a thousand a week. That means that the song bird feathers have had their day as hat decorations. Ten thousand—and by and by there will be tens of thousands—of people who think alike on such a topic must have an influence on the sentiment of the day.

QUAIL IN THE HAY FIELD .- If there are quail in the hay fields, instead of driving the mower over the nests or the young broods, put the dogs in to locate the birds, mark the spot, and when the team reaches it turn the horses' heads to one side. We suggested the plan last year. It was tried by sending spare copies of their printed rul with success. It is a little trouble, but it may save the birds. be in turn sent to organizers of new clubs.

VOL. XXVI.-No. 22. Nos. 39 & 40 Park Row, NEW YORK.

SUSTAIN THE PRIZE LIST.

THE officers of the National Rifle Association contem-▲ plate the preparation of a circular addressed to the public and asking for the establishment by wealthy citizens of prizes and challenge trophies. Wimbledon has scores of such gifts placed at the disposal of the managing council, and in this way records are kept up and certain trophies carry with their possession a championship in this or that style of shooting. In this way rivalry is kept bright and active, and those in control of the meeting feel encouraged and able to offer large added prize lists in money to each of the matches.

Creedmoor needs something of the same sort. It has had such trophies in the past, and they have helped very much in keeping up the interest in the art. The Army and Navy Journal Cup was such. The Hilton shield of to-day is another example of how popular such a prize may become and how much good it may do.

Gen. G. W. Wingate, the heat of the Association, in talking recently on this subject, after speaking of the necessity of keeping up the militia to a state of efficiency as shots, said: But in order to keep up this skill and bring it to the highest state of efficiency possible we must have competition and emulation, and in order to do this we must have prizes. The prizes given at Wimbledon are to a very large extent con-tributed by public spirited citizens, and are of such value as to make their acquisition an object for the volunteers. It is necessary that prizes going over from match to match be provided if these matches are to be continued. The Association cannot afford to provide them. What we want is some suitable trophy which can be contended for by teams from different organizations, and not held finally till won three times. Such a course would make the teams more ambitious and would insure a higher degree of skill among the marksmen

This is exactly the pressing want of riflc practice to-day. It is hardly reasonable to expect militia marksmen to go out and give of their time and money without some incentive. The public has a direct interest in having the shooting ability kept up, and the rich class of citizens perhaps more than others, and it is but fair that trophies, prizes, gifts, etc., be offered, so that when victory does follow effort the winning guardsmen or team may have something to show as an

emblem of that success. We have faith that, if this matter is put strongly and clearly before the public, there will be a prompt and satisfactory response from many quarters, and, the system having been established and its good results shown, there will then be a steady and liberal support to the work which for a dozen years past the National Rifle Association has been courageously carrying on.

THE SIX-INCH TROUT LAW .- Several States have a clause in their fish laws forbidding the taking of trout under six inches in length. The provision is a most wholesome restriction on the unreasonable and foolish destruction of fingerlings. The line between trout fit to basket and trout unfit must be drawn somewhere, and the limit of six inches is none too small. The New York law did have such a clause, but the stupid politicians in the last Legislature did away with it. The markets are now open for the reception of the fry; and Mr. John D. Collins, secretary of the Utica Fish and Game Protective Association, tells that bushels of little trout taken in the headwaters of streams are shipped to New York, Philadelphia and Boston markets. This is not very encouraging to the public-spirited persons who have contributed time and money in efforts to restock the depleted streams of the State.

NEW YORK COUNTY SUPERVISORS .- The county superors in New York have authority to add to the protection of game and fish, but no authority to take from it. They may increase the close season on any species; they may not shorten it. The Rockland county supervisors have voted to open the woodcock season July 1. This they cannot do. The State law provides that the season shall open August 1: persons who shoot woodcock in Rockland county before that date will be just as much liable to a penalty as if the supervisors had taken no action; the unauthorized step of the supervisors will excuse no one.

CLUB RULES .- We have frequent calls for copies of club rules, by laws and constitutions. Secretaries of gun clubs, angling clubs and game protective associations will oblige us by sending spare copies of their printed rules, that these may

CORRESPONDENCE.

money or they will not be inserted.

THE FOREST AND STREAM is the recognized medium of entertain-ment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be re-garded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENIS.

ADVERTISEMENTS. Only advertisements of an approved character inserted. Inside pages, nonparell type, 25 cents per line. Special rates for three, six and twelve months. Reading notices \$1.00 per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the more set they will be inserted.

SUBSCRIPTIONS

SUBSCRIPTIONS May begin at any time. Subscription price, \$4 per year; \$2 for six months; to a club of three annual subscribers, three copies for \$10; five copies for \$10. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Samp-son Low, Marston, Scarles and Rivington, 188 Fleet street, Loadon, Eng. Foreign subscription price, \$5 per year; \$2.50 for six months. Address all communications.

THE CROW RESERVE.

IN reply to the FOREST AND STREAM'S charge that the Crow Indian reservation has been captured by the cattlemen, the Interior Department, through Commissioner Atkins, has given out an explanation and a denial. The explanation, as reported in the New York Times, and copied elsewherc, is in effect a corroboration of the statements made by us. The department explains that leases may lawfully be made; but it appears from Commissioner Atkins's own showing that no single one of the cattlemen, whose herds now cover the reserve, has a lease or any warrant whatever for the occupation. They are, therefore, all trespassers, and should without delay be ejected. The sheepman Barry, who, after dickering with the department without driving a bargain, put his sheep on the reserve and paid nothing, is only one of a class of deflant trespassers, who infest the reserva-tion "without a shadow of right."

Having thus shown the condition of affairs on the Crow reserve to be fully as bad as or worse than that described in these columns, the department expresses a touching confidence in its agent and denies the truth of the charges of the FOREST AND STREAM, "basing this denial on a thorough knowledge of his [the agent's] probity, and a lack of any

accurate information, etc."—a somewhat extraordinary basis. The confidence in the Crow agent's probity is good enough so far as it goes, but it is to be hoped that the department will supplement this by securing the accurate information without which it cannot properly remedy the abuses complained of. We again urge the Secretary of the Interior to make a searching investigation of the condition of affairs in the Crow reserve. Rightly conducted, such an inquiry will show the truth of the FOREST AND STREAM'S chargesthat the choice lands of the reservation have been taken by the cattlemen, who are now practically in control of the reserve, and by the construction of permanent improvements are preparing to maintain their hold in the future; that the Indians do not receive proper compensation for the privileges ac-corded, are not justly treated, do not acquiesce in the taking of their lands, and are in part deceived as to the actual condition of affairs. When the department's confidence in its agent is complemented or supplanted by accurate information on these points, we trust that prompt official action may fol-

<text><text><text><text><text><text>

"What! complaining again? Well, I do love what they call a grumbler, but not a chronic one. Give me one who uses a little judgment, even if it be only a little." "Come now, Roy, with all your good nature had you been the beggar who asked food of the Barmecide prince you would have pulled his nose and pitched him out of his own window had he dared to have played such a measly old joke on you."

window had he dared to have played such a measly old joke on you." Complain? Well, if there was any complain in Roy's vocabulary it must have begun with a k and an u, for it would never have been found under the C's nor over them. He would be pretty thoroughly demoralized and weakened when he could not make an enjoyable meal of fresh air and mountain scenery. He could extract any amount of comfort and sport from the most unpromising beginnings and the most disastrous endings. "Where are your trout?" "There in the basket. I thought I'd just have a little smoke before dressing them." "There are none here. This is your basket, isn't it?" Roy, looking benignly on the proceedings, answered yes. "There is nothing in it." "Nothing in it? Why, man, it's full of pleasant remi-niscences of which you are a part." "Thank you. You'd better dress them after your next pipe."

pipe." "All right, I'll commence on you." "Where are your fish, anyhow?" "In the lake" "They's a good place for them. J

"Where are your fish, anyhow?" "In the lake" "That's a god place for them. They'll keep." Murmuring avails nothing; and Roy's was the right spirit, and we entered into it, perhaps; not fully. To him every-thing ministers to his pleasure. The birds rioting in song, the shimmer of a rippled lake, the dripping of a leaky roof into his ear, rosy twilight lingering on the hilltop, the doughy heaviness of half-baked bread, the soft plaintive hullaby of a meadow brook and the persistent probings of empty mosquitoes are to him mines of pure delight. The guide said to him one day when he came to camp hungry as a wolf, "I'm very sorry, Mr. Roy, for 1 think I've scorched the potatoes." "Oh! that's all right; a little scorching im-proves them and I'm not sure but the more they are scorched "Hang a country where dried apples are a luxury." We saw deer in abundance every day, but refrained from even disturbing them, for the novelty of their appearance had worn off and they had become so accustomed to seeing and hearing us that they almost seemed as though they had lost a little of their instinctive fear of man. MILLARD.

Hatural History.

THE FISHER.

THE FISHER. THE fisher (Mustela pennantee Erxl.), called by hunters "black cat," is not very abundant, yet sufficiently so to make a special part of the fall and winter hunt. The size and shape much resemble the fox, excepting the legs, which are much shorter. The color is black all over except the shoulders and neck, which is mixed with a rich gray, when prime. His body is about two feet long, and tafl one foot, bushy and black. Weight about twenty rounds

gray, when prime. His body is about two feet long, and tail one foot, bushy and black. Weight about twenty pounds. The fur is valuable, commanding for individual skins in the wholesale market ten dollars. The texture of the hide is thick and tough as compared with the mink (American sable), but the fur is fine, black and long. This animal is very industrious and mischievous—a perfect pest to the martin hunter, sometimes following bis lines of log traps for miles and knocking them to pieces and stealing the bait. A general rule among fur hunters is to build a larger trap, about one in eight, along the mountain side, especially for the fisher, and by so doing the hunter not only saves his martins but occasionally secures a specime of more value. It is not a sure thing, however, for the fisher is an artful and shy creature, especially if he is an old one and has been trapped before, as then they will often contrive to get at the bait without springing the trap. The surest way to capture them is with steel traps, and the usual manner of setting it is in open houses built of ever-green boughs, about four or five feet high, and three feet deep. Stick down a forked stick in the extreme back of the cubby, and put your bait on it. Then set your trap in front of the bait (18 or 20 inches from il); cover your trap with fine moss so that it will all look natural; fasten the trap securely to a small detached tree, and ite the top of the tree so that the animal can swing it round at liberty. The best bait is supposed to be fresh fish, yet he will take any fresh meat, and he is bound to have it too. I once, while hunting the Rangeley wilderness, was sorely tried by a fisher's robbing my traps, and set a steel trap for him, and for several weeks he outgeneraled me by stealing the bait. He knew just as well as I did where my trap set, and he would get around or over it and carry off the bait every time. I tried him in all the ways I could contrive, with no better success. Finally I set in another steel trap in front of th

mountains and in the deep forest, beating back as civilization advances, maintaining their solitary habits in the wildest haunts. Some hunters assert that the fishers go into brooks for fish, but I have never noticed any evidence of this. I have caught several specimens alive for zoological gardens, both in this country and in Europe, but they have to be kept in iron-lined cages, as they will continually gnaw wood, and by their industry soon make their escape. Very few are trapped now compared to former years. J. G. R. BETHEL. Maine

ADDITIONS TO CALIFORNIA AVIFAUNA.

ADDITIONS TO CALIFORNIA AVIFAUNA. THE occurrence of the yellow rail and European widgeon in this State was first recorded by Dr. J. G. Cooper in the Proceedings of the California Academy of Natural Sci-ences, Vol. IV., pages 8 and 9. I do not know if the specimens were deposited in any collection and they may not now be found. It may have been from an overslight or perhaps doubts as to the identity of the species that these two have been ex-cluded from the birds of this State, and yet I do not under-stand why the statements and data of these birds again in California which I sent to some Eastern ornithologists should have been wholly ignored. I trust that my making known the following facts in FOREST AND STREAM and the presence of the skins in my collection will be sufficient to convince the most incredulous. *Porana noveboracensis* (Gmelin), Yellow Rail.—I took a female of this species on the salt marsh of Alvarado, Alameda county, Dec. 28, 1863. No. 1169, female. Writer's col-lection). The bird flushed from close before me and flying a few red diversed int the growend schulded out of circit to

county, Dec. 28, 1883. No. 1169, female. Writer's col-lection). The bird flushed from close before me and flying a few yards dropped into the grass and skulked out of sight. It was soon found and pointed by my red setter and 1 picked it up alive. When first caught it made a sound very much like a young chicken in distress. Another specimen of this species which I have seen was shot near Cordelia, Solano county, last year by Mr. W. G. Blunt. The small size und probable scarcity of the bird, together with its secretive babits, has no doubt caused it to be over-looked by collectors. *Anas penelope* (Linn.), Widgeon.—I received a specimen in the flesh from the market in San Francisco, the source of Dr. Cooper's specimens, which, as he suggests, "were prob-ably stragglers from Asia instead of Europe." (No. 542, male, Feb. 17, 1882. Writer's collection.) I do not find the Carolina rail mentioned in any work to which I have referred as having been found in California, and take this opportunity to make known its possibly first occurrence.

and take this opportunity to make known its possibly first occurrence. *Porzana carolina* (Linn.), Sora.—Taken near Gilroy, Santa Clara county, Jan. 30, 1874. (No. 500, adult. Collection of D. S. Bryant.) There is figured in Gould's "Monograph of the Trochilidæ," the type and only specimen then known of *Selasphorus floresis*. I have just received a second example, shot by a boy near San Francisco, in May, 1885, which is a species new to the United States. *Selashorus floressis* (Loddiges). (No. 2.620, male. Writer's

United States. Sclasphorus floressii (Loddiges). (No. 2,620, male. Writer's collection.) The appearance of the bird is strongly suggest-ive of a hybrid between the anna and rufous hummingbirds, but Mr. Ridgway, who identified the bird from my descrip-tion, writes me that he is "rather inclined to consider it a distinct species." Should additional specimens be taken they will prove of great interest. WALTER E. BRYANT.

OAKLAND, Cal., June 9, 1886.

INOCULATION FOR SNAKE BITE.

<text><text><text><text><text><text><text>

March, 1876.) It would be well to inoculate a chicken or rabbit with the juice of the aristolochia or some other of the "antidotal" plants first, and then let the cobra bite it; the pain and terror suffered during the existing experiments would be only slightly aggravated, and with a possible favor-able result.

BEAR AND MOOSE QUERIES.

BEAR AND MOOSE QUERIES. Editor Forest and Stream: Twould be very glad if some of the old hunters who ready our paper would favor me with information on one or two because that are not by any means elucidated in such nat-ural histories as I can refer to. What is the average and maximum recorded weight of the grizzly bear (Ursus horribilis Ord.)? One rarely hears and networks and the scales have been brought in, so far as I can secretarin, it has been voted an immense bear that went over to pounds. What is the maximum authentic recorded height at the shoulder of the moose (Alees machilis (Linné) Gray)? I should any that six feet is about the average height of a bull moose, the holdwing statement: "In October, 1880, Geo. Ross the abounds and the beast made 800 pounds, a bull moose that weat and measured it myself immediately after it was killed. I have and measured it myself immediately after it was killed. I the same month and in the same region of Ontario I by and measured it myself immediately after it was killed. I the same month and in the same region of Ontario I by and measured it myself immediately after it twos killed. I by and measured it myself immediately after it was killed. I by any moose in the same region of Ontario I by and measured it myself immediately after it theses hunters in the same month and in the same region of Ontario I by and heast the same region of Ontario I by any filled a bull moose that was 7 feet 2 inches at the sounders.

It is very difficult to know how far to credit these hunter shoulders." It is very difficult to know how far to credit these hunter statements, but it seems to me just possible that occasionally the moose may attain to such a great stature. A scientific friend totally discredits the statement because the dimensions given are far beyond the known limits of individual varia-tion. But it must be remembered that the variation is in the direction of this animal's specialization; that is, for example, the chief specialization of the common mole (Scalops aquati-cus (Linné) Coues), is its enormous hands, and they are by far more variable in their proportions than any other part of the animal's anatomy. So also the curlew (Numericus longi-rostris Wils.), its remarkable specialization and its most variable proportion is the length of the bill. Why, there-fore, in this case, may not the moose be subject to extreme variation in the elongation of its limbs, which probably is its chief specialization. However, whatever doubts may be cast on the above

chief specialization. However, whatever doubts may be cast on the above records, I have full faith in the honesty of the narrator, and am very sure that the mistake, if any, is due not to deliber-ate exaggeration, but rather to the baneful habit of trusting one's memory, that has, ere now, led the best-meaning of naturalists into lamentable error. ERNEST E. T. SETON. York, June 21, 1886

BIRD NOTES.

BIRD NOTES. D'ITCHESS COUNTY, N. Y.--Of robins the county is full to such an extent that fruit growers complain bit-terly of their depredations. Meadow larks are fairly numer-ous, though not abundant. But the rollicking song of the boolink is seldom more heard. I saw none and only heard the one trill of a single bird. The beautiful orioles also are very rarely met with. This doubtless is in great measure due to the late fashion of ladies' hat decoration. But to their credit he it said, that through the widely pervading influ-ence of the Forest AND STREAM, aided by the numerous Atoutbox Societries, this cruel fashion has been almost en-tirely discarded. Whether our bright plumaged birds and songsters will ever again be as plenty as heretofore is prob-that sings right on, rain or shine, all day long, that has escaped the demands of the milliner, owing to his modest plumage no doubt, and that is the song sparrow. Those I pund almost everywhere, and I think they have largely in ereasted of late years. What has become of the chattering mattins? I have seen but one family this year. Thrushes, the thirds and the frisky little wren are now seldom seen. Is the miscrable English sparrow responsible for their disap-planter. There is one, the same one show seldom seen. Is the miscrable English sparrow responsible for their disap-planter. There is one is the song sparrow the chattering mattins? I have seen but one family this year. Thrushes, the miscrable English sparrow responsible for their disap-planter. There is one is the second of the the disap-ter of the forest and the frisky little wren are not seldom seen. J. H. D. THE TOLEDO EAGLET.—East Toledo, June 14.—Editor Forest and Stream: The eagle hatched April 26 is seven weeks old to-day. It is about one fourth the size of a full-grown eagle, and is fledging nicely and assuming a finc ap-pearance. It still depends on the mother to pick its food in small pieces, which she puts in its mouth. While the old birds have white heads and white or straw-colored beaks, the young bird is black, with black head and jet black beak. A week ago to-day a gentleman who claims to know every-thing about birds tried to make friends with the eagles. He was warned to keep away from then; but he put his hand inside the cage, when the female jumped from the nest and put three talons through his right hand. He is here to-day with a very sore hand, and says he will never again try to make friends with the American eagle. When everything is quiet I go inside, clean out the cage and give them fresh water. They pay no attention to me, but if there is any body around I have no business inside the cage.—HENRY HULCE.

BOMBI.—The Central Park Menagerie has a new attrac-tion in Bombi, a rhinoceros just imported. The beast is 114 feet long and 54 feet high; weight, 7,000 pounds. As he stands munching hay he appears to be about as high as a horse, one-third longer, and three times as thick through the body. His legs are short, immensely thick, and decidedly bowed; his neck and head are typical of immense power; his horn was sawed off years ago, but quite a stump re-mains. The armor of hide plates which protect his body seem to be soveral inches thick. His eyes are small, his month enormous, and his usual expression one of contemptu-ous indifference. Altogether he is a marvel of ugliness, toughness and strength. Even the heaviest of Barnum's elephants would probably have a sorry time of it in a battle with such a brute. Bombi was captured near the delta of the Ganges some ten years ago by a party of hunters, who shot the mother and captured the young one. For the last three years he has been in the collection of Hagenbach, the well-known dealer in wild beasts. The Park Commissioners paid \$5,000 for him. paid \$5,000 for him.

CROWS AND MINNOWS.—Your correspondent "J. P. W.," mentions seeing a crow apparently fishing on Richardson Lake the other day. I have witnessed the same thing there, but I have always explained it in this way: The fish taken by the crows are, in my belief, the dead chubs and minnows which float down from the works of the live-bait sportsmen. Such fish are always plentiful on the surface of that lake in the spring time, and I have often seen the gulls, and once or twice the crows, feeding on them. If "J. P. W." is the "J. P. W." I think he is, I should be very loth to question his opinion on any matter concerning the lake in question, for his experience there has been very extensive and he is a close observer of nature.—SPECIAL.

THE FURSTEE TRAJECTORY TEST. THE full report of the FOREST AND STREAM'S trajectory test of hunt-ing rifles has been issued in pamphile form, with the illustra-tions and the tabular summary, making in all 90 pages. For sale at this office, or sent post-paid. Price 80 cents.

IN THE OLD BACKWOODS.

IN THE OLD BACKWOODS. When I first started for the great virgin forest that many years ago robed with an almost unbroken sheet the northern part of Wisconsin, where deer were said to be abundant, the sweetuess of anticipation was considerably re-duced by anxiety to know what I was going to do with all my game. Familiar with the shotgun and nearly every kind of game upon which it is used, a ranger from childhood of the eastern woods and fields, with keen eyes for hidden squirrels and hares in their forms, a fair shot, too, with the rithe at the target, I quite naturally supposed that all I had to do to shoot deer was to get where the deer were. The re-sults seemed a matter of course. It was early in October that I reached a settler's cabin far in the depths of the "Big Woods" of Wisconsin; just at the beginning of a long spell of that Indian summer that the Northwest alonc can show. A dream of sunlight flooded the woods, the winds were still, the leaves, all dry and crisp, covered the ground so that the scamper of a squirrel over them could be heard at a hundred yards. "There's no use of huntin' now, the woods is too noisy," said my backwoods friend. The words fell on my car like those of an unknown tongue. Even had I comprehended them all the advice that the most experienced hunters in the world could have given could not have held me back. So early the next morning I turned my back upon the little clearing and was soon alone in the wild-erness. Bearcely half a mile from the house I began to find signs

lack upon the little clearing and was soon alone in the wild-erness. Scarcely half a mile from the house I began to find signs that even the most inexperienced eye can not fail to read aright. But one animal could make the narrow, sharp-toed tracks that in all directions were so plain upon the spots of bare ground, and in places had pressed dead leaves in the soft soil beneath. Cautiously I peered around, looked down the ranks of tree trunks, explored the green vistas among the bushes, that filled the more open places, and gazed long and earnestly around that amphitheater of the woods where all things fade into a blurr of mingled form and color. Tall and trim was the basswood, and grandly solemn the old white oak. There was the dark, shaggy bark of the black oak, the smooth, dark gray shaft of the red cak, the maple all aflame above, and other ancient trees with leaves of brown, erimson and gold yet unshed. With brilliant scarlet the clustered head of the ginseng shone along the ground; there, too, were the purple berries of the fragrant spignet; ferns still green with life stood along the shady slopes; wild cherries glistened with intensity of jet, and wild plums of great size, some of golden hue, others of pink, looked tempt-ingly at me. Yct nowhere was there anything that looked like a deer. I listened for the sound of bounding hoofs that I had be-fore heard before the hounds, the crash of brush, or the long-drawn snort or plaintive bleat of which I had read. Yet I heard only the drumming of the squirrel, the tattoo of the woodpecker on some high, dead limb, the harsh, jingling note of the bluejay, or the grating notes of the raven wheel-ing on high. With step as quiet as thick-soled boots, dead leaves and

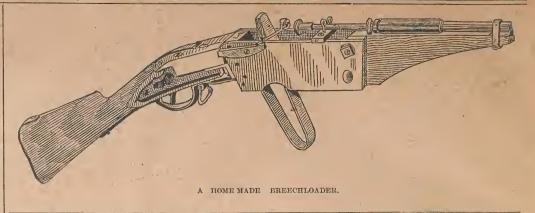

pawed a square yard or more of ground clear of leaves and sticks. The damp, dark soil was laid bare, and in it were a score or more of large hoof tracks whose smooth indenta-tions still shone with freshness. The bush—a thorn apple— was on that side all broken, scarred and frayed, and its bright little red apples were scattered upon the ground be-neath. I had heard of the deer hooking and tearing the brush with their horns at this time of year, and as the sap still shone fresh upon the scratches on the limbs, I looked around in instant expectation and clutched the rifle with the fondest grip of hope. The rustling foot of a northern hare over the dead leaves as it sped away from the clump of blackberry bushes beyond as I advanced sent a tidal wave of chills along my spine, and my hand trembled so that I could hardly have hit a barn without fastening myself inside and stopping up the knot holes. Hours passed, yet that buck appeared not except in imag-ination's field, where every hour he grew larger, fatter and more numerously pronged, yet on I went with faith un-clouded. I looked with contempt at the woodchuck that stopped at the mouth of his hole in the but of some old tree to take a look at me before vanishing within ; and even the porcupine which I had never before seen I allowed to feed undisturbed upon the topmost twigs of the lofty elm. I even felt some disdain for that charming bird, the ruffed grouse, that every few minutes burst with resound ing wing from my path, or gazed calledy at me from the thorn apple or sloe bush where he was feeding, and for that lovely fish, the speckled trout, that flashed in every little brook I crossed or stooped to drink from. My heart was set upon deer, deer shot with a riffe and secured by still-hunting, and I was nearly blind to all the beauties of what is then the loveliest woods upon which the sun ever shone.

set upon deer, deer shot with a rille and secured by stui-hunting, and I was nearly blind to all the beauties of what were then the loveliest woods upon which the sun ever shone. The sun well in the meridian, a growing feeling of vacancy within and a most inviting log finally convinced me that it was time for lunch. But just as I was about to sit down four deep indentations in the ground with fresh, fine soil and moist leaves scattered just abead of them caught my eye. I stood for a moment as if petrified. One who has never been in such a position can little imagine the feelings of the tyro whose expectations have out-soared even his conccit when such a reality first breaks upon him with all its chilling in-tensity. I did not have to try the indentations with my fingers to see if they were hoof tracks. The case was dis-tressingly plain, but I could not resist a look over the log for the preceding tracks. Just over it in a little patch of the log. I had heard much of "jumping a deer," but for the first time had an idea of what it generally means. Without stopping to think how such a large animal as a deer could have thus taken the alarm and bounded away in such open woods without my seeing or hearing it, I started on the trail, looking keenly down every dark lane among the tree trunks, and giving at every flirt of a squirrel's tail or burst of a grouse a convulsive jerk of the rifte, the reaction of which gave me an ague for the next five minutes. But the tracks of the deer showed it still in full bound, now clearing fifteen now twenty feet at a spring, now going clear over a bush which could have been easily avoided, now skipping the trunk of a fallen tree that it would have been as easy to pass under. Much and moment's investigation showed that a doe and two faws had started from a neighboring thicket and gone off with the other deer, alarmed, no doubt, by its running. I hade to confees it, but I was actually verdart enough to think that my chances for a shot were now increased instead of diminished, and fu

ANOTHER BREECHLOADER.

<text><text><text><text>

who had caught it in its inverse sent it to the FOREST AND STREAM with the following letters: NEW YORK, May 7, 1886.—Editor Forest and Stream: This model (or whatever you call it) was made by George M. Grant, of North Tunbridge, Vermont. He was fourteen years old when he made it. When it came to our notice, Mr. W. W. Converse, president of our company, saw it, and thought that as the boy had shown so much ingenuity he should be rewarded, and we sent him one of our single shot rifles. I inclose you a copy of the letter which I have just received from him.—WINCHESTER REPEATING ARMS COMPANY (P. G. Sanford, Agent). NORTH TUNBRIDGE, Vt., May 4, 1886.—Winchester Arms Company: Gentiemen sirs, I received that rifle all right last night and was very much surprised and pleased. I have wished I had one like it a good many times. I shall prize it more than anything in this world. I never had such a coskly present before. And, gentlemen, I thank you more than I can tell; whenever I look at it I shall think of you. Once more I thank you and close. I remain yours truly, GEORGE M. GRANT.

GRANT.
How the weapon came to be made was the question which we put to the lad, and his answer comes to complete the story of how pluck and brains were properly rewarded: Norrn TUNERIDGE, Vt., May 8, 1886.
Editor Forest and Stream:
I received your letter wishing to know all about that rifle I made little more than a year ago. I had a broken pistol that would not work. I got to thinking one day if loouldn't make a rifle out of it. At that time I had four. 32 tim-fire cartridges. I tried one and found they would fit. Then I went to work, when I had time, to make it. I had no ne to tell me nor any one to help me. I done it alone. I did not have to suit me. When I got it done I looded it with a .52 rim-fire cartridge, and set up a mark ix inches square, eight rods off, and fired. I hit it the first time. I fired a good deal after that and hit well. Have no cartridges now such as I used then. After awhile l lent it to a friend of mine and he let a gentleman have it who was stopping around here, and he carried it to New York. That is all I can think of to describe.

MONTANA'S CATTLE KINGS.

You can guess my surprise at receiving such a costly rife as these gentlemen made me the present of. I shall think of them and thank them whenever I use it. I shall remember the Winchester Repeating Arms Company as free-hearted gentlemen, and prize the rifle they sent me more than any-thing I have got. I will close. I remain yours truly, GEORGE M. GRANT.

"JUMPING DEER."

"JUMPING DEER." Editor Forest and Stream: Bang thoroughly familiar with the movements of the Gardacus macrotis when in motion, I wish to correct an provide the cut given illustrative of the "Carbery Deer Hunt" in the Forest AND STREAM of June 3. The "jumpers" do not fold or bend the legs as represented in the cuts; but indicately before touching ground the knees bend forward and the hocks backward, and that instant the feet touch split by that one sudden jerk. That a deer can jump the dis-the distribution and the bindlegs doing the propelling. all by that one sudden jerk. That a deer can jump the dis-the distribution and the same spot. The ears, head, heek and entire body retain a fixed appearance, while the have body near the same spot. The ears, head, heek and entire body retain a fixed appearance, while the have body not be same spot. The ears, head, heek and entire body retain a fixed appearance, while the have beek substanting along unlike anything else in have beek substanting and the bound along like a pumper on the prairie and watch him bound along like a pumper on the prairie and watch him bound along like a pumper on the prairie and watch him bound along like a pumper on the prairie and watch him bound along like a pumper on the prairie and watch him bound along like a pumper on the prairie and watch him bound along like a pumper on the prairie and watch him bound along like a pumper on the prairie and watch him bound along like a pumper on the prairie and watch him bound along like a pumper on the prairie and watch him bound along like a pumper on the prairie and watch him bound along like a pumper on the prairie and watch him bound along like a pumper on the prairie and watch him bound along like a pumper on the prairie and watch him bound along like a pumper on the prairie and watch him bound along like a pumper on the prairie and watch him bound along like a pumper on the prairie and watch him bound along like a pumper on the prairie and watch him bound along

Repeatedly from the saddle and from my snow shoes have I beheld this wingless thing really fly, in the "Carberry Sandhills" and elsewhere; and I have killed them too. Though much shorter-legged than the Virginia deer, they average a heavier weight. Does will reach 170 pounds, and bucks nearly 300. The "great rusty red beast charging through the brush" is very true to life. Mr. Seton's story reads like that of an honest man, and his perseverance is that of a true and enthusiastic sportsman. I assume that he never had the fortune of a clear and prolonged side view of the jumpers, else he would have rendered them standing, even in the air.

A CALIFORNIA OUTING.

Incertate information as to whether the Crow Reservation is used by the stockmen, either with or without permits, or under leases granted by the Crows without Government approval.
MINNESOTA GAME NOTES.—Ashby, Minn., June 17. —From present indications we are led to believe that prairie chickens will be unusually plentiful the coming season. Old birds were more numcrous than usual during the spring months. There has been no rain nor thunder storms to injure the eggs or to destroy the hatch. Young birds are in fine condition at present writing. Ducks that hatch in this section of the county are also in excellent condition and plentiful. We have a good hotel, the Hotel Kittson, livery teams and experienced drivers can be had at reasonable prices. D. A. Lindley of New York, and George Smith of Chicago, with other friends, found this a very satisfactory place to shoot ducks hast fall, killing from 100 to 200 red head ducks per day during their stay. M. A. Gilbert of Chicago, spent 30 days shooting here. The largest number of ducks killed in one day was 213, the smallest 46, his total killing was 2,760 ducks, principally redheads. This shooting is done in Christina Lake, three miles north of Ashby. Stationary blinds are built with brush, etc., from 200 to 300 yards out from the shore, large enough to cover a boat in which one or two men sit, placing 20 or 39 decoy ducks to lakeward from the blind. The places chosen to build the blinds are in the natural feeding place for the ducks. Many thousand ducks were killed in this way by sportsmen from all parts of the country. Col. John Wilson and his son B. M. Wilson of Chicago; she is very proud of the rabit with whet mensit, having beta, shooting both prairie chickens and ducks; she is very proud of her abity as a shot. Hundreds of the lovers of shooting make this their headquarters during shooting scason, the most of them from St. Paul, Minnenpolis and Stillwater, Among the most prominent are G. R. Finch, C. Seabury and J. Tarbox, St. Paul; Chas. Nelson, Senator

PENNSYLVANIA NOTES.—Athens, Pa., June 14.—One day last week a farmer living about four miles east of here killed a bald eagle measuring seven feet from tip to tip; it was thirty-eight inches long and weighed nine pounds. When he fired only one shot hit it, breaking the end of the wing, and it came at him so fercely that he was obliged to club it to protect himself. This is the first one killed near here in several years, and I mounted it for the G. A. R. post of this town, and they will place it in their rooms. Grouse have bred well, and last week a friend saw two fine coveys of young about the size of qualls. He was also fortunate enough to shoot four mink at one shot that were living quite near them. I hope the bounty on minks, owls, wessels, etc., will so thin them out that grouse and quail will have a chance to breed without being molested.—P.

THE BOOMERANG.—Vicksburg, Miss.—Editor Forest and Stream: Noticing in Forest AND STREAM of June 8, an article on the boomerang, in which Mr. Barnum is said to have pronounced it a myth, I copy for you the report of Charles Wilkes, Commander of the U. S. Exploring Excedi-tion, on the above-named weapon. In speaking of the weapons of New South Wales the author says: "The most extraordinary is the boomerang. This is a flat stick three feet long and two inches wide by three-quarters of an inch thick, curved or crooked in the center, forming an obtuse angle. At first one would calculate it was a wooden sword very rudely and clumsily made; indeed, one of the early navigators took it for such. It is an implement used both for war and in the chase. In the hands of a native it is a missile efficient for both, and is thrown sickle-wise, either up-ward into the air, or downward, so as to strike the ground some distance from the thrower. In the first case it flies with a rotary motion, as its shape would indicate; after ascending to a great height in the air, it suddenly returns in an ellipti-tical orbit to a spot near its starting point. The natives in its use are enabled to strike objects which lie behind others with great precision, and to reach those near as if by a back stroke by throwing it at a particular angle. The diagram exhibits the curves of the angles of 22°, 45° and 65° respec-tively, which I have attained in making experiments with it. On throwing it downward on the ground, it rebounds in a straight line, pursuing a ricochet motion until it strikes the object at which it is strown. Birds and small animals are shilled with it and it is also used in killing ducks. The most singular curve described by it, is when thrown in the air above the angle of 45°, its flight is always then back ward; and the native throws it standing with his back instead of his face to the object he is desirous of hitting. It is a faronic weapon with the natives and is frequently seen in-geniously carved.—D. M. P."

AN ADIRONDACK GUIDE'S NIGHT TRIP.—Sunday a tele-gram was received at Boonville for John W. Chisholm, of Boston, who was supposed to be on the Seventh Lake of the Fulton Chain, announcing the serious illness of his wife. The telegram was not sent until Tuesday morning from Boonville and as the case was an urgent one George Good-sell and James Kitts started in a rowboat from the Forge House to Seventh Lake at nearly dusk, the message having arrived there at about that time. The journey up the lake was made in a very fierce wind, and under a disadvantage owing to the darkness. Upon arriving at Seventh Lake, a distance of about sixteen miles from the Forge House, Guide Goodsell could find nothing of the party, and in almost total darkness returned to Hess camp, where it was learned that the party of which Mr. Chisholm was a member, had gone to Big Moose Lake, about eight miles from the camp. Nothing daunted the guide and his companion, and over lake and through the trail of the woods they continued, ar-riving at Big Moose Lake at about two o'clock in the morr-ing, where they delivered their message. Mr. Chisholm at once accompanied them, started at daylight and reaching Boonville at about 5 P. M. of the same day, where he took the train for his home. Considering the roughness of the lake, the darkness and distance traveled, the carrying of the boat from lake to lake and other obstacles overcome, it was a trip which took pluck and perseverance. About forty miles were traveled by lake and carry, and most of it in darkness. Many of the Fulton Chain guides are made up of the right material and George Goodsell is among the number.— Boonville (N. Y.) Herald. A SENSIBLE AGREEMENT.—Gainesville, Texas, June 16.

A SENSIBLE AGREEMENT.—Gainesville, Texas, June 16. —Editor Forest and Stream: The inclosed agreement looks strange, coming as it does from one of the best game dis-tricts in the State, but it will show which way the wind blows in Cooke county.—C. C. The agreement is as fol-lows: In the absence of a law to protect game we hereby agree not to kill any prairie chickens before July 15 next, or quail before Sept. 1, and limit our bag of chickens in one day to the number opposite our names: (Signed) C. Cham-bers 12, F. A. Tyler, Jr. 12, J. B. Spragins 12, W. O. Dus-ton 12, J. M. Potter 12, C. C. Potter 12, J. M. Rowland 12, M. V. Cheatham 12, Joseph Cottraux 12, L. K. Hawkins 12, Burt Simpson 12, J. B. Turner 12, J. B. Morgeson 12, B. S. Brooks 12, J. Means 12, J. C. Rollins 12, J. R. Stevens 12, M. H. Brown 12, H. D. Buck 12, A. L. Frick 13, R. E. Phillips 12, J. H. Garnett 12, S. D. Parkinson 12, Walter W. Hud-son 12, J. T. Rowland 12, J. Z. Keel 12, E. P. Hill 12, C. O. Turner 12, E. P. Bomar 12, Claude Weaver 12, Green Weaver 12, Geo. F. Peery 8, J. W. Phillips 12 (Gainesville, Texas, June 14, 1886). KANSUS—Cimpuron_Inne 14 — L wont to the herfole

KANSAS.—Cimarron, June 14.—I went to the buffalo, southwest of here, in November last; saw two bunches of three and six and killed a two-year old heifer; my compan-ion killed a cow. I am going again in November and shall get meat or stay till I wear the prairie out traveling over it. They are scarce and wild as mustangs. Prairie chickens are nesting here for the first time this season. I am trying, with fair success, to keep them from being killed. Antelope are almost all driven south by the settlers who are setting up the country along the A. T. & S. F. R. R. They are abundant and tame one hundred and twenty-five mile south and south-west from Cimarron. We shall have a large time in Novem-ber about Great Bend, Kan., coursing jack rabbits, at the meet of the National Coursing Club.—W. J. D.

AN ARDENT HOUNDING PROTECTOR.—The Boonville, N. Y., Heratd gives this report of what will be done by one of the gentry whose cause the Heratd espoused last winter: "The Sherman party report seeing many deer. At Beaver Lake they saw five at one time; but the preparations for destruction this season are formidable. At Indian Lake on the South Fork, a person who was last year suspected of doing a good deal of unlawful hounding, has erected a large camp aud got in a thousaud pounds of supplies. He intends to stay all the season, and in the fall to furnish illustrations of how to fill up the woods with deer by driving them with hounds, according to the plan adopted at the recent session of the Legislature."

IRONTON, Mo., June 19.—Quail wintered splendid. At present they are very plentiful, more so than usual. Turkey were numerous in the spring, and we have had a very dry season, which will help our fall shooting considerably. Squirrel are plentiful in the St. Francois River bottoms, about eight miles from here. Deer may yet be found within two miles of Ironton. Fishing was not good this spring; the season was too dry.—W. E. B.

JONATHAN DARLING, of Maine, has brought suit in the Massachusetts courts for alleged seizure of a box containing deer and caribou skins, heads and antlers, in the close season. Darling represents just the class of game butchers whom the protective laws are designed to restrict, and he is naturally the individual to raise a rumpus when his goods are seized.

CROW INDIANS IN THE PARK.—A recent dispatch from Fort Keogh, Mont., reports that small hunting bands of Crow Indians have been killing many game animals in the Yellowstone National Park. Col Weir, Superintendent, a few days ago caught several of these hunting parties.

1 1 1-A supposed empty pistol in the hands of John At-kins, a 12 year-old boy of Pottsville, Pa., was accidentally discharged at a children's picnic while pointed directly at George Farquhar, aged 15. ? ? ? !!!

KANSAS WOLVES.—An Easton (Kan.) man last week cap-tured an old she wolf and seven young, for which he re-ceived \$24 bounty.

So easy to row with Allen's bow-facers. Catalogue free. Oars complete, \$8 per pair. Fred A. Allen, Monmouth, Ill.-Adv.

ONDAWA.

ONDAWA. THE high and mossy mountains roll along Wavelike, beside thee dressed in feathery green, Whilst mighty equinox-a parent strong Of myriad rivulets, with royal mien, Head gray in cloud, o'ershades the varied scene I Through dells and grots or festooned dreamy woods, like driven of more and or solitudes

'Mid plains of emerald or solitudes Dark with the crag, or from the canopy Of leafy myst'ry, loud in childlike glee, Thou fleest laughing, wild, tumultuous-free.

And from thy limpid deeps or cascade's whirl, Or the translucent eddy's olly curl Leaps the bejewelled trout! Thus richer far Than all the mines of gold art thou, Oh Ondawa. MANCHESTER, Vermont.

CAMPS OF THE KINGFISHERS.

XVI. SINCE Jim and Knots had forgotten to wind up their "talk" of the day before, after breakfast they were off again in a boat for another hitch at it and another day with the bass. Knots had reconsidered all his well-laid plans and designs against the trout—a "mighty narrer escape" for the trout of Maybert's Creek from being wiped

with the bass. Knots had reconsidered all his well-laid plans and designs against the trout—a "mighty narrer escape" for the trout of Maybert's Creek from being wiped out of existence. The fishing proved but little better than that of the day before, but we got enough to eat and a few for the neighbors. Enther the bass had not yet taken a notion to feed after the storm, or had failed to find their haunts, and by Sunday night old Knots was growling in a mild way at the lack of sport, and even hinted that he would doubtless cut his visit a few days shorter than first intended, but old Dan and I had been out with him for a good many years and knew the symptoms; his stock of "festivities" was running low, and we could foretell the result. Around the camp fire that evening Dan and I laid out a trip to the extreme head of the lake for next day, to see if the fishing would prove any better up that way, and after an early breakfast next morning we took the philos-opher's boat, a light running cockle shell that had been sent over to him from home a few days before, and were half way to Alexander's point by the time the sun was well above the point, and then we fished slowly along the incurving shore to another point nearly a mile above, without a solitary mibble. This was somewhat in the nature of a backset, but the old pelican and the skipper had encountered numerous small disappointments of the kind in the last score of years, and we did not mind it much. Ashort distance below the point we met Meade, the boat-man, who had brought Knots to camp, with a couple of anglers out from Traverse City for a day's fish. They were in a light yawl, Meade at the oars and the anglers trolling with rods instead of the usual handlines. They had no live bait, but had taken four or five pickerel and as many bass with spoons which was quite encouraging to them, but Dan and I could not quite figure out just the amount of our part of the encouragement.

and I could not quite figure out just the amount of our part of the encouragement. At the point we found a bar or sunken reef reaching away out in the lake eight to twelve feet under water, along the lower side of which we fished carefully till it was lost in deep water, then turning we fished back on the upper side with equal care in glorious looking water for longsnouts or bass without a tightening of our lines to disturb our pulse. The signs had tailed us and not an abrasion marked the speckled coats of our frogs trailing idly asternas we took our way again up shore.

FOREST AND STREAM.
edge of the dead cedar swamp through which it formerly flowed for nearly three miles before entering the lake, but now (I tell it as the neighbors told us) the stream had no fournent through the swamp, the channel, however, four and the feet in depth for more than two miles up, can be readily followed between the walls of leafless, dead trees, killed by the backwater, to near the outer edge of the deadening near the hills, whence it emerges from its hiding of living green. Those the backwater for a mile or two, the Horton boys mot the schoolmaster had told us were some "mighty nice holes" with good trout in them, which Dan and I have no reason to doult, but somehow something kept turning up from day to day—mainly laziness—to prevent us from making another trip to verify it, and as Knots said, "we had only an other trip to verify it to the fine trout fishing to be."
However, I have thought it worth while to point out the first motion be brethren, that in case any of them wander that y for that same big fellow would have been the very identical to the creek that day, for that same big fellow mould have been the very identical to move the suken reef, just starting across the lake to find when the other side to the sawet like law to find the strong of the very of the sine slow near the side would 'hustle six points the sine to the inter side to the sawet held the two "spooners" a short disting the bay may at lease of their boat was entirely covered of bas, the largest of which. Meade said, would 'hustle six points, and a fine bit. Dan and I had plenty of spoones and trollers—in camp; we had forgotten to bring of spoones and trollers—in camp; we had forgotten to bring of spoones and the two short and I had plenty of spoones and trollers—in camp; we had forgotten to bring of spoones and the size spoon. Dan and I had plenty of spoones and trollers—in camp; we had forgotten to bring of spoones and trollers—in camp; we had forgotten to bring of "calamity boxes" along. Dan and I had pl

AMONG THE ALDERS.

AMONG THE ALDERS. If rained quite hard on Tuesday night and I knew well that the next morning would be a good one for trout. Then the day promised to be overeast with perhaps light showers toward noon. "This is the time," said I to myself, "and although I have suffered nearly all night with the totache. I must not let such a morning pass." Twe with these reflections that I prepared myself for a that immediately after breakfast, and took my way over the hill and toward the "Low Meadow." I commenced fishing in the pasture lot when it was possible to cast a fly; but this start of things soon changed. Branches of black ash, yellow birch and occasiorally a maple began to extend themselves across the stream, and now and then an alder bush (as it way ever to remind one of what I was coming to) seemed to take especial delight in growing just where it interfered with my cast. The syst I had only taken three or four fish, none of them farge, however, nor even up to the medium size of a good pr. Fulmer's more recent stocking of the Dingman Creck, in his efforts to improve the streams of Pike county. Pa. But now there is no chance for a fly, and if I will satisfy my huger for trout or entertain my friends, I must resort to the unartistic method (as some think) of bait-fishing. I borrower nod, grit and limber as a switch, good enough for fly-casting, (?) but from past experience I knew most embar-rasing among the alders. Thave been longing for them, like many others, since the start grows just over my head. But Hoose it at length and have been donging for them, so Hoose this, upon the line entangled first on a root, then, as I loose this, upon that grows just over my head. But Hoose it at length and how heck herer running deep and swift by the trunk of and the set hwater running deep and swift by the trunk of and have here han stanket, forgetful of the branches, hove have a rise and I struke, forgetful of the branches, hove his is a deep pool, completely covered by alders that spread is

A the point we found a bar or sunken reef reaching away for the lake of which we fished back on the upper side with equal care in glorious looking water for longsnous are acceled to get out of the block on the upper side with equal care in glorious looking water for longsnous are acceled to get out of the block on the upper side with equal care in glorious looking water for longsnous are acceled to get out of the block on the upper side with equal care in glorious looking water for longsnous are acceled to get out of the block on the upper side with equal care in glorious looking water for longsnous are acceled to get out of the block on the upper side with equal care in glorious looking water for longsnous are acceled to get out of the block we could see the water in the visit of the side of the lake the with rose suddenly, coming from a couple of points east of ror unitible boat and we were moved to go schore and started bar the side in a few minutes the whole lake as far as we core water was covered with whitecaps and the water too rough for our little boat and we were moved to go schore and started bar that it in this brack. We must the bia half pointer with no sign of a loll we got in the boat and started bar that it is nagain. I wait as the care to handle under present cir-tums targes and the were there is an sign as a long in the or to escape the full force of the lake the twish a bang that threatened to split her bottom, the field wine and worked back nearly a mile thill with that my cycs are stilck as they cansid and there is a fallen the as the poposite quarter or down the lake toward care make a wind." It was now rather late in the day to carry out or make a wind." It was now rather late in the day to carry out or the lake and fish back on the east side and make there is a "jam" in the stream, made by branches and ticks that have fonded down against an old tree that has an to the impossible for me to get them. QUEBEC FISHERY LAWS.

QUEBEC FISHERY LAWS. FROM an official publication by the Department of Crown Lands, we extract the following relating to the fishery laws: The Confederation Act gave the Dominion Parliament power to pass laws for the regulation and protection of in-land as well as other fisheries. The owners of land border-ing on any non navigable river or lake, po-sesses the exclu-sive right to fish for salmon, trout, or any other fish in the waters in the front of his land, and may exercise that right or transfer it to another. The right of fishing in water in public, ungranted lands belongs to the Province, represented by the local government, by which it may be disposed or leased to private parties; and any person who fishes in such waters without authority to do so, may be prosecuted for trespass. All fishing, whether in private or public waters, must be done in accordance with the fishery law and regula-tions.

must be done in accordance with the fishery law and regula-tions. Salmon may be killed with rod, reel and fly only, from April 18 to August 31, but foul or unclean salmon shall not be killed at any time. No salmon or grilse of less weight shall be killed. Nets shall only be used in tidal waters. The minister, or any fishery officer, shall have power to define the tidal boundary of estuary fishing, and above the limit so laid down it is unlawful to fish for salmon except with rod and line, in the manner known as fly surface fish-ing. Except in the manner named, salmon shall not be fished for or killed by any artificial pass or salmon leap, nor in any pool where salmon spawn. It is unlawful to fish for or catch any kind of trout (or "Inge") in any way whatever between the 1st of October and the 1st of January, and at no other time except by hook and line, in any inland lake, river or stream except in tidal waters. Whit fish shall not be taken in any manner be-tween Nov 19 and Dec 1, nor by means of any kind of seine between July 31 and Dec. 1. Close seasons for bass, pike, pickerel (*Joree*), maskinongé and other fish may be fixed by the Governor in Council to suit different localities. By the Federal regulations no per-son shall take these fish between April 15 and May 15. It is obligatory upon any person who has no domicile in the Province of Quebec, and who desires to fish in the salmon rivers under control of the Province, to procure a permit or license to that effect from the Commissioner of Crown Landbe before beginning to fish. Such license shall be granted upon the payment of a fee of \$10, and shall be valid until the close of the angling season of the year in which it is granted.

SALMON FISHING.

Portions and silvery-clad sides. Everything is very exciting and each movement of the fish must be carefully watched until finally, wearied out in vain endeavors to escape, he relinquishes further efforts and allows himself to be landed upon the shore. Any one having once experienced the pleasure of hooking and landing a salmon will never forget it. And when you have once landed a salmon you have something worth while being proud of, for he is surely the king of fishes and the most delicately flavored of all the cuire catalogue of the finny tribe. And then again the secnery is so much finer and the air so much fresher and purce among the mountains and valleys on the Miramichi that on the low plains of the west.
To the smaller tributaries of the Miramichi, as we ascend natural falls, among which I might mention the cascade at Fall Brook, which is only a short distance above Borestown and only a few rods from the river. The waterfall is over a wall of rock more than one hundred feet high. About half way down the declivity the water stikes against a project ing rock and is dashed out in fine while spray, making it delightfully cool for quite a distance from Where it strikes, no matter how warm the day may be elsewhere. On the oppoide side of the river a short distance from Fall Brook we falls, and continuing further up the stream we find many objects of interest. The woods of spruce and fir which skirt the banks of the stream in many places, impart health giving down and afford ample shade from the sun in hot weather. At the present rate of rapid transit I am inclined to believe the own and afford ample shade from the sun in the twest, and from bow any more agreeable or pleasant time can be spent by gentlemen from these or other cities of the United States of the stream in about fishing. The fishing beyen in June and continues through July, August, and spentence, thus giving ample time for men of business to so arrange matters as best to suit the for an interval of a stream of the for an interval of a st

AN OUTING FOR LAND-LOCKED SALMON

<text><section-header><text><text><text><text><text>

VERMONT TROUT FISHING.—Philadelphia, June 8.—Have just returned from a vacation to my old home in Rutland county, Vt. Found trout fishing good, filling basket with good-sized ones on several occasions. One was canght (not by writer) weighing 2 pounds 10 ounces, dressed, and one weighing 2 pounds 8 ounces. Fishing in Bomoseen not yet open of course. Plenty of pickerel were caught through the ice last winter, the largest weighing 194 pounds. One mess of eleven weigbed 107 pounds. If laws can be enforced against the nets and spears in spawning time there would be more of the fish; and as it is, large hauls are made in season with line. The landlocked salmon have not been heard from, but the "Swago" bass and pickerel make good sport for spoon or live-bait fishing.—NESHOBEE. VERMONT TROUT FISHING.-Philadelphia, June 8.--Have

SPECIAL COMPETITION.

SALMON FLY-CASTING FOR MR. J. A. NICOLAY'S FRIZE, £5 5s. Judge: Rev. George Summer. (The conditions have already been described in our notice of the tournament). Mr. G. M. Kelson cast 109ft, out and 123ft. home. Sir Randal Roberts cast 107ft, out and 109ft, home. "Down and up again on the same line according to the conditions agreed upon for the Nicolay prize."

so admirably managed on Saturday at Twickenham by the Richmoud Piscatorial Society, who this year relieved Mr. Marston of the management, to the primary programme of contests there are added musical performances by a military band, and a handing over of proceeds to wortby societies like the Thames Angling Preservation Society and the Ang-lers' Benevolent Society, elements of attractiveness are intro-duced not usually found in angling as a practical sport." The Standard says: "Such a gathering of anglers from all parts of the kingdom has not been witnessed in the suburbs of London for many years, and it is certain that no previous tournament has awakened more interest or attracted a larger attendance."

attendance

MAINE ANGLING.

MAINE ANGLING. MAINE ANGLING. If would be hard to imagine a more satisfactory trouting ing of the season was remarkably early in castern waters, and in consequence the first movement of sportsmen was light. But this has since been made up by a fuller exodus, if we may believe hotel and camp-keepers and stage drivers, who report a good trade. As to the catch of both trout and land-locked salmon , it is turning out simply wonderful, and is a most signal triumph, especially in Maine, for fish protection and propagation. It is a fact that more and more root are being taken each year from the Androscoggin and Moosehead waters, and yet the supply is not exhausted. I have talked with a number of long-time visitants of these within a few days, and in almost every case they believe that from the same waters, under the same conditions, they can take as many trout as they could have done three of four years ago, and even more than eight or ten years ago, before the benefits of protection and propagation had begun to be realized. Now it is certain that, in the face of this reasoning, the quantity of trout taken each year has greatly increased. Besides the actual record of size shows a wonderful increase. It would actually seem that the trough observe to indicate. The record of these fish under popunds this spring, one or both of which the Fourser Axio framAh as already mentioned, would seem to leave no year has already mentioned, would seem to leave how protection. Commissioner Henry O. Stanley of Maine, with his colleague, Mr. Stilvell, is much gratified at this arry proof of the value of fish protection and breeding. These gentlemen remark that the large trout are now left to tome to the hook, which formerly fell a prey to the net, the goat in the fact.

beds in the fall. More general satisfaction was never noted concerning the catch of trout among returned sportsmen than is the case this season. By the Andover route to the Androscoggin lakes, the guides and hotel keepers all mention this fact, while the same is especially true of the Phillips route. The fishermen appear to be satisfied. It is true that under whole-some instructions, such as the FOREST AND STREAM labors to promulgate, reasonable sportsmen are learning to be satisfied with fewer fish, but it is also true that there are more fish to be caught. The wonderful success of landlocked salmon, which has shown up for the first time this season, is certainly a triamph for fisheniture which should forever silence all cavil. Accounts begin to come in of this fish being taken on the fly. I heard of one to-day, weighing six pounds, but I have not yet been able to authenticate the story. SPECIAL.

TROUTING IN THE NORTHWEST.

TROUTING IN THE NORTHWEST. THE "effete East" must surrender one more of its old time possessions to the young and vigorous West. The points, and those almost fished out, while in many portions of the Northwest trout abound, and there are yet many streams where the fly of civilization has not found its way. Mr. George Lyman, who began his trout fishing in New York nearly three three score and ten years ago, writes me from the Sioux River, near Ashland, Wis., that he is having "fairly good" sport, that he took thirty-one trout on a half mile of the stream, and being satisfied quit, as a true angler always does. This fishing for scores is one of the vices that the angler despises. It is an evil that is severely felt in the rapidly diminishing number of our game fish. The man who boasts of his hundreds per day and thousands per out-ing is a fish butcher and should be classed with the other comorants. cormorants.

Not far from the Sioux River is the Brule, and Mr. Lyman

Cormorants. Not far from the Sioux River is the Brule, and Mr. Lyman sends me a letter from his friend, Dr. Arthur Holbrook, of Milwaukee, describing some splendid sport. The Doctor landed two pound trout, the result of one cast, with a five-ounce rod. That may fairly be considered good sport and scientific fishing. The largest caught in two days fishing was two and a quarter pounds. There are a number of other streams in the same vicinity where the lusty trout lurk, and many small lakes where bass and mascalonge can be taken in large numbers. The region is also famed for its beautiful scenery. A sail among the Apostle Islands, at the mouth of Chequamegon Bay, Lake Superior, is one of the things no lover of nature should miss. And when good fishing, life-giving air, and the good things of life can be combined with it, there should be many annual visitors. The location is one easy of access. In addition to the-lake steamers, floating palaces, which land at Ashland and Bayfield, there are several rail routes, three from Mil-waukce: the Wisconsin Central; C. M. & St. P., and M. L. S. & W., the latter passing through the far famed Agogebic region. My next will, I hope, be from a point on some of the waters mentioned. JAP. New Anary Ind

NEW ALBANY, Ind., June 16

THE FLUTTERING FLY.—*Editor Forest and Stream:* In FOREST AND STREAM for June 10, I find a cut and descrip-tion of a fly that Mr. Holberton is stated to have invented and that Mr. Holberton is stated to have invented and that Mr. Imbrie has patented. In April or May, 1883, Messrs. D. & W. H. Foster, of Ashbourne, England, sons of the late David Foster, author of "The Scientific Angler," sent me flies tied exactly as the "fluttering fly" is repre-sented in the cut above mentioned. I used these flies for trout fishing the season that they were received, and pre-sented samples to angling friends. Mr. H. P. Wells may recall the fact that I showed him samples of these flies just about a year ago. The Messrs. Foster did not write of these flies as being new or strange, but merely included them with other flies without comment. How long they have been so fashioned in England previous to 1883 I have no means of knowing at present.—A. N. CHENEY (Glens Falls, N. Y.).

PROSPECT LAKE. Editor Forest and Stream:

Editor Forest and Stream: In former issues of your valuable paper you have invited correspondence as to good and convenient points for camping and fishing. I beg, therefore, to call the attention of parties who are in search of pure air—some 1,800 feet above tide water—pure, limpid, delicious water and rational sport, to this point. All such will be highly pleased and benefited. Big, or Prospect Lake, covers some eight or nine hundred acres, wooded all around, except two small spots; bottom and shores are rocky; the water is full of trout and pickerel; four years ago 5,000 salmon-trout spawn were put into it, and while none have yet been caught, there is evidence of their existence, and anglers who know how to fish for them will find rare sport. The location of the lake is in Pike county, Pa., six miles south of Hawley, Pa., reached by the Erie Railway and the Erie & Wyoming Railway. The banks of the lake present many delicious points for camping; those who prefer to be otherwise accommodated can find airy, clean rooms and good wholesome meals at very reasonable charges at the house of Mr. Wm. Aldridge, an intelligent bark miller, excellent good fellow and cuthusiastic fisherman, who knows the lake for many years, has a number of boats, and will take all reasonable pains to show strangers the favorite points for fishing. At present there are some mosquitoes here, but they never last over three weeks or so, and the writer speaks from ex-perience when he says that firs. Aldridge fully understands

At present there are some mosquitoes here, but they never last over three weeks or so, and the writer speaks from ex-perience when he says that Mrs. Aldridge fully understands how to keep her house clear of those enemies of mankind. The nights all summer long are deliciously cool. Mr. Aldridge will haul parties with their outfits from Haw-ley, or they can obtain teams there. Any letters addressed to him at Tafton, Pike county, Pa., will reach him. Within a few days a hotel has been started on the banks of the water; but as the place is new and untried, it is premature to speak of its merits. The writer addresses himself to those only who seek

Water; but as the place is new and untried, it is premature to speak of its merits. The writer addresses himself to those only who seek rational and reasonable sport; those who wish for catching big strings which they cannot use and go to waste are not wanted. It may here not be out of place to speak of a piece of vandalism which has here been perpetrated for some sea-sons past. Certain persons, claiming to come from the Blooming Grove Park, have been in the habit of catching bass four, five and six inches long, and instead of throwing them back have been in the habit of letting them die in the boats. There are too many persons interested in the lake to permit such wanton destruction to continue. A few persons have united to prevent it; and should the outrages be repeated this season, these fellows will get a taste of Pike county justice. "A word to the wise," etc. OUTER. TAFTON, Pike County, Pa., June 14.

TAFTON, Pike County, Pa., June 14. TAFTON, Pike County, Pa., June 14. NEWFOUND LAKE.—The Bristol, N. H., Enterprise re-ports capital lake trout fishing in Newfound Lake, a sheet of water two miles from Bristol, which is three and a half hours ride from Boston. The editor says: "These fish have been speared in large numbers, contrary to law, when on the spawning beds, and this practice has been winked at by the public because it has been supposed they could be taken in no other way. The past week has, however, demonstrated the fact that the fish of this lake are just as ready to respond to the legitimate invitations of fishermen as are the fish of any other lake. Last week Major E. E. Bedee, of Boston, caught in Newfound Lake: Thursday 3, weighing 8, 10 and 15 pounds respectively; Friday 4 trout, 8, 9, 10 and 12 pounds, and 1 land-locked salmon, 15‡ pounds; Tuesday 5 trout, 7, 8, 8, 10 and 10½ pounds, and one land-locked sal-mon, 18 pounds. Elated, he telegraphed to Mr. Mark Hol-lingsworth, of Boston, his success, and yesterday these gen-tlemen caught four, which weighed 6, 7, 8 and 10 pounds re-spectively, or a total of 189½ pounds in 4 days. D. H. Sleeper and John S. Connor fished only a few hours yesterday, and caught two weighing 8 and 11 pounds; two gentlemen from Laconia caught two that weighed 7 and 9 pounds. Geo. H. Fowler has also caught the past week a land-locked salamon weighing 6½ pounds, and one trout weighing 8 pounds, and E. T. Pike a trout that weighed 5 pounds. The above makes a total of 245½ pounds of trout taken from this lake the past week, practically by four days fishing by the above mamed partics. Most of them were caught by trolling, though the finest ones were caught with a dy. The Bristol House, a first class hotel in this village, is only about two miles from the lake. There is abundant camping ground about the lake (which by the way is not surpassed in beauty by any lake in this State), and there are numerous farm houses about the lake where fi

and others have boats that can be hired at reasonable prices." Thour WATERS OF THE NEW YORK FOREST PRESERVE.— Editor Forest and Stream: In the most recent New York State trout law, published in FOREST AND STREAM June 10 last, the brook trout, brown trout and California trout season opens April 1, and closes September 1. "except in the counties included in the Forest Preserve, established by chap. 283 of the laws of 1885, where it shall not be lawful to catch or attempt to catch or kill, or expose for sale any speckled trout, brown trout and California trout save only from the first of May to the fifteenth day of September," Comparatively few peeple seem to understand which of the counties in the State are included in the Forest Preserve. Section 7 of the law above quoted says: "All the lands now owned or which may hereafter be acquired by the State of New York, within the counties of Clinton, excepting the towns of Altona and Dannemora, Essex, Franklin, Fulton, Hamilton, Herkimer, Lewis, Saraloga, St. Lawrence, Warren, Washington, Greene, Ulster and Sullivan, shall constitute and be known as the Forest Preserve." This selection of counties will surprise some of the anglers who are in the habit of fishing the Catskill and more southern streams and have not read the law. In Jefferson county or Rensselaer county, where nature rarely prepares the streams for fly-fishing before May 1, the law permits fishing April 1, and in Ulster and Sullivan, which are earlier counties, the season opens by law May 1. One can fish one part of the Beaverkill a month earlier than another part, and at the close of the season the thing is reversed just fiftcen days. It is well to paste the names of the counties constituting the from the preserve except they are accompanied by their owner. This just lets the man out who buys trout when he can't catch them.—A. N. CHENEY.

TLY-FISHING FOR SHAD.—Holyokc, Mass., June 19.— Editor Porest and Skream: There is some improvement noticed in the shad fishing this week, on the strength of which some of the fishermen are indulging in a cigarette, and others are brushing up rusty and frayed tackle in hopes of having the rust and scales brushed off their own backs. A few good shad have been taken with the fly, and the pros-pect brightens for others to follow." The Silver Sheen and the Cloud is so small that we offer no inducements to those at a distance to try pot luck with us; why it is thus is hard to explain otherwise than the United States and the State Commissioners of Inland Fisheries have turned their backs completely to the city and town of Holyoke and South Hadley Falls, and unless there is a fight in prospect over the taking a few lamprey cells from a scare-crow on the north bank of the river, we never hear of them. It did not used to be so, a few years ago they were in the habit of coming often and tarried late, their stay was interesting insounch that young shad were brought forth by the millions. Their count was instructive and reminded us of the way Pat C. divided the apples: "This is one for me, one for you, and one for me too, one for me, one for you, and one for me too," etc., until the depleted waters before unknown to shad life were filled with Connecticut river shad, and waters of Europe too, got their consignment of the gamy, toothsome South Hadley Falls now take their shad planked in the sun *nia* peddler's cart, when at the same time both places above named, as well as Chicopee and Springfield, pay their taxes, consequently their *pro-ruta* share of appropriations for fishery purposes, and of which a fair share ought to be ex-pended to maintain the fishing industries of South Hadley Falls.—Thootas Chatamers. P. S. The spasmodic efforts of a few days ago are over, cigarettes are abandoned for the old placed back in the book, and the scales are left with us.—C.

placed back in the book, and the scales are left with us.—C. VERMONT NOTES.—Post Mills, VI.—The 15th of June was the opening day for black bass and pickerel fishing in this State. The largest string of pickerel ever taken from Fairlee Lake was caught here to-day, and shows what a few years of enforcing the laws against spearing, notting and illegal fishing will do. One party of two caught 35 pounds, another party 40 pounds, and one boy, thirteen years old, the son of Thos. H. Chubb the fishing rod manufacturer, caught alone and unaided 20 pounds in one-half day's fish-ing, each fish weighing from $\frac{3}{4}$ to $\frac{3}{2}$ pounds. Many other parties caught from 10 to 20 pounds, weight. The largest one caught weighed 4<u>1</u> pounds, and many went from 2 pounds to 3 pounds each. As usual the boys tell big stories of the large ones lost that were bigger than any ever seen before. But very few bass were taken to-day, and but little fishing was done for them, as the day was cloudy and thought just right for pickerel. But the bass fishing bids fair to be first-class, as many have been seen around the shores this spring. The lake is well stocked with perch, which fur mishes good food, and bass grow to enormous size, many caught weighing from 4 to 64 pounds each. The bass as a general thing do not bite freely until about July; then we predict rare sport for the bass angler. The bass in the lake are all small-mouths, and are game from the word go. Fairlee Lake is a most becautiful sheet of water, about three miles in length and from one-half to one mile in width, of clear, cool water, and has fine feeding grounds in all parts of the lake for both bass and pickerel. —OxromrAnoosuc.

HARD LUCK.—Brainerd, Minn., June 19.—The trout fish-crs returned from Brule Tuesday evening, but they were not so heavily loaded with baggage as when they started out. The party was composed of Fred Stanley, J. L. Smith, F. M. Cable and A. A. Green. Their tent caught fire from some unknown cause the first day out and burned everything they took with them, including a photograph outfit, two fine guns, clothing, fishing tackle, provisions, cigars and other traps. This put rather a bad aspect on to things, but they were bound not to be driven home by fire and in three days' fishing afterward they hooked 1,100 trout, Mr. Green ta king the bakery by capturing 518 of the number. In the burned tent were 300 loaded cartridges, and as soon as they got warmed up the fun began and for a half hour it sounded like a volley of artillery, and although there were many people in the vicinity no one dared to go near the fire to try and save anything on account of the shooting. The party is for the outfit as long as Barney escaped unharmed. HARD LUCK .- Brainerd, Minn., June 19 .- The trout fish-

for the outfit as long as Barncy escaped unharmed. FLY-TYING.—Athens, Pa., June 19.—" G. A. M." wants to know how to tie a 'ly. I take the hook in my left hand, and with waxed thread take a few turns around the hook; then I lay the tail on and tie that; next I take a piece of tiasel, four inches long, and tie the end of that on the tail; then I wind the thread back up the body to within a quarter of an inch of the shank. Now I take the stuff for the body and tie the end where the threads is, and wind toward the tinsel and one turn by it. Then I turn the tinsel back toward the point, and wind the body back up the shank to where I began within a quarter of an inch of the shank. That quarter of an inch I leave for hackle and wings. Now wind the tinsel up the body and tie; still keep the hook in left hand, at the shank; each the tip of hackle in same hand and wind toward the end of shak. When you get cnough on tie several times, and clip off the tip and stern. Now you can tie the wings on and shellae. The reason I wind the body once by the tinsel is that it never comes off when put on that way, and is original with me.—E. W. D. POPULAR INTEREST IN ALASKA.—Very rapidly the public

when put on that way, and is original with mc.—E. W. D. POPULAR INTEREST IN ALASKA.—Very rapidly the public interest in our new possession increases, and searcely a day passes that some journal or other does not print some scrap of information respecting this very interesting and remark-able territory. The New York *Times* of the 21st instant contains no less than three columns upon the subject, which are chiefly devoted to the possible discoveries that may result from the visit of an excursion party under Lieut, Schwatka, to be made to the St. Elias district during the present sum-mer. Mt. St. Elias and its brotherhood of mountains lie some 300 miles northwest of Sitka, and are seldom visited by excursion steamers. They are among the highest on the con-timent. Mr. Hallock's book, entitled, "Our New Alaska; or, the Seward Purchase Vindicated," which will be presently forthcoming from this office, is replete with the fullest and most reliable information that can be at present obtained about Alaska, and orders for advance copies are being rapidly received. Its appearance at this time will be most opportune, though Mr. Hallock had prepared the bulk of his material prior to January last.

Fond Du Lac, Wis.—Mr. Harvey Durand has published in the *Reporter* the following card of protest against the trout hog: "I have planted in the waters of Fond du Lac and Green Lake counties during the past four years several hun-dred thousand brook trout. They were furnished by the Fish Commissioner of the State, and were placed in the streams for the public to take, and belong to any one who fishes for them; but in some places there is a disposition on the part of a few to fish the streams in detail for the special purpose of making what has been called a 'record.' I have only to say that this is not legitimate sport. A dozen trout on a string, for one person, is respectable, if they are of ordinary size, and are sufficient for any legitimate family; but to fish steadily from day to day, for the special purpose of 'beating the record,' and take large and small, is termed by sporting men 'fish piracy.' Of course this method will ake the trout entirely from the streams in a very few days, and the work of the Fish Commissioner is nearly lost, for this year the trout will spawn for the first time in most of best fishing in Wisconsin if they will be reasonable when aking the fish and not be ambitions and angle merely to make a record. One thing more. It is against the law to ake trout from the streams until after they are two years old, and then they are six inches long.—H. DURAND."

TOOK THE PRIZE.—Two of the FOREST AND STREAM compositors went down on a tug to the fishing banks, off Scabright, N. J., one day this week and covered themselves with glory, being high lines of the party. They took seventy-two fish. Among these was the biggest one taken, for cateh-ing which the angler took a prize of \$5.

ODD SALMON CAPTURE.—In the Penobscot River a hand-some salmon was captured a few days since ou a raft which came through the sluiceway in the dam, the fish being taken up as the raft emerged from its plunge into the river.

WELD POND, ME.—*Editor Forest and Stream:* I am not unaequainted with Weld Pond, and while much may be said in its favor it will hardly bear out the reputation given it in the article in your issue of May 20.—PHILADEPHIAN.

TRAFFE, Wis., June 17.—Three men were arrested some time ago for fishing for trout with dynamite. They were fined \$100 each and costs.—G. H.

THE ANGLER.

The angler to the brooklet hies; Puts on his hook the tempting bait Of wriggling worms or gaudy flies And for the troutlet lies in wait.

And for the trouter lies in their Next day when by his friends besought The nature of his luck to state, He tells what heavy fish he caught, And as before he lies in weight. —Boston Courier.

Yearly subscription \$1.50. Address "American Kennel Register," P. O. Bod 2832, New York. Number of entries already printed **3810**.

PARASITIC DISEASES OF DOGS .- I.

PARASITIC DISEASES OF DOCS.-I. A six well known to the majority of breeders and large to the presence of parasites. Of these none are so trouble-some or dangerous to life as intestinal worms. One of the latest and highest authorities on the diseases of dogs eavs; "Probably no known disorder the dog is heir to is so destruc-tive as intestinal worms, it being estimated by reliable author-ties that at least three-fourths of the whole canine race are infected by the pest." Another eminent writer on parasites says: "It is remarkable to observe what a number of creatures, including man himself, are destined to play the rôle of intermediary bearer of the canine parasites

<text><text><text><text>

diagnosis be at all clear, the suffering brute should be relieved from pain by a friendly shot. As to the general pathology of this disease, little definite is known; much work has been done on the subject, and various conclusions arrived at, but the evolution of the cruel Filaria is yet veiled in mist. The embryo parasite, after undergoing changes outside the body of their proper host, may be reintro-duced through food, or drinking water, or the bites of insects. As no known entozoan nor mally completes its life cycle within the body of a single host, it is certain that the adult Filaria do not propagate thread worms within the body of their canine bearer.

THE MASTIFF TYPE.

<text><section-header><text><text><text><text><text><text>

of Caution's upper jaw is more than even he anticipated or would wish. Mr. Wade calls attention to Mr. Hanbury placing Prince Regent over Crown Prince. Many able men believe with Mr. Hanbury, that the bulldog type which Crown Prince and liford Caution represent is not the correct type, although just now it may be the more fashionable in England. We are not ultra-fashionable in this country and you will notice that our most popular judges give due consideration to heavy limbs, a fine body and legs that can be used for waiking.

Dr. Perry, by his awards, calls our attention to size in the mastiff. A small dog can hardly be long-headed, leggy and cow-hocked, while a large dog will naturally tend that way. Prizes are given undersized dogs like Homer, rather than a dog of good size and general excellence, like Boss. Again Boss deserves more credit for his good limbs than Dread, who is badly cow-hocked, yet a judge has made the astonishing blunder of placing the latter over the former. This is what you may call bad judging, because there can be no possible reason for such an unjust decision. As I said before, the wronged dog was soon given his proper place, subsequent judges giving Dread vhc, and he., after which he was withdrawn from the beauch.

for such an unjust decision. As I said before, the wronged dog was soon given his proper place, subsequent judges giving Dread vhc, and hc., after which he was withdrawn from the bench.
 We may not have many competent judges, but still we have some, enough to prevent bench show committees from making mistakes, if they keep before them a list including the names of Mason, Mortimer, Watson, Exley, Naylor, Wade, Porter and Dr. Perry. These judges will not blindly follow the head. Their records show their opinions of deformed animals, no encouragement being given to cripples, they are soon missed from the bench. A pointer's nose is a most important feature, but without good limbs to carry him over the ground, his nose would be of little use, and so it is with the mastif, a grand head is greatly to be desired, but if the animal cannot use his limbs he is useless and not even ornamental.
 The Western people are now the best customers for mastiffs, and the type they desire is the same which Eastern breeders will try to perfect. They want size, bone, muscle and courage. Give them these requisites and they will not quarrel about the extra inch on the end of the nose.
 "Ashmont" has suggested, in a contemporary, that we formulate a standard which will suit the requirments of the singestion. I like the idea of an acknowledged standard; but hope it will be kept out of the hands of the slow moving A. K. C., which it appears can no longer raise a quorum. Look at the immense amount of time and labor they have expended upon a couple of protests, out of which nothing has yet come. No, if we mean real work and business, let us keep away from the A. K. C.
 The American members of the Old English Mastiff Club should take the matter up. The English club would no doubt assist. A committee chosen from the authorities I have given above would very quickly settle the question, whether the American mastiff should be an active dog or a cripple.
 I hope those interes

VICTOR M. HALDEMAN. A GIFT TO GUIDO.—Memphis, Tenn.—Editor Forest and Stream: In March, 1885, i had a day ou suipe in Grand Prairie, Ark., with my valued friend, honest John Davidson, the bon nie Scot and stainless judge. For a while he worked a trim, wiry, eager and affectionate orange and white setter bitch named Merwin, a cross of his old native stock on the imported English blood. When she shot away like an arrow from a steel cross-bow, I thought it was the spurt burst of speed of the wire edge, but her obedience, turns, bounding pace and noble carriage of head and merriest tail action I ever saw, charmed me like a new revelation. Merwin, in action, is the distilled essence of the poetry of motion, a delight to see. Wishing to buy a scion of this strain as a rare and very valua-ble acquisition, John said, 'wait a wee," so after a year's waiting a lovely pair of Merwin's babies have reached me, snow white, with black, drooping ears, both boys, and have been christened Walter Scott and Robert Bruce. I confidently look for Merwin's sons to be among field dogs what Lexington was among horses and Bobbie Buns among poets, incompara-ble and peerless, the sire being equal. And they were giftst none were ever more valued.—W. A. WHEATLEY.

IMPORTANT SALE OF DOGS.—Mr. Chas H. Mason in-forms us that he has decided to retire upon his laurels and that in fature he will not exhibit at dog shows, and that his entire kennel will be sold. We are somewhat surprised at this decision, as Mr. Mason has been uniformly successful as an exhibitor and doubtless has won more prizes since 1880, his first appearance here, than any other exhibitor in this country. We are still more surprised that he should dispose of Beaufort, as he is undoubtedly the best pointer in America if not in the world. We have no doubt that the majority of exhibitors will share the hope that he will reconsider his decision and that in the future as in the past he will be seen well to the front with a string of good dogs.

THE WAX TREATMENT.—Editor Forest and Stream: A neighbor has given me the following invaluable cure for dis-temper; he tried it on a dog that he says was apparently dead, and what was his surprise to see him walking about quite well the next morning. He showed me the dog to prove his statement. The remedy is a simple one: Take a little sho-maker's wax, put it on the end of the dog's nose and he will quickly recover. Another esteemed friend informs me that the first litter of pups are liable to go mad and therefore should be drowned. He actually did drown a fine litter of collie pups last year for this very reason.—V. M. H.

DEATH OF BELLISSIMA.—Lancaster, June 15.—Editor Forest and Stream: On Saturday last I had the misfortune to lose my celebrated bull bitch Bellissima. She died while whelping. She had thirteen pups, the largest litter, I think, oi record for one of her breed. Her loss is great. I not only feel that I have lost one of the best bulldogs in the world, but a faithful and affectionate friend.—John E. THAYER.

THE MANITOBA FIELD TRIALS.—The field trials of the Manitoba Field Trials Club will commence on Sep. 21 with the annual Derby for pointers and setters whelped on or after Jan 1, 1885; entries close July 1. There will also be an all-aged stake for which valuable prizes will be offered. Blanks may be had by addressing Chas. A. Boxer, Secretary, Box 283, Winnipeg, Manitoba.

SAN FRANCISCO DOG SHOW.—The California Bench Show and Field Trial Club will hold a dog show at San Fran-cisco July 27, 28, 29, 30 and 31, in Platt's Hall. Entry blanks can be obtained by addressing the Superintendent, Mr. E. Leavesly, 436 Montgomery street, San Francisco, Cal. Mr. Charles H. Mason has been invited to judge the classes.

NASO OF KIPPING.—Westminster Kennel Club, Babylon, L. I., N. Y., June 25.—Editor Forest and Stream: Our new purchases, Naso of Kipping and Glauca, arrived in good con-dition per steamship Hodand of the National line.—JAS. MORTIMER, Supt.

THE AMERICAN SPANIEL CLUB.-Mr. J. F. Kirk, the president of the American Spaniel Club, has appointed as secretary of the club Mr. A. C. Wilmerding, Bergen Point, N. J.

KENNEL NOTES. NAMES CLAIMED.

127 Notes must be sent on the Prepared Blanks.

ET Notes must be sent on the Prepared Blanks. Lady Mac. By Coffin, Zimmer & Co., Glens Falls, N. Y., for stone fawn, black points, mastiff bitch, whelped Nov. 28, 1885, by McMabon (A. K. 559) out of Lady Nevi-ou (A. K. R. 3123). Bob Niz. By C. K. Wakefled, Baltimore, Md., for liver and white pointer dog, whelped Nov. 5, 1855, by Joker, Jr. (Beaufort-Nymph) out of Lady Mac (Baust-Gertrude). Cat-foot. By Max Wenzel, Hoboken, N. J., for red Irish setter dog, whelped March 10, 1885, by Chief (Berkley-Duck) out of Fashlon (Arlington-Flora). Fluck and Rusk. By W. R. Gifford, Skowhegan, Me., for red Irish setter dogs, whelped March 22, 1885, by Tim (Biz-Hazel) out of Florid (Chief-Becky). Blue Cap III, Madcap, Mabel, Harebell and Blue Bell II. By Coffin, Zimmer & Co., Glens Falls, N. Y., for two white, black and an beagie dogs and bree bitches, whelped April 29, 1886, by Blue Cap II. (Blue Cap-Blue Bell) out of Constance (A.K.R. 2912). Dido, Inca and Doc. By John G. Tod, Harrisburg, Tex., for two red Irish sctter dogs and one bitch, whelped April 29, 1886, by Rufus (chamjon Rufus-Clars) out of Fluen (Yon-Flors). THE JUNE REGATTAS AT NEW YORK.

HE-promised competition of the four new boats has given a special interest to regatta week this year, it being generally expected t they would make their first trial at that time, as they have done, are seeing the three contests, unsatisfactory as they were, it is im-sible to look back even a very few years at the regattas without ling very strongly how much yaehing has been advanced, and w very far the cracks of to-day are from the old time favorites of wy years since. Several of the latter here sailed during the past ek without attracting any special notice, nor was there any reason in their angearance or performance why they should a new nor was there ny they show beauty, and their day is

rse the chief interest centers in the large single-stickers, large schooners, especially in the East, claim a part of it. elass is small this year, Bedouin and the rebuilt Gracie being competitors. Bedouin has had a new mast since last season, teeded improvement, her copper has been partly renewed, Galatea, she carries a lighter boom and laced mainsail. Her nee has certainly been far above that of '85 and more like ious year, when she swept the field. The race she sailed on r, though hardly noticed in the daily papers, was a wonder-a of work, and though she gained on Priscilla at time_g

tery fast at many times during rter, was never far from her. On Sat rear division, and was not in with the s, and with a liberal allowance for fluk cie, Fanny and Thetis, miles astern. (roved in looks, but thus far little can b been beaten by Thetis twice, and com-been based by no mean by luck, she fairly won her pla went very fast at many tim tracte, Fanny and Thetis, miles astern. Gracie is certainly greatly improved in looks, but thus far little can be said of her speed, as she has been beaten by Thetis twice, and compared with the pack in the three races has by no means done well. However, she is virtually a new boat, and when in shape may justify the expense of her alter-ations, though we doubt it very much. Fanny sailed a race on Thursday, the first for two years, and in her wind and water only served to show how easily a good cutter of 17t1, less length and less than half her beam, can heat the old type of sloop in light weather. Her day as a racer has pussed away, and there were more of the tribo in last week's races that can go on the same list. From the tone of the daily papers, as well as some whose judg-ment should be of a little more value, one would have supposed last fall that the "cntter eraze" had come to an untimely end, and that the voice of the Gats, all cutter rigged, and three with lead keels, it still seems as though the enter was a pretty lively corpse, and apt to give trouble yet to some of the voltater mounters who wept croedle tears over Genesat's last race. Certainly Bedouin has opened the season with a boom in her class, outsailing it so far that times are hardly worth taking. She was simply ahead, the rest nowhere, while she played with all but Pris-cilla on Thursday. This is a good deal, but not all nor half of it. What she has dome speaks in a measure for beam, but there is a narrow boat still to be heard from, oue of the narrowest of her kind. Undoubtedly the honors of last week heding to one boat, though one may look in wan for any mention of if in the daily papers of New Yerk and Boston, except a few find noties and a live fn while she times. No big type and headlines call attention to ber work, but to any one who reads the times carefully it speaks for itself, thus: Theseday. Thursday. Statrady. Char be said of her speed, as she pared with the pack in the Howver, she is virtually a the expense of her alter-. Fanny sailed a race on her wind and water only of 17th less length and less of sloop in light weather, there were more of the tribe me list.

NEW YORK Y. C., JUNE 17. The second great race of Regatta week was served as badly as the first, as far as weather goes, while it was no more of a real test, though the prizes were fairly won in spite of all fluking. With 35 cn-tries there were enough good boats in each class to make an inter-esting fight, and nothing was lacking but wind. Boston was well in their class. The entries with five yachts, three of them the finest in their class. The entries were as follows: KEEL SCHOONERS. Sailing Time Al-

ie case of the victor in a great race there may be some excuse, but r a beaten boat at the finish or for a boat turning Buoy 10 far stern of her class it is utter folly. A long suffering humanity has at neght been blessed by the invention of the dumb plano; now will not me genius confer an equal boon by inventing a noiseless steam histle, a string that steamboat captains and budding yachtsmen n pull on all day with satisfaction to themselves but without any und following? All the whistling needed is a short blast from the dges' tug as each yacht is timed at any mark, then those on the rrounding boats can take all the times. On Friday Puritan went on the sorew dock and was cleaned and t-leaded below, towing down in the evening.

SEAWANHAKA C. Y. C., JUNE 19.

pot-leaded below, towing down in the vening. SEAWANHAKA C. Y. C., JUNE 19. Net a full appreciation of the important issues at stake between the four big boats, and the furtherance of the general desire to see whether the Boston boats would come to New York, the Seawanhaka C. Y. C came forward with a most timely and substantial induce-ment to them to strain every point to be ready in time. The sum of one thousand dollars was subveribed by members of the large raches in the June regats of the club, and in order to make the race of grader risers the sailing rules of the club were wired so as to allow professionals at the wheel and the order to make the race of grader risers the sailing rules. The ordering of the cup and the solution of the design has been mainly in the basis of ex-Comm-phases a cup to be receded for hy not less than three of the large praches in the June regats of the cup and in order to make the race of graders would have been lost. The ordering of the cup and the selection of the design has been mainly in the basis of ex-Comm-phases would have been lost. The ordering with his cution and contracturing Company; the meive of the design being to an accordance with the name of the cup rules of the extra-soluting Manufacturing Company; the meive of the design being to an accordance with the name of the cup rule of the extra-fortune and Ruh, did not start, leaving walk hyster from grading days race, and no others were forticouling. Good prizes were for the set filler well. all four starting and sulling as pool ap-phies allow profession last deve failer denome set. The rem class filled well. all four starting and sulling photo-the the set he farship beates, they have everything to be provided by the manner in which her Corinthian owner sailed her all through the set and a careful drilling were evidenced in every. Maneever, the sense to be that Priscilla has been the beats would do the there are sto the seven the royone the working obseconds, extra the there are sto

is a matter of years of training and practice, the latter requires only a comparatively short period of careful drilling under a capable master or mate. As usual of late years Bedouin and Gracie have had to carry the honors of the second, late first class. Fanny, Hildegarde, and for this season Mischief, are out of racing. Wennah is laid up (owner gone into steam), and lheen the same (owner abroad), and nobody seems anxious to build for the class. Thetis was at anchor, but should have been in for the honor of Boston Corinthians, if nothing else, while with Huron and Stranger here the Hub might have hoped to capture comething, but the two preferred a duel at home. It is in the third class evidently that the prime sport of the season is to be found, except that Clarrix wins are rapidly becoming monot-crones. This year she salled her first Seawanhaka race, handled by Mr. C. S. Lee and Oriv's crew, doing splendidly, as usal. It seems a great pity to see the latter fine ship moored stem and stern in the onsin, with spars stored and bottom foul, when one thinks of the work she did two years aco, or again latr on "that pleasant day in the early fall," when cutter stock rose so hk2. The fourth, late third, class had only one representative, Rival. Both Vixen and Fanita belong bere and have old reputations the mail class came out very well with six entries, all well known when it is stated that is event were well with six entries, all well known when it is stated that level is the present name of the old Romaine and Mariota is not the rew hoat of that name last year, but has raced before over the Shawanhaka course as the Happy Thought, a keel sloop of New Haven now owned at Larchmont. of them working. In toward Gravesend Bay. Indications of a wind were seen below, and at 11:40 Puritan's spinnaker came in, she then heims between Buoy 16 and Dix Island, and 34 inite ahead of Triscilla and Atlantic, with Graying midway between her and them. Down opt tack, the rest still hecalmed. Soon after the wind reached the other ladders and they filled away, all but Atlantic on starboard tack in to Concy Island, At 11:55 Atlantic bauled down her jih, set a large jibtopsail, hauled up her jib, rea up a small jibtopsail to windward of the big one and bauled down the latter, her crew running hack and forth on deck for nearly 16 minutes. At 11:55 Puritan went on starboard tack, Atlantic following. At the same time Clara felt the wind reached the wind of the dig one and bauled down the latter, her crew running hack and boald down starboard at 12:14 the three were standling to the eastward, Atlantic and Priscilla very near the Coney Island shore. At 12:07 Priscilla went on port tack, soon after crossing under Atlantic's stern. At 12:12 Puritan tacked, and at 12:14 Atlantic, just before was Puritan, Priscilla, Atlantic, Graying, Cinderella, Daphne, Clara, May, Mower, Nomad, Bedouin, Gracie, Athlon, while Iscult was further to the westward in the middle of the Bay. Priscilla held her big jibtopsail and Atlantic, while the latter was sagging of to each after star. Of Buoy 11 Puritan was nor woing well up with the others. At 13:08 atlantic is an up around work on the starboard tack, Mayflower went on starboard tack, puritan following at 13:38 Atlantic while feature and priscilla work on all four the latter was sagging of to tack at 12:15 and was nor woing well up with the batters. Bow, and adding on her and Atlantic, while the latter was sagging of to tack at 12:16 and was nor woing well up with the batters as assessed and the priscilla and that the same starboard tack may fouver went on starboard tack priscilla and the same sagging of to tack at 13:28 Atlantic was arout 300 the starboard tack may fouver went for bu

 Priscilla icr 1 also, going away with no jibiopsail, while Atlahue

 was in trouble lowering hers. Both she and Mayllower soon setsmall jibiopsails, like Puritan, and went away as the breeze caught them.

 Tk was a good reach out to the ship, with more wind than they had bad yet, and though not able to catcu Puritan, Priscilla went to windward of her and gained a good deal. Puritan tack-d at 3:05 crossing Priscilla's bow and making a good turn. Priscilla tacked at 3:10 and made a fine turn, her balloon jibiopsail breaking out in good style. Mayflower followed her about and hoisted her ballooner in stops, breaking it prettily on rounding. Atlantic had dropped well astern, and it was 3:16 when she went about, with spinaker boom ready, small jibiopsail set, and ballooner in stops, breaking it prettily on rounding. Atlantic had dropped well astern, and it was 3:16 when she went about, with spinaker boom ready, small jibiopsail set, and ballooner in stops aloft, breaking out at the mark. The times were:

 Priscilla
 3 11 :20 Atlantic.
 3 28 03 All went merrily in with hooms to starboard, and at 3.45 Puritan was just off the Hook, Priscilla 's mile astern, Mayflower about 1 mile, and Atlantic 2 miles from the leaders.

 The others had been timed at Buoy 10 as follows, and were now met coming out.
 2 28 25 32 Cind-relia.
 2 28 40 Graging.

 Clara.
 2 24 27 Bedouin, Rival and Cinderella. Gracie and Ath'on, last down the Bay, had to anchor off Buoy 10, and the latter finally turoed back.

 At 4 P.M., off the Look, Mayflower and Priscilla, close in shore, seemed to gain on Puritan, buiwsted time in a luffing match, the two latter setting spinnakers, but Priscilla, earrying them in, the thow shile threacher scurgut ther and starby, ca

the file and to the Arrow of the fook and sharing the folde, carry-ing spinnaker until 4.36. Now coming up to Buoy 10 May flower suc-creded in blanketung Friscilla, but the latter was first to pass. The times were: Puritan 4 33 12 Elephant. 4 42 09 Priscilla. 4 41 13 Iseuit. 4 45 30 The small class had turned huoy 5 and were bound in now with the others. Puritan and Priscilla set spinnakers to starboard at the same moment. At 5 P. M. there was no wind, hut Mayflower bad ranged up alongside of Priscilla. At 5:30 the three were nearly even, when a breeze came up the Say and struck Puritan first, sending her away, then Priscilla, and last Mayflower, the latter with her club spinnaker set, all staying their spinnakers well forward. At the same inmeet at 5 P. M. there was no wind, hut Mayflower bad ranged up alongside of Priscilla at Mayflower, the latter with her club spinnaker set, all staying their spinnakers well forward. At the same time Grayling was seen coming u the Hook. Within five min-utes Puritan had sprunaker full, while booth the leaders had theirs very far forward, Priscilla finally trimming hers aft. At 545 Mayflower set her small spinnaker full, while booth the leaders had theirs very far forward, Priscilla finally trimming hers aft. At 545 Mayflower set her small spinnaker, but it was too late to save or for the line bow and bow. Within 150yds. Mayflower took ther. The latter had her boom square off and spunaker full, while booth the leaders her. Puritan finished first with Priscilla finally trimming at and and leading her in hy a few feet amid chearing, stamping of feet and clapping of hands by the spectators. Next came Elephant, then Mariotta and Iseult, making a very close finate, then Culprit fay and Graviling, the latter with the infant pheromenon, Clara, still pegging away at her bets, Bedouin followed, then Cunderella, Daphne and Graveling, the latter with the infant pheromenon, Clara, still pegging away at her bets. Bedouin followed, then Cunderella, Daphne and Graveling, the latter

DORCHESTER Y. C. 94th REGATTA, JUNE 17: THE Dorchester Y. C. sailed a very successful regatta on June 17, 40 yachts enternng. As the club had selected the same date as the N. Y. C. Thetis was not present, while her rivals, Stranger and Huron, elected to stay at home and race rather than try their for-times in New York, so that the interest was divided. A light S W. wind blew all day, freshening at times into a good salling breze. The classes were 40t, and over, 28 to 40tf. 21 to 28tf. Some small hoats entered at a rating of 21tf. in order to get in. The courses were for the first and second classes, from a starting line, leaving Shag rocks on the port, outer buoy off Pig rocks, on port, Halfway rock on star-the dirst and second classes, from a starting line. Justing Shag rocks on the port, outer buoy off Pig rocks, on port, Halfway rock on star-the dirst and second classes, from a starting line. Justing Shag rocks on the port, outer buoy off Pig rocks, on port, Halfway rock on star-the starting point off Natant, leaving Winthrop har buoy on port, Graves' whisting huoy on port to starting line. Distance, 10 miles; the line, 13th hours. The schoners Gevalia and Meta. The first white blew at 11:35 with a second at 12:10 and a starting signal at 12:16 for first and second-classes. Huron went off with a good lead, hut Stranger was bouncered by the small fry. As soon as she was clear of them, however, she closed up and passed Huron, finally leading her a long distance at the finish. Maud won ensly in the second classes keels and Nimbus in second classe therito wensly in the second classes and Echo in hers, Fearless and Black Cloud were in collision and a protest ensued. The time were: BERT CLASE DORCHESTER Y. C. 94th REGATTA, JUNE 17

and Treasurer; Dr. A. E. Cleappol, riede Surgeol; E. C. Day. Meas-turer; George Gascoyne, Assistant Measurer; George R. Ketergen, Surveyor. AMERICAN Y. C. CRUISE AND REGATTA.—The programme for the races and cruise of the American Y. C. next month is as follows: One of the Iron Steamhoat Company's hoats will accompany the yachts. The third annual regata of the club will take place on Thursday, July 16, over the club course, from Larchmont to New London. In addition to the cournodore's cup, which will be awarded to the yacht making the shortest time over the course, irrespective of time allowance, other cups will be competed for by yachts and launches not exceeding 50th on waterline, in the run from New London to Shelter Island. In the afteriono of the same day, at shel-ter Island, there will be cuiter, gits and dingey races for badges and also for the Buteman eballenge cup for cutters, now held by James A. Baker, Esa, The respective prizes offered are open to all steam yachts enrolled in any yacht club; and owners, whether members of the American Y. C. or not, are requested to enter their yachts as soon as possible by notifying the chairman of the regata committee, Mr, Seaver street, New York. YAVIS IN NEW YORK WATERS.—The full British yawl rig is a directed novelty in American waters, Cythera being, we helieve, the bandsone stoer, high sides and shipsbape look hare won favorable comments from almost oil who have seen her. Near why her is anchored a similar vessel, an English yawi, Xarifa, titely artived from England is an board. She is a foot where avery pleasant cruise, having is on board. She is a foot where avery pleasant cruise, having is on board. She is a foot where avery fleasant cruise, having is on board. She is a foot where avery fleasant cruise, having is on board. of the Royal Thames Y. C. DELVIN.—Clara has already made a reputation here for "young Will Fie," the third of the name so well-known among the success-ful builders of the nortb country, but beside her there are now here two others of the same family, which promise to add to the fame of their designer. In the Tompkinsville hasin is the 10-tonner Uldia, owned by Mr. E. M. Fadelford, just fitted out after her trip across, while heside her lies a smaller sister, Delvin, owned by Mr. M. Koose-velt Schnyler. The latter, which arrived in the City of Rome, is 38ft. In L. W., 5ft. 6in. heam, and 6ft. 2in. draft, with 58i sq. ft. In lower saits. In 1884, her first year, she took 18 firsts and 2 seconds out of 17 starts. Last year she only raced during the first of the season, teing beaten by Doris. She will sail here under the Larchmont burgee.

SEAWANNAKAC, C. Y. C. —The fourth regular meeting of the S. C. Y. C. while he held at Delmonico's on June 25, at 5 P. M. The following gentlemen are proposed for membership: Messrs, R. B. Roosevell, Jr. R. B. Hartshoru, Wendell Goodwin, M. Morris Howland, R. M. Appleton, Thes. Dunnell, J. M. Clark, W. Lloyd Jeffries and B. Spaulding de Garmedia.

BEVERLEY Y. C. 107TH AND 108TH REGATTAS.—On July 3 the B. Y. O. will sail its 107th regatta, an open sweepstakes for all cat-boats, off Monument Beach, starting at 1 P. M. The entrance ice is \$2. On July 5, at 1 P. M., the 108th regatta, first race for Buzzard's Bay championship, will be started. It will be open to club yachts only.

only. EAST RIVER Y. C., JUNE 21.—The seventh annual regatta of the E. R. Y. C. was sailed on Monday, 20 yachts starting in a light southerly wind, the course being around the Gangway buoy. The winners were Fly, Maud M., Lydia F., Thetis, Pirate and Lone Star. COLUMBIA Y. C., JUNE 21.—The winners in the nineteenth annual regata of the Columbia Y. C. were Emma and Alice, Henry Gray, Unit, Henry Fisher and A. W. Trankle. The full details will appear next week.

GALATEA.-The latest advices by cable are that Galatea will sail on Saturday for New York.

ALLEN'S how-facing oars, \$8 per pair. Fred A. Allen, Monmouth, 11.--Adv.

FAILING POWERS IN MIDDLE AGE are best provided against by ar endowment policy in the Travelers, of Hartford, Conn. At age 30, an endowment for \$1,000 maturing at 50 costs but \$39.70 a year.—Adv,

Canoeing.

Secretaries of cance clubs are requested to send to Forest AND STREAM their addresses, with name, membership, signals, etc., of heir clubs, and also notices in advance of meetings and races, and eports of the same. Cannocists and all interested in cancoing are equested to forward to Forest ANN STREAM their addresses, with ogs of cruises, maps, and information concerning their local waters, trawings or descriptions of boats and fittings, and all items relating o the sport.

A SUMMER'S SAIL.

OUT of the dusty city and its cares O Bear me, my bonny boat, Beneath the azure canopy of heaven, Where fleecy cloudlets float.

Where fresh sea breezes whisper in mine ear,

Adown the echoing strand, And laughing wavelets fling their diamond shower Upon the golden sand.

How sweet to listen to the ocean's voice,

Singing its censeless lay, And watch the white-winged vessels speeding on

Across the sunlit bay.

And sailing on sweet mem'ries of the past Blend with the summer wind, And present cares of life for once are left In taucy far behind. F.G.

THE HUDSON RIVER MEET.

CODDINGTON'S DOCK, the scene of the Hudson River River spring meet of 1886, was well chosen and admirably adapted for a cance camp. Here the river is wide and the hils not so high as to make squally winds. The beach is all that could be desired with camping sites on the hill in the shade or on the saudy beach. The first comers, the Dock Rats, of Newburgh, artived Friday night, coming to Rondout by steamer Mary Powell (Captain Anderson, of the Powell), five miles away, under convoy of three R. C. C. cancers the same evening.

is an active member of the Rondout C. C.) and padding up to camp, five miles awar, under convoy of three R. C. C. cancers the same evening. Saturday morning dawned bright and fair with a lively breeze from the south, bringing with it Tramp (Stevens), of New York, who had harbored at Rhineelff the night before. During the morning the Shattemucks arrived from the north, hawing run by the camp at two bells in the morning watch. Presumably the watch ou the t'gal-lant foc'le was asleep, and booms being off the port the man at the wheel did not see the camp as the passed by. They made land a mile north and beat back Saturday morning in time for breakfast. Later the Mohicaus arrived via Barrytown and also Captin Ruggles, of Rochester. Saturday was agreeably passed in getting up tents, over-hauling gear and grub chests, and in the afternoon the satiling cracks were out for a maske. A number took a sail over to Barrytown, two miles away, for ship stores, with a quartering threeze, a delightful run and an exciting beat back. By evening the camp was completely settled and locided like a miniature Grindstone, for the point some-what resembles that renow alcan and on the ridge between the Rond-out club and ou the extreme end were the headquarters. Sunday was quiedly spent. The fresh breeze from the south side, the north shore the Statemucks, and on the ridge between the Rond-out due asling devoters and the broad river was dotted with sails. Tramp with her dott, storm lug sail only did some remarkable wind-ward work. Slippery Thetis fiashed in and out here and there, and Pregry. Grant Edgar's new boai, bitted about under a cloud of sail, presided over by the doughty Dock Rat. — Two new boats by new builders are here and so are their respective by her fine lines and a future of glory is predicted for her. Caro, by

Buckhout, the son of the ice yacht builder of Poughkeepsie, shows herself worthy of notice and consideration and looks as if there was no end to her capabilities in a seaway. During the atternoon a shower swept the river and caught a number unprepared. Thetis and Caro were far away from camp to the south, so took sheller with a shad fisherman, and after the blow and rain had a little skirnish to see who would get home first, Thetis came in first, but Caro is a good boat just the same. In the evening the camp-fire melodies were interrupted by a terrific shower and the campers were wooed to sleep by the patter of the rain on their canvas tents. The races were set down for Monday, and in the early hours of the morning heads were protuding from tent openings inspecting the weather and taking notes of the prospect for wind. No one was dis-appointed in the wind, it was out from the north and coming but end first.

morning heads were providing espect for wind. No one was dis-appointed in the wind, it was out from the north and coming butt end first.
The Regatta Committee had settled upon seven races, the first to start at 9.3, providing the committee had breakfasted and washed up their dishes at that hour. They did not come to time, and it was 10 A. M. before the first race, Class A, saling, was called, Won by Peegy, Grant E. Edgar; Helena, Grant Van Deusen, second.
Commodore Bartlet, of Newburgh, had arrived previous to the race and acted as judges' boat and life-saving station, lending assist-ance to four consized mariners.
IL-Class B, Satling-Won by Caro, Grant Van Deusen; Peggy, Grant E. Edgar, geneond.
Before this race and at the start the wind was heavy and a high sea running. Theis, Tramp and Iris went out under storm sails, other-wise the result might have been different.
III.-Onsolation, Sailing-Won by Caro, Grant V. A. Stephens.
IV.-Consolation, Sailing-Won by Yatic, W. A. Stephens.
V.-Paddling, Class 4-Won by Mystic, W. A. Stephens.
VI.-Paddling, Class 4-Won by Mystic, W. A. Stephens.
VI.-Paddling, Class 4-Won by J. S. Poyntar and Grant Van Deusen in Niké.
During the three days meet the wind was all that could be desired.
the water not too lumpy, and the temperature just right. Firty men with thirt, five cances camped during the three days, and though there was a good hotel just over the river at Barrytown, not a mem-ber of the races a general moving took place. The little village of Arter the naces a general moving took place. The little village of Arter the naces a general moving took place. The little village of Arter the naces a general moving took place. The little village of

ber of the camp took a meal that he did not assist in some way in preparing. After the races a general moving took place. The little village of canvas quickly disappeared, and like the Arab, the cauceist quickly folded his tent, but not like him did he quictly steal away, but amid the din of steam whistles, the toot of horns, and to the tune "We part to meet again" the Mohicans paddled to Rondout to ship their cances the following day by steamer. The Shattemucks departed by special steamer for Sing Sing, and the Dockrats by Commodore Bartlett's steam yacht for Newhurgh, and when night had sattled down scarce one was left to tell the tale.

THE NEW NAUTILUS AND PEARL.

Pearl. The design has been carried out with the ntmost care and exacti-tude by the builder, Mr. R. J. Turk, leaving uothing to be desired in these respects, and it is a great satisfaction to see the work so thoroughly well done. [We may mention that we saw this cance in frame last Saturday, and thought it one of the cleverest specimes of the shipwright's craft we had ever seen.—En. Field.]

Ave never salled a cance before this year.-WiLG McKENDRICK, Secretary T. C. C. ESSEX B. AND C. C. REGATTA,--This club will hold their first spring regatta off their club house, north of the Erie R. R. bridge-over the Fassaic River, Newark, on June 26, starting at 2 P. M. The programme includes a padding race, as alling race for canvas cances, a hand padding race, a salling race for canvas cances, a hand padding race, an alling race for canvas cances, a hand padding race, as alling race for canvas cances, a hand padding race, an uset race and the races will be under A. C. A. rules, The committee are Messrs, George O. Tot-ten, Wm. II. Hillier and A. W. Evendeu. NEWBURG B. & C. C.-The canceists of Newburg held their first outing on June 10, when a party of 27, including a number of ladles, in ten cances and row boats, left the clubbouse at 4 P. M. and were towed by the steamer Alice to Clark's Dock, where supper was pra-red. The party rowed and paddled home by mocalight, arriving at 10 P. M.

A.C. A. MEMBERSHIP.—The following candidates have been proposed: John E. Plummer, New York: W. A. Borden, Rochester, N. Y.; W. R. Huntington, Rome, N. Y.; E. R. Perry, Albany, N. Y.; W. D. Frothingham, Albany, N. Y.; E. J. Wheeler, Albany, N. Y.; W. Wheeler, Albany, N. Y.; E. R. Cassidy, Albany, N. Y.; W. Wheeler, Albany, N. Y.; E. J. Baxter, \$1; S. J. Baxter, \$1; Chas. F. Earle, \$5.15; Frank M. Sinclair, \$1; F. D. Shiras, \$1; Geo. Burn, \$1; Previously acknowledged, \$225. Total to date, \$235.15. W. WHITLOCK, Chairman, 37 West Twenty-second street, N. Y.

CRUISES IN CONNECTICUT.-Mr. E. J. Pope, Box 784, Ansonia, Conn., would like to correspond with other Connecticut canoeists. EVERY pair of Allen's bow-facing oars warranted. Send for little catalogue free. Fred A. Allen, Monmouth, Ill.-Adv.

Answers to Gorrespondents.

127" No Notice Taken of Anonymous Correspondents.

G. D. S.-See last issue for Massachusetts game law, W. H. L.-You will do well to read Dr. Henshall's "Book of the Black Bass."

W. H. S., Troy, N. Y.-We believe that there is no law in this State protecting the English sparrow.

Wart.-You will find bass, perch, plekerel and muskallonge, grouse (ruffed and pinnated) and wild fowl, in season.
 MARTER RIFLE SHOT,--Kindly linform me if there are moose, deer and fur-bearing animals in the north woods of Canada. Ans. Yes.
 H. B.,-The arms are well made and give good satisfaction. Send to the manufacturers who will supply illustrated catalogues of the different styles and calibers.
 Bay Eng Ressort WARTE.-I am anxious to find some good local-term by bird shooting. Would like to spend August in some nice family, board reasonable. Can you give me an address? Nething aney, just clean, simple fare.-S. D., Troy, N. Y.
 E. S. C., Nebraska.-I. We have heard it well spoken of. 2. Should prefer a double-barreled gun. 3. There are half a dozen or more different makes, any one of which will last you a life time and your some the refer the makes. A ground the might advertising pages, and can be had focts any dealer.
 B. H. F., Canada.-I. See mosquito preventive recipe in our last snawers to correspondents. 2 The rifls you have ought to red the obting but nothing but actual experience in the field can make you expert there.
 J. G. W., Paterson, N. J.-I. Which is the most killing fly for brook four dual black bass at this season of the year? 2. Also, which do you consider the best bait for chub? Ans. 1. There is no such fly; all are more or less good at different times of the day and on different waters. The best fly of yesterday is often refused to-day. 2. Worms and grasshoppers.
 H. M., Newark, N. J.-Is there any known rule to determine the give fail are more of the year of the day and on different waters of the day and on different waters of the day and on different waters. The best fly of yesterday is often refused to-day. 2. Worms and grasshoppers.
 H. M., Newark, N. J.-Is there any known rule to determine the give fail are more of the signed to different times of the day and on different water

Canoe and Camp Cookery. By "SENECA."

By SEINECA. A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has hum-self actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outht is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages Price \$1.00, NEW YORK: FOREST AND STREAM PUBLISHING Co. 39 Park Row, LONDON; DAVIES & Co., 1 Finch Lane, Cornhill,

for Sale. Province of Unebec PUBLIC NOTICE.

CORRESPONDENCE.

THE FOREST AND ETREAM is the recognized medium of entertain-ment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be re-garded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENIS.

ADVARTISEMENTIS. Only advertisements of an approved character inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices \$1.00 per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted.

SUBSCRIPTIONS

SUBSCRIPTIONS May begin at any time. Subscription price, \$4 per year; \$2 for six months; to a club of three annual subscribers, three copies for \$10; five copies for \$16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Samp-son Low, Marston, Searles and Rivington, 188 Fleet street, Loudon, Eng. Foreign subscription price, \$5 per year; \$2.50 for six months. Address all communications, Forest and Stream Publishing Co. Nos. \$9 AND 40 PARK Row. New York City.

ABOLISH SPRING SHOOTING.

THE sentiment against the spring killing of migratory game birds on their way north to their breeding grounds is just now on the increase. The depletion of game has had the natural effect of turning the eyes of reflective gunners to the several causes of scarcity, and the custom of spring shooting cannot but be recognized as among the most important of preventible agencies. The folly of shooting birds in the spring has perhaps been clearly enough recognized, but the practice has been defended and perpetuated by those who reason that the supply will last long enough for their own pleasure, and as for the condition of affairs after them, that is the lookout of the next generation. It has been the spirit of going in for fun while it lasts.

At the meeting of the New York Association at Rochester last week the society passed resolutions directing one of its committees to seek the legal prohibition of spring shooting in this State. An attempt to secure such a law has several times been made at Albany, but unwise counsels have so far prevailed. If the State Association should take the work up in earnest it ought to put such a law on the books at the next session of the Legislature.

THE NATIONAL PARK RAILROAD JOB.

THE debate in the Senatc on the bill granting a right of The deviation in the brack of the bin granting a right of way to the Cinnabar & Clark's Fork Railroad Com-pany is given on another page. It is instructive reading, The considerations advanced by Senator Vest in opposition to the bill are unanswerable. He denounces the enterprise as a covert first step toward gaining admittance to the Park and gridironing it with passenger railroads; points out that this will result in the destruction of the Park as a national possession of the people, and warns the Senate of the national calamities certain to follow the destruction of the forests on the headwaters of the Missouri.

These arguments cannot be refuted. But they can be ignored; and the lobby, so strenuously engaged in laboring for the railroad people, may succeed in putting the bill through the Senate. Members who share Mr. Butler's extremely myopic view of the Park may feel themselves the less re-sponsible to public sentiment on such a question as this, because, unfortunately, the public is ignorant of the interests at stake, and does not comprehend the national injury contemplated by the bill.

The proposition of Mr. Butler, that his constituents are not concerned in the protection of the Park against the schemers who would ruin it, is entirely mistaken. The citizens of every State in the Union are concerned in this. The Park is national, not less in fact than in name. The whole nation is benefited by the possession and maintenance of such a region of natural wonders and beauties set apart for a public pleasure ground. It is a possession of permanent valuc, from which future generations, as well as the present one, will receive benefit; and it is the height of presumption for any man to rise up in the Senate of the United States and say that because his constituents-meaning his individual political cronies-are not contemplating a pleasure trip this summer to the Park, the Senate will do well to hand it over to the greedy grasp of scheming railroad speculators.

THE WOODCOCK SEASON.

LAST year, it will be remembered, owing to the cold weather and late spring. the woodcock did not go as far north as usual in their migration, but sought breeding grounds in lower latitudes. The result was an unusual supply of home-bred birds in covers where formerly the shooting was confined for the most part to flight birds.

It is the belief of many close students of the woodcocks ways that on their return north in the spring, the birds repair to the particular localities where they were bred, and nest there. In confirmation of this theory it has been noticed this season that many of these grounds where the birds bred in unusual numbers last year have again been frequented by them, and so for a second time the supply of home-bred birds is larger than customary. This fact should go far toward demonstrating the economic folly of summer shooting.

July woodcock are delicious as table delicacies. That is all that can be said in their favor as legitimate game. For other reasons they should be protected at that time. The other reasons they should be protected at that time. season's birds are not fully grown and have not attained maturity of strength. They are found in the vicinity of the nesting grounds, and the broods are usually together. It is then no difficult feat to destroy the whole brood. In New Jersey and other States where July shooting is permitted, most of the birds bagged are young. Only a few of the birds escape to return to these grounds again to breed. Were the birds unmolested at this time they would in August and September separate, moult, and in the beginning of October, being then full grown, new feathered and strong of wing, return to the vicinity of their breeding and afford the best of all woodcock shooting, that of October. There is not the July certainty of destruction about the pursuit then. The number of birds that escape is much larger. And when they come back in the following spring they repair to the same grounds again, and there nest. In a country where woodcock breed, if the shooting be confined to autumn, the supply will be maintained, and good shooting may be had year after year, an occasional very dry season of course proving the exception. This is not theory. It is actual demonstrated fact, coming within the experience of more than one of the readers of these lines.

Common sense demands the abolition of summer woodcock shooting just as clearly as the abolition of all spring shooting.

POLLUTING NEW YORK HARBOR.-It is very gratifying to learn that at last some measures have been taken to stop the evil of dumping all sorts of refuse in the harbor and there is a prospect that action will be taken against the great oil works which drain "sludge acid" into the water and ruin the oyster beds and the fishing grounds. Formerly the shores of Staten Island and of Long Island Sound abounded in fish which came in to feed on the crabs and other food. The sludge acid has banished the food and the fish come no more Mr. J. W. Mersereau, who was recently appointed by Com-missioner Blackford to watch and protect the oyster beds, has arrested several employees of the street cleaning depart ment for dumping garbage in Long Island Sound, contrary to law. The captain of the dumping scows was held in \$1,000 and four scowmen in \$250 each to answer before the next Grand Jury of Westchester county. We hope to record some early action taken against the Standard Oil Company, which has been a great offender.

THE CINCINNATI DOCTOR, who has been striving to climb into a perch of newspaper notoriety by a labored defense of the milliner bird butchers, has been effectually answered by the committee of the Natural History Society of that city.

CONVERTING A DYNAMITER.

A LETTER was received at the New York post office the other day, addressed "To Some Dealer in Fishing Tackle, New York." Most of the post office employees are fishermen or gunners; they all read the FOREST AND STREAM and know where to go for their fishing kits. The letter was duly delivered to one of the large firms, and being opened, read as follows:

read as follows: UTICA May 22d 1886. DEAR SIRS—AS I would like the address of some firm that handled all kinds of Fishing Tackles I take this way to Introduce myself. Now as to the things I would like I would say that they are Torpe-does for to use in Deep watter for catching Fish now if this letter falls in to the hands of a firm that Handles those Torpedoes I would ask that you Please and send me your Prices of the same and I will try and faver you in some way hopeing to here from this letter soon Remain yours F. M. HOUSBROOKER. UTICA Vename O Co PA. emain yours UTICA Venango Co PA.

Notwithstanding that their stock would fit out a thousand ordinary anglers with every conceivable and inconceivable style of lure and device, the firm had none of the violent "tackle" longed for by Mr. Housbrooker. They sent him instead a catalogue of their goods, hoping that he might be induced to try legitimate methods of taking fish with approved tackle, and thus having proved the merits of artistic angling, put away his yearning for piscatory earthquakes. The result of this missionary enterprise will be awaited with interest. If these New York tackle dealers demonstrate the feasibility of converting a thundering Jupiter of a dyna-miter into a gentle devotee of the quiet pursuit of fly-fishing, it will be a genuine triumph of sentiment over brute instinct. But the heart of a dynamiter is stony ground.

THE LAKE GEORGE ISLANDS.-A pretty piece of pretentions audacity has been brought to public notice by the New York Forest Commissioners. Of the numerous islands on Lake George, said to be one for every day in the year, fourteen are private property, having been sold by the State. The rest all belong to the State, and individuals have no claim upon them. But many of these public islands have been seized upon by squatters, who have in some instances erected handsome cottages upon them; and year after year with a high hand and amazing assurance they warn off in-truders under threats of prosecution for trespass. When the bill creating the Forest Commission was under discussion, the Lake George island squatters attempted a surreptitious amendment exempting their little prizes from the commission's control.

MASSACHUSETTS RUFFED GROUSE.-The ruffed grouse is the chief game bird of Massachusetts. The proper protection of this game is of more importance there than that of any other single species. The new law is a great improve-ment on the old statute in securing for the grouse total immunity from lawful snaring. The old law provided that snarers might practice their art on their own lands; and the effect was that snaring was carried on without restriction, and whole covers were completely cleaned out. The close season was extended a month, to Oct. 1, but this excellent provision is in part nullified by the open woodcock season, which includes August and September. The August wood-cock market shooters will shoot chicken grouse; no excuse should be given these gunners to be out with their guns before October.

THE OHIO FISH AND GAME COMMISSIONERS announce that they propose the rigid enforcement of the laws and prosecution of offenders. The Legislature, at its last session, very wisely set apart an appropriation for the purpose, and the officials are therefore in a position to do something. One by one the several States are learning that the natural wealth possessed in the creatures of the woods and waters is worth caring for and maintaining. The recognition of this prin-ciple comes none too soon. At the last session of the Massa-chusetts Legislature, the fish commissioners of that State were made game commissioners also.

THE CROW RESERVE.-If the Interior Department does not propose to content itself with the combined admission and denial of the charges recently contained in these columns, it is to be hoped that it will make a more searching investigation than is to be had by simply communicating with its agent, Williamson. An honest special detective, going to the Crows themselves, would gather the truth, especially if, instead of confining himself to the coffee-coolers loading about the agency, he should interview such representative and leading chiefs as Plenticous, Bobtail Crow, Bear Wolf, Spotted Horse and Deaf Bull, and such talkers as Crow Davis. The Sportsman Tourist.

DAYS WITH THE BARMECIDE CLUB. VII.

VII. How hoked the morning? Good-natured and good-humoret, and all the surroundings helped on the good feeling. The leaves were whispering soft nothings to each other, the lake was smiling, the brook was laugh-ing and a moving mosaie of sunlight and shadow was aughtily playing hide and seek on Sunday morning. The morning sun coming like a earess edged the light elouds with gold and sprend a soft warm color over the mountains. Down from the hills and through the woodland draws, thorough the tamaraek swamp and pungent odors of the forest, eame the breeze, brisk and braeing; out on the lake it hurried furrowing it with silver crowned ripples, which be and the breeze, brisk and braeing; out on the lake it hurried furrowing it with silver crowned ripples, which mather, a diapason of delight, a benediction, the club wet no line this Sabbath day. That person who rejoices in the great blessing of love for angling has a great debt to pay and for the favor granted him when he was imbued with the spirit of the gentle angler and became a brother of those who posses of thessings, and the Giver of all this, perfect and boun-ting in His love and wisdom, asks only that you think and the sum of the sum of the sum of the same done right, even

Hatural History.

THE AUDUBON SOCIETY.

THE AUDUBON SOCIETY. Editor Forest and Stream: Teeling that public opinion is being awakened to a reali-ration of the evils arising from the fearful destruction of our birds to satisfy the demands of fashion, depraved appetites; and while we deplore the too evident decrease in numbers of our song birds, the depopulating of our heronries, the alarm-ing destruction of the eggs of sea birds for food, and the in-human destroying of every nest and egg within reach of the merciless urchin who is seized with the egg-collecting fever, we are at the same time conscious that we, as taxider-mists, are looked upon with disfavor. But we desire to vindicate ourselves, and as representative is upper so the largest establishment of the kind in this country—Ward's Museum—we believe we at the same time express the wishes of every true taxidermist, every honest is upper of the art, when we express it as our desire that the wholesale slaughter of birds (for other than strictly seientific purpose) be discouraged in every way possible. We heartily favor the bird laws as proposed by the Ameri-ean Ornithologists' Union's committee, and shall do all in our power to further the protection of our birds. MAL J. CRITCHLEY, C. E. ALELEY.

WARD'S MUSEUM, Rochester, N. Y., Ju

WARD'S MUSEUM, Rochester, N. Y., June 21, 1880. Editor Forest and Stream: The last Audubon meeting of our college year was held this week, and I thought you might be interested in learning the result of our spring's work. You know that our society was organized in March, and the outline of the work we then proposed for ourselves has here given in the Former Ann STREAM, so that you ar familiar with the general character of our society, and know that we have been going upon the theory that a knowled the good fortune to secure a fine adult female barn owl (Stria ramiliar with the general character of our society, and know that we have been going upon the theory that a knowled the birds themselves would be one of the most effectual checks upon their destruction for the justification of vanity. Mr. John Burroughs was present at one of our first meetings and spent several days with us, inaugurating our field work to the favorite bird hannits of the region. The size of the classes that met with him probably did more to confirm the observers into squads of from six to ten, apparent to assist them, thus canadily did mores as a sub committee of four trained nine others as a sub committee orasit them, thus enabling every one tog out as many times a week sa desirable, and, what we found most essential reducing the sections to three or six. The work has gent remity satisfactory to all concerned. Migration blanks issued by the Division of Economic Orni-

thology of the Agricultural Department were distributed at the outset and have been used for the collection of notes made in the field. Of the eighty-nine members of the society, over fifty have done field work, and twenty-three have filled out the migration blanks or given in their notes in some other

out the migration blanks or given in their notes in some other form. The data collected in this way has been collated, and the results will be sent to the Department of Agriculture, dupli-cates of all notes being kept in the annals of the society for reference in future years. Seventy-six species of birds have been observed, and fifty-six nests, of twenty-two species, have been found. Other interesting notes have been made on the songs of birds, on flowers, and on other natural phenomena, while the study of the birds has breught them much nearer to the lives and sympathies of us all. The work of Audubon proselyting has formed an impor-tant part of the society work, and we trust that our influence has not been unavailing. We have distributed 1,050 circulars on the subject of bird protection, 100 in the Northampton High School, 480 in the departments in Washington, and the rest among families and friends scattered throughout the States from San Fran-ciseo to Boston.

and friends scattered throughout the States from San Fran-ciseo to Boston. One of our most energetic workers has gone to San Fran-eiseo for the summer vacation, and promises to do good work there. Another one has started an Audubon Society in Kansas, and still another elaims forty eonvarts from the Bureau of Engraving and Printing in Washington, while a great many have induced individual friends to give up their feathers. On the whole we feel very much encouraged. We have

On the whole we feel very much encouraged. We have done far better than we had hoped to in this short time, and the interest promises to be permanent. At our last meeting Mr. Burroughs was made an honorary member of our society, and we hope to get new inspiration from him and from other bird lovers next year. Blank schedules have been distributed to the observers for use during the summer months, and when college opens in the fall we hope to add new names to the society, and also new birds to our lists as the result of the summer's work, and to take up our work together with renewed enthusiasm. F. A. M.

SMITH COLLEGE, Northampton, Mass., June 19.

SMITH COLLEGE, Northampton, Mass., June 19. A matter presents itself at this time which, in view of the strenuous efforts made (and as a rule sensibly) to protect our song and some other birds, calls for consideration. I refer to the depredations of robins (*Turdus migratorius*) on the cherry trees about here. Out of ten trees that a while ago were loaded with promising fruit, not one tree but that has suffered. Eight of them have been about stripped of fine black hearts. The only tree having anything of consequence left on it is the one close by the house. Fluttering strings, rags, and even a bell fixed so as to ring when a br cze moves the limbs, are of no avail. Even if you throw a five cracker into a tree it only sends them off for a time. I am glad to see the birds protected, and I am not at all pri juliced; but in this case I think the robin ought to be forcibly invited to let these cherries alone. Perhaps the origin dors of the AuvUNDON SOCIETY or some of its members can suggest a remedy. I do not like monopolies. X. Y. Z. SALDM, Mass.

On complaint of James Anderson, agent of the Massachu-setts Society for the Prevention of Cruelty to Animal- tor the four western counties of the commonwealth, Lewis and Darwin Merrill, of Shelburne Falls, were yesterday arrained before Justice Greene, at Greenfield, for shooting robins, and were each fined \$20 and costs, a total of \$58,58. This is the initial movement of the Society under the provisions of the bird law just passed, which imposes a penalty of \$10 and costs for each robin killed.—Boston Herald, June 24.

eosts for each robin killed.—Boston Herald, June 24. "The ladies of Paris," says the St. James's Gazette, "tired of wearing dead birds, are now spending fabulous sums in procuring all sorts of creeping things—such as spiders, beetles, etc.,—with which to adorn their hair and dresses. It seems the idea originated with Mme. Judie, who during her tour in 'the Golden South Americas,' was presented by a deputation of feminine admirers in Brazil with a 'brace' or 'pair' or 'couple'—we are not sure of the technical term for two insects—of Brazilian beetles, or 'gold bugs'; which, it appears, can be trained, and are tethered by thin gold chains to a hair-pin, and are allowed to wander about her head at their own sweet wills. The idea of ladies adorning them-selves with living insects is hardly original. Not to go as far back as the Egyptians and Etruseans, we ourselves re-member seeing in the Brazils a party of ladies who, having captured a number of fireflies, inclosed them in long tubes of muslin, with which they trimmed the front of their dresses. The effect in a garden after dark was quite as pretty as the electric lights which the 'lolanthe' fairies wore at the Savoy. If Mme. Judic's beetles could speak, they would probably say, with Piscal, 'Fashion is a tyrant from which nothing frees us.' In the meantime they are the sub-ject of much comment in Paris; for, as Pope said in a famous epigram, 'Ladies will talk of what runs in their head.'"

SWIFTS, HUMMING BIRDS AND GOAT-SUCKERS.

SWIFTS, HUMMING BIRDS AND GOAT-SUCKERS.
Edior Forest and Stream:
A nonth or so ago I published in the Proceedings of the Zological Society of London, a paper illustrated by a num-ber of plates and woodcuts, treating of the osteology of swifts, humming birds and goatsuckers. My studies of the oseous system of these several forms has led me to believe that they stand sadly in need of a n classification, as well as still more exhaustive researches into their structure. Much that I saw in the organization of swifts compelled me to adopt the surnise of Hueley, presented as many years ago, that these birds would be found to be some day holhing more than profoundly modified swallows, and having no more afficity with the humming birds than these latter.
In the paper referred to. I proposed that the humming bird he awarded an order by themselves, as the order *Troebilit*, and further, that the goatsuckers or nightjars be similarly dealt with, being grouped in an order *Capruality*.
Now such a hold has the notion gained upon some minds that the humming birds and swiits are in some way related to each other, that my preliminary attempts in the P. Z. S. to throw additional light upon this important subject, have not been fully convincing. Consequently I have determined to write another paper upon this subject, setting forth the complete structure of all these forms, and such related ones as should be compared with them.
To effect this it is highly essential, of course, that I should be anoply supplied with material and alcohol specim-ms of the forms in question. At present I am in a poor locality to secture this, a fact which has impelled me to seek your as-sistance and the advantages offered through a request pub-lished in your widely circulated columns By my own efforts I have gott n together alcoholic specimens of the following birds: 1. Progne subis (purple mrrin). 2. Pretroehelidon taniforus (Cim swallow). 3. Chelidon erg/throgaster (norry the downers (Yaux's swift) 3 Cypselvi

persons to drop me a postal card, saying first that they can supply such and such birds. To this I can answer either by letter or telegraph. My present address is Fort Wingate, New Mexico, and Mr. Robert Ridgway, of the Smithsonian Institution, has also promised to send me such material as may come to his bands of the kind specificd, so if it be more convenient, in certain cases, to send it to him, it will be forwarded to me when occasion offers. The smallest size screw-top preserving jar of glass is the best recepticle to send small specimens of birds in by all odds. This should contain strong alcohol in sufficient quantity to completely cover the contents; then it should be packed in a suitable box, surrounded with paper and sent to my ad-dress by express. Three or four specimens of each species are sufficient, provided they are not badly shot. If both sexes are represented so much the better. I will gladly meet the expenses of transportation and col-lecting, and especially desire that the collector tag the speci-mens, giving dale, name of collector or donor, feex, locality and name of specimens. In cases where the material is donated, I will invariably acknowledge my indebteduess in full in the forthcoming work. Should this meet the eye of the editor of the London *Field*, I will be very thankful to him if he will briefly notice my desiderata in this direction, as there are many continental types, as *Cypselus apus* and others, which would add greatly to the breadth and scope of my paper, and largely enhance its generalizations. R. W. SHUFELDT. Fort WINGATE, New Mexico, June 18, 1886.

FORT WINGATE, New Mexico, June 18, 1886.

THE HISS OF THE GROUSE.

THE HISS OF THE GROUSE. The second of the strange that none of the writers on the ruffled grouse speak of one p-culiar habit of the cock bird in the breeding second wither Wilson, Bird, Hulloca nor any of the encycloo-cias mention the singular hissing that the cock grouse seems to practice as part of his love making, and it is barely possible that it may have escaped general observation. During the latter part of April and the first half of May I was greatly intrest d in watching the actions of a male grouse in my neishborhood, and for the first time in my hife had oy attention called to this peculiarity. It is apparently on the approach of the hen that this demonstration is made, and when she appears in sight the cock sidles down from the log on which he has been strutting with and or a lev-1 with his back (which has the appearance of being slightly arched), and begins to roll his head from side to side with a slow but gradually accelerated movement, accompanying each turn or roll with a distinct sparate of this sibilations he makes a semi-circular sweep of three or four feet, which bridgs him closer to the "hair one." There is probably nothing which approximates these sounds in movement and character (of course not in volume) as the scaping steam from a locomotive just pulling out from a bissing sit couch dupon the ground whine glike amother-less puppy, and approximates is only approximates the search approximates the search is familiar to every hunter and wood-man, but if so, it seams a little strange that none of the books speak of it. Jar BEBE.

A BIT OF FOLK LORE — Central Lake, Mich., June 23.— Editor Forest and stream: The other evening I heard the note of a whyppoorwill I thought, but was not positive, that I had never before heard it in northern Michigan, and asked the "oldest inhabitant" who stood near, if it was not very unusual to hear one of these birds hereabout? He re-plied that it was, but said that he had heard them before,

and added that it had been told bim that any person who on bearing the whippoorwill should immediately remove his coat, and put it on again wrong side out, keeping it thus until the cry of the bird had ceased, should ree 'ive whatever he had wished for meanwhile. The old man did not turn his coat, and perhaps his negligence in that respect may account for the exceeding rustness of the garment. These little scraps of folk-lore are often of interest, especially to students in that line, and I have thought that this might be worth the space it would occupy in the FOREST AND STREAM. -KELPIE.

MOOSE IN THE ADIRONDACKS — We have received in-formation of the killing, last October. of a young bull moose, weight about 350 pounds, in the Long Lake region, just north of Long Lake.

BOMBI, the \$5 000, 7,000lb. rhinoceros of Central Park, died last Saturday, of Ducumonia. The FOREST AND STREAM bears are still vigorous and healthy, cunning, intellectual and otherwise and attractive.

Address all communications to the Forest and Stream Publishing Co.

THE TRAJECTORY TEST.

THE full report of the FOREST AND STREAM'S trajectory test of bunt-ing rifles has been issued in pamphlet form, with the illustra-tions and the tabular summary, making in all 96 pages. For sale at this office, or sent post-paid. Price 50 cents.

THE PARK RAILROAD BILL.

ON motion of Mr Butler, of South Carolina, Senate bill 980 granting right of way to the Cinnabar and Clark's Fork Railroad Company through the Yellowstone National Park, was taken up by the Senate June 2. The discussion on it given below is extracted from the Congressional Record The bill was reported from the Committee on Territories with an amendment, to strike out all after the enacting clause and to insert:

MR. VEST-Mr. President, if I can secure the attention of the Senate for a very few moments I should like to give my reasons, and very earnestly, why this bill should not become a law

a law. To those Senators, if there be any such here, who believe that the Yellowsione Park should be destroyed and cease to exist 1 have no argument to make. I am very well aware that it is popular to assert in this country that bothing should exist in which there is not money, and any one who pro-poses to preserve the great National Park in its original grandeur and beauty, and to preserve the game, which has almost ceased to exist upon this continent, is taunt d with we the ticism and is sneered at as behind the proper spirit and ideas of the age.

with ticism and is sneered at as befind the proper spirit and ideas of the age. I am not ashamed for myself to say that my life has been largely devoted to field sports, that I have lived a large portion of my time in the woods and forests and mountains and npon the rivers of the great West. I know whereof I speak when I say to-day, without any other interest or motive under heaven than that of an American citizen and, stands in the way of one of these speculative enterprises the

<text><text><text><text><text><text>

those winter months in which the range is most necessary to them. Why have the projectors of this enterprise had no pre-liminary survey of the route made? Why is it that they do not bring to Congress the best proof that the nature of the case is suscep ible of?—the r ports of engineers, from prac-tucal observation, who can tesufy to Congress that this is the cheapest and most practicable route between Cinnabar and the Clark's Folk mines? MR. BUTLER—I should like to ask the Senator from Missouri a question, if he will yield to me. Mic, VEST—C rtainly. MR. BUTLER—I ask him if in his experience he has ever known a survey to have been made before a charter has been secured? MR. VEST—This is a case in which the whole argument

MR. BUTLER—I ask bim if in his experience he has ever known a survey to have been made before a charter has been secured? MR. VEST—This is a case in which the whole argument turns upon whether a charter shall be graated uoon this par-ticular route or not. If there were a proporition here for a charter between certain points on the most practicable route, there would be something pertoent in the inquiry of the Senator from South Carolina; but here is a proportion fixing the route, and that is the remarkable fact to which I priot to-day. They d i not want a survey; they do not propose to have one, because p rhaps a survey would defeat their object, which is to get into the Yellowstone National Park, out to get to these mines, but to run up this valley of the Yellow-stone, up to Soda Butte Springs, the most wonderful springs in the contry, at which point they propose to build a depot. The real purpose is to construct a rairoad to carry passer-gers, not ore. There is the money in this entrprise, and not in going to the mines, in which they say they have already ore dumped out ready for transportation. I know whereof I speak from per-onal cbs rvation—I have been in that park and traveled over this id-nicial territory, and I am as thoroughly convinced of the truth of what I say as if it were a mathematical propositio. I know great exertions have been made to pass this bill. I know that a former officer of the Interior Department has been lobbying Congress three sessions to pass it, and he is here again for the same purpose. I know that Secontos, my-soff included, have be an attacked and besmirched in the public press, and we have been branded by the assertion that we were the to Is of the Northern Pacific R-ifrend. Ta-serth here to-day, using only such harguage as this presence ad-mits, that the assertion that I have any other object, direct or indirect, than that which is proper to a citize of this country, and a Senator representing a sover ign State, is so utterly and infamously false that the wretch who make

<text><text><text><text><text><text><text><text>

then up Soda Butte Crick to the Clark's Fork mines, that it is nearer 65 than 46 miles. MR. INGALLS—Do you mean 65 miles south of the northern boundary ? MR. VEST—I mean 65 miles on this proposed route. Mr. INGALLS—Not 65 miles south of the northern bound-ary of the Park. Mr. VEST—No; the most extreme point south of the north-ern boundary of the Park to the most extreme point on this proposed route; but 1 am speaking now of the longi-tudnal distance from where it enters the Park on the north-near Cinnabar, which is the terminus of the branch of the Northern Pacific Railroad nearest the Park, up the Yellow-stone River to its eastern fork and the Soda Butte Creek to the Clark's Fork mines. That I say is 65 miles or in that Vicinity.

MIC OWARD STATES AND A STATES A the hill The report says:

the OHL. The report says: This company was organized under the laws of the Territory of Montran to construct a railroad from Cinnabar, the terminus of the Livingston branch of the Northern Pacific Railroad, on the Yellow-stone River, about five miles north of the northern boundary of the Park, to reach Clark's Forks mining district, in Southern Montana, lying a few miles north of the northeast corner of the Park. Each end of this road, according to this report, is outside

lying a few miles north of the northeast corner of the Park. Each end of this road, according to this report, is outside the Park. Mr. VEST—That is true. But if the Senator from Indiana will simply look at the map of the Yellowstone Park which I have here, and which has the railway marked on it, he will see exactly where that route runs. Tor General Sherman I have very great regard, and how-ever much we may differ from him in regard to his conclu-sions, he is always frank and honest in their utterance. When General Sherman was in the Park, the year before I was there the first time, he came to the conclusion that the idea that the great game of this country, the bison, the elk, and the black tail deer, could be preserved at all was simply Utopian and ideal; but to one who has been accustomed to field sports and the habits of game it is not difficult to cou-ceive how a preserve could be created, with even imperfect guardianship, which would very soon induce the large game to congregate there and consider themselves safe from all assault. Instinct far surpasses intellect when we consider the wonderful intelligence of animals in selecting localities in which they are safe from the pursuit of the huntsman. Let there be, as there has been upon the Potomac River, a preserve like that of the Woodmont Club, with 10,000 acres

of land only, and with only three gamekeepers. In less than eighteen months after that preserve was created the deer from all the adjacent mountains, finding this a com-paratively safe refuge, when started from their covers im-mediately made this preserve the objective point, until to-day there are more deer found upon that 10,000 acres, I under-take to say, than on any other 10,000 acres in the Eastern States States

take to say, than on any other 10,000 acres in the Eastern States. Now, let me read, if the Senator pleases, while upon this idea, a letter coming from a practical hunter and woodsman whose opinion and testimony is worth all the rhetoric and all the appeals that may be made in this Chamber within the next five hours. When in the Yellowstone Park I made the acquaintanee of Mr. Hofer, one of those men fast disappear-ing now from the frontier, who live in the forest—men who, like Daniel Boone and Kenton, when their cattle mingled with those of a neighbor twenty-five miles distant, thought the towns and cities were encroaching upon the domain which they loved so well, and immediately moved further west. This man Hofer lives in the mountains. He knows by instinct almost equal to that of the animals themselves their habits. Here is his testimony in regard to the result of even the imperfect guardianship which we have been enabled under an act of Congress to put over this splendid park. Mark you, it is a part of 8,300 square miles, with such rivers and mountains and lakes and waterfalls, to say nothing of the wonderful geysers, as the whole world beside does not furnish. Mr. Hofer, writing to Mr. Hallett Phillips, says, speaking of the proposed railroad: The county which they propose to go through is about all the round that is used as a winter range or feeding ground for elk,

says, speaking of the proposed railroad: The country which they propose to go through is about all the ground that is used as a winter range or feeding ground for elk, bison and antelope, within the limits of the Park. If it is cut off and a railroad run through, you may as well kill off the game at once, for it will be driven off. The idea that teams, etc., frighten off the game is foolist. All winter elk have fed in sight and close to the wagon road. I have the Government stock now on the east fork of Gardiner. Often the clk come down among the mules and horses and teed with them. All winter elk have fed in sight and close to the wagon road. I have the Bovernment stock now on the east fork of Gardiner. Often the clk come down among the mules and horses and teed with our stock. It is the shooting and loud noises that scare off the game. A thousand teams would be hauling freight to Cook all winter and the game never leave on their account; so long all the game have no fear of teams. It is in winter that the game wants to be protected. In summer they can go any where, but in winter there is only a small portion of the Park where they can stay. The railroad would take that from them. I have been here long enough to know how it will work. All of you who are intrested in the Park know it only in summer. You should know that the sow is so deep in winter, through the Park, that game must come out to live. ie snow is out to live

that the snow is so deep in winter, through the Park, that game must come out to live. He then shows that the country through which the rail-road would ponetrate is the only locality where the game comes out to feed. He concludes by saying that the objection to a railroad across the Snow Mountains on account of the dcpth of snow, is untenable, that all the narrow gauge rail-roads in Colorado run through more snow than ever falls in the Snow Mountains; the snowfall in Colorado being from five to ten feet more. Mr. President, that letter may be roughly written, but it comes from a huntsman, a man who has lived'in those moun-tains for years, who has had charge of the Government stock during the last whiter, who testifies now that the elk and the antelope and the bison and the deer come down to feed with his stock. That is worth all the declarations of these specu-lators that could be piled on these tables until they reached the ceiling.

<text><text><text><text>

r adway could easily be opened and the timber utilized in many ways. My opinion is based not only upon my own observations and the reports of my scouts, but also upon the statement of my guide, who had hunted through that region for years, that if it became neces-sary for me to go into the Park by that route, he could take me there by crossing the divide at the head of Boulder Creek, and then down either Heil Roaring or Soda Butte Creek, the latter affording the most easy passage of the two. I was informed before going into Boulder Creek, by men who claimed to have a thorough knowledge of the Snow Mountairs, that there were only two passes over them, one by Boulder Creek, the other by Clark's Fork, and the passes shown on the accompanying map confirm their statements. I return herewith the map sent me by Colouel Gregory with my proposed route marked thereon in red ink. If more definite and accurate in-

formation is desired. I am willing to make a survey of the route Trusting that information contained herein may be of service to you, I am, Senator, your obedient servant, H. K. Baltzy, First Lieutenant and Adjutant, Fifth Infantry, How, GEORGE G, VEST, United States Senate Chamber, Washington, D. C.

HOS. GEORGE G. VEST, United States Senate Chamber, Washington, D. C.
There is the statement of an Army officer who has been over the Boulder route, and who says it is practicable for the construction of a railroad. But, Mr. President, there is a feature in this bill to which I ask the attention of the Senate. MR. ALLISON—May I ask the Senator a question before he proceeds further?
MR. VEST—Certainly.
MR. ALLISON—I ask whether this bill is recommended either by the Interior Department or War Department?
MR. VEST—It is not; and upon the contrary the Sccretary of the luterior has laid before the Senate in a report here, which covers every detail of this measure, his opposition to it and his reason for that opposition.
I am authorized to say that the Secretary of War is opposed to it, and the commanding General of the Army, General Sheridan, who is familiar with that country and has been over it time and time again, is also opposed to it, and his letter—I think it should be stated in that con-

MR. BUTLER—I think it should be stated in that con-nection that the present Secretary of the Interior as a Sena-tor and a member of the Committee on Railroads reported in favor of this identical bill.

MR. ALLISON-II see by the original act that the Secretary of the Interior is charged with the control and care of this

park. MR. VEST-He is. The Secretary of the Interior has con-

MR. VEST-He is. The Secretary of the Interior has con-trol of this park under the law. In reply to the Senator from South Carolina [Mr. Butler] I have simply to remark that while the Secretary of the Interior was a member of that committee as a Senator, I undertake to say now, for I have it from him, that he knew nothing about this bill, that he paid no attention to it, that there were personal and family circumstances then existing which prevented his attention to it. MR. BUTLER-I am only governed by the record. MR VEST-I will explain that record, and I put against that record the official statement of the Secretary of the In-terior to-day, when he is acting as Secretary of the Interior, and by virue of that office is custodian of this park. He opposes this measure in every way possible. I undertake to say that every man who knows anything of the park and is interested in its preservation is opposed to it. Mr. Hallett Phillips, who was sent there as agent of the Interior Depart-ment, gives his reasons in opposition to it. Mr. Hague, whom I met in the park as a member of the Geological Survey, gives his reasons at length against it. The park superintendent is against it; and old Jack Barronet, the father of the guides in the West, has written me in opposi-tion to this railroad. I stand here to day and say from my own personal knowledge of that country and of the Park that the construction of this railroad is absolutely the de-struction of the Park itself. Now, Mr. President, a few words as to the extraordinary provisions of this bill. Section 4 provides: That if said road shall not be constructed and in running order within there years from and after the passage of this act, the right of way

provisions of this bill. Section 4 provides: That if said road shall not be constructed and in running order within three years from and after the passage of this act, the right of way hereby granted shall thereupon be forfeired, and this condition is expressly understood to be a condition precedent as to all rights granted hereby; and in case of a breach of the condition of this sec-tion, all rights granted hereby shall revert to the United States by Congress: Provided, That the grant hereby shall not be held or con-strued as exclusive, so as to prevent the allowance of the locating other roads along the valley or route adopted under this act, under such grants and regulations as Congress may make and provide and the courts equilably administer.

There is a function of the print hereby shall not be held of coordinate roads along the valley or route alopted under this act, under the submitted of the set of the print hereby shall not be the locating the grant and regulations as Congress may make and provide and the courts equitably administer.
Why is that provision put in this bill? Why was it necessary to suggest that other roads might be constructed along this provision of the lift that this shall not be the only rail.
The function of the bill that this shall not be the only rail.
The function of the bill that this shall not be the only rail.
The function of the print here was a bill pending here in the last four that goes into the Park?
The function of the construction of a road from Green River on the not be not been presented at this secsion. It is held in abeyance of the union Pacific up by Lewis Lake to Climabar. That bill has not be the order of the sect of speculators will come to Congress and the are estopped from denying them the right to enter the not a law, this other set of speculators will come to Congress and for myself have no more concern with that Park or any start exclusively, that is the end of the act of 1873, and for myself have no more concern with that Park or any the pertaining to it.
The resident, I have spoken emestly. I have no interest for the row sking it. If we one ther than a proper one to any the has a system of the country, that they shall the says and desires to impress it upon his fellow shall be the ast and regulated the second of the decountry in order to preserve the wild game of the West, or in order to preserve the wild game of the West, or in order to preserve the wild game of the West, or in order to preserve the wild game of the West, or in order to preserve the wild game of the West, or in order to preserve the wild game of the West, or in order to preserve the wild game of the West, or in order to preserve the wild game of the West, or in order to preserve the wild

MR. BUTLER-Mr. President, I am very sorry that I can

not sympathize entirely with my friend, the honorable Sen-ator from Missouri, in the esthetic view he takes of this case. Mr. VEST-I am past that word "esthetic." Mr. BUTLER-I say it with all respect. Of course while I have great admiration and respect for that Senator, I do not sympathize with him. He has had the good fortune to have hunted in that great Park of the West, and fished in its streams and enjoyed its magnificent scenery. I have never had that opportunity, and, as my friend from Mississippi [Mr. George] says, very few of my constituents will ever have that opportunity, and I do not know but that about the best disposition which can be made of that Park would be to do as my friend has suggested, throw it open for settlement under the land laws of the United States. I think perhaps that would be about as well as anything else. I agree entirely with General Sherman about that, whose letter I will read. I know nothing about this railroad bill except such informa-tion as I have acquired by reason of my position upon the comittee on Territories. The bill came to the Committee on Territories, why, I confess I do not understand. It had before had the unanimous report of the Railroad Com-mittee of this body, and I suppose I may refer to the other House, because their report is before us, and it has had a unanimous report from the committee of the House.

At this point the debate was interrupted by the receipt of messages from the President, and was not resumed.

HOW LONG CAN FOXES RUN?

<section-header><section-header><section-header><text><text>

NEW JERSEY WOODCOCK.

NEW JERSEY WOODCOCK. Fair Forest and Stream: To prove that you will not consider me annoying, but your compilations of the game laws and your reply in your per-sonal column to my inquiry a week or two ago in regard to the legality of shooting woodcock on the first day of July has called forth the inclosed remarks which appeared in the Bridgeton Eventug News of Saturday, July 25. That from and after the pasage of this act, no person half whill, take or expose for sale, or hare unlawfully in his or her possession after the same has been killed, any wood-coke except only between the first day of July and the first day of August and between the last day of September and the sixteenth day of December." If your views are in any way modified by this I hope it will call forth a prominent reply in the columns of your paper and you may possibly be the means of preventing a lawsuit which will undoubtedly occur in the volumes of your paper and you may possibly be the means of preventing a lawsuit which will undoubtedly occur in involve themselves in a legal difficulty. I remain. DAVE N. STREETS. BEDETRON, N. J., JUNE 25.

MUZZLE vs. BREECH.

MUZZLE vs. BREECH. Editor Forest and Stream: Inotice a great mistake in my article in the turkey shoot in your columns (April 8, 1856), which I wish to correct. It arose from an error in copying it for the press, and as it has called out some criti-cism on my muzzleoader shooting I wish to set matters right. My rifle in that article stands credited with shooting hut 1757 ds., which is in fact less than ouc-half the distance I shot it. It was the breech-loaders which shot 1757 ds., their longest range, while my muzzle-loaders shot 2853 ds.; neither of these distances were measured, but were so estimated on the ground. I think I shot ahout 80 rods, hut have placed it at 75 rods. The breechloaders, be it remembered, did sot get a single turkey for dinner at 17574s, hut they did get one after it was moved up nearer to them two or three times. Poor tur-turkeys at 509 ds. hy shooting at their neaks, but I took no stock in this kind of shooting-it would have been murder indeed to the tur-keys to have had my tile shot at them at this distance. To repeat, it stands thus: 1. Muzzleloader, 70 rods. 3859 ds. killed 4 turkeys.

I had obsolved and the shot at them at this distance. To repeat, it ds thus: Muzzleloader, 70 rods, 385vds, killed 4 turkeys. Breechloaders, 32 rods, 175yds, killed 1 turkey, moved up. Breechloaders, same guns, 50yds, killed 4 turkeys. Distributed and the state of the state of the state of the state and most of these shots were "feelers" among the feathers to the center of these hirds of the "order turkey shoot," "genus "," "form fasseed." The two long ranges not being given made e more difficult to adjust the rifles on their hodies, and it never be known how long the breechloaders would have here at this at turkey had remained 175yds away only. My rifle hrought out feathers 14 times in all, and if I had not here nield out on killing fourth turkey I think my turkey meat after that last shot would fourth turkey I think my turkey meat after that last shot would fourth turkey I think my turkey meat after that last shot would be the about to the centhoaders would, a discount the turkey i did not care to engage in so her ruled me and my "old Betsey" i du not care to engage the so her will the most shooting. They rounsly stated, the hreechloaders till the most shooting. They able pluck considering the difficulties they encountered in getting to rough was they had come to the shoot with the wrong kind of

nrkeys. The trouble was they had come to the shoot with the wrong kind of fles-rifles that shot very weak from shooting too little powder be-ind ponderous holts of lead, therehy imparting to the bullets but a

low velocity, thereby producing an unusual high curve or trajectory, bereby, when used as hunting rifles, shooting over and missing most if the game at and along mid-range, and under and missing all of it eyond the point blank range. They also scatter their hullets more r less wildy.

shorting order and the second and the second and missing all of the second mean second and the second secon

The short contact luming hither spratcy flicht will be more marked and of course the shots more scattering than with the long holt unlet. I leave others to explain why these things are so, and now comes up, after many long years of trial, the question, can these evils he remedied? If yes, proceed to do it at once and to issue to the public a good strong and steady shooting rifle, and it will be satisfied with it, as it was with the good muzzleloader hefore fashion and folly set it aside for the new style of rifle. The public aregeting very tired of these, as hunting rifles generally, and it only now wants a few bold and disinterested leaders to forsake them for the masses to follow them, and with a high glee at that. I presume Mr. Clapp has nevr used and thoroughly tested a good what for a century they did do before they were run down, ridiculed and ad aretised almost out of silet by monopolists, their agents and followers. The tyros of to-day's shooting should, in my humble opinion, remain silent for a time on the rifle, hut in the meantime try to learn the facts in regard to them from others of more experience and know their lessons well, then will be they proper time for them to write, and then they may rest assured that attentive readers will appreciate their writings. Let such now learn that the late trial of Forzsr AND STREAM has, under existing conditions, settled and breechloader rifle, and vasily in favor of the former. The question there do write, and then they may rest assured that attentive readers were wry flat trajectory is the result of slow velocity to the hullet. The question under another form was which type or rifles sends is hullet the swittest and therefore the straightest, provided the rifle shots stead? As a swift bullet is indicative of great prover and force in the rifle, the prover trajectory is the result of slow velocity to the hullet. The question under another form was which type of rifles sends is hullet the swiftest and therefore the straightest, provided the rifle shots stead? A

this test. 'The answer, you see, came at each shot and every trial throughout from Alpha to Omega, from the heginning to the end, in favor of the old, true and much honored muzzleloader. Then how to great

old, true and much honored muzzeroader. Then has a senter merit. Proof. See the "Tabulated Summary of Trajectory Test." in the pamphilet report of FOREST AND STREAM's trial at the Creedmoor range, Sept. 26-Oct. 10, 1885, There were in all thirty-one hreech-loaders presented by the best makers and tested at this trual; also one English-made hreechloader, presented indirectly by Mr. Bland, the maker; also two American muzzleloaders. Behold the general

the maker; also two American muzzleloaders. Behold the general result. 1. Thomas Bland & Sons' English double express, .45-cal, breech-loader, heat (aud very hadly, too) the 31 American breechloader. The shot strong, very strong, and almost equal to the two muzzleloaders. 8. But Romer's muzzleloader heat Bland's rifle ahout 15 per cent, at mid range in a 200/ds. trajectory, and also all the 31 American breechloaders, and very, very hadly, too, to wit: From 39 per cent, as the least (Remington, 32-cal, No. 9) up to 243 per cent, as the most (Stevens's hunter's pet, 32-cal, No. 25). (Special-Trajectory No. 21a, Whitney, heing atnormal, is not regarded.) 3. Merrill's muzzleloader also heat Bland's rifle (very slightly) and all the 31 hreechloaders at 50/ds. in a 100/ds. range, very, very badly (and Romer's slightly), to wit: It beat the 31 American breechloaders all the way from 38 per cent, as the least, up to 278 per cent, as the most. 4. Summary: The two muzzleloader sididical between the stat way from 58 per cent.

(and Romer's signey), to view the least, up to 278 per cent. as the most.
4. Summary: The two muzzleloaders individually heat all (32) the breechloaders individually from the beginning to the end of the trial, most wonderful.
The American rifles were, in sporting language, more than "dis-tanced." every one of them was left hehind in speed, "way out of sight" in fact, as the relative heights (Inversely as the velocities) of spond? If the trial had ren to result is score can possibly be asked of the muzzleloader? Tray tell us what more and it will re-spond? If the trial had here for steady shooting and a close target, I fed Warranted in saying that my own experience, as well as the result are made by the editor in Foreiz AND STREAM swell as in the pamphlet, that the beat of the muzzleloaders in steady shoot-here much greater than the great heat in flat curves, and not much short of 500 per cent, heat on a general average of the 21 rifles, 2003ys, range, and 250 per cent, for the 100yds, range.

AN OUTING ON NICKATOUS.

AN OUTING ON NICKATOUS. THE months of anticipation from May to September had at last passed away, and our time had come. The preparations which had been going on for several weeks were completed, and the boxes containing provisions, tankets and tent, with personal luggage, had been checked or Enfield, Maine. The preparations which had been one lady and two gentlemen. Without a northeast storm was raging, but within the com-fortable, lighted car, we gave ourselves up to the feeling of perfect satisfaction, which can come only with a release from the business and home duties of the past year, and the beginning of the fulfillment of the plans for a fortnight in the woods, which had been in view for several months. Es-pecially was this true with the lady, for this was to be her its experience in camp life. Were pleasantly surprised to find among our fellow passengers several whom we had met before on our fishing excursions, and therefore the hour or two before we turned in multiping in speculations of coming days. Arriving at the country station at 8 o'clock in the morning, we were ready for the ten mile ride. The morning was bright and clear; the atmosphere keen and bracing; the roads in fine condition after the recent storm, and our ride over the while, giving us fine views of secnery, distant mountains with beautiful lakes nestled at their feet, was full of the keenest enjoyment. Now and then, old Katahdin lifted his had away in the north, and to the west, the range of bills-while or down from the changing maples added beauty to the comerciable hote, keep ty mine host Page. Monday dawned muggy and rainy, but with that uncer-tisty which is always perplexing. If you decide to start it will certainly clear, just too late. Our baggage was loaded, with the two cances lashed over all, and we followed in an the tow cances lashed over all, and we followed in an the tow cances lashed over all, and we followed in an the two cances lashed over all, and we followed in an the two canc

Ingrice Wagon later. Not many miles had been covered be-fore the clouds disappeared and the sun came out bright and warm. Our route after a fcw miles changed into a rough tote road, used only by the lumbermen in winter to cart in supplies. Rough was no word for it; over rocks and trees, into deep mud holes we plunged, until it seemed as if every bone in our body was out of joint, and walking was much less fatiguing than riding. Reaching Gilman's at last—the only frame building for miles around—we found our guides had loaded our baggage and cances on a jumper and were ready for a three-mile carry to the river above the falls. After a half hour's rest and a light lunch we followed over a fair carry, all the way through beautiful pine woods and the for-est primeval. The river was reached none too soon, our cances launched and baggage loaded as only those experi-cneed men of the craft know how. It is surprising how much can be stowed away in a cance—boxes of provisions, bales of blankets, tent, axe, fishing rods, nets, etc., and yet room for the guide and two passengers to each cance. A comfortable seat, raised slightly from the bottom of the cance, had been arranged for my wife. At length all was ready, and taking our paddles against the strong current, we headed up stream. It was simply delightfull The con-stantly changing scene which every turn of the river brought to vicw; the brilliant coloring of the malles on the shore touched by the sinking sun; the deep dark green of the for-cst, and not a sound to break the stillness except as our voices sounded over the water. On we paddled, occasion-ally coming to the rapids, when all was excitement, as we chose the deep channels and pulled the birches against the strong water. An hour brought us to the lake, and carry-ing round the dam at the outlet, we launched upon Nicka-tous Lake, one of the pretitest sheets of water I have ever seco.

Ing Found the darm at the outlet, we hadhened upon releva-tous Lake, one of the pretiest sheets of water I have ever seen. Now we must take strong, deep strokes with our paddles, for daylight is fast passing, and camp must be pitched and made ready for night. Two miles up the lake we found a convenient camp ground, in a sheltered inlet from the shore of which a tote road had been cut, used in winter to haul logs to the water's edge. Upon high ground, one hundred feet from the shore, was a small clearing surrounded by heavy timber, out of sight from the lake, yet commanding a view up and down for several miles. Here we pitched our tent, started our camp fire, gathered browse for our beds, and had supper under way just in time, for the daylight had gone, darkness had come, and by the light of our camp-fire we ate our first supper in camp. What a world of suggestion in that expression! How it brings to of one's life. Such appetites! The slice of bacon done just to a turn, the bolled potatoes so mealy that their jackets drop off, the hot biscuit, and the cup of tea, and finally the buckwheat cakes with maple syrup to top off. All better than one's in alarm, and wonder if they will hold out. Supper over and cleared away, the fir bows laid thick for beds, everything made snug, and we are ready to sit around our fire and lay our plans for the morrow and listen to a story or two from our guides. It does not take long to get acquainted with Willis-droll fellow. He provokes many a peel of langhter with his odd expressions and funny stories, and the genial warmth of the fire (for the night is cool) is pleasant. But we have had a hard day's work, conversation

<text><text><text><text><text>

Our neighbors were few and far between, one or two camps, perhaps, besides our own on this lake twelve miles in length, and occasionally we saw a cance or heard a rifle shot echoing among the hills. We were isolated from the world, and not a paper or a letter could reach us; and not until ten days after all bets on the Puritan-Genesta race had been paid did we learn of the result. It came to us from a party of Boston gentlemen, whom we mei just at dusk one evening an their way to camp, and our first question was, "Who beat in the race?" The answer came back, "The Puritan, by thirty seconds." And then on that lonely lake in the wilds of Maine, three hearty cheers were given for the Boston boat.

evening an their way to camp, and our first question was, "Who beat in the race?" The answer came back, "The Puritat, by thirty seconds." And then on that lonely lake in the wilds of Maine, three hearty cheers were given for the Boston boat.
In fishing, we had the traditional fisherman's luck. On a rise, and again rewarded by seeing the trout leap from the water for the favorite fly, and our rods bend almost to the dwater for the favorite fly, and our rods bend almost to the over for the full supply of our table, and as we re among those who know when they have had enough, we were control to the full supply of our table, and as we re among those who know when they have had enough, we were control the fames creep in and out among the logs, the crackling of the sticks and the sparks as they fly upward driven by the wind? What more picturesque than to go a short distance into the deep forest and look down upon the camp, brillantly lighted by the huge fire leaping ten feet into air, and all around the quiet stillness of the forest, and not a sound save the hooting of an owl or the laughing of a loor away out on the lake? These are the times when the cup of high us to the our when we must break camp. It came at length. After striking camp and loading the cances we started on our run of over sixty miles down the river. This took three days. At times our course lay through dead water, the river winding in and out through the forest, as we not her river bank showed all too plainly, that our skill and with yor 55 was nearing its end. At lat the the shore by the wind the register and so we there have a for the starts of the row of Passatines of the forest, and from being the forest. This took three days. Why hend the the energister, the river winding in and out through the forest, as we the hooties. The show approves the shore how of passating the forest. The show has showed all too plainly, that our skill and yie for 55 was nearing its end. At lat the the who of Passatines dag and the suitable outh, whe plasan

LANDLOCKED SALMON, SEBAGO LAKE.—Bill Hodgkins, the well-known guide, reports visiting the fishing grounds in Sebago Lake May 51, and boating three salmon, a total weight of 80 pounds. The Portland *Transcript* of June 16 reports: 'Friday, two Portland gentlemen fishing at the outlet of Sebago Lake caught four salmon and a dozen speckled trout." Last summer several salmon (L L) were taken in the Presumpscot River on flies. Brown hackle for artificial, and 'mill fly" for natural, proved the most ag-gravating. With the increase of fish it looks as if our salmon season would not long be restricted to the first two or three weeks after the ice leaves the lakes.—BLACK SPOT.

LAKE MELISSA.

Editor Forest and Stream: Who says fish? I do, and hundreds of them. Black bass, wall eyed pike and gigantic pickerel. A party of us, seven ambitious, emhryo fishermen, are camped here, under the shade of the graceful basswood.

ambitious, emhryo fishermen, are camped here, under the shade of the graceful basswood. Commodiously housed in a good wall tent, we can bid defiance to diurnal storms, and regale ourselve the while in the friendly "seven up" or "raise you one;" when we are not yanking the sportive fish from their aqueous element. We came here from Castleton, D. T., filled with wild ex-pectations of voluminous prey, and our wishes have been more than realized, for to say that this is the "paradise of piscators" is drawing it mild. On our arrival here, after the "stake-out" and a hearty dinner, our first thought and action was to capture minnows for our bait, and finding them plenty in one of the small connecting streams between the lake and another (Lake Sally), we soon netted a good complement and essayed our victims. Hardly had a line been cast, when "first blood" is heard from one boat and quickly followed by the cry "it is a bass." and such fun. The supple rod bends to the sudden strain, and with anxious eyes all watch the combat. Hurrah! he's landed, and a beauty he is. In quick succession the other rods have their own duty to perform, and ere long all the other boats are well stocked with prime fish of various kinds. A friendly dispute begins between two occupants of dif.

A friendly dispute begins between two occupants of various A friendly dispute begins between two occupants of dif-serent boats, and high in air is held aloft an eight-pound pickerel. "Show a better if you can," yells its excited cap-tor, and up goes its counterpart. I believe it was decided that they were twins. We have been here three days, and each a repetition of the other. Uninterrupted success, and we can tally two hun-dred and fity as fine fish as ever graced a table. The accommodations for visitors and sportsmen at Detroit are unexceptionable, and at the boat house near the village is a nice assortment of boats for hire. Be cautious whom you employ as boatmen, and select those who have a reputa-tion for a close mouth and can live on good plain food and drink, without resorting to fire water. A. T. BOND. DETROIT, Minn., June 17. DETROIT, Minn., June 17

GAMPS OF THE KINGFISHERS. CARP LAKE, MICH .- XVII.

GAMPS OF THE KINGFISHERS. CARP LAKE, MICH.—XVII. A FTER the first feeling of discomflure had passed off we joked and laughed_mot "voriferously," however -at our forget(filness in leaving our trolling gear in eamp, and rowed carelessly along, not caring much whether the fish preferred a glittering sham to the toothsome flesh of a speckled frog or not, for to catch fish is not quite all the good there is to be found in going a-fishing. Dan had "set" his rod between one of the rails supporting the thwart and the side of the boat, and was contentedly pufling at his pipe as he sat facing the bow, when, as we drew near the sunken reef, "whiz, bi z-z," went the click of his reel with a burst of music that fairly took our breath, and as the old pelican swung his half paralyzed old right leg over the seat, following it with the good left one, so as to face the way the line was running and grabbed the rod, I stopped the boat and gave her sternway, looking then to see a great fight, for no common fish would raise a commotion like that. But for the first time in all our varied experience of many wars together, the old veteran of many hard fought battles lost his head, and actually forgot what he was doing or how to do it. He forgot to hook his neck-strap in the screw eye in the rod, which would have given him a chance to handle he can't handle a fish at all of any size- and just held on to the cod like grim death, grasping the reel in such a way that it could't turn till the fish, which was pulling like a horse, came so very neartaking him over the stern of the boat, that it could't turn till the fish, which mow had the rod pulled down straight with the tightened line (a new F. braided lineo) how etra, saved Dan a ducking and me the pleasure of fish-ine the. A I got up to step aft and get hold of him and take the red row his head, it for the fash, which now had the rod pulled

however, saved Dan a ducking and me the pleasure of fish-ing him out. As I got up to step aft and get hold of him and take the rod from his hand, it flew back over his head, and the sudden release of the mighty strain 'disturbed his equibilerum,'' as old Dick expresses it, and he tumbled backward off the seat, flat on his back, in the bottom of the hoat. (A fact.) With the 'skipper'' it was either laugh or 'bust,'' and I let off a quiet, very circumspect, and decorous chuckle as I picked the old pelcan up and replaced him on the seat, a fcat requiring not much of an effort, as he only weighs in the neighhorhood of ninety-eight pounds. I handed him his rod, which I had caught and laid for-ward when he took the tumble, and as he recovered his pipe from the bottom of the boat, he said in his quiet way, but with a 'can't-do-the-case-justice'' sort of a look in his old cyes, ''Hickory, nothin' makes me so mad as that,'' but webere this referred to the chuckle that was still ''a agi-tatin' o' my frame,'' the tumble, or the loss of the fish, I have never had the hardihood since to try to find out. The line was reeled up to find the hook, a big, strong, No. 17 salmon trout, broken off bclow the barb, and the sudden ending of the fight and Dan's defeat was accounted for. We were satisfied it was a ''scrouger'' but whether nick-

No. 17 salmon trout, broken on below net star, accounted sudden ending of the fight and Dan's defeat was accounted for. We were satisfied it was a "scrouger," but whether pick-crel, bass or maskalonge we were unable to make out; bass from the "hustle" he developed, but then we "almost always invariably" as old Dick figures it, lose our biggest fish. The old fishhawk owned up squarely that he had lost his head and was so bewildered by the sudden dash of the fish that he never once thought what a reel was made for, but it was too late now to hunt up excuses for his temporary lack o' sense, and he was only glad that I was cheated of the pleasure of fishing him out of the lake. A new hook was tied on and baited with the choicest frog in the buckets, and we pulled along the upper side of the reef out to deep water where a turn was made up lake to make a circuit of a hundred yards or so and come back over the same water where the calamity had overtaken us. As we neared the reef again I struck a fish, which, if not quite so big as the one Dan had lost, was strong enough to break loose after a short, fierce struggle, and then the old pelican just sat there and chuckled himself into a mild "conniption." We fished around in the vicinity over ten acres of water for half an hour longer without another strike. It was clearly our unlucky day; we could not catch fish even when they were in the humor to be caught, and we headed for camp, trusting that another day would bring better luck.

At Alexander's Point we crossed over to fish past the point, near the mouth of Maybert's Creek, for we did not like to go in without a scale; but here too our unlucky streak followed us, and we pulled down to the point at the old log road and across to camp in the gloaming of the evening without once having had occasion to use our stringers. Here another backset awaited us. Old Ben met us at the landing with the information that "old Knots had skipped the ranch an' gone down to 'Cootereye's to stay all aight an' hev an early stait in the mornin' fur the down boat at Sut-ton's Bay." 4 It was clearly a case of too many girls for his peace of mind, or a sudden drought in the matter of "festivities," the latter most likely the moving cause, for old Ben said, "the ole feller looked mighty nigh fagged out, an' I reckon he's gone down to look over ole 'Cootereye's cellar an' hist in a 'rejuvenater' er two." We saw no more of him till we got home, but our good wishes went with him, and we missed him too, for a better comrade never "fit musketers or rassled with a sogry flap-jack" in a fisher's camp than old Knots. KINGFISHER.

DESTRUCTION OF WEAKFISH.

MURDERING BABY TROUT.

<text><section-header><text><text><text><text>

killing to a great extent. One man came in with fifty-seven p-unds of trout and none were over seven inches in length! Another had thirteen pounds of the same kind. At Ed. Wilkinson's a man brought in a creel full of babies and showed them exultingly. Mr. Stimpson, of the Mountain Home, told me that a man calling himself a sportsman wanted to know where he could go and catch babies, but got no information. Mr. F. A. Walters, superintendent of the Adirondack balchery, writes me that "a party of three took in Long Pond (near the Saranacs) in six hours on Wed-nesday last, June 29, 257 brook trout and left part of them on the shore to spoil." Yet we must stock the streams for the trout hog as well as for decent men. FRED MATHER. MOUNTAIN HOME, June 20.

MASSACHUSETTS ASSOCIATION.

MASSACHUSETTS ASSOCIATION.
THE last regular meeting of the Massachusetts Fish and Game Protective Association for this season was held at the Parker House June 22, President Samuels presiding, and though many regular attendants are now on their annual pigrimages to the rivers and forests of Maine, still over thirty responded to the call. The usual routine business was ransacted, and three new members were cleated. The commutate on fiberies reported the following resolution, which as ordered sent to the Seate at Washington.
The Honorable Sente of the United States of America:
The petition of the undersland members of the Massachusetts that safrof the sale was fiberies reported the following resolution, which as ordered sent to the Seate at Washington.
The Honorable Sente of the United States of America:
The petition of the undersland members of the Massachusetts that safrof the sale was fib for quenting these coasts, and represents that the presense of the mackerel on the coasts of the United States would be preservation of the safe for quenting these coasts, and represents that the passace of the fish to our shores, and causes the sawning season broken up by law prontoting ther sale during that season. They also represent that the practice of spring selling that season to coast the during the sawning season to coast a of the coaster of the mackerel are the spawning season to coast a provent the coaster of the mackerel are the spawning season to coast a provent coast and the meretice of the mackerel are the spawning season to coast the fast throughout the fish and preservation of the safe of the safe the preserve the same set the state soft. The spawning show that the shore show the dissochuset is theremen, who ye harge nach who shows and the state soft the same the state soft the same the states of the same the stat

The latter portion of the evening was employed in discuss-ing the new game law enacted by the Legislature, and the following resolution was adopted:

Resolved, That, in the opinion of this Association, the law for the protection of game and other birds, recently enacted by the Masso-chusetts Legislature, is would inadequate to secure their protection, and while the Association will labor for its enforcement while to remains upon the statute books, it will also endeavor to secure its improvement.

The FLUTTERING FLY.—New York, June 25.—Editor Forest and Stream: In answer to your correspondent on the subject of my patent fluttering fly, I would say that when about a year ago I invented this fly, although I had been engaged in the fishing tackle business ten years, and twenty-five years a fly-fisherman, I had never seen or heard of a fly tied in that manner. Still, being anxious to make sure that it was new, I showed it to a number of prominent anglers, American, Canadian and Eoglish, but none had ever seen or heard of it. I also consulted all the prominent moless to angling, both Eoglish and American, that I had access to, and failed to find any mention of such a fly. Still, allow-ing your correspondent's statement (which the public must understand comes from a rival in business) to stand, it would not affect the validity of the patent in this country.—W. HOLEBERTON. My Construction of the fly of the patent in this country. N.Y. Giles Becraft was with me, and we had excellent sport with the trout. One of the flies I used was something like the 'fluttering'' fly illustrated in Forest Ann Stream, of June 10. It was made by one of the best fly-tyers I ever knew, Robert Perric, of Utica, N. Y. It was a hackle re-vereed, and its hooking qualities were first class. I do not think Mr. Perrie claimed to have originated it, but of that I am not sure.—MILLARD (Cheyenne, Wyo.).

SHAD AND PUMPEINS.—Seneca Falls, N. Y., June 15.— Eritor Forest and Stream: Is it not somewhat singular that Washington Irving, who was so close an observer of nature and its various phenomena, should commit the error of placing "broiled shad" before the guests at Mynheer Van Tassel's quilking frolic, as duly set forth in the veracious chronicle of the "Legend of bleepy Hollow"? The story recites that Ichabod Crane rode forth to this historical sup-per, when "the yellow pumpkins were turning up their fair, round bellies to the sun," through "fragrant buckwheat fields," atc., obviously a time of the year when this tooth-some fish is out of season, at least in these later degenerate days, when they are no longer a dainty after midsummer, and, in fact, have deserted the river for their mysterious ocean home. What is the present extreme upper limit in the ludson attained by the shad on its annual migration? When a boy, living near Saudy Hill, I have seen large numbers drawn from below Baker's Falls, which point was then a barrier to their further upward progress.—L. G. S.

THE RANGELEYS. — Bethel, Maine, June 26. — Major Lovejoy and wife arrived here from their annual spring trip to Richardson and Rangeley Lakes. They had, as usual, fine fishing, and say it was still botter than last year. They brought home 10 trout, total 51 pounds, and 6 trout, total 32 pounds. The largest fish, 8 pounds 9 ounces, was caught June 5 by Mrs. L. on an 84-ounce split bamboo rod. This is the largest brook trout ever taken by a lady angler. The dimensions were: length, 264 in.; width, 24 in.; depth, 74 in. —F. H. L.

Sr. LAWRENCE MASKALONGE FISHING.—Ex-Assembly-man Robert A. Livingston came from his island in Alexan-dria Bay last week with one of the largest muscalonge that has been seen in this city for a long time. The fish, which was caught off the dock of Mr. Livingston's island, in the shoal water between it and Judge Donohue's Island, mea-sured nearly five feet in length, and weighed a few ounces less than twenty-five pounds. It was caught with an or-dinary trolling line.

<text><text><text><text>

[TO BE CONTINUED.] THE HUDSON FISHWAYS.—Editor Forest and Stream: The new fishways for the tributaries of the Hudson, which were mentioned a few weeks ago as having been authorized by the Legislature to be built. I hope will be constructed in the most thorough manner. I have not seen a copy of the bill, and therefore cannot say whether they will be con-structed under the supervision of the Commissioners of Fish-eries or not, or whether the Commissioners are to be con-sulted in regard to the choice of the plans. I incline to think, however, that they are not, from the fact that the Engineers' Division of the New York State Canals seems to be in charge of this matter. There are very few fishway experts in the country, and it will injure the prospects of having fishways on all the State streams if these are not only properly con-structed, but properly situated as well. To accomplish this needs a thorough study of the details by some com-

petent expert before the construction is begun, in order that there may be no chance for error. It is also important that these structures should be made efficient and that false notions of economy should not intervene and impair their usefulness. It is not at all difficult to construct a fishway which will readily pass salmon, and some other fishes, but it is more diffi-cult to construct one which shad can be induced to enter, even though they pass up readily after once attempting to go up. It may well be questioned if the engineers of the New York State canals are familiar with the building of fishways, no matter how great their other acquirements may be, and I hope that before the contracts are given out some practical builder of fishways will be engloyed to select the proper sites for the structures. This would be an assurance that the chance of error in location would be reduced to a minimum. With these fish passes properly made, and in good working order, it will not be difficult to obtain appropriations for further work in this direction, and therefore I hope that efforts will be made to have these made in the best manner in order that they may serve as models.—H.

PARASITIC DISEASES OF DOGS-II.

IMPORTANT as are the diseases or block-in. I worms in the dog, the canine cestodes or tapeworms are of even greater interest, allke to the dog owner and the pathologist. Although less numerous than the *nematodcs* de-scribed in the first paper of this series, the part played by these parasites in the economy of life, as regards the propaga-tion of parasitic diseases among animals, is of the first im-portance.

scribed in the first paper of this series, the part payed by these parasites in the economy of life, as regards the propaga-tion of parasitic diseases among animals, is of the first im-portance. The cucumerine tapeworm (*Tenia cucumerina*) is found in from 40 to 70 per cent. of all dogs, and is by far the most common canine tapeworm. It is a small, almost transparent cestode, measuring from 10 to 20 in in length. The body is much elongated and composed of many segments, each seg-ment being in reality a separate individual, joining together a sort of colony of mothers and daughters, which are all pro-duced primarily from the parent head by a process of 'bud-ding," each segment springing from the one before it, but all adhere to each other, and are attached to the larva head or scolex. There is no alimentary canal, the creature subsisting by absorbing nutriment through its skin. The mature or ter-minal joints are much elongated and narrowed at both ends, and each joint is provided with two reproductive papille, one on each side of the margin. The head is furnished with suckers, by which it adheres to the intestinal mucous mem-brane, the intestines of the dog being its proper habitat. The manner in which this parasite obtains entrance into the body of the dog has been thoroughly demonstrated by numer-ous experiments by many observers. The mature terrininal segments, which contain ripe eggs, are passed per anum, and frequently sticking to the hair of the dog, the contained eggs are deposited on the coat. The common dog louse (*Tricho-dectes lalus*) for some reason eats these eggs readily, which the body cavity of the louse, and imbeds itself in the tissues, there becoming encysted and transformed into a microscopic *Cystucerous*, or "louse measle." The way in which a dog will gnaw and lick a louse or flen bite is well-known to all, and in this way 'imeasley" lice are introduced into the canine intes-tinal canal. Here the louse parasite is digested and the ani-nute *Cysticerous* set free, which, penetr

Upon their backs to bite 'ern; And little fleas have lesser fleas, And so ad infinitum/"

And nucle near invitum.¹¹ As the lice are easily passed on from the coat of one animal to another, a single intestinal tape worm of this species may infect a large number of dogs, and an entire pack or kennel will usually suffer at once if one infected dog be introduced. The prevention of cucumerine taenia disease is far mor im-portant than its cure; the method will at once suggest itself, beware of the *Trichodeotes*, and when under treatment or otherwise the tapeworms are expelled they should be destroyed by fire or boiling water. The general considerations of clean-liness, etc., will also at once suggest themselves as efficient aids. The treatment for this disease will be discussed under that proper for tapeworm infection due to other species. The largest and most formidable tapeworm inhabiting the dog is the margined tapeworm (*Tacnia marginata*). It reaches a length of eight feet, but is more commonly but five or six feet long. If is a rather abundant species, being found in 25 per cent. of all full grown English dogs, and is not at all un-common in this country. The larval form or *cysicercus* of this species is found in the sheep, and is known as the slender-necked hydatid, the meck being narrow and much elongated; the entire *cysicercus* is about the size of a large cherry. The head of this *tarnia* is armed with hooks arrayed in a double crown and also with suckers, which taken together, with the great size of the worm, serve tojidentify it,

The way in which the larvæ are introduced into the intes-tine of the dog is by the animal enting raw and infected mut-ton, and the sheep take in the eggs of the *texnia* in drinking water or from eating green food, to which some of the passed ova of this parasite chance to adhere, an infected dog con-stantly sowing the ripe eggs everywhere. The infested ova soon hatch, the embryo emerges and bores its way to a con-venient resting place within the body of its herbivorous host, and there remains encysted until devoured by some hungry dog.

The of this particle drames to adhere, an infected dog constantly solve this particle drame gegs everywhere. The infested ovariant hatch, the embryo emerges and bores its way to a conversion platch, the embryo emerges and bores its way to a conversion platch, the embryo emerges and bores its way to a conversion platch, the embryo emerges and bores its way to a conversion platch, the embryo emerges and bores its way to a conversion platch, the embryo emerges and bores its way to a conversion being the case of a multi, the cyclicarcus or immediate the sheep, and even or dman himself. In the matter condition, as found in the intestine of the dog and wolf, the git to pervent measures from twenty to fifty inches in length. So closely does it resemble in this stage the *Tenia servata* to be described for fortunately it is not by any meaus a common species, being found in less than the per cent. of English dogs, and in a yet mailer number of American animals; among well bread its dogs. The gid tapeworm gains chrance to the body by the animal eating the raw brans of sheep affected with hydrid of the torun, "gid baseac," or "stardy." The photoring a mature bydraid it merican animal set is not the end of the sheep, and the anive and should the dog entra point with what around the aniv, and should the dog entra point with the doub any measure should be any or the way, the with the hole way not end its body arran of the sheep and the anive appear. The embryo increases in size, the holes are cast, and the outer wall develops into a rather bydraid of the bearer, and now a methy on the way, the with the hole way and the anive appear through the targe in ward indices the anive by a sheed of the solution of its body armed with sharp the starts of the extenses with a constant set of a phenomena appear. The embryo increases in size, the holes are cast, and the outer wall develops into a rather bydraid of the torus wall develops into a rather bydraid of a bearer and on the same and of the acture structure of this "vestimate ano

six-hooked embryo emerging from the egg when hatched, boring through the tissues, and cstabilishing itself in the periodical strength, they will certainly a meal of its long-eared bears.
Mothing could be simpler than the prevention of infection by this ternia. If dogs are never allowed to eat uncooked hare or rabbili, they will certainly not suffer from the invasions of this species of parasite. The importance of specify curing any dog of tarnia disease and destroying the passed parasites is evident.
The symptoms caused by tapeworms of various species in the dog are by no means positive or diagnostic. Disturbances of digestion, nutrition in general, and symptoms referable to the nervous system are common. Emaciation without obvious cause, and in spite of a voracious appetite, always suggests the presence of parasites; the finding of segments in the faces is of course positive evidence of the purposes of diagnostis, as the segments of some species are rarely passed spontaneously. After the administration of the medicine the faces must be watched for a day or two for worms. By placing the color, as an ordinary red glazed terra cotta dish, as the taring them up with a small stick the examination is easily and theory, but it must be remembered that unless the "head" or scolar is expelled that the parasite will be speedily reproduced. The most scientitic method is to carefully examine the passages for the heads after the administration of veroifuges. The animal should be prepared for treatment by being if ed only on a solution to for the treatment by being if ed only are support. The dose of the dises of the parse of the sease and hour easily and theory is an addition to the other treatment by being if ed only on solution to the other the passages for the heads after the administration of verifuges. The animal should be prepared for treatment by being if ed only on a small amount of brow the two or three drams; it is given in dose of one of the administer or an the dose of the drive bayes

and under the immediate eye of a skilled veterinary surgeon. If the bowels do not move within three hours after the ad-ministration of any anthelmintic, a full dose of castor oil should be given

The after treatment consists in the giving of only broths and milk as food for a day or two; often tonic treatment and careful attention to exercising and general health will be required after the expulsion of tapeworms to bring the dog up to perfect health.

to perfect health. Tapeworm infection is a disease of adult life, pupples but seldom having access to butchers' offal or the like. They may, however, suffer extensively from the cucumerine species, and the importance of having breeding bitches free from lice at once suggests itself. The prevention of tænia infection has been treated of at length when speaking of the different species. R. W. S.

judge should commit its teaching to memory: "But all the contrarieties and difficulties of breeding weigh nothing (or at least, should not) with the judge who awards prizes at ashow, for if he acts as a man of honor, he is bound to award the prizes (to the best of his ability) to the specimen approaching nearest all round to the standard, and any consideration as to what dogs are likely to be the most useful for improving or preserving the breed, etc., is quite foreign to his commission and simply opening a way for the judge to please his own fancies, and virtually amounts to morally swindling the pub-lic."

and simply opening a way for the judge to please his own fancies, and virtually amounts to morally swindling the public."
Thisten to what Mr. Wynn says on page 218 of his "History of the Mastiff": "The scale of points may give the reader a more general idea of the correct figure of a well reared, typical mastif, but such essentials as activity and symmetry, comjuned with a typical head, a well formed, long, low body and generally heavy animal, should never be lost sight of, either to obtain color, vast height, or grand head with deformed body and weak limbs, or a well grown body with defective head, plainly departing from the true type, which, if the reader has not thoroughly learned from the historical facts which I have laid before his or her notice, I feel it will be a hopeless task to enlighten them."
Then read the standard as amended, that Mr. Wynn appends to his history, and note that every change be has made from the old one is in the direction of adding goodness all over, and remembering that Mr. Wynn is *par excellence* the enthusiast on head among English fauciers, ask yourself if our judges have been right in giving wretched snub-nosed cripples, or contemptible little dwarfs the premier positions? Of course, this presupposes that you have a cory of Mr. Wynn's book, if you have not, send to FOREST AND STREAM for one at once, or resign any consideration or right to have any opinion as to mastiffs. A mastiff man who has not read the book, hasn't got out of his primer, and until he grounds himself in the first principles of mastiff lore, ought not to speak out in meeting. I hope that I may be permitted to add that I have received fully a dozen letters from mastiff nue, all supporting the position I have taken on this matter.
Mr. Haldeman's list of mastiff judges has two very important be solved. Have, the section is that of Mr. W. H. Lee, of Boston, Mass, long the owner of Old Turk (Turk II, A.K.R. 2222) and the importer of Ilford Crouvel. It was Mr. Lee's concurrence that Ilford

HULTON, Pa., June 18, 1886. A ST. BERNARD CLUE. A MEETING will soon be called for the purpose of forming a St. Bernard Club. All who are interested in the breed should at once communicate with Mr. W. W. Tucker, 84 Broad street, New York, who has consented to take charge of the preliminary arrangements. We have no doubt that with the material at hand, an association of the fanciers of the breed will accomplish much of good, and it is to be hoped that every lover of the magnificent animal will lend their influence to make the proposed movement a complete success.

THE ENGLISH FIELD TRIALS.—In our issue of May 20 we published a summary of the English Field Trials which was compiled from an English paper. The report was incom-plete as to the Acton Regnald Stakes. According to the Ken-nel Gazette the winners were: D. R. Scratton's liver and white bitch Hero, 5yrs. (Bang—Hebe), won first in pointers and prize for best of either breed; J. L. Anthony's liver and white bitch Lass of Bow (Braphic—Climax) won second in pointers, and A. P. Heywood-Lonsdale's black and white dog Jovial, 2yrs. (Baron—Joan), won first in setters, and M. A. Richards' black, white and tan bitch Rose, 2yrs. (Diamond—Minnie), won second.

BOSS.

THE mastiff dog Boss, owned by Mr. J. L. Winchell, Fair Haven, Vt., was whelped July 20, 1884. His sire, im-ported Zulu, was by champion Colonel out of champion Diana His dam, Monmouth Meg, was by champion Salisbury and out of Tigress II. (champion Colonel-Lufra). His winnings are very high com., puppy class, New York, 1885; second, Boston and New York, 1886.

<section-header>of Figures II. (champion Colonel—Lufra). His winnings are and New York, 1885. "HISTORY OF THE MASTIFF."* "HISTORY of the Mastiff," by Mr. M. B. Wyns, will be fladly welcomed by all lovers of the breed. The author has made careful research along the records of the distant past of colore that is astonishing. The book is repiete with quotations from the writings of the desting the transformation of the verticings of the desting the transformation of the writings of the destings of modern times. Mr. Wynn has extended his re-back is repiete with quotations from the writings of the dees not tell us in so many words that the mastiff was coveral authors of modern times. Mr. Wynn has extended his re-back is protectives a place so far back in the remote ages prince in pre-historic time waging indiscriminate and bloody warfare upon the formidable edentate and more dreadful saturins. The chapters devoced to the mastiff of modern the single of mastiff type Mr. Wynn says: "In all animals, and even in the races of man, the most distinctive feature forme in the races of man, the most distinctive feature hydrogeneral form of the shull containing the brain, is formed either primarily or most gradually from the continued hydrogeneral form of the shull containing the brain, is formed either primarily or most gradually from the continued hydrigeneral form of the shull containing the brain, is formed either primarily or most gradually throm the continued hydrigeneral form of the shull containing the brain, is formed either primarily or most gradually throm the continued hydrigeneral south as but a portion of the skull torm of the carces and limbs; nay, *ez pedel Herculeen*, insonuch if airly skilled anatomis thas but a portion of the skull torm of the draces south conformity of type, diametrically or-rest indicity to intensity correct idea what the re-ming therefore, on a faily correct idea what the re-ming therefore, on a sait is sometimes incorrectly and pedantically termed, the molossian group, belong

*The "History of the Mastiff," gathered from sculpture, pottery, carvings, paintings and engravings, also from various authors with remarks on the same. By M. B. Wynn, honorary secretary and treag-urer of the late Mastiff Club, and breeder and exhibitor of many prize mastiffs. For sale by the Forest and Stream Publishing Co. Price \$2.50.

WARWICK DOG SHOW.

WARWICK DOG SHOW. The fourth annual exhibition of sporting and non-sporting dogs was held at Warwick on April 28, 29 and 30, in the large exhibition hall belonging to the society. This year the total entry amounted to over 1.600, which is the largest ex-hibition we have attended, and, taking the quality of exhib-its into consideration, the best show we have seen. Yet in a number of instances some of the varieties were not equal in merit to some other shows which have been held; for in-stance the pointers and setters were not equal to what we have seen at Birmingham and other shows, while the quality of the St. Bernards and collies were quite beyond the average. The building is the best adapted for a dog show we know of, with plenty of ground for exercise, and as it is only a three days' show, with a very obliging committee, who allowed all exhibitors at a distance from Warwick to leave on the last day at an early hour to enable them to get home the same inh tor, in the case of Scott and Iris exhibitors, early the following morning, we never heard exhibitors express so much satisfaction with the management of any show; and we believe, from the feeling of all classes of exhibitors, the Warwick show is likely to hold its present position as the sorry to say resulted practically in a failme: The judging was carried on in nine judging rings, under for the classes were judged in the open, so that with so many classes judged at once it was difficuit to see half that was going on. However, as the person leading each dog had a ard with the official number of the dog attached to the from sorry to say resulted practically in a failme: The judging was carried on in nine judging rings, under for the construction was difficuit to see half that was going on. However, as the person leading each dog had a ard with the official number of the dog attached to the from sorty to say resulted practically in a failme: The judges were judged in the open, so that with so many classes judged at once

her head, which is too short, but she is good in body, feet and legs and general character; her condition might have been better. In the challenge class for English setters there were only two. Count Howard, looking well, won easy. We have always spoken well of this dog and, bar nis being small, we think him about the best all round we know. In the open class Prince Rupert, the Birmingham winner, wou. This dog has had a very up and down career since his first appearance at Birmingham. He is rather leggy and his feet Light be better, yet when in condition, he is a dog possessing a good deal of quality. Cobalt, second prize, is too heavy in head. Sir Talton, he., bar beirg small, was about the best setter in the class. The winning bitch is only moderate. Her coat is rather curly. She was catalogued at 420, more than her value we think. Second prize is too small. Black and tan setters were a bail lot. In puppies equal first went to Ulverston Don and Yankee Chief, the former rather leggy, the latter a good made one, full of style, misch possess more quality in head and ears. He was claimed by a well-known fancier who con-siders him a bargain at 220. The Palace winner, Eden Rock, getting whe here. Melle, shown in high condition, won in the challenge class for Irish setters. In open dogs Grouse XIII, the dog we noticed at the Palace where he had slipped his collar and was trying his utmost to get it on again) was first; heis plain in head, good in body, legs and feet, with good coat. color and style. She is full of quality but small. Mulfett and Mrs Evish-moran might have been given vhe. The winner in the puppy class is promising and may render a good accourt of himself again. Mr. Wilson's team of Irish setters won the team prize, with Mr, Shirley's retrievers getting the reserve number. In the challenge class for Irish watter spaniels we found Lady and Hilda again, but on this occasion the property of Capt Thomas. Lady won; we always fancied Young Hilida as best. In the open class, dogs and bitches, Capt. Thomas w

Capt Thomas, Lady work, we avery tableted four, thomas won first and second with two specimens above the average of what is going these days, and the class was also better all through. In the challenge class for Clumber spaniels, Psycho, now about ten years old, won, and he is, in our opinion, the best type of Clumber going. Second went to Boss II., who is plann. We preferred Tower, who is looking rather seedy. In the open class Home's Honesty won well. He is good in head, low on the lecs, with a good body which might be longer. We thought the same gentleman's Hotpot, equal third, the second best, being of the correct type, but not properly furnished at present. His coat and feather was rather better than the winner's. In the otich class we could not follow the idog, but the class was very poor. Bar bedrag small, we thought the same gentleman's Hotpot, equal third, the second best, being of the correct type, but not properly furnished at present. His coat and feather was rather better than the winner's. In the otich class was we could not follow the idog, but the class was very poor. Bar bedrag small, we though the year of the second was the test in the class. Mather, hc., is another good one. In the next class Rastle is short in body First went to Bridford Naomi, the best we have seen for years. The same remark applies to his kennel companion Victor, whe Abot Darkie won. He is long and low with crooked legs, The same remark applies to his kennel companion Victor, whe the scaten's Bruce, low on leg but coarse. Franciful, the next class for black bitches, Boverley Mhea, equal third, is a very nice pupy by Keno. Newton Abbot Princess, winner of second, is bad in legs.

thick-set, proverful animals, deviving their food naturally more from bold attack of larger animals, and tearing the flesh from and gnawing the bones of dead carcasses than on their speed or hunting powers. Their limbs are characteristically short and stot, with powerful muscles to move such powerful short levers. * * * * All mastiffs should be more or less heavily wrinkled about the face, the lips pendulous and having a cer-tain amount of dewlap; the ears, although they should not be set so low as in the heund and should be free from any folding, needine-sized or even thick, heavy ear, is not at variance with purity of mastiff type, and when the face is heavily wrinkled, dewlap pronounced and lips characteristically pendulous, the ear will generally be larger and have more leather about it than modern farcy dictates. Of late years the pendulous, the majority of breeders; in fact, some who set the mselves up for judges, have condemned this oft-mentioned characteristic of the ince, which has been very much lost through the intro-duction of vertracal blood through the boarhound ero s. The stern in the mastiff need not necessarily be carried down, as the modern fancy dictates. for, although a decided improve-ment, we see in the Assyrian sculp ures the tail crooked over the English mastiff. * * * The coat of the mastiff varies greatly according to climate and housing and sooner marks the country the animal belongs to. The colors vary, and formerly the hered ran all colors. It will readily be seen mere height is at variance with the true type: weight and general massiveness being far truer characteristics."

A BIG RAFT OF DOGS.

general massiveness being far truer characteristics." A BIC RAFT OF DOCS. The New York San of June 24 reports: The Year and how's outside the door of Police Headquarters. A moment latter a queer, elderly little worran burst on his vision, and he rubbed his eyes to make sure that what he saw was not the baseless fabric of a nichtmare. The presence of Police is a provide the mark of the structure of the structure of the saveless fabric of a nichtmare. The presence of Police is a provide the mark of the structure of the structure is a provide the mark of the structure of the structure and he rubbed his eyes to make sure that what he saw was ner Corroy and Dunn reassured the Vergeart - Following stee, muzzled and unnuzzled, attached to a stout coid which is he held in her right hand. On one arm she carried a water-ing care also, holding a bag and an apromful of yelps and dates and on her other arm two satchels. Her left hand was ing care also, holding a bag and an apromful of yelps and dates and the there arm two satchels and the thirteen dops immediately surrounded them. Then she turned the bag vers fast shut, colled out and over one another like a lot of mosquide down and ten more chunky little fellows, with the world on the way. She had missed the train for Eastport, i. I. whither she intended togs as she said, had come into the world on the way. She had missed the train for Eastport, i. I. whither she intended tog on ad lispose of the pack of stress, for such she declared the pack to be. The Sergenal stress, for such she declared the pack to allow the dogs to re-mark whither and the dorg in the word dispose of the pack of the specified this she put the dups away in bag and aprop whithe she intended to go and dispose of the rule dup aprop and in the corridor without pay, and whee he learned that as he said she though the station house would be the sation and in the corridor without pay, and whee he learned that and in the corridor without pay, and whee he learned that as he s

The New York Times, of June 25, throws additional light on the case: "Long Island City talk-d about nothing yesterday except the strange Loutta J. Whitham and her tribe of twenty-nine dogs, which created a profound sensation Tuesday night, and afforded widespread amusement on the following day. About seven weeks ago Dennis McMahon, a lawyer, of No. 261 Broad-way, was info mcd by a former neghbor that a strange-look-ing woman, accompanied by a number of dogs, had been making inquiries about him in Morrisana, where he formerly lived. Mr McMahon was somewhat surprised, but soon dis-missed the matter from his mind. One evening a few days later, while he was taking his ease at home, his son told him Mr. McMahon could not remember any female acquaintance who was largely addicted to dogs, but he decided to see the Wound.

Mr. McMahon could not remember any female acquaintance wine was largely addicted to dogs, but he decided to see the woman. "He found at the door a slender woman, not very young, but not il-looking. She was surrounded by thirteen dogs. She looked hungry, as did the dogs. Mr. McMahon, being a practical philanthropist, took the woman and the dogs into his house and feet the lot. He learned that his principal guest was Loutta J. Whitham, the daughter of a woman who some years before had been employed at his summer home in Southern Vermont The mother was somewhat demented, of Mr. and Mrs. McMahon from her mother, and had deter-mined to visit them. Neither Mr. McMahon or his wife were willing to turn the woman out of doors, so they had confort-able quarters prepared for her and her dogs. The next day Loutta assisted in the household duties, and proved herself very u-etul. She was an intellizent woman, but on the dog metsion she was evidently a little off. "Mrs. McMahon determined to keep the women and get rid of the dogs, but she was soon convinced that Rachel weeping for her children would be a cheerful person in comparison with Loutta J. Whitham weeping for her dogs. Mr. Mc Mahon. They arose early in the morning and howled and then sate up late at night and howled. This an-noyed Mr. McMahon. They had the impudence to bark at their benefactor in his own house. Mr. McMahon said this was unkid. Finally the belie of the trob gave birth to a litter of nine pups. Mr. McMahon said this was past endur-ance.

htter of nine pups. Mr. McMahon sad this was pare chain ance. "H told the dog-loving Loutta that the dogsmustgo, either with or without her, as sue might elect. She wept and said that she could not part with her family. Mr. McMahon gave her S5 and told her she could go to a little place of his near Eastport. Long Island, and hve there with her dogs. On Tuesday Loutta and her c ravan set out for Eastport, where they are probably now enjoying themselves. Mr. McMahon says that when Loutta left his house he took a census of her dogs and found the sum total to be thirteen more or less grown animals and nine blind pups, and he does not know how she managed to swell the number to twenty-nine on her way to Long Island City.

PEDIGREE WANTED.—Bangor, Me.—Editor Forest and Stream: I wish to cnange the name of my black and white setter dog Foreman's Boy, formerly Count Berwick, to Fraud. He was sent to me when a pup by Mr. A J. Calahan, of New Haven, Conn., in part payment for Jody Nell, which I sold him. I was to have a pup the irst time bred. He wrote me the pup was by Foreman out of Jolly Nell, whiched June 14, 1885, name Count Berwick. I sold him to Mr. D. A. Goodwin, Newburyport, Mass., who this spring sold him to Dr. Hay-ward, of Taunton, Mars. Soon after Mr. Calahan wrote Dr. Hayward not to register him as a Foreman—Jolly Nell. As a nat'rral consequence the dog has been returned to me. If any of the many readers of this paper can give me the dog's true pedigree, they will oblige H. W. DURGIN.

Woodcock (A K.R. 3781). White, chestnut and tan English setter deg, whelp-d Dec. 14, 1885, by L. Gardner, Mt. Vernon, N.Y., to Adolph Sander, Dayton, O.

KENNEL MANAGEMENT.

1287" No Notice Taken of Anonymous Correspondents.

KENNEL MANACEMENT. BY No Notice Taken of Anonymous Correspondents. J. W.E., Cohoes. — My pointer has a sore on her shoulder, the hair faile off it i-oks raw and is spreading. A friend of mine has a sister which broke out the same way, and ran at the nose, and finally of fowler's solution of arsenic three times daily. Wash the sores is that and morning with warm water and castle soap and dress with balan of Peru ointment. M. H. Pi itad-iphine... Them fra powfer, and, as I always do, a disinfect int in my kennel. Is there any liquid preparation I could safely use for six weeks old colle pupples that would need the irritation or pimples and kill the vermin at the same time? Would it be safe, while they have the pimples, to pass a fine comb wet with kerosene, through the hair's Ans. Put a half grain of corroive sublimite to eight ounces of water for a wash. Do not use the comb and kerosene. G. S. D. Philad-phin...-I fave a spaniel pun (King Charles and cocker, who-e case p-iz2les m+. She appears to b-sizk at her som-ath eal the time. The matter she throws off is hime slime, always filter cating. Itas heen so about six weeks. Have treated her for worms with fluid extrace spigelis and senna, but witbout benefit. She has nad sever 1 fits, only severe on one occarlo, and those I arribute to excitement, as I had her on the street the first day and she was very much excited previous to attack. She has had inward lis getting, very each each boiled files. She soboers continue dy and is getting very mach case subjects and medical. Give as ittle to at woode, the case subjects at match and medical. Give as ittle to at some subject on the subject form. Give milk with lime water, Valentha's one deform chronic gastrifis. The causes are very pumerous. The treatment is directed and medical. Give a slittle food as possible and in a concentrated form. Give milk with lime water, velantha's one deform of Fowler's solution of systeric three times daaly mised in milk. The trouble may have something to du

Atong THE NORTHERN LARES of Wisconsh, Minnesota and Jowa, are bundreds of deligntful places where one can pass the summer months in quiet rest and enjoyment, and return home at the end of the heated term completely reluvenated. Each recurring season brings to Oconouowoe, Waukesha, Beaver Dam, Frontenac, Okoboli, Minnetonka, white Bear and innumerable other charming localities with romantic names, thousands of our best people whose winter homes are on either side of Mason and Divon's line. Elegance and comfort at a moderate cost can be readily obtained. A list of sum-mer homes with all necessary information pertaining thereto is being distributed by the CHICAGO, MILWAUKER & ST. PAUL RAUWAY, and will be sent free upon application by letter to A. V. H. Carpenter, General Passenger Agent, Milwaukee, Wis.-Adv.

NEW YORK ASSOCIATION.

NEW YOKK ASSOCIATION. THE twenty-elghth annual convention of the New York State Association for the Protection of Fish and Game began in Rochester June 21, at the Brackett House. The Prevident James H. Brown, of Rochester, presided at the business meeting, and the fol-lowing named clubs wire represented hy del-sates: Genosee Sports-men's Club, Irondequoit; Monroe County Sportsmen's Club, Atoches-ter; Onoudga County Sportsmen's Club, Syracu-e; Buffalo Atdu-bon Club, of Buffalo; Oneida County Sportsmen's Association, of Uticas; Queen Citz (Luh, Buffalo; Nagara River Shooting Club, La safle; Nortbern Wavne Gun (Lub, of Wolcott. The Ontarlo Gun Club, of East Kendell, and Lakestie Gun Club, of Geneva, appled tor admission and were accepted. — John B. Sare, R-cording Sceretary, who had been appointed at the previous convention to get the consent of Henry A. Richmond, of Buffalo, to shoot at other than It's pigeons for the Deau Richmond tup, reported that Mr. Richmond would not consent to a change. — The following, offered by W. J. Babcock, was adopted: "Belleving that the killing of game during the breeding season is in direct orposition to the true principle of game protection, therefore, — Resolved: That the committee on game laws of this Association be directed to prepare an amendment to the game laws of this State prohibiliting the killing of wild ducks, geese, brant and snipe, between

Feb. 1 and Sept. 1 of each year, and to urge upon the Legislature the adoption of the same," It was resolved that the word amateur included all who never won a prize at any previous State convention where inanimate targets were used.

The meeting adjourned to Tuesday night, when it reconvened, and veral clubs in arrears two years were dropped from membership. letter from L. O. Smith, offering to present a cup to be shot for unally, was read, but as the association had some years ago re-lved to receive no more trophies to be shot for perpetually, the fer was declined and the secretary directed to inform Mr. Smith of e circumstance.

A letter from L. C. Smith, offering to present a cup to be shot for lounally, was read, but as the association had some years ago re-solved to receive no more trophies to be shot for perpetually, the fifter was declined and the sceretary directed to inform Mr. Smith of the circumstance. Utica was chosen as the place to hold the convention of 1887, and t will be under the auspices of the Oneida County Sportsmen's Association. Officers for the ensuing year were chosen as follows; President, Wilbur H. Booth, of Utica: Furst Vice-President, James H. Srown, of Rochester; Second Vice-President, A. Ames Howlett, of Syracuse. Recording Sceretary, Jobn B. Sage, of Puffalo. Corres-onding Sceretary, M. Brunner, of Utica: Treasurer, A. G. Court-rey, of Syracuse. The targets to be shot at in the trap shooting next year can be chosen by the club holding the convention, but they are required to ive reasonable notice of what it shall be to the sportsmen of the State. The business meeting adjourned witbout day. The scores at the trap shooting, which began Tuesday morning on the Driving Park and continued to Friday afternoon, were as follows: Thesday, June 22, Contest No. 1, 12 Porina blackthirds; purse \$250. --F. TAMATOA DE AIN Mass June 17 The Investor Disin Cup Club	PROOFF VALUE AND
JAMAICA PLAIN, Mass., June 17,Tbe Jamaica Plain Gun Club held a shoot on their grounds at Clarenden Hills, June 17. The boys are somewhat out of practice, but managed to crowd in considerable fun for the time, notwitbstanding the poor scores.	BROOKLYN, June 24.—Notwithstanding the bad weather to-day, more than two hundred friends and members of the Glemore Rod and Gun Club assembled at Dexrer's Park, Oppress Hills, L. I., to witness the regular monthly shoot of the club. The big event of the day was the contest for the Midas diamond badge. Joseph Oc's held the badge during the last year, and made a good fight this time. The shoot for the badge was a handicap, with 80yds, boundary, 10 birds each:

A POINT OF DOG LAW.-Henry Albach is a good-natured saloon-keeper in the Sixth Ward, and has a pretty wife. He always thought that when she stood behind the counter more beer was sold than when more awkward hands than hers spun the schooners on the bar. As she was always timid in his absence, a savage poolle of the Scotch terrier breed was kept as her protector, and, as the dog rested his head upon the saw-dust-covered floor, he dreamed of nothing but making a fierce attack upon a burglar. John Ally is a carpenter and lives on Twelfth istreet, New York. John has always dropped into the saloon on his way home to get some beer and ex-change a plessant word with the saloon-keeper's pretty wife. Monday evening John came as usual, and, while standing at the end of the bar drinking his beer, he slyl stole his arm around the waist of the handsome barmaid. The dog not hav-ing tasted the flesh of a burglar for a long time decided not to be conservative, and although the calf of the leg began to worry his lower limbs until he was beaten off. Yesterday John applied to Justice C. J. White for a warrant to kill the dog and after hearing the circumstances the Court denied the application, saying that as he was a treepasser while hugging the saloon-keeper's wife no warrant could issue. The dog's nose still rests upon the sawdust, and he is still watching for burglars.-*Philadelphia Times*.

MILLIONS OF DOLLARS WERE LOST by men who were accidentally injured in 1884, and not insured in The TRAVELERS, of Hartford, Conn, The wise ones insured and drew \$950,000 in cash benefits.—Adv.

EASTERN Y. C.

EASTERN Y. C. [By Telegraph to the Forest and Stream.] BOSTON, June 29.—The regatta of the Eastern Y. C. at Marblehead to-day was a most successful one, wind and weather being fav-orable for a real test of the craft. There was a whole sail breeze all day. The great event was the contest of the three sloops, Puritan, Prisella and Mayflower, twice over the 15 mile course. The yachts crossed the line as follows: Prisella, 12:05; Puritan, 12:12:45; May-flower, 12:14:30. Wind over starboard quarter to southerly stakeboat, which was rounded as follows: Prisella, 12:35:30; Puritan, 12:39:30; Marflower, 12:30:30; Puritan, 15:07:46. Ou the beat to windwards stakeboat, the three rounded the mark as follows: Prisella, 1:30:45; Marflower, 1:07:32; Puritan, 1:07:46. Ou the beat to windwards to starting stakeboat the Puritan worked ahead, the boats rounding as follows: Puritan, 1:23:50; Priscilla, 1:53:30; Puritan, 1:23:50; Priscilla, a, 32:05; Priscilla, 2:21:15; Mayflower, 2:54:94; the northern stakeboat, the was crossed as follows: Puritan, 8:30; Priscilla, 3:36:30; Augitower, 3:37:00. COLUMBIA Y. C. 19TH REGATTA.

COLUMBIA Y. C. 19TH REGATTA. The columbia Y. C. held a very successful regata on June 24, being favored with a good breeze all day. The course of the cub is a peculiar one, but possesses a great advautage in that it is within view of the club house and Riverside drive, so no steamer was beeded. From the club house the yacbis sail up the river to a mark boat on the east shore, thence across to a mark boat on the west shore, thence directly across the river, turning the home mark, thence out around the second mark, and down diagonally across the twice. The mark bides give a variety of courses and his ure some windward work with every wind. The crews were limited to one man per 4t of length and sailug master, the latter being a club prizes a champion penant was given for the boss elapsed time. The undwarf rom 8, to 8, E. during the day, blowing nicely in the after-nom. The summur: CLASE ACABIN YACHS.

KNICKERBOCKER Y. C. CRUISE —The K. Y. C. will start on July 8 for a short cruise, the rendezvous being at City Island. A meeting will be held on board the fingship to decide on the course for the 4th and 5th. The club will start on a longer cruise on July 17 at 4 P. M., returning on July 27.

BOSTON Y. C. REGATTA, JUNE 23.

BOSTON Y. C. RECATTA, JUNE 23. THE first of the two champion cup regatas of the Boston Y. C. was sailed on June 23. For two sensors the Pfaff Cup has been raced for, Edna winning two, and Kity, Frolic and Seabird each one, of the three required to bold it. This year, in addition, two new sil-ver cups are offered by Vice Com. John E. Meer, one for schooners and one for first-class sloops, two wins being needed to hold either cup. The classes and prizes are as follows: — These classes and prizes are as follows: — These classes and prizes are as follows: — The classes chooners.—Measuring 33ft. and more sailing length. Yachts 30ft, and under 37ft, may sail in this class by calling them-selves 53ft, sailing length. The prize is a solid silver champion cup, presented by Vice-Com. John B. Meer, a second prize of \$20 will be given. No prize will be given any yacbt that has not defeated a com-petitor. Mr. N. L. Stebbns, the weil-known photographer, will pre-sent each of the first class cup vaniors a large photograph of his yacbt as a special prize. — Trist Class—Sloops.—Measuring 33ft. and more sailing length. Yachts 30ft. and under 33ft may sail in this class by calling them-selves 33ft, sailing length. The prize is a solid silver champion cup, presented by Vice-Com. John B. Meer; a second prize of \$20 will be given. Mo prize will be given any sail in this class by calling them-selves 33ft, sailing length. The prize is a solid silver champion cup, presented by Vice-Com. John B. Meer; a second prize of \$20 will be given. Second class—under thirty-three feet, sailing length. The prize is

elves 33ft, sailing length. The prize is a solid silver champion cup, presented by Vice-Com. John B. Meer; a second prize of \$20 will be given. Second class-under thirty-three feet, sailing length. The prize is the solid silver Champion Cup, presented by Commodore Pfaff. In addition, a second prize of \$10. The course for first class was from off the club house through the Narrows, leaving Sound Point beacon on port; Spectacle Island, Nix's Mate bell-buoy, Galley's Island, George's Island and buoy No. 7, east of George's Island, on starboard; Toddy Rocks buoy and Point Allerton buoy on starboard; Moding's bell-boat, whistling buoy off the Graves, Egg Rock and Ram Head buoy, on the port; Fawn Bar buoys on the starboard; Sound Point beacon on starboard, Spectacle Island on the port, to the judges' hoat, passing between it and the flag-boat. For second class: From off the club house, through the Racrows, leaving Sound Point beacon on the starboard; Nix's Mate bell-buoy, Galloy's Island, Gorge's Island, duay No. 7, Toddy Rocks buoy, and Point Allerton buoy on the starboard; Harding's bell-buoy, on the port; Point Allerton buoy on the port; Bisland, Galloy's Island, Graye's Island, buy No. 7, Toddy Rocks buoy, and Point Allerton buoy on the port; Bisland, Galloy's Island, Galloy's Island, Mix's Mate bell-buoy on the port; Sound Point beacon on the starboard; Spectacle Island on the port, to the udges' boat, passing between it and the flag-boat. The start was called for 10:30 A. M., all yachts to have headsalis Iowered. Anchored uear Thompin's Island were Eva, Eccho, Kity and Majel, of the second class, outside were Shadow and Nimbus, and sulf inchier on the case, hour was second boat, but Adricone passed her; she beat Nimbus badly, however. Majel led her class, but took the ground hear Sunova Point heacon, Iring there from 11:29 to 11:39. Evaluation and spin the cont on the starboard. Encovered Leveth. Engeth. Corrected.

THE PILGRIM CHALLENGED. BY DR. W. H. WINSLOW.

<text><text><text><text><text><text><text>

We recognized that it was a challenge to a race, but we were too much interested in the pretty cottages, the bold, pine-covered head-lands and the beautiful coves of the shore to pay particular attention to the sailing, and when we had reached Hugh's Head, that barred our progress four miles from our starting point, the sloop had crept up almost upon our beam, and it was evident that sile was faster than the Pilgrim with a boat in tow, and a free sailer before the wind.

our progress four miles from our starting point, the sloop had crept up almost upon our beam, and it was evident that she was faster than the Fligrim with a boat in tow, and a free sailer before the wind. Then the cutter was turned around, the boom jibed and the sheets trimmed flat down for a course along the island and nome. The sloop went past, and I thoughts the did not wish to race after all. The next moment she trimmed in sheets, went square across our stern and made a rapid run with the wind a little free in toward the shore till she was upon our weather quarter, when she went about and struck a parallel course with us, naving gained by the Yankee trick about quarter of a mile the weather gauge of us. Now the contest became interesting. The wind had been freshening as the sun went down, and the strong puffs from the northwest heeled the Pligrim to her rail, and she edged up into it and shot ahead like an arrow. The crew laid himself down flat alongside of the house, racing style, the ladies sat down in the bottom of the cockpit, and I braced my feet against the lee side of the cockpit, and I braced my feet again immediately with a shiver of the managed the tiller and kept the jib sheet ready to let, swo thought the cockpit staving and the water were getting a little too well ac-quainted, but I hauled in again immediately with a shiver of the manasil and then looked over to see my oppment almost upon her beam ends, the malnasil flapping and the jib bellying and shakine. We were both carrying too much sail, but I knew we could stand it, and the stranger was not going to set an example. So we bowled along up the eastern channel, the Pligrim hurging the wind and show as do projecting reeds, the stranger doing nobly, but slowly and surely sag-ging to leeward unt is he was first astern, then upon our lee quarter, while the little Pligrim was dancing away toward Belfast and eating up to the very wind's cew with her joyous excursionists. The all doubt of the effort of the stranger to test speed vanished, for sh

A, J. Fostermann, M. 49 12 405 30 , 5 16 15 [[ROYAL CANADIAN Y. C.—The R. C. Y. C. held an important meeting on June 19, at which twenty-five members were present. Besides some minor changes in the by-laws, the club resolved to abolish their existing sailing regulations and to adopt those of the Lake Y. R. A., the principal difference involved being the question of shifting ballast, which is henceforth prohibited in the R. C. Y. C. By-law No. 17, admitting junior members without entrance fee was changed, making the limit of age 25 years in place of 21.

THE BERTHON FOLDING BOATS.

THE BERTHON FOLDING BOATS. "HE Berthon hoats are well known to persons familiar with Eng-lisb yachting and navical matters, but only a few have found er way to this country. The toats have been manufactured for "ten years, and more than 6,000 are in use in all elimates. Of sizes naing from large ship's boats to the little 'ft oingby. The com-uy has a l-ree factory in operation in the pertty little town of charge t the invertor of the boats, Rev. E. L. Berthon, Vicar of user, who divides his attention between his factory and the care a large grafts with a beautiful old Abby Church. The Rev. Mr, rthon is a great admirer of Yankee mechanical skill, and his work urs close "resemblance to our best examples of lictness and end h, whil- combining with these qualities the best English ideas to thoors ghess. The large war-rooms of the company heug Lord meany, and directors capt. Price, R. N., M. P., Col, Colgethorn and the advertion.

Note that the set of t

el like the leaves of a hook when closing. The ribs are thin but veral inches deep, leaving a space between inner and outer skin nch, reing divided off by the ribs, furnishes tight absolutely water-th compartments capable of floating the boat when the latter is lof aster, also rendering the puncuire of the skin in any one see of litle consequence. Each rib, as also the keel, stem and armost and gunwales, is composite, being built up of thin strips of mada elm, steamed, het that divited througn, making ope manent. If but elastic curve. There are no transverse ribs, but a bottom ard, jointed longitudinally down the middle and hinged by two ribs, vers the bottom. The leves on each side extend from this board under the g.nwale and hold the boat open. They are rapidly set and genged

juited longitudinally down the middle aud hinged to two rbbs. the bottom. The leves on each side extend from this board er the genwale and hold the boat open. They are rapidly set clamped wins are of the best long flax canvas, carefully water-proofed wered with a flexible paint. Cracking or jeeling are unknown, their durability, the agents in New York have an 1^oft, boat has been in active use on board a m-rchant vessel for over their durability, the agents in New York have an 1^oft, boat has been in active use on board a m-rchant vessel for over tears, and is as good and serviceable as when new. This board ed at a trial in January last at the Bookton navy yard. She umg from the davits, opened, lowered with a few men, then of fifteen men boarded her an: pulled around the basis. This sordered by the navy department and was held before a board serve appointed to examine the boats. This board basis made a row as lerport, and recommends the boats highly. The boars easily and rapidly repaired. A rent in canvas can be quickly up or patched, and when painted with the special preparition of a snew. The excellence of the boats highly. The boart exploit in anal step numbers as a in use in landa and Central . As to thick seaworthness, in September, 1882, Capt. Harvey, with a crew of four hands, sailed a 28tt. Berthon boat trons finistere to the Scilly Islamis and thence up the channel to impton, a distance in all of 700 miles, in six days sailing. All clain transports, several steamer lines, and nearly all the tor astand sail to step in forward thwart. The shooting and fish-ats are made lighter and leves beamy. They claim to excel all in strength and carrying power. The Berlan decked cance opened up, and is an excellent sailer, fast and safe in rough the strength and earlying power. The Berlan decked cance opened up, and is an excellent sailer, fast and safe in rough They are sure to become popular in this county. The in strength and carrying power. LIGYDS' YACHT REGISTER. - This valuade using the adjust rear in a still greater siz - han hefore, the regular lists being fuller ind more complete: while several interesting and valuable tables are here added. The most important of these gives tounage, de-cription and nationality of all use yachts on the register, a total of R40 vessels of 167.343 tons. Of these 907 are steam and 2.943 are alling craft, the tounare of the former being 66.407 and of the latter works are included in the list. Another similar table gives a list of rachts are included in the list. Another similar table gives a list of rachts are included in the list. Another similar table gives a list of rachts are included in the list. Another similar table gives a list of rachts are included in the list. Another similar table gives a list of rachts are included in the list. Another similar table gives a list of rachts are included in the list. Another similar table gives a list of rachts are included in the list. Another similar table gives and the racht classified according to their tomage, which gives some inter-sting figures. The largest private yacht is the Alva, now building for Mr. Y anderbilt, 1238 tons, while the next is also an American racht, a Bootch yacht of 812 tons, then Nr. Bennett's Namouna of 740 tons. All these are steamers, but the largest sailing yacht is also an American, a Matassaferes, 406 tons, while the divers and designers, with names and none go of yachts built by them. The list of yachts is larger and more companiand and ever before. The book is bound and printed in the same handsome siyle as usual and is in every way a credit to the great society which if represents. Now that the Y acredit conserve to society which is the proces. Now that the Y acredit conserve to a code, the dimension given con-regys no idea of the aize of a boat, as waterline length does, and sim-larly septh of hold shows hitle as to dract of water, and these latter ingures are the ones that yachtsmen need.

the strap on yate beld in to the mast, whether full same track tackle carried. A lug sail can hardly he set taut by a halliard, but a tack tackle must be employed, and a very powerful one is rigged as follows. On the mast is another ring to which is lashed a brass block (d). On decl is a deck pulley, at pot side of mast. The tack line (b) is made fast to the deck baft the pulley, the end is rove up and forward through th the deck baft the pulley, and aft through deck pulley to cleat at for in the deck about the pulley. The end is rove up and forward through the the deck baft the pulley. The set of the deck pulley to cleat at for the deck pulley. The deck abaff the pulley, the end is rove up and forward through the block (d) thence down and aft through deck pulley to cleat at fore end of well. In setting sail the mast is stepped, hook on boom is snapped into the eye of block (d), the two partels on the bottom are tied, the hallnard is passed from aft forward through the strap on yard and hooked to upner ring (d); then the sail is holisted as high as possible, after which, when the halliard is belayed, the tack is hauded down until the sail is perfectly flat. In reefing or lowering it is best to start the tack first, then when the halliard is set up the tack is hardened down again. A toppingiff (e) is thus fitted: The line is double, running from masthead nown each side of sail and splving into one just below hoom, leaving enouch slack to lower the latter. On the boom is a fairleader (k) lashed flat, and through this the toppingliff is rove, theuee to a cleat on boom. It may thus be easily racende for a pull at any time, even with boom hard off. In boisting or reefing the toppingliff, the fore end 3, cast off and the lift remains on the mast. In setting sail the latter is first dropped into the hight of the toppingliff, the fore end of spars on deck at port side of mast. The sampted on, and all is ready for holisting. On each batten a parrel is made fast, to hold the sail to the mast on the starboard tack. There are small lines about 2½(1, long, the fore ends fast to the battens, while the after cuds are tied or hooked into rung lashed to the battens. The check in a strain logal hoat all saways a trouble, wherever it may be

ift is func-mapped on, and all is read-napped to the batters. The sheet in a small boat is always a trouble, wherever it may be made to the batters. BROOKLYN C. C., JUNE 26. THE race was for the challenge cup of the Brooklyn C. C. The cup was last won by M. V. Brokaw, of the Minx. J. F. Newman, commodore of the club, had challenged for the cup, and half a dozen of the club members had manned their craft to take chances of cap-turing it. The club house was filled with the sound of preparations early in the afternoon, but the heavy squall and shower that came up the astop to the proceedings for awhile. Then the sun shones there are mass twice over a triangular course, a total of three miles. The vind was light at the start and the litle racers slipped along what stops to more a triangular course, a total of three miles. The wind was light at the start and the litle racers slipped along where forced over the line first with "Tom" Budiugton's feet stowed away in the forecastle, his head and shoulders only showing over the guowale. She slipped along as if propelled by auxiliary mosquito power and gained perceptibly on her pursuers. Next came Commo-

PECK & SNYDER, 126 Nassau St., N. Y.

dore Newman in the Sunbeam with a life-preserver and a dozen begs of hirdshot tor ballast. The Kelpie came third, with R. G. Blake for cook and captain bold. Close on his heels was the invincible 'Mart' Brokaw in the Minx, followed by the Guenn, whose helm was in the firm grasp of Vice-Commodore Whitlock, who has the reputation of being able to cut closer to a turning stake than any other canceman lying. The savey little Tip-top, with ber turn up nose and her zebra stripes danced along with Robert Wilkin aboard, and the Edna, Cap-tain Balmano, brought up the rear. Bradually the little sails faded into the distance in the direction of the first turning buoy. They rounded it in the following order: Whitlock, Budington, Blake, Wilkin, Balmanne, Niewman, Brokaw. The hreeze had freshened and sent the Guenn to the front. It was a beat to windward for the second buoy, which was rounded by Whit-leck, Budington, Newman and Blake. All the others had carried away something and were disabled. The third side of the triangle why something and were disabled. The third side of the triangle whitlock rounded the third buoy in good shape and stretched a way on the second lap. Budington carried away his steering gear and concluded to quit. The Sunbeam jibed in a heavy breeze and sea, fouled her boom, and was bottom side up in ahout two seconds, with Skipper Newman in the loving embrace of his life-preserver. Whit lock number the breeze dropped to a calm again.

TORONTO C. C. RACES.—On June 19 three races took place, the sailing challenge cup, novices tropby, the two sailing together, and the padding challenge cup. The entries in the sailing races were the Mac, W. G. McKendrick; Alouetta, W. H. Lys; Boreas, "Hugh Nellson; Kate, Colin Fraser; Wanda, W. H. P. Weston; Sapphire, J. W. Bridgeman; Firedry, W. Cooke; Madge, Chas. Baird, and an un-named cance, A. Shaw. Messrs. Shaw, Baird, Leys, Weston and Cooke are novices. The Mac won the cup, and has been challenged to sail on July 10. Alouette, a new Rushton cance, won the novice trophy. The entries in the padding race were: Alouette, Leys, whi-ner; Mac, McKendrick, and Wanda, Weston.

ALBANY BI-CENTENNIAL REGATTA.—There will be canoe sail-ing races at Albany. on Monday, July 19, at 3 P. M., on the occasion of the celebration of the two hundreth anniversary of the founding of the city. A handsome piece of plate and flags are offered as prizes and all canoeists are invited to compete therefor. Entries will be made in writing to the chairman of the committee before noon of July 19. A. C. A. rules to govern. The races will be under the aus-pices of the Mohican C. C., who will welcome most cordially all A C. A. brethren who may visit the city and compete in the races.—Ros-ERT MULLENNCE URD. New York Level of Micro Multiperson

THE CHALLENGE CUP.—New York, June 20, 188, —Editor Forest and Stream: I heg to acknowledge as follows, further contributions to the A. C. A. International Challengre Cup; Jas G. Knap, Ogdens-hurg, N. X., \$1; E. D. Wetmore, Warren, Pa, \$1, Previously ac-knowledged, \$335,15. Total to date, \$337,15,—WM. WHITLOCK, Chair-man (37 West 22d Street, N. Y.).

A. C. A. PROGRAMME.—The programmes for 1586 have been sent out in the form of a neat circular, as was done last year. Commo-dore Rathbun calls attention to an error in the classification, Rule 1, on page 10-Class B, in which the limit of length should be 17ft, and not 16, as printed.

So easy to row with Alleu's bow-facers. Catalogue free. Oars complete, \$8 per pair. Fred A. Allen, Monmouth, III.-Adv.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents. H. T. B. Hamilton Club-Neither

W. G. S., Marydel, Md.-Train oil is whale oil procured by boiling the blubber or fat.

W. O. S., Maryoer, Md. – Frain oil is whate oil precured by boiling the blubber or fat.
Z., Yonkers, N. Y. – A little white is admissible on the breast of the red Irish setter. The coat grows dark with age.
G. H. P., Middletown, Conn. – The New York woodcock season will open Aug. 1. We cannot advise you as to the locality named.
S. E. B., Boston – Ooly a very few deer are left in Massachusetts. They are protected at all times, the penalty for hunting, chasing or killing one being \$100.
W. N. S. Winchester, Ind. – If you will send your name, we will take pleasure in giving you such assistance as is in our power. It is quite impossible for us to correctly address communications to persons whose names we do not know.
ANCLER. – Where can I find trout streams within fifty miles of New York' Ans. As you no doubt mean streams which are open for free fishing we cannot promise you many fish within that distance. Try Baldwin's, Long Island; Newton, N. J.; Milford, Bushkill or Shohola, Fa.

Pa. W. O. W., Charlottesville, Va.—It is possible that the black bass may occasionally eat its own species, but, as a rule, it prefers soft-finned fishes, minnows, etc., flies, worms and insect larvæ. It is safe to say that the bass does not eat its own kind to any great extent, and we do not remember to have seen a small black bass taken from the stomach of a large one, as is often seen in the case of the pike or nickerel. pickerel

pickerel. C. A., Cambridge, Mass. -1. Could you kindly inform me of the real distinction, if any exists, between a lake and brook trout. 2. Is it possible that there can be lake trout on the Nepissiquit, 70 miles from mouth. in very quick water? 3. Has a prize heen offered by you for a brook trout of 5 pounds or over? Ans. 1. By "lake trout" we understand the "togue" of New England, the "lunge" of Canada and Maine, the "salmon trout" of Western New York, and the "Mackinaw trout" of Mich., the Salvelinus fontinatis, also called speckled trout, mountain trout, etc. 2. No. 8. No. _____

A citizen of Arrowsmith, Ill,, recently captured two young mockingbirds and put them into a cage and hung it on the outside of the house, where the mother bird fed them until one day last week, when a meadow sparrow whipped her away and has since taken maternal care of the little fellows, feeding them as her own.—*Chicago Times*.

A man in Lawrence, Kan, has been arrested for burglary He attempted to prove an alibi by declaring that he had been out fishing, and he couldn't produce any fish and was held for trial. Here is a state of things. A string of fish absolutely necessary to prove that a man has been fishing! This is against all precedent.—Kansas City Journal.

In a garden at Caledonia, N. Y., a bed of flowers has been laid out, twenty-two feet long, to represent a huge trout. The gills, fins and eyes are represented by different colored flowers.

PATENTED MAY 4, 1886.
 With the exception of our Patent Compensating Reels and Section Bamboo Rods which we introduce to the public, the state ever made. The chief points of manifest superiority of this method of tying flies over the old-fashioned way are: If the wonderfully life-like and fluttering motion this fly has when moved on the water.
 Ba-Any of the present favorite combinations of color and form can be tied in this way. Thus, those who believe that fish are attracted by particular colors of fly, can have their old patterns in the patent style.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY. SIX MONTHS. \$2.

NEW YORK, JULY 8, 1886.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertain-ment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be re-garded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENIS.

ADV PARTISEMENTIS. Only advertisements of an approved character inserted. Inside pages, nonpareli type, 35 cents per line. Special rates for three, six and twelve months. Reading notices \$1.00 per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted.

SUBSCRIPTIONS

May begin at any time. Subscription price, \$4 per year; \$2 for six months; to a club of three annual subscribers, three copies for \$10; five copies for \$16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornbill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs, Samp-son Low, Marston, Searles and Rivington, 188 Fleet street, Loudon, Eng. Foreign subscription price, \$5 per year; \$2.50 for six months. Address all communications. Forest and Stream Publishing Oo. New York Corr.

CONCERNING CONSISTENCY.

THE AUDUBON SOCIETY for the protection of birds was founded by the FOREST AND STREAM, a sportsmen's journal. That is the alleged paradox which in this present year of grace is vexing the souls of certain more or less wellmeaning men and women. The editor of an obscure religious paper in Chicago is grieved because a letter received by him from this office relating to the AUDUBON SOCIETY was written on a sheet of paper bearing at its head the pictured rod and gun-implements of bird destruction. A Cincinnati doctor, who has entered the lists as the champion knight of befeathered Duleineas, wants people to go on killing song birds because the AUDUBON SOCHETY was founded by a journal devoted to the interests of a class of men who shoot birds for sport; and the good doctor is also apprehensive lest the wicked journal should actually be given some credit by the public because of these bird protective undertakings.

The worthy individuals are unduly perturbing their spirits in this warm July weather. There is nothing inconsistent in the attitude of FOREST AND STREAM toward song bird destruction. It represents the general sentiment of sportsmen,

Simply because a man pursues and kills game birds and animals which, so far as we may reason from analogy, were created expressly for men to hunt and kill, it does not follow that he is bent on the foolish and wicked extermination of other birds which were created to gladden the world with their beauty and song and to wage their warfare upon the noxious insect hosts. As a matter of fact, the average sportsman recognizes more fully than the average non-shooting man, the economic value of such birds as the AUDUBON Socierry is concerned with. The sportsman, through his elubs and journals, has secured many of the best bird protective laws now in force, and he has secured them, too, in the face of stupid opposition and in spite of the lethargic indifference of just such individuals as are now fault finding because the Audubon movement was not put in motion by themselves

It is always easier to stand out one side and carp and and intelligence of American yacht clubs.

whine than to put one's own shoulder to the wheel; and after a thing has been done in one way it is always easy to gain passing notoricty by loudly proclaiming that it might have been done better in some other way.

The friends of song bird protection invite the co-operation of all sincere workers in the cause. They ask for honest, united, and, if honest and united, effective working together for the common end.

To ask that there should be absolute unanimity of opinion among those who are honestly concerned for the success of the campaign against the song bird feather fashion would be seeking too much from human nature. Differences, misunderstandings and dissensions have been the attendants of every laudable public movement. The cause of the Ameri-can Colonies was hampered year after year by the want of harmony between the American representatives in Paris. But Lee and Deane and Franklin were patriots, and, though they could not understand each other and worked at cross purposes, all had at heart the interest of the Colonies. It is to be hoped that the several individuals who have criticised the AUDUBON SOCIETY because of its origin in this office are sincerely interested in securing the objects sought by the Society; and more than this, it is already an established certainty that the movement, critics or no eritics, is a successful one.

CELEBRATING THE FOURTH.

A PART from the barbaric noise inseparable from the occasion, the distinguishing and suggestive feature of the Fourth of July has come to be the variety of outdoor sports on that day, and the numbers of people who, as participants or spectators, are interested in them. The bare eatalogue of these pastimes discloses the place open-air amusements occupy in the public taste. First and foremost, of course, were the base ball matches innumerable, witnessed by hundreds of thousands of spectators; with lacrosse, cricket and lawn tennis matches; Scottish and athletic games; rowing, yachting and ennocing regattas; horse races and bicycle races; polo; whippet racings; rifle and trap-shooting matches; each engaging its special share of public attention and demanding full reports in the morning papers of the next day. The anglers were out in force, and July woodcoek shooters sweltered in the covers.

The old style of celebrating the national holiday is gradually giving away. In its observance of the day society may be divided into two classes, the first of those who try to get away from the noise and heat, and pass the hours in quiet; and the other of those who seek amusement. The latter is rapidly learning that more satisfaction is to be derived from some form of outdoor sport, than in the aimless methods of celebrating once in vogue, when a big crowd and a big noise, with a spice of patriotic spread-eagleism, furnished the regular programme. The day s a holiday gives more satisfaction because of these regularly organized forms of entertainment. It is more of an event to look forward to.

There are not wanting those who decry the new form of holiday, and who would restore the patriotic programme of earlier days with orations and public reading of the Declaration of Independence. It cannot be said, however, that the Fourth does not accomplish its purpose, even though there be no such formal public recognition of the event it commemorates. The day, even though wholly given over to sensible forms of amusement, has an educational influence of incalculable value, and its influence is to stimulate patriotism none the less, though the direct appeal to that sentiment once so common be now omitted.

A YACHT RACING CLASSIFICATION.

O^N another page we touch on the question of classifica-tion, a subject that is made still more emphatic in the race at Larchmont this week. Here the classes are based on sailing length, namely, a length taken parallel with the load waterline and at a certain distance above it. By this rule Cinderella and Clara, 52 and 53 fect waterline, are classed with Gracie, Bedouin and Fanny of 70 feet load waterline. Ulidia, 42 feet load waterline, goes in with Athlon, 51 feet load waterline, a boat of double her beam. As it happened, none of the 70 feet class were in, and Ulidia was too late to enter formally, so the evils were of no great consequence for the time. They suffice, however, to prove the imperative need of a concerted and intelligent action on the part of the leading clubs. There may be some excuse in the past for the growth of such a faulty and unjust state of affairs, but its continuance is little credit to the enterprise

VOL. XXVI.-No. 24. Nos. 39 & 40 Park Row, New York.

A CONSIDERATION OF DOLLARS AND CENTS. THE woodcock season in the vicinity of Saratoga and Newport and other great pleasure resorts opens in June. This is in conflict with the general laws of the States, but the average landlord of a big hotel is beyond, outside of and above the law. His back door is always open to the furtive or brazen entrance of the market shooter, and his guests cat what is set before them and pay the bill. Publie sentiment in the neighborhood of summer resorts is made by the hotel keepers; if the hotel wants June woodcock, the general sentiment is that June woodcock are quite the corthing. The birds have been potted in the vicinity of Saratoga this year, and are now pretty well exterminated.

In Rhode Island there are many square miles of cove admirably adapted to ruffed grouse. Were the birds given anything approximating a fair chance the State would afford the best grouse shooting in the country. But the covers are depleted by the market-shooters. Woodcock shooting is in order in July; and the multitude and variety of game birds that pass muster as woodcock at the hotel back door are not by any means limited to the species usually recognized as game. These market-hunters kill almost every feathered creature that comes in their way, robins, thrushes, and whatever flies. They cut down great numbers of chicken grouse, and by this constant slaughter of immature birds for the hotel kitchen the grouse covers are made lean and barren by the time decent and law-abiding citizens are ready to go shooting.

If spring and summer shooting could be done away with thoroughly and universally, the supply of legitimate game in legitimate season would furnish a permanent source of pleasurc to sportsmen and of revenue to the citizens of the State. The annual profit from birds killed out of season and covertly smuggled into hotel back doors, does not equal one-hundredth part of the revenue these same birds would bring if preserved for sportsmen who would pay stage fares, board bills, guide fees and other expenses for the privilege of shooting game in season.

JUNE DEER FLOATING

A SUGGESTIVE communication is printed in our Game A Bag and Gun columns, where a Keene Valley, New York, correspondent eites the case of a local great man who has been floating for deer in June. This is a typical case of the corpulent and lazy nabob, who finds it in his power to use indebted employees as tools in his illicit sport. There are many such men in the Adirondacks; they are hotel keepers upon whose nod depend the fortune of guides and oarsmen; or manufacturers who conceive that when they hire men to work for them they may also demand of them complicity in violating the game laws.

These men have about had their day. Their extraordinary position of defiance to the legal restrictions upon shooting and fishing eannot be maintained in the face of the new sentiment forming in many localities in the North Woods. An encouraging sign of the growth of such a sentiment is afforded in the formation of guides' associations for the enforcement of the game laws and the punishment of offenders, be they big or little. Such insubordination on the part of guides naturally provokes the choler of many of the hotel keepers, who toady to the local great man as well as to city guests in quest of June venison. The landlords announce that as retaliatory measures they will prevent the law-abiding club members from obtaining employment as guides. Such tactics may be temporarily successful; but if the guides have pluck enough to fight the contest through to the end, they will be supported by visitors and in time by the hotel keepers themselves.

It happens in the present instance that the June floater is one of the persons active in securing the repeal of the New York hounding law last spring. The advocates of the re-peal, it will be remembered, made a great deal of noise over the enormity of the abuses attendant upon floating. This June floater is a fair specimen of the hounding advocates; his June floating is a fair sample of the actual practice of the hounders who harangued the loudest and longest against deer floating.

"GALLI MULES" are included in the birds not protected in New York by one of the new laws. The galli mule is a woesome fowl and ought to have fared less harshly at the hands of the Albauy politicians.

BETS are not decided by the FOREST AND STREAM. It is taken for granted that those who bet will have intelligence to determine the winner and loser without taxing the ingenuity of newspaper men,

The Sportsman Tourist.

VIII.

FOR several days there had been a soft dampness which portended rain. The new moon, with its sou'east end sticking down so a powder horn could not have been hung on it, was what the old-fashioned farmers of the Mohawk sticking down so a powder horn could not have been hung on it, was what the old-fashioned farmers of the Mohawk Valley would have called a wet moon. And the rain came. A thoroughly bad day, where everything out of doors is dis-mal and all the comfort one can find is inside the shanty, has its place in the angler's calendar. There might be too many of them, enough to make the thing monotonous, but when they happen along not too frequently, they add a wonderful variety to the charms of forest life. They give outers a rare chance to become acquainted, for they must be-come intimate, being housed up in a seven by nine house or thereabout for so many hours. It is generally much pleas-anter to hear the patter of the rain upon the shingles, than upon the broad bark roof. There is the faint sense of pleasant days, and do not have to chalk up one against the glorious life in the woods the first time some rain cloud strikes a mountain peak and springs a leak. We encountered one of those days, but as we were here first, we made it welcome with our most cordial greetings.

Drizzle, drizzle, driz, O'er forest and plain, Scatter thy wetness Gent, gentle rain,

C / B MAN A

"The straight line is the course of the bullet, the crooked line is the track down which the deer ran. A is where he was when he received the first lead, and B C D are where the deer followed the trail and met the bullet, E is where he finally fell and died." "Tll give you a turkey story," says Roy, the facts of which as related to me occurred on the Big Muddy in Southern Illinois, and well worthy of the Yahoos of the American Egypt, and quite equal to any of the remarkable catches of the silver hook fishermen in the stalls of the public market. Of course, Of course,

I cannot tell how the truth may be, I say the tale as 'twas told to me.

I say the tale as 'twas told to me. "A party of four or five were hunting on the Big Muddy in (I think) Jackson county, and making their headquarters with one of the Hill brothers. They had met with varying success, and all of them had killed ducks, geese and swao, and all but Doctor G. had killed one or more wild turkeys. The doctor was bound, as events proved, to either kill a turkey or have the credit of so doing. "Pete Hill came in early one morning with a large fine turkey. No one had seen him with it but the doctor, and he bribed Pete to give him a chance to shoot it over again. The next morning Pete was to leave early with the turkey, shin up a certain tree where he could hide himself from the rest of the party, and at a given signal from the doctor who was then to fire, to drop the turkey to the ground. Part of the scheme worked first rate. The doctor hunted over the grounds apparently very carefully until he approached Pete's tree. When the signal was given, the doctor fired and down

came the turkey. All excitement, the doctor ran to it, closely followed by another of the party, but the cat was out of the bag, for the turkey's legs were tied together with Pete's red bandanna handkerchief, and the doctor's companious in-spected the tree closely enough to find Pete who had then to come down. He was ignorant of the doctor's predicament until he saw the red handkerchief which he had used for convenience in carrying the turkey, but had forgotten to take it off. Bandanna was a name which still clings to the doctor."

That was surely a pretty bad break, but fortunately "That was surely a pretty bad break, but fortunately it ended without loss of life and must have been a good lesson to the doctor. Though entirely different in every respect, it somehow reminds me of a story I heard about a Missourian, who was visiting friends in Posey county, Indiana. They, to make his stay as pleasant as possible, got up all kinds of entertainments for his benefit, and among others was a coon hunt. The night selected was a moon-light one, and before starting the hunters partook of several stratght and mixed. The natives, accustomed to the parti-cular brand of whisky, seemed well able to resist its effects, but not so the Missourian, who was taken in, which how-ever was not strikingly apparent until they were to cross a stream which ran through the woods. The home boys led the way, most of them jumping it clean, as it was quite a nar-row stream, while a few touched the water on the opposite side. The visitor came to the water's edge and refused the jump, but seeing what he supposed was a fallen tree across it, he made an effort to walk the shadow of a large tree which stood behind him. 'Old Mis—hic—sou forever. Hic don't have to tumble into stream where hic there is a log to walk on him,' The first step put a damper on his confi-dence. 'Old Mis—hic—sou forever, Mis—hic/-kersplash. The boys fished him out none the worse for his ducking. In fact it did him good. ''I'd have got over all right if the bark hadn't slipped,'he exclaimed, and he was none the wiser regarding the substance and shadow of that tree.'' ''It's your turn, guide. Give us a fish story now.'' ''To tell you the truth, gentlemen, I never told a lie in my life.'' ''It does not necessarily follow that one must lie to tell a

life." "It does not necessarily follow that one must lie to tell a

"To tell you the truen, generating and the second handed one, "It does not necessarily follow that one must lie to tell a fish story." "Such being the case, I'll tell you a second-handed one, and if it is not true no blame or charge of falsehood can attach to me, besides, as most fish stories have to do with large fish, this one deals in smallones, which is also a point in its favor. It was related in my hearing by Judge French, better known for his strict veracity off the bench as he was respected for his legal acumen when presiding in a court of justice. It ap-pears that some years ago, when the present system of cheese making was introduced in the central counties of New York, a factory was established in the town of New Hart-ford, and the farmers around either brought or had their milk taken there daily and credited to them. This was be-fore the lactometer had been invented or at least before this certain factory had commenced its use. The consequence was that there was some cheating, for the quantity of cheese was not in average proportion to the quantity of cheese was not in average proportion to the quantity of hease Deacon Page. There was discovered one morning in the cans of milk from his farm several small fish, which the deacon was called upon to account for. 'Why I'll tell you all about that. Yesterday my cows broke through the pas-ture fence and drank in the Saquoit creek, a ways bove Mr. Richardson's mill dam, and must have swallowed some of the fish. It is strange my hired girl didn't notice it when she was milking, I'll speak to her about it.'" "Did I ever relate to you," said Storm, "the adventure my grandfather had with the bulhead in the Mohawk River morning when we get up a little earlier than usual, I'll try and tell it. It's a long story and needs an early start in the day." MILLARD.

CHEYNNE, WY

HUNTERBERG CASTLE.

HUNTERBERG CASTLE. THE day of this history was the Fourth of July; the scene, a beautiful valley in Middle Park, Colorado. In the early morning, in remembrance of the nations natal day, a pole was raised, the stars and stripes were flung aloft, cheers were given, a short address was delivered, and thus the ever-glorious was celebrated by a little gathering of strangers far out in the Rockies. There was no booming of cannon, no ringing of bells, no popping crackers, no burst-ing of bombs, nothing but simple recognitions of the day, heaty observance as far as circumstances permitted, and the soleun attention of the glorious mountains. The abode of Reflection. My comrade wanted to do some the abode of Reflection. My comrade wanted to do some my own trout rod, I turned the latter over to him, and sad-ding my pony, determined to spend the day hunting and ambling. The curve later here was only a stout bass rod besides

trout fishing, and as there was only a stout bass rod besides my own trout rod, I turned the latter over to him, and sad dling my pony, deternined to spend the day hunting and namiling. The course taken led me to a mountain six or eight miles southeast which, in the mellow distance, looked like the captol of some undiscovered country. Viewing it as I rod was a natter of increasing interest, and though a grouse with a large brood of little chicks in one place, two small coyotes playing like puppies in auother, and flocks of sage chickens attracted passing notice, the mountain loomed more trandly as I slowly neared it and held studied attention. From the midst of great wings, steep rcofs and many pir hackes, rose a principal dome and two smaller ones, where there were columns and pillars and doorways, and vertica and horizontal seams like the lines of mascorry in a reas structure. With the figure once established, further study brought out more striking semblances and apparent proof of the genuineness of the building. How could a mountain distant from the center, and arrange terraces and steps and rehitectural embellishments? It certainly is the ruin of some temple of the sun, some amphitheatre or forum of an ancient people. The pircets of the Gelousal Survey of my great di-covery. By the right and privilege of discoverer l'II name it Hunterberg Castle, or the Sportsmer's Pantheon, or the Anglemere Coliseum, something grand, something to com-memorate and give even greater renown to the world-wide itater ity of good felows. While gazing and giving rein to fancy and conning names

<text><text><text><text>

and cedar trees on it, and great detached rocks, which, it pase of the dome, where I could certainly get close to the game. Turning the pony's head I put him on the gallop to the place where the ascent was to begin. The ridge was not out making too much noise, and in due time reached the upper portion of the slope, perhaps four or five hundred yates back of the rocks where the sheep was seen. There I tied my steed with the lariat and went on foot. There was much to interest any one in the mazes of rocks where the sleence was as impressive as the mountains were sublime, and I was half inclined to let the sheep go and Caste, looking northwest, and not far from the pedestal where the sleence was as impressive as immense split in the gay granite, one of the door ways I saw from the valley, into which I went stealthily, stepping upon a wide manel or architrave that provided comparatively easy passage to the outer side. Going slowly, scanning the projections and cornices beyond as they came in view, barely moving as I reacted the free opening, the sheep studenly came into my listrace that brought him into clear range. I was stopping low, and for a few moments remained so, breathless, motion-less as the rock by my side, then cautionsly raised the rife and fired. A million echoes and reverberations awoke the while softitudes, hammering the walls where I stood, and then sist is could not be seen, but passages and more distant and such lite-like effort I thought the bullet had missed. But the lap was followed by a thump which meant that feet and bored form was down there somewhere. The next task was to recover the game. From my lofty outlook it could not be seen, but passages and pathways were visible, made by wild animals, and all about were ugly-looking crevices and caronies. The sheep set here so the was not receasary to retrace my steps almost to the point where the sheep was first discovered. Relative positions of rocks and trees were noted, the "marking down" method of the hunter, and then the return was in order

"Half dust, half deity, allke unft To sink or soar." The figure was strikingly beautiful, and I thought as I gazed, if the Iztaccihuatl of Mexico, the woman in white of the Aztecs, is more beautiful than that, it is worthy its re-nown, and worth the journey to see it. I was loth to leave the high veranda. The beautiful sweeps of alpine scenery. the regal mountains in their robes of white and purple, the flowery meadows, the shining river and many small streams hurrying to it, the dark green forests, the columns of smoke here and there like incense from sylvan altars, made pictures of enchanting beauty. "My mother earth! And thou fresk-breaking day, and you, ye mountains, Wby are ye beautiful?"

DOMESTICATION OF THE BUFFALO.

DOMESTICATION OF THE BUFFALO. Editor Forest and Stream: Most of your readers are aware that Mr. Hornaday, the favore for the National Museum, was sent out this spring to procure, if possible, a few skins of the American buffalo (Bison americanus) to be mounted for the museum. Recently Mr. Hornaday returned, practically empty-handed. The melancholy interpretation of this fact is that the buffalo at last has gone forever. These facts, I say, are pretty well how to most of your readers, and to these it will be, I be-lieve, a glad surprise to know that this magnificent species is not doomed to extermination after all. The small herd of domesticated buffaloes kept by Mr. Bedson at Stony Mountain, Manitoba, has contrived to thrive and multiply and the four calves of 1878 are now represented by 18 bulk, 25 cows and 18 calves; these, I learn from a recent article in Science, are to become the stock of a Mani-toban company for the breeding of buffaloes. The great value of the buffalo is now fully recognized, and the various ways in which its physical powers and material products are to be turned to account are set forth at some length in an article by the writer, published in Transaction No. 28, of the Historical and Scientific Society of Manitoba, 1886, entitled "The Mammals of Manitoba." When this was written the fate of the buffalo was trembling in the balance and I took the opportunity of urging its claims on our attention as an animal that would be an invaluable addition to the stock super disce then the matter has been pretty thoroughly ad-vertised among the Manitoban business men and projects of domestication favorably received. And I am sure that now all who are interested either in the stock farm or the chase, will be glad to learn that after all the buffalo has not "gone forever," and since it is proposed to introduce the species on the prairie ranches of the North, it is not unlikely that ere many years have gone we may once again see the American uson feeding and clothin

New York, June 20, 1836. New York, June 20, 1836. W. T. Hornaday, chief taxidermist of the United States National Museum at Washington, was in the city yesterday wisiting friends. Mr. Hornaday has just returned from Montana and other portions of the West, where an effort was made to secure for preservation some specimens of the buffalo, which is rapidly disappearing. To a *Heradd* re-porter Mr. Hornaday pesterday made the following state ment: "On the 3d of May a party consisting of George H. Hedley of Medina, an assistant and myself left Washington for Montana in search of buffalo skins and skeletons for preservation in the National Museum. We arrived in Mon-tana about the 10th of May, and until the time we left, June 15th, we were continually on the lookout for the object of our search. We were told that it would be impossible to find buffaloes there, but after diligent search for a number of days we were fortunate in securing two large bulls and a mea calf. The latter was captured alive with the lasso and was sent immediately to Washington. The skins of the bulls were found to be almost worthless for the purpose in-tended, as the animals are now shedding their thick coats of hair. The skeletons, however, where animals are not allowed to be killed, there are approalby twenty-five buffaloes and in other Territories there are even less than that number. In Yellowstone Park, however, where animals are not allowed to be killed, there are about 200 buffaloes and 5,000 elks. A fine of \$50 and is months imprisonment is imposed for violating the law in this matter. Small herds of buffaloes are reported to be in the British possessions, but the species are rapidly becoming extinct. In October I shall go West again, prepared to secure at least twenty-five skins and skeletons; he case Mr. Hedley does not accompany me in October, Henry L. Ward, son of Professor Ward of this city, will go

out with me. This work should have been done some years ago, when the plains were frequented by the buffalo. Vast herds of cattle are now seen in place of buffaloes. Large quantities of buffalo bones are being collected and are shipped to Eastern factories for the manufacture of fertilizing ma-terial." Mr. Hornaday left for Washington last evening.— *Rochester Herald*.

This cotton possesses great advantages over orunary cor-ton batting, and is better to use than plaster, corn meal or sand, which would form a cake not easily removed from some parts of a bird without pulling feathers out or going to the trouble of moistening it. W. E. B. OARLAND, Cal., June 24, 1886.

THE AUDUBON SOCIETY.

THE AUDUBON SOCIETY. A Garden City, Kansas, correspondent, commenting on the Florida man's queer notion of killing off the mocking-birds because they eat strawberries, says: "If Sam J. Kin-nard, of Waldo, Fla., could be transported from his shady nook in Florida to these vast, treeless prairies, destitute al-most of feathered songsters, how his heart would leap for joy at the sound of the first note of his much-despised mock-ingbird, just as the writer's did lately on discovering that the sweet-noted, restless, chirping robin redbreast and Sam's nightingale had actually found their way this far west, and were visitors, if not residents. I was born in the woods of Ohio, where the scareity of song birds is not known, and in a region where small fruits and berries are the farmer's main sustenance and his pride to protect, and where, too, it is not an uncommon thing to see the birds feeding from one stake while the pickers gather their share from another; and there seems to be enough for both. It was with a thrill of pleasure that I discovered a mockingbird here only last week, hopping about in the few stunted trees that are scat-tered about the city, and how he makes the welkin ring.— Burba.

A Rutherford, N. J., observer estimates the work of a band of four boys in that town in 1885 to have been the destruction of between seven and eight hundred birds' eggs and nearly five hundred old birds.

The observant Orillia Packot says that "this summer, hum-ming birds are few and arrived quite late. Can it be that the lessening in number of the little beauties is caused by the freaks of fashion in ladies' attire?" There is not a doubt about it, and as our able contemporary has joined the Aupu-Box Socierry, he cannot do better than exert the influence of his journal in disabusing the fair sex of a craze that carries such carnage into the ranks of the beautitul birds of our woods roods

A Westerville, O., correspondent says: "I feel a deep interest in the welfare of the birds, and have beheld with astonishment their unwarrentable destruction. I discovered that in this community about thirty young boys were engaged in the work of destroying birds' eggs, or rather gathering and shipping them to a taxidermist of Geneva, N. Y. I found upon investigation that they had gathered no less than 14,000 eggs, and I immediately, through our local newspaper, made a complete exposure of who they were, and which resulted in putting a stop to the business.— M."

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN-hurchased-2 red bellied squirrels (Sciurus aureogaster), 2 yellow-inged sugar birds (Garoba cyanea), and 4 crowned pigeons (Gowa oronata). MEN HAVE NO RIGHT to expose their families to the risk of being thrown helpless on the world when they can prevent it at small cost by taking a policy in THE TRAVELERS, of Hartford, Conn.-Adv,

MOOSE MEASUREMENTS.

MOOSE MEASUREMENTS. Editor Forest and Stream: The of your correspondents asks about the height of mose. I measured five bulk moose in the last three years, a majority of which I killed, and found their height to be for the shoulder and by simply straightening the height from the shoulder and by simply straightening the height from its tread, as if the animal were standing. I was interested in getting accurate measurements and these can be relied on. If I had made one of my Indians pull on the foreling as hard as he could, and then had measured from the point of the hoof to the top of the hair on the back, I could have added a few inches no doubt, but my stories about ag ood maay other measurements of these moose, but only prive the particular one as to which inquiry was made. I ear interested to do so, nor would I place any reliance on simple statements of such Indians as I have had hunting which me, as to the dimensions of moose, unless I could have dood a provide one of feet 6 inches, Aleck said, "I When we got one next year 6 feet 10 inches, he said, "I tell you he's a big one, for sure." The measurements I have have be the statement be have found the size of his considerably larger than the largest thave seen, made by moose as yet unseen, I can imagine that there are old what your correspondent wants, however, is facts, and the size of his considerably larger than the largest thave seen. Weat Wasterstors, D. C., July 5, 1832. Editor Forest and Stream:

WASHINGTON, D. C., July 5, 1886.

NEW YORK SONG BIRDS.

CHAP. 427. An Act for the preservation of song and wild birds. Passed May 20, 1886. The people of the State of New York, represented in Senate and Assembly, do enact as follows:

as follows: SECTION 1. No person in any of the counties of this State, shall kill, wound, trap, net, sanze, catch with bird line, or with any similar substance, poison or drug, any bird of song or any linnet, blue bird, yellow hammer, yellow bird, thrush, woodpecker, cat bird, pewee, swallow, martin, bluejay, oriole, kildee, snow bird, grass bird, gross beak, boholink, phacbe bird, humming bird, wren, robin, meadow lark orf starling, or any wild bird, other than a game bird. Nor shall any person purchase, or have in possession, or have for sale any such song or wild bird, or any part thereof, after the same bas been killed. For the purpose of this act the following only shall be considered game birds; the Anatida, commonly known as swans, greese, brant, and river and sea ducks; the Rallidae, commonly known as rails, coots, mud-hens and galli mules: the Limicolae, commonly known as hore birde, plovers, surf-birds, snipe, woodcock, sand pipers, tatlers, and carlews; the Gallinae, commonly known as wild turkeys, grouse, prairie chickens, pheasants, partridges and unit.

wild furkeys, grouse, prairie chickens, placeauer, plant, (nai), § 2 No person shall take or needlessly destroy the nest or eggs of any song or wild bird. § 3. Section one and two of this act shall not apply to any person holding a certificate giving the right to take birds, and their nest and eggs, for scientific purposes, as provided for in section four of this act.

5 Section one and two of this act shall not apply to any person and olding a certificate giving the right to take birds, and their nest and eggs, for scientific purposes, as provided for in section lour of this act.
6 A Certificates may be granted by any incorporated society of natural history in the State, through such persons or officers as said society may designate, to any properly accredited person of the sace of eighteen years or npward, permitting the holder thereof to collect birds, their nests of eggs, for strictly scientific purposes only. In order to obtain such certificate, the applicant for the same must present to the person or persons having the power to grant said certificates, written testimenials from two well known scientific men, certifying to the good character and fluess of said applicant for the same must powerly executed bond, in the sum of two hundred dollars, signed y two yell known clitizens of the State as surelies. This hond shall be foreited to the State, and the estimates a surelies or officers a by two yell known clitizens of these thas surelies. This hond shall be foreited to the state, and shall he further subject for each such offense.
5. The certificates:
5. The certificate atthorized by this act shall be in force tor one year only from the date of their lisue, and shall he further subject for one there and incur of their fusue, and shall he in the certificate taxe.
5. The certificate yilly of a misdemeanor, punishable by the stransferable.
6. The neglish or European house-sparrow (Passer domesticus) is not nellouded among the hirds protected by this act shall be the soft and the ereminity of a misdemeanor, punishable by the eros one than thirty days, or to a line of not less than the remainder shall be paid to the county yilly of a misdemeanor, punishable by imprisonment in the county jail or genes by of the provisions of this act shall be paid to the county where the offense is committed, exceet if the offense be countit

HABITS OF MOUNTAIN SHEEP.—Yellowstone National Park.—*Editor Forest and Stream:* One of the Park guides, who cared for the Geological Survey party's horses in Cin-nabar Basin, National Park, last winter, says that from their camp the mountain sheep were seen almost every day all winter; and he tells me he went from the Springs here down to the Basin on the 10th of May, and on that day he saw a flock of sheep and three lambs, and the next day the party caught a young elk. He says they spoke about the lambs as being the first that had been seen; and so from that I take it that from the 5th to the 10th of May is about the time of their birth. My informant says that the summer and winter ranges of the sheep arc not different, except that they may range wider in summer than in winter. They stay on the east and south sides of the ranges the most when undisturbed in winter. In summer they are generally found on the higher benches or mesas of the hills and on all sides. Their food is mostly bunch grass and the mountain clover. The quadruped that is their greatest enemy is the mountain lion. They are also subject to a kind of scab disease that is very bad occasionally.—OLD FAITHFUL.

PROGRESS AT WASHINGTON.—In the Senate, June 10, 1886, Senator Warner Miller, of New York, introduced an amendment to the Agricultural Appropriation bill creating in the Department of Agriculture an independent "Division of Economic Ornithology and Mammalogy, for the promo-tion of economic ornithology and mammalogy; an investi-gation of the food habits, distribution and migrations of North American birds and mammals in relation to agricul-ture, horticulture and forestry." The amendment passed both Houses of Congress June 29. It has received the Presi-dent's signature and is now a law. Dr. C. H. Merriam has been appointed Chief of the Division of Economic Ornithol-ogy, and Prof. Walter B. Barrows, Assistant.

KINGSNAKE AND ADDER.—While crossing the Grand Prairie of Arkansas in the latter part of April, my attention was called to what seemed to be an immense coil of snakes lying in the grass apparently lifeless. My companion and I were surprised to find it one kingsnake in the act of swallow-ing another snake. After killing the kingsnake we separated them with little difficulty. The one the kingsnake had killed we found to be a species of the adder, commonly known as the blowsnake. Very little difference could be noticed in the size of the two snakes, but the kingsnake had wrapped himself about the body of his unfortunate victim and had his teeth imbeded in its neck. It would writhe and twist and try to get away, but its antagonist would only loosen this hold to get a fresher one nearer is head. The kingsnake finally succeeded in getting his victim by the head and commenced slowly to swallow it. The battle was now about over and he gradually leosened his hold from around its body and swallowed the entire snake.—L. JAY (De Witt, Ark.).

ROBINS AND CHERRIES.—In your last issue "X. Y. Z." complains bitterly of the depredation of robins in his cherry trees. If he will suspend a mounted hawk with wings spread in his orchard, or will put stuffed cats in the branches of the trees, moving them from day to day, the loss of cherries by birds will be likely to decrease.—C. H. M.

A PROPOSED DESECRATION.

A PROPOSED DESECRATION. The proposition to authorize the Cinnabar and Clark's Fork Rail road Company to enter the Yellowstone National Fark with their tacks is again before Congress. It is one of those jobs which, lississipti, is alluring enough to keep appetite and effort spurred despite discouragement and obstacle, It has already been repulsed under circumstances that would have definitely disposed of any incompany to enter the Yellowstone River has been by act of Congress reserved for the use of the National Park. The peculation definitely disposed of the Yellowstone River has been by act of Congress reserved for the use of the People, set aside as public poperty which shall under no circumstances be opened to private speculation-kept, as it were against the day when population shall hark will be of a value heyond computation. By the terms of the act reacting this reservation the people are promised that the valuey shall have overrun the country, and when a magnificent tract such as the peculation kept, as it were against the day when population shall have hey not computation. By the terms of the act reacting this reservation, the people are promised that the people kept in a state of nature, sacred against the invasion of settlers, is reandeur unspotted, its beauty unsmirched. And as the people aver grandeur unspotted, is beauty unsmirched. And as the people aver grandeur unspotted, is beauty unsmirched. And as the people aver grandeur unspotted, is beauty unsmirched. The mais and that its promises to them and to posterity, the National Park has taken a strong hold upon them, and estalished itself firmly in their appro-ments.

The provided and the posterity, the National Park has taken a strong hold upon them, and established itself firmly in their appro-bation. Against this universal public sentiment, as against the more clearly defined and explicitly expressed opposition of every official of the government in any way connected with the Park, the Chinabar and Clark's Fork Bailroad Company are obstinately and resolutely pressure to be contrary in the park of the Chinabar and Clark's Fork Bailroad Company are obstinately and resolutely pressure with effortery enough to suggest that public interests will be promoted, however infinitesimally, by the construction of the rail-tor with effortery enough to suggest that public interests will be promoted, however infinitesimally, by the construction of the rail-tor and with effortery enough to suggest that public interests will be promoted, however infinitesimally, by the construction of the rail-nation, and with exclusive reference to the enrichment of a few specu-lators at the expense of the people of the United States. The passage of the bill will violate all the essential features of the plan on which the National Park was originally ordained. It will desirey, and per-vancity, to giving it to this private corporation as the reward of a subtrom importunes of a few spece. The private corporation as the reward of the subtrom importunes of a few spece for used the states. The passage of the bill will violates of a future benefit the Park, and will amount, practically, to giving it to this private corporation as the reward of the subtrom importunes of a few spece for a servery quarter of the world, the refuge for the big game which is being so rapidly exterminated extend. Every year attaches the people more deeply to a scheme which is the disting store and Clark's Fork Railway Company propose to destroy. They ask the privilege of invading the Park with their tracks, establishing shops and station houses wherever they see fit, and aspire generally to nullify the whole plan of the national

Quail, partridge, grouse, Aug. 15-March 15. Wild ducks, Sept. 15-April 15. Quail and other imported game protected to 1887. Deer, Sept. 1-Dec. 1. Campers in the mountains may in July and August kill sufficient of the males to supply them-selves with food in camp. Elk, antelope, mountain sheep, protected to 1890. Trout, June 15-March 15; lawful size, 6in.

Vermont.

Deer protected to 1890. Quail, ruffed grouse, Sept. 1-Feb. 1. Woodcock, Aug. 15-Feb. 1. Wild geese and ducks, Sept. 1-May 1. Exportation forbidden.

Washington Territory. Deer, elk, moose, mountain sheep, Aug. 15-Jan. 1. Wild-fowl, Aug. 15-April 1. Prairie chicken, sage hen, Aug. 15-Jan. 1. Grouse, pheasant, quail or partridge, Aug. 1-Jan. 1.

TRANSPLANTING OUAIL.

TRANSPLANTING QUAIL. Editor Forest and Stream: Several years ago myself and brother bought in the New York market three dozen live quail in January and sent them to our old home in Connectieut, placing them in charge of a friend competent to care for them, to be kept till the cold, rough weather was over and then liberated. They were kept confined till early in March, only one dying, while the rest were all healthy and in good condition, when they were taken out and let loose, a pair in a place, in localities affording excellent cover and feeding ground. We expected to have a few days shooting the succeeding fall, but on tak-ing our annual trip to the old stamping ground and working thoroughly the entire section where the birds had been placed, we did not find a single quail. We were told that the birds had frequently been heard calling early in May, but after that time they were neither heard nor seen. Is it prob-able that they returned to the country from which they were captured? I do not know whether the birds we purchased were from the South or West. This being uv only experience in this line, I have oftem were drow user the memo of the birds. I thile now network

were from the South or West. This being up only experience in this line, I have often wondered what became of the birds. I think now, perhaps, a mistake was made in assuming the responsibility of mating the birds, it might have been better to have turned them loose in a bady and allowed them to have "managed their domes-tic affairs in their own way." Will others which are tried similar experiments with this lively game bird rell us of their success through the pages of FOREST AND STREAM? Was the effort to introduce the Mes-sina quait in this country an entire failure? A.

MR. GRIFFIN SMITH, of Longmont, Colo., claims to have shot a mountain lion on the Little Thompson which meas-ured nine feet from the end of its nose to the tip of its tail.

ON the old dirt road that runs down from Minden to Conshata Chute along the eastern borders of Lake Bistenau, in Northwest Louisiana, twelve miles from Min-den and one mile and a half from where the road crosses Brushy Bayou, at the foot of the old mill dam, and just as you reach the high lands ascending from the bottomsthrough which flows the bayou, lived, in 1862, and still lives for aught I know, Green Mays, one of the greatest hunters of the Southwest.

brusny hayon, it the foot the ord min using using has a symplex each the high lands ascending from the bottoms through which flows the bayon, lived, in 1862, and still lives for aught 1 know, Green Mays, one of the greatest hunters of the Southwest. A man of powerful frame, of untiring energy, passion-tely fond of the wild sports of the woods, he had settled here, in the midst of an extensive forest abounding in wild game, for the enjoyment of the great passion of his lattes. Around him stretched an almost unbroken forest, where the antiered monarchs paid court to the meek-eyed does in unitant were of Brushy Bayon, filed with jack and bass and other fish, where he could, after a few hours' sport with rod and line and hook, supply his table with a luxury a king might enty; while two miles distant, nested among the hills, was Lake Bistenau, a very paradise for wildfowl, whence might be heard in the still mornings the distant houk, hour of show of second or the fors time. I can almost see the fook of green-headed mallards disporting themselves in the shallow water at the foot of the old descreta and broken milddam, just above the ford, as we approached the bayou on our way down form Minden. Oht how I wanted a gun. I was young then and had inherited a love for sport. I did the best I could with a little .22 caliber Smith & Wesson parlor pistol, the most formidable weapon we could muster, but did no harm to the ducks, other than to cause them to seek other haunts for their aquatic sports. A mile and a half beyond on the brow of a hill we canne to acan and and the house, that formed a sort of rack, upon which were piled the horms of mary an oble buck. They were the trophies of the hunt, which the great hunter had captured and out of which he arest of maxima and the fitter of a set and out of which the great hunter had captured and out of which the great a monument to his provess. I needed no one to tour destination, about eight miles further down the odd mass on or to cur destination, about eight miles further down t

and when the hour for retiring came, I went to sleep to dream of a wild and incongruous mixture of antlered bucks, screeching wildcats and baying hounds. By daylight the next morning we were through with breakfast and by sunrise we were in the saddle, with the and to take part in the hunt. My experience in the chase was very limited. A few years before I had enjoyed the pleasure of a camp hunt with some skillful hunters in South Alabama, but only got one chance to shoot at a deer. I boldly laid claim, however, to exemption from the initiation act, a ceremony customary among the old deer hunters of the Southwest and enjoyed very greatly by all except the "blooded" to entitle him to be recognized as a sportsman. If unsuspicious, the older hunters make him believe that his assistance is very important in skinning and dressing the deer he has killed. He is put to hold a leg or some import-ant part while the dressing is going on, and while his atten-tion is thus engaged, one of the hunters with bloody hands wipes them over his face, and this is the signal for a burst of merriment. It is useless to be offended, and he soon recognizes the situation and makes the most of it. Though poorly equipped for the purpose, I felt confident I could do the shooting, if I only had a chance. Guns were scarce in that region at that time, and I had to contend my-sely with an fawkward old blunderbus, with a home-made it at all. It was the best to be had. Arriving at our desti-nation, I was told to stand at a certain spot, and there I was let, with the assurance that a deer would be certain to come out at that place. The dynem in the forest I stood around for a time and di-rectly began to get tired of the monotony. I saw no reason why a deer should come to that particular spot more than anywhere else, and seriously doubted whether he would. The uubroken woods extended all around as far as I could see, and one place looked to me as favorable as another. I swe a log about thirty or forty yards away that was much more tempting to

JUNE DEER FLOATING.

NASAWILE, Tenn.
JUNE DEER FLOATING.
Editor Forest and Stream:
The fishing about here has been unusually good so far this season, the trout running larger and more of them, and not the least good thing about it is that it has convinced the natives that it is a good thing to have protection. Two years ago for the first time in this section, a number of the streams and ponds were restocked, and last season the six-inch limit was very generally observed, and the gain is so apparent that the guides are anxious now to have the law observed more strictly. And most of them regret that the hounding bill was repealed. They see that if protecting the torut results so well, perhaps the deer would survive the loss of a few hounds. There is one man in this place who used to be a good still-hunter and thought it the manly way to hunt. But he has grown older and developed a "bay-window," and consequently cannot travel the woods as easily as in the old days, and finds it much easier to have the deer driven to him. It has a business in which he can employ a good many men. Most of them are constantly in his debt, and therefore will do his bidding, and are ready to "put out the dogs" for him in season or out. He used his influence to get the hounding bill repealed, but laughs at the stupidity of the legislators to be fooled by the arguments that were presented to them last winter. But he is now at the lakes, the Ausable, with two others, floating for deer in June.
Meede, Ed. Phelps, the three Turnbull boys, Frank Parker and one or two more have men now out watching the above-in amed party, and hope to get evidence to convict some of them, are very much opposed to the movement, and say they will do all they can to prevent members of the club from getting work as guides. But I think most sportsmen will have intelligence enough to employ them in preference to lawbreakers. The club secured the conviction of a number for fishing on Sunday recently. They are doing a good work and should have the bujot all

pany will pay into the treasury of the club \$25.] SOUTHERN QUALL GROUNDS.—Elizabethtown, Tenn., 'June 21.—This beautiful little town lies in the forks of the Wata-gua and Doe rivers, close up in the great Smoky Mountains. Quail are abundant; no jend to them. Stopping as we have been in towns of from fifteen bundred to four thousand inhab-itants, it has been a surprise to me to hear the notes of Bob White almost every waking hour for the past two months, and on our drives to see them as they rise by the roadside and once or twice in the garden. Where is this, do you ask? Anywhere along the Western & Atlantic Railway from Ma-rietta, Ga., to Dalton, Ga., and from there along the line of the East Tenn., Va. & 'Ga. Railway to Johnson City. Eliza-bethtown is said by knowing ones to have the best bass fish-ing in the South, and we are told that within twenty miles of here is as finc trout fishing as any one need ask. We hope to try it, and then to be able to tell your readers how the bass fishing compares with the St. Clair Flats, Kelley's Island and the Potomac, and how the trout fishing will com-pare with our Northern streams,—V. 'A. T.

THE PRAIRIE CHICKENS.

THE PRAIRIE CHICKENS. Editor Forest and Stream: While raking hay this week I ran over the nest of a prairie chicken. She was just hatching; had eleven that were able to get out of the nest and skulk, and one that was wet. She fluttered around on the ground with her feathers ruffled and tried to get me to follow. On my next round she appeared as a male, with head and tail up, and walked into the grass as if she did not have any claim on the peepers. After din-her I went back and re had removed all the young but the helpless one. That she had killed, I suppose; anyway, it had its skull crushed. A queer freak of a mother. I agree with "M. H.," of Champaign, that the law ought to be changed from Aug. 15 to Sept. 15. They would be grown by that date and would all fly up at once, and the dude could not bag the whole covey. BHEFFIELD, III. SHEFFIELD, III.

Editor Forest and Stream:

I have never seen so many young chickens, and many of them are half grown and more. W. BISMARCK, Dak.

BISMARCK, Dak. Editor Forest and Stream: Sept. 1 is still the legal time to commence killing prairie chickens in lowa, and it is to be hoped that the law will be better observed than it was last season. The weather has been evcrything that could be desired for hatching. Unfortunately a good deal of the prairie grass was not burned until May, which destroyed a great many eggs; but there are still enough left to afford good shooting if let alone until they are ripe. A covey of fitteen is the largest number I have seen together yet. I heard the shrill call of Bob White to day, it being the second quail I have ever seen in this little prairie village. I see a solitary woodcock every summer, never varying forty rods from the spot where first seen three years ago. It must be the same bird, and I think I shall eat him this year if he puts in an appearance. RAND. appearance. LATIMER, Franklin County, June 80.

HOW LONG CAN FOXHOUNDS RUN?

HARME, HARME COURT, JUNE 30.
HOW LONG CAN FOXHOUNDS RUN?
A register of those sweeping dogs he mentions that don't that one of those sweeping dogs he mentions that don't follow the track, but grab on when they get a hot seen and then dry up, are generally here in Massachusetts swept off dogs to take their trail in the morning, start their fox and follow him till shot or holed, and only a first-class dog will do t; no sweeper nor grabber can do it alone; perhaps twenty or thirty of these sweepers might, but it looks to me a little more sportsmanlike to swindle one out of his life with a charge of shot with only one or a pair of dogs to follow him. If "Hounding," of Pine View, will wisit me next November I should be heartily glad to see him and a pair of his best words, and when he has proved them able to catch an old dog fox. I will be glad to acknowledge it through the columns of Forkest AND STREAM, and he can if he so pleases sell his dog fox. I will be glad to acknowledge it through the columns of boxes for a good.
The forkest AND STREAM, and he can if he so pleases sell his dog fox. I will be glad to acknowledge it through the columns of boxes for a good.
The forkest AND STREAM, and he then as representative Southern hounds. I noticed them spoken of and recomplication of his bliches and breed them to a good.
The forkest action of his bliches and breed them to a good.
The my opinion the difference is not so much in the hounds and was going to start a good pack. I would send to him and they have been bred-in too much. But if lower can to flow how was able to catch an old be they have been bred-in too much. But if lower at the bounds have hounds that they are, and lotten read of their they are, and lotten read of their they are, and lotten read of their they are a well bred hound, though I think they have been bred-in too much. But if lower at the bounds and was going to start a good pack I would send to him and they have been bred-in too much. But if lower at the bo

ASHBURNHAM, Mass.

HUNTING RIFLE SIGHTS.

Editor Forest and Stream: 1 have intended for some time to say a few words on the subject of hunting sights, but have waited, hoping that some one of more experience would do it for me. Perhaps if I start the subject some one will take it up and finish it more

one of more experience would do it for me. Perhaps if 1 start the subject some one will take it up and finish it more ably than I can. Your trajectory test has given all your readers the advantage of knowing what different rifles will do, and if we could have a good argument on the sight question through your columns I think it would help many a young hunter to decide what is best. My own experience is that most hunt-ing rifles, as they come from the factory, are not sighted to perfection by any means, and that open sights of any pattern are only reliable when used by the coolest of old hands. In quick shooting, shooting in dim light or at a dim object, it is extremely hard to draw just the right amount of front sight every time. More than half the misses that I have made at game were made by not having a plain view of the front sight because the notch blurred, or from drawing too coarse when in haste. With a peep sight all this is avoided. You cannot draw too coarse, and if you will use a large aperture, say one-tenth of an inch, you will never have any trouble in finding game through it. Many people think that a peep sight must be made with a very small aperture to be accurate, but this is a fallacy. The light is stronger in the center of the aperture than near the rim, and for that reason the eye finds the center. It is very hard to convince some people of this, because in aiming the aperture looks so large and they can see so much ground around the target and so much of the barrel. The only renson that peep sights have not been used for general hunting is because they have been made with too

much of the barrel. The only reason that peep sights have not been used for general hunting is because they have been made with too small apertures, the effect being to darken the mark too much. The common peep sight put on target rifles is of little use in hunting, as one can never find the game through it; but if the peep hole is reamed out to one-tenth of an inch it will be found to be the quickest sight that can be used. I prefer the Lyman sight to any other because it is so small, compact; but as far as the sight itself goes, I should think that any tang peep would do as well. The plan advised by Mr Van Dyke would be excellent if the stopping place was put at point blank.

I think that a bead front sight is much better than the cone-shaped ones now put on all hunting rifles. An open bead, such as is made by Mr. Wm. Lyman, is the best I have seen. The end of the bead being tipped with ivory, shows well on any object except pure white. Ivory, more-over, does not shine or glitter in bright sunlight. A sight of white (?) metal is so nearly the color of a deer that it does not show on one's body at all on a cloudy day. A black sight shows well on game in a good light, but if used with an open rear sight it does not give contrast enough, and therefore gets lost in the notch. With a peep rear sight it does very well, but is not near so good as ivory. The globe sight is a bead sight almost as old as rifles, but it is not of much use in hunting, as it is too hard to find game through it. I have very freely used the ideas and even the exact lan-guage of Mr. Lyman, Mr. Van Dyke and others, and I ought to add several lines of quotation marks to be distrib-uted through the letter. Fore Chark, Teras. Edilor Forest and Stream:

Boght to add several mes of quotation marks to be distributed through the letter.
C. L. S.
Forr CLARK, Texas.
Edilor Forest and Stream:
Now that the trajectory test as given by FOREST AND STREAM has passed and time elapsed for all to have given its record sufficient study to enable one to make a choice out of all the different makes and styles of arm most suitable for each hunter in bagging his game, whether it be on the Western plain or secreted in dense thickets of the Eastern States, I may suggest for the benefit of the latter class, that one essential point must ever be kept in mind, i.e., that their guns are usually sighted for only fifty yards, instead of two hundred. One may look upon the record and feel proud that he is the owner of a gun that makes a trajectory of only eight or ten inches at two hundred yards, and flatter himself that any deer showing up to him within that distance is bound to get hit. If a deer could be made to sit deliberately erect upon its haunches like a woodchuck while the hunter took his own time to hunt a dead rest for his gun, the probability is that the deer would receive a wound some two or three feet below the point aimed at. But few such chances, however, are likely to occur to most of men in a lifetime. One-half of the game will be shot within the fifty yards, and a large percentage of the rest seen will come within seventy-five or one hundred yards, so that the sights set at fifty are about the best that can be half or all-around shooting. One may chance to see a deer at two hundred yards to fire at off-hand occasionally through the open season, will be found to afford good practice. A few shots at each with a stationary sights, no matter whether the rifle carries forty, seventy-five or one hundred grains of powder, will fully satisfy most of hunters that good engineering, even with an inferior weapon, will secure more game than the best of guns in the hands of a novice. CAP Lock.
FREMSERGA, N.Y.

BEARS IN COLORADO.—Berthaud, Col., June 21.—Two weeks ago Mr. O. E. Rhodes, a young man who is herding my cattle some thirty miles up in the mountain, killed a large female cinnamon bear. While out on his horse looking after the cattle he discovered her down the mountain root-ing over stones after ants. He left his horse and boots, so as to make as little noise as possible, and with his .40 90 Ballard crept softly down through the rocks and trees to within about 100 yards of her. At this time she had got up on her hind feet and was ceratching the bark off of a small pine tree, as you have seen a cat do. He gave her a shot plump through the heart. And yet she got down and started off, and it was only after giving her three more shots and having his dog knocked some thirty feet down the mountain that he secured the old lady. She was large, but poor. He loaded her on his pony from a boulder and then the pony got the wind of her and ran away, got fast in an aspen thicket, and finally arived safe at the cabin. Mr. Rhodes says that bear sign is plenty. Blacktail deer are also plenty; he says he could kill one or more any day if he wanted to.—ELK.

MUZZLE VS. BREECH. —Jamcstown, N. Y., July S. — Editor Forest and Stream: I wish to call the attention of Mr. Napo-lcon Merrill to the fact that in your test of hunting rifles there was not a muzzleloading hunting rifle in the contest, the nearest to it being the one fired at the 100 yard range, and that one was beaten in regularity of bullet flight, *i. e.*, in accuracy, by twenty-seven of the thirty-three breech-loaders in competition. At 200 yards the muzzleloader tar-get rifle, with all the appliances of a target rifle, beat all of the breechloading hunting rifles in the regularity of shooling, the nearest one to it being the Maynard .40-cal., which was just four-thousandths of an inch behind the Romer muzzle-loader, the difference in elevation at 100 yards of the five shots being: Romer, .292; Maynard, .296; difference, .004 of an inch. The work of the breechloader is selling it. —R. H. BURNS.

PRINCE LEOPOLDO AUGUSTO, of Brazil, who is a midship-man on the Brazilian sloop Almirante Barroso, now in New York harbor, went woodcock shooting in New Jersey last Thursday. The party went to Fanwood, where they secured the services of Robert Walpole as guide. The day's bag for three guns consisted of eighteen woodcock, one hawk and a mud turtle, which the Prince took back to the ship with him.

WHAT GAME WAS BENJAMIN AFTER IN JUNE?—A late issue of the Utica, N. Y., Observer reports: "While Benja-min Hartman, of Oriskany, was out shooting birds with sev-eral companions yesterday morning, about two miles above Oriskany, he chanced to be near a tramp when the gun acci-dentally went off. The charge of shot passed through the foot of the tramp, injuring it very badly."

So easy to row with Allen's bow-facers. Catalogue free. Oars complete, \$8 per pair. Fred A. Allen, Monmouth, Ill.-Adv.

AMONG THE NORTHERN LAKES OF Wisconsin, Minnesota and Iowa are hundreds of delightful places where one can spend the summer months in quiet rest and enjoyment, and return home at the end of the heated term completely rejuvenated. Each recurring season brings to Coconomovoc, Walkesna, Beaver Dan, Frontenac, Okoboji, Minnetonka, White Bear and innumerable other charming localities with romantic names, thousands of our best people whose winter homes are on either side of Mason and Dixon's line. Elegance and distributed by the ChrcAco, Minwatusze & St. Patu. Raitway, and will be sent free upon application by letter to A. V. H. Carpenter, General Passenger Agent, Miwaukee, Wis.—Adv.

[JULY 8, 1886.

CAMPS OF THE KINGFISHERS. CARP LAKE, MICHIGAN. - XVIII.

THE next day was Bob's birthday, and as a birthday is not an every-day affair, it was resolved to give Miss "Brown Eyes" a good send-off into her seventeenth year in the shape of a picuic, to be given under the management of the "Jones Family," aeross the lake at the "North Pole Events"

The shape of a ploud, to be given under the management of the shape of a ploud, to be given under the management of the "Jones Family," across the lake at the "North Pole Spring." Jim and I had discovered this spring while wandering around on our first unsuccessful hunt for Maybert's Creek, and, as we afterward learned, it is only about five rods from the creek, at the end of an old shingle cutter's road leading off from the main road, and about three-quarters of a mile from the lake. I note this spring because it is the best one anywhere along the lake or near it, and if any thirsty brother ever chances along the road near this little trout spring it will pay him, if it be a hot July or August day, to trudge down to it and slake his thirst with a draught of as pure, spark-ling, icc-cold water as ever welled up from the boson of Mother Earth. Then, when he has covered about half the distance back to the road, it will pay him to trudge back again and do it all over, for it is a rare spring. Hyperboler was elected master of ceremonies, and by 10 o'clock a big lnneh and all the party, except the skipper, who was indisposed, were off across the water for the spring and a good time. As old Dan can handle a rod with more comfort than he can the demoralized old right leg on a three-quarter-mile walk, and as there was no conveyance at hand to take him to the spring and as old Hickory was laid up in camp for repairs (I have carried the old fishhawk on my back on more occasions than one to a desired spot he could not reach alone, where he wanted to sit and fish), he and Muller spent the day fishing till the picnic broke up in the evening with somewhat better results than had attended us the day before.

where he wanted to sit and fish), he could not reach addie, somewhat better results than had attended us the day before. When all were back in camp the birthday festivities wound up with a supper by candle light, and I venture that did there in the Michigan North Woods, surrounded by her new made friends, "the Joneses." As I lay awake a while that night after the camp was at rest I tricd to figure out the reason for the indifferent sport forts, we had been sleeping too late in the mornings and failing during the wrong hours of the day. Before daylight in the morning I was out and half a mit-down shore in a boat, without having disturbed the slum bers of the girls or caused a break in the rythm of Muller's sonorous snore, and long before smoke curled out of the storey samal school of bas that were biting as if they wanted to make up for lost time. Now and then, too, a but always with disastrous results—a stroke of the gaff and a whack of the club ending the controversy in one round. The at last the goggle-eyes began tampering with the frog and it was time to rele up and by 9 o'clock for a late breakfast, with a whock of the club ending the round at twitchin' at yer at the down shore in a boat withing the more a stroke of the gaff and a whack of the club ending the controversy in one round. Then at last the goggle-eyes began tampering with the frog and it was time to rele up and by the rol in the boat, for as then durued red-eyed suofish a nibbin an' a twitchin' at yer at the day in the relevent the same of the solat, with a whock of the club ending the controversy in one round. Then at last the goggle-eyes began tampering with the frog and it was time to rele up and by the rol in the boat, for as then durued red-eyed suofish a nibbin an' a twitchin' at yer at the durued red-eyed suofish a nibbin tan' a twitchin' at yer at the down and a solat and 'ole quintessence' and started out the water by daylight next morning to beat James Mackeree's too dist boad and 'ole quintessence' and started out the transthem to it

a match, and was soon lost in a cloud of solace from the brar root. Next morning with all the good resolutions as to early rising, old Ben was the only one out before daybreak, and going over to call Bob, who had promised to go along if he would awake her, they were soon ready, and as they left the landing I heard him say, "Now, Bob, ef there's anything in airly fishid' yer uncle 'Il show ye how to ketch'em," and then the regular dip of the oars shortly took them out of hearing, past the point a couple of humared yards below. None of the rest had energy enough to get out, and the sun was well up before the camp was astir. When break-fast was ready an hour or two later and the mists had lifted from the water, they were discovered quietly fishing in the first little bay below camp, and the breakfast call on a fry-ing pan soon brought them in hungry and happy. "Look at them fellers, will ye?" said Hyper, as he dragged a fine string of fish to the edge of the water, twisting and thopping and throwing spray over him in small showers, "when Bob at' me go afishin', we go afishin', an' don't ye forgit it; hey! Bob?" But Bob had found the breakfast table, where she was distracting the philosopher with orders, and trying to convince the other girls that her appetite was failing her. It

turned out that Bob had taken ten of the thirteen bass brought in, and Ben had besides taken a pickerel and two "red eyes," but he didn't step quite so high over the achieve-ment as he did when he "ketched James Mackerel's trout." The old cowboy said in explaining how Bob came to lay him out, "Td a felt kinder mean to beat my own niece a-fishin', so I jest fished most o' the time without ary bait on my hook an' she a thinkin' all the time that I was a doin' my level best;" but Ben was used to wriggling out of tight places in fish stories, and it was not to be expected that he would be caught napping in an easy case like this. Bob was highly pleased over her catch, but was content after the first experience to let some of the others do theearly rising, while she found sport enough in late evening fishing, which, after all, was good enongh to satisfy any reasonable angler. We had at last, however, struck the key to the sport—early morning fishing—and those who could muster resolution to be out and on the water before san-up were sure to return before the forenoon was half gone with more fish than we could possibly use, and our neighbors were kept busy "sort-in' bones" during the rest of our stay. So the days passed on toward the end of our vacation, each full of its own pleasures and happiness without a cloud to mar the good feeling of the camp, and it was with many regrets that we looked forward to the breaking up of the happy family to go back to the noise and bustle and drudg-ery of the old life. We, the "old fellers," were getting young again and we hated to break off and take a backset for an-other year. There were some days left yet and each one was worth a

ery of the old life. We, the "old fellers," were getting young again and we hated to break off and take a backset for an-other year. There were some days left yet and each one was worth a whole month on the 'farm, in the sanctum, or in the office, whether we fished early or fished late or fished not at all; each one was to be enjoyed as though it were to be the last. The next morning some of us were awake before day for an early start, but on getting out, a fog so white and dense covered lake and land that it was impossible to see the "bennery" from our tents, and we could barely distinguish the outlines of the kitchen fly not more than a couple of rods away. The philosopher was roused out to get break-fast while we studied over this unlooked for "category." and soon the girls were awake and came filting over, one and two at a time, like shadowy spectres out of the sur-rounding mist, to huddle around the glowing stoves and wonder if this were a sign of another change of weather. Everything exposed was dripping with moisture, and the prospect was not a cheerful one for early sport; but Jim and Ben concluded that they could find their way to a certain strip of promising water above Horton's Bay, where they had made up their minds the night before they wauted to bish, and when Ben had once "set his head" to go they were soon ready and off. They were cautioned as they pulled away from the landing to follow the "synopsis"—as old Dick M. says—of the shore and bay, and keep the line of bulrushes in reach of the oar, lest they get lost in the fog and fail to reach the spot they were searching for, but Ben sid, "Shucks! I reckon I kin row straight across to the pint up yander, an' then we kin find the place slicker 'n grease." Two strokes of the oars hid them in the bank of fog, and we saw no more of them till it lifted, near the middle of the forenoon. The others of us had not "set our heads to go a lishin'," and we decided to stay in camp till the sun drove the mists from the wate. When the fog lifted so we could s

that pole? our own camp, by the jumpin' jehossafat!' and then it all flashed into our empty pates instantly; there were Horton's barn and house, and the familiar fields and the camp, all looking as natural as life, and just then some one touched off the frying-pan, and here we are, but we don't want any more early fishing in a fog, even if we catch a string of fish as long as the boat." A few mornings after we were treated to another fog even heavier, but the experience of Ben and Jim had made us wise and no one ventured to explore its mysteries outside of a convenient hail.

(TO BE CONTINUED.)

THE MUDDY POTOMAC.

THE MUDDY POTOMAC. The angles in this part of the domain are in a state of chronic despair. Most of the time since the latter part of April the water in the Potomac River and tributaries has been as rolly as the muddy Missouri, and now, when much preparation had been made for an outing on the Fourth, there is a deluvian down-pour, and the jig is up again. Good fishing was had during two or three weeks in April, but since then and all through spawning time hardly a fin has been taken. This has probably been fortunate for the fishes, as they were certainly not disturbed while nesting. Tou ably advocate the abolishment of spring shooting; would it not also be well for all concerned to discontinue spring fishing? I think it would. Large numbers of bass and other game fishes are taken in the spring just before and draing spawning time, and the streams are thereby robbed of vast numbers that would come in the order of nature. We all angle in the spring. It would be hard to forego the pleasure; but would it not be wiser? There has usually been fine sport catching striped bass with the fly near Little Falls, and in the tributary streams between this place and salt water, but this season was a blank on account of the condition of the water. There will be excellent black bass fishing in the Potomac in the fall, provided the water is clear, and persons wishing good sport can confidently seek it at any point on the river from the mountains to tide water. WASHINGTON, JULY. TROUT AND BEARS.

TROUT AND BEARS.

TROUT AND BEARS. I ARRIVED at Rawley Springs, in Rockingham county, Virginia, at nightfall on yesterday, June 29, and found the excitement of the hour to be a 164 inch trout killed by Mr. Pearson, the resident superintendent of the Springs property, in Dry River, about a half a mile from the hotel. This morning, while a small company of guests wcre watching the curious gambols of a small boy, a Newfound-had dog and a pair of bear cubs of about fifty pounds' weight, a stalwart mountaineer galloped into the midst of us astride of a mountain nag, calling for the loan of an axe, saying that he had killed a large bear and had two cubs treed about a mile up the river. Thereupon an adjournment was had to the new scene of action and these cubs also cap-tured. tured.

The bear excitement being over, this afternoon I got out my tackle and went down the river to try the trout. In a short time I killed six very fine ones, and hooked but re-turned to the water divers fingerlings. I found the killing fly to be coachman as I tie it, and typical professor. The

by tot down in the office extends. The way of preaty by not down in the office extends. They on a No. 3 Sproat, this same fly sometimes kills bass better than some of the regulation sorts. The rod I used this afternoon is one I made last year of the bois d'arc, or so called Osage orange wood, which I think superior to any rod I have ever handled. Thave found it to be an admirable working rod in bass fishing, but never tried it before on trout. I have no doubt is my own mind that this is by far the best wood in the world for rods. It is little heavier than red cedar, excessively strong and tough with more pliancy and spring than any other wood. The color is a beautiful orange, requiring no stain, receiving the highest polish and curving beautifully. I have rods of ash and ancewood, of bethabara and hornbeam and cedar, and have tried every known material for tips, and I would choose a bois d'arc rod over and above all other known material. The rod I have is rather short, only nine and a half feet; I prefer a rod of ten and a half feet, and I see no sort of occasion for having one rod for bass and a different one for trout. I think everything in excess of ten and a half feet is in the way in a trout or bass rod, under ten feet they begin to get too short. Nevertheless I have a cedar and hornbeam rod only eight and a half feet long I made about twelve years ago and with which I sometimes cast a bait à la Henshall and often use also as a fly-rod on difficult water to cast over. I have killed mary bass and trout with it at long range. RAWLEY SFRINGS,Va. M. G. ELLZEY, M. D.

CAMP OF THE BIG SIX.

<text><text><text><text><text>

CAMP MEDICINE CHEST.—"Kingfisher" writes of camp medicine supplies: "The following is an excellent remedy in case of cramps, colic and ailments of like nature: B

Tinct. Zinglb Tinct. Menth. pip. Spts. Vin. Gal. Sig. Take at once. Mix.

SUBPENSION BRIDGE, N. Y., July 2.—Inclosed I send you clipping from Collingwood, Ont., Weekly Enterprise. The editor is a fisherman and would not tell a lie. The clipping reads: "Messrs. Frank Nettleton, Will Begg, Jas. Stone, W. W. Nettleton and W. Watts were out at the river fishing on the first of the week, and while trolling near the mouth suc-ceeded in catching an immense muskulonge. It took the combined efforts of F. Nettleton and Begg to haul the huge fish into the boat. They brought their prize to town and placed it on exhibition at Stone's hotel. The fish measured 6 feet three inches and weighed 128 pounds. It was the largest caught for some years in these waters."

THIS IS VOUCHED FOR BY THE CORRESPONDENT WHO SENDS IT.—Reading Centre, N. Y.—A novel mode of fish-ing has been employed by a resident of Penn Yan, N. Y., who some time ago, while out rowing in Keuka Lake, had occasion to bend over the side of the boat. No sconer had his face come in close proximity with the water when his nose was seized by a large pickerel. The possessor of this delicate organ having resisted his antagonist, he succeeded in landing him in the boat and rowed ashore, proud of both wound and fish. This is not what is generally known as a "fish story," but an actual case of live bait fishing.—A. T. GESNER.

THE BIGGEST BROOK TROUT.—We have to record the capture of a brook trout weighing 124 pounds, by Mr. J. Frederic Grote, of 114 East Fourteenth street, New York city, in Mooselucmaguntic Lake, Maine, on June 11. The fish was a female, and Mr. Grote kept it in a car for one week, when it died. It was weighed several times at the Mooselucmaguntic House, in presence of Mr. John Schultz, of Philadelphia, and the proprietors, Messrs. Crosby & Twomley. It was 264 inches long, 174 in girth, 74 deep and was 4 inches thick through the back. The guide was Jerry Ellis, and they were trolling with a live minnow in 40 feet of water with a 74-ounce bass trolling rod. The trout was brought to New York and shown to Mr. Blackford, who decided that it was a *fontinalis*. It had been proposed to send it to the Smithsonian Institution to have a plaster cast made of it, but there were doubts as to its standing the journey as it was beginning to soften. It is now in the hands of Mr. Wallace, the taxidermist, and will shortly be on ex-hibition at Mr. Grote's place of business. We believe this to be the largest brook trout yet recorded.

MAINE SPECIAL SALMON LAWS. — Trout and salmon fishers are having a good time this season. Landlocked salmon are being caught in Cathume Lake. One weighing six pounds was caught in Denny's River on a salmon fly flast week. Cathume Lake empties into Denny's River. Poachers have ruined Denny's River for salmon. This is one of the best rivers in Eastern Maine for salmon. Ut it is under a special law, which means, in Maine, no law at all. If our commis-sioners had it under State law it would be fine in a few years. All the special laws for salmon streams in Maine should be abolished at once. It is proved in every case that towns and corporations will not protect. Let this thing be fixed next winter. There is a big scramble for the last lobster, herring and mackerel.—H. (Machias, Me., June 28).

DYNAMITING TROUT.—A gentleman who has recently re-turned from Chatham, N. H., reports that some mean speci-mens of human beings have made use of explosives in Moun-tain Pond, and that "its shores are wind-rowed with small dead trout, suckers, etc." A party (from Maine, we are sorry to say) who camped there about June 10 arc suspected. The matter, our informant tells us, is in the hands of the proper authorities and is to be vigorously pushed. We hope the perpetrators of this meanest of all mean ways of poach-ing will get the full length of the law.—BLACK SPOT (Seba-go Lake, June 28).

MAINE WATERS.—North Bridgton, Mc.—The black bass season in Maine opened July 1. The prospect for fishing in Long and Highland Lakes, Bridgton, was never better, A New York party have boats engaged on both lakes dur-ing the opening week. Our bass fishing attracts more attention each year, situated as we are at the head of the Sebago Lake route, one of the most charming steamboat trips in New England, and in the midst of beautiful drives and fine scenery our location is especially inviting to those seeking rest from the hurry and bustle of city life.—J. C. M.

NEW RICHMOND, Que., July 2 — The salmon fishing, which has been hitherto very poor on the neighboring rivers, has much improved of late. Lord and Lady Lansdowne, who have been camping out on the Cascapedia, have made several fine catches. Mr. R. G. Dun, of New York, fishing in the same stream yesterday, caught a salmon weighing fifty-one pounds, which he has shipped to the Merchants' Club of New York.

THE HULLISTON PRESERVATIVE Co., New Haven, Conn.-Gentle-men: Being a habitual fisherman, and having caught some fine specimens of trout, (on the farm of Charles Parker) one of which welghed over two pounds. I had a desire to preserve them In order to show them to the many callers at my office, and procuring some "Vlandine" at your works. I treated three of them, and I am pleased to report, that after cyhibiting them In my office for four weeks, I then sent them to a friend in Waterbury, where two weeks later I saw the lish, and found them still sound and good, with no indications of decay. It is a wonderful thing, and one of the most importance in the commissary outful for sportsmen and tourists.-FIRED A. DURANT (Durant Hotel, New Haven, Conn.),-Adv.

ALLEN's bow-facing cars can be attached to any boat in 5 minutes Try them. Little catalogue free. Fred A. Allen, Monmouth, Ill.-Adv

fishculture.

THE AMERICAN FISHERIES SOCIETY.

[Discussion following the paper of Mr. John H. Bissell, entitled "Fishculture a Practical Art," published in Forest and Stream, May 20, 1886.]

Discussion following the paper of Mr. John H. Bissell, entitled "Thickulture a Practical Art," published in Forssr AND STREAM, May M, 1880.] M. R. BOOTH-I would like to state for the benefit of some of the gentlemen here, to show the enormous results to be derived from lishculture, that at the cannery I am interested in on the Columbia River, in the State of Oregon, they pack 600,000 cases of salmon per annum. It is worth four to five dollars a case on the ground. Now you can readily see that is \$5,000,000. It takes three fish to the case. That is less than 2,000,000 of fish. Now the salmon there produce, I understand, from 15,000 to 20,000 fry, so you can readily see it doesn't take many salmon to ree-supply by artificial propagation the salmon that are taken from that river to produce \$3,000,000 per annum. In other words, we catch 3,000,000 of fish which produce \$3,000, 000, and they can be replaced by artificial propagation for at least \$10,000 in money. Now if there is anything in this world you can speak of that will produce so much for so little invest-ment I should like to know it. M. BISEELL-Mr. Booth have stated in outline in my paper just what my conclusions are, drawn from a great many facts and a great deal of thought and consideration of the subject. It is true that artificial propagation, if carried on on a proper scale, can be done very cheaply. I made some figures for presentation to the committee by our register two years ago, and if I remember rightly it was something like this: That if way that we were then and are now doing it, that the cost per think it was that—one-third of a cent, or less, per thousand. I think it was that—one-third of a cent, or less, per thousand. I think it was that—one-third of a cent, or less, per thousand. I think it was that—one-third of a cent, or less, per thousand. I think it was that be cost of proper policing, inspection and regula-tion of the fisherles will not cost what Mr. Booth seems to in-dicate. We asked the last Legisla

<text>

to use canvas if they please to catch them. How long would it be if you put in fish at one cent a thousand in the waters— these small fish are comparatively worthless—before they

<page-header><text><text><text><text><text>

THE MACKEREL SEASON.

<text><text><text><text><text>

Indeed there are plenty of thinking men, thoroughly conver-sant with the fishing business, and who have given the sub-ject a good deal of thought, who are convinced that this early fishing for mackerel with seines is a most prolific cause of the departure of mackerel from our coast. It is certainly admitted by all that larger and fatter mackerel would result to the trade were the early seining stopped. But it is understood that the Fulton Market fresh fish trade is to oppose the passage of the anti-early-seining bill in the Senated and it may be defeated.

protective measures is the worst enemy to fish and game protective measures. It is also understood that the "Botton fresh fish trade is inimical to the measure. What means a dollar to the market dealer must not be touched by legislation, be the value of fish and game protection never so great to the rest of the world. The right to buy and sell at all seasons regardless" of results is being fought for with all the force money can buy, and all the foolish sentiment about the sacreo rights of trade that can be gathered up with which to frighten the markets he gislator. The spawning is over by the last of June, and the mackerel then begins to improve in condition as well as size, but the fresh fish dealer is not willing to wait. He must have his prey at all seasons not absolutely prohibited by an edict of nature which cannot be overcome. Specifical

SALMON IN THE HUDSON.

SALMON IN THE HUDSON. SALMON IN THE HUDSON. The conded in our columns, are very encouraging. The most doubting of "Thomases" must admit that these fish are the re-sult of the plant of 1882 by Prof. Baird. In former times an occasional stray salmon has been taken in this river, but it has been at intervals of some years. Now, however, we have and others seen just at the time when they naturally would be looked for after the first planting. In former experiments in the Hudson, we think that to only the quinnat salmon of the Pacific coast were planted, and these fish have failed to re-turn to waters on the Atlantic slope. The salmon put in the Hudson by Prof. Baird since 1882 have all been of the Atlantic species, the Salmo salar, from the rivers of Maine, and there is positive proof that the trout streams of Warren county, New York, afford them food during their early life. Last October we reported the capture of yearlings from Clendon Brook, and now we are permitted to publish the following letter to the Superintendent of the Long Island Hatchery, where the fish are brought to life: This morning's mail should deliver to yon a couple of young salmon. Yesterday editor Harris, of the Glens Falls *Republican*, and I wento ut to try for trout, and our labors ended at Clendon Brook. I fished the brook but a short time, for fifty salmon would rise to one trout, and I did not wish to run the risk of injuring the salmon. Every pool or 'hole'' contained them, they were on the riffs, in fact, they were everywhere. They are so much brighter colored when seen in the water than the trout that they are easily distinguished. I injured two and therefore kept them, and just had time last night after I re-turned to get them in the midnight mail. You will see that they are in good condition, better even than those I sent last type. At four months younger they seen fully as large as the sample I sent last. October, and they are certainly fatter. I think you will call these prety fair yearlings. I

sent you was six, which is about the size of last year's plant that I saw. The plant of 1884 seem to have all gone to sea.— A. N. CHENEY. [We have seen the specimens sent, and they are exceed-ingly plump and well fed. The fact that adults have returned from the light plantings of 1882 shows that they will push through the impure waters of the lower Hudson, as the shad do, and seek the spawning grounds above. The tributaries of the upper river are all that can be desired as salmon nurseries, and we hope to see this good work go on until "Hud-son River salmon" are quoted in the market, and anglers are to be seen whipping the pools above Troy if the proposed fish-ways are properly built.]

ways are properly built.] THE TROY DAM FISHWAY.—Glens Falls, N. Y., June 30.—*Editor Forest and Stream*: Correspondents of Forest and Stream recently questioned the existence of a fishway in the dam at Troy; and in commenting thereon I stated that I had supposed that the law providing for a fishway had been com-piled with, and the the chute now to be seen in the dam was the result. This evening I notice that Superintendent of Public Works Shanahan "has completed the reparts to the old fishway in the State dam at Troy." This seems to settle the question of the fishway's existence, and let us trust that it permits the salmon, lately known to have returned to the Hudson, to ascend another stage on their long journey to the other obstacles are as speedily removed, Hudson River salmon may in a few years become as well known as Hudson River shad.—A. N. CHENEY. CARP CULTURISTS are to have a special journal to be

CARP CULTURISTS are to have a special journal to be called the *Journal of Fishculture* and Rural Hydrauhics. It will be edited by Mr. Milton P. Fierce, and published by the Rural Publishing Co., of Philadelphia, under the patronage of the American Carp Cultural Association.

A. K. R.-SPECIAL NOTICE. A K. R.-SPECIAL NOTICE. THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is pub-listed every month. Entries close on the 1st. Should be in early. Entry blacks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries birthplace to breed, then the result of this early seining of mackerel is plain—the utter driving them from our coast.

PARASITIC DISEASES IN DOGS .- III.

PARASITIC DISEASES IN DOGS.-III.
THEE
PARASITIC DISEASES IN DOGS.-III.
There are a provided in the dog a very small tapes, thus of deally are the ravages of the larval form of this parasits in other animals, that a full understanding of its life instant is most important to the dog owner and stock-raiser. The ommon hydatid tapeworm (*lania echinococcus*) in its double coven of hooks, there being from thirty to forty hook. There are four suckers, behind which the head segment is much elongated, forming the so-called "neek." The fund is armed with a pointed rotellum and a double coven of hooks, there being from thirty to forty hook. The reproductive papilla is situated on the segment when mature equals in length the three exterior ones, there being the intervention of this segment or proglotitis somewhat below the central line. This minute cestode inhabits the intestinal canadicate the dog and wolf, probably causing but trifling inconvenience to its canine bearer, but a dog infected by hydatid tape ince to its canine bearer, but a dog infected by hydatid tape ince to its canine bearer, but a dog infected by hydatid tape ince to its canine bearer, but a dog infected by hydatid tape ince to its canine bearer, but a dog infected by hydatid tape ince to its canine bearer, but a dog infected by hydatid tape ince to its earner bearer, but a dog infected by hydatid tape ince to the harboring one of these tenna is continually pass. The the adult parasite. The eggs are diffused through water, specially by diseased dogs swimming through it, so vashing of the ova which have adhered to the har around the anasy inder the set of draidenee to the data and the adult approxement. This larks now broke and there here the favorite situations. The embry on whore the average is a minute exployed by any herbivorous animal, a most wonder, these again "grandbar researchere". The speceasity does and the search and eggin. The search approxement is a data the search and eggin an indeget the buy diveres animals, as *H*

The serif the following characters: They measure about 1-80 inch in length, the body is divided by an hourglass-like constriction, the anterior portion being armed with rostellum and hooks.
Should any part of an hydatid cyst containing one or more brood capsules be swallowed by a dog or wolf—as often happens when dogs have access to butcher's offal—the cyst walls are digested, and the heads set free. These soon attach the meelves, and rapidly develop into adult tapeworms within the alimentary tract, and the cycle of development goes on, the teenia again producing eggs, to again cause hydatid disease in some unfortunate runninant or in man himself.
As fully twenty-five per cent of all human victims of echinococcus disease die from its ravages, and as it is a very fatal disease among domestic runninants, the importance of this paraits is very great. There are few reliable statistics in regard to its prevalence among dogs, the cestode being of such small size that the most careful observer may miss it even when several are present in the intestines of the dog under dissection. The highest authorities state that this tenia occurs in at least one per cent. of all English and Anerican dogs; in Australia it is quite common, and in Ireland it is reported as being exceedingly abundant, quite a percentage of the human population and many domestic animals succumbing to echinococcus disease. Hydatids are found in all species of our domestic herbivora, although fortunately but rarely, and it is therefore evident how assily dogs may become infected by eating raw butcher's offal.
This simfletent here to say that hydatid disease in man is not excessively rare in the United States, and is a most dangerous and intractable affection. Among our domestic herbivora the disease is a most serious cause of loss of condition, and often proves fatal.
Hydatid cysts may cause death in man or animals by mechanical pressure on vital organs, or by ulcerating or bursting into the body cavity or into almost any of

given rise to inflammation and the consequent formation of baseesses. Its average size was about one-fourth of an inch in ength. This species has since been found to be common among dogs in India. The dog fluke is clothed with minute spines, which been abundantly on its outer surface. Although the average ength is but one-quarter of an inch, specimens one-half of an inch in length have been found. The eggs are oblong, nar-rowed at the anterior pole and are furnished with a sort of id to facilitate the escape of the embry o when hatched. The occasionally been the cause of death, as in a case reported by Professor McConnell. The symptoms caused by the presence of this fluke in the bile ducts are those of inflammation of the liver (hepatitis)-iregion, and at times enlargement of that organ. The syste-mic symptoms may be very profound. The prognosis of both acute and chronic hepatitis in the dog from any cause is very unfavorable, the acute form, whether parasitic or other-wise, usually proving fatal. But little if anything can be done for this affection; tonics, stimulants and nourishing food with possibly a muster plaster

or mustard poultice over the region of the liver are indicated. Opium to allay pain may be required; the dose must at first be small and gradually increased as the symptoms demand; the dose of the sulphate of morphia for a foxhound or pointer is from 1-12 to $\frac{1}{5}$ of a grain, to be repeated as often as neces-care.

is from 1-12 to $\frac{1}{2}$ of a grain, to be repeated as the sary. It is very important that dogs dying of *hepatitis*, especially in tropical countries, should be "posted," and the liver care-fully examined for flukes; the parasites being preserved if found, and the lesions produced noted. More knowledge on this subject is much needed by comparative pathologists and veterinarians. The winged fluke of the dog (*Holostoma alatum*) is of but little clinical importance. It inhabits the small intestines and is rare.

The development of the *trematoda* is even more complex than that of the hydatid tapeworms. The life history of the conjoined fluke has not yet been fully demonstrated, but doubtless it closely resembles the other flukes in its meta-

<text><text><text><text><text><text>

A FRAUDULENT MEDAL.

A FRAUDULENT MEDAL. Editor Forest and Stream: A very glaring fraud has lately come under my notice. The fate Pittsburgh show offered silver medals as second prize in several classes. I recently had one of these analyzed, and it contains no silver whatever, being principally tin and lead! This is the most palpable, outrageous froud I have yet met with. To offer a silver medal which would be worth probably \$250, and give a pewter one worth two cents, is abominable. The recipient of this particular medal had to pay 35 cents expressage on two cents worth of metal. Of course the soci-ety may be a victim and may have paid for real silver medals; but in that case they owe it to themselves and their exhibitors to bring the swindler to justice and get thereal thing. If they are not the victim, then I am sorry to say that somebody is in a very unenviable position. I may say that I am convinced disclosure as you will be. That you may have the evidence of your eyes on this matter, I send you the medal in question. W. WADE.

HULTON, Pa., June 26.

IWe have examined the medal sent us by Mr. Wade, as well as others sent us by winners at Pittsburgh, and find them all alike. The metal of which they are made is very similar to pewter. It consists of lead, tin, zinc, with a slight trace of copper.]

A SINGULAR INCIDENT.—Editor Forest and Stream: I had a little experience with my house dogs this evening which struck me as rather curious. My cocker bitch Dottie Stubbs has been boycotted for a season, and to-day was brought into the house for the first time in four weeks. During her ab-sence we have placed in the library a red foxskin, mounted as a mat. She immediately took her position beside it and guards it most carefully, never taking her eyes from it if one of the other dogs comes into the room. My black cocker jobo and she have always been great friends; but it is no use, if he shows his head in the room there is trouble. Thinking it stood on end, and I saw prospects of a fight in the near future; so I let them out again. While I am writing this letter she is lying beside the mat, with one eye on the black dog in my easy chair. If she lay on the skin, I should think she was cocker bitch that took a pair of beagle pups under her care and would allow no dog near them. But this is my first expe-rience with a common mat. Is it because of its resemblance to a dog? I wonder if any of your readers have had a like experience.—C. S. D. (Warren, R. L). THE MILWAUKEE DOG SHOW.—Milwaukee, Wis., July

experience.-C. S. D. (Warren, R. I.). THE MILWAUKEE DOG SHOW.-Milwaukee, Wis., July 1.-Editor Forest and Stream: Entries for the Milwaukee bench show are coming in apace. They close on the 10th inst. The secretary requests residents to send in their entries at once, in order to avoid the inevitable rush after July 5. Milwaukee is noted for having the best class of non-sporting dogs of any city in the West. A fine special prize has been contaibuted to the club to be awarded to the best pit bull-terrier, Class 104. This class will be judged by a resident of Milwaukee. Great praise is due to Mr. John D. Olcott for his admirable management of our last bench show, as well as for his efforts in engineering the coming one. Mr. Olcott is never so happy as when ministering to the enjoyment of others, and he has made sacrifices of time and money in getting up and conducting those popular shows, which entitle him to the gratitude of all who love and admire that most faithful of all animals-the dog.-M. J. EGAN.

KENNEL MANAGEMENT.

125 No Notice Taken of Anonymous Correspondents. Drog, Philadelphia.—A pointer pup has a very ugly looking skin over his eyes. The eye is red close in and gradually turning to white; it is the same in both eyes. Ans. Drop a few drops of solution of sine sulphate in the eye (strength, two grains to ounce of water) each horning. If not well in a week write again. KENNEL NOTES.

Juniors: Arno, H. C. Cushman, 5ftf.; Marion B., S. S. Mit, 5ftf.; Mermaid, L. J. Frince, Sett.; Ohingachgook, W. Wheeler, 56ft. Wind light and variable. Canoes got away together and for the first quarter key slowly ahead and passed 1% mile buoy with fair lead, Marion B. a good second, Annie O. next; Arno and Came in a good third. thereby winning the junior blue pennant from the former. Arno fourth, Annie O. fith; others not taken as it was too late. The race was generally insatisfactory on account of the lack of wind. The Vesper was absent and unable to competer, and has the name of each winner in-scribed thereon. A new race will be substituted for the 60ft. Init. What with the Susquehanna trip and the Sunday cruises, the Upper Hudson and the cruise to Grindstone, the Turtles are getting a full benefit out of their craft this year. We are counting on many visit-ors of the A. C. A. bi-centennial week, and will give them a good race if they will enter, and a good time whether or not. -MLARON B. On Thursday, July 1, Junior Race, prize, a senior pennan; On Thursday, July 1, Junior Suny eligit Bor prizes. Enth

HALLOCK'S "ALASKA."-Mr. Charles Hallock, who is well known as an experienced traveler, and who has thoroughly studied Alaska and its resources, is about to issue an illustrated work, now on the presses of the Forest and Stream Publishing Co. It is entitled "Our New Alaska; or, the Seward Purchase Vindicated." The glowing accounts of the country from the pen of Mr. A. P. Swineford, who was so long identified with our most important from ore interests, have contributed toward awakening a special interest in the trade, and have served to pave the way for Mr. Hallock's work among what we hope will be-come a large constituency.-The Iron Age, June 24.

BEVERLY Y. C. 107TH AND 108TH REGATTAS.

THE 107th regatta. The first open sweepstakes was sailed at Monument Beach, July 3, in a moderate breeze, W. by S, at start, gradually shifting to S. by E. In the first class, last year's champion, Surprise, was conspicuous by her absence; but the new Mollie, Hanley's latest, was on hand to fill ker place. The Vice-Commodore was first over the line, aud was not passed, though close pressed by Creep, a new and large boat from Mattapoi-sett.

In second class Superior and Crawl, both new hoats, made a close rece, while in third class last year's rivals, Petrel and Fannie, had it rice and there. Summary as below:

hip and buck. Summing us herow,

NEW JERSEY Y. C. CRUISE.

NEW JERSEY Y. C. CRUISE. THE following yachts of the New Jersey Y. C. started on a short cruise down the Bay, Saturday afternoon, July 3: Wayward, Con. W. H. Dilworth and Fred Beltz, owners; catamaran Duplex. The squadron got under way at 2 F. M. with a light breeze from southwest, tide, last of the ebb. Flood lide was met in the Narrows, and after the fleet reached out by buoy 16 the wind lide completely out, and all made the best of their way to an anchorage inside of point against the flood tide and a light southwest wind. Shortly after passing the point the flagship finally passing through the lee of the Growler, owing to the superior drawing of the former's jibtop-sail. The Growler stood on down the beach a while longer and they stod off toward the Hook, the Wayward holding her reach for a bout fitteen minites longer, when she went about and shaped her course to the Highlands and Sea Bright, gathing the stooth west wind. Shortly after her all stood on down the beach a while longer and they stood off toward the Hook, the Wayward holding her reach for about fitteen minites longer, when she went about and shaped her course to the Highlands and Sea Bright, gathing that be gafftopsail was clewed up. The Wayward stood on below Sea Bright and went about and stood for a but her spinnaker. Off the Scotland the Atlantic and fraging were met, the former to be gaying was footing with the Atlantic and graups about her spin and and the Highlands ber gafftopsail was. The John Shortly and the stood on down the beach of a bout and stood for a but her spinnaker. Off the Scotland the Atlantic and fraging were met, the former to be gaying was footing with the Atlantic, but the latter seemed to be laying was footing with the Atlantic, but the latter seemed to be laying was footing with the Atlantic, but the Metter seemed to be laying was footing with the Strewsbury to Thompson's, the others anahorting with the flagship hand the Eagle Wing about five minutes later, all getting in before ' to the

and the happe wing about not inclusion inter, a genergic value of clock. In the sail up the Atlantic and Grayling were met beating out of the Hook, the former being about a ninute and a half ahead. In the reach out, while the Grayling seemed to foot equally as fast as the Atlantic, she did not point up with her, there being the same differ-ence noticeable as on Sunday. Off the wind on Sunday the Grayling seemed to get a little the better of the Atlantic, going out from under her lee, the Atlantic having her balloon jibtopsail set. So it would seem that, while the Atlantic beats Grayling to windward, off the wind the Grayling is equally fast.

EASTERN Y. C. 16TH REGATTA, JUNE 29.

keels; 4 were of L bops of mixed mode ese boats were: O ed keels 5, no prize nber of yachts,

EASTERN Y. C. 16TH REGATTA, JUNE 29. The race of last week at Boston brought to an end one of the most interesting series of races that has taken place in the his-iry of our yachting; races that derive a special importance from be fact that they mark plainly the ereat changes that have taken ace in American yachting, and still further, from the indications hich they give of its future. While the weather m the three califer ces at New York was not favorable to a thorough estimate of the lattrespect; while each of the four served to emphasize some in-ortant points that claim the attention of all. The first of these concerns most the past history of yachting, the edits of yesterday, now noticeable chiefly from their absence. In e 4 races a total of 59 yachts competed, making 93 starts in all; 42 wyachts as a special class, and considering only the classes which we existed for years here, we find 39 yachts with 57 starts in the wraces. If these only 28 were of the loce onterbroard lead keel type, 5 re keel sloops of mixed models, and 6 were thorough cutters. The tries of these hoats were: Old sloops 38, 6 first prizes; new type 8, theys, mixed keels 5, no prizes; cutters 11, 8 firsts. The figures in theys, mixed keels 5, no prizes; cutters 11, 8 firsts.

we find 33 yachts with 57 starts in the of the old centerboard type, 40 fthem he new centerboard lead keel type, 5 els, and 6 were thorough cutters. The ld sloops 33, 6 first prizes; new type 8, es; cutters 11, 8 firsts. The figures in w Tone Minetary

New Type. Mixed Keels. Cutters. Total. 5 11 $3. \dots 23 = 8 = 5 = 11 = 57$ $1 \text{sts and } 2 \text{ds } \dots 9 = 3 = -8 = 8 = 20$ $1 \text{sts } \dots 6 = 2 = -8 = 16$ $1 \text{st of sloops is increased by some small boats entered in one$

table tells its own lesson without any comment; i te representative ones of the section which has alw ling one in American yachting. The boats which or e entire fleet have now actually passed away, they y in the entries and worse in the wins, and the prizes ad British yachts or their fellows of American bu latter also is largely due the interest in the races, the ed the t poorly

ated British yachts or the interest in the new ne latter also is largely due the interest in the new work failing on a few of them. Jusions which follow these facts, however, must be econd and most important feature of the races, the a lass in our regular club regatas. In every race the of these new boats have dwarfed entirely all other fea-schooners have been completely overleoked; and work in the smaller classes has attracted no commer all the interest concentrating in Puritan, Priscula them of course this interest is largely due to the schooners is a state of the school of the sc se this interest is largely due to t ve last full in the Cup race; a nal pride, not only among yacl es, and in the most remote inlar ed to a degree pieviously unkno two great yachting centers, Ne ned a na of all cl

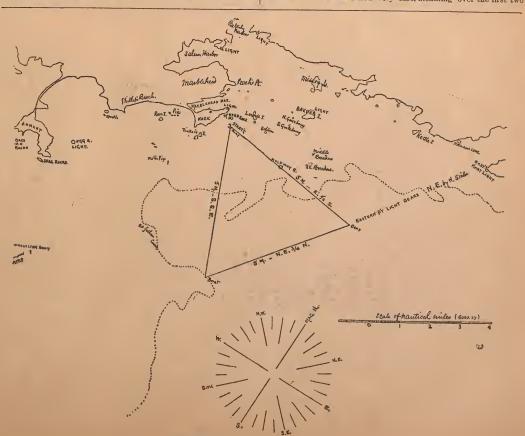

These yachts has also excited to a degree perious unknown, the indur title has also excited to a degree perious unknown, the indur title has also excited to a degree perious unknown, the indur title has also excited to a degree perious unknown, the indured the state of the second state s

ters have since been built here. The new boats of the season as was to be expected, followed very closely the victorious boa ters have since been built here. The new boats of the season have, as was to be expected, followed very closely the victorious boat, the two most noticeable examples being Cinderelia in New York and the new Yandal in Boston. Let us see what this new type really is, First and foremost it has the centerboard, a thoroughly American feature, but this board works through a distinctly marked keel, projecting some distance below the hull proper, and this keel is of lead. Of these features, form and material, the latter is peculiar to Emplesh practice, and the former has always been the exception here and the practice, and the former has always been the exception here and the rule in England. Again, these boats possess the beam that is a char-acteristic of American as distinguished from English practice, though this beam is less than it was a few years since and promises to decrease still more. This, it is true, is a great difference, a May-flower of 28tt, and a Galatea of 15tt, on the same length; but to offset tips except as to the two minor details, a laced mainsail and a fixed bowsprit. Two of the four boats have indeed followed to a certain extent the proportions of the sloop rig only to change for the cutter, in one case with a very marked improvement, the other not having yet been tried. In depth, draft and displacement the new having yet heas nothing in common with the ancient flations, hut leaas toward the aching 1

Strongly toward the same matter of during up to the same and the same matter of the same and the same as a representative of American ideas; a boat derived mainly from a thorough study of Eoglish, not American practice and theory, untrammeled by the rule which has put British designers under such a handicap. No doubt the type has much to recommend it, no doubt but that it is well adapted to our wants, but the battle was not fought out to a close

4.1.12
Iast September, and there is plenty of fight still left in the nar cutter before she is driven from our waters. Genesta was bea Galatea may be, but to-day, when the first craze after a novelty well worn off, the cutters are holding the leading places in our r and taking the prizes from all but the big four. This year i already claim half the wins. Bedouin promises to rival her string 1984. Sfirsts to 9 starts, while Clara has proved simply a marve all who have watched her racing. Narrowest of the narrow, dee than any, she has sailed eight races this season and won e firsts, leaving all her class far behind at the finish and cutting allead of most of the class above. In view of the success of e this one boat of the type, its possibilities for speed must be admit and speed will always be at a premium here. These two types, the narrow keel cutter built under the Y. R. A. rule, and they centerboard cutter built outside of such a rule, and they centerboard cutter built outside of such a rule, and they is aboat, wide centerboard y acht the vas of the race concertains will be the result of the contest?
Jus here may be noted a curious point that has never been cometed on. In the past a man largely shaped his yachning by vased and balasted. Provided with this boat he soon found limit within which it was not too dangerous, and carefully kept with the while was not boat to be had here him are suited to all purposes, the shoal sharpie for Florida, the med of yeaks and pallasted. Provided with this boat he soon found are suited to all purposes, the shoal sharpie for Florida, the mark and a wider range of cruising, and the cutter of moderate beam, and a wider range of cruising, and the cutter of moderate beam. And of yachting, while the yachting has been trained to easily seen, of old the yachting was made to fit out of the race of many a way the deal proves of florid at the success of format and passages of Florid at the forme of a soat for probability be etit the which is a sub obt, while the yachti

waterline length, the allowance between various yachts in each class not being in the least affected. Never hefore has the subject been brought so prominently into notice as in these races, and especially in that of last week.
The classification in each of our clubs has grown up in a desultory way, entirely independent of any scientific or reasonable basis. Certain sizes of yachts have become popular in each club and the classes have followed the accidental grouping. In time, as yachts were added, they were built for one of these classes, and as long as no interclub contests arose there was no trouble. Following the impulse given to yachting of late years. open races have become much more common, and the boats of one club may be found in the races of half a dozen others in a season. Now, no two are likely to nave the same system of classification, as is well instanced in the four arge clubs in question. The New York has heretofore divided its single stick yachts as follows: 55ft, and over; under 55ft, and not under 5ft; under 4ft; word 4ft, which has no place in the classe, and under 56ft. The Arlontic has 60ft. And over; both and under 5ft; 4ft, and under 56ft, under 2ft. The Station of the same and under 5ft. and over, is stick and dres 40ft. Now a new class has claimed a place, and to meet jithe New York Y. C. has established a class of 70ft, and over, is stick and the New York. Y. C. has established a class of 70ft, and odd figue, to sufficiently; the S. C. Y. C. have made had narrowly escaping a serious ufficiently; the S. M. Y. C. which function for the wish to race in another, a 90 tonner of 58ft. Ant oprevious the has the subject at an early of the difficulty of the difficulty and with so to race in another, a 90 tonner of 58ft. At no previous time has the subject at an early at bome trace, is write the difficulty and methods were well shown in the 4ft. C., where Wilfda, all tonner of days are readily escape and with so that of have a nore dupt of the difficulty and with so there thave have ha

was far too small for the class and had no place in it, but went in in a true sporting spirit, and the same took Shona over the course alone, none of the Boston cracks showing up to give the little stran-ger a race. Her crew are made to fit her beam, young Charles Barr, trother of Clara's skipper, and John Junior, son of the latter, a young sallor man of twelve years, who promises some day to make a worthy successor to his father. The class of the little strand the same strand the little strand practice as a Fortuna and Marflower, but for form and style the little black lead pencil, as some call her, can hold her own with any. With a boat of moderate proportions beau'y of form is obtained with com-parative ense, but given an extreme length of 40ft, and a beam of little over 5 t., on which to build a boat at once fast and haddsome, and the task is far different. A look at any of our fastest cutters will show the flat side and many a heavy hige low down. With Shona t is not so, but her narrow sides are beautifully rounded and her long counter is as delicately singped as a black marble statue, every curve and conlour showing the hand of an arist as well as a successful designer. After the races most of the yachts ancbored in Marhlebead Hartor, ruritan saling for Bosion. Mayllower left next morning, Priscilla followed later, bound for a short cruise; in the atternom Clara and Uldia weighed for the return trip, and the quiet oid town settled down to its wonted business of rowing dories and driving shoe pegs as though it had never wakened from its monotonous round to go wild for a day over a yacht race.

BOSTON CITY REGATTA, JULY 5.

BOSION CITY REGATTA, JULY 5. A LARGE field of yachts sailed in the annual city regatts on Mon-day, in a good easterly breeze, the start being made in a dense for, Stranger, Shadow, Lapwing, won easily in their classes, the finish heing closer with the smaller boats. The keel cutter Lapwing, $35\times10\times71t$, beats the keel sloop $\pounds 2ir$, $33\times13\times81t$, over half an hour, while cutter $\pounds 0$ has pushed the latter closely. In the third class four keel boats, Bannerei, Lizzie F. Daly, Echo and Kitty were the lead-ers, the two former beating all the centerboard boats. The times were:

LARCHMONT Y. C. SPRING REGATTA, JULY & YACHT clubs, and especially their regata committees, will fin places the seventh annual regata of the Larchmont Y. C. ahead of older and larger clubs this season. This may be due, to a certal extent, to the small hosts of the club's home fleet; but further the this, a glance at the list will show the presence of a number of fa yachts gathered from about New York and the Sound and making very respectable showing for the club. In the matter of entries the year, the Atlantic Y. C. stands next to the Larchmont, which fa suggests the idea that the division of classes has something to c	$ \begin{array}{cccccccccccccccccccccccccccccccccccc$	CRUISE OF THE KNICKERBOCKER Y. C. ON Saturday, July 3, at 7 P. M. a gun from the flagship Flash sent the freet away. The start was by no means an animated one, as the hreeze was 'up and down the mast.'' The tide was fortunately running flood, however, and with a little turgring at the cars the fol- lowing yachts managed to start: Flash, Gil Blas, Rover, Supervisor, Nanita, Rosetta A., Wacondah, Hornet. Florence, Melvina. By dint of hard rowing the Flash got to City Island at 11:30 P. M., followed shortly by the Gil Blas and others. July 4 dawned fairly, but with no prospects of a breeze. At 10:20 the fleet started, favored by a very gentle breeze from N.E. Nanita,

Cinderella 30 00 Dapme. 310 1 Cinderella 50 42 Part of the fleet now made for Captain's Island, the small fry lead ing for home more directly. The wind now fell a little and cam from the south for a time. Going hack to its old quarter spinnake, were set to port for the last part of the leg. The times at Captain Island were: Clara	⁹ Editor Forest and Stream: The regata of the Eastern Y. C. on the 29th was a most successful affair, and with the lessons taught will long be remembered by every lover of a yacht, and it is with regret that we look over the entries and mark the decadence of the once famous American centerboard sloop and note the hold that English ideas have taken on the minds of American yachtsmen through our lack of original ideas. Out of it lisingle-stickers we find 3 mongrels, 6 cutters, 5 of them English, and 2 centerboard sloops, Active and Priscilla. The result of this race shows conclusively that in the hig single- stickers it was as much in the crew as it was in the vessel, as has been repeatedly shown hefore, and that the victory of Puritan over Priscilla and Marthower was due to the superior handling of Puritan	Silver Cloud, J. McLangblin Longth. Elapsed. Corrected. Silver Cloud, J. McLangblin
Rival	1 judgment in regard to canvas. At the start, with mainsail, clubtop sail, forestaysail, jib and jibtopsail, Priscilla led across the line by a large margin, while Puritan with mainsail, working topsail, forestay-sail, jib and jibtopsail note the difference of the spread of the two), cut down the lead of Priscilla two-thirds after sailing the first ten miles. Over the same distance on the second time around the Perceilla	Flying Vankee, sawyer & Rich
CLASS I SLOOPS AND CUTTERS 42 FEET AND UNDER 55. Athlon 146 30 7 53 23 5 06 52 6 05 52 Daphne	her own. What does this show, not that Priscilla was not astiff as ther own. What does this show, not that Priscilla was not astiff as the Puritan, but that she can and did earry her sail and that to her detriment in the first part of the race. In windward work the Pris- cilla seemed losy, appeared to hold a good wind hut seemed to sail by the head. This may he accounted for by the hallast in its location of the diving power. Under the clubtopsail and mainsail in a fair breeze the head sails appear to halance right for windward work hut with the workfur topsail in a strong breeze there appears to be too much head sail, a trifting reduction in-board would be beneficial. An error in judgment was shown on the Priscilla in the first windward leg of the course by standing to far on after rounding the northern- most stake hoat, she having the eht tide of ship chanuel on her weather bow and on the opposite tack was compeled to cross it, hut on the last windward leg of the course-at slack water-this tack proved an alvatatige. However, it has been practically demon- strated that in a ten knot breeze an American centerhoard sloop with her hallast inside can stand up and carry sail with any cutter or	Twilight, Rideout Bro. 18,01 0 54 45 24 03 Daisy, F. A CAPTAIN IN SKIRTS,—A little woman walked into the office of the steamboat inspectors the other day and astonished those "grave and reverend signors" by remarking that she wanted a license to command a steamboat. It seems that James Coons, who lives in Harlem, owns a little steam lannch called the Elizybeth, in which he is accustomed to cruise about the waters of the Bay and the East River. He is always accompanied by his wife, Mary E, Coons, who applied for the license. He is an engineer and attends to the me-chanical part of the outfit, while his wife, Mary E, Coons, who applied for the license. He is an engineer and attends to the me-chanical part of the outfit, while his wife, Mary E, Coons was already chief engineer Mrs. Coons considered that she ought to be captain. So she applied to the inspectors for a license. When the Inspectors had recovered from their surprise they consulted the law and found that there was nothing to prevent a license hemg issued to a woman, Besides the same thing had been done in the case of a woman who now commands a Missi sippi steamhoat. Having arrived at the conclusion that Mrs. Coons was eligible they proceeded to put her through the regulation nautical catechism. "Could she hox the compass?" She could and dud. "Did she know the rules of the road?" She gave the rules of the road. As she only wanted a special license to command a steam launch on the waters of New York Bay and the promised not to swear at the crew and to deal gently with the chief engineer, the license was may and to gently with the chief engineer, the license was made and the doubless be a strict issumd command, and steem ta tunning you the part of the chief engineer, will he promptly and severely punished.—N. Y. Tribune, Meng W.

2. Any license fee for non resident? 3. What is the open season for moose in Ontario? 4. Any license fee for non-resident? Ans For open seasons see lists in Ghme, Bag and Gun Department. There is a license fee in Quebec, but not in Ontario.
R. W. McL., Chillicothe, O.-I desire to spend the last week of August and the month of September with my wife (who is hardly re-covered from a severe attack to f pneumonia) at some pleasant and healthful resort, where good fishing or hunting (or both) may be had during that period. Ans. We had the name of such a place in Weste Virginia, which, however, has been misland. Perhaps some reader of the Forkers Ans Stream can supply the information sought.
G. K. C., Rochester,--Can you give me a receipt for making a cement for an aquarium, something that will adhere to glass? Ans. One part by measure litharge, one part plaster of Paris, one part the beach sand, one-third part fine powdered rosin. Mix weil all to-gether. This may be kept for years while dry in a well corked hottle, when used make into a puty with boiled linsed oil; a little patent dryer may be used. It will stand water at once, eitner salt or fresh. An Loos, Hartford City, Ind. -A duck skin which I would like to have identified. None of my sportsment friends can rell me the species. I found it in the spring of 1855, one moning when the snow was a foot deep. It was apparently chilled, as it allowed me to pick it up. It lived two days, hut it would not eat any thing and had not-ing in its crop when 1 skinned it. Ans. The duck is at male specime of the *Barelda glacialis*, long-talled duck, old-wire, south-south-erly, or old squaw. It is common on the coast, and is found on the Great Lake:
The Maxirona Esingaxi7.-Mr. J.

erty, or old squaw. It is common on the coast, and is found on the Great Lakes and other inland waters. Your other query will be an-swered later. THE MANTODA EMEGANT.—Mr. J. A. Carman, of Winnepeg, Mani-foba, has sent us the first number of a neatly printed journal or matter and current notes of much service to intending settlers and of special interest to persons who have not been already informed of the remarkable progress and present condition of that valuable section of the Canadian Dominion. Mr. Carman intends to devote a department of his paper to the natural history of the country, and rulue to science and the interest of sport. The Emigrant is a [6 page quarto with very neat typographical appearance. Price. SI per year. L. G. C. Columbus, O.—At our last badge contest a decision was rendered by our captain which has caused some controversy among by rain during the last round of 5, or after all the context and shous that 515 birds, and all hut 8 had completed their full score of 80, out the for the badge in less the shoot being necessarily stopped at any provide in provision for the shoot being necessarily stopped at any time during its progress. Our captian during the lasts or at any first present holders of the hadges shall hold them till the storight sport. Exceptions have been awarded from the short that the present holders of the hadges shall hold them till the present holders of the hadges shall hold them till the set regular shoot." Exceptions have been awarded from the highest scores at the end of even imming, which in this case would have been at the end of the IS, others that they should have been high be scores at the end of the sting the they should have been high be scores at the end of the sting the the remain till some one had yon them under the rules. If there is any general rule among how been a which would cover this point will you kindly refer us to it. Any. The ruling of the captain was correct; It was no shoot.

The "gentleman" (?) who has so kindly undertaken to board my pointer dog (Don) gratis will, I fear, gain nothing by his kindness, but will be prosecuted with the full power of the law if discovered—Advertisement in the Fort Worth (Texus) Gazette.

A boy down at San Juan gained an enviable religious repu-tation by committing to memory 1,000 verses of the Biole, and was rewarded by the present of a shotgun. His reputation was somewhat smirched, however, when four days after he shot his grandmother in the right leg.—San Francisco Alta.

anot his grandmother in the right leg.—San Francisco Alta. A wild goose exhibited so much curiosity about Watchman Hendrickson's lantern at Asbury Park one night last week that he determined to try to kill it. Setting his lantern down near the edge of the water, he produced a stick and watched for developments. The goose waddled up to the lantern and was so intent on watching the flame that Hendrickson crept up and killed it with the stick. At least such is the story re-lated by the Asbury Park Journal.

In front of a dwelling house on West 5th street yesterday afternoon an elderly woman stood talking excitedly with a neighbor and rincing her hands distratedly. Both appeared very much agitated, apparently over the presence of a robin perched on the street fence. Presently one of them made alarming de nonstrations at the bird as if to frighten it away, but the redbreast gave a hop, skip, and jump along the fence, itilted its head sidewise in derision or defance, and refused to go. Then the woman gesticulated more energetically, point ing from the bird to the house, and curious passers-by lingered to learn the meaning of their singular behavior. This is what troubled them: The robin, doubtless for some good reason of his own which he could not explain if he would, had been trying for an hour or more to gain admittance through a win-dow to the upperstory of the house. The mere fact of a robin trying to break and enter a two-story dwelling was not alarming, but the fact that a woman was lying dangerously ill in that house gave the incident appalling significance. The woman was fixed in the conviction that the robin's action was a harbinger of death; hence the woe.—*Erie (Fa.) Dispatch*.

YELLOWSTONE PARK MATTERS.

T seems probable that neither Senator Vest's bill for the better government of the Yellowstone Park nor the bill authorizing the building of a railway through the Park will receive the serious attention of Congress during the present session. We shall have to wait with what patience we can for that body to do its plain duty by the people. In the meantime a larger number of people are constantly becom-ing acquainted with the needs of the Park, and a wider interest is being felt in its proper protection.

The new hotel company is putting up several buildings at various points of interest, and the Northern Pacific Railroad has purchased, as we announced at the time, the Mammoth Hot Springs Hotel, which has been overhauled and put in good order.

There seem to be some hitches in the conduct of matters in regard to the hotels. It will be remembered that last spring Ellwood E. Thorne, of New York, purchased for the Northern Pacific R. R. Co. the large hotel at the Hot Springs. This is said to have been turned over to the new Springs. corporation afterward formed, called the Yellowstone Park Association, the management of which consists of Mr. Charles Gibson, of St. Louis, and a number of gentlemen who are interested in the N. P. R. R., the latter corporation being represented by Mr. H. C. Davis, Assistant General Passenger Agent of the road. The present quarrel in the Passenger Agent of the road. The present quarter in the association is not clearly explained by any of the dispatches which we have received. One account is as follows:

"The new association purchased the present hotels at the lower and upper Geyser Basins, which they refitted and refurnished, opening them on June 15. Mr. Thorne came up from New York three weeks ago to look after the property and found that the new association had control. Mr. Thorne and President Harris, who are old friends, were together a few days ago and the rumor was current that Mr. Harris backed Thorne in the matter, while General Manager Oakes, Traffic Manager Hannaford and Passenger Agent Fee stood by Gibson and Davis. Mr. Thorne cannot get hold of his property and the case may be carried to the courts for adjustment. Superintendent Wear, of the Park, telegraphed the Secretary of the Interior at Washington to sustain the

Northern Pacific in the matter, but Mr. Wear received a reply instructing him to hold himself free from the case."

NEW YORK HARBOR.

NOW that the general government has followed the State of New York in providing for the protection of the harbor of New York city we hope for a return of our game fishes after natural deposits have covered the foul sludge acid which now lines the bottom, or after it has been rendered harmless by age. On Monday last the Senate passed Warner Miller's bill to prevent obstructive and injurious deposits within the harbor and adjacent waters of New York city by dumping or otherwise, and to punish and prevent such offenses and making other provisions. This is a most excellent bill, for it makes the placing, dis-

charging or depositing by any process, or in any manner, of refuse, dirt, ashes, cinders, mud, sand, dredgings, sludge acid, or any other matter of any kind other than that flowing from streets, sewers and passing therefrom in a liquid state in the tidal waters of the harbor of New York or its adjacent or tributary waters a misdemeanor punishable by a fine of not less than \$250 nor more than \$2,500 and imprisonment not less than thirty days nor more than one year or both. The same punishment added to a revocation of license is provided for a vessel towing a load of such prohibited matter. The commissioners of the harbor are to prescribe the limits within which deposits are to be made.

This bill, aided by the one put through the State Legislature last winter by Mr. Doyle to protect the oyster beds from the evils of dumped refuse and chemicals, will tend to keep the mouth of the Hudson cleaner, and must eventually make it a resort for the species of fish which formerly came into it in great numbers but have abandoned it of late years because of its vile flavor and the absence of food on its sticky bottom. Senator Miller's bill was introduced mainly in the interests of commerce, because of the filling of the channel, but it will interest anglers as well, and we have personal knowledge that the Senator is a lover of the gentle art; though we regret to say he is not sound on game law observance.

AMERICAN STEAM YACHTS.

WHILE the main interest this season naturally centers in the large sailing yachts, the steam fleet is by no means neglected, and under the care of the American Y. C. sport is steadily growing. To day the third annual regatta and cruise of the club begins, with a turnout of yachts that does great credit to this young but powerful organization, and the success of last year is likely to be repeated. A notable feature of the past winter was the number of steam yachts which were rebuilt and improved. Until a very recent date the American steam yacht of moderate size was more apt to inspire wonder than admiration in the beholder, the chief feature being a total absence of style, and while the standard as yet is not up to the mark, it is far higher, and constantly improving. The American steam yacht fleet leads all others in the possession of the largest vessels, and is unsurpassed in the matter of elcgant equipment, but in the medium and smaller classes there is room for a vast improvement both in design and in the engineering department. Of skill in design and execution we have plenty, our engineers and mechanics are second to none, and with a demand once manifested for a steam yacht of shipshape proportions and finish, it will be met as quickly and completely as that for a larger class of sailing yachts has been.

KEELS IN LIGHT WINDS .- The yacht races thus far this season show that we have by no means arrived at the bottom of the keel question as yet, and that the possibilities of this class, unhampered by extreme narrow beam or a pure length rule, are likely to surprise even the most sanguine keel boat advocates. The work of the small keels in Eastern waters is throwing some light on the question, and latest results will bear careful study. At Marblehead on Saturday the two keel cutters, Vera and Mona, beat the centerboard cats 10 minutes, in a breeze so light that the larger classes could not

THE WIMBLEDON RIFLE MEETING opened this week. The prizes aggregate \$60,000. That sum will be divided up into small portions by the time it finds its way into the pockets of the winners, for there are scores of contestants. Without a large prize list no range can draw well. Creedmoor ought to be endowed with funds sufficient to warrant an attractive lot of prizes.

AN ACT TO AMEND AN ACT TO AMEND AN ACT TO AMEND AN ACT.-Had the last New York Legislature had a week or two more of useful existence it might have added to the rigmarole which introduces some of its laws; perhaps it might cven have reconsidered its hounding law. In several instances this wise body enacted one law and then sct about providing the proper remedy by straightway enacting an-other measure repealing its own act and substituting something else in place. Thus the trout law was taken up for revision, and a particularly stupid bill passed April 13; on May 25 following, the Legislature crawfished out by another bill correcting some of the ignorant blunders in the act of April 13, but perpetrating a gross outrage with respect to Another piece of double back-action, selfthe fingerlings. correcting legislation was the black bass law. One bill was passed February 9. This was amended and corrected and patched up by a second piece of tinkering on May 20, which is in the title explained to be "An act to amend . . . an act to amend . . . an act to amend . . . an act." This is legislation in the fourth degree. It requires long training in the interpretation of complex and intricate verbiage to determine what such patched-up laws actually mean.

A RIGHTEOUS JUDGMENT.—A Long Island doctor, who showed his skill with the pistol by shooting a tin can atop the head of a companion, and banged away until he not only riddled the can but killed the man, was last week convicted of manslaughter in the second degree. The lawyer for the defense made the curious plea that the marksman was so expert that he was certain of hitting the mark aimed at, and there was consequently no folly in his shooting as he did. No man in this world is so skilled with firearms and so sure of hitting the mark as to be warranted in shooting at tin cans and apples and potatoes on the head of man or woman or child. In this particular case the fallacy of the defendant's argument was demonstrated by the fact that the bullet intended for the can did miss the mark and penetrate instead the brain of the man. There are a number of pistol and rifle shots in this country who give stage exhibitions of their skill by shooting at objects placed on the head of a human being. Every once in a while the papers report a case of death caused by the practice. There are laws enough to forbid such exhibitions, but they are not often enforced; nor are the shooters who cause such death hung as numerously as they should be.

JULY is one of the months in which is demonstrated the strength of the sporting instinct. Men who, under ordinary circumstances, take every precaution to keep cool and comfortable in the mid-summer heat, shoulder their guns and seek out the thickest coverts, and there in quest of a winged lure put themselves through a course of factics that would try the fortitude of disciplined troops. It is all nonsense to decry summer woodcock shooting on the score of its fatiguing hardships. If a sportsman enjoys the toils of the pursuit no argument heaped upon argument can convince him that the pains are not four-fold compensated and rewarded by the pleasures. One might as well try to show the winter wild-fowl shooter that he is an idiot for half freezing himself to death. So long as game remains and the shooting instinct survives, the sportsman will court summer's heat and win-ter's cold, and bear each with smiling content, provided only he have anything to show as a reward.

STEWED DOG AS AN ADVERTISEMENT. - The enterprising managers of a cowboy-Indian show, now exhibiting in the vicinity of New York, have devised an ingenius method of utilizing the common cur of low degree with much profit to themselves. They cause the dogs to be slain, stewed and eaten by the Indians, giving out to the press that the savages are celebrating their regular annual traditional sacred weird and mystical dog feast. The wide-awake editors detail their reporters to witness the dog feast and write up vivid reports of it; and the readers have a column or two of stewed dog served up to them at breakfast or dinner. At first the Indians refused to eat any other than the traditional snow white dog, and the regular annual feast was not celebrated oftener than once a month, but now a dog of any color will do, and the annual feast is a weekly institution. The Indians are not squeamish, but there are signs that the newspaper reading public is becoming satiated and the show managers will soon be obliged to devise other schemes of advertising.

A TEXAS MAN has been found guilty of stealing his own horse and sent to the penitentiary. It would be well if Texas justice were meted out to the fellows who steal other men's dogs.

[JULY 15, 1886.

country, I made for a point where it was likely the bear would pass. And hardly had I thrown myself down when crashing sticks warned me of his rapid approach. He sud-denly came into view, a large brown beast, not over thirty yards distant. Firing rapidly, I struck him in the leg. It seemed only to enrage him, for, after biting at the wounded spot savagely, he rushed straight toward me. Not having had time to reload my barrel, I reserved the other until the muzzle nearly touched his jaws, and pulling the trigger jumped on one side. By the very impetus of his charge he was carried some paces past me, and after a kick or two lay stone dead. So close was he that the powder had scorched his month. REX.

A-SI-NIS KOA, Sipi, Oct. 27, 1885.

[TO BE CONTINUED.]

DAYS WITH THE BARMECIDE CLUB. IX.

TX. TOUR, eight and a pair, seven are fifteen two, twenty-five, that's a go; thirty-one, four holes—and almost innumer-able variations on the above were played until the monotony of the proceedings became so thick it could have been cut with a club; and it must have been the disgust felt by the rainy day at our unprofitable employment indoors that dislocated its spinal column and buried it in the irrevocable past, while it was succeeded by a day of sunshine which un-locked our doors and again scattered us over lake and brook. But a few days more were remaining in which we could practice our gentle art, and the time we improved though it was barren of wonderfully substantial results. But all the same we whipped the rifiles and the eddies and the mirror-like stretches on the brook, the ripples and the quiet on the lake; and managed by persistent effort to keep the wolf from the shanty, and we all felt that we had improved ur casting to an appreciable extent, and that was idle time not idly spent.

<text><text><text><text><text>

meditative mood. Guy had long been doing so in propria persona, for the place was new to him and he had many strange nooks to explore. I was soon roused from my retro-spection by his giving tongue, and starting up, I found him intent on almost taking to the water, but without seeing, at first glance, any cause for his undue excitement. Evidently thinking me very stupid and stolid, he looked into my face and again made the air ring with his music. I now saw, about a fathom's length from shore, a large fish rise to an alder catkin afloat on the surface. The water was so deep and so dark that I could not name the fish, but I presume it was a species of dace, once very abundant here. It was amusing to see the dog attempt to step upon the water and to hear his angry volce at being baulked of a firm foothold and a dash at this novel prey. The fish soon disappeared, and so did Guy—to "fresh fields and pastures new," won-dering, I trow, at his discomfiture, leaving me to moralize a bit and also to wonder if there were now as good fish in the pond as I used to draw thence. I am disposed to doubt the fact, for thoughtless boys and men have made within, as well as out of, the water, and very "small fry," as well as coarse, are only left "to point the moral" and to bear wit-ness to the "changes and chances" which a greedful and selfish age is making in the fair domains of nature. O what heart of grace she has, however, and how bravely she strives to hide man's ravges anceath a veil of greenery and broidery of fair flowers! Ever kindly, ever soothing, ever glorious and beautiful and buoyant!

Hatural History.

THE AMERICAN ASSOCIATION.

THE AMERICAN ASSOCIATION. THE thirty-fifth meeting of the American Association for the Advancement of Science, will be held at Buffalo, N. Y., from Wednesday morning, Aug. 18, until Tuesday evening, Aug. 24, 1886. The headquarters of the Association will be at the High School, and all the offices and meeting rooms will be in that building or in one of the school houses near by. The hotel headquarters will be at the Genesee House. A special circu-lar in relation to railroads, hotels and other matters, has been issued by the Local Committee. In order to take advantage of these arrangements, members who have not received the Local Committee's circular should send for a copy at once. Arrangements for excursions and receptions will be an-nounced by the Local Committee. For all matters pertain-ing to membership, papers and business of the Association, address the permanent sceretary at Salen, Mass., up to Aug. 12. From Aug. 12 until Sept. 25, his address will be Buffano, N. Y.

TWO MONTHS AMONG THE CREES.—1. O^{ME} spring some years ago I was stationed at a post of the Hudson's Bay Company, in the Northwestern Ter-rivery, and busily engaged in Indian trading. Opposition was strong and petty fur traders were traveling about in all directions. Early in March I received instructions to choose man from the fort employees and pass the remainder of the rading season at a certain mountain some eighty miles dis-tant, on the Lower Saskatchewan. A ccordingly, having selected my man and everything being in readiness, one with a keen west wind blowing squarely in our faces. On-ward we traveled over lake and portage, spelling about 8 M. and boiling our copper kettle of tea, with a meal of the inevitable permitcan (at the time the only food used through the North). The poor dogs looked wistfully on, there turn for food coming once only in the twenty-four one. The more monoton for the spring, was a grizzled olf regions of the North, and had accompanied one of the over-and expeditions in search of Sir John Franklin; many and the spenditions in search of Sir John Franklin; many and the scomfortable cabin for a stormy March night across is comfortable cabin for a stormy March night across is confortable cabin for a stormy March night across is confortable cabin for a stormy March night across is confortable cabin for a stormy March night across is confortable cabin for a stormy March night across is confortable cabin for a stormy March night across is confortable cabin for a stormy March night across is confortable cabin for a stormy March night across is confortable cabin for a stormy march night across is confortable cabin for a stormy march night across is confortable cabin for a stormy march night across is confortable cabin for a stormy march night across is confortable cabin for a stormy march night across is confortable cabin for a stormy march night across is confortable cabin for a stormy march night across is confortable cabin for a stormy march night across is confortable cabin for a stor TWO MONTHS AMONG THE CREES .- I.

Reharnessing our dogs, onward we went, reaching our destination late the next night. Choosing a suitable place for encampment we soon put up our leather tepees, and having stowed our trading goods under cover, were settled down

blank to be obtained at the desk of the local committee. Members of the club will be provided with a suitable badge. Special arrangements will be made by which the botanists can visit some interesting collecting field during the long excursion on Saturday. A special excursion will be given the club to some point in the vicinity of Buffalo; the date and place will be announced hereafter. The botanists of Buffalo have other plans for the entertainment of their guests, which are not sufficiently mature to announce. For further information address Dr. J. C. ARTHUR, Secretary of the club, Geneva, N. Y. The Society for the Promotion of Agricultural Science will hold its seventh annual meeting in Buffalo, beginning on Tuesday, August 17. For further information address Dr. BYRON D. HALSTED, Secretary, Ames, Iowa.

THE AUDUBON SOCIETY.

THE AUDUBON SOCIETY. A meeting of the Cincinnati Natural History Society, held Tuesday, July 6, the following report of the Com-mittee on Destruction of Native Birds was submitted to the society and adopted: — Tour committee report as follows in the matter submitted to them, and state that they have carefully investigated the subject of the destruction of our native birds, and several papers have been prepared and read at three meetings of this society. They find: — Thist-That native birds of many species have greatly decreased in numbers over large areas of the country. This spartly true of those water and game birds about which it is comparatively easy to obtain statistics. — Scond—That the chief cause of such decrease, in addition to climatic changes, natural enemies, clearing up the coun-ry, etc., are the direct destruction of birds for their skins and feathers for decorative and millinery uses, the trapping of birds for cage purposes, the destruction of eggs and nests by men and boys, and the introduction of the European partow (*Passer domesticus*), which occupies the nesting places of many species. Three of these causes are prevent-birds and the evil results can be greatly lessened, first, if no places of many species be backed by stronger public opinds and insectivorous species be backed by stronger public opinds and insectivorous species be backed by stronger public opinds and used for decorative forced, if ourd, if thoughtless me and boys could be shown the great economic value of points and taught the desirability of protecting them and their ergs. — Tour committee find that a widespread discussion of the teges.

eggs. Your committee find that a widespread discussion of the bird question shows more interest in "our feathered friends" than they had hoped for, and they trust that Cuvier clubs, Audubon societies and other clubs of like aims will continue to flourish on all sides until public sentiment is entirely opposed to the destruction of our native birds.

A BLACK PRAIRIE DOG.—*Editor Forest and Stream:* During a recent visit to the West I saw at Laramie, Wyoming Territory, a black prairie dog. The animal was captured within four or five miles of Lyramie, and while on exhibition at that town attracted a great deal of attention from old plainsmen and mountaineers, none of whom scemed to have ever seen a similar specimen. It was almost entirely jet black, thougn on the flanks and haunches the color changed to very deep, rich brown. The tip of the tail was much paler—almost fawn color—and the tip of the tail was grizzled, just as is often the case with the chin of an aged black dog. It is not certain to which species of prairie dog the animal belongs. The ranges of *C. ludovicianus* and *C. gunnisonii* overlap here, and both animals are common. The appearance of this melanistic individual leads me to think it probable that it was *C. gunnisonii*, as it had to my eye the somewhat nore delicate and graceful form of the species, but it was impossible to definitely determine the point.— G. B. G. (New York, July 5).

G. B. G. (New York, July 5). EUROPEAN GOLD FINCH IN NEW YORK.—I am informed by Mr. W. A. Conklin, of the Central Park menageric, New York eity, that the European gold finch (*Carducits elegens*) first appeared in the Park in 1879, having probably crossed the Hudson River from Hoboken, N. J., where some binds had been set at liberty the previous year. The species is now common and apparently resident. On April 20, 1886, I discovered in precisely similar situations, two nests, one of which containing five fresh eggs has been forwarded to the Snithsonian Institution. It was placed in a pine tree, rest-ing among the tufts of long needles near the end of a slender horizontal limb, some twelve feet from the ground. The species seems to be gradually extending its range, as on May 23, 1886, I met with a pair occupying a clump of pines six or seven miles to the northward.—E. T. Adney in July Auk.

ELK ANTLERS.—Chehalis, Washington Teritory.—I send you dimensions of an elk's head and horns in my possession. The animal was killed just before shedding the velvet, which makes them look magnificent. Dimensions: "Face, from back of ears to tip of nose, 27 inches; butt of horns, 13 inches; 6 tines on each beam; from point of brow antler to top of horns, 53 inches; distance across from tip to tip, 374 inches; being in velvet they are lighter than if rubbed..-W. G. MERCHER.

BRIGHT FEATHERS AND BRIGHT FOLLAGE.—Lawrence, Mass., Junc 23.—The jay is a nicer bird than I thought he was. I won't shoot any more. He has a bad name among us boys, though. But late in the fall, when the wild grape is ripe, and everything is golden and the maples afire, I would not miss him for a good deal as he goes flashing through the woods like a blue flame, now screaming like wild and once in a while making the sweetest sound, which I can't compare to anything but a bell, and a mighty sweet-sounding one at that.—O. FRED NEWDERT.

Snower of Fish —Mr. W. L. May, Fish Commissioner of Nebraska, has shown us a bottle of small fish of an inch in length, which were picked up in the streets of Harvard, Neb., after a heavy rain and a cyclone, on June 14. The fish were identified by Dr. Bean as the fat head or black-head minnow (*Pimephales prometas*), a common species in the Ohio valley and upper Missouri. The fish are reported by Mr. May as having been very plentiful in the streets.

OCCURRENCE OF THE IVORY GULL AT HALIFAX.—A young bird in immature plumage was shot recently on the coast of Halifax county and is now in the possession of Mr. Thos. Egan, taxidermist of this city.—J. MATHEW JONES (Halifax, N. S., July 9).

BIRDS OF CENTRAL PARK—CORRECTION.—Litchfield, Conn., June 20, 1886.—Editor Forest and Stream: From an oversight on our part, the dates in reference to the occur-rence of the yellow-bellied flycatcher (Empidonas flaviren-tris), in Central Park, are incorrect. The species in ques-tion was observed by Mr. Adney on May 10, 1886. We trust that this correction may appear in your columns as soon as possible.—L. B. WOODRUFF, A. G. PAINE, JR. [This note, owing to erroneous direction, was not received until last week.] until last week.]

WOODCOCK.

WOODCOCK. Editor Forest and Stream: If I were to relate what I do not know, but this dreamy, mysterious and charming game birdeeches, limes atme more space in your valuable journal than jiks of rocks bundford to spare me; hence, if you please, I shut in our train any experiences with the sober, Quaker-i the bottom of 2 deendr pencils than mine the extensive task-ct fringg up the canvas and making the perfect picture. Our first intimate acquaintance '18 Oh many years ago, when I was a boy of eight or nine years. It happened in this way. One of my duites at that time was to ''drive and fetch'' an old brindle cow to and from the rocky pasture lot in my native town in Connecticut. One morning in early June, after seeing the old cow safely behind the ''bars'' in the lot, I started to cross an old mowing field in which the grass was quite light, and scattered here and there were many venerable apple trees, and a few hickory trees which had been left standing on account of the choice quality of the nuts they bore, while the fence surrounding the field was fringed with hazelnut bushes, weeds and briers of various kinds. As I sprang from the fence and landed beyond the bushes, a woodcock started up in front of me almost at my feet and fluttered and tumbled off a few rods and almost urning a summersault settled apparently helpless in the grass. Thinking it a crippled bird, boylike I darted after it, ex-

grass. Thinking it a crippled bird, boylike I darted after it, ex-

15th of November is the only time that affords good sport and really good birds, for they are then strong and healthy, making an honest target for the sportsman, and a true lux-ury for the table.

FOXHOUNDS AND FOXES.

FORMOUNDES AND FOXES.
Editor Forest and Stream:
Thave hunted foxes in Virginia, New Hampshire and Maine, with a pack in the first-named State and with from one to a half dozen dogs in the other States, and therefore for the target in thoroughly acquainted with the points in controversy. Both gentlemen are right as far as their own localities are concerned. The red fox of New England is needed, but in the out of a dozen foxes driven, but I do not think it possible for two or three of the best hounds in the world to do as much, simply because our country is full or foads, swamps and ledges, where so much time is lost in keeping the track that the fox gets far ahead, and the dogs can only trail fast, not drive by the body scent. In Virginia the world to do as much, simply because our country and never foad for hours as they do here. In whiter the great masses of ice and constantly drifting snow make following a New England fox next to impossible, unless one has a slow, patient dog that will stick to his work till the day is done; but of course, this is not driving in the Virginia sense. The presended, but the number used, and the character of the country run over. Virginia dogs do catch red foxes, I have on the same dogs can't do the same dogs that will stick to his work till the day is done; but of course, this is not driving in the Virginia sense. The presended but the number used, and the character of the country run over. Wriginia dogs do catch red foxes, I have the same work here, and from past experience I believe it is regions of Pennsylvania, that comes neare the same and further test are real. Should he do still better next season, I should he do still better next s

"Red Eye" and "Hounding," of Virginia, and Mr. New-ell, of Massachusetts, are each right as to their own locali-ties. Here in Sullivan county, N. Y., a fox would grin at the notion of being caught by any dog. Foxes here run from four to forty hours, not without breaks and loss of track. We have good foxhounds; put them in an open country, like the South, and the run would be shorter and the fox caught or holed. As to Col. Tucker's fast hounds, produced as he claims by a cross between native and im-ported strains, we nave plenty of that kind here, and there is no need to send South for them.—C. F. KENT (Monticello, N. Y.).

SOUTHERN HUNTING METHODS.

Editor Forest and Stream: In reading the apparently interminable discussion on the "hounding" and "non-hounding" questions in your columns last winter, and also allusions to fox hunting in northern woods, "Coahoma" was led into some reflections upon the curious contrasts existing between Northern and Southern methods of pursuing certain sports. In the South still-hunting for deer is rarely ever practiced, and for the most part only by "raftsmen" and such profes-sional woodsmen.

In the South still-hunting for deer is rarely ever practiced, and for the most part only by "raftsmen" and such profes-sional woodsmen. The common practice with sportsmen, and which is con-sidered legitimate sport, is to hunt the decr in very much the same manner as your fox hunting is described. A party of hunters go out on horseback with a pack of hounds. Each member is provided with a shotgun (rarely ever a rifle) and a blowing horn. One or two of the members "go in the drive;" that is, follow and control the hounds. The others are stationed at the various "stands," points where the deer is supposed to be most likely to run by. When a deer is killed by one of the "standers," a long blast is given on his horn to apprise the other hunters of the fact. Then a new drive is instituted in another locality. If the dogs run the game out of the drive without a shot they are recalled by the drivers as soon as practicable and a fresh drive entered upon. This method of hunting deer certainly affords delicious sport. There is not a more thrilling experience, than, after hours of waiting suspense, perhaps, to hear the pack in full cry approaching your stand, with the exciting hallooing of the drivers behind them, while you stand tremb-ling with excitement, your gun cocked and at a "ready," in momentary expectation of the quarry bounding into view and in range of your weapon. Or, as frequently happens, the swelling music of the pack (what orchestra or human chorus can equal its effect on your nervers!) will veer off to right or left, and you spring on your hunting pony, who is as full of excitement and interest in the proceedings as yourself, and dash wildly away, leaping over logs and dodg-ing overhanging branches, to "head off" the game at another stand a mile away. But many a long, cold day, from "early dawn to dewy eve" hath this writer stood, or relined against a tree trunk, vainly waiting in weary solitude for the deer that had presens business in an enturely different part of the twoods.

woods. This method of deer hunting, as practiced in Louisiana and Mississippi, does not drive the deer permanently away from its accustomed haunts, but the same deer may be started in the same locality on successive days. The one great evil, however, which attends this sport, and for which there is no palliation, is the frequency with which the deer escapes car-rying with it one or more buckshot, either to die a lingering and unprofitable death, or possibly recover after much suffer-ing, which no true sportsman can contemplate without dis-comfort of mind. Fox hunting, on the other hand, is conducted quite differ-

and the latter sportsman can contemplate without dis-comfort of mind. Fox hunting, on the other hand, is conducted quite differ-ently. Every huntsman is in the "drive," and there is not a gun in the party. If any unreflecting countryman should shoot a fox before the hounds, he would receive the hearty excertaions of the whole hunt. This different way of viewing the matter in the North and the South is probably due to the comparative scarceness of foxes in the latter region. They are by no means so numer-ous here as they appear to be in the North. The sight of a fox in this country except when put up by the hounds, is an exceedingly rare occurrence, one which this writer has never yet experienced. In former years, when Southern planters could afford to

yet experienced. In former years, when Southern planters could afford to indulge in the luxury, fox hunting was a favorite anuse-ment. Pains were taken to select a pack with special view to harmony of voices, and the music which they made when in full cry on a crisp, frosty morning, made the nerves tingle as nothing elsc could. It was customary to start out a couple of hours before daybreak, and the chase was usually kept up till toward noon, covering a radius of perhaps five miles, the gray fox being the prevailing variety. He was either picked up on the ground, run to earth, or, as was

most usual, was found in a tree, with the pack baying around, sometimes after five or six hours' chase. The writer remembers an occasion when he was a boy of tro years of age, and participated in such a hunt. Soon after setting out, a small beagle bitch started a fox on her own account, and after chasing it alone for several hours, brought it in the vicinity of the main pack, when it was speedly put up a tree. Wishing to have some further sport the leader of the hunt called off the pack and directed me to climb up the tree and force the fox to jump out. This I did, but he very soon 'treed' again. The same tactics were pur-sued, but the poor creature was so exhausted that it per-mitted me to catch it by the tail and throw it to the ground. when the merciles dogs made short work of it. An Irish friend of mine, who is a considerable railroad and lever tractor, who has a good deal of humor about hir somewhat given to drawing the 'long bow,' re Ireland on a visit a few years ago, and while there was in-vited to see the 'county hounds.'' The pack consisted of about fify, and he relates that they were so well trained that the keeper could marshall them in line like soldiers on dress parade, and order them out individually, by name, to a line of platers cortaining food, in their front. More the elaim was the fact that he once has a levee camp or our doors af enigrant travel by wagon, from the start at a few days moissippi to Texas, and raulti 's of actice our gentle ascreted the wagon trains and ass. bled was barren of wonde attracted by the quantities or the mark of while the the action the travel by wagon, from the start at a few days moissippi to Texas, and raulti 's of actice our gentle ascreted the wagon trains and ass. bled was barren of wonde attracted by the quantities or start are the while ped the 'count's the solution the start of the part of wonde attracted by the quantities or start are the while ped the 'count's the yagon, from the start at a few days moissippi to Texas, and raulti 's of actice our ge

HOSPITABLE TEXAS.

HOSPITABLE TEXAS. THIS is a very paradise of a land, from a sportsman's standpoint, especially to those fond of the pursuit of that crême de la crême of game birds, Bob White. The latter are thick on the creeks in the winter, and the open corn fields, etc., carly in the season, in many parts of the State; especially so within a radius of sixty miles of this town. What more exhilarating pleasure can there be than getting up at 5 o'clock in the morning, and with two or three con-genial companions, driving out to one's ground, ready to begin shooting about 8.30 A. M., and lunching at noon. A delightful thing it is to watch a well-bred dog, following all the commands of a competent trainer, noting the wonderful instinct they show when the covey are not there, only alighted and then run on, or with what rigidity of muscle will they stand when the birds are there; how grandly they drop when the birds rise with a "wnirr," leaving one or more of their comrades behind them. I know of nothing so trying to most men's nerves as the first whirr of a large covey, especially if they want to drop a right and left. Shooting as killing a deer with a shotgun is different from performing the same feat with a rifle, in my humble opinion. I have a knot partidges in the turnips, in England, but I must acknowledge that for downright good shooting, the little "Bob White" takes the palm. He is second only to the far-motor. What a pity it is that we can't get a bill passed prohibiting

The weather becomes nice and cool down here about the end of October. Apropos of cool things, one of the coolest that I have struck down here happened to us last fall. When out shooting we had very carfully placed some bottles of Bass' ale in a cool spot, carefully placed some bottles of Bass' upper the struck down here happened to us last fall. When out shooting we had very carfully placed some bottles of Bass' ale in a cool spot, carefully placed some bottles of Bass' upper the struck down here happened to us last fall. When out shooting we had very carfully placed some bottles of Bass' ale in a cool spot, carefully placed some bottles of the section of the happened to amount of care-ful searching could reveal its lurking place. We remember those kind, unselfish men to this day. Best gouil, we have prairie chickens, all kinds of wild-fowl. the s, etc. For the rifle there are deer, antclope and wore are hospitable and only too pleased to see if of the right stamp; and to the thorough the who shoots for the sport and not for the dol carry welcome is accorded by all the best farmers. To me of the less educated ones have an idea that every man out with a dog and gun means so much out of their own pockets. One farmer remarked to me last year about a certain well-known sportsman down here who has paid large prices for his dogs: "I say, Mister, how long will it be be fore M. sells enough birds to pay for that \$1,000 bitch that I hear he has got." What can you reply to such a man? ARTHUR STERT. FORT WORTH, Texas.

New YORK WOODCOCK SEASON.—Fort Plain, N. Y., July 8. Editor Forest and Stream: Will you please inform me through the FOREST AND STREAM when the woodcock season opens in this State? As I understand it it is Aug. 1, and is generally so understood here and the sho ters here are all making calculations on shooting woodcock Aug. 1. But a few claim the law was changed to Sept. 1 this summer. Will you please ascertain and let me know, as I do not want to shoot woodcock before it is lawful to. Furthermore I saw myself that a bill had passed the Legislature changing "he time to Sept. 1, but have not seen anything of it since. am in hope the law has changed to Sept. 1, and the major-iter of the sportsmen here think as I do, for we all know that ni e out of ten men who go shooting woodcock in August she at more or less ruffed groutse, or "short-bills." as they call them, and the summer hotels all buy ruffed grouse in August and say they prefer them, but call them short-bills. If the law has changed I think you should make it prominent in your valuable paper, as I know a great many depend on it for such information, at least I do.—A. W. B. [The sea-son was precedy given in our last issue in list of open game seasons.]-

NEWS OF THE CAMPING CLUES.—Wellsville, O., July 9.—Editor Porest and Stream: Two special cars attached to the mail train and placarded "East Liverpool Camping Clubs, 1886," passed through here on the 2d ult. en route to Waynesburgh, O., near which place they have selected a spot for their annual encampment. This section of country is noted for an abundance of game and its pretty women, so that a good time, both piscatorially and socially, for the boys is insured. A full fledged brass band accompanies them, but it is to be hoped they will be muzzled after arriv-ing in the woods. The Geo. Weaver Fishing Club of Roch-ester, Pa, bound for Michigan; Pittsburgh Recreation Club, en route to Waynesburg, O., and the Pioneer Club going down the Ohio River passed through here this week with all the paraphernalia incidental to the art of castrametation. They anticipate having a good time.—Buz.

Doves IN New JERSEY.—Monmouth, N. J., July 2.— Editor Forest and Stream: Is there no law for the protection of doves in this State? If not I think it would be well for some of our leading sportsmen to bring the matter to the attention of the Legislature next winter. If something is not done, dove shooting will soon be a thirg of the past in this part of the State. It has been customary to wait until after harvest and shoot them when they come in to feed in the stubble (which I think is too early). But some have been shooting them all through the month of June this year, also in the winter when the ground is covered with snow and they come to barryards and grain stacks after food. I think that I am as fond of shooting as any one, but am willing that all should have a chance. Would be glad to have the opinion of sportsmen on this subject.—FAIR PLAY.

MASSACHUSETTS.—South Duxbury, Mass., July 8.—Fall shooting promises to be the best this season it has been for years. Quail are very plenty and can be heard in all direc-tions, four to one compared to last year. Partridges are plenty, too, I found six bevies on my travels last Sunday; they were about a third grown. Woodcock are never plenty here as it is dry and sandy, not enough meadow ground. I have scen several lately past at snuset in the low ground, one was the largest I ever saw.—South SHORE.

PENNSYLVANIA.—Erie, July 5.—Woodcock are very plenty around here now, but I am sorry to say a great many young birds were bagged before the season was open. The bass fishing was very poor this spring, owing to the pound-ncts being on the bass ground, but we hope with the assist-ance of our assemblyman and State senator to have the pound nets done away with. There are several large broods of young ducks around, but the pot-hunters are killing them off when they can get a chance.—J. M.

NEW YORK GAME CONSTABLES —Glens Falls, N. Y., July 1.—*Editor Forest and Stream:* Have you noticed that Sec. 2 of Chap. 429, of laws of 1886, provides that: "Game con-stables, constables, sheriffs and deputy sheriffs shall have the same powers as are conferred upon game protectors for the enforcement of the provisions of Chap. 534 of the laws of 1879 and the amendments thereto, and shall be entitled to the same fees therefor."—A. N CHENEY.

NEW HAMPSHIRE.—Colebrook, July 12.—Trout have been taken in great numbers, but the recent hot weather has sent them in search of colder water, where they will be better secreted. They have diminished some from unlawful and unsportsmanlike methods of capture in certain localities where law does not avail.—NED NORTON.

THE PRINGLE SNIPE SCORE. —A correspondent tells us that the suipe shooting by Mr Pringle, of Louisiana, concerning which inquiries were made in these columns recently, oc-curred in the month of February, at Bayou Teche, La. Gun, breechloader; load, 3[‡] drams powder, 1 1-6 ounces No. 9 shot; time, 6 hours; number of snipe killed, 366.

PROFIT IN BEAR TRAFS.—A York county, New Bruns-wick, bear trapper took into Fredericton recently nine skins of bears, trapped in the neighborhood of Zionville. Some of the skins netted \$15 each in addition to the \$2 bounty. Beavers are still found in New Brunswick in certain localities numerous enough to make their trapping profitable.

RHODE ISLAND.—Manton, R. I., July 12.—Ruffed grouse and quail are quite plenty in this vicinity, but woodcock are scarce.—T. M. A.

MR. GRIFFIN SMITH. of Longmont, Colo., joint still shot a mountain lion on the Little Thompson, we ured nine feet from the end of its nose to the tip of f

A MAINE ANGLING TOUR,

States. This year we expected a repetition of those conditions and were not disappointed. Here the poacher has not revelled, and thanks to the judicious legislation of Maine, he never can; and right here let me join in the chorus of voices that praise the efforts of the Maine Fish and Game Commission, for at Tim Pond, which has a basketful for each that come, whether publican or sinner, since the stealing from spawning beds has been stopped, the trout taken are of much larger average weight. The deer and caribou are becoming so numerous in this region that the New York deer hounding legislature would turn pale with envy at the sight of the tracks. The management of the camps and tables is in the hands of old timers in the business, and all we had to do was to enjoy ourselves and stay as long as home interests would permit.

permit. Then we made our way out on horseback to Smith's farm, from which elevation is laid before one some of the finest scenery in New England, includiog views of Mt. Bigelow and other peaks. The stage rattles along its winding course to the punorama of the valley of the Carabosett River to Kingfield, where the railroad takes us up and soon whirls us back to our homes, healthier and wiser, if not better. M Broductu Horse Bactor BROMFIELD HOUSE, Boston

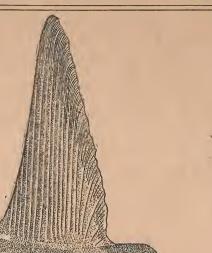

LAKE GEORGE, N. Y.—Game Constable Burnett learned recently that five men from Putnam had been spearing trout in Lake George, and was about to proceed against them when they got wind of the fact, and going directly to Justice of the Peace Lewis Burgess of Hague, made com-plaint against themselves, and were fined five dollars each. It was a comparatively easy way out of a bad scrape, as the Putnamites have been for some time notorious for indulg-ing in the unlawful practice. The men carnestly declared that they "would not do so again," and the justice believes that the lesson taught them will prove a salutary one. Mr. Burgess, who is familiar with the lake and its fishes, is of the opinion that trolling for trout should be stopped, or at least that the close season should be extended until the first of July. He says no person unacquainted with the subject can imagine the number of trout that are taken by trolling from the first of May to the first of October, and especially at the opening of the season, when the trout are near the surface. He thinks still-fishing with hook and line the only legitimate way to take trout. As one specime of the capa-bilities of the lake we would state that Mr. Wildman Smith of Hague, caught on Monday of last week, a salmon trout which weighed seventeen and one-fourth pounds. Two or three years ago Mr. Levi Newton captured a similar one that brought down the scales at the same notch. Neither of these stories are of the ordinary "fishy" description, both be-ing well authenticated,—*Guas Fails Republican*, July 6.

HOW WE KILLED A SUNFISH.

490

HOW WE KILLED A SOUTISH. POOH! Whoh! Sunfish indeed! Is that the way you pass your leisure hours? Was it "Wawayanda," or "Kingfisher," from whose lips proceeded those contemptious explosions? Stay thy speech, most reverend seigniors and highly respected brothers of the angle, for I write not now of the Acanthopterygii, but of the Piectognathes; not of the humble "punkin seed," but of Ortha-goriscus mola; and if your bassing tackle ever gets fast to such a specimen as we one day sighted off Tarpaulin Cove, you will find that it is no Pomotis vulgaris tagging at the line, that's all.

will find that it is no *Pomotis vulgaris* tugging at the line, that's all. I would remark right here ("and what I says I stands to"), that if any one chooses to pick a quarrel with me for my use of a scientific nomenclature which, for anything I know, may be antiquated, I shall depend on Aunt Hannah to ter-minate the discussion. She is my old shotgun, and never "went back" on me but once, and that was owing to the pe-culiar business methods of Mr. E. W. Gillett, of Chicago, who had made the oil with which I on one occasion unad-

antly colored 'kerchiefs upon the heads of West Indian

An the colored 'kerchiefs upon the heads of West Indian egresses. The had barely reached Naushon, and were about to tack, when Smith exclaimed: "There's a shirk, a big one." Tertainly a large fin of some sort was cutting the waves on the weather bow and some distance a head. We all saw is but after another look, Smith qualified his statement by saying that he "never see a shirk act that a way afore." Meither had I; and we forthwith determined to cultivate an acquaintance with the strange fin. We at once tacked, and bore up in its direction. The fin, which now monopolized our attention, was long, broked and obtusely pointed, but slightly curved, and at imes projected some eighteen inches above the surface of the water. Oddly enough, it continually waved from side to side, as though the shark—if shark it were—had that morning the adouble allowance of grog. The few minutes the boat glided past the creature, and so related an a double allowance of grog. The afew minutes the boat glided past the creature, and so related at its outlines could be distinctly seen through the clear, green water. We all gazed in astonishment at the strange aspect of the fish, which was at least three feet in least the wave of a silvery gray color, having several irregular vortical splashes of a darker but upon its sides. The back fin, which had first attracted green the belly. "Mell," said the skipper, "I'll be gosh darned if I cver see in farmed in published works on the fashes of our coast." We child the disting the capture of the fish and at once proceeded to cast about for the means at hand, which certify seemed inadequat. We had neither grains nor lify adouble-barreled short, one with a loosely fitting conical ball, the look may adouble-barreled short, one is the look for we had neither grains nor lily set many of the sea be

of the shot was to fluster the creature and set it flying about in various directions. The skipper put the boat about and I fired the shot charge at a range not greater than before, and as formerly through several inches of water. Herendeen had by this time become intensely excited, and we could not persuade him to sit still. "Now, shoot now," he shouted, as his head popped up, just a few inches too high. "You be hanged," sail I, "Look out she's going to jibe." I was a trifle too late. If that young fellow is now living, his hair is probably growing gray, but I will venture that he remembers the peculiar sensation which he experienced when the boom took him just abaft the right ear, and sent him over to leeward among the sand bags. He lay half stunned for a moment, then slowly rising, crept back to his seat, remark-ing meanwhile, "I guess I'll sit down." "You'd better." observed Smith, grinly, as he lashed the tiller, poised an oar, but foremost, and darted it from him like a whaleman's lance. The loom struck the sunfish squarely on the side, and the force of the blow sent his head partly out of water as the boat shot past, when I took him precisely upon the end of his sub nose with a charge of No. 4. This completed the demoralization of the creature, and

like a whaleman's lance. The loom struck the sunfish squarely on the side, and the force of the blow sent his head partly out of water as the boat shot past, when I took him precisely upon the end of his snub nose with a charge of No. 4.
This completed the demoralization of the creature, and Smith managed to seize the back fin. The fish may have weighed a hundred and filty pounds, perhaps two hundred, we could not tell, but it was all that the three of us could do to haul it over the side. Its skin was rough like that of a stark, or dogfah; and injured our hands somewhat, besides stark, or dogfah; and injured our hands somewhat, besides stark, or dogfah; and injured our hands somewhat, besides stark, or dogfah; and injured our hands somewhat, besides stark, or dogfah; and injured our hands somewhat, besides stark, or dogfah; and injured our hands somewhat, besides stark, or dogfah; and injured our hands somewhat, besides stark, or dogfah; and injured our hands somewhat, besides stark, or dogfah; and injured our hands somewhat, besides stark, or dogfah; from the fish, leaving indeed palpable marks, but with little apparent abrasion of the skin, and the last shot had inflicted but slight injury to the fash. Leaving indeed palpable marks, but with little apparent abrasion of the skin, and the same distance. When we landed at Holmes' Holl, some sailors strolled by just as I was searching the cuddy for a rope, which happened at he woment to be covered with ship's biscuits which had broken loose from their bag.
"Well," said one, "Tm blessed (I think that he said "the moment to be covered with ship's biscuits which had broken loose from their bag.
"What's she good for the away."
"What's bag up, now, I tell y."
I wish 'I had some or 'I now."
"How and loose for the same, 'You jest cut out a chunk and fir it at that spar, 'n you'l see it bound like a ninjy rubber ball. But the if's bang up, now, I tell y."
I had hoped to send this fish to some scient

JUNE 14, 1886. THE FLUTTERING FLY.—Several correspondents arc dis-cussing the origin of the fluttering fly in some of the spot-ing papers and a Mr. Millard, of Cheyenne, Wyoming, sends the following to FOREST AND STREAM: "In June, 1876, I was angling on Twin Rock Lake, near Morehouseville, Hamilton county, N. Y. Giles Beeraft was with mc, and we had excellent sport with the trout. One of the flies I used was something like the fluttering fly illustrated in FOREST AND STREAM of June 10. It was made by one of the best fly-tyers I ever knew, Robert Perrie, of Ulica, N. Y. It was a hackle reversed, and its hooking qualities were first-class. I do not think Mr. Perrie Claimed to have originated it, but of that I am not sure." In conversation with Mr. Robert Perrie on the subject, who is now the pro-prietor of Third Lake House, Fulton Chain, he informed us that he was the originator of the fluttering fly in question and that the same has been successfully used for years by many anglers. He also remembers with pleasure the Mr. Millard who now writes from the Far West.—Boonville (N.Y.) Herald, July 8. A MAINE SALMON.—A letter addressed to us said a salmon

(N. Y.) Herald, July 8. A MAINE SALMON.—A letter addressed to us said a salmon might be expected at the office of FOREST AND STREAM within a few days and that it would be directed to the S-a and River Department for division among such of the staff as might be in town, but the donor requested that there he no acknowledgment. We made arrangements to have it sent to Mr. Blackford's refrigerator and divided. We ate of this salmon in steaks at breakfast, cold for dinner, cold boiled for lunch next day, and pickled for tea, and if we ever tasted one that came up to this in flavor and firmness we have no recollection of it. The fish weighed about fifteen pounds and we will comply with the request of the scader about an acknowledgment, so far as never to tell who it was that so kindly remembered the toilers in the city while be was casting his fly on the salmon rivers of Maine. May the salmon chew up all the flies in his book and the largest ones come to his gaff. BEESTIGNICHE SALMON.—Editor Forest and The

RESTIGOUCHE SALMON.—Editor Forest and the The bing here has been excellent this are the Dr. J h. uxter, the which averaged ch silled two fish which henry W. De Forest took

F SHOT - All IV Holl?

"THE PRESIDENT AS AN ANOLER."--Under the above heading in your issue of June 17, you say, "A Lockport, N.Y., correspondent, who was a schoolmate of President Cleveland, writes us that the latter's angling proclivities were developed at an early age." As 1 presume the Lock-port correspondent refers to me, I wish to make a correction. I think that I wrote you that "I had fished and hunted with Grover Cleveland in our boyhood days, thirly odd years ago." At the time I was a clerk in the store of his brother in haw, Wm. E. Hoyt, at Theresa, N.Y., and Grover came there to spend his vacation, and thus it happened that we fished and hunted together on Indian River. He did most of the fishing while I did most of the hunting, and I shall never forget how he hooked and lost a large black bass in some flood wood, and I could not get him away from that place for an hour, as he was bound to have that bass as it was larger (we always lose the largest fish) than any he had caught, but he did not succeed, and that was the only than food wood had disappeared, as had also the hickory trees where I spent most of the time shooting black and gray squirrels, while Cleveland was fishing for black bass. We did no angling in those days, but the bass are there yet and as the gamy muscalonge and the less gamy pickerel, and they angling in those days, but the bass are there yet and as the text own of Theresa, and should President Cleve-had ever renew his "angling proclivities" on Indian River will probably have to take in a few tout and more "long souts" (as "Kingfisher" puts it) and possibly a thirty or torty pound muscalonge.-J. L. D. (Locar, N.Y., July 8).

forty pound muscalonge.—J. L. D. (Lockport, N.Y., July 8). BLOOMING GROVE PARK.—The Fourth of July, 1886, was celebrated on the fifth at Blooming Grove Park. There were fifty guests at the club house. While many of the members were catching trout in the Blooming Grove and Shahala creeks, and others were trying the bass on Lake Giles, clay-pigeon matches were contested. [The scores are given else-where.] There was one thing very noticeable about the Fourth at the Park, and that was the absence of the fire-cracker and the inevitable burned fingers and hands of the small boy. Beyond a few torpedoes, the cutire noise of the day was made by the shooting of the guns on the pigeon range. Two of the members went after woodcock and suc-ceeded in bagging five on Tuesday and four on Wednesday. The fi-hing now at the park is most excellent. There is no trouble in any one taking his quota of twenty-five trout, all over seven inches, and the bass fishing, especially at Lake Laura, is really wonderful. Lake Giles is stocked from Lake Laura, and when partices go to the latter lake they are required to keep alive as many of the catch as is possible. Last Saturday five rods, using bait and fly, took from Lake Laura five hundred and fifty black bass, keeping alive over three hundred of them. These will be taken to Lake Giles to day. Of these bass some weighed over a pound, a few about a pound and a quarter. PRESERVING FREEN FISH.—Editor Forest and Stream:

few about a pound and a quarter. PRESERVING FRESH FISH.—Editor Forest and Stream: I desire to benefit my fellow sportsmen by a suggestion on the preservation (in perfect condition) of fish. My experi-ence at the Northern lakes has been that it was impracticable to save for transportation, especially the catch which had to be immediately killed, on account of being badly hooked, as well as those selected from the car at the time of departure from the fishing camp I visited Camp Bemis, Rangeley Lakes, this season, arriving there May 30. June 7 I caught a beautiful speckled three-pounder, which was so badly hooked we immediately killed it, and on landing treated it with Rex Magnus, Viandine brand. At the close of my fishing, the 12th, I selected the choicest specimens from my catch, gave them the same treatment, and the 14th carefully wrapped them in cloth and birch bark dampened with a solution of Rex Magnus, placed them in my gripsack, carried it with me in the cars, and had them served in my home the 20th, where they were pronounced by experts to be first-class trout in every respect. I am resolved never to go to the lakes without a supply of Rex. Magnus.— FRANKLIN H. HART (New Haven, Conn., June 29).

FRANKLIN H. HART (New Haven, Conn., June 29). FIVE BASS THAT CANNOT BE CAUGHT.—The Athens, Pa, *Gazette* of July 10, says: "From the Chemung River bridge can be seen almost any clear day five large black bass, which good judges pronounce will weigh from four to six pounds. It is said by some that they were seen there last season. They are old fish—too old in fact, for the best fishermen in this vicinity; they take to nothing but water and small fish, and the small fry must not be attached to hook or line. The most tempting morsels have been set before them, yes, whole picnics of toads, frogs, bullheads and everything a bass could possibly relish has been cast to them. Davies, Smith, Knaresboro, Kınner and all the celebrated fly-fishermen have spread the surface of the water with ornamental feathers for a week past; shotguns and ritles have been brought to bear upon them. Hill tries his new experiment now and then, but the old bass wink in a maner that would indicate that the fellow with the shot-gun was a little fresh. One of the number at least has been there, as he trails a leader with them. They come, fish and go, but the bass are still there." with them. there."

NEW BRUNSWICK.—Magaguadavic Lake in the parish of Prince William, easily accessible from Fredericton, is said to afford good trouting. Two St. John anglers took the train for the station alongside the lake a few days ago. They fished during the afternoon and evening, taking upward of one hundred. The largest weighed five pounds, and the snallest turned the scales at fifteen ounces. This lake is one of the best trout fishing waters in New Bruns-wick.—FRED.

MAINE.—Machias, June 28.—The circulation of FOREST AND STREAM In Maine is one of our greatest helps in fish and game protection. Game prospects are good. Deer are re-ported in large numbers about the sea shore, in meadows and about openings and streams. I have seen plenty of tracks at their crossings. Grouse are having a good season for hatching. I don't believe the crust did much damage to game last winter.—H.

NEW HAMPSHIRE.—Colebrook, July 12.—From short trips to northeast and northwest from this place to Canadian borders I can report deer feeding in the marsh lands in greater numbers than I have ever before seen signs of. Moose in some secuded localities have made the muddy shores look like the pasture lands in more civilized localities. —NED NORTON,

How to CATCH FROGS.—Frankfort, Ky., July 4.—Your correspondent, "Hoosier," asks "Kingfisher" how to catch frogs for bait. Now, having seen "Kingfisher" on all fours chasing speckled frogs turough a Michigan meadow, with the frightened frog sometimes "a lettle ahead," but both jumping six feet at a bounce, we are not going to interferc with his experienced explanation to "Hoosier" of "how to do it." But we would advise "Hoosier," despite "Jeems Mackerel's" lucid instructions to the contrary, that there is no better way to catch frogs for bait than by sprinkling salt on their tails.—SNAKE ROOT. Keokuk, Iowa, July 6.—If "Hoosier" will try the frogs with an ordinary landing or minnow net, he will have no trouble in catching them.— JASON. JASON.

A FISH-LINE DRYER.—We have just seen a neat device for drying lines, which can be attached to a tackle box or other object. It is nickel plated and is both neat and handy. It is called the "Brooks fish line drying reel," and is sold by A. G. Spalding & Bros.

So easy to row with Allen's bow-facers. Catalogue free. Oars complete, 8 per pair. Fred A. Allen, Monmouth, Iil.-Adv.

OYSTER CULTURE. BY FRED MATHER,

[Read before the American Fisheries Society.]

<text><text><text><text><text><text>

4. Artificial fertilization of the eggs of the oyster is feasible, and will become an important adjunct to successful spat cul-

8. The specific gravity of the water may range from 1.003 to 1.0235.
9. The most favorable temperatures of the water for spatting seem to be from 68 degrees to about 78 or 50 degrees Fahr.
10. Spatting will occur just as freely in ponds or tanks as in the open water.
These are well ascertained elementary facts and upon them we must base our new method, which is essentially a system of spat culture, or method of rearing seed oysters for the purpose of cultivation on the open beds or any suitable bottom. We must, however, first of all throw aside as too expensive any and all systems in which tiles or slates are used, especially if these must be fastened together in nests and coated with lime and cement, as practiced in Europe. Oysters are too cheap in America to be produced by any of the old-fogy systems which are available there, as it will not pay to flake off the spat from the collectors under ordinary circumstances in cultivating the American oyster for market, because of its low price."
The experiments at Cold Spring Harbor have attracted some attention from the oystermen about there, and some of the other of the other of the other of the spat form the collectors under ordinary circumstances in cultivating the American oyster for market, because of its low price."

the spat from the collectors under ordinary circumstances in cultivating the American oyster for market, because of its low price."
The experiments at Cold Spring Harbor have attracted some attention from the oystermen about there, and some of them have expressed themselves pleased with the results, and incline to think that seed oysters could be raised in quantities by any person who had an inclosed pond such as ours, where the water came in at times of high tide, and that they would be reasonably certain to get a fair "set" on proper cultch. The following is from the journal kept by my foreman, Mr. F. A. Walters:
July 1-Received first lot of oysters, opened one bushel, found 17 ripe females and 1 ripe male; took spawn from these. After 9 hours, as there was no sign of life, considered not good. July 4-From ½ bushel, 9 females, 1 male. Three hours after taking spawn young were swimming; put in tank. July 10-From 200 oysters 175 were ripe females, 18 not spawning and 7 partly ripe males; had to lose all.
July 11-From 80 oysters 60 ripe females, 4 unripe males, and 16 not spawning. July 14-Cleaned tank.
July 16-Ground-gate of salt pond had to be taken out owing to a leak, poor tides followed, pond did not fill for five days, could not pump and consequently no circulation in tank for that time.
July 29-Opened 70 oysters, found 20 ripe males, 30 females and 20 not spawning. Took two pans of spawn at 10:20 A. M., swimming at 2 P. M., put in salt pond.
July 28-Put in pond 4 pans of spawn in good order.
July 28-Put in tank 4 pans of spawn in good order.
July 28-Put in tank 4 pans of spawn in good order.
July 28-Put in pond 4 pans of spawn in good order.
July 28-Put in pond 4 pans of spawn in good order.
July 28-Put in tonk 4 pans of spawn in good order.
July 28-Discovered set in tank.

August 11-Cleaned tank, and put in spawn from 1 bushel oysters. August 20-Discovered set in tank. September 8-Cleaned tank, found a number of shells and about a peck of gravel with sets on, but all dead. There were no sets on the hanging shells; the reason for this. I think, is owing to lack of current, which should be quite strong, there is more danger of getting too little than too much. Lowered salt pond. September 19-Found a good set, the hanging shells had sets 3 feet from the bottom, but the shells on the bottom did the best.

sets 3 feet from the bottom, but the barrier of the best. During July the temperature of the water in the tank ranged from 65 to 73 degrees, and during August from 70 to 74, while in the pond it ranged from 71 to 87 degrees. The den-sity varying in each from 1.017 to 1.030, standing at the latter figure steadily from July 19 to the close of the season. [Discussion to follow.]

sty varying in each from 1017 to 1020, standing at the latter figure stachly from July 19 to the close of the season. [Discussion to follow.] FISH HATCHING AT LARAMIE.—A little more than a week ago I had the pleasure of inspecting the fish hatchery at Laramie, Wyoming Territory. The drive out of town was a delightful one, and Mr. W. A. Jameson's quick-stepping little team of bays whirled us rapidly along over the smooth road which led us out toward the hatchery. The Laramie plains never looked more beautiful. They were brightly green, level as a floor, and in the distance rising in regular benched terraces to the foothfils of the grand mountains which flank them to the east and west. Here and there the green of these terraces is interrupted by red-washed builfs which, in the lipht of the setting sun glowed like the coals in a furnace. Away to the right was old Fort Saunders, once a post of considerable importance, but now abandoned and occupied by squatters, who hope to get a tile to it before long. The fish hatchery consists of two or three unpretentious wooden buildings; but the work done there seems excellent. The actual business of hatching is over for the season, but the troughs still contained many thousand fry, some of them less than an inch long, which are waiting to be turned out. Of these there are four species, lake trout, California trout, rainbow trout and mountain brook trout, all of them apparently in the best of health. The ponds in the grounds are five in number. The upper one, which is quite small, contains at present no fish. It he second 24,500 lake trout fy were placed last year, and they are now active, vigorous fish, from six to eight inches in beomy being the house, 17,500 California trout fry have been placed. These do not seem to be doing so well as the other fish, and a number of dead ones were noticed on the bottom of the pond. The attendant explained that these firsh whan alarmed take refuge in a fine green vegetable scum which forms along the margin of the pond, and that this sta

SALMON IN THE HUDSON.—Mr. Matthew Kennedy, game protector of the third district of the State of New York, re-ports to Commissioner Blackford that Mr. Putnam Slingerland, of Coeyman's, tcok a twelve pound salmon at Mul's fishery, Castleton, last week. This is the fifth adult salmon captured from the plant of 1882, so far recorded, besides the reports of other fish seen.

CARLO.

CARLO. The story of Sancho, so pleasantly told by your corres-pondent Mr. T. S. Van Dyke in your issue of Feb. 1S. called to mind hke experiences. I find laid away in my portfolio a package labeled "In Memorian," pages written twenty years ago. As I read them to-night they bring me back through many days brunful of pleasure, as I have tramped through the woods and the field. Perhaps it may be a pleasure to your readers to listen to the story of my dog: — Make this record, I write the biography of a friend, one who was a companion in many pleasant walks, and as you read of some of his doings you will uct wonder that I sometimes thought he enjoyed with me the sile.co of the grand still woods and the beauty of the fields. Often as I sat down on the hillside to rest, he would lie beside me and seem to en-joy the beauty that I saw and, forgetful of pheas nt and quail, look through his large knully eyes upon the woods all aglow with the flames that the frost had kindled. With all his intelligence he was true in his irfendship; over willing, always trying to please me, never sharing his affection with any one else; hardly noticing a kind word rom any one but his master, queck to hear my voice or tootstep. He was a large, strongly built pointer, liver color and white, fleeked with fine spots. His this nears and soft fine coat told his blood. From a pup he seemed to heave but few "dog ways". Offen he would sit down and seem to be in serious thought, mmindful of everything about him, then quickly starting 'up would hasten to do something that in his thoughts he had planned to the grocers. One time on his way home, carry-my a small basket of eggs, a little cur ran out and snapping a him, followed him some way. Carlo walked leisurely along; coming to a house he walked up on the porch, carefully statis basket of eugs, a little cur ran out and snapping a him, followed him some way. Carlo walked leisurely along; coming to a house he walked up on the porch, carefully storik basket of eugs,

<text><text><text><text>

lunch and have a smoke. We soon missed our dog but knew he would not stray far away, so pulling our hats down over our heads, and lying back on the soft moss that, with here and there a bunch of partridge berries, like a carpet of green and crimson, covered the ground, while over head the golden sheen frescoed the ceiling, we were soon asleep. In a little while I felt a pull at my hat, there was my dog pawing at my shoulder; from his earnest look I knew there was business on hand. In his own way he soon told us what he wanted. Running backward and forward, at last taking hold of my coat, as much as saying "come on! hurry up," over the fence he led us, whining and looking back at almost every step, across a meadow into a confield where the shocks were still standing, and the orchard grass grew thick upon the ground. As he drew near a corner of the field, too rough and story to be plowed, covered with b.iers and here and there a sumac holding up its red torch, he slackened his pace and his cat-like tread gave us notice to be ready; a stop; the command; a whir of may wings, and five out of the covey went into our empty bags. Carlo had found this bevy and led us nearly a quarter of a mile. My faithful friend was growing old and here he was to

of many wings, and five out of the covey went into our empty bags. Carlo had found this bevy and led us nearly a quarter of a mile. My faithful friend was growing old, and before he was to be put on the retired list I wanted to get a young dog broken in, one to take his place if possible. I had a pup, broken to mind in many ways, but he knew nothing of "business." I thought to give him over to Carlo to train in the way he should go. Frequently I would go to the woods with them, the old dog always taking a patronizing air over the green-horn. Often I have seen hum find the track of a pleasant, follow it along until the pup took it, then step aside and let the young dog follow it up, watching him all the time with the greatest satisfaction. If his protege lost the scent or was "mixed up," he would hasten to his help and soon set him right. Now the time came when I had to give up my faith-ful friend. One morning I missed his friendly greeting, and on going to his kennel found him hardly able to move; as he slowly drew himself cut I saw his hind legs were paralyzed and he could not use them. All I did for him was of no avail, and he must die; to put him out of his misery was the greatest kindness 1 could do; to let some one else by a careless shot ci uelly murder him, I could not think of; to shoot him my-self; could I do it? One chilly morning I lifted him gently inte my wagon and drove out into the wousds; as I laid him down in the old wood road the remembrance of other days came to him, and he started into the brush snuffing the air and dragging his useless linbs stretched out behind him, I called to hum to stand, I lifted my rifle to my shoulder, but through my tears I could not see the sights; brushing them quickly away the creck of the gut told me "A gash an faith-ful tyke as ever lap a sheugh or dyke" was dea. JULY 15, 1884.
lemon and white pointer, Climax, sire Bang Bang, dam Belona, Mr. W. S. Kittle, of this city, is the owner of a hand-some lemon and white pointer bitch, Surf, by champion Bow out of King Maid, purchased from agentleman in Arizona Territory. J. M. Barney is the owner of Torn Pinch, winner of the Derby Stakes, Pacific Coast Field Trials. He is a fine lemon and white bred by John Wise, of Richmond, Va; sired by Wise's Tom, dam Belona. William Schreiber's lemon and white dog Mountain Boy (imported) is a very likely-looking dog and agrand fielder; in fact, he is all that any one would deshe. He is also the possessor of a lemon and white bitch, Lassie (imported), which is a beautiful specimen of the pointer breed. She is by Prime out of Forest Lily. Mr. Schreiber is a credit to the kennels of this coast.
H. A. Bassford is the owner of Solano B, a liver and white Gog addition of José Bow, he is a large, grand looking animal and was placed second in the Derby stakes, Pacific Coast field trials. W. E. White, of Sacramento, is the owner of a very nice dog called Sancho Panza, he is by Bow, Jr. out of Mollie Ash. H. C. Brown of Sacramento is another one of the fortunates in having in his possession a Bow, Jr. –Jessie pointer called Frude. A. B. Truman of this city has purchased a brace of pointer puppies by champion Sensation out of Sept G., winner of first prize in New York is at Hay (the only time exhibited); they are very handsome puppies, showing good nose and swing qualities for their age, as I have see them both in the field; the bitch, the hand-omest of the two, has been purchased oby Mr. F. J. Pinder of this city, a well known dog man. A. B. Ellford, of this city, as soon as he saw these pup ordered one from the same litter, which is also a very fine specime. There is a gene lemma in this city who has a (white dog, he is one of the best yard broke dogs on the Pacific coast. If was not my intention to take up so much of your valuable space, but when "the people" get writing on a baye

to the contrary notwithstanding. Vox Poprin, SALES OF SPORTING DOGS AT ALDRIDGE'S. The second of the seasou's sales of sporting dogs took place at Aldridge's, in St. Martun's lane, yesterday (Friday), when a valuable lot of animals, from the kennels of Sir T. B. Lennard and others, were submitted to auction, including a team of Clumber spaniels from Mr. F. J. S. Fo jambe. The latter scld well, five couple realizing 94/gs., Dan and Drake making the highest figures. 17gs and 15/gs. respectively. A lot of working pointers and setters, twenty-one in number, sold by orders of the executors of the late Mr. H. Burra, totalled 197cs., the seven-year-old Carmey, by Macgregor -Lady Pearl, being a cheap lot at 7gs.; Bounce, by Priam, made 22gs.; Dou, by the same sire, a winner at Aberdeen this year, 18gs.; Bon and Beam, a handsome brace of lemon and white setters, 4/gs.; Milo II. a grandson of Mr. Lort's Jock, 18gs.. York III., 15/gs., and Rose of Glemarkie, 19gs., were the highest figures realized by the remainder. A wayy-coated retriever bitch, Black, first prize Aberdeen in 1856, was cheap at 13gs. Two other retrievers reached 19gs.; and two fair deerbounds, Earl and Simoker, were cheap enough at 3/gs. and 552 second at Birmingtham in 1855, and third Crystal Palace, 1856, securing the top figure, 24gs. Guy and Gobin, by Luck of Hessen, rom a daughter of Priam, sold for 16/gs, and 16/gs. each; and Belhus Magpie, by Priam, 14gs. Other properties realized smaller sums, and two couples of pretty little rabbit beagles brought 9gs.—London Field, June 26.

ST. LOUIS PRIZES NOT PAID.—Boston, July 8.—Editor Forest and Stream: In this week's issue of your paper I read a letter from Mr. Wade finding fault with the Pittsburgh medals. I cau beat that. I sent two dogs to St. Louis, won \$25, and have not received a cent for trouble and expense, which amounted to \$22.50, besides getting my dogs back in boxes without anything but bare boards to ride on over a thousand miles. After waiting a number of weeks I wrote to Mr. Munson, and he answered in reply that the treasurer would attend to it at once. As it is over a month since receiving this answer, I think the dog public should be noti-fied.—JOHN P. BARNARD, JR.

THE COVINGTON DOG SHOW.—We have received the premium list of the first annual dog show of the Latonia Agricultural Association, to be held at Gövington, Ky., Aug. 24 to 27. Major J. M. Taylor, of Cleveland, O., will judge the setters, pointers, foxhounds and beagles, Mr. H. L. Goodman, of Chicago, Ill., the remaining classes. There are champion prizes of \$10 in the English and Irish setter and pointer classes for both dogs and bitches, with \$10 and \$5 in the open classes, the latter including black and tan setters. There are champion prizes of \$5 for greyhounds and pugs. The remain-ing open classes are \$5 and \$8.

ILFORD CROMWELL VS. ILFORD CAUTION.—Editor Forest and Stream: In yours of the 1st you get me all wrong on the above. It was Mr. Lee's concurrence with me that liford Cronwell was the best mastiff in America that encour-aged me to stick to it. I suppose you will blame the blunder on me anyhow, so I may say that Mr. Cook, the former ow ner of these dogs, has made it very easy to blunder by his string of liford Cs., as the two above. Hiord Claudia, Charity, Chan-cellor, Cambria, etc.—W. WADE (Hulton, Pa., July 2, 1886). [Mr. Wade is right, the blame rests on him, as his manuscript will plainly show.].

KENNEL NOTES.

KENNEL NOTE BLANKS.—For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." All Kennel Notes must be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them. Sets of 200 of any one form, bound, for retaining duplicates, sent postpaid, 20 cont NAMES CLAIMED.

Notes must be sent on the Prepared Blanks.

Reference of the Properted Hlanks. Bainer Girl and Bissell. By A. C. Krueger, Wrightsville, Pa., for thite, black and tan beagle bliches, whelped April 20, 1895, by Baneruna (A. K. R. 1703) out of Pet (A. K. R. 252). Mona, M. ss Neilsm. Treme and Maggie May. By Samuel Coulson, fourteal (an, for red Irish setter bliches, whelped May 21, 1886, by Baneruna (A. K. R. 252). KENNEL MANAGEMENT.

128" No Notice Taken of Anonymous Correspondents.

EXAMPLE 1 No Notice Taken of Anonymous Correspondents. C. H. S., Chestnut Hill —I have a setter pup four months old which has ha! round worms for some time. He has passed three or four at different times about seven inches long. He is now very thin and does not eat very much. His coat seems dead. Have given him arecanut and santonine, but it did no good. Ans. Your puppy proh-ably still suffers from worms You may try the fluid extract of spigella and senna it tesspoonful does after a fast of twelve or twenty-four hours. If no worms are passed, tone your dog up with nouribing food and give three drops of Fowler's solution three times daily.

daily. H. D. M. Melbourne, Quebec.—My water spaniel had some sort of lice on her and continual scratching has caused two or three sores to appear which I healed by washing with soap and applying goose oil, and as far as I can see all the lice have left her, but the skin is scaley and dry looking and her hair is thin in places. There does not appear to he any appearance of mange. What can I do to make her hair soft and glossy as it naturally is and to clean her skin of this dandruff. I have washed her several times but it does not appear to take it off. Ans. After washing your dog, rub to vaseline in moderate quantity. This renders the coat glossy and softens the skin. Give five drops of fowler's solution of arsenic in the food night and morning.

Ans. After washing your dog, rub in vaseline in inderate quantity. This renders the coat glossy and softens the skin. Give five drops of Fowler's solution of arsenic in the food night and morning. A Reaber, Peterboro, N. H., -My beagle is in very thin fiesh, and will not eat well. At times his nose is hot and his nose and eyes run a little. If a little frightened or excited his eyes furn green. At immes his breath is unpleasant, but never very bad. Can find nothing to show that he bas worms. He is built right to stand a large amount of work, but if he rune a few hours he will seem very tired the next cakes wilb mik and table earnes. Have tried other kinds of feed, but he will only data little. He is fifteen months old and has been hut esame owidtion the three months I nave had him. Have given hun no medicine, not knowing what to use. Also, five your beagle hwe drops of Fowler's solution of arsenic in his food night and morn-ing. His protean eyes will come out all right. When the pupil dilates hey look green, when it contracts the eyes look black. J. H., Cleveland, O. -1. My beagle pupples, four weeks old, are get-Have given her two grains of santonine and a purge about four hours after, purge thrown up five minutes after taking; throws up food frequendy; ob-rwise lively; appetite good. Ans. I. It is impossible to say from this distance and without more particulars, what canses the tumors in your pupp es, it is doubli-ss enlargement of the glands, sallvary or lymphetic. It may he tiat your dogs do not get enough of the right kind of milk from the mother. Test the milk with litmus at appeworm. Fast her for twenty four hours and give thirty drops of the oleoresin of aspidum or filte may sprage and sce whether it is acid or alkaline, if the former give soda u the food or lime water in the milk. You may try cod liver oil in easyor oil doses three times daily to the pupples. 2. The blich has a tapeworm. Fast her for twenty four hours and give thirty drops of the oleoresin of aspidum or

HUMPHREVS' VETERINARY SYSTEM.—No well-informed person denies that the ownership of animals involves the obligation of their proper nursing and care when sick. It is generally admitted that the com-mon mode of treatment is crule as well as wasteful in life and suffer-ing. But before you condemn us show us a better system. Now, this is precisely what we propose to do. Humpireys' Homeopathic Vet-ermany specifics have been in use twenty-five years, and the tosti-bel disease among domestic animals, and can be given without the slightest trouble. They are not pois nons for destructive to heath, but core in far less time than any other remedies. This system of yeatment is free from intricacy or difficulty one that tells the owner just what to do and how to do it, and while safe and salislatory in results, it secures the animal from all crueity and unkindness. More-over it affords the best chance for their recovery and renewed useful-ess. We think we acting in the interest and for the benefit of our animal friends, who cannot speak for themselves, when we cor-ially indores Humphreys' Homeopathic Veterinary Specifics...Adv. lially indorse Humphreys' Homeopathic Veterinary

THE SPRINGFIELD TOURNAMENT.

Ide A to the first by buildingly dept. By Add. A to the first by the second and the properties of the second and the second the

entered. The Peabody took their turn at shooting to day with the following result:	
First entry, Second entry,	
F R Bull	
	1
George Adams	
J J Leonard	
T B Wilson	1
Kimball	
The team are still one point behind their opponents, but will try to	١.,
overcome them to-day.	
The various other targets were well patronized. Much of the inter-	
est of the members of the Schuetzenverein centered in the "novice	
match" between members of that society, in which some very good	
scores for novices are being made. A. Hollenstein is the leader so	
far, having a total of 95 out of a possible 125 to his credit. He is	
closely followed by Capt, Buchholz, who has a total of 94, while A.	1.
Schultz and Fred Lenoir follow with 87 and 85 respectively. In the	
individual military match some good scores have been made and	
individual initially match some good scores have been made and	
many more entries are expected to day. M. W. Bull, of the City	1.
Guard, is ahead so far, and is looked upon as the probable victor,	
although his competitors are working hard to catch up with him.	1
The score up to to-night was as follows:	1.
	1
M W Bull	
E T Stephens	1.
T T Cartwright 21 21 21-63 Henry McDonald 19 17 36	
On the Massachusetts target A. C. White is at present the leader,	1
but he is being pushed by others as the score will show, each 3 scores	
	1
counting as a continuous one:

Rudson, Syracuse, 17, divided §35. LYNCHBURG: Va., July 9. — Editor Forest and Stream: To awaken an interest in artificial target shooting in this locality, with a view toward orcanizing a club, I had a blue rock trap and birds sent hcre-and gave two shoots, one on the 7th and another on the 9th. A local dealer being anxious to exhibit a Decatur red bird trap, we used one red bird and one blue rock alternately. The red bird trap, did not work well and broke over 30 per cent, from the trap, annoying the shooters greatly, the flight of this bird seemed to be uneven and weak, not going over about 30yds. The blue rock was the favorite, and will probably be sciopted. They flew becautifully, being thrown from 50 to Syds. from the trap at low elevation, making a target to try the skull of the hest shooters. Most of the gentiemen wbo partici-pated in the shooting are good fleid shots but made low scores, having never before seen the targets at which they were shooting. The fol-bying scores were made after considerable preliminary shooting:

 Jas Cleland.

The second race on Saturday was not started until 6 P. M., on ac-obunt of low tide. The courses were: First and second classes— from judges' hoat to spar huvy on northwest corner of Apple Island, eaving that on port, to buoy No. 6 in Lower Middle ground, leaving hat on port and return to judges' boat; distance 6 miles. Third lass—To buoy off northern end of Apple Island, leaving it on port, rround Snake Island and return to judges' boat; distance 4 miles. The wind was very light, but came out fresher from south near the hish. The full times were:

 entered for the ladies' moonlight race over the same course.
 Fancy

 won in first class, Victor in second and Annie in third.
 COPUNTULIAN

won in first class, Victor in second and Aunie in third. CORINTHIAN Y. C. CORINTHIAN Y. C. The second championship race and sixth regatta was beld off Mar-behead on July 10. The preparatory gun was fired at 2.30 p. M. and three others were fired at intervals of five minutes, heing the starting signals for each of the three classes. The wind was resp light and the boats drifted across the lue in a bunch, the wind soon increased a little and the third class succeeded in covering the course within the time limit, hut the first and second classes will have to be resailed. The third class rounded the stakeboar off Marolehead Rock in the following order: Myrile, Pixy, Vers, Psyche, Unique, Mona. Tyro. As soon as they rounded sheets were trimmed down for a beat to wind ward to Gooseherry Ledge huoy. In the light air and couters Mona and Vera were leading the fleet. Mona stood further some to the eastward, rounded Gooseberry Ledge huoy first, closely tollowed by Vera, with the centerboards heaten off. The race home was very close, Vera finally crossing the line Im. Sis, ahead, winning the second championship race and pennant, while the nearest: centerboard was ten minutes behind. The result boards would win in the light air, and that the two keel cutters would come in at the rear of the procession instead of at the head. The following is a summars: THEND CLASS FEELS. Low the down in the light air, and that the two keel cutters boards would win in the light air, and that the two keel cutters the following is a summars:

MIRANDA.

MIRANDA. The races of the large schooners have increased in importance within the past two years, after a period of comparative dui-meric is a school of the large schooners have increased in importance and this scaon especially is unusually large. For use, Giuna, fonican in Boston, and Montauk and Grayling in New York have and this scenes the school of the school of the school of the meric is being extensively altered and will scoue be ready, making one the two masted Mayflower, Sachem, now nearly ready at Law-per of any time, a real type. The other comes from another direction of a now on her way across the Atantic, having sailed on June 29 from Southampton for New York. For nearly a year the report has been current of the purchase of Miranda by an American yachts-ment school and her and the berg to disclose the real owner by shark showson. We are not at the barty to disclose the real owner by shark showson. We are not at the barty to disclose the real owner by and show in the areally sailed, the famous racer thas fallen into good bands and will in all probability make a record that will stand beside that made in British waters, ahead of all others. Miranda is the masterpiece of Mr, John Harvey, being built by him at Wirenhoe to

1878 for Sir George Curtle Miranda Lamiyon, lately deceased. She is 1876, stem to sternpost, on oeck; £8tt. Sin. load waterline, '8ft 9in, beam and draws i8tt., with 28 tons of lead on ner keel. She is a far hetter representative of the modern keel racing yacht than any schooner ever in these waters, and her contests with Sachem, Mon-tauk and Grayling, each a fitting representative of a different type of centerboard boat, promise some most valuable and instructive results.

LOOK TO YOUR BOBSTAYS.

LOOK TO YOUR BOBSTAYS. THE most vulnerable part of a modern racer is certainly the con-nection between the bowsprit end and str-m at waterline, as no other part fails so frequently. In the New York Y. C. regatta Pris-cilla carried away a boit in her hobstay shackle, but hy good luck and good management saved her nosepole. At Marblehead Huron broke a part of the same gear and withdrew, saving her silek, while Bedonin carried away the plate at her stem just after finishing the race, and her stick was in serious danger, as the tack of the jib could not he started, owing to a jibtopsail being stopped to the bowspit. Shona was still more unfo thuste. The holt through shackle and sitem gave way and the stick hroke just inside the gammon iron. This was due entirely to bad construction, as the buwspit, a öla, stick, had just inside the gammon iron and virtually cutting the bowspit in two. In te Royal Oyde Y. C. regata Doris nearly met the same fate, her bobstay golug when two niles from the finish, the wind were sent out on the bowspit, holding it down by their weight, so that she finished third among a lot of 10 tonuers, she being hut 5, and took second prize. being light. Instea were sent out on t that she finlshed th took second prize.

EASTERN Y. C. REGATTA CORRECTED TIMES.—The table or mes given last week was from the official record of the regatis ommitee, but these times have since been revised by the commit-ee, their final report being as follows:

<text><text><text><text>

under in the race from New London to Shelter Island on Friday, the IGht of July. MAYFLOWER.—The alterations in Mayflower have been com-pleted, hut no opp riunity has yet been afforded to test their value, as she is just off the ways. On Friday last she was hauled out at Lockwood's railway, East Boston, where Lawley & Son took her in hand Her lead keel has been cut off at the force end for a length of 4ft, the space left being filled with oak deadwood. The lead, 1,000 hs., has been removed and recast under the keel. One piece, 40ft long, runs been removed and recast under the keel. One piece, 40ft long, runs from the sternpost to the slot, on each side of the latter a piece is bolted, while a fourth piece finishes out the shape forward of the slot. The depth of this shoe, which is bolted up through lead and oak keel, is 5m, the draft being uncreased to that extent. The effects of the alteration will be to effect a better fore and aft trim, the hal-last heing further aft, all of which changes should be been ficial. The weight aloft has also beeu reduced, the spors heing sent ashore at Fiske's wharf for that purpose. The mast will be timmed off im, in diameter and hoom §2m. The iron work will be lightened, and one hock will be removed from the gaff. The canvas had stretched greaty, the mainsail heing 300ft, larger. It has been taken to the navy yard loft and cut off ahout 15m. on head and foot. LARCHMONT Y. C.—This cluh, the foremost of Long Island Sound

greatly, the mainsail being 300ft, larger. It has been taken to the navy yard loft and cut off a hour 15 in. on head and foot.
LARCHMONTY, C.—This club, the foremost of Long Island Sound is growing steadily in numbers and popularity, the roll of 400 being will with many candidates for admission. This year's fleet, as given by the club book, numbers 11 steamers, 20 schooners, 14 cutters and yawis, 45 cabin sloops 27 open jib and mainsail and 26 catboats, a total of 141 yachts. This year's club hes adopted the measurement introduced by the Atlantic Y. C. of length taken parallel to the loadwaterline and at a height of 2 per crut. of load waterline ab we water, thus taking both forwars and after overhang. The book this year is houst for any as cover for very neat appearance and more durable than the white canvas formerly used.
IREX AND QUEEN MAB.—The Up Swin match of the Royal Marvin, but winning on time, by three minutes. We understand that iteut. Hen un offered fi heaten by Irex to turn over his challenge to her, but the offer was declined. There may be glory in heating or bard by there there sund be during the surely there is more honor in a flight with a Puritan or Marfine. What we have the successful or otherwise, this year Galatea's record is likely to outmatch that of Irex in the estimation of yachtsmen.

-is covered; and the comparative values of form and rig are pre-sented, theory being checked by experience. The pictures and plans are very numerous.-Hullstrated Sporting and Dramatic News, London, June 26. THE CORINTHIAN Y. C.-This club has marked the opening of its second season by the publication of a neatlittle club book, wherein it shows the wonderful growth of the club. Established only a year ago, it now numbers 215 members and a fleet of 92 yachts, 50 of them heel boats. Last year five regatus were neld and this year seven are on the programme. The club is purely Corinthian, no professionals be allowed in the races, which are limited to yachts of 80tf 1, w. I. and under, though many larger vessels are on the club list. The anchorage is in Marblehead Harbor and the course is just outside. The success of this club shows what might be done in many other places with equally good management. The officers for 1856 are: Commodore, B. W. Crowninshield; Vice-Commodore, I. P. Falmer; Secretary, Everett Paine; Treasurer, J. B. Rhodes; Measurer, C. H. W. Foster. AITERATIONS-THE SET OF THE TDE.-It is instructive to note the sole direction in which all alterations are now made in yach's large and small. Last winter we noted the addition of outside lead on many yachts, and the change from centerboard to keel, while there awa not a single instance of the large yachts have been altered in the same direction. Mayflower shows more lead on keel and littered in the same direction. Mayflower shows more lead on tweel and thered in the same direction Mayflower shows more lead on the early shifts forward and cutter righ the well forward. Are there ary instances of a change in the opposite direction, where masts have been altered in the same direction. Mayflower shows more lead on keel and hored in Marblehead Harbor on July 9. and a meeting would be held orsatite af rither course for the cruss. On saturday at 8:65 a gun to mastarday night and Adelita, steamers, and Fortuna, Dread naugh, Mohean, Laton, Actes. Meter, Togo, Wander

or each cup. SEIZURE OF AN AMERICAN YACHT.—Sir Roderick Cameron ft New York lately in his schooner Rena, hound for hts summer, scidence at Tadonsac, on the St. Lawrence. After leaving the wner at that place the yacht sailed for New York, but after some ough weather put into the little port of Bactouche for repairs, where he was seized by the customs officials and a fine of \$400 imposed. which her owner refused to pay. The case was laid at once effore the Minister of Customs at Montreal, who ordered the release t the yacht.

CHANGES OF OWNERSHIP.—Nautilus, keel sloop, has been pur-hased hy Mr. Arthur Ryerson, N. Y. Y. C. Ariadne, sloop, huilt ist year for Mr. Howe, has been sold to Mr. H. W. Banks, A. Y. C. osephine, sloop, has been sold to Mr. A. J. Cassatt, former owner of rohe and Valkyr.

Frohe and Valkyr. RACE ON THE SHREWSBURY RIVER.—On July 9 a race was sailed over the ten mile course on the North Shrewsbury in a good S.E. wind. In the first class the winner was Etelsa, with the Annie B. second. In the second class the Fern was first with the Little Spot

second. RACE IN JAMAICA BAY.-The first of three races to take placein Jamaica Bay was sailed on July 11, open to all sail boats on theaay. The course was from Seaside House Dock to the red can buoyhad return, and 14 yachts started. Ripple won in first class and Katen second

n second THE TRIAL RACES.—A meeting will be held to-day, at which the eport of the Cup Committee will be made. It is settled that the trial accs will be held about Aug. 15-30, and will be open to single stick achts of 75ft, or over only. The Brenton's Reef race will be sailed bout Aug. 9.

bout Aug. 9. RACES FOR THE BIG YACHITS.—Bar Harbor Y. C. have pro-osed to offer a cup costing \$1,000 for a race of the four large boats, nd a similar project has been mentioned in connection with the thantic Y. C. cruise, but neither is likely to be carried out. The oats cannot be at Bar Harbor in time, nor will all of them be on the

boats cannot be at Bar Harbor in time, nor will all of them be of the cruise. CAPE MAY COURT HOUSE Y. C.—This club sailed its annual regatta on July 5 over a 19-mile course. The Emma won the cham-pion flag in first class, and the Shortclippe the second prize. In the second class the winners were the Harry and the Laura. ANOTHER YACHT FOR THE TRIAL RACES - Messrs. Gesner & Marr, of New Haven, are now building a sloop of 75th. load waterline, for Mr. Henry Kingsland, of New York, which is expected to take part in the trial races. ROYAL CANADIAN Y. C.—At a meeting on July 7 it was decided to contribute \$100 toward the trophy which the L. Y. R. A, will offer, and also to sail a regatta at Toronto on the day following that of the Toronto Y. C. Aug II. "HUNT'S YACHT LIST."—This valuable little volume comes to us in handy size, thougt harger than in previous years, and with a still larger collection of useful matter. A number of Americau clubs are included in the list. PRISCILLA.—It has been generally reported that a lead keel will

PRISCILLA.—It has been generally reported that a lead keel will orthy be placed under Priscilla, but the report is denied by those onnected with her. A new mast of Oregon pine is now being sepped.

opped. DUTHERN Y. C.—This club sailed their annual regatta on June the course being 15 miles. The winners were Mephisto, open hoat; re, schooner; Anon, cabin sloop, Gypsy, open sharpie, and Carrie cats.

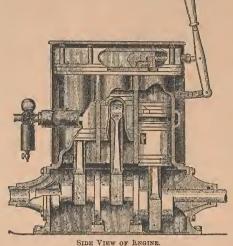

cats. NEW MARINE GLUE.—The Russia Cement Co., of G'oucester, ss., are introducing a new marine glue, made from codfish skins, shipioiners and cabinet-makers. 7UZLE.—This steam yacht, built last spring by Jacob Lorillard, been sold by him to Mr. Frederick Brandreth, of Sing Sing, for 100.

OONA.--The body of one of the crew of the Oona has been found on the beach at Malahide and identified as one of the seamen, Grace, EAST RIVER Y. C.-This club will move next month to a new an-clorage near Hallett's Ooye, where better water can be had,

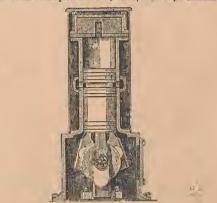

KING PHILIP,--This boat, laid up for some time after her failure as a racer, has been fitted out with reduced spars as a cruiser. DIMASTED.--On Monday last in Long Island Sound the sloop Gladiator lost her mast at the deck and was towed in for repairs.

OIL-BURNING STEAM LAUNCHES.

THE accompanying cuts show the engine and boiler used by Thos. Kane & Co. in their steam launches, of which they are now building a variety of sizes, from 19 to 30it. The Linn valveless on gine, as it is called, is a single-acting three-cylinder engine of the

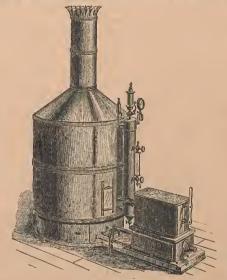

simplest construction, all valves, eccentrics, guides, piston rods, crossheads.stuffing boxes and flywheel heing dispensed with. Tbe working parts are comprised, as shown, in three fore and aft cylin-ders, each with a wide piston and a pitman, and a triple crankshaft.

END VIEW OF ENGINE.

A lever and a plain sliding plate serve to stop or reverse the engine instantly. The oil used runs down and is caught in the lower part of the iron casing, perfectly lubricating the crankrhaft. The latter, as well as the pitmans, is of cast steel, all bearings being of Babbit metal. The boiler is of the porcupine type, a vertical shell with a

ENGINE AND BOILER.

number of radiating tubes, affording a large surface and easy means of cleaning. The fuel, ordinary kerosene oil, is carried in a tank at the how or stern, a jun, iron pipe leading to the boiler. Of course, there are no coal nor ashes, with the accompanying dirt and labor. The engine may be fitted to any boat, or the complete launch, ready to run, can be furnished.

EVERY pair of Allen's how facing cars warranted. Send for little catalogue free. Fred A. Allen, Monmouth, Π_1 —Adv.

Louise Leighton owns a pretty white, shaggy-coated York-shire terrier that one night convulsed 1200 people with haughter. "Il Frovatore" was being sung, with Miss Leighton and her husband, William Eckert, in leading roles. In the blissful tenderness of their wedding duet Mr. Eckert's heart stood suddenly still with a cold. cold chill, as he felt something clawing his white silk tights. The little dog had escaped from the dressing room. In vain did his master shoo and scowl; in vain did stage hands whistle and call from the wings. Doggie had found friends and would not go away. Presenby he squatted down, held up a right paw as he had been taught, and looked up sideways with such a conical leer that it was almost impossible for his master or mistress to follow the orchestra. When the duet was finished the audience yelled, but doggie would not budge until Mr. Eckert went along. In "Robinson crusce" this same little dog improved his oppor-tunity of a legitimate appearance. In the castaway mariner's lonely island home "this real, truly dog," as the children say, performed many pleasing tricks and did h" part as well as any actor in the piece.—San Francisco J"

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership. signals, etc. of their clubs, and also notices in advance of succings and races, and reports of the same. Canociets and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, rapps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

. CANOEING ON BLACK CREEK.

• CANOEING ON BLACK CREEK.
The early days the Genesee River and other tributary streams were maile useful in conveying merchandise, and in travel to and fro. The Indians made use of the streams in carrying home their game, as well as for hunting and fishing. The Genesee was kept clear of obstructions and was navigable for a long distance above Rochester. The methods of travel have changed ot late, to such an extract that an eighteen mile ride ta cance is something of a novely.
When I placed my boat in the stream at 9 o'clock one morning the stream was swollen by recent rains, thus increasing the speed of the current, enabling me to make the trip at this time with greater case of foam were spread over the surface of the stream inter like is and over the surface of the bast, and beside it lay my gun, which have taken in all my hunting trips, and which is valuable from old associations.
"What do you expect to hunt at this season of the year?"
"Why do you take a gun along?"

my gun, which I have taken in all my hunding trips, and which is valuable from old associations. "What do you expect to hunt at this season of the year?" "Why do you take a gun along?" "Wi a habit I have when roaming through the fields and by the streams, whether there is game or not." Facing down stream, pushing the boat hefore me, I glide along with pleasant anticipations, sometimes turning to the rightfor left to avoid snags or rocks; now dering under low, hanging boughs of willow or elm, now shooting over the rapids; a little further on sweeping under a bridge; gagain I an circling through a forest, an open meadow, or fields of grain. A horse feeding by the stream looks at me dist ust-have been taxed heavily for iron bridges to ever the exosent as were place and scampers away; the cows, pigs and sheep also indicare their surprise. Now and then a woodbuck rattles over the brush and darts is to bis hole. How many bridges there are, Residents have been taxed heavily for iron bridges to span the stream. There are from two to five bird's nests under every bridge, and I stop occasionally to admire their construction and the beautiful eggs that lie dike opals and pearls in the security of these snug homes. Often I would not have noticed them were it not for the brid's. If we constructed or not completed, and the birds scement to the recultarities of our birds, I often meet toose I am unable to name. Of recent years I have noticed a small red bird and a blue bird of the birds, streams. Although I am expected to not woodland aud along our streams. Although I am expected to birds, kings there are in our woodland aud along our streams. Although I am expected to not see a swallow. These valuable invect destroyers are disappearing; not long ago the eaves of the farm harms were filled with their ours, kingfishers and field sparrows were numerous. I did not see a swallow is the same stace. The country will be on the eaves of the farm harms were filled with their birds. These rates and the the same house the are send n

not see a swallow. These valuable invect destroyers are disappear ing; not long ago the eaves of the farm barns were filled with their nests, now they are rarely seen in those places. The country will soon be destitute of birds unless methods are taken for their protec-tion. The true my boat and pull with my face backward. I pull along much faster this way, and the change is desirable. I fly along at reput speed and congratulate myself on the good time I am having. Everything is so quiet and so stranze. Every hend in the stream opens up new ynews, this along. Your imagination is const. null strand pressure and pull with my face backward. I pull along much faster this way, and the change is gariners into duce these surprises when laying out parks and grounds with the effect barn person and the or fluctuation is const. The strand opens up new ynews it was struct a boulder standing high above the stream. I am nearly knocked out of the boat which swings around the other end foremost. I shall barve to be more careful or be upset. Face downward is hetter alter al. They the farm warons ratile over the buildess in comparison to the still carriage in which I ride. I escape the dust and heat of the high-way and ride most of the time in the shade of the elms. The train of be upset, and revel in the shade cond my journey. No, such trips as the should be taken at leisure, griving time to take in the scenes of beauxy, and revel nusiness enterprises if we made less baste. I could exnaust myself in an hour by pulling at these oars, thereby marring the pleasure of a lifetime by straining every muscle tugging at the buisness oar without needed rever alor. I am to ilder, but have been hard at work all the witter and spring, my ousiness cares gradually weighing heavier and heard of the reation ilke this gets me out of the ruts, and I go back to my work feeling it a much lighter burde. Merey How can a spider weave its wen across a stream eighty rerumstances est them ravenously at picnics? There are several pickels in my lunch, an

able as that of peuding the 'woodcheck. 'I gain it, however, about a charter of a mile below, where it has become entangled in the wil-lows.'' Time, 11 o'clock A. M. Again I feel like attacking the pickles, but conclude to wait until the regular rural hour for dining.'' Time, 11 o'clock A. M. Again I feel like attacking the pickles, but conclude to wait until the regular rural hour for dining.'' The pickles, but the probat, but now I arrive at a point where I must pull it over the hank are an advanted to be the obstruction, wading through the pickles, but the obstruction, wading through the pickles, but water.' Off I go again. The freshet must have raised the stream several feet, for the buttercups raise their heads piccusly a foot or more univer water. and I offen float over fields of wheat and oats ony boat well upon shore. The current is strong, I am going pretty fast-bump, we have struck, the bow heading down stream. I jump out, and it the twinkling of an eye the current has shifted the solution, while ny gun is submarged. I make a grab, first at the lunch-node the distores to fue and on the solution of the mater the same time set. The gun the off the same the special stream stream, at he most house the present is submarged. I make a grab, first at the lunch-node the distores the solution of the same tices, etc. The purcent is strong about the stream and filled is with water. My overcoat, at the same tice speculating upon the condition of the same tices, etc. The powder is bopelessly wet. No more destruction of wood-chucks for this bopelessly wet. No more destruction of wood-chucks is bopelessly wet. No more destruction of wood-chucks if here the boat the incident as I am again gliding down, for we have struck a beautiful pert of the cargo-next the most beautiful merican forest the, the elike the same tices, see the gam and the stream are apt to gam astrongent. For the same the see the same and the stream are apt to gam astrongent. The see the currention of wood-chucks for this and the twe the same the str

JULY 15, 1886.]

were dressed to kill and had breechloading guns and two trained rabbit dogs. They came by my house on the way down to the swamp below, intending to cross the stream about this spot. They was tremendous bunters, I know by the way they talked, and I knew there was no hope for any rabbits in this part of the country. I told them they bad better look out for the ice, as It was a little soit. They looked at me as much as to say they did not want any advice from country fellers. Well, I watched them as they struck the creek, and by and by I heard a yell and sure enough the feller that was on ahead was in clear up to his neck, and the one follerig after him had tumbled down flat among the horken ice and mud. Well, I pulled them out and dragged them to the house, put them to bed, hung their cloket sover the stove, and finally sent them home about nine o'cloket that night. They didn't put on half so much style when they went away as they did when they came. The rabbits around here in the woods look to me as though they had been laffin' ever since." Thave no time to hear stories oon I go. The sbores of the creek are strewn with clam shells, the better part of the clam baving been atten by mustrais. The stream is fraarant at many points with the smell of musk (not at all disarreeable to me), and yet I did not see a proudly marketed their accumulation of furs. The banks are crevered at may points with the most beautiful ferns. Before me is a group of beautiful white blossoms, something that I have not hefore seen. Stumps of the soft maple are streak fields which they have reached by swinning the stream. Something that like are child how is a proteing what here stream. Something that la have not hefore seen. Stumps of the soft maple are enverabled in bright red leaves that look in the distance like a mound of red flowers. I catch a glimps power and then through the ovenings in the elms, of apple orchards in blossom and farm gradens with their quinces, currants and rame pher res. How sleepy the farmhouses look. Now and then

bit. The scene on the creek is changing every moment, with no we lews alike. Query - Why are woodchucks, weasels and other animals endowed this such remarkable curiosity as they possess? A weasel scuds due to be costs of a tree, but no sconer is he out of danger than he ops his head out of his hole after escaping his pursuer if all is quiet r a few moments. Chipmunks scud along the shores of the creek raphtened almost to dearh, but no sconer do they reach their hiding lace than they step out to take in the situation. The gray squirrels ramble up the elms and beches to sit in full view, with tails curied ver their backs, watching the solitary carsman as he gildes hy. Yeen the hirds seem to be interested in me and twist their necks to a batter view.

Even the hirds seem to be interested in me and twist their necks to get a better view. Query-Why are the male birds most attractive in plumage and song? Look at that hiackbird. What glossy hiack plumage, circled with scarlet, as compared with his modest companion in Quaker garb. The comparison between the male and the female bobolink is equally noticeable, likewise many other species. Possibly because the male birds are alone valuable only as they are made the target for every boy who carries a gun, while the female is clad in obscure colors, which permits her to escape observation. Query-Wby has not man made hetter use of the enormous water power that is present in every creek and river along the shores of the garatise and ocean? What a tug the current gives my boat, it carries me down against a snag or rock in spite of my best en-leavors.

<text>

shoot along rapidly, soon reaching the aqueduct over which the Eric Canal passes. The creek at this point is only about three feet at the bighest, and the water is dripping from above rapidly. I passed through with little inconvenience, however, and soon found myself upon the broad Genesee, which lay before me like a sea of glass. I am now five miles from Rochester. My ride down the Genesee proves to be the least enjoyable. There is no shade from overhang-ing boughs, and the scenery is monotonous. I pull along with a steady oar, exchanging greetings with the fishermen and boatmen along the way, landing in time to reach the evolung train going west. Rochester, N. Y. UHALSS A. GREEN.

ROYAL C. C. ANNUAL REGATTA.

<text><section-header><text><text><text><text><text><text><text><text>

YONKERS C. C. ANNUAL REGATTA. —The first annual regatta of the Yonkers C. C. was held on July 3 The single paddling race was won by J. G. Reeves in Jenne R., the tandem by J. G Reevs and A. B. Fatton in Goblin, hand paddling race by H. L. Quick in Spy, Owing to lack of wind the sailing races were postponed. The regular monthly meeting was held July 6, 1856, at which the following officers were elected for the ensuing year: F. K. Sheers, Coumodore; H. L. Quick, Vice-Commodore; L. Simpson, Secretary-Trensurer.

THE INTERNATIONAL RACES, -We learn that Mr. E. B. Tred-wen will be unable to visit America as he proposed to do, ewing to the serious illness of bis father. Mr. Baden-Powell is now huilding a new 15x31½ cance to race for the New York and A. C. A. cups. SUBSCRIPTIONS TO THE CANCE EXHIBITION.-Mr. Stanton writes to us that the subscription of \$20 to the expenses of the exhib-tion was contributed by Mr. Rushton, through his agent, Mr. Squires.

MUSKETA C. C.-This club, located at Bergen Point, will make a cruise in August to Lake Hopatcong, returning down the Delaware River and through the Raritan Canal.

NEARLY EIGHTEEN THOUSANO MEN were paid cash benefits in 1884 y the Travelers Insurance Company, of Hartford, Conn., for losses y accidental death and disabling injury.—Adv.

Answers to Correspondents.

127" No Notice Taken of Anonymous Correspondents.

W. B. R.- Train oil is whale oil. B. C. W.-See table of open seasons in our last lssue.

VACATION.-What is the best hait for salmon and large trout in kes? Ans. Live minnows if still fishing at a buoy, or dead ones if lakes? trolling.

D. B. K.—I have on my property near Seabright, N. J., a lake which abounds in carp. In the early part of June I took 9 with a lisht fly-rod, averaging 33/ble, each, using worms for hait, at which they bit eagerly and run well, making very good sport. For the past three weeks I have been unable to tempt them. Can you suggest any other bait at which they will he likely to blie? Ans. Try boiled peas and also cotton wet and rolled in flour. The latter stays on the hook best.

Dest. D. M., Lynn, Mass.-Will you or some of the readers of Forest AN STREAM please give me information of the following questions: 1. Where can the greenheart. so-called by rodmakers, be procured near here? 2. Is it the same as horbeam? 3 Do rod makers use muriatic acid to draw the temper or for other purposes on greenheart, if so please Inform bow? Ans. 1. Try some importer of woods in Boston or some rod maker. 2. No; hornbeam is a native wood, called also ironwood. 3. We never heard of such a practice.

Boston or some rod maker, 2. No; hornbeam is a native wood, called also ironwood. 3. We never heard of such a practice.
R., Augusta, Ga. — We had a clay pigeon match here and were shooting doubles. A. went to the score and announred ready, when two traps were sprung. One of the birds was broken from trap and the other was not. A. shoots at the broken bird and then refuses to shoot the other or second bird, and wants two new birds. Is he entilled to them or does he lose both? I claim if both hirds had went from trap all right, and A, shot one and failed to shoot the second, that he lost both. I also claim that when A. shot at a broken bird and missed, and refused to shoot at the second bird, that he lost both. A. sho y firing at the first bird he accepted I and score a miss; hy neglecting to fire at the second bird heat cored a second miss.
W. S. C., Jamestown, N. Y.-Please inform me what the law requires in order to post a private trout stream, what size of hoard bould be used and how the notice should read. Ans. The laws of York require that you publish, "at least once a week for three montos, in a paper of general circulation printed within the county or counties within which such land, or lands and water, are situated, an otice describing be same." In this notice must be a clause declaring that the lands or water will be used for propagating and protecting the store and within ist months you must put up sign boards warming all persons against trespassing. These boards must not be saws of New York, 1868, Chap. 285, Sec. 27, amended hy laws of 1880, Chap. 285, Sec. 27, amended hy laws of 1880, Chap. 51.

Laws of New York, 1906, Chap. 200, Sec. 21, and noted by these of New York, 1906, Chap. 551. J. B. M., Cbillicothe, O.—1. What game is most abundant in Nortberra Nehraska along the Sloux City & Pacific R. R.? 2. Are prairie to index the section, or do they become more numerous as cultivation progresses? 3. Is there good fishing in the Niobrara River and its tributaries? If so what variety are atundant and how are they taken? 4. How do the climate and game of Soutbern Dakota compare with those of Northern Nebraska in the months of September and October? 5. What hunting rifle is best for the country named, and where and at what price can it be obtained? 6. What make of sights are hest for long-range shooting (game shooting?) Mas. 1. Chiefly birds, i.e., prairie chickees and in season and sultable localities ducks and prese. 2. Frairie chickens and sharp-tailed groups (also called prairie chickens) are more abundant in unsettled regions. 3. Not very, mainly catifish. 4. Climates and game are similar. 5 Any good rifle by a standard maker costing from \$16 to \$10. There is no dancerous game and light charges may be used. 6. It is matter of tasts and fancy.

THE AMERICAN SALMON FISHERMAN. By Henry P. Wells. Illus-trated. New York: Harper & Bros., 1886. Price, \$1 50. THE PERCHERON HORSE IN AMERICA. By M. C. Weld; in Frauce-by Cbas, M. Huys. Illustrated. New York: O. Judd Co.

The other day one of St. Paul's most prominent society men went in his canoe to one of the towns down the river. On arriving he proceeded to the hotel for dinner. The young gentleman was attired in a boating costume, with the addition of sleeves and hose. When he entered the hotel the proprietor greeted him as if he thought he had escaped from Stillwater. The hungry canoeman asked the way to the dning-room, but was refused admittance by the hotel keeper, with the assertion that "there were ladies in the dining room, and a man ought to be arrested for walkin' around in that rig." The young gentleman was forced to leave the hotel without his dinner.—St. Paul Pioneer Press.

The

PATENTED MAY 4. 1886. With the exception of our Patent Compensating Reels and Section Bamboo Rods which we introduce to the public, this fly, invented by Mr. Wakeman Holberton, is unquestionably the greatest and most radical improvement in fishing tackle ever made. The chief points of manifest superiority of this method of tying flies over the old-fashioned way are lat—The "onderfully life-like and fluttering motion this fly has when moved on the water. 2d—The fish is almost certain to be hooked if it touches the fly. 3d—Any of the present favorite combinations o color and form can be tied in this way. Thus, those who believe that fish are attracted by particular colors or forms of fly, can have their old patterns in the patent style. 4th—These flies not only offer less resistance to the wind in casting, but more resistance to the water in drawing. Hence one can do as good work with a small hook tied this way as a large hook tied as before. Experience proves that dies dressed this way can be tied on hooks two sizes smaller than one would use on old-fashioned flies. We take this me ns of notifying dealers and fly-types that we shall prosecute any infringement of our rights under this patent to the fullest extent of the law. Our course, in regard to the protection of our patents and copyrights, is known to some people. We assure stuch people that the same old course will still be pursued by this firm. We add a few extracts selected from the numerous and unanimously complimentary press notices of this fly. We could add many letters from well-known and expert anglers if we were willing to drag the names of private gentle-men into our advertisements.

THE FLUTTERING FLY, Patented May 4th, 1886.

Fluttering

PATENTED MAY 4, 1886.

Patented May 46, 186. men into our advertisements. Scientific American:: "When so arranged the wings offer less resistance to the air in casting. As the fly is slowly drawn toward the angler the wings expand, and give it a fluttering, life-like motion, much more alluring to the fish." Forest and Stream: " * * * more like a natural insect than the old patterns whose wings close when being drawn through the water. * * Great ment lies in its superior hooking qualities. A fish cannot nip at the wings or tail, hut swallows the hook before any part of the fly." American Angler: "There is no question as to the killing qualities of this fly. All fish are attracted more by the action of the fly than hy color or form. * * This fly will certainly, when drawn against the current or over a placid pool, scam the surface with an attractive wake, and its expanded wings will create a fluttering motion, assimilating the struggles of a live insect. * * We are teld that few fish are lost by those who use this fly. We do not doubt it,"

DARLING'S FUR DODGE.

T rather seems as if the case which was going to show the way in which the Massachusetts courts would teach a lesson to those of Maine upon the game laws of Mainc had somehow failed to do so. The well-known "Jack" Darling, of Maine, brought a suit in the Municipal Court of the city of Boston against the American Express Company for fail ure to deliver certain goods in Boston. The "goods," which consisted partly of skins, horns, etc., of deer and caribou, were seized at Bangor by Game Warden Allen, the contra-band articles confiscated and the box containing the remainder of the articles, fox and beaver pelts, forwarded to the Boston consignee. For this failure to deliver Darling brought his action. The express company was represented by Louis D. Brandeis, of the firm of Warren & Brandeis, of Boston. It appeared in evidence that a regulation of the company forbade the transportation of these articles and that Darling knew of this regulation. That when Darling presented his box to the station agent, who was also express agent, he was asked what the box contained. He answered "Fur." agent swore that if he had known that deer or caribou were in the box he would not have taken it. It was further proved that "fur" in the language of those acquainted with skins does not include deer. Two points among others grew out of these facts: (1) The defendants contended, by Mr. Brandeis, that if any contract to carry these dcer or caribou existed, it was a contract procured by the fraud of Darling, and any loss must fall on him. (2) The agent, under the regulation had no actual authority to bind the company, and as the regulation was known to Darling, Darling knew he had no authority, consequently the company was not liable. The Court gave a verdict for the express company.

Mr. Darling's fur dodge did not work. He may now sympathize with the Pacific genius who shipped on the steamer Queen of the Pacific a box labeled "Fresh Clams." When the San Francisco customs officers investigated the clam box they found beneath a strata of cinders and ashes an hermeticsealed tin case containing thirty cans of opium of five taels each. The clam man was full of virtuous indignation, but the matter was not taken into the courts.

N another column will be found a communication from a a favorite shooting ground when the New Jersey woodcock found that for three weeks prior to the season opened, he lawful time market-gunners had been killing the game. In a note accompanying his communication "Ajax" tells us that he has the names of the shooters, and can bring sufficient evidence to convict them, witnesses being willing to testify. He asks the substantial assistance of some of the numerous advocates of proper game protection. The case seems to us to be one which may be successfully pushed. Our correspondent, who is well known to us, will probably be satisfied with a much smaller sum than he asks for, and we may state for him that if a sum sufficient to meet expenses be furnished, the guilty parties will be prosecuted at once.

WHERE ARE THE BLUEFISH?

A NGLERS and marketmen are lamenting over the prolonged absence of the bluefish, and many think there will be no bluefishing this summer. A trip through our city markets will show a dearth of fish at this time when they are usually plentiful. No species is now plentiful, and the absence of the bluefish and weakfish at this time of year is noticeable. Striped bass are scarce, kingfish are absent, shad have gone and mackerel have not filled the gaps. We believe, and have maintained, that the interests of anglers and marketmen are identical, and but for the fact that a few over-zealous anglers would restrict the sale of trout too closely, or prohibit it entirely, and that some marketmen are unscrupulous about observing close times, there should be no differences between them. Both want to see fish abund-ant, and the fact that the American Fisheries Society, formerly the American Fishcultural Association, carries on its rolls of membership the following dealers in fishes attests this fact: A. Booth, of Chicago, and Benj. West, S. B. Mil-ler, Pulaski Benjamin, Gilbert Carman, Albert Haley, Caleb Haley, J. N. Harris, W. Middleton, E. G. Blackford, Ernest Miller, H. M. Rogers and Israel Woods, all of Fulton Market, New York. These men are with the fishculturists in their endeavors to increase the food supply, and watch the investigations of Prof. Baird at Wood's Holl with interest.

For weeks the small craft have sailed out from Long Island and from Barnegat laden with anglers on the lookout for a school of bluefish, and the more scientific of them who fish with rod and recl in the tideways, look in vain to see the trollers strike the advance of the incomers. Night finds them disconsolate, for like Rachel, they mourn for what is not. Most of them blame the menhaden steamers for catching up the food of the bluefish and making oil and fertilizers of it, and others go further and accuse the steamers of using small bluefish for oil, when they can take a school of them. This, they claim, is the cause of the decrease of the bluefish, the weakfish and the striped bass.

On the other hand Prof. Huxley has said that the efforts of man are puny compared with the destruction of herring, etc., by the fish, birds and seals, and this has has been indorsed in this country by Prof. Goode and, we think, by Prof. Baird. Mr. Blackford is reported to accept this view of the case also, but with all respect to the weight of authority of these names, we cannot agree with them. It is possible that natural agencies destroy many times more of the herring tribe, and of other defenseless fishes, than man does but nature provides for this, and before man invented and used such destructive means of fishing as he now does the balance was kept up. When man was content with the hook and line, the seine and the gill net, the sea fishes had a chance to escape, but with pound nets along shore and purse seines at sea, and the continued dragging of our bays by nets in order to get fish for fertilizers and oil, the menhaden is not only thinned out but is not safe on its spawning grounds. We cannot believe that with steam cruisers lining our coasts, with men at the masthead on the lookout for a school of menhaden, the capture of these fish on which our better fish feed does not affect the supply of the latter, especially when it is known that a school of menhaden sighted is as good as captured entire by the greedy purse-net. It is possible that the bluefish are merely belated and may

It is possible that the brieffsh are merery belated and may come in later, but the striped bass are not belated, for they are with us all the year and are gradually disappearing. In our columns the "menhaden question" has been argued at length by both sides. Mr. S. B. Miller, of Fulton Market, is reported in the *Evening Post* as saying that he has seen the is reported in the *Evening Post* as suying that the menhaden steamers bring a load of 10,000 weakfish caught with the bunkers (menhaden), and we do not doubt it.

believe that the capture of menhaden for oil affects the presence on our coast of the migratory fishes which feed upon them, and that the menhaden oil and fertilizer factories are a curse to the marketman, the angler, and the professional fisherman.

THE INTERNATIONAL RIFLE SERIES.

N our Rifle columns we have endeavored to bring into one comprehensive group all the international matches in which, since the advent of modern rifle practice, the American riflemen have taken part. For several years past the National Rifle Association have failled to issue any reports, and this has made the gathering up of official statistics no easy task. The record is a proud one for our countrymen, though there are defeats to chronicle, the weight of and merit is largely on our side. In small-bore shooting we remain champions of the world, with very little seeming desire on the part of outsiders to take that championship away.

In military marksmanship we have the championship yet to gain; and it is not all to the credit of the National Guards-men of over two score States that for three years there has not even a whimper of protest at the fact that the British volunteers remain head marksmen in the citizen soldiery. The crror which the Amateur Rifle Club com mitted in allowing the Canadians to score a victory at long range work is one that should be corrected by sending up a strong team and bringing back the championship. Perhaps the live New York Rifle Club will take up the task, or the Walnut Hill men could do it in fine style if they only will.

It has been our pleasure and profit to witness the majority of these matches, to note the progress of the interesting battles, to see the team men fight wind and weather on the one hand and their opponents as well. The whole series has been of remarkable value in making the rifle of to-day so vastly superior to the small arm of a dozen years ago.

DEATH OF CAPT. H. C. CHESTER .- On Saturday last Captain Herbert C. Chester, of the U. S. Fish Commission, died at his home in Noank, Conn., of consumption contracted in, the Arctic regions. Originally captain of a whaleship and a man of giant frame and hardy constitution, he was one of the ill-fated Polaris expedition, and after the burial of Captain Hall and the loss of the ship, built the raft on which Lieutenant Buddington and his party escaped. At Noank, in 1872, he joined the forces of the Fish Commission, and for some years had charge of the dredging. For the past few years he has been superintendent of the hatchery station at Wood's Holl and has invented several forms of hatching apparatus, besides the "Chester folding anchor." We saw him last May, and while he said he was not well it was difficult to believe it. Captain Chester has rendered the Commission great service and his loss will be severely felt. Hc was about 52 years old and leaves a wife.

A SUPERIOR ARTICLE IN THE WAY OF CLUBS is manufactured in New London, Conn., for the Aleuts of the Pribylov Islands, who annually club to death their quota of 100,000 seals. The clubs are from five to six feet in length, three inches in diameter at the head, and the thickness of a man's forearm where grasped by the hands. They would be just the thing for Adirondack deer hounders, and Dr. Sam. B. Ward, Mr. John T. Denny or some other great philanthro-pist would win the gratitude of the oarsmen "guides" by providing them with a supply of these weapons against the arrival of city "sports" next season.

LETTERS FROM THE YELLOWSTONE NATIONAL PARK Speak of the heat and drouth there as being very bad, and state that it is very difficult to extinguish the forest fires. There has been very little rain anywhere in the northern Rocky Moun-tain region this year and the snows last winter were very light, so that there is everywhere a scarcity of water. Owing to the failure of Congress to make a timely appropriation for the Park, the Government work there has stopped.

MR. J. H. BRAYFON, of Chicago, deserves sympathy. is an angler and had planned to spend his vacation fishing with friends. Instead of that, however, he found himself the other day among the twelve men selected to sit as jurors in the Anarchists' trial.

THE NEW JERSEY DOCTOR, who studied the sufferings of broken backed dogs, has been fined in a court of justice. The laws are not strict enough on these matters.

THIS IS A GOOD BEAR YEAR

The Sportsman Tourist.

Address all communications to the Forest and Stream Publishing Co.

TWO MONTHS AMONG THE CREES.-II A PRIL was now nearly half gone and the fur season was drawing to a close, so I decided on letting Pierre re-turn to headquarters while I remained to close up the spring's

turn to headquarters while I remained to close up the spring's trade. A day or two after his departure I noticed there was considerable excitement in the Indian camps, and going over found them busily engaged in constructing a large oval inclosure of poles and pine brush, while at one end was a raised platform. I learned that a large party of heathen Saulteaux were to pay them a visit the next day to join in their usual conjuring and medicine practices, which are held yearly. Never having seen anything of the kind, I was quite pleased when my Indian grandfather asked me to attend the feast which was to open the ceremonies. The next evening at about 7 an Indian boy was sent over for me, and going over I found the long tent filled with Indians, men, squaws and children, women on one side and men on the other, while on the raised dais at the north end was laid out the feast, beavers and geese roasted whole, quantities of moose and bear meat, ducks, small game and bladders full of bear and moose fat. Taking a seat by my grandfather cross-legged on the ground like the rest, I waited events.

dozed off to sleep, waking with a great start about 2 P. M. Imagining a gun had gone off close to me, quite forgetting my situation, I swung my legs over the stage to find them knee-deep in water. It seems an old beaver had been swim-ing about close to my camp and smelling me struck the water with his tail in diving, making a great racket. I started off at sunrise and paddled all day, not finding another dry spot. Glad was I to see the broad Saskatchewan into which the stream I came down emptied about a mile from the trading post, which I soon reached, the current being very swift.

from the training post, which I soon reached, the current being very swift. My chief was pleased to see me back, especially as I had made a good and profitable spring trade, which is the *ne plus ullra* to a fur trader, and we were soon deep in sorting and packing our winter's collection, 80,000 muskrats being one of the items, with a large quantity of fine fur. Rex.

THE MUSKOKA COUNTRY.

pleasure-seekers, who are content to keep in sight of the hotels and summer boarding places located along the princi-pal lines of travel. Some eight miles east of Parry's Sound (one of the semi-

form dimly seen in the dull whiteness of the early winter morning, enlivens the dead landscape as he monses in the orchard or pasture or meadow, where the tangle of aftermath harbors mice under its blanket of snow, or when in the white glare of day he takes with light leaps the fence-side snow drifts, or picks his careful footsteps over the treacher-ous crust that breaks beneath his h-avier pursuer, the hound. In this land it is good to be smart, and no one who has seen Reynard's face while he studies tricks and hunts for scentless footing when the hounds are bellowing on his trail, can doubt his possession of this American virtue. It shines from his eyes, radiates from his whiskers, the cock of his ears in-dicates it, and the turn of his nostrils shows that he is 'up to snuff'. But caught, what a sreaking, sorry varlet he is, as unlike Reynard free as the culprit who sits to add his portrait to the rogues' gallery is to the sharp rascal who was robbing a house the night before. Last, and since usefulness has become of so little worth, least, he is entitled to some consideration for the good he does; this, perhaps, not from any pious intention, but because it was appointed unto him to do. In the provisioning of bims.If and his family he makes way with, besides many other things not so well made way with, no end of pestifer-ous field nice, and I have ripped his paunch in October when it was ready to burst with grasshoppers, as many as would fill the erop of the biggest gobbler of the dame's flock thrice over.

otos field nice, and I have ripped hus paunch in October when it was ready to burst with grasshoppers, as many as would fill the crop of the biggest gobbler of the dame's flock thrice over. But one evil deed committed by fox or man cancels many a good one, and when Reynard departs from the path of rectitude and takes grasshoppers second-hand, after they have been ground in the turkey's mill, and gone to the mak-ing of gallinaceous flesh and fat, gobbles the gobbler, bolts the mill. hopper, stones, grist and all, all his well doing is forgotten, and he is nothing but a thieving, murdering fox. Aud it must be admitted against him by his best friends that at such times his bloodthirst gets the better of his few small virtues. Let him once get among a flock of turkeys, and he can never get enough of slaughter while one victim is left. The blood of the last memb r of the flock must be the sweet est, and he ravens like a wolf in the fold. Such deeds are his undoing, for if he would temper his trencher-valor with more discrction when these opportunities come in his way, hus enemies would be fewer and less vengeful. One lamb at a time usually suffices him, and old ganders will beat him off with savage blows of their wings, so that he zets but now and them a straggling wife or child of their family. But turkeys are his weakness, and when the dame goes to gather ner flock from the woodside field and finds it harried, two-thirds, perbaps, killed outright, and the remainder maimed or frightened out of their slender wike, her wrath and despair struggle for the first places in her heart and voice. Ven-geance is sworn against the spoiler, and woe be unto his house if in the following May the vixen's nursery be in the earth where pick and spade may prevail, and the farmer finds it. And even if their house be builded in the rocks, old and young are laid in wait for and unseasonably shot down. But if some fox hunter gets wind of the intended fail, he makes some disturbance about the threshold; the hint is taken, and the young

<text><text><text><text><text><text><text><text><text><text><text><text><text><text><text><text><text><text><text><text><text><text>

large among the turkeys of the neighborhood. Two or three of them were killed in a day or two before they had got their land legs on. but the others got to the woods, and got picked up the broken thread of wild life and strengthened it perbaps with some boldness spun in during their close ac-quaintance with mankind, so that there were none of their tribe in the county better outfitted for getting an honest living.

perbaps with some boldness spun in during their close ac-quainbance with mankind, so that there were none of their tribe in the county better outfitted for getting an honest living. The sorriest hunt I ever saw or took part in, and one that would almost disgrace. Newport was when a fox that had been in captivity since his early cub-hood, was turned out before four or five dogs in the first winter he had seen. He knew not what to make of seeing the men who had fed him and played with him, a minister among the lot. all at once turned enemies, cheering on the hounds that had been his familiars to worry him, and at first would not run, and afterward only in a dazed uncertain fashion, as if he knew no outdoor tricks of his kind, nor any of the runways of his foregoers and brethren. When his legs gave out and refused to carry him further, the hounds were so loth to lay hold of him that he was picked up and put in a bag before his body got much hurt. Yet his poor soul was so sorely wounded by the sudden and unaccountable persecution that he pined away, and his sordid owner knocked him in the head to save his life—and his pelt. Repard's human enemies have many devices for his tak-ing off. Poison is sometimes set for him with deadly effect, but this dangerous and unlawful practice is discountenanced by almost every one. Trapping in the old way, in a pre-pared bed of ashes or chaff, baited with toasted cheese and lard scraps for some days before setting the trap, which was first carefully smoked to disguise the scent of the iron, so it was said, was never destructive enough to work much harm to fox or fox hunter. The fox cares no more for the sect of iron than for that of wood or stone, which is evi-dent from the fact that he crosses a railroad track as uncon-cornedly as he does a fence or a rock. The odor that he is shyer of than any other in the newly made track of a man, and his nose is so keen that it will duet this hateful odor many days after a trap or bait has been handled. I should justly incur the displeasu

FOREST AND STREAM.

[JULY 22, 1886.

cut him down as he dodges among tree trunks, or flashes through the haze of brush, or flies at full speed aeross the open. Big as he is, and he is not as big as his fluffy coat makes him look, nor as big as a deer, which sometimes escapes unhit, it is no disgrace to miss him under these con-ditions. To see the dogs working out of an old trail, un-raveling foot by foot the tangled web of the foxes' morning mousing is an interesting sight, and seeing which for the hundredth time one can but marvel at the fine sense that tells the hound which way the cold seent tends. The butter following at leisure or now seated on the top rail of a fence, shares the growing excitement of the dogs as the subtle exhalation rises warmer to their nostrils and their mellow baying becomes more continuous and eager. Then when the fox is started and a hundred phantom voices from cliff and woodside join in the melodious uproar, the hunter's for the nearest runway. Then he waits, all ears and eyes, for the nearest runway. Then he waits, all ears and eyes, for the sound of Reynard's light footsteps scarcely stirring the fallen leaves, or his ruddy apparition suddenly growing out of the brown and gray of the autumn woods, or dun herbage of the frosted fields. If the wily rogue slips by un-seen or out of range, what a heart-inking ensues; and if a shot is made and missed, what humiliation of spirit. But if the pellets or bullet hit the flying mark and the fox falls, dyeing the earth redder than his tawny coat, who that loves for a happier moment? And yet in that moment one may ask himself by what right he has quenched such a vigorous fame of wild life and be unable to quite answer his own question. There seems to be in the best-tamed and law-abiding of markind a lurking love for outlaws. Who has not a place

question. There seems to be in the best-tamed and law-abiding of mankind a lurking love for outlaws. Who has not a place in his heart for bold "Robin Hood," and "Little John" and jolly "Friar Tuck," and does not wish them all alive again and under the good green wood. As for mc, though never a turkey comes to Thanksgiving again, nor fat goose to help us keep Christmas. I pray that the days of the red-coated outlaw of our New England woods and fields may be length-ened far beyond mine, and that the sound of his wild voice in the gloaming may not be to my children's children only an old man's tale. FERRISBURGH, VL.

ASSOCIATIONS OF MONTEREY.

WRITING of Monterey, California, Judge John Dean

W RITING of Monterey, California, Judge John Dean Caton, says: Formerly the antelope and deer were most abundant in the vicinity of Monterey. The antelope havelong since entirely deserted this region, though the deer still remain in consid-erable numbers. These are all of the California variety of the mule deer (*Cervus macrotis var. californiaus*) which I first discovered at Santa Barbara ten years ago, and described in "The Antelope and Deer of America." Later investiga-south of San Francisco, while north of that great bay not one occurs, but the ground is almost, if not entirely, occu-pied by the Columbia or true black-tailed deer (*Cervus col-umbianus*).

picd by the Columbia or true black-tailed deer (Cervis col-umbianus). As 1 look upon these mountain ranges and fertile plains I cannot help thinking of the time when, as Dr. Canfield tells us, the whole country, from the mountain to the sea, was literally covered with antelope, and when the deer were so plentiful that it was hardly sport to shoot them. This place has too a peculiar interest to me from the fact that it was here first discovered and recorded that our antelope is a genus by itself, differing from all other known quadrupeds in having a hollow yet a deciduous horn, thus being an in-termediate link between the hollow-horned and the solid-horned ruminant. This great discovery was here made by Dr. Canfield, who was the first, so far as is recorded, to domesticate this strange animal, and was thus enabled to make more careful observations of it than was possible of the wild animal. I feel like taking off my hat when con-scious that I am treading the ground where he trod. The Doctor has long since passed away, but the memory of the great discovercr will long be cherished by the naturalist.

great discovercr will long be cherished by the naturalist. BROOKVILLE (IND.) SOCIETY OF NATURAL HISTORY.— Bulletin No. 2 of the Brookville Society contains a List of the Fishes observed in the Vicinity of Brookville, by Barton W. Evermann; a List of the Birds observed in Franklin County, Indiana, by Amos W. Butler; a Preliminary List of Reptiles and Batrachians of Franklin County, by Edward Hughes; The Flora of Franklin County, by David R. Moore. Most of these lists are quite fully annotated and are of great interest. Of fishes, 35 species are noted; of birds, 235; of reptiles and batrachians, 40, and about 100 species of endogenous plants. About 25 species of fossil corals are cnumerated from the Silurian and from the Devonian drift. Franklin county is a region especially inter-esting to the ornithologist, for it includes in its fauna many species of the birds of both the North and the South, whose ranges here appear to overlap. The good work to be done by local natural history societies, whose members devote themselves to thoroughly investigating their own limited ter-ritory, can hardly be overestimated, and we wish that there were an energetic association of this kind in every county in the United States. the United States.

the United States. A LARGE LOBSTER.—Searching along the Winthrop shore, a few days ago, for whatever was to be found contraband in the lobster trade, Deputy Fish Commissioner, F. R. Shat-tuck, came upon what might be termed a stunner in the possession of Belcher brothers, who had just brought in from their traps something wonderful in crustacean life. It proved to be an example of the size a lobster can attain if left unmolested a long time. Unlike the average large lobster, it was symmetrical, so much so as to cause remark in that regard. It weighed 11⁴ pounds; length over all, 29⁴ inches; large claw, 11 inches; small claw 10³ inches. The question of the age of this sample of what lobsters might attain is an interesting one. Commissioner Shattuck, who is making the lobster a study, suggests that he may be twenty-five years old. The shell has been mounted, and will be on exhibition in Appleton & Litchfield's window for a few days.—Boston Transcript. EARLY OCCHRENCE OF THE GREAT WHITE EGRET AT

EARLY OCCURRENCE OF THE GREAT WHITE EGRET AT WASHINGTON, D. C.—An adult white egret (Ardea egreta) was seen by Mr. Otto Lugger, July 15, in a marsh near the mouth of the railroad tannel, about a mile from the Wash-ington Navy Yard. This record is remarkable for its earli-ness. The northward migration of the white egrets after the breeding season is too well-known to require comment here.—C. HART MERELAN.

BIRDS OF KANSAS.—Col. N. S. Goss has recently brought out a revised edition of his catalogue of the birds of Kansas. The eatalogue of 1883 embraced 320 species and races, of which 161 were known to breed within the State. The present revised list iacludes 335 species, of which 175 are known to breed within the State. The catalogue contains much interesting matter and has cvidently been compiled with great care. To his list of species of Kansas birds, Col. Goss has added the report of the A. O. U. Committee, ap-pointed to investigate "the eligibility or ineligibility of the European house sparrow," and also an appeal for protection for our birds. This appeal eonsists mainly of extracts from Bulletin No. 1, of the American Ornithologists' Union Com-mittee on the Protection of North American Birds, and in-cludes a notice of the AUDUBON SOCIETY and its purposes, an article on bird laws, and an appeal to the women of the country on behalf of the birds.

WHAT THE CROW EATS is a matter of financial interest about here. The favorite diet in early summer in other and warmer localities is not to be found to satisfy his thievish propensities, but a substitute for corn here is the potatoe fields, and the crow's propensity to search for the object of man's soil is rewarded by a generous repast when unmolested. Yesterday I surprised a family of six within thirty yards of my house, not after potatoe destroying insects, as I was in-clined to believe, but digging the row and cutting off the young tubers and eating them. This family has had sym-pathy enough growing in range of my 10-bore daily to feel its power to average misplaced confidence.—NED NORTON.

THE MARTEN, WE PRESUME.—Will some of the Canadian readers of FOREST AND STREAM be kind enough to tell me what animal it was that the early French explores called the sable? Was it the fisher, *M pennantii*, Erxl., or the marten, *M. americana*?—JOHN G. HENDERSON.

THE NEXT MAN'TO DIE is just as likely to be yourself as any of your neighbors, and unexpected death is continually happening. Take a combined life and accident policy in the Travelers, of Hartford, Conn. -Adv.

THE TRAJECTORY TEST.

THE full report of the FOREST AND STREAM'S trajectory test of hunt-ing rifles has been issued in pamphlet form, with the illustra-tions and the tabular summary, making in all 96 pages. For sale at this office, or sent post-paid. Price 50 cents.

this office, or sent post-paid. Price 50 cents. MONTANA WOLVES AND PANTHERS. M ontrana to present. During the year 1884, soon after the last buffalo disappeared across the Canadian border, and when the great herds of domestic cattle succeeded to the stamping grounds of the native bison, there was a remark-table increase in the number of gray wolves on the Montana rages. To be accurate, this species of wolf, together with bis cousin, the printe coyote, always did hang around the buffalo herds, ever watchful to pounce upon some super-anoated bull driven from the band by the younger ones, or to snap up some weak calf or unwise animal that chanced to stray too far from the main body. With the disappear-ance of the buffaloes from Montana, these scavengers of the prairic also disappeared, because, being left without sufficient food supply, they of course followed the wild herds as they retired to more remote pastures. In 1884 the great buffalo herds in the Canadian northwest became pretty well deci-mated, and so the wolves returned to their old hannts. Not being so particular as to object to beefsteak when buffalo hump was not to be had, they played sad havoc with the cattle herds that year. Cattlemen did not begin to pay much attention to the matter until last year, when it was found that it knocked considerable from their profits to support use himmenes swarms of these pests. Cattle, and especially young and weak calves, dropped during the winter time, have been the food upon which they subsisted. In 1884 the Territory offered a bounty for the scalps of destructive wild animals than did the Territory. Many cowboys entered into the scheme of poisoning wolves, which besides affording them plenty of sport and winter anusement, also yielded a handsome largess for the ear punching, after which the skins were sold. In this way a number of the cowboys more than doubled their summer's pay which they received for rounding up and herding cattle. Some of the counties also offered strychn MONTANA WOLVES AND PANTHERS.

skin, after which he is at intercy to solve an end can get. Mr. Wallace Taylor, of Choteau county, in a recent letter, reported a bad state of affairs in his section of the country, occasioned by the wolves devouring cattle and sheep. He says, "The animals are rapidly increasing and getting bolder every day. They even attack bulls and large cows, and in many instances get away with them. The stockmen are doing everything in their power to exterminate them by the liberal use of poison and the increase of bounty; but thus far the animals have not diminished, and the stockmen fear they will actually be obliged to leave that part of the Territory

<page-header><text><text>

offers one dollar on a coyotc, and two dollars on a wolf. This just doubles the territorial bounty on each animal killed or brought in. A young fellow named Martin, with not much on his hands except idle time, practiced a week at the business in Yellowstone county, and the result was nine wolf skins and twenty-six coyote skins. To sum up he got \$13 and \$26 for the coyotcs' ears, and \$9 and \$18 for those of the wolves; after which he sold the hides for an average of about \$1.50 each to a fur dealer in Billings. Total profit, \$118.50, and lots of fun; cost about \$5 for strychnine and time. Bait was had in one dead animal picked up on the range. So much for coyotes and prairie wolves. There is another dangerous animal in Montana, which is almost as destructive as the above two species, but which is a great deal more dangerous, and as much to be feared by human beings as by animals. I refer to what is commonly called in this country the mountain lion. These beasts should be styled more cor-rectly, pumas, catamounts, or American pathers. In this northwestern country they grow to an enormous size, and are just as fierce and bold, if not more so, than the same species found in Africa and other countries. Scores of ad-ventures could be related by Montanians who have met and conquered these mosters, but a few of them will suffice to style of neighbors we have in this yet new and undeveloped country. A ranchman living on the Yellowstone River, while com-

style of neighbors we have in this yet new and undeveloped country. A ranchman living on the Yellowstone River, while com-ing to Miles City during the late Christmas holidays, espied a herd of antelope near Sunday Creek and raised his rifle and fired at them. The bullet wounded an antelope, and the noise of the explosion started the herd on a dead run, the maimed animal also endeavoring to get away. The hunter started to secure his game, and had made but a few steps in that direction when he discovered that the wounded antelope was claimed in another direction. Two mammoth mountain lions had exhibited themselves, secured the ante-lope, and were marching away with it. To own the truth the hunter, or rather ranchman, was a little frightened, and preferred to let the thieves have the game rather than risk a fight with the two of them. Another gentleman living on the south side of the Yellowstones, related his experience with mountain lions, which are quite numerous on his range, about forty miles south of this fort. He says they will drag down a helfer or young steer and take off a quarter almost as neadly as a butcher would with his knifte, which they drag away and devour. When they are hungry again they attack another beef, and never return to a carcass they have left.

attack another beef, and never return to a carcass they have left. He recently came upon a bunch of five lions while out with a party of friends. He struck their trail just over the divide, between Powder River and Cottonwood Creck. After following it in the snow for some time he found where they had chased a deer, and from there they branched off in sev-cral directions, he taking the trail of the largest one, which led him down into one of the gulches. After mounting a large rock he looked over and discovered the beast he was after about thirty feet from where he was standing. Im-mediately upon seeing him the lion took a jump over a coulee about twenty feet deep and thirty feet wide, landing safely upon the other side, from whence he looked back in a very contemptuous manner at our friend. The latter raised his rifle and fired and at the report two other lions came in sight and walked toward a cave which was a short distance away. Taking them one at a time he gave them twelve rounds, at the end of which they had reached the cave and disappeared inside. He was then joined by the rest of the party, and upon arriving at the cave they found that the largest lion had rolled down, the others succeeding by numer-ous rolls and jumps in following the leader. Finding the outlet some eighty feet from the mouth they filled both en

THE SHORE BIRDS.

THE SHORE BIRDS. SALEM, Mass., July 19.—Peeps of both varieties (*minu-tilla* and *pusillus*) were seen in good numbers at Ipswich last week; also a fcw ringnecks (*A. semipalmata*), robin snipe (*M. grissus*), and scattering yellowlegs. Jack curlow (*N. hudsonicus*) are seen passing over. They seldom stop here. I heard the first upland (*T. bartramius*), last Saturday. Grass birds (*A. mamlata*) are also seen. Some varieties have been here for the last two weeks. Our season should open July 1, because some of the birds are either here then or soon will be, and July 15 is too late a date, for the simple reason that before this the southerly migration has begun and nature herself has thus opened the season. Let us hope to see next season more intelligence in this direction by those who frame as well as those who pass our game laws. I have omitted beetle head (*S. helvitica*), one chicken bird (*S. interpres*), and a still sandpiper (*M. himantopus*), as also seen. I have shot a good number of the above mentioned birds this season. X. Y. Z.

ATLANTICVILLE, Long Island, July 17.—A party of three shot from this place 60 large snipe on the 15th, of which 58 were dowitchers, 2 greenlegs, 2 creekers, 2 yellowlegs, large and 1 jack curlew. What most surprised me is the 58 dowitchers. I think it likely that there is not any record made where there have been so many of this kind of bird shot within three years. It looks as if the spring law had something to do with this flight of snipe. Even if it does stop Mr. R. B. Roosevelt from shooting until the 15th of July, Mr. Roosevelt says that there is no shooting in the month of June. Mr. R. is sadly mistaken, as we all are likely to be, yet I presume that Mr. R. will allow me to state that I have seen in the latter part of the first week, also the first part of the second week of June, flights of yelpers, dowitchers and robins with plover. This may not happen every spring or summer, whichever we might call it, yet it has happened and is likely to happen again. The law is just right; it suits me, so let it be. Let Mr. R. sit on his yacht, it will do him good even if he did see such a flight of snipe as is spoken of in his letter. AN OLD GUNNER.

HANDLE WITH CARE.

<text><text><text><text><text>

the men having got in advance of the other turned to look back for the bird just as the one in the rear saw it emerge from the cover, when he fired and at the instant heard the scream of his friend. I was some distance away, but I heard the voice and knew at once what it meant. We hastcued out of the bushes for the road below just in time to see one of our party leading another out to the road. All soon gath-ered around our injured companion and a more sorrowful party I never witnessed; hardy men as we all were, it is no discredit to say we cried like schoolboys. Kneeling on the ground beside our friend I opened the injured eye and was at once satisfied it was ruined, although the man himself thought not—be though the could discover a gleam of light when I opened it. He was a man of pluck, for while we were mourn-ing and weeping over his misfortune he said to us: "Boys, don't feel so bad about it; it is done and can't be helped; no-body is to blame for it." And then, as if to cheer us, he said: "A man can see a good deal in this world with one eye if he watches closely." The object of this article and the naming this painful incident is to impress upon sportsmen the need of the utmost care, caution and coolness while shooting in company with others. For those who blow into the muzzles of loaded guns or drag them toward themselves by the muzzle I have but little sympathy, but should be glad to prevent the anguish of their friends caused by such senseless accidents, and also avoid the shame brought upon sensible sportsmen by such heedless acts. I never allow the muzzle of my gun to point toward myself.

avoid the shame brought upon sensible sportsmen by such heedless acts. I never allow the muzzle of my gun to point toward myself or any one with whom I am hunting, and I will hunt with no one who does not observe the same precaution. I always make it a point to know where my companion is, and that he shall know where I am, while hunting in cover. I will not hunt with a careless man, or one who gets so excited as to lose his caution or judgment. I presume some young men in reading this are ready to exclaim, "Old fogy! We know how to handle a gun with-out any of your caution." I hope so; but if this sketch in-duces any one to become a little more careful, and thus prevent even one serious accident, I am sure the editor will not deem the valuable space it occupies entirely lost. A. CHICAGO, III.

FOXES AND FOXHOUNDS.

FOXES AND FOXHOUNDS. *Editor Forest and Stream:* The differences of "Hounding," of Virginia, and Mr. H. C. Newell can be reconciled upon the theory that each pos-sess dogs best adapted for his respective ways of hunting. It does not require very much logic to convince us that the foxhound with deep, loud and indifferent tongues that fol-lows the walking and trotting fox, whether it be over the granite ledge or more favorable ground, analyzing each step of reynard, can and will run longer than the sweeping dog. A good dog of either breed will run as long as the fox, and the length of time a fox can run depends upon whether he is permitted by the pack to set his own pace or not. While the ground run over necessarily makes a difference in the pace of the dogs and fox, yet I know from experience that there is a vast difference in dogs. My early hunting was with the gun in the mountains of western Pennsylvania, and while yet a boy I killed as high as twenty-three foxes in one winter. After moving to this place I joined a party on a fox hunt. We left our camp before day upon a very favor-able morning for running, and by daylight a red fox was jumped and in a very few minutes ran in plain view of our entire party. I saw the fox and the dogs at the same time, and I confess that kind of running was a surprise to me. I had a gun in my hands, yet nothing could have induced me to have shot that fox. In less than two hours the fox was sur to earth. The dogs were immediately taken to where another fox had been seen by some of the party, and in a few minutes he was up and going; and in less time than the first was holed, this one, after considerable labor, was dug out and killed in twenty-five minutes by the watch. The iol-

minutes he was up and going; and in less time than the first was holed, this one, after considerable labor, was dug out and killed.
In going to other woods a gray fox was started, eaught and killed in twenty-five minutes by the watch. The following day another red fox was caught and killed in a race of two hours and twenty minutes.
After this introduction the shotgun policy was vetoed and nothing said about Pennsylvania hounds running twenty-four and thirty-six hours after the same fox. There is also a difference in the running of the same pack of dogs, much depending upon a favorable scent. There is also a difference in the running of different foxes and of the same fox upon different days. Start an old red fox immediately after he has feasted, and I have known the dogs to earth or eatch one in a few minutes by crowding him from the jump. Men who have dogs they rely upon to kill, well know that with favorable scent there is no such a thing as dogsrunning over six or seven hours after the same fox; and in the majority of cases three hours will end the fox's career. The man who once runs with such dogs has no use for the gun. He would not use it if he had it. What he most needs is something to carry him across the fields, over the fences and ditches with safety to the "death," and I might add that the man stading behind a tree with gun in band anxiously watching alog, hoping that the fox may select it, from which he can watch the delighted twenty-four-hour dog snufting all the scent out of his tracks, while the fox is either killed, or like the Irishman "made to lave that," has no use for other than a slow dog, and the slower the better his chances of gratifying the—to him—exquisite pleasure of lugging home his gun upon one shoulder, while from the other hangs suspended the mutil-tated remains of the fox the tat. *Editor Forest and Stream*: I have heard complaints relating to the inconsistency

A. C. STECK. ORTUWA, Ia., July 14. MASSACHUSETTS GANE LAWS.—Editor Forest and Stream: I have heard more complaints relating to the inconsistency of our new game laws recently made by our Legislature than ever before; and when I say that the present game laws in this State are unjust and unreasonable I believe that I am speaking for a large majority of those who are most directly interested in them. We can now shoot woodcock from August 1, ruffed grouse from Oct. 1, quail from Oct. 15. The shooting of woodcock in August is of no account and ought to be abolished as it acts as a cover for those who would shoot chicken partridges before they ought to be shot; but after Sept. 10, there is no more harm done (if it were not for the present law) in shooting a partridge than there is in October, and in our strict covers of this State those who shoot by fair means do not make large bags of partridges in September. Why can't we have a law as follows: Partridge and woodcock laws off after Aug. 31 to Jan. 31; Quail law off after Oct. 14 te June 1? I believe that would be for the best interests of the game and at the same time be more con-genial to the majority of those most interested.—LAUREL (Boston).

A TOUGH BEAR.

A TOUCH BEAR. Editor Forest and Stream: It is well known that bears will stand a deal of killing. I will give you an instance. I overtook a large one running "right smart" with one of my heaviest traps fast on one fore-foot, clogged with a beech sapling weighing seventy-five pounds or more. I wished to stop him before he reached a muddy swamp, for which he was making, and gave him a shot on the jump. The bullet struck him in the head and laid him out, but he was soon up and came for me. On try-ing to reload, I found I had forgotten to take my cartridges. Bruin was most up to me, bui by dodging around trees I secured a hold of the end of the clog and threw my whole weight upon it till it caught beneath a root. The momentum swung him about against a sapling. This was my opportu-nity, and I lifted the clog and made a turn of the chain and the tree. He was jumping and striking savagely all the while. To go back to camp, five miles, for cartridges was not to be thought of, so he must be dispatched with a club. At every blow he roared, till the wood seemed like a menagerie of caged beasts at feeding time. The brush and had babe a puglist. I got completely winded after a while and sat down on a log to rest and wipe off the per-spiration, and after getting my second wind went for him a full swinging blow on his occiput and laid him down quiet; bu had become blind, and soon exposed his head so I got in a full swinging blow on his occiput and laid him down quiet; bu had become blind, and soon exposed his head so I got in a full swinging blow on his occiput and laid him down quiet; bu had become blind, and soon exposed his head so I got in a full swinging blow on his occiput and laid him down quiet; bu had become blind, and soon exposed his head so I got in a full swinging blow on his occiput and laid him down quiet; bu had become blind, and soon exposed his head so I got in a full swinging blow on his occiput and laid him down quiet; bu had become blind, and soon exposed his head so

AJAX. THE HOUNDS MUST Go.—Montreal, Can., July 15.— Editor Forest and Stream: Mr. Andrew Lyndecker, a guide of the Smith's Lake region and Beaver River, Adirondacks, is an intelligent man, and informs me that the guides in that section of the Adirondacks are bitterly opposed to deer hounding and have banded themselves together as a body to prevent dogs from being used in that region. That means "death to the hounds." They saw far more deer during this trip than it would have been possible to have seen had dogs been allowed to run there during the past year. Our sports-men repeat the cry, "Death to the hounds," and let it be re-echoed throughout the Adirondacks, and the population of long-eared dogs will rapidly decrease there and the deer will in proportion increase. Take up the cry, brothers.—STAN-STEAD.

NEW YORK.—Pearl River, Rockland County, June 14.— The FOREST AND STREAM'S note on the supervisors and the woodcock law has been copied into our county papers, and has had a good result; so far I have heard of no shooting. Quail prospects are better here this season than for a long time.—C.

FOREST AND STREAM.

lake or water course. A SNAKE, A LARK, A DOG, A MAN AND A STICK.—Bay-shore, L. I., July 16 — Editor Forest and Stream: As I was out yesterday, exercising a young dog, I flushed a young meadow lark, he could just fly nicely and alighted in a hcdge about twenty-five yards from me. I went straight toward the place and my dog came to a point. Looking ahcad of her I saw a black snake three and a half feet long, with the lark in his mouth. He had the bird by the head, and moved off four or five feet with it straggling in his mouth. I backed out of the hedge, cut a stick and went for him. I killed the snake and the lark flew and lighted in the grass. It could not have been more than a minute, or perhaps two, from the time I flushed the bird until the snake had him.—H. P. RosEMON. ROSEMON

OHIO GAME.—Wooster, O., July 18.—Woodcock shooting in this neighborhood has been splenoid. The largest bag of the season was made on the 5th by E. F. Stoddard of Dayton. Ruffed grouse are plentier than usual; quail plentier than for years past. I have located over a dozen large flocks of grouse for the opening Sept. 1, when the above gentleman and myself will try them.—JOHN BOLUS.

MICHIGAN BEARS.—Central Lake, Mich, June 30.—There are many bcars, that is, it seems like a good many, in this county just now. One swam across the Intermediate not fifty rods below this village the day before yesterday, and they are frequently seen on the roads. Some hunters, with a good bear dog or two, might "save" several, I think, but no one hunts them.—K.

MR. GRIFFIN SMITH. of Longmont, Colo., claims to have shot a mountain lion on the Little Thompson, which meas-ured nine feet from the end of its nose to the tip of its tail.

NEW YORK DEER LAW .-- The full text of the New York deer law will be given in our next issue.

MUZZLE VS. BREECH,

Idee Taw will be given in our next issue. **MUZZLE VS. BREECH. Editor Forest and Stream:**Your issue of July 1 contained an article from the pen of Mr. Napo-leon Merril, contrasting the difference between muzzle and breech-loading rifles at a shooting match atturkeys, where his "Old Betsy" rods," while four breechloaders-killed one tarkey at thirty-two rods and four (shooting at the beads) at nine rods. He claims from this, as well as from the record made last fall, that the muzzle and berry in a dynamic effective as a hunting rifle, and "that the public is getting tired of these as hunting rifle, and "that the public is getting tired of these as hunting rifle, and "that the public is getting tired of these as hunting rifle, and "that the public is getting tired of these as hunting rifle, and "that the public is getting tired of these as hunting rifle, and "that the public is getting tired of these as hunting rifle, and "that the public is getting tired of these as hunting rifle, and "that the public is getting tired of these as hunting rifle, and "that the public is getting tired of these as hunting rifle, and "that the public is getting tired of these as hunting rifle, and "that the public as a stream of the the shouse." The proof of the pudding is in the eating." Just so; and that is what is killing "Old Betsy" to -day. Is it possible that any anount of takk would convine a majority of our Adjorodack or Western hunters that the old single-barrel muzzle loader of ponderons weight, best with patent muzzle, bail starter, and all the parapherealia attending one of those turker killing old-timers is ever to supercede the breechloader of to-day for all kinds of runch-ind-ready hunting? A gun that is light in weight, with maga.
The great error of the order, and of so many different markes that the hunter can order one carrying a light, medfum or heavy charge of powder and lead, all combin to make a perfect weapons. No targetige unhas ever beeu in toruches to dill the bill of a coo

seeking, so we whistled to "Mickydoo," the boy in charge of the Tillie Covert, and were soon on board, ready in less than an bour to do justice to Mrs Eckert's good dinner at ber comfortable cottage, "The Radnor." As we stepped ashore, I thought of the poet's invocation to the sea, where dwell, as the wise, witty and winsome Heine says—

"Goldfish and pearls and brightest of sea shells.
"Goldfish and pearls and brightest of sea shells.
Which thou preservest in secret places,
There down below in crystal places.
Oh! how I pined afar in desert places.
Like to a withered flower *
Shut in japaneed box of the dry botanlst.
So lay my heart in my breast.
Odors here. murmurs here, breath soft with laughter,
Birds in the blue sky singing out clearly,
"Be thou greeted, thou infinite sea.'"

THE TROUT OF MONTEREY.

BY JOHN DEAN CATON, L.L.D.

<text><text><text><text><text>

POREST AND STREAM. abundance of the purest and coldest water, which was brought in large iron pipes from the headwaters of the Car-mel River in the mountain twenty five miles away. This water is cold, as you will see later on, and in great abund-ance, and the overflow makes a nice brook. A pipe is con-ducted into the pend, from which a four inch j-t is thrown np, I should jurge, at least forty feet when the water is turned on, and as the standpipe is below the surface of the water it has a pretty appearance. Ordinarily the overflow ran through the fish hatchery. When I first visited Monterey and spent nearly two months there in the spring of 1884. I found this fish hatchery in a very prosperous condition, and so again in the spring of 1885. The little lake seemed to be swarning with the young trout, but it was wisely determined not to turn loose the guests of the hotel upon the lake for aucher year, and of course all recogniz d the fact that to make any exception to this rule would be unwise. Only the California or rainbow trout were introduced into the lake for the reason Mr Dyson explained, that they grow more than twice as fast as the eastern brook trout and that they can endure more vicissitudes as well. When on my way over to the same destination last March I reveled in anticipation of trout fishing in this beautiful as ead I promised myself to do my share toward supplying the table of the Hotel del Monte with trout. I had hardly registered at the hotet when I inquired of Mr. Simmons, the number of the state the and the there were only cat-fish there! My heart and hopes fell to a very low point very prickly; I could not at the time even inquire the cause of this misfortune. So soon as I could I commenced the inquiry Mr byson was gone; the hatchery was closed; the fourtain was never seen flowing, the shores of the lake looked ne-gle ted and the beautiful drivery around its shores was alignidated and impassable. All interest in the beautiful little sheet of water, whic

all of the trout; and in proof of this I found a person who had shot a number of the divers; in the craws of one or two of the birds young trout were found. There are two or three species of these aquatic birds which settle in greet numbers upon the ponds along the coast, especially this one, twice a year, and remain for several weeks. This did not satisfy me. I pursued my inquiries in quarters which I thought must be absolutely reliable. From this source I learned that the lake was full of large catfish, which was true, and that the lake deaten up all of the trout! This information was so positive that it fairly staggered me, and I tried to get a speci-men of these ferocious and nimble catfish, but they refused to be taken. I was very anxious to see a catfish with its stomach full of speckled trout. At length I learned that Mr. Dyson was engaged stocking with fish a system of lakes near Castroville, Cal.; to him I addressed a letter containing many inquiries on the subject. I can do no better than to give his answer in full. While it satisfactorily explains the loss of the trout in the pond spoken of, it contains much valuable information about fishculture on the Pacific Coast. Esprissa Lake, Castroville, May 23, 1886. Hon. John Dean Caton, Hotel uel Monte. Dear Sin -Absence from home and your letter having been mislaid are the causes of your not receiving a reply before this, which I truet, you will pardon. First, as to the number of trout that were put in the lake at the Del Monte, I have only my recollection as my authority. When I took possession of the hatchery there I found some memoranda, seemingly of the uumber of uout put in the lake by Mr. Woodbury, who at that time attended to bus, if there were 75 per cent. of the eggs hatched, here were 13,000 trout put in the lake by Mr. Woodbury, who at that the error were as from Feh 7 to July. Shortly after I left f was told that the grant attention to the trout in the lake. I used to catch some every day and examine them, and I found them in excellent health

er in the lake to get foul by not leiting fresh water into the lake, i the fish, not having any shade from the sun, naturally sickened l died. o doubt the divers might have destroyed a number of these fish, the caffish do not eat the fish. They will destroy the spawn. My mion is that the "diver and caffish business" is a very small excuse yet through a large-sized hole. If the trout are all dead there, it ineglect in not keeping the water good. he insect l used to feed the yoing fry on was what is commonly by an as the water fleans. You can find all the above in-ect in the point is that the "diver yours. The second second

Hows, out I found that to get them due into the property much, The temperature of the water at the Del Monte varies very much. I at short notice; in the night it would be from 55° to 53° and at o'elock it would run up to 65° at times. This I avoided in a great easure by using from the main and tank, so bringing down to about ' during the day. This temperature is far too warm for the little llows, that is, for making a strong, healthy fish; but hecau-el por a good head of water so as to make them more and work, I think as the reason I was so successful in having such a good percentage 64° .

of fish. The trout that I placed in these lakes (near Castrovil'e), from what I bave seen of them, are doing nicely. I have not yet cast a line, but next month intend doing so. I see them jumping and they appear quite hvelv and strong. Hoping the above will answer your inquiries, i not I shall be pleased to give you any further information that I can, believe me, yours respectfully, J. H. Drsox.

If not is hall be pleased to give you any further information that 1 can, believe me, yours respectfully, J. H. Drsox. Of the trout streams in this vicinity which invite the angler to their shores, I may mention as the nearest the Carmel River, which rises in the coast range of mountains and emp-ties into the Pacific Ocean several miles from here, near the old Carmel Mission, now fast crumbling to ruins. It is a bold and rapid stream, and, like all of the other mountain torrents, of the purest cold water. Small salmon trout and the brook trout are both taken in this stream, the former much the most abundantly. Both rise to the fly well. The best season is from May to September, depending consider-ably on the rains. The fish are taken in the rapid water between the pools. The stream is not bordered by overhang-ing trees or tangled vines, which so often vex the angler

when fishing the most prolific trout streams, and is so shallow that it may be waded at an ordinary stage of water. Altogether it is the best stream on the coast which invites the angler's visit. South of this stream but one mile away is San Jose Creek, which affords good oport, but the fish are smaller if not less abundant. Ten miles further south is Garropatos Creek, which, however, cannot be reached without fatigue and dif-ficulty, but for this reason affords very fine sport to him whose perseverance enables him to reach it, because its deni-zens are so little disturbed. Still further south are several other very fine trout streams, which are so inaccessible that they are not much disturbed; but to him who erjoys the fatigue and perseverance which enables him to reach them as well as the sport after he gets there, these streams in the mountain fastnesses are the most inviting of all. The first of his outfit must be saddle and pack mul s and tents. What a charming prospect to the hardy and energetic sportsman who loves nature in its wildness, who can see beauty in the rocks and the forest, whose ear loves the music of the fall-ing waters, and who loves to repose in the quiet stillness of nature when all around him seems to sleep.

CAMPS OF THE KINGFISHERS. CARP LAKE, MICHIGAN.-XIX

<section-header><section-header><section-header><text><text><text><text>

talker, too, and had always some entertaining information for us whenever we had occasion to ride with him up or down the lake. One day when Muller and I got aboard for a ride to the village he spoke of the "oil well," of which we had heard every day since our coming, and as we steamed along down he told us the story of its boring and the tragic end of its former owner. Some sixteen or seventeen years ago, he said, a French nobleman of some means, Marquis Marchal Debe-loy, came into the neighborhood for a season of recreation, and was so well pieased with the surrounding country that he bought quite a tract of land on the east side of the lake, including the point above the Narrows (mentioned in a pre-vious number of these letters); and he at once conceived the idea of boring a well at the point to see if he could "strike oil." It was not a very oily looking locality, perhaps, to an oil man; but he had got it into his head that there was a vast pocket of the oleaginous fluid lying under Carp Lake, with millions in it, and he determined to bore for it. To this end he brought in, at great expense, suitable machinery, set it up, and went to work with a zeal that ought to have struck a fortune in a short time, but it didu't. For the first 540 feet the drill struck rock, and after laboring slowly and tediously through this to a depth of something over 200 feet more, one day it suddenly found nothing to work on and directly up through the pipe came a rush of fluid. When the stream came rushing out the workmen fled in dismay, but when their scare was over they came back to have a look at the fluid that looked so much like clear white oil; but a taste of it only proved it to be water, clear and cold as though just escaped from a vast ice house hidden in the bowels of the earth—and the dream of oil and millions was blown to the winds. Moreover, the water had a taste of sulphur that smacked of the infernal regions. Tinally, when the first keen edge of disappointment had worn off the drill was removed, the derrick taken

The Marquis had built himself a substantial house on the point only a few rods from the well, where he lived in good style, much beloved and respected by his neighbors for his goodness to the poor and his kindly and benevolent disposi-tion. But the venture had cost him his snug little fortune. Reverses came and he was forced to sell out his possessions for a song. After lingering for a time around the place that had made him penniless, vainly trying to stem the tide of ill fortune that had set against him, he moved to Chicago and went to work at any kind of labor he could get for means to support his family. After a time he drifted into a gilt-edged gin mill as a bartender (I tell the story as it was told me), and one day there came into the place two or three of his former friends from sunny France. They recognized him at once, him, a French Marquis, mixing the seductive cock-tail behind an American bar. Their cold surprise scened to cut deep into his sensitive nature, and feeling keenly the dis-grace of his position, with a sudden impulse he placed a pistol to his head, and before any one could interfere, sent a bullet through it and fell dead by his own hand. It after-ward appeared that his people in France were very wealthy, but having learned that he had married an American wife had stopped his remittances. By the laws of France his widow could not lay claim to a franc of his share of the estates, nor could list eldest son inherit his title. After his death his family, left to the cold charities of the world, drifted into obscurity, and for some years their old neighbors and friends at Provemont and along Carp Lake have entirely us tight of them. Weak is placed in us by the tale determined us so pay fi

drifted into obscurity, and for some years their old neighbors and friends at Provemont and along Carp Lake have entirely lost sight of them. Such in substance was the story of the oil well, and the interest aroused in us by the tale determined us so pay it a visit on our way back to camp. At the point as we went back we pulled the boat up on the some ten or twelve feet above the lake, but nothing was to be seen of the well. In front of us and a few rods from the water were the crumbling remains of an old cellar wall, the only reminder of the house the Marquis built, the house itself and the outbuildings having long since been destroyed by fire. From here back to the heavily wooded hills, an eighth of a mile perhaps, the view was unobstructed by tree or shrub or bush. On the left and along the curving shore of the little bay was a scattering growth of stunted cedars and bushes and up to the right a heavier growth of woods extending back to the hills, altogether a picture that was very pleasing to the eye. Malk of lees than a hundred yards toward the woods to the right as we had been directed, brought us to the well, the wonderful bore we had heard so much about. There it was in a little sag in the surrounding grouud, a clear white column of water not more than three feet high spouting up apparently out of the earth, as the pipe had been broken off a short distance below the surrounding grouud, a clear white column of water not more than three feet high spouting up apparently out of the earth, as the pipe had been broken off a short distance below the surrounding grouud, a clear white column of water not more than three feet high spouting up apparently out of the earth, as the pipe had been broken off a short distance below the surround ing sourd so forty feet the pressure had grown weaker till the water had gone down to the height we found, but for several years past it has maintained this even pressure with no sign of going low er or giving out. Our philosopher said some one told him there was a store wedged

FOREST AND STREAM.
us in the face and there is no dodging it. We make up our minds right there that life is too short, that work is a burden and a calamity to be deplored, and go to packing up odds and ends that come first to hand, which are sure to get into the wrong place, and then we stop and rest awhile and study it all over, and wonder where the next camp-fire will be kindled, and then we undo all the first work and begin over again with a little more heart in it, for we see at last that it has to be done and done well.
With what bright visions and anticipations of rest and recreation and sport do we make a camp; how reluctant and cheerless the breaking up. A good deal of packing talk was indulged in that evening, but little was actually done. A few things were folded up, the store tent taken down and put where it would be out of the dex, one of the stores "unlimbered," and we went to bed feeling that a start had been made toward breaking up the pleasant camp.
A daybreak I crawled softly out of the tent, leaving Jim and Muller peacefully snoring, and without disturbing any of the others, took a boat, the old rod and a bucket of frogs, and pulled quietly acress the lake and down to the little bey where I had done the first early morning fishing, a mile and a half below, where I knew it was good to be while the mists were yed on the water, for some bass were there and I wanted a farewell solitary "fish," alone and undisturbed, for the afternoon was to begin the real work of packing up.
With due respect to the gregarious clement of the brotherhood, I have a notion that to enjoy to the full the contempation but his rod, no one to disturb his meditations, none to bother him with needless suggestions, none to feel a twinge of envy at his triumphs or dole out scanty sympathy at his defeats. The angler and his ford are always the beest of the store, and on dissensions mar their companionship.
By the time the sum was half an hour high I was off the point near the bay with four large-mouthed bass and fire

that I would not have exchanged him for a score of the other variety, and a boat load of longsnouts thrown in. The small-month is king, and I stand up for him to the last. Along the rushes for a couple of hundred yards and back I took six more big mouths and lost a small-mouth at the last that took a turn arouad an old sunken log standing on end just below the top of the water, and he broke away with the look, gimp and a yard or more of line. The performance took place in plain sight, as the boat was within a few feet of the log when he dashed around it, too close in fact to hold him away from it, else the mishap might not have occurred. It would be a waste of words to try to tell the glories of that brief fight and how big that bass was, and it is not necessary to speak further of the log, for it would require an intimate knowledge of several languages to do it proper justice. With a simple but vehement "Great Scott!" I wilted down on the seat of the boat, tied on another hook, and headed up lake toward camp, for the calamity had given me a backset that it would take days to get over, and I was ready to go back and assist the others in the preparations to break up and go home. At the point near the old log road another bass fell a vicitm to the wiles of the seductive speekled frog and I pulled across to camp with twenty fish, having taken three more longsnouts coming up. The summer's work of the faithful old rod was over and it was to be laid away, to do no more trusty battle against the bronze-backed warriors of the northern waters for another year. Write it down, yc younger fry of the rising generation of anglers, that an honest rod is a priceless friend, whether trimmed with luster-less brass, or resplendent in burnished silver. None of the others had been out to wet and now the rest of the day was to be devoted to packing up every-thing not needed for the night and an early breakfast. After lingering around the camp-frie in the evening till late bed time, listening to the last of the series of open-sir c

wited over an hour before she hove in sight, which served as a reminder of Billy G's experience in calching a train one morning when he started to go a short distance from the city for a day's fishinz. As he neared one end of the depothe saw the train pulling out at the other, and he just "humped himself" on a dead run till he overtook it, panting and puff-ing likes wind-broken hores, and utterly spect. Slamming his lunch basket, minnow bucket and rod up on the rear plattorm, he scrambled after them, and sat down on the top step all out of breath, but feeling mighty good that the laugh was now on lis side instead of the score or more of hangers-on who had cheered him in his race. In telling it, he said: "After 1 got on the platform the train didn't go more than difty feet till it stopped, and then the cussed thing switched off on another track and backed right straight into the depot, and didn't start for a plumb half an hour." When the Curamings had made fast to the pier all went at once on board, except old Ben, who staid behind to super-lined the landing of the buggng and "her some fun" with the knot of village idlers standing around "sizing up" the party. As the boatmen took hold of Jun's big box to slide id down the gang plank, Ben said in bis deliberate, selean way, "Look out boys, con't drop that overboard, fur it con-tains the trapeze fixin's an' tight ropes on which Manacelle Hyperboler Jones over there [pointing to one of the gifs standing on the upper deck] does her astonishin' double-geared auc't urnin five got Signor Jamee Mackerel's wing "has thy in masheen in it an' his shoes that he walks on the wat which tells, the fore, with sole that which at then "that each of the range of the right or the sole on the "that with "whet they getform in, an' if we'd lose that that a size a bushed of freeze on the range of the general was on who he got aboard and turned with a wave of his hand and "Good-bye folks," and then on 'Signor James Mackerel's who loked like the roustabout of the "show," "Did ye fee

CINCINNATI, O., July 15, 2 o'clock A. M.

THE "SPEY" AND "SWITCH" CASTS.

THE "SPEY" AND "SWITCH" CASTS. A Tike recent angling tournament in England the judges John P. Traherne writes to the *Fishing Gazette* as follows: "I have much pleasure in acceding to a request that I should give my opinion as to whether the Spey cast should have been allowed at the switch competition at the Casting Tournament, held at Richmond on the 5th inst., and to which it appears an objection was raised by one of the com-petitors. In order that it may be perfectly understood on what grounds my opinion is based, I propose to give a short description of each, and also state the circumstances under which they are usually adopted in actual practice. "In the case of a switch the angler is supposed to be standing on the banks of a river with either rocks or trees, etc., in such close proximity to him, that to be able to fish is water he must necessarily adopt this method. In making a switch the line is not lifted out of the water in the first instance, as it is when casting in the ordinary fashion, in which case the result would probably be that the fue to the surface of the water by raising the point of the ine to the surface of the water by raising the point of he is standing, carrying the point of the rod behind him as far as such obstructions allow. Then, by a endden down cast of the rod, and then to drag it through the water in the direction he water in front of him, is propelled with that force suggested by the length required. During this process the fly has not been lifted out of the water until the very last inch of the

LIGHT RODS FOR SALT-WATER FISHING.

The FLUTTENING FLY.—*Editor Forest and Stream*: The formation in the inclosed report from an old number of ForkST AND STREAM, may be interesting to the gentlemen whose communications anent the patented "fluttering fly" have lately appeared in your columns. The extract I copy from a note by Mr. B. B. Redding, which I had pasted in a scrap book several years ago; it was taken from your issue of Oct. 13, 1881. Mr. Redding says: "The Indians of Kern River made use of an artificial fly for the capture of trout, and probably used it for ages before Europeans invented it without a barb, was made from the shin bone of a deer. On the leg of a California deer, corresponding to the chestnut or warts on a horse's leg, are also warts but covered with stiff long hairs of a darker color than those on the other parts of the animal. These warts and the hair growing on them have a strong and peculiar scent of the deer, which is not easily removed or washed away. A small bundle of these hairs is neatly fastened at one end around the shaft of the hook, the loose ends pointing to the eye of the hook. The fly was thrown in the water and kept as near the surface as possible by continuous short jerks. Every motion of the forom an alder and was struggling to reach the shore. This would resemble the motion of a caterpillar in the water, that had dropped from the alder, and was struggling to reach the shore. This was the other or four years ago, of Pat Worden, of Krider's, to tie for me some dies closely resembling the "abrignal" as described by Mr. Redding, two of which is a barbing and three orfour years ago, of Pat Worden, of Krider's, to tie for me some dies closely resembling the enclose year. I may add we did not use the stiff long hairs from the chestauts or warts of the California deer, as deer were not handy.—Exercise.

A HUMAN SALMON.—The Halifax *Mail* reports: A small invited company of ladies and gentlemen left the lumber yard wharf yesterday afternoon at 4 o'clock for McNab's Island to witness Lieut. Edmonds, of the Royal Artillery, peranythed company of radies and gentamen fert the function yard wharf yesterday afternoon at 4 o'clock for McNab's Island to witness Lieut. Edmonds, of the Royal Artillery, per-form an interesting swimming feat. Arriving at the govern-ment wharf, all landed, and in a few minutes the lieuleant, clad in a bathing suit, was ready to enter the water. The feat which he was about to try is very popular with swim-mers in England, and is simple yet difficult. It is called "playing the salmon," and is simply a trial of strength and endurance while in the water. A belt is placed around the swimmer's body, and to this is attached a salmon line. He then enters the water and endeavors to break away. The fisherman on this oceasion was Lieut Kent, of the Royal Engineers, who is a salmon fisher of much experience. Mr. Edmonds, when he had once got in the water, by vigorous strokes went out about one hundred yards. At this point he found that the fisherman evidently intended he should go no further. And here the swimmer performed such maneuvers as he thought were calculated to break the line. It was a strong one, however, and would not snap. After being in the water about ten minutes the belt to which the line was attached came off, thus freeing the swimmer. Mr. Edmonds came ashore and was quite fresh, notwithstanding his strug-gle. He expressed a desire to try again after five minutes rest, but the spectators were of opinion that he bad already had enough of that particular kind of ex-reise for one after-noon, and at their request he gave up a further trial. Mr. Edmonds certainly showed himself a powerful swimmer. In the water he appears thoroughly at home. He ean make very rapid progress swimming straightaway and dives like a duck. He was loudly cheered after coming ashore at the conclusion of his struggle with fishermau K-nt, and after bowing his acknowledgments he took a header off the wharf, much to the alarm of the ladies present. The party returned to the city before 6 o'clock, well pleased with the little sea trip an

LANDLOCKED SALMON IN ANONYMOUS POND, MAINE.— While it has always been known that large numbers of land-locked salmon deposited their eggs in the streams emptying into Long, Bear and Anonymons ponds, the upper lakes of the Sebago Lake system, the general belief has oeen that they only visited these upper waters during the spawning season, and that Sebago Lake was their sea, where they again con-gregated after having performed their family duties. The taking of an occasional "black spot" through the ice, when pickerel fishing in the winter, would not dispel the notion, it being argued that they were late visitors who would have soon returned. But the capture of a 6-pound landlocked in Long Pond, by Arthur Plinmer, of Bridgton, in May, 1885, did make it look as though they remained with us; and now more evidence has been added, for Mr. Wood, of Newark, N. J., while fishing for pickerel in Anonymous Pond, July 6, boated a 4<u>4</u>-pound salmon. Now that we are certain they remain with us, we trust more time will be devoted to ang-ling for them; they are a prize worthy of any man's rod and of far more credit to him as an angler than hundreds of fingerling trout from our depleted brooks.—BLACK SPOT.

ANGLING FOR BUFFALO FISH.—Boston, July 13.—Editor Forest and Stream: I hope during September to be in Dakota in the vicinity of a large pond or lake which is said to con-tain, in addition to pike, perch, bullheads, etc., quite a num-ber of buffalo fish, which grow to a large size. The natives, I am told, are not up to taking them with rod and bait. Judging from the plate and description given in "The Fish-ery Industries of the United States," of the red-mouthed buf-falo fish (*letiobus bubulas*), I should take them to be of the carp family, and consequently should suppose that some paste made with flour, with perhaps angle worms or maggots chopped up in it would be the proper bait. Also that ground baiting of a certain locality for some days would be an im-portant preparation for a day's fishing. I am told they run very large in size, and if any way of getting them to take hold of light tackle could be used, that the sport would be very good. If any of your Western experts could give me some points in this matter, they would very much oblige MIO-MAC.

HEDGE HOG POND.—Monson, Mc., July 15.—Among the numerous lakes and ponds in this vicinity none has such an abundance of spotted trout as Hedge Hog Pond, which is in Elliottsville plantation. It is about five miles on an old log-ging road beyond the primitive residence of the famous backwoodsman known as "Doctor Brown." The road from here to Brown's is a very good one for buckboards. It is about one mile around this pond, and the trout are so plenty that a fair bait or fly-fisherman can easily take from 75 to 100 of these in a day. They are from $\frac{1}{2}$ of a pound to 2 pounds in weight. The seenery from here to this place is grand, and a party of genuine anglers who desire to go on a fishing trip and sleep on fir and spruce boughs at night can-not find a more satisfactory place in Northern Maine than this. Two Monson guides, E. B. Hall and Orin J. Rice, have recently been there with some Boston parties and all pronounced it the best trout fishing that they had seen for many years.—J. F. S.

A WEST VIRGINIA RESORT.—Your correspondent "R. W. McL.," Chillicothe, O., will find Kanawha Falls, W. Va., the place to go with an invalid wife for recuperation. It has one good, plain hotel, or accommodations might be secured with one of the villagers. River fishing just below the falls is excellent, and I was told that good trouting could be had back in the mountain streams, which three years ago had hardly felt the angler's touch. The Falls are easily accessi-ble from Chillicothe via Chesapeake & Ohio Railroad. The climate is healthful and the scenery grand. Here you can spend the time in peace and quietness, and avoid the jams and fussiness of more popular resorts.—D. (New York).

WEAKFISH NEAR NEW YORK.—July 16.—I tried the weak-fish yesterday in Raritan Bay oyster flats, from half ebb until half flood tide. Caught forty-three, the largest from one and a half to three pounds during young flood. Crab bait. Weather threeatening with stray wind from S. S. E. Parties going to Tompkinsville, Staten Island, or Perth Amboy, can secure boats there.—BROOKLYNITE.

SARATOGA LAKE, July 12.—Editor Forest and Stream: Bass fishing has been poor here, so far. I have only caught one (big-mouth), about $2\frac{1}{2}$ pounds, but it came up like a water-soaked stick. I hear that a few good fish have been taken at the lower end of the lake; but the scining, jacking at night and such practices make fish scarce.—B. C.

ADIRONDACK TROUT.—Montreal,'July 15.—To-day Mr. E. S. Whitaker, of Watertown, N. Y., with guide and Adiron-dack skiff passed by this city, *en route* for the Thousand Islands. Mr. Whitaker went into eamp on Beaver River May 1, then made a trip through the Middle Adirondaek region to the headwaters of the Hudson, then down to Lake G-orge, through this lake to the Champlain, etc. Mr. Whit-aker says that he saw a couple of *S. fontinalis* that were caught by a Boston party in "Spring pond," of the Bog River chain, that weighed 5[‡] and 5[‡] pounds each.—STAN-STEAD. STEAD.

MATNE MAPS.—N. C. Brackett & Son, Phillips, Me., have just issued new maps of Franklin and Oxford counties, Me. The Oxford county map gives the Rangeley Lake region, showing the location of all the lakes, ponds and mountains, hole is and camps, and even the toteroads and carries. Those of Franklin county include the Dead River region and all the fishing crounds fishing grounds.

[Discussion following the paper on oyster culture published in our last issue.]

MR. BARTLETT-Can you tell us what indicates the ripe-ness of the oyster? MR. MATHER-The appearance of ripeness is a milkiness and swollen appearance of what you might call the body of the oyster, and when you press th you get a milk' substance; in fact, the whole oyster is distended a great deal as a ripe fish

MR. BARLETL-It is quite apparent theo? MR. BARLETL-It is quite apparent theo? MR. MATHER-Very apparent to a person who is at all familiar with it, as I have explained in this paper. MR. CLARK-I would like to ask Mr. Mather if any one has tried to make any computation of how much spawn there is in one female? MR. MATHER-It has been done. I cannot give you the figures now, but I think if I were home and had access to my library I could very easily give that to you. I have an idea that perhaps an oyster of ordinary size may have mine or ten millions of eggs, and that it would vary as it does in the case of fish.

library I could very easily give that to you. I have an idea that perhaps an oyster of ordinary size may have nine or ten millions of eggs, and that it would vary as it does in the case of fish.
Dr. HUDSON—The Chair would state in answer to that question that the estimates vary considerably, and many of them are made very much higher than what Mr. Mather has stated. It has been estimated in many cases as high as fifty millions. Mr. CLARK—Have you any idea of your own, Mr. Mather, what portion you impregnated?
Mr. MATHER—I have not, because to get at this it will be necessary to go over the whole mass with the microscope, and you would have very few in the field at a time. We made no effort to estimate the amount of any impregnation. We recognize the fact that this thing is in its infancy. Several gentlemen have experimented before I did, whose names I mention in the paper read, and from whom I obtained considerable knowledge before I attempted it. I don't know what percentage we did get. We were contended to just work along, the main thing being to get ripe oysters and hatch something, doing the best we can. There is no trouble in hatching them. Every year along our bays and harbors there is a greater' or less amount of spawn.
Mr. MATHER—The set has been found to be best, I understand, on the bottom?
Mr. MATHER—The set has been found to be best, I understand, on the bottom?
Mr. MATHER—Yes, sir; but where there are swift tideways there comes a time in the life of the little cyster when it wants to settle down to steady habits and quit this roving life, and whatever it takes hold of must be clean, and if falls down in the mud it is gone. You can easily see, gentlemen, that, in a state of nature, many millions of spawn must be sent out and but few are impregnated. When the female oyster gets ready, she opens her shells and lets her eggs o, and they must run their chance of a current from sonnewhere bringing them to the milt of some male oyster who has also just

MR. MATHER—I think so, and I think Prof. Rider thinks so also, and those means which he gives to catch the spat I think to be a better way of procedure than the process I have adopted. MR. BOOTH—I think perhaps it may be interesting to some of you gentlemen to give you one of my little experiences. The results I have just heard are very good, very nice indeed. It shows that oysters can be propagated, but it can be done so much more cheaply and in a more practical manner. Some four years ago I planted 12,000 bushels of shells that we had thrown away in the week, in the water in Delaware Bay, where there were no shells or oysters in the neighborhood. Last year we took up from those shells without planting any oysters on them a little over 40,000 bushels of as fine oysters as you ever saw in your life, and I think there are quite as many left on that ground. I say this to give you a little idea of how rapidly oysters will grow. If they would only plant, as Mr. Mather says, the proper shell or material at the proper time, that is all that is necessary. The time oysters spawn is usually in June or July, varying according to the warmness of the atmosphere and the condition of the water. Those are the months that they spawn, and at the time that the oysters are ripe throw over your old oyster shells and try and have no those oyster shells and you have no difficulty in getting more oysters than you can handle. Just take oyster shells and estater them and you will ind oysters enough to re-supply the whole territory. I have done that on the Delaware and also on the Baltimore, but in Chesapeake Bay we have no right to any grounds there, have no title and consequently no water. In the Connecticat waters this has been done for the lass ago there are millions of bushels. The enemy to the oyster in yers, so where there were no oysters a few years ago there are millions of bushels. The enemy to the oyster in yers, so where there were no upsters and also on the Baltimore, but in Chesapeake Bay we have no right to any grounds t

<text><text><text><text><text><text><text><text>

and then the star protudes one of its infigers into the shell and devours the stomach of the oyster. SALMON IN THE TOBIQUE.- Mr. Edward Jack, of Fred-eriston, N. B., writes to the *Globe* of that city: "In a late issue of the *Globe* an anonymous correspondent makes some re-marks with regard to the occurrence of California salmon in New Brunswick. In relation to this matter I may mention that some statements respecting their having been taken in the upper St. John appearing in one of the Boston newspapers and having met the eye of the United States Fish Commis-sioner, he wrote to me for information on the subject, giving me at the same time notable features by which I would be able to distinguish them from our ordinary salmon. It was late when the letter was received. Mr. W. Guion, of this city, to whom I went for information, notified me a few days after that Mr. Ben Waugh had caught one not far from Fredericton. I unfortunately failed to see it, however, and have heard of no other one having been taken since, although I have offered \$10 for a specimen to forward to the United States Fish Com-missioner. A change seems to have taken place lately in the Tobique salmon, it may be that those inforduced from the Restigouche may be taking the place of the St. John River fish. I have ascertained the following facts, which I now communicate, viz.: That at least 15 salmon were taken last summer with the fly in the Tobique by two persons, some-where within twenty miles of the mouth of the river, a cir-cumstance which is said to have never occurred before. The first salmon in the Tobique made their appearance there last year about the first of June; they were said to have differed from any that had been seen there at any time previously, being nothing more than large grilse. The com-non Tobique grilse usually runs from three to five pounds St. John Kiver salmon of the length of these large grilse, an informant said, would weigh fifteen pounds. The appearance pand size of the June r

Lefore." LOOK OUT FOR HIM -New York, July 16. -Editor Forest and Stream: There seems to be a party traveling through the Eastern States who presents letters of introduction from me, claiming in some instances to be chairman of the Fish and Game Committee of the Legislature, and on the strength of hese letters, which are torgeries, he applies for a loan of money, and has been successful in obtaming it in some in-stances. He called on Mr. F. A. Brackett, at Winchester, Mass., representing himself as Mr. T. Royal Roosevelt. After that he called on Mr. Hodge, the Commissioner of Fisheries of New Hampshire, and presented a letter purporting to be signed by me, introducing him as Mr. R. B. Roosevelt. 1 write this to you in order that you may, if you think proper, pub-lish it as a warning to all parties that this party is a fraud and a scoundrel, as I have given out no letters of introduction to any parties traveling on business of the Fish Commission.-E. G. BLACKFORD. any parties trav G. BLACKFORD.

A HIGH FISHWAY.—Inspector Rogers inform us that both shad and alewives have successfully passed through his fishways over the falls at Magaguadavic River at St. George, N. B. It will be remembered that he built his patent fishway buce last fall, and for the first time in the history of the world fish have been successfully passed over a fall of sixty-eight feet in height, and the most of it perpendicular.—Halifax Herald.

PARASITIC DISEASES OF DOGS .- IV.

<text>

<text><text><text><text><text><text><text><text><text>

gaious, and as many as thirty of these parasites have been found in a single follete of the dog. The mannifesting parasite of this species contines itself to the sebaceous follicles of the face, but the camine variety occupies any part of the dog's body.
By the presence of large numbers of this mite, anne-like pustules are formed; this is accompanied with shedding of the hair, and the infested dog is said to suffer from follicular mange. When the pustules are very numerous, great impairment of health and even death may result from the excessive irritation. The propagation of this parasite is quite simple; the eggs are thrown off along with sebaceous matter or with the discharge from the pustules, and adhering to the costs of other dogs, hatch, find their way into the skin follicles, and the symptoms of follicular mange appear.
As might be pre-eupposed from its pathological history, follicular mange is an actively contagious disease, but filtby kennels, bad food, and general neglect, certainly pre-dispose dogs to acquiring follicle mites.
The symptoms of this dis ase are highly characteristic, the follicles of the skin undergo inflammation and then ighboring skin becomes red and tumefied. The hair falls out and the exuation in the follicles becomes purelat, pustules resulting. The pustules soon break, discharge their cottents, and run character and crack open and bleed frequently. The disease extends, and the infortunate animal soon becomes a hideous object, exhahng a most offenside odor. The disease is accompanied by some itching, and often by severe pain. Nutrition is greatly disturbed if the disease is allowed to continue, and the health of the animal fails. The itching in this affection is much less sever than in sarcoptic mange, and the odor and peoplar appearance of the irruption are diagnostic. As absolute diagnost may be made by examining the contents of a diseased follicle under the microscope, when the *Demodex* will be found.
Folloular mange isentirely cura

the skin. We believe that in many stubborn cases great good can be done by injecting the most diseased follicles by means of a hypodermic syringe, with the half-ounce-to-the-pint solution of carbolic acid. Only a few drops of the solution should be used in each pustule. The application of the carbolized solution in water should be

kept up for some weeks after apparent cure, in order to destroy all Demodex eggs which may remain; and if the attack has been severe the dog will require tonic remedies and careful feeding for some weeks after the irruption subsides. In the prevention of this disease its highly contagious char-acter should be remembered, and a dog with follicular mange should always be isolated. As it is to some extent communi-cable to the human skin, some care must be used in cleansing the hands after handling diseased animals, though the symp-toms produced in man by the Demodex are but trilling; indeed, according to authorities, one individual in twenty among men harbors these parasites. R. W. S. PHILADELPHIA.

DEATH OF CHAMPION RUSH.

DEATH OF CHAMPION RUSH. We have received a letter from Mr. Orgill which we publi-h below, announcing the death of champion Rush. But few dogs are more widely known than Orgill's Rush. His first appearance in public was at Baltimore in January, 1877, where he won second in the puppy class his latter sister Rose win sing first. At the first show of the Westminster Kennel Club in May, the same year, he won first in the open class for dogs under fifty-five pounds. His first champion prize was won at Philadelphia, in 1879. In 1880 and 1881 he won the champion prize at New York. He also won many other prizes at more and the supplexed. He was used extensively in the stud and leaves behind him a large number of descendants, some of which have made their mark both in the field and on the bene. Following is Mr. Orgil's letter: "THE CEDARS. Bond's, Tenn, July 16, *-Editor Forest and Stream*: Our old pointer dog champion Rush died this morn-ing, aged 10 years and 3 months. He did not seem to have any disease, but passed quietly away without suffering the storement."

FOX-TERRIER SHOW.

FOX-TERRIER SHOW. THE American Fox-Terrier Club will give their first show at Newport, R. I., Sept. I and 2, Mr. F. Redmond, of London, Eng., a well-known authority on the breed, has con-sented to act as judge. The prize list is a liberal one, and the classification provides for all. The premium list is as follows: Champion dog (smooth), §25; bitch, the same. Open dogs, \$20, \$15, \$10 and \$5; bitches, the same. Pupples dogs, \$15, \$10 and \$5; oitches, the same. Wire-hair, open, dogs, \$15, \$10 and \$5; oitches, the same. Wire-hair, dogs or bitches over seven years of age, \$15 and \$10. Novice class, smooth or wire-hair, dogs or bitches, \$15, \$10 and \$5. Silver cups, value \$25, are offered for best dog or bitch, best dog, best bitch. hest wire-hair dog or bitch, best pair, dog and bitch; best exhibt, not less thau three. Mr. F. Redmond kindly offers a silver cup, value five guineas, for the best American bred dog or bitch under 12 months old. Entry blanks may be obtained of the secretary, Mr. Edw. Kelly, 45 Exchange place, New York. THE ENGLISH FIELD TRIALS -Newark N. J. July 12

the secretary, Mr. Edw. Kelly, 45 Exchange place, New York. THE ENGLISH FIELD TRIALS.—Newark, N. J., July 12. Editor Forest and Stream: I think you have been led into error about the Reynald stake of the English National field trials The Kennel Gazette record you quote is incomplete. The London Field's account is very different. It says, May I, page 549: "The judges now placed Mr. D. R. Scratton's Hero first in pointers; Mr. Heywood Lonsdale's Jovial tirst in setters, Hero also taking the honors awarded for the absolute best of both varieties in the stake. As to the second best dog therein, the setter Rose and pointer Lass of Bow ran off to see which would better grace that position. The latter went with all her old style, and made a fine point at the bottom of the first field, and was quickly backed. Somehow or other the worker of Rose made his dog raise the birds, which caused the spectators to believe she had gained the point, sto which Belle of Bow [sic] showed so much jealousy, by rushing in and standing them as if they were really hers, that the judges properly decided in favor of the setter." I think you should make the record complete in FOREST AND STREAM.—SYNTAX. [The above was in type for last week, but was inadvertently omitted. The Freld's report is as quoted and is undoubtedly correct.] correct.]

THE WAVERLY DOG SHOW.—A contract for five years has been signed by the New Jersey State Agricultural Society, Amos Clark, President, and the New Jersey Kennel (lub, C. J. Peshall, President, by which it is agreed that the Agricul-tural Society is to provide on the fair grounds at Waverly a suitable building and that the Kennel Club is to give annual dog shows in connection with the State fair. The Kennel Club to have full charge of the show.

THE ST. LOUIS PRIZES. -Boston, July 17. -Editor Forest and Stream: I received a check from St. Louis Club this A. M., July 17, for premiums won by me. -J. P. BARNARD, JR.

THE TRIAL OF DR. WATSON, of Jersey City, for cruelly tortuing dogs, was held last week; the doctor being con-victed and fined.

KENNEL MANAGEMENT.

LET No Notice Taken of Abonymous Correspondents. G. J. S., Bleck River Falls, Wis - I have a Gordon and Irish setter pup, born in January, 1856, that seems to be all right in every way except his yets. They are clear and bright, but the lower lids hang down and the white of the eye is more or less bloodshot all the time. The pup is remarkably large for his age, and in good condition. I thought at first be was going to have distemper, but he is apparently all right every other way. Can you tell me the probable cause and

give me a remedy? The eves appear to be redder after having been in water. Ans. Get a stick of blue stone (copper sulphate) and touch the lower lid lightly every morning, or have a solution of zinc sul-phate made of the strength of two grains to the ounce of water, and drop a few drops into the outer conner of the eye night and morning, allowing it to diffuse itself over the eyeball.

L. D. H., Bethel, Conn. – A setter has had a slight attack of distem-per; he has entirely recovered with exception of a severe twitching of face and jaws. Ans. Your dog suffers from chorea, a very com-mon sequel to distemper Give three drops of the following solution there times daily in the food: Of stryching sulphare, two grains; of water, one ounce. Mix. After three weeks stop this and give Fow-ler's solution of arsenic in four-drop doses in the food three times daily.

There times daily in the food: Of strychifts sulphate, two grains; of the test solution of arsenic in four-drop doses in the food three times of solution of arsenic in four-drop doses in the food three times.
S. H. H. Concerd. – A setter had the distemper in April, from which the thought be had recovered with the exception of us; eyes, in which the thought be had recovered with the exception of us; eyes, in which the thought be had recovered with the exception of us; eyes, in which the thought be had recovered with the exception of us; eyes, in which the thought be had recovered with the exception of us; eyes, in which the the the is a goal of the inside of foreless and on breast, they bare since spread and have exceeded by Stonehenge; this coat is very bad, the and the the affected parts in a solution of arsel and what few vegetables and scraps of meet are left from the bar falling out; ever easily. He is rather thin in the bar falling out; ever easily. The is rather thin and the the shapedite is not very cod; but the is in good spirits and strate and what few vegetables and scraps of meet are left from the bar of bar of the use some of your many faster. THE INTERNATIONAL MATCHES. A REVIEW OF TWELVE YEARS.

A REVIEW OF TWELVE YEARS. INTERNATIONAL rifle matches start with the Irlsh-American match of 1874. In the summer of the previous year the Irlsh team of small-bore marksmen had for the first time won the Elcho bield from the Scotch and English shooters. They were the cham-pions then of Great Britain, and Major A. Blennerhasset Leech, who in 1867 had founded the Irish Rifle Association, was so pleased over the doings of his compatriots, that he sent out a sweeping challenge across the ocean, hoping to extend the fame of the Irish team in this direction. His letter was published here in November, 1873, and the Amateur Rifle Club, a young organization, at once took up the chal-lenge, The club knew next to uching of long-range work, but with the hope rather than any expectation of victory, the conditions of the dailenge were agreed to by Col Geo. W. Wingate. The match took place on Sept. 26, 1874, at Creedmoor. It was a very bot day, and the foreigners suffered with the heat. The highest possible score per man teach range was 60, under the old system of marking. The score stood: score stood: AMERICAN TEAM-Col. G. W. Wingate, Captain. 800vds. 900yds. 10

There was a return match in 1875. The Irishmen wanted satis tetion and on their own soil. A team was called together, and or me 29, upon the historic Dollymount in Dublin harbor, the match is fought. A fine team had been sent over under Col. H. A. Gilder ever, and another victory followed for the Americans. It was no good shooting day, but the scores ran high, as follows, same scor

team aggregate. 351 009 040 205 271 236 The Canadians in 1868 were rewarded for their many repulses, suring a victory over an American team. The American team int up in very bad form, defeat was predicted and it came. Atch was fought on the Ainslee Wood Range, esar Hamilton, ie weather was so bad that the match was interrupted and nadian score was finished on the day following. The match ught on Aug. 16, 1882, and the score ran: CANADIAN TEAM.

JAMESTOWN, N. Y., July 17 At the regular shoot for club
medal yesterday, 200yds., off hand, Creedmoor target, the following
scores were made, wind strong from 10 o'clock:
Norton
Hazeltine
Burns

CREEDMOOR, July 17.—It was very hot at uring most of to day, but the shooting was tendance was the largest of the year, excep tries numbered 350 and the first cash prize Creeding asually good, that of July that of July 5. Total

13 J R byrd, 22d Reg. 20 23 43 gt G H Frazer, 47th Reg. 20 24 43 gt G H Frazer, 47th Reg. 23 20 43 gt R M Kaloch, 7th Reg. 19 23 42 ergt. Mahoney made a perfect score at 500yds. This has been but three times this year. Private J. T. Klein, of the 17th Sepa-e Company, who won the medal last year, scored a total of 47 to-7, but as he was the winner of last year, he was entitled to no ze. A peculiarity of the shooting this year is, that in the five thes that have been shot no marksman has won the first prize ce.

A CANADIAN MATCH.—Moncton, N. B., July 15.—The first inter-provincial rifle match, Nova Scotia and New Brunswick participat-ing, took place on the Moncton Rifle Range to-day. The shooting commenced about 11 and was concluded at 5. The conditions were favorable, the wind being almost a fishtail and hazing light. The score beats the best Wimbledon record, New Brunswick's total for the range being 701, or four more than the hizhest in the competition for the Kolapore Cup, while Nova Scotia's 633 was but four behind. The riflemen are delighted at the successful languration of the inter-provincial matches, and if the Nova Scotians are disappointed the New Brunswickers are surprised at the phenomenal success. The score sheets show the following; 200, 600 and 600yds., 7 shots, highest possible, 35 at each range: Nova Scutia.

THE AMERICAN Y. C. REGATTA AND CRUISE. O^N Thursday, Friday and Saturday of last week the yachts of the American Y. C., accompanied by the iron steamer Cygnus, made their third annual cruise through Long Island Sound, the first day heing given up to the main race over the chub course from Larch-mont to New London. The fleet was smaller than last year and the race less interesting, only 8 yachts entering and 2 more going the course.

course. The prizes offered were the 3 Emery Cups, 1 in each class of over 150ft L. W L., S5 to 150ft. and over 50 and under 85ft; slso the Com-modore's Cup, for best elap-ed time, and 1 under Mr. C. H. Haswell's formula. The entries and elements were: Boiler Pres-

Orly one prize will be given to any one yach', so that is will rake the Emery prize. The commodore's cup will go to Yosemite. Meteor dat poil go over the correct courses, so the prize in her class goes to Lagonda. Nereld won in her class, After the race the yachtsmen attended a clam take given by Mr. Ft. L. Osgood at his country place, after which a bop was given at the Pequot House. The review next morning was mitterfered with by a rain sform, but at 0:20 A. M. the flagship, with signals for review aloft, anchored off the Pequot House; while the flage the east shore, turned, and ran down between Laconda and the 'ygrus, each saluting as she passed the latter. The law passed on, and when all were by, Lagon'a lifted anchor and ran ahead to the first place. Before noon the rain ceased About 1:20 the flag treached Greenport and arrangements were at once made for the launch race for boats unter 50 t., the course, originally from New London to Greenport, being changed to one from opposite the Prospect house, around Big Lighthouse and hack, 50 unles. The prizes were the two Manning cups, presented by Mr. Thos. Manning, one for tundar boaters and one for other types, under the Isherwood allowance. Only two yachts started, lifting that fleenfetts bad turned the buoy the wrong way, but on the other side its is claimed that Surprise did not finis properity, so ther are was ordered to be resulted. Following thi was areae for small launches from Lagonda, Orienta and fulle, for a prize offered by the fleet croites y the same yach, now Instanda, and Sentinel. The envire race for the challenge cup, won Isat year by Rival, was raced for by the same yach, now Instanda, and Sentinel. Instanda winning. Aggrega followed between boats from Malentia, Lagonda, Nogya and Tillie. Atslanta first with Lagonda and Meteor, the cutter was made up for a purce of \$25, in which the gig of the Revenue cutter Dexter met those of Yosemite and Meteor, the cutter winning with Yosemite scend. In the evening there was an lumination of the fleet aud a

CRUISE OF THE COOT. xxv.

XXV. I make a show the forenoon when the Coot reached down from ber night's anchorage in Broad Creek to the North River light, and worked out against a light s utherly breeze. The narrow passage is marked by a midchanci buoy at each end, but I could find no traces of the inner one. Many of the beacons and marks in the Sound had been carried away by the heavy lee of the winter, the light at Roan-oke River heurg knocked off its legs, and all the stakes gone in Core S-und. Strange to say, the Lighthouse Service has been slow to replace the marks, con rary to its usual despatch in such matters Several vessels were lost in consequence. One schooner was spitted on the submerged iron socket of a stake in Core Sound and sank. The destination of the Coco was Elizabeth City, at the head of the

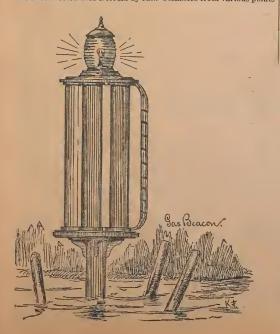

A "SOUNDER"-BEFORE THE WIND.

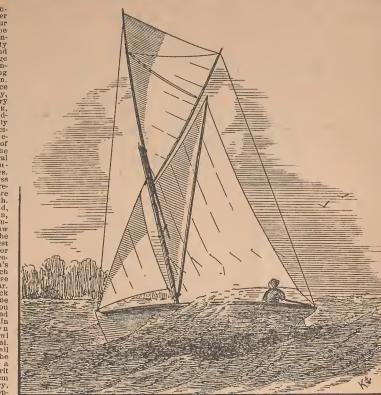

Pasquotank River, the first met with, steering west. From North diver the shore can be followen pretty close, passing half way be-ween it and Wade's Point Light, erec ed on a long sandspit jutting ucross the nouth of the Pasquotank, after which beacons properly painted will pilot you afely up the river, the city opening to view pon rounding Brickhouse Point. The wind had increased to the regulation mild gale from S.S.E., and the Coot went flying before it

with great foaming curlers in her wake. Off the town there is a deep hole of 40ft. The proper anchorage is in 10ft. around the last rcd oeacon, and abreast of the railroad and steamship wharf at the northern end of the town. There protection is also had against the sea, which constantly rolls in upon the city wharves. Though Elizabeth is not very impressive to one fresh from Norfolk, it is the largest and most important town on the Sound, and the last likely place at which to fill up with stores. All the surrourding country d aws upon Elizabeth. It has the only mari- erailway on the Sourd, and is connected with Norfolk by rail. Steamers from various points

in season, oysters without end. When a boatman gets hungry bere-abouts he rounds up, fills the sternsheet full of oysters in a few minutes and draws jib again.

K* Red Beacon.

HULL Y. C., IST CHAMPIONSHIP RACE — The morning of July 17 was so calm that all of the entries in the first championship race of the Hull Y. C. were not able to reach the s. art. About boon, how-ever, a good breeze came out from E.S.E., shifting later to W. and then dropping to a calm. Soon after a very severe squall struck the fileet, cap-lzing two yachts, but doing no serions harm. Twenty-four yachts started, the first at 3 P. M., in the five classes. When the equall struck Zetta was compelied to anchor and rule it out, after-ward giving un. Rocket and Crusader, two of the centerboards, were capsized, but all hands were rescued. Most of the yachts rode out the squall under bare poles. The tumes were: FIRST CLASS KEELS.

GENESTA AND IREX.

he takes from the vessel of which Eaglishmen are justly proud." **CAROLINA Y. C. RECATIAS.** This season has been the most exciting one ever sailed by the boats of this club. On June ?, the opening regata, twelve yachts reported ready for action, and a more beautiful race we have never had. After running six miles the race was between Vixen, Capt. Latimer, and Idler, Com. Jones. Each hoat had ber respective backers, and at the finisb Vixen led, giving Idler a good second. Next in was Ripple. The prizes, \$50 to the first boat, \$50 to second, Next in was Ripple. The prizes, \$50 to the first boat, \$50 to second, Next in was Ripple. The prizes, \$50 to the first boat, \$50 to second, Next in was Ripple. When the second has been were the dub was determined by the club. The city was deserted, and all who could horrow or beg a hoat were landed safely on the beach to witness this race. In the club house were 600 to be one, eager to witness each change in the position of the yachts. The judces, Capt. Michell, W. S. Culler Colfax, Mr. Richard Brad-Brad-Brad and the beach for miles was lined the fad-th was anchored followed by the Restess. Mr. Cowari, Cillian and Florence, Mr. Bow-den Soulie, Mr. Athinson; Rosa, Mr. Smith, Mist, Mr. Conoley; Rip-le, Mr. Giles; Vixen, Mr. Latimer; Idler, Com. Jones; Mascotte, Mr. Parsley. Wind hew from E. S. E. and with a close hault he boats first places, and we do not helieve ever before two hoats ran more evenly that they on the start, dispedent free the Mikes being sailed the Hard. The start is possible on the set art in the start in the start is possible on the start. The start has the far start for the return Vixen and Gler galawed the short acts he boats were compelled to make a short acts he are the dates was the of the return Vixen and the grade the farst places, and we do not helieve ever before two hoats ran more evenly that they do also the third. Ripple fourth, Gliference from the starting, and only hy sheer holdness did their position change. The hast mile of the race the boa

IREX AND MARJORIE.—The results of the races between these wo, now almost the sole representatives of the British racing fleet, nly go to show that if Marjorie had come out here one or two years go she would have had a far better chance against the existing outs which would then bave been matched against the existing racie. Franzy and others, than Genesta and Galtea have against uritan & Co. Besides she would have had Duncan in her, and we il know what he could do. Marjorie is a much less extreme boat han the 90-tonners, and for that reason would have had a far better how with our wider boats.

JERSEV CITY Y. C. 28TH ANNUAL REGATTA.—The Jersey City Y. C., almost the oldest in the United States, sailed its 28th re-gata on July 15, over the following courses: Class A.—From a line between judges' boat and Barthold's statue on Bedloe's Island. thence to and around buoy 5½ and return, keeping to eastward of huoys 11. 8. 15 and Oyster Island buoy and to westward of Fort Lafayette; going and returning keeping buoy 5½ on the port hand. Classes Band D—Starting from same place, thence to and around buoys 11 and 16 and return, keeping buoys on the port hand. Classes Band D—Starting from same place, thence to and around buoys 11 and 16 and return, keeping buoys on the port hand. Classes C and E-Starting from same place, to and around buoy 15 and re-turu, keeping buoy on port hand. Finish for all classes at same line as start. Allowance of time for classes A, B and D 2min. to the foot, other classes Hamin, to the foot; one-quarter of overhang lucluded in measurement. At 11:20 A. M, the signal for the start was given. The tide was nearly out and a light S. E. wind was moving, increas-ing in the afternoon. The times were: Class A-CABIN ShOORS.

in time with amateur sailors,—South Boston Enquirer. "THE BOAT SAILER'S MANUAL."—While no one can learn to sail a boat by staying ashore and reading treaties on the subject, there is yet a great deal of important information regarding hoats and their rigs which may be acquired by intelligent study. The ranks ofsthe yachtsmen are of late heing rapidly augmented by recruits from the boat sailers and caroemen, already a numerous class, while their places in the musquito fleet are being taken just as rapidly by novices. Kever before was boat sailing so popular as now, and with a greater variety and improved models of boats it is each year extending over new waters. To those young sailors who wisb to learn all that can be acquired from hooks, we recommend the valuable httle hand book thately compiled by Lieut. E. F. Qualtrough, U. S. N. author of the "Sailor's Handyhook." The 'Boat Sailer's Manual' contains in a very near and compact little volume, suitably bound in flexible leather, all the essential information which the novice requires. The of rudder, ballast and sails are clearly explained. Knots, bends and splices, with the varieus operations of the rigging aloft, are shown by diagrams. The question of the hest boat for each purposo is dealt with in a practical manner, and the characteristics of the different

types are discussed, a large number of boats being described and illustrated. The management of boats under sail is considered in a separate chapter, racing and its rules, as well as practical boat handling, being dealt with under this head. The cutter and sloop rigs are described and compared, and canoe sailing comes in for an extended notice. The final chapter contains in a compact form some useful hints on weather indications, cookery, hatning and restoring the dro wned and similar subjects. The book is published by Chas. Scribner's Sons, New York.

NEW YORK Y. C.-On July 15 a meeting of the N. Y. Y. held at Delmonico's. A resolution was passed, inviting Lieut to join the club cruiss and to enter the Goelet cup race. The j ing members were also elected: Morris K. Jessun, Frederick joy, J. C. Bergen, Henry Cranston, George H. Warren, Alf Weston, Phillip Titlughast, Lewis H. Livingston, Argust W. Cc M. Ballou, E. J. Greacen, Stanley Greacen, B. F. Gambrill and Browne.

M. Ballou, E. J. Greacen, Stanley Greacen, B. F. Gambrill and Robert Brownc.
NEW YORK Y. C. CRUISE. — The following orders for the coming cruise have been issued by Com. Gerry:
FLAGSHE ELECTAN, N. Y. Y. C., NEW YORK HARBOR, July 20, 1886, GENERAL ORDERS, No. I. The Commodore hereby assumes command of the squadron. Mr. Wullam Krebs is appointed Fleet Captain. — ELERANDE E. GENERAL, CORDERS, NO. 2. The vessels of the squadron will renders yous at New London of Pequet House, on Wednesday, Aug. 4. Captains will report aboard the flag-sbip at an hour which will be duly indicated by signal the sand cevening. During the cruise, theow and the game cock colors, with the accompanying challenge cups, will be aduly signal the squadron, and the holders will be subject to challenge at any time, on one day's notice. Special attention is called to the race for the cups presented by Captain Gorlet, which will take palace at Newport at a time to be determined on at the meeting of the captains on the 4th inst. Also to the fact that Rails V. M. Strans, Place Taptains, Way order of the Commodore, WiLLIAM KRES, Place Lather, Bud or and the component of the captains. The squadron the captain Gorlet, which will take palace at Newport at a time to be determined on at the meeting of the captains. The dub may corter of the Commodore, WiLLIAM KRES, Place Captain.

XACHTING NOTES.— Bedouin has received her new main boom Lawley's...,The East River Y. C. proposes soon to sail a regatta or novel plan. A prize will be given for the last hoat in, no owner sail his own boat. The yachts will be allotted to the different met bers by the regatta committee, and as acch man will sail not bis ov boat but a rival, he will do bis utmost to hring her in first.... Beet cutter, Mr. Augustus Hemmenway, has been leased by Mr. Banere Davis, and Captain Crocker's brother William will sail her.

Davis, and Captain Crocker's prother william will sail her. OPEN REGATTA ON THE SOUND.—On July 35, a large open re gatta will be held at Westport over a 10-mile triangular course, open to four classes of yachts, as follows: First to measure 55ft, eccon 30tt, third 55ft, and fourth 30ft. All boats in fourth class to be cat rigged. Prizes of \$25 will be awarded in each class. The measure ment will be from stem to rudderhead. A time allowance of 1½mit to the foot will be given. Mr. F. Burritt, of South Norwalk, ha charge of the entries.

charge of the entries. AMERICA.-The alterations in Gen. Butler's schooner are of pleted, and on Saturday she started on a trial trip, having owner on board. She has now an outside keel of lead, weight tons, with a single bowsprit in place of her old howsprit and boom, while her sails are entriely now. She sailed nearly to Ma head in company with Maylower, and then stood off shore for thornurb trial trip at see borough trial trip at sea

TRANS-ATLANTIC YACHTING.—The English yawl Xarifa arrived at Cowes on July 15. Coronet, schooner, Mr. R. T. Bush, of New York, arrived at Queenstown on July 18, after a passage of 17 days. She will visit Cowes and Havre, remaining abroad ahout 6 weeks.

MEDUSA.-Mr. Robert Center, former owner of the cutter Vinde has just purchased the cutter Medusa, built by Lawleys from a desh by J. Beavor Webb. She is now fitting out and will join the N. Y. C. cruise.

EASTERN Y. C. CRUISE. - On July 13 the fleet sailed from Rock-land at 9:15 A. M., reaching Bar Harhor about 4 P. M. A meeting was held on hoard Fortuna next morning, at which the fleet was dis-banded.

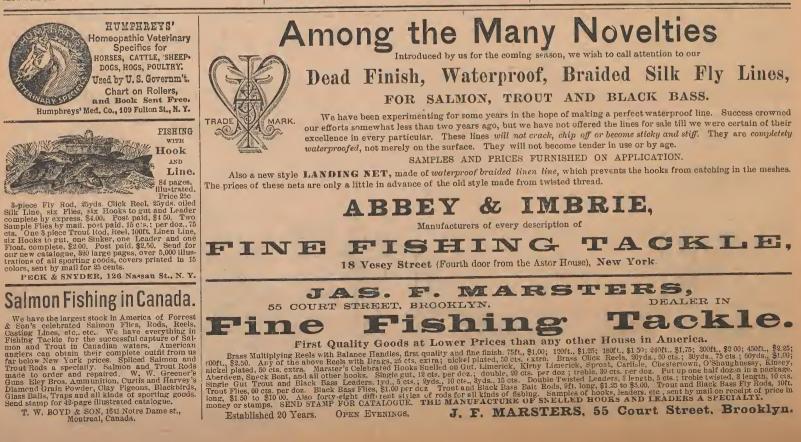

ALLEN'S bow-facing cars can be attached to any boat in 5 minutes. Try them. Little catalogue free. Fred A. Allen, Monmouth, III.-Adv.

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the similest way possible. Everything is made intelligible for beginners: and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canee Building," Price, postpaid, \$1.00. NEW YORK: FOREST AND STREAM PUBLISHING CO. 39 Park Row. LONDON: DAVIES & CO. 1 finch Lane. Combili.
