

GAZETTEER TO MAPS OF RYŪKYŪ-RETTŌ

ERRATA

Ogasawara-gunto 1:50,000 First Edition is incorrectly designated AMS W771. The correct series designation is AMS W711.

On page vii, par. 2 "are reproduced on page 00" should read page x.

**GAZETTEER TO
MAPS OF
RYŪKYŪ-RETTŌ**

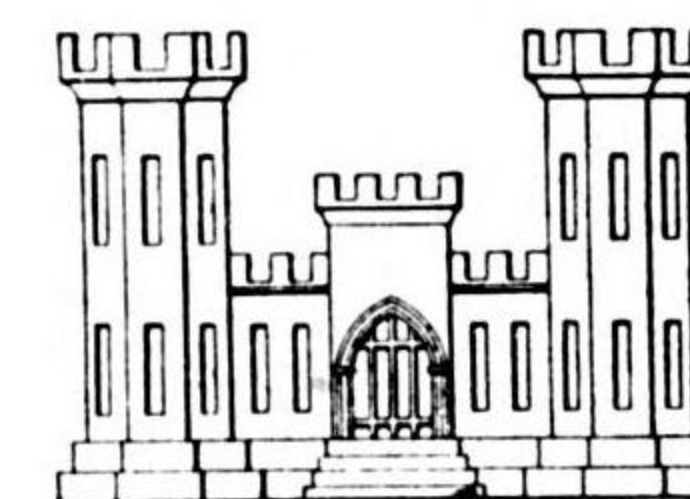

AND

OGASAWARA-GUNTŌ

MAP SERIES AMS L891, L791, W771, L591

SECOND EDITION

JANUARY 1945

WAR DEPARTMENT

ARMY MAP SERVICE

CORPS OF ENGINEERS, U. S. ARMY.

WASHINGTON, D. C.

Gazetteer to Maps of
RYŪKYŪ-RETTŌ
AND
OGASAWARA-GUNTŌ

Second Edition

This gazetteer is based on the following map series:

Ryūkyū-rettō 1:25,000 First Edition, AMS L891.

Ryūkyū-rettō 1:50,000 First Edition, AMS L791 (used for areas not covered by AMS L891).

Southern Japan 1:250,000 Second Edition, AMS L591 (used for areas not covered by AMS L891 or L791).

Ogasawara-guntō 1:50,000 First Edition, AMS W771.

An index map at the end of this volume shows the layout of the sheets in these series, and indicates the areas for which each was used.

The gazetteer is designed to facilitate the finding on the maps of inhabited places, natural features, and other named places. All names are transcribed according to the Modified Hepburn (Romaji) system of transliteration (see Notes on Japanese Place Names, page vi). In alphabetizing the names a strict letter sequence has been followed without regard to diacritical marks, hyphens, or word separations. Listings are columnated as follows:

COLUMN 1

Names.—Names are listed as they appear on the map, including diacriticals, hyphens, and word separations, and are in alphabetical order. They are given in lower case letters regardless of how they appear on the map.

Variant or alternate names shown on the maps are listed, and are cross-referenced to the preferred names.

Names which are spelled alike, have the same designation, and are shown by the area code in column 3 to be in the same area, are indicated to represent separate features by a symbol placed after the name and a footnote.

COLUMN 2

Designation.—The designation of features named, i.e., town, village, mountain, etc., is given in column 2. For a key to designation abbreviations see the table which follows.

ABBREVIATIONS FOR DESIGNATIONS

Archf	Archipelago	Munic	Municipality
Cany'n	Canyon	Pena	Peninsula
Cas	Castle	Pl	Plateau
Chan	Channel	Pref	Prefecture
Cnty	County	S	Stream
Hbr	Harbor	Shls	Shoals
I	Island	Shr	Shrine
I Chn	Island Chain	Str	Strait
Is	Islands	Tw'ns'p	Township
I Grp	Island Group	Vil	Village
Mt	Mountain		

**It is requested that errors and omissions be mailed direct to the
 CHIEF OF ENGINEERS, WAR DEPARTMENT, WASHINGTON, D. C.**

COLUMN 3

Area.—The political or geographical subdivision in which a feature lies is indicated in column 3 by means of an abbreviated code, the key to which is given below and on the index map. Both Ogasawara-guntō and Ryūkyū-rettō are subdivided into *ken* (approximately equivalent to prefecture), *gun* (approximately equivalent to county), and *island groups*.

Note: This Area Code is keyed to a master code for the Japanese Empire used by the A.M.S. for gazetteers of Japan.

COLUMN 4

Grid Reference.—The military grid reference to the location of features is indicated in column 4. This reference is divided into two parts, separated by an oblique stroke as follows:

Before the stroke—the AMS series number, indicated by means of a symbol, and the sheet number on which the feature appears. Series numbers are represented by symbols as follows:

- | | | |
|---|-------|----|
| AMS L89I—Ryūkyū-rettō 1:25,000 | | ** |
| AMS L59I—Southern Japan 1:250,000 | | * |
| AMS W77I—Ogasawara-guntō 1:50,000 | | † |
| AMS L79I—Ryūkyū-rettō 1:50,000 is indicated by the absence of a symbol. | | |

After the stroke—the grid reference of the southwest corner of the 1,000 yard square in which the feature appears is given for all names except those taken from AMS L59I. These latter names are located with reference to the 5,000 yard square in which the feature lies. The reference is to the World Polyconic Grid, Band III N, [Zone "A" and for Ogasawara-guntō and zones "B" and "C" for Ryūkyū-rettō] and consists of two groups of figures separated by a hyphen. The first group is the number of a line extending north-south and the second is the number of a line extending east-west across the map. The intersection of the two lines thus numbered is the southwest corner of the grid square containing the feature concerned.

COLUMN 5

Geographical Coordinates.—Latitude and longitude (from Greenwich) are given to the nearest one-minute for all names.

**GLOSSARY OF JAPANESE GENERIC TERMS
AND DESIGNATIONS**

The following generic terms, shown with their English meanings, are common terminations of Japanese place names. Terms with similar meanings are usually interchangeable, and the substitution of one for another does not alter the identity of the feature concerned.

<i>Japanese</i>	<i>English</i>	<i>Japanese</i>	<i>English</i>
-bana	point	-mine	mountain
-banare	rock	-misaki	cape
-bise (-bishi)	reef	-mori	mountain
-chi	pond	-mura	township
-dai	plateau, plain	-ne	rock, island
-dake	mountain	-saki	cape
-daki	waterfall	-san	mountain
-gan	rock	-sawa	swamp, stream, ravine
-gawa	river	-se	reef, shoal, rapid
-guchi (-kuchi)	channel	-shima	island

-ken	prefecture	-zaki	cape
-kō (-minato)	harbor	-zan	mountain
-kojima	islet	-zawa	swamp, stream, ravine
-machi	chartered town	-ze	reef

NOTES ON JAPANESE PLACE NAMES

1. General.

The following paragraphs present a brief summary of the major points and problems involved in transcribing Japanese place names. Individuals or organizations requiring additional place names over those available on sources with officially adopted romanized transcriptions should consult thoroughly one or more of the publications listed below:

1. *Geographical Place Names—AMS Memorandum Number 453*; Army Map Service, Corps of Engineers, Washington, D. C., 2 Feb., 1943, Revised 25 July, 1944 and Supplements.
2. *Guide to Geographical Names in the Japanese Empire*; U. S. Board on Geographical Names, Special Pub. No. 25, Washington, D. C., Aug. 1944 (available through the Army Map Service.)
3. *Directions for the Treatment of Japanese Place Names*; U. S. Board on Geographical Names, Washington, D. C., Aug. 1944 (distributed as part of AMS Memorandum Number 453 and available through the Army Map Service.)
4. *Glossary of Terms on Maps of Japan*; Army Map Service, Corps of Engineers, Washington, D. C., May 1944.

2. Systems of Romanization.

Since Japanese has no alphabet, the language cannot be transcribed directly into the English alphabet. Instead, a table of equivalents must be worked out in a more or less arbitrary manner. For instance, the sound represented by (シ) may be transcribed as "shi," "si," or "ci." In all cases, the actual pronunciation would be the same.

At present, four systems of romanization are used; namely, *Modified Hepburn* or *Rōmaji*, *Old Hepburn*, *Kokutei*, and *Nipponsiki* (the last two are frequently grouped together as *Rōmazi*). By far the best known is the Modified Hepburn System which is used by the Army Map Service. The name may be contracted to merely "Hepburn" or "Rōmaji." All names in this gazetteer have been transcribed using this system.

Rules governing transcription of Japanese place-names and geographical terms apply to those parts of the Japanese Empire in which the Japanese language is spoken by the great majority of the inhabitants. i.e., Honshū, Kyūshū, Shikokū, Hokkaidō, Karafuto, and the Ogasawara, Ryūkyū and Chishima Islands.

In the conversion of Japanese place-names from Chinese "characters" or *kana* to the Roman alphabet, the Romaji equivalents shown in the table of "Elementary Kana symbols" on page A-5 of

Rose-Innes' *Beginners Dictionary of Chinese-Japanese Characters and Compounds*, and the table of "Irregular Readings of the Kana Symbols and of their Combinations" on pages A-8, -9 of the same volume have been the guide. Both tables are based on the system used in the 4th edition of Hepburn's Japanese-English Dictionary and are reproduced on page 00 of this gazetteer.

3. Pronunciation of Japanese.

The Modified Hepburn system is based on the pronunciation of vowels as in Italian and consonants as in English. It parallels the system advocated by the Royal Geographical Society and the Permanent Committee on Geographical Names for all non-Roman-alphabet languages. Every letter is pronounced, even two or more adjacent vowels, since Japanese uses no diphthongs. Japanese has no accentuation.

Two vowels, O and U, frequently carry long marks ((\bar{O} , \bar{U}). These simply mean that the sound is held longer than normal, as the O sound in "though" and the U sound in "through." Double letters should be pronounced twice, just as in the English words "oneness," "dirk-cut," "cut tobacco" and "cooperation."

4. "Nigori" or "Muddling" of Certain Sounds.

In English, the pronunciation of some words is altered slightly for the sake of euphony. "The" is an example; we say "Thee apple" but "Thuh pear." Japanese carry this process (which they call "nigori") considerably further. Their word for island is "shima." When it sounds better, however, they pronounce it "jima." Thus, two adjacent islands will be named "O-shima" and "ko-jima." The same is true of River—"kawa" and "-gawa"; Mountain—"san" and "-zan;" Waterfall—"taki" and "-daki" and an interminable list of other common words.

Two equally well-informed Japanese persons may disagree on the proper pronunciation of a word, due to the ephemeral nature of "nigori." The very word for "Japan" is open to debate; the two ideographs (日本) can properly be pronounced either "Nippon" or "Nihon." Although the former was recently adopted as official, either is acceptable.

"Nigori" operates to change the spelling of numerous words composed of two or more characters. An important section of Tokyo is called Shimbashi (literally, "new bridge,") although the two ideographs in their pure form are pronounced "shin" and "hashi." The "pure" form, however, would be contrary to Nipponese ideas of euphony, hence the "muddling" of the "n" and "h."

Non-Japanese must bear in mind that such inconsistencies as the difference between "-shima" and "-jima," between "-kawa" and

“-gawa,” or between “Nippon” and “Nihon” are utterly unimportant. They signify no variation of meaning.

5. Plurals.

For all practical purposes, written Japanese has no plurals. “Yama” means either one mountain or a whole group of mountains; “shima” means one island or half a dozen; “se” signifies a rapids or a whole series of them. When it is necessary to make a distinction between singular and plural (as between Rocky Mountain and Rocky Mountains) a combination of two or more characters is used. Thus, one mountain is “yama,” and a range is “sammyaku”; island is “shima” and a group of islands is “gunto.”

6. Generic Terms.

Everyone who comes in contact with Japanese maps will be perplexed by the fluidity of the proper names. A given point of land will be termed variously, “-saki,” “-misaki,” “-hana,” and “-kaku,” depending on the map consulted. A mountain will be “-san,” “-dake,” “-mine,” “-yama” and “-mori,” and an island “-shima,” “-to,” “-sho,” “-shu” or “-iwa.” These discrepancies do not mean that the translator did a poor job or that the maps involved are unreliable. Uses of generic terms on physical features actually vary from person to person and from one year to another. Normally, there will be one preferred local name, but this cannot always be determined.

As in the case of differences due to “nigori,” such variations in names have no important significance. One will be understood, whether he says “Fuji-yama” or “Fuji-san,” “Paramushiru-shima” or “Paramushiru-to,” “Toi-saki” or “Toi-misaki.”

7. Variable Readings.

In addition to variations in readings and spellings as the result of the above reasons, differences may occur due to the application of variable readings to given characters in the written Japanese. Even experts may disagree as to which is the best reading of the characters composing a place name. To eliminate such variations, the readings given by certain selected gazetteers have been accepted as standard (see *Guide to Geographical Names in the Japanese Empire*, noted in paragraph one of these notes.) Where authorities do not exist, the most likely readings transcribed in light of the particular area concerned, are used.

8. Printing Form.

In printing Japanese place-names, the Army Map Service follows the principle that only one capital letter should be used in a name, except as provided in paragraph (h) below, and that the specific

name should be separated from the generic by a hyphen. This system involves the following rules:

- a. Such generic names as *kawa* (river), *shima* (island), *yama* (mountain,) *ura* (inlet,) etc., and untranslated political terms (*gun*, *mura*, etc.) are to be separated from the specific name by hyphens and begun with lower-case letters.
Ex. Asama-yama, Matsu-shima, Tone-gawa, Kaibu-gun, Yoshino-mura.
- b. Specific names are to be unhyphenated, regardless of length or meaning, except as provided in paragraph *c* below.
Ex. Matsushima-wan, Toyanomine-gawa, Shakuhachi-yama, Oshima, Ii-yama.
- c. Such preceding modifications as *Kita* (north), *O* (big), *Shin* (new), *Shimo* (lower), *Oki* (offshore), and comparable special words should be separated from the name proper by hyphens.
Ex. Minami-daitō-shima, Shimo-yamamoto-gun, Kuchino-erabu-shima.
- d. The syllables “ga” and “no” injected into a name in kana should be incorporated with the preceding character in case of hyphenation.
Ex. Tanega-shima, Komaga-dake, Sankakuno-saki.
- e. Care should be taken to differentiate between actual geographical features and communities named after them. The latter should be written without hyphens, regardless of length, except as provided in paragraph (*f*) below.
Ex. Kawasaki (city) and Kawa-saki (cape); Matsuyama (city) and Matsu-yama (mt.); Ichino-se (rapids) and Ichinose (village).
- f. Bona fide modifications of a community name, intended to differentiate one town from another, should be set off from the name proper by hyphens.
Ex. Karuizawa and Shin-karuizawa, Otani and Otani-shinden.
- g. The word *shi* (city) indicating a chartered city, and *machi* (town) for a chartered town, can be eliminated in transcribing community names.
Ex. Yokohama (not Yokohama-shi), Kamaishi (not Kamaishi-machi).
NOTE: Do not eliminate *shi* (*ichi*) or *machi* when the characters are integral parts of the names, as Yokkaichi or Shimmachi.
- h. Both parts of a compound name are capitalized and separated by a hyphen when:
 1. a name is formed by combining two specific names, as in the confluence of two rivers:
Ex. Kuro-Aka-gawa.
 2. a name is modified by another specific name:
Ex. Uji-Yamada, Kamiso-Okitsu.

CONVERSION TABLE OF ROMAJI EQUIVALENTS

(Goju-on Order)

(Hiragana symbols, not included in this list, are transcribed exactly like Katakana. When columns C, D, or E are blank, the spelling is the same as in column A (Modified Hepburn).)

Column A—Modified Hepburn (Romaji)—Official AMS style.

Column B—Katakana.

Column C—Old Hepburn. (Also includes certain obsolete spellings not inherent in Old Hepburn.)

Column D—Kokutei.

Column E—Nipponsiki.

Romanizations in Columns C, D, and E are not used by AMS. Convert to Modified Hepburn (Col. A).

-tchi	ツチ		-tti	-tti	-ssho	ツシヨ		-ssyo	-ssyo

Note: According to the above system,

1. No Japanese name ends in the following letters:

b c d f g h j k m p r s t w y z

2. The following letters never appear:

l v q x

3. All place names must end in one of the following letters:

a e i n o u

(iji is often shown on maps as iii. No place name is ever spelled with iii.)
