Peer review

I have had a look at the medical gallery of Mikael Häggström on July 23, 2014, as available online at the following URL:

https://en.wikiversity.org/wiki/Medical_gallery_of_Mikael_Häggström

Following are some comments:

- The image depicting cervical length measurement (shown at right) is inaccurate, because the vaginal transducer appears to compress the cervix, and the measurement is fragmented while the correct measurement is one single distance. Also, the dorsal margin of the cervix is very diffuse.

- The sonohysterography image (shown at right) is very unclear and inconclusive, and cannot exclude the presence of a polyp.

I am a fellow coworker with Mikael Häggström, otherwise I state no conflicts of interest.
