WORLD COFFEE CROP

VIRTUALLY UNCHANGED

CURRENT SERIAL RECORDS

Summary

Despite a number of individual country changes, the Foreign Agricultural Service's second estimate (September) of the world coffee crop for the marketing year 1968-69 remains at approximately the same level as the first estimate (June). Significant increases for some countries were balanced off by decreases for others. The outlook now is for total harvested production of 62.7 million bags,^{1/} which would provide exportable production^{2/} of about 45.7 million bags.

Estimated exportable production, therefore, remains substantially under anticipated world import needs, thus allowing further drawdown during the coming year of the abundant stocks held in certain producing countries.

Among the series of production changes, up or down, in a number of countries, the most significant were a decrease of 1 million bags in the 1968-69 forecast for Brazil and an increase of about 15 percent for the Ivory Coast.

There have also been some minor changes in the figures for 1967-68, although the overall total remains at 68.1 million bags, with exportable production at 51.6 million.

^{1/} All bags in text and tables are of 60 kilograms (132.276 lb.).

^{2/} Exportable production: Total production less estimated domestic consumption.

1/ Coffee marketing year begins about July in some countries and in others about October. Exportable production represents total harvested production minus estimated domestic consumption. 2/ Of 60 kilograms each.

3/ Includes Guadeloupe, Hawaii (USA), Jamaica, Martinique, Panama, Puerto Rico, and Trinidad and Tobago.

4/ As indicated in footnote 1, the coffee marketing year begins in some countries as early as July. Ecuador is one of these countries. Hence, the crop harvested principally during June-October 1967 in that country is shown as production for the 1967-68 marketing year. In Ecuador, however, this is referred to as the 1966-67 crop. 5/ Includes Bolivia, Guyana, Paraguay, and Surinam. 6/ Includes Cape Verde, Comoro Islands, Congo (Brazzaville), Dahomey, Gabon, Ghana, Liberia, Nigeria, Sao Tome and Principe, and Spanish Guinea.

7/ Includes Malaysia, New Caledonia, New Hebrides, Papua and New Guinea, Portuguese Timor, South Vietnam, and Yemen.

Foreign Agricultural Service. Prepared or estimated on the basis of official statistics of foreign governments, other foreign source materials, reports of Agricultural Attaches and Foreign Service Officers, results of office research and related information.

1/ Coffee marketing year begins about July in some countries and in others about October. Exportable production represents total harvested production minus estimated domestic consumption. 2/ Of 60 kilograms each. 3/ Includes Guadeloupe, Hawaii (USA), Jamaica, Martinique, Panama, Puerto Rico and Trinidad and Tobago. 4/ As indicated in footnote 1, the coffee marketing year begins in some countries as early as July. Ecuador is one of these countries. Hence, the crop harvested principally during June-October 1967 in that country is shown as production for the 1967-68 marketing year. In Ecuador, however, this is referred to as the 1966-67 crop. 5/ Includes Bolivia, Guyana, Paraguay, and Surinam. 6/ Includes Cape Verde, Comoro Islands, Congo (Brazzaville), Dahomey, Gabon, Ghana, Liberia, Nigeria, Sao Tome and Principe, and Spanish Guinea. 7/ Includes Malaysia, New Caledonia, New Hebrides, Papua and New Guinea, Portuguese Timor, South Vietnam, and Yemen.

Foreign Agricultural Service. Prepared or estimated on the basis of official statistics of foreign governments, other foreign source materials, reports of Agricultural Attaches and Foreign Service Officers, results of office research and related information.

Imports into the United States during the first 7 months of 1968 were up nearly 19 percent as compared with the same period of the preceding year. A breakdown of the data by geographic area shows that imports from Africa and Asia rose to over 35 percent of the total from about 33 percent in 1967, while imports from Brazil increased from 26 percent of the total last year to about 32 percent for the same period in 1968. The share of imports from Latin America, other than Brazil, fell sharply during the first 7 months of 1968 to about 33 percent of the total, as compared with over 41 percent in the same period a year earlier.

The International Coffee Council (ICC) met during late August-early September, its final meeting under the 1962 Agreement, and agreed on a quota level of 47.9 million bags for the 1968-69 coffee marketing year (October 1 - September 30). An additional 1.5 million bags--a so-called reserve quota--would be made available to the market during the last three quarters of the marketing year if prices remain above a predetermined level.

Production

Latin America: The estimate for 1968-69 production in Brazil has been revised downward on the basis of recent information from trade and other sources. It is assumed that most of the new-crop coffee will be exported while IBC (Brazilian Coffee Institute) stocks are drawn upon for domestic consumption.

Latest reports indicate that drought damage on the Island of Hispaniola was less severe than anticipated. Production in Haiti and the Dominican Republic in 1968-69, therefore, is expected to be at about the same level as the preceding year. Costa Rica expects record production in 1968-69 substantially higher than preceding years.

It now appears that Ecuador's 1968-69 crop will be less than anticipated as a result of drought in the main producing area.

Africa: Angola should have another good crop in 1968-69 though somewhat smaller than the revised estimate for 1967-68. Favorable weather conditions have improved the outlook for 1968-69 in the Ivory Coast, and Uganda is expected to harvest a record crop. Estimates for Burundi, Congo, Cameroon, and Guinea are also up.

Overall, it is now believed that 1968-69 production in Africa will be up about 3 percent as compared with the previous year.

Asia and Oceania: There have been no changes in the production estimates for the countries in this area.

Smaller Producing Countries: Exportable production in the smaller producing countries is estimated to be as follows (with comparable 1967-68 estimates in parentheses), in 1,000 bags of 60 kilograms each: Jamaica 8,000 (9,000), Panama 26,000 (22,000), Puerto Rico 5,000 (5,000), Trinidad and Tobago 55,000 (59,000), Bolivia 35,000 (35,000), Paraguay 64,000 (29,000), Congo (Brazzaville) 12,000 (9,000), Dahomey 16,000 (13,000), Gabon 13,000 (13,000), Ghana 83,000 (92,000), Liberia 63,000 (56,000), Nigeria 48,000 (49,000), Spanish Guinea 110,000 (110,000), New Caledonia 30,000 (30,000), Papua and New Guinea 275,000 (275,000), Portuguese Timor 40,000 (43,000), and Yemen 40,000 (50,000).

Trade and Other Developments

World coffee imports during the first three quarters of the ICO marketing year (October-September) were substantially larger than a year earlier. According to trade sources, 40.0 million bags were imported between October 1, 1967, and June 30, 1968; this compares with only 38.0 million bags imported during the same period of 1966-67.

United States. During the first 7 months of calendar year 1968, U. S. imports of green coffee amounted to 14.9 million bags, substantially larger than the 12.5 million bags imported in the same period in 1967. As a result, inventories rose sharply to an estimated 4.1 million bags on July 31, 1968, an increase of about 1,250,000 bags (44 percent) above stocks on July 31, 1967, and approximately 1,775,000 bags (77 percent) above stocks on December 31, 1967. Imports in August were also larger than average and stocks continued to increase.

U. S. imports from Brazil amounted to 32 percent of the total during the first 7 months of 1968, followed closely by imports from Africa, which accounted for 31 percent. The share of Latin America, other than Brazil, decreased to 33 percent during the same period. In the same months of 1967, these countries had provided 41 percent of U. S. imports.

Reversing the trend of the past few years, U. S. imports of soluble coffee during the first 7 months of 1968 were off 5.9 percent as compared with the previous year, decreasing to 13.9 million pounds (315,433 bags, green weight equivalent) from 14.8 million pounds (335,373 bags, green weight equivalent) in 1967. As in the recent past, most of these imports came from Brazil. France retained its position as the second most important supplier, though its shipments of 781,000 pounds during the period January through July 1968 were substantially less than the same period of 1967 when it shipped 1.0 million pounds.

Total U. S. roastings during the first 7 months of 1968 amounted to an estimated 12.3 million bags, up about 120,000 bags (1 percent) from the first 7 months of 1967.

Prices: Prices of the four main coffee types indicated somewhat divergent trends during the third quarter of calendar year 1968. Colombian milds and Robustas, both of which broke through the "ceiling" of their price ranges early in the quarter, declined slightly following quota increases but remained at or near their ceiling for the remainder of the quarter.

Unwashed Arabicas showed great stability, remaining at about the midpoint of their range throughout the period.

Other milds, in contrast, increased in price during the month of June and then declined to about the midpoint of their range.

The outlook for prices during the 1968-69 marketing year is for relative stability, with the effect of the fairly low initial ICA quota of 47.9 million bags being slightly offset by the larger than usual stocks now being held in some importing countries, notably the United States.

Only minor adjustments were made to the price selectivity ranges adopted by the ICC which, for the coming year, will be as follows:

	<u>Floor</u>	<u>Ceiling</u>	<u>Change</u>
	<u>¢/lb.</u>	<u>¢/lb.</u>	<u>¢/lb.</u>
Colombian milds	39.25	43.25	Up 0.50
Other milds	37.25	41.25	No change
Unwashed Arabicas	35.25	39.25	No change
Robustas	30.50	34.50	Ceiling up 0.25

Quotas will be increased or decreased, according to the circumstances, by 3 percent when prices move out of these ranges for a specified period of time.

International Coffee Agreement: The ICC, in addition to setting the new price selectivity ranges, agreed upon a total global quota level of 49.3 million bags for 1968-69. This quota is comprised of initial effective annual quotas amounting to 47.9 million bags plus a reserve quota of 1.5 million bags which may be made available to world markets during the second, third, and fourth quarters of the coffee year. This quota reserve is to be released in installments of 500,000 bags each provided that the composite market price remains above 37.40 cents per pound for 15 consecutive marketing days.

Numerous discussions were held, and some progress made, toward adoption of the statutes which will govern the operation of the Diversification Fund.

It was also agreed that measures to control illegal shipments or diversions of coffee from Annex B countries, though notably more effective than in previous years, required still further strengthening. A meeting of experts is to be held in late October to consider ways and means by which this can be accomplished.

Although the Council dealt successfully with a number of the issues, the fundamental problem of the disequilibrium between world production and consumption remains unresolved. It is recognized that the problem of production controls and diversification is an extremely complex one which will not easily be resolved. It is all the more urgent, therefore, that a start be made quickly. In this connection, it may be noted that under the terms of the new Agreement each exporting country must submit to the Executive Board, prior to December 31, 1968, its proposed production goal for 1972-73. It is hoped that the countries concerned will give serious consideration to this task and that the goals proposed will be realistic ones.
