PROFILE BUST OF A YOUNG WOMAN

After Leonardo da Vinci

"Of the prints attributed to Leonardo, the fascinating *Profile Bust of a Young Woman* stands out from the rest for the sensitive quality of its outline, but even here I would be more ready to see the hand of an engraver like Zoan Andrea."

Arthur M. Hind.

FREDERICK KEPPEL
IN MEMORY OF A FRIENDSHIP OF TWENTY
YEARS THIS BOOK IS DEDICATED BY
THE EDITOR

PREFACE

“GOOD wine needs no bush,” and these essays need no commendatory word from the Editor. The plan of this book is a simple one. Certain lovers of prints have been asked to write on the engravers, etchers, or periods which chiefly interest them and upon which they are best qualified to speak ; and, furthermore, to treat their special subjects in their own way. So far as subject matter is concerned, the essays are grouped approximately in chronological order, and the reader may range from Italian engravers before the time of Raphael and woodcuts by Albrecht Dürer to contemporary etchings by Zorn, Lepère, and Herman A. Webster. Throughout the essays one dominant note will be found—a sincere love of Prints and an interest in their Makers.

FITZROY CARRINGTON.

DÜRER'S WOODCUTS

BY CAMPBELL DODGSON, M.A.

Keeper of Prints and Drawings in the British Museum
Author of the Catalogue of German and Flemish Woodcuts in the British
Museum and Honorary Secretary of the Dürer Society

THE first decade of the twentieth century lies not very far behind us, but perhaps it is not too soon to assert that one of its marked features, in the retrospect of a print-lover, is a great revival or extension of interest in every form of engraving among cultivated people who are not specialists. Increased attention has been paid, among other things, to the German woodcuts of the fifteenth and sixteenth centuries, which used to be rather despised by the old-fashioned nineteenth-century collector, with a few enlightened exceptions, as rough and ugly old things which were curious as specimens of antiquity or instructive as illustrations of the life and religion of the generations that produced them, but were not to be taken very seriously as works of art. That estimate is being revised. A generation no longer blinded to the merits of primitive art by the worship of Raphael and the antique is ever tapping fresh sources of delight and enriching itself by the perception of beauty where its fathers saw nought but the grotesque and quaint. It is not surprising, indeed, that German art has made slower progress than Italian on the road to popularity. Even

the primitives, on the south side of the Alps, shared in the winning grace and suavity of the old Mediterranean culture, while their brethren in the North, the French excepted, were indisputably more rugged and barbarous in draughtsmanship and painting, and few of their engravers, except Schongauer, can vie with the Florentines if their achievements are judged by the test of formal beauty. But it is wonderful how, in the North, now and again, art could suddenly blossom and ripen under the creative impulse of an innovator, whose successors, rather than the pioneer himself, lay themselves open to the charge of angularity and uncouthness. The perfection of the very earliest printed books is a commonplace. Less generally known, perhaps, is the great beauty to which the earliest of all the German engravers known to us at all as a personality, though not by name, was capable of attaining. The "Master of the Playing-Cards," who was at work about 1430-40, produced work of extraordinary charm, not only in some of the figures, animals and flowers of the playing-cards themselves, but especially in the large engraving of the Virgin Mary with the human-headed serpent, or Lilith, beneath her feet, which is one of the most splendid and mature creations of the fifteenth century. Then, again, the early book illustrators of Augsburg and Ulm, in the seventies, when the use of blocks for such a purpose had only recently come in, produced woodcuts that were never surpassed by any successors in their simple and direct vivacity and strength, with the utmost economy of line. But the real beauty of some of the much earlier single woodcuts, illustrating, chiefly, the legends of Our Lady and the Saints, has been

much less generally appreciated. They are very rare, and most of them repose, in a seclusion seldom disturbed, in their boxes in the great European print-rooms or even in monastic libraries. They are only beginning to be reproduced, and they are rarely exhibited. But such an exhibition of the earliest German woodcuts as was held at Berlin in the summer of 1908 was truly a revelation. The soft and rounded features, the flowing lines of the drapery, in the prints of the generation before sharp, broken folds were introduced under the influence of the Netherlands, have something of the charm of Far Eastern art, and the gay coloring with which most of the prints were finished has often a delightfully decorative effect when they are framed and hung at a proper distance from the eye. Such praise is due, of course, only to some of the choicer examples; there are plenty of fifteenth-century woodcuts in which the line is merely clumsy and the coloring merely gaudy, but these are more often products of the last quarter of the century than of its beginning or middle. It would not be true to say that the advance of time brought with it progress and perfection in the woodcutter's art; on the contrary, the first vital impulse spent itself all too soon, and gave way to thoughtless and unintelligent imitation.

What was the state of things when Dürer appeared upon the scene? He did so long before the close of the fifteenth century, for his first authenticated woodcut is an illustration to St. Jerome's Epistles, printed at Basle in 1492. Whether he or an unknown artist is responsible for a large number of other illustrations produced at Basle about 1493-95, is a question about

which no consensus of opinion has been formed, and this is not the place to discuss it. All the woodcuts that the world knows and esteems as Dürer's were produced at Nuremberg after his return from the first Venetian journey (1495). Let us see, for a moment, how they stand comparison with what had gone before them. The older woodcuts are nearly all anonymous, and if they bear any signature, it is that of a woodcutter (Formschneider or Briefmaler) who was a craftsman allied to the joiner, rather than the painter. Just before Dürer's time the painter begins to make his appearance on the scene as a designer of woodcuts. There are a few isolated cases in which the almost universal rule of anonymity is broken, and we learn from the preface to a book the name of the artist who designed the illustrations. Breydenbach's "Travels to the Holy Land" (Mainz, 1486) was illustrated by woodcuts after Erhard Reuwich, or Rewich, a native of Utrecht, who had accompanied the author on his journey, and the immense number of woodcuts in the "Nuremberg Chronicle" by Hartmann Schedel (1493) were the work of the painters Wohlgemuth and Pleydenwurff; to whom the much finer illustrations of the "Schatzbehalter" (1491) may also safely be attributed. It is now almost universally believed that the "Master of the Hausbuch," one of Dürer's most gifted predecessors in the art of engraving on copper, was also a prolific illustrator, the principal work assigned to him being the numerous illustrations in the "Spiegel der menschlichen Behaltnis" printed by Peter Drach at Speyer about 1478-80. There are speculations, more or less ill-founded, about the illustrators of a few other woodcut books of the fifteenth century, but I be-

much less generally appreciated. They are very rare, and most of them repose, in a seclusion seldom disturbed, in their boxes in the great European print-rooms or even in monastic libraries. They are only beginning to be reproduced, and they are rarely exhibited. But such an exhibition of the earliest German woodcuts as was held at Berlin in the summer of 1908 was truly a revelation. The soft and rounded features, the flowing lines of the drapery, in the prints of the generation before sharp, broken folds were introduced under the influence of the Netherlands, have something of the charm of Far Eastern art, and the gay coloring with which most of the prints were finished has often a delightfully decorative effect when they are framed and hung at a proper distance from the eye. Such praise is due, of course, only to some of the choicer examples; there are plenty of fifteenth-century woodcuts in which the line is merely clumsy and the coloring merely gaudy, but these are more often products of the last quarter of the century than of its beginning or middle. It would not be true to say that the advance of time brought with it progress and perfection in the woodcutter's art; on the contrary, the first vital impulse spent itself all too soon, and gave way to thoughtless and unintelligent imitation.

What was the state of things when Dürer appeared upon the scene? He did so long before the close of the fifteenth century, for his first authenticated woodcut is an illustration to St. Jerome's Epistles, printed at Basle in 1492. Whether he or an unknown artist is responsible for a large number of other illustrations produced at Basle about 1493-95, is a question about

of refinement on the technical side becomes noticeable, culminating in that extraordinary performance, the *Holy Trinity* woodcut of 1511. But even in the large fifteenth-century blocks, the "Apocalypse," the earlier portion of the "Great Passion" and the contemporary single subjects, much cross-hatching is used and the space is filled with detail to an extent hitherto unknown. Without ever losing sight of the general decorative effect, the telling pattern of black and white, Dürer put in a vast amount of interesting little things, with the conscientiousness and care that characterized everything that he did, and every detail of the leaves of a thistle or fern, or of the elaborate ornament, birds and flowers and foliage and rams' heads, on the base of a Gothic candlestick, had to be reproduced so that the crisp clearness of the original pen-drawing lost nothing of its precision. The result was a work so perfectly complete in black and white, as it stood, that nobody ever thought of coloring it, and that in itself was a great innovation and advance. The fifteenth-century "Illuminirer," or the patron who gave him his orders, seems to have had an instinctive respect for excellent and highly finished work in black and white, which made him leave it alone. Line-engravings of the fifteenth century are very frequently found colored, but they are usually quite second-rate specimens, and prints by the great men, such as the "Master E. S." and Schongauer, were respected and left alone. But such consideration was not often shown to woodcuts, which were frequently colored, especially when used as illustrations, well into the sixteenth century. It was very rarely, however, that any illuminator laid profane

DÜRER. THE RESURRECTION

hands on anything of Dürer's, woodcut or engraving, and when he did so the result is stupid and disagreeable, for it is always the work of a later generation, out of touch with Dürer's genius.

It may be said that if Dürer and his contemporaries did not cut their own blocks, the woodcuts are not original prints by the masters themselves. It must be conceded that they are not original prints quite in the same sense as engravings and etchings, in which the whole work was carried out upon the plate by the masters' own hand, but it would be a mistake to describe them as examples of reproductive engraving. Such a thing as a reproductive engraving was, in fact, unknown in the Germany of Dürer's time. A design originally projected in one medium might be reproduced in another in a case where an engraving by Schongauer, or Meckenen, or Dürer himself, was copied by some inferior woodcutter, as an act of piracy, for a bookseller who was too stingy to pay an artist to draw him a new Virgin or Saint for his purpose. But it would never have occurred to any one to reproduce an engraving or woodcut, a picture or drawing, done for its own sake, as a separate and complete work of art. Reproductions of pictures scarcely exist in German art of the sixteenth century; they are commoner in the Venetian School, among the woodcutters influenced by Titian, and Rubens established the practice once for all by his encouragement of engraving from his pictures, a century after Dürer's time. But when woodcutting was taken up by the German painters, with Dürer as their leader, for the purpose of circulating their compositions at a cheaper price than they could charge for engravings of their

own, they always had a strictly legitimate object according to the canons of graphic art. Rarely working even from sketches, never from a work already finished in another medium, they drew the subjects intended for printing directly upon the block in a technique adapted for the purpose, avoiding such combinations of lines as the most skilful craftsmen would be unable to cut. Their actual handiwork was preserved upon the surface of the block, much as in the modern original lithograph the artist's actual work survives upon the surface of the stone; if it was in any way disfigured, as often, no doubt, it was, that must be set down to failure on the cutter's part. Anything original that the cutter puts in, any swerving that accident or clumsiness permits him to make from the line fixed by the painter's pen for him to follow, is a blemish, and the best woodcuts of Dürer, Holbein, Baldung, Cranach, Burgkmair and the rest of their generation have no such blemishes. They are strictly autographic: the lines that the artist's pen has traced remain and are immortalized by the printing-press; the white spaces, also limited by his controlling will and purpose, result from the mere mechanical cutting away of blank wood that any neat-handed workman can perform. So when we speak of the woodcuts of Millais, Rossetti, Whistler, Walker, Pinwell, Sandys and the rest of the "Men of the Sixties," we know that the blocks were cut by Dalziel or Swain, but every good print is none the less what the designer meant it to be, and what none but himself could have made it.

Of Dürer's woodcutters, unluckily, we know nothing till the comparatively late period when he had

DÜRER. THE ANNUNCIATION TO JOACHIM

been enlisted in the service of the Emperor Maximilian, whose imposing, but somewhat ponderous and pedantic, *Triumphal Arch* was cut from the designs of Dürer and his school by Hieronymus Andreä. There is much more information about the Augsburg cutters than about those of Nuremberg, and there is no single artist in the latter city whose work is so strongly marked out by its excellence from that of his contemporaries as was Lützelburger's, who cut Holbein's "Dance of Death."

To understand Dürer's woodcuts aright, it is necessary to get to know them in their chronological sequence. In conservative collections, where they are arranged by order of subject, on the system of Bartsch, the student is continually confused by the juxtaposition of quite incongruous pieces, placed together merely because "Jérôme," for instance, comes in alphabetical order next after "Jean." The British Museum collection has been arranged for more than ten years past in chronological order, which, in Dürer's case, is unusually easy to determine with approximate accuracy, because his methodical turn of mind caused him to be fond of dates, while the undated pieces can be fitted in without much difficulty by the evidence of style. The justification of the system became all the more apparent when the woodcuts were exhibited for a few months in 1909, and fell naturally into consistent and coherent groups upon the screens, while separated, as a matter of practical convenience, from the engravings. Since then two even more interesting experiments have been made, in exhibitions held at Liverpool and Bremen, toward a reconstruction of Dürer's entire life-work in its

chronological sequence, his pictures, drawings, engravings and woodcuts—represented mainly, of course, by reproductions—being merged in a single series. That is a timely warning against the risks of excessive concentration upon one single side of his many activities, but here we will not digress further from the woodcuts, which are at present our theme.

The series opens magnificently with the group of large and stately woodcuts, abounding in vitality and dramatic invention, produced by Dürer between 1495 and 1500. These include the fifteen subjects of the "Apocalypse," the seven early subjects of the "Great Passion" (not completed until 1510–11) and seven detached pieces uniform with the two series already named in dimensions and style, but independent of them in subject. The blocks of the majority of these single pieces are now, by the way, in an American collection, that of Mr. Junius S. Morgan, but they have suffered sadly from the ravages of the worm. There is a certain exaggeration and over-emphasis of gesture in the "Apocalypse" woodcuts, but Dürer never invented anything more sublime than the celebrated *Four Riders* or the *St. Michael defeating the Rebel Angels*, which I regard as at least equal to the subject more frequently praised. Superb, too, is the group of *Angels restraining the Four Winds*. The landscape at the foot of *St. John's Vision of the Four-and-twenty Elders* (B. 63) is a complete picture by itself, and there is a rare early copy of this portion alone, which is itself a beautiful print, and doubtless the earliest pure landscape woodcut in existence. *Samson and the Lion*, the mysteriously named *Ercules* and the *Knight and Man-at-arms*, often described as

DÜRER. THE FLIGHT INTO EGYPT

From "The Life of the Virgin"

Size of the original woodcut, $11\frac{3}{4} \times 8\frac{1}{4}$ inches

DÜRER. THE ASSUMPTION AND CROWNING OF THE VIRGIN

From "The Life of the Virgin"

Size of the original woodcut, $11\frac{1}{2} \times 8\frac{1}{4}$ inches

its companion, and the *Martyrdom of St. Catherine* are among the finest of the single subjects. After this tremendously impressive group, there is for a time a certain relaxation of energy, or rather Dürer was more bent on other things, especially engraving. To the years 1500-04 belong a number of woodcuts of Holy Families and Saints, much smaller than the "Apocalypse," and rather roughly cut. Some critics have wished to dismiss one or another of them as pupils' work, but for this there is really no justification. Then comes another very good period, that of the "Life of the Virgin," of which set Dürer had finished seventeen subjects before he left for Venice in 1505, while the *Death of the Virgin* and *The Assumption* were added in 1510, and the frontispiece in 1511, when the whole work came out as a book, assuredly one of the most desirable picture-books the world has ever seen! It is impossible to weary of the beautiful compositions, the details drawn with such loving care, the tender and homely sentiment, the humor, even, displayed in the accessory figures of *The Embrace of Joachim and Anne*, the beer-drinking gossips in the *Birth of the Virgin*, where the atmosphere of St. Anne's chamber is sweetened by an angelic thurifer, and the merry group of angelic children playing round Joseph, bent on his carpenter's business, while their elders keep solemn watch round Mary at her distaff and the Holy Child in the cradle. We find landscapes at least as beautiful as those in Dürer's best engravings in the pastoral background of the *Annunciation to Joachim* and the mountainous distance of the *Visitation*. The architectural setting of the *Presentation of Christ in the Temple*, and the

tall cross held aloft, with the happiest effect on the composition, by the Apostle kneeling on the left in Mary's death-chamber, are among the memorable features of the set.

Beautiful again, especially in fine proofs, is the next and latest of the long sets, the "Little Passion," consisting of thirty-six subjects and a title-page, begun in 1509 and finished, like all the other books, in 1511. But it has not the monumental grandeur of the earlier religious sets, and there is an inevitable monotony about the incessant recurrence of the figure of Our Lord, when the history of the Passion is set forth in such detail. The most original and impressive subjects, in my opinion, are *Christ Appearing to St. Mary Magdalen* and the next following it, *The Supper at Emmaus*.

The years 1510 and 1511 were the most prolific of all, and witnessed the publication of other connected pieces, the *Beheading of John the Baptist* and *Salome bringing the Baptist's Head to Herod*, and then the three little woodcuts, *Christ on the Cross*, *Death and the Soldier*, and *The Schoolmaster*, which Dürer brought out on large sheets at the head of his own verses, signed with a large monogram at the end of all. The single sheets of 1511 include, besides the marvelous *Trinity* already mentioned, the large *Adoration of the Magi*, the *Mass of St. Gregory*, a *St. Jerome in his Cell*, which is the best, after the celebrated engraving of 1514, of Dürer's repeated versions of that delightful subject; the *Cain and Abel*, which is one of the great rarities; two rather unattractive *Holy Families*; and the beautiful square *Saint Christopher*, of which many fine impressions are extant to bear wit-

Size of the original woodcut, $9\frac{1}{4} \times 6\frac{1}{8}$ inches

ness to its technical virtues. The average level of all the work of the year 1511 is so astonishingly high, that it must be regarded as the culminating period of the woodcuts, just as a slightly later time, the years 1513-14, witnesses the climax of the engravings. In the next few years Dürer's time was much taken up with carrying out the emperor's important but rather tiresome commissions for the *Triumphal Arch* and two *Triumphal Cars*, the small one which forms part of the *Procession*, and the much bigger affair, with the twelve horses and allegorical retinue, which did not appear till 1522. All this group offers a rich field of research to the antiquary, but is simply unintelligible without a learned commentary, and appeals much less than the sacred subjects to the average collector and lover of art, who cannot unearth the heaps of pedantic Latin and German literature in which the motives by which Dürer was inspired, if I may use the word, lie buried. Inspiration certainly flagged under the influence of Wilibald Pirckheimer and other learned humanists who encouraged Maximilian in his penchant for allegory, and compelled Dürer, probably somewhat against his will, to use a multitude of symbols, intelligible only to the learned, instead of speaking directly to the populace in the familiar pictorial language derived from old tradition but enriched and ennobled by his own matchless art.

The later woodcuts are comparatively few in number. They include a few that are primarily of scientific interest, such as the celestial and terrestrial globes and the armillary sphere, besides the numerous illustrations to Dürer's own works on Measurement, Proportion, and Fortification. But among them are

the two splendid portraits made from drawings now in the Albertina, the *Emperor Maximilian* of 1518 and the *Ulrich Varnbüler* of 1522. Of the former several varieties exist, from no less than four different blocks, and it is now established that the only original version is the very rare one in which the letters "ae" of the word "Caesar" are distinct, not forming a diphthong, and placed within the large "C." The other cuts are all copies, produced probably at Augsburg, the fine large one, with an ornamental frame and the imperial arms supported by griffins, being indisputably the work of Hans Weiditz. Only three impressions of the original are known, in the British Museum, the Berlin Kupferstichkabinett, and the Hofbibliothek at Vienna, in addition to which the École des Beaux-Arts at Paris possesses a fragment damaged by fire at the time of the Commune, when it was still in private hands. It is more generally known that the handsome chiaroscuro impressions of the *Varnbüler* date, like those of the *Rhinoceros*, from the seventeenth century, the color blocks having been added in Holland. The brown and green varieties belong to different editions, distinguished by the wording of the publisher's address at the foot, which in the majority of cases has been cut off.

The *Virgin with the many Angels*, of 1518, is one of Dürer's most accomplished woodcuts, and quite good impressions of it are comparatively common today. The latest of his compositions of this class, the *Holy Family with Angels*, of 1526, is, on the other hand, extremely rare. Some critics doubt its being an authentic work of Dürer, but in spite of certain rather eccentric and unpleasant peculiarities in the drawing,

DÜRER. SAINT CHRISTOPHER

DÜRER. THE VIRGIN WITH THE MANY ANGELS
Size of the original woodcut, $11\frac{3}{16} \times 8\frac{3}{8}$ inches

I consider this scepticism unfounded. Quite at the end of Dürer's life comes that rather fascinating subject, *The Siege of a Fortress*, unique among Dürer's woodcuts in the tiny scale on which its countless details are drawn. Of the many heraldic woodcuts and ex-libris attributed by Bartsch and others to Dürer, very few can be regarded as his genuine work, and most of these are very rare. The best authenticated are his own coat of arms; the arms of Ferdinand I in the book on Fortification; those of Michel Behaim, of which the block is extant with a letter written by Dürer on the back; the arms of Roggendorf, mentioned in the Netherlands *Journal*, of which only one impression is known, and the arms of Lorenz Staiber, of which the original version is also unique. There can be no doubt that the Ebner book-plate of 1516 is by Dürer; the much earlier Pirkheimer book-plate is intimately connected with the illustrations to the books by Celtes, and cannot be regarded as a certain work of the master himself, while the arms of Johann Tschertte are also doubted.

It is a fortunate circumstance for the museums and collectors of to-day that Dürer's prints have always been esteemed, and his monogram was held in such respect and so generally recognized as the mark of something good that they have been preserved during four centuries, while so much that was interesting was allowed to perish because it was unsigned or its signature was not recognized as the work of any one important. It may be paradoxical to say that Dürers are common; few of them are to be had at any particular moment when one wants to get them; but they are commoner than any other prints of their period,

and a large number of impressions of some subjects must come into the market in the course of every ten years. But the sort of Dürer the collector wants, the really beautiful, fresh, clean impression, with the right watermark and genuine, unbroken border-line, is not, and never has been, common. It is surprising how few, even of the famous museums of Europe, have a really fine collection of the woodcuts, perhaps because so many of them were formed some generations ago in uncritical times, when people were apt to think it enough if the subject was represented, in whatever condition it might be. The first-rate proofs are scarce, and getting scarcer every year; when they are to be had, they should be grasped and treasured.

SOME EARLY ITALIAN ENGRAVERS BEFORE THE TIME OF MARCANTONIO

By ARTHUR M. HIND

Of the Department of Prints and Drawings, British Museum
Author of "Catalogue of Early Italian Engravings in the British Museum,"
"Short History of Engraving and Etching," "Rembrandt's Etchings:
an Essay and a Catalogue," etc.

FIFTEENTH-CENTURY Italian engraving is not an easy hunting-ground for the collector, but it is one of the most fascinating not less for its own sake than for the difficulty of securing one's prize.

From the time of Raphael onward Italian engraving presents an overwhelmingly large proportion of reproductions of pictures, and loses on that account its primary interest. But in the fifteenth and the early sixteenth century, the engravers, though for the most part less accomplished craftsmen, were artists of real independence. We may in some cases exaggerate this independence through not knowing the sources which they used, but the mere lack of that knowledge adds a particular interest to their prints. Treated not only in virtue of their special claim as engravings, but merely as designs, we find something in them which the paintings of the period do not offer us.

In general, the presence and influence of one of the greater artistic personalities of the time may be recognized, but seldom definitely enough for us to trace the painter's immediate direction. Mantegna is the most

brilliant exception of a painter of first rank who is known to have handled the graver at this period. But forgetting the great names it is remarkable how in the early Renaissance in Italy even the secondary craftsmen produced work of the same inexpressible charm that pervades the great masterpieces.

One of the most beautiful examples I can cite is the *Triumph of Bacchus and Ariadne*, which is known only in the British Museum impression. It has all the fascination of Botticelli's style without being quite Botticelli—unless the engraver himself is to account for the coarsening in the drawing of individual forms. Mr. Herbert P. Horne, the great authority on Botticelli and his school, thinks it is by Bartolommeo di Giovanni (Berenson's "Alunno di Domenico"). But whether immediately after Botticelli or after some minor artist of the school, there is the same delightful flow and rhythmic motion in the design that one thinks of in relation to Botticelli's *Spring*.

Botticelli was in early life under the immediate inspiration, if not in the very service, of the great goldsmith Pollaiuolo (witness his picture of *Fortitude* in Florence). One almost expects in consequence that he may at some period have tried his hand at engraving, but there is no proof that he did anything besides supplying the engravers with designs. His chief connection with the engravers was in the series of plates done for Landino's edition of Dante's "Divine Comedy" (Florence, 1481). Altogether nineteen plates (and a repetition of one subject) are known, but although spaces are left throughout the whole edition for an illustration to each canto, it is only in rare copies that more than two or three are found. Even

TRIUMPH OF BACCHUS AND ARIADNE

After a design by a close follower of Botticelli, possibly by Bartolommeo di Giovanni
"But, whether immediately after Botticelli or after some minor artist of the school, there is the same
delightful flow and rhythmic motion in the design that one thinks of in relation to Botticelli's *Spring*. . .
We could ill afford to lose the charm of the early Florentine *Triumph of Bacchus and Ariadne* for all the
finished beauty of Marcantonio's *Zuccherà*, and it is still the youth of artistic development, with its naive
joy and freshness of outlook, which holds us with the stronger spell."
Arthur M. Hind.

THE ASSUMPTION OF THE VIRGIN

Florentine engraving, in the Broad Manner, after a design by Botticelli "Most important of all the contemporary engravings after Botticelli is the *Assumption of the Virgin*. . . . An original study by Botticelli for the figure of St. Thomas, who is receiving the girdle of the Virgin, is in Turin, and clinches the argument in favor of Botticelli's authorship. The view of Rome, a record of Botticelli's visit, is an interesting feature of the landscape." Arthur M. Hind.

Size of the original engraving, 325 $\frac{5}{8}$ \times 221 $\frac{1}{4}$ inches

the fine presentation copy to Lorenzo de' Medici (now in the National Library, Florence) is without a single plate, showing perhaps the small regard that was paid to engraving for book decoration at that period. This lack of appreciation and the difficulties (or double labor) the printers experienced in combining copper-plate impressions with type led soon after this and a few other experiments of the period to the use of woodcut as the regular mode of book illustration for well over a century. Apart from the plates to this edition, Botticelli's devotion to Dante is shown in the beautiful series of pen drawings—in the most subtly expressive outline—preserved at Berlin and in the Vatican. It seems on the whole probable that they are later than the 1481 edition, so that we cannot point to the original drawings for the prints.

Most important of all the contemporary engravings after Botticelli is the *Assumption of the Virgin*, the largest of all the prints of the period (printed from two plates, and measuring altogether about 82.5 × 56 cm.). An original study by Botticelli for the figure of St. Thomas, who is receiving the girdle of the Virgin, is in Turin, and clinches the argument in favor of Botticelli's authorship. The view of Rome, a record of Botticelli's visit, is an interesting feature of the landscape.

This engraving is produced in what has been called the BROAD MANNER in contradistinction to the FINE MANNER, e.g. of the *Dante* prints. In the BROAD MANNER the lines are laid chiefly in open parallels, and generally the shading is emphasized with a lighter return stroke laid at a small angle between the parallels. Its aim is essentially the imitation of pen draw-

ing after the manner of such draughtsmen as Pollaiuolo and Mantegna. The FINE MANNER on the other hand shows shading in close cross-hatching (somewhat patchy and cloudy in effect in most of the early Florentine prints), and gives the appearance of imitating a wash drawing.

The two manners may be well compared in the series of "Prophets and Sibyls," which exists in two versions, the earlier being in the Fine, and the later in the Broad Manner. The first series shows a craftsman who drew largely from German sources (putting a *St. John* of the Master E. S. into the habit of the *Libyan Sibyl*). In the second we have an artist who discarded all the ugly and awkward features which originated in the German originals, and showed throughout a far truer feeling for beauty and a much finer power of draughtsmanship than the earlier engraver. Mr. Herbert Horne suspects, rightly I think, that Botticelli himself directly inspired this transformation of the "Prophets and Sibyls."

Through our lack of knowledge of the engravers of this early period in Florence we are driven to a rather constant use of the somewhat unattractive distinctions of the Fine and Broad Manners. We may claim, however, to have advanced a little further in the elucidation of questions of authorship, though the great German authority on this period, Dr. Kristeller of Berlin, would still keep practically all the early Florentine engravings in an unassailable anonymity. This is of course better than classing all the engravings of the period and school, both in the Fine and Broad Manners, under the name of Baccio Baldini, which has long been the custom. A certain "Baccio, *orafo*" has

THE LIBYAN SIBYL

been found in documents as buried in 1487, but there is practically nothing to connect his name with the substance of our prints. We would not on that account regard him as a myth, but are reduced at the moment to Vasari's statement that "Baldini, the successor of Finiguerra in the Florentine school of engraving, having little invention, worked chiefly after designs by Botticelli." Considering the fact that both Broad and Fine Manners (in all probability the output of two distinct workshops) show prints definitely after Botticelli, we are still in entire darkness as to the position of Baldini.

With regard to an important group of Fine Manner prints, Sir Sidney Colvin has given strong reasons for the attribution to Maso Finiguerra, made famous by Vasari as the inventor of the art of engraving. Considering Vasari's evident error in regard to the discovery of engraving (for there were engravings in the north of Europe well before the earliest possible example of Finiguerra), modern students have been inclined to regard Finiguerra as much in the light of a myth as Baldini. But there is no lack of evidence as to his life and work, and without repeating the arguments here, which are given in full in Sir Sidney Colvin's "Florentine Picture-Chronicle" (London, 1898), we would at least state our conviction that a considerable number of the early Florentine engravings, as well as an important group of nielli, must be from his hand. Vasari speaks of him as the most famous niello-worker in Florence, and he also speaks of his drawings of "figures clothed and unclothed, and histories" (the "figures" evidently the series traditionally ascribed to Finiguerra in Florence, but now

for a large part labeled with an extreme of timidity "school of Pollaiuolo"; the "histories," probably the "Picture-Chronicle" series, acquired from Mr. Ruskin for the British Museum). Then considering Vasari's fuller statement that Finiguerra was also responsible for larger engravings in the light of a group of Florentine engravings which correspond closely in style with many of the only important group of Florentine nielli (chiefly in the collection of Baron Édouard de Rothschild, Paris) as well as with the Uffizi drawings, we can hardly escape the conviction that Vasari was correct in his main thesis. A curiously entertaining side-light is given by one of these engravings, the *Mercury* for the series of "Planets." Here we see the representation of a goldsmith's shop in the streets of Florence, stocked just as we know from documents Finiguerra's to have been. And the goldsmith is evidently engaged in engraving, not a niello, but a large copperplate.

The engravings most certainly by Finiguerra, such as the *Judgment Hall of Pilate* (Gotha), the *March to Calvary and the Crucifixion* (British Museum), *Various Wild Animals Hunting and Fighting* (British Museum), are of course rarities which most collectors can never hope to possess. The same may also be said of somewhat later prints in the same manner of engraving (which may be the work of the heirs of Finiguerra's atelier, which is known to have been carried on by members of his family until 1498), such as the Fine Manner "Prophets and Sibyls" and the "Otto Prints." We will in consequence devote less space to these rarities, possessed chiefly by a few European collections, than their artistic interest would justify,

THE PLANET MERCURY

Florentine engraving in the Fine Manner, attributed to
 Maso Finiguerra, or his school

"A curiously entertaining side-light is given by one of these engravings, the *Mercury* for the series of 'Planets.' A YOUNG MAN AND WOMAN EACH HOLDING AN APPLE

A Florentine engraving in the Fine Manner, attributed to the school of Finiguerra

"One of the 'Otto Prints' (so called from the eighteenth-century collector who possessed the majority of the series), *A Young Man and Woman Each Holding An Apple*, is in the Gray Collection, Harvard, and it is a charming example of the amatory subjects of the series, prints such as the Florentine gallant might have pasted on the spice-box to be presented to his *inamorata*. The badge of Medici (the six 'palle' with three lilies in the uppermost) added by a contemporary hand in pen and ink suggests that this one may have been used by the young Lorenzo himself between about 1465 and 1467, which accords well with the probable date of the engravings."

Arthur M. Hind.

(The inscription above reads *o amore te q^a* (questa) and *piglia q^a*: "O Love, this to you" and "Take this.")

Size of the original engraving, $4\frac{1}{4} \times 4\frac{1}{4}$ inches

keeping our argument henceforward more to the engravings that the American amateur has the chance of seeing or acquiring at home.

One of the "Otto Prints" (so called from the eighteenth-century collector who possessed the majority of the series), *A Young Man and Woman Each Holding An Apple*, is in the Gray Collection, Harvard, and it is a charming example of the amatory subjects of the series, prints such as the Florentine gallant might have pasted on the spice-box to be presented to his *inamorata*. The badge of Medici (the six "palle" with three lilies in the uppermost) added by a contemporary hand in pen and ink suggests that this one may have been used by the young Lorenzo himself between about 1465 and 1467, which accords well with the probable date of the engravings.

The only known engraving by the goldsmith and painter Antonio Pollaiuolo, the large *Battle of Naked Men*, shows a far greater artist than his slightly elder contemporary Finiguerra. They had both studied in the same workshop and probably continued a sort of partnership until Finiguerra's death. Pollaiuolo's draughtsmanship evinces a grip and intensity that Finiguerra entirely lacks in his somewhat torpid academic drawings, and it is seen at its best in this magnificently vigorous plate. An excellent impression, surpassed by few in the museums of Europe, is, I believe, in the collection of Mr. Francis Bullard of Boston.

Before leaving Florence for north Italy we would allude to that attractive engraver of the transition period, Cristofano Robetta. His art has lost the finest flavor of the primitive Florentine without having suc-

ceeded to the sound technical system of the contemporaries of Dürer, but it has a thoroughly individual though delicate vein of fancy. The *Adoration of the Magi*, one of his finest plates, is a free translation of a picture by Filippino Lippi in the Uffizi, but the group of singing angels is an addition of his own, and done with a true sense for graceful composition. Fine early impressions of this print are of course difficult to get, but it is perhaps the best known of Robetta's works, because of the number of modern impressions in the market. The original plate (with the *Allegory of the Power of Love* engraved on the back) belonged to the Vallardi Collection in the early nineteenth century, and is now in the British Museum, happily safe from the reprinter.

Among the greatest rarities of early engraving in north Italy is the well-known series traditionally called the "Tarocchi Cards of Mantegna"—somewhat erroneously, for they are neither by Mantegna, nor Tarocchi, nor playing-cards at all. As in the case of the "Prophets and Sibyls," there are two complete series of the same subjects by two different engravers. Each series consists of fifty subjects divided into five sections and illustrating: (1) the Sorts and Conditions of Men; (2) Apollo and the Muses; (3) the Arts and Sciences; (4) the Genii and Virtues; (5) the Planets and Spheres. A considerable number of the earliest impressions known are still in contemporary fifteenth-century binding, and it seems as if the series was intended merely as an instructive or entertaining picture-book for the young. There is the most absolute divergence of opinion as to which is the original series, and the student is encouraged to whet his critical acu-

ANTONIO POLLAIUOLO. BATTLE OF NAKED MEN

"The only known engraving by the goldsmith and painter Antonio Pollaiuolo, the large *Battle of Naked Men*, shows a far greater artist than his slightly elder contemporary, Finiguerra. Pollaiuolo's draughtsmanship evinces a grip and intensity that Finiguerra entirely lacks in his somewhat torpid academic drawings, and it is seen at its best in this magnificently vigorous plate." men on the problem by the excellent set of reproductions which has recently been issued by the Graphische Gesellschaft and edited by Dr. Kristeller. Unfortunately Dr. Kristeller takes what seems to me an entirely wrong view of the matter. I cannot but feel that the more finely engraved series is at the same time the more ancient, and almost certainly Ferrarese in origin, so characteristic of Cossa is the type of these figures with large heads, rounded forms, and bulging drapery. The second series shows a more graceful sense of composition and spacing (the heads and figures being in better relation to the size of the print), but its very naturalism is to me an indication of its somewhat later origin. The less precise technical quality of this second series is closely related to the Florentine engravings in the Fine Manner, and I am inclined to regard it as the work of a Florentine engraver of about 1475 to 1480, i.e. about a decade later than the original set.

Leaving the pseudo-Mantegna for the master himself, we are in the presence of the greatest of the Italian engravers before Marcantonio—if not of all time. Like the Florentines, Mantegna was an ardent lover of antiquity, but his spirit was far more impassive, far more like the antique marble itself. His classical frame of mind was to some extent the offspring of his education in the school of Squarcione and in the academic atmosphere of Padua. His art has a monumental dignity which the Florentines never possessed, but it was without the freshness and inexpressible charm that pervade Tuscan art. An engraving like the *Risen Christ between St. Andrew and St. Longinus* is an indication of the genius that might

have made one of the noblest sculptors, and one regrets that he never carried to accomplishment the project of a monument to Vergil in Mantua, which Isabella d'Este wished him to undertake.

Seven of the engravings attributed to Mantegna (including the *Risen Christ*) are so much above the rest in subtle expressiveness, as well as in technical quality, that we cannot but agree with Dr. Kristeller's conclusion that these alone are by Mantegna's hand, and the rest engraved after his drawings. They are similar to Pollaiuolo's *Battle of Naked Men* in style, engraved chiefly in open parallel lines of shading with a much more lightly engraved return stroke between the parallels. It is this light return stroke, exactly in the manner of Mantegna's pen drawing, which gives the wonderfully soft quality to the early impressions. But it is so delicate that comparatively few printings must have worn it down, and the majority of impressions that come into the market show little but the outline and the stronger lines of shading. Even so these Mantegna prints do not lose the splendidly vigorous character of their design, but it is of course the fine early impressions which are the joy and allure of the true connoisseur. The seven certainly authentic Mantegna engravings are the *Virgin and Child*, the two *Bacchanals*, the two *Battles of the Sea-Gods*, the horizontal *Entombment*, and the *Risen Christ*, already mentioned.

Nearest in quality to these comes the *Triumph of Caesar: the Elephants*, after some study for the series of cartoons now preserved at Hampton Court. But it lacks Mantegna's distinction in drawing, and Zoan Andrea, who is probably the author of one of the

ANDREA MANTEGNA. THE RISEN CHRIST BETWEEN
ST. ANDREW AND ST. LONGINUS

"Of all the early Italian engravers, Andrea Mantegna is by far the most powerful, though scarcely the most human. Like many of the Florentines, he was an ardent lover of antiquity, but his spirit was far more impassive than theirs, and far more like the antique marble itself. His art has a monumental dignity which the Florentines never possessed, but it lacks the freshness and inexpressible charm that pervade Tuscan art. His was a genius that would have made one of the noblest sculptors: the engraving of the *Risen Christ* shows what he might have achieved in the field." Arthur M. Hind.

ZOAN ANDREA (?). FOUR WOMEN DANCING

This engraving, based on a study by Mantegna for a group in the Louvre picture of *Parnassus*, is one of the most beautiful prints of the school of Mantegna. It is most probably by Zoan Andrea. Size of the original engraving, $8\frac{7}{8} \times 13$ inches

anonymous engravings of *Four Women Dancing* (based on a study for a group in the Louvre picture of *Parnassus*), one of the most beautiful prints of the school, was certainly capable of this achievement. Even Giovanni Antonio da Brescia, who did work of a very third-rate order after migrating to Rome, produced under Mantegna's inspiration so excellent a plate as the *Holy Family*.

Other prints attributed to Mantegna, such as the *Descent into Hell* and the *Scourging of Christ*, possess all Mantegna's vigor of design, and reflect the master's work in the manner of the Eremitani frescos, but we can hardly believe that they were engraved by the same hand as the "seven," even supposing a considerably earlier date for their production.

Each of Mantegna's known followers (Zoan Andrea and G. A. da Brescia) entirely changed his manner of engraving after leaving the master; in fact, except in his immediate entourage, Mantegna's style was continued by few of the Italian engravers. For all its dignified simplicity, it is more the manner of the draughtsman transferred to copper, than of the engraver brought up in the conventional use of the burin. We see Mantegna's open linear style reflected in the earlier works of Nicoletto da Modena, and the Vicentine, Benedetto Montagna, but each of these engravers tended more and more in their later works to imitate the more professional style of the German engravers, and of Dürer in particular. Dürer was constantly copied by the Italian engravers of the early sixteenth century, and details from his plates (chiefly in the landscape background) were even more consistently plagiarized.

In the example of Nicoletto da Modena, the *Adoration of the Shepherds*, which we reproduce, it is Dürer's immediate predecessor, Martin Schongauer, from whom the chief elements in the subject are copied. But in this example the background, with its vista of lake with ships and a town, suggested no doubt by one of the subalpine Italian lakes, is thoroughly characteristic of the South, while Schongauer's Gothic architecture is embellished with classical details. Isolated figures of saints or heathen deities against a piece of classical architecture, set in an open landscape, became the most frequent type of Nicoletto's later prints, which are practically all of small dimensions.

Like Nicoletto da Modena, Benedetto Montagna gradually developed throughout his life a more delicate style of engraving, entirely giving up the large dimensions and broad style of his *Sacrifice of Abraham* for a series of finished compositions which from their smaller compass would have been well adapted for book illustration. Several of these, such as the *Apollo and Pan*, illustrate incidents in Ovid's "Metamorphoses," but there is no evidence for, and there is even probability against, their having ever been used in books. Several of the subjects are treated very similarly in the woodcuts of the 1497 Venice edition of Ovid in the vernacular. When engravings and woodcuts thus repeat each other, the woodcutter is generally the copyist, but in this case the reverse is almost certainly the case, as the Ovid plates belong to Montagna's later period, and could hardly have preceded 1500.

Apart from Mantegna, Leonardo and Bramante are

NICOLETTO DA MODENA. THE ADORATION OF THE SHEPHERDS

"In the *Adoration of the Shepherds* it is Dürer's immediate predecessor, Martin Schongauer, from whom the chief elements in the subject are copied. But in this example the background, with its vista of lake with ships and a town, suggested no doubt by one of the subalpine Italian lakes, is thoroughly characteristic of the South, while Schongauer's Gothic architecture is embellished with classical details."

JACOPO DE' BARBARI. APOLLO AND DIANA

"Jacopo de' Barbari is of peculiar interest as a link between the styles of Germany and the South. Whether of Northern extraction or not is uncertain, but the earlier part of his life was passed in Venice. Dürer was apparently much impressed by his art on his first visit to Venice between 1495 and 1497, and . . . even seems to have taken an immediate suggestion for a composition from Barbari, i.e. for his *Apollo and Diana*. Dürer's version shows a far greater virility and concentration of design, but for all its power it lacks the breezier atmosphere of Barbari's print." Arthur M. Hind.

Size of the original engraving, $6\frac{1}{4} \times 3\frac{7}{8}$ inches

the two great names which have been connected with engravings of the period. But I incline to doubt whether either of them engraved the plates which have been attributed to them. The large *Interior of a Ruined Church*, splendid in design and reminiscent of the architect's work in the sacristy of S. Satiro, Milan, might equally well have been engraved by a Nicoletto da Modena, with whose earlier style it has much in common. Of the prints attributed to Leonardo, the fascinating *Profile Bust of a Young Woman* (p. 252), unique impression in the British Museum, stands out from the rest for the sensitive quality of its outline, but even here I would be more ready to see the hand of an engraver like Zoan Andrea, who after leaving Mantua seems to have settled in Milan and done work in a finer manner influenced by the style of the Milanese miniaturists (such as the Master of the Sforza Book of Hours in the British Museum).

In Venice Giovanni Bellini's style is reflected in the dignified engravings of Girolamo Mocetto, and in the region of Bologna or Modena one meets the anonymous master "I B (with the Bird)," whose few engraved idyls are among the most alluring prints of the lesser masters of north Italy.

More individual than Mocetto and far less dependent on any other contemporary painter is Jacopo de' Barbari, who is of peculiar interest as a link between the styles of Germany and the South. Whether of Northern extraction or not is uncertain, but the earlier part of his life was passed in Venice. Dürer was apparently much impressed by his art on his first visit to Venice between 1495 and 1497, and his particular interest in the study of a Canon of Human Proportions

was aroused by some figure-drawings which Barbari had shown him. Dürer even seems to have taken an immediate suggestion for a composition from Barbari, i.e. for his *Apollo and Diana*. Dürer's version shows a far greater virility and concentration of design, but for all its power it lacks the breezier atmosphere of Barbari's print; it is redolent of the study, while the latter has the charm of an open Italian landscape. There is a distinct femininity about Barbari; perhaps this very feature and the languorous grace of his treatment of line and the sinuous folds of drapery give his prints their special allure.

I would close this article with some reference to two other engravers of great individuality of style—Giulio and Domenico Campagnola, of Padua.

Domenico's activity as a painter continued until after 1563, but the probable period of his line-engravings (about 1517-18), and his close connection with Giulio Campagnola (though the exact nature of the relationship is unexplained), justify his treatment among the precursors rather than in the wake of Marcantonio.

Giulio Campagnola, like Giorgione, whose style he so well interpreted, was a short-lived genius. He was a young prodigy, famous at the tender age of thirteen as a scholar of Latin, Greek, and Hebrew, besides being accomplished as a musician and in the arts of sculpture, miniature, and engraving. Little wonder that he did not long survive his thirtieth year. Probably his practice as an illuminator as well as his particular aim of rendering the atmosphere of Giorgione's paintings led him to the method of using dots, or rather short flicks, in his engraving, which is in a

GIULIO CAMPAGNOLA. ST. JOHN THE BAPTIST

"One of the most splendid of his plates is the *St. John the Baptist*, with a dignity of design whose origin may probably be traced back to some drawing by Mantegna, though the landscape is of course thoroughly Paduan or Venetian in its character." Arthur M. Hind.

GIULIO AND DOMENICO CAMPAGNOLA. SHEPHERDS IN A LANDSCAPE

"It is Giorgione again whom we see reflected in the *Shepherds in a Landscape*, a plate which seems to have been left unfinished by Giulio and completed by Domenico Campagnola. There is a drawing in the Louvre for the right half of the print, and there is every reason to think that this drawing as well as the engraving of that portion of the landscape is by Giulio. But the group of figures and trees on the left is entirely characteristic of the looser technical manner of Domenico."

Arthur M. Hind.

Size of the original engraving, $5\frac{3}{8} \times 10\frac{1}{4}$ inches

sense an anticipation of the stipple process of the eighteenth century, though of course without the use of etching. Most of his prints are known in the two states—in pure line, and after the dotted work had been added.

One of the most splendid of his plates is the *St. John the Baptist*, with a dignity of design whose origin may probably be traced back to some drawing by Mantegna, though the landscape is of course thoroughly Paduan or Venetian in its character. More completely characteristic, and the most purely Giorgionesque of all his prints, is the *Christ and the Woman of Samaria*, one of the most wonderfully beautiful of all the engravings of this period.

It is Giorgione again whom we see reflected in the *Shepherds in a Landscape*, a plate which seems to have been left unfinished by Giulio and completed by Domenico Campagnola. There is a drawing in the Louvre for the right half of the print, and there is every reason to think that this drawing as well as the engraving of that portion of the landscape is by Giulio. But the group of figures and trees on the left is entirely characteristic of the looser technical manner of Domenico. The existence of a copy of the right-hand portion of the plate alone points to the existence of an unfinished state of the original, though no such impressions have been found. In any case it distinctly supports the theory that the other part of the original print was a later addition.

We may have to admit in conclusion that there is nothing in Italian engraving before Marcantonio quite on a level with the achievement of Albrecht Dürer, but the indefinable allure that characterizes

so much of the work of the minor Italian artists of the earlier Renaissance is more than enough compensation for any lack of technical efficiency. With Marcantonio we find this efficiency in its full development, joined to a remarkable individuality in the interpretation of sketches by Raphael and other painters. Yet we could ill afford to lose the charm of the early Florentine *Triumph of Bacchus and Ariadne* for all the finished beauty of Marcantonio's *Lucretia*, and it is still the youth of artistic development, with its naïve joy and freshness of outlook, which holds us with the stronger spell.

A PRINCE OF PRINT-COLLECTORS:
MICHEL DE MAROLLES,
ABBÉ DE VILLELOIN
(1600-1681)

BY LOUIS R. METCALFE

THE French make a fine distinction between three varieties of that very special individual to whom we refer in a general way as "a collector." They have always been authorities on that subject and one of them has said: "On est amateur par goût, connaisseur par éducation, curieux par vanité." While another adds: "Ou par spéculation." By "collector" we simply mean a person who has formed the habit of acquiring the things in which he is particularly interested, and these in as many varieties as possible. It implies neither an artistic pursuit nor a deep knowledge of the subject. By *curieux*, however, is meant, as a rule, an *amateur*, a man of taste who collects things which pertain to art exclusively; he is in most cases a *connaisseur*, and always an enthusiast.

Paris, the home of taste, has never been that of the *curieux* more so than at the present day, when, it seems, every one who can afford a rent of over four thousand francs has a hobby of some sort and is a mad collector. A general history of the weakness for things either beautiful or odd or rare, or merely fash-

ionable, would be both voluminous and chaotic, if a distinction were not made between that which pertained to art and that which did not. A complete description of the latter, a hopelessly heterogeneous mass, would make an amusing volume, for there is no end to the variety of things in which vanity and folly have caused human beings to become interested to the point of collecting in large numbers.

George IV collected saddles; the Princess Charlotte and many others, shells. Tulips were so madly sought after in Holland that one root was exchanged for 460 florins, together with a new carriage, a pair of horses, and a set of harness. Shop-bills and posters have been the specialty of many, while thousands of persons have collected postage-stamps and coins. A Mr. Morris had so many snuff-boxes that it was said he never took two pinches of snuff out of the same box. A Mr. Urquhart collected the halters with which criminals had been hanged; and another enthusiast, the masks of their faces. Suett, a comedian, collected wigs, and another specialist owned as many as fifteen hundred skulls, Anglo-Saxon and Roman. If there have been men who have shown a propensity to collect wives, Evelyn tells us in his diary:

“In 1641 there was a lady in Haarlem who had been married to her twenty-fifth husband, and, having been left a widow, was prohibited from marrying in future; yet it could not be proved that she had ever made any of her husbands away, though the suspicion had brought her divers times to trouble.”

Although we much regret that such an intensely interesting work as a *Comprehensive History of Collecting* has never been written, we realize that a

mere description of rare and beautiful objects would be unsatisfactory as long as we did not know their history and the way in which they had been gathered together. It is the soul of the collector which we should like to see laid bare. Was his work a labor of vanity or one of love? Were his possessions mere playthings, speculation, to him, or did they represent treasures of happiness greater than all the gold in Golconda?

Without a doubt, it is one thing to collect what is highly prized on all sides, with large means at one's disposal, and the constant advice of experts, and quite another to search patiently oneself for things which the general public has not yet discovered, and then to acquire them with difficulty.

Who shall know with what admirable zeal some collectors have made themselves authorities on the things which they loved? with what untiring energy they have sifted for years masses of trash in the hope of finding the hidden pearl? Who can tell the inner history of the auction-room, the heart-beats of those who were after the jewel which no one else seemed to have noticed, the sacrifices which many with a slender purse have made in order to secure the precious "find," and lastly the enjoyment which they ever afterward derived from its possession? Many of the great French collections of the last century were made in this spirit: they were begun with a modest outlay and devoted to things which, at that time, no one else wanted. I know of one of the first collectors of Eastern Art in the nineteenth century, who at one time had greatly to reduce his household in order to satisfy his passion for Japanese vases; and of another wealthy

enthusiast who would travel third-class to London to secure an old Roman bronze. The history of such collections becomes that of human beings for whom life is nothing without beauty, and it is too personal to be recorded. The collector will seldom believe that his enthusiasm can be understood by others besides himself: maybe, also, he would be unwilling to reveal the more or less innocent subterfuges to which he had recourse in order to acquire more than one of his treasures.

The American chapter of such a history is the most recent one, and the world is now watching its development with bated breath. The art of the Old World is being imported by the ship-load; fortunes are paid for single paintings, while the paneled wainscots of French châteaux, the ceilings of Italian palaces, the colonnades of their gardens, and the tapestries of the Low Countries, not to mention a hundred varieties of *objets d'art*, are constantly wending their way to the treasure-houses—still in course of construction—of the New World. All this is taking place to the indignation of Europeans and the æsthetes who consider such a radical change of background a desecration, and do not stop to think that this transplantation is hardly more unnatural than the sight of the Elgin marbles in foggy London, or the winged bulls of Ecbatana in the halls of the Louvre.

So long as we as a nation will learn a much-needed lesson and thereby greatly improve our taste, let all honor and glory be given to those who have been responsible for such valuable acquisitions. Our American collections already contain many "gems of purest ray serene," and who will dare say that they are not

destined to become in time worthy successors of the famous ones which have preceded them?

From the writings of Pliny and other classic historians, and from several catalogues and rare documents which have come down to us from the Middle Ages and the Renaissance, we have abundant proof that there never was a time when works of art were not treasured. Cicero, Atticus, and Varro collected writings, and the libraries of Aristotle, Theophrastus, and that of Epaphroditus of Chæronea, which contained thirty-two thousand manuscripts, were famous. Hannibal was a lover of bronzes: it was he who owned the little Hercules of Lysippus which the master himself had presented to Alexander the Great and which afterward became the property of Sulla.

Both Pompey and Julius Cæsar possessed splendid masterpieces of that Greek art which was so highly prized in Italy. The Venus of the Hermitage comes from Cæsar's gallery, and the Jupiter of the Louvre from that of Antony; while the Faun with the Child, and the Borghese vase, now treasured in the Louvre, were once among the possessions of Sallust in his palace on the Quirinal. Not only sculpture was collected in those times, for we also hear of the tapestries of Saurus, valued at twenty millions in the currency of the day; the jewelry of Verres, reputed the finest in existence; the priceless crystals of Pollio; and the two thousand vases of precious stone owned by Mithridates, King of Pontus.

Throughout the Middle Ages the *trésor* of the kings and the most powerful nobles was in reality their collection. That of Dagobert was the result of four Italian conquests. The inventory of the jewels of the

Duc d'Anjou, son of John the Good, contains 796 numbers, while his brother, the Duc de Berry, had a passion for reliquaries, old church ornaments, and rare manuscripts which he caused to be mounted like jewels. The library of Charles V and his *trésor* were valued at twenty millions of francs, and the collection of curiosities of Ysabeau de Bavière had not its equal. It contained, among other things, an ivory box in which was kept the cane with which Saint Louis used to flagellate himself. The Dukes of Burgundy for centuries were the greatest collectors of richly inlaid armor. And what of the treasures of Jacques Cœur, the great banker of Charles VII? With his fleet of trading-vessels and his many banking-houses he secured the pick of the market. We know that his silverware was piled up to the ceiling in the vaults of his palace at Bourges.

In the *Gazette des Beaux-Arts* for the year 1869 we read a description of the home of Jacques Duchié, a famous art collector who flourished during the first half of the fifteenth century. In the courtyard were peacocks and a variety of rare birds. In the first room was a collection of paintings and decorated signs; in the second, all kinds of musical instruments—harps, organs, viols, guitars, and psalterions. In the third was a great number of games, cards and chessmen; and in the adjoining chapel, rare missals on elaborately carved stands. In the fourth room the walls were covered with precious stones and sweet-smelling spices, while on those of the next was hung a great variety of furs. From these rooms one proceeded to halls filled with rich furniture, carved tables, and decorated armor.

MICHAEL DE MAROLLES
ABB. DE VILLELOIN *An.Æ.4.8.*

M. del. et sc.  1648

PORTRAIT OF MICHEL DE MAROLLES, ABBÉ DE VILLELOIN

Engraved by Claude Mellan, from his own design from life, in 1648

Nantiſcil ad vnum faciebat 1657

The Renaissance was the Golden Age of Collectors. What could have withstood the influence of that tremendous movement? The art of Italy and the magnificence of the nobility and the princes of the Church shed, like the Augustan Age, a golden glamour over civilization.

The Médicis set the example, and they were closely followed by the Sforzas, the Farneses, and the Gonzagas. The patronage of the Fine Arts was on such a scale, and the rivalry among the collectors so keen, that in 1515 there were in Rome thirty-nine cardinals who had veritable museums for palaces. It was for Agostino Chigi that Raphael decorated that Farnesina Villa in which such treasures were stored, and for whom, later, he designed those plates on which parrots' tongues were served to Leo X.

What a rage for beauty there was when Baldassarre Castiglione advised all the sons of noble families to study painting, in order that they might become better judges of architecture, sculpture, vases, medals, intaglios, and cameos. What a madness for antiques, when Cardinal San Giorgio sent back to Michelangelo his "Amorino" because he considered it too modern. Would that we could follow the vicissitudes through which went the great collections of the day—the drawings of Vasari, the books of Aldus and Pico della Mirandola, the armor of Cellini, the portraits of Paolo Giovio and the medals of Giulio Romano!

Certain is it that many of their treasures eventually crossed the Alps. It was after Charles VIII had shown to the élite of his nation "the remnants of antiquity gilded by the sun of Naples and of Rome" that the French Renaissance, already well on its way,

received new inspiration, and that the French collectors renewed their activity. Judging by the fabulous accounts given by the country-folk, the contents of many a turreted castle on the Loire must have been wonderful, indeed. Following the lead of Francis I, who had his library, his *pavillon d'armes*, and his *cabinet de curiosités*, and the example of Catherine de Médicis, who had brought from Italy many of her family's treasures, the leading nobles, like Georges d'Amboise in his Château de Gaillon, collected beautiful things with admirable catholicity. It was not only books in sumptuous bindings which were sought after by Louis XII and the Valois, Diane de Poitiers, Queen Margot, Amyot, and de Thou, but art in every form. In the case of Grolier himself, are we not told by Jacques Strada, in his "Epithome du Thrésor des Curiositez," that "great was the number of objects of gold, silver, and copper in perfect condition, and remarkable the variety of statues in bronze and marble, which his agents were collecting for him all over the world"?

Most significant is the inventory of the collection of Florimond Robertet, the able treasurer of the royal finances under Charles VIII, Louis XII, and Francis I, which was made in 1532 by Michelle de Longjumeau, his widow. Never was a catalogue such a labor of love as this one. It is a detailed description of the entire contents of a museum on which a great financier spent his entire fortune; it is full of significant touches concerning the customs of the time and the origin and use of the objects described; and it bears witness to the great enjoyment which both husband and wife derived from their treasures throughout

their lifetime. There were many jewels and some pear-shaped pearls of great size, silver andirons, thirty sets of silks and tapestries, bronzes and ivories. Among the paintings and sculpture were a canvas and a statue by Michelangelo. The porcelain was the first brought to France from China, and there was much pottery from Turkish lands and Flanders, French faïence, Italian majolica, church ornaments, precious books, and four hundred pieces of Venetian glass, "gentillisez des plus jolies gayetez que les verriers sauraient inventer."

It was the religious wars of the end of the century which brought French collecting to a stop. Constant strife and persecution discouraged the last artists of the Renaissance, ruined many a noble family, and scattered the contents of their palaces. Not until years afterward, during the seventeenth century, was it taken up again; then it was to reach great brilliancy during the reign of Louis XIV. The leading families of France began to rebuild their collections when Henry IV and his favorite, Gabrielle d'Estrées, indulged their fondness for medals, cameos, and intaglios, and Marie de Médicis had brought from Tuscany those paintings which she considered such an indispensable luxury. In after years Louis XIII collected armor; Anne of Austria, delicate bindings; and Richelieu, finely chased silverware. And when Louis XIV began to reign, Paris was the proud center of the collecting world. From this time on we have full records of the treasures amassed by many people of taste and culture and we are able to follow them into the following century, no matter how often they change hands—this, thanks to specialists like Felibien

and Germain Brice and the thousand references to art in the memoirs of the time. In 1673 there were in Paris eighty-five important art collectors who owned among them seventy-three libraries, and twenty years later this number had increased to one hundred and thirty-four, a remarkable development for such a short space of time.

The greatest example was set by Cardinal Mazarin and Fabri du Peiresc. The wily Italian who had succeeded Richelieu gave as much time to his collections as to the ship of state, and his fellow-grafter, Nicolas Fouquet, treasurer of the kingdom, was allowed to make himself the most powerful man in France just as long as he was able to supply his Eminence with the millions he was so constantly in need of for the army and his gold-threaded tapestries and busts of Roman emperors. Just before his death, Mazarin had himself carried through a gallery lined with 400 marbles, nearly 500 canvases (among them seven Raphaels), and 50,000 volumes, while he kept weeping and exclaiming: "Faudra-t-il quitter tout cela?" In the south of France, Fabri du Peiresc, great savant and collector, had agents in constant quest of rarities. It is related that "no ship entered a port in France without bringing for his collections some rare example of the fauna and flora of a distant country, some antique marble, a Coptic, Arab, Chinese, Greek, or Hebrew manuscript, or some fragment excavated from Asia or Greece."

By this time there was a new fine art to be collected seriously—that of Engraving. To the masterpieces of Dürer, Lucas van Leyden, and Marcantonio, now over a century old, had succeeded the spirited etchings

of Callot. It was he who first popularized the art in France and paved the way for the enthusiastic appreciation of Morin, Mellan, and Nanteuil. The school of engravers established by Colbert at the Gobelins made their art rank in importance with Painting and Sculpture, and their work won such popular favor that many engravers became publishers, and did a great business selling their prints and those of their pupils to the leading collectors. The first man of taste to make a serious collection of engravings was Claude Maugis, Abbé de Saint Ambroise, almoner to the Queen, Marie de Médicis. He spent forty years making a collection which at his death was sold to Charles Delorme, that physician-in-ordinary to Henry IV and Louis XIII of whom Callot has made such an interesting little portrait. It was when the first part of the Delorme Collection and that of a Sieur de Kervel had been added to his own possessions by the Abbé de Marolles that there was begun the greatest collection of prints and drawings ever assembled.

Michel de Marolles, Abbé de Villeloin, was one of the most picturesque figures of the seventeenth century. He was born in Touraine in 1600, and died in 1681, the son of the gallant Claude de Marolles, *maréchal de camp* in the army of Louis XIII, who had won a famous duel fought in the presence of two armies in the War of the Ligue. His life was indeed a peaceful one. At the age of twenty-six, after having pursued a complete course of studies, he was presented by Richelieu with the abbey of Villeloin in Touraine, and for the remainder of his days he drew its income, cultivated the most interesting people in France, translated the classics, wrote his memoirs, and col-

lected prints as no one ever did before him, or after. Truly, an ideal existence!

Although he tells us that at the age of nine he decorated the walls of his bedroom with prints given him by a Carthusian monk, we know that for the first half of his life the Abbé de Villeloin did little more than collect friends. This must have given him little trouble, for his rank gained him admission to the entire nobility, and his appreciation of literature and the fine arts enabled him to carry on a friendly intercourse with the best-known artists and *connaisseurs*. During this intercourse there was a constant exchange of gifts; in fact, to receive presents seemed to have been the Abbé's object in life. In his "Memoirs" there are one hundred and fifty pages devoted to a complete enumeration of all the persons who have presented him with a gift, or "honored him extraordinarily by their civility," and the list includes the best-known personages of the day.

What did de Marolles give them in return, besides the pleasure of his company and the charm of his appreciation? A mass of bad translations of the classics: that was the great weakness of the Abbé de Villeloin. Chapelain, the poet, complained of it in a curious letter to Heinsius, saying:

"That fellow has vowed to translate all the classic authors, and has almost reached the end of his labors, having spared neither Plautus nor Lucretius nor Horace nor Virgil nor Juvenal nor Martial, nor many others. Your Ovid and Seneca have as yet fought him off, but I do not consider them saved, and all the mercy they can expect is that of the Cyclops to Ulysses—to be devoured last." That Chapelain was not the

only one who did not appreciate the literary talent of the Abbé, and that he often found difficulty in finding publishers for his translations, is admitted by de Marolles himself when, in his poem on "The City of Paris," he says :

"J'ai perdu des amis par un rare caprice
 Quand je leur ai donné des livres que j'ai faits
 Comme gens offensés, sans pardonner jamais
 Bien qu'on n'ait point blessé leur méchant artifice."

But it is not as a man of letters that de Marolles interests us: it is as a great lover of the art of Engraving and the greatest collector of prints in history. Not until he had reached the age of forty-four did he begin to collect them systematically. Then he purchased the first part of the Delorme Collection for one thousand *louis d'or*, the prints owned by Kervel, and those of several other small collectors. His activity was so great that nine years later, in his memoirs, he was able to refer to this collection as follows :

"God has given me grace to devote myself to pictures without superstition, and I have been able to acquire a collection numbering more than 70,000 engravings of all subjects. I began it in 1644, and have continued it with so much zeal, and with such an expense for one not wealthy, that I can claim to possess some of the work of all the known masters, painters as well as engravers, who number more than 400."

He further adds :

"I have found that collecting such things was more suited to my purse than collecting paintings, and more serviceable to the building up of a library. Had we in France a dozen such collectors among the nobil-

ity, there would not be enough prints to satisfy them all, and the works of Dürer, Lucas, and Marcantonio, for which we now pay four and five hundred *écus* when in perfect condition, would be worth three times that amount. . . . It seems to me that princes and noblemen who are collecting libraries should not neglect works of this kind, as long as they contain so much information on beautiful subjects; but I know of no one who has undertaken to do this except for medals, flowers, architecture, machines, and mathematics.”

The collection of the Abbé de Marolles had become so famous by 1666, that Colbert, after having had it examined and appraised by Felibien and Pierre Mignard, advised Louis XIV to purchase it for the royal library. The deed was signed in 1667, and in the following year the Abbé de Villeloin received from the royal treasury the sum of twenty-six thousand livres (\$25,000) for what was described in a seal-colored document as “un grand nombre d’estampes des plus grands maîtres de l’antiquité.” Let us see what this meant.

De Marolles tells us himself, in his catalogue of 1666, that his collection consisted of 123,400 original drawings and prints, the work of over 6000 artists, and that it was contained in 400 large and 141 small volumes. As to the variety of subjects represented, it had no end: it included, for instance, landscapes, views of cities, architecture, fountains, vases, statues, flowers, gardens, jewelry, lacework, machines, grotesques, animals, costumes, decoration, anatomy, dances, comedies, jousts, heraldry, games, heroic fables, religious subjects, massacres, tortures, and over 10,000 portraits.

In describing his collection to Colbert, the Abbé made especial note of his greatest treasures as follows:

“*Leonardo da Vinci*. His work is in 5 pieces.

“*Anthony van Dyck*. There are 210 plates after his work, of which 14 are etched by his own hand.

“*Marcantonio* from Bologna, that excellent engraver who has done such beautiful work after Dürer, Mantegna, Raphael, and Michelangelo, is the greatest of all engravers, and the one whose works are the most sought after. I own 570 of them, in two volumes.

“*Andrea and Benedetto Mantegna*. The work of the former is in 104 pieces, that of the latter in 74, all rare, making 178 pieces in all, some of which are engraved by Marcantonio.

“*Lucas van Leyden*, excellent painter and engraver, of whom I have collected in one volume all the works engraved both on copper and on wood, besides 25 drawings in pen and pencil from his own hand, all very singular. I have 180 of these engravings, many in duplicate, all of great beauty, among them the portrait of Eulenspiegel, unique in France, the other having been sold more than twelve years ago for 16 *louis d'or*. Among the woodcuts, the Kings of Israel are here done in *chiaroscuro*, and unique in this state.

“*Albert Dürer*. One folio volume, bound in vellum, contains 12 portraits of the artist by various masters; 15 drawings by his own hand, which are singular and priceless; his three plates on brass [*sic*], his six etched plates, and all his copper engravings in duplicate, with three impressions of Maximilian's sword-hilt, all having been collected by the Abbé de Saint Ambroise, almoner of Queen Marie de Médicis. . . .

“*Rhinbrand* [*sic*]. The work of this Dutch painter

and etcher consists of many prints, of which I have collected 224, among which are portraits and fancy subjects most curious.”

He further adds that he possesses 192 original crayon portraits by Lagneau, a successor of the Clouets, and 50 by Dumonstier, and that the prints of the old masters of Italy, Germany, and Flanders are contained in 19 folio volumes.

After this enormous collection had passed into the hands of the King, the Abbé de Marolles was engaged to catalogue and classify it, and also to superintend the binding of its 541 volumes. For this he received on two occasions a payment of 1200 livres. The binding was done in full levant morocco, decorated with the royal arms, Louis's monogram, and richly tooled borders; for this purpose 500 green and 1200 crimson skins had been specially imported from the East.

Our indefatigable collector had hardly parted with the result of the labor of twenty-two years when he began the formation of a second collection. To the second part of the Delorme Collection which he then purchased were added the prints of MM. Odespunch and la Reynie, the collection of M. Petau, who had made a specialty of portraits, and that of the Sieur de la Noue, which contained a great number of original drawings. We know very little about this second collection of the Abbé de Marolles, except that when it was catalogued in 1672 it was contained in 237 folios. What became of it has never been ascertained; in all probability it found its way into the print-cabinets of the many *amateurs* of the end of the century. It is evident that he wished to dispose of it, probably for the purpose of starting a third collection, for we have

a letter on the subject addressed to M. Brisacier, *secrétaire des commandements de la Reine*, of whom Masson made that famous engraved plate known as "The Gray-haired Man." In it de Marolles describes his second collection as being hardly less important than the one he had previously sold to the King, and as containing a great number of masterpieces which were unique.

Not satisfied with such extensive researches in the realm of art, the Abbé de Villeloin decided to record all his information on the subject, and in the spring of 1666 announced the title of a colossal work on which he was engaged as: "Une histoire très ample des peintres, sculpteurs, graveurs, architectes, ingénieurs, maîtres-écrivains, orfèvres, menuisiers, brodeurs, jardiniers et autres artisans industrieux, où il est fait mention de plus de dix mille personnes, aussi bien que d'un très grand nombre d'ouvrages considérables, avec une description exacte et naïve des plus belles estampes ou de celles qui peuvent servir à donner beaucoup de connaissances qui seraient ignorées sans cela." This work was, unfortunately, never published, and its manuscript has never been found; it would have been a wonderful compendium of French art during the seventeenth century, and would have given us much precious information concerning a number of prominent engravers of whom so little is known to-day.

All that remains of it is the summary, written in bad verse and published under the title of "Le livre des peintres et des graveurs." It is a curious little book, containing little more than the names of thousands of artists who were obscure in their day and who

are now completely forgotten. To many of them, however, and particularly to the most prominent, are affixed such descriptive little touches, that what would otherwise have been a monotonous pattern becomes an original piece of historical ornament.

As to the "Memoirs" of the Abbé de Marolles, they possess the same defect as many other autobiographies of the time: they were published too soon, and they prove how anxious the author was to witness the sensation he thought he would make. In this case they were published in 1653, fourteen years before the Abbé had sold his first collection, and they tell us little more than that he possessed a very extended circle of acquaintances who thought the world of him on account of his patronage of the fine arts and his literary talent. It is evident that he included himself among his most sincere admirers, and that he regarded the friendship of such a charming woman as Louise-Marie de Gonzague, who later became Queen of Poland, and the incense which all the engravers in France ostentatiously scattered before him, as both natural and deserved. Claude Mellan, Poilly, and Robert Nanteuil were on particularly friendly terms with him, each in turn engraving his portrait from life, the last with such delicacy and finish that that plate ranks among his most successful portraits. Mellan, furthermore, engraved the portraits of his parents, Claude de Marolles and Agatha Castiglione.

The tastes and the mania for collecting of the Abbé de Villeloin were so well known that it is not impossible that it was he of whom La Bruyère was thinking when, in his famous "Caractères," he gives the following description of a collector:

AGATHA CASTIGLIONE

Wife of Claude de Marolles and mother of Michel de Marolles,
 Abbé de Villeloin

Engraved by Claude Mellan from his own design

Size of the original engraving, $6\frac{1}{4} \times 5$ inches

CLAUDE DE MAROLLES

Father of Michel de Marolles, Abbé de Villeloin
 Engraved by Claude Mellan from his own design
 Size of the original engraving, 9¼ × 7¾ inches

“ ‘You wish to see my prints,’ says Democenes, and he forthwith brings them out and sets them before you. You see one which is neither dark nor clear nor completely drawn, and better fit to decorate on a holiday the walls of the Petit Pont or the Rue Neuve than to be treasured in a famous collection. He admits that it is engraved badly and drawn worse, but hastens to inform you that it is the work of an Italian artist who produced very little, and that the plate had hardly any printing; that, moreover, it is the only one of its kind in France; that he paid much for it, and would not exchange it for something far better. ‘I am,’ he adds, ‘in such a serious trouble that it will prevent any further collecting. I have all of Callot but one print; which is not only not one of his best plates, but actually one of his worst; nevertheless, it would complete my Callot. I have been looking for it for twenty years, and, despairing of success, I find life very hard, indeed.’ ”

This is admirably descriptive of a born collector; and what would have been a ridiculous mania in a philistine became a natural attitude on the part of such a *connoisseur* as the Abbé de Marolles. In our eyes his weaknesses were insignificant, and we forgive him his bad translations, his unpublished history of Art, and the rather monotonous self-sufficiency of his Memoirs, for the encouragement which his honest enthusiasm and indomitable collecting gave to the artists who made the Golden Age of Engraving—for having been the Prince of Print-collectors.

JEAN MORIN

1600-1666

By LOUIS R. METCALFE

THE Exhibitions of French Engraved Portraits of the Seventeenth Century recently made at the New York Public Library and at the Boston Museum of Fine Arts, give one an excellent idea of the vogue of the portrait and the excellence attained by that remarkable school of engravers which flourished under the auspices of Louis XIV. A score of masters are represented, from Michael Lasne to the superb Nanteuil, and their models, the most representative personages of that grand century of French history, whether plotters against Henry IV, friends and foes of Richelieu or flatterers of Louis XIV, stand proudly on parade for the twentieth-century American, in all their glory of immense wigs, armor and lace collars, or in the quieter garb of prelates and counselors to the king. It is a remarkable illustration to the history of a great period. The nobility represented the survival of the fittest, for in the early part of the century four thousand of them had died in those street duels which Richelieu had abolished only with the help of the executioner. As to the clergy, no wonder that so many of those portly prelates could afford to have their portraits painted

and engraved: the wealth of the church had never been greater. Their example was followed by every one of any importance in the public eye; he had his portrait made with no more hesitation than one has nowadays to sit to a photographer of recognized excellence.

It was the Golden Age of Portrait-painting, for they were the days of Rubens, Van Dyck, Rembrandt and that host of splendid Dutch artists for whom physiognomy had no secrets. They in turn inspired Philippe de Champaigne and, later, Lebrun and Mignard, Rigaud and Largillière. Many of their glorious canvases have long been public property and remain to-day enshrined in national museums, but many more have for years remained jealously guarded heirlooms in private collections, and have been known only to a few. Many of those which have not been destroyed have become so altered by time and damaged by faulty restoration that they hardly do justice to their creators.

Thanks to the engraver, these portraits are just as alive to-day as when they were painted, for in an engraving there is no paint to fade or darken, no values to become altered. A brilliant impression of an early state remains to-day what it was when it emerged from the master's hand two and a half centuries ago. Such collections as are now exhibited represent more than brilliant examples of an art which is lost; they are historical and artistic documents of great importance, and the French Engravers of the Seventeenth Century deserve infinite praise for having showed all the possibilities of an art which, as Longhi claims in his book *La Calcografia*, "publishes and immortalizes

the portraits of eminent men for the example of present and future generations, better than any other serving as the vehicle for the most extended and remote propagation of deserved celebrity.'"

Among the many artists who were responsible for the Golden Age of Engraving, Jean Morin occupies a unique position. He was born in 1600 and died in 1666. Morin has the distinction of having not only immediately preceded and influenced the master of them all, Nanteuil, but also of having produced fifty portraits which, in contradistinction to all other reproductive engravers, he etched instead of engraved with the burin. It is difficult, however, to realize what a strikingly original and personal artist he was, without first considering in what stage of development his first efforts had found the art.

When had engraved portraiture begun in France? We must look for its first steps in the illustrations of the books which were published during the second half of the sixteenth century; they teem with carefully executed small-sized portraits which, as a rule, were framed in decorative cartouches and bore lengthy inscriptions. Very few of them have been drawn from life; the first engravers, not trusting their own powers, were content to copy those exquisitely sensitive and delicate drawings, the crayon portraits which the Clouets made of royalty and the court at the time of Francis I, Henry II, and Catherine de Medicis. They are a wonderful pendant to Holbein's drawings of the courtiers of Henry VIII. The finest are now hanging in the famous Gallery of Psyche at Chantilly. Nothing can describe the subtlety with which the artist has combined refinement and realism and drawn with

delicate color the features of the famous personages of those tragic times.

Here is Henry IV as a careless youth next to the terrible Catherine when she was an innocent-looking young bride; further on are the baby daughter of Francis I and the indomitable head of the house of Guise. The sad Charles IX is represented here as a mere boy; there, a week before his death, shaking with fever and tortured by remorse for the fearful massacre which he had instigated. The ill-fated Mary Stuart wears becomingly her widow's mourning, and is surrounded by the chivalry and the beauty of the court. The success of these drawings was so great that every one desired complete sets of them, and the result was that they were copied over and over again, first by other artists, and finally by amateurs who were not very faithful to their models. The work of the Clouets was intelligently continued by several members of the family of Dumonstier, and the vogue of this exquisite form of portraiture lasted until the middle of the following century.

It was these finished miniatures which the first engravers attempted to reproduce on wood and copper; their drawing was in most cases weak, and consequently the resemblance was seldom faithful; their knowledge of line-work was very meager, and therefore the modeling was most primitive; but in spite of this, their work is interesting for its exquisite finish and its consistent effort to express the character of the individual. Such very personal little portraits as those of Philibert Delorme in his treatise on architecture, Orlando di Lasso in a book of motets, and the great Ambroise Paré in his treatise on the fractures of

the skull, shared the fame of those of Henry IV by Thomas de Leu, and greatly increased the popularity of engraving.

By the beginning of the seventeenth century it had become extremely fashionable to dabble in engraving, and painters, architects, goldsmiths, noblemen and even ladies were busy gouging wood and cutting copper with an enthusiasm which has bequeathed us a mass of small illustrations, tail-pieces, grotesques, mottos, emblems and other embellishments. Then there appeared during the reign of Louis XIII a peculiar genius in Claude Mellan. He adopted such an original technique that he had practically no followers. Considering cross-hatching rank heresy, Mellan spent a great part of his life making facsimiles on copper of more than four score charming pencil-drawings which he had made from life, using distinct lines which he made broader in the shadows. Although he thereby succeeded in producing a set of very remarkable plates, he was prevented by the exaggerated simplicity of his system from securing all the detail, the refinement of expression necessary to a real psychological study, and he was unable to express any color, texture or chiaroscuro whatever.

The most original artistic genius at that time was Callot, who had introduced etching in France; he delighted everybody with the facility and *esprit* with which he handled the needle, and he produced a great number of plates full of crisply drawn little figures which possessed so much animation that nothing like them had previously been seen. His two attempts at portraiture, however, are far from being significant;

it may be said that he was not serious enough for such work.

By that time portrait-engraving had become extinct in Germany, and it was achieving little of importance in Italy and Spain; in the Low Countries, however, it was producing masterpieces. Even if Rembrandt and Van Dyck had given the world nothing more than their etched portraits, their fame would live forever. In the former, the world found an artist who painted as effectively with the needle as with the brush, and an etcher who reveled in such powerful and correct chiaroscuro that his portraits were a perfect revelation. The glowing light with which he illumined his faces and the boldness and freedom of his line-work amazed the engravers of his time, for in comparison they had worked only in outline, and those who attempted to imitate him achieved very little success. In the plates of Rembrandt the engraved portrait reaches the last degree of warmth of expression and life.

As to Anthony Van Dyck, he had followed the example of Rubens and encouraged the leading engravers of Antwerp to reproduce his portraits on copper. The result was that noble work called his "Iconography," which contained over a hundred portraits of the leading painters and art patrons of the time, most brilliantly engraved by Soutman, the Bols-werts, Vorstermann and Paul Pontius under the master's jealous supervision. In directing this work Van Dyck developed such enthusiasm that he himself etched eighteen portraits from life, in which the faces are modeled with small dots; they are charming drawings which exhibit such a wonderful knowledge of

physiognomy, and possess so much life and color in spite of the simplicity of their treatment, that they remain masterpieces for all times.

Through the genius of Rubens and Van Dyck the art of engraving had become transformed; at last life and color had come into it. No such brilliancy in the treatment of flesh and varied texture had been attained by pure line-work before the appearance of Pontius's portrait of Rubens, and with the exception of the etchings of Rembrandt, nothing so human had previously been seen as Van Dyck's etching of Pontius himself.

But in spite of the best achievements of the Flemish engravers, there was still an important advance to be made before the copperplate could give such a faithful translation of a painting that besides the drawing and the color, it could reproduce all the refinement of detail, all the texture and chiaroscuro, all the painter-like effect of the canvas. That interval could be bridged only by a born draughtsman who had the soul of a portrait-painter and by an artist who would devote himself exclusively to the solution of that one problem. For that final step of its development, reproductive engraving had to go to France and to the unique Jean Morin.

It is incredible that so little should be known about an artist of his prominence, particularly as at that time the best artists were constantly "*en evidence*" and undertaking distant travels for the sake of their education and in order to gain patrons. We must assume that Morin lived a very quiet life and cared little for recognition. Who were his first masters remains a mystery; the references which are made to

him in the records of the time point only to the fact that he was always held in high esteem for the excellence of his work, and that everywhere his serious character commanded respect. Two things are nevertheless certain concerning him. One is that he had begun by becoming a well-schooled painter, for his etched work is of singularly uniform excellence; the other is that he had been influenced exclusively by the Flemish School. It was the etching of Van Dyck which tempted him to give up the brush for the graver, and it was his own peculiarly calm and conscientious temperament which impelled him to carry the original technique of that prince of portraiture to the last degree of finish.

On the other hand, it was from another Flemish artist, Philippe de Champaigne, who had made France his home, that he received inspiration and guidance throughout his life-work. In return for this he devoted himself to the faithful reproduction of as many of that master's canvases as he could engrave before his death.

Morin's work consists of a few figure-subjects and landscapes and fifty portraits. These are among the finest that were engraved during the seventeenth century, and they have the distinction of illustrating the reign of Louis XIII and his minister Richelieu. As an historical gallery they possess as much importance as the portraits made later by the school of Nanteuil: four of them are after Van Dyck, fourteen are from the works of various painters, including Titian, and all the rest, thirty-two in number, reproduce the dignified canvases of Philippe de Champaigne. It was natural for Morin to turn to the Flemish painter, not

only because the latter had soon after his arrival become the painter of the court and the head of the French School, but because his calm, precise art was admirably suited to the engraver's work.

The canvases of Philippe de Champaigne have little of the power of Rubens, or the coloring and supreme elegance of Van Dyck, nor do they possess the depth and originality of the portraits of Rembrandt, but they are characterized by an uncommon strength of draughtsmanship and composition, and they unfailingly exhibit such profound seriousness, restraint and dignity as few masters can boast of. As in the case of most of Morin's portraits, it is hard to gaze upon them without experiencing that peculiar sensation of familiarity with the human being represented, without being convinced that here is the bare truth just as an intelligent and thoroughly sincere nature beheld it, without feeling that some of the model's soul has passed into the canvas. It could not be otherwise with the work of an artist who had toiled so earnestly to follow an ideal, and who himself had been visited by so much affliction. De Champaigne became at the end of his life a Jansenist and a devoted Port Royalist—that is, a member of a community of austere human beings whose lives were so simple and whose thoughts were so high that they were a perpetual reproach to the selfish clergy of the day and the empty butterflies who crowded the salons of Versailles.

He has never come into his own, principally because he stood in such close proximity to more brilliant lights, and also because so many of his scattered paintings have become darkened with age. His work as the painter of Richelieu established such a popu-

larity for the portrait as it had not known before and as it has not known since. To-day, when his name is mentioned, one shrugs his shoulders and says: "Oh, well, but what was he compared to Rubens, Van Dyck and Rembrandt?", and then suddenly remembers that it was he who painted Richelieu and that the full length portrait which hangs in the Salon Carré of the Louvre and the triple study of the head which is in the National Gallery, London, will always rank with the masterpieces of portrait-painting.

Such was the artist to whom Jean Morin went for advice and for whom he developed such intense admiration and devotion. The Flemish painter must have readily seen how much the engraver's temperament had in common with his own, and immediately understood that his faultless drawing and conscientious nature would make of him an admirable interpreter of his canvases. Certain it is that he lost no time in encouraging him to develop his technique, and that he cheerfully gave him his portraits to copy. The friendship which ensued continued until death, and Morin devoted his life to popularizing the portraits of Philippe de Champaigne, later becoming himself affiliated with the noble sect of Port Royalists.

The peculiar significance of Morin's work, aside from the fact that it has been the principal means of perpetuating the work of a remarkable artist, is that it represents the first effort in the history of Engraved Portraiture to reproduce a painted portrait with all its refinement of drawing and variety of tones. No such trouble had previously been taken fully to represent all the color and chiaroscuro of a picture. In

order to accomplish this the engraver had to develop a painter's technique, and that was something very different from the precise and methodical line-work of the engravers who had preceded him. The etched work of Callot was mere line-work; Van Dyck supplemented this with some delicate modeling made with small dots; and Morin, developing this system to the last degree of refinement, bent all his energy to the absolutely faithful reproduction of the canvas in every detail of line and gradation of light. His technique is chiefly etching combined with burin work. As a rule, his faces are modeled entirely with etched dots, and he does this with such delicacy and refinement that in many cases they have the quality of a fine mezzotint. Only in a few of his plates does he use line-work to deepen his shadows, and this is done over the stippling. By means of this system he was able to express the greatest variety of tones, from the very light complexion of a blond Englishwoman to the dark skin and blue-black hair of a southern Frenchman. The hair he always etched with great care, with a line admirable alike for its precision and freedom; the frame alone seems to have been done with the burin. It is, however, in the treatment of the costume that Morin shows his independence of technical finish; he makes little pretense at securing realism in his expression of texture. Compared to the work of Nanteuil the surface of his armor and his moiré silk cassocks and rich lace collars often lack realism, while his backgrounds possess little of that soft gradation which enhances the beauty of so many later engravings.

But it is this very freedom which makes his plates so original and gives them such especial charm. Be-

sides, why should etching partake of the character of slow and precise burin work? Morin's chief pre-occupation is the rendering of the face and the preservation of all the character of the original; it is evident that he spares no pains to make his reproduction an absolutely faithful one. As to the rest of the picture, he does not consider it necessary to do more than recall the picturesque effect of the original's ensemble, but if he treats it with freedom he is careful to make every line serve a definite purpose; he is never careless. It is to his great sympathy and conscientiousness that Morin owed his success as a reproductive engraver, and the fact that his plates had a great influence on his contemporaries. Before him no such delicate tones and deep velvety blacks had been seen, no engraver had been so consistently correct and expressive in his drawing; so much justice had never been done to a painter.

The art of Morin was so personal that the efforts of his pupils Alix, Platemontagne and Boulanger to follow his technique remained unsuccessful; he was as inimitable in his brilliant effects of chiaroscuro as Mellan with his fiendishly clever but exaggerated simplicity of line.

Nevertheless, the lesson of thorough faithfulness he had given was not lost; the seed fell on fertile ground when Robert Nanteuil, at the outset of his career, studied Morin's work closely enough to imitate his technique in such portraits as those of Pierre Dupuis, the royal librarian, and the poet Gilles Menage. The engraver from Rheims had doubtless profited by the example of his own master Regnesson, whose work had already shown Morin's influence. Those clever

little portraits as well as a few others done in that style show a marked advance on the previous ones, in which he had followed that of Mellan, and the delicate little dots with which their faces are modeled paved the way for that system of close, short strokes with which he eventually succeeded in imitating to perfection the peculiar texture of skin. Nanteuil was to inherit the best in all who had preceded him and to combine all previous systems into one which would carry the art of Engraved Portraiture to its greatest development; but it was Morin who gave him the most eloquent example and who pointed out to him the last remaining step to technical perfection.

HIS WORK

ON looking through a complete collection of Morin's portraits one is immediately impressed by the small number of plates which denote crude beginnings. As none of them is dated, it is next to impossible to arrange his works chronologically, all the more so as the engraver perfected his technique and found his manner very early in his career. We find only one portrait which is really unsatisfactory, that of *Louis XI*, copied possibly from an old miniature, and only two which show any hardness of tone, the portraits of *Augustin* and *Christophe de Thou*; they are undoubtedly early works, the head of the dreaded hermit of Plessis-les-Tours being probably Morin's first effort. Then we have that most Gallic of Frenchmen, *Henry IV*, a quaint head drawn with much character; *Marie de Médicis*, after Pourbus; and *Henry II*, after Clouet. These last two are most excellent plates, the

first showing us that intriguing Italian princess shortly after her arrival from Florence, in all the glory of her wonderful complexion and golden hair; the second recalling the exquisite art of Clouet in the simplicity and delicacy of the treatment of the face and the superb detail of the costume.¹ We are then brought face to face with the great *Philip II* of Spain, in one of Morin's most serenely elegant plates after Titian, and the portraits of the two great saints of the time, *Saint François de Sales* and *San Carlo Borromeo*. To the four portraits after Van Dyck we must give special attention, for they contain Morin's masterpieces, the portrait of *N. Chrystin*, son of the Spanish plenipotentiary at the Peace of Vervins, and that of *Cardinal Bentivoglio*, the papal nuncio to the court of Louis XIII. Here we have Morin in his grand manner, transferring all the color of the original canvas to his copperplate and interpreting his models with a boldness, a softness, a clearness of purpose and a strength of sympathy wholly admirable. In awarding the palm, we hesitate between the deep tones, the velvety finish in the head of the somber Spaniard and the subtle modeling of the beautifully illumined, sensitive Italian face. Either of these portraits alone would have established Morin's fame.

The other two plates after Van Dyck represent women, *Margaret Lemon*, beloved of the painter, and the *Countess of Caernarvon*, a remarkable study in high lights, and one of Morin's most delicate plates.

¹ Why such an authority as Robert-Dumesnil should have classed the portrait of Henry IV's queen among the doubtful plates of Morin is a mystery. It is clearly the work of that master, and although an early plate, it is one of his brilliant ones.

The remainder of the gallery consists of his interpretation of Philippe de Champaigne's portraits, and the array of celebrities there represented is a notable one. What would we know of the features of that eccentric monarch, the melancholic *Louis XIII*, if we did not possess this striking etching of Morin? The father of "*le roi soleil*" is here posing, ill at ease, and probably wondering what Richelieu is going to make him do next. An unsatisfactory human being was he whose "principal merit was to have done what few mediocre characters ever do, bow down to the superiority of genius." His queen, *Anne of Austria*, is here shown both in the quiet garb of a widow (a delightfully simple portrait) and in the more ceremonious court mourning, while his prime minister, *Richelieu*, is represented in a plate than which there is none more interesting among Morin's works. A comparison between this impression of the great cardinal's character and that recorded in the superb engraving by Nanteuil is a most interesting one. In the latter we see the steersman of the ship of state in all his grandeur of noble purpose and responsibility, and we feel the immense will-power with which, in constant danger of his life, he bore long with his enemies, and then, driven to action, "went far, very far and covered everything with his scarlet robe." But in Morin's interpretation of the canvas of de Champaigne we see quite another side of the great statesman. It is the Richelieu whom we perceive through some memoirs of the time (and not the least trustworthy ones), and in the literary history of the early seventeenth century. It is a man wholly lacking in a sense of humor, possess-

Size of the original engraving, $12\frac{1}{4} \times 8\frac{3}{8}$ inches

ing plenty of vanity and constantly yearning for recognition as a literary light and a squire of dames.

Quite a different portrait is that of his nephew, *Vignerod*, shown here in three-quarter figure as the Abbé de Richelieu, a most attractive plate, and one of the only two portraits of Morin's in which the model is shown otherwise than in the usual bust form. The other one is that of *Vitré*, a famous printer of the time; it is one of the lowest-toned engraved portraits extant, and in its velvety blackness it is a most striking production. A fine impression of it will turn one's thoughts to Rembrandt and show the full extent of Morin's originality.

The list contains many famous personages: *Mazarin*; *Michel Le Tellier*; *Charles de Valois, duc d'Angoulême*, son of Charles IX and the beautiful Marie Touchet; the *Maréchal d'Harcourt*, the "Cadet à la perle" of the more famous portrait by Masson and the valorous head of the armies of Louis XIII; the charming *Comtesse de Bossu* and her secretly married second husband the *Duc de Guise*; the *Maréchal de Villeroy*, preceptor of Louis XIV; *Potier de Gesvres*, also a warrior; and the *Chancellor Marillac*, whose brother was executed by Richelieu and who himself became the cardinal's victim, though in a less tragic way. All these plates are an admirable interpretation of their models, and show an absolute lack of mannerism. With their brilliant contrasts of light and shade and the uncommon amount of texture due to the freedom of the line-work and the rich color of the ink employed, they have a richness of tone and a decorative effect shared by few of the portraits made later in the century. Some of them are engraved in a rather high key and show a

simply modeled head against a light background, as in the case of *Brachet de la Milletière*, the savant who was first an intolerant Calvinist and then became a militant Roman Catholic. In other portraits like that of *Maugis*, the *maître-d'hôtel* of the king, the artist seems to have reveled in the deepest tones of his inky palette, and he renders the olive skin and the raven hair of this strong-featured individual with a most striking intensity.

Splendid likenesses of prominent ecclesiastical dignitaries are to be found among the portraits which complete this interesting gallery, but one there is which we must pause to contemplate, and it is the faithfully reproduced portrait of that extraordinary human being, J. Paul de Gondi, better known as the *Cardinal de Retz*. In a masterpiece of draughtsmanship, Morin duplicates the art of de Champaigne in expressing all the cleverness and daring, the ambition and the sense of humor, of this born gambler, whose genius for intrigue was at the bottom of the war of the Fronde. One can see him, with his yellow, oily face, unkempt and unshaven, limping through the narrow streets of Paris, distributing largesses among a populace which, the following hour, he would betray to the nobles, and then again champion.

As a pendant we have the brilliantly executed head of *Omer Talon*, *avocat-général du Parlement*, the greatest pillar of French jurisprudence and a great man in his day; it is a plate which Rembrandt would have deigned to look at more than once.

Finally the famous Port Royal is here represented in the persons of *Jansenius*, *Bishop of Ypres*, who raised such a storm in church circles of that time;

After the painting by Philippe de Champaigne
Size of the original engraving, 12¼ × 9¼ inches

Arnauld d'Andilly, the head of the great family of that name and the protector of Port Royal; and *Jean Du Verger de Houranne*, *abbé de Saint-Cyran*, its confessor, a man worthy of the first centuries of Christianity. They were famous men in their day, and their names were on everybody's lips; their story spells the most serious chapter of the history of their age, and still they are all but forgotten in comparison with the great personages of the court, and even their painted portraits are relegated to obscurity.

In these masterly prints of Morin, however, they appear to us just as they looked in their day, with much of their strength and weakness, their aspirations and their secret ambitions. So much animation is there in their faces that it is no hard matter to feel like the old monk in the Spanish monastery who, left alone of all his brothers, said, as he looked on the new pictures by Velasquez, "I sometimes think *we* are the shadows."

ROBERT NANTEUIL

1630-1678

BY LOUIS R. METCALFE

IT is a curious fact that in these days of exhaustive research in everything which concerns the fine arts, Robert Nanteuil, the portrait-engraver of Louis XIV, has remained until so recently both illustrious and unknown. To be sure, his name has been mentioned in all the histories of art, and in the text-books of engraving he is dwelt upon at some length and given a prominent place among the engravers of his time; but he was never found worthy of any especial study, of the least little *brochure*. His name has been familiar only to the connoisseurs and the print-collectors; to them it has always been synonymous with the greatest excellence attained by the lost art of line-engraving.

This silence was broken finally in the artist's own birthplace. In 1884 Mr. Charles Loriquet, curator of the library of the city of Rheims, who had just completed a collection of Nanteuil's portraits for the city museum, addressed the Academy at one of its public sittings and eloquently pleaded with the authorities to erect a monument to him whom he considered second only to the great Colbert as the most illustrious son of Rheims. His description of the artist and his work created such enthusiasm that he was later in-

duced to publish it, together with some interesting documents concerning Nanteuil. The unique little book found its way into many libraries, private as well as public, and has ever since been unfindable.

Many new books on engraving have appeared since that day which have devoted as much as two or three pages to this brilliant artist without, however, giving his work more than a superficial criticism. It was not until Mr. T. H. Thomas published his recent work "French Portrait Engravers of the Seventeenth and Eighteenth Centuries" that the artist received proper recognition. Nanteuil is here frankly recognized as one of the most admirable figures in the history of art, and proclaimed not only prince of portrait-engravers but also a great artist among the portrait-makers of all times. The thirty pages which are devoted to him constitute the most brilliant and thorough criticism that has ever been made of a line-engraver,—they are a splendid analysis of the artist's technique, his development, his influence on his contemporaries, and the exalted position which he occupied among them. Without doubt many readers of that interesting work will wonder why they never had before heard of such an important artist.

It was only four years ago that I for one made his acquaintance. While I was looking through a large collection of old engraved portraits, one head in particular arrested my attention; it was drawn with such rare precision, modeled with such *maestria*, it had such expressive eyes and mouth, that it made all the other portraits seem flat and lifeless. My admiration turned into wonderment when I saw by the signature

that the artist had drawn it from life as well as engraved it. I had known the work of only those showy engravers who, in the time of Louis XV, were content to copy the work of the leading painters of the day and improve on it if they could. There was no *traduttore traditore* about this expressive portrait; here was something of a very different order. The artist was a real portrait-maker, a student of character, a worthy comrade of Holbein, a draughtsman whose ambition it was first to represent the subject as he really looked, then to make as fine an engraved plate as possible.

The text-books on engraving which fell into my hands informed me of the rank he had occupied in that famous school of engraving established by Louis XIV and of the great number of prominent people he had drawn from life. That was enough to whet my curiosity to the limit, for my interest in physiognomy had become a passion, and whenever I had found in the galleries of Europe a convincing portrait of a well-known historical personage, my delight had been keen. Holbeins, Van Dycks, Mierevelts and Quentin de Latours had been for years the objects of my enthusiasm; they were living documents, revelations of personalities such as few memoirs provided. When the catalogue of Robert-Dumesnil, the only complete list of Nanteuil's portraits, had informed me that Nanteuil's models had been in great part the men who had given so much greatness to the reign of the most splendid of modern potentates, I felt that the collection must constitute an historical document of no mean interest, if the likenesses of those celebrities

were as convincing as that of the obscure *Louis Hesselin, Président de la Chambre des Deniers*, which I now owned.

But it was not until I had pored over the contents of six huge volumes containing his complete works, at the Cabinet des Estampes of the Bibliothèque Nationale, that I realized what a unique achievement had been that of the engraver from Rheims. He had made, it seems, a multitude of drawings from life of his contemporaries, in pencil, silverpoint, crayons, and pastels, from the King himself down to the humblest curé of his parish, and had then engraved many of them on copper, securing thereby so many impressions that although almost all of his original drawings have disappeared, his work has been perpetuated for all times. (Whoever has said that a multitude of sheets of paper scattered among the museums of the world constituted a monument more enduring than the pyramids, must have been a collector, for he realized with how much jealousy a treasure can be guarded.) Throughout all this work Nanteuil exhibited such power as a draughtsman that his portraits won international fame for their resemblance, and moreover he engraved with such perfection that his work and the influence he exerted over the great school formed by Louis XIV mark the Golden Age of Line-engraving.

It is therefore in a dual capacity that Nanteuil must be admired, and this point has not been sufficiently emphasized by his critics. He is an inspiring example of a man who has set out to do only one thing (for he never attempted anything but heads)—but has learned to do it so well that he rises far above his

rivals and has made his name a synonym for supreme excellence. To carry the engraved portrait to its greatest possible perfection had been his ambition, and he succeeded in this, for it is not possible to imagine the burin producing more decided color, greater fullness of tone, and finer finish than can be found in a great many portraits by Nanteuil. It can be said that he used the sharp metal point with the same freedom as a great painter uses a brush; his technique was so elastic and susceptible of modification that he was enabled to test to the fullest extent the possibilities of his medium and to determine its limitations.

When one is lucky enough to have the wonderful collections of the Cabinet des Estampes at his disposal, the next thing to do after having seen the works of Nanteuil is to examine those of his contemporaries. It becomes perfectly clear which artists have influenced him, and to what extent; it will also be evident at a glance that he influenced all the rest. This study, however superficial, will take several days, for the number of *peintre-graveurs* encouraged by Louis XIV through the indefatigable Colbert was great, and their work was enormous. Edelinck, who until recently has been better known than Nanteuil, was extremely prolific, and Pitau, the Poillys, Masson, Lombart, and Van Schuppen, to say nothing of Melan and Morin among many others, produced a great many portraits. What a collection! What a complete iconography of *le grand siècle!* Here is everybody who was at all prominent in the most civilized country of the time. Is it possible not to develop a love of portraiture, a strong interest in engraving and a desire to collect engraved portraits, of all pictures

the most convenient, the most possible to acquire and keep in large numbers?

I am reminded of John Evelyn and Samuel Pepys as well as of the abbé Michel de Marolles, who were the first great or systematic collectors of engraved portraits, the Frenchman owning twenty thousand prints and all the portraits extant. Evelyn wrote to Pepys advising him to collect them, for, as he said, "some are so well done to the life that they may stand in competition with the best paintings." He then adds: "This were a cheaper and so much a more useful curiosity as they seldom are without their names, ages and eulogies of the persons whose portraits they represent. I say you will be exceedingly pleased to contemplate the effigies of those who have made such a noise and bustle in the world, either by their madness and folly, or a more conspicuous figure by their wit and learning. They will greatly refresh you in your study and by your fireside when you are many years returned." We later see him write in his "Diary" that he had "sat to the great Nanteuil who had been knighted by the king for his art" and had considered himself "unworthy of being included in that gallery of models whom Nanteuil's art has made famous." We know by his own "Diary" that Pepys became an enthusiastic collector and that he went over to Paris to buy many prints by the great engraver, at a later date commissioning his wife to secure for him many more which he strongly desired.

Portrait-painting had at that time become a mania, and there was no one of any prominence who did not wish to leave to posterity a record of his physical appearance. Richelieu in a single order had called for

an entire gallery full of portraits of celebrities. The French *peintre-graveurs* proved how effectively color could be translated into black and white, and by revealing the true relation of engraving to painting shared the fame of their contemporaries in the other arts.

It is not possible for the lover of prints to glance at this interminable gallery and not be amazed at the number of portraits which show much originality in their treatment and infinite skill in their execution, but I defy the admirer of truth in art not to be impressed by the small number of those by other engravers which are distinguished by both simplicity and conviction. The heads of Mellan, which were drawn with as few lines as possible, remain absurdly unique, and the etched portraits of Morin, who was a faithful translator of Philippe de Champaigne, are too personal for comparison. But the mass of the *peintre-graveurs* give constant proofs of having been influenced by Nanteuil's method, and in the case of Van Schuppen there is a very close following indeed in the master's footsteps. He is supposed to have been his favorite pupil.

Nevertheless, Edelinck, brilliant colorist as he was and a wonderfully clever artist with his burin, refused to do any original work and too frequently attempted to add vigor and brilliancy to the portraits he copied. In modeling his faces he, in the opinion of Nanteuil himself, broke his lines unnecessarily. The work of Masson lacks quiet and balance, when his faces are not out of drawing, while that of the rest of the school displays that great vitality and style which made it a model for all the artists of the following

NANTEUIL. LOUIS XIV

Engraved in 1666 from Nanteuil's own drawing from life
Louis XIV was twenty-eight years of age when this portrait
was engraved

"In appearance Louis, though admirably proportioned, was slightly below the middle height. His eyes were blue, his nose long and well formed. His hair, which was remarkable for its abundance, was allowed to fall over his shoulders. With his handsome features and his serious—perhaps phlegmatic—expression he seemed admirably fitted to play the part of a monarch." Arthur Hassall, *Louis XIV.*

Size of the original engraving, $19\frac{3}{4} \times 16\frac{3}{4}$ inches

NANTEUIL. ANNE OF AUSTRIA, QUEEN OF FRANCE

Engraved in 1666 from Nanteuil's own design from life
Anne of Austria was the daughter of Philip III of Spain, wife of
Louis XIII of France and mother of Louis XIV. She was Regent
from 1643 to 1661.

Size of the original engraving, $19\frac{3}{4} \times 16\frac{3}{4}$ inches

century, without, however, combining these qualities with the solidity, consummate science, and restraint which characterize almost all Nanteuil's portraits.

Nothing more admirable has been done in the realm of engraving than these quiet prints in which there is no affectation, no parade of technical brilliance, and it is a question whether anything more sincere has been accomplished in the history of portraiture. The portraits of Nanteuil take their place with perfect dignity alongside of the subtle crayon portraits of the courtiers of Henry VIII at Windsor Castle, and the exquisite drawings of the courtiers of Francis I and Henry II, which alone would make Chantilly worthy of a pilgrimage. Nanteuil's drawing is perfect and his massing of tones masterly; his expression of texture has both realism and breadth, and his indication of skin by means of a system of very close and delicate short strokes is an admirable solution of a problem which had been the despair of the entire school.

The most superficial study of his modeling of that side of the face which is in full light, for instance, will reveal the supreme delicacy, the never-failing tact, with which he carries out this most difficult part of the work. His burin is as light as a feather, there is not a line too many, and he knows the exact value of each and every tone. It is interesting to note that, according to one of his pupils, he had made a careful study of the chiaroscuro of Leonardo, a master for whom he had an especial admiration.

The great simplicity of his composition allowed him to concentrate all the resources of his art on the expression of character in the head. With an under-

standing of character which was the most sympathetic of his day, he strove to represent his model with all the outward calm of nature which was possible in an age when form reigned supreme and every one was *en parade*. To secure this touch of life Nanteuil, at the last sitting, would do everything in his power to bring out in his sitter's face that look of amused attention which is so characteristic of his portraits, with the result that, as a brilliant critic has recently remarked, "instead of one vivid impression his portrait is the sum of many impressions, a balanced conclusion rather than a single piece of evidence." It is this which makes his work so interesting as a historical document. Here we see in the truest light the divine monarch, the arrogant noble, the worldly prelate, the serious man-of-letters, and the humble commoner who fill all the French memoirs of the seventeenth century.

It is indeed high time that the artist who has been called "the Louis XIV of engraving" came into his own again, or that he at least be accorded some of the immense popularity which he enjoyed during the palmy days of the *grand siècle*. For two centuries he has lain in an obscurity which it is not easy to understand, in spite of the fact that his style of portraiture went out of fashion long before the great monarch died. It remained extremely unpopular throughout the eighteenth century, for what could those austere bust portraits against a plain dark background, in the simplest of settings, have in common with the decorative compositions of the days of Louis XV, in which velvet and embroideries, ermine and rich lace, inlaid armor, canopies and complicated fur-

NANTEUIL. JULES, CARDINAL MAZARIN

Engraved in 1656 from Nanteuil's own drawing from life
This is one of the most interesting of the many portraits of the great
minister engraved by Nanteuil.

Size of the original engraving, $13\frac{1}{2} \times 10\frac{1}{2}$ inches

NANTEUIL. BERNARD DE FOIX DE LA VALETTE, DUC D'EPERON

Engraved in 1650 from Nanteuil's own drawing from life

"This man was the son of the Duc d'Epéron, who was seated in the carriage with Henry IV at the time when the king was assassinated. The Duc was suspected of complicity in the plot, but this never was proved. Both the elder and the younger Espéron were extremely haughty and arrogant men. Their possessions in Guienne were of an almost royal character and they governed them practically independent of the royal authority. Both were associated with the reactionary party."

J. B. Perkins, *France under Richelieu and Mazarin*.

Size of the original engraving, 12 $\frac{5}{8}$ x 10 inches

niture, played such an important part? In comparison with these decorative panels they seem cold and uninteresting, but on the other hand they alone represent real portraiture; they reflect the earnestness of Port-Royal.

There cannot have been a time when they were not admired by those who possessed true artistic perception, but there is no indication that any special value was attached to them or that they were collected. Suffice it to say that at the Mariette sale, in 1775, the complete works of Nanteuil, two hundred and eighty proofs of two hundred and sixteen plates in choice impressions, realized only a trifle over one hundred dollars. More than five times that sum has recently been paid for one single print. In 1825, at a famous auction, record prices of twelve dollars and nine dollars were paid respectively for the portraits of *Pompone de Bellièvre* and *Richelieu*. Half a century later their value was not much greater, and general interest in them remained dormant until four years ago when the collecting world suddenly realized their artistic worth, and made a raid on the leading markets of Europe.

It is said that Nanteuil kept a journal; if so, we must greatly deplore the fact that it has not been preserved to us, for we would have been treated to a delightful account of the habits of painters in that time and to many anecdotes connected with their sittings. Who shall ever know the number of Nanteuil's sitters? His studio was found full of pastel portraits many of which had never been engraved, and his pencil and pen sketches seem to have been innumerable. In spite of his reputation of *bon vivant* and his popu-

larity with both the *bourgeoisie* and the nobility, allusions to Nanteuil in the memoirs of the day are fragmentary and we know little about the man. We are told, however, that he was born in Rheims about 1630 and that he drew so persistently during his school years that his studies were sadly neglected. It was only through the excellence of the frontispiece which he engraved for his thesis that he succeeded in securing his degree. The conscientious engraver Regneson taught him all he knew, gave him his sister in marriage, and sent him to Paris, not to complete his apprenticeship, for Nanteuil was already more famous than his master, but in order to place him under the influence of the court painters.

In the great city his wit and conviviality won him many friends and his talent for securing an excellent likeness secured him instant fame. It is said that he received his first order by following some divinity students to a wine-shop where they were wont to take their meals. There, having chosen one of the portraits he had brought from Rheims, he pretended to look for a sitter whose name and address he had forgotten. It is superfluous to add that the picture was not recognized, but it was passed from hand to hand, the price was asked, the artist was modest in his demands, and before the end of the repast his career had begun. He made so many portraits in a week that he was advised by a famous connoisseur to limit his production to four. At night he copied them in pen-and-ink for the sake of familiarizing himself with that burin work which later was to astonish Europe.

During many months he catered to the growing demand for the portrait, with drawings in the style of

those of the Clouets and the Dumonstiers. One has but to realize in what favor all portrait-makers were in those days in order to understand how this peculiarly gifted artist sprang into such sudden popularity. The dignity of French portrait-painting was being upheld by the noble Philippe de Champaigne, under whose influence the painters of the time produced a great number of portraits which, if not technically brilliant, were presented with that serious dignity which was characteristic of the early seventeenth century and were drawn with admirable sincerity and correctness. To him Nanteuil went for advice and encouragement, and soon after presented the engraved copy of the painter's latest portrait; it met with so much success that it can be said to have started the tremendous vogue of the engraved portrait and the formation of the great school which Colbert installed at the Gobelins.

Meanwhile the artist, already a perfect draughtsman and very proficient with pastels, had carefully studied the technique of all the leading engravers, and as soon as he had evolved a system of his own bent all his efforts on revolutionizing the art. Nanteuil made a picturesque début during that incredible opera-bouffe, the War of the Fronde. He was draughted into military service, but although frequently active with a blunderbuss and wearing a false beard in imitation of the dreaded Swiss mercenaries, he succeeded in making a portrait of all the heroes of the day. For him sat *Condé* and the *Duc d'Epemon*, the last representative of feudalism in France; the *Ducs de Bouillon, de Mercœur, de Nemours, and de Beaufort*, who met in taverns to appoint the generals

of an army which did not exist; the Archbishop of Paris, *de Retz*, who appeared in Parliament armed like a pirate; that fat poet and peasant *Loret*, who sold on street corners his "Muse Historique," a daily satire on the intriguing nobles "who were not afraid of bullets but who were in deadly fear of winter mud," and lastly the indomitable prime minister, *Cardinal Mazarin*, whom the populace twice drove from Paris and then so madly welcomed back that many were trampled to death in the riot. Of that wily Italian he engraved as many as fourteen portraits.

During the few years which followed the civil war he made his most interesting portraits.

It was then that he assiduously frequented the literary salons of the capital where, a poetaster of some renown, he was ever welcome and made that beautiful pastel portrait of *Madame de Sévigné* which has been preserved to us, and another of *Mlle. de Scudéry*, who thanked him as follows:

Nanteuil en faisant mon image
A de son art divin signalé le pouvoir,
Je hais mes traits dans mon miroir,
Je les aime dans son ouvrage.

At this time he engraved the set of small-size portraits which represents the high-water mark of his talent. Can one possibly imagine anything more exquisitely choice than his heads of *Maridat* the philosopher and *Hugues de Lionne* the secretary for foreign affairs? With equal excellence he made the portraits of *Chapelain*, one of the founders of the French Academy, who reported himself to the King as a greater poet than *Corneille*, *Scudéry*, who signed the

NANTEUIL. JEAN LORET

Engraved in 1668 from Nanteuil's own drawing from life
 Loret is chiefly remembered for his *Gazette*, written in *vers libres*,
 which he began to issue in 1650, and continued until his death in
 1666.

Size of the original engraving, $10\frac{1}{8} \times 7\frac{1}{8}$ inches

NANTEUIL. FRANÇOIS DE LA MOTHE LE VAYER

Engraved in 1661 from Nanteuil's own drawing from life. Few were Le Vayer's equal either in wit or learning. His writings were exceedingly numerous. Regarded as the Plutarch of his century for his boundless erudition and his mode of reasoning. He died at the age of eighty-six, in 1672, having enjoyed good health to the last days of his life.

Size of the original engraving, $10\frac{3}{4} \times 7\frac{1}{2}$ inches

popular novels written by his sister, the witty *Marquis de St. Brisson*, the poets *Loret* and *Sarrazin*, the genial *Abbé de Marolles*, savant and print-collector, the learned octogenarian *Le Vayer*, and the ex-preceptor of the King, the archbishop of Paris, *Péréfixe de Beaumont*.

These portraits owe their size to the fact that they had been used as frontispieces for the works of those various personages, but the special care, the *con amore* finish with which they are executed, is due to the fact that the subjects were warm personal friends of the artist. The portrait of *John Evelyn* was made in the same way, although before the artist's technique had reached its fullest development.

Before the year 1660 Nanteuil made, besides many portraits including those mentioned above and several of Mazarin, four very remarkable ones of a larger size. They are those of *Cardinal de Coislin*, the young *Duc de Bouillon*, *Marie de Bragelogne*, and the abbé *Basile Fouquet*. The prelate was a Jesuit who became chaplain of Versailles; the youth, as lord chamberlain of France, had the honor of handing the King his nightshirt, an honor which he forfeited forever when on two successive nights he forgot his gloves. The woman was an old love of Richelieu; the delicate modeling of her careworn face is worthy of Holbein's best manner and is executed with a tact that baffles description. This plate reminds us of the fact that out of two hundred and sixteen portraits Nanteuil made only eight of women; of these only two were made from life,—that of *Anne of Austria* and the one mentioned above, but they are gems of purest ray serene which make us sigh when

we think of what he could have done with Henrietta of England and Mesdames de Lavallière, de Montepan, and de Maintenon! As to the fourth portrait, it is that of the brother of the great *Surintendant des Finances*, Nicolas Fouquet; he was at that time the head spy of Mazarin as well as the chancellor of the orders of the King and the most accomplished rascal who ever fished in troubled waters.

These four engraved portraits are masterpieces of characterization, and exhibit in the most eloquent way the master's powerful draughtsmanship, his utter lack of mannerisms, and the sympathetic way in which he varied his entire technical treatment to suit different subjects. Here is abundant proof that he was primarily a portrait-maker, that, in spite of the fact that he handled the burin with as much ease and sureness as his pencil and chalks, he never strove after effect and never allowed his skill to carry him away and mar the unity of his perfectly balanced composition. He is a psychologist who consistently strove to brand his model's soul on his countenance. Of no other *peintre-graveur* can we say as much.

With the year 1660 came the royal marriage, and a twelvemonth later the death of the despotic Mazarin and the emancipation of the young King. Nanteuil's fame by this time was thoroughly established, he was everywhere recognized as a past-master of his art and was in a position to refuse as many orders as he pleased: The leading men in the church, the parliament, and the *bourgeoisie*, which always followed the lead of the nobility, did not rest until they had the artist from Rheims engrave their portraits and strike off many hundred impressions, which were

quickly enough distributed among their families and friends. Among them were the Maître d'Hôtel and the physician of the King, *Guenault*, the quack who looked after the health of the Queen, and *Dreux d'Aubray*, who became the first victim of his daughter, the famous murderess, the Marquise de Brinvilliers. The two great protectors of Nanteuil at this time were *Michel Le Tellier* and *Nicolas Fouquet*. Of the former, who was then war minister and who as chancellor of France died the day after signing the fatal Revocation of the Edict of Nantes, we have ten convincing portraits, as well as five of his son *Charles Maurice* who became the worldliest of archbishops, and one of his eldest son who became the dreaded war minister *Louvois*. These sixteen portraits of the Le Tellier family represent some of Nanteuil's best work. The portrait of *Fouquet* is a great historical document, a piece of most subtle characterization done in the artist's best manner, and it is interesting to note that it was made only a very short time before the sensational fall of that then most powerful man in the kingdom. Could we but know what thoughts ran through the head of the Lord of Vaux as he sat for his portrait with a quizzical smile! Nanteuil, by the way, has left us the record of the appearance of practically all the principal figures of that sensational trial which lasted three years and the outcome of which alone assured the complete independence of the King.

Nanteuil had now patrons influential enough to insure him a gracious welcome at court. His greatest ambition had been to paint the young King and he felt able to improve greatly on the efforts of both

Mignard and Lebrun. With this end in view he addressed to the King a petition for a sitting in such eloquent verse that the request was readily granted. The first pastel portrait of the King seems to have made a small sensation at court; "Come and look at your husband in this portrait, madame," said Anne of Austria to the young Queen; "he fairly speaks." Still greater, however, was the King's delight when he saw the engraved copy of the portrait which Nanteuil later presented to him. He rewarded with a gift of 4000 livres the artist whom he had already named court painter and engraver with a lodging at the Gobelins, and at whose bidding he had raised the status of engraving to a fine art.

There are in all eleven of these portraits of Louis XIV and they give us an excellent idea of the haughty appearance, the conceited expression of the demigod during the happiest period of his life. What care we for the old monarch who later was caricatured by the pomp of Rigaud's painting and the satire of Thackeray? This is the young Alexander who has just seized the reins of government and set up the most brilliant court in history. In the earliest one he is twenty-six years old, madly in love with Mlle. de La Vallière, and building Versailles with feverish haste; at the last sitting he is thirty-eight and hopelessly under the sway of Madame de Montespan. Here he bears our gaze with a contemptuous air, the man who, "if he was not the greatest of kings, was the greatest actor of majesty who ever filled a throne." These portraits were considered extraordinary in point of resemblance. The great Bernini himself, who had come from Italy to make a bust of the King,

NANTEUIL. NICOLAS FOUQUET

Engraved in 1661 from Nanteuil's own design from life

"Of the three ministers to whom Louis had openly given his confidence, Lionne, Le Tellier, and Fouquet, the last named was the only one who possessed the qualities necessary for a prime minister.

"It was generally believed," says Madame de La Fayette, "that the Superintendent would be called upon to take the Government into his hands." There is no doubt whatever that Fouquet himself expected eventually to succeed Mazarin." Arthur Hassall, *Louis XIV.*

Size of the original engraving, 13 x 10 inches

NANTEUIL. BASILE FOUQUET

Engraved in 1658 from Nanteuil's own drawing from life
Basile Fouquet, Abbé de Barbeaux and Rigny, Chancelier des
Ordres du Roi, was the brother of Nicolas Fouquet, the famous
Superintendent of Finance.

Size of the original engraving, $12\frac{3}{4} \times 9\frac{3}{4}$ inches

warmly congratulated the engraver on "the best portrait ever made of his Majesty," and this before the leading personages of the court.

An unusual feature of these royal portraits is that seven of them are life-size, a feat which had not been previously attempted.

It had become the fashion to hang these portraits in rich frames at the top of the high wainscots used in those days, and the very large size adopted by Nanteuil made of them decorative panels which held their own even in a roomful of paintings. Many of the nobles must have owned complete sets. They met with such favor that during the last four years of his life the artist engraved entirely in that size, about twenty-two inches by thirty, and had started a gallery of all the great men of France; he had actually produced as many as thirty-six before he died in 1678. The list includes the portraits of the Queen Mother *Anne of Austria*, decked out in all her finery a few weeks before she died, that of the young *Dauphin*, the effeminate brother of the King the *Duc d'Orléans*, *Colbert*, *Turenne*, *Louvois*, *Bossuet*, the *Duc de Chaulnes*, and several other celebrities. They are admirable plates in which he secured broad masses and simple effects by means of the same system he used in his small portraits. In spite of the very large surface and what seems like a million lines there is no confusion, not a flaw in the unity of his composition. They had formed the special admiration of the last Medici Duke of Tuscany when, on a visit to France, he had insisted on meeting Nanteuil. From him he purchased for the Uffizi Gallery in Florence the portrait of the painter himself and those of the King and Turenne. He more-

over obliged him to accept a pupil *dans l'intimité*, a thing which Nanteuil had never done for he always locked himself up when he engraved his plates. It was that Domenico Tempesti who has left us such an interesting record of the habits of the engraver and the ideas he held on the subject of portraiture. It is from him that we know that the master made all those delightful pastel portraits in three sittings of exactly two hours each. Would that we knew how long it took him to engrave them! we can only form a vague idea of this from the fact that in his most prolific year he made fifteen engraved portraits. Robert-Dumesnil limits to ten the portraits engraved entirely by Nanteuil; the selection he makes is judicious, but the number was certainly far greater. Of course the purely mechanical draughting of the frame and the filling of the background was the work of assistants, and it is more than probable that in many of the less important plates and in the life-size portraits, on account of the great surface to be covered, the costume was engraved by such pupils as Pitau and Van Schuppen, for instance, as their cleverness for such work almost equaled their master's. But in all the small portraits and those of *Turenne* and the *Ducs de Bouillon*, for instance, we recognize everywhere the vigorous yet tactful touch of Nanteuil himself.

Reproductive work was for Nanteuil an exception. The plates which he engraved from the paintings of other artists number thirty-eight; to each of them he affixed the name of the painter with a fairness which Edelinck, for one, seldom exhibited. It is natural that these plates should show little of that inspiration and originality which were distinctive of a born character

NANTEUIL. JEAN CHAPELAIN

Engraved in 1655 from Nanteuil's own drawing from life
 Jean Chapelain, born at Paris, December 4, 1595, died February 22,
 1674. His mediocre poem "La Pucelle" brought him much more re-
 nown than the "Iliad" brought to Homer. It was Chapelain who cor-
 rected the first poems of Racine.

Size of the original engraving, $10\frac{5}{8} \times 7\frac{1}{2}$ inches

NANTEUIL. POMPONE DE BELLIÈVRE

Engraved in 1657 (when Nanteuil was twenty-seven years of age) after the painting by Charles Lebrun. By many authorities it has been described as the most beautiful of all engraved portraits.

Size of the original engraving, $12\frac{3}{4} \times 9\frac{3}{4}$ inches

student like the artist from Rheims, but the majority are supremely interesting and the finest are masterpieces. It is evident that in the earliest ones, notably in the head of *Chavigny*, reputed a son of Richelieu, he was experimenting with technique and that several others which were used as frontispieces were merely potboilers. Even the portrait of Queen *Christina of Sweden* and the much overrated one of the Dutch lawyer *van Steenberghen* are nothing more than interesting studies of simple linework and softness of tone. In those of the two little sons of the Duchesse de Longueville, the *Comte de Dunois* and the *Comte de Saint Paul*, we see how easy it was for Nanteuil's technique to express the soft outline and the tender complexion of youth with a charming effect.

After Lebrun he engraved with an admirable chiaroscuro the head of the Chancellor *Seguier*, and that well-known portrait of *Pomponne de Bellièvre*, statesman and philanthropist, which, if lacking in vigor, represents the highest point reached by the intelligent refinement of linework. But it is only with the sober and precise work of his master Philippe de Champagne that Nanteuil had a positive affinity. The two artists held identical views about portraiture and the Flemish painter found in the engraver from Rheims an interpreter who fairly breathed in unison with him. It is not possible to imagine anything more admirable than the engraved portraits of *de Neufville*, bishop of Chartres, *Richelieu*, and Marshal *Turenne*. They undoubtedly represent the last word on the subject of line-engraving. The face of the Cardinal is treated with all the subtlety of Velasquez and the head of the greatest captain of his time is modeled

with a strength of coloring which Rembrandt himself would have admired. This plate shows in the clearest way Nanteuil's ability to represent different textures: the hair, skin, lace, silk, and steel armor are treated with precision which is wholly satisfying and a breadth which commands the highest admiration.

From the inventory made in his house the day after his death we learn that Nanteuil had for years been dissipating in extravagant living the large sums he had earned with his work. His household goods, his drawings, and the tools of his profession were sold under the hammer, and it is amusing at the present day to realize that a lot consisting of 2966 of his prints, together with many reams of paper and his printing-press, were valued at only seven hundred dollars.

It is also explained why most of his portraits went through so many different states; it was chiefly on account of the "theses." A curious fashion it was by which wealthy students in law, philosophy, and the arts formally dedicated their graduating theses to one or another distinguished personage whose engraved portrait they ordered from a *peintre-graveur*. This, with a lengthy dedication, was then attached to the printed thesis as a frontispiece and sent to the patron and to many of his friends. It is thus that the Chancellor d'Aligre commissioned Nanteuil, who had the monopoly of such work, to engrave and strike off twenty-five hundred proofs of a new and extra-large portrait of the King measuring thirty inches by forty-two for his son's thesis; for this and the printing of the thesis itself the engraver received the sum of 10,400 livres, or about \$9000 of our money. The price

NANTEUIL. HENRI DE LA TOUR D'AUVERGNE, VICOMTE DE TURENNE,
MARÉCHAL DE FRANCE

Engraved from the painting by Philippe de Champaigne
"It is not possible to imagine anything more admirable than the engraved portraits of *de Neufville*, bishop of Chartres, *Richelieu*, and Marshal *Turenne*. They undoubtedly represent the last word on the subject of line-engraving. . . . The head of the greatest captain of his time is modeled with a strength of coloring which Rembrandt himself would have admired."
Louis R. Metcalfe.

Size of the original engraving, $15\frac{1}{8} \times 11\frac{3}{8}$ inches

NANTEUIL. JEAN-BAPTISTE COLBERT

Engraved in 1668 from Nanteuil's own drawing from life
To Colbert Louis XIV was indebted for much, if not all, of the success
of his enterprises during the twenty-five years succeeding the death of
Cardinal Mazarin.

Size of the original engraving, $19\frac{3}{4} \times 16\frac{3}{4}$ inches

of an ordinary engraved portrait was \$2000. Other less wealthy postulants had to be content with ordering a reimpression of a plate which had already been used and which needed only a change of dedication. In this way the portrait of the Dauphin for instance went through fifteen states and one of the King went through eleven; the plates were naturally often retouched by the artist in order to enable them to withstand so much use. Not to these theses alone, however, must the great number of royal portraits which were printed be attributed, for they had become immensely popular throughout the kingdom and whoever could afford it had one hanging in his house. In 1667 Cardinal de Bouillon ordered the portrait of the King for his thesis, and some years later another student selected for his patron the Cardinal himself. In 1675 it was the son of d'Artagnan, dear to all lovers of romance, who was presented by his father with the finest of the King's portraits for his thesis.

Of course this custom does not account for all the changes of state. When an archbishop became a cardinal for instance, the engraver made the necessary modification in the costume on the copper and provided his patron with a new set of impressions; similarly for a change in a title. In the case of Fouquet, the second of five states of his portrait was made necessary by a mistake in spelling in the dedication, the others being undoubtedly due to the touching-up of the plate on account of the great number of impressions ordered by a powerful man the circle of whose friends constituted the real court of that time. In the case of Cardinal Mazarin, politics undoubtedly

played a great part in the use which was made of his portraits.

It is not generally known that Nanteuil was himself the author of most of the titles and dedications both in prose and in verse, in Latin as well as in French, which form such an attractive feature of his prints. This was to be expected of the clever versifier who had written such amusing sonnets to the royal family and the leaders of the court in connection with their sittings, and of the cheerful companion who had known so intimately the *beaux-esprits* whom the hospitality of Fouquet had so often convened at his château of Vaux. To the Queen, who had a complexion of marvelous whiteness, he wrote a poem thanking her for the order for her portrait, which ended with this line: "*Mais prenons courage, on a peint le soleil même avec un charbon!*"

Nanteuil's original drawings in pencil, crayons, and pastels are fewer by far than those of the Clouets or the pastellists of the eighteenth century which have been preserved to us; probably not more than twenty are now to be found in public collections. To my knowledge the Louvre has two, the Museum of Rheims four, the Chartres Museum one, Florence three, Chantilly four, and Stafford House, London, six. They are supremely interesting for that simplicity and sincerity, that living truth, which make one feel as if he recognized old acquaintances. As for his engravings, there are splendid collections of them in Paris, Dresden, and Chantilly, and there does n't exist a private collection of any importance in the world which does not contain some of the noble work of the past-master of engraved portraiture, the painter of the most bril-

liant period in modern history, the genial artist who had said to his pupil: "*Le temps et la peine ne font pas tant les beaux ouvrages que la bonne humeur et l'intelligence.*"

REMBRANDT'S LANDSCAPE ETCHINGS

BY LAURENCE BINYON

Assistant-Keeper of Prints and Drawings in the British Museum
Author of "Dutch Etchers," "Painting in the Far East," etc.

THE pioneers of landscape art, those who have opened up new possibilities of design in landscape themes, were, at least until the nineteenth century, certain great masters of figure-painting. Titian, Rubens, Velasquez, Rembrandt, each of these gave a fresh impulse to the painting of landscape, an impulse which even to-day has not lost its inspiration; while the conventions established by Claude, Ruysdael and Salvator Rosa seem by comparison tame and more or less artificial or demoded.

Of these masters Rembrandt is the nearest to modern feeling. The famous *Mill*, in which a landscape motive is treated with a richness and depth of humanity that hitherto had found expression only in figure-subjects, stands in this respect as a monument in European art.

Yet landscapes form a very small proportion of Rembrandt's paintings. Rembrandt as a painter rarely seems to treat landscape for its own sake. He composes for the most part arbitrarily, using broad spaces of level and hill-masses with ruined towers as the material elements of a scene for which some vision-

ary play of gleam and cloud seems the real motive in his mind, the counterpart of the emotions he sought to communicate and evoke.

We are now concerned with Rembrandt as an etcher. Here again the proportion of landscape to figure-subjects is small. There are seven and twenty out of a total of some three hundred etchings.

We note at once that the etched landscapes present a different aspect from the painted landscapes.

In his paintings Rembrandt shows none of the characteristics of the national landscape school of Holland, of those artists who relied on the features of their native land,—its wide pastures, its canals, its seaports, its sand-dunes, its farms, its great skies and immense horizons,—and made of the plain portraiture of these familiar scenes their pride and glory. Rather he took hints from his traveled countrymen and the painters who had sought the classic South. Landscape, whether treated simply or as an adjunct to some scene from Scriptural story, was to him a source of romantic appeal. And just as Italian masters, like Botticelli, have sometimes introduced as background foreign scenes from the Rhineland suggested by the work of Northern painters, so Rembrandt, to whom mountains had all the fascination of strangeness and romance, took from actual drawings of Titian's school which he may have possessed or seen, or from pictures by traveled Dutchmen like Hercules Seghers, the features he desired, fusing them into a world of his own imagination.

The etchings, on the contrary, are for the most part pure Holland. Yet their inspiration is very different from that of the typical Dutch painter or etcher.

They are not mere portraits of places. Even when apparently simple transcripts from the scene before the artist's eyes, the composing spirit is at work in them, rearranging and suppressing. And perhaps just because of this absence of the literal topographical spirit, they seem to contain the essential genius and atmosphere of Dutch landscape.

Practically all Rembrandt's landscape work belongs to the middle period of his life. Some writers have sought to account for this by supposing that he turned to such subjects in some rural retreat to soothe his overwhelming grief at the loss of his wife. The actual dates hardly support this supposition. Saskia died in the summer of 1642. But the landscapes begin a few years before that date. The first ten years of the master's life at Amsterdam—the years of his prosperity—were, we know, crowded with portrait commissions; and landscape work would only have been a relaxation. It was hardly more than this at any time, but for some reason it interested him more during the ten or twelve years after 1640 than in his youth or old age.

The earliest date on a landscape etching is 1641; the latest, 1652. The undated plates can be placed with tolerable certainty within a year or so.

In 1634 Rembrandt had etched the large *Annunciation to the Shepherds*, in which the landscape is of the same visionary kind as appears in the paintings. The general effect is of white on black, the supernatural effulgence in the sky, which so startles the shepherds and their flocks, calling out of the gloom mysterious waving heights of foliage and obscure gleams of distance.

REMBRANDT. THE WINDMILL.

"In the *Windmill* Rembrandt found a perfect subject. There is no adventitious impressiveness lent by strong effect of light and shadow in this beautiful plate; all is plain and simply rendered. . . . We feel the strains of weather, the touch of time, on the structure; we feel the air about it and the quiet light that rests on the far horizon as the eye travels over dike and meadow. . . ."

Laurence Binyon.

Size of the original etching, $5\frac{1}{16} \times 8\frac{3}{16}$ inches

REMBRANDT. VIEW OF AMSTERDAM

"In the little *Amsterdam*, as in nearly all these etchings, the sky is left absolutely clear and empty. And how far more truly it suggests to us the brightness of a cloudless day than the most successful of plein-air painting in vivid color, which stops the imagination instead of leaving it free and active! This little plate is filled with air and sun." Laurence Binyon.

Size of the original etching, $4\frac{3}{8} \times 6$ inches

In none of the etchings of pure landscape does Rembrandt adopt this method and conception. None of them has that effect of illuminated gloom which is so peculiarly associated with the master's name. Their effect is of black on white, and the line is given its full value. One of the earliest, probably, is a small plate (B. 207), sometimes called *A Large Tree and a House*. I believe some critics have cast a doubt on it, but it is unmistakably Rembrandt's in conception and "handwriting." The little piece might well be called *Twilight*. We seem to be near the shores of a lake; light is fading out of the sky and scarcely permits us to discern any details; the presence of a few figures and a human dwelling is felt rather than seen. All is gray and quiet; nothing stands out saliently. It is the silvery evenness of tone which is the charm of this tiny plate, in no way striking, yet indefinitely revealing a master's hand. Usually Rembrandt would make such quiet etched work, all of one biting, the basis of a rich effect produced by dry-point. He may have intended to have used the dry-point here, but perhaps thought the scale was too small.

With the *Windmill* and the *Cottage and Hay-barn*, both dated 1641, we come to a group of plates which are typical of Rembrandt's landscape manner in etching. Close to these in date, presumably, are the little *Amsterdam* and the *Cottage and Large Tree*. Mr. Hind, in the latest catalogue of the etchings, follows von Seidlitz in assigning the *Amsterdam* to 1640, though Dr. Six maintains that the absence of a tower not finished till 1638 proves it to be earlier than that year. Rembrandt, however, was quite capable of abolishing towers to suit his composition. The sim-

plest materials presented by the country-side are used in these *etchings*. Though Rembrandt never seems to have cared to make pictures of such subjects, he made a great number of drawings of them. A wonderful series of these sketches, once in the possession of his pupil, Govert Flinck, is at Chatsworth; and numbers of course in the great public collections. These summary small drawings, made with a reed-pen and sepia, and sometimes with a wash of sepia added, do not appeal to every one, certainly not to those whose pleasure is in the external aspect of things, the softness of verdure, the glitter of trees; to say nothing of the want of grandeur and impressiveness in the scenes themselves, the absence of anything scenic, such as makes the most obvious appeal, whether in nature or art.

But the more one studies drawings, and the more one becomes familiar with the qualities which differentiate the first-rate from the second, the higher one inclines to rank these sketches. For one thing, they are almost miraculous in the certainty with which the reality of things is evoked, and the planes of recession indicated. Slight as is the means employed, rough and summary as is the stroke of the blunt pen, sometimes even with what seems a superficial clumsiness or carelessness, the things seen are there,—trees, buildings, bridges and canals, men and women,—and not only visible but, as it were, tangible. We can walk in imagination into these little landscapes, and not only do we breathe an infinite air but we are sure of every step. And this is the great test of mastery in such drawings. Take, for instance, the landscape drawings of Domenico Campagnola, which are also in reed-pen and sepia. These, with their broken fore-

grounds, upland farms among trees of delicate foliage, and distant mountain-ranges, are much more attractive to the eye at first sight than the great Dutchman's sketches. But when in imagination we move into these pleasant landscapes, we are disconcerted by unrealities; our steps are uncertain, for they are not on solid ground. And in fact a pleasant pattern of pen-strokes remains a pattern and nothing else. But Rembrandt's rough strokes have somehow molded all the ground with its saliences and depressions and filled the whole with light and air.

It is the same with the etchings. But there is a difference: the difference of the medium. True artist as he is, Rembrandt conceives all he does in the terms of the material used. His etchings are born as etchings and nothing else; they are not drawings transferred to copper.

There is a specific beauty of the etched line which is quite different from the beauty of a line made by the pen or chalk, or the line ploughed by a burin on copper. If it is unsuited to the sweeping rhythms of large movement in design, such as we associate with Rubens, for instance, its want of modulation and even character help a quiet dignity of draughtsmanship; and the etcher has means of enhancing homeliness of detail unrivaled in any other medium. Old buildings, wharves, boats and shipping at a river-side or quay,—such things as these naturally attract the etcher, for they are congenial to his medium. And in the *Windmill* (B. 233, dated 1641), Rembrandt found a perfect subject.

There is no adventitious impressiveness lent by strong effect of light and shadow in this beautiful

plate: all is plain and simply rendered. But we have only to compare this etching with the etchings of some of Rembrandt's immediate predecessors, like Jan and Esaias Van de Velde, to see the difference not only between a great and an average artist, but between a great and a commonplace etcher. The picturesque tracery of a windmill's sails and timber-work are seen and enjoyed in the Van de Veldes' plates, but how much more than this is in Rembrandt's *Mill*! We feel the stains of weather, the touch of time, on the structure; we feel the air about it and the quiet light that rests on the far horizon as the eye travels over dike and meadow; we are admitted to the subtlety and sensitiveness of a sight transcending our own; and even by some intangible means beyond analysis we partake of something of Rembrandt's actual mind and feeling, his sense of what the old mill meant, not merely as a picturesque object to be drawn, but as a human element in the landscape, implying the daily work of human hands and the association of man and earth. Here is a classic in its kind which many generations of etchers have found an inspiring model. An accident in the biting apparently is the cause of an aquatint-like broken tone of gray in the sky above the mill; but it comes with congruous effect, and is rather a beauty than a blemish.

In the little *Amsterdam*, as in nearly all these etchings, the sky is left absolutely clear and empty. And how far more truly it suggests to us the brightness of a cloudless day than the most successful of plein-air painting in vivid color, which stops the imagination instead of leaving it free and active! This little plate is filled with air and sun.

A first state of this etching belongs to my friend Mr. Gustav Mayer in London, but is absolutely unknown to all catalogues previous to that of Mr. Hind. In it there is a hare running over the fields, but it is a thought too big in scale, and Rembrandt doubtless suppressed it as a distracting incident.

The *Cottage and Hay-barn* (B. 225) and the *Cottage and Large Tree* (B. 226) seem companion plates; and though the latter is not dated, it is natural to assume for it the same date as that inscribed on the former—1641. If the *Cottage and Large Tree* is the finer of these two oblong plates in design, the *Cottage and Hay-barn* is the more brilliant as an etching. The cottage and shed which give the plate its name are in the center of the design, and the dark mass, full of tender shadows and reflections, emphasizes by contrast the play of open light on the fields stretching on either side, the river, the house nestling in a wood, beyond, and the distant towers of Amsterdam. Though all is treated in Rembrandt's broad way, it is surprising how full, how suggestive of intimate detail the landscape is. As we look at it there comes over us the sense of sleepy, bright air and sunshine, the quiet of the fields, in which, though nothing outwardly is happening, we are conscious of the stir of natural life, of growing things, of flowers and grass and insects, and peaceful human occupations going on unobtrusively; of "all the live murmur of a summer's day." It is interesting, in view of Rembrandt's treatment of topography, to note that Dr. Jan Six has shown that the master has here combined two different views in a single composition.

In the *Cottage with White Palings* (B. 232, dated

1642), effective use is made of the broad white planks of the fence to enforce the pattern of black and white in the design. Here again the subject is placed in the center with views on either side, though the horizon is higher than usual.

With the *Three Trees* (B. 212) of 1643, we come to the most famous of Rembrandt's etched landscapes. This plate stands in the same sort of relation to the rest as the *Mill* to the rest of his landscape paintings. It is the grandest and most typical, most expressive of the master's temperament. Here the composition is less accidental, and more (so to speak) architectural. The group of three trees stands up darkly on a bank of high ground at the right. At the left one looks over the level fields to the horizon and a glimmer of distant sea. A thunderstorm is passing away, with contorted clouds piled in the upper sky and trailing over the plain, and rods of violent rain slant across the corner of the scene. For once Rembrandt builds up a landscape design out of sky and earth; and the something elemental which inspires it gives the etching a pregnancy and significance which are absent from the other landscapes, in themselves, at their best, more intimately charming. There are those who object to the straight, hard lines of the rain; but I do not find them untrue, and they are of great value in the design. Then, what beauties lurk in this etching, wherever one looks into it! The return of the light after rain, than which there is nothing more beautiful in nature, gives a wet sparkle to the fields; and again we notice how the trees in their dark relief give glory to the space of luminous clearness beyond. The wagon on the top of the high bank is moving toward the light,

REMBRANDT. THE THREE TREES

With the *Three Trees* of 1643, we come to the most famous of Rembrandt's etched landscapes. This plate stands in the same sort of relation to the rest as the *Mill* to the rest of his landscape paintings. It is the grandest and most typical, most expressive of the master's temperament.

Laurence Binyon.

Size of the original etching, $8\frac{5}{16} \times 11$ inches

REMBRANDT. SIX'S BRIDGE

“To the same year—1645—belongs the well-known *Six's Bridge*, a plate in which the pure bitten line, with no close hatching or shadow-effect, is given full play. Of its kind, this is a perfect etching.”

Laurence Binyon.

Size of the original etching, $5\frac{1}{16} \times 8\frac{3}{16}$ inches

and a painter sits by the roadside, sketching the passing of the storm. An angler fishes in a pool; lovers, hardly discerned, sit together, away from the world in a thicket's obscurity. All the plain, so solitary at first sight, is filled with moving life. Of what particular species the three trees are, it might be difficult, as often with Rembrandt, to say with confidence; from their shape and the sturdy growth of their boughs, I suppose them to be oaks. There is no doubt, however, about the willow in the *Omvul* (B. 209). The gnarled, seamed trunk of an old tree, with its rugged wrinkles and smooth bosses, irresistibly invites the etcher's needle; and Rembrandt, like other etchers since, has evidently found a great enjoyment in this willow-stem, as in that other old willow to which he added, not very felicitously, a St. Jerome reading, spectacles on nose, and a perfunctory lion (B. 232, dated 1648). The *Omvul* shows a different kind of composition; the willow at the edge of a thicket, in whose shadow two lovers are embowered, divides the plate; the right and larger part is all light and open—a river-bank on which a man moves down to the ferry, and the broad sunny stream, and houses, masts, and windmills across the water—a picturesque river-side such as Whistler and Haden loved to etch.

To the same year—1645—belongs the well-known *Six's Bridge* (B. 208), a plate in which the pure bitten line, with no close hatching or shadow-effect, is given full play. Of its kind, this is a perfect etching. Every one knows the story of its being done while Six's servant went to fetch the mustard. But there is nothing hasty or incomplete about it: the masterly economy of lines is perfectly satisfying in its absolute directness

and simplicity. There is great pleasure in contemplating a work like this, so clean, so free from any superfluous element.

But from this time onward Rembrandt seems to grow dissatisfied with pure etching. He grows more and more fond of dry-point, using it very frequently to enrich an etched plate, and in his later years preferring often to dispense with the acid altogether.

Dry-point is employed in the delightful little plate, the *Boat-house* (B. 231), to deepen the shadows of the arch over the water; but in ordinary impressions this has worn off and only the groundwork of bitten lines remains. This is the kind of subject which most artists would have drawn in delicate detail; but Rembrandt is always rather remarkably indifferent to the particular beauty and character of vegetation (probably this was one of the reasons why he made so little appeal to Ruskin); and it is surprising that with all the indifference and roughness in the drawing of the plant-forms on the river-bank, the little plate should still have so intimate a character and suggest so much of the beauty of dark, quiet water in which reflections of flower and herbage are asleep.

In one or two of the plates of 1650 and thereabouts, as if tired of level horizons, Rembrandt closes the view with a mountain or range of hills. Such are the *Canal and Angler* and the *Boat in the Canal* (B. 235 and 236), which, joined together, form one composition; and one might add the *Sportsman with Dogs* (B. 211), though Mr. Hind assigns the completion, at any rate, of this etching to a date of a few years later.

The *Hay-barn with Flock of Sheep* (B. 224) is an instance of a favorite feature in Rembrandt's land-

REMBRANDT. LANDSCAPE WITH A BOAT IN THE CANAL

"In one or two of the plates of 1650 and thereabouts, as if tired of level horizons, Rembrandt closes the view with a mountain or range of hills. Such are the *Canal and Angler* and the *Boat in the Canal*."

Laurence Binyon.

REMBRANDT. FARM WITH TREES AND A TOWER [LANDSCAPE WITH A RUINED TOWER AND CLEAR FOREGROUND]

“ . . . a long, oblong plate, of great beauty for its pattern of light and shade. Part of the sky is shadowed, and the last light, before a shower pours over the trees, illuminates the foliage on one side.”
Laurence Binyon.

Size of the original etching, $4\frac{1}{8} \times 12\frac{5}{8}$ inches

scape—a road seen in perspective at one side of the design. The *Landscape with a Cow Drinking* (B. 237) is a beautiful etching in a rather slight manner, with a suggestion of wind in the branches of trees, and light coming with the wind. Even in the *Three Trees*, though there is storm, there is little impression of movement in the air; and it is characteristic of the landscape etchings as a whole that they are serene and still, and more often suggest a sunny day than gray skies.

Dry-point becomes more emphatic in the *Obelisk* (B. 227); indeed, in the earliest impressions of this plate the black of the bur is too pronounced, and only after it had been printed from till this effect had merged and blended with the etched lines was the right effect attained. Here the obelisk gives character to the design; and in the *Landscape with a Square Tower* (B. 218) a building dominates,—an old tower of rather blunted outlines, such as Rembrandt loved to crown dark hills with in the visionary landscapes of his painting.

Another old tower occurs, less prominently, in the *Farm with Trees and a Tower* (B. 223), a long, oblong plate, of great beauty for its pattern of light and shade. Part of the sky is shadowed, and the last light, before a shower pours over the trees, illuminates the foliage on one side. In the first two states there is a small cupola on the tower; but Rembrandt, no doubt rightly, judged that the design would be improved by lopping it off. The change certainly subdues the local character of the scene.

Another long oblong of perhaps greater beauty is the *Gold-weigher's Field* of 1651 (B. 234). This is all

air and sun and space, the etched lines light and open, with dry-point adding a kind of gleam and vibration to the fertile fields. It is a revelation of what a great artist can do, unaided by tone or color, with a scene that to the average eye would be tame enough. There is a sense, too, of the riches of the earth, the farmer's pride in broad acres and growing crops, which gives a human touch, never absent from Rembrandt's work.

In contrast with this is another plate of the previous year—the *Three Gabled Cottages* (B. 217)—where the dry-point is freely used to give color and softness to the thatched roofs, checkered with the shadow of an old tree. But it is the gratefulness of shadow in the noonday, not its gloom, which is the motive of the etching.

The last group of landscapes are in pure dry-point. It is interesting to compare one of the earlier bitten plates with the *Road by the Canal* (B. 221), delicious in its freshness and spontaneous effect, or the *Clump of Trees with a Vista* (B. 222). Of this last there is a first state with a mere indication of part of the design; the trees, with the peep through the thicket, seem to have been an afterthought.

The Wood over Palings (B. 364), the principal one of several unfinished studies on one plate, has velvety dry-point in the foliage. It is a plate that seems to have served for inspiration to Andrew Geddes, the Scotch artist who was one of the first to inaugurate the revival of etching in the nineteenth century and to realize once again—what had been so unaccountably forgotten since Rembrandt's time—the possibilities and beauty of the dry-point method.

And so the series comes to an end, and landscape

REMBRANDT. THE GOLD-WEIGHER'S FIELD

"This is all air and sun and space, the etched lines light and open, with dry-point adding a kind of gleam and vibration to the fertile fields. REMBRANDT. LANDSCAPE WITH A MILKMAN

This etching, like *The Wood over Paltijns*, has velvety dry-point in the foliage, and may have suggested to Andrew Geddes, the Scotch artist who was one of the first to inaugurate the revival of etching in the nineteenth century and to realize once again—what had been so unaccountably forgotten since Rembrandt's time—the possibilities and beauty of the dry-point method.

Size of the original etching, $2\frac{1}{16} \times 6\frac{7}{8}$ inches

disappears from the master's work, save as a background to figure-compositions. One of these backgrounds may be noticed for its special interest. About 1653 Rembrandt took up a copperplate already etched by Hercules Seghers—a *Tobias and the Angel* (after a composition of Elsheimer's)—and transformed it into a *Flight into Egypt*. Suppressing the two figures, which were of very large size in proportion to the design, he masked the traces of them by a mass of trees, put in his own figures on a much smaller scale, and by the most vigorous use of the dry-point wrought the whole into harmony. The treatment of shadowy masses of foliage reminds us how little there is of this element of landscape in the etchings we have been considering. There is nothing of that feeling for the majesty and mystery of leafy forest-trees which Claude expressed so beautifully in the *Bouvier* etching, and still more in his sepia drawings. Critics have also remarked on other limitations of landscape interest in Rembrandt—the absence of seas and water in movement, the comparative absence of wind and weather, in his etchings.

For all that, when we think of the other Dutch etchers of landscape, we realize how far he towers over those who professed no other subject,—over Molyn, Ruysdael, Everdingen, Waterloo, and Italianizers like Both.

Hercules Seghers is the one who showed most variety and temperament; and his work evidently had a great interest for Rembrandt. He was a curious experimenter, and though he rarely seems quite master of his intentions, he was the antithesis of those landscape artists, so frequent, who "take out a patent,"

as has been said, for some particular corner or aspect of nature, and never do anything else but repeat their favorite theme with variations.

With Rembrandt landscape was a kind of interlude and holiday from more serious design. We feel it in the sunny temper which pervades the majority of the etchings. But how far superior he is to all the rest in his sensitiveness to beauty! As we have seen, he is not greatly interested in the details of landscape form. We find scribbles and shapelessness in his foliage and plants; but his grasp of essential truths overrides all criticism of this kind, and always and everywhere we feel his intense joy in expressing light. The etchings of his contemporaries seem cold and hueless, without air or sun, beside his.

I find it hard to express a preference among the series. The *Three Trees* stands by itself, but there are others which touch one with a more vivid charm. Turning from one to another, I find each arresting the eye with some particular beauty, though the set of oblong plates, from the *Cottage and Hay-barn* to the *Gold-weigher's Field*, contain, I think, the most delight; they are those in which all Holland seems to lie before us, with its pastures and its many peaceful waters.

The landscape of Holland, with its level distances and low horizon, has inexhaustible attractions for the painter of skies and atmosphere. To the born designer it is less stimulating. One of the things that most impress in any representative exhibition of Rembrandt's etchings is the extraordinary variety and freshness of his designing. The proportions of the plate, upright, square, or oblong; the relation of the

figures to the frame; the proportion of light to dark; the use of tone and line;—all these show a constant variety. Those who, when they think of Rembrandt, call up the image of a dark panel with light concentrated on a head or group in the middle of it, find a series of the etchings quite subversive of their preconception.

Now to an inventive designer like Rembrandt the resources of the Dutch landscape offered but little. Where he blends landscape with figure, as in the infinitely pathetic *Burial of Christ*, or the *Woman of Samaria*, or the *Christ Returning with His Parents from the Temple*, though the human types, as always, are taken from the world around the artist, the landscape is drawn from his imagination, or borrowed from others. In the *St. Jerome* (B. 104) the background is no doubt taken from a Venetian drawing. Such methods were, indeed, inevitable, since one cannot go on weaving designs of human forms and landscape material where the typical form of this last is little more than a straight line, or a series of straight lines, across the field of sight.

One may wonder, perhaps with regret, why Rembrandt did not for once etch a landscape of his inner vision, like those paintings at Cassel and at Brunswick. It may be that he felt that for such tone-effects etching was not the appropriate medium. Had he lived in a later day, he might have used mezzotint, as Turner did in his *Liber Studiorum*; and certainly that process should in his hands have yielded marvelous results.

But we may well be content with these landscape

etchings which he has left us. They express the genius of the Dutch country, the "virtue" of it, as Pater would have said, as no other of his countrymen has expressed it. The series of plates in which Legros has expressed the genius of the country of Northern France, with its poplar-bordered streams and sunny pastures, has something of the same native quality. Each of these masters seems to have seized an essence which no one not born of the soil, however enamoured of a land's beauty, can quite possess and make his own.

What is it that gives these landscapes their enduring charm, and why do we rank them so high? Many a later etcher has had equal skill with needle and acid; some have had even greater. Whistler is more delicate, perhaps, more exquisite, more unexpected in his gift of spacing. Yet neither Whistler nor any other master of etching has the secret power of Rembrandt. I say "secret," because we cannot argue about it or explain it. It lay in what Rembrandt was: in the depth and greatness of his humanity. When we have wondered at the sensitive instrument of his eyesight, when we have exalted his magical draughtsmanship, when we have admired his instinctive fidelity to the capacity and limitations of the medium used, when we have recognized the profound integrity of his art, there is still something left over, beyond analysis, and that the rarest thing of all.

How it is we cannot say, but there has passed into these little works an intangible presence, of which we cannot choose but be conscious, though it was not consciously expressed,—the spirit of one of the fullest,

deepest natures that ever breathed. Whatever Rembrandt does, however slight, something of that spirit escapes him, some tinge of his experience,—of those thoughts, “too deep for tears,” which things meaner than the meanest flowers could stir in him.

GIOVANNI BATTISTA PIRANESI

(1720-1778)

PART I

By BENJAMIN BURGESS MOORE

THE life of Piranesi was eminently that of a man of genius, characterized by all the peculiarities ascribable to genius, perhaps as failures of human nature, but also distinguished by that which imparts to its possessor an imperishable renown. Those peculiarities are worthy of notice, as they bear so much on the character of his work; but his works, wonderful as they are in point of execution, are less to be admired for this than for the interest of the subjects he chose, *and that which he imparted to them.* In an age of frivolities, he boldly and single-handed dared to strike out for himself a new road to fame; and in dedicating his talents to the recording and illustrating from ancient writers the mouldering records of former times, he met with a success as great as it was deserved, *combining, as he did, all that was beautiful in art with all that was interesting in the remains of antiquity.*"

These words were prefixed to an account of Piranesi's career published in London during the year 1831 in "The Library of the Fine Arts," and based upon a sketch of his life written by his son, Francesco,

PORTRAIT OF GIOVANNI BATTISTA PIRANESI

From the engraving by F. Polanzani, dated 1750

It is impossible to study this little known portrait without being convinced of its accurate likeness. It certainly conveys an impression of the man's demonic force, which is not given by the more frequently reproduced statue executed by Angelini.

Size of the original etching, $15\frac{1}{4} \times 11\frac{1}{4}$ inches

PIRANESI, ARCH OF SEPTIMIUS SEVERUS

A rendering almost as faithful as an architect's drawing, which Piranesi's unflinching genius has transformed into an enchanting work of art. This arch stands in the Roman Forum. It was dedicated 203 A.D. in commemoration of victories over the Parthians.

Size of the original etching, 140 $\frac{1}{2}$ x 270 $\frac{1}{4}$ inches

but never published, although the manuscript at that period had passed into the hands of the publishers, Priestly and Weale, only to be subsequently lost or destroyed.

Eighty years, therefore, have passed since this evaluation of the great Italian etcher was written, yet to-day he is no more appreciated at his full worth than he was then. At all times it has been not uncommon for an artist to attain a kind of wide and enduring renown, although estimated at his true value and for his real excellences by only a few; but of such a fate it would be difficult to select a more striking or illustrious example than Giovanni Battista Piranesi. Living and dying in the Eternal City, Rome, to whose august monuments his fame is inseparably linked, he was the author of the prodigious number of over thirteen hundred large plates, combining the arts of etching and engraving, which, aside from their intrinsic merit as works of art, are of incalculable value on account of the inexhaustible supply of classic motives which they offer to all designers, and to which they, more than any other influence, have given currency.

These prints, in early and beautiful proofs, are still to be bought at relatively low figures, while each year sees the sale, by thousands, of impressions from the steeled plates still existing at Rome in the Royal Calcography;—impressions which, although in themselves still sufficiently remarkable to be worth possessing, are yet so debased as to constitute a libel upon the real powers of Piranesi.

The wide diffusion of these ignoble prints, and the fact that Piranesi's output was so great as to place his work within the reach of the slenderest purse, are

largely responsible for the failure of the general public to apprehend his real greatness; for rarity calls attention to merit, to which in fact it often gives a value entirely fictitious, while there is always difficulty in realizing that things seen frequently and in quantities may have qualities far outweighing those of work which has aroused interest by its scarcity. This is why the fame of Piranesi is widely spread, although his best and most characteristic work is almost unknown, and his real genius generally unrecognized.

Born in Venice, October 4th, 1720, and named after Saint John the Baptist, Piranesi was the son of a mason, blind in one eye, and of Laura Lucchesi. His maternal uncle was an architect and engineer,—for in those days the same person frequently combined the two professions,—who had executed various water-works and at least one church. From his uncle the young Giovanni Battista received his earliest instruction in things artistic, for which he appears to have displayed a conspicuously precocious aptitude. Before he was seventeen he had attracted sufficient attention to assure him success in his father's profession, but Rome had already fired his imagination, and aroused that impetuous determination which marked his entire career. His yearning after Rome report says to have been first aroused by a young Roman girl whom he loved, but, however that may be, he overcame the determined opposition of his parents, and, in 1738, at the age of eighteen, set out for the papal city to study architecture, engraving, and in general the fine arts; for even in those degenerate days there were left some traces of that multiform talent which distinguished the artists of the Renaissance. When he reached the

PIRANESI. ARCH OF VESPASIAN

In this, as in many of Piranesi's compositions, the figures are frankly posing, but their presence adds such charm to the scene that none could wish them absent

Size of the original etching, $19 \times 27\frac{3}{8}$ inches

PIRANESI. ARCH OF TRAJAN AT BENEVENTO, IN THE KINGDOM OF NAPLES

A fine rendering of that air of glory which the most dilapidated fragments of a Roman Arch of Triumph never lose. The Arch of Trajan, one of the finest of ancient arches, was dedicated A.D. 114. It is of white marble, 48 feet high and 30½ wide, with a single arch measuring 27 by 16½ feet. The arch is profusely sculptured with reliefs illustrating Trajan's life and his Dacian triumphs.

Size of the original etching, 18¾ x 27½ inches

goal of his longing, the impression produced by the immortal city on so fervid an imagination must have been so deep, so overwhelming, as to annihilate all material considerations, although they could not have been other than harassing, since the allowance received from his father was only six Spanish piastres a month, or some six or seven lire of the Italian money of to-day. By what expedients he managed to live we cannot even conjecture, but it may be supposed that he was boarded, apprentice-wise, by the masters under whom he studied. These teachers were Scalfarotto and Valeriani, a noted master of perspective and a pupil of one Ricci of Belluno, who had acquired from the great French painter and lover of Rome, Claude Lorrain, the habit of painting highly imaginative pictures composed of elements drawn from the ruins of the Roman Campagna. This style was transmitted to Piranesi by Valeriani, without doubt stimulating that passionate appreciation of the melancholy grandeur of ruined Rome already growing in his mind, and afterward to fill his entire life and work.

At the same time, he acquired a thorough knowledge of etching and engraving under the Sicilian, Giuseppe Vasi, whose etchings first aroused the great Goethe's longing for Italy. At the age of twenty, thinking, probably not without foundation, that this master was concealing from him the secret of the correct use of acid in etching, Piranesi is reported, in his anger, to have made an attempt to murder Vasi. Such an act would not be out of keeping with the character of the fiery Venetian, for, before leaving Venice, he had already been described by a fellow-pupil as "*stravagante*," extravagant, or fantastic, a term not restricted

by Italians to a man's handling of money, but applied rather to character as a whole, in which connection it usually denotes the less fortunate side of that complete and magnificent surrender to an overwhelming passion which aroused so lively an admiration of the Italian nature in the great French writer, Stendhal. When we, tame moderns, judge the "extravagance" of such characters, it is only fair to recollect that, with all their faults and crimes, these same unbridled Italians were capable of heroic virtues, unknown to our pale and timid age. Men like Cellini and Piranesi, who had much in common, are simply incarnate emotional force, a fact which is, at the same time, the cause of their follies and the indispensable condition of their genius.

After this quarrel Piranesi returned to Venice, where he attempted to gain a livelihood by the practice of architecture. There is reason to believe that at this period he studied under Tiepolo; at any rate there exist in his published works a few curious, rather rococo plates entirely different from his usual manner, and very markedly influenced by the style of Tiepolo's etching. He also studied painting with the Polanzani who is responsible for that portrait of him which forms the frontispiece to the first edition of "*Le Antichità Romane*," and gives so vivid an impression of the dæmonic nature of the man. Meeting with little success in Venice, he went to Naples, after returning to Rome, attracted principally by archæological interests. He stayed at Herculaneum, Pompeii, and Pæstum, where at this time, undoubtedly, he made the drawings of the temples afterward etched and published by his son. The drawings for these etchings of

PIRANESI. THE BASILICA, PESTUM

Size of the original etching, $19\frac{1}{2} \times 26\frac{3}{4}$ inches

Pæstum, among the best known of the Piranesi plates, are now in the Soane Museum in London.

Having decided that he had no vocation for painting, which he definitely abandoned at this time, Piranesi returned to Rome, and settled there permanently. His father now wished him to return to Venice, but he was altogether unwilling to do so, and replied, characteristically, that Rome being the seat of all his affections it would be impossible for him to live separated from her monuments. He intimated that in preference to leaving, he would give up his allowance, a suggestion upon which his father acted promptly by stopping all remittances, so that, estranged from his relatives, Piranesi was now entirely dependent upon his own resources for a livelihood.

His poverty and suffering at this period were undoubtedly great, but his indomitable nature could be crippled by no material hardships. He devoted himself entirely to etching and engraving, and, when twenty-one, published his first composition. At this time he was living in the Corso opposite the Doria-Pamphili Palace, but even if the neighborhood was illustrious, it is not pleasant to think what wretched garret must have hidden the misery of his struggling genius. His first important and dated work, the "*Antichità Romane de' Tempi della Republica, etc.,*" was published in 1748, with a dedication to the noted antiquary, Monsignore Bottari, chaplain to Pope Benedict XIV. This work was received with great favor, as the first successful attempt to engrave architecture with taste, and from the day of its appearance Piranesi may be said to have been famous. However, he still experienced the utmost difficulty in finding the

money necessary to subsist and to procure the materials requisite to his work. Yet, despite his terrible poverty, his labor was unceasing and tireless to a degree that we can now scarcely conceive. It must be borne in mind that, in addition to etching and engraving, he was engaged in the extensive study of archæology, which led him to undertake many remarkable researches. He became a noted archæologist of great erudition, as is shown by numerous controversies with famous antiquarians of the day. Some idea of the copiousness of his knowledge can be gained from the fact that his argument covers a hundred folio pages in that controversy in which he upheld the originality of Roman art against those who claimed it to be a mere offshoot of Grecian genius. In the preface to one of his books, he refers to it as the result of "what I have been able to gather from the course of many years of indefatigable and most exact observations, excavations, and researches, things which have never been undertaken in the past." This statement is quite true, and when we realize that the preparation of a single plate, such as the plan of the Campus Martius, would, in itself, have taken most men many years of work, we can only feel uncomprehending amazement at the capacity for work possessed by this man of genius.

The very spirit of imperial Rome would seem to have filled Piranesi, making him its own, so that the vanished splendor was to him ever present and added to the strange melancholy of the vine-grown ruins which alone remained from the "grandeur that was Rome." In every age and in every province most Italians have been animated by a lively sense of their

PIRANESI. THE TEMPLE OF CONCORD

From this plate it is possible to gain an idea of the greater beauty possessed by ruined Rome when still shrouded in vegetation. The Arch of Septimius Severus is seen in the middle distance

direct descent from classic Rome,—a feeling that its fame was peculiarly their inheritance in a way true of no other people, so that this glorious descent was their greatest pride and claim to leadership. In the darkest days of oppression and servitude, when Italy sat neglected and disconsolate among her chains, there were never lacking nobler souls who kept alive a sense of what was fitting in the descendants of classic Rome, and took therein a melancholy pride. But no Italian was ever more completely an ancient Roman than Piranesi, who certainly, in despite of his Venetian birth, considered himself a “Roman citizen.” This sentiment played an important part in, perhaps, the most characteristic act of his whole life, namely, his fantastic marriage, of which he himself left an account not unworthy of Cellini.

He was drawing in the Forum one Sunday, when his attention was attracted by a boy and girl, who proved to be the children of the gardener to Prince Corsini. The girl's type of features instantly convinced Piranesi that she was a direct descendant of the ancient Romans, and so aroused his emotions that on the spot he asked if it were possible for her to marry him. Her exact reply is not recorded, although it must have conveyed the fact that she was free, but it can surprise no one to hear that the girl was thoroughly frightened by such sudden and overpowering determination. His hasty resolution was confirmed when Piranesi afterward learned that she had a dower of one hundred and fifty piastres, or some three hundred lire of to-day, a fact certain to arouse a keen realization both of his poverty and of the value of money in those days. Without any delay, he pro-

ceeded to ask the girl's hand in marriage of her parents, who, like the girl, appear to have been so terrified and overwhelmed by the cyclonic nature of the man as to be incapable of the slightest resistance. Whatever may have been the motives of all the parties concerned, the fact is that Piranesi was married to the descendant of the ancient Romans exactly five days after he first laid eyes on her classic features! Immediately after the wedding, having placed side by side his wife's dowry and his own finished plates, together with his unfinished designs, he informed his presumably astonished bride that their entire fortune was now before them, but that in three years' time her portion should be doubled; which proved to be no boast but a promise that he actually fulfilled.

According to report, he told his friends that he was marrying in order to obtain the money required for the completion of his great book on Roman Antiquities. However, even if he did marry for money, he maintained all his life, to the poor woman's great discomfort, as jealous a watch over his wife as could be expected of the most amorous of husbands; so his affections as well as his vanity may, perhaps, have been called into play by his marriage. At any rate, his ideas as to family life were worthy of the most severe Roman *paterfamilias*. His son, Francesco, born in 1756, relates that, when absorbed in his studies, he would quite forget the hours for meals, while his five children, neither daring to interrupt him nor eat without him, experienced all the miseries of hunger. His domestic coercion and discipline were doubtless extreme, but the family would seem to have lived not too unhappily.

PIRANESI. VIEW OF THE "CAMPO VACCINO"

The Site of the Ancient Roman Forum showing the Arch of Septimius Severus, Column of the Temple of Jupiter Tonans and of the Temple of Concord and, in the distance, the Arch of Titus, the Colosseum, etc., etc.

Size of the original etching, $16\frac{3}{8} \times 21\frac{1}{2}$ inches

PIRANESI. THE ARCH OF TITUS

In this plate can be seen a favorite device of Piranesi's, which is to enhance the size and stability of massive architecture by placing on some part of the ruin a human figure in active motion. The Arch of Titus was built in commemoration of the taking of Jerusalem. The vault is richly coffered and sculptured, and the interior faces of the piers display reliefs of Titus in triumph, with the plunder of the temple at Jerusalem.

Size of the original etching, $18\frac{5}{8} \times 27\frac{3}{4}$ inches

Every two years, if not oftener, a monumental book would make its appearance, to say nothing of separate plates, and Piranesi was now a famous man. With the exception of Winckelmann, he did more than any one to spread a knowledge and love of classic art, while his learning and his researches aroused a widespread appreciation of the nobility of Roman ruins, thereby largely contributing to their excavation and protection. His exhaustive acquaintance with antiquity and his impassioned admiration for its beauty, combined with his singular and interesting character, caused him to mingle with all that was most remarkable in the world of arts and letters in Rome, at the same time bringing him into relation with whatever foreigners of distinction might visit the city. He was, however, then and always a poor man, for his first important work, "Le Antichità Romane," sold in the complete set for the ridiculous pittance of sixteen paoli, or about seventeen lire, while later the Pope was wont to pay him only a thousand lire for eighteen gigantic volumes of etchings. The very fact that his fertility was so enormous, lowered the price it was possible to ask for his plates during his lifetime, just as since his death it has militated against a correct valuation of his talent. Forty years after he came to Rome, he wrote to a correspondent that he had made, on an average, some seven thousand lire of modern money a year, out of which he had had to support his family, pay for the materials required in his business, and gather together that collection of antiquities which was a part of his stock in trade.

The rapidity with which Piranesi worked, and the number of plates, all of unusually large dimensions,

which he executed, are so extraordinary as to leave one bewildered by the thought of such incomprehensible industry. Competent authorities vary in their statements as to the number of plates produced by Piranesi, but accepting as correct the lowest figure, which is thirteen hundred, it will be found that for thirty-nine years he produced, on a rough average, one plate every two weeks. Ordinarily, great productiveness will be found to have damaged the quality of the work accomplished, but this is not true in the case of Piranesi. Although his work is of varying merit, like that of all true artists, and even comprises examples lacking his usual excellence, there is no plate which betrays any signs of hurry or careless workmanship, while in many the meticulous finish is remarkable. Such an output is in itself phenomenal, yet in preparation for these works he found the time to pursue archæological researches and studies, in themselves sufficiently exhaustive to have occupied the life of an ordinary man. Moreover, in his capacity of architect, he executed various important restorations, including those of the Priorato di Malta, where he is buried, and of Santa Maria del Popolo. Most of his restorations were undertaken by command of the Venetian, Pope Clement XIII, who bestowed on him the title of Knight, or Cavaliere, a distinction of which he was proud, as he was of his membership in the "Royal Society of Antiquaries" in London, of which he was made an honorary fellow in 1757.

The question of how much assistance Piranesi received in the execution of his plates is an interesting one. In a few prints, the figures were etched by one Jean Barbault, whose name sometimes appears on the

PIRANESI. THE ARCH OF TITUS

Showing the relief of the Triumph of Titus and the carrying away of the Seven-branched Candlestick from Jerusalem. A particularly beautiful and not very well-known plate, which clearly shows Piranesi's fine sense of composition, and his keen appreciation of that singularly picturesque contrast between the ancient ruins and the more modern buildings in which they were then embedded.

Size of the original etching, $15\frac{5}{8} \times 24\frac{1}{4}$ inches

PIRANESI. FAÇADE OF ST. JOHN LATERAN

Piranesi, almost without exception, placed a written description of the scene on every one of his plates, using it as a decorative feature. In this case it proves an integral part of a group which makes an interesting etching out of what otherwise would have been a simple architectural drawing.

Size of the original etching, $18\frac{7}{8} \times 27\frac{1}{2}$ inches

margins with that of Piranesi. The latter's son, Francesco, was taught design and architecture by his father, whose manner he reproduced exactly, although none of the numerous etchings which he left behind him show any signs of those qualities which constitute the greatness of his parent's work. The daughter, Laura, also etched in the manner of her father and has left some views of Roman monuments. These two children, together with one of his pupils, Piroli, undoubtedly aided him, but their moderate skill is a proof that their assistance could not have been carried very far. That his pupils never formed a sort of factory for the production of work passing under their master's name, as happened with some famous painters, is made certain by the fact that he established no school which caught his manner and produced work reminiscent or imitative of his. His unparalleled output must, therefore, be almost entirely a result of his own unaided labor.

Piranesi died at Rome, surrounded by his family, on the ninth of November, 1778, of a slight disorder rendered serious by neglect. His body was first buried in the church of St. Andrea della Fratte, but was soon afterward removed to that Priory of Santa Maria Aventina which he had himself restored. Here his family erected a statue of him, carved by one Angelini after the design of Piranesi's pupil, Piroli. Baron Stolberg writes in his "Travels": "Here is a fine statue of the architect Piranesi, as large as life, placed there by his son. It is the work of a living sculptor, Angelini, and though it certainly cannot be compared with the best antiquities, it still possesses real merit."

The singular figure of Giovanni Battista Piranesi, with his power, his fire, and his passionate love of Roman grandeur, not unworthy of some great period of rebirth, appears all the more phenomenal when viewed in relation to his times and his surroundings. The corruption of the pontifical city had been flagrant since the days when it filled with scorn and loathing the wonderful "Regrets" penned by the exiled French poet, Joachim du Bellay, whose homesick heart took less pleasure in the hard marble and audacious fronts of Roman palaces than in the delicate slate of the distant dwelling built by his Angevin ancestors,—but its depravity had at least been replete with virility and splendor. After the Council of Trent, however, the Counter-Reformation spread over the Roman prelate a wave of external reform, which left the inner rottenness untouched, but veiled it decently with all the stifling and petty vices of hypocrisy, until Roman life gradually grew to be that curious androgynous existence which we see reflected so clearly in Casanova's memoirs. During the eighteenth century, when Piranesi lived, the whole of Italy had sunk to depths of degradation such as few great races have ever known, not because the people were hopelessly decayed, for their great spirit never died, but lived to flame forth in 1848 and create that marvelous present-day regeneration of Italy, which is perhaps the most astonishing example of the rebirth of a once great but apparently dead nation that the world has yet seen. The debased condition of Italy at that time was caused, rather, by centuries of priestly and foreign oppression, which had stifled the entire country until it had fallen into a state of torpor little

PIRANESI. VIEW OF THE RUINS OF THE GOLDEN HOUSE OF NERO
COMMONLY CALLED THE TEMPLE OF PEACE

A striking image of the romantic desolation in Roman ruins long since removed
by modern research

PIRANESI. INTERIOR OF THE PANTHEON, ROME

A good illustration of Piranesi's originality in choosing a point of view so curious as to give a novel air to the best known subjects

The Pantheon, completed by Agrippa B.C. 27, consecrated to the divine ancestors of the Julian family, and now dedicated as the Church of Santa Maria Rotonda, is $142\frac{1}{2}$ feet in diameter and its height, to the apex of the great hemispherical coffered dome, is the same. The lighting of the interior is solely from an opening, 28 feet in diameter, at the summit of the dome. The dome is practically solid concrete.

Size of the original etching, $18\frac{7}{8} \times 22\frac{1}{4}$ inches

different to death. Any sign of intellectual or political activity, however slight or innocent, had long been ruthlessly repressed by Austria and the petty tyrants who ruled the states of Italy. Since men must find some occupation to fill their lives, or else go mad, in a land where every noble and even normal employment was forbidden, the Italian of the day was forced to confine himself within the limits of an idle inanity, concerned only with petty questions and petty interests. It is difficult for people of to-day to conceive the abject futility to which such oppression and enforced inactivity can reduce an entire nation. In France the comparative freedom enjoyed under the old régime gave to the eighteenth century, in its most frivolous and futile moments, a charming grace utterly denied to enslaved and priest-ridden Italy. To realize the situation, it is only necessary to consider for a moment the institution of the *cicis-beo*, and to read Parini's "Il Giorno." In this world of little loveless lovers, of sonneteers and collector academicians, the figure of Piranesi looms gigantic, like a creature of another world. He had a purity of taste in artistic matters quite unknown to his contemporaries, while his originality, his passion, and his vigor seem indeed those of some antique Roman suddenly come to life to serve as pattern for a people fallen on dire days.

Francesco Piranesi, after the death of his father, sold the collection formed by him to Gustavus III of Sweden in return for an annuity. He continued the publication of etchings, many, although unacknowledged, from drawings by his father, and was assisted in his archæological research by Pope Pius VI. After

various rather dishonorable transactions, as spy to the court of Sweden, he started for Paris by sea in 1798, having with him the plates of his father's etchings, and accompanied in all probability by his sister Laura. The ship on which he traveled was captured and all it contained taken as a prize by a British man-of-war, England and France being then engaged in hostilities. By some curious chance, the English admiral knew the worth of Piranesi's work, and persuaded the officers who had made the capture to restore the plates to his son, and in addition obtained, by some still more curious chance, both the admission of the plates into French territory free of duty, and government protection of Francesco's ownership. At Paris, Francesco Piranesi and his brother, Pietro, tried to found both an academy and a manufactory of terra-cotta. He also republished his father's etchings and his own, thus creating the first French edition, already inferior in quality to the original Roman impressions. He died in Paris, in 1810, in straitened circumstances. The plates of both the father's and the son's work passed into the hands of the publishers Firmin-Didot, who republished them once more. The original plates, which at one time were rented for almost nothing to any one who wished them for a day's printing, finally found a refuge, as before said, in the Royal Calcography at Rome, where they have been coated with steel and rebitten, so that it is now possible to print as many copies every year as tourists and architects may desire. It can, therefore, be seen that, most unfortunately, the world is flooded with countless impressions which, even if they have value for an architect as documents, or still retain enough

PIRANESI. PIAZZA NAVONA, ROME

This plate shows how Piranesi could render a complicated view without confusion and, at the same time, give an air of novelty to a well-known place

PIRANESI. INTERIOR OF THE VILLA OF MECENAS, AT TIVOLI

An example of Piranesi's skill in making a rather ordinary scene appear dramatic, and arousing a sense of vastness greater than that imparted by the actual building

Size of the original etching, $16\frac{5}{8} \times 23\frac{5}{8}$ inches

character to give them some merit as pictures, are yet so utterly changed and debased as to do the gravest and most irreparable injustice to the reputation of the genius who created them.

PART II

"LE CARCERI D'INVENZIONE" (THE PRISONS)

ANY one who bestows even a passing inspection on the etchings of Piranesi will be struck by the intensity of imagination which they display, a quality whose precise nature it will perhaps be useful to analyze, since, despite the fact that we use the word constantly, the thousand differing values which we attach to it render our ideas of its true meaning in general of the vaguest. Reduced to its ultimate essence, imagination would appear to be the faculty of picture-making; that is to say, the power of bringing images before the mental eye with absolute exactitude, and of clothing ideas with a definite form, so that they have a reality quite as great as that which characterizes the objects of the external world. So long as ideas remain in the mind in the form of abstract conceptions, they are food for reason, but have no power to move us. It is only when, by means of the imaginative faculty, the concept has presented itself as a definite image, that it arouses our emotions and becomes a motive of conduct. When, for example, the idea of an injury to some one we love comes into our sphere of consciousness, a concrete picture of that injury presents itself in some form or other to our inner vision, and is the cause of the emotion which we experience. Our sympathy and understanding will be proportionate to the varying distinctness with which our imaginative power offers such images for our contemplation. Imagination therefore connotes

PIRANESI. THE FALLS AT TIVOLI

This etching illustrates a little known side of Piranesi's talent, namely, his ability to etch pure landscape

The Falls of the Teverone (the ancient Anio) at Tivoli, are fifteen miles east-northeast of Rome. Tivoli was the favorite place of residence of many Romans—Maecenas, Augustus, Hadrian—and the ruins of both Hadrian's Villa and the Villa of Maecenas are still to be seen.

Size of the original etching, 18 $\frac{1}{4}$ x 28 $\frac{3}{4}$ inches

the ability to conceive the emotions and experiences of others, and is thus indissolubly connected with sympathy and all the nobler qualities of human nature.

The fact that our conduct is determined not by concepts, but by mental images which motive emotion, although at first it appear paradoxical, will certainly be recognized by any one who is willing to study, if only for a short time, his own mental experiences. This truth was realized with such force as to be made the base of their entire spiritual discipline by that notable Spaniard, Ignatius Loyola, and his followers, the Jesuit fathers, who have understood the complex and subtle mechanism of the human soul more profoundly and exhaustively than any other body of men which has ever existed. In classic times Horace was cognizant of this peculiarity of man's mind when he wrote that the emotions are aroused more slowly by objects which are presented to consciousness by hearing than by those made known by sight. Burke, it is true, disputes this dictum of the Latin poet, on the ground that, among the arts, poetry certainly arouses emotions more intense than those derived from painting. Although this is probably true, for reasons which he details and which it would be wearisome to reiterate here, it is certain that poetry moves us exactly in ratio to the power it possesses of creating vivid images for our contemplation, while it is certainly doubtful whether any emotion excited through hearing surpasses in vivacity that experienced on suddenly seeing certain objects or situations.

All artists at all worthy of the name are, therefore, possessed to a certain degree of imagination. It is

the gift which makes visible to them whatever they embody in words, pictures, sounds, or sculpture. If totally deprived of it, they could create nothing, for no man can express what does not appear to him as having a real existence for at least the moment of creation. In the domain of art, imagination, in its lower forms, is merely the power of recollecting and reproducing things endowed with material existence; but in its highest development, when handling the conceptions and emotions of an original mind, it acquires the power of actual creation, and is inseparably attached to the loftiest acts of which man is capable.

Every plate etched by Piranesi betrays to even a careless glance the presence of imagination in some form, while in one series this noble faculty is revealed with an amplitude almost unparalleled. If it be only the presentment of fragments of Roman epitaphs, he finds a way by some play of light or shade, or by some trick of picturesque arrangement, to throw a certain interest about them, relieving the dryness of barren facts; if it be the etching of some sepulchral vault, in itself devoid of any but antiquarian interest, he introduces some human figure or some suggestive implement to give a flash of imagination to the scene. In those very plates where he depicts the actually existing monuments of classic Rome, and in which it was his expressed intention to save these august ruins from further injury and preserve them forever in his engravings, he created what he saw anew, and voiced his own distinctive sentiment of the melancholy grandeur of ruined Rome. To-day the word *impressionism* has come to have a rather restricted meaning in connection with a recent school of art, but Pira-

PIRANESI. THE FALLS AT TIVOLI

Among later works there are few better expressions of that feeling for nature in its wildest aspects, which, practically unknown until the time of Rousseau, is now considered the speciality of modern artists. That Piranesi appreciated this side of nature, and was able to express its poetry and power, could be proved by this plate alone.

Size of the original etching, $18\frac{3}{4} \times 28\frac{1}{8}$ inches

PIRANESI. ST. PETER'S AND THE VATICAN

This is perhaps the best example of Piranesi's exaggerated perspective. It is quite justified, in this case at least, by the success with which it creates an impression of vastness and of grandeur which was certainly aimed at by the architects of St. Peter's, but which the exterior of the actual building, quite as certainly, fails to arouse.

Size of the original etching, $18 \times 27\frac{3}{4}$ inches

nesi's work, like that of all really great artists, is in the true sense of the word *impressionistic*. In passing, it may be remarked that he was one of the rare artists in earlier times who worked directly from nature, a habit distinctive of our modern impressionism. Piranesi is concerned with the expression of his own peculiar impression of what he sees; for the benefit of others and for his own delight he gives form to his own particular vision of whatever he treats. He certainly was desirous of, and successful in, recording the existing forms of the buildings he loved so well; it is also true that his etchings and engravings are in many ways faithful renderings which have immense historical and antiquarian value, since they preserve an aspect of Rome none shall ever see again, but together with the actual facts, and transcending them, he offers the imaginative presentment of his own creative emotion. What he draws is based on nature, and is full of verisimilitude, but it is not realistic in the base way that a photograph would be. It contains while it surpasses reality, and is faithful to the *idea* of what he sees, using that word in its Platonic sense.

Taine, in what is probably the most lucid and exhaustive definition of the nature of a work of art ever given, starts from the statement that all great art is based on an exact imitation of nature; then proceeds to demonstrate how this imitation of nature must not extend to every detail, but should, instead, confine itself to the relations and mutual dependencies of the parts; and finally states, as the condition essential to creating a work of art, that the artist shall succeed, by intentional and systematic variation of these relations,

in setting free, in expressing more clearly and completely than in the real object, some essential characteristic or predominating idea. This is wherein art transcends nature, and a work of art is, therefore, constituted by the fact that it expresses the essential idea of some series of subjects, freed from the accidents of individuality, in a form more harmoniously entire than that attained by any object in nature. Now this is precisely what Piranesi did. He is often taken to task for his departure from a literal statement of fact in his renderings of architectural subjects, but, in so departing, he is varying the interrelation of parts so as to disengage the characteristic essence of what he depicts, and thus create a work of art, not a historical document. If he lengthens Bernini's colonnade in front of St. Peter's, he is only composing with the same liberty accorded to Turner, when, in one picture of St. Germain, he introduces elements gathered from three separate parts of the river Seine; and by so doing he expresses the idea of limitless grandeur, latent in St. Peter's, with a fullness it does not possess in the actual building. In his "Antiquities of Rome," he disengages a sense of devastation and of desolate majesty which is the fundamental characteristic of Roman ruin, and one that could have presented itself with such directness and force only to the mind of an artist of genius. His own vision of the inner truth of what he saw, stripped of everything accidental, is what he gives to posterity, and what lifts his work out of the field of simple archæology into the proud realm of true art.

Even in those plates where he etches actual scenes with loving care, Piranesi passes nature, as it were,

PIRANESI. THE VILLA D'ESTE AT TIVOLI

It is interesting to note that at the time Piranesi etched this fine plate the avenue of Cypress trees, which now adds so much to the picturesque of the Villa d'Este, was not even planted.

Size of the original etching, $18\frac{1}{2} \times 27\frac{3}{8}$ inches

PIRANESI. TITLE-PAGE OF "THE PRISONS"

From "Opere Varie di Architettura Prospettive Grotteschi Antichità sul Gusto Degli Antichi Romani Inventate, ed Incise da Gio. Batista Piranesi, Architetto Veneziano." (Rome, 1750.)

Size of the original etching, $21\frac{1}{4} \times 16\frac{1}{4}$ inches

through the alembic of his own personality, doing this moreover in a way peculiar to him and to him alone. His originality consists in this,—that his mind, when considering an object, seized instinctively on certain distinguishing features peculiar to that object, qualities which his mind, and only his, was capable of extracting from the rough ore of ordinary perception; and that for the powerful impression which he thus experienced, he was able to find an adequate and distinctive expression. It was his good fortune to behold Rome in a moment of pathetic and singular beauty, irrevocably vanished, as one of the penalties to be paid for the knowledge gained by modern excavation. In those days the Roman ruins did not have that trim air, as of skeletons ranged in a museum, which they have taken on under our tireless cleansing and research. For centuries the barbarians of Rome had observed the precept: “Go ye upon her walls and destroy; but make not a full end,” so that only the uppermost fragments of temple columns protruded through the earth where the cattle browsed straggling shrubbery above the buried Forum, while goats and swine herded among cabins in the filth and century-high dirt which covered the streets that had been trod by the pride of emperors. But that which, more than anything else, helped to create an atmosphere of romantic beauty none shall see again, was the indescribable tangle of vine, shrub, and flower, which in those days draped and hid under a mass of verdure the mighty ruins of baths and halls that still stupefy by their vastness when we see them now, devoid of their ancient marble dressing, stripped clean like polished bones. Shelley tells how even in his day the Baths of

Caracalla were covered with "flowery glades, and thickets of odoriferous blossoming trees, which are extended in ever-winding labyrinths."

The sentiment of august grandeur inspired by the indestructible mass of Roman ruins was, therefore, in those days curiously complicated by the contrast between them and the fantastic growth of ever-passing, ever-renewed vegetation which wrapped them as in a mantle. The poignancy of this beauty Piranesi seized with a felicity and expressed with a plenitude given to no one but to him. He was, both by nature and by volition, profoundly classical, yet he enveloped all that he handled, however classic it might be in subject, with a sense of mysterious strangeness so strong as to arouse the sensation called in later times *romantic*. This contrast is one of the distinctive phases of his originality.

It would be pleasant to think that Edmund Burke was familiar with the creations of Giambattista Piranesi when he wrote so searchingly of "The Sublime and Beautiful"; but, if this be perhaps an idle fancy, it is certainly true that it would not be easy to find concrete examples demonstrating more clearly than the etchings of Piranesi the truth of large parts of his enquiry, and in particular of the following definition of the sublime: "Whatever is fitted in any sort to excite the ideas of pain and danger, that is to say, whatever is in any sort terrible, or is conversant about terrible objects, or operates in a manner analogous to terror, is a source of the *sublime*; that is, it is productive of the strongest emotion which the mind is capable of feeling. When danger or pain press too nearly, they are incapable of giving any delight,

and are simply terrible, but at certain distances, and with certain modifications, they may be, and they are, delightful, as we every day experience."

The application of these words to the work of Piranesi will probably surprise those persons acquainted only with his etchings of classic ruins. However, even these plates exemplify this definition in many ways which it would be tedious to enumerate, while to feel its full appositeness it is only necessary to study Piranesi's least-known and greatest achievement, commonly called "The Prisons," and known in Italian as "Le Carceri d'Invenzione." These sixteen fantasies, executed at the age of twenty-two and published at thirty, form a set of prints in which it is no exaggeration to say that imagination is displayed with a power and amplitude that have elsewhere never been surpassed in etching or engraving, and only rarely in other forms of pictorial art. Although scarcely known to the public at large, they have always formed the delight of those who feel the appeal of imaginative fantasy, and notably of Coleridge and of De Quincey, who has recorded his impression in golden words. They are reputed to represent scenes which burned themselves into the artist's consciousness while delirious with fever, and it is certain that they do possess that terrible, vivid reality, so enormously amplified as to lose the proportions of ordinary existence, which characterizes all oppressive dreams and particularly those induced by narcotics. They represent interiors of vast and fantastic architecture, complete yet unfinished, composed of an inexplicable complexity of enormous arches springing from massive piers built, like the arches they carry, of gigantic blocks

left rough-hewn. By a contrast that could only have been conceived by genius these monstrous spaces are traversed in every direction by frail scaffoldings, together with ladders, bridges, and all manner of works in wood; and are filled, at the same time, with an inexhaustible succession of ropes, pulleys, and engines, finely described by De Quincey as "expressive of enormous power put forth or of resistance overcome." They are distinguished by one of Piranesi's greatest qualities, the power to express immensity as, perhaps, no one else has ever done, and are flooded with light which seems intense in its opposition to the brilliant shadows, so that altogether it would be difficult to understand their title of "Prisons," were it not for the presence of engines of torment, and of mighty chains that twine over and depend from huge beams, or sometimes bind fast the little bodies of human beings. The unusual and inexplicable nature of these "Prisons" gives to the beholder's imagination a mighty stimulus productive of strange excitement.

The "English Opium-Eater" in likening his visions to these pictures,—and what higher praise of their imaginative force could there be?—speaks of their "power of endless growth and self-reproduction." One of their distinguishing peculiarities is this repetition of parts, as of things which grow out of themselves unceasingly, reproducing their parts until the brain reels at the idea of their endlessness. This characteristic, together with that curious opposition between their air of open immensity and their suggestion of prison-horror, gives them that particular appearance of absolute reality in the midst of impos-

sibility, which is a distinctive feature of dreams. In this way they arouse a sense of infinitude in the mind of the beholder; now, although size is in itself of no importance, it is nevertheless true that, when combined with other qualities of value, "greatness of dimension is a powerful cause of the sublime." This greatness, both in conception and in material execution, they possess, together with that opposition of light to obscurity which "seems in general to be necessary to make anything very terrible." Indeed, that these etchings reveal a more imaginative vigor arouse a kind of awe in any one who gives them more than a passing glance, while the horror which they suggest is never physical so as to nauseate or "press too nearly" and cause pain, but imparts, on the contrary, a sense of danger and of terror that causes a delightful excitement, certainly fulfilling the definition of the sublime as given by Burke.

Although it does not follow that Piranesi is a greater etcher than Rembrandt, it may still be true that these etchings reveal a more imaginative vigor than is shown in those of the great Dutchman. They do not possess that subtle imagination which envelops everything that Rembrandt ever touched in an air of exquisite mystery, and gives to his least sketch an inexhaustible fund of suggestion, nor can they be compared to his etchings as consummate works of art; yet they do have a titanic, irresistible force of sheer imagination, which neither Rembrandt nor any other etcher, however superior in other ways, possessed to the same extent. Their preëminence in this one point is certainly admissible, and as it has been shown, presumably, that they are imaginative, original, and

sublime, is it too much to say that, at least in the expression of certain intellectual qualities, Piranesi in these plates carried the art of etching to the highest point yet attained, so that no one who does not know these plates can know quite all that etching is capable of expressing?

“The Prisons” are also the most notable example of that principle of opposition, or contrast, of which Piranesi made so masterful a use in whatever he did. The application of this law in the handling, and at times in the abuse, of blacks and whites, is, of course, apparent to even the most casual observer in all that came from his hand. In the present series, however, this law may be seen carried to its utmost limit. From every stupendous vault there hangs a long, thin rope, while up gigantic pillars of rough masonry climb frail ladders of wood, and great voids between immense piers are spanned by light bridges, also of wood, bearing the slightest and most open of iron railings. In his plates of Roman ruins, Piranesi introduces the human figure dressed in the lovely costume of the eighteenth century, in order to contrast grace with force, and to oppose the living and the fugitive to the inanimate and the enduring; but here his use of the human figure rises to the truly dramatic. In the midst of these vast and awful halls with their air of stillness and of power, of “resistance overcome,” he places men who seem the smallest and the frailest among creatures. Grouped by twos or threes, whether depicted in violent motion or standing with significant gesture, they are always enigmatic in their attitudes, so that their presence and obvious emotion amid this immense and silent grandeur arouse a sense

of tragic action, a feeling of mysterious wonder and curiosity that gives to all lovers of intellectual excitement a pleasure as keen as unusual. Particularly in one vision of a monstrous wheel of wood revolving in space, no one knows how, above a fragment of rocky architecture, while three human beings engaged in animated converse are obviously unconscious of the gigantic revolutions, the limits of fantasy are reached, and the mind turns instinctively to those images of the spheres rolling eternally in infinite space which are found in Milton and all mystic poets.

These plates are also interesting as a striking and curious proof of Piranesi's conscious mastery of his art. They are filled with such a fury of imagination, and are etched with such dash and boldness of execution that it seems as though they must be, if not, as was once said, the sane work of a madman, at least burned directly on the plate by the force of a fever-stricken mind. But not so; they are, however fevered their original inspiration may have been, the result of careful elaboration, and are but one more proof of the saying of that other and still greater etcher, Whistler, that a work of art is complete, and only complete, when all traces have disappeared of the means by which it was created. There exists in the British Museum a unique, and until recently unknown, series of first states of "The Prisons." Now, although these first states have the main outline and, as it were, the germ of the published states, these latter are so elaborated and, on the whole, improved, as to make it at first incredible that they could ever have grown out of, or had any relation to, the earlier states. The idea of vast masses of ma-

sonry is there, thrown on the paper with a simplicity of decorative effect and a directness of touch which have been lessened in the later work; but, on the other hand, all those scaffolds, engines of torment, and groups of men above described, are lacking, so that the power of contrast and the sense of terror, productive of the sublime, are entirely wanting, and are, therefore, shown to be the result of conscious art used by Piranesi in elaboration of an original inspiration.

Piranesi possessed a style so intensely individual that every print he produced is recognizable as his by any person who has ever looked at two or three of his plates with moderate attention, yet this style never degenerated into *manner*; that is to say, into an imitation not of nature, but of the peculiarities of other men or of one's own earlier work. It became a manner or process in the hands of his son, Francesco, but with Giovanni Battista it always remained *style*, which is the expression of an original intellect observing nature before consciously varying the relations of elements drawn by it from nature, to the end of producing a work of art. This style, whose faults lie in excessive contrasts of black and white, in inadequate handling of skies, and, at times, in a certain general hardness of aspect, is marked by great boldness, breadth, and power, both in conception and in actual execution, but it is never marred by crudity or roughness. It is a remarkable fact that the immense force, which first of all impresses one in Piranesi's work, does not exclude, but is, on the contrary, often combined or contrasted with extreme elegance and fineness of touch. To cite but one instance: in that

PIRANESI. THE PRISONS. PLATE VIII

PIRANESI. THE PRISONS. PLATE XI

Size of the original etching, 16 × 21½ inches

wonderful print which forms the title-page of "The Prisons,"—the figure of the chained man, who imparts such a sense of terror to the whole scene, is handled with a grace and delicacy worthy of Moreau or any of those French contemporaries who filled the land with their exquisite creations for the endless delight of later generations. It is this contrast, together with his dramatic introduction and grouping of the human figure, which gives to Piranesi's style a character that has been aptly qualified as *scenic*. An etching by Piranesi produces very much the same curious effect that a person experiences on entering a theater after the curtain has risen, so that he receives from the stage a sudden, sharp impression, not of a passing moment of the play, but of one distinct, dramatic picture. His etchings are never theatrical in the sense of something factitious and exaggerated beyond likeness to nature, but are always truly dramatic.

It will have been noticed that plates by Piranesi have been referred to both as etchings and engravings; this is because he used both etching and engraving in the same plate, a proceeding which, if decried by theoretical writers, has none the less been habitually employed by many of the greatest masters of both means of expression. Despite his faults and his Latin exuberance, Piranesi is technically one of the great etchers, in whose hands, particularly in certain plates in "The Prisons," the etching-needle attained a breadth of vigorous execution that no one has surpassed. In judging an artist, the obvious precept, to consider what he was aiming to do, is unfortunately too often neglected. To expect of Piranesi either the incomparable delicacy of Whistler, or the

unsurpassed crispness of Meryon would be futile, but he does possess certain forceful qualities which are not theirs. When he used the burin, he could handle it with the greatest precision and skill. In such a plate as the one known as *The French Academy*, the building is engraved with a skill not at all unworthy of the engravers who were at that time doing such wonderful work in France, while the plate, as a whole, gains a delightful quality,—that neither pure etching nor pure engraving could have given,—from the contrast which the sharp and delicately engraved lines make with the figures that are etched with a consummate freedom and dash worthy of Callot, who, one cannot but think, must have influenced Piranesi.

In his valuable monograph on Piranesi, Mr. Arthur Samuel makes the statement that “architectural etching has culminated with him”; and it is certain that in this field his work surpasses, both in architectural correctness and in artistic merit, any that has been done either before or since his day.

PART III

THE INFLUENCE OF PIRANESI ON DECORATION
IN THE XVIII CENTURY

THERE is still another side of Piranesi's originality, public ignorance of which may be said to be complete—namely, his relation to architecture, and the very great debt owed him by that art. That he was an architect who signed himself as such on many plates during his entire life is a fact ignored even by many of those architects who are most indebted to him; but this fact is negligible, together with the work which he actually executed as an architect. The benefits which he conferred were rendered in other ways.

His first, and perhaps greatest, service consisted in the collection of materials. The classic motives which he gathered and etched form an inexhaustible store of ornament on which generation after generation of architects has drawn, and will continue to draw. The enormous quantity and variety of classic fragments of the best quality that Piranesi brought together is in itself astounding, but a fact of still greater importance is that it was he who, more than any one else, gave these motives currency. In his day no one, except Winckelmann—now known chiefly by his influence on Goethe, and by his tragic death—did as much as Piranesi to foster appreciation and spread knowledge of classic antiquity; while his plates, both by their greater currency and higher artistic merit, did wider and more enduring good than could ever be accomplished by the work of a critic and connoisseur,

even of Winckelmann's talent and prestige. His boundless enthusiasm and his real learning aroused more people than we shall ever know, at the same time that his labors, so indefatigable as to be incredible, spread abroad in prodigal profusion the reproductions of the remains of classic buildings, statues, and ornament. The greater part of these relics would have continued, but for him, to be known to only a few collectors and frequenters of museums; and it is certain that more classic motives have come into use, directly or indirectly, from the works of Piranesi than from any other one source, with the possible exception of modern photography.

In this connection it is impossible to insist too much on his exquisite taste, which, although it had its lapses, as in his designs for chimney-pieces, was on the whole of the highest. This fact seems quite incredible if the time and place of his life be considered. The intellectual degradation of all Italy at this period has already been alluded to, and, art being always a reflection and expression of contemporary life, it follows that the artistic degradation of Piranesi's Italian contemporaries was complete. It is difficult to conceive the rococo horrors of eighteenth-century Italy. In France the most contorted productions of the Louis XV style, or the most far-fetched symbolic lucubrations under Louis XVI, never reached such depths of bad taste; for the French, in their most unfortunate moments, can never divest themselves entirely of an innate taste and a sense of measure which give some redeeming grace to their worst follies. The lack of tact, of a sense of limitations, which often characterizes Spanish and Italian art, and at times makes

possible splendid flights never attempted by the French, also permits them, when misguided, to sink to abysmal depths. It would be hard to find much good in the heavy contortions of the rococo work of eighteenth-century Italy, which, starting from Bernini, exaggerated all his faults and kept none of even his perverted genius. Amid this riot of bad taste, Piranesi, with his love of classic simplicity, his sense of the noble, and his feeling for balance and distance, stands out an inexplicable phenomenon.

In certain plates, Piranesi, while using elements taken from antiquity, created a style of ornamental composition which inspired or was copied in work praised for its originality, and passing under the name of other styles. No one dreams of speaking of a Piranesi style, yet there is many a piece of decoration that calls itself Louis XVI, or Adam, or anything else, which comes directly from the work of this much-pilfered Italian. He stands in relation to a great deal of architectural decoration much as do, in science, those profound and creative minds who discover a great principle, but neglect its detailed application, only to have it taken up by lesser inventors of a practical trend, who put it to actual uses, the tangible value of which excites so great an admiration that no thought is taken of the man who discovered the very principle at the base of it all. In such plates as those dedicated to Robert Adam and Pope Clement XIII there can be found, fully developed, the style we call currently Louis XVI, although the greater part of it was produced under Louis XV contemporaneously with the work which goes by that name. The style in question is there, with its exquisite detail copied from

the antique; we can see its inspiration taken from the classic which it wished to reproduce, together with its fortunate inability to do so, and its consequently successful creation of something entirely original but yet filled with classic spirit. That interruption of ornament, that alternation of the decorated and the plain, that sense of balance and of contrast, distinctive of the Louis XVI style—all are here. To think that these qualities came to Piranesi through French influence would be ridiculous, for the style under discussion obviously took for its model classic art, to which it was an attempted return; and as Piranesi was all his life in direct contact with the source of this inspiration, he could scarcely have been formed by a derivation of that which he knew directly.

If this be true, it may be asked why Piranesi's work did not create in Italy at least sporadic attempts at a style analogous to that of Louis XVI. The reason for this lies in the already mentioned condition of the Italy of that day, for a work of art is absolutely conditioned by, and a result of, the environment in which it occurs. Here and there a work of art may, by some phenomenon, occur in opposition, or without apparent relation, to its surroundings; but in such circumstances it will have no successors, just as an unusually hardy orange-tree may thrive far to the north, but will not bear fruit and propagate itself. A great critic has said: "There is a reigning direction, which is that of the century; those talents who try to grow in an opposite direction find the issue closed; the pressure of public spirit and of surrounding manners compresses or turns them aside by imposing on them a fixed flowering." The torpor and bad taste engen-

Statue of Piranesi, by Angelini, assisted by Piranesi's son, and erected in the Church of Santa Maria in Aventino (Rome). It faces the great candelabra which Piranesi had designed to illuminate his statue. This plate was engraved by Piranesi's son, Francesco, in 1790.

PIRANESI. ANTIQUE MARBLE VASE

From "Vasi, Candelabri, Cippi, Sarcofagi, Tripodi, Lucerne ed Ornamenti Antichi Disegn. ed inc. dal Cav. Gio. Batta. Piranesi." (1778) Vol. II, plate No. 73. Piranesi's dedication of this plate reads: "Al Suo Carissimo Amico Il. Sig. Riccardo Hayward Scuttore Inglese."

Size of the original etching, 24 × 16¾ inches

dered in Italy by political and intellectual oppression precluded the work of Piranesi from bearing any fruit in his own country.

To think, on the other hand, that Piranesi exerted an influence on French art of his day is not so fanciful as might at first be supposed. If it be true, as just stated, that it is impossible for the work of an artist to produce any result when his environment is hostile, it is equally true that an artist, or a body of artists, can exert an enormous influence when their surroundings favor and the ground is ready to receive the seed they sow. France was ripe for such seed as Piranesi cast abroad vainly in Italy, and in the former country an incalculable influence in the creation of the Louis XVI style was exerted by those men who accompanied Mme. de Pompadour's brother, Abel Poisson, Marquis de Marigny, on his travels in Italy. Three years previously this great patron of art had caused her brother to be appointed to the succession of the "Surintendance des Beaux-Arts," and after three years of apprenticeship, in order to make himself worthy of this important and exalted position, she sent him, in the company of a numerous suite, to Italy in December, 1749, to complete his education by remaining there until September, 1751. In his following were Soufflot, the architect, and Charles Nicholas Cochin *fils* , the celebrated engraver. On his return from Italy, M. de Marigny directed all the works of art undertaken by the government throughout France, while Soufflot built the church of Ste. Geneviève, now known as the Panthéon, and was one of the most conspicuous and influential men in the world of art in his day. Cochin, aside from being a great engraver, was intellectually

one of the most interesting artists of the day, and, as M. de Marigny's right-hand man, wielded an influence almost incomprehensible to us of to-day. The latter part of his life, he really ruled in M. de Marigny's stead, and his absolute dictatorship in all matters of art in France can only be compared to that of Le Brun under Louis XIV.

That his Italian travels were the decisive influence of Cochin's career is clearly shown in his own work, and is expressly stated by Diderot, who says of him that, "judge everywhere else, he was a scholar at Rome." Soufflot was only seven years older than Piranesi, and Cochin but five. Now, when these distinguished Frenchmen were in Rome, Piranesi was already famous and frequented the most interesting artistic circles. His talents and his remarkably impetuous personality made him one of the curiosities of Rome, so that it is scarcely credible that these visiting foreigners should not have seen much of him. As their express object was the study of antiquity, and as no one in Rome knew more of the ruins or had so lively an enthusiasm for them as Piranesi, it is certainly probable that he influenced them deeply.

Aside from these men, the list is long of famous Frenchmen who studied in Rome during the height of Piranesi's artistic production, and must certainly have felt his influence. It includes Augustin Pajou, the sculptor, who went to the Villa Médicis as Prix de Rome in 1748, at eighteen, and who afterward decorated the opera built at Versailles by Ange Gabriel, architect of the faultless buildings which enoble the Place de la Concorde; Jean Jacques Caffieri, the sculptor, who was in Rome from 1749 to 1753;

Chalgrin, Prix de Rome in 1758, successor to Soufflot as architect of the city of Paris, and architect of St. Philippe du Roule and of the Arc de Triomphe; Jean Antoine Houdon, the sculptor, Prix de Rome in 1761, at twenty, who came to America with Franklin to execute the statue of Washington now in Richmond; and finally Claude François Michel, known as Clodion, who gained the Prix de Rome for sculpture in 1763 and filled whatever he touched with unrivaled grace, raising the art of terra-cotta figurines to a degree of loveliness no one else ever attained. It must be remembered that these architects and sculptors did not confine themselves to architecture pure and simple, as do our prouder and less talented contemporaries. With the spirit which animates all periods of great art, they considered no object too insignificant to be made lovely by their talent. They decorated theaters and houses, designing furniture, clocks, vases, and every article of daily life; filling them all with the consummate, delicate art that remains the despair of all who have followed. If, therefore, as is to be supposed, they underwent Piranesi's influence while in Rome, it would have made itself felt, through them, in all the decorative arts of France.

If Piranesi's influence in France be a subject for hypothesis, in England it can be decisively proved in the case of the so-called Adam style, a vulgar caricature of which is at present so prevalent in New York. Robert Adam, a Scotchman who studied in Rome, was so delightfully original and adventurous as to fit out an expedition to explore the then totally unknown Palace of Diocletian at Spalato in Dalmatia. He was also a friend of Piranesi, who dedicated his views of

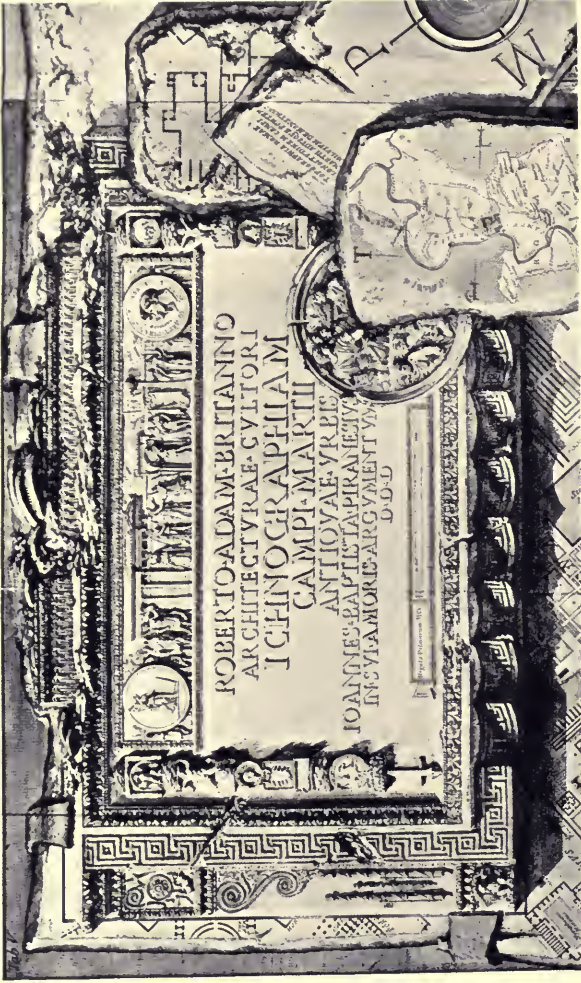

the Campus Martius to "Robert Adam, a British cultivator of architecture, as a proof of his affection." Now Adam, a man of unusually alert mind and delicate taste, was a poor architect, with a most defective sense of proportion in the composition of a building as a whole, who nevertheless possessed unusual and distinctive talent as a decorator. His fine taste led him to cover his work with detail executed and often conceived by remarkable persons, so that much of the credit for originality and delicacy given to him is due, as with so many an architect, to the artists whom he had the cleverness and good fortune to employ and the ability to direct. In the preparation of his monumental book he was assisted by "Eques J. B. Piranesi," as he there signs himself, who actually engraved three plates with his own hand, while the rendering of every design in the book shows his influence. Knowing this, it is impossible to doubt that Adam's taste and style were profoundly influenced by, and indebted to, so original and masterly a mind as that of Piranesi.

A comparison of Adam's book with certain plates by Piranesi will clearly show the debt, while a careful study of only three of his compositions—namely, the title-page before mentioned as dedicated to Adam and the two plates inscribed with the name of Pope Clement XIII—will in itself make clear that much decorative work called either Louis XVI or Adam takes its forms as well as its inspiration directly from the creations of Giambattista Piranesi. Piranesi's influence can also be proved in the case of George Dance, architect of old Newgate Prison; of Robert Mylne, architect of old Blackfriars Bridge; of Sir John Soane, archi-

tect of the Bank of England; and of many more. The subject of Piranesi's influence in England has been so exhaustively treated by Mr. Arthur Samuels in his monograph as to make useless any attempt to rehandle the subject here.

Still another example of Piranesi's influence is to be found in the sketches of the present-day German, Otto Rieth, the originality of whose drawings is so vaunted. Very talented and individual they certainly are, but to any one thoroughly familiar with the architectural fantasies of Piranesi, the source of inspiration is so obvious as to make it impossible that Rieth should not have known the work of his great Italian predecessor.

The influence which Piranesi exerts on the *École des Beaux-Arts*, and consequently on the leading contemporary architects of both France and the United States, is enormous, if hard to define. The use of detail which he furnishes is never-ceasing, but more important than this is the constant inspiration sought in a study of those architectural fantasies which he has filled with the qualities of grandeur and immensity so much valued by the French to-day. The buildings of New York are covered with motives either inspired by Piranesi or taken directly from his work—ornament much of which would never have come into vogue but for him; while a recent number of a leading architectural periodical, without acknowledgment, printed a design of his for its cover.

It is ardently to be hoped that a wider and more just appreciation of Piranesi's unique work may gradually gain currency. Mere productiveness is, of course, of no intrinsic value; but that any human

being should be capable of so vast a labor as Piranesi must in itself excite in us a lively sense of wonder and admiration. When, moreover, it is found that his work, in addition to putting the art of architecture under an enormous debt, is distinguished by imagination, originality, sublimity, and immense skill of execution,—a certain portion of it at least possessing these qualities to a degree unsurpassed by any artist using the particular medium employed,—it is surely not unreasonable to attribute to their creator the rare quality of original genius.

NOTE: I desire to acknowledge my indebtedness to Mr. Arthur Samuel of London, both for material contained in his book and for personal courtesy.

FRANCISCO GOYA Y LUCIENTES

By CHARLES H. CAFFIN

Author of "The Story of Spanish Painting," "Old Spanish Masters, Engraved by Timothy Cole," etc., etc.

THE phenomenon of Goya is among the curiosities of the history of art. For in the latter half of the eighteenth century, when, under the feeble Bourbon dynasty, Spain had reached the lowest ebb of her national and artistic life, an artist arose who represented more than any other her racial characteristics and was destined to exert a world-wide influence on the art of the succeeding century.

While the rest of Europe was seething with the spirit of revolution, Goya, the man, was already in revolt, and at the same time had discovered for himself a revolutionary form of art, which anticipated by half a century the consciousness elsewhere of the need of a new method to fit the new point of view. In a word, he drove an entering wedge into the contemporary classicalism that was based upon a dry imitation of Roman marbles and Raphaellesque compositions, restored nature to art, and adapted his vision of nature to the spirit of inquiry, observation, and research that was in process of fermentation. Finally, he adjusted to his vision of life a method of composition, freer and more flexible than the older ones: that was preoccupied less with the representa-

tion of form than with the expression of movement and character; its aim, in fact, being primarily expressional. Thus he anticipated the motive of modern impressionism and determined in advance the methods of rendering it.

No less remarkable is the degree in which he was an avatar of the mingled traits of his race. For ethnologically the Spaniard is a Celt, who first was disciplined by Roman civilization, then merged in the flood of a Germanic wave, and later infused with the blood and culture of the Arab and the Moor. A truly wonderful amalgam—the ironic humor of the Celt; the mysticism, vigor, and grotesque imagination of the forest-bred Goth; the subtle inventiveness, sensuousness, and abstraction of the Orient, and the uncouth strain of the Black Man, whom to-day we are discovering to be the flotsam of a far-off submerged civilization in Darkest Africa. All these traits are recognizable in the work of Goya that he did to please himself: namely, in his painted figure-subjects, other than portraits, and in his drawings and etchings.

* * * * *

In the modern craze for making over biographies of past worthies, so as to bring their lives into conformity with the standards of respectability in the present, there is a tendency to suggest that many of the records of Goya's career may be apocryphal. This would rob the story of art of a very picturesque personality; one, moreover, which seems to be quite convincingly represented in his art. He was born in 1746, in the little town of Fuendetodos near Zaragoza in the province of Aragón, his father being a small

GOYA. PORTRAIT OF GOYA, DRAWN AND ETCHED BY HIMSELF

farmer. Reared among the hills, he breathed independence, throve mightily in bodily vigor, and proved precociously disposed to art. Accordingly, at the age of fourteen he was put under a teacher, Luzan, in Zaragoza. But it was never Goya's way to take instruction from a spoon, and at this period he distinguished himself less as a student than as a roistering young fellow, apt for gallantry and brawls and ready with his rapier. Having drawn on himself the attention of the authorities of the Inquisition, he found it convenient to proceed to Madrid. Here again his escapades aroused notoriety, so that he abandoned the capital and set forth for Rome, working his way to the sea-board by practising as a bull-fighter. In Rome he mainly nourished his artistic development by observation of the old masterpieces, meanwhile indulging in gallantries, which culminated in a plot to rescue a young lady from a convent. This time he found himself actually in the grip of the Inquisition and was only released from it by the Spanish ambassador, who undertook to ship him back to Spain. Arrived the second time in Madrid he found a friend in the painter Francisco Bayeu, who gave him his daughter, Josefa, in marriage and introduced him to Mengs, the arbiter of art at Court. Josefa bore him twenty children, none of whom survived him, and patiently put up with his infidelities. Mengs had been urged by the king, Charles III, to revive the Tapestry Works of Santa Barbara, and intrusted Goya with a series of designs, which to-day may be seen in the basement galleries of the Prado, while some of them, executed in the weave, adorn the walls of a room in the Escorial. The vogue at the time was for Boucher's pretty pas-

toral ineptitudes, but Goya took a hint from Teniers and represented the actual pastimes of the Spanish people. He, however, far outstripped the Flemish artist in the variety, naturalness, and vivacity of his subjects, while in the matter of composition he showed himself already a student of the harmonies of nature rather than a perpetuator of studio traditions.

These designs secured his general popularity and paved the way for his *entrée* into royal favor at the accession of Charles IV in 1788. Goya, turned forty, was already the darling of the populace and now became the cynosure of the Court. He would pit his prowess against the professional strong man in the streets of Madrid and plunged with equal aplomb and assurance into the gallantries of the royal circle, which was a hotbed of intrigue under the lax régime of Queen Maria Luisa, whose amours were notorious. Foremost among her lovers was Manuel Godoy, whom she raised from the rank of a guardsman eventually to be prime minister. He embroiled his country in a war with England, and finally ratted to Napoleon, conniving at the invasion of the French troops and the placing of Joseph Bonaparte on the throne of Spain. Meanwhile, in the interval before this *débâcle*, Goya, while dipping into intrigue, notably with the beautiful Countess of Alba, and establishing his position as an artist to whom every one who would be anybody must sit for a portrait, maintained an attitude of haughty mental exclusiveness. He was the rebel, the insurgent, the nihilist; lashing with the impartial whip of his satire the rottenness of the Court and the shams and hypocrisies of the Middle Class, the Church, Law, Medicine, and even Painting.

GOYA. BACK TO HIS ANCESTORS!

"Poor animal! The genealogists and the kings of heraldry have muddled his brain, and he is not the only one."

Manuel Godoy, satirized in this print, had a long and fictitious genealogy made for himself, according to which he was a direct descendant of the ancient Gothic kings of Spain.

From "*The Caprices*" (Lefort No. 39).

GOYA. "BIRDS OF A FEATHER FLOCK TOGETHER"

"The question is often raised whether men or women are superior. The vices of either proceed from bad upbringing; where the men are depraved the women likewise are depraved."

From "*The Caprices*" (Lefort No. 5).

Also, like many devotees of sensual pleasures, he was hot in his denunciation of lust, a terrible exponent of its consequences in satiety and sapped vitality.

This last is the theme of one of his most horribly arresting subjects in oils, an allegory of the Fates, wherein lust and its accompanying exhaustion represent the futility of man's existence. It is painted in colors of extreme neutrality that almost amount to monochrome. Thus it illustrates a dictum of Goya's that color no more than line exists in nature; there are only differences of light and shade. It accordingly prepares one for an appreciation of his etchings, in which aquatint plays so intrinsically important a rôle. As a painter he had begun with positive hues—to abandon them, as soon as he reached his maturity, for a sparing use of color and a liberal differentiation of color values. In this he was following Velasquez, whom he admitted to be one of his teachers, the others being Rembrandt and nature. It was Rembrandt, unquestionably, who helped him to a vision of nature that reduced itself to the principle of light and dark; but from nature herself he gained corroboration of the essential truth of such a vision. How true it is the artist of the present day has learned from Goya. Like the latter, he sees color in nature not as positive hues, but as a complex weave of varying intensities of light and shade that play over and transform the hues. It is by the correlation of these varying values that he builds up the structure and secures the planes of his composition, and realizes a unity and harmony of *ensemble*. And it is in Goya's etchings that he finds these principles of color in relation to composition represented with most adequate reliance on simplifica-

tion, organization, and expression—the three watch-words of contemporary artists who are working in the latest modern spirit.

Expression is the keynote of Goya's etchings, as it is of his paintings. It is the quality of feeling rather than of seeing that is interpreted. Thus, in the oil painting of the *Maja, Nude*, it was Goya's intent not so much to represent the young form as to interpret the expression of its youth through the play of light and shadow on the supple torso and limbs; an expression so exquisitely subtle and tender that it defies the copyist's attempted imitation and eludes the resources of photographic reproduction. Similarly, in the splendid impressionism of the group-portrait of Charles IV and his family it is not the appearance of the jewels, clustered on the breasts of the royal pair, but the effect of their luster that he designed to render. And so throughout his drawings and etchings the prime purpose is not to represent the thing seen but to suggest its effect upon the feelings.

* * * * *

Goya's etched work, as catalogued in 1907 by Julius Hofmann, comprises 268 pieces. These include 22 Various Subjects; 16 Studies after Velasquez; 83 Caprices; 21 Proverbs; 82 Disasters of War and 44 Tauromachies, or Scenes from the Bull-Fight. To this list of engraved work are to be added 20 lithographs.

The best known of these groups is *Los Caprichos*, etched in 1794–1798 but not published until 1803. These *Caprices* represent the most spontaneous expression of Goya's temperament and of his attitude toward the life and the society of his day. At the

GOYA. THEY HAVE KIDNAPPED HER

"The woman who does not know how to guard herself is the first to be attacked. And it is only when there is no longer time to protect herself that she is astonished that she was carried off."
From "*The Caprices*" (Lefort No. 8).

GOYA. "BON VOYAGE!"

"Where go they across the shadows, this infernal cohort which makes the air ring with their cries? If only there were daylight— . . . Then it would be another thing; because with a gun we could bring them down. . . . But it is night and nobody can see them." From "*The Caprices*" (Lefort No. 64).

same time, the designs, as in the case of all his etchings and lithographs, were executed with due deliberation, worked out previously in drawings in which every effect was carefully calculated and assured. With corresponding fidelity the drawings were copied on the plate.

It is in this set that the creative quality of Goya's imagination is most demonstrated. He could not only summon visions from the void, but clothe them in convincing shape. Whether he stretched some human type to the limit of caricature or invested it with attributes of bird, beast, or reptile, or used some familiar form of animal, or created a hybrid monster, he had the faculty of giving it an actuality that makes it seem reasonable. As to the meaning of the subjects, the titles which he himself gave them furnish, except in a few instances, an intelligible clue. Prints of this set were brought to England by officers engaged in the Peninsular War and later found their way to Paris and exercised a very conscious influence upon Delacroix. For they not only echoed the turbulence of his own spirit, but helped him to give expression to his own visions of the horrible and fantastic. The best proofs are those of the first edition, many of which were pulled by the artist himself.

The Proverbs, although engraved between 1800 and 1810, were not published until 1850. While their subjects are often difficult to comprehend, they show generally a marked technical advance over the previous work. This is apparent not only in the character of the drawing, but also in the increased simplification and more highly organized arrangement of the composition. Some of the latter, as for example in the case

of *The Infuriated Stallion* and *The Bird-Men*, present designs of extraordinary distinction.

The last prints of *La Tauromachie* are dated 1815. This series falls short of the others in esthetic interest, being more conspicuously illustrative. It was, indeed, designed to represent the various phases through which the baiting of bulls in Spain had passed. Beginning with the early hunting of the bull in the open country, both on horseback and on foot, it proceeds to the methods introduced by the Moors, who are represented in the attire of Turks. Thence it gradually traces the development of a precise science and technique in the management of the sport and incidentally commemorates the prowess of individual bull-fighters, beginning with the Emperor Charles V, and passing to well-known professional toreadors. Contemporary proofs of Goya are very rare; and it was not until 1855 that a complete set was published in Madrid. A later issue, including seven extra prints, was published by Loizelet in Paris.

Of the *Disasters of War* no prints exist prior to those of the set published by the Academy of San Fernando in 1863. Etched during 1810 and the succeeding years of the Peninsular War, the *Disasters* are regarded as the finest products of Goya's needle. Yet he was sixty-four years old when he commenced them. Though he had subscribed to the Bonaparte régime and still held the position of Court painter, he lived apart from active affairs in the seclusion of his country home. The prints are inspired by his country's sufferings, but he did not publish them. To do so would have been to raise a protest against the crime of the French invasion and to stir his countrymen to

GOYA. THE INFURIATED STALLION

increased patriotism. Under the circumstances of his equivocal position Goya may have thought such a course impolitic. Perhaps he felt the national condition to be hopeless. At any rate, he closed himself around in an atmosphere of profound pessimism. "Was it for this they were born?" is the legend beneath one of the prints which shows a heap of mangled corpses. It is the note of the whole series—the criminal horror of war, and its futility. Nowhere else is the element of the *macabre* in his genius more fully revealed. The designs are in no sense illustrative; they are visions of his own brooding, projected against darkness and emptiness. Yet, just as in the *Caprices* he gave bone and flesh to the eery fabrics of his imagination, so by the magic of his needle his abstract imaginings of the enormity of war became visualized into concrete actuality.

Of Goya's lithographs it must suffice here to mention the set of four prints, *The Bulls of Bordeaux*. They were executed in that city in 1825. For after the expulsion of the French by Wellington and the restoration of the Bourbon dynasty in the person of Ferdinand VII, Goya again turned his coat. "For your treason you deserve to be hanged," remarked the new king, "but you are a great artist and I overlook the past." He was reappointed Court painter; but, broken in health and spirits, so deaf that he could no longer indulge his musical taste in playing, he obtained the king's permission to retire to Bordeaux, where he was cared for by a Madame Weiss and her daughter. It was during this time that he visited Paris and was enthusiastically welcomed by Delacroix and the other Romanticists. When he drew *The Bulls*

of *Bordeaux* he was in his seventy-ninth year and able to work only with the aid of a powerful magnifying-glass. Yet the prints in their intense and vigorous movement show no slackening of artistic power. He died three years later, in 1828, and was buried in the cemetery of *Bordeaux*. After lying there for seventy-one years, his body was claimed by his country and interred with honors in *Madrid*. For by this time the modern world of art had recognized Goya's greatness and its own indebtedness to his genius.

* * * * *

Goya's etchings reveal him a great master of design. The versatility of his invention suggests the exuberance of nature, yet calculated art determines each composition. It is architectonic, organic, functional; possessing the quality of a built-up structure, with perfect correlation of its parts and absolute adjustment of means to end. Moreover, it carries the final mark of distinction in that it appears to have grown: it has the vitality, movement, and character of a living organism. It is discovered to be the product of a new mating of nature and geometry, inspired by a wider and more penetrating observation of the former and a more extended and imaginative use of the latter. Hence, at times it strangely anticipates what we are now familiar with in *Oriental* composition.

Most remarkable also is the plastic quality, which is realized not only in the *ensemble* but also in the component parts. Goya's compositions are no mere patterning of surfaces, but an example of actual space-filling, in the true sense that they occupy the third dimension. The substance of his forms and their

GOYA. GOOD ADVICE

"And this advice is worthy of her who gives it. Worse yet is the damsel who follows it to the letter, and misfortune to the first one who accosts her!" From "*The Caprices*" (Lefort No. 15).

GOYA. GOD FORGIVE HER—IT'S HER OWN MOTHER!

"The damsel while young left her native land, served her apprenticeship in Cadiz, and is now returned to Madrid. She has drawn a prize in the lottery, goes one day to the Prado, and is accosted by an old and decrepit beggar—she repulses her; the beggar woman insists. The beauty turns and recognizes her—this poor old woman is her mother."

From "*The Caprices*" (Lefort No. 16).

position in space are so concretely realized that they most actively excite the tactile sense. And yet, for all their concreteness, they are permeated with a quality of abstraction. Thus they fascinate alike by their actuality and their suggestion of a vision. They are frequently hideous, but in their capacity of sense-enhancement and in their stimulus to the esthetic intellectuality they are beautiful.

And the beauty of these compositions is materially increased by the sense of color which they suggest. In consequence of Goya's influence aquatint is coming largely into vogue with modern etchers; but he with this process, and his contemporary, Turner, with mezzotint, were the first to explore fully the resources of tint in combination with line. The English artist, however, used it mainly as a convenient method of representation. In Goya's hand it became a medium of intellectual and emotional expression, comparable to tone in music. Goya, in fact, by his study of nature, advanced the circle of his art, so that, on the one hand, it embraced more of the universal geometry and, on the other, intersected more freely the circles of the other arts. Thus he anticipated the latest modern thought, in its consciousness of the essential unity of the arts and of the essential unity of art with life.

A NOTE ON GOYA

BY WILLIAM M. IVINS, JR.

NO other artist in black and white has ever exhibited such tremendous vitality as Goya. Look back along the line, and there is no maker of prints who has put into them the same exuberant, full-blooded delight in life. For sheer physical strength Mantegna only may be compared with him. And, strangely, with this often almost delirious overflow of animal spirits there is the most remarkable sensitiveness to the significance of gesture. Who, except Hokusai, has ever expressed, in black and white, *weight*—the heaviness of tired bodies, the leaden fall of an unconscious woman's arm, or the buoyancy of excitement—as this Spaniard? Who has ever made motion so moving—made young limbs so supple, elastic, and graceful? His every line is kinetic—he does not relate motion, he exhibits it—and in art as elsewhere deeds are worth more than words.

For sensitiveness to the beauty of the human body, for curious research in the esthetic inversion, the beauty of the hideous, Goya stands alone. No one, not even Leonardo, has plumbed so deep in the hidden shadowy parts. No one has so pictured *fear*—theatricalities a plenty—but only here real terror.

On the purely technical side—the broad massing of sharply contrasted light and shade, the ability to tell

GOYA. LOVE AND DEATH

"Here is a lover who, like those in Calderon, because he could not refrain from mocking his rival, is dying in the arms of his beloved, and by his temerity has lost all. It is not well to draw the sword too often." From "*The Caprices*" (Lefort No. 10).

GOYA. HUNTING FOR TEETH

"The teeth of those who have been hanged are very efficacious in bringing luck. Without this ingredient nothing worth while can be done. Is it not pitiful that the common folk believe such foolishness?"
From "*The Caprices*" (Lefort No. 12).

a tale with the simplest means, the instinctive choice of the pictorially dramatic detail—Rembrandt and Goya stand alone.

On another side that is purely technical, it should be borne in mind that Goya is the only one who has availed himself of all the possibilities of aquatint—the only one who has used the medium with audacity and resolution and success; the only one who has dared use it to express powerful and fundamental things.

Goya, both in himself and for his influence, is one of the greatest artists that the world has seen these last hundred and fifty years—and his greatest work is his black and white.

THE ETCHINGS OF FORTUNY

By ROYAL CORTISSOZ

Literary and Art Editor of the *New York Tribune*

THE etchings of Fortuny make an inviting theme, inviting in itself and doubly sympathetic because it provokes talk about Fortuny. I have always had a weakness for that endearing personality and I cannot, for the life of me, go with foot-rule and a spirit of cold analysis through the twenty-five or thirty plates—twenty-nine, to be exact—recorded in the useful compendium of Beraldi. You cannot be pedantic about an artist whose work has meant to you an early enthusiasm and a lifelong sense of gaiety and brilliance. The first work of art I ever yearned to possess was a drawing by Fortuny. I did not get it into my hands. The spell faded, but it was revived, and long afterward it involved me in an enchanting task. In Paris, one summer, the late Philip Gilbert Hamerton asked me to write a memoir of Fortuny and for two years I spent a good deal of my leisure going hither and yon, collecting material. The book never got itself written, for reasons which I found both pathetic and comic. Too much of the "material" aforesaid proved too heart-breakingly expensive. Mr. Hamerton and I and his London pub-

lisher, the late Mr. Seeley, ruefully concluded as we counted up the figures, that, humorously speaking, ruin stared us in the face. We turned to other things.

That, as I have said, was years ago, but every now and then I go back to Fortuny, for old sake's sake if for no other reason, though he was, of course, a remarkable artist to whom one would be bound, anyway, frequently to return. As a matter of fact, his genius has needed, of late, to be restored to the public consciousness. When the Impressionists came in, Fortuny, or perhaps I should more specifically say, the hypothesis for which he stood, went out. One of the results of my understanding with Mr. Hamerton was a series of visits to the *palazzo* in Venice which is still the home of Fortuny's family, and there you found a contrast that was full of meaning. On the *piano nobile* Fortuny's art held its own in numerous unfinished pictures, sketches, and the like. But, up-stairs, in his son's studio, all was changed. When young Marianito sought inspiration as a painter, he did not follow in his father's footsteps, but went to Munich, and on his walls I saw huge canvases illustrating Wagnerian motives in a huge and splashy manner, strongly suggestive of Franz Stuck and his followers. I confess that at this distance of time I do not recall very accurately just what they were all about; but I can remember as though it were yesterday how extremely different they were from the paintings downstairs. Of course no one could blame Marianito. An artist must seek salvation in his own way. But it is impossible not to feel a certain indignation over the ignorance of those who have tried to wave Fortuny aside as a painter of bric-a-brac.

We saw too much of that sort of thing when the works of Sorolla and Zuloaga were shown at the Hispanic Museum and people went into hysterics over them, talking especially about how the first of these painters was rejuvenating Spanish art. I used to hear such talk in Madrid, some fifteen years ago, amongst the younger men who were even then hailing Sorolla as a pioneer. They were right, and it is right, as I have argued elsewhere, to recognize in this painter's work an influence of the highest value to the modern Spanish school. But there were great men before Agamemnon, and it is stupid to ignore what was done for Spanish painting by Fortuny long before any one ever heard of Sorolla. I have great respect and plenty of admiration for that accomplished technician, and yet I think that he himself, if pressed in the matter, would cheerfully admit that nothing he ever painted could quite touch the portrait in the Metropolitan Museum, *A Spanish Lady*, which Fortuny painted in 1865. Outside of France that was not a particularly good year amongst painters, but Fortuny, then twenty-seven years old, was proving himself not unworthy of Velasquez. He was drawing with mastery and he was painting blacks with amazing skill and taste, with amazing sensitiveness to the beauties lying entangled in one of the most difficult of a colorist's problems. Indeed, I may note in passing that this picture alone would show Fortuny to have enforced lessons in tone which no Spaniard since his time, not even the prodigiously clever Sorolla, has begun to commence to prepare to equal.

There are many other paintings of his over which it would be pleasant to linger, but, having the etchings

Size of the original etching, $5\frac{1}{2} \times 4$ inches

in view, I forbear. At the same time I have driven at nothing irrelevant in speaking of Fortuny's command over the brush, for that is very closely related to his command over the needle. It is important to remember, in the first place, that he was a born draughtsman. The fact was brought home to me when I made a pilgrimage to Barcelona, to see the big Moroccan battle-piece which he painted for the municipality not long after he had won the Prix de Rome. I saw in the spirited picture the Fortuny we all know, but I saw also, in some earlier pieces, the kind of academic work that he did under the influence of old Soberano, his master at Reus, where he was born in 1838. Yes, it was academic work, but it was the work of a youngster of genius who had a *flair* for form and drew it with astonishing adroitness. There, to be sure, you have the essence of Fortuny, more even than in the glitter of light and color conventionally associated with his name. The artists and critics who think that the history of painting began with Manet are wont to damn Fortuny with faint praise, talking about his dexterity as though that were a very ordinary and perhaps specious gift. Well, there is a dexterity, there is a sleight of hand, as honest as anything that you will find in Manet, and Fortuny had it. There are moments, no doubt, in which it takes your breath away as though by some deceptive stroke of conjuror's work. But at bottom there is a sterling sincerity about it, and this, I think, is sharply perceptible in the etchings.

Paradoxically, these do not proclaim Fortuny what the master of etching is wont to be—a lover of line for its own sake, a user of it as a language possessing its

own special character and charm. Rembrandt's strength and Whistler's exquisiteness were alike unknown to him. The truth is that Fortuny employed the needle somewhat as he employed the pen, simply for purposes of swift and free expression. There are some bewitching drawings of his, reproduced by the Amand-Durand process in the memoir by Baron Davillier, and there are others in the catalogue of the great sale of his studio effects in 1875, which, for the impression they leave, might almost be regarded as etchings. The impression in either category is very much one of "black-and-white." Has not Fortuny been the master of a generation of illustrators? Nevertheless his drawings and his etchings are not absolutely interchangeable. In the latter there is too much of the painter for that; his figures are too closely modeled and his backgrounds are too transparent. Some of his plates, such as *The Serenade*, *The Anchorite*, the *Kabyle Mort*, and *The Farrier*, are wonderfully rich in color such as no pen draughtsman could secure. He knew how to fill his backgrounds with deep warm tone, and he could use the same vivifying touch in his treatment of the figure. It is worth while to go carefully through the little collection of etchings that he left, looking more particularly for those rather thin staccato effects which his imitators affect—one is so delightfully disappointed. I have spoken of his sincerity, his honesty. Amongst all the plates there is only one, *La Victoire*, which hints a contradiction. There is something factitious about the composition, recalling the Sicilian nudities hawked about by the photographers in Southern Italy. But even this etching has undeniable brilliance

FORTUNY. A HORSE OF MOROCCO

(Beraldi No. 20)

Size of the original etching, $4\frac{1}{4} \times 6\frac{1}{4}$ inches

as a piece of technique, and, for the rest, Fortuny is the quite artless connoisseur of picturesqueness, etching his Moorish types and his portraits in the mood of the serious observer of nature aiming at the truth. On two or three occasions he appears to have let his fancy rove. His *Amateur de Jardin* and his *Méditation* both belong amongst those graceful studies of costume and pseudo-romantic sentiment with which his paintings have made us so familiar. And once he turned poet in a small way, etching that charming *Idylle* which may reflect no emotion whatever, but has, at all events, a certain dainty elegance; but do not think that Fortuny was really a poet. It was not in his temperament. He was sensuous, mundane, in the soul of him; the very man to enjoy just the career that fell to his lot.

New Yorkers will recall the sale here of the collection formed by the late W. H. Stewart in Paris, the "Cher Monsieur Guillermo" of more than one of the artist's letters printed by Davillier. It was full of Fortunys, which made a dazzling array when they were put up at auction. But it was better to see them scattered about in Mr. Stewart's home by the Seine, and there they breathed the atmosphere of a clearly defined character. You did not think of Fortuny in Spain, quietly painting at Granada; you did not think of him on the more adventurous soil of Morocco, nor did you dwell on thoughts of his days in Rome and on the beach at Portici. You thought, instead, of the Fortuny who took the collectors of Paris by storm, who moved Théophile Gautier to jeweled eloquence, who was young, successful, and happy, who had a great gift and used it truly with a *gaillard* grace. He

was not the specious entertainer, bemusing his audience with incredible tricks. All his wizardry, all his diabolical cleverness, was quite natural to him, springing from his heart and in no wise diminishing his weight and seriousness as a student of nature. Beraldi applauds his etchings for their originality. Let us honor them too for their fidelity to life, for their simple strength, as well as for their light, vivacious charm.

PERSONAL CHARACTERISTICS OF
SIR SEYMOUR HADEN, P.R.E.

PART I

BY FREDERICK KEPPEL

MANY treatises have been published on Seymour Haden the artist, but not one, as yet, on Seymour Haden the man. This is as it should be; because no one can write freely and frankly on the personality of a famous man while that man is still living, and Sir Seymour lived until the year 1910, when he died at the great age of ninety-three.

I met him often every year for about thirty years, and I first made his acquaintance when he lived in his very handsome house in the aristocratic region known as Mayfair, in the west end of London. His house adjoined the residence of the Lord Chief Justice of England.

The doctrine held by the ancients that the Goddess of Fortune was stone-blind has much to warrant it. Let us take the case of three contemporary nineteenth-century etchers, all three being men of genius. I mean the two French masters, Charles Meryon and Jean-François Millet, and the Englishman Seymour Haden. The two French etchers lived in dire poverty and often had to go hungry because they had not the

means to pay for a meal; while, to their English contemporary, "the lines were fallen in pleasant places" and he never knew the wants that pinch the poor.

Born in 1818, in his father's fine house in Sloane Street, London West, Francis Seymour Haden had the advantage of coming of a good and well-known family, in easy circumstances, and the further advantage of having received an excellent university education, so that he found himself, from the first, the social equal of many of the best in the land, and he never had to invade and overcome that formidable social barrier which in England so sternly divides the "somebodies" from the "nobodies"; and during his long and active life he certainly did nothing to diminish or discredit the high social standing to which he was born and bred.

This being so, he remained to the end of his life an ideal Tory aristocrat, a condition which might be compared to that of the Bourbon kings, who "never forgot anything and never learned anything." In maintaining any opinion which he had formed, or inherited, he was as immovable as the rock of Gibraltar, and it made no difference to him if later evidence showed that his earlier opinions were wrong.

I well remember hearing that man of genius, Henry Ward Beecher, say in a sermon: "Talk of the sin of Pride—we have n't half enough of it!" Be that as it may, Seymour Haden was always a proud man, and this innate pride sometimes rendered him intolerant of the opinions of other good men whose ideas were also entitled to due respect. Indeed, I have never known a man who set a higher value on himself.

PORTRAIT OF SEYMOUR HADEN AT THE AGE OF SIXTY-TWO

Nothing was too good for him—whether it might be his collection of the best prints by older masters, his house and its appointments great and small, or the instruments which he used when he practised surgery,—everything must be of the very best. This determination of his was, within limits, a noble one, although it sometimes made him intolerant of other men who were unable to rise to his high ideals.

In this ingrained pride and self-esteem of Seymour Haden's he was far too proud to be vain. I do not think he had any vanity at all. In this respect he differed, "as far as the east is from the west," from his illustrious brother-in-law, Whistler. The latter's lifelong habit was to pose and to perform like an actor on the stage—whether his audience consisted of many auditors or of only one; while Haden, though an eminently well-bred gentleman, cared nothing whatever about the impression he might be making on his auditors—so long as his actions were approved by himself. On such occasions all went charmingly until some other person uttered a heterodox opinion on art, or politics, or any other subject; but when that happened Sir Seymour's indignation would burst forth like a raging volcano.

On one such occasion, while I was a guest in his country house, I infuriated him—though with no evil intention. It was at the time when the patriot Charles Stewart Parnell was making such a brave struggle in the House of Commons on behalf of Home Rule for Ireland, I expressed my admiration for Parnell, when Sir Seymour got very angry and so made all the company uncomfortable. Thus far I did not blame myself; but a year later I certainly was ashamed of my

own indiscretion. I had quite forgotten about the outbreak of the former year and I again expressed my warm sympathy with the cause of Irish Home Rule. It was just at the beginning of dinner at Sir Seymour's hospitable table, but no sooner had I mentioned the subject than he flung down knife and fork, marched out of the dining-room, banged the door behind him, and tramped up-stairs to his bedroom. That sweet woman, Lady Haden, said to me very quietly, "We shall see no more of Sir Seymour to-night," and next morning, before my host appeared at breakfast, his very tactful wife, laying her hand gently on my arm, said to me, "Mr. Keppel, in conversing with my husband, pray avoid the subject of Home Rule in Ireland." Most readers would think that the little incident ended here; but it did n't. Presently Sir Seymour came down to breakfast and carried in his hand a large and handsome book which he presented to me. On the fly-leaf I read a long and most kindly dedication written by himself; and so *that* was the end of the incident. I remember that when I received this *amende honorable* my first impulse was to recall a characteristic Irish adage which says: "First cut my head, an' then give me a plaster!"

Lady Haden was, in a very quiet and refined way, a remarkable woman. She was daughter of an American army officer, Major Whistler, and she bore the Puritan Christian names of Deborah Delano. In more than one of Sir Seymour's etchings her first name is quieted down to "Dasha." She was half-sister to the great Whistler, who was the issue of her father's second marriage, and she clung to her "brother Jimmie" to the end of her life. All the art which was

Size of the original etching, $6\frac{3}{8} \times 10\frac{1}{2}$ inches

inherent in the Whistler family manifested itself in Lady Haden's music. She was a marvelous reader of piano music, and when Sir Seymour got possession of the fine old Elizabethan mansion of Woodcote Manor in Hampshire, Lady Haden, perceiving that there was no musical skill among the young men of the neighboring village of Bramdean, organized a band or orchestra for these rustics. To one she taught the violin, to another the flute, to another the trombone, etc. After about two years of drilling I had the opportunity of hearing her band performing in the school-house at Bramdean, and they played respectably well, while the sweet old lady conducted the music with her baton. Toward the end of her life she became totally blind, and after that I never was more affected in my life than when, at Woodcote Manor, I saw her grope her way to her piano and heard her play, superbly, some great compositions by Beethoven and Chopin.

At Woodcote Manor Sir Seymour enjoyed his life thoroughly (except when something went wrong and made him angry). The mansion stood in its own park and there was a beautiful old garden inclosed with high stone walls. One summer when his long hedge of sweet pea was in full bloom he took me to see it and told me that he had thought out a new and interesting botanical fact, on which he had written a paper for the learned Royal Society, and that he intended to send it to them in London and to invite some eminent botanists of the Society to come to Woodcote and see the phenomenon for themselves. His theory was that garden flowers always had a tendency to return to the original color of the same

blossoms in the wild plant, especially when the garden plant grew tall, and then he showed me that, in his hedge of sweet pea, the purple blossoms at the top were much more numerous than the flowers of pink or blue or white which were lower down, thus proving that when a garden sweet pea grew tall the blossoms returned to the original purple color of the wild pea.

I had always been somewhat of a horticulturist myself and so I said to him: "It is evident that the plants here bearing purple flowers grow taller than the others; but you must remember that any single plant of sweet pea can give you nothing but one and the same color in its blossoms." Sir Seymour sent for his pig-headed old Hampshire gardener, put the question to him, and although the old man was greatly in awe of his master he gave his decision on my side and against Sir Seymour. "You are a pair of fools," was the old gentleman's angry answer, and he started to leave us. But I overtook him and said: "Now, Sir Seymour, it is not fair to me to leave this little scientific question undecided. Pray come back for a few minutes and let me cut two or three of your plants at the roots, disentangle them from the hedge, and show you that although they mingle when growing close together yet you never get more than one colored bloom from one plant." To this he consented, and of course my demonstration showed that his theory was wrong; but his anger against me lasted till bedtime, and it was only next morning that he said to me: "Keppel, you made me angry yesterday about those sweet peas,—but, all the same, I am glad you saved me from making a damned fool of myself before the Royal Society."

getting being an art which expresses itself
by lines, and the line since there are none in nature,
being the essence of conventionalism, how comes it that we
attach either beauty or value to the straight line? It
is precisely because the best art is conventional - that is
to say suggestive rather than imitative - that we may
properly do so with the relatively coarse materials of
his disposal, the painter does not seek to reproduce the
morning mist & the noon-day haze - he seeks to suggest
it. The sculptor does not make his statue of marble
because marble is like human flesh but because, while
it permits perfection of form, marble suggests for hu-
man flesh a purity which it is the province
of art to claim for it. If he painted the eyes and eye-
brows to make his statue like nature he would descend
at once from the region of art into the abysses of realism,
and instead of exalting humanity degrade it

S. Seymour Hudson

Sir Seymour's anger on this occasion was mild compared with the rage he flew into with his gardener when, after the master had been absent for a day in London, he returned and found that his man had spent a laborious day in scraping off the beautiful green moss which adorned the trunks and larger branches of the old apple-trees in the garden. I was with Sir Seymour when he made the distressing discovery and I heard the furious sound of the vials of wrath which he poured on the stupid old man's head. After Sir Seymour had gone the poor gardener said to me: "And that 's my thanks for having worked hard to make his old apple-trees look neat and tidy!"

Besides being a fellow of the Royal College of Surgeons, Sir Seymour Haden was a member of the most exclusive club in London—if not in the world—the Athenæum. It generally took from fifteen to twenty years for any candidate to be elected. Sir Seymour had to wait eighteen years. The usage of this club is to hang on the wall a large sheet of paper setting forth the name and the qualities of the candidate, and any member who approved of this candidate would sign this paper. Whether many of these eminent persons had much idea of the quality of a fine etching is quite another matter, but Sir Seymour's nomination sheet at the club was crammed with signatures of eminent men advocating his election. Among these signatures are those of Robert Browning, Anthony Trollope, Matthew Arnold, Dr. Tait, Archbishop of Canterbury; Huxley, the great scientist; Lord Chief Justice Coleridge, and Sir E. J. Poynter, now President of the Royal Academy of Arts. Besides the signatures of these famous men

who had "achieved greatness" other signers of this Athenæum document had been "born great," including several hereditary peers; and—to finish Shakespeare's sentence—the gentleman chiefly concerned never waited to have "greatness thrust upon him," for he was always quite willing to meet greatness half-way.

The Athenæum Club is so desperately exclusive that no member can bring in an outsider except to a little sentry-box inside the main portal, which room is only large enough to accommodate two persons. On one occasion when I was visiting Sir Seymour I did one of the few deliberately wicked things that ever I did in my life. As I stood in the little sentry-box I perceived His Grace the Archbishop of York entering with a friend at the front door of the club. The two walked straight to the glass door of the little sentry-box where I was, and the eminent prelate said to his friend, in a loud authoritative voice: "We can sign the documents here in a moment." Then it was that "Satan entered into me." I knew that this was my only chance ever to make a British archbishop wait till I was "good and ready," and so, although I had finished my business with Sir Seymour, I began talking and talking about his friends in Paris and what they were doing, until I kept the very impatient archbishop striding up and down before the little door for more than ten minutes, and twice when I caught his eye he looked at his watch, glared at me, and exclaimed, "Dear me, how tiresome!" (It will be remembered that in genteel English parlance the word "tiresome" means "annoying" or "provoking.") At last, when I could talk no more, Sir Sey-

HADEN. WHISTLER'S HOUSE, OLD CHELSEA

Etched in 1863. On the left is Lindsay Row, in which Whistler's house is indicated by a small stellated mark above the chimney. To the right is old Chelsea Church and Battersea Bridge

mour rose from his chair, opened the door, and met the raging Dr. Maclagan outside. "Oh, Archbishop," said he, "I do hope we have not kept you waiting," and His Grace made answer in a very fretful voice, "Well, in point of fact, Sir Seymour, *you have!*" I cannot claim that this prank of mine did me any credit, but in my boyhood days in England my family and I had suffered from the pomposity of English prelates.

The feud between Seymour Haden and Whistler was known throughout Europe. Whistler loathed Haden and Haden detested Whistler. But Sir Seymour drew a distinction between the man whom he abominated and the artist whom he greatly admired. This admiration led him to make a notable collection of Whistler's prints. On one occasion Sir Seymour said to me that if he were forced to part with his Rembrandt etchings or with his Whistlers he would find it hard to determine which master's works he must let go. Later on I repeated this saying to Whistler and that modest gentleman calmly remarked: "Why, Haden should first part with his Rembrandts, of course."

Among the historic questions which can never be definitely determined is the one—whether Seymour Haden was the man who kicked Whistler down-stairs or whether it was Whistler who administered this violent treatment to Haden. I have heard the story from both, and each of these eminent men stoutly maintained that *he* had been the kicker and his adversary the kicked one.

As president of the Royal Society of Painter-Etchers Sir Seymour did a great work in maintaining

sound doctrine in etching. Nothing was admitted which was "commercial" in character, and etchings which were done after paintings by other hands were rigorously ruled out.

The membership comprised foreign as well as British artists, and membership was eagerly sought for,—so much so that many famous etchers never were elected, although they tried hard to be.

The members often had to complain of the masterful ways of their president; he ruled them with a rod of iron, but still the malcontents were forced to endure it,—well knowing that no other man could give to the Society the prestige and authority that Seymour Haden gave to it.

In all other art exhibitions a good thing, done by an outsider, is accepted and welcomed, but the Royal Society of Painter-Etchers exhibits nothing except the work of its own members.

We have seen that Sir Seymour Haden, in spite of his good qualities—and his great qualities—was a man of a domineering and disputatious nature. I know of no figure in dramatic literature whom he resembled so closely as Sheridan's *Sir Anthony Absolute*. Both of these *Sirs* were of a violent and masterful temper, and yet both of them were good men.

Besides Seymour Haden's signal achievements as etcher and as surgeon, and his zeal as an angler, he, like some other good men, had a special hobby which he rode for years, and which he often ventilated in the *London Times*. His theory was that no corpse should be buried in a solid wooden coffin, but that it should be inclosed in a loose wicker case, where the earth could come in direct contact with the dead body.

HADEN. OUT OF STUDY WINDOW

Etched from an upper window in Mr. Haden's house in Sloane Street. In the mid-distance is the suburb of Brompton

Size of the original etching, $4\frac{1}{4} \times 10\frac{1}{4}$ inches

HADEN. THOMAS HADEN OF DERBY

"Thomas Haden of Derby, my grandfather, was, under a polished exterior, one of the most determined men I have ever known, and one of the bravest. He would have made a hero of romance if he had had the chance. At the age of eighty-five he defended his home against the whole mob of Derby, keeping them at bay all night."

Seymour Haden.

Size of the original etching, $13\frac{7}{8} \times 9\frac{3}{8}$ inches

He contended that such contact would very quickly turn "earth to earth." One of his demonstrations was practised on the dead body of a large old sow that died in his farm-yard. (The animal's name, I remember, was Mary Jane.) Sir Seymour had Mary Jane buried in the garden, in a shallow grave, and he had a covering of not more than three inches of earth laid over her. Then every visitor to Woodcote Manor had to visit the grave and to use his olfactory organs over it. I myself had to do this on two occasions and I must say that I detected no foul odor whatever.

For more than twenty years I enjoyed a peculiar privilege in connection with Woodcote Manor. The old couple, used to the stir and bustle of London, where they had "troops of friends," sometimes found themselves somewhat lonely in the solitude of Hampshire, and so it happened that for more than twenty years I was given *carte blanche* to invite to Woodcote any person I pleased. I was very particular as to the persons whom I thus invited; but the people so invited were charmed with their visit, whether it lasted for three days or for two weeks, and the English know very well how to make a guest comfortable.

In the park at Woodcote Manor there is an etched tablet, nailed to the trunk of an ancient hawthorn-tree. It reads:

A loyal friend through weal and woe,
At last, stern death o'ertakes him:
Here sleeps my loving, wise old crow,
Till Gabriel's trumpet wakes him.

I wrote this epitaph at Lady Seymour Haden's request. She gave to my dear old pet crow a resting-place when he died. That crow was more like a friend

than a pet. On Atlantic steamers he would fly about among the sea-gulls, and in London I used to open the windows and he flew where he pleased, but I was always sure that he would come back to me.

THE present article is already so long that I must not prolong it further; but in a later number of THE PRINT-COLLECTOR'S QUARTERLY I intend to give an account of Sir Seymour Haden's visit to the United States.

PART II

SEYMOUR HADEN IN AMERICA

THE former chapter of my article on Sir Seymour Haden referred entirely to my experiences with him in Europe; this second and concluding portion will contain nothing except an account of his sayings and doings during his visit to the United States in the year 1882. The purpose of his American visit was to expound and vindicate the importance of original etching as a fine art. This he did by delivering a series of lectures on the subject, and these lectures, in the main, were very well received.

Being a born and case-hardened controversialist he soon found out that in America no man's unproved *ipse dixit*, however eminent he might be, was dutifully accepted as it would have been in one of the older civilizations of Europe, and so it came about that several unprofitable controversies were hotly

PORTRAIT OF SEYMOUR HADEN

From a photograph from life: taken in New York in 1882

CHAMPNEY. PORTRAIT OF SIR SEYMOUR HADEN

Sketched (unknown to him) in the Print Room of the British Museum by J. Wells Champney of New York. Sir Seymour afterward wrote on this sketch, "Excellent! S. H. 1899."

Size of the original drawing, 9 x 8 inches

waged on both sides. Seymour Haden was by nature pugnacious and "toplofty," and such an attitude went down badly in America. But, all the same, the man himself was treated with distinguished consideration here, and his lectures did genuine good to the cause of true art. He lectured in all our principal cities from New York to Chicago, and although when he landed here I think he had very few personal acquaintances (except myself), yet when he sailed back to England he took with him the cordial friendship and good will of many Americans of the right sort.

His first lecture was delivered before a distinguished audience in Chickering Hall, Fifth Avenue, New York. He had plenty of voice to make his auditors hear him; but his lecture dragged considerably—for a peculiarly British reason: it is known to some of us that in an Englishman's public oration he is not genteel or distinguished if he speaks freely and fluently. No, no; he must befog and entangle his words with all sorts of hesitations and amendments. It is the same in the British House of Commons. I do not mean such master orators as Gladstone was, but the public speech of the average British member,—let us call him Sir Huddleston Fuddleston—sounds like this: "The honorable, hum—the honorable and gallant member from—ha—hum—from Hull, has been good enough to—a—um—to *say*— etc."

Well, Seymour Haden modeled his oratory on this preposterous but genteel British usage; and yet, in private conversation, I have never known a man who used more elegant and appropriate language than he. On the day following that of the lecture, I re-

ceived a visit from my kind and valued friend the Right Reverend Monsignor Doane, who was a genuine lover of fine prints, and he said to me: "Well, I heard your English friend last evening humming and hawing through his lecture." Soon afterward I had the opportunity of bringing these two distinguished men together, and after that, during his yearly visit to England, the monsignor used to be a welcome and honored guest of Sir Seymour and Lady Haden. The artist's lectures in Boston were listened to with earnest attention and he was the guest of honor at a reception given at the St. Botolph Club; but even there storms and tempests arose. He quarreled with the one eminent American whom, the rest of us would think, nobody could quarrel with,—namely, Oliver Wendell Holmes. It was all about a "fool" difference of opinion on some question of medical ethics and usages in America as compared with England.

Before the evening of his reception at the St. Botolph Club, Seymour Haden procured a list of the principal personages whom he was to meet there. He brought it to me, and said: "Now, what should I *know* about these people?" I wrote down for him as many notes as I could, and when he met the Bostonians, I was astonished to see how well he had coached himself about them. On his return to New York, he received a great number of letters. He was staying at the old Hotel Brunswick, Fifth Avenue, and every morning I had to go there and tell him "who was who" among the writers of the letters. One day he was called down to the parlor by a message that a lady wished to see him. He went down and when he came back to his room carrying a card in his hand, he said to me,

HADEN. MYTTON HALL

"Mytton Hall is an old Henry the Seventh house which Mr. Haden was in the habit of staying at for the purpose of his salmon fishing in the river Ribble (the Lancashire River) which runs past it," Seymour Haden.

Size of the original dry-point, $4\frac{3}{4} \times 10\frac{3}{8}$ inches

HADEN. ON THE TEST

"This plate and *A Water Meadow* were done on the same day, one at noon, the other very late in the evening. The Test (in Hampshire) is a famous trout stream."

Seymour Haden.

Size of the original dry-point, $6 \times 8\frac{3}{4}$ inches

“Well, I certainly am in an extraordinary country. That visitor, whom I never knew, is evidently a lady, and she has invited me to come and spend a week with her husband and herself at Yonkers.” Glancing at the card, I read the name of Mrs. James B. Colgate, and said to Seymour Haden, “I should certainly advise you to accept,” and I went on to say that it was easy enough for a stranger from England to see our public show places, big hotels, etc., but not so easy to get an entrée to the home of a really nice American family. Seymour Haden accepted the invitation and spent a week with Mr. and Mrs. Colgate. In those years, I myself lived in Yonkers, and I called on him at the Colgate house the day after his arrival there. The eminent banker showed us into his library, and leaving us alone he closed the door. The English visitor, first looking around to see that there was no other person present, said to me in a sort of whisper: “I am very comfortable here, with but one serious drawback. I have been in the habit, all my life, of taking wine with my dinner; but last evening, what do you suppose they gave me in the place of wine?—*milk!*” This was about nine o’clock at night, and when I got home I stated the case to my dear old mother. She laughed a little wickedly, and said, “I think I can help your friend in this case.” We happened to have some very good sherry. The old lady got a large flat bottle, filled it with the wine, corked it and put it into an innocent-looking pasteboard box, telling me to take it to him. Before leaving my home, I wrote a brief note to Seymour Haden saying that the package which I had to deliver to him must be opened only in the privacy of his own chamber. The Colgates

were total abstainers of so pronounced a kind that when Mr. Colgate rented any house of his in Yonkers, he made a condition in the lease that no intoxicants of any kind were ever to be received in that house. Further than that, one of his principles was, not only never to drink wine or spirits, but never to touch or carry them. When I got back to Mr. Colgate's house, it was ten o'clock at night, and all the lights in the big house were extinguished and the doors locked. I rang and rang at the bell, and at last Mr. Colgate himself, wearing trousers and slippers, opened the door. I had to manufacture a small fiction, which recalls Sir Walter Scott's couplet:

Oh, what a tangled web we weave,
When first we practise to deceive.

Mr. Colgate said to me rather fretfully that all the household had retired, and that Mr. Seymour Haden must wait until the morning. I said to him in reply, that he would do me a great favor, if when he was passing his guest's chamber door, he would knock at it and deliver the package, and this Mr. Colgate consented to do. Some days later a reception was given to Seymour Haden at the Lotos Club, Fifth Avenue, and I accompanied him from Yonkers to New York on that occasion. When Mr. Haden found himself safe in the train, he said to me: "I could n't have slept a wink except for that excellent sherry that your mother sent me, but I took deuced good care to carry away the empty bottle in my bag." I remember that from the train we saw the gorgeous sight of the sun setting behind the Palisades, and mirrored in the Hudson River, and Mr. Haden said to me, with

HADEN. A BY-ROAD IN TIPPERARY

This magnificent plate was etched in 1860, in the park of Viscount Hawarden. All things considered, it is the artist's finest rendering of tree-forms

Size of the original etching, $7\frac{1}{2} \times 11\frac{1}{4}$ inches

HADEN. A SUNSET IN IRELAND

This plate, and also *A By-road in Tipperary*, were done in the park of Viscount Hawarden, in the most beautiful part of Tipperary.

Size of the original dry-point, $5\frac{1}{2} \times 8\frac{1}{2}$ inches

something like reproach in his voice: "Now, why have I never been told of the beauty of all this?" Later on, he said to me, looking about in the crowded train: "Now, is n't it melancholy to think that nobody among all these people, except myself (and perhaps you), has the slightest sense of the beauty of this magnificent sunset!" I was tempted to say to him that he had no right to assume such callous insensibility on the part of the Americans, but though I thought it, I did not say it. Seymour Haden's reception at the Lotos Club was a notable function. I remember that the President, the Hon. Whitelaw Reid, made a very graceful speech in honor of his guest, and I recall vividly the marvelous cleverness of a very young man who had been invited to entertain the company. One of this young man's monologues represented an intimate talk between three Italian opera singers, the soprano, the tenor, and the basso; the three continually interrupting one another. The speaking of the young man was in "fake" Italian, and the three speaking voices were admirably differentiated. I inquired who this young man was, and was told that he was the son of the famous oratorio singer, Madame Rudersdorf of Boston, that his name was Richard Mansfield, and that he was studying for the stage. I then uttered a prophecy that that young man would be a great actor later on; and so he was.

After his return from Boston, the artist spent several weeks in New York, and while he was there, I arranged for him the first public exhibition of his etchings which was ever made in America. The New York press took up the subject with enthusiasm, and every important newspaper printed a long

review of the artist and his work. I collected all of these very laudatory articles, and took them to Mr. Haden at the Hotel Brunswick. Next day he said to me, "Do you know that these reviews of the New York press are distinctly abler and more intelligent than if they had been written in London?" He added, "I wish you would pay my particular compliments to the gentleman who wrote the review in the *New York World*; that article in particular I found to be admirable." He was surprised when he saw me begin to laugh, but I explained to him that the "gentleman" in question was a lady, and the article which he so greatly admired was from the pen of Mrs. Schuyler van Rensselaer.

One very seldom finds that the imaginative and creative artist is also endowed with a logical and judicial cast of mind. It was so with Seymour Haden. He had brought from England a large collection of excellent lantern-slides to illustrate these lectures by means of a stereopticon, and in the lecturer's zeal to glorify original etching at the expense of prints done by any other method, he had procured one lantern slide of the beautiful little portrait which Rembrandt had etched of himself, the complete print of which is hardly bigger than a postage stamp. It was the *Rembrandt à trois moustaches*. Alongside of this, Mr. Haden had printed a morsel of the same size, taken from a crude and unimportant part of the foreground of William Sharp's famous line-engraving of the *Holy Family*, after the painting by Sir Joshua Reynolds. Thus this special pleader, Haden, displayed an etching in its entirety, and less than one-hundredth part of a line-engraving of very large size. Wherever, dur-

HADEN. A LANCASHIRE RIVER

A well-known salmon pool on the Ribble. In Sir Seymour's opinion this is one of his very finest plates. It was awarded the Medal of Honor at the Paris Exposition of 1889.

Size of the original etching, 11 x 16 inches

HADEN. SAWLEY ABBEY

Sawley Abbey stands by a salmon river, the Ribble, which here is enlarged into a wide pool. Seymour Haden often came here for his salmon fishing.

Size of the original etching, $10 \times 14\frac{3}{4}$ inches

ing his lectures, this illustration was exhibited by a stereopticon, there was a universal outcry against the unfairness of it. People all, with one accord, declared that if the artist wanted to confront and contrast etching with line-engraving, fairness would require the lecturer to have chosen two prints of the same size; but there was no "budging" Seymour Haden, when he had formed an opinion.

While in New York, he visited the exhibition of paintings at the National Academy of Design, and was escorted through the galleries by the late James D. Smillie, N.A. When his eye fell upon a certain painting, he suddenly stopped as if he were paralyzed. "Who did that picture?" "It is the work of one of our New York artists, Miss So-and-So." "Why do you allow such dreadful things on your walls?" "Well," said Mr. Smillie, "we like to exemplify various phases in art." "Hum," rejoined Seymour Haden, while glaring at the picture; "she ought to be *disemboweled!*"

Of at least one of our well-known American artists, Seymour Haden expressed the strongest admiration. This was the late John Lafarge, N.A., and he also spoke with enthusiasm of the original American etchings of thirty years ago, the work of such men as Stephen Parrish, Charles A. Platt, Peter Moran, and Joseph Pennell. On seeing a very large, intricate plate by Mr. Parrish, Mr. Haden made the remark to me, "That young man does not know what the sense of fatigue in making a picture is." Even at this period, Seymour Haden was known throughout Europe as being the judge *par excellence* of a fine print, and he was also recognized as an admirable judge of paintings.

While on this subject of Haden's learned judgment of pictures, I will record what he remarked to me after he had visited Niagara for the first time. What he said was: "No artist, except Turner, should have ever dared to attempt making a picture of the Falls of Niagara."

One of Seymour Haden's exceptionally good days was the Sunday which he spent in visiting that famous art collector and admirable man, James L. Claghorn, of Philadelphia. On that occasion, I myself was included as a sort of "make-weight." The Englishman, with genuine zeal, went through Mr. Claghorn's collection of prints, and he wrote with pencil on several of them that they were exceptionally fine.

On another side Mr. Haden excelled as a judge, and that was in the matter of first-class food and first-class cooking. At lunch, our host treated us to a delicious dish of terrapin. Seymour Haden found it wonderfully good and declared that not only had he never tasted terrapin before, but he had never heard of the dish. "Oh, yes," said I to him; "you certainly have heard of terrapin; don't you remember at church on Sundays, when they sing the 'Te Deum,' they sing, 'Terrapin and Seraphim.'" "Oh, tut, tut," said he, "I want to hear no irreverence."

Seymour Haden had ranked as a very able physician. An incident occurred while we were at Mr. Claghorn's house which shows how wise he was in this respect: Mr. Claghorn was a huge and corpulent man of about sixty, but he was full of force and energy. While we were in his library he got up and bustled out on some errand, and Seymour Haden said to me: "Your friend will not live long, and when he

HADEN. THE BREAKING-UP OF THE AGAMEMNON

Perhaps, all things considered, the artist's masterpiece, Collectors differ as to the relative merits of the various etchings by Seymour Haden, but all are agreed in ranking this as a masterpiece. Moreover, it was the first etching to be treated in this particular manner, and it has become the model for many imitators. This fine plate was etched on the Thames, at Greenwich, in 1870. Sir Seymour devoted the money obtained from the sale of the proofs to the aid of the London Hospital for Incurables.

Size of the original etching, $7\frac{3}{4} \times 16\frac{1}{4}$ inches

HADEN. CALAIS PIER

Etched by Seymour Haden after the painting by J. M. W. Turner in the National Gallery, London. This superb etching stands alone in the history of the art. The scene could not be more strongly felt nor more vividly presented had the etcher been working from nature instead of from a painting by another hand. When this etching appeared, Seymour Haden received an enthusiastic letter from John Ruskin, in which the latter exhorted him to devote the remainder of his life to etching the paintings of Turner.

Size of the original print, $23\frac{1}{2} \times 33$ inches

dies he will go off very suddenly." I was shocked on hearing such an unexpected prophecy, and I asked Mr. Haden how long Mr. Claghorn was likely to live. In answer he said, "Just about two years." Two years later, within ten days of the time Haden had designated, Mr. Claghorn suddenly fell dead.

Still continuing the subject of Mr. Haden's critical judgment in dining, I may mention that wherever he went, he would never partake, at a hotel, of a *table d'hôte* meal. He insisted on selecting particular dishes which he wished for, and he had them specially cooked for him. On his return from Cincinnati, he told me that while there he met my own dear friend, the late Herman Goepper, and he had given him, at a club, the very best, and best-served, dinner that he had ever partaken of.

Seymour Haden's course of lectures at Chicago was a great success, and a very notable reception was tendered to him. During the course of that reception, a very influential Chicago lady marched up and said in a loud voice: "Why don't you *educate* your women in England?" "I know what you mean," said the Englishman, "but we don't like to have our English women crammed with a lot of abstruse *isms* and *ologies*." Another lady, who thought the English guest had been rather unfairly attacked, said to him, "Now, Mr. Haden, can't you attack her in return?" "Well, yes," said he; "in America, you don't know how to make tea, and your table knives will not cut anything." Another little dispute arose in Detroit. Haden had arrived late at night, very much fatigued, at the Russell House. At about eight o'clock in the morning he was awakened from a much-

needed sleep by a sound of hammering and grinding in the wall outside his window. He got up, raised the window, and saw two men boring a hole into the front wall of the hotel, for the purpose of inserting an iron bar from which a sign was to be swung. Mr. Haden remonstrated at being disturbed. The two mechanics answered that they were "on that job" and that they were going to do it. Then, as the *Detroit Free Press* related the incident, the elderly gentleman, dressed in night-clothes and a nightcap, had pushed out both his arms, seized the offending and disturbing crowbar, hauled it into his room and shut down the window. Very soon after, the proprietor of the hotel came, knocked at his guest's door, and said that the crowbar which had been seized was not his property and that he would get into trouble if it were not given up at once, but Seymour Haden before giving it up stipulated that he was not to be disturbed with any more noise until such time as he was ready to leave his bed.

It will be noticed that, while in my former article I called him Sir Seymour Haden, in the present one I call him plain Mister. This was because it was after his return from America to England that Queen Victoria gave him his title, and although in London he had a large medical practice he never was even Doctor Haden. In England a surgeon, however eminent, is never addressed as Doctor.

This change to a title of nobility reminds me of a couplet in Thackeray's fine Irish ballad, "Mr. Molony's Account of the Ball":

There was Lord Crowhurst, I knew him first
When only Mистер Pips he was.

HADEN. AN EARLY RISER

Engraved in pure mezzotint in 1897. To this plate and Sir Seymour's mezzotint *Graying Fishing* was awarded the Medal of Honor at the Paris Exposition of 1900.

Size of the original mezzotint, $8\frac{7}{8} \times 11\frac{7}{8}$ inches

HADEN. HARLECH

In *Harlech* the artist has first mezzotinted his composition and has then strengthened and defined the outlines with etched lines. This is the reverse of the method employed by Turner in the "Liber Studiorum." Turner first etched the main lines of his composition and then finished the plate in mezzotint.

Size of the original engraving, $8\frac{7}{8} \times 12\frac{1}{2}$ inches

During his stay in America he learned to like our people greatly, and it was his intention to make us a second visit and to bring his charming American wife along with him; but this purpose of his was never carried out.

Shortly before leaving our shores, he said to me: "One thing alone would render it impossible for me ever to reside permanently in the United States, and that is the intolerable and brutal insolence of the lower classes." To this I made answer: "But, Mr. Haden, in America we have no 'lower classes.' What you suffered from these people was really your own fault. It is all very well in England for a fine gentleman to bully and denounce the cabman, the railway-porter, and the servants at hotels, but it will not do here, and no American, however eminent, ever does it."

When Seymour Haden returned to England he took with him the genuine good will of many Americans, and the lasting friendship of not a few.

THE WATER-COLORS AND DRAWINGS OF SIR SEYMOUR HADEN, P.R.E.

By H. NAZEBY HARRINGTON

Author of "The Engraved Work of Sir Francis
Seymour Haden, P.R.E."

AS an etcher the work of Sir Seymour Haden is known to all lovers of art the wide world over, and not least in the United States, but his general capacity as an artist in other forms of expression is less well known, partly from lack of opportunity and partly from the very limited amount of material.

It must never be forgotten that art was not the main business of his life; it was but an occasional and fitful relaxation in a life devoted to another profession and full of other and varied interests. The wonder is, not that his artistic work was so limited, but that it was so great and so successful.

When a medical student in Paris, instead of spending his evenings in the usual frivolities of the Quartier Latin, he attended the classes of the Government School of Art, which were held in the same building as the School of Medicine. This was done, not from any positive love for art, but rather with the fixed idea that such study would train his powers of observation and make the hands more alert to obey the impulses of the will, and in this way help him in his surgical work. What he dissected he drew, what he drew he

modeled, and in this way obtained a remarkable knowledge of anatomy and some facility in the technique of graphic art.

In this way he got into the habit of using drawing as a sort of shorthand, and so, when in 1844 he traveled in Italy, his diaries were filled with sketches rather than verbal descriptions—sketches that unfortunately have been too generously scattered.

While in Italy he met, and spent some time in the company of, Duval le Camus, a capable French artist who painted a good deal in water-color, and from him no doubt he picked up some knowledge of that medium. In Naples and its neighborhood they spent many happy days sketching together.

During the next fourteen or fifteen years Seymour Haden had not much time for the practice of art. His professional work took up all his time and vigor, but he always took a great interest in art and artists and counted many artists among his friends. He was appointed Surgeon to the Department of Science and Art at South Kensington, and became a collector of etchings by the old masters, not merely for the sake of acquisition but rather for the purpose of study and comparison. He also became the possessor of many pictures and water-color drawings, amongst others of several by Turner; and so, when in 1858 his young brother-in-law J. M. Whistler returned from France with his recently etched plates and his inciting tales of work in the Paris studios, Haden became readily infected and took up etching again, with the result we all know. Thenceforward, whenever a rare afternoon's holiday could be stolen, or a few moments spared between the casts of the line during the an-

nual vacation devoted to fishing, or on the rarer occasions of a continental holiday, the copper plate or the sketching block was brought into use. And so we find sketches done on the Thames and the Ribble, the Teivy, the Test and the Spey; in Holland and in Germany, in Spain and Madeira; at Chatsworth, in the old towns of Rye and Winchelsea, and above all in the fascinating Isle of Purbeck—sketches done for his own pleasure or for his friends, with never a thought of placing them before either the critic or the purchaser.

The earliest sketch that I have seen is one dated 1841. It is in pen and sepia and represents an early morning execution outside the Old Bailey. At a first glance it might be mistaken for an etching by Cruikshank. It measures only three and one half by two and one fourth inches, but is masterly in its drawing, and marvelous in its suggestiveness of a large crowd.

The drawings done in 1844 in France and Italy vary from mere thumb-nail sketches to comparatively finished drawings. Some of them in their carefulness and decision resemble the early drawings of Turner. Two or three figure sketches, notably portraits of Duval le Camus and the Marquis de Belluno (two of his companions), are very expressive and full of character.

While in Rome, through the introduction of the Marquis de Belluno, Haden had many interviews with Pope Gregory XVI, and during two or three of them he took the opportunity of sketching, on one of his shirt cuffs, a somewhat elaborate portrait of His Holiness. The Pope very kindly professed not to

HADEN. OLD OAKS, CHATSWORTH

Size of the original charcoal drawing, 14 x 20 inches

notice what the artist was doing until the portrait was finished. He then quietly remarked that he "now understood why M. Haden had attended at three audiences without a change of linen." One would give much to see this portrait (which Sir Seymour always said was an excellent one), but it has disappeared, having been lent to a friend and never returned.

The drawings done after 1858 were much broader in style than the early sketches, and vary in method, being in lead pencil, pen and ink, chalk, charcoal, and water-color. Thrown off in a moment of inspiration, as a poet would throw off a lyric, he chose the material which chanced to be at hand. Some are on sheets of writing paper, and many valuable ones are on perishable blotting paper. Here and there among these "slight" sketches are specimens that in their economy of line, their stamp of decision, and their interpretative insight, suggest the work of his great master Rembrandt. What strikes one above all is their vigor and "bigness." There is no dainty indecision about them; they go straight for the heart of the subject, giving the vigorous impression of a vigorous mind. They do not give all that could be said on the subject, but they give all that he feels is best worth saying. They make an intellectual appeal to the mind and do not tire with unnecessary platitudes.

The water-color drawings show a good but scarcely a great colorist. They are in the "grand" manner and the best of them have a fine atmospheric quality, as in the *Dinkley Ferry* here, which reminds one of

a good De Wint. The *Course of the Ribble* is probably one of the most finished drawings he ever did, and shows to the highest degree of what he was capable in this medium when time allowed and when loving care was exercised. It is wonderfully mellow, good in color, and true in drawing, but has less of the white heat of inspiration:—I envy the fortunate possessor! The *Lancashire River*, a drawing of the same subject as the etching with the same title, is perhaps his finest piece of color.

But it is in his large charcoal drawings of the end of the seventies that he rises to his greatest heights,—in the sketches done around Swanage in the south of Dorsetshire, and at Chatsworth, and two or three drawn from the stores of his memory. What a revelation it was to me when—I scarcely like to count how many years ago—I first passed into that peaceful little “garden room” that looked out upon the old-time bowling green at Woodcote Manor and saw around its walls some four and twenty of these large charcoal drawings! It was as though some new planet swam into my ken! I had never seen so much suggested with such simple means. Two or three hours’ work with a sheet of rough paper, a piece of charcoal, and a mezzotint scraper! Heath and woodland, sea cliff and river glen, radiant light and quivering mist, houses sleeping in the sun and mysterious shadows lurking in the corners of the quaint old kitchen or the romantic ruin, or lying full length before the giant boles of centuries-old oaks; all suggested with equal ease and magic mastery! Many and many an hour did I afterward spend in that little treasure-

HADEN. COURSE OF THE RIBBLE BELOW PRESTON

house, ever finding fresh beauties revealed to me, and learning through them to see in Nature much that had previously been hidden from me. Haden's etchings had proved him to be a great master in line, these drawings proved him to be almost equally great in tone. What particularly strikes one is the variety and transparency of his shadows. They are not black patches, but receding planes of varying densities. And what atmospheric quality they have! Driving mist and slanting rain, and sun rays penetrating the moisture-laden air, as though by a magician, are fixed for us on paper.

The origin of many of these drawings has been described by Sir Seymour himself in an article written some years ago in *Harper's Magazine*, "On the Revival of Mezzotint as a Painter's Art." With the idea that he could use mezzotint as he had done etching, face to face with Nature, he had taken a previously grounded plate to the bank of the River Test and attempted to scrape upon it what he saw before him. The result was the plate numbered 234 in my catalogue (*The Test at Longparish No. 3*), interesting, but not wholly satisfactory and incomplete in intention. This proved that, unlike etching, mezzotint was too slow a process with which to work from nature at a single sitting, and a return on a later day only proved that the natural effect had changed, or that the artist was in a different phase of mind or not in the humor to complete the original impression. So instead of taking a grounded plate out with him he took a sheet of rough paper which had been rubbed all over with charcoal, this black surface corresponding to the mezzotint ground upon the copper plate, and

on this prepared surface he scraped away the lights. As will be readily understood, this softer material could be much more rapidly manipulated than the harder copper, and so he found that in two or three hours the desired effect could be obtained. His intention was to reproduce in the studio and at his leisure the effects of these studies upon the copper plate. And so, with modifications, in several instances he did—I say *with modifications*, for it was almost impossible for him to closely copy even his own work. The *Salmon Pool on the Spey* provided the *motif* for the mezzotint plate with the same title (H. 250), and more closely of the little *Salmon River*, which served as a frontispiece to Dr. Hamilton's book on "Fly Fishing." The *Encombe Woods* supplied the subject for the two plates H. 218 and 219, which were intended to be a combination of etching and mezzotint, but the latter part of the project was never carried out. This too was the case with *Early Morning* (H. 244) and *By the Waters of Babylon* (H. 245), *Ars Longa, Vita Brevis* (H. 210) and *A Study of Rocks* (H. 211), all of which were etched or dry-pointed from charcoal drawings. The only important plates inspired by these drawings that were fully completed, were *Evening Fishing, Longparish* (H. 239), *An Early Riser* (H. 240), *Grayling Fishing* (H. 241), and *The Pillar of Salt* (H. 246); but they are sufficient to prove what a series of masterpieces we have lost through the dimming of the eye and the numbing of the hand by relentless Age.

However, we must be thankful for what we have, and the regret one has that these drawings should be scattered in different directions, is tempered by the

HADEN. ENCOMBE WOODS

hope that by one of the marvelous photographic processes of to-day this wonderful series of visions may be reproduced, and so again brought together for all of us who love beautiful things, and who reverence the master who produced them.

MERYON AND BAUDELAIRE

BY WILLIAM ASPENWALL BRADLEY

ALL French poets of the middle part of the nineteenth century were interested, theoretically at least, in painting and the graphic arts, which afforded them an ideal and an example of objectivity for their own verbal representations of reality. From Théophile Gautier, godfather of Parnassianism, who reserved for his prose the full resources of his superb Turner-esque palate, to Verlaine, creator of decadence, with his limpid and lovely *aquarelles*, pictorial preoccupations were, on the whole, paramount. Charles Baudelaire almost alone appears, in part, an exception to this rule; but if, in his work, the purely visual element is less pronounced than in that of most of his contemporaries—if the images of sight yield there in number and in clear evocative power to those of sound and of scent, thereby precluding the way for a new poetic dispensation—he nevertheless fits into the late romantic tradition, if only by reason of his keen æsthetic appreciation of the arts of design, and of his association, as a disinterested friend or sympathetic critic, with many of the most illustrious artists of the age. Himself a rebel and an outlaw in the domain of orthodox taste, though with a distinct tinge of the traditional, he was especially drawn to the insurgent leader, like

Delacroix, his championship of whom is as famous as his espousal of the cause of Wagner's music in Paris, or to the solitary *attardé* of romanticism who, like Constantin Guys, worked out his own salvation in his own way. It is not that he did not welcome new movements in all their collectivity of talents and temperaments; but these, to find favor with him, must be vouched for by unmistakable evidences of creative vigor and originality in the individual artists, not merely by plausible theories or pretentious dogmas professed scholastically. Intellectual distinctions counted but little with him in matters of art, and a new way of rendering what was actually seen or felt seemed to him of infinitely more importance than any merely academic discussion as to what an artist should or should not look for, deliberately, in order to put it into or leave it out of his pictures.

Thus it was that while he shrugged his shoulders at the realists who were not really observers, he turned an attentive eye to the work of the group of young painter-etchers who, about 1859, were beginning to attract attention in the salons. Baudelaire thought highly of etching because it afforded an opportunity for "the most clean-cut possible translation of the character of the artist," and he was attracted to those who were engaged in reviving this almost obsolete medium, because they gave clear proof in their work of that personal force and distinction which he valued above all else, and which he was always on the alert to discover in the productions of the new and the unknown.

In his article, *Peintres et Aqua-fortistes*, in-

cluded in the volume of his collected works entitled *L'Art Romantique*, Baudelaire mentions the following etchers as among those through whose efforts the medium was to recover its ancient vitality: Seymour Haden, Manet, Legros, Bracquemond, Jongkind, Meryon, Millet, Daubigny, Saint-Marcel, Jacquemart, and Whistler. With at least two of these, on the evidence of his published correspondence,¹ he had personal relations: Bracquemond and Meryon. The name of the former occurs frequently in the letters with reference to a device which Baudelaire wished to adopt as a frontispiece to the second edition of *Fleurs du Mal*. The idea of this device came to him, as he writes to Félix Nadar (May 16, 1859), while turning the leaves of the *Histoire des Danses Macabres*, by Hyacinthe Langlois. It was to be "an arborescent skeleton, the legs and the ribs forming the trunk, the arms extended in the form of a cross breaking into leaf and shoot, and protecting several rows of poisonous plants arranged in rising tiers of pots, as in a greenhouse." In casting about for an artist to execute this design; Baudelaire mentions and dismisses Doré, Penguilly—whom he afterward wished he had taken—and Célestin Nanteuil. Finally, perhaps at the instance of his publisher, Poulet-Malassis, he chose Bracquemond,—a most unhappy selection as it turned out, for that artist was either unable or unwilling to grasp the poet's conception, and the plate which he etched for this purpose was not used. A few proofs were pulled, however, and impressions in both the first and second

¹ Charles Baudelaire: *Lettres*, 1841-1866. Paris, 1907.

BRACQUEMOND. FRONTISPIECE FOR "LES FLEURS DU MAL" OF BAUDELAIRE

The seven plants symbolize the Seven Deadly Sins, and the outstretched arms of the skeleton will support, later, the Fruits of Evil. This romantic and remarkable frontispiece was never used. Baudelaire criticized the drawing of the skeleton severely, as well as the spirit and arrangement of the whole design.

Size of the original etching, $6\frac{3}{4} \times 4\frac{5}{16}$ inches

PORTRAIT OF CHARLES BAUDELAIRE

From the etching by Félix Bracquemond. Of the same size as the original etching. Evidently an excellent likeness, since it exactly renders that ecclesiastical aspect of the poet which made one of his friends compare him to a cardinal.

states of the plate are now in the Samuel P. Avery collection in the New York Public Library.

Baudelaire's negotiations with the "terrible Bracquemond," as he came to call him, were carried on for the most part through Poulet-Malassis, which perhaps affords a partial explanation of the misunderstanding concerning the *macabre* frontispiece. And, although he speaks in one letter of having met the artist and repeated verbally the instructions which he had already given, with characteristically minute attention to detail, in writing, no such special interest attaches to this meeting, by no means unique, as to that between Baudelaire and Meryon which occurred about the same time, and to which we owe one of the most vivid and fantastic presentments we possess of that mad genius. In his *Salon of 1859*, Baudelaire had written of Meryon with an enthusiasm which awoke a responsive reverberation in the breast of Victor Hugo.

"Since you know M. Meryon," the latter wrote to Baudelaire (April 29, 1860), "tell him that his splendid etchings have dazzled me. Without color, with nothing save shadow and light, chiaroscuro pure and simple and left to itself: that is the problem of etching. M. Meryon solves it magisterially. What he does is superb. His plates live, radiate, and think. He is worthy of the profound and luminous page with which he has inspired you."

This page, which Baudelaire afterward incorporated in his *Peintres et Aqua-fortistes*, where he speaks further of Meryon as "the true type of the accomplished *aqua-fortiste*," and praises the famous

perspective of San Francisco as his masterpiece, does, indeed, betray the subtle penetration of the poet into the very spirit of his fellow-artist: "By the severity, the delicacy, and the certitude of his design, M. Meryon recalls what is best in the old *aqua-fortistes*. I have rarely seen represented with more poetry the natural solemnity of a great capital. The majesties of accumulated stone, *the spires pointing a finger to the skies*, the obelisks of industry vomiting their thick clouds of smoke heavenward, the prodigious scaffoldings of monuments under repair, relieved against the solid mass of architecture, their tracery of a filmy and paradoxical beauty, the misty sky, charged with wrath and with rancor, the depths of the perspectives augmented by the thought of the dramas contained therein,—none of the complex elements of which the dolorous and glorious setting of civilization is composed is here forgotten."

Grateful for such recognition on the part of a distinguished man of letters who was also accepted as one of the leading art critics of the day in Paris, Meryon evidently wrote to Baudelaire, thanking him, and asking permission to call; for in his letter of January 8, 1860, to Poulet-Malassis, the poet writes as follows:

"What I write to-night," he begins, "is worth the trouble of writing: M. Meryon has sent me his card, and we have met. He said to me: *You live in a hotel whose name must have attracted you, because of the relation it bears, I presume, to your tastes.*—Then I looked at the envelope of his letter. On it was 'Hôtel de Thèbes,' and yet his letter reached me."

PORTRAIT OF CHARLES MERYON

From the etching by Félix Bracquemond, done in 1853
Size of the original etching, $8\frac{7}{16} \times 6\frac{1}{8}$ inches

MERYON. LE PONT AU CHANGE

"In one of his great plates, he has substituted for a little balloon a flight of birds of prey, and, when I remarked to him that it was lacking in verisimilitude to put so many eagles into a Parisian sky, he replied that what he had done was not devoid of foundation in fact since, *ces gens-là* [the imperial government] had often released eagles so as to study the presages, according to the rite,—and that this had been printed in the newspapers, even in *Le Monteur*." Charles Baudelaire in a letter to Poulet-Mulassis (January 8, 1860).

It is necessary to interrupt the letter at this point to explain what is obscure in the foregoing allusion for one not familiar with Baudelaire's haunts and homes in Paris. He was living at this time, not in the Hôtel Pimodan where he dwelt so long, and where he held those famous meetings described by Gautier in his introductory essay to *Fleurs du Mal*, but in modest quarters in the Hotel de Dieppe, 22, rue d'Amsterdam, whose principal advantage was its proximity to the Gare de l'Ouest whence he took the train for Honfleur on his frequent visits to his mother. Thus, through a bizarre confusion between the two words, *Dieppe* and *Thèbes*, is explained Meryon's curious mistake in addressing his letter to Baudelaire.

The poet proceeds with the following report of their conversation: "In one of his great plates,¹ he [Meryon] has substituted for a little balloon a flight of birds of prey, and, when I remarked to him that it was lacking in verisimilitude to put so many eagles into a Parisian sky, he replied that what he had done was not devoid of foundation in fact, since *ces gens-là* [the imperial government] had often released eagles so as to study the presages, according to the rite,—and that this had been printed in the newspapers, even in *Le Moniteur*.

"I must tell you that he makes no attempt to conceal his respect for all superstitions, but he explains them badly, and he sees cabal everywhere.

"He drew my attention to the fact, in another of his plates, that the shadows cast by one of the masonry constructions of the *Pont-Neuf*² on the lateral

¹ The *Pont-au-Change*.

² An error of Baudelaire's. The plate is the *Petit-Pont*.

wall of the quay represented exactly the profile of a sphinx; that this had been, on his part, quite involuntary, and that he had only remarked this singularity later, on recalling that this design had been made a short time before the *coup d'état*. But the Prince is the real person who, by his acts and his visage, bears the closest resemblance to a *sphinx*.

“He asked me if I had read the tales of a certain Edgar Poe. I answered that I knew them better than any one else, and for a good reason. He then asked me in a very emphatic manner, if I believed in the reality of this Edgar Poe. I naturally asked him to whom he attributed all his tales. He replied: ‘*To a society of men of letters who are very clever, very powerful, and who are in touch with everything.*’ And here is one of his reasons: ‘*The Rue Morgue. I have made a design of the Morgue.—An Orang-outang. I have often been compared to a monkey.—This monkey murders two women, a mother and her daughter. I also have morally assassinated two women, a mother and her daughter.—I have always taken the story as an allusion to my misfortunes. You would be doing me a great favor if you could find out for me the date when Edgar Poe, supposing that he was not helped by any one, composed this story, so that I could see if the date coincided with my adventures.*’

“He spoke to me, with admiration, of Michelet’s book on *Jeanne d’Arc*, but he is convinced that this book is not by Michelet.

“One of his great preoccupations is cabalistical science, but he interprets it in a strange fashion that would make a cabalist laugh.

MERYON. LE PETIT PONT

"He drew my attention to the fact, in another of his plates, that the shadows cast by one of the masonry constructions of the Pont-Neuf on the lateral wall of the quay represented exactly the profile of a sphinx; that this had been, on his part, quite involuntary, and that he had only remarked this singularity later, on recalling that this design had been made a short time before the *coup d'état*."

(January 8, 1860).

Size of the original etching, $9\frac{7}{8} \times 7\frac{1}{4}$ inches

PORTRAIT OF CHARLES MERYON

From the drawing by Léopold Flameng, made in May, 1858, in Meryon's room in the rue des Fossés-Saint-Jacques, the night before Meryon became dangerously mad and was taken by his friends, in a cab, to Charenton for the first time. Later he was discharged, and took up his lodging in the rue Duperré, and in October, 1866, returned to Charenton, where he died in February, 1868.

“Do not laugh at all this with *méchants bougres*. For nothing in the world would I wish to injure a man of talent. . . .

“After he left me, I asked myself how it happened that I, who have always had, in my mind and in my nerves, all that was needed to make me mad, had not become so. Seriously, I addressed to heaven the thanksgivings of the Pharisee.”

It is not surprising that Baudelaire should have been somewhat disconcerted by this interview which confirmed so strikingly the reports of the mental malady of his visitor to which he had alluded in his *Salon of 1859*, and that he should soon have sought, after some brief intercourse, to avoid personal and private encounters which might have proved embarrassing. He gave notice in ways the artist could not long mistake, that he did not wish to continue the acquaintance on a footing of intimacy, though, as Crépet, in his *Charles Baudelaire*¹ points out, he by no means ceased to interest himself in the artist, several sets of whose *Eaux-Fortes sur Paris* he was instrumental, with one or two other admirers of Meryon, in having purchased by the Ministry. Poor Meryon! With an incomplete realization of his own condition which rendered him incapable of divining the real truth, he felt he had offended Baudelaire in some way, and finally addressed him the following appeal, tragic in its note of noble and unconscious pathos:

¹Charles Baudelaire: Étude biographique d'Eugène Crépet revue et mise au jour par Jacques Crépet. Paris, 1907.

“*Dear Sir:* I called on you yesterday evening at the Hôtel de Dieppe. I was informed that you had changed your domicile. I wished, above all, to see you, in order to learn from your own lips that you were not angry with me, for I do not think I have ever done anything to you which could serve as a motive for your change of manner toward me. Only, as the last letter which I wrote you has remained unanswered, and as three times I have left my name at your dwelling without my having had the slightest word from you, I am entitled to believe that you have some reason for breaking with me. I did not remind you of your promise to write a newspaper article about my work, because, quite frankly, I was sure that you could make much better employment of your time and of your literary skill. My etchings are known to nearly all whom they could interest and rather too much good has been said of them. As to the interruption of our relations, which have been but of brief duration and of slight importance, I agree to this without a word if such is your desire, and I shall conserve, none the less, the recollection of the eminent services you have rendered me in coming to see me, and in occupying yourself with me at a time when I was utterly destitute.

“I have forwarded to M. Lavielle, whom I had the advantage of meeting once with you, the set of my views, reworked and a trifle modified; he has, perhaps, shown them to you. I have had difficulty in procuring the ten sets of them (the printer being very busy at that time) that I have disposed of with sufficient rapidity. I have no longer any left and I have destroyed the *Petit-Pont*, which I propose to engrave

anew, after I have made in it some rather important corrections.

“Adieu, dear sir, with all possible good wishes.

“I am your sincere and devoted friend,

“C. MERYON.

“20, rue Duperré.”

The letter to which Meryon refers in the opening paragraph of the foregoing as having remained unanswered by Baudelaire is doubtless that bearing the date of February 23, 1860, which is the only other one given by Crépet in the appendix to his volume. This is it:

“*Dear Sir:* I send you a set of my ‘Views of Paris.’¹ As you can see, they are well printed, on Chinese tissue mounted on laid paper, and consequently *de bonne tenue*. It is on my part a feeble means of recognizing the devotion you have shown on my behalf. However, I dare hope that they will serve sometimes to fix your imagination, curious of the things of the past. I myself, who made them at an epoch, it is true, when my naïve heart was still seized with sudden aspirations toward a happiness which I believed I could attain, look over some of these pieces with a

¹ Baudelaire had already tried to obtain a set of these prints. In writing to Charles Asselineau (February 20, 1859) he commissions his friend to get from Édouard Houssaye “all the engravings of Meryon (views of Paris), good proofs on Chinese paper. *Pour parer notre chambre*, as Dorine says.” He was not successful, however, at that time. In quoting Molière, Baudelaire refers to Toinette’s speech in *Le Malade Imaginaire* (Act II sc. v).

veritable pleasure. They may, then, be able to produce nearly the same effect upon you who also love to dream.

“I have not yet terminated the notes that I promised to make in order to aid you in your work; at all events, I shall go to see you soon to discuss the matter with you further. As the publisher recoils before the steps which would still have to be taken, he says, for the placing of these prints, there is nothing pressing about the affair. Thus, do not let this disturb you.

“Adieu, monsieur; I hope that before your departure, I shall be able to profit by the kindly reception that I have received from you.

“I am your very humble and very devoted servant.

“I am going to try to place sets with those persons who have been so good, on your recommendation, as to interest themselves in this work.

“MERYON.

“20, rue Duperré.”

This letter renders sufficiently clear the kind of service Baudelaire had rendered Meryon over and above the public praise contained in his writings. What, at the first glance, is less certain is the work on which the poet was engaged at this time and for which Meryon, on his own testimony, had promised to assist him with notes. In a foot-note to this letter, M. Jacques Crépet states that it was “doubtless *L'eau-forte est à la mode*, an anonymous article published by the *Revue anecdotique* in the latter half of April, 1862.” Personally, I doubt the correctness of this conjecture. One has but to turn to Baudelaire's letters of the period to see that there was then under discussion an-

other piece of work for which Meryon would have been much more likely to give assistance in the form of notes, since it directly concerned himself. Indeed, the matter almost amounted to a project of collaboration between Meryon and Baudelaire. The publisher Delâtre had promised to bring out an album of the "Vues de Paris," and had asked the poet to prepare some text for the plates. The first reference to this tentative undertaking occurs in Baudelaire's letter of February 16, 1860 (just a week before Meryon's), to Poulet-Malassis:

"And then Meryon!"—he broaches the matter abruptly, after having expressed his impatience at the attitude of two other artists, Champfleury and Durrant, friends of his, toward Constantin Guys, and at a certain note of pedantry and dogmatism that was stealing into art under the influence and sanction of "realism"—"And then Meryon! Oh, as for him, it is intolerable. Delâtre asks me to write some text for the album. Good! there is an occasion to write some reveries—ten lines, twenty or thirty lines—on beautiful engravings, the philosophical reveries of a Parisian *flaneur*. But Meryon, whose idea is different, objects. I am to say: on the right you see this; on the left you see that. I must say: here originally there were twelve windows, reduced to six by the artist, and finally I must go to the Hôtel de Ville to find out the exact epoch of the demolitions. M. Meryon talks, his eyes fixed on the ceiling, and without listening to any observation."

Thus it was historical and antiquarian notes that, in all probability, Meryon had promised to jot down to facilitate the composition of a running commentary

on the etchings. Meryon's reference to the reluctance of the publisher in the very same paragraph in which he speaks of these notes, serves to remove the least doubt as to what is meant. When he tells Baudelaire not to be disturbed, it is clearly as to the time at his disposal for the preparation of his text. Baudelaire, however, seems to have been less concerned about his own share in the work than about the fate of the project as a whole. Evidently he was not satisfied at the prospects of the work with Delâtre, for, on March 9, 1860, he wrote in a postscript to Poulet-Malassis:

"I turn my letter, to ask you, very seriously, if it would not be advisable for you to be the publisher of Meryon's album (which will be augmented) and for which I am to write the text. You know that, unfortunately, this text will not be in accordance with my wishes.

"I warn you that I have made overtures to the house of Gide. . . .

"This Meryon does not know how to go about things; he knows nothing of life. He does not know how to sell; he does not know how to find a publisher. His work is readily salable."

And again, on March 13, he writes, in response to some proposition from his friend:

"Relative to Meryon, do you mean by *buying the plates* to buy the metal plates, or rather the right of selling an indefinite number of proofs from them? I can conceive that you fear the conversations with Meryon. You should carry on the negotiations by letter (20, rue Duperré). I warn you that Meryon's great fear is lest the publisher should change the

format and the paper. . . . What you say to me of Meryon does not affect what I write to you concerning him."

The excellent business sense, the note of prudence and painstaking, that comes out in all this correspondence on the part of Baudelaire, and which is scarcely less notable than his unwearied devotion to the interests of his friends, ought to go far toward discountenancing the theory that a poet cannot be a good man of affairs. Still again he writes on the same subject, with recapitulations of what he had said before, to the same correspondent:

"I am very much embarrassed, *mon cher*, to reply to you relatively to the Meryon affair. I have no rights in the matter whatsoever; M. Meryon has repulsed, with a species of horror, the idea of a text composed of a dozen little poems or sonnets; he has refused the idea of poetic meditations in prose. So as not to wound him, I have promised to write for him, in return for three copies with the good proofs, a text in the style of a guide or manual, unsigned. It is, therefore, with him alone that you will have to treat. . . . The thing has presented itself to my mind very simply. On one side, an unfortunate madman, who does not know how to conduct his affairs, and who has executed a beautiful work; on the other, you, on whose list I want to see the best books possible. As the journalists say, I have considered for you the double pleasure of a good bit of business and of a good act." And he compares Meryon's case with that of Daumier, then without a publisher, to wind whom up, "like a clock," would also, he tells Poulet-Malassis, be "a great and good bit of business."

This is the last reference in any of the letters to Meryon, or to the album, for which Baudelaire never wrote his text, since no publisher was willing to publish the work. Had Poulet-Malassis not failed in 1861, it might have appeared, and then, in spite of the restrictions imposed upon the restive spirit of the poet, we might have had in Baudelaire's text some literary equivalent of Meryon's etchings. How sympathetic this would have been, is shown by the descriptive and interpretative passage from the *Salon de 1859* already quoted, which, in a few sentences, completely defines the form of Meryon's imaginative genius, and reveals the inmost source of its power to stir the emotions.

There was, indeed, much that was common to the genius of Meryon and of Baudelaire. The work of both was profoundly personal, and in both a powerful and somber imagination was tinged with a subtle fantasy supplied by a morbid exaggeration in the senses, which did not, however, preclude an intense and ardent preoccupation with formal perfection.

On the contrary, these two modern *détraqués* present in their work a solidity of construction and an absolute rectitude in the rendering of their moods and dreams, that is scarcely to be found in the work of even their best-balanced and sanest contemporaries. The art of Baudelaire has been compared to that of Racine, and, in the same way, Meryon's design has the complete economy and control of Robert Nanteuil or of Callot. Men like these make us doubt and reconsider our stock distinctions of "romantic" and "classic." The work of Meryon and of Baudelaire answers equally to both descriptions, and assures them a place apart in their generation. Thus,

while their paths crossed but for a moment, and while they never shared with each other their secret thoughts and aspirations, there is, nevertheless, no small interest for the student in these slight and fragmentary records of what, had it not been for a cruel freak of fate, might have proved an enduring and fruitful friendship.

FÉLIX BRACQUEMOND: AN ETCHER OF BIRDS

BY FRANK WEITENKAMPF

Chief of the Department of Prints, New York Public Library

EVEN the artist of various interests actively expressed,—the versatile artist, if that adjective be used without the suspicion of superficiality which is often its aftertaste—is very apt to become associated in the public mind with some one specialty.

Félix Bracquemond is known particularly well as an etcher of birds. Yet he has done many things, more than one well enough to have established a reputation. At twenty he painted, and exhibited at the Salon of 1853, a portrait of himself, in a manner that carries you back to Holbein, that even faintly suggests the spirit of Van Eyck in its precise and detailed utterance. The portrait clearly indicates his future activity, for he holds in his hand a bottle of acid, while etching tools lie on a table near him. His etched portraits are numerous, and include such comparatively free productions as the ones of Legros and of Meryon, and the large, minutely finished one of Edmond de Goncourt. The last named is a characteristic and typical example of Bracquemond's art, which, even when most painstaking, somehow or other never seems labored. Bracquemond appears

Size of the original etching, $12 \times 9\frac{3}{4}$ inches

as a peculiar and interesting mingling of Teutonic thoroughness and Gallic *esprit*.

The characteristic elements in his portraits—"robustness, versatility and a resourceful mastery of technique"—are peculiar to all his work. The same artist who carefully and with honest and sympathetic adaptation translated such different products of painter's personality as Millet's *Man with the Hoe* and Meissonier's *La Rixe*, as well as canvases and drawings by Holbein (the magisterial portrait of Erasmus), Corot, Gustave Moreau, Gavarni and Delacroix, also, under Japanese influence, etched numerous designs for ceramic ware (he was for a time a sort of artist director at the Haviland factory at Limoges), fishes and birds in swirling, decorative outline. In contrast to these last named are his numerous well-finished pictures of birds and mammals. His hares, moles and mice done with loving emphasis on the texture of their furry pelts. (The vision of happy days, seen by poor bunny suspended by one leg, was reproduced as far afield as Poland, in *Tygodnik Ilustrowány*.) The birds, with the delightful and strong modeling of their bodies felt under the sleek surface of their feathery coverings.

A master craftsman, he has found delight, like Buhot, Guérard and Mielatz, in technical experiments, and his interest and skill in reproductive methods are illustrated in etchings, dry-points, aquatints, lithographs, photogravures retouched with etching, engravings in color, and plates showing combinations of processes. Burty once wrote: "He contrives by repeated use of the acid on certain parts of the plate to get a black which for depth and in-

tensity has never been equaled." And Meryon avowed of him: "I cannot etch. That one, there, he is the true etcher."

His active interests, and his all-embracing outlook on the life about him, found expression in such occasional productions as the etchings of figures modeled in snow by French sculptors in Paris during the Commune; the symbolical lithograph of France defending himself against the Prussian eagle, while strangling his own imperial bird; the ceramic compliment to Uncle Sam: *The Old World and Young America*, or the very large plate done as a memorial tablet for Meryon's coffin. His hand recorded the placid, rural beauties of Bas Meudon and the quick impression of a steamboat, amusingly described by Beraldi (see No. 185). And a bit of woodland, possibly in the Bois de Boulogne, in winter snows, in combination with a gaunt wolf probably studied at the Jardin d'Acclimatation (the Paris "Zoo"), gave him opportunity for his effective *Wolf in the Snow*, also known as *Winter* (Beraldi No. 180), which in its spirit of desolation might be many hundred miles from Paris.

And with all this, his etchings only have been spoken of here,—and they are about 800 in number. But the catalogue (issued in an edition of 220 copies) of his work exhibited at the Société Nationale des Beaux-Arts (Salon) in 1907, includes not only etchings, but paintings, water-colors, pastels and designs executed in embroidered silk, ceramics, iron, cloisonné enamel, jade, wood and bookbindings.

Yet the late Walter S. Carter of Brooklyn, a most catholic print-collector, ventured fearlessly on the

BRACQUEMOND. PHEASANTS AT DAWN: MORNING MISTS

BRACQUEMOND. THE BATHER (CANARDS SURPRIS)

Size of the original etching, 14 x 10½ inches

inviting but not always safe sliding pond of analogy, and proclaimed Bracquemond the "Michelangelo of ducks." Without regard to the manner of the statement, we may accept the classification. For had Bracquemond never etched anything but his bird plates, he would have won his place in the annals of the fascinating art of needle and acid. Perhaps he realized that when he furnished a title-page design for the third volume, devoted to himself, of Beraldi's "Graveurs du XIX^e Siècle," consisting solely of a duck and a portfolio of prints. Much slighter in execution, but more significantly allegorical, was his frontispiece (Beraldi No. 480) for the catalogue of the second portion of the Burty collection. It represented a stand holding an open portfolio from which prints flying upward are gradually evolved into cranes. Ducks, however, have apparently been his special delight. He has pictured them in action, as in the delightful oblong picture of two ducks swimming (Beraldi No. 185) and in the equally, and amusingly, lifelike one of five ducks swimming hurriedly to a central point of common interest. Or in allegorical attitude, as in the *Canard* (Beraldi No. 116), the herald of "fake" news. He has observed the teal along the riverside and the *Gambols* of ducks (Beraldi No. 221), done with a simple and sympathetic delight in the doings of these water-fowl. Hardly ever, perhaps, has he better characterized the useful bird whose call, onomatopoeically imitated, has long served to characterize medical charlatanry, than in the plate known as *The Bather* or *Canards surpris*. The three birds, who have come down to their accustomed swimming hole

only to find it already occupied by a comely young woman, are alive and moving. The beholder can fairly see and hear their wonder at the unwarranted intrusion on their rights, and regards their wagging tails with much of the fascination that Septimus and Wiggleswick (in W. J. Locke's "Septimus") felt in the same diversion.

While the duck apparently appealed most to him, Bracquemond was attracted also by other members of the family of *Aves*. The goose, cousin to the *Anas*, he showed collectively in *Geese in a Storm (The Storm Cloud*. Beraldi No. 219), which may be studied in the Avery collection at the New York Public Library, in a series of touched proofs in which the fortuitous effect of gradually added work in the sky gives somewhat the impression of a storm rising as you look at the consecutive proofs. *Ducks in a Marsh* also move under a lowering sky, and in *It's Raining Pitchforks* (Beraldi No. 212) the flood-gates of heaven are fully opened, so that the water-fowl appear to find themselves doubly in their element.

Bracquemond sometimes labored through a number of states on a plate. The large portrait of Edmond de Goncourt was patiently carried through a number of progressive proofs. And in the process of thus searching for ultimate satisfactoriness he may give us such pleasant surprises as the fourth state of *Morning Mists* (Beraldi No. 779), a pheasant piece, with its delightful background addition of trees—an airy, light impression of early morning. He has done several landscapes of a lightness which approaches a Legros-like delicacy, so that it is perplexing to compare them with such a faithfully studied but

Size of the original etching, $10\frac{3}{4} \times 18$ inches

somewhat hard plate as that of the duck perplexed at sight of a turtle (*L'Inconnu*, Beraldi No. 174), and to realize that the same hand did both. Venturing still farther into the field of ornithology, he depicted golden pheasants, partridges, swallows, with sympathy for his subject and an open eye for its artistic possibilities. The human element enters into these pictures very rarely, and then only when absolutely in place. So in *At the Jardin d'Acclimatation* (Beraldi No. 214), in which two stylishly dressed young ladies are looking at golden pheasants in an enclosure. Once, at least, in *Sea-gulls* (Beraldi No. 782), he felt and rendered the beautiful effect of a circling, gliding flight of gulls over rolling waves, in a graceful swirl of lines combining into a harmonious pattern.

The peculiar effect of this last named plate, with its mingling of Japanese and other influences, is in striking contrast to his early and most remarkable *Haut d'un battant de Porte* (Beraldi No. 110, done at the age of nineteen), in which the dead bodies of three birds of prey and a bat are shown nailed to a barn door, held up as a warning example in a not too smoothly flowing quatrain. To his plates of moralizing or emblematic intention, such as the one just referred to, or the *Canard* (Beraldi No. 116), he delighted in adding such inscriptions, generally in rhyme. His verses in such cases partake a little of the halting metre of those which poor Meryon attached to certain of his plates. Such etched letterpress additions appear also in *Margot la Critique* (Beraldi No. 113) and in *Le Corbeau*. The last named delineation of an old bow-legged crow presents a creature so weird, so uncanny, that without adven-

titious effects it appears as a symbol of some sinister power, felt though not realized. But a still more famous plate, because most strongly characteristic, is *The Old Cock* (the original drawing for which is owned by Samuel P. Avery), a masterly portrait of chanticleer, in all the dignity and pomp of his mature vigor and serene self-sufficiency. Here is the poem for this:

Hé, vieux coq,
 Vieux Don Juan,
 Vieille voix, tu t'érailles,
 Toi-même tu seras
 La pierre du festin fait à tes funeraillies
 Et les convives, las
 De livrer à ta chair de trop rudes batailles
 Se reposeront des dents et des bras
 Racontant à l'envie, tes amours, tes combats.

He japonized this magnificent fowl in a purely decorative spirit, without the psychological element. And on the occasion of the visit of the Russian fleet to Toulon in 1893, he repeated and emphasized the theme to the verge almost of the grotesque, in a representation of the Gallic cock, a Hercules of his kind, with the aggressiveness of conscious strength, trumpeting forth his *Vive le Tsar!* with triumphant enthusiasm. This emblematic use of ornithological specimens has been already referred to in the case of the *Canard*. It appears notably also in *Margot la Critique*. The critic may note that *Margot* happens to be particularly unctuous in the state before the verses, but will not be otherwise adversely influenced by this etched philippic against his brethren.

But besides these many realistic studies of bird

BRACQUEMOND. THE OLD COCK

"But a still more famous plate, because most strongly characteristic, is *The Old Cock*, a masterly portrait of chanticleer, in all the dignity and pomp of his mature vigor and serene self-sufficiency."

BRACQUEMOND. SWALLOWS IN FLIGHT
Size of the original etching, $12\frac{1}{2} \times 10\frac{1}{2}$ inches

life there are just about as many of purely decorative interest, showing strong Japanese influence, and mostly executed for ceramic decoration. There are also decorative combinations of *Reeds and Teal*, *Swallows* flying in graceful curves and swirls, *Lapping and Teal* swimming and flying. Here again we have an entirely different point of view. The loving study of nature, sometimes expressed in an uncompromising hardness in the reproduction of form or detail, or elsewhere in an almost playful lightness of touch in obedience to a passing mood, appears here with quite different results. Seemingly endless changes on the same theme of swirling, undulating curves of flying, running, strutting, swimming bodies of birds and fishes delight the eye with the rhythmic flow of ever recurrent accent on the pure beauty of line.

And at the end, when you have gone through the many portfolios of Bracquemond's work, there occurs to you his own statement quoted by Clement Janin. It is to the effect that a work of graphic art must bear on its face, undisguised, the characteristics of the technique by which it was produced. A lithograph must be a lithograph; a wood-engraving a wood-engraving and not the imitation of an engraving on copper or of a photograph. A review of the arts of reproduction proves that this is not the truism it may seem. It is a basic principle in all art, and will bear earnest and repeated emphasis. And the notable recognition of this fact by Bracquemond is a prime factor in his success in the art that has meant so much to him.

AUGUSTE LEPÈRE

BY ELISABETH LUTHER CARY

Art Editor of the *New York Times*

IT is the fashion of the moment to specialize in art as in other professions, and we no longer expect to find the multiple tendencies and ambitions of a Leonardo or a Dürer, or even of the self-contained Rembrandt, in the modern artist. He is a painter or a sculptor or a wood-engraver or an etcher. He is even more closely classified as a portrait- or a landscape-painter, an animalier or a decorator, a dry-point engraver or a disciple of pure etching. If, as sometimes happens, he escapes from the threads of the Lilliputians and swings his arms in a wider sweep, it is in the mood of deprecation or excuse, as a writer may choose to whittle wood or hammer metal in order to clear his word-fogged brain.

There is, however, a wholesome and growing impression among thoughtful observers that extreme limitation and restriction produce weakness rather than strength, and when we find an artist who has something of the ancient flexibility of mind and hand it is worth our while to acclaim him.

Auguste Lepère has pursued a free course of development, rounding his capacities, and forming himself with balanced and reasonable attention to diversified

LEPÈRE. RHEIMS CATHEDRAL

Size of the original etching, $14\frac{1}{8} \times 10\frac{3}{4}$ inches

LEPÈRE. BELLE MATINÉE. AUTOMNE

Size of the original etching, $7\frac{1}{2} \times 11\frac{1}{4}$ inches

interests. He was born in Paris in 1849. His father was the talented sculptor François Lepère, and he got, no doubt, from his father something of the latter's taste for suggesting passion, even frenzy, in small but monumental figures. While quite young he studied with the English engraver Smeeton, and spent his first professional years in the service of illustration for *Le Monde Illustré*, *L'Illustration*, *Le Magasin Pittoresque*, and *La Revue Illustrée* in Paris, the *Graphic* and *Black and White* in London, and *Scribner's* and *Harper's* in America.

Tiring of this field, he tried all things. He became in turn a metal-chaser, a decorator of leathers, a ceramist, an etcher, a wood-engraver and a painter. If we consider him chiefly as an etcher, it must be with the full appreciation that any craft mastered by him is made subsidiary to the larger principles upon which all works of art are based, whatever the medium or process. He has consistently declined to fritter away his admirable technique upon technicalities undertaken for their own sake, and his work in etching as in painting is the work of an intellect concerned with the problems of rhythm and harmony, color, tone and form, which assail artists in every field.

As an etcher he received his initiation from Bracquemond, the most robust of temperaments and at the same time the most fastidious of technicians. Lepère has been worthy of his teaching. From the first he has sought to render his impression, recorded by a vision singularly prompt and synthetic, with precise care, patiently assembling all the complex virtues of his method to the task. To his slightest plate he has brought conscience and sincerity, and

also a quality without which all the moral gifts with which human nature may be endowed would have availed him nothing as an artist: the rare capacity, that is, for retaining the freshness of his vision throughout a slow process of translation.

Before examining a few of his plates to discern their significant qualities, it will be interesting to consider his own words on the aim of the engraver: notes written with reference to the change in methods of reproduction from interpretation by means of the engraver's art to the use of photography and the resultant processes. Even his notes on engraving for the purpose of reproduction, though less closely allied to the work of his riper years than the notes on engraving from nature as an original art, are excellent reading, since they throw a clear light upon his ideals and definite convictions:

"Formerly," he says, "when an engraver had a work to reproduce, it was *absolutely necessary for him to see it*. He could then study it, comprehend it, and consequently extract its essential principle, simplify it, adapt it to his mode of expression, engrave it.

"If he had not the gift of composition, that of design was necessary in order to make his transposition; that of interpretation, in order to gather the idea of the creator of his model. His work was almost the equal of the work of an original engraver who usually interprets a composition or a model given by nature.

"His art was that of transposition. He took color or mass and made a song in a different key, keeping only the relative values of the shadows and lights and the contours of the objects.

LEPÈRE. VUE DU PORT DE LA MEULE

Size of the original etching, $8\frac{3}{8} \times 12\frac{1}{2}$ inches

LEPÈRE. PEUPLIERS TÊTARDS

Size of the original etching, $7\frac{7}{8} \times 9\frac{3}{4}$ inches

“Photography has come to change all that. It has facilitated the task of the engraver, who, for the most part, has not even seen the works he reproduces. The science of design is almost reduced to knowing how to trace; as for simplifying a photograph, it can only make matters worse. Such as it is, a photograph forms a perfect gamut in which nothing can be changed without losing everything; to extract a line from it is impossible, so indiscernible is the passage from one object to another, a figure in the background, etc., etc.

“Photography is a reproduction; it becomes a betrayal. What is the copy interpreted by this betrayal? How can one extract the character of anything if the true model is not there?

“Here, then, is our engraver obliged to copy with his precise art from something quite vague. Photography sees the globs of color, the accidents of a picture, with as much interest as the most beautiful design. What will he put in the place of these accidents? He traces, he copies; and as the photograph is stupid, he copies a stupidity.

“He does this so thoroughly that he can be dispensed with, the means of printing a photograph having been discovered. What imitates a photograph most completely if not a photogravure? This attains to a degree of impersonality so great that the poor engraver can no longer battle against it.

“For the engraver who possesses no faculty of composition to do artistic work it is necessary that he be an interpreter, a simplifier, with a very well-defined idea of the necessities of his craft, and that he know how to draw directly! He must renounce all attempts

to overstep the boundaries of his craft; he must not try to express colors. One may, in an engraving, express cold and heat; that is, indeed, the main thing. But it is impossible to engrave red, yellow, or green. These are researches that encroach upon the domain of the painter and spoil everything."

Of the original engraver more is exacted. As a true artist he must respect both his craft and the quality of his vision. He must synthetize, simplify, express, avoid photographic vision and trivialities of style; he must employ only the means forbidden to photography: those well-affirmed indications of the movements of the point which are the very foundation of the beautiful technique of engraving.

And in one phrase is summed up the essential aim of the engraver who treats his art with respect, whether he uses it for purposes of reproduction or for original work: "Not to imitate. To express."

Lepère has followed his own doctrine to its logical conclusion. Never servile, even in his most faithful portraiture of a nature that enchants him, he works with a plenitude of science, but also with unwearied freshness of inspiration and a sympathetic feeling for the character of his subject, whether it is a curve of the river near Nôtre Dame where horses come down to drink, or a poor man's hut with climbing vines in bloom, or the wide marshes of the Vendée. With the passage of time his vision has grown larger and calmer, his interpretations magisterial; but in his most classic moments he does not forget to infuse into his composition a strong feeling for this intimate characterization. He is a true creator, living not only above but in his conception. He is at once serene and

moved, in command of his intellectual instrument and impelled by his personal interest.

The *Journée d'Inventaire* is a plate that shows clearly this double action of the artist's mind. The composition is stately in both line and mass. In the background rises the lofty architecture of the Amiens Cathedral; in the foreground, in deep shadow, is a group of figures diversely occupied. The upraised arms of these figures lead naturally to the pointed arches and ascending spires. In a similar fashion, the strong darks of the foreground mount in diminishing quantity through the heavy shadows in the recesses of the doorways to the luminous blacks that mark the slender openings in the towers. It is a beautiful upward movement that repeats the song of the Gothic spirit.

These wonderful darks have also another function. Echoed as they are, in the small, sharp shadows of the multitudinous detail, they send the light quivering all through the picture. It pours down from a sky empty of clouds, and causes the web of decorative imagery with which the structure is draped to shimmer like a fabric set with precious stones. Only a true master of the subtleties possible to interwoven dark and light could thus command his atmospheric effect, and evoke from his slight and restricted materials the grandeur of the immense pile of stone raised by the hands of man, and the contrasting evanescence of the passing sunshine caressing every boss and hollow in the richly manipulated surfaces. It is perhaps not too much to say that nothing more remarkable in its kind has been done in the present century. The element of drama is added by the turmoil of little

figures in shadow at the base of the cathedral, seen in minute detail through the translucent darkness and agitated by their human accidents and emotions. The whole spirit of France, its imperishable monuments, its sparkle of sunshine, its reasonable architecture, its vivid life, may be inferred from this remarkable plate.

Very different in sentiment and less close to perfection in the relation of the parts of the design to the whole, is *La Chôte de Ballon*; yet this also is a beautiful plate. As in the *Journée d'Inventaire*, the eye is led upward by the gestures of the crowd in the foreground to the point of interest, the balloon hung poised above the trees and houses. There is the same contrast of movement, too, in the agitated figures of the foreground with the calm lines and clear light of the distance. In this plate, however, is greater piquancy of light and shade. The abrupt lines and minor episodes are carried so far into the composition as to dominate the general impression, leaving the open distance to play a secondary instead of primary part. Figures are hurrying in excitement toward the scene of the aërial drama; tree branches are tossing, there are little restless clouds passing rapidly across the sky; the air is brisk, it is a bright day, there is much to see and do, and interest is keen—that is the story one carries away from the handsome, stirring print, and also a subtle poetic suggestion that beyond the town, as one follows the slow length of a white cliff, to where it meets the horizon, is a very great world that turns from night to day, from day to night, interminably, unchecked and unspeded by the passing storms of human glee and human woe.

Size of the original etching, $6\frac{1}{4} \times 6\frac{3}{8}$ inches

is more commonplace in subject, the river and its barges having entered into the artistic life of nearly all French etchers; but how few could pass with such sureness of plan, such precision of execution, from the dark bulk of the vessel in the lower left corner to the snapping black of the tree-top in the upper right corner, along a perfect diagonal, without a suspicion of stiffness or formalism in the fluent arrangement of innumerable details of pattern! This strong sense of appropriate and austere design, supported by such an easy grace of handling, is unusual in any age, and especially in our own, when grace and austerity find it almost impossible to live together in one man's work.

Turning away from these subjects, in which nature presents a wide range to the artist and inspires him to breadth and dignity of treatment, to the quaint and touching subjects drawn from peasant life in the Vendean homes, we find beneath the admirable form of Lepère's expression thoughts tender and merry and filled with sympathy for common experience. His work becomes picturesque and living, the mood of the observer changes in response, and the pleasure given is that inspired by simple things, although the treatment of the given scene is often far from simple.

While all these plates are admirably expressive, one in particular, *Le Nid*, seems to me filled with melody, color and charm as well as with the efficient intelligence always to be found in Lepère's work. A little solid house with thick walls stands in greenery. Children, natural, happy, unconcerned, are playing in the foreground. Beyond is a curve of low hill and a glimpse of flat plain; and still beyond, a little town

with its spire. It is all very naïve and fresh; the outdoor setting has much beauty; the types of the children are unhackneyed; the gestures and positions unconventional and spontaneous. A mere glance reveals the felicity of the subject-matter, but longer acquaintance is necessary before all the resources of the design are appreciated. Even in this playful note of pleasant summer pastime we get something of the gravity and serious purpose indispensable to great etchers as to great painters. It was this characteristic that led Lepère to pull down all the detail of the middle distance below the noble swinging line of the hillock, in order to keep the severity of that magnificent curve. It was this which led him to follow a repeating curve in the arrangement and environment of the children, apparently so carelessly disposed among their shrubs and flowers. "Let all things play and bloom and make holiday," he seems to exclaim in this rare plate, "so long as the power of my design is not weakened by them." The artist whose work says that to us is sure of long life in our memories.

There are several of these subjects in which children at play near their homes are the principal feature, and it would be easy to find in each some special note of gaiety and charm and quick Gallic wit. In *Les deux Bourrines*, for example, the groups of little ugly creatures, who form again a curved line of beauty, are characterized with a frank acceptance of their unclassic physiognomies that would have delighted the heart of Daumier. *Le Nid de Pauvres* is not less romantic in its Gothic avoidance of the ideal type.

Classic Lepère can be, however, with a curiously

LEPÈRE. PROVINS

vital appreciation of what the living classic must have been. He has an etching of a swineherd entering the yard in which the beasts are penned. They move, grunting, toward him. Outside is a cluster of great trees with bushy foliage. The light is clear and warm. The folds of the swineherd's mantle and his gesture are Greek. His figure might have passed across the Athenian stage, one fancies, at the time of Sophoclean drama. And the landscape has the deep repose immortalized in classic verse—such songs as in his extreme old age Sophocles made to do honor to his native village:

Our home, Colonus, gleaming fair and white :
The nightingale still haunteth all our woods,
Green with the flush of spring ;
And sweet, melodious floods
Of softest song through grove and thicket ring.

Lepère is not often found in this mood, however, and the swineherd plate cannot be considered wholly characteristic of his temper of mind. It seems to have been one of those rare happenings when the mind is lifted above its habitual plane, occasion serves, and the trained hand obediently records a moment of peculiar exaltation. He is perhaps most of all his daily self in the little plate called *Le Moulin des Chapelles*. Here he shows us the machinery of the mill and the round white column of the structure as others have done, but he also shows us what others seldom do—the use of the mill. A patient horse is standing near, a man is shifting the bags of flour to his back. It is not a mere accident of landscape; it has a social and utilitarian function; it is connected with human life.

This is the most characteristic attitude of mind for

an artist so alert to the significance of visible things; and it is immensely to his credit as an artist that he almost never permits this keen and throbbing interest in the world about him to trespass upon his logical use of his great instrument.

If organization of line and space, ability to establish in each of his compositions a decorative scheme adequate to support easily all the delightful episodes and figures which he chooses to introduce, is the most important element in Lepère's artistic equipment, the next in significance is the clarity and precision of his utterance. There is no vapor in his imagination; he is a poet as well as an artist, with a poet's sensitiveness to definition of form. All that he lacks is the intensity of emotion that sweeps away interest in everything but the personal feeling. We suspect that the world for him will always be "full of a number of things," and that he will not be able to forget any of them in the exaltation of profound self-absorption. But he has a genius for infusing a rich suggestiveness into all that he observes, and for giving his narrative an epic character.

HERMAN A. WEBSTER

BY MARTIN HARDIE

“**D**ID you ever see a barber sharpen his razor? That ’s what it wants—the decision and the smacks.” That is one of the many quaint remarks that old John Varley used to hurl at the pupils who came to him for lessons in the complete art of painting in water-color. It is a remark very appropriate to the vast quantity of etchings, mechanically correct, but unimpassioned and uninteresting, which are produced to-day. There are wonderfully few etchers whose work strikes a note of imagination and individuality, and appeals by its force and directness, its decisions and its smacks. One of that small company is Mr. Herman A. Webster.

An artist’s life is written in his work, and the cold facts of his biography are of little real importance. To some extent, however, they act as a commentary upon his productions, and at the worst they serve to satisfy the not unpardonable curiosity which impels all of us to inquire into the age and life-history of any man whose pictures or prints awaken our instant sympathy. So I put here a few outlines of Mr. Webster’s career, merely the mile-stones that mark the route along which he has proceeded. It has been a career of strenuous activity, for the artist who now prints his finely-wrought plates in his studio in the Rue de Fur-

stenberg at Paris (the street of which Whistler made a lithograph in 1894) has graduated at a famous university, traveled round the world, spent two years in commercial life, toiled as general reporter to a big daily paper, worked in a coal-mine, and acted as assistant cashier in a bank. And the tale of his years is only just over thirty, for he was born in 1878. Need I add—for an English reader it would be quite superfluous—that Mr. Webster is an American, with New York as his native city?

Mr. Webster came into the world with an innate love of art. In his school-days, before he had received any instruction in drawing, he made posters, that were perhaps crude but not ineffective, for the school games; and at Yale he was one of the editors and a valued illustrator of the *Yale Record*. This love of art was fostered by a visit to the 1900 Exposition at Paris, where the *genius loci* has a stronger spell for the young artist than anywhere else upon earth. Studios and restaurants of the Quartier Latin are fragrant with great memories, still haunted by the mighty spirits of the past: Louvre and Luxembourg are filled with the living realities that abide. Amid the enchantment of this artistic atmosphere, with all its traditions and associations, Mr. Webster lingered for some months, and then set out on a trans-Siberian tour to the Orient, staying long enough in Japan and China for his natural instinct to be quickened by the marvelous art which has exerted so strong an influence on the Western world. On returning home his desire to adopt art as his life-calling was checked by family opposition. Here in England—for I write as one of Mr. Webster's English admirers—many a boy

WEBSTER. ST. OUEN, ROUEN

"His chief delight is in the nooks and corners of old-world thoroughfares and culs-de-sac, where deep shadows lurk in the angles of time-worn buildings, and sunlight ripples over crumbling walls, seamy gables, and irregular tiled roofs." Martin Hardie.

Size of the original etching, $5\frac{1}{2} \times 3\frac{5}{8}$ inches

WEBSTER. LA RUE GRENIER SUR L'EAU, PARIS

"A fourth plate, perhaps even finer than any of these in its force, directness, and concentrated simplicity, is the *Rue Grenier sur l'Eau*. There is much of Meryon in its clear, crisp line-work." Martin Hardie.

Size of the original etching, $8\frac{3}{4} \times 4\frac{7}{8}$ inches

artist has been thwarted by a foolish antipathy in the home circle to art in the abstract, but for a parent in the New World the conviction must be even more sincere that business is the only lucrative profession, while art is at least something precarious, if not a downward road to poverty and starvation. And so, at his father's wish, Mr. Webster, in the office of the *Chicago Record-Herald* and elsewhere, served two years of bondage to commerce. Determination, however, won its way at last, and in February, 1904, he set out to Paris with the family consent to "try it for a year." That year is still continuing.

Seven months during 1904 were spent at the Académie Julien under Jean Paul Laurens, in study from the nude; and that is the only academic instruction which Mr. Webster has received. A few months after his arrival in Paris, chance led him to the Bibliothèque Nationale, where he saw some of Meryon's etchings, and fell instantly under the spell of the great artist whose sinister needle first revealed the mysterious and somber poetry of Paris and the Seine. From Meryon and from books he forthwith taught himself to etch, receiving no outside instruction, but evolving his own methods till he attained mastery of the "teasing, temper-trying, yet fascinating art"—a mastery the more valuable and complete in that it was based on his own experience. A first attempt was made from his studio window in the Rue de Furstenberg, and some copper-plates went with him on his autumn holiday at Grez, that "pretty and very melancholy village" in the Forest of Fontainebleau, where Robert Louis Stevenson met the romance of his life. As the first-fruits of this holiday three little etchings won their way into

the next summer's Salon—the *Rue de l'Abbaye*, *The Loing at Grez*, and *The Court, Bourron*, the last being the forerunner of several subjects of similar type. At the Salon also was hung a large oil-painting of still life, a study of fabrics and porcelain; but though color will no doubt claim allegiance again, Mr. Webster has been too closely held in thrall by etching to essay further experiments in the painter's craft.

A pilgrimage to Spain in the spring of 1905 was the source of several spontaneous and effective plates, among them *St. Martin's Bridge*, *Toledo*, and *Mirada de las Reinas*, *Alhambra*. Up to this point Mr. Webster's work may be considered, in a large measure, tentative and experimental, but from 1906 onward he has found in Normandy—at Pont de l'Arche and Rouen—at Bruges, and above all in Paris, the inspiration for a series of plates noteworthy for their fine craftsmanship and their expression of individuality. They have won him the recognition of connoisseurs and public without his passing through any period of undeserved obscurity. At the Paris Salon, at the Royal Academy, and in his native land, his etchings have constantly been exhibited and admired. Nor must I forget to add that in 1908 he was elected an Associate of the Royal Society of Painter-Etchers, which, under the presidency of its veteran founder, Sir Francis Seymour Haden, has done so much to foster the revived art of etching.

It is of some of the chief works produced and exhibited during the last three years that I have now to speak, and in doing so may perhaps indicate a few leading characteristics of the etcher's work. His chief

WEBSTER. QUAI MONTEBELLO

"Few etchers have ever preached the gospel of light with more truth and earnestness than Webster himself in the *Quai Montebello* and many other plates." Martin Hardie.

Size of the original etching, $7\frac{1}{2} \times 5\frac{1}{8}$ inches

WEBSTER. LE PONT NEUF, PARIS

"A fitting companion to this vision of Notre Dame is *Le Pont Neuf*, another of the etcher's largest and most distinguished plates. The stern solidity of the bridge, with its massive masonry, its corbelled turrets, and its deeply shadowed arches, makes pleasing contrast with the irregular sky-line of the sunlit houses that rise beyond."

Martin Hardie.

Size of the original etching, $8\frac{1}{8} \times 11\frac{3}{4}$ inches

delight is in the nooks and corners of old-world thoroughfares and culs-de-sac, where deep shadows lurk in the angles of time-worn buildings, and sunlight ripples over crumbling walls, seamy gables, and irregular tiled roofs. Of such is a series of subjects found in old Rouen—the *St. Ouen*; the *Rue du Hallage*, where the cathedral spire towers high above old timbered houses; and that charming plate with the title *Old Houses, Rouen*, a quaint corner of tenements whose high-pitched roofs stand propped against one another for all the world like a castle of cards. The etcher of this and of the *St. Ouen* was welcomed with warm sympathy by the *Gazette des Beaux-Arts*, which said that “never before has there been so fervent and skilled an interpreter of the bowed timber and crumbling plaster of the old houses of Rouen, which line the street ending in the cathedral with its pointed spire against the open sky.” And so we pass to two courtyard scenes—belonging, like the Rouen subjects, to the year 1906—the *Cour, Normandie*, and *Les Blanchisseuses*. In both we find the artist becoming more adept in using broad and balanced disposition of light and shade to give not merely chiaroscuro but the suggestion of actual color, and more skilled in adding exquisiteness of detail to refined truth of visual impression. *Les Blanchisseuses*, in particular, with its rich mystery of shadow, with its sunshine falling on white walls and lighting the seamed interstices of plaster and timber, has an indefinable charm that, for myself at any rate, makes it a high-water mark in Mr. Webster’s art. Of similar type is the *Old Butter Market, Bruges*, where a cobbled street curves beneath a shadowed archway; and then for variety you step from *Bruges la Morte*,

from the silent cobbles that centuries ago were a busy thoroughfare for ringing feet, to the Bruges of to-day. It is Bruges in a very different aspect, this free and spirited study made on July 27, 1907, on the day of the Fête de l'Arbre d'Or, giving a quick impression of gay holiday crowds, of banners fluttering against the open sky, and of the "belfry old and brown" whose carillon inspired America's poet, as its tall form and fretted outline have inspired the American etcher of whom I write. This *Bruges en Fête*, and *Paysanne*, a clever and direct figure-study of an old peasant at Marlotte, come as an episode of pleasing variety in Mr. Webster's work, and tend to show that, though he has his preferences, he is not really fettered by any limitation of subject or treatment.

It is but natural that an artist of Mr. Webster's temperament, a devoted admirer of Meryon, should become absorbed in Paris herself and endeavor to put upon copperplate the "poésie profonde et compliquée d'une vaste capitale." The Bruges and Rouen plates showed Mr. Webster to be keenly susceptible to the magnetism and charm of medieval tradition, but Paris, steeped in sentiment even more than Rouen or Bruges, was to rouse a still greater warmth and feeling. He began by searching out those picturesque streets in the old quarters that have survived the wholesale demolition of Baron Haussmann, a name hated by artists as that of Granger by lovers of books. The *Rue Brise Miche* found its way to the Royal Academy, and was also honored by publication in the *Gazette des Beaux-Arts* (July, 1907). Closely akin to it in restful balance of composition and in fine shadow effect is the *Rue de la Parcheminerie*—of special value now, for

WEBSTER. LA RUE CARDINALE

"*La Rue Cardinale* has affinity of general treatment with *Rue de la Parcheminerie*, and is not the less interesting for an amazing *tour de force* in the rendering of color and texture in the striped blind over a shop-front."

Martin Hardie.

Size of the original etching, $10\frac{1}{8} \times 7\frac{5}{8}$ inches

WEBSTER. LA RUE DE LA PARCHEMINERIE, PARIS

"Closely akin to *Rue Brise Miche* in restful balance of composition and in fine shadow effect is the *Rue de la Parcheminerie*—of special value now, for the old street has disappeared largely since the making of the plate." Martin Hardie.

Size of the original etching, $11\frac{1}{8} \times 7$ inches

the old street has disappeared largely since the making of the plate. *La Rue Cardinale* has affinity of general treatment, and is not the less interesting for an amazing *tour de force* in the rendering of color and texture in the striped blind over a shop-front. A fourth plate, perhaps even finer than any of these in its force, directness, and concentrated simplicity, is the *Rue Grenier sur l'Eau*. There is much of Meryon in its clear, crisp line-work. Some day perhaps these loving studies of the old Paris of Balzac may be gathered in a series illustrating the "Quartier Marais," and published in an *édition de luxe* with descriptive text by the etcher. Let us hope that this may come to pass, for the buildings that Mr. Webster depicts are far more than a prosaic record of architectural features. There is a spiritual and human suggestiveness behind the mortar and bricks of his pictures: as a poet of his own nation has it, they are "latent with unseen existences." He has appreciated the fact that etching—an art hedged in by limitations and depending upon power of suggestion—is the one art that can give at once those delicate lines, those broad shadows, those crumbling bits of texture. The lover of etching can regard his subject with indifference, and take full joy in the soft play of sunlight, the fine choice of line, the effective massing of light and shade.

Another plate of this "Quartier Marais" series is a noble representation of Notre Dame seen from an unusual aspect. It is a drawing from near the Hôtel de Ville and shows the splendid mass of the cathedral rising above the irregular houses that face the Quartier Marais and the Quai aux Fleurs. There is freedom and charm in the treatment of the fore-

ground, where a little tug puffs along the river and the big barges move cumbrously under the lee of the near bank, and in the middle distance where the light plays pleasantly over the old houses; but the roof of the cathedral itself, put in with unpleasing rigidity of line, comes like cold fact in the middle of romance. It is as though Meryon here had imposed his weakness as well as his strength upon Mr. Webster, for in the *Morgue*, for instance, the one small blemish is the ruled precision of the lines upon a roof. A fitting companion to this vision of Notre Dame is *Le Pont Neuf*, another of the etcher's largest and most distinguished plates. The stern solidity of the bridge, with its massive masonry, its corbeled turrets, and its deeply shadowed arches, makes pleasing contrast with the irregular sky-line of the sunlit houses that rise beyond.

It may be said of all Mr. Webster's etchings—and perhaps there could be no higher praise—that each possesses the faculty of provoking fresh interest. That is certainly the case with four of his most recent plates. One is an interior of *St. Saturnin, Toulouse*, majestic and stately, full of suggestive mystery in the religious light that falls with soft touch upon the pillars, throws into relief the dark masses of the choir-stalls, and strives to penetrate the dim recesses of the vaulted roof. *St. Saturnin* will be among the rariora of the collector, for the plate unfortunately broke when twelve proofs only had been printed.

The artist's subtle perception of light and his refined draughtsmanship have been used to singular advantage in the *Ancienne Faculté de Médecine, 1608*. One is grateful to him for his fine record of this

WEBSTER. "ST. SATURNIN, TOULOUSE"

Size of the original etching, $10\frac{1}{2} \times 4\frac{3}{4}$ inches

WEBSTER. ANCIENNE FACULTÉ DE MÉDECINE, PARIS

"The artist's subtle perception of light and his refined draftsmanship have been used to singular advantage in the *Ancienne Faculté de Médecine, 1608*. One is grateful to him for his fine record of this domed building that was a little gem of Renaissance art, though there is a note of sadness in the substructure of balks and struts set at its base by the ruthless hand of the destroyer."

Martin Hardie.

Size of the original etching, $11\frac{1}{8} \times 7\frac{1}{8}$ inches

domed building that was a little gem of Renaissance art, though there is a note of sadness in the substructure of balks and struts set at its base by the ruthless hand of the destroyer.

Gothic canopies and tracery are drawn with loving care in the *Porte des Marmousets*, *St. Ouen*, *Rouen*, but here again it is the mystery of shadow in the deep porch that supplies the true theme. A church porch has also supplied the subject of one of Mr. Webster's latest works, *Notre Dame des Andelys*. The ordinary observer will delight in the print for its beautiful rendering of a noble fragment of architecture. Those who have real knowledge of etching will appreciate it still more for its clever biting and for its subtle delicacy of line so cunningly used for the indication of stone, glass, and woodwork with their different surfaces and textures.

That plate of *Notre Dame des Andelys*, though not the most instantly engaging, is perhaps the most accomplished which the artist has produced. It is in this accomplishment that from the coldly critical point of view I see an indication—a hint only—of possible danger. Here, and to some extent in the *Pont Neuf* and the *Rue Grenier*, the careful, tense, concentrated work shows almost too disciplined a self-control. Close study of these prints gives just a touch of the irritation that comes from watching the monotonous perfection of a first-class game-shot or golfer, bringing a malicious desire for some mistake or piece of recklessness. The true etching always appeals in some degree by its spice of adventure, by some happiness of accident, and so while the *Pont Neuf* and the *Notre Dame des Andelys* rouse full admiration and respect

for their splendid artistry, the more haphazard methods of the *Rue Brise Miche* and *Les Blanchisseuses* touch a far deeper note of sympathy. They have in them the breezy, natural oratory that is often so much more stirring than the fluent, polished periods of the accomplished speaker. But even where Mr. Webster is most precise in his articulation, most resolute in his adherence to familiar truths, he always combines with this a personal aspect and a power of selection that, disregarding the commonplace and petty, lends poetry to the interpretation. His "careful" work is very far removed from the cold and careful work of the ordinary uninspired craftsman.

In studying the work of a young etcher—and Mr. Webster is still young as an etcher—it is almost always possible to trace certain influences which, quite legitimately, have acted upon his choice of subject and his technique. In one of his first etchings, *The Court, Bourron*, the Whistler influence is frankly apparent. *Les Blanchisseuses* is in no sense an imitative plate, but I should have said it was the work of a man who knew Whistler's *Unsafe Tenement* by heart. And there comes in the critic's danger of leaping to rash conclusions, for Mr. Webster tells me he never saw that print by Whistler till long after his etching was made. For the Meryon influence, which is clearly apparent in much of his work, Mr. Webster makes no apology. Nor need he do so; for if he reminds us, here a little of Whistler, there a little of Meryon, there is always a large measure of himself besides. The true artist lights his torch from that of his predecessors: it is his business to carry on great traditions. "I have done my best simply to learn from him, not to steal"

WEBSTER. PORTE DES MARMOUSETS, ST. OUEN, ROUEN

"Gothic canopies and tracery are drawn with loving care in the *Porte des Marmousets, St. Ouen, Rouen*, but here again it is the mystery of shadow in the deep porch that supplies the true theme."
Martin Hardie.

Size of the original etching, $10\frac{1}{4} \times 7$ inches

—that is Mr. Webster's own expressive way of putting it.

Mr. Webster has not learned from Meryon at the cost of his own individuality, and one reason for the freshness that characterizes his work is that he is one of those who like to transfer their first impressions of nature direct to the plate in the open air. With very few exceptions, that is how his etchings have been made. A certain amount of work is necessarily done afterward in the retirement of the studio, but the straightforward method of rendering nature gives a vividness and spontaneity that careful work from intermediate studies in pencil or color can rarely produce. This spontaneity is the very essence of good etching, for with etching, as with water-color, its highest charm is inevitably troubled by mechanical labor; it is essentially a method of which one feels that "if 't were done, 't were well done quickly." The etcher should no more be able to stay the quick gliding of his needle in the middle of a line than the skater to stand still upon the outside edge. And I think that the etcher who works straight from nature is more apt to search out the notes and accents of character and to seize upon those structural lines which are a fundamental necessity to his work.

Another chief excellence in Mr. Webster's work lies in the fact that from the first he has been his own printer. He is no believer in the principle followed by many other etchers of biting their plate and leaving it to some one "with the palm of a duchess" to do the rest. Patient acquisition of craftsmanship is bound to tell, for the paid printer, be he never so skilled, cannot hope to understand an artist's intentions quite so

well as the artist himself. Mr. Webster, however, has no need of any artifice; there is no trace in his etchings of the meretricious printing which Whistler condemned as "treacly." Light and shade enter into charming alliance in his prints, but line is always of the confederacy, and it is to purity of line that the shadows which tell so strongly owe their strength. In the very depths of them there is always a luminous gloom, never a trace of the harshness and opacity that come from slurred workmanship and reliance upon printer's ink.

Perhaps I have said too much already, for Mr. Webster's work is well able to speak for itself. But there is one noteworthy feature, common to all his plates, that claims attention, and that is his power of rendering sunlight. If he loves dark and dingy thoroughfares with dilapidated roofs and moldering plaster, it is for the sake of those quaint shadows that peep from their recesses and climb the high walls, and still more for the patches of brilliant, quivering sunlight to which the shadows give so full a value. He seems to hear, like Corot, the actual crash of the sun upon the wall—"l'éclat du soleil qui frappe."

PART II

It is difficult to clothe one's speech in the detached terms of a catalogue when writing of an artist whose work always kindles fresh enthusiasm. And so I may perhaps be pardoned if, in adding something to a previous essay upon the etchings of Herman A. Webster, I venture to strike a more personal note.

There can be few men to whom art is more of a religion than to Webster. On two occasions when I saw him during his hurried visits to London in the spring of 1910, he spoke of his art with all the zeal of a missionary and the fervor of a convert. He seemed to be laboring in a slough of despond, beset with a feeling that his past work was something worthless, to be thrown aside like Christian's bundle. He appeared to be torn in sunder by divers doctrines, telling me of the constant ebb and flow of argument in the Paris cafés and studios between the *parti métier* and the *parti âme*—those who maintained that finished technique, the "*cuisine*" of the French student, was the final aim, and those who held that the artist's own emotion, howsoever it might find expression, was the greatest thing of all. Webster felt—and it was a fact, indeed, at which I hinted in writing of his work before—that he was sacrificing something of the *âme* to the *métier*; and his own realization of that is already becoming apparent in his outlook and his style. Then, too, his talk was all of the attainment and suggestion of light as the supreme quality in an etching; and here I could reassure him, for few have ever preached the gospel of light with more truth and earnestness than Webster himself in the *Quai Montebello* and many other plates.

Still, there matters stood more than a year ago, and the plates that Webster had etched at Marseilles and elsewhere lay rejected and unbitten in his studio. Then he set out to America, where he spent the summer of 1910, and, like Mr. Pennell, fell a victim to the sky-scrapers of New York. "They are the most marvelous things," he wrote, "on the face of Mother

Earth to-day. It took me two months to begin to see them, but then they began to glow, to take shape, and to grow. Perhaps no work of human hands in all the world offers such a stupendous picture as New York seen from almost anywhere within the down-town district, or from the river or the bay. There are cliffs and cañons where sun and shadow work the weirdest miracles, and soaring above them, between forty and fifty stories from the ground, rise arched roofs and pointed ones, gray and gold and brown, that one must see with one's own eyes to have the faintest conception of. From across the Hudson in the afternoon when the sun goes down you can watch the shadows creep up the sides of these mountains of brick and stone until you 'd swear you were looking out on some gigantic fairyland."

His admiration of those sky-scrapers found expression in a series of drawings made on behalf of *The Century Magazine*, and in, at any rate, one etching—the *Cortlandt Street, New York*. The subject will appeal most, perhaps, to those who live beneath the familiar shade of these monstrous habitations, with their hundreds of staring eyes; but the ordinary man, though he may find it strangely uninspiring and unromantic, will at any rate admire the firm decision of the drawing and welcome the slender filaments and trembling gray spirals of smoke—so difficult to express in line with a point of steel—that cast a veil over the sordid reality of the scene. Though Webster carried that one plate to a finish, he was still obsessed by all sorts of doubts. Many drawings were torn up, and many plates that he etched were wilfully destroyed. Just as the golfer falls victim to too much

WEBSTER. BENDERGASSE, FRANKFORT

"Then there are the *Street of the Three Kings*, the *Bendergasse*, and *Sixteenth Century Houses*, all of them felicitous in charm of theme, in play of light and shade, and in the suggestion of life given by the animated figures." Martin Hardie.

reading of theoretical works, so for Webster his eager indulgence in theory and science put him "off his game." I say all this to account for what must seem a small output during two years for a man whose sole work is etching. It is all to the artist's credit; but, none the less, we have suffered, *nous autres*, for his convictions. Now, however, Richard is himself again. A month or more spent in Frankfort this summer has produced a series of pencil-drawings and etchings which should bring satisfaction and content both to the artist and to all who admire his work.

Before speaking of the Frankfort series of etchings, a word may be said about Webster's pencil-drawings. I know of no other artist, save perhaps Mr. Muirhead Bone, who can use the pencil-point with such exquisite fineness and precision in the production of an architectural drawing that, with all its accuracy, still retains the freshness of a sketch. Finding in a portfolio a drawing of *Cortlandt Street* and several others that repeated the subjects of the Frankfort etchings, I felt curious as to the exact relationship between these drawings and the work on the copperplate. This interest was largely, perhaps, that of a fellow-etcher, keen to see "how the wheels go round," but Webster's reply to a question on this subject may interest others as well. "I determine my composition," he wrote, "in outline first. This outline I transfer to the plate. Then I go out and carefully study in pencil, on the original outline sketch, the subject I want to do, so as to 'get acquainted' with it before beginning the more exacting work upon the copperplate. I never use a drawing to work from except sometimes as an extra guide in the biting, where a

careful study can be very useful." They are beautiful things, these pencil-drawings of New York and Frankfort, but there can be only one of each. The etchings, fortunately, can be shared and enjoyed by many possessors.

Frankfort has grown to be a large and very modern town with broad thoroughfares and palatial buildings; but it has its old quarter as well, and among the houses that nestle in narrow streets round the cathedral, Webster has found the same kind of subject that fascinated him before in Bruges and Marseilles and Paris. A brilliant draughtsman, he never seems to hesitate or lose his way among the manifold intricacies of the old-world buildings that he depicts. He aims always at knitting his subjects into fine unity of composition by broad massing of light and shade. "In the last few months," he writes, "I have grown never to make an etching for etching's sake, but for the means it gives of studying closely the play of light across my subject." That is his main theme: the light that travels now with cold curiosity as it did centuries ago, glancing into open windows, throwing into relief a corbel or a crocket, casting a shadow under eave or window ledge, revealing, like a patch in some tattered garment, the cracks and seams in moldering plaster or time-worn timber. In depicting these storehouses of human joys and aspirations, hopes and despairs, he has none of Meryon's gloom and morbidity. It is true that behind many of the windows in these poor homes of his pictures some Marie Claire may be toiling in sad-eyed poverty; yet for Webster the outside shall be sunny, little white curtains shall veil the gloom, and flowers shall blossom on the win-

dow ledge, though the sad worker may have watered them with her tears. And if sunshine is still potent in these new plates, there is also a fresh and joyous note of life and movement in the streets. The introduction of figures, well placed and full of character, is a new development in Webster's art. Bustling workers, or happy groups of gossiping women, or the dark mass of a distant crowd, are introduced with consummate skill, and the picturesqueness of the old streets gains new value from the suggestion of this living stream of human traffic. The presence of modern life enhances the gray and wrinkled age of the buildings which have watched so many generations come and go.

Among the new plates are four that deal with street scenes in the Alt Stadt of Frankfort. *Der Langer Franz*, a view of the Rathaus tower that took its nickname from a tall burgomaster of the town, is the smallest of all, but a little gem, brilliant with light and rich in the mystery of shadow. Then there are the *Street of the Three Kings*, the *Bendergasse*, and *Sixteenth-century Houses*, all of them felicitous in charm of theme, in play of light and shade, and in the suggestion of life given by the animated figures. There are admirable figures again in *An Old Court*, one of the plates that the collector of future days will most desire to possess. There is less in it of obvious labor than in the street scenes; the etcher has overcome a natural fear of blank spaces; and his reticence and more summary execution have lent to this plate much of the unconscious and unpremeditated charm that is one of the finest qualities which an etching can possess.

Two etchings of old bridges over the Main at Frankfort must rank among the best work that Webster has yet produced. One is a small and spirited plate showing the tower of the cathedral and a row of houses, most delicately drawn, rising with a beautiful skyline above the solid mass of the shadowed bridge with its heavy buttresses. The other shows the old bridge that spans the Main between Frankfort and Sachsenhausen. Legend tells that in compensation for finishing the building within a certain time the architect made a vow to sacrifice to the devil the first living being that crossed the bridge. Then, when the fatal day arrived, he drove a cock across, and so cheated the devil of his due. Much the same story of outwitting the devil is told about the building of the cathedral at Aix-la-Chapelle. Whether Webster ventured upon any compact I do not know; but this plate, in its building, in its well-constructed composition, in its splendid effect of brilliant sunshine, is one of the most successful tasks he has ever accomplished. The group of figures on the near bank, happily placed like those in Vermeer's famous *View of Delft*, adds no little to the charm of the scene. I would set this plate beside *Les Blanchisseuses* and the *Quai Montebello*, which Mr. Wedmore has found "modestly perfect," as representing the very summit of Webster's art.

While he has surrendered for the time being to the charm of Frankfort, Webster has not been unfaithful to the Paris of his early love. Of Paris he might say, like Montaigne, "That city has ever had my heart; and it has fallen out to me, as of excellent things, that the more of other fine cities I have seen since, the more the beauty of this gains on my affections. I love

it tenderly, even with all its warts and blemishes." All the more for the warts and blemishes of its old buildings Webster loves it, too; and while working on his Frankfort plates he has completed another of *La Rue St. Jacques, Paris*, which, I think, is one of the best etchings he has ever made. At times, even in his Frankfort plates, one still feels that his superb draughtsmanship and his love of detail—*ce superflu, si nécessaire*—have led him to a uniformity of finish that is almost too "icily regular." I do not mean that Webster's elaboration is the cold, almost meaningless, elaboration of the line-engraver; nor do I forget that the technique of Meryon, one of the greatest masters of etchings, was, in Mr. Wedmore's happy phrasing, "one of unfaltering firmness and regularity, one of undeterred deliberation." All the same, one wishes that Meryon had done a few more things like the *Rue des Mauvais Garçons*, and wishes that Webster also, in a similar way, were now and then less sure of himself, were held sometimes by a trembling hesitancy, or driven sometimes by the passion of the moment to allow room for fortunate accident and rapid suggestion. For that reason I welcome his *Rue St. Jacques*. It is not merely fine in its pattern of light and shade, but it has a direct force and simplification that are rich with promise for the future.

Since writing the above, I have seen working-proofs of two new etchings of landscape. And here, too, there is high promise. They show, at least, that Webster is not going to remain a man of one subject; that he is opening his heart to the beauty and romance of simple nature. He has sought his first themes in that pleasant countryside where, between tall poplars, you

get peeps of Château Gaillard, nobly set upon its hill. In landscape, as in his architectural work, Webster sets his theme upon the plate with fine skill of arrangement and with exquisite draughtsmanship. These two plates, *Château Gaillard* and *La Route de Louviers*, are exhilarating in their feeling of sunshine, and they please by their absolute simplicity of statement. They are honest, and without artifice. Printed "as clean as a whistle," without any of the doubtful expedients that give a meretricious attractiveness to so much modern etching, they appeal by their rightness of pattern and precision of line. Those who see high promise as well as present fulfilment in Webster's art, will not regret that he has left the town and set out where

thro' the green land,
Vistas of change and adventure,
The gray roads go beckoning and winding.

ANDERS ZORN—PAINTER-ETCHER

BY J. NILSEN LAURVIK

BROADLY speaking there are but two kinds of artists—innovators and imitators. The first may be known by the opposition they arouse in the sacred sanctums of mediocrity and by their final but reluctant acceptance by the self-appointed custodians of the Hall of Fame whose business it is to exclude genius until Time shall have tempered all its buoyant, youthful enthusiasms, which are the very signs and tokens of those starry creatures whom the gods have blessed. Youth and all its amazing prodigality are of the very essence of genius, and it is by virtue of this exuberant overflowing of the spirit that the works of Anders Zorn make their vital appeal.

He celebrates with fervent, dramatic strokes the pageant of the visible world, and all that his alert eyes can see his nimble fingers depict with an unflinching sense of the pictorial possibilities inherent in the passing procession of contemporary life. There is in his work something of childlike spontaneity,—a healthy, natural enjoyment in the mere practice of his art that is infectious. He has the same impartial love for nature as it is as had Velasquez and Frans Hals, and the same incomparable interdependence of head and hand. His art is, in the best sense of the word, purely objective, dedicated to a specific transcription

of the outward semblance of things. These bright, vivacious plates are not evolved by any painful process of mental cogitation, nor are they the result of imaginative vagaries.

Zorn is concerned but little with abstract form or involved compositions. But he cannot be accused of evading difficulties through any fear of failure, as he has so convincingly demonstrated in his vivid, sun-flecked *Interior of a Parisian Omnibus* with its sharply characterized passengers, and in his dramatically effective *Waltz* with its assemblage of swaying figures moving rhythmically through the spacious ball-room, both marvels of discerning observation recorded with an almost clairvoyant magic of line that evoke the kaleidoscopic shimmer and brilliancy of the scenes depicted. The difficulties presented by these complex subjects are surmounted with the same nonchalant ease and certainty that distinguish his long series of individual portraits and figure pieces. That the latter predominate in the hierarchy of his etched work is a matter of choice rather than of chance and may, I think, be taken as an indication of his keen appreciation of the limitations as well as the possibilities of this medium. No one, not even Whistler, has realized more clearly than he that etching at its best is essentially an impressionistic art, to be practised only in the happiest moods, and his finest plates are marvels of swift, stenographic notations that have been scratched upon the copper direct from nature in a white heat of enthusiasm.

He calls etching his diversion, which accounts for the uniformly high quality of this side of his art.

Size of the original etching, $12\frac{1}{2} \times 8\frac{3}{8}$ inches

ZORN. THE WALTZ

Size of the original etching, $13\frac{1}{4} \times 9$ inches

Done for the sheer love of it, as other men would ride horseback or play golf, these plates are the product of a joyousness that is the mother of all great art. It is typical of him that he should have taken up the practice of this exacting though elusive art merely as an amusement, as he himself says, "with which to while away odd hours, instead of sitting at home or going about for entertainment." This is characteristic of his whole life and harks back to the genesis of his artistic career when, as a mere lad, he carved in birch-wood with his clasp-knife images of the flocks he tended in the Dalecarlian forests. Even in those early days this son of humble peasant folk revealed a power of lifelike characterization that did not pass unnoticed by these shrewd, clear-eyed peasantry whose sole criterion in matters of art was whether or not the counterfeit presentment looked like the original. And in these small carved images of cows and sheep they found a striking resemblance to their models that aroused their keenest admiration. His first patron was one of these peasant folk, a shepherd friend of his, who bought from him a carved statuette of an enraged cow for which Zorn received in payment a sou and a little white loaf. To make his sculpture more lifelike he used to imitate antique statuary by tinting his work. His palette was the palm of his hand, in which he mixed a composite of bilberry juice and certain coloring substances obtained from little forest flowers.

That was the beginning of a sturdy naturalism that no subsequent academic training has been able to nullify. Even in these first tentative attempts at per-

sonal expression he revealed the essential qualities of his genius,—his very powerful color sense and his acute observation of natural phenomena. His work betrays an almost savage delight in the truth of nature, and if to be truthful is to be cruel, then Zorn is often cruel. He employs no gentle gloss, and, whether it be friend or casual sitter, each is treated with unblushing frankness. A full-blooded art, somewhat primitive and exulting in its crude strength, it gives one a pulsating sense of reality. His work has the natural daring of one who is on familiar terms with all the secrets of his art. Conveying an appearance of brilliant, almost reckless improvisation, it is none the less the result of astute and penetrating observation that has in each case recorded the face of actuality as well as its deeper and abiding spirit.

Strongly opposed to all the conventionalities of the studio, he abhors posing as much as he dislikes monogamy, preferring to study his subjects under natural conditions when they are off their guard and then to transcribe his impressions very largely from memory, after the essential lines have been noted. Thus have come into being some of his most memorable plates, such as the *Renan*, and the portrait of himself and his wife, each executed in a few hours of concentrated effort. The very swiftness with which these impressions have been recorded has no doubt contributed much toward giving them that convincing finality which, paradoxically enough, are theirs in a preëminent degree no matter how casual may appear the means by which this effect has been achieved. That is the impression left upon one by his illuminating portrait of the pontifical-looking Renan, for example.

ZORN. MADAME SIMON

Size of the original etching, $9 \times 6\frac{1}{4}$ inches

ZORN. ERNEST RENAN

Size of the original etching, $9\frac{3}{8} \times 13\frac{1}{2}$ inches

Here is set down for all time in a few unerring lines the soul and body of the man—the casuist and the voluptuary of thought, the Balzacian bulk of him physically and the bigness of him mentally. The massive and apparently grotesque exterior of this speculative dreamer, immersed in his own meditations, conveys something of the same sense of aloofness with which Rodin has invested his statue of Balzac. They both appear to be dreaming of life and its mysteries until the immense torso seems but an Olympian pedestal supporting the domelike head. It is more than a pocket-edition biography, this portrait. Executed in one sitting in Renan's study in April of 1892, nine years after his initiation into the mysteries of etching, this plate may be said to epitomize the whole art of Zorn,—his vigorous truthfulness, his synthetic treatment of salient points of character, and his love of dramatic contrasts of sharply juxtaposed masses of black and white. Moreover, it furnishes a striking exposition of the purely technical side of his art in which he has created for himself a highly original and personal method. No one has eschewed more rigorously than he the "happy accidents" employed as a convenient cloak by masquerading incompetents, foisting their meaningless scrawls on a bewildered public, to whom etching has become synonymous with a pretty dilettantism that is within the easy reach of every aspiring fledgling of art. These parallel, slanting strokes that seem to cut and divide the form into unrelated sections are really the expression of an accurate and well-defined intention that manifests itself in the extraordinary verisimilitude of the figure and its adroitly suggested acces-

sories. It is like a fleeting glimpse in a mirror in which the impalpable spirit of reality is reflected, evoking by some mysterious incantation the most fugitive nuances of expression and gesture with the slightest inflection of his modeling.

It is the extreme refinement and subtlety in this seeming brutality that give to these plates their unique value and interest. Seldom has a man suggested his predecessors less than does Zorn in these epigrammatic etchings. They are according to no established formula. If he has looked upon Rembrandt, as what practitioner of aqua fortis has not, there is but slight evidence of it in these straightforward vibrant plates. To be sure, he has the same love of bold contrasts of light and shade as had the master of Amsterdam, without the romantic glamour of the dreamy Dutchman. This modern Swede is more direct, more incisive, his line has something of the penetrating and biting analysis of a page from Strindberg, and not infrequently, as in the case of his haunting portrait of the besotted poet Paul Verlaine, there is discernible a sort of ironic humor that throws a revealing light upon his sitter. With what discerning and subtle insight he has portrayed that gentle flavor of intellectual skepticism which is the chief characteristic of Anatole France; while the head of Rodin, laughing in his foaming beard, is highly indicative of the immense creative energy of the author of *Le Penseur*. In every instance he has successfully summarized the essential and abiding characteristics of his sitter, no less effectually accomplished in the twenty-minute impromptu of Marcelin Berthelot than in the more deliberately studied portrait of Mar-

quand, or the very succinctly realized version of August Strindberg, the Swedish author. These portraits of contemporary men and women are fascinating records of repeated excursions into the realm of *character*, which holds for Zorn the strongest appeal, as it has ever for all men of the North, whose supreme happiness is the realization of a clearly defined individualism.

While Zorn to-day occupies a position of unchallenged supremacy in the difficult and exacting field of portraiture—his portrait etchings would alone make a notable Pantheon of contemporary worthies—it is in his frank, unabashed nudes and in his delineations of Swedish peasant types that we find the most personal expression of his peculiar genius. Nowhere has his faculty of instantaneous perception, his ability to grasp at a glance and in its entirety either an isolated individual or a group of figures, been employed to greater advantage than in these brilliant, dazzling nudes and in these veracious records of his beloved Dalecarlian peasants. With a few swift, sure strokes he gives us the soft contour, the undulating curves of the fresh, firm flesh, of these strong-limbed Junos, as well as the wrinkled, time-worn visages of the aged tillers of the soil.

His interest in this type is not episodic, it is persistent. They were his first subjects as well as his first patrons, and throughout his career it is to them that he has turned for rest and refreshment from the social banalities of the mundane life in the great capitals of the world where he is in constant demand as a painter of exclusive society. At heart he remains a peasant, retaining a strong love for the scenes of his

boyhood with all their simple associations. Here he is at home, and here he has given untrammelled expression to that paganism which is the dominant trait of his character. He delights in portraying these sturdy, flaxen-haired peasants in all the unconscious abandon of their naïve natures, and the series of plates celebrating the intimate life of these people are the most authentic expressions of his art because the most closely related to the mainsprings of his personality.

His love of the unstudied, unposed naturalness of life has found its culminating expression in these nudes of women and children as seen in the open air in the free solitude of the shores of Dalecarlia. Zorn regards nature with the eagerness of the primitive, and these ruddy women are virile protests against the anemic, hyperæsthetic refinements of the school-room conventions. Stripped of all regard for the accepted ideals of feminine beauty these women of Zorn repel or appeal by the unfeigned candor of every look and gesture. These big, blonde women, whose naked bodies move with unrestrained freedom through the tonic, balsam air are imbued with a superb, healthy animalism such as has never been depicted in the whole history of art. They spring from a strong artistic impulse that has its roots in the subsoil of nature. To see these frankly realistic versions of unsophisticated, throbbing femininity is to feel that the nude has never before been adequately portrayed—all other nudes seem mere means toward some elaborately preconceived end while those of Zorn are gloriously self-sufficing, an end in themselves.

An ardent sensuousness marks all these things, but it is sane and wholesome, with no trace of doubtful sub-

Size of the original etching, $7 \times 4\frac{5}{8}$ inches

meaning. That is strikingly exemplified in *My Model and my Boat*, in which the exuberant, re-creating force of life is presented in all its tantalizing seductiveness of ample, quivering curves. The beauty of vigorous symmetry, of inherent strength, overcome the somewhat obvious coarseness of the type of woman depicted here, and one can have nothing but admiration for the underlying sincerity as well as the consummate mastery revealed in every stroke of these plates. But the purely physical allure of his nudes is by no means always as insistent as in the foregoing. The elusive and half-reticent feminine charm has not escaped him, and there are some nudes out of doors, in the lambent light of dawn and twilight, more delicate, more subtly suggestive, than anything hitherto accomplished in etching.

The nudes of Rembrandt would look singularly coarse and heavy by comparison with these silvery, exquisitely modeled Brunhildas of Zorn, who disport themselves on the sunlit beach or emerge from the enveloping shadow of some protruding cliff with a childlike unconsciousness and a pagan naïveté that disarms prudish prejudices. In its supple grace and vibrant vitality the delicately modulated back of the bending figure of *The Bather—Evening* is a pantheistic hymn to the eternal efflorescence of life. She pauses in the silvery twilight, before breaking the surface of the mirror-like lake into a thousand jewels of refracted light, and she is as much a part of the enshrouding stillness as the aged rocks on which she stands. Whistler never did anything more evanescent than the landscape of this plate, which is printed in a key as light and airy as the magically executed

lines, that give the softness of the figure's contours as well as the hardness of the rocks and the veiled serenity of distant lake and woodland. It is a splendid affirmation of the extremely delicate sensibilities possessed by this most vigorous and brilliant of contemporary etchers, whose art is one of the most powerful and significant manifestations of the re-awakened æsthetic impulse of the twentieth century.
