TO OUR PATRONS

We are glad to have the opportunity of thanking our customers for their past business and for the many letters we have had from you praising our plants and our promptness in handling your orders. To those of you that have never bought plants of us, we respectfully solicit your orders, knowing that the quality of our plants will make you a regular customer of ours. The very dry weather of the past summer has caused a great shortage in fruit plants in most sections of the country, and quite a number of the Nurserymen from other states have placed large orders for plants with us for their spring trade. While we have a good stock of plants, in all varieties of Strawberry and Black Raspberry plants, the outlook is that we will be sold out early, and I would advise all that receive our catalog to place your orders as soon after you receive the catalog as possible, to make sure of getting what you want.

A WORD TO THE NEW BEGINNER. In preparing our Catalog we only aim to list varieties that we know are the best, and you will make no mistake in ordering any variety that we have listed, they are all good varieties and they have the vitality too. Let us prove that statement. If you are in doubt as to varieties you wish to order, we want you to feel perfectly at liberty to call on us.

We will appreciate having your order at an early date and wishing you a prosperous year, I remain,

Yours very truly,

J. N. ROKELY.

GENERAL INSTRUCTIONS READ CAREFULLY

When writing, please be sure to sign your name plainly, also give your Postoffice, County and State.

SUBSTITUTION—We will not substitute one variety for another without your permission, unless order is received too late in season to permit correspondence. In this case, some variety having same season and variety will be substituted.

TERMS—Cash with order or part cash and the balance any time before shipment is made. We give references as to our reliability which all are at liberty to investigate. For information as to our standing and reliability, please refer to the Postmaster, or Express Agent of Bridgman, or the Farmers and Merchants Bank, Benton Harbor, Michigan; Bridgman State Bank, Bridgman, Michigan. (In writing to any of the above please enclose stamp for reply.)

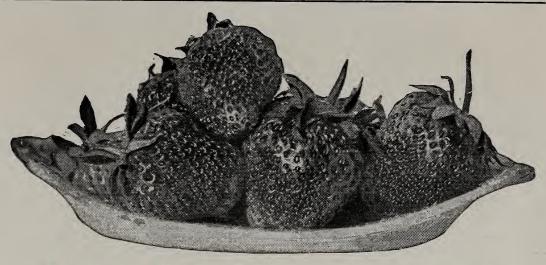

HOW TO SEND MONEY—Order early. The earlier the better. If anything more is needed it can be added later. If not prepared to send the full amount, send part and the order will be booked; the balance may be sent any time before shipment is made.

METHODS OF SHIPPING—By express; this is the safest, and, all things considered, the best way to ship plants, especially strawberry plants. Large orders of cane plants may be shipped by freight, and as a rule they arrive in good condition. Certificate of nursery inspection goes on every package of plants we send out. We have the Adams Express Co.

SEASON OF SHIPPING—We commence to ship the last of March or first of April, according to season.

WE DO NOT ISSUE A FALL CATALOGUE, but we will supply you with what plants you may want at any time after plants are matured in the fall.

Rokley Plants are dependable and true to name. All orders have careful attention.

STRAWBERRY PLANTS

There is no fruit growth that should be so generally planted in the home garden.

Five hundred plants will give you all the fruit that you want for your table use and for canning for winter. Strawberries as a fruit are in a class by themselves. You will make no mistake in ordering any of the varieties listed herewith for either the home garden or for commercial use.

AROMA (S)—Late. This is one of our best and most popular varieties. Berry is very large and one of the best shippers, always selling at top prices owing to its large size and fine appearance. Plant is healthy and puts out plenty of runners. The demand for Aroma plants is very heavy.

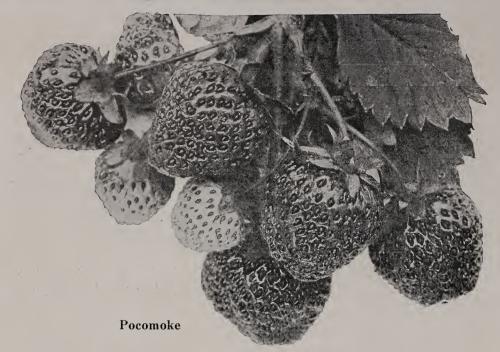

AUGUST LUTHER (S)—Extra early. Where a very early strawberry is wanted we know of no other variety that will compare with it. Ripens early and continues to bear till practically every berry reaches a good size. Fruit is very uniform in shape and size; plants healthy and good plant makers. It succeeds best on rather light soil.

BEDERWOOD (S)—Ripens early, only a few days later than August Luther, and continues to bear heavy pickings of berries till the late varieties are practically gone. The Bederwood is about as firm as Bubach. Plants are healthy, deep rooted and a great drouth resister.

BUBACH (P)—This is one of the oldstandard varieties. The plant is very large and showy, the berries are among the largest. Yields large crops of fancy berries. We recommend this variety for home use or near-by market.

CHARLES I. (S)—The earliest strawberry variety and is very attractive. It is a strong grown; ripens nearly a week before any other fertilizer and a strong grower. The berries

THE ROOT GROWTH IS VERY HEAVY ON OUR GROUNDS

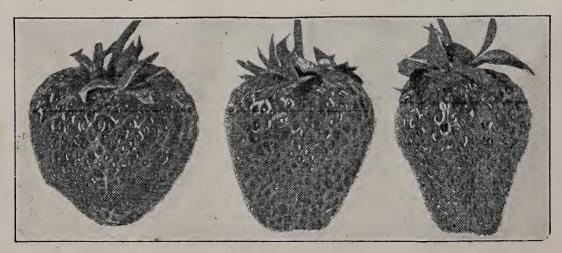

are large regular in form and of good color and quality. We want you to include some Charles I in your order this spring sure.

GANDY (S)—Late. This has been one of the leading varieties with fruit growers all over the country for many years. Berry is large and firm, a good market variety, ripens a few days later than Aroma. It resembles the Aroma very much.

DR. BURRILL—Is an improved Senator Dunlap, and was originated by Dr. Reasoner of Illinois, who originated the famous Senator Dunlap. It is a cross of Senator Dunlap and Crescent, both being wonderful producers. This new

berry is the biggest cropper of all strawberries. Berries are very large and uniform in size and shape. Most of you know what Senator Dunlap is and what loads of nice berries they are producing everywhere.

WM. BELT (S)—The plant is very large, a most luxuriant grower, and remarkably productive. Berry is very large, conical and uniform in shape. Color of Wm. Belt is extra fine, being a brilliant glossy red, and ripening all over at once. This valuable late variety should be planted on well drained soil, as it semetimes rusts on wet soil. Wm. Belt is a profitable late variety.

Wm. Belt

Gandy

Senator Dunlap

Warfield Strawberries

HAVERLAND (P)—Medium early, very productive, fruit large and fine, one of the most popular and well tested varieties; one of our heavy croppers; an all round profitable kind. Demand for this variety is very heavy.

SENATOR DUNLAP (S)—This berry is one of the Warfield type, has perfect blossom, is hardy, productive, a

splendid keeper and is able to hold its own under most any rough and tumble methods of cultivation to which it is likely to be subjected. Senator Dunlap is a very hardy berry, having good-sized and even fruit of a very beautiful dark red color. It is a berry to grow for home use or market. The Senator Dunlap is now one of the greatest all round varieties under cultivation. We sell as many

Progressive Everbearing

of these plants every year as we do of

all other varieties put together.

WARFIELD (P)—This is one of the great standard varieties that has been the leader all over the country before the Senator Dunlap was introduced. It resembles the Dunlap, but has an imperfect blossom. You will make no mistake by planting Warfield and using Senator Dunlap along with them.

GIBSON (S)—This is a new variety that is coming to the front very fast. Gibson commences to ripen with Senator Dunlap, but owing to its great productiveness it continues till quite late. It is a strong grower, with long roots that withstand dry weather; has dark green foliage and lots of it. Berry is extra large and the vines are loaded with fruit. We advise all to try a few Gibson this spring; you will be delighted with them.
BRANDYWINE (S)—Late. Large

size, good quality, good shape, firm and productive. Dark red, fine flavor and good market variety. We can recommend them as a good all around berry.

POCOMOKE (S)—One of the best varieties in existence, not only for its enormous productiveness, but on account of its beauty, adaptability to all soils, its foliage, enduring the dry hot weather, its firmness and high flavor. The plant is a strong, robust grower, with deep roots and lots of them. Perfect blossoms and is an enormous yielder of large, red berries. It ripens evenly and is one of the best shippers yet introduced. You will make no mistake in planting Pocomoke.

SAMPLE (P)—Season medium late. The Sample is a great favorite with us. Very productive. We have fruited it for many years, and we like it better each year. It is our choice for table nad canning, yet it is hard to choose between Sample and Dunlap. Both of them are splendid berries for home use and for The Sample is a very heavy plant maker and the plants are large and thrifty.

A Wonderful New Strawberry The Billy Sunday

The plants are very hearty—a great crown maker-tall, dark green foliage, long, heavy fruit stalks, making the berries easily gathered. The berries are ries easily gathered. very large, glossy red, slightly wedge shape, uniform in shape and size, a delicious, sweet flavor and it ought to make a good shipper. They fruit a long season, and throw out late bloom that develops large berries, making a frost resister. They begin to ripen with Haverland and end with Sample. A perfect flowering variety and a good plant maker. We have only a very few of the Billy Sunday plants this year, and can only offer twenty-five plants to

each customer for \$1.00. You should not fail to place your order early for this variety as undoubtedly we will be sold out before planting time.

The Billy Sunday will not Disappoint You

East Lansing, Mich.

July 22, 1914.

Dear Sir:-

The Billy Sunday Strawberry plants were exceedingly fine with us this year, although before fruiting time it was unusually dry. The quality is very high. The plants are very productive, and we think very highly of them.

> Very truly yours, H. J. ESTACE.

USE THE ORDER BLANK IN THE BACK OF CATALOGUE AND BE SURE TO WRITE YOUR NAME AND ADDRESS PLAINLY

Everbearing Strawberries

Superb Everbearing

We have fruited the Everbearing Strawberry on our ground for the past seven seasons and certainly would not be without this new variety in our home garden. They are simply loaded with fruit from June until November.

The Everbearing Strawberry is no longer an experiment but it is a decided success. They will produce a big crop of fruit the same season they are planted and will start to produce in June of the next season and bear abundantly all summer and fall.

We expect a big sale of our Everbearing plants this year. To be sure that you will be able to buy from us we would suggest that you place your order at once.

PROGRESSIVE—It is no uncommon thing to find a cluster of berries on young plants of Progressives even before they are rooted; in fact, it produces so heavily that the blossoms must be carefully kept

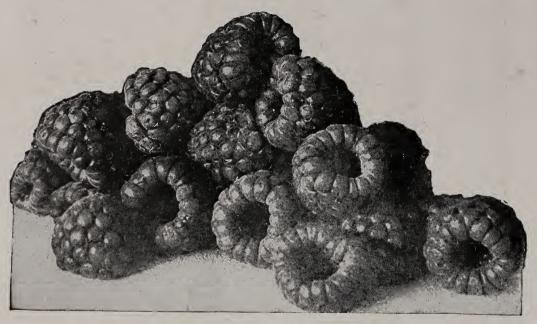

off until mid-summer, or else the plants will completely exhaust themselves before they get a chance to bed up. The quality of the fruit of this variety ranks with the best. It is medium in size, high-

ly colored, being red to the core. The berry parts readily from the cap and if not left on too long after it is ripe, it will carry well. We have a very fine stock of these this year.

SUPERB—The Superb is well named and is the best producer. After planting in early Spring with blossoms kept off until midseason, or until about four weeks before you want ripe fruit you can get a crop the same season you plant; the following spring you will get a regular crop of fruit and then more fruit the following fall. The fruit of the Superb is medium to large and very attractive; seeds are prominent. In addition to being fall bearing variety, Superb is an exceptionally desirable kind for the regular spring crop and immensely productive.

RASPBERRIES

Raspberries will grow and do well on any ground that will produce good field crops. Soil must be comparatively dry or well drained. We generally set raspberries about four feet apart in the row and the rows six feet apart.

Columbian Purple Raspberry

Red Varieties

CUTHBERT—Leading late variety, all over the country. A very rank grower. Very productive. Fruit large and of good quality. If you want a good, all around late red raspberry, plant the Cuthbert.

KING—This is the best money making red raspberry today. The first to ripen and yields very large crops. Berry is bright red and very attractive, very firm in quality and will not turn dark after picked as some other varieties will. All of our big fruit growers here at Bridgman are growing more of the King than of any variety of red raspberry. Plant the King for a money crop.

Purple Varieties

HAYMAKER—Of same type as Columbian, fruit a little more acid and later, prolonging the season. Enormous producer. Delicious for table use and splendid for canning and shipping. The bush is hardy and free from disease.

COLUMBIAN (Purple Cap)—The Columbian is a variety of the Shaffer type; of remarkable vigor and productiveness. It is a very hardy and a rank, thrifty grower; propagates from the tips, same as black caps. Fruit very large and grows abundantly; very rich flavor, tarty, splendid berry for jelly, pies and for canning.

The Great St Regis Everbearing Succeeds upon all soils, whether light,

Black Raspberry Varieties

CUMBERLAND—The largest black raspberry in existence. This raspberry is placed on the market with the full assurance that it is the most profitable market variety yet known because of its immense size, firmness and great productiveness. Cumberland is very hardy, having withstood a temperature of sixteen degrees below zero without injury. Extra productive. Fruit is jet black and

of fine quality. Ripens before Gregg.

GREGG—Fruit very fine and covered with bloom. Gregg has been the leading market variety all over the country. A good all around late black cap. In quality they are hard to beat. They are large and productive.

KANSAS—This variety is a general favorite with growers all over the coun-

Cumberland is a Black Cap that Never Disappoints

try. Ripens just after Soughegan. Firm, handsome and of the best quality. Bush a strong grower; stands drouth and cold. Very productive. It is about as large as Gregg. Strong, healthy canes.

PLUM FARMER—While this is not a brand new sort, having been grown in New York State for several years, it is not widely disseminated. It is a fine grower, being more free from diseases of black caps than other varieties. It ripens very early and most of the fruit is produced in one week. The fruit is very large, thick meated and very firm, making a good berry to evaporate or ship to distant markets.

BLACKBERRIES

There is a great and increasing demand for blackberries. The more intensive culture of farm lands has reduced the supply of wild ones. They are easily cultivated in long, narrow rows, which should be well cultivated and fertilized to get the best results.

ELDORADO—This is undoubtedly one of our finest blackberries. Its large size and delicious quality put it far in advance of other standard varieties. It is the hardiest blackberry in cultivation, have never been known to winter-kill and it will stand the Northern climate uninjured. It is very productive, and has not failed to ripen a crop since its introduction, so we have confidence in recommending it as far superior to anything we know on the market. We are confirmed in this by endorsements of nearly all the agricultural experiment stations and the U. S. Department, Washington, D. C., which has tested the variety and reported as follows: "Sweet,

rich and extra good. It is certainly far superior to the Snyder, and we have never tested anything to equal it." It has been cultivated 20 years, and, under careful tests at different experiment stations for years, has never winter-killed or failed to produce a full crop of the finest fruit. The canes are very vigorous and hardy, enduring the winters of the far Northwest without injury, and their yield is enormous. The berries are large, jet black, borne in large clusters and ripen well together; they are very sweet, melting and pleasing to the taste; have no hard core and keep for four or five days after picking with quality unimpaired.

PLANT GRAPES

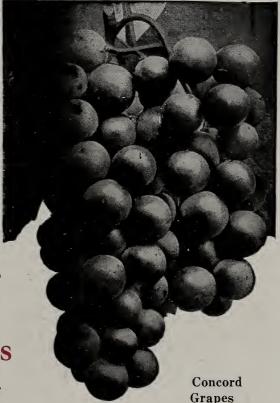

The grape is the most healthful of all fruits, and the most highly esteemed for its many uses. It can be grown by everyone who has a garden, a yard or a wall. It can be confined to a stake, bound to a trellis, trained over an arbor or extended until it covers a large tree or building, and still it yields graceful bunche sof luscious fruit. Enormous profits have been realized from this fruit. Vines produce from 40 to 50 pounds of fruit the fourth year from planting. Good grapes are grown on various soils; clayey, loamy, gravelly, black, sandy, etc. Hillsides are good for grapes.

CONCORD — Large, purplish black grape, very hardy and productive, ripen ing about the middle of September. Thi is one of the most popular market grapes Midseason.

MOORE'S EARLY—Very large, round a black with a blue bloom; quality very fine and is classed as better and sweeter than Concord; they stand handling and shipping, and have an established reputation on the market. Vines extremely hardy and productive. Early.

NIAGARA—Large, slightly oval; pale yellow with a white bloom; the quality is equal to Concord and is the standard white grape of the country. Bunches are large and compact. Vine vigorous, hardy and very productive.

WORDEN—Large, round; black; flesh has a fine flavor unlike any other grape; delicious and melting; a dessert and market sort. It is considered far superior to Concord in every way. The vine is hardy and very productive. Early midseason. Plant Worden.

Currants

LONDON MAR-KET — Strong grower large

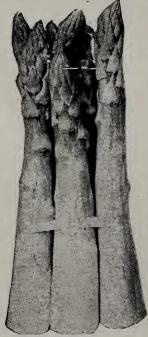

fruit and very productive; holds its foliage and is not liable to attack of worms and borers. Plant is extremely vigorous.

ASPARAGUS

Asparagus is a good crop to have in the home garden, the tender stalks are very delicious, nutritious and appetizing and are relished by nearly everyone, coming so very early in spring, when something of this kind is needed to tone up the system after a dearth of such luxuries. Asparagus should be planted both for home consumption as well as for market. 100 hills will give a fine supply all spring and summer for any small family; larger families should have more.

Asparagus is a great moneyed crop; it is grown very extensively in Southern Illinois, where it is planted by the hundreds of acres, and thousands of dollars are realized from the sale of the stalks every year, netting in many instances \$500 and more per acre.

An asparagus bed once started will last for forty to fifty years and give profitable cuttings. Asparagus is easy to culture. Plant on good soil, just so it is well drained.

Asparagus

RHUBARB OR PIE PIANT

Coming in so early, Rhubarb finds a ready market, being relished by everyone. The city garden should have a dozen or two and every farm can add to its income from Rhubarb. It is easily produced in a commercial way, yields immensely, can be shipped almost any distance, and is easily gathered and packed.

The secret of success is well drained soil. Prepare it well, set 2½ by 4 feet covering the crown with two inches of soil. Do not let water stand on the ground, especially when manure is freshly applied. While a heavy feeder, it should have its fertilizer distributed over

the year, not gorged with heavy applications, which cause a fermentation disastrous to the plant. Top dress in September and February with good manure. As soon as growth starts in the spring rake off the straw portions and work the other in. If the growth begins to look quite yellow in hot weather remove any decaying stalks and cultivate shallow in and between the rows.

GIANT CRIMSON—Early, just before Asparagus; immerse stalks, tender, delicately flavored; productive and continues long in use; the best variety for general use Large, thrifty roots.

How to Prepare the Soil for Strawberries

One important and advantageous feature of the strawberry business not always appreciated is the fact that strawberry in any ordinary soil yields large harvests of fruit. Also to fertilizer, we prefer stable manure over anything else. If the soil is strong enough to produce a large crop of corn or potatoes, it will grow a

fine crop of strawberries without the application of any fertilizer.

The best time to apply the manure is in winter, just when the soil tiller has ample time at his command in which to do this work. It should be spread evenly over the entire surface, so that it will mulch the ground. Not only does it enrich the ground when thus applied, but it also keeps the soil from puddling, and in the spring it will plow up loose and mellow as a garden. After the plowing is done go over the field with harrow or disc until the soil and manure are thoroughly mixed together. It should be pulverized finely to the depth of the plowing.

If your soil is sandy, or loose, black soil, it should be rolled firmly, but if it be clay or stiff black soil, roll it only enough to crush the clods. If the harrow follows directly after the breaking plow, before the clods have time to dry out and become hard the clods will crumble and it will be unnecessary to roll at all. We recommend that this course be followed if you have but one team; plow a while and then har-

row thoroughly the new plowed ground.

If for any reason you cannot haul manure during the winter, then wait until spring, plow your ground as outlined above, then set the plants. After this is done you may spread the fine manure between the rows and the cultivator will mix the manure into the soil. We often have manured our plants in this way, and the results are excellent. In fact, it is an ideal way.

In some localities stable manure cannot be had, and in such cases commercial fertilizers may be used. A fertilizer best adapted to the needs of the strawberry should contain the three principal plant-food ingredients in about the following proportions: Nitrogen, 3 per cent; Potassium, 9 per cent; Phosphorus, 7 per cent.

A commercial fertilizer should be applied and thoroughly worked into the sail

before the plants are set.
