GREETINGS 1930

We are pleased to know that our unending efforts for Seed Service are appreciated. How do we know? By the increase in business and expressions of appreciation by many of our friends and customers. It is truly said, "THAT HE WHO SERVES BEST PROFITETH MOST." It is also true that, HE WHO IS SERVED BEST PROFITETH MOST. Our business is established to be a Real Service to the Market Gardener, Florist and Seed User in general who wishes to have a source of supply for the best varieties of dependable seed. Prompt and efficient personal service is assured. Many years of experience, excellent shipping facilities, large stocks, make it possible for us to care for your orders intelligently and efficiently.

Part of our service is to keep down the multiplicity of items caused by improvements and introduction of new varieties. We select the new of proved worth, to replace an old item that has been improved upon. The old is dropped. WE LIST ONLY THE BEST OF A TYPE.

One word more—be friendly, use our store and make it headquarters when in town.

Seed Insurance.—To produce a crop of high-grade salable vegetable, or any crop, it is necessary to sow seed of good strain, strong germination, and freedom from disease.

Personal selection from the products of expert seed growers who are constantly developing better strains enables us to offer stocks of outstanding merit. Any selection from the Bofferding Seed Co. list will give you the best of its kind. We aim to offer the best; that is why we are eliminating a number of varieties from our catalog this season.

Germination.—Every lot of seed in our stock is tested for germination.

Seed Disinfection.—Last year we announced that all seed would be treated; postal authorities have ruled that mercury treated seeds are poison and cannot be sent through the mails, so we are compelled to discontinue this service.

Note:—Order a supply of Semesan and treat the seed, simple and effective. See page 34.

Carry Over Seed Supply.—Do not be afraid to buy two years' supply. If you buy enough for two years' planting you will have seed on hand that you have proved yourself. Especially, Cabbage, Cauliflower, Radish, Beets, Lettuce and Cucumber—in fact most any seed of strong germination will be as good, and in some cases better of germination the second year. We urge and advise this practice.

FLORISTS AND PLANT GROWERS ATTENTION

We at all times have on hand many items of perennial and other seeds which we do not list in this catalog. Ask for our special lists, for Florists and Large Plant Growers.

Bofferding Seed Co. gives no warranty, express or implied, as to description, purity, productiveness or any other matter of any seeds, plants or bulbs we send out, and we will not be in any way responsible for the crop.

1930 NEW AND IMPROVED STRAINS

This page will warrant the careful consideration of Market Gardeners. Each year there are a few new items which after trial have proved themselves to be superior and only after they have showed themselves worthy have we listed them. WE RECOMMEND AT LEAST A TRIAL OF EACH OF THESE ITEMS.

BEET

Improved Detroit Dark Red. (Growers description.)—In this beet we have eliminated the bronze and red tinged tops and one sees now in a large field of them only the uniform gray green which renders them valuable for cooking as greens. The root itself is smooth and runs true globe shape. But its greatest claim to superiority is the deep uniform fresh-blood color of the flesh of the root. It is not only clear fresh-blood color but the deeper rings are quite inconspicuous. The texture is fine grained and the flesh is crisp and sweet. Pkt. 10c; oz. 15c; $\frac{1}{4}$ lb. 45c; lb. \$1.50.

NEW CARROT

Morse's Red Cored Chantenay.—The tops are shorter and the foliage finer than the regular Chantenay. However the tops are not brittle and are strong enough to bunch easily.

The roots are refined in appearance with small collars, are evenly stumped and have small rat-tails. Surface of roots, smooth and free from large eyes and small rootlets. Color rich orange, core small and nearly the same color as the flesh. Length $5\frac{1}{2}$ to 6 inches long, 2 to $2\frac{1}{2}$ inches at the shoulder, broad at the bottom, often measuring $1\frac{1}{4}$ to $1\frac{1}{2}$ inches just above the rat-tail. Matures a little earlier than the regular Chantenay.

This New Carrot, we believe, is the best bunching variety offered. Pkt. 10c; oz. 20c; $\frac{1}{4}$ lb. 60c; lb. \$2.00.

CELERY

Golden Phenomenal.—The general characteristics are those of the Golden Plume, but it is decidedly taller and the stalks are much longer in the joints. Tall as Paris Golden Self Blanching, 27-28 inches over all and from eight to nine inches to the joint. Season for planting is the same as Golden Plume, being intermediate between Tall and Dwarf Golden Self Blanching.

The plants are heavy, compact and full hearted. Stems broad, thick, brittle and free from strings, of fine flavor and excellent quality all through. Pkt. 25c; oz. \$3.00.

NEW SWEET CORN

Golden Hummer.—Extra early yellow sweet corn, matured in the field trials in 69 days, 10 days in roasting ear stage, ear 7 inches long, 10 rowed and stalk 4 feet.

Six days earlier than Golden Sunshine, sweet and uniform in maturing. Try this. Pkt. 10c; lb. 40c; 5 lbs. \$1.75.

LETTUCE

New York No. 12. (Growers description.)—This is a single plant selection of our own culture which we have been breeding for several years. We believe it to be the outstanding selection of this variety and a great improvement over any existing types of New York.

No. 12 is much earlier, makes large solid heads, uniform in maturing and of the flat head type. Several fields of this strain produced better than 80% No. 1 heads in 65 days from planting. Pkt. 10c; oz. 25c; $\frac{1}{4}$ lb. \$1.00; lb. \$3.50; 5 lbs. \$15.00.

TOMATO

Super-Standard Bonny Best (Stokes).—An exceptional outstanding strain, heavy yielder of uniform large, smooth, round, high-colored scarlet fruits, very early. This seed selected with great care and cost will produce top price tomatoes. Yields reported as high as 14 tons to the acre, maturing before market glut. We recommend a trial against the best tomato you have. For Greenhouse or Outdoor. Pkt. \$1.00; $\frac{1}{2}$ oz. \$3.00; oz. \$5.00; $\frac{1}{4}$ lb. \$18.50.

**BOFFERDING'S
SUPER SELECT****LAWN GRASS SEED****RECLEANED
HIGH GERMINATION**

Our lawn grass seed contains only the highest grade of grasses for the making of a beautiful and durable lawn. It germinates quickly. Root deeply. This enables it to withstand the intense heat of summer and the severe cold of winter, showing beautiful rich green from early spring until late fall.

No annual grasses for making quick show are used to the detriment of a permanent lawn, but only those which are lasting and hardy.

A lawn once established from our Super Select seed will last for years. From six to eight weeks time is all that is required to form a close, thick turf of rich, velvety lawn.

Bofferding's Super Select Lawn Grass Seed—For new lawns use one pound to 300 sq. ft. Lb. 45c; 5 lbs. \$2.00; 100 lbs. \$37.00.

Shady Place Mixture—On all lawns there are shaded spots which are bare and unsightly, for these places a mixture has been made comprising some of the grasses adapted to shady spots and our mixture will grow where ordinary grasses would fail. Lb. 50c; 5 lbs. \$2.25.

Kentucky Blue Grass—Used alone or mixed with white clover for the lawn. Lb. 45c; 5 lbs. \$2.00; 100 lbs. \$35.00.

White Clover—The best clover for lawns. Lb. 55c; 5 lbs. \$2.50.

There are many grasses that can be used to advantage to meet soil and use requirements. We make special mixtures based on the root system, coarse, rough or fine smooth stocks and leaves. Deep rooted and creeping grasses. Let us know the conditions.

ARMOUR'S LAWN AND GARDEN GROWER

For rich green velvety lawns, beautiful flowers, luxurious shrubs and early succulent vegetables use a perfectly balanced, concentrated plant food. These classes of plants need large amounts of Nitrogen (Ammonia) and Potash. Nitrogen gives the rich green color in stems and leaves together with vigorous growth, while Potash helps develop the roots and stalks and makes the plants more resistant to diseases.

VERT ARMOUR'S LAWN AND GARDEN GROWER contains 50% more Nitrogen and Potash than most lawn and garden fertilizers. It also has four times as much total plant food as the best dried manure and a 100-pound bag contains as much plant food as a whole wagon-load of stable manure.

DARLING'S FERTILIZERS

Fertilizers—As we all know that this is only another word for Plant Food. Just as in animal food there must be a relation to the carbohydrates, fat and protein, so with the plant foods there must be supplied proper amounts of Lime, Phosphorous, Nitrogen, and Potash. In as much as most of the soils have sufficient lime or are treated with ample amounts, this element is left out of the commercial fertilizer as a factor.

The first figure in analysis indicates per cent of nitrogen, the second, per cent of phosphates, the third, per cent of potash. We recommend the following in general. If you have special problems consult with us:

3-12-12 GENERAL TRUCK High land no manure.

2-12-2 General high land GRAIN, MEADOWS, Fodder or Silo Corn.

4-16-4 Corn with no manure or high land short humus.

4-8-7 Potato Special where no manure or humus, high land light moisture. (Use Truck Grower where have enough moisture 3-12-12.)

0-9-27 Peat land Potatoes and general crops.

0-14-14 Peat Onions.

0-20-0 Superphosphate to complete manure analysis, 70 lbs. to ton of manure or 1 lb. per cu. ft. manure.

Nitrate of soda or calcium nitrate where quick leaf growth is needed.

Potash promotes high color and sweetness.
