

1909

January - June

Cambridge Mass

1909

Apr. 23

My birth day -
1848 - April 23 - 1909

I am sixty-one years old to-day. I feel
as young as ever and trust I always shall.
Dr. C. G. Dyer gave me a beautiful book describing
the travels of the Duke of the Abruzzi &
party up Ruwenzori in tropical Africa -
the title is 'Ruwenzori' by Filippo de Filippi;
New York. Dutten & Co., 1908 - Dr. Corliss gave
me 'New England History in Ballads' by Edward
E. Hale & his children, Boston. Little Brown & Co.
1903, Mrs. Corliss, a year's subscription to
the best Eng. Mag.; many little weeklies; ~~two~~
a bottle of olives; Dr. Robinson, photo of self;
Mrs. A. Boston, a box of correspondence cards; Judge
Chandler, a pair of rippers; Wallin Deane Rose,
congratulating by telephone "I wish you a very,
very happy birthday tomorrow".

I wrote a number of letters to-day and finished
Juncus - I have 250 sheets of herbarium Specimens.
We took tea with Dr. & Mrs. Corliss.
Miss Brown had made a birthday cake with
my name on it and a squeaking toy in
the center. We had a good deal of
fun -

Cambridge, Mass. to Shelburne, N.H.

1909

May 10

We, M. & I., left the house at 5 minutes of 8 o'clock this morning, drove to Porter's Station, thence to Boston and by G. St. R. train to Shelburne by the usual route. The day was more or less cloudy with much sun and it was quite warm. The mercury reading 71° F. at quarter of six at Philbrick Farm. The journey was interesting. Between Boston and Portland, everything was advancing, the fields were green and Caltha palustris was abundant in wet places, while fields were white with Houstonia caerulea. The trees were laden with Brown Tail buds.

A short distance north of Ipswich station in a Pheasant Wood stretch of meadow land, about 75 or 100 yds from the track I saw a superb adult ♂ Pheasant standing motionless as the train went by.

As we left Portland the field gradually grew browner and after leaving West Bethel large patches of snow lay in ravines while the surrounding hills and mountain's are well covered with the last snow of winter. The river is full of floating logs.

Eus Philbrick met us and we drove to the house where we saw Miss Fannie & Magorie and Cain brother. Frank W. Lovett of Merford, the only guest. Eus said that two days ago no growth had started. Since then some green has grown in the fields and catkins are out. The season has been cold & long, nearly two weeks late and no planting has been done, though generally it begins in late April.

All through the late afternoon and evening Hylas (Hyles & Pickering's* main and another), an occasional Toad and a large Wood Frog number of Wood Frogs have been piping. The Wood Frog note is piping like the quacking of ducks and I, at very near them & listened all the evening.

1909

May 11

A cold, blustering day, bright sun at intervals
heavy showers through much of the morning-

I have stayed in the house to-day
as the weather has been very uncertain - I
have read a good deal to-day, and on the train
yesterday in "In St. Jürgen" in German.

I woke up at 3 o'clock this morning and
heard Pickering's Hyla and the Wood Frogs Hylas
still piping and quacking. I think they Wood Frogs
must keep it up till the approach of
dawn. The Hylas piped occasionally a little
through the day but it was only single ones.
The noise last evening was extraordinary.

Birds thus far have naturally been few. I
have listed the few. Savanna Sparrows are
at times buzzing in the intervals with Crows
and Barn Swallows flying overhead. I saw
two Savanna yesterday as I strolled to the
Creek. This morning I heard Purple Finches
outside my window. Mrs Philbrick tell me
that a few days ago there were flocks
of Redwings & Rusty Blackbirds in the inter-
vale, but they have disappeared.

To-day I sent down to C. H. Knowlton a
notice of the Strophium Habenaria dilatata
to insert in our next Local Flora report.

L. H. Bailey writes me to-day for living
specimens of any Carex - I may get some
later - nothing is up as yet - rare
Pickering's Hyla and the Wood Frogs were
singing to-night -

1909

Shelburne, N.H.

May 12

Clear mild, but very windy all day.
Unfortunately I had a little cold yesterday
and I have kept in doors today. It was
too blustering to do any bird observing, and
vegetation has not yet made any headway
to speak of. I have talked a good deal
with Professor Peabody about his work on
his past life and I have read quite a
bit in my German book. This I enjoy.
Mr. Stevens, this afternoon, gave me a long
account of the running of a newspaper.
He is night editor on the Boston Journal.

Mr. Bas bought acres back of the road
behind the house and he is going to take
out the wood. The trees for the various uses
up here are as follows:-

Pulp wood = poplar, spruce, fir, balsam
Bobbin wood In the bobbins that go inside the
shuttles = paper birch, yellow birch, beech,
rock maple, ash, ~~white~~ white (red) maple.

Spools = paper birch

Cord wood = any hard wood including the
hard woods above, white maple (red),
hornbeam etc.

Soft wood = the coniferous trees + poplar.

I had a letter from L. G. Bailey this evening &
a card yesterday. He thanked me for "Shakespeare Birds' Hymns"
Picken's Hyla & Wood Frogs were singing this morning,
the latter sparingly.

Shelburne, N.H.

1909

May 13

Cloudy and sunny, pleasantly warm in the sun.

Cold better. Besides reading and finishing my 'In St. Jasper' to-day, I took a walk this morning and afternoon. In the morning I went into the pasture and up the slope a bit, back of the house a few birds were singing, a myrtle Warbler warbled incessantly, revealing himself at times, a Black-throated Blue Warbler uttered his nasal notes, and a Black and White Creeper was running about on the branches near me, while a Broad-winged Hawk sounded beyond the Emerson Cottage.

This afternoon Mr. & I strolled over the intervals toward the river. The creek near the river is full of water so that we could not get back bank. The Androscoggin is very high and is full of logs floating swiftly down. There is to be but one drive this year.

In a depression a few feet below the level Erythronium of the meadow in moist ground, some 150 or americanum 200 feet from the river and about 50 feet from a branch creek we discovered an oval patch of most beautiful large flowered Erythronium americanum, Dog-tooth Violet. The spot was 16 feet long and 6 feet wide at the broadest part and I made a fairly accurate count of 238 plants. The place was absolutely exposed to the sun, no cover being anywhere near. It was a beautiful spot of yellow in the almost brown meadow. I took a few specimens.

Pickerings Hyla & the Wood Frog are singing again to-night. The Hyas began at 6 P.M.

1909

Shelburne, N.H.

May 14 Warm sun most of the morning, a brisk thunder-storm with vivid lightning this afternoon, with considerable rain.

This morning Prof. Penhallus, Gus & I went up ^{4th Run} the slope towards Wiggins Rock and visited ~~again~~ the Pitch Pine ~~that~~ discovered in 1881. Shelburne I published this and two others about here in *Keatora*, xi. 21 (1909). Then Gus took us to a 4th specimen ~~that~~ he discovered in Feb., 1909? It is about 100 feet from the one we had left, some 20 feet higher up and is a good specimen. It measures 4 ft. 8 in. in circumference, 4 ft. up and is about 60 ft. high. It is surrounded by the trees of the forest but is not crowded by them. It is covered with cones, but we saw no seedlings or young trees of this species near it. I took a specimen of leaves that was growing on the main trunk near the base, and a couple of cones from the ground beneath.

Pikerius Hyla & Moos Proprietary tonight
& Tom.

A little farther on not far from the foot ^{Hedgehog} ~~destroy~~ of Wiggins Rock, Gus showed us where the ^{Hedgehog} ~~destroy~~ Hemlocks last winter had worn a path in the ground from their stems at the foot of the Rock for some 100 feet to a number of fine Hemlocks which they had in some cases completely stripped. The fine trees were killed, one of them being 7 ft. round, 4 ft. up, and another almost as large.

We walked up to Wiggins Rock. View fine. The rocks are covered with Umbellaria silicis (five Penhallus). Heard Hermit Thrush, Partridge drumming. At some time in the day, reading, etc. I weigh 162 1/4 before dinner.

1909

May 15

Sturbridge, N.H.

Beautiful mild mostly sunny day -

I read for a while this morning "Some African Highways" by Caroline Kirkland, while I started yesterday Prof. Bailey (L. H.) gave it to me last Christmas. It is extremely interesting and well told.

About 10.30 I took a walk down the road. I met Prof. Peabody returning with a lot of Mayflowers. He went over the piece of woods south of the road, and just beyond the Cemetery intervals. This Peabody is thinking of buying from Mrs. T. Bee. I walked on round Wheeler's bog as far as the foot of Crows Nest. Chipping and a Mary land Yellowthroat were singing by the bog and farther on I heard a Solitary Vireo. Mayflowers were abundant by the road leading in toward Crows Nest and I collected some and have put them in press. Returning I heard and saw House Wrens a House Crier behind Wheeler's barn. I listened to him for several minutes before I could see him bobbing in and out among some boards. I have seen 30 species of birds here. They will be recorded later together. I have not found them abundant yet, rather one here and one there, though today I did see a Black-throated Blue, a Myrtle and a Nashville Warbler feeding in the same small tree together and very tame.

This afternoon Mr. & I took a walk down to the river. The logs are still running freely and the river is quite high. There are a good many logs, aground on a shallow flat in the river opposite Mrs. T.'s land.

Sulburne, N.H.

1909

May 15

The warmth of the past two days has started up the vegetation and there is that beautiful flush of green on the birches and poplars and willows only seen at this season. The intervals is also putting on a delicate green coat, as the frost blades push up and begin to bede the dead grass of last year. The snow on the mountain slopes is fast disappearing. I found today in the meadow close to the west end of the Knibble a remnant of snow where two days ago there was a large patch. This evening Prof. Peabell, Gus & I had a good long talk on many interesting topics including trapping experiences etc.

On the 13th I saw a very large Woodchuck Woodchuck at the northern end of the Knibble. He is often seen there and he has a hole nearby. I find a big hole today near there first inside the outermost bushes of the Knibble.

Yesterday in the woods back of the house and not far from the Pitch Pine we visited I saw a large fresh hole of the Pileated Woodpecker in a White Pine some 12 feet up. ^{Pileated Woodpecker's hole in Pine} The ground below was littered with chips. Gus said that the hole was made last winter. The chips and hole had a very fresh look.

Lawrence and Celia Philbrook both came home to day, the former at 11 from Bethel Arm at 5:30 P.M. from Boston — Pickering's Hts., West Andover are staying tonight

Shelburne, N.H.

1909

May 16

Two little skunks by the roadside sat,
As an automobile whizzed by.
Said one little skunk, "Ugh! I couldn't make
A smell like that,
No matter how hard I'd try."
Said the other little skunk as he turned
his head
Curious sniff to take,
"It makes me think of the kind of smell
That Mother used to make."

(Young skunks cannot emit an odor)

Said the shoe to the stocking,
"I'll make a hole in you!"
Said the stocking to the shoe,
"I'll be damned if you do!"

Said the tree to the river,
"I'll fall on you!"
Said the river to the tree,
"I'll be damned if you do!"

Ex Prof. D. D. Penhall, May 16, 1909.
Shelburne, N.H.

Shelburne, N.H.

1909

May 16

- Sunday -

A steady pouring rain all day -
We kept in the house to-day. I spent
much of the morning talking with Prof.
Reinhall. I finished 'Some African High-
ways' and call it a very interesting book.
I have written a number of letters, to
Dr. & Mrs. Collier, Mr. Charles A. Stone in behalf
of Gilbert Hand Hopper who wants to get in
to Stone & Webster, to Gilbert Hopper, to
E. L. Raab, to May D. Dexter.

So the day has passed quiet.

Raab writes me that E. F. Williams has sold
his house, it being too large. This is
astonishing news as I know the vast
amount of time and care put into the
refitting of the place. I have written for
particulars if possible.

E. F. Williams
sells his house

The continuous rain has caused a rise
in the river and the water has backed up
into the creeks and there is quite a large
pond across the road, which flows the
level of the river -

My cold is very much better and I
hope, if it is pleasant tomorrow, to drive
over to the New Millard.

I have listed thirty species of birds here
so far - I shall see many more -

We spent the evening in pleasant conversa-
tion. Prof. Reinhall has many stories.

Pickering's Hyla & the Wood Frogs are hard
at work this evening as usual -

1904
May 17

Shelburne, N.H.

Steady rain all day -

I have been in the house all day.

There is always much to busy about under any conditions. The day has passed in letter-writing, reading *Cathedral*, Nat. Geographic Mag. Herald and in conversation.

I was gratified in receiving a letter from Richard Taber who speaks so splendidly of Helen Dexter whom he is engaged. Z. L. Rawls letter to me of the 14th inst. begins most pleasantly:

"Your letter came yesterday and told me the old story - how you get something out of everything. I always think of the words of the poet:

"How well our busy Walter D.
Employs all kinds of hours,
Extracting facts from everything
With super human powers."

It is so true."

I examined to-day with Prof. Penhallum the flowers of *Epigaea repens*. We opened ^{Epigaea} _{stamens} about 40 flowers. In most cases the stamens were entirely absent. In all cases the pistil was present. In all cases flowers in the same cluster were alike. In one cluster there were stamens, but the number always was less than normal, though different in different flowers. In a cluster examined 2 or 3 days ago, there were filaments without anthers - a bunch full of may flowers picked lately I examined this evening. All had good stamens.

Peckinis Hyla & Wood Frog are singing again, the latter less than usual.

Shelburne N.H.

1909

May 18

(1)

Another wet, rainy day, with glimpses of sunshine.

This morning before breakfast I weighed 16 4/4 lbs.

As the sun came out in the middle of the morning Prof. Remondell & I walked over to Charles Hibbard's Saw mills. I heard Redwings near the mouth of Clement's Brook and saw a couple of Grackles and also in a pool ~~and~~ Solitary Sandpipers.

Redwings
Grackles
Solitary
Sandpipers

We saw Charles Hibbard at the mill and watched the men making bobbins. A company has been formed and the bobbins are to be finished at the mill, instead of sold unfinished. It rained on the way home. *Equisetum arvense* is very abundant over the fields and by the road and on the carthorse and is very large -

I saw two Kingbirds near the mill this morning in the meadow near Clement's Brook, standing in a pool of water, caused by the heavy rains and high brook, up to their bodies. There was good feeding there and no tree or fence or post to stand on. Occasionally they would dive and catch an insect and alight again in the water. I saw another Kingbird so precisely the same thing this afternoon in a pool of water that had collected in the field back of the railway station.

Kingbirds
standing in water

I saw 5 or 6 doves to the village this afternoon in the drizzle. Remondell got a lot of May flowers today and so did Celia Philbrick. I looked over Celia's and they seemed all to have stamens from a hasty survey.

Pebbles' Hyla, Wood frog, Pond Saur, this evening.

Sheelburne, N.H.

1909

May 18

(2) There is a row of very large Willows
(Salix alba, L., var. vitellina (L.) Koch)
on both sides of the road near the barn
at Philbrook Farm. I took ♂ flowers
from one of the trees to-day. The trees
are all males and are in full flower
emitting a sweet fragrance

Shelburne, N.H.

1909

May 19

Cloudy with bright sun in after. Cloudy with some rain in P.M.

It cleared up pretty well this morning and the sun came out, so Prof. Penhallow & I took a walk. Previously Margorie drove me across Shelburne bridge and I collected by the road near the bridge some very large specimens of Equisetum arvense. It is now very abundant over the inter-arvense valley and along the roadsides through it.

Prof. Penhallow & I walked to Hurlin's and through the woods opposite along the road to the sugar house, then on the yellow trail and along the wood road to Lightfoot's and home - Hastula corylea is appearing - The only other flowering plant I saw was a small colony of Viola renifolia in Viola the open woods in very soft mould. The under renifolia surface of the leaves and the petioles are pubescent, and (See Griseb.) the lateral petals are beardless. In V. micrantha (Pl. 6, 1910) the lateral petals are bearded. I collected specimens and put them in press with a dissected flower.

Birds were rather scarce. I heard my first Alder Fly-catcher in the Alders by the road east of Lightfoot's. I saw a beautiful White-crowned Sparrow on the wood white-crowned hill and bank behind the barn. A female Sparrow Oriole was seen in the open ground near the pines opposite Hurlin's. This morning a berry called from the Knobble, my first record, and I heard two Bobolinks singing loudly in the intervale, also my first record. A large patch of fern is still in the intervale just over on bridge fence in

The Mrs. Ellen & Andrew McMillan called in a the intervale carriage this P.M. We had a very pleasant talk. Pickering's Darter is singing as usual, the wood frog very sparingly -

Sheeburne, N. H.

1909

May 20

(1)

Cloudy, in early AM., clear, bright & sunny by 9.30 A.M.
Cloudy in P.M.

This morning after breakfast I from the slope six
back of the house behind the barn I heard White-crowns
the clear rich song of the White-crown Sparrow
below me. It was answered by another, and
hurrying down I observed one and near the
wood pile back of the barn six White-crowns.
It was a beautiful sight for the bird is a
choice one, of dainty plumage and aristocratic
bearing. I watched them for some time.

At 10.30 Prof. Penhallow & I drove up to the
McMillan's over Head Mine Bridge. The water was
very high over the dam, and we saw a blast of
dynamite discharged to break up a congestion
at the head of the flume-way. I got out
at the backland, and Penhallow drove on to
Gorham. Mr. McMillan went to Boston this morning
to come up to-morn with his car & Paul Kelsey.
Mrs. McMillan & I went up into the woods. I saw a
Blackburnian & a Magnolia Warbler. Trillium erectum
& T. undulatum are abundant.

When Prof. Penhallow and I arrived at Endicott Saw
Farm I heard White-crowns singing. Mrs. McMillan, Whitcom
& I went to the porch of the house and saw sing
three birds in a tree close by. One was singing
and with our glasses we watched him as he
opened his bill and uttered his song. He main
tained his natural perching attitude, and merely
opened his mandibles a short way, not more
I should say than four mm.

Shelburne, N.H.

1909

May 20

Mrs. McMillan has invited us to spend two weeks in July and we talked it over. We shall probably go the first half of the month. We returned to the house at noon, met Prof. Peck below and he & I drove back. We saw a shrub of *Hibiscus laetevirens* in flower, the Hobble bush first seen this month. The roadside and in flower slopes just west of Moses Rock were covered densely with *Claytonia caroliniana* in fine flower. There were thousands upon thousands of plants. After dinner I took my boy and tramped and Marjorie drove me back to the spot and I got specimens. It requires careful work to get up a bulb or tube intact, the stem is so slender and brittle.

Before tea I strolled up to Sunset Rock and collected a little *Saxifrage virginiana* that is abundant ^{*Saxifraga*} over the top. On the path leading up to the *virginiana* Jordan Cottage, a rather old driveway I saw and took a blue-flowered violet.

Prof. E. Emerson wrote me to-day asking me to report to him on his flower gardens. So I walked round there and found everything in good shape. The beds have been uncrowded and Prof. Emerson's apparently are advancing well. *Crabia alpina* garden ground flora *superba* (L.) is in flower.

Silene caerulea shows a mass of fresh green. *Oxybaphus* *Leptophyllum* is about a foot high. All seems thriving.

Pickerings *Ayla* and the *Toad* are singing vigorously this evening. I cannot hear the *Wood Frog*.

1909

Shelburne, N.H.

May 21

A pleasant morning mild, sun & cloud. After noon cloudy and pretty chilly -

Prof. Penhallow left this morning for Montreal and Ottawa. He will return about the 26th.

I took my Botany box, travel and binoculars and took a solitary walk through the pasture ^{8 & 9 pl.} behind the Scudder Cottage - The staminate catkins of the Sweet Fern, *Mycia asplenifolia*, ^{Sweet Fern} and the globular, bright red bunches of pistillate flowers are very attractive. The pasture is covered with the shrubs to the detriment of good pasture.

I entered the wood beyond and kept on for ^{In} *Dennaria maculata* some little distance up the slope. Soon I ^{singing a} heard a strange Warbler note. I remembered ^{strange by} that it was at this same spot two years or more ago that I heard a strange note and after much searching I found the bird was the Magnolia Warbler at ~~that~~ time. I didn't recall the note, but I suspected. After patient waiting for some time I spied the little fellow and sure enough it was the Magnolia Warbler. The song was totally unlike the ordinary one which has been described as thus: Pretty, pretty Rá-chéé, strong emphasis being laid upon the syllable Rá. The song of this morning is nearly as I can express it was thus: Ché-éé, Ché-éé with a faint lisp after the last éé, a sound not heard a short distance off.

St. Albans, N.H.

1907

May 21

(2) There was strong emphasis on the she each time. The bird sang for about ten minutes, moving about constantly from tree to tree near me. Some ten minutes after he had stopped singing, I heard in the distance the normal song, and not long after that song stopped, my bird started up again near me. I leave no reason to believe that the two songs belonged to the same bird. It is interesting to note that at least two years ago I heard a Magnolia Warbler in the same locality and I am quite in exact the same spot singing an unusual song, perhaps just like the song of today.

I had the pleasant experience of finding Viola rotundifolia in the rich woods rotundifolia year where I had been studying the in flower Magnolia Warbler. How often have I seen the plant in fruit, but this was the first time I had seen it in flower. <sup>Garter Snake
See note for
Mar 27)</sup> There was a large patch of it and the bright yellow flowers were very beautiful. Viola Viola renifolia is abundant everywhere — renifolia Trillium undulatum was also abundant.

While collecting some of these plants I heard a very loud series of calls, soon followed by a very vigorous hammering into a tree. From my Whitefield, N.H., exp. Pileated perched I feel very sure that the Woodpecker? bird was a Pileated Woodpecker.

Shelburne, N.H.

1909

(3)
May 21

Returning home I visited the Presidential Platform, a platform erected by us many years ago and commanding a fine view of the Green mountains over the ridge to the west of Mt. Wintrop. There is a very large amount of sand in them all still - I go back just in time for dinner - Mr. & I are now the only guests here.

This afternoon I spent most in my room, putting plants into press, writing, etc. As I was sitting at my table, Miss Fanny told me that a deer had just gone up to the Knobble. Jim had seen him swimming the river and entering the woods at the west end of the Knobble. Miss Fanny & I went out and examined the locality, but the deer had evidently kept straight on through the woods near the east end and thence up the woods north of the road.

I have put into press today a few plants:
Bula rotundifolia Michx.

" *reniformis* Gray } flower
Trillium undulatum Willd. normal }

In rich woods by path up Cabot on the first slope north of pasture back of Leander Cottage.
Hypoxis asplenifolia L.

♂ & ♀ flowers in pasture back of Leander Cottage.

The Hylas are singing to-night but I can hear no Wood Frog. They must have stopped -

Shelburne, N.H.

1909

May 22 Colbord a) chilly all day - Slight glimpses
of sun in the P.M. -

There came down this morning by the early Stocking
Train to us from the State Fish Hatchery at Burbank Brook
Colebrook N.H. (Colebrook Hatchery) three cans of ^{with trout}
young trout, fry, to distribute as the saw fit.
The cans came to the house first. One was taken
to the ~~south~~ ^{toward the front of the road.} Heavy Brook. The other two cans
& I took up in a team some distance above
the Wigwam across the 2^d bridge over Burbank
Brook. We put one can full into a tributary of
the brook by dipping the trout in a dipper and putting
them into quiet rocks. We estimated that the
can held certainly 3000 young trout. They were
about an inch long. The cans are about 2 feet
high and 1½ feet in diameter at the base. They
contract to a neck near the top and then
widens out somewhat. On the top is fitted a
conic cover that holds ice. The water must
be changed frequently. The cans were filled last
evening and the water was changed three
times when we received them. The second
can which seemed to contain even more than
the first we emptied into the main brook
just below the 2^d bridge where there was a
large favorable pool and there were long easy
stretches of water down stream.

We stopped at the Wigwam on the way back
for a while. *Viola rotundifolia* was growing
near by. Saw more a few Hobble Bush in flowers.
We were home to dinner. I phot'd the trout can.

Shelburne, N.H.

1909

May 22

(2)

After dinner I drove with Miss Fanny & Lawrence to the McMillans where I got out. The others went to Gorham. Mr. McMillan & Paul Delsey had returned & rather arrived from Boston in the car and they with Mrs. McMillan had just gone to Philbrook's. Paul Delsey took the afternoon train to Boston, via boat from Portland. Mr. Thos. McH. returned soon. I had walked about a bit and heard a Catbird and a very below the line. We had a very pleasant chat and were joined later by Miss Fanny & Lawrence. After a cup of tea we drove home again.

The walk is very high at first Nine Brook and pours down with a tremendous rush - the logs, that are still running, tear through the fence and are tossed wildly in the whirl at the other end.

In spite of the continued cloudy weather beautiful and cold, the trees and shrubs and smaller foliage plants are coming on. It is a very beautiful sight. The trees are clothed with the most delicate of leaves in all their fresh early green. The Rock maples with their drooping flowers are simply beautiful beyond words. I never saw anything more graceful - I must try to photograph one. Mr. McMillan has sent me General Karopkin's "The Russian Army and the Japanese War" in 2 vols., E.P. Dutton & Co., New York, 1899. I shall enjoy them.

The Hyles are singing to night, nothing else.

I weighed this Am. before breakfast 165½ lbs!

Shelburne N.H.

1909

May 23

- Sunday -

Cloudy & sunny, mild AM. Cloudy PM.

The weather is strange, clouds covering the sky most of the time. This morning,

Gus & I drove up the road. We went up to Burbank's pasture a short distance beyond his house where a magnificent Rock Maple stood a stately, draped now with its peasant cloth. Rock maple bears of flowers. I took a picture of this with Gus at the foot of the tree.

In this field and along the road a little Viola further on I collected specimens of Viola septentrionalis septentrionalis Greene that was abundant.

Every character held good, spurred sepals villous, sepals and their auricles ciliolate, and other characters plain seen in the pressed specimen. Every specimen I put into press & examined carefully for all these characters.

We drove on to the Stone cottage where Gus had some things to look after. The view of the big range is very fine. The mountains were entirely uncovered and immense snow drifts fill the deep crevices. In the Gulf of Mexico on the steep southern wall the snow fills to intersecting rifts making a perfect cross. It shows off finely now. Home to dinner.

I have measured on the government map the following distances:

Philbrook Farm to Hamlin's	$\frac{3}{8}$ mile	total
Hamlin's " Burbanks	$\frac{3}{8}$ "	
Burbanks " Gates	$\frac{1}{8}$,	
Gates " Lett Mine Bridge	2 "	

The Hydras began piping at 7 AM. not as vigorously as heretofore. Food are bubbling. No wood traps

Shelburne, N.H.

1909

May 24

Bright, sunny, warm morning, cloudy but pleasant afternoon. Mercury reached 72° to-day. Rained $\frac{1}{4}$ in this pm.

The road ~~into~~^{out} of the house is to be moved back some distance, the bed hill & curve just below the house is to be lowered and straightened. Work began this morning and after breakfast I took three pictures of the situation.

Then Marjorie drove me to the hill and where I spent the day. Mrs. Walker & I went up into the woods and collected Viola Selkirkii, pallens & incognita. We caught a glimpse of a Sharp-shinned Hawk near the old place as it flew through the trees round us, uttering its strange cries and whistle. After dinner we went down to the bottom of the meadow below the house and found Viola septentrionalis abundant. Then we three auto'd to Gorham where I called on Shorey who is going to develop my roll of six pictures.

In a shop window before which a crowd was standing, was a man apparently asleep in a cot bed. It was told he had been hypnotized and would awake at 9:30 P.M. A man professing this art will exhibit this evening.

We came back and auto'd to Philbrick's reading here about 5 o'clock. I visited today: Viola Selkirkii Rush | Woodsed slope of Mt. Evans.

" pallens (Banks) Brained } Lateral petals in all the forms ^x _{in eye brain}
" incognita Brained } of the two latter are bearded - _{Feb 6, 1880}

The frogs are singing vigorously this evening, the toads are barking at intervals.

Gas Philbrick heard a Bittern ^{just now} early this A.M.

Bittern

Shelburne, N.H.

1909

May 25

(1)

Clear and sunny, mingled with clouds and a few rain drops at intervals in the morning. Subs. fell last night or last Monday. In morning after inspecting the work which is progressing on the road I walked down to Ellery Wheeler. I had a talk with Mr. Wheeler by the Cemetery. He has put up a stone of marble (white) on top of a large boulder with several names of his ancestors on it. One of these named is Hope Austin who was his . Wheeler says that Hope Austin was buried where the stone is, but Mrs. does not think so. The boulder referred to was in the field close to the fence just opposite the Wheeler house and Mr. Wheeler says that doubtless his father & grandfather moved it there long ago. He has moved it to the Cemetery. The boulder shows in a card of the house that Mr. Wheeler gave me -

I called it the house and named a large cocoon that Mrs. Wheeler had found on the vine. It was Cithaeris ecroptila as I anticipated.

I then wandered by the bog and noticed how much of the pond was filled by the encroaching vegetation. It is a peat bog in process of formation. Barn, tree and Bank Swallows was darting about low over the water and breaking vegetation, chiefly Cassandra. A Swamp Sparrow was singing merrily his pretty trill from a small white birch growing among the Cassandra. I watched him throw up his little head as he sang. A Lesser and a Field Sparrow were singing near by and from the hill behind the barn

Shelburne, N.H.

1904 the scene was a very attractive one.

May 25 I returned home through the woods on
(2) either side of the road, visiting the
'Falls', a dell by the river opposite the
school house where a few years ago I got
some fine deer tracks firmly imprinted in
the hard pulp from the Berlin mills.
(See Town.). The Ostrich Fern is Ostrich Fern
abundant in this spot and the fresh
tender, unrolling leaves are beautiful.

I then walked through Prof. Reballow's
woods home, having walked down the
road and missed me -

This afternoon the husband came
down in the automobile and I took
Mrs. McMillan to Sweet Rock for Saxifrage
virginicus and then up the slope in the
woods at the end of the pasture back of the
Laddie Cottage for Viola reniformis.
Andrew was with us. We visited the
Presidential Platform and then home.
Meanwhile Mr. & Mrs. McMillan had
taken a short turn of a couple of
miles in the auto, ad for Burbanks.
After their own chores had gone I wrote
and read till supper time. There is al-
ways more to do than I can accomplish.

The Hyles and Toad are singing to-night.
I presume they will stop before very long.

The Rock Maples are still in flower not in leaf.
The Red Maples are leaving out. The Habs
is one mass of white now every where.

PRINCIPALS IN MEDFORD SCHOOL BOARD SITUATION.

1909
May 26
+
June 25

ROSEWELL B. LAWRENCE,
Supporter of Morss Who Resigns as
Chairman of Board.

CHARLES H. MORSS.
Defeated After 14 Years' Service as
Superintendent.

WILL DECIDE ON CANDIDATE.

Medford School Board Will Next
Week Act on New Superintendent.

Much surprise was expressed in Medford yesterday over the defeat of Charles H. Morss for re-election as superintendent of schools after 14 years of service, and as a result thereof the resignation of Rosewell B. Lawrence as chairman of the school board, to which position he had been unanimously elected for 17 years.

Mr. Lawrence originally urged the appointment of Mr. Morss and believes he has proved competent and was entitled to a reappointment. Up to the final ballot he felt that the necessary six votes would be forthcoming.

There has been a strong feeling aroused within the past few years and often expressed that the chairman and superintendent has shown itself at the meetings of the committee.

No candidate has been suggested and nothing will be done until a permanent chairman of the board is elected next week, when a committee of three will be selected to consider and report upon a new superintendent.

Boston Herald, May 26, 1909.

Boston Herald, June 25/09.

Charles H. Morss
is a member of
our New England
Botanical Club.

HAD BUT SIX VOTES.

C. H. Morss Fails of Re-election as
Superintendent of Medford Schools.

Charles H. Morss, for 14 years superintendent of the Medford schools, failed of re-election at a meeting of the school committee last evening, the vote standing five for Mr. Morss with six blank ballots. Every member of the school board, including Mayor C. M. Brewer, who under the city charter is a member ex-officio, was present.

After the vote Rosewell B. Lawrence at once resigned the chairmanship, which he has held for 16 years. He said that he felt he could no longer hold the office.

Judge W. G. Walt was made temporary chairman and the election of a permanent chairman postponed to the next meeting. The board adjourned at 9 o'clock after an executive session.

After the meeting Mr. Lawrence said that the board understood his reason for resigning, but he would not then say that he would resign from the board. He had talked the matter over with friends and his action of last evening was premeditated.

Mr. Morss was superintendent of the Milton schools before coming to Medford in 1885.

Shelburne, N.H.

1909

May 26

A clear delightful day warm and mild.
Wind west. An ideal day.

This morning Mrs & I drove to Silead by way of the village. Just as we left the post office and had run Clements Brook I heard a Warbling Vireo. The opening foliage *Vireo gilvus* very pure and more beautiful. The poplars and birches lining the road with the sun foliage behind us lighting them up make a picture that defies description. The snow-white patches formed by the shade bush is another beauty.

At Silead we visited the big old *Sorbus* *Sorbus* in front of a small house near the bridge - 9 bare leaves and fruit already from it. The tree is in full leaf not entirely developed yet and is covered with flowing clusters still in bud. I took a specimen.

This afternoon I read and wrote and then M. & I took a walk. We inspected the Swett's place and found the gardens well along - Then we watched the men a while on the road and then walked over the intervals. All is beautiful.

I collected a few plants to-day:-

Ribes prostratum L'Her. roadside among rocks, Silead.

Sorbus cult by house in Silead. In bud.

Centemaria neglecta Greene * ♂ & ♀ fls in clumps with no stems.

a few feet of each other, meadows opp. house.

Viola pallens (Banks) Gratiot. meadows opp. house. The

Lateral petals are beardless.

Hylas & Toad are singing briskly tonight from the records M. & I were here in 1881 -

M. & I were here in 1881

Feb. 6, 1910

Steeburn, N.H.

1709

May 27

A clear morning quite warm, cloudy afternoon
and a little rain in the evening

This morning I went into the woods back
of the Scudder Cottage to get some Violets for Dr. Brainerd. Violets
I collected by the little brook in wet springy ground in shade just within the edge of the wood
and close to the path running past the Presidential Platform, Viola pallens, with lateral petals bearded slightly, and leaves smooth. A few minutes walk up the path on the slope at the side in back
I collected Viola reniformis near the locality of May 21.

The petals (lateral) are bearded, as well as the others,
but are a two specimen bed leaves, practically smooth (See Brainerd's letter, June 21, 1910)

In the open pasture behind the Scudder Cottage
and in the grass of the willows near the Philbrick barn I took specimens of what I call Viola septentrionalis, lateral & spur petals bearded,
spurs & auricles ciliolate. All these but a couple V. pallens that I found, I have put up in oil'd paper in a small tin box and have mailed them
with a letter to Dr. Brainerd —

We have watched the work in the road to-day
considerable - It is progressing rapidly.

This morning the men on the road killed a Milk Caddie - I saw it & measured it. It was Milk Caddie
3 ft. 3 in. long. In the woods near the Viola rotundifolia, on May 21, I saw a very large Carter Snake. Carter Snake

This Peabellus came last evening by 10:00 P.M. Peabellus returned at 3:30 from Montreal - his Shaffett
came up on the 5:04 Blue Train.

Hyles & T. 100's are singing this evening in the rain.

(I inserted
incidentally
with pallens
some ^{specimens}
into ^{box}
with leaves
pubescent and
beneath, and
the petals

1909

May 28

Rain all day, mountains obscured in mist.

It has been another steadily wet day.

This morning before the rain was heavy

I went out to the willows by the barn and ~~Strayed~~^{of the} verified a peculiar song - I did not recognize Parula Warbler it at all. The author of the notes was the Parula Warbler - There were two singing and one was but a few yards from me on a low branch and was perfectly identifiable as he threw up his head and sang with parted mandibles.

The song was utterly unlike the snowy war of other species that I am acquainted with. It consists of a rapid, vigorous trill of five or six notes, ending with a very sharp che-u.

I could hear the note distinctly as I sat in my room about 250 feet distant. As the bird uttered the end of his song, che-u, he opened his bill to its fullest extent with head up, and then resumed his normal attitude.

I have spent most of the day reading papers brought home by Prof. Penobscot - "A Birch Ruse" and Contrib. to our Knowledge of the Origin and Development of certain Marsh Lands on the coast of New Eng." He gave me other papers besides.

I have been examining my Butter Bush almost daily. Of the few stems, four only have any continuous bark and those are very sparingly covered in large portions by a bare strip. Yesterday I saw the first signs of life, a small cluster of buds appearing on one stem some four feet from the ground. They are increasing in size & number today. The Wrens & Robins are singing merrily this evening.

Shelburne, N.H.

1909

May 29 Sleety morning, fairly clear afternoon with a little rain -

J. J. Greenough arrived last evening by the 10.10 train. He returns Monday afternoon.

This morning Gus with Prof. Rebellaus, James & I drove to Gorham, stopping at the McMillans to arrange for a picnic at the Wigwam on Monday. We then went to Portland this morning for some dentistry. We had a pleasant drive with a little rain now and then. I met and had a pleasant talk with Judge Evans in Gorham.

The rock maples are showing their leaves now and so are the elms & apple trees. Soon the trees will all be clothed. We returned home late to dinner. But what matter! The blue stemless violet that I call Viola septentrionalis is very abundant. Hobble Bush now bears white in the woods and Ceanothus Blue is in full flower at intervals along the road.

This afternoon I strolled about the place. Prof Rebellaus' Buttonbush and I examined the Butterbush - There is some life yet in two stems that are throwing out buds from different branched. There are no signs of life in any other stems. I think we shall prune them a bit.

Many patches of snow are still visible with the snow or glass on the lower slopes of Morell - Morell I collected to-day:

Viola septentrionalis Greene two clumps, damp roadside, deep violet
Prunus nigra Ait. s.w corner Philbrick Farm, n. of road, full flower, shrub

The Wrens & Toads are singing here this evening

Shelburne, N.H.

1909

May 30

Cloudy morning, with bursts of sunshine,
(1) very cool - Sunny afternoon with fleecy clouds.

Mrs. ^{has}, alas, has a bad cold that developed yesterday. She has stayed in bed today and coughed hard - Still I feel she will be much better tomorrow.

This morning Mrs. Prof. John Brewster, Mr. & Mrs. Frederic C. Cushing of Portland who arrived last evening & I in the 3-seated wagon and James and his Sheffield in a buggy drove 3½ miles up the Glen Road. It was very beautiful all the way. The young foliage is exquisite. Villicum erectum was very abundant and very large and in full flower on the Glen road. Anemone quinquefolia was about out & huge also.

Tiarella cordifolia is just coming into flower. Hobble Bush is a beautiful white. More Maple is in flower. Diospyros virginiana is fresh and abundant. Trees are by the Glen Road. In one place Equisetum hyemale was covering the wet ground and was very tall. There was a very large bed of Viola scabreissima by the road in Shelburne.

The big mountains as we drew nearer were very forbidding. The big fields of sand are still very large and Mrs. says they are in places ^{as} fifteen feet deep - Peabody River is rattling merrily over its stony bed.

On the return we stopped a moment at the McMillan. Mr. McMillan is quite exhausted from a bad bout the nerve of which was killed yesterday in Portland - his wife was up & it too.

It was a most successful drive and we reached home about 1.45 P.M.

Sueburne, Vt.

1909

May 30

(1)

This afternoon after writing a note I strolled Knobble over to the Knobble and wandered over it for old times sake. It is just as of yore when in 1880 I began my botanical studies. Prof. C. E. Covellin, who had owns it, has cleared out the brush and made it easy to walk about at the same time preserving its integrity - The brake was coming up and I cut a large bunch of young tender stems, and his famer will cook them like asparagus to-morrow -

I then wandered over to the Emerton cottage and enjoyed the fine view, and continued round toward the Indian Cottage descending back of the barn, tracing the two streams that flow down the slope and disappear in the loamy soil. Very ^{*} I heard my first Veery this afternoon. It was for first time singing in the Knobble.

I examined this evening the sick of T. williams Abnormal erectum that had been picked on the Glen T. williams Road and found one exhibiting ^{most unusually amongst} teratology. Leaves in whorl of four. Sepals five, Petals four alternating with ^{sepals} petals leaving one vacant place. Stamens ^{normal}, eight, four alternating with petals, four opposite petals, one of the former double and separated ^{The anthers} for three-fifths of the way down, the remaining two-fifths united as well as the filament. Ovary eight-winged, one-celled, four parietal placentae, each placenta attached to the wall between two ridges, and two ridges being between each two placentae, the attachment of the placentae being opposite the petals, ovules numerous - Sepals edged with the maroon color of the petals, two streaked with maroon, otherwise all five green. Petals maroon.

Shelburne, N.H.

1909

May 30

(3) I have sectioned the ovary and unfortunately the upper part showing the four normal styles got crushed. So I record carefully the fact the pistil was of normal shape excepting in its being in the place of four. All the other specimens I examined some 12 in number are normal —

I have passed to-day:

Viola scabioscula Schlecht.

One spot by the road in shade on south road between Ches Shillibobis & Gorham, very abundant.

Equisetum hyemale L., var. affine (Engelm.) A.C. Eaton.
very abundant by roadside in wet, poorly drained
on Glen Road, Gorham, just north of 1st bridge.

Viola cucullata Ait.

Same locality as the Equisetum. Spurred
Trollium petal glabrous. erectum L.

Glen road, Gorham, abundant. A tetraploid form described above —

I could see with the unaided eye to-day sun on the slopes of Morelles opposite the base. There was much frost under the Imp in the Glen Road. It cannot of course last very much longer on the lower mountain slopes.

The Hylas and Toad are busy again this evening. This is warm and their activity depends very much on the temperature I find.

I have been analyzing some of the Celastrus seen here and find it to be C. ineanus

Shelburne Vt.

1909 Trip to "The Bog" Gilead, and fancy across
May 31 at West Bethel.

Clear, mild, fleecy clouds, west wind.
This morning we started in 2 carriages Trip to
"The Bog". One carriage held Gus, "The Bog",
Prof. Remond, Mr. Cushing & Mrs. Remond,
the other, James, Mrs. Cushing, Mrs. Sheffield & the
we crossed the river at Gilead. My brother
near the bridge is still in bed. We reached
"The Bog" by the regular route as last October
bee. The air was clear as crystal and
the foliage soft and green and that con-
trasted strongly with the fog of last
year when May Dexter, Miss Fanny Frost &
picniced there. The Bog Brook was running
quite full. Viola cucullata was abundant and
also Viola pallens, the lateral petals both
bearded and smooth. Ribes pruinosum, Brenns
nigra (by some old apple trees) Vaccinium erectum, etc.
were quite in evidence. I took a few rocks at
the landing and one of a fine view up the river
in Gilead. (Aralia) Panax trifolium was abundant
near the camp and on the way out I took a
little of it, but in the hurry could not get the tubers.

We drove on the return, to W. Bethel. Remond and
James changing seats, and forded the river where I took
a few pictures. The drive home was glorious. James
was going to take the train at W. Bethel, but the train was so
late that he returned to Shelburne and left from bee.
Vegetation is coming out at Shelburne Bog. Rubus & Kalmia glauca
Cassiope has been out some time. I collected to-day

Viola pallens (Banks) Gray. Not found "The Bog". Lateral petals bearded & smooth. ^{See Fig. 1909}
Panax trifolium L. Shrub, roadside about a mile from the picnic grounds.

St. Albans, N.H.

1909

June 1
(1)

Clear cool day, strong west wind -
his cold progresses. She coughs a good deal
at times, but she is better though still in her room.
I staid about the house part of the morning.
Eus & I drove to the station and post office.
I walked over from the post office to the bridge over
Clement's Brook. The water was as clear as
crystal and the gravelly and sandy bottom reflected
by the bright sun made every pebble clear.
The water was about two feet deep and the brook
quite broad. Directly under me as I looked
down into the clear saulit water were four
large suckers, certainly a foot in length. They Suckers
were lying quietly on the bottom side by side
extracting some nourishment from some vegetable matter.
With my binoculars I could see them wonderfully
clear. I watched them for about five minutes
before they glided under the bridge and were lost.

This afternoon, after breakfast I took my
botany bag and followed Emerton Brook up to the
spring where Prof. Emerton's water supply comes from.
The woods are beautiful - I collected a number
of violets -

This afternoon, after writing to Paris, Prof. & Mrs.
Penhallurick, Mr. Cushing & I took a stroll. We saw
a fine pine tree fall to give way to the new road.
We walked down to the 'Fair' and saw the
Ostrich Fern - violet blue & white are abundant
in the grass - Mrs. Cushing joined us later.
The Hyles and Caud are noisy this evening.

There at the same time. I took Morris.

James Greenough told me that his father & family including himself were first in St. Albans in 1876. They were in the Moore Cottage. Morris Morgan & I were

*See p. 2

Shelburne, N.H.

1909

June 1
(2)

I collected this morning some violets in the woods back of the house on the border of or in the neighborhood of the brook that runs from Emerton Spring - I shall call the brook as it has no name Emerton Brook - It is quite dry in the dry season:

Viola cucullata Ait. A number of small plants in wet springy ground around Emerton Spring. Beards of lateral petals strongly pubbed, spurred petal glabrous, sepals not ciliolate.

Viola septentrionalis Greene

Three two rather large plants in pine wood growing among the dead leaves.

Beard of lateral petals not strongly pubbed. Spurred petal villous. Sepals ciliolate.

Viola incognita Brainerd [See 2nd Brainerd, July 6, 1909]

Abundant in wet ground in shade by Emerton Brook. Specimens all taken in one spot. Lateral petals bearded. Leaves more or less pubescent.

The house Cottage at that time was kept by Aunt Hannah Green. We all slept there and took our meals at the Brothers House.

see p. 1

This evening at 8.20 o'clock as I was sitting in Whippomill my room by the open window, a Whippomill suddenly started up his song on the tin roof very close to me. I stood by the window and listened to him for some time. The men below walked up to the spot below him and frightened him off finally.

Shelburne N.H.

1909

June 2
(1)

Clear and cloudy, pretty warm.

This morning Gus drove his family, Mrs. Sheffield & me up the Cabot path back of the house over the ridge to the camp where his men live who are cutting a large tract of woods for him. It was a very steep drive. The camp is a very neat building, with accommodations for the Frenchman, his wife, of four children and three other men. The trees were falling and a large amount will be taken out. I heard there a Winter Wren. We returned the same way - Winter Wren
Cabot Path

In afternoon Mrs. Sheffield & I walked down to the river and followed the bank to the Hamlin place and home by road. I heard Yellow Warbler, a Yellow Warbler in the maples by the river. Two male Redwings were about the creek in Hamlin's and a Warbling Vireo was singing Warbling Vireo in the tall trees near the main road. We saw it.

I am going down to Cambridge to-morrow to be at the Botanical Club on Friday evening at the last meeting. I shall return here on Saturday the 5th by the evening train. His cold is better, but she still coughs at times.

Drs. Penhall left this morning for St. Andrews where he has charge of a large Biological Station. I shall not see him again. I have enjoyed him extremely.

Erythronium americanum Ker.

A fruiting specimen from intervals opp. the house

Shelburne, N.H.

1707

June 2
(2)

Mr. Bowman and Mrs. Herbert Lyman
(Ruth Whitney) arrived by the 5:04 train.
I took Mrs. Lyman for a stroll before
tea - we found a clump of *Rubus*
by the ditch west of the Knobble and
a Humming Bird was hovering over the
blossoms - we went on to the Knobble
and walked over it. Two Wrens Thrushes
were singing there and we saw one
quite near as he perched on a branch
and uttered his call note. We then
crossed over to the Emerald Cottages
and enjoyed the view from there -

Shelburne to Cambridge Mass

1909
June 3

Left Shelburne by the morning train for return to Cambridge - Mrs. Herbert Lyman (Ruth Whitney) Cambridge went too - we had a very pleasant trip.

Every swamp on the long way was abloom with R. leodora. It was a fine sight. Sometimes patches several acres in extent were brilliant with the showy flowers. We made a quick connection at Portland and passed through one or two thunder storms on the way. Vegetation was more and more advanced as we proceeded.

I left Mrs. Lyman at the boat station and went to Dr. Briggs' for a few moments and then to Dr. Deewitt whom I had a long talk with over about M's cold.

Then I went to Harvard Avenue and had a refreshing time at the barber.

Reaching home I had a warm welcome from Dr. & Mrs. Coolidge and Miss Brown - who had been awaiting me - I took tea with them.

I find at home some Viola cerasina transparency from Dr. E. H. Sargent and the transparency C. R. Barnes from Barnes that he had written about. & It is most interesting and replaces the hololeucum one that was broken in transportation from Barnes Christmas time. Barnes is standing on a large cactus in view. I shall get the story from him.

Mary & George called in the evening

Fine total lunar eclipse - I saw it total as it gradually disappeared. Hot day 90 in Cambridge

Lunar eclipse

Cambridge, Mass.

1909
June 4

Sunny morning, cloudy afternoon & evening.
I have been a busy day, especially after
the long trip of yesterday. I called at 80
Spears St. in the morning, saw George,
and I did a number of errands in
Harvard Square. I lunched at the Coles's
and wrote letters, etc. in the afternoon.
The event for which I came down has been
a great success. I reached Williams's at
6 P.M. and gave Mrs. Williams a box of
flowers with which she adorned the table.
We had a delightful time at dinner.

E. F. Williams

B. L. Robinson

E. L. Rand

W. Deane

E. G. Kennedy

Mrs. E. F. Williams

The meeting of the Botanical Club was
equally a success. John Murdoch, Jr. gave
us a sketch of the government forestry work
in Dakota, and the talk of the evening
by H. A. Bartlett on Peat and the Formation
of Peat Bogs was most interesting and
instructive. About forty were present.

This is the last meeting before October.
F. R. Churchell had been to Welling by
Lake and he exhibited fresh specimens
of Primula mistassinica. It was a pretty
display — Fermal told me that he,
Mrs. F. and Prof. Mrs. Wiegard were going
to summer in Newbrooke, Me. The bed-
ford land trip was too expensive —
9 100 to bed by 12.20 —

Cambridge, Mass. to Shelburne N.H.

1909

June 5

A rainy chilly day - I left home about 7.30 A.M. called for a while at 80 Franklin St., then drove to Harvard Sq. with Mary and finally to Boston and after lunch to the North Station where I took the 1.15 P.M. train for Portland arriving there at about 5 P.M. (train time 4.40). I took the electrics to the Grand Trunk Station, had some supper and took the 7 P.M. train reaching Shelburne at 10.11. Mrs Philbrick met me and we drove back in the dark where Mr. gave me a warm welcome - I confess that the trip while a very pleasant one and one that I took in order to be at my post at the Botanical Club, as President has been very tiresome. I am tired - Still I am glad I did it travelling as I have done over 400 miles in all. Our Club has had a very pleasant set of meetings during the past season and I am looking forward to an equally successful season in the fall.

The Hylas were piping as we drove up to the house this evening - I heard them at intervals on the way up from Portland whenever we passed a marshy spot.

Shelburne, N.H.

1909
June 6

Cloudy A.M., clear and warm P.M., cool evening.
I remained in the house this morning, excepting my plants, writing, etc.

The Cecropia moth of last May 25 hatched Cittacus
This morning about 11.05. By 11.33 its fore wings cecropia
which were on the length of the body at first,
3 cm., had enlarged to their normal size,
7 cm. Then the hind wings rapidly assumed
their normal size. I have put the
cocoon with moth attached out of doors on a
tree trunk ~~so~~ the moth may leave at will.

Mrs. & Mrs. McMillan called this afternoon. We had
a pleasant talk. Mr. M. is at last relieved from
his painful tooth. We shall visit them as near
June 29 as possible. M. & I walked down to
the river this P.M. The colors were very
fine.

This cold, though much better, still hangs on, and
we shall stay through this week, when I trust
all trouble will be gone.

The Hyles are as active as ever this evening
and foods are billowy.

I visited my Butterbush to-day. It is Button Bush
really coming into leaf in a number of
places. All the developing buds are traceable
to two of the main stems with the addition
of two short from the ground that are
directly connected with one of these
stems. Each shoot has developing buds.
So I am in hopes ~~that~~, we shall have
considerable growth this year —

Shelburne, N.H.

1909

June 7
(1)

Mild, cloudy most of the day, clear with
beautiful cumulus clouds in P.M.

This morning I gathered a number of
plants of Carex, still young. To send to
F.W. Bailey to plant.

I collected a few plants and drove to
the Post Office with Mrs. I saw no fruit.
Cedar Birds, about twelve in number, on a flowering
apple tree by the road opposite the Bungalow.
A ♀ Hummer was hovering about the blossoms.
The Barn Swallows are now abundant about
Yankee Barn and neighborhood and the
Bank Swallows are flitting round our in-
terior walls and close with noise with their
buzzing notes. In. & I took a stroll before
dinner. The cold still hangs on.

This afternoon Mrs. Cushing drove to
the Stevens Farm. The views Stevens Farm
all along seemed more beautiful than ever.
Tiarella cordifolia makes a beautiful show and
the Cleve's Cherry is now a mass of white.
We returned by Westmore Brook and I got
out by horses Rock and collected some Nootka
and a Carex.

My Butterbush I find to-day really quite Butterbush
thrifty. Besides the budding shoots that are
all connected with two stems, there is a
shoot coming up from the ground vertically
connected with a third stem. There will
be quite a showing of leaves later on.
The Hyles & Rods are singing or wren this way.

1909
June 7
(2)

Shelburne, N.H.

I have collected to-day the following:

Salix cordata Muhl.

Roadside and brookside. From the border of Cabot Brook by the road at entrance to the Philbrick Farm s.w. corner. Also from border of Clement Brook by the Post Office where the plant was 8 or 10 feet high. In former place very low 1-3 ft. *Viola cucullata* Ait. Seeds of last. pet.s strongly ribbed.

Wet, springy meadow by the brook road near Hartin's house. Also wet ground by Philbrick Willows.

Melilotus alba Desr. (Ver. by M. Fernald & W. Greene, Oct. 9, 1922).

A flowerless plant in gravel between the tracks at the Shelburne Station. Leguminous.

Antennaria neodioica Greene.

♀ plants, dry slope by Philbrick willows.

Eriophorum virginicum (Euphr.) Fernald.

In wet, springy ground among the *Scirpus hudsonicus* on C. B. Evans' farm.

Tiarella cordifolia L.

near the river on Stevens Farm.

Viola septentrionalis Greene. Lat. & sp. pubescent.

Low ground Stevens Farm near the river at western end by the woods.

Populus balsamifera L.

Sands of the Androscoggin River, Stevens Farm.

About two small trees some 20 ft high.

Carex tenera Schkuhr.

Grassy upland near Moses Rock.

Viola septentrionalis Greene.

Dry slope by short road near Kendall Farm.

(3)

Viola septentrionalis Greene.

Grassy upland slope near Moses Rock. Large plants. Lat. & spurred pet's pubescent.

Viola septentrionalis Greene.

Grassy upland slope near Moses Rock. Small plants - Lat. & spurred pet's pubescent. 3 plants In one the pubescence on the petels & leaves is much less than on the other two - The 3 plants were close together and exactly resemble each other externally.

This afternoon at Stevens Farm I heard a Water Thrush among the alders close by the river. He sang for a number of minutes, but I did not succeed in seeing him.

Water Thrush
in alders by
river

Mrs. Cushing showed me today a Robin's nest scarcely five feet up in the crook of an apple tree within a few rods ^{from} the house near the Lodge. There were three young birds in the nest, large enough to completely fill it. The old bird left the nest as we approached, but made no sound.

Dr. & Mrs. John B. Hawes of Boston, a newly married couple are here - They arrived on June 3 -

I saw today a Tree Swallow enter one of Mr. Cushing's bird boxes near the road by his house. Tree Swallow entering bird box

1907

June 8

Clear and glorious day -

In early, but it is less than yesterday.
This morning I walked with Mr. Thos. Cushing
and his Rebabbler as far as the Presidential
Platform. Nature is at her best now.
Later Mr. & I walked down to the river
and sat there for quite a while. The boys
are running freely down stream, and a
large number are anchored on both sides
of the ~~river~~. Bank Swallows were constantly
flitting about uttering their buzzing notes
a Spotted Sandpiper flitted across the river,
alighting on a stranded log and then flying
into the meadow and alighting. A Vireo
after calling a number of times from a bush near
the water flew low over the river to the opposite
shore. Savanna Sparrow chirped their grasshopper
notes near us and we were soon to return.

This afternoon Mr. & I spent some time in the
Emerson Piazza enjoying the view, while I
read aloud 'The Great Red in the United States'
by David E. Leibz, Biol. Survey, Bull. No. 83. It is ap-
pealing to learn the terrible details of destruction
(both two 1/4 miles of the work on the new road).

I examined the Robin's nest by the barn today. ~~It has not~~
the three young have grown perceptibly since yes. young
today -

Gus tells that about 16000 bushels of potatoes
were raised in Shelburne last year. He is
making a report for a State publication -

A heavy frost covered the intervals last night.
The Hedges are piping, to-night. I have heard no Frogs -

Home frost.

Trips to Randolph Hill and Moose River picnic ground -

Mild generally cloudy with bursts of sunshine. Mrs. with Mr. Thos. Cushing and I drove to-day to Randolph Hill. The views were as fine as ever all the way - I called at the beehives but saw them in Gorham for a few minutes. I collected a few biotics on the way. We went to the Mount Crescent House which is not yet open and turned round and returned to the Moose River picnic ground in Upper Gorham. The snow lies in big banks on the slopes of King's Ravine, ten feet or more deep according to Mrs.

The picnic grounds are very beautiful. The river runs merely by over its stony bottom and the woods on either side make a beautiful picture. I collected a few plants in a swamp close by that was filled with Viola cucullata, etc. We got home by 4.45 P.M.

Prof. & Clara Emerton & Miss Hobson arrived by evening train for a few days - after supper Prof. & Clara Mrs. & I walked over the new road -

I saw some Cedar Birds in a apple tree by Cedar Brook this evening - Two were sitting passing to close together passing something. I could not see what from one to the other in the customary way at least half a dozen times as I watched. Soon a third bird flew in between them with the article from the bird below it and flew away.

They are piping to night, and I hear a few odds -

Sueburne N.H.

1909
June 9
(2)

I sent off by express this morning to L. H. Bailey a box of Carex roots as he requested. There were several species, young. Prof. Peabellus sent me yesterday from St. Andrews, N.B., where he is at present attending to the opening of the Biological Station there, a capsule paper on "An Account of certain noteworthy features in the habitat of Bleeding Heart". In St. Andrews the plant is taller and more drifty than near to wood it is, and the dries the soil. I trust we can print it in R. bot or a -

I collected to-day:

Viola septentrionalis Greene

Rather moist roadside on Randolph Hill. Lateral & spurred petals pubescent. sepals ciliolate to the tip -

Viola cucullata Ait.

Swamps by Moose River picnic ground, Gorham.

Teard of lateral petals strongly pubescent. Sepals lanceolate, not ciliolate

Viola pallens (Banks) Brainerd. (See Brainerd, Jl. 6, 1908)

Springy ground by Moose River picnic ground. Gorham.

Lateral petals slightly pubescent. Leaves glabrous on both sides

Viarella catifolia L.

Springy ground by Moose River picnic ground - Gorham -

Veronica serpyllifolia L.

Damp ground by Moose River picnic ground - Gorham -

Pyrus americana (Marsh.) D.C.

Young plants, grassy slope near Moses Rock.

Fragaria virginiana Duchesne.

Roadside, rich soil, abundant -

Shelburne, N.H.

June 10

(1)

Cloudy but pleasant & very cool - A little morning sun
rain in late PM and biological work must understand it.
Mr. still coughs badly.

This morning Mr. & I went to the Morse Cottage and sat on the piazza. Hearing a bird I opened my case for my binoculars and the case was empty! Binoculars I had last used the glasses on Ethan Hill yes - last Friday today and where could they be - We returned home and satisfied ourselves that they were not in our room - Mrs. had gone off for the day - I plowed to various places in Ethan but of course nothing had been heard - I was even advised to go back to Ethan Hill and inquire at every house, a practically impossible task. Finally Mr. said that we would go over the route carefully that we had taken with the Morse Cottage. I had gone up the road to the ^{second} row of willows and had climbed up the bank opposite the Pumpalow - As I nearly reached the summit I sat down on a grassy spot out of breath I retraced this course exactly and as I sat down in the same spot near the head of the bank there were my binoculars lying quiet safe & sound in the grass. Mr. had to see how the clasped cover of the case came open and it is most unusual that even with the cover unclasped the glasses should have slipped out especially without my knowing it. Any way I was more than surprised at finding them again -

Sueburne, N.H.

1909

June 10
(2)

This afternoon we went up again and sat on the house's piazza. In the morning just after finding my glasses I heard ^{Horse Wren} and saw a Horse Wren singing on ^{Sunset Rock.} a dead tree close by the Bungalow. This afternoon I heard him and saw him in the trees at the foot of Sunset Rock between the Horse Cottage and the Bungalow. I feel quite sure that I heard a second Wren at one time and the first one was singing in the direction of the Horse Cottage and immediately I heard what I think was a second Wren near the Bungalow as I was standing by it. However it may have been the same bird.

Late this morn., Mr. Simpson & I drove over to Tabgan the village and there Mr. Simpson got his Calliper Rule Tabgan Calliper Rule for measuring logs by See also cord measure and we went down to the June 11 (5) mill and I saw Mr. Simpson apply the ^{at present} measure to logs from the Berlin Mills Co. Lands. It was very interesting and I used the calliper on a few logs. The length is measured by means of a rotating wheel and the diameter at the center is taken and a figure is read giving the cubic feet, which divided by 128 gives the cord measure. I put in press today!

Prunus virginiana L.

In full flower, slope by Bungalow -
Hydras are piping, and Roads singing Sparrows -

1909

June 11

(1)

Shelburne, N.H.

Sunny and cloudy, mild.

This morning Dr. Hawes told me that a pair of House Wrens were building a nest in the fish basket that was hanging outside the back screen of the Bungalow, about 4 feet above the floor, on the upper hinge. Dr. Hawes had used the basket on a fishing trip day before yesterday and on his return that day had hung the empty basket in the position above mentioned. The basket was of the usual kind, of light straw with a sloping lid with a hole in it. Yesterday Dr. & Mrs. Hawes were away all day and the basket was undisturbed. This morning before breakfast he went out to get his basket and, on opening the cover, saw it lined with small twigs. He soon discovered the pair of Wrens and he left the basket hanging there and told me about it at breakfast. I went up after breakfast and examined the basket. It hung in the usual way, tilting forward at the top thus:  The twigs lined the inside from the front edge of the bottom to nearly the top in front and, from a to b, I put the lid back again and sat down a short distance off. Soon the male bird came along with a small twig in his bill and alighted on the floor below the basket. He then flew up and dove down through the hole out of sight. I heard him chattering away as he deposited his twigs.

House Wrens
building in
fish-basket

Selborne, N.H.

1909

June 11 Soon he reappeared and began singing. (House Wrens)
 (2) merrily with both of his tools only out of the fish basket hole. He then flew to the floor and took in his bill a twig that was lying there some eight inches long. With this he flew up to the basket and tried in vain to get it through the hole, but he could not get one end in first, so he held it by the middle. He kept uttering his bubbling song at intervals and finally dropped the twig and flew away, filling the air with music. He returned again and added a fresh twig to the nest. Once I heard the twittering of his mate near by, but I did not see her. At another time I heard another male bird singing, thus confirming my observation of yesterday. This afternoon I visited the spot again and saw the male enter the hole twice, once with a bit of something white in his bill which he deposited, and once with nothing. He sang his full song while in the basket and chattered merrily besides, appearing at the hole several times, and then disappearing into the enclosure.

Dr. Harvey & his wife have seen much more than I have today. They put a number of small twigs on the floor of the portico beneath the basket and saw them all taken into the nest. At one time they saw all three birds at the same time. The two males had a lively tilt, but the

Shelburne, N.H.

1901

June 11
(3)

intruder was driven away. The House Wren is a very pugnacious little fellow and will guard his home most fiercely.

During my two visits to the spot the song of the male Wren was almost constantly heard among the rocks and small trees on the slope of Sunset Rock close by. On the second occasion I inspected the basket again and found that about the same area was lined with twigs, only they were more thickly laid on.

Once I stood very close to the male bird as he ran about on a pile of boards close to the east side of the house. He hopped about with tail erect, scolding in full voice and finally disappeared through the wooden lattice work under the eaves.

The future of this attempt at nest building is very uncertain. In the very situation renders it more than doubtful whether the basket can remain there. There will be constant passing in and out through the screen door and this should drive the birds away. To say nothing of the fact that every time the door is opened the basket is disturbed, as it hangs half against the door and half against the wall. I think we shall try to move the basket without driving away the birds. The trees have close very soon, and the next tenants may not be inclined to protect the birds as they should be.

1909

(4)

Shelburne, N.H.

This morning Mr. & I walked down the road and examined the Peckellus woods. They are very beautiful, but the mosquitoes drove us out. June 11

(5) I examined last evening a Blodget Rule that Mr. Simpson lent me. Its structure is the same as the Tabyan Calliper Rule, and is like this:

Blodget
Rule-

1 = a wheel with spikes in the points. One revolution = 5 feet. Spikes six inches apart. This is run over the log to get the length.

2 = a movable joint to get the diameter of the log at the middle of the log.

3-4 Figures are on this portion

5-6 Figures are on this portion of the movable joint encircling the portion 3-4. On this is read the length of the log.

The diameter is ascertained by fitting the two perpendicular pieces over the log. Then on the strip 3-4 against the figure indicating the length of the log is read the figure given, the cubic feet of board in the log. It gives the cubic feet minus the part sawed off so as to make the log square at the end.

The Tabyan Calliper Rule works in the same way but considers the log square at the end with one side equal to the diameter of the log. This is cord measure. The measure is really more than the log contains -

51

Cloudless, but much smoke in the air.

I have staid near the house all day.
This morning we set a little packing and
healed deer in the sun at hastening
the drying of my plants.

Gus took a party to Eilead this morning
and he brought back to me some fine
flowering specimens of the hybrid crab
(*Sorbus hybrida*) from the tree
near Eilead bridge. I have pressed some
of them - He said that the tree was covered
with clusters of snow-white blossoms.

This afternoon Gus pruned the Butter Butterbush
bush for me behind the barn - I was with
him. He took out all the dead wood, leaving
two large stems and the base of a third
which had a short shoot in throwing out
leaves. The two large stems are showing a
good deal of life still, and, if properly cured
for, or at least left undisturbed I think
they will yet live for some time - The
leaves are now well advanced -

Gus, Mr. Cushing and I sat for some
time on the piazza this afternoon talking
Mr. Cushing explaining the Maine Savings
Bank of which he is Pres't. Treasurer, and
Gus the White Mountain Natl. Bank at
Groton of which he is a Director.

The Wylas and Toads were as active as
ever this evening - Gus says that he heard
a Hyla in the woods today -

1909

Shelburne, N.H.

June 12

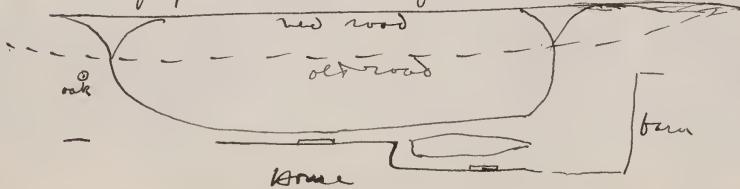

(2) Dr. Hawes tells me that he has seen both Wrens working at their nest in the fish basket. The female was the cleverer of the two. The male tried many times to get a long twig into the hole, but kept dropping it again and again. Finally the female took it and working the twig in her bill got hold of it at the end and drew it in successfully. The male kept singing so much that he continually dropped the twig. He says that today the two birds have been busy most of the time, and they have been taking pieces of grass and the like into the basket. This is of course for a lining.

Work on the new road has been advancing rapidly. I have made some measurements today: Distance from front piazza of main house to middle of old road, 88 feet.

Distance from middle of old road to middle of new road, 53 feet.

The road will therefore be removed from the house $60\frac{1}{2}\%$ of the former distance beyond the old road.

This proposes a clearance of driveway:

See July 11

1907

June 13
(1)

Smoky and cloudy, rain in evening.
This morning Gus took Mr. & Mrs. Cushing & me to the Wijman - We walked on to Bowls and Peters and we visited the Wijman and had a very pleasant time. The road to the spot is now made very smooth and it is easy to drive up. On our return I found the auto and Mr. & Mrs. McMillan with Andrew here. I took Mrs. McMillan up to the Bungalow and she was delighted to see for the first time a House Wren - to see two together and to watch them, and listen to them and see the male enter the basket was a treat.

Mr. & Mrs. Cushing left this afternoon for Portland. We have enjoyed extremely their acquaintance and I hope to meet them again. Howard Philbrick arrived last evening (10.11 train) from Orono. He has graduated and now he holds a degree of S.B.

It is raining this evening, but we shall get off if possible.

The Hylas and Frogs are singing as usual. ^{I have noted all along the Common River} Frog (Hyla vermicularis).

Mr. Simpson called on me this afternoon and read from a Scotch paper a very amusing article, a letter written in 1853 by Andrew Edward of Stonehaven, Scotland, to Mrs. Harriet B. Stowe who was coming over to make addresses against slavery.

Shelburne, N.H.

1909

June 13

This morning I took Mrs. Macmillan & Andrew Houseman to the Burghalud to see the Wrens. Two males were singing constantly in the trees and among the rocks near the house. We saw the pair together several times. They hopped over the piaggia like little shrews from the vine closely, but would take nothing into the basket. They constantly went under the piaggia which is bounded all round, through a little hole close to the ground at the southeast corner. I could hear the male singing and chattering there. They would come out from time to time the first, one being a long narrow opening close to the ground some ten feet from the above mentioned corner. I was at the entrance. This was taken in under the piaggia by the birds. Twice the male alighted on the chair a small boy on it sat on the porch under the basket but flew away without going to it. The porch is on the north side of the house, while the piaggia runs round the south (front) and east sides. Once the male, always shown by his constant singing, flew from the chair to the basket and pausing a moment on the lid entered the hole and remained there for a moment before leaving. He had nothing in his bill. While the pair were about the piaggia I heard the second male singing.

Shelburne, N.H.

1909

June 13 ^{House Wrens}
(3) ^{nest} ~~nest~~ some distance off among the trees and rocks. At times the two males would be singing at the same time. So there is ample evidence that there are three birds there, a pair and an extra male. Whether he has a mate or not I cannot tell.

We examined the basket again. The twigs occupy a good third of the space. No twigs touch the back of the basket but they line the bottom and front owing to the tilt of the basket as it hangs. There is a little lining but not much. There is an approach by a hollow in the conformation of the twigs at the bottom which is evidently where the nest should be.

What the action of the Wren is going to repeatedly under the pizza I cannot understand. They seem hardly to have deserted the basket and it seems a most unlikely place for a nest, as the space under the pizza is entirely ^{see} boarded in and is dark and close. July 4, 1909

Sheehan, N.H. to Cambridge, Mass

1904

June 14

Clear, warm but pleasant day —

We bade good bye to our friends this morning and took the 8.30 train home. Dr. Hunt, John B. Hawes went to Boston with us. We had a very pleasant run all the way. At Mechanic Falls and at Gilford I observed the trees. one each, *Sabicea hybrida* of *Sorbus hybrida* L. That I have noticed on the way down on June 3 last. They had borne copious flowers but the blossoms were gone by — I had hoped to see them in full white flower. The trees of *Rubus* that were in such fine flower on June 3 are gone by now too.

At Newburyport we saw a performance that was in pretty bad taste to say the least. A young married couple, as they were boarding the parlor car were assailed by their friends on the platform in full view of the general public, and were covered with confetti from head to foot.

At Boston we left Dr. & Mrs. Hawes and came out to Concord where we had a hearty welcome from Dr. Thos. Codridge and Miss Brown. Mrs. May called in the evening.

Yesterday Mrs. Philbrick found a large patch *Pyrus* of Chokeberry (*Pyrus melanocarpa* (Michx.) Willd) a few rods from *melanocarpa* the road on the slope of Hack Hill, opposite Wheeler Bog, a few rods from the main road, and off the road to my hills. *Wheeler*
Bog // The patch was some ten feet across. *Pyras* \rightarrow E
I have traversed some main road

Plants collected in Shelburne, N.H.

1909

June 27 The Shelburne plants are dried and labelled. I have collected and pressed one hundred sheets. Of these forty-five (45) sheets are of the genus *Viola*. These include the following species -

Viola cucullata L.

" *septentrionalis* Greene

" *Selkirkii* Pursh

" *pallens* (Sav.) Brainerd

" *incognita* Brainerd

" *renifolia* Gray

" *rotundifolia* Michx.

" *scabriuscula* Schwein

I might have found *V. nephrophylla*,
Sororia, *fimbriatula*, *blanda*, *canadensis*,
cuprea, *labradorica*, *arenaria*.

The first two species, *cucullata* & *septentrionalis* were exceedingly abundant, the former in wet places, the latter on the intervals, in dry pastures, by roadsides both moist & dry. Of *Selkirkii* I got a single specimen in the woods on Int. Evans at Endicott Farm. *Pallens* was in wet sprucey soil, *incognita* & *renifolia* in wet soil and in rich ground in shade. *V. rotundifolia* was in rich woods. *V. scabriuscula* I found abundant in one spot by the road, in shade.

Cambridge, Mass.

1909

June 15

Clear, rather warm.

This morning I spent in clearing up and doing errands at Harvard by name, Cambridge post Savings Bank etc. I went to Novalex and got my paper envelopes that Miss Fannie Switzee has been making for me - They are very satisfactory.

This afternoon, I visited Will Brunsen's *Viola* garden to get *Viola papilionacea* in fruit. *papilionacea* is now absolutely rank, covering large areas with interlacing leaves a foot or more in height. The stout rootstocks form a mat just below the surface of the ground and there is a great abundance of fruit, the large pod 15 mm. long. Many of the leaves are five inches broad. I took a number of specimens.

This evening I went up and called on Dr. Thomas B. L. Robinson finding no one there, but the two Misses Jackson and Paul Kelsey with his 'cello. We had a very delightful time. I read to Dr. Robinson Prof. Penobscot's paper on *Rhodora* and he wants to publish it in *Rhodora* after presenting it to the board -

190⁴
June 16

Glastonbury, Mass.

Clear, cool day -

I stayed at home today busied with various things. We expected Howard Philbrick but he didn't come - Harry Frost, Henry Purdie and Turner all called this evening.

I witnessed this afternoon between 6:15 and 7 o'clock the marvellous sight of Ichneumon flies depositing their eggs. Carl flies called my attention to it. They were on one (Malissa of the Norway Maples on Reed's Ave. by the Chapman's house and were from three to six feet above the ground. There were four females, three of them alike, black with gold trimmings. They must have been nearly ten inches long from tip of antennae to tip of ovipositor. The fourth female was smaller and of a brownish color with some light stripes. They assumed the customary attitude, with body arched and the three long threads circling over the back and inserted into the trunk. They all were inserting their tubes into the holes of a borer probably a Horntail. While I watched one of the flies, she expanded the rear of the body with a broad membrane and worked her body evidently depositing her eggs. Then she withdrew her threads and walked along the trunk, occasionally drawing them through her hind legs extended behind as far as she could. As I watched, a male appeared, a much smaller insect and remained on the trunk near by.

June 19

Trips w Lancaster, Mass.

Cambridge Mass

Clear and cool -

Dr. B. L. Robinson and I took the 8.23 A.M. train from Cambridge Junction and met Col. Bayard at South Lancaster at about 9.30. We drove with Museum and spent some time most pleasantly looking over the building and collections. Then we drove over to the new pond that John has made of several acres for ducks. It is in the valley across the road from the house and is most attractive. There are over 80 Ducks & Geese. I saw a ♀ Mallard setting on eggs in the grass. There are Egyptian Geese, Wood Duck, Loon & Canada Goose, English Pochards, Shovelers, etc. etc.

We then met Bayard Bayard and we all went over to the Pleasanton preserve. There are different species now being raised. Golden, Reeves, Silver, Lady Campbell, Riga-necked Mongolian. We saw eggs, chicks, old birds everywhere. Saw a Hen setting on eggs. Then we went to the Greenhouses, where the Nectarines are nearly ripe. I took one home to m.

At John's house we talked over plans for our enlargement to the Habermann, which he approves of. We stayed with him till we returned by the Lancaster train to No. Cambridge in the middle of the P.M. After a delayed day -

1909

June 21

Cambridge, Mass.

Clear, very hot. 86° Fahr. in the shade.

An exciting day - Lucy, Helen & Mary Dexter after nearly seven months absence, (November 27 - June 21) arrived this morning from the steamer 'Cymric' which came up to the dock in Charlestown early, having anchored during the night in the harbor. We met them at their barge. All were well and bright. Later Charles arrived from Chicago to get his degree. He hadn't seen him for a year. Tower took his last exam. (German) this morning.

Mary Dexter brought me 53 postcard of views in Paris, not one a duplicate of the few or more I already have. I have stamped them all. I shall enjoy them immensely.

I worked on my Shelburne plants this afternoon, naming and labelling a number.

This evening I called again on the Dexies. Tower, Charlie Cogswell & George called.

Cambridge Mass.

1909
June 23

Clear, some clouds, hot, cool at the wedding.
Wedding of A. S. Pease & Henrietta Taxon.
I took the 10.20 A.M. boat at Rowes Wharf
for Nantasket. H. H. Bartlett & Moore and
father, Rev. Mr. Kidder, Dr. Otis, Mrs. Bates & 2 daughters
& Miss Briggs were the ones I knew among the
guests. At Nantasket, barges took us to the
house of Mr. & Mrs. Taxon, Jr. along the Freshwa-
ter Road 8 or 10 miles from the wharf.
One of the Mrs. Taxons pointed out to me the site
of the old Black Rock Hall where I once
was a boy & said. The Taxis house is one of
many lovely cottages with pretty lawns & shrubbery
& verandas. It almost overhangs the water
at high tide and commands a fine view.
Morning light is prominent.

I met Mrs. Taxis, Sen., Mrs. Pease, Mrs. Otis
and the Taxons. The couple were married on
the piazza by Mr. Kidder. Little children in white
holow, ribbons of white silk, strong & strong
came in from the house followed by the others.
Everything went off smoothly and the collation
that followed was partaken on the piazza.

Dr. Otis told me that Charlotte (Aunt Anna's)
had died some two years before and during
her gone to pieces in his business. His
sister didn't see how she could help him.
It seems a retribution for the past.

I took a barge from the house at 2.10 and re-
turned home as I went reaching the house at 4.30.
I saw a seal in the harbor and an inflated seal
skin, cut up, as a boy. Lucy & Helen teased with
me as Helen went over my large matriculation photos from Mass.

Cambridge Mass

1909

June 25

Class Day

Clear intense heat. 91° here - 94° in Harvard at 1 P.M.

After doing some chores in Harvard this morn.

I took mother & about 2 P.M. to Edmund Kelly's speech at the Hemenway Gym. It was a handsome affair. We met all our old Jeffrey friends, Mr. & Mrs. Kelley, Randolph & Ruth Kelley.

Brought along fiancee Miss Pringle, Mrs. Jewel & Prichett, Mr. & Mrs. Gilmore, Gladys & Edmund -

Gladys I met this morning. She is a fine girl and is going to teach in Newton next year. Ed hope graduates this year. Then we went to the Stadium. The games were as usual and the beautiful effects of light & shade, fine dresses, confetti & streamers was unsurpassed.

In evening I went to the new President's first reception at the old home for so many years of President Eliot. I shook hands with President & Mrs. C. Lawrence Lowell and passed on through the College Yard, admiring the (lighted) band, fairly dressed people and especially two large fountains at each end of the yard. The pond, built up of wood, was some fifty feet across, and jets of water a few inches apart were thrown from a pipe that ran round the pond. These jets met in the center and fell in a volume. The effect was beautiful.

On my return home, Will Brewster called. He has finished his Umbagog visit and goes to Westover soon. I have not heard the great chest. My brother went to Princeton last night & Helen their & he

Cambridge, Mass.

1909

June 26

I found to-day Carex muricata L. growing freely in the front lawn of 17 Brewster St. where Prof. A.O. Norton lives. The family are away and the lawn has been left uncut for some time. The grass is about 6 in. tall and the Carex grows amongst it, the longest culms running through the grass near the ground and projecting the spike a few inches above the top of the grass. I took a number of specimens.

Cambridge Mass

1909

June 27

(1)

Celeste, cool -

I worked on my plants this morning and Red-headed
called on Bill Braaten at the Museum. He Woodpecker
sails for Europe on July 14. He told me of nesting in
the nesting of a pair of Red-headed Woodpeckers Waverley
in Waverley and after dinner I took Arthur
Allen and went by electric to the slope of the
hill beyond the Wood road leading to Belmont.
Here there was in former days an attractive
wood where I used to botanize. It is now
being gradually built upon. One house close
to the road belongs to the real estate agent
J.V. McCarthy, who with his two small boys
was very polite in showing us the bird.
The hole is in a dead limb of a large Barn-
wood tree that is about half alive, some forty
feet up directly in front of a house quite
near the first house and perhaps 100 feet from
the road in plain sight. The birds were coming
and going at intervals of a few minutes. I once
saw both birds. Sometimes they would alight and
enter the hole immediately, at others they would
pause a moment by the hole. They left the
hole either directly or would put the dead
out and remain looking about a moment,
the deep red head making a brilliant color spot.
Almost, if not always invariably on leaving the hole
the bird flew round the edge of Belmont house
and alighted on the dead branches of a rather
tall tree nearby and farther away from the
main road. Hopkins is not there for a while

Cambridge, Mass.

1909 A woodpecker Red-headed
 June 27 them for some time - The boys said that they
 (24) saw the birds when they began to make the nesting or
 hole in the tree. They also said that the
 birds had nests in the vicinity last year
 and they conducted me to a dead hickory
 not more than thirty feet from the road and
 perhaps one hundred feet from the present
 site, where they showed me the hole not
 more than fifteen feet up. They said the bird
 brought forth four young - Will Brewster,
 whom I talked with this evening, says
 he cannot imagine Redheads building in
 such a place and he is inclined to think
 that they must have been Flickers. The
 hickory is quite hidden from the road
 by other trees. Altogether it was a most
 interesting observation - We were home
 again in about a hour and a half -

I finished up my Shelburne plants
 this afternoon and have put them
 away for the present

We walked up to Dr. Sparks' lot
 this evening and saw Martha, Charles,
 former and the others - Will Brewster
 & Randa called -

M. & I are going to Shelburne to
 visit the McMillans next Wednesday,
 the 30th. M's cold is very much
 better and she looks forward to going.

1909

June 30

Cambridge Mass. to Shelburne, N.H.
Visit to Mr. & Mrs. G. N. McMillan -

Clear & cloudy with a few drops of rain
in the afternoon. Cool.

M. & I took the 9 A.M. train, North Station
B. & M. R.R., Eastern Division, Pullman Car, and had a
pleasant trip to Gorham, N.H., reaching there at
5:20 P.M. About Lynn & Salem the fields and
hills were yellow with *Gentiana lutea*, a *Gentiana lutea*
most beautiful sight. A little north of
Portland, I saw large patches of *Hieracium aurantiacum* *Hieracium*
aurantiacum, in full flower. The rich deep
orange color is most pleasant to the eye, but
the plant is a sad weed. Farther on there
was a great abundance of *Trochomeria hybrida*
covering fields, while *Ranunculus aquatilis*
in full flower was abundant everywhere.
Thlaspi pratense was in flower in wet places
near the track and north of Portland *Nicotiana*
Quercus was everywhere.

We met Mr. & Mrs. & Andrew McMillan at
Gorham and in the auto we sped home.
Mr. McMillan then drove to Upper Gorham and
met Mr. Paul Kelsey who will stay a few
days. He had a very bad headache on his
arrival and went right to bed.

It is as lonely as ever here. Ellen gratified
us and the evening passed as pleasantly as
usual.

The grass is nearly ready to eat -
This morning Ellen & Mrs. McMillan saw two
Larks on the Lark Promenade -

Antennaria neotropica

The name of the label
is the one Fernow
gave me. I think
it was the above
