*Prior to 1926 number of commodities was 236.

(Continued from page 836)

1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report Vol. 2, page 318), and bringing the figures down to 1930. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption on the basis of figures in 1926 as 100, as follows: 1923, 108.3; 1924, 105.1; 1925, 101.7; 1926, 100.0; 1927, 99.0; 1928, 97.1; 1929, 94.6; 1930, 92.3.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 128.9; 1928, 128.5; 1929, 128.0; 1930, 127.6. Natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 166.9; 1928, 158.9; 1929, 159.1; 1930,

158.8. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

Retail Prices

Beef prices were again generally lower, sirloin steak averaging 28.9 cents per pound in June as compared with 29.3 in May; round steak averaging 24.1 cents per pound in June and 24.4 cents in May; rib roast averaging 22.2 cents per pound in June and 22.6 cents in May, and shoulder roast averaging 16 cents per pound in June and 16.4 cents in May. Veal and mutton were also lower in most localities, the former being down from an average of 18.2 cents per pound to 17.8 cents in June and the latter from 26.9 cents in May to 26.3 cents in June. Fresh pork was slightly higher at an average price of 22.8 cents per

*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18½%; Clothing, 18½%; Sundries, 20%. †Revised

pound. In fresh fish, cod steak, halibut and whitefish were slightly lower. Lard was down from an average price of 16.1 cents per pound in May to 15.2 cents in June as compared with a price of 21.4 cents per pound in June, 1930.

Eggs were again lower in practically all localities, fresh averaging 23.8 cents per dozen in June as compared with 25.4 cents in May and 35.6 cents in June, 1930; and cooking averaging 19.8 cents per dozen in June as compared with 20.9 cents in May and 31.7 cents in June, 1930. Milk was down from an average price of 11.3 cents per quart in May to 10.8 cents in June. Decreases were reported from Amherst, Fredericton, Sorel, St. Johns, Montreal, Brockville, Belleville, Orillia, Niagara Falls, St. Catharines, Windsor, Cobalt, Sault Ste. Marie, Port Arthur and Fort William, Regina, Prince Albert and Moose Jaw. Butter was generally lower, dairy being down in the average from 28.9 cents per pound in May to 23.7 cents in June, and creamery from 32.8 cents per pound in May to 27.6 cents in June. These prices compare with 34.8 cents per pound in June, 1930, for dairy and 38.7 cents for creamery. Cheese was substantially lower at an average price of 23.5 cents per pound in June as compared with 26.6 cents in May and 32.6 cents in June, 1930.

Bread was slightly lower at an average price of 6.2 cents per pound, decreases being reported from St. Hyacinthe, Brockville, and Chatham. Onions advanced in the average from 5 cents per pound in May to 7 cents in June while potatoes were slightly lower at an average price of \$1.01 per ninety pounds as compared with \$1.08 in May. Evaporated apples declined from an average price of 17.7 cents per pound to 17.2 cents. Granulated sugar was lower in some localities, the average being 6.2 cents per pound as compared with 6.3 cents in May.

Anthracite coal was down from an average price of \$15.81 per ton in May to \$15.76 in June. Lower quotations were reported from Ottawa, Kingston, Belleville, St. Catharines, Woodstock and Sarnia. Hardwood was down from an average price of \$11.99 per cord in May to \$11.78 in June. In rent lower quotations were reported from Three Rivers, Oshawa, Sault Ste. Marie, Calgary and Vancouver.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics:

The movement in grain prices was slightly upward in June. No. 1 Manitoba Northern cash wheat, Fort William and Port Arthur basis, averaged 60.7 per bushel as compared

with 60.6 the preceding month. In coarse grains, western barley advanced from 31 cents per bushel to 32.9 cents; flax from \$1.06 per bushel to \$1.07 and rye from 34.2 cents per bushel to 35.5 cents. Flour at Toronto declined from \$5.16 per barrel to \$5.03. Bran and shorts at Montreal were also lower, the former being down from \$20.31 per ton to \$17.94 and the latter from \$22.31 per ton to \$18.98. Raw sugar at New York rose from \$1.20 per hundred pounds to \$1.30 while granulated at Montreal declined from \$4.56 per hundred pounds to \$4.47. Ceylon rubber at New York declined from 6.5 cents per pound to 6.1 cents. Coffee at Toronto was slightly lower at 14.3 cents per pound. In live stock, good steers at Toronto fell from \$6.07 per hundred pounds in May to \$5.85 in June but remained unchanged at \$5.22 per hundred pounds at Winnipeg. Calves at Toronto were down from \$7.43 per hundred pounds to \$6.88 and at Winnipeg from \$7.33 per hundred pounds to \$6.16. Bacon hogs at Toronto were up from \$8.25 per hundred

pounds to \$8.56, and at Winnipeg from \$7.42 per hundred pounds to \$7.61. Lambs at Toronto were substantially lower at \$11.04 per hundred pounds in June as compared with \$13.79 in May. Declines in the prices of milk paid to producers occurred at Quebec, Ottawa, Saskatoon, Regina and Vancouver. Creamery butter at Montreal was down from 23.6 cents per pound in May to 23.3 cents in June, and at Toronto from 23.9 cents in May to 23.4 cents in June. Fresh eggs at Montreal were slightly higher at 25.4 cents per dozen in June as compared with 24.1 cents in May. Raw cotton at New York was down from an average price of 9.4 cents per pound in May to 9.1 cents in June. Raw wool was unchanged at 15 cents per pound. Hemlock lumber was \$1 per thousand board feet lower at \$19. Electrolytic copper at Montreal was down from \$10.30 per hundred pounds in May to \$9.68 in June, while tin at Toronto fell from 25.8 cents per pound to 25.3 cents. Portland cement at Montreal was 6 cents per barrel higher at \$1.60.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes and the accompanying tables give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1924=100, was 62.8 for May, a decline of 1.3 per cent for the month, and of 14.3 per cent since May, 1930. Foods advanced 0.6 per cent while industrial materials declined 2.3 per cent, the greatest decrease in any one group being one of 4.5 per cent in wool.

The *Economist* index number, on the base 1927=100, was 63.6 for June, showing no change from May, decreases in foods being offset by advances in minerals, textiles and miscellaneous commodities.

The *Statist* index number on the base 1867-1877=100, was 82.2 at the end of May, a decline of 2.6 per cent from the previous month due to substantial declines in vegetable and animal foods, minerals and textiles. The following paragraph is quoted from the *Statist*, June 20, 1931:—

“Our index number of sterling wholesale prices underwent a further downward movement last month, the extent of the fall during this period amounting to no less than 2.6 per cent. By the end of May the index number

had fallen to 82.2 (average prices in 1867-1877 being equal to 100), which compares with 98.8 a year ago and 126.2 at the end of May, 1928. The latter date may be taken as the point of departure of the fall in wholesale prices in this country, though the movement became greatly accelerated after the New York crash in the autumn of 1929. Over the three years that have elapsed since the movement began, wholesale prices in this country have fallen by 34.9 per cent, the extent of the fall since October, 1929, i.e., since the collapse in the American stock markets, amounting to exactly 26 per cent. It is interesting to note that over the same period of three years retail food prices have fallen by 18.5 per cent, the cost of living figure by 12.1 per cent, and the level of nominal wages, as calculated by Professor Bowley, by 3 per cent. The latest index number of 82.2 is almost identical with that recorded for the end of May, 1914 (82.3). Since this comparison is in no way vitiated by the intrusion of seasonal factors, it may be said that wholesale prices in this country have on the average fallen to parity with their immediate pre-war level.”

COST OF LIVING.—The index number of the Ministry of LABOUR GAZETTE, on the base July, 1914=100, was 145 at June 1, a decline of 1.4 per cent for the month due to declines in food, clothing and fuel and light; rent and sundries were unchanged.

France

WHOLESALE PRICES.—The index number of the General Statistical Bureau, on the base 1914=100 (gold basis) was 97 for May, a decline of 4 per cent for the month. With the exception of an increase in the group "sugar, coffee, cocoa," all groups contributed to the decline.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base of 1913=100, was 113·7 for April, a decline of 0·2 per cent for the month. Agricultural products advanced 1·5 per cent due to substantial increases in vegetable foods and fodder. With the exception of small increases in hides and leather and technical oils and fats, all other groups declined, the greatest decline being one of 11 per cent in rubber.

COST OF LIVING.—The official index number, on the base 1913-1914=100, was 137·3 for May, an increase of 0·1 per cent for the month due to a small increase in food prices. Heat and light, clothing and sundries were all lower than for April and rent was unchanged.

New Zealand

WHOLESALE PRICES.—The index number of the Census and Statistics Office, on the base 1909-1913=1000, was 1417 for April, a decline of 1·1 per cent for the month, the only group showing an increase was metals and their products.

Automobile Accidents in Canada

The Dominion Bureau of Statistics reports 1,289 deaths (preliminary figures) from automobile accidents throughout Canada in 1930 as against 1,300 in 1929, 1,082 in 1928, 865 in 1927 and 606 in 1926. The figure for 1930 gives a proportion of 13·0 deaths per 100,000 population. The corresponding rates were 13·3 in 1929, 11·2 in 1928, 9·1 in 1927, and 6·5 in 1926. British Columbia had the heaviest rate of any province in 1930, 18·6 per 100,000, while New Brunswick was second with 17·0 and Ontario third with 15·6 per 100,000. Saskatchewan had the lowest rate, 5·8 per 100,000.

The City of Montreal had 136 automobile deaths in 1930 as against 151 in 1929, Toronto 68 deaths in 1930 as compared with 107 in 1929, Winnipeg 30 deaths in 1930 and 25 in 1929, Vancouver 43 in 1930 and 45 in 1929. Deaths occurring in cities from automobile

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics, on the base 1926=100, was 71·3 for May, a fall of 2·7 per cent for the month, the principal declines being in farm products, foods and building materials.

The *Annalist* index number, on the base 1913=100, was 101·1 for June, a decline of 1·7 per cent for the month. All groups contributed to this decline.

Bradstreet's index number, which is the sums total of the prices per pound of 96 commodities of common consumption, was \$8·7756 at July 1, an increase of 1·5 per cent for the month. With the exception of a slight increase in April, 1931, this is the first advance noted since October, 1929. Advances were noted in fruits, hides and leather, textiles, metals, coal and coke, oils and miscellaneous commodities. On the other hand, breadstuffs, live stock, provisions, naval stores and building materials declined, while chemicals and drugs were unchanged.

COST OF LIVING.—In the accompanying table, the base of the index number of the National Industrial Conference Board has been changed from 1913=100 as previously published to the new base 1923=100. The index number for May, on the base 1923=100, was 86·9, a decline of 1·5 per cent for the month, all groups showing decreases from the April level.

accidents are not in every case the results of accidents which took place within the city limits, as those injured in accidents outside of cities are frequently hurried to city hospitals.

In the Registration Area of United States for the year 1929, the latest yet available, the rate was 25·4 per 100,000 population.

The headquarters of the International Federation of Trade Unions was transferred from Amsterdam to Berlin early in July. When the International was originally organized in 1901, the headquarters were located in Berlin and continued there until the outbreak of war in 1914 when the organization ceased to function. With its re-organization in 1919, the headquarters were established at Amsterdam. The Stockholm Congress of 1930 decided that the seat of the I.F.T.U. should be removed to Berlin.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Workman's Right of Wages for Period of Enforced Absence

At the beginning of 1930 a farmer in Saskatchewan hired a workman as a farm labourer for the whole year for \$450 with room and board. No agreement was made as to when or how the wages were to be paid, but the employer from time to time paid the hired man small sums on account. The latter was permitted to go to his home for week-ends, and on September 14, while at home on a weekly visit, he was seriously injured by a bull, and was unable to return to his employment for seven weeks. On November 1, the employee returned to resume his work, but was then informed by the farmer that another man had been hired in his place. The hired man thereupon brought action in the District Court to recover the sum of \$256.60, being the amount of his wages for the entire year and \$30 per month for value of his board and lodging, less the amounts he had received from the defendant in cash, and the value of the board and lodging for the time he was at work.

Judge Doak allowed the plaintiff's claim in part. "The plaintiff's claim," he said, "may be conveniently considered under three headings (1) Wages actually due to him up to September 14; (2) Wages from September 14 to November 1, the period of his absence; and (3) Wages subsequent to November 1. With regard to the first, the plaintiff's wages at the agreed rate would work out to \$37.50 a month and for eight and one-half months this would come to \$318.75. The defendant has paid the plaintiff \$304.50, and there is therefore due to him upon this account, the sum of \$14.25.

"Considerable difficulty arises in connection with the second claim. It is contended by the plaintiff that he is entitled to receive wages during the period of his enforced absence on the ground that performance of the contract by him should be excused under the circumstances. The principle relied upon by the plaintiff is stated in 20 *Halsbury*, p. 84, in the following language:

'A servant is entitled to his wages or salary during absence through temporary illness, provided that the contract of service remains in existence during that time, and that he is ready and willing to carry out his duties, save for the incapacity produced by the illness.'

Judge Doak cited precedents which showed that this principle applies even in a case where the illness has been brought on by the imprudence or misconduct of the servant, there being, however, one exception to its application, namely, that when the illness

of the servant goes to the root of the contract there is ground for a rescission. "In the present case," the judge proceeded, "the illness of the plaintiff did not in my opinion go to the root of the contract so as to justify rescission by the defendant or grounds for allowing him to consider that the contract was at an end. I am of the opinion however that in order to recover wages during the period of his enforced absence the plaintiff must go further than merely showing that his absence was unavoidable. An examination of the authorities to which I have referred shows the reason for the decisions which were arrived at in those particular cases. Thus in *Cuckson v. Stones*, *supra* Campbell, J. at p. 256, says:

"We think that want of ability to serve for a week would not, of necessity, be an answer to a claim for a week's wages, if in truth the plaintiff was ready and willing to serve had he been able to do so, and was only prevented from serving during the week by the visitation of God, the contract to serve never having been determined."

Having cited other judgments to a similar effect Judge Doak continued: "This is but an illustration of the general principle that where there is impossibility of performance due to an act of God, the promisor is excused; and illness is recognized as falling within that category. In my opinion, however, it is necessary to go further than this and enquire whether the particular illness which rendered the plaintiff incapable of performing the contract was due to an act of God, so called, or otherwise. A number of illustrations are given as to the meaning of the term "Act of God" in 7 *Halsbury*, p. 428, and the definition there given is:

'An act of God, in the legal sense of the term, may be defined as an extraordinary occurrence or circumstances which could not have been foreseen and which could not have been guarded against.'

"It is because illness ordinarily comes within the scope of this definition that it has to be considered an act of God, excusing the promisor from the performance of his contract, but it appears to me that it would be otherwise in the case where the illness could not be ascribed to some unforeseen occurrence which could not reasonably be guarded against but was due to an accident arising out of the ordinary scope of the persons' occupation or business. The most common illustration of the difference between the two cases is to be seen in the cases arising out of perils of the sea....

"Bearing in mind the distinction above pointed out it appears to me that the illness

of the plaintiff in the present case cannot be said to be due to an 'act of God,' but rather to one of the ordinary perils to which the plaintiff as a farm labourer was exposed, and it appears to me that it makes no difference whether this accident occurred to him when he was working for the defendant or was working in his own behalf. For these reasons I am of the opinion that the plaintiff is not excused from performance of his contract by reason of the accident and that his right to recover wages for the period during which he was absent must depend upon other considerations.

"It must be admitted in the first place that the contract was not terminated by the plaintiff's illness, for the defendant visited the plaintiff at various times during his illness, and never until November 1, or about that time, indicated any intention to rescind the contract. . . . I think I may take it that the promises in this case were mutual and not independent, that is to say, the plaintiff's right to recover wages would depend upon his doing the work which entitled him to recover them and if the plaintiff had never done any work at all undoubtedly there would be no right of recovery, for the performance of his share of the contract was a condition precedent to his right to recover. . . . The contract is an entire one to work for the whole year and the plaintiff worked for eight and one half months, and the defendant therefore received a substantial part of the consideration for his promise. In the next place, even assuming the illness of the plaintiff gave the defendant the right to elect to treat the contract as at an end, he did not treat it as at an end until the time when the plaintiff was ready to resume work under it.

"For these reasons I am of the opinion that even if the performance by the plaintiff was a condition precedent to his right to recover, the defendant is not now in a position to treat it as anything more than a claim for damages for the plaintiff's failure to perform. The contract remained in existence until the defendant rescinded on November 1 and the plaintiff is entitled to recover under it the wages which were due to him from the period from September 14 to November 1, subject to the defendant's right to recover damages against him.

"Coming now to consider the third ground which the plaintiff has for recovery the decision of the Court of Appeal of this province in *Peidl v. Bonas** appears to be con-

clusive. The plaintiff has asked for judgment for the wages due to him from November 1 until the end of the year, but the decision referred to shows that he is not entitled to more than one month's wages. The plaintiff's board and room formed a part of the consideration in his contract and he is in my opinion entitled to recover this in addition to the actual amount of money he was to receive. . . .

"The result will be that the plaintiff will be entitled to the following amounts:—

Balance of wages to September 14.	\$ 14.25
Value of wages and board and room for seven weeks from September 14 to November 1, at \$37.50 per month for wages, and \$30 per month for board and room.	109.55
One month's wages to which the plaintiff is entitled in lieu of notice.	37.50
Board for the same period.	30.00
Total.	\$191.30

The judgment pointed out that the defendant had not counterclaimed against the plaintiff for damages due to the failure of the latter to carry out his contract in full, and permitted him to amend his pleadings to set up this counterclaim. The counterclaim was allowed to the extent of \$109.55, being the value of the plaintiff's services of which the defendant was deprived during the period of the contract.

Heinbigner versus Kinzel, Saskatchewan, 1931, *Western Weekly Reports*, Vol. 2, page 544.

Contract entered into on Sunday held Invalid

Action was taken in the Yale County Court, British Columbia, by the manager of a dairy farm for wages and a percentage of profits alleged to be due to him by the terms of a contract that had been made on a Sunday. The plaintiff had been engaged to manage a dairy farm near Kamloops for one year at a monthly salary of \$100, with 10 per cent of the profits earned by the concern during the period of his management. An express condition of the contract was that the defendants were to take over from the plaintiff his herd of Jersey cows. This was agreed to, and the bargain was orally completed on Sunday, March 23, 1930. The plaintiff about October 16 received notice of his dismissal.

The defendant claimed that the agreement was illegal, having been made on a Sunday, and that it was in contravention of section 4 of the Lord's Day Act, Revised Statutes of

*LABOUR GAZETTE, May, 1931, page 622.

Canada, 1927, chapter 123. This section reads as follows:—

4. It shall not be lawful for any person on the Lord's Day, except as provided herein, or in any provincial Act or law now or hereafter in force, to sell or offer for sale or purchase any goods, chattels, or other personal property, or any real estate, or to carry on or transact any business of his ordinary calling, or in connection with such calling, or for gain to do, or employ any other person to do, on that day, any work, business, or labour. R.S., c. 153, s. 5.

Judge Swanson, referring to the owners' undertaking to buy the plaintiff's herd, said that there was a completed contract to sell made on that day, and that "the very object which Parliament must have had in mind was to prohibit and penalize just such a commercial transaction made on the Lord's Day. If there is illegality in this phase of the contract, the whole contract must go by the board and be declared unlawful or illegal. If the contract is illegal the Court, solely on the grounds of public policy, will decline to recognize it, or any rights or claims alleged to be possessed by plaintiff for any alleged breach of it."

"At the opening of the case," His Honour continued, "I felt it my duty to call the attention of counsel to the provisions of the Lord's Day Act although the Act was not pleaded by defendants. For these reasons I hold that this action must be dismissed with costs."

Lister versus Burns and Co. (British Columbia) 1931, *Dominion Law Reports*, Vol. 3, page 105.

Employer Responsible for providing Safe Conditions of Work

A millwright in a paper mill in Quebec sustained serious injuries when he fell nine or ten feet from a scaffold on to a concrete floor. Immediately after the fall one of the supports of the scaffold broke and fell on him, causing him further injuries. The Workmen's Compensation not being applicable to his case the workman brought an action against the employer under the common law, claiming \$16,000 in damages. In the first hearing before a jury the plaintiff was allowed \$11,000. The decision was set aside on appeal, but on further appeal the Court of King's Bench reversed the decision of the Superior Court. It was held that the employer had not discharged the duty which he owed the workman, as, notwithstanding that the latter was an experienced man, there was a duty to provide him with safe access to his work. The jury had found that the defendant failed to provide proper and safe scaffoldings, and that fact was sufficient to bring the case within the

terms of article 1053 of the Civil Code, which reads:—

1053. Every person capable of discerning right from wrong is responsible for the damage caused by his fault to another, whether by positive act, imprudence, neglect or want of skill.

Cote versus Anglo-Canadian Pulp and Paper Company (Quebec) 1931, *Rapports Judiciaires* (*Cour du Banc du Roi*), volume 50, page 527.

A workman employed by an express company at Montreal, was one of a party which was engaged in moving a steel plate ten feet long, seven feet high, and two feet thick, and weighing over half a ton. When the plate tilted some of the men dropped their hold, and the workman was pinned to the ground, sustaining injuries which resulted in permanent disability amounting to 50 per cent of his former earning capacity. In an action brought by the workman against the company for damages the Superior Court held that the injury was purely accidental and that no blame attached to anyone; but on appeal by the plaintiff the Court of Appeals concluded that the foreman of the gang of workmen had been at fault, because out of several methods of moving the steel plate he chose one which was extremely dangerous. The judgment of the lower court was therefore set aside and damages of \$10,000 were awarded to the plaintiff.

California Law limiting Free Speech declared invalid

The Supreme Court of the United States, in a judgment rendered by Chief Justice Hughes on May 18, 1931, reversed a decision by the California courts under which a young woman had been convicted under the "anti-Red Flag" section of the Penal Code of California. This Code provides as follows:—

"Any person who displays a red flag, banner or badge or any flag, badge, banner or device of any color or form whatever in any public place or in any meeting place or public assembly, or from or on any house, building or window, as a sign, symbol or emblem of opposition to organized government, or as an invitation or stimulus to anarchistic action, or as an aid to propaganda that is of a seditious character, is guilty of a felony."

The defendant, a member of the Young Communist League, was convicted by a jury under this section, which mentions three illegal purposes in connection with the display of the red flag; (1) as a sign of opposition to organized government; (2) as an invitation to anarchistic action; and (3) as an aid to seditious propaganda. The District Court of Appeals held that the first purpose described

in the statute, i.e., displaying the banner "as a sign, symbol or emblem of opposition to organized government" would, taken by itself, not constitute a violation of the statute; or if that in itself were considered to be a crime under the statute, then to that extent the statute would be unconstitutional. Mere opposition to organized government, the Court held, may be construed to include peaceful and orderly opposition to a government as organized. The language does not necessarily embrace any purpose to overthrow government by force or violence. The first purpose in the statute, therefore, considered by itself alone, would make the statute unconstitutional. But the District Court of Appeals held that the second and third purposes clearly contemplated resort to violence and sedition and were within the power of the State to punish. So, disregarding the first clause of the statute and upholding the other clauses, the conviction of the appellant was sustained by the California Court of Appeal.

Chief Justice Hughes, having reviewed the decision of the California Court, proceeded as follows:—

"We are unable to agree with this disposition of the case. The verdict against the appellant was a general one. It did not specify the ground upon which it rested. As there were three purposes set forth in the statute, and the jury was instructed that their verdict might be given with respect to any one of them, independently considered, it is impossible to say under which clause of the statute the conviction was obtained. If any one of these clauses, which the State Court has held to be separable, was invalid, it cannot be

determined upon this record that the appellant was not convicted under that clause. It follows that instead of its being permissible to hold, with the State court, that the verdict could be sustained if any one of the clauses of the statute were found to be valid, the necessary conclusion from the manner in which the case was sent to the jury is that, if any of the clauses in question is invalid under the Federal Constitution, the conviction cannot be upheld. . . .

"We are thus brought to the question whether any one of the three clauses, as construed by the State court, is upon its face repugnant to the Federal Constitution so that it could not constitute a lawful foundation for a criminal prosecution. The principle to be applied have been clearly set forth in our former decisions. It has been determined that the conception of liberty under the due process clause of the Fourteenth Amendment embraces the right of free speech. The right is not an absolute one, and the State in the exercise of its police power may punish the abuse of this freedom. There is no question but that the State may thus provide for the punishment of those who indulge in utterances which incite to violence and crime and threaten the overthrow of organized government by unlawful means. There is no constitutional immunity for such conduct abhorrent to our institutions. We have no reason to doubt the validity of the second and third clauses of the statute as construed by the State court to relate to such incitements to violence."

The Court remanded the case for further proceedings not inconsistent with its opinion.

Mothers' Allowances in Nova Scotia

The first annual report of the director administering the Mothers' Allowances Act of Nova Scotia reviews the operation of this legislation since its enactment (the provisions of the Act were outlined in the *LABOUR GAZETTE*, August, 1930, page 915).

While the Act was passed on April 30, 1930, it did not come into force for the actual payment of allowances until October 1, 1930. Accordingly no allowances were paid during the financial year ending September 30, 1930, but, as is pointed out, all the work incidental to the receipt and investigation of applications came within that year. Therefore, general statistics are presented as well as a financial statement respecting allowances for the month of October, 1930.

The statistics indicate that there were 1,170 formal applications, received as well as a number of personal applications. There were 426

applications declared ineligible, and 706 approved, while in 38 cases decision was deferred. The total amount paid in the month of October to 706 approved applicants was \$22,143.50, being an average per family of \$31.32. The total number of dependent children beneficiaries was 2,232, the average number of dependent children per family being 3.2.

The director points out that according to indications the total number of mothers in receipt of allowances will exceed 900 before the end of the current year, and that the requirements to pay the allowances will approximate \$340,000, with a further sum of \$21,222 for administration purposes.

Included also is the report of the Advisory Commission, which describes the method of dealing with applications and the general work of the office.

FEDERAL AND PROVINCIAL LABOUR DEPARTMENTS, BOARDS, COMMISSIONS, ETC., IN CANADA

Dominion of Canada

Department of Labour:

Ottawa.

Minister, The Hon. Senator G. D. Robertson.
Deputy Minister, H. H. Ward.
Assistant Deputy Minister, Gerald H. Brown.
Industrial Disputes Investigation Act, H. H. Ward, Registrar.

F. W. Hinsdale, Secretary.
Address of Board: 411 Dunsmuir Street,
Vancouver.

Old Age Pensions Department:

Administered by Workmen's Compensation
Board, H. L. Greenwood, Secretary.

AMENDMENT TO DOMINION OLD AGE PENSIONS ACT

Increased Federal Contribution—System to be Established on Contributory Basis

IMPLEMENTING an announcement made on June 1, during his budget address in the House of Commons, the Right Hon. R. B. Bennett, on July 20, introduced legislation to provide for increasing the federal grant towards the cost of old age pensions. The government bill was preceded by a resolution which was adopted in the terms following:—

"That it is expedient to amend the Old Age Pensions Act by increasing the amount of the payment to the provinces for old age pensions from one-half to seventy-five per cent of the net sum paid out during the preceding quarter by such province for pensions, and to provide for the examination and audit of expenditures in the province and the accounts relating thereto."

The Bill (which is entitled an Act to amend the Old Age Pensions Act) details the intent of the measure in the following preamble:—

"Whereas by section three of the *Old Age Pensions Act* it is amongst other things provided that an agreement may be made with any province for the payment to such province quarterly of an amount equal to one-half of the net sum paid out during the preceding quarter by such province for pensions pursuant to a provincial statute in that behalf; and whereas it is desirable that the system of Old Age Pensions shall be established on a contributory basis as a national undertaking; and whereas, pending the taking of the decennial census of 1931 and obtaining such information therefrom as will enable the necessary actuarial computations to be made, it is desirable and would be of advantage to the Dominion to augment the national contributions."

In the ensuing debate, the Prime Minister, after indicating that the chief change in the amending enactment was the provision for a federal contribution of 75 per cent instead of 50 per cent as formerly, stated: "In any event the whole proposal is but temporary in character, and contemplates a contributory system to old age pensions as was mentioned in the House of Commons when the Old Age Pension bill was under consideration. For that reason this provision has been made for the year."

The Right Hon. W. L. Mackenzie King, after pointing out that the measure meant

"a considerable increase in the amount of money to be handed over from the federal treasury to the provinces for their administration," suggested that if it was the ultimate intention of the present administration to pay 100 per cent of the old age pensions cost then the time was opportune to "consider the desirability of having the entire fund administered by the federal government." This factor, he considered, might lead to the necessity of amending the British North America Act so as "to give the Federal Government the right without delay to administer the entire old age pension law."

Dealing with this phase of the subject the Prime Minister stated:—

"My own view is that no amendment to the British North America Act is required to deal with this problem on one phase of it, and in the preamble to the bill I have indicated that the census of the year will form the basis of actuarial computations that would warrant a contributory system on a national scale being embarked upon. . . . As the matter stands, I know of no constitutional impediment to the federal parliament voting 50 per cent of the sums paid by the provinces to old age pensions. I think it will be agreed that if there is no constitutional impediment against paying 50 per cent, there is none with respect to paying 75 per cent, and it is clear that it is not only probable but almost certain that there will be an increase in the payments made under this statute by reason of other provinces, now that the sum has been increased to the amount I have mentioned, availing themselves of its provisions. In the meantime I assure the committee that the whole problem is being considered from the angle of a contributory system predicated upon an actuarial valuation of the liabilities that would be involved. That is not as simple as perhaps would appear from the mere statement of it, but this year's census will enable us to determine with some degree of exactitude what is

involved, and if there are any constitutional limitations upon our activities in that direction, I think the house will be only too glad to remove them. I do not contemplate any difficulty on that score."

The Prime Minister added that what he had in mind was "that this and allied social insurance matters might be administered by a com-

mission that would have the powers of a body corporate, but that would administer the act as a federal undertaking. My own view is that there is no constitutional difficulty in the way of administering such an act as a federal undertaking on a contributory basis."

After debate, the Bill was given its first reading.

[NUMBER 8

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL employment in Canada at the beginning of July showed a slightly upward tendency, according to the Dominion Bureau of Statistics, which tabulated returns from 7,803 firms (each employing a minimum of 15 persons) in all industries except agriculture, fishing, hunting and highly specialized business. The staffs of these firms aggregated 940,222 workers, or 1,794 more than the number they employed on June 1. The index (based upon the average for the calendar year 1926 as 100) rose from 103.6 in the preceding month, to 103.8 in the month under review, as compared with 118.9, 124.7, 117.7, 109.7, 105.0, 98.0, 97.1, 100.7, 92.2 and 88.6 at the beginning of July in 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. At the beginning of July, 1931, the unemployment percentage reported to the Department of Labour by local trade unions was 16.3 in contrast with 16.2 per cent at the beginning of June, 1931, and 10.6 per cent at the beginning of July, 1930. The July percentage was based on the returns received by the Department of Labour from 1,849 labour organizations with an aggregate membership of 200,505 persons. Reports received by the Department of Labour from the offices of the Employment Service of Canada indicated a decline in the volume of business transacted during June when compared with May, but a slight increase in comparison with the transactions recorded during June last year. Vacancies in June, 1931, numbered 27,183, applications 56,113 and placements in regular and casual employment 25,973.

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty-nine cities was again slightly lower at \$8.11 for July as compared with \$8.16 for June; \$10.91 for July, 1930; \$10.98 for July, 1929; \$10.80 for July, 1928; \$10.92 for July, 1927; \$11.07 for July, 1926; \$10.49 for July, 1925; \$9.91 for July, 1924; \$10.17 for July, 1923; \$10.27 for July, 1922;

\$10.96 for July, 1921; \$16.84 for July, 1920; \$13 for July, 1918, and \$7.42 for July, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was again slightly lower at 71.7 for July as compared with 72.2 for June; 85.3 for July, 1930; 97.2 for July, 1929; 96.0 for July, 1928; 98.5 for July, 1927, and 100.1 for July, 1926.

The loss in working time caused by industrial disputes in Canada in July was much less than that in the preceding month, but was greater than the corresponding loss in July, 1930. Five disputes were in progress at some time during the month, involving 689 workers, and resulting in the loss of 8,044 working days. Corresponding figures for June, 1931, were: ten disputes, 1,209 workers, and 22,439 working days; and for July, 1930, six disputes, 196 workers, and 2,152 working days.

Industrial Disputes Investigation Act

During July the Department of Labour received a report from the Board of Conciliation and Investigation appointed in connection with the dispute between the Mohawk Bituminous Mines, Limited, and certain of its employees, members of the local union of District 18, United Mine Workers of America. Two new applications for the establishment of Boards were received during the month, while one of the applications already noted was withdrawn. The report of the Board above mentioned, together with an account of the proceedings during the month, will be found on page 875 of this issue.

Settlement of industrial disputes in Ceylon

An Ordinance "to provide for the Investigation and Settlement of Industrial Disputes" was enacted by the Governor of Ceylon on March 29, 1931. The Ordinance provides that the Governor may at any time appoint a Commission to conduct an enquiry into any matter relating to industry

(which is defined as including trade and agriculture). In the case of an existing or apprehended industrial dispute, the Controller of Labour (an official appointed by the Governor) may appoint a Conciliation Board, to which the dispute may be referred irrespective of the consent of all the parties concerned. Conciliation Boards are to consist of a chairman and one or more members, in equal numbers, to represent the parties, to the dispute. The Controller may likewise take steps for the amicable settlement of a trade dispute without reference to a Board. If a settlement is arrived at by the Conciliation Board the terms thereof must be notified to the Controller and published by him, together with a notice requiring the parties, or their representatives, to state, within a period of fourteen days, whether they accept or reject the settlement. In the case of acceptance by both parties a settlement becomes binding until either party, or its representative, repudiates it by formal notice sent to the Controller. If no agreed settlement is reached the Conciliation Board must send a full report to the Controller, with specific recommendations for the settlement of the dispute. Penalties are provided for employers contravening the terms of a settlement and for persons taking part in a strike, or inciting others to strike, for the purpose of securing an alteration in the terms of a settlement during the period of its validity.

The Ordinance does not apply to persons in the navy, military or air services of the Crown, or to the police or prison services or to other employees of the Crown or Government except where their emoluments are fixed at daily rates.

Labour camps for road work in Northern Ontario

The Ontario Government intimated in July that labour camps would be organized in Northern Ontario in connection with the road construction which is to be carried on in Northern Ontario next winter for the purpose of providing work for the unemployed. The Hon. George S. Henry, the provincial premier, stated that the organization of these camps would not be of a military nature; comfortable quarters would be provided, and fair wages would be paid, but the rates of wages would not be such as might prevent the men from returning to their normal occupations should the opportunity arise. The premier stated that the camps were intended primarily for unmarried workers, and that it was hoped that work might be provided for married men in their places of residence.

President Hoover's Unemployment policy

On August 7 President Hoover published a statement of the policy of the United States Government in regard to unemployment relief. The government is now engaged in estimating the probable volume of unemployment next winter, and in appraising the action of the existing agencies for relief. "I have been canvassing the situation in conference with business, financial and labour leaders as to the different methods in interstate industries which may be of aid. I have had a number of conferences with leaders of relief and business organizations throughout the country with a view to consolidation and co-ordination of their efforts to support the national, State and local action. We have now under way a re-examination to determine the actual number to be employed through the steadily increasing volume of Federal public works. We are canvassing State and municipal and industrial construction to ascertain what may be expected in that direction. The completion of these conferences and inquiries will require another month. By that time all the facts should be clear, both as to the load to be met, the progress and strength of organization in different regions and the character and method of national organization necessary to co-ordinate and support them."

Results of family settlement schemes

The report of the Oversea Settlement Committee (Great Britain) for the period January 1, 1930, to March 31, 1931, notes that the scheme for the settlement of 3,000 families on farms in Canada, which came into operation on July 1, 1924, was completed in 1929. A statistical review of the scheme from its commencement until July 31, 1930, prepared by the Land Settlement Branch of the Department of Immigration of Canada, shows that the total number of families settled in Canada under the scheme was 3,346. Of this number, 846 or 25.3 per cent have withdrawn from the scheme. On July 31, 1930, there were 2,500 families on their farms. Of the 846 families who had withdrawn, 233 were engaged in agriculture either on farms acquired outside the scheme or in wage employment; 370 were in other employment; and 72 were still in Canada, but their whereabouts are unknown. The remaining 171 families (5.1 per cent of the whole) had either returned to the United Kingdom or left for other countries.

The scheme has resulted in the migration to Canada of 18,074 souls, without reckoning the number of friends or relations who have settled

in Canada as a consequence of families having settled under the scheme. It is estimated that the total advances by His Majesty's Government in the United Kingdom in connection with the scheme will amount to about £750,000, which will represent a recoverable expenditure of about £42 per soul (excluding passage assistance). The average amount of capital per family was £64, and 2,850 families out of the total of 3,346 had some previous experience of farm work (although of course the whole of these were not actually engaged in farm work at the time they left the United Kingdom). The percentage of successes under this scheme is stated to be high; and the number of genuine complaints has been very low, in spite of the economic difficulties of the past two years.

A further 96 families were settled during the year on farms of their own in the province of New Brunswick under the tripartite scheme arranged between His Majesty's Government in the United Kingdom, the Dominion Government and the Provincial Government for the settlement of 500 families on farms in that province. The total number of families who have been settled under the scheme to date is 304.

The Canadian Pacific and Hudson's Bay Land Settlement Scheme provided for the settlement on farms in Canada of 200 families (100 on lands owned by each company) before July 1, 1930. The settlement of the full number of families was completed during the year. It was found necessary to provide special advances for these families in respect of subsistence during the winter months of 1929 and the purchase of seed, etc., in the spring of 1930. The exceptional conditions which prevailed in Canada during 1930 made it difficult for the settlers under this scheme to find employment outside their own farms sufficient to provide them with the means to carry them through the winter, and in these circumstances it became necessary to provide further advances for the subsistence of these families during the winter of 1930.

Holidays with pay for workers in France

An Act to establish a statutory annual holiday for workers was passed by the French Chamber of Deputies in July this year.

It provides that the annual holiday must be uninterrupted: the daily allowance shall be equal to the normal wage estimated on the average of the previous six months; the time when the holiday shall be taken may vary, but in the event of disagreement the justice of the peace shall act as arbitrator; the holiday shall be eight days

after the first year and fifteen days thereafter; absence by reason of sickness, maternity, etc., shall not be taken into consideration, but if such absence exceeds one month the holiday may be postponed. The holiday is compulsory; consequently the worker may not take up employment elsewhere during his holiday without rendering himself liable to prosecution.

Quebec Association for Prevention of Industrial Accidents

This Association was recently incorporated for the purpose of promoting and carrying on the work of prevention of industrial accidents in the province of Quebec amongst the industries which are assessable by the Workmen's Compensation Act, 1931, and to protect and safeguard all persons connected with industrial establishments in the province. The association will promote research and other work in connection with safety education, and for that purpose will form and maintain libraries and assist persons engaged in research work in favour of prevention of industrial accidents; it will direct the organization of local safety branches throughout the industrial centre of the province; it will also undertake to direct the organization of employer groups under the official classes of the Workmen's Compensation Act, 1931, into as many associations for the promotion of accident prevention in their respective branches of the Compensation Act. Members of the Industrial Section of the Province of Quebec Safety League automatically become members of the association.

The board of directors consists of representatives of the various classes of industry designated in schedule 1 of the Workmen's Compensation Act, 1931, with representatives of any association formed by one of these classes. Mr. Allen M. Mitchell of Montreal is president of the new association, with Mr. Arthur Gaboury, of the province of Quebec Safety League, as its general manager.

Social insurance in Quebec

Whether or not the Province of Quebec will participate in the Dominion scheme for Old Age Pensions will depend upon the recommendation that will be made on this subject by the Commission which was appointed by the provincial legislature last year to study social insurance in its various aspects (LABOUR GAZETTE, November, 1930, page 1236; May, 1930, page 516, etc.). This statement was made in July by the Hon. Premier L. A. Taschereau in reply to the question as to the possible effect of the recent amendment

of the Dominion Old Age Pensions Act, increasing the amount of the federal grant to the provinces from 50 to 75 per cent of their total expenditures for Old Age Pensions under the provisions of the Act (LABOUR GAZETTE, July, 1931, page 861).

The terms of reference of the Social Insurance Commission, as stated in a previous issue, include the study of the following subjects; unemployment insurance; old age pensions; sickness insurance; family assistance, or aid to the parents of large families; family placements, or placing of underprivileged or distressed children with approved families in various sections of the province; sanitary conditions in industrial establishments and conditions of workers in such places; occupational diseases; medical inspection for workers engaged in occupations hazardous to health; medical examinations and attendance, with periodical inspections, among factory workers; campaigns of industrial hygiene for workers.

The Commissioners recently returned from Europe, where they studied the various national systems of social insurance.

Penalizing "Unsafe" employers in Ontario

A circular recently issued to employers by the Industrial Accident Prevention Associations of Ontario points out that under section 83 (4-5) of the Workmen's Compensation Act of the province, the Board has authority to penalize an employer who has a greater number of accidents than in the opinion of the Board ought to have happened if proper precautions had been taken for the prevention of accidents. The Board also has authority to penalize a firm where the "ways, works, machinery or appliances are defective, inadequate or insufficient." Under this section of the Act, the Board has authority to place a special levy against the plant, and to collect that in the same way as the assessments are collected, or has the authority to put the plant in Schedule 2, in which case the plant becomes responsible for the entire cost of accidents to its workers.

Effect of "combine" on farm labour in Canada

The effects of farm mechanization on labour in America, with special reference to conditions in Canada, were described in LABOUR GAZETTE, April, 1931, page 427, in a summary of an article in the *International Labour Review* (Geneva). Another article in the same publication recorded the impressions which Mr. H. B.

Butler, the Deputy Director of the International Labour Office, received in regard to the social effects of mechanized farming in Canada during his visit to this continent last year (LABOUR GAZETTE, November, 1930, page 1300). Mr. Butler states that "the invention of the 'combine', a machine which both cuts and threshes the grain, and which operated by two men can harvest as much as 40 acres a day, has been mainly responsible for this displacement of labour. A large farm which formerly took on 30 men in the spring and a further 120-150 during the harvest now employs only 14 men throughout the year. An average small farm will employ 2-3 men instead of 8-10. These are just typical cases which could be multiplied indefinitely. Roughly speaking, every combine deprives at least 5 men of a harvest job, so that the average expectation of harvest employment is 20 days in the year instead of 50-60. As a consequence, whereas the railways used to transport thousands of men annually from the eastern cities to reap the crops on the prairies, no harvest trains have been run during the last two years, though the crops were up to the average level. As the Minister of Labour of one Province put it, 'We have now too many people, because there is no work for them'—and that in a territory of great wealth with a population of little more than 2 to the square mile.

"The machine", Mr. Butler continues, "is also creating another tendency, which likewise threatens to accelerate the depopulation of the land. To repay its capital cost and to give it sufficient scope for its capacity, large-scale farming is becoming more and more necessary. Some large industrialized farms are now springing up under syndicated management, and as the small farmer becomes progressively unable to compete with the larger units, that is say, with the prices which the economies of unified management and mechanical operation on a large scale are able to offer, the industrialization of agriculture is bound to extend. The tendency in this direction is further stimulated by the fear of Russian competition based on similar large-scale methods supplemented by low-paid labour. The general effect of agricultural rationalization has inevitably been to diminish wage-earning employment, and to many small farmers it is presenting the alternative either of quitting the land altogether after disposing of their holdings for what they can get, or else of abandoning wheat cultivation for dairy-farming or mixed farming, which in some districts is unsuitable owing to want of water or other circumstances."

Safeguarding profit sharing schemes in Ontario

28. No company shall solicit or accept from its employees or the employees of its subsidiary or allied companies, subscriptions to securities of its own issue or to securities issued by any of its subsidiary or allied companies, or receive money or other valuable securities, or make deductions from salaries or wages therefor in the guise of a saving plan, unless all moneys arising from such subscriptions are held and administered as a trust fund for such employees, and violation of this Regulation shall constitute a fraudulent act or an offence.

Federal unemployment insurance in Switzerland

The Swiss system of unemployment insurance is described by Mr. H. F. Ramsay, American vice-consul at Zurich, in an article appearing in the current issue of the *Monthly Labour Review* (Washington). In 1909 the Federal Government provided for the granting of subsidies to employment offices as a means of relieving unemployment. The cost was met by contributions from the Confederation, the Cantons, the communes and the employers. The experience of this system up to 1924 suggested the introduction of the contributory principle, and in that year a new federal system of unemployment insurance was established. "The chief features of the federal law," Mr. Ramsay states, "were the conditions to be fulfilled by the insurance companies, insurance funds, or mutual funds, in order to obtain federal subsidy. The federal law, for instance, did not prescribe minimum or maximum age limits between which insurance must be carried, nor did it specify by classes those persons who might be required to insure themselves. These and a number of other questions were left to the cantonal legislatures for regulation. As a consequence, while most of the Cantons have made unemployment insurance compulsory for factory workers, insurance for nearly all other classes of labour is voluntary, and in a few of the Cantons no worker is compelled to carry the insurance. Through the system of subsidies only, the Confederation avoided the establishment of a costly system of administration, while permitting existing funds the opportunity to develop without unnecessary expense. The by-laws of the funds must prescribe exact rules governing contributions of the insured and payments on the part of the organization. No minimum is fixed for the benefit, but it must not exceed 60 per cent

The Board which administers the Security Frauds Prevention Act, enacted by the Legislature of Ontario last year, recently issued Regulation 28, as follows:—

of the wages lost, insured members with family obligations receiving 10 per cent more than those without such obligation. The benefit may be paid only to those who are without work through no fault of their own and who have been unable to find employment. The insured must produce a statement from his last employer establishing the cause of his discharge, and must, in addition, register at the public employment exchange. In the case of certain trades the insured may register at a private employment office specializing in furnishing work for his trade. Benefits are payable only to those who have been members of a fund for at least 180 days and who have paid their contributions without interruption and are payable at the earliest three days after registration at the labour exchange. . . . The federal subsidy is fixed according to the amount of the daily benefits paid by funds to members who qualify for relief, and amounts to 40 per cent of the benefit paid by public funds and similar organizations and to 30 per cent for all others. The Federal Assembly may temporarily increase the foregoing rates by 10 per cent at the maximum."

The basis of the co-operation offered by the Cantons in every instance is that of additional subsidies to either private or public insurance funds or companies. The conditions imposed in every Canton are practically the same as those defined by the Confederation. The amount of subsidy granted to the funds varies from 10 to 45 per cent of the amount of unemployment benefits paid out by the funds.

Soon after the passage of the federal law of October 17, 1924, the various Cantons began to legislate upon the subject. Of the 25 Cantons, all but one have passed laws based upon and supplementing the federal law.

Stabilization of Employment in Retail Stores in U.S.A.

The United States Department of Commerce has issued a pamphlet on "Policies and Practices for Stabilization of Employment in Retail Establishments." Of the expedients now in general use, spreading work through part-time operations is recognized as among the most beneficial to all concerned. Instead of laying off personnel when business declines thousands of firms in all types of work are holding their forces close to normal strength by retaining part of all of their employees on part-time without reductions in wage rates. In spreading work, the practical problems being met by an individual retailer will vary

widely in different types of merchandising. Working expedients include the following:

(a) Reduction of overtime; (b) Use of staggered vacations or leaves of absence; (c) Rotation of days off; (d) Use of shorter shifts where store hours are long; (e) Rotation of shifts or individuals on the same job; (f) Transfer of employees between departments or branch stores to prevent lay-off.

Overtime and contingent forces, it is pointed out, are closely related problems which may be handled with a substantial saving under part-time operations. By working the part-time force longer hours and by a suitable concentration of staggered shifts or individuals, it may be possible to meet most rush requirements without resorting to contingent force operation.

Employment stabilization offers management an unusual opportunity to broaden the training of personnel so that they may be capable of handling several kinds of jobs. Keener interest of employees in time of economic stress makes them more susceptible to opportunities for increased knowledge of their vocation.

In taking up employment slack, consideration may be given to repair, modernization, replacement, improvement, and rearrangement; also expansion and new construction, financed from reserves or on credit.

A thorough survey of market conditions gives a tangible basis for the amount of stock to be kept on hand. Although somewhat afield from the problem of direct employment, planned buying by retailers is of major importance in a national stabilization program and may contribute to a more even flow of production and distribution, thus reducing some of the seasonal peaks and valleys in the employment curve.

The 47th annual convention of the Trades and Labour Congress of Canada will be held at Vancouver, B.C., commencing September 21.

The Canadian National Railways unit of the Brotherhood of Maintenance of Way Employees meeting at Regina on August 2, adopted a resolution proposing that a portion of the federal government's relief fund should be used on the maintenance of Canadian National lines within the Province of Saskatchewan, employment being thereby provided for a large number of unemployed railroad workers. The resolution set forth that the grants made for highway construction tended to increase the use of trucks and buses, to the detriment of the railways, and without involving the owners of these rival services in additional liabilities.

Mr. William Clifford Clark has been appointed professor of commerce and director of the course of commerce and administration at Queen's University, Kingston, Ontario. Professor Clark was engaged by the Department of Labour of Canada in connection with the work resulting from the enactment of the Employment Offices Co-ordination Act in 1918, and in the organization of the Employment Service of Canada which was completed in the following year.

The Government of British Columbia published an order on August 7, that no direct unemployment relief should be given to any person who entered the province after May 7, such relief being thus limited to persons who have been in the province for at least three months. Hitherto all transients seeking relief have been allowed 40 cents a day for maintenance, and it was found that many were coming from other provinces, placing an unfair burden on the taxpayers of the province.

Supplementary letters patent have been issued under the Companies Act of Ontario to the following Safety Associations: the Food Products Safety Association, the Metal Trades Safety Association, and the Woodworkers' Accident Prevention Association. The object of these associations is to promote and carry on the work of the prevention of accidents in their respective classes as defined in the Workmen's Compensation Act of the Province and generally to represent employers in the employments and industries included in these classes in connection with the administration of the Act.

On the recommendation of the Minister of Labour, and in view of the acute unemployment situation at the present time, the Dominion Government published the following order dated August 7, 1931, governing federal civil servants: "Where any employee is known to be using any of his annual leave for the purpose of engaging in temporary employment in connection with the operation of any race track, exhibition, or in the selling of goods of any kind, thereby depriving wholly unemployed people of such temporary work he shall, on the production of evidence proving the said offence to the satisfaction of the Deputy Head, be subject to immediate suspension, investigation and appropriate discipline, except in cases where, for sufficient cause shown, the Minister of Labour shall have granted special permission authorizing such temporary employment."

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

Employment

THE employment situation at the end of July was reported by the superintendents of the Employment Service of Canada to be as follows:—

Haying in the Province of Nova Scotia was well under way, though operations had been somewhat retarded by wet weather. Rain also was the cause of heavy damage to growing potatoes, owing to rot. Inshore and bank fishing in most localities continued good. There were no new developments in logging. Mining was quiet with all mines on short time. Manufacturers of confectionery and foodstuffs reported business as good, but other industries including the iron and steel group, were either working part-time only, or were entirely idle. Building construction was active, and road construction still continued along public highways and through town limits, with rapid progress being made. Tourist traffic considerably increased passenger transportation and freight traffic also was fairly heavy. Trade in general showed improvement. There was an increased demand for women domestics, but some difficulty arose in securing experienced applicants.

Farmers in the Province of New Brunswick reported haying as well advanced, with the crop an excellent one. Some losses were sustained by fishermen, by gales which carried away drift nets, but salmon fishing continued good, with other fish in fair quantities. Along the Shediac and Kent shores, preparations were being made for the lobster season which was about to open. A few woodsmen were placed, but for the most part logging was quiet. Confectionery and foodstuff plants were busy and foundries and machine shops at Chatham were well employed. Other factories, particularly at Saint John, were slack. Excellent progress was being made with the restoration of the wharves at West Saint John. Elsewhere, building was also fairly active, with road construction providing considerable employment at Chatham. Transportation, both freight and passenger, was brisk, the tourist season being responsible for heavy automobile traffic. Trade, wholesale and retail, was good, and collections were improving. There were the usual requests for women domestic workers.

There was a continued demand for farm workers in the Province of Quebec, though in a smaller degree than usual. Except at Sherbrooke, nearly all offices reported complete cessation of logging activities. Mining

was quiet. Manufacturing in Hull was fair only. In Montreal, boot, shoe and printing trades were quiet, also tobacco, with clothing and rubber factories fairly active. In Quebec City, factories were operating at 50 per cent of their capacity, but improvement was noted at Sherbrooke, while at Three Rivers, cotton mills were slack. Conditions were somewhat better in building construction, but in the large cities road and sewer work was provided for a large number of workmen. Transportation was quiet, and not much change was noted in trade. Requests for women domestic workers declined somewhat, resulting in a number of unplaced applicants.

A good demand for farm help continued generally throughout Ontario. In the Niagara district, small fruits were finished, but peaches were not ready for picking. Logging showed little activity, though bushmen were called for at Port Arthur and river drivers at Sudbury. Mining was quiet. No improvement was noted in manufacturing. In Hamilton, Kitchener and Brantford, industries were particularly slack, though at the last named city, textile concerns were busy with normal staffs, and in some cases worked overtime. Building construction was providing much less than the usual volume of employment, the only work undertaken being that of alterations and small jobs. Quietness also prevailed in all branches of women's work, both household and clerical.

As a result of wheat harvesting having started in certain sections of the Red River Valley and the southwest portion of Manitoba, the demand for farm help in that province showed a slight improvement. Grain prospects in much of northern and eastern Manitoba were well sustained on the basis of the previous reports, though grasshoppers had created considerable damage over large areas. Logging and mining were quiet, and no improvement was recorded in manufacturing. Building construction was below the usual level, and the registered unemployed continued to increase in this group, though road work provided by various municipalities was being carried on and helped out the situation in such localities. Trade was quiet. The demand for charwomen in Winnipeg continued much the same, and there was an encouraging increase in orders for household help.

There was a slight improvement noted in the call for farm labour in the Province of Saskatchewan, grain having helped the feed situation in some sections. Coal mines at

Estevan worked only one or two days a week. Building construction was exceptionally quiet, though some orders had been received for extra gangs for railroads. Casual work was scarce and many men were available for the few jobs offered. There was a fair demand for day workers in the Women's Section, but other lines continued quiet.

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(Official Statistics except where noted)

	1931			1930		
	July	June	May	July	June	May
Trade, external, aggregate..... \$		107,827,379	134,302,391	162,456,559	172,080,230	181,008,526

(1) Calculated from yields of Ontario bonds.

(6) Excluding lines east of Quebec.

(2) For group figures, see articles elsewhere in this issue.

(7) Including lines east of Quebec.

(3) Bradstreet

(8) MacLean's Building Review.

(4) Figures for end of previous months.

(9) Sugar production given in periods of four weeks.

(5) Figures for four weeks ending August 1st, 1931, and corresponding previous periods.

(10) The index of the physical volume of business includes forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughterings of cattle, sheep and hogs; storage holdings of butter and cheese.

The call for farm help in the Province of Alberta showed some improvement, and in districts where harvesting had started, no difficulty was experienced in obtaining workers, as the crop generally was light, and there were sufficient men locally to meet all requirements. Very little activity was shown in mining, and no requests for additional help. Logging also was quiet. Conditions remained unchanged in manufacturing, business being slack. There was little building construction and numerous tradesmen were idle. Road work provided some employment, but not in sufficient amount to care for all those who were unemployed. Vacancies were scarcer in the Women's Domestic Section, and applicants were increasing.

Except for haying and first picking of early apples, the demand for farm help in the Province of British Columbia was very slight. Fruit growers sent in few orders for assistance as applicants canvassed direct the places where work was procurable. Little logging was being carried on, but a number of men were engaged in fighting forest fires. No extensive work, other than prospecting, was in evidence in the mining districts. Several sawmills were in active operation, but otherwise conditions were unfavourable. Fruit packing and canning plants were all very busy, with large staffs at work, and sufficient helpers available. Construction was mainly confined to highway and railway work, erection and renovation of small buildings and reconstruction of telephone lines. Longshoring and stevedoring were only fair. Trade was dull and collections slow. A slight improvement was noted in calls for women domestic workers for hotels and restaurants, but regular household work was difficult to secure and a large number of women and girls were unemployed.

EMPLOYERS' REPORTS

There was a slight increase in employment at the beginning of July, according to statements tabulated by the Dominion Bureau of Statistics from 7,803 firms employing 940,222 workers, or 1,794 more than on June 1. This gain brought the index number (based upon the average in the calendar year 1926 as 100) to 103.8, as compared with 103.6 in the preceding month, and with 118.9, 124.7, 117.7, 109.7, 105.0, 98.0, 97.1, 100.7, 92.2 and 88.6 at the beginning of July in 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. Industrial employment was thus at a lower level on July 1, 1931, than at the beginning of July in the preceding five years,

although the index was higher than on the same date in the five years, 1921-1925.

The trend was favourable in the Maritime and Prairie Provinces; Quebec and Ontario reported curtailment, while no general change was indicated in British Columbia. In the Maritime Provinces, construction recorded the greatest improvement, there being large increases in highway construction, and there were also gains in mining and services; on the other hand, manufacturing was slacker. In Quebec, construction reported additions to staffs, but logging registered seasonal declines, and manufacturing also released employees. In Ontario, considerable gains were shown in construction, and trade and mining were also busier, but manufacturing was seasonally quiet, and there were losses in logging and transportation. In the Prairie Provinces, the most noteworthy advances were in construction, but services also showed improvement; on the other hand, mining, transportation, trade and manufacturing recorded reduced activity. In British Columbia, manufacturing, particularly of food products, was busier, as were highway construction, communications and transportation, but logging and building and railroad construction reported declines.

In Montreal, Quebec City, Toronto, Ottawa, Hamilton, Windsor and the adjacent Border Cities and Vancouver, reductions in employment were registered, while improvement was indicated in Winnipeg. In Montreal, employment showed a decline, there being losses in manufacturing and transportation; on the other hand, construction reported heightened activity. In Quebec City, manufacturing and construction were slacker, while services and transportation registered advances. In Toronto, trade and transportation reported increased activity, while there were seasonal losses in manufacturing, mainly in textiles and iron and steel. In Ottawa, most of the decline took place in construction. In Hamilton, manufacturing and construction reported large losses. In Windsor and the adjacent Border Cities, further curtailment was noted, mainly in automobile plants. In Winnipeg, construction registered advances, while other industries showed only slight changes. In Vancouver, there were losses in construction; the other groups showed only minor changes.

In the manufacturing division, seasonal curtailment was shown in textile and iron and steel plants, and there were also losses in leather, lumber, non-ferrous metal, electrical apparatus and chemical and allied product plants. On the other hand, food canneries, electric current, musical instru-

ment, building material and beverage factories reported heightened activity; the general trend in this division was downward. Apart from the manufacturing industries, there were declines in logging, mining and transportation, while services and construction recorded important expansion (that in high-way construction being most pronounced), and there was very little general change in communications and trade.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of July, 1931.

TRADE UNION REPORTS The unemployment volume among local trade unions at the close of June remained almost unchanged from that of the previous month, the 1,849 labour organizations from which returns were tabulated with 200,505 members showing 16.3 per cent of idleness contrasted with 16.2 per cent in May. Large contractions of activity, however, were noted from June last year when 10.6 per cent of the members reported were without work. Nova Scotia, Ontario, Manitoba, Saskatchewan and British Columbia unions all indicated a tendency toward greater unemployment than in May, though the changes were slight. On the other hand, moderate improvement in conditions was reflected by New Brunswick unions while in Quebec and Alberta the gains were less than one per cent. A lower level of activity was maintained in every province than in June of last year, Ontario, Alberta and British Columbia unions showing the greatest depression though the reductions in the remaining provinces were also noteworthy.

On another page of this issue will be found an article in some detail with tabular statements in unemployment among local trade unions at the close of June, 1931.

EMPLOYMENT OFFICE REPORTS Reports from the offices of the Employment Service of Canada for the month of June, 1931, showed 27,748 references of persons to positions and a total of 25,973 placements. Of these the placements in regular employment totalled 11,091, of which 7,339 were for men and 3,752 for women, while placements in casual work were 14,882. Vacancies offered by employers to the Service numbered 27,183, of which 18,878 were for men and 8,305 for women. Applications for employment were registered from 43,574 men and 12,539 women, a total of 56,113. A decrease was shown in the volume of business transacted when the above figures are compared with the preceding

month, the reports for May, 1931, showing 32,289 vacancies offered, 53,350 applications made and 30,728 placements effected, while there was a slight gain over June, 1930, during which month there were recorded 26,221 vacancies, 40,895 applications for work and 24,884 placements in regular and casual employment. A report in detail of the work of the offices for the month of June, 1931, and for the quarterly period April to June may be found elsewhere in this issue.

BUILDING PERMITS AND CONTRACTS AWARDED According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities during June, 1931, was \$8,470,738, as compared with \$11,868,171 in the preceding month and with \$18,621,487, in June, 1930.

The *MacLean Building Review* states that contracts awarded for July were 5.8 per cent less in dollar value than for June and 24.9 per cent less than July, 1930. The percentage of difference between the corresponding seven months' period of last year and this year stands at 31.3 per cent as against 32 per cent for the first six months. Of the July total, which is \$28,054,700, \$11,683,600 was for engineering purposes; \$8,586,300 was for business buildings; \$7,113,300 was for residential buildings; \$671,500 was for industrial purposes. The apportionment of contracts awarded during July, by provinces, was as follows: Quebec, \$9,938,900; Ontario, \$9,362,100; British Columbia, \$2,870,100; New Brunswick, \$2,296,400; Alberta, \$1,307,800; Saskatchewan, \$1,176,100; Manitoba, \$706,500; Nova Scotia, \$380,800; Prince Edward Island, \$16,000.

Production and Trade

INDUSTRIAL PRODUCTION Figures showing the volume of production in certain industries during recent months and also in the corresponding months last year, are shown in the table on page 870.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, states that industrial operations in Canada reached a low point in June, showing reaction from the moderate levels of preceding months. Production indexes reflect a decline which was fairly general among the chief industries. The production of motor cars at 6,835 units in June showed a decline of nearly 36 per cent after seasonal adjustment. The number of new cars made available for use in Canada during the six months ended June 30, 1931, totalled 64,340 cars, com-

pared with 103,000 cars in the first half of 1930. Production of steel ingots and castings during June, reported at 55,605 tons, was at the lowest point for the year to date. This tonnage was 26 per cent under the 75,235 tons in the preceding month and compares with an output of 95,312 tons in June a year ago. A gain was recorded in the output of pig iron, contrary to the general tendency of the month. Production amounted to 55,822 long tons, an advance of 11 per cent from the total of 50,511 tons in May. During the month one blast furnace was banked at Sault Ste. Marie and one blown in at Port Colborne, the active furnaces at the end of June being located one each at Sydney, Hamilton, Sault Ste. Marie and Port Colborne.

The decline in output of newsprint was moderate and the gain in the shipment of lumber to external markets was not equivalent to the normal increase for the season. Imports of raw materials for use in manufacturing plants showed a sharp decline in levels of the preceding month. Receipts of raw rubber, cotton and wool showed marked contraction, while the gain in the imports of crude petroleum was less than normal for the season.

The index of manufacturing production based on 16 significant factors with seasonal adjustment was 135.7 in June compared with 163.3 in May. The level in the month under review was lower than in March or April, but higher than in either of the first two months of the year.

As measured by exports of metals, the mining industry was less active in June. Shipments of nickel to external markets showed a decline during the month. The gain in gold shipments was less than normal for the season, while a slight gain was shown in copper exports after seasonal adjustment. The production of coal was 887,859 tons, compared with 901,514 tons in May. The index of mining operations was 112.0 compared with 149.7.

Railway freight loadings amounted to 221,874 cars, compared with 215,973 in May, but the gain was less than normal for the season.

The wheat crop of Western Canada was reduced to a condition just above half of the average by continued drought, heat, wind and insect damage during June, a situation which has not been materially remedied by the better weather prevailing in July to date. Despite the beneficial rains at the end of June and in the first half of July, the Canadian wheat crop has still the prospect of returning the lowest average yield per acre in the 24 years of official records.

Coal.—Production of coal from Canadian mines during June amounted to 887,859 tons, a falling off of 33.8 per cent from the 1926-1930 average for the month of 1,340,223 tons. The current month's output consisted of 806,344 tons of bituminous coal, 65,066 tons of lignite coal and 16,449 tons of sub-bituminous coal. Nova Scotia's output was 431,212 tons or 48.6 per cent of the total Canadian production. Alberta produced 229,513 tons; British Columbia, 197,794 tons; Saskatchewan, 18,688 tons, and New Brunswick, 10,652 tons.

Receipts of coal during June were recorded at 1,198,335 tons or 36.9 per cent below the five-year average for the month of 1,898,098 tons. Anthracite coal imports totalled 348,563 tons made up of 188,473 tons from the United States, 145,359 tons from Great Britain, and 14,731 tons from Germany.

Bituminous coal importations amounted to 849,711 tons, including 844,054 tons from the United States, and 5,657 tons from Great Britain. Lignite coal imports were recorded at 61 tons.

Exports of Canadian coal amounted to 38,066 tons, a decline of 49.1 per cent from the 1926-1930 average of 74,810 tons.

Coal made available for consumption in June reached a total of 2,048,128 tons; of which quantity the United States contributed 50.4 per cent; Canada, 41.5 per cent; Great Britain, 7.4 per cent; and Germany 0.7 per cent. The five-year average for the month was 54.4 per cent higher at 3,163,511 tons.

A summary of Canadian trade prepared by the Department of National Revenue shows that in June, 1931, the mer-

chandise entered for consumption amounted to \$52,507,534, as compared with \$73,457,404 in the preceding month and with \$91,543,981 in June, 1930. The chief imports for June, 1931, were: Iron and its products, \$9,988,791; Non-metallic minerals and products, \$9,838,334; Fibres, textiles and textile products, \$7,250,641.

The domestic merchandise exported during June, 1931, amounted to \$54,348,421 as compared with \$59,833,245 in the preceding month and with \$78,703,281 in June, 1930. The chief exports in June, 1931, were: Agricultural and vegetable products, mainly foods, \$19,358,216; Wood, wood products and paper, \$17,145,648; Animals and animal products, \$5,263,513.

Strikes and Lockouts

The time loss due to industrial disputes in Canada during July, 1931, showed a decrease from that occurring during June, 1931,

only one-half the number of disputes being recorded, with a similar decrease in the number of workers involved. As compared with July, 1930, although the number of disputes was less, there were increases in both workers involved and time loss incurred, due chiefly to the strike of masters and mates on the Pacific coast, which, although terminating early in July, affected 500 workers for several days. There were in existence during the month five disputes, involving 689 workers, and resulting in a time loss of 8,044 working days, as compared with ten disputes, involving 1,209 workers and resulting in a time loss of 22,439 working days during June, 1931. In July, 1930, there were on record six disputes, involving 196 workers, and resulting in a time loss of 2,152 working days. At the end of the month there were three disputes recorded as strikes or lockouts, involving approximately 125 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been formally called off or lapsed.

Prices

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty-nine cities was again slightly lower at \$8.11 for July as compared with \$8.16 for June; \$10.91 for July, 1930; \$10.98 for July, 1929; \$10.80 for July, 1928; \$10.92 for July, 1927; \$11.07 for July, 1926; \$10.49 for July, 1925; \$9.91 for July, 1924; \$10.17 for July, 1923; \$10.27 for July, 1922; \$10.96 for July, 1921; \$16.84 for July, 1920; \$13 for July, 1918, and \$7.42 for July, 1914. The prices of beef, veal, bacon, lard, milk and butter averaged slightly lower. Including the cost of fuel and rent with that of foods the total budget averaged \$18.26 at the beginning of July as compared with \$18.36 for June; \$21.26 for July, 1930, and July, 1929; \$21.01 for July, 1928; \$21.10 for July, 1927; \$21.30 for July, 1926; \$20.70 for July, 1925; \$20.30 for July, 1924; \$20.65 for July, 1923; \$20.67 for July, 1922; \$21.53 for July, 1921; \$26.92 for July, 1920 (the peak); \$20.66 for July, 1918, and \$14.17 for July, 1914. In fuel, anthracite coal was slightly higher. Rent was lower in the average because of lower quotations for several cities.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1926 as 100 was again slightly lower at 71.7 for July as compared with 72.2 for June; 85.3 for July, 1930; 97.2 for July, 1929; 96.0 for July, 1928; 98.5 for July, 1927, and 100.1 for July, 1926. In the

grouping according to chief component material five of the eight main groups were lower and three were higher. The groups which declined were the Vegetables and Vegetable Products group due to lower prices for barley, rye, wheat, flour, bran, shorts and coffee which more than offset higher prices for flax, corn, sugar, raw rubber and linseed oil; the Fibres, Textiles and Textile Products group because of lower quotations for cotton fabrics; the Wood, Wood Products and Paper group due to declines in the prices of lumber and sulphite pulp; the Iron and its Products group due to lower prices of steel and scrap iron; and the Non-Ferrous Metals group because of declines in the prices of copper, copper sheets, and copper wire bars which more than offset advances in the prices of lead, antimony, tin, silver and zinc. The Animals and Animal Products group was slightly higher due to increased prices for hides, cured meats, steers and hogs, which more than offset lower prices for lambs, milk and raw furs. The Non-Metallic Minerals group was higher mainly because of higher prices for coal. Higher prices for bicarbonate of soda and white lead caused a slight advance in the Chemicals and Allied Products group.

Sickness among Industrial Employees in United States in the Second Half of 1930

According to the United States Public Health Service, a favourable health record among industrial workers during the second half of 1930 is indicated from reports of a group of industrial sick benefit associations covering about 135,000 male industrial employees. This record is based upon the frequency of claims for sickness and non-industrial accident benefits covering cases causing disability for eight consecutive calendar days or longer. A low rate of cases causing more than one week's disability was recorded also for male employees of the same industrial establishments in the first half of 1930.

Although available morbidity rates are based on sample data that may be too small to be representative, favourable mortality rates in 1930 suggest that the relative low incidence rates of disabling sickness among the men included in the record under discussion may have prevailed generally.

That the favourable sickness record was due largely to the absence of serious epidemics of respiratory nature is indicated by the non-respiratory disease rate which differed little in 1930 from that of 1929 and 1928. It will be recalled that the mild wave of influenza did not get under way until January, 1931.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING THE MONTH OF JULY

DURING the month the Department received the report of the Board of Conciliation and Investigation which had been established to deal with differences between the Mohawk Bituminous Mines, Limited, and certain of its employees, being members of Local Union No. 74, District 18, United Mine Workers of America. The dispute related to the company's failure to renew their working agreement which had expired on March 31. The employees desired renewal of the day wage rates and contract mining rates, together with certain adjustments for "over pushing", while the company claimed that existing conditions did not justify rates as high as those which had been in force. The personnel of the Board was as follows: Mr. L. W. Brockington, of Calgary, Alberta, chairman, appointed on the joint recommendation of the other board members, and Messrs. W. S. Henderson, of Calgary, and William Potter, of Wayne, Alberta, nominated by the company and employees, respectively. The text of the report, together with the agreement signed by the parties, is given below.

Applications Received

Two applications for the establishment of Boards of Conciliation and Investigation were received in the Department as follows:—

1. From certain employees of the New Brunswick Telephone Company, Limited, being members of the Association of Telephone Workers of New Brunswick. The dispute in this case arose over the matter of a proposed reduction in wages.

2. From certain employees of the Intercolonial Coal Company, Limited, being members of Local No. 50, Mine Workers' Union of Canada. The employees claimed that wages

were not being paid in some cases to employees on contract rates in accordance with the terms of the agreement in effect and that working conditions in certain places had been changed without mutual consent.

The matters in dispute in both these cases were taken up with the parties concerned by the Chief Conciliation Officer of the Department and negotiations were proceeding at the close of the month.

Other Proceedings

Reference was made on page 638 of the June issue of the LABOUR GAZETTE to the dispute involving masters and mates, members of the Canadian Merchant Service Guild, employed by various tug boat owners, being members of the British Columbia Tow Boat Owners' Association, on strike since April 21, the application for a Board of Conciliation and Investigation in this matter being later withdrawn. Early in July the strike was called off and a statement as to its termination appears on page 878 of this issue.

The July issue of the LABOUR GAZETTE contained at page 745 the texts of the report of the Board of Conciliation and Investigation established to deal with the dispute between the Ottawa Electric Railway Company and certain of its employees, being members of Division No. 279, Amalgamated Association of Street and Electric Railway Employees of America, and of the minority report submitted by Mr. Redmond Quain. Word was later received from the employees' organization that an understanding satisfactory to both parties concerned had been arrived at and that an agreement was signed by the representatives of the company and of Division No. 279. A summary of the agreement will appear in the next issue.

Report of Board in Dispute between the Mohawk Bituminous Mines Limited and its Employees

In the matter of the Industrial Disputes Investigation Act, and in the matter of a certain Board of Conciliation and Investigation,

And in the matter of a certain dispute between the Mohawk Bituminous Mines Limited, and certain of its employees, being coal miners, representatives of Local Union Number 74, District 18, United Mine Workers of America.

MEMBERS:

William Potter, Esq., Wayne, representative appointed by United Mine Workers of America.

W. S. Henderson, Esq., Calgary, representative appointed by employers.

Leonard W. Brockington, Esq., K.C., Chairman.

The Hon. GIDEON ROBERTSON,
Minister of Labour,
Ottawa.

On the 1st day of July, A.D. 1931, a Board of Conciliation and Investigation was set up under the hand and seal of the Minister of Labour pursuant to the provisions of the Industrial Disputes Act, Revised Statutes of Canada, Chapter 112. There was duly referred to the said board for investigation and possible conciliatory action, a dispute between Mohawk Bituminous Mines Limited, and Local Union Number 74, District 18 of the United Mine Workers of America, arising out of the failure of the parties to the dispute to renew an agreement previously subsisting between them, which agreement expired on the 31st day of March, A.D. 1931.

The locality of the dispute was at Bellevue, Alberta, where the Mohawk Bituminous Mines, Limited, has for some years past operated a coal mine.

The board held one meeting in Calgary and then adjourned to Bellevue for the purpose of investigating conditions and taking evidence. The company placed its case before the board and relied largely in argument on the experimental nature of its development, its present economic difficulties and the fall in the general cost of living. The board expressed the opinion that it was neither fair to the company nor the men that what was admittedly a small organization operating in difficult circumstances should assume the burden of a thorough inquiry into wage and working conditions in a large coal mining area. The board further expressed the opinion that it could not be expected to deal with a large question such as the rise and fall in the cost of living in the Bellevue locality without a complete and exhaustive inquiry into the various economic facts forming the basis of that fluctuation with special reference to local conditions in Alberta in general and in the Crow's Nest Pass in particular.

At the close of the second day's evidence the board suggested to the parties that they should make a final endeavour to settle their difficulties. The representatives of the employers and the employees held a meeting which was abortive, and so reported to the board. The chairman of the board with the consent of the other two members then personally attended a meeting between the interested parties and we are happy to announce that negotiations have resulted in an agreement which is attached to this report. Letters have been exchanged between the parties dealing with some minor matters collateral to and explanatory of the new agreement which is in reality an extension of the old, some concessions having been made by the men in view of a new type of experimental work that the company proposes to institute. On the 26th day of July, a new agreement signed by both parties was submitted to the employees of the Mohawk Bituminous Mines Limited for ratification and was accepted, practically unanimously.

The board would like to congratulate the accredited representatives of both parties upon the goodwill which characterized their contentions, their deliberations and their negotiations. The employers have admirably recognized the difficulties of the men, and the men have not been unmindful of the economic conditions and obstacles that face pioneers in the coal industry in Alberta.

The agreement which is in reality an extension of the terms of the arrangement which expired on the 31st of March, A.D. 1931, will

hold for twelve months subject to possible variations in case of radical adjustments in the Crow's Nest scale. A copy of the new agreement and of the letter which is a corollary thereto is herewith attached.

Respectfully submitted,

(Sgd.) WILLIAM S. HENDERSON,
Employers' Representative.
(Sgd.) WILLIAM POTTER,
Employees' Representative.
(Sgd.) LEONARD W. BROCKINGTON,
Chairman.

CANADIAN PACIFIC TELEGRAM

Blairmore, Alta.,

409 P. Burns Bldg.,
Calgary.

Advise Mr. Brockington agreement carried by overwhelming majority.

A. J. MORRISON.

MEMORANDUM OF AGREEMENT made in duplicate this 23rd day of July, 1931,

BETWEEN

The United Mine Workers of America, District No. 18, of the First Part and Mohawk Bituminous Mines Limited, of the Second Part.

Whereas by an agreement dated the 1st day of May, 1929, and made between the said The United Mine Workers of America, District No. 18 of the first part and the said Mohawk Bituminous Mines Limited of the second part, the scale of wages payable by the said Mohawk Bituminous Mines Limited to its employees was settled; and

Whereas the said agreement expired on the 31st day of March, 1931, and since that date whilst the wages paid by the said Mohawk Bituminous Mines Limited have been according to the scale laid down in the said agreement no continuation or extension of the said agreement has been decided by the parties thereto; and

Whereas on account of the decision of the said Mohawk Bituminous Mines Limited not to enter into an agreement extending the said agreement a Conciliation Board was appointed under the "Conciliation and Labour Act, R.S., c. 96" and during the progress of the hearing of such Conciliation Board a settlement was arrived at between the parties hereto and such settlement is embodied in these presents.

Now this Agreement witnesseth—

1. The said agreement dated the said 1st day of May, 1929 is hereby continued subject to the following changes—

- (a) The said Mohawk Bituminous Mines Limited shall use its best efforts to eliminate overpushing.
- (b) The said Mohawk Bituminous Mines Limited shall pay for the mining of "bone" if such bone shall be in strata of greater depth than three (3) inches, sixty (60) cents per ton for all bone so mined and bone shall be piled at the place where it is mined or loaded on cars as the said Mohawk Bituminous Mines Limited shall determine.

2. This agreement shall be subject to any wage variation in the Bellevue Mine of the West Canadian Collieries Limited, and if wages for work like to the work stipulated for hereunder shall be increased beyond the wages payable hereunder or shall be decreased below the wages payable hereunder then automatically and without notice from the said Mohawk Bituminous Mines Limited to its employees the wages payable hereunder shall be subject to like increase or decrease.

3. This agreement shall extend until the 1st day of July, 1932. The parties hereto shall meet thirty days prior to the expiration hereof for the purpose of discussing a renewal hereof.

4. This agreement shall be forthwith submitted by the said The United Mine Workers of America District No. 18 for ratification by reference to its membership; and upon being ratified by a majority voting upon such referendum, this agreement and all provisions hereof shall be deemed to have become and to have been binding on the said The United Mine Workers of America District No. 18 and on the said Mohawk Bituminous Mines Limited as from the day of the date hereof.

In witness whereof the hands of the proper officers of The United Mine Workers of America District No. 18, and the corporate seal of Mohawk Bituminous Mines Limited and the signatures of its proper officers in that behalf all on the day, month and year first above written.

Signed, Sealed and Delivered
in the presence of

(Sgd.) JOS. MCKENZIE
(Sgd.) M. G. GRAVES

The United Mine Workers of America District No. 18,

by (Sgd.) A. J. MORRISON, Sec. Treas.

Mohawk Bituminous Mines Limited
by (Sgd.) E. RICHARDSON, Secretary.
W. L. CARLYLE, President.

STRIKES AND LOCKOUTS IN CANADA DURING JULY, 1931

THE number of strikes and lockouts in existence in Canada during July, 1931, was five, as compared with ten in the preceding month. The number of workers involved showed a corresponding decrease, while the time loss incurred was approximately one-third of that recorded for June, the decrease being due largely to the cessation early in July of the strike of masters and mates employed on tow boats on the Pacific coast, which had caused over 12,000 days time loss in June. Comparing the figures with those for July, 1930, although the number of disputes was less, there were increases in both workers involved and time loss incurred, due chiefly to the strike above mentioned.

included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Two disputes, involving approximately 600 workers, were carried over from June, and three disputes commenced during July. Of these five disputes two terminated during the month, one resulting in favour of the employers and one in favour of the workers involved. At the end of July, therefore, there were three disputes recorded as strikes or lockouts, namely: photo engravers, Toronto and London, Ont., Quebec and Montreal; P.Q., and Winnipeg, Man.; men's clothing factory workers, Toronto, Ont., and truck drivers, False Bay Beach, N.S.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not yet declared terminated. Information is available as to four such disputes, namely: coal miners, Shaughnessy,

Date	Number of disputes	Number of employees involved	Time loss in working days
*July, 1931...	5	689	8,044
*June, 1931...	10	1,209	22,439
July, 1930...	6	196	2,152

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are

Alta., January 15, 1931, one employer; motion picture projectionists, Ottawa, Ont., February 23, 1931, one employer; photo engravers, Toronto, Ont., March 23, 1931, one employer; and tailors, Vancouver B.C., June 6, 1931, one employer, this last being added this month. The dispute involving electrotypers in one firm in Toronto, commencing December 20, 1926, and carried in this list since November, 1927, appears to have lapsed during July and has accordingly been removed from the list.

Information was received too late to be included in the July issue of the *LABOUR GAZETTE* as to a strike of forty-five caddies employed at the Sarnia Golf Club, who stopped work on June 29, 1931, when a reduction of five cents in the rate per round was introduced. On the understanding that the previous rate of sixty cents would be paid, they returned to work the same day.

During July information was received also as to two disputes called by the Amalgamated Clothing Workers of America on June 11, 1931, in two men's clothing factories in Montreal, P.Q., some forty workers being affected by the demand for union wages and working conditions. By June 18, 1931, a settlement was reached, the employers agreeing to the demands of the union as to wages and working conditions, but without a written agreement.

During June disputes between the municipal authorities and men receiving relief tickets for part-time work were reported at Edmonton and Calgary, Alta., as to the amount of work and relief given and these disputes were adjusted.

A dispute early in July involving pulp-wood cutters employed by a firm operating near Chatham, N.B., has been reported, the workers alleging that the terms upon which the employment agency had engaged them were not those offered by the company. As the men refused to begin work under the company's conditions and returned home at once, the dispute is not recorded as a strike or lockout.

On July 30, 1931, at Oshawa, Ont., some thirty-five men constructing a trench for gas mains at piece-rates were prevented from working by unemployed men objecting to the rates paid, but work was resumed on August fourth.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

MASTERS, MATES AND MARINE ENGINEERS, VANCOUVER AND VICTORIA, B.C.—The strike of masters and mates employed on tow boats at Vancouver and Victoria, B.C., commencing April 21, 1931, with a sympathetic strike of marine engineers, was called off early in

STRIKES AND LOCKOUTS IN CANADA DURING JULY, 1931

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
(a) Strikes and Lockouts in Progress Prior to July, 1931			
MANUFACTURING— <i>Printing and Publishing—</i> Photo engravers, Toronto and London, Ont., Quebec, Montreal, P.Q., and Winnipeg, Man.	100	2,600	Commenced May 4, 1931; for union agreement; un-terminated.
TRANSPORTATION— <i>Water—</i> Masters, mates and marine engineers, Vancouver and Victoria, B.C.	500	5 000	Commenced April 21, 1931; against reduction in wages; terminated July 10, 1931; in favour of employers.
(b) Strikes and Lockouts Commencing during July, 1931			
MANUFACTURING— <i>Textiles, Clothing, etc.—</i> Men's clothing factory workers, Toronto, Ont.	15	45	Commenced July 29, 1931; against violation of agreement; un-terminated.
CONSTRUCTION— <i>Buildings and Structures—</i> Carpenters, Vancouver, B.C.	65	300	Commenced July 2, 1931; against reduction in wages; terminated July 9, 1931; in favour of workers.
<i>Highway—</i> Truck drivers, False Bay Beach, N.S.	9	99	Commenced July 20, 1931; against decrease in piece rates; un-terminated.

July, the date of termination in Victoria being July 3 and in Vancouver, July 10. Reports received are to the effect that approximately one-half the strikers had been replaced during the dispute. The employees involved returned to work where their positions had not been already filled, in most cases at a ten per cent reduction in wages put into effect or proposed by the employers before the dispute.

CARPENTERS, VANCOUVER, B.C.—During May and June negotiations were carried on between the building contractors in Vancouver and both carpenters' Unions, the United Brotherhood of Carpenters and Joiners of America and the Amalgamated Carpenters of Canada. The contractors had proposed a reduction in wages and, no settlement having been reached, gave notice that from June 22 the rate would be reduced from \$1 per hour to 85 cents. The date for the change, however, was extended to July 2. The unions claimed that the contractors had not given them sixty days' notice as required in the existing

agreements and called out workmen engaged at reduced rates on certain construction jobs. On July 9 work was resumed, the contractors having agreed to pay the former rate of \$1 per hour pending further negotiations. Following this, work was held up on two other buildings for a few days until the contractors concerned agreed to pay the standard rate.

TRUCK DRIVERS, FALSE BAY BEACH, N.S.—A cessation of work occurred on July 20 against a reduction in wages, piece-rates, from 22-28 cents per mile to 14 cents per mile. At the end of the month the dispute was un-terminated.

MEN'S CLOTHING FACTORY WORKERS, TORONTO, ONT.—This dispute, involving fifteen employes in one establishment in Toronto, commenced on July 29, 1931, when tailors, operators and cutters went on strike claiming that the employer had violated the agreement with the union. No termination had been reported by the end of the month, although the employer had partially replaced the strikers.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue for February, 1931, in the review of Strikes and Lockouts in Canada and Other Countries, 1930. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates.

Great Britain

The number of disputes beginning in June was 23, and 18 were still in progress from the previous month, making a total of 41 disputes in progress during the month, involving 18,400 workpeople and resulting in a time loss of 116,000 working days for the month. Of the 23 disputes beginning in June, 8 were over proposed reductions in wages, 6 on other wages questions, 7 on questions respecting the employment of particular classes or persons and 2 on questions of trade union principle. During the month, settlements were reached in 27 disputes, of which 5 were in favour of workpeople,

11 in favour of employers and 11 ended in compromises; in one other dispute, work was resumed pending negotiations.

A strike involving in all 9,300 colliery workpeople in Cumberland began June 24 "against enforcement of reduction in wages recommended by the Coal Mines National Industrial Board." No settlement had been reported at the end of June.

France

As noted in the *LABOUR GAZETTE*, June and July, a strike involving 120,000 textile workers in the Roubaix-Tourcoing district began May 18, against the withdrawal of a bonus of four per cent of wages which was paid by employers to meet contributions to the Social Insurance fund. On July 6, about 30,000 of these strikers resumed work in the establishments of employers not belonging to the employers' association, the settlement providing for a bonus of 3 per cent of wages until September 15, after which one per cent would be paid and merged in wages.

Cuba

A 24-hour general strike involving it is reported about 40,000 workers in Havana and 60,000 in other large towns of Cuba occurred on August 4 in sympathy with striking street railway employees.

United States

The number of disputes beginning in May was 83, and 71 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 21,325 and the time loss 445,384 working days for the month.

A strike of between 7,000 and 8,000 silk workers at Allentown, Pennsylvania, began May 1, against wage reductions, and was still in progress at the end of July. A strike involving 3,500 silk workers at Paterson, New Jersey, began July 23 and was still in progress at the beginning of August. This strike was for higher wages, shorter hours and other demands, the strikers alleging that piece rates had been cut.

On July 29, 30,000 clothing workers in the men's clothing industry in New York city went on strike to secure a new agreement. The next day, it was reported, an agreement was reached with the manufacturers' association which employs about 20,000 of the strikers. In independent shops, who refused to negotiate with the union, however, the strike continued in an effort to secure union conditions.

Strikes of coal miners have been in progress for the past two months. It was estimated at the end of July that 15,000 coal miners were involved in disputes in Pennsylvania, 10,000 in West Virginia, 10,000 in Kentucky and 5,000 in Ohio. During June, agreements were reached between the United Mine Workers Union and several mine operators in Pennsylvania and West Virginia, some of these providing for increases in certain wage rates.

COMBINES INVESTIGATION ACT

Members of Toronto Electrical Contractors Combine Summoned— Prosecution of Motion Picture Combine Considered by Provinces

FOLLOWING an investigation under the Combines Investigation Act in 1930 into the Electrical Estimators Association, an alleged combine among electrical contractors in the city of Toronto, prosecution of parties to the combine was commenced in June, 1931, in charges laid through the Department of the Attorney General for Ontario. The report of W. T. N. Phelan, K.C., as Commissioner conducting the investigation, was reviewed in the LABOUR GAZETTE, October, 1930, pages 1148-1150. Some fifteen Toronto electrical contractors were summoned to appear in Police Court in Toronto on June 22 to answer charges of conspiracy to restrain or injure trade or commerce in connection with electrical supplies contrary to section 498 of the Criminal Code.

The report of Mr. Peter White, K.C., finding a combine in the motion picture industry in Canada, was remitted in July to the attorneys general of the provinces for such action as they might deem advisable, in accordance with the provisions of the Combines Investigation Act. The findings of Mr. Peter White, K.C., as Commissioner conducting the investigation into the alleged combine, were reported in the LABOUR GAZETTE, July, 1931, pages 786-789. Mr. R. H. Greer, K.C., was retained by the Attorney General for Ontario to examine the evidence in the case and to act for the Crown in the event of prosecutions being conducted by the province. Other provinces also will consider taking action against parties to the motion picture combine reported by Mr. Peter White.

Studies by the United States Public Health Service have shown that there is a great difference in the harmfulness of dust. Of those studied, the only dust which had a really serious or fatal effect upon the worker was that containing free silica. In the investigation of granite cutting plants, most of the workers were found to be exposed to an average of about 60 million particles of dust per cubic foot of air. The dust contained about 70 per cent silica, of which about 35 per cent was in the form of quartz or free silica. Under such conditions there was an almost universal occurrence of silicosis, and a large proportion of

the workers developed pulmonary tuberculosis. This disease, as a rule, did not make its appearance until after some 20 years of exposure, but when it did develop, a fatal result within less than two years was almost certain. The mitigation of the dust hazard in industry is primarily a ventilation problem. In many industries steps have been taken to prevent the escape of dust into the room by surrounding the machine with a suction hood or other device that removes the dust as it forms. This removal of dust at its source is the most important step to be taken.

REPORT OF COMMISSIONER OF LABOUR OF ALBERTA, 1930-1931

THE report of the Bureau of Labour of Alberta for the fiscal year ending March 31, 1931, gives statistics of trade and industry in the province during this period, and gives details of the administration of the various acts in charge of the Bureau, including the Factories Act, the Minimum Wage Act, the Theatres Act, the Steam Boilers Act, the Labour Disputes Act, and the Employment Offices Act.

Trade and Industries

The returns received this year, it is stated, indicate a much smaller volume of business than for the previous year. Returns from 2,620 firms covered 46,279 male employees over eighteen, 895 males under eighteen, 8,127 females over eighteen, 412 females under eighteen, and 499 apprentices. Total payments for wages and salaries were \$78,301,072.89, of which sum \$67,995,462.31 were paid to wage earners. The returns when considered as to employment by months for males, do not show as great fluctuations as in previous years. April was the month of least employment, when 43,846 were employed, and September the month of greatest, when 48,026 were employed. There was a fairly heavy decline after the peak month, and during December the total employed was 43,948. As in previous years the returns, when considered by individual industries, show great fluctuations, and when this is considered with the grouped totals it is apparent that for the unskilled work in the various industries men interchange from one to the other, thereby maintaining a better general balance. The returns of monthly employment of females show a fairly steady increase each month until September, but a very heavy drop for October and November and a slight increase again for December.

The report contains tables showing the average number of wage earners by months and the classified weekly wage rates, etc.

Labour Disputes Act

This section of the report relates to the calendar year 1930. During that period applications were received for the appointments of Boards of Conciliation and Investigation as follows:

(1) From the International Boilermakers and Helpers of America, Local No. 392, Calgary, in respect of an alleged dispute between the Local Union and the Dominion Bridge Company, Limited.

(2) From the Western Association of Stationary Engineers of Edmonton in respect of

an alleged dispute between certain employees and the P. Burns Company, Edmonton.

In respect of the first application, there appeared to be a definite probability of a stoppage of work, therefore a sincere effort was made to create a Board under the Act. The employers, in their statement of reply, claimed there was no dispute between the company and any of its employees, and that the said company had not at any time refused to deal with any of its employees; and further, that the company would not be a party to a Board if such were appointed. Efforts were made to have the company agree to participate in the proceedings of a Board, both by correspondence and interview, without result. A careful consideration of the whole question indicated that no tangible results could be expected from the work of a Board. The application was, therefore, allowed to lapse.

The second application did not indicate a dispute within the meaning of the Act; no action was therefore necessary.

Factories Act

Returns of Inspectors covering inspections under The Factories Act show decreases in the staffs of quite a number of the places visited. A total of 5,061 inspections was made of 4,740 factories, shops, hotels, offices and office buildings, in which were employed 27,354 males and 8,836 females. Recommendations relative to safety, sanitation, hours and wages, and the employment of children, to the number of 1,321 were made, all of which were carried out by employers. There were 577 inspections made of 537 elevators, in connection with which 188 safety recommendations were made. Full particulars of the inspections are given in tables in the report.

Women's Minimum Wages

The amendment to the Act passed at the 1930 Session of the Legislature (LABOUR GAZETTE, July, 1930, page 765) increased the work under this Act considerably, inspectors being required to visit the towns and villages throughout the province. A total of 3,963 inspections was made of 3,665 businesses in which were employed 9,945 experienced females and 821 learners. Of the total female employees 1,588 were employed in places brought within the scope of the Act by the recent amendment; 399 orders for adjustment of wages, 209 for adjustment of hours and 47 for adjustment of staff, so that not more than 25 per cent would be in receipt of ap-

prentice wages, were made. There was a decrease in the number of females employed under all Orders of the majority of the places inspected.

Five Court cases were taken against employers for failing to pay minimum wages; four convictions were obtained and employers were ordered to pay back wages. One case was dismissed the Court ruling the person charged was not responsible.

A number of permits were issued for overtime to be worked to take care of emergencies that had arisen. In all cases employers advised the Department of the number of hours worked and the amount paid for same.

Representations were made to the Board on behalf of hotel proprietors that due to the general trade depression travel was practically nil, which meant very little business, and that a continued application of the wage provisions of Order No. 3 would force a reduction or discontinuance of female help. Records of the volume of guests at a number of establishments were perused. The Board was of opinion that special consideration was desirable and a special order was made removing the application of the wage provisions of Order No. 3 from hotels situate other than in the twelve stated places to which the Act applied from its inception.

With a view to finding out if uniform provisions could be made regulating extra hours of employment for Christmas shopping, public sessions were held in Edmonton, Calgary, Lethbridge and Medicine Hat. Information secured at these sessions suggested that such a course was not desirable at the present time. Permission was, therefore, granted for the necessary overtime to be worked, in accordance with the requirements of the locality.

One request was received from an individual firm for permission to work female employees overtime to permit of seasonal rush trade being taken care of. This request was granted.

Three requests were received for permission to employ a greater number of apprentices than is permitted by the Regulations. Investigations showed that experienced help was not available. Permission was, therefore, granted for the number necessary to meet the requirements of the industries.

Three requests were received for permission to transfer employees from one branch to another at special rates to be fixed by the Board. These requests were granted, the employer being required to furnish the Board with a statement of earnings during the period of such transfer.

Theatre Inspection

This Branch showed a decline in revenue from examinations and projectionists certificates for the period of the report, fewer theatres being in active operation. In this connection the chief inspector of Theatres recommends that the issue of provisional certificates be discontinued. "With the exception of a few isolated cases, the candidates now appearing for examination all expect to operate in theatres where sound pictures will be exhibited. I am of the opinion that if such candidates are unable to obtain the required 50 per cent of marks to attain third class rating, they could not be equal to the demands attached to projection practice if allowed to operate on a Provisional Certificate. If such certificate is not granted the candidate may continue as an apprentice for three more months or until such time as he feels that he has better prepared himself for re-examination. This, I believe, would not work any hardship, but would undoubtedly make for better standards in the lower grades."

Boiler Inspection

The chief inspector of boilers reports that the number of complete inspections for all classes of pressure vessels was 3,065, with a total of 4,895 inspection visits, and the consequent issue of 2,530 inspection certificates. In addition to the foregoing, the inspectors made a total of 776 inspections under the provisions of the Factories Act at 763 points in the province. Eighty-seven of these inspections were undertaken at the oil fields and 579 at grain elevators during the time the inspector was visiting these places to make inspections under the Boilers Act. Considering the reduction in employment at the oil fields, mines and other similar industries, the number of candidates for engineers' certificates, it is stated, compares very favourably with the past.

The inspector notes that the number of casualties resulting from utility of steam and air has been exceptionally small. None of these were due to the failure of a pressure vessel under the Act. An engineer received injuries when the piston rod of the engine under his charge, fractured and shattered the back cylinder head of the engine cylinder. A fireman had one arm badly scalded while in the act of closing a stop valve. The thread on the valve spindle stripped and the valve bonnet was blown off. Other accidents of a minor nature were also reported, but in no case were the injuries sufficient to prevent the continued service of the employee.

Employment Offices

There was a marked decline in the demand for labour in all industries, and the total placements by Alberta Employment Offices recorded a decrease of 454 as compared with the previous year. Of the 50,859 vacancies filled 43,423 were for males and 7,436 for females. Of the male placements, 12,693 were sent to farms; 674 to building construction; 210 to clerical work; 505 to personal occupations; 10,287 to general labouring; 1,995 to lumbering; 176 to manufacturing industries; 6 to professional occupations; 1,865 to railroad construction and maintenance; 685 to mining; 816 to miscellaneous occupations, and 13,794 to casual employment. Of the female placements 1,334 were sent to farms; 61 to clerical positions; 2,481 as domestics; 3 to manufacturing industries; 32 to miscellaneous occupations, and 3,543 to casual employment.

There was a slight increase in the operating costs, the average cost per vacancy filled being 79 cents.

The importance of the service given is indicated by the number of vacancies listed during a period of unusual depression and the large number of applications for employment registered at the offices. This year, of the 43,539 vacancies received in the male section, 99.78 were filled, and of the 73,678 applicants 59.33 were found positions. Of the 7,722 vacancies received in the female section, 96.29 were filled, and of the 10,438 female applicants 71.43 found positions. Twenty-two vacancies in the male section and one in the female section were filled by workers transferred from Government Employment Offices in other provinces; 315 males and 10 females were transferred to employment outside the Province.

Following the practice of previous years, all farmers' organizations were circularized, information being requested as to acreage sown and possible labour requirements for the harvest season. Periodical returns were received of crop conditions, and it was found unnecessary to import labour for harvesting operations.

WORKMEN'S COMPENSATION IN QUEBEC

Industries Excluded from the Operation of New Act

A list of the industries that are excluded from the operation of the Workmen's Compensation Act, 1931, of the Province of Quebec, is given in Regulation No. 2, approved by the Commission last month (Regulation No. 1, was given on page 772 of the last issue).

Regulation No. 2

Section 1.—The following industries and services shall be excluded from the operation of said Act, to wit: (a) The florist and seedsman business; grain culture, gardening and horticulture; the maintenance and breeding of cattle, poultry and bees; fruit culture; the picking, sorting, packing, transportation, handling and storing of fruit and vegetables, performed by a co-operative association or fruit dealing company, whose members or shareholders are exclusively occupied with the culture and sale of the fruit and vegetables produced by them, without otherwise making a business thereof; (b) Laundries where no machine driven by inanimate power is employed; (c) Hairdressing and shoe shining establishments; (d) The manufacturing of plaster statues; (e) Funeral undertakers' service; (f) Educational establishments, hospitals, surgery, medicine, veterinary art and dental surgery; (g) Wholesale and retail business; (h) Hotels and restaurants; (i) Public sheds or garages, without any repair shop, livery stables; stables for auction or other sales; the transportation of passengers with or without baggage, by means of a vehicle drawn by horses, auto-

mobile, motorcycle or aeroplane; (j) Taxi-dermy; (k) The junk business; (l) The architect; (m) Excavations, when not specially mentioned and not included in another industry; (n) Any industry incidental to a retail business for the sale of men's and women's wearing apparel, white underwear, shirts, collars, corsets, hats, caps, furs or dresses; (l) Photography; (p) The trimming of women's hats, when it forms an integral part of the wholesale millinery business; (q) The operating of freight and passenger elevators not connected with any of the industries mentioned in schedules 1 or 2 or which are excluded by the present regulation.

Section 2.—Each of the following industries, exploited incidentally for the necessary and immediate purposes of an establishment where they sell retail only, is excluded from the operation of the Act, to wit:—(a) The making and repairing of watches, clocks and jewellery; (b) The making and repairing of boots and shoes; (c) The making and repairing of harness; (d) The optical business; (e) The tinsmith trade; (f) Pipe cutting; (g) Paper cutting; (h) The preparation of drugs; (i) The manufacture of sausage; (j) The cutting of meat; (k) The grinding of coffee; and other operations of a like nature.

Section 3.—Each of the following industries, although generally subject to the Act, are however excluded when less than six workmen are generally employed therein, to wit:—(a) The cutting or sawing of firewood; (b) The manufacture of cheese and butter, and the operating of a creamery or dairy; (c) The construction and exploiting of telephone lines,

and of works for such purpose, the six workmen being calculated with the exception of those operating the control apparatus; (d) The manufacture of artificial limbs; (e) Laundries operated by motive power, cleaning and laundering establishments; (f) The quarrying of and prospecting for stones and metals, except however mines and quarries already commercially operated and when the workmen are in the employ of a proprietor, lessee or duly registered holder; (g) The working of threshing machines, clover thresher or maize cutter; (h) The removal of garbage, street cleaning, and removal of snow or ice; (i) The manufacture of artificial plumes and flowers; (j) Confectioneries; (k) Bakeries; (l) The cutting, felling, piling, transportation of logs, wood or wood-bark, the peeling of logs by hand, but only in the case where these operations are carried on by an employer for his personal benefit and not acting as contractor or sub-con-

tractor for any industry; (m) The undertaking of window-cleaning; (n) The fishing industry; The industries mentioned in the foregoing section may, upon application by the employer addressed to the Secretary of the Commission, pursuant to article 73 of the Act, be added to schedule 1.

Section 4.—Each of the following industries which constitute only a branch of any industry mentioned in schedule 1, when they generally employ less than four workmen, is excluded from the operation of the Act, to wit: (a) repair shops; (b) Blacksmiths' or carpenters' shops; (c) Upholstering; (d) Framing; (e) The maintaining and operating of Waterworks systems; (f) The manufacture of rubber stamps, blotters, patterns; (g) The butcher business; The industries mentioned in the foregoing section may, upon application by the employer addressed to the Secretary of the Commission, pursuant to Article 78 of the Act, be added in schedule 1.

WOMEN'S MINIMUM WAGES IN NOVA SCOTIA

THE Minimum Wage Board of Nova Scotia recently issued Order No. 5, governing telephone operators in the Province, to become effective from August 1, 1931. Previous orders were outlined in the last issue, page 769, and in the issue of January, 1931, page 34.

Order No. 5.—Governing Female Operators in the Telephone Companies in Cities and Incorporated Towns of Nova Scotia.

(1) Wages.—No person, firm or corporation shall employ a female worker to be employed in a telephone establishment in the Cities or Incorporated Towns of Nova Scotia at a wage less per week for the regular recognized working period of the establishment than is set forth in the following table:—

No worker who begins as a young girl shall, after reaching the age of eighteen years, receive less than the wage prescribed for an inexperienced adult. A person shall be deemed to be an experienced worker when such person has been employed in the industry for one year after attaining the age of seventeen years, and in other cases when such person has been employed in the industry for eighteen months.

The other regulations contained in this order are similar to those in the previous orders, relating respectively to the maximum number of inexperienced employees who may be employed (*i.e.* 25 per cent of the total female working force); the hours of work for which the minimum wages are to be paid (*i.e.* 44 to 50 hours); special permits for aged or handicapped workers; deductions for absence; payment of employees waiting on premises; and penalties.

The text of Order No. 4, governing female employees in the Textile and Needle Trades, will be published in the next issue.

Groups	Experienced workers	Inexperienced Adult over 18 years	Young Girls under 18 years
Halifax, Sydney, Dartmouth and Glace Bay.....	\$11.00	6 months at \$ 9.00 6 months at \$10.00	6 months at \$ 8.00 6 months at 9.00 6 months at 10.00

All other incorporated towns.....	\$9.00	6 months at \$7.00 6 months at 8.00	6 months at \$6.00 6 months at 7.00 6 months at 8.00

NOTES ON LABOUR UNION ACTIVITIES

District 26, United Mine Workers of America

The annual convention of District 26, United Mine Workers of America, was held at Sydney, Nova Scotia, from June 22 to July 6, 1931, with 128 delegates present, representing every local union in the District. President D. W. Morrison, in his opening address gave a brief outline of local conditions, with particular reference to the unemployment situation. He advised the members not to oppose the use of machinery in coal mining, and urged them to strengthen their forces by combining for industrial and political action.

Mr. Thomas Kennedy, secretary-treasurer of the United Mine Workers of America, spoke to the delegates on the aims and objects of the organization, and gave an outline of the method of settling disputes.

For the purpose of deciding matters of contract and interpretation of agreement, the delegates decided on the appointment of an umpire, to be selected by the company and union officials. Many resolutions, dealing with the forthcoming wage agreement with the Dominion Steel and Coal Corporation, were adopted. The delegates went on record as giving their solid support to the district officers in these negotiations.

Among other resolutions adopted were the following:

Requesting the Federal Government to forbid the importation of coal from West Virginia, and other non-union fields of the United States;

Asking the Provincial Government to enact legislation legalizing the 6-hour day in the coal mines of Nova Scotia, with pay for 8 hours work at present standard wages;

Advocating full sittings of the Workmen's Compensation Board in all colliery accidents, with the least possible delay in the payment of compensation, and that allowances be paid to injured employees while the case is being investigated;

Authorizing the executive, subject to the ratification by the various locals, to make arrangements to establish a newspaper;

That Federal aid to the unemployed be not less than the average amount of the cost of living per week as published in the *LABOUR GAZETTE* for a family of five;

Requesting the Nova Scotia Board of Public Utilities to investigate the tramways situation in the mining areas before rendering

a decision on the application of the Cape Breton Electric Company for removal of its lines in Cape Breton;

That no new machinery or new methods of handling the production of coal be installed in the mines, unless local unions concur and the executive agrees;

Authorizing an allowance of \$1,200 for the erection of a memorial at River Hebert in perpetuation of the memory of those who lost their lives in the explosion in that district;

Asking for an investigation of the deductions made by the company for old debts contracted during periods of unemployment;

Advocating the appointment by the Provincial Government of a commission to inquire into retailing and distribution of coal within the province;

Recommending a 5-day week or nationalization of the mines in Nova Scotia;

Protesting against the proposal to close No. 14 colliery, and recommending the appointment of six representatives to work with the executive and citizens of New Waterford for a satisfactory solution of this colliery problem.

A request from some delegates that May 1 be observed as a miner's holiday was rejected by the convention.

Nominations for the various offices took place, election to be held at a later date.

Dominion Railway Mail Clerks' Federation

The Dominion Railway Mail Clerks' Federation held its bi-annual convention in the Mount Royal Hotel, Montreal, Que., on June 23-27, 1931, with delegates from all divisions present. Mr. Camillien Houde, mayor of Montreal, welcomed the delegates to the city. President Dennehy in his address reviewed the activities of the executive since the last convention. He informed the delegates that such matters as excessive running, condition of mail cars, bag shaking, handling of Christmas mail and seniority had been taken up with the proper officials of the Post Office Department, and that satisfactory results had been obtained. Other matters claiming the attention of the officers were: National councils; salary schedules for presentation to the Beatty Commission; superannuation; workmen's compensation. The delegates were further advised that the Federation was in a healthy condition, stronger in membership and financially than at any previous time.

The benevolent branch of the Federation, which was the subject of a special report, was shown to be in a satisfactory condition, with an increase in membership, and it was therefore decided to make no change in the policy of the branch for the next five years.

Many resolutions were passed, among the more important being the following:—

Seeking amendments to the Superannuation Act, which will provide for a lower optional superannuation age for railway mail clerks;

Protesting against the use of old wooden cars in railway mail service;

Asking for permits for employees to travel in postal cars on compassionate grounds, or whilst on annual leave.

Promotion for railway mail clerks, seniority in the service, and conditions under which the mail clerks work, were discussed and special recommendations made.

Officers elected were: president, Gerald Dennehy, Winnipeg, Man.; first vice-president, A. R. Buckler, Halifax, N.S.; second vice-president, F. E. Winter, Saskatoon, Sask.; third vice-president, J. H. Savard, Quebec, Que.; secretary-treasurer, H. A. Clarke, Calgary, Alta.

Brotherhood of Locomotive Firemen and Enginemen

The following is a continuation of the convention proceedings of the Brotherhood of Locomotive Firemen and Enginemen as reported in the July issue of the LABOUR GAZETTE.

One of the most vital questions to come before the convention was the revision of the pension laws, it having been found that the organization would be unable to continue the existing pension plan without charging prohibitive rates. The general policy committee made the following recommendations, which were adopted by the convention: (1) That the pension department be discontinued at as early date as possible; (2) That no new members be taken into the department after August 1, 1931, and (3) That the international president, secretary-treasurer and board of directors be authorized to make lump sum settlements with present pensioners, while those pensioners who do not wish to settle will have their present policies continued. After this has been done, the balance of the assets will be distributed among the members who have not received any benefits from this department. To take the place of pensions, the convention established a disability department which is expected to provide a greater measure of relief than was afforded by the general pension plan.

As a means of reducing the cost of conventions, the president was authorized to conduct an investigation in regard to possible consolidation of lodges. After the investigation, the president, secretary-treasurer and board of directors will determine what lodges shall be consolidated, and shall execute plans for this purpose.

Additional resolutions were adopted as follows:

Instructing the president to take up again with the chief engineer the question of the amalgamation of the two brotherhoods.

Favouring a readjustment of the present railroad rates which would provide sufficient revenue to the carriers, so as to enable them to pay adequate wages to all railroad employees, and provide a fair return on invested capital.

Authorizing the executive to co-operate with the Brotherhood of Railroad Trainmen for political and legislative purposes.

Instructing the president to investigate the effort of certain railroads to evade the overtime rule.

A proposal to create the office of second assistant president, and to reduce the number of vice-presidents, was defeated.

The chief officers elected were: president, D. R. Robertson, 418 Keith Building, Cleveland, Ohio; assistant president, Timothy Shea, Jersey City, N.J.; secretary-treasurer, Albert Phillips, 418 Keith Building, Cleveland, Ohio.; H. H. Lynch, Ottawa, Ont., was re-elected as Canadian vice-president, while Hugh Richmond, Smith's Falls, Ont., was re-elected as a member of the board of directors.

Milwaukee, Wis., was selected as the next convention city.

Provincial Federation of Ontario Fire Fighters

The twelfth annual convention of the Provincial Federation of Ontario Fire Fighters was held at Oshawa, June 17-19, 1931, with approximately fifty delegates in attendance, presided over by President J. A. McEwen. The delegates were welcomed to the city by Mayor Marks, Alderman Morris, Fire Chief Elliott, and Col. McCormick, secretary of the Chamber of Commerce. During the first session Mr. E. P. Heaton, Ontario Fire Marshal and Mr. F. Baer, President of the International Association of Fire Fighters, addressed the delegates.

According to the report of the trustees, total receipts, including balance brought forward, amounted to \$15,680.25; expenditures totalled \$13,725, leaving a balance on hand of \$1,955.25.

The legislative report, which was presented by the secretary, gave a review of the efforts of the legislative committee of the Federation to have a Superannuation and Pension Fund Act for permanent fire fighters of Ontario placed on the statute books of the province, and how the bill was finally defeated in the legal committee of the 1931 Legislature, after receiving first and second readings.

Among the resolutions adopted were: (1) Favouring a memorial service at the opening of the first session of each convention; (2) Instructing each branch of the Federation, not having a superannuation and pension fund, to make written application for same to their local municipal council; (3) Recommending that tubular or ramp type fire escapes be installed on all buildings used for the housing of children, the infirm, and the aged.

Chief officers elected were: President, J. A. McEwen, Fort William; First vice-president, S. Shuttleworth, Windsor; Second vice-president, H. R. Hobbs, Oshawa; Secretary-treasurer, D. H. Lamb, Toronto.

Chatham was selected as the next place of meeting.

Canadian Association of Stationary Engineers

The 42nd annual convention of the Canadian Association of Stationary Engineers was held in the Central Technical School, Toronto, on June 25-27, the delegates representing nearly all the local lodges. Mr. R. A. Arnup, of Woodstock, vice-president, occupied the chair. A scheme for subdividing the association on provincial lines and having the grand lodge meet bi-annually was referred to the executive for report at the next convention.

It was unanimously voted to affiliate with the All-Canadian Congress of Labour, and delegates were elected to attend the meeting of the congress to be held at Montreal in November.

An interim report on colours for the identification of piping systems, as recommended by the Canadian Engineering Standards Association was presented by Captain I. E. Cross, Mr. Edwin Golightly, grand secretary, and Captain I. E. Cross were re-appointed representatives of the C.A.S.E. on the Canadian Engineering Standards Association, with the expectation that a final report calling for the adoption of the scheme would be ready for the next meeting of the grand lodge.

The following officers were elected: Pres., R. A. Arnup, Woodstock; vice-president, E. Gay, London; secretary, Edwin Golightly, Toronto; treasurer, I. E. Cross, Ottawa; conductor, Charles Templar, Toronto, and door-

keeper, S. A. Fairbrother, Kapuskasing. Next convention will be held in Ottawa the last week in June, 1932.

American Federation of Musicians

With approximately three hundred delegates in attendance, presided over by President J. N. Weber, the thirty-sixth annual convention of the American Federation of Musicians was held at Chattanooga, Tenn., June 8-12, 1931. The delegates were welcomed to the city by the Mayor, Hon. E. D. Bass, Mr. E. D. Walsh, president, Chamber of Commerce, and Mr. Paul Aymon, president, Tennessee State Federation of Labour. Mr. William Green, President, American Federation of Labour spoke to the delegates at the opening session.

In his opening address President Weber reviewed generally conditions, as affecting members of the organization, for the past thirty years, but more particularly since the development of the moving picture industry. Referring to the introduction of labour saving machinery, the president stated that "the use of the machine should not result in the discharge of the worker, but merely in the reduction of the days and hours and hardships of their labour, so that hand in hand with mass production mass enjoyment of a shorter working week and day and lightening of labour may go." The delegates were reminded that as a result of the introduction of sound reproducing devices many of the members were being thrown out of employment.

According to reports submitted, the membership of the organization as at March 31, 1931, was 126,423, comprised in 716 locals, as compared with 735 locals and a membership of 139,398 reported to the previous convention.

The report of the treasurer showed total receipts in the general fund, including balance brought forward, of \$532,994.31, disbursements of \$222,542.37, leaving a balance on hand of \$310,451.94.

Among the resolutions adopted were: (1) Urging the locals to inaugurate a radio hour in which to plead the necessity for living music and the importance of employing professional musicians; (2) Advocating that a radio station, together with those hooked-up with it, employing non-union bands or orchestras be considered unfair; (3) Endorsing the appointment by President Hoover of a commission to study the pay of all the services of the United States; (4) Empowering the president of the American Federation of Musicians to name and designate a day in the year as "Living Music Day" on which to celebrate as a movement in advocacy and encouragement of the employment of musicians;

(5) Authorizing the executive board to meet, confer and agree with the National Association of Theatrical Managers and other employers as to the conditions and wages to govern members of the Federation for the ensuing year.

Chief officers elected were: President, Joseph N. Weber, 1440 Broadway, New York, N.Y.; vice-president, Charles L. Bagley, 403 California Bldg., Los Angeles, Calif.; secretary, William J. Kerngood, 37-39 William St., Newark, N.J.; treasurer, H. E. Brenton, Box B, Astor Station, Boston, Mass. Mr. G. B.

Henderson, 489 Davenport Road, Toronto, Ont., was elected as a member of the executive committee.

The next convention will be held in Los Angeles, Calif.

The August issue of the *Carpenter*, official organ of the United Brotherhood of Carpenters and Joiners, was published as a golden jubilee number to commemorate the founding of the Brotherhood which took place at Chicago, Ill., August 8-11, 1881.

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

New Vocational School at Fort William, Ontario

In connection with the opening ceremonies, on July 24, of the new vocational school at Fort William, the following comments appear in the Fort William *Daily Times-Journal* of that date.

"Keeping abreast of the times and providing for her young people the type of education most suited for the twentieth century world is what Fort William is doing by providing the new vocational school which to-day was dedicated at a ceremony with Premier George S. Henry as guest of honour. Not only is the building of the latest design and most modern in every respect, but a new era in educational facilities for the youth of this city is being ushered in through the advent of the school. Not only are the minds of the youth trained and developed in the seat of learning, but with ample campus facilities and two gymnasias the bodies of the pupils will also be trained."

Seeking Places for Graduates of Vocational Schools

Principal S. E. Henry, of the High and Technical Schools at Timmins, Ontario, is endeavouring to give special service to the students graduating from the schools and especially to those who have taken vocational courses. In a circular letter sent out to a large number of businesses and industries, Principal Henry states: "I take this opportunity of bringing to your attention a service we are prepared to render. This year we have a number of students graduating from the vocational school in the following departments: commercial, machine shop, mining and electricity. These students have been given a thorough elementary training in the practical work of these occupations, paralleled with three years of academic study in English,

history, science and mathematics. The attached sheets will give you the names of this year's graduating students, together with some general information regarding each of them. I am prepared to supplement this information with a confidential report on the ability, qualifications, etc., of any of these students. Great care will be taken with all reports issued, and no graduate will be recommended for a position if we do not consider him capable or qualified to fill it. We respectfully solicit your consideration of these students when you are making any changes in, or additions to, the personnel of your organization."

It is hoped that the plan may work out to the mutual advantage of the graduates and the industries and businesses that may need additions to their staffs.

Co-operative Plan of Apprenticeship in Columbus, Ohio

The co-operative plan of apprenticeship training inaugurated in the High Schools of Columbus, Ohio, is described by Mr. H. F. Finsterwald, Principal of the Bexley Junior High School, Columbus, in an article appearing in the July issue of the *Industrial Education Magazine*. The writer points out that the plan has won the full support of local industries to the extent that executives have contracted to give the boys a definite wage scale with automatic wage increases, and apparently for some time to come will be ready to absorb more boys trained by this plan than the school can furnish.

Under the co-operative plan the boy receives his machine shop training entirely in the industry, and is paid there at the rate of 25 cents an hour, increasing each six months to 50 cents an hour in his fourth year. If, meanwhile, the employer wishes to promote him further or to pay him more, that is

optional. The school offers a curriculum designed to make a well-rounded tradesman on the cultural side, and to teach skills which may help in the boy's promotion after the period of apprenticeship is over. The subjects offered are; shop mathematics, blueprint reading, industrial history, safety-first rules, and personal hygiene. Shop instruction is given on the milling-machine, shaper, the planer, and the lathe, so that the boy will acquire fundamental skills and knowledge which he might not get in industry for years, and a knowledge of which prepares him for promotion.

"The purpose of the course" Mr. Finsterwald says, "is to give that boy who definitely wishes to be a tradesman sufficient back-ground to make him a good tradesman, one who can hold a job, and forge ahead in the face of keen opposition. The effort was made to determine just how essential cultural studies related to industries are, in the opinion of industrial managers. The industries responded cordially. The training, they said, is just the sort they want an apprentice to have, but the sort they cannot give, when they have only two or three new lads at a time to teach; while the school can assemble them in good-sized classes of 30 or more.

"The industries are glad to have the fundamental skills taught also; as an opening in some department is liable to occur at any time, and it is important to have an employee with at least sufficient back-ground to learn the new task. The enthusiasm of executives of Jeffreys, Timken Roller Bearing Company, and others in the city, is evidenced by the fact that while they have been laying off people

they have been willing to take on these boys with a few months' intensive school training, and have asked for more boys of the same sort. There was demand for two or three more boys in each case than could be supplied, and they have engaged to take the next year's supply even before they enroll."

It is further pointed out that the curriculum, as planned out for this year for beginners, includes a full year in school, without any work in the industry. During the second and third years the boys will alternate between school and industry. The fourth year the student works entirely in the industry while a record of his success is sent back to the school. The student is urged to go on with high school studies in night school.

The United States Federal Board for Vocational Education recently published a bulletin entitled "Analysis of the Management of a Farm Business." The bulletin deals with the jobs pertaining to the farm business as a whole, rather than with jobs identified with separate enterprises. Attention is given to stating the purpose of vocational education in agriculture and to defining certain terms such as "types of farming, farm enterprise," and "farm job." Dr. Wright, the Director of the Board, states that the bulletin is specifically directed to vocational teachers in all types of agricultural schools, to teacher-trainers, and to State supervisors, for the purpose of assisting in the selection and organization of training content for effective courses of agricultural instruction in connection with the field of activity considered.

Safety Record of Cement Plant

Reference was made in the LABOUR GAZETTE for March, page 317, and for February, page 199 to the success of three plants of the Canada Cement Company in winning the Portland Cement Association safety trophy for having operated during the past year without time-loss accidents. A recent press report relates of the unveiling of the safety trophy at the Fort Whyte plant, near Winnipeg. The trophy, a handsome monument of concrete, was unveiled in the presence of the officials and employees of the firm. Mr. A. J. R. Curtis, on behalf of the Portland Cement Association, in relating the facts of the perfect record, told how the men of the electrical department had topped their fellow workers with 2,863 days without accidents. Next came the employees of the machine shop with 2,695 days. In other departments, mill workers had 1,563 days, the shipping department, 1,517

days, the kiln workers 1,066 days, the carpenters 573 days and the quarry workers 571 days since the last accident took place. Mr. Curtis congratulated the workers on their fine record and the spirit of co-operation with which they had worked with the Cement Company in reducing the hazards of their occupation from one of the most dangerous listed by the National Safety Council of United States to the most safe.

Major Charles K. Newcombe, commissioner for the Workmen's Compensation Board, congratulated both the firm and the employees and told of the enormous bill, nearly a million and a half a year, which Manitoba taxpayers pay annually to support broken and maimed men and destitute widows and children left by workmen accidentally killed. He pleaded for a more widespread following of the example of the safety campaign of the cement workers.

OLD AGE PENSIONS IN CANADA

Statistical Summary of Administration During Second Quarter of 1931 and Since Inception of the System

THE accompanying table gives particulars of operations under the Old Age Pensions Act (Revised Statutes of Canada, 1927, chapter 156) and the various provincial concurrent Acts, during the second three months of 1931, and since these Acts became severally effective. Similar tables, bringing the statistics down to March 31, 1931, were given in the *LABOUR GAZETTE*, May 1931. The text of the Old Age Pensions Act was given in the issue for April, 1927, page 375. It makes provision for the establishment of a Dominion Provincial pension system to be effective in such provinces as have enacted and given effect to special legislation for this purpose. These provinces are British Columbia, Alberta, Saskatchewan, Manitoba, and Ontario. The New Brunswick Legislature passed an Old Age Pensions Act at its session last year, to become effective on its proclamation by the Lieutenant Governor in Council; while in Nova Scotia and Prince Edward Island Acts providing for the participation of these provinces in any federal scheme were passed at the session of 1931, both these Acts to take effect on proclamation.

Under the Old Age Pensions Act a pension is payable to any British subject of 70 years and upwards who is not in receipt of an income of as much as \$365 a year and who has resided in Canada for the 20 years preceding, and has also resided in the province in which the application is made for the five years immediately preceding the granting of the pension. The maximum amount of pension payable under the Act is \$240 yearly. In cases where pensioners have a private income the amount of their old age pension

is subject to a reduction by the amount, if any, that their private income exceeds \$125 a year. The administration of old age pensions is entrusted to the authorities appointed by the respective provincial governments.

Increase in Dominion Contribution

Under the provisions of the Act as it was first passed the Department of Labour of Canada paid quarterly to each province one-half of the total amount of the pensions paid by the provincial pension authority during the preceding three months. At the recent session of the Dominion Parliament, however, the Act was amended, the amount of the Dominion contribution being increased from fifty per cent to seventy-five per cent of the total expenditure, this amendment to become effective on July 31, 1931. Section 3 of the Old Age Pensions Act now reads as follows:—

3. (1) The Governor in Council may make an agreement with the Lieutenant-Governor in Council of any province for the payment to such province quarterly of an amount equal to seventy-five per centum of the net sum paid out during the preceding quarter by such province for pensions pursuant to a provincial statute authorizing and providing for the payment of such pensions to the persons and under the conditions specified in this Act and the regulations made hereunder.

(2) The acceptance by any province of the moneys granted by Parliament for the payment of old age pensions shall be subject to the conditions that the Governor in Council shall have authority to order an examination, inspection and audit of all expenditures of such moneys in the province and the accounts with respect thereto, and that the province shall permit the inspection in such examination of all papers and documents relating to such payments.

(3) This section shall come into force on the thirty-first day of July, 1931.

TABLE I—FINANCIAL SUMMARY OF OLD AGE PENSIONS IN CANADA AS AT JUNE 30, 1931

	Alberta Act effective Aug. 1, 1929	British Columbia Act effective Sept. 1, 1927	Manitoba Act effective Sept. 1, 1928	Ontario Act effective Nov. 1, 1929	Sas- katchewan Act effective May 1, 1928	Northwest Territories Order in C. effective Jan. 25, 1929	Totals

UNEMPLOYMENT INSURANCE FOR CANADA

PROFESSOR H. M. Cassidy, of the Department of Political Economy of Toronto University, contributes to the *Queen's Quarterly* (Kingston) an article on "Unemployment Insurance for Canada." This subject, he points out, has now reached the stage of practical politics in Canada owing to the Prime Minister's statement in the House of Commons on April 29 that his government would endeavour to establish a national scheme during the lifetime of the present Parliament (LABOUR GAZETTE, May, 1931, page 542).

The recent history of the movement is briefly sketched. "In 1916 the Ontario Commission on Unemployment reported in favour of the principle of insurance and suggested public subsidy of trade union benefit plans (the Ghent system) as preferable to a compulsory scheme administered by the province.* Three years later the Mathers Commission on Industrial Relations, appointed by the Dominion government to survey labour questions of the day, advocated state unemployment insurance as a means of lessening labour unrest.† The radical, post-war platform of

the Dominion Liberal Party, adopted at its 1919 convention, called for 'an adequate system of insurance against unemployment, sickness, dependence in old age, and other disability' to be instituted by the Federal government. During the depression of 1921-22 there was some further discussion of the subject. . . .

"In 1928 the topic was revived by the appearance of two official reports favourable to unemployment insurance, one by a Commission on Seasonal Unemployment, appointed by the Manitoba Legislature, and the other by the Industrial Relations Committee of the House of Commons.‡ The Industrial Relations Committee, which was composed of members of all parties represented in the House, stated that 'the necessity of providing some method of unemployment insurance is one that will inevitably have to be dealt with before long,' and accepted and endorsed 'the principle of unemployment insurance, based on contributions derived from the State, the Employer and the Employee.' The members of the House, liberals, conservatives and progressives, adopted the report unanimously,

* LABOUR GAZETTE, March, 1916, page 1023.

† LABOUR GAZETTE, July, 1919 (Supplement).

‡ LABOUR GAZETTE, June, 1928, page 586.

thereby concurring, at least formally, in the committee's findings. Again in 1929 the Committee brought in a favourable report, but made no recommendations for Dominion legislation in view of the fact that the provinces, which had been consulted by the Department of Labour, were not 'prepared to take immediate action.'"

The subject has been once more discussed in connection with the depression which began at the end of 1929 and still continues. "In the spring of 1930, the legislatures of Alberta and Manitoba passed resolutions urging a Dominion-provincial conference to consider unemployment insurance; conferences of civic and provincial officials from the West have urged a national program; a number of delegations from Ontario cities have presented like appeals to the Dominion government; and many church and social service organizations have adopted favourable resolutions. Both the Trades and Labour Congress of Canada and the All-Canadian Congress of Labour, together representative of the great majority of organized workers in Canada, passed strong unemployment insurance resolutions at their 1930 conventions. The Liberals of Ontario adopted an unemployment insurance plank at their convention, held in Toronto last December. Within recent months the governments of Alberta, Saskatchewan, Manitoba and British Columbia have expressed definite approval, and so has Premier Henry of Ontario. The Labour and Progressive members of the House of Commons strongly advocated Dominion action in the course of an extensive debate on unemployment in April of 1930, and they initiated the recent debate which led to Mr. Bennett's promise of legislation. On both occasions Hon. W. L. M. King and Hon. Peter Heenan, formerly Minister of Labour, joined the Labour and Progressive members in supporting the principle of insurance."

The extent of unemployment in Canada is measured by the writer as follows:—"Although no accurate statistics of numbers of persons affected are available, the Dominion Bureau of Statistics index numbers of employment (based upon persons *employed*, not *unemployed*) indicate that the number of Canadians out of work from January to May of 1930 was probably between 350,000 and 450,000; that the number did not fall below 250,000 during the summer of last year; and that during the first three months of 1931, even in spite of the extensive programs of public relief works that have been under way, the number has been higher than last year, perhaps 500,000. The index indicates further that at no time since December of 1929 have less than 10 per cent of Canada's 2,500,000 wage-workers been out of jobs and that during

the winter of 1931 the percentage has risen to 20 or more. In the winter of 1930 the percentage of unemployment in Canada was actually higher than in Great Britain, and it has probably been about as high this past winter, although it was considerably lower last summer and autumn. . . .

"But unemployment in Canada is not confined to bad years," Professor Cassidy continues, "always there is a certain number of persons out of jobs, even in the best of months. And regularly each winter the volume of employment in this country shrinks well below the peak of that of the preceding summer. A well-known economist has described Canada as 'an eight months' country.' Of every 100 workers engaged during the late summer, 10 or more are commonly idle from January until April or May. On account of climatic conditions and the nature of her industries, Canada suffers much more seriously from the seasonal unemployment than the United States, Great Britain, Germany or any other leading industrialized country. During most of the winters since the war she has probably had about as high a proportion of her workers idle as Great Britain, the nation that is commonly supposed to rank first among those cursed with unemployment and doles."

The writer next considers the scales of wages prevailing in Canada, concluding that for the great majority of workmen these wages have to be spent as they are earned to purchase the bare necessities of life.

While supporting the principle of unemployment insurance Professor Cassidy lays stress on the fact that it is not itself a cure for the basic problem of unemployment. "It would be infinitely better," he says, "to provide the workers with useful jobs than to maintain some of them in idleness, either by insurance or relief methods What is needed, in Canada no less than in other countries, is a vigorous, permanent, continuing and unified program to reduce unemployment and abate its evil effects. Beyond question much can be done to iron out fluctuations in opportunities for work. But with the exercise of the best will in the world, and with the application of vastly more intelligent social engineering than has thus far been displayed, there is little prospect that unemployment in Canada could be completely eliminated."

Features of a National Scheme

Mr. Cassidy states six characteristics that should mark any satisfactory system of insurance as follows:—

1. It should guarantee adequate maintenance to the great bulk of the *bona fide* unemployed.

2. It should not be saddled with the support of shirkers or unemployables.

3. It should be on a sound actuarial basis, independent of periodical state subsidies.

4. It should be nation-wide in scope.

5. It should not impose any undue burden upon the development of Canadian industry.

6. It should draw its contributions largely from industry, with heavier charges assessed against establishments guilty of irregular operations than against those which are more regular.

Each of these features is discussed by the writer at length. The task of devising an adequate scheme, in his opinion, calls for thorough inquiry: "What is required is an investigation by economists, statisticians, actuar-

ies, and legal experts, not only of the actuarial side of the problem, but also of other aspects, economic, sociological, financial, legal and administrative, as well as of the experiments with unemployment insurance made in other countries. Upon the basis of their findings it ought to be possible to frame a reasonably acceptable national system. Other countries, fortunately, have pioneered in this field and we ought to be able to profit by their successes and their failures. We have their experience to guide us, even if we lack the advantage of years of study and discussion by experts like Sir William Beveridge, such as preceded inauguration of the National Insurance Act in Great Britain in 1911.

UNEMPLOYMENT INSURANCE PLAN OF CANADIAN KODAK COMPANY

THE Canadian Kodak Company, Limited, recently adopted an unemployment benefit plan, in addition to the retirement annuity, life insurance and disability plan which was outlined in the *LABOUR GAZETTE*, February, 1930, page 156. The company has already begun to accumulate reserves so that benefits can be paid, if necessary, at the beginning of 1933.

Outline of Plan

1. *Employees Eligible.*—Employees of the company will be eligible to benefits under this plan provided that they have been in the employ of the company for a continuous period of not less than one year and are receiving earnings of less than \$50 per week, averaged over a period of three months.

2. *Unemployment Reserve Fund.*—An Unemployment Reserve Fund will be created, and the company will make appropriations annually, beginning in 1931.

If, and when, after January 1, 1933, there is a prolonged period of unemployment and, in the opinion of the management, the fund will be inadequate to take care of the benefits payable, the management may declare that an emergency exists. Upon this declaration of an emergency all officials and employees of the company who are not receiving unemployment benefits will be assessed one per cent (1%) of their earnings. Deductions therefore will be made from the weekly or monthly pay, and such deductions will be added to the Unemployment Reserve Fund. The company will appropriate into the fund an amount equal to these deductions in addition to the annual appropriations. The deductions will continue until the management declares that the emergency is over.

3. *Effective Date of Plan.*—Benefits will become payable under the plan beginning January 1, 1933.

4. *Control and Administration of the Plan.*—A committee will be appointed by the management to administer the plan. The decisions of this committee will be subject only to the general control and direction of the board of directors of the company.

5. *Unemployment Benefits.*—The unemployment benefits shall be paid weekly at the rate of sixty per cent (60%) of the average weekly earnings of the unemployed person, with a maximum of \$18 a week. The last three months of normal employment exclusive of overtime will be the period for determining the average earnings.

6. *Waiting Period.*—Unemployment benefits shall be payable to eligible employees after two continuous weeks of unemployment.

7. *Maximum Period during which Benefits shall be Paid.*—The maximum number of weekly benefits to be paid during twelve consecutive months or during any one continuous period of lay-off or part-time employment shall depend upon employee's continuous length of service prior to such period of lay-off or part-time employment, as follows:

Length of Service	Benefits
1 year to 1½ years.. . . .	6 weeks
1½ years to 2 years.. . . .	8 weeks
2 years to 3 years.. . . .	10 weeks
3 years to 4 years.. . . .	11 weeks
4 years to 5 years.. . . .	12 weeks
5 years and over.. . . .	13 weeks

8. *Unemployment Benefit for Part-Time Workers.*—If, on account of slack work, an employee otherwise eligible to benefits is

receiving reduced pay due either to transfer or part-time work, the difference (after regular waiting period) between his actual earnings and the amount he would receive in benefits under the plan were he wholly unemployed shall be paid to him out of the Unemployment Reserve Fund for the number of weeks specified in paragraph 7.

9. Benefits to Employees Securing Work Outside.—If an employee otherwise eligible to receive benefits secures permanent work outside and is no longer available for work with the company the benefits shall cease. An employee securing temporary work outside will still be eligible for benefits, but in no case shall his weekly benefit exceed the difference between his earnings on the temporary work and his normal weekly earnings prior to lay-off. If his actual earnings equal or exceed his earnings prior to lay-off, his benefits shall cease.

10. Conditions for receiving Unemployment Benefit.—In order to receive the benefit, a laid-off employee shall report to the company as frequently as the company shall require. A blank will be furnished on which he will be required to state what steps he has taken to secure employment. An employee making a false statement on this blank shall forfeit not only his benefits under the unemployment plan, but also employment with the company.

11. Benefits not Assignable.—Benefits under the plan shall not be assignable by the employee, nor subject to the claims of his creditors.

12. Reservations.

- (1) No unemployment benefits shall be paid to employees who have been employed for temporary work and were so notified when they were employed.
- (2) No benefits shall be paid for time taken off on account of the destruction or damage of any part of the property of the company by fire, explosion, lightning, earthquake, windstorm, or other accident, but the company may at its discretion make payments to employees affected by such destruction or damage.
- (3) No benefits shall be paid to an employee for unemployment due either directly or indirectly to strikes, lock-outs or other trade disputes in the plants of the company or elsewhere.
- (4) No benefit shall be paid to an employee laid off who fails to take such steps as may be required to secure employment or who fails to accept a transfer to a reasonable job either with the company or elsewhere.

- (5) No benefit shall be paid to any employee who has been discharged for cause, or who voluntarily leaves the employ of the company, or who ceases to be employed for any reason other than on account of slack work.
- (6) No benefits shall be paid to employees for any period during which they are receiving or entitled to receive sick benefits, accident compensation, disability benefits, or retirement annuities. Such employees shall be eligible for unemployment benefits only when sick benefits or accident compensation have been exhausted and when they are capable of resuming work.
- (7) Upon the death of an employee receiving benefits under this plan, benefits shall cease.
- (8) The payment of benefits will cease if and when the Reserve Fund becomes exhausted.
- (9) The company may discontinue, suspend or change this plan at any time at their discretion.

The LABOUR GAZETTE correspondent at Thetford Mines, on August 1, reported the labour situation there as being much more favourable than in recent months. One mine resumed activity after being closed several months, and the working staffs at other mines were augmented. The asbestos mines were increasingly active.

The Union Labour Life Insurance Company received a Dominion licence, dated July 21, authorizing it to transact, in the province of Ontario, the business of life insurance. Mr. C. E. Seli, of Toronto, has been appointed Canadian chief agent. The work of this company was described in the LABOUR GAZETTE, March, 1926, page 258.

During July a total of 4,361 accidents were reported to the Ontario Workmen's Compensation Board in the industries in schedule 1 of the Act, 20 of which were fatal cases; in schedule 2, industries, 323 were reported, including 5 fatal cases; and 261 Crown, 3 of which were fatal, making in all 4,945, of which 28 were fatal. The total benefits awarded during July amounted to \$432,325.92, of which \$340,161.99 was for compensation and \$92,163.93 for medical aid, as against \$511,712.95 benefits in June this year and \$660,844.16 in July last year.

No fatal accidents were reported to the Workmen's Compensation Board of Alberta in July

STATE HEALTH INSURANCE IN VARIOUS COUNTRIES

THE third publication in the series of monographs dealing with various phases of social insurance has been issued by the Metropolitan Life Insurance Company, its subject being "Health Insurance: a summary of some existing governmental plans providing protection in event of sickness or invalidity." (The first monograph, dealing with schemes of unemployment insurance in various countries, was reviewed in the *LABOUR GAZETTE*, June, 1931, page 646.)

In an introductory note it is stated that the four main types of health insurance now in existence are trade union plans, mutual benefit societies, group sickness insurance, and state-established plans. Considerable information is available on the first three types of plans, which will be the subject of a future monograph. There has been no experience in America with state-established plans, and little information is at hand, as all the experiments with this type have been in other countries. This monograph is therefore limited to a survey of the principal features of three of the outstanding state-established plans—those in Germany, Great Britain and Denmark—with a brief summary of the scope, nature and extent of benefits, sources of funds, and administrative machinery of some of the other state systems. In some countries the government grants special recognition and financial assistance to mutual aid societies which submit to a measure of state control, but does not make membership in a society compulsory for the worker. These are known as voluntary state plans. In other countries insurance is obligatory on the worker and the plan is described as compulsory. All the national plans which have been initiated since the war are of the compulsory type. The sickness insurance schemes that are now in effect in the three countries referred to above are outlined at length.

Germany.—The German system of compulsory sickness insurance is the oldest existing governmental plan. It was put in operation by Prince Bismarck in 1883, twenty-eight years prior to the adoption of similar legislation in Great Britain. In the beginning the German plan covered industrial wage-earners only. Workers in commercial pursuits, however, were brought under its provisions two years later. The inclusion of domestic servants and all agricultural labourers in 1911 made sickness insurance available to practically all workers. There has never been an income limit for ordinary manual workers, but in 1892 a limit was introduced for those with

responsible positions, which is now \$858 a year. At the same time, a limit was placed on the income of eligible non-manual workers. This is now \$643. Workers are divided according to their wage class, and cash payments are proportionate to the "basic" (or representative) wage of each class, the basic wage of the highest paid group being placed at about \$2.38 per day. As a rule, the sickness pay amounts to 50 per cent of the basic wage for every day of sickness, but additional benefits, up to a further 25 per cent, may be granted by the individual funds. In no case may a worker's total sickness pay from all sources exceed 75 per cent of his basic wage.

Maternity benefits are payable to insured women, and also, in more restricted form, to the wives and dependent relatives of insured men. They comprise medical service, a cash indemnity of about \$2.38, the ordinary sickness pay for ten weeks, and a nursing allowance of not less than six cents per week payable for twelve weeks, with the possibility of extension for mothers who continue to nurse their infants. Funeral benefits are payable at a minimum rate of twenty times the basic daily wage, and may be increased by individual funds to twice that amount.

There are six principal types of funds responsible for the working of German sickness insurance. These may be designated as local, rural, works, guild, approved mutual benefit, and mining funds, respectively. Local funds consist mainly of industrial and commercial workers; rural funds, of agricultural, domestic, and itinerant workers. The grouping of workers to form both local and rural funds is made on a territorial basis with boundaries drawn by the government. Works and guild funds, on the other hand, are based on industry and occupation respectively. A works fund may be set up for an undertaking with the consent of its works' council while a guild fund is set up for workers who belong to the same guild. An approved mutual benefit fund is a voluntarily formed society of persons who are allowed, under certain conditions, to administer compulsory sickness insurance, while a mining fund is one especially organized for providing sickness insurance for miners.

General governmental supervision is exercised by the Federal Insurance Office with headquarters in Berlin. There are also regional insurance offices exercising judicial and other administrative functions, with local insurance offices responsible for the actual supervision of the sickness funds. The Federal Mining Benefit Society, with its subordinate

EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN JUNE, 1931

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on July 1 was 7,803, the employees on their payrolls numbering 940,222 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions report-

ing for June was 1,849, having an aggregate membership of 200,505 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment.

(3) The Department of Labour receives reports from the 68 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

(1) Employment Situation at the Beginning of July, 1931, as Reported by Employers

Employment at the beginning of July showed a slightly upward tendency, according to statements tabulated by the Dominion Bureau of Statistics from 7,803 firms employing 940,222 workers, or 1,794 more than on June 1. This increase, which was smaller than that reported on July 1 in previous years of the record, brought the index number to 103·8, as compared with 103·6 in the preceding month, and with 118·9, 124·7, 117·7, 109·7, 105·0, 98·0, 97·1, 100·7, 92·2 and 88·6 at the beginning of July in 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively; the 1926 average equals 100 in calculating these index numbers. Industrial employment was thus at a lower level on July 1, 1931, than at the beginning of July in the preceding five years, although the index was higher than on the same date in the five years, 1921-1925.

The largest gains were reported in construction, but services also afforded heightened employment; on the other hand, manufacturing, as a whole, logging, mining and transportation showed contractions. In some cases, the losses were seasonal in character, while the extremely hot weather generally prevailing at the beginning of July resulted in some instances in a temporary slackening of activity.

Employment by Economic Areas

The trend was favourable in the Maritime and Prairie Provinces; Quebec and Ontario reported curtailment, while no general change was indicated in British Columbia.

Maritime Provinces.—Statements were tabulated from 606 firms employing 74,911 workers, as against 72,004 in the preceding month. This increase was much smaller than that noted on July 1, 1930, when an exceptionally large program of road construction was under way, and the general index was then higher. Construction, particularly highway construction, recorded the greatest improvement on the date under review, but there were also gains in mining and services; on the other hand, manufacturing was slacker, chiefly in the iron and steel, textile and fish-preserving industries, and logging and transportation also showed seasonally reduced activity.

Quebec.—Construction reported additions to staffs in Quebec, while logging was seasonally dull with the end of river-driving operations, and manufacturing also released employees; within the latter, iron and steel, clothing, leather and pulp and paper showed the largest declines. The forces of the 1,793 co-operating employers aggregated 274,437 persons, compared with 277,557 on June 1. An increase had been registered on the same date last year, when the index was higher.

Ontario.—There was a falling-off in activity in Ontario, where the 3,464 firms whose statistics were tabulated reported 379,804 employees, or 4,838 less than on June 1. Considerable gains were shown in construction, and trade and mining were also busier, but manufacturing, especially of iron and steel products, was seasonally quiet, and there were

losses in logging and transportation. Decreases had also been indicated on July 1, 1930, when the index was many points higher.

Prairie Provinces.—The most noteworthy advances in this area were in construction, but services also showed improvement; on the other hand, mining, transportation, trade and manufacturing recorded reduced activity. Data were compiled from 1,156 employers with an aggregate staff of 131,715 workers, as against 124,970 in their last report. This increase of 6,745 workers was greater than that registered on the same date last year, but the level of employment then was higher than on July 1, 1931.

Employment by Cities

In Montreal, Quebec City, Toronto, Ottawa, Hamilton, Windsor and the Adjacent Border Cities and Vancouver, reductions in employment were reported, while improvement was indicated in Winnipeg.

Montreal.—Employment in Montreal showed a decline, there being seasonal losses in manufacturing, notably of textile and iron and steel products, while transportation also released employees; on the other hand, construction reported heightened activity. A combined working force of 141,270 persons was indicated by the 991 co-operating employers, who had

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

British Columbia.—Practically no change as compared with June was reported in British Columbia, where the index stood at 97.9 as compared with 113.5 on July 1, 1930, when a slight gain was also indicated. A total working force of 79,355 persons was employed on the date under review by the 784 firms whose data were received. Manufacturing, particularly of food products, was busier, as were highway construction, communications and transportation, but logging and building and railroad construction recorded declines.

Table I gives index numbers by economic areas.

144,082 on June 1. Decreases were also noted on July 1, 1930, but the index then was higher.

Quebec.—A falling-off was reported in Quebec, where statements were tabulated from 138 firms with 13,272 employees, compared with 13,787 in the preceding month. Transportation and services registered advances, but manufacturing and construction were slacker. The index was lower than at the beginning of July, 1930, when a large gain had been shown.

Toronto.—Trade and transportation reported increased activity, while there were seasonal losses in employment in manufacturing, mainly in textiles and iron and steel. The 1,098 employers furnishing data reduced their staffs

by 1,351 workers to 121,394 at the beginning of July. A decline had also been reported on the same date of last year, when employment was in greater volume.

Ottawa.—Statistics were received from 162 employers with 14,201 persons on their pay-lists, compared with 14,426 in the preceding month. Most of the reduction took place in construction, while manufacturing was rather busier. Losses had also been indicated on July 1, 1930, but the index was then higher than on the date under review.

Hamilton.—There was a further decrease in Hamilton, where employment was in less

volume than on the same date of last year; 1,682 workers were let out from the forces of 233 firms furnishing information, bringing them to 30,644 at the beginning of July. Manufacturing and construction reported large losses; within the former, the contraction in iron and steel plants was most pronounced.

Windsor and the Adjacent Border Cities.—Further curtailment in employment, mainly in automobile plants, caused a decline of 704 persons in the staffs of the 140 reporting employers, who had 11,647 in their employ on the date under review. The index was lower

NOTE.—The "Relative Weight" in Table 1, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

TABLE I. INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS
(AVERAGE CALENDAR YEAR 1926=100)

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia

June 1.....	103.6	105.2	104.3	104.2	103.3	97.9
July 1.....	103.8	109.4	103.2	102.7	108.9	97.9
Relative weight of employment by districts as at July 1, 1931.....	100.0	7.9	29.2	40.4	14.0	8.5

than on July 1, 1930, although larger losses had then been reported.

Winnipeg.—Construction registered advances, while other industries showed only slight changes. An aggregate working force of 30,501 employees was reported by the 371 co-operating firms; this was 356 more than on June 1. The improvement noted on the same date of a year ago involved a larger number of persons, and employment then was generally more active.

Vancouver.—The trend of employment in Vancouver was unfavourable, according to in-

formation from 320 establishments employing 30,628 workers, as against 30,900 in the preceding month. There were losses in construction, while other groups reported only slight changes. A decrease had also been recorded by the firms making returns for July 1, 1930, but the index then was slightly higher.

Index numbers by cities are given in Table II.

Manufacturing

Food canning, electric current, musical instrument, building material and beverage factories registered heightened activity, but

Note.—The "Relative Weight" in Table 2 shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

Relative weight of employment by cities as at July 1, 1931.....	15.0	1.4	12.9	1.5	3.3	1.2	3.2	3.3

seasonal curtailment was shown in textile and iron and steel plants, and leather, lumber, non-ferrous metal, electrical apparatus and chemical and allied product plants recorded contractions in employment. The 4,692 co-operating manufacturers employed 476,663 operatives, as against 487,747 in the preceding month. Decreases were also indicated in this division on July 1, 1930, but the index then was higher.

Animal Products, Edible.—Small additions to staffs were recorded in this group, 82 persons being taken on by the 242 establishments

making returns, which had 19,824 in their employ. Improvement was noted in fish-canning in British Columbia, but there were losses in the same industry in the Maritime Provinces. The index on July 1, 1931, was lower than on the same date in 1930, when larger gains were indicated.

Leather and Products.—Statements were received from 235 manufacturers in this division, employing 13,040 workers, as compared with 18,446 in the preceding month. The bulk of the decrease took place in Quebec. The situ-

NOTE.—The "Relative Weight" in Table 3 shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

TABLE III—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES

(AVERAGE CALENDAR YEAR 1926 = 100)

	All industries	Manufacturing	Logging	Mining	Communications	Transportation	Construction	Services	Trade
July 1, 1921.....	88.6	87.6	63.9	96.5	92.3	92.0	77.7	90.2	92.0

Relative weight of employment by industries as at July 1, 1931.....	100.0	50.7	1.1	5.0	2.9	12.0	16.5	2.5	9.3

ation was more favourable than on the same date in 1930, when losses were also indicated.

Lumber and Products.—Rough and dressed lumber mills showed heightened activity, but other lumber-using factories were slacker, notably furniture and vehicle works. Reductions had also been noted on July 1, 1930,

but the index then was much higher. A combined working force of 43,975 employees was reported by the 777 co-operating firms; this was 225 less than at the beginning of June. Ontario and British Columbia shared in the downward movement, while gains were indicated in the Maritime Provinces and Quebec.

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

Industries	Relative weight	July 1 1931	June 1 1931	July 1 1930	July 1 1929	July 1 1928	July 1 1927	July 1 1926

¹The "Relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

Musical Instruments.—The production of musical instruments showed an increase, according to data from 34 factories employing 1,675 persons, or 157 more than on June 1. Practically all the gain took place in Quebec. Employment in this group was less than on July 1, 1930.

Plant Products, Edible.—The resumption of operations in canneries caused an advance, which, however, was not so great as that registered on July 1 of a year ago. Returns were received from 381 manufacturers of vegetable foods, having 30,209 operatives, as against 28,789 in their last report. The improvement in Ontario was most noteworthy. The index was lower than it was early last summer.

Pulp and Paper Products.—There was a decline in this group, chiefly in printing and publishing houses, while pulp and paper mills were rather busier. The 548 co-operating employers in the Dominion reported 58,647 workers, compared with 58,760 on June 1. Curtailment had also been indicated on July 1, 1930, but the index of employment was then higher.

Rubber Products.—Very little general change was registered in rubber factories, in which employment was lower than in the summer of last year. Statistics were tabulated from 43 firms with 12,377 employees on the date under review, as compared with 12,349 in the preceding month.

Textile Products.—Seasonal curtailment of operations, mainly in Quebec and Ontario, was reported by the 742 co-operating textile manufacturers, who employed 78,669 workers, or 3,853 less than at the beginning of June. The largest losses were in garment, cotton, woollen, headwear and knitting mills. Smaller declines were indicated on the corresponding date in 1930, and the level of employment then was slightly higher than on the date under review.

Tobacco, Distilled and Malt Liquors.—Employment in this division showed a moderate increase, according to statistics from 147 establishments, employing 14,889 persons, compared with 14,777 in the preceding month. There were minor increases in Ontario and British Columbia. Practically no change had been noted on the same date last year, when the index was higher.

Chemicals and Allied Products.—There was a falling-off in activity in chemical factories; 136 firms reported 8,416 employees, compared with 8,636 on June 1. All provinces shared in the downward movement. A decrease had also been shown at the beginning of July, 1930, when the index was fractionally higher.

Clay, Glass and Stone Products.—Continued advances took place in building materials plants, the 162 co-operating establishments enlarging their forces by 153 persons to 11,628 on the date under review. Most of the gain was in Ontario and the Prairie Provinces. The level of employment was lower than on July 1, 1930, when the trend was also upward.

Electric Current.—Improvement was registered in electric current plants, 96 of which reported a combined working force of 15,582 persons, as against 15,167 at the beginning of June. The index was lower than on July 1, 1930, although considerable curtailment had then been indicated.

Electrical Apparatus.—There was a decrease of 200 in the staffs of the 74 manufacturers furnishing data, who had 14,786 employees on July 1. Quebec reported practically all this loss. The number engaged in the production of electrical apparatus, as indicated in these returns, was lower than on July 1, 1930 and 1929, but was greater than at the beginning of July in earlier years of the record.

Iron and Steel.—The trend in iron and steel factories was seasonally downward in all except the Western Provinces where no general changes were indicated; the losses were practically the same as on July 1, of a year ago, when employment was in larger volume. The greatest falling-off on the date under review was in automobile and other land vehicle factories, although the rolling mill, structural iron and steel, heating appliance, and some other divisions also showed contractions. On the other hand, agricultural implement and sheet metal works were busier. Returns were compiled from 722 employers whose forces aggregated 111,002 workers, as against 118,991 in the preceding month.

Non-Ferrous Metal Products.—Moderate reductions were registered in non-ferrous metal products, the smelting and refining and aluminum products divisions showing most of the loss. The 122 co-operating manufacturers employed 17,559 operatives, or 408 less than in the preceding month. A smaller decrease had been reported on the same date of last year, and the index was then higher.

Mineral Products.—A minor gain was shown in this division, but the situation was not so good as in July, 1930. Statistics were received from 94 employers whose staffs rose from 12,552 on June 1, 1931, to 12,593 on July 1.

Logging

The conclusion of river-driving operations in many logging camps, chiefly in the Eastern Provinces, caused a seasonal falling-off in employment, while curtailment was also shown

in British Columbia; 3,867 persons were released from the staffs of the 222 reporting firms, who employed 10,517 at the beginning of July. The decline involved a much greater number of workers than that noted on the corresponding date a year ago, when the index was higher.

Mining

Coal.—There was a decrease in employment in coal mines, 81 of which employed 24,009 men, as compared with 24,456 in their last report. There were slight gains in the Eastern coal fields, but employment in this industry declined in Alberta and British Columbia. An increase had also been noted on July 1, of last year, when the situation was more favourable.

Metallic Ores.—Continued improvement was reported in metallic ore mines, mainly in Ontario. Statements were tabulated from 63 operators employing 16,497 persons, or 213 more than on June 1. The index, at 141.4, was very slightly lower than on July 1, 1930, but was higher than at the beginning of July in previous years for which data are available.

Non-Metallic Minerals, other than Coal.—Reductions in payrolls were indicated in non-metallic mineral mines, 78 of which reported 6,120 employees, or 341 less than in their last report. Firms in Quebec reported most of the decline. Employment was in smaller volume than at the beginning of July, 1931.

Communications

Very little change was registered on telephones and telegraphs, according to returns from the companies and branches making returns, which had 27,086 persons on their staffs, or 31 more than in their last report. The index was at a lower level than on July 1, 1930.

Transportation

Street Railways and Cartage.—Employment in the local transportation group increased, 160 firms reporting 24,718 workers in their employ, as against 24,530 in the preceding month. There were gains in Quebec and Ontario, partly offset by reductions in the Prairie Provinces. Declines had been noted on July 1, 1930, when the index was slightly higher.

Steam Railways.—Statistics tabulated from 104 companies and divisional superintendents in the steam railway operation group showed that they employed 72,108 workers at the beginning of July, or 327 less than in the preceding month. An advance had been recorded on July 1 last year, when employment was above its level at the time of writing.

Quebec reported improvement on the date under review, but there were losses in Ontario and the Prairie Provinces.

Shipping and Stevedoring.—There was a decrease in employment in water transportation on the date under review; 85 companies reduced their staffs by 935 employees, bringing them to 16,156. The situation was not so good as at the beginning of July 1, 1930, although the falling-off then indicated had involved a greater number of workers. There were declines in the Maritime Provinces, Quebec and Ontario, while British Columbia showed slight improvement.

Construction and Maintenance

Building.—Continued, important advances in employment were noted in building construction, but the gains were not so large as those indicated on the same date in 1930. The index, at 117.3, was lower than at the beginning of July last year. The 748 co-operating contractors employed 46,756 workers, as compared with 45,375 in the preceding month. All except the Maritime Provinces and British Columbia reported expansion, that in Quebec being most noteworthy.

Highways.—The number of men engaged on road construction and maintenance was greatly augmented on the date under review, when the 352 firms furnishing data had 67,970 employees, or 14,424 more than at the beginning of June. There were general advances, those in the Prairie Provinces being largest. Employment in this group was not so active as on July 1, 1930, when an exceptionally large program of road work and improvement was being carried out in the Maritime Provinces.

Railway.—A combined working force of 40,095 persons was reported by the 52 contractors and divisional superintendents whose statistics were tabulated, and who had 38,451 employees on June 1. All provinces except British Columbia shared in the increase, which was most pronounced in the Prairie Provinces. Larger additions to staffs were noted on July 1 a year ago, and the index then was higher than on the date under review.

Services

Continued and greater expansion was shown in the service group, according to returns from 281 employers with 23,905 persons on their staffs, as compared with 23,023 in the preceding month. The opening of the summer-hotel season caused most of the gain, which was on a smaller scale than that reported on July 1, 1930, when employment was at a

higher level. The tendency was favourable in all provinces, but the largest increases were in the Prairie Provinces.

Trade

Little general change was noted in trade, wholesale houses showing improvement, which was largely offset by declines in retail stores. Statements were tabulated from 810 firms having 87,622 persons in their employ, practically the same number as in the preceding month. There were additions to staffs in Ontario, but

losses in the Prairie Provinces. The index was a few points lower than in the summer of 1930.

Tables

Index numbers of employment by economic areas, leading cities and industries are shown in the accompanying tables, in which the columns headed "relative weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada on the date under review.

(2) Unemployment in Trade Unions at the Close of June, 1931

The term unemployment as used in the following report applies to involuntary idleness due to economic causes. Persons who are occupied in work other than their own trades, or who are idle due to illness are not considered unemployed, while unions involved in industrial disputes are excluded from these

per cent in May. A considerable falling off in work available was noted from June last year when 10.6 per cent of the members reported were idle. Manitoba and British Columbia unions registered contractions in activity of slightly over one per cent in comparison with May, and in Nova Scotia,

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership, upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The situation among local trade unions at the close of June remained substantially the same as in the preceding month, according to the returns tabulated from an aggregate of 1,849 labour organizations embracing a membership of 200,505 persons. Of these, 32,667 or 16.3 per cent were without employment on the last day of June, contrasted with 16.2

Ontario and Saskatchewan the declines were fractional only. Of the gains in the remaining three provinces the most noteworthy was reported from New Brunswick, while in Quebec and Alberta nominal improvement only was manifest. Extensive employment recessions were indicated by Ontario unions from June of last year, the building and manufacturing industries being particularly depressed and in Alberta and British Columbia important curtailment of activity was recorded. The situation in the remaining provinces was also less favourable than in June a year ago though the reductions were on a smaller scale than those previously mentioned.

A separate tabulation is made monthly of unemployment in the largest city in each province with the exception of Prince Edward Island. During June Montreal unions reported the most substantial percentage of idleness of the cities used for comparison, which was indicative of a slight tendency only toward greater unemployment. Vancouver was next in line, the percentage of inactivity in this city being two points in excess of that reported during May. In Halifax a decline in employment of about 4 per cent was recorded and in Edmonton and Winnipeg the reductions shown were very slight. Pronounced

improvement, however, was reflected by Saint John unions as compared with May, and in Toronto and Regina the employment trend was slightly upward. Moderate increases in activity from June a year ago were reported by Regina unions, while in all other cities curtailment of employment was shown. In Vancouver and Halifax the situation was decidedly less active than in June last year, and in Toronto the contractions registered were pronounced. Noteworthy employment recessions were also indicated from Winnipeg and declines of lesser degree from Saint John, Montreal and Edmonton.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Pr. Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1919.....	3.1	2.0	3.4	2.7	2.1	3.2	2.0	7.9	3.4

June, 1931.....	7.2	6.5	20.0	16.2	14.1	13.5	21.7	15.6	16.3

Accompanying this article is a chart which illustrates the unemployment trend from January, 1925, to date. From this it will be seen that the curve remained at the close of June on practically the same level as in May, indicating an almost unchanged employment situation. A distinct rise, however, was shown in the curve from June last year denoting a substantially increased volume of unemployment during the month reviewed.

From unions in the manufacturing industries 499 returns were tabulated during June, covering a membership of 56,588 persons and of these 10,392 or a percentage of 18.4 were idle on the last day of the month, contrasted with 17.9 per cent of inactivity in May. Garment workers reported a noteworthy reduction in the volume of unemployment from May, as did also general labourers. Jewellery workers and glass workers, in addition, reported a slightly upward employment trend. Of the slightly more than counteracting declines shown from May in the manufacturing industries, those recorded by iron and steel workers effected the greatest number of members. Among hat and cap workers the recessions were pronounced viewed from a percentage basis, but these tradesmen formed but a small share of the entire membership reported in the manufacturing industries. Employment for textile and wood workers, printing tradesmen and papermakers also eased off slightly from May. Compared with the situation in the manufacturing industries during June, 1930, when 12.2 per cent of the members reported were idle, textile, jewellery and glass workers were better employed during the month reviewed, while of the recessions in the remaining trades, those registered by iron and steel workers, papermakers, garment workers and printing tradesmen were the most extensive.

Little variation in the level of activity for coal miners was shown at the close of June as compared with the previous month, the 47 unions from which returns were re-

ceived with 18,064 members, indicating 13.0 per cent of unemployment, contrasted with 12.8 per cent in May. British Columbia mines afforded slightly greater employment than in May and fractional improvement was indicated from Alberta. In Nova Scotia on the contrary, activity was slightly curtailed. Noteworthy employment recessions were recorded in the mining industry from June a year ago when 6.9 per cent of the members reported were idle, inactivity for Alberta miners being the deciding factor in this adverse situation. In Nova Scotia also employment eased off slightly from June last year, while in British Columbia nominal gains in activity were shown. A large amount of short time continued to be reported by miners in both the eastern and western coal areas. Employment for asbestos miners in Quebec was largely retarded from both the previous month and June of last year.

Contrary to the steady improvement which has been shown in the building trades since the close of February, the tendency during June was toward a lessening of the employment volume, though the change was slight. Unemployment, however, continued at a rather high level for the midsummer period. Reports for June were tabulated from a total of 256 unions of building tradesmen with 29,024 members, 11,199 or a percentage of 38.6 of whom were idle on the last day of the month, in contrast with 37.7 per cent in May. A much improved situation was shown by bricklayers, masons and plasterers than in May, and employment was more plentiful also for tile layers, lathers and roofers, hod carriers and building labourers, plumbers and steamfitters and granite and stonecutters. Painters, decorators and paper-hangers, however, reported large contractions of activity from May and among carpenters and joiners, electrical workers and bridge and structural iron workers also, quieter conditions prevailed. In the building trades, compared with the returns for June last year when 26.2 per cent of the members reported were idle, all trades contributed a share to the total increase in idleness during the month reviewed, painters, decorators and paper-hangers and tile layers, lathers and roofers showing particularly heavy percentage employment reductions, though the recessions indicated by carpenters and joiners, bricklayers, masons and plasterers, plumbers and steamfitters and electrical workers involved the greatest number of members.

A nominal unemployment increase only from the previous month, was reported by transportation workers during June according to the

returns received from 786 unions covering a membership of 70,795 persons. Of these 6,760 were without work on the last day of the month, a percentage of 9.5 contrasted with 9.2 per cent of inactivity in May. Steam railway employees, whose returns included about 82 per cent of the entire group membership reporting, indicated a nominal adverse change from May as did also teamsters and chauffeurs, and street and electric railway employees. On the other hand, navigation workers were afforded a somewhat greater volume of employment. Steam railway employees were largely responsible for the unemployment increase shown in the transportation industries over June, 1930, when 6.0 per cent of the members reported were idle, while among teamsters and chauffeurs also employment eased off to some extent. Among street and electric railway employees the tendency was toward lessened activity though the change was fractional only. On the other hand, navigation workers were considerably better engaged than in June a year ago.

Retail clerks with 4 unions, embracing a membership of 1,155 persons at the end of June, indicated .4 per cent of unemployment compared with 4.9 per cent in May and with a fully engaged situation in June a year ago.

A higher level of activity was shown by civic employees during June than in the previous month, the returns received from an aggregate of 72 associations with a membership total of 7,664 persons indicating .4 per cent of unemployment on the last day of the month, compared with 2.1 per cent in May. The same situation prevailed during June as in the corresponding month of last year when .4 per cent of unemployment also was recorded.

Returns were tabulated at the close of June from 133 unions in the miscellaneous group of trades covering 6,093 members, 1,050 or 17.2 per cent of whom were idle, compared with percentages of 16.8 in May and 10.0 in June last year. A considerable increase in unemployment was reported by hotel and restaurant employees from May, and notable declines in activity were registered by theatre and stage employees. Among barbers also a nominal adverse change was indicated. On the other hand, unclassified workers were much better engaged than in May and improvement in conditions was registered by stationary engineers and firemen. Heavy employment losses were reflected by stationary engineers and firemen, hotel and restaurant, and theatre and stage employees

from June of last year and among barbers the trend was toward greater inactivity though the change was slight. Practically the same situation prevailed for unclassified workers as in June, 1930.

Little change in employment conditions from either the previous month or June a year ago, was shown by fishermen during June, according to the returns tabulated from 3 unions with 1,305 members. Of these, 20 or 1.5 per cent were idle on the last day of the month, compared with 1.1 per cent in May and with 1.3 per cent in June last year.

Lumber workers and loggers reported some lessening of the unemployment volume during June from the previous month, the returns

received from 4 unions of these workers with a membership of 878 persons showing 27.9 per cent of idleness compared with 31.8 per cent in May. Large employment recessions, however, were noted from June a year ago when 2.3 per cent of the members reported were without work.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1930 inclusive and also the percentages of unemployment by provinces for June of each year from 1919 to 1928 inclusive and for each month from January, 1929, to date. Table II summarizes the returns in the various groups of industries for the same months as in table I.

(3) Employment Office Reports for June, 1931

The volume of business transacted by the offices of the Employment Service of Canada during the month of June, 1931, as indicated by the average daily placements effected, was nearly 16 per cent less than in the preceding

maintenance. The gain in this division, due principally to work provided in relief of unemployment, was, however, quite substantial and more than sufficient to offset the declines in all other groups. Of the divisions showing

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ——— Vacancies - - - - - Placements o-o-o-o-o

month, but showed a slight gain when compared with the corresponding month last year. All industrial divisions, except farming and mining, showed declines from May, those in construction and maintenance and services being the largest. In comparison with June last year fewer placements were made in all industrial groups, except construction and

reduced placements, those in services, logging, farming and manufacturing were the largest.

The accompanying chart shows the trend of employment from January, 1929, to date, as represented by the ratios of vacancies notified and placements effected for each 100 applications for work registered at the offices of the

Service throughout Canada, computations being made semi-monthly. It will be seen that the curve of vacancies and of placements in relation to applications declined steadily throughout the month, and in each instance was about 17 points lower than at the close of June, 1930. The ratio of vacancies to each 100 applications was 52.1 during the first half and 45.1 during the second half of June, 1931, in comparison with ratios of 65.8 and 62.5 during the corresponding periods of 1930. The ratios of placements to each 100 applications during the same periods were 49.5 and 43.3 in comparison with 61.8 and 59.9 respectively.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during June, 1931, were 1,088 as compared with 1,292 in the preceding month, and with 1,093 during June of last year.

The average number of applications for employment received daily by the offices during the month under review was 2,245, in comparison with 2,134 in May and with 1,704 in June, 1930.

The average number of placements made daily by the offices of the Service during the month under review was 1,039, of which 444 were in regular employment and 595 in work of one week's duration or less, as compared with a total daily average of 1,230 during the preceding month. Placements in June, 1930, averaged 1,037 daily, consisting of 608 placements in regular and 429 in casual employment.

During the month of June, 1931, the offices of the Service referred 27,748 persons to positions and effected a total of 25,973 placements. Of these, the placements in regular employment numbered 11,091, of which 7,339 were of men and 3,752 of women, while placements in casual work totalled 14,882. The number of vacancies reported by employers was 13,878 for men and 8,305 for women, a total of 27,183, while applications for work totalled 56,113, of which 43,574 were from men and 12,539 from women.

The following table gives the placements effected by the offices of the Employment Service of Canada each year from January, 1921, to date:—

Year	Placements		
	Regular	Casual	Totals
1921.....	280,518	75,238	355,756

NOVA SCOTIA

There was a decrease of over 33 per cent in the number of positions offered through employment offices in Nova Scotia during June when compared with the preceding month, and of over 5 per cent in comparison with the corresponding month last year. Placements declined 33 per cent from May, but showed an increase of nearly 3 per cent over June, 1930. The gain in placements over June of last year was due to relief work provided in highway and sewer construction, as, except for a small increase in logging, all other groups showed declines. Of the declines, those in trade and services were the largest. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 19; logging, 61; construction and maintenance, 256; trade, 40; and services, 385, of which 302 were of household workers. During the month 144 men and 58 women were placed in regular employment.

NEW BRUNSWICK

Employment opportunities as indicated by orders received at employment offices in New Brunswick during June were nearly 6 per cent less than in the preceding month, and nearly 25 per cent below the corresponding month last year. There was a decline also in placements of nearly 14 per cent when compared with May, and of nearly 25 per cent in comparison with June, 1930. All groups except logging and trade participated in the decrease in placements from June of last year, those in construction and maintenance, services, transportation, and manufacturing being the largest. Placements by industrial divisions included: manufacturing, 25; logging, 114; construction and maintenance, 51; trade, 15; and services, 500, of which 354 were of household workers. Regular employment was found for 185 men and 67 women.

QUEBEC

During the month of June, positions offered through employment offices in the Province of Quebec were over 25 per cent less than in the preceding month and over 13 per cent below the corresponding month last year. There was a decline also in placements of over 20 per cent when compared with May and of over 15 per cent in comparison with June, 1930. There was a large decline in logging placements in comparison with June of last year, with somewhat smaller decrease in farming and construction and maintenance. The only groups, however, to show improvement were services and trade, the latter being quite small. Industrial divisions in which most of the placements were effected during the month

* 33 placements effected by offices since closed.

were: manufacturing, 93; logging, 137; farming, 29; construction and maintenance, 268; trade, 44; and services, 768, of which 541 were of household workers. Placements in regular employment numbered 673 of men and 524 of women.

ONTARIO

There was a decrease of nearly 22 per cent, both in the number of positions offered and placements effected through employment offices in Ontario during June, when compared with the preceding month, but a gain of nearly 17 per cent in both vacancies and placements in comparison with the corresponding month last year. The gain in placements over June, 1930, was due to work provided in relief of unemployment as, except for a small increase in mining, all other groups showed either fewer placements or a nominal gain only. Of the declines, those in logging, manufacturing, and services were the most noteworthy. Placements by industrial groups included: manufacturing, 724; logging, 248; farming, 1,033; mining, 76; transportation, 145; construction and maintenance, 5,973; trade, 371; and services, 4,370, of which 2,154 were of household workers. During the month 3,359 men and 1,560 women were placed in regular employment.

MANITOBA

The demand for workers, as indicated by orders received at employment offices in Manitoba during June, was nearly 7 per cent less than in the preceding month and over 34 per cent below the corresponding month last year. Placements also were nearly 7 per cent less than in May and over 33 per cent lower than during June, 1930. All industrial divisions participated in the reductions in placements from June of last year, those in services, farming, and construction and maintenance being the most noteworthy. Industrial divisions in which most of the placements were effected during the month were: farming, 205; construction and maintenance, 58; trade, 79; and services, 1,645, of which 1,135 were of household workers. There were 230 men and 492 women placed in regular employment.

SASKATCHEWAN

During June, orders received at employment offices in Saskatchewan called for nearly 25 per cent fewer workers than in the preceding month and over 23 per cent less than during the corresponding month of last year. There was a decline of nearly 26 per cent in placements when compared with May and of nearly 22 per cent in comparison with June, 1930. Fewer placements were made than during June last year in all industrial groups, the

declines in farming, logging, services and construction and maintenance being the largest. Placements by industrial divisions included: manufacturing, 63; farming, 262; construction and maintenance, 502; trade, 47; and services, 835, of which 510 were of household workers. During the month 299 men and 322 women were placed in regular employment.

ALBERTA

Orders received at employment offices in Alberta during June called for nearly 4 per cent more workers than in the preceding month and 19 per cent more than during the corresponding month of last year. There were also similar gains in placements under both comparisons. Increased placements in construction and maintenance, due to work provided in relief of unemployment, were responsible for the gain over June last year, as except for a nominal increase in logging placements, all other divisions showed declines. Of the latter those in farming and services were the most noteworthy. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 36; farming, 497; construction and maintenance, 1,747; trade, 51; and services, 635, of which 415 were of household workers. There were 1,817 men and 315 women placed in regular employment.

BRITISH COLUMBIA

Opportunities for employment, as indicated by orders received at employment offices in British Columbia during June, were nearly 12 per cent better than in the preceding month and nearly 22 per cent in excess of the corresponding month of last year. Placements also were over 12 per cent higher than in May and nearly 27 per cent above June, 1930. The excess in placements over June last year was attributable to work provided in relief of unemployment, as construction and maintenance, under which this work is classified, was the only group to show any improvement under this comparison. Of the declines, those in services, farming and manufacturing were the largest. Industrial divisions in which most of the placements were made during the month were: manufacturing, 69; logging, 59; farming, 428; construction and maintenance, 1,880; trade, 58; and services, 749, of which 434 were of household workers. Placements in regular employment numbered 632 of men and 414 of women.

Movement of Labour

During the month of June, 1931, the offices of the Employment Service of Canada made 11,091 placements in regular employment, 4,297 of which were of persons for whom the

employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 513 were granted the Employment Service reduced transportation rate, 409 going to points within the same province as the despatching office and 104 to other provinces. The reduced transportation rate which is 2.7 cents per mile with a minimum fare of \$4 is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

From Quebec centres 61 persons travelled at the special reduced rate during June 1, within the province and 60 to points outside. The former was a saddler who received a certificate for reduced transportation at Quebec City for a point within the territory covered by that office. The Hull office was responsible for the movement outside the province, which included transfers of 51 river drivers to Pembroke and 9 river drivers to Cobalt.

All certificates issued in Ontario during June were to provincial points, and numbered 222. Of these 187 were granted by the Port Arthur office to 56 bush workers, 1 packer, 119 fire fighters, 2 clerks, 4 cooks and 5 foremen going to employment within its own zone. From North Bay 2 hotel chefs, 1 power construction chain man and 8 government survey workers were conveyed to Timmins, 1 power construction lineman to Kingston, and 6 bush workers to Cobalt. Travelling from Sudbury 1 machine runner went to Timmins, 7 saw mill labourers and 1 cook to employment within the Sudbury zone and 1 carpenter to Cobalt. The Timmins zone also received 2 bridge construction labourers from Pembroke. Securing certificate at Toronto 1 chef and 1 assistant chef were sent to North Bay, and from Sault Ste. Marie 1 steel worker was transferred to Niagara Falls. The 2 remaining certificates were granted at Fort William to 1 bush worker and 1 hotel cook proceeding to employment within the same zone.

Both the Manitoba provincial and inter-provincial labour movement during June was from Winnipeg, and comprised the transfer of 87 workers, 58 within the province and 29 to points outside. Provincially the Dauphin zone was the destination of 1 hotel cook, 1 edgerman and 1 sawmill labourer, and Brandon of 2 hotel employees, while to various points within the Winnipeg zone were despatched 27 farm hands, 14 construction labourers, 1 cookee, 4 carpenters, 2 bricklayers, 1 timber cruiser, 3 highway construction teamsters, and 1 hotel porter. The workers travelling to other provinces included 8 pulp loaders, 3 bush workers, 2 farm hands, 1 construction labourer, 2 hotel workers, 1 camp cook, 1

town domestic, and 1 chore boy going to Port Arthur, 3 hotel employees to Regina, and 6 farm hands and 1 farm housekeeper to various rural points in Saskatchewan.

Transfers at the reduced rate from Saskatchewan offices during June totalled 39, of which 29 were to provincial points, the balance representing an interprovincial movement. Within the province the Regina office effected transfers of 1 highway construction cook and 1 labourer to Yorkton, 1 teacher and 1 hotel clerk to Saskatoon, and of 1 general labourer to Prince Albert, which zone also received 1 hotel cook from Saskatoon. The remaining provincial transfers, however, were to the agricultural districts of the province, which received 17 farm hands and 6 farm household workers, the Regina and Saskatoon offices being chiefly responsible for this movement. The 10 workers going outside the province were river drivers travelling from Prince Albert to employment in the Dauphin zone.

In Alberta 86 workers took advantage of the Employment Service reduced transportation rate during June, 83 of whom went to employment within the province, and 3 to points outside. The latter were farm hands journeying from Edmonton, 1 each going to the Saskatoon, North Battleford and Moose Jaw zones. Provincially, Edmonton transferred 3 farm hands to Lethbridge, and 23 miners, 17 loggers, 14 farm hands, 5 farm domestics, 9 highway construction workers, 3 waitresses, 1 hospital cook, 2 sawmill workers, 1 carpenter, 1 tool dresser, 1 survey worker and 1 domestic to employment within its own zone. In addition, from Calgary 1 farm hand travelled to Drumheller, and 1 town housekeeper to Edmonton.

The labour movement both within and from the Province of British Columbia during June originated at Vancouver, and included the transfer of 18 workers, 16 going to provincial centres and 2 outside the province. Within the province the Penticton zone was the destination of 3 highway construction workers and 1 engineer, while Nelson received 2 carpenters and 1 hotel waitress, Prince George 2 farm hands and 1 miner, and Revelstoke 2 cooks. In addition, 2 hotel workers, 1 mill labourer and 1 farm hand were shipped to employment at points within the Vancouver zone. The 2 interprovincial transfers were of farm hands going to Edmonton.

Of the 513 workers benefiting by the Employment Service reduced transportation rate during June, 387 travelled by the Canadian National Railways, 102 by the Canadian Pacific Railway, 17 by the Timiskaming and Northern Ontario Railway, 4 by the Pacific Great Eastern Railway, and 3 by the Northern Alberta Railway.

(4) Building Permits issued in Canada during June, 1931

The value of the building permits issued by 61 cities during June was \$8,470,738; this was a decrease of \$3,397,433, or 28.6 per cent, as compared with the May total of \$11,868,171, while in comparison with June, 1930, there was also a decline of \$10,150,749, or 54.5 per cent, the value for that month having been \$18,621,487. The aggregate for the first six months of 1931, viz., \$57,472,274, was lower than in 1930 and also than in most years of the record; in this connection it is important to note the considerable decline in the wholesale costs of building materials, the Bureau's index having fallen from 144.5 in January-June, 1920, to 83.6 during the first half of the present year. The 1926 average equals 100 in calculating these index numbers.

Some 50 cities furnished detailed statements showing that they had issued more than 2,000 permits for dwellings valued at over \$4,500,000 and some 2,600 permits for other buildings

estimated to cost approximately \$3,000,000. During May, authority was given for the erection of over 1,200 dwellings and some 3,100 other buildings, valued at approximately \$5,800,000 and \$5,300,000, respectively.

Improvement over May, 1931, was recorded in Manitoba, where there was an increase of 5.8 per cent. Of the declines elsewhere, that of \$2,007,749, or 45.2 per cent, in Quebec was largest.

As compared with June, 1930, there were decreases in all provinces, Ontario reporting the greatest loss of \$6,817,132 or 63.6 per cent.

Of the larger cities, Toronto and Winnipeg recorded increases in the value of the permits issued as compared with the preceding month, but a decline as compared with the corresponding month in 1930. Montreal showed a reduction in the former and an increase in the latter comparison, while Vancouver reported decreases in both comparisons. Of

the other cities, New Glasgow, Kingston and Brandon indicated improvement over May, 1931, and June, 1930.

The accompanying table gives the value of the building permits issued by 61 cities during May and June, 1931, and June, 1930; the 35 cities for which records are available since 1910 are marked with asterisks.

Cumulative Record for First Half-Year, 1920-1931.—The following table gives the value of the building authorized by 61 cities during June and in the first six months of each year since 1920, as well as index numbers for the latter, based upon the total for 1920 as 100. The average index numbers of wholesale prices of building materials in the first six months of the same years are also given.

Year	Value of permits issued in June	Value of permits issued in first six months	Indexes of value of permits issued in first six months (1920=100)	Average Indexes of wholesale prices of building materials in first six months (1926 average=100)

REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD APRIL TO JUNE, 1931

REPORTS received from the offices of the Employment Service of Canada during the quarter April to June, 1931, indicated a considerable increase in the volume of business transacted when comparison is made with the corresponding quarter of 1930, as there was a gain of over 12 per cent in the number of positions offered and of over 14 per cent in placements effected. This increase, however, was entirely due to work undertaken by the municipalities and provincial governments under the Unemployment Relief Act, and included such undertakings as highway and park improvement, bridge, sewer and sidewalk construction, land clearing and repairs to buildings. This work, which is shown under construction and maintenance in the accompanying table, resulted in the placement of large numbers of workers, the gain in this group over the corresponding quarter of last year being more than sufficient to offset reductions in all other divisions. Of the declines, those in services, manufacturing, logging and farming were the most pronounced. Provincially, Nova Scotia, Ontario, Alberta and British Columbia showed gains over the corresponding quarter of 1930, while losses were recorded in New Brunswick, Quebec, Manitoba and Saskatchewan. The accompanying table gives the vacancies and placements of the Employment Service of Canada by industrial groups in the various provinces during the period April to June, 1931.

From the chart on page 917 which accompanies the article on the work of the employment offices for the month of June, it will

be seen that the curves of both vacancies and placements in relation to applications rose slightly during the second half of April, but declined during each other half month period of the quarter and at the close, both curves were about 17 points lower than at the same date in 1930. During the period April to June, 1931, there was a ratio of 58.5 vacancies and 55.8 placements for each 100 applications for employment as compared with 66.9 vacancies and 62.7 placements during the corresponding period a year ago.

The average number of positions offered daily during the quarter under review was 1,333, of applications registered 2,279 and of placements effected 1,273, compared with a daily average of 1,190 vacancies, 1,778 applications and 1,116 placements in regular and casual employment during the second quarter of 1930.

During the three months April to June, 1931, the offices of the Service reported that they had made 99,534 references of persons to positions and had effected a total of 94,175 placements, of which 35,285 were in regular employment and 58,890 in casual work. Of the placements in regular employment 24,379 were of men and 10,906 of women, while casual work was found for 46,722 men and 12,168 women. A comparison with the same quarter of 1930 shows that 82,527 placements were then made, of which 46,497 were in regular employment and 36,030 in casual work. Applications for employment during the period under review were received from 131,738 men and 36,927 women, a total of 168,665, in con-

trast with a registration of 131,547 persons during the same period of 1930. Employers notified the Service during the second quarter of 1931 of 98,657 positions, of which 71,531 were for men and 27,126 for women, as compared with 88,020 opportunities for employ-

ment offered during the corresponding period of 1930.

In another section of this issue will be found a report in detail of the transactions of the employment offices for the month of June, 1931.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the British *Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary, showing the employment situation during June, 1931, is reproduced below. The following report on unemployment conditions in the United States is based on the statistics published by the United States Department of Labour, showing the recent trend of employment throughout the country. The employment situation in the United States is further indicated by unemployment percentages based on statistics compiled each month by the American Federation of Labour, the source of these statistics being returns obtained from the trade union locals in 24 representative cities. Summary figures for July, 1931, and previous months are reproduced below.

Great Britain

Employment during June showed a further decline, on the whole. Unemployment increased in pottery and glass manufacture, in the motor vehicle, cotton, wool, lace, textile bleaching and finishing, and clothing industries, and in building and public works contracting; and there was a further decline in coal mining and in general and marine engineering.

There was some improvement, however, in slate quarrying, in the brick and tile, tinplate, jute, and artificial silk yarn industries, in the distributive trades, dock and harbour service, and hotel and boarding-house service.

Employment showed little change and remained moderate in the southern part of England, but in the Midlands and the Northern Counties there was a decline, and employment remained very bad. In Scotland, Wales and Northern Ireland there was a slight improvement, but employment was still very bad.

Among the workpeople, numbering approximately 12,400,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at June 22, 1931 (including those temporarily stopped as well as those wholly unemployed), was 21·8, as compared with 20·8 at May 18, 1931, and with 15·4 at June 23, 1930. The percentage wholly unemployed at June 22, 1931, was 16·4, as compared with 16·3 at May 18, 1931;

while the percentage temporarily stopped was 5·4, as compared with 4·5. For males alone the percentage at June 22, 1931, was 23·2, and for females 18·4; at May 18, 1931, the corresponding percentages were 21·9 and 17·9.

At June 22, 1931, the numbers of persons on the Registers of Employment Exchanges in Great Britain were 1,851,421 wholly unemployed, 662,141 temporarily stopped, and 113,824 normally in casual employment, making a total of 2,627,386. This was 120,449 more than a month before, and 812,044 more than a year before. The total included 1,945,241 men, 64,518 boys, 568,767 women and 48,860 girls.

The 1,851,421 wholly unemployed included approximately 1,274,910 insured persons who had paid at least 30 contributions during the preceding two years, and therefore satisfied the full contributions condition for the receipt of unemployment benefit; 489,640 insured persons who had paid less than 30 contributions during the preceding two years; and 86,870 uninsured persons. The wholly unemployed claimants for benefit, numbering 1,691,786, included 233,274 men, 5,606 boys, 44,973 women and 2,768 girls, who had been on the Register for less than one month.

In Great Britain and Northern Ireland the total number of persons on the Registers of Employment Exchanges at June 22, 1931, was 2,697,978, and at June 29, 1931, it was 2,735,882.

United States

The Bureau of Labour Statistics of the United States Department of Labour, reports changes in employment and pay-roll totals in June, 1931, as compared with May, 1931, based on returns from 45,911 establishments in 15 major industrial groups, having in June 4,644,057 employees whose combined earnings in one week were \$110,891,821.

The combined totals of the 15 industrial groups show a decrease of 2·0 per cent in employment and a decrease of 4·5 per cent in pay-roll totals over the month interval.

Increased employment in June was shown in 3 of the 15 industrial groups; Canning and preserving, 26·1 per cent; laundries, 0·8 per cent; and dyeing and cleaning, 2·4 per cent.

Decreased employment was shown in the remaining 12 groups: Manufacturing, 2·6 per cent; anthracite mining, 5·2 per cent; bituminous coal mining, 4·9 per cent; metalliferous mining, 3·8 per cent; quarrying and non-metallic mining, 3·6 per cent; crude petroleum producing, 4·2 per cent; telephone and telegraph, 0·6 per cent; power, light, and

water, 0.4 per cent; electric railroads, 0.7 per cent; wholesale trade, less than one-tenth of 1 per cent; retail trade, 0.9 per cent; and hotels, 1.0 per cent.

Unemployment Percentage.—Since the fall of 1927, the American Federation of Labour has compiled statistics each month which indicate the percentage of unemployed union members in 24 representative cities of the United States. These figures are included in the monthly review of industrial and economic conditions which is given in the *Monthly*

Survey of Business, published by the Federation. In July, 1928, the proportion of unemployed union members was 11 per cent; in July, 1929, 9 per cent; in July, 1930, 22 per cent; in July, 1931, 18.9 per cent. The percentages since the beginning of 1931 are as follows: January, 19.8; February, 19; March, 18.1; April, 17.7; May, 17.1; June, 18.3; July, 18.9.

According to an estimate by the American Federation of Labour, approximately 5,200,000 wage earners were unemployed in the United States during July.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

Reference was made in the LABOUR GAZETTE, June, 1930, page 652, to the Fair Wages and Eight-Hour Day Act of Parliament which was adopted on May 30, 1930. The text of this measure appeared in the April, 1930, issue page 383. This Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repair or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(a) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

(2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication or manufacture is carried on in any established plant or factory other than a plant or factory established for the purposes of the work contemplated.

Section 5 of the Fair Wages and Eight-Hour Day Act authorized the Governor in Council, on the recommendation of the Minister of Labour, to make necessary regulations under the Statute. Those regulations have not yet been made. The Act, however, was put into effect at once as respects contracts for construction, remodelling, repair or demolition, both as to its provisions as to current and fair and reasonable rates of wages and as to the application of the eight-hour day.

The Fair Wages Policy of the Government of Canada, which has been in effect since 1900 and is now expressed in an Order in Council adopted June 7, 1922, and amended April 9, 1924, requires that "all contracts made on behalf of the Government of Canada for the construction or remodelling of public buildings of all kinds, railways, canals, roads, bridges, locks, dry docks, elevators, harbours, piers, wharves, lighthouses, and other works for the improvement and safety of transportation and navigation, rifle ranges, fortification, and other works of defence, dams, hydraulic works, slides, piers, booms, and other works for facilitating the transmission of timber, and all other works and properties constructed or remodelled for the Government of Canada must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed, or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district

in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on or if there be no custom of the trade as respect hours in the district then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working

hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from the to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respect hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the Contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the

wages of any workman employed claim therefore may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wages schedules as shown below, or the General Fair Wages Clause above-mentioned:—

DEPARTMENT OF FISHERIES

Contract in Group "A" (Construction, etc.)

Construction of the second floor of Fisheries Experimental Station No. 2 at Prince Rupert, B.C. Name of contractor, Mr. George Scott, Prince Rupert, B.C. Date of contract, May 18, 1931. Amount of contract, \$6,725. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages	Hours of
	Not less than	Not more than
	per hour	per day
Carpenters and joiners.....	\$0 93½	8
Cement workers.....	0 62½	8
Electricians.....	0 93½	8
Electricians' helpers.....	0 60	8
Labourers.....	0 57½	8
Painters and paperhangers.....	1 00	8
Plasterers.....	1 25	8
Plasterers' helpers.....	0 75	8
Plumbers and steamfitters.....	1 12½	8
Plumbers and steamfitters' helpers.....	0 75	8
Roofers—felt and gravel.....	1 12½	8
Roofers—shingle.....	0 93½	8
Sheet metal workers.....	1 12½	8
Sheet metal workers' helpers.....	0 65	8

DEPARTMENT OF PUBLIC WORKS

Contracts in Group "A" (Construction, etc.)

Construction of a public building at High River, Alta. Name of contractor, Mr. Bernard P. Scanlan, Medicine Hat, Alta. Date of contract, July 28, 1931. Amount of contract, \$29,191 and unit prices. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages	Hours of
	Not less than	Not more than
	per hour	per day
Bricklayers, masons and hollow tile layers.....	1 45	8
Carpenters and joiners.....	1 00	8
Concrete finishers.....	1 00	8
Concrete floaters.....	0 50	8
Concrete mixers.....	0 50	8
Concrete workers.....	0 50	8
Electricians.....	1 10	8
Electricians' helpers.....	0 75	8
Engineers—steam hoist (1 drum).....	0 75	8
Engineers—steam hoist (2 drum).....	1 00	8
Engineers—gasoline hoist.....	0 75	8
Labourers.....	0 50	8
Lathers—metal.....	1 12½	8
Marble setters.....	1 45	8
Painters and glaziers.....	0 95	8
Plasterers.....	1 40	8
Plasterers' helpers.....	0 77½	8
Plumbers and steamfitters.....	1 25	8
Plumbers and steamfitters' helpers.....	0 75	8
Roofers—felt and gravel.....	0 85	8
Sheet metal workers.....	1 12½	8
Sheet metal workers' improvers.....	0 80	8
Stonecutters.....	1 25	8
Structural steel workers.....	1 00	8
Teamsters with team and wagon.....	0 95	8
Terrazzo layers.....	1 25	8
Terrazzo layers' helpers.....	0 60	8
Tile setters.....	1 25	8
Truck drivers.....	0 50	8

Construction of a heating plant at St. Anne's Hospital, Ste. Anne de Bellevue, P.Q. Name of contractor, Heaters, Ltd., Montreal, P.Q. Date of contract, July 21, 1931. Amount of contract, \$8,574. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages	Hours of
	Not less than	Not more than
	per hour	per day
Bricklayers.....	\$1 20	8
Painters.....	0 85	8
Steamfitters.....	0 90	8
Welders.....	0 75	8
Boiler setters.....	0 75	8
Labourers.....	0 35	8
	per day	
Driver, horse and cart.....	5 50	8
Driver, team and wagon.....	7 00	8
	per week	
Motor truck driver.....	20 00	8

Installation of heating apparatus in the Signal Station, Sorel Harbour, Sorel, P.Q. Name of contractor, Mr. Francois D. Coron, Sorel, P.Q. Date of contract, July 22, 1931. Amount of contract, \$975. The General Fair Wages Clause was inserted in the contract.

Dredging at the West Pier, Port Dover, Ont. Name of contractors, The Chatham Dredging & General Contracting Co., Ltd., Chatham, Ont. Date of contract, June 30, 1931. Amount of contract, approximately \$13,600. The General Fair Wages Clause was inserted in the contract.

Dredging harbour, Cobourg, Ont. Name of contractors, Canadian Dredging Co., Ltd., Midland, Ont. Date of contract, June 30, 1931. Amount of contract, approximately \$23,516. The General Fair Wages Clause was inserted in the contract.

Dredging at Little Caribou, N.S. Name of contractors, Beacon Dredging Co., Ltd., Halifax, N.S. Date of contract, July 9, 1931. Amount of contract, approximately \$5,743.80. The General Fair Wages Clause was inserted in the contract.

Dredging Saint John River, between 18 and 74 miles above Saint John. N.B. Name of contractors, The Federal Dredging Co., Ltd., Ottawa, Ont. Date of contract, July 9, 1931. Amount of contract, approximately \$12,415.20. The General Fair Wages Clause was inserted in the contract.

Dredging at the eastern entrance channel of harbour, Toronto, Ont. Name of contractors, Canadian Dredging Co., Ltd., Midland, Ont. Date of contract, July 11, 1931. Amount of contract, approximately \$11,520. The General Fair Wages Clause was inserted in the contract.

Dredging western entrance of harbour, Toronto, Ont. Name of contractors, C. S. Boone Dredging and Construction Co., Ltd., Toronto, Ont. Date of contract, July 15, 1931. Amount of contract, approximately \$217,640. The General Fair Wages Clause was inserted in the contract.

Dredging at the Canadian National Railways' dock at Key Harbour, Ontario. Name of contractors, The C. S. Boone Dredging & Construction Co., Ltd., Toronto, Ont. Date of contract, July 17, 1931. Amount of contract, approximately \$54,980. The General Fair Wages Clause was inserted in the contract.

Dredging channel from St. Lawrence River ship channel to Nicolet lower wharf, Nicolet

River, Quebec. Name of contractors, Messrs. Cummins & Robinson, Toronto, Ont. Date of contract, July 17, 1931. Amount of contract, approximately \$11,068.20. The General Fair Wages Clause was inserted in the contract.

Dredging at Hamilton, Ont. Name of contractors, The R. C. Huffman Construction Co. of Canada, Ltd., Toronto, Ont. Date of contract, July 21, 1931. Amount of contract, approximately \$38,775. The General Fair Wages Clause was inserted in the contract.

POST OFFICE DEPARTMENT

Following is a statement of payments made in July, 1931, for supplies ordered by the Post Office Department under contracts which were subject to the regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages, and the performance of the work under proper sanitary conditions:—

Making Metal Dating Stamps and Type, Brass Crown Seals, Cancellers, etc.—

Pritchard-Andrews Co., Ltd., Ottawa, Ont. \$ 486 35

Making and Repairing Rubber Stamps, Daters, etc.—

Pritchard-Andrews Co., Ltd., Ottawa, Ont. 141 55

Making up and Supplying Letter Carriers' Uniforms—

J. H. Shuttleworth, Toronto, Ont. 181 74
 Slingsby Mfg. Co., Brantford, Ont. 8,798 63
 Samuel Doriman, Quebec, P.Q. 32,089 38
 Workmen Uniform Co., Montreal, P.Q. 85 24
 The Wolfe Cap Co., Montreal, P.Q. 325 00
 Grant-Holden-Graham, Ltd., Ottawa, Ont. 732 63
 Hamilton Uniform Cap Co., Hamilton, Ont. 70 00

Scales—

Pritchard-Andrews Co., Ltd., Ottawa, Ont. 625 00

Stamping Ink and Pads—

Pritchard-Andrews Co., Ltd., Ottawa, Ont. 23 75

In the list of officials of federal and provincial labour departments, boards, etc., which appeared on page 859 of the last issue, the name of Mr. Robert B. Irving should have been given as acting commissioner for Workmen's Compensation in New Brunswick, in the place of Mr. James L. Sugrue, deceased.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases, the agreements are signed by both the employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given with other information of general interest.

Manufacturing: Printing and Publishing

ST. JOHN, N.B.—CERTAIN JOB PRINTING OFFICES AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 85.

Agreement to be in effect from June 1, 1931, for an indefinite period until either party gives 30 days' notice of change.

This agreement is similar to the one previously in effect which was summarized in the *LABOUR GAZETTE*, August, 1930, page 969, with the following exceptions:

When additional help is required, employers must apply to the union for it and the union will endeavour to furnish competent help, it being understood that no other help shall be employed without the approval of the union.

If any member considers himself unjustly discharged, he may apply to the union for redress and if not satisfied with the decision may extend the appeal to the executive council of the International Union.

Wages for day work are unchanged at \$35.20 per week for foremen, linotype operators and machinists and \$33 for floor hands and monotype keyboard operators. For night work, wages for foremen, operators and machinists are \$38.20 per week and for floormen \$36 per week.

MONTREAL, QUEBEC.—CERTAIN EMPLOYING PHOTO ENGRAVERS AND THE INTERNATIONAL PHOTO ENGRAVERS UNION, LOCAL No. 9.

A strike to secure this agreement with one firm, which began May 4, 1931, and is still in effect, was reported in the *LABOUR GAZETTE*, June, page 639, and July, page 760.

Agreement to be in effect from May 1, 1931, to April 30, 1932, and from year to year until either party gives notice of change 60 days before May 1, of any year.

This agreement is similar to the one previously in effect which was summarized in the *LABOUR GAZETTE*, December, 1930, page 1454, with the following changes:

Any firm operating under agreement with this local and having branches in other cities shall operate those plants in agreement with the International Photo Engravers' Union under whose jurisdiction they exist.

Minimum wage for journeymen photo engravers \$45 per week. Foremen to receive \$5 per week extra as in previous agreement and there shall be a foreman in each plant. The minimum wage for night work is \$5 per week extra as was also provided in the previous agreement.

If necessary to reduce the working hours in a shop, such reduction shall be uniform throughout the plant, and starting and quitting time will be the same throughout. While working under a shortened schedule of hours, all time worked in excess of the reduced schedule will be paid at overtime rates. A week's notice must be given of any desired reduction in hours.

The number of apprentices allowed is one to every seven journeymen employed.

Wages per week for apprentices: first year \$10, first half of second year \$12, last half of second year \$16, first half of third year \$20, second half \$24, first half of fourth year \$28, second half \$32, first half of fifth year \$36, second half \$40. Apprentices will be paid for all holidays during first three years.

VANCOUVER, B.C.—VANCOUVER PHOTO ENGRAVERS' ASSOCIATION AND THE INTERNATIONAL PHOTO ENGRAVERS' UNION, LOCAL No. 54.

This agreement, which is for the period January 1, 1929, to December 31, 1934, and from year to year thereafter until either party gives 90 days' notice prior to expiration, was summarized in the *LABOUR GAZETTE*, September, 1929. Under this agreement the minimum wage rate for journeymen photo engravers for the two years beginning January 1, 1931, was \$60 per week for day work. It has been agreed however that a wage reduction of 10 per cent be in effect during the four months in which the 40-hour week is in effect this year, that is from July to October, 1931, inclusive.

VANCOUVER, B.C.—CERTAIN DAILY NEWSPAPERS AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, LOCAL No. 69.

Agreement to be in effect from September 1, 1930, to August 31, 1934, and from year to year thereafter until either party gives notice of change 60 days before September 1, of any year. Any questions as to a new agreement will be settled by conciliation or arbitration as provided below, and this agreement will remain in effect until all differences are settled.

Members of local union only to be employed if competent men available; if not, any other members of the International Union may be employed.

Hours: for day work 8 per day, a 48-hour week; for night work 7½ per night, a 45-hour week.

Overtime: time and one-half. Employees who have left the building and are called back to work thirty minutes or more after regular hours will be paid \$1 for such call back in

addition to overtime pay. Christmas Day, Labour Day and Dominion Day, double time; work on Sundays except for regular edition, double time; work on Good Friday, Victoria Day, Thanksgiving Day and New Years Day, time and one-half, provided that it will be permissible to work on the last mentioned four holidays for 5½ hours day or 5 hours night for a full day's pay.

Wages: \$1 per hour for day work and \$1.06½ per hour for night work. When a shift works part day and part night, the night scale will be paid, except that on Saturday night (for a regular edition either Saturday night or Sunday morning) an extra 50 cents for the shift in addition to the night scale will be paid.

One apprentice allowed for each four journeymen or major fraction thereof. Apprentices in their third year to receive at least one-third of journeymen's wage, fourth year one-half and during last year two-thirds.

Foremen to have the right to employ help and to discharge them for certain specified reasons.

Seven days' notice of discharge due to reduction of staff will be given and employees will give seven days' notice if resigning.

The union reserves the right to refuse to execute struck work received from or destined for unfair employers, and also to refuse to work in offices where either the stereotypers or typographical department is unfair. Employers are to be protected against walkouts, strikes or boycotts.

A standing committee of two representatives of each party will be selected and all disputes will be referred to it. If unable to agree, the matter will be referred to arbitration in accordance with the arbitration agreement in force between the American Newspaper Publishers' Association and the International Printing Pressmen and Assistants' Union.

Construction: Buildings and Structures

TORONTO, ONTARIO, AND CERTAIN OTHER CITIES.—THREE ELEVATOR CONSTRUCTION AND MAINTENANCE COMPANIES AND THE INTERNATIONAL UNION OF ELEVATOR CONSTRUCTORS, LOCALS No. 50 (TORONTO), No. 90 (HAMILTON), No. 96 (OTTAWA), No. 89 (MONTREAL), No. 101 (QUEBEC), No. 102 (WINNIPEG), AND No. 82 (VANCOUVER).

The standard international agreement which was summarized in the LABOUR GAZETTE, December, 1930, June, 1928, and December, 1927, provides that the wage rate for journeymen in each city be determined by the average rate of the five highest paid of seven specified building trades. Under this provision the wage rates for journeymen reported to be in effect at June 1, 1931, are as follows: Local No. 50—Toronto, \$1.25 per hour. Local No. 90—Hamilton, \$1.10; Windsor, \$1.37; St. Catharines, \$1.10; Kitchener, 91 cents; London, \$1.03. Local No. 96—Ottawa, \$1.04. Local No. 89—Montreal, \$1.07. Local No. 101—Quebec, 84 cents; Halifax, \$1. Local No. 102—Winnipeg, \$1.28. Local No. 82—Vancouver, \$1.25. These rates are the same as reported in the LABOUR GAZETTE, December, 1930, with the exception of the rate at Halifax which has increased from 88 cents to \$1 per hour.

TORONTO, ONT.—GENERAL CONTRACTORS AND THE MASON AND GENERAL CONTRACTORS OF TORONTO AND VICINITY AND THE INTERNATIONAL UNION OF STEAM AND OPERATING ENGINEERS, LOCAL No. 793.

Agreement in effect from April 15, 1929, to December 31, 1930, and thereafter unless either party gives sixty days' notice prior to its termination.

Contractors requiring engineers will call on the union for them, but if the union cannot supply them, they may secure engineers elsewhere.

Hours: 9 per day except where engineers are required to raise steam before operating, then one hour will be allowed straight time. All jobs working twenty-four hours will be worked three shifts of eight hours each.

Overtime: time and one-half except when working overtime in emergency cases or if engineer on next shift does not report, straight time to be paid. Sundays and holidays double time.

Wages for engineers operating hoisting machines (except steam and power shovels), steam driven concrete mixers, compressors, pumps or other steam driven machines used in building construction: \$1 per hour. This does not include the hoisting by what is commonly known as the Barrow and Sling gas hoisting machines.

During the term of the agreement no member or members of the local union will leave their work to take part in any sympathetic strike without sanction from their International Union headquarters and then only after arbitration with their representative from headquarters.

GUELPH, ONTARIO.—THE MASON CONTRACTORS OF GUELPH AND THE BRICKLAYERS, MASONS AND PLASTERERS' INTERNATIONAL UNION LOCAL No. 3.

This agreement, which came into effect April 1, 1930, for one year has been extended to March 31, 1932. Either party wishing to change it, must give three months' notice prior to the expiration date.

The union agrees to supply to the best of their ability sufficient journeymen to the contractors. No union member will be allowed to work for any person, contractor or company who employs non-union bricklayers or stone masons. The shop steward on the job may examine the working cards of members.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

For work on Saturday afternoon, Sundays and holidays, double time.

Wages for bricklayers and masons: from April 1, 1930, to July 1, 1930, \$1.12½ per hour; from July 1, 1930, to expiration of agreement \$1.20 per hour.

Any union member desiring to engage in contracting or sub-contracting must first resign his active membership. When any firm or company comprises more than two members, not more than one member will be permitted to lay brick or stone.

No union member will be permitted to work for an employer who lays brick by the thousand or bulk or lays stone by the perch as distinct from the furnishing of material; this

will not apply on percentage jobs or alterations where portions of the material are on the ground.

The union will not order any strike against the contractors parties to the agreement, nor will any union member leave work before the matter is brought before the joint arbitration committee for settlement. This committee will consist of three members of each party who will in turn appoint a chairman if necessary.

ST. CATHARINES, ONTARIO.—MASTER PLUMBERS AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 244.

Agreement to be in effect from June 1, 1929, to June 1, 1930, and thereafter from year to year until either party gives three months' notice of change before June 1, of any year.

Only union members to be employed or men willing and eligible to become union members.

Hours: 8 per day, 4 on Saturdays, a 44-hour week. Master plumbers are also to work only 8 hours per day.

Overtime: time and one-half until midnight; after midnight and all work on Sundays and holidays, double time.

Wages for journeymen plumbers and steamfitters: \$1 per hour.

One apprentice allowed to every three journeymen but apprentices employed when the agreement came into effect were to be retained. Apprentices to serve in one shop and for five years unless otherwise agreed upon; of these five years, three will be as a helper and two as a junior.

Each employer may employ a man to do general helping. Each steamfitter will be allowed one helper only who may be an apprentice or a labourer; any additional help must be labourers who will not be classed as apprentices or helpers and will not be permitted to handle the tools of the trade.

For out of town work, fare and board to be paid and travelling time during working hours.

Should any grievance arise, it will be referred to a committee of equal numbers of master and journeymen plumbers and steamfitters.

NIAGARA FALLS, ONTARIO.—MASTER PLUMBERS AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 667.

Agreement to be in effect from August 1, 1929, to April 30, 1930, and from year to year until either party gives two months' notice before April 30, of any year.

Only union members to be employed. All men who were working when this agreement came into effect and were eligible for union membership were to become union members within thirty days.

No union member will do any work pertaining to his trade for anyone but an established sanitary and heating engineer. Union members will not make rules or regulations which would curtail the output of work or make restrictions that would interfere with the operations or directions of employers.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Overtime: time and one-half to midnight; after midnight and all work on Sundays and holidays, double time. In case of necessary

repairs or finishing a repair job if it will not take more than one hour, it may be done at the regular rate.

Wages for journeymen plumbers and steamfitters, \$1 per hour. Apprentices who have served four years and passed the examination will be paid 70 per cent of regular journeyman's rate for first year and 80 per cent for second year, after which time they will receive the minimum journeyman's rate.

For work out of the city, fare and board to be paid and travelling time at single time with this exception: when men are working within ten miles of the city and travelling by radial or working within 15 miles and being transported by automobile they will be paid from the time they leave city to 5 p.m. but will return on their own time up to 6 p.m.; after which time single time to be paid for travelling time.

One apprentice allowed for every five journeymen; for any additional help required, the members will co-operate with the employers by using labourers under the supervision of a journeyman.

Any dispute will be referred to a joint conference board consisting of three employers and three journeymen who will meet when necessary. If unable to adjust such dispute, the matter will be referred to the general office of the United Association of Plumbers and Steamfitters and no strike or lockout will occur until an officer of this association has rendered a decision.

WINDSOR, ONTARIO.—THE LATHING AND PLASTERING SUB-SECTION OF THE BUILDERS AND CONTRACTORS' ASSOCIATION OF ESSEX COUNTY AND THE OPERATIVE PLASTERERS AND CEMENT FINISHERS' INTERNATIONAL ASSOCIATION, LOCAL No. 345.

Agreement to be in effect from June 16, 1931, to June 16, 1932.

Foremen must be union members and are to have power to hire and discharge men. On all jobs in the district done by contractors or employers who are not local men, fifty per cent of the men employed on these jobs must be members of this local union, as long as there are members of the local unemployed. All cornices, moulding and coves shall be run with moulds made by members of this local union and only two members of any contracting firm may work with tools.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Overtime: all overtime and work on Sundays and holidays, double time.

Wages for journeymen: \$1.25 per hour. (The rate previously in effect was \$1.50 per hour). Foremen to be paid \$1 per day extra.

For work out of city, car-fare both ways and travelling time both ways will be paid.

Tools must be carried from one job to another in working hours only.

No person shall help a journeyman at plastering or handle his tools except an apprentice or employer.

Scaffolding must be made safe; union members must not work over open salamanders.

A standing committee consisting of three members of each party will be selected and meet once a month to take up any matters to be adjusted.

EDMONTON, ALBERTA.—EDMONTON SOCIETY OF DOMESTIC, SANITARY AND HEATING ENGINEERS, INCORPORATED, AND THE UNITED ASSOCIATION OF PLUMBERS, GAS AND STEAM-FITTERS, LOCAL No. 488.

Agreement to be in effect from July 27, 1931, to April 30, 1932, and from year to year thereafter until either party gives notice by January 31, of any year.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, September, 1928, and July, 1927, with the following exceptions:

For work out of the city, transportation and travelling time to be paid by employer as before, but the employer will only pay for room and board for one plumber and/or one steamfitter on the same job.

Journeymen will drive a car or truck in connection with the work if requested by employer, the car or truck to be supplied by the employer.

The rate of wages is unchanged at \$1.20 per hour for a 44-hour week.

Transportation and Public Utilities: Street and Electric Railways

WINDSOR, ONTARIO, AND VICINITY.—ESSEX DIVISION, HYDRO ELECTRIC RAILWAYS, AND THE AMALGAMATED ASSOCIATION OF STREET AND ELECTRIC RAILWAY EMPLOYEES OF AMERICA, LOCAL No. 616.

Agreement to be in effect from July 1, 1931, to June 30, 1932.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE June, 1929, page 678, with the following exception:

The wage rate for sub-station operators has been increased from \$130 to \$140 per month.

The wage rates for motormen, conductors, one-man car and bus operators are unchanged, the following being still in effect: 52 cents per hour for first six months, 57 cents for second six months and 62 cents after one year's service.

Service: Public Administration

PORT ARTHUR, ONTARIO.—THE PUBLIC UTILITIES COMMISSION OF THE CITY OF PORT ARTHUR AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL No. 339, AND ALL OTHER EMPLOYEES OF THE ELECTRIC LIGHT AND TELEPHONE DEPARTMENTS OF THE CITY OF PORT ARTHUR.

Agreement to be in effect from May 1, 1931, to May 1, 1932.

This agreement is the same as the one previously in effect and summarized in the LABOUR GAZETTE, November, 1930, page 1335.

The wage schedule is unchanged and is as follows: sub-foreman 90 cents per hour, first class linemen 88 cents, second class linemen 65 to 81 cents, groundmen 50 to 68½ cents, cable splicer 93½ cents, cable splicers' helper 65 to 81 cents.

FORT WILLIAM, ONTARIO.—THE HYDRO-ELECTRIC COMMISSION OF THE CITY OF FORT WILLIAM AND THE CITY OF FORT WILLIAM PUBLIC UTILITIES COMMITTEE AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL No. 339, AND ALL OTHER EMPLOYEES OF THE HYDRO-ELECTRIC COMMISSION AND THE TELEPHONE DEPARTMENT.

Agreement to be in effect from May 1, 1931, to May 1, 1932.

This agreement is similar to the one at Port Arthur mentioned above which was summarized in the LABOUR GAZETTE, November, 1930, with the following exceptions:

The clause is not included which provides that one man in each department may if necessary work from 1 p.m. to 5 p.m. and from 7 p.m. to 11 p.m. six days per week at straight time.

Permanent meter readers are to be supplied with suitable uniforms, caps and overcoat.

Wages: the same wages as at Port Arthur are in effect for sub-foremen, linemen, cable splicers and cable splicers' helpers, and the following classes of work have also been included: line foreman \$210 per month, telephone troubleman \$183.75, meter foreman \$183.75, meter testers and installers \$157.50, meter installers \$147, meter readers \$110 per month for first year, \$120 for second year and \$127 for third year; operators \$110 per month for first year, \$120 for second year, \$130 for third year and \$139.20 for fourth year.

PRICES, RETAIL AND WHOLESALE, IN CANADA, JULY, 1931

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during July was again slightly lower, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being downward from the levels of the previous month.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in sixty-nine cities was again lower at \$8.11 for July as compared with \$8.16 for June; \$10.91 for July, 1930; \$10.98 for July, 1929; \$10.80 for July, 1928; \$10.92 for July, 1927; \$11.07 for July, 1926; \$10.49 for July, 1925; \$9.91 for July, 1924; \$10.17 for July, 1923; \$10.27 for July, 1922; \$10.96 for July, 1921; \$16.84 for July, 1920; \$13 for July, 1918; and \$7.42 for July, 1914. The prices of beef, veal, bacon, lard, milk and butter averaged slightly lower. Including the cost of fuel and rent with that of foods the total budget averaged \$18.28 at the beginning of July, as compared with \$18.36 for June; \$21.26 for July, 1930, and July, 1929; \$21.01 for July, 1928; \$21.10 for July, 1927; \$21.30 for July, 1926; \$20.70 for July, 1925; \$20.30 for July, 1924; \$20.65 for July, 1923; \$20.67 for July, 1922; \$21.53 for July, 1921; \$26.92 for July, 1920 (the peak); \$20.66 for July, 1918; and \$14.17 for July, 1914. In fuel, anthracite coal was slightly higher. Rent was down in the average because of lower quotations for several cities.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was lower at 71.7 for July, as compared with 72.2 for June; 85.3 for July, 1930; 97.2 for July, 1929; 96.0 for July, 1928; 98.5 for July, 1927; and 100.1 for July, 1926. Seventy-seven prices quotations were higher, one hundred and eight were lower, and three hundred and seventeen were unchanged.

In the classification according to chief component materials five of the eight main groups were lower and three were higher. The groups which declined were: the Vegetables and Vegetable products group, due to lower prices for barley, rye, wheat, flour, bran, shorts and coffee, which more than offset higher prices for flax, corn, sugar, raw rubber and linseed oil; the Fibres, Textiles and Textile Products group, because of lower quotations for cotton fabrics; the Wood, Wood Products and Paper group, due to declines in the prices of lumber and sulphite pulp; the Iron and its Products group, due to lower prices for scrap steel and

scrap iron; and the Non-Ferrous Metals group, because of declines in the prices of copper, copper sheets, and copper wire bars, which more than offset advances in the prices of lead, antimony, tin, silver and zinc. The Animals and Animal Products group was slightly higher, due to increased prices for hides, cured meats, steers, and hogs, which more than offset lower prices for lambs, milk and raw furs. The Non-Metallic Minerals group was also slightly higher, mainly because of increased prices for coal. Higher prices for bicarbonate of soda and white lead caused a slight advance in the Chemicals and Allied Products group.

In the grouping according to purpose both consumers' goods and producers' goods were lower, the former because of decreased prices for flour, bran, shorts, coffee, woollen yarn, cotton fabrics and galvanized pails, which more than offset advances in the prices of anthracite coal, cured meats, eggs and sugar, and the latter because of lower prices for lumber, wheat, barley, raw furs, calves, lambs and copper, which more than offset advances in the prices of raw cotton, raw silk, hides, steers, hogs, tin, lead and zinc.

In the grouping according to origin raw and partly manufactured goods declined, because of reduced prices for wheat, rye, corn, calves, lambs, woodpulp and copper. Fully and chiefly manufactured goods were fractionally higher, owing mainly to advanced quotations for rubber, sugar, cured meats, butter, cheese and steel sheets. Domestic farm products, articles of marine origin, articles of forest origin, and articles of mineral origin were lower.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of July, of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the **LABOUR GAZETTE** resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the **LABOUR GAZETTE** was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the **LABOUR GAZETTE** since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of

the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the **LABOUR GAZETTE** a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the **LABOUR GAZETTE**, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1919, quarterly from 1920 to 1929 and monthly since January, 1930. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.3; 1916, 86.3; 1917, 84.6; 1918, 82.9; 1919, 81.6; 1920, 81.1; 1921, 81.4; 1922, 80.1; 1923, 77.7; 1924, 76.5; 1925, 73.8; 1926, 73.2; 1927, 70.9; 1928, 69.3; 1929, 67.4; 1930, 64.7; 1931, 64.1.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to

(Continued on page 944)

*Prior to 1926 number of commodities was 236.

(Continued from page 936)

1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report Vol. 2, page 318), and bringing the figures down to 1930. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption on the basis of figures in 1926 as 100, as follows: 1923, 108.3; 1924, 105.1; 1925, 101.7; 1926, 100.0; 1927, 99.0; 1928, 97.1; 1929, 94.6; 1930, 92.3.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 128.9; 1928, 128.5; 1929, 128.0; 1930, 127.6. Natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 166.9; 1928, 158.9; 1929, 159.1; 1930,

158.8. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

Retail Prices

The downward movement in beef prices, in progress since June, 1930, was continued in July, sirloin steak averaging 28.8 cents per pound, as compared with 28.9 cents in June, and 38 cents in June, 1930; round steak 23.7 cents per pound in July, 24.1 cents in June, and 32.9 cents in June, 1930; and rib roast 21.7 cents per pound in July, 22.2 cents in June, and 30.8 cents in June, 1930. Veal was down from an average of 17.8 cents per pound in June to 17.5 cents in July. Fresh pork was slightly higher at an average price of 22.2 cents per pound. Salt pork and bacon were lower, the former averaging 22.6 cents per

*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18½%; Clothing, 18½%; Sundries, 20%.

pound and the latter 29.2 cents per pound. In fresh fish, cod steak, halibut and whitefish were lower. Lard averaged 14.6 cents per pound in July, as compared with 15.2 cents in June and 21.3 cents in July, 1930.

Eggs were slightly higher, fresh being up from an average of 23.8 cents per dozen in June to 24.4 cents in July, and cooking from 19.8 cents per dozen in June to 20.3 cents in July. These prices compare with 36.2 cents per dozen in July, 1930, for fresh eggs, and 32.7 cents for cooking. Milk was down in the average from 10.8 cents per quart in June to 10.6 cents in July. Lower prices were reported from New Glasgow, Fredericton, Three Rivers, St. Hyacinthe, Saskatoon, Medicine Hat, Lethbridge and Vancouver. Dairy butter was down in the average from 23.7 cents per pound in June to 23.3 cents in July, and creamery from 27.6 cents per pound in June to 26.8 cents in July.

Bread was unchanged at an average price of 6.2 cents per pound. Onions were higher in most localities, the price averaging 7.5 cents per pound in July, as compared with 7 cents in June. Potatoes were practically unchanged, averaging \$1.02 per ninety pounds. Granulated sugar was unchanged at an average price of 6.2 cents per pound. Anthracite coal advanced in the average from \$15.76 per ton in June to \$15.90 in July. Increased quotations were reported from Halifax, Fredericton, Sorel, Montreal, Hull, Ottawa, Orillia, Toronto, St. Catharines, Brantford, Galt, Kitchener, London, St. Thomas, Sarnia, and Sudbury. Coke was down from an average price of \$12.48 per ton in June to \$12.35 in July. Rent was down in the average because of lower quotations for Windsor, Ontario, Winnipeg and Regina.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices, for the most part, declined during the month, No. 1 Manitoba Northern cash wheat, Fort William and Port Arthur basis, averaging 57.3 cents per bushel, as compared with 60.7 cents in June and 95.1 cents in July, 1930. The low price for the month was 52½ cents per bushel, reached on the 25th. The more favourable weather conditions in western Canada, the German financial crisis and the pressure from supplies of Russian wheat were said to be the causes of the lower prices. In coarse grains, western barley was down from an average of 32.9 cents per bushel in June to 32.3 cents in July; western oats from 29.8 cents per bushel in June to 29.4 cents in July; and rye from 35.5 cents per bushel in June to 32.7 cents in July. Flax advanced from \$1.07

per bushel to \$1.18. Flour at Toronto was slightly lower at \$5 per barrel. Both bran and shorts were considerably lower, the former declining from \$17.94 per ton to \$16.46, and the latter from \$18.98 per ton to \$17.46. Raw sugar at New York advanced from \$1.30 per cwt. to \$1.50, and granulated at Montreal from \$4.47 per hundred pounds to \$4.56. The higher prices were said to be due to the smaller crop harvested in Cuba as compared with a year ago and to the reduced estimate of the Java crop. Ceylon rubber was up in the average from 6.1 cents per pound to 6.3 cents. Santos coffee at Toronto was down from 14.3 cents per pound to 14 cents. In live stock, good steers at Toronto advanced from \$5.85 per hundred pounds to \$6.02 and at Winnipeg from \$5.22 per hundred pounds to \$5.57. Hogs also advanced, the price at Toronto being up from \$3.56 per hundred pounds to \$9.07, and at Winnipeg from \$7.61 per hundred pounds to \$8.07. Lambs were substantially lower, the price at Toronto being down from \$11.04 per hundred pounds to \$9.36, at Winnipeg from \$8.98 per hundred pounds to \$7.64, and at Montreal from \$10.38 per hundred pounds to \$8.02. Veal calves were down from \$6.88 per hundred pounds to \$6.67. In raw furs, both beaver and red fox were lower, the former being down from \$15.75-\$19.50 per skin to \$14.75-

\$18.25, and the latter from \$9.25-\$13 per skin to \$8.25-\$11. The price of lynx skins advanced from \$20.50-\$27.50 per skin to \$21.50-\$31.50. Creamery butter at Montreal advanced from an average price of 23.3 cents per pound to 24 cents, and at Toronto from 23.4 cents per pound to 24.2 cents. Fresh eggs at Toronto were up from 21.6 cents per dozen to 22.9 cents. The price of raw cotton at New York was up from an average of 9.1 cents per pound to 9.3 cents. Raw silk at New York advanced from \$2.60 per pound to \$2.95. The advance was said to be due to a decline in world production of silk and to a substantial increase in consumption. In lumber prices, select Canadian white pine was down from \$100 per thousand board feet to \$90, soft maple from \$50 per thousand board feet to \$48, and plain red oak from \$80 per thousand board feet to \$75. Scrap steel was down from \$9.50 per ton to \$8.50, and scrap iron from \$12 per ton to \$11. In non-ferrous metals, copper at Montreal declined from \$9.68 per hundred pounds to \$9.39, and copper wire bars at New York from \$8 per hundred pounds to \$7.75. Tin and silver prices were higher, the former advancing from 25.3 cents per pound to 26.8 cents and the latter from 27.3 cents per ounce to 28.3 cents. Anthracite coal at Toronto advanced from \$13.12 per ton to \$13.34.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of the cost of living are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. The latest quarterly table showing cost of living and wholesale prices index numbers for various countries appeared in the LABOUR GAZETTE for July.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1924=100, was 62.1 for June, a decline of 1.1 per cent for the month, and of 14.5 per cent since June, 1930. As compared with May, the food group as a whole was unchanged, declines in cereals and meat and fish being offset by advances in other foods. Non-foods declined 1.7 per cent, the principal falls occurring in wool and cotton, while other textiles showed a slight advance; metals and minerals and miscellaneous commodities were also lower than in May.

The *Statist* index number, on the base 1867-1877=100, was 82.6 at the end of June, an

advance of 0.5 per cent for the month. The food group was unchanged, an advance in vegetable food being counteracted by declines in animal food and the sugar, coffee and tea group. Non-foods advanced 1.0 per cent due to increases in minerals and textiles.

COST OF LIVING.—The index number of the Ministry of Labour, on the base July, 1914=100, was 147 at July 1, an increase of 1.4 per cent for the month. Foods advanced 2.4 per cent due largely to the use of the new crop of potatoes at higher prices than old potatoes. The other groups were unchanged from the previous month.

France

WHOLESALE PRICES.—The index number of the General Statistical Bureau, on the base 1914=100 (gold basis) was 97 for June, showing no change from the May level. There were increases in the sugar, coffee, cocoa group, minerals and metals and textiles, while vegetable foods and miscellaneous materials were lower.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913

=100, was 112.3 for June, a decline of 0.9 per cent for the month. Agricultural products declined 1.7 per cent, colonial products 0.4 per cent, industrial raw materials and semi-manufactured goods 0.5 per cent and manufactured goods 0.4 per cent.

COST OF LIVING.—The index number of the Federal Statistical Office, on the base 1913-1914 =100, was 137.8 for June, an advance of 0.4 per cent for the month due to an increase of 0.8 per cent in food; heat and light, clothing and sundries were all lower and rent was unchanged.

Italy

WHOLESALE PRICES.—The index number of the Milan Chamber of Commerce, on the base 1913=100 (pre-war currency) was 92.1 for June, a decline of 2.2 per cent for the month. Every group showed declines from the May level.

COST OF LIVING.—The index number of the cost of living, Milan, on the base June, 1927=100, was 83.31 for May, a decline of 1.4 per cent for the month.

United States

WHOLESALE PRICES.—The *Annalist* index number, on the base 1913=100, was 101.9 for July, an advance of 0.7 per cent for the

month. Advances were noted in farm products, food products, textile products and metals, and declines in fuels, building materials, chemicals and miscellaneous commodities.

Dun's index number of wholesale commodity quotations proportioned to the *per capita* consumption of each of the many articles included, was 145,598 at August 1, a decline of 0.6 per cent for the month. All food products declined 3.3 per cent due to lower prices for wheat, corn, pork, dairy and garden products. Clothing was higher due to advances in wool and in hides. Metals and miscellaneous commodities showed little change for the month.

COST OF LIVING.—The index number of the National Industrial Conference Board, on the base 1923=100, was 85.9 for June, a decline of 1.2 per cent for the month. Fuel and light were unchanged, but all other groups were included in the decline.

The index number of the Department of Labour and Industries of Massachusetts, on the base 1913=100, was 140.2 for June, a decline of 0.6 per cent for the month. Declines were registered in food, clothing and sundries, while shelter and fuel and light were unchanged.

Accident Rates in the United States

Coal Mines.—A nation-wide canvass of coal mines to determine the number and causes of non-fatal accidents in 1930 is being conducted by the United States Bureau of Mines. Reports have already been received from half of the operating companies. Figures already compiled show that 270,000 bituminous miners and 62,000 anthracite miners were employed in 1930 to produce 275,000,000 tons of soft coal and 27,000,000 tons of anthracite. The men averaged 195 work days in bituminous mines and 204 work days in anthracite mines. Average daily output of coal per employee was 5.2 tons in bituminous mines and 2.1 tons in anthracite mines. With this production, the returns for bituminous mines show 2.6 deaths and 142 non-fatal injuries for each million tons of coal produced; in anthracite mines there were 7.8 deaths and 530 non-fatal injuries for each million tons of output.

Assuming an 8-hour day at all mines, the records show 95 accidents of all kinds, both fatal and non-fatal, for each million man-hours of work performed at bituminous mines and 144 accidents for each million man-hours at anthracite mines, according to the Bureau. These figures are based on reports covering all "lost-time" accidents, which means all accidents that disabled an employee for more than the remainder of the day on which the accident occurred.

For each death in bituminous mines the returns thus far received reveal 54 non-fatal injuries; corresponding records for anthracite mines show 68 injuries for every fatality. Bituminous mines produced 378,000 tons of coal for each fatality and 7,000 tons for each non-fatal injury. The production in anthracite mines, averaged 128,000 tons for each fatality and 1,900 tons for each injury.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1931

THE number of fatal industrial accidents (including fatalities from industrial diseases included with fatal accidents by workmen's compensation boards, etc., and also fatalities to persons incidental to the pursuit of their occupations), which were recorded in the Department as occurring during the second quarter of 1931, was 283, there being 84 in April, 105 in May and 94 in June.

The report for the first quarter of 1931 was given in the LABOUR GAZETTE, May, page 613. In the second quarter of 1930, 402 fatal accidents were recorded (LABOUR GAZETTE, August, 1930, page 983). The supplementary list of fatal industrial accidents on pages..... contain 5 fatalities for 1930 and 15 for the first quarter of 1931. In this series of reports it is the custom to record industrial accidents under the dates of their occurrence, and fatal industrial diseases under the dates on which they prove fatal.

Reports were received from the provincial workmen's compensation boards, the Board of Railway Commissioners of Canada, from certain other official sources and from the correspondents of the LABOUR GAZETTE. Information as to accidents is also secured from newspapers.

Classified by groups of industries the fatalities occurring during the second quarter of 1931 were as follows:—agriculture, 34; logging, 26; fishing and trapping, 4; mining, non-ferrous smelting and quarrying, 41; manufacturing, 33; construction, 48; electric light and power, 10; transportation and public utilities, 46; trade, 7; finance, 2; service, 32.

Of the mining accidents, 18 were in "metaliferous mining," 20 in "coal mining," and 3 in "non-metallic mineral mining and quarrying, n.e.s."

Of the accidents in manufacturing, 2 were in "vegetable foods, drink and tobacco," 2 in "animal foods," 2 in "textiles and clothing," 2 in "wood products," 7 in "saw and planing mill products," 3 in "pulp, paper and paper products," 3 in "iron, steel and products," 7 in "non-metallic mineral products," and 5 in "chemical and allied products."

In construction there were 29 fatalities in "buildings and structures," 3 in "shipbuilding," 6 in "highway and bridge," and 10 in "miscellaneous construction."

In transportation and public utilities there were 22 fatalities in "steam railways," 10 in "water transportation," 1 in "air transportation," 8 in "local transportation," 1 in "storage," and 4 in "telegraphs and telephones."

In trade there was one fatality in "wholesale," and 6 in "retail."

Of the fatalities in service, 21 were in "public administration," 1 in "recreational," 3 in "custom and repair," 4 in "personal and domestic," and 3 in "professional establishments."

There was no serious disaster resulting in the loss of a very large number of lives during the period under review. Accidents involving the loss of two or more lives were as follows:

On May 11, six coal miners were killed at River Hebert, N.S., by an explosion in the mine; and on April 14, two men suffocated following an explosion of gas in a coal mine near Edmonton, Alberta.

On June 26, four men employed in the mixing house of an explosives plant at Nobel, Ontario, lost their lives in an explosion while mixing nitro-glycerine.

Two men engaged in shipbuilding at Meteghan, N.S., lost their lives on May 28, when a tank exploded in the engine room.

On June 30, a trucker and his helper were killed when a train struck their truck near Tatamagouche, N.S.

On April 19, a mounted police constable and his guide broke through the ice during the break-up near York Factory, Manitoba, and were drowned.

On June 8, the commander of a government steamer and two other members of the crew were drowned from a canoe in the Metagaion River, Que.

Two labourers at a hospital at Lampman, Sask., were overcome by poisonous gas while cleaning a cesspool about June 4.

Supplementary List of Accidents

The supplementary list of accidents occurring during the first quarter of 1931, to be found after the main table of accidents, contains 15 fatalities, of which 3 were in mining, non-ferrous smelting and quarrying, 7 in manufacturing, 1 in construction, 3 in transportation and public utilities and 1 in service. Three of these accidents occurred in January, 6 in February and 6 in March. Concluding the lists is a supplementary list of accidents occurring during 1930 which contains 5 fatalities, of which 3 were in manufacturing, 1 in construction and 1 in transportation and public utilities. One of these accidents occurred in May, 1 in June, 1 in July and 2 in December.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1931

Trade or Industry	Locality	Date	Age	Cause of Fatality
AGRICULTURE AND STOCK-RAISING—				
Farm owner.....	Near Pickering, Ont.....	April 6	Heart seizure while fighting fire which destroyed farm house.
Farmer.....	Chester, N.S.....	" 8	Fell down well.
Farm hand.....	Near Tompkins, Sask.....	" 9	Fell on rod of seeder plough. Died April 12.
Farmer.....	Near Guelph, Ont.....	" 14	57	Struck by tree he was pulling down.
Farm hand.....	Near Ettington, Sask.....	" 16	19	Dragged when horses bolted.
Farmer.....	Rosetown District, Sask.....	" 16	Drowned while drawing water from ditch.
Farm hand.....	Near Dauphin, Man.....	" 18	30	Burned while attempting to rescue farmer's wife after explosion from starting fire with kerosene.
Farmer.....	Near Mission, B.C.....	" 20	Injured when his truck skidded and overturned into ditch.
Farmer.....	Near Perth, Ont.....	" 20	50	Dragged under teeth of harrow when team bolted.
Farm hand.....	Near Kerrobert, Sask.....	" 24	Crushed while operating tractor.
Farm hand.....	Copetown, Ont.....	" 28	70	Thrown beneath wheels of wagon when team ran away.
Farmer.....	Near Oungre, Sask.....	May 11	31	Run over by disc when his horses ran away.
Farmer.....	Near Canora, Sask.....	" 18	53	Run over by land packer when horses ran away.
Farmer.....	Near Greenfield, Ont.....	" 22	63	Gored by bull.
Farmer.....	Consecon, Ont.....	About
Farmer.....	Near Fleming, Sask.....	May 22	45	Injured when his team ran away. Died May 24.
Farmer.....	Near Macgregor, Man.....	" 24	Kicked by horse.
Farmer's daughter.....	Near Vanguard, Sask.....	" 27	18	Accidental discharge of his rifle when he tripped while shooting crows.
Farmer.....	Near Minto, Man.....	" 27	67	Hooked by cow. Died May 28.
Farm hand.....	Near Canora, Sask.....	" 27	56	Struck by chain when it slipped while removing stone. Died, May 30.
Farmer.....	Near Tecumseh, Ont.....	" 28	65	Crushed under falling tree while clearing land.
Farmer.....	Dalhousie Mills, Que.....	" 30	46	Fell into well and was drowned while drawing water.
Farmer.....	Near Seaforth, Ont.....	" 31	57	Injured while blasting stone. Died, May 31.
Farmer.....	Heath Pelham, Ont.....	June 3	70	Accidental discharge of rifle while shooting ground hogs.
Farmer's son.....	Near Windsor, Ont.....	" 6	15	Run over by disc harrow when team ran away.
Farm hand.....	Near Gladstone, Man.....	" 9	Struck by lightning.
Farmer.....	Near Birnie, Man.....	" 10	47	Thrown from wagon when horses ran away.
Farmer.....	Near Ituna, Sask.....	" 12	Thrown from wagon and crushed under wheels.
Farm hand.....	Grenville Co., Ont.....	" 13	18	Fell from wagon. Died June 13.
Farm hand.....	Haywood District, Man.....	" 16	60	Kicked by horse.
Farmer.....	Appleby, Ont.....	" 19	Dragged when horses ran away.
Farmer.....	Near Leroy, Sask.....	About	Struck by lightning.
Farmer.....	Near Stratheona, Ont.....	June 25	Fell into well.
Farmer.....	Agassiz, B.C.....	" 29	35	Train struck his wagon when team bolted.
Farmer.....	" 30	Struck by piece of fly wheel of ensilage cutters when it burst.
LOGGING—				
Tractor driver.....	Near Cochrane, Ont.....	April 1	31	Crushed under tractor upon cranking it while in gear.
Loader.....	Kissinger, B.C.....	" 7	24	Log rolled over him.
Faller.....	Port Alberni, B.C.....	" 11	49	Crushed by falling tree.
Log driver.....	Oromocto River, N.B.....	" 16	33	Drowned from log drive.
Logger.....	Lac des Anglais, Que.....	" 16	40	Crushed by logs when released from jam by blasting.
River driver.....	Fullum Creek, Ont.....	" 24	28	Fell off raft and was drowned.
River driver.....	Lac-à-l'Épaule, Que.....	" 30	55	Fell into river and was drowned.
Faller.....	Elk Bay, B.C.....	May 6	45	Tree fell on him.
Cook.....	Gatineau River, Que.....	" 8	35	Drowned while going through rapids.
River driver.....	Dalton Mills, Ont.....	" 8	Struck by logs when skidway broke.
Driver.....	Cabano, Que.....	" 10	26	Fell from logs and was drowned.
Rigger slinging.....	Garrett, B.C.....	" 10	38	Leg caught in choker.
Logger.....	Great Central Lake, B.C.....	" 11	34	Struck by falling snag. Died May 13.
River driver.....	Quinn Creek, Que.....	About
River driver.....	Moon River, Ont.....	May 12	22	Drowned while driving logs.
Bushman.....	Island Falls, Ont.....	" 13	22	Drowned when his boat capsized while breaking up log jam.
Logger.....	Shelter Bay, B.C.....	" 15	30	Drowned when he attempted to swim ashore from raft to avoid rapids.
Logger.....	Near Prince Rupert, B.C.....	" 18	26	Struck by tree. Died May 21.
Loader.....	Near Prince Rupert, B.C.....	" 25	32	Struck by flying cable. Died May 30.
Truck driver.....	Fanny Bay, B.C.....	June 2	21	Loaded car ran over him.
Pole cutter.....	Port Alberni, B.C.....	" 4	45	Log from truck fell on him. Died June 8.
Logger.....	Near Sidmouth, B.C.....	About
Logger.....	Ramsaywin, B.C.....	June 4	Struck by falling snag; fractured skull.
Logger.....	Near Prince Rupert, B.C.....	June 9	Struck by log.
Chokerman.....	Great Central Lake, B.C.....	" 16	24	Struck by log.
Logger.....	Campbell River, B.C.....	" 23	26	Log rolled on him.
Log driver.....	Near Maniwaki, Que.....	" 27	35	Struck by falling snag.
Log driver.....	Near Maniwaki, Que.....	" 28	24	Drowned from canoe while trying to break up log jam.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER
OF 1931—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
FISHING AND TRAPPING—				
Member of sealing crew	Off coast, Prince Edward Island.	April 5	19	Accidentally shot while engaged in sealing operations.
Fisherman.....	Off Owl's head, N.S.....	May 1	40	Drowned when dory capsized.
Fisherman.....	Near Cape Sable Island, N.S.....	" 19	Drowned while attending to lobster traps.
Fisherman.....	Near Port Alberni, B.C.....	" 31	Drowned when canoe capsized in storm.
MINING, NON-FERROUS, SMELTING AND QUARRYING—				
<i>Metalliferous Mining</i>				
Prospector.....	Beaver Lake, Man.....	April 19	Broke through ice and was drowned.
Miner.....	Flin Flon, Man.....	" 22	25	Crushed under drill when tie broke while moving it.
Labourer.....	Timmins, Ont.....	May 1	33	Silicosis. First laid off May 26, 1926.
Driller.....	Frood Mine, Ont.....	" 1	22	Fell from ladder in mine, fracturing skull.
Mucker.....	Schumacker, Ont.....	" 5	28	Struck by falling timber, fractured skull. Died May 12.
Machine runner.....	Timmins, Ont.....	" 6	35	Caught under fall of rock.
Miner.....	Timmins, Ont.....	" 8	32	Silicosis. First laid off April 10, 1930.
Miner.....	Kirkland Lake, Ont.....	" 10	23	Struck on head by falling plank.
Assayer for mine.....	Cobalt, Ont.....	" 12	46	Poisoned when he took overdose of atropine sulphate in error.
Labourer.....	Timmins, Ont.....	" 15	42	Silicosis. First laid off Sept. 5, 1929.
Machine runner helper	Kirkland Lake, Ont.....	" 22	26	Injured by explosion from drilling into missed hole.
Miner.....	St. Gerard des Laurentides, Que.....	" 26	26	Asphyxiated by fumes from dynamite explosion.
Miner.....	Lac La Pêche, Que.....	" 26	25	Asphyxiated by fumes from dynamite explosion.
Miner.....	Kirkland Lake, Ont.....	" 28	26	Killed during blasting operations when he drilled into a missed hole.
Caretaker at camp.....	Lake Chibougamau, Que.....	About June 1	Drowned from canoe.
Machine runner.....	Porcupine, Ont.....	" 2	35	Crushed by fall of rock.
Miner.....	Anyox, B.C.....	" 11	44	Killed in mine.
Miner.....	Near Sudbury, Ont.....	About June 15	About 30	Killed in mine accident.....
<i>Coal Mining—</i>				
Miner.....	Glace Bay, N.S.....	April 2	54	Crushed under fall of coal. Died April 3.
Miner.....	Sydney Mines, N.S.....	" 4	61	Struck by stone hurled by explosion of blast.
Labourer.....	River Hebert, N.S.....	" 9	37	Fell from stone road trestle with box of stone.
Mine owner.....	Near Edmonton, Alta.....	" 14	60	Suffocated following explosion of gas in mine.
Miner.....			45	
Miner.....	Sydney Mines, N.S.....	" 24	55	Crushed by fall of coal.
Miner.....	Fernie, B.C.....	" 30	36	Injured by fall of rock on Sept. 11, 1922.
Miner.....				
Miner.....	River Hebert, N.S.....	May 11	Explosion in mine.
Miner.....				
Miner.....	Coleman, Alberta.....	" 22	32	Buried by fall of coal.
Miner.....	Dominion, N.S.....	" 29	27	Crushed under fall of coal.
Miner.....	Cadomin, Alta.....	June 11	About 50	Buried by cave-in at mine.
Miner.....				
Miner.....	Glace Bay, N.S.....	" 15	20	Crushed by run away trip. Died July 17.
Labourer.....	Nanaimo, B.C.....	" 17	39	Struck by mine car when it jumped track.
Miner.....	New Waterford, N.S.....	" 17	37	Run over by mine car.
Car runner.....	Glace Bay, N.S.....	" 19	28	Run over by engine.
<i>Non-Metallic Mineral Mining and Quarrying (n.e.s.)—</i>				
Labourer.....	Eustis, Que.....	April 9	63	Caught between sheave wheel and skip. Died April 10.
Worker in clay pit.....	Middle Musquodoboit, N.S.....	June 12	32	Struck by lump of falling clay.
Quarry worker.....	Montreal, Que.....	" 20	44	Electrocuted when he touched switch.
MANUFACTURING—				
<i>Vegetable Foods, Drink and Tobacco—</i>				
Brewery worker.....	London, Ont.....	May 5	30	Burned by shellac when it caught fire. Died May 7.
Worker at beverage plant.....	Orillia, Ont.....	June 22	36	Fell into vat of syrup and was drowned.
<i>Animal Foods—</i>				
Worker in creamery	Dauphin, Man.....	April 2	24	Explosion of cauldron of boiling pitch.
Truck driver for creamery.....	Near Belleville, Ont.....	June 9	24	Leg scalded by water from radiator when hose came loose, infection. Died June 20.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1931—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
MANUFACTURING—Con.				
<i>Textiles and Clothing—</i>				
Machinist.....	Hamilton, Ont.....	April 17	45	While holding cylinder, struck by sledge hammer when it slipped. Died May 2.
Worker.....	Toronto, Ont.....	May 20	65	Cut his thumb while unloading cases, blood poisoning. Died May 23.
<i>Wood Products—</i>				
Worker in woodwork- ing factory.....	Lachute, Que.....	" 5	67	Struck by revolving knife which flew out of shaping machine.
Worker in shook mills.....	New Westminster, B.C.....	June 29	26	While driving yard jitney it skidded and upset on him.
<i>Saw and Planing Mills Products—</i>				
Saw operator.....	Edgett's Landing, N.B.....	April 7	25	Struck by wood sawing machine when it broke loose. Died April 8.
Mill worker.....	Hudson Bay Junction, Sask..	" 7	42	Struck by stick used to throw off belt.
Machine tender.....	Villeroy, Que.....	" 30	22	Struck in stomach by log.
Edgerman.....	Castlegar, B.C.....	May 5	27	Struck by piece of edging which flew back from edger.
Wood sawer.....	Cap Chat, Gaspé, Que.....	" 16	56	Struck by piece of fly wheel when it burst.
Mill worker.....	Hilliers, B.C.....	" 20	65	Struck by plank from carriage.
Saw mill owner.....	Bedeque, P.E.I.....	June 10	65	Caught in saw while sawing logs.
<i>Pulp, Paper and Paper Products—</i>				
Labourer.....	Near Bessemer, Ont.....	April 6	63	Struck by pulpwood pole when knot caught table of mill. Died April 9.
Mill worker.....	Abitibi, Ont.....	About May 18	24	Drowned while trying to swim ashore when rowboat sprang a leak.
Labourer.....	Powell River, B.C.....	" 23	31	Crushed in conveyor.
<i>Iron, Steel and Pro- ducts—</i>				
Machinist.....	Limoulu, Que.....	April 6	22	Struck by piece of iron. Died May 22.
Worker in steel plant.	Montreal, Que.....	" 30	53	Hand caught in belting and was drawn into machine.
Elevator operator.....	Toronto, Ont.....	May 26	55	Electrocuted by short circuit.
<i>Non-Metallic Mineral Products—</i>				
Helper at oil refin- ery.....	Sarnia, Ont.....	April 2	34	Struck his head on beam over door. Died April 17.
Worker at gas plant.	Toronto, Ont.....	" 8	61	Struck by elevator balance weights.
Watchman with gas co.....	Sault Ste. Marie, Ont.....	" 14	67	Overcome by gas while removing bolts from purifier cover.
Janitor with optical co.....	Toronto, Ont.....	" 28	60	Fell down stairs, fracturing skull. Died April 29.
Engineer at gas plant.....	Toronto, Ont.....	May 3	49	Leg mangled in cogs of machine. Died May 18.
Worker at gas plant.	Toronto, Ont.....	" 4	27	Explosion of vaporizer.
Worker in cement plant.....	Point Anne, Ont.....	June 16	28	Clothing became caught between pulley and belt.
<i>Chemical and Allied Products—</i>				
Operator in liquid air plant.....	Halifax, N.S.....	April 30	38	Injured when high pressure oxygen tube burst. 24 45 33 35
4 workers in mixing house of explosives plant.....	Nobel, Ont.....	June 26	24	
			45	
			33	
			35	
CONSTRUCTION— Buildings and struc- tures—				
Labourer.....	Quebec, Que.....	April 4	31	Struck by falling saw horse. Died April 6.
Labourer.....	Montreal, Que.....	" 8	35	Fell 30 ft. when scaffold collapsed.
Labourer.....	St. Raymond, Que.....	" 10	24	Buried by cave-in of sand.
Painter.....	Shawinigan, Que.....	" 11	45	Fell from ladder fracturing skull. Died April 12.
Labourer.....	Montreal, Que.....	" 11	48	Buried by land slide in excavation work.
Painter.....	Lachine, Que.....	" 14	19	Overcome by gas from gas stove while painting in a vacant house.
Plastering contractor	Kingston, Ont.....	" 15	Fell from scaffold, broken neck.
Labourer.....	Quebec, Que.....	" 18	55	Fell from second floor when it gave away. Di April 24.
Worker on power house.....	Fitzroy Harbour, Ont.....	" 20	21	Fell 40 ft. from power house.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER
OF 1931—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
CONSTRUCTION—Con.				
<i>Buildings and structures—Con.</i>				
Labourer.....	Saskatoon, Sask.....	April 24	26	Crushed under falling block of stone.
Blacksmith on power plant construction..	Corra Linn, B.C.....	" 30	46	Struck by gasoline dinkey engine.
Labourer.....	Deschenes, Que.....	" 30	31	Section of wall fell on him while tearing down plant. Died May 4.
Worker on power plant construction..	New Castle Landing, N.B..	May 5	24	Collapse of staging while working on it. Died May 10.
Installing engineer for electrical machinery co.....	Near Colonsay, Sask.....	" 10	36	Injured in auto accident.
Connector.....	Copper Cliff, Ont.....	" 12	Struck by beam and knocked off steel structure.
Labourer.....	Montreal, Que.....	" 13	40	Fell from new hospital wing.
Labourer.....	Toronto, Ont.....	" 14	39	Fell from scaffold when it broke. Died May 16.
Steeplejack.....	Dundas, Ont.....	" 15	20	Fell from church steeple.
Labourer.....	Sowna, B.C.....	" 21	33	Struck by stone from blast.
Labourer.....	Montreal, Que.....	" 26	23	Fell from ladder. Died May 30.
Mason.....	Vancouver, B.C.....	" 27	Fell striking head on stone.
Foreman carpenter..	Hamilton, Ont.....	June 1	28	Struck thumb with sledge hammer, lock jaw. Died June 11.
Labourer repairing wall.....	Montreal, Que.....	" 3	28	Crushed under wall when it collapsed.
Farm hand.....	Near Ayton, Ont.....	" 9	67	Fell from roof while shingling barn.
Labourer.....	Victoria, B.C.....	" 19	Burned when pot of boiling tar upset on him.
Labourer.....	Cox's Spur, Ont.....	" 19	50	About Collapsed from heat while dismantling saw mill.
Labourer.....	Cochrane, Ont.....	" 20	30	Crushed under hotel when it fell from beam supports while being raised.
Painter.....	Montreal, Que.....	" 22	26	Fell from eighth storey window.
Labourer.....	Montreal, Que.....	" 25	53	Poisoned by fumes from dynamite.
<i>Shipbuilding—</i>				
Tool repairer.....	North Vancouver, B.C.....	May 16	64	Drill stand fell on him. Died May 18.
Engineer.....	Meteghan, N.S.....	" 28	40	Injured when tank exploded in engine room.
Engine room worker}			35	
<i>Highway and Bridge—</i>				
Labourer.....	Near Aurora, Ont.....	April 13	52	Fell from truck, fracturing skull. Died April 17.
Road worker.....	Near St. Thomas, Ont.....	May 30	21	Electrocuted by overhead power wire while unloading tractor.
Farmer on road work	Near Strathroy, Ont.....	June 13	58	Buried by cave-in of gravel pit.
Road worker.....	Near Pembroke, Ont.....	" 15	61	Killed during blasting operations.
Labourer.....	Meastead, Sask.....	About	
Worker on street paving.....	Winnipeg, Man.....	June 15	Struck by falling tree.
		" 30	Sunstroke. Died July 1.
<i>Miscellaneous—</i>				
Labourer on power development.....	Beauharnois, Que.....	April 2	23	Electrocuted when he touched live wire.
Mucker on power dam construction..	Fraserdale, Ont.....	" 6	Fell into river and was drowned while attempting to dodge rockslide.
Worker on pier construction.....	St. John, N.B.....	" 8	40	Struck on head by rock in sling of crane.
Labourer on tunnel construction.....	Montreal, Que.....	" 10	36	Buried by cave-in of tunnel.
Cook with dock dredging co.....	Lake Scugog, Ont.....	" 26	21	Drowned from motor launch.
Worker on wharf repairs.....	Esquimalt, B.C.....	May 20	Fell from wharf, broken neck.
Dredge worker.....	Riviere Noire, Que.....	" 30	25	Struck by platform which slipped from holding chain.
Labourer on sewer construction.....	Toronto, Ont.....	June 6	45	Cave-in of sewer.
Labourer on power canal construction..	Beauharnois, Que.....	" 13	30	Struck by scoop of crane and fell from scaffold. Died June 14.
Worker on harbour dredge.....	Port Stanley, Ont.....	" 25	38	Fell from scow and was drowned.
ELECTRIC LIGHT AND POWER—				
Lineman.....	Quebec, Que.....	April 14	33	Fell with pole when it broke.
Lineman.....	Near Milton, N.S.....	" 27	32	Electrocuted while working on transmission line.
Electric helper.....	Isle Maligne, Que.....	May 15	29	Burned when clothing came in contact with live wire. Died May 21.
Operator at power plant	Near Cobalt, Ont.....	" 17	28	Electric burns from pulling wrong switch. Died May 22.
Lineman.....	Midland, Ont.....	June 3	28	Electrocuted while changing insulators.
Lineman.....	Near Morley, Alta.....	" 4	45	Electric burns and shock. Died June 12.
Lineman.....	St. Hyacinthe, Que.....	" 18	20	Electrocuted when he came in contact with high tension current.
Electrician.....	Tenaga, Que.....	" 19	44	Electrocuted when he came in contact with high tension wire.
Line foreman.....	Gatineau Mills, Que.....	" 20	47	Burned when he came in contact with high tension current. Died June 25.
Labourer.....	Brantford, Ont.....	" 30	Leaned against live wire when overcome by heat while painting pole and fell to ground.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER
OF 1931—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
TRANSPORTATION AND PUBLIC UTILITIES—				
<i>Steam Railways—</i>				
Labourer.....	Coquitlam, B.C.....	April 10	Struck in abdomen by switch handle.
Worker on ditch.....	Beavermouth, B.C.....	" 10	28	Crushed by rock slide while working on ditcher.
Dining car second cook.....	Marlboro, Alta.....	" 12	Injured when train was derailed. Died April 28.
Conductor.....	Havelock, Ont.....	" 19	58	Fell under train and was run over.
Roadmaster.....	Albert, N.B.....	" 21	50	Motor car jumped track.
Air-brake inspector.....	Mimico, Ont.....	" 22	48	Struck by train. Died April 28.
Switchman.....	Prince Albert, Sask.....	" 23	45	Run over by freight car.
Sectionman.....	Windsor Junction, N.S.....	" 27	24	Struck by train.
Engineer.....	Stratford, Ont.....	May 5	51	Crushed between two locomotives. Died May 6.
Section foreman.....	Nakina, Ont.....	About		
Engineer.....	Near Field, B.C.....	May 18	37	Struck by train.
Yardman.....	Montreal, Que.....	" 23	65	Fell from engine and was run over.
Section employee.....	Crowsen's Siding, N.B.....	" 30	64	Run over by engine.
		" 31	35	Collision of train with track motor on which he was riding.
Sectionman.....	Thompson Sub. B.C.....	" 31	38	Run over by train.
Conductor.....	Caledonia Junction, N.S.....	June 1	31	Run over by train.
Section man.....	Near Hornepayne, Ont.....	" 2	23	Struck by train.
Section foreman.....	Near Saskatoon, Sask.....	" 8	39	Struck by train.
Asst. section foreman.....	Near Niblock, Ont.....	" 10	49	Struck by train.
Carpenter.....	Nelson Sub., B.C.....	" 15	64	Struck by train.
Foreman of painters.....	Pont-Rouge, Que.....	June 19	About 60	Collision of train with hand car on which he was riding.
Section labourer.....	Near Canaan, Ont.....	" 20	25	Fell from one hand car and was run over by second one.
Section man.....	Near Fort Frances, Ont.....	" 25	Crushed between two cars during shunting operations.
<i>Water Transportation—</i>				
Engineer.....	Off Vancouver, B.C.....	April 10	27	Burned by explosion.
Deckhand.....	Lake of Two Mountains, Que.....	May 6	20	Fell into lake and was drowned.
Ship liner.....	Montreal, Que.....	" 9	40	Fell into hold of ship.
Switch operator loading coal.....	Port McNicoll, Ont.....	" 20	56	Electrocuted when he touched defective switch.
Longshoreman.....	Montreal, Que.....	" 27	52	Fell into water and drowned when truck he was pushing overbalanced.
Officer on steamer.....	Sarnia, Ont.....	June 1	25	Fell from ship's bridge to deck.
Stevadore.....	Montreal, Que.....	" 3	32	Fell through open hatch.
Ferryman.....	Dunvegan, Alta.....	" 9	Thrown into water and drowned when ferry tower collapsed.
Sailor.....	Near Montreal, Que.....	" 12	18	Fell into river and was drowned.
Choreman.....	Indian River, Ont.....	" 25	50	Fell from gangway into river and drowned.
<i>Air Transportation—</i>				
Pilot.....	Sudbury, Ont.....	April 5	Plane crash.
<i>Local Transportation—</i>				
Labourer.....	Langdon, Alta.....	" 11	59	Crushed under telephone poles while unloading them from flat car.
Truck driver.....	Near Rimouski, Que.....	May 16,	50	Collision of train with his truck. Died May 18.
Packer.....	Salmon River Road, B.C.....	" 18	50	Fell from bridge.
Worker with transport co.....	Selkirk, Man.....	June 6	57	Fell through floor of freezer.
Truck driver.....	Calgary, Alta.....	" 8	52	Truck struck pole when he lost control on hill.
Trucker.....	Near Tatamagouche, N.S.....	" 30	40	Train struck their car.
Trucker's helper.....	Windsor, Ont.....	" 25	50	Collision of train with his truck.
<i>Storage—</i>				
Water boy at grain elevator.....	Lethbridge, Alta.....	" 9	18	Fell from roof while lifting water by rope.
<i>Telegraphs and Telephones—</i>				
Inspector.....	Alderson, Alta.....	April 4	30	Crushed under telephone poles being unloaded from flat car.
Telegraph messenger.....	Montreal, Que.....	May 1	19	Collision of auto with his motorcycle, fractured skull. Died June 8.
Lineman.....	Near Sydney, N.S.....	June 5	31	Pole on which he was working toppled over.
Repairman.....	Burnaby, B.C.....	" 22	44	Electrocuted when he touched wire charged with high voltage.
TRADE—				
<i>Wholesale—</i>				
Yard foreman for oil co.....	Saskatoon, Sask.....	June 24	45	Burned when tank of gasoline exploded.
<i>Retail—</i>				
Auto dealer.....	Near Goderich, Ont.....	April 5	Injured when his car overturned, fractured skull. Died April 6.
Bottle washer for dairy.....	Montreal, Que.....	" 18	50	Blood poisoning from steel bristles of brush penetrating his hand. Died April 25.
Labourer with fish merchant.....	Clark's Harbour, N.S.....	May 20	38	Fell from wharf and was drowned.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER
OF 1931—*Concluded*

Trade or Industry	Locality	Date	Age	Cause of Fatality
<i>TRADE—Continued—</i>				
<i>Retail—Concluded—</i>				
Grocer.....	Preston, Ont.....	About May 28	51	Cut his hand while operating machine, blood poisoning. Died July 8.
Storekeeper.....	Kitchener, Ont.....	June 9		Fell from ladder while painting store.
Merchant.....	Sellars, Ont.....	" 25	53	Heavy truck upset on his head.
<i>FINANCE—</i>				
Bank manager.....	Winnipeg, Man.....	May 8		Shot by bank robbers during hold up.
Bank manager.....	Edmonton, Alta.....	June 26		While examining teller's revolver, it accidentally discharged.
<i>SERVICE—</i>				
<i>Public Administration—</i>				
City labourer.....	Edmonton, Alta.....	April 17	65	Slipped from edge of walk into empty swimming pool.
R.C.M.P. constable.....	York Factory, Man.....	" 19	22	Broke through ice during break-up and were drowned.
Indian guide.....				
Window cleaner at Customs Bldg.....	Montreal, Que.....	" 20	60	Fell while at his work. Died April 23.
City labourer.....	Toronto, Ont.....	" 23	58	Fell from truck. Died April 24.
Watchman at incinerator.....	Fort William, Ont.....	" 24	67	Fell to concrete floor fractured skull. Died April 25.
Municipal labourer.....	Asbestos, Que.....	May 1	22	Buried under sand and gravel.
Nightwatchman at excavation.....	Montreal, Que.....	" 4	67	Struck by auto. Died May 8.
Patrol pilot with forestry service.....	Near Port Arthur, Ont.....	" 4	19	Plane crash when wing caught in telegraph wires.
<i>SERVICE—Continued—</i>				
<i>Public Administration—</i>				
<i>Concluded—</i>				
Fire fighter.....	Okanagan Lake, B.C.....	May 14	19	Drowned.
Traffic officer.....	Near Ste. Anne de Bellevue, Que.....	" 16	40	Collision of auto with his motorcycle.
Fire ranger.....	Isaac Lake, B.C.....	" 17	50	Bruised knee on Aug. 23, 1923, infection.
Fireman.....	Ottawa, Ont.....	" 25	30	Thrown from fire truck when auto collided with it. Died May 26.
Fire ranger.....	Near Timmins, Ont.....	" 28	{52	Drowned when canoe capsized in storm.
Fire ranger.....			{31}	
Constable.....	Verdun, Que.....	" 31	37	Collision of his motorcycle with truck.
Commander of gov't steamer.....	Metagaion River, Que.....	June 8		Drowned from canoe.
Member of crew.....				
Member of crew.....	Near Peterborough, Ont.....	" 27		Collision of another auto with his car.
Motorcycle officer.....				
Night engineer for gov't department.....	Brockville, Ont.....	" 30	44	Electrocuted while removing blown down wire.
<i>Recreational—</i>				
Nightwatchman at Y.M.C.A.....	Montreal, Que.....	May 21	54	Fell into swimming pool and was drowned.
<i>Custom and Repair—</i>				
Mechanic.....	La Malbaie, Que.....	April 22		Burned when clothing caught fire after explosion. Died April 26.
Garage employee.....	Toronto, Ont.....	May 5	21	Burned by explosion of gasoline while cleaning car. Died May 11.
Worker in garage.....	Toronto, Ont.....	" 6	30	Explosion of oxygen tank. Died May 7.
<i>Personal and Domestic—</i>				
Window cleaner.....	Montreal, Que.....	" 5	30	Fell from fourth storey of building.
<i>Personal and Domestic—</i>				
<i>Concluded—</i>				
Caretaker at apart- ment house.....	Winnipeg, Man.....	May 8	68	Explosion of hot water boiler.
Cook on girl stud- ents' tour.....	Cobourg, Ont.....	June 18		Explosion of gasoline stove.
Window cleaner.....	Montreal, Que.....	" 22	21	Fell from eighth storey window.
<i>Professional Establish- ments—</i>				
Window cleaner at hospital.....	Montreal, Que.....	April 14	31	Fall from second storey.
Labourer at hospital.....	Lampman, Sask.....	About June 4	50	Overcome by poisonous gas while cleaning cess- pool.
Labourer at hospital.....			13	

SUPPLEMENTARY LIST OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING THE FIRST QUARTER OF 1931

Trade or Industry	Locality	Date	Age	Cause of Fatality
MINING, NON-FERROUS, SMELTING AND QUARRYING—				
<i>Metaliferous mining—</i>				
Loader.....	Timmins, Ont.....	Mar. 25	37	Crushed under falling rock. Died May 10.
<i>Coal Mining—</i>				
Miner.....	Queens Co., N.B.....	Feb. 3	33	Struck by falling rock, fractured skull.
Bucker.....	Cadomin, Alta.....	Mar. 11	49	Asphyxiated by gas in mine.
MANUFACTURING—				
<i>Vegetable Foods, Drink and Tobacco—</i>				
Miller's helper.....	Marie, Que.....	Feb. 28	16	Caught in drive shaft.
<i>Saw and Planing Mill Products—</i>				
Engineer.....	Alliston, Ont.....	Mar 12	48	Fell from wheel, fractured ankle. Died May 29.
<i>Pulp, Paper and Paper Products—</i>				
Labourer.....	St. Gerard de Wolfe, Que...	Feb. 23	20	Drowned.
<i>Iron, Steel and Products—</i>				
Storekeeper at machinery plant.....	Drummondville, Que.....	Mar. 10	48	Thrown to ground when his overalls caught in pulley. Died Mar. 23.
<i>Non-ferrous Metal Products—</i>				
Operator with copper wire and cable manufacturers.	Montreal, Que.....	Mar. 15	50	Leg jammed by reel of wire when it came off stand on Nov. 21, 1929.
<i>Non-metallic Mineral Products—</i>				
Road operator at by-products coke plant.	Ville La Salle, Que.....	Feb. 24	67	Car jumped rail and went over bridge while he was uncoupling it. Died Mar. 12.
<i>Chemical and Allied Products—</i>				
Labourer with chemical manufacturers	Buckingham, Que.....	Feb. 4	50	Thrown to ground when his clothing caught in shaft. Died Feb. 12.
CONSTRUCTION—				
<i>Buildings and Structures—</i>				
Labourer.....	St. Malo, Que.....	Jan. 17	35	Crushed by falling rock. Died Mar. 4.
TRANSPORTATION AND PUBLIC UTILITIES—				
<i>Steam Railways—</i>				
Carman.....	Megantic, Que.....	" 19	54	Pleurisy following injury.
Section foreman.....	Monastery, N.S.....	Feb. 16	52	Scratched thumb on nail, septicaemia. Died Feb. 25.
<i>Local Transportation—</i>				
Teamster.....	Hamilton, Ont.....	Jan. 10	69	Leg pinched between sleigh and anvil while moving sleigh; phlebitis. Died May 23.
SERVICE—				
<i>Professional Establishments—</i>				
Labourer at school..	Montreal, Que.....	Mar. 18,	Poisoned by gas from furnace. Died Mar. 27.

SUPPLEMENTARY LIST OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING 1930

MANUFACTURING—				
<i>Iron, Steel and Products—</i>				
Steel pickler at forgings plant.	Chatham, Ont.....	About May 15	38	Finger cut off by punch press, paralysis. Died May 30, 1931.
Labourer with stove manufacturers	London, Ont.....	Dec. 28	39	Silicosis, first laid off Oct. 5, 1927.
<i>Miscellaneous products—</i>				
Labourer at button factory.	Walkerville, Ont.....	June 30	52	Injured while cleaning enamelling oven. Died June 2, 1931.
CONSTRUCTION—				
<i>Miscellaneous—</i>				
Worker on water main construction.	Port Arthur, Ont.....	About Dec. 15	38	Struck on head by piece of rock during blasting operations. Died May 9, 1931.
TRANSPORTATION AND PUBLIC UTILITIES—				
<i>Water Transportation—</i>				
Diver for canal operation.	Argenteuil, Que.....	July 3	42	Brain hemorrhage and paralytic stroke from strain of diving. Died July 17.

IMMIGRATION TO CANADA DURING THE SIX MONTHS ENDED JUNE 30, 1931

THE accompanying tables, compiled from information issued by the Department of Immigration and Colonization, show the nature and extent of immigration into Canada during the six months ended June 30, 1931, with

RECENT LEGAL DECISIONS AFFECTING LABOUR

Fair Wage Clause inapplicable where
Workman agrees to lower rate

A subway at Pembina Highway, in the Winnipeg Terminal Subdivision, was being constructed for the Canadian National Railways, and for this work the Board of Railway Commissioners authorized the payment of 40 per cent of the cost of construction to be paid out of the Railway Grade Crossing Fund, the amount of the contribution, however, not to exceed \$100,000. The contract for the construction of the subway was awarded by the Railways to Foley Brothers, who began the work towards the end of 1930. This contract contained a "fair wage" clause in the following terms:—

"The workmen and labourers employed by the contractor on or about the work shall be paid such rates of wages as are generally accepted as current for competent workmen and labourers engaged in similar occupation in the district in which the work is being performed and if there is no current rate in such district, then a fair and reasonable rate."

In the course of the work a dispute arose as to the rate of wages to which certain workmen were entitled, who claimed that their work was that of carpenters, whereas they had received the rate of wages of 75 cents an hour instead of \$1.10 an hour, the current rate for carpenters in Winnipeg district. The Winnipeg District Council of the United Brotherhood of Carpenters and Joiners of America (Locals 172 and 343) protested against the payment of these lower rates of wages, alleging that the wage condition in the contract had been violated in this case. The local representative of the Department of Labour endeavoured, without success, to adjust the

difficulty through negotiations between the parties concerned. The main questions at issue related to the type of work that was performed by the workmen, and whether or not they had made any protest against receiving the lower rate of pay, the men declaring that they had protested from the first, and the contractor stating that no such protest was received from them until the conclusion of the work.

Negotiations having failed, action was taken by one of the carpenters in the County Court at Winnipeg, which found a verdict against the plaintiff, on the ground that the plaintiff had agreed from the first to work for 75 cents an hour. "A contract is a contract", the judge stated; "it is binding, and we have no power to change it."

Notice of appeal was given by the plaintiff. *Payment versus Foley Brothers* (Manitoba), 1931.

Employer's responsibility for workman's
unauthorized act

A receiver in a warehouse at Calgary was put to work by his employer as a temporary truck driver, his duties being to make deliveries to customers, make minor repairs to the truck, and finally to return the truck to the garage. He was accustomed to use the truck for the purpose of going to his home for meals, this practice being with the knowledge and approval of his employer. On a certain date, after making his deliveries the driver made a detour for the purpose of calling for a lady friend, and when he was on his way back to the garage his truck collided with a motor car, severely injuring its occupants. Ac-

tion having been brought by the latter against the driver, and also against his employer, for damages, the Alberta Supreme Court held both defendants liable, the driver on account of his negligence, and the employer because of the relation of master and servant existing at the time between them; and awarded the plaintiffs damages to the amount of \$20,096.

Mr. Justice Ford, in giving judgment, discussed the question whether, at the time of the accident, the driver was acting "in the course of his employment as servant" of his co-defendant, citing a number of previous decisions in similar cases. One of these was a decision by Mr. Justice Duff in 1914 (*Halparin versus Bulling*) in which the learned judge pointed out that the employer's responsibility depended upon the answer to the question whether or not the driver was making use of his employer's car in an independent journey of his own. Commenting on this statement, Mr. Justice Ford said: "I think that what Mr. Justice Duff states negatively may in this case be stated affirmatively, and that if the proper finding of fact is that the servant was doing something appertaining to the course of his employment, even if at the same time he may be also carrying out a purpose of his own, or, to put the matter in another form, unless the proper finding is that the servant was on an independent and separate journey of his own, unconnected with the work for which he was employed, the master is liable."

Mr. Justice Ford pointed out that even if Malcolm (the truck driver) was acting in breach of his instructions, if the proper finding should be that he was doing something for which he was employed, the master was not relieved. "I adhere to the view expressed by me at the hearing," his Lordship continued "that the deviation from the shorter course Malcolm might have taken to the garage from his house, for his own purposes, was not such an independent or separate journey as to make it necessary for me to hold that at the time of the accident he was not in the course of his employment. This is especially so having regard to the freedom given to Malcolm as to the time when he was to make his deliveries, to do his repairs, and to return the truck to the garage for the night. Deviations or detours are always a question of degree, and having regard to the time it takes for a motor car to go a few city blocks out of one's way, as opposed to the time of a horse and rig going the same distance, I think it is not unfair to employers, who put these trucks in

charge of drivers who are to exercise their own discretion as to when and how they will drive them, that one should not be too astute to relieve them from liability even though as a matter of law the liability does not arise merely from intrusting the servant with the control of the truck, but arises because of the application of the maxim *respondet superior*."

After citing other cases in which chauffeurs became involved in accidents occurring during private detours from their routes, the judgment concluded as follows:—

"But if I am wrong in applying the 'deviation cases' to the one before me it is clear that even if it can be said that Malcolm, in going to call for his lady friend, was on an independent journey or 'frolic' of his own unconnected with his master's business, it is clear that he re-entered upon the work he was employed to perform when he started back to the garage by the shortest route to finish his work for the day, and indeed for the week, by putting the truck in the storage garage where, as would appear, it was to remain until Monday morning, being left by him in fit condition by repairs, cleaning and greasing, to be taken out at 7:30 or 8 a.m."

West and West versus MacDonald's Consolidated and Malcolm (Albert), 1931, *Western Weekly Reports*, vol. 2, page 657.

Three Months Notice of Dismissal in Yearly Hiring

A stock exchange broker sold his business in May, 1929, to a brokerage company, one of the conditions of the transfer being that the vendor should be retained as manager at a salary of \$75 a week, with the prospect of more if his services proved satisfactory. In July, 1930, the company sent the manager a cheque for \$150, being his salary for the next week, with \$75 in lieu of notice. The manager refused to accept his dismissal, claiming a yearly hiring and that he was entitled to be paid for the remainder of the second year. In an action brought by the manager in the Ontario Supreme Court, Mr. Justice Raney allowed the claim in part, holding that three months would have been a reasonable notice; the plaintiff had been paid one week's salary and was entitled to \$900 more, less the amount of rent due to the company from the plaintiff.

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL employment in Canada at the beginning of August showed very little general change, according to statements tabulated by the Dominion Bureau of Statistics from 7,887 firms in all lines of industry except agriculture, fishing, hunting and highly specialized business. These firms had 956,233 workers on their payrolls on August 1, compared with 943,419 on July 1. The employment index (based on the average in the calendar year 1926 as 100) stood at 105.2 on August 1, compared with 103.8 in the preceding month, and with 118.8, 127.8, 119.3, 110.5, 105.5, 97.5, 95.8, 101.4, 94.2 and 90.0 on August 1, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

At the beginning of August the percentage of idleness reported to the Department of Labour by local trade unions stood at 16.2 compared with percentages of 16.3 at the beginning of July, 1931, and 9.2 at the beginning of August, 1930. The August percentage was based on the returns tabulated by the Department of Labour from 1,862 labour organizations covering a membership of 199,923 persons.

Reports received by the Department of Labour from the offices of the Employment Service of Canada showed that the volume of business during July, as indicated by the average daily placements effected, was the same as that recorded during the previous month, but somewhat above the corresponding daily average of July a year ago. Vacancies in July, 1931, numbered 28,025, applications 66,281 and placements in regular and casual employment 27,002.

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty-nine cities was somewhat higher at \$8.20 for August as compared with \$8.11 for July; \$10.65 for August, 1930; \$11.63 for August, 1929; \$11.08 for August, 1928; \$10.93 for August, 1927; \$11.10 for August, 1926; \$10.84 for August, 1925; \$10.19 for August, 1924; \$10.53 for August, 1923; \$10.44 for

August, 1922; \$11.44 for August, 1921; \$16.42 for August, 1920; \$16.92 for June, 1920 (the peak); \$13.41 for August, 1918; and \$7.68 for August, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was again lower at 71.0 for August as compared with 71.7 for July; 83.7 for August, 1930; 98.4 for August, 1929; 95.3 for August, 1928; 98.3 for August, 1927; and 99.1 for August, 1926.

The loss in working time caused by industrial disputes in Canada in August was slightly greater than that in the preceding month, and was much greater than the corresponding loss in August last year. Eight disputes were in progress at some time during the month, involving 886 workers and resulting in the loss of 9,364 working days. Corresponding figures for July, 1931, were five disputes, 689 workers, and 8,044 working days; and for August, 1930, three disputes, 66 workers, and 529 working days.

Industrial Disputes Investigation Act

During August an application for the establishment of a Board of Conciliation and Investigation was received by the Department of Labour from certain employees of the City of Edmonton in connection with a proposed reduction in civic wages. In connection with an application from New Brunswick that was reported in the last issue a settlement was reached later through the conciliation officers of the Department. Details of the proceedings under the Act during the month will be found on page 973.

Fair Wages Claims in Government ice-breaker contract.

Cheques have recently been issued from the Department of Labour in settlement of wages claims of a number of boilermakers and shipbuilders who were employed by the Halifax Shipyards Limited, Halifax, N.S., in the construction of the Government icebreaker "N. B. McLean," for service in the Hudson's Straits.

These payments were made pursuant to a ruling of the Minister of Labour based on the fair wages conditions of the Government contract, and covered amounts respectively due to a number of individual workmen over a period of several months, in order to bring their wages up to the rates which were found by the Minister of Labour, on investigation, to be generally current in the district. The additional wages payments sanctioned by the Minister of Labour amounted to approximately \$6,500.

Free Admission of Labour Publications into Canada.

In connection with regulations which were made by order in council on August 18, relative to the importation into Canada of certain periodical publications, it is provided in instructions which have been issued by the Department of National Revenue to its officers, that "magazines in which the advertising matter does not exceed twenty per cent of the total space, and magazines maintained by and in the interest of religious, educational, scientific, philanthropic, agricultural, *labour*, or fraternal organizations or associations not organized for profit and none of the net income of which inures to the benefit of any private individual" shipped into Canada from the United States, are admissible free of duty.

Canada Year Book for 1931.

The Dominion Bureau of Statistics recently issued the 1931 edition of the Canada Year Book, the official work of reference for the use of students of social and public affairs in the Dominion. The new edition contains many new features, including a study of wholesale and retail merchandising, with comprehensive statistics of retail distribution, and additional information in regard to sales of Canadian bonds. The "Labour and Wages" section gives an analysis of the occupations of the people, based on the Census reports; a summary of the activities of the Federal and Provincial Departments of Labour; statistics of organized labour, fatal industrial accidents; workmen's compensation; strikes and lockouts; employment and unemployment; old age pensions; the co-operative movement; and a summary of recent labour legislation. Another chapter of this section deals with wages and the cost of living.

The titles of the chapters of the Year Book indicate the wide range of its subject matter, being as follows: Physiography; History and chronology; Constitution and government; Population; Vital statistics; Immigration;

Survey of production; Agriculture; Forestry; The fur trade; The fisheries; Mines and Minerals; Water powers; Manufactures; Construction; External trade; Transportation and communication; Labour and wages; Prices; Public finance; Currency and banking; loan and trust companies; Insurance; Commercial failures; Education; Public health and benevolence; Miscellaneous administration; Sources of official statistical and other information relative to Canada; The annual register, 1930.

The price of the Canada Year Book is \$2.

Safety Code for waterfront operations at Halifax.

An account is given elsewhere in this issue of a new Safety Code governing waterfront operations at the Port of Halifax, which was recently prepared by the Halifax Waterfront Accident Prevention Association and published by the Nova Scotia Accident Prevention Association. For some years attempts have been made to bring about some organized effort for greater safety in connection with longshore work at Halifax, but not until this year were they successful. Meetings of representatives of the Longshoremen's Association, the Steamship and Stevedoring Companies, the Workmen's Compensation Board, the Board of Trade and the Accident Prevention Association, were held, and as a result a Safety Code was drawn up and agreed upon. In so far as is known this is the only jurisdiction in North America, other than on the Pacific Coast of the United States, where a Safety Code has been adopted for stevedoring operations. It is hoped that as a result of the code the number of accidents occurring on the Halifax Waterfront will be greatly reduced.

Public co-operation invited for relief of distress.

The Minister of Labour, in a statement issued last month, pointed out that owing to the extended period of depression and the waning resources of unemployed persons, their clothing requirements would probably be acute this coming winter. He therefore urged all classes of the people to co-operate with organizations such as the Red Cross and other similar associations in providing and contributing goods and funds so as to furnish the destitute with these necessities. The Minister also invited the cooperation of business interests and private citizens proposing to erect buildings of all kinds in order to promote the restoration of normal conditions. He pointed out that construction costs, in-

terest rates and labour supply might never be obtainable under more favourable conditions than they can be obtained at the present time.

Vocational education for insured unemployed workers

Among a number of suggestions submitted to the recent "Governors' Conference" on unemployment (LABOUR GAZETTE, Feb., 1931, page 120) it was proposed by Professor Paul M.

Douglas, of the University of Chicago, that any measure setting up a system of insurance should include a provision giving the State the power in its discretion to require that the worker receiving benefits should receive general or vocational education. In that way he thought that the period of unemployment would be prevented from being a period of degeneration: It could even be made actually a period of development, and workers by learning some new occupation could be induced to move from these industries which are inadequate to sustain them to industries which are advancing.

Recommendations of British Committee on Finance and Industry

A committee on Finance and Industry was appointed by the British Chancellor of the Exchequer at the end of 1929, "to inquire into banking, finance and credit, paying regard to the factors both internal and

international which govern their operation, and to make recommendations calculated to enable these agencies to promote the development of trade and commerce and the employment of labour." The committee was composed of 14 members, including bankers, economists, and representatives of industry, labour and commerce, and chosen from various schools of monetary thought.

The report of the committee, recently published, covers a wide field of subjects. Its general conclusion in regard to the monetary situation is in the form of a recommendation in favour of a judicious expansion of credit, subject to safeguards. The first guiding aim of monetary policy, it says, should be to raise international prices to a level appropriate to the levels of salaries and wages and to the burden of international indebtedness, and then to stabilize that level. Action by the central banking authorities in all countries is recommended for the achievement of this aim.

In an addendum, signed by six members of the Commission (including Sir Thomas Allen, Messrs. Bevin, and Keynes and the

Hon. S. McKenna), it is declared that the practical results of an attempt to reduce salaries and wages as a means of increasing employment are likely to be exceedingly disappointing. It is pointed out that what purely domestic industries might gain in reduced costs by general wage reductions would be offset by the diminished purchasing power of their customers, while even the foreign trade industries could not be certain in advance that wage reductions at home would not be countered by corresponding cuts on the part of their chief foreign competitors. While, however, the signatories are not convinced that it is as yet either necessary or desirable to engage in competitive wage-cutting, they hold that it would be unreasonable to think that the existing level of incomes can be maintained irrespective of the value of money.

The addendum goes on to discuss other methods of relieving the situation, including the organized planning of capital investment. In this connection it calls attention to the need for rebuilding parts of the larger towns and industrial centres, and for the refitting and re-planning on modern lines of some of the staple industries, and suggests the establishment of a "Board of National Investment," entrusted with the duty of raising funds for use by the local authorities in the development of telephones, roads and other national utilities.

Unemployment policy of American Federation of Labour

The Executive Council of the American Federation of Labour recently prepared a statement of the policy recommended by the Federation for meeting the unemployment situation in the

United States. The main recommendations are as follows:—(1) Immediate preparation by Federal, state and community groups for the relief of distress; (2) Maintenance of wages, it being declared that the depression is largely caused by the fact that the masses of the people lack the means to purchase goods; (3) Assurance of employment: every large industry to guarantee to furnish a definite number of jobs for its workers during the next six months; (4) The shorter work-day and the shorter work-week: the five-day week to be immediately introduced and accepted in private and government employ, and the hours worked per day to be reduced to six hours if necessary; (5) Abolition of child labour; (6) Old age pensions, provided through uniform state laws which would make needy citizens over 60 eligible for a pension

of about \$40 a month; (7) A real building program; (8) An anti-injunction bill.

Proposed Economic Council for India

Early this year the Government of India invited Sir Arthur Salter, director of the Economic and Financial Section of the Secretariat of the League of Nations to visit India for a consultation regarding a proposed new organization for "the study of economic questions, including both the continuous interpretation of current developments and the consideration of plans designed to achieve particular purposes." In his report, Sir Arthur Salter recommends the constitution of a Central Economic Advisory Council, with similar Councils in each Province: in so vast a country, he states, no effective economic advisory organization could consist solely of a central committee. The need for co-ordination of policy in India is greater than in countries with a centralized government, and the difficulties of securing it are also greater.

The members of the Central Council should, in his opinion, consist of persons representing the following types of economic experience, interests or research: (a) agriculture, banking and finance (from each main category of banks), commerce, consumers, co-operative organization, economists, industry, labour organization, members of the legislature, officials, railways and communications; (b) representatives of the Provincial Councils and representatives of the Indian States; (c) representatives (one each) from such national bodies as the Indian Cotton Committee, the Tariff Board, the Imperial Council of Agricultural Research, and, when created, the Jute Committee and the Reserve Bank. The total membership of the Central Council, including representatives of the Provincial Councils, of Indian States, and of such national bodies as the Indian Cotton Committee and the Tariff Board, would be likely to amount to about 50.

The best normal method of work would, Sir Arthur Salter suggests, be mainly through small specialized *ad hoc* committees and individual investigators. Working thus, the Central Council might well, especially in its earlier years, devote its discussions to two main tasks—drawing up a program for examining specific problems, and reviewing the previous year's progress and recommending policy in general outline for the coming year.

The suggested Provincial Councils should be much smaller than the central body, averaging perhaps 20 members.

A note on the National economic councils established in various countries in recent years was given in the *LABOUR GAZETTE*, February, 1931, page 118.

Industrial Relations Council for electrical industry in United States

In the course of a paper read before the World Congress on Social Economic Planning held at Amsterdam during August, President H. H. Broach, of the International Brotherhood of Electrical Workers, described the conciliation machinery created jointly by his union and the employers' organization. "I believe", he said, "we have gone as far as any economic group in the world in building proper industrial relations in the electrical construction industry of the United States. The industrial relations plan of this industry is not an experiment. It has been tested through ten years of operation. The National Council on Industrial Relations for the Electrical Construction Industry, created by a joint committee of employers and employees, is a kind of Supreme Court for our industry. It is composed of five members representing employers and five representing the union; its decisions must be unanimous, and these decisions are accepted without quibble. If at any time the employer or union, at any local point, fail of agreement, they must submit their dispute to the Council. Each side agrees in advance to abide by any decision rendered. There is no disturbance. Matters go on as usual. In the past year our employers have believed that by founding their own national organization—comprising only those who employ our union members—they could better face their problems, advance the welfare of the industry and work out some of the industrial conceptions employed in the plan I have just described. They have therefore set up the Electrical Guild of North America. The Guild states directly that it is organized to promote industrial co-operation on a scale hitherto unknown and untried in the building industry. It is significant that in America, the open-shop paradise, this association of employers frankly states: 'The organization and personnel of the firms and corporations, members of the Guild, coupled with the mechanical skill of the members of the International Brotherhood of Electrical Workers, exclusively employed by them, makes for a combination of effort superior to any other now existing'."

Unemployment insurance for electrical workers

At the end of July the New York union of the International Brotherhood of Electrical Workers added unemployment insurance to the benefits already provided for its members. The new plan provides for the payment of \$20 a week for each unemployed journeyman member of the union and \$15 for each unemployed apprentice. The employed members pay 5 per cent of their weekly earnings into the unemployment fund from which these payments are made.

Electrical workers' unions in various cities in the United States are reported to be meeting the unemployment problem in different ways: for example, in Philadelphia each employed union electrical worker gives one day's wages each week and 25 per cent of all overtime pay toward unemployment relief in the local organization; overtime is confined strictly to emergency cases, and, wherever it is possible to do so, the work is spread among the men so as to reduce the number of those unemployed. Members of one local union in Chicago have been assessing themselves at the high rate of 10 per cent of their wages in order to aid their unemployed brothers. Assessments have also been voted in other cities, and rotation of work is practised widely.

The Brotherhood of Electrical Workers also provides pensions and group life insurance for its members (LABOUR GAZETTE, July, 1931, page 738; July, 1930, page 738, etc.)

Handicapped workers under accident compensation

In a recent address on "Workmen's Compensation Relation to Handicapped Individuals," Dr. Frank G. Pedley, of the Industrial Clinic, Montreal General Hospital, mentioned the Vetcraft Shops in Canada as establishing the social value of supervised workshops. Handicapped workers, he says, fall into two groups; first, those who are able for full work but involve their employers in increased liability for accident; and second, those with some chronic illness and able to work only part time. Such shops as the Vetcraft are for the second group. "I refer particularly," Dr. Pedley says, "to those suffering from tuberculosis, heart disease, rheumatism, and the like. Many such persons are able to do some work, and indeed their rehabilitation is often accelerated by suitable employment, but industries as a whole are unwilling to employ lame ducks. It is true that certain companies have made a practice of taking on chronic cases of disease

and convalescents; but this practice is carried on to such a limited extent that it only scratches the surface of the problem. For such individuals supervised workshops are the thing. The handicapped individual who finds all doors firmly closed against him is not in the way of becoming a good citizen or a creditable parent. Work in itself is a great healer, both mentally and physically. At the present time commission boards have not been called upon to take any part in the care of handicapped individuals, except those who receive their handicaps accidentally."

The first group, that is, handicapped persons who are able for full work, involves the employer in double liability, for example a worker with one eye, if injured in that eye, must be compensated for total blindness. Dr. Pedley says that the solution of this difficulty appears to have been found in the creation of a special fund to carry such a liability. Thus, in Ontario the extra cost of the second accident is charged to the disaster fund. The "second accident fund" has been recommended to the Minister of Public Works and Labour in the Province of Quebec, and it is greatly to be hoped, he says, that he will see his way clear to its creation.

Dr. Pedley refers with approval to a provision of the Connecticut Workmen's Compensation Act, permitting a partially disabled workman, on obtaining employment, to sign a waiver releasing the employer from any special liability in the event of an accident.

The Tenth Annual Report of the Federal Department of Labour on Organization in Industry, Commerce and the Professions, being for the year 1931, has just been distributed. The volume, in addition to conveying some idea of the development of organization among those connected with the industrial and commercial life of the Dominion, contains much information in regard to societies whose members are engaged in professional, technical and scientific pursuits. The organizations are divided into the following groups:—(1) Manufacturing; (2) Building and construction; (3) Mining; (4) Transportation and communication; (5) Printing and publishing; (6) Laundering, cleaning, repairing; (7) Personal service and amusement; (8) Financial; (9) Agriculture; (10) Dairying; (11) Horse, live stock, sheep breeders, etc., (12) Wholesale merchants; (13) Retail merchants; (14) Real estate dealers; (15) Professional; (16) Technical and scientific; (17) Insurance; (18) Funeral service.

The report points out that the first seven divisions contain the names of 355 main and branch associations, with a combined membership of 48,549, composed of persons or firms who are identified with industries in which many wage-earners are employed. Some of the employers included in these groups have working agreements with the corresponding organizations of workers covering the conditions of employment in their respective establishments. In the remaining ten groups the employment of labour is in some cases only incidental, and with the exception of the retail merchants' section there is no corresponding body of organized workers. While in the main the associations whose names appear in the report are purely Canadian, a number are connected with organizations whose headquarters are in the United States. The report gives the objects of the various associations, some of which, among other things, aim to secure freedom from unjust or unlawful exactions and to procure uniformity in the customs and usages of their respective trades. The names of all classes of associations published in the volume number 837 main bodies and 477 branches, making a total of 1,314 associations, with a combined membership of 967,865.

The social effects of unemployment insurance

At the recent 51st session of the Governing Body of the International Labour Organization, the German representative, Mr. Weigert, discussed the report of the Unemployment Committee, of which he was a member. He said it was essential that the mentality of the groups in the economic world should be altered, and that in future greater attention must be paid to the effects of economic decisions on the labour market. "The result of not paying sufficient attention to that aspect of the question was shown by the effects on the labour market produced by rationalization in many countries in recent years. . . No one would of course suggest that technical progress in itself should be hampered, but the time had passed when rationalization could be carried out merely for economic and technical reasons without due account being taken of the human factor."

Mr. Weigert considered that unemployment insurance could play an important part in bringing about the necessary changes in social mentality. "The contributions required from employers and workers towards unemployment insurance should not only be regarded as the means of financing the insurance system, but should tend to impress upon

the two groups concerned the necessity of doing everything in their power to combat unemployment. The higher the contribution the more the danger of unemployment would become apparent. It was of course obvious that such contributions must of necessity be limited, since neither employers nor workers could be called upon to bear too heavy a burden. In Germany the contributions paid by employers and workers together for unemployment insurance alone amounted to 6 per cent of the wages and a further 11 per cent for other branches of social insurance. These contributions were excessive and gave rise to grave anxiety. But it was an unsound policy to rely upon State assistance, and it was essential that the expenses of unemployment insurance should be borne directly by both employers and workers. Unfortunately the amount of the contribution did not vary according to the amount of the risk, which weakened the force of the warning provided, and it seemed important to make the contribution more proportionate to the risk involved. That was one of the many aspects of unemployment insurance for which a final solution had not yet been found, and this was one of the reasons why the German Government did not consider that question yet ripe for international settlement. Both in Germany and in Great Britain, where unemployment insurance systems existed, national commissions had recently been set up to study the systems. That did not of course mean that unemployment insurance would be discontinued in those countries. It was however, certain that insurance could not provide a final solution for the unemployment problem. That solution must be sought in an economic organization which would make unemployment insurance unnecessary. For the present, however, it was indispensable, and an increasing number of States were having recourse to it. Whatever its defects might be, unemployment insurance, as the present crisis had shown, continued to be an incomparable instrument of political, economic and moral stability."

Labour policy of the Soviet Union

The International Labour Organization published in its weekly bulletin (August 10) a series of articles describing the present tendencies of labour policy in the union of Soviet Socialist Republics. It is shown that, according to the information available, the execution of the Five-Year Plan has proceeded satisfactorily in some branches of industry, while in others, such as coal mining and the

metal industries, output has fallen short of the totals laid down in the program. This failure, where it has occurred, is attributed by the authorities not to any lack of resources, but to inadequate utilization of such resources as are available, and especially to defective distribution and utilization of labour. Various measures have been adopted to combat the shortage of industrial labour and the instability of workers in employment, the object being generally to place and keep the workers where their labour is considered most useful for the execution of the Five-Year Plan. In pursuance of this policy, arrangements have now been made for the supply of labour for State industrial undertakings by the collective farms in return for certain advantages.

Another method which is being adopted to increase output consists in stimulating the feeling of responsibility in the workers, and regulations have been issued reorganizing trade union activities in the undertakings with a view to decentralization, bringing the workers into closer touch with the problems of production, increasing their responsibilities and encouraging voluntary effort on the part of militant trade unionists. At the same time, piece work, already widely practised, will be extended, and the principle of individual management will be applied to the Trusts. The idea of equalizing wages has been abandoned for the present; remuneration is frankly to be based on the output and not on the needs of the workers.

The five-day week of continuous work would appear not to have yielded the satisfactory results anticipated, and will probably be replaced, except in undertakings working on a three-shift basis, by a week of six days, consisting of five working days followed by a collective rest day. In order to recruit more engineers and skilled workers, an improved status and better conditions of work are to be granted to these classes of workers.

Ten-Year Plan for China.

A program for industrial development has been drawn up by the Chinese Ministry of Industries with the object of transforming China within ten years into one of the principal industrial countries of the world. It is to be executed in part by the Government and in part by private enterprise under the direct supervision of the Government.

Among other things, the Plan calls for the placing under cultivation of 300 million acres of arable land not at present utilized, the development of transport and communications, the establishment of manufacturing in-

dustries throughout the country, the improvement of harbours and the construction of a merchant fleet of at least eight million tons, with engines generating five million horse-power. To meet the needs of these projects it will be necessary to increase the output of coal from 30 million to 200 million tons a year, and that of iron and steel to 12 million tons a year; the amount of power required for industrial undertakings will be increased from 1,750,000 horse-power to 20 million horse-power. The Plan involves an annual expenditure on machinery during the ten-year period of 1,120 million dollars. In order to supply the skilled labour necessary for the manufacture of the machinery required, the Ministry of Industries suggests the establishment in Nanking of model engineering works where mechanics could be trained under foreign supervision.

Although the Plan has not yet been approved by the Chinese Government, it merits close study, since even the partial execution of the program would exercise a considerable influence on the labour situation in China, and possibly also in foreign countries, apart from other economic repercussions which would follow directly or indirectly. It may be noted that the Government has already adopted the regulations governing the organization and functions of an Economic Council, which will doubtless be called upon to play an important part in the adaptation and execution of the program.

A condensed account of the above-mentioned program of industrial development is published in the issue of August 17th of *Industrial and Labour Information*, the weekly publication of the International Labour Office (League of Nations) in Geneva.

Chinese National Economic Council

Draft Regulations governing the organization and functions of a National Economic Council were formally adopted at a meeting of the Legislative Council of China on May 30, 1931. The principal features of these regulations are summarized below.

The object of the National Economic Council is to accelerate economic reconstruction, improve the people's means of livelihood and regulate national finances. The Economic Council is under the jurisdiction of the Executive Council. All State projects for economic reconstruction or development for which the requisite funds are provided either in whole or in part by the National Treasury must be investigated by the National Economic Council before submission to the

National Government for approval. The National Economic Council may investigate the work as well as the expenditure involved in the carrying out of such projects.

The president and vice-president of the Executive Council, the ministers of the interior, finance, railways, communications, industries and education, as well as the responsible heads of the various central government organs connected with economic reconstruction are *ex officio* members of the National Economic Council, to be appointed by the National Government. In addition to the *ex officio* members, not more than eleven members are to be appointed by the National Government on the recommendation of *ex officio* members.

The National Economic Council may organize expert committees to study technical problems and appoint technical experts to supervise or direct the carrying out of various projects.

**Small Holdings
for Unemployed
in Great
Britain.**

The Agricultural Land (Utilization) Act, 1931, which received the Royal Assent on July 31, among other provisions contains sections empowering the

Minister of Agriculture and Fisheries (or, in Scotland, the Department of Agriculture for Scotland) to provide small holdings, together with financial assistance, for unemployed persons, or for agricultural workers who have not sufficient means to obtain holdings from their county councils. The Act also empowers the Minister (or the Department as the case may be) to provide allotments up to one acre for unemployed persons, and allotment gardens for persons who are either unemployed or not in full-time employment; and, subject to regulations to be approved by the Treasury, to defray the estimated loss likely to be incurred by the council of a borough, urban district, or parish, in providing allotment gardens for unemployed persons, or for persons who are not in full-time employment. Unemployed persons, or persons not in full-time employment, will not be required, on obtaining employment, to vacate allotments let to them under either of the above provisions.

The Act also empowers the Minister (or the Department as the case may be) to make grants to councils or to allotment societies for assisting in the provision of seeds, fertilizers and equipment for unemployed or partly unemployed persons for whom allotments are provided. An announcement as to the arrangements for the season 1931-32 may be expected shortly.

Dr. A. C. McKay, the director of technical education at Toronto reports an increase of 982 in the total enrolment in the technical schools in the city as compared with last year, the indication being that unemployment was one of the causes of the increase in attendance at the schools.

During August a total of 4,027 accidents were reported to the Ontario Workmen's Compensation Board in the industries in Schedule 1 of the Act; 24 of these were fatal cases; in Schedule 2 industries 264 were reported including 6 fatal cases; and 303 Crown, 4 of which were fatal, were reported during the month making in all 4,594, of which 34 were fatal.

The members of the Advisory Commission on Mothers' Allowances in Nova Scotia have been appointed for one year, as follows: Mr. Peter F. Moriarty, Halifax; Mrs. Ellen E. Frawley, Halifax; and Mrs. Elizabeth K. Bell, of New Glasgow. The first report of the Director of Mothers' Allowance in Nova Scotia was reviewed in the LABOUR GAZETTE, July, 1931, page 858.

The Industrial Safety Section of the Province of Quebec Safety League has now enlisted more than 700 firms in the Province. This section has its Round Table Discussion Committee which meets fortnightly regularly and where the industrial man brings in his problems for discussion and solution. It has also its Construction Division where similar gatherings are again held fortnightly and where an endeavour is made to solve the problems confronting the builder. The section has also a First Aid Department, which is a branch of the St. John Ambulance Association; and an Industrial Hygiene Committee.

* The Executive Council of the American Federation of Labor announced on August 15 that it had adopted a standard old age pension law to be supplied to the officers of all State Federations of Labour; the State officers would be asked to promote its introduction and enactment into law by the various Legislatures. The proposed law provides in substance that an aged dependent person may be eligible to receive a pension when he reaches the age of 60, the pension, amounting to about \$40 a month, being payable to persons who are citizens of the United States and residents of the State where the pension law is effective.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

Employment

THE employment situation at the end of August was reported by Superintendents of the Employment Service of Canada to be as follows:

Harvesting operations were nearing completion in Nova Scotia; grain crops were turning out well and hay and root crops were exceptionally good. Fair catches of fish were reported and canning establishments were busy. Logging operations remained quiet. Coal miners operated from two to four days during the last week of the month. Business was reported good by biscuit manufacturers and confectioners, also sugar refiners; wood working factories and oil refineries were fairly well employed; there was a good deal of short time in the iron and steel group with some departments idle. Building construction was active and a good number of both skilled and unskilled workers were employed; road work was continued on the public highways but railroad construction had ceased. Tourist traffic by steamship, railroad and automobile was very heavy. The movement of freight was fair. Trade was reported as fairly good. Requests for women domestic workers had increased but plenty of applicants were available.

Considerable progress in the harvesting of grain was reported from New Brunswick. Lobster fishing was in full swing and large shipments were going to the New England markets; salmon fishing was good; fair catches of cod were reported; and there was an increase in the price of shad, which had newly arrived on the market. Lumbering showed little activity except for the yarding of pulpwood at Riverside. Several building contracts were progressing favourably, also the road work in the rural districts. An extensive program of relief work has been planned at Saint John. Manufacturers of confectionery and foods reported business fair. A new cooperage plant at Saint John is supplying barrels for potato shippers in that district. Passenger traffic was heavy and the transportation of freight by rail brisk, but long-shore-men were again idle as vessels had finished loading lumber on the Miramichi River. Trade, both wholesale and retail, was good. There was a slightly increased demand for women domestic workers, but sufficient applicants to fill all orders.

There was a slight decrease in the demand for farm workers in the Province of Quebec. Orders for bushmen were few and there was

not the activity that is generally to be expected at this time of the year. Manufacturing in general showed no sign of improvement, although a moderately active condition prevailed in Hull and Sherbrooke. In Quebec City industries are operating at about seventy-five per cent of their capacity. In Three Rivers paper manufacturing was quiet and cottons below normal. There was no improvement in the metal trades in Montreal or among tobacco workers. The printing trades and boot and shoe manufacturing were dull. Clothing workers continued to be fairly well employed. Several orders for building labourers had been received through the Hull office for the construction of dams and tunnels. In Montreal the demand for labourers was falling off and relief work was practically completed. Activity in the building trades was reported by Quebec and Sherbrooke, but there was no change in the situation at Three Rivers. There were no calls for workers in the transportation group. Trade continued active. In the women's domestic section applicants were much in excess of positions available.

Farm orders had decreased in most districts in Ontario, although a few orders for threshers and tobacco cutters were being received. A few logging camps were started in the Sudbury district but few camps are expected to operate this winter in the North Bay and Timmins zones. The supply of miners in Timmins and Sudbury was greatly in excess of the demand. The Sudbury office, which ordinarily is extremely busy at this time of the year, had received no orders for miners. Canning factories were still busy in Brantford and Chatham and New Toronto. Several women were placed in canning establishments in the Brantford district. Textiles continue to be busy in the majority of centres. An order received by a large car manufacturing firm would keep it busy for a month. Toronto reported a slight general improvement, orders having been received for both skilled and unskilled workers where vacancies have not been reported for some time. City relief projects were about the only construction work to provide additional employment, although building was quite active in some localities. The majority of offices reported applicants awaiting news regarding the highway program in Northern Ontario. The demand for domestic help had increased due to householders returning from their summer

homes. Day work continued to be scarce with applicants for this kind of employment plentiful.

In Manitoba heavy rains had temporarily halted harvesting operations, but were wel-

come as an aid to the late feed crops and pasture lands. Practically all grain is cut and good progress has been made with threshing. There was no activity in logging or mining. Manufacturing and trade, both retail and

(9) Sugar production given in periods of four weeks.

(10) The index of the physical volume of business includes forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughterings of cattle, sheep and hogs - storage holdings of butter and cheese.

wholesale, remained quiet. Construction continued on a lower level than that of last year and large numbers of building tradesmen were unemployed, although the provincial government public works had relieved the situation to some extent. There was a falling off in orders for female domestic workers and somewhat fewer new registrations for work of this kind.

There was very little demand for farm work in the Province of Saskatchewan except in certain districts where threshing operations were under way. A few orders at low wages remained unfilled. Construction continued inactive and except for repair work, resulting chiefly from a recent wind storm, there were few calls for building tradesmen, large numbers of unemployed are registered at all offices. There was an increase in the demand for domestics at Moose Jaw and Regina but few calls were received through other offices. A surplus of applicants was reported, the majority being without experience.

There was a good demand for farm workers through all employment offices in Alberta, except Drumheller and Medicine Hat, and although wages offered were low plenty of applicants were available to fill all vacancies. Hail had caused a loss of crop in the vicinity of Drumheller and heavy rains had retarded operations in the Edmonton zone. Building construction remained quiet with few jobs offering and a number of tradesmen idle. A railway gang was sent out from Medicine Hat. A few coal miners were going out but conditions generally remained unchanged. Manufacturing industries show no improvement, but retail trade was slightly better. Orders for female domestic workers were below normal and very few orders for harvest cooks had been received. Large numbers of applicants were seeking employment.

Orders for farm hands in British Columbia were scarce and lots of help available. Grain harvest had been completed at Cranbrook and threshing was well under way. Fruit picking and the marketing of tomatoes were providing some additional employment. Forest fires had retarded the opening of logging camps and there was little demand for workers in the lumbering industry. Mining continued to be quiet and manufacturing showed no sign of improvement, except in fruit canneries. Except for occasional contracts in some centres building construction was for the most part confined to small jobs. Longshore-men were fairly busy at New Westminster but there was little doing on the waterfronts at Vancouver and Prince Rupert. Trade was reported as quiet and collections

slow. Large numbers of unemployed are registered at all offices. There has been an improvement in the demand for domestic help but little offering in other lines for female workers.

EMPLOYERS' REPORTS

Employment at the beginning of August showed a further upward movement, according to statements tabulated by the Dominion Bureau of Statistics from 7,887 firms, whose payrolls aggregated 956,238 persons, as compared with 943,419 on July 1. The index number stood at 105.2 on the date under review, as compared with 103.3 on July 1, 1931, while on August 1, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, it was 118.8, 127.8, 119.3, 110.5, 105.5, 97.5, 95.8, 101.4, 94.2 and 90.0, respectively.

Greater activity was noted in the Prairie Provinces; employment declined in Quebec, Ontario and the Maritime Provinces, while very little general change was indicated in British Columbia. In the Maritime Provinces, building construction showed gains, and transportation, services and communications were also brisker; on the other hand, the trend of employment was downward in manufacturing, highway and railway construction, trade and mining. In Quebec, manufacturing, logging and trade reported smaller payrolls, while construction indicated considerable improvement, and mining and transportation were also more active. In Ontario, improvement was noted in tobacco and pulp and paper factories, and in shipping, building and highway construction and services; but iron and steel plants reported large reductions, while textile, lumber, chemical and some other factories, and logging, transportation, railway construction and retail trade also showed curtailment, in some cases of a seasonal nature. In the Prairie Provinces, very pronounced expansion was shown in highway construction, mainly in Saskatchewan, where a large program of road work was being carried out as an unemployment relief measure. Services and telephones also showed moderate improvement, but manufacturing, transportation and building construction were slacker. In British Columbia, very little general change was registered, improvement in food canning and electric current plants, and in transportation, communications and building construction, being offset by losses in logging, highway construction, shipping and metal works.

Employment increased in Ottawa; in Quebec City and Vancouver practically no general change was noted, while the tendency was unfavourable in Montreal, Toronto, Hamilton, Windsor and the Adjacent Border Cities and

Winnipeg. In Montreal, employment in transportation improved, while manufacturing, construction and trade released employees. In Quebec, the situation showed little general change, gains in services being offset by losses in manufacturing. In Toronto, there was a falling-off in activity on August 1, 1931, repeating the downward movement noted on the same date of last year. Manufacturing (especially of iron and steel and textile products), and trade were slacker than on July 1, but building construction recorded improvement. In Ottawa, employment showed an advance, mainly in manufacturing, while construction released employees. In Hamilton, manufacturing registered slight but general curtailment, except in vegetable food factories, while construction was also quieter. In the Border Cities, further losses were indicated, largely in automobile works, while other groups showed little general change. In Winnipeg, there were increases in telephonic communications, but manufacturing, road construction and trade reported curtailment. In Vancouver, manufacturing, as a whole, remained practically the same; building reported heightened activity, while trade and highway construction were slacker.

An analysis of the data by industries shows that further reductions were made in manufacturing establishments; increases were recorded in vegetable food, leather footwear, woollen, non-metallic mineral and electric current plants, but the garment and iron and steel industries were seasonally slacker, and losses were also indicated in the lumber, non-ferrous metal, chemical and allied products, clay, glass and stone, electrical apparatus and some other divisions. In the non-manufacturing industries, there were gains in mining, communications, transportation, services and construction and maintenance, those in the last-named being most extensive, chiefly on account of unemployment relief works on Saskatchewan roads. On the other hand, seasonal dullness continued to affect employment in logging camps, and there were also losses in trade.

An article elsewhere in this issue gives in greater detail the employment situation as at the beginning of August, 1931.

TRADE
UNION
REPORTS

Employment for local trade union members remained in about the same volume during July as in the two months preceding, the percentage of idleness standing at 16.2, in contrast with percentages of 16.3 in June and 16.2 in May. Returns for July were received by the Department of Labour from 1,862 local unions embracing a membership of 199,923 persons,

32,396 of whom were idle on the last day of the month. The situation continued more depressed, however, than last year, when at the close of July 9.2 per cent of unemployment was recorded. Quebec unions, owing to improvement in the garment trades of the province reported a higher level of activity than in June. In Alberta quietness in the coal mines caused the percentage of idleness for the province to be somewhat in excess of that reported in June, and in Saskatchewan, British Columbia, Manitoba, New Brunswick and Ontario declines of 1 per cent or under were indicated. No variation in the unemployment level from June, however, was shown by unions in Nova Scotia. Much slacker conditions prevailed in Alberta than in July a year ago, and in Ontario, British Columbia, Manitoba, Saskatchewan and Quebec pronounced curtailment was evident. In New Brunswick and Nova Scotia declines of more moderate proportions occurred.

An article appearing elsewhere in this issue, with tabular statements, gives in greater detail a review on unemployment among local trade unions at the close of July, 1931.

During the month of July, 1931, the offices of the EMPLOYMENT OFFICE REPORTS made 28,512 references of persons to positions and effected a total of 27,002 placements. Of these, the placements in regular employment were 11,744 of which 7,977 were of men and 3,767 of women. Placements in casual work numbered 15,258. The offices of the Employment Service were notified of 28,025 vacancies of which 20,483 were for men and 7,542 for women. Applications for work were registered from 53,824 men and 12,457 women, a total of 66,281. An increase is shown in the business transacted, when a comparison is made both with the preceding month and also with July last year, the reports for June, 1931, showing 27,183 vacancies offered, 56,113 applications made and 25,973 placements effected, while in July, 1930, there were reported 26,150 opportunities for employment, 42,024 applications for work and 25,293 placements in regular and casual employment. A report in detail of the work of the offices for the month of July, 1931, may be found elsewhere in this issue.

Production and Trade

INDUSTRIAL PRODUCTION

Figures showing the volume of production in certain industries during recent months and also in the corresponding months last year, are shown in the table on page 968.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, states that while definite improvement developed in some lines of industrial production during July over the preceding month, operations in general continued at a depressed level. The output of pig iron and steel showed declines in July, indicating further reduction in the operations of a strategic industry. Production of pig iron at 40,300 tons showed, after a seasonal adjustment, a reduction of 22.4 per cent from June. The production of automobiles was reduced to 4,220 units, compared with 6,835 units in the preceding month. There is normally a decline in July, but the drop this year, after seasonal adjustment, was 20.6 per cent. The gain in the exports of lumber was in line with seasonal expectations, while the output of newsprint reflected a more limited demand. The production was 182,731 tons, compared with 193,971 in June, and shipments were somewhat less than production in the month under review.

The rubber industry imported raw material in greater volume than in the preceding month, although the normal trend for the month is downward. Imports were 5,806,000 pounds, compared with 4,731,000 pounds in June. The gain after seasonal adjustment over the decidedly low point of the preceding month was 72 per cent. The imports of crude petroleum were 98,145,000 gallons, the decline from June being slightly less than normal for the season. Imports of raw cotton at 4,374,000 pounds showed a marked decline from the preceding month even after seasonal adjustment. Imports of raw and semi-manufactured wool required for further manufacture were 692,000 pounds, compared with 494,000 pounds in June representing a sharp gain. The index of manufactures, based on sixteen factors in terms of physical volume, was 137.2 in July, compared with 135.7 in June. In the compilation of this index each factor was adjusted for seasonal tendencies.

Coal.—Canadian mines produced 826,156 tons of coal in July; a decline of 34.4 per cent from the five year average for the month of 1,259,330 tons. July's output was made up of 717,193 tons of bituminous coal, 71,972 tons of lignite coal, and 36,988 tons of sub-bituminous coal. Nova Scotia's production totalled 395,240 tons or 47.8 per cent of the total Canadian production. Alberta mined 260,339 tons, British Columbia, 141,239 tons, Saskatchewan, 16,407 tons, and New Brunswick, 12,931 tons. Imports of coal into Canada amounted to 1,245,095 tons or 30.4 per cent below the 1926-1930 average for the month of 1,788,570 tons. Receipts of anthracite coal were recorded at 334,661 tons of

which the United States supplied 194,379 tons, Great Britain 135,868 tons, and Germany 4,414 tons. Bituminous coal imports reached a total of 910,251 tons, consisting of 899,095 tons from the United States and 11,156 tons from Great Britain. Lignite coal imports were recorded at 183 tons. Canadian coal exported during July amounted to 35,603 tons or 35.4 per cent below the average for the month during the past five years. Coal made available for consumption in July totalled 2,035,648 tons of which tonnage the United States supplied 53.7 per cent, Canada, 38.9 per cent; Great Britain, 7.2 per cent, and Germany 0.2 per cent. The five-year average for the month was 2,992,794 tons.

EXTERNAL TRADE

A summary of Canadian trade prepared by the Department of National Revenue shows that in July, 1931, the merchandise entered for consumption amounted to \$48,379,235 as compared with \$52,507,534 in the preceding month and with \$84,550,935 in July, 1930. The chief imports for July, 1931, were: Non-metallic minerals and products, \$8,382,218; Iron and its products, \$8,107,908; Fibres, textiles, and textile products, \$7,151,589.

The domestic merchandise exported during July 1931, amounted to \$49,675,120 as compared with \$54,348,421 in the preceding month and with \$76,407,506 in July, 1930. The chief exports in July, 1931, were: Wood, wood products and paper, \$15,396,070; Agricultural and vegetable products, mainly foods, \$11,987,364; Animals and animal products, \$7,087,705.

BUILDING PERMITS AND CONTRACTS AWARDED

According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities during July, 1931, was \$10,879,505, as compared with \$8,470,738 in the preceding month and with \$15,824,781 in July, 1930.

The *MacLean Building Review* states that the feature of the August awards for new construction throughout Canada is that building construction increased, although the total decreased from the July figures; engineering contracts were less, but contracts for buildings were greater. Of the August total, which is \$26,142,600, \$9,134,100 was for engineering purposes; \$8,207,100 for business buildings; \$7,432,800 for residential buildings; and \$1,368,600 for industrial purposes. The apportionment of contracts awarded during August, by provinces, was as follows: Ontario, \$10,239,600; Quebec, \$9,822,100; British Columbia, \$2,299,000; Saskatchewan, \$1,208,600; Alberta, \$864,300; Nova Scotia, \$813,700; Manitoba, \$541,900; New Brunswick, \$348,600; Prince Edward Island, \$4,800.

Strikes and Lockouts

The time loss due to industrial disputes in Canada during August, 1931, showed a slight increase over that occurring during July, 1931, a similar increase appearing in the number of workers involved. As compared with August, 1930, almost three times as many disputes were recorded, while there were over ten times as many workers involved, with a corresponding increase in the time loss incurred over that recorded for the same month last year during which no disputes involving more than fifty workers occurred. There were in existence during the month eighth disputes, involving 886 workers, and resulting in a time loss of 9,364 working days, as compared with five disputes, involving 689 workers, and resulting in a time loss of 8,044 working days during July, 1931. In August, 1930, there were on record three disputes, involving 66 workers and resulting in a time loss of 529 working days. At the end of the month there were four disputes recorded as strikes and lockouts, involving approximately 220 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been formally called off by the union.

Prices

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities showed a slight increase at \$8.20 for August as compared with \$8.11 for July; \$10.65 for August, 1930; \$11.63 for August, 1929; \$11.08 for August, 1928; \$10.93 for August, 1927; \$11.10 for August, 1926; \$10.84 for August, 1925; \$10.19 for August, 1924; \$10.53 for August, 1923; \$10.44 for August, 1922; \$11.44 for August, 1921; \$16.42 for August, 1920; \$16.92 for June, 1920 (the peak); \$13.41 for August, 1918; and \$7.68 for August, 1914. The most important change was a seasonal advance in the price of potatoes, while the prices of fresh pork, eggs and butter were also somewhat higher. The prices of beef, veal, salt pork, bacon, lard, cheese, flour, rice and beans were slightly lower. Including the cost of fuel and rent with that of foods the total budget averaged \$18.30 at the beginning of August as compared with \$18.26 for July; \$21.01 for August, 1930; \$21.90 for August, 1929; \$21.31 for August, 1928; \$21.11 for August, 1927; \$21.32 for August, 1926; \$21.05 for August, 1925; \$20.57 for August, 1924; \$21.03 for August, 1923; \$20.88 for August, 1922; \$21.98 for August, 1921; \$26.60 for August, 1920; \$26.92 for July, 1920 (the peak); \$21.20 for August, 1918; and

\$14.41 for August, 1914. In fuel, anthracite coal was slightly higher, while bituminous coal and wood were somewhat lower. Rent was slightly lower in the average.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was again lower at 71.0 for August, as compared with 71.7 for July; 83.7 for August, 1930; 98.4 for August, 1929; 95.3 for August, 1928; 98.3 for August, 1927; and 99.1 for August, 1926. In the classification according to chief component materials, seven of the eight main groups were lower, and one was slightly higher. The groups which declined were: the Vegetables and Vegetable Products group, because of lower quotations for wheat, oats, flax, rye, flour, raw rubber, bran and shorts, which more than offset higher prices for corn, coffee and potatoes; the Fibres, Textiles and Textile Products group, because of lower prices for raw cotton, denim, raw wool and serge; the Wood, Wood Products and Paper group, due to lower prices for lumber and ground wood pulp; the Iron and its Products group, due to declines in the prices of wire nails and galvanized barbed wire; the Non-Ferrous Metals and their Products group, because of lower quotations for antimony, copper, silver, lead and zinc; the Animals and Animal Products group because of decline in the prices of hogs, lambs, canned salmon, boots and shoes; and the Chemicals and Allied Products group. The Non-Metallic Minerals group was slightly higher, owing mainly to increased prices for anthracite coal.

Special Committee on Workmen's Compensation in Alberta

The order made by the Alberta Legislature at its recent session, that a special committee be appointed to investigate the subject of workmen's compensation in the province during the recess was noted in the *LABOUR GAZETTE*, April, 1931. The government subsequently appointed the committee as follows:

Representing the Legislature: Messrs. W. R. Hewson, Liberal; Colonel F. J. Jamieson, V.D., Conservative; Fred J. White, Labour; and F. C. Moyer, Independent.

From industry: Messrs. A. L. Smith, K.C., representing the railways; Walter S. Campbell, representing the coal industry; George McInnes, manufacturers; F. M. McMillan, lumber industry; and Jesse Gouge, coal operators.

From Labour: Messrs. Evan Morgan and D. S. B. McAllister-Thompson, coal industry; P. M. Simpson, railways; and Alfred Farmillo and J. Francis, from general labour.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING THE MONTH OF AUGUST, 1931

DURING the month of August an application for the establishment of a Board of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act was received in the Department of Labour from certain employees of the City of Edmonton being (a) members of the Canadian Electrical Trades Union, Edmonton branch, and assisting labourers and (b) members of the Edmonton Civic Employees Union No. 30 and seasonal labourers. The Canadian Electrical Trades Union embraces employees of the telephone, electric light and power house departments, together with a few employees of the street railway. Local Union No. 30 is composed of employees of the water works, city engineer's and scavenging departments and a few labourers connected with the street railway. The application protested against a resolution passed by the Council of the Corporation of the City of Edmonton on August 10, 1931, authorizing a wage reduction equivalent to one day's pay per month for each employee with the exception of married men and single men with dependants whose monthly earnings do not exceed \$100, and in the case of single employees without dependants a minimum of \$70 per month. At the close of the month the western representative of the Department,

Mr. F. E. Harrison, had been instructed to proceed to Edmonton and endeavour to effect an adjustment of the dispute by mediation.

An application for the establishment of a Board of Conciliation and Investigation was reported in the August issue of the *LABOUR GAZETTE* (p. 875), as having been received from employees of the New Brunswick Telephone Company Limited, being members of the Telephone Workers' Association of New Brunswick. A ten per cent reduction in wages was the cause of the dispute, 170 employees being directly affected and 340 indirectly. Mr. M. S. Campbell, Chief Conciliation Officer of the Department, and Mr. T. W. Martin, Eastern Representative, held several interviews with the officials of the company and the employees' representatives and, as a result of their mediation, a settlement was reached, the employees accepting the company's concession that all male employees receiving \$1,000 or less per year would not be subject to the 10 per cent cut, with the understanding that as soon as the company's financial standing would warrant the former wage rate would be established. The company also agreed that no discrimination whatever would be shown against any employee or any member of the committee. The employees accordingly withdrew their application.

CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

Summary of Recent Decisions

SEVEN new decisions were given recently by the Canadian Railway Board of Adjustment No. 1. Earlier decisions were outlined in the *LABOUR GAZETTE*, May, 1931, page 518, and in previous issues; and the fourth report of the proceedings of the Board, covering the period from October, 1927, to September 30, 1930, was issued as a supplement to the issue of December, 1930.

The Board was established under a voluntary agreement concluded in 1918 between the various railway companies and certain of the railway organizations, its original purpose being to secure uninterrupted service on the railways during the continuance of the war. The Board consists of six representatives of labour, one for each of the following railway brotherhoods; the Brotherhood of Locomotive Engineers; the Brotherhood of Locomotive Firemen and Enginemen; the Order of Rail-

way Conductors; the Brotherhood of Railway Trainmen; the Order of Railroad Telegraphers; and the Brotherhood of Maintenance of Way Employees and Railway Shop Labourers.

Supplement to Case No. 370.—Canadian Pacific Railway (Western Lines) and Brotherhood of Locomotive Engineers.

In this case, which was outlined in the *LABOUR GAZETTE*, March, 1931, page 279, representatives of both parties again appeared before the Board to present their respective contentions, the Board's first decision not having led to an adjustment of the dispute. In the opinion of the Board, "hostling" service had been performed in this case within the intent of the rule adopted in 1929; and the engineer's claim for special pay for hostling service at the initial terminal was disallowed

on the ground that he had been paid already for the time he was so occupied, the rule stating that "duplicate payment will not in any case be made."

Case No. 377.—Canadian National Railways. (Central region) and Brotherhood of Railroad Trainmen.

A conductor and crew were regularly assigned to operate a way freight and to perform switching service at the terminal. On two occasions they were required to deliver cars of stock which they had brought in on their train, to a station about a mile from the terminal but within the switching limits. This, they claimed, should be paid for as "extra service," for which provision is made in Article 12 (c) of the Trainmen's schedule, as follows:—

"Trainmen called for extra service (not including special service or switching incidental to their trip or regular assignment) before or after completion of their trip or regular assignment will be paid for such extra service not less than a minimum day at schedule rate of pay, under the conditions applicable to service performed."

The company asserted that the delivery in question formed part of the regular duties of the trainmen.

The Board denied the employees' claim, pointing out that Article 12 (c) concedes the right of the company to require trainmen, before or after the completion of a trip, to give at the terminal "special service or switching incidental to the trip or regular assignment."

Case No. 378.—Canadian National Railways (Central region) and Brotherhood of Locomotive Engineers.

An engineer was ordered to deliver an engine to a certain station in Quebec, and informed that he would be required to return with another engine. However, on his arrival, he was told by the foreman that there was no engine available to bring back, and that he must return "deadhead", that is, as a passenger on another train. He claimed compensation for the return trip in accordance with Article 7, clause A of the Enginemen's Schedule, which requires that engineers shall, on being ordered for service, be informed of the nature of the service for which they are called, whether "turn-around" or one-way service. The company alleged that according to prevailing practice, "deadheading" was compensated only when coupled with service, and referred to Article 16, which contains such provision.

The Board sustained the employees' contention, holding that although the rule provides that "deadheading" might be coupled with other service, yet the evidence indicated that such coupling did not come within the intent of the rules.

Case No. 379.—Canadian National Railways (Western region) and Brotherhood of Locomotive Engineers.

An engineer was assessed demerit marks in consequence of the derailment of a snowplough that was being pushed by his locomotive. The employees claimed that the engineer had obeyed the signals, and that engineers in charge of engines pushing snowploughs are unable to see ahead, and have to rely on signals transmitted by the man in charge of the plough; moreover, the engineer in this case was not familiar with the territory, and was not in possession of a timetable of the district. The management referred to Rule 27 of the Book of Operating Rules which requires that "enginemen and snowplough foremen must know the indication of all fixed signals before passing them".

The Board recommended that the Railways cancel the demerit marks assessed the engineer's record, holding that while there had been a violation of an operating rule, it might have been the consequence of his being in an unfamiliar region.

Case No. 382.—Canadian Pacific Railway (western lines) and Brotherhood of Locomotive Engineers.

An engineer having been ordered to take charge of a train, he came on duty 45 minutes in advance of the time of departure, in accordance with Article 33 (a) of the schedule, which provides that "engineers in road service will appear on duty 45 minutes before the departure time of train, and will sign appearance book, first 30 minutes to be allowed for inspection and making engine ready". On the arrival of the train at the station where he was to take charge, the engineer, as required, took the engine to the shop, had the fire cleaned and the engine supplied with coal and water, and returned it to the train before starting. He claimed that he should be allowed payment for 30 minutes "hostling" service, Article 27 providing as follows:—

"Except as otherwise specified, engineers will be paid a minimum of thirty minutes at rate for class of service for hostling engine preparatory to commencement of trip or when putting engine away at completion of same where men are required to do such work, but when it takes more than thirty minutes, actual time will be paid for such work."

"It is understood that engineers will not be required to hostile engine during time paid for by other arbitraries, for the purpose of depriving men of hostling allowance. Duplicate payment will not in any case be made.

"(b) Hostling of engine at end of run in short run service may be used to make up a minimum day."

The company pointed out that the service performed at the point in question was not such that the engineer should receive special payment under the foregoing article.

The Board did not sustain the employee's claim.

Case No. 383.—Canadian Pacific Railway (western lines) and Brotherhood of Locomotive Engineers.

This case involved the claim of an engineer for payment for hostling service under circumstances similar to those in Case No. 382, the company justifying its refusal on the same grounds. The Board recommended that in this case 30 minutes (for hostling, such as coaling of engine, watering, or the turning of the engine on "wye" or table) should be paid as an "arbitrary" unless payment for the same time had already been made under the provision in respect to preparatory time, etc., this decision, however, being predicated on the provision in the schedule that "duplicate payment will not in any case be made".

Case No. 384.—Canadian Pacific Railway (western lines) and Brotherhood of Locomotive Engineers.

This case concerned another engineer, the circumstances and the decision of the Board being identical with those in Case No. 383.

Settlement of disputes on railways in United States

Since the passage of the Railroad Labour Act in the United States in 1926 (LABOUR GAZETTE, May, 1926, page 423) only four emergency boards have been appointed under its provisions to act in labour disputes. Such boards are appointed only when, in the judgment of the United States Board of Mediation, the dispute threatens to deprive any section of the country of transportation service. The fourth emergency board was appointed by the President on April 16, 1931, to act in the dispute between the Louisiana & Arkansas Railway Co. and its shop-craft employees. The dispute involved a reduction in wage rates and changes in working conditions put into force by the carrier. The board, in its decision, urged the employer either to restore the standard rate of wages on its lines or to submit the matter to arbitration. Under the law the parties are forbidden to make any change in existing conditions or wage rates, except by mutual consent, for a period of 30 days following the board's decision.

STRIKES AND LOCKOUTS IN CANADA DURING AUGUST, 1931

THE number of strikes and lockouts in existence in Canada during August, 1931, was eight as compared with five in the preceding month. The number of workers involved showed a slight increase over that for July while a similar increase was recorded in the time loss incurred. Comparing the figures with those for August, 1930, almost three times as many disputes were recorded, while there were over ten times as many workers involved, with a corresponding increase in the time loss incurred over that recorded for the same month last year, during which no disputes involving more than fifty workers occurred.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Three disputes, involving approximately 150 workers, were carried over from July, and five disputes commenced during August. Of these eight disputes four terminated during the month, two resulting in favour of the workers and two in favour of the employers involved. At the end of August, therefore, there were four disputes recorded as strikes

Date	Number of disputes	Number of employees involved	Time loss in working days
*Aug., 1931...	8	886	9,364
*July, 1931...	5	689	8,044
Aug., 1930...	3	66	529

* Preliminary figures.

or lockouts, namely: photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man.; men's clothing factory workers, Toronto, Ont.; stonecutters, Winnipeg, Man.; and motion picture projectionists, Montreal, P.Q.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not yet declared terminated. Information is available as to four such disputes, namely: coal miners, Shaughnessy, Alta., January 15, 1931, one employer; motion picture projectionists, Ottawa, February 23, 1931, one employer; photo engravers, Toronto, Ont., March 23, 1931, one employer; and tailors, Vancouver, B.C., June 6, 1931, one employer.

Information was received too late to be included in the August issue of the *LABOUR GAZETTE* as to a dispute during July involving some 350 sawmill workers employed in the factory of one company at Barnet, B.C. The firm had instituted a bonus system of payment which the workers claimed would cause a substantial decrease in their earnings; and the Lumber and Agricultural Workers' Industrial Union of Canada, which claimed to have organized the mill, called its members out on strike on July 25, demanding that the firm revert to its old system of payment. The employer agreed to restore the former method and the men returned to work after being out for less than a day.

A strike of ladies' clothing factory workers in the employ of one establishment in Toronto was reported during August, the workers being called out by the union, the International Ladies' Garment Workers' Union, to enforce a demand for the restoration of union wages and working conditions. Incomplete reports indicate that the employing firm was a member of the cloak and suit manufacturers' association of Toronto which signed an agreement with the union in February, 1930 (*LABOUR GAZETTE*, March, 1930, p. 272, and May, 1930, p. 580). In April, 1931, the firm had a disagreement with the union as to reduction of staff, resigned from the employers' association, and began to operate an open shop. The union called out its members, about thirty in number, but the employer reported they were replaced by the middle of June.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

MEN'S CLOTHING FACTORY WORKERS, TORONTO, ONT.—This dispute, as stated in the August issue of the *LABOUR GAZETTE*, commenced in one establishment in Toronto on July 29, 1931, when tailors, operators and cutters went on strike, claiming that the employing firm had violated the agreement between the union, the Amalgamated Clothing Workers of America, and the Clothing Manufacturers' Association of which it had been a member. The employer stated that some fifteen of his employees went on strike when he signed a shop agreement with certain members of his staff. It was reported these became members of the newly formed Canadian Clothing Workers' Union, with a charter from the All-Canadian Congress of Labour. The officials of the Amalgamated Clothing Workers' Union claimed that over forty workers employed by the firm ceased work. The parties to the dispute requested the intervention of the civic authorities owing to allegations as to the activities of communists, and the matter was referred to the police department. On August 25 one of the employees of the firm was arrested on a charge of threatening bodily harm to a striker and was released on \$1,000 bail, while another man, reported to have been brought from the United States, was sentenced to the Ontario Reformatory for four months, to be followed by deportation, for assaulting an employee of the firm. On August 27 two pickets were arrested on charges of intimidation. At the end of the month no termination had been reported.

PHOTO ENGRAVERS, TORONTO AND LONDON, ONT., MONTREAL AND QUEBEC, P.Q., AND WINNIPEG, MAN.—In this dispute, which commenced on May 4, 1931, at the end of August the union reported that over one hundred out of one hundred and thirty-eight union members involved in the dispute were still on the strike list of the union. The employer, however, claimed to have replaced the strikers some time ago.

TRUCK DRIVERS, FALSE BAY BEACH, N.S.—This dispute, commencing on July 20, 1931, resulting from a protest of the workers against a decrease in wages, piece-rates, as reported in the August issue of the *LABOUR GAZETTE*, was terminated August 15, nine out of the twelve drivers involved resuming work at the reduced rates, the others securing work elsewhere by the end of August or early in September. Twelve or eighteen labourers were indirectly involved, work being suspended during the dispute.

MEN'S CLOTHING FACTORY WORKERS, TORONTO, ONT.—This dispute occurred in the establishment of one firm in Toronto when some eighty workers, members of the Amalgamated Clothing Workers of America, went on strike on August 11, 1931, to secure the dismissal by the firm of the services of two cutters who had left the Amalgamated to join the Canadian Clothing Workers' Union. The employing firm was a member of the employers' organization which had a preferential union shop agreement with the Amalgamated since 1919, renewed from time to time to date (LABOUR GAZETTE, August, 1922, p. 889). As the agreement contained a provision that all disputes were to be referred to a Board of Arbitration with an impartial Chairman, the dispute was therefore referred to such a Board, with Mr. H. G. Fester of the Ontario Minimum Wage Board

as Chairman. The Board was unanimously agreed that the men objected to should be discharged, because of membership in an organization which, in the opinion of the arbitrators, was detrimental not only to the clothing industry but to all industries in the Dominion of Canada. The Board also stated that in view of the clause in the agreement as to arbitration the walkout of the cutters was unwarranted, deciding, however, that no penalty was to be imposed, but that this was not to be taken as a justification for the action of the strikers or as a precedent for such action in future.

LADIES' HAT FACTORY WORKERS, MONTREAL, P.Q.—This dispute commenced on August 14, 1931, when some three hundred workers employed by fifteen firms in Montreal engaged in the manufacture of ladies' hats went on

STRIKES AND LOCKOUTS IN CANADA DURING AUGUST, 1931

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
-----------------------------------	----------------------------	---------------------------	---------

(a) Strikes and Lockouts in Progress Prior to August, 1931

MANUFACTURING—			
<i>Textiles, Clothing, etc.—</i>			
Men's clothing factory workers Toronto, Ont.	40	1,000	Commenced July 29, 1931; against violation of agreement; unterminated.
<i>Printing and Publishing—</i>			
Photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man.	100	2,500	Commenced May 4, 1931; for union agreement; unterminated.
CONSTRUCTION—			
<i>Highway—</i>			
Truck drivers, False Bay Beach, N.S.	12	144	Commenced July 20, 1931; against decrease in piece rates; terminated August 15, 1931.

(b) Strikes and Lockouts Commencing during August, 1931

MANUFACTURING—			
<i>Textiles, Clothing, etc.—</i>			
Men's clothing factory workers Toronto, Ont.	80	160	Commenced Aug. 11, 1931; to secure dismissal of workers joining another union, under preferential union shop agreement; terminated Aug. 13, 1931; in favour of workers.
Ladies' hat factory workers, Toronto, Ont.	300	1,800	Commenced Aug. 14, 1931; for union wages and working conditions; terminated Aug. 28, 1931; in favour of workers.
<i>Non-Metallic Mineral Products—</i>			
Stonecutters, Winnipeg, Man...	40	1,040	Commenced Aug. 1, 1931; against reduction in wages; unterminated.
TRANSPORTATION AND PUBLIC UTILITIES—			
<i>Electricity and Gas—</i>

<i>Recreational—</i>			
Motion picture projectionists, Montreal, P.Q.	44	220	Alleged lockout; commenced Aug. 27, 1931; to maintain union wages and working conditions; unterminated.

strike demanding union wages and working conditions. Negotiations between the parties were carried on and from time to time the majority of the strikers returned to work as individual firms signed agreements with or verbally agreed to the terms of the union. By August 28th the dispute was called off by the union.

STONECUTTERS, WINNIPEG, MAN.—The agreement with the Journeymen Stonecutters' Association of America having expired on May 31, 1931, the stonecutting firms in Winnipeg proposed to introduce a reduction of ten cents per hour in the wage rate of the stonecutters in their employ, that is from \$1.25 to \$1.15 per hour. About forty workers, members of the union, went on strike on August 1, 1931, against the proposed reduction. The foremen and apprentices were allowed to remain at work. Although several meetings of the parties concerned were held, no agreement was reached and the dispute was un-terminated at the end of the month. Early in September the dispute was settled at the reduced rate proposed, the stipulation of the strikers that the rate be in force until May, 1932, being accepted.

LINEMEN (ELECTRICAL), MONTREAL, P.Q.—On the expiration of the agreement with the Canadian Electrical Trade Union of Linemen and Helpers on June 30, 1931, the light, heat and power company operating in Montreal, P.Q., and district, refused to agree to certain changes proposed by the union on the ground of better provision for safety, but offered to sign an agreement with their own employees. The union on August 6 called its members out on strike, about 170 linemen being affected, to enforce the demand for union recognition. The strikers requested the intervention of the Department of Labour of the Province of Quebec, but the Registrar of Arbitration and Conciliation Councils under the Quebec Trades Disputes Act reported that the dispute did not come under the Act. The Minister of Labour in the Federal Government was unable to refer the dispute to a Board under the Industrial Disputes Investigation Act, as enabling legislation had not been passed by the provincial legislature. The company secured some fifty workers to replace the strikers and shortly after the beginning of the dispute thirty-five linemen returned to work. Later in August the Montreal representative of the Department of Labour was able to bring about a meeting between the representatives of the parties to the dispute, which resulted in the company agreeing to re-engage the strikers on application without prejudice as required, and on

August 22 the dispute was declared terminated. From time to time during the strike and after its termination damage was done to the transmission lines and equipment of the company, parts of the city and district being deprived of light and power. The Company offered a reward for the apprehension of the guilty parties and extra police were engaged to patrol the districts through which power lines ran. Union officials disclaimed any knowledge of the damage and stated that they were watching the actions of all strikers day and night and that in groups they were patrolling the city to ascertain who was responsible. It was reported in the press that certain former employees of the company were found tampering with the wires and they were charged with damaging property.

MOTION PICTURE PROJECTIONISTS, MONTREAL, P.Q.—This dispute, involving motion picture projectionists in nineteen moving picture theatres in Montreal, P.Q., commenced on August 26, 1931, eighty workers being affected by a demand for the continuation of union wages and working conditions. On the termination of the agreement between the union and the corporation operating the theatres, the company announced a decision to renew it with certain alterations, one being to permit the employment of non-union men, on the ground that better qualified operators could be secured. The union claimed that the change was to escape the union provision for two operators of a machine in the interest of safety, and would result in longer hours, decreased wages, increased danger from fire, etc. No agreement being reached on August 27 the management notified the union that only two operators would be employed in each theatre instead of four after that date and discharged a number of union employees, engaging a number of others. The union claimed this constituted a lockout and called out all its members. At the end of the month no termination had been reported.

Last month the Hamilton Mothers' Allowance Board submitted proposals to the Minister of Public Health of Ontario and to Dr. Jamieson, chairman of the provincial Board, for the amendment of the Mothers' Allowance Act so as to provide for the payment of an allowance to the mother of only one child and to the wife of a prisoner and to reduce from three to two years the period after desertion which qualifies a deserted wife for an allowance. The provincial officials stated that these proposals had been very carefully considered in the past, but that the present time was not suitable to extend the Act.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue for February, 1931, in the review of Strikes and Lockouts in Canada and Other Countries, 1930. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates.

Great Britain

The number of disputes beginning in July was 38, and 13 were still in progress from the previous month, making a total of 51 disputes in progress during the month, involving 36,800 workpeople, with a time loss of 194,000 working days. Of the 38 disputes beginning in July, 9 were over proposed reductions in wages, 6 on other wages questions, 2 on questions of working hours and 16 on questions respecting the employment of particular classes or persons and 5 on other questions. During the month, settlements were reached in 34 disputes, of which 8 were in favour of workpeople, 15 in favour of employers, 11 ended in compromises; in the case of two other disputes, work was resumed pending negotiations.

A dispute involving 11,000 colliery workpeople in Fifeshire and other districts in Scotland began July 9 when the employees refused to continue working under the temporary arrangement with respect to hours, pending settlement of the wages payable for the 7½-hour day. In some collieries work was resumed after a day or two under existing conditions, while at other collieries, chiefly in Fifeshire, the stoppage continued until a general agreement was reached. The dispute was terminated August 1.

A strike of about 3,000 workers in the woollen manufacturing industry in the Bradford district was in progress from July 10 to July 21, against a proposed reduction in wages; work was resumed on the reduced scale.

Cuba

Street railway employees numbering about 2,000, went on strike at Havana on August 1,

against wage reductions and no settlement has been reached at the end of August.

Czechoslovakia

The number of disputes reported for the year 1930 was 155, involving 250 establishments and 26,523 workers directly, and 1,497 indirectly. The time loss for all workers involved was 475,241 working days.

Latvia

The number of strikes reported for the year 1930 was 38, involving 1,547 workers with a time loss of 12,077 working days.

United States

The number of disputes beginning in June was 98, and 105 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 28,840 with a time loss of 691,486 working days for the month.

The strikes of coal miners which began in May in West Virginia and Pennsylvania, followed by other strikes in these States and in Ohio in June, and which were mentioned in the *LABOUR GAZETTE* for August, continued during August. The strikers demanded increased wages, improved working conditions, the right to have union checkweighmen, and other changes. As mentioned in the August *LABOUR GAZETTE*, union agreements were reached in a number of collieries in West Virginia in June, and most of the strikers in that field returned to work. An agreement was also reached in June with one large coal company in Pennsylvania.

The Government of the Province of Saskatchewan has appointed commissioners to administer the funds for the relief of distress provided under the provisions of the Unemployment and Farm Relief Act passed by the Dominion Parliament this year. The Commissioners are as follows: Mr. Henry Black, of Regina (chairman); Mrs. Pearl Johnston, of Coleville; Mr. Albert E. Whitmore, of Regina; Mr. William E. Munro, of Moose Jaw; and Mr. William G. Yule, of Regina. The commissioners are to use for the purpose of relieving distress and providing employment all moneys advanced to them by the Provincial Government from funds furnished for this purpose by the Dominion Government under the Act.

“Labour Agreements in Coal Mines”

A new volume dealing with the handling of labour disputes in the Illinois fields has been published by the Russell Sage Foundation under the title “Labour Agreements in Coal Mines: a Case Study of Agreements between Miners’ and Operators’ Organizations in the Bituminous Coal Mines of Illinois”, by Louis Bloch, formerly a staff member of the Foundation. The book continues the Foundation’s Industrial Relations Series, which comprises studies of various phases of Labour’s participation in management. It analyses the influence of a trade union agreement upon the daily relations between the miners and their employers, as revealed in disputes and their settlement: “How disputes are settled in the industry, how the provisions of the written contract are interpreted in daily practice, how the contract and its interpretations are enforced, and what the effect is upon the functioning of the industry, are the principal questions to which answers have been sought.”

In a preface, Miss Mary van Kleeck, director of Industrial Studies of the Foundation, refers to the “unusual significance” of the habit of co-operation that has grown up in the bituminous mines of Illinois: “In the slow growth since Illinois operators and miners got together for negotiations over common problems in 1898, the essential elements of doing business between miners and operators have become the accepted practice in the mining industry in Illinois. In thirty years it has become so much the custom to conduct affairs in this way that 99 per cent of the miners in the state are members of the union and practically all of the employers either are members of the Illinois Coal Operators’ Labour Association or make separate agreements with the union. At the time of the biennial convention in Illinois in March, 1929, only one company had no agreement with the union, and that record held, despite deep seated difficulties in the mining industry throughout the world and well-nigh overwhelming discouragement for the miners in every other state in the United States except Illinois. At that time in the soft coal industry of the United States it was only in Illinois that there had been a renewal of the agreement hitherto made on an interstate basis between the United Mine Workers of America and the operators. Illinois appeared to be the seeding ground from which a new union might develop.” In the subsequent dispute with the national officers the courts sustained the contention of the Illinois miners in asking for the right to manage their own affairs.

Mr. Bloch records typical cases, describing the disputes which led the miners in each instance to appeal to the pit committee and thence, where necessary, to higher committees for arbitration of disputes; finally he evolves a “code of practice” which actually governs industrial relations in the bituminous mines in the Illinois district. This Miners’ Code sums up the practice and procedure under the agreement in regard to the determination of the rights and duties of the miners and management respectively. Actual cases are given under the three main heads: employment and discharge, mine management, and wages. “The fact that miners’ representatives share in these decisions, and that every decision must be unanimous and joint between the two groups, means that the miners are actually participating in management” to that extent.

“The achievements of collective bargaining,” Mr. Bloch concludes, “should not be judged solely from the standpoint of increased wages and shortened hours, important as they are. The spiritual values gained by collective bargaining should also be considered. The organized worker feels that he can deal on equal terms with his employer in matters pertaining to his employment. The dignity which attaches to the sense of equality in the working relationship established by a written contract with the whole group of employees is one of the spiritual values accruing to the workers under a system of collective bargaining. The knowledge that he has this protection against unjust discharge or indiscriminate assignment to a bad working place is as important to the miner as getting a higher rate of wages for the work he performs The contract, as it operates in the Central Competitive Field, is a give-and-take proposition. Sharing rights of management in regard to working conditions yields the direct benefit of a freer, more satisfied and therefore more efficient body of workers.”

The International Labour Office has a system of Family Allowances in force for the local staff employed at Geneva. Workers paid 4,500 francs (Swiss) per annum receive an allowance of 150 francs for each child, paid monthly.

The Hon. Alfred Duranleau, Minister of Marine, stated recently: “It is not generally known that, last year, 8,889 ships, sail and steam, with a tonnage of 1,393,493 tons were on the Canadian registry, and that over 45,500 men and boys had employment from that source.

LABOUR LEGISLATION ENACTED BY THE PARLIAMENT OF CANADA AND THE LEGISLATURE OF NOVA SCOTIA IN 1931

Parliament of Canada

LEGISLATION enacted by the Parliament of Canada during the Session which opened on March 12 and closed on August 3, 1931, included Acts dealing with unemployment and farm relief, compensation for government employees in case of accidents, vocational education, establishment of a tariff board, old age pensions, government annuities, and safety at sea.

The text of the Unemployment and Farm Relief Act as passed by Parliament was given in the August issue of the *LABOUR GAZETTE* at page 901, and that of the amendment to the Annuities Act in the July issue, at page 764. The text of a Bill for the Promotion of Vocational Education was given in the *LABOUR GAZETTE*, June, 1931, at page 642, and summaries of Bills to amend the Government Employees' Compensation Act and the Old Age Pensions Act were published in the *LABOUR GAZETTE*, for May, at page 505 and July at page 861, respectively. The Bill to create a Tariff Board contained certain sections of labour interest which were summarized in the July issue of the *LABOUR GAZETTE*, page 735. None of these Bills was amended in its passage through Parliament.

The Companies Act was amended to provide that a company may make loans to its employees to enable or assist them to purchase or erect dwelling houses for their own use, even though such employees are share-

holders of the Company, and may take from them mortgages, or other securities for the repayment of such loans.

The Safety of Life at Sea and Load Line Conventions Act, authorizes the ratification of two international conventions signed at London in 1929 and 1930 respectively by all the leading maritime nations of the world. These two Conventions are set forth in the Schedule to the Act and penalties are provided for their infraction. The points covered by the Conventions include the subdivision of hulls of ships into water-tight compartments so arranged that in case of accident the flooding will be localized; the provision of a sufficient number of lifeboats with competent men to man them, life jackets and life saving appliances for all on board; the equipment of ships with radio apparatus; the maintenance of a North Atlantic patrol for the reporting of icebergs and the destruction of derelicts, and the safety of navigation generally; the marking of load lines on the sides of ships indicating the maximum depth to which they may be loaded; division of the world into zones and the fixing of the depth to which ships may be loaded when undertaking voyages to the various zones. The operation of the Convention is limited to ships engaged in international ocean voyages. They do not apply to ships plying on the Great Lakes.

Nova Scotia

The Nova Scotia Legislature, during its session which opened on February 19 and closed on April 15, 1931, enacted a considerable amount of legislation of labour interest. The subjects dealt with included unemployment relief, workmen's compensation, regulation of factories, minimum wages for women, and old age pensions.

Unemployment Relief

The Unemployment Act ratifies the agreement entered into between the Government of Canada and the Government of Nova Scotia pursuant to the Unemployment Relief Act, passed by the Parliament of Canada during its special session in September, 1930, and vests in the Lieutenant-Governor in Council the necessary powers for putting the agreement into effect. The Lieutenant-Governor in Council may authorize the Provincial

Treasurer on the certificates of the Minister of Highways to pay the sums called for under the agreement out of the general revenues of the Province, or to raise them by way of loan. Municipalities are authorized and deemed to have been authorized to benefit from the Dominion Unemployment Relief Act, 1930, and may by resolution of their councils do all things necessary for that purpose and contribute the necessary sums out of their funds. They may carry on approved works and undertakings in accordance with the Agreement and the Order of the Governor-General in Council (P.C. 2246)* and may with the approval of the Lieutenant-Governor in Council, borrow such sums as are required on the credit of the municipality. Contracts made by municipalities under the Act must

* *LABOUR GAZETTE*, October, 1930, page 1140.

contain the provisions as to fair wages, hours of work and conditions of employment required by the agreement and the Order in Council set forth in the Schedules. The provisions of the Act apply in respect of any additional sums which may be placed at the disposal of the Government of Nova Scotia or of the municipalities for the purpose of relieving unemployment.

Workmen's Compensation

The Workmen's Compensation Act was the subject of several amendments. Compensation payable to a person confined in an insane asylum, jail or prison may be paid to such persons as the Board deems best qualified to administer it. It is further provided that if an accident, which happened after January 1, 1928, caused a fracture of the spine, for the results of which accident the workman received medical or surgical treatment within thirty days, and if X-ray films of the spine were taken within one year after the accident but did not show the fracture, and if such films taken after one year and within three years after the accident show a fracture, and disability compensable under Part 1 arose within three calendar months after the accident, and if the workman claimed compensation within one year after the occurrence of the accident, the Board may extend the periods for the application for compensation and the establishment of claims, which are fixed by the Act at one year and fifteen months respectively.

Another new clause provides that an applicant is entitled to the benefit of the doubt, that is to say it shall not be necessary for him to adduce conclusive proof of his right to compensation, but the Board shall be entitled to draw and shall draw from all the circumstances of the case, the evidence and medical opinions, all reasonable inferences in favour of the applicant. The new section applies to applications for compensation by the persons in respect of whom payment of compensation under the provisions of special Acts was sought at the 1931 Session of the Legislature.

Factories Act

An amendment to the Factories Act requires that before erecting or altering a building to be used as a factory the owner shall submit the plans to the inspector and shall not proceed with the work until such plans are approved. He must not begin operations until he has received from the inspector a certificate of inspection and a permit to operate such factory. The definition of "factory" was

amended to include premises where dyeing and cleaning processes are carried on.

Women's Minimum Wages

The Minimum Wage for Women Act was amended to provide that an employer, when so required by the Board, shall furnish sworn statements containing the names, ages, addresses, and actual earnings of his employees, together with the average hours per week worked by each, and such further information as may be required. An employee who is paid less than the minimum wage may sue for and recover the difference between the wages she has been paid during the year last preceding the date of commencement of the suit and the wages to which she was entitled. Orders of the Minimum Wage Board are to be published in two successive issues of the *Royal Gazette* and shall come into force on a date subsequent to the second publication thereof.

Old Age Pensions

The Nova Scotia Old Age Pension Act, which will come into force on proclamation, empowers the Lieutenant-Governor in Council to enter into an agreement with the Governor-General in Council as to a general scheme of old age pensions in the Province pursuant to any Act of the Dominion of Canada and for payment by the Dominion to the Province for the provision of such pensions. In the absence of any special appropriation of the Legislature, the moneys necessary for the purposes of the Act and agreements made thereunder are to be paid out of the Consolidated Revenue Fund of the Province. The Lieutenant-Governor in Council may make regulations for the carrying out of the Act and of any agreement and may appoint a Board of Review with power to determine doubtful cases. Pensions are exempt from taxation and from seizure, garnishment or other legal process and are unassignable. The receipt of a pension does not disqualify the pensioner from voting at provincial or municipal elections.

An annual report must be made by the pension authority. It is provided that in the event of the Government of Canada ceasing to make the contributions provided for in a Dominion Act or failing to carry out the agreement the right of pensions shall cease.

Miscellaneous Legislation

A clause in the Innkeepers Act provides that the lien of an innkeeper or boarding house keeper upon the wearing apparel of any servant or labourer shall not extend to a

greater sum than \$6 and on payment or tender of that sum, or any less sum due, such wearing apparel shall be immediately given up whatever be the amount due by such servant or labourer.

An amendment to the Motor Vehicle Act provides that either the Minister or the Registrar of Motor Vehicles may cancel the licence of a chauffeur or operator. Formerly this power rested solely with the Minister. A further amendment makes it an offence for a chauffeur or operator whose licence has been suspended or cancelled to operate a motor vehicle at any time after such suspension or cancellation until he receives from the Minister or Registrar a certificate permitting him

to apply for restoration, re-issue or issue of a licence.

The Public Utilities Act was amended to provide that the number of shares which may be sold to any employee under the provisions of the Act shall not exceed those which might be allotted or issued to such employee under a written agreement, plan or schedule adopted by the shareholders at an annual meeting or at a special meeting for which notice has been given that such agreement plan or schedule will be discussed. Formerly the number issued to any employee might not exceed in aggregate value the sum of \$200 at the issue price approved by the Board of Commissioners of Public Utilities.

Proposed Labour Program for India

The Royal Commission on Labour in India appointed two years ago recently published a report which reviews at length the existing conditions in factories, on railways, and in mines and plantations. The commissioners make numerous recommendations, including the following:—

Hours of work for perennial (i.e. non-seasonal) factories should be reduced from 60 a week and 11 a day to 54 a week and 10 a day; the maximum daily hours for children should be limited to 5; a weekly rest of 24 hours or a fortnightly rest of two days should be granted;

New legislation should be passed applying to unregulated factories (i.e., small factories using power and factories not using power); in the latter group, no child under 10 should be employed, and the hours of work for children should not exceed 7 a day;

Hours of work underground in mines should be reconsidered; hours above ground should be limited to 54; no child under 14 should be permitted to work in or about mines;

Steps should be taken towards the setting up of minimum wage-fixing machinery for industry;

Maternity benefit legislation should be enacted throughout India;

Workmen's compensation legislation should be extended to cover as completely as possible all workers in industry;

The existing trade union law should be re-examined not more than three years hence, particularly with regard to the limitations imposed on the activities of registered unions; works committees should be established;

Provision should be made in the future constitution for an Industrial Council, composed of representatives of employers, labour and Governments, to meet annually and discuss labour measures and policy; the labour representatives should be elected by registered trade unions where such unions exist.

The possibility of making labour legislation a federal as well as a central and provincial subject should be considered; if this is not practicable, efforts should be made to secure that, as early as possible, the whole of India (including the Native States) should participate in making progress in labour matters.

There was an increase of 5.9 per cent in the estimated cost of buildings for which permits were issued in Principal cities of the United States, during the month of July, 1931, as compared with the month of June, 1931, according to reports received by the Bureau of Labour Statistics of the United States of Labour from 338 identical cities having a population of 25,000 or over. The usual trend between June and July is downward. There was a decrease of 17.5 per cent in the esti-

mated cost of new residential buildings, but an increase of 28.8 per cent in the estimated cost of new non-residential buildings, comparing permits issued during these two months. Permits issued for all building operations during July total \$110,914,195. Dwelling units were provided for 7,844 families in the buildings for which permits were issued during the month. This is a decrease of 17.4 per cent as compared with the number of dwelling units provided during June.

WOMEN'S MINIMUM WAGES IN NOVA SCOTIA

Order governing Employees in the Textile and Needle Trades

THE Minimum Wage Board of Nova Scotia issued early this year Order No. 4, governing employment in the textile and needle trades in the cities and towns of the Province. Order No. 5, governing telephone employees, was outlined in the last issue of the *LABOUR GAZETTE* and the previous orders were reproduced in the issues for July and January.

Order No. 4.—Governing Female Employees in the "Textile and Needle Trades" and Allied Sewing Trades, including weaving, knitting, spinning, making of wearing apparel and the working in and on leather goods, boots, shoes, furs, etc., in the cities and incorporated towns in Nova Scotia.

(1) *Wages*.—No person, firm or corporation shall employ a female worker or suffer or permit a female worker to be employed in any of the above industries in the Cities and Incorporated Towns in Nova Scotia at a wage less per week for the regular recognized working period of the establishment than is set forth in the accompanying table.

No worker who begins as a young girl shall, after reaching the age of eighteen years, receive less than the wage prescribed for an inexperienced adult. A person shall be deemed to be an experienced worker when such person has been employed in the industry for one year, after attaining the age of seventeen years, and in other cases when such person has been employed in the industry for eighteen months.

(2) *Maximum of Inexperienced Employees*.—The number of inexperienced adults or young girls or both shall not exceed twenty-five per cent (25%) of the total female working force, except when the total working force is less than four.

(3) *Hours of Work*.—

(a) The work period for which these minimum wages shall be paid shall not be less than 44 nor more than 50 hours per week.

(b) Work in excess of 50 hours per week shall be counted as overtime and shall be paid for at not less than the minimum wage rates fixed by this order, reckoned on the basis of a 50 hour week.

(c) Work for less than 44 hours per week may be counted as short-time, and shall be paid for at not less than the minimum wage rates fixed by this order, reckoned proportionately to the regular weekly period in the establishment.

(d) The Wage minimums shall be payable for the work-period in any establishment within the limits of from 44 to 50 hours per week. Any worker losing time during the operation of an establishment may be paid proportionately for the actual number of hours worked.

(4) *Board Allowance*.—Where lodging is furnished by Employer there may be deducted from the wage a sum which shall be not more than Two Dollars (\$2) per week, and for Board not more than Four Dollars (\$4) per week, or single meals in excess of Twenty-five cents (.25) per meal.

(5) *Permit*.—The Board may issue permits for lower wages on behalf of aged or handicapped workers. It may also grant permits of variation or suspension of any of these regulations in case of exceptional conditions. Employers or employees are invited to consult the Board regarding any problems which this order may concern.

(6) *Deduction for Absence*.—No deduction below the minimum wage line for absence shall exceed the value of the time lost, reckoned in proportion to the normal working hours in vogue in the establishment.

(7) *Waiting*.—An employee required to wait on the premises shall be paid for the time thus spent.

(8) *Penalties*.—Any violation of this order is punishable by fine. (See section 11 N.S. Acts, 1920, Chapter 11.)

(9) *Posting*.—Each establishment shall keep a copy of this order posted in a conspicuous place on its premises.

(10) This order is subject to annual revision by the Board.

(11) This order shall come into force and be effective on the fifteenth day of February, 1931.

Population Group	Experienced workers	Inexperienced Adults over 18 years	Young girls under 18 years
Cities and towns 17,000 population and over.....	\$11 00	6 months at \$ 9 00 6 months at 10 00	6 months at \$ 7 00 6 months at 8 50 6 months at 10 00

LABOUR AND INDUSTRY IN BRITISH COLUMBIA IN 1930

A COMPREHENSIVE review of the industrial situation in British Columbia during the calendar year 1930, is presented in the annual report of the Department of Labour of that province. Established under the Department of Labour Act of 1917, the Department has authority to require the trade unions, industrial societies and other organizations to supply information as to their rules and practices; to require employers to furnish reports as to their employees in respect to wages, hours of work, etc.; and to obtain from any available source information as to the cost of living, the relations of prices to labour and industrial conditions in the province. Under departmental administration are the employment offices and the Factories Act. The Deputy Minister of Labour is *ex-officio* chairman of the Board of Adjustment under the Hours of Work Act, 1923, which provides for an eight-hour working day in the industries of the province, with the exception of those expressly exempted by the Board. He is also chairman of the Male Minimum Wage Board, administering The Male Minimum Wage Act, and of the Minimum Wage Board (for female employees) which administers the Minimum Wage Act.

Reviewing the unemployment situation in 1930 the deputy minister in a prefatory review states as follows: "The effect of wheat prices during 1929, which began to make itself felt during the latter months of that year, increased with the opening of the present year, and spread into every basic industry in the Province. The workers who bore the brunt of the crisis were those employed in the lumbering industry. The year had not progressed very far before those employed in this basic industry had a reduction made in their wages, and about the middle of the year the cut was general all through the lumbering industry, and ranged from 10 per cent to as high as 30 per cent. Many employers did not make more than a 10 per cent reduction in the wages of married men, the Oriental employees having the heaviest reduction.

"Following this effort on the part of proprietors to keep their plants operating, many of the operations, logging and sawmills, closed down for an indefinite period. This would have greatly increased the number of unemployed had it not been that an increase was registered in the number engaged in manufacturing, transportation and construction."

Referring to the Unemployment Relief Act of 1930, and its operation in so far as the province was concerned, the deputy minister states that the total value of works created up to June 1, 1931, amounted to \$3,382,882 giving approximately 750,870 man day's work. The number of families and single persons who received direct relief under the Act totalled 19,380 up to April 30, 1931, while the amount disbursed was \$484,591.19. An estimate of the total number unemployed in the province, gathered from reports of unemployment officials, placed the number at approximately 24,000, distributed as follows: 9,500 in Vancouver, 2,000 in Victoria; 7,000 in other municipalities; and 5,500 in unorganized districts.

Payroll and Wages.—The report points out that the depression existing throughout the entire world has had the effect of reducing the total payroll of the province for the first time in the last 10 years. In such industries as lumbering, metal mining, coast shipping and smelting, which are largely dependent on world markets and export trade, the largest reductions in salaries and wages occurred. The number of firms reporting payroll totals was 4,704, a decrease of 361 from the previous year. This decrease is largely accounted for in three industries, viz: contracting, with 63 less firms reporting; lumbering, with 141; and metal mining, with 121. The aggregate payroll shown by the 4,704 firms reporting was \$127,160,467.53, for the year 1930, a decrease of \$17,959,858 from the record total of 1929. Since the payroll total of \$127,160,467.53 was based on employers who made returns to the department it is obvious that this amount does not represent the gross total from all sources. Accordingly an estimate of other branches of industry, not covered in the questionnaire to employers, together with returns received too late to be classified, places the grand total payroll of all industries at \$167,133,813.71 as compared with \$192,092,249 in 1929. This estimated total is divided by districts as follows: Greater Vancouver, \$65,031,766.92; rest of mainland, \$70,296,482.05; Vancouver Island, \$31,805,564.74.

Of the payroll total of \$127,160,467.53, the amount paid to officers, superintendents, and managers for the year 1930 was \$13,202,109.09; to clerks, stenographers, and salesmen, \$14,034,744.30; and to wage-earners, \$99,923,614.14; the percentages being 10.38, 11.03, and 78.59 respectively.

The statistics indicate that the amount paid to wage-earners has, with the exception of 1928, decreased since 1926, while an increase in the amounts paid to the other two classifications has occurred during the same period. "While this condition might be easily accounted for during 1930, when a great many of the wage-earners were laid off or placed on short time, the percentage figures clearly show that the reduction in the amount paid to wage-earners was taking place during years when the total pay-roll of the Province was increasing. The reason for this state could be attributed to two causes: first, the increased use of labour-saving machinery, thereby enabling manufacturers to produce more with fewer of the actual wage-earning class; at the same time, in order to dispose of the increased production, a larger staff of salesmen, office-help, and executive officers was employed. The second cause might be that the remuneration to wage-earners has not increased in the same ratio as with other employees. This latter assumption seems to be borne out by the fact that during 1930 there were 7,253 adult males receiving less than \$19 per week, compared with 5,592 in 1929 and 4,391 in 1928. From these figures it would appear that officers in executive positions and those on the office and sales force have been able to maintain their salary-level, and that any reduction made in operating costs has fallen on the wage-earners."

A comparison of the 1930 pay-rolls of the 25 wage groups shows that six have increased and 19 have decreased the amount paid in wages and salaries. Among the groups registering increases, the public utility group led with a pay-roll advance of \$1,281,000 followed by food products with \$567,000; pulp and paper with \$338,000; house furnishings with \$116,000; breweries, with \$25,000; and miscellaneous group with \$107,000.

The greatest pay-roll decrease was in the lumbering industry with a pay-roll reduction of \$11,100,000 since 1929. Next to lumbering, metal mining and smelting suffered a pay-roll reduction of \$3,312,000. Other groups having large reductions were: coast shipping, \$1,165,000; contracting, \$979,000; coal-mining, \$842,000; wood manufacturing, \$592,000; metal trades, \$311,000; oil refining, \$300,000.

The report indicates the number of firms having a pay-roll of over \$100,000 per annum. In 1930 there were 219 firms in this classification as compared with 262 in 1929. The lumbering industry contained 72 of these large firms while food products had 23 of the total. Of the total of 219 such firms, 12 had an annual pay-roll of over \$1,000,000; two of these

were between \$2,000,000 and \$3,000,000, one between \$3,000,000 and \$4,000,000, one between \$4,000,000 and \$5,000,000 and one over \$5,000,000.

Weekly Wage Rates.—The average industrial wage covering a full week's work for the 95,165 adult males as indicated in the general summary was \$28.64, as compared with \$29.20 in 1929. The highest average weekly wage was \$31.51 in 1920. The average is computed from figures supplied by each firm for the week of employment of the greatest number. As previously stated, this represents the average wage for a full week's work, and it is pointed out that the average earnings covering the year would likely be lower, due to stoppages, broken time and various other conditions. The average full week's wages of adult males in each industry for the years 1924, 1929 and 1930 are given in the accompanying table.

AVERAGE WEEKLY WAGES OF MALE EMPLOYEES IN BRITISH COLUMBIA IN 1924, 1929 AND 1930

Industry	1924	1929	1930
	\$	\$	\$

The tables show that the percentage of employees in 1930 who were paid \$25 per week and upward was 58.44 as compared with 59.2 in 1929. It is also shown that there were weekly wage declines in 18 of the 25 groups. The largest decrease in the weekly wage rate occurred in the smelting group with \$3.04; followed by metal mining with \$1.93; cigar and tobacco manufacturing, \$1.52; coast shipping, \$1.48; printing and publishing, \$1.47; house furnishing, \$1.20; coal mining, \$1.15; laundries, \$1. All other reductions were below one dollar per week. The greatest in-

crease was in the explosives and chemicals groups with \$2.05 per week; followed by the jewellery group with \$1.24 per week; food products, with \$1.23; the remaining 4 groups having increases of less than one dollar per week.

The report details in tabular form the number of wage earners in each industry grouped according to the weekly wages received. The table on this page is a summary of all such tables and shows the number of employees by weekly wage groups in 1929.

CLASSIFIED WEEKLY WAGE RATES (WAGE EARNERS ONLY) IN BRITISH COLUMBIA DURING 1930

Decrease in Apprentices.—There was a decrease of 395 in the number of apprentices employed during 1930. These decreases occurred chiefly in the following groups: Contracting, garment making, house furnishing, metal trades, printing and publishing and wood manufacture (n.e.s.). Increases in the number of apprentices were recorded in laundries, metal mining, food products, builders' materials, jewelry, and the manufacture of leather goods. Dealing with the apprentice-situation, the report states:—

“It is very unfortunate that employers could not have retained their apprentices in employment, as a break in their training is a serious thing for those who were learning a trade, having a decided tendency to unsettle

their minds and make them try some other work, thereby losing valuable years not only to themselves, but to the trade in which they had started to learn.”

Employment Service.—The report of the provincial branch of the Employment Service emphasizes the “marked slackening of industrial activity, principally affecting the basic industries of lumbering and mining, but showing by reflection in practically every line of manufacture and distribution.” It is also pointed out that “for the first time in history the grain-crops of the Prairie were harvested without the assistance of labourers from Eastern or Western Canada, immigrants and the use of ‘combines’ being largely responsible for shutting out the thousands of labourers usually shipped from this Province during the harvest season.”

A summary of the business transacted by the employment offices indicates that the total number of placements was 33,641, of which 14,524 were sent to regular positions, ranging in duration from one week to permanence, while the balance, 18,082, were given casual work of less than a weeks duration.

Referring to the “handicap” sections of the Employment offices the report states that handicapped men had first choice in filling 13,710 positions in the Vancouver and Victoria offices. However, between the nature of the work to be performed and the disabilities of the applicants, but a small number of the positions were filled by handicapped men. Of the ex-service men, 258 were sent to “regular” employment where the duration ranged from one week to permanency, and 24 industrial handicaps also received work in this category. Industrials also received 296 “casual” jobs and ex-service men 1,037 of this type. Touching on the difficulty of obtaining employment for “handicaps,” the report observes that “The strenuous period through which our industries are now passing has destroyed the last vestige of response to appeals for employment, on sentimental grounds, for handicapped men. The problem, in so far as the Coast area of the Province is concerned, is still, and likely to remain, one of considerable magnitude.”

Inspection of Factories.—The report of the chief factory inspector indicates the nature of his duties, which include the inspection of all factories under the Factories Act, industrial plants designated by the Workmen’s Compensation Board, passenger and freight elevators and laundries. The inspector reported great progress in accident prevention

and also in proper lighting, ventilation and sanitation of factories and workshops.

During the year 281 passenger and 217 freight elevators were inspected. Also during 1930, 479 males and 214 females renewed their licences, and 160 males and 52 females wrote examinations for elevator operators.

There were 21 applications for extension of the hours of work of female employees, all but one being granted. Eighteen applications were made for permission for children to work in fruit canneries during the holiday season. Permission was granted for the holiday season only. During the year there were fewer violations of the Act governing hours of work in laundries than in the previous year, due to "strict and continued inspections."

Nationality of Workers.—The statistics show that the nationality of employees changed

considerably from last year. Natives of English-speaking countries increased to 72.01 per cent almost regaining the position held in 1928. Those from Continental Europe decreased to 16.07 per cent, while Asiatic employees decreased to 8.97 per cent. The employees from other countries or nationality not stated, increased to 2.95 per cent, the actual number of Asiatics employed being 9,978, compared with 12,253 for 1929.

Labour Disputes.—During the year there were the same number of strikes and lock-outs as in 1929—viz. 9—the number of employees affected being 177 as compared with 482 in the previous year, while the time lost in working days increased to 3,309 in 1930 as compared with 3,320 in 1929.

British Columbia Male Minimum Wage Act

The annual report of the Department of Labour devotes a chapter to the administration of the Male Minimum Wage Act, and in particular reviews the court decisions in connection with the Board's Order governing the wages of licentiates of pharmacy. The various court actions in the case of this order were outlined in the LABOUR GAZETTE, September, 1930, page 1029.

Subsequently, as stated in the LABOUR GAZETTE, May, 1931, page 530, the legislature passed an amendment to the Male Minimum

Wage Act excluding the professions from its operations. This amendment definitely excluded licentiates of pharmacy, nullifying the Board's order and terminating a case which had been before the Board and the courts for 18 months. At present there is only one Order in effect under the Act, i.e., that establishing the minimum wage of stationary engineers (LABOUR GAZETTE, March, 1930, page 282). There were two prosecutions under this Order against saw-mill operators, convictions imposing the minimum fine resulting in both.

British Columbia Hours of Work Act in 1930

The administrative activities under the Hours of Work Act, 1923, are reviewed in the annual report of the Department of Labour. The Board administering the Act reported that it had been "impressed by the fact that throughout this period of declining production the hours worked by employees have not exceeded 48 in the week in the industries covered by the Act."

It is pointed out that "regulations made by the Board grant exemptions to certain employees in a number of the industries covered by the Act. These apply to employees who have to perform preparatory work or necessary repair-work after the regular working day has been completed in order that the plant may be in readiness for the full crew the following morning."

The industries which operate more than forty-eight hours are those not covered by the Act, or those operating on a continuous pro-

cess, and working seven days per week, such as smelting, certain branches of coast shipping, the food products group, oil-refining, and in all lumbering operations east of the Cascade Mountains, where, because of an enforced shutdown during the winter months due to climatic conditions, lumber operators were granted a nine-hour day during their operating season.

In order that all available work in industry might be spread over as many men as possible and thus absorb to a limited extent those out of employment, the Board of Adjustment decided that no further temporary exemptions would be granted under section (9) of the act until such time as conditions again become normal.

The average weekly working-hours covered by the 4,704 firms making returns for the year was 48.62 per week, a slight increase over

1929, when the figures were 48·25; 48·43 in 1928; 48·55 in 1927; and 48·84 in 1926.

Referring to the operation of the Act, the report states as follows: "It is the well-considered opinion of the Board that the working-hours in this Province are the lowest existing in any Province in Canada; 77·60 per cent of the total wage-earners were working eight hours per day or less, 13·36 per cent worked between eight hours and not more than nine hours per day, and 9·04 per cent of all employees were working in excess of nine hours per day; and while the above percentages do not appear as favourable as those given in our last report, it must be realized that many of the industries affected by the present industrial set-back are those to which the Hours of Work Act applies."

The accompanying table shows the trend of average weekly hours in all industries covered by the report in the past three years.

AVERAGE WEEKLY HOURS OF WORK BY INDUSTRIES IN BRITISH COLUMBIA

Industry	1928	1929	1930

Minimum Wages for Women in British Columbia in 1930

Included in the annual report of the Department of Labour is the thirteenth annual report of the Minimum Wage Board. Under this Act, which became operative in 1918, nine orders respecting minimum wages have been put into effect, and these include practically all classes of work in which women and girls are engaged throughout the Province with the exception of domestic servants, fruit pickers, farm labourers and their employers who are excluded from the operation of the Act.

The total number of women and girls within the scope of the Act during 1930, as indicated by the returns from 3,456 employers was 20,461, as compared with 20,766 in 1929, the reduction being attributed to the prevailing, abnormal business conditions.

The report states that owing to the tendency on the part of some employers to reduce wages below the legal limit the Board exercised unceasing vigilance during the year. Through its efforts arrears were paid in the sum of \$3,059.10. This amount represents the difference between the wages to which the employees were entitled and the amounts they actually received, the individual adjustments ranging from 90 cents to \$200. Girls in all parts of the Province benefited from this tangible assistance.

It is also pointed out that effectually to ensure future compliance with the regulations and to remedy actual infractions it was necessary to institute Court proceedings against fourteen employers during the year. The informations were laid in Vancouver, Kelowna, Kamloops, and Victoria. Provisions of four out of the nine Orders had been broken. Two violations under the Office Order were noted, with one each under the Manufacturing and Personal Service Orders. The remaining ten charges were brought against employers in the Public Housekeeping Occupation.

The following is a summary of the minimum wage orders in force, showing the weekly and hourly rate for experienced workers in the various classes:—

Mercantile industry, \$12.75 (hourly rate, 26²/₁₆ cents).

Laundry, cleaning and dyeing industries, \$13.50 (hourly rate, 28³/₄ cents).

Public housekeeping, \$14 (hourly rate 29¹/₂ cents).

Office occupations, \$15 (hourly rate 31¹/₄ cents).

Personal service occupation, \$14.25 (hourly rate, 29¹/₁₆ cents).

Fishing industry (canneries), \$15.50 (hourly rate, 32⁷/₂₄ cents).

Telephone and telegraph occupation, \$15 (hourly rate, 31½ cents).

Fruit and vegetable industry, \$14.40 (hourly rate, 30 cents).

Manufacturing industry, \$14 (hourly rate, 29½ cents).

Of the total of 20,461 women and girls employed in the nine occupations and industries covered by the Act, 3,923 or 19.17 per cent were listed as receiving the actual minimum for their respective classes of work. In the higher scales of pay, it is noted that 12,458 employees, or 60.89 per cent were receiving wages in excess of the minimum. The balance, comprising 4,080 employees, or 19.94 per cent of the total, were recorded as receive-

ing wages below the minimum. This group includes young girls and inexperienced workers for whom lower rates are set, and employees who worked less than 48 hours in the week and were paid on a *pro rata basis*.

The average weekly wage for all occupations for experienced employees over 18 years of age during 1930 was \$17.37 as compared with \$17.64 during 1929. A comparison of the tabular statistics indicates that averages for experienced employees fell below the 1929 levels in eight of the nine occupations, while in the telephone industry the weekly average for skilled operators remained stationary. The accompanying table presents a summary of the chief statistics dealing with all occupations covered by the regulations.

SUMMARY OF ALL OCCUPATIONS

	1930	1929	1928	1927	1926
Number of firms reporting.....	3,456	3,602	3,425	3,455	3,123
Total number of employees.....	20,461	20,766	19,377	17,507	16,070
Over 18 years, or experienced.....	18,450	18,390	17,191	15,697	13,725
Under 18 years, or inexperienced.....	2,011	2,376	2,186	1,810	2,345

Average weekly wages—		
Employees over 18 years.....	\$14 23	\$15 60
Employees under 18 years.....	11 77	13 86
Percentage of employees under 18 years..	5.51%	4.52%

The report shows the relative proportion of married, widowed, and single women employees in industry. From the returns for 1930, the following percentages were indicated: married, 19.67; widowed, 3.68; single 76.65.

Regulations for the protection of workers in the construction of tunnels and open caisson work in Ontario were approved by a recent provincial Order in Council. The subjects dealt with in the regulations include explosives; inflammable material; blasting, misfires, etc.; scaling and inspection for loose material, hoisting, hoisting ropes, and duties of hoisting engineer; signals and signal codes; safeguards against overwinding of hoisting ropes; cages for hoisting; stairways and ladders in shafts; cleaning of ladderways and stairways; shaft protection; ventilation; sanitation; telephone system; and lighting.

MINING IN THE PROVINCE OF QUEBEC IN 1930

THE annual report of the Quebec Bureau of Mines reviews mining operations for the calendar year 1930. The total value of the production of the mines and quarries of the Province of Quebec during the year ending December 31, 1930, amounted to \$41,158,740. Compared with the previous year, when a high record was established by a production representing a value of \$46,454,820, the figures for 1930 showed a falling off of \$5,296,080 or a proportional decrease of 11·4 per cent.

In the metallics and non-metallics section, asbestos led with a valuation of \$13,172,581 for a total of 242,113 tons; copper in ore was second with a valuation of \$10,019,901 for a production of 80,310,363 pounds; while gold was third with a value of \$1,876,960, for 141,747 ounces produced. In the building materials section, cement was in first place with a value of \$7,120,374 for 4,865,609 barrels; limestone was second with \$3,154,517 for 2,811,300 tons; and brick third with \$2,475,403.

Employment and Wages.—Statistics of the mineral industry show a total number of 13,754 men employed part-time in 1930. When reduced to the basis of a year of 300 working days, this total is equivalent to 10,549 men working full time. On this 300-day basis, the total of men employed full time during the previous year was 11,063.

The total wages paid to workmen in mines and quarries during 1930 amounted to \$11,994,271, a decrease of eleven per cent from the amount paid the year before. The sum received by the miners is \$6,525,092 as compared

to \$7,460,484 the previous year; in the quarries \$5,469,179 was paid to the workmen, against \$6,084,072 in 1929. The average wages earned by a 300-day workman during 1930 was \$1,137 against \$1,224 in 1929.

Accidents.—The total number of accidents during 1930 in mines, quarries and assessed plants was 640, of which 24 were fatal. It is explained that recorded non-fatal accidents in 1930 were more than in any previous year owing to the fact that more complete figures have been collected through the co-operation of the Workmen's Compensation Commission. The number of accidents per 1,000 full-year workers was 60·7 in 1930; 44·5 in 1929; and 42·4 in 1928.

The average fatality rate for the year is 2·28 per 1,000 full-year workers. This compares with 1·62, 2·29, 2·63 for the years 1929, 1928, 1927, respectively. In mines proper the proportion was 3·8, and in quarries ·91, against 1·93 and 1·12 during 1929. Of the 24 fatalities in 1930, 19 occurred in mines and 5 in quarries.

The chief causes of fatal accidents in mines were falls of rocks, falls, haulage, and explosives, while in quarries, 60 per cent of the accidents were due to falls of ground. The chief cause of non-fatal accidents in mines was loading of cars and boxes, which represented 22 per cent of the total. In quarries, the chief cause was in handling stones or objects, while in annexed plants, "machinery and tools" and "handling objects and stones" each represented 20 per cent of the accident causation.

MINING IN ALBERTA IN 1930

THE annual report of the Chief Inspector of Mines of Alberta for the calendar year 1930 shows that coal production in the province during that year was the lowest since 1924, this being attributed to the extremely mild winter. The report reviews the activities of the mining industry during the year, and includes tabular summaries of coal production, the number of workmen employed in the coal mines, the annual consumption of coal in the Dominion, the number of accidents, the number and nature of prosecutions under the Mines Act, certificates issued, etc.

Coal Production in 1930.—The coal production in 1930 totalled 5,755,911 tons with a value of \$19,379,000. Of this output, 1,234,382 tons were sold for consumption in the Province of Alberta, 2,020,280 tons in other Provinces in Canada, 44,291 tons for consump-

tion in the United States, 2,120,237 tons were sold to railroad companies, 22,272 tons were used in making briquettes, 220,581 tons were used under colliery boilers, 7,820 tons were used by colliery locomotives, 40,363 tons were put to stock and 99,232 tons were put on the waste heap. In addition to the coal mined, there were 67,517 tons of shale mined, from which 22,007,045 bricks were manufactured.

There were in operation during the year 5 open pits producing shale for brick making; also 301 coal-mines, of the latter 25 were opened, 28 re-opened and 21 abandoned. In addition to the mines abandoned, there were 28 closed temporarily, leaving 251 in operation at December 31, 1930.

The production of domestic coal amounted to 2,874,090 tons; sub-bituminous totalled 603,331 tons, and bituminous 2,278,490 tons. No

anthracite coal has been produced in Alberta since 1923. During 1930 there were 29,784 tons of Alberta coal disposed of in Ontario as compared with 55,335 tons in the previous year.

The number of tons mined per man underground since the year 1919 was as follows:

1919..	958
1920..	1,055
1921..	824
1922..	971
1923..	893
1924..	982
1925..	834
1926..	991
1927..	970
1928..	1,107
1929..	1,004
1930..	871

Number of Employees.—The total number of employees in all the coal fields as at December 31, 1930, was 11,199, which was a decrease of 321 from the number employed during the same month of 1929. The number employed underground at December 31, was 8,625, with 2,574 above ground. Of these totals, domestic fields provided employment for 5,538 underground and 1,302 above ground; sub-bituminous coal mines for 578 below ground and 963 above ground; bituminous mines for 2,509 below and 887 above ground.

Prosecutions.—There were 24 prosecutions instituted for contraventions of the Mines Act, and 12 for contravention of the Coal Mines Regulation Act, involving 15 workmen, 10 officials and 11 operators. Convictions were obtained in all cases.

Examinations for certificates of competency as coal-miners have been conducted by the inspectors at various centres throughout the Province, there having been 800 certificates issued during the year, making a total of 12,119 certificates issued to December 31, 1930.

The report points out that the use of purchased electric power by the mines in the province is still increasing, there having been 25,003,606 k.w. hours purchased during 1930 as against 23,510,529 k.w. hours in 1929.

Accidents.—There were only 11 fatal accidents during the year, which is the lowest recorded in the province since 1911. The ratio of one fatal accident per 523,264 tons of coal mined also constitutes a new record for Alberta. In addition to the 11 fatal accidents, there were 69 recorded as "serious" and 97 as "slight". In 1929, the corresponding totals were 31, 69 and 98. Of the accident total, 8 of the fatal, 63 of the serious and 83 of the slight, were below ground. As during the previous year, the greatest factor in the causation of accidents was haulage which accounted for a total of 50 accidents both above and below ground.

Safety Measures.—In addition to tests made by gas detectors, the report states that samples of mine air have been taken at intervals by the inspectors from mines in the bituminous areas and forwarded to the Chemistry Branch of the Department of Mines, Ottawa, for analysis.

In all bituminous mines that are dry and dusty, rock-dusting with crushed limestone has been continuously carried on. Samples of rock-dust used have been collected and forwarded to the Provincial Analyst and tested for silica content.

Other Mineral Products.—In addition to coal mining, operations in the province yielded bituminous sands to the value of \$7,968; natural gas, \$4,806,125; petroleum, \$4,700,760; and clay products and other structural materials, including cement \$1,144,160; clay products, \$997,686; lime, \$49,525; sand and gravel, \$388,417; and stone, \$21,736.

Old Age Pensions in New Zealand

The annual report of the Pensions Department of the Commonwealth of New Zealand for the fiscal year ended March 31, 1931, shows that 28,995 persons were in receipt of pensions at the close of that period, the total payments during the year being £1,158,788.

The history of Old Age Pensions in New Zealand dates back to 1898, in which year was passed the original Old Age Pensions Act, which provided for a pension of £18 per annum to persons of sixty-five and over who had twenty-five years' continuous residence

in the country and complied with the requirements in other respects. The law relating to old-age pensions is now contained in the Pensions Act, 1926, which is a consolidation of previous enactments on the subject. The qualifications for the old-age pension are briefly as follows:

The applicant, if a male, must have reached the age of sixty-five, or, if a female, must have reached the age of sixty, except in cases where the applicant is the parent of two or more children under fifteen years of

age who are dependent on him (or her). The pension age in such cases is sixty for men and fifty-five for women, and the pension payable may be any sum up to £13 per annum, in addition to the ordinary pension payable.

The applicant must be resident in New Zealand, and must have resided continuously in the Dominion for the past twenty-five years. Continuous residence is not interrupted by absences not exceeding two years in the aggregate.

The applicant must have lived a sober and reputable life during the past year.

The yearly income of the applicant, if single, must not reach £97 10s., and, if married, £143.

The net value of accumulated property, as defined by the Act, must be under £460.

The applicant must not have deprived himself or herself of property or income to qualify for a pension.

The original Act of 1898 provided for a pension of £18 per annum, or 6s. 11d., per week. This amount was, however, increased to £26 per annum (i.e., 10 s. a week, or £2 3s. 4d., a month) by the Amendment Act of 1905. Under the Finance Act, 1917, every person in receipt of an old-age pension was paid an additional 5s. a week, or £13 per annum, by way of war bonus, and, in terms of the provisions of the Finance Act, 1920, this

bonus was incorporated in the statutory pension, bringing it to 15s. a week, or £39 per annum. The Pensions Amendment Act, 1924, provided an additional 2s. 6d. per week in cases where the pensioner was without property and had no income other than his pension, and the Pensions Amendment Act, 1925, extended this increase to all pensioners, making the present general rate £45 10s. per annum. The full pension of £45 10s. is reducible by—

(1) £1 for every complete £1 of income over £52;

(2) £1 for every complete £10 of net capital value of accumulated property.

A further deduction of £1 for every year or part of a year by which the age of a woman pensioner is less than 65 is also made, except in cases where the pensioner is the mother of two or more children under 15 years of age who are dependent on her. The income of a married applicant for pension purposes is considered to be half of the joint incomes of husband and wife. The joint incomes of a married couple must not exceed, with pension added, the sum of £143.

Income includes free board and lodging up to £26 per annum.

The population of New Zealand at the Census taken in 1926 was 1,344,469 persons (686,384 males and 658,085 females).

SAFETY CODE GOVERNING WATERFRONT OPERATIONS AT THE PORT OF HALIFAX

THE Halifax Waterfront Accident Prevention Association recently prepared a Safety Code governing waterfront operations at the Port of Halifax, and this Code has now been published with the approval of the Nova Scotia Accident Prevention Association; the Halifax Harbour Commissioners; the Halifax Longshoremen's Association; and the Halifax steamship and stevedoring companies.

It may be noted that the Association is established under the provisions of the Workmen's Compensation Act of Nova Scotia which provides at Section 83 as follows: "Where any Association shall make rules for the prevention of accidents in the industry or industries represented by such Association, such rules shall, if approved by the Board, be binding on all the employers included in the class, sub-class or group represented by such Association whether or not such employers are members of such Association."

The "foreword" to the Code is as follows:—

"Longshoremen, by reason of the nature and character of the work, the frequent and severe climatic changes in the winter months, and the necessity of giving prompt despatch to ships, are constantly exposed to the danger of serious injury by accident.

"The payment of compensation and medical aid only in part relieves the suffering that necessarily flows in the wake of a serious accident. At the best, it can be only considered a method for relieving a part of the problem. While it is correct to say that accidents will happen in spite of the best precautions, it is equally true to say that a great many accidents can be avoided, and thus necessarily prevent human suffering. The longshoreman who has to carry the bulk of the burden of injury must necessarily be in full sympathy with any organized move-

ment whose aim and ultimate object is to protect him from avoidable accidents.

"No safety movement can be successfully carried on without the fullest measure of co-operation of employers and workmen. Safety regulations will be of no service unless the employer on the one part makes an earnest effort to place them into effect, and the longshoreman, on the other part, will do all in his power to see that such rules are wholeheartedly followed by himself and his fellow workmen.

"Each longshoreman is the guardian of the safety of his fellow longshoremen when working. The safety of one man should be the concern of all the men. The experienced workman can help his less experienced fellow workman by pointing out a dangerous practice or condition when such presents itself. There should be no taking chances when such are contrary to safety rules.

"In respect to Safety Regulations, see that they are carried out to the limit, and remember always that it is a duty you owe to yourself, to the members of your family and to your fellow workmen to consider and adopt a safe method of doing your work and not only preach safety but to religiously practice it as well.

"Ships' Officers are earnestly requested to give their co-operation in this movement for the prevention of accidents on the Halifax Waterfront and to assist in the carrying out of the regulations of the Safety Code."

The Committee which prepared the Code was composed as follows: Messrs. H. I. Mathers, Scotia Stevedoring Co., Ltd., chairman; E. A. Saunders, Halifax Board of Trade, secretary; Captain J. W. Harrison, Furness Withy Co. Ltd.; A. M. Sullivan, president, Halifax Longshoremen's Association; Thos. Evans, Secretary, Halifax Longshoremen's Association; F. C. Cornell, Halifax Harbour Commissioners; Captain E. A. LeBlanc, Canadian National Steamship Co., Ltd.; and M. L. Fraser, Nova Scotia Accident Prevention Association.

The code is in two parts, Part 1, containing Safety Rules for longshoremen, and Part 2, containing safety rules for Steamship and Stevedoring companies.

Safety Rules for Longshoremen

The first section of this part contains the following general safety instructions: (1) Every injury received at work shall be reported immediately by the injured person to his foreman or immediate superior. The injured employee shall see to it that every

wound, however insignificant it may appear is at once treated by the employer's authorized first-aid attendant, or doctor, and carefully guarded against the penetration of dust and other impurities. As long as the injury is not protected by the prescribed emergency covering, the injured person shall not be permitted to work; (2) "Horseplay" and scuffling on the job are prohibited; (3) Employees shall, as far as possible, remain near their work; (4) Entering dark holds, docks, or compartments without light is prohibited; (5) Employees in the vicinity of moving machinery should wear closely fitting clothing; (6) Employees shall not unnecessarily walk or ride strongbacks or beams; (7) Employees shall use only the safe gangways provided when going to and from, or about, the ship; (8) Walking over covered hatches shall only be done in case of necessity and after hatch covers have been examined by foreman. Take time to go around; (9) All precautions for safety shall be taken when it is necessary to use a ladder. Do not use any ladder that is not properly secured; (10) Docks, decks and other working places shall be kept clean and orderly; (11) Employees are expected to do everything possible to prevent fires on the ships and decks. No smoking on ship or dock; (12) No longshoreman under the influence of intoxicating liquors will be permitted to work; (13) When lifting a heavy object, be sure of your footing. Bend your knees; keep your back straight, and push up with your leg muscles, and avoid painful back strains and ruptures; (14) Stand clear of unguarded crankshafts and other moving machinery.

The titles of the remaining sections of this part are as follows: (2) Safe handling of cargo; (3) Safe handling of gear; (4) Safe handling of winches; (5) Special safety rules; (6) First Aid Rules.

Safety Rules for Steamship and Stevedoring Companies

Section 1 defines responsibilities and duties under the code, including those of the steamship agent or stevedoring contractor, the general foreman, the gang foreman and the longshoreman.

Section 2 contains the following general safety rules: (1) Where employer furnishes hoisting equipment all gears and friction drives, wherever located, should be completely encased. Where, in the case of gears, this is impossible, a band guard shall be provided with side flanges extending inward beyond the root of the teeth; (2) Where an edge of

cargo or of a landing platform is exposed and there is danger of falls of persons, the edge should be guarded by a life line; (3) Winches, conveyors, belts, and all driving gear may be lubricated while in motion only when this can be done by means of suitable contrivances, without danger; (4) Lubricating and oiling while a machine is in motion may be done only by persons authorized to do so; (5) Chains or nippers shall not be repaired, even temporarily, by bolting two links together or by the use of wire; (6) Entering dark holds, decks or compartments without a light is forbidden; (7) Drunkenness will not be tolerated. No employer or employee or representative of employing stevedore or

ship who has any contact with stevedore operations shall be allowed to go to work, or continue at work, if under the influence of liquor.

The other sections deal with the following groups of subjects:—

(3) General working conditions, including reporting of injuries; first aid; decks, platforms and gangways; access to vessel; hold ladders; winch operations and noxious cargo.

(4) Preparation of hatches and decks for cargo handling operations.

(5) Handling of cargo and practices incidental thereto.

(6) Stevedoring gear.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Cost of Industrial Accidents

At the annual Safety Conference of the Province of Quebec Safety League, held at Montreal last May, Mr. H. W. Heinrich, of the Travellers' Insurance Company, read a paper on the cost of industrial accidents. He pointed out that there are two kinds of accident costs—direct and indirect. Direct costs comprise expenditures incurred in consequence of claims under the provisions of compensation laws, and of the medical aid required by law. Together, these items amount to about \$3,792,000 for Canada, being a direct cost to the public.

The Travellers' Company's engineers estimate the indirect or hidden cost of all industrial accidents to be four times as great as the compensation and medical payments. Expressed in another way, compensation payments constitute only one-fifth of the total employer accident-cost. This estimate is based upon careful and conscientious research, which now includes no less than 10,000 cases taken at random from claim files. Its accuracy has been demonstrated by application to scores of specific plants.

"The four-to-one proportion does not necessarily hold true, with regard to any one industrial accident, nor for any one individual plant, and it is granted that in nation-wide application the ratio may vary; yet it has already been tested sufficiently to provide approximate confirmation of the facts. At this point it may be of interest to give a résumé of an explanatory article dealing with the four-to-one ratio of hidden costs to recognized ones, which appeared in the *Travellers' Standard* for November, 1927:

Factors in the Hidden Cost, to Employers, of Injuries to Employees

(Excluding compensation and liability claims; excluding medical and hospital cost; excluding insurance premiums, and excluding cost of lost time, except when such is actually paid by the employer without reimbursement.)

1. Cost of lost time of injured employee.

2. Cost of time lost by other employees who stop work (a) out of curiosity; (b) out of sympathy; (c) to assist injured employee, or (d) for other reasons.

3. Cost of time lost by foremen, supervisors, or other executives as follows: (a) assisting injured employee, (b) investigating the cause of the accident; (c) arranging for the injured employee's production to be continued by some other employee; (d) selecting, training, or breaking-in a new employee to replace the injured employee, and (e) preparing accident reports, or attending hearings before industrial commissioners.

4. Cost of time spent on the case by first-aid attendant and hospital department staff, when this time is not compensated by insurance.

5. Cost due to injury to the machine, tools or other property, or to the spoilage of material.

6. Cost due to interference with production, failure to fill orders on time, loss of bonuses, payment of forfeits and other similar causes.

7. Cost under employee welfare and benefit systems.

8. Cost in continuing the wages of the injured employee in full, after his return—even though the services of the employee (who is

not yet fully recovered) may for a time be worth only about half of his normal value.

9. Cost due to the loss of profit on the injured employee's productivity, and on idle machines.

10. Cost of subsequent injuries that occur in consequence of the excitement or weakened morale due to the original accident.

11. Overhead cost—the expense of light, heat, rent and other such items—which continues while the injured employee is a non-producer.

"This list does not include all of the points that might well receive consideration, although it clearly outlines the vicious and seemingly endless cycle of events that follow in the train of accidents. The application of this set of factors to specific cases is illustrated by the following typical example, taken from actual experience."

Total cost of compensation and medical aid.	\$ 209 00
Total additional cost, paid directly by employer.	937 00

The following accidents occurred on a building-erection job:

No. of Accidents	Type of Injury	Compensation and medical cost
3	Fractures and contusions.	\$ 106 00
18	Rivet burns, cuts, bruises.	76 00
21	Falling materials.	15 00
30	Slips and falls.	12 00

The hidden cost was computed as follows:

Time lost by injured employees, paid directly by the employer.	\$ 116 00
Time lost by other employees in consequence of the accidents.	310 00
Time lost by foremen and superintendent as a result of accidents.	78 00
Property damage.	158 00
Payment of forfeits (2 days) for failure to complete the job on time.	200 00
Portion of overhead cost lost during delay due to accidents.	75 00

Deathrate of Canadian Workers

The *Statistical Bulletin* published by the Metropolitan Life Insurance Company analyses in its issue for June the deathrate among insured Canadian workers, as follows:—"The deathrate among Canadian wage earners and their dependants runs about 9 per cent higher than for the Industrial wage-earning population in the United States. This is entirely due to the high deathrates in the provinces of Quebec, New Brunswick, and Nova Scotia—more especially Quebec. These statements are based on an analysis of the mortality statistics of approximately one and one-quarter million Canadian Industrial policyholders of the Metropolitan Life Insurance Company, for the years 1925 to 1930.

"There are nevertheless many encouraging features in the Canadian health situation. The tendency of the mortality rate for most of the preventable diseases has been definitely downward; and in 1930 typhoid fever, scarlet fever, diphtheria, influenza, tuberculosis of the respiratory system, and puerperal conditions recorded lower mortality among Canadian policyholders than ever before. On the other hand, the improvement in Canada for diphtheria and tuberculosis has by no means matched that among American policyholders. For diphtheria, it was not until 1930 that a marked change for the better was observed. For tuberculosis (all forms), the decline in Canada has been small in recent years. There is much to be accomplished, especially in Quebec, in connection with these diseases. With respect to most of the other important diseases, the course of the deathrate among insured Canadians has not differed materially from that observed for policyholders in the United States.

"The most favourable feature in the Canadian mortality statistics, as compared with those for the United States, is that relating to deaths from violent causes. Suicides show a much lower deathrate than among American wage-earners, although the mortality from this cause rose quite sharply in each country in 1930. Fatal accidents also exact a lower toll of life among Canadian wage-earners than obtains in the United States. The deathrate for definite types of accidents, like burns, drownings, falls, machinery accidents, railroad accidents, and more especially automobile fatalities, run, year after year, well below the figures for this country. Canada, nevertheless, has been experiencing a risen automobile accident deathrate, which almost doubled between 1925 and 1929. In 1930, however, a decided reduction was observed.

"The greatest contrast between the mortality statistics of the United States and Canada is found in the figures for homicides. Murders and manslaughters are relatively rare occurrences in Canada. During six years, only 39 homicidal deaths were recorded among Canadian wage-earners insured in the Metropolitan. The deathrate ran from a low point of 0.2 per hundred thousand insured lives to a maximum of 0.8. During the same time, in the United States, the rate ran from a minimum of 7.0 to a maximum of 7.7 and 7,368 deaths were charged to this cause. Obviously, the very high homicide rate in the United States among approximately two and one-quarter millions of insured negroes accounts for some of the difference; but even if the comparison is made on the basis of white lives, the homicide deathrate in

Canada stands at approximately one-sixth that in the United States. Possibly one explanation for Canada's low homicide death-rate is the more prompt and more certain disposition in that country of the cases of those who give way to the homicidal impulse."

European Conference on Rural Hygiene

A European Conference on Rural Hygiene, convened by the Council of the League of Nations, was held in Geneva from June 29 to July 7, 1931. Among the questions on the agenda were two directly affecting social insurance: the question of the best methods of ensuring effective medical assistance in rural districts and that of the best methods of organizing rural health services. The Conference adopted a resolution setting forth the essential elements of medical assistance in rural districts: the number and distribution of doctors and pharmacists, a technically qualified auxiliary staff of nurses, centres of diagnosis, dispensaries, hospitals and laboratories. The resolution then deals with the means of carrying out the program, which calls for the collaboration of public health and welfare authorities, the medical profession, health insurance institutions, mutual benefit associations, and, if necessary, private agencies. The passage of the resolution relating to health insurance is as follows:—

The experts consider that when health insurance applies to the entire body of agriculture labourers it permits the realization of effective medical assistance in rural districts under the best conditions. Nevertheless, where health insurance has not yet been established, rationally organized free medical

assistance may intervene usefully in completing a system which partially satisfies the needs of rural populations.

The Conference also adopted a resolution relating to the methods of organization and the program of work of health services in rural districts. This resolution contains the following passage on co-operation between health services and social insurance institutions: In order to avoid deficiencies and prevent duplications in the promotion of the health of the rural population, it is desirable that collaboration should be established between the public health services and social insurance institutions. This collaboration might relate particularly to the following work: joint study of plans for the provision of sanitary equipment in rural districts; establishment of vital statistics; campaign against tuberculosis, venereal diseases, cancer, mental diseases, alcoholism, etc.; maternal and infant welfare; child welfare; education in hygiene of the rural population. This collaboration might be realized by means of committees of co-operation composed of representatives of the public health service and insurance institutions.

An employee in the transfer department of the Toronto Post Office died on August 8, as the result of injuries he received the day before, when he was struck on the head by an elevator door which he was approaching on a platform truck. The coroner's jury which investigated the circumstances of the accident recommended that post office platform trucks should be equipped with some safety device such as is used by the express companies.

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

Amendment to Regulations of Vancouver Apprenticeship Council

The Vancouver Apprenticeship Council has approved amendments to its rules and regulations whereby contractors may lay off an indentured apprentice during a slack season without pay, subject to the written consent of the council in each case. The right to give official and binding decision on each individual case has been reserved by the council.

Under the former regulations an indentured apprentice had to be retained by the contractor with full pay, regardless of the amount of work offering. Owing to the unusual conditions now existing in the building industry, however, and with a view to relieving con-

tractors who were in many cases heavily burdened with overhead expense during the existing quiet period, the Vancouver Apprenticeship Council, in response to numerous suggestions, agreed to the regulations which may be again changed when conditions return to normal.

Apprenticeship in Ontario

In a recent speech at St. Thomas, Ont., Mr. G. B. Evans, on behalf of the Inspector of Apprenticeship, set forth some important facts in connection with the working of the Apprenticeship Act in the different trades affected. One of the significant facts he mentioned was that the plumbing, steamfitting

and sheet-metal working trades have taken fuller advantage of the Act than some of the other trades: more money had been spent by the Government on the school training of apprentices in these trades than was collected from the employers in these trades.

Mr. Evans pointed out that up to October 31 last, 1418 boys had been registered, of whom 160 had completed their apprenticeship and been granted diplomas; that ninety contracts were cancelled for various reasons; and that since that date 107 boys have registered.

LABOUR DAY MESSAGES OF CANADIAN LABOUR LEADERS

President of the Trades and Labour Congress of Canada

ON the eve of Labour Day, September 7, the following message was issued by Mr. Tom Moore, president of the Trades and Labour Congress of Canada. After referring to the origin of Labour Day, and to its establishment as a public holiday by Act of Parliament in 1894, Mr. Moore proceeded to refer to the economic difficulties of the present day: "It is a period of unrest and demand for change, men and women being no longer content to accept as their lot involuntary idleness and all the misery and degradation of their standards of living which this involves. It is no exaggeration to say that the security of the whole social structure is being seriously threatened by the long continued and ever growing volume of unemployment existing throughout the world which the old order of things, industrial, economic and political, appears unable or unwilling to successfully cope with. The seeking for a remedy for the present insane and intolerable conditions where goods and food are rotting whilst would-be consumers remain hungry and in want has, during the past few years, taken various forms in other countries. We have seen Russian communism and Italian fascism grow to previous unthought of power over millions of people. Kingdoms have fallen and republics taken their place whilst the effectiveness of old established democracies is being questioned as never before.

"From this world maelstrom Canada has not escaped, and the question arises as to how the situation is to be best met. It cannot be gainsaid that Canada is in a more fortunate position to successfully grapple with this problem of unemployment than most other countries. The vast natural resources with which nature has so plentifully endowed this country are as yet scarcely touched and Labour refuses to be convinced that when these are developed for the common good, and not merely for the personal gain of the few, that there is no further possibility of bettering the conditions of the masses. Pend-

ing such change being brought about every effort must be exerted to secure immediate relief for the desperate conditions in which thousands of willing workers now find themselves with the almost certain increase in their numbers during the coming winter. This is a time for courageous spending and not timid retrenchment; all possible public works should be immediately initiated both by federal, provincial and municipal authorities and the utmost advantage taken of the lull in private industrial activity to develop Canada's heritage to the full.

"Unemployment insurance, health insurance and other progressive social legislative measures should be enacted and thus permanently remove the fear of destitution from the minds of willing workers by giving protection to them when unfortunately they are no longer able to provide the necessities of life. Coincident with this, employers must do their part and by reducing hours counteract the displacement of human labour by machinery and thus create more opportunities of employment for the jobless. By these methods, and not through slashing of wages, curtailment of spending power, restriction of national development or reduction in standards of living, lies the way to a solution of the unemployment problem and future national prosperity.

"Civilization only develops in proportion to the will of men to progress and it is this which motivates labour to again reaffirm its determination to use every constitutional means to break through the existing man-made barriers to social progress and continue the forward march to a higher civilization."

President of All-Canadian Congress of Labour

Mr. A. R. Mosher, president of the All-Canadian Congress of Labour, in a message issued in connection with Labour Day, made an appeal for the encouragement of a sense of solidarity among Canadians of all classes. He stated that the organized workers of Canada represented by the All-Canadian Congress of Labour are opposed to the advocacy of

revolutionary activity. "They believe," he continued, "that it is possible, through the democratic institutions of our country, to provide means for the redress of social and economic inequalities, and the evolution of a more satisfactory order of society by the application of intelligence and good-will to the problems which beset Canada and the other nations of the world at the present time. It cannot be denied, however, that many of the institutions which have been built upon a competitive profit-seeking economy are now on trial. They are being judged by their capacity to promote human welfare, and their failure to do this is an indictment which the defenders of the present system must be prepared to meet. . . Surely it is obvious that with her vast area and the abundance of her natural resources, with ample wealth in the form of capital and raw material, with technical knowledge, and with ample skilled and unskilled labour, the Canadian people should be able to provide for every reasonable need. "It is to be hoped that the information to be made available as a result of the census this year will give a picture of Canadian industry which will make possible a larger measure of national planning, and a recognition by the people as a whole of the defects of the pre-

sent economic system. Statistics show that a disproportionate amount of wealth now goes into channels of production, instead of being made available to the people in consumptive goods. In order to bring about a balance between production and consumption, action must be taken by the federal government to provide facilities for the exchange of information regarding raw materials, markets, labour supply, and other factors in industry. The people of Canada should recognize that the industry of the country can and must support its population. The present situation is rapidly becoming unbearable. It challenges the intelligence of every citizen, and the workers are ready to co-operate with the other classes of the community in any measures which will remove the inequalities of the present economic order.

"On Labour Day, therefore, may I appeal to Canadian citizens, generally to give some thought to the actual conditions of the underprivileged masses, and do what they can to develop public opinion for the support of such economic reforms as will prevent the recurrence of economic depressions, through the re-establishment of industry on an intelligent and equitable basis."

NOTES ON LABOUR UNION ACTIVITIES

A.F. of L. Convention

The executive council of the American Federation of Labour has issued the call for the 51st annual convention of the federation, which is to meet in Vancouver, B.C., on October, 5. In announcing the meeting the executive says:

"The fifty-first convention will be convened at a period of widespread unemployment and suffering from curtailed incomes. As this convention will have to consider serious problems and formulate important policies, it is essential that all organizations be duly represented by delegates. At no time in economic history has the close integration of economic interests of all groups been so irrefutable demonstrated as during this world-wide depression. Labour has an essential contribution to make in securing for wage-earners their proper share in economic progress so that prosperity shall be sustained. The coming convention will outline policies to that end and will need the experience and co-operation of wage earners from all industry."

Federation of Catholic Workers of Canada

The tenth annual convention of the Federation of Catholic Workers of Canada was held at Quebec, Que., commencing Sunday, August 30, 1931, with approximately one hundred and twenty delegates in attendance, President Pierre Beaulé occupying the chair. The convention was opened with a banquet at which officials of the Federal and Provincial Governments and the City were present.

At the first business session, President Beaulé presented the annual report in which satisfaction was expressed with the legislation passed by the Dominion and Provincial Governments in regard to labour. The delegates were informed that central councils had been established in each of the principal centres of the province.

The resolutions adopted by the convention will appear in a later issue of the LABOUR GAZETTE.

Officers elected were as follows:—President, Pierre Beaulé, 359 Arago St., Quebec, Que.; first vice-president, Osias Filion, Montreal, Que.; second vice-president, Henri Quevillion, Hull, Que.; secretary-treasurer, Ferdinand Larroche, 114 Hermine St., Quebec, Que.

Canadian Legislative Board, Brotherhood of Locomotive Firemen and Enginemen

The tenth biennial meeting of the Canadian Legislative Board of the Brotherhood of Locomotive Firemen and Enginemen, was held at Ottawa, August 18-25, 1931, with delegates present from every province. At the opening sessions, addresses were delivered by Hon. R. J. Manion, Minister of Railways and Canals; Tom Moore, president of the Trades and Labour Congress of Canada; H. H. Lynch, vice-president, Brotherhood of Locomotive Firemen and Enginemen; and Mrs. Agnes Strong, grand president of the Ladies' Society. The delegates went on record as favouring: the operation and management of the Canadian National Railways by a board of directors appointed for a term of good behaviour and independent of political partisanship or interference; Federal Government control of radio broadcasting under a board or commission appointed by the government, upon which each province shall have representation; the taking of effective measures by the Federal and Provincial Governments to prevent exploitation of the natural resources, including waterpower.

After a discussion on the unemployment situation, the chairman was instructed to assist other social and labour organization to impress upon the Federal Government the urgent necessity for immediate relief for all who are suffering as a result of unemployment, and to press for the enactment of some adequate system of unemployment insurance, an appropriate share of the cost to be borne by industry and the state. The delegates considered the question of immigration interrelated with unemployment, and declared their opposition to the admission into Canada of those who might add to the unemployment problem, or those who, because of race or nationality, cannot assimilate with Canadians.

The following resolutions on motor vehicle competition were adopted:—(a) Urging amendments to the Highway Traffic Acts to provide more adequate taxation on all motor vehicles using the highway for revenue purposes; (b) Requiring owners and operators of motor vehicles to conform to regulations governing the operation as well as the freight and passenger tariff which shall be charged for the use of such service; (c) Asking for sufficient financial responsibility on the part of owners and operators to ensure payment of all claims for damages which may be legally assessed against them; (d) Requesting that drivers of all such motor vehicles be required to pass a qualifying examination; and (e)

Urging the withholding of franchises to operate bus and truck lines where adequate transportation facilities already exist, or where the railroad companies can and will provide those facilities.

Among other resolutions adopted were: Seeking legislation restricting enginemen in train service from being on duty more than twelve hours without rest; Advocating the enactment of provincial legislation requiring all motor vehicles to come to a full stop at highway crossings not otherwise protected.

In the revision of the by-laws of the board, provision was made for an assistant chairman.

Officers elected were: chairman, W. L. Best, Ottawa; assistant chairman, F. W. Hicks, Winnipeg, Man.; secretary-treasurer, James Pratt, Toronto, Ont. Board of Directors, J. G. McLean (chairman), St. Thomas, Ont.; J. L. Southern (secretary), Port Arthur, Ont.; W. L. Druce, Brandon, Man.

The next regular meeting of the Board will be held at Vancouver, B.C.

International Stereotypers' and Electrotypers' Union of North America

The thirtieth annual convention of the International Stereotypers' and Electrotypers' Union of North America was held at Toronto on July 20-25, with approximately 120 delegates in attendance. The President W. T. Keegan occupied the chair. Mayor Stewart extended a welcome to the delegates and invited them to join in celebrating the city's 100th anniversary by holding their 1934 convention in Toronto. Representatives of the Dominion and Provincial Governments also welcomed the delegates.

The report of the executive officers indicated that the International Union had continued to make steady progress, both as to membership and finances. The goodwill existing between the members and employers, resulting in benefits to each side, was referred to in the report. According to the report of the committee on technical education, forty-eight local unions, out of a total of eighty-four reporting, had established technical education committees, which have for their object the assisting of apprentices to become trained craftsmen. The committee strongly urged all local unions to adopt some system to educate the apprentices, in order that they may become proficient mechanics.

The following resolutions were adopted: (1) Recommending that each child attending school have individual text books, and that these text books be replaced every year; (2) Advocating an apprenticeship holiday in

all local jurisdictions where an over-supply of journeymen exists or is threatened; (3) Authorizing the resumption of strike benefit payments to members of locals at Niagara Falls, N.Y., and Elmira, N.Y.; (4) Recommending that the president's salary be raised from \$4,000 to \$5,000 per annum.

The convention will meet next year in Cleveland, O., while Kansas City, Mo., was selected as the convention city in 1933.

International Plate Printers', Die Stampers' and Engravers' Union of North America

The International Plate Printers', Die Stampers' and Engravers' Union of North America held its thirty-ninth annual convention at Philadelphia on July 20-24, 1931, with President H. F. Niessner presiding. During the preliminary session, addresses were delivered by Adolph Hershberger, president of the Philadelphia Central Labour Union and Musicians' Union; M. T. Curry, business agent of the Photo Engravers' Union, Philadelphia; and Mr. Andrew J. Bemiller, Department of Economics, University of Pennsylvania.

Reports presented by the executive officers, the committee on local unions, and the delegates to the convention of the American Federation of Labor and Trades and Labour Congress of Canada, were outstanding features of the convention.

Among the resolutions adopted were the following:

Favouring old age pension laws.

Directing the incoming executive officers to arrange for the continuation of the contract with the Union Labour Life Insurance Company for the death insurance of the membership at a rate not to exceed ninety cents per month, effective December 1, 1931.

Requesting the Trades and Labour Congress of Canada to aid in the formation of new locals of the plate printers within its jurisdiction.

Endorsing the policy of the American Federation of Labor on the five-day-week, old age pensions, Volstead Act, and the unemployment situation.

Recommending that local secretaries write the American Red Cross inquiring into the attitude of the Society in failing to aid suffering families of striking miners.

Mr. James Wade, a member of local No. 6, Ottawa, Canada, was elected president of the International Union. Other officers elected were: first vice-president, J. Paul Kriozere, Chicago; second vice-president, William Kelly, New York; secretary-treasurer, James E. Goodyear, New York.

J. H. Windsor, Washington, D.C., and James Wade, Ottawa, Canada, were elected delegates to the convention of American Federation of Labor and the Trades and Labour Congress of Canada, respectively.

Buffalo, N.Y., was selected as the convention city for the 40th annual meeting.

Quebec Provincial Council, United Brotherhood of Carpenters and Joiners

Delegates from practically all the local unions in the province attended the twenty-second convention of the Quebec Provincial Council of the United Brotherhood of Carpenters and Joiners of America, which was held at Quebec, Que., on July 2-4, 1931, under the chairmanship of Mr. Omer Fleury, who is also business agent for the carpenters in that city. Addresses were delivered by Jas. F. Marsh, Toronto, Ont., fraternal delegate from the Ontario Provincial Council; Arthur Martel, Montreal, Que., executive board member of the Brotherhood for Canada; and Tom Moore, president, Trades and Labour Congress of Canada.

Over twenty resolutions were dealt with referring to unemployment, and unemployment insurance.

Resolutions were adopted: (1) urging the Provincial Government to pass fair wage legislation similar to that adopted by the Federal Parliament; and (2) pressing for the adoption by the provincial authorities of the Federal old age pension legislation.

Officers elected were: president, Omer Fleury, Quebec, Que.; secretary, Pierre LeFebvre, Montreal, Que.; treasurer, Pierre Blanchandin, Montreal, Que.

The choice of the next convention city was left to the executive.

Pension Proposals of Railway Labour Executives

The Railway Labour Executives Association, in a three-day meeting held in Washington, D.C., on July 27-29, considered several divisions of a comprehensive program to increase the security of life and livelihood for railway employees. The executive discussed in detail a report on Old Age Pensions, prepared after a year of study by their counsel, and appointed a sub-committee to prepare a bill to be introduced in the next session of Congress to provide "retirement insurance" for all railway employees. The Association approved the following principles to govern the draft of a bill to provide old age security for railway employees:

1. Railway employees should not seek merely pensions, which are a bounty provided

without legal obligation by an employer or by the state, but should be protected by retirement insurance, whereby the individual employee obtains a legal right to an income in old age which can be enforced as a legal obligation.

2. By a federal law all railroads engaged in interstate commerce should be required to provide retirement insurance for superannuated employees, in order not only to compensate such employees for long service, but also to promote the efficiency, economy and safety of rail transportation.

3. The retirement insurance should be paid for through compulsory contributions from employer and employee fixed on a sound actuarial basis, whereby the individual employee will acquire a vested right in trust funds, which can be maintained and enforced by him or his beneficiary just as other forms of insurance.

4. The federal act should be drafted, as advised by counsel, in such a manner as to provide every possible safeguard against attack upon the ground of exceeding constitutional authority, with particular care to avoid the expenditure of public funds or the use of public credit in violation of constitutional limitations.

5. The insurance requirements of the federal act should be based on the advice of a competent actuary, and the contributions pro-

vided should be ample to furnish the protection promised.

It is stated that "in order to purchase retirement insurance of only one dollar a day, payable at the age of 65, a man of 60 must pay (according to an eminent actuary) \$523.08 per year, while a man of 20 would pay only \$16.40 a year. If a law in order to provide for uniform benefits is to require the older railway men to pay one-fifth of the cost of their insurance, and to require the younger men to pay five times the cost of their insurance, these facts should be clearly stated, so that these obligations (if they can be legally imposed) may be knowingly assumed."

The Halifax Trades and Labour Council at its meeting in August approved the suggestion of the United Mine Workers local union that the provincial Legislature should meet in special session to consider unemployment. The provincial government was asked also to give effect within the province to the federal Old Age Pensions Act. Telegrams were sent to the Minister of Public Works and the Minister of Labour at Ottawa protesting against the use of spray guns in painting the immigration shed at the railway terminals. The Council decided that no Labour Day Celebration would be held this year owing to the unemployment situation.

Decrease in Industrial Accidents in United States

The industrial accident experience in the United States during 1930 is reviewed by the National Safety Council in a recent edition of industrial accident statistics. This report indicates that over 1,600 establishments reporting their records have achieved a general reduction of 28 per cent in injuries during the past two years and also reduced the severity rate by 8 per cent in the same period.

For the single year 1930, data are available from 4,198 establishments, as compared with 3,603 in 1929, 2,557 in 1928, 2,347 in 1927 and 1,725 in 1926, the number of employees represented in the reports increasing from 1,221,094 in 1926 to 2,236,629 in 1930, the difference representing an increase in man hours of 2,172,979,000 reported in the five-year period.

Among all the industries, fifteen had frequency rates below the average, but thirteen were higher. Among the industries having high

rates were construction and mining, with rates nearly three times the general average. Construction, which for the past several years has had a rate slightly lower than mining, exceeded the latter's rate in 1930.

The industries with low frequency rates are not, however, uniformly low in severity. The cement industry, for instance, which ranked first in frequency is twentieth in severity. The meat packing industry, on the other hand, with a high frequency rate, ranked sixth in severity. These differences result, of course, from the varying relationships between major and minor injuries in the various industries. In meat packing, for instance, there were 1,000 injuries for each fatality, whereas in public utilities one injury out of 50 was a death case. In the automobile industry there were 200 injuries for each fatality, in the petroleum industry only 70.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Correspondence Committee on Industrial Hygiene

A meeting of a number of members of the Correspondence Committee on Industrial Hygiene met at the International Labour Office from July 30 to August 1, 1931, and examined proposals for the drafting of international regulations relating to the measures to be taken to prevent anthrax infection in industries other than that of hides and skins. They refer mainly to the handling of bones, hooves and horns. The question will be discussed further at the next meeting of the Committee.

The meeting also discussed the risks of lead poisoning in the process of enamelling by powdered lead on cast iron. It was recognized that a serious risk existed when enamel containing lead was used in the dry state, and that the ideal method would be the prohibition of the use of lead-bearing enamels. Doubts, however, were expressed as to the technical feasibility of such a measure, and it was judged desirable that an enquiry be made on this point. Some of the members considered that the danger could be virtually eliminated by means of strictly enforced special regulations covering technical methods and medical inspection.

On the subject of toxic solvents, the meeting recommended that all new cases of poisoning occurring in the chemical industry be notified to the International Labour Office, which should hand on the information to interested persons. A program of research into the dangers of the industrial use of solvents was drawn up.

The members also discussed the dangers of lead poisoning in accumulator factories. It was considered that there was a serious risk, and that every country which has not yet done so should introduce regulations governing work in such factories.

The meeting considered the conclusions of the International Silicosis Conference held at Johannesburg in 1930 (LABOUR GAZETTE, October, 1930, page 1179), and made suggestions regarding the research work still to be carried out on this subject.

Finally, the members discussed the conditions of work of married women. It was recognized that the employment of married women could not be prohibited at the present time, and that the introduction of protective measures in most cases depended on local circumstances and on existing facilities for the care of mothers and children. The meet-

ing approved a proposal submitted by the Belgian Government representative on the Governing Body that the Office undertake an enquiry into the conditions of work of married women in all aspects.

Question of Holidays With Pay

The question of the right of workers to an annual holiday without loss of wages has not yet reached the stage of being placed on the agenda of the International Labour Conference, but progress has been made in this connection. The subject was first brought before the Washington Conference in 1919, when a resolution was submitted by the Swedish Government in favour of the consideration of the matter by the next Session, in view of the fact that it was "essential, for the physical as well as for the psychical health of employees, that they should enjoy, each year, a certain period of absolute rest." The question was raised in the Governing Body of the Office in 1920, in 1923 and in 1924. It was provisionally selected for the agenda of the Conference in 1927, but gave place later to other questions. In 1929 it was once more taken up in the Governing Body, and in the following year the Conference adopted by 84 votes to 21 a resolution presented by the Polish Government in which the Governing Body was requested to consider the possibility of placing the question on the agenda of an early Session of the Conference. In accordance with this decision, the Governing Body instructed the Office last October to draw up a report on the existing law and practice with regard to annual holidays, with a view to the possible inclusion of the subject in the agenda of the Conference for 1932. In January last, however, the Governing Body decided to give priority to another item—invalidity, old-age and widows' and orphans' insurance—and the question of holidays was therefore once more deferred. In view, however, of the spread of the practice of granting paid holidays, the subject may be expected to receive further consideration in the near future.

The Annual Review, 1930

As was noted in the partial review which was given in the LABOUR GAZETTE, June, 1931, page 678, the Director's report for 1930 appeared in a new form this year, being in two separate volumes instead of one as formerly. The annual review of 1930 has now been published separately, supplementing the

first volume (already reviewed) which discussed present day problems on which it was desired that the Conference should hold further discussion.

The first part of the Annual Review deals with the general activity of the International Labour Organization; the work of the Conference and of the Governing Body and its committees in 1930; the relations of the Organization with the League and with workers' and employers' organizations; and the work of the Office in collecting and preparing information for the use of Governments, trade organizations, and all those interested in social problems.

The second part of the Annual Review surveys the development of labour legislation and the protection of the worker. In order to place this in its economic setting, this part begins by a study of changes in price levels, financial activity, production, international trade and incomes. Full details are given as to legislation adopted or proposed, and important decisions by employers' or workers' organizations on hours of work, weekly rest, night work, holidays with pay, women's work, protection of children and young persons, and factory inspection. Special sections deal with the developments in industrial medicine and hygiene, with accident prevention, and with social insurance.

On the subject of wages, index numbers are given of money and real wages, accompanied by a table of cost of living indices.

On unemployment will be found statistics and a summary of measures taken in different countries for the relief and assistance of the unemployed, and of the national regulations and international agreements on the subject of the recruiting and placing of workers, and the organization and control of emigration and immigration. The problems arising in connection with special categories of workers, such as seamen, agricultural workers, professional workers, natives, etc., are also briefly described. As regards the conditions of living of the workers, special reference is made to what has been done in connection with their general education and training, their housing, and the utilization of their spare time.

The final chapter refers to the steps taken to give effect to the recognition of the workers' general rights, such as their right to combination, as well as to the profit-sharing, and the participation of workers in national economic life. Information in connection with individual and collective contracts of service and on industrial relations in general, will also be found.

A chart of ratifications is appended, giving the position in the various States members of the Organization on March 15, 1931, with regard to International Labour Conventions.

Chinese National Factory Inspection Service

At the request of the Chinese Government, the International Labour Office has just sent a Mission to China to assist in organizing the National Factory Inspection Service. It was announced some time ago that the Chinese Government intended putting into force as from August 1, 1931, the Factory Act of 1929 and the Administrative Regulations for the application of the Act, which were promulgated on December 16, 1930. The enforcement of these Regulations, which mark an important stage in the social evolution of China and are of particular importance in view of the ten-year program of industrial development to which we refer elsewhere in this issue, depends on the establishment of an efficient system of factory inspection. On January 31, 1931, the Chinese Legislative Council adopted a Factory Inspection Act, which is to be put into force by Decree at a later date, but the establishment of the National Factory Inspection Service is no small task, and the Chinese Government felt the need of expert advice in its execution.

The Mission consists of Mr. Pone, Chief of Section in the Diplomatic Division of the Office, and Dame Adelaide Anderson, formerly Principal Lady Inspector of Factories in Great Britain, who has already rendered valuable service in China and is intimately familiar with the conditions of labour prevailing there. This Mission, following on the visit of the Director of the International Labour Office in 1929 and the establishment last year of a Branch of the International Labour Office in Nanking, will serve still further to strengthen the collaboration of China in the International Labour Organization.

"Unemployment Problems in 1931"

The International Labour Office recently published under this title a volume containing studies of the problem of unemployment and the world depression. The first two chapters consist of extracts from the Director's Report to the 15th Session of the International Labour Conference (this report was outlined briefly in the *LABOUR GAZETTE*, June, 1931, page 678). The Director gives a description of the depression, of its scope, its causes and the possible remedies. One chapter deals with the direct action of the Organization against unemployment, and another with the relations

between hours of work, wages, and unemployment.

The volume also includes a series of memoranda submitted in January, 1931, to the Unemployment Committee of the Governing Body. Some of these memoranda were prepared by officials of the Office, such as those on unemployment and monetary fluctuations, and on the effects of rationalization on unemployment. The other memoranda are the

work of experts who are not on the staff of the Office, but were consulted on particular points. These are the memoranda by Professor Albert Hahn on the inequalities in the international distribution of capital as a cause of unemployment; Professor Maurice Ansiaux on disturbances in international trade and their effects on unemployment; Professor L. Hersch on population and unemployment, and Mr. G. D. H. Cole on wages and unemployment.

UNEMPLOYMENT AND FARM RELIEF ACT, 1931

AGREEMENTS between the Dominion Government and the governments of the various provinces as to the work to be carried on under the provisions of the Unemployment and Farm Relief Act, 1931, were approaching completion as this issue went to press. The text of this Act (Statutes of Canada, 1931, chapter 58) appeared in the LABOUR GAZETTE, August, 1931 page 901, and the general regulations under the Act were given on page 904 of the same issue.

Shortly after the Act became effective all members of the House of Commons were invited by the Minister of Labour to furnish suggestions regarding federal undertakings that might usefully be carried out in their constituencies under the direction of the Department of Public Works. The Minister also conferred with the provincial governments respecting provincial and municipal works which might provide opportunities for employment during the coming winter. Details of these various undertakings will be given in future issues of the LABOUR GAZETTE.

Works to be undertaken by the Federal government include construction of public buildings, wharves, repairs to both, and generally needed federal works of all descriptions. The federal Government will also share in the cost of construction of the Trans-Canada highway to the extent of 50 per cent of the cost thereof; each provincial government is required to define the route and the point of contact with the adjoining provinces; the Dominion Government will also participate in the cost of maintenance. Other highways wholly within the province will be assisted as to construction costs on the basis agreed upon with the provincial authority and as circumstances justify.

Any municipality desiring to carry on local improvement works of any sort with federal and provincial aid must submit its proposals in connection therewith to the provincial government.

As the success of the relief measures will largely depend upon the fair and equitable dis-

tribution of opportunities for employment and payment of reasonable rates of wages, the Federal Government will require that a maximum work day of eight hours shall prevail on works and undertakings carried on under the provisions of the Unemployment and Farm Relief Act, 1931, unless a modification of this requirement is previously agreed to by the Minister; the Provincial or Municipal Authorities may fix rates of wages to be paid provided that such rates be fair and reasonable and not in excess of the rates required to be paid by the Federal Government for the character or class of work in the district; and, if available, only goods and materials of Canadian manufacture or production shall be used, and contracts shall be let only to bona fide Canadian construction firms established and operating in Canada prior to January 1, 1931.

Of the amounts expended under Dominion-provincial agreements for works carried out under the Unemployment and Farm Relief Act, 1931, not less than 40 per cent must be expended for labour.

SUMMARY OF UNEMPLOYMENT REGISTRATION, SEPTEMBER 1, 1931

Province	Married Men	Single Men	Women	Not Classified	Total
Pr. Edw. Isld.					1,500
Nov. Scotia (1)					18,000
New Brunswick					7,858
Quebec (1)					100,000
Ontario (2)	71,500	58,500			130,000
Manitoba	26,486	10,248	4,755	450	41,939
Saskatchewan (3)					26,094
Alberta	9,220	6,230			15,450
British Columbia (4)			764		38,880
Total					379,721

(1) Figures are estimated as no registration was held.

(2) Ontario reports the probable number in real need of employment to be about 70,000.

(3) Including 8,237 married men, 4,851 single men and 764 women registered in cities.

(4) This includes 5,940 transients and 6,745 aliens.

Registration of Unemployed

During the summer months the provincial governments carried out surveys of the situation as to unemployment in their respective territories, and the figures on page 1005 showing the number of persons registered as unemployed in the various provinces as on September 1 were submitted to the Minister of Labour.

Throughout the drought areas which exist in the three Prairie Provinces, principally in Saskatchewan, roughly 200,000 people were reported as suffering severely because of repeated crop failures due to drought conditions; these people are not included in the numbers of the unemployed, as many of them are taking advantage of every opportunity to support themselves and their dependants.

Outline of Relief Measures

The Hon. G. D. Robertson, Minister of Labour, in a statement issued on September 16, described the progress that had been made at that date in the organization of relief measures, as follows:—

Out of the Unemployment and Farm Relief Act of 1931, efforts have been renewed with all the provinces co-operating, to organize a substantial employment relief campaign. Negotiations have been concluded with some provinces, and satisfactory progress has been made with others, while the federal government itself has in contemplation federal works at federal expense further to assist in relieving the national situation. The problem is more acute in Western Canada than in the East because of large sections in Western Canada suffering from drought and crop failures of varying intensity in different districts. The federal government has instituted a number of federal undertakings which are from week to week being extended, while a number of provinces have already commenced substantial relief works, largely in connection with highway construction. The trans-Canada highway project is being prosecuted with vigor. The federal government is paying fifty per cent of the cost thereof, and on other provincial highway projects is contributing a large portion of the total.

Prince Edward Island

In the province of Prince Edward Island, a program of relief work has been recommended to the government of the province somewhat in excess of last year's efforts because of the increased volume of unemployment. Heretofore, many people from that province annually sought employment in lumbering and other industries in adjacent provinces which this year is not available to the same extent.

Nova Scotia

In Nova Scotia, a very considerable federal program will be prosecuted by which many wharf and dock repairs and reconstruction will be carried on by the federal government

alone, while in co-operation with the provincial government, a substantial volume of work is contemplated on the trans-Canada highway. The cost of municipal undertakings is being shared by agreement with the provincial government on a basis much similar to last year's agreement. The municipal projects are in course of preparation but have not yet received federal approval.

New Brunswick

In the province of New Brunswick a comprehensive and somewhat extended program of road building has been submitted by the provincial government, while in the city of Saint John, about 1,800 men have for some months been engaged on the reconstruction of the docks which were destroyed by fire in June last.

Quebec

Negotiations with the province of Quebec are still in the preliminary stages and conferences with the government of that province are now taking place.

Ontario

The province of Ontario has outlined a comprehensive program of road building, particularly in connection with the trans-Canada highway, and numerous municipal projects will be submitted for consideration and approval about the end of the present month. It is intended by both the provincial and federal authorities to employ on the road projects in Ontario, men who would otherwise be wholly unemployed; first those adjacent to the highway undertakings, and secondly, to offer opportunities for employment, particularly to transients and single men from urban centers as certified through the Employment Service of Canada, relying upon the municipal undertakings to furnish employment for the more skilled artisans in building and other industries, giving married men preference in these opportunities and thereby assisting them to obtain employment adjacent to their family responsibilities as far as possible.

Prairie Provinces

The province of Manitoba has already commenced some highway construction work and a substantial program of municipal projects will be submitted for approval shortly.

Relief of the farmers in the drought-stricken areas of the Prairie Provinces constitutes the most difficult problem in Western Canada, but this ought not to be confused with unemployment arising from industrial or commercial fluctuations. Some substantial projects in the urban centers have been tentatively approved, and the minister of agriculture, Hon. Robert Weir, is actively directing the farm relief program in those areas, particularly in Saskatchewan as well as assisting in the relief of unemployment in the cities and towns. He is at present in the West, as is the minister of the interior, Hon. T. G. Murphy, who is helping to map out the program in Manitoba.

In Western Canada, substantial national park areas in Alberta offer opportunities for the creation of considerable useful work in delimiting park boundaries, clearing and building roads and opening up avenues of communication between park areas of which Jasper and Banff are centers, as well as some similar works in parks located in the provinces of Manitoba, Saskatchewan and British Columbia.

The provincial government of Alberta has concluded an agreement with the federal government respecting both provincial and municipal undertakings in that province, and like Ontario, it is expected that substantial relief will accrue to the larger urban centers by the withdrawal of transients and single men, who may be wisely assisted in the outside undertakings, both in parks and on provincial roads.

British Columbia

The province of British Columbia is suffering particularly because of the contraction in the lumbering and mining industries. Field crops in that province, as in the Eastern Provinces, have been quite satisfactory as to volume, but not so satisfactory as to sales prices obtainable. With its milder climate and the large migration of available labour to the Pacific slopes, British Columbia faces a difficult problem and a very substantial program of roadbuilding throughout that province already is under way. More than 3,000 men already are at work and the provincial government is at present engaged in obtaining municipal proposals for local improvement works and this program will, it is expected, be available for consideration of the federal government within the next ten days.

Transportation Industry

The contraction in our transportation industry constitutes a difficult problem. Some 25,000 fewer men are regularly employed on our railways now than was the case three years ago and the reason for that is obvious. The decrease in gross earnings due to the falling off in carloadings and passenger traffic has necessitated stern economies. During the past week, however, the transportation situation seems to be improving and it may with reasonable confidence be expected that railway earnings will show better results during the next few weeks than they did in the month of August, owing to the fact that the crop movement is later this year than last year. The very substantial effort put forth by the railways last year to expend large sums to assist in the relief of unemployment, especially among their own employes, has made it difficult for them to participate to the same extent this year so far as improvements in equipment, maintenance and so forth are concerned.

As detailed proposals are received from time to time, with the approval of the various provincial governments, they will be sympathetically considered and dealt with as liberally as the financial conditions of the country warrant, without indulging in anything that savors of prodigal expenditure. Parliament has entrusted the government with a serious and important task, which trust will be discharged faithfully and without discrimination.

The Minister pointed out that under the act agreements are made with the provinces and not with municipalities, which latter must submit their needs and situations to the provincial governments for endorsement and submission to the federal government in the uniform method determined as necessary for the proper compilation at Ottawa of the information which is essential before approval can be given; and without such federal approval no works for which beneficial assistance will be sought under the act may be properly commenced.

Regulation of Unemployment Charities in Ontario

An Order in Council approved by the Government of Ontario on August 13 declared that, in cities having a population of not less than 200,000 charitable institutions are to be subject to the control of the Minister of Public Welfare, when they "include any scheme, measure, organization or undertaking formed of or by any person or persons,

society, body, association or corporation, having as an object the procuring or giving of aid, assistance or relief in any manner to or for the benefit of any unemployed person or persons and which may be designated as Unemployed Charities." Unemployment charities undertaken by a municipal corporation or by any church, church organization, religious society or body are exempt from the order.

The Order contains regulations governing unemployment charities in the cities covered by its provisions. Permits to undertake such work must be obtained from the Minister, and the Department may investigate, inspect and audit every unemployment charity. One regulation is as follows: "No person shall be employed or his services used on behalf of any unemployment charity for its purpose in soliciting alms, food, clothing, money or contributions from the general public, unless such person is furnished with credentials to be issued by and obtained from the municipality which issued the permit for such unemployment charity."

Drought Commission in Saskatchewan

A commission under the Inquiries Act was issued by the Saskatchewan Government in

August to the undermentioned with instructions to inquire into all matters pertaining to drought conditions in portions of the province and in provinces and states adjacent to the province and to report and make recommendations that would tend to remove the causes of such conditions:—the Hon. J. F. Bryant, Minister of Public Works; the Hon. W. C. Buckle, Minister of Agriculture; W. D. Cowan, M.P., of Regina, Professor C. J. Mackenzie, of the University of Saskatchewan; Dr. Thomas A. Patrick, of Yorkton; and Lt.-Col. F. J. O'Leary, of Regina.

The commission refers to the drought conditions during the past three years and the injury caused to farm lands and crops through evaporation and by winds occasioning violent dust storms and drifting of the soil. The commissioners are instructed to investigate climatic conditions as affected by the conservation of water and the absence of trees, and to study the whole question in the light of experience and of the remedies taken under similar conditions elsewhere, and they are to make recommendations as to possible dam sites for conservation of water and submit such proposals as to afforestation and any other matter as will assist in permanently removing the cause of drought conditions as they now exist in parts of Saskatchewan.

UNEMPLOYMENT RELIEF ACT, 1930

Relief Provided in Cooperation with Provinces, Municipalities and Railway Companies

AN account was given in the LABOUR GAZETTE, September, 1930, of the special session of the Parliament of Canada summoned especially to deal with problems arising out of exceptional economic conditions with resultant unemployment, and of the enactment during that session of the Unemployment Relief Act. Particulars of the expenditures approved have been given from month to month in subsequent issues.

The various Provinces, Railway Companies and Departments of the Government co-operating under the Unemployment Relief Act, 1930, have furnished statistics showing the actual volume of employment furnished from commencement of operation under the Act to July 31, 1931. Details for each Province are as follows:—

Employment Afforded to August 31, 1931

Locality, etc.	Individuals given employment	Number of Man-days work given
Prince Edward Island.....	2, 195	19, 389
Nova Scotia.....	33, 137	514, 867
New Brunswick.....	20, 500	310, 000
Quebec.....	83, 851	1, 213, 273
Ontario.....	43, 000	2, 384, 000
Manitoba.....	34, 839	376, 151
Saskatchewan.....	29, 418	630, 154
Alberta.....	23, 923	404, 936
British Columbia.....	34, 514	746, 191
Yukon.....	150	2, 096
C.N.R.....	7, 094	206, 156
(2)Banking N.S. Coal.....	65, 759
C.P.R.....	10, 369	350, 772
Totals.....	327, 990	7, 228, 744

(1) These figures do not include repeaters, i.e., no one individual is counted more than once, although he may have been laid off and re-employed.

(2) The number of individuals given employment is not available.

Direct Relief

For direct relief where employment could not be given, accounts amounting to \$2,055,713.57 have been paid to August 31, 1931, to supplement Provincial and Municipal expenditures. This amount has been divided amongst the Provinces as follows:—

Province	Dominion Contribution to August 31, 1931
	\$
Prince Edward Island.....	2,843 49
Nova Scotia.....	22,603 39
New Brunswick.....	3,503 01
Quebec.....	426,598 72
Ontario.....	767,160 56
Manitoba.....	472,921 46
Saskatchewan.....	65,754 08
Alberta.....	128,461 71
British Columbia.....	165,867 15
Total.....	2,055,713 57

THE CANADIAN LEGION AND UNEMPLOYMENT

FEATURING the convention of the Canadian Legion, Dominion Command, held at Niagara Falls recently, was the report of the Unemployment Committee, which was adopted by the delegates. This committee, which is composed of representatives from every province, formulated a policy based on the Legion's responsibility to the general problem as well as its particular application to ex-service men.

In a comprehensive preamble, the committee indicated the gravity of the situation and its attendant economic problems. "It was also realized," observes the report, "that these problems constitute a definite challenge to the survival of our civilization, needing vision, understanding and statesmanship if we are to secure a full measure of the blessings of peace in whose name so many lives have been sacrificed in the Great War."

Referring to the magnitude of the problem in its international aspects, the report pointed to the seeming obscurity of fundamental causes and "the lack of general agreement among leaders in business, finance and economic thought as to remedies to be applied to effect a permanent solution." For this reason, the committee did not attempt to probe causes or make specific suggestions for permanent solution, and concentrated upon "the necessity of regarding the present situation as requiring emergency treatment." However, it was felt that some statement should be made regarding the Legion's attitude toward economic conditions "in order that the people of Canada may know that ex-service men are not entirely disregarding the larger issues in favour of their own particular interests." Accordingly, the following three paragraphs summarize the Legion's views of the general problem:

"No deep thinking person to-day can look with equanimity on the tragic absurdity of an economic system that permits a large por-

tion of our people to periodically lack the necessaries of life, surrounded by storehouses of food and goods accumulated by their labour, nor can the condition be satisfactorily accepted which enforces periods of unwilling idleness when on every hand useful work needs to be undertaken. That a remedy must be found to this problem if we are to avoid the advent of more sinister social, economic and political evils, is obvious to every intelligent person to-day.

"While the complexities of the problem are fully realized it is by no means the opinion of the Committee that it is beyond human intelligence to find a permanent solution notwithstanding the gravity of conditions. In the opinion of the Committee, however, such an objective can only be achieved by the whole-hearted exercise of co-operation between Governments, capital, labour, leaders of business, finance and economic thought. We are convinced that the solution will not be achieved without courageous sacrifices.

"It is possible that cherished ideas and privileges will have to be modified or entirely relinquished; established methods may have to undergo the process of change; and the practice of a vigorous personal discipline may be required before a new and satisfactory order of things can follow. Such forms of sacrifice were demanded and willingly suffered during the Great War and these characteristics were vital contributions to ultimate victory. Ex-service men who sacrificed much during the war, large numbers of whom are still suffering as a result, surely have a right to regard the needs of Peace as equally compelling as those of war and to expect that our people will not shrink from the task now imposed of working out a solution to our problem rendering willing co-operation and service and making such sacrifices as may be necessary. Continuing, the report urged respect for constituted authority, and anticipated

that ex-service officials would be represented on all federal, provincial and municipal committees appointed to control or administer all measures which are designed to meet our present need, bending every effort to their complete success."

The committee then submitted a summary of suggestions, which were subsequently adopted. The first part of the recommendations dealt with the Legion's responsibility. This section urged co-operation in the administration of government measures as set forth in the Unemployment and Farm Relief Act of 1931; registration of veterans, coupled with a study of the capabilities and record of each man; co-operation with employers of labour; utilization to the fullest measure of the scheme of probational training of disabled ex-service men under the direction of the Department of Pensions and National Health; inclusion of statutory preference in appointments to positions in provincial and civic governments similar to the preference extended under the Federal Civil Service Act; inclusion of a requirement for the employment of a definite percentage of veterans in the form of tenders for government contracts; and also that in Government employment, notwithstanding the seniority status of unnaturalized alien employees, no ex-service man may be laid off until the services of every such alien shall be dispensed with. This last recommendation was forwarded in the form of a resolution to Sir Henry Thornton, president of the Canadian National Railways.

Other recommendations were as follows:

That, as an emergency measure, industry should be urged to reduce hours rather than reduce staff, thus spreading the work amongst employees so as to retain their entire staff and further that advantage should not be taken of present conditions to reduce wages and thereby lower the standard of living.

That all government authorities and all other employers of labour be urged to discontinue the practice of dual employment, i.e., husband and wife in lucrative positions in order that as many families as possible may be sustained.

That efforts be made to secure a preference for the breadwinner of a deceased or totally disabled non-pensioned veteran's family.

That provision be made in the Pension Act for the extension of the age limit for children's allowances by one year in order to encourage the further education of pensioners' children for an additional year, thus maintaining their morale and removing them from the labour market.

That Provincial and Civic Governments shall rigorously enforce the Fair Wage Provisions

in connection with all relief work carried on and in all their contracts. Further, that no ex-service man working on any such relief measures shall receive less than the direct relief allowance granted by the Department of Pensions and National Health.

The committee also appended a supplementary report in the form of a resolution from the convention of the Ontario Provincial Command, held a few days before the Dominion convention. This resolution was also adopted by the Dominion convention, and was as follows:

(a) That this Dominion Convention of the Canadian Legion strongly urge upon the Federal Government the formation of a National Employment Council, representative of industry and commerce, agriculture, labour and the war veterans, appointed on a non-political basis, to make a complete study of the situation, and make such recommendations to the Federal Government as they consider would help to solve the pressing economic problem which confronts the Dominion.

(b) That this Dominion Convention of the Canadian Legion petition the Prime Minister of Canada to call a conference of the Provincial Premiers to discuss a program of planned development of the Nation's great natural resources, under public ownership and construction.

Weekly Half Holiday in Saskatchewan

By an order in council dated August 5, 1931, the schedule of the Weekly Half Holiday Act of Saskatchewan was amended by the addition of the following group to the list of classes of shops that were already declared to be exempt from the provisions of the Act: "Shops in which the principal trade or business is that of the sale by retail of fuel, lumber and builders' supplies." The terms used in the Order are defined as follows: "Shop" shall include the building and yards connected therewith; "Fuel" shall include coal, wood and coke only; "Lumber and Builders' Supplies" shall include all unmanufactured lumber, laths, shingles, and also sand, gravel, lime, cement and bricks and shall not include builders' hardware, plumbing supplies, electrical supplies or manufactures of wood, such as sash, door and similar house furnishings.

A list of the types of shop exempted from the provisions of the Act appeared in the LABOUR GAZETTE, June, 1931, page 631.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN JULY, 1931

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on August 1 was 7,887, the employees on their payrolls numbering 956,238 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions report-

ing for July was 1,862, having an aggregate membership of 199,923 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment.

(3) The Department of Labour receives reports from the 68 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

(1) Employment Situation at the Beginning of August, 1931, as Reported by Employers

Employment at the beginning of August showed a further upward movement, according to statements tabulated by the Dominion Bureau of Statistics from 7,887 firms, whose payrolls aggregated 956,238 persons, as compared with 943,419 on July 1. The index number stood at 105·2, compared with 103·8 on July 1, 1931, and 118·8, 127·8, 119·3, 110·5, 105·5, 97·5, 95·8, 101·4, 94·2 and 90·0 on August 1, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. The employers making returns therefore reported smaller payrolls than at the beginning of August in the preceding four years, but the index of employment was practically the same as in 1926, and was higher than in the five years, 1921-1925.

Construction reported a very large gain, chiefly due to important works undertaken for the relief of unemployment in Saskatchewan; the tendency was also favourable in mining, communications, transportation and services. On the other hand, logging continued seasonally quiet, and there were also losses in manufacturing and trade.

Employment by Economic Areas

Greater activity was shown in the Prairie Provinces; employment declined in Quebec, Ontario and the Maritime Provinces, while very little general change was indicated in British Columbia.

Maritime Provinces.—Statements were tabulated from 603 firms in the Maritime Provinces employing 73,411 persons, compared

with 74,938 in the preceding month. Practically no change had been indicated on August 1, 1930, but the index then was much higher than on the date under review. Building construction showed gains at the beginning of August, and transportation, services and communications were also busier; on the other hand, the trend of employment was downward in manufacturing, notably in fish-preserving, iron and steel and lumber works, highway and railway construction, trade and mining.

Quebec.—Curtailement was shown in Quebec, according to returns from 1,813 employers with 272,818 workers, as against 274,987 on July 1. Manufacturing, logging and trade reported smaller payrolls, while construction indicated considerable improvement, and mining and transportation were also more active. Employment was in smaller volume than at the beginning of August a year ago, although the contraction then had involved a larger number of workers.

Ontario.—There was a further contraction in employment in this province on August 1, when the 3,521 co-operating firms reported 374,182 employees, a reduction of 7,906 persons since July 1. Improvement was noted in tobacco and pulp and paper factories, in shipping, building and highway construction and services, but iron and steel plants reported large reductions, and textile, lumber, chemical and some other factories, logging, transportation, railway construction and retail

trade also showed curtailment, in some cases of a seasonal nature. Activity had also declined on August 1, 1930, but the index then was higher.

Prairie Provinces.—A very pronounced increase in employment was indicated in the Prairie Provinces, where 1,162 employers reported 156,504 workers, or 24,561 more than at the beginning of July; this increase, which was the largest ever reported in the Prairie Provinces, was almost entirely due to road work undertaken for the relief of unemployment in Saskatchewan. Services and tele-

ing 79,323 persons, or almost the same number as in the preceding month. Increases were indicated at the beginning of August last year, when the situation was more favourable.

Table I gives index numbers by economic areas.

Employment by Cities

Employment advanced in Ottawa; in Quebec City and Vancouver practically no general change was noted, while the tendency was unfavourable in Montreal, Toronto, Hamilton, Windsor and the Adjacent Border Cities and Winnipeg.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

phones also showed moderate improvement, but manufacturing, transportation and building construction were slacker. Smaller gains had been reported on August 1, 1930, and the index then was rather lower than on the date under review.

British Columbia.—Practically no general change was registered in British Columbia, where food canning and electric current plants, transportation, communications and building construction showed improvement, which, however, was offset by losses in logging, highway construction, shipping and metal works. Returns were compiled from 787 firms employ-

Montreal.—As on August 1, 1930, there was a decrease in Montreal on the date under review; employment last year, however, was more active than at the beginning of August this year. A combined pay-roll of 138,482 employees, or 3,421 less than on July 1, was reported by the 1,004 co-operating firms. Transportation registered improvement, while manufacturing, construction and trade released employees; the greatest losses in factory employment took place in the iron and steel, tobacco and textile divisions.

Quebec.—Very little general change was reported in Quebec City; services showed im-

provement, but manufacturing as a whole was dull. Statements were received from 136 employers whose staffs aggregated 13,225 workers, compared with 13,215 in the preceding month. An increase has been indicated on August 1 a year ago, when the index was higher.

Toronto.—As on the same date last year, there was a falling-off in activity in Toronto, according to data from 1,128 firms employing 118,724 persons, or 3,230 less than at the beginning of July. The level of employment was

lower than on August 1, 1930. Manufacturing (especially of iron and steel and textile products), and trade were slacker than on July 1, but building recorded improvement.

Ottawa.—Employment in Ottawa showed an advance, 202 persons being added to the forces of the 166 co-operating employers, who had 14,448 workers on August 1. There were gains in manufacturing, while construction released employees. Employment at the beginning of August, 1930, had also increased, but the index then was several points higher.

NOTE.—The "Relative Weight" in Table I shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS
(AVERAGE CALENDAR YEAR 1926=100)

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia
Aug. 1, 1921.....	90.0	102.4	83.7	90.5	96.8	85.4

Relative weight of employment by districts as at Aug. 1, 1931.....	100.0	7.7	28.5	39.1	16.4	8.3

NOTE.—The "Relative Weight" in Table 2 shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

Hamilton.—There were further reductions in staff in Hamilton, 231 establishments reporting 30,571 persons on their pay-lists, as against 30,820 in their last return. Manufacturing registered slight but general curtailment (except in vegetable food factories, which were seasonally active), while construction was also quieter. The situation was not so favourable as on the same date last year, although decreases had also then been noted.

Windsor and the Adjacent Border Cities.—Continued losses were shown in the Border Cities; statistics were received from 139 firms

employing 9,285 workers, or 2,337 less than on July 1. Automobile works largely reduced their working forces, while other groups showed little general change. Smaller declines had been recorded on August 1, 1930, and employment then was in greater volume.

Winnipeg.—A decrease was indicated in Winnipeg, according to 369 firms who had 29,999 employees, as compared with 30,575 at the beginning of July. There were increases in telephonic communications, but manufacturing, road construction and trade showed curtailment. An improvement was evidenced on

Relative weight of employment by cities as at Aug. 1, 1931	14.5	1.4	12.4	1.5	3.2	1.0	3.1	3.2

NOTE.—The "Relative Weight" in Table 3 shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

the corresponding date last year, when the index was higher.

Vancouver.—In Vancouver, manufacturing showed little general change; building reported heightened activity, while trade and highway construction showed curtailment. Returns were compiled from 322 employers with 30,624 persons on their staffs, as compared with 30,693 in the preceding month. An increase had been indicated on August 1, 1930, when the level of employment was higher.

Index numbers of employment by cities are given in Table II.

Manufacturing

Further reductions were made in the manufacturing establishments, 4,752 of which reported 466,000 operatives on their pay-rolls, as compared with 478,323 on July 1. In some cases, the contractions were due to shutdowns for holidays, and it was expected that work would be resumed early on the month. Increases were recorded in vegetable food, leather footwear, woollen, non-metallic mineral and electric current plants, but the garment and iron and steel industries were seasonally slacker, and losses were also indicated in the lumber, non-ferrous metal, chemical

The "Relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

slight decline in the group as a whole. Statistics were received from 237 firms employing 19,746 workers, as compared with 19,824 in the preceding month. The trend on August 1 in other years of the record has usually been downward, but on the date under review activity was less than in midsummer of any other of the last few years of the record.

Leather and Products.—An increase in employment was shown in the leather group, 206 persons being added to the staffs of the 241 co-operating manufacturers, who employed 18,407 on August 1. The situation as reported by these firms was more favourable than on the corresponding date last year, when a slight decrease had been noted.

Lumber and Products.—Rough and dressed lumber mills, container, furniture, vehicle and other branches of the lumber group were slacker, the industry as a whole showing a considerably larger decline than that recorded on August 1, 1930, when the index was higher. The pay-rolls of the 785 firms furnishing data aggregated 42,779 operatives, as against 44,217 in their last report. There were small decreases in all except the Prairie Provinces, which showed very little general change.

Musical Instruments.—Employment in musical instrument factories was slacker than in the preceding month, and it was also not so active as in the corresponding month last year. Statements were received from 35 manufacturers who had reduced their pay-rolls by 122 persons to 1,605 on August 1, 1931.

Plant Products, Edible.—Large additions to staffs were registered in fruit and vegetable canneries, and starch and glucose and sugar and syrup factories were also busier, while chocolate and confectionery production showed curtailment; 400 employers in the vegetable food group reported 31,141 workers, or 632 more than at the beginning of July. The increase took place largely in Quebec and British Columbia. Employment was in smaller volume than on August 1, 1930, when greater gains had been indicated.

Pulp and Paper Products.—Printing and publishing establishments recorded lowered activity, while other divisions of this group reported little general change. Statistics were received from 560 manufacturers whose pay-rolls were decreased by 112 persons to 58,513 on August 1. Improvement took place in the Maritime Provinces and Ontario, while there were losses in Quebec. Substantial advances were noted in the corresponding month last summer when the index was higher than on the date under review.

Rubber Products.—There was a decline in rubber factories, 43 of which 12,217 persons on their pay-rolls, compared with 12,377 on July 1. The reduction, which took place chiefly in Quebec and Ontario, was smaller than that reported at the beginning of August of a year ago, when employment was, however, at a decidedly higher level.

Textile Products.—Cotton, silk, knitting, garment and other textile factories recorded reduced working forces, but there were important increases in headwear and woollen mills; on the whole, there was a decrease of 3,427 workers in the staffs of the 752 co-operating manufacturers, who employed 75,670. The general tendency in all provinces was downwards. Smaller losses were noted at the beginning of August, 1930, when the index was a few points higher.

Tobacco, Distilled and Malt Liquors.—Data were received from 145 establishments in these industries, whose payrolls, aggregating 14,882 on August 1, showed little change since July 1. Losses in tobacco factories were practically offset by improvement in breweries. The situation on August 1 last year was more favourable.

Chemicals and Allied Products.—Further contractions were noted in chemical works on August 1, 1931, 396 persons having been released since the preceding month from the pay-rolls of the 138 co-operating manufacturers, who employed 8,046 workers. The index was lower than at the beginning of August, 1930.

Clay, Glass and Stone Products.—For the first time since March, there was a reduction in building material plants, according to 160 employers with 11,256 workers, or 244 less than in their last report. The bulk of the decrease was in Ontario. Employment was in smaller volume than on the same date last summer, when losses had also been indicated.

Electric Current.—An increase took place in electric current works, 95 of which reported 16,041 employees, as against 15,560 on July 1. Most of the improvement was recorded in British Columbia. The index number on the date under review was slightly lower than on August 1, 1930.

Electrical Apparatus.—Employment in 77 electrical apparatus works showed a decrease at the beginning of August; they employed 14,597 operatives, or 234 less than in the preceding month. The situation was not so good as on August 1 last year, when a minor reduction had been indicated.

Iron and Steel Products.—Automobile, railway car, agricultural implement, machinery, foundry, sheet metal and other factories reported declines, largely of a seasonal character.

A combined working force of 104,663 persons was indicated by the 735 co-operating manufacturers, who had 111,632 on July 1. Ontario firms recorded the greatest curtailment, but there were general losses throughout the Dominion. Seasonal contractions had also been noted on August 1, 1930, but the index then was much higher than on the date under review.

Non-ferrous Metal Products.—There was a decrease in employment at the beginning of August, 493 workers being released from the staffs of the 124 firms furnishing data, who employed 17,125. Almost all the reduction took place in Ontario and British Columbia. Employment was in smaller volume than on August 1, 1930, when the trend was upward.

Mineral Products.—Statistics tabulated from 89 manufacturers of mineral products showed that they employed 12,647 workers, or 107 more than in the preceding month. Most of the improvement took place in Ontario. The index was lower than on the same date of a year ago, although contractions had then been indicated.

Logging

Seasonal dullness continued greatly to affect employment in logging camps in all provinces. Statements were tabulated from 227 firms, employing 7,805 men, or 2,751 less than in the preceding month. Much larger losses were reported on August 1, 1930, but employment then was in larger volume.

Mining

Coal.—There was a decrease of 213 employees in the staffs of the 81 operators furnishing returns, bringing them to 23,790 on August 1, 1931. This loss, in which both Eastern and Western coal fields shared, compared unfavourably with the gain registered on the same date last year, when the index was higher than on the date under review.

Metallic Ores.—Moderate gains were recorded in metallic ore mines, in which employment was slightly more active than at the beginning of August last year. Returns were received from 64 mines, with 16,774 workers, as compared with 16,530 in their last report. The greatest improvement was in the Prairie Provinces.

Non-metallic Minerals (Other than Coal).—Expansion was noted generally in this division, in which 82 employers enlarged their payrolls by 138 persons to 6,345 at the beginning of August. The advance occurred wholly in Quebec. Employment was at a lower level than in the summer of 1930.

Communications

There was another advance in the personnel of telegraph and telephone companies on August 1, those co-operating with the Dominion Bureau of Statistics having 27,391 employees, as against 27,122 in the preceding month. The number engaged in this group was lower than on August 1 a year ago.

Transportation

Street Railway and Cartage.—A slight falling-off was registered in this division, according to data received from 158 employers with 24,627 workers, as against 24,680 on July 1. Improvement had been recorded on August 1 last year, when the index was a few points higher.

Steam Railway Operation.—The trend of employment in steam railway operation was slightly unfavourable, chiefly in Ontario and the Prairie Provinces. The 104 companies and divisional superintendents furnishing data reported 71,879 employees, compared with 72,098 in their last report. A smaller decrease had been recorded on the same date in 1930, when the index was higher.

Shipping and Stevedoring.—Statements were tabulated from 87 companies in this group, employing 17,052 workers, or 396 more than on July 1, 1931. There were gains in the Maritime Provinces, Quebec and Ontario. An advance had also been noted at the beginning of August a year ago, and employment then was more active.

Construction and Maintenance

Building.—Considerable improvement was again reported in building construction, 750 contractors adding 819 persons to their staffs, bringing them to 47,573 at the beginning of August. There were increases in all except the Prairie Provinces. Employment was not so brisk as in the same month of 1930, the gains then indicated having involved a larger number of workers.

Highway.—The number engaged on highway construction and maintenance showed further, important increases in all except the Maritime Provinces and British Columbia. Data were received from 362 employers with 96,145 workers on their payrolls, as compared with 68,006 at the beginning of July. Most of the increase in this industry took place in Saskatchewan, when an important unemployment relief program was under way.

Railway.—Practically no change, on the whole, was recorded in this group on August 1, 1931, when 49 companies and divisional superintendent reported that they had 40,045

men on their staffs. There were gains in Quebec and the Western Provinces, but contractions in the Maritimes and Ontario. The index number was lower than at the beginning of August, 1930, when curtailment had been indicated.

Services

Hotels reported further additions to their payrolls, while only slight changes were indicated in other groups in this division; 275 firms employed 24,490 persons, or 557 more than at the beginning of July. A decrease had been recorded on August 1, 1930, when the situation was more favourable.

Trade

There was a falling-off in both wholesale and retail trade, according to 829 trading

establishments, which employed 86,322 workers, as compared with 88,500 on July 1. All provinces shared in the declines, which were greatest in retail trade in Quebec and Ontario. Losses were also recorded at the beginning of August last year, when the index was a few points higher.

TABLES

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables, in which the columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employers reported in Canada by the firms making returns on the date under review.

(2) Unemployment in Trade Unions at the close of July, 1931

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work outside their own trades or who are idle owing to illness are not considered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Practically the same level of activity was maintained by local trade unions during July as in the previous two months, the percentage of idleness standing at 16.2 in contrast with percentages of 16.3 and 16.2 in June and may respectively. The July percentage was based on the returns furnished to the Department of Labour by 1,862 labour organizations combining a membership of 199,923 persons. Considerable depression, however, continued to be shown from last year when at the close of July 9.2 per cent of the members reported were without work. Quebec unions alone recorded a higher employment volume than in June, the garment trades of Montreal particularly indicating improvement in conditions, though a large number of workers continued to be reported as employed at reduced time. In Nova Scotia the situation remained unchanged from that of June. Owing to greater inactivity for coal miners in Alberta, unemployment in that province showed a moderate increase in comparison with June, while of the contractions indicated

in New Brunswick, Ontario, Manitoba, Saskatchewan and British Columbia none were over 1 per cent. In the unfavourable situation shown from July last year and shared by all provinces, Alberta unions indicated the greatest increase in slackness, though the reductions recorded by Ontario, British Columbia, Manitoba, Saskatchewan and Quebec unions were also quite extensive. In Nova Scotia and New Brunswick declines were on a more moderate scale.

Reports on unemployment from the largest city in each province, with the exception of Prince Edward Island, are tabulated separately each month. Of these, Montreal unions reported 5 per cent improvement during July over the previous month followed by gains of over 4 per cent in Edmonton and about 2 per cent in Halifax. On the other hand, Regina and Toronto unions indicated a substantial falling off in available work from June and Vancouver, Saint John and Winnipeg recessions of lesser degree. Large increases from July a year ago, in slackness were registered by Toronto and Vancouver unions, and in Saint John, Montreal and Winnipeg employment showed a considerable drop. Activity for Halifax and Edmonton unions was also moderately curtailed and in Regina the decline was nominal only.

From the chart which accompanies this article it will be noticed that the curve has remained at practically the same level during July as in both May and June showing an almost stationary unemployment volume during the three months. The curve, however, maintained a level considerably above that noted in July last year, indicating a much

greater degree of slackness during the month reviewed.

Largely due to the better situation prevailing for garment workers during July, the percentage of unemployment in the manufacturing industries, as a whole showed some reduction from June. Returns for July were tabulated from 496 unions in the manufacturing industries with 57,699 members, 9,263 or 16.1 per cent of whom were idle on the last day of the month contrasted with 18.4 per cent in June. Conditions for leather and fur workers, metal polishers and bakers and confectioners also showed some improvement from June. On the contrary, iron and steel workers reported contractions of activity involv-

ment also eased off very slightly. Alberta unions as in the previous comparison were almost wholly responsible for the adverse situation shown from July, 1930, while in Nova Scotia nominally improved conditions were indicated. British Columbia miners reported a small percentage of idleness compared with a fully engaged situation in July a year ago.

Employment in the building and construction trades during July declined very slightly from June and remained slack on the whole, as shown by the returns tabulated from 267 unions combining a membership of 28,540 persons. Of these 11,386 were idle on the last day of the month, a percentage of 39.9

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

ing the greatest number of workers, and employment for papermakers, printing tradesmen, general labourers and wood, textile, hat, cap and glass workers was also retarded. In the manufacturing industries, in comparison with the returns for July last year, when 7.3 per cent of inactivity was recorded, textile, leather, jewellery, brewery and glass workers, all registered a somewhat greater employment volume during the month reviewed, the combined gains being slight in comparison with the pronounced declines manifested by iron and steel, garment and wood workers, papermakers and printing tradesmen.

Coal miners with 49 unions reporting 18,895 members during July indicated 17.5 per cent of idleness, contrasted with 13.0 per cent in June and with 8.8 per cent in July, 1930. A large share of this increase in slackness from June was registered by Alberta miners, though in Nova Scotia and British Columbia employ-

contrasted with 38.6 per cent of unemployment in June. Noteworthy improvement in conditions was manifest by electrical workers from June and among tile layers, lathers and roofers, the percentage increase was pronounced though rather few workers were effected. In addition, painters, decorators and paperhangers and plumbers and steamfitters reported a slightly better situation. On the other hand, bricklayers, masons and plasterers, granite and stonecutters and hod carriers and building labourers maintained a lower lever of activity than in June and a substantial drop in employment was indicated by bridge and structural iron workers. Among carpenters and joiners the recessions recorded were fractional only. In comparison with the returns for July of last year in the building trades when the unemployment percentage stood at 28.3, hod carriers and building labourers were the only tradesmen to register

an improved situation during the month reviewed. Especially extensive were the employment losses reported by bridge and structural iron workers, granite and stonecutters and tile layers, lathers and roofers, who, however, formed a small share of the total membership in the building trades, and much slacker conditions prevailed for bricklayers, masons and plasterers, carpenters and joiners, painters, decorators and paperhangers and plumbers and steamfitters than in July a year ago. From electrical workers the contractions indicated were moderate.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Pr. Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1919.....	3.1	2.0	3.4	2.7	2.1	3.2	2.0	7.9	3.4

Among transportation workers during July the change in employment conditions from June was slight, the trend, however, being toward greater activity. This was manifest by the returns tabulated at the close of July from 784 unions with 69,472 members, 6,171 or a percentage of 8.9 of whom were idle on the last day of the month contrasted with 9.5 per cent in June. Steam railway employees, whose returns included about 82 per cent of the entire group membership reporting, indicated a slightly upward employment tendency during July and among teamsters and chauffeurs some improvement was noted. Activity for navigation workers, however, was somewhat curtailed from June. Street and electric railway employees reported the same unemployment volume in the two months compared. Greater depression was apparent among transportation workers than in July a year ago when 4.9 per cent of the members reported were without employment, inactivity for steam railway employees being a large factor in this adverse situation, though navigation workers and street and electric railway employees also contributed in a much smaller way to the total unemployment increase. Teamsters and chauffeurs, however, were slightly better employed than in July last year.

The 5 unions of retail clerks from which returns were tabulated at the end of July, embracing a membership of 1,312 persons indicated 2.0 per cent of unemployment on the last day of the month in contrast with .4 per cent in June and with a fully employed situation in July last year.

Among civic employees during July practically no variation in the level of activity was shown from June the 72 unions from which returns were received with 7,396 members reporting an unemployment percentage of .3 contrasted with .4 per cent in June. In July last year .6 per cent of the members reported were idle.

The unemployment percentage in the miscellaneous group of trades rose from 17.2 at the close of June to 19.0 in July, the latter percentage being based on the returns tabulated from 141 unions with a membership aggregate of 5,931 persons. Hotel and restaurant employees during July indicated a slightly higher level of activity than in June, while moderate reductions in employment were apparent among stationary engineers and firemen and unclassified workers. Declines of minor importance, however, occurred among theatre and stage employees and barbers. Compared with the situation in the miscellaneous group of trades during July last year when 10.8 per cent of inactivity was recorded, stationary engineers and firemen, and hotel and restaur-

TABLE II.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

Table with 19 columns (Months, Fishing, Lumbering and Logging, Mining, Manufacturing Industries, Vegetable products, Pulp and paper, Pulp and paper mill products, Printing, publishing and lithographing, Wood products, Fibres, textiles and textile products, Textile and carpet workers, Hat, cap and glove workers, Animal products, Iron and its products, Non-ferrous metals, Clay, glass and stone products, Mineral products, Miscellaneous industries, Building and construction, Transportation, Shipping and stevedoring, Steam railway operation, Local transportation, Communication, Telegraph operation, Telephone operation, Trade (retail shop clerks), Services, Governmental, Miscellaneous, All occupations)

ant employees reported a large increase in slackness during the month reviewed and among theatre and stage employees the situation declined substantially. Employment for barbers also showed a slight falling off. Among unclassified workers, however, some improvement was manifest.

Fishermen reported the same unemployment situation during July as in June, the percentage of inactivity in both months standing at 1.5. Returns were received for July from 3 unions of these workers covering 1,305 members. In July a year ago all members were reported busy.

Unemployment was in greater prevalence among lumber workers and loggers during

July than in either the previous month or July of last year, according to the returns received from 4 unions with 850 members. Of these 287 or a percentage of 33.8 were idle on the last day of July contrasted with 27.9 per cent of inactivity in June and 22.2 per cent in July, 1930.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1930 inclusive and also the percentages of unemployment by provinces for July of each year from 1919 to 1928 inclusive and for each month from January, 1929, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

(3) Employment Office Reports for July, 1931

The volume of business transacted by the offices of the Employment Service of Canada during July, 1931, showed no change in the average daily placements effected from those of the preceding month, but an increase of nearly 7 per cent in comparison with the average daily placements reported during the corresponding period of 1930. The total placements for the entire month under review were slightly higher, however, due to the fact that there was one more working day in July than in June. Gains over last month were recorded in farming, construction and maintenance, and manufacturing, of which the highest was in farming. All other groups showed declines. These were moderate with the exception of that in services, which was fairly heavy. In comparison with July last year, all industrial divisions, except construction and maintenance, showed decreased placements, the gain in this, offsetting by a substantial amount, the declines mentioned.

The accompanying chart shows the trend of employment since January, 1929, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. It will be noted that the curves, both of vacancies and placements in relation to applications, declined steadily throughout the month, and at the end of July were about 20 points below the levels recorded at the close of July a year ago. The ratio of vacancies to each 100 applications was 43.1 during the first half and 41.4 during the second half of July, 1931, in contrast with the ratios of 62.2 and 62.3 during the corresponding periods of 1930. The ratios of placements to each 100 applications during the periods under review were 41.5 and 39.9 as compared

with 60.1 and 60.3 during the corresponding month of 1930.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during July, 1931, was 1,078 as compared with a daily average of 1,006 during the corresponding month a year ago and with 1,088 recorded daily in June, 1931.

The average number of applications, for employment received daily by the offices of the Service during the month under review was 2,550 in comparison with 1,616 in July, 1930. Applications for work during the preceding month of 1931 averaged 2,245 daily.

The average number of placements made daily by the offices of the Service during July, 1931, was 1,039, of which 452 were in regular employment and 587 in work of one week's duration or less, as compared with a total daily average of 1,039 during the preceding month. Placements in July a year ago averaged 973 daily, consisting of 611 in regular and 362 in casual employment.

During the month of July, 1931, the offices of the Service referred 28,512 persons to vacancies and effected a total of 27,002 placements. Of these, the placements in regular employment were 11,744, of which 7,977 were of men and 3,767 of women, while placements in casual work totalled 15,258. The number of vacancies reported by employers was 20,483 for men and 7,542 for women, a total of 28,025, while applications for work numbered 66,281, of which 53,824 were from men and 12,457 from women.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1921, to date.

Year	Placements		
	Regular	Casual	Totals
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552

NOVA SCOTIA

Employment opportunities, as indicated by orders received at employment offices in Nova

of which 238 were of household workers. Regular employment was found for 222 men and 67 women.

NEW BRUNSWICK

During July, positions offered through employment offices in New Brunswick were nearly 7 per cent less than in the preceding month and over 15 per cent below the corresponding month last year. Placements were nearly 2 per cent less than in June and over 14 per cent below July, 1930. Logging and trade were the only groups in which more placements were made than during July last year. The declines in all other groups,

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ——— Vacancies - - - - - Placements o-o-o-o-o

Scotia during July, were over 12 per cent less than in the preceding month and nearly 10 per cent below the corresponding month last year. There was a decline also in placements of nearly 15 per cent in comparison with June and of nearly 11 per cent when compared with July, 1930. The largest reduction in placements from July of last year was in trade, with smaller declines in services, manufacturing, transportation and logging. These losses were largely offset by gains in construction and maintenance, and farming. Industrial divisions in which most of the placements were effected during the month were: logging, 38; farming, 106; construction and maintenance, 142; trade, 39; and services, 301,

of which that in construction and maintenance was the largest, were more than sufficient to create an adverse situation for the province as a whole. Placements by industrial divisions included: manufacturing, 25; logging, 110; farming, 23; construction and maintenance, 22; trade, 48; and services, 474, of which 307 were of household workers. During the month 158 men and 57 women were placed in regular employment.

QUEBEC

There was an increase of nearly 10 per cent in the number of positions offered through employment offices in the Province of Quebec during the month of July when compared

* 88 placements effected by offices since closed.

with the preceding month, but a decline of nearly 13 per cent in comparison with the corresponding month last year. Placements were over 1 per cent higher than in June, but nearly 22 per cent less than in July, 1930. All industrial divisions, except services, participated in the reduction in placements from July of last year, those in logging accounting for more than half of the decline. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 77; logging, 186; farming, 86; construction and maintenance, 220; and services, 775 of which 592 were of household workers. Regular employment was found for 642 men and 608 women.

ONTARIO

The demand for workers, as indicated by orders received at employment offices in Ontario during July, was over 16 per cent less than in the preceding month, but nearly 8 per cent higher than during the corresponding month last year. There was a decline in placements of over 15 per cent when compared with June, but a gain of over 6 per cent in comparison with July, 1930. Increased placements in construction and maintenance were responsible for the gain over July of last year, as although farm placements were appreciably higher, declines in logging, manufacturing and mining more than offset this gain, and made a considerable reduction in the net increase for the province. Placements by industrial groups included: manufacturing, 846; logging, 214; farming, 2,036; transportation, 117; construction and maintenance, 3,575; trade, 356; and services, 3,807, of which 2,000 were of household workers. There were 3,637 men and 1,701 women placed in regular employment during the month.

MANITOBA

During July, orders received at employment offices in Manitoba called for over 48 per cent more workers than in the preceding month, but over 12 per cent less than during the corresponding period last year. There was an increase of over 49 per cent in placements in comparison with June, but a decline of nearly 11 per cent when compared with July, 1930. Farm placements were considerably less than during July, 1930, and there was a somewhat smaller decline in services. These reductions were more than sufficient to offset the gain in construction and maintenance, which was the only group to show improvement. Industrial divisions in which most of the placements were effected during the

month were: farming, 491; construction and maintenance, 1,111; trade, 76; and services, 1,320, of which 763 were of household workers. During the month 678 men and 462 women were placed in regular employment.

SASKATCHEWAN

Orders listed at employment offices in Saskatchewan during July called for practically the same number of workers as in the preceding month, but were nearly 39 per cent less than during the corresponding month last year. Placements were the same as in June but over 37 per cent less than in July, 1930. All industrial divisions participated in the decline in placements from July of last year, farming and construction and maintenance showing the largest reductions. Placements by industrial divisions included: manufacturing, 52; farming, 402; construction and maintenance, 359; trade, 42; and services, 876, of which 449 were of household workers. There were 458 men and 293 women placed in regular employment during the month.

ALBERTA

Opportunities for employment, as indicated by orders received at Alberta offices during July, were 65 per cent better than in the preceding month and 99 per cent in excess of the corresponding month last year. Placements showed a similar gain under both comparisons. Work provided in relief of unemployment was responsible for the substantial gain in placements over July last year, as all other groups showed declines. Of the latter, those in farming and services were the largest. Placements by industrial divisions included: manufacturing, 87; farming, 538; construction and maintenance, 3,825; and services, 524, of which 345 were of household workers. During the month 1,707 men and 289 women were placed in regular employment.

BRITISH COLUMBIA

There was a gain of over 4 per cent in the number of positions offered through employment offices in British Columbia during July, when compared with the preceding month and of nearly 19 per cent in comparison with the corresponding month last year. Placements were over 3 per cent higher than in June and nearly 19 per cent above July, 1930. As in Alberta, the gain in placements over July of last year was entirely due to relief work for the unemployed, construction and maintenance being the only division to show any improvement. Of the declines those in farming, manufacturing, and services were the most

noteworthy. Placements by industrial divisions included: manufacturing, 89; farming, 220; transportation, 49; construction and maintenance, 2,036; and services, 908, of which 391 were of household workers. Regular employment was found for 475 men and 290 women.

Movement of Labour

During the month of July, 1931, the offices of the Employment Service of Canada effected 11,744 placements in regular employment, 5,497 of which were of persons for whom the employment located was outside the immediate vicinity of the offices at which they were registered. Of the latter, 291 were granted the Employment Service reduced transportation rate, 250 proceeding to points within the same province as the despatching office and 41 to other provinces. The reduced transportation rate which is 2.7 cents per mile with a minimum fare of \$4 is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

All certificates at the reduced rate issued in Quebec during July were granted by the Hull office, which despatched 4 river drivers to Pembroke and 3 river drivers to Cobalt.

The movement of labour in Ontario during July was entirely provincial and comprised the transfer of 83 workers. Of these, 58 were conveyed from Port Arthur to employment at various points within the same zone, including 47 bush workers, 6 carpenters and 5 fire fighters. The Port Arthur zone was also the destination of 1 mill man travelling from Cobalt. From North Bay 1 cook proceeded to Sudbury, 1 trimmer man to Cobalt, 2 carpenters to Timmins, and 1 cookee within the North Bay zone. To the Timmins zone also were shipped 2 power construction workers from Niagara Falls, and 1 carpenter from Pembroke. In addition, the Sudbury office transferred 13 bush workers and 2 sawmill workers, and Fort William 1 hotel cook to employment within their respective zones.

In Manitoba all certificates for reduced transportation during July were issued at the Winnipeg office and numbered 85, of which 58 were provincial and 27 interprovincial. The former were granted to 1 hotel cook and 1 town domestic going to Dauphin, 1 farm domestic to Brandon, and 45 farm hands, 2 farm housekeepers, 4 plasterers, 2 carpenters, 1 hotel porter and 1 building labourer to various points within the Winnipeg zone. Of the persons going outside the province 15 were bound for Port Arthur and vicinity, in-

cluding 7 farm hands, 1 café worker, 2 cooks, 1 deck hand, 2 miners, 1 machinist, and 1 housekeeper. To Estevan 1 hotel chambermaid was carried at the special rate, while the balance of the movement outside the province was to the agricultural districts of Saskatchewan, which received 7 farm hands and 3 farm domestics.

From offices in Saskatchewan 31 workers secured certificates for reduced transportation during July, all of whom went to provincial employment. The Regina office was instrumental in the transfer of 7 farm hands to Yorkton, 1 mechanic to Swift Current, 1 town housekeeper to Moose Jaw, 1 farm hand each to the Saskatoon and North Battleford zones and 5 farms hands within the Regina zone. To the Regina zone also was destined 1 farm hand travelling from Yorkton. Securing certificates at Saskatoon 4 carpenters went to Prince Albert, 2 farm hands to North Battleford, and 5 farm hands and 1 farm domestic to employment in the Saskatoon zone. The balance of this provincial movement was from Moose Jaw, which office despatched 1 farm hand to Swift Current and 1 town domestic within its own zone.

The business transacted by Alberta offices in July involved an issue of 68 reduced transportation rate certificates, 63 of which were to provincial points and 5 to centres outside. The majority of the transfers within the province were effected by the Edmonton office which sent 1 gardener to Lethbridge, 1 farm hand each to the Drumheller and Calgary zones, and 30 farm hands, 4 farm domestics, 11 miners, 3 labourers, 2 teamsters, 1 fireman, 2 carpenters, 1 engineer, 1 railway construction worker, 1 waitress, 1 hotel worker, and 1 housekeeper within the territory covered by the Edmonton office. From Calgary 1 farm housekeeper was conveyed to Medicine Hat, and 1 farm hand to Lethbridge. The 5 persons going outside the province were agricultural workers who travelled to the Saskatoon zone on certificates issued at Edmonton.

British Columbia transfers at the reduced rate in July numbered 17, of which 15 were to provincial points. Of these, 13 were effected by the Vancouver office, which despatched 2 mine workers and 1 town housekeeper to Penticton, 1 logger and 1 engineer to Kamloops, 1 farm domestic to Vernon, 1 farm hand to Prince George, 1 master mechanic to Nelson, and 3 miners, 1 cook and 1 housekeeper within the Vancouver zone. In addition, the Prince Rupert and Nelson offices each despatched 1 farm hand to employment with-

in their respective zones. The 2 interprovincial transfers were of clerks proceeding from Vancouver to Ottawa.

Taking advantage of the Employment Service reduced transportation rate during July, 192 workers journeyed over the Canadian Na-

tional Railways, 89 over the Canadian Pacific Railway, 5 over the Pacific Great Eastern Railway, 3 over the Temiskaming and Northern Ontario Railway, and 2 over the Northern Alberta Railway

(4) Building Permits Issued in Canada in July, 1931

The value of the building authorized during July showed an increase of \$2,408,767, or 28.4 per cent as compared with the preceding month, but there was a decline of \$4,945,276, or 31.3 per cent, as compared with July, 1930. The aggregate for the 61 cities in July, 1931, was \$10,879,505, as against \$8,470,738 in June, 1931, and \$15,824,781 in July, 1930. The total for the first seven months of 1931, viz., \$68,351,779, was lower than in 1930 and also than in most years of the record, but in using these figures, it should be noted that there has also been a very considerable decline in the wholesale costs of building materials, the Bureau's index (average 1926=100) having fallen from 144.3 in the first seven months of 1920 to 83.6 in the period January-July, 1931.

Some 50 cities furnished detailed statistics, showing that they had issued over 1,000 permits for dwellings valued at approximately \$4,300,000, and some 2,000 permits for other buildings estimated at about \$6,300,000. In June, authority was given for the erection of some 2,000 dwellings and 2,600 other buildings, valued at approximately \$4,500,000 and \$3,000,000, respectively.

Increases over June, 1931, were reported in Nova Scotia, Quebec, Ontario and British Columbia, the largest gain being that of \$971,018, or 24.8 per cent in Ontario. Of the reductions in the other provinces, that of \$258,485, or 42.7 per cent in Manitoba was most pronounced.

In comparison with July, 1930, Nova Scotia and New Brunswick registered improvement, there being gains of 289.2 and 35.9 p.c., respectively, in those provinces. Elsewhere declines were indicated, that of \$1,429,483, or 22.7 per cent in Ontario being largest.

Of the larger cities, Toronto reported an increase over June, 1931, and July, 1930; in Montreal and Vancouver there were gains in the former, but losses in the latter comparison,

while in Winnipeg the July, 1931, total was less than in either the preceding month or the same month of last year. Of the other centres, Halifax, New Glasgow, Sydney, Moncton, Westmount, Belleville, Hamilton, Owen Sound, Welland, Riverside, New Westminster and Prince Rupert showed gains as compared with both June, 1931, and July, 1930.

Cumulative Record for First Seven Months, 1920-1931.—The following table gives the value of the building authorized by 61 cities during July and in the first seven months of each year since 1920, as well as index numbers for the latter, based upon the total for 1920 as 100. The average index numbers of wholesale prices of building materials in the first seven months of the years since 1920 are also given (1926 average=100).

Year	Value of permits issued in July	Value of permits issued in first seven months	Indexes of value of permits issued in first seven months (1920=100)	Average Indexes of wholesale prices of building materials in first seven months (1926 average=100)
	\$	\$		
1931.....	10,879,505	68,351,779	90.5	83.6
1930.....	15,824,781	101,238,766	134.1	98.9
1929.....	22,702,584	147,311,851	194.7	99.5
1928.....	25,761,956	127,798,943	169.3	97.3
1927.....	16,369,195	97,211,914	128.8	96.7
1926.....	18,683,415	97,443,834	129.1	100.8
1925.....	12,812,603	78,712,320	104.3	103.1
1924.....	11,681,196	72,355,350	95.8	109.9
1923.....	13,078,547	86,126,043	114.1	111.7
1922.....	15,740,810	87,022,484	115.3	108.3
1921.....	10,965,891	66,737,575	88.4	130.2
1920.....	13,743,045	75,497,755	100.0	144.3

The aggregate for the first seven months of this year was less by 32.5 per cent than in 1930, and was also below the average recorded in the eleven years of the record. The average index number of wholesale prices of building materials, however, continued lower than in any other year since 1920.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the British *Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary showing the employment situation during July, 1931, is reproduced below. The following report on unemployment conditions in the United States is based on the statistics published by the United States Department of Labour, showing the recent trend of employment throughout the country. The employment situation in the United States is further indicated by unemployment percentages based on statistics compiled each month by the American Federation of Labour, the source of these statistics being returns obtained from the trade union locals in 24 representative cities. Summary figures for August, 1931, and previous months are reproduced below.

Great Britain

Employment during July showed a further decline in most industries. The decline was

greatest in coal mining, general engineering, and motor vehicle manufacture; also in most of the textile industries, the clothing trades, and in building and public works contracting. Unemployment also increased in slate quarrying, shipbuilding and ship-repairing, boot and shoe manufacture, and in shipping service.

There was a slight improvement in iron and steel manufacture, and in the tinplate industry.

Each of the administrative divisions showed a decline in employment, which remained moderate in London and the Southern areas, and very bad in the North of England and in Scotland, Wales, and Northern Ireland.

Among the workpeople, numbering approximately 12,400,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at July 27, 1931 (including those temporarily stopped as well as those wholly unemployed), was 22·6, as compared with 21·8 at June 22, 1931, and with 16·7 at July 27, 1930. The percentage

wholly unemployed at July 27, 1931, was 16.7, as compared with 16.4 at June 22, 1931; while the percentage temporarily stopped was 5.9, as compared with 5.4. For males alone the percentage at July 27, 1931, was 23.8, and for females 19.5; at June 22, 1931, the corresponding percentages were 23.2 and 18.4.

At July 27, 1931, the numbers of persons on the Registers of Employment Exchanges in Great Britain were 1,877,543 wholly unemployed, 724,690 temporarily stopped, and 111,117 normally in casual employment, making a total of 2,713,350. This was 85,964 more than a month before, and 740,620 more than a year before. The total included 1,991,757 men, 70,800 boys, 594,588 women and 56,205 girls.

The 1,877,543 wholly unemployed included approximately 1,274,760 insured persons who had paid at least 30 contributions during the preceding two years, and therefore satisfied the full contributions condition for the receipt of unemployment benefit; 508,450 insured persons who had paid less than 30 contributions during the preceding two years; and 94,330 uninsured persons. The wholly unemployed claimants for benefit, numbering 1,709,621, included 240,714 men, 5,484 boys, 48,068 women and 2,918 girls, who had been on the Register for less than one month.

In Great Britain and Northern Ireland the total number of persons on the Registers of Employment Exchanges at July 27, 1931, was 2,783,237.

United States

The Bureau of Labour Statistics of the United States Department of Labour reports changes in employment and pay-roll totals in July, 1931, as compared with June, 1931, based on returns from 46,058 establishments in 15 major industrial groups, having in July 4,491,521 employees whose combined earnings in one week were \$104,280,547.

The combined totals of 15 industrial groups show a decrease of 2.0 per cent in employment and a decrease of 4.8 per cent in

pay-roll totals over the month interval. Inventory taking and repairs in many manufacturing plants over an extended Fourth of July holiday closing, together with a curtailment in retail trade and coal mining operations at this season of the year regularly cause a seasonal decrease in employment in July and an even more pronounced decrease in pay-roll totals.

Increased employment in July was shown in 5 of the 15 industrial groups: Crude petroleum production, 0.5 per cent; electric railroad operation, 0.4 per cent; hotels, 1.9 per cent; canning and preserving, 44.7 per cent; and laundries, 0.9 per cent.

Decreased employment was shown in the remaining 10 groups: manufacturing, 2.5 per cent; anthracite mining, 14.5 per cent; bituminous coal mining, 2.6 per cent; metal-liferous mining, 6.4 per cent; quarrying and non-metallic mining, 1.8 per cent; telephone and telegraph, 0.4 per cent; power, light, and water, 0.5 per cent; wholesale trade, 0.3 per cent; retail trade, 5.8 per cent; and dyeing and cleaning, 0.4 per cent.

Unemployment Percentage.—Since the fall of 1927, the American Federation of Labor has compiled statistics each month which indicate the percentage of unemployed union members in 24 representative cities of the United States. These figures are included in the monthly review of industrial and economic conditions which is given in the *Monthly Survey of Business*, published by the Federation. In August, 1928, the proportion of unemployed union members was 9 per cent; in August, 1929, 9 per cent; in August, 1930, 22 per cent; in August, 1931, 18.4 per cent. The percentages since the beginning of 1931 are as follows: January, 19.8; February, 19; March, 18.1; April, 17.7; May, 17.1; June, 18.2; July, 18.8; August, 18.4.

According to an estimate by the American Federation of Labor, approximately 5,100,000 wage earners were unemployed in the United States during August.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

Reference was made in the LABOUR GAZETTE, June, 1930, page 652, to the Fair Wages and Eight-Hour Day Act of Parliament which was adopted on May 30, 1930. The text of

this measure appeared in the April, 1930, issue page 333. This Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repair or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(a) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contem-

plated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

(2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication or manufacture is carried on in any established plant or factory other than a plant or factory established for the purposes of the work contemplated.

The Act was put into effect at once as respects contracts for construction, remodeling, repair or demolition, both as to its provisions as to current and fair and reasonable rates of wages and as to the application of the eight-hour day.

With respect to contracts for other classes of work, the Fair Wages Policy of the Government of Canada, (which has been in effect since 1900 and was expressed in an Order in Council adopted June 7, 1922, and amended April 9, 1924) requires that they must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above-mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on or if there be no custom of the trade as respect hours in the district then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the

Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from the time to time during the continuance of the contract

for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the Contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed claim therefore may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wages schedules as shown below, or the General Fair Wages Clause above-mentioned:—

DEPARTMENT OF NATIONAL DEFENCE

Contract in Group "A" (Construction, etc.)

Construction of a barrack block at the Royal Canadian Air Force Training Station, Trenton, Ont. Name of contractors, Quinte Construction Co., Ltd., Trenton, Ont. Date of contract, August 19, 1931. Amount of contract, \$54,913. A fair wages schedule was inserted in the contract as follows:—

<i>Scales.—</i>	
Pritchard-Andrews Co., Ltd., Ottawa, Ont.	1,078 80
<i>Stamping ink and pads.—</i>	
J. E. Poole Co., Toronto, Ont.	370 70
<i>Letter boxes, etc.—</i>	
Pritchard-Andrews Co., Ltd., Ottawa, Ont.	228 80

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A summary is given below of the more important industrial agreements and schedules of wages and working conditions that have been received by the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Mining, Non-Ferrous Smelting and Quarrying: Non-Metallic Mineral Mining and Quarrying

AVONDALE AND WENTWORTH VICINITY, NOVA SCOTIA.—CANADIAN GYPSUM COMPANY LIMITED AND THE NOVA SCOTIA QUARRY WORKERS' UNION OF SWEETS' CORNER, HANTS COUNTY, NOVA SCOTIA.

Agreement to be in effect from April 25, 1931, to May 1, 1934, and from year to year thereafter until either party gives notice 30 days before May 1, of any year.

This agreement is the same as the one previously in effect and summarized in the *LABOUR GAZETTE*, November, 1929, page 1282, with the following exception:

Work to cease at midnight on nights before July 1, Labour Day and Christmas, as well as on Saturday nights. All work on these holidays and on Sundays to be paid double time as before.

The hours and wages are unchanged as follows:

Hours: 9 per day or night; 8½ on Saturday for day workers; for night workers, work to stop at midnight on Saturdays.

The basic wage rates are: \$2.90 per day (minimum) for labourers, \$3.24 for carpenters and certain other classes, \$3.78 for stationary engineers and several classes, up to \$5.85 for gas shovel operators.

Wages are to be adjusted every six months according to the cost of living index number, but the minimum wage of \$2.90 per day will be maintained.

Manufacturing: Food, Drink and Tobacco

TORONTO, ONTARIO.—CERTAIN EMPLOYERS (JEWISH) AND THE BAKERY AND CONFECTIONERY WORKERS' INTERNATIONAL UNION, LOCAL No. 181.

Agreement to be in effect from May 1, 1931, to May 1, 1932, and until a new agreement has been signed or this agreement cancelled or terminated by the union.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, August, 1930, page 967, with the following exceptions:

Wages: foreman or first hand \$44 per week, second hand \$40, third hand \$36 (a reduction of \$6 per week in each case from the former rates). Wages for jobbers: foreman or first hand 95 cents per hour (a reduction of 10 cents per hour), second hand 85 cents (a reduction of 10 cents per hour), third hand 75 cents per hour (a reduction of 12½ cents per hour).

VANCOUVER, B.C.—CERTAIN EMPLOYING BAKERS AND THE BAKERY AND CONFECTIONERY WORKERS' UNION OF AMERICA, LOCAL 468 AND AUXILIARY.

Agreement to be in effect from February 1, 1931, to January 31, 1932. Thirty days' notice of change to be given by either party.

Only union members to be employed; all help to be engaged through the union office. No discrimination against union members for upholding union rules and principles. Only one employer to work in any shop; all others must be union members. The employer will not purchase bakery products from any shop not operating under an agreement.

All employees are to authorize the employer to deduct from their pay all dues, fines or assessments levied in accordance with the rules of the agreement or the by-laws and constitution of the union.

Hours: 8 per day, 6 days per week; split shifts not allowed.

Overtime: to be worked only in case of emergency and not more than two hours a week if extra help is available. Overtime will be paid at time and one-half. Time and one-half also for work on holidays.

Wages: no wage scale is included in the agreement, but it is provided that no union member will have wages reduced during the life of the agreement and no one to be employed at less wages to replace workers leaving or laid off. No deduction in pay on account of observing the seven holidays specified. Jobbers or extra men employed by the day to be paid at least \$6 per day.

Two apprentices, either male or female to be allowed in each shop, one in the cake department and one in the bread department, apprentices to be transferred from one kind of work to the other so that they may learn the trade thoroughly. New apprentices must be between 16 and 22 years of age and may not be employed while other apprentices are unemployed. Apprentices are to pass an examination in another shop than the one in which they have been working before being accepted as journeymen. One girl apprentice to be allowed in each shop where women finishers are employed in the cake department.

As many helpers as required may be employed, but they must not do journeymen's or apprentices' work.

One week's notice of resignation or discharge to be given.

The union label will be furnished to master bakers at cost as long as they uphold their agreement and a union card will be furnished to retail bakeries for display. If the union is engaged in any controversy with shops fail-

ing to sign or observe the agreement, then all shops operating under the agreement will place the union label on all their products and the union agrees to carry on a campaign to advance the sale of union labelled bakery products.

A board of adjustment will be formed consisting of three employers and three union members, who shall meet regularly to adjust disputes. If unable to settle any question a seventh disinterested party will be chosen and the decision of the majority will then be final and binding. No strike or lockout to occur pending settlement.

Manufacturing: Pulp, Paper and Paper Products

THOROLD, ONTARIO.—THE ONTARIO PAPER COMPANY LIMITED AND THE INTERNATIONAL BROTHERHOOD OF PAPER MAKERS, THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS, THE INTERNATIONAL BROTHERHOOD OF STATIONARY FIREMEN, THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, THE INTERNATIONAL ASSOCIATION OF MACHINISTS, THE UNITED BROTHERHOOD OF CARPENTERS, THE INTERNATIONAL UNION OF OPERATING ENGINEERS.

The agreement which came into effect May 1, 1930, and was summarized in the LABOUR GAZETTE, August, 1930, page 968, has been renewed for another year to May 1, 1932, with the following additions:

The management to determine individual efficiency and members of the various unions to recognize the necessity for the fullest co-operation with the management and the necessity for adjustments of men, positions and rates.

The company reserves the right to exercise the privilege accorded in the agreement of putting into effect any working conditions or wage schedule contained in any award or agreement between the unions signing the agreement and other newspaper manufacturers.

Manufacturing: Printing and Publishing

OTTAWA, ONTARIO.—PROPRIETORS OF A FRENCH DAILY NEWSPAPER AND THE NATIONAL CATHOLIC UNION OF PRINTERS AND BOOKBINDERS OF THE DIOCESE OF OTTAWA.

Agreement to be in effect from January 1, 1931, to January 1, 1932.

Only union members or those willing to become such to be employed.

Hours: 48 per week for both day and night work.

Overtime: time and one-half for first three hours; double time thereafter. Double time for work on Sundays and holidays.

Wages for journeymen typographers, linotype operators, printing pressmen for both newspaper and job work, bookbinders: \$38 per week for day work and 15 per cent extra for night work. Wages for journeymen stereotypers \$30 per week for both day and night work.

Apprentices in all these trades will serve five years. One apprentice allowed to every three journeymen or fraction thereof, but a journeyman will have the right to one apprentice. This clause does not apply to job printing departments.

Wages for apprentice typographers, printing pressmen and bookbinders: from \$13 per week during first half of third year to \$26 for last half of fifth year. Wages for apprentice stereotypers from \$12 per week for first year to \$28 per week for fifth year.

Seniority to be considered in making promotions and in laying off and taking on men again, when they are of equal ability.

One week's notice of leaving or of being laid off to be given.

The union label to be placed on all work going out of the office as far as possible.

TORONTO, ONTARIO.—CERTAIN EMPLOYING PHOTO ENGRAVERS AND THE INTERNATIONAL PHOTO ENGRAVERS' UNION, LOCAL No. 35.

Agreement to be in effect from May 1, 1931, to April 30, 1932, and year to year thereafter until either party gives notice 60 days before May 1, of any year.

A strike to secure this agreement with one firm which began May 4, 1931, was reported in the LABOUR GAZETTE, June, page 639, July, page 760, and August, page 877, has not been called off.

This agreement is similar to the one previously in effect which was summarized in the LABOUR GAZETTE, June, 1926, page 601, with the following exception:

The clause in the previous agreement, providing that permanent employees are not to be laid off temporarily owing to slackness of work, has been omitted from this agreement and it is provided that employers if necessary to lay off one or more employees temporarily may do so on a day's notice but that no employee will be laid off more than once in any calendar week.

The minimum wage rate is the same as previously, that is, \$55 for a 44-hour week.

WINDSOR, ONTARIO.—PUBLISHERS OF A DAILY NEWSPAPER AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 553.

Agreement to be in effect from June 1, 1931, to December 31, 1932. The agreement will be automatically renewed unless either party gives 60 days' notice prior to the expiration of the agreement.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, July, 1929, page 803, but amends the wage schedule, cancelling increases to \$1.12 per hour due from July 1, 1931, as follows:

Wages per hour for day work: from June 1, 1931, to August 31, 1931, \$1.08; from September 1, 1931, to December 31, 1931, \$1.06; from January 1, 1932, to December 31, 1932, \$1.05. Wages for night work 8½ cents per hour over day scale.

Loebster shift rate of \$2 above night rate to be paid on shifts running from night into regular working hours of any day shift.

Construction: Buildings and Structures

WINDSOR, ONTARIO.—GENERAL CONTRACTORS OF THE COUNTY OF ESSEX AND THE INTERNATIONAL UNION OF OPERATING ENGINEERS, LOCAL No. 871, (HOISTING AND PORTABLE ENGINEERS).

This agreement covers engineers employed to run hoisting and portable engines and boilers

used on building construction and for loading and unloading material on jobs or in yards where operated by steam, electricity, gasoline, hydraulic, compressed air, etc., including pumps, siphons, pulsometers, concrete mixers, air compressors, derricks and elevators, street rollers, locomotives, cable ways, clam shells, pile drivers, steam shovels and trench machines.

Agreement to be in effect from May 1, 1930, to April 30, 1931, and until terminated by either party giving notice by March 1, of any year.

Hours: 8 per day, 4 on Saturdays, a 44-hour week. Both engineers and firemen will work one hour extra per day at straight time if required to raise steam.

Overtime including Saturday afternoons, time and one-half; double time for work on Sundays and holidays.

Wages: one drum machine operator to be paid \$1.10 per hour, and two or more drum machine operators at \$1.25 per hour; air compressors engineers, \$1.25 per hour broken time or \$58.32 per week straight time, firemen 90 cents per hour.

Engineers reporting for work and not required will be paid two hours' time.

SASKATOON, SASKATCHEWAN. — SASKATOON BUILDERS' EXCHANGE AND THE AMALGAMATED CARPENTERS OF CANADA, SASKATOON BRANCH.

Agreement to be in effect from June 24, 1931, to April 30, 1932.

Hours: 9 per day, 5 on Saturdays, a 50-hour week. If necessary to work on Saturday afternoon to finish up a certain piece of work, straight time to be paid, but this will not apply for two weeks in succession to the same contractor.

Wages for carpenters: 90 cents per hour.

In case of any dispute a joint committee consisting of three members of each party will be formed to consider it and their decision will be binding.

EDMONTON, ALBERTA.—EDMONTON BUILDERS' EXCHANGE, INCORPORATED, AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA, LOCAL No. 1325.

Agreement to be in effect from May 1, 1931, to April 30, 1932, and for another year unless notice of change is given by either party before January 31, 1932.

Members of local union to be given preference of employment.

Hours: 8 per day, 4 on Saturdays, a 44-hour week. In case of night shifts 7½ hours will be worked with 8 hours' pay.

Overtime: time and one-half; Sundays and holidays, double time, no work on Labour Day.

Wages for carpenters \$1 per hour. (This is the same rate as previously in effect.)

Transportation to be paid, both ways by the contractors for out of town work.

Labourers are not to use carpenters' tools.

EDMONTON, ALBERTA.—EDMONTON BUILDERS' EXCHANGE, INCORPORATED, AND THE AMALGAMATED CARPENTERS OF CANADA, EDMONTON LOCAL.

Agreement to be in effect from May 1, 1931, to April 30, 1932, and for another year unless notice of change is given by either party before January 31, 1932.

The terms of this agreement are the same as those in the agreement between the Builders' Exchange and the United Brotherhood of Carpenters and Joiners summarized above.

EDMONTON, ALBERTA.—MASTER PLASTERERS' SECTION OF THE EDMONTON BRANCH OF THE CANADIAN CONSTRUCTION ASSOCIATION AND THE OPERATIVE PLASTERERS AND CEMENT FINISHERS' INTERNATIONAL ASSOCIATION, LOCAL No. 372.

The agreement to be in effect from January 15, 1931, to April 30, 1932. Both parties agree to meet to negotiate a new agreement in February, 1932. However, if a change in the agreement is desired prior to that date, notice must be given in writing 90 days before the end of 1931.

Any member who starts working with a non-union plasterer, and fails to notify the union of the fact within 8 hours, shall be fined by the union. Foremen must be union members. Only two members of the contracting firm may work with tools of the trade.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

In case of shift work, three shifts of 8 hours each to be worked. On country jobs, maximum 9 hours per day, a 54-hour week.

Overtime: time and one-half. No work on legal holidays or between noon Saturday and 6 p.m., after which time until 8 a.m. Monday, double time.

Wages for operative plasterers: \$1.40 per hour.

For country work, transportation only extra expense to be paid for by the contractor.

Members allowed to take on contracts up to \$500, but are not to hire plasterers to assist them in the work.

Safe scaffolding to be provided; no work over open salamanders.

In case of dispute, no stoppage of work to take place before matter in dispute is referred to a joint arbitration committee consisting of three members from each party. In case of deadlock, the committee has right to appoint an independent party to settle the dispute.

CALGARY, ALBERTA.—THE CALGARY ASSOCIATION OF SANITARY AND HEATING ENGINEERS AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 496.

Agreement to be in effect from May 1, 1931, to April 30, 1932, and for another year unless notice of change is given by either party by February 28, 1932.

Only union members to be employed and the union agrees to give preference to members of the Association of Sanitary and Heating Engineers.

Hours: 8 per day, 5 days per week, a 40-hour week. Only emergency work to be done on Saturdays. In out-of-town work 10 hours per day may be worked.

Overtime: time and one-half from 5 p.m. to midnight; double time thereafter. Double time for work on Sundays and holidays. Night shifts may be employed at time and one-quarter for a ten-hour shift.

Wages: from July 1, 1931, to December 31, 1931, \$1.20 per hour; from January 1, 1932, to April 30, 1932, \$1.25 per hour. (The rate in effect up to July 1, 1931, was \$1.25 per hour.)

For work out of city, fare to be paid by employer and travelling time up to 8 hours per day.

One plumber's apprentice allowed to each shop and one additional apprentice to each five journeymen, with not more than five apprentices in any one shop. One steamfitter apprentice allowed in each shop where one licensed steamfitter is regularly employed. All other conditions surrounding apprenticeship in these trades to be left in the hands of the Joint Apprenticeship Committees.

Members of one branch of the trade may not work at the other except on permit. At least half of the number of plumbers and steamfitters employed by heating and plumbing contractors securing work in this local's jurisdiction must be local residents.

In case of any grievance, if the business agent of the union is unable to settle with the employer, a committee of each party will meet to settle it, and no cessation of work will occur until a decision is rendered.

Transportation and Public Utilities: Electric Railways

OTTAWA, ONTARIO.—THE OTTAWA ELECTRIC RAILWAY COMPANY AND THE AMALGAMATED ASSOCIATION OF STREET AND ELECTRIC RAILWAY EMPLOYEES OF AMERICA, DIVISION No. 279.

Agreement to be in effect from May 1, 1931, to April 30, 1932, and year to year thereafter subject to notice of termination or change 30 days prior to May 1.

This agreement was signed on August 5, 1931, following the report of the Board under the Industrial Disputes Investigation Act, published in the LABOUR GAZETTE for July, page 745, being based on the recommendations in the minority report.

The principal changes were to adopt the 8-hour day as far as possible instead of 9 hours, hourly rates being adjusted to reduce daily earnings an average of 10 per cent. One-man car operators, motormen, and conductors were reduced 1 cent per hour with a minimum of 8½ hours' pay instead of 9, and mechanics, shed men, track men, etc., reduced from 9 hours per day to 8 with a 10 per cent reduction in daily wages, men already on the 8-hour day and those remaining on the 9-hour day being reduced in wages 10 per cent.

The agreement is similar to that previously in force since May 1, 1926, summarized in the LABOUR GAZETTE for July, 1926, page 712, and amended in 1929, LABOUR GAZETTE, September, 1929, page 1054, the principal changes in wages, hours, and working conditions, in effect from July 16, to be as follows:

Hours: Car Operators and bus drivers 8½ per day, with time and one-half after 8½ hours; mechanics, shed men, trackmen, 8 per day with time and one-half after 8 hours; trackmen when on construction to work 9 hours when required at straight time; substation employees, 9 hours per day.

Sundays and holidays, time and one-quarter rates of wages for all classes.

Wages: one-man car operators, 54 cents per hour; motormen and conductors, 49 cents; bus drivers, 45 cents per hour.

Hours and Wages in Mines in Great Britain

The Coal Mines Act, which received the Royal Assent in Great Britain on July 8, was intended to meet the situation arising out of the expiration of the Coal Mines Acts of 1926 and 1930, which provided for a return to the 7-hour day on July 9. The new Act provides that hours of labour in coal mines shall be 7½, and continues this provision for one year, or until the coming into operation of an Act to enable effect to be given to the Draft convention limiting hours of work underground adopted by a Conference of the International Labour Office on June 18, 1931 (LABOUR GAZETTE, July, 1931, page 798).

The new Act provides, as regards wages, that "the minimum percentage additions to basic rates of wages and the subsistence wage, rated in every district shall not be less than those in force in that district at the appointed day

(this is explained below), and it shall be a term of every contract for the employment of a workman whose wages are determined by reference thereto that the wages of that workman shall be calculated accordingly: provided that, save as herein expressly provided, nothing in this section shall prejudice the operation of any agreement entered into or custom existing before the commencement of this Act."

"Appointed Day," in relation to any district for which wages were regulated on the basis of a daily limit of seven-and-a-half hours' work below ground on the day before the commencement of this Act, means that day, and, in relation to any district in which wages were not so regulated, means the first day after the commencement of the new Act, on which wages are so regulated.

PRICES, RETAIL AND WHOLESALE, IN CANADA, AUGUST, 1931

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was slight, the weekly family budget in terms of retail prices being somewhat higher, while the Dominion Bureau of Statistics index number of wholesale prices was lower.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in sixty-nine cities showed the first advance since January, 1930, being \$8.20 for August, as compared with \$8.11 for July; \$10.65 for August, 1930; \$11.63 for August, 1929; \$11.08 for August, 1928; \$10.93 for August, 1927; \$11.10 for August, 1926; \$10.84 for August, 1925; \$10.19 for August, 1924; \$10.53 for August, 1923; \$10.44 for August, 1922; \$11.44 for August, 1921; \$16.42 for August, 1920; \$16.92 for June, 1920 (the peak); \$13.41 for August, 1918; and \$7.68 for August, 1914. The most important change was a seasonal advance in the price of potatoes, while the prices of fresh pork, eggs and butter were also somewhat higher. The prices of beef, veal, salt pork, bacon, lard, cheese, flour, rice and beans were slightly lower. Including the cost of fuel and rent with that of foods the total budget averaged \$18.30 at the beginning of August, as compared with \$18.26 for July; \$21.01 for August, 1930; \$21.90 for August, 1929; \$21.31 for August, 1928; \$21.11 for August, 1927; \$21.32 for August, 1926; \$21.05 for August, 1925; \$20.57 for August, 1924; \$21.03 for August, 1923; \$20.88 for August, 1922; \$21.98 for August, 1921; \$26.60 for August, 1920; \$26.92 for July, 1920 (the peak); \$21.20 for August, 1918; and \$14.41 for August, 1914. Fuel was slightly lower, an advance in the price of anthracite coal being more than offset by lower prices for bituminous coal and wood. Rent was down slightly.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was again lower at 71.0 for August, as compared with 71.7 for July; 83.7 for August, 1929; 95.3 for August, 1928; 98.3 for August, 1927; and 99.1 for August, 1926. Thirty-eight prices quotations were higher, one hundred and seven were lower, while three hundred and fifty-seven were unchanged.

In the classification according to chief component materials seven of the eight main groups were lower, and one was slightly higher. The groups which declined were: the Vegetables and Vegetable Products group, because of lower quotations for grains, flour, raw

rubber, bran and shorts, which more than offset higher prices for coffee and potatoes; the Animals and Animal Products group because of declines in the prices of hogs, lambs, canned salmon, boots and shoes; the Fibres, Textiles and Textile Products group, because of lower prices for raw cotton, denim, raw wool and serge; the Wood, Wood Products and Paper group, due to lower prices for lumber and ground wood pulp; the Iron and its Products group, owing to declines in the prices of wire nails and galvanized barbed wire; the Non-Ferrous Metals and their Products group, because of lower quotations for antimony, copper, silver, lead and zinc; and the Chemicals and Allied Products group. The Non-Metallic Minerals group was slightly higher, owing mainly to increased prices for anthracite coal.

In the grouping according to purpose both consumers' goods and producers' goods were lower, the former because of declines in the prices of flour, bran, shorts, canned fruits, fresh meats and cheese, which more than offset advances in the prices of coffee, potatoes, butter, eggs and anthracite coal; and the latter because of lower quotations for wheat, oats, raw cotton, lambs, hogs, raw wool, copper and lumber, which more than offset advances in the prices of steers, calves, corn, raw silk and tin.

In the grouping according to origin articles of farm origin, articles of marine origin and articles of forest origin were lower, while articles of mineral origin were slightly higher. Raw and partly manufactured goods were lower, because of decreased prices for wheat, oats, barley, raw rubber, raw cotton, hogs and lambs. Fully and chiefly manufactured goods were also lower, mainly because of declines in the prices of flour, bran, shorts, canned fruits, canned vegetables, copper sheets and copper wire bars.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of August, of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city ex-

cept milk and bread are the averages of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of milk, bread and fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to

the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1919, quarterly from 1920 to 1929 and monthly since January, 1930. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141·4; 1905, 135·6; 1910, 118·1; 1911, 113·4; 1912, 109·1; 1913, 100·0; 1914, 96·5; 1915, 90·3; 1916, 86·3; 1917, 84·6; 1918, 82·9; 1919, 81·6; 1920, 81·1; 1921, 81·4; 1922, 80·1; 1923, 77·7; 1924, 76·5;

(Continued on page 1048)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family

*Prior to 1926 number of commodities was 236.

(Continued from page 1040)

1925, 73.8; 1926, 73.2; 1927, 70.9; 1928, 69.3; 1929, 67.4; 1930, 64.7; 1931, 64.1.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report Vol. 2, page 318), and bringing the figures down to 1930. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption on the basis of figures in 1926 as 100, as follows: 1923, 108.3; 1924, 105.1; 1925, 101.7; 1926, 100.0; 1927, 99.0; 1928, 97.1; 1929, 94.6; 1930, 92.3.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 128.9; 1928, 128.5; 1929, 128.0; 1930, 127.6. Natural gas,

1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 166.9; 1928, 158.9; 1929, 159.1; 1930, 158.8. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

Retail Prices

Beef prices showed little change in the average, sirloin steak being up from an average of 28.8 cents per pound in July to 28.9 cents in August and round steak from 23.7 cents per pound in July to 23.9 cents in August, while rib roast and shoulder roast were lower, the former being down from an average of 21.7 cents per pound in July to 21.5 cents in August and the latter from 15.6

cents per pound in July to 15.2 cents in August. Veal was generally lower at an average price of 16.5 cents per pound in August as compared with 17.5 cents in July. This compares with an average price of 23.3 cents per pound in August, 1930. Mutton was also slightly lower in the average at 26 cents per pound. Fresh pork was up from an average price of 23.2 cents per pound in July to 24.5 cents in August, while salt pork declined from 22.6 cents per pound in July to 22.2 cents in August. Boiled ham was substantially higher, averaging 56.6 cents per pound in August as compared with 49.8 cents in July. The increases were less pronounced in the western provinces. Lard was again lower at an average price of 14.3 cents per pound in August, as compared with 14.6 cents in July. The price in August, 1930, was 21 cents.

Eggs showed a seasonal advance, fresh being up from an average of 24.4 cents per dozen in July to 26.1 cents in August, and cooking from 20.3 cents per dozen in July to 22.1 cents in August. Advances were reported from most localities. These prices compare with 37.3 cents per dozen for fresh eggs in August, 1930, and 33.3 cents per dozen for cooking. Milk was unchanged at an average price of 10.6 cents per quart. Butter also showed a slight seasonal increase in most localities, dairy being up from 23.3 cents per pound in July to 23.6 cents in August and creamery from 26.8 cents per pound in July to 27 cents in August. Cheese was again lower at an average price of 22.9 cents per pound, as compared with 23.5 cents in July and 31.4 cents in August, 1930.

Bread was unchanged at an average price of 6.2 cents per pound. Flour was down in the average from 3.3 cents per pound in July to 3.2 cents in August. Beans were down from an average of 6.1 cents per pound in July to 5.9 cents in August and onions from an average price of 7.5 cents per pound in July to 6.6 cents in August. The price of potatoes showed a seasonal advance with the marketing of the new crop. The average price per bag of ninety pounds was \$1.36 in August, as compared with \$1.03 in July. The price in August, 1930, was \$2.18 per ninety pounds. Prunes averaged 11.8 cents per pound in August, 12 cents in July and 15.6 cents in August, 1930. Anthracite coal was up from an average price of \$15.99 per ton in July to \$16.17 in August. Higher prices were reported from St. John, Three Rivers, Sherbrooke, St. Hyacinthe, St. John's, Thetford Mines, Hull, Kingston, Belleville, Peterborough, Oshawa, Orillia, St. Catharines, Hamilton, Kitchener, Stratford, Chatham and

*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18%; Clothing, 18%; Sundries, 20%. †Revised.

Timmins. Hard wood was down from an average price of \$11.72 per cord in July to \$11.44 in August.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

No. 1 Manitoba Northern cash wheat, Fort William and Port Arthur basis, averaged 55.1 cents per bushel in August as compared with 57.3 cents in July. The high price for the month was about 58 cents per bushel reached on the 20th and the low 51 cents per bushel reached early in the month. Coarse grains, for the most part, showed a movement similar to that in wheat, western barley being down from an average of 32.3 cents per bushel to 31.8 cents; flax from \$1.18 per bushel to \$1.04; western oats from 29.4 cents per bushel to 28.3 cents; and rye from 32.7 cents per bushel to 29.4 cents. The price of flour at Toronto declined from \$5 per barrel to \$4.80. The corresponding price in 1913 for this grade of flour was \$5.37 per barrel. Granulated sugar at Montreal was unchanged at \$4.56 per cwt. Ceylon rubber at New York was down from 6.3 cents per pound to 5.3 cents. The decline was said to be due to the fact that stocks were increasing rapidly and that consumption was declining. In livestock, steers at Toronto advanced from \$6.02 per hundred pounds to \$6.45 but declined at Winnipeg from \$5.57 per hundred pounds to \$5.45. Veal calves at Toronto advanced from \$6.67 per hundred pounds to \$8.52 but showed little change at

Winnipeg at \$5.59 per hundred pounds. Bacon hogs at Toronto were down from \$9.07 per hundred pounds to \$7.29 and at Winnipeg from \$8.07 per hundred pounds to \$6.35. The price of lambs at Toronto declined from \$9.36 per hundred pounds to \$7.86, at Winnipeg from \$7.64 per hundred pounds to \$6.29, and at Montreal from \$8.02 per hundred pounds to \$6.92. Creamery butter at Montreal was unchanged at 24 cents per pound, while at Toronto the price advanced from 24.2 cents per pound to 24.5 cents. Fresh eggs at Montreal were up from 25.5 cents per dozen to 30.4 cents and at Winnipeg from 20.2 cents per dozen to 25.3 cents. Raw cotton at New York was substantially lower, the average price being 7.2 cents per pound as compared with 9.3 cents in July. The lower prices were said to be due to the increased estimates of the 1931 crop and to uncertainty regarding the disposal of the extensive holdings of the Federal Farm Board. Raw wool was 1 cent per pound lower at 14 cents. White pine lumber declined from \$85 per thousand board feet to \$80. Spruce was also down from \$27-\$29 per thousand board feet to \$22-\$24. Wire nails were down from \$2.90 per keg to \$2.80 and galvanized barbed wire declined from \$3.70 per hundred pounds to \$3.50. In non-ferrous metals, electrolytic copper at Montreal declined from \$9.39 per hundred pounds to \$8.86 and wire bars at New York from \$7.75 per hundred pounds to \$7.50. Tin was up from an average price of 26.8 cents per pound to 29 cents. Crude oil at Sarnia advanced from \$1.88 per barrel to \$2.08.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and certain other countries. The index numbers of the cost of living are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. The latest quarterly table showing cost of living and wholesale prices index numbers for various countries appeared in the LABOUR GAZETTE for July.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1924=100, was 61.5 for July, a fall of one per cent for the month and of 14.2 per cent from July, 1930. Foods declined 3.4 per cent, while industrial materials advanced 0.2 per cent.

The *Economist* index number, on the base 1927=100, was 62.5 at the end of July, a decline of 1.7 per cent for the month. All five groups were included in the decline, the greatest fall being in the minerals group amounting to 3.7 per cent due to a decrease of 12.4 per cent in copper with smaller decreases in certain other minerals.

The *Statist* index number, on the base 1867-1877=100, was 80.2 at the end of July, a fall of 2.9 per cent for the month and of 15 per cent from July, 1930. During the month of July, foodstuffs declined 3.1 per cent and industrial materials 2.8 per cent, all of the six sub-groups being included in the movement.

COST OF LIVING.—The index number of the Minister of Labour, on the base July, 1914=100, was 145 at August 1, a fall of 1.4 per

cent for the month, due to lower food prices, chiefly potatoes. Rent, clothing, fuel and light and sundries were unchanged from the previous month.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100, was 111.7 for July, a decline of 0.5 per cent for the month. Agricultural products and manufactured products both declined, while colonial products and industrial raw materials and semi-manufactured goods were higher than in June.

COST OF LIVING.—The index number of the Federal Statistical Office, on the base 1913-1914=100, was 137.4 for July, a decline of 0.3 per cent for the month, due to small decreases in food, clothing and sundries; the heat and light group was slightly higher, while rent was unchanged.

Italy

WHOLESALE PRICES.—The index number of the Milan Chamber of Commerce on the base 1913=100, (pre-war currency) was 91.5 for July, a decline of 0.7 per cent for the month. Increases were noted in textiles and minerals and metals, but all other groups were lower than in June.

New Zealand

WHOLESALE PRICES.—The index number of the Census and Statistics Office, on the base 1909-1913=1000, was 1394 for June, a decline of 0.4 per cent for the month. Foods and metals and minerals were higher, but all of the other main groups showed declines from the May level.

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics, on the base

1926=100, was 70.0 for July, showing no change from the June level. There were no marked changes in any one of the main groups. Small increases in the food group, hides and leather products, fuel and lighting materials, metals and metal products were offset by declines in farm products, building materials, chemicals and drugs, housefurnishing goods and miscellaneous commodities. No change was recorded in the textile group.

Bradstreet's index number, which is the sums total of the prices per pound of 96 commodities of common consumption was \$8.4904 at September 1, a decline of 3.4 per cent for the month, which is the lowest recorded in twenty years or since May, 1911. The principal declines in the month occurred in breadstuffs, hides and leather and textiles, while smaller decreases were noted in live-stock, oils, naval stores and miscellaneous commodities. Increases occurred in provisions, fruits, metals, coal and coke and building materials, while chemicals and drugs were unchanged.

Dun's index number, which is based on the *per capita* consumption of each of the many articles included was \$141.724 at September 1, a decline of 2.7 per cent for the month. Except for a small increase in dairy and garden produce, all groups declined, the principal fall occurring in breadstuffs.

COST OF LIVING.—The index number of the Bureau of Labour Statistics on the base 1913=100, was 150.3 for June, a decline of 6.5 per cent from last December. All groups were included in the movement, but the greatest decrease was in food amounting to 13.8 per cent for those six months.

The index number of the National Industrial Conference Board, on the base 1923=100, was 85.9 for July, showing no change from June. Small increases in food, fuel and light and sundries were offset by declines in housing and clothing.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Employer Liable for Injury to Third Party Where Workman Obeyed Orders

In October, 1929, the vice-president of an engineering company went, in the course of his duties, on board a collier that had been chartered by the company and was lying at the Dominion Coal Company's dock at Montreal. On going ashore, as he stepped off the gangplank, he was struck and severely injured by a coal car which had been released from the top of the coal company's coal chute and was being returned empty to the coal yard. In an action brought against the

Dominion Coal Company by the injured man the Superior Court at Montreal found that the defendant was liable for damages under Articles 1053 and 1054 of the Civil Code of the Province of Quebec. These Articles read as follows:—

1053. Every person capable of discerning right from wrong is responsible for the damage caused by his fault to another, whether by positive act, imprudence, neglect or want of skill.

1054. He is responsible not only for the damage caused by his own fault, but also for that caused by the fault of persons under his

control and by things which he has under his care.

Masters and employers are responsible for the damage caused by their servants and workmen in the performance of the work for which they are employed.

In regard to Article 1054 the judgment stated: "It is admitted that the coal car, track, and wharf in question were all under the control of the company defendant at the time of the accident. It is also admitted that the plaintiff's injuries were caused by his being struck by the said coal car. The defendant in order to escape liability must prove that it could not have prevented the accident. . . . Under Article 1054 plaintiff is not bound to prove fault or negligence on the part of the defendant; nor can defendant escape by merely proving that it was guilty of no fault or negligence. To escape, defendant must prove that it was unable by the exercise of all reasonable means to prevent the damage.

"Counsel for the defendant has suggested that art. 1054 can have no application to the present case for the reason that in this case there was an intervention of human agency. . . . It cannot be suggested that the man, whose duty it was to release the coal car at the top of the chute was guilty of any fault or acted in any way differently from that in which his duty required him to act. The evidence shows that it was simply his duty to release the car and allow it to go back by gravity of its own accord and that he did not in any way interfere with the return of the coal car unless he were signalled to do so by someone at the coal tower; and there was a distance of about five acres between the two. How can it be said that any human agency intervened to cause the accident? . . .

"There can be no doubt that art. 1054 is applicable to the present case. What proof has the company defendant offered to show that it could not have prevented the accident? I do not see any. There can be no doubt that had the coal car in question been provided with a light or equipped with a warning bell or had some employee of the defendant been on the car or stationed immediately opposite the gangway for the purpose of stopping persons from crossing when the car was descending, the accident would have been prevented. There is an entire absence of proof that the defendant took any such precautions and defendant, is, therefore, liable under Art. 1054."

The Court also found the company liable under Article 1053, "it being negligent and at fault in failing to equip said coal car with a proper light and with a bell or other warning

device and in failing to take reasonable measures to protect persons on the premises from such danger. . . . As the occupier of premises the company defendant owed a definite obligation to the plaintiff, who was upon the defendant's premises on lawful business in the interests of the defendant and as such was an invitee of the defendant. . . . The company defendant in the present case failed to take any reasonable precautions to protect the plaintiff. Even if defendant's evidence to the effect that the lights used for the operating of the towers were on at the time of the accident, it is clear that these lights were not intended to and could not light the wharf surrounding the towers. . . . In any event the company defendant owed the plaintiff protection quite apart from and beyond the matter of affording him light, and should have given him some adequate warning of the approach of the car in question."

Damages against the defendant were assessed at \$10,361, with interest and costs.

Howes versus Dominion Coal Company, Ltd. (Quebec) 1931, (*Rapports Judiciaires, Cour Supérieure*, vol. 69, page 305).

Workman's Delayed Claim for Municipal Fair Wage Rate

A workman was employed by a contractor on street work in the City of Quebec, receiving payment at the rate of 35 cents an hour. After about three months, he heard that the employer's contract with the City contained the provision that the workmen employed should be ratepayers of the City and that they should be paid at the rate of 40 cents an hour, and he claimed payment of the difference between the two rates of pay. The Superior Court disallowed the workman's claim, holding that a stipulation as to the wages to be paid, such as was contained in the employer's contract with the City, could only be invoked by workmen in the absence of any contrary agreement with their employer, and that a workman who accepts a lower rate without protest has no right after the period of his employment to claim payment of the difference between that and the stipulated rate; a workman who agreed to a lower rate without being aware of the existence of the stipulated rate might, on learning that it existed, ask that the agreement be cancelled, but could do so only on the ground that he had entered into it through a misunderstanding.

Juneau versus Plamondon et Cité de Quebec, 1931, vol. 69. (*Rapports Judiciaires de Quebec, Cour Supérieure*, page 327).

OCTOBER, 1931

[NUMBER 10

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

A CONSIDERABLE increase in employment was shown at the beginning of September, according to returns received by the Dominion Bureau of Statistics from 7,798 firms, each with a minimum of 15 employees, representing practically every industry except agriculture, fishing, hunting and highly specialized business operations. These firms employed 972,537 persons, as compared with 955,991 in the preceding month. The employment index number (with the average for the calendar year 1926 as the base equal to 100), stood at 107·1 on September 1, as compared with 105·2 on August 1, 1931, and with 116·6, 126·8, 119·1, 111·0, 106·2, 97·8, 94·2, 101·2, 94·8 and 89·8 on September 1, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. The increase on September 1 was largely due to increased highway construction undertaken for the relief of unemployment in Quebec.

At the beginning of September the percentage of idleness reported to the Department of Labour by local unions was 15·8 in contrast with 16·2 per cent at the beginning of August, 1931, and 9·3 per cent at the beginning of September, 1930. The September percentage was based on the reports received by the Department of Labour from an aggregate of 1,833 labour organizations, with a total membership of 197,863 persons.

Reports received by the Department of Labour from the Offices of the Employment Service of Canada showed that the volume of business, as indicated by the average daily placements effected was somewhat lower than that of the previous month and considerably below that recorded daily during the corresponding month of last year. Vacancies in August, 1931, numbered 26,809, applications 71,383 and placements in regular and casual employment 25,662.

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty-nine cities was somewhat lower at

\$8.03 for September, as compared with \$8.20 for August; \$10.38 for September, 1930; \$11.64 for September, 1929; \$11.15 for September, 1928; \$10.87 for September, 1927; \$10.94 for September, 1926; \$10.81 for September, 1925; \$10.28 for September, 1924; \$10.46 for September, 1923; \$10.28 for September, 1922; \$11.82 for September, 1921; \$15.95 for September, 1920; \$16.92 for June, 1920 (the peak); \$13.31 for September, 1918; and \$7.83 for September, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was again slightly lower at 70·0 for September, as compared with 70·9 for August; 82·1 for September, 1930; 97·8 for September, 1929; 95·4 for September, 1928; 97·1 for September, 1927; and 98·5 for September, 1926.

The loss in working time caused by industrial disputes in Canada in September was much greater than the corresponding losses in the preceding month and in September last year. Sixteen disputes were in progress at some time during the month, involving 3,748 workers and resulting in the loss of 35,464 working days. Corresponding figures for August, 1931, were: eight disputes, 886 workers, and 9,364 working days; and for September, 1930, twelve disputes, 2,990 workers, and 13,138 working days.

Disputes Industrial Investigation Act

During September the Department of Labour received an application for the establishment of a Board of Conciliation and Investigation in connection with a dispute between the Canadian National Railways and its machine shop employees over a reduction in working hours per week; the Minister of Labour discussed the situation with a committee of the machinists' union, and it was decided to leave the matter in abeyance for the time being. An application was also received in connection with a dispute that had arisen in the coal mines in Estevan District, Saskatchewan, and a commissioner was appointed to investigate and report upon

the causes and circumstances leading to the dispute. Details of the proceedings under the Act during the month appear on page 1065 of this issue.

Government intervention in labour disputes in Canada

"Government Intervention in Labour Disputes in Canada" was the title of an article published as a supplement to the **LABOUR GAZETTE** in March, 1925,

being a reprint of an article by Margaret Mackintosh of the Department of Labour appearing in *Queen's Quarterly*, January-March, 1924. There has been considerable demand for this publication and a revised and enlarged edition has just been issued as Bulletin No. 11 of the Industrial Relations Series of publications of the Department of Labour.

The original article was written when the constitutional validity of the Industrial Disputes Investigation Act, probably the best known of the Canadian laws for the prevention and settlement of industrial disputes, was before the courts in the action brought by the Toronto Electric Commissioners to restrain a board of conciliation and investigation from proceeding to inquire into a dispute between the commission and its employees. The final judgment in the case was given by the Judicial Committee of the Privy Council in January, 1925, and the Act was amended to bring it into line with the decision. The article deals at some length with the Industrial Disputes Investigation Act and with the Dominion Conciliation and Labour Act. An outline is given, too, of the history of the different provincial enactments providing for the settlement of labour disputes, and a final section, appearing for the first time, deals briefly with the various commissions of inquiry which have been appointed to investigate disputes presenting peculiar difficulties.

Labour Legislation in Canada in 1930

The Department of Labour recently published the second annual supplement to the consolidated volume which was published two years ago under the title: "Labour Legislation in Canada as existing on December 31, 1928." The supplement contains the legislation enacted during 1930 by the Parliament of Canada and by the several provincial legislatures. Where existing acts were amended, notes have been inserted to explain the significance of the amendments. A number of Orders in Council and certain regulations made during the year under statutory authority have

been inserted. The Statutes of Saskatchewan were revised during the year, and the labour laws contained in that revision have been printed in the Saskatchewan section of the supplement. The volume of consolidated statutes may be obtained from the Department of Labour for one dollar, the charge for each supplement being 25 cents.

Settlement of unemployed city workers on farms

Reference was made in the **LABOUR GAZETTE**, June, 1931, page 626, to the policy of the Dominion Department of Immigration and Colonization of encouraging the settlement on farms of unemployed Canadian workers and their families. It was announced in September that in accordance with this policy nearly 15,000 men had up to that date been placed on Canadian farms. The two railway companies have assisted the plan by refraining from their usual efforts to promote new immigration, and by co-operating through their colonization departments in bringing unemployed men into contact with farmers who need help. Up to September, 3,749 families and 10,609 single men had been placed by the Dominion Government, while 800 families and 2,000 single men had been placed by the Province of Ontario, and 450 families and 300 single men by the Province of Quebec. The wages of the men who have been placed on the land for year-round jobs are stated to range from \$5 to \$25 per month, depending upon the experience of the labourer. The higher figure is paid for men who can milk, plough and do all other operations on the farm.

Employers' plan to stabilize industry

Mr. Gerald Swope, president of the General Electric Company, at the annual meeting of the National Electrical Manufacturers' Association (United States), held at New York in September, submitted the following suggestions for stabilizing American industry.

1. Organization of United States industries through formation of trade associations, to stabilize and co-ordinate production, putting all corporations on a basis of parity for domestic business. The associations would control production.

2. More uniform and continuous employment, removing from the worker's mind the fear which has been built up by "the 40-year deadline" which might throw him out of work in advanced years. It would provide for unemployment insurance to which both

workers and employers would contribute as "a safety reservoir" and also for old age pensions, as well as life and disability insurance.

3. Increasing the cost of manufactured products to the consumer, to cover protection of workers by the industries rather than by "the vicarious methods of the imposition of a tax."

4. Protection of the public by a federal supervisory body to prevent exploitation which might accompany the control of production in each industry.

Plan to stabilize bituminous coal mining in United States

A plan for stabilizing the bituminous coal industry in the United States was presented in the September issue of *Coal Age* (New York). The authors describe the difficulties in

which this industry now finds itself—"too many mines, too many operating companies, a declining market for coal as a raw fuel, weak marketing policies and methods, lack of research to develop new uses for its products, inadequate sales realizations, and an unstable labour situation." It is pointed out that a "gambling basis of profit" for an industry as important as coal mining is unsafe for the nation and for the industry itself, and that the time is ripe for a program of stabilization on an economic foundation. The proposed program includes the following features:—(1) production control; (2) sound merchandizing; (3) stabilized industrial relations; (4) more mechanization; (5) co-ordinated research to develop new uses for coal; (6) more consolidations; and (7) more safety.

Each of these features is enlarged upon in the "plan." The section dealing with "Stabilized Industrial Relations" recommends as follows:—"Direct labour charges are such a major part of the cost of production that it is obvious that there can be no hope for price stability and for long-term planning without stabilization of wages and standardization of working conditions. In an industry compelled to carry the idle-capacity load of bituminous coal, such stabilization without the interposition of some outside agency representing the workers presents almost insuperable obstacles. During periods of sharp competition, individual companies and districts seeking to maintain what they conceive to be proper industrial relations find themselves isolated from their logical markets because competing districts have cut wages, increased the hours of labour, or by otherwise changing working conditions have reduced out-of-pocket

costs of production. Inherited prejudices in some fields and bitter personal experiences in others have made the idea of a revival of unionism obnoxious to many employers. Nevertheless, unless some new formula can be found, the conclusion seems inevitable that the desired stabilization of wages and of working conditions must come through a recognition and an acceptance of an outside labour organization by a sufficiently large percentage of the operators to give the wages and the working conditions so established a controlling influence in the districts where direct recognition is withheld."

The authors of the plan would amend the Sherman Act to permit of joint agreements among operators in regard to production policies and prices, in order to enable them to cope with the overproduction that has disorganized the industry. They would protect the consumer against unreasonable prices by prohibiting any form of concerted action to create limited distribution areas. They would introduce sound methods of merchandizing; promote consolidations of good properties in different districts; and establish a co-operative organization that would not only carry on research into new uses for coal products, but would also finance and exploit these products in the interests of the industry as a whole.

One industry stimulates other industries

The value of the mining development of Manitoba to the Province as a whole was exemplified by Mr. T. W. Laidlaw, assistant deputy minister of Mines for the Province, in a recent address in which he analysed the various expenditures of the Hudson Bay Mining and Smelting Company in 1929 in connection with the development of the Flin Flon mine. These expenditures totalled \$28,900,000, this amount including the following items:—wages, \$5,626,500; food stuffs, \$733,762; lumber, \$375,852; cement, \$426,575; clothing; \$76,500; explosives, \$161,204; fuel and oil, \$287,367; machinery, \$5,728,200; electrical supplies, \$541,746; iron and steel, \$1,695,751; paint and glass, \$9,000; tools, \$42,000; freight, \$1,662,535.

Mr. Laidlaw pointed out that practically 80 per cent of the total wages are expended in food, clothing and housing; the freight item covers large shipments of hay and oats. Commodities used by the Company in 1929 included the following items: fresh and cured meat, 2,220,000 lbs.; eggs, 166,200 doz.; flour, 1,940,000 lbs.; sugar, 107,500 lbs.; coffee, 73,300 lbs.; tea, 60,700 lbs.; potatoes, 1,315,000 lbs.; fruits and other vegetables, 49 car loads; jam,

7½ car loads; canned milk, 6½ car loads; dried milk, 27,200 lbs.; tobacco and cigarettes, 33½ tons.

"Can you," Mr. Laidlaw asked, "conceive of any set of figures that illustrates more vividly the effect upon the general wealth of the Province than these?"

Recent developments of national unemployment insurance

Information as to the progress of unemployment insurance in various countries is given in appendices to the minutes of evidence taken before the Royal

Commission on Unemployment Insurance (Great Britain). Great Britain, it is stated, was the first country to introduce, by the National Insurance Act of 1911, a system of compulsory contributory unemployment insurance on a national basis. After the war, this example was followed, with considerable variations, by certain other countries: Italy, by a Decree of October, 1919; Austria, by an Act of March, 1920; Russia, by a Labour Code of 1922; Queensland, by an Act of October, 1922; Poland, by an Act of July, 1924; Bulgaria, by an Act of April, 1925; Germany, after various experiments, by an Act of July, 1927; while the compulsory system was maintained in the Irish Free State after its separation from the United Kingdom. All these countries have maintained the system, with various amendments, except Russia, where it is suspended, either permanently or temporarily, by an Order of October, 1930. The Russian system was distinguished from all the other compulsory systems in that the total costs of insurance were borne by the employers, which in most cases meant the public authorities.

Reference is also made to the method of relieving unemployment adopted by New South Wales, Queensland (in addition to compulsory insurance), Victoria and New Zealand. This has taken the form of an unemployment relief tax, of varying amounts levied on income in New South Wales, Queensland and Victoria, and on every male person of twenty years of age or over, with certain exceptions, in New Zealand.

Unemployment relief in New South Wales

Two Acts, the Prevention and Relief of Unemployment (Amendment) Act, 1931, and the Unemployment Relief Tax Act, 1931, passed by the Legislature of New South Wales, were assented to on July 3, 1931. The Prevention and Relief of Unemployment (Amendment) Act, 1931, extends the operative period of the Prevention and Relief of Unemploy-

ment Act, 1930, as amended by the Prevention and Relief of Unemployment (Amendment) Act, 1930, to June, 30, 1932. Unemployment Relief Tax is now payable at the rate of one shilling in the pound on—

(a) the net assessable income of every person, other than a company, whose income exceeds £100 a year during the income year ending June, 30, 1931;

(b) the net assessable income derived by every company during the income year ending June 30, 1931; and

(c) the income from employment derived by every person, other than a company, during the income year commencing July 1, 1931, who is paid at a rate of not less than two pounds a week, or the equivalent hourly or daily rate.

Five-day week in British and American industry

Further progress in the adoption of the five-day week by industries in Great Britain is noted in the annual report of the Chief Inspector of Factories and Workshops for the year 1930. Introduced as an expedient during periods of slack trades, the shorter week is now the permanent method of working in many industries. No industry as a whole has adopted the system, but nearly every great industry in the country is represented by individual firms. As a rule the number of working hours per week remains as before, the four hours previously worked on Saturday being distributed through the other days of the week, and for this reason few adjustments of wages have been necessary. In some industries the normal working day is limited to 8 or 8½ hours by trade union rules, and any extra time worked must be paid as overtime, even although the weekly total of 47 or 48 hours is not exceeded.

As to the effects of the five-day week, the Chief Factory Inspector states that production appears to have increased where it has been given a fair trial: "There is a very general consensus of opinion," he says, "as to the advantages of the system both to employers and employed."

From the employers standpoint the advantages claimed are (1) reduction in overhead charges, resulting in lower cost of production; (2) complete cessation of production work on Saturdays, allowing time for maintenance work and repairs, cleaning of plant, etc., to be carried out by the maintenance staff during their normal hours, and obviating the necessity for overtime work; (3) delivery of orders speeded up by a total of half a day over the week; (4) absenteeism reduced and time-keeping on the whole improved.

From the workers' point of view the advantages seem to centre round the long week-end which affords opportunity for recreation and sport. The Chief Inspector remarks that "owing to the gradual rise in the standard of education among the workers, and the widening of their interest by means of lectures at Institutes and by wireless, the free Saturday becomes of greater value. With the tendency for both work and recreation to be 'speeded-up' the strain on workers' vitality tends to increase and a longer period for recuperation is needed."

In the United States, the 5-day week as a permanent labour policy has been making considerable progress during the past few years. Reports were received from 37,587 establishments in 77 different industries in answer to a questionnaire sent out by the Bureau of Labour Statistics show that 2.4 per cent of such establishments had permanently adopted the 5-day week for part or all of their employees and that 5.6 per cent of all the employees covered in the survey were on a 5-day week basis. The automobile industry had the highest percentage (44.3) of workers on the 5-day week, followed by the radio industry (34.4), the dyeing and finishing textiles industry (27.0), and the aircraft industry (24.9).

Organization of women workers recommended

The absence of union organization among women in industry was discussed by the Committee on Women Workers of the International Federation of Trade Unions, at a meeting held in Switzerland recently. It was estimated that at the present time less than one-tenth of the women wage-earners belong to national trade union organizations that are affiliated to the International Federation, and the Committee recommended that national bodies should give fuller consideration to unionizing women. A report on the subject considered by the committee stated that in industrial countries the number of women working for their own support averaged about one-third of the total labour force. Industrial work for women was shown to result from the use of machinery, and rationalization had encouraged it by opening new avenues of employment. The report recalled that the International Federation had repeatedly declared that opposition to female employment afforded no solution for the employment problems resulting from the displacement of male by female workers: efforts should rather be made to improve the economic position of workers of both sexes, and this object could only be achieved by the organization of women workers.

Proportion of women in employment in various countries

The statement in the preceding note that women form about one-tenth of the working forces in industrial countries finds support in the results of the United States census of 1930, which showed that, of the whole number of persons reporting a gainful occupation in that year (48,832,589) the male workers numbered 38,053,795, and the female workers numbered 10,778,794.

In Russia, according to statistics published from official sources by the International Labour Organization, the percentage of women employed in industry has been very stable during recent years: on January 1, 1926, it was 28.4 per cent; on January 1, 1927 it was 28.5; on January 1, 1928 it was 28.7 per cent; on January 1, 1929 it was 28.8 per cent; on January 1, 1930 it was 28.4 per cent. During these years the number of women industrial workers rose from 643,628 to 881,132. The use of female labour was most extensive in the lighter industries. In the textile industry the percentage of women amounted to 62.6 on January 1, 1930 (67.4 per cent in the linen industry), while in the clothing industry it was 53.7, and in some branches of the chemical industry, such as rubber and matches, it was about 57. In heavy industry, on the other hand, the percentage of women varies between 5 and 12, and is only increasing very slowly. In certain branches of these industries there has even been a slight decrease. The Commissariat of Labour of the Russian Federation of Soviet Republics has drawn up a list of occupations in which women must be employed either by preference or exclusively, and this list was approved by the Council of People's Commissaries of the Russian Federation on January 16, 1931. Among the occupations in which women must be employed exclusively the most important are certain branches of the textile, chemical, electrical engineering and clothing industries, while a large number of posts are reserved for them in offices and commercial undertakings. Plans are in preparation for the substitution of women for men in these occupations and for the distribution of the labour thus released among the various branches of industry.

In Japan the Central Employment Exchange Office recently studied the position of women workers in that country during the past five years: the results show that the increase in the number of women workers has not been so great as was generally supposed. In factories and mines the demand for women

workers is less at present than five years ago. The number of women employed in mines is declining on account of the approaching prohibition of the employment of women underground. On the other hand, the number of women workers engaged in transport and communications and in casual labour has increased. The number of women teachers in primary schools increased by about 10,000 in the last five years, but the rate of increase was lower than in the case of men teachers. The number of women employed in offices, banks, etc. has not increased so much in the past five years as is commonly believed, the proportion of women to men employees having risen only from 15.2 to 17.26 per cent. This increase is attributed to the replacement of men workers by lower-paid women employees as a part of the process of rationalization.

The rapid increase in the number of old age pension laws in the United States has been accompanied by an expansion of trade union pension plans. During the four years 1927 to 1930, the number of persons cared for through the medium of old age benefits by eleven labour organizations rose from 6,839 to 13,049, while the amount of benefit rose from \$2,362,476 to \$3,403,180 or 44 per cent.

As far as possible, one qualified first-aid man of the St. John Ambulance Association will be included in every gang of 50 employed under the various relief schemes in Alberta. Single men, members of the St. John Ambulance Association and the St. John Ambulance Brigade have been registered for this service, and members of Workmen's Compensation Board, First Aid Class are also eligible.

By an Order in Council issued at Edmonton in September, the Minister of Lands and Mines of Alberta was charged with the administration of the Coal Miners' Wages Security Act (Statutes of Alberta, 1928, chapter 46), in the place of the President of the Executive Council. The provisions of this Act were outlined in the LABOUR GAZETTE, June, 1928, page 582. It provides that in order to ensure that coal mining companies are in such a financial position as to be able to meet all obligations to their workmen, these companies shall be required to make returns to the government as to the amount of wages paid by them during the preceding year and the amount of their assets and liabilities, and to furnish the Minister with bonds equal to the largest amount paid in wages in one month during the previous twelve months.

Mr. John Blue, of Edmonton, has been appointed as a member of the Minimum Wage Board of the Province of Alberta representing the employers of labour, in the place of Mr. James Kellas, who had resigned.

During the month of September a total of 3,919 accidents were reported to the Ontario Workmen's Compensation Board, in Schedule 1 of the Act, 21 of these being fatal; in Schedule 2 industries 263 were reported, including 6 fatal cases; and 254 accidents to employees of the Crown, 3 of which were fatal, were reported during the month, making in all 4,436, of which 30 were fatal.

An assessment of 3 per cent on working members to provide funds to take care of unemployed was decided last month by the Toronto Cutters and Clothing Workers of America. Mr. Gregg, an official of the union, estimated that 3 per cent weekly assessment would take care of probably 24 members on a weekly allowance of from \$10 to \$12. Other branches of the Clothing Workers' Union were expected to levy the same assessment on members. The union took care of its own unemployed last year through an assessment on working members, and very few members were compelled to seek charity from community organizations.

Inter-Dominion Reciprocity for Old Age Pensions Proposed

The Union of Canadian Municipalities, at its annual convention held at Vernon, B.C., in September, adopted the following resolution:—"That the Government of Canada be memorialized to establish reciprocity or nationalization of the residence qualifications of old people, so as to entitle them to the benefits of the Old Age Pension Act upon furnishing evidence of having resided during the 20 years next preceding application jointly in Canada or any other part of the British Empire." The convention expressed the opinion that the various commonwealth within the Empire should undertake reciprocal obligations in regard to old age pensions, similar to the mutual arrangements between the provinces that are now in effect under the Dominion Act.

The Convention also adopted a resolution requesting the Federal government to establish a non-contributory unemployment insurance system.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

Employment

THE employment situation throughout Canada was reported by the Superintendents of the Employment Service of Canada at the end of September to be as follows:

Harvesting of root crops continued in the Province of Nova Scotia, but gales in the Annapolis Valley caused the loss of about 100,000 barrels of apples. Lumbering operations remained quiet. Due to storms, catches of fish were somewhat less than usual, but where the industry was unhampered by adverse weather conditions, fish were plentiful and prices good. Coal mines operated from two to five days per week. Bakers, confectioners and manufacturers of foodstuffs reported business good, while other lines were moderately busy. A further lay-off of men was expected to take place shortly in the iron and steel industries, owing to the completion of a large order. Street, sidewalk and sewer municipal work kept a number of men employed, but building construction was somewhat slack. Passenger and freight traffic was fair, also trade. Large numbers of female domestic workers continued to register, many of whom were assigned to suitable positions.

Farmers in the province of New Brunswick, generally, reported all crops good, though high winds had caused considerable loss in some sections. Inclement weather also greatly handicapped fishermen in their work, but the market was, for the most part, well stocked with lobsters, salmon, haddock and halibut. Clam digging also afforded employment for a large number of men. Business in confectionery and foodstuff plants showed no change, but improvement was noted in the pulp mills, and iron and steel industries were particularly busy. Building construction was progressing favourably and road construction, especially at Chatham, proceeding rapidly. Passenger and freight transportation was fairly brisk, though tourist traffic had slackened slightly, due to the advanced season. Trade was good, with collections fair. There was the usual demand for women domestic workers.

There was little demand for farm help or bushmen in the province of Quebec. Mining also was quiet, although Amos reported slightly improved conditions. Manufacturing concerns in Montreal, with the exception of the clothing trades, showed little activity, while in Quebec City, conditions were somewhat reversed, confectionery and boots and shoe factories being busy, with clothing inactive. At Three Rivers, paper and cotton industries, and boot and shoe factories were

doing well. Montreal, Quebec and Three Rivers reported little activity in the building trades. A few orders in this line were listed at Hull and satisfactory conditions prevailed at Sherbrooke. Transportation and trade, for the most part, registered a decline and though a number of placements were effected in the women's domestic section, applicants, especially at Montreal, were far in excess of vacancies.

In the province of Ontario there was little call for regular farm help, but opportunities offered for silo filling and potato pickers. Few logging camps were opening and the demand for men was very limited. Pulp and paper mills at Fort Frances were busy, with excellent prospects of continuing so throughout the winter. Mining was quiet. There was no material change reported in industrial conditions in the manufacturing centres. A slight improvement was noted at Guelph, Kitchener, Peterborough and Stratford, but it was not sufficient to better the general situation, which remained very quiet. With the exception of a few centres, where a fair amount of building construction was in progress, there was little activity in this line. Municipal relief projects, such as street and sewer construction, employing men in rotation, afforded the chief means of employment locally. Numerous applications for work on the proposed Trans-Canada Highway had been received by the various offices, and lists of single men eligible for this labour had been made and were in readiness for the quotas which had not as yet been assigned. This measure formed the chief topic of enquiry at the Offices and many men were keenly awaiting news of the commencement of the undertaking. Calls for women domestic workers showed an increase, but applicants were registered in such large numbers that orders could be easily filled.

The demand for farm help in the province of Manitoba continued steady, the call being chiefly for men for fall ploughing and potato picking. No difficulty was experienced in filling all orders received. A few men were sent out for cordwood cutting. Mining and manufacturing remained quiet. Conditions in the construction group, especially at Winnipeg, were very unsatisfactory. Excavation work on one of the large projects had been discontinued, throwing a number of men out of work and continuous wet weather had delayed any extension of sewer work. Negotiations, however, were proceeding concerning other works to be undertaken in relief of unemployment. Elsewhere in the province little else but road work carried out by the various municipalities

was under way. Retail trade was generally fair, with an improvement noted in seasonable lines. Certain lines also in the wholesale trade were more active. The demand for both

domestic help and day workers was somewhat less than that previously recorded.

Farm work, harvesting and threshing in the province of Saskatchewan had been at a

(10) The index of the physical volume of business includes forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughtering of cattle, sheep and hogs; storage holdings of butter and cheese.

standstill owing to intermittent rain, but it was expected that threshing would be resumed shortly. A number of farmers were much interested in the proposed relief program whereby farm hands might be placed with farmers for the winter. Some of the men, however, were unwilling to take positions, owing to the low wages offered, or the distance to be travelled. Conditions remained unchanged in the coal mining districts. Little construction was in progress other than that provided as a relief measure. There was also little activity shown in the Women's Domestic Section.

A great deal of harvesting remained to be done throughout the province of Alberta because of previous inclement weather, but with farm hands plentiful, it was unlikely that orders would increase to any extent. Beet workers and potato diggers were also in demand. Practically no call existed for men for logging, with prospects still indefinite. Coal mines, especially at Drumheller, were preparing for the season's run and conditions in this group showed considerable improvement. There was also a possibility of mines reopening elsewhere, but there were sufficient miners available in all districts to meet the demand. Building construction was fairly brisk, but many projects were nearing completion and nothing new was in sight. Progress was being made on various city works, the usual turnover of men on relief rotation work taking place. Various Federal camps, designed to take care of transient single men were also started and men had been sent out to these. Better conditions in trade were reported by the merchants. More applicants were registered in the Women's Domestic Section, but orders remained about the same.

There was little demand for farm workers in the province of British Columbia as wages were not attractive. Fruit growers were oversupplied with men, although good experienced apple pickers were in demand. Canneries were closing down, leaving tons of tomatoes on the ground. There was little lumbering going on, and many of the camps were working with reduced crews. Mining generally, both metal and coal, was quiet, although more prospectors for placer gold mining had gone into the Big Bend district. Manufacturing showed no improvement and there was little activity in shipping and longshore work. Local tradesmen were busy in some centres on small building contracts, but outside of relief work, no demand for unskilled labour existed. Government camps, which had opened recently, were taking care of some of the unemployed. Numerous applicants, however, were regis-

tered, for whom, as yet, no opportunity for work had come. Trade showed slight improvement. Quietness prevailed in the Women's Domestic Section, with a large number of women and girls seeking employment.

EMPLOYERS' REPORTS

There was an increase in employment at the beginning of September, when the 7,798 firms who reported to the Dominion Bureau of Statistics showed a combined working force of 972,537 persons, as compared with 955,991 in the preceding month. The index number (average calendar year 1926=100) stood at 107.1, as compared with 105.2 on August 1, 1931, and with 116.6, 126.8, 119.1, 111.0, 106.2, 97.8, 94.2, 101.2, 94.8 and 89.8 on September 1, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. The advance at the beginning of September took place chiefly in Quebec, where an important program of unemployment relief work was reported on highway construction.

Firms in Quebec showed important gains, and improvement was also recorded in the Prairie Provinces; in Ontario, the general situation was unchanged, while the Maritimes reported contractions. In the Maritime Provinces, the reduction was chiefly in construction particularly highway construction, but manufacturing, mining and trade also released employees, while logging, shipping and building were busier. In Quebec, no general change was noted in manufacturing; logging, mining and services showed moderate gains, while very important increases were reported in highway construction, largely as an unemployment relief measure. On the other hand, transportation, building and railway construction were slacker. In Ontario, manufacturing as a whole employed more operatives, but curtailment was indicated in transportation, construction and retail trade. In the Prairie Provinces, mining, local transportation, highway and railway construction afforded more employment, but manufacturing was slacker, notably in the iron and steel and lumber divisions, and steam railway transportation, building construction and trade showed curtailment. In British Columbia, there was a decline in employment, chiefly in construction and manufacturing, while shipping, mining and trade reported improvement.

An analysis of the returns by cities shows that employment advanced in Quebec City, Toronto and Windsor and the adjacent Border Cities; in Winnipeg, there was no general change, while curtailment was registered in Montreal, Ottawa, Hamilton and Vancouver. In Montreal, manufactures showed general

contractions, and transportation was also slacker, but construction and trade reported improvement. In Quebec City, minor gains were noted in manufacturing, services and construction, while there were similar losses in trade. In Toronto, manufacturing showed considerable improvement, but construction, trade and local transportation recorded lowered activity. In Ottawa, declines were reported in manufacturing and construction. In Hamilton, manufacturing, transportation and construction showed contractions. In Windsor and the adjacent Border Cities, automobile plants afforded greater employment, but construction was not so active. In Winnipeg, manufacturing as a whole was rather brisker, but curtailment was noted in construction. In Vancouver, decreases in personnel were reported in manufacturing and construction, while retail trade and services registered moderate improvement.

The manufacturing group in the Dominion as a whole, showed very little general change; there were declines in iron and steel and other metal, lumber, pulp and paper, woollen and edible animal product factories, while the vegetable food, clothing, silk, tobacco, electrical apparatus, leather, electric current, chemical, musical instrument and non-metallic mineral divisions recorded improvement. Logging, mining, highway construction and services also afforded increased employment; the important gains in road work were reported as largely due to unemployment relief undertakings in Quebec. On the other hand, communications and transportation showed practically no change, while building and railway construction and trade were slacker.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of September.

TRADE UNION REPORTS. Little variation from the July level of unemployment among local trade unions featured the August situation, the trend, however, being toward more favourable employment conditions. This was apparent from the returns tabulated for August from a total of 1,833 local unions covering 197,863 members, 15.8 per cent of whom were idle on the last day of the month in contrast with 16.2 per cent in July. Noteworthy curtailment of activity, however, was evident from August last year when the unemployment percentage stood at 9.3. There was little general change in the various provinces from July, Saskatchewan, Ontario, Alberta and Quebec unions showing an upward movement of employment,

while in Nova Scotia, Manitoba, New Brunswick and British Columbia industrial expansion was somewhat retarded. A lower level of activity was maintained in all provinces than in August a year ago, conditions in Manitoba and Alberta being especially slack, though recessions indicated throughout the country were noteworthy.

On another page of this issue appears an article with tabular statements on unemployment among local trade unions at the close of August, 1931.

EMPLOYMENT OFFICE REPORTS. During the month of August, 1931, the Offices of the Employment Service of Canada referred 27,223 workers to positions and made a total of 25,622 placements. Of these the placements in regular employment were 12,434, of which 8,930 were of men and 3,504 of women. Placements in casual work numbered 13,228. Employers notified the Service of 26,809 vacancies, of which 19,314 were for men and 7,495 for women. The number of applicants for work was 71,383, of whom 59,754 were men and 11,629 were women. An increase is shown in the number of applications received, but a decline in the vacancies listed and placements effected, when the above figures are compared both with those of the preceding month, and with the corresponding month a year ago, the reports for July, 1931, showing 28,025 vacancies offered, 66,281 applications made and 27,002 placements effected, while in August, 1930, there were reported 36,572 vacancies, 52,945 applications for work and 34,792 placements in regular and casual employment. A report in detail of the work of the Offices for the month of August, 1931, may be found elsewhere in this issue.

BUILDING PERMITS AND CONTRACTS AWARDED. According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities in Canada during August, 1931, was \$8,224,074, as compared with \$10,879,505 in the preceding month and with \$14,029,564 in August, 1930.

The *MacLean Building Review* states that new construction contracts for all Canada included in the September figures amounted to \$33,658,400. This was an increase of 28.7 per cent over the August figure and an increase over the September, 1930, figure of 3.8 per cent. A decrease for the year to date is shown of 30.3 per cent from the same period of 1930. Of the above total, \$18,303,700 was for engineering purposes; \$6,697,500 was for residential buildings; \$6,694,100 was for

business buildings; and \$1,963,100 was for industrial purposes. The apportionment of the contracts awarded during September, by provinces, was as follows: Ontario, \$17,441,300; Quebec, \$11,044,600; New Brunswick, \$1,747,500; British Columbia, \$1,416,100; Alberta, \$789,500; Saskatchewan, \$472,900; Manitoba, \$414,400; Nova Scotia, \$318,600; Prince Edward Island, \$13,500.

Production and Trade

INDUSTRIAL PRODUCTION. Figures showing the volume of production in certain industries during recent months and also in the corresponding months last year, are shown in the table on page 1060.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, states that business operations showed a moderate recession in August from the level of July. Despite considerable irregularity, manufacturing was fairly well maintained. The output of steel ingots showed a gain at 52,491 tons compared with 45,097 tons in July. Contraction occurred in the production of pig iron, the output being 23,212 tons compared with 40,303 in the preceding month. The production of motor cars showed a moderate gain, contrary to seasonal tendencies; the output was 4,544 units, a gain of 9.5 per cent after seasonal adjustment. The imports of raw materials for use in Canadian manufactures registered gains in several important departments. The imports of raw cotton were 4,754,000 pounds compared with 4,374,000 in July, the gain being somewhat greater than normal for the season. The imports of raw wool and wool yarn for further manufacture were considerably greater in August, the gain over the preceding month being no less than 34 per cent. Imports of crude petroleum were 106,065,000 gallons compared with 98,145,000 in July, a gain of 7.7 per cent, after seasonal adjustment; these imports were greater in each month from March to August of this year than in the corresponding months of last year. A decline was shown in the imports of crude rubber during August. An output of 165,124 tons of newsprint compared with 182,731 tons in July, though production is normally greater in August.

The index of manufacturing production was 136.3 in August, compared with 137.2 in July, a decline of 0.6 per cent. Employment in manufacturing plants was fully maintained; the index compiled from the returns from the principal manufactures remained at 94.7 on September 1 unchanged from August 1. If adjustment were made for seasonal tendencies, a moderate gain would be indicated.

The construction industry was not so successful in obtaining new business in August as in the preceding month, even after adjustment is made for seasonal variation.

The movement of railway freight showed contraction in August, the loadings amounting to 205,490 cars compared with 206,987 in July. The decline, after seasonal adjustment, was slightly more than 4 per cent. The operating revenues of the Canadian National Railway, exclusive of eastern lines, was \$11,895,000 compared with \$16,130,000 in August 1930. The operating revenues of the Canadian Pacific Railways were \$11,323,000 compared with \$15,682,000 in the same month of last year.

Coal.—Coal production in Canada during August amounted to 760,127 tons as compared with the five year average for the month of 1,336,983 tons. The August output consisted of 612,468 tons of bituminous coal, 105,055 tons of lignite coal and 42,604 tons of sub-bituminous coal. Mines in Nova Scotia produced 335,766 tons; in Alberta, 252,907 tons; in British Columbia, 141,206 tons; in Saskatchewan, 18,853 tons; and in New Brunswick, 11,395 tons. Compared with the 1926-1930 average for the month, a decline of 19.2 per cent was recorded in the imports of coal; the August imports totalled 1,488,880 tons while the five-year average was 1,842,167 tons. Anthracite importations amounted to 230,679 tons, made up of 129,912 tons from the United States, 88,361 tons from Great Britain, and 12,406 tons from Germany. Receipts of bituminous coal were recorded at 1,258,038 tons; of which the United States supplied 1,243,106 tons and Great Britain 14,932 tons. Imports of lignite coal consisted of 163 tons cleared through British Columbia ports.

Exports of Canadian coal amounted to 27,436 tons, a falling-off of 64.5 per cent from the five-year average for the month of 77,329 tons.

Coal made available for consumption totalled 2,221,571 tons as against an average of 3,101,821 tons for August during the past years. During the month under review, the United States supplied 61.8 per cent of the total available supply, Canada, 33.0 per cent, Great Britain, 4.6 per cent, and Germany, 0.6 per cent.

EXTERNAL TRADE. A summary of Canadian Trade prepared by the Department of National Revenue shows that in August, 1931, the merchandise entered for consumption amounted to \$47,308,079 as compared with \$48,379,235 in the preceding month and with \$77,906,294 in August, 1930. The chief imports for August, 1931, were:

Non-metallic minerals and products, \$8,139,326; Iron and its products, \$7,377,398; fibres, textiles and textile products, \$7,371,772.

The domestic merchandise exported during August, 1931, amounted to \$48,763,652, as compared with \$49,675,120 in the preceding month and with \$69,290,228 in August, 1930. The chief exports in August, 1931, were: Wood, wood products and paper, \$15,877,314; Agricultural and vegetable products, mainly foods, \$11,717,684; Animals and animal products, \$6,670,833.

Strikes and Lockouts

The time loss due to industrial disputes during September, 1931, showed a large increase, being about four times as large as that recorded for the preceding month, a similar increase appearing in the number of workers involved. As compared with September, 1930, a substantial increase occurred in the number of disputes recorded, with a corresponding increase in the number of workers involved and the time loss incurred; strikes of coal miners, fishermen and sawmill workers involving large numbers of workers being responsible for the high figures for the month. There were in existence during the month sixteen disputes, involving 3,748 workers, and resulting in a time loss of 35,464 working days, as compared with eight disputes, involving 886 workers and resulting in a time loss of 9,364 working days in August. In September, 1930, there were on record twelve disputes, involving 2,990 workers and resulting in a time loss of 13,138 working days. At the end of the month there were on record nine disputes, involving approximately 2,400 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been formally called off by the union.

Prices

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities showed a slight decrease at \$8.03 for September, as compared with \$8.20 for August; \$10.38 for September, 1930; \$11.64 for September, 1929; \$11.15 for September, 1928; \$10.87 for September, 1927; \$10.94 for September, 1926; \$10.81 for September, 1925; \$10.28 for September, 1924; \$10.46 for September, 1923; \$10.28 for September, 1922; \$11.82 for September, 1921; \$15.95 for September, 1920; \$16.92 for June, 1920 (the peak); \$13.31 for September, 1918; and \$7.83 for September, 1914. The decline was

due mainly to a fall in the price of potatoes. There were, however, less important decreases in the prices of beef, mutton, fresh and salt pork, bacon, lard, bread and flour. Slight advances occurred in the prices of eggs, butter, evaporated apples and prunes. Including the cost of fuel and rent with that of foods the total budget averaged \$18.06 at the beginning of September, as compared with \$18.30 for August; \$20.75 for September, 1930; \$21.90 for September, 1929; \$21.38 for September, 1928; \$21.05 for September, 1927; \$21.15 for September, 1926; \$21.02 for September, 1925; \$20.65 for September, 1924; \$20.97 for September, 1923; \$20.90 for September, 1922; \$22.37 for September, 1921; \$26.38 for September, 1920; \$26.92 for July, 1920 (the peak); \$21.11 for September, 1918; and \$14.33 for September, 1914. Fuel was slightly lower, due to a decrease in the price of wood. Little change occurred in rent.

In wholesale prices, the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was slightly lower at 70.0 for September, as compared with 70.9 for August; 82.1 for September, 1930; 97.8 for September, 1929; 95.4 for September, 1928; 97.1 for September, 1927; and 98.5 for September, 1926. In the classification according to chief component materials six of the eight main groups declined, one advanced and one was unchanged. The groups which declined were: the Vegetables and Vegetable Products group, due to lower prices for corn, flax, oats, wheat, flour, bran and shorts, which more than offset higher prices for oranges, lemons and rye; the Animals and Animal Products group, due to reduced quotations for steers, hogs, lambs, beaver skins and leather, which more than offset higher prices for calves, canned lobsters and eggs; the Fibres, Textiles and Textile Products group, due mainly to reduced quotations for raw cotton, raw silk, raw wool, denim and certain woollen fabrics; the Wood, Wood Products and Paper group, due to lower prices for lumber and ground wood pulp; the Non-Ferrous Metals and their Products group, because of lower quotations for antimony, copper, lead, tin and zinc; and the Chemicals and Allied Products group, due to lower prices for citric acid, copper sulphate and certain other chemicals. The Non-Metallic Minerals and their Products group was somewhat higher, due mainly to increased prices for plate glass, gasoline, kerosene, and anthracite coal. The Iron and its Products group was unchanged.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING THE MONTH OF SEPTEMBER, 1931

DURING the month of September an application for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act was received in the Department of Labour from machinists and helpers to the number of approximately 4,000 employed in the repair shops of the Canadian National Railways, being members of the International Association of Machinists. In the spring of 1930 the Canadian National Railways, in order to effect economies in expenses, reduced the working hours of the shop forces from forty-four to forty hours per week as provided by the terms of agreement. On September 4 a further reduction in working hours was put into effect, all main shop forces being required to lay off every alternate Friday for the remainder of the year, the average working hours per week being accordingly reduced to thirty-six. The International Association of Machinists protested against the latter arrangement claiming a violation of the existing agreement. The Minister of Labour discussed the situation with a committee of the machinists' union, and, in view of the temporary character of the arrangement of which complaint was made in the application, it was decided for the time being to hold the matter in abeyance.

The Mayor of the Town of Estevan and the Reeve of the Municipality of Coalfields, both in the Province of Saskatchewan, made application during September for the establishment of a Board of Conciliation and Investigation to enquire into a dispute which had arisen between the mine owners and their employees in the Estevan district in southeastern Saskatchewan. In accordance with section 65 of the Industrial Disputes Investigation Act, His Honour Judge Edmund R. Wylie, of Estevan, Saskatchewan, was, on the recommendation of the Prime Minister, acting for the Minister of Labour in the absence of the latter, appointed a Commissioner under the provisions of Part 1 of the Inquiries Act to investigate and report upon the dispute in question or any matters or circumstances connected therewith, including the causes and circumstances which led to a cessation of work in the various mining and other industries at or near Estevan or elsewhere in southeastern Saskatchewan during the early part of September, 1931. A commission was also issued to Judge Wylie by the Government of the Province of Saskatchewan, provision being made for the appointment of counsel and other assistance. Full details concerning this dispute and mediation by an officer of the Department of Labour will be found in the article following.

STRIKE OF COAL MINERS AT ESTEVAN, SASK., AND APPOINTMENT OF ROYAL COMMISSION OF INQUIRY

A STRIKE of coal miners in Saskatchewan in the vicinity of Estevan began on September 7, 1931, and continued until October 7 when an agreement for a resumption of work pending the result of an inquiry by a Royal Commission was reached following conference of the parties to the dispute with the Commissioner's counsel. The dispute involved approximately six hundred miners, of whom about two hundred were working when it occurred, the operations for the season having just commenced, and was marked by a disturbance in the town of Estevan in which three miners were killed, a number of persons were injured, including several police and citizens, with considerable property damage.

The strike was called by the Mine Workers' Union of Canada which had recently organized the coal miners in the district, but the mine operators refused to negotiate with or recognize this union. The representatives of the miners demanded recognition of the union

and the negotiation of an agreement as to wages and employment conditions and the elimination of alleged abuses in relation to the weighing of coal (charging non-observance of the law as to check-weighing), also of abuses as to prices charged at company stores and boarding houses (claiming that employees were compelled to patronize these on pain of dismissal); they claimed also that wages had been reduced and that hours of work were excessive, and that miners who made any complaints were dismissed. Toward the end of August, it is reported, one mine was shut down for two days by a successful strike to secure the reinstatement of a miner dismissed when he joined the union. Early in September the provincial Minister of Labour, with the Deputy Minister, met representatives of both parties at Estevan and reported that while operators would not recognize the union they were willing to make some concessions and that apparently the dispute would be settled without a strike.

On September 7 the union notified the operators that unless their demands were agreed to a strike would occur the next day. Operations accordingly ceased in all the mines in the district. In a "stripping" or surface mine operated by steam shovels, which the union had not organized, mining of coal for shipment was stopped by the management and work confined to tracklaying, etc., pending negotiations for a settlement in the other mines. Work was resumed in a few hours in about twenty small pit mines in the district after negotiations with union representatives on condition, it is reported, that the coal was to be for domestic use in the district and not to be shipped out. The strike, therefore, directly affected the eight deep seam mines operated by members of the Saskatchewan Coal Operators' Association. The "stripping" mine resumed operations on September 17.

A brick and tile manufacturing plant in the district was affected by a strike, on September 7, of its employees, who had joined the Lumber and Agricultural Workers' Union, like the Mine Workers' Union of Canada affiliated with the Workers' Unity League of Canada, a branch of the Red International of Labour Unions. On September 23 work was resumed following direct negotiations between the employees' representatives and the management, the restoration of wage rates reduced in the spring being conceded.

The coal operators continued to refuse to meet union representatives, but offered to negotiate with a committee representing all the miners in the district. On September 16 some of the operators brought in some men to replace the strikers, but in the presence of large bodies of pickets gave up the attempt, and applied for additional police protection. On September 17 the Mayor of Estevan and the Reeve of Coalfields, the municipality in which the mines are located, applied to the Federal Minister of Labour for a Board of Conciliation and Investigation under Section 65 of the Industrial Disputes Investigation Act, neither of the parties to the dispute having made an application. In the absence of the Minister, the Prime Minister, acting for the Minister, recommended in accordance with a provision in this section the appointment of a Royal Commission instead of a Board, and an Order in Council of September 18 appointed His Honour Judge Edmund R. Wylie, District Court Judge of the Judicial District of Estevan, as Commissioner. The provincial government also issued a commission to Judge Wylie with provision for the appointment of counsel and other assistance.

The Chief Conciliation Officer of the Federal Department of Labour was also despatched to Estevan to bring about if possible a resumption of work pending the inquiry. Arriving in Estevan on September 21, the day of the settlement of the strike in the brick plant, the Departmental representative met representatives of both parties to the coal mining dispute. The operators agreed to re-employ all strikers without discrimination pending the inquiry by the Royal Commission. Representatives of the miners agreed to waive recognition of the union and resume work pending the inquiry if a number of specified grievances were immediately remedied by negotiation between the eight operators and a committee of three miners from each mine. These grievances included allegations as to abuses in certain instances in connection with purchases in company stores, check-weighing, non-payment of wages for repair work, prices of powder, and various other matters. The operators agreed to this and to remedy any such conditions; but the local president and secretary of the union then claimed that their representatives in these arrangements had no authority to agree to such terms. They insisted that there should be no resumption of work pending the inquiry unless the operators agreed to meet union representatives as well as employees and to negotiate a higher wage scale and to remedy other grievances. No settlement having been arrived at the Conciliation Officer left the vicinity for a conference with the provincial authorities in Regina. The Premier of Saskatchewan issued the following statement as to the efforts made to settle the dispute:—

"Every possible and every reasonable effort has been made on the part of both the provincial and federal authorities to bring about settlement of the industrial dispute at Estevan and Bienfait.

"Before the strike had been called the government suggested the advisability of an inquiry into any grievances by a commission and suggested that this inquiry should take the form of a commission of three, one to be appointed by the men, one by the operators and a third to be appointed by the two, then by the provincial government.

"The operators, in due course, suggested a name but no name was forthcoming from the men. Subsequently the Minister of Labour and the Minister of Public Works endeavoured at Estevan to get the conflicting forces together, but this was impossible. Again the Deputy Minister of Labour of the province spent some time in Estevan and Bienfait and did everything possible to bring about an understanding.

"The strike was subsequently called and to both the men and the operators the government urged they get together and settle their differences with as little trouble as possible. Subsequently by concurrent orders in council the provincial and Dominion governments appointed

Judge Wylie of Estevan as a commissioner to investigate matters.

"Mr. Campbell, chief conciliation officer of the federal department of labour spent considerable time, and a great deal of effort, in the area meeting the operators and meeting the miners' executive, and was hopeful at one time of being able to effect a conciliation. Before Mr. Campbell met the men's executive he obtained from the coal operators a written undertaking from them that should the miners agree to return to work at once pending the report of the royal commission, the mine owners concerned agreed that all their former employees who reported for work would be re-engaged without discrimination. This undertaking was signed on behalf of the eight deep seam operators who were affected by the strike and had their plants tied up.

"For the purpose of resuming work the operators undertook with Mr. Campbell that certain concessions would be made which had not previously been recognized as between the operators and the men. Notwithstanding all the efforts of Mr. Campbell it was found impossible to bring these parties together.

"The Royal Canadian Mounted Police have functioned in the area for the purpose of preserving peace. That function has been performed by them and will continue to be performed by them.

"While there is disagreement as between the parties the government has confidence in the good judgment of all concerned and that reason on the part of both the operators and the men will prevail. Judge Wylie is proceeding immediately with his inquiry and this fact should satisfy all concerned that there is a determination on the part of the authorities, Federal and Provincial, to get at the facts at issue.

"With this inquiry proceeding it is hoped that, as above stated, the best judgment in the field will prevail and that there will be no disturbances of any kind.

"At this season of the year, and this year in particular, the question of a coal supply is vital and if coal cannot be obtained from the Saskatchewan fields then it will have to be obtained elsewhere. This is naturally not the desire of the authorities and it would seem very unfortunate if it should eventuate."

The operators of the smaller mines in the district, who had been operating under an arrangement with the union, decided no longer to recognize it owing to interference by union officials with their operations contrary to the arrangement made. On September 28, it was announced that the Commissioner would begin the inquiry in the Court House at Estevan at ten o'clock Wednesday, September 30.

On Monday, September 28, the municipal authorities of Estevan were informed that the miners had announced a parade through the streets of Estevan on Tuesday afternoon and a meeting in the Town Hall in the evening, but had made no application for permission to parade nor for the use of the hall. The officials of the union were notified that this would not be permitted. On Tuesday afternoon the parade of miners was stopped at

the edge of the town by the Chief of Police, who was attacked and injured. A detachment of Royal Canadian Mounted Police was attacked, several being struck by missiles and bullets and a force of firemen using hose was overpowered. Finally several strikers were injured by the return fire of the police, one being instantly killed, and two dying later. A small number of citizens were also injured, fire apparatus was destroyed, and many windows were broken. The mob dispersed on the arrival of police reinforcements, a number being arrested.

The first hearing before the Royal Commission began the next morning, but was adjourned until Monday, October 5. On that day the vice-president of the union called upon all miners in Canada to strike for twenty-four hours on October 7 in protest against the shooting of the miners at Estevan and to demand that police should be withdrawn and proceedings against those arrested should be stopped. Reports from the mining districts indicate that little response to this call resulted. In the meantime counsel for the Royal Commissioner met representatives of both parties to the dispute, and following the first hearing on October 5, a meeting of the parties the following day was arranged, at which it was agreed that work would be resumed on the following terms:—

"We, the mine operators and employees in conference at the court-house, Estevan, this sixth day of October, 1931, hereby agree that the mines be opened immediately and the men return to work on the following conditions, viz.:

"(1) That this be considered a temporary arrangement pending the findings of the Wylie Royal Commission and the possible drafting of a working agreement between the operators and the men.

"(2) That committees of employees for each mine be a recognized organization in each mine.

"(3) That the provisions of the Mines Act be observed in relation to check-weighers.

"(4) That all water in the roadways and working face be removed by the company and that such places be kept as dry as possible.

"(5) That the terms of any schedule or agreement finally reached between the operators and the men be made retroactive to the date of recommencement of work by them.

"(6) That there shall be no victimization or discrimination against men on account of the strike, particularly in reference to men on the payrolls as at September 7 last.

"(7) That contract men be employed on an eight-hour basis, face to face, and the company men work nine hours a day.

"(8) That because of working conditions in the various mines, the removal of slack and questions of overweight be left to negotiations between the operators and the committees of employees."

SETTLEMENT OF STRIKE OF FOUNDRY EMPLOYEES AT ST. BONIFACE, MANITOBA

ON September 11 sixty-five of the employees in a foundry at St. Boniface, producing railway car wheels, ceased work owing to a dispute as to decreases in wages and reduction in staff, the strike being terminated and work resumed on September 19, as a result of conciliation proceedings undertaken by the Federal Department of Labour at the request of the Mayor of St. Boniface, Mr. David Campbell, K.C.

Wage rates for piece workers had been reduced approximately five per cent in July after consultation with employees, but in August notice of a further reduction of between five and ten per cent was posted without previous discussion with employees, and a section of the plant was closed down, eight moulders and helpers being laid off. One moulder many years in the plant was discharged. The plant had been operating only from three to five days per week.

The employees, through a shop committee, a section of the Workers' Unity League, sent the management a written statement declining to accept the wage reduction, and making the following proposals: recognition of a committee elected by the workers in the shop to deal with the management regarding wage rates, hours and all conditions affecting employment; no reduction in existing wage rates; division of work among employees instead of reducing the number; that the moulder dismissed should be given some employment; and that the shop committee should receive thirty days' notice of any proposed changes in conditions of employment. No reply being received, the committee on September 9 sent a communication demanding that the proposed wage cut be withdrawn, the discharged moulder be re-engaged, and that there should be no discrimination against any employee, and stating that if these terms were not accepted by September 11 a strike would occur.

The conditions not being accepted, the strike began. The employees stated that the management gave notice that unless the committee disbanded they would all be discharged and barred from future employment in the plant.

The establishment, it is reported, was picketed night and day by from one hundred to four hundred men, many coming from Winnipeg and being members of the National Unemployed Workers' Association; and a small

force of municipal and provincial police was placed on guard.

The management claimed that most of their employees were willing to work, but were kept out of the plant by a small number who belonged to the Industrial Union of Metal Workers, affiliated with the Workers' Unity League, a communist organization, assisted by the pickets from the National Unemployed Workers' Association; and that if sufficient police protection were provided, the strikers would return to work or would be immediately replaced by others. It appears that the same wage reductions had been made in other plants of the company in other localities and were accepted by the employees, also that most of the labourers were paid between 40 cents and 50 cents per hour before the cut of five per cent, and that moulders on piece work averaged about \$40 per week and helpers over \$30 when working full time. The Mayor, however, finding that the strikers were open to discuss a reasonable compromise, refused to provide the additional police requested, and asked the Federal Minister of Labour for the assistance of the Department.

The Chief Conciliation Officer of the Department arrived on the scene on September 17, and with the Winnipeg representative of the Department discussed the matters at issue with the Mayor and each party to the dispute.

The Deputy Minister of Labour took the matter up from Ottawa with the head office of the company at Toronto urging that the management make every attempt to secure an amicable settlement through the departmental officers on the ground. The following day a settlement was reached providing for the establishment of piece rates for moulders and helpers practically equivalent to those before the strike, and a reduction of 2½ per cent for labourers, etc., instead of five per cent; that the company would recognize a committee of employees to handle grievances and give thirty days' notice of changes in wages or conditions of employment; that the men laid off would be taken back and work shared; that the discharged moulder would be employed as a labourer; and that the strikers would be taken back without discrimination as soon as the plant was ready. The pickets were immediately withdrawn and the plant was reopened the following day, September 19.

CANADIAN NATIONAL RAILWAYS EMPLOYEES' BOARD OF ADJUSTMENT No. 2

Summary of Recent Decision

REPORTS have been received of three cases recently settled by the Canadian National Railways Employees' Board of Adjustment No. 2. An account of previous cases was given in the *LABOUR GAZETTE*, July, 1931, page 757, and in previous issues. The issue of August, 1930, contained a general summary of the proceedings of the Board, covering the period from January 1, 1928, to December 31, 1929; and a similar summary of proceedings from the date of the inception of the Board to December 31, 1927, appeared in the issue of October, 1928, page 1060.

The Canadian National Railways Employees' Board of Adjustment No. 2, was established for the purpose of disposing of outstanding grievances or disputes that might arise from the application, non-application, or interpretation of the schedule of working conditions for "Clerks and Other Classes of Employees as herein named," which are not adjusted between the officers of the railway and the representatives of the employees. The members of the Board are appointed for a term of one year, subject to reappointment. The Board is composed of four members selected by the management and four members selected by the representatives of the employees concerned. The decisions of the Board are binding upon the parties to the agreement. Provision was made in the agreement constituting the Board for the appointment of an arbitrator in any case in which the Board might be unable to agree upon an award. Up to the present time in only one case has it been found necessary to appoint an arbitrator.

Case No. 77.—Operating Department (Atlantic Region)

The employees of the former Atlantic Quebec and Western and the Quebec and Oriental Railways submitted a complaint that they were being denied their right to exercise, in accordance with the schedule, their seniority on the Campbellton Division of the Canadian National Railways, to which these former systems have belonged since 1929.

The employees stated that shortly after the lines were taken over the general manager of the C.N.R. had informed the general chairman of the employees' committee that he would extend the provisions of the clerks' schedule to the corresponding classes of employees in the former systems. Subsequently, however, the general manager of the Atlantic Region systems, they stated, had declined to

accede to the request of the employees who were taken over that they be merged with the other employees on the Campbellton Division. The employees contended that this refusal to permit them to exercise their seniority in the reconstituted Campbellton Division violated the provisions of Article 3, Rule A, of the schedule for Clerks and other Classes of Employees.

The management stated that after the lines were taken over by the C.N.R. the general Chairman of the different organizations was informed that schedule rates of pay and working conditions would be applied to the employees on those lines, but the question of seniority rights was left in abeyance; subsequently under agreements made with some of the organizations, the employees who were taken over were protected in their positions, and the same practice was followed with regard to all these employees. The company stated further that in May, 1931, the general chairman of the Canadian Brotherhood of Railway Employees made a formal request verbally that employees on these lines be included with employees on the Campbellton Division. This was not agreed to, the company considering that the Railway should reserve the right to protect its own interests and the interests of the employees when branch lines are acquired. The management held that in any event a mutual agreement between the Railway and the General Chairman was necessary before seniority rights of such branch line employees could be merged with employees on the main line.

The Board, in rendering their judgment, said that this case should preferably be the subject of an agreement between the General Manager and the General Chairman. They suggested that, under the circumstances, the employees on the two lines taken over by the C.N.R. should be merged on the seniority list for the Campbellton Division: each employee on the two railways should hold his present position, unless he bids in another position, or is displaced by any senior employee on the merged seniority list whose position is abolished, or who is displaced as a result of a position held by an employee senior to him being abolished.

The Board finally requested that the General Manager and the General Chairman confer again and make a sincere effort to reach a mutually satisfactory agreement, and in the event of their failing to do so, that the case be again submitted to the Board for consideration at its next meeting.

STRIKES AND LOCKOUTS IN CANADA DURING SEPTEMBER, 1931

THE number of strikes and lockouts in existence in Canada during September, 1931, was sixteen, as compared with eight the preceding month. The number of workers involved was over four times as great as that recorded for August, with a similar increase appearing in the time loss incurred. Comparing the figures with those for September, 1930, a substantial increase was recorded in the number of disputes occurring, the number of workers involved and the time loss incurred showed a similar increase. Extensive strikes of coal miners, fishermen and sawmill employees involving large numbers of workers were responsible for the high figures for the month.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Sept., 1931..	16	3,748	35,464
*Aug., 1931..	8	886	9,364
Sept., 1930	12	2,990	13,138

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Four disputes, involving approximately 220 workers, were carried over from August, and twelve disputes commenced during September. Of these sixteen disputes seven terminated during the month, three resulting in favour of the employers and two in favour of the workers involved; one resulted in a compromise and the result of one was recorded as indefinite. At the end of September, therefore, there were nine disputes recorded as strikes or lockouts, namely: photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man.; men's clothing factory workers, Toronto, Ont.; motion picture projectionists, Montreal, P.Q.;

salmon fishermen, Berkley Sound, B.C.; coal miners, Estevan District, Sask.; sawmill workers, Fraser Mills, B.C.; sawmill workers, Barnet, B.C.; longshoremen, Barnet, B.C.; and cooks and waiters, Edmonton, Alta.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not yet declared terminated. Information is available as to four such disputes, namely: coal miners, Shaughnessy, Alta., January 15, 1931, one employer; motion picture projectionists, Ottawa, Ont., February 23, 1931, one employer; photo engravers, Toronto, Ont., March 23, 1931, one employer; and tailors, Vancouver, B.C., June 6, 1931, one employer.

Information has been recently received as to a strike of forty-five coal miners near Estevan, Sask., from August 21 to August 23, to secure the reinstatement of a man alleged to have been dismissed for joining a union, the strike being successful.

Information has also been recently received as to a stoppage in September on unemployment relief work at North Vancouver. Particulars as to the dispute have not yet been secured.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

MEN'S CLOTHING FACTORY WORKERS, TORONTO, ONT.—This dispute, involving one establishment in Toronto since July 29, 1931, where the management had resigned from the Clothing Manufacturers' Association, which had an agreement with the Amalgamated Clothing Workers of America, and had signed a shop agreement with certain of its employees causing the strike of its union employees, was terminated at the end of September. Early in October, however, an agreement was signed between the company and the union providing for union wages and working conditions and work was resumed on October 5. The agreement is described elsewhere in this issue.

STONECUTTERS, WINNIPEG, MAN.—As stated in the September issue of the LABOUR GAZETTE, the strike of stonecutters at Winnipeg, commencing August 1, 1931, was terminated early in the month, work being resumed on September 3, 1931, at a reduction of ten cents per hour, a rate of \$1.15 per hour, that fixed by

STRIKES AND LOCKOUTS IN CANADA DURING SEPTEMBER, 1931

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
(a) Strikes and Lockouts in Progress Prior to September, 1931			
MANUFACTURING—			
<i>Textiles, Clothing, etc.—</i> Men's clothing factory workers Toronto, Ont.	40	1,000	Commenced July 29, 1931; against violation of agreement; untermi- nated.
<i>Printing and Publishing—</i> Photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man.	100	2,500	Commenced May 4, 1931; for union agreement; untermi- nated.
<i>Non-Metallic Mineral Products—</i> Stonecutters, Winnipeg, Man...	40	40	Commenced Aug. 1, 1931; against reduction in wages; terminated Sept. 2, 1931; in favour of employer.
SERVICE—			
<i>Recreational—</i> Motion picture projectionists, Montreal, P.Q.	44	1,100	Alleged lockout; commenced Aug. 27, 1931; re union wages and working conditions; untermi- nated.
(b) Strikes and Lockouts Commencing during September, 1931			
FISHING AND TRAPPING—			
Salmon fishermen, Berkley Sound, B.C.	500	3,000	Commenced Sept. 24, 1931; for increase in piece rates; untermi- nated.
MINING, NON-FERROUS SMELTING AND QUARRYING—			
Coal miners, Estevan District, Sask.	600	12,600	Commenced Sept. 7, 1931; for recognition of union, higher wages and improved conditions; untermi- nated.
Coal miners, Wayne, Alta. . . .	110	500	Commenced Sept. 14, 1931; for payment of back wages; terminated Sept. 21, 1931; in favour of workers.
Coal miners, Sydney Mines, N.S.	950	2,000	Commenced Sept. 21, 1931; for discharge of official; terminated Sept. 30, 1931; in favour of employ.
MANUFACTURING—			
<i>Other Wood Products—</i>			
Sawmill workers, Fraser Mills, B.C.	650	7,800	Commenced Sept. 17, 1931; for increase in wages and recognition of union; untermi- nated.
Sawmill workers, Barnet, B.C.	350	2,450	Commenced Sept. 23, 1931; against decrease in wages; untermi- nated.
<i>Non-Metallic Mineral Products—</i>			
Brick and tile workers, Este- van, Sask.	33	462	Commenced Sept. 7, 1931; for increase in wages; terminated Sept. 23, 1931; in favour of workers.
<i>Metal Products—</i>			
Foundry workers, St. Boniface, Man.	85	680	Commenced Sept. 11, 1931; against reduction in wages and layoff of workers; terminated Sept. 19, 1931; compromise.
CONSTRUCTION—			
<i>Buildings and Structures—</i>			
Plasterers, Montreal, P.Q.	60	150	Commenced Sept. 15, 1931; against reduction in wages; terminated Sept. 21, 1931; in favour of employer.
TRANSPORTATION—			
<i>Water—</i>			
Longshoremen, Barnet, B.C. . . .	150	1,050	Commenced Sept. 23, 1931; in sympathy with strike of sawmill workers; untermi- nated.
SERVICE—			
<i>Public Administration—</i>			
Relief workers, Passburg, Alta.	30	120	Commenced Sept. 23, 1931; for increase in wages; terminated Sept. 29, 1931; indefinite.
<i>Business and Personal—</i>			
Cooks and waiters, Edmonton, Alta.	6	12	Commenced Sept. 29, 1931; for union wages and working conditions; untermi- nated.

the Manitoba Fair Wage Board for government contracts, to be maintained until May, 1932.

MOTION PICTURE PROJECTIONISTS, MONTREAL, P.Q.—This dispute, resulting from the decision of the management to reduce the number of operators, alleged by the union to constitute a lockout as a result of which all union workers in these theatres were called out, was untermiated at the end of the month, although the employer claimed to have replaced those ceasing work. Toward the end of the month in connection with picketing three former employees were arrested and the management secured a temporary injunction restraining the union from publishing statements alleged to be prejudicial to the company.

SALMON FISHERMEN, BERKLEY SOUND, B.C.—Fishermen were reported in the press about September 24, 1931, to have ceased work demanding a higher price for fish delivered to salmon canneries and salteries, but early in October a settlement was reported providing for a compromise on the price of fish.

COAL MINERS, ESTEVAN, SASK.—A strike of coal miners demanding recognition of the Mine Workers' Union of Canada and improved working conditions, which commenced September 7, 1931, and was untermiated at the end of the month, is described elsewhere in this issue in an article on the appointment of a Royal Commission following the application for a Board of Conciliation and Investigation by the municipal authorities. A dispute involving one mine for two days during August is referred to in a preceding paragraph, and a strike of brick and tile makers in the same district from September 7, 1931, to September 23 is dealt with in another paragraph.

COAL MINERS, WAYNE, ALTA.—Miners in one colliery ceased work on September 14, 1931, to secure the payment of wages in arrears, work being resumed by some workmen on September 17 and by the remainder on September 21, part of the wages in arrears having been paid, with a promise that the balance would be paid in full on the next pay-day.

COAL MINERS, SYDNEY MINES, N.S.—Miners in one colliery at Sydney Mines, N.S., ceased work demanding the dismissal of an official alleged to have marked coal cars in such a way as to deprive the miners of their wages. The management reported that the official's duty was to mark the cars of coal with exces-

sive rock so that the coal would be properly cleaned before going into the railway cars, that the committee asked for a meeting with the mine manager, but that the men went on strike before the meeting was held. The strikers asked the other miners in the district, 12,000 in number, to go on a sympathetic strike, but the district officers of the union advised the other coal miners not to do so, and also advised the strikers to resume work pending negotiations with the management and an investigation by the provincial authorities. The strike was accordingly terminated on September 30. As the colliery was operating only two days per week the miners involved lost only two days' work.

FOUNDRY WORKERS, ST. BONIFACE, MAN.—A cessation of work in one establishment on September 11, lasting eight days, owing to a reduction in wages and in the number employed, settled through the mediation of the Department is described in an article on page 1068.

SAWMILL WORKERS, FRASER MILLS, B.C.—Employees in one establishment struck at closing time on September 16, 1931, their representatives having demanded a ten per cent increase in wages, equal pay for married and single workers, an increase in piece rates on shingles, time and one-half after eight hours per day and the recognition of the Lumber and Agricultural Workers Industrial Union, with preference of employment for its members. It appears that during the past year there have been a number of reductions in wages owing to the depressed conditions in the industry. The Minister of Labour being in the vicinity with the resident representative of the Department, went into the matter with the management and offered the services of the Department in bringing about negotiations for a settlement. The management offered to meet a committee of its employees but refused to negotiate with the union. At the end of the month the departmental conciliation officer arranged a meeting between the management and a committee of employees at which a basis of settlement was reached. This, however, was subsequently refused by the union. In connection with picketing, a number of union members were arrested for disorderly conduct and charged with being members of an unlawful assembly and with assaulting police officers.

SAWMILL WORKERS, BARNET, B.C.—Employees in one establishment ceased work on September 23, 1931, against a decrease in wages of approximately twenty per cent, the fourth decrease since July, 1930. The management stated that unless such reductions were

made the plant would have to be closed down owing to the low price of lumber products. The resident officer of the Department interviewed the management and offered the assistance of the Department in conciliation. The manager stated that he would be very glad to accept this as soon as a favourable opportunity occurred. At the end of the month the dispute was untermiated.

BRICK AND TILE WORKERS, ESTEVAN, SASK.—Employees in one establishment ceased work on September 7, 1931, demanding the restoration of wage rates in effect in the spring of this year, and therefore an increase from 30-42½ cents per hour to 35-50 cents. Work was resumed on September 23, an agreement to adjust the wages on the basis demanded for the balance of the year having been reached. This dispute was incidental to a strike of coal miners in the vicinity and is referred to in a special article on that dispute.

PLASTERERS, MONTREAL, P.Q.—Approximately sixty plasterers employed by about twelve firms ceased work on September 15, 1931, against a decrease in wages from \$1.05 per hour to 85 cents. Work was resumed September 17, the reduction in wages having been accepted by the plasterers' union.

LONGSHOREMEN, BARNET, B.C.—In sympathy with the strike of sawmill workers, longshoremen refused to load a boat at the establishment affected. At the end of the month no resumption of work had been reported.

RELIEF WORKERS, PASSBURG, ALTA.—Workers engaged by the provincial government on the repair of highways, undertaken as relief work for unemployed coal miners, ceased work on September 23, 1931, at noon, demanding an increase in wages from 30 cents per hour to 40 cents and an increase in hours from eight to ten per day, including the time required for going to and returning from work. It is reported that about 100 unemployed men picketed the highway to prevent any who wished to do so from working. The work was, therefore, closed down for the time being.

COOKS AND WAITERS, EDMONTON, ALTA.—Employees in one restaurant ceased work on September 29, 1931, on the refusal of the employer to sign an agreement with the union which had been accepted by other establishments. The agreement in question had provided for a decrease in rates of ten per cent. At the end of the month no termination had been reported.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue for February, 1931, in the review of Strikes and Lockouts in Canada and other countries, 1930. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates.

Great Britain

During August, the number of disputes which began was 36 and 14 were still in progress from the previous month, making a total of 50 disputes in progress during the month involving 63,900 workpeople with a time loss of 349,000 working days for the month. Of the 36 disputes beginning in August, 13 were over proposed reductions in wages, 14 on other wage questions, 2 on questions as to working hours, 4 on questions respecting the employ-

ment of particular classes or persons and 3 on other questions of working arrangements. Settlements were reached in 34 disputes of which 4 were in favour of workpeople, 15 in favour of employers and 15 ended in compromises; in two other disputes work was resumed pending negotiations.

The dispute involving 9,300 colliery workpeople in Cumberland which began June 24 against the reduction in wages recommended by the Coal Mines National Industrial Board and was noted in the *LABOUR GAZETTE*, August, was terminated by August 22 and the reduction in wages accepted, although certain concessions were granted by the employers.

Disputes occurred in various collieries in Scotland between August 7 and August 27, involving in all about 30,000 workers for an average of three days. Surface and certain other workers were dissatisfied with the wages paid for the 7½ hour day under the general agreement, but work was resumed under the terms of this agreement.

A dispute involving 2,200 lace curtain workers in Ayrshire, Glasgow and Nottinghamshire began June 15 against reductions in wages and was still in progress during Sep-

tember except that a settlement was reached in Nottinghamshire on September 14.

A dispute involving 3,000 furniture workers in London began August 14 against proposed reductions in wages and no report of any settlement has been noted.

A dispute involving 3,300 bolt and nut makers at Darlaston began August 19 against proposed reductions in wages and terminated August 22 when the reduction was accepted.

France

Revised figures for the years 1927 and 1928 give the number of strikes in the year 1927 as 396, involving 110,458 workers with a time loss of 1,046,019 working days; in 1928, 816 strikes involving 204,116 workers with a time loss of 6,376,675 working days.

Figures for the first quarter of 1931 are as follows: in January, 14 strikes with 866 workers involved; in February, 23 strikes involving 4,262 workers, in March, 25 strikes involving 2,079 workers.

Poland

The number of disputes beginning in the year 1930 was 319. The number of workers involved in all disputes in progress during the year was 53,126 and the total time loss 427,127 working days for the year.

British India

During the first quarter of 1931, 52 disputes were in progress involving 103,507 workpeople

with a time loss of 731,223 working days for the quarter.

Australia

The number of disputes in existence in the year 1930 was 183 involving 695 establishments and directly involving 51,972 workers. The time loss for the year was 1,511,241 working days and the estimated loss in wages £1,592,342.

During the first quarter of 1931, 32 disputes were in progress involving 77 establishments and directly involving 6,664 workers with a time loss of 67,494 working days. The estimated loss in wages was £68,633.

United States

The number of disputes beginning in July was 61 and 113 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 68,282 and the time loss 877,789 working days for the month.

The disputes in the coal mining industry in West Virginia, Pennsylvania and Ohio which were mentioned in the LABOUR GAZETTE, August and September have subsided. Coal production in northern West Virginia and the Pittsburgh district is reported to be the same or higher than before the strikes, while in Ohio, work was resumed during July and August.

Unemployment in France

The *Economist* (London), in a recent issue estimated the number of unemployed persons, on a basis that would render this number comparable with the British unemployment figures, to be as follows:—

Totally unemployed as a result of the depression..	630,000
Short-timers unemployed for more than two days..	34,000
Labour reserve..	250,000
Total..	914,000

"This total," it is stated, "is perhaps the most comparable with the official figures for Great Britain. Ignoring, however, the requirements of comparison, and substituting for the figure of short-timers given above the total calculated equivalent of those unemployed under that heading (450,000) we obtain a gross total of 1,330,000. In round figures, and bearing in mind the limitations of the available statistics, which probably result in the above estimates being minimum figures, it may be said that there are between one mil-

lion and 1½ million unemployed in France at the present time."

It is pointed out that, unlike Great Britain and Germany, France has no compulsory State insurance against unemployment; consequently there do not exist the same means of counting the numbers out of work.

The Industrial Relations Section of the Department of Economics and Social Institutions of Princeton University has just published a Selected Bibliography on Unemployment Prevention, Compensation and Relief, including the title of works describing company, trade union and public programs. The items in the bibliography have been selected from the mass of material on this subject that has grown rapidly since 1921, and especially since 1929, and contains not only the titles of books and magazine articles, but those of mimeographed reports and small pamphlets. The list has been prepared specially for use in the fall and winter of 1931-32.

COMBINES INVESTIGATION ACT

Members of Electrical Estimators' Association Committed for Trial— Prosecutions in Motion Picture Case.

TWENTY-THREE firms and individuals associated with the Electrical Estimators' Association, an alleged combine of Toronto electrical contractors, were committed for trial after a preliminary hearing by Magistrate Jones in Toronto Police Court on September 17, on charges laid under the Combines Investigation Act and under section 498 of the Criminal Code. The prosecutions were conducted for the Crown by T. Herbert Lennox, K.C. G. R. Geary, K.C., acted as counsel for the secretary and a number of the members of the Electrical Estimators' Association. The accused were to be tried at the Criminal Assizes of the Supreme Court of Ontario in Toronto early in October.

Hon. W. H. Price, K.C., Attorney General for Ontario, announced on September 22 that

the Provincial Government would shortly commence prosecutions against members of a combine in the motion picture industry, named in the report of Peter White, K.C., following his investigation under the Combines Investigation Act. On the following day seizures were made of correspondence and other documents in the offices of several of the motion picture companies in Toronto. Proceedings are being instituted by way of indictments to be preferred before the Grand Jury of the Criminal Assizes which opened in Toronto on October 5. The prosecutions are being conducted by R. H. Greer, K.C., assisted by I. A. Humphries, K.C., of the Department of the Attorney General.

VOCATIONAL EDUCATION ACT

Department of Labour Announces Postponement of Its Operation

THE Department of Labour, in a recent communication to the Governments of the various Provinces, intimated that the Dominion Government had decided, after careful consideration, to postpone the operation of the Vocational Education Act (Statutes of Canada, 1931, chapter 59) until such time as the economic conditions of the country should warrant expenditures being made in connection with the work to be promoted under the terms of the Act.

The text of the Act was given in the *LABOUR GAZETTE*, June, 1931, page 643. It provides for the promotion of vocational education in Canada, and for the appropriation by the Dominion of the sum of \$750,000 per annum for fifteen years for this purpose, payments to be made conditional upon the conclusion of agreements with the several provincial governments. The Department pointed out that section 5 of the Act empowers the Governor-in-Council to make regulations for the administration of the Act, and that it would be necessary that these regulations be promulgated before any such agreements could be entered into between the Dominion and the several Provinces. No grants under the provisions of the Act could therefore be made to any Province by the Dominion before the regulations had been promulgated and agreements with the various provinces completed.

The communication further intimated, in response to inquiries from certain of the Pro-

vincial Governments, that it was not intended by the Dominion Government that the grants to be made under the provisions of the Act should be retroactive to April 1, 1931, the date of the commencement of the current fiscal year.

In conclusion, the communication emphasized the intense interest of the Dominion Government in the development of vocational education and expressed deep regret that the present unemployment situation should have rendered it necessary to postpone the operation of the Act. It was felt, however, that the Provincial Governments would appreciate the difficulties with which the Federal Government was faced, and that they would realize the necessity for postponing the operation of the Vocational Education Act until the industrial situation improved.

In so far as the provinces of Manitoba, Saskatchewan, Nova Scotia and Prince Edward Island are concerned, there is still to their credit, under the provisions of the Technical Education Act of 1919, and amendments thereto, the sums mentioned hereunder, from which payments will continue to be made on approved vocational education work.

Saskatchewan..	\$361,955 54
Manitoba..	445,858 70
Nova Scotia..	242,692 08
Prince Edward Island.. . . .	66,254 16

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

Registration at Vocational School, St. Thomas, Ont.

The inability of graduates in the commercial departments to find positions because of the business and industrial depression is believed to be the cause of the reduction in attendance of new students at the Vocational School in St. Thomas, Ontario, and also the reason for 16 senior students returning to the school. The principal of the school drew attention to these conditions when recently presenting his report to the members of the Vocational-Advisory Committee of the Board of Education. Registration in No. 1 A of the Commercial Department was 45 as compared with 68 last year. Only five boys registered as compared with 40 girls. The 16 senior students who returned to school—five boys and eleven girls—did so in order to keep up with their work.

The total registration at the school is 487 students, 268 boys and 219 girls.

Evening Vocational Classes in Calgary

A decided movement in favour of evening studies was indicated by registrations on the opening night of evening classes conducted by the Calgary School Board. While enrolments on the first night did not indicate what the final registration would be, comparisons with previous openings showed that increases might be expected this term.

Increased Attendance at Ottawa Technical School and High School of Commerce

With ninety more students registered at the Technical School and 185 more at the High

School of Commerce, Ottawa, than a year ago, the Advisory Vocational Committee of the Collegiate Board is faced with many problems in providing accommodation and securing the additional teachers required to handle the situation. Principal Nichol reports 118 girls and 442 boys or a total of 560 students at the Technical School, while Principal Simpson reports 819 girls and 356 boys or a total of 1,175 students at the School of Commerce.

New Courses of Study at Provincial Institute of Technology and Art, Calgary, Alta.

Officials of the Provincial Institute of Technology and Art, Calgary, report that during the coming term two new courses will be offered, which will be of special interest to advanced students. They are a two-year course in aeronautics, and a course for teachers, preparatory for instructing public school manual arts classes.

The aeronautics course will include a knowledge of, and experience with, gas engines, airplane construction and theory of flight. It is anticipated that the theoretical requirements for a commercial pilot's licence will be met, though actual flight will not be included in the study.

The manual arts instructors' course will consist of shop-work in wood, metal, concrete, elementary electricity and home mechanics. Shop talks and methods of teaching will be included. The course, requiring 900 hours to complete, will close on May 20, 1932.

Applications for enrolment have been numerous to date, and the officials expect a busy year.

Workmen's Compensation in Saskatchewan

Regulation 46 under the Workmen's Compensation (Accident Fund) Act of Saskatchewan was recently approved by the Provincial Government and will become effective on November 1, 1931. Regulation 45 relates to the industries covered by the provisions of the Act. (Earlier Regulations under the Act were given in the *LABOUR GAZETTE*, January, 1931, page 35, and in previous issues). The new Regulations are as follows:—

Regulation 45

Regulation 32 of the Workmen's Compensation Board as adopted by the Board on the 20th day of March, 1930, and approved by the Lieutenant Governor in Council on the 21st day of March, 1930, and published in *The Saskatchewan Gazette* on the 29th day of

March, 1930, is amended in the following particulars:

Group 6 of Class 19 is amended to read as follows:

General construction of grain elevators and of all buildings over three storeys and basement not herein otherwise specified and classified.

Group 4 is added to class 20 as follows:

Class 20, group 4—Construction of grain elevators or other buildings, erections or structures not otherwise specified and classified where the construction is in the main of concrete.

All necessary changes in classification of industries rates of assessment and adjustment of class funds for the year 1931 shall be made and done in accordance with this Regulation.

Regulation 46

When less than six workmen are usually employed therein each of the following industries, namely, lumbering, logging, river driving, rafting, booming, the operation of sawmills, shingle mills and lath mills, the cutting and hewing or manufacture otherwise of wooden railway ties, and the carrying on of all forest operations similar to or incidental to the industries herein

before enumerated, and the drilling of wells for water is excluded wholly from the class in schedule 1 in which it would otherwise be included. Provided, however, that if such industries are carried on by the same employer as part of or incidental to another main industry which is included in schedule 1, that this exclusion shall not operate to exclude such industries from the main industry.

CIVIL SERVICE SUPERANNUATION IN NEW BRUNSWICK

DURING the session of 1931, the Legislature of New Brunswick enacted The Public Service Superannuation Act to provide retiring allowances for employees in the public service of the province. It provides for the payment of allowances to every employee who has served at least 10 years in the public service, and who having attained the age of 70 years, is retired, or who has become incapable of discharging his or her duties by reason of ill-health or physical incapacity. Upon the death of an employee with 10 years service, one-half of the superannuation allowance is payable to his widow, or to those of his children who are under 18 years of age, or to other dependants.

Where an employee dies before serving 10 years, or is compelled to retire by reason of ill-health, or physical disability; or if he is dismissed or resigns before the service period of 10 years, the sums which have been deducted from his salary with interest at 3 per cent shall in case of his death be paid to his personal representatives, or in case of retirement, dismissal, or resignation, to such employee.

An employee's contribution to the fund is 5 per cent of his or her salary, deducted monthly, and such salary deductions cease when any employee has paid in contributions for a period of thirty years. If at any time the superannuation fund is insufficient to make all payments required by the Act, it is provided, that the Provincial Secretary-Treasurer shall pay into the fund an amount out of consolidated revenue sufficient to enable such payments to be made. The amount of the superannuation is provided for as follows:

"The superannuation allowance payable to any employee shall be calculated upon the average yearly salary of such employee during

the last three years of service of such employee and shall not exceed, if such employee has served ten years but less than eleven years an annual allowance of ten-fiftieths of such average salary, and if he has served for eleven years, but less than twelve years, an annual allowance of eleven-fiftieths thereof, and in like manner a further addition of one-fiftieth of such average salary for each additional year of service up to thirty years when an annual allowance of thirty-fiftieths may be granted, but no addition shall be made for any service beyond thirty years; provided that in no case shall such annual allowance exceed two thousand dollars.

"Any employee who is in the public service at the coming into force of this Act, and who at the age of seventy or over has served ten years in the public service but less than twenty-five years, may be retired from the service with an annual superannuation allowance of twenty-five-fiftieths of his average yearly salary during his last three years of service, which allowance may be increased by order of the Lieutenant-Governor in Council to thirty-fiftieths of such annual salary; provided that in no case shall the annual allowance under this section exceed two thousand dollars."

It is provided that an employee with 30 or more years of service and who has attained the age of 65 years if a male, or 55 years if a female, may be retired on superannuation. While retirement is compulsory at 70 years, the services of any employee may be retained, if deemed in the public interest, for a further period "upon such terms as to remuneration and as to superannuation allowance or retirement as the Lieutenant-Governor in Council may deem expedient."

The Act comes into force upon proclamation.

SUPERANNUATION FUNDS FOR CIVIC EMPLOYEES IN VARIOUS CITIES IN CANADA

THE payment of superannuation allowances to public employees has become increasingly general throughout Canada in recent years. Pension schemes are in effect for Dominion Civil Servants and for civil servants employed in most of the provincial governments. In several provinces, pensions for school teachers have also been established. Municipal pension schemes have been adopted in several of the larger cities, while others are contemplating such action. In some cities, a superannuation allowance for the employees of police and fire departments has been the first step in the direction of a general scheme covering all civic employees.

The subject of public employees' pensions has been reviewed in previous issues of the *LABOUR GAZETTE*. Existing schemes for the pensioning of provincial civil servants were outlined in the *LABOUR GAZETTE* for February, 1924, page 127 and February, 1928, page 128. Superannuation plans for municipal employees were dealt with in the issues for May, 1924, page 390, and November, 1927, page 1175. Supplementing these reviews the present article summarizes municipal plans that have been subsequently adopted in various Canadian centres.

Montreal

A bylaw providing for the superannuation of all permanent civic employees was adopted recently by the Montreal City Council. Plans had been in course of preparation for a number of years and were amended under successive administrations. Finally the best features of the various plans were drafted into a new bylaw. This bylaw was given its first and second readings during July, and the third and final reading, marking the formal establishment of the scheme, was deferred until the employees were given an opportunity to ballot on the project. Voting took place in the last week of September, the result being that the plan was adopted by a large majority.

All permanent civic employees, exclusive of policemen and firemen, who have their own fund, are now entitled to pension on retirement through accident, illness or superannuation after January 1, 1932. The pension fund bylaw provides that civic employees shall contribute 2 per cent of their salaries or wages to the fund, any portion of any salary above \$4,000 per annum being exempt from such contribution. No pension shall be less than \$600 or more than \$3,200 per year.

An employee having 10 or more years' service may claim his superannuation if physically unfit to continue work, and his pension will be one-fiftieth of his average salary received during the last five years, multiplied by the number of his total years of service. Any male employee 65 years, or female 60 years of age, having at least 20 years' service on or after January 1, 1932, may claim superannuation with a pension of one-half the average salary of the last five years.

After thirty-five years service, if superannuation age is reached, the pension will be one-fiftieth of the average salary of the last five years multiplied by the number of years' service.

The city will pay in twice as much as the total annual contribution of the employees and if the total thus contributed is not sufficient to cover the pensions provided under the bylaw the city will provide from its annual estimates the amount necessary to cover the shortage. If there is more money in the fund than is required, this money will be used to create a reserve fund, up to \$100,000. After the reserve fund reaches that amount the city's contribution will be reduced as much as the fund permits.

The fund will be administered by a committee consisting of the chairman of the Executive Committee of the city council, the director of civic departments, the chief city attorney, the city treasurer and the director of the city health department. The cost of administration will be paid by the city. No pension will be granted under the bylaw without the approval of the Executive Committee on report from the Pension Fund Commission.

Any pensioner superannuated on grounds of disability, who is believed to have regained his or her health, may be required to undergo further medical examination and go back to work if fit to do so. Any employee who sues the city for damages forfeits his right to pension. Pension may be refused in case of sickness or accident caused by misconduct. After the coming into force of the system, any male over 40 or female over 35 entering the city service will not be entitled to benefit of the pension fund.

Any employee resigning or dismissed from the civic service loses his right under the pension fund. In the case of an employee dying in service, his heirs are entitled to his contributions, plus 4 per cent interest compounded annually. If a pensioner dies be-

fore he has drawn as much pension as he paid contributions his heirs will be entitled to draw the difference, without interest. Any one who forfeits the rights to his pension will be entitled to a refund of his contributions without interest.

Toronto

In Toronto a special pension fund committee has for several years been considering prospects for the establishment of a pension plan for civic employees. This year a report embodying such a plan was submitted to the board of control and city council, but has not yet been approved. It was reported that the board of control had decided that the present period of depression was not a good time to adopt the plan.

There has been in operation in Toronto a police benefit fund, the chief provisions of which were given in the *LABOUR GAZETTE*, May, 1924, page 393. According to the original provisions of the fund, the members of the police force contributed 7 per cent of their wages while the city contributed \$10,000 annually. However, for some years, the fund has been operating without sufficient reserve, the deficiency being estimated at approximately \$3,000,000. In order to put the fund on a sound actuarial basis to provide for all future claims, an amending bylaw was adopted to June 29. This bylaw provided for payment by the city of \$143,941 annually for a period of 40 years in addition to continuing the annual payments of \$10,000 which the city treasury was previously paying.

It was also provided that those who were members of the force prior to the passing of the amending blaw would continue to contribute 7 per cent of their wages, but new members will be required to contribute 9½ per cent of their pay.

The new by-law considerably reduced the pensions of the higher officers, although there were no reductions in the pensions of the lower ranks. The "full pension" allowance to members retiring from the force after 30 years service is now established on the following scale: chief constable, \$2,000; deputy chief constable, \$2,000; chief inspector, \$2,000; inspector, \$1,650; sergeant or detective sergeant, \$1,396.94; patrol sergeant, \$1,248.33; constable, \$1,159.16. In the case of patrol sergeants and constables the amount is increased by \$20 for each good conduct badge up to a total of five badges.

Provision is also made for retirements, either voluntary or upon disability, when the length of service is less than the "full pension" period

of 30 years. In such cases pensions are on a graded scale varying with length of service.

Where any member dies in the service from causes other than as a result of injuries sustained in discharge of his duties, the allowance (in the case of a deceased member with six or more years service) varies in accordance with rank on the following schedule, constables of all classes, \$1,600; patrol sergeants, \$1,700; sergeants and detectives, \$1,800; inspectors, \$1,900; staff-inspectors or orderly-room inspector, \$2,000; chief inspector or inspector of detectives, \$2,100; deputy chief constable, \$2,400; chief constable, \$3,000.

There is also a smaller allowance according to length of service in case of death under six years of service. However if a member is killed in discharge of his duties, or dies as a result of injuries sustained in service, the allowance is one and one-half times that provided in the foregoing schedule.

Saskatoon

The city council of Saskatoon recently adopted a civic superannuation scheme covering all departments not participating in existing benefits. At present, the police and fire departments have separate schemes in operation. Employees of the city hospital and library board are excluded from the new scheme, but may come under its operation upon application.

According to a summary of the scheme in press reports, the employees are prepared to take care of all costs during the present year, the city's contributions starting in 1932 on a graduated scale reaching a maximum of about five and a half per cent of the pay-roll of those affected in 1936. Automatic retirement at the age of 65 years, with pension payments ranging upward from 10 to 60 per cent of the average salary of the individual, are other features of the scheme.

The scheme was to become effective as from July 1, 1931; approximately 300 employees are affected.

According to a recent press report, action has been taken to have the by-law quashed on the grounds that its enactment was *ultra vires* of the city council.

Ottawa

The Ottawa city council on September 8 adopted a bylaw providing for the pensioning of civic employees. This superannuation scheme, which is now effective, covers all permanent employees of the city, exclusive of police and fire department employees, who are provided for under their own superannuation

fund. Employees have a period of six months in which to elect whether they will come under the bylaw. They will pay into the fund five per cent of their wages or salaries, payments to cease after 35 years of service, while the city will contribute an additional sum sufficient to maintain the fund on a sound basis.

Retirement for male employees is at 65 years of age and for females at 60 years, but it is provided that any present employee 35 years or older may continue for an additional five years beyond those limits subject to the annual approval of the Board of Control and Council. Any person entering the service of the city who has passed the age of 50 is ineligible for pension under the bylaw.

The amount of pension is set forth in the bylaw as follows:

1. The annual superannuation allowance of each employee shall be determined as follows, namely:

(a) In respect of service prior to the date this bylaw becomes effective, one per centum of the annual rate of salary of the employee as of said date multiplied by the number of years of permanent service prior to the said date taken to the nearest completed year and

(b) 2 per cent of the total average yearly salary payments made after the said date.

In no case, however, shall an employee be entitled to an amount greater than 70 per cent of salary payments during the periods covered in (a) and (b).

Disability superannuation is also to be paid to employes totally and permanently disabled while in the city's service. It is to be not less than \$10 a month and not more than \$40, depending on the extent of service and not to exceed what would be paid as superannuation to which the employe would be entitled at the time he was involuntarily retired. On the death of an employee, or a superannuated employee, it is provided that a widow shall receive not less than one-half of what her husband was entitled to or was receiving as superannuation, this payment to continue until the widow re-married. For each dependent child an allowance of 10 per cent of the superannuation is provided. There are retrictions in the case of employes marrying after the age of 60 years or dying within one year after marriage. In the case of an employee who is not survived by a widow or children, there is a clause which permits the making of a lump sum grant to other dependents.

The fund is to be administered by a board comprising the mayor, one controller, one alderman, one representative of the employees and the commissioner of finance.

Old Age Pensions Systems in Various Countries

The second monograph in a series dealing with the subject of social insurance in its various phases has been published by the Metropolitan Life Insurance Company. The first, which described existing systems of unemployment insurance, was the subject of a note in the LABOUR GAZETTE, June, 1931 page 646.

The present monograph summarizes some existing governmental plans for the relief or the prevention of "old age dependency," insurance and retirement funds, being excluded. It examines broadly the present status of legislation now in effect which has as its principal purpose old age provision for the general population, whether in the form of non-contributory poor relief, or of funds established on an insurance basis. The monograph states a number of questions which must be answered in framing both these forms of "old age dependency" laws, relief or insurance—age limits, coverage, amount of contributions, investment of funds etc. Prominence is given to the history of the compulsory old age system in Germany, from 1889 to 1931; to the British

Acts of 1908 and 1925 (the first being non-contributory for persons over 70 years of age, and the second providing for compulsory contributions towards pensions from the age of 65 years); and to old age assistance established in Canada, under the Old Age Pensions Act, 1927 (the monograph omits reference to the amendment made to the Act this year, increasing the amount of the Dominion contribution from one-half to three-fourths of the total amount expended in pensions).

The countries having non-contributory systems are enumerated as follows:—Australia, Canada, Denmark, Great Britain, Irish Free State, New Zealand, Russia and the Union of South Africa. All these systems except that in Russia place the entire expense of the insurance upon industry.

Contributory systems are in force in Bulgaria, Chile, Czechoslovakia, France, Germany, Great Britain, Greece, Hungary, Italy, Jugoslavia, Luxemburg, Portugal, Spain and Sweden. Great Britain is included in both lists on account of the two Acts mentioned above.

The provisions of all the Acts giving effect to these systems are shown in tabular form in the monograph.

United States

A separate section deals with Old Age Assistance in the United States. Federal Legislation has been proposed from time to time, but so far provision for old age dependency has been left to the individual States. In 1914 Arizona enacted the first Old Age Pension measure, but this was declared unconstitutional, and the first Act to become effective was that in Alaska in 1915; as amended later, this law provides cash assistance for men over 65 years of age, up to a maximum of \$25 a month, and for women over 60 years of age, up to a maximum of \$45 a month; the system being financed entirely by the Territory. In 1923 legislation of the relief type was enacted in Montana, Nevada and Pennsylvania, being based on a "standard bill" privately drafted the year before. (The Pennsylvania law was declared unconstitutional in 1924.) Similar laws were passed in Wisconsin in 1925, in Kentucky in 1926, in Colorado and Maryland in 1927, in California, Minnesota, Utah and Wyoming in 1929, and in Delaware, Idaho, and West Virginia in 1931. New Jersey also en-

acted this year a measure which will take effect in July, 1932, to provide relief up to \$1 a day for persons over 70 years of age, the State supplying 75 per cent of the funds and the counties 25 per cent. The monograph observes that while most of these laws are for "old age pensions" they are purely relief or assistance measures. The extent of the State's share varies from the entire cost, as in Delaware, to nothing, as in several States which authorize the counties to grant old age assistance. In other States the cost is shared with the counties or municipalities. The qualifying age is seventy in six States and 65 in eight. The amount of the pension is mostly such as will bring the recipients total income up to \$1 a day. The total old age assistance laws of Massachusetts and New York (both enacted in 1930) differ in principle from those of the other States. They are not separate pension laws, but are extensions of the welfare laws already in effect. Aid is given citizens aged 70 or over, but it is not restricted to money payments, nor is it limited in amount. The nature and amount of relief is determined entirely upon the merit and need of each individual case, after investigation by local public welfare authorities. The system is state-wide and the States pay a portion of the cost.

Labour Statistics of Principal Railways of United States, 1930

A bulletin on Statistics of Railways of Class 1, United States, published by the Bureau of Railway Economics (Washington, D.C.) shows that the number of employees on railway payrolls during the calendar year 1930 averaged 1,487,730 as compared with 1,660,850 in 1929. The compensation paid to these employees in 1930 aggregated \$2,550,553,940 as compared with \$2,896,566,351 in 1929. The average compensation per employee per hour (on a basis of eight hours per day) was \$0.678 as compared with \$0.666 in the previous year. The average compensation per employee per year was \$1,714.39 in 1930, while in 1929 it was \$1,744.03. During 1930, the total number of hours paid for (hourly and daily employees) amounted to 3,759,523,523, while the average number of hours per employee throughout the year was 2,527. For 1929 the corresponding figures were 4,346,821,546 and 2,617.2, respectively.

It is explained that these statistics cover the operations of Class 1 railways only, namely, carriers with annual operating revenues exceeding \$1,000,000. Class 1 railways operate approximately 92 per cent of the total railway

mileage of the United States, and earn about 97 per cent of the total revenue.

Upon the recommendation of the Minister of Public Works and Labour of Ontario, an order in council was recently issued containing additional regulations relating to the examination of candidates for stationary engineers' certificates and the granting of such certificates. The additional regulations provide that "a person desiring to operate a refrigerating plant and who is found sufficiently proficient in electric and refrigeration knowledge and operation, but has not had steam plant operating experience, may be granted, upon examination, a certificate allowing him to operate a refrigeration plant only, of a horse power denoted on the certificate." It is also stipulated that "a stationary compressor plant not used for refrigerating purposes and the motive power of which is other than steam and is more than 50 horse power, must be in charge of an engineer holding a certificate of not less than one grade lower than that required by the regulations for a stationary steam plant of the same horse power."

TRADES AND LABOUR CONGRESS OF CANADA

Synopsis of the Proceedings of the 47th Convention

FOR the third time in its history the Trades and Labour Congress of Canada met in the city of Vancouver, the first occasion being in the year 1915, the second in 1923 and the third in the present year, when on September 21 the 47th convention opened in the Hotel Vancouver. The opening proceedings were presided over by Mr. Colin McDonald, president of the Vancouver, New Westminster and District Trades and Labour Council, who welcomed the delegates on behalf of organized labour. Acting Mayor John Bennett, in the absence of Mayor Taylor, who was ill, tendered the civic welcome, the spokesmen for the Government of British Columbia being the Hon. R. L. Maitland, minister without portfolio, and the Hon. W. A. McKenzie, Minister of Labour. Mr. Angus McInnes, M.P. for Vancouver South, also addressed the delegates. On turning over the convention to President Tom Moore, Mr. McDonald presented him with a gavel made from the wood of a yew tree grown on a neighboring mountain. Mr. Moore, who replied to the addresses of welcome, thanked the local arrangements committee for the presentation. Seated on the platform, in addition to the speakers, were the five members of the Executive Council of the Congress, and Mr. A. B. Swales and Mr. Chas. Case, fraternal delegates, respectively from the British Trades Union Congress and the American Federation of Labour.

As is usual, the first order of business was the presentation of the report of the Credential Committee, which as finally adopted showed certificates received for 254 delegates, 43 of whom represented international organizations which have affiliated the whole of their Canadian membership, 1 represented a provincial federation of labour, 23 represented trades and labour councils, 185 represented branch unions, and the two fraternal delegates above mentioned.

Following the appointment of Ald. Rod Plant as associate secretary, Ed. Smith as sergeant-at-arms and W. Watt as messenger, the reports of the executive council, provincial executive committees, federations of labour and of the fraternal delegates to American Federation of Labour and the British Trades Union Congress, together with the report by the executive council on "Employment, Unemployment and Under-employment," were distributed to the delegates. At the suggestion of the executive council it was decided

to create another committee, viz., committee on legislative activities.

The various committees being named, the several reports were referred for consideration and report.

Report of the Executive Council

The Executive Council's report outlined their activities during the period since the last Convention, the opening passage referring to the many problems arising from the long continued state of unemployment, which had called for increased efforts on the part of the Council.

The first section of the report referred to the legislative program which had been presented to the Federal Government on January 21, 1931, which included: (1) Unemployment insurance; (2) British North America Act amendments; (3) Old Age Pensions; (4) Technical education; (5) Representation on Tariff Board; (6) Colonization and Immigration; (7) Health units; (8) Pensions for the blind; (9) Marine and shipping matters; (10) Criminal Code amendments; (11) International Labour Organization; (12) Fair wages; (13) Electoral reform; (14) Railway Act; (15) Calendar reform; (16) Tariff policies; (17) Enactment of legislation to encourage co-operative trading and to facilitate inter-provincial trading by co-operative societies; (18) That action be taken to give effect to the Aird report by the creation of a nationally owned and operated system of radio broadcasting; (19) That effect be given to the report of the Government Commission (1921) respecting prison reform; (20) Abolition of money grants for cadet training and other military training in schools and the substitution therefor of grants for non-military physical training; (21) Amendments to the Bankruptcy Act to give priority of wage claims over other creditors and that provisions of the Canada Marking Act be extended to cover the boot and shoe industry.

(The full text of the legislative demands was published in the LABOUR GAZETTE for February, 1921, pages 179-185.)

The second section of the report gave a review of the special and ordinary sessions of Parliament, mentioning such measures as: (1) Unemployment Relief Act; (2) Customs Act amendment; (3) Customs tariff amendments; as having been before the special session. In reporting on the ordinary session reference was

made to the following: (1) Vocational Education Act; (2) Old Age Pensions Act; (3) Government Annuities Act amendments; (4) Railway matters; (5) Loans to Harbour Commissions; (6) Beauharnois Power Project; (7) Government employees' compensation; (8) Naturalization and immigration; (9) Bank Act; (10) Taxation; (11) Health units; (12) State medicine; (13) Health insurance; (14) unemployment and unemployment insurance; (15) Economic Council; (16) Eight-hour day; (17) International Labour Organization conventions and recommendations; (18) Constitutional changes; (19) Shipping legislation; (20) International peace; (21) Cadet training; (22) Criminal Code amendments; (23) Re-election of Ministers of the Crown; (24) National coal policy; (25) Bankruptcy Act; (26) Tariff Board; (27) Copyright Act amendment.

The executive reported that to the executive committees and provincial federations of labour funds had been provided with which to carry on their legislative work. The executive also presented a summary of the legislative changes which had been made by the provincial legislatures, as well as of questions which had been raised, including: (1) Old age pensions; (2) Workmen's compensation; (3) Mothers' allowances; (4) Unemployment and unemployment insurance; (5) Social insurance; (6) Minimum wages; (7) Aid for the blind; (8) Ontario Apprenticeship Act; (9) Factory Acts; (10) Departments of Labour; (11) Education; (12) Mines Act; (13) Income Tax Act; (14) Highways Traffic Act; (15) Immigration; (16) Health insurance; (17) Public ownership; (18) Health and safety; (19) Other provincial enactments of interest to workers.

Besides these references, the Executive Council submitted the full texts of the reports of the provincial executive committees and federations of labour, which covered the provinces of Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia.

Under the heading of "Relations with National and International Bodies," the executive expressed appreciation to the officers of the American Federation of Labour and the international organizations for their friendly co-operation at all times on matters of common interest. Affiliation has been maintained with the International Federation of Trade Unions, it was reported, and Mr. P. M. Draper, secretary-treasurer of the Congress, had attended the fifteenth session of the International Labour Organization, having been appointed by the Dominion Government as the

workers' representative. The executive also submitted brief reports of the activities of the welfare associations with which the Congress is identified, including the Dominion Council of Health and Canadian Council on Child and Family Welfare. It was stated that in addition to representation on the bodies above referred to direct affiliation has been maintained with the Women's Trade Union League of America, the American Association for Labour Legislation, and the League of Nations Society in Canada, whilst representation has been continued to be accorded the Congress on the Employment Service Council of Canada, and the Executive Council of that body, the Canadian Council on Immigration of Women, the Canadian Engineering Standards Association, the Dominion Fire Prevention Association, the National Safety League, Frontier College, and the Canadian Social Hygiene Council.

Unemployment and Under Employment.—

Under this heading the executive stated that "whilst the willingness of workers to share whatever employment there may be is a well-recognized policy of the labour movement, yet when part time employment extends over lengthy periods or is carried to such an extent as to bring the total earnings of workers below subsistence level it becomes almost as great a menace as unemployment itself. Both phases of this important question have occupied the attention of your Executive throughout the entire year and every possible effort has been put forth to secure relief to the needy and destitute and the institution of a system of contributory unemployment insurance." Officers of the Congress, it was stated, have availed themselves of opportunities to address public bodies and service clubs and also have attended numerous conferences called by other bodies in order to make better known, and arouse public support for, labour's program to cope with the unemployment problems. Representations, it was also stated had been made on a number of occasions to the Government through the Minister of Labour, especially in respect to the conditions of employment which should obtain on relief works undertaken by the Federal Government or aided by federal funds, and a considerable measure of success was claimed in having many of these conditions made to harmonize with labour's policies. Because representations made to governments by some of the affiliated bodies respecting unemployment relief measures indicated that in many instances there is a lack of knowledge of the general policies of the Trades and Labour Congress of Canada in respect to unemployment and under-

employment and the reasons for the same based on many years of experience and study and also as a concise record of labour's policies on this matter, the executive council presented a special pamphlet which had been prepared for general distribution reviewing this question from the time of its introduction in the first resolution of the first convention of the Congress in 1883 up to the present.

This special report closed with the following summary of labour's program:—

Progressive reduction of hours through the securing in both public and private employment, of the shorter work day and five day week; the strict enforcement of one day's rest in seven; and the granting of holidays with pay to workers of all classes;

Resistance to wage reductions so as to prevent lessening of the purchasing power of the masses and conversely a gradual raising of real wages and earnings of all workers so as to increase purchasing power;

Participation by the workers through their trade unions in the management of industry, so as to assist in bringing about proper budgeting of work and stabilization of employment;

Public ownership and control of public utilities so as to prevent stock watering and other forms of over-capitalization or profiteering;

Abolition of fee charging employment offices and continued development of free employment bureaus as provided by the Employment Service Co-ordination Act, 1918, and through these offices assistance for transportation of workers to distant jobs and temporary employment;

Settlement of industrial workers on vacant lands;

Co-ordination of seasonal occupations;

Generous support of the National Research Council so as to encourage fullest development and use of our natural resources and use of Canadian materials whenever possible.

Control to be exercised over tariff protected industries so as to compel preference of employment for Canadian labour, observance of hours and rates of wages equal to those adopted by the federal government for government work, prevention of watering stock and charging of unreasonable prices to the consumer and the granting of a tariff high enough to allow of these measures being put into force and yet enable efficiently managed industries to successfully meet competition in the home market.

Ratification of the Conventions of the International Labour Organization (League of Nations) so as to encourage similar action in other countries where the scale of living is lower than these minimum world standards

and thus bring about an increase in consuming power throughout the world.

Publication of information gathered in the last census returns so as to make known the actual volume of unemployment existing and the establishment of machinery whereby similar information can be secured at more frequent intervals than the decennial census in order to provide authentic information as to the employment and unemployment situation at any time.

The establishment of an expert body in connection with the National Research Council devoted to the gathering of facts in respect to the economic changes taking place in industry and agriculture with an advisory committee attached thereto composed of representatives of national organizations, including the Trades and Labour Congress of Canada, who are in a position to give guidance as to the form its investigations should take from time to time.

During times of trade depression work to be provided by federal, provincial and municipal authorities wherever possible by undertaking the erection and repair of public buildings, construction of highways, reforestation, clearing of agricultural land, separation of grade railway crossings, cheap loans for the construction of workmen's homes, etc. On all such works a maximum work day of eight hours and the five day week to be observed along with the payment of fair and reasonable wages.

The establishment of a national system of unemployment insurance based on contributions from the State, employers and employed.

Pending this the joint participation of Federal, Provincial and Municipal authorities in payment of direct relief to needy and destitute unemployed and their families as was done in 1921 and again under the Federal Unemployment Relief Act 1930.

Contributory to all the above, other social measures which indirectly help to cope with the unemployment situation should be advanced as rapidly as possible. Amongst such are old age pensions, pensions for the blind, health and sickness insurance, apprenticeship act, technical education, raising of the school leaving age, minimum wage laws, measures for the protection of women and children, in fact practically all forms of social legislation which protect the health and safety of the worker or provide maintenance for those unable or incapable of earning their own living.

Holidays with Pay.—In reference to this subject the executive stated that it is becoming increasingly recognized in most countries that this question, both from its social aspect and as an effective means of combat-

ing unemployment caused through the increased productivity of machinery is of increasing importance, and therefore recommended that "holidays with pay" be added to the Platform of Principles of the Congress.

On the subject of "British North America Act Amendments" the executive stated:—"The Congress has made numerous representations to the Government during the past several years, urging amendments to the British North America Act which would foster 'national unity' by giving greater powers to the Federal Government to deal with social and labour legislation, and particularly that covered in the recommendations and conventions of the International Labour Conference (League of Nations); abolish appeals to the Privy Council and establish the Supreme Court of Canada as the highest court of appeal, and bring about such changes in the constitution of Parliament as may be necessary to make decisions of the elected representatives of the people paramount." The executive recommended that the representations of the Congress be reiterated and efforts continued to obtain action thereon.

Disarmament.—The executive stated that the International Federation of Trade Unions had issued a manifesto on this subject, the declarations in which were fully endorsed by them. Reference was made to the action of the executive in assisting in securing signatures to the petition of the League of Nations Society in Canada in favour of world disarmament.

Canadian Congress Journal.—Reference was made by the executive to the progress of the official publication and emphasized the necessity of all members becoming subscribers for the *Journal*.

The executive referred to the co-operation of the Congress with the Canadian Federation of the Blind in its efforts to secure pensions for the blind in other matters, and recommended that the officers of the Congress and affiliated bodies continue to render assistance to the Federation.

On the question of radio policy the executive recommended that as soon as a decision has been rendered by the Privy Council on the question of jurisdiction that efforts be renewed with the object of securing public control and operation of radio broadcasting in Canada.

Support had been given, the executive stated, to the Workers' Educational Association of Ontario, which body desires to still further extend its activities to other provinces.

Gratification was expressed with the adoption by the Federal Parliament of the Vocational Education Act, which will, it was as-

serted, assist the provinces in the development of technical education.

On the question of the magazine tax the executive stated that a complete list of journals published by the affiliated international organizations had been submitted to the Government, and under the law as finally adopted such labour journals were to be admitted to Canada free.

The executive closed their report to the convention with reports of the respective fraternal delegates from the Congress to the 1930 conventions of the British Trades Union Congress and the American Federation of Labor, both of whom gave a résumé of the business transacted by these bodies.

Report on Executive Council's Report

The committee on officers' reports made extended references to the various items in the report of the executive council, in which they expressed concurrence, and recommended that the Congress continue its affiliation with the International Federation of Trade Unions, Dominion Council of Health, Canadian Council on Child and Family Welfare, as well as with other bodies on which the Congress has had representation. The committee concurred with the recommendation that "holidays with pay" be added to the platform of principles, and expressed approval of the efforts of the executive regarding amendments to the British North America Act and recommended a continuance of effort in this direction. The committee endorsed the action of the executive on disarmament, and in regard to the *Congress Journal* urged increased support to the publication. The committee concurred in the radio policy of the executive and approved of public control and operation of radio broadcasting in Canada. The committee also endorsed the Workers' Educational Association of Ontario and expressed satisfaction with the action of the Federal Government in excluding labour journals from the new magazine tax. It was recommended that every assistance possible be rendered to the Canadian Federation of the Blind in securing adequate relief for blind persons.

Unemployment and Underemployment

The Committee on Officers' Reports commended the special report on "Employment, Unemployment and Underemployment" to the careful attention of the delegates. Twelve resolutions on the subject of unemployment were also referred to the committee and these were covered by the recommendations of the committee, which were as follows: (1) Concurrence in the statement in regard to reduction of hours and holidays with pay, (2) endorsement of the maintenance of wage

standards, (3) approval of the recommendation regarding participation by the workers through their trade unions in the management of industry; (4) reendorsement of the policy of public ownership and control of public utilities; (5) endorsement of free employment bureaus; (6) urging that Canadian industrial workers who desire to settle on vacant lands be given similar assistance as has in the past been given to immigrants; (7) advocating co-ordination of seasonal occupations with a view to providing steadiness of employment; (8) emphasizing the need for proper control of tariff protected industries to prevent unreasonable prices; (9) ratification of the conventions of the International Labour Organization; (10) favouring the publication of the information gathered in the last census re unemployment and also that similar information be procurable at more frequent intervals than the decennial census; (11) endorsing the establishment of an expert body in connection with the National Research Council and also that an advisory committee be attached to such body; (12) approval of carrying on public construction and repair work during times of depression at fair wages and a maximum eight-hour day and five-day week; (13) reendorsement of the policy of the congress regarding unemployment insurance; (14) supporting the statement of the executive council with respect to direct relief to the destitute unemployed.

The committee directed attention to the increasing number of industries which are placing their employees on short time and for prolonged periods, thus adding to the problem of under-employment, and opined that not only must assistance and relief work be granted to the unemployed, but any plan devised must apply equally to these not receiving a sufficiency for an adequate standard of living. The committee approved of the officers in availing themselves of the opportunities to address public bodies and service clubs in order that labour's viewpoint be made better known.

The recommendations of the committee were adopted.

Report of Committee on Legislative Activities

The Committee on Legislative Activities expressed approval of the manner in which the legislative program of the Congress had been presented to the Federal Government, and noted with satisfaction that in the unemployment relief measure adopted by Parliament at the special session, fair wages and the eight-hour day were made operative as far as the Government was concerned. The committee was gratified to note that in some instances where representations were made

by the executive measures protecting the interests of the workers had been put into effect. The committee urged persistent effort to secure favourable action on measures which have not yet been enacted. The committee expressed satisfaction with the progress being made in all the provinces in securing labour legislation, and urged that efforts be continued to secure uniformity in such laws. With the modern development in industry, the committee stated, there is a necessity for the vigorous application of labour laws already adopted by the various provinces, and they suggested that as the elimination of labour has a tendency to destroy the standard of living of the workers, more progressive provincial legislation was necessary to relieve unemployment and protect the health of the workers.

The report was unanimously adopted.

Report of Secretary-Treasurer

Mr. P. M. Draper, the secretary-treasurer, presented the financial statement for the fiscal year 1930-31, which, with the balance from the previous year, showed receipts of \$38,006.39, with expenses amounting to \$23,282.47, leaving a balance of \$14,723.29. Included in the above figures are the receipts and disbursements for the headquarters building in Ottawa, which had an income of \$1,615, while the outlay for equipment and maintenance amounted to \$1,650.17. The trustees of the Congress building, which comprise the executive officers of the Congress, asked for authority to make some needed improvements to the building, the expense to be paid out of the general funds of the Congress. The paid-up membership for the year was 191,137, an increase of 2,250. The American Federation of Musicians has affiliated its entire Canadian membership, while the Canadian branches of the International Union of Elevator Constructors now affiliate direct. There are now 63 international organizations which have affiliated the whole of their Canadian membership and pay *per capita* tax direct to the Congress.

The Audit Committee, to which the report was referred, reported as having found all accounts correct, and recommended in favour of the proposed alterations to the Congress offices. The report was adopted.

Subsequently the Ways and Means Committee recommended, and the recommendation was approved: (1) that the fraternal delegate to the forthcoming convention of the American Federation of Labour be granted \$200; (2) that the delegate to the British Trades Union Congress be allowed \$800; and (3) that the Executive Council be authorized to pay the incidental expenses of the convention.

Proposed Constitutional Changes Defeated

Seven resolutions were referred to the Committee on Constitution and Law. One of these sought to limit the term of office of the president to one year, and to prohibit him or the secretary-treasurer from accepting any other office of emolument of a public or private nature. Another resolution along the same lines was aimed at the secretary-treasurer. Both resolutions were defeated, as was also a request that the executive council consist of one representative from each province in addition to the president and secretary. A resolution which sought to increase the number of vice-presidents to five, each to represent an industrial group, was reported against by the committee. The report of the committee was defeated by 62 in favour to 67 against. A roll-call vote was demanded, the discussion, with the approval of the delegates being reopened. After a long debate the previous question was called, and the previous decision was reversed by a vote of 127 to 53, leaving the constitution unaltered.

On the resolution asking that all local unions affiliate with the nearest Trades and Labour Council affiliated with the Congress, it was reported that the matter was covered by the present constitution; non-concurrence was therefore recommended and adopted.

Non-concurrence was also taken on a resolution asking that the Winnipeg Trades and Labour Council be authorized to elect the provincial executive committee of the Congress.

On a request embodied in a resolution that the Congress delete from its Platform of Principles the demand for "exclusion of all Asiatics," the Convention approved of a substitute by the committee, reading as follows: "the exclusion of all races which cannot be properly assimilated in the national life of Canada."

Union Labels

The Committee on Union Labels, to which three resolutions were referred reported favourably on one declaring in favour of the aggressive policy of the American Federation of Labour in regard to union label products, and urged the trade unionists of Canada to actively support union label agitation. Favourable consideration was given to a resolution asking that all members of organized labour and friends and sympathizers be urgently requested to demand the union label on all purchases. The third resolution seeking to limit the advertising field of the *Congress Journal* was defeated.

The committee drew attention to a shingle mill in Vancouver producing a thoroughly

union product, and recommended that the delegates convey the information to their respective unions that shingles having the union stamp are now available.

The committee also recommended that the officers of the Congress refuse permission for distribution in Congress convention halls of all printed matter which does not bear the label of the allied printing trades.

Recommendation was made that an aggressive nation-wide campaign in favour of the manufacture and purchase of commodities bearing the union label be inaugurated, and in this connection the committee pointed out that the label signified fair conditions of employment.

The report of the committee was adopted.

Free Speech and Assembly

To the Committee on Resolutions was referred 109 resolutions, in some cases two or more covering the same subject. In such instances the committee selected the resolution which most clearly expressed the policy of the Congress or submitted a substitute. On the questions of picketing, and free speech and assembly three resolutions were presented. The first asked that the Criminal Code be so amended that the rights of cities, towns and provinces to pass by-laws which conflict with the provisions of the Criminal Code in regard to peaceful picketing be declared *ultra vires*, "without the necessity of the responsibility of proving same being placed on the complainant." This was referred to the executive council with instructions to endeavour to have the cause of complaint removed. For the two other resolutions under this heading the following substitute was presented by the committee and adopted:—

"That Congress record its emphatic opinion that free speech, free assembly and free press are absolutely necessary in Canada in the best interests of the workers, and instructs the executive council to use every effort to preserve these and to eliminate all obstacles to this freedom."

It was also resolved that the executive council press for the repeal of section 98 of the Criminal Code.

Employment of Wives of Government Employees

The following resolution in opposition to wives of Government employees holding positions was adopted:—

Whereas, due to world-wide economic conditions, men are being driven out of employment with very little opportunity of securing work; and whereas, there are numerous married women whose husbands are holding steady Do-

minion and Provincial Government positions which pay a fair wage; and whereas, these women are in the main actuated by greed, and because of that fact they are now holding positions to the detriment generally of the unemployed. Therefore, be it resolved, that this Congress goes on record as instructing the incoming executive officers to at once take up the matter with the various Governments affected and urge them to issue forthwith instructions that no married woman whose husband is employed by the Government at a fair wage may continue to be employed, otherwise such a condition should automatically render the said government employee liable to instant dismissal.

Protection of Workers' Homes

Six resolutions were presented asking for legislation to prevent foreclosure of mortgages on unemployed workingmen's homes. One of the two on this subject which were adopted as covering the other four read as follows:—

Whereas, a number of workers are losing their homes through inability to make payments regularly in accordance with the terms of the agreement to purchase; and whereas, this condition arises through no fault of their own, but is caused by not being able to secure employment, and after much privation and hardship, it will mean their losing the equity they have established in such residences; Therefore, be it resolved, that the officers in each province be urged to immediately take this matter up with their respective provincial governments to the end that adequate protection be given to prevent further losses by workers of their homes.

The other resolution, which was also approved, was in favour of a moratorium to apply on all unemployed workers' obligations, including payments on mortgages, goods and chattels on time payments, insurance premiums, taxes, etc., representations on the matter to be made to the federal and provincial governments.

Five-Day Week

Ten resolutions on the hours of labour were referred to the Committee on Resolutions. On the first resolution on this subject the convention approved of the recommendation of the committee that the Congress reiterate its policy of shorter working hours and increased wages, with a view to providing work for greater numbers and increasing their purchasing power.

The convention also approved of a resolution in favour of the five-day week and six-hour day as a partial solution of the present economic depression, and followed this up with a resolution asking that the Dominion Government enact legislation to apply to all employees coming under their jurisdiction and that the provincial governments pass a five-day week law applicable to all.

The convention approved of a resolution in favour of asking for amendment to the Ontario law governing hours of labour in industry,

providing that an eight-hour day and five-day week be the maximum hours of labour in the province.

Other resolutions adopted in this group protested against workers in certain establishments being forced to labour seven days a week and also called for the eight-hour day for employees in the penitentiaries.

Holidays with Pay

In addition to the declaration as to "holidays with pay," being added to the platform of principles of the Congress, as above mentioned, the convention adopted a resolution asking the various governments to enact legislation to compel all employers of labour employing more than twelve employees permanently to give all such employees who have been employed for twelve months or over at least one week's holiday with full pay each year.

Old Age Pensions

The first resolution under this heading, which was adopted, called on the Dominion Government to adopt old age pensions as a Federal measure covering all provinces of the Dominion. The second called on the Government of the province of Quebec to pass enabling legislation so as to have old age pensions made applicable to that province.

Another resolution which was approved was in favour of the lowering of the pensionable age to 65 years and that 15 years' residence be sufficient qualification for pension. A resolution protesting against contributory old age pensions was also adopted. Two other resolutions on the same subject were not considered, their subject matter being covered by those adopted.

Trade with Russia

Three resolutions on the question of trade with Russia were referred to the Committee on Resolutions, one of which demanded the repeal of the Order in Council debarring Russian goods, and another condemned the action of the Dominion Government in imposing the embargo against Russian commodities. The committee recommended non-concurrence in the three resolutions. A debate ensued, in which several speakers participated, and which was brought to a close by the previous question being called. The recommendation of the committee was adopted.

Political Action

Three resolutions were introduced under this heading, the first asking the Congress to go on record as favouring the formation of a national

labour party, such party to be maintained by a voluntary contribution system on the part of organized labour. The other two requested: (1) that the executive prevail upon the trade unions to affiliate with the provincial and municipal branches of the Labour Party, (2) that affiliated bodies be discouraged from supporting candidates of the two leading political parties, (3) that the Congress instruct its executive council to take immediate steps to engage in political action.

The Committee on Resolutions reported that as the Congress had previously dealt with the subject of these resolutions, and had adopted a policy, they recommended re-affirmation of said policy and non-concurrence in the resolutions. Their recommendation after some discussion was adopted.

The policy of the Congress on labour political action is contained in the following resolution adopted at an earlier convention:—

Whereas, at the Victoria Convention in 1906, a definite policy was laid down committing the Congress to a recognition of the necessity for labour political organizations as a means of securing the amelioration of industrial conditions and to promote the passage of laws concerning the welfare of workers in the mines, the factories, the forests, in fact in all walks of life; and, whereas, it has been made manifestly plain that effective legislation in this regard and energetic enforcement of such laws can best be obtained by the presence in Parliament, in the Provincial Legislatures, and in other elective bodies of representatives elected from the ranks of labour for the direct interest of labour; and, whereas, following the decision of the Ottawa Convention in 1917, the Congress took steps to co-ordinate the different working-class political bodies in the various provinces, which action has later resulted in the creation of a Dominion-wide Labour Political Organization; therefore, be it resolved, that Labour political autonomy be left in the hands of this established labour political party, and the congress again urge all labour organizations to affiliate, and inasmuch as the Platform of Principles of this Congress contains the epitome of the best thought of Organized Labour during the whole period of its existence and struggles, that this Congress continue to act as the legislative mouthpiece for organized labour in Canada independent of any political organization engaged in the effort to send representatives of the people to Parliament, the provincial legislatures or other elective bodies of this country.

Industrial Disputes Investigation Act

Two resolutions asked that the provinces of Quebec and Ontario be urged to adopt enabling legislation to permit the operation of the Industrial Disputes Investigation Act in those provinces. The one adopted read as follows:—

Whereas, by decision of the Privy Council, the Industrial Disputes Investigation Act, 1907, has been declared *ultra vires* when applied to public utilities and corporations holding incorporation and operating within provincial bound-

aries; and whereas, in the interests of industrial harmony it is desirable that the said legislation should be permitted to function universally throughout the Dominion without hindrance; and whereas, pending suggested amendment to the British North America Act that would permit of such a course, enabling legislation is being sought from the provincial government that will allow of such action; and whereas, up to date, all provinces, with the exception of Ontario and Quebec, have agreed and enacted such enabling legislation; Therefore, be it resolved, that the incoming executive committee of both these provinces be instructed to press upon their legislators for the enactment of the necessary legislation.

The convention also adopted a resolution asking that the British Columbia Industrial Disputes Act be amended to include all employees now outside the scope of the Federal Industrial Disputes Act.

Motor Transport Regulation

Three resolutions, having for their object the control of motor transport, were submitted. One which was adopted urged the executive council to,—

“do all in its power to bring pressure to bear on the Federal Government urging that all motor vehicles plying for trade, either as individual units or as motor transportation companies who carry on business as public carriers, be licensed under the control of the Railway Board of Canada, or a new authority set up for that purpose, with the view of standardizing all rates on a fair and equitable basis, and strictly observing the eight hour day.”

Canadian National Railways

The following resolution was unanimously adopted:—

Whereas, during the last session of the Dominion Parliament the Canadian National Railways was subject to many unwarranted attacks by members of the present Parliament, and believing that many of the attacks had for their purpose the undermining of public opinion to become opposed to national ownership, and creating many difficulties for the management of the road; Therefore, be it resolved, that this congress, as the mouthpiece of organized labour, state our resentment at such political interference.

Fair Wage Regulations

Nine resolutions having to do with fair wage regulations were introduced. The first requested that a penalty clause be inserted in all government contracts that will render all parties violating such contracts liable to prosecution under the Criminal Code and also that such parties be permanently barred from working or tendering on any future government contracts. This was adopted, as was also a resolution asking the Federal Government to have inspectors on all government undertakings report violations of the fair wage rates and labour conditions as contained in the specifications of the various contracts.

Favourable action was taken on a resolution asking that the Federal Government be asked to compel the Harbour Commission of Montreal to pay the same rates of wages as are paid by the government for similar work.

Other resolutions adopted under this heading were: (1) Urging the Government of Ontario to provide that where the government gives financial aid to any corporation, or guarantees bonds, a fair wage policy shall be observed on all undertakings so assisted; (2) that where subsidies are voted by the Quebec Government or municipalities to hospitals, churches, asylums, universities, etc., a fair wage clause and limitation of hours be inserted in contracts for such buildings; (3) that all provincial governments be requested to adopt a fair wage policy similar to that of the Federal Government; (4) opposition to the sub-letting of contracts by the Canadian National Railways on the Northern Alberta Railway extension.

Minimum Wage Legislation

Of four resolutions under this heading two were adopted, as follows: (1) asking for amendments to the minimum wage law of Quebec so as to insure adequate protection to all female workers in both industry and commerce; (2) urging that amendments be asked to minimum wage laws similar to those secured in Manitoba* insofar as employment of male labour displacing female labour coming within the scope of the several acts is concerned.

Mothers' Allowances

Two resolutions concerning mothers' allowances were adopted, the first requesting that the Quebec Government be asked to pass legislation providing for mothers' allowances and maternity benefits. The second resolution asked that the Ontario Government be asked to amend the Ontario Mothers' Allowances Act so as to make the law applicable to a mother with one child.

Health and Safety

Under this heading the convention approved of a resolution in favour of urban residents being given the right to vote on a system of municipal doctors and nurses.

The convention went on record as being in favour of national health insurance, and decided to ask the various governments to take immediate steps to adopt such legislation, and also approved of a request for health and invalidity insurance. Other resolutions approved under this heading were: (1) In

favour of barbers' licence bill in Ontario; (2) in favour of safety doors for all passenger elevators and interlocks at freight elevator landings; (3) in favour of legislation regulating the use of paint-spraying machines; (4) in favour of the rigid enforcement of the blower laws of Ontario with a view to protecting metal polishers and buffers; (5) in favour of two projectionists instead of one being employed in all Canadian moving picture theatres; (6) in favour of legislation to govern the erection, operation and supervision of mechanically operated hoisting appliances.

Law-off of C.P.R. Employees

A special resolution accepted by the convention read as follows:—

Whereas, thousands of railroad employees affiliated with this congress, and with many years of experience in the industry, have been removed from their means of subsistence by the management of the Canadian Pacific Railway in a recent order closing the company's shops at all main terminal points on the system; and whereas, this corporation is the largest of Canadian privately controlled industries, and therefore most involved in the continued prosperity of Canada; and whereas, a vast amount of Canada's natural wealth was turned over to the said company for the purpose of promoting construction; and whereas, many thousands of Canadian ratepayers and small municipalities are dependent upon continued employment by the C. P. R.; and whereas, there is a moral obligation upon companies which became tremendously wealthy in times of prosperity to refund some of their surplus in times of depression, Therefore, be it resolved, that we draw the attention of the government, both federal and provincial, to this national calamity, with the request that they do all in their power to induce the company to restore their employees to the service.

Curtailement of Railway Service

Another special resolution which was accepted and adopted by the convention was as follows:—

Whereas, press despatches and editorial comment have just recently appeared in a section of the Canadian newspapers from one end of the country to the other, and which has apparently been inspired from Ottawa, and which has for its purpose the moulding of public opinion favourable to amalgamation of Canadian railroads; and whereas, there has been no suggestion from this source that the roads be amalgamated under public ownership; and whereas, amalgamation is suggested for the sole purpose of reducing expenses by eliminating terminals and curtailing service; and whereas, each curtailement in service only lends encouragement to public highway competitive transportation companies; and whereas, there has been some four billion dollars invested in the railroads of Canada and approximately 100,000 Canadians are dependent on this industry for their maintenance; Therefore, be it resolved,

*The Manitoba Act was amended this year to include boys under 18 years of age within its provisions (LABOUR GAZETTE, May, 1931, page 503.)

that this convention re-affirm its policy of government ownership of public utilities, and that we firmly believe that the best interests of Canadian citizens in general would be best served by legislation protecting the railway transportation companies against unfair competition over highways rather than by curtailment of the service.

Other Resolutions Adopted

On recommendation of the Committee on Resolutions the convention approved of other resolutions as follows:—

Urging the Federal Government to give favourable consideration to certain demands of the National Association of Marine Engineers when the Canada Shipping Act is under revision;

In favour of railway employees being represented on the proposed commission to study transportation problem of Canada;

Asking the Dominion Government to take the initiative with a view to the cancellation of war debts, failing in which that a reduction in interest on war debt be recommended;

Opposition to men employed on public relief work being paid in other than money, and the prevailing fair wage to be the basis of payment on all such work;

Asking for the complete abolition of fee-charging private employment bureaus;

Asking that the congress press for public ownership and democratic management of all public utilities;

In support of the principle of national control of the banking system;

In support of a royal commission to investigate the Beauharnois Power Company, and expressing the opinion that the project should be developed as a public ownership undertaking;

In favour of legislation being sought that will only allow dividends being paid on active capital invested in industrial, commercial and public utility corporations, and also that legislation be sought to prevent the practice of watering of stock;

In favour of repeal of section of Ontario Elections Act requiring deposit by candidates of \$200, and also asking for the abolition of election deposits in parliamentary elections;

To request the Government of British Columbia to amend the Elections Act so as to insure equal rights for Canadian citizens;

In favour of a corrective duty and true valuation being placed on moulders' patterns and core boxes entering Canada;

Urging every possible moral assistance to the organized musicians in their efforts to secure the substitution of performance by their members in theatres, instead of present mechanical means;

Expressing opposition to the present system of penal reform which exacts labour from inmates of penal institutions on constructional work;

Reaffirming the demand of the congress for amendment to the Ontario Liquor Control Act to permit the sale of beer and wine in licensed places;

In favour of applications for naturalization by Japanese being considered and treated on an equal basis with the applications of other aliens;

In favour of amending the Insolvency Act so that workers' claims take precedence over other claims;

In favour of the Ontario Government securing equalization of the income tax levied by municipalities in the province and that such tax be made compulsory in all Ontario municipalities;

In favour of fees of witnesses being equal to the rates of pay of the witnesses' various occupations;

In favour of more English being taught in the rural schools of the province of Quebec.

Referred to Executive Council

The following resolutions were referred to the executive council without any decision being recorded:—

Protesting against alleged violations of the coastal shipping laws;

Asking that no foreign ship be licensed to operate in the coastal trade of Canada;

Asking the Board of Railway Commissioners to amend its rules re colour tests for signal maintainers;

Instructing the executive council to endeavour to effect an understanding with Batten's Limited, whereby members of the Photo-Engravers' International Union may be employed in the company's plants;

Asking that the members of the National Association of Marine Engineers be deterred from infringing on the jurisdictions of other affiliated organizations.

A telegram announcing the closing down of work on the science building in Winnipeg was also referred to the executive council.

Address by Minister of Labour

The fraternal addresses were delivered at the Wednesday morning session, which was presided over by Mr. P. M. Draper, the secretary-treasurer. Previous to hearing the fraternal delegates Hon. Senator G. D. Robertson, Federal Minister of Labour, who had not found it possible to be present at the opening session, was introduced. In his opening remarks, the minister referred to the progress

made by the Congress and the labour movement in Canada and the United States. Referring to the forthcoming convention of the American Federation of Labour, which was to open on October 5th in Vancouver, he regretted that business prevented him from remaining to attend the meeting. The minister made extended reference to the development of the Department of Labour, which in addition to the gathering and publishing of statistics, administered the Industrial Disputes Investigation Act under which many strikes had been averted. Mention was made of the fair wages policy of the Government which provided for the established rates of pay to workmen employed on public works, and now includes the eight-hour day. Touching on technical education, the minister stated that at the last session of Parliament provision was made for a continuance of assistance to the provinces, the new act providing for the payment annually of \$750,000 for a period of fifteen years. Referring to old age pensions, he stated that the Dominion Government had increased its contribution from fifty to seventy-five per cent and that five provinces were now paying pensions as provided in the Statute.

After a passing reference to the Combines Investigation Act, another law administered by the Department of Labour, the minister referred to wage tendencies and stated that the wage agreements received in the department showed that many had been renewed at former rates, and where increases had been sought the matter had been deferred, though in some instances reductions had occurred, these being mainly in the building trades. The minister followed with a statement covering the reduction in cost of living which had occurred in 1930-31, the general average being about fourteen per cent. He made extended reference to the present depression, special mention being made of the low price of grain as compared with 1928 and to the drought in southern Saskatchewan for three successive years. After mentioning the restrictions which had been placed on immigration in 1930, resulting in a substantial decrease in the number of persons entering Canada, Senator Robertson outlined the measures adopted to relieve the unemployment situation, the money voted by Parliament being placed under the control of the Department of Labour, by whom the regulations were drafted under which the funds should be spent on unemployment relief work in co-operation with the provinces and municipalities. The minister stated that the Government was making a sincere effort to afford the necessary relief, and appealed for the co-operation of all people in an endeavour to

carry the Dominion through this difficult period. He was aware that certain propaganda was being made for the apparent purpose of hindering the work of relieving distress, but he expressed the opinion that the people of Canada were too well grounded in constitutional methods to be led away by such appeal. At the conclusion of his address Senator Robertson was tendered a standing vote of thanks.

Fraternal Messages

Mr. Charles Case, of Cincinnati, Ohio, fraternal delegate from the American Federation of Labour, in extending the greetings of that organization, referred to the depression in the United States and the efforts of employers to reduce wages, which in many instances had been successfully resisted by organized labour. Mr. Case mentioned the progress made in the United States in eliminating child labour and in old age pension legislation. He criticized the prohibitory liquor law of the United States and hoped for its early abolition.

Mr. A. B. Swales, fraternal delegate from the British Trades Union Congress, after referring to the advantages of the exchange of fraternal delegates and to the early formation in Canada of branches of British trade unions and to the policy of the British Congress to adjust its structure as required by the ever-changing conditions in industry, made mention of the application of rationalization to industry in Great Britain which has added greatly to the unemployed situation, laying idle at one stroke a thousand or more workers. While the employers are compensated for the loss arising from the closing of their factories or mines, the workers displaced, he stated, are given little or no consideration. Unemployment, Mr. Swales declared, at the present time is the greatest of all social and economic problems with which Great Britain has to deal, and while there are said to be two and a half million unemployed persons, about one and three-quarter million are wholly unemployed, the remainder being temporarily unemployed and employed in casual occupations. The speaker stated that while the situation was serious from the working class point of view, it would have been much graver were it not for the unemployment insurance system. Referring to the growth of the British Labour Party, the speaker stated that the Party was formed in 1900, and in that year had but two members in the House of Commons, while now it has 287 members. He outlined the legislation which had been enacted by the former Labour Governments in the interests of the working class. In reference to

the newly-formed national government in Great Britain, Mr. Swales declared that without consultation with the party members, and on his own initiative, Mr. Ramsay MacDonald decided to form "what he calls a national government to meet what he apprehends as a great financial crisis." The speaker declared that the Labour Party resented the action of Mr. MacDonald in handing over the Labour Government without any authority to do so. The Labour Party was now the official opposition and would organize for the next election and "looks forward to rallying to the labour cause sufficient electors to make Labour the dominant party in the state with power to carry the movement along the next stages of displacing capitalist society by a system based upon co-operative effort and goodwill."

Mr. James C. Shanessy, president of the Journeymen Barbers' International Union, conveyed fraternal greetings to the Congress at the Tuesday morning session. Greetings were also received from the Workers' Educational Association of Ontario.

At the closing session of the convention on Friday afternoon the fraternal delegate from the American Federation of Labour was presented with a gold watch and chain. The delegate from the British Trades Union Congress was given a diamond stick pin, his wife being the recipient of a gold lavalier. Presents were also given to the chairman and secretary of the local arrangements committee, the first named receiving a gold stick pin and the latter a pair of cuff links.

Officers Elected

The election of officers, which took place at the Thursday afternoon session, resulted as follows:—

President, Tom Moore Ottawa, Ont. (re-elected for the thirteenth time); secretary-treasurer, P. M. Draper, Ottawa, Ont. (re-elected for the 32nd time); vice-presidents, P. R. Bengough, Vancouver, B.C.; R. J. Talton, Montreal, Que. (re-elected); James Simpson, Toronto, Ont. (re-elected).

Fraternal delegate to the American Federation of Labour, Colin McDonald, Vancouver, B.C.

Fraternal delegate to the British Trades Union Congress, Arthur J. Crawford, Toronto, Ont.

Provincial Executive Committees: Quebec—Pierre Lefebvre (chairman), Montreal; Omer Fleury, Quebec; Henri Vaillancourt and J. J. Cupello, Montreal. Ontario—Humphrey Mitchell (chairman), Hamilton; Rod Plant, Ottawa; Albert Call, St. Catharines; T. Jackson, Toronto. Manitoba—H. Kempster (chairman), Winnipeg; the three remaining members to be named later. Saskatchewan—Wm. Stephenson (chairman), Moose Jaw, H. Perry, Regina, H. D. Davies, Prince Albert, Alex. M. Eddy, Saskatoon. British Columbia—Colin McDonald (chairman), Vancouver; E. H. Morrison, Vancouver; R. W. Nunn, Victoria; S. MacDonald, Prince Rupert. Nova Scotia—the naming of the committee for this province was left to the executive council.

Hamilton, Ontario, was selected as the convention city for 1932.

NOTES ON LABOUR UNION ACTIVITIES

International Photo-Engravers' Union

The thirty-second annual convention of the International Photo-Engravers' Union was held at Minneapolis, Minn., on August 17-23, with fifty-one delegates present, representing thirty-two local unions and a membership of 7,735, which was eighty-five per cent of the total. The credential committee reported that the Canadian delegates present represented ninety per cent of the entire membership in Canada.

As a token of appreciation from the Canadian membership for assistance and support received from headquarters, W. C. Golby, representative in Canada, presented the International Photo-Engravers' Union with a carved gavel sounding board.

A detailed account of the activities of the Union throughout the whole jurisdiction was

contained in the reports of the president and vice-presidents. According to the report of the secretary-treasurer, total receipts for the year amounted to \$379,408.80, expenditures totalled \$393,537.19, leaving a deficit of \$14,128.39.

The insurance committee, reporting on the group insurance policy carried for the members with the Union Labour Life Insurance Company, stated that owing to the continued favourable mortality rate the premium was reduced from 89 cents to 75 cents per month for each \$1,000 of insurance carried.

A number of changes in the constitution was approved by the convention.

Among the resolutions adopted were: (1) Advocating a closer connection with allied trades affiliated with the Allied Printing Trades Councils; (2) Commending the mem-

bers of the Canadian local unions for their loyalty to the organization and assuring them of continued co-operation and moral and financial assistance; (3) Endorsing the formation of ladies' auxiliaries and urging their establishment in all cities.

Officers re-elected were: President, Edward J. Volz, New York, N.Y.; First vice-president, Matthew Woll, Washington, D.C.; Second vice-president, Frank H. Glenn, Philadelphia, Pa.; Third vice-president, Levant V. Caukin, Los Angeles, Calif.; Secretary-treasurer, Henry F. Schmal, 3138 South Grand Blvd., St. Louis, Mo.

The next convention will be held at Toronto, Ont., August 15-20, 1932.

Central Council of National Catholic Syndicates

The Central Council of National Catholic Syndicates, in a statement issued at Montreal in September, expressed their views of the existing economic situation, and suggested the following measures for dealing with the depression:—

1. Action by the controllers of capital to stimulate trade and industry;
2. Stabilization of present prices or their increase to a higher level;
3. Maintenance of present wages levels;
4. Reasonable return on capital invested after payment of adequate wages to labour;
5. Promotion of the back-to-the-land movement;
6. Establishment by law in the whole Dominion of the eight-hour day;
7. Public works programs, including removal of slums, widening of streets and building of workmen's homes; contracts for such undertakings let by public authorities should provide fair wages and the eight hour day;
8. Maintenance of full staffs by public utilities undertakings;
9. Establishment of a sound unemployment insurance scheme to which labour, industry and federal and provincial governments would contribute;
10. The wealthy should assist welfare organizations in their endeavours to help those in want.

United Postal Employees of Canada

The Convention of the United Postal Employees of Canada held in Montreal in September was the most successful in the history of the organization, which covers all the large city postoffices in Canada, delegates coming from as far west as Vancouver, and as far east as Halifax.

Purely departmental matters formed the basis for a large portion of the business; however, one resolution was worthy of note as it had for its intention the widening of the field

of promotion for postoffice employees, and would place all such offices under the present Civil Service Act. This resolution reads as follows:

"That all offices with a revenue of \$5,000 or over be staffed from city offices and placed under the jurisdiction of the District Superintendent. Appointees to be classed according to revenue of the office concerned, and on the basis of the present classification namely: Principal Clerk, Senior Clerk, Postal Clerk."

The Convention also approved the following resolution:—

"That Superannuation be optional after thirty years of service or at sixty years of age, and compulsory after thirty-five years of service or at sixty-five years of age."

Amalgamated Civil Servants of Canada

The sixth biennial convention of the Amalgamated Civil Servants of Canada was held at Regina, Sask., September 8-11, 1931, with approximately fifty delegates in attendance, President Harold Baker, occupying the chair. Mayor James Balfour and E. G. Lavers, president of the Regina local council, welcomed the delegates to the city. Addresses on group insurance were delivered by Mr. Lumby, representing the Portage la Prairie Mutual Insurance Company, and Mr. Turnbull, representing the Great West Life Insurance Company.

The report of the national officers reviewed conditions in the various departments of the government, and made a number of recommendations. Among the numerous subjects referred to in the report were: superannuation; eight-hour day; Government Workmen's Compensation Act; transfer of natural resources; Civil Service councils; merit system; organization. A number of changes were made in the constitution and by-laws of the organization.

Resolutions were adopted approving of the following measures:—

Statutory increase in salary of civil servants be not less than \$120 per annum;

Semi-monthly payment of salaries to all government employees outside of Ottawa;

Annual holidays with pay, sick leave pay and allowances for all full time government employees;

That temporary employees be given preference over outsiders in filling vacancies under the Civil Service Act;

Unemployment insurance;

Formation of promotion boards throughout the whole service;

That there be no deviation from the merit system in promotions;

That all employees of the government be placed under the Civil Service Commission; A 44-hour week in the service;

Inauguration of the six-hour day and five-day week;

Group fire and automobile insurance for the membership;

Installation of radiophones in all off-shore light stations;

That postmasters in offices with a revenue of over \$2,000, be placed under the Civil Service Commission, and that vacancies in these positions be filled from within the postal service;

Establishment of an indemnity system for the protection of money-order clerks;

That full-time civil servants shall not accept any positions during their vacations;

That the Post Office rates on second class matter be increased.

Officers elected were: President, Harold Baker, 2526 West Sixth Avenue, Vancouver, B.C.; First vice-president, F. McGrath, New Westminster, B.C.; Second vice-president, G. J. Goslin, Winnipeg, Man.; Third vice-president, R. Wilson, Toronto, Ont.; Fourth vice-president, E. Eggleston, Saskatoon, Sask.; Fifth vice-president, O. N. Finn, Montreal, Que.; Sixth vice-president, J. S. Spiller, Calgary, Alberta; Secretary, Fred. Knowles, Box 42, Ottawa, Ont.

The Mine Workers' Union of Canada

The sixth annual convention of the Mine Workers' Union of Canada, District No. 1, was held at Calgary, Alberta, September 14-19, with approximately forty-five officers and delegates in attendance.

President James Sloan, in his report, gave a detailed account of the activity of the organization since the last convention. Owing to the number of wage agreements terminating before the close of the present year or early in 1932, he urged the delegates to place themselves on record as favouring the calling of a unity scale convention of all unorganized and organized miners, with a view to securing a single Western Canada agreement. The president further urged the local units to take an active interest in all kinds of educational work, such as the establishing of libraries, distribution of literature, and having lectures delivered by leading members of the Union or of the working class. He laid stress on the necessity of building up youth sections by the development of sports, social entertainment, etc., and called upon the delegates to discuss resolutions dealing with the right to picket, the repeal of section 98 of the Criminal Code, the use of militia in labour disputes, deportation, and trading relations with the Soviet Union.

Vice-president Maurice in his report informed the delegates that one important weakness of the organization was the insufficient attention paid by the local units to drawing young miners into the work of the Union. He recommended that youth sections be set up to look after the interests of the young miners and provide social attractions and educational activities.

According to the report of the secretary-treasurer, the membership as at August 31, 1931, stood at 2,989, with expenditures exceeding income by more than \$4,000.

Resolutions were adopted as follows:—

Authorizing the establishing of youth sections in every local;

Instructing the executive to endeavour to secure a single district agreement, no agreement however to be contracted that provides for the intervention of the Provincial or Federal Department of Labour in the capacity of arbitrator or conciliator;

Seeking amendments to the Workmen's Compensation Act;

Authorizing the payment of \$600 to the striking miners at Estevan, Sask., and arranging for future relief to needy cases in this locality;

Urging the locals to affiliate with the Workers' Sports Association, and suggesting that the district executive board secure cups for competition in the various lines of sport;

Instructing all sub-district and local executives to organize auxiliary unions composed of miners' wives and daughters;

Recommending the changing of the name of the official journal from *Western Miner* to the *Canadian Miner (Western Section)*;

Authorizing the calling of a 24-hour strike in protest against treatment of compensation cases;

Asking that not less than 50 cents per hour be paid to any worker on relief work;

Favouring the affiliation of all local units with the Canadian Labour Defence League;

Urging all unemployed miners to join the National Unemployed Workers' Association;

Pressing for the payment of wages weekly;

Favouring the abolition of "closed camps";

Demanding immediate legislation to provide for a six-hour day;

Favouring legislation to establish a non-contributory system of unemployment insurance;

Recommending a stricter observance of 8-hour day legislation;

Urging miners to take advantage of Rule 22 of the Alberta Coal Mines Regulation Act, authorizing workmen's representatives to inspect mines once a month;

Recommending that all firebosses be appointed and paid by the government;

Recommending that a mine rescue team be kept ready in every mining camp of fifty men;

Asking that all emergency hospitals be located within, one-quarter of a mile from coal mines;

Recommending the abolition of "open lights" in all coal mines, and that other safety lamps be supplied without cost to the workmen;

Requesting duplicate report books for accidents;

Demanding the immediate repeal of Section 9S of the Criminal Code;

The right to unrestricted picketing;

That the deportation powers vested in the Immigration Officers under the Immigration Act be rescinded;

That the Federal Government immediately open up trade relations with the U.S.S.R.;

Protesting against the use of militia in labour disputes;

Condemning the system of road construction relief under the Unemployment Relief Act;

Protesting against the practice of garnisheeing wages and the eviction of workers because of debts;

Recommending that the local units take up the defence of Mooney and Billings.

OCCUPATIONS IN UNITED STATES AS SHOWN IN 1930 CENSUS

DURING September the Director of the Census for the United States made public the results of the fifteenth census in regard to "gainful workers," these being classified by sex and industrial groups. In the population of the United States as returned for April 1, 1930, there were 98,723,047 persons 10 years of age and over. Of these, 48,832,589 were returned as gainful workers, that is, as persons usually working at a gainful occupation. The gainful workers therefore represented 49·5 per cent of the population 10 years old and over, or 39·8 per cent of the total population (122,775,046.)

Of the whole number of gainful workers, 38,053,795 were males, forming 76·2 per cent of the male population 10 years old and over, or 61·2 per cent of the total male population. The 10,778,794 female gainful workers formed 22·1 per cent of the female population 10 years old and over, or 17·8 per cent of the total female population. The percentage of the male population 10 years of age and over gainfully employed in 1930 (76·2) was materially lower than the percentage in 1920 (78·2), which in turn was lower than the percentage in 1910 or 1900. The percentage of the female population 10 years old and over gainfully employed in 1930 (22·1) was materially higher than the percentage in 1920 (21·2) and decidedly higher than the percentage in 1900 (18·8). The percentage of female workers shown for 1910 is not strictly comparable with the data for the other years, mainly because of the inclusion of relatively larger numbers of females as farm workers.

Of the whole number of male gainful workers returned in 1930, 11,901,247, or 31·3 per cent, were engaged in manufacturing and

mechanical industries; 9,568,347, or 25·1 per cent were engaged in agriculture; 5,820,642, or 15·3 per cent in trade; and 3,990,875, or 10·5 per cent, in transportation.

Of the whole number of female gainful workers, 3,149,391, or 29·2 per cent were engaged in domestic and personal service; 2,416,288, or 22·4 per cent were employed in manufacturing and mechanical industries; 1,762,795, or 16·4 per cent, were engaged in professional service, mainly in teaching; and 1,716,384 or 15·9 per cent were employed in trade.

The number of males engaged in agriculture in 1930, namely, 9,568,347, may be compared with 9,578,289 male workers returned in agricultural occupations in 1920. Allowance must be made, however, for the fact that the 1920 enumeration was made in January, when considerable numbers of farm labourers were temporarily engaged in other occupations, while the 1930 census was taken in April when by reason of the advancing season the number of men at work as farm labourers was decidedly larger. The actual decline in the number of persons employed in agriculture throughout the year is doubtless considerably greater than the census figures taken alone would indicate.

Of the male workers in the rural-farm population, 89·2 per cent were engaged in agriculture, and a major part of the remainder in manufacturing and mechanical industries and in transportation. Conversely, there were 423,970 male agricultural workers in the urban population, and 835,847 in the rural-nonfarm population, these representing, for the most part, farm labourers living in nearby cities or villages rather than on farms where they work.

In the urban population more than three-fourths of the male workers were employed in three groups, manufacturing, transportation, and trade, taken together, as were nearly three-fifths of the workers in the rural-non-farm population.

GAINFUL WORKERS IN THE MAIN INDUSTRY GROUPS, BY SEX,
FOR THE UNITED STATES, 1930

INDUSTRY GROUP	Males	Females	Percent	
			Male	Female
All industries.....	38,053,795	10,778,794	100.0	100.0

Occupational Census in Germany

The results of the last occupational census undertaken in the middle of 1925 in Germany have recently been published. Out of the total number of 14,433,000 workers in Germany, 6,595,000 (or 46 per cent) were skilled and 7,838,000 (or 54 per cent) were semi-skilled and unskilled. They were distributed among the principal industry group as follows:

SKILLED, SEMI-SKILLED, AND UNSKILLED
WORKERS IN GERMANY IN 1925

Industry Group	Number of Workers	
	Skilled	Semi-skilled and unskilled
Agriculture and forestry.....	188,000	2,419,000
Manufacturing industries and handicrafts.....	5,830,000	3,951,000

Government, public health, etc.....	144,000	461,000
Total.....	6,595,000	7,838,000

Industrial Census in South Africa

The preliminary report of the fifteenth industrial census of the Union of South Africa issued recently by the Office of Census and Statistics, gives detailed information concerning industries (manufacturing) in the Union during 1929-30, together with corresponding statistics for previous years. Details are given as to the number of establishments, fixed capital, number of employees, salaries and wages, cost of fuel, light and power, value of materials used, gross value of output, and sex of employees, etc.

In 1929-30, the number of establishments totalled 7,730, having a capitalization of £67,112,000. The total number of employees was 218,585, of whom 91,024 were Europeans. During the period under review the proportion of European employees to total employees was 37.61 per cent. The total amount paid in wages and salaries was £27,574,000, of which amount £20,551,000 was paid to Europeans. The gross value of industrial products in 1929-30 was £112,178,000.

In the manufacturing industries, the food and drink group employed the largest proportion with a total of 36,551 employees, of whom 10,444 were Europeans. The metals group was second with 33,864 employees, including 12,464 Europeans.

A study of the subsequent history of persons whose claims for unemployment benefit had been disallowed, is given in an appendix to the minutes of evidence taken before the Royal Commission on Unemployment Insurance (Great Britain). Nearly one third of the persons in a sample group found work for a part of the time they were unemployed; but the duration of the jobs was brief, and those obtained by the men were mostly of the less skilled type. The proportion of the sample having recourse to poor relief was only 17 per cent, but over half the married men received public assistance. On this feature of the study the *Economist* (September 19) remarks that "the reports make clear the unexpected fact that a very lively dread of falling on the rates still prevails in most areas. That there still exists a keen sense, not only of personal, but of family and even of neighbourly pride in this matter is evident from the account given by the investigators of the extent to which individuals are supported by relatives, friends, and even landladies. This method of maintenance means, of course, that the reduction in the standard of living brought about by unemployment is in no way mitigated, but only spread more thinly over a large number of people. . . .The extent to which the spirit of independence is shown to have survived is distinctly encouraging."

CANADIAN CONSTRUCTION ASSOCIATION

Proposal to Extend Government Relief Measures to Include Building Construction

INAUGURATION of a program of building construction to provide work for skilled mechanics was urged upon Right Honourable R. B. Bennett on September 28, by representatives of the Canadian Construction Association. The deputation was headed by the President H. P. Frid and the General Manager, J. Clark Reilly, and comprised outstanding contractors and building material manufacturers from every part of the Dominion. A plea was advanced on behalf of the bricklayers, the carpenters, plumbers and the labourers who would receive employment on buildings, as well as the factory workers and the clerks engaged in subsidiary activities. The Association asked for a joint Federal and Provincial contribution of twenty-five per cent of whatever building projects the municipalities might launch. The delegation pointed out that the wages paid would be widely diffused, and would go far to alleviate the distress in quarters apparently receiving very little consideration under the Government's present arrangements.

The Prime Minister stated that he would give the matter his earnest consideration and would discuss it with his colleagues.

Mr. George Oakley, M. P. P. (Riverdale, Toronto) a past President of the Toronto Builders' Exchange, representing the Trade Contractors Section, brought to the Prime Minister's attention the fact that Mayor Stewart and the members of the Board of Control in Toronto had expressed themselves as favourable to the inclusion of buildings in their unemployment relief program. In this attitude they had received the hearty support of organized labour. The completion of the Custom House was instanced as an example of work which would be done without delay.

In a normal year, according to Mr. Joseph M. Pigott, spokesman for the general contractors, the construction industry spent five hundred million dollars and employed on jobs and in furnishing material about 330,000 people. "It is the only major industry where practically all labour and material are Canadian" he said.

It was also maintained that 83 per cent of the money expended on construction improvements went out in wages, and only 17 per cent represented true material costs and fixed charges. Because of low construction costs, the government and municipalities had an excellent opportunity at the present time to

secure necessary accommodation cheaply. It was also claimed that the building operations of private interests would be encouraged by government participation in construction.

Mr. J. B. Carswell, managing director of the Burlington Steel Company, spoke on behalf of the manufacturer members. He asked that the governments contribute to a building construction program in order that factory workers could be retained in employment. In ordinary times, he said, the transportation of materials from the place of manufacture to the job constituted a large share of business to the railways. Stimulation of construction would, he felt, help them improve their position.

The deputation consisted of Messrs. H. P. Frid, President of the Canadian Construction Association; George Oakley, President, George Oakley & Sons, Ltd; J. B. Carswell, Managing Director, Burlington Steel Company; Joseph M. Pigott, President, Pigott Construction Company, Hamilton; C. Currie, President Currie Products Limited, Hamilton; J. P. Anglin, President Anglin Norcross Limited, Montreal; V. C. Moynes, Sales Manager, Canada Cement Company, Toronto; C. J. A. Cook, of Cook & Leitch, Montreal; W. B. Champ, President Hamilton Bridge Co.; W. D. Black, Vice President Otis Fensom Company; W. H. Yates, Jr., President Yates Construction Co., Hamilton, R. J. Lecky, Vancouver; Joseph F. Meagher, Ross-Meagher Co., Ottawa; W. S. Cameron, Manager, A. B. Ormsby Co., Toronto; J. F. Cameron, General Sales Manager, Gypsum, Lime & Alabastine, Canada, Limited, Paris; H. Neville Mason, Dominion Bridge Company, Toronto; Frank E. Waterman, President Toronto Brick Company; C. Blake Jackson, President, Jackson-Lewis Company, Toronto; W. H. Lindsay, Canada Crushed Stone Company, Ltd., Hamilton.

Text of Memorandum

The memorandum which was presented to the Prime Minister reads as follows:—

The Executive and Advisory Committees of the Canadian Construction Association, in session at Windsor, Ontario on September 9th, and at a further meeting in Toronto on September 16th, spent considerable time in the discussion of the plans published to date by your Government for unemployment relief. As the construction industry of our country is very directly affected, we feel that there are some suggestions which we would offer, in the hope that they may be of assistance to you in your most difficult task. To enable you quickly to grasp our

arguments we are stating our case under twelve brief headings, which headings can be developed, and proofs of figures furnished, at a later date and in co-operation with the appropriate Government Departments.

1. We realize that immediate actual relief disbursements will have to be made to take care of urgent cases of destitution, particularly in the West, with which action we are in accord.

2. Our understanding of the relief works which you have under consideration with the Provincial authorities, up to the present time, is that they consist principally of road construction, notably the Trans-Canada Highway, grade separation work, sewer work, and other similar projects. While work of this nature provides occupation through the winter months for large numbers of single men at present unemployed, and floating around the country, it does not furnish relief to men who are not able to be sent away into the camps, or who are not physically fit to handle the pick and shovel. Work of this character will not assist a great deal in spreading money through the population centres, where the unemployment is most severe.

3. While we are quite in accord with the necessity of providing temporary work of this nature, we would submit that on account of the excessive and unavoidable costs which it will involve, it is most desirable that a more substantial and more economical plan be worked out which would ultimately replace these temporary measures.

4. The construction industry, next to agriculture, alone employs more men directly and indirectly and offers employment in more diversified channels than any other industry in Canada.

5. In a normal year the construction industry spends 500 million dollars, and employs directly and indirectly approximately 330,000 people.

6. It is the only major industry where practically labour and material are all Canadian. The Construction Industry in Canada is practically self-contained.

7. Eighty-three per cent of all moneys expended on the construction of buildings goes out in wages either directly on the job or

directly in the factories and only 17 per cent represents true material costs and fixed charges.

8. In view of all of the above we are naturally much exercised to read in the press that building construction programs are not being favourably considered by your Government. We submit that an aggressive building construction program by the Dominion Government, together with assistance from the Dominion Government to the Provinces and Municipalities along the same lines, will more quickly than anything else get the tradesman, the artisan and the labourer out of the unemployed ranks and back to his own bench or calling.

9. Apart altogether from the unemployment situation, building costs are at such a low index at the moment that it would be good business to proceed at this time with numerous building operations which have been mooted and have been hanging fire for several years back. We would cite the fact that more Federal Building construction has originated in Washington during the past few months than ever before in the history of the United States.

10. We further believe that building operations of private projects could be stimulated if the Government, together with Mortgage and Loan Companies, Bankers and other financial interests would co-operate in an intensive study of the financing of such work.

11. A glance at the list of members of this Association attached hereto will show that we are divided into two main groups:—first the smaller group of contractors who are the assemblers of the materials produced by the second and larger group of manufacturers and supply houses. This second group, with vast sums of money invested in warehouses, factories, shops and machinery, is the same group which will have to face the burden of taxation which is bound to follow in the wake of this situation. Pick and shovel work will not in any way help to provide the means of meeting these taxes.

12. In conclusion, let us assure you, Sir, that all the experience and knowledge of the members of this Association are yours to command if we can assist you in any way towards a solution of this arduous problem.

Winter Building Construction in the United States

In an article dealing with the causes of seasonal fluctuations in the construction industry, the *Monthly Labour Review* (published by the United States Department of Labour) states in its current issue that cold weather presents no insurmountable physical obstacles to winter building. A recent survey carried out by the Bureau of Labour Statistics in Illinois, Minnesota and Wisconsin showed that the following opinions now prevail among contractors and builders in these States:

(1) Winter weather is not regarded as a deterrent to building operations in the case of the major types of buildings, such as large offices, industrial plants, large apartment buildings, etc., which require a year or more for completion.

(2) On major operations, architects and general contractors carry on construction work

irrespective of the season of the year and even in sub-zero weather.

(3) The precautions and the equipment needed for winter work are comparatively simple and have now become fairly standardized.

(4) The extra expenses involved in protecting winter work against the weather are comparatively small and represent but a small fraction of the total building cost. The exact amounts vary considerably with the nature of the project and the severity of the winter season. Some of the architects and contractors are of the opinion that this extra cost is in some measure overcome by the lower costs on other items; they point out that the price of materials is lower in the winter; that the contractor may voluntarily reduce his profit on a winter job in order to

keep his organization intact and his men employed, while the workmen will often accept a lower rate for year round work. Some are even of the opinion that the extra measures necessary to protect the job in winter are no greater or more expensive than those necessary, because of heat and rain, to protect it in the summer.

(5) There is no definite agreement among the builders as to the comparative efficiency of labour in winter work.

(6) In the construction of smaller buildings, and particularly of the smaller houses, the season of the year is still an important factor. The opinion of architects and builders in this field is more or less divided. Some favour winter operations in all buildings, while others are opposed to winter work on houses as uneconomical and more or less hazardous. Those in favour of winter work on this class of building believe that the person who has

his house built in the off-season has a decided advantage because of lower costs of materials, lower charges by the contractor, a higher grade of labour, etc. They state, also, that a house built in the winter under the proper precautions is as well constructed as one built in the summer. Others, on the contrary, are of the opinion that winter costs are enough higher to make a prospective home builder hesitate to undertake the construction of his new house in the winter.

(7) The architects and the contractors no longer need to be educated as to the practicality of winter construction work. The amount of winter operations in the construction industry, however, will be determined by the extent toward which the general public, and particularly the prospective builders, are educated to the safety, feasibility and desirability of building in the off-season.

Winter Building and Seasonal Unemployment

Winter building is regarded as a partial remedy for unemployment in an article appearing in the August-September issue of the *International Labour Review* (Geneva), by Dr. E. Bernhard, secretary of the Unemployment section of the International Association for Social Progress. Figures are given showing the relative importance of the building industry, and the technical and other difficulties in the way of winter building, are examined, mostly in the light of experience in the United States and Germany. Dr. Bernhard considers it as established that in most cases the extra cost of such building remains within reasonable limits even in comparatively cold winters, provided that the builders have the necessary appliances and experience; but only large-scale undertakings can fully meet these special requirements. In North America it is estimated that the extra cost of building in winter amounts to about 5 per cent for building proper, but the percentage is higher for engineering construction. The writer makes the following suggestions for stabilizing construction throughout the whole year:—

“Some help towards meeting this extra expense will be provided if other savings, besides the saving on interest, can be made—in particular, on the cost of materials, freights, and wages. The building materials industry can work more efficiently if the level of building activity is steadier; it has therefore an

interest in allowing lower prices for orders given during the winter. The railways can use their rolling stock more economically if the transport of building materials is spread out over the whole year; thus a reduction of rates for winter transport might perhaps be possible. Last but not least, the workers have a special interest in the encouragement of winter building—a fact amply vouched for by the unemployment statistics for the trade. Building workers and their organizations should consider seriously whether the continuation of building activity during the winter might be facilitated by a moderate reduction of wages. As wages represent in general some 40 per cent of the total building cost, the saving resulting from a more elastic wage policy would certainly be an important contribution towards meeting the extra expense.

“In countries with public unemployment insurance systems, the authorities must have an interest, which can hardly be over-estimated, in the stimulation of winter building activity. Only in this way can they really combat winter unemployment, principally caused as it is by the building industry. It may therefore be asked whether the unemployment insurance authorities ought not to be empowered to make grants out of their funds in suitable cases towards the extra cost caused by winter building, with a view to preventing unemployment.”

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Industrial Clinics Recommended

At a meeting of the American Health Association, held at Montreal in September, Mr. J. D. Hackett, the director of the Industrial Hygiene Branch of the New York State Department of Labour, expressed the belief that many occupational diseases go unrecognized at present, and that the best means to recognize and cope with them would be industrial clinics at which such diseases could be studied and means of prevention discovered. He stated that some of the more obvious occupational diseases, such as lead poisoning, were being eliminated gradually through the control now exercised over working conditions.

Sanitary work suggested for Relief of Unemployment

A committee appointed by the same association to consider sanitation works for the relief of unemployment, recommended that public authorities could help to palliate unemployment and aid the health of the public by constructing water supply improvements, by building works for the disposal of garbage, by salving municipal waste land, by draining mosquito breeding land, and by reclaiming wet grounds for recreational and other purposes.

"Every department should during this present emergency," the report said, "press for the accomplishment of construction work really needed for the protection of public health, as such not only creates employment but takes advantage of the present low cost of construction and provides installations of permanent value useful to the community rather than being of mere temporary expediency. Furthermore, the great value in engaging the unemployed in useful work cannot be over-emphasized."

Safety Records at Hamilton

A circular issued recently by the Industrial Accident Prevention Associations of Ontario points out that the records of the Workmen's Compensation Board of the province show an astonishing number of infections, and that a high percentage of these infections occurred in what were originally minor accidents. Apparently in a serious accident, or a mechanical accident, workers will seek help, but in too many instances the minor injury is neglected.

The circular refers to a recent safety record established by the Hamilton Works of the Steel Company of Canada. Some depart-

ments of the Canada Works of this company have operated more than 1,600 days without a lost time accident, and thirteen departments had a record in excess of 1,000 days without a lost time accident. The B. Greening Wire Company at Hamilton also operated recently in three of their departments for more than 1,000 days, without a lost time accident.

Material Platform Hoists

A bulletin containing safety suggestions for the protection of workmen on hoists has been prepared by the Committee on Accident Prevention of the Building Trades Employers' Association of New York City. It states that the cost of compensation in the State for injuries sustained in connection with hoists reached a total of \$315,946 for the three years 1927-1929; but while this figure is small compared with the total cost of building construction injuries, the average cost per case for hoist accidents is exceedingly high, 41 per cent of the cases involving death, permanent total or permanent partial disabilities. The outstanding causes of hoist accidents it is stated, seem to lie in faulty signalling, leaning into the shaft to locate the position of the car, working in an adjoining shaftway, using the hoist as a scaffold, and riding hoists. Objects falling into the shaftway are also a constant source of danger. "While it is true that hoist accidents result in injuries which may be more severe than other classes, it is also true that they can be more easily eliminated by safeguards, safety rules and practices. The human factor cannot be completely controlled, but minimizing the exposure will tend to lessen the hazard, say, of a man peering into a shaftway to locate a car. It remains for contractors to find ways of reducing the serious losses due to these accidents."

This bulletin was prepared to aid contractors in providing better mechanical and physical protection and to encourage them to greater activity in accident prevention.

Rheumatism as Industrial Disease

The August issue of the *Statistical Bulletin* of the Metropolitan Life Insurance Company contained an article dealing with rheumatic disease as a cause of disability. Its importance is stated to be in its great prevalence, particularly that of the disabling forms of the disease. "In a survey of over 600,000 persons, in 1917, the Metropolitan Life Insurance Company found that rheumatism was one of the most important causes of disability. Al-

together, 164.4 persons per 100,000 persons surveyed were reported as suffering from rheumatic conditions, which accounted for nearly nine per cent of all illnesses reported. Only 12.4 per cent of these persons were at work; the rest being unable to work, although not all of them were confined to bed. These illnesses were, moreover, of long duration.

"The prevalence of these conditions is very strongly associated with certain occupations. Generally speaking, morbidity rates from rheumatism are highest in industries and occupations where the individual is exposed to extremes of heat or cold, or to dampness. The sheltered occupations show uniformly low rates. Thus, in the Group Department disability experience of the Metropolitan Life Insurance Company, excessively high rates of attack occurred among quarry workers, iron miners, employees of steam railroads and subway and elevated roads and paper and pulp workers. Groups with low rates were employees of machinery and metal working plants and in the printing industry. Similarly, the experience of the Boston Edison Electric Illuminating Company showed high sickness rates from rheumatism among repairmen, linemen, chauffeurs, meter testers, labourers, firemen and oilers.

"The economic losses arising out of the great amount of disability from rheumatism are very high. It is estimated that rheumatic disease causes directly a loss each year of seven and one-half million weeks of work and a loss in wages of \$200,000,000. Indirectly, there is a further incalculable loss because of the impaired efficiency of persons who work while suffering from rheumatism."

Quebec Association for the Prevention of Industrial Accidents

The incorporation of this Association was noted in the *LABOUR GAZETTE*, August, 1931, page 855, its purpose being briefly outlined. The president, Mr. Allen M. Mitchell, reported in September that a large majority of the employers in the Province had become interested in the Association's work, and that group organizations, corresponding to the industrial classifications in the new provincial Workmen's Compensation Act, would be functioning early in October. The Association, Mr. Mitchell pointed out, will serve industries by having its representatives visit the plants to co-operate with the various safety committees. A survey of industrial establishments is being made in order to ascertain the extent of the protection provided for machinery and other safety measures, and advice will be given in places where safety work has been in a back-

ward state, first aid groups being organized so that cases of infection may be lessened. Each industrial group within the Association is quite distinct, having its own president and board of directors, carrying on its own program; but each receives the co-operative benefits of membership in the central association.

The Quebec Association for the Prevention of Industrial Accidents will organize branches in Quebec, Three Rivers, Drummondville, St. Hyacinthe, St. Johns, Sherbrooke and in the Lake St. John district.

Occupational Diseases Compensation in France

A law was passed in France, dated January 1, 1931. Which amended the law of October 2, 1919, extending the provisions of the workmen's compensation law to cover certain occupational diseases. The earlier law provided that compensation should be paid only for cases of poisoning from lead or mercury, but a decree issued February 19, 1927, made the reporting of occupational diseases arising from the use of various poisonous substances compulsory, although compensation was not paid in such cases. The present law adds to the compensable diseases cases of occupational poisoning from tetrachlorethane, white phosphorous, and benzol and the toxic conditions resulting from the action of X-rays or the following radioactive substances: uranium and its salts, uranium X, ionium, radium and its salts, radon, polonium, thorium, mesothorium, radiothorium, thorium X, thoron, and actinium.

Some Occupational Poisons

Some of the poisons to which certain workers are exposed were described in a recent paper by Mr. J. D. Hackett, director of the Division of Industrial Hygiene, Department of Labour of the State of New York. The information is based on a study of the reports of compensation cases in the State.

On the subject of lead poisoning Mr. Hackett states that at the present time storage battery plants account for a large proportion of the lead hazard, although there are only a few storage battery plants in the State. "Our records show that a larger number of cases of lead poisoning come from these than from lead painting which employs a much larger number of men.

"In painting we have avoided the dangers of lead largely by substitution of benzol and similar chemicals as the basis of lacquer thinners, widely used on automobile bodies, lamps, chandeliers, ornamental iron work, etc., but

in this there is a new danger. For the lacquer is applied in a spray which creates a vapour, and this when breathed by the worker, may first cause a headache and loss of breath, and in later stages, heart affections, skin eruptions and delirium."

"Carbon monoxide is a widespread occupational danger, often unrecognized because it has no smell nor colour. It is a sure poison and many a worker is affected by it but does not know the cause. He sees no gas; he smells no gas; yet he gets a headache, and that is the first symptom. If he has not breathed too much of the poison the cure is at hand. All he has to do is to breathe fresh air and he will be restored in a minute, but too much of the poison will permanently injure him. Workers in hat-forming factories are commonly in danger of carbon monoxide poisoning from the fumes from gas appliances often carelessly used in the work.

"Preventing occupational poisons is a difficult matter. No sooner have you banished one poison than another comes in its place. For years we sat at breakfast and looked at our nickel-plated toasters, after coming from the bathroom where every fixture was nickel-plated. These days are over and now we have replaced the harmless nickel-plating by the newer and more attractive chrome plating. All the world over, with one accord the platers took to chrome plating. They did not know that unless proper precautions are taken, the fumes of chromic acid may cause perforation of the nasal septum and nasty, disagreeable sores on the bodies of the workers. Chrome plating is used for grills, compacts, mirrors, and countless other attractive articles. Even shoes are now chrome tanned, the process being cheaper than the old-fashioned tanning process, but also more dangerous.

"Aniline is another poison. Those becoming furs which women wear around their necks must be dyed and they are most effectively dyed with aniline. Some of the dyes are harmless; some are poisonous and the fur worker does not know which is which. The fur industry has much to learn about hygiene. It ought to discriminate between the use of safe and unsafe dyes, which is often the difference between good and bad dyes. No dye is good in our opinion if it poisons the worker, and there is no justification for its use. The handling of furs, even before the dyeing process begins, is often dangerous. Unless due precautions are taken, anthrax—a disease accompanied by sores and ulcers, together with internal troubles—may result from inhaling the dust from furs, hides or other animal products, especially if these be infected.

"Other prominent occupational poisons mentioned are arsenic poison, which also may be contracted in a variety of seemingly harmless occupation—pottery decorating, carpet making, feathercurling, wall paper printing; and wood alcohol poisoning, from the manufacture of varnish, from toy painting from the making of buttons, shoe polish, artificial flowers, etc.

"Silica poisoning, which, although it affects workers in rock drilling, sand blast cleaning and the manufacture of cleansing and scouring materials, is not largely recognized as a compensable disease. Almost every dust is a hazard and silica dust particularly so. This kind of poison is insidious. A worker continues breathing silica dust for years without apparent inconvenience, but in the long run it gets him. His lungs clog up; his breathing becomes difficult; he no longer is able to work. Yet this is not inevitable if proper preventive measures are observed."

The results of a census of seamen who were actually employed on March 31, 1930, on sea trading vessels registered under the Merchant Shipping Act of Great Britain, show that 194,633 persons were employed on that date, as against 203,560 persons on the same date in the preceding year. Of the total of 194,633 persons, 70,901 were deck hands, 68,477 engine room employees, and 55,255 were stewards, cooks and others employed in attending on the passengers or crew. 127,518 of the employees were of British nationality. While the Lascars included 17,251 deck hands, 21,736 engine room men and 13,695 stewards, etc.

Dr. J. A. Krantz, chief of the Rehabilitation Division of the Federal Board for Vocational Education of the United States, stated recently that the Board, after ten years' experience, believed that the work of re-establishing disabled workmen in employment could best be carried on by local communities. Hitherto such work has been done directly by State governments. The Board now believes that the communities can render the best service, as they are closer to local conditions than the State of regional boards, and are better able to study the capacities of the physically handicapped, and train them for suitable work. Some cities, such as St. Louis and St. Paul, have already provided for local rehabilitations.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Unemployment and Public Works

The Twelfth Assembly of the League of Nations, adopted at a plenary meeting in Geneva on September 24, a long resolution relating to the economic situation and the various measures which may be taken to cope with it. The resolution included the following section referring to public works:—

The Assembly,

Seeing that, among the measures of international solidarity calculated to mitigate the effects of the economic depression and to assist the resumption of activity which would benefit the workers of all countries, consideration should be given to the execution of important public works jointly undertaken by public or private groups on European or extra-European territory;

Seeing, further, that the problem has already been approached by the Commission of Enquiry for European Union and has been laid before the competent organs of the League of Nations;

In order to expedite the examination of these programs, to co-ordinate them on an international scale, to hasten their putting into effect and to follow their execution:

Invites the Council of the League of Nations to instruct the committee of Enquiry set up by the Communications and Transit Organization, to which should be added representatives of the International Labour Office and possibly of the economic and financial organs of the League, to undertake these various tasks.

This Committee will examine the concrete proposals of the various Governments, particularly from the point of view of the utility and productivity of the works proposed.

It will report to the Council of the League of Nations. The Commission of Enquiry for European Union will be called on to give its opinion on the proposals relating to Europe.

The death occurred in Paris on September 2, of Mr. Arthur Fontaine, Chairman of the Governing Body of the International Labour Office, following an illness of three months. Mr. Fontaine had served continuously as Chairman of the Governing Body from the inception of this work in 1919 and prior thereto had occupied a prominent position in the public service of France and was recognized as a leading authority on social, industrial and labour problems throughout the world.

Only a few days earlier, the International Labour Organization lost another of its most

active supporters in Monsignor Nolens, who passed away in Amsterdam. Monsignor Nolens had represented the Government of the Netherlands at the International Labour Conference since its inception and had served as President of the Eighth Session of the Conference in 1926.

Children in Non-Industrial Occupations

The International Labour Office recently published a pamphlet under the title: "The Age of Admission of Children to Employment in Non-Industrial Occupations: Third Item on the Agenda of the Sixteenth Session, International Labour Conference, 1932." At the fifteenth session of the International Labour Conference held in Geneva in May and June, 1931, a questionnaire was prepared for submission to the member Governments on the age of admission of children to employment in occupations not covered by the conventions passed at the conferences of 1919, 1920 and 1921 on industrial employment and employment at sea and in agriculture. The questionnaire relates to non-industrial occupations, including commercial employment, work in family undertakings, and private domestic service, in theatres, and in street trades. This pamphlet contains the text of the questionnaire and the committee report to the 1931 conference upon which it is based.

Ratification of International Labour Conventions

On August 31, 1931, the total number of ratifications of International Labour Conventions registered by the Secretary-General of the League of Nations and officially notified to the International Labour Office was 440. At the same date the number of Conventions of which the ratification has been authorized by the competent authority in the countries concerned, but had not yet been registered with the Secretariat of the League of Nations, was 26. During the month of August, 1931, three new ratifications were registered.

Mexico Enters the League

At the opening sitting of the Twelfth Assembly of the League of Nations a resolution was submitted by the British, French, German, Italian, Japanese and Spanish delegations calling attention to the omission of Mexico from the list of countries mentioned in the annex to the Covenant of the League of Nations as being invited to accede to the

Convention, and proposing that this omission should now be repaired. The resolution was supported by representatives of the various countries and adopted unanimously on September 8. Three days later it was announced to the Assembly that a telegram had been received from the Mexican Minister of Foreign Affairs stating that "the Government of Mexico, which has been absent from that great institution for reasons over which she had no control, now at once accepts the invitation thus given." On receipt of this acceptance the Assembly adopted a resolution declaring Mexico to have become a member of the League and inviting its representatives to take part as soon as possible in the work of the Assembly. Finally, the credentials of the delegation from the Republic of Mexico were received and approved, and the delegates were authorized forthwith to participate in the proceedings.

By becoming a member of the League of Nations Mexico has obtained a membership also in the International Labour Organization.

The Minimum Age of Admission of Children to Employment in Non-Industrial Occupations

The International Labour Office has forwarded to the Governments of States Members of the Organization a questionnaire on the age of admission of children to employment in non-industrial occupations.

It will be remembered that this question was the subject of a first discussion at the Fifteenth Session of the International Labour Conference, which met at Geneva last June. It has been entered on the Agenda of the 1932 Session with a view to second discussion, and Governments are being consulted by the International Labour Office in preparation for this. On the strength of the replies received the Office will draw up a final report, which will be the basis for the discussions of next year's Conference.

The questionnaire of the International Labour Office first asks Governments whether they consider that international regulations should be adopted on the age of admission of

children to employment in non-industrial occupations, and whether these regulations should take the form of a Draft Convention rather than of a Recommendation.

Other questions deal with the scope of the proposed Convention. Three international Conventions have already been adopted, in 1919, 1920, and 1921, prohibiting the employment of children under fourteen in industrial undertakings, on board ship, and, at least during school hours, in agriculture. Should the proposed Convention prohibit employment in the same way for all occupations other than those covered by the three existing Conventions so as to complete the international regulations adopted with a view to protecting children against the dangers of employment at too early an age?

Should a general minimum age for these occupations be prescribed? Should it be fixed at fourteen as in the case of regulations applying to other occupations? Should the minimum age be the same as the school-leaving age where this is above fourteen? Should the general minimum age be laid down as an absolute provision, so as to prohibit any employment in the occupations covered during school hours and outside the hours fixed for school attendance?

Governments are asked to reply to other questions, concerning light employment outside school hours, possible exceptions and special cases which the Convention may allow for, and measures of enforcement of the proposed regulations.

Publications of the International Labour Office

Another series of "Occupation and Health", the encyclopaedia of hygiene, pathology and social welfare which is in course of preparation by the International Labour Office, has just been issued, containing brochures on the following subjects; Ironing, Ivory, Kapok, Lithopone, Mental Hygiene in Industry, Occupational Diseases, Occupational Poisonings; Naphthylamine, Wool (Disinfection), Medical Inspection of Factories, Metallization by Pulverization, and Methyl Acetate.

Wage Determination in the Coal Mining Industry

Last year the Governing Body of the International Labour Office requested the office to prepare a report on wages in the mining industry with a view to the adoption by the International Labour Conference of a Draft Convention designed to establish equivalent wages and condition of the life of miners in coal-producing countries. The report has now been published by the Office under the title: "Principles of Wage Determination in the Coal-Mining Industry: an International Survey."

The object of the report is stated to be "to facilitate the orderly consideration of the possible forms of international action relative to the determination of wage questions in coal mines." Separate chapters are devoted to (1) a general survey of the problems of wage-fixing in coal mines, with special reference to existing difficulties; (2) the machinery of collective bargaining, including the organization of employers and workers, collective agreements, and methods of conciliation and arbitration of disputes in various countries; (3) economic considerations involved in determination of wages; (4) methods of wages payment, including "social payments" such as family allowances, and payments in kind such as free coal.

The final chapter considers all these problems in view of the possibility of international action. Such action, it is pointed out, must, as far as the International Labour Organization is concerned, be based on the Preamble to Part XIII of the Treaty of Versailles, which lays down the principle that "the failure of any nation to adopt humane conditions of labour is an obstacle in the way of other nations which desire to improve the conditions of their own countries," and recommends "the payment to the employed of a wage adequate to maintain a reasonable standard of life as this is understood in their time and country."

The report points out that the principle of "equitable division of the proceeds" as between workers and owners is difficult of application in coal mining owing to special conditions in the industry: "the unusually high proportion of total costs of production represented by wages (in some cases as much as 70 per cent.), and the relatively small amount of capital invested in coal-mines in comparison with the value of the annual output,

coupled with the fact that the price of coal is subject to wide fluctuations, together tend to result in the return on capital being at times excessively high, and at other times excessively low, or possibly an actual loss; with the result that the wage situation is liable to be in almost continuous ferment."

The purpose of the minimum wage, as considered in the report, is to safeguard coal-mining wages generally from being forced to unduly low levels by reason of an adverse economic situation. From the international point of view, the main question at issue is whether there should be any relationship, direct or indirect, between the minimum wage set up in one country and the minimum wage set up in another. "Thus, in the way of direct relationship it has been suggested that there might be a certain ratio established between the minimum wages of the different countries, this ratio to be determined by some statistical test. As an example of an indirect relationship there is the proposal that in each country the guaranteed minimum wage in the coal mining industry should be a uniform percentage of the average wage paid in industries comparable as regards skill, etc., in that country."

Under the heading "methods of wage payment" the report suggests that international action should be taken to promote the extension of family allowances and paid holidays to those countries and coal fields where no such payments are at present made.

The conclusion is reached that "the adoption of principles for the equitable division of the product, as also the institution of a minimum wage, would have a certain influence in preventing what is sometimes referred to as 'unfair' competition. For if, in countries where no provision for an equitable division of the product exists, wages in one way or another can be made to bear the brunt of competitive price-cutting, it is evident that such countries will be at an advantage upon the world market. Accepted principles of wage determination would serve to obviate this possibility. Similarly, the guarantee that wages would not be allowed to fall below a certain minimum, by preventing progressive lowering of coal-mining wages under pressure of economic circumstances, would likewise tend to have an influence upon the competitive situation."

UNEMPLOYMENT AND FARM RELIEF ACT, 1931

AGREEMENTS under the provisions of the Unemployment and Farm Relief Act, 1931, had been concluded at the time this issue went to press between the Dominion Government and the Governments of the Provinces of Nova Scotia, New Brunswick, Manitoba, Saskatchewan, Alberta and British Columbia. The text of this Act (Statutes of Canada, 1931, chapter 58) appeared in the LABOUR GAZETTE, August, 1931, page 901, and the general Regulations under the Act were given on page 904 of the same issue. As was stated in the last issue, the assistance rendered by the Dominion Government under the terms of the

Act is in the form of (1) Direct relief for unemployed persons, such relief being dispensed by the municipalities or the provinces; (2) Contributions towards municipal and provincial public works; (3) Contributions towards Provincial highways, and (4) Towards the Trans-Canada Highway. The percentages of such expenditures that will be paid by the Dominion Government are shown in the following table. In addition a substantial program of Federal Public Works is being undertaken, and, together with provincial and municipal works, is now under way. Details of these undertakings will be published later.

PERCENTAGES PAYABLE BY DOMINION UNDER DOMINION—
PROVINCIAL AGREEMENTS

Clause of Agreement	Direct Relief		Public Works		Provincial Highways	Trans- Canada Highway

Sub-Committee of Council

A subcommittee of Council on Unemployment Relief has been appointed consisting of the Honourable Sir George H. Perley, K.C.M.G., Minister without portfolio, the Honourable H. A. Stewart, Minister of Public Works, the Honourable Robert Weir, Minister of Agriculture, the Honourable E. N. Rhodes, Minister of Fisheries, and the Honourable Senator Gideon D. Robertson, Minister of Labour. The Dominion Director of Unemployment Relief, Mr. Harry Hereford, will act as Secretary of the Committee. This Committee will deal with the proposals of

the Municipalities and Provinces as put forward by the Provincial Authorities.

Mr. J. B. Carter will continue to act as Assistant Director and the following Assistants to the Director have been appointed to assist in the administration of the Act:—

Mr. M. H. McGeough, Assistant to Director for British Columbia.

Lt. Col. J. B. Harstone, Assistant to Director for Alberta.

Lt. Col. G. C. MacLean, Assistant to Director for Manitoba.

In addition, Major G. W. Northwood, K.C., has consented to act as General Representative for Manitoba.

Unemployment Relief Act, 1930

Particulars are given in the accompanying table of the relief provided by the Dominion Government, in co-operation with the Provinces, municipalities and railway companies, under the provisions of the Unemployment Relief Act, enacted at the special session of the Parliament of Canada in September, 1930 (LABOUR GAZETTE, September, 1930). The statistics show the actual volume of employment provided from the commencement of operations under the Act to the end of September, 1931. Details for each Province are as follows:

UNEMPLOYMENT RELIEF ACT, 1930.
EMPLOYMENT AFFORDED TO SEPTEMBER 30, 1931.

Province, etc.	(1) Individuals given employment	Number of man-days work given
Prince Edward Island.....	2,195	19,389

(1) These figures do not include repeaters, i.e. no one individual is counted more than once.

(2) The number of individuals given employment is not available.

Unemployment Benefit Plans in the United States and Other Countries

The United States Bureau of Labour Statistics recently published Bulletin No. 544 (Employment and Unemployment Series) outlining (1) unemployment benefit plans in the United States, and (2) unemployment insurance in other countries. Part 1 presents the result of a survey made by the Bureau last April, when it was found that 70 unemployment benefit or employment guaranty plans were in existence in the United States, the number of employees potentially affected by them being about 226,000, though the number of those actually eligible for benefit at the time of the survey was considerably below that figure. The plans were distributed, by type, as follows:—

1. Fifteen company plans: i.e. those established by employers either individually or in groups. These companies employed about 116,000 employees at the time of this study, and of this number it is estimated that slightly more than 50,000 were eligible to benefits.

2. Sixteen joint-agreement plans, established by agreement between trade-unions and employers, and covering approximately 65,000 workers. In some instances union membership totals were used, as the figures representing number of persons eligible were not available.

3. Forty-eight trade union plans, maintained solely by labour organizations, either national or local, for the benefit of their own members. These covered about 45,000 persons.

The bulletin describes each of the plans that are included in the totals given above. The company plans described are those of the Dennison Manufacturing Co. Framingham, Mass.; Columbia Conserve Co., Indianapolis, Ind.; Dutchess Bleachery (Inc.), Wappingers Falls N.Y.; Croker-McElwain Co. and

Chemical Paper Manufacturing Co., Holyoke, Mass.; United Diamond Works (Inc.), Newark, N.J.; John A. Manning Paper Co. (Inc.), Troy, N.Y.; Behr-Manning Corporation, Watervliet, N.Y.; S. C. Johnson & Son, Racine, Wis.; Leeds and Northrup Co., Philadelphia, Pa.; Proctor & Gamble Co., Cincinnati, Ohio; Brown and Baily Co., Philadelphia, Pa.; Consolidated Water Power & Paper Co., Wisconsin Rapids, Wis.; General Electric Company; Joint Plan Fond du Lac, Wis.; Rochester (N.Y.) unemployment benefit plan; Delaware and Hudson Railroad.

The Joint Agreement plans described in the Bulletin are those in the men's clothing industry in Chicago; New York City, and Rochester, N.Y.; women's garment industry, Cleveland, Ohio; cloth hat and cap industry, New York City and Philadelphia, Pa.; straw-hat industry, New York City; full-fashioned hosiery industry; lace curtain industry, Kingston, N.Y.; lace industry, Philadelphia, Scranton and Wilkes-Barre, P.A. The Bulletin also describes the trade union plans in the Deutsche-Amerikanische Typographia; International Association of Sidergrahpers; Diamond Workers' Protective Union of America; Bookbinders, Locals No. 31-125, San Francisco, Calif., No. 119 New York City, and No. 8, Chicago, Ill.

Part 2 of the Bulletin deals with the public unemployment insurance systems in effect in eighteen countries which were found to have adopted such systems up to May, 1931. These countries are as follows:—Austria, Belgium, Bulgaria, Czechoslovakia, Denmark, Finland, France, Germany, Great Britain, Irish Free State, Italy, Luxemburg, Netherlands, Norway, Poland, Queensland, Spain and Switzerland.

INTERNATIONAL ASSOCIATION OF PUBLIC EMPLOYMENT SERVICES OF THE UNITED STATES AND CANADA

THE Nineteenth Annual Convention of the International Association of Public Employment Services was held in Cincinnati, on September 22-24, over one hundred delegates attending. The delegates from the United States outlined the relief work program in the various centres, indicating substantial plans along lines similar to those in Canadian municipalities.

A great deal of time was devoted to a discussion of the best possible organization of a Federal-State Employment Service in the United States, and comparison very favourable to the Canadian method of organization was made by all the speakers. Professor Leiserson, Antioch College, Yellow Springs, Ohio, urged that the re-organization of the Public employment system of the United States should follow the lines of the Canadian Employment Service.

The President of the Association, Mr. H. C. Hudson, Department of Labour, Toronto, and Mr. J. T. Hopkins of the Employment Centre of Rochester, N.Y., delivered brief address over a local radio station, dealing with the work of the Employment Service in their respective communities. Mr. Hopkins described the experiment which is carried on in Rochester under which local employers and State and municipal authorities are organizing an experimental office to try out different methods of conducting a public employment office. The results of the Rochester plan have been entirely satisfactory so far. (A note on the Rochester plan appeared in the *LABOUR GAZETTE*, March, 1931, page 295).

Mr. Emanuel Koveleski of Rochester, N.Y., was elected President for 1932, while Mr. A. J. Odam of the Department of Labour, Ottawa, was added to the Executive. Washington, D.C., was selected as the meeting place for the convention in 1932.

Industrial Commission of Colorado Refuses Reduction of Coal Miners' Wages

On August 4, 1931, the Industrial Commission of Colorado rendered a decision refusing the demand of the Bluff Springs Leasing Co., a coal mining company, for a reduction in the wage rates of its employees.

On July 7 the company served notice of its intention to reduce the wages of its employees, effective August 7, 1931. On July 11, 21 employees of the company filed a petition with the Commission protesting against the proposed reduction. At the hearing before the commission the company contended that it was necessary to reduce the price of coal \$1.50 per ton in order to meet the competition of the large coal companies which had already reduced the price of coal. The company also contended that it had to pay a royalty of 55 cents per ton to the owners of the mine and 50 cents per ton commission for selling its coal, which caused a loss of 93 cents on each ton of coal sold. The employees contended that

if their wages were reduced it would be impossible for them to earn more than \$3.50 to \$4 per day, and that such a wage was not sufficient for them to support their families and was therefore not a living wage.

The commission pointed out that, according to the records of the State coal mine inspector the coal miners of Colorado averaged a trifle over 183 days' work per annum during the last 10 years, and that the average number worked during 1930 was only 164 days. Considering the number of days a coal miner works per year, the commission in its award, said:—"The present wage scale is not sufficient, and it is to be regretted that the employees should be required to sell their labour at a lower price. Labour should be the first charge against every industry, and the welfare of the wage earner should be the first consideration of every employer."

EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN AUGUST, 1931

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on September 1 was 7,798, the employees on their payrolls numbering 972,537 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions report-

ing for August was 1,833, having an aggregate membership of 197,863 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment.

(3) The Department of Labour receives reports from the 68 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

(1) Employment Situation at the Beginning of September, 1931, as Reported by Employers

According to data tabulated by the Dominion Bureau of Statistics, there was a further increase in employment at the beginning of September; this was largely due to increased highway construction work undertaken for the relief of unemployment in Quebec. The working forces of the 7,798 co-operating employers aggregated 972,537 persons, compared with 955,991 in the preceding month. The index number (based upon the average for the calendar year 1926 as 100) stood at 107.1, as compared with 105.2 on August 1, 1931, and with 116.6, 126.8, 119.1, 111.0, 106.2, 97.8, 94.2, 101.2, 94.8 and 89.8 on September 1, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. The record for these years shows that there is often a slackening in industrial activity on September 1; last year, this had involved the release of a considerable number of workers, but the index then, (as on the same date in 1929, 1928 and 1927) was higher than on the date under review.

Logging, mining, highway construction and services showed heightened activity, that in road construction being especially noteworthy; there was no general change in manufacturing as a whole, while building and railway construction and trade were slacker.

Employment by Economic Areas

Firms in Quebec showed important gains, and improvement was also recorded in the Prairie Provinces; in Ontario, the general

situation remained practically unchanged, while the Maritime Provinces reported contractions.

Maritime Provinces.—In the Maritime Provinces, there was a decline in employment, which, however, involved a much smaller number of workers than that registered on September 1, last year. Most of the loss this year took place in construction, owing to curtailment of road work, but manufacturing, mining and trade also released employees, while logging, shipping and building were busier. Statistics were received from 581 firms, whose staffs aggregated 70,378 workers, compared with 73,468 in the preceding month. The index was much lower than on the same date in 1930.

Quebec.—Practically no general change was noted in manufacturing; logging, mining and services reported moderate gains, while there were very important increases in highway construction, largely as an unemployment relief measure. On the other hand, transportation, building and railway construction were slacker. Within the manufacturing group, there were large decreases in pulp and paper, but considerable seasonal improvement was noted in the textile industries. The working force of the 1,806 employers co-operating in Quebec stood at 292,909 persons, as against 272,904 on August 1. Decreases were registered at the beginning of September, 1930, but the index then was a few points higher.

Ontario.—In this province, 3,468 firms reported very little general change in their staffs; manufacturing, especially of vegetable food products, showed considerable improvement; musical instruments, chemical, electrical apparatus and mineral product plants were also busier, while the lumber, pulp and paper, textile, metal, transportation and construction industries and retail trade recorded curtailment. The payrolls of the 3,468 firms making returns aggregated 373,202 persons, or 59 less than in the preceding month. Em-

railway transportation, building construction and trade showed curtailment.

British Columbia.—Employment as indicated by employers in British Columbia showed a further decrease; this took place chiefly in construction and manufacturing, notably of lumber, animal food and non-ferrous metal products, while shipping, mining and trade reported greater activity. The working force of the 791 firms furnishing data declined from 79,476 persons on August 1, to 78,339 at the beginning of September. The

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

ployment was not so active as in the early autumn of 1930, although the decline then indicated involved a much greater number of persons.

Prairie Provinces.—There was a small increase in employment in the Prairie Provinces, where the index was approximately the same as on September 1, 1930, when an increase had also been indicated by the firms making returns. Data were tabulated from 1,152 employers of 157,717 workers, as compared with 156,882 at the beginning of August. Mining, local transportation, highway and railway construction afforded heightened employment, but manufacturing was slacker, notably in the iron and steel and lumber divisions, and steam

contraction involved a slightly larger number of workers than that indicated on September 1, 1930, when employment was in greater volume.

Table I gives index numbers by economic areas.

Employment by Cities

Employment advanced in Quebec City, Toronto and Windsor and the adjacent Border Cities; in Winnipeg, there was practically no general change, while curtailment was registered in Montreal, Ottawa, Hamilton and Vancouver.

Montreal.—Employment in Montreal showed a slight falling-off on September 1, 404 workers having been released from the pay-lists

of the 1,007 co-operating firms, who employed 138,204. Manufacturing (except of clothing and tobacco products) reported general contractions, and transportation was also slacker; but construction and trade showed improvement. The index was lower than on the same date in 1930, although a greater contraction had then been recorded.

Quebec.—A slight increase was indicated in Quebec, according to 136 employers of 13,411 persons. Minor gains were noted in manufacturing, services and construction, while

there were similar losses in trade. Employment as reported by employers was not so active as at the beginning of September a year ago.

Toronto.—Manufacturing showed considerable improvement, while construction, trade and local transportation recorded declines. Statements were received from 1,094 firms with 118,713 workers, or 382 more than on August 1. A fairly large decrease had been indicated on the same date a year ago, but employment was then above its present level.

NOTE.—The "Relative Weight" in Table I shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS

(AVERAGE CALENDAR YEAR 1926=100)

Aug. 1	105.2	106.8	102.4	100.7	129.1	98.0
Sept. 1	107.1	102.7	109.8	100.7	130.0	96.6
Relative weight of employment by districts as at Sept. 1, 1931	100.0	7.2	30.1	38.4	16.2	8.1

Ottawa.—There was a decline in Ottawa, chiefly in manufacturing and construction. The 159 firms furnishing returns reported 14,193 employees, compared with 14,349 in the preceding month. On September 1, 1930, a reduction involving a much larger number of workers had been noted, but the index then was rather higher.

Hamilton.—Manufacturing (particularly of iron and steel products), transportation and construction reported contractions in Hamil-

ton, while other industries showed little general change; 234 employers recorded 30,058 persons on their payrolls, as against 30,635 on August 1. Employment was in smaller volume than at the beginning of September a year ago, when considerably greater curtailment had been indicated.

Windsor and the Adjacent Border Cities.—A slight advance was registered in the Border Cities, where the 134 co-operating firms reported 9,542 workers, as against 9,217 in the

NOTE.—The "Relative Weight" in Table 2 shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

TABLE II.—INDEX NUMBERS OF EMPLOYMENT BY PRINCIPAL CITIES

(AVERAGE CALENDAR YEAR 1926=100)

Relative weight of employment by cities as at Sept. 1, 1931	14.2	1.4	12.2	1.5	3.1	1.0	3.1	3.1

preceding month. Automobile plants afforded increased employment, but construction was not so active. A much smaller gain had been noted on the same date last year, but the index was then considerably higher.

Winnipeg.—Employment in Winnipeg showed very little change; manufacturing as a whole was rather more active, in spite of losses in iron and steel products, but construction showed curtailment. An aggregate working

force of 29,981 persons was reported by the 368 employers who made returns for September 1. A slight increase had been recorded on the same date in 1930, when the index was higher.

Vancouver.—There was a further decline in activity in Vancouver, according to statements received from 327 firms employing 30,351 workers, as against 30,719 on August 1. Manufacturing and construction reported decreases

NOTE.—The "Relative Weight" in Table 3 shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES
(AVERAGE CALENDAR YEAR 1926=100)

	All industries	Manufacturing	Logging	Mining	Communications	Transportation	Construction	Services	Trade

in personnel, while retail trade and services registered moderate improvement. Employment was in less volume than on the same date a year ago, when additions to staffs had been noted.

Index numbers by cities are given in Table II.

Employment by Industries

Manufacturing.—Iron and steel and other metal, lumber, pulp and paper, woollen and edible animal product factories showed curtailment, in some cases of a seasonal character, while the vegetable food, clothing, silk, tobacco, electrical apparatus, leather, electric

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

Industries	Relative weight	Sept. 1, 1931	Aug. 1, 1931	Sept. 1, 1930	Sept. 1, 1929	Sept. 1, 1928	Sept. 1, 1927	Sept. 1, 1926

¹The "Relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

current, chemical musical instrument and non-metallic mineral divisions recorded improvement. Statements were received from 4,711 manufacturers employing 465,748 operatives, as compared with 465,815 at the beginning of August. Employment on September 1, 1930, had declined, but the index then was many points higher than on the date under review.

Animal Products, Edible.—Declines were shown in dairies and fish-preserving establishments, those in the latter occurring in the Maritime Provinces and British Columbia. The payrolls of the 223 co-operating factories aggregated 19,187 employees, as compared with 19,733 in the preceding month. Employment on September 1, 1930, had also decreased, but the index number then was higher than on the date under review.

Leather and Products.—A slight gain was shown in leather factories, chiefly in footwear plants; this was about the same in size as that noted at the beginning of September last year, when the level of employment was lower. Statements were received from 241 manufacturers having 18,630 persons in their employ, as against 18,508 on August 1. Quebec firms reported most of the increase.

Lumber and Products.—Further seasonal reductions were made in sawmills, but furniture and vehicle factories were busier. The general decrease (in which all provinces shared although the largest losses were in Ontario), was smaller than that noted on September 1, 1930, but the index then was very much higher. A combined working force of 40,804 persons was registered by the 788 establishments from which returns were received, and which employed 42,706 in their last report.

Musical Instruments.—Additions to staffs were recorded in musical instrument works, 34 of which increased their working forces by 171 persons to 1,790 on September 1. The increase was largely confined to Ontario. Although reductions had been indicated at the beginning of September, 1930, employment was then at a higher level.

Plant Products, Edible.—Confectionery, chocolate, cocoa, sugar and syrup and fruit and vegetable factories reported heightened activity, that in canneries being most pronounced. The general improvement was on a larger scale than on the same date last year, but the index was then higher. Data were compiled from 396 firms in the vegetable food group, whose payrolls rose from 31,162 on August 1, to 35,336 at the beginning of September. Ontario reported important advances; an increase was also indicated in British Co-

lumbia, while elsewhere the trend was generally downward.

Pulp and Paper Products.—Employment in this group showed a reduction, mainly in pulp and paper mills and printing shops; larger losses had been noted on September 1 last year, when the index was higher than on the date under review. The forces of the 547 co-operating establishments included 56,686 persons, as compared with 58,510 in the preceding month. There were declines in all provinces.

Rubber Products.—Practically no change was indicated in rubber factories, 43 of which employed 12,212 workers. A decrease had been registered on September 1, 1930, but the index was then much higher than on the date under review.

Textile Products.—Increases were noted in textile factories, 739 of which had 76,481 employees, as against 75,609 on August 1. Most of the advance took place in Quebec. Garment and personal furnishing and silk factories registered the bulk of the gain, while woollen and miscellaneous textile mills were slacker. Employment on the same date last year was in somewhat greater volume; the increase then reported had, however, involved a smaller number of workers.

Tobacco, Distilled and Malt Liquors.—Considerable improvement occurred in this industry on September 1, when 344 persons were added to the payrolls of the 145 co-operating factories, which employed 15,210 operatives. Large seasonal gains were reported in tobacco factories, but beverage plants were rather slacker. The level of employment was lower than at the beginning of September, 1930, when a slight decline had been indicated in the group as a whole.

Chemical Products.—Employment in this division showed an advance, according to statistics from 133 employers of 8,082 persons, compared with 7,923 on August 1. The situation was not so favourable as on the same date a year ago.

Clay, Glass and Stone Products.—Stone works released employees, while the glass division showed some improvement. Statements were received from 166 plants, having 11,152 workers, as against 11,408 in the preceding month. A smaller reduction had been noted on the same date last year, and the index then was considerably higher.

Electric Current.—Greater activity was shown in electric current plants, 93 of which employed 16,172 persons, compared with

16,004 in their last report. The improvement took place chiefly in Quebec. The index was very slightly lower than on September 1, 1930.

Electrical Apparatus.—Employment in this group increased at the beginning of September, when 209 workers were added to the forces of the 75 co-operating establishments, which had 14,715 employees. This gain occurred mainly in Ontario; it was not so large as that noted on the corresponding date in 1930, when the index was above its level at the time of writing.

Iron and Steel Products.—The agricultural implement, railway car, rolling mill, structural iron and steel and some other branches of the iron and steel group recorded contractions in employment, while automobile, shipbuilding and heating appliance factories were busier. There was a reduction of 1,346 in the forces of the 730 co-operating iron and steel manufacturers, who employed 103,221 persons at the beginning of September. Activity was curtailed in all except the Maritime Provinces, but chiefly in Ontario. The trend on September 1, 1930, was decidedly unfavourable, but the index number then was much higher than on the date under review.

Non-Ferrous Metal Products.—The precious metal division reported heightened employment, while smelting and refining showed considerable curtailment; 124 manufacturers in the groups as a whole employed 16,562 operatives, as against 17,105 on August 1. Gains had been indicated on the same date last year, when activity was greater.

Mineral Products.—Employment in this group showed a further increase, according to statements from 95 establishments with 12,943 persons on their payrolls, as against 12,669 at the beginning of August. Quebec and Ontario reported most of the improvement. The index was lower than on September 1, 1930, although contractions had then been noted.

Logging

Employment in logging camps showed a slight seasonal increase at the beginning of September, according to the 215 co-operating firms, whose payrolls aggregated 8,254 workers, compared with 7,716 in the preceding month. The number employed in the bush was smaller than in any other year on record.

Mining

Coal.—Data were received from 80 operators having 24,220 men on their payrolls, as compared with 23,821 at the beginning of August. The Western coal-fields reported the expan-

sion, which involved a smaller number of workers than that registered on the same date a year ago, when the index number was higher.

Metallic Ores.—Employment in metallic ore mines showed a slight falling-off, according to returns from 62 firms whose forces declined from 16,700 persons on August 1, to 16,534 at the beginning of September. A contraction had also been shown on September 1, 1930, when the index number was slightly lower.

Non-Metallic Minerals (other than coal).—Further gains were reported in this group, in which 77 firms enlarged their staffs by 306 workers to 6,592 on September 1. Practically all the improvement took place in Quebec. A minor decrease had been noted on the corresponding date last year, but the level of employment was then higher.

Communications

Practically no change was noted in the communications division, in which the companies reporting employed 27,458 workers. Employment continued in smaller volume than on the same date in 1930, when a slight reduction had been indicated.

Transportation

Street and Electric Railways and Cartage.—Very little change was shown in local transportation on the date under review, when the 160 employers furnishing data reported 24,628 workers, or almost the same number as in the preceding month. There were increases in the Prairie Provinces, but declines in Quebec and Ontario. The index number was several points lower than at the beginning of September, 1930, when a considerable gain was indicated.

Steam Railways.—There was a further decrease in the number employed in steam railway operation on September 1, according to the 102 companies and branches from which returns were received, and which had 71,456 employees, compared with 71,871 on August 1. Employment was at a lower level than on the same date last year, when improvement had been noted. Comparatively small losses were reported at the beginning of September in all provinces except British Columbia, where there was a minor gain.

Shipping and Stevedoring.—There was an increase in employment in water transportation, in which activity was, however generally less than on the same date in 1930. Statements were received from 85 employers of 17,468 workers, as against 16,976 in the preceding month.

Construction and Maintenance

Building.—A falling-off was noted in building construction, in which employment was slacker than in the late summer of 1930. Data were received from 721 contractors, whose pay-rolls declined from 47,271 on August 1, 1931, to 46,339 persons on the date under review. The trend was favourable in the Maritime Provinces, but there were losses in Quebec, Ontario and the Prairie Provinces.

Highway.—There was a very pronounced increase in this group, 17,879 men being added to the forces of the 355 co-operating employers, who had 114,055 workers; there were losses in all provinces except Quebec and Saskatchewan, in both of which important road construction programs were under way for the relief of unemployment. Activity was greater than on September 1 in any other year on record.

Railway.—A decrease in employment was indicated by the 50 firms furnishing data in this division, who employed 38,679 persons, as against 40,079 in the preceding month. Improvement was reported in the Prairie Provinces, but elsewhere there were losses. Heightened activity had been noted on the corresponding date of 1930, but the index number then was many points higher.

(2) Unemployment in Trade Unions at the Close of August, 1931

The term unemployment as used in the following report has reference to involuntary idleness, due to economic causes. Persons who are occupied in work other than their own trades, or who are idle owing to illness, are not considered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The present article on unemployment among members of local trade unions deals with the situation at the end of August, and is based on the returns tabulated by the Department of Labour from 1,833 local unions, representing 197,863 members. Of these 31,247, or a percentage of 15.8 were without employment on the last day of the month, compared with 16.2 per cent of inactivity in July. Conditions were largely depressed from August a year ago, when 9.3 per cent of the members involved were idle. The unemployment volume in the various provinces changed but slightly from July, Saskatchewan, Ontario, Alberta and

Services

There was a moderate increase in the service group, in which business this year has not been so brisk as in 1930. The 279 establishments furnishing returns for September 1, 1931, reported 24,751 assistants, as against 24,637 on August 1.

Trade

There was a decrease in the staffs of retail establishments, while a slight gain occurred in wholesale trade; employment in this group continued at a rather lower level than in the late summer of last year, when improvement had been recorded. Returns were received from 833 establishments employing 86,355 persons, compared with 86,529 at the beginning of August, 1931.

Tables

Index numbers of employment by economic areas, leading cities and industries, are given in the accompanying tables, in which the columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on the date under review.

Quebec unions reporting an upward employment trend, while in Nova Scotia, Manitoba, New Brunswick and British Columbia slight curtailment of activity was noted. All provinces shared substantially in the unemployment increase shown from August of last year, the contractions in Alberta and Manitoba being particularly heavy.

Each month a separate tabulation is made of unemployment in the largest city in each province, with the exception of Prince Edward Island. The unemployment percentage in Halifax during August exceeded by over 5 per cent that shown in July. In Edmonton also moderate employment curtailment was registered, and declines on a smaller scale were shown by Saint John, Montreal and Winnipeg unions. Toronto, Vancouver and Regina unions, however, reported a higher level of activity than in July. Extensive increases in slackness from August a year ago were recorded by Winnipeg, Vancouver, Saint John, Toronto, Montreal and Halifax unions, and in Regina and Edmonton recessions of lesser degree, though noteworthy, were indicated.

Accompanying this review is a chart which shows the trend of unemployment by months from January, 1925, to date. The projection

of the curve during August was downward from that of July, indicating some improvement in the employment volume afforded. A sharp rise in the curve, however, was shown from August a year ago when conditions were less depressed than in the period surveyed.

A slightly higher volume of employment was afforded workers in the manufacturing industries during August than in the previous month, according to the reports tabulated from an aggregate of 493 local unions, with 57,238 members. Of these 8,041 were idle on the last day of the month, a percentage of 14.0 in contrast with 16.1 per cent of unemployment in July. Pronounced increases in activity were registered by hat and cap work-

ers all reported a much better situation during the month reviewed. Paper makers, garment, iron and steel, and metal polishers, on the other hand, reported large increases in slackness, and noteworthy declines in activity were registered by fur, hat and cap workers, and bakers and confectioners. The situation for printing tradesmen also declined moderately, and nominal recessions were indicated by cigarmakers.

Among coal miners the same percentage of idleness was maintained during August as in the preceding month, namely 17.5, though fluctuations were apparent in the various provinces. The August percentage was based on the returns received by the Department of

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

ers and metal polishers from July, which, however, had little effect upon the percentage for the group as a whole, as these workers formed a very small share of the total membership in the manufacturing industries. The change in the garment trades from July was slight, with a tendency toward greater activity. In the iron and steel trades some employment expansion was noted and better conditions prevailed for glass and leather workers, papermakers and cigarmakers. On the contrary, textile and wood workers, bakers and printing tradesmen suffered some curtailment in available employment. Among general labourers the situation remained uncharged from July. In making a comparison with the returns for August, 1930, in the manufacturing industries, when the unemployment percentage stood at 8.0, textile, leather, glass and general labour-

Labour from 49 unions of these workers, embracing a membership of 19,443 persons. In Alberta unemployment eased off slightly from July, though conditions still remained slack, and in Nova Scotia and British Columbia a slightly lower level of activity was indicated. Employment was largely curtailed from August of last year when 6.6 per cent of the miners reported were without work, the recessions being largely confined to the miners of Alberta, though in Nova Scotia and British Columbia also the employment movement was less favourable.

Activity in the building and construction trades continued at a low level during August, with slight employment, losses from July. This was manifest by the returns tabulated for August from 264 unions of building tradesmen with 27,002 members, 11,207 or a percentage

of 41.5 of whom were idle on the last day of the month, in contrast with a percentage of 39.9 in July. A lower level of employment from July was indicated in all trades, the most extensive declines and which ranged around 4 per cent, being recorded by granite and stonecutters, hod carriers and building labourers, tile layers, lathers and roofers, painters, decorators and paper hangers, and bridge and structural iron workers. Among electrical workers and bricklayers, masons and plasterers the recessions indicated were slight, while curtailment of less than 1 per cent oc-

cured among carpenters and joiners, and plumbers and steamfitters. Important recessions in employment were registered in the building trades from August a year ago when 28.8 per cent of the members recorded were idle, all tradesmen with the exception of hod carriers and building labourers showing large increases in slackness, while among these workers the situation was substantially better.

The transportation industries with 779 unions reporting 68,655 members in August, indicated 9.5 per cent of idleness on the last day of the month in contrast with 8.9 per cent in July. The percentage of unemployment for August also exceeded that shown in the corresponding month a year ago when 5.0 per cent of inactivity was recorded. Steam, and street electric railway employees, navigation workers, and teamsters and chauffeurs all contributed a share to the slight increase in idleness shown from July. Responsibility for the adverse situation indicated in the transportation industries from August last year rested largely with steam railway employees, though activity for teamsters and chauffeurs and street and electric railway employees was also at a lower level. Navigation workers, however, were slightly better engaged than in August, 1930.

Retail clerks reported a fractional unemployment increase during August over the previous month as shown by the returns tabulated from 5 associations with 1,296 members. Of these 32 were idle on the last day of the month, a percentage of 2.5, contrasted with 2.0 per cent of inactivity in July. In August last year all members were reported busy.

Civic employees in all three months used here for comparison reported a high level of activity, the 70 unions from which reports were tabulated in August, with a total of 7,612 members, showing .1 per cent of unemployment, contrasted with .3 per cent in July and .5 per cent in August a year ago.

The employment situation in the miscellaneous group of trades during August remained practically the same as in the previous month, according to the reports tabulated from 124 unions, embracing 6,025 members. Of these 1,137 or a percentage of 18.9 were unemployed on the last day of the month in contrast with 19.0 per cent in July. Activity for hotel and restaurant employees showed a noteworthy increase from July, and among theatre and stage employees, barbers and unclassified workers, the gains in employment were fractional only. Stationary engineers and firemen reported little change in conditions from July, with a slight tendency toward

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Pr. Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada

greater unemployment. A noteworthy drop in the volume of work afforded was shown in the miscellaneous group of trades from August of last year when 12.4 per cent of the members reported were without employment, stationary engineers and firemen, and theatre and stage employees being particularly depressed. Reductions on a smaller scale were registered by hotel and restaurant employees and barbers. Unclassified workers, on the other hand, were much better employed than in August last year.

The 3 unions of fishermen from which returns were tabulated during August including 1,305 members, indicated 7.7 per cent of inactivity, compared with percentages of 1.5 in the previous month and 1.2 in August last year.

(3) Employment Office Reports for August, 1931

During the month of August, 1931, reports from the offices of the Employment Service of Canada showed declines in the average daily placements of five per cent from those of the preceding month, and of twenty-six per cent from those effected during the corresponding month a year ago. The loss in the former instance was largely due to decreased placements in construction and maintenance, and in the latter case to a decline in farming. The only gain over July was registered in farming, all other industrial divisions showing losses, except transportation, which remained unchanged. Construction and maintenance alone recorded a gain over August, 1930, the heaviest declines, other than that in farming, occurring in services, manufacturing, transportation and logging.

The accompanying chart shows the trend of employment since January, 1929, as represented by the ratio of vacancies notified and of placements effected for each one hundred applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. It will be seen that the curve of vacancies and of placements in relation to applications declined throughout the month, though during the latter half of the period the downward trend was very slight. At the close of August, however, the curve of vacancies was 33 points below that shown at the end of August, 1930, and the curve of placements nearly 31 points lower than the level recorded for the corresponding period last year. The ratio of vacancies to each one hundred applications was 38.0 during the first half and 37.2 during the second half of August, 1931, in contrast

Further reductions occurred among lumber workers and loggers during August, as shown by the reports received from 4 unions with 764 members. Of these 289, or a percentage of 37.8 were idle on the last day of the month, compared with a percentage of 33.8 in July. Activity for these workers was largely curtailed from August a year ago when 18.8 per cent of unemployment was recorded.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1930 inclusive, and also the percentages of unemployment by provinces for August of each year from 1919 to 1928 inclusive, and for each month from January, 1929, to date. Table II summarizes the returns in the various groups of industries for the same months as in table I.

with the ratios of 67.6 and 70.4 during the corresponding periods of 1930. The ratios of placements to each one hundred applications during the periods under review were 36.2 and 35.8 as compared with 64.7 and 66.6, respectively, during the corresponding month of 1930.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during August, 1931, was 1,032 as compared with 1,078 during the preceding month, and with 1,407 in August a year ago.

The average number of applications for employment received daily by the offices of the Service during the month under review was 2,746, in comparison with 2,550 in July, 1931, and with 2,037 during August last year.

The average number of placements made daily by the offices of the Service during August, 1931, was 987, of which 478 were in regular employment and 509 in work of one week's duration or less, as compared with the total daily average of 1,039 during the preceding month. Placements in August a year ago averaged 1,339 daily, consisting of 958 placements in regular and 381 in casual employment.

During the month of August, 1931, the offices of the Service referred 27,223 persons to vacancies and effected a total of 25,662 placements. Of these, the placements in regular employment were 12,434 of which 8,930 were of men and 3,504 of women, while placements in casual work totalled 13,228. The number of vacancies reported by employers was 19,314 for men and 7,495 for women, a total of 26,809, while applications for work

numbered 71,383 of which 59,754 were from men and 11,629 from women.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1921, to date:—

Year	Placements		
	Regular	Casual	Totals
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552
1924.....	247,425	118,707	366,132
1925.....	306,804	106,021	412,825
1926.....	300,226	109,929	410,155
1927.....	302,723	112,046	414,769
1928.....	334,604	135,724	470,328
1929.....	260,747	137,620	398,367
1930.....	187,872	180,807	368,679
1931 (8 months).....	95,526	201,043	296,569

ation and logging being the largest. Placements by industrial groups included: construction and maintenance, 235; trade, 35, and service 315, of which 236 were of household workers. During the month regular employment was found for 239 men and 61 women.

NEW BRUNSWICK

There was a gain of over 13 per cent in the number of positions offered through Employment Offices in New Brunswick during August, when compared with the preceding month and of over 11 per cent in comparison with the corresponding month of last year. Placements also were nearly 14 per cent higher than in July and over 13 per cent above August, 1930. The gain in placements over August of last year was due to orders re-

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

NOVA SCOTIA

During the month of August, 1931, positions offered through Employment Offices in Nova Scotia were over 6 per cent less than in the preceding month and over 24 per cent below the corresponding month of last year. There was a decline of nearly 5 per cent in placement when compared with July and of nearly 24 per cent in comparison with the corresponding month of last year. All industrial divisions, except construction and maintenance and farming, participated in the decline in placements from August, 1930, those in transport-

ceived for firefighters and, with this exception, placements in all industrial divisions showed little change from August, 1930. Services, in which 667 placements were effected, accounted for the majority of the positions secured for applicants during the month. There were also 49 placements in the logging industry. Placements in regular employment numbered 79 for men and 51 for women.

QUEBEC

The demand for workers, as indicated by orders received at Employment Offices in the

* 84 placements effected by offices since closed.

Province of Quebec during August, was over 13 per cent higher than in the preceding month, and over 11 per cent above the corresponding month of last year. There was a gain of nearly 23 per cent in placements over July and of over 11 per cent in comparison with August, 1930. Substantial gains under construction and maintenance and services accounted for the increase in placements over August last year, but were offset in part by a large reduction in logging placements. Declines also were recorded in manufacturing, farming and transportation. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 76; logging, 199; construction and maintenance, 556; and services 756, of which 563 were of household workers. During the month 879 men and 577 women were placed in regular employment.

ONTARIO

During August, 1931, orders received at Employment Offices in Ontario called for nearly 11 per cent fewer workers than in the preceding month, but were over 3 per cent in excess of the corresponding month of last year. There was a reduction in placements of over 12 per cent when compared with July, but a gain of nearly 5 per cent in comparison with August, 1930. The increase in placements over August of last year was due to gains in farming and construction and maintenance. Of the declines in all other groups, those in services, manufacturing and transportation were the largest. Placements effected by industrial groups included: manufacturing, 740; logging, 174; farming, 1,590; transportation, 111; construction and maintenance, 3,054; trade, 289; and services, 3,634, of which 1,936 were of household workers. During the month, regular employment was found for 2,671 men and 1,467 women.

MANITOBA

Orders listed at Employment Offices in Manitoba during August called for nearly 40 per cent more workers than those of the preceding month, but there was a decline of over 36 per cent from the total of the corresponding month last year. There was an increase of nearly 39 per cent in placements when compared with July, but a decrease of nearly 38 per cent in comparison with August, 1930. Construction and maintenance was the only industrial division in which more placements were made during the month under review than in August of last year. This gain was due to work provided in relief of unemployment. Of the declines, those in farming were very heavy and exceeded the net

decreases in all groups. Services was the only other division to show a large reduction in placements. Industrial divisions in which most of the placements were effected were: manufacturing, 42; farming, 1,471; construction and maintenance, 1,290; trade, 95, and services, 1,283, of which 816 were of household workers. There were, during the month, 1,604 men and 407 women placed in regular employment.

SASKATCHEWAN

Opportunities for employment, as indicated by orders received at Employment Offices in Saskatchewan during August, were 40 per cent higher than in the preceding month, but nearly 70 per cent less favourable than in the corresponding month last year. Placements increased nearly 38 per cent when compared with July, but declined nearly 68 per cent in comparison with August, 1930. All industrial divisions participated in the declines in placements from August last year, that in farming being particular heavy and accounted for more than 70 per cent of the reduction. Of the losses in all other divisions, those in construction and maintenance and services were the largest. Placements by industrial groups included: farming, 925; construction and maintenance, 650; and services, 766, of which 514 were of household workers. During the month regular employment was secured for 1,046 men and 373 women.

ALBERTA

There was a decrease of about 35 per cent in both the number of positions offered and placements effected through Employment Offices in Alberta during August, when compared with the preceding month, and of about 32 per cent in comparison with the corresponding month last year. As in Manitoba and Saskatchewan, farm placements were very much below those of August, 1930, and were mainly responsible for the large reduction under this comparison. Construction and maintenance was, however, the only group in which there was any gain, but losses in other divisions were not large. Industrial groups in which employment was found for the majority of workers included: farming, 1,194; construction and maintenance, 1,373; and services, 609, of which 443 were of household workers. Placements in regular employment were found for 2,044 men and 342 women.

BRITISH COLUMBIA

Employment opportunities, as indicated by orders received at Employment Offices in British Columbia during August, were about 12 per cent less favourable than during both

the preceding month and the corresponding month last year. Corresponding declines were recorded in placements under both comparisons. There was a large increase in placements in construction and maintenance when compared with August, 1930, but this gain was offset by losses in all other industrial divisions. Of the declines, those in services and manufacturing were the largest. Placement by industrial divisions included: manufacturing, 73; farming, 119; construction and maintenance, 1,828; and services, 874, of which 355 were of household workers. During the month 368 men and 226 women were placed in regular employment.

Movement of Labour

During the month of August, 1931, the offices of the Employment Service of Canada made 12,434 placements in regular employment, 6,641 of which were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 403 were granted the Employment Service reduced transportation rate, 357 going to points within the same province as the despatching office and 46 to other provinces. The reduced transportation rate, which is 2.7 cents per mile with a minimum fare of \$4.00, is granted by the railway companies to bona fide applicants at the Employment Service who desire to travel to distant employment for which no workers are available locally.

The reduced rate certificates issued in Quebec during August were granted at the Hull office which transferred 10 to Pembroke.

Taking advantage of the reduced transportation 65 persons secured certificates at Ontario centres during August, 63 of whom travelled to provincial points and 2 outside the province. The latter were salesmen journeying from Fort William to Winnipeg. Proceeding from Sudbury 6 mine workers went to Sault Ste. Marie and 25 bushmen, one saw mill worker, one cook and one cookee to points within the Sudbury zone. From Cobalt 7 miners and one power dam labourer were conveyed to Timmins, one carpenter to Peterborough and one mine worker to Port-Arthur. To the Timmins' zone also 2 pipe fitters, one rock driller, one carpenter and one concrete inspector were transferred from Niagara Falls. For employment within their respective zones Port Arthur despatched 10 bushmen, and Fort William one carpenter and 2 cooks. Destined to the Port Arthur zone in addition was one hotel chef, travelling from Toronto.

In Manitoba 116 persons availed themselves of the reduced transportation rate during

August, 96 of whom went to employment within the province, the balance representing an inter-provincial movement. The Winnipeg office was instrumental in all provincial transfers, despatching 3 farm domestics to the Brandon zone and 83 farm hands, 3 teamsters, 4 painters, one cookee, one mine worker, and one store clerk to centres within its own zone. Of the 20 persons proceeding to other provinces 19 travelled on certificates secured at Winnipeg and included 3 farm hands, one farm domestic, and one cafe cook going to Port Arthur, one hotel waitress and one domestic to Regina, and 12 farm workers to employment at various rural points in Saskatchewan. The one remaining transfer was of a farm hand sent from Dauphin to the Moose Jaw zone.

Saskatchewan offices granted 86 reduced rate certificates during August, 84 provincial and 2 inter-provincial. Of the former 58 were issued at Regina to 32 highway construction labourers going to Prince Albert, 3 farm hands and one blacksmith to Saskatoon, one millwright and one housekeeper to North Battleford, 3 farm hands and one farm domestic to Moose Jaw, one farm hand to Yorkton, one janitor, one farm worker, and one housekeeper to Swift Current, and 11 farm hands and one domestic within the Regina zone. From Saskatoon the transfers included one farm worker and one farm domestic proceeding to North Battleford, one domestic to Prince Albert, 2 farm hands to Yorkton and 8 farm hands and one domestic to points within the Saskatoon zone. Journeying from Moose Jaw 2 sheet metal workers, one farm hand and one housekeeper were bound for Saskatoon, 2 farm hands for North Battleford, one farm hand for Prince Albert and 4 farm hands and one town domestic for employment within the Moose Jaw zone. Of the two persons travelling outside the province one, a farm hand, was despatched from Moose Jaw to Lethbridge and one, a domestic, was conveyed from Regina to Winnipeg.

Workers benefiting by the reduced transportation rate in Alberta during August were 110 in number, 99 of whom went to provincial employment and 11 to centres outside. Within the province the Edmonton office transferred 5 farm hands to Drumheller, one farm hand each to Calgary and Medicine Hat, and 65 farm hands, 6 farm housekeepers, 2 carpenters, 5 highway construction workers, one miner, 2 bushmen, 3 housekeepers, 2 hotel workers, one engineer, one cook and one waitress within the Edmonton zone. From Calgary, in addition, 2 harvesters were carried at the reduced rate to Edmonton and one farm hand to Drumheller. The movement

outside the province was of agricultural workers travelling from Edmonton, 9 of whom went to the Saskatoon zone and 2 to North Battleford.

Reduced rate certificates were granted by British Columbia offices during August to 16 persons, 15 of whom were bound for employment within the province. All of these secured their certificates for reduced transportation at Vancouver, from which point one farm hand, one mine worker, and 2 farm housekeepers proceeded to Penticton, one hotel cook to Vernon, one flunkey and one cook to

Revelstoke and 4 bush workers, 3 mine workers and one farm hand to centres within the Vancouver zone. The one transfer outside the province was of an engineer travelling from Nelson to Calgary.

Of the 403 workers who profited by the Employment Service reduced transportation rate during August 209 travelled by the Canadian National Railways, 176 by the Canadian Pacific Railway, 10 by the Temiskaming & Northern Ontario Railway, 5 by the Northern Alberta Railway and 3 by the Pacific Great Eastern Railway.

(4) Building Permits Issued in Canada During August, 1931

There was a seasonal decline in the value of the building permits issued during August, 1931, as compared with July, while in comparison with August last year, there was also a considerable reduction; during the month under review, the 61 co-operating centres authorized building estimated to cost \$8,224,074, as compared with \$10,879,505 in July, 1931, and \$14,029,564 in August, 1930. There was, therefore, a decrease of 24.4 per cent in the first comparison, and of 41.4 per cent in the second. The aggregate value of the building authorized in the first eight months of this

year, viz., \$76,575,853, was lower than in 1930, and also than in most years of the record. In considering these data, however, it should be noted that there has also been a very significant decline in wholesale costs of building materials, the Bureau's index, based on the 1926 average as 100, having fallen from 156.3 in the first eight months of 1920, to 83.4 in the period, January-August, 1931.

Some 50 cities furnished detailed statistics showing that they had issued about 1,000 permits for dwellings estimated to cost nearly \$3,900,000, and over 2,000 permits for other

buildings valued at more than \$3,900,000. During July, authority was granted for the erection of some 1,000 dwellings and 2,600 other buildings, estimated at about \$4,300,000 and \$6,300,000 and \$6,300,000, respectively.

Nova Scotia, New Brunswick, Saskatchewan and Alberta reported gains as compared with July, 1931, that of \$285,851, or 97.9 per cent in Alberta being most noteworthy. Of the reductions elsewhere indicated, that of \$1,441,749 or 36.2 per cent in Quebec was greatest.

New Brunswick and Alberta reported a higher aggregate of building permits issued than in August last year, there being increases of 170.8 per cent and 17.3 per cent, respectively, in those provinces, as compared with August, 1930. Declines in this comparison were recorded in the remaining provinces, that of \$2,302,624 or 39.9 per cent in Ontario being most pronounced.

Of the larger cities, Toronto showed improvement as compared with August, 1930, but the total was smaller than in July, 1931, while Montreal, Winnipeg and Vancouver reported decreases in both comparisons. Of the other centres, Sydney, Fredericton, Saint John, Three Rivers, Oshawa, Peterborough, St. Catharines, Sandwich, St. Boniface, Edmonton, Medicine Hat and Nanaimo registered gains in both comparisons.

Cumulative Record for First Eight Months, 1920-31.—The following table gives the value of the building authorized by 61 cities during August and in the first eight months of each year since 1920, as well as index numbers for the latter, based upon the total for 1920 as 100. The average index numbers of wholesale

prices of building materials in the first eight months of the years since 1920 are also given (average 1926=100).

Year	Value of permits issued in August	Value of permits issued in first eight months	Indexes of value of permits issued in first eight months (1920=100)	Average Indexes of wholesale prices of building materials in first eight months (1926 average=100)
	\$	\$		
1931.....	8,224,074	76,575,853	88.7	83.4
1930.....	14,029,564	115,268,330	133.6	93.4
1929.....	21,582,221	168,894,072	195.7	99.6
1928.....	17,448,542	145,247,485	168.3	97.5
1927.....	29,478,378	126,690,292	146.8	96.8
1926.....	11,672,599	109,211,942	126.5	101.7
1925.....	9,511,008	88,223,328	102.2	104.3
1924.....	9,406,733	81,762,083	94.7	109.1
1923.....	11,425,031	97,551,074	113.0	111.7
1922.....	18,158,932	105,181,416	121.9	108.4
1921.....	10,928,039	77,665,614	90.0	128.6
1920.....	10,805,846	86,303,601	100.0	156.3

The aggregate for the first eight months of this year was 33.6 per cent lower than in 1930, and was also lower than the average of \$109,272,658 recorded in the eleven years, 1920-1930, while the average index number of wholesale prices of building materials was much lower than in any other year of this record. During August, the index of wholesale prices of building materials stood at 82.1, compared with 87.8 in August, 1930.

The accompanying table gives the value of building permits issued by 61 cities during July and August, 1931, and August, 1930. The 35 cities for which records are available since 1910 are marked by asterisks.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary showing the employment situation during August, 1931, is reproduced below. The following report on unemployment conditions in the United States is based on the statistics published by the United States Department of Labour, showing the recent trend of employment throughout the country. The employment situation in the United States is further indicated by unemployment percentages based on statistics compiled each month by the American Federation of Labor,

the source of these statistics being returns obtained from the trade union locals in 24 representative cities. Summary figures for August, 1931, and previous months are reproduced below.

Great Britain

Employment during August showed a further decline in a number of important industries, but this was offset to a large extent by an improvement in coal mining. The net decline, in industry as a whole, was therefore small.

A decline occurred in the brick and tile, glass, iron and steel, tinplate and motor vehicle industries, in shipbuilding and ship-repairing, in the textile trades except linen, jute and hosiery, in the clothing and distribu-

tive trades, and in building and public works contracting.

There was some improvement, however, in coal mining, in jute manufacture, and in the boot and shoe industry.

Employment showed little net change in any of the administrative divisions; it remained moderate in London and the Southern areas, and very bad in all other areas.

Among the workpeople, numbering approximately 12,400,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at August 24, 1931 (including those temporarily stopped as well as those wholly unemployed), was 22·7, as compared with 22·6 at July 27, 1931, and with 17·1 at August 25, 1930. The percentage wholly unemployed at August 24, 1931, was 17·3, as compared with 16·7 at July 27, 1931; while the percentage temporarily stopped was 5·4, as compared with 5·9. For males alone the percentage at August 24, 1931, was 23·7, and for females 20·0; at July 27, 1931, the corresponding percentages were 23·8 and 19·5.

At August 24, 1931, the numbers of persons on the Registers of Employment Exchanges in Great Britain were 1,958,395 wholly unemployed, 661,829 temporarily stopped, and 113,558 normally in casual employment, making a total of 2,733,782. This was 20,432 more than a month before, and 694,080 more than a year before. The total included 1,986,268 men, 75,908 boys, 610,729 women, and 60,877 girls.

The 1,958,395 wholly unemployed included approximately 1,310,690 insured persons who had paid at least 30 contributions during the preceding two years, and therefore satisfied the full contributions condition for the receipt of unemployment benefit; 539,390 insured persons who had paid less than 30 contributions during the preceding two years; and 108,320 uninsured persons. The wholly unemployed claimants for benefit, numbering 1,774,734, included 257,245 men, 6,191 boys, 56,448 women and 3,200 girls, who had been on the Register for less than one month.

In Great Britain and Northern Ireland the total number of persons on the Register of Employment Exchanges at August 24, 1931, was 2,805,416, and at August 31, 1931, it was 2,833,722.

United States

The Bureau of Labour Statistics of the U.S. Department of Labour reports the changes in employment and pay-roll totals in August, 1931, as compared with July, based on returns made by 46,917 establishments in 15 major

industrial groups, having in August 4,583,275 employees, whose combined earnings in one week were \$105,527,491.

The combined total of these 15 industrial groups shows a decrease of 0·3 per cent in employment from July to August and a decrease of 1·1 per cent in earnings.

Increased employment in August was shown in 3 of the 15 industrial groups: Anthracite mining, 3·4 per cent; bituminous coal mining, 0·8 per cent; and canning and preserving, 39·8 per cent.

Decreased employment was shown in each of the remaining 12 groups: Manufacturing, 0·6 per cent; metalliferous mining, 0·8 per cent; quarrying and non-metallic mining, 3·0 per cent; crude petroleum producing, 4·5 per cent; telephone and telegraph, 0·8 per cent; power, light, and water, 0·8 per cent; electric-railroad operation, 0·9 per cent; wholesale trade, 0·3 per cent; retail trade, 2·5 per cent; hotels, 0·5 per cent; laundries, 1·7 per cent; and dyeing and cleaning, 5·2 per cent.

Unemployment Percentage.—Since the fall of 1927, the American Federation of Labor has compiled statistics each month which indicate the percentage of unemployed union members in 24 representative cities of the United States. These figures are included in the monthly review of industrial and economic conditions which is given in the *Monthly Survey of Business*, published by the Federation. In August, 1928, the proportion of unemployed union members was 9 per cent; in August, 1929, 9 per cent; in August, 1930, 22 per cent; in August, 1931, 18·4 per cent. The percentages since the beginning of 1931 are as follows: January, 19·8; February, 19; March, 18·1; April, 17·7; May, 17·1; June, 18·2; July, 18·8; August, 18·4.

According to an estimate by the American Federation of Labor, approximately 5,100,000 wage earners were unemployed in the United States during August.

The Dominion Bureau of Statistics has undertaken an inquiry into the household and personal expenditures of representative groups of Dominion civil servants, this information being desired by the Commission now engaged in investigating the salaries and wages paid to government employees (LABOUR GAZETTE, June, 1930, page 619). It is pointed out that no such information now exists in regard to any class of workers in Canada, and that the results of the inquiry may have general statistical value. Individual civil servants will be asked to fill forms giving details of their expenditures under the headings of clothing, food, rent, fuel, etc.

FAIR WAGE SCHEDULE FOR MANITOBA, 1931-1932

UNDER the provisions of Section 10 of Chapter 69, Consolidated Amendments, 1924, being "An Act to Establish and Protect the Wages of Workmen Employed on Public Works," the Minister of Public Works of Manitoba has approved of the rate per hour and working hours set forth in the following schedule, as the minimum rate per hour payable to any employee engaged in the respective trades, and the maximum number of hours during which an employee engaged in the respective trades shall be required to work. The schedule will apply and be effective from September 14, 1931, until April 30, 1932, or until such times as another order may be made by the said Minister of Public Works. The previous schedule for Winnipeg, effective from May 1, 1930, until April 30, 1931, was given in the LABOUR GAZETTE, June, 1930, page 713.

As compared with last year's schedule, decreases appear in the rates of wages of the following classes of labour:—

In Winnipeg and District:—Asbestos workers, journeymen from 95 to 85 cents; improvers 75 to 70 cents; bricklayers from \$1.45 to \$1.35; carpenters from \$1.10 to \$1; electrical workers from \$1.10 to \$1; marble setters from \$1.40 to \$1.30; mosaic and tile setters from \$1.35 to \$1.25; engineers in charge of machines of three drums or more, from \$1.20 to \$1.10; engineers in charge of double-drum machines, from \$1.10 to \$1; engineers in charge of single-drum machines, from \$1.05 to \$1; firemen from 75 to 70 cents; painters from 95 to 85 cents; sheet metal workers from 90 to 85 cents; stone cutters from \$1.25 to \$1.15.

In the rest of the Province of Manitoba (exclusive of Winnipeg):—Asbestos workers, journeymen from 90 to 80 cents; improvers from 75 to 70 cents; bricklayers, from \$1.35 to \$1.25; carpenters from \$1 to 90 cents; electrical workers from \$1 to 90 cents; marble setters, from \$1.30 to \$1.20; mosaic and tile setters, from \$1.25 to \$1.15; engineers in charge of machines of three drums or more, from \$1.10 to \$1; engineers in charge of double-drum machines, from \$1 to 90 cents; engineers in charge of single-drum machines, from 95 to 90 cents; painters from 85 to 80 cents; plumbers, from \$1.12½ to \$1.05; sheet metal workers from 80 to 75 cents and stonecutters, from \$1.10 to \$1.

(c) Carpenters on hydro electric development.....	0 85	..
7. Cement finishers.....	0 70	50

*Subject to any adjustment which may be necessary should an agreement between the employees and employers be effected prior to May 1, 1932.

NOTE.—All men hired in Winnipeg to go into the country to work on buildings shall be paid the city schedule, excepting where other agreements for specific work are in effect.

Proposed Economic Congress in United States

A proposal to establish a National Economic Congress in the United States was recently submitted to American industry by Matthew Woll, vice-president of the American Federation of Labor. Many of the major industries were later reported to be in favour of establishing such a congress, which would be composed of representatives of all existing forms of industrial organization and would estimate economic and industrial factors and draw up a plan for co-ordinating industrial activities for a definite period. Simultaneously with Mr. Woll's proposal, the United States Chamber of Commerce sent out

a questionnaire seeking to ascertain the views of American business leaders as to the feasibility of setting up a permanent council to formulate a plan for regulating employment and business. The questionnaire, which contains nine questions, was sent to about 200 trade association leaders; it asked *inter alia* whether the recipient considered that a planning council should be set up by a purely governmental authority or through the co-operation of Congress and business men, or by business men alone, and whether labour, agriculture, consumers, etc., should be represented.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

Reference was made in the *LABOUR GAZETTE*, June, 1930, page 652, to the Fair Wages and Eight-Hour Day Act of Parliament which was adopted on May 30, 1930. The text of this measure appeared in the April, 1930, issue page 383. This Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repair or demolition of any work shall be subject to the following conditions respecting wages and hours:—

- (a) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;
- (b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

(2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication or manufacture is carried on in any established plant or factory other than a plant or factory established for the purposes of the work contemplated.

The Act was put into effect at once as respects contracts for construction, remodelling, repair or demolition, both as to its provisions as to current and fair and reasonable rates of wages and as to the application of the eight-hour day.

With respect to contracts for other classes of work, the Fair Wages Policy of the Government of Canada, (which has been in effect since 1900 and was expressed in an Order in Council adopted June 7, 1922, and amended

April 9, 1924) requires that they must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above-mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are general accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on or if there be no custom of the trade as respect hours in the district then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour here-

under shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following Fair Wages Clause:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respect hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the Contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the

contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed claim therefore may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, those included under the "A" groups containing either fair wages schedules as shown below, or the General Fair Wages Clause above-

mentioned, and those coming under the "B" groups containing the Fair Wage Clause specified in the "B" conditions, as given above:—

DEPARTMENT OF NATIONAL DEFENCE

Contracts in Group "A" (Construction, etc.)

The completion of Hangar A. 3 at the Royal Canadian Air Force Training Station, Trenton, Ont., including concrete apron, concrete floors, stuccoing and plastering, glazing, plumbing, heating and electrical work. Name of contractors, Messrs. Quinte Construction Ltd., Trenton, Ont. Date of Contract, September 17, 1931. Amount of contract, \$50,960. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Bricklayers and masons.....	\$ 1 00	8
Bricklayers' and masons' helpers..	0 45	8
Plasterers.....	1 00	8

Driver, team and wagon.....	1 00	8

Dredging Little Cataraqui Bay at Kingston Elevator Company's Elevator, Kingston, Ont. Name of contractors, Russell Construction Co., Ltd., Toronto, Ont. Date of contract, September 14, 1931. Amount of contract, approximately \$66,399.16. The General Fair Wages Clause was inserted in this contract.

Contracts in Group "B" (Interior Fittings, etc.)

Construction and installation of interior fittings for public building at Kamsack, Sask. Name of contractors, Canadian Office & School Furniture Ltd., Preston, Ont. Date of contract, September 14, 1931. Amount of contract, \$1,128. The "B" labour conditions were inserted in this contract.

Construction and installation of interior fittings for public building at Lumsden, Sask. Name of contractors, Canadian Office and School Furniture Ltd., Preston, Ont. Date of contract, September 14, 1931. Amount of contract, \$978. The "B" labour conditions were inserted in the contract.

Construction and installation of interior fittings in the Post Office at Rodney, Ont. Name of contractors, The Interior Hardwood Co., Ltd., Kitchener, Ont. Date of contract, September 17, 1931. Amount of contract, \$781. The "B" labour conditions were inserted in the contract.

Construction and installation of interior fittings in the public building at Port Credit, Ont. Name of contractors, The Interior Hardwood Co., Ltd., Kitchener, Ont. Date of contract, September 4, 1931. Amount of contract, \$995. The "B" labour conditions were inserted in the contract.

Construction and installation of interior fittings in the public building at Middleton, N.S. Name of contractors, The Canadian Office and School Furniture Ltd., Preston,

Ont. Date of contract, September 14, 1931. Amount of contract, \$1,349. The "B" labour conditions were inserted in the contract.

DEPARTMENT OF RAILWAYS AND CANALS

Contract in Group "A" (Construction, etc.)

Guniting surface of certain walls of Port Colborne Elevator and marine towers and other work connected therewith, Port Colborne, Ont. Name of contractors, E. P. Muntz, Ltd., Toronto, Ont. Date of contract, September 23, 1931. Amount of contract, approximately \$11,557. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Nozzlemen.....	\$1 25	8
Assistant nozzlemen.....	0 60	8
Cement gunmen.....	0 85	8
Cement finisher.....	0 70	8
Labourer.....	0 40	8

POST OFFICE DEPARTMENT

Following is a statement of payments made in September, 1931, for supplies ordered by the Post Office Department under contracts which were subject to the regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages, and the performance of the work under proper sanitary conditions:—

<i>Making metal dating stamps and type, brass crown seals, cancellers, etc.</i> —Pritchard-Andrews Co., Ltd., Ottawa, Ont.	\$ 282 97
<i>Making and repairing rubber stamps, dater, etc.</i> —Pritchard-Andrews Co., Ltd., Ottawa, Ont.	128 44
<i>Making up and supplying letter carriers' uniforms</i> —Wm. Scully Ltd., Montreal, P.Q.	35 36
<i>Mail Bag Fittings</i> —	
F. W. Carling, Ottawa, Ont.	519 60
John Morrow Screw & Nut Co., Ingersoll, Ont.	730 12
Hamilton Cotton Co., Hamilton, Ont.	1,293 52
Baker Bros., Ottawa, Ont.	104 00
<i>Scales</i> —Pritchard-Andrews Co., Ltd., Ottawa, Ont.	140 00
<i>Stamping Ink and Pads</i> —	
J. E. Poole Co., Toronto, Ont.	170 45
Pritchard-Andrews Co., Ltd., Ottawa, Ont.	43 50

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing: Food, Drink and Tobacco

REGINA, SASKATCHEWAN.—BREWERS OF REGINA AND THE INTERNATIONAL UNION OF THE UNITED BREWERY, FLOUR, CEREAL AND SOFT DRINK WORKERS OF AMERICA, LOCAL No. 318.

Agreement to be in effect from July 2, 1931, to July 2, 1933. Either party desiring change to give 60 days notice prior to expiration date.

Only union members to be employed, if available. If none available, extra men may be employed and will be granted permit cards by the union. No discrimination to be shown employees for upholding union principles. The brewers are to give preference to union-made material and machinery if possible and if quality and price are the same.

Hours: 8 per day, 4 on Saturdays, a 44-hour week, except on days when bottling is done when 9 hours will be worked and 5 hours on Saturdays. Engineers to work 8 hours per day, 7 days per week with the exception of days when bottling is carried on when 9 hours will constitute a day's work.

Overtime: time and one-half; double time on Sundays and holidays.

Wages: firemen \$130 per month; truck driver \$140; night watchman \$90; machinist helper 65 cents per hour; other classes included: 40 cents for inexperienced men for first two months; 45 cents per hour for first year; 47½ cents for second and third year, 50 cents per hour after three years.

If necessary to reduce staff, the men will be laid off in rotation in each department in a fair and impartial way.

The union label will be supplied to firms observing the agreement.

The union reserves the right to discuss grievances with the management. No strike or lockout to occur until a dispute has been referred to an arbitration board consisting of three members of each party and a neutral chairman chosen by them.

Manufacturing: Textiles and Clothing

MONTREAL, QUEBEC.—CERTAIN HAT MANUFACTURERS AND THE CLOTH HAT, CAP AND MILLINERY WORKERS' INTERNATIONAL UNION, LOCAL No. 49.

This agreement was signed by certain employers and verbally accepted by others, following the strike reported in the LABOUR GAZETTE, September, page 977.

Agreement to be in effect from August, 1931, to August 15, 1932 and for another year unless notice of change is given by either party thirty days before August 15, 1932.

Only union members to be employed and they will be employed through the union. The firm will not give out any work to be made in a non-union shop.

Hours: 44 per week.

Except for the trial period, workers are to be paid by the week. The minimum wage for a qualified worker in the blocking department will be \$40 per week. At the beginning of each season a committee of the union will meet representatives of the firm to adjust wages of employees whose work has entitled them to such an adjustment.

When there is not sufficient work for full time, the available work will be equally and impartially divided among all workers of the shop, the division of work to be arranged between the firm and the shop committee.

If the union is unable to supply sufficient help, non-union workers may be employed, but they must join the union unless they are engaged during the busy season only.

One week's notice of leaving position to be given by union members.

No worker to be discharged without sufficient cause before submitting the case to the board of adjustment which is to consist of an equal number of representatives of each party and an impartial chairman chosen by them.

TORONTO, ONTARIO.—A CERTAIN CLOTHING MANUFACTURER AND THE AMALGAMATED CLOTHING WORKERS OF AMERICA.

This agreement was signed following the strike reported in the LABOUR GAZETTE, August page 879, September page 976 and this issue page 1070.

Agreement to be in effect from September 28, 1931, to May 1, 1934, but notice of any change in the agreement or adjustment of the existing wage scale desired may be given by either party 90 days before May 1, of any year.

The terms are similar to those of the agreement between the Associated Clothing Manufacturers and the union effective May 1, 1922 (LABOUR GAZETTE, August 1922, page 889) which has been renewed from time to time. This provides for: preferential union shops; forty four hour week; time and one-half rates of pay for any overtime work necessary; double time to be paid for work on legal holidays; adjustment of all grievances through shop stewards and union representative with arbitration if not settled in three days; outside work to be given to contract shops employing union members; equal division of work among employees during slack seasons; regulation of hiring, discharge and absenteeism without good reason. A wage scale of rates for the various operations

provides for weekly rates ranging from \$16 per week for general help and \$18 for helpers to \$36-\$38 for cutters.

Construction: Buildings and Structures

TORONTO, ONTARIO.—THE MASON AND GENERAL CONTRACTORS AND THE GENERAL CONTRACTORS' SECTIONS OF THE BUILDERS' EXCHANGE AND THE BRICKLAYERS, MASONS AND PLASTERERS' INTERNATIONAL UNION OF AMERICA, LOCAL No. 2 (BRICKLAYERS) AND No. 26 (STONEMASONS).

Agreement to be in effect from September 8, 1931, to December 31, 1932. If any change is desired, seventy days notice must be given before December 31, 1932 and a new agreement made before December 1, 1932. If no agreement is reached by that date, the union is to send for an official representative of the International Union executive board to negotiate a settlement.

No member of Local No. 2 will work for anyone who employs non-union stonemasons and no member of Local No. 26 will work for anyone employing non-union bricklayers.

Union members will not work for employers laying brick by the thousand or stone by the toise or on a piece work basis. Employers to notify union for men required.

Hours: 8 per day or night.

Overtime: time and one-half; Sundays and holidays, double time.

Wages: bricklayers and stonemasons \$1.10 per hour and no union member will work for any employer for less.

Wages for apprentices: from 25 cents per hour for first year to 60 cents during fourth year.

Not more than two members of a firm will be permitted to lay brick. Any union member desiring to engage in contracting or sub-contracting must resign his union membership.

No strike until matter in dispute is brought before the joint arbitration committee. No sympathetic strike except under direct authority of the international union.

A joint arbitration committee consisting of three members from Locals 2 and 26 (combined) and three members of the employers to be appointed and to meet whenever required.

VANCOUVER, B.C.—VANCOUVER FLOORLAYING CONTRACTORS AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL No. 1875 (FLOORLAYERS).

Agreement to be in effect from May 1, 1931, to April 30, 1932.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, September, 1930, page 1092 and October, 1929, page 1162, with the following exception:

No union member will be allowed to work on floors for any contractor who is not a member of the Master Floorlayers Association of Vancouver except with the written consent of both parties to the agreement.

The hours and wages are unchanged, that is 40 hours per week except during December and January when it is 35 hours per week. The wages for journeymen floorlayers and scrapers \$1.12½ per hour, finishers \$1.10.

VANCOUVER, B.C.—CERTAIN CONTRACTORS AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 170.

Agreement to be in effect from August 1, 1931, to June 30, 1932.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, March, 1930, page 327, and October, 1927, with the following exceptions:

Overtime: the rate of payment for overtime is changed from double time to time and one-half.

Wages: \$9 for an 8-hour day (The rate in effect previously was \$10). On all work figured before July 1, 1931, \$1 per day extra will be paid to the local union.

Construction: Shipbuilding

VANCOUVER, B.C.—CERTAIN SHIPBUILDING COMPANIES AND OTHER FIRMS ENGAGED IN SHIP REPAIRS AND THE BOILERMAKERS AND IRON SHIPBUILDERS' UNION OF CANADA, LOCAL No. 1.

This agreement which came into effect May 15, 1929 to continue until May 15, 1930 and

thereafter until 30 days notice by either party is still in effect.

No discrimination to be shown any employee belonging to the union.

Hours: 8 per day, a 44-hour week for regular day work. Where two or three shifts are worked, the second and third shifts to work 7 hours and 10 minutes and will be paid for 8 hours; a 40-hour week for second and third shifts.

Overtime: time and one-half for first four hours; double time thereafter. Double time for work on holidays. For work under certain conditions work to be paid at time and one-quarter for regular hours.

Wages per day: acetylene welders and burners \$6.46, acetylene welders' helpers \$4.30; anglesmiths \$7, anglesmiths' helpers \$5.24; boilermakers, chippers and caulkers, riveters; shipfitters, drillers and tappers \$7, ironworkers' helpers \$5.24; holders-on \$5.92; punch and shearmen \$5.94; passer boys \$3.20; reamers and countersinkers \$5.50, rivet heaters \$5.30, frame bender helpers \$5.62, drilling out rivets \$5.92.

Reductions in Wages in the United States

Reductions in wages were announced during September by various large employers of labour in the United States, to become effective on October 1, as follows:—

United States Steel Corporation, employing 220,000 workers, 10 per cent reduction;

Bethlehem Steel Corporation, 50,000 workers, 10 per cent reduction;

Youngstown Sheet and Tube Company, 10 per cent reduction;

General Motors Corporation, 10 to 20 per cent reduction for salaried employees, workers on an hourly wage basis not affected;

United States Rubber Company, a 5-day working schedule involving a reduction in the earnings of 25,000 employees of about 9 per cent, the hourly scale remaining as before;

American Smelting and Refining Company, 10 per cent reduction;

Utah Copper Company, 10 per cent reduction;

Colorado Fuel and Iron Company, 10 per cent reduction;

General Refractories Company, 10 per cent reduction;

Jones and Laughlin Steel Company, about 20,000 workers, 10 per cent reduction;

B. F. Goodrich Rubber Company, 10 per cent reduction;

Pepperell Manufacturing Company (cotton goods), 10 per cent reductions in salaries and wages; and reduction in common stock dividend from 6 to 4 per cent;

The salaries and wages of employees of the Chicago Stock Exchange, except those receiving under \$20 a week, were to be reduced 10 per cent from October 1.

The following statement was issued by the Ontario Department of Labour recently in reference to the control by the Provincial Government of the use of benzol in industry. "Benzol is used principally as a solvent in forty-five to fifty miscellaneous industrial occupations, and its unrestricted use creates a hazard which is detrimental to the health of industrial workers. The Factory Inspection Branch of the Department of Labour is required by law to control and regulate its use so as to prevent exposure to the poisonous vapour from this highly volatile liquid. An order prohibiting its use is issued only when conditions are such as to impair the health or endanger the lives of the employees."

PRICES, RETAIL AND WHOLESALE, IN CANADA, SEPTEMBER, 1931

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was again downward, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being lower.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in sixty-nine cities was somewhat lower at \$8.03 for September, as compared with \$8.20 for August; \$10.38 for September, 1930; \$11.64 for September, 1929; \$11.15 for September, 1928; \$10.87 for September, 1927; \$10.94 for September, 1926; \$10.81 for September, 1925; \$10.28 for September, 1924; \$10.46 for September, 1923; \$10.28 for September, 1922; \$11.82 for September, 1921; \$15.95 for September, 1920; \$16.92 for June, 1920 (the peak); \$13.31 for September, 1918; and \$7.83 for September, 1914. The decline was due mainly to a fall in the price of potatoes. There were, however, less important decreases in the prices of beef, mutton, fresh and salt pork, bacon, lard, bread, and flour. Seasonal advances occurred in the prices of eggs and butter, while the prices of evaporated apples and prunes were also somewhat higher. Including the cost of fuel and rent with that of foods the total budget averaged \$18.06 at the beginning of September, as compared with \$18.30 for August; \$20.75 for September, 1930; \$21.90 for September, 1929; \$21.38 for September, 1928; \$21.05 for September, 1927; \$21.15 for September, 1926; \$21.02 for September, 1925; \$20.65 for September, 1924; \$20.97 for September, 1923; \$20.90 for September, 1922; \$22.37 for September, 1921; \$26.38 for September, 1920; \$26.92 for July, 1920 (the peak); \$21.11 for September, 1918; and \$14.33 for September, 1914. Fuel was slightly lower, due to a decrease in the price of wood. Little change occurred in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was again slightly lower at 70.0 for September, as compared with 70.9 for August; 82.1 for September, 1930; 97.8 for September, 1929; 95.4 for September, 1928; 97.1 for September, 1927; and 98.5 for September, 1926. One hundred and thirty-five prices quotations declined, forty-five advanced and three hundred and twenty-two were unchanged.

In the classification according to chief component materials six of the eight main groups declined, one advanced and one was unchanged. The groups which declined were:

the Vegetables and Vegetable Products group, due to lower prices for corn, flax, oats, wheat, flour, bran and shorts, which more than offset higher prices for oranges, lemons and rye; the Animals and their Products group, due to reduced quotations for steers, hogs, lambs, beaver skins and leather, which more than offset higher prices for calves, canned lobsters and eggs; the Fibres, Textiles and Textile Products group, due mainly to reductions in the prices of raw cotton, raw silk, raw wool, denim and certain woollen fabrics; the wood, Wood Products and Paper group, due to lower prices for lumber and ground wood pulp; the Non-Ferrous Metals and their Products group, because of lower quotations for antimony, copper, lead, tin and zinc; and the Chemicals and Allied Products group, due to lower prices for citric acid, copper sulphate and certain other chemicals. The Non-Metallic Minerals and their Products group was somewhat higher, due mainly to increased prices for plate glass, gasoline, kerosene and anthracite coal. The Iron and its Products group was unchanged.

In the grouping according to purpose both consumers' goods and producers' goods were lower, the former because of declines in the prices of flour, bran, shorts, potatoes, coffee and silk hosiery which more than offset advances in the prices of eggs, coal, gasoline and kerosene, and the latter owing to lower prices for lumber, wheat, flax, steers, hogs and copper, which more than offset advances in the prices of rye, calves, silver and plate glass.

In the grouping according to origin raw and partly manufactured goods declined, mainly because of lower prices for wheat, oats, raw silk, raw cotton, steers, hogs and copper, which more than offset higher prices for rye, calves, eggs, raw jute and silver. Fully and chiefly manufactured goods were also lower, due mainly to declines in the prices of flour, bran, shorts, butter, cheese, leather and citric acid. Canadian farm products and articles of forest origin were lower, while articles of marine origin and articles of mineral origin advanced.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of September, of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of sixroomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of

commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of milk, bread and fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climate conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published

in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1919, quarterly from 1920 to 1929 and monthly since January, 1930. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.3; 1916, 86.3;

(Continued on page 1150)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family

Table with columns for Commodities, Quantity, and prices for years 1900 through 1931. Rows include Beef, Lard, Eggs, Milk, Butter, Beans, Apples, Sugar, Tea, Coffee, Potatoes, and totals for All Foods, Starch, laundry, Fuel and light, and Rent.

AVERAGE COST OF STAPLE FOODS BY PROVINCES

Table showing average costs of staple foods by province for the years 1900 through 1931. Provinces listed include Nova Scotia, Prince Edward Island, New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan, Alberta, and British Columbia.

†December only. ‡Kind most sold. *For electric light and gas see text. ††An allowance for the cost of clothing and sundries would increase the figures by about 50 per cent. See text

*Prior to 1926 number of commodities was 236.

(Continued from page 1142)

1917, 84.6; 1918, 82.9; 1919, 81.6; 1920, 81.1; 1921, 81.4; 1922, 80.1; 1923, 77.7; 1924, 76.5; 1925, 73.8; 1926, 73.2; 1927, 70.9; 1928, 69.3; 1929, 67.4; 1930, 64.7; 1931, 64.1.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report Vol. 2, page 318), and bringing the figures down to 1930. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption on the basis of figures in 1926 as 100, as follows: 1923, 108.3; 1924, 105.1; 1925, 101.7; 1926, 100.0; 1927, 99.0; 1928, 97.1; 1929, 94.6; 1930, 92.3.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921,

143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 128.9; 1928, 128.5; 1929, 128.0; 1930, 127.6. Natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 166.9; 1928, 158.9; 1929, 159.1; 1930, 158.8. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

Retail Prices

The decline in beef prices continued, sirloin steak being down from 28.9 cents per pound in August to 28.2 cents in September; round steak from 23.9 cents per pound to 23 cents; rib roast from 21.5 cents per pound to 20.9

cents; and shoulder roast from 15.2 cents per pound to 14.5 cents. These prices compare with 35 cents per pound for sirloin steak in September, 1930, 29.8 cents for round steak, 27.7 cents for rib roast and 21.1 cents for shoulder roast. Mutton averaged 24.1 cents per pound in September as compared with 26 cents in August. Both fresh and salt pork were down, the former from an average of 24.5 cents per pound in August to 22.3 cents in September, and the latter from 22.2 cents per pound to 21.9 cents. Breakfast bacon was down from an average of 28.9 cents per pound in August to 28 cents in September. The price in September, 1930, was 39.8 cents. Lard was again lower in most localities, averaging 13.8 cents per pound in September as compared with 14.3 cents in August and 20.9 cents in September, 1930.

Eggs showed a substantial seasonal advance in most localities, fresh averaging 30.3 cents per dozen in September as compared with 26.1 cents in August, and cooking averaging 25.7 cents per dozen in September, and 22.1 cents in August. The prices in September, 1930, were 38.6 cents per dozen for fresh eggs and 34.6 cents for cooking. Milk was little changed in September at an average price of 10.5 cents per quart. Butter prices showed little change during the month, dairy being unchanged at an average price of 23.6 cents per pound and creamery averaging 27.2 cents per pound in September as compared with 27 cents in August. The prices in September, 1930, were 33.1 cents per pound for dairy and 36.4 cents for creamery.

Bread prices averaged 6.1 cents per pound in September, 6.2 cents in August and 7.4 cents in September, 1930. Flour was again slightly lower at an average price of 3.1 cents per pound. Onions were lower in most localities, the price averaging 4.8 cents per pound in September as compared with 6.6 cents in August. Potatoes showed a substantial seasonal fall, being down in the average from \$1.36 per ninety pounds in August to 97 cents in September. The price in September, 1930, was \$1.62. Evaporated apples were slightly higher averaging 17.3 cents per pound as compared with 16.9 cents in August. Prunes were also up from an average of 11.8 cents per pound in August to 12.2 cents in September. Coffee prices were lower in many localities, the average being 47.9 cents per pound in September as compared with 49.3 cents in August and 55.8 cents in September, 1930. Higher prices for anthracite coal were reported from Montreal, Orillia, Toronto, Niagara Falls, Guelph, London and Owen Sound. Hardwood, stove lengths, was down from an average price of \$13.98 per cord in

*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18½%; Clothing, 18½%; Sundries, 20%.

August to \$13.80 in September, while soft was down from an average of \$10.48 per cord in August to \$10.27 in September.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices during September moved within narrow limits, the downward tendency being continued. No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, was down from an average price of 55.1 cents per bushel in August to 53.6 cents in September. The high price during September was 55½ cents per bushel reached on the 22nd and the low 51½ cents on the 19th. Other grain prices, for the most part, were lower, western barley being down from an average of 31.8 cents per bushel to 30.7 cents; flax from \$1.04 per bushel to 97.4 cents; and western oats from 28.3 cents per bushel to 27.4 cents. Rye advanced from an average price of 29.4 cents per bushel to 32.5 cents. The price of flour at Toronto declined from \$4.80 per barrel to \$4.64. Bran and shorts were also lower, the price of the former at Montreal being down from \$15.79 per ton to \$15.25 and the latter from \$16.79 per ton to \$16.25. Raw sugar at New York declined from \$1.50 per cwt. to \$1.44, while granulated at Montreal was unchanged at \$4.56 per cwt. Ceylon rubber at New York was down from an average price of 5.3 cents per pound to 5 cents. Green coffee at Toronto declined from 14.3 cents per pound to 13 cents. In livestock good steers at Toronto declined from \$6.45 per hundred pounds to \$6.31 and at Winnipeg from \$5.45 per hundred pounds to \$5.01. Bacon hogs at Toronto were down from \$7.20 per

hundred pounds to \$5.99, at Winnipeg from \$6.35 per hundred pounds to \$5.16, and at Montreal from \$7.17 per hundred pounds to \$6.27. Lambs at Toronto declined from \$7.86 per hundred pounds to \$7.44. Veal calves at Winnipeg advanced from \$5.59 per hundred pounds to \$6.27 but at Toronto the price was down from \$8.52 per hundred pounds to \$8.47. The price of beef hides at Toronto was down from 10-11 cents per pound to 6.5-8.5 cents. Sheep skins declined from 75 cents per skin to 40 cents. Creamery butter at Toronto was down from 24.5 cents per pound to 24 cents and at Montreal from 24 cents per pound to 23 cents. Fresh eggs at Montreal advanced from an average price of 30.4 cents per dozen to 32.4 cents and at Toronto from 27.5 cents per dozen to 29.3 cents. Raw cotton at New York declined from an average of 7.2 cents per pound to 6.5 cents. The decline followed the publication in the United States of figures indicating that supplies for 1931 would be much greater than probable consumption. Raw wool was slightly lower at an average price of 13-14 cents per pound. Spruce lumber was \$1 per thousand board feet lower at \$17 and common fir timber was down from \$14 per thousand board feet to \$12. In non-ferrous metals electrolytic copper at Montreal declined from \$8.86 per hundred pounds to \$8.61 and tin at Toronto from 29 cents per pound to 28.3 cents. The price of silver at New York advanced from 27.5 cents per ounce to 28.2 cents. Crude oil at Sarnia advanced from \$2.08 per barrel to \$2.33 and at Regina from \$2.30 per barrel to \$2.55. An increase of 1½ cents per gallon in the tank wagon price of gasoline was reported from Halifax, Montreal, Toronto, Winnipeg, Regina and Calgary.

Proposed Economic and Social Policy on Present-Day Problems

At the Congress of the Labour and Socialist International, held in Vienna from July 24 to August 1, a number of resolutions on the economic crisis and unemployment were adopted. The Congress drew attention to certain characteristics of the present depression; the maladjustment of production and consumption; the impossibility of controlling productive forces which have increased beyond all measure; anarchic competition; imprudent rationalization; artificial barriers obstructing international relations; catastrophic disturbances of credit; and the general feeling of insecurity.

The Congress expressed the view that the remedy for this situation was a planned organization of the world. Among the immediate palliatives recommended was the systematic reduction of hours of work on an international basis.

In another resolution the Congress urged that organized labour should play a larger part in the work of the League of Nations. The Congress uttered a warning against the danger to society which might arise from a dislocation of credit to Central Europe. The present situation showed how far the welfare of each nation depended on the prosperity of the whole world, and demonstrated the urgent need for collective international action.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes and the accompanying tables give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1924=100, was 59·9 for August, a decline of 2·6 per cent for the month. With the exception of an advance in meat and fish all of the ten groups were lower than for July, the most notable decline being one of 10·4 per cent in cotton. The index number for cotton, on the base 1924=100, was 37·9 for August.

The *Statist* index number, on the base 1867-1877=100, was 79·1 at the end of August, a decline of 1·3 per cent for the month. Increases were noted in vegetable foods and minerals, but all other groups were lower than at the end of July. The sugar, coffee and tea group was 6 per cent lower and textiles 5·9 per cent lower.

COST OF LIVING.—The index number of the *Ministry of Labour Gazette*, on the base July, 1914=100, was 145 at September 1, showing no change from August. There was no change in the index number for food, and a slight decline in clothing was offset by an advance in fuel and light.

Germany

COST OF LIVING.—The index number of the Federal Statistical Office, on the base 1913-1914=100, was 134·9 for August, a decline of 1·8 per cent for the month due to a fall of 3·3 per cent in food prices and smaller declines in clothing and sundries. There was a slight advance in heat and light, while rent was unchanged.

Italy

WHOLESALE PRICES.—The index number of the Milan Chamber of Commerce on the base

1913=100 (pre-war currency), was 89·8 for August, a decline of 1·9 per cent for the month. There were small advances in minerals and metals and miscellaneous vegetable products, but all other groups declined.

Australia

WHOLESALE PRICES.—The Melbourne index number of the Bureau of Census and Statistics, on the base 1911=1000 was 1425 for June, a decline of one per cent for the month. Declines were noted in metals and coal, jute, leather, wool, etc., dairy produce and groceries, while increases were noted in meat, agricultural produce, etc., and chemicals. There was no change in building materials.

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics, on the base 1926=100, was 70·2 for August, an advance of 0·3 per cent for the month due to a small increase in the food group, and an increase of 7 per cent in the fuel and lighting group due to increases in petroleum products. The eight other groups were all lower than in July.

The *Annalist* index number on the base of 1913=100, was 100·5 for September, a fall of 1·2 per cent for the month. Declines occurred in farm products, food products, textile products and metals, while there were advances in fuels, building materials, chemicals and miscellaneous commodities.

COST OF LIVING.—The index number of the National Industrial Conference Board, on the base 1923=100, was 85·9 for August, showing no change from July. Small increases in food and fuel and light were offset by decreases in housing and sundries, while clothing was unchanged.

The index number of the Department of Labour and Industries, Massachusetts, on the base 1913=100, was 140·4 for August, a decline of 0·1 per cent for the month. Increases in food and fuel and light were almost offset by declines in clothing, shelter and sundries.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Employer is Required to Provide Safe Conditions of Labour

A workman was employed by a financial company in Quebec, being required, among his other duties, to carry the ashes out of the boiler room and to deposit them outside the building in an adjoining shed. For this purpose he used a wheelbarrow, and was obliged to mount an inclined gangway about eighteen inches wide in order to reach the platform on which he dumped the ashes. Early one morning while he was so engaged, the light which should have illuminated the inclined gangway failed, and the workman in attempting to push his barrow up the gangway, misjudged his position owing to the lack of light, the wheel-barrow toppling over and precipitating him to the floor. In an action brought by the workman against the company for damages the District Court awarded him \$3,000 for his injuries, and on appeal by the employer this judgment was affirmed by the Court of King's Bench of Quebec. On further appeal, the Supreme Court of Canada varied the judgment of the lower courts, reducing the amount of damages, as against the employer, to four-fifths of the total amount, or \$2,400.

The employing company had contended that the workman had voluntarily accepted the risk, thus absolving the employer from liability in the event of an accident. On this point Mr. Justice Duff said:—

"This is not a case governed by the principle *volenti non fit injuria*. That principle involves, in its essence, the postulate of an intentional acceptance of risk by the workman, for himself exclusively, as between him and his employer. There is nothing of the kind here. Indeed, the respondent was not only not *volens*, he was not, in the pertinent sense, *sciens*; he had not, that is to say, a real appreciation of the risk involved in attempting to pass over the gangway in the prevailing obscurity. On the other hand he was negligent; and his negligent conduct contributed directly to the physical slip which was the immediate cause of his injury. So likewise were the appellants negligent, and their negligent conduct, in failing to provide adequate light, was operative up to the last moment and was a direct concurrent cause, in the juridical sense, with the respondent's negligence, of what occurred.

"It is plainly a case for division of damages. The appellants, I think, should bear four-fifths. The respondent's excess of zeal in their behalf was his undoing, and, for him, faithful

servant as he was, there is much to be said in excuse. Unfortunately, he must bear his own costs of both appeals, although he is entitled to the costs of the action."

General Trust of Canada versus St. Jacques (Supreme Court of Canada) 1931, *Dominion Law Reports*, vol. 3, page 654.

Master not Liable for Employee's Negligence outside Scope of Employment

In the case of *Battistoni versus Thomas* (reported in the LABOUR GAZETTE, March, 1931, page 377) one of the co-defendants subsequently appealed from the judgment of Mr. Justice D. A. MacDonald, and the British Columbia Court of Appeal allowed the appeal. The circumstances of this case, as already stated, were as follows:—Morgan Thomas (the appellant) had a contract to collect milk in cans from farmers in Fraser Valley and deliver the filled cans at a dairy in Vancouver, and he employed his son to drive the truck. On Christmas day, 1929, the son, having delivered his load, took a friend with him, and passed the afternoon driving about Vancouver instead of returning home with the truck as his father expected him to do. While he was so driving around, his car struck and seriously injured a woman (she and her husband being the plaintiffs in the case), who brought the action against the father and son, the former being included as being the employer of the driver of the truck. On appeal by the father against the decision of the lower court, the Court of Appeal held that in such cases the decision must depend upon particular circumstances. In the present case, the driver at the time of the accident was acting outside the scope of his employment and was going "on a frolic of his own," without being at all upon his master's business.

Battistoni versus Thomas (British Columbia) 1931, *Western Weekly Reports*, vol. 3, page 44.

The Appellate Division of the Ontario Supreme Court reversed the judgment of Mr. Justice Raney earlier in the year in the case of *Boyd versus Smith*. The facts of this case, with the judgment of the lower court, were outlined in the LABOUR GAZETTE, April, 1931, page 499. A young girl had received serious injury when she was struck by an automobile which was driven by an employee of a firm while he was engaged on the firm's business, the employee, however, not having any authority from the firm to use the car, which belonged to one of the directors. The Appeal Court held that although the employee was

engaged in his employer's business yet he had acted beyond the course of his employment in wrongfully taking possession of the automobile without the consent of his employer, and in driving it to the premises of a customer without being a licensed driver. The Court found that the accident occurred because the employee drove the car, which he had no authority from his employer to do. "He had no licence to drive, was an inexperienced and incompetent driver, and the illegal taking out of this dangerous machine without the knowledge of the company and attempting wrongfully to drive it on the public highway was contrary to Smith's duty as an employee of the defendant company and was outside the scope of his employment. The *causa causans* was the driving of the car."

Boyd versus Smith (Ontario) 1931, *Dominion Law Reports*, vol. 3., par. 748.

Alleged Wrongful Dismissal

The Ontario Court of Appeal allowed the appeal of the defendant company in the case of *Kadish versus Thuna Balsam Remedies, Limited*, which was noted in the *LABOUR GAZETTE*, January, 1931, page 112. The lower court had given judgment for the plaintiff, awarding him damages for wrongful entry and dispossession at \$500, and damages for wrongful dismissal at \$90. The plaintiff in this case was engaged by the defendant company as manager of their store at Hamilton at a weekly salary plus a percentage of the proceeds of the weekly sales. There was a stipulation that he should handle only such merchandise as was supplied to him by the company, and a further stipulation that in the event of the parties severing business connections the plaintiff would not engage in the same line of business in the city for a period of two years from the date of the severance. The plaintiff was dismissed from the position after less than two years, the company paying him at the rate of \$15 a week in lieu of notice.

Kadish versus Thuna Balsam Remedies, Limited, Ontario, 1931, *Ontario Weekly Notes*, vol. 40, page 500.

Injunction not Warranted Unless Acts of Union are Unlawful

The Court of Errors and Appeals of the State of New Jersey recently held that an injunction is not warranted in an employer's

action against a labour union if the facts disclose no unlawful acts of the union and show that the combination of employees was for their mutual protection and economic welfare. (*Bayer v. Brotherhood of Painters, Decorators and Paperhangers of America, Local 301, et al.*).

The difficulty arose over the alleged activity of the contractor in encouraging the use of machines instead of manual labour to apply paint, which practice the union regarded as inimical to its members' economic welfare. The contractor denied that he used such machines in his own business, but admitted that he advanced money for the purchase of such a machine for a corporation in which he was a stockholder and that the corporation used such machines. He applied for an injunction restraining the union from placing him on the "unfair" list; from attempting to collect fines from his employees; from doing anything whatsoever to keep union men from working for him; from injuring his business in any way; from encouraging sympathetic strikes; and from persuading others to refrain from working for him.

The order granting an injunction was issued by the Court of Chancery, and the union thereupon appealed to the Court of Errors and Appeals of New Jersey, contending that the employees had a right to combine and by peaceable means refuse to work for an employer who does not conform to the rules of the union and to persuade others to leave or refuse to enter such employment. After reviewing the evidence, the court reversed the order of the Court of Chancery, saying in part as follows:—

"It seems clear from the statutes and the decisions of the courts of our own State, as well as of other jurisdictions, that employees may combine for their mutual protection; that they may for themselves conclude what acts and things are for their economic welfare; that they may enforce their demands by strikes, if they violate no contracts of employment; that they may peaceably and without threats or intimidation induce others to do so, if no contractual rights are violated thereby. None of these acts is unlawful, and the fact that complainant may be affected unfavourably by the regulations of the union established to further their own interests does not render them unlawful."

[NUMBER 11

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL activity in Canada showed a decline on October 1, according to statements received by the Dominion Bureau of Statistics from 7,362 employers, each with a minimum of fifteen employees whose staffs aggregated 945,842 persons, as compared with 974,331 in the preceding month. Employment customarily shows a falling-off in the autumn, but the decrease this year indicated the release of a larger number of persons than usual. The employment index (based on the average for the calendar year 1926 as 100) stood at 103·9, as compared with 107·1 on September 1, 1931, and with 116·2, 125·6, 118·8, 110·3, 106·5, 99·5, 95·0, 100·7, 95·8 and 91·3 on October 1, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. These returns are representative of all industries except agriculture, fishing, hunting and highly specialized business.

At the beginning of October the percentage of unemployment reported to the Department of Labour by local trade unions stood at 18·1 as compared with percentages of 15·8 at the beginning of September, 1931, and 9·4 at the beginning of October, 1930. The October percentage was based on the returns tabulated by the Department of Labour from 1,841 labour organizations covering a membership of 193,849 persons.

Reports received by the Department of Labour from the Offices of the Employment Service of Canada showed a gain in the volume of business transacted, as indicated by the average daily placements effected, when a comparison is made with the preceding month and also with September last year. Vacancies in September, 1931, numbered 41,723, applications 81,453 and placements in regular and casual employment 40,077.

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty-nine cities was again lower at \$7.84 at the beginning of October, as compared with \$8.03 for September; \$10.32 for October, 1930; \$11.68 for October, 1929; \$11.28 for October, 1928; \$10.99 for October, 1927; \$10.93

for October, 1926; \$10.89 for October, 1925; \$10.31 for October, 1924; \$10.65 for October, 1923; \$10.23 for October, 1922; \$11.48 for October, 1921; \$15.83 for October, 1920; \$16.92 for June, 1920 (the peak); \$13.54 for October, 1918; and \$7.99 for October, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was slightly higher at 70·4 in October as compared with 70·0 in September; 74·6 for October, 1930; 96·8 for October, 1929; 95·2 for October, 1928; 97·2 for October, 1927; and 98·1 for October, 1926.

The loss in working time caused by industrial disputes in Canada in October was slightly greater than in the preceding month and showed a substantial increase over the corresponding loss in October last year. Sixteen disputes were in progress at some time during the month, involving 3,072 workers and resulting in the loss of 38,529 working days. Corresponding figures for September, 1931, were: sixteen disputes, 3,478 workers, and 35,464 working days; and for October, 1930, ten disputes, 2,240 workers, and 9,931 working days.

Industrial Disputes Investigation Act

During October the Department received two applications for the establishment of Boards of Conciliation and Investigation, Boards being established in both

cases. The first was an application from employees of the Winnipeg Electric Company in connection with a proposal by the company to reduce wages. The second application was from the Canadian National and Canadian Pacific Railway Companies in connection with a proposed reduction of 10 per cent in the wages of certain employees. Details of these cases are given on page 1177.

Legislative program in Province of Quebec

The Speech from the Throne at the opening of the Quebec Provincial Legislature contained the following paragraphs in regard to the existing economic situation and the measures to be undertaken by the government to meet the depression:—

"Unemployment, which has perhaps been exaggerated in a country like ours where the long winter necessarily interrupts many of our activities, will still require your attention.

"You will be asked to vote the necessary credits to allow us to co-operate with the federal and municipal authorities.

"My ministers think that a return to the land is still the best remedy for unemployment, because it offers a character of permanence which is wanting in too many of the temporary relief measures to which recourse has been had and which become a burden too heavy for government and municipalities. Further, the public resources are not inexhaustible and the charity of individuals must come to their aid.

"Our municipalities, during the days of prosperity, became heavily indebted; the relief which they have granted to the sufferers from unemployment have added to their burden. In order to insure their financial stability, my ministers will ask you to approve of a law providing for the setting up of a commission of experts directed to report on all the loans which municipalities desire to make.

"The Commission formed to study the various systems of social assurance has done considerable work and several of its members have visited foreign countries to make inquiries into their working. The report of the Commission is not yet completed; the Government will hasten to submit it to you as soon as it has been received and will ask you to study it.

"A Department of Labour, formed at the last session, has had its organization completed by the nomination of a Minister of Labour. The Government hopes that the workmen of the Province, who see one of themselves presiding over this Department, will be satisfied by this realization of the desire which they had put forth to this effect.

"I may add that the new Workmen's Compensation Act came into force on the 1st of September last and is giving satisfaction.

"The commercial and industrial depression has considerably affected the revenue of the Province as indeed those of all other countries, and the grants to the unemployed as well as the great works for bridges, highways and colonization which the Province has undertaken to give employment to the workmen, render necessary a loan and the finding of new sources of revenue. The new taxes, however, will be exceedingly light."

Financial unemployment measures in New Zealand

The current issue of *the Commercial Intelligence Journal* (published by the Department of Trade and Commerce) contains an account of economic and financial conditions in New Zealand, contributed by the Canadian assistant trade commissioner at Auckland. The financial measures taken by the government to deal with unemployment are described as follows: "In order to cope with existing unemployment, several schemes have been tried, working chiefly in conjunction with municipal and similar authorities. Funds are derived for carrying on these schemes by a wages-and-salaries stamp tax of 1d. in 6s. 8d. (1½ per cent) levied on the wages of all persons, male and female, with the sole exemption of domestic servants. Extension of this tax to all income other than salaries and wages is accomplished by a tax of 3d. in the pound on two-thirds of all such other individual income for the year ended March 31, 1931. A flat levy at the rate of £1 per annum is also made on males between certain ages.

"The Consolidated Fund is to supplement these taxes with an amount equal to that collected. Proceeds of the taxes for a year are estimated at £1 057 000, which, together with arrears of previous levy, and a subsidy from Consolidated Fund, will provide an estimated sum of £2,185 000 for relief. The operation of some of the taxes is limited at present to one year. It is announced that collections from the stamp tax on wages and similar unemployment levies has exceeded estimates on the first month of operation."

Minister of Labour for Province of Quebec

In accordance with the Labour Department Act which was passed by the Legislature of the Province of Quebec at the session of 1931 (*LABOUR GAZETTE*, May, 1931, page 528), the Hon. C. J. Arcand has been appointed by the Provincial Government as head of the new Department, being the first Minister of Labour for the Province. Formerly the interests of labour were in charge of the Department of Public Works and Labour, but the Legislature considered that the time had come to establish a separate Department. The Hon. Mr. Arcand had been president of Local 506, Brotherhood of Railroad Trainmen (Montreal) for the past sixteen years. In his early life he worked in the gold mines in California, and was in the service of the Canadian Pacific Railway Company for about thirty-five years.

Mr. Gerard Tremblay, who was formerly the business agent for the Central Trades Council of Montreal under the National Catholic Unions, has been appointed Deputy Minister.

The functions of the Minister of Labour, as defined by the Act, include the duty of instituting and controlling inquiries into important industrial questions as well as into labour conditions; collecting statistics relating thereto, and transmitting them to the Quebec Bureau of Statistics; administering the provincial Acts respecting disputes between employers and employees, municipal strikes and lockouts, employment bureaus, minimum wages for women, safety in public buildings, inspection of scaffolding, protection of the public from fire, safety and inspection of industrial establishments, stationary engineers, weekly day of rest for industrial employees, labour accidents, workmen's compensation, etc.

Coal Miners' Wages Security Act of Alberta

By a recent Order in Council of the Alberta Government the administration of the Coal Miners' Wages Security Act of Alberta was placed in charge of the provincial Department of Mines. The provisions of this Act, which was enacted in 1928, were outlined in the *LABOUR GAZETTE*, June, 1928, page 582. It is designed to protect persons employed in or about coal mines in respect to the payment of their wages. Employers are required to furnish a bond unless they have been exempted by the Board of Public Utility Commissioners from this obligation. The Chief Inspector of Mines of the province reports that since the Act took effect it has successfully protected the wages of miners, and that in a number of cases wages have been secured and paid to the workmen which otherwise would have been lost to them. The requirement of a bond has had the further advantage of preventing many transient operations from being started. The reports of the Board of Public Utility Commissioners give the following particulars regarding certificates of exemption during the past three years: In 1928, 39 certificates of exemption were issued, and 11 were dismissed; in 1929, 49 were issued and 4 dismissed; and in 1930, 43 were issued and 4 dismissed.

Robert Owen Foundation to further co-operation in Canada

benefit and managed under the control of the

working force and in general to foster the development of co-operative system of production and distribution in this country. The initiators "invite all their fellow-Canadians anxious for better days to join in this constructive effort. They believe that if this movement can take root throughout this country it will help considerably in solving the present economic crisis, which, while it may be due immediately to a variety of causes, is due primarily, in their opinion, to a fundamental maladjustment in human affairs; a maladjustment which can be redressed only by the voluntary co-operation of the people." They point out that experiments in co-operative methods of industrial organization and management already made in Canada and elsewhere show that co-operative industries can be made very successful, more successful than the competitive concerns of the usual type. The members of the Foundation invite the adherence to this movement of all those who have a belief in the possibility of a readjustment of economic conditions in Canada through the voluntary, co-ordinated efforts of her people.

Information concerning the Foundation may be obtained from the Secretary-Treasurer, Mr. Spencer Clark, or the Provincial Trustee, Professor H. Lasserre, 259 Roxborough Street East, Toronto.

The *Canadian Co-Operator*, in its issue for October, stated that "the Foundation has been investigated by the Executive of the Co-operative Union of Canada. As a result, it has given its cordial approval, and authorized its general secretary to become a member of the Advisory Committee of the Foundation."

Trade Union Congress of Great Britain

The report of the General Council, submitted to and approved by the 63rd Annual Trades Union Congress, held at Bristol in September, dealt with the problems of the country's economic position. These difficulties the Council believed to be due to the failure of industry to adapt itself to the new conditions, to the unsound monetary policy pursued by successive Governments, and to the reparations and war debts settlements. The remedies the Council suggest are the cessation of the deflation policy, the reconstruction of basic industries on modern lines as public utility services, and an international policy aiming at world peace and the revision of international debts and reparations. They further urge the raising of the world level of wholesale prices. They suggest that the weakness of the exchanges is due to the lack of balance between British imports and exports. They

strenuously oppose wage reductions as a remedy for the situation, and advocate "devaluation." They pronounce no opinion upon the question of a revenue tariff, but recommend that a full investigation should forthwith be made into the whole question of fiscal policy, and that a report should be submitted later to a special conference of trade union executives.

The Congress adopted the following resolution in favour of a policy of planned economic development:—

"This Congress, being in accord with the traditional policy of the trade union movement, welcomes the present tendency towards a planned and regulated economy in our national life; having regard to the seriousness of the economic situation, Congress expresses the view that only by a comprehensive planning of our economic development and regulated trading relations can the needs of the present day be met; Congress therefore instructs the General Council boldly to advance this policy both nationally and internationally, keeping in mind that, in order to maintain and improve the standard of living, the people as consumers must be protected from exploitation, by public control and regulation."

Vocational retraining for discharged workers

Dr. J. C. Wright, director of the Federal Board for Vocational Education (U.S.A.) suggested in a recent address that vocational training might be so used as to

prevent or mitigate the unemployment which results from the introduction of new mechanical processes, and that men and women could be trained in advance of such changes for some position where their previous experience could be utilized as far as possible. "Vocational education," he said, "must assume responsibility for insuring the welfare of labour to the full extent that training for new employments is required to bring our workers into adjustment with new industrial needs. The man or woman who is thrown out of job through technological changes in industry is in much the same position as the boy or girl who has not yet entered upon employment. Practically, therefore, they are without training for any job which society wants done. They are in need of what may be termed 'conversion training', that is, training for some other occupation closely related to the one from which they have been displaced. Because of the need of such persons to re-establish themselves as wage earners as quickly as possible the educational program provided for them should be specific and vocational in character.

"In some instances those who are out of a job as a result of technological changes, must be given the necessary retraining in industrial plants rather than in vocational high schools, since the school can not always afford to install the equipment necessary for specialized training. When classes are held in an industrial plant it is possible to secure the assistance of an instructor from the local vocational education staff in organizing the program and giving the instruction. Where the equipment required is not elaborate, a school can give some training or make arrangements to have it given in a local plant.

"One-half of the workers unemployed today," Dr. Wright continued, "are, according to United States Census figures, under 35 years of age, 35 per cent are between the ages of 35 and 54, and only 15 per cent fall in the group over 55 years old. Interpreted in another way, this means that the age grouping of the unemployed is particularly favourable for realizing some of our educational ideals."

Under the terms of the Vocational Education Act, which is administered by the Federal Board for Vocational Education, federally-aided vocational education instruction is given in day, part-time, and evening classes organized as a part of the public school system of the various states. All of the 48 States have accepted the terms of the national act and are carrying on a vocational education program.

American view of British unemployment insurance

Miss Frances Perkins, Industrial Commissioner for the State of New York, visited England recently at the request of Governor Roosevelt, in order to study the system of unemployment insurance in that country and to make suggestions as to the suitability of such a scheme to conditions in the State. After her return in October she reported that the British system had been the means of upholding the morale of the British workers throughout the long period of unemployment, that it had removed the fear of hunger, prevented abject poverty, and actually improved the standard of living in spite of the depression. She declared that the British Act had functioned in a satisfactory manner so long as it paid its own way, and only became involved in difficulties when its benefits had to be supplemented by grants from the public treasury.

The Industrial Commissioner recommended that if an unemployment insurance scheme were to be established in New York it should be framed with a view to emergencies or

periods of exceptional unemployment, and not merely as a means of coping with seasonal unemployment. She suggested that there should be a waiting period of a month or even longer, as "this would rule out minor employment breaks in which administration is difficult and expensive, and build up the fund for emergencies against which no degree of forethought or thrift can protect the individual. I believe", Miss Perkins continued, "that industry should foot the bill for unemployment insurance. The argument that the benefits will mean more to the workers if they have contributed directly to the fund seems to me a sentimental consideration. Our experience with workmen's compensation does not indicate that it has any basis in fact." She suggested that, as a beginning, seven States should combine to establish an insurance authority, modelled on the Port Authority of New York and New Jersey, the industrial States of Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania and Ohio, joining together to make the experiment.

The Industrial Commissioner concluded as follows: "I believe, that if we are willing to proceed carefully and experimentally, safeguarding our projects against the difficulties the English experience has defined for us, drawing our plans to conform to our social and political conditions, we can lift the fear and ease the suffering that come to American wage-earners and to their wives and children when industry slows up and there are no wages because there are no jobs."

Labour suggestion for municipal housing scheme at Winnipeg

Labour organizations in Winnipeg recently submitted a proposed municipal housing scheme to the City Council, for the purpose of providing employment for members

of the skilled trades. It was proposed that one hundred houses should be built on city-owned lots, the city purchasing the materials, the labour to be supplied by a co-operative organization of building operatives on a non-profit basis, the finances to be provided by the Dominion Government, and the houses to be rented at an economic rent which would provide for upkeep, interest and the repayment of the capital borrowed. In order to ensure economical construction of houses that may be within the means of wage-earners to rent, the following policies were suggested:— (1) purchasing of material in large quantities by the city; (2) building of a number of homes at one time and at one location and thus spreading overhead charges; and (3) by plac-

ing the labour contract, with a co-operative body of building trades workers, the latter to be a legal entity, to be bonded and to supply the supervision. The houses would be built at a stated figure based on the Winnipeg fair-wage schedule.

Functions of proposed trade associations in United States

Further information on the subject of the voluntary trade associations that were recently proposed by Mr. Gerald Swope as a means for stabilizing industry in the United States, has been given in a recent pamphlet entitled "The Future of American Industry: its Problems and Needs," by Magnus W. Alexander, President of the National Industrial Conference Board (New York). The main features of Mr. Swope's plan were noted in the last issue of the LABOUR GAZETTE (page 1054). "How to bring about in a practical way effective self-discipline of industry is the concrete problem," Mr. Alexander states. "A solution may be found in several directions. There is, however, already at hand an instrument of industry's own creation, that could be made to serve the purpose of effective industrial self-regulation. I refer to the individual trade association in each important branch of American industry. Acknowledging their present value and achievements, but recognizing also their past errors, I believe that they can be made to serve the greater purpose if organized to that end. With men of the highest character, attainment, social outlook, and personality in charge, it is fair to assume that these trade associations could and would induce the various industrial units in their respective fields to function in the general social interest, thereby removing the need for direct governmental regulations or control of industry.

"Upon the degree of success achieved by American industry in successfully solving its current problems through voluntary co-operation, guided by scientifically directed and practically applied research, depends in large measure the stability of American economic and political institutions. To-day these institutions are called upon to prove their superiority over those operating on principles like those prevailing in Communistic Russia. It is highly important at this time that American industry should demonstrate its ability to carry on successfully, in the social no less than in the economic sense, through a trying period of crisis and depression to new heights of achievement. The overshadowing question of to-day, with us as with every nation, is this: Shall social progress be

dominated by the ideals of American democracy with its principles of private property, individual initiative and enterprise, personal freedom and responsibility, and voluntary co-operation and combination, or shall it pass under the sway of Russian Communism with its doctrines of collective ownership, state enterprise, complete subordination of the individual to the mass, and compulsory regimentation of industry and society? In determining the answer to this vital question, American industry has the opportunity to play a great part. Its opportunity, and its obligation, is to give to the world a convincing object lesson in the successful working of American democracy. The constructive accomplishments of organized American industry in the past inspire confidence that it will prove fully equal to this task."

Effects of regulation of farm wages in England

The results of the working of the Agricultural Wages (Regulation) Act, 1924, during the two years ending September, 1930, are summarized in a report recently

published by the Minister of Agriculture and Fisheries (Great Britain). The provisions of this Act were outlined in the *LABOUR GAZETTE*, August, 1924, page 632, and December, 1924, page 1025. It set up an agricultural wages committee for each county of England and Wales, and a Central Agricultural Wages Board. Each committee consists of an equal number of employers' and employees' representatives, together with two impartial members appointed by the Minister of Agriculture, and a chairman. The wages board similarly consists of an equal number of representatives of employers and employees, together with members appointed by the Minister, whose number may not exceed one-quarter of the total number of members of the board. The committee have authority to fix minimum rates of wages, subject to approval by the board. When so approved the rates of wages so prescribed are enforceable in a court of law.

The average weekly minimum wage for adult male workers (other than those belonging to special classes) was approximately 31 shillings and 8 pence during the past two years, not counting overtime payments or additional earnings at special seasons.

The report summarizes the principal features of the farm labour situation in England and Wales since the passing of the Act as follows: (1) increased receipts by agricultural workers; (2) heavier labour costs to farmers which, while they have been set off to some

extent by reductions in staffs, have accentuated the depression brought about by the heavy fall in prices realizable for agricultural produce; (3) less secure employment for workers in the arable districts during the winter months; (4) improved labour organization and management on a number of farms previously conducted in a haphazard manner; and (5) labour disputes, strikes and lock-outs have been avoided.

"Apart, however, from these material results," the report continues, "wage regulation in agriculture has been associated with an indirect or psychological change to which many persons familiar with the conditions in the countryside attach great importance. The relationship between employer and worker has altered and is still altering. The old relationship which existed up to 20 or less years ago varied greatly from farm to farm. A good employer treated his worker as an old and trusted friend. On the other hand, a bad employer treated his employees as little more than serfs. In neither case were the hours of employment numbered or discussed. These conditions are gradually being altered, and new conditions more comparable with those obtaining in the industrial world are taking their place. It would not be true to say that this change is due solely to wage regulation, although it has contributed to the result."

Importance of recreation for industrial workers

In an address before the International Recreation Congress at Toronto in October, Mr. W. H. Kilby, director of recreation for the Canadian National Railways, Montreal, stated that highly competitive industry had produced a nervous condition in its employees without a counterbalance of healthy recreation. These conditions were evidenced in a desire for emotional entertainment rather than in participation in physical play. Mr. Kilby said that an industrial recreation policy was dependent in Canada on the vision, generosity, and "play consciousness" of industrial executives. Of 150 Canadian industries he had canvassed, nearly 90 per cent were sponsoring some recreational program for their employees, but in nearly all cases they have asked for information and guidance. Only through the proper use of leisure time could craftsmanship be prevented from deteriorating, and Mr. Kilby proposed the formation of a National Canadian Recreative Association to plan recreation for all Canadians of all classes.

The superannuation by-law recently adopted by the City of Saskatoon, Saskatchewan (the provisions of which were outlined in the last issue of the *LABOUR GAZETTE*, page 1079), was subsequently declared by the District Court to be invalid, the Court finding it should have been submitted to a vote of the ratepayers.

The National Joint Council for Dock Labour (Great Britain) in accordance with the recommendations contained in the recent report of the Committee of Inquiry on Dock Labour, has appointed a Standing Advisory Committee on Port Employment, representative of the employers' and workers' organizations, to encourage and assist in the development of measures calculated to regularize port employment.

The Vancouver City Council, on October 29, decided to introduce the five-day working week for the City Hall staff. Of these employees, 543 in number, 426 will have the reduced working period, while the remainder will contribute one day's pay each month for the relief of the unemployed.

In 1920 the New Zealand Government adopted a system of dental clinics for children in the public schools. The clinics are established on application from responsible local organizations which undertake to contribute toward the cost of suitable clinic premises and certain maintenance expenses. The work begins with the primer class. Each year the teeth of all the children in this class are examined, and a form is sent to the parents of each child asking for consent to treatment if treatment is needed. When consent is received the teeth of the child are put in order. The child is re-examined every six

months thereafter, and further defects are remedied. At the present time approximately 60,000 children in 738 schools are being cared for.

A pamphlet containing useful information for fathers, mothers and teachers, as to the best methods of safeguarding the health of children has been published by the Department of Pensions and National Health (Ottawa), under the title: "Keep the Family Well: Protection by Prevention." The writer is Dr. Helen MacMurchy, chief of the Division of Child Welfare. (National Health Publication No. 41; Little Blue Books, Leaflet Series.)

Regulations under the Public Health Act of Manitoba were published in the *Manitoba Gazette*, October 24, defining the duties and powers of public health nurses. This term is applied to a fully qualified registered nurse in the Province, who is in the employ of the Department of Health and Public Welfare, and who receives her instructions directly from the Director of the Public Health Nursing Service. Public health nurses have the right to enter any school in the Province and to require certificates in respect to the freedom of children from communicable diseases; to enter into homes, and to investigate the sanitary conditions, the health of the inmates, etc.

During the month of October a total of 3,947 accidents were reported to the Ontario Workmen's Compensation Board in the industries in Schedule 1 of the Act, 24 of which were fatal cases; in Schedule 2 industries 266 were reported including 6 fatal cases; and 377 Crown, 3 of which were fatal, were reported during the month making in all 4,590, of which 33 were fatal.

Colonies for Unemployed Persons in Germany

The German Minister of Finance, Herr Dietrich, recently submitted to the Government a Bill relating to the establishment of agricultural colonies for unemployed persons on the outskirts of towns. The Bill is based on the idea that the problem of unemployment cannot be solved solely by means of unemployment relief, that the means of bringing about a productive solution through the medium of great public works are not available, and that mass settlement of purely agricultural kind is impracticable. Small-scale settlement, which the Bill seeks to encourage, would take the form of a grant to unemployed persons of

parcels of land of two to four acres each, where they might build wooden houses, cultivate vegetables, potatoes and fruit, and breed livestock on a small scale. Thus they would be in a position to provide for their needs by their own labour and would cease to be a burden on the community; they would at least be able to pass through the period of depression with less difficulty and would also have the possibility of continuing to seek employment for wages in towns. Industrial employment would thus be combined with agricultural work performed by the whole family.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

Employment

THE employment situation throughout Canada was reported by the superintendents of the Employment Service of Canada at the end of October to be as follows:—

There were few requests for farm help received in the Province of Nova Scotia. Catches of fish were fair only, though an increased demand for lobsters had somewhat strengthened the market. Lumbering was quiet with little evidence of later improvement in this line. The greater number of the mines in the vicinity of New Glasgow operated six days a week, while those in Cape Breton worked from two to five and a half days. Manufacturers for the most part reported business good, especially amongst bakers and confectioners. Clay products were working to capacity, but some idleness was reported in the iron and steel group. Building construction at Halifax was particularly brisk, with a number of skilled and unskilled workers employed. Contracts at New Glasgow also were well underway, supplemented by unemployment relief work on highways, sewers and streets. Passenger and freight traffic showed a decline at Halifax, but continued fair at New Glasgow and Sydney. Trade was steady, with prices reasonable, though, owing to mild weather, there was little movement in winter stocks. In the Women's Domestic Section the demand continued for charworkers, but there was little call for domestic and commercial workers.

Farmers in the Province of New Brunswick still continued busy with fall ploughing, and several requests were sent in for men to clear land. Fish were plentiful and good catches were reported. Logging was quiet. Export orders at the sugar refineries increased their output, but nearly all other plants were on short time. Building construction was unusually active, especially at Saint John, where several large projects were advancing rapidly, so that the majority of skilled building tradesmen and unskilled labourers were fairly busy. Road construction, under relief schemes, provided employment in those centres where normal building activity was below par. Railway freight and passenger traffic was light, but work on the waterfronts was available through the loading and unloading of several large vessels. Wholesale houses were somewhat quiet, but retail trade reported a fair fall business, with average collections. There was the usual demand for women domestic workers.

With the exception of Montreal, there were no orders for farm help reported in the Province of Quebec. Orders for bushmen were also very scarce, none being received in the above city. In Hull, several large logging companies had decreased operations 75 per cent. Slight improvement was recorded, however, at Quebec City, and at Rouyn it was thought that conditions would be satisfactory in the coming winter. The mining situation was quiet, except at Amos and Hull, where some work was being carried on. Manufacturing concerns at Montreal were inactive. This included the boot and shoe industry, printing trades, clothing and rubber. The closing of the Angus shops had also thrown many men out of work. From an employment point of view, the outlook was a little better in Hull. In Quebec City quietness prevailed, with the exception of furs, which had regained its activity. In Sherbrooke, manufacturing was satisfactory, but in Three Rivers improvement was shown only in boots and shoes, cottons and foundries. Construction and maintenance showed slightly better conditions at Amos, but a decrease in municipal work was noted at Montreal. In Quebec City, construction was active, but maintenance was at a standstill. Labourers at Rouyn had been busy for a certain time, but road-making having ceased the number of unemployed was greater. The building industry in Sherbrooke was fair, but Three Rivers reported no new construction, the chief source of employment being road work. Transportation showed slight variation. In the Women's Domestic Section a number of placements was effected, but applicants, in the larger centres, still exceeded the demand.

The demand for farm help in the Province of Ontario was smaller than usual, farmers appearing to work on the co-operative plan of helping one another. Logging, except at North Bay, where additional small camps at different points were opening, was exceptionally quiet. At Fort Frances, pulp and paper mills also showed some improvement. Little activity was reported in the mining sections. A more optimistic feeling prevailed amongst manufacturers, as several industries were re-engaging former employees. This, however, had not relieved the slackness of the present situation to any great extent as yet, but was considered a good omen for the future. Very little building was in progress throughout the province, the chief source of employment being that provided by the government as a relief measure. This consisted mostly of work

(8) MacLean's Building Review.

on the Trans-Canada Highway, though various municipalities were also providing work locally on road repairs and sewer extensions. Trade was fair. Casual placements in the Women's Domestic Section were fewer in number, but the demand for general domestics continued as usual.

With post-harvest work in the Province of Manitoba practically completed, orders for farm help showed a decline. Logging and mining recorded no activity. Evidence that the home building season in Winnipeg was not yet over was proved by the number of permits issued, though these were far below the number registered at the same time last year. New relief undertakings also created quite a demand for unskilled labour. In addition to sewer construction, other large projects were also well under way. A number of men were likewise engaged for road construction. Several relief programs have been recommended for the City of Winnipeg, where the greater number of unemployed are registered, and if approved in their entirety, will be the means of providing a large proportion of the applicants in the unemployed group with at least half time employment during the winter. Mild weather retarded sales of seasonable lines, although a fair demand was reported for light rubber footwear and boots and shoes. Very little change was noted in wholesale conditions. Collections were fair. In the Women's Domestic Section, a slight gain was shown in the orders for day workers, but this was offset by a reduction in the calls for domestics.

Threshing having been completed in the Province of Saskatchewan, there were fewer demands for farm help, although some farmers had taken men on the understanding that work would continue for the winter, providing the farm relief scheme came into force. There was a decided improvement in the mining group, due to much colder weather and a satisfactory settlement between operators and miners. No demand existed for men for building construction, but more work of a casual nature was available. This, however, only relieved the situation temporarily, permanent positions being almost impossible to secure. Relief camps took care of many men, but there was still a large surplus of unemployed single men waiting to be admitted to future camps. Regardless of conditions, the Women's Domestic Section maintained a steady call for domestics and housekeepers, but wages offered were below normal, and orders were consequently somewhat difficult to fill.

The call for farm help in the Province of Alberta was reduced to the usual winter

demand, many vacancies being for chore work for board only, or nominal wages. These orders were almost impossible to fill. Provincial relief camps took one hundred men for bush work in the vicinity of Calgary, but elsewhere logging was quiet. Coal orders were slowly coming in, and prospects were gradually improving. Building construction was at a standstill, and railway construction reduced to a minimum. Relief work provided by the cities or the government furnished the only means of employment available for the large number of applicants registered at the offices throughout the province. There was a decrease in placements in the Women's Domestic Section, with applicants still increasing.

Farm operations in the Province of British Columbia were very quiet, and many men on ranches were seeking work in relief camps. Logging remained unchanged, with no new camps opened. Mining, both metal and coal, showed little activity. Manufacturing also recorded little sign of improvement, being limited for the most part to the operation of a planing plant at Cranbrook and small railway tie mills at Canal Flat and Fairmont Springs. Apart from jobbing and repair work there was little building construction going on. Highway construction took care of a number of men under the government relief scheme, but was inadequate in providing employment for all registered, many men in different centres still being on direct relief furnished by the government or the municipality. Quietness prevailed at the waterfront both in Vancouver and Prince Rupert, while the maintenance staff at the dry dock and shipyards in the latter city was on short time. Longshore gangs at New Westminster, however, were busy. Wholesale and retail business was fair. In the Women's Domestic Section there was still a surplus of applicants for all classes of employment.

EMPLOYERS' REPORTS

Industrial activity showed a seasonal curtailment on October 1, according to statements tabulated by the Dominion Bureau of Statistics from 7,862 employers, whose staffs aggregated 945,842 persons, as compared with 974,331 in the preceding month. This decrease involved the release of a larger number of persons than have usually been laid off at the beginning of October in the ten years of the record. The index stood at 103.9, compared with 107.1 on September 1, and with 116.2, 125.6, 118.8, 110.3, 106.5, 99.5, 95.0, 100.7, 95.8 and 91.3 on October 1, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. The average

number of persons employed by the reporting firms in the calendar year, 1926, is taken in every case as the base equal to 100 in calculating these index numbers.

Firms in all provinces reported contractions, those in Quebec being most extensive. In the Maritime Provinces a small decline was indicated, involving many fewer workers than that registered on the same date last year, when the index was, however, higher. Transportation and services reported the bulk of the decrease, while there were important gains in building and highway construction (largely as a result of the unemployment relief program), and logging was seasonally more active. In Quebec, manufacturing and construction registered most of the reduction, but transportation also reported less activity; on the other hand, logging and trade showed improvement. In Ontario, curtailment was indicated, particularly in manufacturing, transportation, mining and services, while employment increased in highway construction, logging and trade. In the Prairie Provinces, there was a small decrease in employment. This was chiefly due to the closing of large railway car shops, together with losses in building and railway construction and trade. In British Columbia, further contractions were noted, mainly in manufacturing and transportation, while logging and trade reported heightened activity and unemployment relief undertakings absorbed large numbers of workers.

The trend of employment was downward in Montreal, Winnipeg and Vancouver, but upward in Quebec City, Toronto, Ottawa, Hamilton and Windsor and the adjacent Border Cities. In Montreal, manufacturing showed the greatest curtailment, this taking place chiefly in railway car shops, but there was also a decided falling-off in construction. In Quebec, there were seasonal losses in services, but construction showed improvement. In Toronto, manufacturing was much busier, and construction and trade also absorbed more workers. In Ottawa, construction was more active, while other groups showed comparatively little change. In Hamilton, curtailment was registered in manufacturing, but construction afforded greater employment. In Windsor and the adjacent Border Cities, there was an increase in the number employed, mainly in the automobile trades and construction. In Winnipeg, there were losses in trade and building construction, while road work reported improvement. In Vancouver, manufactures recorded decreases, and there was also a falling-off in transportation and construction.

An analysis of the returns by industries shows that there was a large decline in manufactures, chiefly in the land vehicle group,

owing to the closing of the railway car shops; lumber, food, tobacco and beverage, non-ferrous metal, non-metallic mineral, rubber and building material factories also reported reductions, in some cases of a seasonal nature. On the other hand, large gains were made in textile and pulp and paper plants, and improvement was also shown in leather, musical instrument, chemical and electrical apparatus works. Logging, mining and trade registered seasonal gains, but in construction, transportation, services and communications there were contractions.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of October.

TRADE UNION REPORTS

According to the returns received by the Department of Labour from an aggregate of 1,841 local unions during September, embracing a membership of 193,849 persons, 35,048, or a percentage of 18.1 were without employment on the last day of the month, contrasted with percentages of 15.8 in the previous month and 9.4 at the close of September, 1930. The customary curtailment of activity with the autumn season was in evidence to some degree during the month reviewed, though the situation was more particularly affected by railway car shop closings in a number of provinces, Quebec unions showing the greatest recessions due largely to a shutdown for an indefinite period in the Angus shops of Montreal. Ontario, Manitoba, Alberta and British Columbia unions also suffered curtailment of employment, due to car shop closings. Some improvement in the coal mining industry of Alberta, however, was indicated from the previous month, though full time employment was not yet assured, the gains among these workers, however, exceeding the contractions reported in the majority of industries and causing the unemployment percentage for the province as a whole to be substantially reduced from August. The employment tendency in Nova Scotia was also upward, though the change was slight. On the other hand, New Brunswick and Saskatchewan unions reported declines in the employment volume available, though the change in the latter province was fractional only. All provinces shared in the retrogressive employment movement shown from September last year, conditions in Quebec, Ontario and Manitoba being especially slack during the month surveyed, though in New Brunswick, Saskatchewan, Alberta and British Columbia also pronounced contractions were apparent, and in Nova Scotia reductions in activity on a much smaller scale were recorded.

Elsewhere in this issue will be found a more detailed article with tabular statements on unemployment among local trade unions at the close of September, 1931.

EMPLOYMENT OFFICE REPORTS

Reports from the Offices of the Employment Service of Canada for the month of September, 1931, showed 42,092 references of persons to positions and a total of 40,077 placements of which 19,924 were in regular employment and 20,153 in casual work. Regular placements totalled 15,643 for men and 4,281 for women. Vacancies reported to the Service were 41,723, 32,931 being for men and 8,792 for women. Applications for work were received at the offices from 67,518 men and 13,935 women, a total of 81,453. A marked gain was noted in the business transacted when the figures were compared both with those of the preceding month and with those of September a year ago, the report for August, 1931, showing 26,809 vacancies offered, 71,383 applications made and 25,662 placements effected, while in September, 1930, there were recorded 35,668 vacancies, 56,746 applications for work and 33,368 placements in regular and casual employment. In another section of this issue will be found a detailed report of the work of the offices for September, 1931, and for the quarterly period July to September of the current year.

BUILDING PERMITS AND CONTRACTS AWARDED

According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities in Canada during September, 1931, was \$10,322,414, as compared with \$8,224,074 in the preceding month, and with \$11,093,020 in September, 1930.

The *MacLean Building Review* states that construction contracts awarded in all Canada during October had an estimated value of \$28,789,200, which brought the total for the year to date to \$279,582,500. This total is 28.8 per cent less than that for the same period of 1930. Of the above total, \$15,842,100 was for engineering purposes; \$7,599,700 was for residential buildings; \$4,880,000 was for business buildings and \$467,400 was for industrial purposes. The apportionment of the contracts awarded during October, by provinces, was as follows: Ontario, \$7,947,100; British Columbia, \$7,787,500; Quebec, \$5,651,300; Alberta, \$2,612,200; New Brunswick, \$2,034,900; Saskatchewan, \$1,089,000; Manitoba, \$947,300; Nova Scotia, \$706,900; Prince Edward Island, \$13,000.

Production and Trade

INDUSTRIAL PRODUCTION

Figures showing the volume of production in certain industries during recent months and also in the corresponding months last year, are shown in the table on page 1171.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, states that business operations in Canada during September were fairly well maintained at the level of the preceding month. Moderate advances in some lines counterbalanced the curtailment in several strategic industries. The output of newsprint showed a gain over the low level of August, production being 178,412 tons, a gain of 12.5 per cent after seasonal adjustment. Raw cotton was imported in increased volume in preparation for operations in the textile industry. Imports in September were nearly 5,000,000 pounds compared with 4,754,000 pounds in August, a seasonally adjusted gain of more than 30 per cent. The imports of rubber showed a decline in the month under review, and imports of crude petroleum were less than in August even after seasonal adjustment. Production by the iron and steel and automobile industries reached a new low point on the present movement. The net result was that the index of manufacturing production was 130.0 in September compared with 136.3 in the preceding month.

Owing mainly to the placing of a large contract for a hydro-electric development, the total of construction contracts awarded showed a marked gain in September. The assigned values amounted to \$33,658,000 compared with \$26,143,000 in August. The gain after seasonal adjustment was about 51 per cent. The mining industry was more active in September, the mineral production index at 124.2 showing a gain of 10.6 per cent over the preceding month. The increase in gold shipments was a paramount factor in the upward trend of the index. The production of coal was also at a considerably higher level. Shipments of gold were about 240,000 ounces compared with 222,000 ounces in the preceding month. Silver was shipped to the amount of 2,154,000 ounces compared with 1,571,000 ounces in August. Exports of nickel were 3,905,000 pounds compared with 3,678,000 pounds in the preceding month.

Coal.—Canada's coal production in September reached a total of 1,004,753 tons, a decline of 26.5 per cent from the five-year average for the month of 1,366,386 tons. The September output included 672,780 tons of bituminous coal, \$290,508 tons of lignite coal

and 41,465 tons of sub-bituminous coal. Saskatchewan's output during the month increased materially over the August total and amounted to 34,565 tons. Production from mines in Nova Scotia totalled 396,194 tons, in New Brunswick, 12,120 tons, Alberta, 413,857 tons, and British Columbia, 148,017 tons.

Imports of coal into Canada declined 20.1 per cent to a total of 1,484,059 tons as compared with the 1926-1930 average for the month of 1,857,867 tons. Receipts of anthracite amounted to 281,124 tons consisting of 164,648 tons from the United States, 100,514 tons from Great Britain, and 15,962 tons from Germany. Importations of bituminous coal totalled 1,202,573 tons, of which the United States supplied 1,187,563 tons and Great Britain, 15,010 tons. Lignite coal imports were recorded at 362 tons.

Exports of Canadian coal continued at a low level amounting to 25,410 tons as against the September five-year average of 77,836 tons.

Canada's coal supply for September (computed on the basis of production plus imports less exports) of 2,463,402 tons, showed a falling-off of 21.7 per cent from the September 1926-1930 average of 3,146,417 tons. Of the total tonnage of coal made available for consumption in Canada during the month, the United States mines supplied 54.9 per cent, Canadian Mines, 39.8 per cent, Great Britain mines, 4.7 per cent, and German mines, 0.6 per cent.

A summary of Canadian Trade prepared by the Department of National Revenue shows that in September, 1931, the merchandise entered for consumption amounted to \$45,379,099 as compared with \$47,308,079 in the preceding month and with \$87,900,201 in September, 1930. The chief imports in September, 1931, were: Non-metallic minerals and products, \$8,614,132; Iron and its products, \$6,882,840; Fibres, textiles and textile products, \$6,529,563.

The domestic merchandise exported during September, 1931, amounted to \$48,991,335 as compared with \$48,763,652 in the preceding month and with \$81,046,227 in September, 1930. The chief exports in September, 1931, were: Wood, wood products and paper, \$15,220,889; Agricultural and vegetable products, mainly foods, \$12,470,993; Animals and animal products, \$7,928,907.

Strikes and Lockouts

The time loss due to industrial disputes in October, 1931, showed a slight increase over the preceding month, while the number of workers involved declined slightly. As com-

pared with October, 1930, a very substantial increase was recorded over last year in the number of disputes recorded and also in the time loss incurred. The increase was less marked, however, in the number of workers involved owing to the large figure recorded for the same month last year when a dispute at Springhill, N.S., involved some 1,400 coal miners for about six days. There were in existence during the month sixteen disputes, involving 3,072 workers, and resulting in a time loss of 38,529 working days, as compared with sixteen disputes, involving 3,748 workers and resulting in a time loss of 35,464 working days in September. In October, 1930, there were on record ten disputes, involving 2,240 workers and resulting in a time loss of 9,931 working days. At the end of the month there were on record nine disputes, involving approximately 1,750 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been formally called off by the union.

Prices

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was again lower at \$7.84 for October, as compared with \$8.03 for September; \$10.32 for October, 1930; \$11.68 for October, 1929; \$11.28 for October, 1928; \$10.99 for October, 1927; \$10.93 for October, 1926; \$10.89 for October, 1925; \$10.31 for October, 1924; \$10.65 for October, 1923; \$10.23 for October, 1922; \$11.48 for October, 1921; \$15.83 for October, 1920; \$16.92 for June, 1920 (the peak); \$13.54 for October, 1918; and \$7.99 for October, 1914. The decline was due mainly to lower prices for potatoes, beef, mutton, pork, bacon, lard, flour, rolled oats and beans. The prices of eggs and milk were slightly higher. Including the cost of fuel and rent with that of foods the total budget averaged \$17.86 at the beginning of October, as compared with \$18.06 for September; \$20.68 for October, 1930; \$21.96 for October, 1929; \$21.52 for October, 1928; \$21.18 for October, 1927; \$21.14 for October, 1926; \$21.11 for October, 1925; \$20.67 for October, 1924; \$21.16 for October, 1923; \$20.87 for October, 1922; \$22.01 for October, 1921; \$26.46 for October, 1920; \$26.92 for July, 1920 (the peak); \$21.48 for October, 1918; and \$14.48 for October, 1914. Fuel was slightly higher, due to higher prices for anthracite coal in some localities. Rent was little changed in the average.

In wholesale prices, the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was slightly higher at 70.4 for October, as compared with 70.0 for September; 74.6 for October, 1930; 96.8 for October, 1929; 95.2 for October, 1928; 97.2 for October, 1927; and 98.1 for October, 1926. In the grouping according to chief component materials three of the eight main groups were higher, three were lower and two were unchanged. The groups which advanced were: the Vegetables and Vegetable Products group, because of higher prices for wheat, barley, oats and rye, which more than offset declines in the prices of corn, flour and potatoes; the Iron and its Products group, because of advances in the prices of steel tank plates, auto-

mobile body plates and annealed steel sheets; and the Non-Ferrous Metals and their products group, because of advances in the prices of copper, lead, silver, tin and zinc. The groups which declined were: the Animals and their Products group, due mainly to lower prices for livestock and hides; the Fibres, Textiles and Textile Products group, due to lower quotations for certain cotton goods, raw wool and worsted cloth yarn, which more than offset higher prices for raw cotton, raw jute and raw silk; and the Wood, Wood Products and Paper group, due mainly to reductions in the prices of lumber. The Non-Metallic Minerals and their Products group and the Chemicals and Allied Products group were unchanged.

Crime and Unemployment in the United States

The United States National Commission on Law Observance and Enforcement recently issued a report dealing with the causes of crime. In each of the three studies included in the first volume of the report there is a discussion of unemployment as a cause or contributing cause of crime. The investigators assert a definite relationship between economic insecurity and crimes, more especially the largest group of crimes, namely, those against property. An analysis of the records of prisoners admitted to Sing Sing during the 12 months ended February 28, 1930, showed that 45 per cent of those convicted of crimes against and 25 per cent of the remainder were unemployed at the time of the crime. Similar results were apparent from an analysis of prison records over a period of ten years. It was also shown that over the same period the proportion of unemployed among the men committed was larger in bad times and less in good times.

In the study of the negro's relation to law observance, it is stated that being out of work is undoubtedly a very direct and common cause of crime, although it is not always possible to decide just what part this cause plays in the cases of all unemployed offenders. Indirectly, however, poverty with all that it entails is closely related to a sordid environment. Unemployment leaves the individual in idleness, with time to associate with chronic idlers, and to seek any amusement and excitement in order to avoid boredom or thought of the future. These factors, together with the fact that the Negro worker particularly lives so near the margin of existence that there is seldom any money surplus, are out-

standing aspects of the phenomenon. Other factors cited in this connection include the seasonal or itinerant nature of much of the Negro employment and the low economic status which prevents Negroes from paying fines for minor offences and forces them to the alternative of imprisonment with its possible consequence of a criminal career.

The Province of Ontario is spending \$30,000 a day for old age pensions and mothers' allowances, according to a recent estimate by the Hon. W. G. Martin, the Provincial Minister of Public Welfare. He pointed out, however, that while the monthly expenditure for mothers' allowances was \$220,000, the benefits went to 6,000 homes and to 18,000 children, helping in this way to solve the problem of juvenile delinquency.

The Saskatchewan Workmen's Compensation Board recently stated that a number of serious accidents, including one fatality, have occurred in road construction, owing to workmen being permitted to ride on the running board of trucks and motor cars or in other insecure and improper positions on such trucks. One employer already has been summoned to show cause why the cost of an accident resulting in grievous injury to an employee while being permitted to ride on the running board of a gravel truck should not be assessed against him, individually, and added to his assessment. The Board intimates that such accidents are a serious drain upon the fund.

RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

DURING the month of October two applications for the establishment of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act were received in the Department of Labour.

On October 24 an application was received from employees of the Winnipeg Electric Company, being conductors, busmen, mechanical department employees, trackmen and gas work employees, members of the Street Railway Employees' Units of the One Big Union. Notification received by the Employees' Committee on September 30 of a ten per cent wage reduction which the company purposed putting into effect on November 1 was stated to be the cause of the dispute. A Board was established and Messrs. Ernest T. Leech, K.C., and R. B. Russell, both of Winnipeg, were appointed members thereof on the recommendation of the employer and employees, respectively. In the absence of a joint recommendation from these two members, the Minister appointed

Mr. W. J. Christie, of Winnipeg, as third member and chairman of the board.

On October 30 the Canadian National and Canadian Pacific Railway Companies (subsidiary railways: the Dominion Atlantic Railway, Quebec Central Railway, Northern Alberta Railways, and Esquimalt and Nanaimo Railway) applied for a board to deal with a proposed ten per cent wage cut affecting locomotive engineers, locomotive firemen and hostlers, conductors, trainmen and yardmen, and telegraphers, assistant agents and linemen. The application stated that 26,500 employees throughout Canada were directly affected by the dispute. The Minister of Labour established a board on November 4, constituted as follows: Mr. James MacDonnell, of Toronto, Ontario, chairman, appointed on the joint recommendation of the other members of the board, Mr. Isaac Pitblado, K.C., of Winnipeg, Manitoba, appointed on the recommendation of the employing companies, and Dr. J. C. Hemmeon, of Montreal, P.Q., appointed on the employees' recommendation.

SUMMARY OF PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

THE tables presented below summarize the proceedings under the Industrial Disputes Investigation Act for the fiscal year ending March 31, 1931, and from March 22, 1927, to March 31, 1931.

The proceedings under the Act during the fiscal year 1930-31 include six cases in which certain proceedings had taken place during the preceding fiscal period. On March 31, 1931, results were still pending in connection with one application.

TABLE I.—PROCEEDINGS BY INDUSTRIES FROM APRIL 1, 1930 TO MARCH 31, 1931

Industries affected	Number of applications for Boards	Number of Boards established	Number of strikes not averted or ended

STRIKES AND LOCKOUTS IN CANADA DURING OCTOBER, 1931

THE number of strikes and lockouts in existence in Canada during October, 1931, was sixteen, the same number as in the preceding month. The number of workers involved showed a decline, however, due largely to strikes of coal miners at various points throughout Canada during the preceding month which involved some 1,700 workers. The time loss for the month, however, was slightly greater than in September, three strikes of sawmill workers in British Columbia, involving approximately 1,200 workers for about 26,000 working days during the month, accounting largely for the increase. Comparing the figures with those for October, 1930, a very substantial increase was recorded over last year in the number of disputes recorded and also in the time loss incurred. The increase was less marked, however, in the number of workers involved, owing to the large figure recorded for the same month last year when 1,400 coal miners were involved for only six days in a dispute at Springhill, N.S.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Oct., 1931...	16	3,072	38,529
*Sept., 1931...	16	3,748	35,464
Oct., 1930...	10	2,240	9,931

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Eight disputes, involving approximately 2,300 workers, were carried over from September, and eight disputes commenced during October. As noted elsewhere in this article, one dispute recorded as unterminated last month and carried over into October, is shown by information later received not to have

been a strike, and consequently has not been included in the statistics for the current month. Of the sixteen disputes occurring during the month ten were recorded as terminated, two being in favour of the employers concerned, two in favour of the workers involved, two being partially successful, two resulting in a compromise and the result of two being recorded as indefinite. At the end of October, therefore, there were six disputes recorded as strikes or lockouts, namely: photo engravers, Montreal and Quebec, P.Q., Toronto and London, Ont., and Winnipeg, Man.; sawmill workers, Fraser Mills, B.C.; sawmill workers, Barnet, B.C.; motion picture projectionists, Montreal, P.Q.; cooks and waiters, Edmonton, Alta.; and women's clothing factory workers (cloakmakers), Winnipeg, Man.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not yet declared terminated. Information is available as to three such disputes, namely: coal miners, Shaughnessy, Alta., January 15, 1931, one employer; motion picture projectionists, Ottawa, Ont., February, 23, 1931, one employer; and photo engravers, Toronto, March 23, 1931, one employer. The strike of tailors in the employ of one firm in Vancouver, which commenced on June 6, 1931, and has been carried in the above list for some months, was called off by the union during October and has consequently been removed from the list.

A strike of unemployment relief workers at Victoria, B.C., was reported in the press as occurring on September 29, 1931. It appears, however, that no cessation of work occurred. A deputation of workers requested the Council for improvements in conditions which were granted to some extent.

A strike of unemployed relief workers at Burnaby, B.C., on October 24, against delay in payment of wages, has been reported in the press but has been officially denied by the authorities.

A cessation of work by electrical workers on certain buildings in Montreal was reported in the press about October 10, 1931. The information secured by the Department is that the contractors proposed a decrease in wages from 90 cents per hour to 75 cents and that the cessation was the result of a misunderstanding as to the date on which this was to

STRIKES AND LOCKOUTS IN CANADA DURING OCTOBER, 1931

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
(a) Strikes and Lockouts in Progress Prior to October, 1931 *			
FISHING AND TRAPPING— Salmon Fishermen, Barkley Sound, B.C.	500	1,000	Commenced Sept. 24, 1931; for increase in piece rates; terminated Oct. 2, 1931; compromise.
MINING, NON-FERROUS SMELTING AND QUARRYING— Coal miners, Estevan, Sask...	600	3,000	Commenced Sept. 7, 1931; for recognition of union; terminated Oct. 6, 1931; indefinite.
MANUFACTURING— <i>Textiles, Clothing, etc.—</i> Men's clothing factory workers, Toronto, Ont.	40	140	Commenced July 29, 1931; against violation of agreement; terminated Oct. 5, 1931; in favour of workers.
<i>Printing and Publishing—</i> Photo engravers, Montreal and Quebec, P.Q., Toronto and London, Ont., Winnipeg, Man.	100	2,500	Commenced May 4, 1931; for union agreement; un-terminated.
<i>Other Wood Products—</i> Sawmill workers, Fraser Mills, B.C.	650	16,900	Commenced Sept. 17, 1931; for increase in wages and recognition of union; un-terminated.
Sawmill workers, Barnet, B.C.	360	9,360	Commenced Sept. 23, 1931; against decrease in wages; un-terminated.
SERVICE— <i>Recreational—</i> Motion picture projectionists, Montreal, P.Q.	44	1,144	Alleged lockout; commenced Aug. 27, 1931; re-union wages and working conditions; un-terminated.
<i>Business and Personal—</i> Cooks and waiters, Edmonton, Alta.	12	200	Commenced Sept. 29, 1931; for union wages and working conditions; un-terminated.
(b) Strikes and Lockouts Commencing during October, 1931			
MINING, NON-FERROUS SMELTING AND QUARRYING— Coal miners, Medicine Hat, District, Alta.	30	30	Commenced Oct. 7, 1931; one day protest strike in sympathy with miners at Estevan; terminated Oct. 8, 1931; indefinite.
MANUFACTURING— <i>Textiles, Clothing, etc.—</i> Women's clothing factory workers, Montreal, P.Q.	18	340	Commenced Oct. 1, 1931; against decrease in wages of certain pressers; terminated Oct. 23, 1931; in favour of employer.
Women's clothing factory workers (cloakmakers), Winnipeg, Man.	70	280	Commenced Oct. 27, 1931; against discharge of workers; un-terminated.
<i>Other Wood Products—</i> Furniture factory workers, Winnipeg, Man.	28	98	Commenced Oct. 5, 1931; against decrease in wages; terminated Oct. 8, 1931; in favour of workers.
Sawmill workers, Port Moody, B.C.	150	225	Commenced Oct. 3, 1931; for recognition of union and reinstatement of certain employees; terminated Oct. 8, 1931; employees reinstated.
SERVICE— <i>Public Administration—</i> Truck drivers, East Kildonan, Man.	5	12	Commenced Oct. 6, 1931; for increase in piece rates; terminated Oct. 8, 1931; in favour of employer.
Unemployment relief workers, Cedar District, near Nanaimo, B.C.	165	1,300	Commenced Oct. 19, 1931; for change in working conditions; terminated Oct. 28, 1931; partially successful.
Unemployment relief workers, Nanaimo, B.C.	300	2,000	Commenced Oct. 20, 1931; for change in working conditions; terminated Oct. 28, 1931; partially successful.

*The dispute of longshoremen at Barnet, B.C., carried in this table as un-terminated in the October issue is shown by information later received not to have been a strike or lockout.

be effective, work being resumed pending the completion of negotiations.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

SALMON FISHERMEN, BARKLEY SOUND, B.C.—As stated in the October issue of the *LABOUR GAZETTE*, salmon fishermen, members of the Fishermen's Protective Association, ceased work about September 24, 1931, demanding a higher price for fish delivered to salmon canneries and salteries, namely, an increase from 5 cents per fish to 10 cents. The Provincial Secretary and certain other government officials held meetings at which the parties to the dispute were present, with the result that on October 2, 1931, a settlement was reached, the fishermen agreeing to accept a rate of six cents per fish when the government offered to cancel the \$50 licence on seine nets, on condition that the fishermen would resume operations by October 5.

COAL MINERS, ESTEVAN, SASK.—This strike of coal miners demanding recognition of the Mine Workers' Union of Canada and improved working conditions, commencing September 7, 1931, was, as stated in the October issue of the *LABOUR GAZETTE*, unternminated at the end of the month; but as stated in a special article on the appointment of a Royal Commission following the application for a Board of Conciliation and Investigation by the municipal authorities, (*LABOUR GAZETTE*, October, 1931, pp. 1065-1067), an arrangement was reached early in October whereby the strikers returned to work on October 8, pending the final findings of such a Board, certain concessions being granted them in the meantime. On October 22, the miners voted to approve an agreement providing for a ten per cent increase in wages, a reduction in the price of coal to miners, a reduction in the price of powder, and recognition of a pit committee, checkweighmen, etc. The investigation of the Royal Commission continued.

MEN'S CLOTHING FACTORY WORKERS, TORONTO, ONT.—As stated in the October issue of the *LABOUR GAZETTE*, this dispute, commencing July 29, 1931, against alleged violation of agreement, was terminated on October 5, 1931, an agreement (*LABOUR GAZETTE*, October, 1931, p. 1139) being signed between the employer and the union providing for union wages and working conditions.

PHOTO ENGRAVERS, TORONTO AND LONDON, ONT., MONTREAL AND QUEBEC, P.Q., AND WINNIPEG, MAN.—In this dispute, which commenced on May 4, 1931, the union reported at

the end of October that over one hundred out of the one hundred and thirty-eight members of the union involved in the dispute were still on the strike list of the union. The employer, however, claimed to have replaced the strikers some time ago.

SAWMILL WORKERS, FRASER MILLS, B.C.—As mentioned in the October issue of the *LABOUR GAZETTE*, negotiations for a settlement were brought about at the end of September through the mediation of the Department of Labour, but no settlement was reached. Early in October the conciliation officer of the Department, with the Deputy Minister of Labour for British Columbia, and municipal officials, conferred with representatives of the strikers and later with the officials of the mill. The latter offered to restore the wage rates prior to July 1, 1931, to increase the piece-rates for shingles, to operate only forty-eight hours per week, to meet a committee of employees at any time, to employ as many men as possible, and to show no discrimination in the re-employment of strikers. The governmental and civic officials then placed these terms before the strike committee, proposing that the municipal officials take a ballot of the striking employees on accepting the terms. The union organizer opposed this, stating that it must be dealt with at a union meeting, and also that the concessions were insufficient. The mediators then suggested that the union arrange for a ballot of the employees and that the other grievances should be taken up with the company officials. The strike committee agreed to place the proposals before a union meeting. On October 9, at a union meeting, the proposal to submit the terms offered by the company to a vote by ballot was defeated. As a result of a conference of the municipal authorities with the provincial Deputy Minister of Labour and the departmental Conciliation Officer, it was arranged that the two latter should notify the employees who had been at work the day before the strike that a ballot on the offer of the company would be taken by the Clerk of the Municipality of Coquitlam on October 16. The union advised its members to ignore the ballot. Out of the some 650 strikers only 109 voted, of whom 104 were in favour of returning to work. In the meantime, on October 15, on the arrival of longshoremen to load a boat at the mill wharf, a clash between the pickets and police occurred, in which it is reported a dozen were injured, the pickets being dispersed. The following day the engineers and firemen in the mill, keeping up steam for fire protection and for electric current for the

village, were called out by the union. The company arranged to secure electric current from the British Columbia Electric Company, and the chief engineer with some assistance kept up steam pressure for the pumps. On October 23 the officials of the company met a committee of the strikers but no settlement was reached.

SAWMILL WORKERS, BARNET, B.C.—In connection with this dispute, commencing September 23, 1931, against a decrease in wages, the fourth since July, 1930, as stated in the last issue of the *LABOUR GAZETTE*, the conciliation officer of the Department offered to mediate, and the management stated its willingness to accede to this proposal when the time was opportune. At the request of municipal officials the matter was taken up later, and again on October 14, with the Deputy Minister of Labour for British Columbia, and the management was asked if it would consider offering the terms of settlement offered by the Fraser Mills Company to their employees. The answer was that the mill could not operate even at lower wages under existing conditions. From the first day of the strike the mill has been picketed, but no disturbances were reported except about October 17, when a foreman was molested and two pickets were arrested. One was acquitted while the other was convicted of interfering with a police officer and was fined.

LONGSHOREMEN, BARNET, B.C.—In the last issue of the *LABOUR GAZETTE* it was stated that longshoremen refused to load a boat at a sawmill where employees were on strike. The information secured by the Department is that the longshoremen's union, the Vancouver and District Waterfront Workers' Association, adopted the following resolution: "That owing to the very imminent danger to which gangs would subject themselves in complying with an order to go to work at Barnet at the present time, and as this Committee cannot accept the responsibility for the safety or perhaps lives of the members, we cannot recommend the compulsion of any member to comply with the order." The union officials stated there was no intention of a sympathetic strike, but that it was entirely a question of safety and the members were free to work if they chose to do so. Toward the end of the month another boat failed to be loaded under the same circumstances. This is, therefore, not recorded as a strike.

MOTION PICTURE PROJECTIONISTS, MONTREAL, P.Q.—This dispute commenced on August 27, 1931, when the management decided to reduce the number of operators, and it was alleged by the union to constitute a lockout. As a

result of this all union workers in the theatres concerned were called out, and the dispute was terminated at the end of October, although the employer claimed to have immediately replaced all those ceasing work. Toward the end of August three former employees had been arrested in connection with picketing and the management had secured a temporary injunction restraining the union from publishing statements alleged to be prejudicial to the company. On October 29 the men arrested were acquitted, the judge deciding that their actions had constituted only peaceful picketing, such as the law permitted.

COOKS AND WAITERS, EDMONTON, ALTA.—This dispute, which commenced on September 29, 1931, for union wages and working conditions, was terminated at the end of October, the employer still refusing to sign an agreement with the union which had been accepted by other establishments. The union reports, however, that all but six of the original strikers have secured work elsewhere, but that some of the workers are still receiving strike pay.

COAL MINERS, MEDICINE HAT DISTRICT, ALTA.—The Mine Workers' Union of Canada asked all miners in Canada to strike for one day on October 7, 1931, in protest against the intervention of police and the arrest of coal miners in the Estevan district of Saskatchewan in the disturbance on September 29. The only locality in which a strike has been reported is the district near Medicine Hat, Alta., where thirty miners ceased work for one day. In several other coal mining districts, however, where mines were not being operated daily, coal miners not working that day paraded as a demonstration in sympathy with the Estevan miners.

WOMEN'S CLOTHING FACTORY WORKERS, MONTREAL, P.Q.—This dispute commenced on October 1, 1931, when members of the Industrial Union of Needle Trades Workers went on strike protesting against a reduction in wages, piece rates, affecting two pressers. The management had not recognized the union, but, at a meeting brought about by the representative of the Department of Labour, met the representative of the union and agreed to take back all the strikers unconditionally as soon as they could be absorbed.

WOMEN'S CLOTHING FACTORY WORKERS (CLOAKMAKERS), WINNIPEG, MAN.—This dispute commenced on October 27, 1931, in the establishment of one firm in Winnipeg, being called by the Industrial Union of Needle Trades Workers when the employer discharged three cutters. The management

refused to recognize the union, but the resident officer of the Department of Labour, in conjunction with the Mayor and others, held interviews with both parties in an attempt to bring about a settlement. The dispute, however, was unterminated at the end of the month.

FURNITURE FACTORY WORKERS, WINNIPEG, MAN.—Twenty-eight employees, affiliated with the Workers' Unity League, working in one establishment in Winnipeg, went on strike on October 5, 1931, protesting against a cut of five per cent in wages put into effect by the employer on October 1. The plant was picketed from the beginning of the dispute: one worker was arrested when he tried to prevent a truck load of furniture from leaving the plant, and was allowed out on bail. The strikers demanded certain changes in working conditions as well as the withdrawal of the reduction in wages, and at the suggestion of the Mayor, the resident officer of the Department of Labour offered his services in an effort to secure a settlement. At a meeting between the parties a settlement was drawn up and accepted by both parties. The strikers returned to work on October 8, the reduction having been withdrawn and their demands as to working conditions granted.

SAWMILL WORKERS, PORT MOODY, B.C.—A cessation of work on October 7, involving 143 employees in a sawmill, occurred when employees going to work were kept out by about two hundred men, stated to be from Vancouver and from Fraser Mills and Barnet where sawmill strikes were in progress. A demand for recognition of the Lumber and Agricultural Workers' Industrial Union and for the reinstatement of certain discharged employees was made. The management stated that only a small number of men belonged to the union which had declared the strike. The pickets dispersed on the arrival of Dominion and provincial police. A committee of the employees informed the management that they were holding a meeting to consider the matter and desired police protection. The employees decided by a vote of 101 to 29 to resume work. The management stated its intention of refusing to re-employ a small number of the ring leaders, but at the request of the committee agreed to take back all, including some previously dismissed. A picket of three hundred men dispersed on the arrival of the employees accompanied by police and work was resumed the next day.

TRUCK DRIVERS, EAST KILDONAN, MAN.—This dispute commenced on October 6, 1931, when truck drivers employed by the Council

of East Kildonan to haul gravel under the unemployment relief scheme for gravel sidewalks on the highway, went on strike against the rate per yard set by the Works Committee of the Council, the drivers owning and operating the trucks. After discussion with the Committee, being convinced that the rate offered was general in the district for their class of work, the truck drivers returned to work on October 8.

UNEMPLOYMENT RELIEF WORKERS, NANAIMO AND DISTRICT, B.C.—On October 19, 1931, workers on roads under unemployed relief measures ceased work, demanding transportation to work when at some distance, the dismissal of a foreman, higher wages, and some other concessions. Unemployment relief workers in Nanaimo also ceased work in sympathy. The provincial authorities after investigation, arranged for transportation for excessive distances, and work was resumed on October 28.

The British Institute of Certified Grocers recently sent a party of apprentice grocers to visit the principal producing centres of Quebec and Ontario for the purpose of studying Canadian methods of packing and handling produce. The information so obtained will be distributed among the members of the Institute. The party was met at Quebec by Mr. C. B. Birkett, Canadian Junior Trade Commissioner who was in charge of the tour. Visits were to be made to Montreal, Sherbrooke, Ottawa, Toronto, Hamilton, Guelph, London, Welland, Niagara Falls and Oshawa.

Building permit reports received by the Bureau of Labour Statistics of the United States Department of Labour from 345 identical cities having a population of 25,000 or over, indicate that there was an increase of 6.4 per cent in the number of buildings and a decrease of 29.2 per cent in the estimated cost of buildings for which permits were issued during the month of September, 1931, as compared with August, 1931. There was an increase of .1 of 1 per cent in number and a decrease of 25.8 per cent in the estimated cost of new residential buildings; and an increase of 11.8 per cent in the number and a decrease of 34.5 per cent in the estimated cost of new non-residential buildings. Additions, alterations and repairs increased 5.4 per cent in number and decreased 15.1 per cent in estimated cost. Dwelling units were provided during September, 1931, for 7,156 families. This is a decrease of 17.9 per cent, as compared with the dwelling units provided during August, 1931.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue for February, 1931, in the review of Strikes and Lockouts in Canada and other countries, 1930. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates.

Great Britain

The number of disputes beginning in September was 28, and 12 were still in progress from the previous month, making a total of 40 disputes in progress during the month, involving 13,300 workers, with a time loss of 101,000 working days for the month. Of the 28 disputes beginning in September, 7 were over proposed reductions in wages, 8 on other wage questions, one on a question as to working hours, 5 on questions respecting the employment of particular classes or persons and 3 on other questions of working arrangements and 4 on questions of trade union principle. Settlements were reached in 26 disputes, of which 7 were in favour of workers, 11 in favour of employers and 8 ended in compromises; in the case of three other disputes work was resumed pending negotiations.

The dispute involving 2,200 lace curtain workers in Ayrshire, Glasgow and Nottinghamshire, which began June 15 against proposed reductions in wages and was mentioned in the last issue of the *LABOUR GAZETTE*, terminated during September when the workers returned to work under smaller reductions in wages than were first proposed.

The dispute involving 3,000 furniture workers at London which began August 14 and was mentioned in the last issue, was reported to be practically terminated by the middle of October, the strikers returning to work under revised reductions in wages.

Norway

In the May and June issues of the *LABOUR GAZETTE*, mention was made of a dispute affecting about 80,000 workers in various in-

dustries in Norway which was in progress at the beginning of April. This dispute, which is the greatest ever known in Norway and involved a time loss of 10,000,000 working days, was caused by proposed reductions in wages of from 12 to 15 per cent, and was not terminated until September 14, when work was resumed, it is reported, at an average reduction in wages of about 6 per cent for time work and somewhat greater reductions for piece work.

United States

The number of disputes beginning in August was 67 and 76 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 29,000, and the time loss for the month 1,304,774 working days.

The strike of silk workers at Allentown, Pennsylvania, which began May 1, and was reported in the August issue of the *LABOUR GAZETTE*, was terminated in the majority of the factories by the end of August. Some of the employers granted union recognition but the strikers were unsuccessful in averting reductions in wages.

The strikes involving about 8,000 textile workers in New Jersey, which began during July, were partly settled in September when half of the number of strikers returned to work, a compromise having been reached as to wages.

The strike of 30,000 men's clothing workers, which began July 29 in New York City, was reported in the August issue of the *LABOUR GAZETTE*. The majority of the strikers, employees of members of the manufacturers' association, returned to work after being out one day, and settlements were made later at various independent shops, and by August 21, the strike was practically terminated.

On October 5, a strike of woollen textile workers began at Lawrence, Massachusetts, which later involved 23,000 workers and was still in progress at the beginning of November. The cause of the strike was a proposed reduction in wages of ten per cent.

On October 7, a strike involving between 2,000 and 3,000 longshoremen at Boston, Massachusetts, began and continued during the month. The dispute was over the weight of sling-loads and rates of pay for overtime. No report of any settlement has been noted.

LABOUR LEGISLATION IN PRINCE EDWARD ISLAND AND THE YUKON TERRITORY IN 1931

Prince Edward Island

The Legislature of Prince Edward Island was in session from March 24 to May 7, 1931, and enacted several laws which deal with subjects of labour interest, including unemployment relief, health of employees, old age pensions, and statute labour.

The Unemployment Act ratifies the agreement entered into between the Government of Canada and the Government of Prince Edward Island pursuant to the Unemployment Relief Act passed by the Parliament of Canada at its special session in September, 1930. The agreement and the regulations made under authority of the Dominion Act appear in the schedules to this Act. The Lieutenant-Governor in Council is empowered to authorize the Provincial Treasurer to pay out of the general revenues of the Province the sums necessary for the carrying out of the agreement or to raise the money therefor by loan. All municipalities are given authority to benefit by the Dominion Act and to do all things necessary for this purpose, to contribute out of their funds, to carry on approved works and undertakings, and to raise money by way of loans without any formality other than that of obtaining the approval of the Lieutenant-Governor in Council. Contracts made by municipalities must contain the provisions as to fair wages, hours of work and conditions of employment required by the agreement and the regulations, viz.: the observance of the Fair Wages and Eight Hour Day Act, 1930, and the Fair Wages Policy of the Government of Canada as set forth in P.C. 1206 dated June 7, 1922; the employment as far as possible of local labour; and the avoidance of discrimination because of political affiliations. The provisions of the Act apply in respect of any additional sums placed at the disposal of the Province or the municipalities.

The Public Health Act was amended to forbid the employment in the handling of foodstuffs of any person suffering from open tuberculosis instead of advanced tuberculosis as formerly.

The Prince Edward Island Old Age Pensions Act, 1931, which is to come into force on proclamation, authorizes the Lieutenant-Governor in Council to enter into an agreement with the Governor General in Council for a general scheme of old age pensions in the Province pursuant to any Act of the Parlia-

ment of Canada, and for payments by the Dominion to the Province for that purpose. In the absence of a special appropriation, the cost of pensions is to be a charge upon the general revenue of the Province, and the Lieutenant-Governor in Council is authorized to raise money by way of loans to provide the necessary funds. He may also make regulations for the carrying out of the Act and may appoint a board of review with authority to decide special cases. The Minister in charge of the administration of the Act must make an annual report. Pensions are exempt from Provincial and municipal taxation, and from garnishment, seizure or other legal process and are not assignable. Their receipt does not disqualify pensioners from voting at a provincial, city, town or municipal election. In the event of the incapacity of the pensioner, the pension may be paid to an approved trustee to be expended for the pensioner's benefit. The right to a pension ceases if the Government of Canada ceases to make contributions or fails to carry out the agreement.

The Road Act was amended to permit persons liable for road and horse taxes to commute the cash payment thereof either in whole or in part by performing work either in person or by an approved substitute. Notice of intention to do such work must be given to the Superintendent of Highways for the district before May 1 in the year in which the taxes are payable, and the work must be performed before July 15 of the same year.

Yukon

The Council of the Yukon during its 1931 session amended the Steam Boiler Ordinance to provide that on all steam plants of over 100 h.p. where two or more engineers are employed, the engineer in charge must hold a second-class certificate, the holder of a third-class certificate being duly qualified to act as assistant or second engineer. Formerly the engineer in charge was required to hold a first-class certificate and his assistant a second-class certificate.

The second annual convention of the United Maritime Fishermen met in session at Halifax on October 28, with more than 100 delegates from all parts of the Maritime Provinces and Magdalen Islands. C. P. McCarthy, Tidnish, P.E.I., was chairman and Dr. Richards Hamer, Halifax, Secretary.

MEXICAN LABOUR CODE

A FEDERAL Labour Code has been adopted by the Congress of the United States of Mexico and was promulgated by the President of the Republic on August 21. The Code applies throughout the territory of the Republic and both federal and local authorities are responsible for its application. All employers and workers are covered by it. Employers are required to employ at least 90 per cent of Mexicans or naturalized foreigners of European race. The Code contains full provisions for the regulation of contracts of employment and especially of collective agreements, which are compulsory. The collective agreement must be concluded with the trade union to which the majority of the workers in the undertaking belong; it may be revised every two years.

Young Persons and Women.—In accordance with the principles laid down in the Constitution, the minimum age of admission to employment is fixed at 12 years. The employment of boys under 16 at dangerous or unhealthy work or night work is prohibited. Boys over 16 may conclude a contract of employment without the authority of their parents, and any married woman may likewise conclude a contract without the authority of her husband. Women workers will be entitled to a compulsory rest period with pay of eight days before their confinement and one month after it.

Hours of Work.—Another section establishes in accordance with constitutional principles the eight-hour day except for domestic servants and persons employed in the care of the sick. The Code permits overtime in special circumstances up to a maximum of three hours a day three times a week. A holiday with pay of four days will be granted to

workers who have been employed for more than a year and one of six days to those who have been employed for more than two years.

Wages, Health and Safety.—Special provisions deal with the protection of wages and determine the minimum wage. The Code contains very detailed regulations governing the conditions of health and safety in industrial undertakings.

Special Occupations.—Various chapters deal with the work of domestic servants, seamen, railwaymen and agricultural workers and with employment in small industrial undertakings and home work. The contract of employment of apprentices is also specially regulated.

Freedom of Association.—The provisions regulating trade union organization are extremely liberal. The Code recognizes the right of employers and workers to combine in trade unions without the previous permission of the authorities, but it fixes the number of workers who may constitute a trade union at not less than 25. Minors have the right to belong to a trade union. In order to be legally constituted the trade unions must be registered by the Conciliation and Arbitration Board. The Act gives full recognition to the right to strike and regards a strike as suspending the contract of employment. It provides for compensation for industrial accidents and occupational diseases.

Conciliation and Arbitration.—With a view to the settlement of collective disputes, the Code establishes district conciliation and arbitration boards and a national board, and it determines the method of working and the powers, procedure and responsibilities of these boards. Finally, the Code provides for penalties of a general kind for infringements of its provisions.

Transportation of Trucks by Railways in United States

In order to meet motor truck competition and the resulting loss to the revenue of railways the Pennsylvania Railroad recently adopted a plan for transporting truck bodies by rail at rates below the trucking cost. The same plan is now followed by three other railway companies, namely the Baltimore and Ohio, the New Jersey Central, and the Delaware, Lackawanna and Western Companies. The new service proposes free service at certain cities for the lifting of the truck bodies, loaded or empty, from the chassis to the railroad car, and vice versa. The rates for the transportation of the bodies are on a flat charge for each truck body.

The truck bodies are loaded by the shipper and transported to the freight depot by motor, thence lifted by cranes onto railroad cars and shipped to destination point, and there lifted on to waiting truck chasses for final shipment to consignee. The plan was first brought to the attention of the Interstate Commerce Commission on March 4 of the current year by John F. Deasy, vice-president in charge of the central region of the Pennsylvania Railroad, during the progress of hearings on the Commission's investigation into rail-motor co-ordination.

OLD AGE PENSIONS IN CANADA

Statistical Summary of Administration During Third Quarter of 1931 and Since Inception of the System

THE accompanying table gives particulars of operations under the Old Age Pensions Act (Revised Statutes of Canada, 1927, chapter 156) and the various provincial concurrent Acts, during the third three months of 1931, and since these Acts became severally effective. Similar tables, bringing the statistics down to June 30, 1931, were given in the LABOUR GAZETTE, August 1931. The text of the Old Age Pensions Act was given in the issue for April, 1927, page 375. It makes provision for the establishment of a Dominion Provincial pension system to be effective in such provinces as have enacted and given effect to special legislation for this purpose. These provinces are British Columbia, Alberta, Saskatchewan, Manitoba, and Ontario. The New Brunswick Legislature passed an Old Age Pensions Act at its session last year, to become effective on its proclamation by the Lieutenant Governor in Council; while in Nova Scotia and Prince Edward Island Acts providing for the participation of these provinces in any federal scheme were passed

at the session of 1931, both these Acts to take effect on proclamation.

Under the Old Age Pensions Act a pension is payable to any British subject of 70 years and upwards who is not in receipt of an income of as much as \$365 a year and who has resided in Canada for the 20 years preceding, and has also resided in the province in which the application is made for the five years immediately preceding the granting of the pension. The maximum amount of pension payable under the Act is \$240 yearly. In cases where pensioners have a private income the amount of their old age pension is subject to a reduction by the amount, if any, that their private income exceeds \$125 a year. The administration of old age pensions is entrusted to the authorities appointed by the respective provincial governments.

Increase in Dominion Contribution

Under the provisions of the Act as it was first passed the Department of Labour of Canada paid quarterly to each province one-

TABLE I—FINANCIAL SUMMARY OF OLD AGE PENSIONS IN CANADA AS AT SEPTEMBER 30, 1931

	Alberta Act effective Aug. 1, 1929	British Columbia Act effective Sept. 1, 1927	Manitoba Act effective Sept. 1, 1928	Ontario Act effective Nov. 1, 1929	Sas- katchewan Act effective May 1, 1928	Northwest Territories Order in C. effective Jan. 25, 1929	Totals

half of the total amount of the pensions paid by the provincial pension authority during the preceding three months. At the last session of the Dominion Parliament, however, the Act was amended, the amount of the Dominion contribution being increased from fifty per cent to seventy-five per cent of the total expenditure, this amendment to become effective on July 31, 1931.

No agreements between the Dominion and Provincial Governments under the provisions

of the amending Act of 1931 have yet been completed, and the amount of the Dominion contributions, as shown in the accompanying tables, therefore remains as formerly at the figure of 50 per cent of the total expenditures for old age pensions. However, when new agreements have been entered into between the Dominion and the respective Provincial Governments, the amount of the Dominion Government's contribution will be revised accordingly.

WIDOWS', ORPHANS' AND OLD AGE CONTRIBUTORY PENSIONS IN GREAT BRITAIN

PARTICULARS of the administration of the contributory pensions schemes in England and Wales, and in Scotland, during the fiscal period ending March 31, 1931, were recently published in the reports of the Departments in charge. These reports were summarized in the *Ministry of Labour Gazette*, October, 1931.

England and Wales.—308,692 widows, with 259,078 children, were in receipt of pensions during the year, a sum of £10,656,800 being disbursed. The number of children receiving orphans' pensions was 14,307, the amount they received totalling £290,500 for the year. In accordance with the provisions of the amending Act of 1929, widows' pensions were awarded to widows aged 55 and over whose husbands died or reached the age of 70 before the commencement of the main scheme of January 14, 1926. Widows who attained the age of 60 before January 1, 1931, became entitled to pensions on July 1, 1930, or on attaining the age of 60, whichever was the later; widows who were between 55 and 60 on January 1, 1931, became entitled to pensions on that date.

Up to March 31, 1931, the number of claims received from widows in England and Wales, under this extension of the Acts, was 326,400; the number of widows' pensions awarded was 254,189; and the number of beneficiaries was 237,949. The total amount paid in pensions to widows under these provisions, up to March 31, 1931, was estimated at £3,970,000.

The total number of persons between the ages of 65 and 70 in receipt of old age pensions under these provisions in England and Wales on March 31, 1931, was 571,983. These figures include wives of men over 70 who became entitled to pensions between the ages of 65 and 70 under the Act of 1929. The number of such awards up to March 31, 1931, was 26,144.

At March 31, 1931, the number of Old Age Pensions in payment to persons over 70 years of age in England and Wales by virtue of the Contributory Pensions Acts was 479,631. These totals do not include pensions payable under the Old Age Pensions Acts.

Scotland.—The numbers of pensions and allowances in payment on December 31, 1930, were: Widows' pensions under 1925 Act, 36,586; widows' pensions under 1929 Act, 23,082; children's allowances, 37,338; orphans' pensions, 2,675; old age pensions at ages 65-70, 64,355. In addition there were 70,766 pensions payable to persons over 70 from moneys voted under the Old Age Pensions Acts where the pension was payable in respect of insurance, free from conditions as to means. The total of these pensions and allowances was 234,802, as compared with 189,404 on December 31, 1929, the large increase being mainly due to the effect of the Act of 1929.

The payments under the Contributory Pensions Act to widows (including children's allowances) during the nine months from April 1, to December 31, 1930, were estimated at £1,321,770. The corresponding figures for orphans' pensions were £42,162, and for pensions at ages 65-70, £1,285,877.

The Variety Five Cent to One Dollar Store at Montreal has taken a group life insurance policy for the benefit of its employees, the underwriters being the Metropolitan Life Insurance Company. The company and the employees agree to share the cost of the scheme, which took effect on September 15. In addition to life insurance, insured employees have the advantages of a visiting nurse service when sick or injured and under the care of a physician, and a health advisory bureau regularly distributes pamphlets on life extension and hygiene.

Old Age Pensions in Australia

The annual report on invalid and old age pensions for the Commonwealth of Australia covering the twelve months ended June 30, 1931, has recently been received. A review of the pension legislation of the Commonwealth was given in the *LABOUR GAZETTE* for September, 1929, page 967. The pensionable age for men is 65 years, or, in the event of permanent incapacity, 60 years; while for women the qualification age is 60 years. The pension is fixed at such amount as deemed reasonable and sufficient, having regard to all circumstances of the case, but must not exceed £25 per annum in any event, or be at such a rate as will make the pensioner's income, together with pension, exceed £52 per annum. Old age and invalidity pensions have been paid in the Commonwealth since July 1, 1909, but the portion of the Act authorizing pension payment to women became effective on December 15, 1910.

During the year, there were granted 28,844 claims for old age pensions, and 10,006 claims for invalid pensions. The total number of pensions current on June 30, 1931, were 240,520. Of this total, 172,177 were old age pensions, and 68,343 were invalid pensions. The total expenditure in 1930-31, exclusive of administrative costs, but including total payments to pensioners, benevolent asylums, and hospitals for maintenance of pensioners, was

£11,710,953. The cost of administration during the year was £93,077, or 15s. 11d. in proportion to every £100 payment of pension. The average number of pensioners for each 10,000 of population is given as 266 for old age and 105 for invalid pensioners.

Maternity Allowances.—The annual report of the Commissioner of Maternity Allowances, Commonwealth of Australia, recently issued, shows that the number of claims paid during the twelve months ended June 30, 1931, totalled 126,149, while 770 claims were rejected. In the previous year there were 128,598 claims paid and 821 rejections. During the past year the total amount paid in allowances was £630,652, while the cost of administration was £15,332, or £2 8s. 7d. to every £100 of maternity allowances paid. Since the Act came into effect on October 10, 1912, the number of claims paid totalled 2,475,475 with a total of 12,308 rejections.

An outline of the Commonwealth Maternity Act appeared in the *LABOUR GAZETTE*, April, 1928, page 414. Under its provisions a sum of £5 is paid to the mother in respect of each confinement at which a living or viable child was born. This allowance is paid irrespective of the financial status of the mother, and no distinction is made between married and unmarried mothers.

MOTHERS' ALLOWANCES IN BRITISH COLUMBIA, MANITOBA AND SASKATCHEWAN

British Columbia

THE ninth annual report of the Mothers' Allowances Board of British Columbia for the year ending September 30, 1930, shows that at the close of the period the number of families assisted was 1,468 as compared with 1,370 in September, 1929, while the number of assisted children was 3,229—an increase of 201.

Expenditures during the year totalled \$803,512.52, of which \$785,036.38 was paid to beneficiaries under the Act, while \$18,476.14 comprised administrative costs. It is pointed out that the number of mothers assisted varies from month to month, as they become ineligible for further pension on re-marriage, or when their children attain the age of sixteen years, and for other reasons, while new applications are being constantly received. During the year 1,745 families, with 3,883 children, were assisted. The average pension for a family amounted to \$45.85 per month.

Since the Act came into force in July, 1920, applications for assistance were received in respect of 5,828 families. During those ten years and three months a total of \$5,751,653.30 was expended under the Act.

A table is given showing the status and number of children of families in receipt of assistance during September, 1930. Of a total of 1,468 families who were assisted during that month 539 were families with one child, 461 were families with two children, 259 were families with three, 116 were families with four, 50 were families with five, 28 were families with six, eleven were families with seven, and four were families with eight children. Of the 1,468 mothers who received allowances 847 were widows, 249 were deserted, 261 had husbands who were incapacitated; 51 husbands were insane, and 11 were in the penitentiary; 44 mothers were unmarried and 5 were foster mothers.

Tuberculosis was the leading cause of incapacity of the husbands, followed by heart disease, blindness, rheumatism and asthma.

The following paragraphs from the Board's report indicate its duties and the service performed:

"Throughout the year regular visits have been made to the families in receipt of assistance. Trained visitors are enabled through these visits to keep in close contact with each case. Any changes that take place in the financial and family circumstances and conditions are noted. Care is taken to see that the assistance given is utilized for the purpose for which it is intended, viz: the providing of home care for the children under satisfactory conditions. As a result of the information gained by visitors making their periodical calls, adjustments in amount of allowances paid are made in accordance with the changed circumstances.

"In the many difficulties which are encountered by assisted families the visitors are able to be of real help. In times of illness of the mother or her children, suitable medical, surgical, hospital and nursing arrangements have been made with the minimum of hardship to the families. Through the generosity and co-operation of members of the medical profession, times of sickness have been rendered immeasurably less anxious to those assisted families whose incomes are such that 'budgeting' for such eventualities is impossible.

"When families are found to be living in undesirable quarters or congested localities which are manifestly unsuitable for rearing young children, every effort is made to induce

them to remove to less cramped accommodation in low rent areas. The surroundings and health of scores of families have been improved through this interest being taken in this branch of the work. Regular school attendance is showing improvement.

"Self-help and self-respect are encouraged. Many families who were in danger of becoming 'leaners on public benevolence' have been encouraged to augment their incomes through their own efforts. They have learned that the amount provided is in the nature of assistance and at the most is only sufficient for the barest necessities, and that ample scope remains for acquiring additional comforts through their own personal enterprise, so long as proper home care for the children is not thereby jeopardized. Of the 1,468 mothers in receipt of help in September, 1930, there were 693 who were not rent payers.

"Care and thought is given to the important problem of establishing boys and girls in remunerative employment when they reach the age of sixteen years. Whenever possible places are found for these older children. Many families have been able to get out of the 'indigent' class by reason of the older children becoming satisfactorily established in industry."

By an amendment passed by the provincial legislature this year the Mother's Pensions Act is now administered by the Superintendent of Welfare in the Department of the Provincial Secretary (LABOUR SECRETARY, May, 1931, page 530). This change is in accordance with a plan to consolidate all welfare work in the province under one department.

Manitoba

The annual report of the Child Welfare Division of the Department of Health and Public Welfare of Manitoba reviews the administration of the Child Welfare Act during the fiscal year ending April 30, 1930. This enactment combines in one statute practically all of the child welfare legislation of Manitoba. The Child Welfare Act consists of 12 parts, each of which is concerned with some phase of the protection and care of children. Part III defines the conditions of bereaved and dependent children, and the grounds on which they may be enrolled under government assistance and yet remain in their own home. This part of the Act takes the place of the Mothers' Allowance Act which was repealed in 1924, when the Child Welfare Act was enacted (LABOUR GAZETTE, May, 1924, page 373 and August, 1924, page 626).

The department's report deals chiefly with the administrative activities under this third section of the Act. During the fiscal year ended April, 1930, the total number of families assisted by means of the mothers' allowance was 1,055. During the year, however, 216 families were discontinued, leaving the number under allowance at the end of the period as 839. Of the 187 new applications received during the year, 42 were refused and half of these were regarded as having resources sufficient. The other half were refused for various causes which made the applicants ineligible under the regulations. The report points out that the fact that nearly one-quarter of the new applications were refused may be interpreted in various ways. "It may be regarded as indicating an extended desire on the part of many families to obtain assistance under the

misfortune of the death or disability of the father and the approach of 'hard times,' but as only 21 of the families out of the 187 were regarded as having 'resources sufficient,' and the remaining were refused for various reasons, the number of refusals need not be interpreted as lack of desire for independence on the part of many families, nor as niggardliness on the part of the government."

Cancellations for the year totalled 235. In this respect the report observes that "the word 'cancellation' need not imply anything derogatory, as the word merely indicates that for good and sufficient reasons the assistance rendered by the government was terminated. Of the total number, 61 were regarded as having resources sufficient, which speaks well for the thrift of the families concerned, and the assistance the allowance provided, until they reached again the estimable goal of independence. If to this be added the 78 mothers who were ineligible because of having only one child under 15 years of age, and the 16 with no children under 15, the remainder is not at all large."

Bereaved and dependent children.—In the 1,055 families receiving allowance during the fiscal year the number of children under fifteen years of age was 3,180, or an average of three children under 15 years to each family. The statistics indicated that there were 2 families with 9 children under fifteen; 3 with 8 children; 23 with 7 children; 39 with 6 children; 77 with 5 children; 164 with 4 children; 274 with 3 children; 408 with 2 children and 51 families with one child under fifteen years.

The amount paid in allowances during 1929-30 was \$485,059.50 as compared with \$531,357.33 in the previous year. The total amount disbursed since the enactment of mothers' allowances legislation in 1916 is \$4,893,494.48.

Of the 1,055 families benefiting by the allowance during the year, the age of death or disability of 627 fathers was between 25 and 45 years. "The inference is quite plain," the report observes "that in the majority of these cases the children were of tender years. It surely is a problem for public health and medical practice how to reduce the loss through death or disability of the breadwinner at such

comparatively early ages. In the majority of such cases the family is far from independence. Of the 1,055 there were 739 who left no resources at death, and 54 left under \$200. Only 115 of the whole number left cash resources of over \$1,000. As a general rule the earlier the death or disability of the father, the less are the resources of the family and the longer will the children remain under allowance. The economic loss occasioned by small children being bereft of the breadwinner falls back upon the state, which for a number of years must stand in some degree in the place of the provider."

Occupations.—About three-quarters of the fathers had been labourers or farmers who at their death left their dependants inadequately provided for, "though, probably in many cases pioneer work and death at a comparatively early age rendered the family independence fairly improbable."

Fourteen Years of Allowances.—Dealing with features of 14 years history of mothers' allowances in the province the report states that during those 14 years the total number of applications was 2,565, which gives an average of 183 applications per annum. "Considering the population of Manitoba during this period, and accepting the view that such population would not show a large number of older people, the fact of such a high average number of applications for mothers' allowance puts a persistent question mark to the record of our provincial health. The amount of expenditure for that period on mothers' allowances alone closely approximates \$5,000,000, or roughly \$357,000 per annum. This may be regarded as a considerable burden on a population which has not yet reached three-quarters of a million."

Neglected and other Children.—Under this section statistics are presented with reference to the administration of other sections of the Child Welfare Act. At the end of the fiscal year there were 1,146 children who were wards either directly under the department or various Children's Aid Societies. The report also summarizes the work in connection with feeble-minded children, handicapped children, children of unmarried parentage, and adopted children.

Saskatchewan

The superintendent of mothers' allowances for the Province of Saskatchewan announced recently that, commencing on October 1, allowances would be granted in accordance with the following schedule:—

	Per month
Mother and one child.. . . .	\$ 8
Mother and two children.. . . .	12
Mother and three children... . .	16
Mother and four children... . .	20
Mother and five children... . .	24
Mother and six children... . .	28
Maximum amount...	30

Formerly, the amounts to be paid were determined, under the general regulations, by the administering officer in accordance with the necessity of each case. The usual maximum payment was \$30 per month, but in exceptional cases it was sometimes \$40 or even \$50 per month. Part VI of the Child Welfare Act, which relates to mothers' allowances, provides that the payments under this head are not to exceed the amount voted for that purpose by the Legislature. Allowances are paid to any woman who has a child or children under 16 years of age and who is a widow, or who is the wife of an inmate of a gaol or penitentiary, tubercular sanitarium, or of an institution for incurable, feeble-minded or

insane persons, or who is the wife of a man who is permanently incapacitated by incurable disease or insanity from contributing sufficiently to the support of his family; or who is a woman having resident with her one or more children under 16 who are orphans, and who is the grandmother, sister, aunt or other suitable person acting as foster-mother and has not adequate means to care properly for them.

Under an amendment passed this year (LABOUR GAZETTE, April, 1931, page 436) payments are also made to a mother whose husband is permanently incapacitated by blindness. A foster mother caring for children whose mother is dead and whose father is incapacitated, is also eligible.

WOMEN'S MINIMUM WAGES IN NOVA SCOTIA

Order Governing Employees in Factories

THE Minimum Wage Board of Nova Scotia recently published Order No. 6, governing female employees in all factories not dealt with in other orders, and the paper trades. The orders so far issued by the Board are as follows:—

Order No. 1.—governing laundries, dry cleaning establishments and dye works at Halifax (LABOUR GAZETTE, January, 1931, page 34).

Order No. 1a.—governing laundries, etc., in Sydney and Glace Bay (do., page 34).

Order No. 1b.—governing laundries, etc., in all other incorporated towns (do., page 35).

Order No. 2.—governing food trades in Halifax (do., page 35).

Order No. 2a.—governing food trades in other cities and towns (LABOUR GAZETTE, July, 1931, page 769).

Order No. 3.—governing hotels, restaurants and refreshment rooms in cities and towns (LABOUR GAZETTE, January, 1931, page 35).

Order No. 4.—governing the textile and needle trades (LABOUR GAZETTE, September, 1931, page 984).

Order No. 5.—governing telephone operators (LABOUR GAZETTE, August, 1931, page 884).

ORDER No. 6

Governing Female Employees in all Factories not dealt with in other orders, and the paper trades (which include printing, book binding, paper box making, paper bag making, manufacturing stationery and other trades making paper or paper products).

(1) *Wages*.—No person, firm or corporation shall employ a female worker or suffer or permit a female worker to be employed in industries as above mentioned in the cities or incorporated towns in Nova Scotia at a wage less per week than is set forth in the following table.

Population group	Experienced workers		Inexperienced Adults over 13 years		Young girls under 13 years	
	\$	cts.	\$	cts.	\$	cts.
Cities and towns of 17,000 population and over.....	11	00	6 months at 9	00	6 months at 7	00
			6 months at 10	00	6 months at 8	50
					6 months at 10	00
All towns under 17,000 population.....	10	00	6 months at 8	00	6 months at 6	00
			6 months at 9	00	6 months at 7	50
					6 months at 9	00

No worker who begins as a young girl shall, after reaching the age of eighteen years, receive less than the wage prescribed for an inexperienced adult. A person shall be deemed to be an experienced worker when such person has been employed in the industry for one year, after attaining the age of seventeen years, and

in other cases when such person has been employed in the industry for eighteen months.

(2) *Maximum of inexperienced employees*.—The number of inexperienced adults or young girls or both shall not exceed twenty-five per cent (25%) of the total female working force, except when the total working force is less than four.

(3) *Piece-Work*:—The wages paid to each time-worker and to each piece-worker during the first six months' employment in the industry shall conform to this order. In the case of piece-workers of more than six months' experience it is sufficient if at least 80 per cent receive wages conformable to this order.

(4) *Hours of Work*:—(a) The work-period for which these minimum wages shall be paid shall not be less than 44 nor more than 50 hours per week.

(b) Work in excess of 50 hours per week shall be counted as overtime and shall be paid for at not less than the minimum wage rates fixed by this order, reckoned on the basis of a 50 hour week.

(c) Work for less than 44 hours per week may be counted as short-time, and shall be paid for at not less than the minimum wage rates fixed by this order, reckoned proportionately to the regular weekly period in the establishment.

(d) The wage minimums shall be payable for the work-period in any establishment within the limits of from 44 to 50 hours per week. Any worker losing time during the operation of an estab-

lishment may be paid proportionately for the actual number of hours worked.

(5) *Permit*:—The Board may issue permits for lower wages on behalf of aged or handicapped workers. It may also grant permits of variation or suspension of any of these regulations in case of exceptional conditions. Employers or employees are invited to consult the Board regarding any problems which this order may concern.

(6) *Deduction for absence*:—No deduction below the minimum wage line for absence shall exceed the value of the time lost, reckoned in proportion to the normal working hours in vogue in the establishment.

(7) *Waiting*:—An employee required to wait on the premises shall be paid for the time thus spent.

(8) *Penalties*:—Any violation of this order is punishable by fine. (See section 11 N.S. Acts, 1920, Chapter 11).

(9) *Posting*:—Each establishment shall keep a copy of this order posted in a conspicuous place on its premises.

(10) This order is subject to annual revision by the Board.

(11) This order shall come into force and be effective on the first day of November, 1931.

Pulp and Paper Industry in Canada in 1930

Statistics of the pulp and paper industry in Canada for 1930 are presented by Mr. R. H. Coats, Dominion Statistician, and R. G. Lewis, statistician on Forest Products, in the *Pulp and Paper Magazine* for October 8. The pulp and paper industry is shown to be the most important manufacturing industry in Canada, heading the lists in 1930 for gross and net values of manufactured products as well as for distribution of wages and salaries. In total capital invested the industry is second only to electric light and power plants and in total number of employees it is second only to saw-mills.

The industry has headed the lists in wage and salary distribution since 1922 when it replaced the saw-mills in this respect and it has been first in gross value of products since 1925, exceeding the gross value of flour mill production. In these comparisons, it is pointed out, only the manufacturing stages of the pulp and paper industry are referred to, no allowance being made for the capital invested, the men employed, the wages paid or the products of the operations in the woods, which form such an important part of the industry

as a whole. Operations in the woods are dealt with in reports on primary forest production owing to the difficulty of separating the production of pulpwood from the production of saw-logs and other primary forest products.

Some of the more important statistics of the pulp and paper industry in Canada during 1930 are summarized in the article as follows: number of plants, 109; capital employed, \$714,437,104; total employees, 33,207; salaries and wages, \$45,774,976; fuel used, \$10,633,286; power employed H.P., 1,634,784; pulp-making materials, \$88,281,829; paper manufactured, \$173,626,333; gross value of production \$215,674,246; net value of production, \$133,681,991; pulpwood exported \$13,611,617, wood pulp exported, \$39,059,979; paper, etc., exported, \$133,440,242.

The "Unemployed Women's Association, Calgary," has been incorporated under the Societies Act of the Province of Alberta, its purpose being "to provide for the recreation of the members and afford opportunity for friendly and social intercourse."

Imperial Service Medals for Canadian Employees

The Imperial Service Medal, bearing the Inscription "For Faithful Service," is awarded to civil employees in the various parts of the Empire on their retirement after service of twenty-five years. The honour restricted to those who are not eligible for companionships in the Imperial Service Order, which was instituted by King Edward VII in 1902.

The following list of employees of the Dominion Government have recently been awarded Imperial Service Medals by His Majesty the King:—

Department of Marine

Lightkeepers: Henry Havelock McNeill, Dalhousie Island, New Brunswick; Alphonse Theriault, Jerseyman Island, Nova Scotia.

Department of Mines

Caretaker: John Henry Fortune, Mines Branch Building, Ottawa, Ontario.

Department of National Defence

Foreman, Ferdinand Cantin, Quebec.

Department of Railways and Canals

Brakemen: Etienne Beaupré, Mont Joli, Quebec; Antoine Joseph Paradis, Joffre, Quebec.

Enginemens: Ferdinand Belliveau, Moncton, New Brunswick; Nelson Allen Hurd Belyea, South Devon, New Brunswick; Robert Crane Colpitts, Moncton, New Brunswick; Octave Gagnon, Riviere du Loup, Quebec; Gaudiose Lambert, Joffre, Quebec; Robert Phinney, Truro, Nova Scotia; Murdock Arthur Smith, Sydney, Nova Scotia.

Carmen: Philippe Belliveau, Moncton, New Brunswick; Albert Malouin, Joffre, Quebec.

Constable: Thomas Charles Billington, Halifax, Nova Scotia.

Leading Hand Coach Carpenter: John Albert Bishop, Moncton, New Brunswick.

Coach Carpenters: Maxime Boudreau, Moncton, New Brunswick: (2 individuals of same name and residence).

Boilermaker: William Simon, Moncton, New Brunswick.

Stationary Boiler Fireman: Joseph Daniel Brown, Truro, Nova Scotia.

Yardmaster: Louis Wilkins Cann, Halifax, Nova Scotia.

Conductors: Everett Crowe, Truro, Nova Scotia; David Allen Gibson, Moncton, New Brunswick; Albert Ernest Logan, South Devon, New Brunswick; Murdock McDonald, Truro, Nova Scotia; Coll McDougall, Moncton, New Brunswick; James Robert McManus, Saint John, New Brunswick; Nelson Horatio Morton, Moncton, New Brunswick;

William Alexander Mitchell, Levis, Quebec; Louis Joseph Phydime Tardif, Levis, Quebec.

Machinists: George Almon Duncan, Campbellton, New Brunswick; Narcisse Leger, Moncton, New Brunswick; Herbert Grant McKenzie, Moncton, New Brunswick; Pierre Roy, Riviere du Loup, Quebec.

Lockmasters: William Henry Fleming, Chafey's Locks, Ontario; Arthur Sidney Jones, Smith's Falls, Ontario.

General Foreman: Joseph Philippe Aime Gauvreau, Riviere du Loup, Quebec.

Wood Machinists: James John Govang, Moncton, New Brunswick; Angus Calixte LeBlanc, Moncton, New Brunswick.

Station Agents: Marcel Amedée Guimont, Sainte Monique, Quebec; François Xavier Stevens, Rogersville, New Brunswick; Frederick Morison, Apohaqui, New Brunswick.

Engine Watchman: John Hetherington, Joffre, Quebec.

Sectionmen: William Hetheridge, Charlottetown, Prince Edward Island; George Huard, Chaudiere, Quebec; Charles Augustus McLean, Charlottetown, Prince Edward Island; Alexander McLeod, Bayfield, Nova Scotia.

Sleeping Car Porters: Thomas Johnson, Halifax, Nova Scotia; John Welch, Halifax, Nova Scotia.

Section Foremen: Joseph Emmanuel Lacharite, Saint Cyrville, Quebec; George O'Brien, Quarryville, New Brunswick; Arthur Poirier, Amqui, Quebec; Robert Smith, Westville, Nova Scotia; John Angus Stewart, Wood Island, Prince Edward Island.

Night Foreman: William Edward McLaren, Pictou, Nova Scotia.

Netting and Ashpan Inspector: Walter McNaughton, Stellarton, Nova Scotia.

Captain, s.s. *Scotia*: Lorenzo Raymond Maguire, Mulgrave, Nova Scotia.

Hostler: Frederick Charles Tupper Miller, Halifax, Nova Scotia.

Sleeping Car Conductor: Timophy Mullaney, Halifax, Nova Scotia.

Freight Checker: James Allen Murray, Saint John, New Brunswick.

Towerman: Gilbert Parent, Montreal, Quebec.

Fuel Foreman: Alfred Francis Peebles, Mulgrave, Nova Scotia.

Porter Instructor: Charles Henry Pinheiro, Halifax, Nova Scotia.

Switchmen: Alfred Taylor Tait, Moncton, New Brunswick.

Machinist Helper: Libere Voutour, Moncton, New Brunswick.

UNEMPLOYMENT AND FARM RELIEF ACT, 1931

AGREEMENTS between the Dominion Government and Governments of the various provinces as to work to be carried on for the relief of unemployment under the provisions of the Unemployment and Farm Relief Act, 1931, have been negotiated in accordance with the regulations. Included in the regulations are provisions that the eight-hour day must prevail; that the wages paid may be fixed by the Provincial and Municipal Authorities, but must be such as are fair and reasonable; that only goods and materials of Canadian manufacture or production may be used; and that contracts may be let only to *bona fide* Canadian construction firms established and operating in Canada prior to January 1, 1931.

The agreements also provide that all persons employed on the works or undertakings to which the Federal Government contributes shall be residents of Canada and, so far as practicable, of the locality in which the work is being performed, and in no case shall discrimination be made or permitted in the employment of, or in the granting of direct relief to, any persons by reason of their political affiliation, race, or religious views.

A sub-committee of Council has been set up to deal with Unemployment Relief matters. This Committee consists of the following Ministers:—

Right Honourable Sir George Perley, K.C.;

The Honourable Senator G. D. Robertson, Minister of Labour (Chairman);

The Honourable E. N. Rhodes, Minister of Fisheries;

The Honourable R. Weir, Minister of Agriculture;

The Honourable Maurice Dupré, Solicitor General;

The Dominion Director of Unemployment Relief, Mr. Harry Hereford, acting as Secretary of the Committee.

The Honourable Senator G. D. Robertson, Minister of Labour, announced that up to November 12, approval had been given by the Dominion Government to Municipal and Provincial projects, the total cost of those projects being approximately \$43,144,114, to which the Dominion contribution is \$17,265,757. This sum does not include municipal or provincial

works in the Provinces of Quebec and New Brunswick.

In these two eastern Provinces work is under way, but the details have not yet been checked and, therefore, the totals are not yet available for publication. It was expected, however, that the Minister would make a further announcement regarding these Provinces in a few days.

The total above mentioned does not include Federal Works which are being undertaken by the Dominion government at the present time, and approvals of which to the same date amount to \$5,331,937, of which the Dominion Government pays the total cost. There may be a further list of Federal works made public at an early date.

The total cost of Dominion, Provincial and Municipal undertakings approved, is approximately \$48,476,051, the total Federal contribution being \$22,597,694.

In addition, the Dominion Government is ministering to the needs of the destitute farmers in the drought area of Saskatchewan by supplying the funds—100 per cent—for the purchase of food, clothing, fuel, seed and feed.

Undertakings approved are shown in the following tabulation by provinces, with details so far available for publication. Additional details will be furnished as fast as the recommendations of the Provinces are received and approved by the Subcommittee of Council:—

APPROVED PROVINCIAL AND MUNICIPAL WORKS AS AT NOVEMBER 12, 1931

	Total cost		Dominion's proportion

THE UNEMPLOYMENT PROBLEM IN GERMANY

Report and Recommendations of Government Advisory Commission

THE report of an Advisory Commission appointed by the German Government in January, 1931, to study the problem of unemployment, has been published in an English version by the Ministry of Labour of Great Britain. The chairman of the Commission was Dr. Brauns, a former Federal Minister of Labour, the other members being Dr. Bernhard Dernburg (a former Federal Minister); Dr. Herman Dersch (Professor at the University of Berlin and a Director in the Federal Insurance Office); Dr. Wilhelm Engler (President of the Hesse State Employment Exchange); Herr Hans Frick (ex-Departmental Principal Secretary); Dr. Eduard Heimann (Professor at the University of Hamburg); Frau Antonie Hopmann (Secretary of the Catholic Women's Union); Dr. Wilhelm Polligkeit (Professor at the University of Frankfurt-on-Main); Dr. Adolf Tortilowicz von Batocki-Friebe (formerly Governor of a Province of Prussia); and Dr. Friedrich Zahn (President of the Bavarian Statistical Office).

Dr. Brauns, the chairman, in an address to the Commission, stated that in his view the function of the Commission was to endeavour, in the light of existing conditions, to make such concrete proposals for combating unemployment and its consequences as were within the power of German public bodies and German legislation to put into effect. He thereupon made a number of suggestions on these lines, and the Commission agreed upon a provisional program covering the following points:—

- (1) The productive organization of unemployment relief;
- (2) The distribution of work in accordance with considerations of labour market policy (placing of labour, reduction of working hours, workers exercising secondary occupations, raising of the school-leaving age, etc.)
- (3) Wages and prices policy in relation to their effect on the labour market.
- (4) the labour market and agriculture; unemployment and home colonization;
- (5) duty work (Pflichtarbeit); labour conscription; voluntary labour service; the provision of work;
- (6) the direct relief of unemployment; unemployment insurance, emergency benefit, poor relief; their conditions and limits, benefits, organization and inter-relationship.

The Commission issued their Report in three parts, dated 27th March, 29th April, and 28th May, 1931, respectively. Part I makes recommendations for relieving unemployment by means of a redistribution of the available work. Two measures are considered in this connection: (a) the reduction of working hours, and (b) the restriction of the exercise of secondary occupations. Part II is concerned with the possibilities of creating additional opportunities of work. Part III deals with the organization of the direct relief of unemployment under the unemployment insurance, emergency benefit and poor relief systems, and the measures necessary to enable these systems to meet the heavy financial burdens imposed on them during the present period of acute unemployment.

The Commission divided their work into two main tasks: first, the consideration of the possibilities of combating unemployment by the organization of the labour market; second, the mitigation of the effects of unemployment, in particular, the direct relief of unemployment in its three forms, unemployment insurance proper, emergency benefit and the poor relief system for able-bodied unemployed persons.

The Reduction of Working Hours

The Commission recommended certain administrative measures to the consideration of public bodies, and unanimously proposed the passing of an Act on the following lines:—

i. The Federal Government, with the agreement of the Reichsrat and after consultation with the parties concerned, shall be empowered to reduce the statutory maximum duration of normal working hours to 40 a week for individual branches of industry or occupations, due regard being given to the question whether the reduction is technically and economically possible, and whether it is practicable in view of the number of workers available on the labour market.

ii. This authorization shall not cover undertakings in which normally less than ten workers are employed;

iii. If the Federal Government issues such an Order, the provisions of collective agreements which are not in accordance with it shall cease to be in force one month after the promulgation of the Order.

iv. If use is to be made of the power to exceed the statutory maximum working hours which is provided for in collective agreements,

the approval of one of the authorities designated in the Working Hours Order shall be necessary. This shall apply both when the maximum duration of work is as fixed by the provisions of the Working Hours Order and when this has been reduced in accordance with Article i above.

Abolition of Secondary Occupations

The Commission did not recommend any legislative action on this subject, but decided that the greatest possible pressure should be brought to bear on all bodies that would be concerned in the elimination of the exercise of secondary occupations. Only paid secondary employment need be prohibited, but all permits for secondary employment should be rescinded immediately, and fresh requests for permits should be granted only in cases in which the exercise of a secondary occupation can be justified by the situation of the labour market. Steps should be taken to reserve jobs which become available elsewhere for those who are without any income. Pension allowances, it is considered, should be reduced in cases where earnings are derived from employment; married women officials should be eliminated, and social circumstances should be considered when vacancies are filled.

Creation of Employment

The Commission examined the usefulness and practicability of every one of the numerous proposals for creating employment which have occupied public attention and which have been received by the Commission from all quarters. These proposals have had for the most part to be rejected. In particular, all proposals were resolutely rejected which aimed at creating funds for the financing of contracts by any method likely to lead to inflation or by the transfer of public promissory notes to contractors. The mere discussion of such plans is calculated, in the opinion of the Commissioners, to shake confidence in the German currency and public loan issues, which confidence is a necessary condition of all recovery.

After a discussion of the special difficulties of Germany from international and political causes the Commission considered the possibilities of creating work of a domestic character. "All measures of this nature must be designed to free our industries from their present stagnation, and to provide productive outlets for our idle labour, machinery and stocks of commodities. Consideration of the problem and the experience of former crises show that a revival of industry is normally

attained by the investment of new capital, which once more sets in motion the idle machinery of production. Formerly such revivals were as a rule due to private enterprise, and the initiative was usually taken by the building industry. The obstacles in this field today are too well known to need description here. This state of affairs makes it necessary that private initiative, which is now hampered by influences outside its control, should be assisted by the creation of additional employment with the aid of capital obtained on the strength of public credit, which will be reflected in increased employment and new markets for German trade and industry as a whole. Such schemes as are suitable to central planning, are of permanent national economic value, and are likely to show a profitable return on the capital invested, will constitute the natural field of activity."

Besides measures which aim at the direct creation of employment, measures which seek to achieve the same end indirectly by arousing and stimulating private initiative are also to be recommended.

In addition to freeing industry from the many bonds that are hampering its elasticity and adaptability, and in addition to the most economical use of public funds, it is declared to be of primary importance that steps should be taken to facilitate the creation of capital and the lowering of interest rates.

"If schemes for the creation of employment are not merely to bring a temporary alleviation of unemployment, but are to go further and bring about a revival of industry as a whole, so that the benefits are passed on to a growing number of workers, far-reaching plans calling for considerable expenditure must be drawn up. The execution of such a program does not necessarily involve the withdrawal of capital from any other part of the German economic system; on the contrary, a profitable outlet should thus be formed for capital which would not be available were it not for such measures.

"The technical means of providing capital is long-term credits. But the great difficulty at the present time is that Germany is incapable of providing sufficient capital. Consequently, the importation of foreign capital—provided that it can be obtained at a reasonable rate of interest—is imperative.

"Whatever steps may be taken to create employment in the ways described as a means of stimulating trade and industry, their success depends upon strict adherence to the following principles: sound public finances, economy in public and private activities and in standards of living, maintenance of the German

currency and greater tranquillity in our domestic political conditions. All citizens must be expected to do their duty by the community and abandon all purely individualistic activities and to take a responsible share in the restoration of the State, inspired by the highest ideals and with a steadfast determination not to fail in this day of need."

The Report proceeds to enumerate spheres of work offering scope for future development. These include: power production; transport and communications; agricultural improvements; agricultural settlement; and housing. In some cases such works may be carried on without recourse to public funds, solely by means of the creation of credit.

The same section of the report considers measures of a special character, including communal provision of work; compulsory and private labour services; duty-work (including work for charitable institutions, parks, etc.; maintenance of roads, etc.), and vocational education of unemployed persons, such education being considered to be a suitable method of increasing the vocational qualifications of the unemployed, in addition to being a valuable means of preserving from decline the craftsmanship of those without work.

Unemployment Insurance and Relief

The final portion of the report deals with the question of ensuring the efficient functioning of the machinery for the direct relief of unemployment. Unemployment insurance took effect in Germany in October, 1927. It is stated that the scheme had from the outset to contend with the special difficulty (as

compared with other forms of social insurance) "that it covered all occupational groups and every form of employment relationship without regard to the degree of unemployment risk or the possibility of dealing with it on insurance lines." To meet this danger the Act of 1927 provided for the constitution of an emergency fund, and imposed upon the Reich the obligation to grant loans. At the same time a further form of unemployment relief was incorporated in the Act in order to provide relief for those unemployed persons who are not yet, or who have ceased to be, qualified for insurance benefits. "But under the strain of the present crisis the unemployment insurance and emergency benefit systems proved unequal to the task of providing for the masses of unemployed workers. In consequence, the poor relief system developed, in practice, into a third form of unemployment relief for those unemployed persons who, for a variety of reasons, were no longer covered by either unemployment insurance or emergency benefit.

The Commission recommends the continuance of the insurance principle, supplemented by a system of relief, the existing emergency benefit plant to be retained.

In conclusion the Commission state their firm belief that mass unemployment is not to be regarded as "an inevitable fate against which we are unable to fight;" and they urge that attention should be directed towards the means they suggest for checking it, and that the practical application of the ideas put forward in their report should not be left untried.

UNEMPLOYMENT INSURANCE IN GREAT BRITAIN

UNDER the provisions of the Economy Act, passed by the British Parliament early in October, changes were made in the rates of benefit and contributions under the unemployment insurance schemes. The rates of weekly benefit (except that for dependent children) are reduced by 10 per cent, rounded off to the nearest 3d., as follows:

Class	Old Rates	New Rates
	s. d.	s. d.
Man	17 0	15 3
Woman	15 0	13 6
Adult dependant	9 0	8 0
Child	2 0	2 0
Young man	14 0	12 6
Young woman	12 0	10 9
Boy, aged 17	9 0	8 0
Girl, aged 17	7 6	6 9
Boy, aged 16	6 0	5 6
Girl, aged 16	5 0	4 6

The rates of weekly contributions are increased to 10d. each from employers, from the employed, and from the Exchequer in the case of men, with corresponding increases from the other classes, namely: to 9d. for women and for young men; 8d. for young women; 5d. for boys; and 4½d. for girls.

The payment of insurance benefit—as distinguished from transitional payments—is to be limited to 26 weeks in a benefit year, after which a fresh insurance qualification would be required. The effect of this is to transfer claimants from insurance benefit to the transitional class, but not necessarily to reduce the total payments made.

A needs test is to be applied to those whose insurance rights have expired, namely persons now drawing transitional benefit and those applying for transitional payments in future, including those who do so because they have

reached the 26 weeks' limit of insurance benefit. They may, however, continue to receive assistance in cash up to the same rates as under the insurance scheme if they show that they are in need of it.

It has been decided that there shall be no borrowing for the Unemployment Fund beyond the statutory limit already authorized. Any sum necessary to balance the accounts of the Unemployment Fund is to be provided by means of a grant from the Exchequer out of current revenue.

The Minister of Labour subsequently prepared draft regulations for removing from the operation of the Unemployment Insurance Acts the anomalies in respect of (1) persons who habitually work for less than a full week, but nevertheless receive the normal earnings of a full week; (2) seasonal workers; (3) persons whose normal employment is not for more than two days in the week; and (4) married women.

In the Act the persons in the first class are described as those "who habitually work for less than a full week and by the practice of the trade in which they are employed nevertheless receive earnings or similar payments of an amount greater than the normal earnings for a full week of persons following the same occupation in the same district." The Minister's draft regulation provides that in these cases the amount of benefit in respect of any benefit week "shall be reduced by the amount by which the aggregate of the earnings or similar payments received by them in that benefit week and if the benefit aforesaid exceeds the normal earnings for a full week of persons following the same occupations in the same district." That is to say that the total of earnings and benefit is not to exceed the normal wage as defined by the Statute.

Social Insurance in Italy

The following summary of the various forms of social insurance now in effect in Italy was given in a recent press despatch from Rome:—

Social insurance in Italy covers the worker from the cradle to the grave, for the workman's compensation law provides benefit up to five years' wages for the death of a worker. Besides workmen's compensation, the system of compulsory insurance covers old age and disability pensions, sickness and accident payments, unemployment, maternity benefits, and insurance against tuberculosis. In sickness caused through employment, the employers have to meet the doctor's bills, while the worker receives half pay from the insurance fund. Government agencies exist to help needy or abandoned mothers or infants, to give free medical attention and assistance to the sick, to care for the blind and deaf and dumb, and to take preventive measures against con-

tagious diseases. Incurables and chronic sufferers are also cared for by Government agencies. Old Age pensions are payable at 65, and widows and children receive pensions should the insured person die before pensionable age. Unemployment insurance is compulsory for all workers receiving less than 800 lire (about \$45) monthly, this being a good wage for Italy. Not only does the worker have a "waiting period" of eight days before drawing benefit, but benefit depends upon contributions. A special organization has been started for seeing that the workers are properly provided with amusements and facilities for spare time recreation. The "Opera Nazionale Lopolavoro" (National After-Work Organization) undertakes this duty, it organizes clubs, dramatic societies, libraries, pageants, evening classes, gymnasia, sports grounds, concerts, lectures and every sort of recreational activity.

SOCIAL INSURANCE PLAN OF THE ZEISS OPTICAL WORKS

THE social insurance plan which has been followed by the Zeiss Optical Company at Jéna, Germany, for over fifty years, is described in the current issue of the *American Labour Legislation Review*, as being an example of successful dealing with unemployment by a private concern. It is stated that the Zeiss plan is so complete that it is accepted by the German Employment Exchanges and Unemployment Insurance Act, the firm and its employees being exempted from participation in the national scheme. In 1881 Ernst

Abbé bought out the works from the Zeiss family and incorporated the Zeiss firm and the Schott Glass Works, a subsidiary concern, as an independent foundation with a title deed of impersonal ownership. He provided no elaborate managerial group but only general managers, division superintendents, and shop foremen, with boards of management from among them, and shop committees and sub-committees. He limited the highest salary paid to an employee of the foundation to ten times the average wage paid in the firm. The

plan provides for a basic wage for each operation, with higher rates for overtime. It allows 12 holidays in the year on pay and a vacation for each person employed, varying from one to three weeks in accordance with the length of service. Vacation pay is 30 per cent in excess of the person's basic wage. The scheme provides health insurance. It grants invalidity and old age pensions to all who have been with the firm for five years: a person invalidated after five to ten years of service receives a pension amounting to 50 per cent of his actual wages. After the tenth year of service the rate for invalidity or old age pensions rises one per cent a year to a maximum of 80 per cent of his previous wage. Widows and children of deceased employees also receive pensions. The pension funds are not kept separate from the working capital of the foundations. Since the foundations have enjoyed sound business management, the claims to pensions did not disappear through inflation. Rather, worker and pensioner alike shared the lean years and the recovery.

"At the end of the year, after capital is set aside for depreciation and expansion of business, for sound reserves for the industry and the pension system, for the important contributions made to the university and the town of Jéna, and for scientific and social purposes, the remainder is pro-rated among all the employees of the firms on the basis of their year's earnings. This bonus is designed to encourage interest in the affairs of the firm, and as all share alike and no other bonus is paid, the results seem satisfactory. Before the war these bonuses averaged eight per cent of the wages or salaries. In the years 1926-1929 they were four, seven, nine, and eight per cent respectively.

"The unemployment insurance or dismissal compensation plan is in accordance with the entire scheme and point of view of the foundation. Every person laid off because of shortage of work, who has been in the employ of the firm for six months, is entitled to a dismissal wage equal to the amount of his basic wage and for one-sixth of the time of employment with the firm. Nor does the firm take on a lot of cheap and temporary labour. Rather, every employee is hired with a view to continued service and the possibility of training and promotion. After three years' service a person dismissed for anything but grave misconduct receives his basic wage for six months as unemployment compensation. This may be paid in a lump sum or in instalments, but usually according to the latter method. After five years' service, unemployment compensation is paid according to the higher rates granted pensioners. Persons who have worked for the firm for 12, 15 or more years, therefore, receive thousands of marks in compensation. Consequently few such workers are discharged as release is too expensive. Instead, the personnel department shifts them about from one department to another, with a constant eye upon their basic wage. Every effort is made, also to stabilize production. The efficiency of the employment system is indicated by the financial soundness of the firm, which closes year after year without deficit after all its commitments are made, and usually with a small surplus.

"So soundly did Ernst Abbé plan the Zeiss foundation that to-day, 40 years after its establishment and 25 years after his death, it functions as originally designed and in advance of public practice."

Displacement of Labour by Machines on Farms in United States

An article in the October issue of the *Monthly Labour Review*, published by the United States Department of Labour, deals with the mechanization of agriculture as a factor in labour displacement. It is shown that technological displacement in the farming industry has been continuous since the first settlement of the country, but that owing to the expansion of markets for farm products and to the continued draft upon labour for the development of new farms, there was no actual shrinkage in farm employment before 1910, and but little shrinkage until after 1920, in spite of the fact that there was an increase in production per farm worker of 183 per cent between 1850 and 1924, as measured in crop-areas cultivated per worker.

The writer reviews the history of agriculture in the United States from the standpoint of mechanization and measures the effects of mechanical changes. He anticipates the following developments in the near future:—

1. It is likely that within the next few years practically all wheat produced in the United States will be grown under conditions existing in the industry in the Great Plains region and in the Northwest; that is, on large farms, with big "hook-ups" of the most modern machinery, a maximum of mechanical power, and a minimum of man labour.

2. It is probable that the same will be true of the other two main commercial field crops—corn and cotton—though in a somewhat lesser degree.

3. Because of these developments, a great deal of land in the Middle, Southern and Eastern States may be released for the growing of other crops, and a considerable acreage of the less profitable land will probably go out of cultivation entirely.

4. The adaptation of types of machines and units of power to different conditions and purposes, and to smaller farms, will result in the mechanization of fruit, vegetable, and general truck farming, as well as of the animal and dairying industries, though at a slower rate than in the production of field crops.

5. There will be a great change in the kind of labour required on farms, tending, on the whole, to the replacement of unskilled by skilled or semi-skilled workers. This change will probably be accompanied by an increase in the wages of hired farm workers.

6. It is likely that farming will come to be regarded more as a business, and less as a manner of living. In the future farmers will live on their farms only when conditions there are favourable for home-making.

7. It is to be expected that the displacement of farm labour will continue at varying rates throughout the industry, but more rapidly in the areas most favourable to large-scale machine operations. Owing to the fact that, under existing economic conditions, the limit of profitable expansion in agriculture has been reached, it is not to be expected that in the near future the industry will be able to absorb any considerable portion of the labour that will be technologically dispensed with through the continued installation of new and better machines and the more effective utilization of the machines.

Mineral Production in Canada in First Half of 1931

A preliminary report issued by the Dominion Bureau of Statistics of the mineral production of Canada during the six months ending June 30, 1931, states that considering the drastic fall in prices and the general depression that has prevailed, Canada's mineral industry may be regarded as showing remarkable strength during the first six months of 1931. Production of metals, fuels, and non-metals totalled \$95,689,288 as against \$116,360,409 during the first half of 1930, a decrease of 17.8 per cent. The reduction in volume of copper, lead, nickel, and silver, however, was much less than is indicated by the values received for these metals. Canada's metals must be sold in a world-wide market and the lower prices prevailing were the cause of serious concern to Canadian base metal producers. Lessened demand for fuels and non-metallic minerals the markets for which are nearer the source of supply, reduced the output of this group considerably. Gold, which the Dominion is producing in ever increasing quantities is the bright spot in the picture; during the present year in addition to greater production, prospecting for new properties and development of promising showings, are meeting with much support.

Metals as a group reached a production value of \$61,717,841 as compared with \$75,031,606 during the first six months of 1930. Lower outputs were recorded for all metals except gold, bismuth, the metals of the platinum group, and zinc.

The output of coal from Canadian mines decreased 17.7 per cent to a total of 5,891,588 tons as compared with 7,159,761 tons produced in the first half of 1930. Declines were recorded in all the principal coal producing provinces except Saskatchewan in which prov-

ince a 10.9 per cent increase in output was shown. Nova Scotia accounted for 44.5 per cent of the total output and Alberta, 33.6 per cent. The remainder of the production was obtained from the following sources: British Columbia, 15.8 per cent; Saskatchewan, 4.5 per cent; and New Brunswick 1.6 per cent.

Crude petroleum production in Canada reached a total of 937,779 barrels as compared with 639,884 barrels in the first six months of 1930. Natural gas production in Canada declined 6.1 per cent during the period under review to a total of 14,972,342 thousand cubic feet as compared with 15,928,745 thousand cubic feet produced in the first six months of 1930.

Asbestos production was 76,145 tons valued at \$2,447,617 as against 123,693 tons worth \$4,570,733 for the first six months of 1930. Gypsum output totalled 293,131 pounds worth \$992,418 a decrease of 33 per cent in quantity and 23 per cent in value. Salt production during the half-year totalled 115,906 tons valued at \$910,876, a decrease of 21 per cent in quantity, but an increase of 7 per cent in value when compared with the total for the corresponding period of 1930.

Monthly records of employment are collected by the Bureau and issued in the form of index numbers based on the monthly average for the calendar year 1926 as 100. On this basis general mining during the half-year ending June 1931, stood at 107.4 as against 116.8 during the first six months of 1930. Coal mining showed an average employment index of 95.8 as compared with 101.5 in the first half of last year. Metal mining stood at 138.6 as against 147.7 during the same period of 1930. Non-metal mining was recorded at 99.0 whereas during the first six months of the preceding year the figure was 124.3.

AMERICAN FEDERATION OF LABOUR

Summary of the Proceedings of the 51st Annual Convention

FOR the second time in three years the American Federation of Labour met in a Canadian city, the 51st annual convention being held in Vancouver, B.C., from October 5 to 15. At the opening session the invocation was given by the Rev. Canon A. H. Sovereign, bishop-elect of the Yukon. The welcome of the local labour movement was extended by Mr. Percy Bengough, chairman of the reception and entertainment committee, and Mr. Clarence Herrett, vice-president of the Vancouver, New Westminster and District Trades and Labour Council. Ald. John Bennett, acting mayor of Vancouver, spoke for the city and Hon. W. A. MacKenzie, provincial Minister of Labour and Mines, welcomed the delegates on behalf of the province of British Columbia. W. A. Pitchard, reeve of Burnaby, also spoke at the opening session. In handing over the convention to Mr. Wm. Green, president of the federation, Mr. Bengough, on behalf of the reception committee, presented him with a gavel made from the wood of the yew tree and suitably engraved. The addresses of welcome were replied to by President Green, whose speech it was on motion decided to have printed in pamphlet form and made available for distribution to the organized labour movement of America. At a subsequent session a telegram was read from the Hon. G. D. Robertson federal minister of labour, extending to the delegates a warm welcome to the Dominion of Canada. Messages were also received from Hon. W. N. Doak, United States Secretary of Labour; John R. Alpine, director of the Employment Service of the United States; United States Senator Robt. M. Lafollette, Jr.; United States Senator Robert F. Wagner; and James F. Barton, national adjutant of the American Legion.

The first order of business at the opening session on October 5 was the report of the Credential Committee, which, with additions from time to time, showed 335 delegates in attendance representing 81 international and national organizations, four departments, 24 state federations, 47 city central bodies, 15 local trade and federal labour unions, and four fraternal delegates, one of whom represented the Trades and Labour Congress of Canada.

Report of Executive Council

After the adoption of the rules to govern the conduct of the convention the report of the executive council consisting of 145 pages

was presented, First Vice-President Frank Duffy reading the following summary:—

Our report for the past year summarizes the achievements of half a century of labour progress under the leadership of the American Federation of Labour. We point out that we are in the beginning of a new industrial age characterized by associated activity and the formulation of the rights and equities of the creators of wealth.

Secretary Morrison's report shows the total receipts for the year were \$932,827.20—of which \$569,105.82 was income and \$363,721.38 the balance on hand at the beginning of the fiscal year. Total expenses were \$561,985.13. The balance at the end of the past fiscal year was \$370,842.17—\$52,527.88 in the general fund and \$318,314.19 in the defense fund.

The total membership upon which affiliated unions paid per capita tax in the past year was 2,889,550.

The Treasurer's report summarizes income and expenses by months and indicates the investment of funds.

The report of the trustees of the American Federation of Labour Building shows a balance on hand of \$62,729.19.

Fifty Years of Service.—Under this section we refer to the organization of the Federation of Trades and Labour Unions of the United States and Canada in 1881 and the merging of this organization with the American Federation of Labour formed in 1886.

A roster of organizations affiliated to the Federation during the past 50 years indicates which have continued membership and which have dropped out, and important organization changes in each union.

There has been a striking parallel between increases in trade union strength and gains in wages and decreases in hours of work—rapid increases in membership were accompanied by marked improvement in working conditions.

We summarize the development of collective bargaining which has been the instrumentality for giving workers status in industry, for progressively raising standards of work and broadening the functions of unions. The Federation has served as the medium for putting the support of all workers behind individual union undertakings.

Under Federation leadership unions have steadily extended their control over their time by promoting the eight-hour day; the shorter work week; first one-day rest in seven, and now the five-day week; Saturday half-holiday has been secured for many government workers.

Our trade union movement by securing social sanction for definite work standards has aided in the development and maintenance of ethical standards governing relations between employers and workers. These ethical standards are the basis for legal and economic rights.

Trade unionism has contributed to industry the principles of functional representation for Labour—the work contract, the importance of time economies, the high wage principle, specific needs for greater efficiency and regularization of work. Most fundamental of all, it has sup-

pled a constructive agency for securing the co-operation of workers in the processes and problems of production.

We summarize the contributions which the Federation has made for improving our public school system which earlier unions took a leading part in establishing.

We enumerate specific political measures through which the Federation has helped to extend the practices of democracy.

We refer to types of legislation by which we have helped protect wage-earner incomes—including mechanics' liens, assignment of wages, time and method of payment, compensation for accidents.

We have advocated the principle of protective legislation for women and report types and extent of legislation secured.

The social service of the Federation includes higher standards of living for the masses on this continent, the development of labour statistics for guiding further progress, organizing the labour market, regulation of immigration. We have created the tools for further progress and established constructive policies for the advancement of labour progress as an integrated part of national progress.

Our fifty years of service have helped to give this country upstanding workers with the highest wage levels in the world and the highest standards of living. We have ahead of us the problem of extending these gains to backward areas while steadily advancing the standards for those in the front ranks of progress.

Unemployment.—As the first step toward the solution of this problem is to discover the facts about it, the Federation has been contributing a real service in supplying the only monthly unemployment statistics available for the United States. We summarize by graphs trade union unemployment in the United States and Canada from 1926 through the first half of 1931.

We review the extent of unemployment discovered by the unemployment census of 1930, the federal survey of 1931, the estimate of the Department of Commerce for January, 1931, and the Federation estimates.

We submit an emergency unemployment program which includes: (1) maintain wages; (2) shorten work hours; (3) assure employment to minimum work forces; (4) each employer to take on additional workers; (5) create work through public building; (6) strengthen employment agencies; (7) keep young persons in school to prevent their taking jobs from older men and women; (8) preference for workers with dependants; (9) financial relief from public and private funds.

Our long-time program recommended for dealing with the unemployment problem includes:

(1) National planning based upon extension of organization throughout functional groups and co-ordination of information and plans.

(2) Public accounting so that the facts of all business enterprises shall be public property.

(3) A federal labour board to collect the facts of labour progress and to advise as to steps necessary to balance Labour's progress with that of other groups.

(4) Organization of workers in trade unions essential to balance progress of society and industry.

(5) An employment service adequate to organize and serve the labour market.

(6) Vocational guidance and retraining to enable workers to adjust to industrial changes.

(7) To balance work time and wages against increases in productivity so that workers shall share in industrial progress by advances in real wages and greater leisure. Unequal distribution of national income has thrown our industrial mechanism out of balance. Failure to shorten the work week has created unemployment.

(8) Recognition of workers' equities in their jobs.

Under the captions "High Wage Philosophy" and "Bankers and Wages" we report progress in maintaining the high wage principle and bankers' advocacy of wage reductions.

We report progress in planning for more adequate labour statistics by the Department of Labour and the Federation's participation in this work.

Under the subject "International Economic Situation" we summarize the economic difficulties of Great Britain and Germany, other European countries, South America, and Australasia, setting for the the conditions leading to the present moratorium. We summarize the most recent figures on unemployment in industrial countries. Business depression in the United States is definitely related to this world situation.

Under "Jurisdictional Problems" we report efforts to secure compliance with the decisions of the Executive Council and the conventions of the American Federation of Labour in the controversy between the International Brotherhood of Teamsters, Chauffeurs, Stablemen and Helpers of America and the Brotherhood of Railway Clerks; to adjust jurisdictional difficulties between the International Alliance of Theatrical Stage Employees and Moving Picture Machine Operators of the United States and Canada and the International Brotherhood of Electrical Workers of America and other organizations in the Building Trades Department.

We report an agreement between the National Federation of Federal Employees and the International Federation of Technical Engineers, Architects and Draftsmen's Unions.

We have continued our efforts to secure a merger between the cigarmakers' union and the tobacco workers; to adjust differences between the flint glass workers and the machinists; between the flint glass workers and the glass bottle blowers; to adjust the jurisdictional claims of the engineers and the firemen. Our decision to extend the title of the International Union of Pavers, Rammermen, Flag Layers, Bridge and Stone Curb Setters to include jurisdiction over asphalt workers was protested by the International Hod Carriers, Building and Common Labourer's Union of America, who gave formal notice of appeal to this convention.

We approved the change of title of the International Brotherhood of Stationary Firemen and Oilers to International Brotherhood of Firemen and Oilers without change of jurisdiction.

Benefit Services of National and International Unions.—Our survey of union benefits shows a large increase over the preceding year in the benefits paid by unions to their members. An improvement in reporting results from reports of benefits paid by local unions, in addition to those paid by national and international headquarters. A comparison of the benefits paid in the past three years shows a sharp increase in unemployment benefits.

The information compiled is striking proof of the value of union membership as a business investment.

Five-Day Week.—Our report of progress in extending the five-day week shows the distribution of change which is illustrated by map.

National Legislation.—Our report of legislative achievements includes the following of outstanding general interest: the enactment of laws to provide prevailing rates of wages on public buildings in the United States and the District of Columbia; Saturday half-holiday for 600,000 government employees without reduction of wages or salaries; advance planning of public works to be constructed during depressions; appropriations for better labour statistics, and federal employment service; a number of measures bringing betterment for specific crafts or callings.

Under the section "Injunction Legislation" we report progress in our efforts to secure necessary injunction legislation. Under various guises, the doctrine of conspiracy as applied to union functions and the doctrine "protection of property" have been the basis for injunctions limiting union activities. The Sherman Anti-Trust Law has been interpreted to afford a basis for restraining alleged interference with interstate commerce. The Clayton Anti-Trust Law has been perverted to multiply injunctions against unions.

To correct such abuses of the injunction Labour has drafted a bill to be introduced in the next session of Congress. We urge upon all unions co-operation in passing legislation that will stand the test of Supreme Court examination.

Taxation.—We call attention to continued attempts to enact sales tax legislation which would place a disproportionate burden upon those with smaller incomes.

We believe income and inheritance taxes are more equitable methods. Forty-five states have inheritance taxes. We believe that the Federal Estate tax measure should be returned and that the Federal Gift tax should not have been repealed. Corporation dividends and profits are another fertile field for income tax.

We believe the tax burden should be placed on those most able to pay.

State Labour Laws.—In the field of state labour legislation, our report includes the following:

The decision of the National Convention of Insurance Commissioners to increase the rate for private insurance affords an opportunity to urge the adoption of state insurance funds, under which the costs of administration are materially reduced.

Five states have declared the yellow-dog contract illegal. The Senate discussion of the nomination of Judge Parker to the United States Supreme Courts has helped to educate public opinion against this practice.

Since the passage of the Hawes-Copper Act, five states have passed laws prohibiting the sale of goods produced by convict labour in other states. Several states are planning to establish the State-Use system.

Unusual need for new federal penitentiary buildings has disclosed that a 1925 law to use prison labour as much as possible brings convict labour into competition with the building trades.

We report that seventeen states have adopted old age pension laws. We have studied these laws, and believe they should be considered as old-age securities. We have proposed a model bill which would achieve this purpose.

Non-Partisan Political Activity.—Due to the importance of the forthcoming presidential campaign, we urge all unions to get ready to advance Labour's interests, by questioning candidates upon fundamental principles and to "get out the vote."

We report upon a number of issues of broad social and political consequence as follows:

Modification of the Volstead Act to legalize beer containing 2.75 per cent alcohol.

The activities of the War Policies Commission, which has considered industrial conscription.

An aggressive campaign for the adoption of the Child Labour amendment.

A proposal for a personnel classification board, which would repeal laws secured by federal employees to protect their interests.

Elimination of the "lowest bidder" policy.

To correct prevailing misunderstandings and set forth the salient facts as to procedure in the Hoover Dam construction.

We call attention to a notable decision for free press by the United States Supreme Court.*

We recommend to this convention that a clear and definite declaration be made against maximum age limits for appointment to government service.

We recommend further study of patent law in relation to consequences to labour.

We report the results of a survey of military training in high schools.

U.S. Employment Service.—We summarize changes in the U.S. Employment Service to make its work more effective.

Problems of Railway Workers and Bituminous Coal Miners.—Under this title we present the facts of changes taking place in the transportation industry due to motor bus, pipe carriers, aviation, and revival of water transports. These changes profoundly affect workers.

We set forth the chaotic conditions in the bituminous coal industry and urge stabilization of industry by the restoration of collective bargaining.

Federal Commissions.—We report on two important federal commissions; Child Welfare which has completed its work and Home Building and Ownership which convenes in November.

Legal Information Bureau.—Under this section we summarize important legal decisions of special interest to Labour.

Educational Work.—Under this heading we report upon the following educational publications and undertakings, including the "American Federationists," the "A.F. of L. Weekly News Service," "Notes for Speakers," "Legal Information Bulletin," "Monthly Survey of Business," reprints and pamphlets, the American Federation of Labor Library, the Workers' Education Bureau.

We report on organizing work (Deliberation of special Labour days, the Samuel Gompers

*An outline of this decision appears among the "Recent Legal Decisions" at the end of this issue.

memorial, the 200th Anniversary of the birth of George Washington).

The section of Porto Rico reports the creation of a Department of Labour for the Island and discusses special problems. This is followed by a report on Pan-American labour relations.

Unemployment Insurance.—Under this section we outline the unemployment insurance laws and experience of Great Britain and Germany. We point out that such laws would be unsuited to our country but that failure of employers to provide work for workers will contribute to public opinion favourable to such legislation.

In conclusion we state "The problems that lie ahead require co-ordination of effort and the application of the principles of balanced progress toward prosperity nationally and internationally. Upon each group constituting the whole of any joint enterprise or problem, rests responsibility for organizing to take part in meeting the situation upon a basis of mutual interests. Every group must organize not for exploitation or selfish interests but for advancement as a part of the whole undertaking. Labour will seek to fulfill its obligation to organize and will stand ready to co-operate.

The various sections of the report were referred to appropriate committees for consideration and report. The Auditing Committee subsequently reported that all books and records of the federation covering the past fiscal year had been examined and found correct. The remaining portions of the report of the executive council as reported upon by the several committees were approved.

Want Prevailing Wage Rates on Road Construction

To the Committee on Building Trades were referred four sections of the report of the executive council, the first of which referred to the low wages paid on road construction work. The committee urged that the executive council continue its efforts to have the prevailing rate of wage law extended to include road building and similar projects. The committee requested that all organizations take note of the report which is to be presented to the United States Congress by the Federal Trades Commission on the investigation into the letting of contracts for the construction of government buildings. The committee approved of a bill which the executive council had prepared for submission to Congress providing that awards of contracts shall be made to the "bidder whose bid, conforming to the specifications, will be most advantageous to the government, prices and other factors considered." The committee also expressed approval of the activities of the executive council in behalf of adequate homes for the people. The report of the committee on these items was adopted, together with a resolution protesting the attitude of a certain company in construction of its plant in Long Beach, Calif.

Legislation

The Committee on Legislation commended the executive council for its efforts in endeavouring to secure beneficial legislation and to defeat measures inimical to labour's interests, and stated that fifteen measures favourable to labour had been enacted by the United States Congress, four hostile bills had been defeated, and three favourable bills had been vetoed by President Hoover. The committee recommended that the three last mentioned measures be supported in the next Congress, viz., (1) providing for a national employment system; (2) increase of wages for village letter carriers, and (3) providing a practical way of solving Muscle Shoals' problem.

The committee supported the executive council in its attitude in regard to contractors paying the prevailing rate of wages on government contracts, and in this connection concurred in a resolution proposing that the federal prevailing rate law be made applicable to all federal projects.

The committee recommended that the executive council watch carefully the administration of legislation for advanced planning and construction of public works, the stabilization of industry and the prevention of unemployment, and also recommended aid in behalf of legislation to prevent the smuggling of immigrants as seamen into the United States.

Under the heading of "Naval Construction," the executive council told of successful efforts to secure employment for navy yard employees. This was approved by the committee, as were also two resolutions, one of which asked for legislation to restrict competition of enlisted men in the navy with civilian workers, the other favouring legislation providing that construction and repair work on naval vessels be done in Government navy yards and plants.

The committee reported agreement with the executive council in regard to (1) Canal Zone retirement, (2) Oil embargo, (3) Wages for federal employees, (4) Credit unions and small loans, (5) Conditions of post office labourers, (6) Wage increases to United States immigration inspectors and custom service employees, (7) Denunciation of proposed sales tax in the United States. In connection with the latter subject it was decided that the executive council send out a special circular to affiliated bodies calling attention to this matter. The committee approved of the efforts of the executive council to minimize the competition of convict labour and supported the proposal of a state-use system with prohibition of the sale with-

in its borders of convict made goods from other states.

The question raised in the executive council's report in regard to an age limit for United States government employees was, on motion of the secretary of the committee re-referred to the executive council with a view to calling a conference of interested affiliates to work out a suitable solution.

A resolution favouring a federal licensing law for business firms and corporations in the United States with a view to protecting wage-earners' health, life and limb was on recommendation of the committee referred to the executive council for study and investigation. The convention approved of a resolution proposing investigation into labour policy of firms in the United States seeking higher protective tariffs.

The convention also approved of resolutions (1) requiring the use of American-produced materials on government work in Canal Zone; (2) providing for employment of American citizens on government construction on Panama Canal work; (3) endorsing legislation providing shorter workday for seamen; (4) proposing amendment to liberalize the United States compensation law; (5) endorsing the establishment of the five-day week in the United States postal service without reduction in pay; (6) reaffirming position of the federation in favour of higher government employment standards; (7) opposition to finger printing for government employment; (8) opposition to proposed classification law affecting mechanical trades employed by the United States Government.

Amended Constitution

The Committee on Law recommended against a resolution proposing amendment to the constitution of the federation requiring affiliation of organizations with their respective departments. The recommendation was adopted. The committee approved of a recommendation of the executive council to amend two sections of the constitution so as to permit the council to use certain moneys for organizing purposes. It was pointed out that from time to time the organizers of the federation organize federal labour unions, which bodies are later absorbed into international organizations or go out of existence, and so as to permit the funds of these unions which had been set aside for defence purposes to be used as suggested the amendment was proposed. This was agreed to.

Education

The Committee on Education in the opening passages of its report referred to the opening address of President Green and suggested that it should have the widest possible distribution and also urged the same procedure as far as possible with other addresses and literature of the federation. The committee expressed satisfaction with the service rendered by the federation during the past 50 years and commended the executive council for the information set out in its report. The committee recommended that the section of the report dealing with "Social Service of the Federation" be printed in separate pamphlet form and widely distributed. The work of the Legal Information Bureau of the federation was commended and satisfaction expressed with the publications of the federation and its library. Reference was made to the Workers' Education Bureau, the labour institute at Rutgers University and other means for workers' education. The committee supported the proposal of the executive council that state federations of labour, city central bodies and local unions in the states which have not yet ratified the child labour amendment to the constitution of the United States be urged to elect representatives who will vote for ratification. The convention endorsed the parent-teacher movement and denounced discriminatory tactics in the employment of teachers. The convention approved of resolutions (1) Asking that steps be taken to absorb unemployed teachers into school systems by making room for regular appointments through reducing the number of children in classes to a maximum of 30 children to a class, (2) Favouring compulsory full-time education to the age of 16 and part time education to the age of 18 for all children in every state, and that adequate machinery for such law enforcement be provided and maintained, (3) Reaffirming support of vocational and continuation schools.

Provision for Older Workers

The Committee on State Organizations had referred to it several sections of the executive council's report, one of which dealt with conditions in Porto Rico and a resolution endorsing rehabilitation plans for Porto Rico. The committee recommended that the executive council render every assistance possible to the Porto Rican workers in their efforts to improve their industrial condition. The committee concurred in the suggestion of the executive council that those who are planning for the care of the unemployed shall include

provisions for older workers and that state bureaus of labour statistics shall continue inquiries to get the facts of employment on older workers. The committee expressed the opinion that if men of 45 or 50 years of age are to be discarded, then there must be a readjustment in the wage system that will permit of a saving wage ample to allow retirement of wage earners at the new age limits, and recommended that in negotiating wage scales all local unions demand that schedules be made on that basis. The committee recommended, and the recommendation was adopted, that the president and secretary of the federation send a special letter to all international organizations urging them to include in their respective constitutions a clause directing their local unions to affiliate with the various state and city central bodies in their respective localities. In connection with the latter subject the Committee on Local and Federated Bodies recommended the re-affirmation of the pronouncement of the Toronto convention of the federation urging all national and international unions to take such action as in their judgment may best be calculated to bring their local branches into the respective city central bodies.

Shorter Work Day

The Committee on Shorter Work Day directed attention to the story of progress of the five-day week as told by the executive council and called upon all affiliated bodies to co-operate with the executive council in its surveys in order to secure adequate information as to the growth of the five-day week. The committee commended the executive council for its efforts in securing a more general observance of the shorter work week through legislation whereby nearly 600,000 employees of the United States government and the District of Columbia were granted a shorter work day on Saturday the year round without reduction in wages. The committee supported the executive council's opposition to a proposed amendment to the constitution of the United States whereby Congress would have power to fix the hours of labour in private employment. The Committee approved of a resolution in favour of an eight-hour work day for firefighters of Greater New York, but expressed opposition to a resolution which asked the federation to go on record in favour of a six-hour day and a five-day week, with a certain day and date to be designated as "Proclamation Day," upon which members of all unions affiliated with the federation shall proclaim and start on a shorter working time, the committee declaring the proposal as impractical and unwise.

Industrial Relations

Resolutions were referred to the Committee on Industrial Relations as follows: (1) Hotel and Restaurant Employees' International Alliance asking assistance in controversy with Cleveland hotels; (2) Stove Mounters' International Union, protesting labour policy of stove company in Athens, Ill.; (3) Metal Trades Department, calling attention to the unsettled dispute with a Chicago manufacturer of radios and refrigerators; (4) Stove Mounters' International Union, protesting labour policy of a Cleveland stove company; (5) Asking that the executive officers use their efforts towards having a certain gasoline company employ union labour on all of its construction work. These were adopted, as was also a recommendation of the committee that the executive council lend its assistance to the wall-paper crafts in their struggle against anti-union wall-paper manufacturing companies in the United States.

Unemployment and Unemployment Insurance

The first matter reported on by the Committee on Resolutions was that of unemployment, in connection with which several sections of the report of the executive council, together with eight resolutions, on the same subject, were considered and reported upon. The committee endorsed the emergency unemployment program of the executive council for the winter of 1931-32 which contained the following proposals:—

1. Maintain wages;
2. Shorter work hours;
3. Assure employment of minimum work forces;
4. Each employer to take on additional workers;
5. Create work through public building;
6. Strengthen employment agencies;
7. Keep young persons in school to prevent their taking jobs from older men and women;
8. Preference for workers with dependents;
9. Financial relief from public and private funds.

To the recommendation of the committee an amendment was offered to the effect "that the American Federation of Labour stand committed to unemployment relief through federal appropriation pending the working out of the unemployment program submitted by the executive council in its report." The amendment was defeated and the recommendation of the committee adopted. Under the heading of "Unemployment Prevention

by Co-ordinating Economic Development" in the report of the executive council the committee reported as having considered four resolutions, and recommended approval of the report of the council in lieu of the resolutions. This was adopted.

On the question of unemployment insurance the committee expressed its emphatic approval of the declaration of the executive council "that compulsory unemployment insurance legislation such as is now in effect in Great Britain and Germany would be unsuited to our economic and political requirements here and unsatisfactory to American working men and women." Proposed legislation for so-called "unemployment reserves," the committee declared, is equally fallacious and belongs in the same category as proposals for unemployment insurance legislation. The committee agreed with the statement of the executive council that on all matters of social legislation the Canadian membership affiliated with the American Federation of Labour is free to act in accord with their own judgment, "but we can not refrain from cautioning them in this instance."

The committee recommended adoption of the report and non-concurrence in three resolutions which favoured a system of state and federal unemployment insurance. The debate, which continued for some time, was finally closed on the call for the previous question, the report of the committee being adopted.

The committee agreed with the high wage philosophy of the executive council and supported its attitude towards certain leading bankers who favoured wage reductions.

The committee also dealt with other sections of the executive council's report in regard to employment and unemployment statistics, the United States employment service, and expressed gratification at the appointment by the President of the United States of two labour representatives on an advisory committee dealing with statistics on employment and unemployment. The committee directed attention to the section of the executive council's report headed "International Economic Situation" which it considered highly illuminating.

Immigration

The Committee on Resolutions reported on the section of the executive council's report on immigration wherein it was stated that the last session of the United States Congress had failed to enact legislation to reduce immigration into the United States. The Committee concurred in the statement that there is no more important question than the protection of the wage-earners of the United States and

Canada from excessive immigration. In connection with the general subject of immigration the committee expressed the hope that the day is not far distant when the immigration and exclusion laws of the United States and Canada will be so adjusted as to thoroughly safeguard the workers of both countries from aliens of other lands, and that then, as affecting the native citizens of each, it may be possible to remove all barriers between these two great neighbouring nations in which the standards of life and labour are almost identical.

The committee recommended in favour of preventing the entry of aliens to El Paso, Texas, before 10 o'clock in the morning of each day and also re-affirmed the decision of the federation that no rule, order, proclamation, practice or procedure be permitted by any department of the Government that will evade, avoid or make more difficult the enforcement of the U.S. immigration laws.

On a resolution proposing that the quota provisions of the United States immigration law be applied to Mexico the committee recommended its adoption as a reaffirmation of the policy of the federation in favour of such legislation.

The committee reported favourably on a resolution in favour of independence for the Philippine Islands and also endorsed a resolution asking that the present exclusion law be made applicable to Filipinos.

"Yellow Dog" Contracts

The Committee on Resolutions reported on that section of the executive council's report in which reference was made to the "Yellow Dog" contract, in which it was reported that five states, viz., Wisconsin, Arizona, Colorado, Ohio and Oregon, have enacted legislation which outlaws the provisions of labour contracts whether written or oral, expressed or implied, under which workers as a condition of employment are compelled to surrender their right to organize. Congratulations were extended to the state federations in the states where these enactments had been adopted.

Old Age Security

The Committee on Resolutions reported on the statement in the report of the executive council that seventeen states had enacted old age pension laws, the population of these states being about 42,000,000, and that the council had prepared a model old age pension bill for introduction in the legislatures of the various states. The convention endorsed the action of the executive council.

Modification of Volstead Act

The executive council reported that they were endeavouring to carry into effect the instructions given by previous conventions regarding the modification of the Volstead Act so as to provide for the manufacture, sale and distribution of beer containing 2.75 per cent of alcohol by weight. The Committee on Resolutions, to which this was referred, together with two resolutions favouring repeal of the Volstead Act, recommended approval of the executive council's report and non-concurrence in the two resolutions. This recommendation was adopted.

Non-Partisan Political Policy

The Committee on Resolutions also reported on the section of the executive council's report with reference to the non-partisan political policy of the federation in which it asked the convention to elect the friends of labour and to defeat its enemies, whether they be candidates for president, for Congress or other offices, and reaffirming the pledge "which all members of organized labour should freely give," viz., "We will not vote for a candidate for Congress who is opposed to a law prohibiting the issuance of injunctions in labour disputes." The Committee concurred in the procedure recommended by the council and also in a resolution in favour of city central bodies establishing committees to work for the registration of voters. These recommendations were adopted.

Labour Representative at Disarmament Conference

Approval was given to a resolution asking that the federation petition the president of the United States to include a representative of labour in the deputation of advisers to the general disarmament conference in Geneva, Switzerland, in February, 1932.

Approval was also expressed in a resolution asking that the executive council give attention to the study of the methods of promoting world peace.

Bituminous Coal Situation

The executive council referred to what was termed the terrible conditions prevailing in the bituminous coal fields and directed attention to the suffering and privation which so many hundreds of thousands of miners are continuously forced to endure. Particular attention was drawn by the Committee on Resolutions to the following statement:—

We are convinced that the primary requirements necessary to the stabilization of the

bituminous coal industry are a thorough and complete organization of the men employed in the industry, the establishment of contractual relations between employers and employees through the process of collective bargaining, and the adoption of a just, equitable and fair wage scale which will in operation provide for a universal labour cost in coal production.

The convention concurred in this section of the report and in the assurance of continued co-operation and full support pledged to the United Mine Workers as embodied in the report of the executive.

Anti-Injunction Legislation

Under the above heading the executive council set forth the pressing need for anti-injunction legislation, described the development of the use of the injunction in the labour field, directed attention to the declarations made by both major political parties in 1928, favouring legislative relief in relation to injunctions in labour disputes, warned State Federations against the acceptance of legislative proposals not approved by the American Federation of Labour, reported that the Special Committee on Injunctions is being continued in existence to deal with state anti-injunction legislation, and urged that every effort be made to secure remedial legislation from the coming session of Congress.

The executive council submitted the copy of an anti-injunction bill to be introduced at the next session of Congress, which bill, in accordance with the authority conferred by previous conventions, is subject to such changes and modifications as the executive council may find necessary. The council was commended for the procedure followed and the Committee on Resolutions recommended a continuance of the discretionary power vested in it. A motion being made to adopt the report, an amendment was made to strike out Sections 7, 8 and 10 of the bill and to strike out all authority for granting injunctions. It was later moved that these sections of the bill be referred to the executive council for study and such action as it deems advisable. With this amendment the report was adopted.

Approval was given to a resolution in favour of legislation curbing the power of judges to issue arbitrary writs of injunction restraining lawful activities of the people and denouncing all attempts by police authorities to suppress free speech and peaceful assembly.

Jurisdictional Disputes

To the Committee on Adjustment was referred a resolution from the International Association of Bridge, Structural and Orna-

mental Iron Workers complaining that the Thorold, Ontario, branch of the International Brotherhood of Pulp, Sulphite and Paper Mill Workers had taken into its ranks men who come under the jurisdiction of the first named union. On recommendation of the committee the complaint was referred to the executive council for the purpose of calling a conference of both organizations with a view to amicable adjustment of the dispute. To the Committee on Executive Council's Report was also referred a number of jurisdictional problems. In regard to the dispute between the Teamsters and Railway Clerks the committee advised that the executive council continue in their efforts to effect a satisfactory settlement. Like action was taken in regard to the dispute between the Theatrical Stage Employees and the Electrical Workers. Approval was given to the decision reported in the matter of the controversy with the Technical Engineers, Draftsmen and the Federal Employees. The committee approved of the disputes between the Cigarmakers and Tobacco Workers and the Flint Glass Workers and Machinists being left in the hands of the executive council to continue their efforts to adjust the difficulties. In regard to the controversy between the Flint Glass Workers and the Glass Bottle Blowers over "neon gas sign" workers the committee reported that the contending unions had agreed to submit the matter to a committee of three who will investigate and report to the next convention of the federation. The committee expressed approval of the procedure which is to be taken in regard to the dispute between the Engineers and Firemen. Approval was given by the committee to the jurisdiction of the International Union of Pavers, Rammermen, Flag Lavers, Bridge and Stone Curb Setters being extended to cover asphalt workers. The convention, however, sent the matter back to the executive council to permit of the Hod Carriers, Building and Common Labourers being heard. Concurrence was given to the dropping of the word "Stationary" in the title of the International Brotherhood of Firemen and Oilers. The committee non-concurred in the extension of the jurisdiction of the National Federation of Federal Employees. To this committee was referred a resolution questioning the constitutionality of an action taken by the executive council in regard to giving jurisdiction over terrazzo workers' helpers to the Marble Workers. The committee recommended that the resolution be referred to the executive council, but the convention adopted a motion confirming the decision already rendered. The controversy between the Machinists and Carpenters, in

which the committee declared some progress had been made, was also referred to the executive council.

The Committee on the Report of the Executive Council approved of the valuable information supplied by the executive council concerning benefit services of national and international organizations and also commended the review by the executive on workmen's compensation.

Union Labels

The Committee on Labels in its report stated that "trade unionists cannot be too often reminded that the union label, shop card and button are the insignia of their own expressed and oft-reiterated creed." Reference was made to the union label campaign conducted in April, 1931, by the Union Label Trades Department, practically every conceivable method being used to reach the general membership and the general public.

Organization

The Committee on Organization concurred in that portion of the executive council's report in regard to organizing work and expressed the opinion that the services of organizers are necessary.

Five resolutions were referred to the committee, one of which sought to give representation to joint councils of women's auxiliaries, through fraternal delegates, in conventions of the federation. The committee recommended against the proposal, but suggested that if the women's auxiliaries form a national women's council that such bodies be given representation in the American Federation conventions through fraternal delegates. This recommendation was adopted, as were also two resolutions in favour of assistance being given to the organizing of laundry workers and postal labourers. On three resolutions from Los Angeles, Calif., which in the main dealt with gaining recognition of certain employees by the motion picture producers the committee recommended their reference to the executive council in an endeavour to bring about the desired result. This was also adopted.

International Labour Relations

After referring to the difficulties in the Latin-American countries the Committee on International Labour Relations recommended that when the labour movements of these various countries indicate their preparedness to participate that the executive council of the federation arrange for a delegation to represent the American Federation of Labour

at the sixth congress of the Pan-American Federation of Labour. The Committee believed that the latter body has a constructive service to render to the workers of the new world and also recommend that this work be continued as extensively as possible.

A resolution referred to the committee which proposed that the United States station unofficial observers in the International Labour Office at Geneva was on recommendation of the committee referred to the executive council.

Other Resolutions

In addition to the resolutions previously mentioned the convention dealt with the following:—

Disapproval of military training in the schools in the United States.

Referring to the executive council three resolutions in regard to employment conditions on Hoover Dam, formerly known as Boulder Dam.

Approval of the executive council continuing its study of patent laws to offset destructive effects of automatic machinery and scientific processes.

Endorsing the efforts of the Hotel and Restaurant Employees and Beverage Dispensers' International Alliance to unionize hotels and catering establishments.

Urging patronage of products of a union textile mill in Salem, Mass.

In favour of co-operation and assistance to the International Ladies' Garment Workers' Union in its negotiations with employers for renewal of collective agreements.

Asking the executive council to consider the advisability of having in Washington at the time of the dedication of the Gompers memorial a pageant designed to give labour's story, in which international organizations, state federations and other groups may participate.

Approving in principle a tax on incomes for the benefit of states, to be so graduated that it will be levied in increasing percentages on progressively larger incomes.

In favour of legislation extending the privilege of the Saturday half-holiday or shorter work week to employees of the Panama Canal on the Isthmus of Panama.

Protesting the policy of the quartermasters' department of the United States navy of displacing American seamen with Filipinos.

Referred to the executive council a resolution proposing legislation to compel the printing of producers' names on the containers of all food products sold in the United States.

In favour of stone used in the construction of federal buildings to relieve unemployment being prepared in the localities where buildings are erected.

Instructing the executive council to use every effort to have oil and gas corporations use union labour for the construction and maintenance of their buildings.

In favour of securing a national cleared radio channel for WCFL, organized labour's station in Chicago.

Reiterating belief in the innocence of Thomas J. Mooney and Warren K. Billings, and advising national and international unions, and state federations of labour that no appeal for funds on behalf of the Mooney-Billings cases receive any consideration unless such appeal bears the approval of the executive council of the American Federation of Labour.

Protesting against reductions in rates of pay for gas burners in navy yards.

In favour of supplies used in departments of the United States Government being made in America under proper labour standards.

In favour of the president of the federation appointing a special committee of five to consider the interests of the labour press.

Textile Workers Strike

At the fifth day's session the president of the federation was advised by a telegram from the secretary-treasurer of the Massachusetts State Federation of Labour that 25,000 textile workers in the city of Lawrence, Mass., had gone on strike against a 10 per cent wage reduction. President Green announced that he had instructed an organizer of the American Federation to proceed to Lawrence for the purpose of rendering all assistance possible to the strikers.

Memorial to Deceased Members

As has been the custom for many years, the delegates at the morning session of October 8 stood in silence for a brief moment as a tribute to departed brothers, the list of 31 deceased members having been previously read by the secretary.

Fraternal and Other Addresses

At the morning session of October 8 the messages of the fraternal delegates were heard, the first speaker being Mr. F. Wolstencroft, of Manchester, one of the fraternal delegates from the British Trades Union Congress, followed by Mr. A. Beard, of London, his co-delegate from the same body. The fraternal greetings from the Trades and Labour Congress of Canada were extended by Mr. Colin

McDonald, of Vancouver. Each of the fraternal delegates was presented with a special gold badge. At a later session each delegate received a gold watch and chain as well as a gold wrist watch for each of their wives, as a reminder of their visit to the federation convention.

Among others to address the convention at some one or other of the sessions were: United States Senator James J. Davis, of Pennsylvania, former United States Secretary of Labour; Mr. Edward F. Henning, former assistant Secretary of Labour of the United States; Mr. Frank N. Brooks, vice-commander, American Legion; Mr. Frank Ashley Horr, member of Congress for the first district of the State of Washington; Mr. Edward Keating, editor of Labour; Mr. A. B. Swales, of London, England; Mr. Spencer Miller, secretary of the Workers' Education Bureau, Mr. Peter Manniche, of the International People's College, Elsinore, Denmark, and Mr. Robert Harlin, mayor of Seattle, Wash.

Telegrams conveying fraternal greetings were received from Rev. C. Rankin Barnes, of Chicago, Ill., executive secretary of the Social Service Department of the Episcopal Church; Local Union No. 791 of the United Brotherhood of Carpenters and Joiners of New York City; Local Union No. 180 of the United Brotherhood of Carpenters and Joiners, of Vallejo, Calif.; Benjamin Schlesinger, president, International Ladies' Garment Workers' Union, New York; Local Union No. 657 of the Journeymen Barbers' Union, Brooklyn, N.Y.; Michael J. Kelley, first vice-president, Amalgamated Meat Cutters and Butcher Workmen, Chicago, Ill.; National Labour

Committee for Palestine, New York. Other communications received were from: Major Geo. L. Berry, president of the International Printing Pressmen and Assistants' Union, who represented the A.F. of L. at the convention of the American Legion held in Detroit; Tulsa Typographical Union, No. 403; Arizona State Federation of Labour; Newport Central Labour Union; New Orleans Central Trades and Labour Council; the Commission of Atlantic City; Central Labour Union of Washington, D.C.; Sleeping Car Porters' Union of Chicago, Ill.

The officers for the year 1931-32 are as follows, all being re-elected without opposition: President, Wm. Green, Washington, D.C.; first vice-president, Frank Duffy, Indianapolis, Ind.; second vice-president, T. A. Rickert, New York, N.Y.; third vice-president, Matthew Woll, Washington, D.C.; fourth vice-president, James Wilson, Cincinnati, Ohio; fifth vice-president, John Coefield, Washington, D.C.; sixth vice-president, A. O. Wharton, Washington, D.C.; seventh vice-president, Joseph N. Weber, New York, N.Y.; eighth vice-president, G. M. Bugniazet, Washington, D.C.; treasurer, Martin F. Ryan, Kansas City, Mo.; secretary, Frank Morrison, Washington, D.C.

Fraternal delegates to the British Trades Union Congress, Joseph A. Franklin, Kansas City, Kan., and Elmer E. Milliman, Detroit, Mich.

Fraternal delegate to the Trades and Labour Congress of Canada, Frank B. Powers, Chicago, Ill.

Cincinnati, Ohio, was chosen as the convention city for 1932.

Meeting of All-Canadian Congress Postponed

The fifth convention of the All-Canadian Congress of Labour, which was to have opened in Montreal on the 2nd inst., has been postponed. The circular letter, dated September 28, 1931, announcing the postponement, read in part as follows:—

On account of the prevailing unemployment and distress, and in compliance with a general request from the affiliated national unions, the Executive Board of The All-Canadian Congress of Labour has decided to postpone the fifth convention of the Congress until 1932.

It has been represented to the Board that the attendance at the convention, if held in Montreal next November in the regular way, would show a marked decline in comparison with previous years, on account of the inability of many local units to meet the expense of sending delegates. An inquiry

addressed to all the national unions confirmed this view: the unions were unanimously of the opinion that the postponement was desirable in the interests of the movement, and in several quarters strong objection was expressed to the holding of a convention at a time when every union is straining its resources to assist its unemployed and under-employed members.

In the circumstances, the Executive Board had to choose between a postponement until next year, and holding a convention at which the local units remote from Montreal would not be represented. Though reluctant to interrupt the sequence of the annual conventions, the Board was yet more reluctant to call a convention which would not be representative of the workers in the greater part of the country. Therefore the Board decided to postpone the fifth convention until 1932.

RECENT LABOUR UNION ACTIVITIES

International Typographical Union

The International Typographical Union held its seventy-sixth annual convention at Boston, Massachusetts, September 14-19, 1931, with approximately two hundred and seventy-five delegates in attendance, President Charles P. Howard being in the chair. The civic welcome was extended by Mayor James M. Curley. Others to address the convention at the opening sessions were: Frank Morrison, secretary of the American Federation of Labour, Hon. Charles F. Hurley, representing Governor Ely of Massachusetts, and John J. Manning, secretary of the Label Trades Department, A. F. of L.

President Howard's report covered in detail the many activities of the organization and reviewed the measures adopted to maintain the advances gained during past years. He expressed the opinion that automatic machinery, which displaced workers faster than new industries could absorb them was responsible in a large measure for the unemployment situation. He stated that the suggestion had been submitted that the International Union adopt a mandatory five-day week law as a means of relieving unemployment; but while he considered this as one of the best solutions for present difficulties, the president thought it would be better to leave the question to the discretion of the individual local unions. Other questions dealt with in President Howard's report were: levying assessments for unemployed relief; unemployment insurance; old age pensions; death benefits; defence fund; restriction and registration of apprentices; arbitration of differences; allied trades relations; union printers home; and wage scale negotiations.

The report of the secretary-treasurer, which covered the year June 21, 1930, to June 20, 1931, showed a balance on hand in all funds at the beginning of the period of \$6,301,494.44; receipts amounted to \$2,714,035.62, while disbursements totalled \$2,675,316.85, leaving a balance on hand of \$6,340,213.21, apportioned as follows: general fund, \$611,515.20; mortuary fund, \$3,044,578.84; old age pension fund, \$2,684,119.17. This report also contained much statistical material with illustrative charts.

A number of amendments to the constitution were approved by the convention, and on October 28, 1931, these were submitted to a referendum vote of the membership.

Five-Day Week.—The committee on laws, to whom was referred a proposal to establish a mandatory five-day week law, brought in the following recommendations, which were

adopted by the convention: (1) That local unions in whose jurisdiction there is unemployment should restrict the working time sufficiently to meet immediate needs and that the International Union give full support and co-operation in accomplishing this result; (2) That the executive council continue conferences with other printing trade unions for the purpose of working out a plan of co-operation to bring into realization the five-day week; (3) That the executive council be instructed to seek conferences with associations of employers for the purpose of setting forth the necessity for dividing the working time and appraising the advantages to the industry from the five-day week; (4) That the president be directed to approach individual employers who realize the necessity for providing greater opportunity for employment and endeavour to secure their co-operation in bringing about the five-day week through conference and agreement rather than by mandatory action.

Other Resolutions.—Among other resolutions adopted were the following:—

Instructing the secretary-treasurer to send a letter to Mr. Henri Gagnon, general manager of the French daily newspaper *Le Soleil* of Quebec, P.Q., expressing gratitude and appreciation for his friendly relations and support of the International Union during the past twenty-five years.

Favouring legislation inaugurating the five-day week in the government printing office, Washington, D.C.;

Recommending that the delegates endeavour to interest members without dependants and philanthropic persons in the endowment fund instituted by the board of trustees of the Union Printers' Home, who planned to have the interest accruing from this fund carry the increased Home maintenance cost and provide capital to erect new buildings as required;

That none but members of the International Typographical Union be permitted to operate typesetting, typesetting or material making machines;

Favouring the establishment, when conditions warrant, of an eastern sanatorium similar to that at Colorado Springs, and recommending that officials of State and city governments be thanked for their interest in the scheme and that offers of free sites be held in abeyance.

Long Beach, California, was selected as the convention city for 1932.

Amalgamated Clothing Workers of America

The achievements of this organization in recent years include:—

1. The working system of collective bargaining, with "impartial machinery" for the adjustment of disputes.

2. The union's activist attitude toward the problem of production and its policy of co-operation with employers for the success of the respective business enterprises.

3. The system of unemployment insurance established in Chicago, Rochester and New York, involving employment exchanges, the practice of equal division of work in times of distress, and that of a "dismissal wage" to workers in case of displacement due to technological changes.

4. The co-operative ventures of the union, which include two banks, a number of credit unions and investment organizations and the development of several co-operative housing enterprises in New York City—all steadily expanding in size and in the number of services they are assuming.

5. The operation by the union of a clothing factory in Milwaukee.

Brotherhood of Maintenance of Way Employees

The twenty-fourth regular convention of the Brotherhood of Maintenance-of-Way Employees was held in Toronto, commencing September 14, 1931, with President F. H. Fljodzal presiding over three hundred and seventy-five delegates who were in attendance. Controller James Simpson, in the absence of Mayor Stewart, welcomed the delegates to the city. Mr. Tom Moore, president of the Trades and Labour Congress of Canada also extended a welcome to the delegates. The personal greetings of President Beatty of the Canadian Pacific Railway Company were extended by Mr. George Hodge, manager of the company's department of personnel. Mr. Larry O'Connell, who presided during the opening ceremonies, read a telegram of welcome to the delegates from Premier R. B. Bennett. Hon. G. D. Robertson, Minister of Labour sent a message regretting his inability to attend the convention owing to the pressure of work. The good wishes of the American Federation of Labour and its officers were conveyed in a telegram from President William Green.

The report of the president showed that notwithstanding the difficulties encountered since the last convention, the Brotherhood had made considerable progress. Satisfaction was expressed in the fact that the members of the organization were not called upon to

face general demands for wage reductions. The membership had increased considerably and wage increases were secured on fifty-five railroads, according to the president's report. President Fljodzal further informed the delegates that the increase in the average straight time earnings of the craft throughout the jurisdiction in October, 1930, as compared with October, 1928, was \$5,857,272.

Reference was made by the president to the program of co-operation inaugurated in 1928 between the management of the Canadian National Railways and its organized maintenance-of-way employees on the entire system, and he stated that "we can look upon this movement as one of the outstanding accomplishments of our Brotherhood in recent years." The delegates were informed that steps were being taken to establish a similar program on the Baltimore and Ohio railroad. A further report on the co-operative union-management plan in force on the Canadian National Railways was presented by Otto S. Berger, consulting engineer of the Railway Employees' Department, A. F. of L., and amplified by M. S. Blaiklock, chairman of the system co-operative committee.

The president strongly urged the membership to use their franchise on election day as it was the greatest means of power within their reach.

The committee on constitution and laws recommended that the term of office for grand lodge officers be four years instead of three, but the delegates decided to continue the present policy of electing officers at each triennial convention. A proposal to add another vice-president for Canada and divide the work between the east and west was introduced, but while much sympathy was expressed for the idea, the convention decided to allow the question stand over for consideration at some future convention.

The tendency to reduce wages was emphatically denounced by the convention, and the Brotherhood pledged itself to vigorously resist any effort on the part of railroad managements to reduce the wages of maintenance-of-way employees. The delegates went on record as favouring the closest possible program of united opposition on the part of all standard railway labour organizations in the event of a general effort to reduce wages of any class of railroad workers. Commenting on these recommendations President Fljodzal said:—

"The Brotherhood is committed to a policy of co-operation and conciliation, but there are certain things upon which we will never compromise:—We will never give away the right of collective bargaining; we do not

accept the false theory that wage reductions will bring back prosperity; wage reductions are against good public policy and we believe it is good citizenship to stand firm against pay cuts at this time."

Among other resolutions adopted were the following:—

Pledging the Brotherhood to continue its non-partisan political activity;

Calling upon the subordinate lodges and membership to support State Federations of Labour and other *bona fide* labour organizations in the enactment of favourable labour legislation;

Re-affirming the Brotherhood's stand for the five-day week with no reduction in the present wages received for six days;

Favouring federal old age pension legislation for the United States and instructing the president of the Brotherhood to work in harmony with other railroad organizations upon a suitable program;

Urging the retention of Muscel Shoals as a government-operated project;

Endorsing the union-management co-operation plan;

Denouncing company unions;

Recommending that efforts be made to establish uniform rates of wages in the various regions of the United States;

Favouring continued support to the Chicago Federation of Labour radio station WCFL;

Seeking the inclusion in all wage agreements of a provision for arbitration of all disputes and time and one-half for all work in excess of eight hours;

Favouring a program of stabilization of employment;

Urging the unconditional pardon of Tom Mooney and Warren K. Billings;

Re-iterating the Brotherhood's support for the Union Labour Life Insurance Company;

Urging every member to become a subscriber to *Labour*.

Chief officers elected were: President, F. H. Fljozdal, 61 Putnam Ave., Detroit, Mich.; Secretary-treasurer, E. E. Milliman, 61 Putnam Ave., Detroit, Mich.; W. V. Turnbull, Montreal, Que., was elected vice-president for Canada.

Detroit, Mich., was selected as the next convention city.

SAFETY REGULATIONS FOR TUNNEL OR CAISSON WORK IN ONTARIO

UNDER the authority of the amendment that was made at the recent session of the Ontario Legislature to the Department of Labour Act (LABOUR GAZETTE, May, 1931, page 531), the Minister of Public Works and Labour of the Province recently issued Regulations respecting the safety and protection of persons engaged in the construction of tunnels and open caisson work.

REGULATIONS RESPECTING THE PROTECTION OF PERSONS WORKING IN TUNNEL OR OPEN CAISSON WORK

1. Whenever work is in progress in the construction of which men are employed in tunnel or open caisson work, the person, firm or corporation carrying on the work or the contractor for any part-section or subdivision thereof shall be responsible in all respects for full compliance with all provisions of these regulations.

2. Every person, firm, corporation, municipal council or other public authority shall require as a condition of any contract or sub-contract awarded, accepted or executed in which work of any kind is done by men employed in tunnel or open caisson work, that these regulations be complied with.

3. Any person, firm, corporation, municipal council or other public authority, before commencing work in the construction of which men are employed in tunnel or open caisson work, shall notify in writing the inspector appointed to administer these regulations and

shall forward to him the plan and specifications of the work to be done.

4. The inspector may at any hour by day or night enter upon any land or into any place or building where men are employed in tunnel or open caisson work, may make such examination and inquiry as may be necessary to ascertain whether these regulations are complied with by employers and employees, and may require the production of any record, register, notice or document covered by these regulations.

5. The inspector whenever he deems it necessary may take with him into any place where work is in progress in the construction of which men are employed in tunnel or open caisson work, a legally qualified medical practitioner, medical officer of health or sanitary inspector.

6. The inspector may make such recommendations in writing as may be necessary for the proper and efficient carrying out of these regulations and the employer of men engaged in work in tunnel or open caisson work shall be responsible for the immediate and proper carrying out of any such recommendations made to him.

7. Air, electrical, hydraulic, mechanical, oil, steam and structural equipment, or any part thereof, whether portable or stationary, that functions in any way affecting the persons employed in tunnel or open caisson work shall in every respect be to the satisfaction of the inspector, and the inspector at any time by giving notice in writing to the contractor or sub-contractor shall require that all such equipment in whole or in part be inspected, improved, renewed, repaired or otherwise dealt with for the better carrying out of these regulations.

8. The Minister of the Department responsible for the administration of these regulations may authorize any physician attached to the Industrial Hygiene Division, Provincial Department of Health to undertake such medical examination or inquiry as may be necessary to safeguard and promote the health of persons employed in tunnel or open caisson work.

9. Subject to the approval of the Lieutenant-Governor in Council, the Minister may add, alter, amend, change, delete or otherwise deal with any regulation having for its object the better protection of persons employed in tunnel or open caisson work.

Definition of Terms

(a) Application: These rules shall apply to all tunnels and accessory shafts in the Province of Ontario while under construction, except tunnel construction in connection with mines.

(b) "Tunnel" means a subterranean passage or chamber constructed without removing the superincumbent material.

(c) "Shaft" means an excavation made from the surface of the ground, the longer axis of which is steeper than forty-five (45) degrees.

(d) "Open Caisson" means a casing being sunk or constructed below water level.

(e) "Constructor" means the person, firm or body corporate in immediate control of the construction of any tunnel or its accessories and as such responsible for the condition and management thereof.

(f) "Superintendent" means the person resident on the work for the contractor having general supervision and responsibility.

(g) "Foreman" means a person in charge of a subdivision of the work or of the entire work at any one time and under the instruction of the superintendent.

(h) "Works" means any or all parts of a tunnel excavated or being excavated as well as shafts and approaches, power houses, lumber yards, storage yards and structures of all kinds, which are in the immediate vicinity of, and used in connection with the excavation or the immediate disposal of excavated material or in connection with the construction of the tunnel lining.

(i) "Magazine" means any building or other structure or place in which explosives are stored or kept, whether above or below ground.

(j) "Person" means a firm or body corporate as well as natural persons.

(k) "Underground" means within the limits of any shaft or tunnel.

(l) "Employees" or "Persons Employed" means all persons receiving compensation from the constructor or others for labour or services performed on the works.

(m) "Approved" (unless otherwise specified), means approved by the Minister of Labour.

General

(a) The constructor and superintendent of every tunnel shall use every reasonable precaution to insure the safety of the workmen on the works in all cases, whether provided for in these rules or not.

(b) Each workman employed on the works (when first engaged) shall have his attention directed to the provisions of these rules.

(c) Every employee shall be responsible for carrying out all rules which immediately concern or affect his conduct.

(d) Employees shall not remove or make ineffective any safeguards while the same are in use, except for the purpose of making repairs, and such safeguards so removed shall be replaced.

(e) All defects in or damage or injury to machinery or timbering or the apparatus and equipment on the works, all unsafe or dangerous conditions in any part of the works, and all accidents, occurring in the course of, or in connection with tunnelling operations, other than those of a purely minor character, even though not resulting in personal injury, shall be promptly reported to the tunnel foreman or superintendent by the person observing the same.

Intoxicating Liquor Prohibited.

No person, shall, while under the influence of intoxicating liquor, enter any shaft or tunnel or any of the buildings connected with the operation of the same, where workmen are employed, nor shall intoxicating liquors be brought into any such places.

Provided, however, that nothing herein contained shall prevent the carrying of any alcoholic spirits or other stimulants into such shafts, tunnel or building for medicinal purposes, in accordance with law.

Superintendent

The constructor of every tunnel shall appoint a man who shall be personally in charge of the works and the performance of the work done therein, who shall be designated as the "superintendent"; provided, however, that nothing herein contained shall prevent the owner or constructor of any tunnel from personally filling the office of superintendent.

The superintendent of every tunnel shall inspect at least one a week, or cause some competent person or persons appointed by him, to inspect all appliances, boilers, engines, magazines, shafts, shaft houses, underground workings, roof, pillars, timbers, explosives, bell ropes, speaking tubes, telephones, tracks, ladders, dry closets and all parts and appliances of said tunnel in actual use, and any such person or persons appointed by the said superintendent shall at once report any defect therein to the superintendent. It shall be the duty of the superintendent, upon ascertaining such defects, to take immediate steps to remedy the same, so as to make the same comply with the provisions of these rules, and he shall forthwith notify the constructor of said tunnel of the existence of such defects. It shall be the duty of the superintendent to appoint a competent man to have full charge under the direction of said superintendent of every magazine containing explosives situated on such works, and to make such other appointments and perform such other duties as are provided by these rules to be performed by such superintendent.

Explosives

The handling and storing of dynamite and explosives shall be in compliance with the regulations of the Dominion Government.

Inflammable Material

(a) It shall be the duty of the constructor of every tunnel in which oils, other than lubricating oils, and other dangerous inflammable materials are used, to store such materials, or cause them to be stored, in a covered building

kept solely for such storage, which building shall be at least one hundred (100) feet from any shaft, tunnel or approaches, or any building directly connected with a tunnel opening, and at least three hundred (300) feet from any powder magazine; provided, that gasoline, naphtha, distillate and fuel oils may be stored in a tank or tanks buried in the ground, which tank or tanks shall be provided with proper vents and shall be placed at least fifty (50) feet from any shaft, tunnel or approaches, or any building directly connected with a tunnel opening, and at least three hundred (300) feet from any powder magazine; and provided, further that lubricating oils may be stored in a well constructed covered building, which shall be at least fifty (50) feet from any shaft, tunnel or approaches, or any building directly connected with a tunnel opening. No tank shall be installed from which fuel oil is to be conducted by gravity to the point of combustion, unless such tank shall be so located that escaping oil cannot run to any building within one hundred (100) feet of any tunnel opening.

(b) Oil for illumination or power and other inflammable material shall not be taken into the underground workings of any tunnel or kept therein in quantities greater than necessary to afford one day's supply.

(c) Waste or decayed timber shall not be stored in a tunnel, but shall be promptly removed therefrom. Empty boxes, wooden chips, paper and combustible rubbish of all kinds shall not be allowed to accumulate underground.

Blasting, Misfires, Etc.

(a) Only experienced men who have been selected and regularly designated by the superintendent in charge and whose names have been posted in the field office or at the magazines shall handle, transport, prepare or use dynamite or other high explosives.

(b) There shall be one blaster in charge of blasting in each section and he shall enforce his orders and directions and personally supervise the fixing of all charges and all other blasting operations and shall use every precaution to ensure safety.

(c) Every firing circuit shall be broken underground at a point and to the satisfaction of the Inspector.

(d) No greater quantity of explosives than that which is required for immediate use shall be taken into the shaft or tunnel.

Scaling and Inspection for Loose Material

In rock tunnels it shall be the duty of the superintendent of the tunnel to cause frequent inspection of the roof and sides to be made by a competent person detailed for such purpose, and to have all loose pieces of rock removed from the roof and sides of the excavation.

After a blast is fired, loosened pieces of rock shall be scaled from the roof and sides of the excavation and after the blasting is completed, the entire locality shall be thoroughly scaled and all loose rock or ground shall be removed and the excavation made safe before proceeding with the work.

Hoisting Engineer

It shall be the duty of every superintendent of every tunnel having a hoisting engine to appoint and designate one or more men, who shall be able to speak and read the English language readily, to be known as hoisting en-

gineers. Such hoisting engineers shall be not less than nineteen (19) years of age. It shall be the duty of every superintendent to appoint as hoisting engineers men who are familiar with the details and working of a hoisting engine and except in case of emergency to permit no other than such duly appointed hoisting engineers to run such engine or hoisting machinery; except that, by and with the consent of the superintendent, specified apprentices may be taught the operation of the hoisting engine at such times and under such restrictions as the superintendent may determine to be free of risk to life and limb.

Duties of Hoisting Engineer

(a) It shall be the duty of every hoisting engineer to keep a careful watch over his engine and over all machinery under his charge.

(b) He shall, while on duty, be in immediate charge of his engine, and shall not at any time delegate any of his duties to any other person, except to apprentices duly designated, as provided in these rules.

(c) He shall familiarize himself with and use the signal code posted in the engine room, as hereinafter provided.

(d) He shall not run his engine unless the same is properly provided with brakes and distance marks or hoisting ropes or cables.

(e) It shall be the duty of the hoisting engineer to exclude every person from his engine room, except any person or persons whose duties require their presence therein.

(f) He shall hold no conversation with any one while his engine is in motion or while attending to signals.

(g) He shall not hoist men out of, or lower men into, any tunnel or shaft at a speed greater than the rate posted in the engine room.

(h) He shall inspect at least once a day all hoisting machinery and safety appliances connected therewith and shall immediately report any defects found therein.

(i) After any stoppage of hoisting, for repairs, he shall run a bucket, skip, cage or other conveyance, on which no men shall ride, up and down the working part of the shaft at least once, and shall not permit the bucket, skip, cage or other conveyance to be used for hoisting or lowering men until the hoisting machinery and shaft shall have been found to be in safe condition.

(j) He shall do no hoisting in any compartment of a shaft while repairs are being made in the said hoisting compartment except such hoisting as may be necessary to make such repair.

(k) He shall not turn over the charge of the engine to his relief at change of shift or at any other time while the bucket, skip, cage or other conveyance is in motion.

Hoisting

(a) The superintendent of the tunnel shall establish for each shaft rates of speed for the cages, skips, buckets or other conveyances that shall not be exceeded in the hoisting or lowering of men, and he shall post a notice of such limitation in a conspicuous place near each hoisting engine; such rates of speed shall not exceed those set forth in subsection (d) following.

(b) The Superintendent of the tunnel shall determine the maximum number of men that in his judgment may safely ride on each cage,

skip, bucket or other conveyance used in the tunnel under his supervision and shall post in a conspicuous place near each shaft a notice stating the maximum number of persons so permitted to ride and forbidding the carrying of any greater number. The number of persons permitted to ride, as determined by the superintendent shall not exceed the maximum approved by the Minister.

(c) At all times when hoisting or lowering is being done, there shall be two signalmen on duty, one each at the top and bottom respectively of each shaft. Such signalmen shall be not less than twenty-one (21) years of age and shall be appointed and instructed in their duties by the superintendent. The signalmen shall prevent overloading of men on cages, skips, buckets or other conveyances used in the shaft. No other persons but the signalmen shall give signals for starting or stopping such conveyances.

(d) In hoisting or lowering men with a bucket, the speed, except in the case of apprehended danger shall not exceed one hundred (100) feet per minute, when the bucket is within fifty (50) feet of the top or bottom of the shaft, or five hundred (500) feet per minute in any other part of the shaft.

(e) No person shall ride upon any cage, skip or bucket that is conveying explosives other than man in charge of same.

Signals

(a) Every shaft shall be provided with an efficient means of interchanging distinct and definite signals between the top of the shaft and the lowest level and the intermediate levels from which hoisting is being done. After sinking operations have been completed and before tunnelling operations are begun from any shaft, there shall be provided and maintained two (2) separate systems of signalling, which shall be either electrical, pneumatic or mechanical, or one such system supplemented by speaking tube or telephone.

(b) No person shall ride upon any bucket, cage, skip, or other conveyance, unless proper signals have been given.

(c) The signal to move the cage, skip or bucket shall be given only when the same is at the level from which the signal is to be given.

Signal Codes

(a) The following code of signals shall be used: 1 bell—Stop if in motion, or hoist if not in motion. 2 bells—Lower. 3 bells—Men on, run very carefully.

(b) An easily legible copy of the above code, and of any special code adopted in any shaft or tunnel shall be printed in letters at least one-half ($\frac{1}{2}$) inch high, on a board or metal plate not less than eighteen by eighteen (18 x 18) inches, and shall be securely posted in the engine room, at the collar of the shaft and at each level or station.

Hoisting Ropes

(a) No rope or cable shall be used for hoisting or lowering men when such hoisting or lowering is done by any means other than human or animal power, unless such rope or cable shall be composed of metal wires, with a factor of safety determined as hereinafter set forth provided, however, that such metal wires may be laid around a hemp centre.

(b) There shall not be used any rope or cable for the raising or lowering of men, either

when the number of breaks in any consecutive ten (10) feet of said rope exceeds ten per cent (10%) of the total number of wires composing the rope, or when the wires on the crown of the strands are worn down to less than eighty per cent (80%) of their original area, or when they show marked signs of corrosion.

(c) All ropes used for hoisting or lowering men shall be thoroughly inspected once in every week by some competent person designated for the purpose by the superintendent. If upon any inspection, such hoisting rope or cable shall be found to be below the requirements set forth in these rules, it shall be discontinued for such purpose forthwith.

(d) Every rope used for hoisting or lowering men shall be securely fastened at both ends, and when in use shall never be fully unwound; at least two (2) full turns shall remain always on the drum or reel. The end of the rope attached to the conveyance in the shaft shall be bound around an oval thimble and fastened to itself by the use of three or more clamps or shall be securely fastened within a tapered socket.

Safeguards Against Overwinding

(a) Approved means to prevent overwinding shall be provided.

(b) There shall be installed in every shaft where men are hoisted a device which shall indicate or give a warning signal in the engine room whenever the cage, skip or bucket in ascending or descending reaches a certain point below or above the limit of travel of the cage, skip or bucket, such point to be determined by local conditions.

Cages for Hoisting

In all shafts where men are hoisted or lowered by means of a cage, an iron-bonneted cage shall be used for the conveyance of men, but this provision shall not apply to shafts in the process of sinking or during the dismantling of the shaft after work in the tunnel is substantially completed.

Cages shall be provided with bonnets consisting of two (2) steel plates not less than three-sixteenths (3-16) of an inch in thickness, sloping towards each side and so arranged that they may be readily pushed upward to afford egress to persons therein, and such bonnet shall cover the top of the cage in such manner as to protect persons on the cage from falling objects.

Cages shall be entirely enclosed on two sides with solid partitions or wire mesh not less than No. 8, U.S. Standard gauge, no opening in which shall exceed two (2) inches.

Cages shall be provided with hanging chains or other similar devices for hand holds.

Every cage shall be provided with an approved safety catch of sufficient strength to hold the cage with its maximum load at any point in the shaft.

A safety device shall be provided for blocking cars while on cage.

All parts of the hoisting apparatus, cables, brakes, guides and fastening shall be of the most substantial design and shall be arranged for convenient inspection. The efficiency of all safety devices shall be established by satisfactory tests before the cages are put into service and at least once every three months thereafter and a record thereof kept.

Stairways and Ladders in Shafts

In each shaft except during the period of sinking there shall be a covered stairway at least two and one-half (2½) feet wide leading from the bottom of the shaft to the surface. In lieu of this, however, in case it is not practicable to construct such a stairway, a ladder shall be installed with landings at every twenty (20) feet of sufficient width to permit men to pass. All stairways and ladders shall be kept clear and in good condition at all times. The distance between the centres of the rungs of a ladder shall not exceed fourteen (14) inches and shall not vary more than one inch in any one ladderway. The length of the ladder rungs (width of ladder inside of stringers), shall not be less than twelve (12) inches. The rungs of a ladder shall in no case be less than four (4) inches from the wall or other obstruction in the shaft or opening in which the ladder is installed.

At all landings where it is necessary to cross from one side of the shaft to the other, passageways shall be provided and shall be kept free from all obstructions and properly lighted.

Cleaning of Ladderways and Stairways

Timbers and projections on which debris may lodge in ladder ways and stairways in daily use shall be kept cleaned of all loose rock and other debris.

Shaft Protection

During shaft sinking operations, the tops of all shafts shall be guarded by a standard rail and standard toe-board, which may be provided with the necessary gates to give access to the shaft, but such gates shall be kept closed when access to the shaft is not necessary.

Means for blocking cars shall be provided at all landings and also for blocking cars on cage.

Ventilation

The constructor of every shaft or tunnel shall provide and maintain for every such shaft or tunnel a good and sufficient amount of ventilation for such men as may be employed therein, and shall cause an adequate quantity of pure air to circulate throughout the working place of such shaft or tunnel.

Sanitation

The constructor of every tunnel or open caisson employing more than twenty-five (25) men under ground shall provide a wash and change house, which shall be free of cost and open at all reasonable hours. Such wash and change house shall be adequately heated and lighted and shall contain a sufficient supply of warm and cold water available to the men.

Telephone System

Where tunnels are driven more than 250 feet in length from the shaft, a telephone system shall be established and maintained, communicating with the surface at each such shaft and with a station or stations readily and quickly accessible to the men at the working level.

Lighting

(a) While work is in progress all tunnels, stairways, ladderways and all places on the surface where work is being conducted, shall be properly lighted. In shafts more than one hundred (100) feet deep, artificial lighting shall be provided below that depth.

(b) All electric light wiring shall be installed to the satisfaction of the inspector.

(c) All places where hoisting, pumping or other machinery is installed and in the proximity of which persons are working or moving about, shall be so lighted when the machine is in operation that the moving parts of such machine can be clearly distinguished.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Accident Prevention at Glace Bay Colliery

According to a recent press report, No. 23 colliery of the Dominion Coal Company at Glace Bay has achieved a splendid record in accident prevention during the past several months. With an average working force of approximately 400 employees and with an output of 1,000 tons per day, the colliery operated from November 25, 1930 to May 10, 1931, without a lost time accident. From May 10 to October 5 there were only two accidents, which makes the ratio equivalent to 42,902 tons of coal produced per accident for that period. In view of the many hazards attendant upon coal mining in Cape Breton collieries, this record is considered particularly meritorious. It was made possible through the co-operation of the employers and the accident prevention program of the management in its endeavour to promote safe working conditions.

A feature of active coal mining at the colliery is the protective hats which are worn by many officials and workmen, and provide immunity from head injuries.

Safety Devices for Hoists

An article published in the *Contract Record and Engineering Review* (Toronto) for October 14, describes safety devices for hoisting elevators that have been perfected recently by McDaniel Brothers, general contractors of Beaumont, Texas.

Four types of accidents have developed in connection with the hoisting of materials on construction jobs. The first is that due to defects in ropes and slings. This danger has been pretty well eliminated through the introduction of an inspection procedure which applies the tests developed to determine the strength of ropes and finds whether they are in sound condition.

The second type of accident is caused by the crossing of signals by workmen wishing to move the elevator while loading or unloading is taking place at another floor. The development of an electric signal system which prevents the engineer from receiving a signal to move the hoist while the gate is open has

about eliminated this threat to the safety of workmen.

The slipping of loads while the hoist is in operation was for a long time a decided menace. The development of a safety hoist equipped with emergency brakes by the Lidgerwood Manufacturing Company late in 1929 was the solution to this accident problem. These emergency brakes set automatically in case the power fails or a fuse blows out or if the leverman fails to keep his feet on the service brake levers. Each of these levers is connected to a switch controlling the emergency brake and when the operator takes a foot off the lever, the emergency brake takes hold.

One type of hoist accident has not yet been entirely eliminated and it is the one which is most often fatal. This is the danger to workmen who stick their heads into the shaft to see where the elevator is and are struck by it as it descends. Education has been advocated as the surest means of preventing this type of accident. Warning signs are being posted near the hoist gates by many construction companies. McDaniel Brothers have just recently perfected their scheme for preventing accidents to men looking into the hoist shaft. Taking a hint from the device used by railroads to warn men standing on cars when a low bridge or tunnel is coming by hanging fringed nets over the tracks, the contractors hung chains 60 feet from the bottoms of the elevator cages. The clanking of these chains gives warning to anyone looking into the shaft that the cage is on the way. In order that the chains may be seen as well as heard and that the direction in which the cage is moving may be determined, rubber tabs are placed at regular intervals along the chains.

Another device installed by the firm in connection with the hoist consists of an invention to arrest the cage in case the cable breaks. At any slackening of the cable, iron bars are thrust into the wooden sides of the elevator shaft, thus "freezing" the cage. This device has already received a test, for a cable did break one day, and, although there was no one on the elevator at the time, the device worked perfectly and the cage was stopped.

Employees' Mutual Benefit Associations and Sickness Prevention

The United States Public Health Service recently made a survey for the purpose of ascertaining to what extent the employees' mutual benefit associations in the United States have gone beyond their primary function of providing certain fractions of wages

when sickness causes loss of time from work, to a broader program of health improvement and a better care of their disabled members. It is stated that as a whole the associations are still essentially insurance organizations, making no attempt to control either the incidence or the severity of disability afflicting their members. However, approximately 43 per cent of the associations replying reported that improvement in health had probably resulted from the work of the associations; thirty-six per cent stated that the number of absences on account of illness had been reduced.

Some of the more progressive organizations are making an effort to shorten the duration of disability by assisting in provisions for adequate medical attention and nursing care. Others are giving physical examinations and carrying on a program of health education.

Sick benefit associations are not a recent development in the United States, the largest number of associations being from 10 to 14 years old and two per cent of those reporting having been in existence for over 50 years. One-fourth of the associations pay in cash benefits less than \$1 per day, and one-half pay from \$1 to \$2 per day. The most popular rate of benefits is from \$9 to \$11 per week. Quite frequently the rate of payment to female members is considerably less than the rate paid to males. The maximum period for which benefits may be paid varies as greatly as the rate paid. Thirteen weeks is the most frequent period, but the length of time for drawing benefits ranges from five weeks to over a year or to the full duration of disability.

"Sick benefit associations are beginning to realize that they have a bigger and broader field than merely making cash payments, namely, the discovery and correction of physical impairments; the promotion of health educational activity, especially in the hygiene of living; and better medical care when their members are disabled."

Chairmanship of the Governing Body of I.L.O.

The Governing Body of the International Labour Office, at its meeting in Geneva on October 12-17, adopted a report of the Standing Orders Committee under which the Chairmanship of the Governing Body will hereafter be held in rotation by the Governments represented on this Body, as far as possible in the following order: (1) a European State of chief industrial importance; (2) a non-European State of chief industrial importance; and (3) a state elected by the Conference.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Agenda of the 1933 Conference

The following subjects were provisionally selected by the Governing Body, at its 55th Session, for consideration by the General Session of 1933:

- (1) The systems of providing for rest and organizing shifts in automatic glassworks;
- (2) Unemployment insurance;
- (3) Holidays with pay;
- (4) Underground work of women and young persons.

The final choice will be made next January. If the 1932 Session so decides, the 1933 Session will also have to consider, on second discussion, the subjects of old-age, invalidity and widows' and orphans' insurance, and the abolition of fee-charging employment agencies.

New Chairman of the Governing Body

Mr. Ernest Mahaim, Professor of International Law in the University of Liège, sometime Minister of Industry and Labour of Belgium, has been unanimously elected Chairman of the Governing Body of the International Labour Office in the place of the late Mr. Arthur Fontaine.

When the War ended, Mr. Mahaim was chosen by his Government as one of its representatives on the Commission on International Labour Legislation appointed by the Peace Conference early in 1919, and took a share in the shaping of Part XIII of the Treaty of Versailles, by which the permanent International Labour Organization was established. During the same year he served on the Organizing Committee for the First Session of the International Labour Conference, attended that Conference as delegate of the Belgium Government, and finally, as the representative of that Government, became a member of the first Governing Body of the International Labour Office, which seat he has held continuously since 1919.

Mr. Mahaim has a wide and profound knowledge of international law and of social and political science and has had a long and probably unique experience of international labour legislation. To these qualifications he adds the qualities of impartiality, tact and firmness combined with courtesy and he enjoys in full measure the admiration and affection of all who have worked with him in the International Labour Organization.

Eight Hour Convention Ratified by Spain

On May Day of this year, the Provisional Government of the Spanish Republic announced its intention of ratifying uncondition-

ally the Washington Hours Convention. This intention has now been carried out.

By a letter dated October 15, 1931, the Secretary-General of the League of Nations informed the International Labour Office that the Spanish Government had decided that the time had come to make its ratification of this Convention absolute, and had therefore withdrawn the reservation attached to the instrument of ratification deposited with the Secretariat of the League of Nations and registered by it on February 22, 1929. The reservation was to the effect that the observance of the provisions of the Convention by Spain should be contingent on its ratification by France, Germany, Great Britain and Italy. This condition is withdrawn as from October 1, 1931.

Of the fifteen ratifications of the Hours Convention so far registered, eleven are now unconditional—those of Belgium, Bulgaria, Chile, Czechoslovakia, Greece, India, Lithuania, Luxemburg, Portugal, Roumania and Spain. The rest are conditioned as follows:—

Austria: Conditional on ratification by Belgium, Czechoslovakia, France, Germany, Great Britain, Hungary, Italy, Poland, Switzerland and Yugoslavia.

France: Conditional on ratification by Germany and Great Britain.

Italy: Conditional on ratification by Belgium, France, Germany, Great Britain and Switzerland. (A Bill providing, among other things, for the withdrawal of this reservation was presented by the Government to the Senate last year, but has not yet become law.)

Latvia: Conditional on ratification by three of the eight States "of chief industrial importance" (Belgium, Canada, France, Germany, Great Britain, India, Italy and Japan).

Publications of the Office

A further series of brochures of *Occupation and Health*, the Encyclopaedia of Hygiene, Pathology and Social Welfare which is in course of publication by the International Labour Office, has just appeared. It comprises monographs on: Ironing, Ivory, Kapok, Lithopone, Mental hygiene in industry, Occupational Diseases: Historical Review, Occupational Poisonings, Naphthylamine, Wool (Disinfection), Medical Inspection of Factories, Metallization by Pulverization, Methyl Acetate.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN SEPTEMBER, 1931

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on October 1 was 7,862, the employees on their payrolls numbering 945,842 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for

September was 1,841, having an aggregate membership of 193,849 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 68 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

(1) Employment Situation at the Beginning of October, 1931, as Reported by Employers

There was a decline in employment at the beginning of October, according to statements received by the Dominion Bureau of Statistics from 7,862 firms, whose staffs aggregated 945,842 persons, as compared with 974,331 in the preceding month. Employment customarily shows a falling-off in the autumn, but the decrease this year involved the release of a larger number of persons than usual. The index (based upon the average for the calendar year 1926 as 100) stood at 103.9 on October 1, 1931, compared with 107.1 on September 1, 1931, and with 116.2, 125.6, 118.8, 110.3, 106.5, 99.5, 95.0, 100.7, 95.8 and 91.3 on October 1, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. Employment as reported by the firms making returns was thus lower at the beginning of October than on the same date in any of the years since 1926, but was higher than on October 1 in any of the preceding five years.

The most pronounced contractions since September 1 were in manufacturing, in which the closing of large railway car shops was an important factor; construction also recorded very extensive curtailment, while losses on a smaller scale took place in communications, transportation and services. On the other hand, logging, coal-mining and trade were seasonally more active, while, within the manufacturing group, improvement was also shown in the pulp and paper and textile industries.

Employment by Provinces

Firms in all provinces showed decreases, that in Quebec being greatest.

Maritime Provinces.—A small decline was indicated in the Maritime Provinces, where the 565 co-operating employers reduced their payrolls from 70,358 persons on September 1, to 70,230 at the beginning of October. This shrinkage involved many fewer workers than that recorded on the same date last year, when the index was, however, higher than on October 1, 1931. Transportation and services reported the bulk of the decrease, but there were important gains in building and highway construction (largely as a result of the unemployment relief programme), and logging was seasonally more active. Manufacturing showed no general change.

Quebec.—There was a reduction in Quebec; this took place chiefly in construction, owing to the completion of special highway work undertaken during the preceding month. Manufacturing also released a large number of workers, and transportation was slacker. On the other hand, logging and trade showed improvement. Within the manufacturing group, heightened activity was indicated in pulp and paper and textile factories, while practically all the decline occurred in the iron and steel division as a result of the closing of important railway car shops. Statistics were compiled from 1,866 firms with 272,655 workers, compared with 294,761 at the beginning of Sep-

tember. Smaller losses had been noted on October 1, 1930, when the index was higher.

Ontario.—Curtailment was indicated in Ontario, according to 3,510 employers of 369,297 persons, or 4,708 less than in the preceding month. Additions to staffs had been noted on October 1 a year ago, and employment was then in greater volume. Manufacturing as a whole, (particularly of lumber and canned products), transportation, mining and services reported contractions, while employment increased in highway construction, logging and trade. Within the manufacturing division, improvement was noted in textiles, pulp and paper, electrical apparatus and other plants.

had been reported on that date in 1930, when the index was slightly higher than in October of the present year. Returns for the date under review were received from 1,135 firms with an aggregate working force of 155,959 employees, compared with 156,907 on September 1.

British Columbia.—Employment in British Columbia showed further curtailment, mainly in manufacturing and transportation, while unemployment relief projects provided work for a large number of persons in the highway construction group, and logging and trade also reported heightened activity. Data were tabulated from 786 employers, whose payrolls de-

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

Prairie Provinces.—After five months of increasing activity, there was a slight decrease in the Prairie Provinces at the beginning of October. This was mainly due to the closing of large railway car shops, together with losses in building and railway construction and trade. On the other hand, coal-mining was seasonally brisker, and steam railway operation also showed improvement; the greatest gains, however, were those in highway construction work as the unemployment relief programme advanced. Employment has declined on October 1 in most years of the record, but an increase

clined from 78,300 persons on September 1, to 77,701 at the beginning of October. Losses on a larger scale were registered on October 1, 1930, but the index then was many points higher.

Table I gives index numbers by economic areas.

Employment by Cities

The trend of employment was downward in Montreal, Winnipeg and Vancouver, but upward in Quebec City, Toronto, Ottawa, Hamilton and Windsor and the adjacent Border Cities.

Montreal.—There was a large decrease in employment in Montreal, where the 1,051 co-operating firms employed 132,788 persons, or 6,637 fewer than on September 1. Manufacturing showed the greatest curtailment, but there was also a decided falling-off in construction work; within the manufacturing group, textile factories reported considerable improvement, while closing of large railway car shops accounted for the bulk of the decrease. General improvement had been noted on the corresponding date of last year, when employment was in greater volume.

Quebec.—Activity in Quebec increased slightly at the beginning of October, 128 workers having been taken on since September 1 by the 135 employers whose returns were compiled, and who had 13,503 on their paylists on the date under review. There were seasonal losses in services, but construction showed improvement. The index was lower than at the beginning of October, 1930, although a reduction was then reported.

Toronto.—Expansion was indicated in Toronto, according to 1,133 firms employing 120,462 persons, compared with 119,437 in their

NOTE.—The "Relative Weight" in Table I shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS

(AVERAGE CALENDAR YEAR 1926=100)

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia
Oct. 1, 1921	91.3	104.5	85.0	91.5	99.3	85.5

Sept. 1	107.1	102.7	109.8	100.7	130.0	96.6
Oct. 1	103.9	102.6	101.6	99.3	129.1	95.9
Relative weight of employment by districts as at Oct. 1, 1931	100.0	7.4	28.8	39.1	16.5	8.2

last report. Manufacturing (particularly of textile, electrical apparatus and paper products) was much busier, and construction and trade also absorbed more workers. Larger additions to staffs had been reported on October 1, a year ago, and conditions than were generally better.

Ottawa.—Construction was more active, while other groups showed comparatively little change. The forces of the 162 employers furnishing data aggregated 14,598 workers, or 329

more than on September 1. The index of employment was rather lower than on the same date in 1930, although the gains then indicated had been smaller.

Hamilton.—Curtailement was registered in manufacturing, in which iron and steel plants showed the most pronounced loss; on the other hand, construction was considerably more active. Statements were tabulated from 233 firms with 30,236 employees, compared with 30,129 in the preceding month. The index

Note.—The "Relative Weight" in Table 2 shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

Relative weight of employment by cities as at Oct. 1, 1931.....	14.0	1.4	12.7	1.5	3.2	1.1	3.1	3.1

number at the beginning of October last year was higher, although the trend of employment was then downward.

Windsor and the Adjacent Border Cities.—There was an increase in the number employed in the Border Cities, mainly in the automobile trades and construction. One hundred and thirty-six establishments recorded 9,985 employees, as against 9,577 on September 1. Contractions had been reported on October 1,

1930, but employment was then in greater volume.

Winnipeg.—Employment in Winnipeg showed a recession on October 1, when the forces of the 363 co-operating firms aggregated 29,311 workers, or 482 fewer than in the preceding month. There were decreases in trade and building construction, while road work reported improvement and other groups showed little general change. Declines had also been

NOTE.—The "Relative Weight" in Table 3 shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

Relative weight of employment by industries as at Oct. 1, 1931.....	100.0	47.9	1.2	5.1	2.9	11.7	19.6	2.5	9.1

indicated at the beginning of October a year ago, when the index was higher than on the date under review.

Vancouver.—There was a loss in employment in Vancouver, according to 324 em-

ployers with 28,897 persons on their payrolls, compared with 30,283 on September 1. Manufacturing, especially metal and canning factories, reported decreases, and there was also a falling-off in transportation and construction.

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES, (Average 1926-100).

Industries	Relative Weight ¹	Oct. 1, 1931	Sept. 1, 1931	Oct. 1, 1930	Oct. 1, 1929	Oct. 1, 1928	Oct. 1, 1927	Oct. 1, 1926

¹The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

A much smaller reduction had been recorded on October 1, 1930, when the index stood at 112.1, as compared with 99.7 at the beginning of October of this year.

Index numbers by cities are given in Table II.

Manufacturing

There was a decrease in manufacturing plants, 4,768 of which reported 453,370 operatives, compared with 467,697 in the preceding month. Large gains were recorded in textile and pulp and paper factories, and improvement was also shown in leather, musical instrument, chemical and electrical apparatus plants. On the other hand, very important declines were indicated in the iron and steel group, chiefly owing to curtailment of activity in railway car shops, and lumber, food, tobacco and beverage, non-ferrous metal, non-metallic mineral, rubber and building material factories reported reductions, in some cases of a seasonal nature. A smaller decrease in employment had been noted on October 1, 1930, when the index was many points higher.

Animal Products—Edible.—There were continued losses in fish-preserving establishments and in dairies. Statistics were received from 211 manufacturers, employing 18,100 persons, as compared with 19,210 in the preceding month. This contraction, which was most pronounced in British Columbia, was on a smaller scale than that registered on the corresponding date last year, when the index was, however, higher than in the autumn of the present year.

Leather and Products.—Footwear, tanning and miscellaneous leather product factories reported slight additions to staffs. Most of the improvement took place in Ontario. The 242 employers making returns reported 18,944 workers, or 284 more than on September 1. Practically no change had been noted at the beginning of October a year ago, and the index number was then several points lower than on the date under review.

Lumber and products.—Further important reductions in personnel were indicated in the lumber group, in which employment was at a decidedly lower level than on October 1, 1930. The decreases took place almost entirely in rough and dressed lumber mills and container plants, while furniture factories were somewhat busier. A combined working force of 38,004 persons was reported by the 758 co-operating manufacturers, as compared with 40,288 at the beginning of September. Although the largest contractions were in Ontario, the tendency was downward in all provinces.

Musical Instruments.—Additions to staffs were registered in musical instrument plants, in which, however, employment was not so brisk as during last autumn. Thirty-four establishments reported 1,924 employees, as compared with 1,796 in the preceding month. The gain occurred in Ontario.

Plant Products, Edible.—Fruit and vegetable canning showed considerable declines, owing to the completion of the season's packing operations, while sugar and syrup and chocolate and confectionery factories afforded heightened employment. The staffs of the 410 reporting firms aggregated 33,285 persons, or 2,082 less than in their last report. Employment was not so brisk in Quebec, Ontario and British Columbia, Ontario showing the most pronounced declines; on the other hand, improvement was noted in the Maritime and Prairie Provinces. The general reduction compared unfavourably with the increase registered on the corresponding date in 1930, when the index was decidedly higher.

Pulp and Paper products.—There was an increase in the staffs reported by 555 employers in this group, who had 58,401 workers on their payrolls, as compared with 56,864 at the beginning of September; this took place in printing and publishing houses and pulp and paper mills, the latter being decidedly busier. Considerable gains were recorded in Quebec and Ontario, while minor improvement was also registered in the Prairie Provinces. Curtailment had been indicated at the beginning of October a year ago, but the index number was then higher.

Rubber Products.—Employment in rubber goods showed a decrease on October 1, 1931, repeating the movement recorded on the same date in the last few years, during which the level of employment has been decidedly higher. Data were compiled from 42 firms with 12,035 employees, as against 12,200 in their last report. The curtailment took place almost entirely in Quebec, while the tendency was upward in Ontario.

Textile Products.—Garment and personal furnishing, woollen, hosiery and knitting, headwear and some other branches of the textile industry reported increased activity, while cotton mills released employees; 803 manufacturers enlarged their payrolls from 78,406 workers at the beginning of September, to 80,647 on the date under review. Quebec and Ontario recorded the bulk of this expansion, but improvement was also shown in the other provinces. Smaller gains had been noted at the beginning of October last year, but the

index was then above its level of October 1, 1931.

Tobacco, Distilled and Malt Liquors.—There was a falling-off in employment in these industries on the date under review, according to the 147 establishments furnishing statistics, which employed 14,325 workers, or 912 less than on September 1. Employment was in smaller volume than in the autumn of 1930, when improvement had been shown. Firms in Quebec and Ontario registered most of the loss.

Clay, Glass and Stone Products.—Seasonal contractions were indicated in building material plants, in which activity was less than on October 1, 1930. The forces of the 169 co-operating employers declined by 145 persons to 11,110 at the beginning of October. The largest reductions took place in the Prairie Provinces.

Electric Current.—There was a slight decrease in electric current plants at the beginning of October, when 94 establishments reported 16,150 workers, compared with 16,233 on September 1. A similar decline was indicated on the corresponding date last year, when the index number stood at 133.6, compared with 132.4 on October 1, 1931.

Electrical Appliances.—Further additions to staffs were made in electrical apparatus works, 79 of which had 14,945 employees, or 171 more than in their last report. This gain was larger than that noted on October 1, 1930, when the index number was many points higher. There were losses in Quebec, but greater increases in Ontario.

Iron and Steel Products.—The heating appliance, sheet metal and automobile divisions of the iron and steel group registered increases in employment, while there were very pronounced reductions in railway car shops, and losses on a smaller scale in rolling mills, shipbuilding, structural iron and steel and other branches. Statements were received from 735 manufacturers, whose payrolls aggregated 92,846 persons, as compared with 103,352 in the preceding month. Employment generally declined, but the largest recessions were in Quebec and the Prairie Provinces. Much less extensive curtailment had been indicated at the beginning of October last year, when employment was in considerably greater volume.

Non-Ferrous Metal Products.—The smelting and refining and base metal divisions of this group reported declines. A combined working force of 15,705 persons was reported by the 124 co-operating employers, who had

16,594 employees at the beginning of September. The index was much lower than in the autumn of 1930. Practically all the reduction on October 1, 1931, occurred in Ontario.

Logging

Statements were tabulated from 220 logging companies, whose staffs were enlarged by 3,139 workers to 11,443 on the date under review. This advance was on a smaller scale than in the early autumn of 1930, when the index was much higher; in fact, employment on October 1, 1931, was in smaller volume than in the autumn of any other year since 1921. Camps in Quebec absorbed most of the extra men reported on October 1, 1931.

Mining

Coal-Mining.—There was a large increase in coal mines, in which employment was not so brisk as on October 1, 1930, despite the fact that the improvement then reported was less pronounced. Returns were received from 80 operators employing 26,014 persons, as compared with 24,220 in their last report. The gains were indicated mainly in the Prairie coal fields.

Metallic Ores.—Employment in this group showed a falling-off on October 1; 62 employers reported 16,104 workers, or 431 less than at the beginning of September. Ontario registered the bulk of the curtailment. Advances had been noted on the corresponding date last year, when the index number was a few points higher.

Non-Metallic Minerals, other than Coal.—Reduced activity was reported in this group, in which statistics were received from 77 firms employing 6,350 persons, or 223 less than on September 1. There were slight declines in all except the Prairie Provinces, which showed no general change in this group. The index was decidedly lower than on October 1, 1930, although greater losses were then indicated.

Communications

There was a falling-off in employment in communications, in which the companies and branches furnishing data reported 27,034 employees, as compared with 27,458 on September 1. The index was lower than in the autumn of 1930.

Transportation

Street and Electric Railways and Cartage.—A minor decrease was indicated in local transportation, 141 persons being released from the forces of the 160 co-operating firms, who re-

ported 24,521 on their payrolls. Employment in this industry was not quite so brisk as on October 1 of last year.

Steam Railways.—Statistics were tabulated from 101 employers in the steam railway operation group, whose payrolls declined from 71,455 on September 1, to 70,975 at the beginning of October. A slightly larger loss had been indicated on the same date of last year, but the index was then higher. There were reductions on the date under review in all except the Prairie Provinces.

Shipping and Stevedoring.—General contractions were registered in the water transportation group, in which 86 companies employed 15,150 workers; this was a loss of 2,335 compared with their payrolls in the preceding month. An improvement had been noted on October 1 of last year, when the index was higher than on the date under review.

Construction and Maintenance

Building.—There was another decline in employment in building, 1,887 persons being let out from the forces of the 717 co-operating contractors. They had 44,371 employees; this number was smaller than that reported at the beginning of October a year ago, when a slight increase had been indicated. In the Maritime Provinces there was further improvement, while the trend was unfavourable in Quebec, Ontario and the Western Provinces.

Highways.—Largely owing to unemployment relief works, employment in this group increased in all provinces except Quebec, where the cessation of special works undertaken in the preceding month caused a considerable reduction. This offset the gains elsewhere indicated, and resulted in a decrease in the highway construction group as a whole. Statements were tabulated from 360 employers, whose staffs, standing at 106,589, were smaller by 7,568 workers than on September 1. The

number of persons employed in the group was very much greater than in any other autumn on record.

Railways.—Reductions in employment were reported on railway construction, especially in the Prairie Provinces. The forces of the 47 companies and divisional superintendents furnishing returns declined from 38,694 at the beginning of September, to 34,479 on the date under review. This shrinkage was more extensive than that registered on October 1, 1930, when the level of employment was higher.

Services

The closing of summer hotels, together with losses in laundries and dry cleaning establishments, accounted for a decrease of 1,579 persons in the staffs of the 287 firms in this group whose returns were received, and who employed 23,328 on October 1. The declines indicated on the same date last year involved a smaller number of workers, and employment was then more active.

Trade

Retail trade showed a small increase in personnel, while wholesale houses reported little general change; 830 trading establishments reported 86,114 employees, compared with 85,926 in the preceding month. The index stood at 120.8, compared with 127.9 on October 1, 1930.

Tables

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry, is of the total number of employees reported in Canada by the firms making returns on the date under review.

(2) Unemployment in Trade Unions at the Close of September, 1931

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work other than their own trades, or who are idle because of illness, are not considered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As a number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such

figures have reference only to the organizations reporting.

Partly due to the usual slowing up of activity with the autumn season, and more particularly to the employment losses sustained in the iron and steel trades consequent upon the closing of a number of railway car shops, the unemployment volume among local trade unions at the close of September exceeded by over 2 per cent that registered in August. The September situation was based upon the returns tabulated by the Department of La-

bour from a total of 1,841 local unions, embracing 193,849 members, 35,048 or a percentage of 18.1 of whom were without work on the last day of the month, contrasted with 15.8 per cent in August. Quebec unions were most seriously affected by shutdowns, the Angus shops in Montreal being closed toward the end of September for an indefinite period, while in other car shops the members were working at greatly reduced time. In Ontario, Manitoba and British Columbia also employment recessions were recorded, due to car shop closings. The Alberta situation as a whole, however, was substantially better than in August, due to improvement in the

A separate record is kept each month of unemployment in the largest city in each province, with the exception of Prince Edward Island. Especially noteworthy were the losses in employment reported from Montreal during September where car shop closings were largely responsible for this reduction. In Winnipeg, Vancouver and Toronto also recessions on a smaller scale were noted, and in Edmonton and Halifax employment eased off slightly. On the other hand, Regina and Saint John unions reported minor improvement in conditions. In all cities used for this comparison, a lower level of activity was shown from September last year, Montreal, Toronto, Winni-

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

coal mining industry as it was reported the mines were opening up a bit, though full time work was not yet assured. In Nova Scotia slight gains in activity were recorded, the coal mines and building trades reporting some employment expansion. The New Brunswick and Saskatchewan situation was less favourable than in August, the decline in the latter province being but nominal. Important losses in activity, among local trade unions were recorded as compared with September last year when 9.4 per cent of the members registered were idle, conditions for Quebec, Ontario and Manitoba union members being decidedly less active during the month reviewed, while noteworthy recessions were apparent among New Brunswick, Saskatchewan, Alberta and British Columbia unions, and employment for Nova Scotia workers declined moderately.

peg, Vancouver and Regina unions especially reporting large increases in slackness.

The chart which accompanies this article illustrates the unemployment trend by months from January, 1925, to date. Contrary to the downward projection of the curve shown during July and August, the course follower in September was upward, indicative of a moderate increase in idleness over the previous two months. Unemployment as represented by the curve appeared in much larger proportions than in September a year ago, the curve resting at a point considerably above that of September, 1930.

The manufacturing industries during September reported a substantial falling off in activity from the previous month, the contractions being largely confined to the iron and steel trades where the cessation or partial suspension of operations in railway car shops

was the deciding factor in the adverse situation reported. Large increases in slackness were registered also by bakers and confectioners, metal polishers, hat and cap, fur and glass workers, and general labourers, which, however, involved much fewer workers than in the iron and steel trades. Among leather workers, in addition, declines on a much smaller scale were noted, and employment for pulp and paper makers and printing tradesmen was less favourable, though the changes were slight. On the other hand, wood workers recorded a much better situa-

tion than in August, and improvement in conditions was shown by textile and garment workers and by cigar makers. For September returns were received from 494 unions in the manufacturing industries with 56,439 members, 11,295 or a percentage of 20.0 of whom were without employment on the last day of the month, in contrast with percentages of 14.0 in the previous month and 8.7 in September, 1930. In the majority of trades a lower level of activity was maintained during September than in the corresponding month last year, unemployment in the iron and steel trades, as in the previous comparison, being chiefly responsible for this retrogressive employment movement, with contributing reductions of lesser degree among garment workers, pulp and paper makers, and printing tradesmen. Leather and textile workers, and general labourers, however, reported improvement in the employment volume from September last year.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Pr. Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada

Coal miners registered a considerably better situation in September than in the preceding month, the Alberta mines particularly absorbing a much greater number of workers, though in Nova Scotia and British Columbia, the situation also showed some improvement. Part-time work, however, was in evidence to a noteworthy degree in both the eastern and western coal fields. Reports were tabulated for September from 52 unions of coal miners, covering a membership of 18,829 persons, 6.2 per cent of whom were idle on the last day of the month in contrast with 17.5 per cent in August. Compared with the situation in September last year when 3.0 per cent of the members reported were unemployed Alberta unions showed the most extensive employment curtailment during the month reviewed, while in Nova Scotia and British Columbia slight declines in activity only were registered.

The seasonal lull in employment conditions was in evidence in the building and construction trades during September, which together with the depression which has extended over a considerable period in these trades caused a substantial unemployment percentage at the close of the month which was 6 points in excess of that registered in August. Unemployment figures were compiled at the close of September from reports received from 255 unions of building tradesmen, with 25,597 members, 12,165, or 47.5 per cent of whom were idle on the last day of the month, contrasted with 41.5 per cent in August. Bricklayers, masons and plasterers, and carpenters and joiners, who together formed a large share of the workers engaged in the building trades

showed reductions involving the greatest number of workers. Among painters, decorators and paperhangers, and tile layers, lathers and roofers also very quiet conditions prevailed, and employment for plumbers and steamfitters, and electrical workers was also retarded. Hod carriers and building labourers indicated an unchanged situation from August. Bridge and structural iron workers reported a noteworthy unemployment drop from August, though conditions were still very slack, and the level of activity for granite and stone-cutters tended slightly upward. Marked depression was shown in the building trades from September a year ago when 27.9 per cent of the members reported were unemployed, all tradesmen sharing quite substantially in this adverse employment movement.

From unions in the transportation industries 787 reports were tabulated during September, embracing a membership of 67,637 persons, 8,115 or 12.0 per cent of whom were idle on the last day of the month, contrasted with percentages of 9.5 in August and 5.4 in September last year. All tradesmen participated in the unemployment increase shown from August, steam railway employees, whose returns constituted over 81 per cent of the entire group membership reported, indicating the most noteworthy curtailment of activity, though employment for navigation workers also showed a considerable drop. Among street and electric railway employees, and teamsters and chauffeurs the tendency was toward lessened activity, though the changes were but nominal. Contractions of activity were noted in all divisions of the transportation industries from September a year ago, steam railway employees, as in the previous comparison, suffering the greatest employment losses, though declines of noteworthy proportions were reported also by navigation workers.

The 5 unions of retail clerks from which returns were tabulated during September, with a total membership of 1,250 persons, reported 3.6 per cent of their members idle on the last day of the month compared with 2.5 per cent of inactivity in August and with a fully engaged situation in September last year.

Civic employees with 71 unions reporting 7,661 members in September, indicated 0.3 per cent of their members idle on the last day of the month, compared with 0.1 per cent of unemployment in August and 0.7 per cent in September, 1930.

A slight unemployment gain was recorded in the miscellaneous group of trades during September from the previous month, the 126 unions from which reports were tabulated with 5,847 members showing an unemployment percentage of 20.2 in contrast with 18.9 per cent in August. The contractions of activity from August were confined chiefly to stationary engineers and firemen, the tendency among barbers being also unfavourable though the change was very slight. Theatre and stage employees, unclassified workers and hotel and restaurant employees, however, reported some improvement in the employment volume available. Noteworthy reductions in activity were registered in the miscellaneous group of trades from September last year when 12.0 per cent of idleness was recorded, unclassified workers alone reporting a substantially improved situation. On the other hand, much slacker conditions prevailed for stationary engineers and firemen than in September last year, and pronounced employment recessions were apparent among hotel and restaurant employees. Curtailment of activity, on a much smaller scale, was recorded by theatre and stage employees and barbers.

The trend of activity for fishermen during September was slightly upward from August, as manifest by the returns received from 3 associations, with a membership total of 1,255 persons. Of these 75, or a percentage of 6.0, were idle on the last day of the month, in contrast with 7.7 per cent in August. The situation, however, was less favourable than in September a year ago when 1.5 per cent of the members reported were unemployed.

Noteworthy improvement from August conditions was reported during September by lumber workers and loggers, the 5 unions from which returns were tabulated with 895 members indicating an unemployment percentage of 24.6 in contrast with 37.8 per cent of idleness in August. Unemployment for these workers was, however, in greater volume than in September, 1930, when 17.2 per cent of the members reported were without work.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1930 inclusive, and also the percentage of unemployment by provinces for September of each year from 1919 to 1928 inclusive, and for each month from January, 1929, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

(3) Employment Office Reports for September, 1931

The volume of business transacted by the offices of the Employment Service of Canada during the month of September, 1931, showed a gain in the average daily placements over those of the preceding period and also over last year's, registering an increase of nearly 63 per cent in the former and of 20 per cent in the latter comparison. An outstanding gain in placements over those of last month took place in construction and maintenance, where numerous men had been provided with work on the highways. Much smaller gains were recorded in all other industrial divisions, except logging and transportation, but these only

of the Service throughout Canada, compilations being made semi-monthly. It will be seen that the curve of vacancies and of placements in relation to applications took a sharp upward course during the first half of September and continued a moderated upward trend during the latter half of the month under review, the curve of vacancies attaining a level, at the end of the period, about seven points below that of September, 1930, and the curve of placements five points below that recorded at the close of the corresponding month last year. The ratio of vacancies to each one hundred applications was 50.3 during the first

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o-o-o-o-o

slightly contributed to the net increase shown. The declines in logging and transportation were nominal only. Although decreased placements in all groups, except construction and maintenance and mining, were reported in comparison with September, 1930, the gain in the former section, due to highway relief work sponsored by the Government, more than offset all declines recorded, of which those in farming, services and logging were the largest.

The accompanying chart shows the trend of employment since January, 1929, as represented by the ratio of vacancies notified and of placements effected for each one hundred applications for work registered at the offices

half and 52.0 during the second half of September, 1931, in contrast with the ratios of 67.2 and 58.5 during the corresponding periods of 1930. The ratios of placements to each one hundred applications during the periods under review were 47.4 and 50.7 as compared with 62.1 and 55.5 during the corresponding month of 1930.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during September, 1931, was 1,669, as compared with 1,032 during the preceding month and with 1,427 in September a year ago.

The average number of applications for employment received daily by the offices during the month under review was 3,259, in comparison with 2,746 in August, 1931, and with 2,270 during September last year.

The average number of placements made daily by the offices of the Service during September, 1931, was 1,604, of which 797 were in regular employment and 807 in work of one week's duration or less, as compared with the total daily average of 987 during the preceding month. Placements in September a year ago averaged 1,335 daily, consisting of 844 placements in regular and 491 in casual employment.

During the month of September, 1931, the offices of the Service referred 42,092 persons to vacancies and effected a total of 40,077 placements. Of these the placements in regular employment were 19,924 of which 15,643 were for men and 4,281 for women, while placements in casual work totalled 20,153. The number of vacancies reported by employers was 32,931 for men and 8,792 for women, a total of 41,723, while applications for work totalled 81,453, of which 67,518 were for men and 13,935 from women.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1921, to date:—

Year	Placements		
	Regular	Casual	Totals
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552
1924.....	247,425	118,707	366,132
1925.....	306,804	106,021	412,825
1926.....	300,226	109,929	410,155
1927.....	302,723	112,046	414,769
1928.....	334,604	135,724	470,328
1929.....	260,747	137,620	398,367
1930.....	187,872	180,807	368,679
1931 (9 months).....	115,450	221,196	336,646

NOVA SCOTIA

During the month of September, 1931, positions offered through employment offices in Nova Scotia were nearly 31 per cent higher than in the preceding month, and about 36 per cent above the corresponding month last year. There was a gain of 30 per cent in placements when compared with August, and of over 43 per cent in comparison with September, 1930. The increase in placements over September last year was entirely due to gains in the highway division of construction and maintenance, representing unemployment relief work, as all other groups showed declines. None of the reductions, however, were

large. Nearly all the placements effected were in construction and maintenance with 413, and services with 338. Regular employment was found for 390 men and 71 women.

NEW BRUNSWICK

There was a decline of nearly 31 per cent in the demand for workers, as indicated by orders received at employment offices in New Brunswick during September, when compared with the preceding month and of nearly 23 per cent less in comparison with the corresponding month last year. Placements were nearly 32 per cent less than in August and nearly 22 per cent below September, 1930. All industrial divisions participated in the declines in placements from September last year, but services was the only group to show any appreciable reduction. There were 55 placements under construction and maintenance and 455 in services. Regular employment was found for 50 men and 72 women during the month.

QUEBEC

During September, employment offices in the Province of Quebec received orders for 11 per cent less workers than in the preceding month and 21 per cent less than during the corresponding month last year. There was a decline also in placements of over 11 per cent when compared with August and of nearly 19 per cent in comparison with September, 1930. This reduction in placements from September last year was due to losses under logging and construction and maintenance, which declines were offset in part by gains in services and trade. The changes in other groups were nominal only. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 81; logging, 234; farming, 46; construction and maintenance, 137; trade, 91; and services, 892, of which 748 were of household workers. During the month 626 men and 723 women were placed in regular employment.

ONTARIO

Orders listed at employment offices in Ontario during September called for 82 per cent more workers than in the preceding month and 41 per cent more than during the corresponding month last year. There was an increase of over 85 per cent in placements when compared with August, and of over 44 per cent in comparison with September, 1930. The large increase in placements over September last year was entirely due to work provided in relief of unemployment on highway construction, as the only other groups to show gains were farming and mining, and in them

* 77 placements effected by offices since closed.

the increase was quite small. There was a large reduction in placements in services, with smaller declines in logging, manufacturing and transportation, in the order mentioned. These losses, however, represented only about 20 per cent of the gain under construction and maintenance alone. Placements by industrial divisions included: manufacturing, 1,171; logging, 122; farming, 1,378; transportation, 96; construction and maintenance, 10,341; trade, 387; and services, 4,300, of which 2,446 were of household workers. There were 3,245 men and 2,075 women placed in regular employment during the month.

MANITOBA

Opportunities for employment as indicated by orders received at employment offices in Manitoba during September were nearly 16 per cent less than in the preceding month, and over 3 per cent fewer than in the corresponding month last year. Placements also were over 16 per cent less than in August and nearly 6 per cent below September, 1930. That the decline in placements in comparison with September last year was small was due to work provided on highway and sewer construction in relief of unemployment, as there were fewer placements in all groups except construction and maintenance, under which this work is classified. Of the reductions, those in farming and services were the most noteworthy, and equalled the gain under construction and maintenance. Placements by industrial divisions included: farming, 762; construction and maintenance, 1,590; trade, 62; and services, 1,057, of which 870 were of household workers. There were 881 men and 400 women placed in regular employment.

SASKATCHEWAN

There was a gain of 56 per cent in the number of workers required through employment offices in Saskatchewan during September, when compared with the preceding month, but a decline of nearly 29 per cent in comparison with the corresponding month of last year. Placements also were nearly 52 per cent above August, but were over 20 per cent less than in September, 1930. All industrial divisions, except construction and maintenance and mining, participated in the declines in placements from September last year, those in farming being the most pronounced. The gain under construction and maintenance was due to highway construction undertaken in relief of unemployment. Industrial divisions in which most of the placements were effected during the month were: manufacturing 57; farming, 1,530; transportation, 44; construction and maintenance, 1,266; trade, 47; and services,

703, of which 473 were of household workers. Positions in regular employment were secured for 2,171 men and 320 women.

ALBERTA

Employment opportunities, as indicated by orders received at employment offices in Alberta during September, were 75 per cent better than in the preceding month, but nearly 15 per cent less favourable than during the corresponding month last year. There was a gain also in placements of over 77 per cent when compared with August, but a decline of 14 per cent in comparison with September, 1930. As in Saskatchewan, a large reduction in farm placements accounted for the decline from September last year, although there were fewer placements in all divisions except construction and maintenance and mining. Relief work on highway construction was responsible for the gain under construction and maintenance. Placements by industrial divisions included: manufacturing, 48; farming, 2,772; mining, 282; construction and maintenance, 1,985; trade, 39; and services, 626, of which 469 were of household workers. Placements in regular employment numbered 3,909 of men and 338 of women.

BRITISH COLUMBIA

During the month of September, positions offered through British Columbia offices were over 114 per cent higher than in the preceding month and nearly 126 per cent above the corresponding month last year. Placements also were nearly 112 per cent above August and about 126 per cent in excess of September, 1930. The substantial gain in placements over September last year was due to highway construction provided in relief of unemployment, as all groups except construction and maintenance showed declines. Of the latter those in manufacturing, services, and farming were the largest. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 74; farming, 115; construction and maintenance, 5,363; and services, 701, of which 423 were of household workers. During the month 4,371 men and 282 women were placed in regular employment.

Movement of Labour

During the month of September, 1931, the offices of the Employment Service of Canada made 19,924 placements in regular employment, 7,628 of which were of persons for whom the employment found was outside the immediate vicinity of the offices at which they were registered. Of the latter, 534 were granted the Employment Service reduced

transportation rate, 481 travelling to centres within the same province as the despatching office and 53 to other provinces. The reduced transportation rate, which is 2.7 cents per mile, with a minimum fare of four dollars, is granted by the railway companies to bona fide applicants at the Employment Service who may wish to proceed to distant employment for which no workers are available locally.

Certificates issued in Quebec during September numbered 16, these being granted at the Hull office to 15 bushmen going to Pembroke and to one bridge builder journeying to Toronto.

The movement of labour from Ontario centres during September was entirely to provincial situations and comprised the transfer of 95 workers. Of these 68 travelled from Port Arthur, including 2 carpenters proceeding to Timmins and 62 bushworkers and 4 miners to points within the territory covered by the Port Arthur office. Destined to the Timmins zone also were 3 miners sent from Cobalt, one steamfitter from Niagara Falls, 3 building construction workers, 5 power construction labourers, 2 bridge builders and one carpenter from Pembroke. The remaining transfers were effected by the Sudbury office, which despatched one hoist compressor man to Sault Ste. Marie and 8 bushmen, one teamster, one cookee, and one stonemason to points within its own zone.

Workers taking advantage of the Employment Service reduced transportation rate in Manitoba during September were 52 in number, 44 of whom went to provincial employment and 8 to centres in other provinces. All of these travelled on certificates issued at Winnipeg. Within the province 2 hotel workers were conveyed to Brandon, one waitress to Dauphin, and 39 farm hands, one farm domestic, and one fisherman to points within the Winnipeg zone. The inter-provincial movement included one farm hand, one upholsterer, one boatman and one town domestic going to Port Arthur, 3 farm hands to Regina and one farm hand to Yorkton.

Reduced rate certificates were granted by Saskatchewan offices during September to 47 persons, all of whom went to provincial points. Included in these and travelling from Regina were 4 farm hands and one highway construction worker proceeding to Moose Jaw, 2 car-

penters, one housekeeper and one teacher to Swift Current, one highway construction cook to Estevan, one farm hand and one housekeeper to Prince Albert and 10 miners, 2 teachers and one farm hand to points within the Regina zone. From Moose Jaw 2 domestics were transferred to Saskatoon and 6 farm hands to employment in the district covered by the Moose Jaw office. The Yorkton office was instrumental in the transfer of one farm boy to the Regina zone. The balance of this provincial movement was from Saskatoon, from which point 10 farm hands and 3 farm domestics were despatched to employment within the Saskatoon zone.

By the offices in Alberta during September 302 persons were transferred at the special rate, 273 within the province and 29 to points outside. The latter were farm hands travelling from Edmonton to Saskatchewan rural points. Included in the provincial transfers from Edmonton were one highway construction foreman and 1 miner going to Drumheller and 234 farm hands, 4 farm domestics, 13 highway construction workers, 5 mine workers, 4 railroad construction workers, 2 labourers, one boat builder, one timekeeper, one hotel waitress and one maid to employment at various points within the Edmonton zone. In addition, Calgary shipped 2 farm hands and one cook within its own zone and one farm hand and one cafe waitress to Drumheller.

All certificates granted in British Columbia during September were to provincial points and numbered 22. Receiving certificates at Vancouver 2 cooks were conveyed to Revelstoke, one miner to Kamloops, one baker to Penticton and 7 carpenters and 2 cooks to employment in the Vancouver zone. To points within its own zone Prince George transferred 6 highway construction workers, this zone also being the destination of 2 tie makers travelling from Prince Rupert. In addition Penticton received one construction cook shipped from Nelson.

Of the 534 workers who benefited by the Employment Service reduced transportation rate during September, 148 travelled by the Canadian National Railways, 372 by the Canadian Pacific Railway, 9 by the Pacific Great Eastern Railway, 3 by the Timiskaming and Northern Ontario Railway, and 2 by the Northern Alberta Railway.

(4) Building Permits Issued in Canada During September, 1931

The value of the building permits issued by 61 cities during September stood at \$10,322,414; this was an increase of \$2,098,340, or 25.5 per cent, as compared with the total of \$8,224,074 in August, 1931, but a decline of \$770,606, or 7 per cent, in comparison with the

aggregate of \$11,093,020 recorded in September last year. The cumulative total for the first nine months of this year (\$86,898,267), was lower than in 1930 and other years of the record; in considering these data, it should, however, be noted that there has also been

a very decided decline in wholesale costs of building materials, the Bureau's index (1926=100) having fallen from 155.3 in the first three quarters of 1920, to 83.8 in the first nine months of the current year.

Some 50 cities furnished detailed statistics for September, showing that they had issued 800 permits for dwellings estimated to cost approximately \$3,200,000, and nearly 2,000 permits for other buildings valued at over \$5,900,000. In addition, Brantford, Galt and Lethbridge reported the authorization of engineering projects valued at \$22,356, \$53,000 and \$75,000, respectively. During August, authority was granted for the erection of about 1,000 dwellings and 2,000 other buildings, estimated in each class to cost approximately \$3,900,000.

New Brunswick, Quebec and Ontario reported increases in the estimated value of building as compared with August, 1931, that of \$1,953,763, or 76.9 per cent in Quebec being most pronounced. Of the declines in the remaining provinces, that of \$248,016 or 42.7 per cent in Alberta was greatest.

As compared with September, 1930, there were gains of \$789,139 and \$1,514,244 in New

Brunswick and Quebec, respectively. In the remaining provinces, there were reductions, of which that of \$824,483 or 61.5 per cent in British Columbia was the largest.

Of the larger cities, Montreal and Toronto registered higher totals of permits issued than in either the preceding month or the same month last year. In Winnipeg and Vancouver, on the other hand, there were decreases in both comparisons. Of the other centres, Moncton, Saint John, Quebec City, Galt, Port Arthur, Stratford, St. Catharines, York and East York Townships, Welland and Lethbridge showed increases as compared with both August, 1931, and September, 1930.

Cumulative record for first nine months, 1931.—The following table gives the value of the building authorized by 61 cities during September, and in the first nine months of each year since 1920, as well as index numbers for the latter, based upon the total for the corresponding period of 1920 as 100. The average index numbers of wholesale prices of building materials in the first nine months of the years since 1920 are also given (average 1926=100).

Year	Value of permits issued in September	Value of permits issued in first nine months	Indexes of value of permits issued in first nine months (1920=100)	Average Indexes of wholesale prices of building materials in first nine months (1926 average=100)

1922.....	11,597,034	116,778,450	121.5	108.5
1921.....	10,907,828	88,573,442	92.1	126.8
1920.....	9,842,677	96,146,278	100.0	155.3

The aggregate for the first nine months of this year was 31.2 per cent less than in 1930, and was also lower than the eleven-year average of \$122,210,012, while the average index numbers of wholesale prices of building materials were much lower in 1931 than in any other year of the record.

The accompanying table gives the value of the building permits issued by 61 cities during August and September, 1931, and September, 1930. The 35 cities for which records are available since 1910 are marked with asterisks.

REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD JULY TO SEPTEMBER, 1931

EMPLOYMENT conditions, as indicated by business transacted by the Office of the Employment Service of Canada during the quarter July to September, 1931, showed only a nominal decline from that of the corresponding quarter last year, as there was a decrease of 2 per cent in vacancies and of about 1 per cent in placements listed; the greater part of the net reduction in placements during the quarter under review occurred in farming and was due to the small demand for harvest workers in the Prairie Provinces. Fewer placements were also made in all other industrial divisions, except construction and maintenance where a very substantial gain nearly counterbalanced the previous declines shown. This increase was entirely due to work provided on highways and other Government projects for the relief of unemployment. Provincially, Ontario and British Columbia reported increased vacancies and placements, all remaining provinces showing declines in both instances, except Alberta, where a slightly higher number of placements was recorded: The adverse change in Nova Scotia was very slight.

From the chart on page 1235, which accompanies the article on the work of the Employment Offices for the month of September, it will be noticed that the curves of vacancies and of placements in relation to applications declined steadily throughout July and August, but followed an upward trend during September, which was much more pronounced during the first half of the month than during the latter half, the level of each curve at the end of the quarter under review being lower

than that shown at the close of the corresponding quarter last year, vacancies showing a level 7 points below and placements 5 points lower than that recorded at the close of September, 1930. During the period July to September, 1931, there was an average of 44.1 vacancies and 42.3 placements for each one hundred applications for employment, as compared with 64.9 vacancies and 61.6 placements for each one hundred applications during the corresponding period last year.

The average number of positions offered daily during the present quarter was 1,254, of applicants registered 2,846 and of placements registered 1,205, in contrast with the daily average of 1,278 vacancies, 1,971 applications and 1,214 placements in regular and casual employment during the corresponding quarter of 1930.

During the three months, July to September, 1931, the Offices reported that they had made 97,827 references of persons to positions and effected a total of 92,741 placements, of which 44,102 were in regular employment and 48,639 in casual work. Of the placements in regular employment, 32,550 were of men and 11,552 of women, while casual work was found for 39,456 men and 9,183 women. Records for the corresponding quarter of 1930 showed 93,453 placements, of which 61,904 were in regular employment and 31,549 in casual work. Applications for employment during the period under review were received from 181,096 men and 38,021 women, a total of 219,117 in contrast with the registration of 151,715 persons during the same period in 1930. Employers notified the Service during the quarter July to

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary showing the employment situation during September, 1931, is reproduced below. The following report on unemployment conditions in the United States is based on the statistics published by the United States Department of Labour, showing the recent trend of employment throughout the country. The employment situation in the United States is further indicated by unemployment percentages based on statistics compiled each month by the American Federation of Labor, the source of these statistics being returns obtained from the trade union locals in 24 representative cities. Summary figures for September, 1931, and previous months are reproduced below.

Great Britain

Employment during September showed, on the whole, a further decline. The decline continued in the building trade, in public works contracting, and in the brick, tile, artificial stone and cement, glass, and iron and steel industries. Unemployment also increased in the engineering, paper, cotton, silk and artificial silk, and jute trades, in textile bleaching and finishing, in the tailoring and distributive trades, and in shipping, hotel, restaurant and boarding-house services.

There was a further improvement in coal mining, and the numbers unemployed also decreased in the pottery, motor vehicle, wool textile, carpet, hosiery, and leather trades, and in dock and harbour service.

The decline was experienced in all areas except the Midlands and Northeastern Divisions. Employment remained moderate in London and the Southern areas and very bad in all other areas.

Among the workpeople, numbering approximately 12,400,000 insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at September 21, 1931 (including those temporarily stopped as well as those wholly unemployed), was 23·2, as compared with 22·7 at August 24, 1931, and with 17·6 at September 22, 1930. The percentage wholly unemployed at September 21, 1931, was 17·9, as compared with 17·3 at

August 24, 1931; while the percentage temporarily stopped was 5·3, as compared with 5·4. For males alone the percentage at September 21, 1931, was 24·3, and for females 20·4; at August 24, 1931, the corresponding percentages were 23·7 and 20·0.

At September 21, 1931, the numbers of persons on the Registers of Employment Exchanges in Great Britain were 2,044,482 wholly unemployed, 654,755 temporarily stopped, and 112,378 normally in casual employment, making a total of 2,811,615. This was 77,833 more than a month before, and 701,957 more than a year before. The total included 2,045,715 men, 76,825 boys, 627,628 women, and 61,447 girls.

The 2,044,482 wholly unemployed included approximately 1,363,300 insured persons who had paid at least 30 contributions during the preceding two years, and therefore satisfied the full contributions conditions for the receipt of unemployment benefit; 571,070 insured persons who had paid less than 30 contributions during the preceding two years; and 110,110 uninsured persons. The wholly unemployed claimants for benefit, numbering 1,855,512, included 270,605 men, 6,518 boys, 59,168 women and 3,550 girls, who had been on the Register for less than one month.

In Great Britain and Northern Ireland the total number of persons on the registers of Employment Exchanges at September 21, 1931, was 2,885,268, and at September 28, 1931, it was 2,896,989.

United States

The Bureau of Labour Statistics of the U.S. Department of Labour reports the changes in employment and pay-roll totals in September, 1931, as compared with August, based on returns made by 47,521 establishments in 15 major industrial groups, having in September, 4,707,018 employees, whose combined earnings in one week were \$104,303,613.

The combined total of these 15 industrial groups shows an increase of 0·8 per cent in employment from August to September and a decrease of 2·8 per cent in earnings. This decrease in earnings from August to September is partly due to the wide observance of the Labour Day holiday, which falling in the pay period reported by many companies, materially affected the earnings of the employees in the reporting establishments.

Five of the 15 industrial groups surveyed reported increased employment in September as compared with August. The increase shown

in 4 of these groups (anthracite mining, bituminous coal mining, retail trade, and canning and preserving) were especially marked. The dyeing and cleaning group also reported a gain in number of employees over the month interval.

While decreased employment was shown in the 10 remaining industrial groups surveyed, in six instances (manufacturing, metalliferous mining, telephone and telegraph, electric-railroad operation, wholesale trade, and laundries) the decrease was 1 per cent or less. The remaining groups reporting decreased employment (quarrying and non-metallic mining, crude petroleum producing, power, light, and water, and hotels) showed slightly greater losses from August to September.

A separate summary is made of the latest data available relating to all employees, exclusive of executives and officials, on Class I railroads. This tabulation is made from Interstate Commerce Commission reports for the months of June and July, 1931, and therefore cannot be included in the general statement for the month of September. The number of employees of Class I railroads as at July 15, totalled 1,294,392, representing a decrease

of 0.6 per cent since June 15. The amount of pay-roll in the entire month of July was \$176,449,287, representing an increase over the previous month of 0.6 per cent.

Unemployment Percentage.—Since the fall of 1927, the American Federation of Labor has compiled statistics each month which indicate the percentage of unemployed union members in 24 representative cities of the United States. These figures are included in the monthly review of industrial and economic conditions which is given in the *Monthly Survey of Business*, published by the Federation. In September, 1928, the proportion of unemployed union members was 10 per cent; in September, 1929, 10 per cent; in September, 1930, 21 per cent; in September, 1931, 19.5 per cent. The percentages since the beginning of 1931 are as follows: January, 19.8; February, 19; March, 18.1; April, 17.7; May, 17.1; June, 18.2; July, 18.8; August, 19.2; September, 19.5.

According to an estimate by the American Federation of Labor, approximately 5,600,000 wage earners were unemployed in the United States on October 19.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

Reference was made in the LABOUR GAZETTE, June, 1930, page 652, to the Fair Wages and Eight-Hour Day Act of Parliament which was adopted on May 30, 1930. The text of this measure appeared in the April, 1930, issue, page 383. This Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repair or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(a) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(b) The working hours of persons while so employed shall not exceed eight hours

per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

(2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication or manufacture is carried on in any established plant or factory other than a plant or factory established for the purposes of the work contemplated.

The Act was put into effect at once as respects contracts for construction, remodelling, repair or demolition, both as to its provisions as to current and fair and reasonable rates of wages and as to the application of the eight-hour day.

With respect to contracts for other classes of work, the Fair Wages Policy of the Government of Canada, (which has been in effect since 1900 and was expressed in an Order in Council adopted June 7, 1922, and amended April 9, 1924) requires that they must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed or, in the absence of such standard conditions, fair and reason-

able rates and hours. The conditions above-mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are general accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on or if there be no custom of the trade as respect hours in the district then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness,

saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letters boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following Fair Wages Clause:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respect hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the Contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Gov-

ernment any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payment remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed claim therefore may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the later. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, those included under the "A" groups containing either fair wages schedules as shown below, or the General Fair Wages Clause above-mentioned, and those coming under the "B" group containing the Fair Wages Clause specified in the "B" Conditions as given above:—

DEPARTMENT OF AGRICULTURE

Contract in Group "A" (Construction, etc.)

Construction of a fox building at the Animal Diseases Research Institute, Hull, P.Q. Name of contractors, Messrs. Edward Brunet & Son, Hull, P.Q. Date of contract, October 20, 1931.

Amount of contract, \$4,883. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
		per day	per week
Carpenters and joiners.....	\$0 90	8	44
Electricians.....	0 80	8	44
Painters and glaziers.....	0 70	8	44
Plasterers.....	1 00	8	44
Lathers.....	0 75	8	44
Plumbers and steamfitters.....	1 05	8	44
Sheet metal workers.....	1 00	8	44
Labourers.....	0 45	8	44

DEPARTMENT OF NATIONAL DEFENCE

Contracts in Group "A" (Construction, etc.)

Construction of alterations to Craig Street Armoury, Montreal, P.Q. Name of contractors, Messrs. R. & E. J. Ryan, Ltd., Montreal, P.Q. Date of contract, October 3, 1931. Amount of contract, \$3,434. A fair wages schedule was inserted in the contract as follows:—

Trade of class of labour	Rates of wages not less than	Hours of labour not more than	
		per hour	per day
Plumbers and steamfitters.....	\$0 90	8	8
Plumbers' and steamfitters' helpers.....	0 50	8	8
Cement finishers.....	0 75	8	8
Carpenters.....	0 75	8	8
Plasterers.....	0 85	8	8
Painters.....	0 75	8	8
Ordinary labourers.....	0 40	8	8

Construction of Physics Building, Royal Military College, Kingston, Ont. Name of contractors, Messrs. Angus Robertson (Ont.) Limited, Toronto, Ont. Date of contract, October 26, 1931. Amount of contract, \$14,757. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
		per hour	per day
Bricklayers and masons.....	\$1 10	8	8
Carpenters.....	0 90	8	8
Cement finishers.....	0 60	8	8
Electricians.....	0 80	8	8
Painters and glaziers.....	0 80	8	8
Plasterers.....	1 10	8	8
Plumbers and steamfitters.....	0 90	8	8
Labourers.....	0 40	8	8
Driver, horse and cart.....	0 60	8	8
Driver, team and wagon.....	0 80	8	8

DEPARTMENT OF PUBLIC WORKS

Contracts in Group "A" (Construction, etc.)

Construction of repairs to wharves at William Head Quarantine Station, Nanaimo District, B.C. Name of contractors, Victoria Pile Driving Co., Ltd., Victoria, B.C. Date of contract, October 26, 1931. Amount of contract, approximately \$10,701.19. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
Pile driver foreman.....	per hour \$1 25	per day 8
Engineer.....	1 12½	8
Pile driver man.....	1 00	8
Pile driver boom man.....	1 06½	8
Bridgeman.....	1 00	8
Timbermen.....	1 00	8
Fireman.....	0 68½	8
Labourers.....	0 50	8

Construction of partitions and other work in the Public Building at Calgary, Alberta. Name of contractors, Buchan Construction Company, Calgary, Alta. Date of contract, October 21, 1931. Amount of contract, \$15,800. A fair wages schedule was inserted in the contract.

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
Brick and hollow tile layers.....	per hour \$1 45	per day 8
Plasterers.....	1 40	8
Plasterers' helpers.....	0 75	8
Marble setters.....	1 37½	8
Plumbers and steamfitters.....	1 25	8
Plumbers' and steamfitters' helpers.....	0 50	8
Sheet metal workers.....	1 12½	8
Sheet metal workers' helpers.....	0 50	8
Electricians.....	1 10	8
Electricians' helpers.....	0 65	8
Carpenters and joiners.....	1 00	8
Teamster, team and wagon.....	0 90	8
Painters.....	0 80	8
Gravel roofers.....	0 60	8
Concrete floaters.....	0 50	8
Concrete mixers.....	0 50	8
Concrete workers.....	0 50	8
Labourers.....	0 50	8
Truck drivers.....	0 50	8
Floor waxers and polishers.....	0 50	8
Concrete finishers.....	1 00	8
Lathers.....	per yard 0 07	

Construction of an addition on east side, enlarging the approach of the wharf at Victoria, P.E.I. Name of contractors, Messrs. K. A. and E. W. Webster, Morell, P.E.I. Date of contract, October 19, 1931. Amount of contract, approximately \$5,712. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
Timbermen.....	per hour \$0 42½	per day 8
Carpenters.....	0 55	8
Enginemem.....	0 50	8
Blacksmiths.....	0 50	8
Blacksmiths' helpers.....	0 40	8
Labourers.....	0 35	8
Driver, horse and cart.....	0 55	8
Driver, team and wagon.....	0 70	8

Construction of repairs and painting Public Building, Sydney Mines, N.S. Name of contractors, Gates Contracting Co., Ltd., Kentville, N.S. Date of contract, October 13, 1931. Amount of contract, \$9,457. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
Concrete workers.....	per hour \$0 35	per day 8
Stonemasons.....	0 80	8
Stone cutters.....	0 70	8
Brick and hollow tile layers.....	0 80	8
Carpenters and joiners.....	0 55	8
Sheet metal workers.....	0 60	8
Sheet metal workers' helpers.....	0 40	8
Roofers, felt and gravel.....	0 50	8
Terrazzo layers.....	0 80	8
Terrazzo layers, helpers.....	0 40	8
Marble setters.....	0 80	8
Tile setters.....	0 80	8
Lathers, metal.....	0 55	8
Plasterers.....	0 80	8
Plasterers' helpers.....	0 40	8
Painters and glaziers.....	0 55	8
Labourers.....	0 35	8
Driver, one horse and cart.....	0 55	8
Driver, two horses and wagon.....	0 70	8
Motor truck driver.....	0 40	8

Re-roofing, etc., of Shaughnessy Hospital, Vancouver, B.C. Name of contractors, Western Steel Products, Ltd., Vancouver, B.C. Date of contract, October 19, 1931. Amount of contract, \$16,081. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
Carpenters and joiners.....	per hour \$1 00	per day 8
Sheet metal workers.....	1 12½	8
Sheet metal workers' helpers.....	0 75	8
Roofers, (patent).....	0 90	8
Labourers.....	0 50	8
Driver, two horses and wagon.....	1 25	8
Motor truck driver.....	0 50	8

Construction of a public building at Perth, Ont. Name of contractor, John Davidson, Smith's Falls, Ont. Date of contract, October 26, 1931. Amount of contract, \$61,950 and unit prices. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Concrete mixer operator.....	\$0 60	8
Concrete finishers.....	0 70	8
Stonemasons.....	1 00	8
Stone cutters.....	0 90	8
Brick and hollow tile layers.....	1 00	8
Structural steel workers.....	0 90	8
Carpenters and joiners.....	0 70	8
Sheet metal workers.....	0 75	8
Roofers, felt and gravel.....	0 60	8
Terrazzo layers.....	1 00	8
Marble and tile setters.....	1 00	8
Lathers, metal.....	0 70	8
Plasterers.....	1 00	8
Plasterers' helpers.....	0 45	8
Painters and glaziers.....	0 65	8
Plumbers and steamfitters.....	0 75	8
Electricians.....	0 70	8
Labourers.....	0 40	8
Driver, one horse and cart.....	0 60	8
Driver, two horses and waggon.....	0 80	8
Motor truck driver.....	0 45	8

Construction of repairs to east pier at Kingsville, Essex Co., Ontario. Name of contractors, The R. C. Huffman Construction Company of Canada, Ltd., Toronto, Ont. Date of contract, September 26, 1931. Amount of contract, approximately \$19,626.33. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Carpenters.....	\$0 70	8
Timbermen.....	0 50	8
Blacksmiths.....	0 60	8
Steam hoist engineer.....	0 65	8
Pile driver.....	0 65	8
Labourers.....	0 40	8
Man, team and wagon.....	0 75	8

Construction of wharf repairs at Douglas-town, Caspe Co., P.Q. Name of contractors, A. E. Pelletier, St. Octave, P.Q., and Cyrinus Simard, Price, P.Q. Date of contract, October 28, 1931. Amount of contract, approximately \$6,037. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Timbermen.....	\$0 42½	8
Carpenter.....	0 55	8
Blacksmith.....	0 50	8
Blacksmith helper.....	0 40	8
Engineer (hoist).....	0 50	8
Teamster and team.....	0 70	8
Labourers.....	0 35	8

Reconstruction of 314 lineal feet of frontage of Queen's wharf, together with necessary dredging of the approach thereto, Port Hope, Ont. Name of contractors, The R. C. Huffman Construction Co. of Canada, Ltd., Toronto, Ont. Date of contract, September 30, 1931. Amount of contract, approximately \$19,866.50. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Blacksmiths.....	\$0 60	8
Boatmen.....	0 45	8
Carpenters and joiners.....	0 70	8
Concrete mixer operator.....	0 55	8
Diver.....	1 25	8
Steam hoist engineer.....	0 70	8
Firemen.....	0 45	8
Labourers.....	0 40	8
Quarry-men.....	0 45	8
Team, man and wagon.....	0 75	8
Timbermen.....	0 50	8
Concrete finishers.....	0 60	8
Motor truck driver (5 tons).....	2 50	8
Motor truck driver (1 and 2 tons).....	1 50	8

Construction of a public building at Ste. Anne de Bellevue, P.Q. Name of contractor, Mr. Noel Gagne, Jonquiere, P.Q. Date of contract, October 22, 1931. Amount of contract, \$17,925 and unit prices. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Cement finishers.....	\$0 75	8
Bricklayers and hollow tile setters.....	1 20	8
Stone masons.....	1 20	8
Sheet metal workers.....	0 80	8
Roofers 'felt and gravel'.....	0 80	8
Carpenters and joiners.....	0 85	8

Fair Wages Conditions in Harbour Commission Contracts

Under the Fair Wages Order in Council it is provided that certain conditions, referred to therein as "A" Conditions, shall, as far as practicable, be observed by the department or departments of Canada, in connection with all agreements made by the Government involving the grant of Dominion public funds in the form of subsidy, advance, loan, or guarantee for any of the purposes mentioned. Under this authority, fair wages conditions are prepared from time to time in the Department of Labour for insertion in contracts awarded by the Harbour Commission throughout Canada. The labour conditions in question are similar to those which are applicable to contracts awarded by the several departments of the Dominion Government and take the form of either the General Fair Wages Clause or a fair wages schedule.

The Department of Labour was recently notified that the following construction contract was executed by the Saint John Harbour Commissioners under the above-mentioned conditions:—

Halifax Harbour Commissioners

Construction of a frost-proof concrete floor (second floor) in Pier 2 of the Halifax Ocean Terminals, Halifax, N.S. Name of contractors, Brookfield Brothers Construction Co., Ltd., Halifax, N.S. Date of contract, September 26, 1931. Amount of contract, \$47,476.36. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Carpenters and joiners.....	\$0 73	8	44

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In each agreement or schedule, the rates of wages for the principal classes of labour are given with other information of general interest.

Manufacturing: Printing and Publishing

HALIFAX, NOVA SCOTIA.—A CERTAIN JOB PRINTING OFFICE AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, LOCAL No. 330.

Agreement to be in effect from May 23, 1931, to May 23, 1932, and from year to year there-

after until either party gives notice 60 days before the expiration date.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, June, 1930, with the following exception:

Regular hours and overtime are the same as before, that is 8 hours per day, 4 on Saturdays, a 44-hour week, with time and one-half for overtime, but it is provided in this agreement that if the employer decides to have a 5-day week of 44 hours, the union will not demand overtime pay for the extra time over 8 hours required each day to make up the 4 hours not worked on Saturday.

The wages are the same as previously in effect, that is from \$25 to \$30 per week for journeymen pressmen and \$18 for platen assistants (feeders).

STRATFORD, ONTARIO.—A CERTAIN NEWSPAPER AND CERTAIN BOOK AND JOB FIRMS AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 139.

This agreement came into effect August 1, 1930, for one year, but has been renewed to August 1, 1932.

Only local union members to be employed, and employers agree to respect the union constitution.

Hours: in newspaper offices 48 per week for day work and 45 per week for night work; in book and job offices 44 per week.

Overtime: time and one-half for first four hours, double time thereafter; Sundays and holidays, double time.

Wages per week for journeymen: foreman and machinist operators \$40; linotype operators, hand compositors, stonemen and floor men \$35.

One apprentice allowed to every three journeymen or fraction thereof employed. Apprentices must be at least 16 years of age and will serve five years. Provision is made for apprentices to learn all branches of the trade, and they are to be examined yearly before the local committee on apprentices.

Journemen may serve machine apprenticeships of twelve weeks at not less than two-thirds the prevailing rate of wages.

One week's notice of leaving or of discharge to be given.

The union reserves the right to refuse to execute struck work received from or destined for unfair offices.

A joint standing committee of two representatives of each party will be appointed for the settlement of all disputes. If this committee cannot agree, a board of arbitration consisting of two members of each party and a fifth chosen by them will be formed, the decision of this board to be final and binding.

LONDON, ONTARIO.—NEWSPAPER PUBLISHERS AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 133.

The agreement which came into effect January 1, 1925, and was summarized in the *LABOUR GAZETTE*, August, 1925, page 829, was renewed in January, 1928, for a period of three years and has again been renewed to be in effect from January 1, 1931, to January 1, 1934. The hours and wages provided therein are as follows:—

Hours: 44 per week for day work and 42 for night work.

Wages for journeymen: \$38 per week for day work and \$41 for night work.

SAULT STE. MARIE, ONTARIO.—A CERTAIN JOB PRINTING FIRM AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 702.

Agreement to be in effect from May 17, 1931, to May 17, 1932.

Only union members to be employed and the employer will respect the union constitution.

Hours: 44 per week for both day and night work.

Overtime: Time and one-half.

Wages: hand compositors, make-ups, proof-readers, machinists and other journeymen \$35 per week for day work and \$37 for night work. Machinist operators to be paid 50 cents extra per week for every machine cared for. Foremen to receive \$2 per week extra.

Apprentices to be paid \$7 per week for first year, \$10 during second year, \$13 during third year, \$14.50 during first half of fourth year, \$16 during second half, \$19 during first half of fifth year, \$23 during second half.

One apprentice allowed for every 5 journeymen employed. Apprentices must be at least 16 years of age, and are to complete the course in printing of the international union. They will be examined yearly before the local apprenticeship committee.

Learners on machines are to be either journeymen or fifth-year apprentices. The period of learning will be six months and they will be paid from \$20 per week for first month to \$32 during sixth month and \$2 extra per week for night work.

A joint standing committee of two representatives of each party will be appointed for the settlement of all disputes. If this committee cannot agree, a board of arbitration consisting of two members of each party and a fifth chosen by them will be formed, the decision of this board to be final and binding.

REGINA, SASKATOON AND MOOSE JAW, SASKATCHEWAN.—EMPLOYING PRINTERS AND THE INTERNATIONAL STEREOTYPERS AND ELECTROTYPERS UNION, LOCAL No. 116.

Agreement to be in effect from September 15, 1931, to September 14, 1932, and thereafter until a new agreement is reached.

This agreement is similar to the one summarized in the *LABOUR GAZETTE*, September, 1928, page 1013, with the following exceptions:

Wages for journeymen: 88 cents per hour for day work with \$3 per week extra for night work. (This is a reduction of ten per cent.)

Apprentices must be at least 18 years old, have a satisfactory education and be approved by the union's examining board. They will be paid \$15.30 per week for day work and \$17.10 for night work, with \$1.50 per week increase each year.

CALGARY, ALBERTA.—A CERTAIN PUBLISHING FIRM AND THE INTERNATIONAL STEREOTYPERS AND ELECTROTYPERS UNION, LOCAL No. 109.

Agreement to be in effect from May 27, 1929, to May 26, 1932.

Hours: 45 per week for day work and 42 for night work.

Wages for day work: from May 27, 1929, to May 26, 1931, \$1.05 per hour or \$47.25 per week; from May 27, 1931, to May 26, 1932, \$1.06½ per hour or \$48 per week. Wages for night work \$3 per week extra and for lobster shift \$5 over day rate.

Wages for apprentices from one-quarter of journeymen's scale for first year to three-quarters of journeymen's scale for fifth year.

Manufacturing: Food, Drink and Tobacco

TORONTO AND ST. CATHARINES, ONTARIO.—CERTAIN BREWERIES AND THE INTERNATIONAL UNION OF THE UNITED BREWERY, FLOUR, CEREAL AND SOFT DRINK WORKERS OF AMERICA, LOCAL 304.

Agreements to be in effect from April 1, 1931, to April 1, 1932, and from year to year until either party gives notice one month before April 1, of any year.

Only union members to be employed, but if an employer hires a competent man who is not a union member, the union will allow such a man to join.

Hours: 9 per day, 5 on Saturdays, a 50-hour week for all except drivers and their helpers who will work 9½ hours per day, a 57-hour week from the first of May to the end of September and 9 per day, a 54-hour week from October to April.

Overtime: time and one-half. Drivers and helpers on regular routes, however, will not be paid overtime, but drivers on special routes may in some cases receive overtime pay. Time and one-half for work on legal holidays.

Wages per week: engineers and coopers \$30; bottlers operating machines, watchmen, fermenting room and cold storage workers, kettle-men and truck drivers \$24.50; bottlers other than those operating machines and truck drivers' helpers \$22.50.

All drivers and helpers after one year's service are to receive an annual two weeks' vacation with pay.

All disputes concerning the agreement are to be adjusted by an arbitration committee of two chosen by the employers and two by the union. If they cannot agree, they are to select a fifth disinterested party and the majority decision of this committee will then be final and binding. No strike or lockout until a board of arbitration has reached a decision.

HAMILTON, ONTARIO.—CERTAIN BREWERIES AND THE INTERNATIONAL UNION OF THE UNITED BREWERY, FLOUR, CEREAL AND SOFT DRINK WORKERS OF AMERICA, LOCAL No. 312.

The agreement which came into effect May 2, 1929, to run to April 30, 1930, and from year to year until either party gives notice one month before April 30, of any year, is still in effect.

This agreement is similar to the agreement between the union and the breweries of Toronto and St. Catharines which is summarized above, with the exception of the wage scale which is as follows:

Wages per week: engineers (who work 8 hours per day 7 days per week) \$33.60; coopers \$31; cellar men \$28; bottlers operating machines, drivers, watchmen (on duty 12 hours 6 days), fermenting room and cold storage workers, stablemen, chauffeurs \$25; drivers' helpers, kettlemen \$24.50; maltsters \$24; bottlers other than those operating machines \$23; permit card help (extra help employed during busy season and granted permits by the union) \$20.

Drivers who were included in the agreement from 1929 to 1931, are no longer employed by the breweries but by a transportation company and have a separate agreement which is summarized below.

HAMILTON, ONTARIO.—A CERTAIN TRANSPORTATION COMPANY AND THE INTERNATIONAL UNION OF THE UNITED BREWERY, FLOUR, CEREAL AND SOFT DRINK WORKERS OF AMERICA, LOCAL No. 312.

Drivers for breweries, members of this local union, were formerly employed directly by the breweries and included in the brewery agreement which is summarized above, but are now employed by this transportation company.

Agreement to be in effect from June 6, 1931, indefinitely.

Only union members to be employed, but if any non-union members are employed, the union will allow such men to join.

Hours: 50 per week from the first of April to the end of November and 44 hours from the first of December to the end of March with no reduction in wages.

Overtime to be paid at straight time. All drivers to receive full pay for all legal holidays.

Wages per week: city drivers \$25, drivers on long routes \$26.

All grievances concerning the violation of the agreement will be referred to an arbitration committee consisting of two members of each party. If they cannot agree, they are to select a fifth disinterested party and a majority decision will be final and binding. No strike or lockout to occur before this board has reached a decision.

Construction: Buildings and Structures

EDMONTON, ALBERTA.—EDMONTON BUILDERS' EXCHANGE INCORPORATED AND THE BRICKLAYERS, MASONS AND PLASTERERS' INTERNATIONAL UNION No. 1 ALBERTA.

This agreement covers bricklayers and masons only.

Agreement to be in effect from May 1, 1931, to April 30, 1932. Both parties are to meet during February, 1932, to negotiate a new agreement.

Hours: 8 per day, 4 on Saturdays, a 44-hour week. When consecutive shifts are worked, 7 hours to constitute a day's work. For work outside a ten mile radius, 9 hours per day may be worked with Saturday afternoon optional.

Overtime: time and one half to 9 p.m.; all other overtime and work on Sundays and holidays double time.

Wages: bricklayers and masons \$1.40 per hour. On any job employing three or more union members, a foreman to be employed and will be paid 10 cents per hour extra; if ten or more journeymen, foreman to be paid 15 cents per hour extra.

For work out of the city, transportation and travelling time during working hours to be paid by the employer.

No strike or lockout to occur until any dispute has been referred to the joint arbitration committee. This committee will consist of three members of each party whose decision will be binding.

EDMONTON, ALBERTA.—THE TILE, MARBLE AND TERRAZZO CONTRACTORS AND THE BRICKLAYERS, MASONS AND PLASTERERS' INTERNATIONAL UNION LOCAL No. 1 ALBERTA.

This agreement covers marble masons, tile layers, terrazzo and mosaic workers only.

Agreement to be in effect from May 1, 1931, to April 30, 1933. Both parties are to meet during January, 1933, to negotiate a new agreement.

Members of local union to have first consideration by contractors.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Overtime: time and one half to 9 p.m.; after 9 p.m. and work on Saturday afternoons, Sundays and holidays, double time.

Wages per hour: marble masons \$1.37½; tile layers, terrazzo and mosaic workers \$1.30. Man in charge of ten workmen or three mechanics to be paid 10 cents per hour extra.

For work out of city, where workman goes daily, extra travelling time to be allowed. For work out of city where workman does not return home daily 15 cents per hour extra to be paid.

Any dispute will be referred to an arbitration committee consisting of three members of each party whose decision will be binding. No strike to occur until the disputes has been brought before this committee.

CALGARY, ALBERTA.—CERTAIN ELECTRICAL CONTRACTORS AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL No. 348.

Agreement to be in effect from August 15, 1931, to May 1, 1932, and from year to year thereafter until either party gives notice 60 days before May 1, of any year.

Only union members will be employed, if available, and union members will only work for employers who comply with the terms of the agreement (This does not apply to regular maintenance, municipal or government work).

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Overtime: all overtime including Saturday afternoon to 5 p.m. to be paid for at time and one-half; after 5 p.m. on Saturdays and all work on Sundays and holidays, double time.

Wages: journeymen \$1 per hour for day work (the former rate in effect was \$1.10); foreman \$1.25 (Jobs employing four or more journeymen and lasting at least a week shall have a foreman). Night work to be paid at one and one-eighth regular rate.

Apprentices to serve four years and must pass a satisfactory examination. One apprentice allowed for the first journeyman employed and one additional apprentice for every three additional journeymen.

Wages for apprentices: first year optional, second year 30 cents per hour, third year 40 cents, fourth year 60 cents.

A journeyman will be required to make any necessary corrections in his work for which he is responsible on his own time during regular working hours.

For work out of jurisdiction of the union where a higher rate prevails, the higher rate will be paid.

Transportation to be paid by employer to all jobs within the local's jurisdiction. For work outside the local jurisdiction transportation, board and other necessary expenses to be paid by the employer.

A joint committee will be formed consisting of two representatives of each party which will select its own chairman and secretary. This committee will meet regularly and all disputes will be referred to it. If this committee fails to adjust any matter, it will be then referred to the International Office of the union for adjustment.

VANCOUVER, B.C.—CERTAIN ROOFING AND SHEET METAL FIRMS AND THE SHEET METAL WORKERS INTERNATIONAL ASSOCIATION, LOCAL No. 280.

Agreement to be in effect from September 11, 1931, to June 30, 1932, and from year to year thereafter until either party gives 90 days' notice of change.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, October, 1929, page 1162, with the exception of the wage scale.

The rate of wages previously in effect was \$1.12½ per hour and this rate was continued to September 30, 1931. From October 1 to December 31, 1931, \$1.06¼ per hour; from January 1, 1932, \$1 per hour.

Transportation and Public Utilities: Street and Electric Railway

VANCOUVER AND VICINITY, B.C.—BRITISH COLUMBIA ELECTRIC RAILWAY COMPANY LIMITED AND THE AMALGAMATED ASSOCIATION OF STREET AND ELECTRIC RAILWAY EMPLOYEES OF AMERICA.

The agreement which came into effect September 30, 1927, to be in effect for three years, has been extended for a further period of three years, that is until September 30, 1933, and thereafter until changed by the parties. This agreement was summarized in the LABOUR GAZETTE, August, 1928, page 905.

Service: Personal and Domestic

CALGARY, ALBERTA.—CERTAIN RESTAURANT PROPRIETORS AND THE HOTEL AND RESTAURANT EMPLOYEES' INTERNATIONAL ALLIANCE, LOCAL 597.

Agreement to be in effect from March 1, 1931, until either party gives 30 days notice of change.

Union members to have preference of employment. Extra help to be furnished by the union, and the business agent may visit employees while on duty.

Hours: 8 per day, 6 days per week.

Extra time on the counter to be paid at 75 cents per hour.

Wages per week: waiters and waitresses on counters \$18, waiters and waitresses on tables \$13, miscellaneous employees \$10.50. This scale includes three meals per day while working.

Service: Recreational

KINGSTON, ONTARIO.—CERTAIN MOTION PICTURE THEATRES AND THE INTERNATIONAL ALLIANCE OF THEATRICAL STAGE EMPLOYEES, LOCAL No. 528.

Agreement to be in effect from June 22, 1931, to August 31, 1932.

Only union members to be employed.

Hours: not over 7 per day; overtime to be paid at \$1.50 per hour; Sunday double time.

Wages for projectionists \$50 per week at two theatres and \$57.50 per week at other theatre.

Two weeks notice of discharge or of leaving position.

PRICES, RETAIL AND WHOLESALE, IN CANADA, OCTOBER, 1931

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was varied, the weekly family budget in terms of retail prices being lower than in September, while the Dominion Bureau of Statistics index number of wholesale prices was slightly higher, this being the first advance since October, 1929.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in sixty-nine cities was again lower at \$7.84 at the beginning of October, as compared with \$8.03 for September; \$10.32 for October, 1930; \$11.68 for October, 1929; \$11.28 for October, 1928; \$10.99 for October, 1927; \$10.93 for October, 1926; \$10.89 for October, 1925; \$10.31 for October, 1924; \$10.65 for October, 1923; \$10.23 for October, 1922; \$11.48 for October, 1921; \$15.83 for October, 1920; \$16.92 for June, 1920 (the peak); \$13.54 for October, 1918; and \$7.99 for October, 1914. The decline was due mainly to lower prices for potatoes, beef, mutton, pork, bacon, lard, flour, rolled oats and beans. The prices of eggs and milk were slightly higher. Including the cost of fuel and rent with that of foods the total budget averaged \$17.86 at the beginning of October as compared with \$18.06 for September; \$20.68 for October, 1930; \$21.96 for October, 1929; \$21.52 for October, 1928; \$21.18 for October, 1927; \$21.14 for October, 1926; \$21.11 for October, 1925; \$20.67 for October, 1924; \$21.16 for October, 1923; \$20.87 for October, 1922; \$22.01 for October, 1921; \$26.46 for October, 1920; \$26.92 for July, 1920 (the peak); \$21.48 for October, 1918; and \$14.48 for October, 1914. Fuel was slightly higher, due to higher prices for anthracite coal in some localities. Rent was little changed in the average.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was slightly higher at 70.4 for October, as compared with 70.0 for September; 74.6 for October, 1930; 96.8 for October, 1929; 95.2 for October, 1928; 97.2 for October, 1927; and 98.1 for October, 1926. One hundred and two price quotations were higher, seventy-six were lower and three hundred and twenty-four were unchanged.

In the classification according to chief component materials three of the eight main groups were higher, three were lower and two were unchanged. The groups which advanced were: the Vegetables and Vegetable Products group, because of higher prices for wheat, barley, oats and rye, which more than offset

declines in the prices of corn, flour and potatoes; the Iron and its Products group, because of advances in the prices of steel tank plates, automobile body plates and annealed steel sheets; and the Non-Ferrous Metals and their Products group, because of advances in the prices of copper, lead, silver, tin and zinc. The groups which declined were: the Animals and their Products group, due mainly to lower prices for live stock and hides; the Fibres, Textiles and Textile Products group, because of lower quotations for certain cotton textiles, raw wool and worsted cloth yarn, which more than offset higher prices for raw cotton, raw jute and raw silk; and the Wood, Wood Products and Paper group, due mainly to reductions in the price of lumber. The Non-Metallic Minerals and their Products group and the Chemicals and Allied Products group were unchanged.

In the grouping according to purpose consumers' goods were lower, reductions in the prices of flax and cured meats, potatoes, onions, flour, certain cotton textiles and wool yarns more than offsetting higher quotations for coffee, eggs and domestic coal. Producers goods were slightly higher, advances in the prices of wheat, barley, oats, raw cotton, raw silk, silver and copper more than offsetting lower prices for corn, flax, steers, calves, hogs, raw wool and spruce lumber.

In the grouping according to origin raw and partly manufactured goods were higher, mainly because of higher quotations for wheat, oats, barley, coffee, eggs, raw silk, copper and lead. Fully and chiefly manufactured goods declined, due chiefly to lower prices for flour, certain cotton textiles, wool yarn, cured meats, leather and copper sheets. Domestic farm products, articles of marine origin and articles of mineral origin were higher, while articles of forest origin were slightly lower.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of October, of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city ex-

(Continued on page 1264)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family

*Prior to 1926 number of commodities was 236.

(Continued from page 1256)

cept milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of milk, bread and fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an

*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 13%; Clothing, 13%; Sundries, 20%.

article heavily weighted for this purpose rises or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climate conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1919, quarterly from 1920 to 1929 and monthly since January, 1930. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the

prices of each article have been weighted according to workmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.3; 1916, 86.3; 1917, 84.6; 1918, 82.9; 1919, 81.6; 1920, 81.1; 1921, 81.4; 1922, 80.1; 1923, 77.7; 1924, 76.5; 1925, 73.8; 1926, 73.2; 1927, 70.9; 1928, 69.3; 1929, 67.4; 1930, 64.7; 1931, 64.1.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report Vol. 2, page 318), and bringing the figures down to 1930. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption on the basis of figures in 1926 as 100, as follows: 1923, 108.3; 1924, 105.1; 1925, 101.7; 1926, 100.0; 1927, 99.0; 1928, 97.1; 1929, 94.6; 1930, 92.3.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 128.9; 1928, 128.5; 1929, 128.0; 1930, 127.6. Natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 166.9; 1928, 158.9; 1929, 159.1; 1930, 158.8. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

Retail Prices

Beef prices were again lower, sirloin steak being down from an average price of 28.2 cents per pound in September to 27.3 cents in October; round steak from 23 cents per pound in September to 22.1 cents in October; rib roast from 20.9 cents per pound to 20.4 cents; and shoulder roast from 14.5 cents per pound

to 13.7 cents. These prices compare with 34 cents per pound for sirloin steak in October, 1930; 28.9 cents per pound for round steak; 26.7 cents per pound for rib roast; and 20.2 cents per pound for shoulder roast. Mutton was down from an average price of 24.1 cents per pound in September to 23 cents in October. Lower quotations were reported from most localities. Both fresh and salt pork declined, the former averaging 20 cents per pound in October, 22.3 cents in September and 29.8 cents in October, 1930, and the latter overaging 20.2 cents per pound in October, 21.9 cents in September and 27.1 cents in October, 1930. Breakfast bacon was 2 cents per pound lower in October at 26 cents per pound. The price in October, 1930, was 39.8 cents. Lard was slightly lower averaging 13.3 cents per pound in October as compared with 13.8 cents in September.

Eggs showed a seasonal advance in most localities, fresh averaging 32.4 cents per dozen in October, 30.3 cents in September and 42.7 cents in October, 1930, and cooking overaging 27.5 cents per dozen in October, 25.7 cents in September and 38 cents in October, 1930. Milk showed a slight increase in the average at 10.6 cents per quart. A slight decline occurred at St. John, N.B., while increases were reported from St. Hyacinthe and Medicine Hat. Both dairy and creamery butter were lower, the former being down from an average of 23.6 cents per pound in September to 23.3 cents in October and the latter from 27.2 cents per pound in September to 26.8 cents in October. Prices in October, 1930, were 34.8 cents per pound for dairy butter and 38.7 cents for creamery.

Bread was unchanged at an average price of 6.1 cents per pound. Flour was slightly lower at an average price of 3 cents per pound in October as compared with 3.1 cents in September and 4.3 cents in October, 1930. Canned vegetables averaged lower in most localities, tomatoes being down from an average price of 12.7 cents per tin in September to 12.2 cents in October; peas from 11.7 cents per tin in September to 11.3 cents in October; and corn from 13.7 cents per tin in September to 13 cents in October. Beans averaged lower at 5.6 cents per pound in October as compared with 5.9 cents in September and 9.2 cents in October, 1930. Onions also were down from an average price of 4.8 cents per pound in September to 3.8 cents in October. Potatoes were again generally lower, the price averaging 80.2 cents per ninety pounds in October as compared with 96.8 cents in September and \$1.48 in October, 1930. Anthracite coal was up in the average from \$15.91 per ton to \$16. Advances were

reported from Halifax, St. Hyacinthe, Ottawa, Peterborough, Niagara Falls, Hamilton, Brantford, Stratford, Sarnia and Timmins. Bituminous coal was practically unchanged at an average price of \$9.71 per ton. Hardwood was slightly lower at an average of \$11.35 per cord. A slight decline in rent was reported from Medicine Hat.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices, for the most part, were higher, No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, being up from an average price of 53.6 cents per bushel in September to 59.9 cents in October. The low price for the month was 53½ cents reached on the 5th and the high 70¾ cents reached on the 31st. This latter quotation is the highest level reached in nearly a year. A greater export demand, together with smaller supplies from Russia were said to be the reasons causing the advance. In coarse grains, Western barley advanced in the average from 30.7 cents per bushel to 33.2 cents, western oats from 27.4 cents per bushel to 31.2 cents and rye from 32.5 cents per bushel to 37 cents. Flax was down from an average price of 97.4 cents per bushel to 94.4 cents. Flour at Toronto declined in the average from \$4.64 per barrel to \$4.60. Toward the end of October, however, some improvement occurred following the advance in wheat prices. Raw sugar at New York advanced from \$1.44 per cwt. to \$1.58, while granulated at Montreal was unchanged at \$4.56 per cwt. Ceylon rubber at New York advanced from an average

price of 5.2 cents per pound to 5.4 cents. Santos coffee at Toronto rose from 13 cents per pound to 14.5 cents. In live stock good steers at Toronto declined from \$6.31 per hundred pounds to \$5.90 and at Winnipeg from \$5.01 per hundred pounds to \$4.78. Veal calves at Toronto advanced from \$8.47 per hundred pounds to \$8.53 but were down at Winnipeg from \$6.27 per hundred pounds to \$5.75. The price of bacon hogs at Toronto declined from \$5.99 per hundred pounds to \$5.74 and at Winnipeg from \$5.16 per hundred pounds to \$4.71. Lambs at Toronto declined from \$7.44 per hundred pounds to \$6.80 and at Winnipeg from \$5.80 per hundred pounds to \$5.65. Creamery butter at Toronto was down from 23.9 cents per pound in September to 23.1 cents in October and at Montreal from 23 cents per pound to 22.5 cents. At Winnipeg the price was 1 cent per pound lower at 24 cents. Fresh eggs at Montreal advanced from 33.2 cents per dozen to 45.9 cents and at Toronto from 30.4 cents per dozen to 45.4 cents. Raw Cotton at New York was somewhat higher at an average price of 7.1 cents per pound as compared with 6.8 cents in September. Raw silk advanced from \$2.80 per pound to \$3.05. Raw wool was 1 to 2 cents per pound lower at 9-13 cents per pound. In lumber the price of white pine declined from \$29-\$31 per thousand board feet to \$28, and birch from \$52 per thousand board feet to \$50. Annealed steel sheets advanced from \$3.22 per hundred pounds to \$3.56 and steel sheets from \$2.72 per hundred pounds to \$2.97. In non-ferrous metals electrolytic copper advanced from \$8.61 per hundred pounds to \$9.15, tin from 28.3 cents per pound to 29 cents and silver from 29.3 cents per ounce to 33 cents. Western domestic coal at Lethbridge was 50 cents per ton higher at \$5 per ton.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and certain other countries. The index numbers of the cost of living are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. The latest quarterly table showing cost of living and wholesale prices index numbers for various countries appeared in the LABOUR GAZETTE for October.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1924=100, was 59.7 for September, a decline of 0.3 per cent

for the month. Foods advanced 0.2 per cent as a decrease in meat and fish was more than counteracted by advances in cereals and other foods. Non-foods declined 0.5 per cent due to declines in iron and steel, wool and miscellaneous commodities while advances were noted in coal, other metals and minerals, cotton and other textiles (except wool).

The *Economist* index number, on the base 1927=100, was 65.1 at the end of September, an advance of 4.5 per cent for the month. Prices had declined during the first three weeks of the month, but with the suspension of the gold standard on September 21, rose and at the end of the month were 4.5 per cent higher than at the end of August.

Cereals and meat was the only group which was lower at the end of September than at the end of August.

The *Statist* index number, on the base 1867-77=100, was 80·7 at the end of September, an advance of 2·0 per cent for the month. Every group was included in the advance, except animal food which was 2·6 per cent lower for the month. The greatest advance was one of 9·7 per cent in textiles.

The following paragraph is quoted from the *Statist*, October 17, 1931:

"Having become dependent not only on fluctuations in gold prices but still more on the exchange value of a currency no longer linked to gold, British wholesale prices inevitably rose during the past month. The increase was, however, only 2 per cent, in contrast with a depreciation of about 20 per cent in sterling. The explanation was partly that gold prices had continued to fall and partly that sufficient interval had not yet elapsed for domestic prices to reflect fully the effect of the decline in the exchange value of the pound. The suspension of the gold standard on September 21 fortunately occurred at a time when stocks of commodities in this country were abnormally heavy, while the speculative buying, which subsequently took place, was much more moderate than might ordinarily have been expected."

COST OF LIVING.—The index number of the *Ministry of Labour Gazette*, on the base July 1914=100, was 145 at October 1, showing no change from the previous month. A small decline in clothing was offset by an advance in fuel and light.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100, was 108·6 for September, a decline of 1·5 per cent for the month. Nearly all groups were included in the general decline, the greatest fall being one of 10·6 per cent in rubber. The index number for rubber, on the base 1913=100, was 7·6 for September.

COST OF LIVING.—The index number of the Federal Statistical Bureau, on the base 1913-1914=100, was 134·0 for September, a decline of 0·7 per cent for the month. With the exception of a slight advance in heat and light, all groups were lower than for August.

Italy

WHOLESALE PRICES.—The index number of the Milan Chamber of Commerce, on the base 1913=100 (pre-war currency) was 88·9 for September, a decline of one per cent for

the month. With the exception of advances in vegetable foods and other vegetable products, all groups were lower than for August.

COST OF LIVING.—The index number of the cost of living, Milan, on the base, June, 1927=100 was 81·86 for August a decline of 0·9 per cent for the month.

United States

WHOLESALE PRICES.—The index number of Bureau of Labour Statistics, on the base 1926=100, was 69·1 for September, a decline of 1·6 per cent for the month. With the exception of small increases in fuel and lighting materials and metals and their products, all groups were lower than for August.

The *Annalist* index number, on the base 1913=100, was 100·5 for October showing no change from September. Increases in farm products, food products, fuels, chemicals and miscellaneous commodities were offset by declines in textile products, metals and building materials.

Bradstreet's index number, which is the sums total of the prices per pound of 96 commodities of common consumption was \$8·0877 at November 1, a fall of 2·5 per cent for the month, and is the lowest index number recorded since November, 1908. As compared with prices at October 1, increases were noted in breadstuffs, livestock, oils and naval stores; decreases in provisions, fruits, hides and leather, textiles, metals, building materials and miscellaneous commodities.

Dun's index number of wholesale commodity quotations proportioned to the *per capita* consumption of each of the many articles included was \$140·369 at November 1, which shows an advance of 2·9 per cent for the month, due chiefly to a recovery in breadstuffs occurring at the end of the month. Advances were also noted in meat, dairy and garden produce and other foods. On the other hand, clothing, metals and miscellaneous commodities were lower than a month previous.

COST OF LIVING.—The index number of the National Industrial Conference Board, on the base 1923=100, was 85·6 for September, a decline of 0·3 per cent for the month. With the exception of a small advance in fuel and light, decreases were noted in all groups.

Hospital treatment for men employed in unemployment relief camps is being provided for in British Columbia by means of a provincial grant to the hospital treating the patient of \$2.50 a day, this being the amount paid for hospital treatment under the Workmen's Compensation Act. The province also makes a regular *per capita* grant of 70 cents.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1931

THE number of fatal industrial accidents (including fatalities from industrial diseases included with fatal accidents by workmen's compensation boards, etc., and also fatalities to persons incidental to the pursuit of their occupations), which were recorded in the Department as occurring during the third quarter of 1931, was 275, there being 104 in July, 91 in August and 80 in September.

The report for the second quarter of 1931 was given in the *LABOUR GAZETTE*, August, page 948. In the third quarter of 1930, 442 fatal accidents were recorded (*LABOUR GAZETTE*, November, 1930, page 1350). The supplementary lists of fatal industrial accidents on page 1276 contains two fatalities for 1930 and 13 for the first half of 1931. In this series of reports it is the custom to record industrial accidents under the dates of their occurrence, and fatal industrial diseases under the dates on which they prove fatal.

Reports were received from the provincial workmen's compensation boards, the Board of Railway Commissioners of Canada, from certain other official sources and from the correspondents of the *LABOUR GAZETTE*. Information as to accidents is also secured from newspapers.

Classified by groups of industries the fatalities occurring during the third quarter of 1931 were as follows: agriculture, 47; logging, 15; fishing and trapping, 4; mining, non-ferrous smelting and quarrying, 34; manufacturing, 26; construction, 49; electric light and power, 17; transportation and public utilities, 42; trade, 10; service, 31.

Of the mining accidents, 15 were in "metal-liferous mining," 10 in "coal mining," 3 in "non-metallic mineral mining and quarrying, n.e.s.," and 6 in "structural materials."

Of the accidents in manufacturing, 3 were in "vegetable foods, drink and tobacco," 1 in "animal foods," 1 in "textiles and clothing," 4 in "leather, fur and products," 3 in "saw and planing mill products," 3 in "pulp, paper and paper products," 1 in "printing and publishing," 2 in "iron, steel and products," 3 in "non-metallic mineral products," and 5 in "chemical and allied products."

In construction there were 13 fatalities in "buildings and structures," 7 in "railway," 20 in "highway and bridge," and 9 in "miscellaneous construction."

In transportation and public utilities there were 19 fatalities in "steam railways," 1 in

"street and electric railways," 10 in "water transportation," 1 in "air transportation," 5 in "local transportation," 4 in "storage," and 2 in "telegraphs and telephones."

In trade there were 2 fatalities in "wholesale," and 8 in "retail."

Of the fatalities in service, 19 were in "public administration," 1 in "recreational," 1 in "laundering, dyeing and cleaning," 2 in "custom and repair," 6 in "personal and domestic," and 2 in "professional establishments."

There was no serious disaster resulting in the loss of a very large number of lives during the period under review. Accidents involving the loss of two or more lives were as follows:

On August 27, two miners were crushed by falling rock at Kimberley, B.C.

On August 5, two workers in a soap factory at Hamilton, Ontario, lost their lives following an explosion of a steel tank containing soap flakes, and on August 11, two workers in a soap factory at Montreal, Quebec, were killed owing to an explosion of varnish in the plant.

In buildings and structures construction, two workmen were fatally injured at Montreal, Quebec, on August 22, when a scaffold collapsed and they fell 35 feet.

In telegraphs and telephones, two men were electrocuted while removing a pole near Stratford, Ontario, on September 8.

On August 18, four men engaged in forestry patrol were drowned in Rainy Lake, Ontario, when their plane crashed into the lake.

On July 1, a plane crashed at Hamilton, Ontario, resulting in the loss of three lives, being the press agent for the air tour, the pilot and the parachute jumper.

Supplementary Lists of Accidents

The supplementary list of accidents occurring during the first half of 1931, to be found after the main table of accidents, contains 13 fatalities, of which 2 were in agriculture, 1 in mining, non-ferrous smelting and quarrying, 1 in manufacturing, 4 in construction, 3 in transportation and public utilities and 2 in service. One of these accidents occurred in February, 2 in April, 2 in May, and 8 in June.

Concluding the lists is a supplementary list of accidents occurring during 1930. This includes 2 fatalities, of which 1 was in transportation and public utilities and 1 in trade. One of these accidents occurred in April and one in November.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1931

Trade or Industry	Locality	Date	Age	Cause of Fatality
AGRICULTURE AND STOCK-RAISING—				
Farm hand.....	Near Chatham, Ont.....	July 1	21	Collapsed from heat.
Farm hand.....	Near Chatham, Ont.....	" 1	51	Overcome with the heat.
Farm hand.....	Near Benito, Man.....	" 1	17	Struck by arm of whiffletree when clevice broke while pulling stumps. Died July 2.
Farm hand.....	Near Deseronto, Ont.....	" 2	33	Collapsed in field from heat.
Farm hand.....	Near Smithsville, Ont.....	" 2	45	Collapsed from heat.
Farm hand.....	Near Smithsville, Ont.....	" 2	35	Collapsed from heat.
Farm hand.....	Near Delhi, Ont.....	" 2	28	Collapsed from heat.
Berry picker.....	Pictou, Ont.....	" 2	48	Collapsed from heat.
Farm hand.....	Near Hamilton, Ont.....	" 2	45	Overcome by heat.
Farm hand.....	Douro, Ont.....	" 2	30	Sunstroke.
Farm hand.....	Queensboro, Ont.....	" 3	15	Sunstroke.
Labourer.....	Rosslyn, Ont.....	" 4	33	Thrown from truck injuring head. Died July 10.
Farmer.....	Near Lake Megantic, Que.....	about July 6	29	Thrown into lake and drowned when his horse shied.
Farmer.....	Plattsville, Ont.....	" 8	47	Fell from load of hay.
Farm hand.....	Near Pictou, N.S.....	" 15	Struck by lightning.
Farmer.....	Near Sedley, Sask.....	" 23	Fell beneath wheels of wagon when horses bolted
Farmer.....	Gaspe, Que.....	" 27	Struck by lightning.
Farmer.....	St. Joachim, Que.....	about July 28	50	Overcome with the heat.
Farm hand.....	La Tuque, Que.....	" 30	23	Struck by lightning.
Farmer.....	St. Edouard de Lotbiniere, Que.....	" 30	Thrown when his horse crashed into load of hay.
Farmer.....	Near Red Deer, Alta.....	About Aug. 1	45	Thrown from wagon and run over when team ran away.
Labourer.....	St. Alexander, Que.....	" 2	18	Crushed beneath wheels of harvesting machine.
Farm hand.....	Near Osgoode, Ont.....	" 6	40	Thrown from binder and run over when horses bolted.
Farmer.....	Near Richmond, Ont.....	" 6	42	Struck by lightning.
Farmer.....	New Home, Man.....	" 7	Team ran away while haying.
Farmer.....	Hyde Park, Ont.....	" 18	38	Struck by lightning.
Farm hand.....	Near Millbrook, Ont.....	about Aug. 20	17	Fell from stack on tines of his fork.
Farmer.....	Near Mount Forest, Ont.....	" 20	43	Fell from wagon and was run over.
Farmer.....	Near Luseland, Sask.....	about Aug. 20	50	Accidental discharge of his rifle.
Farmer.....	Ashern, Man.....	" 20	56	Fell from horse.
Farmer.....	Methven District, Man.....	about Aug. 21	Thrown from horse.
Farmer.....	Near Vankleek Hill, Ont.....	" 24	30	Fell from tractor. Died Aug. 27.
Farmer.....	Near Keyes, Man.....	" 25	65	Trampled by bull.
Farmer.....	Quebec, Que.....	Sept. 1	53	Fell into pit while delivering produce.
Farmer.....	St. Damien, Que.....	" 1	70	Gored by bull.
Farm hand.....	Near Tuffnell, Sask.....	" 2	23	Struck by lightning.
Farmer.....	Near Arthur, Ont.....	about Sept. 9	Thrown across barn when entangled in rope while unloading hay.
Farm hand.....	Scotburn, N.S.....	" 11	61	Gored by bull.
Farmer.....	Near Ripley, Ont.....	" 11	65	Struck by falling tree.
Farmer.....	Crowland, Ont.....	" 19	66	Fell from wagon.
Farmer.....	Near Fort William, Ont.....	" 20	56	Gored by bull. Died Sept. 22.
Farmer.....	Cawood, Que.....	" 21	35	Struck by crow bar when it caught in belt of threshing machine. Died Sept. 23.
Farmer.....	Near South Stukely, Que.....	" 21	72	Burned in attempt to rescue horse from burning barn.
Farmer.....	Near Fort Saskatchewan, Alta.....	about Sept. 25	Injured when attacked by bull.
Farmer.....	Canora District, Sask.....	" 26	30	Fell from tractor and granary passed over him while being moved.
Farmer.....	Near Blenheim, Ont.....	about Sept. 29	60	Fell down stairs in barn while carrying sack of potatoes, broken neck.
Farmer.....	Wetaskiwin, Alta.....	about Sept. 30	Fell under wagon when team ran away.
LOGGING—				
Logger.....	Koprino Harbour, B.C.....	July 2	45	Jumped off moving trucks.
Logger.....	Grassy River, Ont.....	" 2	31	Fell into river and drowned.
Logger.....	Near Rouyn, Que.....	about July 4	20	Limb of tree pierced his abdomen when he fell.
Loader.....	Rock Bay, B.C.....	" 28	26	Fell from load of logs. Died July 30.
Logger.....	Near Mission, B.C.....	" 18	Fell from truck.
River driver.....	Saskatchewan River, Man.....	" 22	47	Drowned.
Brakeman.....	Near Poss Mill, Ont.....	Aug. 5	41	Struck by train.
Logger.....	Cowichan, B.C.....	" 7	48	Pinned between logs.
Logger.....	Queen Charlotte, B.C.....	" 11	35	Struck by falling snag. Died Aug. 13.
Labourer.....	Island Falls, Ont.....	" 22	22	Log rolled over him from skidway.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1931--Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
LOGGING—Concluded				
Logger.....	Tsolum River, B.C.....	about Aug. 22	25	Fell into river and was drowned.
Logger.....	Near Port Alberni, B.C.....	Sept. 4	21	Injured in logging accident. Died Sept. 8.
Teamster.....	Near Lower Five Islands, N.S.....	" 18	59	Fell from wagon and crushed against tree.
Logger.....	Lockport, B.C.....	about Sept. 18	74	Jammed against stump by stick when it swung.
Logger.....	Hillcrest, B.C.....	" 24	44	Log rolled over him.
FISHING AND TRAPPING—				
Sealer.....	Off Sonora, N.S.....	about July 2	32	Eaten by shark when boat capsized.
Fisherman.....	Near Digby, N.S.....	Sept. 10	73	Struck by lightning.
Fisherman.....	Island Lake, Sask.....	about Sept. 12	Drowned when canoe capsized in squall.
Crab fisher.....	Off Vancouver, B.C.....	" 14	28	Drowned when boat capsized.
MINING, NON-FERROUS, SMELTING AND QUARRYING—				
<i>Metallic Mining—</i>				
Labourer.....	Copper Cliff, Ont.....	July 1	30	Heat prostration. Died July 6.
Miner.....	Kirkland Lake, Ont.....	" 7	20	Fell 10 feet when beam gave way.
Miner.....	Boston Creek, Ont.....	" 19	49	Silicosis, first laid off Oct. 2, 1929.
Miner.....	Rouyn, Que.....	" 20	Crushed by falling rock following blasting operations.
Sealer.....	Timmins, Ont.....	" 28	34	Silicosis, first laid off April 10, 1925.
Miner.....	Kirkland Lake, Ont.....	" 28	26	Crushed by falling rock.
Drill helper.....	Kirkland Lake, Ont.....	Aug. 8	30	Crushed under falling rock, following air blast.
Labourer.....	Timmins, Ont.....	" 26	36	Crushed between two truck loads of timber.
Miner.....	Kimberley, B.C.....	" 27	38	Crushed by falling tuck, second man died Sept. 4.
Miner.....	Kimberley, B.C.....	" 27	36	Crushed by falling tuck, second man died Sept. 4.
Deckman.....	Kirkland Lake, Ont.....	" 29	24	Crushed between descending skip and steel head frame of shaft.
Mucker.....	Timmins, Ont.....	Sept. 9	27	Struck by falling rock.
Miner.....	Timmins, Ont.....	" 12	32	Crushed by fall of rock.
Miner.....	Frood Mine, Ont.....	" 19	38	Fell down shaft when support broke.
<i>Coal Mining—</i>				
Miner.....	New Waterford, N.S.....	about July 4	49	Crushed by fall of rock. Died July 17.
Miner.....	New Waterford, N.S.....	Aug. 3	21	Struck by run away trip. Died Aug. 6.
Miner.....	Glace Bay, N.S.....	" 4	40	Struck by fall of coal, fractured spine.
Miner.....	South Wellington, B.C.....	" 8	51	Injured in mine. Died Aug. 9.
Mine official.....	New Waterford, N.S.....	" 27	45	Injured in mine.
Miner.....	Little Bras d'Or, N.S.....	" 31	50	Struck by falling stone.
Miner.....	North Sydney, N.S.....	Sept. 2	31	Crushed under fall of coal.
Mule driver.....	Corbin, B.C.....	" 5	32	Struck when car trip was derailed.
Miner.....	Three Hills, Alta.....	" 21	43	Rock fell on him, fractured skull.
Miner.....	Sydney Mines, N.S.....	" 30	58	Crushed by falling rock.
<i>Non-Metallic Mineral Mining and Quarrying (n.e.s)—</i>				
Worker in gypsum quarry.....	Cheverie, N.S.....	Aug. 20	64	Crushed under fall of gypsum.
Quarry worker.....	Chicoutimi, Que.....	Sept. 10	45	Injured by delayed dynamite blast.
Gas Driller.....	Steveston, B.C.....	" 12	60	Fell from derrick. Died Sept. 13.
<i>Structural Materials—</i>				
Quarryman.....	Little Current, Ont.....	July 2	48	Stoneworker's phthisis. First laid off May 6, 1931.
Stone crusher.....	Chandos Twp., Ont.....	" 2	60	Collapsed from heat.
Worker at stone quarry.....	Iberville, Que.....	" 8	47	Electrocuted while repairing wires for crane.
Sandstone quarry- man.....	Wallace, N.S.....	Aug. 1	70	Hit by piece of flying rock from shot.
Labourer with sand and gravel co.....	Vancouver, B.C.....	" 4	57	Struck by shackle pin when it came out.
Worker in sand pit.....	South Hull, Que.....	Sept. 21	26	Buried under fall of sand.
MANUFACTURING—				
<i>Vegetable Foods, Drink and Tobacco—</i>				
Worker at sugar plant.....	Montreal, Que.....	July 21	22	Burned by boiling liquid when it exploded. Died July 29.
Worker in sugar re- finery.....	Saint John, N.B.....	Sept. 18	44	Caught in stoker drive shaft. Died Sept. 20.
Labourer in starch factory.....	Cardinal, Ont.....	" 19	38	Truck upset on him. Died Sept. 27.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF
1931—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
MANUFACTURING—Con.				
<i>Animal Foods—</i>				
Worker at packing plant.....	Peterborough, Ont.....	about Aug. 6	48	Extreme changes of tempeature at plant. Died Aug. 7.
<i>Textiles and Clothing—</i>				
Millwright.....	Galt, Ont.....	July 29	50	Fell from roof. Died Aug. 4.
<i>Leather, Fur and Pro- ducts—</i>				
Worker.....	Toronto, Ont.....	" 2	Benzol poisoning from fumes inhaled while at work.
Labourer.....	Toronto, Ont.....	Aug. 4	57	Burned when gasoline ignited while filling tractor. Died Aug. 12.
Worker.....	Toronto, Ont.....	" 11	32	Benzol poisoning from fumes inhaled while at work.
Worker with fur dyers.....	Montreal, Que.....	" 27	16	Explosion of drying machine.
<i>Saw and Planing Mill Products—</i>				
Trim sawyer.....	Barnet, B.C.....	July 7	22	Struck by belt when it flew off.
Mill worker.....	Noranda, Que.....	" 21	17	Fell on circular saw.
Labourer.....	Swift Current, Ont.....	Aug. 26	38	Fell off boom and drowned.
<i>Pulp, Paper and Paper Products—</i>				
Mill worker.....	Hawkesbury, Ont.....	Sept. 9	22	Suffocated when buried under slide of pulp logs.
Oiler.....	Lake Megantic, Que.....	" 19	40	Fell while oiling machinery, fractured skull.
Worker.....	Fort William, Ont.....	" 20	27	Electrocuted when he touched door of metal motor house.
<i>Printing and Publishing—</i>				
Press reporter for air tour.....	Hamilton, Ont.....	July 1	34	Killed in plane crash when wing fabric ripped.
<i>Iron, Steel and Products—</i>				
Mill worker.....	Hamilton, Ont.....	" 3	30	Crushed under falling steel when chain of crane broke.
Labourer at machinery factory.....	Seaforth, Ont.....	" 21	69	Knocked down when struck by tongue of grain thresher. Died July 24.
<i>Non-Metallic Mineral Products—</i>				
Electrician with Cement co.....	Montreal, Que.....	July 7	25	Electrocuted.
Superintendent of asphalt plant.....	Montreal, Que.....	" 20	27	Explosion of tank of asphalt when oil was poured in.
Worker in oil refinery	Calgary, Alta.....	Sept. 29	38	Poisoned in acid plant.
<i>Chemical and Allied Products—</i>				
Worker.....	Shawinigan Falls, Que.....	July 31	Explosion at plant.
Worker in soap factory.....	Hamilton, Ont.....	Aug. 5	29	Explosion of steel tank containing soap flakes.
Worker in soap factory.....			50	
Worker in soap factory.....	Montreal, Que.....	" 15	15	Explosion of varnish in plant.
Worker in soap factory.....			14	
CONSTRUCTION—				
<i>Building and Structures—</i>				
Worker.....	St. Cesaire, Que.....	July 2	40	Collapsed from heat.
Painter.....	Montreal, Que.....	about July 6	75	Fell from ladder. Died Aug. 6.
Worker.....	Beauharnois, Que.....	" 7	23	Fell from roof of power house.
Roof repairer.....	Montreal, Que.....	" 21	68	Fell from roof. Died July 29.
Worker.....	Montreal, Que.....	" 21	43	Fell from water tank.
Welder.....	Montreal, Que.....	" 26	36	Explosion while repairing seams on gasoline tank.
Workman.....	Montreal, Que.....	" 29	32	Fell from building fractured skull. Died Aug. 3.
Worker.....	Vancouver, B.C.....	Aug. 14	57	Fell from roof. Died Aug. 15.
Carpenter.....	Silver Lake, Ont.....	" 17	73	Fell from roof of cottage.
Carpenter's helper.....	Hamilton, Ont.....	" 18	19	Fell 40 feet from building.
Workman.....	Montreal, Que.....	" 22	39	Fell 35 feet when scaffold collapsed, second man died Sept. 10.
Workman.....	Halifax, N.S.....	Sept. 2	37	Crushed under granite block when staging gave way.
Mason's helper.....			37	
<i>Railway—</i>				
Labourer.....	London, Ont.....	July 1	35	Sunstroke. Died July 2.
Labourer.....	Near Medstead, Sask.....	" 1	21	Struck by falling tree.
Labourer.....	Moose River Crossing, Ont..	" 10	35	Crushed under dump car when it dumped on him.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1931—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
CONSTRUCTION—Con.				
<i>Railway—Con.</i>				
Contractor.....	Near Estevan, Sask.....	Aug. 26	50	Struck by flying timber during windstorm.
Worker on bridge construction.	Montreal, Que.....	Sept. 12	54	Fell 85 ft. from bridge.
Worker on terminal bridge construction.	Montreal, Que.....	" 24 th	24	Fell 45 feet when plank broke.
Workman.....	Montreal, Que.....	" 26	54	Fell from steel beam, fractured skull.
<i>Highway and Bridge—</i>				
Road worker.....	Braeside, Ont.....	July 1	47	Collapsed from heat.
Labourer.....	Near Guelph, Ont.....	" 2	43	Collapsed from heat.
Bridge worker.....	Near Lilloet, B.C.....	" 8	20	Fell from bridge and was drowned.
Teamster.....	Kincardine, Ont.....	" 15	53	Old structure fell on him. Died July 16.
Road worker.....	Near Winchester, Ont.....	" 24	28	Backed into by truck. Died July 26.
Bridge worker.....	East York, Ont.....	" 28	45	Fell from bridge when plank broke.
Worker with paving contractors.	Burroughs Falls, Que.....	About Aug. 3	Burned in fire at garage for trucks.
Structural steel worker.	New Glasgow, N.S.....	" 4	32	Electric burns when derrick struck high tension wires while unloading steel girders. Died Aug. 6.
Truck driver.....	Near Atwood, Ont.....	" 5	25	Fell and was run over by truck.
Handyman.....	Birch Lake, Ont.....	" 7	Injured when chain holding hoist engine in place broke.
Road worker.....	Near Latchford, Ont.....	" 14	71	Struck by auto. Died Aug. 17.
Labourer.....	Blind River, Ont.....	" 14	62	Injured when buried under gravel slide. Died Aug. 16.
Road worker.....	Near Oliver, B.C.....	" 17	55	Injured while at work. Died Aug. 19.
Road worker.....	Near Calgary, Alta.....	" 19	45	Fell from truck. Died Aug. 21.
Road worker.....	Near Morin Heights, Que.....	" 19	21	Injured while blasting rock.
Road worker.....	Burbrooke, Que.....	About Aug. 27	Truck in which he was riding overturned.
Derrick operator.....	Warton, Ont.....	Sept. 3	Electrocuted when arm of derrick fell over high tension wire.
Truck driver.....	Near Renfrew, Ont.....	" 5	38	Train struck his truck.
Labourer.....	N.S.....	" 11	Struck by auto, fractured skull.
Labourer.....	Near Nelson, B.C.....	" 26	33	Struck by rock while blasting stumps.
Miscellaneous—				
Labourer on power dam construction.	Beauharnois Que.....	July 3	28	Plank fell on his head. Died July 6.
Worker on power dam construction..	Beauharnois, Que.....	" 8	23	Fell in front of tractor.
Labourer on power dam construction..	Fraserdale, Ont.....	" 13	28	Crushed under fall of rock from canyon. Died July 14.
Labourer on sewer construction.....	Saskatoon, Sask.....	" 21	30	Asphyxiated when sewer caved in.
Worker on dam construction.....	Chats Falls, Ont.....	Aug. 1	28	Scalded when steam boiler of locomotive upset.
Labourer.....	Covansville, Que.....	" 20	32	Struck by truck.
Worker on power line construction.....	Greenbush, Ont.....	" 31	42	Explosion of dynamite while re-drilling post hole.
Night watchman on wharf construction	Levis, Que.....	Sept. 13	65	Fell into river and was drowned.
Labourer on coffer dam construction..	St. John, N.B.....	" 14	25	Crushed under falling boulder.
ELECTRIC LIGHT AND POWER—				
Lineman.....	Exeter, Ont.....	July 8	37	Electrocuted while repairing transformer.
Lineman.....	Montreal, Que.....	" 22	45	Electrocuted while repairing high power wires.
Lineman.....	Calabogie, Ont.....	" 22	17	Electrocuted while working on pole.
Lineman.....	Near Brantford, Ont.....	" 25	20	Electrocuted when he came in contact with live wire.
Lineman.....	Owen Sound, Ont.....	" 27	38	Electrocuted when he touched high tension wire.
Lineman.....	Seaforth, Ont.....	" 30	Electrocuted when he touched high voltage wire.
Lineman.....	Ste-Catherine, Que.....	Aug. 2	25	Electrocuted while working on pole.
Lineman.....	Kenora, Ont.....	" 3	31	Electrocuted when he touched live wire.
Manager of power co.	Delhi, Ont.....	Aug. 11	23	Electrocuted while removing wires.
Watchman at power plant.....	Montreal, Que.....	" 12	36	Struck by train.
Lineman.....	Ancaster, Ont.....	" 19	29	Electrocuted when he came in contact with live wire.
Machinist at power plant.....	Sault Ste. Marie, Ont.....	" 19	54	Electrocuted when he touched high voltage wire.
Power plant employee.	Woodstock, Ont.....	Sept. 11	28	Electrocuted while repairing trouble.
Substation worker.....	Belleville, Ont.....	" 14	24	Electrocuted while putting in new circuit.
Worker with light co.	Kitchener, Ont.....	" 21	35	Electrocuted while changing street bulb.
Lineman.....	Crystal City, Man.....	" 25	31	Electrocuted when he came in contact with live wire.
Lineman.....	Montreal, Que.....	" 27	34	Electrocuted when he touched live wire.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF
1931—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
TRANSPORTATION AND PUBLIC UTILITIES—				
<i>Steam Railways—</i>				
Engineer.....	Near Winnipeg, Man.....	July 1		Scalded when his train was derailed. Died July 5.
Brakeman.....	Near Kemptville, Ont.....	" 2	49	Crushed between engine and train.
Section labourer.....	St. Thomas, Ont.....	" 15	32	Struck by piece of steel while splitting bolts.
Conductor.....	Hamilton, Ont.....	" 28	42	Struck by jigger when he jumped from engine. Died July 31.
Section foreman.....	Saskatoon, Sask.....	" 29	44	Struck by auto.
Maintenance Mechanic.....	Near Windsor, Ont.....	Aug. 3	38	Fell from truck, fractured skull. Died Aug. 7.
Sectionman.....	Near Hearst, Ont.....	About Aug. 4		Injured when speeder ran into moose.
Car shop worker.....	Montreal, Que.....	Aug. 10	42	Burned by explosion in shops. Died Aug. 11.
Sectionman.....	Kamloops, B.C.....	Aug. 19	60	Struck by locomotive.
Worker.....	Hamilton, Ont.....	" 20	50	Run over by engine.
Patrolman.....	Mile 83, Allanwater Sub., Ont.....	" 23	39	Train struck speeder.
Labourer.....	Lake Fortune, Que.....	" 31	20	Fell from gasoline speeder.
Brakeman.....	Dundas, Ont.....	Sept. 2	43	Fell from car and was run over during switching operations in quarry.
Painter.....	Erris, B.C.....	" 7	49	Fell 125 feet while painting bridge.
Brakeman.....	Kelowna, B.C.....	" 7	40	Fell and was run over by car during switching operations.
Sectionman.....	Soo Junction, Ont.....	About Sept. 15	45	Run over by train.
Track worker.....	Saskatoon, Sask.....	" 18	53	Oil barrel fell on him.
Sectionman.....	Toronto, Ont.....	" 19	40	Fell 30 feet from bridge.
Trackman.....	Near Salvus Station, B.C.....	" 25		Train struck speeder on which he was riding. Died Sept. 26.
<i>Street and Electric Railways—</i>				
Operator.....	Vancouver, B.C.....	Aug. 1	40	Electric burns when he pulled wrong switch. Died Aug. 2.
<i>Water Transportation—</i>				
Deckhand.....	Toronto, Ont.....	July 5	17	Fell off deck and was drowned.
Seaman.....	Victoria, B.C.....	" 8	70	Fell from gangplank of ship and was drowned.
Loader.....	Port Arthur, Ont.....	" 18	30	Fell from boat while loading pulpwood and was drowned.
Shipper.....	Sydney, N.S.....	" 22	22	Fell 30 feet from coal pier.
Longshoreman for paper company.....	Ocean Falls, B.C.....	Aug. 1		Fell down hold of ship.
Sailor.....	Quebec, Que.....	" 15	25	Fell overboard and was drowned.
Night watchman.....	Quebec, Que.....	" 17		Fell overboard and was drowned.
Second mate.....	Slave Lake, Alta.....	" 21	36	Drowned.
Sailor.....	Quebec, Que.....	Sept. 10	18	Fell from scaffold while painting ship and was drowned.
Fireman on boat.....	Fort William, Ont.....	" 21	26	Fell from ladder into stokehold.
<i>Air Transportation—</i>				
Pilot.....	Hamilton, Ont.....	July 1		Killed in plane crash when wing fabric ripped on swerving upward.
<i>Local Transportation</i>				
Truck driver.....	Near Cottam, Ont.....	" 2	40	Injured when his truck upset in accident.
Taxi driver.....	Near Portage la Prairie, Man.....	" 8		Injured in auto accident.
Truck driver.....	Near Humberstone, Ont.....	Aug. 4	43	Struck by truck.
Truck driver.....	Near Chalk River, Ont.....	" 21		Collision of auto with his truck. Died, Aug. 26.
Truck driver.....	Near Elmira, Ont.....	Sept. 9	25	Injured when truck overturned. Died Sept. 12.
<i>Storage—</i>				
Elevator worker.....	Fort William, Ont.....	July 5	31	Smothered in elevator bin.
Grain elevator worker.....	Owen Sound, Ont.....	Sept. 2	58	Fell 90 feet to floor of bin.
Grain elevator operator.....	Chauvin, Alta.....	" 5	32	Fell from top of elevator to bottom of bin.
Truck driver.....	Near Vinemount, Ont.....	" 7	25	Injured when his truck crashed into ditch.
<i>Telegraphs and Telephone—</i>				
Lineman.....	Near Stratford, Ont.....	" 8	19	Electrocuted while removing pole.
Lineman.....			44	
TRADE—				
<i>Wholesale—</i>				
Employee of oil co.....	Montreal, Que.....	July 25	19	Fell into river and was drowned while unloading barrels of oil from boat.
Salesman for electric supplies.....	Saskatoon, Sask.....	Sept. 25	58	Radio fell on his head when he fell off truck. Died Sept. 26.

TRANSPORTATION AND PUBLIC UTILITIES— Steam Railways— Night foreman.....	Kingston, Ont.....	April 12	65	Fell on tongue of express truck, injuring back. Died Aug. 29.
Trackman.....	Robinson, Ont.....	June 29	51	Sunstroke.
Water Transportation— Engineer.....	Near Manila, B.C.....	Feb. 24	Shot by Filipino on ship.
SERVICE— Public Administration— Municipal labourer....	Cobalt, Ont.....	June 6	48	Struck by truck. Died Sept. 4.
Constable.....	Montreal, Que.....	" 9	Shot while making arrest at shooting affray. Died Aug. 23.

SUPPLEMENTARY LIST OF FATAL INDUSTRIAL ACCIDENTS OCCURRING
DURING 1930

Trade or Industry	Locality	Date	Age	Cause of Fatality
TRANSPORTATION AND PUBLIC UTILITIES— Steam Railways— Labourer.....	West Toronto, Ont.....	April 7	25	Fell from hand car and was run over. Died Sept. 21.
TRADE— Wholesale— Janitor for meat co....	Vancouver, B.C.....	Nov. 11	66	Fell on cement floor, fractured skull. Died July 2, 1931.

Fatal Accidents in Great Britain in September

The number of workpeople, other than seamen, in Great Britain and Northern Ireland, reported during September, 1931, as killed in the course of their employment was 155, as compared with 122 in the previous month and with 192 in September, 1930. Fatal accidents to seamen reported in September,

1931, numbered 25, as compared with 29 in the previous month and 27 in September, 1930.

Of the 155 fatalities resulting from industrial accidents during September, 21 were in railway service, 70 in mines, 6 in quarries, 58 in factories and on docks, wharves and buildings under the Factory Acts. Of the fatalities to

seamen 23 were on steam trading vessels, the remaining two being on steam fishing vessels.

The total number of cases of poisoning, anthrax and epitheliomatous and chrome ulceration in Great Britain and Northern Ireland reported during September, 1931, under the Factory and Workshop Act, or under the Lead Paint (Protection against Poisoning) Act, was 38; the total number of deaths reported was 5. Lead poisoning formed the largest group,

most of these cases resulting from the handling of paint. Two cases of anthrax and ten of skin cancer occurred during the month, seven of the latter resulting from contact with oil, two from handling pitch, and one from tar. Six cases of chrome ulceration were reported. Of the five fatalities from industrial diseases three were due to skin cancer, one to anthrax, and one to lead poisoning.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Crown not liable for Accident to Employee outside his Employment

A young man was employed as a labourer by the Buoy Branch of the Department of Marine and Fisheries at Three Rivers, Quebec, assisting on a barge in the work of laying buoys though not himself a member of the crew. He was paid by the hour, and was fed and lodged on board the barge. On April 25, 1929, he left the barge with a fellow employee after supper to go to a theatre. When the two men returned late at night they found that the barge had changed its berth, and was moored further down the wharf, and in order to reach it they had to walk along the top of a concrete wall on which "nigger heads" or mooring posts had been placed at intervals. No lights were provided on the wall, and the young man tripping over one of these fell into the river and was drowned. His father claimed damages for the young man's death, alleging that it was due to the fault and negligence of the Crown.

Mr. Justice Audette, in the Exchequer Court of Canada, found that the suppliant was not entitled to the relief sought in his petition of right. There was no evidence, he stated, to show that the Crown was under any obligation to do anything which it had failed to do. "At the time of the accident the deceased was not acting in the course of, or within the scope of, his employment. After 6 o'clock in the evening he was perfectly free to do what he cared to do. No particular person can be found to be blamed for the accident, which obviously was the result of the victim's own negligence in walking in the dark upon the coping of the edge of the wharf."

Joubert versus the King (Exchequer Court of Canada), 1931, *Dominion Law Reports*, Vol. 4, page 164.

Freedom of Press maintained by United States Supreme Court

The Executive Council of the American Federation of Labor, in their report to the recent convention, as outlined on page 1204 of this issue, called attention to a "notable decision for free press" by the United States Supreme Court. The case referred to is that of *Near versus Minnesota*, on which judgment was given by the Supreme Court on June 6 this year, the opinion of the Court being delivered by Chief Justice Hughes.

Minnesota had enacted a statute by the provisions of which it provided for the abatement as a public nuisance of a malicious, scandalous and defamatory newspaper. In the midst of a political campaign, an action was started against the newspaper published by *Near* on the ground that it constituted a nuisance. *Near* was requested to show cause why a temporary injunction should not issue and was in the meantime forbidden to publish, circulate or have in his possession, certain copies of the paper. A demurrer was filed but was over-ruled, and the District Court certified the constitutionality of the Statute to the State Supreme Court, which sustained the statute. The case then came on for trial and the District Court made findings of fact that the newspaper constituted a public nuisance. The judgment perpetually enjoined the publication of the newspaper. *Near* appealed to the Supreme Court of the state asserting his right under the federal constitution and the judgment was affirmed.

An appeal was then taken to the United States Supreme Court where the statute was held unconstitutional because it infringed on the liberty of the press guaranteed by the 14th Amendment. The liberty of the press, the court held, as guaranteed by the constitution, involved immunity from previous restraints of censorship; and the fact that the liberty of the press might be abused does not make such immunity any the less necessary in dealing with official misconduct, since subsequent punishment for such abuses is the appropriate remedy.

THE LABOUR GAZETTE

PREPARED AND EDITED BY
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 31]

DECEMBER, 1931

[NUMBER 12

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

THERE was the customary contraction in industrial employment in Canada at the beginning of November, when the 7,880 firms furnishing employment returns to the Dominion Bureau of Statistics reported 938,524 employees, as compared with 946,700 on October 1. Each of these firms employed a minimum of 15 workers. Reflecting the reduction, the index (based on the average for the calendar year 1926, as 100), declined from 103·9 in the preceding month to 103·0 on the date under review, as compared with 112·9, 124·6, 118·9, 108·8, 104·0, 98·3, 94·1, 100·0, 97·0 and 91·3 on November 1, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. The index on November 1, 1931, was thus lower than on the same date in the preceding five years, but was higher than at the beginning of November in the periods, 1921-25. The recession on the date under review was smaller than that reported on November 1 last year, and was also slightly less than the average decline recorded on November 1 of the last ten years.

At the beginning of November, 1931, the unemployment percentage reported to the Department of Labour was 18·3, contrasted with 18·1 per cent of inactivity at the beginning of October, and 10·8 per cent at the beginning of November, 1930. The percentage for November was based on the returns furnished to the Department of Labour from 1,864 labour organizations, with a membership total of 192,603 persons.

Reports received from the offices of the Employment Service of Canada during October, 1931, indicated a marked gain in the average daily placements effected, when the figures are compared with those recorded during the corresponding period a year ago. This increase was almost entirely due to the vast amount of work being done on the highways of Canada under the Unemployment and Farm Relief Act. Vacancies in October numbered 56,901, applications 85,685, and placements in regular and casual employment 55,789.

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty-nine cities was little changed at \$7.82 for the beginning of November as compared with \$7.84 for October; \$10.25 for November, 1930; \$11.75 for November, 1929; \$11.28 for November, 1928; \$11.07 for November, 1927; \$11.01 for November, 1926; \$11.23 for November, 1925; \$10.46 for November, 1924; \$10.69 for November, 1923; \$10.29 for November, 1922; \$11.08 for November, 1921; \$15.32 for November, 1920; \$13.65 for November, 1918; and \$7.96 for November, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1926 as 100 was again slightly higher at 70·6 for November as compared with 70·4 for October; 79·5 for November, 1930; 95·7 for November, 1929; 94·9 for November, 1928; 96·9 for November, 1927; and 97·7 for November, 1926.

The loss in working time caused by industrial disputes in Canada in November was less than in the preceding month but was somewhat greater than the corresponding loss in November last year. Eleven disputes were in progress at some time during the month, involving 1,660 workers and resulting in the loss of 22,489 working days. Corresponding figures for October, 1931, were: 16 disputes, 3,072 workers, and 38,529 working days; and for November, 1930, 6 disputes, 2,000 workers, and 11,807 working days.

Industrial Disputes Investigation Act

During November the Department received the report of the Board of Conciliation and Investigation appointed to investigate the question of the proposed reduction in the wages of certain employees of the Canadian National Railways and the Canadian Pacific Railway Company. One new application for the appointment of a Board was received. The text of the report, with a full account of proceedings under the Act during the month, will be found on page 1292.

Work of Labour Courts in Germany in 1930

Some account of the Labour Courts which began to function in Germany in 1927 appeared in the LABOUR GAZETTE, April, 1927, page 367. The Labour

Courts have jurisdiction, to the exclusion of the ordinary courts and irrespective of the amount in dispute, in all civil disputes between the parties to collective agreements, or between parties capable of entering into collective agreements, or as to the existence or non-existence of a collective agreement; also in disputes between employers and employed arising out of employment or apprenticeship, as to the existence or non-existence of a contract of employment or apprenticeship, or arising out of unlawful actions connected with employment or apprenticeship. The labour tribunals consist of qualified judges and assessors chosen from employers and employed persons. Disputes are settled by way of judgment or decision. The labour courts have jurisdiction in the first instance. Appeal from their decisions lies in the state labour court where the amount in dispute exceeds 300 marks. In special cases, appeal may be made from a judgment of the state labour court to the federal labour court.

Recently published statistics show that during 1930, 438,449 cases were filed for hearing under the ordinary procedure. Of these cases 63.2 per cent related to manual workers; 28.2 per cent to salaried employees; and 8.6 per cent to craftsmen. The great majority of the disputes arose out of contractual relations between employers and workers or out of unlawful acts connected with employment; these causes accounted for 400,345 cases, or 91.3 per cent. The number of disputes between employers and workers showed an increase over the figure for 1929 of 12.4 per cent.

Of the disputes submitted to the Courts, 399,440 or 91.1 per cent were settled, 36 per cent by compromise and 22.5 per cent by withdrawal of the claim. Only 18.8 per cent of the total number of cases were decided by a formal judgment, the remainder being settled by default or being abandoned, or otherwise arranged. The number of appeals lodged with the District Labour Courts was 20,042. Of this number 3,211 cases, or 16 per cent, remained unsettled. The number of cases settled by formal judgment was 8,775, the rest being settled, either by conciliation or by default, or lying outside the jurisdiction of the Court. 69 per cent of the cases, as against 70 per cent, in 1929, took less than two months to settle.

Commission on Canadian transportation problems

A commission to investigate the transportation problems of Canada was appointed by Order in Council dated November 21. The order points out "the vital im-

portance of transportation to the trade and commerce of Canada, the serious and continuing deficits of the Canadian National Railway system, and the diminished revenues of the Canadian Pacific Railway system, conditions which have brought about in part by duplication of tracks, facilities and services of every kind, and in part by competition of other modes of transportation, particularly motor vehicles operating on the highways."

The Commission is composed of seven members, as follows: The Right Hon. Lyman P. Duff, judge of the Supreme Court of Canada (chairman); Mr. L. F. Loree, New York, President of the Delaware and Hudson Railway Company; Mr. Beaudry Leman, Montreal, general manager and director of the Banque Canadienne Nationale; Professor Walter C. Murray, University of Saskatchewan; Sir Joseph Flavelle, chairman, Canadian Bank of Commerce, etc.; Right Hon. the Lord Ashfield, chairman and managing director of the Underground Electric Railways of London, Limited, the Metropolitan District Railway (London), the London Electric Railway, etc.; and Dr. John C. Webster, F.R.S., of Shediac, N.B.

Railwaymen's "Ship-by-Rail" Association

Railway employees in various railway centres throughout Canada have recently formed a "Ship-by-Rail" Association, with commit-

tees chosen from the various railway organizations, for the purpose of providing a means whereby employees may co-operate in improving the traffic situation. An article appearing in the *Railroad Trainman*, December, 1931, refers to the association as follows: "It is felt by the employees of the railways that there is an insufficient realization on the part of the public that the railways represent an enormous capital investment and that any factor which lessens railway traffic is a menace to the people of Canada as a whole, and they have decided to use their influence with the public, with merchants and manufacturers, and with the provincial and federal governments for the purpose of restoring traffic to the fullest possible extent. Owing to the fact that motor trucks in Canada operate under provincial jurisdiction, there has been a lack of uniformity in the regulations governing them, while the railways are required to conform to very strict regulations with respect

to the rates charged for their services and the working conditions of railway employees. It is hoped that through the united efforts of the 'Ship-by-Rail' association it will be possible to secure uniform regulations governing truck and bus transportation, in order to protect the railways from any unfair competition."

Railways and motor truck competition

Sir Henry Thornton, President of the Canadian National Railways, discussed the existing problems of railway transportation in the course of an address before the New York Chamber of Commerce on November 19. With respect to the competition of motor trucks on the highways he suggested that the following rules should be followed:—

(1) Those who use the highway for commercial vehicles should pay a tax or impost consistent with the use so made.

(2) The width, weight, and speed of commercial vehicles should be such as to permit the free and safe use of the highway by other users.

(3) Those to whom the movement of freight and passengers upon the highway is confined should be subjected to that physical examination that will protect passengers confided to their care and other users of the highway from accidents.

(4) Rates charged for the movement of freight and passengers should be subjected appropriately to either state or federal regulation.

"With the establishment of such regulations, competition becomes fair and the railways will have to take their chance."

Action recently taken by certain railway companies in the United States in regard to the competition of motor trucks on the roads was noted in the last issue, page 1185.

Dominion Agricultural Credit Company

The formation of this company, under legislation enacted at the last session of Parliament, has been completed, and this new farm credit organization is expected shortly to be ready for business. Subscriptions to the amount of over 60 per cent of the capital have been received, and the directors have been appointed, the president being the Hon. J. D. McGregor, Lieutenant-Governor of Manitoba, with Mr. H. O. Powell, Weyburn, as vice-president and general manager.

Mr. L. C. McOuat, general agricultural agent (Eastern Lines), Canadian Pacific Railway, in the current issue of *Agricultural and Industrial Progress in Canada*, describes the purposes of this organization as follows:—

"The Dominion Agricultural Credit Company is a permanent organization, set up with

a view to developing and maintaining additional lines of revenue from western farms. It is not an attempt to revolutionize western agriculture, as there is little thought but that wheat will continue as the real money crop of Western Canada, and the provision of credit facilities for the purchase of live stock is not designed to reduce the importance of this particular crop in the realm of agriculture. It is rather to assist farmers to supplement their operations in this line by including sufficient live stock production as a safeguard against the inconveniences of years such as are now being experienced, when they will at least be able to obtain their maximum living requirements and at the same time have a small surplus which can be exchanged for the necessities of life.

"The new organization lends money only on live stock for breeding purposes, and there is no arrangement for loaning money for feeding. In all probability committees will be formed in each community where loans are to be made, which will recommend the applicants for loans from this company. The company will loan up to 80 per cent of the value of the live stock, and, in certain cases where the applicant has unattached security to offer, he may be able to get 100 per cent. Loans will not exceed \$1,000, and the minimum loan will probably be \$200. Repayment is spread over three years with interest at 6 per cent."

Construction industry's plan to regularize employment

The Canadian Construction Association recently prepared the following general plan to regularize employment, which it was hoped might serve as a basis for

future discussion.

"It is proposed that this plan be adopted and put into practice for at least three or four years, with a view to making it continuous, as a solution of the serious unemployment problem which recurs periodically under present conditions. This plan should be a combination of the Federal relief measure passed last Fall, with the best principles of insurance as practised in other countries; the former should provide employment and the latter provide the means. Under this plan every individual employee on a salary or wage basis (except those employed on relief work) would be required to contribute. Every employer would also be required to contribute an amount equal to the total assessed on his employees, and the Federal Government would also assist by contributing a like amount. In order to establish a fund immediately the Federal Government should be asked to vote an

amount, which would be considered as a loan, to establish this employment plan.

"A Federal commission should be appointed to carry out this proposed plan, and might be organized on a similar basis as the Provincial Workmen's Compensation Boards. All relief works performed under this plan should be in the nature of general improvements of all kinds, but otherwise should be non-productive, that is, nothing would be produced for sale. The result of these works would be to create an increased demand for the productions of existing industry, thus indirectly providing greater employment and more steady work for those who would be contributing to the fund.

"The wages and salaries paid on all such relief work should be considerably below those paid on regular normal work, so that workers would be attracted to existing industries whenever the demand for increased regular employment occurred. In other words, employment under this plan must always be considered in the light of relief work, which would practically cease in prosperous times. An indirect result would be to remove a great deal of the emergency relief assistance handed out by charitable organizations at the present time, and would tend to reduce want, suffering and crime.

"As a basis for consideration, this Association is of the opinion that the step taken by the Dominion Government last Fall, through which large sums of money were spent in providing work on projects of a non-productive character, such as roadwork, grade separations, etc., indicates the proper course to be followed. It suggests that, with some modifications, the recent Federal relief plan might well form the basis of a scheme to regularize employment.

"It is suggested that some index of unemployment shall be maintained and that when it reaches a certain level, either general across the country or in any particular locality, then, and only then, work under this fund shall automatically be provided and improvement work put in hand."

Suggestions by Mr. H. P. Frid, president of the Canadian Construction Association, for the development of building construction as an effective method of creating employment are outlined on another page of this issue.

Proposed unemployment relief measures in United States

public and private measures

The Committee on Employment Plans and Suggestions set up by President Hoover's Organization on Unemployment Relief recently presented their report,

being recommended to relieve the depression:—

(1) United national action to encourage every American citizen now employed to resume normal buying—to use available income to purchase goods normally needed and in the replacement of which labour is employed; (2) Public confidence in financial and credit structures must be re-established; (3) Bankers may make their effective contributions to the national program through assuming as liberal and encouraging an attitude as possible toward the credit requirements of their average customer; (4) The spreading of available work in industrial, commercial, and professional enterprises still is the most fruitful field for immediate unemployment relief; (5) Federal, state, and local public service has not felt the pinch of unemployment. This group, representing one of the largest single blocks of labour, must be called upon for their fair contribution; (6) Nothing should be omitted to make immediately available new additional employment represented by public work already authorized but delayed by red tape; (7) Special consideration to provision of part time employment, at least, for the white-collar class, male and female; (8) In making effective the spread of employment, consideration should be given by every unit of industry to the capacity of each individual employee for self help and to his personal and community responsibilities; (9) Community and district surveys to determine the extent of "made work" available; (10) Survey should be made of the possibility for transfer of surplus labour from cities to farms, on a work-for-keep and/or other basis.

The British Canadian Co-operative Society

A short history of this society, written by the general manager Mr. W. C. Stewart, has been published to commemorate its 25th anniversary. From small beginnings the business of the society increased steadily until in the 25th year the sales amounted to \$1,446,570.84 and the membership was 3,437, \$28,817.32 was provided for depreciation, \$6,462.13 allocated to reserve and \$147,586.81 applied to the payment of purchase dividends. The sales for the twenty-five years aggregated \$20,335,768.19, and the membership and customers received during that period \$2,075,376.52 in purchase dividends.

"In other words," the *Canadian Co-Operator* comments, "there has been, since the Society commenced business, an average saving of 10 per cent to the co-operators of the community in the cost of living, and to that extent an increase in their purchasing power. This takes no account of the savings to consumers which

have accrued to them through having so much of the retail distribution of the community under their own control, and the consequent ability to keep within reasonable limits competitive prices, which would not have been possible had there been no co-operative society. Only recently, we understand, efforts have been made to induce the society to raise the price of bread, but without success. In addition, the members have received in interest on their capital in the twenty-five-year period \$175,378.23 and have created, out of the annual surplus, a reserve fund of \$66,006.58, besides depreciating the assets \$169,900.74."

The problem of efficient distribution of commodities

A committee of the International Chamber of Commerce recently published at Geneva a report on "Distribution in the United States and Europe," and an

outline of this report appeared in the *Economist*, November 14. The development of the world's productive capacity and the consequent increase in wealth, it is pointed out, have made the problem of distribution much more intricate and difficult than in any previous period. Yet retailing remains to-day, as formerly, largely an unorganized and unskilled occupation.

In the United States, as well as in Europe, the overwhelming proportion of all retail outlets are operated by small, independent retailers. On the other hand, both American and European experience shows that the typical independent retail establishment is small, unprofitable and short-lived. One American enquiry shows that, out of a given number of independent retailers in business, at a given time, no fewer than 50 per cent of the drug stores, 85 per cent of the grocery stores, 62 per cent of the hardware stores, and 74 per cent of the shoe stores had gone out of business or into bankruptcy at the end of five years. On the subject of business failures, the report observes that "there is a heavy expense carried by the distributive agencies and by society as a whole through the existence of so many unprofitable and unstable small retail outlets. . . . The uneconomic retailers whose shop passes drearily from bankruptcy to bankruptcy is a luxury for which the consumer has to pay."

New agencies competing with the unorganized retailers are described in the report. In the United States the largest of these is the chain-store group, accounting for 18-20 per cent of total retail sales. Department stores, both chain and independent, from the next largest category, and account for 14 to

16 per cent of the total. Mail-order houses (including their retail outlets) sell 3-5 per cent of the total. Company or industrial stores, house-to-house selling, and canvassing and peddling are each responsible for about 3 per cent each of the total. In Europe comprehensive statistics are not available, but in general it appears to be true that department stores are responsible for a substantially smaller fraction of total retail sales (say 5 to 7 per cent, against 14 to 16 per cent in the U.S.A.); while chain stores, with which in Europe must be included the co-operatives, also usually account for a smaller proportion of all retail sales than in the United States. To this general statement Great Britain is an exception. In Britain, taking chains and co-operatives together, some 3,500 groups controlling 45,000 retail outlets and accounting for 21 to 23 per cent of the total retail trade occupy very much the same position as do chain stores alone in the United States.

Among other signs that are noted of the changes now in progress in methods of distribution the report mentions the following:—the absorption of the wholesaler's function at various other stages in the distributive process and the consequent weakening of the position of wholesalers; the vast growth of advertising both in America and Europe; the increasing sales of packeted and standardised goods which diminishes the sales effort required and so far cheapens distributive costs; the gradual education of the consumer, particularly in America, resulting from national advertising of branded goods and, to a greater extent, from the spread and development of domestic science training in the schools and through other organizations; and the growth of market intelligence and market research services.

The report concludes that the most essential requirements of the retailing problem to-day are "the allocation and evaluation of the potentialities of each local market for the consumption of goods by commodity lines; the efficiency of retail outlets in supplying them; and the economic adjustment of all other distribution and production planning and activities to the efficient retailing of goods, in accordance with the effective demand which can be developed in each local market."

International Congress on Vocational Education on Technical Education, organized by the French Association for the Advancement of Technical Education, was held in Paris from September 24 to 27, 1931, and was attended by over 1,200 delegates, repre-

senting 36 European and oversea countries. The Congress was divided into seven sections, dealing respectively with vocational guidance, collaboration between the State and employers' and workers' associations for the organization of vocational and technical education, recruiting and training of staff for vocational courses and practical instruction in vocational schools, recruiting and occupational training for sales and publicity work, general culture as part of the technical training of engineers, the contribution of the cinema to vocational guidance, apprenticeship and technical education, and technical education and the technical press.

Progress in accident prevention over 25 years

The results of a study recently made by the United States Bureau of Labour Statistics of the accident record of the iron and steel industry, are summarized in the *Monthly Labour Review*, November, 1931. A remarkable decline is shown to have taken place in accident rates for the industry since 1907, the first year for which figures were obtained. In 1907 the workers were killed or injured at a rate of 80.8 for every million hours of exposure (frequency rate), and for every thousand man-hours of exposure 7.2 days were lost as a result of accidents (severity rate). In 1930 the frequency rate had been reduced to 18.6 accidents per 1,000,000 man-hours of exposure, a decrease of 77 per cent, and the severity rate to 2.5 days lost per 1,000 man-hours of exposure, a decrease of 65.3 per cent.

The downward tendency is shown in the returns for 1930 as compared with the previous year. The frequency rates, which had advanced from 19.7 in 1928 to 25.1 in 1929, dropped to 18.6 in 1930, lower than for any previous year. The severity rate, which had reached its lowest level of 2.2 in 1928, but had risen to 2.6 in 1929, declined to 2.5 in 1930.

Prevention of profiteering in Great Britain

On October 7, 1931, the Royal assent was given to an emergency Act introduced by the British Government to prevent profiteering in food. The Act, which is entitled "The Food-stuffs (Prevention of Exploitation) Act," provides that if it appears to the Board of Trade that, by reason of the action of any persons in exploiting the present financial situation, there is, or is likely to arise, in Great Britain or in any part thereof any shortage of or any unreasonable increase in the price of any article of food or drink of general consumption, the Board of Trade may by regulation

make such provision as they consider necessary or expedient for the purpose of remedying or preventing that shortage or increase in price.

Regulations made under this section may confer or impose on any person or body of persons such powers and duties as the Board of Trade may consider necessary or expedient for effecting the aforesaid purpose, and may provide for the trial by Courts of summary jurisdiction of persons guilty of offences against the regulations, the maximum penalty being imprisonment for a term of three months or a fine of \$500, or both, together with the forfeiture of any articles in respect of which the offence was committed or of any profits accruing to the person committing the offence in respect of the transaction to which the offence relates or the forfeiture of both such articles and such profits.

Weekly rest day revived in the Soviet Union

On December 1 a decree of the Council of People's Commissars became effective in the Union of Socialist Soviet Republics, restoring the general day of rest, and abandoning the "uninterrupted week" which was described in the *LABOUR GAZETTE*, October, 1929, page 1075. Under the latter plan, now abolished, industries worked continuously, workers having periodical rests which varied according to individual preferences or in accordance with the requirements of individual industries. This arrangement, it is stated, resulted in confusion, and caused unnecessary losses through the employment of inexperienced "reliefs," and the difficulty of carrying out repairs to machinery. The new six-day week will consist of five working days and one general rest day, the latter falling on the sixth, eighteenth, twenty-fourth and thirtieth day in each month. It is to be observed in all industrial enterprises and offices, except those that directly serve the essential requirements of the people, such as cooperative stores, dining halls, and transport.

"Flexible week" recommended by Metal Trades Association

Among other recommendations for stabilizing employment the committee on industrial relations of the National Metal Trades Association proposed, in a recent report on this subject, the operation of shops on a "flexible week" basis. This organization is an employers' association composed of 1,100 shops throughout the United States, employing nearly a million and a half workers. "By flexible week," it is stated, "is meant the practice of so varying the hours of work that variations in productive requirements can be made without resorting to variations in the

number of employees. Thus, when business levels decrease and a reduction in productive effort is necessary, reduce the number of hours worked per week rather than to lay off employees. Similarly, when business increases above normal, do not meet the increase by adding new employees; instead, increase the schedule of hours worked. Meet any further increase in required productive effort by working limited periods of over-time. Only when it becomes evident that additional over-time is impractical, should new employees be added to the payroll."

Other recommendations are as follows:—

"Manufacture products for stock when sales levels are below productive levels, and withdraw products from stock for shipment when sales levels are above production levels. This practice will not only assist in stabilizing employment, but when the cost of carrying inventory is not too high, will discourage over-expansion."

"When practical, postpone overhauling, re-arranging, and repairing of machines, equipment and buildings as much as possible during periods when sales volume is increasing, thus creating a reservoir of odd jobs on which employees may work when reductions in productive effort must be made."

CORRECTION

A note printed on page 1080 of the last issue of the LABOUR GAZETTE referred to the publication by the Metropolitan Life Insurance Company of a monograph on old age pension systems in various countries. The third paragraph of this note enumerated the countries having non-contributory systems, and concluded: "All these systems except that in Russia place the entire expense of the insurance upon industry." This statement was erroneous, and the sentence should have read as follows: "All non-contributory pension schemes are financed by the government with the exception of that of Russia, in which case the expense was placed upon industry."

By an Order in Council in British Columbia the business of automobile service stations were declared to be exempt from the provisions of the Weekly Half Holiday Act (Revised Statutes of British Columbia, chapter 273). This Act provides that shops where wholesale or retail trade or business is carried on must be closed for the service of customers not later than 1 o'clock in the afternoon of one week-day in each week. Certain types of shop are exempted from this provision, the exemptions including bakeries, cigar stands, drug stores, newspaper stands, restaurants,

shops or stands for the sale of fresh fruit, vegetables, soft drinks, cut flowers, and dairy produce, confectioners' shops, etc.

The introduction of mechanical music in the motion pictures resulted in the displacement of 108 musicians, or 60 per cent of the total, in the white theatres of Washington, D.C., and of 21, or 91 per cent, of the total, in the coloured theatres of that city. On the other hand, the number of motion-picture-machine operators has remained about the same since the installation of sound equipment. (*Monthly Labour Review*, November, 1931).

The Bureau of Labour Statistics of the United States Department of Labour received building permit reports from 343 identical cities having a population of 25,000 or over, for the months of September, 1931, and October, 1931. These reports indicated that there was a decrease of 6.3 per cent in the number and an increase of 2.4 per cent in the estimated cost of new residential buildings comparing October with September. In contrast, new non-residential buildings increased 6.3 per cent in number but decreased 16.7 per cent in estimated cost. Additions, alterations and repairs increased .3 to 1 per cent in number but decreased 2.8 per cent in estimated cost. Total building operations increased 1.1 per cent in number but decreased 8.1 per cent in cost. Dwelling units were provided during October, 1931, for 7,981 families. This is an increase of 12.0 per cent as compared with September, 1931.

International Conference on the Coal-Mining Industry

An international conference convened by the Central Council of the British coal-mining industry, which was attended by representatives of the coal owners of Belgium, Czechoslovakia, France, Germany, the Netherlands and Poland, was held in London on September 30, and October 1. The conference was for the purpose of considering the possibility of devising measures for meeting the economic position of the coal industry throughout Europe. The discussions were officially reported to have revealed a satisfactory consensus of opinion on fundamental principles, and a statement embodying the results of the discussions was later submitted to the colliery owners' organizations in the various European countries for their consideration, after which it was contemplated that a further conference would be held.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

Employment

THE employment situation throughout Canada was reported by superintendents of the Employment Service of Canada at the end of November to be as follows:—

There were few requests for farm help in the Province of Nova Scotia but fall ploughing was still being carried on due to mild weather. Bankers and shore fishermen reported fair catches and were busily preparing for the opening of the lobster season on December 1. Lumber operations remain quiet. Coal mines at Stellarton operated five days a week and a large amount of coal was hoisted and shipped: those at Coalburn and Westville operated six days, but at Thorburn and in Cape Breton, days worked averaged from one to four. The Malagash salt mines remained idle. With the exception of food working factories, where business was a little quiet, and in the steel industry, where slackness prevailed, other manufacturing industries were reported to be fairly busy. Some building construction was in evidence, but this consisted largely of inside work on buildings nearing completion. Street and sewer work as well as wharf extension, was being carried on as a relief measure. Transportation of passengers and freight was light and trade was fair. The demand for domestics in the women's domestic division continued and many good placements were effected.

There was little demand for farm help in the Province of New Brunswick, local farmers being busy with fall ploughing. Fishermen reported good catches. Logging, except in the southern sections of the Province, showed some improvement, as some of the small camps had opened. Manufacturing was merely fair, many factories working on short time. Good progress was reported in building construction on all jobs under way, but few new contracts were given out. At West Saint John a considerable amount of reconstruction work had been completed and a number of men laid off, though it was thought that a fair percentage of these men would find work at the port. Sewer work at Moncton provided employment for about three hundred. Transportation and trade were fair. There was the usual demand for women domestic workers.

No activity in farming in the Province of Quebec was noticed during the month. A number of applicants registered at the offices for logging but very few placements were effected. Mining was quiet. In Montreal, manufactur-

ing showed no improvement, except in metal trades, where the reopening of the Angus shops provided employment for a number of workers. A few openings were offered in Hull for female factory employees, but at Quebec city, the majority of factories were working with reduced staffs. Conditions were satisfactory at Sherbrooke and somewhat improved at Three Rivers. There was little demand for building labourers in Montreal and a seasonal decrease was noted in municipal work. There were a few orders listed for workers in Hull. In Quebec city and Sherbrooke construction was active. Subsidized unemployment work in the larger centres also helped to ameliorate the industrial situation. Transportation was quiet, except at Three Rivers, where conditions were reported as normal. Trade in Montreal and Three Rivers showed a decline; elsewhere there was little change. In the women's domestic section, there were a number of applicants registered at the offices for whom no work was available, although at Hull, conditions showed improvement and were noted also as satisfactory in Quebec city and Sherbrooke.

The demand for farm help in the Province of Ontario, which previously was small, had entirely fallen off and as logging camps were largely filled, there was also little activity in that group. Many men sought employment at the mines but few found work there. Tool and die makers were in demand at Toronto and Windsor, as these cities looked forward to a commencement of production in the auto trade. Factories in Belleville were running steadily and improved conditions were indicated at Brantford, where production in many cases was once more at a normal level. Building trades were still very quiet but relief projects kept many men in employment, notably on highway construction, such as Trans-Canada, Northern Development roads and provincial highways. Little activity was shown throughout the province in the women's domestic section, due to work being slack, with many applicants available.

The movement of men to farms in the Province of Manitoba continued good for the season of the year, a number being placed under the Government scheme of assistance to the labourer and farmer. There was little call for loggers and miners. Relief undertakings, such as building sewers and highways, were responsible for the marked increase in the call for labour in the construction and maintenance

group. Building permits in Winnipeg, however, were much below those of last year, though two large projects were in sight, for which plans were being prepared. A nominal

decline occurred in both applicants for work and placements in the women's domestic section, the majority of women being placed in regular, rather than casual work.

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA
(Official Statistics except where noted)

	1931			1930		
	November	October	September	November	October	September

(8) MacLean's Building Review.

Farming in the Province of Saskatchewan was fairly active during the month, owing to the demand for men under the Government relief scheme. Logging was quiet. At Estevan, the mines were working full time with additional men being placed each week as work opened up for them. Labour conditions, in general, remained practically unchanged, relief work for both city and country being the main issue. There was a fair demand for domestics, but fully competent help was somewhat scarce.

There was only a nominal call for farm hands in the Province of Alberta, with applicants still increasing. A few men found employment in the logging industry, but conditions in this group were still very quiet, and prospects were indefinite. Mines at Drumheller were running full time with an outgoing tonnage larger than that of the corresponding period last season. Improvement was also noted at Edmonton, but at Lethbridge, miners were working only three days a week. Manufacturing industries, for the most part, were very quiet. At Calgary and Edmonton, however, increased staffs were reported by several firms. Outside of relief work, there was little activity in construction. Trade showed some improvement due to Christmas buying, though additional helpers, hired by the stores, were mostly on a part-time basis. Little change was recorded in the women's domestic section, a number of unplaced applicants still being listed in the various offices.

Cold weather in the Province of British Columbia put an end to a great deal of outdoor farm work, but a large number of men still wished to go out to the farms, if only for food and shelter. Logging was quiet. Mining showed some activity, but coal mines at Fernie were working on an average only two days a week. Manufacturing was rather slack, although lumber mills at various points were in operation and factories at Nelson were reported busy. Construction, other than that provided under the Government unemployment relief scheme, consisted mostly of repair jobs. At Nelson and Revelstoke, however, extra men found work on hotel extension. Highway development had been somewhat handicapped owing to adverse weather conditions and in some districts it was necessary to resort to direct relief in order to provide for the unemployed. Railroad maintenance showed some improvement, particularly at Revelstoke, where railway shops required additional men for repairs, incidental to wheat moving traffic. Longshore workers at New Westminster and Prince Rupert were fairly busy. Trade

was quiet. In the women's domestic section, a large number of applicants were registered, but work of any kind seemed difficult to procure.

EMPLOYERS' REPORTS

Employment at the beginning of November showed the customary seasonal contraction, but this involved a rather smaller number of workers than have been released, on the average, on the same date in the last ten years. The staffs reported by employers were smaller than on November 1 in any other of the last five years, but larger than in the years 1925-1921. The Dominion Bureau of Statistics tabulated statements from 7,880 employers, whose payrolls were reduced from 946,700 persons on October 1, to 938,524 at the beginning of November. Reflecting this decrease, the index number (with the average for the calendar year 1926, as the base equal to 100), declined from 103.9 in the preceding month to 103.0 on the date under review, as compared with 112.9, 124.6, 118.9, 108.8, 104.0, 98.3, 94.7, 100.0, 97.0 and 91.3 on November 1, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

The trend was upward in the Maritime Provinces and British Columbia, while elsewhere losses were recorded. In the Maritime Provinces there was a considerable increase on November 1, most of this taking place in construction (due to unemployment relief undertaking), and in logging, which was seasonally active. In Quebec, construction and manufacturing registered pronounced curtailment, while logging, shipping, pulp and paper and rubber reported improvement. In Ontario employment again declined; the most extensive recessions were mainly of a seasonal nature in building and railway construction, steam railway transportation, canning, pulp and paper, saw-milling and iron and steel plants, while tobacco factories, logging and retail trade were seasonally busier, and many additional men were engaged on road work under the unemployment relief scheme. In the Prairie Provinces, coal mining, railway transportation, highway construction and retail trade were much more active; on the other hand, manufacturing, building and railway construction and services showed contractions. In British Columbia increased employment was indicated, largely on highway construction in connection with the unemployment relief measures, while transportation and trade were also busier. Manufacturing, logging and railway construction, however, showed curtailment.

Additions to staffs were registered in Hamilton and Vancouver, while in Montreal, Quebec City, Toronto, Ottawa, Windsor and the adjacent Border Cities and Winnipeg, there

were reductions. In Montreal, manufactures, construction, and services reported reduced activity, while there were gains in shipping; within the manufacturing group, there was also curtailment in textile, leather, building material, electrical apparatus and other plants. In Quebec City, services and manufacturing showed curtailment, while other industries recorded only slight changes. In Toronto, most of the decline was in manufacturing and in building construction and services, while trade was seasonally busier. In Ottawa, almost all the curtailment was reported in manufacturing. In Hamilton, most of the decrease took place in manufactures (particularly in iron and steel), and building also afforded less employment, but highway construction was more active as the unemployment relief program advanced. In Windsor and the adjacent Border Cities, curtailment was reported in all industries, that in automobile plants being most extensive. In Winnipeg, trade reported seasonal gains, but manufacturing and construction released help. In Vancouver, manufacturing on the whole showed a slight reduction, while highway construction, transportation and trade were more active.

Further shrinkage of a seasonal character was noted in manufactures, chiefly in the iron and steel, lumber and food-canning industries, although there were also losses in pulp and paper, textile, leather, building material, electric current, electrical apparatus, non-ferrous metal and non-metallic mineral works. On the other hand, beverage factories registered considerable advances, and there were smaller gains in rubber works. In the non-manufacturing industries there were large increases in logging, shipping and trade, and road construction and maintenance showed increased activity as the unemployment relief undertakings progressed. Mining, communications, railway operation services and building and railroad construction, however, reported decided losses.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of November, 1931.

TRADE UNION REPORTS The situation among local trade unions showed little variation during October from the previous month, as manifested by the 1,864 unions co-operating with the Department of Labour, with a membership total of 192,603 persons. Of these 35,325 were without employment on the last day of the month, a percentage of 18.3, as contrasted with 18.1 per cent of idleness in September. A noteworthy reduction was noted in the employment volume from October last year when 10.8 per cent of the

members involved were idle. Influencing the situation during October as in the previous month, were the shut downs in railway car shops, a number of which closed in September and remained idle or working at greatly reduced time throughout the following month. Quebec union members were the chief sufferers through these closings, the Angus shops in Montreal throwing a large number of workers out of employment. Some falling off in activity was registered also by Saskatchewan, Alberta, British Columbia and Nova Scotia unions, which was partially offset by the gains in employment afforded members in Ontario, Manitoba, and New Brunswick. Throughout the various provinces, however, the changes were slight. In every province an unfavorable situation was shown from October, 1930, Quebec, Ontario, Manitoba, Alberta and British Columbia unions all reporting a substantial drop in the volume of work accorded, a general adverse change being shown in the majority of trades and industries.

An article in greater detail, with tabular statements on unemployment among local trade unions at the close of October, 1931, appears elsewhere in this issue.

EMPLOYMENT OFFICE REPORTS During the month of October, 1931, the offices of the Employment Service of Canada referred 57,490 workers to positions and effected a total of 55,789 placements. Of these, the placements in regular employment were 28,524, of which 25,096 were of men and 3,428 of women. Placements in casual work numbered 27,265. Employers notified the Service of 56,901 vacancies, of which 49,158 were for men and 7,743 for women. Applications for work were received at the offices from 72,423 men and 13,262 women, a total of 85,685. A marked gain is shown when the figures are compared both with those of the preceding month and with those of the corresponding month a year ago, the reports for September, 1931, showing 41,723 vacancies offered, 81,453 applications made, and 40,077 placements effected, while in October, 1930, there were recorded 32,259 vacancies, 67,996 applications for work, and 31,221 placements in regular and casual employment. A report in detail of the work of the offices for the month of October, 1931, may be found elsewhere in this issue.

BUILDING PERMITS AND CONTRACTS AWARDED According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities in Canada during October, 1931, was \$8,713,402, as compared with \$10,322,414 in the preceding month, and with \$12,756,402 in October, 1930.

The *MacLean Building Review* states that construction contracts awarded showed an expected seasonal decrease during November. These totalled \$24,642,200 for all Canada. New construction to date during 1931 is 29.6 per cent less in dollar value than for the same period of 1930. Of the above total, \$12,886,600 was for engineering purposes; \$6,959,000 was for residential buildings; \$4,163,900 was for business buildings, and \$632,700 was for industrial purposes. The apportionment of the contracts awarded during November, by provinces, was as follows: Ontario, \$11,796,600; Quebec, \$7,546,300; Manitoba, \$2,105,500; British Columbia, \$1,213,600; Saskatchewan, \$930,600; Alberta, \$714,200; Nova Scotia, \$196,100; New Brunswick, \$137,300, and Prince Edward Island, \$2,000.

Production and Trade

INDUSTRIAL PRODUCTION

Figures showing the volume of production in certain industries during recent months and also in the corresponding months last year, are shown in the table on page 1287.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, states that business operations were at a lower level in October than in the preceding month. While gains were recorded in some lines of industrial production, the constructive developments were counterbalanced by widespread declines. Mining operations were an exception in that heightened activity was recorded in October. Gold and copper were shipped in greater volume and coal mining was practically maintained at the relatively high level of the preceding month. The index of mineral production was 139.5 in October compared with 124.2 in September.

Manufacturing production was further curtailed in October, the low percentage of operations in the automobile and primary iron and steel industries having an important influence in depressing production indexes. The production of steel was 30,926 long tons compared with 33,390 long tons in September. As only one blast furnace was in operation, the output of pig iron during the month has not been published. One furnace at Hamilton, having a capacity of 550 tons a day or about 13 per cent of the total capacity of all iron blast furnaces in Canada, was active during the month. The output of motor cars was 1,440 units compared with 2,646 in September, the decline, after seasonal adjustment, being 35.5 per cent. Imports of crude petroleum were 97,341,000 gallons, showing a slight gain over September although the increase was less than normal for the season. Imports of crude rubber at 3,509,000 pounds showed, after

seasonal adjustment, a gain of 1 per cent over September. Receipts of raw cotton from other countries were 7,859,000 pounds, a gain of 16.7 per cent after seasonal adjustment. The gain in the imports of raw wool was less than normal for the season.

Carloadings in October, after seasonal adjustment, remained at the low level of the preceding month, but the gains in recent weeks hold out hopes of business improvement. The average daily output of electric output was 45,093,000 k.w.h. in the month under review compared with 42,114,000 k.w.h. in September, a gain of one per cent after seasonal adjustment. This gain supplements a similar increase in September over the preceding month, furnishing evidence of greater demand from domestic and industrial establishments.

Coal.—The output of coal in Canada during October amounted to 1,204,401 tons, a falling-off of 26.5 per cent from the 1926-1930 average for the month of 1,638,456 tons. The October production consisted of 763,626 tons of bituminous coal, 400,482 tons of lignite coal, and 40,293 tons of sub-bituminous coal. Mines in Nova Scotia produced 459,087 tons; in New Brunswick, 14,464 tons; in Saskatchewan, 79,250 tons; in Alberta, 487,853 tons, and in British Columbia, 163,747 tons.

Coal imports into Canada during October declined 25.6 per cent to 1,446,690 tons as compared with the five-year average for the month of 1,944,762 tons. Anthracite importations reached a total of 362,102 tons, made up of 214,001 tons from the United States, 134,852 tons from Great Britain, and 13,249 tons from Germany. Bituminous coal imports included 1,061,582 tons from the United States and 22,564 tons from Great Britain. Receipts of lignite coal consisted of 434 tons cleared through British Columbia ports and 8 tons through Saskatchewan ports.

Canadian coal exports of 37,782 tons were 55 per cent below the October five-year average of 83,994 tons. The October exports were consigned principally to the United States, Newfoundland, Australia, New Zealand, and St. Pierre and Miquelon.

Coal made available for consumption in Canada during October totalled 2,613,309 tons, or 25.3 per cent less than the October 1926-1930 average of 3,499,224 tons. Canada's coal supply in October was made up of 48.8 per cent from the United States mines, 44.7 per cent from Canadian mines, 6.0 per cent from Great Britain mines, and 0.5 per cent from German mines.

EXTERNAL TRADE

A summary of Canadian Trade prepared by the Department of National Revenue shows that in October, 1931, the merchandise entered for consump-

tion amounted to \$45,932,572, as compared with \$45,379,099 in the preceding month and with \$78,358,351 in October, 1930. The chief imports in October, 1931, were: Non-metallic minerals and products, \$9,431,975; Fibres, textiles and textile products, \$6,344,234; Agricultural and vegetable products, mainly foods, \$6,302,869.

The domestic merchandise exported during October, 1931, amounted to \$55,537,917 as compared with \$48,991,385 in the preceding month and with \$82,781,428 in October, 1930. The chief exports in October, 1931, were: Agricultural and vegetable products, mainly foods, \$17,505,144; Wood, wood products and paper, \$15,742,232; Animals and animal products, \$8,404,776.

Strikes and Lockouts

The time loss due to industrial disputes in November, 1931, showed a substantial decline from the preceding month, a similar decline appearing in the number of workers involved. As compared with November, 1930, almost twice as many strikes and lockouts were recorded, a corresponding increase showing in the time loss incurred. The number of workers involved, however, showed a small decrease, owing largely to the inclusion in last years' figures of a strike of coal miners in Nova Scotia involving 1,300 workers. There were in existence during the month eleven disputes, involving 1,660 workers, and resulting in a time loss of 22,489 working days, as compared with sixteen disputes, involving 3,072 workers, and resulting in a time loss of 38,529 working days in October. In November, 1930, there were on record six disputes, involving 2,000 workers, and resulting in a time loss of 11,807 working days. At the end of the month there were on record six disputes, involving approximately 475 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been formally called off by the union.

Prices

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was little changed at \$7.82 for the beginning of November as compared with \$7.84 for October; \$10.25 for November, 1930; \$11.75 for November, 1929; \$11.28 for November, 1928; \$11.07 for November, 1927; \$11.01 for November, 1926; \$11.23 for November, 1925; \$10.46 for November, 1924; \$10.69 for November, 1923; \$10.29 for November, 1922; \$11.08 for November, 1921; \$15.32 for

November, 1920; \$13.65 for November, 1918; and \$7.96 for November, 1914. The most important change was a seasonal advance in the price of eggs, while the prices of beef, veal, mutton, pork, lard, milk, butter, cheese, flour, rice, beans and potatoes were lower. Including the cost of fuel and rent with that of foods the total budget was \$17.81 at the beginning of November as compared with \$17.86 for October; \$20.60 for November, 1930; \$22.03 for November, 1929; \$21.52 for November, 1928; \$21.27 for November, 1927; \$21.24 for November, 1926; \$21.51 for November, 1925; \$20.81 for November, 1924; \$21.19 for November, 1923; \$20.89 for November, 1922; \$21.60 for November, 1921; \$26.13 for November, 1920; \$26.92 for July, 1920 (the peak); \$21.61 for November, 1918; and \$14.36 for November, 1914. In fuel anthracite coal was slightly higher, while hard wood showed a downward tendency. Rent was slightly lower in the average.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1926 as 100 was again slightly higher at 70.6 for November as compared with 70.4 for October; 79.5 for November, 1930; 95.7 for November, 1929; 94.9 for November, 1928; 96.9 for November, 1927; and 97.7 for November, 1926. In the classification according to chief component materials three of the eight main groups were higher and five were lower. The groups which advanced were: the Vegetables and Vegetable Products group, due to increased prices for wheat, oats, rye, corn, barley and flour which more than offset declines in the prices of potatoes, carrots, turnips, parsnips and hay; the Non-Ferrous Metals and their Products group because of higher prices for lead, zinc and silver; and the Chemicals and Allied Products group, due to higher quotations for sodium bichromate and certain tanning materials. The groups which declined were: the Animals and their Products group, mainly because of lower prices for fresh and cured meats, calves, hogs and lambs which more than offset higher prices for steers, butter, lard and eggs; the Fibres, Textiles and Textile Products group, because of lower quotations for cotton underwear, serge and raw silk which more than offset higher prices for raw cotton, raw jute, raw wool and woollen yarn; the Wood, Wood Products and Paper group, owing mainly to lower prices for spruce lumber and ground wood pulp; the Iron and its Products group, because of lower quotations for scrap iron and steel; and the Non-Metallic Minerals and their Products group, due to declines in the prices of gasoline and sulphur.

RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

DURING the month of November an application for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act was received in the Department of Labour from the Canadian Pacific Railway Company in connection with a dispute which had arisen with its clerks, freight handlers and station employees and various subsidiary groups, namely, freight handlers, West St. John; subforemen and freight checkers, West St. John; gang foremen, checkers, coopers, sealers and porters, Montreal Wharf; shop clerks, Angus; stores department employees; pursers and freight clerks, B.C. Lake and River Steamers; freight shed and baggage room staffs, Victoria, B.C. Coast Steamship Service; freight shed and baggage room staffs, Esquimalt and Nanaimo Railway; waterfront freight handlers, Vancouver. The application stated that 5,000 employees were directly affected by the dispute, which was caused by the company's proposal to put a 10 per cent wage reduction into effect. The employees protested the inclusion in the groups covered by the application of certain employees who they claim are covered by separate agreement with the railway, and whose wages had not yet been made the subject of dispute or negotiation with the employing company. The matter was receiving consideration by the Department at the close of the month.

The Department received on December 1, the findings of the Board of Conciliation and Investigation which dealt with differences as between the Canadian National Railways and Canadian Pacific Railway (subsidiary railways: the Dominion Atlantic Railway, Quebec Central Railway, Northern Alberta Railways, and Esquimalt and Nanaimo Railway) on the one hand, and certain of their employees on the other hand, being locomotive engineers, locomotive firemen and hostlers, conductors, trainmen and yardmen, and telegraphers, assistant agents and linemen. Thirty days' notice of a 10 per cent wage reduction given by the companies on September 15, 1931, was the cause of the dispute, which directly affected 26,500 employees throughout Canada. The personnel of the board was as follows: Mr. James Macdonnell, of Toronto, Ontario,

chairman, appointed on the joint recommendation of the other members of the board, Mr. Isaac Pitblado, K.C., of Winnipeg, Manitoba, nominated by the employing companies, and Dr. J. C. Hemmeon, of Montreal, P.Q., the employees' nominee. The report was signed by the chairman and Mr. Pitblado, and recommended that a 10 per cent reduction in the basic rates of pay of the employees concerned should be put into effect as from November 15, 1931. Dr. Hemmeon submitted a minority report dissenting from this recommendation. Immediately upon receipt of these reports in the Department of Labour, certified copies were despatched to the parties concerned.

The secretary of the Conference Committee of General Chairman of Railway Employees wrote the Department on December 2 stating that by unanimous vote the Committee of General Chairmen found themselves unable to accept the recommendation for 10 per cent reduction in the basic wage rates and that "the question at issue will now be submitted to the 26,000 or more employees directly concerned."

The employing companies advised the Department on the same date of their willingness to accept the recommendations of the board and that they were "prepared to negotiate with the representatives of the classes of employees mentioned as may be necessary for the revision of existing agreements to make effective the recommendations of the Board of Conciliation and Investigation." The railways also notified the employees that pending such discussion as might be necessary they were arranging to apply a 10 per cent reduction on pay rolls commencing with that for the last half of November for the classes of employees covered by existing agreements. The men thereupon protested the right of the employers to make the reduction retroactive to November 15, the date mentioned in the Board's report, claiming that this action would be in violation of the provisions of section 58 of the Industrial Disputes Investigation Act, and requested an opinion on this point. The matter was receiving consideration at the time the LABOUR GAZETTE was going to press.

The text of the report of the Board and of the minority report is given below.

Report of Board of Conciliation and Investigation in Dispute between the Canadian National Railways and Canadian Pacific Railway and Subsidiary Railways, on the One Hand, and Their Locomotive Engineers, Firemen, Conductors, Trainmen, Telegraphers, Etc., on the Other Hand.

November 30, 1931.

In the matter of the Industrial Disputes Investigation Act and of a dispute between Canadian National Railways and Canadian Pacific Railway (subsidiary railways: the Dominion Atlantic Railway, Quebec Central Railway, Northern Alberta Railways, and Esquimalt and Nanaimo Railway) on the one hand (Employer) and certain of their employees on the other hand, being locomotive engineers, locomotive firemen and hostlers, conductors, trainmen and yardmen, and telegraphers, assistant agents and linemen (Employees).

To the Honourable,

The Minister of Labour,
Ottawa, Ont.

SIR,—The Board of Conciliation and Investigation established in the above matter and composed of Mr. J. M. Macdonnell, of Toronto, Chairman; Mr. Isaac Pitblado, K.C., of Winnipeg, Man., nominated by the railways; and Dr. J. C. Hemmeon, of Montreal, nominated by the employees, met in the Mount Royal Hotel, in the City of Montreal, on Tuesday, November 17, 1931, and has been practically in continuous session since that date, the public hearings ending on November 26.

The employees were represented by:

- R. H. Cobb, Assistant Grand Chief, B. of L.E.
- C. S. Montooth, Vice-President, O.R.C.
- H. H. Lynch, Vice-President, B. of L.F. & E.
- James Murdock, Vice-President, B.R.T.
- J. J. Trainor, Acting Vice-President, O.R.T.
- J. B. Ward, General Chairman, B.L.E., Canadian Pacific Railway.
- G. A. Stone, General Chairman, B.L.E., Canadian National, Atlantic Region.
- H. B. Chase, General Chairman, B.L.E., Canadian National, Western Region.
- Thomas B. Skelly, General Chairman, B.L.E., Canadian National, Central Region.
- Thomas Todd, General Chairman, O.R.C., Canadian National, Eastern Lines.
- B. L. Daly, General Chairman, O.R.C., Canadian National, Western Lines.
- Charles Harrison, General Chairman, O.R.C., Canadian Pacific System.
- W. G. Graham, General Chairman, B. of L.F. & E., Canadian National, Central Region.
- R. E. Linden, General Chairman, B. of L.F. & E., Canadian National, Atlantic Region.

T. M. Spooner, General Chairman, B. of L.F. & E., Canadian National, Western Region.

Hugh Richmond, General Chairman, B. of L.F. & E., Canadian Pacific Railway.

A. McGovern, General Chairman, B.R.T., Canadian Pacific, Eastern Lines.

John Maloney, General Chairman, B.R.T., Canadian National, Central Region.

R. H. Urquhart, General Chairman, B.R.T., Canadian Pacific, Western Lines.

W. G. Cunningham, General Chairman, B.R.T., Canadian National, Western Lines.

J. W. R. Hibbits, General Chairman, B.R.T., Canadian National, Atlantic Region.

J. A. Bell, General Chairman, O.R.T., Canadian Pacific, Eastern Lines.

Geo. Gilbert, General Chairman, O.R.T., Canadian Pacific, Western Lines.

W. H. Phillips, General Chairman, O.R.T., Canadian National, Western Lines.

J. H. Dixon, General Chairman, O.R.T., Canadian National, Eastern Lines.

J. T. Eddy, General Chairman, O.R.T., Canadian National, Central Region.

The Railway Companies were represented by:

CANADIAN NATIONAL RAILWAYS

- Mr. S. J. Hungerford, Vice-President.
- Mr. A. E. Crilly, Chief of Wage Bureau.
- Mr. A. J. Hills, Assistant to Vice-President.

CANADIAN PACIFIC RAILWAY

- Mr. Grant Hall, Vice-President.
- Mr. George Hodge, Manager, Department of Personnel.
- Mr. H. J. Humphrey, Assistant to Vice-President.

"The nature and cause of dispute including claims and demands by either party upon the other to which exception is taken" is set out in the application for the establishment of the Board in the following terms:—"On September 15, 1931, the employers served notices upon the employees to the effect that from October 1, 1931, and until December 31, 1932, they should accept a reduction of ten per cent in their compensation on each payroll, the existing basic rates of pay to be maintained, and the matter to receive further consideration at the expiration of the period mentioned unless, in the meantime, arrangements

should mutually be made otherwise. In the event that the proposal was not accepted, the communications stated that they should be accepted as the required thirty days notice for the revision of agreements between the employers and employees for a ten per cent reduction in the rates of pay specified therein.

"It was suggested that if a joint conference was desired by the different classes of employees involved, the railways would be prepared to participate in such a conference."

The application further shows that after various communications between the parties, on October 28, 1931, the proposal of the railways was definitely declined in writing by the representatives of the employees.

The matter for consideration by the Board is therefore the application of the railways for a 10 per cent reduction in the rates of pay specified in the existing wage agreements between the employers and the employees. Every reasonable effort was made to bring about a settlement of the difference between the parties. In particular, the chairman interviewed the representatives of the parties separately, and brought about a joint meeting of these representatives. Nothing, however, was accomplished by this, as neither side was prepared to make concessions.

At the hearings every opportunity was given to both sides to present their case both orally and by written statements.

The proceedings were marked throughout by the best of temper and good feeling on both sides, and we noted with pleasure the mutual respect and regard which the representatives of the parties to the dispute have for each other.

The railways submitted that the proposed 10 per cent reduction in basic rates of pay was fair and reasonable on the following grounds:—

1. The unfortunate and serious financial conditions with which the railways are faced because of the heavy and long continued falling off in their revenues, and
2. The reductions in the cost of living from which they urged that the employees, even with a reduction of 10 per cent, would be in "a better position in respect to the purchasing power of their rates of pay" than in 1920 (when wages were at their peak), or when the various existing agreements subsequent to that date were made with the classes of employees before the Board or even than in January, 1930.

In support of their argument, the railways in their first submission said: "If it is admitted that under certain changing conditions, as for instance, increases in cost of living and

increases in railway earnings, increases in rates of pay are justified—and this is admitted as evidence to be placed before the Board will show such increases to have been granted—it is submitted, that if such changing conditions are altogether reversed, it must likewise be admitted that decreases in rates of pay upon occasion are also justified."

As to the railways' first point, namely, financial condition of the railways, the railways submitted "Comparative statements of the financial results of their operations for each year from 1926 to 1930, inclusive, and for the first nine months of 1931 with the same period of 1930". . . . "The statement for the Canadian National Railways shows that in 1930 their Income Deficit after providing for Fixed Charges amounted to over \$65,000,000, an increase of approximately \$33,000,000 in the Deficit as compared with the years 1926 and 1928, respectively. The year 1929 shows the turn for the worse when the Income Deficit after Fixed Charges increased approximately \$15,000,000 over 1928." For the first nine months of 1931 the statement showed "that the Operating Ratio even before the payment of Taxes is 102·83 per cent; that before any Fixed Charges are provided for, the net railway Operating Income shows a Deficit of \$6,225,314; and that the Income Deficit after providing for Fixed Charges amounts to \$70,959,781—an increase of approximately \$18,000,000, as compared with the Deficit in the first nine months of 1930." The figures quoted were for the Canadian National lines in Canada only.

"The statement for the Canadian Pacific Railway shows that, in 1930, its Surplus was only \$133,186, as compared with a Surplus of \$10,719,096 in 1926, and a Surplus of \$14,892,257 in 1928, the small Surplus in 1930 being secured notwithstanding, as indicated by the statement, an exceptional Credit to Special Income Account of \$6,500,000 by a special distribution of a Steamship Surplus. The turn for the worse is also apparent in the Canadian Pacific Railway figures for 1929, when the Surplus fell off nearly \$9,000,000, as compared with the more favourable year of 1928. The rate of Return from Rail Operations on Investment in Railway Property in 1930 was only 3·464 per cent. Notwithstanding the very unsatisfactory financial results secured in 1930, as indicated, the figures for the first nine months of 1931, as compared with the same period in 1930 show that the Net Rail Earnings have decreased \$8,223,757, as a result of which the Return on Investment for the first nine months dropped from 2·073 per cent to 1·328 per cent. Special Income also decreased \$8,644,851 and Income before Fixed Charges was therefore \$16,868,608 less than

in 1930. Fixed Charges were \$1,544,713 more than in 1930, so that Income Available for dividends on preferred and ordinary stock was only \$6,946,042 as compared with \$25,359,363 in 1930—or a decrease of \$18,413,321. Dividends on the ordinary stock for the nine months were reduced approximately \$12,000,000 but, notwithstanding this fifty per cent cut in dividends, the Deficit for the period was \$6,508,496 greater than in 1930."

In support of the second point "reductions in the cost of living" the railways submitted statements and graphs showing changes in the cost of living as between August and September, 1931, on the one hand, and on the other hand the year 1920 (the year of peak wages), and all years since then in which new wage agreements were entered into with the employees. The object of these statements and graphs was to show that the percentage reduction in basic rates of pay now proposed by the railways is substantially less than the percentage reduction which has already taken place in the cost of living since 1920 and also since the various agreements were made. For example, the decrease in the cost of living from July, 1927, the date of the last agreement with the engineers, to September, 1931, is shown as 14.4 per cent; the decrease in the cost of living from May, 1927, the date of the last agreement with the firemen, to August, 1931, is shown as 12.7; the decrease from November, 1929, the date of the last agreement with the conductors, to September, 1931, is shown as 18 per cent, and the decrease from January, 1930, to September, 1931, is shown as 18.5 per cent. The railways further pointed out that, as compared with the purchasing power of the wage dollar in January, 1930, the wage dollar, due to the decrease in the cost of living, now has the purchasing power of \$1.23.

The railways accordingly urged "that conditions which justify decreases in rates of pay were never more apparent than they are at the present time."

The employees, while conceding, as stated in their submission No. 2, that "if there was substantial justification or reason for a reduction in wages, the proposals of the railways constitute a fair basis to work from," argued that there was no substantial justification. They put forward, among other arguments, the following in support of their contention:—

1. They urged that "increases or decreases in the cost of living are not the essential or determining factors in justifying an upward or downward scale of wages";
2. They contended "that Canadian railroad men should receive the same wage rates as similarly classed employees, with

whom they are closely related, on the American side of the International boundary";

3. They criticized the accuracy of the deductions drawn by the railways from the cost of living figures used by them, and furnished the Board with an estimate of decreases in cost of living prepared in a different way. They further urged that "they have already suffered in practical effect a serious decrease in earnings, and using the railroads' own measuring stick, a decrease greater than the reduction in cost of living."

As regards their first contention, we are of the opinion that while, of course, there are other important factors to be considered, changes in the cost of living are an important factor in the arranging of rates of pay. In this connection, we observe also that it was clearly in the mind of Mr. McAdoo, from whose writings the employees quoted with approval, that this adjustment of railway wages was made principally on account of increases in the cost of living.

A consideration of the recommendations made by other Conciliation Boards would indicate that the cost of living has always been considered an important factor when considering rates of pay. Moreover, the employees themselves, on the last day of the sittings, said in a written reply to one of the railway statements, the following: "The employees submit that so far as cost of living is concerned, increases in these costs may call for increases in wages and that decreases in actual changed standard cost of living, where shown to be permanent, may afford ground for argument in decreasing wages," though they at the same time urged that present conditions do not justify decreases at this time.

As regards the employees' second point, we feel that railway basic wage rates in Canada must be based on conditions in Canada and not in the United States. We feel that the capacity to earn revenue must be an important element in the payment of wages, and in the United States railway earning conditions are substantially different from those of Canadian railways: traffic in the United States is heavier per mile of railway than in Canada, rates have been in many respects higher, and in addition freight rates have been recently increased to an extent which it is estimated will yield the railways an additional \$125,000,000 per annum. We do not, however, consider it necessary to go at length into this point, inasmuch as the existence of differences in the railway wage scales between the two countries has already been recognized by the employees in their various agreements with the railways since 1924. Moreover, other Boards of Conciliation have recognized this difference.

As to the employees' third point, the employees in criticizing the "cost of living" figures of the Department of Labour (Family Budget) used by the railways, pointed out that they were apt to be "grossly inaccurate" because of the fact "that while the standard of living is constantly changing the content or budget and weighting of the various items on these indexes is very infrequently revised," and also because of the fact that the family budget does not include all family purchases. In our view the family budget is a fairly accurate comparison of the changes in the cost of the items which comprise the budget. It has for many years been compiled by the Government of Canada for the purpose of comparing costs of living in different years and has been constantly used by both railways and employees during the discussions relative to wage changes. We think it is a fair basis for showing changes in the cost of living from time to time.

The employees after urging their objection to these index figures of the Department of Labour, in their presentation of November 25, 1931, stated the following: "For the sake of argument, however, and in order to bring the present hearing to an early close, they are willing to meet the railways on their own ground and concede to the Department of Labour's cost of living index numbers the same basis of exactness with which the railways have endowed them."

They then proceeded to present to the Board certain statements and charts headed "Comparison of wages received and costs of living." In so far as the cost of living line on these charts is concerned, while the employees apparently used as their index figures, not the figures of the family budget used by the railways, but those of another tabulation made by the Department of Labour and published in the LABOUR GAZETTE called "Changes in the Cost of Living in Canada from 1913 to 1931," and while the employees changed the base year from 1913 to 1926, still the cost of living line on the charts and the changes in the cost of living shown thereon and shown in the statements as submitted by them for the periods under consideration, show approximately reductions in the cost of living very similar in percentage to those shown if the index figures of the family budget are used. For instance, if the family budget figures are used, the decrease in the cost of living from January, 1930, to September, 1931, is shown to be 18.5 per cent, whereas if the other index figures (used by the employees) are used, the figure for the same period is approximately 15 per cent. We do not think it necessary to determine the exact percentage of decrease in the cost of living, as in any event the percentage is larger than the percentage of reduc-

tion in basic rates of pay (10 per cent) now urged by the railways.

The employees further criticized the soundness of comparing January, 1930, with September, 1931. According to the railways' figures, the reduction in the cost of living in that period was 18.5 per cent, whereas the employees showed it as 15 per cent. The employees suggested that a fairer comparison would be a comparison of the average index figures for all of the months of 1930 with the average index figures for all of the first nine months of 1931. They showed that such a calculation would indicate a decrease in the cost of living from January, 1930, to September, 1931, of 9.2 per cent. In view of the fact that the decrease since the early part of 1930 has been gradual and continuous, this method in effect by averaging all the months of 1930 and similarly averaging the first nine months of 1931 really shows the decrease only from the middle of 1930 to the middle of May, 1931.

We have studied the monthly figures as given out by the Department of Labour, and in view of the gradual and continuous decline already referred to, it seems to us fair to compare January, 1930, with September, 1931, to see how much the cost of living has actually gone down between those dates. However, in order to do our utmost to meet the objection of the employees, we have, ourselves, compared the month of September, 1929, with the month of September, 1931. The relative figures are September, 1929—159, September, 1931—136, which shows a decline of nearly 15 per cent. In making this comparison we have used the index figures used by the employees. We note incidentally that since September there has been a further decrease.

Under all the circumstances, we think we are well within the mark in concluding that there has been a drop in the cost of living from the dates of the existing wage agreements to September, 1931, of more than 10 per cent, the amount of the suggested wage decrease. We believe that this conclusion of ours will be confirmed by the common knowledge of the housewife and householder.

The charts put in by the employees already mentioned, headed "Comparison of wages received and cost of living" besides having the line already referred to showing changes in the cost of living, have a line purporting to trace the wage rates of the employees during the period from 1920 to 1931. It appears to us that the real point in issue in this case is whether, since the existing wage agreements were made between the railways and the employees, such changed conditions have arisen as justify a decrease in the basic rates of pay,

and on that issue we do not feel we need go back of the dates of the existing wage agreements, although the charts submitted by both sides went back to the year 1920 though prepared on different bases.

There is a further serious objection to these charts of the employees in so far as wage rates are concerned, for the years 1930 and 1931, the vital years of this inquiry. The base of the index in the charts is changed during the period which the chart is stated to cover, inasmuch as the *basic rate of pay* is used up to the year 1930, and then a change is made from the basic rate of pay to a constructive rate of pay, arrived at by using the average annual compensation actually paid the employees in 1930 as compared with average annual compensation paid in 1928.

In view of this change in the base index, we do not consider the charts of value on the point now under consideration.

As regards the figures on which the constructive drop in wages in 1930 was based and which figures are intended to show that average wages were reduced by 10 per cent from 1928 to 1930, it must be noted that the matter under consideration is a proposed percentage reduction in *basic rates of pay*. These basic rates have not been reduced since the wage agreements of 1926 and 1927. But we feel that if average annual remuneration to all employees is to be made the basis of comparison, the year 1928 should be selected as the starting point, inasmuch as it was a peak year substantially above both 1927 and 1929. If the year 1927, in itself a year of good average annual wages, were taken, it would be found that the decrease to 1930 in average wages was not 10.5 per cent but only 1.2 per cent. If the year 1926 were taken, it would show that the 1930 average wages were not lower, but actually about 4 per cent higher than the average wages in 1926.

While our inquiry was concerned with basic rates of pay only, the Board felt that it ought to be informed not merely as to basic rates of pay, but also as to actual wages received, and it therefore requested figures showing actual average annual wages of the classes concerned during the years from 1926 to 1930 inclusive, which are as follows: 1926—\$2,206, 1927—\$2,305, 1928,—\$2,556, 1929—\$2,242, and 1930—\$2,278. It should be pointed out, that owing to the fact that every employee, however short a time he is employed, who is in the employ of the Company on the day when the monthly return to the Government is made, is taken into account in determining the average annual wage, the average figures underestimate the actual earning power of these employees who are employed practically the

whole of the year. The above averages are average earnings of all the employees concerned. But we were also furnished with statements of the average earnings of each class of employees for the year 1930 which statements are as follows:—

CANADIAN NATIONAL RAILWAYS	
COMPENSATION RECEIVED BY RAILWAY TRAIN SERVICE AND TELEGRAPH EMPLOYEES, AS SHOWN IN RETURNS TO GOVERNMENT, YEAR 1930.	
Class	Average annual income
Train Dispatchers and Traffic Supervisors..	\$3,201
Supervisory Agents' and Assistants..	1,972
*Station Agents — Non-Telegraphers (Small Stations)..	537
Signalmen (Non-Telegraphers) at Interlockers..	1,390
Station Agents—Telegraphers and Telephoners..	1,919
Yardmasters and Assistants..	3,085
Switch Tenders..	1,710
Hostlers..	1,795
Road Passenger Conductors..	2,977
Road Freight Conductors..	2,809
Road Passenger Brakemen, Baggage-men and Flagmen..	2,102
Road Freight Brakemen and Flagmen..	2,052
Yard Conductors and Yard Foremen..	2,281
Yard Brakemen and Helpers..	2,049
Road Passenger Engineers and Motormen..	3,254
Road Freight Engineers and Motormen..	3,248
Yard Engineers and Motormen..	2,549
Road Passenger Firemen and Helpers..	2,439
Road Freight Firemen and Helpers..	2,339
Yard Firemen and Helpers..	1,971
Total average..	\$2,298

*The non-telegrapher agents at small stations as reported above are agents in name only, as their duties are mostly those of caretakers. The minimum annual rate for a permanent station agent is \$1,524. If these non-telegrapher agents at small stations were taken out, the "total average" would be \$2,304.

Wage Bureau, November 23, 1931.

Total average..	<u>\$2,310</u>

Montreal, November 21, 1931.

It was further brought to our attention that reductions in earning capacity had been suffered by numerous other classes of railway employees either by actual percentage reductions or in some other way, which meant reduction of operating costs to the railways and less earnings to the employees. On the other hand, as will appear, from the average earnings above set forth, the men concerned in the present dispute who are employed (with certain minor exceptions notably the firemen in certain districts, who, we are informed, have to some extent shared the available work), are in receipt of substantially the same amount of actual remuneration as since the last important wage increases were made; and the scope of this inquiry does not cover those who are unemployed.

Moreover, we have endeavoured from the figures of the Department of Labour to compare the earning position of the men engaged in this dispute with that of men in other callings, and have come to the conclusion that the earnings of the classes before us are, broadly speaking, very substantially higher than those of men of relatively the same amount of training and preparation in other callings.

We believe, further, that the great majority of people in Canada, whether their income is derived from wages, salaries, professional services, interest or dividends, have suffered substantial decreases in their annual income—we believe in very many cases much more than 10 per cent.

Under all the circumstances we feel that a substantial measure of justice would be done if the classes before us would accept the 10 per cent reduction in basic rates now proposed. In other words we feel that the employees engaged in this dispute can accept the decrease requested, not only without being relatively in a worse position than they were in when the last agreements were made, but without making a reduction in income relatively greater than that already taken by a very large number of their fellow citizens.

We have not overlooked one general argument—in addition to arguments specifically concerned with wages and the cost of living—which was made by the employees in the fol-

lowing terms: "It is held by the men employed on the Railways, members of these Organizations, that to curtail by ten per cent the earnings of twenty-six thousand or more reputable and substantial citizens at the various terminals and elsewhere throughout Canada would only tend to increase the business depression now, and for some time, so seriously in evidence, by decreasing by ten per cent the ability of this large number of citizens to purchase the commodities used in the everyday life of Canadian homes."

We fail to see how, if a case for reduction in wages is made out on other grounds, it can be successfully met by this argument. While there may be some validity in the contention that if wages could be generally kept up business would be better, and while it may be argued that by a concerted action to maintain wages and prices on a far-reaching scale throughout the world at the beginning of the depression, the present depression might have been avoided, this did not in fact happen and it is the actual situation at the present with which we must deal.

Having regard to the practically universal deflation in prices and the widespread decline in incomes whether from earnings or dividends, the suggestion that a small section of the community should have their wages kept up is doubly objectionable. In the first place even assuming that the maintenance of wages of this small section of the community would maintain a larger spending power than if the proposed reduction is made—and we think this an unwarrantable assumption inasmuch as it may just as well be argued that the result of the decrease will be merely a transference of spending power—the effects on general business conditions would not be important. In the second place it would have the unfair effect of placing on the railways and through them on the community in general the burden of preferential treatment of this small section of the community. We cannot believe it is economically sound to put this burden on the Railways.

In the case of the Canadian National Railways particularly it would appear to work a manifest inequality as, owing to the fact that the public pays the deficits it is clear that the effect of the employees' proposal would be that the whole community of which they are such a small part shall continue to contribute to these classes the amount of the present proposed wage decrease. Without labouring the point further we repeat that we have not been able to accept the validity of this argument.

We quoted above the statement of the railways to the effect that, it is admitted that in-

creases in costs of living and increases in railway earnings justify increases in rates of pay. This principle has been accepted and acted upon in the past and it is our earnest hope, and we believe it to be just, that if this decrease is now accepted, the restoration to the employees, as soon as conditions sufficiently improve, of any reductions which they have accepted, should have the sympathetic attention of the railways, and we understand from what the railways, themselves, have said at the enquiry, that it is their full intention to do so.

On careful consideration of all the evidence, statements and arguments presented, the

undersigned have come to the conclusion, that according to the merits and substantial justice of the case there should be a ten per cent reduction in the basic rates of pay of the employees concerned, and that such reduction should apply to all wages hereafter payable by the railroads and earned after the 15th day of November, 1931.

All of which is respectfully submitted.

(Sgd.) J. M. MACDONNELL,
Chairman.

(Sgd.) ISAAC PITBLADO,
Member of the Board.

MONTREAL, November 30, 1931.

Minority Report

In the minds of many people it is considered a matter of regret when members of a Board of Conciliation are unable to present a unanimous decision to the Minister of Labour. I am by no means confident that such should be the case, especially when we know that intelligent people often reach conflicting and contrary conclusions based upon facts upon which they may agree. Confusion becomes worse confounded when there is a disagreement as to facts or as to the presentation of these facts. I have, therefore, no apology to offer because I do not agree with my friends and colleagues on the Board.

This Board was constituted for the purpose of investigating the justice and fairness of notices served by the Canadian National Railways, the Canadian Pacific Railway, and certain subsidiary railways, for a revision of agreements between these railways and certain of their employees, including locomotive engineers, locomotive firemen, conductors, trainmen and telegraphers for a reduction of ten per cent in the basic pay set forth in the aforesaid agreements. During the course of the investigation much material and many statistics were placed before the Board by both sides in the case. The members of the Board in addition to hearing the evidence presented and studying the facts submitted to them have attempted to bring the parties to the dispute together in the hope that they might agree to some arrangement which would be mutually satisfactory, but unfortunately they have met with no success nor has the Board itself been successful in reaching a unanimous decision.

I have referred to the mass of material that has been presented to the Board. Some of it has not been pertinent to the matter under discussion but most of it has been helpful. In addition it might be supposed that so much material would only confuse the issue and darken counsel, but in my opinion that has not been the case, for I am sure that there

are a few salient facts which stand forth as beacons to us and those salient facts which have influenced my judgment I shall endeavour to present.

In the first place, the railway companies have placed great stress upon their unfortunate and regrettable financial position. This must to a certain extent be conceded but it is doubtful whether the railways are justified in their statement that "they believe the decrease in rates of pay proposed to be essential in securing the necessary improvement in the financial results of their operations." We have been told that the railways expect to obtain a sum of \$2,500,000 to \$3,000,000 each per annum from the proposed reduction of ten per cent. The question that occurs to me is whether this comparatively small saving in expenses is worth while under the circumstances and considering the consequences. Are there not other and more productive economies?

The railway employees contend that they have already contributed their share inasmuch as they are collectively receiving much less. To this the railway officials reply that this may be so but that individually the employees are earning about as much now as in previous years. This is a difficult point. It is not much help to know what the men on good runs are actually receiving. I am aware, too, of the difficulties that arise when we consider average annual earnings of the employees but I know of no better test. Taking these for what they are worth we know that in 1929 the average annual earnings of the employees concerned were 8.4 per cent lower than in 1928, and in 1930 they were 10.5 per cent lower than in 1928. During the same period the cost of living shows an increase of 1 per cent in 1929 over 1928 and drops only 1.3 per cent in 1930 as compared with 1928. It is only fair to add that 1928 was a peak year and there was some carry over to 1929.

Moreover the railways advance the claim that a reduction in wages of ten per cent will

leave the employees no worse off, in fact will leave them better off than before as a result of a lower cost of living. In support of this claim charts have been submitted in which basic wages and living costs are based upon the year 1920. These charts show a very marked decrease in the cost of living since that year and a comparatively small decrease in basic wages. The employees counter by choosing 1926 as the base year for prices for the reasons that 1920 was a year of abnormally high prices and that the Dominion Bureau of Statistics has advocated the choice of 1926 and uses it in calculating the changes in cost of living as well as changes in wholesale prices. The charts presented by the employees purport to show that there has been an actual reduction in real wages. The railway officials claim that this is not so, for the reason that the base of the index is changed from basic rate of pay until 1930 to a constructive rate based on the average compensation in 1930. There is no doubt that the index was so changed and this change and the reasons for it should have been pointed out and explained by the employees. At the same time I am of the opinion that this change is quite justifiable and the conclusions therefrom sound. It is true that the year 1928 was a peak year for railway earnings and actual wages paid, but I consider that the year 1928 was the only year that could consistently be chosen as it was the first year which fully reflected changes in wage rates as established by action of the railways themselves during the years 1926 and 1927.

Moreover I do not think that the railway officials are justified in comparing cost of living figures in a particular month of one year with the same or any other month of another year. In laying stress on this point and even at the expense of repetition, may I add that in attempting to compare cost of living statistics in any one year with those of another year I should not select one month in the first year and compare it with another or even the same month in the second year for the reason that one month is not representative of the entire year. What I think should have been done was to compare the monthly average for a whole year with the monthly average for another. Statistics for 1931 being available for nine months only, should have been compared with the similar period of 1930. If this had been done, the picture presented to the Board would have been quite different and much less favourable to the contention advanced by the railways. Moreover the employees have contended, and I agree with their contention, that their standard of living has risen. Many of those things which used to be considered comforts or even luxuries are now necessities. No one will deny that this is desirable, but the effect is that cost of living has to that

extent increased and this increase is not reflected in the cost of living figures.

The employees have placed much emphasis on their contention that their wages should not be lower than those of men doing similar work in the United States. It would be difficult to maintain this contention for all occupations although much can be said for it on account of the fact that living and working conditions are much the same in Canada and the United States. This is particularly true of railway employees in the two countries, and if a reduction of ten per cent in wages is put into effect in Canada the existing differences in wages is increased to that extent. From my knowledge of the situation and from the facts that have been presented to the Board I am under the impression that increases in the wages of railway employees in the United States since 1918 have been an important factor in bringing about increases in wages in Canada and I am naturally led to conclude that a reduction in railway wages in Canada is premature if we consider this phase of the controversy by itself.

I trust that it will not be considered an intrusion of the academic point of view to suggest that a decrease in wages during the present depression is undesirable in that it curtails purchasing power. I do not suggest that wage earners are the only purchasers but I submit that their earnings are more likely to be spent in buying commodities than are the incomes of the other classes of society. Many economists are of the opinion that wage cuts only accentuate the downward movement in prices. If this is so and I think that it is so, I am of the opinion that a cut in wages so serious and so widespread as the one proposed is a grave mistake. Probably the most accurate conclusion is that wages may properly be cut where such cuts would increase the amount of wage payments, and should be maintained where cuts would diminish the volume of wage payments. The present proposed reduction in wages would undoubtedly diminish the amount of wage payments. Indeed the reduction is suggested for that purpose and that purpose only.

I have only one point more to advance in support of my views. I feel sure that economic conditions in this country are beginning to show signs of improvement. My conviction is partly an emotional one and is partly based on facts that have been placed before this Board. If I am not mistaken in my analysis of the situation, I contend that this is a most inopportune time for reducing wages. My conviction is that better times are at hand, better times both for the railways and the employees.

(Sgd.) J. C. HEMMEON,

Member of the Board.

STRIKES AND LOCKOUTS IN CANADA DURING NOVEMBER, 1931

THE number of strikes and lockouts in existence in Canada during November was eleven as compared with sixteen the preceding month. The number of workers involved and the time loss involved showed a similar decline. In comparison with the figures for November, 1930, almost twice as many strikes and lockouts were recorded, a corresponding increase appearing in the time loss; the number of workers involved, however, showed a small decrease, owing largely to a strike of 1,300 coal miners in Nova Scotia last year.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Nov., 1931..	11	1,660	22,489
*Oct., 1931..	16	3,072	38,529
Nov., 1930..	6	,000	11,807

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Six disputes, involving approximately 1,200 workers, were carried over from October, and five disputes commenced during November. Of the eleven disputes in progress during the month, five were recorded as terminated, two being in favour of the workers concerned, one resulting in a compromise, and the result of two being recorded as indefinite. At the end of November, therefore, there were six disputes recorded as strikes or lockouts, namely: photo engravers, Toronto, Ont., London, Ont., Montreal, P.Q., Quebec, P.Q., and Winnipeg, Man.; motion picture projectionists, Montreal, P.Q.; women's clothing factory workers, Toronto, Ont., cooks and waiters, Edmonton, Alta.; men's clothing factory workers, Montreal, P.Q.; and motion picture projectionists, Edmonton, Alta.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not yet declared terminated. Information is available as to four such disputes, namely: motion picture projectionists, Ottawa, Ont., Feb. 23, 1931, one employer; photo engravers, Toronto, Ont., Mar. 23, 1931, one employer; cloak-makers, Winnipeg, Man., Oct. 27, 1931, one employer; and sawmill workers, Barnet, B.C., Sept. 23, 1931, one employer, the two last disputes being added to this list this month. The strike of coal miners in one colliery at Sphaughnessy, Alta., which commenced on January 15, 1931, and has been carried in the above list for some months, appears to have lapsed during November and has consequently been removed from the list.

In connection with the strike of linemen employed by the electric, light, heat and power company at Montreal, which terminated August 22, 1931, a number of the former employees were charged with criminal offences (LABOUR GAZETTE, Sept., 1931, p. 978). During November the court proceedings were concluded. Two pleaded guilty to the charge of committing damage, and nineteen pleaded guilty to charges of conspiracy, the charges of committing damage being dropped. All were sentenced to terms of imprisonment from fifty days to twenty-three months. A union official charged with conspiracy was acquitted.

In Toronto, Ont., about November 20, 1931, it was reported that stage hands and musicians in one theatre were involved in a dispute, when on the termination of their agreement with the management, the musicians were notified that the theatre was to operate under a new management. Information secured by the Department, however, is that the dispute did not constitute a strike or lockout, and that an agreement was signed with the stage hands.

Information has been received too late to be included in the statistical table as to a strike of some twenty-five employees in a women's clothing factory in Toronto about November 25, 1931, in protest against a wage cut for operators and pressers. After two days, it is reported, a compromise was reached and the strikers returned to work.

The Mine Workers' Union of Canada called out on strike on November 12, 1931, its locals in Alberta in protest against the Provincial Workmen's Compensation Board's decisions in

cases affecting miners. Information secured by the Department is that most of the mines were working only certain days per week and that on November 12 very few mines were operating. At Coleman and Cadomin, as the mines were not operating, the miners held meetings and demonstrations.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

WOMEN'S CLOTHING FACTORY WORKERS (CLOAKMAKERS), WINNIPEG, MAN.—This dispute, affecting the establishment of one firm in Winnipeg, commenced on October 27, 1931, when the employer discharged three cutters, the Industrial Union of Needle Trades Workers declaring a strike in the shop. The resident officer of the Department of Labour, in conjunction with the mayor and others, attempted to bring about a settlement, holding

STRIKES AND LOCKOUTS IN CANADA DURING NOVEMBER, 1931

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
(a) Strikes and Lockouts in Progress Prior to November.			
MANUFACTURING—			
<i>Textiles, Clothing, etc.—</i>			
Women's clothing factory workers (cloakmakers), Winnipeg, Man.	70	900	Commenced Oct. 27, 1931; against discharge of workers; plant closed down about Nov. 18, 1931; indefinite.
<i>Printing and Publishing—</i>			
Photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., Winnipeg, Man.	100	2,500	Commenced May 4, 1931; for union agreement; unternminated.
<i>Other Wood Products—</i>			
Sawmill workers, Fraser Mills, B.C.	650	11,000	Commenced Sept. 17, 1931; for increase in wage and recognition of union; terminated Nov. 23 1931; compromise.
Sawmill workers, Barnet, B.C.	360	4,000	Commenced Sept. 23, 1931; against decrease in wages; plant closed down Nov. 14, 1931; indefinite.
SERVICE—			
<i>Recreational—</i>			
Motion picture projectionists, Montreal, P.Q.	44	1,100	Alleged lockout; commenced Aug. 27, 1931; re union wages and working conditions; unternminated.
<i>Business and Personal—</i>			
Cooks and waiters, Edmonton, Alta.	6	150	Commenced Sept. 29, 1931; for union wages and working conditions; unternminated.
(b) Strikes and Lockouts Commencing during November, 1931.			
MANUFACTURING—			
<i>Textiles, Clothing, etc.—</i>			
Women's clothing, factory workers, Toronto, Ont.	23	23	Commenced Nov. 2, 1931; against reduction in piece-rates; terminated Nov. 3, 1931; in favour of workers.
Women's clothing factory workers, Toronto, Ont.	200	2,000	Alleged lockout, commenced Nov. 19, 1931; for union wages and working conditions; unternminated.
Men's clothing factory workers, Montreal, P.Q.	125	500	Commenced Nov. 26, 1931; against alleged violation of agreement; unternminated.
SERVICE—			
<i>Public Administration—</i>			
Truck drivers, Hamilton, Ont.	75	225	Commenced Nov. 14, 1931; for increase in wages; terminated Nov. 17, 1931; in favour of workers.
<i>Recreational—</i>			
Motion picture projectionists, Edmonton, Alta.	7	91	Commenced Nov. 14, 1931; for payment of wages in arrears; unternminated.

meetings with both parties to the dispute, but with no definite results. About the middle of November four strikers were arrested on assault charges rising out of a clash between the picketers, strike breakers and the company officials, three of those taken into custody being also charged with intimidation. It was reported that assault charges would also be laid against two officials of the company alleged to have been involved in the disturbance. The company then secured an injunction against further picketing, but about November 18 closed the plant down, stating that only the office staff would remain at work and that no new help would be taken on until about the middle of January. Although the pickets were withdrawn owing to the injunction, the union still considers the strike as in progress. The dispute is, therefore, added to the list of strikes and lockouts which, although employment conditions are no longer affected, have not been called off by the union.

PHOTO ENGRAVERS, TORONTO AND LONDON, ONT., MONTREAL AND QUEBEC, P.Q., AND WINNIPEG, MAN.—This dispute which commenced on May 4, 1931, in several establishments operated by one company, owing to a demand that the union agreement be renewed, was reported by the union to be unternminated at the end of November, although the employer claimed to have replaced all the strikers shortly after the commencement of the dispute.

SAWMILL WORKERS, FRASER MILLS, B.C.—This dispute, commencing September 17, 1931, arising from a demand for increases in wages and recognition of union, was terminated on November 23, 1931, the employees accepting the concessions made by the management. As stated in the November issue of the *LABOUR GAZETTE*, a vote of the strikers had been taken by the municipal officials on the terms offered by the management, but only a small number had voted. During November, however, as the result of discussions between the parties concerned and Dominion, provincial and municipal officials, another vote was taken, the members of the union and the non-union strikers voting separately, and the terms of the management were accepted on November 20. Work in preparing the mill for further operations was beginning on November 23, and it was stated that early in December nearly all the former employees would be again employed.

SAWMILL WORKERS, BARNET, B.C.—The establishment affected by this dispute, commencing September 23, 1931, and arising from a protest of the workers against decreases in wages, was closed down by the management

on November 14, 1931. The dispute is, therefore, recorded as terminated, but the union has reported the strike as in progress at the end of November. The dispute is, therefore, added to the list of strikes and lockouts which, although employment conditions are no longer affected, have not been called off by the union.

MOTION PICTURE PROJECTIONISTS, MONTREAL, P.Q.—In connection with this dispute, commencing August 27, 1931, when a company operating nineteen theatres in Montreal refused to renew the union agreement and discharged some operators, during November three members of the union charged with offences in connection with picketing in September were acquitted; but they still face contempt of court proceedings for alleged failure to comply with an injunction against picketing issued in the Superior Court (*LABOUR GAZETTE*, November, 1931, p. 1181). At the end of the month the dispute was unternminated.

COOKS AND WAITERS, EDMONTON, ALTA.—As reported in the *LABOUR GAZETTE* last month some of the workers involved in this dispute, which commenced on September 29, 1931, on the question of union wages and working conditions, have secured work elsewhere. A number of strikers, however, are still receiving strike pay, and at the end of November no termination had been reported.

WOMEN'S CLOTHING FACTORY WORKERS, TORONTO, ONT.—On November 2, 1931, some twenty-three workers, members of the Industrial Union of Needle Trades Workers, became involved in this dispute in one establishment in Toronto, owing to the proposal of the management to introduce a reduction in piece-rates, stated by the company to amount to ten per cent and by the union to twenty per cent. The officials of the firm requested a conference with a committee of the union and of the workers, as a result of which the proposed wage reduction was withdrawn. Work was resumed the next day under a verbal agreement that the old rates of wages would be paid.

WOMEN'S CLOTHING FACTORY WORKERS (CLOAKMAKERS), TORONTO, ONT.—This dispute is stated by the union to have commenced on November 19, 1931, when two firms having agreements with the International Ladies' Garment Workers' Union in force until January 1, 1932, instituted a change in methods which involved discharging a number of workers. The union claims that the terms of the existing agreement were violated and some of its members were locked out. The employers state that the closing-down of certain

sections of their plants made it necessary to discharge the workers employed in those sections. Several meetings were held between the parties involved, but at the end of November the dispute was unterminated.

MEN'S CLOTHING FACTORY WORKERS, MONTREAL, P.Q.—Employees in one establishment in Montreal ceased work on November 26, 1931, alleging that the union agreement had been violated when work was sent out to non-union shops. A settlement is reported to have been effected early in December.

MOTION PICTURE PROJECTIONISTS, EDMONTON, ALTA.—This dispute, involving one theatre in Edmonton, commenced on November 14, 1931, the workers desiring to enforce the demand of

the members of the Motion Picture Projectionists' Union that arrears of wages due its members employed in that theatre be paid in full. At the end of the month no settlement had been reported.

TRUCK DRIVERS, HAMILTON, ONT.—This dispute, involving some seventy-five truck drivers engaged at unemployment relief work, occurred on November 14, 1931, the drivers demanding an increase to the prevailing rate of wages paid by the city for their class of work. The mayor of the city and members of the Board of Control interviewed the authorities concerned, with the result that it was agreed that the truck drivers should receive the rate demanded, and work was resumed on November 17, 1931.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue for February, 1931, in the review of Strikes and Lockouts in Canada and other countries, 1930. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates.

Great Britain

During October, the number of disputes which began was 28 and 8 were still in progress from the previous month, making a total of 36 disputes in progress during the month, involving 13,600 workers with a time loss of 55,000 working days for the month. Of the 28 disputes beginning in the month 8 were over proposed reductions in wages, 9 on other wages questions, 2 on questions as to working hours, 4 on questions respecting the employment of particular classes or persons and 5 on other questions. Settlements were reached in 31 disputes during the month, of which 8 were in favour of workers, 11 in favour of employers and 12 ended in compromises. In the case of two other disputes, work was resumed pending negotiations.

France

Figures for the second quarter of 1931, show the number of disputes in April as 30, involving 2,920 workers; in May, 23 involving

2,095 workers; in June, 33 involving 2,252 workers. Over two-thirds of all these disputes were over wage questions.

Sweden

The number of disputes reported for the year 1930 was 261 involving 20,751 workers with a time loss of 1,021,000 working days for the year.

Australia

During October a dispute occurred in the meat export works in Victoria affecting about 2,000 workers. The dispute, which began on October 14, was caused by a demand by the slaughtermen for an increase in wages. These men were under an agreement which did not expire until the end of December and work was resumed October 23 with no change in the agreement.

During the second week in October, a strike of seamen began, involving a number of vessels at Sydney and later at Melbourne. These vessels were engaged in coastal shipping. The dispute, which was in protest against the dismissal of one fireman on a ship, was reported terminated November 4, when the seamen's union decided on a return to work.

United States

The number of disputes beginning in September was 98, and 89 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 46,029. The time loss for the month was 695,963 working days.

The strikes, involving 8,000 textile workers in New Jersey, which began on July 22 and July 27 and which were reported in the

November LABOUR GAZETTE were terminated in practically all of the mills during September and October, agreements having been reached.

During the last part of September silk hosiery workers in New Jersey numbering in all about 8,000 took part in a number of strikes when they refused to accept the new national agreement made between the silk hosiery manufacturers association and the union and affecting establishments in various parts of the country. This agreement provides for wage reductions amounting to from 30 to 45 per cent and for arbitration of all disputes. These strikes were ended by October 12 and the wage reduction accepted. At Milwaukee, Wisconsin, a four weeks' strike involving 1,600 silk hosiery workers against this same agreement also ended in favour of it, the reduction in wages being accepted.

On September 24, about 5,000 or 6,000 anthracite coal miners in the Wyoming district of Pennsylvania went on strike and by September 29, it was reported that about 20,000 men were out and the mines were closed. On October 12, work was resumed when the strikers agreed to observe the agreement.

The strike of 23,000 woollen textile workers at Lawrence, Massachusetts, which began October 5, against a proposed reduction in wages of ten per cent was reported in the previous issue of the LABOUR GAZETTE. On November 9, the plants were reopened and the majority of strikers applied for work, although only about 11,000 were immediately employed. One mill, however, which had previously employed 6,000 was closed indefinitely, and in addition about 3,000 strikers refused to return to work.

MINIMUM WAGES IN MANITOBA

Regulation Governing Employment of Women and Boys in Retail Stores

THE Minimum Wage Board of Manitoba has re-issued Regulation No. 12 (LABOUR GAZETTE, May, 1930, page 524), governing employment in retail stores in the province. The new Regulation applies to boys as well as to female employees, the Minimum Wage Act having been amended at the last session of the Provincial Legislature so as to provide for the inclusion of male employees under 18 years of age (LABOUR GAZETTE, May, 1931, page 503). The text of the revised regulation is as follows:—

REGULATION 12—RETAIL STORES—GOVERNING ALL WOMEN WORKERS IN ALL PORTIONS OF THE PROVINCE OF MANITOBA AND BOY WORKERS UNDER 18 YEARS OF AGE EMPLOYED IN GREATER WINNIPEG AND BRANDON, INCLUDING SHOPS, BOOTHS, STALLS, NEWS STANDS, DELIVERING AND MESSENGER SERVICES. (DEPARTMENT STORES AND MAIL ORDER HOUSES ARE COVERED BY REGULATION No. 2.)

1. *Conditions of Labour.*

(1) **Cleanliness.**—Every room and the floor, walls, ceilings, windows, and every other part thereof, and all fixtures therein, shall at all times be kept in a clean and sanitary condition.

(2) **Drinking Water.**—A sufficient quantity of safe, fresh drinking water within reasonable access of all workers, and on the same floor as any regular working room, shall be provided with sanitary appliances for drinking. A common drinking cup shall not be used. When the water is iced, the shall not be in the same container as the water.

(3) **Lighting.**—Artificial illumination in every work room shall be installed, arranged and used, so that the light furnished will at all times be sufficient for the work carried on therein and prevent unnecessary strain to the

vision or glare to the eyes of the worker. Each workroom shall be lighted from outdoors, with windows at least equal in size to one-eighth of the floor space, and opening on a street, lane or court at least ten feet wide, except where the work requires a low temperature or a subdued light.

(4) **Ventilation.**—There shall be 400 cubic feet of air space for each employee in each workroom. All windows and sashes, except show windows, shall open freely. Air shafts shall provide for a free circulation of fresh air. Storm sashes shall either be on hinges or have a portion at least eighty square inches in size, which can readily be opened. In any workroom which cannot be ventilated by these means, mechanical appliances shall be installed.

(5) **Toilet Rooms.**—There shall be provided suitable and convenient toilets, and when three or more women are employed these shall be separate from those used by the opposite sex, and the number of such toilets shall not be less than one to every twentyone (21) female persons employed at one time, or fraction thereof. Such toilets must be thoroughly ventilated, and must be kept in a clean and sanitary condition, and privacy assured at all times.

(6) **Wash Basins.**—Wash basins shall be provided in at least the proportion of one to twenty-five female persons employed at one time, or fraction thereof, and shall be separate from those used by the opposite sex. Individual towels, either cloth or paper, shall be furnished to the workers, and shall be kept in a clean and sanitary condition.

(7) **Temperature.**—There shall be a thermometer in each workroom, and the temperature during working hours shall be between 60 and 75 degrees Fahrenheit, except when the temperature outdoors exceeds 75 degrees Fahrenheit.

(8) **Health and Injuries.**—All machinery and danger points shall be protected as far as

possible by the best safety devices known. All protection possible against occupational diseases shall be provided. Each establishment shall keep a First Aid Kit to be approved by the Bureau of Labour, and at least one reliable member of the working force shall be trained in its use. Where five or more women are employed a couch or stretcher shall be provided for emergencies, and where no dressing room or similar apartment exists, a screen shall be provided.

(9) Seats.—Seats shall be provided in accordance with section 23 of "The Shops Act" in the proportion of one seat to every four employees of fraction thereof.

2. Hours.

(1) Women.—The hours of labour shall be not more than nine (9) hours in any day and not more than forty-eight (48) hours in any week, except that eleven and one-half (11½) hours may be worked on Saturdays. These hours shall be so arranged that each female employee in Greater Winnipeg and St. Boniface shall receive one-half holiday each week, except during the month of December. Employees in other portions of the Province shall receive one-half day off during the months of June, July, August and September. In establishments that remain open on Sundays, arrangements shall be such that the female employees shall have one free day each week in addition to the half day off.

(2) Boys.—The hours of labour shall be not more than nine (9) hours in any day except on Saturdays, when eleven and one-half (11½) hours may be worked. These hours shall be arranged so that no boy shall work more than fifty (50) hours in a week. Each boy shall receive one full day off in seven.

(13) Overtime. Overtime may be worked not oftener for any employee than thirty days (30) in one year. No overtime to exceed three (3) hours in any day nor six (6) hours in any week, except from December 15th to December 24th inclusive, and exhibition weeks, when nine (9) hours overtime may be worked. There shall be extra pay at not less than the regular rate for all overtime worked. A record of all overtime worked by each employee shall be kept in a manner convenient for examination by the inspectors.

(4) Lunch Hour.—At least one hour shall be allowed for lunch.

(5) Delays.—An employee waiting on the premises as required by the employer shall be paid for the time thus spent.

3. Wages.

(1) The Minimum Wage—Women.—No experienced employee of eighteen years of age or over shall be paid at a rate less than twelve dollars (\$12) per week.

(2) Inexperienced Employees.—No inexperienced employee shall be paid wages at a rate less than \$9 per week for the first four months of employment, and \$10 per week for the second four months, and \$11 per week for the third four months, after which period she shall be considered an experienced employee.

(3) Part Time Workers.—Employees working as part time workers shall be paid, if experienced, at a rate of not less than thirty

cents (30c.) per hour, and if inexperienced, at a rate of not less than twenty-five cents (25c.) per hour. The total number of inexperienced workers shall not exceed twenty-five per cent (25%) of the total experienced employees.

3a. Wages.

The Minimum Wage—Boys.—No boy under 18 years of age shall be paid wages at a rate less than eight dollars (\$8) per week for the first six months of employment; nine dollars (\$9) per week for the second six months, and ten dollars (\$10) per week after twelve months of employment.

Exception.—Messenger boys in drug stores shall be paid wages at a rate of not less than eight dollars (\$8) per week. Boys working as part time workers at night shall be paid wages at a rate of not less than fifteen cents (15c.) per hour.

Women and Boys.—

Method of Payment.—Wages shall be paid weekly and after each week's wages have been earned they shall be paid within three days.

Statutory Holidays.—No reduction shall be made from the minimum wage for statutory holidays.

Uniforms.—If special uniform is required it shall be furnished and laundered by the employer without cost to the employees. No girl or boy under fourteen (14) years of age shall be employed.

4. Board, Lodging, Etc.

Where lodging is furnished by the employers, there may be deducted from the wage rate a sum which shall be not more than at a rate of two dollars (\$2) per week and for board at not more than at a rate of four dollars and a half (\$4.50) per week, or one dollar and a half (\$1.50) per week, if one meal is supplied each working day; or three dollars (\$3) per week if two meals are supplied each working day; or twenty-five cents (25c.) for each meal if the number supplied is less than one each working day. For both lodging and board at not more than at a rate of six dollars (\$6) per week.

5. Permits of Exemption.

The Board may issue a permit upon application therefor to any employer, granting modification of or exemption from these regulations. Such permits will be issued only in cases of exceptional or emergent conditions arising.

6. Penalty.

Any violation of these regulations is punishable by fine or imprisonment, or both. See "The Minimum Wage Act," Section 17.

7. Posting of Regulations.

Each employer shall keep a copy of these regulations posted in a conspicuous place.

This order becomes effective and of full force and effect from this date and all regulations and orders of the Minimum Wage Board appertaining to the above mentioned establishments made prior to the date hereof are hereby repealed.

All complaints are treated strictly confidential. Order No. 4, governing the employment of women and boys in beauty parlours and hair-dressing establishments, was outlined in the LABOUR GAZETTE, July, 1931, page 770.

WORKMEN'S COMPENSATION IN ALBERTA IN 1930

THE thirteenth annual report of the Workmen's Compensation Board of Alberta describes the work carried on under the Workmen's Compensation Act (Accident Fund) during the calendar year 1930. The total number of accidents reported for 1930 was 12,607, as compared with 14,899 in 1929. This decrease is considered to be connected with a reduction in the amount of payroll and number of persons employed during 1930. As, however, information as to payroll totals and employment during 1930 was not complete, the Board had not such data available at the time the report was published. The payroll for 1929 of all industries within the scope of the Act was \$106,117,134.03, and the number of persons employed during that year in those industries was 87,655.

Net assessments levied on employers during the year, together with those outstanding at December 31, 1929, totalled \$1,162,552.08, as compared with \$1,373,771.04 during the previous year. Of this amount, \$1,139,586.97 was collected, leaving \$22,965.11 unpaid at December 31, 1930.

Of the total of 12,607 accidents reported during the year, 49 proved fatal, 140 resulted in some permanent disability and 12,418 were of a temporary nature. Compensation covering temporary disability, totalling \$498,014.50 was paid, and 523,837.46 was transferred from the Accident Fund to the Pension Fund to cover awards in the case of permanent disabilities and fatal accidents. This amount, together with interest earned by the fund, \$116,999.46, less the amount paid to pensioners, \$401,536.87, brings the balance at the credit of this fund at December 31, 1930, to \$2,486,376.58, out of which 269 widows, 478 children, and 394 permanently disabled workmen are receiving monthly payments.

Under Order in Council, Privy Council No. 558, 1928, the Department of Pensions and National Health was required to refund to the Board the full costs of accidents to workmen who are in receipt of a pension of 25 per cent or greater on account of disabilities due to, or aggravated by war service. Through the provisions of this Order, an employer may give employment to a seriously disabled ex-service man without the risk of added accident cost on account of war disability. In this respect, the sum of \$11,670.68 was refunded to the Board by the Department of Pensions and National Health.

The administration expense during the year was \$98,551.17 as compared with \$94,736.58 for the year 1929.

The report contains the rates of assessment levied on the employers in each industry under the Act per \$100 of payroll. Among the industries with the higher rates of assessment are the following: steel building construction, \$6 (over four stories) and \$4; logging (woods operations), \$5; sawmills, shingle mills and planing mills, \$5; employment in or about coal mines, \$3.75; sewer construction (with blasting), \$4.50; fishing \$6; road-making (with blasting), \$3.75; manufacture of wooden boxes, \$3.50. There is also given the medical-aid rating under the various schedules, based on each shift or part thereof. In this respect, steel construction, logging, and saw mills, have the highest medical-aid rating, with 5 cents each per shift. With reference to this feature of workmen's compensation, which is only present in the Alberta and British Columbia Acts, it is explained that employers are authorized to deduct a sum as determined by the Board from the earnings of each workman in their employ for every day or part of a day worked. These deductions are forwarded to the Board at stated periods during the year, and credited to the Medical Aid Fund, out of which payments are made for medical service and hospital attention to workmen who have met with accidents in the course of their employment. The contributions for medical aid during the year totalled \$271,336.77, while payments for medical aid services amounted to \$264,779.62.

The statistics relating to the claims made during 1930 are summarized as follows:—

Number of employers within scope of the Act at December 31, 1931	4,149
Number of accidents reported in 1930 . .	12,607
Number of accidents and claims not fully disposed of at December 31, 1929	2,609
Number of claims disposed of by award of pension or payment of compensation	6,091
Number of claims disposed of by payment only of account for medical aid . .	4,186
Number of accidents disposed of for which no application for compensation was received	257
Number of accidents disposed of on which no compensation was due	3,262
Number of claims on which further payments have to be made	605
Number of accidents awaiting further reports and on which no payments have been made	815

Of the 12,607 accidents reported during the year the largest number (2,918) occurred in mining. The building group was second with 1,521 accidents, while class 15 (quarrying, brick and glass works, cement, etc.) was third with 1,440 accidents, and class 37 (warehouse,

cartage, elevators, power laundries, etc.) was fourth with 1,263. The most frequent cause of accidents was that designated as "flying and falling objects," followed by "falling and tripping" and "machinery tools and equipment." The time loss caused by permanent disability cases totalled 13,034 days, and by temporary disability cases, 133, 591 days. The number of accidents to minors (20 years and under) was 891; and to those of advanced age (60 years and over) was 219.

Accident Prevention, Mine Rescue and First Aid.—The report of the Mine Rescue and First Aid Department deals with operations under this head during the year. The activities of the Mine Rescue cars in the various districts, mine rescue training, and first aid classes are reviewed in detail. The section on accident prevention refers to the checking of accident reports, and the consequent information given to employers as to the necessary methods to adopt in the protection of workmen by providing guards on machinery, building scaffolding, providing ventilation equipment, etc. Reference is also made to the good accident prevention work of various plants and industries.

Explaining the relation of assessment rates to the accident records of each group, the report observes as follows: "We find many people have the opinion that all moneys received by the Workmen's Compensation Board are placed in a general fund and when an accident takes place the necessary amount to pay the claim is taken from this fund. The average employer sees no connection between the number and cost of accidents taking place in his industry and his rate of assessment. When he appreciates the fact that all industries are placed in their respective classification and the assessment rate determined by their accident cost, we are generally able to secure the mutual co-operation of employers and employées in accident prevention."

Included also is the report of the chief electrical inspector who reviews the operations of his department under the Electrical Protection Act. Since the Act became effective in 1920, a standard type of construction was adopted for the province, and regulations have been put into effect, revised and amended from time to time in order to keep pace with the rapid development of the industry. A list is presented of the cities, towns, and villages where wiring inspections have been made.

Workmen's Compensation in Saskatchewan

Additional regulations governing the operation of the Workmen's Compensation (Accident Fund) Act were recently approved by Order in Council. Earlier regulations under the Act were given in the *LABOUR GAZETTE*, October, 1931, page 1076; and January, 1931, page 35 and in previous issues.

Regulation No. 47.—Effective from January 1, 1932, regulation 47 provides as follows:

When less than (6) workmen are usually employed in a mining industry (including prospecting and development work) such industry is wholly excluded from the operation of the Act and is withdrawn from the class in schedule 1 in which it would otherwise be included.

Regulation No. 48.—This regulation provides for the listing of the Safeway Stores Limited (a retail mercantile business consisting of the selling of groceries, meat products and other food stuffs), under a new group in Class 18, under Regulation 32.

Regulation No. 49.—This regulation is a substitution of Regulation 18, and is as follows:—

Distributors of farm machinery and implements and repairs for and parts thereof for a manufacturer within or without the province, or for an agent of such manufacturer when such distributors are the primary source within the Province from which such goods may be obtained, are, as to all employees placed under group 5 of class 11, which new group (5) in class 11 is hereby created for the said purpose.

Mothers' Allowances in Saskatchewan

An Order in Council limiting the amount of mothers' allowances payable under the provisions of Part VI of the Child's Welfare Act (Statutes of Saskatchewan, 1927, chapter 60) was issued at Regina during October. The Act provides for the payment of an allowance to a woman who has one or more children under her care, being a widow or the wife of an incapacitated husband. The amount

of the allowance is not specified in the Act, but the total expenditure must not exceed the amount voted each year by the Legislature for this purpose. The new Order reads as follows:—

The Executive Council has had under consideration a report from the Minister in charge of the administration of the Child Welfare Act, dated October 16, 1931, stating that owing to the present economic conditions prevailing in this

province, the expenditure under the Child Welfare Act has increased to such an extent that it will be impossible to continue to make the payments at the present rate from the amount authorized at the last session of the Legislature; that the sum of \$263,955 has been expended for the support of deserving and indigent widows with children under sixteen years of age.

Upon consideration of the foregoing report and on the recommendation of the Minister in charge of the administration of the Child Welfare Act, the Executive Council advises that

the payments under the said Act shall not exceed the following amounts, to take effect as on, from and after the first day of October, 1931.

To a mother with one child.	\$ 8 00
To a mother with two children.	12 00
To a mother with three children.	16 00
To a mother with four children.	20 00
To a mother with five children.	24 00
To a mother with six children.	28 00
To a mother with seven or more children.	30 00

HEALTH UNITS IN THE PROVINCE OF QUEBEC*

Paper read before the American Health Association, Montreal, September, 1931, by Dr. Alphonse Lessard, Director of the Quebec Provincial Bureau of Health.

Up to 1926, as far as supervision of rural organization regarding Public Health is concerned, the Province of Quebec was divided into eighteen districts, each of them in charge of a medical officer of health, called inspector, under the immediate direction of an Inspector General. This medical officer, usually, but not always, residing in his district, supervised a certain number of counties, and it was not rare to see several of them having charge of the health protection of 60, 70 and even 90 municipalities. Deprived of the indispensable services of a nursing staff and of sanitary inspectors, the inspector was left alone to do the tremendous work arising in an immense territory with a large population. The consequence was that during the year many municipalities were overlooked, epidemics of all kinds were unnoticed, doctors were not pressed to declare their contagious cases, nuisances were not looked after; in other words, in spite of the devotion and zeal of these officers, we were condemned to wait year after year for adequate rural sanitation, which could only be established by means of an intensive educational campaign.

Certain efforts had, however, been made to reduce the consequences of the two principal scourges from which our population suffers, tuberculosis and infantile mortality, through the establishment of several regional anti-tuberculosis and babies' clinics in the various centres of the Province; but, apart from the educational value of these organizations, the

main thing was lacking—the scientific method of promoting public health—decentralization, and the creation of local systems under the central direction of a governing body.

Thanks to the good advice and help of the Rockefeller Foundation, to which the Province of Quebec will always owe a debt of gratitude, and to the good examples seen in so many States of the American Union by the heads of our Health Service, the County Health Unit system was put to trial a little more than five years ago in our territory. The task was not an easy one, and among the hardest difficulties which I foresaw when my good friend, Dr. Russell, made that a condition to the Foundation's help, was that of bringing the local authorities, County Councils, Municipal bodies to agree to the idea of making voluntary contributions on an ascending scale, to the heavy expenses involved in County Health Units.

The people of our Province, more than 85 per cent of whom are of French descent, language and mentality—patient under poor economic conditions, and eager to preserve their traditions—relied upon their splendid natality to enable them to survive, and delayed to give the necessary attention to improving methods of hygiene. It was when our people became more prosperous, when a decrease in the birth-rate began to be felt, that the whole people, including all classes, recognized the urgency of the problem.

We consequently began in 1926 the organization of our Country Health Units. Three were created during that year, one in 1927, four in 1928, five in 1929 (with a training school in addition), ten in 1930, and two at the beginning of the present year, forming a total of 24 units covering 30 counties, with a population of 800,000: that is to say, nearly 50 per cent of the rural population liable to be organized under that system. I am not aware of the exact progress accomplished in the same domain by any of the States of the Union during a similar period of time, but I

* The House of Commons, on March 3, 1930, adopted a motion "that in the opinion of this House, the government should take into consideration the advisability of making grants to the province equal to one-third of the cost of establishing, and to cover permanently such full time health units as may be organized." (LABOUR GAZETTE, March, 1930, page 253.)

hardly believe that so many Units were anywhere given birth during so brief a period as five years.

Instead of considering the County Health Units, as elsewhere, as a purely local and autonomous organization, responsible to the county authorities, the Quebec Provincial Bureau of Health sees it as an integral part of its general system. The direction for all the Units' activities comes directly from the central office. Appointed and paid by the Provincial Department, the personnel reports to us every week on all the work done. Money contributed by the counties, by the municipalities, by the Rockefeller Foundation, is sent to us, and we transmit it to the Provincial Treasurer, who keeps it in trust together with governmental appropriations towards the County Health Units. Thus there is uniformity in the methods and unity in the direction. As far as public health and its administration are concerned, direction, command and orders must come from the governing body, and our population is astonishingly willing to comply with such a system. Moreover, in many small towns or cities with a population of 6, 8, 10 or 15 thousand people, which were formerly provided only with a small part-time health service, we have taken into our hands the care of public health, conditionally on their agreeing to make a predetermined contribution; and the municipal authorities of these towns are so satisfied with the efficiency of the new system and are so glad to be free of the patronage evils, that they all tell us they would never consent to go back to their old regime.

Financing.—Our territory is very large—in fact, the Province of Quebec has the largest area of all the Provinces of Canadian Confederation. In certain parts the population is widely scattered, and some of our counties are themselves like provinces, being as large as some of the New England States. Some of them have a fairly large population, and the staff of certain Units must care for 45, 50 and 55 thousand people. The consequence is that the budgets of those Units must be necessarily high. However, in order not to discourage at the outset a population which is not accustomed to contribute big amounts of money towards public health, and considering also that the first duty of the State is to take the biggest share in the expense of a service benefiting the whole population, we have limited theoretically the average budget of a County Health Unit to \$12,000, and according to the Health Units law, we require from the County a contribution of one-fifth of that amount, say \$2,400 for the first year; the fourth, \$3,000 for the

second year; the third \$4,000 for the third year, and the half, \$6,000 for the fourth and the following years. In reality the budget always exceeds \$12,000; for example, the free distribution of sera and vaccines, the salaries and travelling expenses of additional nurses, the travelling tuberculosis and babies' clinics made by a staff of full time specialists: all these activities are provided entirely at the expense of the Province, in addition to the latter's share in the common outlay; and we may say that the amount spent in the average of our County Health is nearer to \$20,000 than to \$12,000.

In certain Counties whose valuation is low on account of the poverty of the population, we only ask for the first year the sum of \$1,000 as a beginning, the legislature having considered that a poor population often needs and deserves, more than a rich one, the blessing and the advantages of such an organization.

I understand that in States or Provinces elsewhere, all the moneys for public health purposes, as for other activities, must be voted by Legislatures, and that the estimates for such purposes cannot be exceeded during the financial year. In our Province it is different: when the Provincial Bureau of Health is requested by a County Council to create a Health Unit in the latter's territory, all the director has to do is to ask from the Provincial Treasurer the necessary amount, which is drawn from the Consolidated Revenue Fund; thus, without any previous vote of the Legislature, we have the power of creating 5, 10 or 15 new organizations as the case may be, and to proceed with their maintenance.

Dr. Lessard stated that the Rockefeller Foundation has contributed since 1925 large sums of money, though on a decreasing scale every year; and the moral as well as financial encouragement thus given, has done much to induce our population to adopt the new system and to tax themselves for the promotion of public health; and it is my privilege to-day to seize the present occasion, in the name of those to whom I am responsible and in the name of the Health Service of the Province, to extend to this great philanthropic body the expression of our deepest feelings of gratitude.

None of the thirty counties which organized units failed after the first year to renew and increase their contribution, because the population saw the benefits of such an organization. Some County Councils which had voted by a majority of only one or two in favour of the establishment of a Health Unit, voted unanimously and enthusiastically at the beginning of the second year the increased contribution required by the law. Our population

is sometimes slow in adopting new ideas and methods, but once they are convinced of their excellency, permanence is assured. We shall not relax our efforts until the entire Province, as far as the rural and semi-urban population is concerned, will be covered by the Health Unit System. There is a possibility of 50 or 55 units on our territory. We have already 24 Units covering 30 Counties; we had nearly one-half of the rural population organized

under the system in five years, and I am convinced that before five other years have elapsed, our program will be accomplished and our aim attained.

(Dr. Lessard next described the activities of the provincial Health Units in the fight against tuberculosis and diphtheria, and concluded his paper with a tribute to the high qualities of the doctors in charge of the Health Units.)

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Health Record for 1931

The *Statistical Bulletin* published by the Metropolitan Life Insurance Company reviews in its October issue the health records of the company's industrial policyholders in the United States and Canada for the first three quarters of 1931, and states that the record for the past year so far is in many respects the most remarkable of all years in the company's experience. "In the first place, it is almost unbelievable that the United States and Canada could experience such excellent health in a year of severe business depression and widespread unemployment. These are conditions which lead us to expect an increased death toll—especially among industrial wage-earners and their dependents, the very group who suffer most from the effects of unfavourable economic conditions. Again, the year's remarkable record has been made in spite of a bad beginning. In January, there was widespread prevalence of influenza and the death rate from that disease and from pneumonia rose sharply. So also did mortality from the principal chronic diseases, namely, heart conditions, diabetes, cerebral hemorrhage and nephritis, as invariably happens during an influenza epidemic. Increased death rates, as compared with 1930, were recorded during February and March, and, at the end of the first quarter, there appeared to be small prospects that 1931 would rank as an exceptionally good health year. Beginning with the second quarter, however, a distinct change for the better was observed. The April death rate, with two exceptions, was the lowest ever registered for that month; in May, a new minimum mortality rate for that month was recorded, and the second quarter established a new low figure for that part of the year. Excellent health conditions continued during the third quarter, especially among the coloured policyholders. The outcome, as already noted, is that the cumulative death rate now stands less than one per cent higher than the previous minimum. Indeed, among the insured living west of the Rocky Mountains,

and among Canadian policyholders, 1931, to date, has been the best health year on record."

First Aid on the Canadian National Railways

Accident prevention work on the Canadian National Railways has been brought recently within the scope of the co-operative management plan (the constitution of this plan was given in the *LABOUR GAZETTE*, May, 1928, page 487). The annual report of the C.N.R. for 1930, recently published, states that during that year first aid instruction cars travelled over the various regions and special attention was given to the instruction of employees connected with train and engine service and those stationed at remote points on the System. After much study with outside institutions a new standard train service first-aid package was determined upon, which it is believed will be satisfactory to the different compensation boards.

Physical examinations are now made by the Medical Services Department of the System every three months of dining, sleeping and parlour car service employees, with the object of protecting the public against communicable diseases. Examinations have also been made of various employees, including those over sixty-five years of age. Such examinations are stated to have saved approximately \$20,000, apart from other resultant benefits to the employees of the company. Much work has been done in regard to sanitation matters, such as ventilation of buildings, fumigation and the disinfection of stock, fish and other cars; to sewage disposal at stations and summer hotels; and more particularly to water supplies for trains, steamships and hotels as well as to the examination of all milk used by the company.

Code of Lighting for Factories

The United States Bureau of Labour Statistics had just published as Bulletin No. 556 in its Safety Code Series a "Code of Lighting: Factories, Mills, and other Work Places," being a revised edition of a code which was approved ten years ago by the American En-

gineering Standards Committee. The code is intended to serve as a guide for factory owners and operators in their efforts to improve lighting conditions in their factories. It makes available authoritative information for legislative bodies, factory boards, industrial commissions, and others who are interested in the framing of regulations for better lighting. Parts 1 and 2 of the code discuss the advantage of good illumination and describe the essentials of such illumination. Part 3 contains a set of regulations suggested for adoption by State authorities.

A preface to the Wisconsin Industrial Lighting Code is quoted as a statement of the reasons for the intervention of governments in the matter of factory illumination.

"Insufficient and improperly applied illumination is a prolific cause of industrial accidents. In the past few years numerous investigators studying the cause of accidents have found that the accident rate in plants with poor lighting is higher than in similar plants which are well illuminated. Factories which have installed improved lighting have experienced reductions in their accidents which are very gratifying. Of even greater importance, poor lighting impairs vision. Because diminution of eyesight from this cause is gradual it may take the individual years to become aware of it. This makes it all the more important to guard against the insidious effects of dim illumination; of glaring light sources shining in the eyes; of flickering light; of sharp shadows; of glare reflected from polished parts of the work. To conserve the eyesight of workers is a distinct economic gain to the State, but regardless of that, humanitarian considerations demand it. Finally, inadequate illumination decreases the production of the industries of the State and to that extent the wealth of its people. Factory man-

agers who have installed improved illumination are unanimous in the conviction that better lighting increases production and decreases spoilage.

Safeguarding New Employees

The Director of Industrial Hygiene of the New York State Department of Labour recently called attention to the special liability to accident to which new employees are subject. "The new man is the old man returned to work after a long period of unemployment," he said. "He is unfamiliar with his new job; perhaps unfamiliar with steady wages, good food, proper clothing. He has, in fact, been through bad times. He is glad to get work, eager to do it, but, and this is the burden of the story, he is far more subject to accident than the man who has been steadily at work and an accident in such circumstances is a double tragedy. His proneness to accidents is due to many causes besides the mere fact of his previous unemployment. It is due to his unfamiliarity with new environment, the new work; the strange workers, lights, doors, benches, machines with which he is surrounded. He has to become familiar with all these before he gets into his gait and until he does so, he is a hazard to himself and to his fellow employees. Thousands of these new men will crowd into industry before long; thousands of accidents will result from their employment if the employer does not make a special effort to deal with the problem their arrival presents. What should be done about it is clear enough. The new employee should be given special attention from the start; he should be trained in his work. The dangers that surround him should be pointed out; each new man should have a "sponsor" who is definitely assigned to "put him wise."

Unemployment in Australia

The Acting Commonwealth Statistician of Australia recently analysed the employment situation in the Commonwealth during the third quarter of 1931 as follows:—

"The percentage of unemployment in the trade unions which report it shows little change in the third quarter of this year. There is a small increase for the whole of Australia from 27.6 per cent to 28.3 per cent. The increase is much less than that recorded for any of the five preceding quarters, and is in fact the smallest increase since unemployment began to increase at the beginning of 1929. . . . It must be expected that the revival of employment will lag a little behind business activity when it begins to revive. Many employers are keeping their payrolls a little larger than is strictly necessary for the present

business, so that there will be little slack to take up when business begins to mend. On the whole the information available gives some ground for believing that bedrock has been reached, and that in the next quarter there will be a small but real improvement in the absence of any further collapse overseas or international troubles."

The statistics appended to the statistician's statement show that for the third quarter of 1931, 396 unions reported on unemployment. Their returns showed a membership of 426,603. The percentage of unemployed members of trade unions in the various States for the same period was: New South Wales, 31.6; Victoria, 26.8; Queensland, 16.9; South Australia, 33.3; Western Australia, 27.9; Tasmania, 27.3.

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

Films on Education for Apprentices

The apprenticeship branch of the Department of Labour of Ontario recently decided to send to Ottawa films connected with the work of the apprentices in their technical training. The Ottawa Trades and Labour Council approved the idea and pledged its co-operation in recommending the citizens to see the film when it is produced.

Agricultural Education in Canada

A letter containing a cheque for \$20,000 to aid in the spreading of agricultural education among farm boys and girls of Canada was received early in December by the Hon. Robert Weir, Minister of Agriculture, Ottawa, the gift coming from Mr. George A. Ranney, vice-president and treasurer of the International Harvester Company. The money is to be devoted to the Canadian Council of Boys' and Girls' Club Work, and a permanent trust fund will be established, the income from which will be used in furthering the movement. The fund will be known as the International Harvester Company of Canada Limited Endowment for Boys' and Girls' Club Work, and is in commemoration of the invention of the reaper by Cyrus Hall McCormick in 1831, just 100 years ago.

The boys' and girls' clubs are spread all over Canada, each specializing on some form of agricultural production. They include calf clubs, poultry clubs, swine clubs, grain, potato, colt, sheep and orchard clubs. Mr. R. Duncan, director of extension work of the Ontario Department of Agriculture, is chairman, and Mr. W. V. Longley, holding a similar position in Nova Scotia, is vice-chairman. The council itself is composed of representatives of the Dominion Department of Agriculture, the provincial Departments of Agriculture, the railways, and of a number of industrial concerns.

Necessity for Vocational Guidance

The case for vocational guidance was laid before the recent annual convention of the Winnipeg Teachers' Association, by Mr. Herbert I. Troyer, executive secretary of the Canadian Educational Guidance movement. "Vocational guidance," he said, "does not mean helping boys and girls to find work, though that is involved, nor does it mean the act of one individual in advising or prescribing a vocation for another individual. It is the bringing to bear on the choice of a vocation,

organized information and applied common sense. Modern scientific guidance involves six steps—self discovery through self-analysis; job analysis by means of accurate information; intelligent choice as opposed to blind drift; adequate preparation as against short cuts; sympathetic placement in an occupation, and directed progress by way of adjustment to jobs."

Courses of Study for Apprentices

The Apprenticeship branch of the Ontario Department of Labour, Toronto, recently issued courses of study covering the following building trades:—bricklaying, stonemasonry, plastering, plumbing, steamfitting, sheet metal work, and electric installation. The courses contain an outline of each lesson to be given to the apprentices. The material and equipment to be used are described, references are given to definite sections of books for each course, and blue prints show in a graphic way the work which has to be covered for each course.

Arbitration of Dispute involving Clothing Workers at Hamilton, Ont.

Under the terms of the agreement between the Amalgamated Clothing Workers of America and Firth Brothers Limited, Hamilton, Ont., similar to that with a certain manufacturer in Toronto (LABOUR GAZETTE, October, 1931, p. 1139), a dispute as to changes in wages was referred to arbitration. The Impartial Arbitrator provided for under the agreement was Mr. H. F. Fester, member of the Ontario Minimum Wage Board, Toronto, and the case was dealt with on October 17, 1931. The employer had proposed a reduction in wages of twenty per cent owing to industrial depression. The workers objected on the ground that earnings under existing conditions were too low to maintain the workers decently and concessions had been made which were of advantage to the employer equal to wage reductions and that demands for improved quality had slowed up work, reducing the earnings of workers, most of whom were piece workers. The arbitrator decided that wages should be reduced ten per cent, effective from October 19, 1931, until other arrangements were made.

The City Council of Toronto passed a by-law on December 1 requiring clothes cleaning and pressing establishments to close every evening at 7 o'clock.

LEGISLATIVE PROGRAMS OF LABOUR ORGANIZATIONS

Ontario Executive Committee of the Trades and Labour Congress of Canada

The Ontario Executive Committee of the Trades and Labour Congress of Canada, consisting of Messrs. Humphrey Mitchell, M.P. (chairman), Hamilton; Ald. Rod Plant, Ottawa; and Ted. Jackson, Toronto, accompanied by President Tom Moore and Vice-presidents Simpson and Tallon of the Trades Congress and a large delegation of representatives of Trades and Labour Councils, District Councils and local international craft unions, waited on the Hon. G. S. Henry, Premier of Ontario, and members of his cabinet on November 26, and presented a program of desired legislation. The Cabinet ministers present with the Premier, were: Hon. Col. W. H. Price, Attorney-General; Hon. J. D. Monteith, Minister of Public Works and Labour; Hon. W. F. Finlayson, Minister of Lands and Forests; and Hon. G. H. Challies, Provincial Secretary.

Paramount in the program presented was the question of unemployment, with which were coupled under-employment and unemployment insurance. This question was further dealt with in a specially prepared brief, which covered many phases of the problem and set forth the policies of organized labour, as represented by the Trades and Labour Congress of Canada. It directed attention to the fact that the Congress had been dealing with the question of unemployment ever since its inception, and that the requests presented were the result of mature thought and deliberation. From the discussion which ensued on the various remedial measures proposed, it was revealed that in some instances action was being taken by the government in harmony with the requests. (The views of the Trades and Labour Congress on the subject of unemployment were set forth in the report of the recent convention at Vancouver, *LABOUR GAZETTE*, October, 1931, page 1083.)

Workmen's Compensation Act.—Attention was drawn to the fact that desired changes to the Workmen's Compensation Act had been submitted to Justice Middleton, who was appointed by the government to enquire into the matter, and the hope was expressed that the report would be made before the opening of the Legislature, so that amendments to the Act, in accordance with requests presented, may be introduced by the government. (The appointment of Mr. Justice Middleton was noted in the *LABOUR GAZETTE*, February, 1931, page 122.)

Regulations Governing Motor Trucks and Buses.—The government was asked to enact the following regulations:

(1) Providing for an eight-hour day and one day's rest in seven for drivers of motor trucks and buses, failing in this that the present ten-hour day be rigidly enforced.

(2) That motor transportation companies be placed under the jurisdiction of the Board of Railway Commissioners of Canada, or some similar authority with respect to tariffs, etc.

(3) That a more equitable taxation be established in respect to such companies.

Fair Wages Regulations.—Under this heading the delegation requested:—

(1) The adoption of fair wages regulations in Ontario similar to those established by the Federal Government.

(2) That each governmental department or commission be instructed to incorporate the Fair Wages Regulations in all specifications for work undertaken.

(3) That the Department of Labour be charged with preparation of wage schedules and to administer the Fair Wages Regulation.

Other requests made by the delegation included the following:—

That definite action be taken to give effect to such conventions of the International Labour Conference as come within the jurisdiction of the Provincial Government.

The enactment of legislation making the Industrial Disputes Investigation Act applicable in Ontario.

Establishment of a system of health insurance.

That the Factory Act be brought up to date in conformity with modern conditions.

The inclusion of boys within the provisions of the Minimum Wage Act.

That a moratorium be established in order that foreclosure be not applied in cases where unemployed workers are unable to meet their obligations in respect to payments on mortgages, goods and chattels, insurance premiums, and taxes.

To provide for the mother with one child under the Mother's Allowance Act, and that the property exemption under the Act be raised from \$2,500 to \$5,000.

Legislation at the next session of the Legislature to regulate the use of paint-spraying machines.

Stricter enforcement of the regulations governing blowers in the province and appointment of extra inspectors for this purpose.

That two qualified operators be required to be on duty in all theatres exhibiting sound motion pictures.

Opposition to the coupling of the Parents' maintenance Act with the Old Age Pensions Act of the Province.

Repeal of the Act now awaiting Royal assent requiring election deposits in Ontario.

Sale of beer and wine in licensed places.

Equalization of the income tax levy by municipalities throughout the province and that its collection be made mandatory.

Adjustment of witness fees to conform with present day incomes.

Enactment of legislation to provide for a minimum of one week's holiday in each year with pay to employees permanently employed in shops where more than twelve workpeople are engaged.

That women be not employed when the husband is working in the government service at a fair wage.

An Act to protect linemen and others engaged in the electrical industry.

Establishment of uniform plumbing regulations.

Substitution of physical training for military training in schools.

Enactment of legislation providing for the examination and licensing of electrical workers.

Uniform building regulations throughout the Province.

Federation of Catholic Workers of Canada

Last month a delegation from the Federation of Catholic Workers waited on Premier Taschereau of Quebec and members of his Cabinet, and presented their legislative program. Appreciation was expressed for the government's action in establishing a separate Department of Labour, and congratulations were extended to Hon. C. J. Arcand on his appointment as Minister of Labour. The support of the Federation was pledged to the "Back-to-the-Land" movement launched by the government, and an extension of the movement was favoured if it should be found necessary.

Among the requests presented were the following:—

Compulsory arbitration of disputes between municipalities and their police and fire-fighting forces;

That the use of machinery be provisionally restricted in order to increase the volume of labour available for the unemployed;

Abolition of special tax imposed by municipalities on outside labour;

Compulsory suspension of work in bakeries between midnight on Saturdays and midnight on Sundays, and an allowance of eight hours' rest to bakery workers between working days or shifts;

The adoption of a social insurance scheme by the Province, and that, if necessary, the provincial and federal authorities come to an understanding to this end;

Revision of exemptions granted by order in council to certain industries under the Workmen's Compensation Act, as they exclude certain classes of workers formerly covered;

Establishment of a superior labour council to be entrusted with the ever-increasing important social problems;

Amendment of the Companies Act with a view to preventing the practice of "watering of stocks";

Greater protection for women workers under the Minimum Wage Act, and enlargement of the inspection staff;

That the government prevent communism taking root in the province by giving effect, among other things, to the measures for public welfare recommended by the Federation;

The creation of a provincial hydro-electric commission, such as operates in Ontario, as a means of bringing down electricity rates in the province;

Adoption of a labour code, and, as a first step, the establishment of a planning board composed of lawyers, sociologists and representatives of labour;

Legislation for the extension to the province of the Dominion Industrial Disputes Investigation Act;

Extension to officials of the Department of Labour of the statutory protection provided for civil servants;

Compulsory sanitary inspection of works, including drinking water;

Creation of a museum of domestic timber species readily accessible to those interested in wood and woodwork;

Investigation by the government of the qualifications of its inspectors and scaffolders and of the adequacy of the present staff;

Establishment of a practical scheme of accident prevention;

Extension of scholarships to technical school students;

Adoption of apprenticeship legislation similar to that existing in France;

That the government provide, by order in council, for the payment of fair wages on roadwork;

Drawing the attention of the Department of Labour to the advantages to tradesmen of having trade manuals available.

Quebec Provincial Executive of Trades and Labour Congress

The Quebec Provincial Executive Committee of the Trades and Labour Congress of Canada, composed of Messrs. Pierre Lefevre (chairman), Henri Vaillancourt, Omer Fleury and J. J. Cuppello, accompanied by a delegation of about 50 members of international trade unions, waited upon the Hon. L. A. Taschereau, Prime Minister of the Province, on November 10, and presented a program of desired legislation. With the Prime Minister were the Hon. C. J. Arcand, the newly appointed Minister of Labour; the Hon. J. N. Francœur, Minister of Public Works; the Hon. A. David, Provincial Secretary; the Hon. J. E. Perrault, Minister of Roads and the Hon. A. Godbout, Minister of Agriculture.

The first item on the program asked for the enactment of enabling legislation to provide for the payment of old age pensions under the provisions of the federal Old Age Pensions Act. This was followed by a request for health and invalidity insurance. Other requests for legislation were as follows:—

Mothers' Allowances;

Extension of the Women's Minimum Wage Act;

That inspectors on provincial works be instructed to report all infractions of the Fair Wages Act; and that where grants of public funds are made to hospitals, churches, asylums, universities, etc., a fair wage clause and provision for the limitation of hours be inserted in the contracts;

That enabling legislation be passed permitting the full operation of the Industrial Disputes Investigation Act in the Province of Quebec;

A five-day week law, together with prosecution of industrial concerns which require their men to work seven days per week;

Enactment of a law requiring the provision of one week's holiday each year with full pay for all employees;

Provision of safety devices on all passenger elevators;

Legislation to govern the erection, operation and supervision of mechanically operated hoisting appliances;

The government was commended for its past action in connection with the payment of fair wages on government contracts, and as a means of extending this practice, the delegation urged that preference be given by the provincial authorities to those contractors who pay fair wages.

Regulation of the use of paint-spraying machines;

A law requiring the employment of two projectionists instead of one in all Canadian moving picture theatres;

That men employed on public works should not be paid otherwise than in money, the prevailing wage to be the basis of payment on all such works;

Abolition of fee-charging employment bureaus;

A moratorium on mortgages and time payments;

Legislation to provide that dividends be paid only on actual cash invested in industrial, commercial and public utility corporations, and to prohibit the practice of watering stock;

Public ownership and democratic management of all public utilities;

That more English be taught in the rural schools of the province;

Opposition to election deposits.

The delegation also asked for the passage of legislation embodying the decisions of the International Labour Conference as follows: (a) Establishment of the eight-hour day; (b) Protection of women and children in industry and commerce; (c) Co-operation of other provinces to obtain ratification of all these conventions and recommendations; and (d) that the province of Quebec be officially represented at the annual conference of the International Labour Organization at Geneva.

The Montreal Trades and Labour Council unanimously adopted a resolution on December 3 asking the Legislature of the Province of Quebec to amend the Industrial Establishments Act so as to reduce from 55 to 44 the number of hours that may be worked in the woollen and cotton industries by women and girls, and by boys under 18 years of age. The Act was amended by the Legislature last year (LABOUR GAZETTE, May, 1930, page 516), so as to reduce the maximum normal working hours of women and girls, and of boys under 18, from 60 to 55 hours per week.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATIONS

Relation of Oversea Countries to the Organization

The Governing Body, at its last session, concurred in the suggestion of the Director of the Organization that a meeting of those members of the Governing Body who represent oversea countries should be held in connection with the 56th session in January, 1932. Consideration will then be given to proposals submitted by Mr. Bakhale, Indian workers' delegate, at the 15th session of the Conference, with a view to ensuring closer collaboration of oversea countries in the work of the International Labour Organization. Among the questions to be discussed will be the following:—

(1) Question of incomplete delegations; development of employers' and workers' organizations in oversea countries.

(2) Placing of questions which are of concern to oversea countries on the Agenda of the Conference.

(3) Possibility of the Organization paying the travelling expenses of non-Government delegates to the Conference coming from Oversea countries.

(4) Representation of oversea countries in committees set up by the Governing Body; increase in the number of members of the Staff of the Office coming from oversea countries.

(5) Propaganda in favour of the International Labour Organization in oversea countries.

(6) Possibility of holding a session of the Conference in an oversea country.

Agenda of the 1932 Conference

Consideration is being given to the question of holding the 16th Session of the International Labour Conference at an earlier date than usual, and this will be decided at the meeting of the Governing Body in January.

The agenda of the 16th session will include the three following items:—

i. Abolition of fee-charging employment agencies (first discussion).

ii. Invalidity, old age and widows' and orphans' insurance (first discussion).

iii. Age of admission of children to employment in non-industrial occupations (second discussion).

The first two of these items were included in the Agenda by virtue of decisions of the Governing Body taken at its Fiftieth and Fifty-first Sessions respectively (October, 1930 and January, 1931), and the third item by virtue of a decision taken by the Conference itself at its Fifteenth Session (May-June, 1931) under Article 6, paragraph 5, of its Standing Orders.

Proposed Session of Conference outside Europe

At the Fifty-fifth Session of the Governing Body of the International Labour Office held at Geneva October 12-17, when the resolution of the Fifteenth Session of the International Labour Conference concerning states which are not members of the International Labour Organization and the sending of incomplete delegations to the Conference was under consideration, the Japanese Government representative suggested that the question of holding a session of the International Labour Conference outside of Europe and the question of paying expenses of overseas non-Government delegates should be given careful consideration. The representative of the Government of India expressed the view that incomplete delegations would always be sent from some overseas countries as long as the Labour Organization devoted most of its attention to questions of interest to Europe only, and as long as the membership of committees and the staff were predominantly European. Instead of addressing appeals to governments, he suggested that the Office should endeavour to interest public opinion in countries outside of Europe.

A resolution concerning the convocation of an advisory conference of Asiatic countries was also considered by the Governing Body at this meeting. The proposal was supported by the British, Indian and German Government representatives and opposed by the French and Japanese. After a long discussion, the Governing Body decided by 12 votes to 8 that the Director should consult the Asiatic Governments and the Governments having territorial possessions in Asia on the question of the convocation of such a conference, its composition and the agenda.

Ten Years of the International Labour Organization

A study of the work of the Geneva Organization during the first ten years of its existence, as viewed by officials of the Office, has been issued anonymously from Geneva under the title "The International Labour Organiza-

tion; the First Decade," published for the International Labour Office by George Allen and Unwin, Ltd., London (Distributed in Canada through the League of Nations Society, Ottawa). Mr. Albert Thomas, the Director

of the Office, in a preface, states that the book is a "confession of faith" on the part of those who have worked for the Organization: "we can say with joy and pride that in these ten years the conviction and enthusiasm of the staff of the International Labour Office have never failed or weakened."

The present work describes the origins and principles of the Organization, its work, the results obtained, and its position in the general movement for justice and peace. The authors bring out clearly the difficulties encountered, difficulties, which, in the Director's opinion, are still growing or at least "changing their angle." The founders, in 1919, imagined that it would be comparatively easy to obtain the required ratifications of the Conventions adopted by the Conferences, but difficulties arose before many months had passed, and the office has ever since encountered "administrative delays, national prejudices, constitutional contradictions, legal objections, economic apprehensions, press of parliamentary work, Government negotiations, opposition manoeuvres, indifference or hostility in public opinion, mutual misunderstandings and suspicions and so on." This enumeration gives some idea of the unremitting efforts on the part of the Office that lay behind the total of 415 ratifications recorded in January, 1931.

On the other hand, it is shown that the results of the work are not confined to the adoption of conventions. The Office has found its most fruitful function in promoting and stimulating social progress in every country. In every sphere—hours of work, wages, hygiene, safety, employment and unemployment, it has been able to define and clarify the demands of workers and the currents of public opinion in the different countries. The authors of the book give a general picture of this work. In the words of the Director they describe "the indirect influence of the Conventions, which, even if not ratified, serve as standards for national legislation (in particular, the enormous influence of the much-maligned Eight-Hour Convention which, although only sparsely ratified, has been almost universally accepted as the code for hours of work) and the real but rarely recognized effectiveness of the important Recommendations, such as that on inspection, which is now the recognized standard for the young inspection services in countries which were revived or unified by the War or which are only now launching out upon industrial life, or the Recommendation on workers' spare time, which may already be said to have become the charter

of the new humanism at which the world of labour aims. They also show the organizing power of the social insurance Conventions, which are at the origin of the new international groups of insurance funds and provide a clearly defined framework for their activities (it is even said that these Conventions have indirectly led to organized resistance on the part of doctors). They bring out, too, the value of our scientific studies, of the *Encyclopædia of Industrial Hygiene*, of the *Safety Survey*, of our studies on finding employment, on social insurance and public works, which have led to the imitation of the most successful schemes in other countries and thus sometimes proved as useful for the defence of human life as the Conventions themselves, even when ratified. These pages tell of the fruitful meetings in our commissions of experts and men of science separated by the War or by circumstances; the revival of great scientific movements which have been more or less paralysed; the resurrection of ideas or aspirations which were being allowed to languish or were stifled. Through all the tangle of legal procedure, through all the confusion of committees, commissions and conferences, beneath the apparent emptiness of congress resolutions and the jumble of texts, we see with amazement the desired reforms being adopted in every part of the world—slowly, it may be, but surely, and sometimes even beyond our highest hopes. It is occasionally the habit of workers' meetings to cast doubts on the value of the International Labour Organization; some, in moments of disillusion, have gone so far as to say that our international institutions are a sham. But that view cannot be accepted by anyone who reads these pages with an open mind. It must be frankly admitted that the movement for the protection of the workers would never have had the same vigour or the same success amidst all the political and economic difficulties of the post-War world had it not had at its centre the International Labour Organization."

In concluding their account of the first decade of the Organization the writers state their belief that it has now passed its formative period and is now ready to face the problems of the future. "The Organization has become a living organism; it grows and evolves in the field defined for it by international law; it absorbs one by one the departments assigned to it, creating as occasion arises the organs it needs for the purpose. This first stage may be said to have been accomplished.

"It is possible to conceive of the ultimate and complete realization of the ideal for which the Organization is patiently working, a world in which conditions of labour are governed by international conventions that do justice to all needs of protection and are

ratified and applied by every State. In such a world, the 'social justice,' which by the Treaties of Peace is the aim of the Organization, will have been finally and fully established."

International Association for Social Progress

The fourth general assembly of the International Associations for Social Progress was held at Paris from October 19 to 22, the following organizations and countries being represented at the meeting:—

The International Labour Office, the International Institute of Scientific Organization of Labour, the "Fédération Syndicale Internationale", "Confédération Internationale des Syndicats Chrétiens", International Federation of Independent Organizations of Employees, International Union for Associations, "Conférence Permanente Internationale des Organisations Privées pour la Protection des Migrants," and the International Social Institute.

The following countries were represented:—Germany, Austria, Belgium, Brazil, Bulgaria, Canada, Denmark, Spain, Estonia, United States of America, Finland, France, Great Britain, Greece, Hungary, Japan, Latvia, Luxembourg, Norway, Mexico, Poland, Rumania, Sweden, Switzerland, Czechoslovakia and Yugoslavia.

The following questions were discussed by the Assembly:—(a) The problem of International policy relative to migrations of workers; (b) Seasonal unemployment in the building and construction industry; (c) The problem of real wages and a high wage policy; (d) Social insurance, pensions, public and private assistance, provident institutions.

On the question of the wages the Association adopted a resolution stating that, its

object being to further any action which might improve the position of the workers, it could not accept any solution of the wage problem which did not contribute to raising the standard of living of the masses. An increase in real wages was partly dependent on an increase in general production, which was to a great extent conditioned by the disappearance of customs barriers. In times of economic depression, however, the reduction of real wages was not the right way of reducing difficulties, since it hampered rather than facilitated economic recovery. The Congress declared that the present economic depression could not be overcome without the economic co-operation of the nations. In conclusion, the Congress, recognizing the exceptional seriousness of the world position, urged all the national branches of the Association for Social Progress to exert all their influences on the Governments and on public opinion in the different countries to bring about international co-operation in the campaign against the economic depression.

In regard to future activities, the Association inserted in its program the study of new aspects of the problem of hours of work and the study of the respective functions of relief and insurance against social risks, especially that of unemployment.

Canada was represented at the Conference by Mr. Charles Déry, member of the staff of the Canadian Minister to France.

COAL STATISTICS FOR CANADA IN 1930

THE Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics recently issued a report on the coal industry in Canada for 1930. The production of coal in Canada during 1930 amounted to 14,881,324 tons valued at \$52,849,748, a decrease of 14.95 per cent in quantity and 16.2 per cent in value from the 1929 total of 17,496,557 tons worth \$63,065,170. A decline of 11.39 per cent was shown in the Nova Scotia output, 4.28 per cent in New Brunswick, 0.13 per cent in Saskatchewan, 19.51 per cent in Alberta, and 16.33 per cent in British Columbia.

Coal mines in operation during 1930 suffered a total loss in output of 6,523,251 tons due to lack of orders, mine disability, absenteeism, car shortage and other causes. In addition, it is estimated that labour disputes at the mines, which involved 6,228 men with a consequent loss in working time of 24,183 man-days were responsible for a further loss of 59,200 tons. Active mines in Nova Scotia produced 72 per cent of their possible output; in New Brunswick, 74 per cent; in Saskatchewan, 64 per cent; in Alberta, 66 per cent; and in British Columbia, 73 per cent.

Canadian coal mines furnished employment to 29,172 employees during 1930. In Nova Scotia and New Brunswick an average of 14,526 employees worked in or about the coal mines; in western Canada employment was at a much lower level than in 1929. An average of 250 days work was furnished surface employees while underground men worked 210 days; in the preceding year the averages were—surface, 275 days and underground, 246. Salaries and wages paid during 1930 totalled \$36,442,361 as compared with \$42,376,378 in 1929 and \$43,320,811 in 1928.

The average cost of labour for each ton of coal raised in Canada in 1930 was \$2.44, the labour cost in each producing province being as follows:—Nova Scotia (bituminous), \$2.90; New Brunswick, \$2.72; Saskatchewan (lignite), \$.94; Alberta (bituminous), \$2.05; (sub-bituminous), \$1.99; (lignite), \$1.99; British Columbia (bituminous), \$2.74; Yukon (bituminous), \$3.40.

The average value of coal raised in Canada in 1930 was \$3.55 per ton f.o.b. mines, as compared with \$3.60 in 1929.

EMPLOYMENT IN THE DOMINION CIVIL SERVICE, 1929-1930

THE sixth annual report of the Dominion Bureau of Statistics dealing with the numbers of the civil service employees in the various Federal departments and the expenditures on their salaries and wages during the fiscal year ended March 31, 1930, was published recently. Tabular statistics summarize the payrolls of the various departments from month to month, the tables being arranged to distinguish between permanent and temporary employees.

The total number of employees at March 31, 1930, was 44,175, as compared with 42,790 employees on the payrolls at the end of the fiscal year 1929, or an increase of 1,385. Of the total of 44,175 employees, 31,616 were permanent and 12,559 were temporary employees.

During the fiscal year, the total expenditure on salaries and wages for civil servants amounted to \$90,808,425.71. Of this total, \$52,812,375.19 represented the total payroll of

permanent civil servants in all departments; \$14,365,823.17 the total salaries of temporary civil servants; while \$23,630,327.35 was the salary and wage expenditure on non-enumerated classes. The comparative figures for the previous fiscal year were: grand total of salaries and wages, \$87,584,764.95; permanent \$48,118,901.46; temporary, \$16,682,691.29; non-enumerated classes, \$22,783,172.18. The non-enumerated classes consist of employees engaged by several departments in work of a casual nature. The number of such employees is not available, though the expenditure on wages and salaries is recorded.

In the following table the total number of permanent and temporary employees in the entire civil service and the total salary expenditure for March, 1930, are detailed. In several of the larger departments there are important branches under distinct supervision apart from the main department, and in such cases statistics are shown separately.

NUMBER OF EMPLOYEES, AND SALARIES OF VARIOUS DEPARTMENTS OF DOMINION GOVERNMENT

*The number of employees does not include the non-enumerated classes.

The annual report of the Canadian National Railways states that consideration is now being given to a proposal that the system should join with the Canadian Pacific Railway Company, banks and other institutions in establishing a fund for the purpose of assisting farmers to engage in mixed farming and acquire live stock; such assistance to be in the form of secured and repayable loans. It is felt by the management of the system that

although grain crops will remain the chief agricultural product, particularly in the Western Provinces, yet in view of the recent tremendous reduction in wheat market values (over 50 per cent in 1930 as compared with 1928), and in view of seasonal and weather conditions which effect grain crops, farmers should be encouraged to develop other less variable sources of revenue.

THE UNEMPLOYMENT AND FARM RELIEF ACT, 1931

Employment Afforded

DETAILS of employment afforded under the Dominion Unemployment and Farm Relief Act, 1931, up to November 30, 1931, as reported by the Provinces and Departments of the Dominion Government are shown in the following tabulation. Undertakings were started at various dates but in no case previous to August 18, 1931.

	(1) Number given employ- ment to November	Man—Days (8 hrs.) worked to November
Province, etc.—	30, 1931	30, 1931
Prince Edward Island.....	1,036	6,611
Nova Scotia	25,126	260,376
New Brunswick	25,000	344,234
Quebec	8,095	69,852
Ontario	51,000	512,500
Manitoba	27,806	221,577
Saskatchewan	5,551	100,300
Alberta	29,919	354,432
British Columbia	30,352	727,965
Federal Departments	6,857	97,522
Total	210,792	2,695,369

(1) Repeaters are not included, i.e. no one individual is counted more than once.

In connection with sending men to employment at Government relief camps, arrangements have been made with the railway companies by which workers are sent to the camps free of transportation charge, the cost of transportation, based on a special rate, being divided equally between the Dominion Government and the Province concerned. Provision is made for return of men from camps at special rate payable by the worker. To November 30th, approximately 4,751 men have taken advantage of this special rate.

The text of the Unemployment and Farm Relief Act, 1931, was given in the *LABOUR GAZETTE*, August, 1931, page 901, and the Regulations under the Act on page 904 in the same issue.

NATIONAL EMERGENCY FUND

Voluntary Subscriptions Invited by Canadian Red Cross Society

THE Prime Minister, the Right Hon. R. B. Bennett, in a wireless message issued at sea on December 9 during his return voyage from England, made the following appeal to the Canadian people in support of the campaign of the Canadian Red Cross Society which was to be inaugurated on the following day.

"Before leaving Canada, I decided to make an appeal to the people of the Dominion for a National Emergency Fund to be raised by voluntary subscriptions and used for the relief of suffering and distress during the coming winter. With this in view I asked the Canadian Red Cross Society to undertake, in co-operation with other organizations and societies, the necessary collection and distribution of this fund. His Excellency the Governor General, in his capacity as president of the Red Cross, assured me of the willingness of the society to carry on this effort with the fullest understanding, sympathy and efficiency.

"We are still faced to-day with difficulties that are in some respects similar to those which confronted us during the Great War. Our troubles are less serious than those of

some other countries, but nevertheless there is a great deal of distress and suffering resulting from the economic depression, widespread unemployment and continued crop failure in large areas of the Prairie Provinces. Parliament authorized expenditures to provide what the Government might deem best in the form of official undertakings to minimize unemployment. Through a co-operative program with provincial governments and municipalities much has been accomplished in providing relief in this way. But over and above what has been and will be done through such regular official expenditures and channels, there are large numbers of special cases in all parts of Canada that cannot be cared for through Governmental activities. They can only be effectively dealt with through voluntary attention and assistance. It is for these that I appeal to the generosity and public spirit of our citizens. I am proud of what they have done and are doing, but there is still an urgent problem before us all. Never, indeed, has the splendid charity of the Canadian people been so much needed as it is at the present time. I feel confident that the liberality and human-

kindness they have shown in the past will be expressed again on this occasion.

"I ask all the men, women and children in our Dominion who are not themselves in need, and also all organizations, clubs, societies and lodges of every kind, to make a sacrifice for this cause. Let us as a people make sure that no child shall go hungry or unclothed, and no sick or afflicted person shall lack care. We may be grateful that the outlook for the future is becoming brighter, and we may do much to ensure a strength and fortitude in our national life by helping those of our countrymen who are in distress and want."

Contributions by Federal Civil Servants at Ottawa

About the middle of November the announcement was made by the Civil Service Association of Ottawa that in view of present distress from unemployment it proposed to invite the Civil Service Federation of Canada, the Professional Institute of the Civil Service, the Dominion Public Works Association, and the Printing Bureau Benefit Association to

co-operate in organizing a special subscription in aid of unemployment relief funds, donations to be solicited from all Federal Government employees in Ottawa and the immediate vicinity. Mr. V. C. Phelan of the Labour Department has been selected as Chairman of the Joint Committee formed. It is proposed to give fifty-five per cent of all moneys collected to the Red Cross in line with the Prime Minister's appeal, twenty per cent being given to the Ottawa Red Cross and thirty-five per cent to the National fund. Ten per cent of the total is to be given to the Canadian Legion Shelter at Ottawa, ten per cent to the Ottawa Union Mission and fifteen per cent to the Ottawa Welfare Bureau. The balance of ten per cent is to be spent on unemployment relief in the discretion of the Joint Committee. No total has been fixed as an objective for this special collection but an effort has been made to secure individual contributions on the basis of about a day's pay. The total sum contributed has not yet been ascertained, though the response by departments to date has been very generous.

THE CONSTRUCTION INDUSTRY AND UNEMPLOYMENT

MR. H. P. FRID, President of the Canadian Construction Association, is contributing to the *Contract Record and Engineering Review* a series of articles dealing with the subject of the "construction industry and its relation to the unemployment situation" (The proposals recently submitted by the Association to the Dominion Government in connection with proposed grants to assist the building trades under the Unemployment and Farm Relief Act were given in the *LABOUR GAZETTE*, October, 1931, page 1098). Mr. Frid states that the Association has been engaged in a study of possible methods by which the building industry might (1) alleviate present unemployment conditions, and (2) provide some method for a more permanent solution of the problem. "Our Association," he says, "through our executive and advisory committees, some months ago offered to the Minister of Labour to place at his disposal their resources and experience to be used in any way he might deem advisable in his efforts to get work started. Similar representations have been made by our men to the various Provincial authorities. In some of the centres where unemployment has been most severe the men of the construction industry have taken a leading part in directing public opinion and in carrying out practical measures.

"Construction," Mr. Frid continues, "offers a ready weapon with which to fight distress and want. There are certain types of construction work that can be started very quickly and that furnish immediate employment to the type of worker who is the first to be hit, i.e., common labour. It is natural that these forms of relief work should be the first to attract the attention of municipal, provincial and federal authorities. Things which have been undertaken will assist in the problem of relieving the single man and a certain number of married labourers. There yet remain many men, trained to use their hands at skilled trades or factory machines, married and with families to support, whom it is not economical to send into far away camps. What shall be done for them? We are faced with the alternative of giving them direct money relief, at the risk of pauperizing them and lowering their morale, or of providing other forms of construction, especially building construction, to keep their families from want and themselves in self-respect."

The Association president urges local associations "to leave no stone unturned to get the municipality to which they belong interested in every possible form of construction work that can be undertaken." A survey should be made in each community of possible construction work for relieving un-

employment. "Call a meeting with representatives of labour, the local architects' association, engineers' association and other groups affiliated with our industry to see if joint action cannot be taken. Get the co-operation of the local members of your provincial house, as well as your own federal members. They are supposed to speak for you and they should know what you are thinking about. Approach your council or board of control and place before them the result of your investigations. Urge upon them not only the sewer, sidewalk, and road work, but also get them to include all needed forms of building construction. Start something soon—the federal vote will lapse on March 31 next. Action is necessary and at once.

"Every member of the labour unions should be quite alive to the importance of seeing that the activities of city, province and Dominion in the relief of unemployment are conducted along the best lines and in the best interests of the worker. Every workman in the building trades should realize the important position that the construction industry occupies as a means of keeping things going, provided its resources are properly used. I would say, therefore, that it is equally as important for every local labour union to consider what can be done along construction lines, as it is for the local builders' associations to give this problem their consideration. If the money of the municipality, assisted by provincial and Dominion subsidies, is spent wisely and well, relief will be spread fairly over common labour and skilled trades."

Referring to the value of construction activity as a means for relieving unemployment, Mr. Frid states that the Association recently estimated that the amount of labour that would be involved in the erection of various types of buildings: it was found that, including the labour engaged in the preparation of building materials in factories, quarries, forests and mines, the amount expended on labour would be at least 80 per cent of the total cost of new building.

Conditions to-day are unusually favourable for the undertaking of building construction: Mr. Frid states that "contractors are willing to undertake construction of all kinds at figures which seem to indicate that they are more concerned with continuing their organizations than in making much of a profit. The materials that enter into the building are obtainable at prices which are very considerably less than those quoted even six months ago. While there has been no general reduction in the hourly rates of skilled labour, there has been a very noticeable improvement in the efficiency of the worker. I am well within the facts when I state that an owner should get a building for from 15 per cent to 20 per cent less than two years ago. In every city the local association, in conjunction with other local bodies, should appeal to banks, insurance companies, manufacturers and commercial firms to proceed with their undertakings without further delay, not only to relieve unemployment but on the sound basis of having the work done at a reasonable figure."

UNEMPLOYMENT IN NEW ZEALAND

Government Proposals for Meeting the Depression

A STATEMENT on unemployment in New Zealand was laid before the House of Representatives in October by the Hon. J. A. Coates, minister in charge of unemployment.* The minister stated that more than 50,000 adult men were registered as unemployed (The population of New Zealand in 1930 was estimated at 1,490,405, exclusive of aborigines). "Not all of the 50,000 men," he continued,

"are wholly unemployed; many of them are engaged in part-time relief work for sustenance. We have not resorted to the so-called 'dole' or relief without work—a decision which, in my judgment, was sound, and for which the Government previous to this one is entitled to credit. Of the men placed, however, more than 36,000 are employed under what is called Scheme 5, which is mainly roadwork with pick and shovel. The Unemployment Board is spending money at the rate of £2,500,000 a year, and more than nine-tenths of that large sum has been going into Scheme 5. Much of the roadwork is useful, but it cannot be described as directly productive; and, as time goes on, it becomes ever more difficult to find satisfactory roadwork to be undertaken.

* In the General Elections held in New Zealand on December 2, the National Government was returned to power with a substantial majority, the Hon. G. W. Forbes continuing as Prime Minister. The Hon. Mr. Coates also remained in office. The Prime Minister had asked the electors for a "doctor's mandate" similar to that granted to the National Government of Great Britain in the recent election.

"The position as it is to-day must be changed. We cannot afford to become a 'nation of navvies.' In the interests of the country and of the men directly concerned, those who are now unemployed or are engaged on unproductive relief work must, as far as practicable, be diverted into productive work. It is to this task that we must at once apply our energies. An immediate objective will be to move, say, 20,000 men from Scheme 5 into productive work. That is a substantial number, though far short of the total unemployed; yet it is well to remember that every man placed, every forward step towards recovery, will indirectly lead to the employment of other men."

Productive Use of Labour

Mr. Coates maintained that the government should aim at increasing production rather than at promoting further development work, and suggested the following basic consideration:—

(1) We should view our problem less as one of simply relieving unemployment, of making work for work's sake than as one of enabling production to proceed.

(2) New Zealand has reached a stage in its development when its people must depend more on the fruits of industry and less on development work—national or local—out of loan-money.

(3) We have unemployment because on present price-levels it is uneconomic to employ labour under the conditions on which it must be employed. Unemployment will only be solved when the wheels of industry revolve of their own volition and again employ labour to the fullest extent.

(4) Primary production from our farm lands is the keystone of the Dominion's economic structure. It is essential that the unemployed labour should be directed from road and unproductive work to productive work on the farms. This is the policy which the Unemployment Board by every possible means intends to pursue. So far as men engaged on roadwork are concerned, the ideal must be to move them "over the fence" on to the land.

(5) Important as farming is, we cannot hope to absorb in it the 50,000 men now unemployed. After ninety years' development New Zealand has 80,000 farmers; it would be vain to expect now to place 50,000 additional men on the land. Consequently we must look also to other productive work for the absorption of the unemployed. It may be held necessary to take action to relax restrictions now militating against the employment of labour on an economic basis. This, I recognize, raises controversial issues bearing upon labour legislation, and I shall not deal with the matter here.

(6) It is also to be recognized, I think, that in expending moneys on productive work we must take into account not the equal allocation of funds as amongst districts, but those purposes and localities which promise to be most economically justifiable.

The minister stated that the yearly revenue available for the Unemployment Board was

now £2,500,000, while the expenditure was at the rate of £50,000 a week. The government therefore recommended that the already heavy tax of 3d. levied on wages and salaries should be increased to 5d. in the £1.

Farm Development

The first measure suggested as a means for increasing production is one enabling the farms already occupied to absorb additional labour, and new land to be brought into cultivation: "We are faced with the fact that, with 42,000 men placed under the various schemes, less than 6,000 are on the land, more than 36,000 are on the roads." Next, small-farm holdings are to be established: "We have the land; we have the cottages or hutments of the type used in public works camps; and we have the men anxious to get on the land. Can we not bring these together? We might visualize a group of cottages—not over-elaborate, it is true, but more acceptable than conditions that many must now accept—cottages with a few acres of land on which families could occupy themselves part-time. Families grouped together around a centre might develop into a prospering, self-reliant community with a social life and amenities of their own."

Another form of possible assistance, both for farms and for industry, is that of a "labour loan" by which the funds available for relief might be used to tide over the difficulties of people temporarily unable to finance necessary labour.

In order to further these proposals the minister announced that he intended to summon a meeting of chairmen of County Councils throughout the Dominion. "They will indicate blocks of land, public or private, that are worth consideration. Recognizing that existing farms must absorb far more men, they will suggest means of attaining this end. . . Our object must be to bring the country into complete organization and to use in this crisis the genius inherent in our people. I am at once sending a letter to every County Chairman to deal more fully with this subject."

Co-ordination of Plans

The same principle of collaboration is to be applied by consulting the local unemployment committees, the minister stressing the "imperative need" that the services of all government departments should be co-ordinated for the most effective attack on the problems on hand.

Apart from farming, which is the paramount industry of New Zealand, the government plans to encourage and guide unemployed

men in the direction, for example, of gold prospecting and mining, forestry, flax-growing, fruit growing manufacturing and other industries are to be encouraged: "One great weakness of our industrial position at present," the minister stated, "lies in the fact that we have so many firms working independently of one another, and all attempting to produce small quantities of a great variety of lines. Manufacturers must recognize that the onus rests upon them to place their industries upon a more economic basis by agreeing upon some scheme of co-ordination and specialization in the lines they produce, thus enabling them to reduce prices. When we turn our attention to the possible extension of New Zealand's industries, primary or secondary, it is certain that the key to the problem is the market for the things we produce."

Besides the external market there is also the highly important home market, and the minister pointed out the responsibility of individual consumers, particularly women, in purchasing articles made in New Zealand, and next to them, British-made goods.

To employers of labour the minister appealed to help the country by rationing work and sharing employment; by manufacturing for stock; and possibly by granting

leave of absence to employees without pay for a definite period. He also pointed out that among the registered unemployed there were many able and skilled men, and he suggested that employees needing such help should communicate with the Employment Offices. The general public were advised to take advantage of prevailing low prices and to undertake such work as repairing and painting of property.

Mr. Coates pointed out the need at the present time for a co-ordination of the social services, and in this connection referred to the necessity of providing avenues of employment for young people leaving school. "This," he said, "is one of the most tragic phases of the present depression. Men who have passed middle age have more or less formed their characters, but boys leaving school at the age of sixteen and seventeen, with all the high hopes of boyhood before them, will be irretrievably ruined if in the next two or three years they find they are not wanted. The country must resolutely face this position. Every avenue of employment possible for boys must be opened."

The minister deprecated undue pessimism under the depressing influences of the day, preferring to regard the crisis rather in the nature of a challenge and an opportunity.

Recommendations of Committee of New York State Legislature on Unemployment

The New York State Legislature appointed last April a Joint Legislature Committee on unemployment, with instructions to investigate the subject in its every aspect and to make recommendations to the Legislature. In their report, recently published, the committee recommend that, if contracts for public works are to be entered into, legislation governing such contracts should be enacted substantially as follows:

1. Such contracts shall be let only to such persons, firms or corporations, having their residence within the State for at least one year prior to the date upon which the contract is entered into.

2. Materials used in the work shall, if possible be manufactured or produced within the State.

3. Workmen employed on the work shall have been residents of the State for at least one year prior to the date of employment.

4. Workmen shall be employed only after competent inquiry as to their needs, and preference shall be given to men with dependants and without means of support.

5. No person, firm or corporation shall be permitted to charge a fee or receive compensation of any nature for procuring employment for any person upon such work.

6. No labour camp shall be permitted upon or in connection with such work.

7. Adequate provision must be made for the strict enforcement of these regulations.

The Committee also recommends as follows:—

1. That in any State legislation, the principle that welfare relief is a local and community obligation should be firmly established.

2. That any emergency action taken at this time should be such as will conform as closely as possible to a long range program of social and economic re-construction.

3. That State supervision of public relief agencies and their expenditures for welfare relief work in the various communities of the State should be vested solely in the State Department of Social Welfare.

4. That the duty of the State in this emergency is to increase, if possible, the sources of revenue of its political sub-divisions directly, but that if such an increase is not now possible, and pending legislation to that end, the State should reimburse the welfare districts thereof, upon compliance with the laws of the State and the rules and regulations of the State Department of Social Welfare, to the extent of 50 per cent of the amounts expended by such districts for welfare relief during each month commencing October 1, 1931 and ending June 30, 1932.

5. That no fund should be created by the State by taxation specifically for welfare purposes.

6. That no actual money be paid to any person in the form of a dole.

7. That the State should so far as possible meet the emergency welfare situation confronting it by the strictest economy in the operation of State government and by encouraging and, so far as possible, compelling similar economy in local governments.

8. That should increased taxation be found necessary, ways and means for such increase should be devised by the Legislature at its next regular session without particular reference to any specific necessity and the needs of the State in the interim met by the issuance of the necessary short term certificates of indebtedness.

10. That the five day week for labour on public works be adopted by the State in accordance with the recommendation of the Governor in his message to the Legislature on unemployment relief.

INCREASE IN BRITISH REGISTERED EMPLOYED, 1923-1931

CHANGES in the estimated numbers insured against unemployment in Great Britain from 1923 to 1931 are described in the November issue of the *Ministry of Labour Gazette* (London). The number of persons insured against unemployment under the Unemployment Insurance Acts is estimated once a year on the basis mainly of information derived from the exchange of unemployment books in July. The Unemployment Insurance Acts provide, subject to certain exceptions, for the compulsory insurance against unemployment of substantially all employed persons. The principal classes of persons who are exempted from such compulsory insurance are juveniles under 16 years of age (since January 2, 1928), persons aged 65 and over, persons employed otherwise than by way of manual labour at a rate of remuneration exceeding in value £250 per annum, persons employed in agriculture and private domestic service and outworkers. Persons employed by local public authorities, railways and certain other public utility undertakings, members of the police force, and persons with rights under a statutory superannuation scheme may, in certain circumstances also be exempted.

The total number of insured workers, aged 16 to 64 inclusive, in Great Britain at the beginning of July, 1931, is estimated at 12,500,000 (including persons insured under the Special Schemes for the banking and insurance industries). For Great Britain and Northern Ireland the corresponding total is 12,770,000.

Taking as 100 the number of insured persons aged 16 and over in 1923 (that is, 11,485,800), the index numbers for the subsequent years are as follows: 1924, 101·6; 1925, 103·5; 1926, 104·8; 1927, 105·6; 1928, 106·5; 1929, 108·4; 1930, 111·2; 1931, 114·5. It will be seen that between 1923 and 1928, although there were minor fluctuations from year to year, the rate of expansion was fairly uniform, and amounted on the average each year to about 1·3 per cent of the numbers insured in 1923. In the three

subsequent years, however, the rate of increase was greatly accelerated, and between 1930 and 1931 it reached 3·3 per cent of the numbers insured at July, 1923.

Tables are given which show that while the numbers of insured men and of women increased during the past three years, those of boys and of girls showed a considerable decline. The decrease among juveniles in 1930-31 is attributed largely to the acute industrial depression, which reduced the numbers of juveniles reaching 16 years of age who were able to secure insured employment during the year; but possibly the fall in the birth rate in 1915 may also have had some influence.

The United States Public Health Service, summarizing reports received from a group of industrial sick-benefit associations, covering about 150,000 male industrial employees, reports that a low rate of incidence for the more important disease groups with the exception of influenza, continued from 1930 throughout the first quarter of 1931. "Since influenza and pneumonia generally fluctuate together," it is stated, "the low rate of pneumonia in the first quarter of this year is noteworthy. Declining industrial activity, especially in the iron and steel industry, where an abnormal incidence of pneumonia appears to be associated with certain occupations, may tend to reduce the occurrence of this disease among a group representing the factory payroll of several of the larger industries of the country. In the year 1921 the frequency of illnesses reported as neurasthenia was 2·5 cases per 1,000 males, a rate which has not been approached since then. Industrial conditions in 1931 resemble those of 1921, and the report calls attention to the statement of the medical director of a large industrial establishment that he had noticed an unusual number of cases of nervous indigestion, neurasthenia, and the like, which he attributed to the insecurity of jobs and to financial worry."

EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN OCTOBER, 1931

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on November 1 was 7,880, the employees on their payrolls numbering 946,700 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for

October was 1,864, having an aggregate membership of 192,603 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 68 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

(1) Employment Situation at the Beginning of November, 1931, as Reported by Employers

There was the customary seasonal contraction in industrial activity at the beginning of November, when the 7,880 firms furnishing employment returns to the Dominion Bureau of Statistics reported 938,524 workers, compared with 946,700 on October 1. Reflecting the reduction, the index number declined from 103·9 in the preceding month to 103·0 on the date under review, as compared with 112·9, 124·6, 118·9, 108·8, 104·0, 98·3, 94·1, 100·0, 97·0 and 91·3, on November 1, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. The index on November 1, 1931, was lower than on the same date in the preceding five years, but was higher than at the beginning of November in the period, 1921-25. The recession on the date under review was smaller than that reported on November 1 last year, and was also slightly less than the average decrease indicated during the last ten years.

Pronounced curtailment took place in manufacturing (notably of lumber, iron and steel and food products), and there were also losses in communications and services. On the other hand, logging and trade reported considerable improvement of a seasonal character, and highway construction absorbed many additional workers, as the unemployment relief programs advanced in a number of provinces.

Employment by Economic Areas

The tendency was upward in the Maritime Provinces and British Columbia, while elsewhere losses were recorded.

Maritime Provinces.—There was a considerable increase in employment in the Maritime Provinces on November 1, 1931; most of the gain took place in construction (due to unemployment relief undertakings), and in logging, which was seasonably active. On the other hand, manufacturing (notably of iron and steel and lumber products) was slacker, and mining and transportation also showed a falling-off. Returns were received from 575 employers, with 80,103 workers on their payrolls, or 9,695 more than at the beginning of October. A decline had been indicated on November 1, 1930, when the index was lower.

Quebec.—There was a further large reduction in Quebec, where the 1,851 co-operating firms reduced their staffs by 14,668 employees, bringing them to 257,430. Logging, shipping, pulp and paper and rubber factories reported improvement, while construction and manufacturing registered pronounced curtailment. Within the manufacturing group, the lumber, textile, clay, glass and stone and leather divisions showed most contraction. Employment was in less volume than on the same date in 1930, when the reported decreases were not so extensive.

Ontario.—Employment declined in Ontario, but the losses were on a decidedly smaller scale than those indicated on November 1, 1930, when the index was nevertheless higher. The most extensive recessions on the date under review were mainly of a seasonal nature in building and railway construction, steam rail-

way transportation, canning, pulp and paper, saw-milling and iron and steel plants, while tobacco factories, logging and retail trade were seasonally busier, and many additional men were engaged on road work under the unemployment relief scheme. A combined working force of 365,237 persons was reported by the 3,518 employers whose data were tabulated, and who had 370,245 on their pay-rolls in the preceding month.

Prairie Provinces.—As is usually the case at the time of year, there was a decrease in the Prairie Provinces on November 1, 1931.

the largest losses, while improvement was indicated in iron and steel factories.

British Columbia.—Increased employment was recorded by the 782 employers furnishing returns in British Columbia; their staffs aggregated 80,210 workers, compared with 77,550 in the preceding month. The gain occurred very largely in highway construction work in connection with the unemployment relief measures, but transportation and trade were also busier. On the other hand, manufacturing (notably of food, lumber and metal products), logging and railway construction

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

The decline involved a much smaller number of workers than that noted in the autumn of 1930; the index at the beginning of November of the current year was a few points higher, largely owing to the unemployment relief program being carried out on the highways. Returns were compiled from 1,154 firms having 155,544 employees as against 156,399 on October 1, 1931. Coal mining, railway transportation, highway construction and retail trade afforded considerably more employment; on the other hand, manufacturing, building and railway construction and services showed contractions. Within the manufacturing group, lumber, pulp and paper, building material and electric current plants reported

showed curtailment. Employment was in smaller volume than on November 1 of last year, although the movement was then unfavourable.

Table I gives index numbers by economic areas.

Employment by Cities

Additions to staffs were registered in Hamilton and Vancouver, while in Montreal, Quebec City, Toronto, Ottawa, Windsor and the adjacent Border Cities, and Winnipeg there were reductions.

Montreal.—The trend of employment in Montreal was downward, 2,652 persons having been let out from the staffs of the 1,051 co-

operating firms, who employed 130,321. Manufactures, construction and services reported reduced activity, while there were gains in shipping; within the manufacturing group, there was curtailment in textile, leather, building material, electrical apparatus and other plants. Decreases had also been noted on November 1, 1930, but the index was then several points higher.

Quebec City.—Employment showed a fall-off in Quebec, according to 135 employers

of 13,131 persons, compared with 13,614 on October 1. Services and manufacturing indicated contractions, while other industries recorded only slight changes. Employment as reported by employers was in smaller volume than on the same date of last year, when losses had also been noted.

Toronto.—There was a reduction in the number of workers on the payrolls of 1,135 firms in Toronto, who had 118,675 persons in their employ, or 2,055 fewer than in the pre-

NOTE.—The "Relative Weight" in Table I shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

Oct. 1.....	103.9	102.6	101.6	99.3	129.1	95.9
Nov. 1.....	103.0	116.6	96.2	98.1	128.2	98.9
Relative weight of employment by districts, as at Nov. 1, 1931.....	100.0	8.5	27.4	38.9	16.6	8.6

ceding month. Most of the decline took place in manufacturing (notably in iron and steel, textile and printing and publishing establishments), and in building and services, while trade was seasonally busier. A much smaller loss had been registered at the beginning of November of a year ago, and the index was then higher.

Ottawa.—Almost all the curtailment in Ottawa was in manufacturing, in which lumber mills showed the greatest shrinkage in per-

sonnel; the changes in the other groups were slight. The 154 employers furnishing data reported 13,903 workers, as against 14,565 on October 1. Employment was in less volume than on the same date in 1930, when the contractions indicated had involved a smaller proportion of the payroll.

Hamilton.—Employment continued to increase slightly in Hamilton, where the 233 co-operating firms employed 30,193 persons, or 31 more than at the beginning of October.

NOTE.—The "Relative Weight" in Table 2 shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

TABLE II.—INDEX NUMBERS OF EMPLOYMENT BY PRINCIPAL CITIES

(AVERAGE CALENDAR YEAR 1926=100)

	Montreal	Quebec	Toronto	Ottawa	Hamilton	Windsor	Winnipeg	Vancouver

Relative weight of employment, by cities, as at Nov. 1, 1931...	13.9	1.4	12.7	1.5	3.2	0.9	3.1	3.1

Manufacturing was slacker, chiefly in the iron and steel group, and building also afforded less employment, but highway construction was more active as the unemployment relief program advanced. A decrease had been reported on November 1 of last year, but the index was then higher.

Windsor and the Adjacent Border Cities.—Activity in the Border Cities showed a decline; 140 employers reported 8,368 persons

on their payrolls, compared with 10,014 at the beginning of October. Curtailment was noted in all industries, that in automobile plants being most extensive. Improvement had been indicated on the same date of a year ago, when employment was much better than during this autumn.

Winnipeg.—Employment in Winnipeg was slacker, according to 376 firms employing 28,704 workers at the beginning of November,

NOTE.—The "Relative Weight" in Table 3 shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES

(AVERAGE CALENDAR YEAR 1926=100)

	All industries	Manufacturing	Logging	Mining	Communications	Transportation	Construction	Services	Trade
Nov. 1, 1921.....	91.3	87.8	107.8	102.6	89.8	102.0	85.5	80.1	92.3

as compared with 29,633 in their last report. Trade reported seasonal advances, but manufacturing and construction released help. Reductions had also been recorded on November

1, 1930, when employment was at a higher level.

Vancouver.—There was an upward movement in Vancouver, where 326 employers had

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES, (Average 1926-100).

¹The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

29,523 persons on their staffs, or 683 more than in the preceding month. Manufacturing, on the whole, showed a slight reduction, while trade, transportation and highway construction were more active. Employment was not so brisk as at the beginning of November of last year, although losses had then been reported.

Index numbers by cities are given in Table II.

Manufacturing

Further shrinkage of a seasonal character was noted in manufactures, chiefly in the iron and steel, lumber and food-canning industries, although there were also losses in pulp and paper, textile, leather, building material, electric current, electrical apparatus, non-ferrous metal and non-metallic mineral works. On the other hand, beverage factories registered considerable advances, and there were also gains in rubber works. The 4,778 co-operating manufacturers reported 438,353 operatives, as against 453,338 at the beginning of October. This decline involved rather fewer workers than that shown on November 1 last year, but the index was then many points higher.

Animal Products—Edible.—Dairies and fish canneries reported seasonal curtailment, while meat-packing plants afforded slightly more employment. Statistics were received from 206 manufacturers, employing 17,766 persons, as compared with 18,138 in the preceding month. This contraction, which took place chiefly in Ontario and British Columbia, was smaller than that registered on the corresponding date last year, when the index number was, however, a few points higher.

Leather and Products.—There was a falling-off in employment in this group on November 1, chiefly in boot and shoe factories in Quebec. The 234 firms furnishing data reported 17,834 workers, as against 18,499 on October 1. Activity was greater than on the same date in 1930, when a rather larger decline had been noted.

Lumber and Products.—Further contractions, involving a smaller number of employees than in the autumn last year, were indicated in the lumber group, in which employment was, however, in less volume than in November, 1930. The losses on the date under review took place chiefly in rough and dressed lumber mills, but vehicle and other plants were also slacker. A combined working force of 34,750 persons was reported by the 768 co-operating manufacturers, as compared with 38,108 at the beginning of October. There were important decreases in all provinces.

Musical Instruments.—Practically no change in staffs was indicated in musical instrument factories, 34 of which reported 1,917 workers. Employment was in smaller volume than at the beginning of November, 1930, when the tendency was also upward, but the increase was greater.

Plant Products—Edible.—Fruit and vegetable canneries made large seasonal reductions in their payrolls, while chocolate and confectionery factories showed an advance. The forces of the 406 reporting firms aggregated 31,145 persons, or 2,220 fewer than in their last return. Employment declined in Ontario and British Columbia; in Quebec very little general change took place, while elsewhere improvement was indicated. This curtailment did not involve nearly so many workers as that registered on the corresponding date in 1930, but the index number was then higher than on the date under review.

Pulp and Paper Products.—There was a large decrease in the staffs reported by employers in this group, 554 of whom had 56,646 workers on their payrolls, as compared with 58,279 at the beginning of October. Important reductions were recorded in pulp and paper mills and in printing and publishing houses. The tendency was unfavourable in all provinces except Quebec, the greatest losses taking place in Ontario. Large contractions had been indicated at the beginning of November a year ago, but the index was then higher.

Rubber Products.—Employment in rubber goods showed a slight increase on November 1; data were compiled from 42 firms with 12,228 employees, as against 12,035 in their last report. This increase took place in Quebec and Ontario. Employment was at a lower level than on November 1, 1930, when a reduction had been indicated.

Textile Products.—Thread factories reported heightened activity, but the production of cotton and silk goods, garments and personal furnishings and headwear showed a falling-off; 800 textile manufacturers reduced their payrolls from 80,622 on October 1, to 79,170 on the date under review. The decreases were recorded largely in Quebec. A gain had been noted at the beginning of November last year, when the index was higher than on the date under review.

Tobacco, Distilled and Malt Liquors.—There was a considerable gain in employment in beverage factories, but other groups in these industries showed little general change, according to the 144 establishments furnishing statistics, which employed 14,646 persons, as compared with 14,240 on October 1. Most of the

advance occurred in Ontario. Practically no change had been indicated on the corresponding date last year, but employment was then in greater volume.

Chemicals and Allied Products.—Contractions were recorded in this group, in which statements were furnished by 138 plants employing 8,199 persons, or 148 fewer than in their last report. Activity was less than in the autumn of 1930, when an increase had been reported.

Clay, Glass and Stone Products.—Seasonal curtailment was indicated in building material plants, chiefly in Quebec, Ontario and the Prairie Provinces; employment generally was at a lower level than on November 1, 1930. The forces of the 180 employers from whom information was received declined by 987 persons to 10,315 at the beginning of November.

Electric Current.—Employment in the production of electric current showed a contraction, 284 workers being released from the forces of the 94 co-operating manufacturers, who employed 15,862 persons. Similar declines had been indicated in this industry on November 1 last year, when the index was fractionally higher.

Electrical Appliances.—Curtailment was reported in electrical apparatus works, 82 of which had 14,748 employees, or 196 fewer than in their last report. This falling-off was less than that noted on the same date last year, but employment was then in greater volume.

Iron and Steel Products.—The crude, rolled and forged, automobile and machinery divisions of the iron and steel group registered greatly reduced employment, while there were smaller losses in the heating appliance, structural iron and steel, boiler, engine and tank and foundry and machine shop groups. Statements were received from 737 manufacturers whose payrolls aggregated 89,334 persons, as compared with 92,992 in the preceding month. Employment declined in all except the Prairie Provinces, the losses in Ontario being most noteworthy. The curtailment indicated at the beginning of November last year was not as pronounced, but employment then was decidedly more active than on the date under review.

Non-ferrous Metal Products.—Data tabulated from 122 firms in the non-ferrous metal group showed that they employed 15,231 workers, or 437 less than on October 1. Losses were registered in smelters and refineries and in lead, tin, zinc and copper works. Employment was slacker than on the same

date of 1930, when smaller losses in personnel had been reported.

Non-Metallic Mineral Products.—There was a decline in employment in non-metallic mineral product factories, 98 of which released 143 persons, bringing their staffs to 12,152 at the beginning of November. Establishments in Ontario reported most of the reduction. The index was lower than on November 1, 1930, although the curtailment had then involved a larger number of persons.

Logging

Statistics were tabulated from 223 firms employing 17,293 men, or 5,887 more than in the preceding month. This advance was rather greater than that reported on November 1, 1930, but employment then was more active than on the date under review, when it was, in fact, at a lower level than at the beginning of November in any other year on record. The greatest increases on the date under review occurred in the Maritime Provinces.

Mining

Coal-mining afforded slightly more employment, while other non-metallic mineral and metallic ore mines were slacker. Statements were compiled from 224 mine operators, with 48,404 employees, or 153 fewer than in their last report. Of the total employees recorded on the date under review, 26,223 belonged in the coal-mining, 16,032 in the metallic ore and 6,149 in the non-metallic mineral group. Large additions to staffs had been indicated on November 1, 1930, and the index then was above its level at the time of writing.

Communications

Telephones and telegraphs showed a seasonal decrease in employment; the companies and branches making returns had 26,560 workers on their payrolls, a loss of 452 since October 1. Conditions were not so good as on November 1, 1930.

Transportation

Street Railways and Cartage.—There was practically no change in employment in local transportation, according to 163 firms whose staffs aggregated 24,661 at the beginning of November. Small losses in Quebec and the Prairie Provinces were offset by similar gains in Ontario and British Columbia. Activity was less than on the corresponding date in 1930, when the unfavourable movement was more marked.

Steam Railways.—Statistics were tabulated from 102 employers in the railway operation group, in which their payrolls decreased by 528 persons to 70,367 on November 1. Declines were recorded in the Eastern Provinces, Quebec and Ontario, but the Western Provinces reported heightened activity. Employment was not so brisk as in the autumn of 1930, although much more pronounced contractions had then been indicated.

Shipping and Stevedoring.—Improvement was noted in water transportation, 86 companies employing 15,928 workers, as compared with 15,142 in the preceding month. Quebec, Ontario and British Columbia reported greater employment, while there were losses in the Maritime Provinces. Curtailment was shown on November 1 last year, but the situation was then more favourable.

Construction and Maintenance

Building.—There was an important decrease in building, 2,347 persons being let out from the forces of the 712 co-operating contractors, who had 42,197 employees, a number considerably less than that reported by the firms making returns at the beginning of November, 1930; the losses then indicated had, however, exceeded those noted on the date under review. The largest declines took place in Ontario and the Prairie Provinces.

Highways.—Work on highways and streets increased considerably, owing to the unemployment relief works undertaken in most of the provinces. Curtailment in this group is usually indicated during the autumn; the index at the beginning of November was higher than in any previous year for which data are available. Statements were tabulated from 364 employers, whose staffs, standing at 114,722, were larger by 7,602 persons than on October 1. All provinces except Quebec shared in the upward movement.

Railways.—Further curtailment of railway construction work was recorded, especially in Ontario and the Prairie Provinces. The forces

of the 43 companies and divisional superintendents furnishings returns declined from 34,386 persons on October 1, to 30,561 at the beginning of November. This shrinkage exceeded that registered on the corresponding date in 1930, when the level of employment was considerably higher.

Services

There were continued decreases in the personnel of hotels and restaurants, as the tourist and vacation season closed while activity in laundries and dry-cleaning establishments also declined; 283 firms in the service division employed 21,782 persons, as against 23,275 at the beginning of October. The index was lower than on November 1, 1931, although greater contractions had then been indicated.

Trade

The trend of employment in trade continued upward, 1,311 workers being added to the forces of the 836 retail and wholesale establishments furnishing returns, whose staffs aggregated 87,696. The advance took place in the former division. The index, standing at 122.8, was some six points lower than on November 1, 1930; it was also below the 1929 level, but was higher than in earlier years of the record. Further pronounced gains in employment may be expected during the next few weeks, in preparation for the Christmas and holiday trade. The increases recorded on the corresponding date last year gave employment to a smaller number of workers.

Tables

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on the date under review.

(2) Unemployment in Trade Unions at the Close of October, 1931

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are occupied in work other than their own trades or who are idle due to illness are not considered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month

with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

A slight change only in the labour volume afforded members of local trade unions was indicated at the close of October from the previous month, the percentage of unemploy-

ment standing at 18.3 in contrast with 18.1 per cent in September. The October percentage was based on the returns received from an aggregate of 1,864 labour organizations, whose membership numbered 192,603 persons. Railway car shops, a number of which closed during September, throwing many workers out of employment, remained idle or practically so throughout October, and were again an important factor in the unfavourable employment movement for the country as a whole. Unions in Quebec showed the most extensive employment losses due to these shut-downs, the Angus Shops in Montreal continuing closed throughout the month. In Saskatchewan, Alberta, British Columbia and Nova Scotia also the trend of employment was slightly downward, while Manitoba, New

the employment losses sustained in September due to car shop closings continuing throughout October, and at the end of the month there was an unemployment increase of 2.1 per cent over September. Conditions in Toronto also continued quiet, employment recessions of 2.3 per cent being shown from September, and in Regina and Edmonton a less favourable situation was indicated during October. On the other hand, Saint John unions reported an increase in activity of over 4 per cent during October, and the gain recorded from Halifax was 2.5 per cent, while in Winnipeg the expansion noted was fractional only. Distinctly unfavourable conditions were reported by Montreal, Toronto, Winnipeg, Regina, and Vancouver unions as compared with October a year ago, and in

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

Brunswick and Ontario unions indicated some improvement in the employment volume available. The changes throughout, however, were slight. The percentages of unemployment in all provinces exceeded those recorded in October, 1930, when 10.8 per cent of idleness was recorded in the country as a whole, Quebec, Ontario, Manitoba, Alberta, and British Columbia unions all showing appreciable increases in slackness which were rather generally distributed throughout the various trades and industries.

Unemployment in the largest city in each province, with the exception of Prince Edward Island, is tabulated separately each month. Vancouver unions at the close of October reported the largest percentage of idleness of these cities used for comparison, which was 1.6 per cent in excess of that recorded in September. Montreal unions were next in line,

Edmonton and Halifax also noteworthy curtailment of employment was evident. In Saint John, however, employment was in greater prevalence than in October a year ago.

Accompanying this article is a chart which shows the unemployment trend by months from January, 1925, to date. The curve during October was a continuation of the upward course shown in the previous month, though the projection was slight. The level reached by the curve at the close of the month was, however, substantially higher than in October last year, indicating that unemployment was in much greater volume during the month reviewed.

The manufacturing industries, with 505 unions reporting 558,863 members in October, indicated that 21.0 per cent of the members were idle on the last of the month, contrasted with 20.0 per cent in September. The iron

and steel trades remained quiet as in the previous month, principally due to the cessation of employment in railway car shops, the losses sustained by these workers involving the greatest number of members. Employment for textile and wood workers, bakers and confectioners and cigarmakers was also retarded, and recessions of less than 1 per cent were apparent among printing tradesmen. A much higher level of activity, however, was recorded by pulp and paper makers than in

September, and somewhat better conditions prevailed for glass, hat and cap, fur, leather, garment, and unclassified workers and metal polishers. Compared with the situation in the manufacturing industries during October, 1930, when 10.7 per cent of the members reported were without employment, iron and steel workers registered the most extensive reductions in activity during the month surveyed, and in the printing trades also fair-sized recessions occurred. Contractions of lesser magnitude, though noteworthy, were reflected by garment, textile, and wood workers, and the situation also declined for metal polishers, glass and fur workers, paper makers, bakers and confectioners, and cigar makers. Unclassified workers, however, were afforded a much greater volume of employment than in October last year, and considerable improvement in conditions was shown by hat, cap and leather workers.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1919.....	3.1	2.0	3.4	2.7	2.1	3.2	2.0	7.9	3.4
Average 1920.....	1.8	2.0	7.2	3.4	3.3	3.2	2.3	11.2	4.9

Aug., 1931.....	9.3	7.7	16.9	15.2	15.7	11.8	24.4	16.4	15.8
Sept., 1931.....	8.2	10.4	22.7	18.7	19.0	12.3	16.0	17.9	18.1
Oct., 1931.....	8.6	9.2	23.6	18.3	17.7	12.7	16.4	19.7	18.3

Stationary employment conditions prevailed in the mining industry as a whole, during both September and October, the percentage of idleness standing at 6.2 in each month. Fluctuations, however, occurred in the various provinces, Nova Scotia and British Columbia miners showing nominal curtailment of activity from September, which was counteracted by improvement in the Alberta mines. Nova Scotia, Alberta and British Columbia unions all combined to effect an unfavourable employment balance for the mining group in Canada as compared with October last year when 1.9 per cent of the members reported were idle. Alberta unions showing a decided falling off in employment during the month reviewed, with moderate curtailment in Nova Scotia, while in British Columbia a small employment percentage was recorded, in contrast with a fully engaged situation in October, 1930.

Besides the members entirely out of work in the coal mining industry a considerable number were reported on short time.

The building and construction trades during October continued slack, with a slight increase in idleness over September, as was indicated by the reports received from 262 unions of building tradesmen embracing 25,931 members. Of these 12,898 were without work on the last day of the month, a percentage of 49.7 as compared with 47.5 per cent in September. All trades participated in this slightly downward employment movement from September,

TABLE II—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

Table with 15 columns: Months, Fishing, Lumbering and Mining, Manufacturing Industries, Vegetable products, Pulp and paper products, Pulp and paper mill workers, Printing, publishing and lithographing, Wood products, Fibres, textiles and textile products and carpet workers, Garment workers, Hat, cap and glove workers, Animal products, Iron and its products, Non-ferrous metals, Clay, glass and stone products, Mineral products, Miscellaneous manufacturing industries, Building and construction, Transportation, Shipping and stevedoring, Steam railway, Local transportation, Communication, Telegraph operation, Telephone operation, Trade (retail shop) clerks, Services, Governmental, Miscellaneous, All occupations.

granite and stone cutters showing the greatest percentage increase in slackness, with more moderate recessions occurring among carpenters and joiners, while employment for the remaining tradesmen eased off but slightly. Heavy contractions of activity were recorded in the building trades from October a year ago, the percentage of idleness for that month standing at 31.5. Hod carriers and building labourers alone registered decided advances in employment over October last year, while activity for the remaining tradesmen declined sharply.

Slightly better conditions prevailed for transportation workers during October than in the previous month, the 782 unions from which returns were tabulated with 66,506 members, showing 10.9 per cent of idleness contrasted with 12.0 per cent in September. Steam railway employees, whose returns included over 81 per cent of the entire group membership reporting, navigation workers, and teamsters and chauffeurs, all shared in this slight employment advance, while among street and electric railway employees the trend of activity was downward, though the change was nominal only. In the retrogressive employment movement shown from October last year in the transportation industries, when 6.5 per cent of unemployment was recorded, the recessions were chiefly confined to steam railway employees, though the level of activity was also very slightly reduced for navigation workers, street and electric railway employees, and teamsters and chauffeurs.

Small employment advances were shown by retail clerks at the close of October, the 5 unions from which returns were tabulated, with 1,246 members, showing 2.3 per cent of idleness in contrast with 3.6 per cent in September. A slight drop in the volume of work afforded was manifest from October last year when only 1 per cent of the membership involved was reported idle.

Among civic employees 2.2 per cent of the members registered were without work at the close of October, as contrasted with percentages of 0.3 in September and 0.2 in October, 1930. The percentage for the month reviewed was based on the returns received by the Department of Labour from 74 associations of these workers with a membership total of 7,840 persons.

Employment in the miscellaneous group of trades remained at a low level during October, though some slight improvement was noted from September, the 134 unions from which reports were tabulated, with 6,262 members, indicating 19.5 per cent of their members idle compared with 20.2 per cent in September. A large factor in this favourable situation recorded in October was the improvement shown by theatre and stage employees, though among stationary engineers and firemen the trend was also towards greater employment. On the other hand, hotel and restaurant employees, barbers and unclassified workers reported minor contractions of activity. Heavy increases in unemployment among stationary engineers and firemen were chiefly responsible for the adverse employment movement shown in the miscellaneous group of trades from October, 1930, when 13.3 per cent of the members reported were idle, barbers also showing nominal curtailment of activity. Unclassified workers, on the contrary, reported substantially improved conditions, and the employment tendency for theatre and stage employees was upward. Among hotel and restaurant employees the same percentage of idleness was reported in both months being compared.

Operations for fishermen were largely restricted during October caused by the closing of the halibut season, the percentage of idleness standing at 15.6, contrasted with 6.0 per cent in September. In October last year a high level of activity was maintained, 2.3 per cent of the members reported being without work. For the month under review returns were received from 4 associations of fishermen, embracing a membership of 1,280 persons.

Lumber workers and loggers, with 5 unions including 824 members in October, reported an unemployment percentage of 34.1 at the close of the month, contrasted with percentages of 24.6 in September and 8.6 in October, 1930.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1930, inclusive, and also the percentages of unemployment by provinces for October of each year from 1919 to 1928, inclusive, and for each month from January, 1929, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

(3) Employment Office Reports for October, 1931

The volume of business transacted by the offices of the Employment Service of Canada during the month of October, 1931, showed increases in the average daily placements of 29 per cent and nearly 79 per cent, respectively, when a comparison was made with the records

of September, 1931, and with those of October, 1930. This large gain, in each instance, was due to increased placements in the highways division of construction and maintenance, where a great amount of work was undertaken under the Unemployment and Farm

Relief Act, sponsored by the Dominion and provincial governments. Logging also showed a gain over September, but was almost entirely offset by a nearly corresponding decline in manufacturing. Farming also recorded a substantial decrease in placements. In other groups the adverse change was small. The only group, except construction and maintenance, to show a gain in placements over those of October, 1930, was farming, where the increase registered was traceable to positions secured, particularly in the West, under the Farm Relief Act. Of the declines shown, that in services was the highest, followed by others of smaller proportions in logging, manufactur-

of October, however, the levels attained were about 20 points above those recorded at the end of the corresponding period a year ago. The ratio of vacancies to each 100 applications was 68.4 during the first half and 64.6 during the second half of October, 1931, in contrast with the ratios of 50.5 and 45.1 during the corresponding periods of 1930. The ratios of placements to each 100 applications during the periods under review were 66.6 and 63.7 as compared with 48.8 and 43.7 during the corresponding month of 1930.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during October, 1931, was

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o-o-o-o-o-o

ing, trade and transportation. The total declines, however, only amounted to about 20 per cent of the gain reported in construction and maintenance alone.

The accompanying chart shows the trend of employment since January, 1929, as represented by the ratios of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be noted that the curve of vacancies and of placements in relation to applications showed a marked upward trend during the first half of October, but each followed a downward course during the latter half of the month under review. At the close

2,108, as compared with 1,669 during the preceding month and with 1,195 in October a year ago.

The average number of applications for employment received daily by the offices during the month under review was 3,174 in comparison with 3,259 in September, 1931, and with 2,519 during October last year.

The average number of placements made daily by the offices of the Service during October, 1931, was 2,067, of which 1,057 were in regular employment and 1,010 in work of one week's duration or less, as compared with the total daily average of 1,604 during the preceding month. Placements in October a year ago averaged 1,157 daily, consisting of 524 place-

ments in regular and 633 in casual employment.

During the month of October, 1931, the offices of the Service referred 57,490 persons to employment and effected a total of 55,789 placements. Of these the placements in regular employment were 28,524, of which 25,096 were of men and 3,428 of women, while placements in casual work totalled 27,265. The number of vacancies reported by employers was 49,158 for men and 7,743 for women, a total of 56,901, while applications for work numbered 85,685, of which 72,423 were from men and 13,262 from women.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1921, to date:—

Year	Placements		
	Regular	Casual	Totals
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552
1924.....	247,425	118,707	366,132
1925.....	306,804	106,021	412,825
1926.....	300,226	109,929	410,155

1930.....	187,872	180,807	368,679
1931 (10 months).....	143,974	248,461	392,435

NOVA SCOTIA

During the month of October, positions offered through employment offices in Nova Scotia were nearly 35 per cent higher than in the preceding month and over 45 per cent in excess of the corresponding month of last year. Placements were over 39 per cent more than in September and 48 per cent above October, 1930. The gain in placements over October of last year was entirely due to highway construction undertaken in relief of unemployment, and the increase in construction and maintenance more than offset the declines in services, transportation, trade and manufacturing. The changes in other divisions were nominal only. Industrial divisions in which most of the placements were effected during the month were: construction and maintenance, 682; trade, 43; and services, 393, of which 286 were of household workers. During the month 642 men and 74 women were placed in regular employment.

NEW BRUNSWICK

There was a gain of 193 per cent in the number of positions offered through employment offices in New Brunswick during October, when compared with the preceding month and of 124 per cent in comparison with the corre-

sponding month last year. Placements also were 199 per cent higher than in September and 126 per cent higher than in October, 1930. As in Nova Scotia, this large increase in placements over October of last year was attributable to work provided on highway construction in relief of unemployment, although the building division of construction and maintenance also showed improvement. Services was the only group to show any appreciable loss. Placements by industrial divisions included: manufacturing, 23; logging, 20; construction and maintenance, 1,049; and services, 528, of which 374 were of household workers. Placements in regular employment numbered 617 of men and 73 of women.

QUEBEC

Orders listed at employment offices in the province of Quebec called for over 3 per cent more workers than in the preceding month, but 6 per cent less than during the corresponding month last year. There was a gain of nearly 10 per cent in placements when compared with September, but a loss of nearly 6 per cent in comparison with October, 1930. There was a decided increase in placements in services in comparison with October of last year and gains were also recorded in manufacturing and trade. These increases, however, were more than offset by declines under construction and maintenance, logging and farming. The changes in other groups were nominal only. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 114; logging, 364; construction and maintenance, 155; trade, 62; and services, 914, of which 729 were of household workers. During the month 797 men and 660 women were placed in regular employment.

ONTARIO

Opportunities for employment, as indicated by orders received at employment offices in Ontario during October, were over 50 per cent better than in the preceding month and over 77 per cent in excess of the corresponding month of last year. There was a gain also in placements of over 56 per cent when compared with September and of over 83 per cent in comparison with October, 1930. The substantial gain in placements over October of last year was entirely due to work provided in relief of unemployment on highway construction, as losses were recorded in all other groups. Of the declines, those in services, logging, and manufacturing were the largest, with somewhat smaller reductions in trade, farming and transportation. Placements by industrial divisions included: manufacturing,

* 63 placements effected by offices since closed.

627; logging, 249; farming, 586; transportation, 112; construction and maintenance, 22,176; trade, 317; and services, 3,844, of which 2,293 were of household workers. There were 8,386 men and 1,453 women placed in regular employment.

MANITOBA

The number of positions offered through employment offices in Manitoba during October was over 27 per cent higher than in the preceding month and nearly 56 per cent above the corresponding month of last year. Placements were 29 per cent higher than in September and nearly 58 per cent above October, 1930. There was a large increase in placements over October of last year in construction and maintenance, due to relief work provided on highway construction. This gain, however, was partly offset by declines in all other groups except farming, where a small improvement was recorded. The only decline of importance was in services. Placements by industrial divisions included: manufacturing, 39; farming, 622; construction and maintenance, 2,487; trade, 107; and services, 1,244, of which 1,080 were of household workers. There were 1,018 men and 387 women placed in regular employment during the month.

SASKATCHEWAN

Employment opportunities, as indicated by orders received at employment offices in Saskatchewan during October, were 25 per cent less than in the preceding month and nearly 3 per cent below the corresponding month of last year. There was a decline also in placements of nearly 22 per cent when compared with September and of nearly 4 per cent in comparison with October, 1930. Fewer placements were made in services, trade, transportation and manufacturing than during October last year, but these losses were offset, in part, by gains in construction and maintenance and farming. The changes in other groups were nominal only. Placements by industrial divisions included: manufacturing, 25; farming, 725; mining, 34; transportation, 34; construction and maintenance, 1,183; trade, 55; and services, 821, of which 508 were of household workers. Regular employment was secured for 1,117 men and 319 women during the month.

ALBERTA

Alberta orders during October called for nearly 18 per cent more workers than those received during the preceding month and nearly 66 per cent more than during the corresponding month of last year. Placements were nearly 13 per cent higher than in September

and over 60 per cent in excess of October, 1930. The gain in placements over October last year was due to relief work on road construction, although farm placements were also considerably higher and a small gain was reported in logging. Of the declines in all other groups, those in services and manufacturing were largest, but were not of sufficient importance to offset to any appreciable degree the gains mentioned above. Industrial groups in which most of the placements were effected during the month were: manufacturing, 27; logging, 102; farming, 2,223; mining, 264; construction and maintenance, 3,192; and services, 631, of which 420 were of household workers. There were 3,963 men and 269 women placed in regular employment.

BRITISH COLUMBIA

There was a gain of over 49 per cent in the number of positions offered through employment offices in British Columbia during October, when compared with the preceding month and of over 243 per cent in comparison with the corresponding month last year. Placements also were nearly 49 per cent higher than in September and nearly 239 per cent above October, 1930. The substantial gain in placements over October of last year was due to work on highway construction provided in relief of unemployment, as construction and maintenance was the only group to show any improvement. None of the declines, however, were large, the majority being in services, transportation, logging and farming. Placements by industrial divisions included: manufacturing, 155; logging, 74; farming, 68; construction and maintenance, 8,446; and services, 629, of which 395 were of household workers. Regular employment was found for 8,556 men and 193 women during the month.

Movement of Labour

During the month of October, 1931, the offices of the Employment Service of Canada made 28,524 placements in regular employment, 7,903 of which were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 197 were granted the Employment Service reduced transportation rate, 184 going to centres within the same province as the despatching office and 13 to other provinces. The reduced transportation rate, which is 2.7 cents per mile, with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

The movement of labour from Ontario centres during October was entirely to points within the province and included the transfer of 94 workers. Of these, the Sudbury office was instrumental in the transportation of 9 highway construction cooks and 2 clerks to Port Arthur, and of 5 bushmen, 2 mine labourers, 3 cookees, one clerk, one teamster and one mill watchman to employment within the Sudbury zone. From North Bay 6 general labourers and 10 loggers were carried at the special rate to Cobalt and 11 bushmen to Timmins, which zone also received 20 bushmen from Cobalt and one bushman from Fort William. The Fort William office in addition shipped one rigger and one carpenter within its own zone. The balance of this movement was from Port Arthur, 16 bushmen and 4 carpenters travelling to points within the territory covered by this city office.

The Manitoba offices issued 36 certificates for reduced transportation during October, 25 of which were granted to persons going to provincial points and 11 to other provinces. The Winnipeg office was responsible for the transfers provincially of 2 farm housekeepers and 2 hotel waitresses to Brandon, one cook, 2 waitresses, and one farm domestic to Dauphin, and of 14 farm hands and 2 highway construction labourers to centres within the Winnipeg zone. To a point within its own zone Dauphin despatched one domestic. Of the persons proceeding outside the province, 3 farm hands, one housekeeper and one hotel cook were carried to Port Arthur, and 5 farm hands and one farm housekeeper to various rural centres in Saskatchewan, all travelling on certificates issued at Winnipeg.

(4) Building Permits Issued in Canada During October, 1931

The estimated value of the building authorized by 61 cities during October was \$8,713,402; this was a decrease of \$1,609,012, or 15.6 per cent, as compared with the September total of \$10,322,414, and of \$4,043,000, or 31.7 per cent, as compared with the aggregate of \$12,756,402 for October, 1930. The cumulative total for the elapsed ten months of 1931 (\$95,611,669) was also lower than the average for the same period in the eleven years, 1920-1930; in connection with these data, however, it should be noted that there has also been a very decided decline in the wholesale costs of building materials, the Bureau's index having fallen from 154.4 per cent of the 1926 base in the first ten months of 1920 to 83.0 per cent in the months January-October of the present year, a decline of 46 per cent.

From Saskatchewan centres the labour movement during October was provincial only and comprised the transfer of 4 persons. Of these the Saskatoon office despatched one highway construction foreman and one farm housekeeper, and Regina one teacher and one construction labourer to employment within their respective zones.

Transfers from Alberta centres during October were 43 in number, 41 provincial and 2 interprovincial. The latter were of a farm hand and a farm domestic who travelled from Edmonton to the Saskatoon zone. The provincial movement was entirely from Edmonton, from which centre 2 farm hands were conveyed to Drumheller and 20 farm hands, 11 railway construction bridgemen, 2 highway construction labourers, one survey man, one cookee, one miner, one cook, one farm household worker and one waitress to situations within the Edmonton zone.

At British Columbia offices 20 persons secured certificates for reduced transportation during October, all to provincial points. Of these 12 were labourers travelling to centres in the Penticton zone on certificates issued at Nelson. The Penticton zone, in addition, was the destination of 2 bakers and one hotel waitress transferred from Vancouver. Receiving certificates also at Vancouver, 4 carpenters and one hotel worker proceeded to situations within the Vancouver zone.

Of the 197 workers who travelled at the Employment Service reduced transportation rate during October 89 were carried by the Canadian National Railways, 55 by the Canadian Pacific Railway, 47 by the Timiskaming and Northern Ontario Railway, 4 by the Pacific Great Eastern Railway and 2 by the Northern Alberta Railway.

Some 50 cities furnished detailed statistics, showing that they had issued nearly 900 permits for dwellings estimated to cost approximately \$4,500,000, and about 3,000 permits for other buildings valued at almost \$3,800,000. In addition, Brantford, Saskatoon and Prince Rupert reported the authorization of undertakings classed as engineering projects valued at \$32,246, \$300,000 and \$100,000, respectively. During September, authority was granted for the erection of about 800 dwellings and 2,000 other buildings, estimated to cost approximately \$3,200,000 and \$5,900,000, respectively.

Nova Scotia and Saskatchewan recorded increases of 49.0 per cent and 479.8 per cent, respectively, in the value of authorized building as compared with September, 1931. The

greatest decrease in this comparison was that of \$908,816 or 20.2 per cent in Quebec.

In the comparison with October, 1930, there were gains of 184.2 per cent and 40.1 per cent in Nova Scotia and Saskatchewan, respective-

ly; the other provinces recorded declines, that of \$2,196,813 or 38.0 per cent in Quebec being most pronounced.

Montreal, Toronto, Winnipeg and Vancouver showed decreases in comparison with both September, 1931, and October, 1930. Of the other centres, Halifax, New Glasgow, Fredericton, Sherbrooke, Fort William, Peterborough, Port Arthur, Walkerville, Regina, Saskatoon and Prince Rupert reported increases over September, 1931, and October, 1930.

Cumulative Record for First Ten Months, 1931.—The following table gives the value of the building authorized by 61 cities during October and in the first ten months of each year since 1920, as well as index numbers for the latter, based upon the total for 1920 as 100. The average index numbers of wholesale prices of building materials in the first ten months of the years since 1920 are also given (average 1926=100).

Year	Value of permits issued in October	Value of permits issued in first ten months	Indexes of value of permits issued in first ten months (1920=100)	Average Indexes of wholesale prices of building materials in first ten months average (1926=100)
	\$	\$		
1931.....	8,713,402	95,611,669	89.7	83.0
1930.....	12,756,402	139,117,752	130.6	93.3
1929.....	18,073,378	204,084,467	191.5	99.6
1928.....	21,558,085	187,179,719	175.7	97.9
1927.....	18,848,019	160,009,554	150.2	96.8
1926.....	14,738,402	134,902,338	126.6	100.4
1925.....	11,312,644	109,678,825	102.9	104.0
1924.....	13,089,588	109,906,921	103.2	107.7
1923.....	9,999,187	118,319,159	111.0	111.0
1922.....	10,737,525	127,515,975	119.7	108.6
1921.....	10,491,228	99,064,670	98.7	125.2
1920.....	10,401,041	106,547,319	100.0	154.4

The aggregate for the first ten months of this year was 31.3 per cent lower than in 1930, and was also less than the eleven-year average of \$136,028,700, while the average index numbers of wholesale prices of building materials were much lower than in any other year since 1920.

The Ontario Council of Women recently called the attention of the provincial government to an alleged gap in the legislation for the protection of children employed in non-industrial undertakings in the province. Attention was called in particular to the practice of keeping young persons at work in stores for excessively long hours on Saturdays, on days before holidays, and during Christmas week. The Hon. Dr. J. D. Monteith, Minister of Public Works and Labour, promised that an investigation of the subject would be made by the government.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the British *Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary showing the employment situation during October, 1931, is reproduced below. The following report on unemployment conditions in the United States is based on the statistics published by the United States Department of Labour, showing the recent trend of employment throughout the country.

Great Britain

Within a fortnight of the departure of sterling from the gold standard on September 21 there was an improvement in employment, which continued throughout October.

There was a marked improvement in employment in all the textile industries and particularly in cotton and wool. Employment also improved in the mining and metal manufacturing industries, in general engineering, motor vehicle and metal goods manufacture, and in the clothing, boot and shoe, glass, and paper trades.

The seasonal decline continued in building, public works contracting, hotel and boarding house service, and in the distributive and transport industries.

The improvement in employment occurred mainly in the Midlands and Northern divisions of England, and to a slighter degree in Wales and Scotland, but in all these areas employment was still very bad. It also remained very bad, though showing an improvement, in Northern Ireland. In London and the Southern areas employment showed a decline, mainly of a seasonal nature, but it was still moderate, and much better than in other areas.

Among the workpeople, numbering approximately 12,770,000 insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at October 26, 1931 (including those temporarily stopped as well as those wholly unemployed), was 21·9, as compared with 22·6 at September 21, 1931, and with 18·5 at October 27, 1930. The percentage wholly unemployed at October 26, 1931, was 18·1, as compared with 17·4 at September 21, 1931; while the percentage temporarily stopped was 3·8 as compared with

5·2. For males alone the percentage at October 26, 1931, was 23·6, and for females 17·5; at September 21, 1931, the corresponding percentages were 23·7 and 19·7.

At October 26, 1931, the numbers of persons on the Registers of Employment Exchanges in Great Britain were 2,127,943 wholly unemployed, 482,553 temporarily stopped, and 115,596 normally in casual employment, making a total of 2,726,092. This was 85,523 less than a month before, but 488,591 more than a year before. The total included 2,044,853 men, 70,634 boys, 557,150 women, and 53,455 girls.

The 2,127,943 wholly unemployed included approximately 1,412,880 insured persons who had paid at least 30 contributions during the preceding two years, and therefore satisfied the full contributions condition for the receipt of unemployment benefit; 604,550 insured persons who had paid less than 30 contributions during the preceding two years; and 110,510 uninsured persons. The wholly unemployed claimants for benefit, numbering 1,932,085, included 284,628 men, 7,084 boys, 56,140 women and 3,685 girls, who had been on the Register for less than one month.

In Great Britain and Northern Ireland the total number of persons on the registers of Employment Exchanges at October 26, 1931, was 2,792,320.

United States

The Bureau of Labour Statistics of the United States Department of Labour reports the changes in employment and pay-roll totals in October, 1931, as compared with September, based on returns made by 48,434 establishments in 15 major industrial groups, having in October 4,603,617 employees, whose combined earnings in one week were \$103,983,267.

Three of the 15 industrial groups surveyed reported gains in employment and earnings over the month interval. Anthracite mining reported a large increase in number of workers combined with a much greater increase in pay-roll totals, while both bituminous coal mining and retail trade showed substantial gains in each item.

In the remaining 12 industrial groups in which decreased employment was reported, decreases of 2·3 per cent or less were shown in the following groups: crude petroleum producing; telephone and telegraph; power, light, and water; electric-railroad operation; wholesale trade; hotels; laundries; and dyeing and cleaning. The decreases in employment in

the manufacturing, metalliferous mining, and quarrying industries were slightly larger, and the canning industry showed the usual large seasonal decrease in employment in October, due to the ending of the vegetable canning season. The combined total of these 15 industrial groups shows a decrease of 2.7 per

cent in employment from September to October, and a decrease of 0.9 per cent in payroll totals.

According to an estimate by the American Federation of Labour, approximately 6,200,000 wage earners were unemployed in the United States on November 18.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

Reference was made in the *LABOUR GAZETTE*, June, 1930, page 652, to the Fair Wages and Eight-Hour Day Act of Parliament which was adopted on May 30, 1930. The text of this measure appeared in the April, 1930, issue, page 383. This Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repair or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(a) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

(2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication or manufacture is carried on in any established plant or factory other than a plant or factory established for the purposes of the work contemplated.

The Act was put into effect at once as respects contracts for construction, remodelling, repair or demolition, both as to its provisions as to current and fair and reasonable rates of wages and as to the application of the eight-hour day.

With respect to contracts for other classes of work, the Fair Wages Policy of the Government of Canada, (which has been in effect

since 1900 and was expressed in an Order in Council adopted June 7, 1922, and amended April 9, 1924) requires that they must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above-mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on or if there be no custom of the trade as respect hours in the district then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor

shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letters boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following Fair Wages Clause:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the Contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively

the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payment remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed claim therefore may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, those included under the "A" groups containing either fair wages schedules as shown below, or the General Fair Wages Clause above-mentioned, and those coming under the "B" group containing the Fair Wages Clause specified in the "B" Conditions as given above:—

DEPARTMENT OF MARINE

Contract in Group "A" (Construction, etc.)

Construction of a quarantine launch for William Head, B.C. Name of contractors, Walkems Shipyard, Ltd., Vancouver, B.C. Date of contract, November 25, 1931. Amount of contract, \$32,044. A General Fair Wages Clause was inserted in the contract calling for the observance of fair and reasonable rates of wages and the application of the eight-hour day.

DEPARTMENT OF NATIONAL DEFENCE

Contracts in Group "A" (Construction, etc.)

Construction of pump house and sump wells at the Royal Canadian Air Force Training Station, Trenton, Ont. Name of contractor, Quinte Construction Co., Trenton, Ontario. Date of contract, November 9, 1931. Amount of contract, \$3,850. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages	Hours of labour
	Not less than	Not more than
	per hour	per day
Bricklayers and masons.....	\$1 00	8
Bricklayers' and masons' helpers...	0 45	8
Plasterers.....	1 00	8
Carpenters.....	0 80	8
Painters and glaziers.....	0 65	8
Ordinary labourers.....	0 40	8
Roofers (sheet metal).....	0 70	8
Roofers (tar and gravel).....	0 60	8
Electricians.....	0 70	8
Plumbers and steamfitters.....	0 70	8
Plumbers and steamfitters' helpers	0 45	8
Concrete workers.....	0 40	8
Sheet metal labourers.....	0 45	8
Structural ironworkers.....	0 90	8
Driver, team and wagon.....	0 75	8
Driver, horse and cart.....	0 60	8
Concrete mixer operator.....	0 55	8
Truck driver.....	0 45	8

Reconstruction of the Armoury, Woodstock, N.B. Name of contractors, Messrs. Armstrong Bros., Perth, N.B. Date of contract, November 7, 1931. Amount of contract, \$29,990. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages	Hours of labour
	Not less than	Not more than
	per hour	per day
Concrete mixer operator.....	\$0 45	8
Concrete labourers.....	0 35	8
Painters.....	0 55	8
Felt and gravel roofers.....	0 50	8
Sheet metal workers.....	0 60	8
Structural iron workers.....	0 75	8
Plumbers and steamfitters.....	0 60	8
Bricklayers and masons.....	0 80	8
Carpenters.....	0 55	8
Electricians.....	0 60	8
Plasterers.....	0 80	8
Labourers.....	0 35	8
Driver, horse and cart.....	0 55	8
Driver, team and wagon.....	0 70	8

Installation of an automatic sprinkler system in Hangar A3, Royal Canadian Air Force Training Station, Trenton, Ont. Date of contract, November 19, 1931. Amount of contract, \$12,985. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages	Hours of labour
	Not less than	Not more than
	per hour	per day
Sprinkler fitter.....	\$1 20	8
Labourers.....	0 40	8

Painting metal ceiling of Hangar A2, R.C.A.F. Station, Trenton, Ontario. Name of contractor, Mr. Harry Onyon, Trenton, Ont. Date of contract, September 11, 1931. Amount of contract, \$661. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages	Hours of labour
	Not less than	Not more than
	per hour	per day
Bricklayers and masons.....	\$1 00	8
Bricklayers' and masons' helpers...	0 45	8
Plasterers.....	1 00	8
Carpenters.....	0 80	8
Painters and glaziers.....	0 65	8
Ordinary labourers.....	0 40	8
Roofers (sheet metal).....	0 70	8
Roofers (tar and gravel).....	0 60	8
Electricians.....	0 70	8
Plumbers and steamfitters.....	0 70	8
Plumbers and steamfitters' helpers	0 45	8
Concrete workers.....	0 40	8
Sheet metal labourers.....	0 45	8
Structural ironworkers.....	0 90	8
Driver, team and wagon.....	0 75	8
Driver, horse and cart.....	0 60	8
Concrete mixer operator.....	0 55	8
Truck driver.....	0 45	8

Laying of electric cable, etc., to the Pump House, R.C.A.F. Station, Trenton, Ont. Name of contractors, Messrs. Hibbard Bros., Belleville, Ont. Date of contract, August 3, 1931. Amount of contract, \$1,345. The last mentioned fair wages schedule was inserted in the contract.

Construction of an extension of 20" water main and services to Hangar A3, R.C.A.F. Training Station, Trenton, Ont. Name of contractors, Quinte Construction Limited, Trenton, Ont. Date of contract, August 10, 1931. Amount of contract, \$2,834. The last mentioned fair wages schedule was inserted in the contract.

Heating, plumbing, stucco and plastering, etc., the Pump House at R.C.A.F. Training Station, Trenton, Ont. Name of contractors, Quinte Construction Limited, Trenton, Ont. Date of contract, October 6, 1931. Amount of contract, \$2,750. The last mentioned fair wages schedule was inserted in the contract.

Laying of sanitary sewer from Hangars, etc., to sewage sump at R.C.A.F. Station, Trenton, Ont. Name of contractors, Rayner Construction Limited, Toronto, Ont. Date of contract, September 26, 1931. Amount of contract, \$4,460. The last mentioned fair wages schedule was inserted in the contract.

Stuccoing exterior walls of Hangar A2, R.C.A.F. Training Station, Trenton, Ont. of contractors, Quinte Construction Limited, Trenton, Ont. Date of contract, July 6, 1931. Amount of contract, \$2,700. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Bricklayers and masons.....	\$1 00	8
Bricklayers' labourers.....	0 45	8
Plasterers.....	1 00	8
Carpenters.....	0 80	8
Painters and glaziers.....	0 70	8
Ordinary labourers.....	0 40	8
Roofers (sheet metal).....	0 70	8
	per day	
Driver, team, horse-wagon.....	6 50	8
	per hour	
Structural ironworkers.....	1 00	8
Plumbers and steamfitters.....	0 70	8
Electricians.....	0 70	8
Concrete workers.....	0 40	8
Sheet metal workers.....	0 70	8
Roofers (felt and gravel).....	0 70	8
Plumbers and steamfitters' helpers	0 45	8

Service crossings, King's Highway, R.C.A.F. Station, Trenton, Ont. Name of contractors, Quinte Construction Limited, Trenton, Ont. Date of contract, July 2, 1931. Amount of contract, \$700. The preceding fair wages schedule was also inserted in this contract.

DEPARTMENT OF PUBLIC WORKS

Contracts in Group "A" (Construction, etc.)

Construction of repairs to the south approach of bascule bridge at Burlington Channel, Ontario. Name of contractors, Ontario Construction Co., Ltd., St. Catharines, Ont. Date of contract, November 15, 1931. Amount of contract, approximately \$6,199 50. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours of labour Not more than
	per hour	per day
Labourers.....	\$0 40	8
Carpenters and joiners.....	1 00	8

POST OFFICE DEPARTMENT

Following is a statement of payments made in November, 1931, for supplies ordered by the Post Office Department under contracts

which were subject to the regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages, and the performance of the work under proper sanitary conditions:—

Making metal dating stamps and type, brass crown seals, cancellers, etc.

Pritchard-Andrews Co., Ltd., Ottawa, Ont. \$ 660 16

Making and repairing rubber stamps, dater, etc.

Pritchard-Andrews Co., Ltd., Ottawa, Ont. 186 50

Making and supplying Letter Carriers' Uniforms.

Wolfe Cap Co., Montreal, Que. 4 68

Kaufman Rubber Co., Kitchener, Ont. 885 06
 Miner Rubber Co., Granby, Que. 1,353 48
 Richelieu Mfg. Co., St. Hyacinthe, Que. 494 10
 R. J. Devlin & Co., Ottawa, Ont. 1,475 00
 Samuel Dorfman, Quebec, Que. 10,107 76

Mail Bag Fittings

F. W. Carling, Ottawa, Ont. 3,140 00
 Ketchum Mfg. Co., Ottawa, Ont. 85 26

Scales

Pritchard-Andrews Co., Ltd., Ottawa, Ont. 320 00

Letter Boxes, etc.

F. H. Plant Ltd., Ottawa, Ont. 740 40
 Capital Brass, Ltd., Ottawa, Ont. 1,523 58
 Pritchard-Andrews Co., Ltd., Ottawa, Ont. 844 34

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing: Food, Drink and Tobacco

GUELPH, ONTARIO.—A MANUFACTURER OF MALT SYRUP AND THE INTERNATIONAL UNION OF THE UNITED BREWERY, FLOUR, CEREAL AND SOFT DRINK WORKERS OF AMERICA, LOCAL No. 304.

Agreement in effect from January 1, 1929, to January 1, 1932. Thirty days notice before expiration date must be given by either party desiring a change.

Only union members to be employed, if available, but if not, extra men may be employed and will be given permit cards by the union.

Hours: 8 per day, a 48-hour week.

Overtime and work on Sundays and holidays, double time.

Wages per week: pan operators \$33, shipper and fireman \$31, repairman and cooper \$30, brewers \$29, helpers \$28, assistant shipper and truck driver \$27, dry operators and yardmen \$26.

In case of lay-off in dull season, men will be laid off in rotation for not more than one week at a time.

All disputes which cannot be settled with the proprietor or superintendent will be referred to an arbitration board consisting of two members of each party and a fifth chosen by them whose decision will be final and binding. No cessation of work during arbitration proceedings.

VANCOUVER AND VICTORIA, B.C.—CERTAIN BREWERIES AND THE INTERNATIONAL UNION OF THE UNITED BREWERY, FLOUR, CEREAL AND SOFT DRINK WORKERS OF AMERICA, LOCAL No. 300 AT VANCOUVER AND LOCAL No. 280 AT VICTORIA.

This agreement, which is in effect from May 1, 1929, to December 31, 1931, was summarized in the LABOUR GAZETTE, August, 1929, as applying to a certain Brewery Company in Victoria. The same agreement is also in effect for the same period at Vancouver, B.C., and this applies to Local Union No. 300.

Manufacturing: Pulp, Paper and Paper Products

IROQUOIS FALLS, ONTARIO.—ABITIBI POWER AND PAPER COMPANY LIMITED AND THE INTERNATIONAL BROTHERHOOD OF PAPER MAKERS.

This agreement came into effect May 1, 1926, to run to April 30, 1927, and from year to year until either party gives notice 30 days before May 1, of any year, and was amended on May 1, 1927, to provide for the substitution of the 1927 standard wage schedule for the 1926 schedule previously in effect. The agreement is still in effect except for the wage scale which was amended August 15, 1931, to reduce wages approximately five per cent. A similar change in wages has been made in mills operated by the company and its subsidiaries in other localities.

The terms of this agreement are similar to the agreement between the Manitoba Paper Company, Limited (a subsidiary of the Abitibi Power and Paper Company, Limited) at Pine Falls, Manitoba, and the International Brotherhood of Pulp, Sulphite and Paper Mill Workers, which was summarized in the LABOUR GAZETTE, July, 1931, page 832, except that the clauses

not affecting paper makers such as the wage scale, hours for outside day workers, hours for wood handling operations, apprenticeship system in mechanical trades and necessary work in case of shutdown of mills, are not included.

Wages per hour for certain classes from August 15, 1931, are: machine tenders \$1.15 to \$1.43; back tenders 98 cents to \$1.29; third hands 76 to 94 cents; fourth hands 59 to 61 cents; fifth hands 54 to 56 cents; beater engineers \$1.16; oilers 56 to 59 cents; rewinder men 77 cents; revinder men's helpers 56 cents.

IROQUOIS FALLS, ONTARIO.—**ABITIBI POWER AND PAPER COMPANY LIMITED AND THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS, THE INTERNATIONAL ASSOCIATION OF MACHINISTS AND INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS.**

This agreement which came into effect May 1, 1929, to run to April 30, 1930, and from year to year until either party gives notice 30 days before May 1, of any year, is still in effect except for the wage scale which was amended August 15, 1931, to reduce wages approximately five per cent. This change in wages is similar to that made in mills operated by the company and its subsidiaries at Pine Falls, Manitoba, and other localities.

The terms of this agreement other than wages are similar to the agreement with the Manitoba Paper Company (a subsidiary of the Abitibi Power and Paper Company, Limited) at Pine Falls, Manitoba, which was summarized in the *LABOUR GAZETTE*, July, page 832, except that the provision for at least four hours pay for all day workers called out for Sunday or holiday work and also the clauses relating to wood handling operations and necessary work in case of shutdown are not included. There is an additional clause providing that common labourers are to join their respective unions after thirty days' continuous service and the rate of wages for them will be set by a conference between the union or unions and the company for a period of three months.

Wages for certain classes from August 15, 1931, are:

Wood room: assistant foreman, knife changer and drum operators 58 cents, block pile powder man 57 cents, sawyers 46 cents, oilers 43 cents, hand knife barker and sulphite chippers 42 cents. All other employees of wood room with the exception of foreman 41 and 40 cents. Grinder room: assistant foreman and jiggerman 60 cents, crankman, oilers and grindermen 46 cents, floorman and wood pickers 43 cents. Sulphite mill: cooks 84 cents (others on salary), acidmakers 78 cents, stock runners 71 cents, cooks' helpers 47½ to 66 cents, burner men, deckers and rotary screenmen 45 cents, oilers and cleaners 43 cents. Mixing room: broke beaters and mixing men 40 cents. Wet room: refinerman, deckers and rotary screenmen and oilers 43 cents, screenmen and wet machines men 41 cents, truckers 40 cents. Finishing Room: checkers 46 cents, finishers and core-makers 43 cents; car liners, truckers, wrapper cutters and helpers 41 cents; cleaners 40 cents. Steam Plant: engineers 66½ to 73 cents, pump men 59 to 64 cents, firemen 61 cents, oilers 59 cents, bunkermen and sweepers 43 cents. Sanitary and fire protection: watchmen 43 cents, sanitary crew and cleaners 40 cents. Teaming

and outside equipment: teamsters 42 cents, teamsters' helpers and labourers 40 cents. Stores: storemen 47½ to 61 cents, stores labour 40 cents. Sawmill: machine man 57 cents, labourers 40 cents. Mechanical: pump repairs 76 cents, millwrights and digester repairmen 68 to 71 cents, millwrights' helpers 56 to 60 cents, steam plant repairmen 68 to 71 cents, bullgang 47½ to 52 cents. Machine Shop: machinists 68 to 83 cents; tinsmiths 68 to 76 cents, blacksmith 68 to 71 cents, mechanics' helpers 56 to 59 cents. Pipefitters: pipefitters 68 to 77 cents, pipefitters' helpers 56 to 60 cents. Electrical: motor winder 73 to 85½ cents, telephone men 68 to 81 cents, linemen 68 cents; journeymen 68, 71 and 76 cents. Bricklayers and masons 68 to 78 cents, carpenters 68 to 71 cents, painters and glaziers 60 to 66½ cents, masons' helpers 40 to 56 cents, painters' and glaziers' helpers 56 to 60 cents.

PINE FALLS, MANITOBA.—**MANITOBA PAPER COMPANY (A SUBSIDIARY OF THE ABITIBI POWER AND PAPER COMPANY, LIMITED) AND THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS.**

The agreement which was summarized in the *LABOUR GAZETTE*, July, 1931, page 832, was amended August 15, 1931, to provide for the following changes in wages: a five per cent reduction on all rates over 42 cents per hour except that a minimum rate of 70 cents per hour for mechanics and machinists will be maintained, men previously receiving 42 cents per hour will be reduced to 41 cents and no change will be made in rates of all men receiving 41 cents or less per hour.

Manufacturing: Printing and Publishing

HALIFAX, NOVA SCOTIA.—**NEWSPAPER PUBLISHERS AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, No. 330.**

Agreement to be in effect from May 30, 1931, to May 30, 1932, and for such time thereafter not exceeding 30 days as may be required to negotiate a new agreement.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, June, 1930, page 714, with the exception that no mention is made of the wage rates for journeymen.

TORONTO, ONTARIO.—**TORONTO DAILY NEWSPAPER PUBLISHERS AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 91.**

The agreement which was previously in effect and was summarized in the *LABOUR GAZETTE*, July, 1928, and January, 1926, has been renewed for another year, that is until March 31, 1932.

Wages for journeymen: \$47.50 per week for work on evening newspapers and \$50.50 for work on morning newspapers.

TORONTO, ONTARIO.—**PROPRIETORS OF THIRD SHIFT PUBLICATIONS AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 91.**

The agreement which was previously in effect and was summarized in the *LABOUR GAZETTE*, August, 1929, page 925, has been renewed for another year, that is until March 31, 1932.

Wages per week for journeymen employed on the shift worked between 11 a.m. and 9 p.m.: \$52.50 per week.

Manufacturing: Textiles

TORONTO, ONTARIO.—ASSOCIATED CLOTHING MANUFACTURERS AND THE AMALGAMATED CLOTHING WORKERS OF AMERICA.

This agreement which came into effect May 1, 1922, and was summarized in the LABOUR GAZETTE, August, 1922, page 889, has been in effect from year to year since with certain wage adjustments. The latest renewal was from May 1, 1931. It is provided in the agreement that either party may give the other notice of change ninety days before May 1, of any year. The terms of the agreement are similar to those of the agreement between this union and a certain clothing manufacturer at Toronto, which was summarized in the LABOUR GAZETTE, October, 1931, page 1139.

Construction: Buildings and Structures

TORONTO, ONTARIO.—TORONTO DISTRICT, ONTARIO ASSOCIATION OF ELECTRICAL CONTRACTORS AND DEALERS AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL No. 353.

The agreement which came into effect June 1, 1929, for a period of three years and which was summarized in the LABOUR GAZETTE, June, 1929, page 677, and November, 1926, page 1146, was amended June 1, 1931, and will remain in effect until May 31, 1933. Six months before expiration date the parties will appoint representatives to negotiate a new one. The following changes have been made:—

Hours: 8 per day, five days a week, a 40-hour week.

Overtime: all overtime to be paid double time, with the exception that men may be allowed to work Saturday mornings on emergency work and that each contractor may employ one journeyman on Saturday mornings at straight time for repair or maintenance work.

The division of journeymen into class "A" and class "B" is continued. Class "B" men are to do residential work only.

The wage rate of \$1.25 per hour for class "A" electrical workers which has been in effect since June 1, 1930, is continued to May 31, 1932; and from June 1, 1932, to May 31, 1933, the rate will be \$1.35. The rate for class "B" will be 85 cents per hour to the termination of the agreement.

TORONTO, ONTARIO.—CERTAIN MOSAIC, MARBLE, TERRAZZO FIRMS AND THE BRICKLAYERS, MASONS AND PLASTERERS INTERNATIONAL UNION, LOCAL No. 2, ONTARIO.

This agreement covers terrazzo workers, members of the above local union.

Agreement to be in effect from January 1, 1931, to December 31, 1931, and until a new agreement is reached. Both parties to meet three months before expiration date to draw up a new agreement.

Hours: 8 per day with a 5-day week.

Overtime: time and one-half. Work on Saturdays, Sundays and holidays, double time.

Wages per hour: first class terrazzo workers \$1.10; second class terrazzo workers 95 cents.

For work out of city, travelling expenses and an allowance for board and travelling time during working hours to be paid by employers.

The number of apprentices allowed to employers is limited by the agreement. Apprentices must be between 17 and 20 years of age and must be duly indentured. They are to serve four years and be given a thorough training in all marble, mosaic and terrazzo work.

Wages per hour for apprentices: first year 35 cents, second year 45 cents, third year 60 cents, fourth year 75 cents.

No strike to occur until any dispute has been referred to a joint arbitration committee consisting of representatives of each party.

TORONTO, ONTARIO.—CERTAIN TILE AND MANTEL CONTRACTORS AND THE BRICKLAYERS, MASONS AND PLASTERERS INTERNATIONAL UNION, LOCAL No. 2, ONTARIO.

This agreement covers tilesetters, members of the above local union.

Agreement to be in effect from January 1, 1931, to December 31, 1931, and until a new agreement is reached. Both parties are to meet three months before the expiration date to draw up a new agreement.

The union will supply tilesetters but if unable to furnish a sufficient number they will work with mechanics secured by the contractor such mechanics to work under similar conditions.

The union will not limit the amount of work an employee is to do nor limit the use of machinery or tools.

Hours: 8 per day, five days per week, a 40-hour week.

Overtime: overtime work time and one-half; work on Saturdays, Sundays and holidays, double time.

Wages per hour: tilesetters, \$1.25.

Each employer may employ one apprentice and one additional apprentice for each five journeymen regularly employed with a maximum of three apprentices. Apprentices must be at least 16 years and not more than 17 years of age and must be duly indentured. Their application must be approved by the local joint arbitration committee. They will serve a term of four years including school instruction if provided. They are to be given a thorough training in all tilesetting work.

Wages for apprentices: first year 25 cents, second year 35 cents, third year 45 cents, fourth year 60 cents.

A joint arbitration committee to be formed and there will be no strike before a dispute has been brought before this committee.

TORONTO, ONTARIO.—SHEET METAL CONTRACTORS AND THE INTERNATIONAL ASSOCIATION OF SHEET METAL WORKERS, LOCAL No. 30.

Agreement to be in effect from May 1, 1931, to April 30, 1932, and for another year unless thirty days' notice is given before expiration date.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, August, 1929, page 926, with the following exceptions:

Overtime: time and one-half to midnight on other days and on Saturdays until 5 p.m. All other overtime or work on Sundays and holidays, double time.

Wages for journeymen sheet metal workers: \$1.07½ per hour. (This is a reduction of 7½ cents per hour from the 1930-1931 rate, but is the same as paid in 1929-1930).

Apprentices must be registered with the union and are not to work outside the shop during their first three years except under journeyman's supervision as provided in the previous agreement, but all other clauses relating to apprentices are omitted from this agreement.

NIAGARA FALLS, ONTARIO.—THE BUILDERS EXCHANGE MASTER CARPENTERS AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL No. 713.

The agreement which was to be in effect May 1, 1931, to April 30, 1932, and which was summarized in the *LABOUR GAZETTE*, June of this year, page 710, has been amended to provide for a wage rate of 90 cents per hour from November 1, 1931 to April 30, 1933. (This is a reduction of 10 cents per hour.)

ST. CATHARINES, ONTARIO.—MASTER CARPENTERS AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL No. 38.

Agreement (made following the strike which was reported in the *LABOUR GAZETTE*, July, 1931, page 761) to be in effect from May 1, 1931, to April 30, 1932. This agreement is the same as the one previously in effect and summarized in the *LABOUR GAZETTE*, June, 1929, page 806, and July, 1928, page 787, with the following exception:—

The wage rate for journeymen carpenters is 90 cents per hour. (This is a reduction of 10 cents per hour.)

FORT WILLIAM AND PORT ARTHUR, ONTARIO.—WORKING RULES AND WAGE SCALE OF THE INTERNATIONAL UNION OF OPERATING ENGINEERS, LOCAL No. 865.

This schedule has been in effect since May 1, 1930, and is verbally accepted by certain employers.

Union representatives may visit job stewards but not interfere with the work.

Hours: 8 per day except on construction jobs when hours are 10 per day.

Overtime: time and one-half for all overtime and for work on Sundays and holidays.

Wages per hour for stationary engineers: second class job 75 cents, third class job and licence 65 cents, fourth class job and licence 60 cents.

Wages per hour for hoisting engineers on construction: steam shovels \$1.20; engineers in charge of cranes, drag lines, clam shells, orange peels, derricks, pile drivers 85 cents; engineers on all other machines used in construction as skip hoists, concrete mixers, air compressors, pumps, stone crushers, dinky locomotives, street rollers and all other boilers used on construction 75 cents.

CALGARY, ALBERTA.—GENERAL CONTRACTORS' ASSOCIATION AND THE BRICKLAYERS', MASONS, AND PLASTERERS' INTERNATIONAL UNION No. 2, ALBERTA.

The agreement which came into effect April 1, 1929, for a period of one year and which was summarized in the *LABOUR GAZETTE*, May, 1929, page 536, is still in effect.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Wages for journeymen bricklayers and masons: \$1.45 per hour.

VANCOUVER AND DISTRICT, B.C.—WAGE SCALE AND WORKING RULES OF THE INTERNATIONAL UNION OF OPERATING ENGINEERS, LOCAL No. 115.

The wage scales and working rules for Locals 844 and 46A were both summarized in the *LABOUR GAZETTE*, November, 1930, page 1334. These two locals have since amalgamated and formed one local, number 115.

This scale for Local 115 came into effect May 1, 1931, and is in effect subject to 30 days' notice.

All men to be hired through union headquarters whenever possible. The business agent will be allowed on any job where union members are employed. Union members will not instruct as operators any men who are not union members. Union firemen will be employed with union engineers. If a member of the union is discharged for enforcing these rules and scale, no union member will work for such employer until redress is made.

Hours: 8 per day, 4 on Saturdays, a 44-hour week, except for work outside a 25 mile radius of Vancouver when 48 hours shall be a week's work. When members are required to raise steam before the regular work day, a minimum of one hour's time will be allowed. On jobs where two or more shifts are employed, 7½ hours will be a day's work and be paid for 8 hours.

Overtime: double time. All work between Saturday noon and Sunday midnight double time except for shift work. Double time for work on holidays.

For work out of city, transportation and travelling time up to 8 hours per day will be paid by employers.

Where a member is required to wait for material or other reasons, beyond his control he will be paid full time for waiting.

Wages per day: hoisting steel \$10; clam shell, orange peel, pile drivers, loco cranes, aerial cable ways, derricks and scraper \$9; tower hoists, snubbers, road roller, compressors (oil and electric) \$8; firemen and oilers \$5.50; all unspecified work \$7. Wages per day on dipper dredges: engineers \$10, cranesmen \$8, firemen \$5.50, chief engineers \$7. Wages per day on shovels and drag lines to apply on all contract jobs within a radius of 25 miles of Vancouver; engineers \$10, cranesmen \$8, firemen \$6.50, oilers on power shovels \$5.50. Wages per month on all contract jobs outside a radius of 25 miles of Vancouver: engineers \$250, cranesmen \$200, firemen \$160, watchmen \$140.

VICTORIA, B.C.—MASTER PLUMBERS' ASSOCIATION AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 324.

The agreement which came into effect February 1, 1929, to remain in effect subject to 30 days' notice was summarized in the *LABOUR GAZETTE*, August, 1929, page 927. Both parties verbally agreed to a wage rate of \$1 per hour (a reduction of 12½ cents per hour) from May 1, 1931.

Transportation and Public Utilities: Water Transportation

SAINT JOHN, N.B.—VARIOUS STEAMSHIP COMPANIES AND THE INTERNATIONAL LONGSHOREMEN'S ASSOCIATION, LOCAL No. 273.

Agreement to be in effect from November 1, 1931, to October 31, 1932, and from year to year thereafter until either party gives notice 30 days before October 31, of any year.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, December, 1930, page 1456, with minor changes in certain clauses.

The regular wage rate remains at 70 cents per hour day and night for handling general cargo and 80 cents for handling bulk cargoes. The regular hours are the same as before, that is 9 per day except for the Saturday afternoon holiday from June 1, to September 30.

SAINT JOHN, N.B.—VARIOUS STEAMSHIP COMPANIES AND THE INTERNATIONAL LONGSHOREMEN'S ASSOCIATION, LOCAL No. 810 (COAL HANDLERS AND TRIMMERS).

Agreement to be in effect from November 1, 1931, to October 31, 1932, and from year to year until either party gives notice 30 days before October 31, of any year.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, January, 1931, page 94, with minor changes in certain clauses.

The regular wage rate remains at 80 cents per hour for day work and \$1 for night work, with a 9-hour day.

SAINT JOHN, N.B.—VARIOUS STEAMSHIP COMPANIES AND THE INTERNATIONAL LONGSHOREMEN'S ASSOCIATION, LOCAL No. 1039 (STEAMSHIP HORSE AND CATTLE FITTERS, SEALERS, LINERS AND CLEANERS).

Agreement to be in effect from November 1, 1931, to October 31, 1932, and from year to year until either party gives notice 30 days before October 31, of any year.

This agreement is the same as the one previously in effect and summarized in the LABOUR GAZETTE, January, 1931, page 94, with minor changes in certain clauses.

The regular wage rate remains at 65 cents per hour for day work and 97½ cents for night work, with a 9-hour day.

Social Policy of the Co-operative Movement

The Central Committee of the International Co-operative Alliance, following a conference held at Paris recently, issued a statement of co-operative principles, which it was suggested might be so extended in their application as to provide a practical cure for the economic depression:—

“The Central Committee of the I. C. A. assembled at Paris in the presence of the unparalleled economic crisis which the failure of the competitive capitalist system has produced, declares that the solution of the present world difficulties lies in the application and generalization of the principles on which the co-operative organization of commerce and industry, as represented in the organization of the sixty million co-operators who constitute the membership of the I. C. A., is based.

“Our co-operative system offers the only effective alternative to the anarchy of competition and private profit because it is based upon service to the community and the elimination of private gain, and puts an end to the inequalities between the resources of the consumer and the producer.

“The Central Committee, therefore, calls upon all its affiliated organizations to demonstrate the superiority of their economic system and its power to secure the highest interests of the community by all the means in their power, among others:—

(a) by the exercise of the utmost vigilance and economy in their purchases and the ac-

cumulation of stocks; (b) by distributing all commodities to their members at the most equitable price, since the whole of the benefits of co-operation go to the consumers; (c) by resisting all attempts of capitalist enterprise to use the present situation for private profit; (d) by using all the means in their power to mitigate the evils and distress attendant upon the dreadful and increasing unemployment of the world's workers, particularly by the establishment of the co-operative regime.”

Co-operative principles were discussed at a conference held at Sydney Mines, Nova Scotia, in October, to celebrate the 25th anniversary of the British Canadian Co-operative Society. Mr. George Keen, general secretary of the Co-operative Union of Canada showed that the co-operative movement throughout the world was fundamentally one of consumers: that the mobilization of the demand for merchandise and services by consumers would enable the people to organize production in an orderly, efficient and economical manner. He pointed out that a consumers' society provided the means whereby the business talent of each local community could be developed, as well as a centre where the education of the people in co-operative philosophy and principles could be given.

PRICES, RETAIL AND WHOLESALE, IN CANADA, NOVEMBER, 1931

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was slight, the weekly family budget in terms of retail prices being slightly lower, while the Dominion Bureau of Statistics index number of wholesale prices again advanced somewhat.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in sixty-nine cities was little changed at \$7.82 at the beginning of November, as compared with \$7.84 for October; \$10.25 for November, 1930; \$11.75 for November, 1929; \$11.28 for November, 1928; \$11.07 for November, 1927; \$11.01 for November, 1926; \$11.23 for November, 1925; \$10.46 for November, 1924; \$10.69 for November, 1923; \$10.29 for November, 1922; \$11.08 for November, 1921; \$15.32 for November, 1920; \$13.65 for November, 1918; and \$7.96 for November, 1914. The most important change was a seasonal advance in the price of eggs. The prices of beef, veal, mutton, pork, lard, milk, butter, cheese, flour, rice, beans and potatoes were lower. Including the cost of fuel and rent with that of foods the total budget averaged \$17.81 at the beginning of November as compared with \$17.86 for October; \$20.60 for November, 1930; \$22.03 for November, 1929; \$21.52 for November, 1928; \$21.27 for November, 1927; \$21.24 for November, 1926; \$21.51 for November, 1925; \$20.81 for November, 1924; \$21.19 for November, 1923; \$20.89 for November, 1922; \$21.60 for November, 1921; \$26.13 for November, 1920; \$26.92 for July, 1920 (the peak); \$21.61 for November, 1918; and \$14.36 for November, 1914. In fuel anthracite coal was slightly higher. Hardwood showed a slight downward tendency. Rent was lower in the average.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was again slightly higher at 70.6 for November as compared with 70.4 for October; 79.5 for November, 1930; 95.7 for November, 1929; 94.9 for November, 1928; 96.9 for November, 1927; and 97.7 for November, 1926. Ninety-six prices quotations were higher, seventy were lower and three hundred and thirty-six were unchanged.

In the classification according to chief component materials three of the eight main groups were higher and five were lower. The groups which advanced were: the Vegetables and Vegetable Products group, due to increased prices for wheat, oats, rye, corn, barley

and flour which more than offset declines in the prices of potatoes, carrots, turnips, parsnips and hay; the Non-Ferrous Metals and their Products group, because of higher prices for lead, zinc and silver; and the Chemicals and Allied Products group, due to higher quotations for sodium bichromate and certain tanning materials. The groups which declined were: the Animals and their Products group, mainly because of lower prices for fresh and cured meats, calves, hogs and lambs which more than offset higher prices for steers, butter, lard and eggs; the Fibres, Textiles and Textile Products group, because of lower quotations for cotton underwear, raw silk and serge which more than offset higher prices for raw cotton, raw jute, raw wool and woollen yarn; the Wood, Wood Products and Paper group, owing mainly to lower prices for spruce lumber and ground wood pulp; the Iron and its Products group, because of lower quotations for scrap iron and steel; and the Non-Metallic Minerals and their Products group, due to declines in the prices of gasoline and sulphur.

In the grouping according to purpose consumers' goods declined, lower prices for potatoes, onions, canned vegetables, fresh and cured meats and woollen cloth more than offsetting higher prices for flour, bran, shorts, eggs and woollen yarns. Producers' goods were slightly higher, due to advanced quotations for wheat, oats, rye, barley, hides, steers, raw cotton, raw wool and silver, which more than offset declines in the prices of calves, hogs, lambs, spruce lumber, electrolytic copper and woollen cloth.

In the grouping according to origin both raw and partly manufactured goods and fully and chiefly manufactured goods were higher, the former due to higher prices for grains, steers, eggs, raw wool, silver and zinc, which more than offset lower prices for potatoes, rubber, hogs, calves, lambs and electrolytic copper, and the latter due mainly to higher prices for flour, bran, shorts, rolled oats, butter and sodium bichromate. Domestic farm products, articles of marine origin and articles of mineral origin were higher, while articles of forest origin were slightly lower.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of November, of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact

quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of milk, bread and fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and

soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climate conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1919, quarterly from 1920 to 1929 and monthly since January, 1930. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

(Continued on page 1368)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL, AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family

Table with columns for Commodities, Quantity, and prices for years 1900 through 1931. Includes sub-sections for All Foods, Starch, laundry, Fuel and light, and Rent. Totals are provided at the bottom of each section.

AVERAGE COST OF STAPLE FOODS BY PROVINCES

Table showing average costs for various provinces: Nova Scotia, Prince Edward Island, New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan, Alberta, and British Columbia.

†December only. ‡Kind most sold. *For electric light and gas see text.

††An allowance for the cost of clothing and sundries would increase the figures by about 50 per cent. See text.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.3; 1916, 86.3; 1917, 84.6; 1918, 82.9; 1919, 81.6; 1920, 81.1; 1921, 81.4; 1922, 80.1; 1923, 77.7; 1924, 76.5; 1925, 73.8; 1926, 73.2; 1927, 70.9; 1928, 69.3; 1929, 67.4; 1930, 64.7; 1931, 64.1.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report Vol. 2, page 318), and bringing the figures down to 1930. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption on the basis of figures in 1926 as 100, as follows: 1923, 103.3; 1924, 105.1; 1925, 101.7; 1926, 100.0; 1927, 99.0; 1928, 97.1; 1929, 94.6; 1930, 92.3.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 128.9; 1928, 128.5; 1929, 128.0; 1930, 127.6. Natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 166.9; 1928, 158.9; 1929, 159.1; 1930, 158.8. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

Retail Prices

Beef prices, for the most part, were lower, sirloin steak being down from an average of 27.3 cents per pound in October to 26 cents in November, round steak from 22.1 cents per pound to 21.2 cents and rib roast from 20.4 cents per pound to 19.6 cents. Shoulder roast was unchanged at an average price of 13.7 cents per pound. These prices compare with 32.4 cents per pound for sirloin steak in November, 1930, 27.4 cents for round steak, 25.6 cents per pound for rib roast and 19.3 cents for shoulder roast. Veal and mutton were again lower in most localities, the former averaging 16.2 cents per pound in November and 16.4 cents in October, and the latter 22.1 cents per pound in November and 23 cents in October. Pork prices were again generally lower, fresh leg roast being down from an average price of 20 cents per pound in October to 18.4 cents in November and salt pork from an average of 20.2 cents per pound in October to 18.8 cents in November. Prices in November, 1930, were 28.1 cents per pound for fresh pork and 26.8 cents for salt pork. Boiled ham was substantially lower in most localities being down in the average from 49.8 cents per pound in October to 45.9 cents in November. In fresh fish cod steak, halibut and white fish were lower. Lard was down from an average price of 13.3 cents per pound in October to 12.9 cents in November.

The price of eggs was substantially higher in most localities, fresh averaging 44.3 cents per dozen in November as compared with 32.4 cents in October and 51.3 cents in November, 1930, and cooking averaging 34.4 cents per dozen in November, 27.5 cents in October and 43.1 cents in November, 1930. The price of milk, which usually advances at this season, was slightly lower at an average price of 10.5 cents per quart as compared with 10.6 cents in October. Declines were reported from Charlottetown, St. John, Galt and Trail. Butter prices showed little change. The downward tendency, however, was continued, dairy averaging 23.1 cents per pound in November, 23.3 cents in October and 35.5 cents in November, 1930, and creamery averaging 26.2 cents per pound in November, 26.8 cents in October and 38.9 cents in November, 1930. Cheese declined from an average price of 22.9 cents per pound in October to 22.5 cents in November.

Bread was unchanged at an average price of 6.1 cents per pound. Flour was somewhat lower in many localities, the average price being 2.9 cents per pound in November as compared with 3 cents in October and 4.1 cents in November, 1930. Rolled oats were down from an average of 4.8 cents per pound in October to 4.6 cents in November. The

*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18%; Clothing, 13%; Sundries, 20%.

prices of canned vegetables continued to decline in most localities, tomatoes being down from 12·2 cents per tin in October to 11·4 cents in November, peas from 11·3 cents per tin in October to 11 cents in November, and corn from 13 cents per tin in October to 12·1 cents in November. The price of potatoes was generally lower at an average of 69·4 cents per ninety pounds in November as compared with 80·2 cents in October and \$1.34 in November, 1930. The price of anthracite coal was up in the average from \$16 per ton in October to \$16.14 in November. Increases were reported from Moncton, Fredericton, Belleville, St. Catharines, Galt, St. Thomas, Windsor, North Bay, Sudbury and Timmins. Hard wood, in stove lengths, was slightly lower at an average price of \$13.57 per cord as compared with \$13.78 in October. Lower quotations for rent were reported from Thetford Mines, St. Catharines, Brandon and Calgary.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

During October wheat prices advanced, due, it was said, to a strong export demand and to a falling off in supplies from Russia. This relatively high level was maintained during the first ten days of November. During the last half of the month, however, the movement was downward and much of the gain of the previous month was lost. Average prices for November were, however, substantially higher than in October, No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, being 67·3 cents per bushel as compared with 59·9 cents in October. The high price for the month was 73½ cents per bushel near the beginning and the low 60 cents per bushel toward the end. Coarse grains also averaged higher in November, western barley being up from an average price of 33·2 cents per bushel in October to 42·5 cents in November; western oats from 31·2 cents per bushel in October to 33·6 cents in November; rye from 37 cents per bushel in October to 48·8 cents in November and flax from 94·4 cents per bushel in

October to \$1.06 in November. The price of flour advanced for the first time since February, following the increased prices for wheat. Spring wheat flour at Toronto was up from \$4.60 per barrel in October to \$5.22 in November. Bran and shorts each advanced \$4.75 per ton, the former to \$19.99 and the latter to \$20.99. The price of raw sugar at New York, in Canadian funds, was down from \$1.58 per cwt. to \$1.54, while granulated at Montreal was unchanged at \$4.56 per cwt. Ceylon rubber at New York declined from 5·4 cents per pound to 5·2 cents, Canadian funds. In live stock good steers at Toronto were slightly higher at \$5.92 per hundred pounds as compared with \$5.90, while at Winnipeg the advance was from \$4.78 per hundred pounds to \$4.83. Veal calves at Toronto were down from \$8.53 per hundred pounds to \$7.23 but were unchanged at Winnipeg at \$5.75 per hundred pounds. Hogs at Toronto declined from \$5.74 per hundred pounds to \$5.23, at Winnipeg from \$4.71 per hundred pounds to \$4.20 and at Montreal from \$5.49 per hundred pounds to \$5.20. Good lambs at Montreal advanced from \$6.22 per hundred pounds to \$6.45 but at Toronto the price declined from \$6.80 per hundred pounds to \$6.59 and at Winnipeg from \$5.65 per hundred pounds to \$5.57. Creamery butter at Toronto advanced from 23·1 cents per pound to 23·7 cents and at Montreal from 22·5 cents per pound to 23·5 cents. Eggs were substantially higher, fresh at Montreal being up from 45·9 cents per dozen to 54·8 cents, at Toronto from 45·4 cents per dozen to 49·9 cents, and at Winnipeg from 37·8 cents per dozen to 48·5 cents. Spruce lumber was \$4 per thousand board feet lower at \$26. Steel scrap was down from \$7-\$8.50 per ton to \$6.50-\$8. Scrap iron also was down from \$8-\$11 per ton to \$7.50-\$10.50. In non-ferrous metals electrolytic copper declined from \$9.15 per hundred pounds to \$8.75. Copper wire bars were down from \$7.90 per hundred pounds to \$7.83. Tin was unchanged at 29 cents per pound, while the price of silver at New York, in Canadian funds, was substantially higher at 36·2 cents per ounce as compared with 33·1 cents in October.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and certain other countries. The index numbers of the cost of living are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. The latest quarterly table showing cost of living and wholesale prices index numbers

for various countries appeared in the *LABOUR GAZETTE* for October.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1924=100, was 62·8 for October, an increase of 5·2 per cent for the month. With the exception of a small decline in meat and fish, all groups showed

substantial advances over the average for the month of September.

The *Statist* index number, on the base 1867-1877=100, was 82·3 at the end of October, an advance of 2 per cent over the previous month. With the exception of a decline in animal foods, all groups were higher than at the end of September. The following paragraph is quoted from the *Statist*, November 14, 1931:

"Measured by the *Statist* index number, the increase in wholesale prices in October was only 2 per cent, following a similar increase in September, in which month the depreciation in sterling could, of course, have had very little effect. The fact that the rise in prices, in face of a fall of more than 20 per cent in sterling, has been so limited, must be attributed partly to the continued decline in gold prices during both September and October. The extent of this latter movement is brought out in the large table at the foot of the page (table omitted), which shows that in the United States and France, in particular, the decline during these two months was very pronounced, though more recently, it is true, this tendency has been reversed in the former country. It has also to be remembered that a number of countries from which a large part of our imports are derived have followed Britain in departing from the gold standard, or, where they were already divorced from that standard, have not allowed the sterling value of their currencies to appreciate to any marked extent."

COST OF LIVING.—The index number of the *Ministry of Labour Gazette*, on the base July, 1914=100, was 146 at the end of October, an increase of one point over the first of the month, due to an increase in the food group. Eggs, potatoes, cheese and butter were all higher, while meat was cheaper. Rent, clothing, fuel and light and sundries showed no change.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100, was 107·1 for October, a decline of 1·4 per cent for the month. Of the sixteen groups included, four showed small advances, but all other groups declined, the greatest fall being one of 9·2 per cent in cattle.

COST OF LIVING.—The index number of the Federal Statistical Office, on the base 1913-1914=100, was 133·1 for October, a decline of 0·7 per cent for the month. Food, clothing and sundries were lower, while the heat and light group was higher and rent was unchanged.

Italy

WHOLESALE PRICES.—The index number of the Milan Chamber of Commerce, on the base 1913=100 (pre-war currency), was 88·9 for October, showing no change from the September level. Advances in vegetable foods, miscellaneous vegetable products, and minerals and metals were offset by declines in animal foods, textiles, chemical products and construction materials.

COST OF LIVING.—The index number of the cost of living, Milan, on the base June, 1927=100, was 81·26 for September, a decline of 0·7 per cent for the month.

India

WHOLESALE PRICES.—The index number of the Labour Office, Bombay, on the base July, 1914=100, was 107 for September, showing no change from the August level. All of the food groups, as well as oilseeds and textiles other than cotton were higher than the previous month, while raw cotton, hides and skins and metals were unchanged. There was no change in cotton manufactures.

COST OF LIVING.—The index number of the cost of living, Bombay, on the base July, 1914=100, was 108 for October, showing no change from September. An increase in fuel and lighting was counteracted by declines in pulses and clothing. There was no change in cereals, miscellaneous foods and house rent.

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics, on the base 1926=100, was 68·4 for October, a fall of one per cent for the month. There were very small increases in fuel and lighting materials and miscellaneous commodities, but all other groups contributed to the decline.

The *Annalist* index number on the base 1913=100, was 102·0 for November, an advance of 1·4 per cent for the month due to higher prices for farm products and fuels. There were declines in food products, textile products, metals, building materials, chemicals and miscellaneous commodities.

Bradstreet's index number, which is the sums total of the prices per pound of 96 commodities of common consumption was \$7·9123 at the first of December, a decline of 2·2 per cent for the month. There were small increases in naval stores and chemicals and drugs, but apart from these, all groups were lower than at November 1.

COST OF LIVING.—The index number of the National Industrial Conference Board, on the base 1923=100, was 84·9 for October, a decline of 0·8 per cent for the month. There was a slight increase in fuel and light, but all other groups were lower than in September.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Union Member Forfeits Benefits by Failing to Pay Dues

A member of the Brotherhood of Maintenance of Way Employees, an unincorporated union, defaulted in the payment of his dues, and thereby forfeited his membership. He was reinstated later, but died shortly afterwards. In an action brought by his widow for death benefits under the union's life insurance plan the Manitoba Court of Appeal held that the default of the deceased caused a loss of his union benefits, and that, since the period between his re-instatement and death was not long enough to entitle the widow to set up a claim, she was not entitled to any benefit.

Mr. Justice Dennistoun, in his judgment, referred in passing to the decision of the Supreme Court of Canada in December, 1929, declaring that unincorporated trade unions had no legal standing (LABOUR GAZETTE, January, 1931, page 108). In the present case no attack had been made on the action.

"The widow in the present case," he continued, "claims, as beneficiary of her deceased husband, the sum of \$500 from the funds of the death benefit department of the trade union referred to, and she has been given judgment for that sum by His Honour Judge Stubbs, but without any reasons for his conclusions.

The rights of the parties are to be determined by the provisions of the constitution and by-laws of the Brotherhood which it is admitted set forth the contract between the organization and its members.

By article XXIII, Sec. 3, it is provided, *inter alia*:—

Upon due proof of the death of any member of the Brotherhood, who at the time of such death shall be in good standing in said Brotherhood, and whose participation in the benefits of the Death Benefit Department is not limited under sec. 4, or debarred under sections 6, 7 and 17 of this article, the Superintendent of the Death Benefit Department shall out of the funds or property coming into his custody or control as such superintendent pay to the designated beneficiary of such member as follows:

If such member had a continuous membership for twelve months next preceding such death the sum of \$50.

Then follow like provisions for payments on a sliding scale for more lengthy continuous membership up to 60 months and \$400. And finally:

If such a member had a continuous membership for 72 months next preceding such death the sum of \$500.

The plaintiff claims, and has been awarded by the trial Judge, \$500 under the last-quoted paragraph of the constitution.

Counsel for the defendants points out that a claimant is not entitled to any benefit whatsoever unless the deceased had at least 12 months' continuous membership prior to death and says further that this deceased member had a membership of only two months and 25 days prior to his death, which entitled his widow to nothing.

It appears from exhibits filed at the trial that all the dues of the deceased were paid for the years 1924, 1925, 1926, 1927, 1928 and 1929, but that he did not pay for the first quarter of 1930, his arrears being \$2.50 for grand lodge dues, and \$1.75 for local lodge dues for January, February and March. He paid in full for the second quarter, April, May and June, \$4.25, and died on June 25 in that quarter, while still in arrears for the first quarter which deprives his widow of all claims against the benefit fund.

This seems to be a defence drastic in the extreme, but on a careful examination of the constitution and by-laws it is well taken.

It is apparent that this is not an insurance scheme on an actuarial basis, for payment of \$10 in annual dues to grand lodge, even if the whole of that sum were handed over to the death benefit department, which was not done, could not provide a \$500 payment to a beneficiary at the end of six years. It is a scheme, admitted by counsel, for inducing members to keep up their trade union membership.

A member who fails for 30 days to pay his dues forfeits all claim on the beneficiary funds. This is covered by article XXIII, sec. 6, which says in part:

If such member remains delinquent during the entire month on the first day of which such dues and assessment became payable, he, his beneficiary, and aforesaid subordinate lodge and persons, shall be deemed to have forfeited all rights, interests, and benefits, of, in and to said Death Benefit Department, its funds and property, until such member shall have reinstated his membership and becomes entitled to benefits under sections 3, 4 and 17 of this Article.

It is sec. 17 of article XXIII which has the sting in it. It must be read carefully before its full meaning is appreciated.

It says:

Sec. 17. In determining the sum payable to any person under this article no period of membership in said brotherhood prior to July 1, 1919, shall be considered.

In computing the period of continuous membership under this Article no period of membership of a member prior to joining, last

renewal, or last re-instatement, or for which dues may be paid beyond the date of death of such member shall be considered.

That means that a member loses all the benefit of his membership prior to the date of his re-instatement. He may renew his membership, after delinquency, within six months, upon payment of all back dues subject to the limitations of article XXIII, secs. 4, 6, 7 and 17.

He is reinstated so far as his trade union membership is concerned, but in so far as the benefit funds are concerned he is not reinstated but merely permitted to renew his membership—by making a fresh start, entitling him to nothing until after the expiration of 12 months at the least.

It was urged by counsel that this deceased member had an unemployment card for the first quarter of 1930, which permitted him to make default in payment of his lodge dues.

That is governed by article XVI, sec., 2, as well as by article XXIII, sec. 9, which permits the holder of such a card to be in default of payment of local dues or assessments, other than grand lodge dues and assessments. These latter must be paid in any event. In the present case they were not paid and as a result there is no claim on the fund by reason of the default. I refer to *Wilson v. Sons of England Benefit Soc.* (1909) 1 O.W.N. 144; *Wintemute v. Brotherhood R.R. Trainmen* (1900) 27 O.A.R. 524; and to *Cooley on Insurance*, vol. III, pp. 2338 and 2344.

The deceased was not misled in any way. He realized his position and knew that he had lost his benefit, but he expected that in some way it would be overlooked or made right, if he paid up his arrears, at some future date.

Then he died suddenly, and the Brotherhood, acting on their well-considered policy in respect to this fund, refuse to pay. This fund is not an insurance fund, it is but an inducement to members to retain their membership in the union, and it suits the union to have defaults made as often as may be, in order that it may maintain the death benefit department as long as possible. If every delinquent who was reinstated in membership was also reinstated on the fund, financial disaster would result.

I would allow the appeal and dismiss the action.

Hniden versus Herr (Manitoba) 1931, *Western Weekly Reports*, vol. 3, page 546.

Wages Due must be paid to Employees on Strike

In 1923 the Virginia Railroad discharged three men, one being a member of the Brotherhood of Locomotive Engineers, and the others being members of the Brotherhood of Locomotive Firemen and Enginemen. Under an agreement between the engine service brotherhoods and the Virginian railroad, any employee who was discharged was entitled to a hearing, and, if found to have been unjustly dismissed, he was to be paid for the time lost. The two Brotherhoods investigated the case, declared the discharges unjust, and asked the company to reinstate the men, with compensation for lost time. The general superintendent and general manager of the Virginia Railroad refused to grant this request, and the Brotherhoods then carried the case to the former Railroad Labour Board.

After a series of hearings, at which both management and men were represented, the Railroad Labour Board found in favour of the discharged employees, and ordered the company to take them back, with pay for the time they have been out of service.

In accordance with this ruling the company instructed the former employees to return to work. At that time a strike was in progress on the railway, and the three men declined to resume work while the other regular employees were on strike. The company thereupon refused to give them the wages which the Board had declared to be due to them. The three employees then brought action against the company in the United States District Court of Virginia, which awarded them the full amount due for their wages. On appeal by the company the Circuit Court of Appeals affirmed this judgment, and finally, on further appeal, the United States Supreme Court, in November, 1931, affirmed the judgment of the two lower courts.

Some Workmen's Compensation Decisions in England

Some British cases illustrating the fine distinctions that have to be made in the application of Workmen's Compensation principles are cited by Mr. H. Samuels, author of a recent work entitled "The Law Relating to Industry," writing in the English magazine *Industrial Welfare and Personal Management*, November, 1931. A few of these cases are outlined below:—

A pit head bath was provided by a firm on their premises for those of their miners who desired to use it. A miner after ceasing work

was using the bath and fractured his skull through slipping on the tiled floor. Compensation refused on ground that the man had remained on his employer's premises for the enjoyment of a privilege conferred and not in the performance of a duty imposed.

"A man may have an accident and honestly believe at the same time that nothing serious has happened to him and, therefore, not conceiving that he had a good claim against his employer, makes no claim, but if it afterwards turns out that he has made a mistake in fact and really has been injured, that may be reasonable cause for his not making a claim within six months."

A lorry driver passing another lorry which had broken down halted to give it a tow. In the manoeuvring he was crushed between the two vehicles. Compensation refused.

The liability for accidents occurring to employees when being conveyed by the firm or

in vehicles belonging to the firm varies according to the circumstances. If, for example, a function is arranged to take place in the firm's time and the employees attend as part of their day's work, the provisions of the Employers' Liability and Workmen's Compensation Acts would apply in the case of accidents to the manual and other workers who came within their scope. Where, however, there is no direction of the firm to the employee, so that the latter has no duty under his contract of service to attend the function there is no liability on the firm in the case of accident. If, on the other hand, vehicles belonging to or hired by the firm are used, there would be an additional liability if accidents arose through the vehicle being unsafe or through the negligence of the driver provided by them (except in so far as the firm contract out of such risk), irrespective of whether the workmen's Compensation Act applies to the case in question or not.
