## WORLD COFFEE PRODUCTION

### ESTIMATE VIRTUALLY UNCHANGED

#### Summary

With only minor adjustments up or down for a number of countries, the Foreign Agricultural Service's fourth estimate (March) of the world coffee crop for the 1969-70 crop year remains virtually unchanged from the third estimate made in December. The total world harvest is estimated at about 64 million bags, <sup>1/</sup> of which approximately 45.8 million bags are expected to be available for export <sup>2/</sup> after allowing for estimated consumption in the producing countries.

Since estimated world import demand for coffee during the current coffee year substantially exceeds estimated exportable production, there will undoubtedly be a significant drawdown of accumulated stocks, particularly those held in Brazil. This will be the fourth consecutive year in which such a drawdown has been made necessary because of insufficient current-year production.

Among the more marked individual country changes are decreases of 100,000 bags each in the estimates for Costa Rica and India and increases of 100,000 bags each in the estimates for El Salvador and the Ivory Coast.

1/ All bags in text and tables are 60 kg. (132.276 lb.).  
2/ Exportable production is total production less estimated domestic consumption.

1/ Coffee marketing year begins about July in some countries and in others about October. Exportable production represents total harvested production minus estimated domestic consumption. 2/ Of 60 kilograms each. 3/ Includes Guadeloupe, Hawaii (USA), Jamaica, Martinique, Panama, Puerto Rico, and Trinidad and Tobago. 4/ As indicated in footnote 1, the coffee marketing year begins in some countries as early as July. Ecuador is one of these countries. Hence, the crop harvested principally during June-October 1967 in that country is shown as production for the 1967-68 marketing year. In Ecuador, however, this is referred to as the 1966-67 crop. 5/ Includes Bolivia, Guyana, Paraguay, and Surinam. 6/ Includes Cape Verde, Comoro Islands, Congo (Brazzaville), Dahomey, Gabon, Ghana, Liberia, Nigeria, Sao Tome and Principe, and Spanish Guinea. 7/ Includes Malaysia, New Caledonia, New Hebrides, Papua and New Guinea, Portuguese Timor, South Vietnam, and Yemen.

Foreign Agricultural Service. Prepared or estimated on the basis of official statistics of foreign governments, other foreign source materials, reports of Agricultural Attaches and Foreign Service Officers, results of office research and related information.

<sup>1/</sup> Coffee marketing year begins about July in some countries and in others about October. Exportable production represents total harvested production minus estimated domestic consumption. <sup>2/</sup> Of 60 kilograms each. <sup>3/</sup> Includes Guadeloupe, Hawaii (USA), Jamaica, Martinique, Panama, Puerto Rico and Trinidad and Tobago. <sup>4/</sup> As indicated in footnote 1, the coffee marketing year begins in some countries as early as July. Ecuador is one of these countries. Hence, the crop harvested principally during June-October 1967 in that country is shown as production for the 1967-68 marketing year. In Ecuador, however, this is referred to as the 1966-67 crop. <sup>5/</sup> Includes Bolivia, Guyana, Paraguay, and Surinam. <sup>6/</sup> Includes Cape Verde, Comoro Islands, Congo (Brazzaville), Dahomey, Gabon, Ghana, Liberia, Nigeria, Sao Tome and Principe, and Spanish Guinea. <sup>7/</sup> Includes Malaysia, New Caledonia, New Hebrides, Papua and New Guinea, Portuguese Timor, South Vietnam, and Yemen.

Foreign Agricultural Service. Prepared or estimated on the basis of official statistics of foreign governments, other foreign source materials, reports of Agricultural Attaches and Foreign Service Officers, results of office research and related information.

## Production

North America. As was foreseen in January, the Costa Rican crop was adversely affected by rains during the harvest period, and 1969-70 production is now estimated at about 5 percent less than that of the preceding year.

The estimate for Guatemala has also been reduced slightly. Unusually copious rains during the rainy season brought about an increase in fungus diseases, which occasioned some berry drop.

Production in Haiti will also be less than anticipated earlier. Here the culprit was not adverse weather conditions but rather a general decline in productivity due to aging trees and the absence of significant reinvestment in the coffee area.

In contrast to the foregoing, 1969-70 production estimates have been revised upwards for both El Salvador and the Dominican Republic. Salvadoran production will probably equal the record crop of 1967-68; the estimate for the Dominican Republic is the highest for that country in the past several years. Higher production is attributed, in the latter country, to good weather and the absence of hurricane damage for the past several years.

However, despite average-to-good crops in most countries, it appears that El Salvador is the only country in the North American regional group that will have any significant amount of coffee in excess of its current 1969-70 quota.

South America. The fourth estimate for the 1969-70 crop in Brazil remains the same as the third estimate--that is, 19 million bags. However, reflecting both reduced demand in consuming countries as well as farmer reluctance to sell in Brazil, registrations of coffee for export have been below normal in recent months.

Coffee production in 1969-70 in Colombia is expected to be at about the level of the preceding year. Some sources believe this estimate to be slightly low and point out that the mid crop was a good one and that flowering for the main crop was excellent.

The estimates for Venezuela and Ecuador remain unchanged. Peru is now expected to harvest a slightly smaller crop than earlier anticipated owing to lack of rain in some areas and insect damage in others.

Africa. Crop conditions in most of the African coffee-producing countries remain essentially as described in the third quarterly coffee circular published in January 1970. There have been a few minor changes in the various production estimates, including a small downward revision in the estimate for Burundi and upward adjustments for the Ivory Coast, Guinea, and Togo.

Total African production, estimated at 18.2 million bags for 1969-70, is only slightly higher than that in 1967-68 or 1968-69.

Asia. It is now believed that coffee production in India in 1969-70 will be lower than indicated by earlier forecasts. The revised figure is based on data received from both official and unofficial sources. In view of this smaller crop and increasing domestic consumption, exportable production will be less than last year.

The production estimate for Indonesia remains unchanged.

Smaller producing countries. Exportable production in the smaller producing countries is estimated to be as follows, with comparable 1968-69 estimates in parentheses, in thousands of bags: Jamaica, 6,000 (4,000); Panama, 16,000 (11,000); Trinidad and Tobago, 57,000 (51,000); Bolivia, 45,000 (45,000); Paraguay, 25,000 (40,000); Congo (Brazzaville), 14,000 (19,000); Dahomey, 13,000 (16,000); Gabon, 18,000 (18,000); Ghana, 86,000 (70,000); Liberia, 56,000 (63,000); Nigeria, 40,000 (43,000); Equatorial Guinea, 110,000 (110,000); New Caledonia, 20,000 (20,000); Papua and New Guinea, 285,000 (275,000); Portuguese Timor, 45,000 (50,000); and Yemen, 50,000 (60,000).

#### Other Developments

Quotas. Further increases in quota, amounting to 2,015,000 bags, were distributed during January by the International Coffee Organization in accordance with the provisions of Resolutions 216 and 218 approved last fall. The total quota in effect following these actions amounted to 51,010,700 bags.

Should the composite price of the four main types of coffee remain above 40.67 U.S. cents per pound, as seems likely, an additional 750,000 bags of coffee will be added to quotas in April.

Trade. United States imports of green coffee in 1969 amounted to only 20.3 million bags, 20.3 percent less than in 1968 and the lowest amount imported in any year since 1958. Imports during 1968 were exceptionally high owing to a buildup in inventories in anticipation of a longshoremen's strike in the fall of 1968.

Imports of soluble coffee, however, increased sharply in 1969 to 911,205 bags (green bean equivalent) compared with only 511,423 bags in 1968. Brazil continued as the principal supplier of soluble coffee with shipments to the United States market of 639,999 bags (green bean equivalent) in 1969.

As in past years, the United States purchased coffee from a great many countries. There were some shifts, however, in the proportions of amounts of coffee coming from different areas. Latin American producers of Mild coffee, for example, increased their share of the U. S. market to 36 percent in 1969 from 32 percent in 1968. Imports of coffee from Africa and Asia, largely Robustas, amounted to 35 percent of the total in both years. Brazil's share of the market, however, dropped to 29 percent in 1969 from 33 percent in 1968.

Prices. Coffee prices in general were stable during the first quarter of 1970. The ICO composite price, which reached 49.5 cents per pound in mid-January, edged up only slightly to 50.3 cents per pound at the end of March. There was some up-and-down price movement during the quarter, however, and price behavior differed according to type.

Colombian Milds peaked in January at just over 60 cents per pound, subsequently fell to about 56.5 cents in February, and recovered in March to reach 59 cents per pound at the end of the month.

Unwashed Arabicas, primarily Brazil's, were very steady throughout the quarter at about 53 cents per pound.

Other Milds and Robustas followed similar trends during the period under review. That is, a slight rise in early January followed by a decline in February and a rather strong recovery in March, particularly during the last half of the month.

By the end of March, Other Milds, Unwashed Arabicas, and Robustas were all at new highs for the 1969-70 coffee year with only Colombian Milds below the peak reached in January.

In late March the Brazilian Coffee Institute issued a resolution raising minimum export prices from 46.5 cents per pound to 47 cents for shipments effected in May; to 47.5 cents for coffee exported in June; and to 48 cents per pound for July shipments.

Taking into account the various factors that might be expected to have a bearing on the market, it is believed likely that prices will remain relatively stable during the next few months.

Outbreak of Hemileia vastatrix in Brazil. Reports from Brazil in early February indicated that trees infected with the rust disease Hemileia vastatrix had been discovered in the State of Bahia. Subsequent reports indicate that the disease may also have spread to the States of Espirito Santo, Minas Gerais, and Rio de Janeiro.

This is the first appearance of this disease in the Western Hemisphere, aside from a very minor outbreak in Puerto Rico in 1903 that was quickly and successfully eradicated.

Brazilian authorities, assisted by experts from Portugal, are now evaluating the situation with a view to determining possible control and eradication measures.
