[NUMBER 1

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL employment in Canada at the beginning of December showed the reduction usual at this season; the losses, though on a smaller scale than on the same date of 1929, exceeded the average decline reported during the years, 1921-29, but employment as indicated by employers continued rather more active than on the same date in other years of the record except 1929 and 1928. The Dominion Bureau of Statistics tabulated statements from 7,514 firms (each with at least 15 employees), employing an aggregate staff of 962,763 persons, as compared with 1,002,388 in the preceding month; the employment index stood at 108·5, compared with 112·9 on November 1, and 119·1, 116·7, 108·1, 102·3, 96·5, 91·9, 96·9, 96·3 and 88·3 on December 1, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922, and 1921, respectively. These indexes, which are based upon the average number of employees of the reporting firms in the calendar year 1926 as 100, are indicative of conditions in all industries except agriculture, fishing, hunting and highly specialized business.

At the beginning of December, 1930, the percentage of unemployment as reported to the Department of Labour by local trade unions stood at 13·8, contrasted with 10·8 per cent of inactivity at the beginning of November and 9·3 per cent at the beginning of December, 1929. The percentage for December was based on the reports tabulated by the Department of Labour from 1,798 labour organizations, combining a membership of 205,854 persons.

Reports received by the Department of Labour from the Offices of the Employment Service of Canada showed an increase in the volume of work transacted during November, when a comparison was made with the business effected during November a year ago. This was due to the various Municipal and Provincial relief works in progress throughout the Dominion. Vacancies in November, 1930, numbered 36,503, applications 68,862 and there

were 35,557 placements in regular and casual employment.

The average cost of weekly family budget of twenty-nine staple foods was \$10.10 at the beginning of December, as compared with \$10.25 for November; \$11.83 for December, 1929; \$11.31 for December, 1928; \$11.17 for December, 1927; \$11.18 for December, 1926; \$11.56 for December, 1925; \$10.58 for December, 1924; \$10.73 for December, 1923; \$10.39 for December, 1922; \$11.00 for December, 1921; \$14.84 for December, 1920; \$16.92 for June, 1920 (the peak); \$13.65 for December, 1918; and \$7.96 for December, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was again considerably lower at 77·8 for December, as compared with 79·8 for November; 96 for December, 1929; 94·6 for December, 1928; 97·2 for December, 1927; and 97·9 for December, 1926.

The loss in working time caused by industrial disputes in Canada during December was considerably less than in the preceding month and was less than half the corresponding loss in December, 1929. Eight disputes were in progress at some time during the month, involving 721 workers, and resulting in the loss of 10,117 working days. Corresponding figures for November, 1930, were:—six disputes, 1,968 workers, and 13,065 working days; and for December, 1929, seven disputes, 1,684 workers, and 12,979 working days.

Industrial Disputes Investigation Act

During December, consideration was given by the Department of Labour to an application for the establishment of a Board of Conciliation and Investigation that had been received from the employees of a coal mining company in Alberta. It was ascertained, however, that the existing agreement between the employer and workers provided means for the settlement of disputes, and it was finally agreed that the question in dispute should be left in abeyance during the life time of this agreement. An account of the recent proceedings under the Act appears on page 12.

Wages, hours of labour and prices in Canada 1920-1930

Two supplements are included with this issue of the *LABOUR GAZETTE*. The first deals with Wages and Hours of Labour in Canada, 1920 to 1930, including the following classes of labour: (1) building, metal, printing, electric railways, civic employment, and longshoremen; (2) mining, lumbering, electric power, telephone; and (3) factory labour in various industries. The second supplement deals with the movement of wholesale and retail prices and changes in the cost of living in Canada and various other countries in 1930 and in recent years.

Employment of children and young persons in Canada

A brief summary of a new bulletin on this subject, just issued by the Department of Labour, appears on another page of this issue. It is hoped that this publication will stimulate public interest in the many problems arising out of the employment of juvenile labour in industry. The bulletin represents the first systematic study of the extent to which children and young persons are employed in industry in Canada. The need for such a study is evident from the frequent requests for information on the subject that have been received by the Department from time to time. Copies of the bulletin may be obtained from the Department, the charge being 25 cents for each copy.

Unemployment index number will be possible after decennial census

Reference was made in the last issue of the *LABOUR GAZETTE* to the measures now being taken by the Dominion Bureau of Statistics and the Department of Labour to secure data on unemployment in connection with the Decennial Census to be taken throughout the Dominion next June. The inclusion of a questionnaire on unemployment in the United States decennial census which was started in April last year, is described in the annual report of the Commission of Labour Statistics as being the outstanding event of the year in the field of employment statistics. "When the findings of the federal census regarding unemployment are fully compiled," the commissioner states, "there will be available a basis upon which can be fitted the monthly volume of employment data of the Bureau of Labour Statistics. In other words, when the exact number of persons out of work at a given time is known, estimates for other periods can be made by applying for such periods the index numbers

of the volume of employment as collected monthly by the Bureau."

Unemployment inquiry by Canadian Manufacturers' Association

The inquiry into the subject of unemployment undertaken by the Canadian Manufacturers' Association in pursuance of a resolution adopted at their last annual convention, was noted in the *LABOUR GAZETTE*, August, 1930, page 868. The results obtained by the inquiry were described in the December issue of *Industrial Canada*, the monthly magazine published by the Association. The replies to a questionnaire addressed to members confirmed the belief already held that the bulk of unemployment in Canada was in seasonal occupations such as farming, building and construction, lumbering, road-building, shipping, etc., rather than in manufacturing.

"At the same time," the report continues, "there is considerable unemployment in manufacturing and your committee feels that it might be of interest to members to call attention to the methods which have been successfully adopted by certain large United States concerns, with a view to reducing the unemployment evil by regularizing employment, in other words, spreading it out more evenly over the twelve months, instead of having 'peak' periods with increased staff and overtime, alternating with slack periods, when large numbers of men are laid off. While it is recognized that it is hardly possible for many concerns so to regularize employment as to be able to guarantee their workers a minimum of 48 weeks' employment on full wages a year, as one large United States concern with a Canadian branch has been able to do, at the same time your Committee feels that the adoption of some of the methods mentioned below would enable companies greatly to reduce the amount of seasonal unemployment."

The report then quotes the statement of the unemployment policy that was recommended last year by the General Electric Company, which was reproduced in the *LABOUR GAZETTE*, September, 1929, page 1059. In conclusion it is recommended that when it is necessary to reduce working hours, it is best to reduce the number of working days, rather than to reduce the length of the working day.

Accident and unemployment insurance compared

Mr. John B. Andrews, secretary of the American Association for Labour Legislation, in an article appearing in the *Railroad Trainmen*, January, 1931, advocates a system of unemployment insurance on the same financial basis as workmen's

compensation. Such a system he describes as being "an American plan," as opposed to the systems now in effect in Great Britain and Germany. "One of the most important factors in the safety movement in America," he says, "is the workmen's compensation laws. With the book-keeping that is required in the reporting of accidents and the payment of certain definite sums for occupational injuries, the safety movement was put on the map in this country. This interest in the prevention of accidents which has been kept alive day after day and year after year has been the biggest factor in the whole situation.

"Our experience with accident compensation suggests that we might get some benefit out of applying the same plan to the irregularity of employment. Under accident compensation the employer maintains a fund out of which the benefits are paid later to the worker who is unable to work on account of injury. It is suggested that into a reserve fund the employer also be required to pay a small per cent of the payroll in good times, in order that when unemployment comes in his industry there may be a fund available to tide the unemployed in that industry over the period of unemployment."

Mr. Commons states that legislation on these lines is to be introduced in several State legislatures during the present month. Moreover, as he points out, "this does not mean at all that the federal government and industries engaged in inter-state commerce, should not also make contributions to the establishment of a system of unemployment insurance."

Suggested program for prevention of unemployment

An "unemployment program" was proposed by the *Nation* (New York) in its issue for December 10. It is suggested that after provision has been made for the relief of actual suffering, definite measures could be taken to secure the prevention of unemployment in the future. The first step would be to organize the labour market by establishing a national system of public labour exchanges. Secondly, a compulsory system of public unemployment insurance should be established on an actuarial basis, with employers, workers and the government contributing, perhaps equally, and with benefits held strictly within actual insurance limits. In times of special stress the State, and not the insurance system, would bear the added load. However, it is pointed out that the organization of the labour market and insurance cannot solve the problem of unemployment, as the experience of Great Britain and Germany since the war indicates. The great preventive of unemployment, it is pointed out, is the

stabilization of industry. It is suggested that "our most powerful single agency, the Federal Reserve System" should be used primarily for the purpose of stability. There are also possibilities in the long-range planning of public works. "Let both federal and State governments now draw up carefully studied plans of needed public improvements, extending over, say, ten years or more; let them secure the necessary bond authorizations; and then let the less pressing items be held back against the next period of hard times. Something can be done thus. The major task, however—that of keeping fundamental industries running on an even keel—requires planning and action on a nation-wide and a world-wide scale. The conquest of unemployment requires not only a national economic council to organize a planned national economy, but an international economic conference to work out the methods of international organization and control essential to a stable world industrial order."

Suggestions to employers for stabilizing industry

A preliminary report issued by the committee appointed last March by Governor Franklin D. Roosevelt of New York, on the stabilization of industry for the prevention of unemployment, contained the following suggestions to employers for minimizing this evil:—(1) Avoid reductions of workers which are not immediately necessary, remembering that efficient operation is rarely attained through sudden, drastic fluctuations, either up or down, of the working force; (2) speed repairs, renovation and construction; (3) use some or all of the workers who would otherwise be released, for "spring housecleaning" of plant and office; (4) work the full force part time rather than part of the force full time; (5) manufacture for stock to the limit of economic wisdom.

When the laying off of workers is unavoidable, the Committee suggests: (1) that as among employees whose ability is approximately equal, those with dependants and those of long service be the last to be released; (2) that, in all practicable cases, a "dismissal wage" be paid, or, at least, two weeks' notice be given. It is the policy of one well-known company, when a plant is closed or a process discontinued to pay one week's wage for each year of service to any employee with 15 years or more of service, and to pay a week's wage for each year of service to any employee, 45 years or more of age, with 10 years service; (3) that employees who are laid off be given the benefit of every possible aid by the employer in finding work elsewhere.

The committee made the following specific recommendations:—

1. "Steady work the year round" should be incorporated in business men's thinking so that it may assume major importance in the employer's daily planning and actions.

2. Encouragement should be given to the co-operative efforts of citizens working through their various local associations.

3. State and municipal governments should direct more attention to the receiving of some of their construction and purchasing activities for times of depression.

4. The effectiveness of the State Employment Office system should be increased.

British Unemployment Insurance Commission

The British Government has appointed a commission on unemployment insurance with the following terms of reference:—"To inquire into the provisions and working

of the unemployment insurance scheme and to make recommendations with regard to (1) its future scope, the provisions which it should contain, and the means by which it may be made solvent and self-supporting, and (2) the arrangements which should be made outside the scheme for the unemployed who are capable of and available for work."

The chairman of the Commission is Judge Holman Gregory, the other members being Mr. W. Asbury, chairman of the Public Assistance Committee; Professor Henry Clay, of Manchester University; Dr. H. J. W. Hetherington, chancellor of Liverpool University; Mr. E. C. P. Lascelles, deputy umpire under the Unemployment Insurance Acts; Mrs. C. D. Rackham, temporary inspector of factories; and Mr. H. M. Trouncer, president of the Institute of Actuaries.

Death of Dr. Adam Shortt

The Department of Labour heard with regret of the death on January 14, of Dr. Adam Shortt, C.M.G., of Ottawa, chairman of the

Dominion Board of Historical Publications. Dr. Shortt was chairman of one of the first boards of conciliation and investigation established under the Industrial Disputes Investigation Act in 1907, and served with outstanding success on subsequent boards. He was Professor of Political and Economic Science at Queen's University from 1889 to 1908, and was chairman of the Civil Service Commission from 1908 to 1917.

Dr. Shortt was one of the Canadian representatives at the International Economic Conference, 1927, and was subsequently appointed by the League of Nations as a member of its consultative economic committee which meets annually.

Need for vocational guidance for young workers

In a series of articles appearing in the *Worker* (Australia) on the causes and effect of unemployment the Hon. E. G. Theodore, ex-Premier of Queensland,

refers to the urgent need for a systematic provision of vocational guidance, as follows:—

"One cause of unemployment is the lack of knowledge among young people regarding the prospects of continuous employment in different occupations. The 'dead end' occupation, providing neither a career nor a training, adds considerably to the number of potential unemployed. A similar problem arises for 'misfits' who have entered occupations for which they are unsuited. One urgent need is a nation-wide organization for providing vocational guidance. This should adopt and develop methods of ascertaining the vocational aptitudes of young people and place before them and their parents detailed information regarding such occupations as they are suited to, such as wages, working conditions, prospects of advancement, risks of injury, sickness and unemployment. At present there is no systematic provision of such guidance, but its introduction should divert young people out of trades in which there is no place for them, and away from vocations in which they will never be successful."

Canadian Educational Guidance Movement

A national organization "for promoting vocational guidance and educational counsel" was founded at a meeting held at Toronto on December 29, under the title

of the Canadian Educational Guidance Movement. The meeting was attended by the Hon. George S. Henry, premier of Ontario (who promised the movement the support of his government); Mr. E. W. Beatty, president of the Canadian Pacific Railway Company, Sir Robert K. Falconer, president of the University of Toronto, and other prominent public men. The objects of the new organization were set forth as follows:—

1. To co-operate with educational authorities in (a) presenting the enlarging opportunities for service in all vocations; (b) urging the importance of intelligent decision regarding the choice and sphere of life-work; (c) emphasizing the value of adequate academic or special training as necessary preparation for efficient service.

2. To assist students in the choice of vocation and to offer counsel regarding educational opportunities.

3. To provide teachers, parents and students with authoritative information regarding re-

quirements for and opportunities in various forms of life-work.

4. To relate the results of this effort to those institutions to which the students may go for further training.

New Deputy Minister of Labour for Ontario

Mr. Arthur W. Crawford, formerly Director of Technical Education in the Department of Labour of Canada, was appointed Deputy Minister of Labour

of the Province of Ontario on January 6, succeeding Mr. J. H. H. Ballantyne, who had resigned. Mr. Crawford was in charge of the administration of the federal Technical Education Act, from 1921 to 1928. In the latter year he resigned his position in the Dominion Government to take the post of Inspector of Apprenticeship for Ontario, being the first administrator of the Apprenticeship Act passed by the provincial legislature in 1928. The new Deputy Minister is a graduate of the University of Toronto, and is an electrical engineer by profession. He enlisted for military service in 1914 and served overseas until 1917. In 1918 he was appointed District Vocational Officer, under the Department of Soldiers' Civil Re-establishment, for the Hamilton District, where he had charge of the training of disabled soldiers in different trades and occupations, retaining that position until he came to the federal Department of Labour.

Health Insurance advocated in Alberta

Alderman D. K. Knott, of Edmonton, advocated the establishment of a national health insurance scheme in a recent address. He pointed out that persons of small

means are now unable to meet the medical expenses involved in severe sickness, and proposed that Canada should follow the example of the more advanced nations in the world by assuming the control, cure and prevention of sickness by means of a contributory scheme of state insurance. Mr. Knott referred to the preliminary report of the British Columbia Commission on Health and Maternity Insurance, whose report was published last year (LABOUR GAZETTE, April, 1930, page 400), stating that the commission had ascertained that an insurance scheme should be organized on the basis of a contribution by the workman (or person whose income falls below a specified standard) of three cents per day, the balance of the cost of medical and hospital charges to be defrayed by means of contributions by the employers

and by the State. In the alderman's opinion, the British system of insurance, while it was imperfect in some respects, was the only practical plan that had yet been evolved.

County Health Units in Canada

The National Council of Women of Canada at its last annual convention adopted a resolution to request the Dominion Government to provide financial assistance to the provinces for the establishment of County Health Units, as requested recently by the Dominion Health Council. It will be recalled that the House of Commons in March last year adopted a resolution declaring that "the government should take into consideration the advisability of making grants to the provinces equal to one-third the cost of establishing, and to cover permanently such full-time health units as may be organized" (LABOUR GAZETTE, March, 1930, page 254). The resolution of the National Council of Women sets forth that it has been proven that the cost of unnecessary illness and death in Canada is very great, amounting to millions of dollars and thousands of lives annually; that full-time health service results in an immediate fall in sickness and death rates; that in most rural communities the people have been forced to rely upon the part-time service of physicians for the carrying on of community health measures—an arrangement which is at best ineffective; that the most satisfactory method of securing results in rural and small urban areas as regards the control of communicable disease, of maternal and infant mortality—and the reduction of general mortality rates—has been demonstrated in Quebec, British Columbia and many States in the United States to be by means of the County Health Unit, such Units supporting a full-time health officer, sanitary inspector, public health nurse and secretary; that organized health conservation of this type should be made applicable to the whole Dominion; that the achievement of such an ideal can only be made possible by the financial participation of the Dominion Government as in the case of the successful venereal disease control scheme already in operation.

Statistics of unemployment in principal countries

Statistics of unemployment in all of the principal industrial countries have been compiled by the International Labour Office (League of Nations) during the present month, and a table containing the latest available figures appears in their weekly publication of January 5. This table is reproduced on another page of this issue.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

THE employment situation throughout Canada at the end of December was reported by the superintendents of the Employment Service of Canada as follows:—

Agriculture in the province of Nova Scotia was quiet and heavy snow had in some sections retarded the farmers in gathering fuel for domestic purposes. No new development occurred in the logging industry, and operations in that division were on a small scale. Stormy weather was responsible for very poor catches of fish. Manufacturers reported business as seasonally slow, while in the steel and iron industry some idleness was reported. Municipal sewer work afforded employment for men in several centres, and in Halifax many small contracts were well under way. Snow storms had also been of great benefit to those out of work, many unemployed having obtained several days' labour through this medium, but a number of men on highway and railway construction and maintenance had been laid off. Transportation, due to the holiday season, was heavy, and Christmas trade was good. The demand and supply for domestic workers was above the average.

In New Brunswick as in Nova Scotia, the agricultural and logging industries were quiet. Weather conditions had somewhat hampered fishing operations in the vicinity of Chatham, but at Moncton and Saint John the supply of fish was plentiful. Manufacturing, especially in confectionery and food stuffs, showed improvement, but in several other lines employees were working on short time to avoid a layoff. Somewhat fewer men were engaged in construction and maintenance, owing to the holiday season or to completed contracts. Little work, however, was offered for ordinary labour other than a few days' snow shovelling. Traffic, both passenger and freight, was exceptionally heavy at Christmas, the latter owing to a large shipment of Christmas trees out of the Maritimes to the upper provinces and to the United States. Trade was good, both wholesale and retail houses reporting output as favourable. Placements in the Women's Domestic Section continued fair.

The employment offices in the province of Quebec reported very few orders received for farm workers. Little activity was also shown in logging, some companies having reduced their operations this year. No progress was shown in the manufacturing industries. In Montreal, all trades were quiet, while Three Rivers stated there was a decrease in all manufactures, except cloth, and sash and door mills, where there was a slight increase.

Paper mills in the district were also closed for an indefinite period. Leather trades in Quebec city showed a gain, and factories in Sherbrooke were busy. With the exception of Quebec, where construction and maintenance was active, orders for building tradesmen or labourers were not numerous. Civic employees in Montreal were employed on certain construction work, but as in other parts of the province, little building or improvement of any kind was in progress. Transportation in Three Rivers showed a decrease. Trade in the larger centres was favourable, and an increase in the volume of work was noted for domestic household workers.

Although plenty of farm applicants were available, there were quite insufficient orders listed at the employment offices in Ontario to meet their needs. Bush work was providing less employment than in previous years, and in those districts where a few placements were made, lack of snow retarded cutting operations. No activity was reported in the mining group. Many industrial plants were closed over Christmas for varying periods, due to holidays and stocktaking, but were expecting to re-open early in the New Year. Further staff reductions were noted where Christmas rush orders had been completed, but this was in a measure offset by the rehiring of old hands on the part of several firms. Whatever activity was shown in the building and construction group consisted almost wholly of relief work on sewers, drains or highways. This gave employment to large numbers of men in every centre who were engaged for short periods in rotation. Applicants in the Women's Division were less numerous than is customary at the holiday season and some orders received could not be filled owing to scarcity of female domestic workers. Casual workers for households were also greatly in demand and work of such a nature easily obtainable, the demand exceeding the supply.

Few farm placements were reported for the province of Manitoba. Logging also was much quieter, and no activity took place in the mining group. Although construction work showed more than the usual seasonal slackness, prospects in the city of Winnipeg were good. Contracts had been awarded for work on several bridges and it was expected that these projects would be started in the very near future. Work on the new Hydro bridge at Lac du Bonnet had been begun, and a number of men had found employment there. While a fairly good volume of Christ-

mas trade was reported, it was not quite up to expectations. Wholesale firms stated that conditions continued quiet in that group. In the Women's Domestic Section, holiday festivities had created an additional demand for

daily help. The situation was not encouraging, however, in regard to regular domestic employment.

With no scarcity of applicants to fill positions, few farm orders were being reported to

(10) The index of the physical volume of business includes forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughtering of cattle, sheep and hogs; storage holdings of butter and cheese.

the Saskatchewan employment offices, and though logging, also, was rather quiet some placements were made, a few of which, however, were men sent to relief camps as replacements. Coal mining likewise showed little activity, due to continued mild weather. There was no demand for building tradesmen or labourers, such placements as were made in the construction group being of a purely casual nature, or those supplied by the various municipalities in the form of relief work on sewers, highways, subways, etc., nor was work available on the railways. Orders for women domestic workers were few, though there was a slight increase in odd jobs for women, undoubtedly due to preparation for the holidays.

As in the other Prairie Provinces, there were few demands for farm workers reported in the province of Alberta, with plenty of applicants on hand. Some vacancies for winter work with board only were offered, but these were not easily filled. Outside of a fair demand for tie makers and men sent to relief camps, little activity was shown in logging. Conditions in coal mining remained unchanged, most miners working part time only. Manufacturing industries were quiet and in some cases were running short hours rather than lay off men. There was little building in progress and no railroad orders, though there was a possibility of some work in the latter line being available in the new year. Such construction as was in evidence was that provided on highways and bridges by the province or the municipalities, as a relief measure. Christmas trade was brisk, but not up to the level attained in former years. The situation in the Women's Domestic Division was extremely quiet, and few placements were made.

There was no demand for farm workers in the province of British Columbia, with the exception of a few replacements of men on holiday leave. Logging, for the most part, remained quiet, though several offices reported that some companies would shortly resume operations. Others, however, were expecting to lay off a few men. Mining, both metal and coal, had little activity to report. Prospects for improvement in manufacturing were very remote, though most factories in Nelson were working full time. Shingle mills at Vancouver showed no change, but ship lining contractors stated conditions were good. Machine shops, foundries, and sash and door factories were all slack. Construction, other than a little railroad work and employment offered as a relief measure by the Government, was very quiet, with a considerable number of building mechanics idle. Long-

shore work in Vancouver was only fair, as more than fifty per cent of the men were unemployed, and although there was very little work on the waterfront at Prince Rupert, dry-dock and shipyards at that point were busy. Trade improved during Christmas week, but was below that of last year. Quietness prevailed in the Women's Domestic Section, though at holiday time additional placements were made.

EMPLOYERS' REPORTS

The seasonal losses reported at the beginning of December, 1930, were on a smaller scale than on the same date in 1929, though they exceeded the average decline recorded during the last ten years. Nevertheless, employment continued in rather greater volume than on December 1 in any previous year of the record except 1929 and 1928. Statements were tabulated by the Dominion Bureau of Statistics from 7,514 firms employing 962,763 persons, compared with 1,002,388 in the preceding month; the index (average, 1926=100) stood at 108.5, compared with 112.9 in November, 1930, and with 119.1, 116.7, 108.1, 102.3, 96.5, 91.9, 96.9, 96.3 and 88.3 on December 1, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922, and 1921, respectively.

All provinces registered curtailment, the largest recessions taking place in Quebec and Ontario. In the Maritime Provinces, the seasonal reductions in employment occurred chiefly in construction and manufacturing, while logging, trade and shipping showed improvement. In Quebec, manufacturing, transportation and construction indicated declines, while important gains were reported in trade, and railway transportation was also busier. In Ontario, employment showed a considerable decline; retail trade and logging registered marked seasonal increases, but construction, transportation and manufacturing reported large losses, and smaller decreases were shown in mining, communications and services. In the Prairie Provinces, there was also a further reduction in employment; retail trade was seasonally much more active, while construction registered especially pronounced declines, and transportation, manufacturing, mining and communications were also slacker. In British Columbia, manufacturing was dull, as were general construction, transportation and mining. On the other hand, trade, public construction work and logging recorded heightened activity.

Of the eight centres for which separate tabulations are made, only Hamilton showed improvement at the beginning of November, while lessened activity was reported in Mont-

real, Quebec city, Toronto, Ottawa, Windsor and the adjacent Border Cities, Winnipeg and Vancouver; the losses in Montreal were most noteworthy. In Montreal, manufacturing, construction and transportation reported a falling-off, but retail establishments afforded increased employment. In Quebec there was a decrease, chiefly in construction, transportation, and manufacturing. In Toronto, retail trade recorded improvement, while manufacturing and construction were slacker. In Ottawa, curtailment was indicated, chiefly in construction and manufacturing, while trade afforded more employment. In Hamilton, municipal construction work, as an unemployment relief measure, was decidedly busier, but manufacturing as a whole was slacker, in spite of gains in textile mills. In Windsor and the adjacent Borden Cities there was a moderate decline, mainly in construction. In Winnipeg, improvement was reported in trade, but manufacturing and building construction released employees. In Vancouver, manufacturing and construction showed curtailment; on the other hand, trade afforded more employment.

A substantial reduction in activity occurred in manufacturing establishments, mainly in iron and steel and lumber factories, but also to some extent in food, clothing and other groups. Logging and trade registered marked seasonal improvement, but mining, communications, transportation services and construction and maintenance reported reductions; those in the last named would have been much more extensive had it not been for public works undertaken for the relief of unemployment.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of December, 1930.

**TRADE
UNION
REPORTS**

Employment at the close of November showed a further and more pronounced contraction, partly due to conditions incidental to the winter season, together with the unusual depression which existed during the greater part of 1930. Returns for the month under review were received from an aggregate of 1,798 labour organizations, embracing a membership of 205,854 persons, and of these 28,337 or a percentage of 13.8 were idle on the last day of the month, compared with a percentage of 10.8 in October and with 9.3 per cent in November, 1929. The decline in activity when compared with October and shared by all provinces, was in evidence to a noteworthy degree in Quebec and Saskatchewan, the garment trades of the former province

accounting to a considerable extent for the unfavourable conditions shown, though depression in the building trades and steam railway operation was also a large factor in the general adverse situation indicated. Substantial employment recessions were manifested by Ontario and Quebec unions from the figures for November a year ago, and in all other provinces with the exception of Nova Scotia reductions on a smaller scale were noted. The trend of employment in Nova Scotia, while upward from November, 1929, changed but slightly.

On another page of this issue will be found an article in greater detail on unemployment among local trade unions at the close of November, 1930.

**EMPLOYMENT
OFFICE REPORTS**

During the month of November, 1930, the offices of the Employment Service of Canada referred 36,751 workers to positions and effected a total of 35,557 placements. Of these placements in regular employment were 11,690, of which 8,726 were of men and 2,964 of women. Placements in casual work numbered 23,867. Employers notified the Service of 36,503 vacancies of which 29,208 were for men and 7,295 for women. Applications for work were received from 57,150 men and 11,712 women, a total of 68,862. An increase is shown in all transactions, when the figures are compared with those of the preceding month and also with November, 1929, the reports for October, 1930, showing 32,259 vacancies offered, 67,996 applications made and 31,221 placements effected, while in November, 1929, there were recorded 26,984 vacancies, 42,685 applications for work and 25,976 placements in regular and casual employment. A report in detail of the work of the offices for the month of November, 1930, will be found elsewhere in this issue.

**BUILDING
PERMITS
AND CON-
TRACTS
AWARDED.**

According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities during November, 1930, was \$11,791,478, as compared with \$12,723,789 in the preceding month and with \$16,171,400 in November, 1929.

The *MacLean Building Review* states that "the value of all contracts awarded in 1930, as compiled by MacLean Building Reports, Limited, amounted to \$456,999,600 as compared with \$576,651,800 in 1929. While this is a decrease of 20.7 per cent it must be kept in mind that 1929 was the most active year for building that Canada has ever known and was 22.1 per cent in excess of 1928, the second

highest year ever recorded. The 1930 volume is only 3.4 per cent below that for 1928."

The value of construction contracts awarded throughout the Dominion in December is estimated at \$24,542,300. Of this total \$13,339,800 was for engineering purposes; \$6,202,600 was for business buildings; \$4,580,500 was for residential buildings; and \$419,400 was for industrial purposes. The apportionment of the contracts awarded during December, by provinces, was as follows: Ontario, \$8,387,000; Quebec, \$7,014,100; British Columbia, \$4,033,400; Manitoba, \$1,967,800; Saskatchewan, \$1,699,500; Nova Scotia, \$1,018,700; Alberta, \$330,100; New Brunswick, \$64,200; Prince Edward Island, \$27,500.

Production and Trade

INDUSTRIAL PRODUCTION.

Figures showing the volume of production in certain industries during recent months and also in the corresponding months of 1929, are shown in the table on page 7.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, states that industrial production in Canada during 1930 was less than in 1928 or 1929, but compared favourably with any preceding year, the official index showing a gain of 6 per cent over 1927. The industries engaged in the production of goods required for the expansion of plant and equipment continued with moderate operations despite the business reaction which became more pronounced toward the end of the year. In the eleven months ended November, 1930, the production of pig iron was 708,000 tons, a decline of 30 per cent from the 1,008,000 tons made during the same period of 1929. The production in the first eleven months of 1927 was 646,000 tons. The cumulative production of steel ingots and castings in the first eleven months was 948,000 tons, a decline of 27 per cent from the total of 1,297,000 tons during the same months of 1929. This compares with 710,000 tons made in the same period of 1927. On November 30 there were 4 blast furnaces in operation having a capacity of 1,750 tons per day or about 41 per cent of the total capacity of the iron blast furnaces in Canada. The output of the automobile industry reflected limited demand in domestic and external markets. The output during the first eleven months was reduced to 148,600 units, compared with 257,800 units in 1929 and 182,600 units in 1927 representing declines of 42.4 per cent and 18.6 per cent. The output of cement in the first ten months at 9,870,000 tons showed a recession of 12 per cent. Lime was down 16 per cent and clay products were valued at 19.4 per cent less than in the same period

of 1929. The production of copper was 30 per cent greater, the output in the first ten months of 1930 being 259,500,000 pounds. Zinc showed a gain of 34.5 per cent and lead of 2.6 per cent. The gain in nickel was 8 per cent, the total output being 91,300,000 pounds. The output of petroleum was nearly 34 per cent greater and of natural gas 3.3 per cent greater. The production of the precious metals was heavier than in 1929, the increase in gold being 4.5 per cent, while silver showed a gain of 12.4 per cent.

Coal.—Coal output from Canadian mines recorded a marked decline in November. Production during the month was 1,315,420 tons, a decrease of 19.3 per cent from the October total of 1,630,013 tons and 22.7 per cent below the average output for November during the past five years of 1,702,437 tons. Mines in Nova Scotia produced 491,491 tons; in New Brunswick, 16,371 tons; in Saskatchewan, 80,082 tons; in Alberta, 555,491 tons; and in British Columbia, 171,985 tons. November's output consisted of 843,853 tons of bituminous coal, 51,808 tons of sub-bituminous coal, and 419,759 tons of lignite coal. Imports of coal into Canada declined 7.7 per cent in November from the 1925-1929 average for the month. Anthracite coal imported amounted to 445,555 tons, made up of 297,092 tons from the United States, 113,515 tons from Great Britain, 29,404 tons from Russia, and 5,544 tons from Germany. Importations of bituminous coal totalled 1,122,319 tons consisting of 1,118,665 tons from the United States and 3,654 tons from Great Britain. Receipts of lignite amounted to 3,613 tons received from the United States and cleared through Saskatchewan and British Columbia ports. Exports of Canadian coal continued to follow a lower trend and in November totalled 62,266 tons as compared with 93,043 tons, the November 1925-1929 average for the month. Coal made available for consumption in Canada during November amounted to 2,824,641 tons, a decline of 14.7 per cent from the five-year average for the month of 3,311,908 tons. The November supply was obtained from the following sources: Canadian mines, 44.5 per cent; U.S. mines, 50.2 per cent; Great Britain mines, 4.1 per cent; and the remainder from Russia and Germany.

EXTERNAL TRADE

A summary of Canadian trade prepared by the Department of National Revenue shows that in November, 1930, the merchandise entered for consumption amounted to \$76,325,063 as compared with \$78,358,351 in the preceding month and with \$108,733,697 in November, 1929. The chief imports in November, 1930, were: Non-

metallic minerals and products, \$13,314,246; iron and its products, \$12,839,098; fibres, textiles and textile products, \$12,737,761.

The domestic merchandise exported during November, 1930, amounted to \$73,060,871 as compared with \$82,781,428 in the preceding month and with \$111,068,332 in November, 1929. The chief exports in November, 1930, were: Agricultural and vegetable products, mainly foods, \$30,693,356; wood, wood products and paper, \$17,631,037; animals and animal products, \$7,822,690.

On the wheat situation at the beginning of December, the *Monthly Review of Business Statistics* makes the following statement: "Using the official estimate of the carry-over of wheat in Canada at July 31, 1930 (112 million bushels) and the provisional estimate of the Canadian wheat crop (396 million bushels), and with an allowance for seed, home consumption, and unmerchantable grain (110 million bushels), it may be calculated that Canada began the 1930-31 shipping season with an exportable surplus of about 398 million bushels—approximately 100 million bushels more than in 1929. At the end of October, an increase of about 40 million bushels in the exports had reduced the excess surplus of 1930 to 60 million bushels. During November, 1930, exports exceeded those of the same month of 1929 by approximately 10 million bushels, so that 1930 export supplies were only 50 million bushels higher than at December 1 of 1929 and amounted to about 278 million bushels. . . . Clearances to date in December show that it is not likely that average December export figures will be reached in this month, but the low prices and lowered European stocks should lead to increased demand in 1931."

Strikes and Lockouts

The time loss due to industrial disputes in Canada in December, 1930, was somewhat lower than that occurring during November, while the number of workers involved was less than one-half that shown for November. As compared with December, 1929, the figures for December, 1930, show that while one more strike occurred, less than one-half the number of workers were involved, the time loss showing a substantial decrease from that incurred in the same month in 1929 during which a strike of some eight hundred pulpwood cutters in Northern Ontario caused 10,000 days' time loss. There were in existence during the month eight disputes, involving 721 workers, and resulting in a time loss of 10,117 working days, as compared with six strikes, involving 1,968 workers, and re-

sulting in a time loss of 13,065 working days in November, 1930. In December, 1929, there were on record seven disputes, involving 1,684 workers and resulting in a time loss of 12,979 working days. At the end of the month there were two disputes recorded as strikes or lockouts, involving approximately ninety workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been formally called off or lapsed.

Prices

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was again lower at \$10.10 at the beginning of December, as compared with \$10.25 for November; \$11.83 for December, 1929; \$11.31 for December, 1928; \$11.17 for December, 1927; \$11.18 for December, 1926; \$11.56 for December, 1925; \$10.58 for December, 1924; \$10.73 for December, 1923; \$10.39 for December, 1922; \$11 for December, 1921; \$14.84 for December, 1920; \$16.92 for June, 1920 (the peak); \$13.65 for December, 1918; and \$7.96 for December, 1914. Of the twenty-nine foods included in the budget twenty-four were lower, the most important declines being in the prices of beef, pork, lard, butter, bread, flour, rolled oats, beans, evaporated apples, prunes and potatoes. Seasonal increases occurred in the prices of eggs. Including the cost of fuel and rent with that of foods the total budget averaged \$20.46 at the beginning of December, as compared with \$20.60 for November; \$22.11 for December, 1929; \$21.56 for December, 1928; \$21.37 for December, 1927; \$21.40 for December, 1926; \$21.87 for December, 1925; \$20.90 for December, 1924; \$21.21 for December, 1923; \$20.97 for December, 1922; \$21.49 for December, 1921; \$25.67 for December, 1920; \$26.92 for July, 1920 (the peak); \$21.64 for December, 1918; and \$14.26 for December, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, continued downward, being 77.8 for December, as compared with 79.8 for November; 96 for December, 1929; 94.6 for December, 1928; 97.2 for December, 1927; and 97.9 for December, 1926. In the classification according to chief component materials seven of the eight main groups were lower, while one was slightly higher. The groups which declined were: the Vegetables and Vegetable Products group, mainly because of lower prices for

grains, milled products, raw rubber and hay; the Animals and their Products group, due to lower quotations for canned salmon, hides, butter, cheese, eggs and hogs; the Fibres, Textiles and Textile Products group, because of declines in the prices of raw cotton, raw jute, hessian, manilla, hemp, raw wool, worsted cloth yarns; the Wood, Wood Products and Paper group, because of price reductions for certain lines of lumber and wood pulp; the

Iron and its Products group, due to lower prices for automobile body plates and scrap; the Non-Ferrous Metals and their Products group, due to lower prices for electrolytic copper, copper wire bars, silver, tin and zinc; and the Chemicals and Allied Products group, due to declines in the prices of arsenious oxide, iodine and shellac. The Non-Metallic Minerals and their Products group was slightly higher, due mainly to increases in the prices of bituminous coal.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING THE MONTH OF DECEMBER, 1930

DURING the month of December consideration was given to an application for the establishment of a Board of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act received from employees of the Coal Producers Limited, Coalhurst, Alberta. Four hundred and fifty employees, members of the Coalhurst Miners' Union, were stated to be directly affected by the dispute. The question at issue arose in connection with the interpretation of the clause respecting abnormal conditions, the men claiming that, in determining an abnormal condition, bone and coal should be included in the thickness of the seam. Following receipt of the application in the Department, Mr. F. E. Harrison, western representative of the Department of Labour, took the matter up with the parties concerned, to whom it was pointed out that the existing wage contract contained a clause providing means for the settlement of any dispute or grievance which might arise during the life of the agreement, i.e., first, by the employee concerned making personal application to the person in charge; in the event of an agreement not being then reached, the matter to be taken up by the employees' committee and the management; failing an

agreement in this way the dispute to be referred to an independent chairman, whose decision would be final and binding on both parties. If the parties concerned were unable to agree upon a chairman, the agreement provided that the Minister of Labour should be asked to appoint the chairman.

Mr. Harrison arranged several conferences between the disputing parties, and, after considerable discussion, the representatives of the local union stated that they would allow the matter to remain in abeyance pending the expiry of the present contract on March 31, 1932.

The LABOUR GAZETTE, September, 1930 (page 1009), contained the text of the reports of the Board of Conciliation and Investigation established to deal with various matters in dispute between the Winnipeg Electric Company and three groups of its employees being members of the Street Railway Employees' Unit, One Big Union, namely: (1) motormen, conductors and busmen; (2) trackmen, and (3) mechanical department employees. While an agreement has not been signed embodying the board's findings, it is understood that the present verbal arrangement as to wages and working conditions is in accordance with the recommendations of the majority of the board.

CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

Outline of Decisions in Recent Cases

SEVEN new decisions were given recently by the Canadian Railway Board of Adjustment No. 1. Earlier decisions were outlined in the LABOUR GAZETTE, November, 1930, page 1250, and in previous issues; and the fourth Report of the proceedings of the Board covering the period from October, 1927, to September 30, 1930, was issued as a supplement to the issue of December, 1930.

This Board was established under a voluntary agreement concluded in 1918 between the various railway companies and certain of the

railway organizations, its original purpose being to secure uninterrupted service on the railways during the continuance of the war. The Board consists of six representatives of labour, one for each of the following railway brotherhoods: the Brotherhood of Locomotive Engineers; the Brotherhood of Locomotive Firemen and Enginemen; the Order of Railway Conductors; the Brotherhood of Railway Trainmen; the Order of Telegraphers; and the Brotherhood of Maintenance of Way Employees and Railway Shop Labourers.

Case No. 362.—Northern Alberta Railways and the Order of Railroad Telegraphers.

A young man who was employed as agent at a station in Alberta closed the station for the purpose of attending a hockey game at which he was to play, having failed to obtain permission to do so. He further submitted false information to his superior officer in connection with the incident. He was dismissed from service for irregularities in his work, and for disobeying instructions. The employees, while conceding that an offence had been committed, claimed that the punishment was excessive, as the day when the incident occurred was a Civic Holiday, business being slack. The Board considered that the Company was entirely justified in dismissing this agent. However, having regard to the circumstances involved in the case, the youth of the man concerned, and "the general desire of all those intrusted with the operation of the railroads to deal in reasonable charity with the mistakes of employees," the Board stated that it would regard it as a kindly act on the part of the general manager if the man was reinstated to the extent of being restored on the spare board without loss of seniority for future promotion.

Case No. 363.—Canadian Pacific Railway (Western Lines) and Order of Railroad Telegraphers.

Two new local freight agencies were opened in Saskatchewan as "exclusive agencies," this is, agencies outside the direct jurisdiction of a station agent. The telegraphers claimed that according to the clause in their schedule giving the union certain privileges in connection with the appointment of agents, the two new positions thus created should have been bulletined over the district and filled in the prescribed manner. The company, on the other hand, pointed out that there were regular railway station agents at these two points and that the new local freight agents were not station agents, and were therefore not covered by the provision in the schedule. The Board decided that the action of the company in this case did not constitute a violation of the schedule, but recommended that the parties should confer and endeavour to reach an agreement as to the future status of these positions.

Case No. 364.—Canadian National Railways (Western Region) and Order of Railroad Telegraphers.

A controversy arose as to the manning of Frobisher tower, at a point where the Canadian National crosses the Canadian Pacific

tracks. For the past ten years the signalling in connection with the trains of both lines was performed by a section foreman. The employees claimed that the work at this tower should be performed by an employee covered by the Towerman's Schedule, and that the senior unemployed towerman was entitled to schedule wages as from the date that the question was taken up with the management.

The Board denied the claim of the employees.

Case No. 365.—Canadian National Railways (Western Region) and Order of Railroad Telegraphers.

This case concerned the manning of Strathcona tower at South Edmonton. For some time past this tower had not been used in connection with regular trains, and there was no prospect that it would be further used for this purpose. The towerman having been moved by the company to another position, the employees claimed that he should be restored, compensated for his expenses in moving and paid schedule wages for time lost; and further, that any towerman who had lost time as a result of the subsequent reduction in staff should likewise be compensated. The company stated that the work at this tower did not warrant the expense of a towerman, and that a section foreman was used to perform the necessary signals. They claimed further that nothing in the telegraphers' schedule called for the keeping of a towerman under such circumstances.

The Board denied the claim of the employees.

Case No. 366.—Canadian National Railways (Western Region) and Order of Railroad Telegraphers.

This case concerned the action of the company in dispensing with the services of a towerman at Midale, under similar circumstances to those of Case No. 365.

The Board in this case also denied the claim of the employees.

Case No. 367.—Canadian National Railways (Western Region) and Order of Railroad Telegraphers.

A shortage was found in the remittances made by an agent in Alberta, and he was required to make good the amount. The agent's declaration as to the amount he had sent disagreed with the statement of the two bank tellers who received the remittance, there being no evidence as to loss in transmission. The employees contended that the agent had checked, sealed and delivered the correct sum, and that the amount of the shortage should be refunded to him.

The Board was unable to decide between the conflicting statements and the case was therefore removed from the docket.

Case No. 368.—Canadian National Railways (Central Region) and Brotherhood of Railroad Trainmen.

The appointment of a relieving or assistant yardmaster at Toronto terminal led to an objection by the employees that the provisions in Article 146, paragraph A of their agreement had not been observed: "In the appointment of yardmasters and assistant yardmasters the senior Yardsman will in all cases be given full and unprejudiced consideration." When the vacancy occurred, the senior yardsman had been assigned the position, and he held it for

three months after which the company displaced him by appointing instead a man who was then a junior yardsman, but had formerly worked as a relieving yardmaster. The employees contended that the man first appointed should be restored to the position. The company explained their action by stating that the first appointment was made through a misunderstanding on the part of the local officers, and that when the records of the two men were examined it was found that the second man's qualifications were best suited to the position.

The Board denied the claim of the employees, considering the fact that the man chosen by the company had formerly acted as a relieving yardmaster.

CANADIAN NATIONAL RAILWAYS EMPLOYEES' BOARD OF ADJUSTMENT No. 2

Summary of Recent Proceedings

REPORTS have been received of five cases recently settled by the Canadian National Railways Employees' Board of Adjustment No. 2. An account of previous cases was given in the *LABOUR GAZETTE*, October, 1930, page 1133 and in previous issues. The issue of August, 1930, contained a general summary of the proceedings of the Board, covering the period from January 1, 1928, to December 31, 1929; and a similar summary of proceedings from the date of the inception of the Board to December 31, 1927, appeared in the issue of October, 1928, page 1060.

The Canadian National Railways Employees' Board of Adjustment No. 2 was established for the purpose of disposing of outstanding grievances or disputes that might arise from the application, non-application, or interpretation of the schedule of working conditions for "Clerks and Other Classes of Employees as herein named," which are not adjusted between the officers of the railway and the representatives of the employees. The members of the Board are appointed for a term of one year, subject to reappointment, and it is composed of four members selected by the management and four members selected by the representatives of the employees concerned. The decisions of the Board are binding upon the parties to the agreement. Provision was made in the agreement constituting the Board for the appointment of an arbitrator in any case in which the Board might be unable to agree upon an award. Up to the present time in only one case has it been found necessary to appoint an arbitrator.

Case No. 64—Sleeping, Dining and Parlour Car Department

Article 6. Rule (f) of the schedule covering employees in the Sleeping, Dining and Parlour Car Service reads as follows:—

"When employees are called upon to equip, strip, stock or transfer cars during their layover period they shall be paid *pro rata* for such time lost on a twelve hour day basis with a minimum of one-half day."

The dining car crews assigned to the International Limited, running between Montreal and Chicago, made a claim under this section for overtime pay for stocking their cars during the layover at Montreal, their home terminal, the duty required of them being to put supplementary supplies on the train, beginning two and a half hours earlier than the schedule called for. The company pointed out, however, that Rule (f) was created to take care of employees who should be required to report for duty when new cars, or those fresh from the shops, were being put into service, or when complete transfers were made from one steward to another. They explained further that the word "supplies" was used to mean provisions required for a trip, while the word "equipment" referred to utensils which remained on a car while it remained in commission. The company therefore claimed that the men should be paid under the provisions of Rule (e) which covered work done in handling supplies for the trip.

The Board at first adjourned this case in the hope that an agreement between the parties would be reached, and when informed that no agreement had been arrived at, they

proceeded to deal with it but were not able to come to a decision. They therefore referred the question at issue to an arbitrator, as provided for under the agreement constituting the Board. The arbitrator, Mr. G. S. Currie, of Montreal, heard the case on November 28, and issued the following decision on December 4:

"The claim of the employees for overtime pay under Article 6, Rule (f) is not justified. I am of the opinion that all overtime, such as is necessary in the particular cases under consideration, should be paid in accordance with Article 6, Rule (e)."

Case No. 65—Sleeping, Dining and Parlour Car Department

This case concerned the request of porters on the Toronto-Vancouver run for additional layover privileges at Vancouver. It was heard by the Board last August, but was referred back to the parties concerned in the hope that an agreement would be reached on the point at issue. Subsequently the case was settled satisfactorily by agreement, and it was withdrawn with the Board's approval.

Case No. 66—Operating Department, Western Region

The position of Assistant Inward Rate Clerk at the Winnipeg Local Freight Office having fallen vacant, the position was bulletined, and was then awarded by the company to an employee who had formerly been an expense clerk. Another employee, who was senior in standing to the man appointed, claimed that he should have been chosen, and as the result of the protest he was given an opportunity to learn the duties of the position, but after a week he removed from it and the original appointment was confirmed. The employees claimed that this man should have been given a reasonable time to qualify for handling the new duties. The company explained that considerable experience was necessary for handling the work of that office, and that the claimant was not considered competent. The Board sustained the employees' claim, deciding that the senior applicant should be given a further opportunity to qualify for the Assistant Rate Clerk's position.

Case No. 67—Operating Department, Atlantic Region

The car checkers at Rivière du Loup having been required to load and unload baggage and mail, they claimed that such work did not come within their duties as car checkers, as they were "clerical workers" as set out in Article 2, Rule A of the "Schedule

for clerks and certain other classes of employees." Such work, they stated, should be performed by the group composed of Freight Porters, Baggage Porters, Station Porters, etc. The company pointed out that there was very little car checking work at that point, and that the checkers were used only for a short time each day in assisting with the baggage, being paid for such work at the same rate as assistant baggage masters.

The Board denied the claim of the employees.

Case No. 68—Stores Department, Atlantic Region

A new clerical position was established in the stores department at Rivière du Loup, and this was awarded to a man who had no previous experience in the service. After a protest from the employees the company bulletined the position as vacant, but the same man was in fact retained in the position. The employees contended that the position should have been bulletined in the first instance, and that the intent of Article 3 Rule (g) was to give preference to employees in the service. The Board, however, while agreeing with the latter contention, found that no application for transfers had been submitted by the employee desiring the position, and therefore denied the claim of the employees.

Pensions of \$25 a week will be paid to all members of Local No. 306, Motion Picture Operators' Union (New York), who pass their sixtieth birthday or who become disabled through accident or occupational disease. Only members who have been in good standing for 15 years will be eligible for such pensions.

The director of the United States Conciliation Service, in his annual report for the past fiscal year, states that since the creation of the Department of Labour in 1913 the conciliation branch has used its good offices in nearly 10,000 trade disputes, involving about 13,000,000 workers. Over 76 per cent of the cases handled were adjusted by the Service directly, and a considerable proportion of the remainder were adjusted later as the indirect result of the efforts of the representatives of the Department. It is stated that employers and workers, in their agreements, frequently make provision in the event of the occurrence of disputes for calling in a conciliation officer, whose advice is to be accepted on the question at issue.

STRIKES AND LOCKOUTS IN CANADA DURING DECEMBER, 1930

THE number of strikes and lockouts in existence in Canada during December, 1930, was eight, as compared with six the preceding month. The number of workers involved was less than half that shown for November while the time loss for the month amounted to about three-quarters of that incurred during November. As compared with December, 1929, the figures for December, 1930, show that while one more strike occurred, less than one-half the number of workers were involved, the time loss showing a substantial decrease from that incurred in the same month in 1929 during which a strike of some eight hundred pulpwood cutters in Northern Ontario caused 10,000 days' time loss.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Dec. 1930..	8	721	10,117
*Nov. 1930..	6	1,963	13,065
Dec. 1929..	7	1,684	12,979

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Four disputes, involving approximately 600 workers, were carried over from November, and four disputes commenced during December. Of these eight disputes, six terminated during the month; one terminated in favour of workers; the result of one was recorded as a compromise, while the other four resulted in favour of the employers. At the end of December, therefore, there were on record two disputes recorded as strikes or lockouts, as follows: Sash and door factory workers, Vancouver, B.C., and furniture factory workers, upholsterers, Toronto, Ont.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not yet declared terminated. Information is available as to four such disputes, namely: electrotypers, Toronto, Ont., December 20, 1926, one employer; photo engravers, Toronto, Ont., January 7, 1929, one employer; motion picture projectionists, Vancouver, B.C., June 23, 1930, one employer; and bakery drivers, Saskatoon, Sask., September 22, 1930, one employer.

A cessation of work on an irrigation ditch at Peachland Creek, B.C., was reported in the press as a dispute. The information secured by the Department indicates that the men ceased work owing to the inclement weather shortly before the job was finished. The municipal authorities closed up the work and had it finished by contractors later on when the weather improved.

A cessation of work on December 2, 1930, at Canyon Falls near Cochrane, Ont., involving twenty-four out of three hundred workers engaged on the construction of a tunnel in connection with Hydro electric development was reported in the press, the men refusing to work ten hours per day instead of eight. Information secured by the Department indicates that for part of the work the men were divided into three shifts of eight hours each and that when this was finished work at ten hours per day was resumed. Some of the workmen secured for tunnelling were miners and refused employment at ten hours per day.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

SHORE FISHERMEN, NORTH SYDNEY AND DISTRICT, N.S.—The dispute involving shore fishermen at North Sydney and other points to the number of between 500 and 1,000 in a cessation of work from November 16, 1930, was settled on December 4 at North Sydney and on December 21 at Ingonish. As the result of the mediation of the Mayor of North Sydney an agreement was reached by which the fishermen partly secured their demands, including an increase of one-quarter cent per pound for market cod and a reduction in the price of bait. Fishermen in Guysboro County on the mainland partially suspended operations during this period, attempting to secure an increase in the price paid for fish, and in December an increase of one-half cent per pound was given.

Shortly after this, however, the boats were laid up for the winter.

SASH AND DOOR FACTORY WORKERS, VANCOUVER, B.C.—In this dispute, which commenced on November 3, 1930, it was reported that there were thirty-two employees involved at the end of November, but at the end of December, as twelve had secured work with other employers, there remained only twenty on strike. The union, however, was reported to be still picketing the establishment.

ORNAMENTAL, IRON WORKERS, VANCOUVER B.C.—This dispute, which commenced on October 16, 1930, affecting four establishments,

to secure an increase in wages, was terminated on December 3, 1930, work being resumed at \$7.50 per day, the rate previously in effect.

COAL MINERS, NEW WATERFORD, N.S.—A cessation of work for one day occurred in No. 16 Colliery at New Waterford, N.S., on December 5, 1930, as a result of the refusal of fifteen boys to work, complaining that employment was not being fairly divided. Operations in the mine were, therefore, suspended. It appears that all shifts were not being regularly worked and the employees complained that some of the workers were getting more work than others, and contended that the senior employees should get the preference.

STRIKES AND LOCKOUTS IN CANADA DURING DECEMBER, 1930

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
-----------------------------------	----------------------------	---------------------------	---------

(a) Strikes and Lockouts in Progress Prior to December, 1930

FISHING AND TRAPPING— Shore fishermen, North Sydney and district, N.S.....	500	6,200	Commenced Nov. 16, 1930; for increase in rates for fish: terminated Dec. 21, 1930; compromise.
MANUFACTURING— <i>Textiles—</i> Hosiery factory workers, Guelph and Mount Dennis, Ont.....	55	1,400	Commenced Oct. 30, 1930; against reduction in wages; lapsed by end of December; in favour of employer.
<i>Saw and Planing Mill Products—</i> Sash and door factory workers, Vancouver, B.C.....	32	750	Commenced Nov. 3, 1930; against reduction in wages; untermi-nated.
<i>Iron, Steel and Products—</i> Ornamental iron workers, Vancouver, B.C.....	6	18	Commenced Oct. 16, 1930; for increase in wages; terminated Dec. 3, 1930; in favour of employer.

(b) Strikes and Lockouts Commencing during December, 1930

MINING, NON-FERROUS SMELTING AND QUARRYING— Coal miners, New Waterford, N.S.....	15*	15	Commenced Dec. 5, 1930; division of available work; duration one day; in favour of employer.
MANUFACTURING— <i>Clothing (including knitted goods)—</i> Women's clothing factory workers (pressers), Montreal, P.Q.....	21	504	Commenced Dec. 3, 1930; alleged discharge of workers for union activity; lapsed by end of December; in favour of employer.
<i>Other Wood Products—</i> Furniture factory workers, (upholsterers), Toronto, Ont....	60	1,080	Commenced Dec. 10, 1930; against reduction in wages; untermi-nated.
CONSTRUCTION— <i>Canal, Harbour and Waterway—</i> Carpenters, engineers, etc., Lakefield, Ont.....	32	150	Commenced Dec. 9, 1930; to secure payment of wages; terminated Dec. 15, 1930; in favour of workers.

* 675 indirectly involved.

The company on the other hand contended that it was necessary that each employee should work in the shift to which he belonged. It was arranged that the matter would be discussed between the union officials and the management and that work would be resumed on December 8 (Monday). As Saturday is for the time being an idle day, only one day's work at the mine was lost. The dispute also spread to Colliery No. 14 in the same locality where eleven men were indirectly affected for one shift.

WOMEN'S CLOTHING FACTORY WORKERS, PRESSERS, MONTREAL, P.Q.—A number of pressers in a clothing factory ceased work on December 3, 1930, alleging that some of the employees had been dismissed for belonging to a certain organization, the Industrial Union of Needle Trades Workers. The management is reported to have denied that such was the reason for their discharge. The strikers were replaced by other workers, but during December picketing was carried on, and at the end of the month the dispute appears to have lapsed.

FURNITURE FACTORY WORKERS, UPHOLSTERERS, TORONTO, ONT.—A cessation of work involving the upholsterers in a furniture factory, sixty in number, occurred on December 10, 1930, the employees ceasing work when the management proposed an amendment to the agreement providing for a reduction in wages of thirty-five per cent. (LABOUR GAZETTE, July, 1930, p. 842). When the union refused to accept a reduction of more than twenty per cent, the factory was closed to them and other workers were brought in to carry on the work. At the end of the month no settlement had been reported.

CARPENTERS, ENGINEERS, ETC., LAKEFIELD, ONT.—A number of employees on a construction job near Lakefield, Ont., ceased work on December 9, 1930, when their demand for prompt payment of wages was refused and the spokesman for the employees was discharged. The wages were paid shortly afterwards and the workers were re-engaged from time to time as required.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue for February, 1930, in the review of Strikes and Lockouts in Canada and Other Countries, 1929. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Information about particular disputes is obtained for the most part from newspaper reports.

Great Britain

The number of disputes beginning in November was 27 and 14 were still in progress from the previous month, making a total of 41 disputes in progress during the month, involving 8,800 workpeople and resulting in a time loss of 64,000 working days for the month. Of the 27 disputes beginning in November, 8 arose out of proposed reductions in wages, 10 on other wages questions, 3 on

questions of working hours, 4 on questions respecting the employment of particular classes or persons and 2 on other questions. Settlements were reached in 20 disputes, of which 4 were in favour of workpeople, 5 in favour of employers and 11 ended in compromises. In 3 other disputes, work was resumed pending negotiations.

On January 1, a stoppage of work affecting 140,000 coal miners in South Wales began. The dispute arose over the introduction of the 45-hour working week provided for under the new Coal Mines Act when the owners tried to enforce a reduction in wages which the miners refused to accept.

United States

The number of disputes beginning in October was 41 and 39 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 16,549 and the time loss was 345,100 working days during the month.

No settlement was reported of the strike of 4,000 textile workers at Danville, Virginia, which began September 30, and was mentioned in the last three issues of the LABOUR GAZETTE.

UNEMPLOYMENT RELIEF ACT, 1930

Further Proceedings in Co-operation with the Provinces, Municipalities and Railway Companies

IN previous issues of the *LABOUR GAZETTE*, an account has been given of the Special Session of the Parliament of Canada summoned especially to deal with problems arising out of exceptional economic conditions with resultant unemployment, and of the enactment of the Unemployment Relief Act. Particulars of the expenditures approved have been given from month to month.

The Provinces continue to submit their proposals for provincial and municipal work under the agreement entered into with the Dominion Government, the following joint expenditures having been approved by the Minister of Labour up to January 10th:—

In British Columbia 16,756 individuals had been given employment up to December 31, 196,200 man-days work had been given, the average number of days' employment per man being just under 12. Up to December 31, 1,777 individuals and 1,437 families had been given direct relief, the figures for direct relief, however, not including December figures for the City of Vancouver.

In Alberta, up to December 31, 8,636 individuals were given employment; 110,342 man-days work were given, which is an average of nearly 13 days' work per man; 1,566 heads of families and 2,280 single men were given direct relief. While detailed figures for the municipalities are not generally available, the City of Lethbridge has notified the Department of Labour that the number of men given employment from December 5 to January 3 was 210, and the number of man-days work given 1,072. The figures for Lethbridge are included in the figures given as for the province.

The reports from Saskatchewan indicate that 17,150 individuals have been given work up to the end of December, 211,440 man-days work having been provided. This gives an average number of days employment per man of about 12½. In addition, Saskatchewan reports that 139,064 days' work has been provided for teams; 8,400 individuals have been given direct relief.

Manitoba reports that from the commencement of relief work to December 31, 11,498 men without teams were given employment. During the same period 4,311 men with teams, trucks, etc., were given employment, the total number of men employed up to December 31, being 15,809. The number of man-days work given to men without teams aggregates 77,801, and with teams 30,881, total man-days work being 108,682. This does not include unemployment relief work arranged in the Riding Mountain National Park under the provisions of the Unemployment Relief Act, where 214 individuals were given 3,714 man-days work, the average number of days' employment per man being slightly over 17. Relief given in the form of groceries, fuel, etc., in Manitoba, from October 1 to December 31, was provided in 5,977 cases, a total of 15,513 individuals, parents and children being included.

The number of men given employment under the Unemployment Relief Act arrangements in Ontario is reported as 41,000 to December 31, the total man-days work given

Province	Total Joint Expenditures
Prince Edward Island.. . . .	\$ 200,000
Nova Scotia.. . . .	2,323,539
New Brunswick.. . . .	406,300
Quebec.. . . .	9,721,350
Ontario.. . . .	13,541,147
Manitoba.. . . .	2,330,432
Saskatchewan.. . . .	1,615,698
Alberta.. . . .	2,667,536
British Columbia	2,550,770
Yukon.. . . .	20,000
Grade Crossing Fund.. . . .	1,439,360
Canadian Pacific Railway.. . . .	11,514,000
Canadian National Railways.. . . .	14,159,403
	\$62,489,535

Extent of Relief Provided

From the following details it may be seen that 151,296 individuals have been given employment for 2,008,003 man-days from the commencement of the operations of the Unemployment Relief Act to December 31, this number not including Quebec and being incomplete in so far as New Brunswick and the Canadian National Railways are concerned.

The various Provinces, railway companies and departments of the Government, who are cooperating under the Unemployment Relief Act, 1930, have furnished statistics showing the actual volume of employment given to date. Details for each province, etc., are given below. A complete summary cannot be presented, as in the case of the Province of Quebec where a very large amount of unemployment relief work is being undertaken, the provincial authorities find themselves unable to furnish a complete statement at the present time. In other provinces the information, while fairly complete, is in some instances not based on the same dates as the other provinces.

being 760,000. This gives an average of 18 days' employment per individual. The number of cases of direct relief in Ontario up to December 31 was 14,000 and this includes heads of families and single men.

No complete returns have been received from the Province of Quebec, the provincial authorities stating that although they have circularized the municipalities requesting information, this information is not yet to hand, and in consequence the Provincial Government is unable to have its figures included in this summary. It is understood that the Provincial Government has recently appointed a statistician who will have charge of reports from municipalities. In view of the fact that about \$10,000,000 worth of work has been approved for the Province of Quebec, it will be seen that the absence of statistics from this province greatly affects the grand total of employment so far given under the Act. However, reports from 22 of the smaller municipalities in Quebec indicate that 1,700 individuals have been given work to the extent of 11,979 days.

The December figures for New Brunswick are not yet available, but information to the end of November indicates that 15,906 men have been given work to the extent of 94,788 days.

From Prince Edward Island a report has been received stating that the number of men directly employed under the Unemployment Relief Act, up to December 31, is 684. These men were working for a total number of 6,884 man-days, being an average of 10 days per man. In addition to this the report states that a considerable amount of labour was utilized in the preparation of the materials used.

Nova Scotia reports that 28,692 individuals were given employment up to the end of December working 324,672 man-days, or an average of 11 days' employment per man;

1,433 heads of families were given direct relief up to December 31.

From the Yukon a report has been received that up to December 24, 150 individuals had been given employment amounting to 2,096 man-days, or an average of 14 days' work per man. No money was expended for direct relief in the Yukon under the Provisions of the Unemployment Relief Act.

The Canadian Pacific Railway Company reports that work done as a result of the Agreement under the Unemployment Relief Act has resulted in 3,807 individuals being given employment up to December 31, an aggregate of 119,450 man-days work being given.

The Canadian National Railways have not yet reported the number of individuals given employment to December 31, but the total man-days work given amounts to 57,756. There were actually employed on December 31, 542 men; of these 359 men were employed in Western Canada laying track.

In addition to the work outlined above the Canadian National Railways expect to award a contract for the new station at Saint John, New Brunswick, within a short time. The contract for the La Canardiere subway, Quebec, was awarded on December 31, and extensive construction work will shortly follow. At Brantford, Ontario, cut-off, the contractor is engaged in moving plant and equipment to the scene of work, and an early start will be made. Contracts for the subways and track elevations at London, Ontario, will be awarded within a short time. A contract has been entered into for work on the Fort William freight storage shed.

In previous issues details of expenditures approved to December 10, have been set forth. The details of additional expenditures approved to January 10th and included in above summary are given below:—

Additional Expenditures Approved up to January 10, 1931

		Bonfield—Gravelling streets. . . .	400

UNEMPLOYMENT RELIEF MEASURE IN NEW ZEALAND

THE Unemployment Act, 1930, passed by the legislature of New Zealand on October 11, 1930, provides for the establishment in the Public Account of an Unemployment Fund, the constitution of an Unemployment Relief Board, and the raising of an unemployment levy. This Act gives effect to the recommendations of the special committee on unemployment, which were outlined in the LABOUR GAZETTE, August, 1930, page 911.

The Unemployment Fund is to consist of the net proceeds of the Unemployment Levy and of a subsidy from the Consolidated Fund equal to one-half of the expenditure out of the Unemployment Fund. All monies required to be expended for the purposes of the Act are to be paid out of the Fund by direction of the Minister of Finance on the recommendation of the Unemployment Relief Board.

The membership of the Board includes the responsible Minister who is Chairman, two persons appointed on his recommendation, two nominated by organizations of employers in primary and secondary industries, two nominated by workers' organizations, and one nominated by the New Zealand Returned Soldiers' Association. Its main functions are to make arrangements with employers for giving work to unemployed persons, to take steps to reduce unemployment by promoting the growth of primary and secondary industries, and to make recommendations for the payment of sustenance allowances to unemployed persons. In the exercise of its functions the Board is empowered to establish labour exchanges or co-operate in the man-

agement of existing exchanges; to ensure co-operation between departments of State, local authorities, public bodies, and other persons engaged in carrying out public works; to assist workers, by means of grants and loans, to pursue courses of vocational training and to organize such courses, and to provide, by means of loans or grants, for the carrying out of development works. The Board is further empowered to carry out inquiries and to appoint local committees and define their powers.

Under the Act every male person who, on December 1, 1930, is of the age of 20 years or upwards (except persons in receipt of pensions under the Pensions Act, 1926, or of total disablement war pensions under the War Pensions Act, 1915, or natives within the meaning of the Native Land Act, 1909, who do not become voluntary contributors) is liable to an annual levy of 30s., payable in equal quarterly instalments, the first instalment being due on December 1, 1930. Provision is made for the payment of the levy by persons who attain the age of 20 years after December 1, 1930, and by persons who become resident in New Zealand after that date. The Governor-General, on grounds of public policy, may exempt, wholly or in part, any person or classes of persons from payment of the levy. Payment is made by the contributor to any Money Order Office or Postmaster, or by means of revenue stamps.

Sustenance allowance at the rate of 21s. a week in respect of the contributor, 17s. 6d. a week in respect of his wife or other person who, in the opinion of the Board, is in charge of his home and family, and 4s. a week in

respect of each child, is payable for a period not exceeding 13 consecutive weeks to a contributor to the Fund who has been unemployed for at least 14 days, and has been resident in New Zealand for at least six months. On the special recommendation of

the Board, the waiting period may be reduced and the period during which sustenance allowance is payable may be extended. No allowance is payable in cases where a contributor fails to accept suitable employment, whether offered by the Board or otherwise.

UNEMPLOYMENT DISCUSSED BY AMERICAN ASSOCIATION FOR LABOUR LEGISLATION

UNEMPLOYMENT and unemployment insurance were the main topics discussed at the annual meeting of the American Association for Labour Legislation which was held at Cleveland, Ohio, December 29-31. The meetings were attended by economists, university officials, trade union representatives and government officials from the United States and Canada. Mr. Harry Hereford, Director of Unemployment Relief, represented the Dominion Minister of Labour, Senator Robertson, and at a large meeting in the Auditorium of Cleveland College explained to the audience the work of the Department of Labour in connection with the administration of the Unemployment Relief Act, 1930.

Other Canadians present were Mr. R. H. Coates, Dominion Statistician, Miss Findlay of the Ontario Department of Labour, and Mr. Bryce M. Stewart, former Director of Employment Service.

Senator Robert Wagner of New York in the course of an address, said that the United States would never become accustomed to the breadline, and should realize the urgency of finding a permanent remedy for unemployment.

Professor Don Lescohier of Wisconsin said that public opinion was rapidly becoming favourable to the idea of unemployment insurance.

Miss Florence C. Thorne of the American Federation of Labor and Professor E. F. Baker of Barnard College scored the United States Government for its alleged failure to establish an adequate public employment service.

Dr. J. Lubin, of the Brookings Institution of Washington, was of opinion that there would still be a serious unemployment problem after the existing depression ended. He suggested unemployment insurance to take care of workers displaced on account of technical reasons.

Mr. John B. Andrews, Secretary of the American Association for Labor Legislation, announced that nine States had improved their labour laws during 1930, New York, Massachusetts and Virginia leading the way. Including in recent State legislation were pension retirement laws in Massachusetts, New Jersey, Kentucky and Mississippi. New Jersey also set up a commission to study old age pensions. New York established an eight-hour day for railway grade crossing elimination work, and Louisiana reduced women's hours of work to nine a day and fifty-four a week. However, of the eleven States having special sessions, not one enacted any unemployment legislation.

FEATURES OF BRITISH UNEMPLOYMENT INSURANCE SYSTEM

The Right Hon. Margaret Bondfield, Minister of Labour of Great Britain, described the practical working of unemployment insurance in that country in the course of an article contributed to a recent issue of *The American Labour Legislation Review*, as follows:—

"The Unemployment Insurance Scheme is administered by the Minister of Labour through the national system of Employment Exchanges. The country is divided into areas for each of which either an Employment Exchange or a subsidiary Exchange known as a 'Branch Employment Office' is provided.

The contributions from employers and employed are paid by means of unemployment insurance stamps purchased by the employer from the Post Office and affixed by him, week by week, to 'unemployment books' issued to his work-people. Benefit is paid weekly to insured persons who furnish evidence of unemployment by attending at the Local Office (Employment Exchange or Branch Employment Office) as required. The Minister has power to make an arrangement with a trade union or similar organization which makes payments to its members while unemployed, whereby unemployment benefit

is paid through that organization instead of direct from an Employment Exchange or Branch Office.

"When a man loses his employment he attends the Exchange to register for fresh employment and to claim benefit. In every case his last employer is asked to give the reasons why employment terminated, and the claimant is given an opportunity of commenting upon the employer's statement if the reply indicates that benefit should not be allowed. Before benefit can be paid the man must show that he has paid the minimum number of contributions and that he is capable of work, available for work, and is unemployed within the meaning of the Act. He must also show that he is free from disqualification. No person can get benefit if he has left his last employment voluntarily or has lost it through his own conduct or because of a trade dispute. The decision whether or not the claimant is qualified for benefit is given by independent authorities appointed by the Minister for this purpose. Their decisions are not subject to review by the Minister or the Department. There is a right of appeal in certain cases to a central Umpire whose decision is final. So long as the claimant is unemployed and in receipt of benefit he must attend the Exchange regularly, usually once a day or, in districts where unemployment is severe, every other day. By this means he keeps in touch with the Exchange and there is a check on the continued fulfilment of the conditions.

"It has often been said that persons are in receipt of benefit who are not entitled to it. These allegations have been examined from time to time by independent authorities and on every occasion it has been found that they had no foundation.

"When the Unemployment Insurance scheme was introduced, twenty years ago, very little was known of the composition of the unemployed. The scheme was an experiment and experiments have been continued, and extended, down to the latest amendment in 1930. It was perhaps inevitable that the scheme should have been introduced on a uniform basis, and equally inevitable that it should be extended, and amended, to meet changing conditions. Too little was known about unemployment to enable the framers of the scheme to differentiate between various classes of persons. The development of the future will probably be in the direction of greater differentiation, in the insurance scheme, to meet individual needs and economic needs, proceeding side by side with greater control over the labour market, in co-operation between employers, trade unions and Employment Exchanges.

"Unemployment Insurance is gradually losing the essentially provisional character that marked its early stages, and it is being placed on an increasingly scientific and permanent basis. At the same time its financial organization is still rather unsettled, and continues to raise numerous problems. At the present moment the question of the administrative and financial organization of unemployment insurance is one of the most important problems of social policy. The important task now is to stabilize the system, and definitely to fix its relations with the general administration of other social insurances, and more especially to adapt it as closely as possible to the needs of the economic system."

No "Standing Army"

Elsewhere in the same article Miss Bondfield disposes of the idea that there is a standing army of unemployed composed of persons who are permanently unemployed: "If we analyzed the alarming total on any day," she states, "we should find that more than half had been unemployed less than a month; three-quarters less than three months, and even of the remaining quarter consisting of the poorest type of men, least efficient, least trustworthy, including the inevitable mixture of shirkers, only a small proportion had not found work within six months. This effectively disposes of the idea that there is a standing army of unemployed. It still leaves us, of course, with a very difficult problem. I have analyzed the figures because far too much prominence is given to totals regardless of the classes making up those totals. It is the patchiness of unemployment that has given rise to some of the most difficult problems of unemployment insurance.

"In practically all the industrialized countries where unemployment insurance was introduced or extended after the war the problem has been mainly one of providing relief for exceptional unemployment, i.e., of extending the pure insurance principle to meet an emergency. This has been the position in England."

The legislatures of four States (Louisiana, Massachusetts, New York, and Virginia) and Porto Rico passed amendments to the workmen's compensation laws during 1930. In general, these acts liberalized the existing legislation in various ways, such as extending the period of compensation for certain injuries, increasing the benefits, adding to the list of compensable occupational diseases, and improving the administrative machinery.

Unemployment Insurance in the United States

Industrial Relations Counselors, Incorporated (New York), recently published the first of a series of reports on the existing arrangements in the United States protecting workers against the hazard of unemployment. In the United States, so far, efforts to relieve unemployment have been entirely voluntary rather than official, consisting of those undertaken by labour unions, by unions and employers jointly, or by individual companies. The limited extent of the unemployment compensation movement in American industry, according to the report, is evident in the fact that during 1928 a little more than 107,000, or nearly one-half of 1 per cent, out of an approximate total of 23,000,000 wage earners, enjoyed, theoretically at least, some sort of protection against unemployment, under the seventy-two formal plans in operation under the auspices of trade unions, employers, or unions and employers jointly.

During 1928 a total of \$277,505 was paid in out-of-work benefits by the forty-one unions operating plans independently of employers,

and covering a combined membership of 35,000. In addition, a total of about \$1,000,000 is shown to have been paid out to members of trade unions which, with a combined membership of 63,500, operated out-of-work benefit plans jointly with employers. Eleven individual firms, maintaining unemployment benefit plans of their own and employing approximately 11,000 wage-earners, paid out \$11,871 during the year.

"There is a growing tendency among the larger progressive industrial companies to combine their unemployment benefit plans with measures to regularize employment by lessening seasonal fluctuations. While these efforts have met with a fair degree of success, few concerns have made headway against cyclical unemployment. Such regularization policies, moreover, while increasing the proportion of employees working full time, also are apt to result in the squeezing out of the 'marginal' workers employed part of the time, a process which does not contribute to the lessening of total unemployment."

An article analyzing coal mine labour productivity, by Dr. Ethelbert Stewart, United States Commissioner of Labour Statistics, in the December issue of the *Monthly Labour Review* shows the wide variations in the output of underground workers as between States and even between different counties of the same State. For example, the average output per man per day for underground employees ranged from 1.43 tons in North Carolina to 10.34 tons in North Dakota in 1929, while the output for all employees (underground and surface) ranged from an average of 1.25 tons in North Carolina to 7.90 tons in Montana. The increase in the use of machines for coal cutting and of mechanical loaders and the installation of electric engines and larger cars is responsible for most of the increase in output in the coal mines during the past 40 years, although some of it is due to the entirely different method of getting out the coal such as the practice of blasting from the solid, which means that there is no mining done in the old sense of the term.

for 1927, the last preceding census year. The number of wage earners (average for the year) increased 2.4 per cent, from 8,349,755 to 8,550,284, and wages increased 3.9 per cent, from \$10,848,802,532 to \$11,271,016,618. As compared with 1919, the changes are as follows: Value of products, increase of 10.3 per cent; number of wage earners, decrease of 5 per cent; wages, increase 7.7 per cent. Because of the substantial decline in wholesale prices between 1919 and 1929, the rate of increase in value of products does not reflect the true increase in production during the 10-year period.

The Women's Minimum Wage Board of the province of Quebec advises women and girls in industrial employment in the province to secure from their employer, on leaving, a statement as to the length of their service. Owing to the absence of positive proof on this point employees sometimes find it difficult to secure the periodical wage increases provided by the Board in its regulations. It is pointed out that while most employers comply with the law in this respect, there have been cases where employers have refused to grant the regular increment on the ground that the workers had not served the full period in the same plants, and that there was no proof of prior service.

The United States Bureau of the Census announces that, according to a preliminary tabulation of the data collected in the Census of Manufactures taken in 1930, the total value (at f.o.b. factory prices) of products reported for 1929, \$68,453,486,518, exceeds by 9.1 per cent the corresponding total of \$62,718,347,289

EMPLOYMENT OF CHILDREN AND YOUNG PERSONS IN CANADA

New Bulletin Issued by the Department of Labour

THE Employment of Children and Young Persons in Canada is the title of a bulletin of 140 pages just issued by the Department of Labour, its purpose being to show the nature and extent of the employment of young persons under 18 years of age in as far as information is available.

The material has been arranged in three parts. Part I is devoted mainly to the collection and analysis of the statistical information contained in the report of the census of 1921. A slight sketch of the different economic divisions of the country is given, and an analysis of the changes in juvenile employment through the years marked by the censuses of 1891, 1901, 1911 and 1921. Part II deals with accidents to young persons in the course of their employment. Part III shows in tabular form the provisions of the existing provincial laws requiring school attendance and establishing minimum ages and maximum hours for the employment of children in mines, factories, shops, streets and places of amusement. There are also tables setting out briefly the chronological development of this legislation. These tables are supplemented by a historical survey of the laws governing juvenile employment in Canada. Such an account is deemed necessary to an understanding of the present legislation and together with quotations from various commissions recommending or reporting on the administration of certain laws, is a necessary part of a bulletin of information on juvenile employment in Canada. The first two sections of Part III cover the legislation on apprenticeship and technical education and the laws requiring school attendance. Then follow sections on the laws regulating labour conditions in certain classes of employment—mines, factories, shops, and streets and places of amusement. A final section deals with the laws governing dangerous occupations and the night work of young persons. In an appendix are quoted some extracts from the report of a comparative study of children at work and in school in Cincinnati. This study extended over a five-year period and covered as far as possible the same children from year to year. It is of particular interest in a consideration of the problems of juvenile education and employment.

The census of 1921 showed 73,208 children between 10 and 15 years of age, inclusive, as being engaged in gainful occupations. That is 6.8 per cent of all the children of these ages in Canada. There seems reason to believe that there are fewer children employed in

some localities and in some industries at the present time than in 1921. Restrictive factors at work since that year are the minimum wage laws of certain provinces, which have tended to reduce the number, or at least the proportion, of young girls in the trades affected by minimum wage orders. The school-leaving age has been raised in four provinces, and the minimum age for some classes of employment such as work in mines in Nova Scotia and in shops in Ontario. On the other hand, 1921 was a year of industrial depression, and with expanding industries in subsequent years, employment opportunities increased. Problems arise from the employment of these children owing to their lack of general education and of vocational training, and their physical and mental immaturity, with consequent susceptibility to the diseases, accidents and moral hazards of the working world, and all such effects on the individual react on society.

Over half the number of employed children under 16 were reported as working about farms, the great majority of these being employed on their parents' farms. In addition to those children who did not attend school at all during the year, school reports show a much larger number who attended irregularly or lost considerable time at certain periods of the year on account of farm work. In districts where different kinds of fruit, potatoes, sugar beets and tobacco are grown on a large scale, children are frequently kept out of school at busy seasons. On grain and dairy farms, the problem seems to be one of complete non-attendance. As the bulletin points out, irregular attendance results in a falling behind in school work, with discouragement and dislike of school as a result. Such children are likely to leave school at the earliest opportunity whether or not they have reached the limit of their ability as far as the ordinary school curriculum is concerned. A British Government report is quoted as follows:—

"Agriculture is essentially from top to bottom a skilled industry, and if there is to be an agricultural revival in England one of the most potent means for bringing it about must be an improved education."

The figures show that lower school attendance in rural districts is a problem in all the provinces, but more particularly in the east, if some allowance be made for the newer and scattered nature of the settlements on the prairies.

Over 14,000 children under 16 years of age were employed in factories in Canada in 1921, the largest number working in cotton, clothing, lumber, metal and in printing and book-bind-

ing establishments. Juveniles of 16 and 17 were employed in similar places and in factories producing boots and shoes, biscuits and confectionery, tobacco and rubber goods. Some information is given as to the peculiar hazards of employment in connection with processes generating dust, fumes and gases, or requiring the handling of poisonous substances, but there are no data to show to what extent juveniles are exposed to those dangers. The greater susceptibility of adolescents to diseases and particularly to industrial poisons, and their greater liability to accidents, are pointed out. The existing information as to accidents to minors in Canada is very fragmentary. Experience elsewhere has shown that juveniles are more frequently injured by machinery, and that the proportion of accidents resulting in permanent disability is higher among juveniles than among adults. Compared with Britain or some of the United States, the Canadian provinces appear to have little or no legislation regulating the employment of young persons in dangerous trades. Some of these industries, including the electrical apparatus and rubber industries, have developed rapidly only in recent years.

Figures are given in the bulletin to show the number of children and young persons employed about shops, mines, construction works,

in domestic service and other occupations. Children in street trades, and children employed before and after school hours, are dealt with in special sections. The possible effects on health and character of street work are pointed out. The employment of school children, like so many other kinds of employment, can only be determined as to its results by medical examinations and the periodical checking up of school records.

Wherever possible, data regarding hours of labour and other working conditions are given. Juveniles employed at jobs furnishing manual or mental training are preparing for a future of relatively high wages and steadiness of employment. Those working at odd jobs as messengers or general helpers, and receiving little if any training, are likely to become general labourers with comparatively low wages and irregular employment. The children who leave school as soon as the law permits form a large proportion of the latter class. Many social problems are said to be traceable to this haphazard employment of children, whether they be children of normal or sub-normal intelligence. The drifting into employment of boys and girls unable to make progress at ordinary schools is hardly a solution of the problem of children retarded as to school grades.

ANNUAL REPORT OF LABOUR DEPARTMENT OF QUEBEC FOR 1929-30

THE annual report of the Minister of Public Works and Labour of the Province of Quebec details the administrative operations of the Department during the year ended June 30, 1930. In a prefatory note the Deputy Minister points out that the development of the Department since its establishment in 1888 has necessitated the decentralization, under separate administration, of two recently created branches—the Board of Examining Electricians and the Women's Minimum Wage Board. The report of the latter is summarized elsewhere in this issue. Among the duties and functions of the Department are: the supervision of all proceedings under the Quebec Trades Disputes Act; supervision of the work of the Women's Minimum Wage Commission; the inspection of industrial establishments, especially from the standpoint of the workers' safety and health; the carrying out of the provincial government's fair wage policy, requiring the payment of current rates of wages in connection with work under provincial government contracts; superintending licensed registry offices for domestic servants;

administering the Boiler Inspection Act; superintending the inspection of foundries; maintaining provincial employment offices and supervising juvenile employment by means of educational certificates issued to children under 16 years of age.

Registration of Children.—Since the amendment to the Quebec Industrial Establishments Act in 1919, requiring educational certificates for children before they can be employed, a total of 32,318 children have been registered. During the period covered by the report, the number of children, 14 to 16 years old, who were registered, totalled 1,132, of which number, 1,064 were registered at Montreal. It is stated that the registration of children is not so difficult as when the law came into effect, particularly in Montreal and Quebec, where there is no lack of night schools. To assist in closer supervision, it is suggested that a night school be established in each important industrial centre, or else that before entering employment in a factory a child must have a certificate of study from the local school com-

missioners. By means of radio broadcasts parents are to be induced to keep their children at school as long as possible.

Working Hours and Overtime Permits.—Thirty-two permits were granted during the year to allow employers to keep their factories in operation beyond the hours fixed by statute. Commenting on this fact, the report observes that "this may appear anomalous in a time of depression, particularly as the requests came from textile manufacturers in small towns. As regards working hours for girls and women, attention is drawn to the difficulty of applying the law in laundries. Night work for girls and woman is forbidden by legislation, and the manufacturer who secures an extension of working hours is prohibited from prolonging the working period beyond nine o'clock at night." However, it is pointed out that many laundries which have to make deliveries to ships about to sail cannot operate on the basis of the extension granted by the inspectors "even though the owners have no desire to work more than 55 hours a week." Accordingly, a derogation from the ordinary rule is regarded by the report as being necessary in the case of laundries.

By an amendment to the Industrial Establishments Act a week's work for women in the Province was reduced to 55 hours. Formerly this ruling applied only to cotton industries. It is considered that, apart from the relief that the amendment will afford to working women generally, the new provision will result in facilitating the enforcement of Women's Minimum Wage Act.

Inspections of Industrial Establishments.—The report of inspectors of industrial establishments and public buildings indicates that the total number of inspections during the year was 3,491, of which number 2,092 were in the Montreal division, 1,155 in the Quebec division and 244 in the Eastern Townships division. Among the duties of the inspectors, of chief importance is that concerning the installation of fire escapes and safety exits. During the year approximately 90 fire escapes were installed.

Industrial Accidents.—During the period under review, there were reported to the Department by employers a total of 1,618 industrial accidents, of which 36 were fatal. In the previous year there were 2,180 accidents reported, of which 32 were fatal. With respect to accidents, there were 192 signed or anonymous complaints made in the Montreal division. Upon investigation only 33 of them were justifiable. The complaints received

from the Quebec division numbered 56, while 53 were received from the Eastern Townships.

Boilers and Heating Systems.—The revenue from boiler and heating system inspections, the examination of plans for building boilers, and of the qualifications of stationary engineers during the year amounted to \$24,857.80 in the Montreal division, an increase of \$4,249. The revenue for the above services in the Quebec division totalled \$10,185.90. Both amounts greatly exceeded the revenues of previous years. The inspection service of the Department especially concentrates upon second hand boilers and new boilers coming from the United States and from other provinces. Mention is made of the "ever increasing number of insurance companies doing boiler inspection concurrently with the Department."

Government Employment Offices.—In his report, the general superintendent of employment bureaus states that the industrial situation in the Province varied very little during the past year, the agriculture and lumbering industries indicating the largest number of placements. Two new employment bureaus, one at Amos and the other at Rouyn were opened during the year, but neither indicated any pronounced activity owing to the depression in the mining and lumbering industries. The total placement for the year numbered 24,117, which was over 3,000 less than the year previous.

Licensed Employment Bureaus.—In connection with private employment bureaus, the Deputy Minister emphasizes that in compliance with the wishes of organized labour the Department will adhere to its policy of refusing sanction to the opening of any new licensed offices. The opinion is expressed that "although their present number is less than those of some other provinces, six or seven of them are amply sufficient for labourers speaking a foreign tongue." Touching on another problem, the Deputy Minister reports that "there always remains the problem of female servants registry offices unauthorized by town or government. Many abuses were reported last year. The keepers should be licensed and placed under the same obligations as men's employment bureaus."

Board of Examining Electricians.—The report of the chief examiner observes that "the public accepts, if not eagerly, at least uncomplainingly, the provisions of the law respecting electrical installations," and that engineers, architects and technicians seek more carefully to meet the requirements of the

Canadian Electrical Code, which has now been adopted as standard in seven provinces of the Dominion. During the year there were 99,558 inspections made, and 53,331 certificates issued.

Trade Disputes and Sunday Labour.—The report of the Registrar of Conciliation and Arbitration Councils showed that there were no serious disputes during the year, and that

the Quebec Industrial Disputes Act was not invoked in that period. The Registrar commented upon the general trend to have disputes "settled by the arbitration and conciliation councils of the unions or syndicates affected." An inquiry was held into complaints about Sunday work in an industrial plant at Portneuf, the results of the inquiry being given in a special report.

REPORT OF WOMEN'S MINIMUM WAGE COMMISSION OF QUEBEC, 1929-30

THE fourth annual report of the Women's Minimum Wage Commission of the Province of Quebec reviews its activities in the administration of Women's Minimum Wage Act for the twelve months' period ended June 30, 1930. The Orders so far issued by the Board govern the employment of female workers in the following industries: Laundries, dye works and dry cleaning establishments; printing in all its branches; textile trades and all allied processes; boot and shoe and leather industry; clothing industry in all its classifications; tobacco, cigar and cigarette industry. Of the above Orders, those governing the clothing and tobacco industries were issued during the period covered by the present report (LABOUR GAZETTE, May, 1930, page 522). Detailed information respecting the other Orders was given in the following issues of the LABOUR GAZETTE: laundries, December, 1926, page 1195, March, 1927, page 271, November, 1928, page 1198, February, 1929, page 175; printing and textile industries, November, 1927, page 1174, January, 1928, page 30, July, 1928, page 713; boot, shoe and leather industry, May, 1929, page 489.

An important feature of the administration of the Act is the system of investigations and inspections carried out by the Commission. In the Montreal district there were 18 inquiries into complaints, 10 of which were found to be justified. In several of these, employees had been paid lower wages than the rate to which they were entitled, and in such cases wage balance was adjusted and arrears collected on behalf of the employees. The smallest individual claim was \$1.50 and the largest \$45. In this district, also, there were 80 inspections and 109 visits to demand the return of reports from employers. In the Quebec district, there were 125 inspections and visits while seven complaints were investigated.

It is pointed out that the Commission is endeavouring to administer the Act by an educational campaign, featured by methods that foster confidence and co-operation instead of employing coercion and force.

Investigation into Needle Trades.—During 1929-30 an investigation was made into the needle trades which give employment to 11,873 women, of whom 9,510 are in Montreal. There are 407 such establishments, of which total 364 are located in Montreal. In relating the results of the investigation the report states as follows:—

"This industry is very peculiar, the conditions therein being so different in each branch that no less than ten enactments were needed to cover every needle trade; thus, work in one branch is only for a season; in another, it lasts usually eight months; in another, there is no slack season, and the average wage does not vary from one time to another. It was therefore impossible to fix minima and uniform working hours, for to do so would prejudice one or the other."

Clothing Industry.—The report indicates that the clothing industry is sub-divided into several branches according to the nature of the manufacturing process, each branch being covered by an enactment designating the hours of work and the minimum wages. Separate regulations are issued for the district of Montreal and the rest of the Province. In the Montreal district, during the period under review there were 364 clothing firms employing a total of 9,510 women. Of this total, 4,079 were classed as inexperienced (under \$12 per week) and 5,431 were rated as experienced (over \$12 per week). The total employed is also divided into piece-workers and those working by the day, there being 4,463 in the former category and 5,047 in the latter. The average weekly wages paid amount to \$13.27, apprentices receiving a weekly average of \$8.37, with experienced workers receiving an average of \$16.95 per week. Similar particulars for the rest of the Province outside of Montreal are as follows: Number of firms, 43; number of women employed, 2,363; inexperienced (under \$10), 1,423; experienced (over \$10), 940; piece-workers, 1,454; day workers, 909; average weekly wages, \$9.32; inexperienced, \$6.50; experienced, \$13.59.

Tobacco, Cigar and Cigarette Industry.—The statistics given as regards the employment of women in this industry in the district of Montreal were: Firms reporting, 27; number of women employed, 3,339; inexperienced (under \$12), 1,986; experienced (over \$12), 1,353; piece-workers, 2,420; day workers, 919; average weekly wages, \$11.87; inexperienced, \$9.28; experienced, \$15.67. For the rest of the province, the figures were: firms reporting, 16; number of women employed, 942; inexperienced (under \$10), 620; experienced (over \$10), 322; piece-workers, 712; day workers, 230; average weekly wages, \$8.88; inexperienced, \$6.94; experienced, \$12.63.

Laundries and Dye Works.—The annual summary of the situation in this industry, in the city of Montreal, was indicated by the following figures: number of firms employing women, 42; number of women employed, 1,336; average weekly wage, \$12.63. For the rest of the province the statistics presented were: number of firms employing women, 20; number of women employed, 303; average weekly wage, \$9.39.

Printing Industry.—In the printing industry (city of Montreal), the following statistics were indicated: number of firms employing women, 107; number of women employed, 1,046; average weekly wage, \$12.85. For the rest of the province the figures are: number of firms employing women, 30; number of women employed, 235; average weekly wage, \$9.78.

Textile Industry.—The particulars respecting the employment of women in the textile industry (city of Montreal) were as follows: number of firms employing women, 14; number of women employed, 2,674; average weekly wage, \$13.33. The statistics for the rest of the province were as follows: number of firms employing women, 24; number of women employed, 5,930; average weekly wage, \$12.01.

Boot and Shoe Industry.—The report explains that enactments covering this industry only came into force on July 1, 1929, and that statistics for the year were not completed at the time of publication.

The report shows that there are in the province a total of 796 establishments governed by enactments of the commission. Of these, 606 are in Montreal and 190 outside. The number of women workers protected by the Act totals 29,711, of which total 18,788 are employed in Montreal.

It is emphasized that "one of the most delicate phases of the commission's work is the effective protection of aged, infirm or handicapped workwomen, who, having to earn a living, are unable for one reason or another to draw the same wage as a normal workwoman." In these cases the commission is authorized to issue permits allowing such to be employed at lower wages than the established minimum for the class of labour concerned. However, it is pointed out that the number of such permits is so small that it has little influence on the general wage. There were 18 establishments to which permits were issued during the year. The number of permits that expired during the same period was 15, leaving 47 permits in force at the close of the year.

The inclusion of boys under 18 years of age in the provisions of the Minimum Wage Act of Ontario was among the recommendations of the Ontario Provincial Council of the National Council of Women of Canada, reported at the last convention of the central body.

The Union of Manitoba Municipalities, at its 27th annual meeting, held recently at Winnipeg, adopted a resolution asking that the municipalities should be relieved of direct financial responsibility in connection with the old age pension system. The Hon. John Bracken, premier of the province, in an address to the convention, promised that if the Dominion Government undertook the entire burden of old age pensions, the province would assume full responsibility in connection with the health services, and a portion of the liability for soldiers' taxation relief, and would provide for a reduction of the land tax by 50 per cent.

Production of the glass industry in Canada during 1929 was valued at \$15,507,448, according to a bulletin recently issued by the Dominion Bureau of Statistics. This output was the highest on record, being 11 per cent over the previous high record of \$14,021,778 in 1927, and 12 per cent greater than the total of \$13,795,690 for 1920, the third best year. The 60 plants engaged in the manufacture of glass or glass products during 1929 reported a working capital of \$16,289,364 and afforded employment to a monthly average of 3,948 people, who received \$4,740,676 as salaries or wages. Their purchased materials cost \$5,355,156 and the value added by manufacturing was \$10,152,286.

MINIMUM WAGES IN NOVA SCOTIA

First Orders Governing Employment of Women in Various Occupations

THE Minimum Wage Board of Nova Scotia has so far issued four orders establishing minimum rates of wages for female employees respectively in laundries, dry cleaning establishments and dye-works in Halifax and in Sydney, etc.; in the food trades at Halifax; and in hotels, restaurants and refreshment rooms in the cities and towns in the Province. The Minimum Wage Act of Nova Scotia was passed in 1920, but only took effect in 1930. The new regulations governing its administration were given in the *LABOUR GAZETTE*, July, 1930, page 736. The text of Order No. 1 is given in full, while in the remaining orders any points in which the provisions differ from those in Order No. 1 are indicated.

Order No. 1.—Governing Female Employees in Laundries, Dry Cleaning Establishments and Dye Works in the City of Halifax.

(1) Wages.—No person, firm or corporation shall employ a female worker or suffer or permit a female worker to be employed in a laundry or dyeing or cleaning establishment in the City of Halifax at a wage less per week for the regular recognized working period of the establishment than is set forth in the following table:—

HALIFAX

Experienced Workers	Inexperienced Adult over 18 years	Young Girls Under 18 years
\$11 00	6 months at... \$ 9 00	6 months at... \$ 7 00
	6 " " 10 00	6 " " 8 50
		6 " " 10 00

No worker who begins as a young girl shall, after reaching the age of eighteen years, receive less than the wage prescribed for an inexperienced adult. A person shall be deemed to be an experienced worker when such person has been employed in the industry for one year, after attaining the age of seventeen years, and in other cases when such person has been employed in the industry for eighteen months.

(2) Maximum of Inexperienced Employees.—The number of inexperienced adults or young girls or both shall not exceed twenty-five per cent (25%) of the total female working force, except when the total working force is less than four.

(3) Hours of Work.—(a) The work-period for which these minimum wages shall be paid shall not be less than 44 nor more than 50 hours per week.

(b) Work in excess of 50 hours per week shall be counted as overtime and shall be paid for at not less than the minimum wage rates fixed by this order, reckoned on the basis of a 50-hour week.

(c) Work for less than 44 hours per week may be counted as short-time, and shall be paid for at not less than the minimum wage rates fixed by this order, reckoned proportionately to the regular weekly period in the establishment.

(d) The wage minimums shall be payable for the work-period in any establishment within the limits of from 44 to 50 hours per week. Any worker losing time during the operation of an establishment may be paid proportionately for the actual number of hours worked.

(4) Board Allowance.—In the City, lodging including board shall not be charged for in excess of a rate of (\$4.50) per week; nor single meals in excess of 25 cents per meal.

(5) Permit.—The Board may issue permits for lower wages on behalf of aged or handicapped workers. It may also grant permits of variation or suspension of any of these regulations in case of exceptional conditions. Employers or employees are invited to consult the Board regarding any problems which this order may concern.

(6) Deduction for Absence.—No deduction below the minimum wage line for absence shall exceed the value of the time lost, reckoned in proportion to the normal working hours in vogue in the establishment.

(7) Waiting.—An employee required to wait on the premises shall be paid for the time thus spent.

(8) Penalties.—Any violation of this order is punishable by fine. (See section 11, N.S. Acts, 1920, Chapter 11.)

(9) Posting.—*Each establishment shall keep a copy of this order posted in a conspicuous place on its premises.*

(10) This order is subject to annual revision by the Board.

(11) This order shall come into force and be effective on the first day of October, 1930.

Address all communications to the Minimum Wage Board, Halifax, N.S.

Dated at Halifax, this 5th Day of August, A.D. 1930.

H. E. MAHON,
Chairman.
KATHERINE A. SCANLON,
JEAN U. FIELDING,
P. J. HEALY,
RODERICK KERR,
Minimum Wage Board.

Order No. 1a.—Governing Female Employees in Laundries, Dry Cleaning Establishments and Dye Works in the City of Sydney and Town of Glace Bay.

The Minimum wage scale in this order is the same as in Order No. 1, and the other provisions are also the same, except that it was to take effect as from November 1, 1930, and that section (4) reads as follows:—

Board Allowance.—Where lodging is furnished by employer there may be deducted from the wage a sum which shall be not more

than One Dollar and Fifty Cents (\$1.50) per week, and for Board not more than Four Dollars and Fifty Cents (\$4.50) per week, or single meals in excess of Twenty-Five cents (.25) per meal.

Order No. 1b.—Governing Female Employees in Laundries, Dry Cleaning Establishments and Dye Works, in all incorporated Towns in Nova Scotia, with the exception of Glace Bay:

(1) Wages.—No person, firm or corporation shall employ a female worker or suffer or permit a female worker to be employed in a laundry or dyeing or cleaning establishment in any Incorporated Town of Nova Scotia at a wage less per week for the regular recognized working period of the establishment than is set forth in the following table:—

Experienced Workers	Inexperienced Adult over 18 years	Young Girls under 18 years
\$10 00	6 months at...\$8 00	6 months at...\$ 6 00
	6 " " 9 00	6 " " 7 50
		6 " " 9 00

The other provisions in this order are the same as in Order No. 1, except that the order was to come into force and be effective on January 1, 1931.

Order No. 2.—Governing Female Employees in the "Food Trades" including the Making of Confectionery, Biscuits, Chocolate, Grocery Specialties Together with Bakeries and All Allied Industries in the City of Halifax.

(1) Wages.—No person, firm or corporation shall employ a female worker or suffer or permit a female worker to be employed in a confectionery or bakery establishment in the City of Halifax at a wage less per week for the regular recognized working period of the establishment than is set forth in the following table:—

Experienced Workers	Inexperienced Adults over 18 years	Young Girls Under 18 years
\$11 00	6 months at...\$ 9 00	6 months at...\$ 7 00
	6 " " 10 00	6 " " 8 50
		6 " " 10 00

The other provisions of this order are the same as those in Order No. 1, except that section (4) is as follows:—

(4) Board Allowance.—Where lodging is furnished by Employer there may be deducted from the wage a sum which shall be not more than Two Dollars (\$2.00) per week, and for Board not more than Four Dollars (\$4.00) per week, or single meal in excess of Twenty-Five cents (.25) per meal.

This order came into force and became effective on December 1, 1930.

Order No. 3.—Governing Female Employees in Hotels, Restaurants and Refreshment Rooms, in Cities and Incorporated Towns of Nova Scotia.

(1) Wages.—No person, firm or corporation shall employ a female worker or suffer or permit a female worker to be employed in Hotels, Restaurants and Refreshment Rooms in the Cities or Incorporated Towns of Nova Scotia at a wage less per week for the regular recognized working period of the establishment than is set forth in the following table:—

Population Group	Experienced Workers	Inexperienced Workers
Cities of 17,000 population and over.	\$11 00	6 months at...\$ 9 00
		6 " " 10 00
Cities and Towns between 2,000 and 17,000 population.....	\$10 00	6 " " 8 00
		6 " " 9 00

The other provisions in this order are the same as those in Order No. 1, except section (4) which reads as follows:—

(4) Board Allowance.—Where lodging is furnished by Employer there may be deducted from the wage a sum which shall be not more than Two Dollars (\$2.00) per week, and for Board not more than Four Dollars (\$4.00) per week, or single meals in excess of Twenty-Five Cents (.25) per meal.

This order came into force and became effective on December 1, 1930.

Regulations of Saskatchewan Workmen's Compensation Board

The following new regulations (Nos. 42, 43, and 44) under the Workmen's Compensation Act (Statutes of Saskatchewan, 1929, chapter 73) were published in the *Saskatchewan Gazette*, December 6, 1930. Earlier regulations were printed in the *LABOUR GAZETTE*, October, 1930, page 1154; August, 1930, page 917; July, 1930, page 765; April, 1930, page 392.

Regulation 42.

All industries carried on by any of the persons, firms, corporations or societies hereinafter enumerated which but for this regulation might

come within the operation of the Workmen's Compensation Act of the Province of Saskatchewan being Chapter 73 of the Statutes of 1928-29 and amendments thereto are hereby wholly excluded from the operation of the Act.

- (a) All church corporations, organizations or assemblies or bodies of people organized or coming together for religious purposes or worship whether orthodox or unorthodox, christian or non-christian or pagan.
- (b) All religious brotherhoods, sisterhoods and societies.
- (c) The Red Cross, Humane Societies, Fraternal Societies and all other Societies existing only for charitable, social or fraternal purposes and all those bodies

of societies commonly known as fraternal societies and all other voluntary organizations existing for charitable, social or fraternal purposes.

Nothing in this Regulation shall be construed to exclude any work which is let by contract by any of the above named persons, firms, corporations or societies nor shall anything in this Regulation be construed to exempt the above named persons, firms, corporations, or societies from the operation of Section 11 of The Workmen's Compensation Act and nothing in this Regulation shall be deemed to exempt the said persons, firms, corporations or societies from its duty to report to the Workmen's Compensation Board any work let by contract, the performance of which constitutes an industry within the definition thereof contained in the said Act and within the Schedule to the said Act.

This Regulation shall become and be effective on, from and after midnight of December 31, 1930.

Regulation 43.

Whereas the second paragraph of Regulation 1 adopted by the Board on March 20, 1930, approved by the Lieutenant Governor in Council on March 21, 1930, and published in *The Saskatchewan Gazette*, on March 29, 1930, reads as follows:—

"Provided that in no case shall any assessment be less than \$20.00." And whereas it is desirable to amend the quoted portion of Regulation:—

1. The following paragraph is substituted for the paragraph above quoted:—

"Provided that in no case shall any assessment levied upon a Municipal Corporation be less than Twenty Dollars (\$20.00) upon the annual payroll and that in no case shall any assessment levied upon an employer other than a Municipal Corporation be less than Ten Dollars (\$10.00) on the annual payroll."

This Regulation shall come into effect at Midnight of December 31, 1930.

Regulation 44.

Whereas some doubt may exist as to the applicability of the Workmen's Compensation Act to those employers who are operating outfits for sawing wood for fuel or for other purposes not connected with lumbering, logging or sawmills, such wood sawing outfits not being operated in connection with an industry which otherwise comes under the Act:

And whereas the Board deems it desirable to remove any such uncertainty;

The Board hereby approves and passes a Regulation dealing with the said matter as follows:—

Employers engaged in the operation of wood sawing outfits, sawing or manufacturing wood for the purpose of fuel when such wood sawing outfits are not operated in connection with logging, lumbering or sawmill operations and are not operated in connection with an industry which otherwise comes under the Act shall be deemed to be excluded from the operation of The Workmen's Compensation Act.

Labour Conditions in Soviet Agriculture and Forestry

The British *Ministry of Labour Gazette*, in its issue for December, 1930, reproduced statistics showing the earnings and hours of labour in the socialized, and also in the unsocialized sections of the industries of agriculture and forestry in the Union of Soviet Socialist Republics. This information was taken from a recent publication of the State Planning Commission (Gosplan). Earnings on State farms (Sovkhozy), it is stated, increase according to the degree of mechanisation, and, in the period July-September, 1929, average daily earnings on 1,333 farms, employing on July 1, 1929, permanent, seasonal and temporary workers in the proportion of 14.6, 16.1 and 69.3 per cent, respectively, were as follows:—

In addition, payments in kind were made, the value of which is not stated for the period referred to. In June, 1929, the value of these payments is stated to have increased the earnings of permanent, seasonal and temporary workers by 0.3, 1.2 and 3.7 per cent respectively.

The statistics of the average monthly earnings of workers on peasant farms, in September, 1929, are stated to have been as follows: for daily workers on individual farms 22.8 roubles, including 13.1 roubles for board; for workers employed by rural communities and groups of employers, 31.4 roubles, including 6.3 roubles for board.

The higher earnings of workers employed on the State farms, as compared with the earnings of workers employed on peasant farms, are attributed to the higher productivity of such labour in large-scale farming.

According to the results of a special inquiry into the working and living conditions of approximately 12,000 forestry workers in various parts of the Union, the average daily earnings in February and March, 1929, amounted to 175 copecks for workers on foot and 259 copecks for mounted workers; while the average duration of the working day was 11.3 hours.

Class of State Farm	Monthly Earnings	
	Permanent	Seasonal
	Roubles*	Roubles*
Grain trust.....	75.7	61.3
Agricultural trust.....	38.5	30.7
Sheep farms.....	44.1	43.0
Cotton and other fibres.....	67.9	48.2
Land societies.....	39.7	30.6
Sugar trust.....	42.3	30.1
Other state farms.....	42.8	36.5
All classes (including some not shown in the Table).....	42.4	32.4

* One rouble or 100 copecks, equals about 50 cents at the par of exchange.

For agricultural workers the available statistics of working hours relate to 1928, when the length of the working day on State farms ranged from 8.1 to 9.2 hours according to the season of the year. In the case of workers

on peasant farms, according to an inquiry covering approximately 19,000 workers, the average length of the working day ranged from 8.7 hours in winter to 11.9 hours in summer.

LEGISLATIVE PROPOSALS OF LABOUR ORGANIZATIONS

Quebec Provincial Executive of Trades and Labour Congress of Canada

Representatives of the Quebec Provincial Executive of the Trades and Labour Congress of Canada waited upon the Provincial Cabinet on January 8 for the purpose of presenting the requests for the enactment of legislation as approved by the Congress. The delegates included Messrs. Pierre Lefevre, Chairman, Omer Fleury, Quebec, J. A. D'Aoust, Three Rivers, and Phil. Corriveau, who were accompanied by approximately 100 of the chief officers of the various local and district councils in the Province. They were received by Hon. L. A. Taschereau, Prime Minister, and several members of the Provincial Cabinet, including the Hon. J. N. Francoeur, Minister of Public Works and Labour. The requests that were presented were as follows:—

Early and thorough investigation into the hazards of spray painting, and the enactment of such laws as will adequately protect the workers and provide efficient supervision of all shops using spraying machines.

That operators of gas or electrically driven shovels, cranes and similar machines be subject to examination for licence and be placed under the jurisdiction of the Stationary and Hoisting Engineers' Board of the Province.

Enactment of legislation governing the erection and operation of hoisting appliances and the construction of buildings where workers are exposed to the danger of falling objects.

Legislation compelling all automobile owners to carry insurance against personal and property damage to others.

Immediate action in reference to the question of unemployment, sickness and invalidity insurance.

The establishment by the provincial government of an 8-hour day, and the insertion of a fair wage clause in all contracts for public works.

Stringent enforcement of existing legislation providing for the observance of one day's rest in seven.

Protesting against any further lowering of the upper age limit for employment by the government or by industry.

Enactment of provincial legislation to give effect within the province to the Federal Old Age Pensions Act.

Enactment of amendments to the Workmen's Compensation Act so as to eliminate certain features of the present law that delay the settlement of cases, and the adoption of the principle of the collective liability of industry for accidents.

Regulation of the hours of labour of women under the Women's Minimum Wage Act.

Abolition of fee-charging employment bureaus in the province.

Legislation to establish a system of mothers' allowances in the province.

Further protection of passenger elevators, by means of equipment with safety doors in addition to those which lead from landings into elevator shafts.

Limitation of the operating periods of pulp and paper mills in the province so as to effect an equal distribution of orders or equal operating time among the various mills in the province.

Sale of beer and wine to licensed taverns in the province.

Enactment of enabling legislation to make the Federal Industrial Disputes Investigation Act fully operative in the province in respect to public utilities and corporations within the province.

Enactment of legislation in regard to the draft conventions of the International Labour Conference:—Relating to the establishment of the eight-hour day; and the protection of women and children in industry and commerce. Also co-operation with other provinces to obtain ratification by Canada of all these conventions and recommendations, and that the province should be officially represented at the annual conference of the international Labour Organization at Geneva.

Federation of Catholic Workers of Canada

On December 11 a delegation from the Federation of Catholic Workers of Canada, composed of Abbé Maxime Fortin (chaplain), and Messrs. Pierre Beaulé (president), Clovis Bernier (director), and Thos. Poulin (assistant secretary), waited on the Quebec Provincial Cabinet and presented requests for desired legislation. The delegation was accompanied by the officers of the Central Council of National Catholic Unions of Quebec city, as well as by a number of other members of the Catholic unions.

The program submitted included the following requests:—

A school of sociology;

Amendments to the Workmen's Compensation Act so as to provide for collective insurance;

Enforcement of the law against the selling of cigarettes to minors;

Aid to employment offices conducted by trade unions, and abolition of private employment offices;

Improvement in the industrial schools of the province;

Extension by the provincial government, as a remedy for unemployment, of the 8-hour day to all its employees and to workers employed on government works;

To compel contractors to register the names and addresses of their employees;

Helmets to be supplied by contractors to those employed in excavating;

That officers of the Department of Labour be given the same privileges as other civil servants in regard to insurance;

That Catholic unions be given representation on all appointive bodies;

Amendments to the regulations covering electrical inspection so as to permit temporary installations of electrical fixtures for national and religious celebrations;

That the provincial Department of Labour be separated from the Department of Public Works under a separate minister;

Awarding of scholarships to the best scholars in the technical schools of the province of Quebec;

Establishment of an accident prevention bureau;

Compulsory arbitration in all disputes involving firefighters or police;

Two-platoon system for firefighters in all cities of 30,000 or over;

That the authorities proceed with all possible public work, and compel contractors to refrain from using machinery of any kind on such jobs, and that the provincial Government induce the farmer to remain on the farms and encourage the excess rural population to take up colonization;

An eight-hour day for bakers, suppression of Sunday and night work in bakeries, and appointment of inspectors to enforce the law;

Establishment of an industrial museum, open to workers, and containing native and foreign species of woods;

Amendments to the Minimum Wage for Women Act as to include women employed in stores;

Enactment of a law to compel all employers to give their employees having performed at least a month's service eight days' notice before dismissal, if such employees are not guilty of criminal negligence in the discharge of their duties;

Repeal of the tax of one-tenth of a cent per ton per mile on truck owners;

A minimum wage law for men based on the cost of living figures as published in federal statistics;

That the provincial Government pass enabling legislation so as to make Federal Industrial Disputes Investigation Act applicable to disputes on public utilities within the province;

A labour code for the province;

That the provincial Government provide that a fair wage clause be inserted in all contracts where grants are made for public works;

Appointment of fair wage officers on government work;

Amendment to the Professional Syndicates Act to provide for an insurance fund;

Increase of witness fees to \$4 per day;

Enactment of an Apprenticeship Act for the province of Quebec similar to that of France.

Two of the requests of the delegation were covered by the Speech from the Throne, viz.: the creation of a separate Ministry of Labour, and the adoption of collective insurance as part of the Workmen's Compensation law.

Abbé Fortin and other members of the delegation complimented the Government on its adoption of these portions of the Federation's program.

OCCURRENCE OF SILICOSIS IN CANADA

Contributed by Dr. J. G. Cunningham, Director of the Division of Industrial Hygiene, Ontario Department of Health

DR. CUNNINGHAM was the representative of Canada at the International Conference on Silicosis, which was held last August at Johannesburg, South Africa, under the auspices of the International Labour Office (Geneva), with the assistance of the Transvaal Chamber of Mines and of the Government of the Union of South Africa. (Notes on this conference appeared in the *LABOUR GAZETTE*, September, 1930, page 1040; October, 1930, page 1179.) Dr. Cunningham's paper follows:—*

Silicosis in Canada

The subject of silicosis has deservedly received increased attention within the last few years. The lung diseases due to dust inhalation referred to in the broader sense as pneumoconiosis, or as miners' phthisis and silicosis, are designated as compensable in the Workmen's Compensation Acts of Ontario and Alberta. They are compensable in Nova Scotia and British Columbia under the heading of diseases due to occupation, while in Manitoba and Saskatchewan legislation in regard to compensation is pending.

In Ontario and Manitoba, examinations in miners to determine the presence of silicosis have been made by the Provincial Departments of Health.

A survey was made by the Industrial Hygiene Division of the Department of Health in Ontario gold mines in 1922 and again in 1925-1926.

Using the South African classification of cases, later adopted in the Ontario Workmen's Compensation legislation, there were few compensable cases in Sudbury and Cobalt where the amount of free silica in the ore and country rock is low. Cases were also few in Kirkland Lake where the camp is of recent origin, while in Porcupine, among 236 workers nearly all with over five years under ground exposure to silica dust, there were 46 cases of silicosis, 29 ante-primary, 9 primary and 8 secondary. The average underground exposure of the ante-primary cases was 11 years. This represented an accumulation of cases.

In 1928, the Ontario Mining Act was amended to provide physical examination on employment and yearly thereafter of all un-

derground men except in mines exempt by the Chief Inspector of Mines. To be employed, the workmen must hold a certificate of "Freedom from Tuberculosis," good for twelve months, stating that he is free from tuberculosis of the respiratory organs. In the meantime, an amendment to the Workmen's Compensation Act provided for the appointment of medical officers, working under the supervision of the Workmen's Compensation Board, to conduct these examinations. The definition of tuberculosis in silicosis cases was included. Tuberculosis alone is not compensable. Cases arising in the course of these examinations are submitted to the Workmen's Compensation Board if the total exposure to silica of five years in Ontario mines is verified. Cases are then referred to a Silicosis Referee Board for examination and report on diagnosis. If the claim is allowed the miner is notified of the fact by the Workmen's Compensation Board and informed that if he continues in work exposing himself to silica and should the disease progress, no further benefits will be paid, whereas, if exposure to silica ceases and the disease progresses compensation is paid accordingly.

Up to January 1, 1930, there had been compensated 91 ante-primary cases, 58 primary and 33 secondary, of which 18 have died, at a cost of \$268,356, and \$282,500 set aside for continuing claims. From 5 per cent to 10 per cent of applicants for work have been rejected on account of their physical condition. Among these have been a number of cases of silicosis from outside Ontario. The number of cases of tuberculosis without silicosis revealed by these examinations shows no important variations from camp to camp and no significant increase compared with workers in mines or other heavy trades elsewhere.

Dust control in the mines includes blasting at the end of the shift, the use of water in drills and on rock surfaces throughout, and general ventilation.

The examination of 133 granite-cutters with over 15 years experience in the trade showed 19 ante-primary, 5 primary and 10 secondary cases.* The average exposure of the ante-primary cases was 31 years, much longer than in miners, but the proportion of secondary cases was higher in granite cutters. The work is done under dry conditions in sheds which are open in summer but closed in winter.

Exhaust equipment and general ventilation are used for removing dust. A positive

* Another paper by Dr. Cunningham on this subject was reprinted in the *LABOUR GAZETTE*, January, 1929, page 43.

* These terms were defined in the *LABOUR GAZETTE*, April, 1923, page 341.

pressure mask devised by Dr. F. M. R. Bulmer of the Industrial Hygiene Division, Ontario Department of Health, is in fairly common use by granite cutters in the Province. Provision for initial or periodical examinations of these men has not yet been put into effect.

Cases of silicosis have been detected among sand-blasters, moulders and grinders. Examination by the Manitoba Department of Health have revealed cases of silicosis incurred elsewhere, but the mine operations are too recent to show the length of time required for its development. Dust counts and rock analyses indicate the necessity for preventive measures.

The X-ray picture is of first importance in the diagnosis of the condition but must be considered only in relation to physical examination findings and the worker's general condition.

Studies on the pathology based on autopsy findings and animal experiments have been made by Dr. T. H. Belt, Pathology Department, University of Toronto; Dr. G. C. Cameron, Banting and Best Chair of Medical Research; Dr. A. R. Riddell and H. E. Rothwell, Division of Industrial Hygiene, Ontario Department of Health.

South African Conference.—In August of this year the International Labour Office called a Conference of experts from eight different countries to Johannesburg, South Africa to consider the various aspects of silicosis. Discussions dealt mainly with the effect of the inhalation of free silica (SiO_2), in the mining industry.

The proceedings may be grouped under three main headings, prevention; pathology and diagnosis; prognosis, compensation and after care.

For the prevention of silicosis in mining, water has been used extensively, at the point of origin of dust, during blasting and drilling, and for wetting rock surfaces.

In grinding, local exhaust equipment properly installed and maintained has been found to be more effective than the use of water alone, but it is not practical for most mining

operations. When water is used, it is even more important than under dry conditions that men with active tuberculosis should not be at work, spreading the tubercle bacillus, since the organism lives longer under wet conditions. This involves examination on employment and periodical examination thereafter to eliminate those with tuberculosis.

With the reduction in the amount of fine dust in the air which has been effected in South African mines, the average length of time for the development of early silicosis is about twelve years. This is a marked improvement over previous conditions.

The pathology and diagnosis of the disease elicited important technical discussions at the Conference, in the course of which it was demonstrated that silicosis has been produced experimentally in animals, an important preliminary to the recognition of the manner in which silica produces its effects.

In addition, the Conference recommended for general acceptance the standard of diagnosis of silicosis developed by the Miners' Phthisis Bureau of South Africa, based on a very wide experience with the disease.

Prognosis when silicosis is established is not satisfactory. South African experience indicates that practically all cases reaching the first compensable stage are sooner or later complicated by tuberculosis, with total disability.

For after care, a number of schemes for the rehabilitation of men with silicosis, removed from mines, have been instituted in South Africa and Australia without success. The problem is complicated there by the lack of other types of industrial employment.

In reference to compensation, it should be recognized that silicosis is a disease due to occupation, frequently progressive in character and attended by disability.

The Conference passed resolutions dealing with these aspects of the subject, indicating where further research is desirable and suggesting the institution of comparable methods for the determination of dust concentration in air, and for radiological technique.

Methods of accident prevention were discussed at a safety congress held during December under the auspices of the New York State Department of Labour. Reports were received from industries having a clear accident record for the year. It appeared that the greatest success is obtained when there is strong executive support and the workers are carefully educated as to the dangers existing. One paper showed the tremendous success that can

be obtained where the employers of small plants seriously study prevention. Another was devoted to an exposition of how accident prevention can be most successfully secured amongst groups of industries. In one such case all the industries of a neighbourhood gathered together, hired a safety engineer who organized methods thoroughly in all plants and obtained considerable success.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Hazards of Winter Operations in Nova Scotia

The executive committee of the Nova Scotia Accident Prevention Association, at their recent quarterly meeting, gave special consideration to the industries whose operations are more or less seasonal in nature and become intensified during the winter months. Among these are the lumbering and allied industries, and stevedoring work in connection with the winter port business at Halifax. The Committee decided to make a distribution of cards to the lumber operators for posting around the lumber camps, calling the attention of the employees to the chief hazards of the industry, and in particular to the use of axes which are the most prolific cause of injuries. It was also decided to distribute a large poster showing the number and causes of accidents in this industry during the last year.

The Secretary reported that, owing to unforeseen circumstances, a special committee appointed last winter to deal with accident prevention in connection with stevedoring operations was unable to complete its work, but that it is hoped to accomplish something definite this year. A code of safety regulations for this industry is now in course of preparation.

Progress in Accident Prevention

The United States Secretary of Commerce, Robert P. Lamont, in a recent appeal addressed over the radio to employers and workers to endeavour to lessen the enormous human and economic losses caused by industrial accidents, described the measure of success so far obtained by concerted safety efforts as follows:—

"The accident records in iron and steel and other major industries, compiled by the United States Bureau of Labour Statistics, may be taken as indicative of what may be achieved for accident prevention in the more dangerous industries. From 1910, when the safety movement was started, to 1927, the accident frequency rate per 1,000,000 worker-hours exposure was reduced from 74.7 to 19.7 a reduction of nearly three-quarters. In the same period the accident severity rate per 1,000 worker-hours exposure was reduced from 5.20 to 2.30, or 56 per cent. In the cement industry, from 1919 to 1927, the frequency rate declined 67 per cent, the severity rate 49 per cent; in paper making, from 1920 to 1927, the declines were 41 per cent and 40 per cent, respectively; in chemicals, from 1923 to 1927, the declines were 27.5 per cent and

60 per cent, respectively. If by carefully planned safety work such notable reductions can be made in such short periods of time, it seems reasonable to expect that intensive effort can in the next ten years cut in half the destruction of lives, health and dollars by industrial accidents."

Architects and Construction Safety

The *Contract Record and Engineering Review* (Toronto) in its issue of December 24, points out that "so far, most of the burden of instituting safety measures in connection with construction operations has fallen on the contractors who, for the most part, have been putting forth every effort to reduce the hazards attached to their work. The architectural profession, however, could be of effective assistance in this direction if it would only recognize that, as a major element in the construction industry, it has a responsibility to encourage the formulation and adoption of appropriate safeguards for construction workers. The subject, consequently, might well be taken in hand by the Royal Architectural Institute of Canada and its affiliated provincial associations." The *Record* quotes from a recent report from the Committee on Health and Safety of the American Institute of Architects as follows:—

"Architects enjoy reciprocal relations with the master craftsmen in many directions, yet they have refrained from participating in the movement to establish safe working conditions and to eliminate the greatest source of economic waste."

Control of Dust in Asbestos Industry

The British Home Office lately published a report on the effects of asbestos dust on the lungs and on dust suppression in the asbestos industry. Part 1 gives details of the occurrence of pulmonary fibrosis and other lung affections in this class of workers, and Part 2 describes the processes giving rise to dust, and the methods of its suppression. The investigators establish the facts that the inhalation of asbestos dust over a period of years results in the development of a serious type of fibrosis of the lungs, that the development of the disease varies in direct proportion to the length of the exposure to dust, and that susceptibility to the disease is not affected either by age or sex.

The remedy for these conditions is to be found, as in the case of so many industrial diseases, in the suppression of dust. The second part of the report indicates that this

point has only recently been appreciated. In the non-textile section of the industry, no serious difficulties arise as regards the application of exhaust ventilation. For the textile section, it is evident that experimental work will have to be carried out before completely successful ventilating appliances are evolved effectively to remove all the dust.

The report points out that manufacturers are clearly confronted with the necessity of attaining conditions in their industry which will ensure much less dust in the atmosphere than can safely be tolerated in many comparable trades not using asbestos.

The principal methods for the control of dust are:—(a) application of exhaust draught at dust-producing points; (b) substitution of enclosed mechanical methods for hand conveyance and for dusty hand work generally; (c) effective enclosure of dust-producing machines and plant; (d) substitution of wet methods for dry.

The following measures are also recommended for controlling the hazard:—the elimination of certain dust producing appliances; the abandonment of settling chambers in manufacturing processes, to the utmost extent; effectual separation of processes to prevent unnecessary exposure to dust; wide spacing of dust-producing machines in new factories and, as far as practicable, in existing works. Use of sacks of close texture material for internal work; efficient cleaning system with wide use of vacuum methods; storage of asbestos and other goods to be outside workrooms; exclusion of young persons from specially dusty work.

Poisoning by Turpentine, etc.

The Home Secretary (England and Wales) has appointed a Departmental Committee to inquire and report whether, and, if so, subject

to what conditions, if any, the schedule of Industrial Diseases to which section 43 of the Workmen's Compensation Act, 1925, applies can properly be extended to include (i) poisoning by turpentine; and (ii) papilloma occurring in workers liable to mule-spinner's cancer; and to advise on any other proposal for extending or modifying the schedule which may be referred to them.

Recommendations of British Health Research Board

The Industrial Health Research Board of Great Britain (formerly known as the Industrial Fatigue Research Board) have issued their tenth Annual Report, for the year 1929.

The report directs attention to certain definite conclusions which have been reached as the result of the Board's investigations, e.g., as to the value of scientifically designed and well adjusted lighting; the value of special spectacles to workers (including those of normal vision) engaged on fine work; the benefit of rest pauses, both to the comfort of the worker and to the increase of output; the proper limits on temperature and on humidity in factories and mines.

In conclusion, the Board observe that "these conditions involve no revolutionary change in factory routine, and in some cases do little more than place upon a scientific and statistical basis empirical practices adopted by individual workers or by enlightened firms, as the outcome of careful observations. Their value is demonstrated by the fact that they have already been adopted in certain branches of industry, and their utility would be greatly increased by more widespread acceptance.

Survey of Canadian Fisheries

In order to devise means for expanding the domestic and foreign market for Canadian fish the Hon. E. N. Rhodes, Minister of Fisheries, recently retained a well-known firm of marketing specialists to make a complete survey of the fishing industry. The study will cover the methods of marketing that are followed in countries where fish marketing is efficiently carried out, and the existing organizations of the markets in Canada, including the methods of transportation, canning, merchandizing, etc. The minister points out that according to the best statistics available the *per capita* consumption of fish in Canada is 22 pounds per annum, whereas in Great Bri-

tain, according to figures accurately compiled, the consumption is 40.3 pounds; and that if, by pursuing the best methods fish can be made more generally available in first-class condition to the individual house-holders throughout Canada, the Canadian consumption of fish should be largely increased. An increase of 10 pounds per head per year, making the Canadian consumption only three-quarters that of the consumption in Great Britain, would result in increased Canadian sales amounting to 100,000,000 pounds per year, and it is for the purpose of preparing the ground upon which can be based a policy directed towards this end that this survey is being undertaken.

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

Vocational Schools in the United States

According to the annual report of the United States Federal Board for Vocational Education, more than a million persons, young and old, were enrolled in Vocational schools in 1930. This number includes 170,000 who were learning to farm, 250,000 to make better homes, and 625,000 to do some specific job in trade and industry. This enrolment, the report states, was largely in schools which received aid under the terms of the national Vocational Education Act and all of it in vocational courses organized and conducted under a joint Federal and State plan of vocational education. Vocational education is carried on in the classroom, in the shop, in the factory and on the farm. Under the national Vocational Education Act, which is administered by the Federal Board, three types of schools have been set up in each of the States; the day school for the boys and girls who have chosen an occupation and desire training in it; the part-time school for persons who are employed and can devote part of the day to instruction and training; and evening schools for workers who desire to devote time outside their employment hours to improving themselves in the occupation in which they are engaged. Instruction in these schools, the report states, reaches into every kind of employment requiring a measure of technical or mechanical skill. Practical farm courses, courses covering trade and industrial occupations such as the building trades, mining and specific lines of manufacturing, and courses in home making for girls and women are provided in these vocational schools.

The report shows that the largest enrolment of vocational education students last year was reported by the part-time schools in which more than 418,000 received instruction. The evening schools enrolled over 341,000 students, while in all-day schools the enrolment was more than 300,000 students.

Benefits of Vocational Guidance

A more adequate system of guidance of boys and girls in selecting occupations is recommended by a committee on vocational guidance and child labour in a report to the White House Conference on Child Health and Protection, which was held at Washington in November, 1930. It is stated in the report that "increasing technicalities in the various

industrial and business occupations of the country make necessary vocational guidance to meet the needs of the modern world." Millions of youths in their 'teens, it is stated, are constantly leaving school to enter a thousand different occupations. They are without conception of the risks or opportunities involved. Vocational guidance has been introduced in the United States to assist them in making selections and in fitting themselves adequately for whatever occupation they elect. The committee recommends that vocational guidance be established in all school systems and become an integral part of every school organization.

Education in House Construction

A bulletin entitled "Light Frame House Construction," prepared co-operatively by the United States Federal Board for Vocational Education and the National Committee on Wood Utilization of the Department of Commerce, has just been published. Commenting on the publication, Mr. Frank Duffy, general secretary of the United Brotherhood of Carpenters and Joiners of America, and first vice-president of the American Federation of Labor, said: "I consider it the best textbook on the subject ever issued. It should prove of great value not only to apprentices but to men of the trade as well."

To make the book as practical as possible, each separate type of job met with in the building of houses—50 of these are listed—is described, the technical information necessary to intelligent completion of each of these type jobs is presented, and a full explanation of the methods used in completing them, is given. For example, in describing type job No. 2—the selection, framing and installing of a girder—the bulletin shows the necessity of giving careful consideration to the size and type of girder; explains the factor entering into the determination of the number, grade and size of the girders to be used; and illustrates how these factors are worked out for specific cases.

The same detail is followed in connection with the other 49 type jobs covered in the bulletin, which includes everything from framing and installing the foundation sill to laying roof shingles. The latest developments in construction of frame walls and chimneys especially from a fire-safety standpoint, are included in the bulletin.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Fifteenth Session of the International Labour Conference

The Fifteenth Session of the International Labour Conference will be held in Geneva, opening on May 28. The agenda will comprise the two items following:—

1. The Age of Admission of Children to Employment in Non-Industrial Occupations;
2. Hours of Work in Coal Mines.

The Conference will also have to deal with the following matters:—(1) a report on wages in the coal-mining industry which has been prepared with a view to exploring the possibilities of international action; (2) reports on the working of the Conventions which were adopted at the First and Second Sessions of the International Labour Conference in 1919 and 1920, respectively.

These Conventions have now been in effect for ten years, and it is required in such cases that the Governing Body will submit a report on their operation, with a view to determining if any amendments are desirable. With respect to seven of these Conventions, the Governing Body has considered that no revision or modification is requisite. These Conventions are as follows:—

Convention concerning unemployment;

Convention limiting the hours of work in industrial undertakings to eight in the day and forty-eight in the week;

Convention concerning the employment of women before and after childbirth;

Convention fixing the minimum age for admission of children to industrial employment;

Convention concerning the night work of young persons employed in industry;

Convention fixing the minimum age for admission of children to employment at sea;

Convention for establishing facilities for finding employment for seamen.

In respect of another Convention adopted in 1919, concerning employment of women during the night, the Governing Body decided in June last that the question of placing the revision or modification of this Convention of the Conference should be further pursued.

In addition to the consideration of the Director's annual report and of reports from different countries on the operation of Conventions which have been accepted by them, the forthcoming Session of the Conference will also have to proceed to the election of the Governing Body of the International Labour Office which is held once in every three years.

Hours of Work in European Coal Mines

A proposal for the regulation of the hours of work in coal mines, with special reference to European conditions, will come before the International Labour Conference at its Fifteenth Session in May-June next. A proposal in favour of shorter hours of work in these mines came before the last Session of the Conference, but failed by a narrow margin to receive a two-third majority vote, necessary for its adoption. In anticipation of the forthcoming Conference, the Secretary for Mines of the British Government, Mr. Shinwell, M.P., has been conducting a series of conversations in London with representatives of the German and Polish Governments. It is hoped thereby to ensure beforehand agreement among the chief coal-producing countries and thus to clear the way for international regulation of the coal-mining industry in which there has been much irregularity of employment for years past.

Ratification of Draft Convention

At November 30, 1930, the total number of ratification of International Labour Conventions registered with the Secretary-General of the League of Nations and officially notified to the International Labour Office was 414.

At the same date the number of Conventions of which ratification had been authorized by the competent authority in the countries concerned, but had not yet been registered with the Secretary-General of the League of Nations, was 23.

Six new ratifications have been registered during the month of November 1930.

International Wage Comparisons

The committee on Cost of Living and Wage Statistics met in December at the International Labour Office, Geneva, under the chairmanship of Dr. Riddell, representative of the Canadian Government, for the purpose of examining with a view to possible improvements the statistics compiled by the Office relating to the comparative purchasing power of the wages of workers in the chief industrial countries of the world. The comparative index numbers of real wages were given in the LABOUR GAZETTE, December, 1930, page 1471, and in previous issues. With a view to the future development of international wage comparisons, the committee recommended that official representatives of the governments which have hitherto collaborated in the enquiry and those whose co-operation is anticipated

should be called together to consider further improvements. For instance, renewed efforts should be made to obtain, for all countries, the actual earnings per unit of time, allowance being made for social insurance bonuses, holidays with pay and family allowances, but not for overtime payments. It was considered

that the number of industries included in the enquiry should be extended to cover the largest possible proportion of the working population, and that efforts should be made to obtain information concerning clothing and rents, in order to enable these important items to be included in the comparisons.

ESTIMATE OF MINERAL PRODUCTION IN CANADA, 1930

NEW records were established in the output and value of gold, petroleum and natural gas, and more copper, lead and zinc were produced in 1930 than in any previous year in the mining history of Canada, according to the official estimate recently issued by the Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics at Ottawa, Canada. However, because of the drastic reduction in metal prices and on account of lower outputs in many of the non-metallic minerals, and structural materials, the total value of Canada's mineral production in 1930, amounting to \$276,865,000, decreased 11 per cent from the record output of \$310,850,246 created in 1929. Figures showing the quantity and value of production in the several

branches of the industry for 1929 and 1930 are given in the accompanying tables.

In 1929, the latest year for which industrial statistics are available, there was invested in the mining industry in Canada some \$850,000,000 in lands, plants, buildings and working capital. More than 95,000 men were employed in operating the mines, smelters, oil and gas wells, brick plants and quarries, who received \$125,000,000 in salaries and wages. This widespread activity in Canadian mining is not only reflected in the great expansion of the industry itself but its influence, magnitude, and spending power are now recognized as being important factors in the general industrial life of the Canadian people.

ANNUAL REVIEW OF EMPLOYMENT IN CANADA, 1930

IN Canada, as in other parts of the world, there was a general slackening in industrial activity during 1930. At the beginning of the year there were the usual heavy losses in employment throughout the Dominion, succeeded by partial recovery during January. This recovery, however, was on a smaller scale than is ordinarily reported and was followed by declines in the next two months, during which the index of employment fell slightly below the figure for the same months in 1929. Seasonal expansion then caused an increase in the number employed during the three months, May 1 to July 1, but the additions made by

tions involved a smaller number of workers than in the early winter of 1929. In spite of this beneficial effect the index on December 1, 1930, standing at 108.5 per cent of the 1926 basic average, was nearly three points lower than at the beginning of the year.

The accompanying chart illustrates the fluctuations in employment since 1921, as indicated by the larger employers reporting monthly to the Dominion Bureau of Statistics. This shows plainly that although activity was generally less than in 1929, yet, on the whole, it was greater than in other years since 1921. Owing to the marked seasonality

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS IN INDUSTRIES OTHER THAN AGRICULTURE, 1921-1930

The light curve is based upon the number employed on the first day of the month by the firms reporting, compared with the average employment they afforded in the calendar year 1926 as 100. The heavy curve shows this crude curve corrected for seasonal variation as determined by the experience of the last decade.

employers to their payrolls were smaller than those recorded in the same period of the last few years, and the curve of employment, already lower than in 1929, fell below the 1923 level also, as from August 1. Nevertheless, the staffs reported by employers were with these exceptions considerably larger than in any other period of the years since 1921. From July, 1930, onward, the trend of employment was steadily downward, the period of curtailment following the spring and summer activity, being therefore rather longer than usual. Towards the close of the year, however, the influence of public unemployment relief measures began to be evident in the stabilization of employment, so that the seasonal contrac-

tion of employment in the Dominion, an index of seasonal variation has been prepared according to the¹ Harvard method; the monthly indexes

¹The Harvard method is described in detail and exemplified in most modern statistical text books. In this method, link relatives are first constructed by dividing the index for each month by that for the month preceding. The median of these link relatives for each month is then ascertained, and these medians are expressed as a chain series with January as the base. The next steps involve the removal of the discrepancies between the Januaries due to long-term growth, and the conversion to a percentage basis. The resulting factor for each month is then divided into the corresponding crude index; this corrected index then shows the trend of employment after adjustment for seasonal tendencies.

plotted in the light curve have been adjusted by means of this index, and the corrected indexes are shown in the heavy curve. By eliminating the pronounced seasonal peaks and troughs, the trend of employment over a period of years is clearly indicated. From both the crude and the corrected curves, it is evident that employment, despite the downward movement characterizing most of 1930, was at a higher level than in other years since 1921, with the exception of 1929 and part of 1928.

The Dominion Bureau of Statistics tabulated payroll data from some 7,260 firms who employed a monthly average of 993,845 workers during 1930, their staffs varying between 941,427 on April 1, and 1,043,232 at the beginning of July. The index, calculated upon the average for the calendar year 1926 as 100, reached its peak for the year in the latter month, standing at 118.9. In 1929, the peak was 127.8 on August 1, while that in 1928 was 119.3, also on August 1. The index averaged 113.4 during the year under review, as

TABLE I—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS

AVERAGE CALENDAR YEAR, 1926 = 100

NOTE.—The relative weight shows the proportion of employees reported in the indicated area to the total number of employees reported in Canada by the firms making returns on the date indicated.

Relative weight of employment by districts as at Dec. 1, 1930.....	7.7	28.3	40.8	14.9	8.3	100.0

¹The average for the calendar year 1926, including figures up to Dec. 31, 1926, being the base used in computing these indexes, the average index here given for the 12 months Jan. 1-Dec. 1, 1926, generally shows a slight variation from 100.

compared with 119.0 in 1929, 111.6 in 1928, 104.6 in 1927, 99.6² in 1926, 93.6 in 1925, 93.4 in 1924, 95.8 in 1923, 89.9 in 1922 and 88.8 in 1921.

As is usually the case, the outstanding feature of the situation during 1930 was the marked expansion in construction, in which the

²As the average for the calendar year, 1926, including figures up to December 31, 1926, is the base used in computing these indexes, the average for the 12 months, January 1-December 1, 1926, generally shows a slight variation from 100.

number of workers covered by these statistics more than doubled between March and August. Towards the latter part of the year, unemployment relief works absorbed a very large number of persons, many of whom were employed in rotation, so that the number assisted in this manner was actually greater than appears in these statistics. Manufacturing showed gains during many months; these, however, were on a smaller scale than in 1929, and activity was generally less than in either 1929 or 1928. The early part of 1930 saw ex-

TABLE II—INDEX NUMBERS OF EMPLOYMENT BY PRINCIPAL CITIES

AVERAGE CALENDAR YEAR, 1926 = 100

NOTE.—The relative weight shows the proportion of employees reported in the indicated city to the total number of employees reported in Canada by the firms making returns on the date indicated.

Relative weight of employment by cities as at Dec. 1, 1930...	14.1	1.4	12.7	1.3	3.4	1.5	3.3	3.2

¹The average for the calendar year 1926, including figures up to Dec. 31, 1926, being the base used in computing these indexes, the average index here shown for the 12 months, Jan. 1-Dec. 1, 1926, generally shows a slight variation from 100.

ceptionally large numbers of men engaged in logging operations, but as export and other conditions were unfavourable, employment became very slack as from the spring of last year, and the customary seasonal gains towards the autumn and winter provided work for a much smaller number of workers than usual. Transportation, also, was quieter than in the two preceding years. In mining and com-

munications, employment was maintained throughout 1930 at a lower level than in 1929, but it was generally better than in 1928. Trade and services during the first half of 1930 were more active than in the preceding year, but from August 1 on, the indexes were slightly lower, though they averaged rather higher than in 1929 and earlier years of the record.

TABLE III—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES
AVERAGE CALENDAR YEAR, 1926 = 100

NOTE.—The relative weight shows the proportion of employees reported in the indicated industry to the total number of employees reported in Canada by the firms making returns on the date indicated.

¹The average for the calendar year 1926, including figures up to Dec. 31, 1926, being the base used in computing these indexes, the average index here given for the 12 months Jan. 1-Dec. 1, 1926, generally shows a slight variation from 100.

Employment by Economic Areas

Firms in all except the Maritime Provinces generally reported less activity in 1930 than in 1929. The index, based upon the 1926 average as 100, was higher in the Maritime Provinces than elsewhere; this was largely due to the execution of an important program of road work during the summer months.

Maritime Provinces.—In the early part of 1930, employment in the Maritime Provinces showed an increase, but this was succeeded by three months of contraction. During the summer, considerable improvement was recorded, especially in highway construction work, but from September 1, the trend was downward. At the peak of employment on July 1, the index stood at 141.1, compared

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES, 1927-1930.

NOTE.—Average calendar year, 1926=100. The relative weight shows the proportion of employees in the indicated industry to the total number of employees reported in Canada by the firms making returns on the date indicated.

with the previous high point of 127.5 on August 1, 1929. The index number averaged 118.3 during 1930, as compared with 114.8 in the preceding year, and 106.6 in 1928. Manufacturing as a whole afforded a smaller volume of employment in 1930 than in 1929; the index at the end of the year was in fact lower

than in the early winter of the last few years. The pulp and paper industries, which have been gaining steadily in recent years, showed further improvement in 1930; lumber, textiles and iron and steel, however, reported a less favourable situation than in 1929 or 1928. The tie-up in the movement of grain, which

affected general conditions towards the end of 1929, continued during 1930 as an important factor in transportation, but in spite of this, the group afforded more employment than in 1929 or 1928. Construction was considerably brisker, especially in the highway division; services, communications and trade also registered a higher level of employment than in

any other year of the record. Employment in mining was on the whole maintained at approximately the same level as in the preceding year. Considerable activity in logging in the early months of 1930 was succeeded by a period of quietness, and the index averaged many points lower than in 1929. The aggregate payrolls of the 552 reporting firms in the

Maritime Provinces averaged 79,817 persons, as compared with 77,007 in the preceding year.

Quebec.—In Quebec, the period of expansion during the summer of 1930 was shorter, and in this period a smaller number of persons was added to the staffs of the reporting

firms, than was the case in the preceding summer. Until May 1, the index each month was higher than in the corresponding month in any of the last nine years, but from then on the situation was not so favourable as in 1929, while from September 1, employment was at a slightly lower level than in 1928

also. From the low point of 103·7 on April 1, the index rose to 116·8 at its peak on July 1, but by the beginning of December it had fallen to 106·7, or slightly lower than on January 1. The labour forces of the 1,680 co-operating employers varied between 262,565 and 297,187 workers on the dates of minimum and maximum activity, respectively, aver-

aging 279,911 for the twelve months. The mean index was 110·3, as compared with 113·4 in the preceding year. Manufacturing as a whole was slacker than in 1929, averaging approximately the same as in 1928, but was higher than in earlier years of the record. Lumber, pulp and paper, and iron and steel recorded a smaller volume of employment

than in the preceding year; reduced activity was indicated, on the whole, in textiles, although these industries towards the close of the year showed some improvement over earlier months. Owing probably to stock market conditions activity in mining was rather curtailed as compared with 1929, but

employment was, on the average, greater than in 1928. Communications and transportation were not so active as in 1929, but the level of employment in the former was generally higher than in 1928 and earlier years for which data are available, while transportation was quieter than in any other year since 1926.

TABLE IV—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES, 1927-1930—Continued

(NOTE.—Average calendar year, 1926 = 100. The relative weight shows the proportion of employees in the indicated industry to the total number of employees reported in Canada by the firms making returns on the date indicated.)

Industries	July 1 1929	Aug. 1 1929	Sept. 1 1929	Oct. 1 1929	Nov. 1 1929	Dec. 1 1929	Relative weight, Dec. 1 1929	Aver. Jan. 1- Dec. 1 1929

Construction, during the greater part of 1930, afforded more employment than in the preceding year, the index averaging a few points higher than in 1929 or 1928. Employment in logging was in much greater volume during the first few months of last year than in any other year of the record, but the prevailing dullness in this group adversely affected em-

ployment in the 1930-31 season; the number on the payrolls of the co-operating firms however averaged higher than in the preceding year. In practically every month of 1930 employment in trade was better than in other years of the record, the index averaging 133.5 compared with 130.6 in 1929, the previous maximum. Services were also slightly more active.

TABLE IV—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES, 1929-1930—Continued
(NOTE.—AVERAGE CALENDAR YEAR, 1926 = 100)

(The relative weight shows the proportion of employees in the indicated industry to the total number of employees reported in Canada by the firms making returns on the date indicated).

Ontario.—An average of 410,479 employees was registered by the 3,235 firms furnishing data in Ontario; the mean index was 114.6 in 1930, or over eight points lower than in the preceding year. Manufactures reported less activity than in 1929 and the index also averaged slightly lower than in 1928. Employment in iron and steel, pulp and paper,

building material, lumber, textile and other factories shared in the general quietness prevailing in 1930. On the other hand, food, electrical apparatus and some other industries reported increases over preceding years. Operations in logging camps, very brisk in the first few months of the year, recorded a pronounced falling off in employment in the latter part.

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES, 1929-30—*Concluded*
(NOTE.—AVERAGE CALENDAR YEAR, 1926 = 100)

The relative weight shows the proportion of employees in the indicated industry to the total number of employees reported in Canada by firms making returns on the date indicated).

Industries	July 1 1930	Aug. 1 1930	Sept. 1 1930	Oct. 1 1930	Nov. 1 1930	Dec. 1 1930	Relative weight, Dec. 1 1930	Aver. Jan. 1-Dec. 1 1930

Mining maintained a good volume of employment throughout the year, the index averaging 142.8 as compared with 138.2 in 1929 the previous maximum. In communications and transportation, however, the numbers employed were smaller than in the previous year; activity in communications was greater and in transportation slightly less than in 1928. Employment in construction although somewhat lower than in 1929, nevertheless continued in good volume, while services and trade showed more activity than in other years for which data are available. The high level of employment in the latter two industries reflects in some measure a brisk tourist trade.

Prairie Provinces.—Important advances were indicated in the Prairie Provinces during the summer months; the period of general expansion lasted a month longer than in 1929, but the number of persons added to the payrolls was smaller. In these provinces only, was the index more than fractionally higher at the close of the year than at the beginning. The employers furnishing data had an average staff of 139,048 persons during the year, and the index averaged 117.1, while in 1929, the average index was 126.3. The unfavourable conditions prevailing in agriculture since the autumn of 1929, resulted in much unemployment among farm workers (who are not represented in these statistics) and also had a very deleterious effect upon business in general. The growing use of machinery in agricultural work is also a factor in the Prairie employment situation. Activity in manufacturing, logging, mining, transportation, services and trade was, on the whole, lower in 1930 than in 1929, the year of maximum activity. Within the manufacturing group, there were losses in the lumber, iron and steel and other industries. Construction work was at a lower level during most of 1930 than in 1929, although the index in the last quarter was higher, chiefly as a result of unemployment relief work. Communications reported improvement over the preceding year.

British Columbia.—The firms reporting in British Columbia employed an average working force of 84,592 employees, and the index averaged 107.9 as compared with 111.5 in 1929, and 106.4 in 1928. At the end of the year, employment was slightly higher than at the beginning. Nearly all groups of manufacturing showed lowered activity, notable exceptions being the pulp, paper and printing and miscellaneous groups divisions, on the other hand, there were losses in iron and steel, textile and lumber plants. Logging, mining, transportation, services, and trade were slacker during the greater part of 1930 than in 1929, while employment in communications and construction was maintained at slightly higher levels than in the preceding year.

Monthly index numbers by economic areas are shown since 1927 in Table I, which also give annual averages since 1921.

Employment by Cities

Of the eight centres for which separate tabulations are made, Quebec, Ottawa and Vancouver recorded on the whole a rather higher level of employment than in 1929. Montreal, Toronto, Hamilton, Windsor (including the adjacent Border Cities) and Winnipeg, however, showed reduced employment as compared with the preceding year. In the two centres last named, the index was also lower than in 1928, but the remaining cities reported higher activity in that comparison.

Montreal.—The staffs of the 914 Montreal firms making returns averaged 138,725 persons, while the mean index, at 111.8 was 3.5 points lower than that for the preceding year. Manufacturing was more active during part of 1930, but the index averaged slightly lower in the twelve months than in 1929, although it was higher than in 1928. Vegetable food, printing, tobacco and miscellaneous manufactures afforded more employment than in any other year on record, but the textile, and iron and steel industries were slacker. Communications, transportation and construction also showed curtailment as compared with 1929, while trade during most of the year was slightly more active.

Quebec.—Considerable fluctuations were indicated in Quebec, but the index averaged higher than in earlier years of the record. From the low point of 110.0 on March 1, it rose to its maximum of 138.5 on September 1, and at the beginning of December was higher than the average for any previous year on record. The staffs of the employers furnishing data averaged 12,766 and the index averaged 125.3 in 1930, compared with 11,977 and 124.2 respectively, in 1929. Transportation and construction, on the whole, afforded more employment than in earlier years of the record, but manufacturing was generally slacker.

Toronto.—Employment in the first quarter of 1929 showed curtailment, succeeded by three months of moderate improvement. From July until October the tendency was again unfavourable, while increases on October 1, were followed by reductions in the next two months. At the close of the year the index was slightly lower than at the beginning, and was also below the mean for 1930. The index for the year averaged 116.3, as against 121.3 during 1929. The number of employees of firms co-operating during 1930, averaged 123,799. Within the manufacturing group, iron and steel reported the most marked

falling-off, but losses were also indicated in textile, printing and publishing and other industries. Construction was not nearly so active as in 1929. In trade and transportation, however, employment was generally well maintained by the firms furnishing returns.

Ottawa.—Manufacturing on the whole reported a smaller volume of employment than in the preceding year, all branches showing rather reduced activity. Moderate gains were noted in trade, while construction also afforded slightly more employment. A mean payroll of 13,278 workers was reported by the employers furnishing data, and the index averaged 123.1, as compared with 12,695 employees and an average index of 120.7 in 1929.

Hamilton.—Following a period of marked industrial expansion during 1929, employment in Hamilton was dull during the whole of 1930, the index being over 19 points lower at the end of the year than at the beginning. All industries showed curtailment, but the greatest losses were in the iron and steel group, while employment in trade was relatively more stable than in other lines. Towards the latter part of 1930, the textile division showed improvement over earlier months. The co-operating firms reported an average working force of 34,270 persons; the index averaged 113.9, compared with 128.4 in 1929, and 108.2 in 1928.

Windsor and the Adjacent Border Cities.—The index number of employment in the Border Cities averaged 128.6 and the recorded payrolls averaged 15,927 workers in 1930, compared with 153.2 and 18,906, respectively, in the preceding year, while in 1928 the mean index was 137.3, and in 1927, 86.2. Largely owing to depression in the automobile and related industries, employment in the Border Cities was dull throughout 1930. Construction also showed less activity than in 1929.

Winnipeg.—The unfavourable situation that first developed in Winnipeg as a result of crop conditions from September, 1929, continued during 1930. Employment decreased steadily during the first four months of the year, after which there was a period of moderate expansion lasting until September 1; this was succeeded by contractions until the close of 1930. The mean index for the year was 107.6, compared with 112.3 in 1929 and 110.1 in 1928. All branches of manufactures were slacker than in 1929; the food and printing industries showed least curtailment. Transportation, reflecting the grain congestion, afforded a smaller volume of employment, and trade was also duller than in the preceding year. On the other hand, construction showed a slight

improvement. An average staff of 32,347 was recorded by the 345 firms whose data were received.

Vancouver.—Conditions in Vancouver did not show so great a change from those of 1929 as was the case in other cities, although considerable unemployment was indicated during the year; the index averaged 109.8 as compared with 109.2 in the preceding year, while the paylists covered averaged 29,671 persons. Until the autumn, manufacturing showed improvement over 1929, but from then on, dullness in the lumber industries offset the gains that were reported in other groups. Communications recorded a higher level of employment throughout the year, while the indexes for construction, transportation, services and trade averaged slightly lower than in 1929; in all of these except construction and services, activity was generally greater than in 1928 and earlier years of the record.

Index numbers by cities are given in Table II.

Manufacturing

From the beginning of 1930, employment in manufacturing was quieter than in the preceding year, and from the spring was also slacker than in 1928, although it averaged higher than in 1927 and earlier years on record. Statistics were received from some 4,400 manufacturers employing, on the average, 525,247 operatives, as compared with the average of 555,280 reported by the 4,100 establishments reporting in 1929. The index averaged 109.0 per cent of the 1926 payrolls of the co-operating firms, as compared with a mean of 117.1 in the preceding year and 110.1 in 1928. Nearly all branches of manufacturing shared in the generally unfavourable movement; notable exceptions were the vegetable food, tobacco, electric current, electrical apparatus, chemical and non-metallic mineral groups. Especially important losses were indicated in the rubber, lumber and iron and steel groups, in the last of which the automobile, agricultural implements, and crude, rolled and forged divisions, were particularly affected by the prevailing dullness. The Animal food, pulp and paper, building material and non-ferrous metal industries reported a relatively more favourable situation as compared with 1929 than was the case among the other branches of manufacturing which showed curtailment. The textile trades improved towards the latter part of the year, but employment averaged less than in 1929.

Animal Products, Edible.—Employment in this division showed much the same trends as during 1929, but was not quite so active. Fish-preserving factories, dairies, and meat-packing plants reported rather smaller staffs.

The payrolls of the reporting employers averaged 18,589 persons, varying between 16,479 on March 1, and 21,152 at the beginning of August. The mean index was 109·7, compared with 113·8 in 1929, and 111·2 in 1928.

Leather and Products.—Boot and shoe and other leather-using factories, on the whole, afforded less employment than in the preceding year; an average working force of 15,722 employees was recorded by the co-operating establishments, and the mean index was 87·8, as compared with 93·1 in 1929.

Lumber Products.—The seasonal movements always indicated in lumber mills caused pronounced fluctuations during 1930, when employment was generally much quieter than in 1929. Steady gains between February 1, and June 1, were succeeded by consistent losses during the latter part of the year. The payrolls of the firms furnishing data ranged between 55,948 persons at the beginning of June and 39,205 on December 1, averaging 43,929 in the 12 months, as compared with the 1929 mean of 53,870. The average index, standing at 93·3, was many points lower than the mean of 106·2 for the preceding year. Rough and dressed lumber mills, owing partly to curtailment of foreign demand, recorded a smaller volume of employment than in 1929, and losses in that comparison were also noted in furniture and other lumber-using factories.

Musical Instruments.—Activity in musical instrument factories was not so pronounced as in 1929, according to statements from some 38 firms whose staffs averaged 2,058. The mean index stood at 70·9 in 1930, compared with 100·6 in the preceding year. The production of wireless apparatus is not included in this industrial group, which, as in previous years, has undoubtedly been seriously affected by the popularity of radios.

Plant Products, Edible.—Employment in vegetable food factories, on the whole, was better in 1930 than in the preceding year, mainly due to unusual activity in canneries, while the tendency was also favourable in the bread and bakery division. On the other hand, flour mills, sugar and syrup and chocolate and confectionery factories were slacker than in 1929. An average working force of 32,020 persons was registered by the reporting establishments, in which the number of operatives ranged between 28,204 on January 1, and 40,888 at the beginning of October. The mean general index of 113·0 in 1930 compared favourably with the 1929 average of 110·9, and also with that of 103·2 in 1928.

Pulp and Paper.—The pulp and paper industries shared in the general dullness in the foreign and domestic market, but the losses

in employment, as compared with 1929, were not so marked as in some of the other industries, and activity, was on the whole, slightly greater than in 1928, and considerably greater than in earlier years of the record. The reported staffs averaged 65,303 employees and the index 109·1, as compared with a mean index of 111·4, in 1929. During 1930 employment was lower than in 1929 in the pulp and paper goods groups, but in printing and publishing establishments the general situation was unchanged.

Rubber Products.—Activity in rubber factories was materially reduced during 1930, partly as a result of the depression in the automobile industry, since the production of tires ordinarily employs about 55 p.c. of the workers in the rubber group. The mean index in 1930 was 117·4, compared with 139·5 in the preceding year, and 128·7 in 1928. The pay-rolls of the plants supplying information averaged 14,992, ranging between 16,394 workers on February 1, and 13,498 at the beginning of November.

Textile Products.—Employment in the textile industries showed wide fluctuations in 1930. Considerable improvement was indicated during the first quarter of the year, followed by four months of decreasing activity; from the first of September, however, the trend was favourable until December when losses were again recorded; at the end of the year the level of employment was practically the same as at the beginning. The index averaged 101·2, as compared with 107·2 in 1929. An average staff of 80,715 employees was reported by the co-operating manufacturers, who averaged 677. Practically all branches of this group reported curtailment as compared with 1929, the smallest falling-off being noted in the garment trades.

Tobacco, Distilled and Malt Liquors.—Statements were compiled from nearly 150 firms, whose working forces averaged 15,924 persons. The mean index of 124·9 in 1930 showed very little variation from the 1929 mean of 124·6, but was considerably higher than the 1928 average of 109·3. Tobacco factories were slightly more active during the year under review than in 1929, while employment in the production of distilled and malt liquors was rather less.

Chemical and Allied Products.—The level of employment in this group was slightly higher than that reported in 1929, and was considerably higher than in 1928 and earlier years for which data are available. The index averaged 118·8, as compared with 117·8 in 1929 and 110·5 in 1928. An average payroll of 7,726 workers was registered by the employers whose statistics were tabulated.

Clay, Glass and Stone Products.—Employment in these industries was generally less than in 1929, but greater than in 1928 and previous years on record. The index number averaged 121·7, while in 1929 and 1928 it was 126·2 and 111·4, respectively. The moderately high level of activity in building during 1930 is reflected in the personnel of building material factories, 157 of which reported an average working force of 12,558 persons. At the maximum, the number employed was 14,222.

Electric Current.—The average number engaged in the production of electric current was greater than in any other of the last ten years; the index averaged 130·8, as compared with 127·6 in 1929 and 118·3 in 1928, the previous high levels of the record. The aggregate staffs of the cooperating producers averaged 15,759 during 1930, as compared with 15,389 in the preceding year.

Electrical Apparatus.—Employment in this division, which includes a considerable proportion of the firms producing radios and equipment, was in greater volume during 1930 than in any other period on record, although the improvement indicated was not so pronounced as that in 1929 over 1928. The reported pay-rolls included, on the average, 16,438 workers, and the mean index was 157·1 as compared with 14,555 and 143·8 respectively, in 1929.

Iron and Steel Products.—The trend of employment in this group was generally downward throughout the year, except for an unusually brief period of seasonal activity between February 1 and April 1. The slackness in the automotive industries contributed largely to this retrogressive movement, but the crude, rolled and forged, agricultural implement, machinery, heating appliance, structural iron and steel and other divisions also showed considerable curtailment. Towards the close of the year, however, the losses were on a smaller scale than in the early winter of 1929, which may perhaps be taken as an indication that the end of the depression is in sight. The aggregate working force of the 694 manufacturers of iron and steel products who reported during 1930, averaged 139,267 persons; in 1929 the mean was 161,126 and in 1928 it was 143,013. The average labour force per establishment in the year under review was 201, or 43 less than in the preceding year, while the average index, at 108·1, compared unfavourably with that of 125·2 in 1929 and 112·6 in 1928, although it was higher than the 1927 mean of 101·6.

Non-Ferrous Metal Products.—Employment in this division fluctuated considerably during the year under review, but averaged rather less than in 1929, although it was better than in 1928 and all earlier years for which statistics

are available. The index averaged 129·2 and the reported employees 19,792; in 1929 the mean index stood at 132·8.

Non-Metallic Mineral Products.—In spite of losses in many months of the year, employment in non-metallic mineral product plants averaged higher than in 1929, the index standing at 142·5, as compared with 138·2 in 1929 and 120·5 in 1928. Statements were received each month from over 80 firms with an average staff of 13,737 persons. The gas, petroleum and other divisions of this classification maintained a good volume of employment.

Other Manufacturing Industries.—In spite of improvement towards the end of 1930 fur factories recorded a rather less favourable situation than in the preceding year, while the production of wood distillates and extracts and of miscellaneous manufactured products also showed a moderate decrease.

Logging

Logging camps, on the whole, reported decidedly less activity than in the last few years; the index was considerably higher in the first four months of 1930 than in any other year on record, but employment in this group was soon affected by the prevailing depression. The working force of the firms supplying information averaged 28,921 and the index number 108·0 in 1930; in 1929, the mean index was 125·8. As has already been mentioned in other issues, the growing practice on the part of the larger operators, of letting contracts for their wood requirements to small contractors and to settlers on the northern frontiers of settlement, is increasing the difficulty of collecting current statistics on employment. As usual, the greatest variation in logging was in Ontario and Quebec, while in British Columbia the fluctuations were not so marked. The index in Quebec was considerably higher than that for the Dominion as a whole.

Mining

As in 1929, there were losses in mining during the first part of 1930, followed by a series of advances lasting almost without interruption until the beginning of November, when declines were indicated; the gains during this period of expansion, however, did not result in so high a level of employment as in 1929, but this level was higher than in 1928 and earlier years on record. The index averaged 117·8, compared with 120·1 in 1929 and 114·4 in 1928. In coal-mining, conditions were not quite so good as in 1929, employment being generally less active. The mean index was 104·1, as compared with 107·4 in 1929, and 106·4 in 1928, while the labour force of the

cooperating operators averaged 27,548 workers in 1930. In metallic ores, employment was generally higher during 1930, although it did not attain so high a peak as in one or two months of the preceding year; the index, at 145.6 averaged some six points more than in 1929, the previous maximum. The staffs of the reporting firms averaged 16,851 during the year under review, compared with 16,055 in the preceding year. The commencement of productive operations in some of the mines in Manitoba on which preparatory work has been going forward for some time, materially increased employment in this group. Non-metallic minerals (other than coal) registered reduced employment in spite of the seasonally upward movement recorded during the summer. The index averaged 124.4 as against 137.1 in the preceding year; a mean payroll of 8,112 persons was employed by the co-operating firms, while those reporting in 1929 had an average of 8,803. Quarries, asbestos mines and other divisions coming under this heading recorded less activity.

Transportation

Heavy seasonal losses were shown in the first three months of 1930, but were on a smaller scale than in the first quarter of the year preceding. Following this period, the tendency was almost uninterruptedly favourable until the beginning of September, after which seasonal losses were again recorded. Employment was in smaller volume throughout 1930 than in 1929, and was also rather less than in 1928, although it exceeded that in 1927 and previous years for which data are on record. The index averaged 104.6 as compared with 109.7 in 1929 and 105.9 in 1928. The transportation companies whose returns were tabulated employed, on the average, 120,536 workers. In the steam railway division, the index averaged 100.7, or over six points lower than in 1929. An average working force of 79,133 employees was recorded in steam railway operation, compared with 84,438 in 1929. Street railways and cartage companies with an average payroll of 25,099 persons, reported unchanged employment as compared with the preceding year, the index averaging 123.6 as compared with 111.7 in 1928. Employment in shipping and stevedoring was also lower than in 1929; the mean index was 99.8, while the reported staffs averaged 16,305, varying between 11,253 persons on February 1, and 19,175 at the beginning of June. In the preceding year, the mean index was 104.7, while in 1928 it was 96.4.

Communications

Telegraphs and telephones reported a good volume of employment during 1930; although this was slightly less than in 1929, it was greater than in 1928 and earlier years on record. The index averaged 119.8, compared with 120.6 in 1929, and 108.2 in 1928. The personnel of the companies furnishing data averaged 30,483 employees, of whom some 80 per cent were engaged on telephones. Activity in this group was fairly general throughout the Dominion.

Construction and Maintenance

The period of expansion indicated by the construction industries in 1930 was shorter than in 1929, and the number of persons added to the payroll was smaller. Despite this, activity in the construction industries, aided by governmental unemployment relief measures, was well maintained, being practically the same as in 1929, the previous maximum, and at a higher level than in earlier years on record. During the period of most marked activity from April 1 to August 1, more than 90,000 extra workers were added to the forces of the co-operating employers, whose payrolls averaged 125,644 during the twelve months, varying between 79,682 on February 1 and 174,564 at the beginning of August. The general index for this group averaged 129.8, compared with 129.7 in 1929, and 118.8 in 1928.

Building construction gained steadily from April 1 to October 1, but did not attain quite so great a volume as in the preceding year; employment was nevertheless brisker than in earlier years for which data are available. The mean index was 134.3 in 1930, compared with 135.3 in 1929, and 112.0 in 1928. The average number of persons employed by the reporting contractors was 52,480. As already stated in connection with logging, there is an increasing tendency for the larger contractors to submit their contracts, by trades, to sub-contractors, who usually employ a comparatively small number of workers. When they have less than 15 employees, they are not asked to furnish data on employment, so that the number employed in building is undoubtedly considerably in excess of that covered in these statistics.

Road construction reported an especially high level of employment during the year; this was partly due to unemployment relief works, especially towards the latter part of the year. The number employed was higher than in any other year on record; in the Maritime Provinces, an unusually important program of highway construction and im-

provement was carried out during the summer, but considerable activity was noted in all provinces. The payrolls reported averaged 33,876 workers, and ranged between 9,038 on March 1 and 66,156 at the beginning of August. The average index of 183.6 compares favourably with that of 150.1 indicated in 1929, and 137.1 in 1928. In many districts, road work is supplementary to the occupations ordinarily followed by nearby residents, particularly agriculturists during slack periods on their farms.

Employment in *railway construction*, (in which the working forces covered averaged 39,288 men) was not so active as in the last few years. The index averaged 99.9, while in 1929 the mean was 114.4 and in 1928, 116.7.

Services

Statements were received monthly from some 235 firms in this division, whose employees averaged 22,529. With only two exceptions, gains were noted from February to September, succeeded by seasonal declines until the end of the year. Employment in hotels and restaurants was maintained at a good level during 1930, while other divisions did not report much change as compared with 1929. The index number for the service industries as a whole was 131.6, as against 130.3 in 1929, and 118.1 in 1928. Activity in these three years was greater than in any other for which statistics are available.

Trade

Employment in trade was on the average rather brisker than in any previous year of the record, the index number being higher in most months of 1930 than in the same months of any other year since 1920. Both *retail* and *wholesale trading establishments* maintained a good volume of employment. With one exception, there was uninterrupted expansion from March until the end of the year. The payrolls of the co-operating firms averaged 87,967 persons and the index 127.7, compared with 126.2 in 1929. Of these workers, nearly 72 per cent were classified as employed in retail stores. In recent years, there has been an increasing tendency for the larger stores and chain organizations to absorb the small businesses which would otherwise not be represented in these statistics. This may partly account for the favourable showing, but it also appears that the volume of employment afforded in trade has been well kept up, in spite of the prevailing business depression. This may indicate that the purchasing power

of the majority of the population and their standard of living have undergone little change in the past year.

Tables Showing Employment by Industries

Table III gives the index numbers of employment by main industrial divisions since 1927, together with yearly averages since 1921, while the trend of employment in some 60 industries during the years 1927-30 is shown in Table IV. The columns headed "relative weight" indicate the proportion that the number of employees in the indicated industry is of the total number of employees reported in Canada by the firms making returns on June 1 and December 1 of the indicated years. Chart V shows the course of employment in some of the important industries since 1927; the curves are based upon the indexes given in Table 3.

Persons desiring detailed indexes for the years 1924-1926 may obtain these on application to the Dominion Bureau of Statistics.

Last year the New York Federation of Labour agreed to the suggestion of Governor Roosevelt that organized labour should take a more active part in the work of accident prevention. Accordingly it was decided that the local unions in each industry should each appoint a permanent safety and health committee for the purpose of studying and reporting upon unsafe practices and of investigating accidents as they occur, making a report to the State Department of Labour and the Union Executive committee in cases where accidents are found to have been caused by lack of proper safeguards. Representatives of the Department of Labour often address these committees, giving the unions the latest information concerning the causes and prevention of accidents, and industrial diseases, and keeping them informed as to the activities of the Department itself.

A delegation representing the Federated Association of Letter Carriers of Canada waited on the Hon. Arthur Sauvé, Postmaster-General on December 16, in order to submit the following requests: Holidays, between May and October, rather than in the winter months; increases in pensions; payment for overtime work and elimination of postal deliveries on civic holidays; limitation of the weight of a mail carrier's bag when he leaves the post office to 35 pounds; and regulations concerning magazines and newspapers in the mail and the disposal of unaddressed letters. The Postmaster promised to give careful consideration to these requests.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN NOVEMBER, 1930

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on December 1, was 7,514, their employees numbering 962,763 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for November was 1,798, having an aggregate

membership of 205,854 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment.

(3) The Department of Labour receives reports from the 67 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period of various classes of building construction.

(1) Employment Situation at the Beginning of December, 1930, as Reported by Employers

The seasonal falling-off in employment recorded on December 1, 1930, was on a smaller scale than on the same date last year, although it exceeded the average decline recorded during the last ten years. The 7,514 firms reporting to the Dominion Bureau of Statistics employed 962,763 persons on December 1, compared with 1,002,388 in the preceding month. Reflecting this decline of about four per cent, the index, based upon the 1926 average as 100, stood at 108.5, compared with 112.9 on November 1, 1930, and 119.1, 116.7, 108.1, 102.3, 96.5, 91.9, 96.9, 96.3 and 88.3 on December 1, 1929, 1928, 1927, 1926; 1925, 1924, 1923, 1922 and 1921, respectively. Employment as reported by employers therefore continued rather more active than on the same date in other years of the record except 1929 and 1928.

The most noteworthy losses were again indicated in construction and manufacturing, while considerable seasonal improvement was reported in logging and trade. An important feature of the situation was the large increase in work on public undertakings for the relief of unemployment: this exercised a stabilizing influence upon employment in construction, in which the seasonal declines involved a much smaller number of persons than those recorded on December 1, 1929.

Employment by Economic Areas

All provinces registered curtailment, the largest recessions taking place in Quebec and Ontario.

Maritime Provinces.—The seasonal reductions noted in the Maritime Provinces were on a much smaller scale than on December 1, 1929, but the level of employment then was higher. Most of the decline in 1930 took place in construction and manufacturing, while logging, trade and shipping afforded greater employment. The payrolls of 561 co-operating employers totalled 74,430 workers, as against 74,969 on November 1.

Quebec.—There was a further falling-off in activity in Quebec, according to statements from 1,722 employers of 272,589 persons, or 13,213 less than in the preceding month. Manufacturing, construction and transportation showed declines, those in construction, despite unemployment relief work, being particularly noteworthy; on the other hand, important improvement was shown in trade, and railway transportation was also busier. Smaller decreases were recorded on December 1, 1929, when employment was in greater volume.

Ontario.—Employment in Ontario showed a considerable contraction; 12,265 workers had been released during November from the staffs of the 3,338 firms whose statistics were received, and who had 392,458 on their payrolls. Retail trade and logging registered marked seasonal gains, but transportation, construction and manufacturing reported large losses, and smaller reductions were shown in mining, communications and services. The

index was many points lower than in the same month of last year, when curtailment was also reported.

Prairie Provinces.—Further marked declines were indicated in the Prairie Provinces on the date under review; the 1,141 reporting employers had let out 8,903 workers, reducing their staffs to 143,053 on December 1. Retail trade was seasonally more active, while construction registered especially pronounced reductions, and transportation, manufacturing, mining and communications were also slacker; the general losses in construction would have been much larger had it not been for in-

work and logging recorded more activity. The situation was not so favourable as on the same date in 1929.

Table I gives index numbers by economic areas.

Employment by Cities

Of the eight centres for which separate tabulations are made, only Hamilton showed improvement as compared with November 1, while lessened activity was reported in Montreal, Quebec City, Toronto, Ottawa, Windsor and the adjacent Border Cities, Winnipeg and Vancouver; the losses in Montreal were most noteworthy.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

creases due to unemployment relief work. Employment at the beginning of December was at a very slightly lower level than on the same date in 1929, and was also less in 1928, but activity was greater than in the early winter of all other years on record.

British Columbia.—Continued losses involving about the same number of workers as those noted on December 1, 1929, were shown in British Columbia, where 751 firms had 80,233 employees, as compared with 84,938 in their last report. Food and metal factories and lumber mills were slacker, as were general construction, transportation and mining; on the other hand, trade, public construction

Montreal.—There was a reduction in the employment afforded by the 954 cooperating firms, whose staffs declined by 5,101 persons to 135,701 at the beginning of December. Manufacturing, construction and transportation reported a considerable falling off, while retail establishments showed increased employment. Rather more extensive losses were noted on the same date last year, but the situation then was better.

Quebec.—Employment in Quebec City showed a decrease, 780 workers being laid off by the 124 employers whose returns were received and who had 13,184 employees on December 1. The largest contractions were

in construction, transportation and manufacturing. Smaller declines were indicated on the same date in 1929, when the index was very slightly lower.

Toronto.—Continued decreases in personnel were reported in Toronto by 1,032 firms who employed 122,591 persons, as compared with 124,165 at the beginning of November. Trade

showed noteworthy improvement, but manufacturing and construction were slacker. Larger losses had been registered on December 1 last year, but the volume of employment was then greater.

Ottawa.—Curtailement was shown, chiefly in manufactures and construction, while trade afforded more employment; 148 employers in

NOTE.—The "Relative Weight" in Table I, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

TABLE I—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS (AVERAGE CALENDAR YEAR 1926=100)

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia
1921

Relative weight of employment, by districts at as Dec. 1, 1930.....	100.0	7.7	28.3	40.8	14.9	8.3

Ottawa recorded a combined payroll of 12,545 workers, as against 13,416 in their last report. Employment was not so active as at the beginning of December, 1929, when smaller losses had been indicated.

Hamilton.—Chiefly owing to public unemployment relief work, an increase was reported in Hamilton, where an aggregate working force of 32,319 persons was employed by the 224

firms furnishing data, who had 31,508 employees on their November 1 staff. Municipal construction work, as already mentioned, was busier, but manufacturing as a whole was slacker, in spite of gains in textile mills. The index was many points lower than on the same date a year ago, when curtailment was noted.

NOTE.—The "Relative Weight" in Table II shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

Relative weight of employment by cities as at Dec. 1, 1930...	14.1	1.4	12.7	1.3	3.4	1.5	3.3	3.2

Windsor and the Adjacent Border Cities.—There was a moderate reduction in the Border Cities, mainly in construction. Statements were tabulated from 137 employers with 14,147 workers, or 337 less than in the preceding month. Much greater losses were indicated on December 1, 1929, but employment was then at a higher level.

Winnipeg.—Employment again decreased in Winnipeg, according to data received from 361 firms employing 31,676 persons. Improvement was reported in trade, while manufacturing and building construction released employees. The index was lower than on the same date last year, when losses had also been noted.

NOTE.—The "Relative Weight" in Table III shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

Vancouver.—There was also a contraction in Vancouver, according to 298 employers of 30,555 workers, or 862 less than on November 1. Manufacturing and communications showed curtailment, but trade afforded more employment. A rather smaller reduction had been recorded at the beginning of December, 1929, when the index was two points higher.

Index numbers by cities are given in Table II.

Manufacturing

A substantial seasonal reduction in employment occurred in manufacturing establishments, 4,521 of which employed 488,533 operatives, compared with 507,387 on November 1. This decline was smaller than that

TABLE IV—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

The "Relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

noted at the beginning of December, 1929, when the index was, however, many points higher than on the date under review. The largest losses this year were in lumber and iron and steel, but these declines involved fewer workers than those noted on the same date in 1929. Important reductions were also recorded in clothing, food, pulp and paper, non-ferrous metal and clay, glass and stone factories. On the other hand, improvement was shown in rubber and electric current plants.

Animal Products—Edible.—There were further seasonal declines in fish-canneries (mainly in British Columbia), and also in meat-packing plants. The result was a reduction of 883 in the staffs of the 189 firms making returns, who had 17,740 employees. This decrease involved about the same number of persons as that recorded on the same date in 1929, when employment was at a higher level.

Leather and Products.—Employment in this industry showed a small loss at the beginning of December, chiefly in boot and shoe factories. Statements were tabulated from 193 manufacturers, employing 14,795 persons, as compared with 14,878 on November 1. Greater losses had been noted on December 1, 1929, when the index was many points higher than on the date under review.

Lumber and Products.—Seasonal curtailment of operations on a smaller scale than at the beginning of December, 1929, took place in saw-mills, while furniture, vehicle and match factories also reported reductions in payrolls. All provinces shared in the downward movement. Data were received from 776 firms in this industry, whose staffs declined from 44,376 workers on November 1, to 39,205 on December 1. The index was considerably lower than on the same date a year ago.

Plant Products—Edible.—Contractions in the different divisions of the vegetable food group produced a reduction of 1,994 employees in the 386 plants from which returns were received, and which reported a combined working force of 31,729 operatives. Fruit and vegetable canneries released help, owing to the completion of the season's work, and sugar and syrup factories and bakeries were also slacker. Curtailment was indicated in all provinces. The volume of employment on December 1, 1929, was larger, although the losses then noted were rather more extensive.

Pulp and Paper.—Statements were received from 546 manufacturers in the pulp and paper industry, whose payrolls were reduced by 1,994 persons to 61,670 at the beginning of Decem-

ber. Employment was not so brisk as on the same date in 1929, when less extensive losses had been noted. Improvement took place in printing and publishing establishments, while pulp and paper works released employees. Reductions in personnel were shown in all except the Prairie Provinces.

Rubber Products.—Partial recovery from the losses indicated in recent months was reported in the rubber group. This took place mainly in Quebec. The working forces of the 40 cooperating establishments stood at 13,847 compared with 13,498 on November 1. Curtailment had been shown on the corresponding date last year, but the level of employment was then considerably higher.

Textile Products.—There was a seasonal recession in employment in these industries, chiefly in the clothing trades, while cotton and silk mills were busier. Returns were compiled from 713 manufacturers employing 79,296 workers, or 2,146 less than in the preceding month. General curtailment was shown in all except the Maritime Provinces, that in Quebec being most noteworthy. There was a smaller loss at the beginning of December, 1929, when the index was a few points higher.

Tobacco, Distilled and Malt Liquors.—Employment in tobacco factories was not so active, and other divisions of this group also showed slight declines. An aggregate payroll of 15,781 persons was indicated by the 147 cooperating firms, compared with 16,188 at the beginning of November. Minor increases in Ontario were offset by reductions in Quebec. Small gains had been shown on the same date last year, when the index was several points higher.

Clay, Glass and Stone Products.—Further seasonal losses occurred in brick, glass and stone works; 1,168 persons were released by the 158 cooperating manufacturers, who had 11,523 on their payrolls. Quebec, Ontario and the Prairie Provinces recorded most of the shrinkage. A downward tendency was also in evidence on December 1, 1929, but the volume of employment then was greater.

Electric Current.—There was a small increase in employment in electric current plants, 93 of which reported 15,976 employees, or 142 more than in the preceding month. The gain occurred mainly in Quebec. A reduction was reported at the beginning of December, 1929, when the index number was slightly lower.

Electrical Appliances.—Losses in payrolls were noted in electrical apparatus plants, mainly in Quebec and Ontario; 64 manufacturers employed 16,009 persons, as compared

with 16,559 in their last report. Employment on December 1, 1929, was higher than on the date under review, the losses then indicated having involved fewer workers.

Iron and Steel Products.—Considerable curtailment was indicated in iron and steel factories, chiefly in the structural iron and steel, boiler, engine and tank, crude, rolled and forged, machinery, and heating appliance divisions. On the other hand, automobile factories showed slight improvement. There was a decrease of 3,099 in the staffs of 715 cooperating manufacturers, who employed 122,250 workers. Employment declined in all provinces. The situation was not so favourable as on the same date in the preceding year, although the losses then indicated were on a much larger scale.

Non-Ferrous Metal Products.—There was a falling-off in employment in this division at the beginning of December, according to data received from 118 employers of 18,627 persons, as compared with 20,087 in the preceding month. A slightly downward movement was noted in all provinces. The index was lower than on December 1, 1929, when small losses had been registered.

Logging

Continued pronounced advances were shown in logging; there were general increases, those in the Maritime Provinces being largest. Statements were tabulated from 221 logging camps having 28,633 employees, or 4,198 more than in their last report. This expansion involved a much smaller number of persons than that recorded on December 1, 1929, when the index was many points higher.

Mining

Coal.—Employment in coal mines decreased at the beginning of December, 285 persons being released from the payrolls of the 83 reporting operators, who had 29,035 employees. The Prairie Provinces reported most of the reduction. Gains were reported on the corresponding date in 1929 and the index number then was a few points higher.

Metallic Ores.—There was a large decrease in employment in metallic ore mines; 1,089 workers were released from the forces of the 63 employers from whom information was received and who had 16,258 persons on their pay lists. A small increase had been indicated in December, 1929, when the number engaged in the industry was greater.

Non-Metallic Mineral other than Coal.—Continued declines in employment were noted in this industry, in which 79 firms furnished data, showing that they had reduced their

staffs by 456 persons to 7,499 on the date under review. All provinces except British Columbia shared in this seasonal slackness. Conditions were not so good as in the same month of 1929, when the movement was also downward.

Communications

Decreases in personnel were noted on both telephones and telegraphs; 1,182 persons were released from the payrolls of the cooperating companies and branches, which had 30,072 employees on the date under review. The index was lower than in the early winter of 1929, although it was higher than in any other year of the record.

Transportation

Street Railways and Cartage.—Employment in this division was seasonally quiet in all provinces. Data were compiled from 151 firms whose staffs declined from 25,517 on November 1, to 24,696 at the beginning of December. Although this loss was rather less pronounced than that recorded on the same date in 1929, the index then was slightly higher.

Steam Railways.—The trend of employment in railway operation was downward, 106 employers reporting 76,529 workers, as compared with 78,461 in the preceding month. The largest decrease was in the Prairie Provinces. The index number was lower than on December 1, 1929, despite the fact that the losses then reported greatly exceeded those indicated on the date under review.

Shipping and Stevedoring.—Seasonal declines were registered in shipping, from which 1,228 persons were let out by the 81 cooperating employers, whose staffs aggregated 17,134. Improvement in the Maritime Provinces was offset by curtailment in Quebec, Ontario and British Columbia. Decreases had also been indicated on December 1, 1929, but the index then was higher.

Construction and Maintenance

Building.—Employment in building construction showed a seasonal falling-off from the preceding month. Statements were compiled from 741 contractors employing 48,569 persons, as compared with 57,248 on November 1. The most extensive curtailment was in Quebec and Ontario, although there was a general recession throughout the Dominion. Slightly greater curtailment was reported on December 1, 1929, when employment was more active.

Highway.—Further important decreases were noted in the staffs of the 293 highway contractors furnishing statistics, who employed

44,040 workers on December 1, as compared with 50,089 in the preceding month. Declines were registered in all provinces, except British Columbia, but these would have been much more extensive had it not been for public works undertaken to relieve unemployment. The number released on December 1, 1929, was much greater, and employment then was in decidedly less volume.

Railway.—Activity on railway construction and maintenance showed another seasonal decline which, however, involved fewer workers than that noted on the same date in 1929, when the index was lower than on December 1, 1930. Statistics were received from 54 contractors and divisional superintendents whose staffs diminished from 42,965 men on November 1, to 35,982 on the date under review. The most pronounced contractions were in Ontario and the Prairie Provinces, although there was general losses throughout the country.

Services

Further seasonal reductions were reported by the 245 cooperating firms in this division who had 21,369 employees, or 463 less than

in the preceding month. Hotels and restaurants continued to decrease their labour forces, and laundries were also slacker. Employment was slightly less active than on December 1, 1929, but was brisker than on that date in all earlier years of the record.

Trade

Large seasonal increases were again noted in retail trade, but wholesale houses released some employees. Returns were received from 804 trading establishments with 94,414 employees, or 4,198 more than on November 1. The index, standing at 134·8, was only fractionally lower than the maximum for the last ten years reported on December 1, 1929. This index is particularly significant as an indication of the anticipated purchasing power of the people during the holiday season.

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area, or industry, is of the total number of employees reported in Canada by the firms making returns on the date under review.

(2) Unemployment in Trade Unions at the Close of November, 1930

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work other than their own trades or who are idle because of illness are not considered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The customary seasonal curtailment of industry with the approach of the winter season, combined with the exceptional dullness which prevailed during 1930, caused the percentage of unemployment among local trade unions to rise from 10·8 at the close of October to 13·8 on the last day of November, 1930. All provinces shared in this downward employment movement manifest during November, Quebec and Saskatchewan showing the most important reductions. The Quebec situation was influenced to a large degree by the unfavourable conditions existing in the garment trades, though the building trades and steam railway operation also contributed substantially to the general adverse situation shown.

Compared with conditions in November, 1929, when the unemployment percentage stood at 9·3, Nova Scotia unions alone registered improvement during the month under review, which was but nominal, while of the declines those reported by Quebec and Ontario unions involved the largest number of workers.

A separate tabulation is made monthly of unemployment in the largest city in each province except Prince Edward Island. Regina unions during November reported large employment recessions from the previous month, and in Montreal, Edmonton and Vancouver the declines were noteworthy. Moderate curtailment of activity was reflected by Toronto and Winnipeg unions, while in Halifax the employment tendency was slightly adverse. Saint John unions, however, reported a nominally improved situation. In all cities a lower level of activity was maintained than in November, 1929, Regina as in the previous comparison showing the most extensive employment losses. In Toronto also the reductions were especially noteworthy.

Accompanying this article is a chart which illustrates the unemployment trend by months from January, 1924, to date. From this it will be noted that the curve at the end of November rose sharply from the previous month, showing a substantial increase in the volume

of idleness, and unemployment as shown by the curve was also considerably in advance of that indicated in November, 1929.

Unemployment in the manufacturing industries was more prevalent during November than in the preceding month according to the reports received from a total of 496 unions with 59,132 members. Of these, 8,774, or a percentage of 14.8, were idle on the last day of the month, contrasted with 10.7 per cent in October. A considerable proportion of the employment reductions took place in the garment trades of Quebec where operations were largely restricted. The majority of the trades, however, reported some falling off in available work which was of minor importance when compared with that recorded by unions of garment workers. Considerable improvement, however, was indicated by unclassified

1929. In the Nova Scotia coal fields employment eased off slightly during November from the previous month, while in British Columbia the situation remained almost unchanged. Alberta unions, on the other hand, showed a nominal employment advance. The trend of employment for both Nova Scotia and Alberta miners was slightly better than in November, 1929, and in British Columbia practically all members were reported at work in both months of the comparison.

The seasonal lull in building activities was in evidence to a more marked degree during November than in the preceding month, the 239 unions of building tradesmen from which reports were received with a total membership of 30,199 persons, showing 37.7 per cent of idleness compared with 31.5 per cent in October. Bricklayers, masons and plasterers

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

workers, and employment for wood, hat and cap workers and bakers was on a higher level. The situation in the manufacturing industries, as a whole, was also less favourable than in November, 1929, when the unemployment percentage stood at 12.8. Especially noteworthy were the declines among pulp and paper makers, while reductions of lesser magnitude occurred among textile, wood, hat and cap, jewellery, glass, unclassified workers, printing tradesmen, metal polishers and cigarmakers. On the contrary, the garment trades reflected more active conditions than in November, 1929, and employment for iron and steel workers increased slightly.

From unions of coal miners 50 reports were tabulated during November, covering 18,349 members, 389 of whom or a percentage of 2.1 were idle on the last day of the month, contrasted with 1.9 per cent of unemployment in October and 2.4 per cent in November,

reported particularly depressed conditions from October, and the contractions registered by carpenters and joiners affected a considerable number of workers. Among the remaining tradesmen employment recessions on a much smaller scale were noted. In making a comparison with the return for November, 1929, in the building trades when 16.3 per cent of the members reported were without employment, bricklayers, masons and plasterers, carpenters and joiners hod carriers and building labourers, title layers, lathers and roofers, and bridge and structural iron workers all reported large increases in slackness during the month under review, and among painters, decorators and paperhangers, and plumbers and steamfitters employment also showed a substantial falling off. Reductions on a more moderate scale were recorded by granite and stonecutters and electrical workers.

The situation in the transportation industries was somewhat less favourable during November than in either the previous month or November, 1929, the returns tabulated from a total of 756 unions with a membership aggregate of 70,305 persons showing 8.2 per cent of unemployment contrasted with 6.5 per cent in October and with 7.0 per cent in November a year ago. Steam railway employees, whose returns constitute about 80 per cent of the entire group membership reporting, navigation workers, and teamsters and chauffeurs all shared slightly in the employ-

ment drop manifest both in comparison with October and with November a year ago. Among street and electric railway employees the same situation prevailed as in October, but nominal improvement in conditions was indicated from November, 1929.

From longshore workers whose returns are tabulated separately each month, due to the casual nature of their employment, 14 reports were received during November, covering a membership of 6,255 persons. Of these 1,182 were idle on the last day of the month, a percentage of 18.9 contrasted with 17.5 per cent of unemployment in October and with 22.6 per cent at the close of November a year ago.

The 6 associations of retail clerks making returns during November with 1,309 members, reported .3 per cent of unemployment compared with percentage of .1 in October and with 10.2 in November, 1929.

Civic employees with 71 unions reporting 8,233 members during November were not quite so busy as in October, the percentage of idleness standing at 1.3 contrasted with .2 per cent in October and with 2.3 per cent in November a year ago.

Unemployment in the miscellaneous groups of trades at the close of November increased slightly from the previous month, the 129 unions from which reports were tabulated with 6,756 members, indicating 14.2 per cent of idleness compared with 13.3 per cent in October. Stationary engineers and firemen were largely responsible for the less favourable situation, though among barbers also employment eased off slightly. On the other hand, hotel and restaurant employees reported considerable improvement in conditions, and employment for unclassified workers and theatres and stage employees was slightly better. In comparison with the returns for November, 1929, when 6.2 per cent of idleness was reported in the miscellaneous group of trades, stationary engineers and firemen, as in the previous comparison, registered the most extensive contractions, and among unclassified workers employment was at a considerably lower level. Quieter conditions also prevailed for hotel and restaurant employees, theatre and stage employees, and barbers than in November a year ago.

Due to the closing of the halibut season employment for fishermen showed a large falling off from October, the 3 unions from which reports were received with 1,325 members, indicating 13.6 per cent of unemployment compared with 2.3 per cent in October. The situation, however, was better than in November, 1929, when 19.7 per cent of the members reported were idle.

TABLE 1.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Pr. Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1919.....	3.1	2.0	3.4	2.7	2.1	3.2	2.0	7.9	3.4
Average 1920.....	1.5	2.0	7.2	3.4	3.1	3.2	2.8	11.2	4.9

TABLE II—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

Table with 17 columns: Months, Fishing, Lumbering and Logging, Mining, Manufacturing Industries, Vegetable products, Pulp and paper, Printing and publishing, Wood products, Textiles, textiles and textile products, Workers, Hat, cap and glove makers, Animal products, Iron and its products, Non-ferrous metals, Clay, glass and stone products, Mineral products, Miscellaneous manufacturing industries, Building and construction, Transportation, Shipping and stevedoring, Steam railway operation, Local transportation, Communication, Telephone operation, Trade (retail shop clerks), Services, Governmental, Miscellaneous, All occupations.

Lumber workers and loggers recorded heavy increases in unemployment at the close of November as shown by the reports received from 4 unions with 934 members. Of these 189, or a percentage of 20.2 were without work on the last day of the month, contrasted with 8.6 per cent in October. Pronounced curtailment was also evident from November, 1929, when 6.3 per cent of the membership reported were without work.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1929 inclusive, and also the percentage of unemployment by provinces for November of each year from 1919 to 1927 inclusive and for each month from January, 1928, to date. Table II summarizes the returns in the various groups of industries for the same months as Table I.

(3) Employment Office Reports for November, 1930

The volume of business transacted during the month of November, 1930, by offices operated under the Employment Service of Canada was 28 per cent more extensive than in October and nearly 30 per cent in excess of November a year ago. The gain in both instances was entirely due to greatly increased placements in the construction and maintenance group, where provincial and municipal

The accompanying chart shows the trend of employment since January, 1928, as represented by the ratio of vacancies notified and of placements effected for each one hundred applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. It will be noted that the curves of vacancies and placements in relation to applications showed an upward

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ——— Vacancies - - - - - Placements o-o-o-o-o

relief measures afforded extra work for the unemployed, in the construction of sewers, drains, dikes, pipe lines, highways, park and boulevard improvement, etc. All remaining industrial divisions except mining, in which there was a nominal gain, showed declines in comparison with November a year ago, those in logging and manufacturing being the heaviest.

trend during the first half of November, the former curve, however, remained stationary during the latter half of the month, but that of placements continued upward, though at the close of November, it was still three points below the level shown last year at that time, while the curve of vacancies was six points below the ratio shown on November 30, 1929.

The ratio of vacancies to each one hundred applications was 53.0 throughout the month, in contrast with ratios of 67.5 and 59.0 during the two periods of November, 1929. The ratios of placements to each one hundred applications during the periods under review were 49.5 and 53.5 as compared with 65.0 and 56.8 during the corresponding month of 1929.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during November, 1930, was 1,521 as compared with 1,195 during the preceding month and with 1,080 in November a year ago.

The average number of applications for employment received daily by the offices during the month under review was 2,870, in comparison with 2,519 in October and with 1,708 during November, 1929.

The average number of placements made daily by the offices of the Service during November, 1930, was 1,482, of which 487 were in regular employment and 995 in work of one week's duration or less, as compared with a total daily average of 1,157 during the preceding month. Placements in November a year ago averaged 1,040 daily, consisting of 643 placements in regular and 397 in casual employment.

During the month of November, 1930, the offices of the Service referred 36,751 persons to vacancies and effected a total of 35,557 placements. Of these the placements in regular employment were 11,690, of which 8,726 were of men and 2,964 of women, while placements in casual work totalled 23,867. The number of vacancies reported by employers was 29,208 for men and 7,295 for women, a total of 36,503, while applications for work numbered 68,862 of which 57,150 were from men and 11,712 from women.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1920, to date.

Year	Placements		
	Regular	Casual	Totals
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756

1930 (11 months).....	171,415	142,513	313,928

NOVA SCOTIA

There was an increase of over 10 per cent in the number of positions offered through Employment Offices in Nova Scotia during November, 1930, when compared with the preceding month, and of nearly 27 per cent in comparison with November, 1929. Placements were almost 8 per cent higher than in October and 27 per cent in excess of November a year ago. Increased placements in transportation, services and construction and maintenance were responsible for the gains over November, 1929, all remaining groups showing declines, though in farming and manufacturing, these changes were nominal only. Industrial divisions in which most of the placements were effected were: manufacturing, 45; transportation, 179; construction and maintenance, 102; trade, 66; and services, 443, of which 342 were of household workers. Placements of men in regular work numbered 98 and of women 68.

NEW BRUNSWICK

Orders listed at Employment Offices in New Brunswick during November, 1930, called for over 21 per cent more workers than in the preceding month and over 15 per cent more than during November a year ago. Placements also showed gains of nearly 22 per cent and 12 per cent, respectively, under each comparison. The largest increase in placements over November, 1929, was in construction and maintenance, followed by gains of lesser magnitude in services and manufacturing. Losses were shown in all other groups, the most pronounced being in logging. Placements by industrial divisions included: manufacturing, 33; logging, 15; construction and maintenance, 200; and services, 628, of which 409 were of household workers. During the month 220 men and 45 women were placed in regular employment.

QUEBEC

During the month of November, 1930, positions offered by Employment Offices in the Province of Quebec were almost 26 per cent less than in October and over 43 per cent less than in November a year ago. Placements also declined over 29 per cent from the preceding month and were 46 per cent less than in November, 1929. Fewer placements in comparison with November a year ago were made in all groups except trade, where a slight gain was reported. Logging was chiefly responsible for the total loss shown, though services and construction and maintenance showed fairly heavy declines, those in the remaining groups being of lesser volume, or nominal only. Divisions in which employment was found for the majority of workers

included: manufacturing, 41; logging, 418; transportation, 45; construction and maintenance, 209; trade, 49; and services, 441, of which 333 were of household workers. Regular employment was found for 808 men and 326 women.

ONTARIO

Opportunities for employment as indicated by orders received at Employment Offices in the Province of Ontario during the month of November, 1930, were nearly 35 per cent in excess of those recorded during October and 56 per cent more than those listed during November a year ago. Placements showed an increase of 37 per cent over the preceding month and of almost 84 per cent in comparison with November, 1929. A very heavy gain in placements occurred in construction and maintenance, which was due to the extensive relief programs sponsored by the Municipal and Provincial governments and resulted in repairs and extension to sewerage systems and drains, sidewalks, and highway and park improvement, beside other undertakings of a local nature, as repairs to reservoirs, brush cutting and operation of stone quarries. The only other group showing improvement was services, where a moderate gain was reported. Of the divisions where losses occurred, the heaviest was in logging, followed by slighter recessions in manufacturing, transportation and farming. Placements by industrial divisions included: manufacturing, 798; logging, 526; farming, 264; transportation, 228; construction and maintenance, 14,326; trade, 469; and services, 4,261, of which 2,243 were of household workers. During the month 3,652 men and 1,298 women were placed in regular employment.

MANITOBA

Employment Offices in Manitoba during November, 1930, reported a decline of nearly 19 per cent in vacancies when a comparison was made with the records of October, 1930, and also with those of November a year ago. Placements were also 17 per cent less than during the preceding month and almost 48 per cent below those effected in November, 1929. All groups, except construction and maintenance, reported fewer placements, the most pronounced declines being in logging and services. A fair sized gain was shown in construction and maintenance, but quite insufficient to offset the declines indicated above. Placements by industrial divisions included: manufacturing, 48; logging, 111; farming, 359; construction and maintenance, 617; trade, 125; and services, 1,112, of which 852 were of household workers. There were 612 men and 403 women placed in regular employment during the month.

SASKATCHEWAN

The number of positions offered through Employment Offices in Saskatchewan during November, 1930, was 4 per cent less than in the preceding month, but almost 52 per cent in excess of November, 1929. Placements declined practically 4 per cent from October, but increased nearly 53 per cent over November a year ago. The major portion of the gain was in the construction and maintenance group, due to relief work carried on in various sections of the province, but additional placements were also recorded in logging and farming. Other groups showed declines, that in services being the most pronounced. Industries in which the largest number of positions were filled were: manufacturing, 69; logging, 413; farming, 429; construction and maintenance, 1,174; trade, 84; and services, 670, of which 441 were of household workers. During the month under review 1,106 men and 292 women obtained regular employment.

ALBERTA

There was a decrease of nearly 18 per cent in opportunities for employment offered by Alberta Offices during November, 1930, as compared with those of the preceding month, but an increase of 47 per cent over vacancies offered during the corresponding month a year ago. Placements showed a loss of 17 per cent in comparison with October's but a gain of nearly 48 per cent over November, 1929. Construction and maintenance was again the only group to report noteworthy improvement in placements and this, as in all sections of the country, was due to the relief work, both Municipal and Provincial, carried on in various sections, highway, sewer and bridge construction being the main undertakings in the Province of Alberta. Mining also showed a slight gain, all other divisions showing declines. The majority of placements recorded during the month was in the following industrial groups: manufacturing, 98; logging, 69; farming, 330; mining, 149; construction and maintenance, 1,845; trade, 78; and services, 759, of which 367 were of household workers. Placements in regular employment numbered 1,725 of men and 270 of women.

BRITISH COLUMBIA

During November, 1930, orders received at Employment Offices in the province of British Columbia were over 9 per cent more than in October and 42 per cent in excess of November a year ago. Placements also showed gains of 9 per cent and nearly 43 per cent over those of the preceding month and of November, 1929. Nominal gains only were

shown in services, farming, fishing and communication and one of a substantial nature in construction and maintenance, where additional work on highways, etc., had been provided for the unemployed. All other groups reported declines, that of manufacturing being the largest. The majority of placements recorded during the month occurred in the following industries: manufacturing, 125; logging, 309; farming, 74; transportation, 81; construction and maintenance, 1,437; trade, 124; and services, 875, of which 475 were household workers. Placements in regular work numbered 505 of men and 262 of women.

Movement of Labour

During the month of November, 1930, the offices of the Employment Service of Canada effected 35,557 placements in regular employment, 4,742 of which were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 698 were granted the Employment Service reduced transportation rate, 549 going to points within the same province as the despatching office and 149 to other provinces. The reduced transportation rate, which is 2.7 cents per mile with the minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Quebec offices issued 61 certificates for reduced transportation during November, 17 provincial and 44 interprovincial. The latter were issued at Hull to 39 bushmen travelling to situations in the Pembroke zone and to 5 bushmen going to Cobalt. Provincially Quebec transferred 8 bushmen, 5 teamsters and 3 cooks, and Hull 1 bushman to employment within their respective zones.

From Ontario centres 212 persons travelled at the Employment Service reduced transportation rate, 192 of whom were bound for centres within the province and 20 to points outside. The provincial movement from Sudbury included 25 carpenters going to Timmins, 4 plasterers to Sault Ste. Marie and 46 bushmen and 1 handyman to employment within the Sudbury zone. To points within its own zone Port Arthur despatched 75 bushmen and Fort William 5 tie loaders. Receiving certificates at North Bay 6 teamsters, 6 bushmen and 1 tinsmith proceeded to Timmins and 5 bushmen and 3 teamsters to Cobalt. In addition, the Timmins zone received 14 dam construction workers from Cobalt, and Oshawa 1 tool maker from Windsor. Of the workers going outside the province 12

were rock drillers travelling to Quebec on certificates issued at Cobalt and 8 were bricklayers destined to the Rouyn zone and transferred from North Bay.

Transfers at the special reduced rate in Manitoba during November were 177 in number, all of which originated at Winnipeg and of these 100 were to provincial centres and 77 to points in other provinces. Within the province 1 farm hand, 8 farm household workers and 3 hotel employees were conveyed to Brandon, 1 farm hand, 1 farm domestic, 1 hotel cook, 2 highway construction labourers and 1 housekeeper to Dauphin, and 58 farm hands, 17 bushmen, 2 farm domestics, 3 fishermen, 1 construction labourer and 1 highway construction cook to employment at points throughout the Winnipeg zone. The interprovincial movement included 40 bushmen, 3 farm hands, 1 hotel waitress, 2 domestics, 1 barn boss, 1 hotel porter and 1 saw filer going to Port Arthur; 4 bushmen to Prince Albert and 21 farm hands and 3 farm household workers to various rural points in Saskatchewan.

The business transacted by Saskatchewan offices in November involved an issue of 129 reduced rate certificates, 126 of which were to provincial centres and the remainder to points outside. The transfers within the province represented the movement of 94 bushmen mainly to points within the Prince Albert zone and of 26 farm hands and 3 farm household workers to various agricultural centres throughout the province. All offices combined to effect these transfers. In addition, 1 labourer travelled from Prince Albert to Weyburn, 1 power construction lineman from Regina to Saskatoon, and 1 miner from Moose Jaw to employment within its own zone. The 3 persons going outside the province were bushmen, 1 journeying from Regina and 1 from Saskatoon to the Dauphin zone, while from Moose Jaw, 1 was transported to Winnipeg.

In Alberta 74 workers took advantage of the Employment Service reduced transportation rate during November, 69 going to provincial employment, the balance representing an interprovincial movement. The majority of the transfers within the province were effected by the Edmonton office which despatched 1 farm hand to Drumheller and 4 farm hands, 1 farm domestic, 21 bridge men, 17 bush workers, 3 saw mill workers, 1 truck driver, 1 axe man, 7 mine workers, 3 hotel workers, 1 labourer, 1 miller's assistant, and 1 domestic to employment at points within the district covered by the Edmonton offices. From Calgary also, 2 farm hands went to Drumheller, 1 cook to Edmonton and 3 farm

hands and 1 farm domestic within the Calgary zone. The 5 transfers outside the province were of farm hands proceeding from Edmonton to Saskatoon.

British Columbia offices granted 45 certificates for reduced transportation during November, all to provincial points. Of these, 32 were issued at the Vancouver office to 7 steamfitters, 5 mine workers, 1 hotel worker and 1 foreman going to Nelson, 1 farm hand and 1 hotel cook to Kamloops, 1 baker and 1 hotel cook to Penticton, 1 farm hand to Prince George and 5 tunnel construction workers, 2 carpenters, 1 cement finisher, 1 miner, 1 cook, 2 farm household workers, and

1 bushman travelling to points within the Vancouver zone. In addition, Nelson transferred 2 bushmen and 1 engineer and Prince George 10 bushmen to employment within their respective zones.

Workers who benefited by the Employment Service reduced transportation rate during November were 698 in number, 426 of whom were conveyed by the Canadian National Railways, 207 by the Canadian Pacific Railway, 55 by the Timiskaming and Northern Ontario Railway, 9 by the Pacific Great Eastern Railway and 1 by the Northern Alberta Railway.

(4) Building Permits Issued in Canada During November, 1930

The aggregate value of the construction represented by the building permits issued by 61 cities during November was \$11,791,478. This was a seasonal decline of \$932,311 or 7.3 per cent as compared with the October total of \$12,723,789, and a reduction of \$4,379,922 or 27.1 per cent in comparison with the November, 1929, figure of \$16,171,400. The total for November, 1930, was slightly greater than the average for November of the last ten years. The cumulative value for the elapsed eleven months of 1930 was also rather higher than the average for the same period in the ten years, 1920-29.

Some 50 cities furnished detailed statistics, showing that they had issued nearly 900 permits for dwellings estimated to cost nearly \$4,600,000 and about 1,900 permits for other buildings estimated at almost \$7,000,000. During October, authority was granted for the erection of about 1,200 dwellings and 3,000 other buildings, estimated to cost approximately \$5,500,000 and \$6,000,000, respectively.

New Brunswick, Alberta and British Columbia reported increases of 122.8 per cent, 27.1 per cent and 51.2 per cent, respectively, in the value of the building permits issued as compared with October, 1930, while reductions were indicated in the remaining provinces, that of \$500,505 or 79.1 per cent in Saskatchewan being the largest proportionately.

As compared with November, 1929, New Brunswick, Quebec and Alberta reported increases, that of \$1,894,600 or 56.0 per cent in Quebec being the most noteworthy. The greatest decline in this comparison was that of \$4,724,005 or 54.4 per cent in Ontario.

Of the four largest centres, Montreal recorded a decrease in the value of the building authorized in November as compared with the preceding month, but an increase over November of a year ago. In Toronto and Winnipeg, there were reductions in both com-

parisons, while in Vancouver the aggregate value was higher than in the preceding month, but lower than in November of last year. Of the other centres, Saint John, Three Rivers, Brantford, Fort William, Ottawa, Owen Sound, York and East York Townships, Lethbridge, Medicine Hat and Kamloops reported greater building authorizations than in either comparison.

Cumulative Record for First Eleven Months, 1920-1930.—The following table shows the value of the building authorized by 61 cities during November and in the first eleven months of each year since 1920, as well as index numbers for the latter, based upon the total for 1920 as 100. The January-November index numbers of wholesale prices of building materials in these years are also given (average 1926 = 100).

Year	Value of permits issued in Nov.	Value of permits issued in first eleven months	Indexes of value of permits issued in first eleven months (1920=100)	Average indexes of wholesale prices of building materials in first eleven months (Average 1926=100)
	\$	\$		
1930.....	11,791,478	148,349,706	132.2	91.4
1929.....	16,171,400	220,255,867	195.3	99.5
1928.....	15,830,836	203,010,555	181.0	98.0
1927.....	12,857,622	172,858,176	154.1	96.7
1926.....	9,975,451	144,877,789	129.2	100.2
1925.....	7,988,765	117,665,590	104.9	103.8
1924.....	10,212,908	120,119,829	107.1	107.2
1923.....	8,228,206	126,547,365	112.8	111.7
1922.....	11,182,030	138,698,005	123.6	108.6
1921.....	12,192,414	111,257,084	99.2	123.9
1920.....	5,627,949	112,175,268	100.0	153.4

The aggregate for the first eleven months of 1930 was 32.6 per cent lower than in 1929, the high level of the record, but was slightly higher than the ten-year average of

\$146,746,553, while the average index numbers of wholesale prices of building materials continue lower than in any other year since 1920. The accompanying table gives the value of

the building permits issued by 61 cities in October and November, 1930, and November, 1929. The 35 cities for which records are available since 1910 are marked by asterisks.

ESTIMATED COST OF BUILDING WORK AS INDICATED BY PERMITS ISSUED BY 61 CITIES

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the British *Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary, showing the employment situation during November is reproduced below. The following report on unemployment conditions in the United States is based on the statistics published by the United States Department of Labour, showing the recent trend of employment in selected manufacturing industries throughout the country. The employment situation in the United States is further indicated by unemployment percentages based on statistics compiled each month by the American Federation of Labor, the source of these statistics being returns obtained from

the trade union locals in 24 representative cities. Summary figures for November, 1930, and previous months are reproduced below.

Great Britain

Employment continued to decline in November. There was a further seasonal increase in the numbers unemployed in the building industry, in public works contracting, brick, tile, cement and artificial stone manufacture, in the clothing trades, and in shipping service. Unemployment also increased in the mining industries (other than coal mining), in the pottery, glass, iron and steel (other than pig iron), engineering, shipbuilding and ship-repairing, and boot and shoe industries, and in the silk and artificial silk, linen, lace and carpet trades. There was however some improvement in coal mining and in the cotton and jute industries.

Among the workpeople, numbering approximately 12,400,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at November 24, 1930 (including those temporarily stopped as well as those wholly unemployed) was 19.1, as compared with 18.7 at October 27, 1930, and with 10.9 at November 25, 1929. The percentage wholly unemployed at November 24, 1930, was 14.8, as compared with 13.9 at October 27, 1930; while the percentage temporarily stopped was 4.3, as compared with 4.8. For males alone the percentage at November 24, 1930, was 19.8, and for females 17.2; at October 27, 1930, the corresponding percentages were 19.4 and 16.8.

At November 24, 1930, the numbers of persons on the registers of Employment Exchanges in Great Britain were 1,659,867 wholly unemployed, 521,305 temporarily stopped, and 105,288 normally in casual employment, making a total of 2,286,460. This was 48,959 more than a month before, and 1,001,002 more than a year before. The total included 1,659,476 men, 59,521 boys, 518,040 women, and 49,423 girls.

The 1,659,867 wholly unemployed included approximately 1,156,830 insured persons who had paid at least 30 contributions during the preceding two years and therefore satisfied the full contributions condition for the receipt of unemployment benefit; 419,670 insured persons who had paid less than 30 contributions during the preceding two years; and 83,370 uninsured persons. The wholly unemployed claimants for benefit, numbering 1,515,950, included 256,304 men, 6,149 boys, 45,672 women, and 2,976 girls who had been on the register for less than one month.

In Great Britain and Northern Ireland the total number of persons on the registers of Employment Exchanges at November 24, 1930, was 2,358,897.

United States

Employment in the United States decreased 2.5 per cent in November, 1930, as compared with October, 1930, and pay-roll totals decreased 5.1 per cent, according to returns made to the Bureau of Labour Statistics. The industries included in the above statement are manufacturing, coal mining, metalliferous mining, quarrying and non-metallic mining, crude petroleum producing, public utilities, trade (wholesale and retail), hotels, canning and preserving, and laundries, dyeing and cleaning.

A separate summary is made of the latest data available relating to all employees, exclusive of executive and officials, on Class I railroads. This tabulation is made from Interstate Commerce Commission reports for the months of August and September, 1930, and therefore cannot be included in the general statement for the month of November. The number of employees of Class I railroads as at September 15, totalled 1,469,521, representing a decrease of 1.9 per cent since August 15, 1930. The amount of pay-roll in the entire month of September was \$200,817,972, representing a decrease over the previous month of 3.4 per cent.

Employment in manufacturing industries decreased 2.7 per cent in November as compared with October, and pay-roll totals decreased 6.1 per cent. These changes are based upon returns made by 13,280 establishments in 54 of the principal manufacturing industries of the United States. These establishments in November had 2,837,854 employees whose combined earnings in one week were \$67,242,656.

The bureau's weighted index of employment for November, 1930, is 76.5, as compared with 78.6 for October, 79.7 for September, and 94.8 for November, 1929; the index of pay-roll totals for November, 1930, is 68.3, as compared with 72.7 for October, 74.2 for September, and 95.1 for November, 1929. The monthly average for 1926 equals 100.

Each of the 12 groups of industries had fewer employees in November than in October, the notable decreases being 7.3 per cent in leather, 4.2 per cent in lumber, and 3.8 per cent in stone-clay-glass; the smallest decrease was 0.3 per cent in the paper group.

Twelve of the 54 separate industries, upon which the manufacturing index is based, reported more employees in November than in October. Silk goods employees increased 4.5 per cent, slaughtering and meat packing and dyeing and finishing textiles each increased 1.5 per cent, and cotton goods employees increased 1.3 per cent; each of the decreases in the remaining 8 industries reporting increases was less than 1 per cent.

Outstanding decreases in employment in November as compared with October, most of which were largely seasonal, were 16.8 per cent in carriages and wagons, 9.9 per cent in millinery, 8.7 per cent in fertilizers, 8.3 per cent each in boots and shoes and women's clothing, 7.8 per cent each in men's clothing and cement, 7.3 per cent each in ice cream and cast-iron pipe. Employment was 1.9 per cent lower in November in the iron and steel

industry, 2.4 per cent lower in the automobile industry, 5.1 per cent lower in automobile tires, 5.8 per cent lower in shipbuilding, 5.6 per cent lower in machine tools, 4 per cent in petroleum refining, 3.3 per cent in woollen and worsted goods, 2.8 per cent in electrical-machinery-apparatus supplies, and 3.3 per cent lower in foundry and machine-shop products

Nine additional industries have been taken up during 1929 and 1930 and are not included in the bureau's indexes of employment or pay rolls, no data for 1926, the index-base year, being available. Increases in employment in these industries were reported in November as follows: Aircraft, 2.1 per cent; beet sugar, 26.7. Decreased employment was reported in the remaining 7 industries as follows: 0.6 per cent in rayon, 10.3 per cent in radio, 3.5 per cent in jewelry, 1.8 per cent in paint and varnish, 1.2 per cent in rubber goods, 7.4 per cent in beverages, and 0.2 per cent in cash registers, adding machines, and calculating machines

Decreased employment and pay rolls were shown in each of nine geographic divisions except the Mountain division, which again showed increased employment, due to the inclusion of the beet sugar industry. This industry's refining season begins in October and requires considerable numbers of additional employees while it lasts. Omitting beet sugar there would have been a decrease of 1.7 per cent in employment and a decrease of 4.4 per cent in pay-roll totals in the Mountain division.

Unemployment percentage.—Unemployment statistics which are being compiled each month by the American Federation of Labour, indicate the percentage of unemployed union members in twenty-four representative cities

of the United States, as follows: October to December, 1927, 14 per cent; January, 1928, 18 per cent; February, 1928, 18 per cent; March, 1928, 18 per cent; April, 1928, 16 per cent; May, 1928, 13 per cent; June, 1928, 11 per cent; July, 1928, 12 per cent; August, 1928, 9 per cent; September, 1928, 10 per cent; October, 1928, 9 per cent; November, 1928, 10 per cent; December, 1928, 13 per cent; January, 1929, 15 per cent; February, 1929, 15 per cent; March, 1929, 14 per cent; April, 1929, 12 per cent; May, 1929, 11 per cent; June, 1929, 9 per cent; July, 1929, 9 per cent; August, 1929, 9 per cent; September, 1929, 10 per cent; October, 1929, 11 per cent; November, 1929, 12 per cent; December, 1929, 16 per cent; January, 1930, 20 per cent; February, 1930, 22 per cent; March, 1930, 21 per cent; April, 1930, 21 per cent; May, 1930, 20 per cent; June, 1930, 20 per cent; July, 1930, 22 per cent; August, 1930, 22 per cent; September, 1930, 21 per cent; October, 1930, 21 per cent; November, 1930, 22 per cent.

The *Monthly Survey of Business* (published by the American Federation of Labour), from which the above percentages have been taken for the past two years, did not indicate in its issue for January, 1931, the percentage of unemployment in trade unions for the month of December, but gave the actual number of unemployed wage earners during the month as 5,300,000. This total is based upon United States Government figures supplemented by the estimate of the American Federation of Labour. It is stated in the same publication that "in December unemployment in trade unions increased less than is usual at this time of year, but figures for manufacturing industries in November showed that among the unorganized, unemployment increased more than usual."

STATISTICS OF UNEMPLOYMENT IN THE PRINCIPAL INDUSTRIAL COUNTRIES

INDUSTRIAL and Labour Information, the official weekly journal of the International Labour Office (League of Nations) in its issue of January 5, observes that "the year of 1931 opens under the black and menacing cloud of practically universal industrial depression and unemployment." There is, it adds, hardly a country in which unemployment has not become more serious since statistics of unemployment in various countries were compiled for November last.

"This is," it is stated, "partly due to normal seasonal causes; but the seasonal movement is

merely added to the continued deepening and widening of the general depression—deepening as shown by the steadily increasing unemployment, and among other things by the steadily decreasing world price level; widening because France, for instance, appears for the first time to be showing signs of an appreciable slackening in industrial activity and of unemployment.

"Evidence continues to point to a very close connection between the increase in unemployment and a fall in prices. This fall, which appeared in November to be coming to an end, has since then set in again with renewed

vigour. The fall in prices is essentially a monetary phenomenon. The monetary causes, are, however, by no means the only ones operating in the present crisis, and remedies must be sought in a number of different directions."

The International Labour Office has a special committee working at present on the unemployment problem and means of removing the causes of unemployment. The Economic and Financial Organization of the League of Nations is also engaged in an inquiry into the world economic depression. There are there-

fore two parallel but in no way overlapping international enquiries on unemployment and the world depression now in progress, and the International Labour Office announces that "some preliminary results of these enquiries may be looked for in the comparatively near future."

The accompanying interesting tabular statement of unemployment statistics in the principal industrial countries of the world has been compiled by the International Labour Office and published in its weekly journal of January 5.

* September, 1929.

The annual report of the United States Bureau of Labour Statistics for the fiscal year ended June 30, 1930, states that various reports received by the Bureau during the year indicate a growth of the 5-day week in industry, especially in the building trades. An analysis of the material available to the

bureau in February, 1930, showed that the 5-day week was then in existence in one or more of the building trades in at least 97 cities, involving 349,296 building-trades employees. In 17 of these cities, with 271,996 workers, all building trades were on a 5-day week basis.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

Reference was made in the LABOUR GAZETTE, June, 1930, page 652, to the Fair Wages and Eight-Hour Day Act of Parliament which was adopted on May 30 last. The text of this measure appeared in the April issue at page 383. This Act provides as follows:—

3. (1) Every contract made hereunder with the Government of Canada for construction, remodelling, repair or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(a) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or accept in cases of emergency, as may be approved by the Minister.

(2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication or manufacture is carried on in any established plant or factory other than a plant or factory established for the purposes of the work contemplated.

Section 5 of the Fair Wages and Eight-Hour Day Act authorized the Governor in Council, on the recommendation of the Minister of Labour, to make necessary regulations under the Statute. Those regulations have not yet been made. The Act, however, was put into effect at once as respects contracts for construction, remodelling, repair or demolition, both as to its provisions as to current and fair and reasonable rates of wages and as to the application of the eight-hour day.

The Fair Wages Policy of the Government of Canada, which has been in effect since 1900 and is now expressed in an Order in Council

adopted June 7, 1922, and amended April 9, 1924, requires that all contracts made on behalf of the Government of Canada for the construction or remodelling of public buildings of all kinds, railways, canals, roads, bridges, locks, dry docks, elevators, harbours, piers, wharves, lighthouses, and other works for the improvement and safety of transportation and navigation, rifle ranges, fortification, and other works of defence, dams, hydraulic works, slides, piers, booms, and other works for facilitating the transmission of timber, and all other works and properties constructed or remodelled for the Government of Canada must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed, or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on, or if there be no custom of the trade as respect hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give

effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district. or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respect hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the Contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively

the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed claim therefor may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being

performed under contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts Awarded Recently

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wage schedules as shown below, or the general fair wages clause above mentioned:—

DEPARTMENT OF NATIONAL DEFENCE

Contracts in Group "A" (Construction, etc.)

Electrical work at the Royal Canadian Air Force Hangar, Trenton, Ont. Name of contractors, The Canadian Comstock Co., Ltd., Toronto, Ont. Date of contract, December 12, 1930. Amount of contract, \$4,100.00. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Bricklayers and masons.....	\$1 00	8
Bricklayers' labourers.....	0 45	8
Plasterers.....	1 00	8
Carpenters.....	0 80	8
Painters and glaziers.....	0 70	8
Ordinary labourers.....	0 40	8
Roofers (sheet metal).....	0 70	8
Driver, team and wagon.....	per day 6 50	8
	per hour	
Structural ironworkers.....	1 00	8
Plumbers and steamfitters.....	0 70	8
Electricians.....	0 70	8
Concrete workers.....	0 40	8
Sheet metal workers.....	0 70	8
Roofers (felt and gravel).....	0 70	8
Plumbers and steamfitters' helpers	0 45	8

Plumbing work at the Royal Canadian Air Force, Hangar, Trenton, Ont. Name of contractors, The McClung Hardware, Ltd., Trenton, Ont. Date of contract, December 12, 1930. Amount of contract, \$4,361.00. The above-mentioned fair wages schedule was also inserted in this contract.

DEPARTMENT OF PUBLIC WORKS

Contracts in Group "A" (Construction, etc.)

Construction of an addition and alterations to the public building at Kenogami, P.Q. Name of contractors, Gagnon & Co., Ltd., Jonquiere, P.Q. Date of contract, December 5, 1930. Amount of contract, \$2,722.80. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Concrete workers.....	\$0 40	8
Concrete mixers.....	0 45	8
Concrete floaters.....	0 55	8
Concrete finishers.....	0 75	8
Stone masons.....	1 00	8
Stone cutters, limestone.....	0 75	8
Stone cutters, granite.....	1 00	8
Brick and hollow tile layers.....	1 00	8
Structural steel workers.....	1 10	8
Carpenters and joiners.....	0 55	8
Sheet metal workers.....	0 55	8
Felt and gravel roofers.....	0 55	8
Terrazzo layers.....	1 00	8
Marble and tile setters.....	1 00	8
Plasterers.....	1 00	8
Metal lathers.....	0 60	8
Painters and glaziers.....	0 55	8
Plumbers.....	0 55	8
Steamfitters.....	0 55	8
Electricians.....	0 55	8
Labourers.....	0 35	8
Skilled labourers and helpers.....	0 45	8
	per day	
Driver, horse and cart.....	5 00	8
Driver, team and wagon.....	6 50	8
	per week	
Motor truck driver.....	17 50	8

Construction of wharf repairs at Fairhaven, Charlotte Co., N.B. Name of contractors, Luther Rogerson & Son, Leonardville, N.B. Date of contract, November 15, 1930. Amount of contract, approximately \$8,500.00. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per per day week
Carpenters.....	\$0 65	8 48
Blacksmiths.....	0 65	8 48
Labourers.....	0 35	8 48
	per day	
Horse, cart and driver.....	4 50	8 48
Team, wagon and driver.....	6 50	8 48

Installation of electric plant, wiring and fittings in the public building at Arichat, N.S. Name of contractor, Wm. W. Hoyt, Halifax, N.S. Date of contract, December 12, 1930. Amount of contract, \$1,465.00. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per per day week
Electricians.....	\$0 90	8 48
Electricians' helpers.....	0 45	8 48

Installation of electric wiring and fittings in public building, Owen Sound, Ont. Name of

contractors, Patterson Electric Ltd. Toronto, Ont. Date of contract, December 6, 1930. Amount of contract, \$1,947.00. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Electricians.....	\$0 75	8
Electricians' helpers.....	0 50	8

Construction of a wharf extension at St. Omer, Bonaventure Co., P.Q. Name of contractor, Mr. Omer Arseneau, St. Omer, P.Q. Date of contract, December 6, 1930. Amount of contract, approximately \$23,408.00. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Master carpenter.....	\$0 60	8
Carpenters.....	0 50	8
Timbermen.....	0 40	8
Blacksmiths.....	0 50	8
Blacksmiths' helpers.....	0 40	8
Labourers.....	0 35	8

Construction of a breakwater wharf at Cockburn Island, District of Algoma East, Ont. Name of contractors, McLarty, Harten & Urber, Ltd., Sault Ste. Marie, Ont. Date of contract, December 6, 1930. Amount of contract, approximately \$26,237.27. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Carpenters.....	\$0 75	8
Quarry men.....	0 45	8
Blacksmiths.....	0 65	8
Blacksmiths' helpers.....	0 50	8
Labourers.....	0 45	8
Teamsters, team and wagon.....	per day 6 50	8
	per hour	
Truck driver.....	0 50	8
Derrick hoist operators.....	0 85	8
Diver.....	1 00	8
Diver's tender.....	0 50	8
Timbermen.....	0 60	8

Construction of an extension to the wharf at Bamfield East, Comox Alberni District, B.C. Name of contractors, Victoria Pile Driving Co., Victoria, B.C. Date of contract, November 25, 1930. Amount of contract, approx-

imately \$6,260.17. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Pile driver foreman.....	\$1 25	8
Pile driver engineer.....	1 12½	8
Pile driver boomman.....	1 06½	8
Pile driver bridgeman.....	1 00	8
Fireman.....	0 68½	8
Powdermen.....	0 68½	8
Labourers.....	0 50	8
Divers.....	2 00	
	per day	
Pipelayers.....	4 75	8
Pipefitters.....	5 25	8
Pumpmen.....	5 50	8

Construction of a public wharf at Petit de Grat, N.S. Name of contractors, Thos. D. Morrison of Descousse, Harry J. Doyle and Charles D. Doyle of Rocky Bay, N.S. Date of contract, December 6, 1930. Amount of contract, approximately \$9,016.00. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per per day week
Carpenters.....	\$0 60	8 48
Labourers.....	0 35	8 48

Construction of a wharf at Point Fleurent, Bonaventure Co., P.Q. Name of contractor, Joachim J. Leclerc, St. Joachim de Tourelle, P. Q. Date of contract, December 6, 1930. Amount of contract, approximately \$26,473.00. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Master carpenter.....	\$0 60	8
Carpenters.....	0 50	8
Blacksmith.....	0 50	8
Blacksmiths' helpers.....	0 40	8
Labourers.....	0 35	8
Timbermen.....	0 40	8

Docking, repairing, chipping, scraping and painting of Steel Hopper Scow No. 105, at Pictou, N.S. Name of contractors, The Pictou Foundry and Machine Co., Pictou, N.S. Date of contract, December 1, 1930. Amount of contract, \$1,150.00. A fair wages clause was inserted in the contract.

Docking, repairing, chipping, scraping and painting of Steel Hopper Scow No. 115, at Pictou, N.S. Name of contractor, The Pictou Foundry and Machine Co., Pictou, N.S. Date of contract, December 1, 1930. Amount of contract, \$975.00. A fair wages clause was inserted in the contract.

Contracts in Group "B" (Interior Fittings, etc)

Construction of interior fittings in the public building at Saskatoon, Sask. Name of contractors, Canadian Office & School Furniture Co., Ltd., Preston, Ont. Date of contract, November 17, 1930. Amount of contract, \$23,255.00. The "B" conditions* were inserted in the contract.

Construction of interior fittings in the public building at Beauharnois, P.Q. Name of contractors, Canadian Office and School Furniture Co., Ltd., Preston, Ont. Date of contract, December 2, 1930. Amount of contract, \$1,235.00. The "B" conditions* were inserted in the contract.

Construction of interior fittings in the public building at Gretna, Man. Name of contractors, Canadian Office and School Furniture Co., Ltd., Preston, Ont. Date of contract, December 12, 1930. Amount of contract, \$840.00. The "B" conditions* were inserted in the contract.

Construction of interior fittings in the public building at Saint-Pascal, P.Q. Name of contractors, The Interior Hardwood Co., Ltd., Kitchener, Ont. Date of contract, December 24, 1930. Amount of contract, \$885.00. The "B" conditions* were inserted in the contract.

Construction of interior fittings in the public building at Sydenham, Ont. Name of contractors, The Interior Hardwood Co., Ltd., Kitchener, Ont. Date of contract, December 24, 1930. Amount of contract, \$735.00. The "B" conditions* were inserted in the contract.

DEPARTMENT OF RAILWAYS AND CANALS

Contracts in Group "A" (Construction, etc.)

Furnishing and erection of one 135' through plate girder swing span, hand operated, at Courtenay Bay Trestle, Saint John, N.B. Name of contractors, Dominion Bridge Co., Montreal, P.Q. Date of contract, December 23, 1930. Amount of contract, approximately \$39,945.00. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day per week
Structural steel workers.....	\$0 75	8 48
Hoisting engineer.....	0 65	8 48

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Construction: Buildings and Structures

THREE RIVERS, QUEBEC.—A CERTAIN CONTRACTOR AND THE NATIONAL CATHOLIC UNIONS OF CONSTRUCTION WORKERS.

This agreement, which covers the conditions of work on one contract, is to be in effect from May 1, 1930, to April 30, 1931, in so far as the wage scale is concerned and to the end of the contract in so far as the other conditions are concerned. The agreement is similar to the one covering another contract which was summarized in the LABOUR GAZETTE for November, 1930, with the following exceptions:

Wages: the wage rates paid to the classes of work mentioned in the other agreement are the same as in this, but the following additional

classes are included: journeymen plumbers 70 cents per hour, junior journeymen plumbers 55 cents, plumbers' apprentices 30 to 40 cents, licensed electricians 50 cents, carpenters' apprentices 40 cents, truck drivers 40 cents, firemen with certificate 55 cents, plaster mixers and hod carriers 45 cents, terrazzo expert, tile and mosaic layers \$1, mortar and celanite mixers 45 cents, stationary engineers on portable machines 60 cents, wood lathers \$3 per thousand, metal lathers 45 cents per hour, pipe layers 45 cents, cement finishers 70 cents.

All workmen and foremen will be secured through the unions.

If the contractor or sub-contractor violates any of the clauses of the agreement, they will have to pay to the Central Council of National Catholic Unions of Three Rivers \$10 per day for each infraction and a fine of \$10 per day for each workman employed who is not a member of these unions.

In case of dispute the matter will be referred to a joint committee consisting of two representatives of each party. If unable to agree, a fifth member will be chosen and the decision of the committee as so formed will be final and binding. There will be no stoppage of work while the committee is considering the dispute.

Transportation and Public Utilities: Water Transportation

HALIFAX, N.S.—CERTAIN STEAMSHIP COMPANIES AND THE INTERNATIONAL LONGSHOREMEN'S ASSOCIATION, LOCAL No. 269.

Agreement to be in effect from November 30, 1930, to November 30, 1931, and from year to year thereafter unless either party gives notice 30 days before November 30, of any year.

This agreement is similar to the one previously in effect and summarized in the LABOUR

GAZETTE, February, 1928, and February, 1930, with the following exceptions:

In the previous agreement one clause reads as follows:

"That not less than six men be employed in the holds of ships, whether discharging, loading or shifting cargo. This clause not to apply to coastal or grain steamers. Any question of practicability to be discussed by the Business Agent of the Longshoremen's Association and a representative of the Steamship Company concerned."

A dispute over the interpretation of the last sentence of this clause resulted in a strike on one ship which was reported in the *LABOUR GAZETTE*, May, 1930, page 499, and in the appointment of a board under the Industrial Disputes Investigation Act, the report of the board being given in the issue for June, 1930, page 632. This sentence has been omitted from the present agreement.

Time and one half will be paid for work after 6 p.m. on Saturdays instead of double time as was previously provided.

Any dispute as to the interpretation of any clauses of the agreement which cannot be settled between the parties will be referred to a committee consisting of one representative of each party and a third chosen by them; the majority decision of this committee will be final and binding.

ST. JOHN, N.B.—CERTAIN STEAMSHIP COMPANIES AND THE INTERNATIONAL LONGSHOREMEN'S ASSOCIATION, LOCAL No. 810 (COAL HANDLERS AND TRIMMERS).

Agreement to be in effect from December 1, 1930, to October 31, 1931, and from year to year thereafter until either party gives 30 days' notice before October 31, of any year.

The agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, February, 1928, with only minor changes in working conditions.

The regular rate of pay remains at 80 cents per hour for day work and \$1 per hour for night work.

ST. JOHN, N.B.—CERTAIN STEAMSHIP COMPANIES AND THE INTERNATIONAL LONGSHOREMEN'S ASSOCIATION, LOCAL No. 1039 (STEAMSHIP HORSE AND CATTLE FITTERS, SEALERS, LINERS AND CLEANERS).

Agreement to be in effect from December 1, 1930, to October 31, 1931, and from year to year thereafter until either party gives notice of change 30 days prior to October 31, of any year.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, February, 1928, with only a minor change in working conditions.

The regular rate of pay remains at 65 cents per hour for day work and 97½ cents per hour for night work.

Service: Personal

VICTORIA, B.C.—CERTAIN EMPLOYERS AND THE INTERNATIONAL ALLIANCE OF HOTEL AND RESTAURANT EMPLOYEES, LOCAL No. 459.

Agreement to be in effect from June 1, 1930, to June 1, 1931.

Hours: 8 per day, six per week.

Overtime for waiters, time and one half.

Work permits to cost \$1 per month payable to the local union.

Wages to include meals while working. Wages per week: chefs \$36, second fry cook \$30, night cook, \$32.40, cooks' helpers \$19.90, dish washers \$18, waiters \$18 per week or 45 cents per hour on short shifts, waitresses \$15 per week or 35 cents per hour on short shifts; at white lunches, cafeterias, etc., counter men \$18 per week, counter girls and pantry girls. \$12, bus girls \$9; waitresses at hotels \$35 per month with room or \$45 per month without room.

In case of shortage of help, non-experienced help may be employed and they will be paid \$15 per week for men and \$12 per week for girls for two months, after which time they will become union members and receive the union rate of pay.

A bill to provide for the reduction of the hours of work in mines has been introduced in the French Chamber of Disputes by Mr. Dura-four, a former Minister of Labour. Under its provisions a working day of 7½ hours would be established for a period of six months, and of 7¼ for another six months; this reduction in hours of work not giving rise to a reduction in wages. The promoters of the bill pointed out that, according to the accepted French social policy, miners are entitled to shorter hours of work than those laid down by general legislation on account of the strenuous nature of the work. No objection, it was stated, is taken to such discrimination by other classes of labour.

Workers' productive societies in the United States have declined in number in recent years according to data secured by the Bureau of Labour Statistics in connection with its latest study of co-operative societies published in the *Monthly Labour Review* for December. There were only 20 workers' productive societies in operation at the end of 1929 as compared with 39 in 1925, the date of the last previous comprehensive survey. Although the number of enterprises had decreased, the sales, share capital, surplus and reserves, and net profit per society were larger in 1929 than in 1925. A smaller amount was returned to the stockholders in 1929, however, as more of the profit was retained in the business.

The City Council of Hamilton, Ontario, has invited twenty-six other municipalities in the province to join in sending a delegation to Ottawa to request the Dominion Government to put some form of unemployment insurance into effect before next winter.

PRICES, RETAIL AND WHOLESALE, IN CANADA, DECEMBER, 1930

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices in December continued downward, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being lower than in November.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was again lower at \$10.10 at the beginning of December, as compared with \$10.25 for November; \$11.83 for December, 1929; \$11.31 for December 1928; \$11.17 for December, 1927; \$11.18 for December, 1926; \$11.56 for December, 1925; \$10.58 for December, 1924; \$10.73 for December, 1923; \$10.39 for December, 1922; \$11.00 for December, 1921; \$14.84 for December, 1920; \$16.92 for June, 1920 (the peak); \$13.65 for December, 1918; and \$7.96 for December, 1914. Of the twenty-nine foods included in the budget twenty-four were lower than in November, the most important declines being in the prices of beef, pork, lard, butter, bread, flour, rolled oats, beans, evaporated apples, prunes and potatoes. Seasonal increases occurred in the prices of eggs. Including the cost of fuel and rent with that of foods the total budget averaged \$20.46 at the beginning of December, as compared with \$20.60 for November; \$22.11 for December, 1929; \$21.56 for December, 1928; \$21.37 for December, 1927; \$21.40 for December, 1926; \$21.87 for December, 1925; \$20.90 for December, 1924; \$21.21 for December, 1923; \$20.97 for December, 1922; \$21.49 for December, 1921; \$25.67 for December, 1920; \$26.92 for July, 1920 (the peak); \$21.64 for December, 1918; and \$14.26 for December, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 502 commodities in 1926 as 100, continued downward, being 77.8 for December, as compared with 79.8 for November; 96 for December, 1929; 94.6 for December, 1928; 97.2 for December, 1927; and 97.9 for December, 1926. One hundred and twenty-two prices quotations were lower, thirty were higher and three hundred and fifty were unchanged.

In the grouping according to chief component materials seven of the eight main groups were lower, while one showed a slight increase. The groups which declined were: the Vegetables and Vegetable Products group,

mainly because of lower prices for grains, milled products, raw rubber and hay; the Animals and their Products group, due to lower prices for canned salmon, hides, butter, cheese, eggs and hogs; the Fibres, Textile and Textile Products group, because of declines in the prices of raw cotton, raw jute, hessian, manila, hemp, raw wool, and worsted cloth yarns; the Wood, Wood Products and Paper group, because of price reductions for certain lines of lumber and for wood pulp; the Iron and its Products group, because of lower prices for automobile body plates and scrap; the Non-Ferrous Metals and their Products group, due to lower prices for electrolytic copper, copper wire bars, silver, tin and zinc; and the Chemicals and Allied Products group, due to declines in the prices of arsenious oxide, iodine and shellac. The Non-Metallic Minerals and their Products group was slightly higher, due mainly to an increase in the price of bituminous coal.

In the grouping according to purpose, both consumers' goods and producers' goods were lower, the former due chiefly to lower prices for bread, flour, oatmeal, rolled oats, cheese and eggs, and the latter due to reduced quotations for certain lines of lumber, wheat, oats, flax, corn, raw cotton, raw jute, raw wool, hides, hogs, copper, tin and silver, which more than offset higher prices for barley, bran, raw silk, lambs and steers.

In the grouping according to origin, lower prices for wheat, oats, flax, corn, hogs, wool, hides, pulp, tin and silver caused a decline in the raw and partly manufactured goods. Fully and chiefly manufactured goods were also lower because of lower quotations for flour, shorts, cheese, canned salmon, copper wire bars and brass. Domestic farm products, articles of marine origin, articles of forest origin and articles of mineral origin declined.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of December, of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the averages of

quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provisions for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published

in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1917, quarterly from 1918 to 1928, and monthly since January, 1929. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

Cost of Electric Current and Gas for Household

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.3; 1916, 86.3; 1917, 84.6; 1918, 82.9; 1919, 81.6; 1920, 81.1;

1.—RETAIL PRICES OF STAPLE FOODS, GROCERIES, FUEL AND LIGHTING, AND

Table with 12 columns: LOCALITY, Sirloin steak, Round steak, Rib roast, Shoulder roast, Stewing, Veal, Mutton, Fresh, Salt, Bacon (Breakfast), and Ham. Rows list various Canadian locations and their corresponding prices in cents.

a Price per single quart higher. b Price in bulk lower. c Formerly quoted 11-15 cents but milk at 15 cents per quart not extensively sold.

RENTALS IN CANADA AT THE BEGINNING OF DECEMBER, 1930

Fish								Lard, pure leaf, best, per lb.	Eggs			Butter	
Cod steak, fresh and frozen, per lb.	Halibut, fresh and frozen, per lb.	Whitefish, fresh and frozen, per lb.	Salt herrings, per lb.	Salt herrings, per doz.	Salt cod, boneless, per lb.	Finnan haddie, per lb.	Canned salmon, (kind most sold) per lb. tin.		Fresh, specials, and e-tras, per doz.	Cooking, fresh No. 1's and storage, per doz.	Milk, in bottles, per quart	Dairy, solids, prints, etc. per lb.	Creamery, prints, per lb.

* Prior to 1926 number of commodities was 236.

(Continued from page 97)

down to 1930. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 72.2; 1925, 69.9; 1926, 68.7; 1927, 68.2; 1928, 67.1. This index number is weighted according to consumption in each city. When the above index number, 1900-1929, is weighted according to population in each city covered for the years 1923-1928, the figures are substantially the same as those issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 129.4; 1928, 127.8. Natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6;

1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 165.9; 1928, 158.6. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

Retail Prices

The decline in beef prices, in progress since June, was continued in December, sirloin steak being down from an average of 32.4 cents per pound in November to 31.6 cents in December; round steak from 27.4 cents per pound in November to 26.7 cents in December; rib roast from 25.6 cents per pound in November to 24.8 cents in December; and shoulder roast from 19.3 cents per pound in November to 18.6 cents in December. Declines were recorded in most localities.

Veal and mutton were also lower, the former being down from an average of 22.4 cents per pound in November to 21.8 cents in December, and the latter from 27.2 cents per pound to 26.7 cents. Fresh leg roast of pork was down from 28.1 cents per pound in November to 26.8 cents in December. Salt pork and bacon showed little change in the average. Lard was ½ cent per pound lower in the average at 20.8 cents.

Eggs showed a substantial seasonal advance, fresh being up from an average of 51.3 cents per dozen in November to 58.5 cents in December, and cooking from 43.1 cents per dozen in November to 45.9 cents in December. Increases were reported from practically all localities. Prices, however, were considerably lower in December than at the beginning of the year. In many of the cities the usual seasonal advances in milk prices were not made, while in some cases prices were lower than in the summer. Declines as compared with July, were reported from Kingston, Oshawa and Toronto. The average for December was 12.1 cents per quart, as compared with 12.2 cents in November and 12 cents in July. Lower prices for butter were reported from most localities, dairy being down from 35.5 cents per pound in November to 34.9 cents in December, and creamery from 38.9 cents per pound in November to 38.3 cents in December. The December average prices are about 9 cents per pound lower than in January. Cheese was slightly lower at an average price of 29.9 cents per pound.

The price of bread was again lower at an average of 6.6 cents per pound in December, as compared with 6.9 cents in November and 7.8 cents in January. Decreases were reported from Sydney, Truro, Charlottetown, St. John, Fredericton, Sherbrooke, St. Hyacinthe, Montreal, Ottawa, Peterborough, Oshawa, Hamilton, Brantford, Kitchener, St. Thomas, Windsor, Sarnia, Cobalt, Sault Ste. Marie, Winnipeg, Regina and Prince Albert. Flour was again considerably lower at an average price of 3.8 cents per pound, as compared with 4.1 cents in November. Decreases were general. Canned tomatoes were down from an average price of 15.1 cents per 2½-pound tin in November to 14.6 cents in December, and peas from 13.8 cents per 2-pound tin in November to 13.5 cents in December. Beans were lower at an average price of 8.1 cents per pound, as compared with 8.7 the previous month. Lower prices were reported from most localities for potatoes, the average being \$1.27 per 90 pounds, as compared with \$1.34 in November and \$2.34 in January. Prunes were 1 cent per pound lower at an

*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18%; Clothing, 18%; Sundries, 20%. †Revised.

average price of 12.9 cents. Granulated sugar was unchanged at an average of 6.4 cents per pound. The downward tendency in coffee and tea prices continued, the former averaging 53.9 cents per pound and the latter 57.5 cents. Anthracite coal showed little change, averaging \$16.16 per ton. A slight increase was reported from Hamilton, Stratford and Sarnia. No changes were reported in rent.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices were generally lower during December, No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, averaging 55.6 cents per bushel, as compared with 64.4 cents in November and \$1.30 in January. The lowest price on record in Canada was 50 cents per bushel, reached on the 27th. The unusually large crops in Australia and the Argentine were said to be influences tending toward lower price levels. Western oats declined from an average of 28.2 cents per bushel in November to 26.8 cents in December, and flax from \$1.05 per bushel in November to 98.2 cents in December. A slight advance occurred in the price of barley, being up from 23.4 cents per bushel in November to 25.1 cents in December. Flour prices moved in sympathy with wheat, being down at Toronto from \$5.73 per barrel to \$5.36. This is a decline of \$3.19 per barrel from the January level of \$8.55. Rolled oats at Montreal declined from \$2.55 per 90 pounds to \$2.40. Raw sugar at New York was again lower at \$1.35 per cwt. as compared with \$1.46 in November and \$2 in January. Granulated sugar at Montreal was unchanged at \$4.66 per cwt. Ceylon rubber at New York was also unchanged from the November price of 9 cents per pound. The price in January, 1930, was 15.1 cents per pound. In livestock, good steers at Toronto averaged \$7.36 per hundred pounds, as compared with \$7.37 in November and \$9.75 in January. At Winnipeg the average was \$5.99 per hundred pounds, as compared with \$5.87 in November. Veal calves at Toronto were down from \$12.31 per hundred pounds to \$11.31, \$4.47 below the January average price. Hogs at Toronto declined to \$10.45 per hundred pounds from \$11.22 in November and \$13.31 in January. The price at Winnipeg was \$8.77 for December, \$9.11 for November and \$11.04 for January. Lambs at Toronto advanced from \$8.28 per hundred pounds in November to \$8.74 in December. Beef hides at Toronto declined to 8.5-10.5 cents per pound in December, as compared with 9.5-11.5 cents in November and 14-16.5 cents in January. Calf skins

declined 1 cent per pound to 11 cents. Fresh eggs at Montreal were down from 64 cents per dozen in November to 60.3 cents in December. At Toronto the price was down from 61.3 cents per dozen to 53.8 cents. Raw cotton at New York was down from 10.95 cents per pound in November to 10.01 cents in December, as compared with 17.22 cents per pound in January. Raw silk at New York was slightly higher at \$2.60 per pound, as compared with \$2.55 in November. Raw wool was practically unchanged in December at 13-14 cents per pound. The price in January was 21 cents per pound. Electrolytic copper at Montreal averaged \$12.20 per hundred pounds in December, as compared with \$12.22 in November and \$19.75 in January. Tin prices declined to the lowest level since 1904 at 28½ cents per pound, as compared with 31 cents in November and 44.1 cents at the beginning of the year. Silver at New York averaged 32.6 cents per ounce, as compared with 35.9 cents in November and 45 cents at the beginning of the year. Galvanized steel sheets were \$4 per hundred pounds in December, as against \$4.10 in November and \$4.35 in January. Scrap iron was down from \$14 per ton to \$13.50.

A summary issued by the Workmen's Compensation Board of Ontario for the year 1930 shows a total of 69,267 accidents reported during the year, a decrease of 17,836 from the prior year. The fatal accidents numbered 520, as compared with 510 during 1929. The total benefits awarded in the past year amounted to \$7,423,018.82, as compared with \$8,012,157.78 during 1929, the 1930 figures being made up of \$6,086,972.77 compensation and \$1,336,046.05 medical aid. Taking a basis of 300 working days, this would show average daily benefits awarded of \$24,743, requiring an average of 865 cheques per day. There was a decrease in the average number of new claims reported daily from 290 in 1929 to 231 in 1930.

The correspondent of the LABOUR GAZETTE at Trail, B.C., reports that the unemployment situation at that point has been met to a considerable extent by the special works that are now in progress in the district. The Consolidated Mining and Smelting Company has employed a large number of men all winter on the construction of their fertilizer plant, and the West Kootenay Power and Light Company have about 900 men engaged on a power project a short distance from Nelson on the Kootenay River. However, a number of men were left in the district without jobs when work on the construction of a Canadian Pacific track round Kootenay Lake shut down in October.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. Tables showing the index numbers of the cost of living and of wholesale prices in various countries are included in the Supplement to this issue dealing with "Prices in Canada and Other Countries, 1930".

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1924=100, was 67.4 for November, a decline of 0.9 per cent for the month. Foods were 0.5 per cent lower due to a reduction of 4.5 per cent in cereals partly counteracted by advances in meat and fish and other foods. Industrial materials fell 1.1 per cent due to declines in textiles, miscellaneous commodities and iron and steel while coal and other metals and minerals were slightly higher.

The *Economist* index number, on the base 1927=100, was 70.9 at the end of November, a decline of 2.1 per cent for the month. With the exception of a small advance in miscellaneous commodities, all groups were lower than at the end of October, the principal decreases occurring in cereals and meat and other foods.

The *Statist* index number (in continuation of Sauerbeck's figures) on the base 1867-1877=100, was 88.6 at the end of November, a decline of 2 per cent from the end of October. Foodstuffs were 3 per cent lower with reductions in all groups. Industrial materials declined 1.2 per cent due to decreases of 3.4 per cent in textiles and of 1.4 per cent in sundries. Minerals advanced 0.6 per cent.

COST OF LIVING.—The Ministry of Labour index number, on the base July, 1914=100, was 155 at December 1, a decline of 1.3 per cent for the month due to lower prices for foods chiefly butter, bread and flour and also to slightly lower prices for clothing. There were small increases in rent and fuel and light. Sundries were unchanged.

France

WHOLESALE PRICES.—The index number on a gold basis, 1914=100, was 102 for November, a decline of 2.9 per cent for the month. Every group was included in the general decline.

Germany

WHOLESALE PRICES.—The Federal Statistical Office index number, on the base 1913=100, was 120.1 for November, a decline of 0.1 per

cent for the month. The principal changes in the different groups were increases in all agricultural products and in non-ferrous metals and rubber, while all other groups showed small decreases.

COST OF LIVING.—The official index number, on the base 1913-1914=100, was 143.5 for November, a decline of 1.3 per cent. With the exception of rent which was unchanged, all groups showed reductions, the largest being one of 2.5 per cent in clothing.

India

WHOLESALE PRICES.—The index number of wholesale prices in Bombay, on the base July, 1914=100, was 117 for October, a decline of 2.5 per cent for the month. Food fell 3.5 per cent due to decreases in cereals and pulses although sugar and other food advanced slightly. Among non-foods, miscellaneous raw and manufactured articles were higher, raw cotton was unchanged, but all other groups showed decreases.

COST OF LIVING.—The working class cost of living index number in Bombay, on the base July, 1914=100, was 128 for November, a decrease of 3 per cent for the month due to lower prices for food and clothing, while fuel and lighting and house rent were unchanged.

United States

WHOLESALE PRICES.—The Bureau of Labour Statistics index number, on the base 1926=100, was 80.4 for November, a decline of 2.6 per cent for the month. All groups were lower than in October, the greatest decreases being in farm products, foods, hides and leather products and fuel and lighting materials. The decline in the fuel and lighting was due to a sharp reduction in petroleum prices.

Bradstreet's index number which is the sum total of the prices per pound of 96 articles of common consumption was \$9.5082 at January 1, a decrease of 3.3 per cent for the month. There were small increases in fruits and naval stores, but all of the other groups were lower than at December 1.

Dun's index number, based on the estimated *per capita* consumption of each of the many articles included in the compilation, was \$159.719 at January 1, a fall of 2 per cent for the month. With the exception of an increase in meat, all groups were included in the decline.

COST OF LIVING.—The index number of the National Industrial Conference Board, on the base July, 1914=100, was 150.0 for November, a decline of 1.3 per cent for the month. Due to higher prices for coal, the fuel and light group showed a small advance, but the other groups were all lower than for October.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Unincorporated Trade Unions Have No Standing in Law

THE Supreme Court of Canada, in a decision handed down on December 23, confirmed the judgment of the Court of King's Bench (Appeal Side) in the case *Society Brand Clothes Limited (plaintiff-appellant) versus Amalgamated Clothing Workers of America et al (defendants-respondents)*. The latter decision was given in the *LABOUR GAZETTE*, December, 1929, page 1442, and the original judgment of the Superior Court, Montreal, from which the appeal was first taken, was outlined in the issue for March, 1929, page 359. The circumstances of the strike in 1926 which led to a petition by the plaintiffs for an interlocutory injunction to restrain the union from following a certain course of action, and to the subsequent legal proceedings, were detailed in the issue for August, 1926, and in subsequent issues. The facts of the case are fully stated in the reasons for the judgment of the Supreme Court of Canada. Present at the hearing were Chief Justice Anglin and Justices Duff, Newcombe, Rinfret and Cannon.

Mr. Justice Cannon

Cannon J., (Concurred in by the Chief Justice and Mr. Justice Newcombe):

The defendants were sued for damages and an injunction under the following designation:—

"Amalgamated Clothing Workers of America, an *unincorporated* association, having its head office and principal place of business for the Province of Quebec in the city and district of Montreal, and all the local branches of the said Amalgamated Clothing Workers of America existing in the city and district of Montreal, and the 'Montreal Joint Board' of the said Amalgamated Clothing Workers of America an *unincorporated* subsidiary Association of the said Amalgamated Clothing Workers of America, having its head office and principal place of business in the city and district of Montreal."

The trial judge and a majority of the Court of King's Bench dismissed the action against these defendants on the ground that, being unincorporated and not possessing any civil personality, they could neither legally be constituted defendants, nor be sued.

The Court of King's Bench unanimously allowed the appeal, however, and maintained the action against some additional individual respondents, who were condemned to pay to the plaintiff appellant the sum of \$6,286.02; and also upheld and declared absolute and permanent as against them the interim in-

junction which had been granted pending the trial. Mr. Justice Rivard and Mr. Justice Hall, dissenting, would likewise have maintained the appeal against the Amalgamated Clothing Workers of America and would have included them in the foregoing condemnation. Rivard J., in his opinion, seems to go further than the formal judgment and would also hold responsible the "Montreal Joint Board," the other respondent.

The individual defendants did not appeal from this condemnation; and, so far as they are concerned, the judgment is final and binding on both parties.

The plaintiff, however, has come before this court seeking judgment against the two unincorporated bodies, and the only question before us is whether or not an unincorporated labour union may be considered in law an entity distinct from its individual members, suable in the common name and liable to damages recoverable out of the common fund; or, in other words, does legal theory conform to industrial reality and subject an unincorporated collectivity to responsibility for its tortious acts?

We cannot add much that would be useful to the remarks of the learned trial judge and to the opinion of Mr. Justice Bond in the Court of Appeals. The respondents are not sued as a corporation, or partnership or as entities having legal existences distinct from that of their individual members, but as "unincorporated associations." An attempt was made, however, to show that because in the State of New York, where the first-named respondent has its principal establishment, an unincorporated association can be sued through its president or its treasurer, under art. 79 of the Code of Civil Procedure of Quebec, that association may be sued and brought before the courts of that province. In the State of New York, there is the following statutory provision:

"Action of Proceeding against Unincorporated Associations.

"An action or special proceeding may be maintained, against the president or treasurer of such an association, to recover any property, or upon any cause of action, for or upon which the plaintiff may maintain such an action or special proceeding, against all the associates, by reason of their interest or ownership therein, either jointly or in common, of their liability therefor, either jointly or severally. Any partnership, or other company of persons, which has a president or

treasurer, is deemed an association within the meaning of this section."

"On this point we share the views of Mr. Justice Bond, who says:

"It is to be observed, however, from a reading of this section, that while headed as an action against an unincorporated Association, the text indicates that the action which is contemplated, and may be maintained is one against the president or treasurer of such Association in a representative capacity as representing all the individual members, and, moreover, is applicable only to certain restricted cases, for or upon which the Plaintiff may maintain such an action or special proceeding against all the associates by reason of their interest or ownership, or their liability jointly or in common. The Law in question does not purport to incorporate such an association, nor does it appear to recognize such an association, except in so far as it authorizes action against the president or the treasurer under certain particular circumstances, and in the event of a judgment being obtained, the same may be satisfied out of any personal or real property belonging to the association or owned jointly or in common by all the members thereof. (Section 15). In other words, this Law appears to create or authorize what, in other jurisdictions, are frequently termed 'Representative' or 'Class' actions. The organization itself is not authorized to appear in judicial proceedings."

In this instance, the writ was not issued against either the president or the treasurer, and nothing shows that the defendants now before the Court are, to use the terms of 79 C.C.P., "foreign corporations or persons duly authorized under any foreign law."

But it is claimed that the respondents could not raise this point orally at the trial, because they had not, either by way of preliminary motion or by their plea to the merits, alleged that they are not an entity known to the law and capable of appearing in court proceedings.

Our present Chief Justice, in "Local Union No. 1562, United Mine Workers of America *et al v. Williams et al*, 59 Can. S.C.R. p. 240, said at p. 257:

"While I should have thought it better, had the defence in addition to the bare denial of incorporation contained a plea that the Local Union is not registered, is not a partnership, and, as an entity not known to the law, cannot be sued by its adopted name, (R. 93), I incline to think this issue was sufficiently raised by the explicit traverse of the allegation that the Local Union is a

body corporate. But, if not, the objection of suing the Local Union being its non-existence as an entity known to the law, I confess my inability to understand how any conduct of those representing that body, such as that here relied on, can create an estoppel which would justify the granting of a judgment against it. A judgment should not wittingly be entered against a non-entity."

Brodeur, J., concurred with Anglin, J., as did also Duff, J., who said (at page 246):—

"In order to prevent misconception, I ought to state . . . that this is not, in my judgment, a proper case for amendment, and, moreover, that in disposing of the appeal, we are bound to give effect to the contention that the Union is not a suable entity."

Mignault, J., dissented, *dubitant*, and Idington, J., also dissented.

This question is referred to, in his opinion, by Mr. Justice Rivard, as follows (translated):—

"Under similar conditions, could we give to unincorporated unions a sort of quasi-civil personality which would at least allow them to be sued? (Cf. United Mine Workers of America vs. Coronada Coal Company, United States Supreme Court, June 5, 1922, D.P. 22-2-153, and the note of Mr. Edward Lambert). Such a solution would contradict neither our decision in the case of Rother, nor the decision of Justice Charbonneau in *Cournoyer vs. Union of Carpenters and Joiners* (46 S.C., 242), and of Justice Rinfret in *Payette vs. United Brotherhood of Maintenance of Way Employees and Railway Shop Labourers* (C.S. Montreal, February 3, 1923), but it would be contrary to principles to adopt it as an absolute rule.

"I do not think, however, that it is more necessary to pronounce upon it now than it was in the cases cited.

"In the case of the United Mine Workers of America vs. Williams, decided by the Supreme Court of Canada (59 S.C.R., 240), 'the issue of want of legal entity was sufficiently raised by the explicit denial of the allegation that the local union was a body corporate.'

"In the case before us, is this means of contestation raised? Is it raised according to the rules of our system of procedure? I do not think so.

"The two associations or unions are well described in the writ of summons as being unincorporated; but they do not take advantage of this description, and in their plea they were careful not to make the least mention of it. They therefore took from it no means of defence whatsoever. Far from raising an objection by way of exception to the form, they did not

even insert it or present it in their plea on the merits. In sum, they acquiesced in the fact that they were cited in justice, they accepted the citation as it stood. They did not appear to say that they were irregularly brought before the court; on the contrary, taking advantage of the opportunity offered them by the plaintiff to appear, they attempted to have the action dismissed on its merits. It was only as a last resort, and in pleading orally before the court, that they raised this means of defence. It is too late." (End of translation.)

With respect, we cannot agree with this contention; and we feel that Article 176 of the Code of Civil Procedure which says that "Irregularities in the writ or service or in the declaration are waived by the appearance of the defendant and his failure to take advantage of them within the delays prescribed" cannot apply to incapacity of a defendant where it appears throughout on the face of the proceedings, and we feel inclined to accept the view that a court, should *proprio motu* take notice that an aggregate voluntary body, though having a name, cannot appear in court as a Corporation, when in reality not incorporated.

Moreover, the decision of the Supreme Court of the United States in the Coronado case, although discussed by the parties and in the judgments *a quo*, was not mentioned in the evidence given by the two experts called by the parties to prove, as a fact, the foreign law. These two New York lawyers did not refer to it as part of the law of the State of New York which was in issue between the parties, probably because this judgment does not apply to, and does not bind the state courts or govern their practice.

Nor can the defendants be deemed quasi-corporations under the provisions of the Professional Syndicate Act of Quebec, 14 Geo. V. c. 112, now c. 255 R.S.Q. (1925), which they have not carried out; neither have they availed themselves of C. 125 of the Revised Statutes of Canada (1906), (now c. 202 R.S.C. (1927)), which contains the following provisions:—

"2. In this Act, unless the context otherwise requires, 'trade union' means such combination, whether temporary or permanent, for regulating the relations between workmen and masters, or for imposing restrictive conditions on the conduct of any trade or business, as would, but for *this Act*, have been deemed to be an unlawful combination by reason of some one or more of its purposes being in restraint of trade.

"6. Any seven or more members of a trade union may, by subscribing their names to the rules of the union and otherwise comply-

ing with the provisions of this Act with respect to registry, register such trade union under this Act, but if any one of the purposes of such trade union is unlawful, such registration shall be void.

"18. The trustees of any trade union registered under this Act, or any other officer of such trade union who is authorized so to do by the order thereof, may bring or defend, or cause to be brought or defended, any action, suit, prosecution or complaint, in any court of competent jurisdiction, touching or concerning the property, right or claim to property of the trade union, and may, in all cases concerning the property, real or personal, of such trade union, sue and be sued, plead and be impleaded, in any such court, in their proper names, without other description than the title of their office.

"29. The purposes of any trade union shall not, by reason merely that they are in restraint of trade, be deemed to be unlawful, so as to render any member of such trade union liable to criminal prosecution for conspiracy or otherwise, or so as to render void or voidable any agreement or trust."

The defendants have not registered under these provisions, no doubt because any advantage that they might secure under sec. 29 of the Trade Union Act is already theirs under the following sections of the Criminal Code:

"497. The purposes of a trade union are not by reason merely that they are in restraint of trade, unlawful within the meaning of the last preceding section.

"498. Every one is guilty of an indictable offence and liable to a penalty not exceeding four thousand dollars and not less than two hundred dollars, or to two years' imprisonment, or, if a corporation, is liable to a penalty not exceeding ten thousand dollars, and not less than one thousand dollars, who conspires, combines, agrees or arranges with any other person, or with any railway, steamship, steamboat or transportation company...

"(a) to unduly limit the facilities for transporting, producing, manufacturing, supplying, storing or dealing in any article or commodity which may be a subject of trade or commerce; or

"(b) to restrain or injure trade or commerce in relation to any such article or commodity; or

"(c) to unduly prevent, limit, or lessen the manufacture or production of any such article or commodity, or to unreasonably enhance the price thereof; or

"(d) to unduly prevent or lessen competition in the production, manufacture, purchase, barter, sale, transportation or supply

of any such article or commodity, or in the price of insurance upon person or property.

"2. Nothing in this section shall be construed to apply to combinations of workmen or employees for their own reasonable protection as such workmen or employees.

"590. No prosecution shall be maintainable against any person for conspiracy in refusing to work with or for any employer or workman, or for doing any act or causing any act to be done for the purpose of a trade combination, unless such act is an offence punishable by statute."

It is therefore clear that the defendants have not the status of quasi-corporations to which the decision of the House of Lords in *Taff Vale Railway v. Amalgamated Society of Railway Servants*, 1901 A.C. p. 426, might be applied.

We must accordingly reach the conclusion that, while, under the prevailing policy, our legislation gives to unincorporated labour organizations a large measure of protection, they have no legal existence; they are not endowed with any distinct personality; they have no corporate entity; they constitute merely collectivities of persons. The acts of such an association are only the acts of its members. Therefore, it cannot appear before the courts and its officers have no capacity to represent it before the tribunals of the province of Quebec, where "nul ne plaide au nom d'autrui," (C.C.P., 81). However cogent the reasons that may be urged in favour of authorizing and legalizing proceedings against unincorporated bodies, the Superior Court, and this court, cannot, under article 50 C.C.P., do more than order and control these bodies "in such manner and form as by law provided." The Province of Quebec has not yet legislated to give legal existence to or recourse against unincorporated bodies. The existing legislation compels us to reach the conclusion that Parliament and the legislature have not deemed it proper or necessary to compel, even international trade unions, although governed by foreign administrators, to acquire legal existence and liability in Canada through registration. We must, accordingly, ignore the industrial reality and must refuse to regard an unincorporated labour union as, in law, an entity distinct from its individual members.

We would therefore dismiss the appeal with costs. Nov. 29, 1930.

Mr. Justice Rinfret

Rinfret, J. (Translation): I concur in the opinion of my colleague, Mr. Justice Cannon.

A number of distinctions are to be made, I consider, between the case in point and that

of *Payette and United Brotherhood of Maintenance of Way Employees and Alfred Dérome et al.*, 25 Que. Practice Rep., p. 78 (in which case, sitting in Superior Court, I gave an opinion that has been quoted in the present case).

In the *Payette* case, the defendant is designated as follows in the writ of summons: "Legally constituted body of Detroit, in the State of Michigan, one of the States of the United States of America." Judgment had been rendered against defendant under this designation, and it accepted the decision. The so-called incapacity of the defendant had been raised by garnishees, in the course of proceedings in contestation of their declaration, following attachment after judgment. In that case, furthermore, the existence of no special legislation in the State of Michigan, in which State the defendant had its main place of business, had been proven, and the only reference given the Court was the decision of the Supreme Court of the United States in *Coronado Coal Company of Arkansas vs. United Mine Workers of America* (259 U.S., p. 344) as being the foreign law which applied. The defendant, according to the designation in the writ, was therefore apparently a corporation, and, as rightly noted by Mr. Justice Bond, in appeal, the judgment in the *Payette* case rests on the ground expressed as follows:—

"It is not the defendant, however, which raised these means. The first point could be dismissed on the simple ground that the garnishees allege a right which is not theirs, and that the designation of the defendant concerns the defendant exclusively. There is judgment against the defendant under the name and designation given in the writ of attachment after judgment. The defendant appeared under this writ, and did not protest against the decision in the main action nor pleaded irregularity in the procedure of summoning or in its designation in connection with the attachment procedure. There is there more than sufficient ground to dispose of the first point raised."

In the case before us, Amalgamated Clothing Workers of America are designated as "an unincorporated Association"; the Montreal Joint Board as "an unincorporated subsidiary association of the said Amalgamated Clothing Workers of America," and "Local Unions" Nos. 115, 167, 209, 247 and 277 as "being unregistered and unincorporated subsidiary branches in the City and District of Montreal of the said Amalgamated Clothing Workers of America." Furthermore, the headquarters of the Amalgamated Clothing Workers of America are in New York. The special legislation of the State of New York is proven,

and it does not confer civil personality to these associations; it does not recognize them as corporation or person, but simply establishes a method of procedure enabling the summoning of such associations without the necessity of designating all the members of the association and serving each with a legal notice.

Article 79 of the Code of Civil Procedure of the Province of Quebec, under the circumstances, does not cover the defendant-appellant who, under the foreign law (that of the State of New York in the case) is considered neither "a corporation" nor a "person" and, therefore, "cannot appear in Court."

Mr. Justice Duff

Duff, J.: At the conclusion of the argument it appeared to be quite clear that the impleadability of the respondents, which the respondents disputed, could only be sustained if the respondents could be brought within art. 79 of the Code of Civil Procedure, which is in these words:—

"All foreign corporations or persons, duly authorized under any foreign law to appear in judicial proceedings, may do so before any court in the Province."

Admittedly the respondents are not a corporation, whether they are or are not a "person" in the juridical sense, that is to say, whether or not, the members of the collectivity, described as the Amalgamated Clothing Workers of America, constitute a juridical person distinct from the personality of the individuals, is a question which is to be decided by the law of New York. The law of New York upon this subject was fully discussed in the evidence. The effect of that evidence is a question of fact. I have examined the testimony of the professional witnesses and the authorities cited by them with the greatest care; and in the result I think the weight of argument to be adduced from what is said and from the materials referred to, lies on the side of the negative. My conclusion, that is to say, is that, in point of fact, such a collectivity is not by the law of New York a juridical person in the pertinent sense.

This conclusion is all that is necessary to determine the appeal, but I feel it incumbent upon me to make one observation. The question of juridical personality is entirely a question of the law of New York. Reference to such cases as the Taff Vale case or to the judgments in this court in *Local Union v. Williams*, 59 S.C.R. 240, are quite beside the point, and any discussion of them in this connection is a mere waste of breath.

Agreement restricting employee's future undertakings is invalid

The plaintiff in this case was engaged by the defendant company as manager of their store at Hamilton at a weekly salary *plus* a percentage of the proceeds of the weekly sales. There was a stipulation that he should handle only such merchandise as was supplied to him by the company, and a further stipulation that in the event of the parties severing business connections the plaintiff would not engage in the same line of business in the city for a period of two years from the date of the severance. The plaintiff was dismissed from the position after less than two years, the company paying him at the rate of \$15 a week in view of notice. After the dismissal an agent of the company made forcible entry of the premises behind the store, in which under the terms of the agreement the plaintiff resided, his wife being ejected. The plaintiff's action was for damages for wrongful entry upon and dispossession of the premises occupied by him, and for wrongful dismissal. The defendant company counter-claimed for an injunction restraining the plaintiff from continuing in his present employment in the herbalist business.

Mr. Justice Raney, who heard the case in the Ontario Supreme Court, found for the plaintiff, awarding him damages for wrongful entry and dispossession at \$500, and damages for wrongful dismissal at \$90.

In regard to the counterclaim the clause of the agreement on which the defendant company relied reads as follows:—

"It is further agreed that in the event of the parties hereto severing business connections, the party of the second part will not engage in the herbalist business in the City of Hamilton for two years from the date of such severance."

Of this condition Judge Raney said:—"As between employer and employee clauses of this nature are, *prima facie*, invalid. To establish the validity of such a covenant by the employee, it was incumbent upon the company in this case to prove that there existed some special circumstance which rendered it reasonably necessary for the protection of the defendant company's business, other than the circumstance that the business in which the employee might embark would be competitive."

Kadish versus Thuna Balsam Remedies Ltd., Ontario, 1930, *Ontario Weekly Notes*, page 325.

Fines for Faulty Work Declared Lawful

The decision of the Chancery Court (England and Wales) in the case of Sagar versus Ridehalgh and Son, Limited, was noted in the LABOUR GAZETTE, June, 1930, page 730. On appeal, that decision was reversed by the Master of the Rolls (Lord Hanworth) in a judgment given on December 9. The effect of the new judgment is that Lancashire weaving firms are entitled to make deductions from wages for cloth which is spoiled owing to the fault of the weaver.

A test action was brought by Thomas Sagar, a member of the Nelson and District Weavers' Association, against Messrs. H. Ridehalgh and Son, Ltd., cotton cloth manufacturers, of Nelson. He asked for a declaration that a deduction of a shilling from his wages, because certain cloth was spoilt in weaving was illegal. Mr. Justice Farwell decided that the cloth was spoiled by Sagar's carelessness, but held that the deduction was illegal. The employers appealed.

The Master of the Rolls said the employers justified the deduction on four grounds: that (1) piece-work rates were for good work; (2) the practice of the mill was to pay for merchantable cloth and that, as Sagar knew, this practice included the right of deduction; (3) the custom of the whole of the weaving trade in Lancashire recognized the practice; and (4) the sum deducted was less than might have been deducted if the employers had exacted the full amount by which the cloth fell short of standard.

The Master of the Rolls pointed out that the Truck Act, on which Sagar relied, was passed to prohibit payment of wages otherwise than in current coin, and provided that the entire amount of the wages should be paid in current coin. It did not deal with any system by which wages were to be estimated before payment.

On behalf of the workman, it was argued that there was no promise of skill by him. Lord Hanworth said it was a term of the contract that the weaver should receive full scale rates for good work. Quality of work was to be taken into account. The prohibition of the Truck Acts did not apply.

Lord Justices Lawrence and Romer concurred in the judgment. An appeal to the House of Lords is under consideration by the union.

Four men in a threshing gang in Alberta at \$4 a day quit work, stating that the hours were too long and the work too hard. They promised to stay an additional day to enable the employer to obtain new men, but failed to do so, and the employer was obliged to suspend work. The employer refused to pay the men the wages they had earned, amounting to \$22 each. The men sued the employer under the Master and Servant Act for this amount, but the police magistrate dismissed the case with costs against the complainants, the employer, however, undertaking to pay them the wages they had earned.

[NUMBER 2

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

THE usual seasonal contraction in industrial employment in Canada was shown at the beginning of January, 1931, according to reports received from employers, the resulting losses, however, involving a rather smaller number of workers than on January 1, 1930. In spite of this smaller falling-off (which was partly due to the stabilizing effect of unemployment relief work), employment was at a lower level than on the same date in the two preceding years, although it was higher than on January 1 in any of the years, 1921-28. The Dominion Bureau of Statistics tabulated statements from 7,511 firms, each with at least 15 employees, in all industries except agriculture, fishing, hunting and highly specialized business. The payrolls of these concerns declined from 974,918 persons on December 1 to 912,400 at the beginning of January, a decrease of some 62,500 persons or 6.4 per cent. Reflecting this contraction, the employment index number (based upon the 1926 average as 100) stood at 101.7 on January 1 1931, compared with 108.5 in the preceding month, and with 111.2, 109.1, 100.7, 95.9, 90.7, 84.9, 89.8, 87.3, 78.8 and 88.8 on the same date in 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

At the beginning of January, 1930, the percentage of unemployment reported to the Department of Labour by local trade unions throughout Canada was 17.0, contrasted with 13.8 per cent of idleness at the beginning of December, and with 11.4 per cent at the beginning of January, 1929. The January percentage was based on the reports tabulated by the Department of Labour from 1,904 labour organizations, embracing a membership of 219,641 persons.

Reports received from the offices of the Employment Service of Canada indicated an increase in the volume of business transacted in December, 1930, as shown by the average daily placements effected, when a comparison was made with the preceding month and also with December a year ago. This increase was en-

tirely due to more placements effected in construction and maintenance, where various governmental relief schemes had provided work for the unemployed. Vacancies in December, 1930, numbered 55,675, applications 74,171 and there were 54,751 placements in regular and casual employment.

The average cost of a weekly family budget of twenty-nine staple foods was \$9.86 at the beginning of January, 1931, as compared with \$10.10 for December, 1930; \$11.88 for January, 1930; \$11.30 for January, 1929; \$11.19 for January, 1928; \$11.37 for January, 1927; \$11.63 for January, 1926; \$10.77 for January, 1925; \$10.78 for January, 1924; \$10.52 for January, 1923; \$11.03 for January, 1922; \$14.48 for January, 1921; \$16.92 for June, 1920 (the peak); \$12.42 for January, 1918; and \$7.73 for January, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was again lower at 76.7 for January, 1931, as compared with 77.8 for December, 1930, 95.4 for January, 1930; 94.0 for January, 1929; 96.9 for January, 1928; 97.8 for January, 1927; and 103.0 for January, 1926.

The loss in working time caused by industrial disputes in Canada during January was much less than in the preceding month and was also less than the corresponding loss in January, 1930. Six disputes were in progress at some time during the month, involving 560 workers, and resulting in the loss of 4,840 working days. Corresponding figures for December, 1930, were; eight disputes, 723 workers, and 8,661 working days; and for January, 1930, five disputes, 2,169 workers, and 7,254 working days.

Industrial Disputes Investigation Act

The Department received in January an application for a Board of Conciliation and Investigation in connection with a dispute involving equipment employees in the Atlantic region of the Canadian National Railways. An account of the proceedings under the Act during the month appears on page 129 of this issue.

Annual review of industrial disputes in Canada

This issue contains an annual review of strikes and lockouts in Canada and other countries in 1930. In addition to the usual tables giving particulars as to the disputes which occurred during the year, including their causes and results, the industries and numbers of workers affected, and the methods of settlement, the report gives summary tables of the disputes that have occurred in industry in Canada in each year since January, 1, 1901.

Validity of Combines Investigation Act finally established

The Judicial Committee of the Privy Council, in a judgment given on January 29, affirmed the validity of the Combines Investigation Act and of Section 498 of the Criminal Code. This decision upholds the judgment rendered by the Supreme Court of Canada on April 30, 1929, concerning the constitutional validity of Dominion legislation respecting combines (LABOUR GAZETTE, May, 1929, page 569). The question had been referred to the Supreme Court by the Dominion Government by Order in Council (P.C. 2194), dated December 6, 1928 (LABOUR GAZETTE, January, 1929, page 25). The decision of the Privy Council arose out of an appeal by the Proprietary Articles Trade Association of Canada, in connection with the report made in 1927 by a Commissioner under the Combines Investigation Act, which found that this Association constituted a "combine" as defined by the Act (LABOUR GAZETTE, November, 1927, page 1165). The text of this important decision is not available at the time of going to press, but it will be published in full in the next issue.

Dominion Government's policy on old age pensions, etc.

The report of the annual interview between the Dominion Government and the Trades and Labour Congress of Canada, which appears on another page of this issue, contains an outline of a statement by the Prime Minister as to the Government's intentions in regard to old age pensions, unemployment insurance and technical education. The proposals of the Congress delegation had included requests that the Government should deal with these subjects at the coming session of Parliament. Mr. Bennett stated that legislation would be introduced dealing with old age pensions and restoring the grants for technical education. In regard to unemployment insurance he considered that a close study should be made of

the subject, and that an inter-departmental inquiry would be the best method to adopt.

Unemployment policy in Manitoba and Alberta

The Speech from the Throne at the opening of the Manitoba legislature on January 27, announced that "action has been taken in co-operation with the Dominion Government and the urban and rural municipalities, in order to relieve the conditions caused by unemployment in the period of general depression in which our country has not escaped sharing in considerable measure. In this connection my Government will ask you to approve of the borrowing of the necessary money to take advantage of the Dominion Government's unemployment policy, and to make the necessary legislative provision for guaranteeing the debentures of certain municipalities, which have been issued in order to enable them to take advantage of the provisions of that policy; and you will be asked also to ratify certain Municipal By-laws passed in order to permit the unemployment undertakings agreed upon being prosecuted without delay. Many public works, widely distributed over different areas of the Province are in progress. In addition to being of immediate benefit in alleviating the distress due to unemployment these works will result to the permanent general advantage. Of outstanding importance at the present time," the speech continued, "is the situation created by the depressed prices for the products of the agricultural industry. Active work of a constructive character in promoting the interests of this industry has continued to be carried on with unremitting energy by my Government." The establishment of a Department of Labour and Industry was also forecasted "in order to effect a still greater efficiency in the operation of the services concerned with labour matters and the furtherance of a more balanced industrial activity in the Province."

At the opening of the Alberta legislature on January 29, the Speech from the Throne intimated that the earliest measures to be introduced would deal with the various problems confronting the government as a result of the general economic and industrial depression. "The low level of prices prevailing in agricultural products," it was stated, "together with crop failures in parts of the Province and the consequent curtailment in business and industry, have resulted in extensive unemployment and distress." The legislature was to be asked to ratify the agreements made with the government of Canada and the urban and rural authorities providing for expenditures for public works and other means

of relief; also to make provision for the extension of the work of the Debt Adjustment Bureau, and to consider legislation for the consolidation of arrears of taxes, and the extension of time for the payment thereof.

Value of conciliation in labour disputes

The Hon. William N. Doak, whose appointment as United States Secretary of Labour was noted in the issue for December, outlines in the *Railroad Trainmen* for February the policies he will follow in that position. One of the most essential of these policies he reckons to be that of conciliation in labour disputes. "In my opinion", he writes, "no greater patriotic service can be rendered than the extension of the principle of mediation and conciliation to all other lines of employment. It is my intention to bend every effort in this direction. It is my firm belief that there has never been and will never be any labour dispute which could not and cannot be settled through negotiation without resort to conflict. This conviction is based on more than twenty years' experience as a representative of employees without actually having to engage in labour warfare. The reward for sound reasoning between employers and employees is peace, freedom from the distress and suffering which comes to the workers, the financial loss to the employer, the inconvenience to the public, and the bitterness and mutual distrust which such conflicts always produce. Labour problems are matters of public concern. As such, it is my earnest desire to exert every effort to see that they are justly settled as peacefully and promptly as possible."

United States Board of Mediation

The Board of Mediation, established in the United States in 1926, as an independent agency by the provisions of the Railway Labour Act (LABOUR GAZETTE, August, 1926, page 792) has published its fourth annual report, covering the fiscal year ended June 30, 1930. The report contrasts the strained relations between the railways and their workers in 1926 with the present condition of mutual confidence, this improvement being attributed to the conciliation work of the Board. "Discussions are now carried on and conclusions are reached, based on the merits of questions under consideration in a temperate and businesslike way. The public, for which the Railway Labour Act was primarily passed by Congress, has been the special beneficiary of the application of, and the splendid results obtained from this law. No disturbing situations involving carriers and employees now exist in railroad industry."

It is pointed out that adjustment boards as contemplated by the Railway Labour Act have not been generally created, but that conditions have been improved rather by the voluntary action of the parties concerned.

British Labour approves machinery for joint consultation

The Conference on Industrial Reorganization and Industrial Relations, which was formed in Great Britain in 1927 on the initiative of the late Lord Melchett (then Sir Alfred Mond) recently published their final report. The formation and the progress of this organization have been noted in earlier issues of the LABOUR GAZETTE (September, 1929, page 965; March, 1929, page 265, etc.). Lord Melchett's first conference proposed the establishment, on a more formal footing, of a National Industrial Council; and in accordance with this decision, which was approved by the Trades Union Congress in September, 1928, the Conference on Industrial Reorganization and Industrial Relations which was set up later invited the National Confederation of Employers' Organizations and the Federation of British Industries to co-operate with the Trades Union Congress in the setting up of such a Council. The two employers' organizations were unable to accept the findings of the Conference as they stood and to co-operate with the General Council in setting up the proposed National Industrial Council; but they jointly invited the General Council to a conference, at which they could explain their position and discuss the possibility of joint discussions in some other form. The General Council accepted the invitation, and joint meetings were held at various dates in 1929, which resulted in the setting up of machinery for the joint discussion of a large range of subjects.

The British *Ministry of Labour Gazette*, for January, states that "in view of this development, it has been decided that the old Conference on Industrial Reorganization and Industrial Relations should be terminated. The hope is expressed 'that the new machinery thus established will not only take its place as an integral, permanent feature of our industrial system, but will justify itself by the contributions it makes to the solution of the grave economic problems that confront us.' The joint chairmen of the Conference declare their conviction 'that the fullest consultation between the representatives of organized employers and organized labour is essential to the welfare of British industry and its future prosperity.'"

National Economic Councils

The establishment of an Economic Advisory Council in Great Britain last year was noted in the *LABOUR GAZETTE*, March 1930, page

257. The purpose of the new body was stated by the Prime Minister Mr. MacDonald to be "to advise the government in economic matters, and to make a continuous study of developments in trade and industry and in the use of national and imperial resources, of the effect of legislation and fiscal policy at home and abroad, and of all aspects of national, imperial and international economy with a bearing on the prosperity of the country."

The leading article in the *Monthly Labour Review* for January describes the recent spread of the idea of national economic councils in Europe. In France the National Economics Council organized in 1925 has functioned successfully, particularly in regard to the comprehensive plan for co-ordinating all the elements entering into the economic life of that country. In England and Italy the establishment of such councils is more recent, while in Germany although a provisional economic council was organized in 1920, a bill providing for a permanent council which has been pending before the Reichstag for several years has not been enacted so far into law.

Other countries in which national economic councils have been formed include Czechoslovakia, Spain, and Japan. In Czechoslovakia a consultative commission, composed of 150 members chosen by the Government and representing employers' and workers' organizations and economists, gives its opinion either on its own initiative or at the request of the Government, upon questions of general economic importance. In Spain, a Council for the National Economy was appointed by royal decree in 1924; this organization, which acts entirely in a consultative capacity, is composed of 24 members representing the various commercial and producers' organizations of the country. In Japan the Imperial Economic Council is presided over by the prime minister and has for vice-presidents the minister of finance, agriculture, and commerce, the other members being designated by the cabinet and chosen among public officials and representatives of producers' organizations; the scope of the activities of the council are very wide, embracing economic subjects, protection of the workers, and the general industrial development of the country. In still other countries, notably Norway, Hungary, Poland, and Portugal, some attempts at the constitution of similar organizations have been made, while in Russia the Superior Council of National Economy forms one of the basic institutions of that government.

Co-operation of banks with industry

The *Economist* (London), in a "Hungarian Supplement" published with its issue of December 20, describes the newly developed

system of co-operation between the banks and industry which is stated to have transformed industry in Hungary during the past ten years. After a reference to the dislocation of the economic structure that resulted from the war and the Treaty of Trianon, the article proceeds as follows: "Under these conditions, it was most fortunate that the banking organization of the country was both ready and able to meet the needs of industry. Indeed, the rôle of the banks became even more marked than it was before the war, since the period of hostilities and of general inflation had reduced the working capital of industry to the merest fraction of its former self. The banks not only helped with their own assets and with the resources placed at their disposal by people living within the country itself, but also obtained foreign credits with which to increase the working capital of the various industrial undertakings, then so sadly depleted. They came to participate more and more in industrial companies, and also placed industrial shares both at home and abroad. Their support was all the more valuable since Hungary, now independent in the economic sphere, was able to adopt a customs and trade policy of its own, with a view to encouraging home industries. Even though the present network of commercial treaties has somewhat relaxed this protectionist system, Hungarian industrial life has undergone a considerable transformation during the past decade, and many branches have progressed in a truly remarkable manner in spite of adverse trade conditions. This is in itself a proof that the foundations have been well and truly laid. . . ."

"The wisdom of this policy of co-operation between banks and industry has been confirmed by the endeavours recently made in Great Britain and France with the same end in view. Even in these highly developed countries, where development has been on entirely different lines, the need for the banks to take a more active interest in industry has been recognized in these hard times."

Government policy on immigration and colonization

The Hon. W. A. Gordon, Minister of Immigration and Colonization, issued the following statement in regard to the Dominion Government's immigration policy, following a conference at Ottawa on January 30, which was attended by the Hon. Senator Robertson, Minister of Labour; Sir

Henry Thornton, president of the Canadian National Railways; Mr. E. W. Beatty, president of the Canadian Pacific Railway Company, and others:—

“A rather exhaustive discussion was held on the general question of immigration and colonization, without any exception being taken to the Government's present announced policy of restricting immigration into Canada, at least until the people already resident in Canada have been absorbed into employment.

“The possibility of evolving a further policy for the purpose of giving Canadian citizens more favourable consideration by way of colonization assistance for them was also discussed, with no definite conclusion, however, being reached at the moment.”

Unemployment relief by United States firms

President Hoover's Emergency Committee for Employment has published the results of a survey of unemployment relief which was undertaken to ascertain the methods used by individual industries to meet the present emergency. Large corporations, it is stated, showed the most serious unemployment. Practically all of those employing 5,000 or more men faced a decline. On the other hand, 25 per cent of the companies employing less than 1,000 men were operating normally and were without unemployment difficulties. Of the companies employing less than 500, 39 per cent were operating at a normal increased rate. The degree of unemployment shown by the survey indicated great variation among companies and extended from full normal operation to a decline of 50 per cent, with some few reporting a loss in employment as great as 75 per cent. Emergency activity increased rapidly with increasing unemployment. A large proportion of those who reported little or no change in the number at work were able to do so only through extensive application of emergency measures.

Subdivision and distribution of work was recognized as the most practical step that can be taken. Eighty-two per cent of the companies reporting an unemployment problem were using it. The commonest use of shortened time as a means of distributing work is to reduce the number of days of operation. An almost equally used method is to decrease the number of hours worked per day. A third system is a combination of these two, whereby one large industry has reduced the daily hours of labour from eight to six and the plant operation to four days a week. Rotation of employment is practised by al-

ternating crews and so giving employment to one group one week and another the next. Forty-three per cent of those with an unemployment problem were doing this to some degree.

An important source of unemployment relief is to be found in activities associated with repairs, renewals, and maintenance. About one-third of the companies having an unemployment problem had proceeded with work of this nature which would otherwise have been postponed. In many cases the work consisted of painting and cleaning which was not essential to plant operation. The attitude of those reporting this activity indicates that justification was found for further extension of this eventually needed work, in that it was of beneficial economic service in preserving the property as well as the plant organization. Construction work that has already been projected or can be foreseen as necessary in the early future is economically available to the same end. Manufacturing for stock was reported by one out of five of those firms facing an unemployment problem.

Many companies have announced policies of “taking care of all of our former employees” or “seeing that none of our people are in want.” Between one-third and one-half of the companies which the survey revealed as having an unemployment problem had adopted some provision for direct relief. Over half of the companies studied were trying to place released men in other departments. Others made careful studies of financial resources and dependants. Others made careful studies of financial resources and dependents before rather than after dismissal, and a number were making strong efforts to find their men temporary or odd jobs elsewhere. Fourteen per cent of the companies having an unemployment problem were granting loans, some with and some without interest to a selected group of former employees, the general expectation being that these loans would be repaid in small and unburdensome amounts after the employees had returned to work.

United States Senate to consider unemployment insurance

Senator Wagner of New York has given notice of a resolution and bill to be submitted to the United States Senate at its present session to establish a system of unemployment insurance. The principal provisions of the resolution are as follows:—

“The committee is authorized and directed to make a general study of the employment

insurance systems in use by private interests in the United States and by foreign governments, with a view to determining (1) the manner in which such systems were instituted and are now being operated; (2) the cost involved, and the results achieved under each such system; (3) the relief, if any, afforded by each such system during the economic depression of 1930; and (4) the condition of each such system as of July 1, 1930, with particular regard to the manner in which it survived the economic depression of 1930."

The bill which will accompany this resolution contains a proposed plan for Federal and State co-operation in the maintenance of unemployment insurance systems. Senator Wagner pointed out that a rounded program of organized action against unemployment must contain two primary features: First, the reduction of the amount of unemployment by every known means; second, when unemployment does occur, the prevention of hardship by distributing the loss."

United States governors confer on unemployment

On the invitation of Governor Roosevelt, of New York, the governors or representatives of seven States held a conference at Albany, New York, in January, on ways and means of overcoming economic depression and unemployment. The topics considered at the meeting were as follows:—(1) The experience of European nations with compulsory and voluntary unemployment insurance; (2) American experience with voluntary unemployment reserves or insurance; (3) Possible or proposed American variations, corrections and improvements, if a general system by States should be adopted. This would cover safeguards against the dole coverage by private insurance companies, group insurance, private industrial company insurance and governmental supervision. It would cover also both voluntary and compulsory forms of unemployment insurance.

Governor Roosevelt stated after the conference that further studies would be made into unemployment reserves or insurance as a preventive or relief of unemployment.

Proposed State unemployment reserve funds

The American Association for Labour Legislation has prepared a tentative draft for an Act for Unemployment Reserve Funds for submission to State legislatures in the United States. The Act would require employers to contribute a small fixed percentage of their

payrolls to a fund which would be administered so as to furnish to employees such benefits as the condition of the fund permits. Employees are not required to contribute to the fund, as they already bear a considerable portion of the cost of unemployment owing to the limit placed upon the benefits. A maximum limit of ten dollars a week is fixed, and no employee is to receive benefit for more than thirteen weeks in a year or for more than one week for each four weeks in which he has been employed by employers subject to the Act. Opportunity is offered to workers in any industry to elect voluntarily to pay contributions, and thus receive additional benefits. Payments are not to be made to persons who are unemployed owing to stoppage of work due to a trade dispute, and no person is to be denied benefits for refusal to take a job where there is such a dispute.

The bill recognizes that it is essential to any system of unemployment benefits that there should be a "work test." It provides for the application of this test through employment offices, and it is to be expected that the operation of the plan will result in a reduction of unemployment by furnishing jobs instead of benefits wherever possible.

If a worker's right to benefit is contested, it will be passed upon by the officer in charge of an employment office, and an appeal is allowed to an Appeal Board composed of a representative of labour, an employer, and a neutral arbiter.

The administration of the plan in each industry is placed in the hands of an Employment Stabilization Board provided for that industry, under the supervision of the State Department of Labour. Since employers who are contributing to the fund are in a position to aid effectively in stabilizing employment in their industry, it is provided that when those who employ a majority of its workers elect to do so they are authorized to administer the fund for their industry and conduct an employment office for its employers and employees subject to the approval of the State Department of Labour.

Under the proposed legislation, employers who furnish satisfactory proof of their ability to pay benefits equal to those which the reserve fund for their industry pays are permitted to make payments directly to their employees, and are relieved from the duty of contributing to the fund. Those employers who remain in the fund are encouraged to reduce unemployment among their employees by the possibility of the payment of dividends on the basis of their employment experience.

Effect of stabilization on number of workers employed

An unusual aspect of the problem of stabilizing employment is considered by Dr. Ethelbert Stewart, United States Commissioner of Labour Statistics, in an article appearing in the *Monthly Labour Review*, January, 1931. Taking the boot and shoe industry as one that is specially subject to variations in employment, he shows that establishments in that industry which succeed in stabilizing employment will produce enough shoes to supply the demand, and will eventually "crowd out" those in which employment is most irregular.

"If we are to regularize employment," Dr. Stewart says, "we must not forget that this cannot be done if we maintain the present number of establishments in any industry. That is to say, the 1,329 boot and shoe factories of the United States cannot operate continuously with their present maximum force. To illustrate: 14.5 per cent of these establishments now employ 60.4 per cent of the wage earners and are producing 65.6 per cent of the total output, operating on broken time, or the irregular time of which we are speaking. If, however, these same plants were to operate full time at their present capacity they would produce 95 per cent of the total output, thus crowding out about 85 per cent of the present number of establishments.

"In other words, in order to operate 200 establishments full time at present capacity, 1,129 other establishments would have to be closed. Not only that, but if all of the establishments worked at the same efficiency attained by the best establishment, 81,811 men would do the work now being performed by 202,191. To go a little more into detail, the most efficient boot and shoe factory in the United States, measured in output per man per day, produces 14 pairs of shoes per man per day. At this rate of production, 81,811 men working 300 days a year would produce the same number of shoes now produced by the 203,110 men which the census reports as engaged in the industry."

County health units in Alberta

In accordance with its plan to establish the county health system, the government of Alberta has arranged to organize Health Units at High River and Red Deer. Two doctors are now taking special training at Toronto for these positions at the expense of the Rockefeller

Foundation. Nurses and a sanitary inspector and a clerk will be appointed later. There will also be a veterinary inspector and possibly a district agriculturist, who will assist the farmers of the district in an advisory capacity.

The agreements for the establishment of health units are between the districts concerned, the province and the Rockefeller Foundation. The latter will bear 25 per cent of the cost for the first three years, the district 25 per cent, and the province the remaining 50 per cent. The district will gradually assume an increased percentage of the cost at the end of three years. It is expected that numerous districts will come into the arrangement before long and that eventually the province will be well covered with health units.

Toronto Academy of Medicine and health insurance

The Toronto Academy of Medicine discussed the subject of state health insurance at a meeting held at the University of Toronto on January 29. The president, Dr. A. King Smith, expressed approval of the principle, but insisted that the medical profession should be consulted in the framing of any scheme. The profession, he said, would be glad to discuss the subject with government officials and with representatives both of labour and of employers. All the speakers at the meeting expressed approval of the health insurance principle, including Mr. H. W. MacDonnell, secretary of the Industrial Relations committee of the Canadian Manufacturers' Association, and Mr. James Simpson, vice-president of the Trades and Labour Congress of Canada. The speakers agreed that health insurance would lead to a higher standard of community health and welfare, greater efficiency in industry, and removal of anxiety from among people of restricted income regarding illnesses; and that it would also relieve the profession of the burden of serving large numbers of people who cannot or do not pay, a service estimated to total more than \$500,000 annually in Toronto alone.

From the doctors' point of view, it was alleged that the schemes in effect in certain foreign countries put the profession under the control of the laity, burdened physicians with so much routine work that they had no time for adding to their knowledge through practice or research, and while guaranteeing them a steady regular income reduced their total income to a low level.

Inquiry into workmen's compensation in Ontario

The Government of Ontario has appointed Mr. Justice Middleton as a Commissioner to inquire into the subject of workmen's compensation in the province and to make recommendations as to the advisability of amendments to the Act. The Hon. W. H. Price, attorney general, in announcing the government's decision, intimated that the administration of the Act was not in question, but that it was believed that certain amendments might be desirable at the present time. The Premier, The Hon. George S. Henry, also stated that the Act might well be reviewed by a competent authority.

For several years deputations representing organized labour have requested that certain changes might be made in the Act, the latest of these delegations being from the provincial executive of the Trades and Labour Congress of Canada, whose proposals are outlined on another page of this issue. The labour representatives desire, among other changes, that railways should be included in the scope of the Act; that the percentage of wages to be paid in compensation should be raised from 66½ to 75 per cent; and that the maximum yearly wages that are considered in estimating the amount of awards should be raised from \$2,000 to \$2,500.

Mr. Price, in his announcement, said:— "Representations have been made from time to time during the period in which the act has been in operation that there might be some revision of its terms, not a fundamental revision, but a checking of it up with the idea of gathering all data so that advantage could be taken of the information that has become available in the past fifteen years. The Prime Minister, on receiving the labour deputation a few days ago, mentioned the fact that the Act might very well be reviewed by a competent authority, where every interest could be heard. With this idea in view the Honourable William Edward Middleton, a Justice of Appeal of the Supreme Court of Ontario, has been requested to accept a Commission to inquire into and report upon and to make representations regarding the advisability of making amendments to the Workmen's Compensation Act. Mr. Justice Middleton had the opportunity of being very closely in touch with Sir William Meredith when the original act was framed. He was chairman of the Statute Revision Commission in 1927, and is well equipped to carry out this Commission."

Coal Mines Board in Great Britain appointed

The Coal Mines Act, 1930, of Great Britain (the provisions of which were outlined in the LABOUR GAZETTE January, 1930, page 41), provides that the Board of Trade shall set up a National Industrial Board, with powers to investigate and report upon any dispute as to the terms of a proposed agreement for the regulation of wages or other conditions of colliery workers in any district where there has been a failure to settle the dispute in accordance with any arrangements in force in the district. The Secretary for Mines recently announced that the Coal Mines National Industrial Board, under the Coal Mines Act, had been constituted, with Sir Harold Morris, K.C. (president of the Industrial Court, and chairman of the Railways National Wages Board) as chairman.

The discontinuance on March 31 of a number of offices of the Department of Immigration and Colonization which are located in the United States was announced by the Minister, the Hon. W. A. Gordon, on February 9. "For the present," he said, "the movement from the United States is being confined strictly to those who can establish beyond question that they will not contribute directly or indirectly to the unemployment problem in Canada." The offices to be closed are at Boston, Buffalo, Chicago, Fargo, Omaha, Great Falls, Montana, and San Francisco.

The Hon. Senator Griesbach, who was appointed recently to investigate the Edmonton Police Department, included in his report a recommendation that the city policemen's union should be dissolved. This union holds a charter from the Trades and Labour Congress of Canada, and it is stated that a protest against the recommendation is to be made by the Edmonton Trades and Labour Council.

The Vancouver and New Westminster District Trades and Labour Council adopted a resolution on January 20 in favour of amendments to the Workmen's Compensation Act of British Columbia that would include within the scope of the Act casual labour employed on jobs involving an expenditure of \$50 or more; provide that the amount of compensation should be based on the wages received by a workman at the time of an accident; and also provide for continuing the payment of compensation for temporary incapacity to an injured workman until he returns to his job or has obtained employment that is equally remunerative.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

Employment

THE Employment situation at the end of January was reported by the Superintendents of the Employment Service of Canada to be as follows:—

Though few requests were received for farm help in the Province of Nova Scotia, farmers at New Glasgow were taking advantage of the favourable weather by hauling logs and cordwood. Large catches of fish were reported, some fishermen having made exceptionally well at a single tide. Logging was quiet. At Stellarton, the mines operated steady time while others, elsewhere, lost time due to lack of orders. In the vicinity of Sydney mines were in operation only two or three days a week. Manufacturing at Halifax was, for the most part, good. At New Glasgow, biscuit and confectionary manufacturers reported business as fair and at Trenton, the steel workers, in all departments, were fully employed. Other factories had sufficient orders on hand to keep them employed for some time, or were contemplating extending their plants for future production. Construction was slack, though at Halifax, where large contracts were nearing completion, smaller ones were well under way, with a good number of skilled and unskilled workers employed. Both passenger and freight traffic was fairly heavy, while trade, owing to seasonal sales, was good. There was a continued demand for women domestic workers and placements were made accordingly.

In the Province of New Brunswick farmers were busy securing their year's supply of firewood. Others were pelting foxes. Heavy storms at Chatham had prevented the bringing of produce to the city market. Fairly heavy catches of fish were reported. Logging showed no activity. Little manufacturing was being carried on, except in pulp and paper. Foundry work also showed a decline. Building construction, at Chatham, was held up owing to unfavourable weather, but at Saint John all work was moving rapidly. Bus transportation was light and passenger and freight traffic on railways only fair. There was the usual demand for women domestic workers with all orders easily filled.

The Employment Offices, in the Province of Quebec, reported that farm orders were few, with a corresponding scarcity of placements. Logging also showed a decline with the exception of Sherbrooke, where a large number of bushmen were placed. There was no activity displayed at the mines. Indications pointed to resumption of activities in the manufac-

turing industries, particularly in the zones covered by the Offices of the Employment Service. At the time of writing, however, Montreal reported a curtailment in the boot and shoe trades and in tobacco: quietness in textile, rubber and clothing and no improvement in the metal trades. Conditions in printing alone were satisfactory. Sherbrooke stated that manufactures as a whole were favourable. In Quebec City, nearly all factories, with the exception of leather, were quiet. Pulp and paper mills at Three Rivers again registered a decrease. Work in the building trades in Montreal was slack, but up to 10,000 men had been employed during the month of January for snow removal. Building in Quebec was active, but repairs which had been in progress in Three Rivers were nearing completion. Transportation was dull and trade showed a falling off. Very few placements also were effected for women domestic workers. Little change in conditions from those of last month were shown in any occupation, applicants throughout the Province being more numerous than vacancies.

Farming in the Province of Ontario, showed some indications of a renewal of activity where enquiries were coming in for help required in the early spring. While under ordinary conditions this would be a very busy time of year for the logging industry, yet the demand for bushmen was practically at a standstill, according to reports received from Northern Ontario Employment Offices. The supply of miners still exceed the demand but it was thought that the re-opening of a mine in the Cobalt area might result in a few placements. A gradual re-absorption of old employees was taking place in many factories, automobiles and agricultural implements reporting the most improvement. In Sault Ste. Marie an order for 30,000 tons of steel rails had given considerable stimulus to employment. Textile firms in Hamilton also showed indications of better business. Relief work continued to be the chief source of employment for large numbers of unskilled workers, wholly dependent on this labour during the off season, when few other projects were under way. The total number of women domestic workers showed a considerable increase, a large number of whom were middle aged women whom it was difficult to place. Toronto reported a few enquiries regarding summer employment, but elsewhere in the Province, the demand for household and hotel work continued below the supply of available workers.

Continued mild weather, in the Province of Manitoba affected the placement of workers in the farming group, so that with the exception of Winnipeg, few men had been sent out. Logging and mining were also inactive and no improvement was registered in manufacturing. Construction likewise was slack. Brandon was still employing 100 men, in rotation, on relief work, while Winnipeg reported that the building of two bridges was proceed-

(¹⁰) Sugar production given in periods of four weeks.

ing, with an additional number of workmen absorbed. Relief work was also being carried on in this city, which afforded casual work for numerous unemployed. Retail and wholesale trade continued quiet in all lines and collections were generally slow. In the women's domestic section applicants exceeded vacancies, though the volume of work available remained at the same level, as formerly reported.

Throughout the Province of Saskatchewan, owing to continued fine weather, there was slight demand for farm help. Little activity was shown in logging, with the exception of work provided at Government relief camps. Coal mining reported no improvement. Nearly all building construction was at a standstill, though some employment, as a relief measure, was provided on watermains, and highways or in bridge building. The demand for women domestic workers was not large and there was no difficulty in securing suitable applicants to meet the requirements.

Farming, in the Province of Alberta, was very quiet with little likelihood of any marked improvement before spring. There was a fair demand for bushmen at Edmonton, but as weather conditions were unsuitable for operations in this group, no increase in placements was anticipated. Owing to a shutdown of three local mines at Drumheller, the registration of unemployed miners showed an increase, for whom steps were being taken to provide relief. At Lethbridge, the majority of the mines worked no more than 2 days a week. Manufacturing industries were quiet. There was little change in building construction, with prospects for the coming season poor. Railroad work also was slack, it being doubtful whether there would be a demand for extra gangs in the spring, as in previous years. Retail merchants were running extensive sales with fairly satisfactory results, but, other than this, trade conditions were unfavourable with collections difficult. Quietness prevailed in the women's domestic section, and no difficulty was experienced in filling orders promptly.

Farming, in the province of British Columbia, was quiet as was also logging the only demand in the latter group being for tie makers and sawyers and those engaged in getting out poles. Mines, in general, were only working part time and a number of men were being laid off. Manufacturing firms reported no change for the better, some factories having closed down. Iron foundries, machine shops, garages, etc., were all very slack and generally on short time and prospects did not appear particularly encouraging for the immediate future. Some contracts in building construction kept local men employed, otherwise, al-

most the only work available was that provided by the Government as relief. Highway work at Revelstoke still continued, with fine weather favourable to road repairs and construction. Railroads, except at Kamloops, were also engaging few men. Dry docks and shipyards at Prince Rupert were active, but longshoring and shipping at that point, quiet. At Vancouver, regular waterfront workers were unemployed for several weeks at a time. Trade, both wholesale and retail, was fair, but collections very slow. There was very little work of any kind for women domestic workers, with many applicants on the waiting list. Outside of relief work, opportunities for employment throughout the province were not numerous and there was little prospect of present improvement.

EMPLOYERS' REPORT

The seasonal curtailment in employment registered at the beginning of January, 1931, involved a smaller number of workers than that reported on January 1, 1930 and 1929. In spite of this smaller falling-off (which was partly due to the stabilizing effect of unemployment relief work), employment was at a lower level than on the same date in the two preceding years, although it was higher than on January 1 of any of the years, 1921-28. The Dominion Bureau of Statistics tabulated returns from 7,511 firms whose payrolls declined from 974,918 persons on December 1, to 912,400 at the beginning of January. Reflecting this contraction, the index (based upon the 1926 average as 100) stood at 101.7 on January 1, 1931, as compared with 108.5 in the preceding month, and with 111.2, 109.1, 100.7, 95.9, 90.7, 84.9, 89.8, 87.3, 78.8, and 88.8 on the same date in 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

All except the Maritime Provinces recorded declines, those in Quebec and Ontario being most extensive. In the Maritime Provinces, the increase took place chiefly in transportation, due to the opening of the winter ports, and in construction, as a result of unemployment relief work, while logging was also seasonally more active. On the other hand, manufacturing and mining showed seasonal curtailment. In Quebec, manufacturing, construction and transportation reported especially pronounced losses, but the trend was also unfavourable in mining and communications, while improvement was noted in retail trade and in highway and road construction, the latter as a result of unemployment relief plans. In Ontario, manufacturing, construction and transportation registered the greatest losses, while logging recorded an advance. In the Prairie Provinces, construction reported

the most noteworthy decrease, but transportation, manufacturing, mining and trade were also slacker. On the other hand, logging indicated increased activity. In British Columbia, lumber, food and iron and steel factories, transportation, logging and trade recorded important curtailment, while there were gains in highway construction as a result of the unemployment relief scheme.

There were contractions in each of the eight cities for which separate tabulations are made, firms in Montreal, Quebec City, Toronto, Ottawa, Hamilton, Windsor and the adjacent Border Cities, Winnipeg and Vancouver reporting reduced employment. In Montreal, important declines were noted in transportation and manufacturing. In Quebec City, manufactures reported losses in employment, while construction was more active. In Toronto, there were contractions in manufacturing and also in construction, services, transportation and trade, but road construction absorbed more workers in consequence of the unemployment relief scheme. In Ottawa, manufactures and construction indicated seasonal curtailment, and trade also afforded less employment. In Hamilton, trade and shipping showed reduced activity, and manufacturing as a whole was slacker, despite gains in iron and steel factories. In Windsor and the adjacent Border Cities, manufacturing and construction were dull. In Winnipeg, manufactures and construction registered the greatest declines, but wholesale trade was also slacker, while communications showed moderate improvement. In Vancouver, employment in manufactures, communications, transportation and trade showed a falling-off since the preceding month, while highway construction afforded considerably more work of a relief character.

An analysis of the returns by industries shows important contractions in manufacturing, construction, transportation, communications, mining, services and trade, while logging recorded gains.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of January, 1931.

TRADE UNION REPORTS.

The usual quietness reflected in a number of trades and industries with the winter season was in evidence during December and to a more marked degree than in previous years, and together with holiday closings and following inventory and stocktaking periods resulted in an unemployment percentage at the end of December of 17.0, contrasted with 13.8 per cent of idleness in November and with 11.4 per cent in December, 1929. All provinces shared in the unfavourable situation shown in comparison with

November, the recessions being around 3 per cent in each province. Further and more extensive curtailment of operations was reported in the building trades from November, particularly in Quebec, in which province also the manufacturing industries reported noteworthy declines. The transportation industries also registered a moderate drop in the volume of work available from November, which was most apparent in the Province of Ontario. Alberta unions alone reported an upward employment trend from December, 1929, the improvement being but nominal, while in all other provinces slacker conditions prevailed, Quebec, Ontario, New Brunswick and British Columbia unions showing the most marked contractions.

In another section of this issue will be found a report in greater detail on the unemployment situation among local trade unions at the close of December, 1930.

During the month of December, 1930, the offices of the Employment Service of Canada made 55,769 references of persons to positions and effected a total of 54,751 placements. The number of placements made in regular employment during the month was 16,457, of which 13,833 were of men and 2,624 of women workers. In casual work the offices placed 38,294 people. Employers notified the Service of 55,675 vacancies, of which 48,346 were for men and 7,329 for women. The number of registrations for work was 64,962 of men and 9,209 of women, a total of 74,171 applications. Compared with the preceding month and also with December a year ago, the transactions of the offices showed a marked gain, which was entirely due to the work provided by the Federal-Provincial relief plan for the alleviation of unemployment. The records for November, 1930, showing 36,503 vacancies offered, 68,862 applications made and 35,557 placements effected; while in December, 1929, there were recorded 28,762 vacancies, 42,695 applications for work and 27,811 placements in regular and casual employment. A report in detail of the work of the offices for the month of December, 1930, may be found elsewhere in this issue and on another page will be found a statement of the activities of the offices for the last quarter of the same year.

BUILDING PERMITS AND CONTRACTS AWARDED.

According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities during December, 1930, was \$15,439,964, as compared with \$11,791,478 in the preceding month and with \$14,688,682 in December, 1929.

The *MacLean Building Review* states that \$20,299,100 worth of new construction was awarded throughout the Dominion during January, this figure being the lowest recorded during the past two years. Of this total \$9,921,000 was for engineering purposes; \$6,011,200 was for business buildings; \$3,944,200 was for residential buildings; and \$422,700 was for industrial purposes. The apportionment of the contracts awarded during January, by provinces, was as follows: Quebec, \$7,006,000; Ontario, \$5,923,400; British Columbia, \$2,472,600; Manitoba, \$1,497,000; Nova Scotia, \$1,343,500; Alberta, \$853,100; Saskatchewan, \$820,000; New Brunswick, \$353,500; Prince Edward Island, \$30,000.

Production and Trade

INDUSTRIAL PRODUCTION. Figures showing the volume of production in certain industries during recent months and also in the corresponding months of 1929, are shown in the table on page 124.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, states that throughout the greater part of 1930, the industry and commerce of Canada were on a relatively moderate level. Operations during the first half were fairly well maintained at the levels established in the last quarter of 1929, but subsequently the economic trend turned downward and contraction continued to the end of the year. In making comparisons with conditions in 1928 and 1929, it should be recognized that in those years the Dominion enjoyed the most rapid industrial expansion in its history. The economic depression of 1930 was international in its scope and one of the most severe in time of peace. The inflation of speculative values, resulting in stringent credit conditions during the period of superactivity, was one of the chief elements in bringing about the recession of the past year. Industrial recession began in June, 1929, and a severe deflation of stock prices followed in the last quarter of that year. In May 1929, the index of industrial production was 187.9 marking the culmination of the prosperity phase of the last economic cycle. This compares with 137.7 in December last, the lowest point reached since the latter part of 1926. This index, which includes most of the basic mineral products, construction, and wide variety of manufactured products, average 164.0 in 1930, being 12.5 per cent higher than in 1926 and 6 per cent higher than in 1927. The declines from 1928 and 1929 were 4.6 per cent and 14.8 per cent respectively.

Production indexes show that in December operations were uneven as compared with November, but that the downward tendency predominated. The mining index showed a gain, the shipments of gold and silver contributing to the increase. Exports of nickel and asbestos also showed a gain. Substantial contraction was shown in manufacturing operations, a reduction in the output of newsprint and iron and steel contributing to the decline. Imports of crude petroleum showed a gain after seasonal adjustment, and the gain in the output of motor cars was equivalent to the normal increase for the season. Imports of crude rubber and raw cotton were sharply curtailed. The index of manufacturing production was 127.8, in December as compared with 139.7 in November. While freight movement was at a low level in December, an increase was shown over the preceding month, adjustment being made for seasonal tendencies.

Coal.—The output of coal from Canadian mines in December totalled 1,274,857 tons, a decline of 3 per cent from the November total of 1,315,420 tons, and 24 per cent from the five-year average output for December of 1,674,025 tons. Bituminous coal produced amounted to 877,186 tons, sub-bituminous coal, 54,961 tons, and lignite coal, 342,710 tons. Production from mines in Nova Scotia reached a total of 459,628 tons; in New Brunswick, 19,585 tons; Saskatchewan, 80,185 tons; Alberta, 529,053 tons; and British Columbia, 186,406 tons. Coal imported into Canada in December totalled 1,223,032 tons, a decrease of 18 per cent from the 1925-1929 average for the month of 1,491,443 tons. Anthracite receipts during December were recorded at 301,802 tons and consisted of 248,398 tons from the United States, 46,348 tons from Great Britain, 5,936 tons from Germany, and 1,120 tons from the French East Indies. Imports of bituminous coal amounted to 918,327 tons, made up of 915,459 tons from the United States and 2,868 tons from Great Britain. Lignite coal importations totalled 2,903 tons received from the United States and cleared through Saskatchewan and British Columbia ports. Canadian coal exported declined 50 per cent as compared with the average for the month during the past five years. The December exports consisted of 55,061 tons of bituminous coal and 5,667 tons of lignite.

Canada's coal supply in December was obtained from the following sources; United States mines, 48 per cent; Canadian mines about 50 per cent; Great Britain mines 2 per cent and a small tonnage from Germany and the French East Indies. The total coal available for consumption in Canada during December was 2,437,161 tons, or 20 per cent be-

low the December 1925-1929 average for the month of 3,044,302 tons.

EXTERNAL TRADE

A summary of Canadian trade prepared by the Department of National Revenue shows that in December, 1930, the merchandise entered for consumption amounted to \$60,337,934 as compared with \$76,325,063 in the preceding month and with \$84,365,155 in December, 1929. The chief imports in December, 1920, were: Iron and its products, \$10,837,218; Non-metallic minerals and products, \$10,127,279; Fibres, textiles and textile products, \$9,036,486.

The domestic merchandise exported during December, 1930, amounted to \$66,819,668 as compared with \$73,060,871 in the preceding month and with \$88,520,355 in December, 1929. The chief exports in December, 1930, were: Agricultural and vegetable products, mainly foods, \$20,641,053; wood, wood products and paper, \$19,762,105; non-ferrous metals and their products, \$8,567,335.

Strikes and Lockouts

The time loss due to industrial disputes in Canada in January, 1931, was lower than that occurring during December, 1930, being only slightly over one-half that incurred during the latter month. The number of employees involved also showed a substantial decrease. As compared with January, 1930, the figures for January, 1931, show that while one more strike occurred, less than one quarter the number of workers were involved and a smaller time loss was incurred. There were in existence during the month six disputes, involving 560 workers, and resulting in a time loss of 4,840 working days, as compared with eight disputes, involving 723 workers and resulting in a time loss of 8,661 working days in December, 1930. In January, 1930, there were on record five disputes involving 2,169 workers and resulting in a time loss of 7,254 working days. At the end of the month there were two disputes recorded as strikes or lockouts, involving approximately 160 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been formally called off or lapsed.

Prices

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was again considerably lower at \$9.86 for January, 1931, as compared with \$10.10 for December, 1930; \$11.88 for

January, 1930; \$11.30 for January, 1929; \$11.19 for January, 1928; \$11.37 for January, 1927; \$11.63 for January, 1926; \$10.77 for January, 1925; \$10.78 for January, 1924; \$10.52 for January, 1923; \$11.03 for January, 1922; \$14.48 for January, 1921; \$16.92 for June, 1920 (the peak); \$12.42 for January, 1918; and \$7.73 for January 1914. Of the twenty-nine items in the food budget twenty were lower, while two showed slight increases. The most important declines occurred in the prices of eggs, with less important decreases in pork, bacon, butter, cheese, flour, rolled oats, beans and prunes. Including the cost of fuel and rent with that of foods the total budget averaged \$20.21 at the beginning of January, 1931, as compared with \$20.46 for December, 1930; \$22.17 for January, 1930; \$21.55 for January, 1929; \$21.41 for January, 1928; \$21.59 for January, 1927; \$21.96 for January, 1926; \$21.09 for January, 1925; \$21.23 for January, 1924; \$21.13 for January, 1923; \$21.52 for January, 1922; \$25.30 for January, 1921; \$26.92 for July, 1920 (the peak); \$19.61 for January, 1918; and \$14.49 for January, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was again lower at 76.7 for January, 1931, as compared with 77.8 for December, 1930; 95.4 for January, 1930; 94.0 for January, 1929; 96.9 for January, 1928; 97.8 for January, 1927; and 103.0 for January, 1926. In the classification according to chief component materials all of the eight main groups were lower; the Vegetables and Vegetable Products group, because of declines in the prices of wheat, rye, barley, flax, flour, coffee and raw rubber; the Animals and their Products group, mainly because of lower quotations for steers, hogs, fresh meats, hides, cheese and fresh eggs, which more than offset higher prices for calves, lambs and butter; the Fibres, Textiles and Textile Products group, because of lower prices for cotton thread, cottonades, denims and ticking, which more than offset higher prices for raw cotton and raw silk; the Wood, Wood Products and Paper group, due mainly to decreased prices for certain lines of lumber; the Iron and its Products group, because of lower quotations for wire; the Non-Ferrous Metals and their Products group, due to lower prices for electrolytic copper, copper wire, brass sheets, lead, silver and zinc; the Non-Metallic Minerals and their Products group, due to lower prices for plate glass; and the Chemicals and Allied Products group, because of declines in the prices of copper sulphate, aluminium sulphate and shellac.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING THE MONTH OF JANUARY, 1931

DURING the month of January an application for the establishment of a Board of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act was received from certain work equipment employees of the Canadian National Railways, Atlantic Region, being ditchermen, members of the Canadian Brotherhood of Railway Employees. Twelve workmen were stated to be directly affected by the dispute, which related to the men's request for a schedule of wages and working conditions and for representation by a person of their own choice. The application was under consideration at the close of the month.

The text of the findings of the Board of Conciliation and Investigation which dealt

with a dispute between various employers of Vancouver, B.C., on the one hand, as represented by the Shipping Federation of British Columbia, Limited, and their longshoremen, on the other hand, as represented by the Vancouver and District Waterfront Workers' Association, appeared in the *LABOUR GAZETTE*, August, 1930, page 889. In accordance with the understanding reached before the Board, as set forth in its final report dated August 4, 1930, an agreement has been signed by the representatives of the parties concerned effective for three years as from November 1, 1930. A summary of the agreement will appear in the next issue, under the heading "Recent Industrial Agreements."

STRIKES AND LOCKOUTS IN CANADA DURING JANUARY, 1931

THE number of strikes and lockouts in existence in Canada during January, 1931, was six, as compared with eight the preceding month. The number of workers involved was also proportionately less, being 560 as compared with 723 for December, while the time loss was only about one-half as large. Comparing the figures with those for January, 1930, while the latter month had but five disputes, there were about four times as many workers involved and in these a greater time loss resulted.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Jan. 1931...	6	560	4,840
Dec. 1930....	8	723	8,661
Jan. 1930....	5	2,169	7,254

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Two disputes, involving approximately 80 workers, were carried over from December, and four disputes commenced during January. Of these six disputes, three terminated during the month, and one was recorded as having lapsed. One of these four was recorded as being partially successful, the other three were recorded as in favour of employers, with two recorded as unterminated at the end of January, namely, coal miners at Shaughnessy, Alta., and pile drivers, bridge builders and hoisting engineers at Vancouver, B.C.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not yet declared terminated. Information is available as to four such disputes, namely: electrotypers, Toronto, Ont., December 20, 1926, one employer; photo engravers, Toronto, Ont., January 7, 1929, one employer; motion picture projectionists, Vancouver, B.C., June 23, 1930, one employer; and bakery drivers, Saskatoon, Sask., September 22, 1930, one employer.

Three teamsters employed by a contractor putting in a new water reservoir for the Light

and Water Commission of Preston, Ont., ceased work for a day, January 19, when paid but 70 cents per hour instead of 80 cents per hour, claimed to be the prevailing wage. The town authorities assured the contractor that this was the prevailing rate and this being paid, the teamsters returned the next day. As this constitutes only a minor dispute, it has not been included in the tabular statement of strikes and lockouts.

A strike of stonecutters in Halifax, N.S., toward the end of January has been reported in the press. Information secured by the Department is that, while there was a demand that the stone for the building should be cut in Halifax, no cessation of work occurred.

The following paragraphs give particulars regarding certain disputes in addition to the information in the tabular statement:—

FURNITURE FACTORY WORKERS, UPHOLSTERERS, TORONTO, ONT.—When this dispute, commencing December 10, 1930, was reported to the Department early in January, the resident officer of the Department attempted to bring about a settlement. As stated in the January

issue of the **LABOUR GAZETTE**, the factory was operating under a union agreement, not expiring until February 1, 1931 (**LABOUR GAZETTE**, July, 1930, page 842), and the employer had proposed a decrease in piece-rate wages of 35 per cent, the union offering to agree to a 20 per cent reduction. The employer refusing to arbitrate, as provided by the agreement, closed the plant for a few days and opened with a wage scale for upholsterers lower by 35 per cent, and partially replaced the workers refusing these terms. The management stated to the conciliation officer that it had been found impossible to continue operations at the wages paid as they were one hundred per cent higher than paid by competitors and theirs was the only union establishment in that branch of the industry. The union, it was claimed, had refused to reduce the wage scale and the workers had refused to co-operate in securing a reasonable output of work, and the management secured all the upholsterers needed under the depressed conditions. It was also claimed that under the reduced scale earnings were 75 cents to one dollar per hour, and

STRIKES AND LOCKOUTS IN CANADA DURING JANUARY, 1931

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
(a) Strikes and Lockouts in Progress Prior to January, 1931			
MANUFACTURING— <i>Other Wood Products—</i> Sash and door factory workers, Vancouver, B.C.....	20	200	Commenced November 3, 1930; against decrease in wages; workers partially replaced; lapsed during January.
Furniture factory workers (upholsterers) Toronto, Ont....	60	1,000	Commenced December 10, 1930; lockout to enforce decrease in wages in violation of agreement; strikers partially replaced; lapsed during January.
(b) Strikes and Lockouts Commencing during January, 1931			
MINING, ETC.— Coal miners, Shaughnessy, Alta.....	130	1,500	Commenced January 15, 1931; against dismissal of workers; partial return of strikers; unterminated.
MANUFACTURING— <i>Textiles, clothing, etc.—</i> Textile factory workers, St. Hyacinthe, P.Q.....	120	960	Commenced January 7, 1931; to secure increase in wages and changes in conditions; partially successful; work resumed January 16, 1931.
Women's clothing factory workers, Toronto, Ont.....	200	1,000	Commenced January 13, 1931; to secure higher wages, shorter hours, etc.; terminated January 19, 1931; in favour of employers.
CONSTRUCTION— <i>Bridge—</i> Pile drivers, bridge builders and hoisting engineers, Van- couver, B.C.....	30	180	Commenced January 3, 1931; against employment of any but union members; replacement of workers by January 17; unterminated.

higher than in other establishments, and that it would be useless to arbitrate as they could not pay more. The union on the other hand claimed workers were averaging only \$24 per week during the past nine months, and that the agreement had been violated openly and deliberately in several instances by the employer although operating under agreements with the union for several years. No settlement was reached and the dispute appears to have lapsed by the end of January.

SASH AND DOOR FACTORY WORKERS, VANCOUVER, B.C.—This dispute, commencing November 3, 1930, was reported in the December issue of the *LABOUR GAZETTE* as involving only one establishment and thirty-two workers, owing to a reduction of wages, but later information reveals that another establishment was involved for one half day, with thirty-one workers, work being resumed without a reduction in wages. In the establishment first reported at the end of December twenty workers were still on strike, twelve having secured work elsewhere, but at the end of January the factory was closed down and the dispute appears to have lapsed.

COAL MINERS, SHAUGHNESSY, ALBERTA.—Miners in one colliery ceased work when two workmen were suspended because they were mining less coal than others and refused to give any explanation. The mine had been operated on a day wage basis since September when a dispute arose as to conditions of piece work, resulting in a cessation of work for nearly three weeks; this dispute was settled by an agreement to be in force till March 31, 1932, providing for day wages until piece rates could be agreed upon. This settlement was the result of mediation by officers of the Department, and early in February the conciliation officer for the Western provinces met the parties, but no settlement was reached. The management pointed out that the agreement provided that there should be no strikes without recourse to negotiations and arbitration if necessary, and that as in the previous dispute this provision had been violated. The workers also made allegations as to violations of the agreement by the employer. The management stated that about 40 out of 130 employees had resumed work and that an agreement had been reached with a committee of these as to work on a piece rate basis.

In connection with picketing the mine, intimidation was reported and three of the pickets were arrested and committed for trial before the Supreme Court of Alberta in Lethbridge.

WOMEN'S CLOTHING FACTORY WORKERS, TORONTO, ONT.—A number of workers in several factories manufacturing women's dresses ceased work on January 13, being called on strike by the Industrial Union of

Needle Trades Workers. It was reported that the International Ladies Garment Workers' Union had been organizing the dressmaking establishments in Toronto and opening negotiations with the employers to secure an agreement such as those secured in cloak factories in Toronto and Montreal as the result of strikes in January and February, 1930 (*LABOUR GAZETTE*, April, 1930, p. 447); and that when a strike was called by the Industrial Needle Trades Workers' Union, a rival organization, some employees thinking it had been called by the international union ceased work, but returned when informed at the union offices that no strike had been called. The Industrial Union of Needle Trades Workers claimed that 500 workers in 10 factories ceased work, but the Department has been unable to secure as yet official information from the parties involved. On January 16 when a building containing a number of dressmaking establishments was picketed by a large number of strikers, attempting to prevent any workers from entering, several persons were arrested and charged with disorderly conduct. On January 19 one was sentenced to imprisonment for 60 days, the magistrate recommending his deportation, and eight others were fined \$10 and costs. The same day the strike was called off by the Industrial Union of Needle Trades Workers.

PILE DRIVERS, BRIDGE BUILDERS AND HOISTING ENGINEERS, VANCOUVER, B.C.—Employees on the construction of a bridge ceased work Saturday noon, January 3, 1931, the contractors having refused their demand for the employment only of members of the Pile Drivers, Bridge, Wharf and Dock Builders' local of the United Brotherhood of Carpenters and Joiners, the hoisting engineers going out with the pile drivers. It appears that the contractor had a number of his regular employees building caissons a short distance from the bridge site, and the pile drivers' union claimed it was the custom to have these built by members of their union, the question of safety being stressed. The contractor claimed that his employees had many years experience, and declined to displace them. The resident officer of the Department met the representatives of the parties to the dispute, but no settlement was reached. The contractor undertook not to replace the strikers immediately, and on Thursday notified the union he would do so next day. By Saturday all had been replaced by members of the pile drivers' local affiliated with the All Canadian Congress of Labour.

TEXTILE FACTORY WORKERS, ST. HYACINTHE, P.Q.—Employees ceased work on January 7, 1931, to secure increases in wages and certain changes in conditions and resumed work on January 16, having secured concessions on certain points.

RECENT STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month. The annual review containing a table summarizing the principal statistics as to strikes and lockouts in other countries is on a later page of this issue. Information about particular disputes is obtained for the most part from newspaper reports.

Great Britain and Northern Ireland

Preliminary figures for the year 1930 have recently been published. During the year 415 disputes began and 8 were still in progress from the previous year, making a total of 423 disputes in progress during the year, involving 309,400 workers and resulting in a time loss of 4,404,000 working days for the year. Two-thirds of all the workers involved and nearly three-quarters of the total time loss were due to two disputes, one in the wool textile industry and the other in coal mining.

Of the 415 disputes beginning in 1930, 39 were for increases in wages, 89 over proposed reductions in wages, 116 over other wages questions, 19 on questions related to hours, 79 on questions respecting the employment of particular classes or persons, 26 on questions of trade union principle and 46 on other questions. There was in addition one small sympathetic strike.

The accompanying table gives a classification of the disputes by industries.

INDUSTRIAL DISPUTES IN GREAT BRITAIN AND NORTHERN IRELAND DURING 1930

Industry group	1930		
	Number of Disputes beginning in 1930	Number of work-people involved in all disputes in progress	Aggregate duration in working days of all disputes in progress
Coal mining.....	145	149,400	667,000
Other mining and quarrying.....	7	500	7,000
Brick, pottery, glass, etc.....	7	600	6,000
Iron and steel.....	5	700	9,000
Engineering.....	11	900	8,000
Shipbuilding.....	23	4,100	15,000
Other metal.....	30	4,200	60,000
Cotton.....	18	2,600	36,000
Wool textile.....	7	122,200	3,279,000
Other textile.....	20	4,000	77,000
Clothing.....	21	1,400	10,000
Food, drink and tobacco.....	5	900	3,000
Woodworking, furniture, etc.....	21	3,300	88,000
Paper, printing, etc.....	6	800	7,000
Building, public works contracting, etc.....	47	3,800	46,000
Transport.....	22	5,200	25,000
Commerce, distribution and finance.....	6	3,500	51,000
Other.....	14	1,300	10,000
Total.....	415	309,400	4,404,000

The number of disputes beginning in December was 30, and 20 were still in progress from the previous month, making a total of 50 disputes in progress during the month, involving 99,400 workpeople and resulting in a time loss of 547,000 working days for the month. Of the 30 disputes beginning in December, 6 were over demands for increases in wages, 9 on other wages questions, 9 on questions as to working hours, 3 on questions respecting the employment of particular classes or persons and 3 on other questions.

The dispute involving 150,000 coal miners in South Wales which began January 1, and was mentioned in the LABOUR GAZETTE, January, was terminated January 17, in favour of workers. The hours of work were fixed at 45 per week under the new Coal Mines Act, but the owners wished to have them so arranged that wages would be slightly reduced. In the settlement of the dispute, wages for the 45-hour week would be the same as for the 48-hour week formerly worked.

Weavers in cotton mills in Lancashire have become involved in a large dispute. In an attempt to reduce costs and revive trade, the employers' organization decided to introduce the "more-loom" system, by which the number of looms per weaver was to be increased from four to eight, although the speed of the machines would be reduced. The union claimed that this would increase unemployment and refused to consent to the system. On January 6, about 4,000 weavers at Burnley went on strike and the employers' organization closed their weaving mills at Burnley on January 12, thus locking out 25,000 workers. Although the Ministry of Labour used every effort to avert it, a general lockout covering the great majority of the weaving sheds in Lancashire began January 19 and about 250,000 workers became involved. In spite of the continued efforts of the Prime Minister and the Government to bring about a settlement, the dispute was still in progress at the end of January.

United States

The number of disputes beginning in November was 37, and 27 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 8,464 and the time loss 313,649 working days for the month.

The strike of 4,000 textile workers at Danville, Virginia, which began September 29, 1930, and was mentioned in the last four issues of the LABOUR GAZETTE was terminated January 29, when the union called off the strike.

STRIKES AND LOCKOUTS IN CANADA AND OTHER COUNTRIES, 1930

THE year 1930 had fewer strikes and lockouts than any year since 1915, there being but sixty-seven, a figure less than that shown for any year since 1900 except 1914 and 1915, when there were but sixty-three disputes in each case. While there were a few hundred more workers involved in disputes in 1930 than during 1929 and five of the other years, the resulting time loss was less than in any year since the commencement of the records. This was due to the absence of any protracted disputes of large magnitude. The largest dispute during the year was that involving 1,800 workers employed in women's clothing factories in Toronto in January, which lasted eleven days and resulted in a time loss of 18,000 working days. Other disputes of large dimensions occurring during the year included that which

involved 1,400 coal miners at Springhill, N.S., in September, lasting eight working days and resulting in a time loss of 11,200 working days; that involving 1,300 coal miners at New Aberdeen for three days; and that of five hundred shore fishermen at North Sydney and district, N.S., lasting for over a month and resulting in a time loss of 11,000 working days. Most of the disputes occurring during 1930 were in the manufacturing, construction and mining industries, which were responsible for 31.3 per cent, 28.4 per cent and 22.3 per cent respectively of the total number of disputes on record, manufacturing showing the largest time loss, namely 43.6 per cent. The eleven disputes occurring in the textiles and clothing group caused 36.5 per cent of the total time loss, while mining accounted for

TABLE I—STRIKES AND LOCKOUTS IN CANADA BY YEARS, 1901-1930

Year	All Industries					Coal Mining			Industries other than Coal Mining		
	Number of disputes		Number of employers	Number of workers involved	Time loss in working days	Number of disputes in existence during year	Number of workers involved	Time loss in working days	Number of disputes in existence during year	Number of workers involved	Time loss in working days
	In existence during the year	Beginning in the year									
1901.....	99	97	285	24,089	737,808	2	1,760	7,040	97	22,329	730,768
1902.....	125	124	532	12,709	203,301	3	510	10,120	122	12,199	193,181

*In these totals figures for disputes extending over the end of a year are counted more than once.

26.3 per cent and construction and fishing for 13.5 per cent each.

Revision of Statistics, 1901-1930

The accompanying tables of industrial disputes in Canada from 1901 to 1930 are the result of a revision of the record for the whole period, which became desirable following the adoption of a new classification of industries and occupations in 1922. This classification has been used since that date for the publication of these statistics each month in the *LABOUR GAZETTE*, and for the review and analysis of the figures for each calendar year which appears in an early issue in the next year. The new classification was that drawn up by the Dominion Statistician in consultation with officials of other departments of the Federal Government and other authorities, and is used for the decennial census, the annual census of industry, and other official statistics. The classification of industries and occupations used since 1900 had been changed in 1917 for one similar to that finally adopted for the census of 1921 by the Dominion Statistician. While the principal groupings in the classification used for the three periods, 1901 to 1916, 1917 to 1921, and 1922 to 1930, were necessarily similar, there were differences sufficient to make impracticable any satisfactory comparison of statistics by industries for the various years or periods. For instance the classification in use from 1901 to 1916, essentially a classification by trade groups rather than by industries, included all disputes involving unskilled labour in a separate group, disputes in railway shops were included under metal trades, etc. In revising the records by industries it was also decided to make other revisions in the methods of compilation and analysis which appeared desirable and had been adopted in recent years. Until 1922 only strikes or lockouts involving six workers or more, lasting at least one day were included in the record, but it has been found that disputes involving large numbers of employees for a few hours were sometimes of great importance, and that occasionally strikes of a small number of employees for a short time were important as indirectly affecting a large number of other employees, as tying up an important public utility, etc. It was therefore decided, while adhering to the practice adopted in 1900 of confining the record to disputes involving six or more employees for at least one day, to follow the example of Australia, and to include all disputes resulting in a time loss of ten or more man working days. A separate record is also

kept of the minor disputes thus excluded, and these are mentioned in each issue of the *LABOUR GAZETTE* and in the annual review.

In the revision a number of disputes were included in the record which had previously been omitted owing to lack of information, and in many cases the record as to a dispute has been amended or completed as a result of additional information being secured. This was true particularly of the period 1916 to 1918 when information as to many disputes did not reach the Department owing to the censorship during the war, and similarly many were not published in the Departmental reports for the same reason. The number of disputes now recorded for the thirty-year period is therefore increased by the above additions, but as most of them involved relatively few employees and lasted for relatively short periods of time, they caused little increase in the numbers of employees involved or in the time loss. In revising the figures as to time loss and numbers of employees involved considerable reductions were made in some cases by making due allowance for cessation or partial cessation of operations and for reductions of staff that would have occurred even if there had been no strike or lockout, for instance in coal mines during summer months, etc. As a very large percentage of the time loss appeared in coal mining disputes of long duration this procedure reduced the figures considerably. A number of disputes, usually of little importance, were omitted from the record owing to lack of information, particularly as to numbers of workers involved.

Compilation of Statistics

Since its establishment toward the end of 1900 the Department of Labour has maintained a record of strikes and lockouts in Canada, publishing in the *LABOUR GAZETTE* each month a complete list of those in progress, so far as available, with particulars as to the nature and result of each dispute. Early in each year a review of the previous year has been given, including statistical tables analysing the data, and since 1912 including a complete list of the disputes on record during the year. As the monthly statements in the *LABOUR GAZETTE* are necessarily of a preliminary nature the annual review constitutes the revised record for the year. A special report on "Strikes and Lockouts in Canada 1901 to 1912," issued in 1913, contained a complete list of strikes and lockouts for that period with analytical tables. The annual reviews in the *LABOUR GAZETTE* have brought the lists of

disputes and analytical tables down to date each year.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical tables, therefore, strikes and lockouts are recorded together, the term dispute being used with reference to either.

A strike or lockout included as such in the records of the Department, is a cessation of work involving six or more employees and lasting one working day or more. Disputes of less than one day's duration and disputes involving less than six employees have not been included in the published record unless a time loss of 10 days or more is caused. A separate record of such disputes involving less than 10 days' time loss is maintained in the Department. Although not included in the statistical record, such disputes are mentioned in the LABOUR GAZETTE at the time of their occurrence. During 1930 there were five such disputes, involving 64 employees, making a time loss of 32 working days.

The figures in this report are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. As to duration of strikes, numbers of employees concerned, etc., it is impossible always to secure exact information, but the estimate made in such cases is the result of painstaking methods in the collection of data, and, with increasing experience in dealing with the subject it is believed that the statistics indicate the conditions with reasonable precision. The estimate of time loss is reached by multiplying the number of working days during which each strike lasted by the number of employees involved in the dispute from time to time so far as known. The number of employees recorded for each dispute is the number of those directly affected that is on strike or locked out and does not include those indirectly affected. In recent years, when the information is available, the number indirectly involved has been shown in footnotes.

The record does not include minor disputes as described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, al-

though the unions or organizations concerned have not yet declared them terminated. In addition to the list in Table 10 information is available as to the following disputes of this nature carried over from 1929: electrotypers, Toronto, Ont., Dec. 20, 1926; plumbers in Kingston, Ont., April 2, 1928, several employers, terminated Sept. 2, 1930; photo engravers, Toronto, Ont., Jan. 7, 1929; and moulders, Lachine, P.Q., May 2, 1929, one employer, lapsed during May, 1930. Also during 1930 the following dispute included in Table X was added: motion picture projectionists, Vancouver, B.C., one employer.

Charts

The accompanying chart of the time loss in working days by groups of industries for each year back to 1901, shows that in mining considerable time loss occurred in 1909, 1910, 1911 and 1913, and again in 1917, 1922, 1924 and 1925. In 1919 the time loss due to general strikes is shown separately. This had previously been shown in the chart as included in the metal trades group, so that there is a corresponding decrease in the time loss for metal trades for that year, the only year that did show a great time loss in metal manufacturing; 1920 also showing an appreciable amount. In construction considerable time loss appeared only in 1912 and 1919. In transportation there was considerable time loss only in 1901, due to a strike of trackmen; in 1903 due to a strike of railway clerks and freight handlers throughout western Canada, and a strike of longshoremen at Montreal, with a sympathetic strike of teamsters; and in 1908, due to a strike of railway shop machinists. There also occurred considerable time loss in clothing, textiles, boots, furs, etc., in 1903, 1908, 1912, 1914, 1917, 1925 and 1926. The time loss in other manufacturing industries was large in 1901, due to a lockout of cigarmakers at Montreal; and in 1921, 1922, 1923 and 1924, due to the prolonged disputes of job printers to secure the forty-four hour week.

From the chart showing results of the disputes it appears that the majority of employees were successful or partially successful in 1901, 1902, 1907, 1915, 1916, 1917, 1918, 1926 and 1930, but were unsuccessful in 1908, 1921 and 1923:—

(a) Clothing, textiles, furs and leather.
 (b) Transportation and Public Utilities.
 (c) Includes General Strikes, 1919—12 disputes, 44,367 workers, and time loss of 1,033,686 working days.

Analysis of Statistics, 1930

Table I is a summary of the principal statistics for the period for which the record has been compiled, beginning in 1901. The table shows the number of disputes beginning in each year and the number in existence during the year, the difference in each case being the number of disputes carried over the end of the previous calendar year. A small number of disputes have been carried over at the end of every year except 1903 and 1929. The approximate number of employers involved in all industries, as well as the number of workers involved and the time loss, is given. In addition to these data, the number of disputes in existence during each year in coal mining and in industries other than coal mining, is given, along with the number of workers involved and the time loss. A study of the latter figures will

reveal that a few disputes in coal mining in most years account for a large proportion of the workers involved and for a still larger proportion of the time loss resulting.

Tables IA and IB give summary figures for the thirty-year period as to results of disputes and as to time loss by industries with numbers of workers involved, etc., also illustrated by charts.

Table II gives an analysis by number of workers involved during 1930 and shows that 6 per cent of the disputes, 4 in number, involving over 1,000 workers each, involved 43·6 per cent of the workers and caused 42·6 per cent of the time loss, that 47·8 per cent of the disputes involved only 5 per cent of the workers and caused only 3·1 per cent of the time loss, indicating that nearly half of the disputes involved comparatively few workers and for short periods of time.

TABLE II—STRIKES AND LOCKOUTS IN CANADA, 1930, BY NUMBER OF EMPLOYEES INVOLVED

Number of workers involved	Disputes		Number involved		Time loss	
	Number	Per cent of total	Workers	Per cent of total	Working days	Per cent of total
5,000 and over.....	4	6·0	6,000	43·6	39,100	42·6

Total.....	67	100·0	13,768	100·0	91,797	100·0

TABLE IV—STRIKES AND LOCKOUTS IN CANADA, 1930, BY DURATION

Period of duration	Disputes		Number involved		Time loss	
	Number	Per cent of total	Workers	Per cent of total	Working days	Per cent of total
Unterminated and carried over from previous year.....	2	3·0	124	0·9	2,385	2·6
25 days and over.....	13	19·4	1,151	8·4	29,129	31·7
20 days and under 25.....	3	4·5	60	0·4	1,274	1·4
15 days and under 20.....	3	4·5	125	0·9	1,941	2·1
10 days and under 15.....	5	7·4	2,148	15·6	22,258	24·2
5 days and under 10.....	15	22·4	2,330	16·9	17,432	19·0
Under 5 days.....	26	38·8	7,830	56·9	17,378	18·0
Total.....	67	100·0	13,768	100·0	91,797	100·0

Table III gives an analysis by time loss in man working days, and shows that 6 per cent of the disputes caused 47.2 per cent of the time loss, each of four disputes causing over 10,000 working days time loss. It also shows

that 56.7 per cent of the disputes caused but 8.1 per cent of the time loss.

Table IV gives an analysis by duration, that is the number of days each dispute was in progress, and shows that only 19.4 per cent

TABLE V—STRIKES AND LOCKOUTS IN CANADA, 1930, BY PROVINCES

*The Electric Light and Power group does not include undertakings mainly public utilities; Non-ferrous smelting is included with mining; erection of all large bridges is under Bridge Construction; water service is under Public Administration.

lasted over 25 working days, and 3 per cent were unterminated or carried over from the previous years; that 61.2 per cent of the disputes were under 10 working days and that these involved 73.8 per cent of the workers out during the year and accounted for 38 per cent of the time loss.

Table V gives an analysis by provinces, and shows that Nova Scotia and Ontario each had 26.9 per cent of the disputes for the year and that Nova Scotia had the largest time loss, 43.7 per cent of the time loss for the Dominion, with Ontario next, having 30.8 per cent of the time loss. Quebec was next, both in the number of disputes, 19.4 per cent, and in time loss, 17.2 per cent. British Columbia, Alberta, New Brunswick and Saskatchewan follow in that order both in respect to number of disputes and time loss. For Manitoba and Prince Edward Island no disputes were recorded during the year.

Table VI gives an analysis by industries and shows that mining, manufacturing and construction were responsible for 83.5 per cent of the disputes, 91.1 per cent of the workers involved and 83.4 per cent of the time loss incurred. In manufacturing, the textiles and clothing group had over half the number of disputes and most of the time loss, while in construction, the buildings and structures group experienced most of the disputes and time loss. Fishing had but 3 per cent of the disputes, yet suffered 13.5 per cent of the time loss. Mining with 22.3 per cent of the disputes had 26.3 per cent of the time loss.

Table VII gives an analysis by causes and results and shows that there were 16 disputes caused by demands for increases in wages, and the same number to secure or to maintain union wages and working conditions, and that 9 were caused by decreases in wages. The workers won 20 disputes in which 6,667 workers were involved, lost 28 disputes with 3,433 workers involved, and compromised or were partially successful in 17 disputes with 3,544 workers involved. The latter disputes caused the greatest time loss, being 37,264 working days. Only one dispute for an increase in wages resulted in favour of workers, while six resulted in compromises and nine

were in favour of employers. Of those caused by decreases in wages, four resulted in favour of employers, two in favour of workers, one in a compromise and two were unterminated. The disputes concerning questions of unionism resulted chiefly in favour of workers, sixteen being in their favour, seven in favour of employers and five in compromises. One dispute, caused by a demand for shorter hours, resulted in a compromise.

Table VIII gives an analysis by industries and methods of settlement with respect to the number of disputes and the workers involved, and shows that 28 disputes, in which 6,699 workers were concerned, were settled by direct negotiations. In 8 disputes, involving 4,294 workers, conciliation or mediation were responsible for settlements, while 2 disputes were settled by reference to boards under the Industrial Disputes Investigation Act. In 12 other disputes settlements were effected by the return of the workers and also 12 by replacement of workers.

Table IX gives an analysis by months for the past ten years, giving the number of disputes starting during each month, as well as the number of disputes in existence, and the number of workers involved each month, both in new disputes and in all disputes in progress, with the total time loss by months. This table shows that the greatest number of disputes generally occurs in May and that the greatest time loss generally occurs in July. The past year was an exception, in that the greatest number of strikes occurred in September and the largest time loss in February, followed closely by September and November. This large time loss was due to a strike of 500 fishermen at North Sydney in November, and to one of 1,300 coal miners at New Aberdeen in November. During September 1,400 coal miners at Springhill, N.S., were on strike for over a week, and 260 coal miners at River Hebert for two weeks, as well as 170 plasterers at Montreal for over a week. In February much time loss was incurred through the disputes involving 950 coal miners at Glace Bay for a day and by 1,800 women's clothing workers at Toronto out for 7 days during February.

Strikes and Lockouts in Other Countries 1919-1930

The accompanying table gives the principal figures as to strikes and lockouts in other countries as compared with Canada since 1919, showing the number of disputes (strikes and lockouts), the number of employees involved in stoppages of work and the time loss in man working days in those countries for which such figures are available.

In some of these countries, figures as to strikes and lockouts are published separately, but in the table here given they have been included together. The practice varies greatly in the various countries also in regard to other points. In some cases the number of strikes and lockouts shown for a year is the number beginning during the year, in other cases it is the number ending during the year, and in still other cases it is the number in existence during the year, including those carried over from the previous year, with those beginning during the year.

The figures as to the number of employees involved published by some countries show not only the number of employees directly involved, but also the number of those indirectly involved, that is, thrown out of work by disputes to which they were not parties, but exact information as to these points is not always given. In the table given herewith the column showing numbers of employees involved includes figures for the numbers directly involved, or the total number directly and indirectly involved according to the method adopted by the country in question.

For some countries, figures as to time loss, that is, the number of man working days lost, are not given. Footnotes to the table indicate the nature of the statistics with reference to the above points. Many countries publish these statistics only once each year or less frequently, the figures being issued in some cases after an interval of some length.

The following notes give information as to the more important strikes and lockouts in each country in the year 1930.

Great Britain and Northern Ireland

The largest dispute in 1930 was that in the wool textile industry in Yorkshire and Lancashire which lasted from April to June. There were 120,000 workers involved and the time loss was 3,258,000 working days. The dispute occurred when the workers refused to accept the reduction in wages amounting to about 9 per cent which was recommended by the Court of Inquiry under the Industrial Courts Act. In most districts work was resumed during June, in some cases at the

reduction which had been so recommended and in other cases at a smaller reduction in wages.

Another important dispute was in the coal mining industry in Scotland in which 76,000 workers were involved during the first week in December. This dispute was over the arrangement of hours of work under the new Coal Mines Act which came into effect on December 1, and work was resumed pending further negotiations.

Australia

The most important dispute during 1930 had begun in March, 1929, and involved between 10,000 and 12,000 coal miners in New South Wales against a reduction in wages. Many of the employees had returned to work during 1929 and the dispute terminated in May, 1930, in favour of employers.

France

The Social Insurance Act which came into effect July 1, 1930, and applies to all wage earners with annual incomes below certain amounts, provides for a compulsory insurance scheme paying benefits in case of death, disability, maternity and old age. The funds are secured by a government subsidy and by equal contributions from employers and employees. This contribution amounts to about four per cent of workers' earnings. Although accepting the principle of this law, workers in some districts demanded increases in wages to equal the amount of their contributions as they claimed the cost of living had not fallen and had in some cases increased. A number of strikes occurred in the textile and metal industries of the Department of the Nord in the Lille and Roubaix and Tourcoing districts beginning at the end of July and in August. About 100,000 workers were involved in the first week in August. Through the mediation of the Ministry of Labour, settlements were effected in August and the first part of September, granting increases in wages equal to or slightly less than the amounts of the workers' contributions. It was also reported that several thousands of workers in various industries at Rouen were successful in securing wage increases of six per cent.

Germany

Several disputes occurred in connection with the general movement for reductions in wages towards the end of the year. Berlin metal workers numbering 126,000 refused to accept the government conciliation award providing for reductions in wages of 6 to 8 per cent and

ceased work October 15. The dispute was referred to arbitration and work was resumed October 30, on practically the same terms as the original award although part of the reduction was delayed until January. In Bielefeld a lockout of 8,000 workers in the metal industry was settled by a reduction in wages of from 3 to 5 per cent. In Hanover from 8,000 to 10,000 workers in the metal industry were on strike in December against a reduction in wages of 13½ per cent. The settlement of the dispute provided for reductions of from 3½ to 7½ per cent.

India

A strike of about 20,000 employees of the Great India Peninsula Railway began on February 4, to secure an 8-hour day, increases in wages and other demands. The Government of India agreed to reinstate the strikers as soon as possible, to revise the wage scale of the lower paid employees and to reconsider the wages in the shops. The strike committee would not accept this offer and insisted on immediate reinstatement of all strikers, but about half of them returned to work by March 17. On April 15, the strike was called off.

Sweden

A dispute concerning 4,500 workers in the paper industry which lasted from April to June was settled through government conciliation, adjustments in wage rates being mostly in favour of workers although in some cases there were decreases.

United States

A strike involving about 22,000 ladies' garment workers in the dress manufacturing industry in New York City lasted from February 4, to February 12, and resulted in a compromise settlement. The union was successful in securing a provision for the establishment of an impartial commission appointed by the State Governor for the settlement of all future disputes and better employment conditions.

Four thousand textile workers at Danville, Virginia, were on strike from September 29, 1930, to January 29, 1931, on which date the union called the strike off. The cause of the dispute was the alleged discrimination against union employees. It is understood that strikers were being re-employed except those who had unlawfully interfered with non-union workers, but no recognition of collective bargaining was secured.

(p) Not official, but a study made by a college professor at Peking.

Paper-Using Industries in Canada

The Dominion Bureau of Statistics (Forest Products Branch) recently published a report on the paper-using industries of Canada for 1927-28. The report details the production in Canada of commodities whose chief component material is paper and paper-board. It is pointed out that two summaries of these statistics have been published annually in the past. One of these dealt with printing trades and the allied graphic arts, and the other with the manufacture of paper goods. The present report combines these two groups in one with the object of showing the importance of the paper using industries in their relation to the pulp and paper industry on which they depend to a large extent for their raw material, and their importance as a source of supply of the packing material, containers, stationery, printed matter, and other paper commodities so necessary in modern business and industry. The report also gives additional reviews for past years as well as certain historical and general information relating to the group of industries as a whole.

In 1928 wood and paper products formed 11.7 per cent of the total value of manufactured products in Canada, and 21.4 per cent of the total value of exports of all kinds of Canadian produce. The wood and paper group products in Canada comes second in importance to vegetable products both in respect to gross value of production and total value of exports. The steadily increasing importance of this group of products is shown in the following figures:—

	Production	Exportation
1926.. ..	\$600,064,661	\$286,305,842
1927.. ..	629,567,156	280,959,319
1928.. ..	682,549,865	289,125,744

Summaries of the principal statistics of this industry, especially those pertaining to the capital employed, numbers and salaries of wage earners, cost of materials, gross value of production, etc., were included in the tables of manufacturing statistics published in the LABOUR GAZETTE, May, 1930, page 600.

OLD AGE PENSIONS IN CANADA

Statistical Summary of Administration During Fourth Quarter of 1930 and Since Inception of the System

THE accompanying table gives particulars of operations under the Old Age Pensions Act (Revised Statutes of Canada, 1927, chapter 156) and the various provincial concurrent Acts, during the fourth three months of 1930, and since these Acts became severally effective. Similar tables, bringing the statistics down to September 30, 1930, were given in the LABOUR GAZETTE, December, 1930. The text of the Old Age Pensions Act was given in the issue for April, 1927, page 375. It makes provision for the establishment of a Dominion Provincial pension system to be effective in such provinces as have enacted special legislation for this purpose. These provinces are British Columbia, Alberta, Saskatchewan, Manitoba, and Ontario. The New Brunswick Legislature passed an Old Age Pensions Act at its session this year, to become effective on its proclamation by the Lieutenant Governor in Council. The final report of the Nova Scotia Commission on Old Age Pensions was outlined in the LABOUR GAZETTE, May, 1930, and the question of

participating in the system is still under consideration in that province.

Under the Old Age Pensions Act a pension is payable to any British subject of 70 years and upwards who is not in receipt of an income of as much as \$365 a year and who has resided in Canada for the 20 years preceding, and has also resided in the province in which the application is made for the five years immediately preceding the granting of the pension. The maximum amount of pension payable under the Act is \$240 yearly. In cases where pensioners have a private income the amount of their old age pension is subject to a reduction by the amount, if any, that their private income exceeds \$125 a year. The administration of old age pensions is entrusted to the authorities appointed by the respective provincial governments. The Department of Labour of Canada pays quarterly to each province one-half of the total amount of the pensions paid by the provincial pension authority during the preceding three months.

FINANCIAL SUMMARY OF OLD AGE PENSIONS IN CANADA AS AT DECEMBER 31, 1930

	Alberta	British Columbia	Manitoba	Ontario	Saskat- chewan	North West Territories	Totals
—	Act effective Aug. 1, 1929	Act effective Sept. 1, 1927	Act effective Sept. 1, 1928	Act effective Nov. 1, 1929	Act effective May 1, 1928	Order in Council effective Jan. 25, 1929

UNEMPLOYMENT RELIEF ACT, 1930

Relief Provided in Co-operation With Provinces, Municipalities and Railway Companies

IN previous issues of the *LABOUR GAZETTE*, an account has been given of the Special Session of the Parliament of Canada summoned especially to deal with problems arising out of exceptional economic conditions with resultant unemployment, and of the enactment of the Unemployment Relief Act. Particulars of the expenditures approved have been given from month to month.

The Provinces continue to submit their proposals for Provincial and Municipal work under the Agreement entered into with the Dominion Government, the following joint expenditures having been approved by the Minister of Labour up to February 9th:—

Prince Edward Island	\$ 200,000
Nova Scotia	2,329,539
New Brunswick	1,361,000
Quebec	10,164,050
Ontario	13,594,422
Manitoba	2,536,044
Saskatchewan	1,880,048
Saskatchewan Drought Area	424,550
Alberta	2,666,033
British Columbia	2,654,070
Yukon	20,000
Grade Crossing Fund	1,439,360
Canadian Pacific Railway	11,514,000
Canadian National Railways	14,159,403
Department of Interior (Parks)	33,000
	<hr/>
	\$64,975,519

Approximate Extent of Relief Provided

The various Provinces, railway companies and Departments of the Government which are co-operating under the Unemployment Relief Act, 1930, have furnished statistics showing the actual volume of employment given to date. Details for each Province, etc., are given below. The complete figures cannot be presented, as in the Province of Quebec, where Unemployment Relief work has been approved of to be carried on in about one thousand municipalities, the Provincial authorities find themselves unable to furnish a complete statement at the present time, owing to the fact that the municipalities are responding slowly to their request for statistics.

The following details show that at least 180,492 individuals had been given employment for 2,863,168 man-days from the commencement of the operations under the Unemployment Relief Act to the end of January, 1931, these figures not being complete, as returns from the Province of Quebec, where a great deal of work is being done, are only partially included.

In British Columbia 22,206 individuals had been given employment up to January 31, 321,802 man-days work having been given. Up to January 31, direct relief had been given to 3,512 families, in addition to 12,089 individuals. These figures furnished by the provincial authorities are said not to include Victoria, Prince George and Nelson.

In Alberta up to January 31, 11,902 individuals were given employment, 171,479 man-days work being given. Direct relief was also given to 2,717 heads of families, and 8,489 single men. While detailed figures for the municipalities are not generally available, the City Manager of Lethbridge has notified the Department of Labour that the number of men given employment in that municipality is 396 to January 31, 2,112 man-days work having been provided. The figures for Lethbridge are included in the figures given for the Province. In addition to the above, Unemployment Relief work is now being carried on in the National Parks at Banff, Waterton and Jasper, 197 men having been given a total of 1,073 man-days work.

The reports from Saskatchewan indicate that the total number of men given employment was 18,472 to January 31, 296,467 man-days work having been provided. In addition the Province reports that 139,064 team-days work were given. These figures included 145,209 man-days work given to about 9,000 farmers in some 44 municipalities in the drought area. The number of individuals given Direct Relief amounted to 12,014.

Manitoba reports that 19,495 individuals were given employment up to January 31, 134,560 man-days work being given. There were actually working on January 31, 2,211 individuals, and included in this number were 771 men employed on the Grasmere drainage project. Direct relief to January 31, was given to 25,658 individuals. These figures do not include unemployment relief work under the Unemployment Relief Act in the Riding Mountain National Park, where 263 individuals have been given 8,899 man-days work.

The number of men given employment under the Unemployment Relief Act arrangements in the Province of Ontario is reported as 43,000 up to January 30. The total number of man-days work given to the same date being 1,160,000. The number of cases given direct relief up to January 30, was 17,000, this figure including single men and heads of families.

In Quebec work is being carried on under the Unemployment Relief Act in over 900 municipalities, but the provincial authorities have not yet found themselves able to prepare a representative report showing the number of men thus given work. Reports from a few of the municipalities show 5,309 men given work amounting to 45,660 man-days. Figures for direct relief given in the City of Montreal are available to December 31 only. They show that to that date 8,839 heads of families, including some 31,970 individuals, were given direct relief. In addition the Montreal Council of Social Agencies reports that to the same date 17,932 free nights lodging had been furnished, together with 107,982 free meals.

The figures for New Brunswick show a total of men employed to January 31, of 22,112. Employment was given to the extent of 149,267 man-days. No figures have yet been received covering direct relief, but it is understood that there was very little expenditure in this connection up to the end of January.

In Prince Edward Island, 1,074 individuals had been employed up to January 31, a total of 8,098 man-days work having been given. During December 151 individuals were given direct relief, which was also extended to 9 individuals during the month of January.

Nova Scotia reports that 29,540 individuals were given employment up to January 31, work being given to the extent of 372,565 man-days. The number receiving direct relief during January was 1,893, all heads of families.

The Yukon Territory has given employment this winter to 150 individuals, who were given 2,096 man-days work. No money was expended for direct relief in the Yukon under the provisions of the Unemployment Relief Act.

Railway Companies.—The Canadian Pacific Railway reports that work done as a result of the Agreement under the Unemployment Relief Act has resulted in 4,203 individuals being given employment up to January 31. These men were given a total of 124,852 man-days' work.

The Canadian National Railways had 501 men actually employed on January 31, but since the commencement of the relief work have given employment to 2,569 individuals, who had been given 66,350 man-days' work up to January 31.

In addition to the work outlined above tenders are being invited by the Canadian National Railways in respect to the Newmarket Sub-Division Crossing, which has just been covered by an Order of the Board of Railway Commissioners.

At the Brampton Sub-Division Crossing, where the Canadian Pacific Railway is also concerned, the engineers of the respective companies have agreed on the details of plans, which have been filed with the Board of Railway Commissioners for approval, and when the Board's Order issues, the work in question will be proceeded with.

Additional Expenditures Approved up to February 9, 1931

In previous issues details of expenditures approved to January 10, have been set forth. The details of additional expenditures approved to February 9, and included in above summary are given below:—

Province of Manitoba

Municipality of La Broquerie (Piney Road)—Roads.	\$ 1,000
Municipality of St. James—Paving and laying watermain.	40,000
Rupert's Land (Hole Lake Road)—Brushing and close cutting of roadway.	750
Kemnay—Construction of subway.	150,000
Trans-Canada Highway.	13,800
Town of Birtle—Road work and improvements.	625
Village of Teulon—Road improvements.	312
Municipality of Swan River—Road improvements.	625
Municipality of Whitemouth—Road improvements.	1,250
Municipality of Winchester—Road improvements.	1,250
City of Brandon—Civic improvements.	6,250

Town of Oak Lake—Creek diversion.	\$ 625
Town of Morden—Road improvements.	625
Municipality of Odanah—Road improvements.	1,250
Municipality of Daly—Road improvements.	1,250
Municipality of St. Boniface—Diversion of Seine river.	5,000
Municipality of Springfield—Brushing and gravelling.	1,250
Municipality of Victoria—Clearing road, hauling gravel.	1,250
Village of Shoal Lake—Clearing road, digging well.	250

Province of Quebec

Simplified Procedure Under Quebec Unemployed Aid Act, 1930

The *Municipal Bulletin*, the official organ of the Department of Municipal Affairs of the Province of Quebec, contained in its issue for January, 1931, the following explanation of the working of the Unemployed Aid Act, which was passed recently by the Quebec Legislature (LABOUR GAZETTE, December, 1930, page 1336): Under this Act the municipalities which have been authorized to spend a certain amount in order to relieve unemployment are exempted from nearly all the formalities enacted by the Cities and Towns' Act or by the Municipal Code. Once the contract has been signed with the Ministers of Labour of the Governments of Quebec and Ottawa, respectively, the Council may, notwithstanding Chapter 112 of the Revised Statutes, 1925, order by a mere resolution the works to be done. If the municipality must borrow, even for only a month or two during the collection of the taxes, a by-law is necessary, but this by-law is exempted from all the ordinary formalities. Only the approval of such by-law by the majority of the members present forming a quorum of the council and by the Lieutenant-Governor in Council through the Department of Municipal Affairs is required. The Lieutenant-Governor in Council, by Order-in-Council, has decided that the fees prescribed by the Official

Tariff shall not be paid for the procedures that must be submitted for the approval of the Lieutenant-Governor in Council or of the Minister of Municipal Affairs under this Act. The adoption of such a by-law does not require any notice of motion, or public notice in the newspapers, or more than one reading or promulgation. It has only to be adopted by the Council in the same manner as a mere resolution, and approved by the Lieutenant-Governor in Council. The only difference between this by-law and a resolution is that it is entitled 'By-Law'; it has a number and it is approved by the Lieutenant-Governor in Council.

Municipalities wishing to make a short term loan from the Bank or otherwise for the share of the Government before their grants are paid may provide for such a loan in the same by-law, to be approved by the Lieutenant-Governor in Council, providing for a loan to pay the share of the municipality. All correspondence concerning the works to be done, the salaries, the working hours and such matters must be addressed to the Minister of Public Works and Labour. As for the matters concerning short term loans, loan by-laws, bonds, etc., the correspondence must be addressed to the Minis-

ter of Municipal Affairs. Loans by means of notes for a term of three years or less are allowed, but the issue of bonds for a term of over three years is strongly recommended; no loan should be for more than twenty years. If a municipality has already been

authorized by order in council, before the adoption of the Unemployed Aid Act, 1930, to do certain works, the Council must now pass a by-law as hereabove mentioned if it wishes to borrow in order to pay for its share in the cost of the works.

MONTREAL COUNCIL OF SOCIAL AGENCIES

AT the annual meeting of the Montreal Council of Social Agencies on January 24 reports were given of the services rendered to the public by the various agencies, including the co-operative health service, unemployment relief, juvenile vocational assistance, care of the physically handicapped, and others.

Sheltered Industry for Handicapped

Among these activities, it was reported that problems in the care of the physically handicapped were a major interest in the early part of the year. A committee appointed at the close of 1929 made a preliminary study of the possibility of establishing a sheltered workshop for physically handicapped men who are incapable of competing in general industry. Men suffering from heart disease, and convalescents from tuberculosis would, it was stated, rank high among those who would derive great benefit from such a sheltered industry where they might have the opportunity of regular part time employment. From an economic standpoint such an industry would enable many individuals now wholly unproductive to be at least partially self-supporting. From the standpoint of the hospitals and the medical profession, it was found undesirable that individuals so handicapped should either remain idle or work beyond their strength. The physical breakdown and return of former patients in a more serious condition than before as a result of failure to withstand the strain of full time employment, has been a matter of common experience in all the large hospitals.

The committee enlisted the co-operation of business interests in a study of the possibility of establishing a sheltered industry which would not compete with existing Canadian industries. Finally, in view of the intention of the Occupational Therapy Association to develop an active program of work, this project was turned over to that association for further study.

Unemployment Among Office Workers

Early in the fall of 1930, the Sun Life Assurance Company drew the attention of the Montreal Council of Social Agencies to the

condition of unemployment among office workers. It was the idea of the company that many office workers were probably in real distress at that time, and that undoubtedly as the winter progressed this distress would become more acute and would involve a greater number of individuals. The company suggested to the council that a registration bureau for office workers be set up and they offered space and personnel for this purpose. A special committee of the Council was appointed to look into the matter. This committee reported very favourably, and suggested that its personnel be enlarged and its scope extended to the whole field of unemployment. In this way the special committee on unemployment of the Montreal Council of Social Agencies was formed under the chairmanship of Dr. Grant Fleming. This committee has acted as a financing and co-ordinating body for unemployment relief for the Protestant community. Credit, however, is given to the Sun Life Company for initiating this movement.

It became evident in the course of this work that although centralization of activities was in many respects desirable, it was not practical to mix all groups of the unemployment population in one bureau, and so the activities of the central committee were delegated to three sub-committees, the Central Registration Bureau for Office Workers, the Emergency Unemployment Relief Committee (for married men), and the Protestant Bureau for Homeless Men.

The Montreal Trades and Labour Council, on January 15, elected Mr. John T. Foster to serve as its president for his 18th term in this office. Mr. Foster, in the course of an address, referred to the proposed changes in the provincial Workmen's Compensation Act, welcoming the premier's announcement that the "Ontario system" of employers' collective liability would be introduced during the present session of the legislature (LABOUR GAZETTE, December, 1930, page 1365), and strongly commenting on the critical attitude of insurance companies and others towards the proposed change in the existing system of workmen's compensation.

BRITISH GOVERNMENT'S MEASURES FOR RELIEF OF UNEMPLOYMENT

THE *Ministry of Labour Gazette*, January, 1931, summarizes the principal measures taken by the Government* of Great Britain for the relief of unemployment during the existing crisis. This summary is based upon a report recently issued as a "White Paper" (Cmd. 3745). Before the international depression had made itself felt, it is stated, the Government had already set on foot a twofold economic policy, comprising—

(i) a short-range policy, designed to provide immediate employment by pressing forward development work of public utility with the utmost vigour;

(ii) a long-range policy, designed to increase the efficiency of British industry, and to promote the prosperous development of British economic life.

These two aspects of the Government's policy are dealt with respectively in the first two parts of the White Paper, Part I dealing with emergency works approved for Government financial assistance, and Part II with economic re-organization. The third part of the White Paper deals with measures taken to sustain or improve the quality of the population.

Part I refers to the series of conferences held by the Government with representatives of local authorities in June and July last, with the object of securing an extension of the program of public works which could be put in hand for the relief of unemployment. The Government decided to increase and expedite the road program and provided special grants of £500,000 for approved employment schemes in selected necessitous areas. The passing of the Public Works Facilities Act at the end of the last session provided a more expeditious alternative to private bill legislation for Local Authorities and public utility undertakings.

The White Paper summarizes what has been done under the Development (Loan Guarantees and Grants) Act, 1929; under the Colonial Development Act, 1929; under the various road programs; and under other programs. The total value of schemes under various programs which have been approved up to September 30, was £135,929,248. On the basis commonly accepted that £1,000,000 provides work for one year for 4,000 men, these schemes will provide work to the extent of more than 500,000 man-years, or over 150 million days of work.

Part II of the White Paper deals with economic re-organization. Under the heading

of "industrial re-organization," the White Paper refers to the passing of the Coal Mines Act, 1930; to the Report on the cotton industry; to the formation, with the support of the leading banks and financial houses, or the Bankers' Industrial Development Company, to consider schemes submitted by the basic industries of Great Britain for the purpose of their rationalization, either by industries or by regions; to the action taken in connection with the iron and steel industries; and to the help given by the Government in connection with the insurance of a new large express steamship for the Cunard Company.

Under the heading of monetary conditions, the White Paper refers to the easy credit conditions now widely prevailing, and to the Government's contribution to the attainment of these conditions by their handling of the floating debt. New issues of Conversion Stock provided funds which were used to reduce the need for public borrowings in the short term market on Treasury Bills, and increased the resources of the money market available for trade and commerce.

Reference is made to the establishment of the Overseas Trade Development Council, and to other measures which have been taken for the promotion of the export trade. Trade missions have been sent to South Africa, to China and Japan, and to South America; and an investigation on behalf of the boot and shoe industry is proceeding in Northern Europe. Greatly increased use is being made of the facilities afforded by the Export Credits Guarantee Department.

Assistance has been given, in various forms, to the electricity supply industry, not only in the towns but also in the rural districts. The eight schemes already prepared by the Electricity Commissioners and adopted by the Central Electricity Board cover nearly 72 per cent of the area of Great Britain, and over 97 per cent of the population.

Housing has been assisted by the partial restoration of the housing subsidy under the Housing (Revision of Contributions) Act, 1929, and by the Housing Act, 1930, which provides machinery for a systematic and sustained attack on bad housing conditions.

The White Paper summarizes the main provisions of the Agricultural Land Utilization Bill, now before Parliament; refers to the passing of the Land Drainage Acts (for England and Wales and for Scotland); and men-

tions the other measures which have been taken for the benefit of agriculture and fisheries.

Part III of the White Paper deals with the measures taken to sustain and improve the quality of the population. Under the two Education Bills (for England and Wales and for Scotland) now before Parliament it is intended to secure a more adequate national system of education for all children between the ages of 11 and 15.

Training centres for the unemployed have been established, which now have an annual output of 8,500 for men and 4,400 for women. Special attention has been given to the needs of unemployed boys and girls; there are now 107 junior instruction centres or classes open,

which have been attended by about 65,000 boys and girls in the last eight months.

The "placing" machinery of the Employment Exchanges has been developed; the number placed in 1929 was a million and a half, and the figure for 1930 will be larger still. A large program of reconstruction and rehabilitation of Employment Exchanges has been put in hand.

The Unemployment Insurance Acts have been amended, so as to improve the scale of benefit for adult dependants and in other cases; and the conditions for the payment of benefit, which had been found in practice to be inequitable, have been modified. These changes have relieved poor law expenditure, particularly in the depressed areas.

Taylor Society's Recommendations for Avoiding Unemployment

The Taylor Society, of New York, recently suggested the following methods whereby employers might reduce the risk of unemployment. These suggestions were made in a report submitted in January to President Hoover's Emergency Committee for Employment.

1. Industrial plants can begin and concentrate investment in necessary new construction and new equipment and in general maintenance work; many such projects have been planned and shelved during prosperity for lack of time to execute them.

2. Mercantile establishments can now construct the new store front which they have contemplated, procure and install new show-cases and shelves, and otherwise prepare for active business.

3. Owners of homes and buildings for rent should make new construction and maintenance work.

4. In addition to capital construction and maintenance projects suggested above, both industrialists and merchants should manifest a more venturesome confidence in the future; the former by resuming the production of staples and experimenting with new lines, the latter by price reductions which will clear their shelves for new merchandise.

5. Industrialists and merchants should re-examine their management methods from the standpoint of scientific management and discover every possible method of stimulating business and every possible economy of purchasing, production and merchandising, thereby establishing in reduced costs of management and operating a basis for continuance of employment and high wages.

6. All employers should distribute available work by shortening work periods rather than by employing a limited number full time.

Vocational Rehabilitation in United States

Over 4,500 persons disabled through accident or disease were physically and vocationally rehabilitated and placed permanently in wage-earning employment in over 600 different occupations last year by State agencies operating in the United States under the national vocational rehabilitation act administered by the Federal Board of Vocational Education. These persons, who represent all types of the disabled, were rehabilitated into occupations ranging from unskilled to highly skilled labour and including purely professional and technical employments. In addition, over 20,000 disabled men and women in process of rehabilitation were being carried on the rolls of State rehabilitation boards at the

end of the year. While many of the rehabilitated persons included individuals who had previously been employed in occupations in which they had become disabled through accident, a number of them were persons who because of disease had never before been able to earn a livelihood. The figures quoted do not include the District of Columbia, the vocational rehabilitation work in which is carried on under a special act which became effective February 24, 1929. The average cost of rehabilitating a disabled man and making him self-supporting is \$250. This figure is contracted with the annual cost—from \$300 to \$500—of maintaining a disabled person as a public charge.

PUBLIC EMPLOYMENT SERVICES IN THE UNITED STATES

THE functions and operations of the Federal Employment Service of the United States, as well as the activities of the State Employment services, are reviewed in an article in the January issue of the *Monthly Labour Review*, the official publication of the United States Department of Labour.

The Federal Government, it is stated, made its initial entry into the employment service field in 1907 for the specific purpose of diverting immigrant labour from the port of entry into less congested areas where employment opportunities were greater. Very little actual placement was done by this organization, its chief function being mainly that of an information bureau, operating as a division of the Bureau of Immigration and within the then Department of Commerce and Labour. For several years this service continued as a secondary activity of the various immigration stations, which had been established throughout the country. In 1913, the Department of Commerce and Labour was reorganized into two separate bodies with the Bureau of Immigration coming under the newly created Department of Labour. Among the duties of the new body was that of advancing the opportunities of workers "for profitable employment."

The country was divided into zones, and upon this basis a plan of co-operation between the employment service and local post offices was developed by which applications for work and for workers were distributed throughout each community reached by the postal service, and then gathered up by the carriers and forwarded to the nearest branch of the employment service.

The Employment Service operated under the Bureau of Immigration until 1917. With the entry of the United States into the war, the Employment Service was separated from the Immigration Bureau, and became a distinct unit administered by the Department of Labour. In 1917 Congress allotted over \$1,000,000 for the re-organization and expansion of the Employment Service on a national basis adequate to meet war needs. One of the first steps then taken was to establish offices in various States, and the organization of the United States into 13 employment districts with a superintendent over each. As a result, at the end of 1917, there were over 400 employment offices throughout the country. The chief activity of the United States Employment Service during this period was that of war labour recruiting, and this objective was conducted intensively. After the armistice the work of the Federal Service bearing directly

upon war production was immediately discontinued. The problem then became not one of finding workers, but of finding jobs for the demobilized service men and workers thrown out of employment by the sudden stoppage of war production.

In March, 1919, the failure of a deficiency appropriation Bill left the United States Employment Service without funds. Drastic curtailment of operations to a skeleton organization resulted. The appropriation granted for the fiscal year 1919-20 was insufficient to maintain any field organization. This resulted in the Federal offices being turned over to the several States and municipalities in which they had been maintained, or, where this was not possible, they were abandoned. However, co-ordination was continued with the States and municipalities by the system which had been established. In addition, the Federal Service maintained its harvest labour and juvenile placement work. This arrangement has prevailed since that time, the United States Employment Service serving as a clearing house through and for its various co-operating agencies.

The method of co-operation with the State systems is described as follows:—

"The plan of co-operation which has been developed between the United States Employment Service and the various State systems involves the appointment of a State official, usually the head of the State Service, to serve as Federal director for the State at a salary of \$1 a year; the use by the State offices of standard record forms provided by the Federal office; and the grant to the State of the franking privilege in matters bearing directly upon placement. Where necessary the service pays, wholly or in part, the salary of employees needed to carry on its work where State funds are not sufficient. Thus placement clerks and examiners in offices in Pennsylvania, Massachusetts, Minnesota, Iowa, and other States are actually on the pay roll of the United States Employment Service and are engaged in work for both the State and the Federal services. . . . Similar financial assistance is given municipal agencies, several of which are operated jointly as Federal-municipal undertakings independent of the State government."

It is stated that at the present time just half of the States—twenty-four—maintain public employment offices as a State service. In all of these, the Department of Labour, or the Industrial Commission, is the medium of administration. The normal number of employment offices which these States operate is 151,

a total somewhat increased recently owing to temporary expansions to cope with the present emergency. The total annual expenditure in connection with these offices is something over one and a quarter million dollars.

The article details what is being attempted in the various States by government means to bring the worker and the job together in normal times as well as in periods of industrial depression, and the machinery through which that effort is made.

Juvenile placement, covering workers between the ages of 14 and 21 years is closely allied to the vocational guidance movement. For the most part it is carried on by city school boards through their vocational guidance departments or their continuation schools.

As regards the placements of handicapped workers, the article states that "responsibility for securing work for the handicapped and disabled, so far as it is met at all by governmental means, is divided between the public employment offices and the rehabilitation agencies. 'Rehabilitation by placement' and 'employment training' are two methods used in

the return to industry of both veterans and disabled civilians under the State and Federal rehabilitation programs. Both methods, of course, involve securing a job for the trainee. To that extent the rehabilitation services are employment services.

"Then, too, after the beneficiary of the rehabilitation service is declared rehabilitated, the responsibility of at least assisting him to find a job remains. Discharge of this responsibility is attempted in various ways. The Veterans' Bureau established an employment service, but its procedure is largely that of making contacts with other agencies which do the actual placement. In the civilian rehabilitation field, the task of finding a job for the trainee seems to be assumed to a large extent by the rehabilitation agent who handled the case, and hence is largely individual effort. Placement after the course of training is completed is generally conceded to be the weakest point in the rehabilitation service at present. That does not, however, apply to placement work where the job secured is itself the means used to rehabilitate the disabled worker."

NEW COMPANY PLANS FOR UNEMPLOYMENT INSURANCE

THE Industrial Relations Section of Princeton University recently issued a memorandum which reviewed certain "Company Plans For Unemployment Insurance." This memorandum is presented as a supplement to that issued previously on the subject of "Company Plans, for the Regularization of Plant Operation and Employment" (LABOUR GAZETTE, December, 1930, page 1402). In view of the fact that older plans of unemployment insurance had been dealt with in previous memoranda, it was decided to limit this paper to three insurance funds that came into prominence during 1930.

The memorandum suggests that insurance would lead to a reduction in unemployment similar to the reduction in industrial accidents that has followed workmen's compensation. "It is a well known fact," it is stated, "that as soon as companies began paying benefits for all cases of accidents they became intensely interested in preventing such disasters, since the benefits were an additional cost to the concern. Both the frequency and severity of accidents have decreased notably since the adoption of the indemnification plans. Similarly one of the most promising features of private unemployment insurance is the pressure it exerts towards preventive measures. While such measures may be taken in the absence of an insurance program, definite, announced provisions for the com-

pensation of employees for whom no work is available act as a spur to far-sighted planning. They also make it essential for the company to transfer its workers within the plant. The concern, therefore, has a financial incentive to give regular and steady employment to its men."

Brown and Bailey Company.—The first scheme dealt with is that of the Brown and Bailey Company of Philadelphia, manufacturers of folding paper boxes. This company has placed a trust fund of \$7,500 in the hands of a trust company of that city for the purpose of affording security and continuity of income to their employees in times of reduced operation. This fund, supplemented by further company contributions to it, is to be used in the payment of unemployment benefits to employees sufficient to guarantee them eighty per cent of their normal wages when employed part time or totally unemployed. Fire and other disasters, sickness and accidents, that cause men to stop work are not considered reasons for paying unemployment benefits. All workers on weekly wages, both skilled and unskilled, new and old, are eligible for benefits and there is no service requirement. Foremen and other supervisors getting weekly or monthly salaries are not included. The plan as adopted did not call for any contribution on the part of the employees. Recently, however, it has been

proposed by the shop committee of the plant, entirely on their own initiative, that they contribute one per cent of their wages to the fund if it falls below \$5,000 and until it again reaches \$7,500.

Fond du Lac Plan.—Another distinct type of scheme is that embodied in what is described as the "Fond du Lac Steady Employment Plan." The chief feature of this scheme is that five companies in Fond du Lac, Wisconsin, recently have agreed upon a plan that not only incorporates unemployment insurance, but provides also for inter-plant transfer of men with direct financial incentives for each company to reduce unemployment. According to the memorandum, the agreement calls for co-operation of each in employing or finding employment for the unemployed of the other companies wherever it is reasonably practical. In case of failure to give steady work, an unemployment benefit of sixty-five per cent of the average wage is to be paid the worker. The five companies—the Demountable Typewriter Company, Inc., the Northern Casket Company, the Standard Refrigerator Company, The Sanitary Refrigerator Company, and the American Lock and Hinge Company—do not intend the scheme to be exclusive and so the agreement

explicitly states that other companies may join. The plan covers all factory and office workers between the ages of twenty-one and sixty who have been employed continuously for two years or more by one of the companies. Managers, assistant managers, superintendents, salesmen, and construction workers are not included. "The company, when contemplating laying off a man, will try to use him in another department of its plant. Failing in this, it will see if one of the other companies may have work for him. Unemployment benefits cease as soon as the beneficiary obtains re-employment or any offer of employment. The companies do not guarantee that the new position offered will involve the same type of work or have the same wage, but agree that they will attempt to furnish as good or better employment, whenever possible. Each company in the agreement has an unemployment fund of its own and makes contributions to it in any manner it sees fit.

General Electric Company.—The third scheme outlined is unemployment pension plan of the General Electric Company. This plan was reviewed in the LABOUR GAZETTE, for July, 1930, page 740.

Past and Present Methods of Employers in Meeting Unemployment

Colonel Arthur Woods, chairman of President Hoover's Committee on Unemployment, giving evidence before a committee of the United States Senate recently, contrasted the attitude of employers during the present industrial depression with employment policies during similar crises in the past. "In the old days," he said, "when an industrial depression came on, the first thing that the head of a business would do was to fire everyone he could, to cut the wages of everyone he kept, to put off all repair work and reconstruction work and new construction work that he could possibly put off, postpone the whole thing; and it was not until after he had done all that sort of thing that he dared to go to the bank and ask the bank to be easy and to extend his credit. And if he had not done that, the bank would have asked him first, 'Have you done all you can to trim your sails, to take things in?' That was the prevailing thought. I do not think there was any thought any other way."

"Now we find coming into industry an almost wholly different attitude. I do not want to say how far it has gone. I do not want to give the impression that it is wholly characteristic of industry today; but I do say that we see signs of it, instances of it, in a marked and a striking way and a definite way. That means that instead of trying to discharge every

one they can, they try to keep every one they can. If they cannot keep them on full time, they keep them on part time. If they have to discharge people, instead of doing it indiscriminately, they pick out for discharge those who can stand it best—unmarried men; men who would be likely to be able to adapt themselves to a different kind of job; sometimes older men who have already qualified for pension. And when they do have to drop men out, they look after their welfare.

"Some companies are making loans without interest to employees whom they let go, to be paid back when the employee gets his job back. They back up their credit at the local stores. They let them stay in houses if they are company houses. They give them actual relief.

"All that we find going on. Then, with reference to reconstruction and repair work, we find that the tendency is growing, instead of to put off reconstruction and repair work that would be undertaken in ordinary times, to anticipate it. They do now the reconstruction work and repair work that ordinarily would not be done until later, with the idea of trying to fill in the depression and provide work; and they are doing this sort of thing, as far as I can see, not out of charity, not with any idea that it is a welfare move, but because it is good business."

MINIMUM WAGES FOR WOMEN IN ALBERTA

Orders Governing Telephone Operators and Hotel Employees

THE Minimum Wage Board of Alberta issued an order, taking effect on its publication in the *Alberta Gazette* on January 15, governing the employment of female telephone operators in the province. Women in this occupation were formerly included in the classes covered by Order No. 5 (governing female employees in offices), "telephone or telephone operators" being mentioned in the list of employments covered by that Order (*LABOUR GAZETTE*, August, 1925, page 779). Accordingly, Order No. 5 is now amended by the omitting of the words "telephone or," and a new Order dealing with this class of labour is issued as follows:

Order No. 3.—Governing Female Telephone Operators

This order shall apply to cities, towns and villages having a population of six hundred, or over.

Wages

1. Except as hereinafter provided, no person, firm or corporation shall employ a female worker or suffer or permit a female worker to be employed as telephone operator at a rate of wages less than \$14 per week.

2. The rate of wages for apprentices may be less than the rate above prescribed, but shall be in accordance with the following schedule: One month probationary period for which no wage rate is stipulated, not less than—

\$7.50 per week for the 2nd and 3rd months;

\$10 per week for the 4th, 5th and 6th months;

\$11 per week for the 7th, 8th and 9th months;

\$12 per week for the 10th, 11th and 12th months—

after which period she shall be paid not less than the minimum rate of \$14 per week.

Deductions

3. Where the usual hours of employment in any establishment in a week are forty or more, in the event of the employment of any employee for less than the usual hours in any week, deduction may be made from the minimum wage; but the employer shall pay such employee an amount for such week bearing the same relation to the minimum wage as the actual number of hours of employment in the said week bears to the usual hours.

Where the usual hours of employment in any establishment in a week are less than forty, deductions may be made from the minimum wage; but the employer shall pay to the employee for such week an amount which bears the same relation to the minimum wage as the number of hours of actual employment in such week bears to forty.

"Usual hours" as referred to in this order, shall mean the usual, regular, or customary number of hours worked in a week by the majority of the female employees in the class of employment concerned in the establishment.

Overtime

4. Where overtime or time in excess of the maximum hours fixed by the board is worked, the employer shall pay the employee for such overtime an amount (at a rate not less than the minimum wage) proportionate to the number of hours of overtime worked by the said employee.

This order shall come into force upon the date of publication in the *Alberta Gazette*.

A. A. CARPENTER,
Chairman, Minimum Wage Board.

W. SMITEN,
Secretary, Minimum Wage Board.

The following additional order, became effective on January 31, 1931:—

Order No. 8 (a)

This order shall apply to Cities, Towns, and Villages having a population of 600 or over.

Hours

No person, firm, or corporation shall employ a female, or suffer or permit a female to be employed, as telephone operator for a greater number of hours than nine in any one day or forty-eight in any one week; provided that where by reason of the season of the year, or otherwise, it seems advisable, the Board may temporarily increase such hours.

Order Governing Women in Hotels

The Minimum Wage Board of Alberta issued an order dated December 15, 1930, in regard to the application of Order No. 3, governing female employees in hotels, restaurants, boarding houses, etc. (*LABOUR GAZETTE*, August, 1925, page 778). This order was originally restricted in its application to the twelve largest cities in the province, but last year it was made to apply to all such establishments in the province. The new order restores the former limitation, in so far as it applies to hotels, and accordingly the order is now in effect only in the following cities: Calgary, Edmonton, Lethbridge, Medicine Hat, Red Deer, Wetaskiwin, Blairmore, Camrose, Cardston, Coleman, Drumheller and Redcliff.

Provisional Assessment Rates for Workmen's Compensation in New Brunswick, 1931

The Workmen's Compensation Board of New Brunswick, as provided for under the Act, recently published the provisional assessments for 1931, being the estimated amounts necessary to provide sufficient funds in each of the industrial classes to meet all claims for compensation payable during the ensuing year. The provisional rates of assessment for 1931, per \$100 of payroll, show a few changes from the rates of 1930 (LABOUR GAZETTE, January, 1930, page 23). These changes indicate to some extent the nature of the accident record in each group on which assessment is based.

In several of the larger industrial groups the assessment remained unchanged from last year, among these being coal mining, which continues at \$5 per \$100 of payroll; manufacturing of steel and iron and its products continues at \$2; sawmills, lathmills, lumber yards workers and woodcutters, etc., remains at \$5.

The principal changes among the industrial classification in the rates of assessment levied upon them for 1931, as compared with 1930, are as follows:—

Classes showing increases:—

Construction, installation or operation of electric power lines or appliances; electric light

system; power plants; electric railways; gas works, including natural gas installation and maintenance: increased from \$2 to \$3.

Provincial, municipal or civic roads and streets making and repairing exclusive of bridge construction; scavenging; street cleaning; snow or ice removal; culverts; construction not otherwise classified; concrete work or cement work not otherwise classified: increased from \$3 to \$4.

Construction of dry docks, piers, wharves, breakwaters or other harbour improvements, including dredging, subaqueous construction or pile driving: increased from \$2.50 to \$3.50.

Classes showing decreases:—

Bricklaying; mason work or stone cutting not otherwise specified; building; general construction; concrete or cement work in or connected with buildings; excavating for or connected with buildings not deeper than eight feet; plastering; structural carpentry, not otherwise specified; roof; sheet metal work; metal roofing, siding, ceiling or the like; building construction (concrete); house wrecking or house moving: reduced from \$3 to \$2.50.

Operation of dry-docks, including repair work on vessels: reduced from \$4.25 to \$3.75.

Inquiry Into Hours and Wages of Bakers in British Columbia

Notices were published in the *British Columbia Gazette*, February 6, of the appointment of Messrs. J. D. McNiven, Adam Bell, and R. D. Morrison as the "Board of Adjustment" under the Hours of Work Act, 1923; and also of the appointment of Messrs. J. D. McNiven, Adam Bell, and George H. Cowan as the "Male Minimum Wage Board" under the Male Minimum Wage Act of 1925. Mr. McNiven, who is the Deputy Minister of Labour for the Province, is the chairman of both Boards.

Notice is given that both Boards are to hold investigations at Victoria and Vancouver during February into the circumstances surrounding the employment of bakers, bread delivery men and salesmen. The first-mentioned Board will inquire into the question of the necessity for extending the hours of these workers beyond the limit of 8-hours per day or 48 hours per week. The Male Minimum Wage Board are authorized to extend their inquiries so as to cover occupations of a similar nature to that of bakers.

Basic Wage Reduced in Australia

The full arbitration court of the Commonwealth of Australia, sitting at Melbourne on January 22, ordered a reduction of ten per cent in basic wages for the year dating from February 2, as a measure of national emergency to combat the economic depression.

The judgment effects the Victorian, South Australian and Tasmanian Railway services, the Australian Workers' Union with the exception of shearers (whose wages were reduced recently) timber workers, clerks, engineers,

tramway employees, carpenters, painters, dockers, the Merchant Service Guild and others.

The Commonwealth statistician described the cut as the first step toward a reduction of £30,000,000 in national salary costs. He said that another heavy reduction in the basic wage would occur almost immediately when the cost of living figures for the past three months is issued. The further reduction would be between four and five shillings weekly.

ALBERTA FEDERATION OF LABOUR

Summary of Proceedings of 15th Annual Convention

THE fifteenth annual convention of the Alberta Federation of Labour was convened at Calgary on January 12, 1931, with approximately one hundred delegates in attendance, presided over by the president, Fred. J. White, M.L.A. At the opening session, Mayor Davison, who is a member of the Typographical Union, welcomed the delegates to the city, and Premier J. E. Brownlee extended greetings on behalf of the Provincial Government.

According to the joint report of the president and secretary, the Federation was in a strong position, both as to membership and finances, notwithstanding the business depression in Western Canada. The report also reviewed the representations made to the Provincial Government on January 28, 1930 (LABOUR GAZETTE, February, 1930, page 184). Among other subjects discussed in the executive report, were: the Coal Mines Act; Minimum Wage Act; Mothers' Allowance Act; Electrical Energy Act; Coal Miners' Wage Security Act; Mechanics' Lien Act; Education of Soldiers' Children Act; Unemployment Relief Act; public ownership of the power resources of the province; health insurance and state medicine; old age pensions; and trade schools.

The treasurer's report showed total receipts, including balance from last year, amounting to \$2,029.61; disbursements, \$1,162.50, leaving a balance as at December 31, 1930, of \$867.11.

The report of the committee on officers' reports expressed satisfaction that the membership in affiliation with the federation had not decreased despite the stringencies of the times, and that a number of unions heretofore unaffiliated had become identified with the federation.

Unemployment

In regard to unemployment, it was the opinion of the committee that immediate relief should be three-fold, the cost being borne by the Dominion, provincial and municipal authorities. The committee suggested that the programs of relief employment initiated by the Government and the cities, be extended to take in all parts of the province where unemployment exists. That a summer conference of the Dominion and provincial governments should be held to evolve a comprehensive program of winter relief extending over a number of years, and failing this, that the Alberta Government take the initiative

and call a conference of the Western Provinces, was urged by the committee. In order that working people may during periods of employment make provision for the period when they may be unemployed, the committee recommended that the federation concur in the view of the Trades and Labour Congress of Canada, that some form of unemployment insurance should be enacted, firstly, as a purely national measure, or through the co-operation of the provinces. With a view to stabilization of employment conditions in the mines, the committee suggested that the Government should make a thorough survey of the coal mining situation. The committee made a further recommendation, that the Federal Government cause an economic conference to be called of industrialists and economists, who would endeavour to work out a program so as to regulate production, distribution and credit facilities, in order that the employment situation be stabilized throughout the Dominion. The legislation enacted at the 1930 session of the Legislature, as enumerated in the officers' report, was approved by the committee. The report of the committee was adopted by the convention.

Workmen's Compensation

To the committee on Workmen's Compensation were referred over thirty resolutions, among which were: (1) Recommending that the minimum weekly payment to injured workmen be increased to \$15 per week, and where weekly earnings are less than \$15 per week, then that 100 per cent of such earnings be paid; (2) Favouring a minimum rate of compensation in cases of permanent total disability of \$90 per month; (3) Urging that compensation be computed on a daily rate instead of on yearly earnings; (4) Seeking the payment of 75 per cent of a workman's wages, based upon the rate of pay received at time of accident, and that compensation be paid from date of injury until the disability has passed.

Other Resolutions

Other resolutions recommended as follows: (1) A minimum work-day of 8 hours and a 5 day week for all workers in Canada; (2) A more suitable location and adequate accommodation for the Provincial Government employment bureau; (3) The immediate institution of an unemployment insurance scheme; (4) State health insurance; (5) Free education

for all to the highest seat of learning and stressing the necessity of free books for all pupils; (6) Serious consideration of organizing farm workers; (7) Right-of-way for fire apparatus; (8) An eight-hour day in all paid fire departments in the province; (9) Public ownership of all utilities; (10) That single men doing relief work be provided with proper housing accommodation and receive a reasonable rate of compensation; (11) Nationalization of the coal mining industry; (12) Immediate investigation of the possibilities of securing by-products from the coal industry; (13) One day off in seven for all paid firemen in the province; (14) That the Federal fair wage officer act in a similar capacity for the Alberta Government; (15) That the Trades and Labour Congress of Canada urge the Federal Government to deal with the unemployment situation as a national emergency; (16) That measures be taken by the government to cope with the unemployment conditions affecting women and girls; (17) Fair wage legislation in Alberta similar to the Dominion statutes; (18) That the age at which boys may be employed in any mine be raised from sixteen to eighteen years; (19) That all persons working in or around any mine be paid every two weeks and on Saturday; (20) That the Provincial Government give financial assistance for distressed miners and their families; (21) Federal unemployment insurance for all unemployed or part-time employment for male or female workers; (22) Abolition

of all miners' provisional certificates, and a stricter supervision over examinations for miners' certificates; (23) That the "closed-door" policy on immigration be closely watched; (24) That Canadian naturalization of newcomers be strictly enforced after the necessary residence period; (25) An eight-hour day law for all hospital nursing staffs in the province; (26) That industry retire its workers with a liberal gratuity after twenty-five years' service; (27) Legislation restricting hours of labour to eight hours for drivers on trucks and busses; (28) That the government place barbers and beauty parlor operators amongst the licensed trades; (29) That all stoppages from wages through the mines offices for school taxes be discontinued; (30) That any change in the present Alberta Liquor Control Act be first submitted to the electors of the province; (31) Full provision for Alberta's future supply of natural gas before there is any exportation of this commodity; (32) That all affiliated members patronize establishments using the union label and to use union label goods; (33) Revival of the stone cutting industry within the province; (34) Offering of prizes for the best essay on the history, aims and accomplishments of the trade union movement, to be competed for by students in grades XI and XII in the high schools of the province.

In the election of officers, Fred J. White, M.L.A., Calgary, was re-elected president, and Elmer E. Roper, Edmonton, re-elected secretary.

District 18, United Mine Workers of America

The nineteenth consecutive constitutional convention of District 18, United Mine Workers of America, which has jurisdiction over the coal areas of Alberta, was held in Calgary, January 7-10, with 27 delegates in attendance. Mr. Robert Livett, the provincial president, presided. The report of the officers outlined their activities during the past two years, during which it was stated they had been guided by the declared policies of the organization. It was also stated that "continued trade depression with its consequent unemployment and similar problems, coupled with the activities of those who seek to destroy us, have made the work more difficult." Appreciation was expressed at the loyalty and support of the membership who had contributed to the progress which had been made. Reference was made to the strike in Wayne and the situation in Mercoal, as well as to the difficulty in organizing owing to the depressed state of the mining industry, and mention

was made of unemployment in general and of its effects. In regard to workmen's compensation it was suggested that representations should be made to the Alberta Legislature with a view to having changes made in the present method of computing earnings. In the matter of wage policies the officers urged caution in new wage scales, but pointed out that wages should be paid commensurate with the skill, labouriousness and hazard of the service rendered. This report, as well as the financial report of the secretary-treasurer was adopted.

Telegrams conveying greetings to the delegates were received from Tom Moore, president of the Trades and Labour Congress of Canada, and John L. Lewis, president of the United Mine Workers.

Resolutions were adopted in favour of the following measures:—

Amendment of the Old Age Pensions Act so as to provide for the payment of pensions

to British subjects of ten years' residence in Canada and that the age be reduced from 70 to 60 years;

That the Federal and Provincial Governments be petitioned to establish a coal by-products plant in the Drumheller area;

That the dumping of all coal into Canada be banned;

That provision be made for a competent first aid man at each mine;

That the closed door policy on immigration be closely watched;

That Canadian nationalization of new comers be encouraged after the necessary residence period;

State unemployment insurance and state medicine;

An eight-hour day law applicable to all workers;

Federal and Provincial aid for destitute miners, in connection with which a telegram was sent to Premier Brownlee;

Public ownership of mines and minerals.

Much time was devoted to questions dealing with scale and other technical matters. A number of resolutions seeking desired changes in the Workmen's Compensation Act were adopted, as were also a number of proposed alterations in the constitution, one of which changes the time of meeting from January to October every two years, the next convention to be held in October, 1932.

NEW BRUNSWICK FEDERATION OF LABOUR

Eighteenth Annual Convention, January, 1931

THE New Brunswick Federation of Labour held its eighteenth annual convention on January 6-8, 1931, President E. R. Steeves, Moncton, presiding. Among the speakers to address the delegates at the opening session were: His Honour Lieut.-Governor H. H. McLean; Mayor W. W. White; Hon. L. P. D. Tilley, K.C., president of the Executive Council; and Thomas Bell, M.P. At a later session Hon. Dr. P. J. Veniot, former Premier of New Brunswick and former Postmaster General, addressed the convention. According to the report of the executive, as presented by George R. Melvin, secretary-treasurer, the most important matters demanding immediate attention were: (1) Devising ways and means of having put into full effect the Mother's Allowance Act, the Minimum Wage Act (Women and Girls), the Old Age Pensions Act, and the Children's Protection Act; (2) securing some clear cut pronouncement on the unemployment situation as it exists. After reviewing the action of the federal and provincial Governments on unemployment, the report suggested that there was need for some scheme such as unemployment insurance.

A substantial balance standing to the credit of the Federation at the close of 1930, was shown in the financial report. This report further showed that the affiliates of the Federation numbered 47 bodies, with a combined approximate membership of 4,500.

The resolutions adopted included the following recommendations:—

Early proclamation bringing into effect the Mother's Allowance Act, the Minimum Wage Act, the Old Age Pensions Act, and the Children's Protection Act.

Amendment to the Liquor Control legislation to permit the sale of light wines and beers.

Amendment to Section 36 (1) (b) of the Workmen's Compensation Act to provide compensation of \$10 per week, and where wages less than that amount, then full wages.

That acetylene and electric welders be placed under the Workmen's Compensation Act.

Amendment of the Public Utilities Act with a view to determining a fair rate to be charged for service rendered by any privately-owned utility company enjoying a monopoly.

Licensing of all employing electricians and inside wiremen, and the inspection of all inside electrical work.

Increase in the amount of workmen's compensation from 55 to 75 per cent of average wages.

The curtailing to a minimum of home studies for public school children.

Institution of the 8-hour day on all provincial public works.

Adoption of the federal ballot for use in New Brunswick.

Revision of the Theatres and Cinematographs Act so as to cover recent advances in the industry and that motion picture machine operators be consulted before any further changes are made.

Elimination of all tax on theatre admission tickets of the value of fifty cents and under.

Amendment of the Coroner's Act so that an inquest shall be held into every fatal industrial accident and that the coroner be paid.

Representation of labour on the board of public utilities commission.

Elimination of machinery where labour could be used on provincial works, and that labourers be paid not less than 40 cents per hour, 8 hours per day.

Compilation of a list of goods bearing the union label, made in Canada and obtainable in New Brunswick and that this list when completed be distributed to all affiliated locals.

Pensions for all blind persons in Canada.

That owners or lessees of theatres seriously consider the re-instatement of orchestras in their places of entertainment.

That an inquiry be made of premiums charged by automobile insurance companies in the province.

That jurymen be paid sufficient to cover all loss of time and expenses incurred.

Appointment of a qualified boiler inspector, and that all boilers be inspected once a year.

Closer co-operation between the government, the compensation board and stationary engineers.

That a portion of the unemployment relief fund allotted to the Province of New Brunswick be paid to municipalities that have already made provision for the starting of certain public works, the 8-hour day and the provision of the Fair Wages Act to prevail.

Adoption of the shorter work day, 40-hour week, and an unemployment insurance scheme, as a further solution of the unemployment problem.

The officers re-elected were: President, E. R. Steeves, Moncton; First vice-president, J. A. Whitebone, Saint John; Second vice-president, James L. Johnston, McAdam; Third vice-president, John Wallace, Reynolds; Secretary-treasurer, George R. Melvin, Saint John.

TRADES AND LABOUR CONGRESS OF CANADA

Annual Presentation of Legislative Program to Dominion Government

THE executive council of the Trades and Labour Congress of Canada, composed of Tom Moore (president), P. M. Draper (secretary-treasurer), John T. Foster, James Simpson and R. J. Tallon (vice-presidents), accompanied by Canadian representatives of affiliated organizations, presented to the Dominion Government on January 22 a program of legislative and administrative changes desired by the congress. The Prime Minister, Right Hon. R. B. Bennett, who received the delegation in the railway committee room of the House of Commons, was accompanied by the following members of the Cabinet: Hon. Senator G. D. Robertson, Minister of Labour; Hon. Hugh Guthrie, Minister of Justice; Hon. E. B. Ryckman, Minister of National Revenue; Hon. R. J. Manion, Minister of Railways and Canals; Hon. H. H. Stevens, Minister of Trade and Commerce; Hon. E. W. Rhodes, Minister of Fisheries; Hon. W. A. Gordon, Minister of Immigration; Hon. C. H. Cahan, Secretary of State; Hon. D. M. Sutherland, Minister of National Defence; Hon. Murray MacLaren, Minister of Pensions and National Health; Hon. Mr. Dupré, Solicitor General, and Hon. A. Duranleau, Minister of Marine.

Unemployment

Mr. Tom Moore, after some introductory remarks, presented the memorandum on unemployment, in which pleasure was expressed at the prompt action taken by the Government to give effect to the recommendations of the Employment Service Council of Can-

ada (LABOUR GAZETTE, September, 1930, page 1057), which had met in Ottawa in August, 1930, and the acceptance by the Dominion of partial responsibility by co-operating with provincial and municipal authorities in respect to the providing of work and granting of direct relief. The delegation paid tribute to the Minister of Labour for his untiring efforts to make the money voted for relief work at the special session of Parliament promptly available, as a result of which many relief jobs were then under way by provincial and municipal authorities, and for his firm insistence that the regulations, especially those respecting hours of labour and conditions of employment, should be strictly adhered to in the carrying out of these works. Satisfaction was expressed that the Minister of Immigration had given effect to the recommendation of the congress for the strict enforcement and maintenance of regulations prohibiting the entry of immigrant labour into Canada, it being believed that continued adherence to this policy was essential to prevent an accentuation of the unemployment problem. With a view to the removal of the causes of unemployment and the mitigation of any future similar crisis, the following proposals were made:—

(a) That control should be exercised over tariff protected industries so as to compel preference of employment for Canadian labour; observance of hours and rates of wages equal to those adopted by the Federal Government for government work; prevention of watering of stock and charging of unreasonable prices to the consumer and the granting of a tariff high

enough to allow of these measures being put into force and yet enable efficiently managed industries to successfully meet competition in the home market.

(b) That generous support be given to the National Research Council so as to encourage the fullest development and use, in their highest manufactured form, of our natural resources.

(c) That a clause be inserted in all government contracts demanding that all materials used in such contracts shall be of Canadian manufacture and wherever this is not possible that preference be given to countries within the British Empire.

(d) That every encouragement should be given for the continued development of free employment bureaus administered by the provinces and co-ordinated by the Federal Employment Service Act; towards the co-ordination of seasonal occupations; for the settlement of industrial workers on vacant lands and to provide financial assistance for transportation of workers to distant jobs and temporary employment.

(e) For the gathering, in connection with the 1931 census, of information respecting unemployment and that action be taken to make this available as soon as possible.

(f) For the establishment of a national system of unemployment insurance based on contributions by the state, the employers and the employees.

Unemployment Insurance

In respect to the latter proposal, the opinion was expressed in the memorandum that this can be dealt with by the Federal Government inasmuch as in 1921 the Department of Justice, in reporting on a recommendation of the Washington Conference of the International Labour Organization, said: "Unemployment insurance has a pronounced Federal aspect, and on the whole the Minister thinks the establishment of a system of unemployment insurance is competent to the Dominion in the exercise of its residuary legislative power with relation to the peace, order and good government of Canada."

Labour's reasons for urging the adoption of unemployment insurance were summarized as follows:—

(1) It will tend to reduce the volume of unemployment by (a) stabilizing purchasing power of the workers and thus continuing to provide employment to thousands who would otherwise be added to the ranks of the unemployed; (b) Inducing greater effort towards co-ordination of seasonal activities; (c) Leading to the employment of Labour already in Canada instead of the seeking of immigrant supplies of same; (d) Better budgeting of work so as to reduce the peak period of employment and subsequent periods of depression.

(2) It would give protection to the worker and his family and prevent the demoralization which often occurs when, through inability to obtain employment, workers are compelled to depend upon charitable doles.

(3) It will reveal actual facts concerning the amount and causes of unemployment, thus providing valuable information essential to the prevention of unemployment.

(4) It will make higher living standards possible and assist in decreasing industrial unrest.

Economic Research

The periodic occurrence of acute unemployment, it was stated, emphasizes the need in Canada for some permanent organization devoted to the gathering of facts in respect to the economic changes taking place in industry and agriculture, and the opinion was offered that the National Research Council could well include on its staff the necessary experts for such an undertaking. As a means of contact with organizations in a position to give guidance as to the form such investigations should take from time to time, it was recommended that there be established an Advisory Committee to this Council, on which one or more representatives of such organizations, including the Trades and Labour Congress of Canada should be members.

British North America Act Amendments

Mr. P. M. Draper, the secretary-treasurer of the congress, read the following memorandum on amendments to the British North America Act:—

"We believe that when the British North America Act became law in 1867 the purpose sought was to establish national unity within the Dominion of Canada. With the great changes that have occurred during the past decade it has become increasingly apparent that amendments to this Act are necessary if this ideal is to be achieved. Its provisions often act as a deterrent to social and economic progress and create unnecessary hardship on Canadian citizens, especially those who find it essential, in the following of their occupations, to move from one province to another.

"For these reasons Organized Labour has sought amendments to the Act which would:—

(a) Foster 'national unity' by giving greater powers to the Federal Government to deal with social and labour legislation and particularly that covered in the recommendations and conventions of the International Labour Conference (League of Nations); (b) Abolish appeals to the Privy Council and establish the Supreme Court of Canada as the highest court of appeal, and (c) Bring about such changes in the constitution of Parliament as may be necessary to make decisions of the elected representatives of the people paramount.

"The extent to which the provisions of this Act relating to the respective jurisdiction of the Federal and Provincial Governments creates complications on matters of national importance was demonstrated during the Fourth Session of the Sixteenth Parliament (1930) by the manner in which it was cited in the debates on Health Units; Establishment in Universities of Chairs of Scholarship on International Peace; Development of national highways; Federal assistance for Technical Education; Nationalization of radium supply; Radio broadcasting; Unemployment Insurance; Labour conditions in bonused industries, and Old Age Pensions.

"From such reports as have been made public of the Imperial Conference 1930, it would appear that difficulties were again encountered when attempting to clearly define Canada's attitude towards complete national autonomy with the result that decision was deferred until the representations of the provinces have received consideration.

"We are informed by the public Press that it is the intention of the Government to hold a conference with the Provincial Governments in respect to this matter and we would most respectfully urge that if the Federal Government does not consider it within its competence to take immediate action on the recommendations outlined above that authority should be sought at this forthcoming provincial Conference to enable these changes to be brought about."

Old Age Pensions

Mr. John T. Foster, vice-president of the congress, submitted the following memorandum on old age pensions:—

"Prior to the passage of the present Old Age Pension Bill, organized labour strongly urged that the responsibility for the protection of aged workers should be accepted wholly by the Federal Government so as to ensure equality of treatment to all Canadian citizens irrespective of the provinces in which they reside. Experience has shown the proposal was a sound one inasmuch as up to the present time only the provinces west of the Quebec boundary have put the existing Act into operation, the Maritime Provinces having stated their inability to give such benefits to their aged workers owing to their financial position.

"The need for protection to aged needy workers has been amply demonstrated by the numbers who have qualified for benefits in the Provinces of Ontario, Manitoba, Saskatchewan, Alberta and British Columbia and every effort should be made to extend similar benefits to equally worthy Canadian citizens in the other provinces.

"We are glad to know from public statements made that it is now the intention of the Government to accept responsibility for the payment of such benefits and we sincerely hope that legislation will be introduced at the coming session of Parliament to implement these promises.

"With the growing difficulty which aged workers find in obtaining employment, it becomes increasingly apparent that there are great numbers who still remain unprovided for and we would at this time respectfully urge that the Act should be amended so as to reduce the qualifying age from seventy years to sixty-five.

"We would further request that the provision in the Act limiting the aggregate of private and pension income to \$360 in the year should be materially increased so as not to penalize those who by their own efforts have been able to purchase government annuities or secure moderate pensions through their membership in labour or fraternal organizations and we would ask that this maximum of \$360 should be raised to a sum which would provide a more comfortable existence for these thrifty workers during their declining years.

"Another section of the Act which has caused considerable hardship to needy workers otherwise qualified to be granted these benefits is the demand for five years' residence in the

province where the application is made and we would respectfully ask that this be repealed so that those who have resided twenty years within Canada may become eligible irrespective of the province in which they have lived."

Technical Education

The memorandum on technical education, as presented by Mr. James Simpson, vice-president of the congress, pointed out the importance of technical education as the foundation of industrial efficiency, and stated that the Trades and Labour Congress had been represented by a vice-president on the commission which had been appointed in 1910 to enquire into technical education and as a result of whose report the Technical Education Act was passed. Proceeding the memorandum stated:

"The benefits of this measure, which came into effect in 1919, were so apparent that during the entire period of its operation it received the full support of not only labour but also of employers, educational authorities and all public bodies concerned.

"By this Act the Federal Government agreed to co-operate with Provincial Governments in the development of this important educational activity and the financial aid thus provided resulted in the establishment of technical schools in every province.

"It is our contention that this aid should never have been discontinued, and that the great assistance rendered to Canadian industry by the development of facilities for technical education through the Technical Education Act justify its re-enactment. We, therefore, respectfully urge that action be taken at the forthcoming session of Parliament to again place such a measure on the Statute Books."

Representation on Tariff Board and Other Government Appointed Bodies

In the memorandum on representation on Tariff Board and other bodies appointed by the Government, which was read by Mr. R. J. Tallon, vice-president of the congress, it was stated that:—

"Labour desires at all times to co-operate in constructive activities and believes that membership on the Tariff Board would provide an opportunity, not only for protecting workers' interests, but that also from its experience in industry to contribute something of value towards a solution of the many problems with which a Tariff Board has constantly to deal. The Government has recognized on many occasions the value of the co-operation of organized labour on numerous Boards, Commissions, etc. At the present time such representation is accorded it on the Dominion Council of Health, the Employment Service Council of Canada, the National Research Council, the Canadian Engineering Standards Association, the Railway Commission and the Canadian National Railway Directorate, in addition to a number of other national bodies of a non-governmental character.

"The Tariff Board, dealing, as it does, with questions which vitally affect labour, cannot be

classed as less important to Labour than any of the foregoing and we, therefore, most strongly urge that the Government will give favourable consideration to the appointment on the reconstituted Tariff Board of a Labour representative chosen in agreement with the Trades and Labour Congress of Canada.

"It has been a source of gratification to note that the Government has seen fit to select one from the ranks of organized labour to fill the responsible position of Minister of Labour and also a matter of favourable comment that in the reorganization of the Canadian National Railways Directorate Labour's representative has been reappointed."

Other Proposals

The remaining items in the memorandum were presented by Mr. Moore, and in part, were as follows:—

Colonization and Migration.—Appreciation was expressed for the protection being afforded Canadian workers during the present depression by the strict enforcement of the immigration regulations and the Order in Council prohibiting the entry of contract labour (LABOUR GAZETTE, October, 1930, page 1144); it was urged that this policy be maintained at all times, and that only such immigrants be admitted as can be properly absorbed in the national life, and for whom there is reasonable prospect of employment for a period long enough to allow of establishing themselves in this country without displacing workers already here.

It was requested that the administration of the Alien Labour Act be assigned to a minister of the government so that violations may be promptly and effectively dealt with.

Satisfaction was expressed with the action taken during the past few months by the Minister of Immigration in encouraging settlement of Canadian citizens on available farm lands, a policy which, according to public reports, has resulted in more than one thousand unemployed industrial workers being assisted to establish themselves on farm holdings.

With the transfer of the natural resources to provincial control which carries with it responsibility for placement and settlement of immigrants, it was considered that the necessity for the establishment of an Advisory Board to the Immigration Department was increasingly necessary. Such a Board, it was stated, should include not only representatives of each province but also those of industry, labour and agriculture in order that national policies on colonization and immigration may be evolved to meet circumstances as they exist from time to time.

Since 1922, the International Labour Office (Geneva) having endeavoured to compile comparative international statistics referring to

the movements of people between countries, it was suggested that the Dominion Government co-operate in this by furnishing "emigration" as well as "immigration" statistics for Canada, in accordance with the recommendations adopted by the conference of the International Labour Organization 1922.

(2) *Health Units.*—Endorsation was given to the efforts being made by the Canadian Social and Hygiene Council for the establishment of county health units throughout Canada. The beneficial results that have accrued where they have been established, mostly in the Province of Quebec, and with the financial aid of a United States Foundation, it was stated, warrants assistance being given by the Dominion Government to enable similar units to be established throughout Canada, and the Government was asked to make provision for the setting up of such units.

(3) *Pensions for the Blind.*—It was stated that the Congress strongly supported the efforts of the Canadian Federation of the Blind for pensions for those who, because of their affliction, are unable to provide maintenance for themselves. It was also suggested that the Dominion Health Department establish a small committee on which *bona fide* organizations of the blind be given representation for the purpose of making recommendations on matters concerning the interests of dependent blind persons and on such measures as might lead to prevention of blindness.

(4) *Letter Carriers Conditions.*—Appreciation was expressed of the action of the Postmaster General in including Christmas, as well as New Year's Day, as a holiday for letter carriers. It was stated that "the inadequacy of the pay to letter carriers for the service which they render has been publicly admitted by all parties in Parliament during the past several years," and it was urged that this unsatisfactory condition be corrected. It was also requested that steps be taken to give full power to the Postmaster General to deal with salaries and conditions of employment of letter carriers without undue restriction by the Civil Service Commission.

(5) *Marine and Shipping Matters.*—In connection with the proposed revision of the Shipping Act so as to bring the sections regulating labour conditions more into harmony with present day developments, it was mentioned that action on this had been delayed pending decision by the Imperial Conferences. Now that definite decisions were understood to have been arrived at at the Imperial Conference (1930), it was urged that revision of

the act be made immediately. Consideration was particularly asked for the following proposals emanating from the National Association of Marine Engineers: (a) That this organization be granted representation on the Examining Board for Marine Engineers; (b) for the appointment of a qualified engineer to sit as a commissioner on the Wreck Commission on all cases; (c) for the appointment of a health inspector at each important port with full power of inspection on Canadian ships; (d) for regulations which will compel all vessels whether steam or sail, whose tonnage or nominal horse power would ordinarily place them in the category of vessels requiring certified officers under the Act, to take out Seamen's Article of Agreement, and that unqualified workmen be prohibited from operating unloading machinery on vessels, and (e) for the revision of the section dealing with coast-wise trading so as to exclude from Canadian port-to-port trade other than ships built in Canada, owned by Canadians, manned by Canadian seamen and registered in Canada, with a view to permitting ships of other countries to enter this trade only under proper duties.

(6) *Criminal Code Amendments.*—Regret was expressed that notwithstanding that on eight different occasions the House of Commons has adopted bills to repeal the amendments to the Criminal Code that were inserted during the 1919 session of Parliament, and to restore the sections dealing with sedition, etc., which existed prior to that time, the Senate has refused to approve of the same. It was urged that the expressed will of the elected representatives of the people should be given effect to in respect to this subject. Further amendments urged for the past several years, to re-insert the clause defining and legalizing peaceful picketing previously contained in Chapter 13, Section 173, of the Consolidated Statutes of Canada, 1886, were again requested.

(7) *International Labour Organization.*—It was requested that legislation be enacted to give effect to such of the conventions and recommendations emanating from the conferences of the International Labour Organization at Geneva, as come within the jurisdiction of the Federal Government. To this end the president asked (a) for the full application of the Eight-Hour Day Order-in-Council to all government employees; (b) the repeal of the Lord's Day Act, and the enactment of a measure which would insure to all workers one day's rest in seven; (c) the adoption of up-to-date seamen's articles of agreement; (d) measures to deal with unemployment and provide unemployment insurance; (e) adoption of the

recommendations respecting immigration and emigration statistics and (f) steps leading to ensuring safety in loading and unloading ships.

It was further requested that steps be taken to encourage greater interest on the part of the provincial governments in those matters emanating from the International Labour Organization, which, under the terms of the British North America Act, are held to come within provincial jurisdiction, and for that purpose annual interprovincial conferences to consider these International Labour Conventions, etc., were suggested.

(8) *Fair Wages.*—Amendments to the Fair Wage Act of 1930 (LABOUR GAZETTE, April, 1930, page 383), were requested so as to make the provisions of this measure applicable to all undertakings financed wholly or in part by the Dominion Government funds. It was also suggested that "in order to overcome the abuses which still continue from non-compliance with the wage provisions of the Act and the fair wage regulations that the wages of employees be paid in cash each week by a representative of the Department letting the contract, the total amount of such wages paid to be deducted from monies due to the contractor." A further request was that all contracts for water transportation for the Government of Canada should be made with Canadian registered ships, manned by Canadian personnel and paying the rates of wages recognized in Canada for the respective classes of the crew.

(9) *Electoral Reform.*—Request was made that the Election Act be amended so as to provide for half holiday with pay on election day; also that the Senate and House of Commons Act be amended so that members once elected to the House of Commons should not be compelled to seek re-election upon acceptance of a position as a Minister of the Crown. Attention was called to the difficulty encountered by seamen, who are necessarily away from home on election day, in exercising their franchise, and it was asked that some arrangement be made whereby polls could be taken on ships which are away from their regular ports.

(10) *Railway Act.*—Changes in this Act were requested so as to require the Railway Board of Commissioners to deal with applications made by railway employees respecting amendments to existing orders in the same manner as those made by railway companies or shippers. Request was also made that the powers of the Dominion Railway Commission be extended so as to cover motor transportation on highways.

(11) *Calendar Reform.*—It was stated that the Transport Committee of the League of Nations has the subject of calendar reform under consideration, and that an International Conference will probably be called to deal with the question during the present year. In preparation for this meeting, national committees on calendar reform have been set up in nineteen countries, and it was urged that similar action be taken in Canada.

(12) *Prison Reform.*—It was requested that steps be taken to give effect to the report of the Government Commission (1921) on this matter.

(13) *Cadet Training.*—Abolition of all money grants for cadet training and other military training in schools was asked, to be replaced by grants of non-military physical training.

(14) *Bankruptcy Act Amendments.*—Changes were asked with a view to giving priority to wage claims over other creditors.

(15) *Canada Marking Act.*—To be extended to apply to the boot and shoe industry.

(16) *Co-operative Legislation.*—For the purpose of encouraging co-operative trading in Canada and facilitate interprovincial trading by such societies.

(17) *Nationalization of Radio.*—The Government was urged to give effect to the Aird Report by the creation of a nationally owned and operated broadcasting system. Radio broadcasting, it was declared, should be developed in the national interests rather than along the lines of an advertising medium.

(18) *Tariff Policies.*—The policy of the Trades and Labour Congress of Canada in support of tariff protection for industry, it was pointed out, was set forth fully in a memorandum submitted to the Drayton Tariff Commission at its sittings in Ottawa, January 1921. The proposals made therein, as amended at subsequent annual convention of the congress, were summarized as follows:—

(a) Industries enjoying protection should be compelled to absorb all available labour in Canada before employing workers from other countries.

(b) The Department of Labour should have power of investigation and control over conditions of employment of the workers in a protected industry with sufficient power to enforce at least as high a standard for workers in protected industries as those enjoyed by workers engaged in similar occupations in any country against which such tariffs are applied, these in no case to be less than such as are set out in the conventions and recommendations adopted at the annual conferences of the International Labour Organization in harmony with the terms of Part XIII of the Treaty of Versailles.

(c) Protection should never be so high as to create a monopoly and remove all incentive for initiative and improvement on the part of the management.

(d) The Government should have full control over the capitalization of industries benefiting by protection and thus prevent watering of stocks and cutting of melons.

(e) To secure industrial stability in protected industries that the scope of the industrial Disputes Act be extended so as to cover all such industries.

The Government was asked to carefully consider giving effect to the above when dealing with tariff matters. Mr. Moore stated that the executive council of the congress viewed with some concern the action of certain manufacturers whose industry was aided by tariff increases last September, and who apparently gave pledges not to exploit the people through price advances; they have, however, whilst not increasing current prices, reduced wage rates, which action organized labour regards as exploiting the workers, if not the public. Support was voiced to the protests made by one of the affiliated organizations, the Pattern Makers' League, with respect to the unsatisfactory manner in which duties are assessed on patterns for castings coming into Canada, which it was claimed should be assessed according to their finished value.

The memorandum closed with a declaration in support of action which may lead to the fuller development of the steel shipbuilding industry in Canada.

The Prime Minister's Reply

Replying to the representations made, the Prime Minister informed the delegation that the subject of radio broadcasting was one which must be considered from two standpoints, technical and national. Canada's geographical position presented certain difficulties which must be born in mind in the consideration of the matter from a national viewpoint. The action to be taken will be determined by the cabinet so that steps may be taken at the next session of Parliament. Old Age pension legislation, he stated, would also be introduced at the coming session, and grants for technical education would be restored. On the question of unemployment insurance, Mr. Bennett stated that there should be a close study of the matter, but in place of a commission he thought that an inter-departmental inquiry might be conducted to obtain the fullest information.

The president of the congress declared that Labour was pleased with the Government's action in preventing exploitation of the consumer as promised at the emergency session of Parliament in September last, but he stated

that labour had been exploited, mentioning the shoe industry.

The Prime Minister said he was not aware of this, and stated that he had just spoken to Senator Robertson, the Minister of Labour, who informed him that an inquiry was under way, and would be pursued.

Broadly and generally, Mr. Bennett remarked, in dealing with the matter of unemployment, the Government, seized as it was with the seriousness of the problem, took measures as soon as it came into office for the purpose of securing the labour population of the country against suffering. The administration had ever since continued, and proposed to continue in the future, to do its best with difficulties which confronted the people.

Turning to the recommendation of the delegation that all money grants for cadet training and other military training in schools be abolished and grants for non-military physical training be submitted, the Prime Minister said that the matter of cadet training would be discussed in Council, but there was no intention to permit anything of a military nature.

In regard to the proposal for the abolition of appeals to the Privy Council and the establishment of the Supreme Court of Canada as the highest court of appeal, the Prime Minister said that Parliament had no right at the present time to take away from the provinces or any litigant the right of appeal to the Judicial Committee of the Privy Council. This would involve an amendment to the British North America Act, and any such amendment would have to be preceded by a conference between the Dominion and the provinces, who were contracting parties to the Canadian constitution. The Prime Minister observed that the right of appeal to the Privy Council was not a restriction, but it was a right which had been conferred upon the poorest of the King's subjects to carry his appeal to the foot of the throne.

In reference to the recommendation that steps be taken to give full power to the Postmaster General to deal with salaries and conditions of letter carriers "without undue restriction by the Civil Service Commission," Mr. Bennett remarked any steps initiated to take letter carriers out of the public service and from under the jurisdiction of the Civil Service Commission probably would produce considerable dissent.

The Prime Minister was of opinion that some of the prison reforms mentioned by the delegation respecting a report made in 1921 had been acted upon in certain respects. He stated further that the Government would give careful consideration to the representa-

tions made, and heartily thanked the delegation for the manner in which they had presented their program. He believed the delegates would accord their sympathetic support in the matter of handling the problems of the country.

Other Members of Delegation

The executive of the Trades and Labour Congress was accompanied by the following representatives of affiliated international organizations: W. G. Powlesland, of the Brotherhood of Blacksmiths; Walter Coyle, Brotherhood of Boilermakers; Jos. Pelletier, Brotherhood of Bookbinders; E. W. A. O'Dell, Boot and Shoe Workers; B. J. Hiscock, Bridge, Structural and Ornamental Iron Workers; Frank McKenna, Louis Beuloin, Thos. Broad and Jos. Corbett, Brotherhood of Railway Carmen; Arthur Martel, Pat Green and Jas. F. Marsh, United Brotherhood Carpenters and Joiners; E. Ingles, Jas. Broderick and J. Noble, Brotherhood of Electrical Workers; Frank Healey, Steam and Operating Engineers; J. S. Noel, Fire Fighters; W. F. Bush, United Garment Workers; Jas. Somerville, Geo. Murphy and R. Riley, International Association of Machinists; W. V. Turnbull, J. J. O'Grady, W. Jewkes and J. G. Gerald, Maintenance-of-Way Employees; A. Bell, International Association Sheet Metal Workers; F. W. Felker, Moulders' Union; A. D'Aoust, International Brotherhood Papermakers; Wm. Renwick, F. Yates and Wm. Kirby, Pattern Makers' League; Jas. Ward, Operative Plasterers; J. W. Bruce, United Association Plumbers and Steamfitters; Geo. R. Brunet, Printing Pressmen; Maurice Labell, Brotherhood Pulp, Sulphite and Paper Mill Workers; Magnus Sinclair, Amalgamated Association Street and Electric Railway Employees; W. P. Covert, International Alliance Theatrical Stage Employees; J. L. Smith, Journeymen Stonecutters' Association; Jas. Watt, Journeymen Tailors' Union; J. J. Trainor, Order Railroad Telegraphers; G. R. Pawson, Commercial Telegraphers' Union; J. J. Reaves, Federated Association Letter Carriers; W. A. MacDonald, National Association Marine Engineers; Chas. Dickie, Division 4, Railway Employees Department, A. F. of L., and A. E. Bastien, American Federation of Labour.

Hon Dr. J. M. Robb, Minister of Health for Ontario, announced on January 31, that plans are now under consideration by the provincial Department of Health for improving the system of medical inspection in the province. These plans include provision for a full-time health officer and a board of health to be appointed by each county council.

FEDERATION OF CATHOLIC WORKERS OF CANADA

On January 28 a delegation waited on the Hon. G. D. Robertson, Minister of Labour; Hon. Arthur Sauvé, Postmaster-General; Hon. Maurice Dupré, Solicitor-General, and Hon. Alfred Duranleau, Minister of Marine, and submitted a memorandum based on resolutions which had been adopted by the Federation of Catholic Workers of Canada at the annual convention held in Montreal in September last. The first item dealt with communist propaganda and suggested that the Federal Government consider as illegal all communist meetings, apprehend both organizers and speakers, deport the foreign agitators and hold as political prisoners those who are British subjects. Other matters brought to the attention of the ministers were as follows:—

Immigration.—Owing to the conditions prevailing, it was requested that all immigration be suspended for an indefinite period;

Half-holiday.—On the question of Saturday half-holiday, it was suggested that this apply to a certain number of stores, while others would take the half-holiday on Monday mornings;

Removal of Snow.—Asking that the Government either through the Railway Commission or some other way have the railways pay a fair wage for snow removal, and also prevent the labourers being quartered in cars stationed on sidings;

Working Tourists.—Asking that some action be taken to prevent United States citizens from coming to Canada as tourists and taking the places in hotels of Canadian workpeople;

International Agreements.—Asking for ratification of conventions of the International Labour Organization, especially concerning night and Sunday work for bakers;

Unemployment.—Asking that unemployment relief works be extended during the winter, and also that in the execution of such works no more machinery than is actually necessary be used;

Representation.—Urging that the Federation of Catholic Workers be given representation on the labour delegation to the International Labour Conference.

After the Solicitor-General had spoken the Minister of Labour dealt with the several matters which had been submitted by the delegation, explaining in detail the Federal unemployment relief program. During the presentation reference was also made to a national old age pension scheme, to which Hon. Senator Robertson replied by quoting a statement made recently by Prime Minister Bennett to the effect that old age pensions legislation was on the program of the government, and that though it might cost some \$25,000,000 yearly to carry out such a plan, it would be adopted to the best interests of the working classes. The conference was brought to a close by brief remarks by the Postmaster-General and the Minister of Marine.

The members of the delegation were: Chevalier Pierre Beaulé, Ferdinand Laroche, J. P. Guerard, Alfred Martin-Boucher, Emile Verrette, Thomas Poulin and Albert Gagnon, from Quebec City; O. Pilon and Clovis Bernier, from Montreal; J. E. A. Tremblay, from Chicoutimi; Emile Tellier, from Three Rivers; Lionel Harper, Maurice Doran, Jules Leonard and M. Chenier from Hull. Accompanying the delegation were l'Abbe Maxim Fortin, general chaplain of the Federation and Rev. R. L. P. Gratton, O.M.I., chaplain for Hull.

Trades Disputes Bill in British Parliament

The Trades Disputes Bill introduced by the government in the British House of Commons early in January amends the Act which was brought in by the Conservative Government in 1927 following the general strike in the previous year (LABOUR GAZETTE, September, 1927, page 944; May, 1927, page 523). In moving a resolution for the second reading of the amending bill, Sir William Jowitt, attorney-general, stated four propositions to which the bill sought to give effect, as follows:—

1. Any revolutionary or political strike or lockout is illegal, but the right to declare a strike or lockout, even though it were sympa-

thetic, in the furtherance of a genuine trade dispute must not be placed in jeopardy.

2. No man should be held guilty of the crime of intimidation merely for doing, or stating that he intends to do, that which it is lawful for him to do.

3. When an association of individuals has lawfully decided by a majority vote to set up a political fund, any and every member of that organization should be bound by the majority decision, unless he gives specific notice of his dissent.

4. The Treasury should have unfettered discretion to regulate conditions under which, and the extent to which, any grade of civil servants may take part in political affairs.

LEGISLATIVE PROGRAMS SUBMITTED TO PROVINCIAL GOVERNMENTS BY ORGANIZED LABOUR

Ontario

The Ontario Executive Committee of the Trades and Labour Congress of Canada, consisting of Ald. Humphrey Mitchell (chairman), Hamilton; Ald. Rod Plant, Ottawa; Ted Jackson, Toronto, and R. H. Hessel, London, on January 14, waited on Hon. G. S. Henry, Premier of Ontario, and members of his cabinet, and presented a program of desired legislation. This program included a request for definite action to give effect to such decisions of the eight annual conferences of the International Labour organization as have been considered to come within the jurisdiction of the Provincial Legislatures, including in particular (a) enactment of an eight-hour day law for industrial and commercial undertakings; (b) further protection of women and children in such employment, and (c) the bringing of all young persons, irrespective of age, under the Minimum Wage Act.

Unemployment and Unemployment Insurance.—Under this heading the following recommendations were made:—

(1) That continued financial assistance be extended to municipalities in carrying on relief works.

(2) That all possible public works be immediately undertaken and further that regulations governing rates of pay and hours of labour on all such works, whether carried on by or on behalf of the Government, be immediately amended so as to provide for the five day forty-hour work-week without reduction in the aggregate earnings of the workers involved.

(3) That the purchase of departmental and other supplies during periods of unemployment be adopted as a permanent policy of the Government.

(4) That the fullest co-operation be offered to the Federal Government in any movement having for its purpose the establishment of a national unemployment insurance plan for Canada.

(5) That legislation providing for an eight-hour day in accordance with the Washington Hours Convention (I.L.O. Conference, 1919) be enacted during the forthcoming session of the Legislature. Such having been declared by the Supreme Court of Canada as coming within the jurisdiction of Provincial government we suggest that if placed in operation would greatly assist in reducing the volume of unemployment.

Old Age Pensions.—Dealing with old age pensions the delegation regretted that the Parents' Maintenance Act had been coupled with the administration of the Old Age Pensions Act, and asked for the repeal of certain amendments which had been made to the first named act and that the Old Age Pensions

Act be entirely separated from any poor relief or charity legislation. Requests were also made (1) that the Provincial Government accept the responsibility for medical and surgical treatment of old age pensioners; (2) an increase in the personnel of the Old Age Pensions Commission, and that a fully qualified labour representative be included in any additions to the commission.

Mothers' Allowance Act.—It was requested that there be a flat rate of benefits for the entire province, that the property exemption be raised from \$2,500 to \$5,000, and that the act be amended to include a widow with one child or one dependent child.

Industrial Disputes Investigation Act.—The Government was asked, in accordance with a resolution adopted by the Trades and Labour Congress, to enact legislation enabling the Federal Industrial Disputes Investigation Act to become operative within the Province of Ontario.

Regulation of Paper Companies.—After pointing out the unsatisfactory conditions existing in many of the paper mill communities, the delegation asked that officials of the respective provincial governments be requested to assist in causing the paper companies to limit operation periods in such a way as to effect an equal distribution of orders or equal operating time.

Ontario Apprenticeship Act.—The delegation offered opposition to any proposal for the repeal of the Ontario Apprenticeship Act, a measure which it was declared was basically sound.

Fair Wages and Other Labour Conditions.—Under this heading the following demands were submitted:—

(1) Eight-hour day with a maximum of 40 hours per week.

(2) Established wage rates, and where there are no established wage rates, or where such wage rates are out of proportion to those prevailing in the trade or trades throughout the province, then a fair and reasonable wage rate to be made effective.

(3) That such Fair Wage Regulations to cover undertakings carried on by the government direct, or by any of its departments; on all contract jobs given by the government or department of the government; on all undertakings of the Hydro Electric Commission, or by the Contractors for the Commission, on development work, maintenance and operation of its several plants; and on all undertakings, maintenance or operation of equipment by all

other commissions or similar bodies, privileged to spend public moneys and being under the supervision of the provincial government of Ontario.

(4) That the Department of Labour be made responsible for preparing wage schedules, the enforcement of the regulations, and otherwise to administer the Fair Wages Act.

Other requests made by the delegation included: (1) An increase in witness fees; (2) Priority of wage claims over all other liens; (3) That where a strike exists, employers who advertise in the press for workmen be required to set out in the advertisement that a strike exists; (4) Opposition to the bill introduced by the Ontario Government requiring a deposit of \$200 for candidates in provincial elections; (5) In favour of the sale of beer and wine in licensed places for beverage purposes; (6) Opposition to the unrestricted use of paint-spraying machines; (7) That electrical workers be compelled to pass an adequate examination and be licensed; (8) Protection of men engaged in the building industry; (9) Licensing of operators of machines used in the building and construction industry; (10) A more equitable tax on motor transport companies and an eight-hour day for drivers of trucks, buses and taxi cabs, and that all automobile owners be obliged to carry insurance against personal and property damage to others, the said insurance to be administered by the government; (11) The three-platoon system for Ontario permanent fire departments; (12) Legislation providing for health insurance; (13) Examination and licensing of plumbers and steamfitters; (14) That representatives of labour be appointed to commissions under the jurisdiction of the government; (15) Abolition of private employment bureaus and private detective agencies; (16) Abolition of military training in the schools; (17) A licence and sanitary law to govern barbers and barber shops; (18) Prohibition of manufacture of clothing in the homes of the wage-earners; (19) Revision of Factory Act based upon a maximum of 48-hours per week instead of 72 hours as at present, and other amendments in order to bring it up to modern standards;

(20) That the legal fraternity, through its society, be compelled to carry a blanket bond for its membership or such other safeguards as may be required for the protection of the public; (21) That the housing situation be investigated with a view to improving the housing conditions of the poor in towns and cities; (22) Amendments to the Workmen's Compensation Act, including the raising of benefits from 66½ per cent to 75 per cent of earnings at time of injury.

On the question of pension and superannuation funds for firemen of permanent fire departments, the government was asked to permit a committee representing the fire fighters to meet with the Cabinet to go further into the matter.

The following representatives of organizations affiliated with the Trades and Labour Congress of Canada accompanied the Provincial Executive Committee:—E. Ingles, J. Noble and T. P. Eversfield, Electrical Workers; E. W. A. O'Dell and Jas. Daly, Boot and Shoe Workers; Jas. F. Marsh, Reg. Jackson, W. Dunn, S. H. Anglesey and J. Gillanders, Brotherhood Carpenters; Frank Healey and H. Peppin, Steam and Operating Engineers; Jas. Ward, Operative Plasterers; Frank Hall, Railway and Steamship Clerks; W. V. Turnbull, Maintenance-of-Way Employees; F. J. Wilson, Marble Tile and Terrazo Workers; T. Lee Hamilton, Hamilton Buildings Trades Council; A. Ball, Toronto District Trades and Labour Council; B. J. Hiscock, Bridge, Structural and Ornamental Iron Workers; Jas. Adams and J. A. Gardiner, Elevator Constructors; F. Molineux and J. Boyle, Painters, Decorators and Paperhangers; D. Lamb, P. Herd and R. Lyons, Fire Fighters; R. Riley, Machinists; Geo. Lewis, Journeyman Barbers; J. Gavin, Brewery Workers; J. McLeod and Wm. Jenoves, Bricklayers, Masons and Plasterers; Wm. Varley, Toronto Building Trades Council; J. W. Bruce and Geo. Milligan, Plumbers and Steamfitters; A. Guest and E. Burns, Hotel and Restaurant Employees; Jos. T. Marks, Labour Educational Association of Ontario.

Nova Scotia

On January 22 the members of the Legislature Committee of the Halifax District Trades and Labour Council, headed by Mr. James Rudge, and members of the Joint Legislative Board of the Brotherhood of Locomotive Engineers, Order of Railway Conductors, Brotherhood of Locomotive Firemen and Enginemen, and Brotherhood of Railroad Trainmen, waited on Premier Harrington and made several recommendations in regard to legislation for the forthcoming session of the Nova Scotia Legis-

lature. The program presented contained the following requests:—

That the Legislature pass a law providing old age pensions in Nova Scotia;

That the maximum compensation allowed under the Workmen's Compensation Act be raised from \$1,200 to \$2,000;

That the amount of compensation payable under the Workmen's Compensation Act be increased from 60 per cent to 66½ per cent of the workmen's earnings;

That stricter traffic rules be passed, including provision for stop-signs at railway crossings, and that elimination of railroad crossings be continued;

That inspectors of stationary boilers be appointed;

That a factory inspector be appointed under the Factories' Act;

That the Factories' Act be amended to include laundries and dye works;

That legislation be enacted to improve housing conditions among the working classes of Nova Scotia;

That the law under which applicants for motor vehicle permits are examined be made stricter in regard to the driver's vision and hearing.

Manitoba

On January 24 the Manitoba provincial executive of the Trades and Labour Congress of Canada, composed of Messrs. F. Macintosh, J. B. Graham, R. W. Hill and W. B. Lowe, accompanied by H. Kempster, W. Atkins, R. C. Gilliland, R. C. McCutcheon, and J. W. Silver, representing the Winnipeg Trades and Labour Councils, and F. W. Nicks, and W. L. Best, of the Brotherhood of Locomotive Firemen and Enginemen, Wm. Hill, of the Brotherhood of Locomotive Engineers, H. R. Davis of the Brotherhood of Railroad Trainmen, A. S. McKechnie, of the Order of Railway Conductors, and P. Barry, Brotherhood of Maintenance of Way Employees, submitted to Premier Bracken and members of the Provincial Government a memorandum of proposed legislation.

On the question of unemployment the delegation asked earnest consideration of the following recommendations: (a) A Dominion-wide unemployment insurance scheme; (b) a six-hour day for Government employees as a lead to employers of labour in general; (c) raising of the school age from 14 to 16 years; (d) reduction of the pension age from 70 to 65 years; (e) setting up of a board to study the causes of trade depressions; (f) that the provincial government refrain from cooperating in any scheme of subsidized immigration in the future.

Other requests included the following measures:—

A Child Welfare Act to provide for (a) mothers whose husbands are confined in public institutions or physically unable to support the family; (b) mothers who have been deserted for a period of two years; (c) for a substantial increase in the appropriations for the carrying out of the act so as to allow for more liberal treatment for those coming under the act; (d) to prohibit the employment of women for a period of two months before and two months after childbirth, maintenance to be paid out of a fund provided by the Government; (e) asking for a clause similar to that in the Ontario Act providing for reciprocal action between provinces in the payment of benefits under the act;

A law limiting the hours of labour to eight per day and not more than 44 hours per week for all industries within the scope of provincial legislation;

Amendment of the Minimum Wage Act so as to apply to boys under 18 years of age;

A liberal appropriation for the efficient carrying out of the Building Trades Protection Act;

An act to provide for compulsory public liability insurance for automobile owners, the government to collect and hold policy at time of issuing licence;

Amendment of the provincial Income Tax Act so that exemptions shall be the same as in the Federal Act;

Amendment of the Public Highways Act so as to provide for more adequate taxation on all motor vehicles using the public highway for revenue purposes; to require all owners and operators of such vehicles to conform to regulations regarding not only the operation, but also the freight and passenger tariff which shall be charged for the use of such service; to require sufficient financial responsibility on the part of owners and operators to insure payment of all just claims for damages which may be legally assessed against them; and that drivers of all such motor vehicles be required to pass a qualifying examination;

That both provincial and municipal authorities undertake the ultimate elimination of railway grade crossings;

That the Bureau of Labour be given the status of a department of labour with a separate minister;

Enactment of a provincial measure similar to the Alberta Labour Disputes Act, with certain amendments;

Amendment to Garnishee Act to prevent wages being withheld until judgment has been secured;

That school text books be supplied free up to and including grade twelve.

The delegation expressed approval of the principles contained in the report of the Aird Commission on Radio Broadcasting and requested endorsement of this report by the Manitoba Government.

New Brunswick

On January 28, the executive board of the New Brunswick Federation of Labour, composed of Messrs. E. R. Steeves, president, Moncton; James A. Whitebone, first vice-president, Saint John; James B. Johnston, second vice-president, McAdam; John H. Wallace, third vice-president, Reynolds; and George R. Melvin, secretary-treasurer, Saint John, waited on the Executive Council of the Provincial Government and presented the annual legislative program, based on the resolutions which had been adopted by the federation at its convention held a short time previously, a report of which appears in this issue. Among other requests made on the Government were the following:

Redrafting of the regulations governing the inspection of motion picture machines and operating booths, as well as the examination and licensing of operators.

Amendments to the Factories Act in order to bring it up to the standard of similar acts in the Dominion.

That all engineers operating high or low pressure steam boilers be required to hold a licence.

That a Deputy Minister of Labour be appointed.

That all government printing bear the printers' union label.

Appointment of labour representatives on the Workmen's Compensation Board, Public Utilities Commission, and Plumbers' Examining Board.

That all the remaining water powers and other natural resources of the province be developed under public ownership and control.

Appointment of a scaffolding inspector.

Amendment of the Public Utilities Act with a view of determining a fair rate to be charged for service rendered by any privately owned utility company enjoying a monopoly.

That the regulations governing the expenditure of Federal Unemployment Relief money within the province be strictly adhered to, and that some plan such as unemployment insurance be devised as a means of preventing as far as possible future unemployment.

Creation of national body to study scientifically the cause of unemployment periods and endeavour to find a means of preventing them.

That an Act similar to the Federal Fair Wages and Eight Hour Day Act of 1930 be enacted in the province, by which labourers on government work would receive a minimum wage of forty cents per hour for an 8-hour day.

That the laws relating to jury duty be amended to provide payment for lost time and expenses incurred by jurymen.

That automobile insurance rates within the province be investigated with a view to a material reduction.

The Provincial Legislative Joint Board of the transportation trades, consisting of Messrs. J. Frank Cane (chairman) representing the Brotherhood of Locomotive Firemen and Enginemen; S. H. Shaw (secretary) representing the Brotherhood of Railroad Trainmen; Richard C. Jefferson, representing the Brotherhood of Locomotive Engineers, presented their legislative program in conjunction with the executive of the New Brunswick Federation of Labour.

Alberta

A delegation from the Alberta Federation of Labour, headed by President Fred J. White, M.L.A., recently met Premier Brownlee and members of his Cabinet and presented a legislative program based on resolutions adopted at the meeting of the Federation held at Calgary in January, a review of which appears in this issue. In addition to these demands, the following representations were made: (1) That health insurance legislation be enacted; (2) To amend the Boilers Act so as to include, among other things, the inspection of the installation of separator equipment in the oil fields, and that only qualified engineers be allowed to take charge of such equipment; (3) That the Mothers'

Allowance Act be amended to provide allowances for mothers with one child; (4) That no amendments be made to the Theatres Act without due consideration by the Alberta Federation of Labour; (5) The appointment of a plumbing inspector; (6) To amend the Mechanics' Lien Act, to provide for a five per cent increase in the amount retained by owners in order to protect the wages of workers; (7) To provide for the declaration of a public holiday for all provincial and municipal elections; (8) That the pay of jurymen be increased; (9) Strict enforcement of the Minimum Wage Act and the Factories Act as affecting Chinese cafes and other establishments.

CANADIAN CONSTRUCTION ASSOCIATION Proceedings at Thirteenth Annual Convention

THE thirteenth annual convention of the Canadian Construction Association was held on January 27 to 30 at Niagara Falls and was attended by over 250 members, representing general contractors, trade contractors, manufacturers and supply men.

In his presidential address, Mr. H. P. Frid reviewed construction in 1930, declaring that the set-back during the past year had only "quickenened Canada's pulse, making her rearrange plans and policies to meet the new conditions." He urged a program of thorough co-operation of the various units in the construction industry—the government, architects and engineers, contractors, manufacturers, and supply-houses, and advocated "the employment of Canadians to carry out Canadian work."

The Association had as its guest speaker at the annual banquet, the Hon. Senator G. D. Robertson, Minister of Labour, substituting for Hon. H. H. Stevens, Minister of Trade and Commerce, who, through illness, was prevented from attending. During the course of his address, the Minister of Labour announced that the Dominion Government intended to continue the Technical Education Act, which, he pointed out, would have an important bearing on the Association's apprenticeship undertaking. In conclusion, the Minister reviewed the government's unemployment relief policy, stating that as a result of the Dominion's \$20,000,000 appropriation, to be spent along with amounts provided by the provinces and municipalities, over \$64,000,000 worth of construction work was now proceeding that would not otherwise have materialized at this time.

The report of the general manager, Mr. J. Clark Reilly, reviewed the various phases of the construction industry. What was characterized as the outstanding effort during the year was the Association's opposition to the eight-hour day on government contracts, and the ruling that a manufacturer's plant did not come under the Act. It was also pointed out that the Association had actively participated in measures to relieve unemployment, and that the accident prevention group had progressed in its drafting of a code of practice.

Apprenticeship.—The question of apprenticeship was dealt with briefly in the general manager's report in which comment was made upon the "very determined opposition to the Ontario Act with special reference to the assessment of employers." In spite of this,

it was stated, a large percentage of the assessment had been collected, and boys are at present receiving training in four of the principal technical schools of the province.

At one of the sessions considerable discussion on apprenticeship developed following an address by Mr. A. W. Crawford, formerly Inspector of Apprenticeship of Ontario, and now Deputy Minister of Labour. The discussion on this subject was reported in the *Contract Record and Engineering Review*, official publication of the Association, as follows:—

"J. P. Anglin expressed the feeling that problems which had appeared to be almost insurmountable had been effectively solved by Ontario's apprenticeship scheme, and he hoped to see an early adoption of a similar plan in Quebec. W. E. Dillon, of Toronto, sketched the protests that had been raised against the Act, stating that they were not altogether on the question of how apprentice training was to be financed but that they were also against the day school technical training. H. K. Sheehy of Peterborough explained that the general attitude of the Provincial Builders' and Supply Association was that the Act was developed by general contractors who employed only two or three trades. Mr. Crawford, however, pointed out where trades themselves had asked to come under the Act, and was borne out by J. B. Carswell of Hamilton.

"J. M. Pigott, of Hamilton, pointed out that the changing personnel of the industry made it impossible to receive a mandate from the industry as a whole. The Act, he declared, was not the result of one year's work, but when the scheme was first developed it was presented to the provincial organization and endorsed at its conventions. He stressed the fact that with new tools and new methods constantly being developed, the building trades are becoming more technical. Consequently, he asked, how can you adapt boys to these changing conditions unless they are given technical training? He even ventured the prophecy that in time a four month's course would supplant the present eight weeks' training. R. J. Lecky, of Vancouver, outlined the progress being made in his city in the matter of apprentice training, stating that a superintendent had now been appointed to perform duties similar to those of the Ontario apprenticeship inspector.

"Mr. Crawford, in summing up, stated that the regulations, including the assessment feature, were dictated by the industry itself

and could be changed by the industry. He expressed his whole-hearted belief in the careful selection of boys and in the superiority of day over night classes in the technical schools."

A history of the accident prevention movement in the construction industry of Ontario and the accomplishments to date of the recently formed Construction Safety Association featured an address by Mr. Chas. Robertson of Brantford. Discussing the paper, Mr. J. M. Pigott of Hamilton stated that in the long run he believed the Construction Safety Association would get more benefit from operating independently than as a member, as at present, of the Industrial Accident Prevention Associations. Mr. T. A. Paterson of Montreal explained how the contractors in Montreal were functioning through the construction division of the Quebec Safety League. One of its accomplishments was a safety code.

Five-Day Week.—With regard to the question of changing wage rates and the alternative of favouring a five-day week or six-hour day or two shifts per day of five hours, a resolution was carried that a five-day week be recommended, providing that where emergencies occurred, work done Saturday morning should be paid for at straight time and not overtime rates.

Resolutions.—Among the recommendations of the general contractors' section which were adopted were the following:—

That the prompt action of the federal, provincial and municipal governments in proceeding with public works during this winter as relief measures to provide employment and stimulate trade be unanimously commended.

That whereas the cost of construction has been considerably reduced during this past eighteen months, we urge upon owners and financial institutions that now is a most opportune time in which to proceed with all types of investment construction works.

That, in view of the reduction in the cost of living, there certainly should be no consideration given to increases in wages of any mechanics within our industry.

That we strongly recommend to the labour organizations in some trades and localities where wages are out of line, that they voluntarily offer a reduction as a further incentive to aid in bringing out new construction work and in this way provide more employment for their fellow-workers.

That whereas any action that would increase the cost of construction is inimical to the best interests of Canadians in general as well as our industry in particular, therefore we

are against any proposal for the further reduction in hours per week now in force in this industry, and further that where a double shift is worked either for purposes of speed or to provide employment, standard day work wages only should be paid on such shifts.

The manufacturers and supply section went on record as being:—

Opposed to the waiving of liens.

In favour of the use of C.C.A. signs on jobs, trucks, etc.

In favour of furthering the use of Canadian-made goods, and of urging the Department of Trade and Commerce to extend and enforce the regulations pertaining to the marking of goods with the country of origin.

Opposed to the juggling of bids and in favour of asking for the co-operation of general contractors to this end.

In favour of working out a system for minimizing the issuing of unreliable credit.

In favour of developing support for the Construction Building at the Canadian National Exhibition.

Outlook for 1931.—Construction prospects in 1931 were outlined by Mr. H. W. Pepper, Ontario manager of MacLean Building Reports Limited. His forecast for 1931 was, briefly, that residential construction would show a 20 per cent increase over 1930; industrial building, a 30 per cent increase; public works and utilities, a 5 per cent decrease; general engineering, possibly a 10 per cent decrease although a definite forecast was difficult to make; commercial, educational and public building no marked change with possible decreases in the latter two classes. On the whole, it is not expected that much change will take place from the 1930 level.

Announcement was made recently of the successful candidates in the first and record year of examinations in first aid work which is conducted at the plants of the Dominion Coal Company under the auspices of the St. John Ambulance Association. It is stated that this first aid training had made a marked improvement in the manner in which injured men are handled. First Aid stations, clean, well heated and supplied with all necessary drugs and appliances await the injured men on the surface. There his doctor called by telephone from the scene of the accident is awaiting when he is taken out of the mine. Every precaution is taken to prevent accidents but when an accident happens special care is exercised to protect the injured and get him in the hands of his doctor as soon as possible.

CONSTRUCTION SAFETY CODE

Publication by Industrial Accident Prevention Associations of Ontario

THE preparation of a Safety Code for the construction industry has for some time engaged the attention of safety organizations in various provinces in Canada. The movement has the active support of the Canadian Construction Association, as will be seen from the report of the annual meeting of the Association which appears on another page of this issue. The Safety Code which is reproduced below in full has been published by the Industrial Accident Prevention Associations, the safety organization officially approved under the provisions of the Ontario Workmen's Compensation Act. A similar code is now under consideration by the Province of Quebec Safety League, and it is hoped will ultimately be adopted in the remaining provinces.

The Construction Safety Code, as adopted for the Province of Ontario, is prefaced by an appeal addressed to workmen as follows:— "We want you to know that every effort has been made to make working conditions right, and we now expect you to follow these rules. Each of the rules has been made necessary because of a serious accident somewhere. Failure to observe these reasonable rules may result in serious personal injury or in dismissal."

CONSTRUCTION SAFETY CODE

General

1. Superintendents and foremen must feel their responsibility in the matter of accident prevention.

2. All municipal ordinances relating to construction work and all provincial regulations must be obeyed.

3. Barricades must be erected to keep out the public. Warning signs must be placed wherever the public is exposed to any danger.

4. It is essential that adequate and suitable toilet conveniences be provided at the start of operations. All buildings in use for this purpose must be kept in a clean and sanitary condition.

5. Fresh and pure drinking water must be provided.

6. Men taken on must be suited to the work required of them.

7. Men who have been drinking or who are sick must not be allowed to work.

8. A fully equipped First Aid Kit or First Aid Room must be available on the job as called for by regulations of the Workmen's Compensation Board.

9. Timekeepers or others in charge of First Aid Work must be carefully instructed.

10. "Doctor" and "Hospital" cards, giving telephone numbers, must be placed in conspicuous places.

11. Injury to employees of sub-contractors involving equipment, scaffolding, tools, etc., belonging to the general contractor, make complicated and difficult accident cases.

Do not permit any employee of any sub-contractor to use any equipment, hoists, staging, scaffold, material, etc., without an order to do so from the office.

Sub-contractors must not be allowed to remove pieces of timber or cut away supports or braces from stagings, scaffolds, etc., without such permission.

12. Fire extinguishers must be placed around the building and during the winter months they should be filled with non-freezing liquid.

13. Ascertain location of nearest fire alarm box.

Wrecking

14. Before beginning wrecking operations see that all gas, electricity and water are shut off from the building.

15. If chimneys or walls are to be pulled down as a whole, a check-up of every worker must be made before dropping.

16. Use water to reduce dust when tearing down plaster or brickwork.

17. Timber, steel beams and other heavy or bulky material must be lowered where practical, not thrown from building, but, if it is necessary to throw any material out of the building, watchman must be posted below.

Excavation

18. Banks and adjoining walls must be shored to prevent settling and cave-in.

A competent person must be held responsible for frequent inspection of shoring.

Material Storage

19. All materials must be piled on good foundations and in such a manner that pile cannot fall over.

20. Inspect piles of brick, sand, gravel, crushed stone, lumber and all building material frequently so that they will not become unsafe from continual adding to and withdrawing of stock.

21. If piles of sand, gravel, crushed stone and like material become frozen, see that men do not work under the overhang, which should be broken down.

22. Experienced men only should be used in unloading flat cars of round poles.

Material Elevators

Towers

23. Use only experienced men in the erection and taking down of towers. Construct towers of sound material only and of ample strength to carry the loads intended.

24. Towers and all parts thereof should be regularly and frequently inspected and a substantial ladder securely fastened must extend the entire height of the tower.

25. Platforms of ample size and strength with railings and toeboards must be built at each level where men work and the bottom of tower must be screened or planked in on as many sides as possible.

26. All platform hoists must be guarded at all floors with suitable gates two feet away from opening.

27. Interior shafts or towers in which buckets or cages are operated must be barricaded so that no traffic is possible through them. At basement level where cage runs only occasionally, railings or gates and danger signs must be provided.

Cages or Platforms

28. Platforms of elevators must be of sufficient size so that wheel-barrow handles will not project over the edge. Stop cleats must be nailed on platforms for wheel-barrow. Care must be taken in piling empty barrows on hoists to prevent slipping.

29. Platforms of elevators must be strongly built and have toeboards on unused sides.

30. Construct roof of 2-inch plank on the head of the cage to protect men loading from being struck by falling objects.

Bucket Hoists

31. When working bucket hoist, men must not be allowed to work in pits without first resting the bucket on timbers placed across opening and resting on solid supports on two sides of the pit.

32. Platforms for men at the hopper must be well built and provided with a protective railing.

Hoisting Engines

33. Where the hoist engine is placed close to the building the engineer must be protected against falling material by a substantial plank roof.

34. Exhaust steam pipes must discharge so as not to obstruct the view of the engineer.

35. The brakes of hoist engine must be inspected frequently and special care taken to see that brakes, operating levers and gears are in proper working condition.

36. A dog or pawl must be used to hold the load when it is to be suspended for any considerable time as the brake must not be used for this purpose. The dog or pawl should be located so as to engage at top side of drum gear.

37. All gears must be properly guarded.

38. An electric bell signal system must be used if possible and hand and whistle signals avoided. If electric bell system is not possible, use pull rope with gong.

Cables

39. Inspect all cables frequently and report any that are found to be worn, frayed or partially broken.

40. When the cable is received in a coil it must be rolled out on the ground like a hoop and straightened out before being put on the sheaves.

41. Cables must be guarded at all points where persons or material might come in contact with them and cables running from engine to hoist must be enclosed or fenced off. All horizontal cables that are less than ten feet above floor level must be suitably enclosed to prevent contact with any person and all cables must be boxed in horizontally or if vertical to a height of twelve feet as material falling and striking may throw them off sheaves.

42. Special precautions must be taken to prevent chafing where cables run through floors or against steel works or other objects.

Sheaves

43. Sheaves of largest practical diameter should be used for all cables of installations. They must be frequently inspected and kept well oiled. Sheaves that have become worn must not be used, as they injure the cable.

44. Snatch blocks must be well anchored. When located near the floor or in other exposed places, see that they are well guarded.

General

45. Post danger signs on material hoists and elevators, to warn men that they must not ride on them—this applies to everyone.

46. Engineer must not lift a load on which any person is riding.

47. Engineer must be notified before any work is done on any part of any hoist, machinery, or in the pit.

Derricks

48. Derricks must have capacity clearly painted on them and must not be used for loads in excess of that capacity.

49. Derricks and foundations must be frequently inspected and inspection should show that the derrick is properly anchored, especially the foot of the mast.

50. Particular attention must be given to the weighting and anchoring of stiff-leg derricks. Material for weighting must always be enclosed in well constructed boxes.

51. Brakes should be provided for breast derricks and if not there, particular care must be exercised if the load is lowered by the hand crank. If one crank should slip off it would throw an unexpected load on the other man and his crank be jerked from his hand.

52. A hold-back line or guide rope must be used on all loads that are liable to swing while being hoisted.

53. Before lowering load by the brake, cranks must be removed so that no one can be struck by them.

54. Workmen must not be allowed to ride on loads or slings handled by derricks.

Hoisting Equipment

Ropes

55. Proper equipment must be provided for hoisting and setting stone and equipment should be in first class condition before being sent to the job.

56. Have someone in your organization responsible for the rope you use, preferably someone who knows how to splice and make knots correctly. Store rope in a cool, dry place. Hang up slings and tackle.

57. Generally speaking the working load of a new rope should not exceed one-fifth of its tensile strength. A table of tensile strengths for different sizes and grades of rope can be obtained from any reputable manufacturer of rope. When a rope contains knots or splices allow a larger factor of safety.

58. A dry rope held taut in service should be immediately slackened off if it becomes wet. If this is not done, contraction of the rope will either cause it to break, put an undue strain upon it or damage the material to which it is attached.

59. Do not allow rope to come in contact with acid of any sort. Animal excreta will quickly destroy the strength of rope.

Chains, Slings and Hooks

60. Slings must be provided as a part of the hoisting equipment and every precaution must be taken to see that they are kept in good condition and in charge of an experienced man.

61. Chain slings are dangerous and should be handled only by men of wide experience and then only with extreme care.

62. Slings should not be bent around sharp corners of the material to be hoisted. This can be prevented by pieces of wood lagging or heavy bagging to protect the sling.

63. Chains must be inspected frequently. Watch for small cracks.

64. Do not let the chain kink. Chains break by kinks straightening out and dropping the load a short distance.

65. Be sure that hooks used for each class of work are correctly designed to lift the load without overstraining any part of the hook.

66. Hooks which have become bent must not be used until properly heat treated and repaired.

Scaffolds, Runways, Etc.

67. Scaffolds must be inspected frequently.

68. Do not use scaffolding built by others until after a careful examination.

69. Do not overload scaffolds.

70. Hooks, anchors and outriggers for swinging scaffolds must be well secured.

71. Platforms used on swinging scaffolds must have ample guards with safety lines where necessary.

72. Runways must be solidly built and evenly supported and have a smooth running surface of sufficient width to prevent buggies running off.

73. Horse scaffolds must not be set on built up piles of material, such as bricks, tile, etc.

74. Platforms, guardrails and fences must be erected in such a manner as to protect the public and workmen from danger.

75. Tools must not be hung on any part of the scaffold.

Stairs and Ladders

76. The use of ladders should be discouraged. If traffic is to be continued for any length of time, safety and economy will be obtained by the use of temporary stairways substantially built with railings and wide enough for at least two men to pass.

77. Where ladders are used they must be substantially built, set level and well secured.

78. Rails of ladders must always project at least three feet above the floor level. They must be of sound material and fillers must be nailed in between rungs.

Floor and Wall Openings

79. Substantial railings must be erected around all floor openings.

80. All floor openings must be protected by toeboards.

81. Openings in walls to elevator shafts, stairways and in outside walls of upper floor levels must have gates or railings. Cables to be used to protect outside openings.

82. When necessary temporarily to remove railings or covering, these must be replaced as soon as possible.

Dangerous Substances

Explosives

83. The handling of explosives shall be entrusted only to experienced and competent men, and explosives must be stored in a dry cool place, protected from fire, lightning and theft.

84. Blasting caps or electric fuses must not be transported with high explosives.

85. If the explosive is frozen, great care must be used in thawing. It is dangerous to do this near steam pipe, open fire, in an oven or in bright sunlight.

86. Before a charge is exploded a warning must be given to allow everyone to withdraw to a safe distance. When blasting is being done in congested areas special precautions are necessary.

87. Where explosive substances are stored or used, properly worded danger signs must be posted, telling of the hazard and warning against the carrying of matches or open lights and prohibiting the entrance of unauthorized persons.

Gasoline

88. In pouring gasoline from one container to another keep the two containers always in contact with each other or attach a chain so that contact may be maintained between the two.

89. Fires must not be started with gasoline or coal oil.

Electricity

90. Use enclosed switches and fuses.
 91. Switchboards must be railed off so that no unauthorized person can get at them.

Salamanders

92. Use great care in handling and placing salamanders. They should have protection underneath and at sides where necessary. Do not place them too near tarpaulins or other combustibles. Where salamanders are used in basements, care should be taken to ensure sufficient ventilation.

Safe Practices

93. Report any unsafe condition to your foreman at once.
 94. In case of sickness or injury, no matter how slight, go to the First Aid at once.

Clothing

95. Employees must be properly clothed. Heavy shoes must be worn to protect the feet from nails, etc. Gloves, baggy or flowing clothing should not be worn around moving machinery.

Tools

96. Defective tools must not be kept on the job.
 97. Do not allow small tools to lie around where anyone can fall over them or so they can fall on men below.
 98. Discharge of workmen who constantly drop tools will prevent probable serious injury.
 99. When cutting wire under tension or spring wire in coils, hold wire close to the cutters and stand so that the other end cannot fly in the face.
 100. Bull points must be held with a suitable holder other than the hands.

Goggles

101. Where work requires it, every worker must wear a pair of goggles suited to the work to be performed.
 (a) To protect the eyes from flying objects including molten metal.
 (b) To protect the eyes from injurious light and heat rays.
 (c) To protect the eyes from dust.
 (d) To protect the eyes from gases, fumes or liquids.
 102.
 (a) Goggles must be worn when cutting steel, concrete, etc.
 (b) Goggles must be worn by men handling lime.
 (c) Men engaged in cutting chases or chipping masonry should wear suitable goggles.

Respirators

103. Respirators must be provided for men working with cement, lime and other dusty materials in smoky, confined and gaseous places.

Loads on Jacks

104. In jacking, adequate blocking must be placed as work proceeds so that at no time shall blocking be separated more than one inch from objects being jacked.

Overhead Protection

105. Protection must be provided to overcome the hazard of bricklayers clipping bricks and pieces falling on workmen below.
 106. Workmen cutting off ends of lumber must exercise care so that ends will not drop on floor below.

Concrete Mixers

107. If a side loading hopper is used on concrete mixer, operator must see that men are out of danger before hopper is lowered.
 108. All gears must be properly guarded.

Saws

109. All woodworking saws must be guarded in accordance with accepted standards of safe practice.

Housekeeping

- "Good housekeeping is essential in the construction industry."
 110. Clean scaffolds and runways daily of all rubbish and do not allow tools, buckets, etc., to be left on the scaffold when men leave. In winter, remove snow and ice from scaffold before starting work. Sprinkle platform with sand or other material to prevent slipping. Rubbish and old material must be removed from the building and premises as fast as accumulated.
 111. Material must not be allowed to accumulate on the floor so as to overload it.
 112. All material must be kept well back from outside edges of open floors and all floor openings.
 113. Protruding nails are a main source of accident on form work. Boards having nails in them must not be allowed to accumulate on the floor or ground. Nail injuries frequently result in infection and subsequent loss to injured men. All nail injuries must be reported and heavy soled shoes must be worn.

Merchant Marine Statistics, 1930, published by the Bureau of Navigation of the United States Department of Commerce, contains a table showing the nationality of the Seamen. This table was compiled by shipping commissioners from articles of agreement. The total number of seamen in the merchant marine service is given as 288,496. Of this number 143,189 were rated as native Americans and 37,922 as naturalized. Those of British Nationality totalled 23,748; followed by 17,555 Germans and 13,605 Spaniards. Of the remainder the largest groups were composed of Filipino, Norwegian, South American and Danish seamen.

REGULATIONS TO IMPROVE HEALTH OF UNDERGROUND MINERS IN MANITOBA

THE following regulations dated January 8, 1931, have been issued under the Public Health Act of Manitoba, dealing with the preservation and improvement of the health of workmen employed underground in mines in the Province.

1. In these regulations the expression
 - (a) "Department" means the Department of Health and Public Welfare;
 - (b) "mine" shall have the meaning assigned to it in paragraph (n) of section 2 of the Mines Act;
 - (c) "Minister" means the Minister of Health and Public Welfare.
2. Every workman employed underground in a mine shall be examined at least once in every twelve months as to his physical fitness to work underground by a medical officer approved by the Minister, and every applicant for underground work who is not the holder of an unexpired certificate issued under regulation 3 or 9 shall be so examined.
3. If the medical officer finds upon examination, which examination shall include the taking of x-ray plates, that the workman is physically fit to work underground, he shall certify in the prescribed form that such is the case and shall deliver such certificate to the workman.
4. Every certificate issued under regulation 3 shall remain in force for not more than twelve months from the date of issue, and at the expiration of such period of twelve months a re-examination, including the taking of x-ray plates, shall be necessary before a new certificate under regulation 3 shall be issued.
5. A certificate under regulation 3 or regulation 9 shall be required in the case of workmen engaged in any ore or rock crushing operations at the surface of the mine except where the ore or rock is crushed in water or a chemical solution and is kept constantly in a moistened or wet condition.
6. A workman who is not the holder of an unexpired certificate issued under regulation 3, or an unexpired temporary certificate issued under regulation 9, shall not be employed in underground work in a mine in Manitoba or in ore or rock crushing operations at the surface of any mine.
7. Every manager, superintendent or person in charge of a mine in which workmen are employed underground, before permitting a workman to work underground shall require such workman to deliver to the manager, superintendent or person in charge, his certificate issued under regulation 3, or his temporary certificate issued under regulation 9, which certificate, or temporary certificate, shall remain in the custody of such manager, superintendent or person in charge during the period of the workman's employment, or until the expiration of such certificate, and shall be returned to such workman on his being discharged from or leaving the mine.
8. If such a certificate or temporary certificate expires while a workman is employed underground in a mine the manager, superintendent or person in charge shall not permit such workman to continue work underground until a new certificate under regulation 3, or a

temporary certificate under regulation 9, shall have been obtained by the workman and delivered to the manager, superintendent or other person in charge.

9. In mining camps in the Winnipeg mining district where no facilities for taking x-ray plates are available at the mine, a temporary certificate covering a period not exceeding three months may be issued to workmen employed or applying to be employed underground by a medical officer approved by the Minister, after a complete physical examination without the taking of x-ray plates.

10. Before the expiration of the period named in such temporary certificate the workman to whom such temporary certificate was issued shall apply for and obtain a certificate issued under regulation 3, after a complete physical examination including the taking of x-ray plates, and a second temporary certificate shall not be issued to any workman.

11. Examinations under regulation 3 or regulation 9 shall be based on and in accordance with instructions issued from time to time by the Department to medical officers approved by the Minister for conducting such examinations, and the said Department shall prescribe the form of certificates and temporary certificates to be issued under these regulations.

12. These regulations shall not apply to workmen employed underground for a less period than fifty hours in any one calendar month.

13. (a) A workman who works underground in a mine and does not hold an unexpired certificate issued under regulation 3 or an unexpired temporary certificate issued under regulation 9 and
 - (b) A manager, superintendent or person in charge of a mine who permits a workman to work underground in a mine who does not hold an unexpired certificate under regulation 3 or an unexpired temporary certificate under regulation 9, and
 - (c) A manager, superintendent or person in charge of a mine who does not require a workman to produce his certificate on commencing work underground or who does not re-deliver the certificate to the workman on his being discharged or leaving the mine, and
 - (d) A workman who does not deliver upon request his certificate to the manager, superintendent or person in charge of a mine on commencing or upon applying to work underground,

shall severally be liable to the penalties provided in section 388 of the Public Health Act for violation of regulations made under the said Act.

During the month of January a total of 3,711 accidents were reported to the Workmen's Compensation Board of Ontario in the industries in Schedule 1 of the Act, 19 of which were fatal cases; in Schedule 2 industries, 305 were reported, including 1 fatal case; and 220 Crown, 1 of which was fatal, were reported during the month, making in all 4,235, of which 21 were fatal.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Accident Prevention in Mines

Mr. W. B. Paton, safety engineer of the Hudson Bay Mining and Smelting Company, of Flin Flon, Manitoba, writing in the *Canadian Mining Journal*, January 23, suggests methods for reducing the number of accidents in mines that are caused by falls of roof and sides. This class of accident, he says, as generally recognized in mining circles is by far the most numerous of all mining accidents. The reasons for the special risks of the industry, which continue to increase notwithstanding the progress of mining methods in other directions, are stated to be as follows:—the advent of too many unskilled workmen; the lack of the right kind of safety education; too much rush, and incidentally too many risks; too much contract work; and the wrong system of timbering.

Mr. Paton's suggestions for reducing accidents are summarized as follows:—

- (1) Engage only practical, methodical, vigilant and careful officials;
- (2) Let every new workman be examined by the safety engineer or others responsible before he enters the mine;
- (3) Make sure that every man underground—no matter in what capacity he is engaged—is able to test a roof by the "vibration" method;
- (4) Appoint independent scalers and make sure that they know their work. (Too many shift bosses, he says, consider scalers equivalent to common laborers);
- (5) Suspend careless workmen; get rid of careless repeaters;
- (6) Make new men have a compulsory hearing and sight test;
- (7) Have broken props or bars repaired immediately;
- (8) Use a reliable kind of timber;
- (9) Especially in dry mines, beware of decaying timbers. Have them renewed;
- (10) Enforce the use of safety or temporary props where deemed necessary;
- (11) Watch the sides, they are often more dangerous than the roof;
- (12) Don't give workmen causes for excuse; maintain a plentiful supply of timber, as near the working places as possible;
- (13) Don't encourage the withdrawal of timber by sledge-hammer; enforce the use of the Sylvester or other safe device for this purpose;
- (14) Conscientious effort and vigilance will bring their own reward.

The "vibration method" mentioned in paragraph 3 (above) consists of placing the tips of the fingers or the palm of the hand on the part to be tested and tapping with the rod held in the other hand. The tapping should be gentle at first and only increased if found necessary.

With this method, the degree of stability is ascertained by the amount and nature of vibration which is transmitted from the part under test to the fingers.

Accidents to Longshoremen at Halifax

The Halifax Board of Trade appointed a special committee in January to study methods of reducing the number of accidents among waterfront workers. The committee includes representatives of the shipping companies, the Halifax Harbour Commission, the Nova Scotia Longshoremen's Association and the Nova Scotia Accident Prevention Association. A member of the latter association stated that this group showed a serious deficit for the purposes of workmen's compensation, and that the present rate of assessment of 4 per cent per \$100 of payroll would have to be increased unless some means could be found of lessening the risks of longshore work.

The committee decided to investigate the situation thoroughly and endeavour to lessen the hazard so that an increase in the assessment would not be found necessary.

Safety of Sailors on Great Lakes

A recent issue of the *News-Chronicle*, of Port Arthur, Ontario, contained the following note on the overloading of ships, with special reference to shipping on the Great Lakes.

"The LABOUR GAZETTE for September contains reference to an international convention regarding the loading of merchant ships to which Canada has subscribed. The agreement divides the oceans into zones according to the hazards of weather conditions, and specifies the extent to which vessels may be loaded. Thirty nations have signed it. Made for the purpose of ensuring safety for sailors and aimed at a tendency of owners to order overloading, announcement of the agreement is a reminder of an agitation that was carried on with reference to the Great Lakes a few years ago. A number of accidents caused an outcry against the extent to which freighters were loaded during the fall and there was much talk of regulating acts. Not so much has been heard in this connection during the past few seasons. Vessel owners of the Great Lakes have shown every indication on their own part of taking all reasonable precautions. It is much better so than under pressure of an Act of Parliament."

Canadian Cement Plants again win Safety Trophy

The Portland Cement Association announced on January 8, from its headquarters at Chicago, that the highest honours in regard to successful accident prevention in the cement industry in the United States and Canada had been again awarded to two cement mills in Canada. It was stated that no workman at either of these two plants had missed a single day's pay through accidental injury.

The winning mills are those of the Canada Cement Company, Ltd., at Port Colborne, Ontario, and Exshaw, Alberta. As a result of the outstanding record of those plants, Canada takes her place as one of the leading countries in efficiency and safety of cement manufacture. The plants at Port Colborne and Exshaw had been presented with cast stone monuments for similar safety records during 1926 and 1928 respectively. New inscriptions will be engraved upon these monuments to commemorate the new awards.

Two delegates, elected by the workmen of each of the plants, will be invited to journey to Washington, D.C., at the expense of the Portland Cement Association to receive the award at the hands of high United States Government officials and in the presence of the leaders of the cement industry while in convention there.

Messrs. F. B. Kilbourn, general superintendent; L. M. MacDonald, superintendent; Jack Dempster, safety director, and J. Cuthbert, chairman of the safety committee, organized and carried on the successful campaign at the Port Colborne plant. Mr. W. D. Armstrong, superintendent, was responsible for the successful record at the Exshaw plant.

Safety Record at Moncton, N.B.

The *Daily Times*, of Moncton, N.B., in its issue of January 19, 1931, contained the following announcement:—

A record which possibly is unequalled in the operation of a public utility company of similar size to the Moncton Tramways, Electricity-Gas Co. Ltd., was established here on Saturday when the employees of the local concern completed a full year without a lost-time accident of any sort. During the year, 188,776 man hours' work were performed, a decided improvement over the figures of 1929, when 166,732 man hours' work were put in by the employees, and 1,144 man-hours were lost owing to accidents.

Some of the individual departments of the company's business show an even better record. In the Electric Power Station, meter

and engineering department, and in the gas compression station, meter and storeroom, the employees have gone for 24 months without a lost-time accident. In the electric line department 13 months have elapsed without any lost-time accidents while the gas line department and trolley operators, shop and track department have a record of 14 and 12 months respectively with no lost time on accident account.

Every department of the company's plant is supplied with a complete First Aid outfit, and in addition the company has a Davis inhalator, which takes the place of the less up-to-date pulmotor, in readiness for resuscitation purposes in cases of electric shock or drowning. The employees attend safety committee meetings, monthly, when all accidents and their causes are discussed and remedies suggested to prevent their recurrence. All employees have one hour's instructions in First Aid work fortnightly, this being on the company's time.

The Safety First precautions are in use in all of the plants of the Utilities Power and Light Corporation, of which the Moncton company is a subsidiary. Records are kept in every plant and comparisons made each month, the local plant having an enviable record in this respect. At this time of the year, particularly, accidents are most liable to occur through slipping and extraordinary precautions are taken against accidents of this nature.

As one means of accident prevention the company keeps in stock, for sale to their employees, special safety shoes which may be purchased at a reasonable price. The toe-cap of these shoes is so constructed as to withstand the pressure of a four hundred pound weight dropped from one foot in height upon the toe of the wearer, and the soles are constructed of a special durable material which is non-slipping and which wears almost like iron. These may be had either in the work type or as a dress shoe.

Safety Work at St. Thomas Foundries

A remarkable safety record was made in 1930 by the branch of the Canada Iron Foundries, Limited, at St. Thomas, Ontario. This plant had only two "lost-time" accidents last year, with a total number of hours when employees were absent from work of 384 out of a total of 337,435 hours worked. During 1930 the employees handled 15,691 tons of molten metal or an average of 1,307 tons a month. The St. Thomas foundry won the Hughes Memorial Safety Shield in 1927, the first year that a Safety First program was

in operation at the plant, while in the two following years it stood second in the inter-plant competition.

Safety Movement at Winnipeg

A joint meeting of the Winnipeg Board of Trade's industrial committee and accident prevention committee, together with members of the provincial Bureau of Labour and the Workmen's Compensation Board was held at Winnipeg on January 22, for the purpose of formulating plans for a campaign of safety work in local industrial plants. Mr. Charles F. Roland pointed out that preventive work was steadily increasing in Winnipeg, and that the Board of Trade committee, although without funds, had organized 22 groups for "industry in safety" work. Plans were being made, he said, for interesting plant executives in the appointment of safety directors in each plant, and it was believed that the available first aid men could direct this work.

Major C. K. Newcombe, commissioner of the Workmen's Compensation Board, told of the increase in fatal industrial accidents from 5 in 1924 to 51 in 1930, and showed how employers in Manitoba had paid out more than \$10,000,000 since the Workmen's Compensation Act came into force.

Mr. Edward McGrath, secretary of the Bureau of Labour, outlined the activities of the bureau and the safety work being carried on by the provincial government by means of a bi-monthly bulletin service, rigid inspection of plants, and first aid classes conducted nightly in the Bureau's offices. He expressed the opinion that every first aid man was an effective safety agent and asked employers to encourage their employees to learn first aid.

A suggestion that the safety work of the accident prevention bureau of the Board of Trade should be assisted financially by the Workmen's Compensation Board met with the approval of the meeting.

Safety Code for Abrasive Wheels

The United States Bureau of Labour Statistics has published, in its Safety Code Series, a Safety Code for the Use, Care and Protection of Abrasive Wheels. The Code is approved by the International Association of Industrial Accident Boards and Commissions, the Grinding Wheel Manufacturers' Association, and the American Standard Association. The 1926 edition of this code had a very wide distribution, and was recognized as the most authoritative publication on the subject available. In order to keep pace with recent progress in the grinding wheel industry it was necessary to revise certain sections of the code,

but although a great many changes have been made they are all in detail only. In other words, the same general principles apply now as in the past. The importance of proper wheels, correct mounting, suitable machines, careful operation, and proper speed, are recognized as means of preventing wheel breakage, but as all of these things are dependent on human control it is considered essential that some form of mechanical guard be employed at all times.

The membership of the International Association of Industrial Accident Boards and Commissions includes the Department of Labour of Canada, and the Workmen's Compensation Boards of New Brunswick, Nova Scotia, Ontario and Quebec, while among the associate members are the Industrial Accident Prevention Associations of Ontario, the Canadian National Safety League, and the Province of Quebec Safety League.

Prevalence of Home Accidents

Dr. Theodore B. Appel, Secretary of Health of Pennsylvania, states that a recent survey by one of the leading insurance companies elicited the rather astonishing fact that it was much safer for a person to be working in a factory than to be engaged in domestic duties. No less than 46 per cent of the injuries cared for by 22 visiting nurse associations in a metropolitan city arose out of domestic pursuits, and but 9 per cent happened while the injured person was at work. Among the domestic injuries nearly one-half were due to falls on or down stairs, over chairs and in bath tubs; and to slips on rugs or off the step ladder. It would appear that these types of home hazards deserve more consideration as a cause of disability than they have been receiving. Burns and scalds are next in importance as a cause of domestic injury. No less than 28 per cent of home casualties during 1930 were directly traced to the stove, grate, lamp and match hazards.

Dr. Appel points out that "while undoubtedly spectacular progress has been made in industrial establishments against accidents by means of improved safety appliances, physical examinations and personal instruction, a concentrated and regulated effort along these lines regarding the home has as yet not been made."

Conditions of Work in London Shops

Officials of the Corporation of the City of London (England) recently investigated the conditions of employment of shop assistants in the city with a view to reporting to the Government. The general impressions obtained from the inquiry were that conditions are not

up to the standard to be found in factories and workshops, and that vast improvements could be made if "workplaces" were defined so as to include shops. Establishments in the following categories were visited:—Bakers and pastrycooks; boot shops; butchers (including pork butchers); chemists; confectioners; cooked meats and tripe shops; dairies; depart-

mental stores; drapery (soft furnishing, etc.); tobacconists; wholesale establishments; fancy goods and toy shops; fishmongers and poultryers; greengrocers; fruiterers, and florists; grocers and provision dealers; hair-dressers and barbers; ironmongers and household stores; and newsvendors (mostly lock-up shops).

NOTES ON TECHNICAL EDUCATION AND APPRENTICESHIP

Courses in Aeronautics and Salesmanship at Saint John Vocational School

According to an announcement recently made by the officials of the Saint John Flying Club, arrangements have been made with the Saint John Vocational School for student pilots to take a course in aeronautics during the present winter months. The course will consist of 12 lectures to be given weekly, and the subjects to be covered are: theory of flight, sequence of flying instruction, navigation, meteorology, engines, rigging and air regulations.

A course in salesmanship will also be conducted at the Saint John Vocational School. This course will be open to persons now actually engaged as clerks, retailers, travelling salesmen, sales managers, department heads, etc.—as well as to persons who are taking up this vocation.

Vocational Education in the United States

Labour's responsibility for the successful promotion and operation of vocational training courses in the United States is emphasized in a pamphlet recently issued by the Federal Board for Vocational Education.

Prepared at the request of Mr. William Green, president of the American Federation of Labour, the pamphlet tells what vocational education is and how it is carried out, and shows how advisory committees composed of representatives from the public schools and from the employer and worker groups are essential in setting up the most effective vocational training classes. "The specific purpose of vocational education as contemplated in the national Vocational Education Act," the pamphlet explains, "is to equip boys and girls and men and women for the effective pursuit of occupations. Such training prepares those of school age for advantageous entrance into skilled trades and occupations, and enables those who have left school for employment to receive further training which will fit them to do better work, command higher wages, and take advantage of opportunities for promotion. For this type of education to

be successful, it is necessary to have the fullest co-operation of employers and employees. Without the counsel and help of management and workers in industry, the school cannot operate an efficient program of training which will meet the needs of industry and equip those receiving the training to fit into employment with a minimum of difficulty."

As explained by Mr. Green in a letter addressed to organized labour and incorporated in the pamphlet, the publication was prepared to clear up "some misunderstanding among the members of labour organizations of our country regarding the aims and purposes of national and State vocational education laws."

Part Time Trade Schools in United States

A total enrollment of more than 600,000 persons in federally aided trade and industrial vocational schools in the United States in 1930—an increase of 10 per cent over 1929—is reported by Mr. Frank Cushman, chief of the trade and industrial service of the Federal Board for Vocational Education. "The rate of growth in enrollment in part-time trade schools during 1930," Mr. Cushman states, "exceeds that for any other type of school. This is particularly gratifying since it is through the part-time vocational schools that the best work is being done in training apprentices in different trade and industrial occupations. Under this plan apprentices who are receiving their practical training on the job supplement this training with education in such subjects as drawing, mathematics, and trade science, received at the part-time vocational school. The increase shown in the attendance at part-time schools indicates that the States are giving serious attention to the development of apprenticeship programs and that they are achieving tangible results.

"The enrollment in evening schools in 1930 showed an increase of 26 per cent over 1929. This increase constitutes good evidence that vocational training for persons who have left the regular schools and are already at work in industrial jobs is being effectively developed."

THE FISHING INDUSTRY IN CANADA IN 1929

THE fishing industry in Canada in 1929 is reviewed in an annual report recently issued by the Dominion Bureau of Statistics in collaboration with Dominion and Provincial Fisheries Departments. The report reviews the early history of Canadian fisheries, their wide diversity and the extent of the Canadian fishing grounds, the most of the Canadian fishing grounds, the most extensive in the world, and the quality of their product. Emphasizing the last feature, the report states that "it is an axiom among authorities that food fishes improve in proportion to the purity and coldness of the waters in which they are taken. Judged by this standard, the Canadian cod, halibut, herring, mackerel, whitefish and salmon are the peer of any in the world. It is possible, therefore, to state that by far the most valuable fisheries of the western hemisphere, if not of the globe, belong to Canada."

In 1929, there were larger catches of fish both on the Atlantic coast and in the Inland Fisheries but Pacific coast landings decreased by more than 80,000,000 pounds, and as much of this decrease was in the salmon fishery the net result of the year's fisheries operations in the Dominion as a whole was that the marketed value of the production was about \$1,500,000 less than in 1928, or \$53,518,521 as compared with \$55,050,973. However, the total for the year was \$2,916,000 above the average annual value of the preceding five year period.

Notwithstanding the decrease in its production, British Columbia continued well in the lead among the provinces in point of marketed value. Forty-five per cent of the production value for the Dominion for the year is credited to British Columbia, thirty-five per cent to the Maritime Provinces, eight per cent to the Prairie Provinces and the Yukon Territory combined, seven per cent to Ontario, and five per cent to Quebec.

During 1929 the total investment in the industry increased by more than \$4,000,000 and reached the sum of \$62,336,057. The greater part of the increase, or \$2,710,914 was in the capital invested in vessels and boats and gear used in the primary operations of catching and landing the fish, and the total amount so invested reached \$33,842,002. The investment in fish canning and curing establishments was increased by \$1,552,772, notwithstanding that there was a decrease in the number of lobster and salmon canneries and in the number of reduction plants.

Among the major fisheries, the salmon fishery ranked first in importance during the year, the marketed value of its products being \$15,008,825. In 1928 the cod fishery ranked second to the salmon fishery and the lobster fishery was third in importance. In 1929, however, the lobster fishery came into second place, with marketed value figures of \$5,696,542, or an increase of something more than \$512,000, and the cod fishery was third with a value of \$5,394,636 as compared with \$6,285,777 in 1928. Halibut marketed value was \$4,832,296, an increase of more than a million dollars. In the case of herring the marketed value of \$3,186,669 represented an increase of some \$80,000. The catch in the pilchard fishery, which is carried on in British Columbia only and has become of rapidly increasing importance with the growing utilization of the fish in producing fish meal and oil, was larger than it had been in 1928, but, in many cases, the oil content was not as great as it had been in the former year and the marketed value of the products of the fishery, \$2,199,834, showed a drop of some \$360,000. Whitefish continued the most valuable among the inland fishes and the landings had a marketed value of \$2,453,703, an increase of some \$260,000. As in 1928, the haddock, pickerel, sardine, smelt, and trout fisheries, respectively, yielded marketed returns of more than \$1,000,000.

The industry in 1929 gave employment to 80,373 persons as compared with 78,219 in the previous year. Of the total personnel engaged during the year, 64,083 were employed in the primary operations as compared with 62,785 in 1928, and 16,290 were persons employed in fish canning and curing establishments, an increase of more than 800 over the previous year.

Fish Canning and Curing Establishments

As pointed out in the report, the fish canning and curing industry is confined to the sea fisheries of the Maritime provinces, Quebec and British Columbia. There were in operation in 1929 a total of 730 establishments classified as follows: lobster canneries, 354; salmon canneries, 64; clam canneries, 23; sardine canneries, 3; other fish canneries, 5; fish curing establishments, 242; and reduction plants, 39.

Employees, Wages and Hours.—The total number of persons given employment during any portion of the year was 16,367. Of this total, 660 are classified as salaried employees; 11,122 as wage earners, and 4,585 as contract or piece workers. The total number of employees shows an increase of 933 over the

preceding year, the increase being divided among the three classifications as follows: salaried employees, 30; wage earners, 543; contract and piece workers, 360. The total paid to all employees in 1929 was \$5,411,855 which amount was divided among the various groups of workers as follows: salaried employees, \$951,669; wage earners, \$3,668,802; contract and piece workers, \$791,384. The total amount shows an increase of \$150,759 over the previous year.

The period of highest employment in this industry is from May to September, June being the peak month. Exclusive of contract and piece workers (for which no monthly statistics of employment are available) the total number of wage earners in June 1929 was 9,727, of which 6,450 were male employees and 3,277 were female workers.

The total number of days worked by all plants during the year 1929 was 75,544, or an average per plant of 103.5 days. An arrangement of the returns of the establishments in groups according to certain specified periods of time in operation gives the data in another form, as follows: 330 establishments are shown as having operated for periods of less than 60 days during the year; 159 for periods of from 60 to 119 days; 120 for periods of from 120 to 179 days; 47 from 180 to 239 days; and 74 for periods covering 240 days and over. In the last classification are 45 fish curing establishments, 11 reduction plants, 8 lobster canneries, 6 salmon canneries, 3 clam canneries, and one other fish cannery. The average number of hours worked per day by wage-earners in the industry in

1929 was nine, and the average number of hours per week, 54.5. A compilation of the returns of the number of wage-earners according to the number of hours worked in month of highest employment, shows that 3,647 wage-earners were recorded as working eight hours or less per day; 3,500 as working nine hours; 6,043 as working ten hours; and 268 as working over ten hours.

Fishing Bounty

Under the authority of "An Act to encourage the Development of the Sea Fisheries and the Building of Fishing Vessels" the sum of \$160,000 is appropriated annually by the Governor in Council. It is distributed under the name of Fishing Bounty by the Department of Fisheries amongst fishermen and fishing vessel and boat owners on the Atlantic coast, under regulations made from time to time by the Governor in Council.

For the year 1929, payment was made on the following basis: To owners of vessels entitled to receive bounty, \$1 per registered ton; payment to the owner of any one vessel not to exceed \$80; to vessel fishermen entitled to receive bounty \$7.50 each; to owners of boats measuring not less than 12 feet keel, \$1 per boat; to boat fishermen entitled to receive bounty, \$6.65 each.

There were 9,546 bounty claims paid. In the preceding year there were 9,390 bounty claims paid. The total amount paid in 1929 was \$159,762.65 allocated as follows: to 546 vessels and their crews, \$40,282.00; to 9,000 boats and their crews, \$119,480.65.

Working Hours of Builders in Western Australia

Hours of work for bricklayers, stonemasons and plasterers in Western Australia recently formed the subject of an award by the State Arbitration Board. A previous award had fixed them at 44 in the week with a minimum wage of 2s. 8d. per hour. In view of the present depressed state of the industry the Master Builders' and Contractors' Association applied to the State Arbitration Court in November for a new award, embodying provisions for the introduction of a 48-hour week and considerable reductions in wages.

The new award, which was issued in November, maintains the 44-hour working week. The President, in announcing the decision of the Court, said that it was generally acknowledged that workers in the building trade should have fewer hours per week than the normal or standard week. For many years past, the working week in this industry throughout Australia had been 44 hours. The reason for this was not hard to find. The industry had the pecu-

liar characteristic that the worker in it must follow the job. He could not very well shift his home with his job, but must be prepared to spend, if necessary, a great deal of time in travelling which was not included as part of the week's work. It followed that the building workers, in respect to hours, constituted a class by themselves and could not be compared with the workers in other industries or callings. Whatever doubt there might be as to the justice of reducing the hours of work from the standard of 48 in the week in other industries, there could be no doubt that from a comparative standpoint, the workers in this industry deserved special consideration.

The President added that the wages on which the hourly pay would be calculated would be as follows: the basic wage would be at the rate of £4 6s. per week; the margin for skilled workers, £1 4s. per week; lost time, 11s.; total £6 1s. The hourly rate would thus be 2s. 9d.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Unemployment Insurance

In view of the general prevalence of unemployment, particular interest attaches to an analysis of the present legislation of different countries relating to unemployment insurance, published by the International Labour Office in the January number of the *International Labour Review*. It takes the form of two tables, the first of which deals with the scope of insurance laws (showing the limitations as regards the trades or occupations covered, as regards earnings and as regards age), while the second deals with the financial organization of the various insurance systems (giving in detail the contributions of the public authorities, employers, and workers respectively, and indicating the benefits paid and the period for which they are paid).

In an introductory note attention is drawn to the substantial progress made in legislation on unemployment insurance since 1919, when the First Session of the International Labour Conference adopted a resolution on the subject. At the beginning of that year, the number of workers insured against unemployment was estimated at from 4,500,000 to 5,000,000, the main body (3,700,000) being found in Great Britain, the only country where at that time insurance was compulsory, and then only for certain industries. To-day, unemployment insurance in the form of a compulsory system is in force in ten countries and, if the countries with voluntary insurance are added, about 47,500,000 workers in all are covered.

The following are the figures for the several countries:—

Countries with compulsory insurance:

	Insured persons
Australia: Queensland.. . . .	137,000*
Austria.. . . .	1,300,000*
Bulgaria.. . . .	287,000
Germany.. . . .	16,738,000
Great Britain and Northern Ireland.. . . .	12,100,000
Irish Free State.. . . .	284,000
Italy.. . . .	2,600,000*
Poland.. . . .	1,033,000
Switzerland (9 cantons).. . . .	150,000*
U. S. S. R.. . . .	10,000,000**
Total.. . . .	44,629,000

Countries with voluntary insurance:

Belgium.. . . .	628,000
Czechoslovakia.. . . .	1,129,000
Denmark.. . . .	288,000
Finland.. . . .	—***
France.. . . .	200,000
Netherlands.. . . .	388,000
Norway.. . . .	43,000
Switzerland (14 cantons).. . . .	165,000*
Total.. . . .	2,841,000

* Estimate.

** Estimate. Since October 9, 1930, the authorities have suspended all insurance benefits until further notice, owing to the situation of the labour market.

*** No estimate available.

Unemployment and Public Works

A report of nearly 200 pages on Unemployment and Public Works has been issued by the International Labour Office containing the results of research into the utilization of public works as a means of counteracting unemployment.

This question has been the subject of consideration by the International Labour Organization from the very beginning of its existence. By a Recommendation adopted at Washington in 1919, it was proposed that Governments should "co-ordinate the execution of all work undertaken under public authority, with a view to reserving such work as far as practicable for periods of unemployment." In 1927 the Joint Committee on Economic Crises appointed by the Economic and Financial Committees of the League and the International Labour Office drew up a list of points which it was desirable to investigate, and it is on the basis of this plan that the Office pursued the researches of which the outcome is now being made public.

The report deals first with the economic justification for the policy of advance planning of public works—its cost, its effect on industry, and the limitations to its operation. This is followed by a general survey of the legislative and administrative measures adopted in different countries for such advance planning. A number of administrative problems involved—multiplicity of authorities, recruitment of labour, etc.—are next discussed. The financial problems entailed by the application of the policy are considered in a special chapter.

While advance planning is still applied only on a restricted scale, most countries have at one time or another put public works in hand earlier than would have been the case in ordinary circumstances. The second part of the report summarizes what has actually been done in this respect in recent years in fifteen of the chief industrial countries, the particulars given being avowedly presented as examples of the policy in operation rather than as a complete or exhaustive record of the steps taken. Where possible, statistics are given showing the number of workmen given employment and the cost of the works undertaken.

A summary of the main points covered by the study, together with a number of conclusions drawn from the facts set out, complete the volume.

Labour Problems Involved in European Union

The effort towards European union, which is being undertaken in Geneva at present by a special Committee of the League of Nations,

concerns the International Labour Organization from several points of view. Although, strictly speaking, all the questions dealt with by the Organization are of a world-wide character, there are some which are principally the concerns of Europe and which the development of European co-operation might help to solve. Several of these questions are reviewed in a memorandum of the Office which has been submitted to the Commission of Inquiry for European Union.

The memorandum begins by referring to three questions, each of which concerns a particular industry: the regulation of conditions of labour in coal mines, the conditions of labour on the shipping of great rivers, and the automatic coupling of railway wagons.

The coal problem is especially pressing in European mines on account of the depression from which they are suffering. After certain preliminary technical studies undertaken on the request of the Assembly of the League of Nations, the International Labour Conference discussed last year the question of hours of work in coal mines, without however obtaining

the necessary majority for a Draft Convention, and this question has again been placed on the agenda of this year's Session. The problem of inland navigation is also of special interest to Europe since the continent possesses several of the great international rivers of the world. With regard to the automatic coupling of railway wagons, which is already in use in North America and Japan, the Office, with the co-operation of the parties concerned, is considering whether it would not be desirable, from the point of view of accident prevention, to introduce these methods on the great railway systems of Europe.

Besides these three special questions the report refers to three others which are of more general interest, but also possess certain aspects of primary interest to Europe: these are migration, unemployment and the agricultural crisis. In conclusion, the memorandum considers the question whether it would be desirable or even possible for a European labour organization to be set up within the International Labour Organization itself.

STUDIES ON INDUSTRIAL RELATIONS

Results of an Inquiry Undertaken by the International Labour Office on Suggestion of Canadian Delegates

THE Eleventh Session of the International Labour Conference, held at Geneva in 1928, adopted the following resolution proposed by Mr. H. H. Champ, Employers' Delegate from Canada, seconded by the Canadian workers' adviser, Mr. R. J. Tallon (LABOUR GAZETTE, July, 1928, page 747):—

"Whereas it is contended that a policy of active collaboration between employers and employed, such as exists in certain countries, has resulted both in an improvement in the level of real wages and working conditions, and also in greater and more economical production; and Whereas the economies resulting from such collaboration can also be made available for the benefit alike of the employers, employed and the community as a whole; Therefore be it resolved: That this Conference requests the Governing Body to consider the advisability of instructing the International Labour Office to follow with due attention the progress of the spirit of collaboration between employers and employed and to report on the subject from time to time."

The International Labour Office subsequently carried out the suggestion contained in this resolution and has now published the first volume in a series of Studies on Industrial Relations, giving particulars of the plans adopted by leading concerns in the principal industrial countries of the world for establish-

ing and maintaining, on a permanent basis, satisfactory relations with their employees.

A World-Wide Movement

The report notes that much of the impetus for the study of industrial relations was derived from North America, and recalls the study of Industrial Relations in the United States and Canada that was made in 1927 by Mr. H. B. Butler, the Deputy Director of the Office at Geneva (LABOUR GAZETTE, September, 1927, page 985). In America great stress is now laid on establishing good relations between employers and workers, and the same subject has been studied, sometimes under Government auspices, and sometimes on the initiative of employers' and workers' organizations, in Great Britain, Australia, New Zealand, Finland, the Netherlands, and Sweden. National Economic Councils have been established in Germany and France, while in Great Britain regular consultations are now held between representative employers' and trade union organizations.

Object of the Series

The object of the present series of studies is "to ascertain the actual development of the relations between employers and workers, both in the works and in collective negotiation be-

tween representative organizations. This development naturally differs to some extent from country to country, as it must necessarily be largely influenced by the conditions in which industry has grown up, by national habits of thought and other factors of a national character. But it may none the less be found that its general problems are common to all countries and that, despite diversities in method, the attempts to solve them proceed on general principles which are largely similar.

The countries covered in the present volume are Czechoslovakia, France, Germany, Great Britain, and the Saar. The industries involved are boot and shoe manufacture, coal mining, electrical equipment, and passenger transport. All of the undertakings are generally recognized as successful representatives of their industries and countries, and many are of world-wide importance. In every case the study, after a brief introduction dealing with the general history of the firm, its size, the number of workpeople, its capitalization, and so forth, deals with the organization and administration of industrial relations, including the internal organization of the industrial relations department of the particular firm, a history of its relations with the employers' organizations and trade unions, and a description of the works councils or other bodies in operation in connection with the firm. Full information is given with regard to the functioning of the system of industrial relations, the procedure with regard to employment, management, training, apprenticeship and education, health and sanitation, accident prevention, pensions, profit-sharing and co-partnership, insurance, savings plans and various forms of welfare activities. In each case special reference is made to the extent to which the active collaboration of management and workpeople is concerned in the actual organization and functioning of these various schemes.

A second series of studies is in preparation, which will, it is hoped, as far as possible, cover industries and countries not touched in the first series. This second series will include among others, studies of industrial relations in the Fiat Motor Works, Italy, and the Sandviken Steel Works, Sweden. The following paragraphs indicate the general nature of the several plans, full details of which will be found in the report itself.

The Siemens Works

The report gives a description and history of the undertakings of the Siemens-Schuckert Works, and proceeds to describe the organization and administration of its industrial re-

lations department. The working of industrial relations at Siemensstadt is the resultant of the operation of two factors which are often considered to be inconsistent: in the first place, the thorough-going application of the principles of scientific method to all industrial relationships; and in second place, the development of essentially personal relations between the head of the firm and his workpeople, on the basis of an old tradition of family contacts. The mere framework of industrial relations is, indeed, the same at Siemensstadt as in all other German firms, for it is constituted by legislation and collective agreement. The particular significance of Siemensstadt resides in the fact that it represents the filling in of this framework on the largest scale and in the most complete manner. The organization of industrial relations in the Siemens firms has been carried to a very high pitch in efficiency. The industrial relations policy of the firms is very completely centralized in the Industrial Relations Department, and the application of the policy is loyally and effectively carried out in the works, where every detail is in charge of some highly qualified official. On the side of the workers, the fact that a large number of works council representatives devote their whole time to questions of industrial relations would appear to ensure that the interests and desires of the workpeople can be centralized, systematized and discussed with the representatives of the management with the fullest possible recognition of principles and attention to details.

"Siemensstadt is undoubtedly a remarkable example, in a firm of the largest size, of the maintenance of direct personal relations between management and the workers side by side with and in addition to the relations through representation provided for by the works councils and otherwise. It is a striking illustration of the view that the application of legal machinery for ensuring industrial relations is not inconsistent with the retention and even the development of freer and less formal contacts between management and the workers."

Lens Mining Company

The main conclusion reached from the study of the arrangements of this company is the stress that is laid upon voluntary agreements, leading to a general spirit of collaboration and devotion to common interests. This spirit governs industrial relations in regard to recruiting, stability of employment, hours of work, and more especially the fixing of wages. Throughout, the company allows the workers a large share in the control of social institutions, for which at the same time the company pays most of the costs.

London Traffic Combine

The general principles of industrial relations in the Combine are stated as follows:—

(1) Basic conditions of work are regulated in accordance with collective agreements. In all cases the Combine has been associated with other undertakings engaged in passenger transport in the negotiations with the trade unions which led to these collective agreements.

(2) The Combine remains in direct contact with the trade unions concerned, and makes direct settlements with them on matters which concern its employees.

(3) In conjunction with the trade unions concerned the Combine has set up a wide variety of schemes to facilitate industrial relations within the Combine.

(4) Negotiations between the Combine and the trade unions and between management and workers cover wages, hours, and conditions of service. They expressly exclude questions of management and discipline.

(5) Nothing in the various schemes is to be taken to cancel the regular channels by which employees communicate with the officials and officers on matters which concern them, it being understood that every employee shall, in the first instance, address his case to the official immediately over him, or through him to the official or officer authorized to deal with it. It is a general principle that all disputes shall be dealt with in the first place locally and as rapidly as possible.

The State Mines of the Saar Basin

The most striking feature of the organization of industrial relations in the Saar Mines is found to lie in the constant endeavour of the Mines Administration to work in contact with the trade unions as far as this is possible—contact in collective negotiations for fixing the conditions of work in the mines; contact in conciliation committees for the settlement of disputes arising during employment between the management and members of the staff; and contact for the adjustment of the details and the carrying into effect of all measures affecting the workers' conditions. Thus, to a certain extent, the mines administration and the workers' organizations came to depend on each other for the realization of their respective economic and social programs. Their relations rapidly grew so extensive that they eclipsed all other institutions aiming at the same ends. The workers' committees elected under the former German legislation play only a very secondary part compared with them.

"In other words," this section concludes, "the management of the mines has sought to obtain the good-will of the workers, not by

bestowing favours and privileges but by a system of consideration and confidence. Its aim has been less to exert a direct influence on the worker's mind than to adapt its methods to his demands and wishes. Knowing that he was devoted to his trade union, it chose the latter as the foundation for its system of industrial relations. At the same time it recommended all its engineers to try, in their daily working relations with their men, not so much to obtain formal discipline as to understand them, to make themselves understood by them, and so to create a psychological atmosphere favourable to collaboration."

The Bata Boot and Shoe Company

Bata founded this business at Zlin in 1894 when he set up a shoemaker's shop. In 1928 he had 12,000 workers and a daily productive capacity of 75,000 pairs of shoes.

"In its essential principle," the report states, "Bata's entire system can be reduced to a policy of efficiency. The world production of shoes, he says, is only 900 million pairs per year, whereas there are 2,000 million human beings. If only two pairs a year are allowed for each person, it will be seen how wide the margin is between supplies and requirements. To provide mankind with the shoe that it needs, it is not enough to increase production; cost prices must be reduced; in other words, efficiency must be increased. This is the end that Bata has set out to attain and to which he has subordinated his entire organization."

This notion of "service," which Bata invokes to justify his industrial activities, he extends to his staff. To serve the undertaking and so help to satisfy a need of mankind should be the intention of every one of his workers. But Bata does not believe that such a frame of mind can be induced by moral suasion alone, and it is in putting this view into practice that the originality of his scheme becomes manifest. By means of workshop autonomy, the sharing of profits and losses, collective piece wages, commissions and bonuses, he has set out to establish a real community of interests between his undertaking and each of his workers. Without in any way decentralizing the management, he has so distributed responsibilities that the earnings of most of his staff depend on the results of their work, or on that of the team to which they belong or which they direct. The greater the responsibility the closer the connection between earnings and output. He has thus striven to make his workers the arbiters of their own fate and to make them feel that they have a personal interest in the suc-

cess of the undertaking. Briefly, the working of the entire system as organized at Zlin depends upon two psychological factors: the personality of the chief and the special nature of the labour employed.

The "original principle underlying Bata's undertaking is said to lie in the breaking up of the large undertaking into a multitude of

small autonomous workshops; and the endeavour to develop in the wage earner a real sense of being an essential part of the undertaking, and to transform him, to some extent and in proportion to the responsibilities he carries, into a collaborator having a direct interest in production."

UNEMPLOYMENT IN CANADA IN 1930 AS REPORTED BY TRADE UNIONS

THE Department of Labour is furnished monthly with reports from local trade unions throughout the country, showing their membership and the number of members out of work from which the Department compiles the percentage of unemployment among organized workers in Canada from month to month. During the year 1930 an average of 1,742 unions made returns each month covering a membership average of 206,217 persons.

The general industrial depression which existed during 1930 affected the trade union situation to a marked degree, the unemployment level throughout the year being substantially higher than for some years past. Depressed conditions were most noticeable in the building and construction trades, where the programme of operations for the year showed marked curtailment from previous years. The transportation industries also suffered noteworthy employment losses due chiefly to the small grain movement throughout the year.

During January, 1930, the employment tendency was upward from the previous month, the improvement, however, being but fractional and caused by heightened activity in the garment trades. In February the building trade and steam railway operation were responsible for the slight drop in available work recorded from January. At the end of March the same level of activity was shown as in January, indicative of a slight gain from February conditions. This improvement continued throughout April, the building trades showing the most pronounced gains, though employment in practically all trades tended slightly upward. The percentage of 9.0 shown at the close of the month was the most favourable point reached during the year. Conditions in May and June did not maintain the upward trend of April, employment in these two months showing some falling off due, in the former month to pronounced reductions in the manufacturing industries, principally the garment trades and in the latter month to inactivity for building tradesmen. A slightly better situation was reported in July from the previous month, the recovery shown in the gar-

ment trades being a large factor in this employment advance. Among transportation workers also a somewhat greater volume of activity was apparent. During August and September very little variation from July conditions was shown, the tendency, however, being in a less favourable direction. Unemployment continued to rise steadily until the close of the year, the contractions being more extensive each month, until on the last day of December the percentage of idleness stood at 17.0, being the peak of unemployment for the year.

Accident Compensation in Ontario in 1930

The following figures show the number of accidents reported and awards made by the Workmen's Compensation Board of Ontario during 1929 and 1930.

	1929	1930
Total accidents reported..	87,103	69,267
Fatalities.....	510	520
Total awards for compensation and medical aid..	\$8,012,157 78	\$7,423,018 82
Medical aid (only).....	\$1,385,524 62	\$1,336,046 05

In the past twelve months reports on 1,046 injuries were received involving money awards of \$100 or more, and making a total of \$1,141,846.71, or almost \$1,100 per case. Classes 7 (rolling mills, steel works, etc.), 9 (fabrication of structural steel, locomotives, boilers, etc.), 12 (manufacture of painting, chemicals, etc.), and 19 (printing; manufacture of paper, etc.) were the hardest hit by those losses.

The Women's Minimum Wage Commission of the province of Quebec has begun an investigation into the wages paid to working women in factories producing paper, corrugated boxes, corsets, and brassieres. Another investigation into wages in the fur industry is also in progress.

REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD OCTOBER TO DECEMBER, 1930

THE work of the offices of the Employment Service of Canada during the quarter, October to December, 1930, indicated greater activity during that period than in the corresponding quarter of 1929, as there was shown an increase of 33 per cent in vacancies offered and of 35 per cent in placements effected in regular and casual employment. The gain registered was due in both cases to projects undertaken under the provisions of the Unemployment Relief Act, 1930, including work on parks, highways, drains sewers, bridges, etc., which provided labour for many workers who otherwise would have been unemployed. Provincially, Quebec was the only province to record declines both in vacancies and in placements, while Manitoba reported a decrease in the latter division only. The gains, as in the former comparison, were largely due, in each province, to the relief program already referred to in the construction and maintenance group. The accompanying table gives the vacancies and placements of the Employment Service of Canada by industrial groups in the various provinces during the period, October to December, 1930.

From the chart on page 225 which accompanies the article on the work of the Employment Service for the month of December, it will be noted that the trend of the curves of vacancies and placements in relation to applications was downward during the month of October, followed by an upward course during the remainder of the quarter, which became very marked in both instances during the latter half of December, and at the end of the quarter was 13 points above, for vacancies, and 14 points higher, for placements, than the levels attained at the close of December, 1929. During the period, October to December, 1930,

there was a ratio of 59.0 vacancies and 57.6 placements for each 100 applications for employment, as compared with 68.2 vacancies and 65.6 placements during the corresponding quarter of 1929.

The average number of positions offered daily during the quarter under review was 1,617, of applications registered 2,741, and of placements effected 1,579, in contrast with a daily average of 1,214 vacancies, 1,780 applications and 1,167 placements in regular and casual employment during the last quarter of 1929.

During the three months, October to December, 1930, the offices reported that they had made 125,394 references of persons to positions and had effected a total of 121,529 placements, of which 42,275 were in regular employment and 79,254 in casual work. Of the placements in regular employment 32,847 were of men and 9,428 of women, while casual work was found for 67,094 men and 12,160 women. Comparison with the same period in 1929 showed that 89,853 placements were then made, of which 54,210 were in regular employment and 35,643 in casual work. Applications for employment during the period under review were received from 174,940 men and 36,089 women, a total of 211,029, in contrast with the registration of 137,058 persons during the same period of 1929. Employers notified the Service during October to December, 1930, of 124,437 vacancies, of which 100,347 were for men and 24,090 were for women, as compared with 93,449 opportunities for work during the corresponding period in 1929.

On page 224 of this issue will be found a report in detail of the transactions of the Employment Service for the month of December, 1930.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN DECEMBER, 1930

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on January 1, was 7,511, their employees numbering 912,400 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for

December was 1,904, having an aggregate membership of 219,641 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment.

(3) The Department of Labour receives reports from the 67 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period of various classes of building construction.

(1) Employment Situation at the Beginning of January, 1931, as Reported by the Employers

As is customary at the beginning of the year, employment on January 1, 1931, showed a pronounced curtailment, which, however involved a rather smaller number of workers than that indicated on the same dates of 1930 and 1929. In spite of this smaller falling-off (which was partly due to the stabilizing effect of unemployment relief work), employment was at a lower level than on the same date in the two preceding years, although it was higher than on January 1 of any of the years 1921-28. The Dominion Bureau of Statistics tabulated returns from 7,511 firms, whose payrolls declined from 974,918 persons on December 1 to 912,400 at the beginning of January, a decrease of approximately 62,500 persons, or 6.4 per cent. Reflecting this contraction, the index (based upon the 1926 average employment as 100) stood at 101.7 on January 1, 1931, as compared with 108.5 in the preceding month, and with 111.2, 109.1, 100.7, 95.9, 90.7, 84.9, 89.8, 87.3, 78.8 and 88.8 on the same date in 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

Manufacturing, construction, transportation, mining, communications and trade reported large seasonal contractions as compared with December, while logging registered improvement.

Employment by Economic Areas

All except the Maritime Provinces recorded declines, those in Quebec and Ontario, where manufactures are especially important in the industrial distribution, being most extensive.

Maritime Provinces.—There was an increase in employment in the Maritime Provinces on January 1; this occurred chiefly in transportation, due to the opening of the winter ports, and in construction, as a result of unemployment relief work, while logging was also seasonally more active. On the other hand, manufacturing and mining showed seasonal curtailment. Statements were received from 565 firms employing 81,216 persons, compared with 74,553 at the beginning of December. Small gains had been noted on January 1, 1930, when the index was several points lower.

Quebec.—The decrease in Quebec was smaller than on the same date last year, but the situation was not so favourable as on January 1, 1930 and 1929. Manufacturing (notably of textile, food, lumber, pulp and paper, tobacco, leather; building material and iron and steel products), construction and transportation reported especially pronounced losses, but the tendency was also downward in mining and communications, while improvement was noted in retail trade and in highway and road construction, the latter as a result of unemployment relief plans. In many cases, operations will have been resumed early in the new year. The labour forces of the 1,730 co-operating employers aggregated 260,675 workers, as against 280,007 on December 1, 1930.

Ontario.—Manufacturing, construction and transportation showed the greatest curtailment in Ontario. Within the manufacturing division, textile, food, iron and steel, pulp and

paper and lumber reported the most extensive shrinkage. Logging, however, recorded an advance. A combined payroll of 366,252 persons was employed by the 3,339 firms whose returns were received, and who had 296,622 on their staffs on December 1. These contractions involved a larger proportion of the reported employees than those indicated on January 1, 1930, when the index was higher.

Prairie Provinces.—Declines involving a rather smaller percentage of payrolls than at

any of the eight preceding years. The 751 firms furnishing data reported 75,664 employees, as against 80,382 in the preceding month. Lumber, food and iron and steel factories, logging, transportation and trade recorded important curtailment, while there were gains in highway construction as a result of the unemployment relief program.

Index numbers of employment by economic areas are given in Table I.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

the beginning of January, 1930, were noted in the Prairie Provinces, where employment was not so active as at the commencement of last year. Statistics were tabulated from 1,123 employers of 128,593 workers, or 14,761 less than on December 1. Construction reported especially noteworthy losses, but manufacturing, transportation, mining and trade were also slacker. On the other hand, logging registered improvement.

British Columbia.—The recessions in British Columbia were not so extensive as on January 1 last year, but the index was lower than at the beginning of 1930 and 1929, although the employment reported by employers was in greater volume than on the same date in

Employment by Cities

There were contractions in each of the eight cities for which separate tabulations are made, firms in Montreal, Quebec, Toronto, Ottawa, Hamilton, Windsor and the adjacent Border Cities, Winnipeg and Vancouver reporting reduced employment.

Montreal.—The decrease in Montreal involved a smaller number of workers than that registered on January 1, 1930; but the index on the date under review was lower than at the beginning of last year. Statements were received from 964 establishments with 135,506 employees, as compared with 143,108 in the preceding month. Important declines were

shown in transportation and in manufacturing, especially in food, textile, iron and steel and tobacco factories. On the other hand, additions to staffs were noted in road construction, as an unemployment relief measure, and retail trade was seasonally busier.

Quebec.—Manufactures reported a loss in employment in Quebec City, while construction afforded more employment; the 121 co-operating employers reduced their staffs from 13,154 persons on December 1, to 13,026 at the beginning of January. This decrease was less than that indicated on January 1 last year, and the index continued higher than on the same date in earlier years of the record.

Toronto.—Toronto firms reported a larger seasonal contraction than on January 1, 1930,

when employment was in much greater volume. There were declines in manufacturing, the most noteworthy being in textiles, metals and foods; construction, transportation, services and trade were also slacker, but highway construction absorbed more workers in consequence of the unemployment relief scheme. Returns were tabulated from 1,057 employers with 118,258 workers, compared with 125,416 in their last report.

Ottawa.—Manufactures and construction registered seasonal curtailment, and trade also afforded less employment. The working forces of the 153 reporting establishments aggregated 13,079 persons, or 392 fewer than at the beginning of December. This reduction involved about the same number of employees as that

TABLE I—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS
(AVERAGE CALENDAR YEAR 1926 = 100)

NOTE.—The "Relative Weight" in Table I, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

recorded on the same date last year, when industrial activity was greater.

Hamilton.—Data were received from 226 firms in Hamilton employing 32,167 workers, as against 32,534 on December 1. Trade and shipping showed reduced activity, and manufacturing as a whole was slacker, despite gains in iron and steel factories. Highway construction also reported increased employment. The declines noted on January 1, 1930, were much more extensive, but the index was then many points higher.

Windsor and the adjacent Border Cities.—There was a decidedly larger contraction in the Border Cities than on January 1, 1930, when employment was in considerably greater volume. Manufactures and construction were seasonally quiet. Returns were compiled from 139 establishments with 11,103 persons in their employ, or 3,074 less than on December 1.

Windsor.—Manufacturing and construction registered the most marked decline in Winnipeg, but wholesale trade was also slacker, while communications showed moderate improvement. The 363 co-operating firms reported 29,975 employees, compared with 31,721 in the preceding month. This reduction involved more workers than were released on January 1, 1930, when employment was brisker.

Vancouver.—Further reductions took place in Vancouver, according to returns from 304 employers of 30,431 persons, as compared with 30,624 on December 1. A large decrease had been indicated on the same date last year, and the index then was lower. There were losses in manufacturing, communications, transportation and trade on January 1, 1931, as compared with the preceding month, while highway construction afforded considerably more work of a relief character.

TABLE II—INDEX NUMBERS OF EMPLOYMENT BY PRINCIPAL CITIES
AVERAGE CALENDAR YEAR, 1926 = 100

NOTE.—The relative weight in Table II shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

	Montreal	Quebec	Toronto	Ottawa	Hamilton	Windsor	Winnipeg	Vancouver
1922—Jan. 1.....	74.2	94.0	87.2	69.2

Relative weight of employment by cities as at Jan. 1, 1931....	14.9	1.4	13.0	1.4	3.5	1.2	3.3	3.3

Index numbers by cities are given in Table II.

Manufacturing Industries

The losses in employment registered by manufacturers were larger than on January 1, 1930; they were, in fact, only exceeded in the ten years' recorded by those noted on January 1, 1923, 1924 and 1925, while the index was lower than at the beginning of any other year since 1926. The most extensive reductions on the date under review were in food, lumber, iron and steel and textile factories, but the pulp and paper, building material, leather, non-

ferrous metal and tobacco industries also recorded important curtailment. As in previous years, the declines so generally reported were largely due in shutdowns for holidays, inventories and repairs, and considerable improvement may be expected in the next report. Statistics for January 1 were compiled from 4,546 manufacturers, employing 455,455 operatives, compared with 489,434 on December 1.

Animal Products.—Edible—Large reductions were reported in this division, in which all branches showed curtailment, that in fish-preserving plants being most extensive. State-

TABLE III—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES

(AVERAGE CALENDAR YEAR 1926 = 100)

NOTE.—The "Relative Weight" in Table 3 shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

Relative weight of employment by industries as at Jan. 1, 1931.....	100.0	49.9	3.2	5.6	3.2	12.2	13.4	2.3	10.2

ments were received from 191 manufacturers with 16,581 workers, as compared with 17,889 at the beginning of December. This loss was larger than that recorded on January 1, 1930, when the index number was some points higher. All provinces reported reduced employment, but the heaviest contractions were in the Maritimes and British Columbia.

Leather Products.—There was a decline in the leather industries at the beginning of January, particularly in boot and shoe factories. The shrinkage involved more employees than that noted on the corresponding date last year, when the index was higher. A combined working force of 13,350 persons was registered by the 188 firms making returns, as compared

TABLE IV—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

¹The "Relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

with 14,784 in the preceding month. The tendency was generally downward, but the greatest losses occurred in Quebec and Ontario.

Lumber Products.—Seasonal contractions on a much smaller scale than on January 1, 1930, were noted in lumber mills, 763 of which reduced their payrolls from 38,944 on December 1 to 34,833 workers at the beginning of January. Employment was in decidedly smaller volume than on the corresponding date last year. Sawmills registered the most pronounced decreases, but there was also curtailment in furniture, match, container and other wood-using industries. There were especially marked losses in Ontario, although employment generally declined.

Musical Instruments.—Thirty-eight manufacturers of musical instruments released 691 persons from their staffs, bringing them to 1,666 at the beginning of January. Practically all the decrease took place in Quebec and Ontario. A smaller recession had been noted on January 1 a year ago, and the index number was then considerably higher.

Plant Products, Edible.—There were seasonal reductions in employment in all branches of the vegetable food group, the greatest being in sugar and syrup, canning, biscuit, chocolate and confectionery factories. The working forces of the 394 co-operating employers totalled 27,227 persons, as compared with 31,826 in their last report. The contractions in Ontario were especially pronounced, but the movement was generally unfavourable. The declines noted at the beginning of January last year were on much the same scale, but the index number then was higher than on the date under review.

Pulp and Paper Products.—The shrinkage at the beginning of January, 1931, was more extensive than in 1930, when employment was in greater volume. Statistics were received from 551 firms, whose staffs aggregated 59,365 workers, or 2,434 less than in their last report. The most noteworthy losses were in Quebec and Ontario, although the trend was downward in all except the Maritime Provinces. Pulp and paper mills reported a large share of the reduction, but there were also declines in plants producing paper goods and in printing establishments.

Rubber Products.—Rubber factories showed a decrease, which was smaller than that of January 1, 1930; 41 rubber factories had 13,557 employees on the date under review, as against 13,847 at the beginning of December. Ontario reported losses, while improvement was shown in Quebec. The index number, at 106.3, was considerably lower than on the same month last year.

Textile Products.—The 715 firms furnishing data released a much smaller proportion of their total operatives than was the case among the establishments reporting at the beginning of January, 1930, when the index number was a few points higher than on the date under review. Their payrolls included 74,972 persons on January 1, against 79,243 in the last report. Ontario recorded the bulk of the shrinkage, which was especially marked in the hosiery and knit goods and garment divisions.

Tobacco, Distilled and Malt Liquors.—The falling-off in employment at the beginning of January involved a much larger number of employees than on January 1 last year, when employment was in greater volume. Statements were tabulated from 148 manufacturers in this group, employing 14,847 workers, or 1,028 less than on December 1. Practically all the loss took place in tobacco factories, and in Quebec, while in Ontario and British Columbia improvement was noted.

Chemical Products.—Employment in chemical and allied product plants, chiefly in Quebec and Ontario, showed a contraction on January 1, when 324 persons were released from the labour forces of the 126 establishments, which had 7,585 employees. Smaller declines had been noted on the corresponding date a year ago, when the index number was a few points higher.

Clay, Glass and Stone Products.—Further contractions in employment were made in building material works, 156 of which reported an aggregate staff of 9,800, as compared with 11,468 in the preceding month. All provinces shared in this curtailment, which, however, was most marked in Quebec and Ontario. Brick, glass and stone plants recorded important declines, which were rather greater than those of January 1, 1930, when employment was decidedly more active.

Electric Current.—There were large decreases in the number employed in electric current plants, according to statistics from 93 producers, employing 15,170 workers, or 855 less than on December 1. Quebec and Ontario reported most of this falling-off, which involved about the same number of employees as that indicated at the beginning of January last year, when the index was slightly lower.

Electrical Apparatus.—A further reduction in personnel was registered by the 69 co-operating electrical apparatus factories, whose labour forces aggregated 15,576 persons on January 1, as compared with 16,211 in the preceding month. Employment was in smaller volume than on the same date of 1930; rather slighter declines had then been noted.

Iron and Steel Products.—Vehicle, crude, rolled and forged, heating appliance and general plant machinery works, foundries and machine shops reported decided curtailment, while considerable improvement was shown in agricultural implement factories; the payrolls of the 734 firms furnishing data in the iron and steel group totalled 115,048 against 122,710 employees on December 1. This contraction (which was on a larger scale than on the corresponding data last year, when the index was higher) was most pronounced in Ontario, but the movement was generally downward.

Non-Ferrous Metal Products.—The loss recorded in non-ferrous metal products involved more workers than that indicated on the same date in 1930, and the index then was many points higher than on January 1, 1931. Returns were compiled from 119 employers of 17,432 persons, as compared with 18,677 at the commencement of December. The most noteworthy reductions were in Ontario.

Mineral Products.—Declines were noted in this group, the shrinkage being larger than that registered at the beginning of last year. A combined working force of 12,150 persons was employed by the 89 establishments whose returns were received and who had 12,997 employees on December 1. The situation was not so favourable as on January 1, 1930.

Logging

Logging, which has been exceptionally dull this winter, showed a small increase, contrasting with the declines usually indicated on January 1 in earlier years of the record; but, in spite of this, employment was in less volume than at the beginning of January of most years for which data are available. A combined working force of 29,012 men was reported by the 226 co-operating firms, who had 28,674 employees in the preceding month. Improvement was shown in the Maritime and Prairie Provinces and Ontario, while the movement elsewhere was downward.

Mining

Coal.—There was a further contraction in coal mines, 83 of which reduced their payrolls from 29,035 persons on December 1 to 28,377 at the beginning of January. There was practically no change in British Columbia, while a falling-off was shown in the Prairie and Maritime coal fields. The index number on January 1, 1930, was higher; employment then had, on the whole, remained almost stationary.

Metallic Ores.—Losses were noted in metallic ore mines, 285 workers being released from the payrolls of the 68 co-operating firms, who

employed 16,008 persons at the beginning of January. Quebec and Ontario registered most of the reduction in this group. A greater contraction has been indicated on January 1, 1930, but employment then was more active.

Non-Metallic Minerals (Other than coal).—The trend of employment in this division continued seasonally downward, the reductions being on a smaller scale than on January 1 a year ago, when the index was, however, many points higher. Statements were received from 75 firms employing 6,929 workers, as compared with 7,506 in the preceding month. Quebec recorded the greatest shrinkage.

Communications

Further losses were reported in telephones and telegraphs; the situation compared unfavourably with that on the same date in 1930. The payrolls of the companies and branches furnishing data declined from 30,090 on December 1 to 28,852 employees at the beginning of January.

Transportation

Street Railways and Cartage.—Employment in local transportations showed a further seasonal decline, involving a large number of workers than that reported on January 1, 1930, when the index number was nearly eight points higher. A combined staff of 23,902 persons was employed by the 154 co-operating firms, who had 24,725 workers in the preceding month. All except the Maritime Provinces shared in the reductions, those in Quebec and Ontario being most marked.

Steam Railways.—Employment on steam railways showed a decrease involving rather fewer workers than that indicated on the corresponding date a year ago; the index number then, however, was a few points higher than on the date under review. Improvement in the Maritime Provinces was offset by contractions elsewhere. The payrolls of the 105 companies and divisional superintendents furnishing returns aggregated 74,807 persons, as against 76,472 in their last report.

Shipping and Stevedoring.—There was a large reduction in employment in water transportation, chiefly in Quebec, while a seasonal increase was noted in the Maritime Provinces. Approximately the same number of workers was let out as on January 1, 1930, when the index was higher. Returns were compiled from 84 employers of 12,049 men, compared with 17,175 in the preceding month.

Construction and Maintenance

Building.—Continued curtailment of operations was shown in building construction; 722 contractors reduced their staffs from 48,666 at the beginning of December to 37,805 on January 1. The most pronounced declines were in Quebec and Ontario, although there were general losses. More extensive decreases were indicated on January 1 last year, but the index was then many points higher.

Highway.—Statements were received from 279 firms employing 55,168 workers. Activity in this group, owing to the unemployment relief measure throughout the Dominion, was generally maintained at a much higher level than in the winter of other years for which data are available. Employment in Saskatchewan, however, showed a large falling-off since December 1, while important gains were indicated in the Maritime Provinces.

Railway.—A further, pronounced recession was shown in this division, in which 52 employers reported 29,553 persons on their payroll, as compared with 35,990 in the preceding month. The index was rather lower than on January 1, a year ago, when the declines noted were considerably smaller. Ontario and

the Prairie Provinces recorded the bulk of the decrease.

Services

Reduced activity was registered in service group, in which 249 firms employed 21,155 persons, or 237 less than in the preceding month. Larger decreases were indicated at the beginning of January, 1930, when the index was practically the same.

Trade

Retail and wholesale trade afforded less employment than on December 1. The 800 co-operating employers had 93,328 workers, compared with 94,570 in their last report. Employment was at a slightly lower level than on January 1, 1930, but the index was higher than in the same month in any previous year for which data are available.

The accompanying tables give index numbers of employment by economic areas, leading cities and industries. The columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on the date indicated.

(2) Unemployment in Trade Unions at the Close of December, 1930

The term unemployment as used in the following report has reference to involuntary idleness, due to economic causes. Persons who are engaged in work other than their own trades or who are idle because of illness are not considered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The unfavourable movement that employment has maintained during the past few months continued to be in evidence during December, the declines in activity being of more extensive proportions than those previously shown. Shutdowns for the holiday period and subsequent stock taking, together with between-season dullness especially in the out-of-door industries, were large factors in this adverse employment trend. The December situation was based on an aggregate of 1,904 reporting unions with 219,641 persons, of whom 37,437, or a percentage of 17.0 were idle on the last day of the month, contrasted with 13.8 per cent in November. Quieter conditions

prevailed also than in December, 1929, when 11.4 per cent of the members reported were idle. Employment restrictions were noted in every province when compared with November, but were not of an outstanding character in any one province, the reductions in each case ranging around 3 per cent. The building and construction trades especially indicated dullness, Quebec unions showing the most important recessions, in which province also the declines reported in the manufacturing industries were substantial. Curtailment of activity was shown also by transportation workers, centred largely in the Province of Ontario. Compared with the situation in December, 1929, conditions in Alberta showed very little change during the month under review, the employment tendency, however, being upward. In the remaining provinces a lower level of activity was maintained, the reductions in Quebec, Ontario, New Brunswick and British Columbia being particularly heavy. An important feature of this unfavourable situation when compared with December a year ago was the marked depression indicated in building and construction operations.

A report on unemployment in the largest city in each province with the exception of Prince Edward Island is compiled separately

each month. During December Regina and Edmonton unions reported some lessening in the unemployment volume from November, the percentage of idleness in the former city showing a drop of 3 per cent, and in the latter a contraction of 2·3 per cent. Montreal unions registered the largest percentage of idleness of the cities used for comparison, which was over 3 per cent in excess of that indicated in November. Halifax was next in line, reporting a large unemployment volume, which was substantially higher than that recorded during the previous month. The situation in Saint John and Winnipeg was also less favourable, and reductions on a more moderate scale were recorded by Vancouver and Toronto unions. In Edmonton nominal improvement only was shown in conditions from December of 1929, while in the remaining cities employment was

as shown by the curve, were somewhat better than in the previous month, and the situation during August and September remained almost unchanged from that of July, the tendency, however, being toward lessened activity. During the remainder of the year the curve rose steadily, showing an increasing unemployment volume, until at the close of the year it rested at a point considerably above that shown in December, 1929. In each month throughout the year the course traced by the curve was somewhat above that shown in the corresponding month of 1929, indicative of more depressed conditions during the year just reviewed.

The manufacturing industries with 515 unions reporting at the close of December, a total of 63,618 members, indicated an unemployment percentage of 17·7, contrasted with

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

at a lower level. In this comparison Halifax and Saint John unions reported large increases in slackness during the month reviewed, while important curtailment of activity occurred among Montreal, Toronto and Vancouver unions. Recessions of lesser degree, however, were indicated by Winnipeg and Regina unions.

Accompanying this article is a chart which illustrates the trend of unemployment by months from January, 1924, to date. The curve during January, 1930, showed a slight drop from the previous month, indicating a small reduction in the volume of unemployment, but in February it rose slightly, returning at the close of March to the same level as was shown in January. The improvement thus indicated during March extended throughout April. In May and June, however, unemployment showed a slight and gradual increase. July conditions,

14·8 per cent in November. Especially noteworthy were the employment recessions shown by iron and steel workers, and pulp and paper makers, though activity for wood, garment, fur, hat and cap, leather, glass, and jewellery workers was also reduced from November. Several pulp and paper establishments, particularly in Quebec and Ontario, were reported as closed or working but a few days a week. The situation in the printing and publishing trades remained about the same as in November, while brewery and textile workers, general labourers, and metal polishers showed increases in activity, which, however, affected but a few workers. Contrasted with the situation in December, 1929, when 13·7 per cent of idleness was reported in the manufacturing industries, cigar and tobacco workers registered substantial improvement in conditions during the month reviewed and leather workers and gen-

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

Table with columns for Months (1919-1930) and various industry groups including Fishing, Logging, Mining, Manufacturing, Vegetable products, Pulp and paper, Wood products, Textile and carpet workers, Garment workers, Hat, cap and glove workers, Animal products, Iron and its products, Non-ferrous metals, Clay, glass and stone products, Mineral products, Miscellaneous industries, Building and construction, Shipping and stevedoring, Steam railway operation, Local transportation, Communication, Telephone operation, Trade (retail shop clerks), Services, Governmental, Miscellaneous, and All occupations.

eral labourers slight gains in activity, while the trend of employment in the remaining trades was downward from December a year ago, pulp and paper makers, printing tradesmen, iron and steel, garment and wood workers showing losses involving the greatest number of workers.

Coal miners at the close of December showed a slight drop in the volume of work afforded from November, the 51 unions which made returns, covering a membership of 19,223 persons, indicating 4.4 per cent of idleness com-

pared with 2.1 per cent in the previous month. Both Nova Scotia and Alberta unions contributed to this employment decline, British Columbia showing a fully engaged situation compared with a nominal unemployment percentage in November. In making a comparison with the situation for December, 1929, when 2.6 per cent of inactivity was recorded, Nova Scotia unions were wholly responsible for the unemployment increase shown during the month reviewed, while in Alberta some improvement was recorded, and in British Columbia adequate work was provided during the both months compared. Short time continued to be in evidence to a considerable degree in both the eastern and western coal fields.

Operations in the building and construction trades were futher curtailed during December, partly due to winter quietness, the 260 unions from which reports were tabulated with 31,877 members showing an unemployment percentage of 44.5 contrasted with 37.7 per cent of idleness in November. Carpenters and joiners reported the most important employment losses from November, and the recessions indicated by granite and stonecutters, plumbers and steamfitters, and painters, decorators and paperhangers were noteworthy. Employment for electrical workers and bricklayers, masons and plasterers also subsided slightly. On the other hand, bridge and structural iron workers and tile layers, lathers and roofers reported some recovery from previous dullness. Heavy increases in unemployment were registered in the building trades from December, 1929, when the percentage of inactivity stood at 25.6. An especially depressed situation from December a year ago was indicated by bricklayers, masons and plasterers, carpenters and joiners and bridge and structural iron workers, and employment for hod carriers and building labourers, plumbers and steamfitters, granite and stonecutters, and painters, decorators and paperhangers declined substantially. Tile layers, however, were somewhat better engaged than in December, 1929.

Unemployment in the transportation industries, as a whole, showed a moderate increase during December from both the previous month and December, 1929, the 809 unions from which reports were tabulated with an aggregate membership of 74,473 persons showing 10.6 per cent of idleness contrasted with 8.2 per cent in November and with 8.3 per cent in December a year ago. Slackness among steam railway employees whose returns include over 81 per cent of the entire group membership reporting, accounted largely for this adverse employment movement indicated in both comparisons. Contributing declines, though on a smaller scale, were registered by naviga-

tion workers, and employment for street and electrical railway workers showed a nominal reduction. Conditions improved very slightly for teamsters and chauffeurs from November, but a fractional unemployment increase was noted from December a year ago.

Each month reports on unemployment among longshore workers are tabulated separately, owing to the casual nature of their employment. For December reports were received from a total of 13 unions with 6,128 members, 53.7 per cent of whom were without employment on the last day of the month, contrasted with 76.9* per cent in November and 16.4 per cent in December, 1929.

Retail shop clerks were quite actively engaged at the close of December as in both the preceding month and December a year ago, the 6 unions from which reports were tabulated with a membership total of 1,263 persons reporting .2 per cent of inactivity, compared with .3 per cent in November and with .1 per cent in December, 1929.

Reports were received at the close of December from 72 associations of civic employees, including 8,283 members, 1.0 per cent of whom were idle on the last day of the month contrasted with 1.3 per cent in November and with 2.0 per cent in December a year ago.

Minor contractions in activity were reported in the miscellaneous group of trades during December from the previous month by the 136 unions from which reports were tabulated covering a membership of 7,112 persons. Of these, 1,075 were idle at the close of the month, a percentage of 15.1 compared with 14.2 per cent of inactivity in November. Hotel and restaurant employees and barbers indicated an upward employment movement from Novem-

ber, which was more than offset by the contractions registered among stationary engineers and firemen, theatre and stage employees and unclassified workers. Compared with the situation in December, 1929, in the miscellaneous group of trades when 5.6 per cent of idleness was recorded, stationary engineers and firemen and unclassified workers were afforded considerably less employment during the month under review, and noteworthy recessions occurred among hotel and restaurant and theatre and stage employees. The level of activity for barbers also was slightly below that of December, 1929.

The 5 unions of fishermen from which reports were tabulated at the close of December with a membership of 1,370 persons indicated 11.5 per cent of idleness on the last day of the month in contrast with 13.6 per cent in November and with 24.6 per cent in December, 1929.

Among lumber workers and loggers a large unemployment increase was shown during December over both the previous month and December, 1929, indicated by the reports tabulated from 5 unions including 1,344 members. Of these, 554 were without work on the last day of the month, a percentage of 41.2 compared with 20.2 per cent in November and with 2.7 per cent in December a year ago.

Table II shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1929 inclusive, and also the percentage of unemployment by provinces for December of each year from 1919 to 1927 inclusive, and for each month from January, 1928, to date. Table I summarizes the returns in the various groups of industries for the same months as in Table II.

(3) Employment Office Reports for December, 1930

The volume of business transacted by the offices of the Employment Service of Canada during the month of December, 1930, showed a gain of 42 per cent in the average daily placements effected when compared with those of the preceding month, while an increase of 89 per cent was recorded over the placements effected daily during December a year ago. The expansion in both cases was due to additional placements in construction and maintenance, where work on highways, sewers, drains, bridges, wharfs, etc., under the Federal Unemployment Relief Act had employed many workers, where assistance was most needed. In comparison with December a year ago, all remaining groups showed declines, except mining, where a minor gain only occurred, the largest contractions occurring in logging and services.

The accompanying chart shows the trend of employment since January, 1928, as represented by the ratios of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be seen that the curve of vacancies and of placements in relation to applications showed a sharp upward trend throughout December and at the close of the period each curve had attained a considerably higher level than that shown at the end of December a year ago, the curve of vacancies being almost 13 points higher, and that of placements nearly 14 points above the level shown at the close of December, 1929. The ratio of vacancies to each 100 applications was 63.1 and 88.1 during the first and second half of December, 1930, in comparison with

*Revised figure.

the ratios of 59.3 and 75.2 during the same periods of 1929. The ratios of placements to each 100 applications during the periods under review were 61.8 and 87.0 as compared with 56.6 and 73.4 during the corresponding month of 1929.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during December, 1930, was 2,142 as compared with 1,521 during the preceding month and with 1,151 in December a year ago.

The average number of applications for employment received daily by the offices during the month under review was 2,853, in comparison with 2,870 in November and with 1,708 in December, 1929.

of men and 2,624 of women, while placements in casual employment totalled 38,294. The number of vacancies reported by employers was 48,346 for men and 7,329 for women, a total of 55,675, while applications for work numbered 74,171, of which 64,962 were from men and 9,209 from women.

During the year 1930 the offices of the Service throughout Canada reported 386,034 vacancies, 612,990 applications and 368,679 placements in regular and casual employment, a decline of 7 per cent from the placements effected during the preceding year, 1929.

The following table gives the placements effected by the offices of the Employment

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o—o—o—o—o—o

The average number of placements made daily by the offices of the Service during December, 1930, was 2,106, of which 633 were in regular employment and 1,473 in work of one week's duration or less, as compared with a total daily average of 1,482 during the preceding month. Placements in December a year ago averaged 1,113 daily, consisting of 599 placements in regular and 514 in casual employment.

During the month of December, 1930, the offices of the Service referred 55,769 persons to vacancies and effected a total of 54,751 placements, of these the placements in regular employment were 16,457 of which 13,833 were

Service of Canada, each year, from January, 1920 to date:—

NOVA SCOTIA

During the month of December, 1930, positions offered through employment offices in Nova Scotia were nearly 24 per cent less than in the preceding month but over 8 per cent higher than during the corresponding month of 1929. Placements declined over 22 per cent when compared with November, but were nearly 9 per cent higher than in December a year ago. All groups, except manufacturing, logging and trade, participated in the gains in placements over December, 1929, those in services being the largest. Industrial divisions in which most of the placements were effected during the month included: manufacturing, 32; transportation, 41; construction and maintenance, 55; trade, 37; and services, 447, of which 340 were of household workers. There were 39 men and 63 women placed in regular employment during the month.

NEW BRUNSWICK

There was a decline of over 5 per cent in the number of positions offered through employment offices in New Brunswick during December when compared with the preceding month, but a gain of over 30 per cent in comparison with the corresponding month of 1929. Placements were over 6 per cent less than in November but nearly 28 per cent above December a year ago. Logging was the only group to show any appreciable decline in placements from December, 1929. Of the gains under this comparison those in construction and maintenance and services were the most noteworthy. Placements by industrial divisions included: manufacturing, 30; construction and maintenance, 163; and services 589, of which 457 were of household workers. Regular employment was found for 118 men and 68 women.

QUEBEC

The demand for workers as indicated by orders received at employment offices in the Province of Quebec during December was 20 per cent less than in the preceding month and nearly 43 per cent lower than during the corresponding month of 1929. Placements declined nearly 28 per cent when compared with November and over 45 per cent in comparison with December a year ago. A large reduction in placements in the logging industry was mainly responsible for the decline from December, 1929, although manufacturing and construction and maintenance also showed considerable less activity. The changes in other groups were small. Industrial conditions in which most of the placements were

effected during the month were: manufacturing, 29; logging, 190; construction and maintenance, 183; trade, 30; and services, 445, of which 341 were of household workers. Placements in regular employment numbered 463 of men and 307 of women.

ONTARIO

During December employment offices in Ontario received orders for nearly 54 per cent more workers than in the preceding month and about 103 per cent more than during the corresponding month of 1929. Placements also were 56 per cent higher than in November and over 114 per cent above December, 1929. The substantial gain in placements over December a year ago was entirely due to work undertaken in relief of unemployment. There were over 26,000 placements in the construction and maintenance group, under which this relief work falls, and this total is nearly 20,000 in excess of the number placed during December, 1929. Fewer placements were made in all other groups, logging, manufacturing and trade showing the largest reductions. Placements by industrial divisions included: manufacturing, 525; logging, 448; farming, 149; transportation, 219; construction and maintenance, 26,491; trade, 463 and services 4,253, of which 2,173 were of household workers. There were 8,294 men and 1,120 women placed in regular employment during the month.

MANITOBA

Orders listed at Manitoba offices during December called for 171 per cent more workers than in the preceding month and 138 per cent in excess of the corresponding month of 1929. Placements increased 170 per cent over November and 89 per cent over December a year ago. As in Ontario, relief work accounted for the entire gain in placements over December, 1929. The increase due to this was, however, partly reduced by declines in all other industrial divisions, those in logging and services being the most substantial. Industrial divisions in which most of the placements were effected during the month included: manufacturing, 31; logging, 314; farming, 247; construction and maintenance, 4,701; trade, 104; and services, 1,024, of which 855 were of household workers. During the month 603 men and 294 women were placed in regular employment.

SASKATCHEWAN

Opportunities for employment as indicated by orders listed at employment offices in Saskatchewan during December were nearly 43 per cent better than in the preceding month and over 132 per cent more favourable than

during the corresponding month of 1929. Placements also were nearly 44 per cent higher than in November and over 138 per cent above December, 1929. The increase in placements over December a year ago was due to gains under construction and maintenance and logging and was attributable to work undertaken in relief of unemployment. The manufacturing industries showed a nominal increase in placements but all other groups declines, those in services being the largest. Placements by industrial divisions included: manufacturing, 57; logging, 946; farming, 208; construction and maintenance, 2,169; trade, 59; and services 662, of which 467 were of household workers. During the month 1,211 men and 298 women were placed in regular employment.

ALBERTA

Employment opportunities as indicated by orders received at employment offices in Alberta during December were over 67 per cent better than in the preceding month and over 119 per cent more favourable than during the corresponding month of 1929. There was an increase also in placements of 66 per cent when compared with November and 120 per cent in comparison with December a year ago. As in Saskatchewan, relief work accounted for the gains in placements over December, 1929, but in addition to the increases in construction and maintenance and logging, under which the relief work was provided, there was a decided gain in the number of mine workers placed. Of the declines those in services, transportation, farming and manufacturing were the most noteworthy. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 42; logging, 919; farming, 164; mining, 225; transportation, 30; construction and maintenance, 3,443; trade, 45; and service, 716, of which 582 were of household workers. Placements in regular employment numbered 2,635 of men and 242 of women.

BRITISH COLUMBIA

There was a gain of nearly 19 per cent in the number of positions offered through the employment offices in British Columbia during December when compared with the preceding month and of nearly 70 per cent in comparison with the corresponding month a year ago. Placements also were over 19 per cent in excess of November and over 76 per cent higher than in December, 1929. Construction and maintenance was the only group to show any gain of importance over December, 1929, and was responsible for the improvement recorded under this comparison, although placements in the logging industry were slightly higher. Of

the declines those in manufacturing, services, transportation and trade were the largest. Placements by industrial divisions included: manufacturing, 71; logging, 289; farming, 62; transportation, 60; construction and maintenance, 2,144; trade, 88; and services, 899, of which 518 were of household workers. During the month regular employment was found for 470 men and 232 women.

Movement of Labour

During the month of December, 1930, the Offices of the Employment Service of Canada effected 16,457 placements in regular employment 4,598 of which were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 948 were granted the Employment Service reduced transportation rate, 846 going to points within the same province as the despatching office and 102 to other provinces. The reduced transportation rate which is 2.7 cents per mile with a minimum fare of \$4.00 is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

The labour movement both within and from the province of Quebec during December was of bush workers totalling 41 and of these 28 went to points within the province and 13 to centres outside. The former included 15 workers travelling from Montreal and 13 from Quebec to situations within their respective zones. The interprovincial movement originated at Hull from which centre 8 bushmen were transferred to Pembroke and 5 to Cobalt.

Certificates granted by Ontario offices during December were 196 in number, 192 of which were provincial. On certificates issued at Port Arthur, 130 bush workers and 2 miners journeyed to employment within the territory covered by that office. From Cobalt 41 power dam construction workers proceeded to the Timmins zone which zone was also the destination of 6 carpenters and one tinsmith travelling from North Bay and of one carpenter despatched from Pembroke. In addition, North Bay transferred 9 bushmen to Cobalt, and Sudbury 2 bushmen to employment within its own zone. The 4 transfers outside the province were lead burners going from Toronto to Montreal.

In Manitoba 161 workers secured certificates for reduced transportation during December 80 of whom were bound for provincial employment and 81 for points in other provinces. The Winnipeg office effected the transfer of all these workers, the movement within the

province including one farm hand and one hotel cook going to Dauphin, 2 farm hands and 2 farm domestics to Brandon, and 38 farm hands, 2 farm housekeepers, 31 bushmen and 3 teamsters to employment within the Winnipeg zone. Of the persons transferred outside the province 68 were bush workers and one a hotel general travelling to Port Arthur and vicinity, while Yorkton received 4 farm hands and one farm general, Regina 2 farm hands, one farm housekeeper and one hotel waitress, Prince Albert one lumber camp orderly and one farm hand, and Moose Jaw one farm hand.

Saskatchewan offices issued 444 certificates for reduced transportation during December, 441 of which were to centres within the province. Of these 415 were granted to bushmen, 245 of whom went to situations in the Prince Albert zone, 115 to Yorkton and vicinity and 55 to the Regina zone. The majority of these secured their certificates for reduced transportation at Saskatoon and Prince Albert. In addition the Saskatoon, Regina and Moose Jaw Offices were responsible for the transfer of 20 farm hands and 2 farm household workers to employment at various points throughout the province. The Saskatoon office also transferred one town housekeeper each to the Moose Jaw and Prince Albert zones, while from Moose Jaw one timekeeper was conveyed to Regina, and from Saskatoon one highway construction cook to a point within the district covered by that office. The 3 interprovincial transfers included one teamster and one farm hand going from Moose Jaw to Winnipeg, and one truck driver from Swift Current to Medicine Hat.

(4) Building Permits Issued in Canada During December, 1930

The building permits issued by 61 cities in December, 1930, represented construction work valued at \$15,439,964, as compared with \$11,791,478 in November, 1930, and \$14,688,682 in December, 1929. There was, therefore, an increase of \$3,648,486, or 30.9 per cent in December as compared with the preceding month, and of \$751,282 or 5.1 per cent in comparison with the figures for the same month in 1929. In the record going back to 1920, the December, 1930, figure was only once exceeded, the total for December, 1928, having been larger.

Detailed statements were received from some 50 cities, showing that they had issued over 500 permits for dwellings valued at some \$2,600,000 and about 1,200 permits for other buildings at an estimated cost of about \$12,000,000. During November, the construction of some 900 dwellings and 1,900 other buildings was authorized: these were estimated to cost ap-

proximately \$4,600,000 and \$7,000,000, respectively.

By offices in Alberta 80 transfers at the reduced rate were effected, 79 of which were to provincial situations and one to a point outside the province. The latter was of a farm hand despatched from Edmonton to the Saskatoon zone. The Edmonton office was responsible for the bulk of the provincial movement being instrumental in the transfer of one farm hand to Drumheller and of 51 bushmen, 12 farm hands, 2 farm domestics, 3 miners, 3 bushmen, one fisherman, one cook and one hotel porter to employment within the Edmonton zone. From Calgary, in addition, one blacksmith and one housemaid were conveyed to Lethbridge and 2 farm hands to Drumheller.

In British Columbia 26 workers benefited by the Employment Service reduced transportation rate in December, all of whom went to provincial situations. From Vancouver 2 mine workers and one farm hand were transferred to Penticton, one farm hand to Kamloops and 3 carpenters, 3 railroad construction workers, 4 cooks, one domestic, one miner, one lead burner, one blacksmith and one pipefitter to points within the Vancouver zone. For employment within their respective zones, Nelson despatched 6 bushmen and Prince Albert one farm hand.

Of the persons who profited by the Employment Service reduced transportation rate during December, 688 were carried by the Canadian National Railways, 189 by the Canadian Pacific Railway, 57 by the Temiskaming and Northern Ontario Railway, 11 by the Pacific Great Eastern Railway and 3 by the Northern Alberta Railway.

As compared with the preceding month, Nova Scotia, Quebec, Ontario, Manitoba, Saskatchewan and British Columbia registered increases in the value of the authorized building, the gain of \$1,969,586, or 37.3 per cent, in Quebec being most pronounced. Declines of 98.6 per cent and 70.5 per cent were indicated in New Brunswick and Alberta, respectively.

Nova Scotia, Quebec, Manitoba and British Columbia recorded increases over December, 1929, in value of the building authorized. In this comparison also, Quebec reported the most marked gain of \$4,756,671, or 191.2 per cent, while the greatest decrease was that of \$2,832,490, or 40.3 per cent in Ontario.

Montreal and Vancouver showed increases in the value of the building permits issued as compared with November, and also in com-

parison with December, 1929. In Toronto, there was a gain in the former and a loss in the latter comparison, while Winnipeg reported decreases as compared with both November, 1930, and December, 1929. Halifax, Quebec, Brantford, Belleville, Chatham, Galt, Niagara Falls, Owen Sound, Port Arthur, St. Thomas, East Windsor, Walkerville, St. Boniface, Medicine Hat, Nanaimo and North Vancouver recorded advances in both comparisons.

Cumulative Record for 1930.—The following table shows the value of the building authorized by 61 cities during December and in the years since 1920; the 1930 figures are unrevised, while for preceding years the statistics are revised (a revised statement for 1930 will be issued next month). Index numbers, based upon the total value of the building authorized by these cities during 1929 as 100, are given below, as are the average index numbers of wholesale prices of building materials in the years, 1920-1930. (Average 1926=100).

The December total for the 61 cities, as already mentioned, was greater than in any other December on record, except 1928. The unrevised statistics for 1930 indicate that last year's aggregate was only three times exceeded in the years since 1920, the totals for 1929, 1928 and 1927, alone having been higher, while

Year	Value of permits issued in Dec.	Value of permits issued in first twelve months	Indexes of value of permits issued in first twelve months (1920=100)	Average indexes of wholesale prices of building materials in first twelve months (Average 1926=100)
	\$	\$		
1930.....	15,439,964	163,799,870	140.0	90.9
1929.....	14,688,682	234,944,549	200.8	90.0
1928.....	16,095,160	219,105,715	187.2	98.1
1927.....	11,755,566	184,613,742	157.8	96.7
1926.....	11,508,818	156,386,607	133.6	100.0
1925.....	7,363,777	125,029,367	106.8	103.8
1924.....	6,463,319	126,583,148	108.2	106.7
1923.....	6,974,256	133,521,621	114.1	111.7
1922.....	9,517,402	148,215,407	126.7	108.6
1921.....	5,537,330	116,794,414	99.8	122.7
1920.....	4,844,354	117,019,622	100.0	152.4

last year's aggregate was 4.9 per cent greater than the ten-year average of \$156,221,419. The index numbers of wholesale prices of building materials continue considerably lower than in any other year since 1920.

The accompanying table gives the value of the building permits issued by 61 cities in November and December, 1930, and December, 1929. The 35 centres for which records are available since 1910 are marked with asterisks.

ESTIMATED COST OF BUILDING WORK AS INDICATED BY BUILDING PERMITS ISSUED BY 61 CITIES

¹ Report not received.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the British *Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary, showing the employment situation during December, 1930, is reproduced below. The following report on unemployment conditions in the United States is based on the statistics published by the United States Department of Labour, showing the recent trend of employment in selected manufacturing industries throughout the country. The employment situation in the United States is further indicated by unemployment percentages based on statistics compiled each month by the American Federation of Labor, the source of these statistics being returns obtained from the trade union locals in 24 representative cities. Summary figures for January, 1931, and previous months are reproduced below.

Great Britain

Apart from a slight improvement before Christmas, employment continued to decline in December, and, at the end of the month, the numbers unemployed reached a figure higher than any recorded in the period of ten years for which comparable statistics are available. Increases in the numbers unemployed occurred in most industries, the principal of which included mining (other than coal mining), iron and steel manufacture, general and marine engineering, shipbuilding and ship repairing, the metal trades, pottery manufacture, the textile industries (with the exception of jute, carpets, textile bleaching, dyeing, etc.), the leather trades, boot and shoe manufacture, and the building trade together with the manufacture of bricks, tiles, and cement. There was some improvement in coal mining, in the jute and carpet industries, in textile bleaching, dyeing, and finishing at hotels and boarding houses and in dock and harbour service.

Among the workpeople, numbering approximately 12,400,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at December 22, 1930 (including those temporarily stopped as well as those wholly unemployed) was 20·2, as compared with 19·1 at November 24, 1930, and with 11·0 at December 16, 1929. The per-

centage wholly unemployed at December 22, 1930, was 14·9, as compared with 14·8 at November 24, 1930; while the percentage temporarily stopped was 5·3, as compared with 4·3. For males alone the percentage at December 22, 1930, was 20·7, and for females 18·8; at November 24, 1930, the corresponding percentages were 19·8 and 17·2.

At December 29, 1930, the number of persons on the registers of Employment Exchanges in Great Britain were 1,766,398 wholly unemployed, 774,630 temporarily stopped, and 102,099 normally in casual employment, making a total of 2,643,127. This was 356,667 more than a month before and 1,132,896 more than a year before. The total included 1,895,585 men, 67,141 boys, 623,209 women, and 57,192 girls.

The 1,766,398 wholly unemployed included approximately 1,247,960 insured persons who had paid at least 30 contributions during the preceding two years, and therefore satisfied the full contributions condition for the receipt of unemployment benefit; 436,860 insured persons who had paid less than 30 contributions during the preceding two years; and 81,580 uninsured persons. The wholly unemployed claimants for benefit, numbering 1,620,510, included 276,650 men, 5,723 boys, 47,663 women, and 3,474 girls who had been on the register for less than one month.

In Great Britain and Northern Ireland the total number of persons on the registers of Employment Exchanges at December 29, 1930, was 2,724,978.

United States

Employment in the United States decreased 1 per cent in December, 1930, as compared with November, 1930, and pay-roll totals decreased 0·4 per cent, according to returns made to the Bureau of Labour Statistics. The industries included in the above statement are manufacturing, coal mining, metalliferous mining, quarrying and non-metallic mining, crude petroleum producing, public utilities, trade (wholesale and retail), hotels, canning and preserving, and laundries, dyeing and cleaning.

A separate summary is made of the latest data available relating to all employees, exclusive of executives and officials, on Class I railroads. This tabulation is made from Interstate Commerce Commission reports for the months of September and October, 1930, and therefore cannot be included in the general statement for the month of December. The

number of employees of Class I railroads as at October 15, totalled 1,438,744, representing a decrease of 2.1 per cent since September 15, 1930. The amount of pay-roll in the entire month of October was \$206,065,981, representing an increase over the previous month of 2.6 per cent.

Employment in manufacturing industries decreased 1.8 per cent in December as compared with November, and pay-roll totals decreased 1.3 per cent. These changes are based upon returns made by 13,150 establishments in 54 of the principal manufacturing industries of the United States. These establishments in December had 2,772,399 employees whose combined earnings in one week were \$65,848,883.

The bureau's weighted index of employment for December, 1930, is 75.1, as compared with 76.5 for November, 78.6 for October, and 91.9 for December, 1929; the index of pay-roll totals for December, 1930, is 67.4, as compared with 68.3 for November, 72.7 for October, and 92.0 for December, 1929. The monthly average for 1926 equals 100.

The vehicles group of industries gained 0.6 per cent in employment in December and the paper group was unchanged, but each of the 10 remaining groups reported fewer employees.

There were increases in employment in December in 13 of the 54 separate industries upon which the manufacturing index is based. The pronounced increases were: 2.5 per cent, in agricultural implements; 2.1 per cent, in book and job printing; 1.7 per cent, in fertilizers; 1.5 per cent, in automobiles; 1.1 per cent in rubber tires; and 0.8 per cent in shipbuilding.

The outstanding decreases in employment in December ranged from 13.1 to 4.3 per cent and were in the following industries: Stoves, carriages and wagons, cane-sugar refining, carpets, cement, brick, cast-iron pipe, shirts, saw-mills, furniture, leather, and hosiery. Employment fell off 1.5 per cent in the iron and steel industry and 1 per cent in the cotton-goods industry.

Each of the nine additional industries surveyed, but not included in the bureau's indexes, reported fewer employees in December than in November, the decreases ranging from 23.6 in the radio industry and 15 per cent in the beet-sugar industry to 0.8 per cent in the rubber-goods industry.

Decreased employment in December was shown in each of the nine geographic divisions, the Pacific division leading with a decrease of 5.7 per cent and the East North Central division showing the smallest decrease, 0.3 per cent.

Unemployment percentage.—Unemployment statistics which are being compiled each month by the American Federation of Labor, indicate the percentage of unemployed union

members in twenty-four representative cities of the United States, as follows: October to December, 1927, 14 per cent; January, 1928, 18 per cent; February, 1928, 18 per cent; March, 1928, 18 per cent; April, 1928, 16 per cent; May, 1928, 13 per cent; June, 1928, 11 per cent; July, 1928, 12 per cent; August, 1928, 9 per cent; September, 1928, 10 per cent; October, 1928, 9 per cent; November, 1928, 10 per cent; December, 1928, 13 per cent; January, 1929, 15 per cent; February, 1929, 15 per cent; March, 1929, 14 per cent; April, 1929, 12 per cent; May, 1929, 11 per cent; June, 1929, 9 per cent; July, 1929, 9 per cent; August, 1929, 9 per cent; September, 1929, 10 per cent; October, 1929, 11 per cent; November, 1929, 12 per cent; December, 1929, 16 per cent; January, 1930, 20 per cent; February, 1930, 22 per cent; March, 1930, 21 per cent; April, 1930, 21 per cent; May, 1930, 20 per cent; June, 1930, 20 per cent; July, 1930, 22 per cent; August, 1930, 22 per cent; September, 1930, 21 per cent; October, 1930, 21 per cent; November, 1930, 22 per cent; December, 1930, 16.6 per cent; January, 1931, 19.4 per cent.

The *Monthly Survey of Business* (published by the American Federation of Labor) from which the above percentages have been taken, in its issue of February 1, 1931, comments as follows on the unemployment increases:

"In the first part of January, 5,700,000 wage earners were out of work in the United States according to our preliminary estimate. This compares with 5,500,000 in December (These figures do not include farm labour or office workers). Unemployment is practically always worse in January, but this year's reports, covering 800,000 union members, show that the increase since December has been worse than usual and just as great as last year when the stock crash started heavy lay-offs. Our weighted unemployment figures show 19.4 per cent out of work in January as compared to 16.6 per cent in December. Conditions are especially bad in building, where 50 per cent are out of work; garment industries, 43 per cent out; musicians and other professionals, 43 per cent; water transport, 35 per cent; metal trades, 27 per cent; other manufactures, 34 per cent. The change for the worse has been especially severe in garment industries, manufacturing and building."

Child and Family Welfare, the official organ of the Canadian Council on Child and Family Welfare, recently published a special legislation number, giving an analysis of the legislation enacted during 1929 and 1930 by the Dominion Parliament and the provincial legislatures in the field of social welfare.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

Reference was made in the *LABOUR GAZETTE*, June, 1930, page 652, to the Fair Wages and Eight-Hour Day Act of Parliament which was adopted on May 30 last. The text of this measure appeared in the April issue at page 383. This Act provides as follows:—

3. (1) Every contract made hereunder with the Government of Canada for construction, remodelling, repair or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(a) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

(2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication or manufacture is carried on in any established plant or factory other than a plant or factory established for the purposes of the work contemplated.

Section 5 of the Fair Wages and Eight-Hour Day Act authorized the Governor in Council, on the recommendation of the Minister of Labour, to make necessary regulations under the Statute. Those regulations have not yet been made. The Act, however, was put into effect at once as respects contracts for construction, remodelling, repair or demolition, both as to its provisions as to current and fair and reasonable rates of wages and as to the application of the eight-hour day.

The Fair Wages Policy of the Government of Canada, which has been in effect since 1900 and is now expressed in an Order in Council adopted June 7, 1922, and amended April 9, 1924, requires that all contracts made on behalf of the Government of Canada for the construction or remodelling of public buildings of all kinds, railways, canals, roads, bridges, locks, dry docks, elevators, harbours, piers, wharves, lighthouses, and other works for the improvement and safety of transportation and navigation, rifle ranges, fortifications, and other works of defence, dams hydraulic works, slides, piers, booms, and other works for facilitating the transmission of timber, and all other works and properties constructed or remodelled for the Government of Canada must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed, or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on or if there be no custom of the trade as respect hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classifica-

tion of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Contractor to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the Contractor

until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed claim therefore may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour

conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts Awarded Recently

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wages schedules as shown below, or the general fair wages clause above-mentioned:—

DEPARTMENT OF NATIONAL DEFENCE

Contracts in Group "A" (Construction, etc.)

Structural Steel for Hangar A. 3, R.C.A.F. Training Station at Trenton, Ont. Name of Contractor, Hamilton Bridge Company, Hamilton, Ont. Date of contract, January 29, 1931. Amount of contract, \$13,100. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Bricklayers and masons.....	\$1 00	8
Bricklayers' labourers.....	0 45	8
Plasterers.....	1 00	8
Carpenters.....	0 80	8
Painters and glaziers.....	0 70	8
Ordinary labourers.....	0 40	8
Sheet metal roofers.....	0 70	8
	per day	8
Driver, team and wagon.....	6 50	
	per hour	8
Structural ironworkers.....	1 00	8
Steamfitters' and plumbers' helpers.....	0 45	8
Plumbers and steamfitters.....	0 70	8
Electricians.....	0 70	8
Concrete workers.....	0 40	8
Sheet metal workers.....	0 70	8
Felt and gravel roofers.....	0 70	8

Construction of a stores building at the Airport, St. Hubert, P.Q. Name of contractors, The St. George Construction Co., Ltd., Rosemount, Montreal, P.Q. Date of contract, January 26, 1931. Amount of contract, \$18,985. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Concrete labourers.....	\$0 40	8
Concrete mixer operator.....	0 50	8
Masons.....	1 20	8
Carpenters.....	0 85	8
Electricians.....	0 90	8
Labourers.....	0 40	8
Roofers (felt and gravel).....	0 80	8
Roofers (metal).....	0 80	8
Painters and glaziers.....	0 85	8
Bricklayers.....	1 20	8
Plumbers.....	0 90	8
Structural iron workers.....	1 00	8
Plasterers.....	1 05	8
		to May 1st, 1931

DEPARTMENT OF PUBLIC WORKS

Contracts in Group "A" (Construction, etc.)

Construction of an extension to the wharf at Carleton, P.Q. Name of contractors, Messrs. Farley & Grant, Ottawa, Ont. Date of contract, February 4, 1931. Amount of contract, approximately \$26,082. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Carpenters.....	\$0 50	8
Blacksmiths.....	0 50	8
Blacksmiths' helpers.....	0 40	8
Labourers.....	0 35	8

Construction of extension to protection work at Baie St. Paul, P.Q. Name of contractors, Murray Bay Contracting and Logging Co., Ltd., Pointe Malbaie, P.Q. Date of contract, November 21, 1930. Amount of contract, approximately \$9,976.40. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Carpenters.....	\$0 55	8
Timbermen.....	0 40	8
Blacksmiths.....	0 50	8
Blacksmiths' helpers.....	0 40	8
Labourers.....	0 35	8
	per day	8
Driver, horse and cart.....	5 00	
Driver, team and wagon.....	6 50	

Construction of a pile bent and creosoted timber superstructure wharf at Kaslo, Kootenay District, B.C. Name of contractor, Mr. L. H. Rawlings, Victoria, B.C. Date of contract, January 5, 1931. Amount of contract, approximately \$37,472.08. A fair wages

schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than	
	per hour	per day	per week
Pile driver engineer.....	\$1 12½	8	48
Carpenters.....	0 81½	8	48
Labourers.....	0 50	8	48

Construction of new fittings and alterations to existing fittings, etc., on first floor of the Public Building at Regina, Sask. Name of contractors, The Western Manufacturing Co., Ltd., Regina, Sask. Date of contract, December 27, 1930. Amount of contract, \$7,822. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than	
	per hour	per day	per week
Bricklayers and masons.....	\$1 45	8	8
Carpenters and joiners.....	1 00	8	8
Concrete finishers.....	1 00	8	8
Concrete workers.....	0 50	8	8
Electricians.....	1 10	8	8
Electricians' helpers.....	0 75	8	8
Hollow tile setters.....	1 45	8	8
Labourers—building.....	0 50	8	8
Labourers—common.....	0 45	8	8
Marble setters.....	1 25	8	8
Metal lathers.....	1 00	8	8
Metal lathers (per sq. yard).....	0 08	8	8
Painters and glaziers.....	0 87½	8	8
Plasterers.....	1 40	8	8
Plasterers' helpers.....	0 60	8	8
Plumbers and steamfitters.....	1 25	8	8
Plumbers' and steamfitters' helpers.....	0 60	8	8
Stonecutters.....	1 25	8	8
Terrazo layers.....	0 85	8	8
Terrazo layers' helpers.....	0 50	8	8
Motor truck drivers.....	0 50	8	8
Teamster—with team and wagon.....	0 90	8	8
Teamsters.....	0 45	8	8

Deepening an area from Lake Ontario to North Bay, Ont. Name of contractors, Sin-Mac Lines, Ltd., Montreal, P.Q. Date of contract, December 31, 1930. Amount of contract, approximately \$6,480. The General Fair Wages Clause was inserted in the contract.

Deepening entrance channel to Fishermen's Harbour, Point Pleasant, Ont. Name of contractors, Sin-Mac Lines, Ltd., Montreal, P.Q. Date of contract, February 4, 1931. Amount of contract, approximately \$2,778.70. The General Fair Wages Clause was inserted in the contract.

Construction and delivery of a snagboat to replace Snagboat "Bobolink," Prince Rupert, B.C. Name of contractors, Canadian Government Merchant Marine, Ltd., Prince Rupert, B.C. Date of contract, December 29, 1930.

Amount of contract, \$44,918. The General Fair Wages Clause was inserted in the contract.

Contracts in Group "B" (Interior Fittings, etc.)

Interior fittings for public building, Lloydminster, Sask. Name of contractors, W. H. Cushing, Ltd., Regina, Sask. Date of contract, January 2, 1931. Amount of contract, \$2,440. The "B" Conditions* were inserted in the contract.

Interior fittings for public building, Sturgeon Falls, Ont. Name of contractors, Interior Hardwood Co., Ltd., Kitchener, Ont. Date of contract, January 16, 1931. Amount of contract, \$1,185. The "B" Conditions* were inserted in the contract.

Interior fittings in public building, Melville, Sask. Name of contractors, Regina Sash & Door Co., Ltd., Regina, Sask. Date of contract, August 15, 1930. Amount of contract, \$2,370. The "B" Conditions* were inserted in the contract.

DEPARTMENT OF RAILWAYS AND CANALS

Contracts in Group "A" (Construction, etc.)

Manufacture, delivery and erection of the superstructure of a steel highway swing bridge, including the wooden flooring, over the Trent Canal at Fenelon Falls, Ont. Name of contractor, Sarnia Bridge Co., Ltd., Sarnia, Ont. Date of contract, January 9, 1931. Amount of contract, \$6,512. A fair wages schedule was inserted in the contract for the erection work as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than	
	per hour	per day	per week
Structural ironworkers.....	\$1 00	8	8
Carpenters.....	0 75	8	8
Concrete workers.....	0 45	8	8
Labourers.....	0 45	8	8
Motor truck driver.....	0 50	8	8
Helpers.....	0 45	8	8

Manufacture, delivery and erection of the Surge Tank, Penstock Breaching and connections required for the Hydro-Electric Power Plant for the Welland Ship Canal at Merriton, Ont. Name of contractors, Horton Steel Works, Ltd., Bridgeburg, Ont. Date of contract, January 26, 1931. Amount of contract, approximately \$103,104. A fair wages schedule was inserted in the contract for the erection work as follows:—

*Shown on page 234.

POST OFFICE DEPARTMENT

Following are statements of payments made in January, 1931, for supplies ordered by the Post Office Department under contracts which were subject to the regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages and the performance of the work under proper sanitary conditions:—

<i>Metal Dating Stamps and Type, Brass Crown Seals, Cancellers, etc.</i> —	
Pritchard-Andrews Co., Ltd., Ottawa, Ont.	\$ 681 14
<i>Making and Repairing Rubber stamps, Daters, etc.</i> —	
Pritchard-Andrews Co., Ltd., Ottawa, Ont.	254 49
Capital Rubber stamp Works, Ottawa, Ont.	36 35
<i>Making Up and Supplying Letter Carriers' Uniforms</i> —	
Pollack & Dorfman, Quebec, P.Q.	6,053 61
Jay Wolfe, Inc., Montreal, P.Q.	1,280 50
Wm. Scully, Ltd., Montreal, P.Q.	416 70
St. George Woollen Mills, Ltd., St. George Beauce, P.Q.	673 14
Workman Uniform Co., Ltd., Montreal, P.Q.	33 33
Grant-Holden-Graham, Ltd., Ottawa, Ont.	55 31
Woods Mfg. Co., Ltd., Ottawa, Ont.	968 60
<i>Mail Bag Fittings</i> —

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing: Iron, Steel and Products

EDMONTON, ALBERTA.—A CERTAIN EMPLOYER AND THE INTERNATIONAL MOULDERS UNION, LOCAL No. 373.

Agreement to be in effect from April 7, 1930, to April 7, 1931, and from year to year thereafter until either party gives notice 30 days before April 7, of any year.

Only union members to be employed.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Overtime: time and one-half; Sundays and holidays double time.

Wages per hour for journeymen moulders: 80 cents.

Apprentices to serve four years; one apprentice allowed for the shop and one for every five journeymen employed.

Wages for apprentices: first year 30 cents per hour, 5 cents per hour increase each six months of second and third year, and 10 cents

per hour increase each six months of the fourth year.

Any grievance will be taken up with the management and by the shop committee, and failing an adjustment the committee will take the matter up with the proper officials of the union.

In the event of a strike, or any difference arising where the employees cease work, they shall not be paid for any moulds that may be made until there are enough to make a proper cast, and the same is poured by the moulders who put up the moulds.

Manufacturing: Pulp, Paper and Paper Products

EDMONTON, ALBERTA.—CERTAIN JOB PRINTING OFFICES AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, LOCAL No. 235.

Agreement to be in effect from November 1, 1929, to October 31, 1932.

The constitution and by-laws of the local union to be part of this agreement.

All pressmen, assistant pressmen and feeders are to be under the jurisdiction of the union. If the union fails to furnish competent workmen, the employer may engage non-union employees and they will be admitted to the union if eligible. The foreman to hire and discharge employees.

No cylinder pressman to be permitted to feed his own press and no press or presses shall be run at any time without a pressman in charge. No pressman shall run more than two automatic feed presses. The minimum number of journeymen and helpers employed on various presses is specified.

Hours: 44 per week for day work and 42 per week for night work.

Overtime: time and one half for first three hours, double time thereafter; time and one half for work on New Year's Day, Good Friday, May 24th, Thanksgiving Day and Civic Holiday; double time for work on Sundays, Dominion Day, Labour Day, Christmas Day.

Wages per week for journeymen: from November 1, 1929, to October 31, 1930, \$44 for day work and \$46.20 for night work; from November 1, 1930 to October 31, 1931, \$46.20 for day work and \$48.30 for night work; from November 1, 1931, to October 31, 1932, \$47.08 for day work and \$49.14 for night work. Offset pressmen to receive 5 cents per hour over regular rate.

Wages per week for pressfeeders: from \$11.50 during first six months to \$20 during seventh six months. Pressfeeders to receive this scale after becoming union members. They must work as registered feeders at least one year before being admitted to membership.

Apprentices must pass their quarterly examinations regularly or they will not receive their raise in pay when due.

Wages per week for apprentices: from \$11.50 during first six months to \$19 during sixth six months, one half of journeyman's scale during fourth year and two-thirds of journeyman's scale during fifth year.

A standing joint committee will be appointed to see that offices are staffed in proportion to their equipment.

Any dispute as to wages and hours will be submitted to an arbitration committee consisting of one representative of each party and a

third chosen by them, providing it cannot be settled by conciliation. Pending settlement, work to continue.

The Allied Printing Trades Council label and shop number must be used on all printing where a label is called for.

Construction: Buildings and Structures

MONTREAL, QUEBEC.—CERTAIN EXCAVATING CONTRACTORS AND THE INTERNATIONAL UNION OF OPERATING ENGINEERS, LOCAL No. 588.

Agreement to be in effect from January 6, 1931, to December 31, 1931. If either party decides to terminate or change same on its expiration, they are to give 30 day's notice.

Only local union members to be employed. The business representative of the union will be allowed on all jobs.

Hours: engineers 10 per day, a 60-hour week; firemen and oilers 12 hour day or 72 hour week, except when shovel is not in operation, firemen and oilers will be paid for ten hours per day.

Overtime: time and one-half; double time for work on Sundays and for holidays, except minor necessary repairs for which straight time will be paid. No work on Labour Day.

Wages per week: shovel engineers \$72, firemen and oilers \$43.20.

One week's notice of leaving job or of discharge to be given.

On work outside of city limits, transportation to be paid.

SASKATOON, SASKATCHEWAN.—MASTER SHEET METAL WORKERS AND THE SHEET METAL WORKERS INTERNATIONAL ASSOCIATION, LOCAL No. 758.

Agreement to be in effect from May 1, 1930, to May 1, 1931, and from year to year thereafter until each party gives two months' notice before May 1, of any year.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, September, 1929, with the following exceptions:—

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Wages for journeymen sheet metal workers: \$1.15 per hour.

The Vancouver Trades and Labour Council, at a meeting on January 20, adopted a resolution in favour of the amendment of the Workmen's Compensation Act of British Columbia so as to provide for a minimum compensation payment of \$4 per day; that hernia cases be given consideration by the board on the recommendation of the attending physician; that casual labour be brought under the provisions of the Act; and that, where awarded, temporary total disability compensation be continued until the recipient has resumed his former occupation at the time of disablement. An amendment will also be sought to the Hours of Work Act, cancelling all exceptions to the Act, and asking that all work be brought under the provisions of the Act.

PRICES, RETAIL AND WHOLESALE, IN CANADA, JANUARY, 1931

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices in January was again toward lower levels, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being lower than in December.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was again lower at \$9.86 at the beginning of January, 1931, as compared with \$10.10 for December, 1930; \$11.88 for January, 1930; \$11.30 for January, 1929; \$11.19 for January, 1928; \$11.37 for January, 1927; \$11.63 for January, 1926; \$10.77 for January, 1925; \$10.78 for January, 1924; \$10.52 for January, 1923; \$11.03 for January, 1922; \$14.48 for January, 1921; \$16.92 for June, 1920 (the peak); \$12.42 for January, 1918; and \$7.73 for January, 1914. Of the twenty-nine items in the food budget, twenty were lower, while two showed a slight increase. The most important declines occurred in the prices of eggs, with less important decreases in pork, bacon, butter, cheese, flour, rolled oats, beans and prunes. Including the cost of fuel and rent with that of foods the total budget averaged \$20.21 at the beginning of January, 1931, as compared with \$20.46 for December, 1930; \$22.17 for January, 1930; \$21.55 for January, 1929; \$21.41 for January, 1928; \$21.59 for January, 1927; \$21.96 for January, 1926; \$21.09 for January, 1925; \$21.23 for January, 1924; \$21.13 for January, 1923; \$21.52 for January, 1922; \$25.30 for January, 1921; \$26.92 for July, 1920 (the peak); \$19.61 for January, 1918; and \$14.49 for January, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 502 commodities in 1926 as 100, was again lower at 76.7 for January, 1931, as compared with 77.8 for December, 1930; 95.4 for January, 1930; 94.0 for January, 1929; 96.9 for January, 1928; 97.8 for January, 1927; and 103.0 for January, 1926. One hundred and twenty-three prices quotations declined, sixty-one advanced and three hundred and eighteen were unchanged.

In the grouping according to chief component materials all of the eight main groups were lower, the Vegetables and Vegetable Products group, because of declines in the prices of wheat, rye, barley, flax, flour, coffee and raw rubber; the Animals and their Products group, mainly because of lower

quotations for steers, hogs, fresh meats, hides, cheese and fresh eggs, which more than offset higher prices for calves, lambs and butter; the Fibres, Textiles and Textile Products group, because of lower prices for cotton thread, cottonades, denims and ticking, which more than offset higher prices for raw cotton and raw silk; the Wood, Wood Products and Paper group, due mainly to decreased prices for certain lines of lumber; the Iron and its Products group, because of lower quotations for wire; the Non-Ferrous Metals group, due to lower prices for electrolytic copper, copper wire, brass sheets, lead, silver and zinc; the Non-Metallic Minerals and their Products group, due to lower quotations for plate glass; and the Chemicals and Allied Products group, because of declines in the prices of copper sulphate, aluminium sulphate and shellac.

In the grouping according to purpose, both consumers' goods and producers' goods were considerably lower, the former due to reduced quotations for coffee, flour, cured meats, sugar, eggs, cottonades, denims, ticking and certain silk goods, and the latter due to lower prices for grains, hides, lumber, wood pulp, copper, lead and silver, which more than offset higher prices for raw silk, raw cotton and lambs.

In the grouping according to origin, raw and partly manufactured goods were lower, due mainly to declines in the prices of grains, hides, steers, hogs and non-ferrous metals. Fully and chiefly manufactured goods were also lower, because of decreased quotations for flour, gluten meal, tires, denim, silk fabrics, cheese, wire, copper sheets, brass, plate glass, aluminium sulphate and potassium iodide. Domestic farm products, articles of marine origin, articles of forest origin and articles of mineral origin were lower.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of January, of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the averages of quotations reported to the Department and to

the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the **LABOUR GAZETTE**.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the **LABOUR GAZETTE** resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the **LABOUR GAZETTE** was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provisions for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry, starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the **LABOUR GAZETTE** since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations repre-

sented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the **LABOUR GAZETTE** a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the **LABOUR GAZETTE**, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1917, quarterly from 1918 to 1929, and monthly since January, 1930. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.3; 1916, 86.3; 1917, 84.6; 1918, 82.9; 1919, 81.6; 1920, 81.1;

* Prior to 1926 number of commodities was 236.

(Continued from page 241)

down to 1930. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption as follows: 1923, 74.4; 1924, 72.2; 1925, 69.9; 1926, 68.7; 1927, 68.2; 1928, 66.7; 1929, 65.0. This index number is weighted according to consumption in each city. When the above index number, 1900-1929, is weighted according to population in each city covered for the years 1923-1929, the figures are substantially the same as those issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 128.9; 1928, 128.5; 1929, 128.0. Natural gas, 1913, 100;

1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 166.9; 1928, 158.9; 1929, 159.1. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

Retail Prices

The downward movement in beef prices was much less pronounced in January than for some months previously, advances being recorded in many localities in Ontario and Quebec. Sirloin steak averaged 31.5 cents per pound, as compared with 31.6 cents in December, 1930, and 38 cents in June. Round

steak was 26.5 cents per pound in January, 26.7 cents in December, 1930, and 32.9 cents in June, 1930. Rib roast was unchanged at an average price of 24.8 cents per pound, as compared with 30.8 cents in June, 1930, while shoulder roast averaged 18.6 cents per pound in January, the same as for December. Veal and mutton were slightly higher, the former averaging 22 cents per pound, as compared with 21.8 cents in December, and the latter averaging 26.9 cents per pound in January and 26.7 cents in December. Pork prices were considerably lower, fresh being down from an average of 26.8 cents per pound in December to 25.9 cents in January and salt pork from 26.6 cents per pound in December to 26.3 cents in January.

Eggs were generally lower, fresh averaging 50.5 cents per dozen, as compared with 58.5 cents in December and 64.4 cents in January, 1930, and cooking 40.1 cents per dozen, as compared with 45.9 cents in December and 52.1 cents in January, 1930. Milk was unchanged at an average price of 12.1 cents per quart, a decline was reported from Woodstock, Owen Sound, North Bay and Sault Ste. Marie, and an increase from Prince Albert. Creamery butter was down from an average price of 38.2 cents per pound in December to 37.3 cents in January and 47.5 cents in January, 1930. Cheese was also lower at 29.2 cents per pound in January, as compared with 29.9 cents in December.

Bread was unchanged at an average price of 6.6 cents per pound. Flour was again slightly lower at an average price of 3.7 cents per pound. Canned tomatoes averaged 14.3 cents per 2½ pound tin, as compared with 14.6 cents in December, and canned peas 13 cents per 2 pound tin, as compared with 13.5 cents in December. Beans averaged 7.7 cents per pound in January, 8.1 cents in December and 10.4 cents in January, 1930. Potatoes averaged \$1.25 per 90 pounds, practically the same level as for December. Prunes were lower in the average at 12.6 cents per pound, as compared with 12.9 cents in December and 16 cents in January, 1930. Anthracite coal showed little change at an average price of \$16.22 per ton. A decline in rent was reported from Saskatoon.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices, for the most part, were lower, although the declines, particularly in wheat, were less pronounced than for some months. No. 1 Manitoba northern cash wheat, Fort

*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18½%; Clothing, 18½%; Sundries, 20%.

William and Fort Arthur basis, averaged 53.9 cents per bushel in January, as compared with 55.6 cents in December. This was the smallest decline recorded in any month during the period of unbroken decline commencing in May, 1930. The relative steadiness was said to be due in part to the prospect of reduced crops in France and Italy. Western barley declined from 25.1 cents per bushel in December to 22.1 cents in January; flax from 98.2 cents per bushel in December to 95.1 cents in January; western oats from 26.8 cents per bushel in December to 26.2 cents in January; and rye from 30.4 cents per bushel in December to 27.1 cents in January. Flour at Toronto was down from \$5.36 per barrel in December to \$5.21 in January. Raw sugar at New York was slightly higher at \$1.38 per hundred pounds, as compared with \$1.35 in December, while granulated at Montreal declined from \$4.65 per hundred pounds to \$4.56. Ceylon rubber at New York was down from 9 cents per pound in December to 8.3 cents in January. In livestock, good steers at Toronto were down from \$7.36 per hundred pounds to \$7.22 in January, while at Winnipeg the price advanced from \$5.99 per hundred pounds in December to \$6.19 in January. Calves at Toronto were down from \$11.31 per

hundred pounds in December to \$10.82 in January, while at Winnipeg the price advanced from \$9.50 per hundred pounds in December to \$10.77 in January. Hogs at Toronto fell from \$10.45 per hundred pounds to \$10.19 and at Winnipeg from \$8.77 per hundred pounds to \$8.70. The price of lambs at Toronto advanced from \$8.74 per hundred pounds to \$9.56. Creamery butter at Montreal was up from an average price of 33.2 cents per pound in December to 34 cents in January. A slight increase occurred also at Toronto. Fresh eggs were substantially lower, the price at Montreal declining from 60.3 cents per dozen to 38.6 cents and at Toronto from 53.8 cents per dozen to 35.5 cents and at Winnipeg from 47.3 cents per dozen to 36.5 cents. Raw cotton at New York was up from an average price of 10 cents per pound in December to 10.3 cents in January. The price of raw silk at New York advanced from \$3 per pound to \$3.57. Wool prices showed little change. Electrolytic copper at Montreal declined from \$12.20 per hundred pounds to \$11.68. Copper wire bars at New York declined from \$10.25 per hundred pounds to \$10. Copper sulphate was 10 cents per hundred pounds lower at \$4.65.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. The latest table showing wholesale and retail prices index numbers for various countries appeared in "Prices in Canada and Other Countries, 1930," issued as a supplement to the LABOUR GAZETTE, January, 1931.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1924=100, was 65.5 for December, a fall of 2.8 per cent for the month. Foods fell 3.7 per cent with substantial decreases in all groups. Non-foods declined 2.2 per cent, the greatest falls occurring in cotton and wool.

The *Economist* index number, on the base 1927=100, was 68.7 at the end of December, a fall of 3.1 per cent for the month. The commodities showing the heaviest declines were grain stuffs, almost all textile materials, all non-ferrous metals except tin, and rubber

and linseed oil. As compared with December, 1929, the index number has fallen 22.2 per cent, the fall in textiles amounting to 37.7 per cent and in cereals and meat to 24.2 per cent. On the base 1913=100, the index number is now 98.7.

The *Statist* index number, on the base 1867-1877=100, was 86.9 at the end of December, a fall of 1.9 per cent for the month. With the exception of an advance in animal foods, all groups were lower, the greatest change being a drop of 9.1 per cent in textiles.

COST OF LIVING.—The Ministry of Labour index number, on the base July, 1914=100, was 153 at January 1, a fall of 1.3 per cent for the month. Foods were 2.1 per cent lower due to declines in the prices of eggs, bacon, cheese and flour. Rent, clothing, fuel and light and sundries were unchanged.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100, was 117.8 for December, a fall of 1.9 per cent for the month. Of the 18 groups included, 14 showed declines, the greatest being 6 per cent in paper and its products.

COST OF LIVING.—The official index number, on the base 1913-1914=100, was 141·6 for December, a fall of 1·3 per cent for the month. With the exception of a slight increase in rent, all groups were lower than for November, the principal change being a fall of 3·1 per cent in clothing.

Italy

WHOLESALE PRICES.—The index number of the Milan Chamber of Commerce on the gold basis, 1913=100, was 100·1 for December, a decline of 2·7 per cent for the month. Every group contributed to the general decline.

Sweden

WHOLESALE PRICES.—The index number of the Commerce Department, on the base 1913=100, was 117 for December, showing no change from November. None of the component groups showed any marked changes during the month.

COST OF LIVING.—The index number of the cost of living on the base July, 1914=100, was 161 at January 1, a fall of 1·2 per cent since October 1, due chiefly to lower food prices.

United States

WHOLESALE PRICES.—The Bureau of Labour Statistics index number, on the base 1926=100, was 78·4 for December, a fall of 2·5 per cent for the month. Every group was in-

cluded in the general decline, farm products falling 5 per cent and foods 4·6 per cent.

Bradstreet's index number, which is the sum total of the prices per pound of 96 articles of common consumption, was \$9.3087 at February 1, a decline of 2·1 per cent for the month. This is the sixteenth consecutive monthly decline and prices were lower on February 1, than at any time since January 1, 1915, but still 6·8 per cent higher than at August 1, 1914. Of the thirteen groups, nine declined between January 1, 1931, and February 1, two were unchanged and two (oils and naval stores) advanced slightly.

COST OF LIVING.—The Bureau of Labour Statistics index number of the cost of living, which is calculated semi-annually, on the base 1913=100, was 160·7 for December, a fall of 3·5 per cent from the June level. In this period, foods declined 7·2 per cent, house-furnishing goods 3·8 per cent, clothing 3·7 per cent, rent 2·1 per cent, and miscellaneous items 0·2 per cent; on the other hand fuel and light increased 1·3 per cent due chiefly to higher winter coal prices.

The index number of the Department of Labour and Industries, Massachusetts, on the base 1913=100 was 149·9 for December, a decrease of 0·9 per cent for the month. All groups were lower with the exception of one slight increase in fuel and light.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1930

THE number of fatal industrial accidents (including fatalities from industrial diseases included by workmen's compensation boards, etc., and also fatalities to persons incidentally to the pursuit of their occupations), which were recorded in the Department as occurring during the fourth quarter of 1930, was 292, there being 113 in October, 102 in November and 77 in December. The report for the third quarter of 1930 was given in the *LABOUR GAZETTE*, November, page 1350. In the fourth quarter of 1929, 389 fatal accidents were recorded (*LABOUR GAZETTE*, February, 1930, page 234). The supplementary lists of fatal accidents on pages 259 to 261 contain 52 for the first three quarters of 1930, and 7 for 1929.

In this series of reports it is the custom to record industrial accidents under the dates of their occurrence, and fatal industrial diseases under the dates on which they prove fatal.

Reports were received from the provincial workmen's compensation boards, the Board of

Railway Commissioners of Canada, and from certain other official sources; and from the correspondents of the *LABOUR GAZETTE*. Information as to accidents is also secured from newspapers.

Classified by groups of industries the fatalities occurring during the fourth quarter of 1930 were as follows: agriculture, 25; logging, 25; fishing and trapping, 8; mining, non-ferrous smelting and quarrying, 46; manufacturing, 28; construction, 58; electric light and power, 7; transportation and public utilities, 63; trade, 10; service, 22.

Of the mining accidents, 27 fatalities were in "metalliferous mining," 16 fatalities were in "coal mining," 2 in "non-metallic mineral mining and quarrying, n.e.s.," and 1 in "structural materials".

Of the accidents in manufacturing, 1 was in "vegetable foods, drink and tobacco", 1 in "animal foods", 3 in "textiles and clothing", 1 in "leather, fur and products", 4 in "saw

and planing mill products", 2 in "wood products", 6 in "pulp, paper and paper products", 6 in "iron, steel and products", 2 in "non-ferrous metal products", 1 in "non-metallic mineral products", and 1 in "chemical and allied products".

In construction there were 23 fatalities in "buildings and structures", 1 in "railway construction", 1 in "shipbuilding", 12 in "highway and bridge", and 21 in "miscellaneous construction".

In transportation and public utilities there were 19 fatalities in "steam railways", 2 in "street and electric railways" 26 in "water transportation", 4 in "air transportation", 9 in "local transportation" and 3 in "storage".

In trade there were 2 fatalities in "wholesale", and 8 in "retail".

Of the fatalities in service, 12 were in "public administration", 1 in "laundering, dyeing and cleaning", 5 in "custom and repair", 3 in "personal and domestic", and 1 in "professional establishments".

There were two serious disasters during the period under review. One occurred at Anyox, B.C., on November 12, when eight coal miners were crushed by a rock slide when it struck their bunkhouse. The other disaster occurred on December 3, off the coast of Yarmouth, Nova Scotia, when a pulp carrying motor ship crashed on rocks during a blinding snow storm and strong gale and the crew of eight men were drowned.

In fishing and trapping, two fishermen were drowned in Lake Manitoba on November 21 when their sleigh broke through the ice. Another two fishermen were drowned in Caraquet Bay, New Brunswick, on December 5, when they broke through the ice while placing nets. Two other fishermen were drowned near Prince Rupert, British Columbia, on December 12 when they were caught in a squall.

Two labourer engaged in building construction at Quebec were killed by falling 70 feet

when a scaffolding collapsed on October 28. Two riggers on power dam construction at Rapide Blanche, Quebec, were thrown into the water and drowned on October 1. Two labourers on sewer tunnel construction at Kitchener, Ontario, were buried on October 8, when the tunnel caved in. Two labourers on sewer construction at Windsor, Ontario, were electrocuted on November 18, when a hoisting crane came in contact with a high tension cable.

In steam railways transportation three members of a train crew lost their lives near Killaly, Sask., on December 16, when their train was derailed. On October 22 the captain and engineer of a tug were drowned in Lake Winnipeg when the boiler exploded. In air transportation three men perished near Prince Rupert, B.C., while in search for another pilot who was forced down in a snow storm on October 11, and perished from exposure on November 20, along the Liard River, Yukon.

Supplementary Lists of Accidents

The supplementary list of fatal accidents occurring during the first three quarters of 1930, to be found after the main table of accidents, contains 52 fatalities, of which 2 were in agriculture, 3 in logging, 4 in fishing and trapping, 13 in mining, non-ferrous smelting and quarrying, 3 in manufacturing, 8 in construction, 13 in transportation and public utilities, 1 in electric light and power, 3 in trade and 2 in service. One of these accidents occurred in January, 1 in February, 3 in May, 4 in June, 5 in July, 7 in August and 31 in September.

Concluding the lists is a supplementary list of accidents occurring during 1929. This includes 8 fatalities, of which 2 were in logging, 2 in mining, non-ferrous smelting and quarrying, 2 in construction and 2 in transportation and public utilities. Two of these accidents occurred in June, 1 in August, 2 in October and 3 in December.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1930

Trade or Industry	Locality	Date	Age	Cause of Fatality
AGRICULTURE AND STOCK-RAISING—				
Farmer.....	St. Anselme, Que.....	Oct. 6	23	Killed while blasting out large stone.
Farmer's son.....	Near Athens, Ont.....	" 15	22	Crushed against a post by tractor.
Farmer.....	Near Owen Sound, Ont.....	" 16	72	Fell off load of hay, fractured skull.
Farmer.....	Near Spencerville, Ont.....	" 17	35	Explosion of delayed charge while blasting out stumps.
Farmer.....	Beaverlodge, Alta.....	" 18	Dragged when horses ran away. Died Oct. 21.
Farmer.....	Near Roland, Man.....	About Oct. 18	33	Crushed in wood sawing machine when clothing became entangled.
Farmer.....	St. Raymond, Que.....	" 23	22	Caught in driving pulley of gasoline engine while threshing.
Farm hand.....	Jerseyville, Ont.....	" 23	18	Run over by trailer containing baled hay. Died Oct. 27.
Farmer.....	Near Taber, Alta.....	" 24	Pleuro-pneumonia from accidentally swallowing gasoline while syphoning it from drum. Died Oct. 26.
Farmer.....	Near Winnipeg, Man.....	About Oct. 27	33	Clothing became entangled in belt of wood sawing machine.
Thresher.....	Near Unity, Sask.....	Nov. 3	Fell from rack of threshing machine and was kicked by horse.
Farmer.....	Near Brooks, Alta.....	" 4	22	Pinned underneath his motor truck when it overturned.
Farmer.....	Near Maple, Ont.....	About Nov. 5	56	Caught in pulley of sawing machine. Died Nov. 10.
Farmer.....	Near Coronation, Alta.....	" 12	Struck by truck while hauling hay.
Farmer.....	Breadalbane, P.E.I.....	" 15	23	Fell from wagon and was run over by auto. Died Nov. 20.
Farmer.....	Near Owen Sound, Ont.....	" 17	Injured when team of colts ran away while plowing. Died Nov. 19.
Farmer.....	Ward's Creek, Kings Co., N.B.....	" 19	Killed when his horse ran away.
Farmer.....	Near Woodstock, Ont.....	About Nov. 24	Fell from hay mow, fracturing skull.
Farmer.....	Carriboo Island, N.S.....	Dec. 3	30	Gored by bull.
Farmer.....	Near Luseland, Sask.....	" 10	45	Skull crushed when rim of tractor wheel fell on him.
Farmer.....	Near Guelph, Ont.....	" 12	67	Attacked by bull. Died Dec. 13.
Farmer.....	Beaumont, Que.....	" 13	69	Struck by falling tree while cutting firewood.
Farmer.....	Near Estevan, Sask.....	" 17	Gored by bull.
Farmer.....	Near Sundre, Alta.....	" 27	35	Fell into well.
Farmer.....	Near Arborg, Man.....	" 30	60	Run over by his team.
LOGGING—				
Log maker.....	Montpellier, Que.....	Oct. 3	24	Struck by falling limb.
Loader.....	Near Silverton, B.C.....	" 6	62	Overcome by strain while loading logs.
Watchman.....	Bersimis, Que.....	" 12	30	Fell into crib and drowned.
Bushman.....	Harding Twp., Ont.....	" 16	Struck by falling tree.
Lumberman.....	Near Ranger Lake, Ont.....	" 21	About
Labourer.....	Sanmaur, Que.....	" 22	27	Tree fell on him.
Labourer.....	Petit Lac Long, Que.....	About Oct. 23	25	Struck by falling tree.
Rigging slinger.....	Mission, B.C.....	" 23	24	Drowned from rowboat.
Logger.....	Near Glendale, Ont.....	About Oct. 24	Struck on head by line when it broke.
Logger.....	Near Parent, Que.....	About Oct. 24	Struck by falling tree.
Log cutter.....	Parent, Que.....	" 25	25	Struck by falling tree.
Driver.....	Minnie Chute, P.Q.....	" 26	19	Struck by falling tree.
Wood cutter.....	Lac Saguy, Que.....	" 29	48	Thrown into water and drowned.
Log maker.....	Fee Spur, Ont.....	" 31	About	Struck by falling tree.
Rigger.....	Cowichan, B.C.....	Nov. 14	23	Struck by falling snag, fractured skull.
Barn boss.....	Bloomsbury, Alta.....	" 22	28	Struck by moving logs.
Logger.....	mile 115, C.N.R., Ont.....	" 26	52	Hit by falling tree.
Logger.....	Ranger Lake, Ont.....	About Dec. 1	23	Skull fractured in jumping off moving train. Died Nov. 27.
Labourer.....	Newport Woods, Que.....	" 2	39	Struck by falling tree.
Logger.....	Cedar Lake, Ont.....	" 5	37	Struck by falling limb.
Farmer.....	Near St. Clet, Que.....	" 5	35	Drowned when he fell through ice.
Log-roller.....	Cedar Lake, Ont.....	" 5	59	Struck by falling tree.
Labourer.....	St. Marthe, Que.....	" 6	18	Crushed by rolling log.
Farmer.....	Lachevrotiere, P.Q.....	" 7	Tree fell on him.
Sawyer.....	Birch Point, Man.....	" 13	36	Struck by falling tree.
Sawyer.....	Birch Point, Man.....	" 18	42	Struck by falling tree.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER
OF 1930—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
FISHING AND TRAPPING—				
Trapper.....	Garden Lake, Ont.....	About Nov. 10	21	Broke through ice and drowned.
Fisherman.....	Fort William, Ont.....	Nov. 16	21	Run over by box car.
Fisherman.....	Lake Manitoba, Man.....	" 21	Sleigh broke through ice and drowned.
Fisherman.....				
Fisherman.....	Caraquet Bay, N.B.....	Dec. 5	Broke through ice and drowned while placing nets.
Fisherman.....	Near Prince Rupert, B.C....	" 12	40	Drowned when caught in squall.
Fisherman.....				
MINING, NON-FERROUS, SMELTING AND QUARRYING—				
<i>Metalliferous mining—</i>				
Miner.....	Britannia Mines, B.C.....	Oct. 2	20	Run over by ore car. Died Oct. 3.
Miner.....	Kimberley, B.C.....	" 8	50	Fell under truck.
Sampler.....	Kirkland Lake, Ont.....	" 9	29	Fractured skull.
Labourer.....	Kirkland Lake, Ont.....	" 9	59	Silicosis, first laid off on Dec. 31, 1928.
Miner.....	Flin Flon, Man.....	" 10	26	Fell down shaft while removing drilling machines.
Trammer.....	Rouyn District, Que.....	" 11	41	Struck by falling rock.
Miner.....	Britannia Mines, B.C.....	" 30	20	Struck and run over by ore car. Died Oct. 31.
Timber helper.....	Frood Mine, Ont.....	Nov. 3	24	Struck by falling rock.
Timberman.....	Copper Mountain, B.C.....	" 4	45	Crushed by falling rock.
Shaftman.....	Kirkland Lake, Ont.....	" 7	39	Crushed by fall of rock.
Miner.....	Kirkland Lake, Ont.....	" 12	33	Crushed by falling rock. Died Nov. 13.
Shifter.....			45	
Hoistman.....	Anyox, B.C.....	" 12	45	Crushed by rock slide while in bunkhouse.
Watchman.....			51	
Compressor man.....	Anyox, B.C.....	" 12	50	Crushed by rock slide while in bunkhouse.
Miner.....			57	
Blacksmith.....	Anyox, B.C.....	" 12	25	Crushed by rock slide while in bunkhouse.
Tram operator.....			30	
Timberman.....	Upper Summit Lake, Ont...	About Nov. 15	Broke through ice and was drowned.
Prospector.....			40	
Miner.....	Kirkland Lake, Ont.....	" 15	40	Crushed by falling rock.
Mechanic.....	Noranda, Que.....	" 19	30	Struck by falling rock.
Prospector.....	Near Central Manitoba Mines, Man.....	About Nov. 25	23	Frozen on mine trail.
Prospector.....	Near Schreiber, Ont.....	About Nov. 30	74	Frozen in shack on mining claim.
Nipper.....	Noranda, Que.....	Dec. 15	46	Injured during blasting.
Engineer at refinery.....	Copper Cliff, Ont.....	" 19	48	Burned when steam relief valve burst while adjusting it. Died Dec. 22.
Framer.....	Frood Mine, Ont.....	" 20	38	Jammed in collision of car and engine. Died Dec. 23.
<i>Coal mining—</i>				
Miner.....	Union Bay, B.C.....	Oct. 3	50	Struck on head by falling rock.
Miner.....	Michel, B.C.....	" 4	Injured in mine.
Mine worker.....	Stellarton, N.S.....	" 4	27	Crushed by fall of rock in mine.
Miner.....	Coleman, Alta.....	" 17	22	Crushed in gear of pulley. Died Oct. 30.
Miner.....	Thorborn, N.S.....	" 18	Struck by auto.
Miner.....	Glace Bay, N.S.....	" 20	58	Struck by falling stone.
Miner.....	Drumheller, Alta.....	" 31	46	Crushed by fall of rock. Died Nov. 9.
Pile driver.....	Nanaimo, B.C.....	Nov. 3	62	Injured when he fell from piling to wharf. Died Nov. 7.
Miner.....	Bellevue, Alta.....	" 12	49	Crushed by rock.
Driller.....	Coal Valley, Alta.....	" 13	32	Buried under slide of coal.
Miner.....	Clover Bar, Alta.....	" 15	37	Crushed by fall of coal when coal car jumped track.
Miner.....	Drumheller, Alta.....	" 17	38	Struck by piece of coal. Died Nov. 19.
Fireboss.....	Tulameen, B.C.....	" 23	47	Explosion of detonator caps.
Miner.....	Estevan, Sask.....	" 25	44	Crushed by falling boulder.
Miner.....	Near Taber, Alta.....	" 27	34	Crushed by fall of roof in mine.
Miner.....	Eyremore, Alta.....	Dec. 1	31	Crushed by falling rock.
<i>Non-Metallic Mineral Mining and Quarrying (n.e.s.)—</i>				
Miner.....	Thetford Mines, Que.....	Oct. 4	32	Fell 200 feet down shaft.
Train shed helper.....	Asbestos, Que.....	Dec. 5	23	Struck by falling rock.
<i>Structural Materials—</i>				
Gravel pit worker.....	Near Sunderland, Ont.....	Nov. 20	70	Buried by cave-in in gravel pit.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1930—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
MANUFACTURING—				
<i>Vegetable Foods, Drink and Tobacco—</i>				
Worker with yeast mfrs., etc.....	Ville Lasalle, Que.....	Nov. 5	27	Caught in mixing machine. Died Nov. 6.
<i>Animal Foods—</i>				
Jelly powder plant worker.	Toronto, Ont.....	" 13	60	Fell from ladder, injuring spine. Died Nov. 23.
<i>Textiles and Clothing—</i>				
Mill man.....	Montreal, Que.....	Oct. 2	37	Crushed between truck and calendar machine.
Machine operator with surgical dressings mfrs.	Montreal, Que.....	" 6	52	Struck in jaw by lever, pneumonia. Died Oct. 16.
Weaver.....	Montreal, Que.....	" 21	65	Finger crushed in weaving machine. Died following operation.
<i>Leather, Fur and Products—</i>				
Labourer with tanners.	Acton, Ont.....	Nov. 11	35	Caught in skudding machine.
<i>Saw and Planing Mill Products—</i>				
Labourer.....	Leclercville, Que.....	Oct. 18	34	Fell against driving pulley.
Fireman.....	St. Jerome, Que.....	Nov. 2	26	Burned to death after explosion.
Labourer.....	Near Gracefield, Que.....	" 3	18	Struck by flying circular saw when wooden frame broke.
Saw operator.....	Youghall, N.B.....	Dec. 9	30	Struck by log when it flew back from saw.
<i>Wood products—</i>				
Mechanic.....	Rodney, Ont.....	Oct. 16	Caught in pulley while putting on belt.
Worker in box factory.	Vernon, B.C.....	Nov. 21	Crushed by rolling log.
<i>Pulp, paper and paper products—</i>				
Worker in sulphite mill.	Atholville, N.B.....	Oct. 10	39	Mangled when caught in teeth of conveyor cogs.
Worker at rubberoid plant.	Lachine, Que.....	" 14	40	Injured by explosion in asphalt tank. Died Oct. 15.
Pipe fitter.....	Fort William, Ont.....	Nov. 7	37	Scalded when valve on steam line gave way. Died Nov. 13.
Mill worker.....	Smooth Rock Falls, Ont....	" 7	35	Suffocated in coal chute when buried under coal slide.
Mill worker.....	Three Rivers, Que.....	" 10	48	Struck by wheel when it flew off.
Mill worker.....	Kenogami, Que.....	" 24	36	Struck by piece of shattered revolving mill stone.
<i>Iron, steel and products—</i>				
Furnaceman in machine shop.	Amherst, N.S.....	Oct. 21	42	Burned when furnace exploded.
Handyman with cab and body bldrs.	Hamilton, Ont.....	" 25	19	Benzol poisoning from spraying paint. Died Oct. 27.
Worker in plant....	Brantford, Ont.....	" 29	Crushed under falling metal sheets. Died Oct. 30.
Worker in blast furnace.	Hamilton, Ont.....	" 31	42	Severely burned by slag when it poured out. Died Nov. 7.
Machinist in tool factory.	Galt, Ont.....	Nov. 3	52	Grinder's phthisis, first laid off Dec. 7, 1926.
Labour at coke oven	Sydney, N.S.....	" 27	48	Run over by coal train.
<i>Non-ferrous metal products—</i>				
Furnaceman at aluminum plant.	Toronto, Ont.....	" 7	45	Explosion in oil furnace.
Worker in electrical plant.	Toronto, Ont.....	" 24	26	Pinned underneath heavy falling tank when crane chain broke.
<i>Non-metallic mineral Products—</i>				
Labourer with salt cake mfg. Co.	Alsask, Sask.....	" 24	47	Caught in shafting, skull fractured.
<i>Chemical and allied products—</i>				
Carbide furnace charger at cyanamid plant.	Niagara Falls, Ont.....	Dec. 2	35	Burned by gas explosion in furnace. Died Dec. 3.
CONSTRUCTION—				
<i>Buildings and structures—</i>				
Labourer.....	Ottawa, Ont.....	Oct. 2	22	Fell from ladder while cleaning roof of building. Died Oct. 4.
Stone cutter with govt. dept.	Ottawa, Ont.....	About Oct. 15	49	Pneumoniosis, first laid off Oct. 6, 1927.
Carpenter.....	Bowden, Alta.....	" 16	30	Auto overturned, fractured spine.
Labourer.....	Toronto, Ont.....	" 17	35	Brick fell on him while loading truck, fractured skull. Died Nov. 27.
Rigger.....	Chippawa, Ont.....	" 21	48	Fell from scaffold into water and drowned.
Labourer.....	Quebec, Que.....	" 28	42	Fell 70 feet when scaffolding collapsed. Second man died Oct. 30.
Labourer.....			22

—Con.				
Carpenter.....	Halifax, N.S.....	Oct. 31	60	Fell from scaffold.
Carpenter.....	Near Granby, Que.....	" 31	68	Struck by motor truck while returning from work.
Roofer.....	Calgary, Alta.....	Nov. 1	42	Truck turned over into ditch.
Tinsmith.....	Traveller's Rest, P.E.I.....	" 5	About 75	Collision of train with his car.
Bricklayer's helper..	Slave Falls, Man.....	" 6	22	Fell from scaffold.
Carpenter.....	Maniwaki, Que.....	" 17	31	Electrocuted when wet plank he was carrying touched high tension wires.
Carpenter.....	Fraserdale, Ont.....	" 19	About 37	Fell from concrete mixing plant.
Worker.....	Sudbury, Ont.....	" 19	59	Crushed under building when jack slipped while it was being moved.
Fitter.....	Toronto, Ont.....	" 20	42	Struck by falling valve when hooks of crane slipped on July 31, 1919.
Steel worker.....	Stillwater, B.C.....	" 20	21	Fell 140 feet to ground.
Worker.....	Prescott, Ont.....	" 24	25	Drawn into cement mixer when clothing became caught while oiling it.
Worker.....	Toronto, Ont.....	Dec. 5	36	Fell from scaffold.
Carpenter.....	Near Smithers, B.C.....	About Dec. 8		Fell from roof of shed.
Foreman for machinery works.	Near Oakville, Ont.....	" 13		Injured in collision while returning home from Port Credit. Died Dec. 16.
Helper with machinists.	New Westminster, B.C.....	" 24	50	Collided with street-car.
Workman.....	Montreal, Que.....	" 26	31	Fell from third storey of building.
<i>Railway—</i>				
Worker at subway construction.	Near Oshawa, Ont.....	Oct. 13		Crushed between box car and crane.
<i>Shipbuilding—</i>				
Fireman.....	Lauzon, Que.....	" 20	61	Fell and ruptured himself when coming out of oil pump house. Died Nov. 1.
<i>Highway and bridge—</i>				
Labourer.....	St. Dominique, Que.....	" 7	60	Skull fractured when truck overturned.
Teamster.....	Port Carling, Ont.....	" 9	45	Thrown out of wagon and run over when horses ran away.
Steelworker.....	Vancouver, B.C.....	" 11		Fell 40 feet off bridge.
Caterpillar driver....	Arthur, Man.....	" 24	25	Crushed under tractor when it overturned on side of hill.
Truck driver.....	Insinger, Sask.....	" 27	40	Slipped under wheels of truck.
Foreman.....	Montreal, Que.....	" 31	35	Crushed by arm of steam shovel when it fell on him.
Labourer.....	Sudbury, Ont.....	Nov. 11	24	Crushed under wheels of truck.
Labourer.....	Clementsport, N.S.....	" 18	57	Struck by auto.
Teamster.....	Russell, Man.....	" 19	29	Kicked by horse while loading horse on railway car. Died Nov. 21.
Worker on street paving.	Montreal, Que.....	" 28	42	Struck by street car. Died Nov. 30.
Bridge builder.....	Bissette Creek, B.C.....	Dec. 6	45	Fell 62 feet to ground.
Labourer.....	Princeton, B.C.....	" 19	28	Struck by falling timber.
<i>Miscellaneous—</i>				
Rigger on power dam construction.	Rapide Blanche, Que.....	Oct. 1	29	Thrown into water and drowned.
"			27	
Labourer on sewer tunnel construction.	Kitchener, Ont.....	" 8	25	Buried under cave-in in tunnel. Second man died Oct. 10.
"			33	
Labourer on pier construction.	Halifax, N.S.....	" 27	38	Fell from pier and was drowned.
Diver on coffer dam construction.	Fitzroy Harbour, Ont.....	" 28	28	Suffocated while at work under water.
Carpenter on power development.	Beauharnois, Que.....	" 30	22	Struck by falling piece of timber.
Labourer on sewer construction.	London, Ont.....	Nov. 8	63	Struck by boom of crane.
Worker on power dam construction.	Near Jonquieres, Que.....	" 10	27	Crushed by falling rock when elevator cable broke.
Labourer on sewer construction.	Windsor, Ont.....	" 18	34	Electrocuted when hoisting crane came in contact with high tension cable.
"			42	
Worker on telephone line construction.	Near Les Ecoureuls, Que....	" 20	28	Crushed by falling pole which was being hoisted into position.
Well driller.....	Leitrim, Ont.....	" 22	63	Caught in belt running from engine to drill.
Worker on coffer dam	St. John, N.B.....	" 25	30	Struck by pile driver swung by gust of wind.
Cribman on power dam construction.	Rapide Blanc, Que.....	" 26	23	Drowned.
Worker on power dam construction.	Abitibi Canyon, Ont.....	Dec. 8	18	Crushed by fall of rock from roof of tunnel.
Rigger on power development.	Beauharnois, Que.....	" 12	29	Struck by end of girder.
Truck driver on dock construction.	Midland, Ont.....	" 15	33	Drowned when his truck skidded off dock while dumping it.

Trade or Industry	Locality	Date	Age	Cause of Fatality
CONSTRUCTION—Con.				
<i>Miscellaneous—Con.</i>				
Worker on dam construction.....	Near Fitzroy Harbour, Ont.	Dec. 16	34	Struck by steam shovel.
Worker on canal construction.....	St. Louis de Gonzague, Que.	" 16	29	Delayed dynamite explosion while blasting rock
Lineman on power line construction...	Luseland, Sask.....	" 20	26	Crushed by poles falling from car.
<i>Electric light and power—</i>				
Worker at power plant.....	Hamilton, Ont.....	Oct. 1	31	Electrocuted while removing steel tower.
Substation worker.....	Hamilton, Ont.....	" 25	27	Electric burns from accident in plant. Died Nov. 7.
Worker at power plant.....	Lloydminster, Alta.....	Nov. 24	26	Electrocuted.
Electrician.....	Swift Current, Sask.....	" 29	22	Fell from pole.
Lineman.....	Toronto, Ont.....	Dec. 17	47	Burned when he touched live wire while working on pole.
Dynamo tender at power house.....	Ottawa, Ont.....	" 29	44	Complication from electric shock received on January 5, 1926.
Troubleman.....	Quebec, Que.....	" 31	35	Injured when he jumped from train on way to work.
TRANSPORTATION AND PUBLIC UTILITIES—				
<i>Steam Railways—</i>				
Conductor.....	Smith Falls, Ont.....	Oct. 1	60	Stumbled and fell beneath wheels when he stepped from train.
Worker.....	Port Moody, B.C.....	" 1	54	Struck by train.
Sectionman.....	Bigsby, Ont.....	" 2	42	Struck by train.
Brakesman.....	Sydney, N.S.....	" 9	55	Crushed by runaway car while repairing broken coupling.
Section worker.....	Near Cornwall, Ont.....	" 10	24	Struck by train.
Fireman.....	Sarnia, Ont.....	" 14	35	Electrocuted while carrying poker when it touched power line.
Yardman.....	Farnham, Que.....	" 16	25	Caught between couplings during switching operations.
Switchman.....	Coronation, Alta.....	Nov. 1	37	Struck by locomotive.
Gang labourer.....	Milton, Ont.....	" 12	22	Struck by train.
Labourer.....	Lytton, B.C.....	" 12	55	Struck by train.
Carman.....	Port Mann, B.C.....	" 13	43	Fell under cars during switching operations. Died Nov. 23.
Bridge carpenter.....	London, Ont.....	" 17	53	Fell on his head when he jumped from moving train. Died Nov. 18.
Patrolman.....	Toketer, B.C.....	" 20	41	Struck by train on curve.
Labourer.....	Beaconsfield, Que.....	Dec. 2	54	Struck by train. Died Dec. 3.
Brakeman.....	Near St. Laurent, Que.....	" 12	44	Collision of freight train with his engine.
Engineer.....	Toronto, Ont.....	" 15	41	Run over by engine.
Engineer.....	Near Killaly, Sask	" 16	52	} Train derailed.
Fireman.....			46	
Mail clerk.....			42	
<i>Street and Electric Railways—</i>				
Motorman.....	Edmonton, Alta.....	Dec. 6	44	Collision of two street cars.
Trolleyman.....	Preston, Ont.....	" 19	50	Fell from top of car to ground.
<i>Water transportation—</i>				
Longshoreman.....	St. John, N.B.....	About Oct. 3	46	Injured by fall while at work at rigging during painting of bridge. Died Dec. 1.
Worker on tug.....	Powell River, B.C.....	" 7	56	Gasolene explosion. Died Oct. 12.
Ferryman.....	Lachine, Que.....	" 10	42	Fell into canal and drowned.
Captain of tug.....	Lake Winnipeg, Man.....	" 22	18	} Drowned when boiler of tug exploded.
Engineer of tug.....			25	
Longshoreman.....	Campbellton, N.B.....	" 24	20	Crushed under descending sling load of sulphite which was being loaded into freight hold.
Worker on canal.....	Welland, Ont.....	" 27	46	Fell into canal and drowned.
Worker in steamship co. storeroom.....	Vancouver, B.C.....	" 29	70	Fell down elevator shaft.
Longshoreman.....	Montreal, Que.....	Nov. 1	32	Bale of cotton fell on him while loading it on ship. Died Nov. 9.
Longshoreman.....	Vancouver, B.C.....	" 6	50	Fell from wharf and drowned.
Deckhand on sand and gravel boat.....	Point Edward, Ont.....	" 17	48	Thrown into water and drowned when line dorry upset.
Sailor on tug boat.....	Quebec, Que.....	" 20	20	Drowned.
Longshoreman.....	Vancouver, B.C.....	" 24		Struck by piece of steel which was being loaded on boat.
Oiler.....	Near Vancouver, B.C.....	Dec. 1	22	Slipped and fell under whirling crankshaft.
Lighthouse keeper.....	Otter Head, Ont.....	" 1	63	Fell 40 feet from engine room steps.
Labourer loading ship.....	Woodfibre, B.C.....	Dec. 2		Struck by falling bale of pulp.

Janitor.....	Vancouver, B.C.....	Nov. 23	Fell down elevator shaft. Died Nov. 29.
<i>Professional establishments—</i> Nightwatchman at church.	Montreal, Que.....	Oct. 13	72	Injured when he went up to steeple to wind clock. Died Oct. 16.

SUPPLEMENTARY LIST OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING
FIRST THREE QUARTERS OF 1930

Trade or Industry	Locality	Date	Age	Cause of Fatality
AGRICULTURE AND STOCK-RAISING— Teamster.....	Penticton, B.C.....	Sept. 15	Cut up by disc harrow.
Farmer.....	Plympton Twp., Ont.....	" 27	46	Pinned underneath water tank when engine and tank went into ditch. Died Oct. 1.
LOGGING— Driver.....	River Franche, Que.....	May 20	26	Fell into river from dam and drowned.
Teamster.....	Fort Frances, Ont.....	July 18	53	Struck by falling timber while loading it on wagon.
Boom labourer.....	Point a Nadeau, Que.....	Sept. 19	34	Fell off boom into river, pneumonia. Died Oct. 9.
FISHING AND TRAPPING— Fisherman.....	Epenanza Inlet, B.C.....	" 13	30	Fell overboard and drowned.
Trapper.....	Near Fort William, Ont.....	" 23	65	Struck by train.
Deckhand.....	West Coast Vancouver Island, B.C.	" 24	17	Drowned.
Fisherman.....	Port Dover, Ont.....	" 28	17	Fell over edge of dock and drowned.
MINING, NON-FERROUS SMELTING AND QUARRYING— <i>Metalliferous mining—</i> Miner.....	Sherridan, Man.....	Feb. 24	33	Struck by bolt from clevice of cable when it fell from collar of shaft. Died Nov. 19.
Miner.....	Kootenay Lake, B.C.....	July 24	42	Drowned when boat capsized.
Mine worker.....	Ogden Township, Ont.....	About Aug. 15	Carbon monoxide poisoning in mine.
Machinist.....	Copper Cliff, Ont.....	" 6	39	Struck in stomach by file when it caught in revolving sheave. Died Oct. 3.
Machine runner.....	Schumacher, Ont.....	" 12	34	Premature explosion during blasting operations.
Labourer.....	Galetta, Ont.....	Sept. 13	44	Silicosis. First laid off Aug. 2, 1929.
Foreman.....	Sulphide, Ont.....	" 16	57	Silicosis. First laid off Oct. 1, 1929.
Miner.....	Anyox, B.C.....	" 16	28	Fell off mine trip. Died Sept. 19.
Miner.....	Lake Dubuisson, Que.....	" 28	40	Drowned from canoe while crossing lake in storm.
Miner.....	23
<i>Coal mining—</i> Driver.....	Nanaimo, B.C.....	May 23	39	Injured by fall of rock. Died Sept. 18.
Driver.....	Michel, B.C.....	June 5	37	Hit by truck. Died Nov. 2.
<i>Structural materials—</i> Labourer in stone quarry.	St. Samuel, Que.....	July 14	49	Fell off embankment. Died Oct. 17.

SUPPLEMENTARY LIST OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING
FIRST THREE QUARTERS OF 1930—*Concluded*

Trade or Industry	Locality	Date	Age	Cause of Fatality
MANUFACTURING— <i>Textiles and clothing—</i> Mechanic with art silk mfrs.	Drummondville, Que.....	About Jan. 2	53	Fell down stairs. Died Jan. 8, 1930.
<i>Pulp and paper products—</i> Contractor.....	Chateau Richer, Que.....	Sept. 22	57	Heart disease aggravated by his work. Died Dec. 15.
<i>Iron, steel and products—</i> Labourer at implement plant.	Hamilton, Ont.....	Sept. 11	42	Injured by fall from ladder while putting on belt on Sept. 30, 1921.
CONSTRUCTION— <i>Buildings and structures—</i> Tinsmith.....	Ottawa, Ont.....	June 27	62	Ruptured while attempting to stop ladder from being blown down.
Plasterer's helper....	Roblin, Man.....	Sept. 17	37	Slipped and fell down basement steps. Fractured skull.
Labourer.....	Contrecoeur, Que.....	" 20	20	Electrocuted.
Carpenter.....	Montreal, Que.....	" 22	39	Fell off window sill. Died Oct. 3.
Labourer with contractors.	Chicoutimi, Que.....	" 24	43	Nephritis aggravated by his work. Died Dec. 16.
Engineer.....	Estevan, Sask.....	" 28	49	Car overturned. Spine fractured.
<i>Highway and bridge—</i> Checker.....	National Park Highway, Sask.	" 18	32	Thrown under wheel when he jumped off truck.
Labourer.....	Near Brampton, Ont.....	" 26	22	Truck in which he was riding to work collided with another truck. Died Sept. 29.
TRANSPORTATION AND PUBLIC UTILITIES— <i>Steam railways—</i> Freight trucker.....	Windsor, Ont.....	May 12	61	Struck by reel of wire while unloading it from car, paralysis. Died Nov. 22.
Labourer.....	Craven, Sask.....	July 7	42	Sunstroke.
Labourer.....	Pinkie, Sask.....	Aug. 2	32	Struck by train, skull fractured.
Truckman.....	London, Ont.....	Sept. 19	67	Crushed while riding on coach truck during switching operations. Died Sept. 21.
Labourer.....	Medicine Hat, Alta.....	" 30	35	Buried by cave-in of ditch.
<i>Street and electric railways—</i> Electrician.....	Montreal, Que.....	Sept. 28	50	Burned when he came in contact with high tension wire. Died Oct. 5.
<i>Water transportation—</i> Master mariner for fur traders.	Vancouver, B.C.....	June 3	58	Drowned.
Lightkeeper.....	Welcome Island, Ont.....	" 25	73	Skin disease contracted while painting boat. Died Sept. 14.
Navigation officer....	Prince Rupert, B.C.....	Aug. 3	48	Fell down hold. Died Oct. 13.
Watchman for barge Co.	Anyox, B.C.....	About Sept. 4	30	Slipped from wharf and was drowned.
Watchman.....	Port McNicoll, Ont.....	" 15	17	Fell overboard and drowned while closing gangway door on ship.
Second engineer on motor ship.	Hudson Bay, Man.....	" 27	Exposure when lifeboat was battered after ship ran ashore in storm. Died Oct. 15.
<i>Local transportation—</i> Repair foreman.....	Petersfield, Man.....	" 29	23	Car overturned, fractured skull.
ELECTRIC LIGHT AND POWER— Lineman.....	Joliette, Que.....	July 17	22	Electric shock. Died July 24.
TRADE— <i>Wholesale—</i> Truck driver for brewery.	Near Teviotdale, Ont.....	Sept. 30	30	Thrown off truck when it swerved.
<i>Retail—</i> Labourer with lumber merchants.	Carleton, Que.....	Aug. 9	50	Struck by post. Died Oct. 6.
Truck driver for merchant.	Cranbrook, B.C.....	Sept. 23	19	Gassed in tank car.
SERVICE— <i>Public administration—</i> Patrol.....	Kamloops, B.C.....	Aug. 6	Car backed over precipice.
Labourer with public works.	Lumberton, B.C.....	Sept. 29	50	Foot slipped and caught by drive shaft.

SUPPLEMENTARY LIST OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING
1929

Trade or Industry	Locality	Date	Age	Cause of Fatality
LOGGING—				
Logger.....	Ruskin, B.C.....	June 11	24	Covered by slide. Died Sept. 28, 1930.
Bushman.....	Timmins, Ont.....	Dec. 4	Struck by log while sawing logs. Died June, 1930.
MINING, NON-FERROUS SMELTING AND QUARRYING—				
<i>Coal mining—</i>				
Miner.....	Stellarton, N.S.....	Dec. 7	54	Fall of coal, fractured spine and ribs. Died Oct. 19, 1930.
<i>Non-metallic mineral mining and quarrying, n.e.s.—</i>				
Mill cleaner at asbestos mine.	East Broughton, Que.....	" 6	34	Heart lesion aggravated by fall. Died July 19, 1930.
CONSTRUCTION—				
<i>Highway and bridge—</i>				
Labourer.....	Admaston Twp., Ont.....	June 11	51	Injured when horses bolted when operating scraper. Died Nov. 21, 1930.
Cement finisher.....	Montreal, Que.....	Aug. 17	45	Tuberculosis aggravated by contusion of lombar region. Died June 25, 1930.
TRANSPORTATION AND PUBLIC UTILITIES—				
<i>Air Transportation—</i>				
Pilot.....	North of Lake St. John, Que.	Oct. 9	{Plane crash in snow storm and perished.
Mechanic.....				

Employers Oppose Changes in Quebec Compensation Act

The Montreal Board of Trade, on January 14, adopted the following resolution:—

"Whereas, the present Workmen's Compensation Act, certain provisions of which the Provincial Government now proposes to amend, was adopted only two years ago after careful and thorough investigation, first by a Royal Commission in 1925 which reported against a state insurance system, and, second, by a committee, appointed in 1927, which studied the systems in operation in other provinces and States on this continent; and whereas, the present act assures the payment of such compensation as the parties agree upon with the approval of the Workmen's Compensation Commission, or as may be fixed by that commission, within the provision of the act, thereby guaranteeing to the beneficiaries fair and equitable treatment, with adequate safeguards for the payment in full of such compensation; and whereas, if necessary, the scale of compensation fixed by the present act may be re-adjusted without resorting to the principle of compulsory state insurance; and

whereas, the adoption of compulsory state insurance, as presently proposed, would be unwarranted and arbitrary, and would entail a greater burden on industry in this province, without its having been established that workmen or their dependents have, under the present system, failed to receive in full compensation to which they have been entitled;

"Therefore resolved: That the council of the Montreal Board of Trade earnestly urges the Provincial Government to refrain from instituting a system of state insurance for workmen's compensation until it can be shown by further investigation by an independent and competent commission that the change would benefit those in whose interest the present act was primarily designed, by minimizing the risk of accident and by rendering the payment of indemnities more certain, while keeping the tax on industry as low as compatible with adequate compensation to those honestly entitled thereto, three considerations which the present act as now administered substantially fulfils."

RECENT LEGAL DECISIONS AFFECTING LABOUR

Sunday Labour Unlawful in Manitoba

The police magistrate at Winnipeg refused to convict a man who was charged with "carrying on the business of his ordinary calling on the Lord's Day," the ground of the refusal being that there was no law in Manitoba specifically forbidding him to do so. The charge was laid under Section 4 of the Lord's Day Act (Revised Statutes of Canada, 1927, chapter 123), which reads:—

It shall not be lawful for any person on the Lord's Day, except as provided herein, or in any provincial Act or law now or hereafter in force, to sell or offer for sale or purchase any goods, chattels or other personal property or any real estate, or to carry on or transact any business of his ordinary calling, or in connection with such calling, or for gain to do, or employ any other person to do, on that day, any work, business, or labour.

The magistrate submitted to the Manitoba Court of Appeal the question whether or not he was right in his refusal, which was based on the judgment of that court, subsequently affirmed by the Judicial Committee of the Privy Council, in the Sunday Excursions case (LABOUR GAZETTE, January, 1925, page 91). That case turned on the provisions of Section 7 of the Lord's Day Act, which prohibits certain work on Sunday "except as provided by any provincial Act or law now or hereafter in force." It was held that the provincial Act in question, making provision for Sunday excursions, was within the competence of the Legislature of Manitoba; and that therefore the prohibition contained in the Dominion Act did not apply.

Mr. Justice Dennistoun, in the course of his judgment in the Court of appeal, after a full discussion of decisions in previous cases on this subject, answered the magistrate's question as follows:—

"The conclusion I arrive at is that there is no provincial Act or law in Manitoba which makes provision for the exercise of one's ordinary calling on Sunday within the meaning of the exception contained in section 4 of the Lord's Day Act, and that the defendant in the case at bar should have been found guilty. The learned magistrate was of course quite justified in holding as he did, relying upon previous utterances of this Court. The defendant should not be further pressed upon the present charge. It is sufficient that the law be now clarified for the future guidance of all concerned."

—*Rex versus Thompson* (Manitoba), 1931, *Western Weekly Reports*, vol. 1, page 26.

Jewish Sabbath Recognized by Quebec Lord's Day Act

Action was brought in the Recorder's Court at Montreal against a Jewish firm of clothing manufacturers, on the charge that they had violated the provisions of the Lord's Day Act (Revised Statutes of Quebec, 1927, chapter 199) by operating their plant on Sunday. In the complaint laid it was charged that 50 men and 15 women were at work cutting, sewing and pressing clothing in the defendant's factory on a Sunday of November. The work was going on quietly and without disturbing any one, and there was no trading or packing or shipping. It was established that this factory is closed from five p.m., on Friday until 8 a.m., on Sunday, from conscientious motives on the part of the employer. The defendant claimed that the complaint must be dismissed, basing his assumption on section 7 of the Act, which reads as follows:—

"Notwithstanding anything contained in this division, whosoever conscientiously and habitually observes the seventh day of the week as the Sabbath Day, and actually abstains from work on that day, shall not be punishable for having worked on the first day of the week, if such work does not disturb other persons in the observance of the first day of the week as a holy day, and if the place where such work is done is not open for trade on that day."

Recorder Semple dismissed the complaint on the ground of the exception expressed in the foregoing section.

During the course of the argument the true meaning of the words "Sabbath day" was under consideration. It was urged that according to the Hebraic interpretation these words mean from sundown on Friday to sundown on Saturday. This, Recorder Semple observed, is clearly against the words of the statute: "whosoever conscientiously and habitually observes the seventh day of the week as the Sabbath day." The statute recognizes the importance of the Sabbath day, but determines it as commencing at midnight on Friday and ending at midnight on Saturday. This fact, however, did not affect the defendant, because it was shown that the clothing factory was closed all day Saturday, thus complying with the provision of law which allowed it to fall under the exception in the statute.

Agreement Restricting Employee's Future Undertakings is Invalid

The last issue of the *LABOUR GAZETTE*, page 112, contained a note on the case of *Kadesh versus Thuna Balsam Remedies Limited*, in which the judge declared to be invalid a clause in a contract of employment which purported to restrict the employee's activities subsequent to the term of his employment. The same question arose recently in connection with an agreement between a barber and the proprietor of a hairdressing establishment at Sudbury, Ontario. This agreement contained the following clause:—

"After the termination of the agreement by such notice or otherwise, the said apprentice will not, directly or indirectly, enter into competition with the said employer in the said business in or within a radius of 25 miles of the town of Sudbury for a period of five years. Provided, however, that this covenant shall not apply in the event of a sale by the said employer."

After about a year the employee gave one week's notice of leaving, as required by the agreement, and took a position in a similar establishment in the same city. The employer brought action against the employee in the Ontario Supreme Court for breach of contract.

Mr. Justice Fisher, in giving judgment against the plaintiff, said:—"The contract must be strictly construed. The defendant, after giving the one week's notice, was entitled to sever his connection with the plaintiff and become an employee of any person or firm in the same business as the plaintiff. In becoming a 'hair expert operator' with another firm, he was not entering 'into competition with said employer in the said business.' If this is not the proper construction of the agreement as applied to the facts, the action may be considered from another point of view. This contract, being in restraint of trade and contrary to the interests of the public, though that is not pleaded, will not be enforced.

"Sudbury is now a city of upwards of 10,000 inhabitants. Considering the nature of the business, to restrict one who is engaged as an employee in respect of an area of 25 miles for five years is an unreasonable restriction and more than is reasonably required for the protection of the business of the employer. If the restricted area had been confined to a few blocks or even half a mile from the plaintiff's shop, it may be that the defendant should be restrained from setting up a like business in opposition to the plaintiff within that area.

"This action is based upon a contract between employer and employee, and it is upon a different footing from an action upon a covenant exacted on the sale of a business

and its goodwill. In the present case it is not suggested that there is anything confidential in the business, or that there are any trade secrets that can be divulged or given away to others to the detriment of the employer, or that, after the defendant severed his connection, he canvassed the plaintiff's customers; and, as the law recognizes the right of every man to earn his livelihood, this contract, binding for five years on an employee, and applying to an area of 25 miles from Sudbury, is not, having regard to all the circumstances, reasonable; in reference to the respective interests of the parties, and is also prejudicial to the interest of the public, and therefore void."

The action was therefore dismissed with costs.

Mayer versus Lanthier (Ontario), 1931, *Ontario Weekly Notes*, Vol. 37, page 346.

A "menial servant" may be dismissed on one month's notice

A farm worker agreed to work for a farmer in Saskatchewan from March 11 to November 1, 1930, for the sum of \$350, and continued in the employment until May 15, when the farmer assaulted and dismissed him. He brought action against his employer claiming wages for the time he had worked, damages for the breach of contract of hiring, and damages for the assault. The defence consisted of a denial of the hiring and of the assault, and with reference to the contract of hiring the defendant said that he engaged the plaintiff as a farm labourer at a monthly wage of \$45. The defendant paid into Court the sum of \$68, in full satisfaction of the plaintiff's claim. The trial judge dismissed the action with costs, but on appeal the Saskatchewan Court of Appeal set that judgment aside.

Mr. Justice Turgeon pointed out that the plaintiff was immediately subject to the defendant's orders in carrying out his duties, and that he was therefore a "menial servant" in the legal sense of the term.

Mr. Justice Martin, in the course of his judgment said:—"Where a contract of employment is for a definite time, and the employee is dismissed without cause, he may at once commence action for the breach of contract. The measure of damages is the actual loss sustained; the amount of damages may be much less than the wages for the unexpired period, depending upon the plaintiff's success in obtaining equally good employment elsewhere. In the case of menial servants, however, usage has established the

right to dismiss at any time by giving a month's notice, or a month's wages in lieu of notice. . . .

"In the present case, the plaintiff falls within the category of menial servants, and the contract of employment, therefore, could be terminated by one month's notice, or by the payment of one month's wages in lieu of notice, namely, the sum of \$45. . . .

"In the result, the appeal should be allowed with costs, the judgment below set aside, and judgment entered for the plaintiff for the sums of \$94.60, \$45 and \$27, in all the sum of \$166.60, less the amount of \$23.70, for which the defendant is entitled to credit, leaving a balance of \$142.90, and the costs of the action."

—*Peidl versus Bonas* (Saskatchewan), 1931, *Western Weekly Reports*, vol. 1, page 225.

Union Agreement Held Enforceable in New York State

The International Association of Bridge, Structural, and Ornamental Ironworkers entered into a contract with a group of eighteen iron erectors in New York under the title of Structural Steel Board of Trade. One of the terms of the agreement was that only members of the union should be employed in the metropolitan area, which includes parts of New Jersey, Connecticut, Long Island and Westchester County. The employers having engaged outside labour, the union sought an injunction restraining the employers' group from violating their contract with the union.

Supreme Court Justice Black held for the plaintiff that the ten-year contract made between the union and the employers, organization on May 22, 1930, was valid, and that the latter had broken the agreement. He therefore granted a preliminary injunction.

The preliminary injunction requires the employers to carry out the terms of the contract,

which provides for the exclusive use of union men, the inclusion of non-union employees in the union, and the arbitration of all disputes.

The *New York Times* of January 4, states that this action, which was brought as a suit for \$3,500,000 damages, was the first case of its kind in which a contract made on behalf of a labour union with an employers' organization—in this case organized under the membership corporation law—was held to be enforceable and immediate relief granted. About 7,000 ironworkers were involved in the action. The agreement made last May, the *Times* continues, was for the settlement of the twenty-five year old dispute between the union and the steel erecting companies. At the last moment the employers declined to enforce the agreement, holding that for various reasons it was invalid, while the union made many efforts to have the matter adjusted through the officials of the United States Department of Labor, but without success.

Supreme Court Justice Cotillo, in a decision given at New York on January 11, declared that the existing emergency in regard to unemployment did not justify the practice followed by city marshals, acting under orders from Mayor Walker, of delaying or refusing to serve eviction warrants on tenants who were unable to pay their rent. Referring to the Mayor's suggestion the judge said:—"It is proposed to permit tenants to continue in possession, for a limited time though it may be, without payment. Well-intentioned and humane though the proposal may be, those who have made it have lost sight of the fact that it amounts to a shifting of public responsibility upon a single class which is not financially able to bear it, and which, even if able to do so, should not, except to the extent of its share in the general burden, be morally required to do so."

[NUMBER 3

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

A SLIGHT decrease from the preceding month was noted in industrial employment in Canada at the beginning of February, according to returns received by the Dominion Bureau of Statistics from 7,431 firms, each with a minimum of fifteen employees. The staffs of these firms on February 1 aggregated 904,315 persons, as compared with 913,080 on January 1. This decline caused the index (average, 1926=100) to stand at 100.7, while in the preceding month it was 101.7, and on February 1, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, it was 111.6, 110.5, 102.0, 96.6, 91.8, 87.1, 91.7, 90.6, 79.9 and 91.2, respectively. Important recovery was shown in manufacturing, especially of textile and iron and steel products, while improvement was also reported in railway construction and in shipping and stevedoring. On the other hand, important declines were noted in highway and building construction, in trade, mining and logging. In many cases, these contractions were of a seasonal character. The returns are representative of employment in all industries except agriculture, fishing, hunting and highly specialized business.

At the beginning of February, 1931, the percentage of unemployment reported to the Department of Labour by local trade unions throughout Canada stood at 16.0, as compared with percentages of 17.0 at the beginning of January, 1931, and 10.8 at the beginning of February, 1930. The percentage for February was based on the returns received by the Department of Labour from an aggregate of 1,866 labour organizations including 210,402 members.

Reports received by the Department of Labour from the offices of the Employment Service of Canada showed a slight decline from December in the volume of business recorded during January, as shown by the average daily placements effected, but a substantial gain over January a year ago. Vacancies in January, 1931, numbered 55,185, applications 86,044, and placements in regular and casual employment 53,972.

The average cost of a weekly family budget of twenty-nine staple foods was \$9.44 at the beginning of February, as compared with \$9.86 for January; \$11.83 for February, 1930; \$11.15 for February, 1929; \$11.03 for February, 1928; \$11.23 for February, 1927; \$11.50 for February, 1926; \$10.93 for February, 1925; \$10.75 for February, 1924; \$10.53 for February, 1923; \$10.61 for February, 1922; \$14.08 for February, 1921; \$16.92 for June, 1920 (the peak); \$12.54 for February, 1918; and \$7.75 for February, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was again lower at 76.0 for February, as compared with 76.7 for January; 94.0 for February, 1930; 95.0 for February, 1929; 96.8 for February, 1928; 97.6 for February, 1927; and 102.2 for February, 1926.

The loss in working time caused by industrial disputes in Canada during February was considerably greater than in the preceding month but was less than the corresponding loss in February, 1930. Eight disputes were in progress at some time during the month, involving 1,966 workers, and resulting in the loss of 9,505 working days. Corresponding figures for January, 1931, were: six disputes, 560 workers, and 4,840 working days; and for February, 1930, six disputes, 2,959 workers, and 14,360 working days.

Social policy of the Dominion Government

The Speech from the Throne at the opening of the Parliament of Canada on March 12 referred to the great economic depression existing throughout the world, and to the measures proposed by the Government for improving conditions in the Dominion. "It will be your privilege," the speech stated, "to consider certain measures designated by my ministers to ameliorate existing conditions, to provide further means by which our people may go forward to achieve prosperity heretofore unattained, and to furnish them with all possible safeguards against a recurrence of the present subordination to world forces."

The speech made reference to the Government's belief that "domestic factors have largely determined the degree of economic distress from which this country is suffering," and proceeded as follows: "It was this belief which impelled my ministers at the emergency session of Parliament held in September last to remove one of the root weaknesses in our industrial system by effecting such then possible changes in the tariff as would, in their opinion, provide substantial security against harmful world competition. Although in the interval world conditions have changed but little for the better this tariff legislation has resulted in a marked improvement in the domestic situation through the strengthening of established industries, and in addition many others, formerly exporters to Canada, have now become producers in Canada.

"The operation of the Unemployment Relief Act, 1930, has proved equally beneficial. While the grant authorized by this Act could not immediately have checked unemployment arising from causes of which you have full knowledge, yet its careful administration by my ministers, ably aided by the provincial and municipal governments and the two great railway systems, has resulted in the institution of a nation-wide program of public undertakings, each one a unit in a scheme of national development, which have collectively provided work for the greatest number of men who have ever been employed through the direct efforts of the Federal Government."

After a reference to the recent Imperial Conference, which is to be resumed at Ottawa next summer for the purpose of completing agreements for closer Empire trade, the speech dealt with the measures to be taken for the orderly marketing of the wheat crop of western Canada, including the effecting of a reduction in the cost of production and marketing and the providing of more stable markets.

Other legislation contemplated by the Government was outlined in the following paragraph:—

"The broad outline of the general scheme of national development undertaken by my Government, including provision for old age pensions, aid to agriculture, technical education and highway construction, has already been made known. My ministers are persuaded that this general scheme cannot advantageously be altered. Careful consideration has therefore been given to the progressive stages by which it will be carried out, and you will be asked to consider measures sanctioning such action as the current econo-

mic situation warrants, and such as can be undertaken without undue demands upon the national exchequer."

Industrial fatalities in Canada in 1930

This issue contains the annual report on industrial fatalities which occurred in Canada during the calendar year 1930. The number of workers who met their death in the course of their employment reached the large provisional total of 1,607, and this figure may be increased by later reports. The revised figure for 1929 was 1,766, so that a slight improvement is evident in 1930, although the reduction may be partly due to the decline in the volume of industrial employment last year. The report includes tables showing the distribution of the fatal accidents by industries, by causes, by localities, and by months. This annual report supplements the quarterly reports on industrial fatalities which appear from time to time in the *LABOUR GAZETTE*.

It is recognized that the increasing pace of industrial production exposes the workers to increased risks, but on the other hand the concerted efforts now being put forth by safety organizations are showing results in holding down the number of accidents. Some idea of the extent of the collaboration among safety organizations was given at the recent annual meeting of the Province of Quebec Safety League where it was stated that the League maintained a continuous exchange of information with the following bodies:—The Canadian National Safety League; the Industrial Accident Prevention Associations of Ontario; Ontario Safety League; Maritimes Safety League; British Columbia Safety League; National Safety Council, (U.S.A.); International Safety Survey Department, League of Nations, Geneva; National Safety First Association (Great Britain); Institute of Highway Engineers (England); Swedish Association for the Protection of Workers (Sweden); The Swiss Federal Association for the Prevention of Accidents, etc.; The Association of German Labour Officials and Inspectors; Association of Belgian Manufacturers for the Prevention of Industrial Accidents; The Association of Italian Manufacturers for the Prevention of Industrial Accidents; The New South Wales Safety First Association (Australia); The Association of French industries against labour accidents; Central Austrian Office for Accident Protection (Vienna); International Association of Industrial Accident Boards and Commissions (Washington, D.C.).

New Workmen's Compensation Act of Quebec

The Hon. J. N. Francoeur, minister of Public Works and Labour, introduced in the Quebec Legislature last month the new Workmen's Compensation Act which had been forecast in the opening Speech from the Throne (LABOUR GAZETTE, December, 1930, page 1365). The bill mainly follows the Ontario Act, providing for the establishment of an Accident Fund to be made up of contributions paid by employers of labour, and to be administered by the Workmen's Compensation Board. The amount of compensation for disabilities is to be estimated on the basis of 66½ per cent of average weekly earnings, the maximum annual salary considered in this calculation being \$2,000. In fatal cases the widow will receive \$40 a month, with an additional monthly payment of \$10 for each child under 16 years of age. A full account of the provisions of the Act will be included in the outline of this year's labour legislation which will appear in a future issue of the LABOUR GAZETTE.

New Brunswick Commission on Workmen's Compensation

The Speech from the Throne at the opening of the Legislature of New Brunswick announced that the government had appointed a Commission to make a full investigation of the financial affairs of the Workmen's Compensation Board and to suggest practical means for the prevention of accidents. Reference was made to the changes in the Act that had been suggested recently by the representatives of organized labour in the Province (LABOUR GAZETTE, February, 1931, page 178). The Commission is instructed to investigate this and all cognate subjects. The final reports of the New Brunswick Commission on Old Age Pensions and Mothers' Allowances are outlined elsewhere in this issue.

Proposed periodical revision of Compensation Act

The Saskatchewan Branch of the Canadian Manufacturers' Association recently suggested to the provincial government that in order to place the Workmen's Compensation Act on a stable basis, prevent continual requests for amendments and the friction which this engenders, and in order also to conserve the time of the government and legislature, the Act be opened for revision only once in every five years; and that on such occasions a committee representative of the workmen, employers and the legislature be appointed to confer and agree on proposed amendments.

Old age pensions in the United States

The February issue of the *International Labour Review*, the official monthly journal of the International Labour Office, contains an article on old age pensions in the United States by Mr. Maurice Stack, of the Social Insurance Section of the International Labour Office. In an introductory note to this article, it is stated that "in the United States the problem of providing workers with means of support during the periods when they cannot earn their living has, except in the special case of industrial accidents, hardly been recognized as being in principle a matter of public responsibility. The prevailing doctrine has been that the solution of this problem is the responsibility of each individual: let him accumulate savings or, if he will, join with others to insure their common risks. This doctrine has been abandoned in most parts of Europe because it has been found that most workers do not in fact cover their risk, either because their wages do not allow a sufficient margin, or because they are improvident or prone to optimism: hence it has been necessary to establish systems of compulsory insurance. If the doctrine endures in the United States, it may be because real wages are much higher than in Europe, at least in the case of skilled workers, and therefore the workers are supposed to be better able to cover their risk on their own initiative. Their common individualistic outlook and dislike of government interference has led both trade unions and employers to oppose compulsory contributory insurance, but both have established schemes of sickness, old age and unemployment insurance for their members or workers. A vast business in working-class life insurance is conducted by commercial companies. Finally, the logic of facts has obliged governments in almost every State to introduce workmen's compensation for industrial accidents. At the present time a widespread campaign is being waged for and against legislation to provide non-contributory old age pensions. The purpose of Mr. Stack's article is to examine briefly the methods and adequacy of the voluntary provision against old age and the nature of the legislation which is being advocated as a supplement to such provision."

Problems of railway transportation in 1930

The Bureau of Railway Economics, established by the railways of the United States for the scientific study of transportation problems has published a review of railway operations in 1930, prepared by Julius H. Parmelee, the director of the Bureau. The writer states that while the

railway faced many problems in 1930, growing out of the world-wide depression of that year, they also confronted a number of economic problems not related to the depression.

"The greatest of these was the rising tide of competition from other agencies of transportation, which some have thought might eventually engulf the railway industry. Briefly stated, the growth in number and use of the private passenger automobile and the common carrier autobus has whittled down the passenger traffic to less than three-fifths of the volume of 1920. The private, contract, and common carrier motor truck operates in ever-widening zones of activity, and has brought an increasing element of freight competition into the picture. Additional elements are the growth of hydro-electric and other power plants, which indirectly tend to reduce coal consumption and coal movement by rail; rapid expansion in the pipe line industry, which has come to cover the piping of gasoline and natural gas, as well as the cruder oils; inland waterway development, fostered by large and increasing government appropriations for river and canal improvements."

The railway executives are asking that the measures of regulation now applied to their operations should be applied also to their competitors and that the government should withdraw from subsidized competition with the railways and give the carriers a respite from rate reductions and other unfavourable regulations. The pamphlet concludes as with the following plea:—

"The nation must recognize that its economic welfare in the future depends on a modern and co-ordinated system of transportation, and that only a long look ahead, and an earnest and intelligent survey of present and future policy with respect to the development of the several agencies of transportation, will preserve the most effective agencies in full vigour, and will enable them adequately to meet the demands for transportation service."

Federal and local share in Health Units

The United States Public Health Service recently issued a report which suggests that the development of efficient whole-time local health organizations, through which all necessary public health activities may be conducted in proper sequence and in proper relation one to the other, is a program which should be enlarged and extended. As has been indicated by President Hoover, in a message to Congress, this should be based on local and State responsibility: "But the Federal Government," it is stated, "also has an obligation of contributing to the establishment of such agencies. It is agreed by experienced public health authorities that any program limited

to special diseases or particular elements of the population is not economical and leads to confusion. There is no doubt that adequate local health organizations provide the machinery through which all public health activities may be conducted, thereby insuring to communities a well balanced comprehensive and general public health program adapted to their needs. It is believed that it would be of advantage to place such co-operative work on a more permanent basis, and to provide for it for a term of years rather than from year to year."

At a national conference of **Amalgamation of trade unions affiliated to the Labour Unions in South Africa Trade Union South Africa** Congress and Cape Federation of Labour Unions which was held in Cape Town in October, 1930, it was formally agreed to constitute a new South African Trades and Labour Council as the official voice of organized labour in South Africa. The National Executive Committee of the South African Trade Union Congress has now recommended all its affiliated unions to transfer their affiliation to the newly constituted Trades and Labour Council as from January 1, 1931.

Several other unions in the Cape Province and the Transvaal which have hitherto not been affiliated to either of the existing bodies have agreed to affiliate to the new Trades and Labour Council. These unions are mainly organizations of workers in the food and catering industry. The Cape Federation of Labour Unions is consulting its affiliated unions on the question of affiliation to the new Council. It is also reported that the Department of Labour has agreed to recognize the Council as the channel of communication with South African organized labour on national and international matters.

Alberta proposes unemployment insurance conference

On February 16 the Alberta Legislature unanimously adopted the following resolution, which was moved by the premier, the Hon. Mr. Brownlee: "That having regard to the heavy financial obligation upon the Province and Municipalities by reason of the present unemployment and relief situation; and

"Further having regard to the probability that notwithstanding any improvement in financial and economic conditions reasonably anticipated this year there will still be a very substantial amount of unemployment this summer and next winter;

"Now, therefore, this Assembly is of the opinion that a conference should be held as early as possible this summer between the Dominion Government and the Governments

of the Provinces, together with representatives from the larger Municipalities, to formulate plans leading to a solution of this problem in the light of the experience of the present winter, and that the Government should communicate with the Governments of Canada and of the Provinces to this effect."

Quinquennial Census for British Columbia

The Speech from the Throne at the opening of the British Columbia Legislature on February 11, announced that the provincial government had conducted negotiations for the establishment of a quinquennial census similar to that now taken in the Prairie Provinces. It was stated to be provisionally understood that this request would be granted, and would be put into effect following the Dominion census of the present year.

Under the Census and Statistics Act of 1905 and the Statistics Act of 1918, a census of the population and agriculture of the three Prairie Provinces was taken in 1906, to be repeated every tenth year thereafter, in addition to the decennial census of the whole Dominion, which is taken in the intermediate decennial periods (1921, 1931, etc.).

Vocational training and technological unemployment

The Director of the United States Board for Vocational Education suggests that the national system of vocational training may be utilized to relieve unemployment resulting from the introduction of new machinery and of new operations and processes in industry. To this end he asks employers and workers to keep the vocational schools informed as to new types of work for which training is needed. Training for new jobs, he states, is sometimes provided by labour unions for their members, by employers for their own workers, and by State or local educational services by means of special or "opportunity" courses. In order to make these systems generally effective he asks for full co-operation between the vocational school authorities and employers and workers.

"The province of the vocational school in relieving technological employment is to re-train for new jobs those who have been thrown out of employment. The employer can give the school authorities information on employment opportunities for which the school can train workers, and can frequently provide equipment for this training which the school does not possess. The worker on the other hand knows the requirements of specific occupations, information which is invaluable to the school in setting up vocational courses. For the information and assistance it needs in

setting up courses, therefore, the school must look to the employer and the employee groups."

Measures in various countries to cope with unemployment

The British Government's recent measures for the relief of unemployment in 1930 were outlined in the last issue of the LABOUR GAZETTE, page 169. A summary of the measures taken or recommended by the governments of various other countries to lessen unemployment, appears in *Industrial and Labour Information*, the weekly publication of the International Labour Office, in its issue of February 9, as follows:—

The German Minister of Finance has proposed that some of the funds now devoted to the relief of unemployment should be used to subsidise undertakings which would agree to provide employment for the workers concerned. In a statement recently published the French Minister of Labour said that employers had been invited to reduce hours of work rather than dismiss workers. The head of the Italian Government has expressed the opinion that the causes of the present depression are, among others, Soviet dumping, customs barriers, expenditure on armaments, political insecurity, the fall in the price of silver, and the hoarding of gold by certain countries; he added, however, that the principal cause of the depression was the lack of balance between production and consumption. Both in Yugoslavia and in Bulgaria labour representatives have asked the public authorities to take steps for the relief of unemployment by expediting public works. The results of the recent census of unemployment in Japan have now been published, and the Government has decided to undertake a scheme of public works on a national basis.

U.S. Chamber of Commerce seeks to stabilize employment

The United States Chamber of Commerce is organizing a concerted effort by American industry to stabilize employment and to insure business in future against the disturbing effects

of recurring economic depressions. Mr. Julius Barnes, the chairman, stated on February 9 that a committee composed of business executives and economists was being formed, and that its work would consist of promoting greater co-operation among trade organizations. United efforts will thus be made to supplement the efforts of individual corporations to strengthen the "key industries" throughout the country, and with a substantial number of workers relieved of unemployment it is hoped that a framework will be provided to give greater rigidity to the structure of industry. Mr. Barnes stated that the Chamber

was convinced that the movement could start from the trade associations, and he believed that if a certain number of trades could give their workers the assurance of uninterrupted employment a formidable barrier would be erected against the recurrent waves of depression.

Some views on unemployment insurance

(page 120), at its first session, heard the case for and against unemployment insurance argued by experts and business men. Professor William Leiserson of Antioch College, a member of the Ohio State Unemployment Commission, held that unemployment insurance means nothing more or less than an extension of the workmen's compensation which is in effect in most states. "Workmen's compensation is not paid out as damages for injuries in industrial employment," he said. "It is in payment for lost time. Unemployment and the consequent loss of wages cannot be eradicated. The risk must be considered."

Professor Paul H. Douglas of the University of Chicago stated his belief that unemployment will be pronounced for ten years or more, with longer periods of depression and shorter stretches of "good times" than we have had in the past. If workers are to be protected by unemployment reserves against these ups and downs, he held, it must be by mandatory legislation. After a decade of experimenting, he pointed out, less than one per cent of the country's workers are protected by voluntary funds. "It is a crucial fact that business men in general will not want to assume added costs which will place them at competitive disadvantage with other firms which do not take similar action."

Mr. James D. Craig, an actuary of the Metropolitan Life Insurance Company, which six months ago undertook a study of unemployment insurance at Governor Roosevelt's request, told the conference that he felt insurance for seasonal unemployment could be placed on an actuarial basis. "For technological unemployment it is a question. It would be necessary to experiment in the industrial relations field to accumulate the necessary actuarial experience, and we could do that if we were permitted by law to do it."

Industrial policies in times of depression

be followed by firms in times of reduced oper-

The conference of Governors of seven States on the subject of industrial depressions, to which reference was made in the last issue

of the last issue of the *Labour Gazette*, held that unemployment insurance means nothing more or less than an extension of the workmen's compensation which is in effect in most states. "Workmen's compensation is not paid out as damages for injuries in industrial employment," he said. "It is in payment for lost time. Unemployment and the consequent loss of wages cannot be eradicated. The risk must be considered."

Professor Paul H. Douglas of the University of Chicago stated his belief that unemployment will be pronounced for ten years or more, with longer periods of depression and shorter stretches of "good times" than we have had in the past. If workers are to be protected by unemployment reserves against these ups and downs, he held, it must be by mandatory legislation. After a decade of experimenting, he pointed out, less than one per cent of the country's workers are protected by voluntary funds. "It is a crucial fact that business men in general will not want to assume added costs which will place them at competitive disadvantage with other firms which do not take similar action."

Mr. James D. Craig, an actuary of the Metropolitan Life Insurance Company, which six months ago undertook a study of unemployment insurance at Governor Roosevelt's request, told the conference that he felt insurance for seasonal unemployment could be placed on an actuarial basis. "For technological unemployment it is a question. It would be necessary to experiment in the industrial relations field to accumulate the necessary actuarial experience, and we could do that if we were permitted by law to do it."

President Hoover's Emergency Committee for Employment published in January a short report making suggestions as to the best industrial policies that could

be followed by firms in times of reduced operation and employment. These suggestions are based upon the practice of progressive companies which reported their policies to the Committee during its inquiries. A summary of the approved procedure is given as follows:—

"1. The policy upon which a company is acting in regard to employment procedure should be clearly determined and definitely stated, either for management use or for general announcement, as seems best. Concentration of authority to see that the policy adopted is followed out is generally deemed essential.

"2. Consultation with representatives of the workers affected, in the determination and application of procedure, is usually helpful in insuring that policies agreed upon may be fair as between individuals.

"3. The maintenance of accurate and complete records of procedure and experience is helpful as a basis for future action.

"4. Co-operative interchange of information on procedure and experience among companies in the same community, industry, region, or affiliated group, is proving to be most valuable."

Community promotion of industry

New developments of industrial activity in various centres in Canada during the coming year are forecast in *Agricultural and Industrial Progress in Canada*, the monthly publication of the Canadian Pacific Railway Company. "The western outlook," it is stated, "is steadily improving and confidence is being shown in all industries and trade. There is a better understanding of the causes of the economic situation with which commerce has been struggling, the successful outcome of which is now becoming apparent."

The Toronto Industrial Commission reports that during 1930 thirty new industrial firms were making ready to begin manufacturing operations in the city; besides these, 160 British, European and United States firms stated that they are definitely considering the establishment of plants in Canada, while 184 other firms are regarded as "prospects." The Industrial Commissioner of Montreal also is initiating a new policy for attracting new industries to that centre. "Community promotion," it is stated, "has only recently found favour in the Dominion, but it may now be regarded as a proved system which yields good returns for the money invested. The Toronto Industrial Commission is notably justifying its existence by bringing new industries and commercial enterprises to the city. While Montreal's experiment will be carried out along different lines, its general principles will be the same."

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

Employment

THE employment situation throughout Canada at the end of February was reported by superintendents of the Employment Service of Canada to be as follows:—

There were no orders received for farm help in the Province of Nova Scotia, the majority of the farmers being busy hauling ice, breaking roads or sawing cordwood cut during the winter. Heavy storms hindered the hauling of logs and only a few requests for choppers had been received. Plentiful supplies of haddock and fresh cod were available, and lobster fishermen were busy preparing for the season. The majority of the mines at Stellarton, Thorburn, Westville and in the vicinity of Sydney operated five days a week. Manufacturers of food stuffs and confectionery, also the oil refineries, reported business as being steady, while the iron and steel companies only showed a fair amount of activity. Building construction at Halifax was progressing rapidly, with municipal street and sewer work being carried on by the various districts. A number of men were also employed by the railroads and bus companies for snow shovelling. Transportation, both freight and passenger, was for the most part fair, as was also trade. An improvement was shown in the demand for women domestic workers and placements made accordingly.

Very little activity in farming took place in the Province of New Brunswick, though in some districts farmers were busy hauling furnace wood for domestic use. City markets were well stocked, with not much change recorded in prices. Fishermen along the Shediac and Kent shores reported lobster fishing as good, while at Chatham lobster fishermen were busy repairing factories and building boats and traps. Logging remained quiet. Manufacturers of confectionery and foodstuffs stated business was good, and woodworking factories and foundries were busy. Pulp and paper manufacture had fallen off, with several departments closed owing to over-production. A partial lay-off was reported among cotton goods workers at Saint John, a proportion of the staff in one factory taking week about. Building construction at Chatham was quiet, but considerable work continued on the highways. At Moncton, no permits had been issued, while at Saint John, excellent progress was being made on all jobs underway, with additional work soon to be started at West Saint John. Passenger, freight and bus traffic was

heavy, and longshore men also were moderately busy. Retail trade was fairly good, clearance sales continuing in some localities, and wholesale houses were fairly busy on spring shipments. Few permanent positions for domestics were offered, but a considerable number of charwomen were placed in employment.

Scarcity of farm orders prevailed in the Province of Quebec. Sherbrooke was the only centre to report placements in logging. Mining also showed no improvement. In manufacturing, Montreal returns showed greater activity in boot and shoe and textile factories. Printing trades likewise were busy, but clothing was quiet, as was also tobacco and cigars, with a curtailment noted in rubber. Quebec reported leather trades in general, active, but furs and clothing slack. Sherbrooke, alone, stated manufacturing conditions were satisfactory, while at Three Rivers they were normal, with the exception of paper manufacturing, which was very quiet. Very few orders were reported in the building trades at Montreal, a few labourers having been placed. The municipal government, however, had employed during February, an average of 6,000 men on repairs and snow removal. In Quebec City construction was active, but maintenance quiet. Important projects in building construction were expected to be under way very soon in Hull, for which many men would be required. Building trades were quiet at Sherbrooke, and at Three Rivers the only activity was the continuation of work already underway. With the exception of Sherbrooke where conditions were satisfactory, trade was only fair. In the Women's Domestic Section an increase in the number of orders and placements was shown in several localities.

Stratford and London were the only districts in which farm orders were being received to any extent by employment offices in the Province of Ontario. Very little employment was afforded in the logging industry, due to the small cut during the past few months and the lateness of the season, thus leaving a surplus of this class of labour in the North Country, for whom no other work was available. No expansion was shown in mining, and as a consequence, many men usually engaged in this class of work were seeking other employment. Conditions in the manufacturing group were also quiet, with no marked improvement to record. The pulp and paper industry was at a standstill at Sault Ste. Marie, but showed increased activity at Timmins. Conditions in

the rubber industry at Kitchener were less favourable. Iron and steel foundries at Welland were on a better footing, but not doing so well at Sault Ste. Marie and Peterborough. Textile factories at London were re-absorbing

old hands, while automobile plants at Windsor were still on short time. Practically the only source of employment under construction and maintenance at this season is relief work undertaken by municipalities and government

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA
(Official Statistics except where noted)

	1931		1930	1930		1929
	February	January	December	February	January	December
Trade, external, aggregate.		96,047,920	128,390,702	149,071,910	160,279,066	174,842,396

(8) MacLean's Building Review.

(5) Figures for end of previous months.

(6) Sugar production given in periods of four weeks.

(6) Figures for four weeks ending February 28, 1931, and corresponding previous periods.

(10) The index of the physical volume of business includes forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughterings of cattle, sheep and hogs; storage holdings of butter and cheese.

authorities. It was hoped, however, that new projects soon to be underway would provide work for many of the building tradesmen and unskilled labourers now idle. Orders were slowly coming in to the Women's Domestic Section, but applicants, in some cases, were difficult to place, owing to lack of experience and references, or to the poor type of worker available. Casual placements were also fewer in number.

A few enquiries for farm help for early spring were made in the Province of Manitoba; otherwise there was little demand. Logging was quiet, the close of the season being partially responsible for this. Mining likewise showed no improvement. Conditions in manufacturing were somewhat better. Due to unusually fine weather, prospects were excellent for an early start on construction in the City of Winnipeg and projects already underway were proceeding rapidly. Elsewhere, there was little doing, other than that afforded by the relief plan. Trade was fair. The demand for experienced women domestics was slightly greater, but a substantial decline occurred in the number of orders for day workers.

The demand for farm help in the Province of Saskatchewan remained practically unchanged, with the number of applicants increasing. There was also little activity in logging, the lack of snow making it difficult to haul cordwood. Miners were working only one or two shifts per week. Building construction was very quiet, and though some road maintenance was being carried on, conditions in this group were not favourable. Relief work in several cities, however, helped somewhat to relieve the situation. A large number of enquiries were made regarding railroad work, but nothing was in sight. Orders were being placed for women domestic workers, and where Saskatoon reported a shortage of applicants for city and country domestic work, other offices had a surplus of registered workers on hand.

The demand for farm help in the Province of Alberta remained fair, with applicants plentiful and little difficulty in filling orders where wages were offered. A few bushmen were placed, the conditions in this industry being much slacker than usual. Coal mines, which had been in operation, were gradually closing down, thus increasing the number of unemployed seeking work on the various relief schemes in progress throughout the province, which for the most part took the form of construction of water mains and highway improvement. Little actual building construction was reported, with prospects for the immediate future in this line none too bright. Manufac-

turing industries were running very quietly, with no demand for extra help. Trade also was quiet. The majority of work offered in the Women's Domestic Section was of a casual nature, with sufficient help on hand to meet the demand.

There were few immediate requests for farm hands in the Province of British Columbia, however enquiries had been received for spring help. Little improvement was evident in logging and lumbering, though several small portable tie mills in the Fraser Valley were about to resume cutting. Little activity was also shown in mining, either coal or metal. Manufacturing was quiet, but shingle and saw mills were in better condition than during previous weeks, even if still much below normal capacity. Sash and door factories were particularly slack, and several had closed down. The drydock and shipyard at Prince Rupert was not so busy, a number of mechanics having been discharged, while longshoring and shipping there, and at Vancouver, was extremely quiet. Very little general building was taking place. Government road construction, however, was still being carried on, and this along with relief work on sewers and mains, sponsored by various municipalities, was about all the work available for the average labouring man. Few orders were received for railroad work. Trade, both retail and wholesale, was only average. Lists of applicants for positions in the Women's Domestic Section continued to grow, the advanced age of some of the workers, or the lack of experience of others, along with the scarcity of calls, being the chief handicaps in the situation. On the whole, little improvement was shown in the labour situation throughout the province.

Employment showed a slight decrease at the beginning of February; the Dominion Bureau of Statistics tabulated

from 7,431 firms, whose staffs aggregated 904,315 persons, as compared with 913,080 on January 1. Reflecting this decline, the index (average 1926=100) stood at 100·7 at the beginning of February, while in the preceding month it was 101·7, and on February 1, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, it was 111·6, 110·5, 102·0, 96·6, 91·8, 87·1, 91·7, 90·6, 79·9 and 91·2, respectively.

Reductions were recorded in all provinces except Ontario, where the tendency was upward. In the Maritime Provinces, construction reported especially heavy losses, but decreases were also indicated in logging, mining, communications and trade, while manufacturing

was brisker. In Quebec, manufacturing, (notably of iron and steel and textile products) transportation and railway construction showed increases, but logging, mining, building and highway construction and trade were slacker. In Ontario, considerable gains were made in manufacturing, notably in the iron and steel, textile and lumber divisions. Construction also reported heightened activity, while there were seasonal reductions in trade and transportation, and logging and communication also released employees. In the Prairie Provinces, logging and railway construction were more active, but shrinkage was recorded in trade, highway construction, transportation, mining, manufacturing and communications. In British Columbia, there was recovery in manufacturing, and building and railway construction were rather brisker, but highway construction and services were slacker.

The trend of employment was upward in Montreal, Ottawa, Hamilton, Windsor and the adjacent Border Cities, and Vancouver, while Quebec, Toronto and Winnipeg showed reductions. In Montreal, manufacturers registered substantial recovery, especially in the iron and steel and textile groups, and transportation was also busier, but heavy losses occurred in trade and building construction. In Quebec, manufactures reported curtailment, and trade and construction were seasonally dull. In Toronto, heavy seasonal decreases took place in trade and construction, and transportation was also slacker, but there were important gains in manufacturing, notably in textile factories. In Ottawa, manufacturing was brisker, and improvement was also noted in highway construction, while trade and building were seasonally quiet. In Hamilton, employment showed an increase, mainly in city construction work, although manufacturing was also slightly busier. In Windsor and the adjacent Border Cities, considerable recovery was indicated, chiefly in automobile plants. In Winnipeg, the number employed showed a contraction, mainly in trade and communications, while manufactures were somewhat more active. In Vancouver, the manufacturing, transportation and construction industries reported recovery, but trade and services was slacker.

An analysis of the return by industries shows improvement in manufacturing, notably in the iron and steel and textile industries, but the lumber, leather and non-ferrous metal divisions also registered important gains, while there were losses in animal food, pulp and paper, rubber, building material, electric current and non-metallic mineral plants. Logging,

mining, communications, transportation, construction and maintenance and trade reported curtailment.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of February, 1931.

TRADE UNION REPORTS

Contrary to the unfavourable employment trend of the last few months among local trade unions, the situation at the close of January showed slight improvement. This was indicated by the reports received for January from a total of 1,866 labour organizations with an aggregate membership of 210,402 persons, of whom 33,700 or 16.0 per cent were idle on the last day of the month, compared with 17.0 per cent in December. The level of activity was, however, considerably below that of January, 1930, when 10.8 per cent of the members reported were without work. Quebec unions registered large employment increases from December, due to the more active conditions prevailing in the garment establishments of Montreal. The employment tendency in Nova Scotia was also upward, though the gain recorded was but nominal. Of the declines registered in the remaining provinces none were particularly noteworthy. Ontario and Quebec unions reported reductions from January a year ago which involved the greatest number of workers, and in New Brunswick, Manitoba and Saskatchewan also extensive employment curtailment was noted. Contractions on a more moderate scale were indicated by Alberta and British Columbia unions. On the other hand, Nova Scotia unions registered fractional gains in activity.

A review in greater detail on unemployment among local trade unions appears elsewhere in **this issue**.

EMPLOYMENT OFFICE REPORTS.

Reports from the offices of the Employment Service of Canada for the month of January, 1931, showed 55,627 references of persons to positions, and a total of 53,972 placements. Of these the placements in regular employment were 13,932, of which 10,846 were of men and 3,086 of women, while placements in casual employment totalled 40,040. Vacancies offered by employers to the Service numbered 55,185. Of these 47,853 were for men and 7,332 for women, while applications for employment were registered from 74,383 men and 11,661 women, a total of 86,044. A gain in applications received was shown, when the business of the month was compared with that of the

preceding period, but vacancies and placements showed a decline. All divisions, however, recorded increases over those of January a year ago, the reports for December, 1930, showing 55,675 vacancies offered, 74,171 applications made, and 54,751 placements effected, while in January, 1930, there were recorded 27,365 vacancies, 43,790 applications for work, and 25,929 placements in regular and casual employment. A report in detail of the work of the offices for the month of January, 1931, will be found elsewhere in this issue.

BUILDING PERMITS AND CONTRACTS AWARDED	According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities during January, 1931, was \$7,510,745, as compared with \$15,439,964 in the preceding month, and with \$7,217,397 in January, 1930.
-------------------------------------------------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

The *MacLean Building Review* states that construction contracts awarded throughout Canada during February amounted to \$25,930,100, exceeding those for January by 27.7 per cent, an increase of \$5,631,000. The increase was made up entirely of work in the engineering group, building groups showing a slight decrease. Of the total amount, \$16,304,100 was for engineering purposes; \$5,369,300 was for business buildings; \$3,701,000 was for residential buildings, and \$555,000 was for industrial purposes. The apportionment of the contracts awarded during February, by provinces, was as follows: Quebec, \$11,546,700; Ontario, \$7,813,000; British Columbia, \$2,634,900; Alberta, \$1,212,200; Manitoba, \$1,201,300; Saskatchewan, \$849,400; Nova Scotia, \$512,100; New Brunswick, \$155,500; Prince Edward Island, \$5,000.

Production and Trade

INDUSTRIAL PRODUCTION	Figures showing the volume of production in certain industries during recent months and also in the corresponding months of 1929, are shown in the table on page 272.
--------------------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, states that manufacturing production in Canada showed a further decline in January and considerable irregularity developed during the month. Imports of raw cotton, indicating prospects in the cotton industry, were considerably below the level of the last quarter of 1930. The quantity was 10,151,000 pounds compared with 12,343,000 in December, and

imports are normally greater in January than in the preceding month. Newsprint production showed recession from the level of December, whereas a substantial increase would be normal for the season. Operations were at 57.3 per cent of rated capacity.

Production of pig iron at 35,592 tons was 7 per cent lower than the total of 38,293 tons in December, and less than one half the 87,079 tons made in January of a year ago. At the end of January, the same three furnaces were in blast as on December 31. These active furnaces, located at Sydney, Hamilton, and Sault Ste. Marie, had a daily capacity of 1,400 tons or about 33 per cent of the total capacity of all blast furnaces in Canada. Production of steel ingots and castings amounted to 57,598 tons, a gain of 3 per cent over the 56,101 tons of December.

The output of cars and trucks was 6,496 compared with 5,622 in December, the gain after seasonal adjustment being 22.5 per cent. Imports of crude rubber indicating prospects in the tire and rubber goods industries, were 3,829,000 pounds compared with 3,016,000 pounds in December, representing a substantial gain even after seasonal adjustment. The imports of crude petroleum at 58,975,000 gallons showed considerable decrease from the 69,388,000 gallons imported in December. The index of manufacturing production was 124.0 in January compared with 127.8 in December.

The estimated carryover of wheat at the beginning of the present crop year was 112,000,000 bushels and the final estimate of the 1930 crop was 398,000,000 bushels, making a total of 510,000,000 bushels. Deducting 110,000,000 bushels as an allowance for seed, home consumption and unmerchantable grain, it is calculated that 400,000,000 bushels were then available for export—about 100,000,000 bushels more than for the same season of 1929. The total excess up to the end of January in the exports over the same period of the last crop year was nearly 60,000,000 bushels. Consequently the surplus available on January 31, with no allowance for carryover, amounted to 244,000,000 bushels, or 44,000,000 bushels more than the comparable quantity at the same date in 1930.

Coal.—Canadian output of coal during January of 1,164,498 tons recorded a decline of 24.7 per cent from the five-year average for the month of 1,545,523 tons. January output consisted of 783,246 tons of bituminous coal, 45,707 tons of sub-bituminous coal and 335,545 tons of lignite. Alberta was the leading producing province with an output of 455,307 tons, or 39 per cent of the total production.

Nova Scotia mines produced 438,491 tons, or 38 per cent of the total output. British Columbia's production totalled 166,475 tons; Saskatchewan, 83,411 tons; and New Brunswick, 20,814 tons.

Imports in January declined to a low point, the total for the month was 792,826 tons or 31.1 per cent below the 1926-1930 average for the month of 1,151,493 tons. Receipts of bituminous coal in January totalled 546,263 tons. Anthracite importations amounted to 245,119 tons, made up of 239,420 tons from the United States and 5,699 tons from Great Britain. During the month 1,444 tons of lignite coal were cleared through the ports of British Columbia.

An appreciable falling off was recorded in the exports of Canadian coal during January. Exports for the month totalled 37,017 tons or 65.6 per cent less than the average for January during the period 1926-1930.

Coal available for consumption in Canada during January amounted to 1,920,307 tons, consisting of 245,119 tons of anthracite coal, 1,295,730 tons of bituminous coal, 45,707 tons of sub-bituminous coal, and 333,751 tons of lignite coal. The average January coal supply during the period 1926-1930 was 2,589,317 tons.

EXTERNAL TRADE.

A summary of Canadian trade prepared by the Department of National Revenue shows that in January, 1931, the merchandise entered for consumption amounted to \$50,413,895 as compared with \$60,337,934 in the preceding month and with \$84,662,377 in January, 1930. The chief imports in January, 1931, were: Iron and its products, \$10,051,314; Non-metallic minerals and their products, \$8,246,470; Fibres, textiles and textile products, \$8,024,617.

The domestic merchandise exported during January, 1931, amounted to \$44,682,883 as compared with \$66,819,668 in the preceding month and with \$73,507,326 in January, 1930. The chief exports in January, 1931, were: Wood, wood products and paper, \$14,310,018; Agricultural and vegetable products, mainly foods, \$9,357,271; Non-ferrous metals and their products, \$7,046,881.

Strikes and Lockouts

The time loss due to industrial disputes in Canada in February, 1931, was higher than that occurring during January, 1931, being approximately twice that during the latter month. The number of employees involved also showed a substantial increase owing to a strike of 1,700 dressmakers in Toronto. As compared with February, 1930, while the latter month had two disputes less, double the num-

ber of workers were involved, with a proportionally large amount of time loss, due chiefly to a strike of women's clothing factory workers in Toronto which involved some 2,000 workers for about one week during February last year. There were in existence during the month eight disputes, involving 1,966 workers, and resulting in a time loss of 9,505 working days, as compared with six disputes, involving 560 workers, and resulting in a time loss of 4,840 working days in January. In February, 1930, there were on record six disputes, involving 2,959 workers and resulting in a time loss of 14,360 working days. At the end of the month there were three disputes recorded as strikes or lockouts, involving approximately 1,716 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected, but which had not been formally called off or lapsed.

Prices

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was again considerably lower at \$9.44 at the beginning of February, as compared with \$9.86 for January; \$11.83 for February, 1930; \$11.15 for February, 1929; \$11.03 for February, 1928; \$11.23 for February, 1927; \$11.50 for February, 1926; \$10.93 for February, 1925; \$10.75 for February, 1924; \$10.53 for February, 1923; \$10.61 for February, 1922; \$14.08 for February, 1921; \$16.92 for June, 1920 (the peak); \$12.54 for February, 1918; and \$7.75 for February, 1914. Of the twenty-nine items of foods twenty-four were lower, the most important decline being in eggs, while less important decreases occurred in the prices of beef, bacon, lard, milk, cheese, bread, flour, rolled oats, beans, evaporated apples and prunes. Including the cost of fuel and rent with that of foods the total budget averaged \$19.78 at the beginning of February, as compared with \$20.21 for January; \$22.12 for February, 1930; \$21.41 for February, 1929; \$21.25 for February, 1928; \$21.46 for February, 1927; \$21.87 for February, 1926; \$21.19 for February, 1925; \$21.18 for February, 1924; \$21.17 for February, 1923; \$21.07 for February, 1922; \$24.85 for February, 1921; \$26.92 for July, 1920 (the peak); \$19.80 for February, 1918; and \$14.54 for February, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was again lower at 76.0 for February, as compared with 76.7 for January; 94.0 for February, 1930; 95.0 for February, 1929; 96.8 for February,

1928; 97.6 for February, 1927; and 102.2 for February, 1926. In the classification according to chief component materials one of the eight main groups was higher, while seven were lower. The Vegetables and Vegetable Products group advanced, mainly because of higher prices for wheat, flax, oats, rye, barley, flour, malt, oatmeal and rolled oats, which more than offset declines in the prices of canned fruits, corn, gluten meal, potatoes and hay. The groups which declined were: the Animals and their Products group, due to lower quotations for raw furs, hides, leather and livestock; the Fibres, Textiles and Textile Products group, because of declines in the

prices or raw jute, hessian, raw silk and raw wool, which more than offset higher prices for raw cotton and wool cloth; the Wood, Wood Products and Paper group, due to reduced prices for timber and lumber; the Iron and its Products group, because of lower prices for galvanized steel sheets, wire, scrap iron and steel; the Non-Ferrous Metals and their Products group, due to lower prices for antimony, copper, copper sheets, copper wire, lead and zinc; the Non-Metallic Minerals and their Products group, because of lower prices for gasoline and kerosene; and the Chemicals and Allied Products group, because of reduced quotations for litharge and lamp black.

Nova Scotia Miners Desire Unemployment Insurance

The local union of the United Mine Workers of America at Glace Bay, Nova Scotia, adopted the following resolution on February 24:—

“Whereas, unemployment has steadily increased during the past years in the coal mines of the Province, and whereas, there has been no legislation put into effect to permanently lessen unemployment in the coal industry of this Province; and whereas, having passed through a year of suffering and want to thousands of miners and mine workers of this Province, with no relief in sight; and whereas, there are no means whereby the worker unemployed can sustain his family without having to beg for municipal relief or become dependent on charity; and whereas, municipal, provincial and federal governments all refuse to accept responsibility in providing adequate assistance to the worker unemployed; and whereas, unemployment causes a tremendous amount of privation and distress to the worker where there is no permanent relief for him when unemployed.

“Therefore, be it resolved, that we ask the Provincial Government to immediately place into operation a system of unemployment insurance to assist the workers of this Province from the distressing conditions existing during the past year. Be it further resolved, that we ask the Provincial Government to give one per cent per ton of the royalty which it receives from the coal industry to assist in maintaining unemployment insurance, and

that a tax of one per cent be placed on every ton of coal mined in this Province to maintain an unemployment insurance scheme.”

The annual convention of the Industrial Accident Prevention Association of Ontario will be held at Toronto on April 23 and 24. At this convention, accident prevention will be discussed in detail, looking to a further reduction in accidents and compensation costs.

The ratepayers of Edmonton, Alberta, recently voted by a large majority in favour of a half-holiday for retail clerks in the city for eleven months in each year. The ballot was taken for the purpose of settling a controversy that had been in progress for the past year in regard to the early closing of stores for one afternoon each week. A similar ballot was taken about a year ago, Wednesday afternoon being fixed as the time for closing, Wednesdays in December being excepted. Following the first ballot the City Council obtained from the Legislature an amendment to the City Charter which provided for a half-holiday each Wednesday during May, June, July and December, this arrangement superseding that under the first ballot. The second ballot was then taken with the result mentioned above. As the regulations now stand, the Council has ordered early closing for four months, permitting stores to remain open for the other seven months with the stipulation that all clerks are to be given a half-holiday in each week.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING THE MONTH OF FEBRUARY, 1931

APPPLICATIONS for the establishment of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act were received in the Department of Labour during the past month as follows:—

- (1) From certain employees of the Canadian National Railways, being members of the Brotherhood of Locomotive Firemen and Enginemen. The points at issue related to the perpetuation and application of rules governing "representation" and "regulation of mileage," including conditions under which demoted engineers may take and hold positions of firemen. The number of employees directly concerned in the dispute was stated to be 4,500.
- (2) From certain employees of the Canadian Pacific Railway Company, being members of the Brotherhood of Locomotive Firemen and Enginemen. The dispute in this case concerned the application of the mileage regulations, 4,000 employees being directly affected.

Upon receipt of the above applications the Department endeavoured to bring about a satisfactory disposition of the matters in dispute without the necessity of the establishment of a Board of Conciliation and Investigation and at the close of the month action under the statute was being withheld in each case at the request of the applicants pending further conference on the subject.

Application Withdrawn

An application for the establishment of a Board of Conciliation and Investigation was reported in the February issue of the *LABOUR GAZETTE* (page 129) as having been received from certain work equipment employees of the Canadian National Railways, Atlantic Region, being ditchermen, members of the Canadian Brotherhood of Railway Employees. The application was subsequently withdrawn by the employees concerned, and no board was established.

CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

Outline of Decisions in Recent Cases

THREE new decisions were given recently by the Canadian Railway Board of Adjustment No. 1. Earlier decisions were outlined in the *LABOUR GAZETTE*, January, 1931, page 12, and in previous issues; and the fourth report of the proceedings of the Board covering the period from October, 1927, to September 30, 1930, was issued as a supplement to the issue of December, 1930.

This Board was established under a voluntary agreement concluded in 1918 between the various railway companies and certain of the railway organizations, its original purpose being to secure uninterrupted service on the railways during the continuance of the war. The Board consists of six representatives of labour, one for each of the following railway brotherhoods: the Brotherhood of Locomotive Engineers; the Brotherhood of Locomotive Firemen and Enginemen; the Order of Railway Conductors; the Brotherhood of Railway Trainmen; the Order of Telegraphers; and the Brotherhood of Maintenance of Way Employees and Railway Shop Labourers.

Case No. 369.—Canadian Pacific Railway (western lines) and Brotherhood of Locomotive Engineers.

An engineer in freight service outside the regular schedules was taken off his train and required to "double-head" or run his engine as a second engine on a freight train running in the opposite direction for a distance of eight miles. Later he "double-headed" back to the point where he had left his train, and proceeded to his original destination. The employees claimed that when this engineer was required to run in the opposite direction from his objective terminal, he automatically entered "short-turn" service, and that he should be compensated under Paragraph (d), Article (2) of the Engineers schedule, that is on the basis of mileage or hours of run. The Company contended that no additional mileage was due in such a case, except that payment should be made for overtime over the full trip in accordance with Article 33, clause H. The company claimed further that the paragraph cited by the employees referred only to "turn-around" service, and was not

applicable to a crew used to assist at or between intermediate stations.

The Board denied the claim of the employees.

Case No. 370.—Canadian Pacific Railway (western lines) and Brotherhood of Locomotive Engineers.

An engineer was ordered to be ready at 6.30 a.m., his train to depart at 7 a.m. He came on duty at 5.15 a.m. and performed hostling service until 5.45, at which time the preparatory time of 45 minutes began, as allowed by the Engineer's agreement. The employees claimed that he should be allowed pay for the 30 minutes he was on duty before the preparatory time began, under the provisions of Article 27, which reads as follows:—

(a) Except as otherwise specified, engineers will be paid a minimum of thirty minutes at rate for class of service for hostling engine preparatory to commencement of trip or when putting engine away at completion of same where men are required to do such work, but when it takes more than thirty minutes actual time will be paid for such work. It is understood that engineers will not be required to hostile engine during time paid for by other arbitraries, for the purpose of depriving men of hostling allowance. Duplicate payment will not in any case be made.

(b) Hostling of engine at end of run in short run service may be used to make up a minimum day.

The company contended that 45 minutes was allowed for preparatory time, the 30 minutes from 6.30 to 7 a.m. being allowed for

movement of the train to the station and for taking on water; and further that the engineer was not ordered for or required to report at 5.15 a.m.

The Board decided that under the language of the agreement, in cases in which after coming on duty engineers are required to hostile engines, they are entitled to an allowance of thirty minutes for such service in addition to the thirty minutes preparatory time allowance for service up to the time ordered for.

Case No. 371.—Canadian National Railways (central region) and Order of Railway Conductors and Brotherhood of Railroad Trainmen.

On a heavy ascending grade between North Stratford and Wenlock, a distance of about 8 miles, an assisting engine is operated out of Island Pond to help the way-freight train between these two points, and as the assisting engine is operated out of Island Pond it is allowed to remain coupled with the train to the latter point, a distance of fifteen miles in all. The employees claimed that this practice violated the rule which reads: "Way-freight trains will not be double headed except where there is but one freight train each daily." The company contended that the use of an assisting engine on a way-freight train, when necessitated by physical conditions over a short stretch of territory, does not constitute "double heading" of way-freights as prohibited by the rule above quoted.

The Board decided that the double heading of way-freight trains from North Stratford to Island Pond as a practice was in conflict with the provision of the agreement as stated.

STRIKES AND LOCKOUTS IN CANADA DURING FEBRUARY, 1931

THE number of strikes and lockouts in existence in Canada during February, 1931, was eight, as compared with six in the preceding month. Owing to a strike of 1,700 dressmakers at Toronto the number of workers involved showed a considerable increase, being 1,966 as compared with 560 for January, while the time loss was about twice as large, 9,505 working days being lost in February as compared with 4,840 in January. Comparing the figures with those for February, 1930, while the latter month had only six disputes, there was double the number of workers involved, with a proportionally large amount of time loss, due chiefly to a strike of women's clothing factory workers in Toronto which involved some 2,000 workers for about one week during February last year.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Feb. 1931...	8	1,966	9,505
*Jan. 1931...	6	560	4,840
Feb. 1930....	6	2,959	14,360

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and

disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Three disputes, involving approximately one hundred and forty workers, were carried over from January (information as to one of these, fur workers in Toronto, is included for the first time in this issue) and five disputes commenced during February. Of these eight disputes, four terminated during the month and one was recorded as having lapsed. Of these five disputes, four were recorded as resulting in favour of the employer and one in favour of the workers, leaving three recorded as un-terminated at the end of February, namely: clothing factory workers, Toronto, Ont., motion picture projectionists, Ottawa, Ont., and waitresses, Vancouver, B.C.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not yet declared terminated. Information is available as to six such disputes, namely: electrotypers, Toronto, Ont., Dec. 20, 1926, one employer; photo engravers, Toronto, Ont., Jan. 7, 1929, one employer; bakery drivers, Saskatoon, Sask., Sept. 22, 1930, one employer; upholsters, Toronto, Ont., Dec. 10, 1930, one employer; and coal miners, Shaughnessy, Alta., Jan. 15, 1931, one employer. The dispute involving motion picture projectionists in Vancouver, B.C., since June 23, 1930, carried in this list for some months, appears to have lapsed during February.

Reference has been made in the press to a reported dispute between fishermen and owners of boats engaged in the halibut fisheries operating from Vancouver and Prince Rupert over the renewal of the agreement as to the fishermen's share of the catch, etc. It has been reported that there was a cessation of work for a time toward the end of February, but that an agreement was reached involving some changes from that previously in force, but particulars as to the dispute and settlement have not been received.

The following paragraphs give particulars regarding certain disputes in addition to the information in the tabular statement:

COAL MINERS, SHAUGHNESSY, ALTA.—In connection with this dispute, reported in the February issue of the *LABOUR GAZETTE*, early in the month, at the request of the union, a representative of the Labour Department attempted to bring about a settlement by conciliation. The manager stated that as two agreements with the union had been violated he would deal in future only with his own employees, and that as he had signed an agreement with a committee of the employees who had resumed work he had all the men necessary for carrying on operations for the time being. The representative of the workers claimed that the trouble would not have occurred if the management had dealt with the officers of the union. The dispute was therefore not settled, but as employment conditions appeared to be no longer affected, it has been recorded as terminated from February 5, 1931, and added to the list of strikes and lockouts which have not been called off by the union under those conditions.

FUR WORKERS, TORONTO, ONT.—Employees in two establishments ceased work on January 14, 1931, against a reduction in wages that was claimed to be in violation of an agreement not expiring until April, 1932. The employer claimed that the dispute was the result of a misunderstanding. On February 16, work was resumed under the wages and conditions of the agreement.

PILE DRIVERS, BRIDGE BUILDERS AND HOISTING ENGINEERS, VANCOUVER, B.C.—This dispute, occurring on January 3, 1931, as the result of a protest against the employment of any but union members, appears to have lapsed, the workers involved having been replaced by January 17.

WOMEN'S CLOTHING FACTORY WORKERS (CLOAKMAKERS) AND SYMPATHETIC STRIKE OF DRESSMAKERS AND FURRIERS, WINNIPEG, MAN.—Cloakmakers in one establishment, about sixty in number, ceased work on February 4 protesting against a reduction in wages for some of the classes alleged to be from ten per cent to thirty-five per cent and the laying-off of about fifteen employees. The employees had desired that the work available should be divided among the regular staff. On February 10 dressmakers and furriers in the same establishment ceased work in sympathy with the cloakmakers. A number of employees temporarily laid off are reported also to have joined in the sympathetic strike, bringing the

number up to about eighty. A number of employees in each class on strike remained at work, and the strikers were replaced to a great extent. The establishment was picketed and some of the pickets were arrested, including one of the union organizers of the Industrial Union of Needle Trades Workers of Canada. Two of those arrested were fined for disorderly conduct and assault. On February 25 the strike was called off by the union, the employer making no concessions to the strikers.

CLOTHING FACTORY WORKERS, TORONTO, ONT.—Employees in about seventy dressmaking establishments in Toronto ceased work on February 25, 1931, the demand of the union, the International Ladies' Garment Workers' Union, for an agreement with the dressmaking

manufacturers' association having been refused. Negotiations had been in progress since early in the year, and the officials of the Ontario Department of Labour mediated between the parties but without securing a settlement. A union official estimated that eighty per cent of the employees in these establishments were on strike. In connection with picketing a number of strikers were arrested for interfering with the entry of workers into the shops. At the end of the month the dispute was still unterminated. On February 27, three firms were reported to have made agreements with the union, followed by others early in March.

MOTION PICTURE PROJECTIONISTS, OTTAWA, ONT.—Employees in three theatres operated by one proprietor, became involved in a dispute

STRIKES AND LOCKOUTS IN CANADA DURING FEBRUARY, 1931

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
(a) Strikes and Lockouts in Progress Prior to February, 1931			
MINING, ETC.—			
Coal miners, Shaughnessy, Alta.....	90	350	Commenced Jan. 15, 1931; against dismissal of workers; employment conditions no longer affected by February 5, 1931.
MANUFACTURING—			
<i>Fur, Leather and other Animal Products—</i>			
Fur workers, Toronto, Ont....	50	600	Commenced Jan. 14, 1931; against reduction in wages; terminated Feb. 14, 1931; in favour of workers.
CONSTRUCTION—			
<i>Bridge—</i>			
Pile, drivers, bridge builders and hoisting engineers, Vancouver, B.C.....			Commenced Jan. 3, 1931; against employment of any but union members; lapsed early in February.
(b) Strikes and Lockouts Commencing during February, 1931			
MANUFACTURING—			
<i>Textiles, Clothing, etc.—</i>			
Clothing factory workers, (cloakmakers), Winnipeg, Man.....	60	1,000	Commenced February 4, 1931; against reduction in wages and staff; terminated Feb. 25, 1931; in favour of employer.
Clothing factory workers (dressmakers and furriers), Winnipeg, Man.....	50	500	Commenced Feb. 10, 1931; sympathy with strike of cloakmakers; terminated Feb. 25, 1931; in favour of employer.
Clothing factory workers (dressmakers), Toronto, Ont	1,700	6,800	Commenced Feb. 25, 1931; for union wages and working conditions; unterminated.
SERVICE—			
<i>Recreational—</i>			
Motion picture projectionists, Ottawa, Ont.....	6	30	Commenced Feb. 23, 1931; to maintain union working conditions; unterminated.
<i>Business and Personal—</i>			
Waitresses (restaurant), Vancouver, B.C.....	10	225	Commenced Feb. 3, 1931; against reduction in wages unterminated.

regarding the engagement of union employees. The employer reported that the men were immediately replaced. The union picketed the establishments involved, and at the end of the month the dispute was untermated.

WAITRESSES, VANCOUVER, B.C.—Employees in two restaurants ceased work on February 3, 1931, protesting against a reduction in wages of twenty per cent, the rates in one establishment being reduced from \$15.00-17.00, with

meals, per week of forty-eight hours, to \$12.00-14.00. It was reported that in January twelve restaurant operators proposed to the union that wages should be reduced twenty per cent owing to a falling off in business. The union refused to accept this change in the existing agreement, and ten of the restaurants, employing chiefly men, withdrew the proposal. The other two gave up their union cards, and at the end of the month the dispute was untermated.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE following article brings down to date the information given in the issue for February, 1931, in the review of Strikes and Lockouts in Canada and Other Countries, 1930. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Information about particular disputes is obtained for the most part from newspaper reports.

Great Britain

During January, 37 new disputes were reported and 13 were still in progress from the previous month, making a total of 50 disputes in progress, involving 281,800 workpeople and resulting in a time loss of 3,397,000 working days for the month. Of the 37 disputes beginning in the month, 17 arose out of wages questions, 5 out of questions as to working hours, 10 on questions respecting the employment of particular classes or persons and 5 on other questions of working arrangements. Settlements were reached in 37 disputes, of which 7 were in favour of workpeople, 14 in favour of employers and 16 ended in compromises.

The dispute in the cotton manufacturing industry which began during January and was reported in the LABOUR GAZETTE, February, page 132, was terminated February 13. It was estimated that at the end of January, the number of workers involved was about 120,000. The settlement of the dispute provided that the "more looms to a weaver" experiment at Burnley would be discontinued.

Irish Free State

Statistics for the year 1930 show the number of disputes beginning in the year as 83, affecting 128 establishments and 3,410 workpeople.

The total time loss for the year was 77,417 working days.

Of the 83 disputes beginning in the year, 39 were over wages questions, 27 over the engagement or dismissal of workers, 4 over hours of labour and 9 over other questions as to conditions of employment, 3 were over trade union questions or refusal to conclude a collective agreement and one was a sympathetic dispute.

Settlements were reached in 76 disputes: in 15 cases the workers' claims were wholly admitted, in 23 cases admitted in part and in 20 cases rejected; in 5 cases employers' claims were wholly successful, in 4 cases successful in part and in 7 cases rejected; two other disputes had an indeterminate result.

Germany

During January, a dispute occurred in the Ruhr coal mining district. Employers wished to reduce wages 12 per cent, but the coal miners were willing to accept only a reduction of 4 per cent. Partial strikes occurred during the first part of January which involved, it was reported about 35,000 workers. An award by a conciliation committee recommending a reduction of 6 per cent in wages was rejected by both parties, but was later declared binding by the Minister of Labour.

United States

The number of disputes beginning in December was 22 and 11 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 6,361, and the time loss 279,119 working days for the month.

A strike of woollen mill workers at Lawrence, Massachusetts, involved directly and indirectly about 10,000 workers and lasted for a week in February. The strike was a protest against an increased amount of work to be assigned to employees; the workers decided on February 26, to resume work.

ORDER IN COUNCIL PROHIBITING CERTAIN IMPORTATIONS FROM SOVIET UNION

THE following Order in Council relating to imports from the Union of Soviet Socialist Republics of coal, wood-pulp, pulpwood, lumber and timber, asbestos and furs, was published in *The Canada Gazette*, February 28, 1931:—

(463)

At the Government House at Ottawa, Friday, the 27th day of February, 1931.

Present: His Excellency the Administrator in Council.

Whereas it is provided by section 2, chapter 3, of the 21 George V (Second Session)—“An Act to amend the Customs Tariff”—that the Governor in Council may from time to time prohibit the importation into Canada of any goods exported directly or indirectly from any country not a contracting party to the Treaty of Versailles, and that any order prohibiting the importation into Canada of any goods from any such country shall be published in the next following issue of *The Canada Gazette*.

And whereas the Minister of National Revenue reports that it has been established

to his satisfaction that the Union of Soviet Socialist Republics was not a contracting party to the Treaty of Versailles aforesaid:

And whereas the Minister of National Revenue further reports that, having regard to the documentary and other evidence that has been received by the various Departments of the Public Service in Canada, it is in the public interest that the importation into Canada from the aforesaid Union of Soviet Socialist Republics of coal, wood-pulp, pulpwood, lumber and timber of all kinds, asbestos and furs, should be prohibited:

Therefore, His Excellency the Administrator in Council, on the recommendation of the Minister of National Revenue, is pleased to order that the importation into Canada of coal, wood-pulp, pulpwood, lumber and timber of all kinds, asbestos and furs from the Union of Soviet Socialist Republics be and it is hereby prohibited.

This Order in Council shall be published in the issue of *The Canada Gazette*, appearing on the twenty-eighth day of February, 1931.

E. J. LEMAIRE,
Clerk of the Privy Council.

ORDER IN COUNCIL RELATING TO VALUATION OF AUTOMOBILES IMPORTED INTO CANADA

Order in Council

(297)

At the Government House at Ottawa, Thursday, the 19th day of February, 1931.

Present: His Excellency the Administrator in Council

Whereas it is provided by Section 37 of The Customs Act as follows:

“37. In determining the fair market value for duty of goods imported into Canada, the prices of which are published or listed by the manufacturers or producers, or persons acting on their behalf, the Governor in Council may from time to time fix and determine a certain rate of discount which may be applied to such published or listed prices, and such published or listed prices, subject to deduction of the amount of discount according to such rate, shall be deemed and taken to be the fair market values of any such manufactures or productions respectively as are specified in such Order in Council.”

And whereas the prices of automobiles and other motor vehicles manufactured or produced and imported into Canada are published or listed by the manufacturers or producers thereof, such published or listed prices being the prices at which the goods are sold to the consumer thereof;

And whereas sales by the manufacturers or producers to others than consumers, such as

dealers or distributors, are made on the basis of such published or listed prices less a discount, which discount varies from time to time according to trade conditions and is not uniform or stable.

Now therefore, His Excellency the Administrator in Council, on the recommendation of the Minister of National Revenue, and under the powers granted by Section 37 of The Customs Act, is pleased to fix and determine a rate of discount of 20 per cent, which may be applied to the prices of automobiles or other motor vehicles, excepting motorcycles, so published or listed by manufacturers or producers thereof; such published or listed prices, subject to deduction of a discount of 20 per cent to be deemed and taken to be the fair market value of such goods, on importation into Canada under the General Tariff, and to be the value for duty thereof on such importation into Canada by others than consumers, provided, however, that such fair market value be not less than the price actually paid by the importer to the exporter for the goods, and that for duty purposes on importation of such goods into Canada where the discount allowed in the home market is less than 20 per cent, no greater discount shall be allowed from such published or listed prices than is allowed on sales of such goods in the home market to the consumers thereof.

E. J. LEMAIRE,
Clerk of the Privy Council.

ANNUAL REPORT OF DEPARTMENT OF LABOUR OF CANADA FOR FISCAL YEAR ENDING MARCH 31, 1930

THE annual report of the Department of Labour of Canada for the fiscal year ended March 31, 1930, recently issued, describes the various activities of the Department in the interest of labour. The following statutes are now administered under the authority of the Minister of Labour: (1) The Labour Department Act providing for the collection of labour statistics and for its monthly publication in the *LABOUR GAZETTE*; (2) The Conciliation and Labour Act; (3) The Industrial Disputes Investigation Act; (4) The Government Annuities Act; (5) The Old Age Pensions Act; (6) The Employment Offices Co-ordination Act; (7) The Technical Education Act; (8) The Combines Investigation Act; (9) The White Phosphorus Matches Act. The Minister of Labour administers also the Fair Wages Policy of the Federal Government, including since May 30, 1930, the administration of the Fair Wages and Eight Hour Day Act.

The report refers to the decline in industrial activity during the period covered. "Business activity, which moved steadily forward during the first few months of the fiscal period, slackened as it became evident that the western crops would, owing to the drought, be much smaller than in any of the four preceding years. Other retarding conditions then developed. Not only was the volume of grain harvested in Western Canada substantially less than in 1928, but an unprecedentedly large percentage of what was produced remained unsold in Canadian elevators. The smaller crop, coupled with the increased use of farm machinery, resulted in no demand being made upon Eastern Canada for harvest workers for the Prairie Provinces; consequently, for the first time in a quarter century no harvest trains were run to the West. This crop condition instantly resulted in a reduction of purchasing power, the rise of doubt concerning trade stability, and the reduction of employment opportunities for railway workers. Following sharply upon this situation came the stock market crash, in which was registered the effects of the unfavourable world-wide economic conditions which have continued to the present time to depress industry and create an unhealthy state of employment."

Industrial Disputes Investigation Act

This chapter of the report constitutes the twenty-third annual report of the Registrar of Boards of Conciliation and Investigation.

Applications for the establishment of Boards of Conciliation and Investigation received during the fiscal year numbered twenty-three; twenty-six disputes figure, however, in the record, proceedings having been continued over from the preceding fiscal period in three cases. Over 28,000 employees were directly concerned in these disputes, which were distributed amongst different industries as follows: steam railways, 12; street and electric railways, 4; shipping, 2; telegraphs, 2; light and power, 2; and disputes not falling clearly within the direct scope of the statute, 4. Fourteen boards were established, one of which dealt with two applications. Ten boards reported during the year. No interruption of work occurred following the award of a Board of Conciliation and Investigation.

All reports and minority reports made by boards or members of boards established under the provisions of the Industrial Disputes Investigation Act were, as required by the statute, published in the *LABOUR GAZETTE*, the official monthly journal of the Department of Labour.

In addition to its application to industrial disputes in mines and public utility industries coming within the jurisdiction of the federal authorities, the Industrial Disputes Investigation Act is operative in respect to similar disputes falling within the provincial sphere in British Columbia, Alberta, Saskatchewan, Manitoba, New Brunswick, and Nova Scotia, these provinces having taken the necessary legislative action. Three boards established during the year came within this category. The provinces of Ontario, Quebec, and Prince Edward Island have not yet enacted enabling legislation on the subject. Proceedings also took place during the year in connection with a board which had functioned during 1927.

With respect to ten cases before the department in which boards were not granted, settlements were effected by departmental mediation in three instances and negotiations were still in progress in one dispute at the close of the fiscal year. In three cases falling outside the direct scope of the statute consent to the establishment of a board was withheld by the employer. One application was held in abeyance at the request of the applicants, and in the two remaining disputes it was not possible to apply the provisions of the statute.

Full details of the proceedings during the year are given in this section of the report.

Conciliation Work

The report contains full details of the work of the Department in connection with the adjustment of labour disputes. In most cases the proceedings were under the provisions of the Conciliation and Labour Act, which empowers the minister to inquire into the cause and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or an arbitrator when requested by the parties concerned. In some disputes occurring in industries coming directly under the Industrial Disputes Investigation Act, namely, mines and public utilities, preliminary inquiries by officers of the department resulted in the settlement of the matters in dispute without the necessity of the establishment of Boards of Conciliation and Investigation under the Act.

Labour troubles in the coal mining fields of Nova Scotia, New Brunswick, Alberta and British Columbia, which in past years have been very pronounced, with the exception of the year 1929, were almost entirely eliminated during the year under review and coal mining operations were continuing throughout Canada without interruption. Strikes in other industries have been few, of short duration and of minor importance.

In recent years there has been a marked tendency on the part of employees to bring their grievances to the attention of the department before resorting to strike measures. Where such opportunities have been afforded, departmental officers have been highly successful in bringing about an amicable adjustment of the difficulty. Experience in such matters has very clearly demonstrated that it is much easier to negotiate successfully in a friendly atmosphere and more satisfactory results are obtained under such circumstances. Settlement of disputes under these conditions means that there is no loss of wages to the employees concerned and no stoppage of work or inconvenience to the industry. It is therefore to be hoped that the tendency in this direction may be even more marked in succeeding years.

The Department of Labour has on its staff conciliators and mediators who are stationed at Vancouver, Toronto, Ottawa, Montreal and Halifax. The territory of the officer resident in Vancouver comprises the four western provinces. The Conciliation Officer resident in Toronto confines his activities to Ontario, while the officer in Montreal covers the province of Quebec. The territory of the officer residing in Halifax includes the three Maritime Provinces. The headquarters of the

Chief Conciliation Officer are at Ottawa. These officers are also charged with certain duties arising out of the administration of the Fair Wages Policy applying to contracts let by the Dominion Government and to works aided by federal funds.

Fair Wages Policy

The Fair Wages Policy of the Government of Canada has been administered by the Department of Labour since its inception in 1900. It was based originally on a resolution of the House of Commons adopted at the session of 1900 and was later expressed in an Order in Council of June 7, 1922, with certain amendments which were made by Order in Council of April 9, 1924.

Fair wages conditions were prepared or sanctioned by the Department of Labour during the fiscal year 1929-30 for insertion in 434 contracts for Dominion public works executed by various departments of the Government, and in 14 contracts awarded by certain harbour commissioners for works aided by Dominion public funds. These conditions for the protection of the labour to be employed were prepared in accordance with the terms of the Fair Wages Policy of the Government of Canada as set forth in an Order in Council adopted on June 7, 1922, and amended April 9, 1924.

Fair wages conditions in water-power development were made the subject of an Order in Council adopted on December 3, 1929, on the recommendation of the Minister of the Interior. This order requires the insertion in the regulations governing the mode of granting and administering Dominion water-power rights in the provinces of Manitoba, Saskatchewan, and Alberta and in the Northwest Territories, of conditions for the protection of labour employed in the construction, alteration, extension, maintenance and operation of works authorized by licence. The conditions in question are similar in terms to the fair wages conditions which apply to contracts for the construction of Dominion public buildings and other works, the Minister of Labour being named as the authority to determine for the purposes of the licence what are the current or fair and reasonable rates of wages and the current and fair and reasonable hours. The Order in Council also stipulates that in all cases preference shall be given to the employment of Canadian labour.

Fair Wages and Eight-Hour Day Act.—During the 1930 session of the federal Parliament a law was enacted respecting fair wages and an eight-hour day for labour employed on public works of the Dominion of

Canada. This measure, the short title of which is the Fair Wages and Eight-Hour Day Act, 1930, gives statutory effect to the Fair Wages Policy of the Government in so far as concerns the construction, remodelling, repair or demolition of any works for the Government of Canada, whether carried out under contract or by workmen employed by the Government who are exempt from the operation of the Civil Service Act. In providing for the observance of current rates of wages, which have been applicable since the Fair Wages Resolution was adopted by the House of Commons in March, 1900, the important proviso is added that in all cases wages to be paid shall be such as are fair and reasonable, and, further, that the working hours shall not exceed eight hours per day except in special cases as the Governor in Council may otherwise provide, or in cases of emergency.

The report gives details of the various government contracts of the year that were governed by Fair Wage Orders, including also contracts awarded by certain of the Harbour Commissions for works aided by Dominion public funds.

Since the inception of the Fair Wages Policy in 1900, Fair Wages officers have been employed by the Department of Labour to prepare fair wages schedules as required and to assist in the adjustment of complaints and disputes arising from time to time as to the proper rates and labour conditions observable under the terms of Government contracts. These officials are stationed at Vancouver, Toronto, Ottawa, Montreal and Halifax, and, in addition to their duties as Fair Wages Officers, act as conciliators and mediators in connection with industrial disputes which are brought to the attention of the Department, as referred to in Chapter II of this report.

Statistics

The section of the report dealing with the statistical work carried on by the Department contains information as to strikes and lock-outs, wages and hours of labour, prices and cost of living, and fatal industrial accidents. Statistics of employment and unemployment, labour organizations and other subjects are given in other chapters. Statistical and other information relating to labour conditions has been collected and published by the Department of Labour since its establishment in 1900 as required by statute (Labour Department Act, chapter 111, Revised Statutes, 1927, section 4). In accordance with the Statistics Act (1918), chapter 190, Revised Statutes, 1927, and under arrangements with the Dominion Statistician, statistics are collected and published in co-operation with the Dominion

Statistician, in close association with statistics of general social and economic conditions as organized in the Dominion Bureau of Statistics.

The "Labour Gazette"

The LABOUR GAZETTE was published regularly each month during the period covered by this report, both in English and French, the issues for 1929 forming the twenty-ninth yearly volume of the series. Its publication was one of the original functions of the department, section 10 of the Conciliation Act of 1900 (section 4 of Labour Department Act, Revised Statutes of Canada, 1927, chapter 111), providing that the new Department should issue this periodical for the purpose of disseminating accurate information in regard to labour affairs. The average number distributed each month was 10,542 of the English edition and 1,708 of the French. The average monthly paid circulation was 7,240 or 6,250 of the English edition and 990 of the French.

Labour Organization in Canada

The nineteenth annual report on Labour Organization in Canada, covering the calendar year 1929, which was prepared in the Labour Intelligence Branch, was along lines similar to its predecessors and gave information as to the nature of the labour bodies with which the organized workers in the Dominion are identified. The report also gave statistics of trade unionists in the Dominion, and contained references to some of the more important events of interest to organized labour and those who concern themselves with such matters.

Organization in Industry, Commerce and the Professions

The Labour Intelligence Branch also prepared the seventh report on Organization in Industry, Commerce and the Professions in Canada, a volume which made its first appearance in 1921 with a view to meeting the demand for information showing the extent of organization in the Dominion among persons engaged in industrial, commercial and professional pursuits.

Co-operative Associations

Another volume prepared in the Labour Intelligence Branch was the report on Co-operative Associations in Canada. Previously information on this subject had appeared in the Report on Organization in Industry, Commerce and the Professions, but the importance of the co-operative movement in the Dominion prompted the preparation of a separate report, the first of which appeared in the summer of 1928.

Labour Legislation in Canada

A report on labour legislation enacted in 1929 was published during the year, being the first supplement to the volume published in the preceding year entitled *Labour Legislation in Canada as existing on December 31, 1928*.

The present volume consists of sixty-one pages and covers laws enacted by the Parliament of Canada, the legislatures of all the provinces and the Council of the Yukon. Short notes outlining the provisions amended accompany the text of certain sections of amending Acts. In addition to the statutes several Orders in Council of labour interest have been placed in the body of the report as have also certain regulations made under statutory authority.

Library of the Department

The library of the Department of Labour was organized in 1900 when the Department was created, and has steadily increased its collection of documents since that time. Through the exchange of publications with departments of other Governments carrying on work along similar lines, the department is kept in touch with labour matters in almost all countries of the world.

Subject to the requirements of the departmental officers, the services of the library are at the disposal of the general public, and frequent use is made of its material by students from the Canadian universities and by others interested in labour problems. Books are sent by mail, wherever possible, to any persons wishing to borrow them and special information and bibliographies are compiled when required.

Combines Investigation Act

The report contains the seventh annual report under the Combines Investigation Act, summarizing the proceedings under the statute for the fiscal year ending March 31, 1930.

Reference was made in the last annual report to the unanimous decision of the Supreme Court of Canada, on April 30, 1929, in favour of the constitutional validity of the Combines Investigation Act. An appeal from this judgment was entered, but at the close of the fiscal year the appeal had not been heard by the Judicial Committee of the Privy Council.

The most important case dealt with under the Act during the fiscal year was that of the Amalgamated Builders' Council and other related organizations in the plumbing and heating industry. An investigation by a commissioner, Mr. Gordon Waldron, K.C., was begun in July, 1929, and completed in December, when the commissioner reported that in his opinion a combine existed. The Attorney-

General of the province of Ontario, to whom the report was remitted, declined to take proceedings, and action was therefore instituted by the Federal Department of Justice. Counsel were appointed in February, 1930, but informations were not laid until after the close of the fiscal year. The report of proceedings under the Combines Investigation Act, which appears as part of this present volume, contains reference to court decisions growing out of this case, one of them affecting the constitutionality of the Trade Unions Act, and also to the cancellation of two certificates of registration issued under the latter statute to organizations of contractors against which the commissioner reported.

Preliminary inquiries into a trade association of electrical contractors in Toronto, an alleged combine in the motion picture industry, and an alleged combine of milk producers in Montreal, were among the more important matters dealt with under the Act. Other investigations were also in progress during the year.

Canadian Government Annuities

The Government Annuities Act is the enabling legislation under which the Canadian Government Annuities System is operated. The purpose of the statute is to encourage and aid the people of Canada in the formation of habits of thrift, so that provision may be made for old age, and the Canadian Government Annuities System was carefully designed with this object in view. The cost of administration is borne by the Dominion Government and there is no charge made on this account against the annuitant. There is, of course, no loading of the rates for profits, and the annuitant, therefore, receives full benefit for every dollar paid in. Various forms of advertising were used to acquaint the people of Canada with the advantages of the Canadian Government Annuities system, and many thousands of inquiries regarding annuities reached the department. Although not quite up to the record achieved in 1927-28 and 1928-29, the amount of purchase money received for Government annuities during 1929-30 reached the large figure of \$3,156,475.24, while the number of contracts issued, 1,257, was exceeded only in 1928-29.

Old Age Pensions

This chapter constitutes the fourth annual report on the administration of old age pensions in Canada under the provisions of the Old Age Pensions Act, chapter 156, R.S.C. 1927, being for the fiscal year ending March 31, 1930. Quarterly reports of proceedings under this Act appear regularly in the *LABOUR GAZETTE*.

Employment Service

The fiscal year ended March 31, 1930, was the twelfth in which the Employment Service Branch, set up under the Employment Offices Co-ordination Act, co-operated with the provincial Governments to maintain the Employment Service of Canada. Employment offices were conducted by the Dominion-Provincial Employment Service during the year in sixty-six centres of chief industrial activity, and continued to prove of value in the task of finding suitable employment for all classes of workmen. These offices supplied workers not only locally, but also to adjoining districts.

Persons placed in employment during the fiscal year 1929-30 numbered 401,509. Of these placements 256,690 were for a period in excess of seven days, while in 144,819 placements the duration of employment was seven days or less.

Technical Education

The Technical Education Act was passed in 1919 and provided for the distribution of ten million dollars to the provinces over a period of ten years. Owing to the fact that eight of the provinces were unable to earn their full appropriations during this period, the Act was extended at the 1929 session of Parliament for a term of five years in order that those eight provinces might have a further opportunity of earning the balance to which they were entitled under the provisions of the Act.

Ontario had already earned its entire allotment when the ten year period terminated. During the year under review three other provinces, namely, British Columbia, Alberta and Quebec, earned and received the entire balance of their appropriations and no further payments on account of this work may be made to those provinces.

During the past year the Technical Education Branch of the department published a bulletin under the title "Federal Aid to Provinces under Technical Education Act for 10-Year Period 1919-1929." The purpose of the bulletin was to describe how the Dominion Government had assisted the provinces in the development of vocational education under the provisions of the Technical Education Act for the ten-year period 1919-1929. The bulletin gives an extended and detailed account of federal co-operation with the provinces during that period, including the purpose of the Act, a description of the character and scope of the education and training which have been developed and extended with the aid of federal funds, a statement of the principles and policies adopted by the Department of Labour for the administration of the Act and

an interpretation of certain sections of the law. It also contains reviews prepared by the various provinces and submitted to the department outlining what has been accomplished in each province under the provisions of the Act. A list of publications issued by the Technical Education Branch of the department is also included.

International Labour Organization

The Department of Labour is entrusted with the duties arising out of the relations of Canada with the International Labour Organization. These have entailed much correspondence, not only with the International Labour Office, but also with other departments of the Dominion Government, with the provinces and with employers' and workers' organizations. Replies have also been prepared in the Department of Labour to various questionnaires which were circulated on behalf of the International Labour Office. The performance of these duties has necessarily entailed a close study on the part of officers of the department of the various technical questions figuring on the different conference agenda and meetings of the Governing Body and of questionnaires received from the International Labour Office.

The "Halifax Waterfront Accident Prevention Association" was organized in February at a meeting attended by representatives of the Harbour Commission, the Board of Trade, local steamship interests and the Longshoremen's Association. The new association will issue a pamphlet on the subject of methods of preventing accidents among waterfront workers.

The annual report of the Department of Natural Resources of Nova Scotia, which has been recently received, reviews the work of the department for the fiscal year ended September 30, 1929, dealing with its activities in connection with agriculture and allied operations, land settlements, factory inspection, employment service, immigration, etc. It also contains a directory of agricultural societies, with information concerning membership, finances, etc.

During February a total of 3,440 accidents were reported to the Ontario Workmen's Compensation Board in the industries in Schedule 1 of the Act, 19 of which were fatal cases; in Schedule 2 industries, 275 were reported including 4 fatal cases; and 209 Crown, 2 of which were fatal, were reported during the month, making in all 3,924, of which 25 were fatal.

UNEMPLOYMENT RELIEF ACT, 1930

Relief Provided in Co-operation With Provinces, Municipalities and Railway Companies

AN account was given in the **LABOUR GAZETTE**, September, 1930, of the special session of the Parliament of Canada summoned especially to deal with problems arising out of exceptional economic conditions with resultant unemployment, and of the enactment during that session of the Unemployment Relief Act. Particulars of the expenditures approved have been given from month to month in subsequent issues.

The Provinces continue to submit their proposals for Provincial and Municipal work under the Agreement entered into with the Dominion Government; the following joint expenditures having been approved by the Minister of Labour up to March 9:—

Province	Total cost of Public Works
Prince Edward Island.. . . .	\$ 200,000
Nova Scotia.. . . .	2,319,636
New Brunswick.. . . .	1,362,474
Quebec.. . . .	10,199,300
Ontario.. . . .	15,544,803
Manitoba.. . . .	2,432,334
Saskatchewan.. . . .	1,919,733
Saskatchewan (Drought Area).. . . .	849,100
Alberta.. . . .	2,750,633
British Columbia.. . . .	2,697,020
Yukon.. . . .	20,000
Grade Crossing Fund.. . . .	2,445,312
Canadian Pacific Railway Co.. . . .	11,514,000
Canadian National Railways.. . . .	14,159,403
Dept. of the Interior (Parks).. . . .	37,000
Banking of Nova Scotia Coal.. . . .	150,000
	\$68,600,748

Approximate Extent of Relief Provided

The various Provinces, Railway Companies and Departments of the Government which are co-operating under the Unemployment Relief Act, 1930, have furnished statistics showing the actual volume of employment given to February 28. Details for each Province, etc., are given below. The complete figures cannot be presented, as in the Province of Quebec, where Unemployment Relief work has been approved of to be carried on in over one thousand Municipalities, the Provincial Authorities find themselves unable to furnish a complete statement at the present time owing to the fact that the rural municipalities are responding slowly to their request for statistics.

The following details show that at least 228,351 individuals have been given employment and 3,975,355 man-days work have been afforded from the commencement of operations under the Unemployment Relief Act

to February 28, 1931. These figures are not complete owing to the Province of Quebec not having yet supplied entire figures.

In British Columbia, 24,509 individuals were given employment up to February 28, 414,649 man-days work having been given. Up to the end of February direct relief had been given to 4,370 families and in addition 12,101 individuals had been assisted.

In Alberta up to February 28, 15,370 individuals were given employment, 229,649 man-days work being given. Direct relief was given to 4,150 heads of families and 1,277 single men. In addition Unemployment Relief work carried on at the National Parks at Banff, Jasper and Waterton, have given 430 men 5,062 man-days work.

The report from Saskatchewan indicates that the total number of men given employment was 19,554 up to February 28, 379,174 man-days work having been provided. In addition 14,151 individuals were given direct relief.

Manitoba reports that 21,267 individuals were given employment up to February 28, 176,569 man-days work being given. There were actually working on February 28, 1,881 individuals including 842 men employed on the Grassmere drainage project. Direct Relief to February 28 had been given to 36,968 individuals. In addition to these figures unemployment relief work carried on in the Riding Mountain National Park has given work to 307 individuals who have been given 6,112 man-days work.

The number of men given employment under the Unemployment Relief Act Agreements in the Province of Ontario is reported as 43,000 up to February 28, the total number of man-days work given to the same date being 1,590,000. The number of cases given direct relief up to February 28 was 17,000, this figure including single men and heads of families.

In Quebec work is being carried on under the Unemployment Relief Act in over one thousand Municipalities, but the Provincial Authorities have not yet found themselves able to prepare a representative report showing the number of men who have been given work as a result of the public works undertaken under the Act. Reports from sixty-two of the Municipalities show that to February 28, 39,393 individuals were given employment amounting to 385,518 man-days. In addition 287 families and 4,392 individuals were given direct relief.

The figures for New Brunswick show a total of men employed to February 28 of 24,941 who were given employment to the extent of 161,179 days. No direct relief has yet been given in the Province of New Brunswick.

In Prince Edward Island 1,143 individuals had been employed up to February 28, a total of 8,399 man-days work having been given. Up to February 28, 275 individuals had been given direct relief.

Nova Scotia reports that 30,462 individuals were given work for 403,260 man-days. The number of families receiving direct relief up to the end of February was 2,331.

The Yukon Territory has given employment under the Act this winter to 150 individuals who were given 2,096 man-days work. No

money has been expended for direct relief in the Yukon under the provisions of the Unemployment Relief Act.

The Canadian Pacific Railway Company reports that work done as a result of the Agreement under the Unemployment Relief Act by which the Railway Company advanced the date of carrying out certain works, so that unemployment might be relieved, has resulted in 4,645 individuals being given employment up to February 28. These men were given a total of 138,166 man-days work.

The Canadian National Railways reports that work done as a result of the Agreement under the Unemployment Relief Act has resulted in 3,180 individuals being given employment up to February 28, 75,522 man-days work having been given.

Additional Expenditures Approved up to March 10

In previous issues details of expenditures approved to February 10, have been set forth. The details of additional expenditures approved to March 10, and included in above summary are given below:—

Province of Quebec		Total estimated cost of works	Name of Place	Total estimated cost of works
Arthabaska County—			Lotbiniere County—	
Princeville.. . . .	\$	500 00	St. Flavien Village.. . . .	250 00
Beauce County—			Matapedia County—	
Beauceville.. . . .		1,000 00	Masse & Ouimet Missions.. . .	1,000 00

INTERNATIONAL LABOUR ORGANIZATION AND UNEMPLOYMENT

Report of Unemployment Committee adopted by Governing Body

THE committee on unemployment, appointed in November by the Governing Body of the International Labour Organization (LABOUR GAZETTE, November, 1930, page 1300), presented their report on January 31, and the Governing Body adopted it in an amended form, as given below. After adopting the committee's report the Governing Body decided to place the question of unemployment on the Agenda of its April session for renewed consideration.

The committee was composed of twelve members, four from each group (governments, employers and workers) of the Governing Body, under the chairmanship of Mr. Yoshisaka (Japan), as follows:—

Governments: Germany (Mr. Weigert, substitute Mr. Laemmler), Great Britain (Mr. Hilton), Italy (Mr. De Michelis), Japan (Mr. Yoshisaka).

Employers: Mr. Cort Van Der Linden (Netherlands), Mr. Lambert-Ribot (France), Mr. Olivetti (Italy), Mr. Vogel (Germany); *Substitutes:* Mr. Curcin (Yugoslavia), Mr. Forbes Watson (Great Britain), Mr. Gerard (Belgium), Mr. Miyajima (Japan).

Workers: Mr. Jouhaux (France), Mr. Müller (Germany), Mr. Poulton (Great Britain), Mr. Schürch (Switzerland); *Substitutes:* Mr. Mertens (Belgium), Mr. Johanson (Sweden).

Mr. Albert Thomas, Director of the International Labour Office, in an introductory address, proposed that first consideration should be given to what he called the real work of the Office, that is to say, to the solution of those questions which were strictly within its scope under the Treaties of Peace. He emphasized in particular the need for national and international organization of the labour market by public employment exchange services; the need for development of existing systems of unemployment insurance, and the adoption of such systems in countries where they do not yet exist; the desirability of the Governments undertaking extensive public works of national utility and at the same time expanding their orders for supplies so as to counteract the effects of the temporary falling-off of activity in private enterprise; the desirability of Governments coming to an agreement with a view to the joint execution of public work of an international character; the desirability of investigating whether a reasonable shortening of the working day or week might not to some extent mitigate the consequences of the depression by employing a larger number of workers for the same quan-

tity of work; the necessity of regulating the development of mechanization, having regard to the consuming power of the markets; the importance of seeking out means of raising the remuneration of labour in countries where it is most inadequate at the present time, in order to eliminate the factor of competition and to increase the absorptive capacity of certain markets.

The Committee's Report

The report of the Committee, as adopted by the Governing Body, reads as follows:—

The Committee, which is greatly concerned at the increasing gravity of the unemployment problem and its consequences both from the humanitarian and social point of view and from the point of view of the world economic situation, considers it indispensable to study the causes thoroughly and to try to find remedies capable of practical application.

Considered as a whole, this exceptionally grave unemployment appears to be the cumulative effect of economic and financial disturbances likely to affect more especially certain countries and certain industries. Among these disturbances there are some which recur with a certain regularity, while others have been introduced into the economic system of the world after the war-time and post war upheavals.

Without wishing to make either a complete or a systematic enumeration, the Committee, desirous of showing the complexity of the problem, draws attention to the following factors which, rightly or wrongly, are often considered as causes of unemployment:

Causes of Unemployment

Excessive production of certain agricultural products said to result partly from exceptionally good harvests and partly from an increase in the amount of cultivated land due to faulty estimates of the demand, which is sometimes diminished by under-consumption, leading to inability to sell, to a decrease in the purchasing power of the rural population and consequently to a contraction of outlets for industrial products;

The maladjustment between the production of certain industrial products, such as raw materials and industrial equipment, and the markets' power of absorption;

The alleged inelasticity in the links whereby effective purchasing power, as expressed in currency and credit, is held by some to be connected with the world's available gold supply

and to have been a factor in the unprecedented fall in world prices;

Lack of confidence which is often said to be the cause of an inadequate distribution of gold, of an imperfect circulation of capital and a restriction in the granting of credits and which by preventing the financing of countries which are in need of capital and the development of the purchasing power of consumers is said to have made it impossible to restrict the fall of world prices;

The fall in the price of silver, which is said to have brought about a considerable decrease in the purchasing power of countries whose currency is based on that metal, a purchasing power already reduced by the political conditions in some of those countries;

Too high a cost of production in certain countries as a result of physical, geographical or other conditions;

The disturbances in international commerce caused not only by the development of new industrial areas but also by artificial barriers put in the way of international trade and by the difficulties said to be associated with the problem of political debts;

The difficulties in the way of adjusting movements of population to the possibilities of exploiting the resources of the world;

The disorganization of the labour market caused by the extra-rapid development of labour-saving machinery and of the process of rationalization.

These various causes of unemployment, which are in some cases generally admitted and sometimes the subject of controversy, should be thoroughly studied with a view to bringing out their real importance as well as the importance of methods suitable for mitigating them. These investigations will be carried out by the International Labour Office in co-operation with the League of Nations, experts and other organizations being consulted, if necessary, so as to show in a systematic form the known elements and factors of unemployment. The Committee urges, however, that the International Labour Organization should immediately strive more than ever, with the help of the employers' and workers' organizations represented in it, to induce Governments to take all immediately practicable steps to preserve the world of labour from the consequences of unemployment.

Suggested Remedies

The Committee therefore desires that the attention of Governments should be called with insistence to the following points:—

The need for the organization of the labour market by public employment exchange services, which should collaborate as effectively as possible in the drawing-up of systematic

schemes for the re-employment of the unemployed and the re-adaptation, if necessary, of discharged workers to the technical requirements of production;

The need of developing existing systems of relief and insurance against total unemployment and short time, and the creation of insurance systems where they are not yet in existence, with the means necessary to ensure that they are immediately financed by advances from the State, every effort being made to adapt them to the essential needs of the workers without interfering with the re-employment of the workers in industries capable of activity either at home or abroad;

Undertaking extensive public works of national utility in accordance with programs previously drawn up and at the same time expanding orders for supplies, so as to counteract the effects of the temporary falling off of activity in private enterprise; the possibility of Governments coming to an agreement through the appropriate organs of the League of Nations with a view to joint execution of extensive public works of an international character;

International co-operation which will make possible the free movement and placing of men in unexploited regions capable of utilizing their activity, and with a view to increasing markets;

The development of suitable methods for ensuring co-operation among the different national economic systems.

Length of Working Day

With regard to the measures to be taken on the subject of the length of the working day or week and the remuneration of labour, in relation to unemployment, the Committee takes note of the fact that the representatives of the employers and workers, hold different opinions at the present time.

The representatives of the workers, while maintaining their demands in connection with the 40-hour week, ask for:—

A reasonable shortening of the working day or week, taking into account the increase in output obtained by improved methods of production;

Seeking suitable means of raising the remuneration of labour in countries where it is most inadequate at the present time, with a view to eliminating one factor of unfair competition and to increasing the consumptive capacity of certain markets, without neglecting the development of social insurance, which preserves a certain power of consumption to workers prevented from earning their living by causes beyond their control.

The employers consider, on the contrary, not only that the measures suggested by the

workers would be of no avail, but that they would produce most serious disturbances. They are convinced, on the other hand, that one of the essential measures to be adopted in the effort to restore economic equilibrium should be a reduction of the cost of production and the expenses of distribution so as to

enlarge markets by increasing the purchasing power of the whole body of consumers.

As a result of this difference of opinion the Committee invites the Office to pursue its investigations in order to lead at a later date, if possible, to a narrowing of the gap between the two points of view and to positive action.

Report by International Labour Office on Methods of Advance Planning

The International Labour Office (Geneva) recently published a study of "Unemployment and Public Works" (Studies and Reports, Series C, No. 15). The report owes its existence to an Article in the Recommendation on Unemployment, adopted by the First International Labour Conference in 1919; to a Resolution of the International Labour Conference in 1926; and to desire expressed by the Joint Committee on Economic Crises, that more information on the subject should be obtained. The essential feature of the policy recommended at Washington in 1919 and at Geneva in 1926 is the co-ordination of works undertaken under public authority "with a view to reserving such work as far as practicable for periods of unemployment," or, as the 1926 Resolution put it, "the organization of public works so as to counteract the fluctuations of private business."

The report points out that the policy of advance planning of public works is one of suitably distributing in time the execution of the ordinary works and orders for supplies required by public authorities and public utility undertakings. In connection with seasonal variations this policy may sometimes be more costly, but in connection with cyclical fluctuations it would almost certainly be more economical than would be the case if no systematic planning took place. The orders of public authorities are very considerable, and any action taken with regard to them must have a decided effect on the labour market. If, as has been estimated, production in a depression is about 15 to 20 per cent less than in the best years, and if the orders of public authorities are from 5 to 10 per cent of the total production, the result of shifting these orders from one period to another must be appreciable.

There are, however, certain limits to the operation of the policy, for not all the orders of public authorities can be postponed or advanced, but it is shown that, on the other hand, sufficient can be done in this way to make a real difference to the labour market. It is essential, however, the report points out, that the necessary steps should really be taken in advance and not left until the crisis arrives, for by that time it will be too late to have an effective influence on the labour market.

An important chapter of the report is devoted to a survey of actual legislative and administrative measures adopted in different countries for planning public works programs in advance. It is noted in the first place that even before the war such measures were taken in several countries. Since the war the economic situation has been abnormal, and many countries have been unable to undertake advance planning either because they had so much leeway to make up, or because they had so much unemployment that they had already put in hand all the works for which they could find money. "Apart from this, however, it is too often true that nothing is done, or, what is still worse, that more orders are given during periods of prosperity than during periods of depression. On the other hand, considerable attention has been paid to the relation of public works to employment conditions in a number of countries, and in particular, the measures adopted in Sweden have been set out in some detail as they show what kind of works can be postponed, and give an idea as to the effect of such postponement or advancement on the labour market."

The report examines the administrative problems involved in public works policies, and finds that the great difficulties in the way of advance planning arise from the large number of departments which undertake public works both in the central government and in the various local authorities. The labour necessary for public works which are speeded-up is normally recruited through the employment exchanges, and this ensures the best possible situation in the labour market. The policy of advance planning does not involve any interference with works already started. All that is required is that in a period of prosperity fewer contracts, and in times of depression more contracts, would be entered into. It is necessary to have a reliable index to indicate the best time to speed up or slow down public works, as the case may be. An index of employment or unemployment, supplemented by an index of general business conditions, is generally used.

In regard to financial problems, the report points out that there are various methods of providing for the effective financing of ad-

vance planning. To a limited extent taxation is adequate if steps are taken to carry forward credits from one financial year to another and to give the public authorities some discretion as to the time at which the money is to be used. More important works are, however, financed by means of loans. Difficulties may arise because the necessary funds are not

available soon enough, and various suggestions have therefore been made for the creation of special public works funds or other reserve funds, the rapid amortization of loans, the raising of a loan from the banks. A few examples are given in which more or less satisfactory solutions of the problem appear to have been found.

UNEMPLOYMENT POLICY OF INTERNATIONAL FEDERATION OF TRADE UNIONS

THE Joint Committee appointed by the International Federation of Trade Unions and the Labour and Socialist International to investigate the economic depression and unemployment, met at Zurich on January 21 and 22, 1931, and had before it fifteen reports submitted by its sub-committees. A series of resolutions was adopted, some of which are summarized below:—

Wages.—The machinery of production of the world economic system, both in industry and agriculture, has increased enormously since the war, but the goods which can be produced cannot find a market. While the accumulation of profits has sufficed to develop and perfect the machinery of production in the course of a few years at an unprecedented rate, the increase in wages during the same period has not sufficed to increase the consumption of the masses to the same degree as the increase in the productive capacity of industry and agriculture. This disproportion between productive capacity and consumption, which is the basic fact of the depression, is primarily to be attributed to the fact that profits, which are to a large extent accumulated and used for extending and perfecting the machinery of production, have increased more quickly than wages, the greater part of which are used for purchasing consumption goods. A reduction of wages cannot modify this disproportion, but can only aggravate it. If the employers in all countries attempt to increase their ability to compete against the employers of other countries by depressing wages, the final result of all these exertions will only be a fall in mass consumption throughout the world, which will only intensify the depression. The Committee therefore considers that the most important task of the labour movement at the present time is to oppose wage reductions with all its energy in all countries.

Hours of Work.—Rationalization has enormously increased the productivity of labour in the course of a few years; but the workers who have been rendered unnecessary by technical developments and the intensification of

work have not been transferred to other branches of production. Their labour power is now lying fallow. It is absolutely necessary to adjust the hours of labour to the greatly increased productivity of labour. In view of the enormous unemployment throughout the world, the Committee considers it opportune and essential to take up the fight for the five-day week (40-hour week) internationally.

In addition to this, the labour market must be relieved by the introduction of workers' holidays where they do not yet exist, by raising the school-leaving age, and by organizing the labour market and the placing of workers in employment.

Public Works.—The Committee pointed out with emphasis that the disproportion between productive capacity and consumption, which is the basic fact of the depression, can be modified, not by the reduction of State expenditure in times of economic crises but by the greatest possible expenditure for productive public works.

In every country a national department should be set up which, on the basis of a program of investment prepared in advance for a long period, would concentrate the necessary work and orders for the carrying out of this program upon periods of great unemployment.

This method of providing more regular employment will be all the more effective the greater the participation of the State and the local authorities is in the economic system as a whole. The extension of this participation is therefore a condition for the exercise by the community of effective influence upon employment.

Insurance.—The Committee emphatically demands that the unemployed and short-time workers, so long as and in so far as full-time work cannot be guaranteed to them, shall receive the necessary financial support for the whole period of unemployment or short-time work. It calls upon the labour movement to defend unemployment insurance, which is being everywhere attacked by the employers. It

demands the creation in all countries of institutions which guarantee the unemployed a right to the necessary means of support. It demands that these arrangements shall also extend to short-time workers.

Cartels.—The progressive organization of national and international cartels and monopolies undoubtedly contributes towards prolonging the depression through the fixing of artificially high prices in time of depression and through the organization of dumping, which disorganizes the world market. The

Committee therefore calls upon the Labour Parties to take part in the fight for the public control of all monopolistic combinations and their price fixing, with the co-operation of the trade unions and co-operative societies; the international cartels should be controlled in a similar manner by an international economic body to be set up by the League of Nations.

Other resolutions relate to protective and financial policies, and to political obstacles to effective action to deal with the evils due to economic depression.

Employers' Plan for Unemployment Insurance at Rochester, N.Y.

Fourteen industrial companies at Rochester, New York, recently agreed on an unemployment benefit or insurance plan, payments to unemployment workers to begin on or after January 1, 1933. All employees with service of one year and over and receiving less than \$50 a week will be eligible to receive unemployment benefits. The benefits will be 60 per cent of the normal pay, with a maximum of \$22.50 a week, the period of benefits varying from six weeks for employees with one year's service to 13 weeks for employees of five years' service and over. Unemployment benefits are to be paid after two weeks unemployment. Benefits will be paid to part-time workers in case their earnings are less

than they would receive in benefits if they were totally unemployed. An employee procuring temporary work outside still will be eligible for benefits, but in no case are his benefits and temporary earnings plus the benefits to exceed his normal earnings prior to the lay-off.

The companies reserve the right to declare an emergency on a period of extended unemployment, and, during the emergency, to have the fund supplemented by contributions of one per cent from all officials and employees not receiving benefits, the company to contribute during the period an extra amount equal to that received from such employees.

The Consolidated Mining and Smelting Company is now operating a part of their new fertilizer plant at Warfield, near Trail, B.C., and have already shipped several cars of fertilizer. Considerable employment is being afforded in the district while the new plant is under construction. Work is also provided by the Kootenay Power and Light Company on the construction of a new power plant on the Kootenay River.

activities in connection with agriculture and its allied operations, land settlement, factory inspection, employment service, immigration, etc. It also contains a directory of agricultural societies, together with information concerning membership, finances, etc.

An old-age pension bill, providing for \$25 monthly payments to indigent persons of 70 years or more, was passed by the Indiana House of Representatives on March 3, and is now awaiting the Governor's signature. Adoption of the plan is optional with each county, and the state will bear half of the expense in any county where the pensions are put into effect. Most of the states which have "optional" pension laws require the counties to pay all the cost, and as a result few counties pay the pensions.

The opening Speech from the Throne in the Legislature of Nova Scotia announced that Nova Scotia in common with other provinces "has shared in the advantages to be secured from the Federal Unemployment Relief Act, and the moneys thus secured have tended in no small measure to alleviate the serious distress which might otherwise have existed." Elsewhere the speech referred to the decrease in coal production in the province during the past year, and stated that "our greatest hope for securing larger markets for our coal lies in the development of a national fuel-steel policy for Canada."

The annual report of the Department of Natural Resources of Nova Scotia, which has been recently received, reviews the work of the Department for the fiscal year ended September 30 1929. The report deals with

The secretary-treasurer of New Brunswick, introducing his budget proposals in the Legislature on March 3, announced that two new forms of provincial taxation would be introduced in order to provide means of meeting future expenditures, namely, a tax and licence fee on signs, and a levy on all meals costing one dollar or more.

PRIVY COUNCIL DECISION UPHOLDS VALIDITY OF DOMINION COMBINES LEGISLATION

Supreme Court Judgment on Combines Investigation Act and Section 498 of the Criminal Code Sustained

THE constitutional validity of the Combines Investigation Act and of Section 498 of the Criminal Code has been finally established by a judgment of the Judicial Committee of the Privy Council delivered on January 29, 1931. The reasons for judgment are printed in the concluding pages of this issue. The judgment contains a review of the legislative history of the Act and of the section and concludes with a finding that the present legislation is valid as dealing with three classes of subjects named in Section 91 of the British North America Act: the criminal law (clause 27), the raising of money by any mode or system of taxation (clause 3), and patents of invention and discovery (clause 22). Clause 2, relating to "the regulation of trade and commerce" is referred to, but their Lordships felt it unnecessary to discuss this further ground. "They desire, however," this section concludes, "to guard themselves from being supposed to lay down that the present legislation could not be supported on that ground."

The greater part of the provisions of the Combines Investigation Act is upheld by the judgment as "criminal" legislation. It says:

"The substance of the Act is by Section 2 to define, and by Section 32 to make criminal, combines which the legislature in the public interest intends to prohibit. The definition is wide, and may cover activities which have not hereto been considered to be criminal. But only those combines are affected 'which have operated or are likely to operate to the detriment or against the interest of the public, whether consumers, producers, or others'; and if Parliament genuinely determines that commercial activities which can be so described are to be suppressed in the public interest, their Lordships see no reason why Parliament should not make them crimes."

It is the opinion of their Lordships also that the present legislation does not interfere with the administration of justice, which comes within the jurisdiction of the provinces. "Nor is there any ground," the judgment adds, "for suggesting that the Dominion may not employ its own executive officers for the purpose of carrying out legislation which is within its constitutional authority, as it does regularly in the case of revenue officials and other matters which need not be enumerated."

The remedies which the Combines Investigation Act provides in the way of reducing customs duty and revoking patents, "having

no necessary connection with the criminal law, must be justified on other grounds":—

"Their Lordships have no doubt that they can both be supported as being reasonably ancillary to the powers given respectively under 91 (3) and affirmed by s. 122, the Raising of Money by any Mode or System of Taxation, and under 91 (22), Patents of Invention and Discovery. It is unfortunately beyond dispute that in a country where a general protective tariff exists persons may be found to take advantage of the protection and within its walls form combinations that may work to the public disadvantage. It is an elementary point of self-preservation that the legislature which creates the protection should arm the executive with powers of withdrawing or relaxing the protection if abused. The same reasoning applies to grants of monopolies under any system of patents."

In the argument before the Judicial Committee, the Dominion Government was represented by Hon. N. W. Rowell, K.C., and F. P. Varcoe of the Department of Justice. The province of Ontario, as well as the Proprietary Articles Trade Association, was represented by W. N. Tilley, K.C.; the province of Quebec by Hon. Geoffrey Lawrence, Frank Gahan and Maurice Alexander. The interests of the Proprietary Articles Trade Association were further represented by Hildreth Glyn-Jones, son of Sir William Glyn-Jones, who directed the operations of the P.A.T.A. in Canada up to the time of his death in 1927.

The constitutional question which is now disposed of by the judgment of the Privy Council has been before the courts since March, 1929, when the Supreme Court of Canada heard the argument on a reference submitted by the Dominion Government. Such a reference had been urged by the Proprietary Articles Trade Association following Commissioner L. V. O'Connor's finding against that body in October, 1927. The Dominion Government considered it essential for the enforcement of combines legislation in Canada that the questions which had been raised concerning its validity, by counsel and by certain judges of the provincial courts, should be set at rest. An Order in Council authorizing the reference was therefore passed, on December 6, 1928. It was printed in full in the LABOUR GAZETTE, January, 1929, page 25.

On April 30, 1929, the Supreme Court of Canada delivered unanimous judgment holding the Combines Investigation Act and Sec-

tion 498 of the Criminal Code *intra vires* the Parliament of Canada. This judgment appeared in full in the *LABOUR GAZETTE*, May, 1929, at pages 569 to 578. An article was

printed in the same issue, at pages 497-499, referring to the case and reviewing briefly earlier legislation respecting combines in Canada.

COMBINES INVESTIGATION ACT

Investigation Into an Alleged Combine in the Bread-Baking Industry in Canada

THE report of an investigation under the Combines Investigation Act into an alleged combine in the bread-baking industry in Canada was made public by Hon. G. D. Robertson, Minister of Labour, on February 17. "So far as the situation throughout the Dominion of Canada is concerned," the report of the investigation concludes, "it has not disclosed a combination which has operated or is likely to operate to the detriment or against the interest of the public. Particular attention has been given in the inquiry to the vertical combination effected through the entry of certain flour milling companies into the bread-baking industry. No conclusive evidence has been adduced to show that this combination constitutes a combine within the meaning of the Combines Investigation Act. At the same time, the predominant position of these flour milling companies in the baking business, and the possibilities of monopoly and price enhancement which are theirs, are such as to warrant continued governmental interest in the situation, and, should the need arise, further governmental action on behalf of the consuming public."

The report was made by Mr. F. A. McGregor, Registrar of the Combines Investigation Act, as a result of complaints received from Vancouver, Winnipeg, Halifax and a number of other cities in the Dominion. From Winnipeg came a formal application which charged the existence of a local combine, while the Vancouver complaint asked for an inquiry into other wheat products as well as bread. Because of the time required for an inquiry into the trade, in all wheat products, it was decided to limit the present report to the bread-baking industry. "In dealing with these complaints," the report adds, "it has been recognized that the scope of the Combines Investigation Act does not extend to the investigation of prices unless combination or monopoly operating against the public interest is alleged or believed to exist. Even where such charges are made it is obvious that, in a preliminary inquiry such as this, detailed examination of possible arrangements among local bakers in each community is not practicable."

The conclusion of the report discusses a number of phases of the question as to whether there exists in the bread-baking industry in Canada a combine within the meaning of the Combines Investigation Act, that is, a combination which has operated or is likely to operate to the detriment or against the interest of the public, whether consumers, producers or others.

"It is often assumed," says the report in this commentary "that, in business, combination is the very antithesis of competition; that so long as competition exists, a combination of manufacturers or dealers cannot maintain excessive prices. Competition, regarded as the life of trade, is depended upon also as the public's chief measure of protection. Distinction should be made, however, between two different types of competition: the one, competition in price; the other, competition in quality, service and sales promotion. The one tends to keep costs and prices down to a minimum; the other, where it is not kept within control by price competition or some other means of regulation, has usually the opposite effect of increasing costs and prices.

"Within the bread-baking industry examples of both kinds of competition are clearly seen: competition in quality, service and salesmanship more plainly in recent years, competition in price very markedly in recent months. The latter type seems to have come in part as a reaction from the other.

"What the present inquiry has disclosed is that higher prices have been due not so much to combination as to this costly form of competition in quality, service and salesmanship. The additional costs have quickly become absorbed into normal costs, ultimately appearing to be as necessary as any other items of expense. Such increased costs are all but certain to lead to higher prices, and the baker's explanation of these higher prices is that they do little more than reimburse him for his actual outlays. This is the situation which has developed in the bakery trade during a period in which the public was less concerned about price than it is at present. The bakers have become engrossed in a competition which has led them into adding more and more of the

expensive ingredients in order to attract business, into more elaborate delivery and other services, into selling campaigns which have for their chief object persuading potential customers to 'change bakers,' a service for which consumers of bread in the end have to pay.

"There is no gainsaying that the consumer himself should accept a certain share of the responsibility for present-day high prices, of bread as of many other commodities. He is getting more and he is paying more for it. The acceptance of, or the demand for, extra service, extra quality and wider variety, particularly in periods of prosperity, sometimes without apparent realization that they must eventually be paid for, plays an important part in the maintenance of prices at high levels.

"As to combination, the present investigation, being in the nature of a preliminary inquiry, has not been intensive enough to include examination of local price arrangements among bakers in individual towns and cities throughout the country. Rather, it has been a Dominion-wide survey, principally of costs and prices, with the view of ascertaining what influences have been affecting the spread between wheat and bread prices, and, in particular, what have been the effects of the entry of four of the largest flour milling companies into the bread-baking industry.

"Since 1925 these four flour milling companies have acquired control over 96 bakeries operating from Nova Scotia to British Columbia, which now produce over a third of the bread sold in the Dominion and over ninety per cent of the bread sold in the localities in which they operate. In most instances these bakeries were going concerns. Many of them had been engaged, even before they were acquired, in the highly expensive sales campaigns above referred to. These campaigns have not been introduced, therefore, as a result of the new control, but on the other hand it is not apparent that the new control has thus far been followed by reduced selling costs.

"Nor have the flour costs of these mill-controlled bakeries been reduced as a result of the new relationship. One would expect that a chain bakery using several thousand barrels a month would buy flour from its parent milling company at prices far below those of small competitors using less than a carload a month. The returns received, however, show that in many instances the small baker (purchasing now from one milling company, now from another, frequently from the smaller mills) has been outbuying his large-scale competitor, whose purchases are naturally confined to one large flour milling company.

"If it were not for other price competition beyond its control, a combination of this type and size might affect prices to the disadvantage of the public. The chief possibilities of such disadvantage lie in the direction of price agreements among the mill-controlled groups, of continued costly sales competition, and of the dictation of the prices charged by independent bakeries. The power of the mill bakeries over independents is greatly augmented by their ability to suffer heavy losses in one community where it might be considered desirable to eliminate competition by means of a price war. These, however, are only possibilities. It may be that 'the sight of means to do ill deeds' will not make ill deeds done; it may be that the possibilities for good outweigh those for ill. It seems likely also that the development of the newer forms of price competition will continue to be effective in preventing undue advantage being taken of the reductions in price which have occurred within recent months. Chain store competition, even though much of it has been below cost, supplemented by the competition of smaller low-cost bakeries all over the country has made itself felt. The small capital required to operate small bakeries and the short time within which they can be brought into operation is a public safeguard of some importance. . . . There is also the additional possibility of bread being baked at home in the event of bakers' prices going beyond what are considered reasonable limits. Modern living conditions, however, have lessened the importance of this as a competitive factor.

"Apparently the situation has been taking care of itself, and can continue to take care of itself so long as these factors, actual and potential, remain in existence. If they continue to be as effective as they have been (and there seems to be no reason to believe that they will not) the public as well as the industry will be the better off, having such problems solved without the necessity of governmental intervention."

Besides dealing with the question whether there is a combine in the bread-baking industry, the report compares, by means of tables and charts, Canadian bread prices of the present with those which were in effect before the war and with those obtaining in the United Kingdom and the United States. "Bread prices," the report says, "did not come down proportionately in the early months of 1930, and that fact doubtless gave rise to most of the protests. But by December, 1930, they came to bear the same relationship to wheat prices as in January, 1929, the same indeed as in the first six months of 1929. Assuming that a bushel or sixty pounds of wheat is used in making sixty pounds of bread—a

pound of wheat to a pound of bread—to maintain the same relationship, a decline of sixty-five cents in wheat from the January, 1929, average of \$1.21, to the December, 1930, average of fifty-six cents, should have been followed by a decline in bread prices of 1.1 cent. That is exactly the decline which did take place in bread prices: in January, 1929, bread sold for 7.7 cents; in December, 1930, the average was 6.6 cents in 69 localities. And this in spite of the fact that flour prices did not reflect the decline in wheat prices to anything like the same extent as bread prices did.”

The report emphasizes that this does not imply an expression of opinion that flour and bread prices were in a proper relationship in 1929 or that there is “no ground for complaint about the present price level.” On the other hand, the report points out that “while bread prices followed wheat prices in their decline during 1930, at the opening of 1930 bread prices were decidedly out of line with wheat prices as compared with the relationship which existed in 1923.” It is shown in the report that between January, 1925, and June, 1930, “while wheat and flour prices fluctuated freely, bread prices were maintained at a high level which was generally unchanged. The interval between these dates,” it is stated, “constitutes a period in which occurred the most striking development of the bread industry in recent years, namely, the acquisition of a large measure of control in the bread-baking industry by a few flour milling companies.”

It is pointed out further that, in addition to the rise in the general price level of the country, “something other than flour” is responsible for most of the increase in the price of bread between 1913 and 1930. This is shown, according to the report, “by a statement of the spread between the wholesale cost of the flour used in making a pound of bread and the retail price of bread: in 1913 the spread was 2.3 cents; in 1930 it was 5.1 cents. In other words, even if the baker had got his flour for nothing in 1930 he would still have charged 5.1 cents a pound for his bread; in 1913 he would have charged only 2.3 cents.”

The report reviews the relation between bread prices in the different provinces and states that Nova Scotia, New Brunswick, Alberta and British Columbia have practically always been above the Dominion average while Prince Edward Island, Quebec, Ontario and Manitoba have as consistently been below that average. In this connection a table is published showing the reductions in the prices of bread between January, 1929, and December, 1930, in 69 cities scattered throughout the Dominion.

In a discussion of the content of the Canadian loaf the report publishes a typical formula for bread obtained by an analysis of returns made by 158 bakeries. This analysis, as compared with the British loaf, indicates percentages of the different ingredients in 100 pounds of dough as follows:—

	Canadian bakeries	British bakeries
Flour..	59.3	65.6
Salt..	1.1	0.8
Sugar..	1.1	0.0
Shortening..	1.1	0.0
Milk or milk powder..	1.3	0.0
Malt..	0.5	0.2
Yeast..	0.8	0.5
Yeast food..	0.2	0.0
Water..	34.6	32.9
	100.0	100.0

In addition to securing formulas from bakers a chemical analysis of 17 samples of bread was made for the inquiry under the direction of the Dominion Analyst. These samples varied in price from seven to twelve cents for the twenty-four ounce loaf. The report embodies the findings of the analyst, whose comment on those samples was that “they did not show a great deal of difference in their nutritive value.”

The criticism of Canadian bread prices on the ground that they are much higher than those of the United Kingdom is dealt with in a special section of the report. In this section the costs of Canadian and British bakers are compared, the British costs being for 1923 with the exception of flour, which is for 1929, and the Canadian costs being for 1929 throughout. This comparison shows total Canadian costs of 7.06 cents and British costs of 3.80 cents. An examination of the details reveals a difference of a third of a cent on flour, a half a cent on other ingredients, over half a cent on baking costs, over one cent on delivery and sale and half a cent on overhead. The report comments that the Canadian loaf is much richer than the British loaf and remarks that within the past two years some of the larger Canadian bakeries have put out in a few cities a special bread more after the type of the English loaf and that the difference in cost of ingredients between this loaf and the ordinary Canadian loaf is estimated as just less than two-thirds of a cent per pound.

The costs of Canadian bakeries are analysed in some detail. In this section it is pointed out that flour costs of the smaller independent bakers are not much higher than those of the mill-owned bakeries contrary to the natural expectation that the mill-owned bakeries would be able to purchase flour on more favourable terms because of the larger volume of their purchases. The question is discussed whether

high wages are the cause of high bread prices. "It is difficult to secure decisive tests," says the report in this connection, "owing to the lack of comparative figures over a period of years. Practically none are available between 1913 and 1920, and even those between 1920 and 1930, in the reports of the Department of Labour, being samples only and apparently samples of the highest, are inadequate except as indicating the trend. An examination of the sample wages of seven groups of bakery workers shows that between 1920 and 1930 there were reductions in every instance but one, varying from \$1 to \$2.50 a week. The one exception, machine operators, showed no change. The other six groups referred to are: mixers, bench workers, spongers, oven tenders, packers and delivery employees. The disparity between these sample figures and a more representative average is illustrated by a comparison of wages of bench workers. The average of these sample wages for 1930 was \$28.35; whereas the returns received in the present inquiry on the wages of 592 bench workers, representing all provinces, show an average of \$22.67 per week, three-quarters of the bench workers receiving wages of \$25 or less."

"One explanation of the exceptionally high costs of the larger bakeries," states the report in discussing delivery and sales costs, "appears to lie in their use of high-pressure sales methods. They have, to begin with, a productive capacity which in most instances is greater than their market. The plant of the Canada Bread Company in Ottawa, for instance, or the Standard Bread Company, either one, could produce more bread than is eaten by all the people in the city. More than that, there are at least twenty-five other bakeries doing business in Ottawa, a number of them giving city-wide delivery service. Naturally if a bakery is to approach capacity, it must have a highly effective selling force in the face of such competition. But ordinarily it is not competition in price which characterizes the efforts of the larger bakeries to secure business. Price competition would be effective in keeping costs down; but the competition in quality, in service and in sales promotion which has been substituted has had just the opposite effect of tending to increase costs and therefore to enhance prices and keep them up. Here is one instance where competition (not price competition, it is to be noted) operates to the disadvantage of the public. All the arts of modern salesmanship have been put to use—extensive and expensive advertising campaigns, special delivery services, credit, feature breads of fancy shapes or fancy ingredients—all designed to secure vol-

ume. Sales effort to secure volume has its economic justification when increased volume makes possible lower costs and lower prices. In the bread-baking industry, however, while volume has been secured by a few large baking companies, the selling expenses involved in gaining this volume have been exceedingly heavy, and apparently have more than offset whatever may have been effected in the way of economies from large-scale production. Certainly there is no evidence here that increased volume means lower prices: the records show that it is the large bakeries that are the high-price bakeries."

A summary of the costs of making and selling bread in Canada in 1929, shown by types of bakery, is given as follows:—

	Mill- Con- trolled Bakeries	Large Inde- pendents	Smaller Inde- pendents	All Bakeries
Number reporting	(76)	(12)	(31)	(119)
Cents per pound of Bread				
Flour.....	2-38	2-39	2-58	2-43
Other ingredients.....	0-78	0-87	0-69	0-76
Baking costs.....	1-06	1-04	1-47	1-17
Delivery and sale.....	1-86	1-91	1-04	1-65
Overhead.....	0-84	0-71	0-61	0-77
Total costs...	6-92	6-92	6-39	6-78

From the above summary it is apparent that the cost of ingredients is not responsible for the increase in bread prices since pre-war days. "Flour prices in December, 1930," it is stated in the concluding section, "were the same as during the year 1913. The increase in the cost of ingredients other than flour in that period amounted to only a third of a cent to the pound of bread."

Under the heading of "Combination in the Bread-baking Industry," the report discusses the operations of the bakeries controlled by flour milling companies and the competition between them and the chain stores. It lists the flour milling companies which control bakeries as: Lake of the Woods Milling Company, Limited; Maple Leaf Milling Company, Limited; Ogilvie Flour Mills Company, Limited; and Western Canada Flour Mills Company, Limited. The Lake of the Woods Company, it is stated, controls Inter City Baking Company, Limited, which operates in central Canada, and Inter City Western Bakeries, Limited, with branches west of the Great Lakes. The Maple Leaf Company controls Canada Bread, Canadian Bakeries, Limited (operating in western Canada), Dominion Bakeries, Limited, and Eastern Bakeries, Limited. The Ogilvie Flour Mills Company controls Consolidated Bakeries, Limited, and a

new western chain known as McGavin Bakeries, Limited. The bakeries of the Western Canada Flour Mills are controlled through the Purity Bakery Company, Limited, Toronto. The report estimates that 76 mill-controlled bakeries produced 38 per cent of the bread sold in Canada in 1929 and 93½ per cent of the bread sold in the cities and towns in which their plants were situated.

"Within recent months," says the report, on the subject of the chain store, "other forms of competition have appeared which make it difficult for the mill-controlled bakeries to sustain prices at unduly high levels. The same tendency toward centralization of industry which is seen in the consolidation of bakeries and their control by flour milling companies is to be observed also in the entrance of the chain store into the bakery business. On the one hand we have the flour mills reaching forward into bread manufacture and distribution; on the other we have the chain store, primarily a retail distributing organization reaching back into manufacture—the two meeting on the common competitive ground of the bread-baking industry." The report states that in some cases the chain store has been selling below cost and charging the loss to advertising. "Such a practice," it says, "particularly on the part of a chain which carries many lines of goods and can afford to cut on one for advertising purposes, undoubtedly works an injury to the baking trade whose only or chief product is affected. The impression which is given to many is that 5 cents must be the fair price for the pound-and-a-half loaf, and that anything above that is excessive. On the other hand, where costs of the larger bakeries appear to become unduly high, and where little evidence of price competition is apparent, an extreme form of price-cutting may serve a highly useful public purpose in forcing reductions in costs. Certainly any experiment which shows possibilities of eliminating the admitted wastes

of modern distributive methods, in the bread business as in many other lines, is much needed and is certain to be welcomed."

Within the report, which is available for circulation in French as well as in English, there is a reference to the local situation in Peterborough, where it is stated that a price war was "staged not waged, in November last." "In September, 1930," the report describes this incident, "when the larger Peterborough bakeries were selling bread wholesale at 10 cents, and later at 9 cents, some of the smaller independent bakers cut the price as low as 6 cents, thereby enabling the retail grocers to meet the chain store price of 7 cents. This price proved damaging not only to the larger bakeries, but to the small bakeries themselves, since it meant selling below their cost. In the hope of extricating themselves they appealed to the larger bakeries, and an arrangement was made early in November whereby the larger bakeries would come down to the low price of 6 cents, with the definite intention of remaining at that price for a short time only, when all the bakers would advance together. It was not decided in advance apparently how long the low prices would continue, or what prices would prevail subsequently. By the end of November all the local bakers had suffered such losses as to create a general desire for an increase. It was decided then to raise the price to 8 cents wholesale and 9 cents retail. The head of one of the two mill-controlled bakeries was reported to be in favour of the smaller bakers making only a one-cent advance (their business was largely wholesale), but the other large bakeries held out for the same increase on the part of all, otherwise they would continue at the 6 cent level. The increase was put into effect on December 1, but shortly afterwards one of the smaller bakers dropped to the 7 cents price, thus enabling the retail stores to sell at 7 cents in order to meet chain store competition."

Court Proceedings in Windsor and London Against Plumbing Combine

Twenty-one persons and two corporations charged at Windsor as parties to an illegal combine of plumbing and heating contractors were committed for trial by Magistrate D. M. Brodie of the Windsor Police Court on February 9. The hearings in Windsor on the question of committal for trial were completed in July, 1930. The decision announced on February 9 had been withheld pending the decision of the Privy Council which upheld the constitutional validity of the Combines Investigation Act and section 498 of the Criminal Code, the two Acts under which the charges had been laid.

These cases, together with similar court actions instituted at London, Ontario, were commenced following an investigation conducted under the Combines Investigation Act in 1929 into the Amalgamated Builders' Council and related organizations, an alleged combine of plumbing and heating contractors and others in the province of Ontario. The prosecutions were conducted by A. G. Slaght, K.C., and J. C. McRuer, K.C., acting as counsel for the Dominion Government. After certain parties to the combine had pleaded guilty and were sentenced in London and Windsor in May and June, 1930, proceedings against the

remaining persons charged were delayed by the Windsor and London Police Magistrates until the decision of the Privy Council should be announced.

In London, preliminary hearings on the matter of committal for trial were resumed before Magistrate T. W. Scandrett on February 11, 1931, in similar offences charged against the Canadian Plumbing and Heating Guild, the Dominion Chamber of Credits, Limited, and four residents of Toronto connected with the head office of these organizations. Louis M. Singer, K.C., and W. F. O'Connor acted as counsel for the defendants. Each defendant at London was charged under nine counts, four of which were laid under the Combines Investigation Act and four under section 498 of the Criminal Code. These charges related to combining with the result of lessening competition, enhancing prices and

otherwise restraining or injuring trade to the detriment of the public, in relation to plumbers' and steamfitters' supplies or services. The ninth charge, laid under the Criminal Code, section 444, alleged conspiracy to affect prices and to defraud the public. The completion of the London hearings occupied eleven days, ending on February 26. Judgment was reserved.

Announcement that the Provincial Government that had taken over the prosecution of the A. B. C. cases was made by the Attorney General for Ontario during the course of the February hearings at London. In addition to counsel already engaged in the matter, D. L. McCarthy, K.C., of Toronto, was retained by the Province to act as Crown Counsel at the trials of those charged. The Windsor cases were to be presented at the assizes opening at Sandwich on March 2, before Mr. Justice Wright.

REPORT OF SASKATCHEWAN ROYAL COMMISSION ON IMMIGRATION AND SETTLEMENT

THE appointment by the government of Saskatchewan in January last year of a commission to investigate the subject of immigration in the Province was noted in the *LABOUR GAZETTE*, February, 1930, page 109. The Commission was composed of:—Professor W. W. Swanson, of the University, (chairman); Mr. P. H. Shelton (vice-chairman); and Messrs. T. Johnston, G. C. Neff and A. R. Reusch, with Miss C. A. Lenhard as clerk. The Commission's terms of reference covered every phase of immigration, including many problems that have been unexplored hitherto. Their report, a volume of 206 pages, just issued, is the result of many public hearings in all parts of the province, and contains a valuable list of suggestions and recommendations to the Provincial Government for the better control of immigration. The following paragraphs contain the substance of these recommendations, which are supported by a full discussion of the evidence taken, with numerous illustrative charts, maps and tables.

Dominion Conference Proposed

While the Commissioners had authority to deal only with matters within the province itself, they point out that "no possibility exists of any system which would prevent persons who have legally entered any province of Canada from migrating at any time to this province, and we therefore urge that an effort be made to call a conference between the representatives of the Government of Canada and of all the provinces, in the hope that from such a meeting might arise uniformity of opinion concerning an immigration and settle-

ment policy, and we beg to remind you that this report is necessarily framed so that it may be used, if adopted, not only as a basis for the immigration and settlement policy of your government, but as this province's recommendations to the proposed and later conferences.

"It has been announced that a conference of the three governments of the Prairie Provinces with the Dominion Government will be held in the near future to consider this question. Owing to the general likeness of the conditions in these three provinces, and certain differences between them and the conditions in the other provinces, such a special conference would be desirable, but we urge that it be followed by the general conference which we propose."

The Commission further recommends the immediate holding of a conference of representatives of the Provincial Departments of Natural Resources, Agriculture and Labour, the College of Agriculture of the University of Saskatchewan, representatives of the organized farmers and other interested public bodies, invited representatives of the Dominion Department of Immigration and the Dominion Department of Agriculture, and the persons or corporations who desire to obtain licences as immigration and colonization agents, in order to deal with the details of immigration and settlement regulations.

Immigration Regulations

In making recommendations that would modify federal legislation the commissioners have in mind that if these are approved by the

Provincial Government the latter will bring them to the attention of the Federal Government. They recommend as follows:—

Machinery.—1. That an advisory Federal Board of Commissioners be created to consider and recommend policies of immigration and settlement, on which will be represented every province.

2. That primary control of all immigration activities of the province should be in the hands of the Minister of Immigration and Natural Resources of the province.

3. That a Provincial Council of Immigration and Land Settlement be created consisting of the deputy ministers of the Department of Natural Resources, Agriculture and Labour of the Province, to control the flow of immigration and settlement.

4. That a bureau be established, representative of this Provincial Council of Immigration and Settlement, in London, England, to deal with all matters of immigration affecting this province, as far as they can be supervised in London, and to co-operate with other government representatives on matters affecting our trade and commerce.

5. That all matters affecting after-care of immigrants settled on the land should be in the hands of the Minister of Agriculture of the province, and that after-care of non-agricultural immigrants should be in the hands of the Minister of Labour of the province, acting upon information placed at their disposal by the Provincial Council of Immigration and Settlement.

6. That it should be agreed that the representative of this province on the proposed Federal Board of Commissioners should be empowered to state the numbers and classes of immigrants required by the province.

7. That all leases, agreements of sale or mortgages affecting land in transactions between licensed immigration and colonization agency and a settler should be filed with and approved by the Provincial Council of Immigration and Settlement, and a suitable fee imposed.

Immigration Agencies.—1. That any person, corporation or society desiring to engage in business as an immigration and colonization agency should (1) obtain a licence to that effect from the Dominion Government; and (2) before being allowed to operate in Saskatchewan should obtain a provincial licence which would impose upon such person, corporation or society, the obligation to submit all its activities in connection with land settlement to the supervision of the Provincial Council of Immigration and Settlement.

2. That no licences should be granted to any person, corporation or society, except those who, in the opinion of the Provincial Council of Immigration and Settlement, are

capable of entering on actual programs of settlement.

Classes of Immigrants.—1. That first efforts should be given to provide for the settlement on the land of persons now resident in this province.

2. That no special measures are necessary to stimulate immigration to Saskatchewan of Canadians from other provinces.

3. That the Dominion Government should aid, to the extent of one half of their transportation expenses to Canada, in the repatriation of Canadians now resident in the United States, to the several provinces from which they migrated.

4. That every encouragement should be given to British immigration and that the British Government should be invited to assist in devising schemes for such a movement and in providing financial aid for carrying them out. We specially recommend assisted immigration of British boys of school-leaving age and over, under proper safeguards.

5. That with the exception of grants made by the British Government for the assistance of British settlers, grants made by the Dominion Government for repatriation of Canadians, or grants made by the Province to assist in the settling of residents of the province on public lands and for boy settlement schemes, no governmental financial aid to settlement be granted.

6. The Commission makes no recommendation with respect to a quota law.

7. That no single agricultural workers be admitted at present.

8. That domestics be admitted under proper control by the Provincial Council of Immigration and Settlement, and that measures be taken to encourage the reuniting of families.

9. That when, in the opinion of the Provincial Council of Immigration and Settlement, there is room for immigration, preference should be given with proper safeguards, as to numbers and treatment, first to nominations by established farmers, and that immigrants should be charged a head tax intended to provide insurance against indigency, which, however, need not be applied in the case of British immigrants if, after negotiations, the British Government prefers to contribute to this insurance on a basis proportionately to the contributions from other nationals, obtained through the head tax.

10. That heads of families may be admitted on the nomination of immigration agencies where the nominee has a minimum capital of \$250 upon landing in Saskatchewan, the proper safeguards as to head tax and after-care applying; these nominations should only be permitted where the Provincial Council of Immigration and Settlement is satisfied as to actual opportunity for employment and housing.

11. That immigration agencies should be permitted to bring in leasehold or partial payment purchase settlers as hereinafter provided on condition that the settler does not become a public charge within a period of five years after admission. Such settlers should only be admitted for location in areas and on terms approved by the Provincial Council of Immigration and Settlement. This is particularly desirable as a means of directing a flow of immigration from Great Britain.

12. That any immigrant, married or unmarried, having the necessary capital to establish himself in agriculture or industry may freely enter the province for the purpose of taking up land, or to establish himself in business.

13. That no other person be permitted to enter except by specific permission of the Provincial Council of Immigration and Settlement through this province's representative on the Federal Board of Commissioners.

14. That where the foregoing regulations restrict the free movement of immigration to the province they shall not be enforced against British migrants.

Methods of Land Settlement and After-Care.—1. That a complete soil and economic survey of the province be made, and that the conclusions arising from it be used as a basis for future settlement policies, and that all existing cases of location of settlers on unsuitable lands be brought to the attention of the Provincial Council of Immigration and Settlement and to land-owning corporations in cases concerning them.

2. That this survey be applied first to the remaining Crown lands and to areas where it is believed that settlement has taken place on unsuitable land.

3. That immigration and colonization agencies be permitted to sell farms to immigrants in areas, in units and on terms only as approved by the Provincial Council of Immigration and Settlement.

4. That immigration and colonization agencies be permitted to lease farms for not less than ten years to immigrants in areas, in units and on terms only as approved by the Provincial Council of Immigration and Settlement.

5. That homesteading be discontinued and that the remaining Crown lands where immediately available for agriculture be sold (a) to residents of the province, (b) to other Canadians, (c) to British settlers, (d) to other immigrants.

6. That the Government investigate the "use lease" method of disposing of Crown lands with a view to testing it.

7. That Crown lands found suitable for settlement but which require clearing, be cleared under Government auspices, and the

cost of this included in the sale or lease price of such lands.

8. That land not suitable for agriculture but useful for ranching be leased for this purpose.

9. That blocks of land suitable for agriculture located in ranching areas be included in the ranching leases.

10. That efforts be made to transfer settlers now on lands unsuited for agriculture, or included in areas suited for ranching, to more suitable locations, under a system of government expropriation and compensation in respect to the latter.

11. That immigration agencies, railways and mortgage companies be invited to apply similar correction in the case of settlers located on lands leased or sold on partial payment terms by them.

12. That immigration agencies, railways, land and mortgage companies be invited to consider the transfer of settlers from land ownership to long term lease where experience has shown that the settler is not making reasonable progress.

13. That where a cycle of bad seasons has impaired the economic position of a farmer who is a mortgagor, he be given security of tenure by the automatic extension of the terms of his mortgage or other instrument of obligation.

14. We recommend to the Government consideration of schemes for the assistance of residents of Saskatchewan to settle on the lands of the province.

General Recommendations.—1. That the Dominion Government be requested to compel naturalization of immigrants who have resided in the Dominion for a period of seven years.

2. That all immigrants landing in Canada take oath to obey the laws of the country, and that within a period of six months they should make application signifying their intention of becoming citizens.

3. That lands carrying merchantable growth of timber be withdrawn from settlement and administered as forestry lands.

4. That in view of the outstanding importance of taking full advantage of the gifts and capacities of newcomers as a contribution to our common life, special efforts should be made through the Department of Education and other public bodies to approach the question of assimilation in the most sympathetic attitude in order to win the confidence and co-operation of incoming settlers.

5. That the Government consider the rendering of assistance to the new settlers and others in establishing themselves: (a) by increasing the agricultural representative service, and (b) by inducing experienced farmers to establish themselves in immigrant communities.

6. That unemployment relief as it becomes necessary should, as far as possible, be obtained by the use of unemployed labour in opening land to settlement or otherwise developing our natural resources.

7. That the Saskatchewan Farm Loans Act be amended to permit progress loans to farmers engaged in clearing and breaking land, through the establishment of a separate department.

8. That the Government consider the provision of better markets for pulpwood in districts where this product is available; if feasible by the construction of a pulp mill.

Movement to Cities

The report notes the present decided trend to a movement of agrarian population in the urban centres over all this continent. "In the case of the older communities of Canada this trend has now become so marked as to create a serious danger that the rural population will be lessened in numbers and altered in condition to a point of danger—since the tendency is everywhere for the younger people to respond to the urge to seek the greater economic attractions of city life, leaving the countryside populated by a community of steadily advancing average age.

"It is possible that this tendency will cease at some future date, but it still visibly exists, and we are of the opinion that as long as that is the case, it will be necessary, if we are to maintain a biologically and economically sound condition of rural population, to permit at least some inflow of immigration."

Elsewhere it is stated that "the tendency is for those young people who seek wider economic opportunity to do so beyond the boundaries of the province and even of the country. That represents a serious loss. It is due to the fact that our society is not large enough to support the complete metropolitan centres necessary to provide the fullest cultural and economic opportunities. That condition can only be corrected by permitting a steady increase of the rural population which is the base of all economic growth."

For these and other reasons the commission concludes that no unnecessary checks should at present be placed on immigration. The report then proceeds to lay down certain principles of control, intended to provide for the maximum freedom of immigration, limited however by the necessity to maintain the standards of living already existing.

Classes of Immigrants

The following suggestions are made as to the classes of immigrants that should be specially considered:—

"The first effort should be in the direction of relocation of settlers who have been in error placed on land unsuited for agriculture.

Later we recommend a method of determining such cases and we suggest that this readjustment of unfortunate instances among existing settlers should be the first part of a settlement policy.

"Next, in our opinion, come the comparatively large number of persons who, with some experience as settlers, have for reasons often beyond their control abandoned farms, migrated to the urban centres, and now regret the change. We advise concentration on the problem of how to obtain their relocation as agriculturists and have suggested that they be given first opportunity to utilize the remaining Crown land on easy terms.

"We have next given consideration to the question of the migration of settlers from other provinces of the Dominion, but have concluded that no special efforts are necessary in this direction. There is a steady flow from east to west and it is possible that this has already been carried on as far as is desirable, when it is remembered that the mere transfer of inhabitants from one part of Canada to another is not a net gain for the country as a whole. . . .

"A more reasonable effort in the direction of attracting native-born Canadians to a share in the future development of the wealth of this province would seem to lie in the possibility of inducing at least some of the Canadians at present residing in the United States to return to Canada. It will be seen that we have made specific recommendations in this case, and urge the most careful consideration of them, in view of the admitted fact that those born and reared in Canada are already equipped with training in Canadian modes of life, and automatically accept those standards of living which are the aim of all our social and economic plans.

"In the matter of encouragement of immigration of settlers from Great Britain, we feel that no obstacle should be placed in the way of their free entry into the province, but that care should be taken on the contrary to extend to them such support as will aid them to achieve permanent success. It is, in our opinion, much to be desired that steps be taken to fit many more British-born to enter into our national life. We admit the apparent failure of some of the schemes so far tried for this conversion of city-bred people of Britain into capable Canadian farmers, but refuse to accept this as final. To take an excellent comparison, it is admitted that the plan of training men in Britain as farmers or farm labourers has not been successful, while on the other hand the method of assisted settlement known as the Three Thousand Family Scheme has in general been satisfactory, and has added a desirable group of settlers to our community."

OLD AGE PENSIONS IN NEW BRUNSWICK

Final Report of Commission to Consider Position of Province Under Federal Act

THE Commission appointed last year by the Government of New Brunswick to consider the question of Old Age Pensions with a view to the possibility that the province might enact legislation to give effect within its jurisdiction to the provisions of the Dominion Old Age Pensions Act, recently presented their second and final report. This report states that the operation of such a scheme would "place a very heavy responsibility on the Province."

The commission's interim report was outlined in the *LABOUR GAZETTE*, April, 1930, page 336. The commission was also instructed to investigate the subject of Mothers' Allowances, and their report on this subject, just issued, is outlined in the next article in this issue, in which also the names of the Commissioners are given.

At the time of submitting its interim report, the Commission had received 9,628 questionnaires from persons claiming to be eligible to receive a pension. "Since that time," the report states, "this number has grown to almost 11,000, which means that more than two-thirds of the persons of seventy years of age and upwards, as estimated to be in the Province, have responded to the appeal of the Commission. The different statements contained in its Final Report are therefore based on the information gleaned from its questionnaires; but while so large a number has been reported, the Commission has no reason to change its estimate of the total number of persons of seventy years of age and upwards in the Province, which was stated as approximately 16,138. The Commission has been compelled, however, from its classification of the questionnaires, to revise its estimate of the probable number of eligibles, as it has been found upon a cross-checking for duplicates and ineligible who had sent in questionnaires that its present report must be based upon a total of 8,677 questionnaires that disclosed some qualification for pensions instead of the previous estimate of about 8,000."

Among the questionnaires received were 268 showing incomes greater than \$365 per year, which were therefore not taken into consideration in any of the Commission's classifications.

The Commission believes that the cost of organization and administration for the first year would probably be greater than for succeeding years. From a study of the report of the administration of Old Age Pensions Acts in other provinces the cost of organization in New Brunswick is estimated at about \$25,000,

this sum being made up of the following items: Printing and Stationery, \$2,000; office equipment, \$4,000; postage, \$1,000; inspectors (3 at \$1,800), \$5,400; expenses of same (traveling), \$5,000; clerks, stenographers, etc., \$5,000; superintendent, \$2,000; telegraph, telephone, etc., \$600. After the first year the operating cost would be reduced, and would probably amount to about \$13,700.

The report estimates the number of pensioners in each county, in the Province, the average income of each pensioner, the average pension payments to those who are eligible, and finally arrives at the following totals for the whole province.

Number of Pensioners.....	8,677
Total Cost	\$1,923,165 54
Less 5% on personal property....	26,180 00
Total Net Cost.....	1,896,985 54
Average Pension	218 62

(After this statement was completed the Commission received 150 additional questionnaires calling for Total Annual Pension of \$33,825. These additional questionnaires were from the Province in general, and were not received in time to include in the detailed tables.)

The Commissioners make the following statement of the probable cost of old age pensions in New Brunswick:—

"The estimated cost of operating an Old Age Pension Act in this Province upon a basis of 8,677 eligibles is \$1,896,985.64, being an average pension to each such eligible of \$218.62. One-half of this sum would be payable by the Federal Government, but would still make this Province liable for the sum of \$946,492.82. These figures may, however, be reduced by approximately \$125,860.54, as shown by the table herein which states the replacement value of real estate assigned to the Pension Board, leaving the net sum payable under the Local Pension Act of \$820,632.25. In its interim report your Commission, upon the information then at hand, estimated the total amount payable in pensions each year at \$1,956,000. The difference between the two estimates is \$60,014.36, and therefore unless under the administration of the Act it is found possible to reduce the above figures by a very considerable extent, the operation of the Old Age Pension Act will place a very heavy responsibility upon the Province."

In regard to existing parish and alms houses aid the Commissioners state that there are at present 205 persons outside of alms houses and municipal homes receiving parish aid at

an approximate daily cost of 45 cents per person, or \$3,334, per year, but the Commission is satisfied this is only a small portion of those receiving such aid, and a complete statement would show that out-door relief, so-called, would be very materially reduced by the adoption of a pension system. What is here stated in respect to out-door relief is equally applicable to institutional or municipal home maintenance, so far as the inmates thereof are of the age of seventy years and upwards, and would seem to justify a contribution by the municipalities to assist the Provincial Act as is suggested for one source of revenue by the interim report of your Commission.

Pensions are already being paid within the province from various other sources. On this subject the report states that "there are now in this Province 69 persons over the age of 70 years receiving pensions. These pensions are being paid for various services, such as Federal and Provincial Government services, school teachers, railway employees, and to those who have lost sons or daughters or other support in the Great War, and workmen's compensation."

Referring to the provision of the Federal Act with regard to persons who have lived for a portion of the first twenty years in some other province the commissioners find that "there are 66 persons qualified for pension who have lived some part of the last twenty years in other Provinces. This will have the effect of reducing the amount of pension that will have to be paid by New Brunswick. On the other hand there are 89 pensioners at present in other provinces, who are at present being paid by those provinces, and who have lived some part of the last twenty years in New Brunswick."

Persons who would otherwise be qualified for Old Age Pensions in the Province are reported to have personal property to the value of \$523,600. In arriving at the total cost due regard has been paid to this fact and credit taken at 5 per cent per annum. Another fact that would lower the amount of pensions is that "there are in the province 1,517 persons, qualified for some amount of pension, who are living with sons or daughters. This fact will tend to reduce the amount of pensions allowed and in some few cases may disqualify. There is no way that this Commission can get at this matter as it will be a question of administration and will depend on how strictly each claim is adjusted."

As an additional source of revenue to meet the cost of pensions the Commissioners suggest a provincial tax (somewhat on the lines of the Amusement Tax) on all magazines published outside of Canada, having a sales

price of 15 cents and over, and containing 20 per cent or over of fiction, and being sold by news stands and other shops. This, it is stated, would not affect the better class of magazines, but would tend to restrict the sale of the more objectionable class, and would produce some revenue. Magazines coming in by subscription would not be subject to this tax. The Commission suggests a sales tax of 10 cents per copy.

The Federal Act (Sections 2 and 3) makes provision for the assignment of the pensioner's real estate to the Pensions Board, and upon the death of the pensioner the said real estate may be sold and the Board reimburse itself from the proceeds, the amount of the pensions paid plus 5 per cent. On this subject the report states that "there are 1,951 owners of real estate amongst the prospective pensioners in this Province, and some of them will refuse to assign their real estate. However, for the purpose of this illustration the Commission has assumed that they all make assignments to the Board (those that refuse to do so will be disqualified, and will reduce the total number of pensioners by just that many, so that the results in the end will be approximately the same). In very many, in fact the most of the cases there is no value given in the questionnaires for real estate. They simply say 'a small house,' '40 acres of land' or some such words. In those cases where a value is given, it runs all the way from \$100 to \$2,000 or \$3,000.

The following statement is given showing the repayment values of real estate assigned to the Board:—

8,677 Pensioners, Average Age.	73.6 years
Expectation of life for the	
above Pensioners.	7.63 "
Total Pension Years.	66,205.51 "
Average Pension for the whole	
Province.	\$ 218 62
Total amount required to pay	
this Pension (66,205.51 years	
x \$216.62)	14,473,848 60
(One-half paid by the Federal	
Government.)	
Balance for the Province of	
New Brunswick to pay.	7,236,924 30
Number of persons owning some	
real estate.	1,951

"Assume that all of these persons are willing to assign to the Board in order to qualify under the Federal Act, and take an average value of \$500, there would be a repayment to the Board within the next 7.63 years of \$975,500.

"This amount from the total cost of \$7,236,924.30 leaves a balance of \$6,261,424.30, which divided by the "Expectation of Life" (7.63 years) gives an average annual cost to the Province of \$820,632.28."

REPORT OF COMMISSION ON MOTHERS' ALLOWANCES IN NEW BRUNSWICK

THE Legislature of New Brunswick, at its session last year, enacted a Mothers' Allowance Act, to take effect on its proclamation at a future date (LABOUR GAZETTE, October, 1930, page 1152). The act provides for the granting of an allowance to a mother of two or more children under 16 years of age, who is a widow and fulfils other required conditions, and also in special circumstances to the mother of one child. This legislation was adopted as the result of a favourable report from the Commission, headed by Mr. Justice Grimmer, who were already investigating the question whether or not the Province should participate in the Federal Old Age Pensions Act, and to whom the further question as to proposed legislation on mothers' allowances was subsequently referred (LABOUR GAZETTE, April, 1930, page 361). The Commission reported favourably on the latter proposal, and legislation was enacted at the session then in progress. The full report of the commission on the subject of mothers' allowances has now been made public.

The Commission was instructed: (1) to report upon the rate or rates which will be reasonable for allowances to mothers upon whom children are dependent, along lines similar to those of the Acts in force in several provinces of the Dominion; (2) to determine the cost of such mothers' allowances; (3) to inquire into and report upon what alternative means of taxation could be imposed or other means taken to provide the increase in revenue which would be necessitated by the adoption of such scheme.

Another commission had studied the subject of mothers' allowances in 1924 (LABOUR GAZETTE, June, 1924, page 481), and made estimates of the probable cost, together with recommendations as to methods of raising the revenue necessary for the purpose. The material gathered by the earlier commission is incorporated in the present report.

The Commission was as follows: The Hon. Mr. Justice W. C. H. Grimmer (chairman), Mrs. H. F. Macleod, Mrs. J. B. Chouinard, Mr. Oscar J. Dick, and Mr. George A. Stone, with Mr. R. A. Cross as secretary. In their inquiries the commissioners obtained information from Children's Aid societies, associated bureaus, etc.; also from the provinces of Canada where mothers' allowances were being administered (namely Alberta, British Columbia, Manitoba, Ontario and Saskatchewan); and from the Department of Labour of Can-

ada and the Canadian Council of Child Welfare. The report contains a full study on the whole subject of family allowances, prepared by Miss Charlotte Whitton, the secretary of the last-named organization.

Findings of the Commission

The Commissioners found that "in nearly every case the needy mothers and children were reported from the urban districts, it being found very difficult to obtain reliable information as to the needy mothers and children from the rural districts. This latter may be accounted for in that there are really not many needy cases in the rural districts, or that such as do exist are already being suitably cared for; or on the other hand that there is an existing pride in those mothers in need in the rural districts that prevents them from making their wants publicly known.

"Your Commission also found that the mothers needing assistance may be included in three main classes, viz., widows, wives, whose husbands are totally incapacitated, wives deserted by their husbands. Also that to some extent the children now being maintained in the various orphanages could be re-established in their homes under the mother's care when the mother's allowance become operative, which re-establishment however would require the strictest investigation and supervision.

"From information at hand it is also apparent that it is very important that in every case of allowances being granted it be strongly impressed upon the mother that in accepting the allowance she becomes in effect an employee of the Province, and that whenever the authority administering the Act becomes dissatisfied with her conduct the allowance may be withdrawn. Also that it must be recognized as a first principle that the administration of the allowances will be regulated by the most strict supervision, and that too much economy in the line of social service supervision will be more than offset by an increase in and abuse of allowances. The selection of social service supervisors will be a matter of most careful consideration in that tact, sympathy and firmness will be required as well as good business judgment."

Tables are given showing the number of mothers that would be subject for allowances in Saint John, Fredericton, Moncton and Chatham, the number of children and the probable cost of allowances at these centres. From these figures the probable number of

mothers in the urban districts of the province who would receive allowances is estimated at 193, with 692 children, involving payments amounting to \$88,880 per annum, the total cost for the entire province being estimated at \$165,254 (including children in orphanages if they should be re-established in their own homes).

Recommendations

The Commission's recommendations are as follows:—

"The Commission recommends that regulations be made whereby a mother owning real estate, such as a small house, who has received aid under the Act, shall make an assignment or conveyance thereof to the Board for its protection, so that in case of her remarrying it would not be possible for the property to pass into the control of the second husband, or sold; but on the contrary that the property should be held for the benefit of the children, who had been receiving aid so long as needed, or sold for reimbursement of the allowances paid.

"The basis of calculation hereby submitted is as follows:—for a mother and one child under sixteen (when, and if, qualified under the Act), \$25.00 per month—very few will qualify in this class; for a mother with two children, under sixteen, \$30.00 per month, and \$5.00 additional monthly for each child under sixteen, up to a maximum of \$60.00 per month.

"This Commission, viewing the social need standpoint, also recommend the passing of an Act for the aid, by sons and-or daughters, for

the maintenance of parents, due regard being had for the means and personal responsibility of such sons and-or daughters; Also:—in the case of mothers' allowances, that a boy or girl having passed the age of 16 and being capable may be made responsible, in some small part, for the family maintenance, whether living at home or away therefrom. This would contribute to the public good, inasmuch as it would establish a feeling of responsibility amongst these affected, and if such an Act were put into operation in a few cases at least the moral power behind it would make for automatic enforcement. This moral force is the essence of all good laws.

"The Commission also recommends that each County and-or incorporated city, town or village be charged with 50 per cent of the allowances paid in such County, incorporated city, town or village. Adjustment being made once every year for changes of residence; the full cost of administration being carried by the Province. This will assist in localizing supervision, and will not, in the final analysis make the cost *per capita* in any way a direct tax.

"Your Commission also recommends the appointment of a full time Supervisor, necessarily a woman, who will give her entire time to the work; for a so-called case reader or chief investigator, and for a sufficient field staff to investigate thoroughly over and above or in addition to any local report every application for allowance before the allowance is made. This from experience has been found absolutely necessary in the Provinces now operating the mothers' allowances."

EMPLOYEES' PENSION PLAN OF STANDARD OIL COMPANY

THE adoption of a new industrial insurance and pension plan for its 45,000 employees was recently announced by the Standard Oil Company, of New York. This plan which is retroactive to January 1, 1931, replaces the original self-administered plan of pensions and allowances adopted by the company in 1903. It is administered by the Metropolitan Life Assurance Company. In announcing the new policy, Mr. Herbert L. Pratt, chairman of the board of the company, stated, in part, as follows:—

"Since our original annuity plan was installed in 1903, the number of employees of the company has increased from 8,000 to 45,000, so that for the protection of this large increase in numbers it became necessary for the board of directors to review the problem. A study has shown that many industrial corporations, railroads, banking and other insti-

tutions, operating their own annuity plans within their own organizations, as we have been doing, have found it necessary to reduce materially the benefits to the employee, and in some cases to discontinue the plan altogether.

"In an endeavour to prevent the possibility of such an unfortunate experience for our employees we have decided to terminate the present plan and to adopt a new plan which has been set up on an independent co-operative basis, supported by contributions of employees and a very much greater contribution on the part of the company."

Under the provisions of the plan, men are to be retired at 65 and women at 55, with certain exceptions to fit particular instances of long service, on pensions that are roughly equal to 2 per cent of their average salary multiplied by the number of years the employee has

spent in the company's service. An employee retired after thirty-five years of service would thus receive at least 70 per cent of his average previous pay, the announcement points out.

The plan provides for death and disability benefits, independently of the pension allowance. The premiums used to purchase what are in effect annuities for all Standard Oil employees are paid for the most part by the company, with a system under which the employee contributes also in proportion to his salary.

While no announcement was made as to the total cost of the new plan to the company, it is understood that the company will bear approximately three-fourths of the cost of the plan and the employees one-fourth, and that the total paid in premiums by the company will exceed \$5,000,000 and may reach \$10,000,000 a year. The entire cost of the premiums necessary to care for the pension requirements up to the end of 1930 is assumed by the company.

The new plan will have the effect of putting the pension relations between the corporation and its employees on a definite contractual basis, and will make the retirement benefits irrevocable. Although the Standard Oil Company of New York reserves the right to discontinue the plan at any future date, one provision of the agreement with the Metropolitan

Life Assurance Company is that in case of discontinuance all annuities purchased for employees up to that time shall remain in force. Participation in the new plan on the part of the employees is made optional, with provision that the acceptance of the terms of the plan by a worker shall not affect his rights under the workmen's compensation laws.

Although the exact amount of death benefits was not made public, it will approximate a year's salary, according to the announcement. Another provision of the plan protects employees against loss as the result of accidental injuries or permanent disability.

An important feature of the agreement between the insurance company and the oil company governs the pension allowances of employees of long service. After twenty-five years of service the annuity of any employee becomes his absolute property, and even if he leaves the service of the company he is entitled to the benefits of the plan as soon as he reaches the retirement age.

Another provision is that in determining the amount of annuity due for services up to the adoption of the present plan the salary of the employee shall be regarded as that which he received during the last payroll period of 1930, instead of the average of his pay for the last five years, as under the old plan.

Age Limits in Industry in the United States

The results of studies of the position of middle aged workers in industry were published last year by the States of Maryland and California, and are reproduced in the *Monthly Labour Review*, February, 1931.

In the report for Maryland, the conclusion is reached that in addition to the conscious and deliberate establishment of an age bar to hiring, there is at work a definite and perhaps unrecognized tendency to choose the younger worker at a time when, as at the present, choice is all too easy, and that this is perhaps even more widely effective than the acknowledged placing of limits. This, the report holds, is demonstrated "by the fact that notwithstanding the conditions revealed by an analysis of the relative age distribution of the industrial workers for whom records were secured, no less than 64 of the 79 manufacturing establishments involved claimed to have no specified maximum age limit for employment."

An important cause of the discrimination against older workers, it is held, is the existence of the welfare plans, such as pensions, retirement plans, group insurance, compensation insurance, and employees' benefit funds.

Another, perhaps even more influential, is unemployment, not merely the temporary unemployment due to a passing business depression, but the more serious and enduring form, due to the displacement "of human labour by improved mechanical devices accompanied by an increasing labour market caused by growth of population, immigration, and the further industrialization of women, both married and single, and of Negroes, and which make it possible to choose more or less freely from among numbers of applicants."

In California, as in the Maryland study, it was found that employers frequently explained their adoption of maximum hiring-age limits as due to their maintenance of such plans as retirement pensions or group insurance. To test this, an analysis was made of the figures concerning the establishments which had and which had not set up welfare plans. The total number of establishments reporting was 2,808, of which 306 or approximately 11 per cent had established age limits. Of the total number reporting, 783 had group insurance or pension plans or both, or physical examinations, or combined physical examinations with one or both of the other plans, and in this group

148 establishments, or 18.9 per cent, had adopted age limits for hiring. On the other hand, among the 2,025 which had neither group insurance nor retirement plans nor physical examinations, only 158 or 7.8 per cent had hiring-age limits.

Establishments having a combination of the insurance and pension plans, or pension plans alone, or physical examinations of applicants for employment are the establishments in which maximum hiring-age limits are found more frequently than in establishments having group insurance only. Technological unemployment is given as one important reason for

the existence of age limits on hiring. Since the war the part in production played by machinery has increased materially, the output per worker has grown larger, and the number of workers required has decreased, while the demand upon the individual worker has in many cases become more severe. A considerable part of the difficulty, however, is ascribed to sheer prejudice against the older worker, which leads to a hasty assumption that he is less useful than a younger applicant, and takes no account of the qualities in which he may excel.

NATIONAL COUNCIL OF WOMEN OF CANADA

Proposals Submitted to the Dominion Government

ON February 5 a delegation representing the National Council of Women of Canada presented to the Prime Minister and members of the Dominion Government a number of requests for legislation, based on resolutions recently adopted by the Council. The delegation was received by the Right Hon. R. B. Bennett, Prime Minister; the Hon. G. D. Robertson, Minister of Labour; the Hon. Hugh Guthrie, Minister of Justice; the Hon. A. Duranleau, Minister of Marine; and the Hon. G. T. Murphy, Minister of the Interior. The views of the National Council were presented by Mrs. J. A. Wilson, the president, who was supported by Miss M. Winifred Kydd, of Montreal, vice-president, and president of the Montreal Local Council of Women; Miss A. M. Going, president of the Kingston Local Council; Mrs. Jean Muldrew, Ottawa, convener of the League of Nations committee; Mrs. J. S. Digman, Toronto, convener of the Arts and Letters committee and Government representative at the Prague Conference; Dr. Edna M. Guest, Toronto, convener of the Public Health committee; Mrs. J. Wesley Bundy, Toronto, provincial president, Ontario; Mrs. J. A. Henderson, Montreal, provincial president, Quebec; Mrs. W. L. McFarland, Toronto, president of the Toronto local council; and Mrs. H. H. Rowatt, Ottawa, secretary of the National Council of Women. Among the suggestions submitted by the delegates were those following:—

Amendment of the Naturalization Act so that a British woman married to a foreigner may retain her British nationality; and that a married woman be permitted to take out naturalization papers as if she were a *femme sole*.

That enabling legislation be enacted making it compulsory that in criminal cases, in which

women and children are principals, a proportion of the jury shall be women.

That the Dominion Government appoint a special committee to study the question of calendar reform, both in its academic and practical aspects, such committee being empowered to take steps to inform the general public in respect to the proposed reforms, in order that a consensus of intelligent opinion may be obtained from all sections of the Dominion; and that the League of Nations be requested to convene an International Conference entrusted with proposing specific measures for the reform of the calendar.

That the Government of Canada sign the General Act of Arbitration and Conciliation as drawn up by the League of Nations in 1928.

Adoption of the principle of health examinations before marriage in a form easy to popularize and possible to enforce, which would be approved by the medical profession.

That the Dominion provide financial assistance to the provinces in establishing County Health units in all Provinces as requested recently by the Dominion Health Council. (The resolution on which this request was based was given in the LABOUR GAZETTE, January, 1931, page 5).

That the Federal Housing and Town Planning Bureau be reorganized and made a central bureau to carry on more completely the work of education and guidance in these subjects, and that those Provinces whose Acts are not cohesive or have become inoperative may be energized, so that Canada may grow aright on both constructive lines and avoidance of costly mistakes with regard to the health and welfare of her people and may also take a respected place in the Housing and Town Planning Councils of the nations.

Amendment of the Long Service Pensions Act so that dependants would be placed on an equal status with dependants of the pensioners under the present War Pensions Act.

Provision by the Dominion of pensions or allowances for blind persons.

That the age limit for women under the Old Age Pensions Act be reduced from 70 to 65 years. (It was pointed out that women are physically unfit to earn a living wage at the age of seventy years, and that Australia, New Zealand, Great Britain, Denmark, Germany, Italy, Luxembourg, Spain, Sweden and Switzerland have reduced the age limit to sixty-five years).

On the subject of unemployment the National Council declared itself as anxious to assist in every possible way in the emergency situation that has arisen out of unemployment, each Local Council being urged to assume the responsibility of taking immediate action in connection with the co-ordination of the local units concerned in securing employment and relief in the various municipalities.

It was further recommended that in all conferences for the consideration of economic

problems, women as well as men should be invited to participate in the deliberations, and wherever boards or commissions are appointed to carry out the necessary work of adjustment, women as well as men compose such boards or commissions.

(This resolution was submitted to all authorities concerned, including the Provincial Government, Dominion Government and any other interested groups).

Establishment of a Canadian broadcasting Company by the Dominion of Canada to own, operate and control all broadcasting stations in the Dominion, to erect high-powered stations that can serve the whole Canadian people, to eliminate direct advertising, and by the increase of a licence fee from one to three dollars to finance a greater number of Canadian programs.

The Prime Minister thanked the delegation for their suggestions, to which he undertook to give careful consideration, pointing out however that some of the subjects dealt with were matters falling within provincial rather than federal jurisdiction.

WORKMEN'S COMPENSATION IN QUEBEC IN 1930

THE third annual report of the Workmen's Compensation Commission of Quebec reviews the operations under the Act of 1928 for the year ended December 31, 1930. The provisions of the Workmen's Compensation Act, which came into effect on September 1, 1928, were detailed in the LABOUR GAZETTE, May, 1928, page 459.

The Act applies to the work of building, including the business of demolishing; to factories, manufactories, or workshops; stone, wood or coal yards; lumbering operations, including protection service and the floating of timber; any transportation business by land or by water or loading or unloading; any gas or electrical business; the business of building, repairing or maintaining public roads, railways, tramways, telephones, telegraphs, water works, drains, sewers, dams, wharves, docks, elevators, bridges or other similar work; mines or quarries; any industrial enterprise or yard in which explosives are manufactured, used or kept, or in which machinery is used, operated by mechanical power, but only if the accident is caused by such machine or the discharge of such explosives; any commercial establishment, but only if the accident which happens in such an establishment is caused by an elevator to the persons in charge of same, or if the accident happens in a work-

shop forming part of the establishment; and is caused to workmen of such workshop by machinery operated by mechanical power.

Agricultural industries and domestic service are excluded, as is also navigation by means of sails, even when the vessel is equipped with an auxiliary motor. An employer of less than seven workmen is not subject to the provisions of the Act, but may place himself under its provisions by giving notice in proper form to the Workmen's Compensation Commission. The Provincial Government and corporations are subject to the Act when carrying on any enterprise within its scope.

Insurance.—All employers in enterprises covered by the Act, with the exception of the Crown and municipal, school, ecclesiastical and governmental corporations, and of railways under the control of the Parliament of Canada, must insure in an approved fixed premium or mutual insurance company. The Commission may, however, at its discretion, exempt an employer and grant him a licence to be his own insurer.

Claims and Awards.—During 1930, the Commission received a total of 20,900 claims, as compared with 25,610 in 1929. It is pointed out, however, that it cannot be concluded that the number of accidents in 1930 was greatly reduced from 1929. It is believed that the

reduction was partly due to the fact that the provisions of the Act had become better known, and that a greater number of workmen were in a position to determine, without assistance, whether the Workmen's Compensation Act will apply to their particular claim or not.

The total number of accidents in 1930, which involved payment of compensation, was 19,850. Of this total, 6,412 occurred in the lumbering industry, and 4,814 in factories or workshops. Of the 19,850 compensable accidents in 1930, 168 were fatal, 2,927 entailed permanent incapacity, and 16,755 temporary incapacity.

In 1929 indemnity was granted in 21,377 cases as follows: fatal accidents, 152; permanent incapacity, 2,497; temporary incapacity, 18,728.

Of the compensation awards in 1930 for temporary incapacity, 10,823 were payable by insured employers through insurance companies; 5,865 were paid by self insurers; and 67 by employers who were neither insured or self-insurers at the time of the award. In the permanent incapacity group, 2,009 were payable by insured employers; 889 by self-insurers; and 29 by non-insured employers. Of the total of 168 fatal accident indemnities, 101 were payable by insured employers; 66 by self-insurers; and 1 by a non-insured employer.

Touching on the payment of indemnities the report states as follows: "The total amount of indemnities awarded during the year 1930 amounts to \$3,792,346.15. This item does not include the fees paid by employers or by their insurance companies to physicians, nurses and hospitals. Further, the amount does not include transportation expenses and funeral expenses, which are also at the charge of the employer or his insurance company. The Commission has no information concerning these different items. It will be noted however, that a sum of \$845,628.61 has been paid on account of indemnity for temporary total incapacity only. Taking this figure for comparison, we have reason to believe that the employers or their insurance companies have paid on account of fees for doctors, nurses, hospital transportation, and funeral expenses, an additional sum which may be roughly estimated at \$1,000,000. If this estimate is correct, it may be assumed that during the course of the year 1930, the employers subject to the law or their insurance companies have paid or will be called upon to pay in future, for accidents happening in the year 1930, a total sum of between four and a half million (4,500,000) and five millions (\$5,000,000)."

NUMBER OF ACCIDENTS IN 1930 INVOLVING PAYMENT OF COMPENSATION

	Temporary Incapacity	Permanent Incapacity	Death	Totals
Building or demolishing.....	2,246	547	20	2,813
Factories or workshops.....	3,864	907	43	4,814

WORKMEN'S COMPENSATION IN NEW BRUNSWICK IN 1930

THE twelfth annual report of the Workmen's Compensation Board of New Brunswick reviews the administration of the Act during the calendar year 1930.

According to the financial statement the total income for the year 1930 is estimated at \$680,462.50 from which is deducted the cumulative deficit from the year 1929 of \$61,740.60, showing a net estimated income of \$618,721.90. The estimated expenditure is shown as \$614,468.91, leaving an estimated surplus of \$4,252.99. It is pointed out that these figures, as in other years, do not pur-

port to be the actual amount of money to the debit or credit of classes, but show what has been collected from the provisional statements filed, and what the Board think, after going over the data in their possession, is a fair income to be expected from the amount to be collected owing to the expected increase of the actual payrolls over the provisional. The expenditure shows the same condition. To the amount paid out is added a sufficient sum which the Board estimates will cover the cost of claims in assembly and the claims which may be existing as of December 31, 1930, but

not reported to the Board, and also the estimated amount for claims reported, partly paid, but not completed. When the actual figures for 1930 are received and all collections made and all claims adjusted the figures may vary considerably. The cost of administration during 1930 was 8·07 per cent.

The report does not contain full statistics for 1930 as the period for reporting accidents was not concluded at the date of publication. However, final figures are given for the year 1929, and the tabular summaries indicate for that year the number of accidents, cause, locality, average age of workmen, average wage, etc. In 1929, there were 8,983 accidents,

of which 30 were fatal, while in the previous year there were 7,736 accidents with 34 fatalities. The average age of workmen involved in accidents in 1929 was 32·65, their average wage being \$20.37 per week.

From 1919 to 1929 the annual compensation cost of accidents was as follows: In 1919, \$376,007.45; 1920, \$548,302.83; 1921, \$469,675.69; 1922, \$496,676.40; 1923, \$564,890.09; 1924, \$620,756.34; 1925, \$570,883.19; 1926, \$485,772.14; 1927, \$543,087.88; 1928, \$641,132.93; 1929, \$628,547.58.

The accompanying table shows the number of industrial accidents according to degree of severity from 1919 to 1929, inclusive.

INDUSTRIAL ACCIDENTS IN NEW BRUNSWICK 1919-1929

	1919	1920	1921	1922	1923	1924	1925	1926	1927	1928	1929
Fatal Accidents.....	25	47	35	30	37	38	31	23	28	34	36
Permanent Total.....			1	1	2	1	1			1

REGULATIONS GOVERNING COAL MINES IN ALBERTA

Regulations under the Coal Mines Regulation Act, 1930, of Alberta, were published in the *Alberta Gazette*, January 15, 1931. The provisions of this Act were outlined in the *LABOUR GAZETTE*, July, 1930, page 759. The regulations, which came into effect on February 1, 1931, replace the regulations hitherto in force. In the main, they follow closely the previous regulations, although several clauses have been added and others revised or amended. The new regulations deal with the following subjects:—

Ventilation.—As regards ventilation it is provided that where a mine is ventilated by a fan, and not more than ten men are employed underground, a gauge other than automatic recording pressure gauge may be used. Gauge readings shall be taken once at least every two hours and recorded in a book to be kept for the purpose and signed by the person taking the readings.

An amended regulation governing the points at which the quantity of air shall be measured provides that such measurement be taken in each district or split at a point as near as is reasonably practicable to where the air enters the first working room on the split and at such other points as may be directed by the District Inspector.

Explosives.—The following are the amended and additional regulations governing the use of explosives:—

Where shots are fired electrically, the person firing the shot shall not use a cable less than sixty feet in length for the purpose of firing, and such person shall take refuge in a manhole or other safe place, or otherwise be at least sixty feet away from the place where the shot is fired at the time of the firing of such shot.

No delay action fuses shall be used underground for firing shots in coal and their use may only be permitted for other work underground when recommended by the District Inspector and authority to use same granted by the Chief Inspector in writing.

For the purposes of Rule 6 (vi) of Section 87 of The Coal Mines Regulation Act, black powder can only be taken and used underground in a mine, when same is compressed and made in stick form.

Washhouses.—The new regulations respecting washhouses provide that:—

All plans of proposed washhouses, emergency hospitals and the equipment necessary for the furnishing of these buildings shall be submitted to and approved of by the Minister.

Washhouse plans shall show particulars as to the cubical capacity, means of heating,

ventilating, form of lockers or hangers and other essential details and the Minister may grant approval stating the maximum number of men for which the washhouse has been approved.

If the point where the workmen check in and check out of the mine is away from the main entrance of the mine, and no facilities are provided for the workmen washing within a reasonable distance of the point where they enter and return from the mine, the Minister may order a washhouse and a lamp house to be provided situated as near the place where the men enter and return as is reasonably practicable.

First Aid.—The new first aid features of the regulations are as follows:—

In all mines where more than ten men are ordinarily employed underground all overmen, examiners and driver bosses when on duty, shall carry first aid pocket kits to be supplied by the operator of the mine.

The operator shall furnish the necessary supplies in order to keep the kit replenished, and persons required by the regulation to carry such a kit, shall report to the manager when fresh supplies for same are required.

Provided, however, where first aid stations are established underground and where same in the opinion of the District Inspector adequately meet the requirements for supplying first aid he may on the application of the manager of the mine grant exemption in writing from the regulation requiring the carrying of first aid pocket kits.

Electrical Installations.—Specific precautions are prescribed governing the use of electricity in mines. In case of any difference of opinion arising as to the safety of any electrical installation (particularly in regard to risk of explosion of gas or coal dust) provision is made for the settlement of differences under the Act which requires that notices of installation be sent to the District Inspector of Mines. The revised regulations contain the following new clauses in this respect:—

Notice of the intention to instal any equipment, not already approved of, underground in any mine, notwithstanding that it may be in a ventilating district in which electrical equipment is already installed.

Notice of the intention to change the location of any electrical equipment underground shall be made whether same be portable machinery or not, in case such change of location would in any way alter the conditions under which the original application to instal was made and granted.

With reference to switch gear, the new regulations also provide as follows:—

All switches used for medium or high pressure in any mine shall be of the oil type or

of approved flame-proof construction, and all switches used in any mine for low pressure where oil switches are not required to be used shall be of the externally operated type.

Other Regulations.—If the District Inspector considers that the system of supporting the roof and sides adopted in any mine or part of a mine is unsatisfactory, he may require the manager to fix some less distance or otherwise modify the system, and the manager shall comply with the requisition unless he disputes the reasonableness thereof, in which case the dispute shall be settled in manner provided by the Act for settling disputes.

All tipples, cleaning plants or buildings above ground shall be kept clear of fine coal-dust, as far as is reasonably practicable, and all dust shall be cleaned off at least once daily.

If in the opinion of the District Inspector of Mines the coal-dust held in suspension in the atmosphere of any tippie, cleaning plant, screens or buildings, is of such quality and fineness as to be dangerous he may order all smoking stopped and impose such other conditions as he may deem necessary in the interest of safety.

All carbide shall be stored in a dry place and the covers of carbide containers or drums shall at all times be kept on except when carbide is being removed from them.

Every person opening a carbide container or drum shall use the greatest precaution and shall not have a lamp on his head, nor pipe, cigar or cigarette in his mouth, and shall keep all open lights at least four feet away from the container.

A notice showing the signals used shall be posted at the terminals and at all intermediate points or landing places on all rope haulage systems.

A similar notice showing the signals in use shall be posted on the pit bank, engine room, and shaft bottom where hoisting of men or material is being done through a shaft.

There are also regulations for the guidance of district boards of examiners in the conduct of examinations for certificates of competency as coal miners made pursuant to Section 5 of The Coal Mines Regulation Act.

The Toronto Typographical Union has adopted the "Denver plan," a system of organizing the firms patronized by the families of the printers, these firms undertaking to have their printing done in local union shops. The union points out to the firms the extent of the business they receive from those engaged in the printing trade, and hopes before long to enlist all buyers of printing in a co-operative effort to bring back to union shops in Toronto the business that is now sent out to non-union shops outside the city.

CANADIAN NATIONAL SAFETY LEAGUE

Report on the Work of the National and Provincial Leagues in 1930

THE annual meeting of the Canadian National Safety League was held in Hamilton on February 28, with a large attendance which included representatives of all the provincial affiliates and of industrial organizations and labour, together with representatives of the Dominion and provincial governments. Representing the Hon. Senator Robertson, Minister of Labour, who was unable to be present, Mr. H. H. Ward, Deputy Minister, addressed the gathering, referring to the Department's close interest in safety work.

Annual Report

The twelfth annual report, which was presented at the business session by Mr. J. F. H. Wyse, general manager reviewed the safety activities of the main organization and the affiliated provincial leagues during the year 1930. In the work of promoting accident prevention throughout the Dominion, the central body acts as a co-ordinating agency for the following provincial safety leagues: the Ontario Safety League, the Province of Quebec Safety League, the Maritimes Safety League, the British Columbia Safety League, the Manitoba Safety League, and the Saskatchewan Safety League, the last named having been organized in November, 1930.

Acknowledgment was made to the Dominion Government for financial assistance to the extent of \$10,000 each year, which was used for the purpose of distributing educational safety literature throughout the Dominion to industries, schools, public officials, boards of trade, fire rangers, summer resorts, steam railways, electric railways, etc. This work was assisted not only by the provincial affiliates, but also by the passenger and tourist agents of the Canadian National Railways and the Canadian Pacific Railway Company, the Accident Prevention Committee of the Canadian Electric Railway Association, fire rangers, guides and summer hotels. Safety literature was distributed from the office of the Canadian National Safety League as follows: 12,000 industrial bulletins, 20,000 school bulletins, 3,100 reports and circulars, 23,000 safety calendars. In addition to these activities, the central body, through its general manager, Mr. J. F. H. Wyse, was represented at the convention of various affiliated organizations.

Ontario Safety League.—The seventeenth annual report of the Ontario Safety League, which is included in the report of the central body, details the work of the organization during 1930. Acknowledgment is made of the

co-operation of various organizations in promoting safety work. Featuring the general safety campaign was the promotion of accident prevention in schools. During 1930, the field secretary spoke to 172,000 children in 424 schools, located in 127 different cities, towns and villages throughout the Dominion. Other phases of this work included distribution of service bulletins, illustrated lectures, formation of school safety patrols, prize essays and drawing contests and letters to parents. The industrial program was most extensive and included the usual distribution of literature, while a continuous and intensive campaign was conducted in an effort to reduce accidents and fatalities from the highway hazards.

Accident statistics from the League records indicate that during 1930 the province had a total of 1,838 fatal and 12,689 non-fatal accidents as compared with 1,850 fatal and 12,485 non-fatal accidents in 1929. Deaths caused by automobile vehicles head the list with 524 fatalities as compared with 576 in 1929. Drownings again are second with 322 as compared with 321 in the previous year. Falls accounted for 174 fatalities, and railroads 142, as compared with 196 and 108, respectively, in 1929. The ratio of fatalities per 1,000 automobiles in 1930 was 0.4; for 1929, 0.6; for 1928, 0.7. The worst year was 1913 when the fatality rate was 6.0 per 1,000.

British Columbia Safety League.—The third report of the British Columbia Safety League was submitted "with a feeling of assurance that the year witnessed the definite establishment of a safety consciousness in the minds of the public of the province." The report refers to the influence of the safety campaign in schools upon the industrial life of the province as follows: "Notwithstanding that we have not a separate industrial accident prevention department we feel that the general safety educational program of this league has unmistakably reached those in industrial pursuits and proved of marked assistance to safety engineers throughout the province."

The campaign in British Columbia also concentrated on traffic conditions, and as a result, it is stated that there has been "a general tightening up of traffic law enforcement that has had a most telling effect." The report outlines a program of legislation in this respect which the League intends to pursue during 1931.

Province of Quebec Safety League.—The report of Mr. Arthur Gaboury, secretary-gen-

eral of the Quebec Safety League, discusses the progress of the organization and reviews the work of the League in its various activities, such as legislation, organization, education, and traffic. Under the heading of legislation, the recently enacted "Stop Law" governing traffic at railroad crossings is discussed, and it is stated that irrespective of arguments for and against the measure "there has been a perceptible decrease in the number of railroad crossing fatalities."

Manitoba Safety League.—The annual report of the Manitoba Safety League indicates that the intensive educational campaign in accident prevention has been productive of successful results. Special attention was given to first aid training during the year as well as to traffic hazards.

Reports of an encouraging nature were also received from the Maritimes Safety League, and the newly organized Saskatchewan Safety League.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Safety Trophy won by three Cement Plants

Reference was made in the last issue (page 199) to the success of two plants of the Canada Cement Company in winning the Portland Cement Association Trophy for having worked during the past year without time-loss accidents. The plants mentioned were those at Port Colborne, Ontario, and Exshaw, Alberta. In addition to these the trophy was also won by a third plant of the same company, situated near Winnipeg. The Winnipeg plant, under Superintendent Dowrie, had already won the trophy in 1926, and repeated their performance in 1930 under Superintendent V. C. Hamilton.

It is worthy of record that under the Ontario Workmen's Compensation Act, the three Ontario plants of the Canada Cement Company were rated at 1.5 per cent of payroll for 1930, this same rate being fixed as provisional rate for 1931. In 1921 the rate was 5 per cent, and has diminished continuously since that year owing to the persistent efforts in this class to prevent accidents.

Medals Presented to Workers at Joggins Mines, N.S.

During the month of December presentation was made to the Maritime Coal, Railway and Power Company, Joggins, N.S., of a shield for showing the greatest reduction in accident frequency during the three months ending September 30th, in a safety campaign conducted among the subsidiary companies of the Utilities Light and Power Corporation, of which the Maritime Company is now a part. Five employees of the company also received gold medals for heroic rescue work carried on at the Victoria Coal Mines, River Hebert, where in a recent explosion seven miners lost their lives. The recipients were Messrs. R. W. Balmanno, J. D. Betts, Graham Betts, George Thompson and Joseph Forrest. The shield and medals were awarded by the president, Harley Clark, of the Utilities Light and Power Corporation, Chicago, who was repre-

sented at the presentation by Mr. Wilson, general safety director, and Mr. Hoffman, safety instructor of the Corporation.

Nova Scotia Mine Safety Team in International Contest

The Nova Scotia *Industrial Safety News*, published by the N.S. Accident Prevention Association, contains in its issue for February an account of the efficient mine rescue corps maintained by the Acadia Coal Company. It is stated that through the co-operation of the Dominion Government, the Provincial Government of Nova Scotia, and the Dominion Steel and Coal Corporation, a team was sent to Louisville, Kentucky, to compete in the International Mine Rescue and First Aid Contest which was held in September, 1930. Despite the fact that the team sent had no special training and that they were competing under rules which were foreign to them, the showing made by the team was remarkable, and was most favourably commented on by the officials in charge of the contest. Their work in the gallery while wearing the oxygen breathing apparatus was conceded by the experts in attendance to have been exemplary. In the First Aid contest, working as they were under strange conditions, they made the high percentage of 96.32 out of a possible 100 marks.

Accidents in Planing Mills in Ontario

Some facts in connection with accidents and compensation in the planing mill group under Workmen's Compensation in Ontario were stated by Mr. J. B. McKenzie, chairman of the Compensation Committee of the organization at the annual convention of the Ontario Retail Lumber Dealers' Association, held at Windsor, in January, Mr. M. N. Cummings of Westboro presiding.

"During 1929," he said, "the sum of \$221,632.51 was collected from the 654 employers in Class 4, which was an average of \$338.88 from each employer; \$227,502.34 was spent by the Compensation Board, so that

there was a deficit of \$5,869.83 for 1929. Of this sum, \$137,604.50, or 61½ per cent of the total expenditure, was paid for compensation other than pensions or medical aid; \$33,587.58 was paid for pensions, which was 15 per cent of the total expenditure; \$42,586.58 or 18½ per cent was paid for medical aid, \$8,038.75 or 3¼ per cent was paid for administering expenses, and \$5,526.51 or 2¼ per cent was paid to Class 4 Industrial Accident Prevention Association.

"For 1930 the Industrial Accident Prevention Association has received reports on 72 accidents, each costing more than \$100, which totalled \$82,009.29. The most expensive accident of these 72 was \$7,971. In our own division of Class 4, the planing mill group, there were 38 cases, each costing over \$100 which totalled \$41,044.44, averaging \$1,080.12 a case. The most expensive case cost \$5,033 which was caused by the death of a man when a lumber pile fell on him. The next most expensive case cost \$4,360 when a man was killed when thrown from the door of a freight car of lumber, partly unloaded, while the car was being shunted. I am struck by the astonishing fact that in this group of planing mill employers only twenty per cent of the accidents were mechanical, while eight per cent of the accidents were non-mechanical. From Monthly Memorandum No. 107 it is evident that during 1930 there has been a considerable reduction in the total amount of accidents for all industries over 1929. There were only 69,267 accidents costing \$7,423,018.82 in 1930, in comparison with 87,103 accidents costing \$8,012,157.78 in 1929. This is a reduction of 17,836 cases and a saving of \$589,139. If the reduction in our class had been proportional with the other industries, our rates should not be increased for this year."

Safe Handling of Materials

The Province of Quebec Safety League recently published Leaflet No. 4, dealing with the subject of "Safe Handling of Materials at the Plant." Many accidents, it is stated, happen to workers while handling materials by hand or by hand trucks: "Statistics show that, at least in medium plants, more accidents happen to men handling materials than to men operating machinery. If we could reduce the risks involved in handling materials, we should probably eliminate a considerable number of industrial accidents."

The leaflet makes the following suggestions on safe methods to be followed by industrial truck drivers in loading and unloading:—

1. Load your truck with care so that the load will ride well, with minimum pressure

against the sides of the truck. A load should be built on the principle of an arch, with all sides counter-balancing each other towards the centre. Before starting, see that the load is tied or fastened in such a way that it will remain in the same position. Do not take the chance of having your load skid when you have to jam the brakes on suddenly.

2. Learn to lift properly and to conserve your strength. Place your feet apart with object to be lifted as nearly as possible in line with your feet. Squat close to your load, always bending knees but never leaning over. Lift steadily. Let the weight rest, as you lift, on the muscles of the thighs, not on weaker muscles of the back.

3. A little time spent in clearing the way, around your truck, before loading or unloading will save time and make your job safer.

4. If your truck is in a narrow driveway or a closed shed, *be sure to stop your motor* while loading or unloading; otherwise monoxide gas will get you.

5. Always make sure that skids and runways are in good condition and perfectly supported. If you use your tail gate as a gang-plank to a loading platform, make sure that chains are strong enough and properly hooked.

6. Always warn those who are helping you of the particular hazards of your job. It may be all very simple to you, but helpers may not be as familiar as you are with those little problems. A word of explanation may avoid many useless words . . . of a different nature and what's more important, may prevent an accident.

7. When you handle materials on property not controlled by your employer, be constantly alert for accident hazards that may arise from your familiarity with the new surroundings. Never try to show off. Obey the rules established on such properties and don't be afraid to ask questions about it, if necessary.

8. Don't belittle your job. Loading or unloading a truck requires brains as well as strength. Before you tackle the job, think over the difficulties for a few minutes. Estimate for example in advance the amount of space required for placing materials and decide how these should be piled.

The government of Ontario is promoting legislation at the present session for the purpose of removing the special accident risks now incurred by employers who engage blind workers. Under the proposed measure the government would assume half the liability for accident compensation with respect to the blind.

OCCUPATIONS OF INDIANS IN CANADA

THE annual report of the Department of Indian Affairs gives the following information as to the occupations followed by the Indians in the various provinces of Canada.

Ontario.—The Indians in the western and central parts of Ontario engage largely in farming. The reserves generally are well suited to this purpose and the activity of the department's field agents has resulted in a steady improvement both in the methods of operation and the results achieved. The success achieved by the returned soldiers of this province has been especially creditable and they are rapidly developing prosperous communities. During the summer months Indians find a profitable source of income as guides and canoe-men. Many are employed at various industries and trades, while railway and navigation companies employ a large number. As a rule they are excellent bushmen and many find employment in the various lumber camps. There is still an excellent market for snowshoes, canoes and moccasins, and these are usually manufactured by the other members of the community. The women also have many sources of income; some are employed as domestics; others support themselves by making baskets and fancy work. In certain districts berry-picking is an important item and furnishes considerable income.

Quebec.—In the agricultural districts of Quebec the Indians are developing a keener interest in farming operations and are making decided progress. In the Gaspé peninsula the Indians find employment in the lumber camps and mills, but on the north shore of the gulf, fishing, hunting and trapping are still the principal sources of income. In the northern part of the province lumbering is the chief pursuit. One of the principal industries of the Indians in Quebec is making baskets, and many of the Indians spend the summer months at the resorts in order to dispose of the baskets, lacrosse sticks, racquets, moccasins, etc., to the tourists. Some of them, particularly in the Saguenay district, act as guides and canoe men.

New Brunswick.—In the Northeast division of New Brunswick, the Indians are mostly engaged in fishing, hunting and trapping. Some farming is carried on, and the Indians have rather tended to increase their interest in this regard. The lumbering industry employs quite a large number and the Indians all through the eastern provinces have become very proficient in the lumber camps, on the river drives and in the mills. In the northern division there is less farming carried on, and the Indians during the summer months find employ-

ment generally as day labourers. In the Southern division they support themselves chiefly by the manufacture and sale of Indian wares.

Nova Scotia.—In Nova Scotia, the Indians follow various occupations, but, as a rule, do not confine themselves to any particular one. Many of them cultivate the land with indifferent success, but as there are exceptions in almost every case, so it is with our Indians; a few of them are succeeding very well as farmers. The majority of those living near industrial centres usually work as day labourers. Hunting, trapping and acting guides for sportmen are favourite occupations, more especially with Indians of middle age. Basket-making and the manufacture of fancy moccasins, etc., are confined mostly to women. A profitable employment among Indians in a few sections of Nova Scotia is the manufacture of hockey sticks.

Prince Edward Island.—But few of the Indians of Prince Edward Island are farmers. The principal industries are basket-making and fishing.

Manitoba.—The reserves in Manitoba suitable for extensive agriculture are mainly within the Birtle, Griswold and Portage la Prairie agencies, and generally speaking, progress has been satisfactory in recent years. In the northern agencies Indians are expert guides and canoe-men, and many find employment in this way or with the transport or fur companies. In the southern and more settled districts many of the younger people seek employment as day labourers, and owing to the high wages have been fairly prosperous. The Indian women make needle-work, baskets, etc., for which there is a ready market.

Saskatchewan.—The principal occupation of the Indians of Saskatchewan is mixed farming and stock-raising. The close supervision which the department has had over these Indians has greatly improved their methods of farming. Most of the Indians are well provided with machinery of good quality. As a rule they have good stock and suitable houses. In the outlying districts, however, hunting and trapping are still the main sources of income and will so remain until civilization encroaches upon the hunting grounds.

Alberta.—The principal occupations of the Indians of Alberta are farming and stock-raising. Almost all the reserves in the settled districts of the province have large herds of horses and cattle. In the northern parts of the province hunting and trapping are still almost the sole sources of income; there is practically no farming carried on and the

construction of steamers on the Peace and Athabasca rivers, and of the railways to Peace River Crossing and Fort McMurray, have greatly lessened the wages of the Indians with the trading companies and transports.

British Columbia.—The occupations of the Indians of British Columbia vary with their habitat. The Indians situated along the coast earn their livelihood principally by fishing. In many instances they own their own motor launches, nets and gear, while others are supplied by the various canneries. Many of the women are also employed in the canneries or in the hop fields, and earn a steady income. In the inland parts of the province some farming operations are carried on and particularly in the irrigated districts, grain, fruits of all kinds, and vegetables have been raised with success. These Indians have been making marked progress in this regard and are now well equipped with modern machinery. The Kootenay, Kamloops, Okanagan and New Westminster Indians own large herds of horses and cattle. While the Indians in the northern

and remote parts of the province still depend upon hunting and trapping for their livelihood, the agents report a marked improvement in their manner of living.

Northwest Territories.—In the Northwest Territories the Indians depend entirely upon hunting and trapping for a livelihood. A few have been induced to raise small plots of potatoes. They own no horses or cattle, transportation being almost entirely by canoe along the great waterways, or by dogs in winter. They catch and preserve large quantities of whitefish for their own use and for consumption by their dog-trains in winter.

Yukon.—Hunting, trapping and fishing are the chief occupations of the Yukon Indians, and they have been fairly successful during the past year. The women also derive some revenue from the sale of moccasins and curios of various kinds, while the men are expert at making tobaggons and snowshoes. Practically no farming is carried on owing to climatic conditions, but some of the Indians cultivate patches of potatoes and other vegetables.

Pottery Industry in Saskatchewan

A recent publication of the Department of Railways, Labour and Industries of Saskatchewan ("Some Brief Notes on Saskatchewan's Industrial Development and Natural Resources," July, 1930) gives the following account of the clay products industry in the province.

"In the boom days before the war the province boasted nearly a dozen brick plants which were all successfully operating. In the years following, when building construction fell off, all but three or four of these plants ceased operation entirely, and those that continued to operate were unable to show a profit on their operations. It was at this point in the development of the clay industry that the Government decided to find out what could be done to aid the industry generally. Realizing that the province possessed exceptional clays and opportunity for developing a clay industry, a ceramic expert was brought to the province, and in co-operation with the University of Saskatchewan a clay laboratory for research work in the clay industry was established at the University of Saskatchewan. Largely due to the efforts of this ceramic expert and research work carried on the clay industry has already regained much of its previous prosperity, and has been able to branch out into new lines which have really added new industries to the province. Refractory materials are now being manufactured which are not manufactured elsewhere in

Canada and had to be imported. The beginning of a pottery industry is also growing up in the province. It is safe to say that without assistance of the Government these new industries would not have been brought into successful development in such a short time."

During February the Male Minimum Wage Board of British Columbia received a petition signed by 87 per cent of the bread wagon drivers at Victoria for the establishment of minimum rates of pay and payment for overtime work.

Reports from New Zealand at the beginning of February indicated that unemployment registrations exceeded 16,000 at that date. In pursuance of the policy of the Government that sustenance grants should not be paid without the performance of work, the Unemployment Board was preparing a rationing scheme under which a single unemployed man will have two days' work a week and a married man three days or more, according to the number of his dependants. Work will be provided and supervised by local authorities, the Unemployment Board paying the cost of wages. The Government is also preparing plans under which farmers will be assisted to undertake development work employing labour. It is hoped that these measures will make the payment of sustenance grants without work unnecessary.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Agenda of the 1931 Conference

The two items following had been inscribed some months ago on the agenda of the Fifteenth Session of the International Labour Conference, which opens in Geneva on May 28 next, namely:—

(1) age of admission of children to employment in non-industrial occupations (first discussion);

(2) hours of work in coal mines (first or second discussion, according to the decision of the Conference itself).

At the meeting of the Governing Body of the International Labour Office which was held from January 28-31 it was decided to add to the foregoing the question of the revision on two specified points of the 1919 Conference concerning the employment of women during the night. In accordance with the established rules of procedure, governments had been consulted on this last mentioned subject and in the light of their replies the Governing Body defined exactly the two respects in which the Conference should be invited to consider the amendment of the Convention, viz., the exclusion from the Convention of women employed in a supervisory capacity and the precise hours of the night during which women's work should be prohibited.

Agenda of the 1932 Conference

It was decided at the October meeting of the Governing Body of the International Labour Office that the question of the abolition of fee-charging employment agencies should be inscribed on the agenda of the 1932 Session of the International Labour Conference. At the meeting of the Governing Body which was held from January 28-31, it was decided to place on the 1932 agenda the question also of old age, invalidity, and widows' and orphans' insurance for workers in all occupations, including agriculture, with the exception only of seamen.

Fifty-First Session of the Governing Body

The 51st Session of the Governing Body of the International Labour Office was held in Geneva from January 28 to 31. Among the Government representatives in attendance was Dr. W. A. Riddell, Canadian Advisory Officer in Geneva, who attended as substitute for Senator G. D. Robertson, the Canadian Minister of Labour.

The Governing Body discussed at length the report of a Committee on Unemployment and adopted a resolution which appears elsewhere in the present issue of the LABOUR

GAZETTE.. The whole subject of unemployment was discussed at considerable length and was inscribed on the agenda of the April session of the Governing Body for further attention.

The Governing Body decided to set up a technical committee on glassworks to study the organization of weekly rest in glass factories and in particular the four-shift system.

Draft regulations were presented to the Governing Body which had been proposed by the Correspondence Committee on Industrial Hygiene for the measures to be taken against anthrax in the hides and skins industry. The International Labour Office was instructed to communicate this document to the different governments for their opinion and for a statement of the measures they would be prepared to take to give effect thereto.

A report was adopted of a committee of the Governing Body on cost of living and wages statistics, which made certain recommendations for the improvement of the methods used by the International Labour Office in this connection.

Committee on Automatic Couplings

The Committee on Automatic Couplings which had been set up by the International Labour Office last year held its second meeting in Geneva on February 2-3. After examining a report on the results of the enquiry undertaken by the International Railway Union into the question of automatic couplings (the union having appointed a special committee consisting of representatives of the railway administrations of Austria, Belgium, France, Germany, Italy, Poland and Russia), the Committee unanimously adopted a resolution expressing the opinion that the adoption of a uniform and satisfactory system of automatic coupling would contribute to the prevention of accidents in countries where screw coupling is still in use, and that it seemed to be technically possible to devise such a coupling. The Committee accordingly recommended that railway administrations should construct new vehicles with a view to their adaptation to automatic coupling as soon as the investigations of the International Railway Union were sufficiently advanced.

The Committee also decided to set up a sub-committee to follow the question, and asked the International Railway Union to agree that representatives of the Committee and of the Conference on Technical Standards should be kept informed of the progress of

the investigations and the proposals made and should be present at the tests.

The sub-committee is to submit a report to the International Labour Office before January 31, 1932. This report will be distributed to all members of the Committee, and the date of the next meeting of the Committee will then be fixed by the Governing Body of the International Labour Office.

The Committee postponed consideration of the financial problems to a later meeting.

Australia and the Conventions

The Problem of Jurisdiction.—By letter dated December 5, 1930, the Prime Minister's Department of the Commonwealth of Australia forwarded to the International Labour Office a statement concerning the respective jurisdictions of the Commonwealth and the States in relation to the subject matter of the Conventions adopted by the International Labour Conference from 1919 to 1928, as follows:—

“So far as Australia is concerned the Conventions fall into two categories, namely: (a) wholly within the jurisdiction of the Commonwealth, or (b) within the jurisdiction of both the Commonwealth and the States.

The following Conventions fall wholly within the jurisdiction of the Commonwealth: (1) Seamen's articles of agreement; (2) Repatriation of seamen; (3) Inspection of emigrants on board ship.

As regards the Conventions falling within the jurisdiction of both the Commonwealth and the States, a distinction is drawn between (1) Conventions which mainly concern the Commonwealth but concern the States to some extent, and (2) Conventions which mainly concern the States but concern the Commonwealth to some extent.

The following Conventions mainly concern the Commonwealth, but concern the States as regards intra-State shipping (shipping within the limits of the individual States): (4) Facilities for finding employment for seamen; (5) Minimum age for the admission of children to employment at sea; (6) Unemployment indemnity in case of loss or foundering of the ship; (7) Minimum age for admission of young persons to employment as trimmers or stokers; (8) Compulsory medical examination of children and young persons employed at sea.

The following Conventions mainly concern the States, but concern the Commonwealth as regards Commonwealth territories: (9) Hours of work; (10) Unemployment; (11) Employment of women before and after childbirth; (12) Employment of women during the night; (13) Minimum age for the admission

of children to industrial employment; (14) Night work of young persons; (15) Age for admission of children to employment in agriculture; (16) Rights of association and combination of agricultural workers; (17) Workmen's compensation in agriculture; (18) White lead in paint; (19) Weekly rest in industrial undertakings; (20) Workmen's compensation for accidents; (21) Workmen's compensation for occupational diseases; (22) Equality of treatment for national and foreign workers as regards workmen's compensation for accidents; (23) Night work in bakeries; (24) Sickness insurance for workers in industry and commerce and domestic servants; (25) Sickness insurance for agricultural workers; (26) Creation of minimum wage fixing machinery.

Activities during 1930

During 1930 the International Labour Organization extended the scope of its protective action to two new categories of workers in different parts of the world, numbering tens of millions of persons of both sexes employed in commerce and offices on the one hand, and as colonial workers on the other. The Draft Convention concerning hours of work of salaried employees adopted at the Fourteenth Session of the International Labour Conference in 1930 was carried by a sufficient majority to justify the hope that the State Members will ratify rapidly and thereby secure for workers in commerce and offices the benefit of the eight-hour day in places where it has not already been granted. The Draft Convention on forced or compulsory labour of natives in colonies did not win the absolutely unanimous support of the colonial powers. The difference of view was, however, rather on points of practical application than on the principle of the condemnation of forced labour and by now some even of the countries that did not vote for the Convention have sought inspiration in its clauses for the regulation of compulsory labour in their colonies.

Cost of Living and Real Wages

It is announced by the International Labour Office that the results of the enquiry which has been made by the Office at the request of the Ford Motor Company into the cost of living and real wages in certain industrial centres in Europe, as compared with Detroit, will be available very shortly.

Establishment of Labour Office in Egypt

A decree has been issued by the Egyptian Government providing for the establishment of a labour office to be entrusted with the supervision of the enforcement of existing labour laws and regulations, the systematic

study of labour conditions and problems and the drafting of future labour legislation. The creation of this office represents the first tangible outcome of the work of a committee which was appointed by the Government three years ago to prepare a new and comprehensive labour code covering the whole range of conditions of employment—regulation of wages, hours, safety, workmen's compensation, conciliation and arbitration, freedom of association, protection of women and children, and the rest. Although Egypt is not yet a member of the League of Nations or of the International Labour Organization, the Egyptian authorities took advantage of the knowledge and experience of the technical services of the International Labour Office on many of these questions, and the resources of the Office were readily placed at their disposal.

International Conference on Silicosis

The International Labour Office has just published a report of the proceedings and discussions of the International Conference on Silicosis which was held in Johannesburg, South Africa, in the month of August last. Reference was made to the proceedings of this Conference in the September and October, 1930, issues of the *LABOUR GAZETTE*.

It is announced that Mr. V. A. Sinclair, K.C., of Toronto, chairman of the Workmen's Compensation Board of Ontario, has been appointed as an expert on the subject of workmen's compensation on the committee of the International Labour Office (League of Nations), Geneva, on Social Insurance.

THE SOVIET "FIVE YEAR PLAN"

THE *Economist* (London) in its issue of February 7, contains an article entitled "Progress of the U.S.S.R.," showing the results in a number of industries of the working of the "Five Year Plan" during its first and second years, and of the developments that are projected for 1931, the third year of the Plan.

"Since its inception," the *Economist* states, "the Piatiletka (the Five Year Plan) has seen two major changes. The first occurred in the autumn of 1929, when it was decided, in view of the unexpectedly high level of achievement, to revise all estimates in an upward direction. The second took place last September, when it was resolved that henceforth the economic year should be identified with the calendar year, instead of being reckoned from the beginning of October to the end of the following September.

"The official output figures of Soviet industry for the year to September 30th last show that, while the original estimates of the Piatiletka have in most cases been exceeded by a wide margin, the revised estimates have been realized only in isolated instances. The gross output of all State industry, valued in roubles at 1926-7 prices, is stated to have exceeded that of the plan's first year by 25 per cent, while for the two years combined, output amounted to 30,500 million roubles, compared with 29,300 million roubles provided for in the original estimates. In general, the heavy industries, upon which the greatest efforts were concentrated in 1930, record the most outstanding successes.

"The production of consumers' goods was less satisfactory, partly as a result of comparative neglect and partly owing to a lack of raw materials.

"In agriculture, progress was fairly general. The total area under cultivation in 1930 amounted to 127.7 million hectares, compared with 118 million hectares in 1929, while the grain harvest totalled 86.5 million tons, against 71.7 million tons in 1929, an increase of 20.6 per cent.

"A part of the admitted hardships which the Russian people are enduring is attributable to the fact that the country is living for the future. Immense sums have been applied to capital investments and new construction during the last two years. Whereas during the three years which preceded the inauguration of the Piatiletka new construction formed only 18 per cent of the total amount of capital works, in the Five-Year Plan it amounts to 54 per cent, or, if house-building is included, to 61 per cent of the whole.

"In the field of foreign trade, the second year of the plan brought considerable expansion. Exports from U.S.S.R. in 1929-30 totalled 1,002 million roubles, against 878 millions in 1928-9, a large proportion being represented by wheat, oil, and timbers.

"As regards the condition of the workers, the Soviet Government claims that equally concrete achievements stand to its credit. The average wage paid to workers engaged in State industry has increased, in roubles, by 12.1 per cent in two years. No satisfactory figures have been given, however, to show what is the real buying power of these wages.

"According to the estimates for 1931, it seems that the greatest attention is to be devoted to the coal and metallurgical industries, and to oil."

EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN JANUARY, 1930

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on February 1 was 7,431, their employees numbering 904,315 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for January was 1,866, having an aggregate

membership of 210,402 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment.

(3) The Department of Labour receives reports from the 67 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

(1) Employment Situation at the Beginning of February, 1931, as Reported by Employers

Employment at the beginning of February showed a further decrease, according to data tabulated by the Dominion Bureau of Statistics from 7,431 firms whose payrolls aggregated 904,315 persons, compared with 913,080 on January 1. The Index, based on the 1926 average as 100, declined from 101.7 in the preceding month to 100.7 on February 1, while in the same date in 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, it was 111.6, 110.5, 102.0, 96.6, 91.8, 87.1, 91.7, 90.6, 79.9 and 91.2 respectively. These figures show that although the number employed by the reporting firms on the date under review was less than at the beginning of February in the preceding three years, it was nevertheless greater than in any earlier year since 1921.

Important recovery was shown in manufacturing, especially of textile and iron and steel products, while improvement was also reported in railway construction and in shipping and stevedoring. On the other hand, important declines were noted in highway and building construction, in trade, mining and logging. In many cases, these contractions were of a seasonal character.

Employment by Economic Areas

Reductions were recorded in all provinces except Ontario, where the tendency was upward.

Maritime Provinces.—Construction reported especially heavy losses in the Maritime Provinces, but decreases were also indicated in logging, mining, communications and trade. On the other hand, improvement was shown

in manufacturing, particularly in textile and iron and steel factories. Statistics were received from 542 firms, employing 74,991 workers, compared with 81,062 at the beginning of January. Smaller losses had been indicated on the same date in 1930, and the index then was slightly higher.

Quebec.—Increases in manufacturing (notably of textile and iron and steel products), in transportation and railway construction were offset by reductions in logging, mining, building and highway construction and trade. The working forces of the 1,700 co-operating employers aggregated 259,188 persons, as against 260,137 in their last report. A small advance had been indicated on February 1, 1930, when the index was higher.

Ontario.—Considerable gains were made in manufacturing notably in the iron and steel, textile and lumber divisions. Construction also reported heightened activity, while there were seasonal reductions in trade and transportation, and logging and communication also released some employees. According to data received from 3,434 firms, their staffs rose from 367,530 at the beginning of January, to 372,910 on the date under review. This advance involved a larger number of workers than that indicated on February 1, 1930, but the index was then, however, much higher than on the date under review.

Prairie Provinces.—Employment in the Prairie Provinces has shown a contraction at the beginning of February in most years of the record, but the falling-off reported by the

firms making returns on February 1, 1931, involved a larger proportion of the aggregate payroll than has been the case in the last few years. The index was lower than on the same date in 1930. Statements were tabulated from 1,102 employers, whose staffs declined by 6,666 persons to 121,873 on February 1. Logging was more active, and railway construction also showed improvement, but manufacturing, mining, communications, transportation, highway construction and trade reported considerable curtailment.

Quebec City, Toronto and Winnipeg reported reductions.

Montreal.—Manufactures showed substantial recovery, especially in the iron and steel and textile groups, and transportation was also busier, but heavy seasonal losses were indicated in trade and building construction. On the whole, however, there was a small increase in Montreal, according to the data received from 955 firms employing 136,204 workers, as compared with 135,648 in the preceding month.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

British Columbia.—There was a moderate contraction in employment at the beginning of February; this took place mainly in the highway construction and service groups, while manufacturing and building and railway construction were rather busier. The working forces of the 744 reporting firms aggregated 75,353, a decrease of 459 persons as compared with their January 1 staffs. A slight improvement had been indicated on February 1, 1930, and the index was then a few points higher.

Index numbers of employment by economic areas are given in Table I.

Employment by Cities

The trend of employment was upward in Montreal, Ottawa, Hamilton, Windsor and the adjacent Border Cities and Vancouver, while

This gain was less than that recorded on February 1, 1930, when the index was higher.

Quebec.—Returns tabulated from 121 employers in Quebec City showed that they had reduced their staffs by 635 persons to 12,402 at the beginning of February. Manufacturers reported curtailment in personnel, and trade and construction were seasonally slacker. The index was higher than on the corresponding date of last year, when employment had shown a greater reduction.

Toronto.—Heavy seasonal losses took place in trade and construction, and transportation were also slacker, but there were important gains in manufacturing, especially of textile products. The result was a decrease of 494 in the number employed by the 1,067 co-oper-

ating firms, who had 118,491 employees. Although a larger decrease had been indicated on February 1 of a year ago, the index was then higher than on the date under review.

Ottawa.—Manufacturing was rather busier, and improvement was also noted in highway construction, while trade and building were seasonally quiet; 152 employers in Ottawa had 13,154 workers, or 79 more than on January 1. Employment was in smaller volume than at the beginning of February, 1930, despite the fact that general losses had then been indicated.

Hamilton.—Employment in Hamilton showed an increase, mainly in city construction work, although manufacturing was also slightly busier. Statistics were tabulated from

227 firms employing 32,890 persons, compared with 32,121 in the preceding month. The index was many points lower than on February 1 of a year ago, although curtailment had then been reported.

Windsor and the adjacent Border Cities.—Considerable recovery, chiefly in automobile plants, was indicated in the Border Cities, where 927 workers were taken on by the 138 co-operating employers, whose staffs aggregated 12,014. Employment was not so active as on the same date of 1930, when larger gains had been noted.

Winnipeg.—The number employed in Winnipeg showed a contraction, mainly in trade and communications, while manufactures were

NOTE.—The "Relative Weight" in Table I, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

TABLE I, INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS
(AVERAGE CALENDAR YEAR 1926=100)

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia
Feb. 1, 1921.....	91.2	108.1	86.2	93.8	93.0	77.4
Feb. 1, 1922.....	79.9	88.2	71.1	84.7	82.4	74.8

July 1.....	118.9	141.1	116.8	116.9	120.4	113.5
Aug. 1.....	118.8	140.9	114.7	115.7	126.2	115.8
Sept. 1.....	116.6	122.5	113.6	113.6	129.8	114.6
Oct. 1.....	116.2	116.2	113.0	114.6	130.0	112.1
Nov. 1.....	112.9	110.1	111.9	111.6	125.8	105.4
Dec. 1.....	108.5	109.5	106.7	108.2	118.6	100.0
Jan. 1, 1931.....	101.7	119.3	99.3	100.1	106.4	94.1
Feb. 1.....	100.7	110.6	98.8	101.7	101.0	93.8
Relative Weight of Employment by Districts as at Feb. 1, 1931.....	100.0	8.3	28.7	41.2	13.5	8.3

busier. Returns were compiled from 360 firms with 29,554 employees, compared with 30,047 in the preceding month. Employment was not so active as at the beginning of February of last year, although greater curtailment had then been noted.

Vancouver.—The manufacturing, transportation and construction industries reported recovery, but trade and services were slacker. The 303 reporting firms employed 30,899 persons as against 30,643 on January 1. The index was slightly higher than on the same date in 1930, when greater improvement had been reported.

Index numbers of employment by cities are given in Table II.

NOTE.—The "Relative Weight" in Table II shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

TABLE II—INDEX NUMBERS OF EMPLOYMENT BY PROVINCIAL CITIES

(AVERAGE CALENDAR YEAR, 1926=100)

	Montreal	Quebec	Toronto	Ottawa	Hamilton	Windsor	Winnipeg	Vancouver
Feb. 1, 1922.....	74.6		90.4				86.1	76.8
Feb. 1, 1923.....	87.3		95.9	101.9	85.8		91.1	74.3
Feb. 1, 1924.....	88.2		93.6	95.5	88.7		86.7	78.9
Feb. 1, 1925.....	86.4	102.4	91.7	91.7	81.4		86.2	84.3

Manufacturing

The revival in manufacturing was not so marked as on February 1, 1930, when the index was higher than on the date under review. Statements were tabulated from 4,526 manufacturers employing 467,106 operatives, compared with 456,173 in the preceding month. The most noteworthy recovery took place in the iron and steel and textiles industries, but the lumber, leather and non-ferrous metal divisions also registered important gains, while there were losses in animal food, pulp and paper, rubber, building material, electric current, and non-metallic mineral factories.

Animal Products—Edible.—There was a further decline in employment in this group at the beginning of February; the reduction in-

volved fewer workers than that noted on the corresponding date last year, but the index was then a few points higher. Statements were tabulated from 192 firms employing 16,315 workers, as compared with 16,595 in the preceding month. Meat-preserving plants reported the greatest losses.

Leather and Products.—Employment in boot and shoe factories showed a large increase, but the situation was not so favourable as on the corresponding date of a year ago when similar gains were noted. A com-

bined working force of 13,957 persons reported by the 185 co-operating manufacturers, who had 13,166 employees at the beginning of January. Most of the advance took place in Quebec and Ontario.

Lumber and Products.—Considerable improvement was indicated in sawmills and in furniture, container, vehicle and other lumber-using factories; 1,717 workers were taken on by the 755 firms making returns, who had 36,536 on their staffs. This increase was rather larger than that registered at the begin-

TABLE III—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES
(AVERAGE CALENDAR YEAR 1926 = 100)

NOTE.—The "Relative Weight" in Table 3 shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

ning of February, 1930, when employment was, however, in greater volume. The gains in Ontario were most extensive.

Musical Instruments.—There was a further curtailment in employment in musical instrument works, 37 of which reduced their pay-rolls from 1,666 persons on January 1 to 1,492 on February 1. Practically all the decrease

was in Quebec. Larger contractions were noted on February 1, 1930, but the index number then was much higher.

Plant Products, Edible.—There was very little general change in the vegetable food group, according to the 389 reporting establishments, which employed 27,287 workers. Canners showed further seasonal declines, and

¹The "Relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

flour and cereal, sugar and syrup factories also released employees, but improvement was noted in some other branches, notably in bread and biscuit factories. Activity on February 1 last year was greater, general gains having then been recorded.

Pulp and Paper.—Contractions were indicated in pulp and paper mills, while printing and publishing and paper-using factories were also quieter. The index was lower than on February 1, 1930, when losses had also been indicated. Data were received from 543 employers of 58,405 workers, as against 59,104 at the beginning of January. Most of the reduction took place in Quebec.

Rubber Products.—A further decrease was shown in rubber factories, 42 of which released 255 employees from their payrolls, bringing them to 13,302 at the beginning of February. Employment was not so brisk as on the same date in 1930, when the tendency was upward.

Textile Products.—The advance in employment in the co-operating factories was larger than on February 1, 1930, but activity then was rather greater than on the date under review. Silk, woollen, headwear, garment and personal furnishing and hosiery and knitting establishments registered important increases in personnel. The working force of the 717 co-operating firms aggregated 80,725 persons, as compared with 75,993 in their last report. Ontario and Quebec showed particularly noteworthy improvement.

Tobacco, Distilled and Malt Liquors.—A small gain was recorded in this group, in which employment was in less volume than on February 1 a year ago. Returns were tabulated from 147 manufacturers with 14,907 employees, or 39 more than in the preceding month.

Chemicals and Allied Products.—Statements were compiled from 126 firms in this group, whose staffs aggregated 7,709, as compared with 7,670 at the beginning of January. Employment was not so active as in the winter of 1930.

Clay, Glass and Stone Products.—There was a further seasonal decrease in this group on the date under review, according to 154 manufacturers, whose labour forces included 9,407 workers, or 400 less than in the preceding month. Employment was slacker than on February 1, 1930, although larger losses were then indicated.

Electric Current.—Continued curtailment was reported in electric current plants at the beginning of February, when the 93 co-operating manufactures reported 14,727 employees, compared with 15,155 at the beginning of January. Activity was less than on February 1 last year.

Electrical Appliances.—Employment in electrical appliance works showed a slight recession, and the situation was not so good as on the same date a year ago. Data were received from 69 establishments, employing 15,573 operatives, as against 15,591 on January 1, 1931.

Iron and Steel Products.—There were large increases in employment in iron and steel factories, the recovery being most noteworthy in vehicles and rolling mills, while agricultural implement factories were slacker. The improvement in Ontario and Quebec was most pronounced, but the trend was generally upward. Statistics were tabulated from 736 firms, whose staffs stood at 120,736, compared with 114,943 on January 1. The index was lower than on the corresponding date last year, when greater advances had been indicated.

Non-ferrous Metal Products.—Lead, tin, zinc and copper and precious metal works recorded heightened activity, but smelting and refining was slacker. The general gain was less than as on February 1, 1930, when the index was several points higher. The working forces of the 120 co-operating manufacturers included 17,824 employees, or 412 more than at the beginning of January. The increase took place largely in Ontario and Quebec.

Mineral Products.—Eighty-five establishments in the mineral products group reported 11,801 workers, as compared with 12,161 in the preceding month. Activity was generally less than in the winter of 1930.

Logging

Contractions were recorded in logging operations at the beginning of February; the decrease compared unfavourably with the gain noted on the same date in 1930, when the index was many points higher. Statements were received from 223 operators employing 27,488 workers, as against 29,030 on January 1. The trend of employment was downward in all except the Prairie Provinces.

Mining

Coal and other non-metallic minerals afforded decreased employment, and metallic ore mines were also rather slacker. On the whole, there was a decline of 1,286 persons in the forces of the operators furnishing returns, who numbered 223. Their staffs aggregated 49,952 employees, of whom 27,582 were engaged in the mining of coal, 15,928 in metallic ores and 6,442 in non-metallic minerals, other than coal. Activity had increased on February 1, 1930, when the index was several points higher than on the date under review.

Communications

The working force of the companies and branches reporting stood at 27,555 persons, compared with 28,663 in the preceding month, most of the reduction taking place on telephones. The number employed was not so great as on the same date in 1930, although the losses then recorded had been larger.

Transportation

Street Railways and Cartage.—There was an upward trend in employment in this division on February 1, but the index was lower than in the winter of 1930. The 154 co-operating employers had 24,038 persons on their payrolls, or 147 more than in the preceding month. Quebec registered increases, but there were reductions in the other provinces.

Steam Railway.—Seasonal contractions involving a larger number of workers than on February 1 a year ago, were noted in steam railway operation, in which employment was at a lower level than in the last few years of the record. Returns were compiled from 106 companies and branches in this group, whose staffs aggregated 71,949 persons, as compared with 74,834 on January 1. There were large decreases in the Prairie Provinces and Ontario.

Shipping and Stevedoring.—Employment in water transportation showed an increase, contrasting with the declines usually recorded at the beginning of February; 78 employers added 490 workers to their payrolls, bringing them to 12,508 on the date under review. There were gains in the Eastern Provinces and British Columbia.

Construction and Maintenance

Building.—Employment in building construction decreased on February 1, as is customary during the winter. The index was lower than at the beginning of February of 1930. Statistics were received from 702 contractors, with 35,847 persons in their employ, as against 37,804 on January 1. The greatest contractions were in Quebec, while improvement was noted in Ontario and British Columbia.

Highway.—The number of persons employed by 256 firms in the highway construction and

maintenance group was 48,321 or 6,905 less than in the preceding month. The seasonal losses in the Maritime and Prairie Provinces were especially pronounced, while increases were shown in Ontario. Employment in this group was in greater volume than on February 1 in any previous year on record, due to the public unemployment relief works undertaken throughout the Dominion.

Railway.—Considerable improvement was noted in railway construction and maintenance, contrasting with the decline reported on the same date of 1930, when the index was lower. Statements were tabulated from 47 employers in this group, with 31,803 persons on their payrolls, as compared with 29,554 in the last report. Increases in personnel were registered in all provinces, those in Quebec being greatest.

Services

Employment in services was not so active as in the preceding month; 250 establishments reported 21,228 employees, or 95 less than on January 1. The index was a few points lower than on February 1 of last year, when improvement was noted in this group.

Trade

Following the usual activity at the Christmas and holiday season, there was a considerable falling-off in the number employed in trade on February 1. The losses were on a slightly larger scale than those noted on the same date in 1930, and the index of employment stood at 123.1, compared with 124.6 on February 1 last year. The 798 trading establishments furnishing data reduced their payrolls from 93,321 employees on January 1, to 86,520 at the beginning of February. There were general decreases, mainly in retail stores, but wholesalers were also slacker.

Index number of employment by tables. economic areas, leading cities and industries are given in the accompanying tables. The columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area, or industry, is of the total number of employees reported in Canada by the firms making returns on February 1, 1931.

(2) Unemployment in Trade Unions at the Close of January, 1931

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work other than their own trade or who are idle because of illness are not considered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making reports varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

in December, the tendency, however, being toward greater activity. In all other provinces a lower level of employment was maintained, but the recessions indicated were slight. Ontario, Quebec, New Brunswick, Manitoba and Saskatchewan unions all reported marked reductions in available work from January, 1930, and in Alberta and British Columbia moderate curtailment of activity was evident. Nova Scotia unions, on the other hand, reported nominal improvement in conditions.

A separate compilation is made each month of unemployment in the largest city in each province with the exception of Prince Edward

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

Some slight reaction from the steady decline in activity which has been indicated by local trade unions during the past few months was shown at the close of January, the 1,866 labour organizations from which reports were tabulated with 210,402 members, indicating 16.0 per cent of idleness contrasted with 17.0 per cent in December. Unemployment was, however, substantially greater than in January, 1930, when 10.8 per cent of the members reported were without work. The determining factor in the better conditions which prevailed during January from the preceding month was the improvement manifest in the province of Quebec, due largely to marked employment gains in the garment trades of Montreal, where operations were resumed in a number of factories. In addition, iron and steel workers and building tradesmen in the same province contributed, though in much lesser degree, to the total employment expansion. The Nova Scotia situation was much the same as

Island. During January, Montreal unions registered important gains in the employment volume afforded from the previous month due particularly to the commencement of operations in the majority of garment factories. A large number of workers in these factories, however, were reported as employed part time only, and activity in Montreal still remained at a rather low level. In Vancouver, also, unemployment eased off slightly during January. Regina unions reported a large increase in idle members from December, and in Saint John also employment showed noteworthy curtailment. Minor declines in activity were reflected by Toronto, Edmonton, Winnipeg, and Halifax unions. Edmonton unions alone indicated a more favourable situation than in January a year ago, the improvement, however, being but nominal while of the contractions in the remaining cities, those recorded by Toronto and Saint John were quite pronounced.

From the chart which accompanies this article it will be seen that the curve of unemployment at the end of January followed a course contrary to that of the last few months and extended in a downward direction. The divergence from December, however, was very slight. The curve rested considerably above the level indicated at the end of January, 1930, showing that unemployment was in greater prevalence during the month under review.

A substantially improved situation as compared with the previous month, was shown by unions in the manufacturing industries during January, the 499 unions from which reports were tabulated with 57,341 members indicating 12.0 per cent of idleness compared with 17.7 per cent in December. Better conditions in the garment trades of Quebec accounted to a large extent for this favourable situation, and contributory gains, though involving fewer workers, were indicated by iron and steel, wood, hat and cap, leather, jewellery and unclassified workers, papermakers, printing tradesmen and metal polishers. On the other hand, heavy declines in activity were recorded by cigar makers and reductions on a smaller scale by textile, fur and glass workers compared with the situation in the manufacturing industries in January, 1930, when 8.8 per cent of the members reported were idle, the majority of trades indicated a lower level of activity during the month under review, the reductions in the garment trades covering the greatest number of workers. Considerable improvement was shown by unclassified workers from January a year ago and among fur, textile and hat and cap workers, the employment trend was upward.

Returns tabulated from 53 unions of coal miners at the end of January with a total membership of 19,587 persons indicated 1,087, or a percentage of 5.5 idle, contrasted with 5.4 per cent of unemployment in December and with 4.2 per cent at the close of January, 1930. Inactivity in the Alberta mines was responsible for the slight increase in idleness shown over December while in Nova Scotia a fractional employment gain was recorded and in British Columbia adequate work was provided for all members reported. Alberta unions were also a large factor in the less favourable situation shown in comparison with January, 1930, though in Nova Scotia also activity was very slightly reduced. In British Columbia, as in the previous comparison, all members were reported busy.

Quietness still prevailed in the building and construction trades, the unemployment volume at the end of January being slightly in excess of that indicated in December. Returns for the month reviewed were received from a total of 256 unions of building tradesmen with a

combined membership of 30,994 persons, 14,331 of whom or a percentage of 46.2 were idle on the last day of the month, contrasted with 44.5 per cent in December. Extensive employment losses were reported from January, 1930, when 30.6 per cent of the members reported were without work. A large drop from December in the volume of work afforded was shown by steam shovel and dredgemen and bridge and structural iron workers, who together formed but a small share of the total membership for the group. Also among painters, decorators and paper hangers and tile layers, lathers and roofers, noteworthy curtailment of activity was evident, and employment for granite and stone cutters, bricklayers, masons and plasterers, and carpenters and joiners declined. On the other hand, hod carriers and building labour-

ers, plumbers and steamfitters and electrical workers reported a somewhat greater volume of activity than in December. A small advance in employment was indicated by electrical workers from January a year ago but in all other trades the situation was adverse, especially noteworthy contractions being reported by bricklayers, masons and plasterers and carpenters and joiners.

Only a slight variation from the previous month in the unemployment volume was recorded during January in the transportation industries, the percentage of unemployment rising from 10.6 in December to 11.0 at the close of the month reviewed. The January percentage was based on the returns tabulated from 794 unions of transportation workers covering 72,864 members. Steam railway employees, whose returns included over 82 per cent of the entire group membership reporting, indicated a fractional unemployment gain from December, as did street and electric railway employees; and among teamsters and chauffeurs activity was also at a lower level. Some lessening of the unemployment volume, however, was reported by navigation workers. Steam railway employees accounted to a large extent for the unfavourable situation shown in the transportation industries from January, 1930, when 7.3 per cent of the members reported in the group as a whole, were without work and among street and electric railway employees and teamsters and chauffeurs some employment cessation was noted. Navigation workers were afforded about the same volume of activity as in January a year ago.

Each month a separate compilation is made of unemployment affecting longshore workers owing to the casual nature of their employment. During January 15 associations of these workers made returns with a membership covering 7,141 persons, 24.0 per cent of whom were reported idle on the last day of the month contrasted with 16.0 per cent in December and with 10.8 per cent in January, 1930.

Retail clerks at the end of January with 5 unions reporting 1,238 members, indicated 3.4 per cent of the members out of work compared with .2 per cent in December and with a fully engaged situation in January a year ago.

The 72 unions of civic employees from which returns were received in January, with 7,660 members, indicated an unemployment percentage of 2.1 in contrast with 1.0 per cent in December. Conditions showed nominal improvement, however, from January, 1930, when 2.5 per cent of the members reported were without work.

Unions in the miscellaneous group of trades suffered a moderate drop from the preceding month in the volume of employment afforded during January, as shown by the reports received from 134 unions, embracing a membership of 7,619 persons. Of these, 1,393 were idle on the last day of the month, a percentage of 18.3 compared with 15.1 per cent in December. Hotel and restaurant employees indicated a decided slump in activity from December, and were the main feature in the unfavourable situation reported in the group as a whole, though among unclassified workers and barbers unemployment eased off slightly. Stationary engineers and firemen maintained the same unemployment volume as in December, while among theatre and stage employees the trend was toward greater activity, though the improvement registered was fractional only. All trades shared in the retrogressive employment movement shown in the miscellaneous group, as a whole from January, 1930, when 8.9 per cent of the members reported were idle, conditions for hotel and restaurant employees, stationary engineers and firemen and unclassified workers being particularly depressed.

Little change from the previous month in the situation for fishermen was indicated at the close of January, the 4 unions which made returns in January with 1,362 members showing 11.0 per cent of idleness contrasted with 11.5 per cent at the end of December. Noteworthy improvement in conditions, however, was noted from January, 1930, when 18.4 per cent of unemployment was recorded.

Greater activity prevailed for lumber workers and loggers during January than in December, though unemployment still remained at a rather high level. Returns for January were tabulated from 4 unions of these workers with 1,184 members, 30.6 per cent of whom were idle on the last day of the month contrasted with 41.2 per cent in December. A large falling off in available work, however, was recorded from January, 1930, when the percentage of idleness stood at 12.2.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1930 inclusive and also the percentage of unemployment by provinces for January of each year from 1919 to 1928 inclusive and for each month from January, 1929, to date. Table II summarizes the returns in the various groups of industries for the same months as in table I.

(3) Employment Office Reports for January, 1931

During the month of January, 1931, the volume of business, as shown by the average daily placements effected by the offices of the Employment Service of Canada, was 1 per cent less than that transacted during the previous month, but more than double that of January a year ago. A substantial gain over December was shown in construction and maintenance and one of lesser magnitude in manufacturing, but these were more than offset by declines in all other groups. A noticeable increase over January last year was due to exceptionally heavy placements in construction and maintenance, in which division work sponsored by the Federal-Provincial re-

an upward trend during the latter half of the period under review. In both instances the ratios of vacancies and placements to applications were higher than those shown at the close of January last year. The ratio of vacancies to each 100 applications was 61.7 and 66.2 during the first and the second half of January, 1931, in comparison with ratios of 62.0 and 63.0 during the same periods of 1930. The ratios of placements to each 100 applications during the periods under review were 60.4 and 64.7 as compared with 57.4 and 61.1 during the corresponding month a year ago.

The average number of vacancies reported daily by employers to the offices throughout

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ——— Vacancies - - - - - Placements o-o-o-o-o

lief plan for the alleviation of unemployment was carried on. A slight gain was also shown in mining, but all remaining groups registered declines, the largest being in logging.

The accompanying chart shows the trend of employment since January, 1929, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be seen that the curves of vacancies and placements in relation to applications declined sharply during the first half of the month, but showed

Canada during January, 1931, was 2,123 as compared with 2,142 during the preceding month and with 1,053 in January, 1930.

The average number of applications for employment received daily by the offices during the month under review was 3,310 in comparison with 2,853 in December and with 1,685 during January last year.

The average number of placements made daily by the offices of the Service during January, 1931, was 2,076, of which 536 were in regular employment and 1,540 in work of one week's duration or less, as compared with a total daily average of 2,106 during the preced-

ing month. Placements in January a year ago averaged 998 daily, consisting of 591 placements in regular and 407 in casual employment.

During the month of January, 1931, the offices of the Service referred 55,627 persons to vacancies and effected a total of 53,972 placements. Of these the placements in regular employment were 13,932, of which 10,846 were of men and 3,086 of women, while placements in casual work totalled 40,040. The number of vacancies reported by employers was 47,853 for men and 7,332 for women, a total of 55,185, while applications for work numbered 86,044, of which 74,383 were from men and 11,661 from women.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1921, to date:—

Year	PLACEMENTS		
	Regular	Casual	Totals
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552
1924.....	247,425	118,707	366,132
1925.....	306,804	106,021	412,825

1931 (1 month).....	13,932	40,040	53,972

NOVA SCOTIA

There was a decline of 16 per cent in the number of positions offered through employment offices in Nova Scotia during January, when compared with the preceding month, and of nearly 15 per cent in comparison with the corresponding month of last year. Placements were over 17 per cent less than in December and nearly 15 per cent below January, 1930. Construction and maintenance was the only group to show any appreciable gain in placements over January of last year, and this was more than offset by declines in services. Fewer placements were also made in manufacturing, logging, and trade. The changes in other groups were nominal only. Industrial divisions in which most of the placements were effected during the month were: construction and maintenance 96; trade, 34; and services, 356, of which 293 were of household workers. During the month 29 men and 63 women were placed in regular employment.

NEW BRUNSWICK

The demand for workers, as indicated by orders received in employment offices in New Brunswick during January, was 14 per cent

higher than during the preceding month and nearly 46 per cent above the corresponding month of last year. Placements, also, were nearly 15 per cent above December and over 50 per cent in excess of January, 1930. Construction and maintenance and services were the only groups in which more placements were made during the month under review than in January of last year and accounted for the increase under this comparison. The gain in the former was attributable to work undertaken in relief of unemployment. Placements by industrial groups included: manufacturing, 21; construction and maintenance, 324; and services, 566, of which 401 were of household workers. Regular employment was found for 99 men and 54 women during the month.

QUEBEC

During January, employment offices in the Province of Quebec received orders for nearly 23 per cent more workers than in the preceding month, but nearly 15 per cent less than during the corresponding month last year. There was a gain of 21 per cent in placements in comparison with December, but a decline of nearly 21 per cent when compared with January, 1930. Logging showed the most substantial loss in placements from January of last year, followed by manufacturing and construction and maintenance. The only gain of note was in services. Placements by industrial divisions included: manufacturing, 33; logging, 201; construction and maintenance, 165; trade, 30; and services, 623, of which 492 were of household workers. There were 379 men and 464 women placed in regular employment during the month.

ONTARIO

Orders received at Ontario offices during January called for just under 1 per cent more workers than in the preceding month, but nearly 173 per cent more than during the corresponding month of last year. There was a nominal gain in placements when compared with December, but a gain of nearly 209 per cent in comparison with January, 1930. A large number of placements was again made on relief work and accounted for the substantial increase in placements over January of last year. There were, however, more placements in the services' division, but these gains were partly offset by declines in other groups, of which those in logging and manufacturing were the largest. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 719; logging, 496; farming, 196; transportation, 134; construction and maintenance, 26,922; trade, 450; and services, 3,738, of which

2,098 were of household workers. During the month 6,682 men and 1,292 women were placed in regular employment.

MANITOBA

Opportunities for employment, as indicated by orders received at employment offices in Manitoba during January, were nearly 18 per cent better than in the preceding month and over 162 per cent above the corresponding month of last year. There was a gain of over 16 per cent in placements in comparison with December and of nearly 106 per cent when compared with January, 1930. Construction and maintenance was the only group in which more placements were made during the month under review than during the corresponding month of last year. This gain, which was due to placements on unemployment relief work, was offset in part by declines in all other divisions, of which those in logging, services and farming were the most substantial. Industrial divisions in which most of the placements were made during the month were: logging, 172; farming, 188; construction and maintenance, 6,060; trade, 90; and services, 944, of which 779 were of household workers. During the month 601 men and 379 women were placed in regular employment.

SASKATCHEWAN

There was a decline of nearly 23 per cent, both in the number of positions offered and of placements effected when compared with the preceding month, but a gain of nearly 61 per cent in vacancies and of nearly 70 per cent in placements when compared with the corresponding month of last year. The gain in placements over January, 1930, was due to increases in the construction and maintenance and logging divisions. These gains, however, were offset, in part, by declines in all other groups, of which those in services, farming and manufacturing were the largest. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 30; logging, 532; farming, 133; construction and maintenance, 1,751; trade, 55; and services, 656, of which 459 were of household workers. During the month 751 men and 318 women were placed in regular employment.

ALBERTA

Employment opportunities, as indicated by orders received in employment offices in Alberta during January, were nearly 16 per cent less favourable than in the preceding month and nearly 7 per cent below the corresponding month of last year. Placements also were nearly 16 per cent less than in December and

over 6 per cent fewer than in January, 1930. Although placements in the construction and maintenance, mining and logging divisions were higher than during January, 1930, these gains were more than offset by declines in all other groups. The largest reduction was in the services' division. Placements by industrial groups included: manufacturing, 67; logging, 457; farming, 142; mining, 226; construction and maintenance, 3,185; and services, 576, of which 500 were of household workers. Placements in regular employment numbered 1,923 of men and 239 of women.

BRITISH COLUMBIA

During January, positions offered through employment offices in British Columbia were 8 per cent less than in the preceding month but over 47 per cent in excess of the corresponding month of last year. There was a decline of over 8 per cent in placements when compared with December, but a gain of nearly 54 per cent in comparison with January a year ago. Placements on relief work were responsible for the increase over January, 1930, as construction and maintenance, under which this work falls, was the only group to show a substantial gain in placements under this comparison. There was, however, a small increase in bush placements. Of the decline in all other groups those in services, manufacturing and trade were the largest. Placements by industrial divisions included: manufacturing, 79; logging, 332; farming, 56; transportation, 33; construction and maintenance, 1,987; trade, 45; and services, 792, of which 475 were of household workers. Regular employment was found for 382 men and 277 women.

Movement of Labour

During the month of January, 1931, the offices of the Employment Service of Canada made 13,932 placements in regular employment, 3,682 of which were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 781 were granted the Employment Service reduced transportation rate, 718 going to points within the same province as the despatching office and 63 to other provinces. The reduced transportation rate which is 2.7 cents per mile, with a minimum fare of \$4.00, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Transfers at the reduced rate from Quebec centres in January numbered 80, of which 73 were to provincial points, the balance repre-

senting an interprovincial movement. The Quebec office effected all transfers within the province, despatching 73 bushmen to employment within its own zone. The 7 persons going outside the province were also bushmen, bound for Pembroke on certificates issued at Hull.

Benefiting by the reduced transportation rate in Ontario 256 persons were found employment, 250 of whom went to positions within the province and 6 to situations outside. The latter were miners despatched from Timmins to the Quebec zone. Provincially, Port Arthur despatched 110 bush workers and Fort William 70 bush workers to centres within their respective zones. From Sudbury 14 machine drillers were sent to Timmins, one lumber camp clerk to Sault Ste. Marie and 20 bushmen and 12 teamsters to employment within the Sudbury zone. The Timmins zone, in addition, received 5 miners and 2 dam construction workers from Cobalt, one pump operator from Ottawa and one fur trader from Toronto. To the Cobalt zone were destined 5 teamsters and 6 lumber loaders travelling from North Bay and 2 dairy workers transferred from Kitchener. The remaining provincial transfer was of a plumber's helper bound for North Bay and journeying from Niagara Falls.

The Manitoba transfers at the reduced rate during January were 105 in number, all of which were effected by the Winnipeg office. Of these, 58 were provincial and 47 interprovincial. Included in the provincial movement were 4 farm domestics and 2 hotel employees going to Brandon, one store clerk and one farm hand to Dauphin and 28 farm hands, 18 bushmen and 3 mine workers to employment in the Winnipeg zone. Of the persons going outside the province the Port Arthur zone received 21 bush workers, one hotel employee, one domestic and one cook. To the agricultural districts of Saskatchewan 16 farm hands and 4 farm household workers travelled from Winnipeg. In addition 3 hotel employees were despatched to Regina.

Certificates for reduced transportation were issued by Saskatchewan offices during January to 226 persons, 224 of whom travelled to centres within the province and the remainder to employment outside. Provincially 199 bush workers were despatched to employment chiefly in the Prince Albert zone, the Saskatoon and

Prince Albert offices being largely responsible for this labour movement. In addition, 13 farm hands and one farm household worker were sent to various rural points throughout the province, a number of offices assisting in the transfer of these workers. The Estevan office despatched one labourer each to Saskatoon and Prince Albert zones, while from Regina one hotel cook and one teacher went to Saskatoon, one labourer to Moose Jaw, and 2 teachers and 2 laundry workers to Prince Albert. From Saskatoon one hotel waitress went to a point within its own zone, which zone also received one book-keeper journeying from Weyburn. The 2 transfers outside the province were of a farm hand and a farm domestic despatched from Regina to Brandon.

Of the 62 workers who were granted reduced rate certificates in Alberta during January 61 travelled to employment within the province. Of these 60 received their certificates at Edmonton for various points within the same zone and included 46 bush workers, 6 farm hands, 3 miners, 2 hotel maids, 2 sawmill workers and one fireman. The Edmonton zone also received one farm housekeeper from Calgary. The one person going outside the province was a town housekeeper who travelled from Calgary to Swift Current.

British Columbia offices granted 52 certificates for reduced transportation during January, all provincial. Of these, 26 were issued at Vancouver to 4 mine workers and one sawyer going to Penticton, one hotel waitress to Nelson, one seamstress to Kamloops, and to 7 bush workers, one railway construction labourer, one bridge construction foreman, one steel worker, 3 cooks, one blacksmith, 2 construction engineers, one timekeeper, one construction superintendent and one carpenter travelling to employment at various points within the Vancouver zone. Securing certificates at Nelson 13 railway construction workers went to Kamloops and 7 bushmen and one farm hand within the Nelson zone, while from Prince George 5 bushmen were transferred to points within its own zone.

Of the 781 workers who took advantage of the Employment Service reduced transportation rate during January 543 travelled by the Canadian National Railways, 203 by the Canadian Pacific Railway, 24 by the Timiskaming and Northern Ontario Railway and 11 by the Pacific Great Eastern Railway.

(4) Building Permits Issued in Canada During January, 1931

There was a seasonal decline in the value of the building permits issued by 61 cities during January as compared with the preceding month, but the aggregate was slightly higher than in January, 1930. It was also greater than in January of most years since this record was instituted in 1920, being exceeded only by 1929 and 1928. The co-operating municipalities reported permits for building estimated to cost \$7,510,745 as compared with \$15,440,281 in December, 1930, and \$7,217,397 in January, 1930. There was, therefore a reduction of 51 per cent in the former, but an increase of 4.1 per cent in the latter, more significant comparison.

Some 50 cities furnished detailed statements, showing that they had granted over 400 permits for dwellings valued at about \$1,800,000 and more than 1,000 permits for other buildings estimated to cost approximately \$4,500,000. In December, authority was granted for the erection of some 500 dwellings and 1,200 other buildings, estimated to cost approximately \$2,600,000 and \$12,000,000, respectively.

New Brunswick, Saskatchewan and Alberta reported increases in the value of the building authorized during January as compared with

December, the gain in the first named being most noteworthy. Of the declines recorded in the remaining provinces that of \$5,778,568, or 79.8 per cent, in Quebec was most pronounced.

As compared with January, 1930, there were increases in New Brunswick, Quebec, Ontario and British Columbia. The most marked gain in this comparison was in British Columbia, where the value of the building authorized increased by \$1,092,074, or 109.9 per cent. Reductions were recorded in Nova Scotia and the three Prairie Provinces, that of \$816,835, or 76.1 per cent in Saskatchewan being greatest.

In Montreal and Vancouver, there were decreases in the value of the building permits granted as compared with the preceding month, but increases over the corresponding month of last year. Toronto showed a decline in both comparisons, while in Winnipeg the January total was higher than in December, but lower than in January, 1930. The following cities reported increases in both comparisons—New Glasgow, Saint John, Sherbrooke, Three Rivers, Fort William, Guelph, Kitchener, London, Oshawa, York and East York Townships, Wel-

ESTIMATED COST OF BUILDING WORK AS INDICATED BY PERMITS ISSUED BY 61 CITIES.

Record for January in the Years 1920-1931.—The following table gives the value of the building authorized by 61 cities during January of each year since 1920. Index numbers of wholesale prices of building materials in January of the same years are also given (1926-100).

As previously stated, the 1931 figure for January was only twice exceeded in the 12 years' record, i.e., by the aggregates for 1929 and 1928.

The accompanying table gives the value of the building permits issued by 61 cities in January, 1931, and December and January, 1930. The 35 cities for which statistics are available since 1910 are indicated by asterisks.

Year	Value of permits issued in January	Indexes of value of permits issued in January (1920=100)	Indexes of wholesale prices of building materials in January (1926 average 100)

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the British *Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary, showing the employment situation during January, 1931, is reproduced below. The following report on unemployment conditions in the United States is based on the statistics published by the United States Department of Labour, showing the recent trend of employment in selected manufacturing industries throughout the country. The employment situation in the United States is further indicated by unemployment percentages based on statistics compiled each month by the American Federation of Labor, the source of these statistics being returns obtained from the trade union locals in 24 representative cities. Summary figures for February, 1931, and previous months are reproduced below.

Great Britain

There was some fluctuation in the course of employment during January, but at the end of the month the numbers unemployed showed a net decrease as compared with the end of December, 1930, although they remained higher than immediately before Christmas.

Increases in the numbers unemployed occurred in a large number of industries, of which the principal included building and public works contracting with the manufacture of bricks, tiles and cement; the glass industries; engineering; shipbuilding and ship

repairing; the manufacture of metal goods; the woollen, worsted, jute, hosiery, lace and carpet industries; textile bleaching, dyeing and finishing; the clothing industries, except hat and cap manufacture; the woodworking and furnishing trades; and the transport and distributive trades.

There was an improvement, however, in the manufacture of pottery, steel, and tinplates; and in the motor vehicle, artificial silk yarn, linen, hat and cap, boot and shoe, and paper and paper board industries.

Among the workpeople, numbering approximately 12,400,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at January 26, 1931 (including those temporarily stopped as well as those wholly unemployed), was 21.5, as compared with 20.2 at December 22, 1930, and with 12.4 at January 27, 1930. The percentage wholly unemployed at January 26, 1931, was 16.5, as compared with 14.9 at December 22, 1930; while the percentage temporarily stopped was 5.0, as compared with 5.3. For males alone the percentage at January 26, 1931, was 22.1, and for females 19.9; at December 22, 1930, the corresponding percentages were 20.7 and 18.8.

At January 26, 1931, the number of persons on the Registers of Employment Exchanges in Great Britain was 1,875,330 wholly unemployed, 607,443 temporarily stopped, and 109,877 normally in casual employment, making a total of 2,592,650. This was 50,477 less than a month before, but 1,101,131 more than

a year before. The total included 1,850,797 men, 74,176 boys, 600,179 women and 67,498 girls.

The 1,875,330 wholly unemployed included approximately 1,313,000 insured persons who had paid at least 30 contributions during the preceding two years, and therefore satisfied the full contributions condition for the receipt of unemployment benefit; 455,500 insured persons who had paid less than 30 contributions during the preceding two years; and 106,830 uninsured persons. The wholly unemployed claimants for benefit, numbering 1,697,928, included 254,645 men, 7,056 boys, 54,939 women, and 4,616 girls who had been on the register for less than one month.

In Great Britain and Northern Ireland the total number of persons on the Registers of Employment Exchanges at January 26, 1931, was 2,671,213.

United States

Employment in the United States decreased 4.2 per cent in January, 1931, as compared with December, 1930, and pay-roll totals decreased 8.2 per cent, according to returns made to the Bureau of Labour Statistics. The industries included in the above statement are manufacturing, coal mining, metalliferous mining, quarrying and non-metallic mining, crude petroleum producing, public utilities, trade (wholesale and retail), hotels, canning and preserving, and laundries, dyeing and cleaning.

A separate summary is made of the latest data available relating to all employees, exclusive of executives and officials, on Class I railroads. This tabulation is made from Interstate Commerce Commission reports for the months of October and November, 1930, and therefore cannot be included in the general statement for the month of January. The number of employees of Class I railroads as at November 15, totalled 1,378,242, representing a decrease of 4.2 per cent since October 15, 1930. The amount of pay-roll in the entire month of November was \$186,155,582, representing a decrease over the previous month of 9.7 per cent.

Employment in manufacturing industries decreased 2.7 per cent in January, 1931, as compared with December, 1930, and pay-roll totals decreased 7.6 per cent. These changes are based upon returns made by 12,913 establishments in 54 of the principal manufacturing industries of the United States. These establishments in January had 2,697,244 employees whose combined earnings in one week were \$60,665,960.

The latter part of December and first part of January habitually show marked and rapid

fluctuations both in employment and pay-roll totals due to the holiday season and the custom of taking inventories and making repairs at that time. These conditions usually notably affect pay-rolls in the large iron and steel and automobile plants.

The bureau's weighted index of employment for January, 1931, is 73.1, as compared with 75.1 for December, 1930, 76.5 for November, and 90.2 for January, 1930; the index of pay-roll totals for January, 1931, is 62.3, as compared with 67.4 for December, 1930, 68.3 for November, 1930, and 87.6 for January, 1930. The monthly average for 1926 equals 100.

The leather group of industries shows an increase of 3.9 per cent in employment and an increase of 4.1 per cent in pay-roll totals in January, but each of the remaining 11 groups reported fewer employees and decreased pay-roll totals as compared with December.

There were increases in employment in 11 industries in January and increases in pay-roll totals in 8 of the same industries. These increases were largely seasonal and were in the following industries: Agricultural implements, chewing and smoking tobacco, boots and shoes, millinery and lace goods, men's clothing, automobile tires and inner tubes, cane-sugar refining, and slaughtering and meat packing; carpets, leather, and steam-railroad car shops reported increased employment with decreased pay-roll totals.

The outstanding decreases in employment in January ranged from 7.9 per cent in saw-mills to 18.4 per cent in brick plants and occurred in the following additional industries: Confectionery, rubber boots and shoes, cement, hosiery, and knit goods, carriages and wagons, cigars and cigarettes, and stoves.

Eight of the nine industries which are surveyed but not included in the bureau's indexes reported decreased employment in January as compared with December and all of them reported decreased pay-roll totals. The outstanding decreases were 35.7 per cent in beet sugar and 26.5 per cent in radio and were seasonal; jewelry had 9.7 per cent fewer employees, rayon 7.2 per cent fewer employees, while the decreases in paint and varnish, rubber goods, beverages, and cash registers, etc., were small. Aircraft reported an increase of 0.6 per cent in employment.

Decreased employment in January was shown in each of the nine geographic divisions. The smallest decrease was 1 per cent in the East South Central division and the greatest decrease was 8.2 per cent in the Mountain division, the beet-sugar industry's closing season being responsible for the latter.

Unemployment percentage.—Unemployment statistics which are being compiled each month by the American Federation of Labor, indicate the percentage of unemployed union members in twenty-four representative cities of the United States, as follows: October to December, 1927, 14 per cent; January, 1928, 18 per cent; February, 1928, 18 per cent; March, 1928, 18 per cent; April, 1928, 16 per cent; May, 1928, 13 per cent; June, 1928, 11 per cent; July, 1928, 12 per cent; August, 1928, 9 per cent; September, 1928, 10 per cent; October, 1928, 9 per cent; November, 1928, 10 per cent; December, 1928, 13 per cent; January, 1929, 15 per cent; February, 1929, 15 per cent; March, 1929, 14 per cent; April, 1929, 12 per cent; May, 1929, 11 per cent; June, 1929, 9 per cent; July, 1929, 9 per cent; August, 1929, 9 per cent; September, 1929, 10 per cent; October, 1929, 11 per cent; November, 1929, 12 per cent; December, 1929, 16 per cent; January, 1930, 20 per cent; February, 1930, 22 per cent; March, 1930, 21 per cent; April, 1930, 21 per cent; May, 1930, 20 per cent; June, 1930, 20 per cent; July, 1930, 22 per cent; August, 1930, 22 per cent; September, 1930, 21 per cent; October, 1930, 21 per cent; November, 1930, 22 per cent; December, 1930, 16.6 per cent; January, 1931, 19.8 per cent; February, 1931, 19.1 per cent.

The *Monthly Survey of Business* (published by the American Federation of Labor) from which the above percentages have been taken, in its issue of March 1, 1931, comments, in part, as follows on the unemployment situation:

"Last year unemployment rose steadily from September through February. This year our reports from 803,000 union members show that apparently the rise has already been checked—a month earlier than last year. This is cheering news indeed. Our weighted figure for the per cent of union members unemployed declined from 19.8 in January to 19.1 in February. On the basis of union reports and government figures we estimate that, not counting farm labourers or office workers, the number out of work in January was 5,870,000 (revised figure) and in February 5,777,000 (preliminary figure). . . .

"Though union reports this month give further evidence that the bottom of depression may have been reached, they show unemployment still at peak levels. The improvement is so small as to be negligible for the millions out of work. There is no question that unemployment will last on at nearly its present high level for several months and will be a serious problem for the rest of the year."

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which included among their provisions fair wages conditions for the protection of the labour to be employed. The Fair Wages Policy of the Government of Canada has been in effect since 1900 and is now expressed in an Order in Council which was adopted June 7, 1922, and amended April 9, 1924.

The Fair Wages Order in Council requires that "all contracts made on behalf of the Government of Canada for the construction or remodelling of public buildings of all kinds, railways, canals, roads, bridges, locks, dry-docks, elevators, harbours, piers, wharves, lighthouses, and other works for the improvement and safety of transportation and navigation, rifle ranges, fortification, and other works of defence, dams, hydraulic works, slides, piers, booms, and other works for facilitating the transmission of timber, and all other works and properties constructed or remodelled for the Government of Canada" must contain either a fair wage schedule based on the current wages rates and working hours in the

district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed, or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current

or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees, fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military or naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other article and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair

and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefor may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada,

unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts Awarded Recently

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wages schedules as shown below, or the general fair wages clause above-mentioned:—

DEPARTMENT OF FISHERIES

Contracts in Group "A" (Construction, etc.)

Construction of four launches for service on the West Coast. Name of contractors, Walkems Shipyard, Ltd., Vancouver, B.C. Date of contract, February 11, 1931. Amount of contract, \$14,995. The General Fair Wages Clause was inserted in the contract.

DEPARTMENT OF NATIONAL DEFENCE

Contracts in Group "A" (Construction, etc.)

Construction of an elevated steel water tank and observatory at the Royal Canadian Air Force Training Establishment, Trenton, Ont. Name of contractors, The Horton Steel Works, Ltd., Montreal, P.Q. Date of contract, February 5, 1931. Amount of contract, \$15,980. A fair wages schedule was inserted in the contract for the foundations for the above as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Masons.....	\$1 00	8
Carpenters.....	0 80	8
Ordinary labourers.....	0 40	8
Concrete workers.....	0 40	8
Driver, team and wagon.....	per day 6 50	8

Construction of concrete floors in Hangar No. 2, Royal Canadian Air Force Training Establishment, Trenton, Ont. Name of contractors, The Raynor Construction Co., Toronto, Ont. Date of contract, February 20, 1931. Amount of contract, \$4,900. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Carpenters.....	\$0 80	8
Ordinary labourers.....	0 40	8
Concrete workers.....	0 40	8
Concrete floor finishers.....	0 55	8
Driver, team and wagon.....	per day 6 50	8

DEPARTMENT OF PUBLIC WORKS

Contracts in Group "A" (Construction, etc.)

Construction of a public building at Drumheller, Alta. Name of contractors, Buchan Construction Co., Calgary, Alta. Date of contract, February 2, 1931. Amount of contract, \$50,998 and unit prices for any additional work. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Concrete workers.....	\$0 50	8
Concrete mixers.....	0 50	8
Concrete floaters.....	0 50	8
Concrete finishers.....	1 00	8
Stone masons.....	1 45	8
Stone cutters.....	1 10	8
Brick and hollow tile layers.....	1 45	8
Structural steel workers.....	1 00	8
Carpenters and joiners.....	1 00	8
Sheet metal workers.....	1 12½	8
Sheet metal workers' helpers.....	0 75	8
Roofers, felt and gravel.....	0 85	8
Terrazzo layers.....	1 25	8
Terrazzo layers helpers.....	0 60	8
Marble setters.....	1 45	8
Tile setters.....	1 45	8
Metal lathers.....	1 12½	8
Plasterers.....	1 40	8
Plasterers' helpers.....	0 77½	8
Painters and glaziers.....	0 75	8
Plumbers and steamfitters.....	1 20	8
Plumbers and steamfitters helpers.....	0 75	8
Electricians.....	1 10	8
Electricians' helpers.....	0 60	8
Labourers.....	0 50	8
Driver, horse and cart.....	0 75	8
Driver, team and wagon.....	0 95	8
Motor truck driver.....	0 50	8
Steam hoist engineer (2 drum).....	1 00	8
Steam hoist engineer (1 drum).....	0 75	8
Gasoline hoist engineer.....	0 75	8

Construction of an extension to the wharf at Mont Louis, Gaspé Co., P.Q. Name of contractors, Mr. John J. LeBlanc and Capt.

Jos. A. Allard, both of Carleton, P.Q. Date of contract, February 18, 1931. Amount of contract, approximately \$27,049.60. A fair wages schedule was inserted in the contract as follows:—

Amount of contract, \$1,500. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	
	per hour	per day
Carpenters.....	\$0 50	8
Timbermen.....	0 40	8
Labourers.....	0 35	8
Blacksmiths.....	0 50	8
Blacksmiths' helpers.....	0 40	8

POST OFFICE DEPARTMENT

Following are statements of payments made in February, 1931, for supplies ordered by the Post Office Department under contracts which were subject to the regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages and the performance of the work under proper sanitary conditions:—

<i>Making Metal Dating Stamps and Type, Brass Crown Seals, Cancellers, etc.—</i>	
Pritchard-Andrews Co., Ltd., Ottawa, Ont.	\$ 490 40
<i>Making and Repairing Rubber Stamps, Daters, etc.—</i>	
Pritchard-Andrews Co., Ltd., Ottawa, Ont.	279 03
Capital Rubber Stamp Works, Ottawa, Ont.	18 15
<i>Making up and Supplying Letter Carriers' Uniforms.—</i>	
Pollack & Dorfman, Quebec, P.Q.	493 34
Jay Wolfe, Inc., Montreal, P.Q.	472 50
Woods Manufacturing Co., Ltd.	34 80

<i>Mail Bag Fittings.—</i>	
Ontario Equipment Co., Ltd., Ottawa, Ont.	3,030 00
Interprovincial Equipment Co., Ottawa, Ont.	267 71
Baker Bros., Ottawa, Ont.	1,010 00
<i>Scales.—</i>	
Pritchard-Andrews Co., Ltd., Ottawa, Ont.	117 00
<i>Stamping Ink and Pads.—</i>	
J. E. Poole Co., Toronto, Ont.	726 30
Pritchard-Andrews Co., Ltd., Ottawa, Ont.	91 01
<i>Letter Boxes.—</i>	
Collins Wire Goods Ltd., Toronto, Ont.	315 00

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULE OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing: Printing and Publishing

EDMONTON, ALBERTA.—CERTAIN JOB PRINTING OFFICES AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 604.

Agreement to be in effect from November 1, 1929, to October 31, 1932, and for such time thereafter (not exceeding thirty days) as may be required for the completion of a new agreement.

This agreement is the same as the one previously in effect and summarized in the LABOUR GAZETTE, May, 1927, page 556, with the following exceptions:

Wages per hour for journeymen: from November 1, 1929, to October 31, 1930, \$1.00 for day work and \$1.06 $\frac{2}{3}$ for night work; from November 1, 1930, to October 31, 1931, \$1.05 for day work and \$1.11 $\frac{1}{3}$ for night work; from November 1, 1931 to October 31, 1932, \$1.07 for day work and \$1.13 $\frac{1}{3}$ for night work.

The hours remain the same as before, 8 per day for five days a week and 4 on Saturdays, a 44-hour week for day work, and 7 per night, six nights per week, a 42-hour week for night work. Journeymen on split shift to work same number of hours and receive same wages as for night work.

**Transportation and Public Utilities:
Water Transportation**

VANCOUVER B.C.—SHIPPING FEDERATION OF BRITISH COLUMBIA, LIMITED AND THE VANCOUVER AND DISTRICT WATERFRONT WORKERS' ASSOCIATION.

Agreement signed following the award of the board under the Industrial Disputes Investigation Act, 1907. a copy of which award appeared in the LABOUR GAZETTE, August 1, 1930, page 889.

Agreement to be in effect from November 1, 1930, to November 1, 1933, and thereafter from year to year until either party gives notice 60 days before November 1 of any year.

The agreement applies specifically to the Port of Vancouver and to the discharging and loading of deep-sea vessels only.

Subject to certain conditions, members of the association will be allotted at least 60 per cent of all work allotted by the Federation.

The Rules, Working Conditions and Wage Schedule which are summarized below form part of the agreement, but may be amended at any time by mutual agreement, or by the Joint Standard Practice Committee consisting of three employers and three employees. If this committee cannot reach a unanimous decision, the matter will be referred to a board of arbitration consisting of one representative of each party and a third chosen by them, the majority decision of this committee to be final and binding and any amendment to the Rules, Working Conditions and Wage Schedule decided by them will then form part of the agreement. In case of a change in wages desired by either party, 60 days notice will be given and a joint conference held to discuss it. If unable to agree, the matter will be referred to the Joint Standard Practice Committee or if necessary to an arbitration board as above. Any change in wages requested on account of changes in the cost of living will be based on the cost of living figures published in the LABOUR GAZETTE with the cost of living at Vancouver in 1924 and the wage rate at that time (80 cents per hour) as the base.

The employment and regulation of labour including the despatch and distribution of work and earnings will be controlled and supervised by the Shipping Federation through its Labour Manager.

Any disputes will be settled in the same way as amendments to "Rules, Working Conditions and Wage Schedule" are made, which method is described above. It is agreed that neither party will apply for a board under the Industrial Disputes Investigation Act, until and unless every other reasonable means of arriving at a settlement has been used.

In case of a strike by employees not members of the Association, members of the Association will not strike in sympathy.

If more men are required than the number registered, the association will be notified and they will open the membership to more men who after securing a certificate of physical fitness will be employed for a probationary period of sixty days and if satisfactory will be registered as regular longshoremen.

Rules, Working Conditions and Wage Schedule

Employer reserves right to select his own employees, to place them, to decide size of gangs on any job. No interference with the foreman by any member of the association will be made.

Hours: All time between 8 a.m. and 5 p.m. (except Sundays and holidays) will be considered straight time, and all other time including Sundays and holidays as overtime. Ten hours will be maximum number in one day when other suitable men are available except when finishing up certain work. Twelve hours will be the maximum at points where transportation is provided.

Wages: unless otherwise provided all labour at straight time to be paid 87 cents per hour for ship work and 83 cents for dock work; for overtime \$1.30 for ship work and \$1.25 for dock work; double winch driver 97 cents for straight time and \$1.40 overtime. If the regular meal hour is advanced or deferred one hour all labour (unless otherwise provided for) on straight time will be paid \$1.30 per hour for ship work and \$1.25 for dock work, on overtime \$1.95 for ship work and \$1.87½ for dock work; double winch driver \$1.40 for straight time and \$2.05 for overtime. Men will not work more than six hours without a meal hour except when finishing a ship when meal hour rate will be paid from beginning of meal hour until released or when discharging mail, baggage, silk or express cargo when men will be paid the meal hour rate only during meal hour or for any time in excess of six hours from time work started.

Higher rates of wages are paid for work with special commodities. For work with the following: caustic soda (when in sacks) cement, fertilizer (animal and fish), green hides, lime (when in single sacks), nitrates, salt (fine, in bulk), all of these commodities when in lots of 25 tons or over, also bulk cargo of ballast, cement, cement-clinker, coal, coke, concentrates, grain, ore and sulphur and commodities in sacks weighing 125 pounds or more, (this last group applies only to ship men when loading vessel and to dock loaders and pilers when used), the following wages per hour to be paid: hatch tender, single winch driver, hold men, sling men 97 cents straight time, \$1.40 overtime and noon meal hour, \$2.05 for any other meal hour; double winch driver 10 cents per hour over these rates; dock truckers 83 cents straight time, \$1.25 overtime and noon meal hour, \$1.87½ for any other meal hour; loaders and pilers 10 cents per hour over rates for dock truckers. For work on creosoted products: hold men, single winch driver and sling men 97 cents straight time, \$1.40 overtime and noon meal

hour, \$2.05 any other meal hour; hatch tender, double winch driver and side runner 10 cents per hour over these rates; dock truckers 83 cents straight time, \$1.25 overtime and noon meal hour, \$1.87½ any other meal hour; loaders and pilers 10 cents per hour over rate paid dock truckers. For work on lumber, logs and piles (except when submerged or awash): single winch driver, hold men, sling men 87 cents straight time, \$1.30 overtime and noon meal hour, \$1.95 any other meal hour; hatch tender, double winch driver and side runner 10 cents per hour over these rates; dock truckers, loaders and pilers 83 cents straight time, \$1.25 overtime and noon meal hour, \$1.87½ any other meal hour. For work on lumber, logs and piles (including creosoted) from the water when submerged or awash: single winch driver and hold men 97 cents straight time, \$1.40 overtime and noon meal hour, \$2.05 any other meal hour; hatch tender, double winch driver, side runner, sling men, boom men 10 cents per hour over these rates. For men working in refrigerators or below deck in connection with refrigerators when the chambers contain commodities frozen for reasons of preservation wages to be 97 cents per hour straight time and \$1.40 overtime. For work on high explosives all labour will be paid \$1.30 per hour for ship work straight time, \$1.25 for dock work straight time; \$1.95 for ship work overtime and \$1.87½ for dock work overtime; double winch driver \$1.40 straight time, \$2.05 overtime. For work on damaged cargo where the cargo of a vessel is badly damaged through fire, collision, springing a leak or stranding, all labour will be paid for handling the badly damaged part of cargo: \$1.30 for ship work straight time, \$1.25 for dock work straight time, \$1.95 for ship work overtime and \$1.87½ for dock work overtime; double winch driver \$1.40 straight time and \$2.05 overtime. If cargo damaged through any other reason, the matter of additional compensation may be taken up with the Company through the Labour Manager, but rates paid will in no case exceed those for damaged cargo mentioned above. When a vessel strands outside the harbour limits and the cargo has to be discharged or shifted, all labour will be paid \$1.62 per hour while working and 81 cents per hour while travelling or standing by. For such salvage work free transportation will be paid and free meals furnished on board if men are not permitted to go ashore.

A minimum of two hours pay for any work done in any one day, three hours pay if partly in morning and partly in afternoon; when men start, resume or continue work between 1 a.m. (1.30 a.m. for some work) and 5 a.m. they will be paid for four hours; if they resume work after 7 p.m. at least two hours pay.

Stand-by Time: When men are ordered for work and no work is provided in an hour and men are released they will be paid as follows: when released between 8 a.m. to 5 p.m. full straight time with minimum of an hour; when released between 5 p.m. and 1 a.m. full overtime with a minimum of two hours; when released after 1 a.m. full overtime with a minimum of three hours; when released between 7 a.m. and 8 a.m. one hour overtime and one hour straight time except for Sundays and holidays when two hours overtime will be allowed.

Waiting Time: When men are ordered to work and are waiting for work and are eventually put to work they will be paid as follows:

when waiting they will be paid from the definite starting time until work commences 43½ cents per hour for ship work (straight time) and 41½ cents for dock work (straight time); for overtime work they will be paid 65 cents for ship work and 62½ cents for dock work. If waiting only because of a shortage in the number of men, they will only be paid for the time after a sufficient number of men are on hand.

Suspended Time: During straight time hours only when men have started work and the work is stopped and men are retained on the job, they will be paid at half straight time rate for such work and such suspended time will be included in the maximum working period of 10 hours per day which is allowed. If however suspended time is on account of shifting ship, weather conditions or switching cars, pay may be stopped for one hour between the hours of 8 a.m. and 5 p.m. Not more than one hour of suspended time without pay shall occur in any one day.

Provision is made for despatching of men, notice to be given before required, etc. When a gang which has been working is ordered back the next day and some of the men report but are not required, if no previous notice has been given such men will be paid two hours straight time. When in special cases it is found necessary to start new work between 1 a.m. and 5 a.m., pay will start from 1 a.m. at waiting time or full time rate as the case may be.

Registered wheat trimmers will be despatched in rotation off the board.

When registered and on the premises, men are not allowed to choose their own job, and if they fail to report to work when ordered will be suspended unless sufficient reason is given.

Unless specifically provided no allowance will be made for travelling time or transportation to or from any place or places within the limits of Vancouver Harbour.

For work at North Vancouver, ferry or bridge tickets will be supplied and same wages and conditions as at Vancouver will apply except when working at night they will be released at 11.30 p.m. or if finishing a ship they will continue to work until midnight at overtime rate. If released between midnight and 1 a.m. full time will be allowed with a minimum of 3 hours for any work performed after midnight; when work ceases between 1 a.m. and 5 a.m. transportation will be provided to the Federation Hall.

For work at Barnet, Capilano, Dollarton, Port Moody or to ships in stream or points other than those which can be reached by ordinary transportation services, transportation will be provided both ways. If working later than midnight they will be paid at full overtime rate until 5 a.m. When transportation is provided both ways daily, men will furnish their own meals. For work at such outside points travelling time will be allowed each way at full time rate for all time in excess of 30 minutes. Barnet, Capilano and ships in stream are not included and for Dollarton and Port Moody the maximum excess time is 15 minutes.

For work at outposts, such as Alberni, Chemainus, Crofton, Genoa Bay, Nanoose, Port Mellon, Powell River, Woodfibre and other places similarly situated transportation will be paid both ways and half the cost of board and lodging at these places, the men's share not to exceed \$1.00 per day. Travelling time will be allowed to these places at half straight time

rate, that is 43½ cents per hour for shipmen and 41½ cents per hour for dock men. Stand-by, waiting and suspended time at these ports will be paid between 8 a.m. and 5 p.m. (meal hours excluded) at half the straight time rate, that is 43½ cents for shipmen and 41½ cents per hour for dock men. If suspended for one hour or more between 5 p.m. and 8 a.m. men will be paid full overtime rate for first hour and half straight time rate until released.

Any question as to the interpretation of this schedule which cannot be satisfactorily adjusted between the man and their employers at the time, may be referred by the men to their Association Committee or the Shipping Federation Labour Manager who will deal with the case in the customary manner, and in the meantime no stoppage of work will occur.

Service: Recreational

OTTAWA, ONTARIO.—CERTAIN LOCAL THEATRES AND THE INTERNATIONAL ALLIANCE OF THEATRICAL STAGE EMPLOYEES AND MOTION PICTURE MACHINE OPERATORS OF THE UNITED STATES AND CANADA, LOCAL No. 257 (MOTION PICTURE PROJECTIONISTS).

Verbal agreement to be in effect from September 1, 1929, to August 31, 1931.

Only union members to be employed.

Overtime: \$1.50 per hour, trade screenings \$1 per reel, extra performance \$7.50 per man.

Two weeks' notice of resignation or discharge to be given; when an operator is discharged for any reason, the union will be allowed to furnish another operator in his place.

Any dispute will be settled by a committee of arbitration consisting of one representative of each party and a third chosen by them, and no strike to occur until a decision has been reached.

The wages and hours reported to be in effect are as follows: \$60 per week of 30 hours (a 5-hour shift per day), \$62 per week of 48 hours (an 8-hour day), \$35 and up per week of 28 hours.

TORONTO, ONTARIO.—CERTAIN LOCAL THEATRES AND THE INTERNATIONAL ALLIANCE OF THEATRICAL STAGE EMPLOYEES AND MOTION PICTURE MACHINE OPERATORS OF THE UNITED STATES AND CANADA, LOCAL No. 173 (MOTION PICTURE PROJECTIONISTS).

Agreement to be in effect from September 1, 1929, to September 1, 1931. Unless 30 days' notice is given previous to cancellation date, same will be in force for the ensuing year.

Only union members to be employed.

Two weeks' notice of resignation or discharge will be given.

Wages: from \$35 to \$65 per week for silent pictures and from \$30 to \$75 per week for sound pictures, the wages varying according to capacity of theatre, nature of program, length of shift, etc.

The Attorney-General of Saskatchewan having intimated that janitors are not among the classes covered by the Workmen's Compensation Act, 1929, the Regina Trades and Labour Council recently decided to bring the matter before the Provincial Government with a view to having the Act amended in this respect.

PRICES, RETAIL AND WHOLESALE, IN CANADA, FEBRUARY, 1931

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices in February continued toward lower levels, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being lower than in January.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty-nine cities was again lower at \$9.44 at the beginning of February, as compared with \$9.86 for January; \$11.83 for February, 1930; \$11.15 for February, 1929; \$11.03 for February, 1928; \$11.23 for February, 1927; \$11.50 for February, 1926; \$10.93 for February, 1925; \$10.75 for February, 1924; \$10.53 for February, 1923; \$10.61 for February, 1922; \$14.08 for February, 1921; \$16.92 for June, 1920 (the peak); \$12.54 for February, 1918; and \$7.75 for February, 1914. This budget has declined each month since January, 1930. Of the twenty-nine items included in the calculation twenty-four were lower than in the previous month, the most important decline being in eggs, while less important decreases occurred in the prices of beef, bacon, lard, milk, cheese, bread, flour, rolled oats, beans, evaporated apples and prunes. Including the cost of fuel and rent with that of foods the total budget averaged \$19.78 at the beginning of February, as compared with \$20.21 for January; \$22.12 for February, 1930; \$21.41 for February, 1929; \$21.25 for February, 1928; \$21.46 for February, 1927; \$21.87 for February, 1926; \$21.19 for February, 1925; \$21.18 for February, 1924; \$21.17 for February, 1923; \$21.07 for February, 1922; \$24.85 for February, 1921; \$26.92 for July, 1920 (the peak); \$19.80 for February, 1918; and \$14.54 for February, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 502 commodities in 1926 as 100, was again lower at 76.0 for February, as compared with 76.7 for January; 94.0 for February, 1930; 95.0 for February, 1929; 96.8 for February, 1928; 97.6 for February, 1927; and 102.2 for February, 1926. One hundred and seventeen quotations declined, forty-two advanced and three hundred and forty-three were unchanged. Wholesale prices as represented by this index have declined steadily since August, 1929, with the exception of December, 1929, when a slight advance was recorded.

In the grouping according to chief component materials one of the eight main groups

was higher, while seven were lower. The Vegetables and Vegetable Products group was higher, mainly because of increased prices for wheat, flax, oats, rye, barley, flour, malt, oatmeal and rolled oats, which more than offset declines in the prices of canned fruits, corn, gluten meal, potatoes and hay. The groups which declined were: the Animals and their Products group, due to lower quotations for raw furs, hides, leather and live stock; the Fibres, Textiles and Textile Products group, because of declines in the prices of raw jute, hessian, raw silk and raw wool, which more than offset higher prices for raw cotton and woollen cloth; the Wood, Wood Products and Paper group, due to reduced quotations for timber and lumber; the Iron and its Products group, because of lower quotations for galvanized steel sheets, wire, scrap iron and scrap steel; the Non-Ferrous Metals and their Products group, due to lower prices for antimony, copper, copper sheets, copper wire, lead and zinc; the Non-Metallic Minerals and their Products group, because of lower prices for gasoline and kerosene; and the Chemicals and Allied Products group, because of reduced quotations for litharge and lamp black.

In the grouping according to purpose, both consumers' goods and producers' goods were lower, the former because of lower quotations for canned fruits, potatoes, eggs, fresh and cured meats, lard, woollen yarn and carpets, and the latter because of declines in the prices of gasoline and kerosene, copper, lead, silver, zinc, raw silk, raw rubber, hides, leather and live stock, which more than offset higher prices for raw cotton, grains and tin.

In the grouping according to origin raw and partly manufactured goods were lower, due to declines in the prices of live stock, hides, eggs, non-ferrous metals, raw rubber and raw silk, which more than offset advances in the prices of grains, raw cotton and tin. Lower prices for gluten meal, copper sheets, copper sulphate, galvanized iron, lard, leather, canned salmon and gasoline caused a decline in fully and chiefly manufactured goods. Canadian farm products, articles of marine origin, articles of forest origin and articles of mineral origin were lower.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of February, of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact

quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be

available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the averages of (Continued on page 360)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family

Table with columns: Commodities, Quantity, and years 1900-1931. Rows include Beef, Veal, Mutton, Pork, Bacon, Lard, Eggs, Milk, Butter, Cheese, Bread, Flour, Rice, Beans, Apples, Prunes, Sugar, Tea, Coffee, Potatoes, Vinegar, All Foods, Starch, Coal, Fuel and light, Rent, and Totals.

AVERAGE COST OF STAPLE FOODS BY PROVINCES

Table with columns: Province and years 1900-1931. Rows include Nova Scotia, Prince Edward Island, New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan, Alberta, and British Columbia.

†December only. §Kind most sold. *For electric light and gas see text.

††An allowance for the cost of clothing and sundries would increase the figures by about 50 per cent. See text.

* Prior to 1926 number of commodities was 236.

(Continued from page 353)

quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to

be maintained. At times when the price of an article heavily weighted for this purpose rises or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1918, quarterly from 1919 to 1929, and monthly since January, 1930. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to

show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.3; 1916, 86.3; 1917, 84.6; 1918, 82.9; 1919, 81.6; 1920, 81.1; 1921, 81.4; 1922, 80.1; 1923, 77.7; 1924, 76.5; 1925, 73.8; 1926, 73.2; 1927, 70.9; 1928, 69.3; 1929, 67.3; 1930, 65.5.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report Vol. 2, page 318), and bringing the figures down to 1930. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption as follows: 1923, 74.4; 1924, 72.2; 1925, 69.9; 1926, 68.7; 1927, 68.2; 1928, 66.7; 1929, 65.0. This index number is weighted according to consumption in each city. When the above index number, 1900-1929, is weighted according to population in each city covered for the years 1923-1929, the figures are substantially the same as those issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 128.9; 1928, 128.5; 1929, 128.0. Natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 166.9; 1928, 158.9; 1929, 159.1. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

Retail Prices

Beef prices, which ordinarily show some seasonal advance at this time, were again lower, sirloin steak being down from an average of 31.5 cents per pound in January to 31.2 cents in February; round steak from 26.5 cents per pound in January to 26.1 cents in February; and rib roast from 24.8 cents per pound in January to 24.4 cents in February. Somewhat lower prices were reported from most localities. Veal was down from an average of 22 cents per pound in January to 21.6 cents in February, while mutton was slightly higher at an average price of 27.2 cents per pound. Fresh pork was lower in most localities, averaging 25.2 cents per pound, as compared with 25.9 cents. Bacon declined from an average of 38.3 cents per pound in January to 37.1 cents in February. In fresh fish, cod steak, halibut and white fish were slightly lower. Lard was down from an average price of 20.8 cents per pound in January to 20.1 cents in February.

Eggs showed a substantial fall in all localities, fresh averaging 35.1 cents per dozen, as compared with 50.5 cents in January and 59.7 cents in February, 1930, and cooking averaging 27.4 cents per dozen in February, 40.1 cents in January and 51.8 cents in February, 1930. Milk was slightly lower at an average price of 12 cents per quart, declines being reported from Truro, Kingston, Oshawa, St. Catharines, London and Sudbury. Dairy butter was slightly lower at an average price of 33.5 cents per pound in February, but the price of creamery advanced from 37.3 cents per pound in January to 37.7 cents in February. Cheese was down from an average price of 29.2 cents per pound in January to 28.8 cents in February.

Bread fell from an average price of 6.6 cents per pound in January to 6.5 cents in February, lower prices being reported from Hull, St. Catharines, Owen Sound, Prince Albert, Lethbridge and Prince Rupert. Lower prices for flour were reported from most localities, the price in the average being 3.5 cents per pound, as compared with 3.7 cents in January. Rolled oats were also slightly lower at 5.1 cents per pound. Beans were down from an average price of 7.7 cents per pound in January to 7.1 cents in February. Potatoes were little changed at an average price of \$1.24 per ninety pounds. Prunes averaged lower in February at 12.2 cents per pound, as compared with 12.6 cents in January and 16.4 cents in February, 1930. Anthracite coal was unchanged at an average price of \$16.22 per ton. A slight decrease in rent was reported from Thetford Mines.

*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18%; Clothing, 18%; Sundries, 20%.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices, for the most part, averaged somewhat higher than in January. No. 1 Manitoba northern cash wheat, Port Arthur and Fort William basis, was 59.3 cents per bushel in February, as compared with 53.9 cents in January, the first advance in the average price since April, 1930. During the first half of the month prices rose steadily, due, it was said, to the unfavourable weather conditions in the winter wheat belt of the United States and in the Argentine, where harvesting operations were seriously hampered. Later in the month prices declined somewhat, due, in part, to an announcement of the United States Farm Board that a large part of their holdings was to be sold. Western barley was unchanged at an average price of 22.1 cents per bushel. Flax advanced from an average of 95.1 cents per bushel to 96.9 cents; oats from 26.2 cents per bushel to 27.7 cents; and rye from 27.1 cents per bushel to 28.6 cents. The price of American corn was down from 82.6 cents per bushel to 79.3 cents. Flour at Toronto was slightly higher at \$5.28 per barrel. Rolled oats advanced 10 cents per 90-pound bag to \$2.50. Raw sugar at New York declined from \$1.38 per hundred pounds to \$1.32, while granulated at Montreal was unchanged at \$4.56 per hundred pounds. The price of raw rubber was again down, reaching the lowest point on record at 7.1 cents per pound on February 24. The average price for the month was 7.7 cents per pound, as compared with 8.3 cents in January. Live stock prices, for the most part, were lower, steers at Toronto being down

from \$7.42 per hundred pounds to \$6.23, and at Winnipeg from \$6.11 per hundred pounds to \$5.59; veal calves at Toronto from \$10.82 per hundred pounds to \$9.60 and at Winnipeg from \$10.77 per hundred pounds to \$9.34; hogs at Toronto from \$10.19 per hundred pounds to \$8.63 and at Winnipeg from \$8.70 per hundred pounds to \$7.47; and lambs at Toronto from \$9.56 per hundred pounds to \$8.85, at Winnipeg from \$7.88 per hundred pounds to \$7.36, and at Montreal from \$8.29 per hundred pounds to \$8.15. In raw furs beaver skins were down from \$19.50-\$26 per skin to \$15.25-\$19, and red fox from \$12.38-\$18.75 per skin to \$10-\$15.25; while mink skins advanced from \$12.75-\$17.25 per skin to \$15.25-\$21. Muskrat skins showed little change at \$.92-\$1.01 per skin. Creamery butter at Montreal was slightly higher at 34.9 cents per pound. Fresh eggs at Montreal declined from 38.6 cents per dozen to 33.9 cents and at Toronto from 35.5 cents per dozen to 32.6 cents. Storage eggs at Montreal were down from 23.5 cents per dozen to 19.8 cents. Raw cotton at New York rose from 10.28 cents per pound to 10.96 cents. Raw silk, however, was lower at \$2.85 per pound. In lumber common cedar boards were down from \$14 per thousand board feet to \$12, and common fir timber from \$14 per thousand board feet to \$13. Scrap steel declined from \$9-\$10.50 per ton to \$8-\$9.50, and cast iron scrap was \$1 per ton lower at \$9. In non-ferrous metals electrolytic copper averaged slightly lower at \$11.49 per hundred pounds as compared with \$11.68 in January, while copper sheets were down from 25.9 cents per pound to 25.4 cents. Tin ingots advanced slightly to 28½ cents per pound. Silver was again lower at 26.7 cents per ounce as compared with 29½ cents in January.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. The latest table showing wholesale and retail prices index numbers for various countries appeared in "Prices in Canada and Other Countries, 1930," issued as a supplement to the LABOUR GAZETTE, January, 1931.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1924=100, was 64.3 for January, a fall of 1.8 per cent for the

month and of 18.4 per cent from January, 1930. With the exception of an increase of one per cent in coal, all groups were lower than for December, the greatest fall being one of 4.5 per cent in cereals.

The *Economist* index number on the base 1927=100, was 66.3 at the end of January, a fall of 3.5 per cent for the month, and of 23 per cent for the year. The decline during the month was general and extended to all of the five groups included, the largest decrease being one of 4.3 per cent in textiles.

The *Statist* index number, on the base 1867-1877=100, was 85.7 at the end of January, a fall of 1.4 per cent for the month. With the exception of a slight increase in animal foods,

all groups were lower than at the end of December. The following extract is from the *Statist*, February 14, 1931:—

“Over the past twelve months the fall in sterling wholesale prices has amounted to 19·6 per cent, while the increase in prices since June, 1914, has now been narrowed to 5·5 per cent. A better comparison between present and pre-war wholesale prices is, however, obtained by contrasting the latest figure with the average figure for 1913, which, unlike the figure for a single month of 1914, is not influenced by purely seasonal factors. The average figure for 1913 was 85, so that the latest figure is less than 1 per cent above the average for the pre-war year. It is interesting to note that the index number for the month of January, 1913, was 86·4, i.e., nearly 1 per cent above the figure last month. Sterling wholesale prices may thus be said to have reverted approximately to their pre-war level. The comparison of the various group index numbers with their 1913 equivalents is interesting. Vegetable foods last month were 1·3 per cent above the 1913 average; animal food prices, on the other hand, still showed an increase of 33 per cent over the pre-war level, while groceries were lower by 18·4 per cent than they were in 1913. Minerals were 6·5 per cent lower last month than in 1913, while the fall in textiles measures no less than 19·5 per cent. Sundry materials on the contrary are up by 8·5 per cent. Except in the case of meat prices in one direction and of grocery and textile prices in the other, the dispersion is not abnormal.”

COST OF LIVING.—The index number of the Ministry of Labour, on the base July, 1914=100, was 152 at the end of January, a fall of one point from the first of January. Food prices declined 1·4 per cent due to lower prices for eggs, bread and flour, butchers' meat, bacon and cheese; potatoes on the other hand advanced in prices. There was also a decline in clothing prices, while rent, fuel and light and sundries were unchanged.

Italy

WHOLESALE PRICES.—The index number of the Milan Chamber of Commerce, on the gold basis 1913=100, was 98·2 for January, a decline of 1·9 per cent for the month. All of the eight main groups contributed to the general decline, the largest decreases occurring in animal foods and construction materials.

COST OF LIVING.—The index number of the cost of living, Milan, on the base June, 1927=100, was 86·51 for December, a fall of 2·8 per cent for the month.

New Zealand

WHOLESALE PRICES.—The index number of the Census and Statistics Office, on the base 1909-1913=1000, was 1482 for December, showing no change from November. An increase in foodstuffs of vegetable origin was offset by declines in textile manufactures, wood and wood products, animal products and metals and their products.

COST OF LIVING.—The quarterly index number, on the base July, 1914=1000, was 1554 for November as compared with 1569 for August. All of the main groups showed declines except rent which was unchanged.

United States

WHOLESALE PRICES.—*Bradstreet's* index number, which is the sum total of the prices per pound of 96 articles of common consumption, was \$9·1690 at March 1, a decrease of 1·5 per cent for the month and of 18·3 per cent from March 1, 1930. This is the seventeenth consecutive monthly decline in this index number. As compared with the previous month, there were declines in breadstuffs, provisions, fruits, hides and leather; increases were noted in livestock, textiles, metals, oils, naval stores and miscellaneous commodities.

Dun's index number, which is based on the estimated *per capita* consumption of a year's supply of commodities was \$153·546 at March 1, a fall of 1·6 per cent for the month. All of the seven groups showed declines, the largest declines being in meat and breadstuffs.

COST OF LIVING.—The index number of the Department of Labour and Industries of Massachusetts, on the base 1913=100, was 148·6 for January, a fall of 0·9 per cent for the month, due to lower prices for food, clothing and sundries; shelter and fuel and light were unchanged.

According to an announcement published in *Izvestia*, January 21, reproduced in the *London Times*, January 23, the Secretariat of the Moscow Trade Union Council intimated that notwithstanding the official abolition of employment, “illegal unemployment” still existed, and many unemployed members of trade unions were still applying for unemployment relief. The Secretariat ordered the branches of trade unions near Moscow to round up these unemployed and send them to work, and to expel from the unions all those who refused to go where they were sent. The secretariat repeated its orders to its agents to cease to give unemployment relief.

FATAL INDUSTRIAL ACCIDENTS IN CANADA IN 1930

THE accompanying tables provide an analysis of the fatal accidents to work-people in Canada in the course of their employment during the calendar year 1930, according to causes, provinces and months, as well as by industries. Quarterly statements giving a list of the accidents occurring during the period covered and certain particulars as to each, appeared in the *LABOUR GAZETTE*, May, August and November, 1930, and February, 1931. The tables include such fatalities from industrial diseases as are listed with fatal accidents by workmen's compensation boards.

The record is compiled from reports from the following governmental authorities: the Board of Railway Commissioners; the Explosives Division of the Department of Mines, Ottawa; the Workmen's Compensation Boards of Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia; the Ontario Factory Inspector; the Ontario Railway and Municipal Board; and the British Columbia Department of Mines. Reports were also received from the correspondents of the *LABOUR GAZETTE*, resident in the principal industrial centres throughout Canada.

Industrial accidents reported in the press are also included in the record after inquiry has been made to avoid duplication. Most of the accidents in agriculture are recorded from press reports, and while it is not known to what extent the accidents in this industry are covered, it is believed that in this respect the record is fairly complete. On the whole, however, the information obtained from press reports is used merely to supplement information received from official sources.

Fatalities by Industries

The total number of fatalities recorded for the year was 1,607, the fatalities being attributed to the various industries in the following proportions: transportation and public utilities, 316, or 19.66 per cent of the total; construction, 312, or 19.42 per cent; mining, non-ferrous smelting and quarrying, 257, or 15.99 per cent; manufacturing, 189, or 11.76 per cent; logging, 168, or 10.45 per cent; agriculture, 121, or 7.53 per cent; service, 115, or 7.16 per cent; trade, 54, or 3.36 per cent; electric light and power, 40, or 2.49 per cent; and fishing and trapping, 35, or 2.18 per cent.

The tables also include summary figures for 1929, being a final revision of the figures published in the *LABOUR GAZETTE*, March, 1930, by the inclusion of accidents occurring in 1929

which were reported too late for incorporation into the annual statement. These accidents were shown in detail in the supplementary lists in the *LABOUR GAZETTE*, May, August and November, 1930, and February, 1931. The figures for 1930, being still incomplete, are accordingly to some extent not comparable with the completed figures for 1929.

In some industries where considerable changes in figures from year to year appear, these may be attributed to changes in industrial conditions or to particular occurrences; for example, in logging, and also in manufacturing, the decrease in the number of fatalities may be largely due to there being a reduction in the number of men engaged in these industries, more particularly during the latter part of 1930, while the increase in fatalities in the mining, non-ferrous smelting and quarrying group is explained by the fact that the 257 fatalities in 1930 include 46 coal miners who were trapped in a gas-filled shaft by a cave-in following an explosion and succumbed to asphyxiation at Blakeburn mine, British Columbia, on August 13. In the construction group there was an increase in fatal accidents from 298 to 312 which may be accounted for by the fact that there was one serious disaster in this group of industries in 1930, which occurred in the St. Lawrence river, near Brockville, Ontario, on June 26, and resulted in the loss of thirty of a government drill boat crew who were engaged in deepening the channel and were blasting a shoal off Cockburn Island. Drilling operations had been practically completed and the drilled holes had nearly all been loaded preparatory to putting off the blast, when a bolt of lightning during a severe electric storm struck the drill boat and apparently ran down the lead wires to the loaded holes, causing a terrific premature explosion of the charges therein. The drill boat which was lying alongside of the drilled and explosive loaded area was so shattered by the explosion that it sank immediately and thirty of the crew lost their lives.

Fatalities by Causes

The classification of fatal accidents according to causes shows that the largest number, 427, came under the category "by moving trains, vehicles, etc." This includes all accidents due to cars or engines, including mine and quarry cars, and to automobiles and other power vehicles and horse-drawn vehicles, as well as accidents caused by moving implements (both those impelled by power and those drawn by horses), by moving watercraft

and by aircraft. The largest number of accidents thus caused, 121, appear under the heading covering persons being struck or run over by, or crushed by or between cars and engines. 66 of these victims being engaged on steam railways. Also, 97 were caused by automobiles and other power vehicles and implements, 97 were in connection with watercraft (15 being in fishing and trapping and 37 in water transportation); 31 were due to derailments and collisions (20 in steam railways); 25 were caused by animal-drawn vehicles and implements (13 of which were in agriculture, accidents primarily caused by animals being classified elsewhere); 26 were caused by persons falling from or in cars or engines, 16 by mine and quarry cars; and 15 fatalities occurred in aircraft.

Next in order as a cause of fatalities came "falls of persons," 307 in number, including 120 falls into pits, shafts, harbours, rivers, etc. (some of which resulted in drowning), 77 falls from elevations, 28 due to collapse of support, 27 falls from loads, etc., 16 from ladders, 9

into holds of vessels, 9 due to falls on the level, 9 into tanks, vats, kilns, etc., 8 down stairs and inclines, and 4 due to falls on sharp objects.

"Dangerous substances" caused 305 fatalities, of which 78 were due to explosive substances, 72 to electric current, 54 to mine explosions from gas, coal dust, etc., 41 to hot and inflammable substances and flames, 33 to gas fumes, etc., 14 to steam escapes, boiler explosions, compressed air, and 13 to conflagrations.

Fatalities numbering 212 were caused by "falling objects," of which 73 were due to objects falling in mines and quarries, 67 to falling trees and limbs, 37 to objects falling from elevations, loads, piles, 19 to collapse of structures, 12 to breaking or loosening of straps, cables, etc., and 4 to other falling objects.

There were 60 fatalities caused by handling of heavy or sharp objects and 6 by the use of tools. Working machines caused 39, prime movers caused 59, and 11 were due to hoisting apparatus. There were 45 fatalities caused

by striking against or being struck by objects, of which 9 were due to striking against objects and 36 to being struck by objects. Animals caused 36 fatalities including 29 caused by horses.

The category "other causes" includes 108 fatalities, of which 4 were deaths following infection, 33 due to industrial diseases, strains, etc., 5 to drownings of which no particulars were available, 10 to shooting and violence, 32 to cave-ins, landslides, ice-jams, etc., 22 to lightning, frost, storms, sunstroke, and 2 accidents of which no particulars were available.

Fatalities by Provinces

The classification of fatal accidents according to provinces shows that the largest number, 574, occurred in Ontario. There were 357 in Quebec, 309 in British Columbia, 101 in Nova Scotia, 79 in Alberta, 70 in Manitoba, 62 in Saskatchewan, 48 in New Brunswick, 5 in Prince Edward Island, and 2 in the Yukon and Northwest Territories. In Ontario the largest proportion of fatalities occurred in the

construction group, where there were 137, with 113 in transportation and public utilities, 74 in manufacturing, 72 in mining, non-ferrous smelting and quarrying, 49 in service, 46 in agriculture, 45 in logging, 17 in trade, 13 in electric light and power and 8 in fishing and trapping. In Quebec, the largest number, 88, was also in the construction group, with 69 in transportation and public utilities, 65 in manufacturing, 44 in logging, 24 in mining, non-ferrous smelting and quarrying, 24 in service, 18 in trade, 15 in agriculture, and 10 in electric light and power. In Nova Scotia and Alberta there were respectively 29 and 17 mining fatalities, and no other industry suffered so many fatalities in Nova Scotia, while in Alberta there were 19 fatalities in transportation and public utilities. In Manitoba the largest number of accidents, 14, was in construction, while in Saskatchewan the greatest number, 21, was in agriculture. In British Columbia, there were 98 fatalities in mining, non-ferrous smelting and quarrying, 64 in logging, 51 in transportation and public utilities, and 34 in construction.

(a) These fatalities include accidents to fishermen and seamen outside Canadian waters and such accidents are assigned to the province in which the various ships were registered and exclude accidents to Canadian fishermen and seamen on boats registered in another country. For particulars of accidents, see quarterly statements in the Labour Gazette for May, August, November 1930 and February 1931. (b) Revised figures for 1929.

Accident Frequency in Certain Industries

The table of fatalities by months shows the highest point to have been in August, when there were 191, with 186 in June, the average per month being 133.92. The low point for the year, 77, was reached in December. This table gives estimates of the number of employees in certain industries, the latest figures available being given in each case. The frequency rate of fatalities for the industries for which estimates were available was highest in logging, being 4.22 per thousand persons employed during the year, and second for mining, non-ferrous smelting and quarrying, being 2.70 per thousand. Construction showed a frequency rate of 1.68 per thousand and manufacturing 0.30 per thousand. The total number of employees in the group transportation and public utilities, is not available; by sub-groups the frequency rates were: steam railways, 0.73; street and electric railways, 0.43; water transportation, 4.33; local transportation, 0.90; telegraphs and telephones, 0.37. In electric light and power the frequency rate was 2.52 and in trade, 0.17.

Similar figures for 1929 are given in the table. It should be noted that in making these calculations the number of employees by industries used is the same for 1930 as for 1929, no later figures being available. It is known from employment statistics that the numbers of employees decreased, particularly in the latter part of 1930, and if an allowance for this reduction were made the ratio of fatalities to numbers employed in 1930 would be somewhat higher than the figures given. As statistics are not available for making exact calculations in each case, the figures for 1930 are not comparable with those for 1929 except in a general way.

(a) Census of 1921. (b) Annual census of industry 1928. (c) Annual census of industry 1929. (d) Fishermen only 1929. (e) Revised figures for 1929.

Fatal and Non-Fatal Accidents in Canada Recorded by Provincial Workmen's Compensation Boards.

The Labour Department's records of industrial accidents include only fatal accidents and fatalities arising out of employment, that is from industrial diseases, etc. The only information of a comprehensive nature as to non-fatal accidents is from the records of Workmen's Compensation Boards in the various provinces, except that in manufacturing, mining and steam and electric railway operation accidents are dealt with by various governmental departments and commissions, and these are also covered by the Workmen's Compensation Boards.

The annual reports of the Workmen's Compensation Boards are reviewed from time to time in the LABOUR GAZETTE, information being given as to accidents, amounts paid in compensation, etc. The annual reports of the several provincial Workmen's Compensation Boards for 1929 were summarized in the following issues: Quebec, April, 1930, pp. 389-391; Ontario and Manitoba, May 1930, pp. 525-529; Nova Scotia, June, 1930, pp. 663-664; and British Columbia, Alberta and New Brunswick, September, 1930, pp. 1033-1037.

None of the provincial Boards have jurisdiction over all industries so that the accidents recorded are those in certain industries only. Most of the Boards deal with accidents in logging, mining, manufacturing, construction,

transportation and public utilities, excluding agriculture, trapping, finance, domestic service, etc., but including to some extent fishing, trade, and governmental service.

The accompanying table summarizes the figures as to fatal and non-fatal accidents recorded by the several Provincial Workmen's Compensation Boards for 1928, 1929 and 1930. The figures not yet published by the Boards in their annual reports have been secured as far as available. It may be observed that the Department of Labour figures show 1,677 fatal industrial accidents as occurring during the year 1928, while the total number of fatal accidents which were included by the provincial Workmen's Compensation Boards for that year was 757, this figure including Quebec figures for four months only with none for Saskatchewan or Prince Edward Island. This difference is largely accounted for by the fact that the provincial Boards do not include accidents in all industries. In addition, however, the Boards' records include only accidents to employees, while the Labour Department's records include accidents to all persons when occupied in industry, including employers and workmen carrying on their own business, and there are many such, particularly in trucking, trade, etc., as well as in agriculture.

(a) Accidents requiring medical treatment but not causing disability for a sufficient period to qualify for other compensation; the period varies in the several provinces; figures not reported by some Boards.
 (b) Quebec, from Sept. 1, 1928.
 (c) Figures not yet tabulated; only total number reported to Board given.
 (d) Saskatchewan, from July 1, 1930.
 (e) The province of New Brunswick Board reports 1,037 minor accidents in 1928 and 1,774 in 1929, involving no compensation or medical aid.

IMMIGRATION TO CANADA DURING THE NINE MONTHS ENDED DECEMBER 31, 1930

THE accompanying tables, supplied by the Department of Immigration and Colonization, show the nature and extent of immigration into Canada during the nine months ended December 31, 1930. Out of a total of \$2,901 immigrants 26,473 were British, 21,070 were from the United States, 13,236 were of Northern European races, and 22,122 were of other races. April last year was the month of heaviest total immigration, although the largest groups from Great Britain and the United States arrived in May. The number of Canadians who returned from the United States to Canada during the nine months' period was 26,414. Of the immigrants coming from the United States the largest group was from the State of Michigan, the State of New York being next in order, followed by Massachusetts and Washington. Statistics of immigration to Canada during the fiscal year ended March 31, 1930, appeared in the LABOUR GAZETTE, May, 1930, page 610.

The United States Bureau of Labour Statistics has received building permit reports from 295 identical cities of the United States having a population of 25,000 or over for the months of December, 1930, and January, 1931. According to permits issued during January, 1931, the estimated cost of total building was \$98,678,521, a reduction of 22.4 per cent as compared with the total building for which permits were issued during December, 1930. Residential building decreased 18.2 per cent in estimated cost, comparing permits in these two months, and new non-residential building decreased 32.5 per cent. According to permits issued during January, 1931, 8,081 dwelling units were provided in new residential buildings, a decrease of 13.1 per cent as compared with the number of families provided for in the residences for which permits were issued during December, 1930. Comparing permits issued in January, 1931, with those issued in January, 1930, there was a decrease in the estimated cost of all building of 13.7 per cent. Permits issued for residential building show an increase of 1.9 per cent in estimated cost, comparing January, 1931, with January, 1930. However, estimated cost of new non-residential buildings decreased 29.5 per cent.

The Minimum Wage Board of Quebec intimated recently that proceedings would be taken against six employers who after repeated warnings from the Board continued to evade the minimum wage orders. The Women's Minimum Wage Act provides that employers who fail to comply with the orders may be fined up to \$50 for each offence.

Immigration to the United States During Second Half of 1930

The Bureau of Immigration of the United States Department of Labour reports that during the six months, July to December, 1930, a total of 187,345 aliens were admitted and 167,000 deported, resulting in an increase to the alien population of the country of 20,245 as compared with 104,050 for the corresponding months a year ago.

From July to December last, 75,521 immigrant aliens were admitted from all countries. This is a decrease of 61,449 or 44.9 per cent, from the 136,970 immigrants entering in the same period of 1929. European immigration dropped from 78,099 to 48,269, or 38.2 per cent, and Canadian immigration from 39,684 to 17,521, or 55.8 per cent. The statistics show a continued decline of arrivals from Mexico. While the number of immigrants admitted from that country dropped 68.4 per cent during the fiscal year ending last June as compared with the preceding fiscal year or from 40,154 to 12,703, there was a further decline in the following five months of 73.9 per cent or from 7,638 to 1,996, and in December last the decrease amounted to 71.5 per cent, as compared with the corresponding periods a year ago.

About two-thirds of the European immigrants came from Italy, Germany, Great Britain, and the Irish Free State, these countries contributing 8,686, 8,735, 7,768, and 5,781 respectively, during the half-year ending December 31, 1930. In the same period of the previous year, 12,839 immigrants came from Italy, 13,802 from Germany, 15,511 from Great Britain, and 9,713 from the Irish Free State. Of the 6,439 immigrants admitted during the month of December last, 4,550 came from Europe, 974 from Canada, 271 from Mexico,

245 from Asia, and 399 from other countries.

Less than one-half of the present day arrivals are newcomers for permanent residence in the United States. Of the 187,345 aliens admitted from July to December last, about 40 per cent or 75,521 were immigrants, the remaining 111,824 being classed as non-immigrants. The six largest groups under the Immigration Act of 1924 included 60,595 aliens who entered as residents of the United States after a visit abroad, 44,528 were quota immigrants, 32,165 came in as visitors for business or pleasure, 16,679 as natives of non-quota countries, 11,313 as husbands, wives, and unmarried children of American citizens, and 16,362 were in continuous transit through the country. With the exceptions of the aliens in transit, a less number of these principal classes arrived than during the same period of the previous year. The largest decreases were for natives of non-quota countries, 26,202 or 61 per cent; for quota immigrants, 26,563 or 37 per cent; and for husbands, wives, and children of citizens, 8,500 or 43 per cent.

Aliens deported from the United States under warrant proceedings for various causes under the immigration laws numbered 8,508 for the six months ended December 31, 1930. This is an increase of 2,851 and 199, respectively, over the 5,657 and 8,309 for the corresponding months of 1928 and 1929. Mexico was the destination of nearly one-half of the aliens deported from July to December last, 4,217 going to that country, while the next largest number of 2,523 went to Europe, principally to Great Britain, Germany, and Italy; 1,145 were sent to Canada, 345 to China and other Asia, and 278 to other countries.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Employer Must Provide Safe Working Place

A young employee in a sawmill sustained serious injuries, when the machinery started to run again after a temporary halt, his hand becoming involved. The accident was attributed partly to the carelessness of the young man, who was carrying on "practical joking" at the time, and partly to the neglect of the employer in not having provided sheaths for the gears at the place where the employee was required to work. The employer became subject to penalties under section 4 of the Industrial Establishments Act (Revised Statutes of Quebec, 1925, chapter 182), which provides that "the industrial establishments mentioned

in Section 3 (i. e. all manufactories, works, workshops, work-yards, and mills of every kind and their dependencies) shall be built and kept in such manner as to secure the safety of all employed in them; and, in those which contain mechanical apparatus, the machinery, mechanism, gearing, tools and engines shall be so placed and kept as to afford every possible security for the employees."

The amount of damages, however, was reduced owing to the contributory negligence of the workman, being fixed at \$1,962. This award by the Superior Court (Beauce) was later affirmed by the Court of King's Bench.

Blais versus Roy, Rapports Judiciaires de Québec (Cour du Banc du Roi), 1931, page 164.

Master Liable for Accident Caused by Truckdriver when off Route

A farmer in British Columbia employed his son as truckdriver to deliver milk and return with the empty cans. On one occasion the truckdriver having delivered his load proceeded home by an indirect route, making various stops, and picking up a friend. While off his regular route the truck struck a woman who was crossing the road, causing her injuries which resulted in the loss of one leg and serious injury to the other. On an action for damages brought jointly by the woman and her husband against the farmer and his son, the British Columbia Supreme Court found that the cause of the accident was "the inexcusable negligence of the driver of the truck in failing to take the precautions which a reasonably prudent driver would have taken under the circumstances." The Court assessed the damages at \$15,000, but reduced this amount as the woman was in some degree at fault.

"The really difficult question in the case, however," the judgment stated, "is whether or not the driver of the truck was at the time of the accident, acting within the scope of his employment. If he was on his way home with his truck full of empty cans then he was doing what he was employed to do and was acting within the scope of his employment. The fact that he had deviated from the direct route did not relieve the employer of his liability."

The judgment cited previous decisions in similar cases. "In *Whatman versus Pearson* the driver of a horse and cart, in direct contravention of orders, went home about a quarter of a mile out of the direct line of his work to his dinner and left his horse unattended on the street before his door. The horse ran away and the employer of the driver was held liable for the damage caused to a third person. In *Merritt v. Hepenstal* a tradesman's teamster sent out to deliver parcels went to his supper at his own home before completing the delivery. He afterwards started to finish his work and in so doing ran over and injured a child who was held entitled to recover from the employer. As has been stated time and time again in these cases every case must depend upon its own circumstances. It is my opinion under the circumstances of this case the driver must be held to have been at the time of the accident acting within the scope of his employment and his employer is therefore liable.

"The husband of the plaintiff sues for special damages which already amount in medical and hospital fees to some \$2,000. His wife is still in a wheel chair and he and his

seven children are deprived entirely of her services and he will be put to unascertainable expense. I think I am well within reason in placing his damages at \$3,000. In the result the plaintiff G. Battistoni recovers \$3,000 and the plaintiff L. Battistoni four-fifths of her damages, viz., \$12,000."

Battistoni versus Thomas (British Columbia), 1931, 1 *Dominion Law Reports*, page 559,

Contractor has no Preferential Claim in Bankruptcy

Further action was taken in the Appellate Division, Ontario Supreme Court, by the trustee in bankruptcy, in an appeal from the order by Mr. Justice Raney, noted in the *LABOUR GAZETTE*, December, 1930, page 1475, which declared that the respondent in the case, a truckdriver furnishing his own truck for certain work, was entitled under the Bankruptcy Act, in virtue of his work as a servant, to priority in the settlement of claims against the estate of his bankrupt employer. Section 121 of this Act gives a preference to "all wages, salaries, commissions or compensation of any clerk, servant, travelling salesman, labourer or workman in respect of services rendered to the bankrupt or assignor during three months before the date of the receiving order or assignment. . . ."

The Appeal Court declared that "to the extent only to which the remuneration payable by the bankrupt consists of compensation to the respondent for his service as the operator of the truck, he is entitled to the preference provided by s. 121 (3) of the Bankruptcy Act, but not for rental of the truck; and, unless the parties agree on the proper apportionment, the question is to be referred to the Registrar to ascertain the proper apportionment, having regard to the foregoing declaration."

Re Sexton (Ontario), 1931, *Dominion Law Reports*, vol. 1, page 657.

Sunday Theatre Performances Unlawful under English Statute

The Court of Appeals at London, on January 27, upheld a decision of the Court of King's Bench which declared theatre performances to be unlawful under the provisions of the Lord's Day Act of 1781. The appeal was taken by the London County Council. Moving picture exhibitions have been carried on every Sunday in England for many years, notwithstanding their prohibition by the Act of the reign of George III, but theatre owners have made a practice of handing over to charitable institutions a portion of their receipts on that day. A bill to legalize Sunday performances is now before the British Parliament.

CONSTITUTIONAL VALIDITY OF DOMINION LEGISLATION RESPECTING COMBINES

Text of Judgment of Judicial Committee of Privy Council on Combines Investigation Act and Section 498 of Criminal Code

PRIVY COUNCIL APPEAL NO. 118 OF 1929

*The Proprietary Articles Trade Association and others, Appellants, versus The Attorney
General of Canada and others, Respondents, from the Supreme Court of Canada*

Judgment of the Lords of the Judicial Committee of the Privy Council, delivered
January 29, 1931

Present at the Hearing: Lord Blanesburgh, Lord Merivale, Lord Atkin, Lord Russell
of Killowen, Lord Macmillan.

(Delivered by Lord Atkin)

This is an appeal from the Supreme Court of Canada on a reference by the Governor in Council under Section 55 of the Supreme Court Act. The questions submitted to the Court were:

- (a) Is the Combines Investigation Act, R.S.C. 1927, c. 26, *ultra vires* the Parliament of Canada either in whole or in part, and, if so, in what particular or particulars or to what extent?
- (b) Is Section 498 of the Criminal Code *ultra vires* the Parliament of Canada, and, if so, in what particular or particulars or to what extent?

The Supreme Court answered both questions in the negative. The appellants are The Proprietary Articles Trade Association, who had been found by a commission appointed under the Combines Investigation Act to have been party to a combine as defined in the Act, and had been admitted to be heard on the reference under Section 55, Subsection 4, of the Supreme Court Act. The other appellants are the Attorney General for the Province of Quebec and the Attorney General for the Province of Ontario. The reference involved important questions of constitutional law within the Dominion, and their Lordships have had the assistance of full and able argument in which all the numerous relevant authorities were brought to their notice. After careful consideration of the arguments and the authorities their Lordships are of opinion that the decision of the Supreme Court is right.

In determining judicially the distribution of legislative powers between the Dominion and the Provinces made by the two famous Sections 91 and 92 of the British North America Act two principles have to be observed. First, the accepted canon of construction as to the general effect of the sections must be maintained. This is that the general powers of legislation for the peace, order and good government of Canada are committed to the Dominion Parliament, though they are subject to the exclusive powers of legislation committed to the provincial legislatures and enumerated in Section 92. But the provincial powers are themselves qualified in respect of the classes of subjects enumerated in Section 91, as particular instances of the general powers assigned to the Dominion. Any matter coming within any of those particular classes of subjects is not to be deemed to come within the classes of matters assigned to the provincial legislatures. This almost reproduces the express words of the sections, and this rule is well settled.

The second principle to be observed judicially was expressed by the Board in 1881, "it will be wise to decide each case which arises as best they can without entering more largely upon an interpretation of the statute than is necessary for the decision of the particular question in hand." *Citizens' Assurance Company v. Parsons*, 7 App. Cas. at p. 109. It was restated in 1914: "The structure of Sections 91 and 92 and the degree to which the connotation of the expressions used overlap render it in their Lordship's opinion unwise on this or any other occasion to attempt exhaustive definitions of the meaning and scope of these expressions. Such definitions, in the case of language used under the conditions in which a constitution such as that under consideration was framed, must almost certainly miscarry." *John Deere Plow Company v. Wharton*, (1915) A.C. 330 at p. 338. The object is as far as possible to prevent too rigid declarations of the Courts from interfering with such elasticity as is given in the written constitution.

With these two principles in mind the present task must be approached.

The claim of the Dominion is that the Combines Act and Section 498 of the Criminal Code can be supported as falling within two of the enumerated classes in Section 91, viz., (2) The Regulation of Trade and Commerce, and (27) The Criminal Law except the Constitution of Courts of Criminal Jurisdiction but including the Procedure in Criminal Matters. Reliance is also placed on (3) The Raising of Money by any Mode or System of Taxation, (22) Patents of Invention and Discovery and on the general power of legislating for Peace, Order and Good Government. The appellants, on the other hand, say that the Act and the section of the Code violate the exclusive right of the Provinces under Section 92 to make laws as to (13) Property and Civil Rights in the Province, and (14) The Administration of Justice in the Province.

Both the Act and the section have a legislative history, which is relevant to the discussion. Their Lordships entertain no doubt that time alone will not validate an Act which when challenged is found to be *ultra vires*: nor will a history of a gradual series of advances till this boundary is finally crossed avail to protect the ultimate encroachment. But one of the questions to be considered is always whether in substance the legislation falls within an enumerated class of subject, or whether on the contrary in the guise of an enumerated class it is an encroachment on an excluded class. On this issue the legislative history may have evidential value.

The history of the Act and the section of the code so far as it has been laid before their Lordships is as follows: In 1888 a select committee of the House of Commons of Canada reported upon the existence of combinations in manufactures, trade and insurance in Canada, and that legislative action would be justified for suppressing the evils resulting from these and similar combinations and monopolies. In 1889 Parliament passed an Act for the prevention and suppression of combinations formed in restraint of trade (52 V, c. 41), which made it a misdemeanour punishable with fine or imprisonment to be a party to a combination as defined in the Act, for this purpose sufficiently described as in restraint of trade. One may complete the history of the section by recording that in 1892 the material section of the Act of 1889 was placed in the Criminal Code as Section 520. In 1899 the wording of the definition was varied by omitting in certain phrases the words "unduly" and "unreasonably": but in 1900 the words were restored, and the section has since stood in the Criminal Code in the form then enacted and now forms Section 498 of the Criminal Code (R.S.C. 1927, c. 36), which is the section attacked.

To revert to the Act, in 1897 by Section 18 of the Customs Tariff Act of that year the Governor in Council was authorized to empower any judge to hold an inquiry as to whether with regard to any article of commerce there existed any combination to unduly enhance (the split infinitives are throughout the work of the legislature) the price of such article or otherwise to unduly promote the advantage of the producers at the expense of the consumers. The judge was empowered to compel the attendance of witnesses, and the production of documents. Upon his report the Governor in Council was empowered to reduce or withdraw any customs duty which facilitated such a combination. The powers conferred by this section appear to be the germ from which have sprung the more elaborate powers conferred by more recent Acts. In 1904, by the Inland Revenue Amendment Act (4 Ed. VII, c. 17), the Minister of Inland Revenue was empowered to withdraw from a manufacturer any excise licence in case of a sale or consignment by him of goods under restrictive conditions as there defined. In 1907, by the Customs Tariff Act of that year, the power of the Governor in Council to appoint a judge to inquire into the existence of combinations was enlarged: and his power to deal with any customs duty facilitating such combination was extended to cases where the existence of a combination appeared as a result of a judgment of any of the courts. In 1910 the Combines Investigation Act (9 and 10 Ed VII, c. 9) was passed. It made more elaborate provision for an investigation into the existence of trade combinations and provided additional remedies. It contained a definition of "combine" in very general terms. An investigation was to be ordered by a judge on application by persons interested. When ordered the investigation was to be held by a board of three commissioners appointed *ad hoc*, who were armed with large powers of obtaining evidence. Their report was to be published. If any person was reported to have been guilty of doing the acts already prohibited in Section 520 of the Criminal Code and continued so to offend after the report, he was to be guilty of an indictable offence and liable to a penalty not exceeding \$1,000 a day for each day the

offence continued. The Governor in Council's power to reduce or withdraw customs duty was reaffirmed: and if a patent was used so as to unduly assist a combination it was made liable to revocation.

In 1919 were passed two Acts of some importance in this history, inasmuch as they have both been held by this Board to have been *ultra vires* the Dominion Parliament. The first is the Board of Commerce Act (9 & 10 Geo. V, c. 37). Under this Act, a permanent board of three commissioners was set up which was to be a court of record. The Board might sit anywhere in Canada, and either in public or *in camera*. Its duties were to have charge of the general administration of the contemporaneous Act, the Combines and Fair Prices Act of 1919 (which is the second Act above referred to), and to investigate or make orders as it might be empowered by either Act, or from time to time by the special direction of the Governor in Council. It had power to make future, contingent or conditional orders, either final or interim: and its orders could be enforced by being made a rule of court, either of the Court of Exchequer or any superior provincial court. Any order might be reviewed and varied or rescinded by the Governor in Council: and there were provisions by which questions of jurisdiction and questions of law could be brought by way of appeal before the Supreme Court of Canada. Large powers of securing the attendance of witnesses and the production of documents were given to the Board.

The second Act of 1919, above referred to, is the Combines and Fair Prices Act (9 & 10 G. V, c. 45), with the administration of which the Board of Commerce, as above constituted, was specially charged. The Act was divided into two parts, Combines and Fair Prices. A combine was defined as having only reference to such combines as thereafter defined as had, in the opinion of the Board of Commerce, operated, or were likely to operate "to the detriment of or against the interest of the public, consumers, producers, or others," and subject to such qualification was defined in terms which appear to be substantially wider than those in the Act of 1910, or in the Criminal Code, and include fixing a common price, or enhancing the price or cost of articles and lessening competition within any particular district, or generally, in production, sale or supply. The first part, dealing with combines, empowered the Board to restrain and prohibit the formation and operation of combines. For this purpose, the Board, of its own initiative, or a commissioner, on application, could order an investigation into the existence of a combine. The Board itself held the necessary inquiry, and if of opinion that a combine existed could order the person or persons complained of to desist from the acts forming part of the operations of the combine. Disobedience constituted an indictable offence and exposed the party guilty to a penalty not exceeding \$1,000 a day. Whenever, in the opinion of the Board, such an offence had been committed, the Board had power to remit the record to the Attorney General of the province where it had been committed with a recommendation to prosecute, but no prosecution was to be commenced for such an offence or under Section 498 of the Code without the written authority of the Board. The powers of the Governor in Council to reduce customs duties and the power of the court to revoke patents in cases of combines were re-enacted. The second part, dealing with fair prices, was restricted to the control of necessaries of life defined in the Act as staple and ordinary articles of food, clothing and fuel, including the material of which they might in part be manufactured, and such other articles as the Board might prescribe. In respect of such articles, no person was to accumulate or withhold from sale any amount in excess of what was necessary for the consumption of his household or the ordinary purposes of his business: and any excess was to be offered for sale at prices not higher than were reasonable or just. The Board were directed to inquire into and restrain and prohibit any breach of the Act, or the making of unfair profits on necessaries of life. An unfair profit was to be deemed to be made when the Board declared that it had been made. Elaborate powers of inquiry, and of ordering statistical returns, were entrusted to the Board. The Board might make declarations as to the guilt of any person concerned, and might order or prohibit the doing or omission of any act connected with the offence. Disobedience to such orders was an indictable offence, subject to a continuing penalty not exceeding \$1,000 a day, or to imprisonment for a term not exceeding two years. Similar provisions to those in Part I were enacted as to prosecutions.

Their Lordships have dealt at some length with the provisions of the Acts of 1919, inasmuch as the appellants relied strongly on the judgment of the Board, in *re The Board of Commerce Act, 1919*, reported in (1922) 1 A.C. 191, which held both Acts to be *ultra*

vires.* Unless there are material distinctions between those Acts and the present, it is plainly the duty of this Board to follow the previous decision. It is necessary therefore to contrast the provisions of the Acts of 1919 with the provisions of the Act now in dispute. The judgment above referred to was given in November, 1921, and on June 13, 1923, there was passed the Combines Investigation Act, 1923 (13 & 14 G. V, c. 9), which repealed the two Acts of 1919 and enacted provisions which were substantially those of the present Act. The Act of 1923 was revised in 1927 and appears substantially in the original form in the revised Act—the Combines Investigation Act (R.S.C., 1927, c. 26). By this Act “combines” are defined as combines “which have operated or are likely to operate to the detriment or against the interest of the public, whether consumers, producers or others,” and which “are mergers, trusts or monopolies so-called or result from the acquisition by any person of any control over the business of any other person or result from any agreement which has the effect of limiting facilities for production, manufacture or transport or of fixing a common price, or enhancing the price of articles or of preventing or lessening competition in or substantially controlling production or manufacture, or otherwise restraining or injuring trade or commerce.” By the Act the Governor in Council may name a Minister of the Crown to be charged with the administration of the Act, and must appoint a Registrar of the Combines Investigation Act. The Registrar is charged with the duty to inquire whether a combine exists, whenever an application is made for that purpose by six persons supported by evidence, or whenever he has reason to believe that a combine exists, or whenever he is directed by the Minister so to inquire. Provision is made for holding further inquiry by commissioners appointed from time to time; and the Registrar and a commissioner are armed with large powers of examining books and papers, demanding returns, and summoning witnesses. The proceedings are to take place in private unless the Minister directs that they should be public. The Registrar is to report the result of any inquiry to the Minister, and every commissioner is to report to the Registrar who is to transmit the report to the Minister. Any report of a commissioner is to be made public unless the commissioner reports that public interest requires publication to be withheld, in which case the Minister has a discretion as to publicity.

By Section 32 “every one is guilty of an indictable offence and liable to a penalty not exceeding ten thousand dollars or to two years’ imprisonment, or if a corporation to a penalty not exceeding twenty-five thousand dollars, who is a party or privy to or knowingly assists in the formation or operation of a combine within the meaning of this Act. (2) No prosecution for any offence under this section shall be commenced otherwise than at the instance of the Solicitor General of Canada or of the Attorney General of a province.” By subsequent sections, refusal to obey orders as to discovery and other interference with an investigation are made offences for the most part subject to summary conviction and appropriate penalties are imposed.

Under a group of sections, 29-31, entitled “Remedies,” powers are given as in previous Acts for the Governor in Council to reduce customs duties, and for the Exchequer Court to revoke licences where the duties are used to facilitate a combine or when the holder of a patent uses it so as unduly to limit the manufacture, or enhance the price of any article. Power is given to the Minister to remit to the Attorney General of a province any returns made in pursuance of the Act or any report of the Registrar, or any commissioner; and, if no action is taken thereon by the Attorney General of the province, the Solicitor General (representing the Dominion) may take the appropriate action.

In their Lordships’ opinion Section 498 of the Criminal Code and the greater part of the provisions of the Combines Investigation Act fall within the power of the Dominion Parliament to legislate as to matters falling within the class of subjects, “the Criminal Law including the Procedure in Criminal Matters” (Section 91, 27). The substance of the Act is by Section 2 to define, and by Section 32 to make criminal, combines which the legislature in the public interest intends to prohibit. The definition is wide, and may cover activities which have not hereto been considered to be criminal. But only those combines are affected “which have operated or are likely to operate to the detriment or against the interest of the public, whether consumers, producers, or others”; and if Parliament genuinely determines that commercial activities which can be so described are to be suppressed in the public interest, their Lordships see no reason why Parliament should not make them crimes. “Criminal law” means “the criminal law in its widest sense”

* LABOUR GAZETTE, December, 1921, page 1508.

(*Attorney General for Ontario v. Hamilton Street Railway* (1903), A.C. 524). It certainly is not confined to what was criminal by the law of England or of any province in 1867. The power must extend to legislation to make new crimes. Criminal law connotes only the quality of such acts or omissions as are prohibited under appropriate penal provisions by authority of the State. The criminal quality of an act cannot be discerned by intuition; nor can it be discovered by reference to any standard but one: Is the act prohibited with penal consequences? Morality and criminality are far from co-extensive; nor is the sphere of criminality necessarily part of a more extensive field covered by morality—unless the moral code necessarily disapproves all acts prohibited by the State, in which case the argument moves in a circle. It appears to their Lordships to be of little value to seek to confine crimes to a category of acts which by their very nature belong to the domain of "criminal jurisprudence"; for the domain of criminal jurisprudence can only be ascertained by examining what acts at any particular periods are declared by the State to be crimes, and the only common nature they will be found to possess is that they are prohibited by the State and that those who commit them are punished. Their Lordships agree with the view expressed in the judgment of Newcombe, J., that the passage in the judgment of the Board in the *Board of Commerce* case to which allusion has been made was not intended as a definition. In that case their Lordships appear to have been contrasting two matters—one obviously within the line, the other obviously outside it. For this purpose it was clearly legitimate to point to matters which are such serious breaches of any accepted code of morality as to be obviously crimes when they are prohibited under penalties. The contrast is with matters which are merely attempts to interfere with provincial rights, and are sought to be justified under the head of "criminal law" colourably and merely in aid of what is in substance an encroachment. The Board considered that the Combines and Fair Prices Act of 1919 came within the latter class, and was in substance an encroachment on the exclusive power of the Provinces to legislate on property and civil rights. The judgment of the Board arose in respect of an order under Part II of the Act. Their Lordships pointed out five respects in which the Act was subject to criticism. It empowered the Board of Commerce to prohibit accumulations in the case of non-traders; to compel surplus articles to be sold at prices fixed by the Board; to regulate profits; to exercise their powers over articles produced for his own use by the householder himself; to inquire into individual cases without applying any principles of general application. None of these powers exists in the provisions now under discussion. There is a general definition, and a general condemnation; and if penal consequences follow they can only follow from the determination by existing courts of an issue of fact defined in express words by the statute. The greater part of the statute is occupied in setting up and directing machinery for making preliminary inquiries whether the alleged offence has been committed. It is noteworthy that no penal consequences follow directly from a report of either commissioner or Registrar that a combine exists. It is not even made evidence. The offender, if he is to be punished, must be tried on indictment, and the offence proved in due course of law. Penal consequences, no doubt, follow the breach of orders made for the discovery of evidence; but if the main object be *intra vires* the enforcement of orders genuinely authorized and genuinely made to secure that object are not open to attack.

It is, however, not enough for Parliament to rely solely on the powers to legislate as to the Criminal Law for support of the whole Act. The remedies given under Sections 29 and 30 reducing customs duty and revoking patents, having no necessary connection with the Criminal Law, must be justified on other grounds. Their Lordships have no doubt that they can both be supported as being reasonably ancillary to the powers given respectively under 91 (3) and affirmed by S. 122, the Raising of Money by any Mode or System of Taxation, and under 91 (22), Patents of Invention and Discovery. It is unfortunately beyond dispute that in a country where a general protective tariff exists persons may be found to take advantage of the protection, and within its walls form combinations that may work to the public disadvantage. It is an elementary point of self-preservation that the legislature which creates the protection should arm the executive with powers of withdrawing or relaxing the protection if abused. The same reasoning applies to grants of monopolies under any system of patents.

The view that their Lordships have expressed makes it unnecessary to discuss the further ground upon which the legislation has been supported by reference to the power to legislate under 91 (2) for "The Regulation of Trade and Commerce." Their Lordships

merely propose to dissociate themselves from the construction suggested in argument of a passage in the judgment in the *Board of Commerce* case under which it was contended that the power to regulate trade and commerce could only be invoked in furtherance of a general power which Parliament possessed independently of it. No such restriction is properly to be inferred from that judgment. The words of the statute must receive their proper construction where they stand as giving an independent authority to Parliament over the particular subject matter. But following the second principle noticed in the beginning of this judgment their Lordships in the present case forbear from defining the extent of that authority. They desire, however, to guard themselves from being supposed to lay down that the present legislation could not be supported on that ground.

If then the legislation in question is authorized under one or other of the heads specifically enumerated in Section 91, it is not to the purpose to say that it affects property and civil rights in the provinces. Most of the specific subjects in Section 91 do affect property and civil rights, but so far as the legislation of Parliament in pith and substance is operating within the enumerated powers there is constitutional authority to interfere with property and civil rights. The same principle would apply to 92 (14), the Administration of Justice in the Province, even if the legislation did, as in the present case it does not, in any way interfere with the administration of justice. Nor is there any ground for suggesting that the Dominion may not employ its own executive officers for the purpose of carrying out legislation which is within its constitutional authority, as it does regularly in the case of revenue officials and other matters which need not be enumerated.

Their Lordships are of opinion that the Supreme Court of Canada were right in answering both questions in the negative, and that this appeal should be dismissed, and they will humbly advise His Majesty accordingly.

VOLUME 31]

APRIL, 1931

[NUMBER 4

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

LARGELY owing to seasonal curtailment in the outdoor industries, employment in Canada at the beginning of March showed a decrease, according to returns received by the Dominion Bureau of Statistics from 7,452 employers of labour, each with a minimum of fifteen employees, and representing all industries except agriculture, fishing, hunting and highly specialized business. The working forces of these firms aggregated 901,585 persons, as compared with 906,813 in the preceding month. This reduction caused the index number (based on the 1926 average as 100) to decline from 100.7 on February 1, to 100.2 at the beginning of March, as compared with 110.2, 111.4, 102.6, 97.5, 92.6, 88.1, 91.8, 91.0, 82.9 and 89.1 on March 1, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

At the beginning of March, 1931, the unemployment percentage reported to the Department of Labour by local trade unions throughout Canada was 15.6, in contrast with 16.0 per cent of idleness at the beginning of February, 1931, and with 11.5 per cent at the beginning of March, 1930. The percentage for March was based on the reports tabulated by the Department of Labour from 1,832 labour organizations, covering a membership of 202,669 persons.

Reports received by the Department of Labour from the offices of the Employment Service of Canada showed a small increase over the previous month in the average daily placements effected. The total placements for the period, however, were somewhat less, due to the fewer number of working days. A marked increase was recorded over the business transacted during February a year ago. Vacancies in February, 1931, numbered 51,809, applications 73,240 and placements in regular and casual employment 50,874.

The average cost of a weekly family budget of twenty-nine staple foods was \$9.14 at the beginning of March, as compared with \$9.44 for February; \$11.67 for March, 1930; \$11.23 for March, 1929; \$10.92 for March, 1928; \$11.05 for March, 1927; \$11.46 for March, 1926; \$10.74 for March, 1925; \$10.58 for

March, 1924; \$10.79 for March, 1923; \$10.54 for March, 1922; \$13.23 for March, 1921; \$16.92 for June, 1920 (the peak); \$12.66 for March, 1918; and \$7.68 for March, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1926 as 100 was again lower at 75.1 for March, as compared with 76 for February; 91.9 for March, 1930; 95.6 for March, 1929; 97.7 for March, 1928; 97.3 for March, 1927; and 101.3 for March, 1926.

The loss in working time caused by industrial disputes in Canada during March was much greater than in the preceding month owing to a strike in the clothing industry at Toronto, and was also, for the same reason, greater than the corresponding loss in March last year. Four disputes were in progress at some time during the month, involving 1,815 workers and resulting in the loss of 25,969 working days. Corresponding figures for February, 1931, were:—eight disputes, 1,966 workers and 9,505 working days; and for March, 1930, four disputes, 1,598 workers, and 7,049 working days.

Old Age Pensions Act in Nova Scotia

The legislature of Nova Scotia has passed an Old Age Pensions Act, enabling the Province to participate in the benefits of the Dominion Act. The bill, which was introduced by the premier, the Hon. G. S. Harrington, empowers the Governor in Council to enter into an agreement with the Federal Government in reference to the payment of pensions to aged persons under the conditions laid down in the Dominion Old Age Pensions Act.

World Congress on Social Economic Planning

A "World Congress on Social Economic Planning" will be held next August at Amsterdam under the auspices of the International Industrial Relations Association (I.R.I.), with headquarters at the Hague, Holland. (A brief report on a previous conference, dealing with "Rational Organization and Industrial Relations" was given in the LABOUR GAZETTE, May, 1930, page 546.)

It is hoped that delegates will attend representing management, labour, and the social sciences in all nations. The call for the congress, which is being issued jointly from the main office of the I.R.I. at the Hague from the office of the Vice-President in the United States, at the Russell Sage Foundation Building in New York City, declares as follows:—

"In a world of enlarged economic resources, employment is insecure and standards of living have not been raised or maintained in proportion to the increase in production. Mal-adjustment exists between economic capacity and buying power. In the present stage of economic life the task of achieving balance seems to demand international economic co-operation. Development of means of transport and communication is day by day establishing unity as the coming stage of economic evolution. Some regions of the world remain largely self-sufficient. Others are more closely interdependent. But interdependence is rapidly taking the place of self-sufficiency. Nations and industries, however, are not fully conscious of this growth towards unity, and their policies are still largely shaped towards self-sufficiency as an objective, often to the detriment of human welfare. The rapid growth of interdependence which is making all nations suffer together provides at the same time an unprecedented occasion for all nations and all groups to act together towards a solution. If one group imposes its limited interest upon another, if output be unreasonably restricted by labour, if prices be held artificially high by monopolistic business, or if they be forced too low by destructive competition, if governments limit the contribution of their national areas towards the world's economic life, balance is disturbed for all. The I.R.I. invites the participation in this Congress, of all who, either from study or experience, have a contribution to make or who seek to share in a growing awareness of the unity of economic life. It offers its platform to leaders of business and labour, economists, management engineers and representatives of governmental activities to seek for a sound basis of co-operative, constructive effort towards a planned development of productive capacity and standards of living."

Among the subjects to be discussed at the conference are: The present paradox—unemployment in the midst of economic progress; the world's productive capacity; national economic planning; the co-operative movement; the international bank—its relation to planned production; international economic planning—standard of living; the experience of the electrical industry in the United States and Canada in building human relations for labour's participation, etc.

Western Municipalities recommend unemployment insurance

The City Council of Brandon, Manitoba, recently adopted a resolution requesting the Federal Government to establish a system of unemployment insurance that would provide for a proper standard of living. The

resolution sets forth that the present methods of relieving the distress of the unemployed and needy are out-of-date and socially detrimental, and penalize the thrifty; that municipalities which meet the needs of the unemployed attract the needy from other cities; that the burden is often borne by the workers in the form of shorter work-days and loss in pay; that municipalities are on the verge of bankruptcy through expenditures on relief; that relief works are already practically exhausted; and that the causes of depression are beyond the control of municipalities. A similar resolution was adopted later by the city council of Edmonton, Alberta, and by other municipalities in Western Canada.

Pension system for building trades in New York

The New York Building Congress is planning an extension to the entire building industry of the system of old age pensions and insurance that has been in effect in the electrical industry since 1929 (LABOUR GAZETTE, November, 1929, page 1223). The Building Congress is an organization composed of labour representatives, employers and architects.

The insurance system in the electrical industry was established under the joint auspices of the International Brotherhood of Electrical Workers and the Electrical Contractors' Association. The employers undertook to pay to the Board of Insurance Trustees of the Electrical Industry, which controls the system, 20 cents per hour for every member of the union in their employment in Greater New York and on Long Island. The plan went into operation on April 1, 1930. According to a report lately published by the Board, on December 1, 1930, 43 retired workers were receiving pensions of \$40 per month and 23 disabled workers were receiving compensation of \$30 per month. Twenty-six workers died during the eight months and in every case the \$3,000 policy was paid. Cash reserves had accumulated until the board had \$65,868.57 on deposit in New York banks and legal securities worth \$300,000 in its vaults. When the reserve reaches \$1,100,000 the 20-cent per hour payment will be cut to 17½ cents, a reduction of 12½ per cent.

The Board points out that at the beginning there was considerable scepticism on the part of many workers, as well as some employers, as to the practicability of the plan. Some of the employers are said to have regarded it as too simple; to members of the union it seemed too good to be true. "As time goes on, however," the report continues, "the em-

ployer has seen that the plan is working. He has also noticed a changed attitude on the part of the workers, who now feel that the employers are interested in their welfare, their future and the security of the members of their families. The scepticism of the worker has disappeared. He knows of older members of his union, unable to work and nearing life's sunset, being made comfortable and free from worry, and he also knows of the death of some fellow-worker and the \$3,000 check promptly delivered to his dependants."

Pittsburgh plan for unemployment relief

The Pittsburgh plan for unemployment and relief funds is described in the current number of the *Monthly Labour Review*

which states that a fund is being raised in Allegheny County, to be administered by a group of industrialists, economists and bankers, who will organize themselves into an employing agency. To raise this fund all employers of labour are asked to contribute an amount equal to one average day's pay roll in 1929. This should amount to more than a million dollars. When this fund is exhausted a second levy will be made and, if need be, others. All capable unemployed shall apply for work through this agency, giving their full records in detail, and information as to their dependants and needs. These applications will be filed according to trades and rated according to necessity. Then city and county governments having work to do, but which are unable to do it because of lack of funds, will submit a formal application to this central bureau for certain types of employees and from such lists work will be provided. Semi-public enterprises, such as schools, churches, hospitals, playgrounds, etc., may draw the necessary labour next in order of importance.

The 3,000 employers backing this plan may make application for certain types of labour not provided for in their 1931 budget and these requests will be given to a separate committee, which will decide the importance of the work that is applied for and the rate of pay, and will allot the order in which such work should be performed. In this way, city and country work, industrial improvements, clean-ups, paint-ups, etc., can be put into motion at once. Industry will receive a return for its contribution to the unemployment situation. Every regular Pittsburgh employee will be assured work at the rates prevailing in their respective crafts. No breakdown of wage scales is contemplated. The money thus put into circulation will tend to bring about a recurrence of normal conditions.

Changing immigration conditions in Canada.

Immigration figures up to the end of 1930 were given in the last issue of the *LABOUR GAZETTE*, page 374, and in previous issues.

Fuller statistics on this subject have appeared more recently in the report of the Department of Immigration and Colonization for the fiscal year ended March 31, 1930. The report refers to the changing conditions in Canada and the consequent lessening in the demand for immigrant labour. These changes continue from year to year especially in the direction of the displacement of labour by labour-saving machinery. Harvester excursions from eastern to western Canada, which have been an annual feature of the western harvest for many years, have now practically ceased. The explanation of this is due to two facts, first, the growth of centres of population in Western Canada from which harvest help can be drawn, and second, the introduction of the harvester-combine and other agricultural power machinery. It is estimated that during the past three or four years the number of harvester-combines brought into use, has been sufficient to displace more than 30,000 harvesters. (This subject is dealt with in an article on another page of this issue.)

As the year closes, the report states, it becomes increasingly evident that Canada will not require so large an immigration of labourers as have come in during the past few years, and steps have already been taken to curtail the movement of that class from Europe and also to ensure that the labourers brought in during 1930 will come as far as possible in the early spring months.

A movement not included in the regular immigration figures is that of Canadians returning to this country. Information on this subject was collected and tabulated first in the fiscal year 1924-25. The movement year by year, since April 1, 1924, is shown in a table in the report. It includes only those Canadian citizens who left Canada to reside in the United States and who on returning to Canada declared their intention of resuming their residence in Canada. Those who left Canada on visits have not been included in this summary. The total number of returning Canadians in the fiscal year 1924-25 was 43,775; 1925-26, 47,221; 1926-27, 56,957; 1927-28, 39,887; 1928-29, 33,798; 1929-30, 29,830; 1930-31 (eleven months), 28,729. Of these returning Canadians the great majority were Canadian-born citizens, the remainder being British subjects with Canadian domicile or alien-born people who secured naturalization in Canada.

The Minister of Labour in a speech before the Senate on March 18, referred to this movement as follows:—

"About one million Canadians who had gone to the United States during the previous decade, finding themselves out of employment because of the natural desire of the American employer to give the preference to American nationals, began drifting home. When Parliament last September voted \$20,000,000 to create employment opportunities in Canada, many Canadians outside the boundaries of this country felt that their opportunities of getting something to do, in order to provide for their dependants, were better in Canada than elsewhere; consequently a substantial number returned. This aggravated the Government's difficulty in coping with the unemployment situation."

Social effects of economic depression in North America.

The "social effects of the economic depression in North America" are discussed in the March issue of the *International Labour Review* (Geneva) by Mr.

H. B. Butler, deputy director of the International Labour Office. In this article Mr. Butler summarizes the impressions he received during his visit last year to Canada and the United States (*LABOUR GAZETTE*, November, 1930, page 1301). He considers that "it is certain that both countries, with their vast resources, their solid foundations and their vigorous spirit, will overcome their present difficulties and go forward with fresh energy. But in all probability their future development and their treatment of social problems will be considerably influenced by the experiences of the present crisis. In particular, the restriction of immigration, which is already being applied, is likely to persist for some years owing to the reduced demand for labour in both industry and agriculture as the result of mechanisation. This may retard the expansion of their home markets, upon whose rapid growth their economic development has so largely depended during the past two generations. It may also have considerable effects on Europe, if an outlet for its surplus population is no longer available. From whatever angle the future is regarded, the conclusion seems irresistible that its prosperity, whether for Europe or for America, will largely be conditioned by the success with which international adjustments are effected, not only in the domains of finance, commerce and social standards, but also in the field of politics. All these spheres of activity are closely bound together, not only nationally but internation-

ally. Because that fact is being gradually, though as yet dimly, realized, the League and the International Labour Organization have come to play an increasingly important role as providing the machinery for international discussion and for the elaboration of international solutions of the world's difficulties."

The problem of a permanent cure for unemployment.

Addressing the Senate on March 18, the Hon. G. D. Robertson, Minister of Labour, described the efforts of the Government since it took office last August to relieve the suffering due to unemployment in Canada. He referred to unemployment as "the darkest shadow that hangs over the head of the wage earner in any country," and proceeded as follows:—

"So it would appear to me highly desirable that all governments should give more attention to trying to find a permanent solution of the problem than has been given to it by governments in years gone by. Many economists, many great teachers and preachers, many labour leaders, are in these days turning their minds to this problem; and the Government already has done a little, it hopes, to help in reaching a solution of the difficulties in the days that lie ahead. It is not easy to devise a policy for the relief of unemployment, or to create an unemployment insurance scheme or anything of that sort as a panacea or cure, because Parliament or the Government, like the physician, must ascertain the primary causes before it can intelligently apply a remedy. The Government has acted upon the suggestion made last summer, that, inasmuch as 1931 is the decennial census year, provision ought to be made for taking a census of all the unemployed in Canada and ascertaining their former employment, their sex, their age, the length of time they have been out of work, and a number of other relevant facts, so that when the census is completed there will be concrete and reliable information to assist the Government authorities, and the economists who are doing research work, to form accurate conclusions as to what can be done towards discovering something to effect a permanent cure."

Unemployment measures in United States. Of the three bills introduced by Senator Wagner in the United States Senate dealing with unemployment and the stabilization of industry (*LABOUR GAZETTE*, March, 1930, page 257), the third, to provide advance planning against unemployment was passed by both House and

Senate at the recent session, but was vetoed by President Hoover. This measure was intended to organize the American labour market through a system of federal grants to states co-operating in a nation-wide system of free employment offices. An appropriation of \$1,500,000 for the first year and four million dollars a year for three succeeding years was to be authorized. Under the bill the staff of the United States Employment Services would be civil service employees; provision was also made for federal and state advisory councils of employers, employees and technical experts to discuss unemployment problems.

The first of Senator Wagner's bills, adopted last spring, will make possible more adequate information on labour trends in the United States, particularly technological unemployment. The second, enacted earlier in this session, requires advance planning and scheduling of public works to "take up the slacks" in private enterprise. A substitute for the third bill (that vetoed by the President) was brought forward late in February by the new secretary of labour, the Hon. W. N. Doak. It discarded the co-operative state system of public employment services provided by the Wagner bill and eliminated federal aid.

The Associated Contractors of America recently issued a statement on the provisions of the act for the advance planning and regulation of public construction, which declared that the act had "placed in the hands of the President of the United States a sure means of maintaining general business stability in the future; with a six-year advance plan of public construction laid down in detail, as required by the new law, several billion dollars worth of business will always be in reserve to be thrown into the breach as needed when business begins to lag."

Work of the St. John Ambulance Association.

The annual report for 1930, presented at the recent 21st annual meeting of the Canadian Branch of the St. John Ambulance Association, shows that the teaching of first-aid is making greater progress than ever in Canada and is becoming generally recognized as a necessity in industry both to employer and worker. A total of 19,748 proficiency certificates and awards were made during the year, this figure being 39 per cent ahead of 1929, until now the best year since the war, and 23 per cent ahead of 1915, previously the record year. In the last five years the work of the Association has more than doubled, and the number of persons who have

qualified in first aid during the past twenty-one years has now reached 200,813.

The report calls attention to the remarkable fact that the work of the Association has been able to progress so favourably in a time of marked general depression. "In considering the cause for this, the most probable seems to be that everywhere employers in industry have been obliged to do all they can to reduce costs, amongst which the cost of accidents looms large. First Aid lessens these costs, firstly by reducing the number of accidents, for experience everywhere proves the First Aider to be a safer workman, and secondly by minimizing the results of such accidents as occur, by reasons of the first aid administered." Special mention is made in the report of the excellent First Aid work carried on by the two Railway Companies and by the Bell Telephone Company, the Royal Canadian Mounted Police, the Northern Electric Company, and the Department of National Defence Centre. New First Aid Centres have been organized also by the Steel Company of Canada and Canadian Industries Limited.

Workmen's Compensation inquiry in Alberta.

On March 18 the Legislature of Alberta unanimously adopted a motion proposed by the premier, the Hon. J. E. Brownlee, "that the whole subject of workmen's compensation and the Workmen's Compensation Act be referred to a Special Committee during the recess with a view to making recommendations at the next session of the Legislature on this subject, said Committee to be appointed by the Government and to consist of five representative employers, five representatives of employees, and five members of the Legislative Assembly, and further, that the Committee may be summoned from time to time during the interim following the present session and any expense involved in connection with the work of the Committee shall be paid by the Province."

Compensation for accidental hernia

An article on accidental hernias and their compensation, by Dr. E. St. Jacques, was published in the *Canadian Medical Association Journal*, May, 1930. The writer recommends that terms should be used in a strict sense so as to differentiate between traumatic hernias, i.e. those resulting from direct blows, and those developing under stress of work. Factors determining the diagnosis of an accidental hernia should be (a) sudden intense pain forcing cessation of work; (b) appearance

of a lump not before apparent; (c) local tenderness on examination. Exceptional hernias of partially accidental character should not be regarded as entirely the result of recent injury.

Compensation for hernias, in Dr. St. Jacques' opinion, should be awarded on the following basis:—

In accidental hernia, an injured worker who accepts operation should merit free treatment, or full pay from the date of the injury until ten weeks from the date of the operation, plus 5 per cent partial permanent disability compensation, and he should be allowed fifteen days in which to make his decision. A healthy worker who refuses operation should be allowed 10 per cent partial permanent disability compensation. A worker unfit for operative treatment should be allowed 15 per cent partial permanent disability compensation.

In aggravated hernia it is considered that a worker who accepts operation should be awarded free treatment, or full pay from the date of the injury until ten weeks from the date of the operation; and fifteen days should be allowed him to decide. A worker whose health precludes operation should be granted 5 per cent partial permanent disability compensation for the aggravation of the pre-existing disability. A healthy worker who refuses operation is stated to merit no compensation whatever.

Canadian compensation system favoured for Great Britain.

The type of workmen's compensation prevailing in Canada, with a central accident fund, compulsory insurance by employers, and merit rating, as its characteristic features, is strongly

recommended for adoption in England, in an article in the current issue of the *Political Quarterly* (London) by William A. Robson. The writer shows that the British compensation system, begun in 1897 and further developed in 1906, makes provision only for financial support for the injured man and his dependants, and that this financial provision has come to be looked upon as the sole function of workmen's compensation. It is further shown that the absence of any inducement to employers to provide safer conditions of work has resulted in an increase in the number and seriousness of industrial accidents: there is "a strong *prima facie* case for concluding that British industry has become more dangerous in recent years to the workers who are engaged in it; that the burden of mutilation and disease, of suffering and disfigurement, of total incapacity and partial disablement imposed by the toll of non-fatal accidents, shows

a real increase during the past quarter of a century, and particularly during the last ten years."

In Mr. Robson's opinion, this unfavourable accident record points to the failure of the whole scheme. "The first criterion of any scheme of compensation," he says, "must be the effect it produces on the community in terms of human suffering. Industrial accident means death and misery, mutilation and disease; and no system of compensation which merely provides money payments for loss of earning power, without at the same time stimulating effort to prevent the occurrence of accidents, can be regarded as satisfactory."

Another charge made by the writer against the existing system is its wastefulness: "The total amount spent by all the employers in Great Britain on workmen's compensation amounted to the formidable sum of £12,000,000. It would appear that less than half this large sum goes as actual compensation to injured workmen or their dependants. A very large share indeed is wasted in payments for commission to insurance agents, the expenses of management, the profits of insurance companies, legal proceedings and medical expenses incurred in connection with the settlement of claims."

A system of merit rating, such as is provided under workmen's compensation on this continent, when it is based on a thorough analysis of tangible hazards, has been proved to be a valuable means of promoting industrial safety. "It can be definitely stated," Mr. Robson states, in this connection, "that any scheme of insurance rating which brings the employers the results of wide experience and offers them definite rewards for the removal of specific hazards will accomplish much for the prevention of industrial accidents."

The late Mr. J. Alexander Killingsworth.

The Department of Labour heard with regret of the death, on March 15, of Mr. J. Alexander Killingsworth, who had been a faithful correspondent of the *LABOUR GAZETTE* at St. Thomas, Ontario, since 1905. Mr. Killingsworth had a wide knowledge of labour questions, particularly those in connection with railways. Early in life he entered the service of the Michigan Central Railway, and spent a number of years with that company as a locomotive fireman and later as an engineer. He left the railroad to join the editorial staff of the *St. Thomas Journal*. After a few years of newspaper work he was appointed manager of the St. Thomas street railway. From that position he went to the Père Marquette Rail-

way as chief clerk at St. Thomas, and continued in that position until he was appointed as customs officer at St. Thomas. He remained in the service of the Department of National Revenue until his illness became serious nearly a year ago.

Mr. Killingsworth was known by a wide circle as "the Railwaymen's Poet," having published three volumes of verse.

**The Women's
Bureau of
United States
Department
of Labour.**

A pamphlet describing the origin and work of the Women's Bureau has been published by the U.S. Department of Labour (Bulletin No. 84, Women's Bureau Series). The employment conditions of women and children were investigated in 1907-9, and this inquiry led to a public demand for the establishment of a special organization to deal with the special problems of working women. But it was not until the United States entered the world war in 1917 that the movement had positive results. The "Woman in Industry Service" was one of several war services created in the Department of Labour in 1918. Miss Mary van Kleeck, head of the department of industrial studies of the Russell Sage Foundation, was chosen to direct the work, and Miss Mary Anderson, field organizer for the National Women's Trade Union League, was appointed assistant director. The most important achievement of the "Woman in Industry Service" during the war was to draw up standards to regulate the employment of women. After the war, the Woman in Industry Service was continued through 1919, its title being changed to Women's Bureau, and in June, 1920, it was made permanent by act of Congress. Upon the resignation of Miss van Kleeck in 1919, Miss Anderson was appointed director and she has been reappointed by each succeeding administration. Co-operation with State departments of labour always has constituted an important feature in the bureau's activities. In many instances the States are not equipped for work that the bureau's authority and experience enable it to accomplish, and in turn the States can be of the greatest assistance in various bureau projects. In addition to reports of wages, hours, and working conditions in 20 States and a number of specific industries, the Bureau's publications include studies of occupation distribution, accidents, fluctuation in employment, family responsibilities, legislation, and a variety of other subjects—a total of eighty-odd bulletins, and more than 7,100 pages in 12 years. In all the studies it undertakes the Bureau has the co-

operation of employers, workers, State officials, and other agencies in possession of information essential to the surveys.

The extent of the Bureau's field of work, and the problems awaiting solution, are stated in the Bulletin as follows: "The Bureau of the Census has estimated from its 1930 returns that the number of employed women in the United States is about 10,000,000. With the number of women workers constantly growing, with the striking increase of married-women wage earners, with the share of women in family support and economic responsibility assuming greater proportions, with acute problems of employment and unemployment piling up as a result of the present machine age, and with the development of more industries and new processes giving rise to new hazards and additional strain for women workers, the task of the Women's Bureau each year becomes more extensive and complicated. It is the purpose of the Bureau to collect, correlate, and make available for reference, a mass of information that shall be accepted by employers, employees, health authorities, women's organizations—in fact, all interested persons—in their combined efforts to have the working conditions and employment relations of American women the best in the world."

During March a total of 3,987 accidents were reported to the Ontario Workmen's Compensation Board in the industries in Schedule 1 of the Act, 22 of which were fatal cases; in Schedule 2 industries 326 were reported, including 5 fatal cases; and 210 Crown, 2 of which were fatal, were reported during the month, making in all 4,523, of which 29 were fatal.

The City Council of Saskatoon, Saskatchewan, decided in March that all contracts let by the city for the supply of gravel must include a provision stipulating that the wages paid are not to be less than 45 cents an hour. Deductions may be made when meals and lodgings are provided. Another condition is that only residents of the city are to be employed.

Thirty-seven State Departments of Education in the United States have recently appointed representatives to co-operate with the National Vocational Guidance Association in promoting guidance activities, for most of these the responsibility lies chiefly with the rural and small-town schools. Nine State departments have already begun guidance programs, most of them within the last two years.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

Employment

THE employment situation at the end of March was reported by Superintendents of the Employment Service of Canada to be as follows:

There was little activity in farming in the Province of Nova Scotia, but in the fishing industry, preparations were being made for heavy catches, especially of lobster. While logging operations were drawing to a close and men returning from the camps, portable saw mills worked to capacity. All coal mines at Stellarton operated six days a week and a large amount of coal was hoisted and shipped, but at other centres, mines worked part-time only. Manufacturers of confectionery and food stuffs reported trade good, while wood-working factories also were well employed. Improvement was likewise recorded for the iron and steel industries. Building construction, on the whole, was very favourable and tradesmen well occupied. Municipal street and sewer work was also proceeding rapidly. Transportation continued dull, except at Sydney, where both freight and passenger traffic were heavy. Trade, wholesale and retail, was good and collections fair. An increased demand for women domestic workers was recorded, with a number of placements made.

Farmers in the Province of New Brunswick were busily engaged in early Spring work, but fishing had been poor, owing to unfavourable ice conditions. Logging was quiet. Business was fair in pulp and paper manufactures, confectionery and food stuffs, but machine shops, foundry and boiler works at Saint John were quiet. Foundry work at Chatham, however, was good, with large orders coming in for marine work. Other lines of manufacturing were normal. Building construction was proceeding satisfactorily and steady progress was reported on buildings under contract. Passenger and freight traffic on railways was fair. Trade was good. There was the usual demand for casual workers in the women's domestic section and placements made accordingly.

No perceptible change took place in farm orders in the Province of Quebec, though requests for spring help were beginning to come in. Little activity was shown in logging, outside of a few calls for river drivers. Mining recorded slightly better conditions. In manufacturing, glass, boots, shoes, textile, printing trades and clothing, with the exception of factories in Montreal and Quebec, showed

slight improvement, but no increase was shown in rubber manufacturing establishments. Quebec City stated leather factories were active, but furs quiet. In Sherbrooke, the general situation in manufactures was satisfactory. Orders had been received at Hull for all classes of building tradesmen, but in the remaining cities of the province, the demand had not been heavy. Large numbers of men, at Montreal, had been employed by the city for cleaning of streets and construction work. Transportation, as well as trade, was quiet. In the women's domestic section an increase was reported in the placing of workers.

Low wages, coupled with somewhat colder weather in some parts of Ontario, retarded the demand for farm workers. Closing of logging camps and a delay in commencing the spring drives prevented the placing of men in that industry. From Cobalt and Sudbury came reports of a few men being sent out to the mines, but at Timmins, there prevailed the usual surplus of workers looking for that type of employment. Manufacturing manifested better conditions, for skilled mechanics were in demand at Toronto, and factories in Pembroke operated on full time. Textile plants showed improvement in Kitchener and Guelph. At Timmins, paper mills were working steadily but there was no sign of resumption of activity in that line in Sault Ste. Marie. Iron and steel in that district, however, were continuously improving, whereas, at Hamilton, the increased activity of previous weeks had not been sustained. The season's building program was barely begun and as winter relief works were being curtailed and gangs reduced, many men were left without any prospect of immediate employment. Although experienced cooks general were still in demand in the women's domestic section, other placement work in farm and household service was satisfactory, there being increased calls for help, especially for day workers.

Conditions in the agricultural group in the Province of Manitoba showed continued improvement, as there was a growing demand for all classes of farm labourers. On the other hand, no activity was noticeable in logging and a number of men, returning from the camps, were seeking other work. Mining also was quiet, but a slight improvement in the volume of manufacturing was reported generally. In the city of Winnipeg, building permits for the present season had passed the million dollar mark and preparations for many extensive projects were progressing rapidly.

At Brandon, contemplated work on the Kemnay subway was expected to start shortly at an estimated cost of \$150,000. At Dauphin, however, little or no construction was under way. Trade, both wholesale and retail, was fair. In the women's domestic section little

change was shown, the demands being principally for city and farm housekeepers for whom few vacancies were available.

There was a slight improvement registered in farm placements in the Province of Saskatchewan, but cold and unsettled weather

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA
(Official Statistics except where noted)

(9) Sugar production given in periods of four weeks.

helped to account for the present inactivity in the group, as compared with more active conditions of a year ago. As the logging season drew to a close, many men returned to the city from the various camps. Coal mines of the smaller order recorded better business, but the large mines were practically closed for the season. Little construction work was in progress, aside from that provided by the various municipalities for the relief of the unemployed. Slight change was shown in the number of women domestic workers required, the supply of applicants being in excess of the demand.

The severe cold weather experienced throughout the West retarded farm operations in the Province of Alberta, but enquiries were increasing, and there was evidence that a fair number of farm hands would be required, when it was again possible to work on the land. Outside of a few odd men sent out, there was no demand for help in the logging industry. Coal mining was also quiet, with only the smaller mines in operation and men working, in some instances, only one day a week. Manufacturing showed no improvement, with one large packing plant making a further reduction in staff and contemplating a second cut in wages. Cold weather also handicapped building construction, neither was there much activity shown in railroad construction, but it was expected better conditions would prevail shortly. Relief work, though on a decreasing scale, was still available in the larger cities. Wholesale trade was slow, while retail trade showed a slight gain. Little activity was reported in the women's domestic section, with applicants greatly in excess of vacancies.

There was little demand for general farm hands in the Province of British Columbia, but fruit growers had done a fair amount of tree spraying and in the Oliver district over 20,000 young fruit trees had been planted. Logging was quiet and few placements were made in this group. Coal mines, for the most part, had closed down and those in operation were working part-time only, while metal mining showed little change. The outlook in manufacturing still continued unfavourable, with shingle mills closed and other industries, including machine shops and foundries, operating on short time. Sash and door factories and fertilizing plants, only, were busy. Building construction was mainly confined to small jobs and repair work, with relief work still in progress to provide assistance for the large majority of men, who, otherwise, would be wholly unemployed. Rail-

road construction was progressing favourably at Penticton and Kamloops, with an increased demand for road gangs reported at Revelstoke. Ship and longshore work, both at Prince Rupert and Vancouver, was quiet and few men found employment at the dry docks and shipyards. Trade was fair, with collections slow. Conditions in the women's domestic section showed no improvement, with a large number of applicants on the waiting list. Throughout the province, quietness prevailed in nearly all industrial groups.

Largely owing to seasonal losses in the out-of-door industries, there was a decline in employment at the beginning of March, according to monthly statements furnished to the Dominion Bureau of Statistics by 7,452 of the larger employers of labour throughout Canada. The working forces of these firms aggregated 901,585 persons, as compared with 906,813 in the preceding month. This decrease caused the index number (based on the average for 1926 as 100), to decline from 100.7 on February 1, to 100.2 at the beginning of March, as compared with 110.2, 111.4, 102.6, 97.5, 92.6, 88.1, 91.8, 91.0, 82.9 and 89.1 on March 1, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

The trend was downward in the Maritime and Prairie Provinces and Ontario; in British Columbia, practically no change was indicated, while improvement was noted in Quebec. In the Maritime Provinces, the largest losses were in construction, but manufactures, logging, communications and transportation were also slacker. In Quebec, important increases took place in manufacturing, particularly in the iron and steel, textile and leather groups, and construction was also more active. On the other hand, logging showed heavy seasonal declines and services and trade were also dull. In Ontario, iron and steel and textiles recorded considerable recovery; mining and services were also more active, while construction, logging and trade were seasonally slack. In the Prairie Provinces, mining, transportation, construction and trade reported reduced activity. In British Columbia, manufacturing showed contractions and mining was also slacker, while construction afforded more employment.

Activity declined in Hamilton and Windsor and the adjacent Border Cities, while the trend was favourable in Montreal, Quebec City, Toronto, Ottawa and Winnipeg; in Vancouver, practically no change was indicated. In Montreal, there were additions to staffs, chiefly in manufacturing and construc-

EMPLOYERS' REPORTS

tion. In Quebec, manufacturing afforded more employment, but construction was not so brisk, while other industries reported only small general changes. In Toronto, the iron and steel, textile and service groups showed increased activity, but there was a considerable decrease in printing and publishing, construction and trade. In Ottawa, improvement was indicated, chiefly in construction, while trade was not so brisk. In Hamilton, there was a downward tendency in most groups, but the losses were generally small. In the Border Cities, a slight decline was reported, mainly in manufactures and construction. In Winnipeg, the increase was largely in construction and manufacturing, while trade was seasonally slacker. In Vancouver, manufactures recorded small gains, but trade showed seasonal curtailment.

A review of the returns by industries shows improvement in manufactures, notably in iron and steel, leather and textile factories. On the other hand, logging, construction, mining, transportation, communications and trade showed seasonal curtailment.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of March, 1931.

TRADE UNION REPORTS The trend of employment among local trade unions at the close of February continued upward, though the change from January was very slight. This was indicated by the returns tabulated for February from an aggregate of 1,832 labour organizations with 202,669 members, 15.6 per cent of whom were idle on the last day of the month, in contrast with 16.0 per cent in January. Unemployment, however, remained at a somewhat higher level than in February last year when 11.5 per cent of the members reported were without work. Slight improvement in conditions from January was reported by New Brunswick, Ontario, Nova Scotia, Quebec and British Columbia unions, the gains in employment in the last three provinces named being less than one per cent. Alberta unions, on the other hand, indicated a moderate drop in the volume of work afforded, and in Manitoba and Saskatchewan nominal declines in activity were shown. The percentages of unemployment in all provinces exceeded those registered during February, 1930, Ontario unions showing the greatest increase in slackness.

A more detailed article on unemployment among local trade unions at the close of February is printed elsewhere in this issue.

EMPLOYMENT OFFICE REPORTS During the month of February, 1931, the offices of the Employment Service of Canada made 52,293 references of persons to vacancies, and effected a total of 50,874 placements, of which 11,188 were in regular employment and 39,686 in casual work. Of the placements in regular employment, 8,304 were of men and 2,884 of women. Applications for work were received from 73,240 workers, of whom 63,479 were men and 9,761 women, while employers notified the Service of opportunities for 44,798 men and 7,011 women, a total of 51,809 vacancies. A decline was shown in the business transacted when the above figures were compared with those of the preceding month, but a substantial increase was indicated when a comparison was made with the corresponding month of last year, the reports for January, 1931, showing 55,185 vacancies offered, 86,044 applications made and 53,972 placements effected, while in February, 1930, there were recorded 23,175 vacancies, 36,223 applications for work and 22,073 placements in regular and casual employment. A report in detail of the work of the offices for the month of February, 1931, will be found elsewhere in this issue.

BUILDING PERMITS AND CONTRACTS AWARDED According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities during February, 1931, was \$5,929,587 as compared with \$7,510,745 in the preceding month and with \$8,919,078 in February, 1930.

The *MacLean Building Review* states that construction contracts awarded throughout Canada during March, 1931, amounted to \$27,311,800. This was an increase of 5.3 per cent over the awards for February and a 12.6 per cent increase above the total for March, 1930. Of the total amount, \$10,080,300 was for business buildings; \$9,993,800 was for engineering purposes; \$5,568,700 was for residential buildings and \$1,669,000 was for industrial purposes. The apportionment of the contracts awarded during March, by provinces, was as follows: Ontario, \$14,842,900; Quebec, \$8,068,300; British Columbia, \$2,127,200; Alberta, \$629,000; Nova Scotia, \$548,400; Saskatchewan, \$446,400; Manitoba, \$324,300; New Brunswick, \$320,300; Prince Edward Island, \$5,000.

Production and Trade

INDUSTRIAL PRODUCTION Figures showing the volume of production in certain industries during recent months and also in the corresponding months last year, are shown in the table on page 393.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, states that business operations in Canada, after adjustment for seasonal tendencies, showed a gain in February over the level of the first month of the year. Irregularity was in evidence in some directions, but the broad tendency was toward greater activity. One of the chief elements in the improved outlook was the gain in the operations of the primary iron and steel industry. The production of iron and steel registered marked gains, the output of steel ingots being 82,637 tons compared with 57,598 in January. The 9,871 cars and trucks produced in February represented a gain of 10 per cent after seasonal adjustment. The imports of crude rubber and petroleum indicated preparations for increased operations by the tire and oil industries. The sharp gain in the exports of lumber was an omen of revival of demand in external markets. The greater activities of the meat packing industry were indicated by important gains in inspected slaughtering. The imports of raw cotton were reduced to moderate proportions in February, while the output of the newsprint industry showed further contraction. The flour milling industry is also operating at a low proportion of capacity in the current period. The official index of manufacturing production was 128.7 in February compared with 124 in the preceding month, a gain of more than 3 per cent.

At the beginning of the present crop year, on July 31, 1930, the estimated carryover of wheat in Canada was 112 million bushels and the final estimate of the 1930 crop was 398 million bushels, making a total amount in Canada of 510 million bushels. Deducting 110 million bushels as an allowance for seed, home consumption and unmerchantable grain, it is calculated that 400 million bushels were then available for export—about 100 million bushels more than at the same season of 1929. Exports during this crop year have exceeded those of the last crop year during every month, the total excess up to February 28 being nearly 63 million bushels. The surplus available at February 28 (with no allowance for carryover) amounted to 232 million bushels, almost 39 million bushels more than the comparable quantity at the same date in 1930.

Coal.—Coal output from Canadian mines during February amounted to 963,443 tons, a decline of 28 per cent from the five-year average for the month of 1,342,320 tons. Production during the month consisted of 723,498 tons of bituminous coal, 33,885 tons sub-bituminous coal and 206,060 tons of lignite. Alberta mines produced 333,110 tons

or 34 per cent of the total Canadian output. Nova Scotia produced 403,437 tons; British Columbia, 149,589 tons; Saskatchewan, 56,728 tons; and New Brunswick, 20,579 tons. Imports of coal in February were recorded at 830,609 tons, a falling-off of 20 per cent from the 1926-30 average for the month of 1,035,306 tons. Shipments received from the United States consisted of 243,893 tons of anthracite coal, 570,975 tons of bituminous coal, and 863 tons of lignite coal. Importations from Great Britain amounted to 3,852 tons of anthracite coal and 11,026 tons of bituminous coal. Exports of Canadian coal continue to decline; during February 21,641 tons were exported as compared with the 1926-1930 average for the month of 61,498 tons. Coal made available for consumption in Canada during February was obtained from the following sources: United States, 46.02 per cent; Canadian, 53.14 per cent; and Great Britain, 0.84 per cent. The coal supply for the month under review was 1,772,411 tons, or 24 per cent below the February 1926-1930 average of 2,316,128 tons.

EXTERNAL TRADE

A summary of Canadian trade prepared by the Department of National Revenue shows that in February, 1931, the merchandise entered for consumption amounted to \$50,994,084, as compared with \$50,413,895 in the preceding month and with \$30,922,161 in February, 1930. The chief imports in February, 1931, were: Iron and its products, \$11,353,238; Fibres textiles and textile products, \$8,710,521; Non-metallic minerals and products, \$7,833,622.

The domestic merchandise exported during February, 1931, amounted to \$43,872,682, as compared with \$44,682,883 in the preceding month and with \$66,689,817 in February, 1930. The chief exports in February, 1931, were: Wood, wood products and paper, \$14,299,548; Agricultural and vegetable products, mainly foods, \$9,436,044; Non-ferrous metals and their products, \$5,691,593.

Strikes and Lockouts

The time loss due to industrial disputes in Canada in March, 1931, was higher than that occurring during February, 1931, being approximately three times that incurred during the latter month, due chiefly to a strike of women's clothing factory workers in Toronto which commenced late in February and continued throughout March involving about 1,700 workers at its beginning and causing some 25,000 days time loss during March. There was very little difference in the number of workers involved during the two months, only a very slight decline being shown for March. As

compared with March, 1930, although the same number of disputes occurred involving approximately the same number of workers, the time loss was much greater, due chiefly to the above mentioned strike of clothing workers. There were in existence during the month four disputes, involving 1,815 workers, and resulting in a time loss of 25,969 working days, as compared with eight disputes, involving 1,966 workers and resulting in a time loss of 9,505 working days during February, 1931. In March, 1930, there were on record four disputes, involving 1,598 workers and resulting in a time loss of 7,049 working days. At the end of the month there were two disputes recorded as strikes or lockouts, involving approximately six hundred workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected, but which had not been formally called off or lapsed.

Prices

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities continued downward being \$9.14 at the beginning of March, as compared with \$9.44 for February; \$11.67 for March, 1930; \$11.23 for March, 1929; \$10.92 for March, 1928; \$11.05 for March, 1927; \$11.46 for March, 1926; \$10.74 for March, 1925; \$10.58 for March, 1924; \$10.79 for March, 1923; \$10.54 for March, 1922; \$13.23 for March, 1921; \$16.92 for June, 1920 (the peak); \$12.66 for March, 1918; and \$7.68 for March, 1914. Of the twenty-nine items in the food budget twenty-three were lower, and one was slightly higher. The most important decreases occurred in the prices of beef, veal, mutton, pork, lard, fresh eggs, cheese, bread, flour, beans and potatoes. Including the cost of fuel and rent with that of foods the total budget averaged

\$19.47 at the beginning of March, as compared with \$19.78 for February; \$21.96 for March, 1930; \$21.52 for March, 1929; \$21.15 for March, 1928; \$21.29 for March, 1927; \$21.77 for March, 1926; \$21.00 for March, 1925; \$21.00 for March, 1924; \$21.42 for March, 1923; \$20.96 for March, 1922; \$23.87 for March, 1921; \$26.92 for July, 1920 (the peak); \$20.00 for March, 1918; and \$14.35 for March, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was again lower at 75.1 for March, as compared with 76 for February; 91.9 for March, 1930; 95.6 for March, 1929; 97.7 for March, 1928; 97.3 for March, 1927; and 101.3 for March, 1926. In the classification according to chief component materials six of the eight main groups declined, while two were slightly higher. The groups which were lower were: the Vegetables and Vegetable Products group, mainly because of lower prices for wheat, corn, cotton seed oil, coconut oil and potatoes, which more than offset higher prices for barley, rye, oatmeal and rolled oats; the Animals and their Products, due to lower prices for canned salmon, calves, hogs, lambs, eggs and leather; the Wood, Wood Products and Paper group, because of lower prices for certain lines of lumber; the Iron and its Products group, owing to lower prices for galvanized steel sheets and automobile body plates; the Non-Metallic Minerals and their Products group, because of reductions in the prices of asbestos, crude oil, kerosene and gasoline; and the Chemicals and Allied Products group, due to lower prices for white lead, potassium iodide and bone meal. The Fibres, Textiles and Textile Products group was slightly higher, mainly because of higher quotations for raw silk and hessian. The Non-Ferrous Metals group was also somewhat higher, due to increased prices for copper sheets, wire bars, silver and tin.

The Speech from the Throne at the opening of the Prince Edward Island Legislature on March 24 announced that in view of anticipated federal old age pensions legislation, the Government has undertaken a census of these persons eligible for relief under the act. It was announced that negotiations had been held between the government and the federal Minister of Agriculture with regard to a national agricultural policy, the federal minister approving of the establishment of agricultural schools and offering the services of the various experimental stations for this purpose. Economic conditions in the province are more favourable than elsewhere, the speech notes, attributing this result to "the wise policy of mixed farming."

A committee representing the Canadian Nurses' Association and the Canadian Medical Association has been engaged for the past two years in an investigation of conditions in Canada affecting nurses, with Dr. G. M. Weir, of the Department of Education, University of British Columbia, as chairman. The object of the committee is to find some method of reconciling the often prohibitive cost of nursing, with a scale of payment of nurses that would compensate them for their long working hours and expensive training. The nurses of the United States have completed a five-year survey and are now working on grading their schools of nursing as a result. A similar movement is being carried on in England on behalf of the nurses there.

CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

Outline of Decisions in Recent Cases

TWO new decisions were given recently by the Canadian Railway Board of Adjustment No. 1. Earlier decisions were outlined in the *LABOUR GAZETTE*, March, 1931, page 278, and in previous issues; and the fourth report of the proceedings of the Board covering the period from October, 1927, to September 30, 1930, was issued as a supplement to the issue of December, 1930.

This Board was established under a voluntary agreement concluded in 1918 between the various railway companies and certain of the railway organizations, its original purpose being to secure uninterrupted service on the railways during the continuance of the war. The Board consists of six representatives of labour, one for each of the following railway brotherhoods; the Brotherhood of Locomotive Engineers; the Brotherhood of Locomotive Firemen and Enginemen; the Order of Railway Conductors; the Brotherhood of Railway Trainmen; the Order of Railroad Telegraphers; and the Brotherhood of Maintenance of Way Employees and Railway Shop Labourers.

Case No. 372—Canadian National Railways (Atlantic Region) and Brotherhood of Locomotive Engineers.

An engineer could not be located when required for duty and the company dropped his name to the foot of the list of spare engineers available for service. Later his name was taken off the list for the same offence, and he thus lost fifteen additional places. The company asserted that the engineer had known he was first on the spare list and that he would be required for a "turn-around" trip, but had purposely evaded the call. When he could not be located by the call-boy he was placed at the foot of the list as provided for by Clause 1 of Article 40, but when this was brought to the attention of the foreman his name was taken off the spare list until he had seen the master mechanic, in accordance with an arrangement in effect with the Engineers' Local committee at Moncton, covering cases where men neglect or evade calls. This agreement had been reached with the local committee after it had been brought to their attention that the Company was being put to a great deal of inconvenience through some engineers evading calls for undesirable assignments. The engineer was informed by letter that he had been taken off the list, and by the time he had seen the master mechanic and

was again placed on the list, fifteen other men had had their turn ahead of him. The engineer claimed that he should be allowed a "run" for each of these fifteen turns, but the company declined to comply with his demand.

The employees contended that Article 40 Clause 1 defined to what extent engineers on the spare list shall be penalized when not located for service, while Article 23 provides that when engineers on this list are passed over they are to be compensated by payment for 50 miles for each run that they have lost.

The Board found that the company had acted in good faith in the course they had taken in regard to this engineer, and did not sustain the employees' claim. However, the Board recommended that the representatives of the Locomotive Engineers and of the Railways should confer further with a view to removing any cause which might exist for misunderstanding or friction in respect to the arrangements for calling and the possible evasion of calls for certain service.

Case No. 373—Canadian National Railway (Atlantic Region) and Brotherhood of Locomotive Engineers.

In this case also an engineer failed to respond when required for service and the next man on the list was ordered out ahead of him. The employees contended that the telephone was the only method used to locate an engineer for this trip, no effort being made to send a call-boy to the engineer's house nearby, although 30 minutes was spent over telephones in securing a man. The engineer stated that he received no call by telephone; that he was at home, and that a call-boy could have reached him. He claimed payment on a mileage basis for the trip he had lost under Article 23 of the Engineers' Schedule.

The company contended that where a telephone is available it will be used for calling the men, and when the engineer could not be reached on his phone, he was dropped to the foot of the Spare Board, as provided for by Clause 1 of Article 40, as was done in the case of two other engineers who were on the list ahead of him and could not be located. He was not taken off the list altogether until he had seen the master mechanic (this being in accordance with an arrangement in effect with the Local Committee at Moncton covering

cases where men cannot be located), on account of the fact that he was third on the list, and when he later called up the foreman, was given the benefit of the doubt by being placed at the foot of the list. He claimed

five "run-arounds" at fifty miles each, which the Company had declined to pay.

Under the circumstances as shown in this case the Board sustained the claim of the employees.

CANADIAN NATIONAL RAILWAYS EMPLOYEES' BOARD OF ADJUSTMENT No. 2

Summary of Recent Proceedings

REPORTS have been received of six cases recently settled by the Canadian National Railways Employees' Board of Adjustment No. 2. An account of previous cases was given in the *LABOUR GAZETTE*, January, 1931, and in previous issues. The issue of August, 1930, contained a general summary of the proceedings of the Board, covering the period from January 1, 1928, to December 31, 1929; and a similar summary of proceedings from the date of the inception of the Board to December 31, 1927, appeared in the issue of October, 1928, page 1060.

The Canadian National Railways Employees' Board of Adjustment No. 2, was established for the purpose of disposing of outstanding grievances or disputes that might arise from the application, non-application, or interpretation of the schedule of working conditions for "Clerks and Other Classes of Employees as herein named," which are not adjusted between the officers of the railway and the representatives of the employees. The members of the Board are appointed for a term of one year, subject to reappointment, and it is composed of four members selected by the management and four members selected by the representatives of the employees concerned. The decisions of the Board are binding upon the parties to the agreement. Provision was made in the agreement constituting the Board for the appointment of an arbitrator in any case in which the Board might be unable to agree upon an award. Up to the present time in only one case has it been found necessary to appoint an arbitrator.

Case No. 70.—Operating Department and Classified Labourers (Atlantic Region)

At a number of points in the Atlantic Region it is the practice to close down the stationary boilers at certain periods of the year, when the positions of stationary firemen are abolished, and locomotives are used to do the work ordinarily done by stationary boilers. Classified labourers are called upon to fire these locomotives, which are, for all intents

and purposes, stationary engines, and they are paid the rate of 46 cents per hour, the classified labourers' regular rate. The employees claimed that the classified labourers doing this work should be paid the rate of stationary firemen for the time they are so engaged, that is, 55 cents per hour.

The company contended that no additional work or responsibility resulted to the employees from having to fire locomotives to do the work of stationary boilers and refused to concede the employees' claim.

The Board sustained the employees' claim to the extent that one classified labourer on each shift should be paid the stationary fireman's rate during the time the roundhouse employees are required to look after engines used to supply steam for purposes other than engine service.

Case No. 72.—Operating Department (Central Region) and Various Freight Office Clerks, Bonaventure Freight Office, Montreal.

Certain freight office clerks at Montreal protested against an arbitrary reduction in their rates of pay effected by the Company about April 1, 1930, claiming that this action violated Article 11, Rule (d) of the Schedule, and that they should receive payment of wages at the former rates as from the date on which the reduction was made. It was stated that on January 1, 1930, the management adopted a new system of handling the collection and remittance of freight charges, and rearranged the duties of the employees to conform to the new system. These employees were paid their regular schedule rates of pay up to March 31, 1930, but on that date the rates were reduced from \$120 to \$115 (in one case from \$131 to \$115). They claimed that the work required of them was practically the same under the new system as formerly, and that no reductions in pay had been effected at Toronto under similar circumstances.

The management, on the other hand, explained that the new system, which was introduced on January 1, 1930, changed the

method of collecting freight revenue, the majority of the accounts being now forwarded by mail. Two collectors were continued at the old rate of pay, the others, whose pay was reduced, being assigned to collection work at the freight office. Their former rates were continued for three months in order to ascertain whether the new system would work out satisfactorily. When it proved to be satisfactory, the management regarded the duties of the employees affected as belonging to "new positions," and fixed the rates of pay "in conformity with the wages for positions of a similar kind or class," as provided by Article 11, Rule (c).

The Board decided that the claim of the employees should be denied.

Case No. 73.—Operating Department (Central Region) and Freight Shed Employees, Parent Square, Quebec.

The management closed the freight shed at Quebec on St. Jean Baptiste Day, the employees losing one day's pay. They claimed that Article 8, Rule (c) of the schedule provided only for the closing of the freight shed on seven holidays each year, St. Jean Baptiste not being included on the list, and that they were entitled to compensation for the time lost. The management in refusing the demand stated that all stores, industries and business places in Quebec City (with the exception of Anglo-Protestant offices) were closed, and that no freight was looked for on that day. The sheds were therefore closed, only half of the office staff being retained. The management contended that there was no schedule rule or practice to forbid the laying-off of hourly rated employees when there was no work for them to do.

The Board denied the claim of the employees, recommending however that the representatives of the Company and of the employees confer and decide which one of the two days, i.e., St. Jean Baptiste Day, or Dominion Day, shall in future be observed as a holiday under the schedule, in the city of Quebec.

Case No. 74.—Sleeping, Dining and Parlour Car Department and Certain Dining Car Employees at Toronto.

The Toronto-Footes Bay run is operated only during the summer months each year. Before the summer of 1928 the dining car crews operating on two trains on this run were allowed four days' relief each month, in addition to Sundays, at their terminal. During the summer of 1928 this extra four days' relief

was discontinued. The employees contended that as no agreement for such discontinuance had been reached between the superintendent and the employees' general committee (in accordance with Article 4, Rule (c) of the schedule), the crews on this run in 1928, 1929 and 1930 were entitled to compensation, at their regular rates of pay, for the four days' relief for each month for which such leave had not been allowed.

The company stated that the superintendent, prior to 1928, had considered the elimination of the four days' relief per month, the conditions on this run being unusually favourable in regard to rest. They contended further that the proposed change had been fully discussed in 1928 and previously, between the company and members of the employees' committee, and that they were not obliged to concede the men's demand for additional compensation.

The Board expressed the opinion that the days of rest for the crew on the Toronto-Footes Bay run should have been arranged between the Superintendent and the Employees' General Committee at the beginning of each summer season. The case was referred back to the parties for further consideration, the Board being of the opinion that the period of rest on this run was not adequate or on the basis of established hours of rest on other runs. Should the parties to the dispute fail to reach an agreement, the case was to be referred back to the Board at its next meeting.

Case No. 75.—Sleeping, Dining and Parlour Car Department and a Porter at Toronto.

A porter submitted a claim for expenses incurred by him through the failure of the management to provide him with free meals in accordance with Article 9, Rule (a) of the schedule for employees in sleeping, dining and parlour car service. He had been assigned to relieve a parlour car porter on the service between Toronto and Buffalo, New York, and obliged to obtain and pay for meals on a Lehigh Valley dining car during the trip. The employees contended that the article referred to does not state that it only applies to Canadian National dining cars, but on the other hand it does state specifically that the employees, while on duty on trains to which dining, cafe or buffet cars are attached, will be served meals free.

The management submitted that Rule (a) of Article 9, (which reads: "Employees of this Department while on duty on trains to which Dining, Cafe or Buffet Cars are attached, will be served meals free") had always

been regarded as referring only to Canadian National dining cars, and that obviously this was the correct interpretation.

The Board denied the claim of the employees, but recommend that both parties confer as to the proper method of dealing with such cases.

Case No. 76.—Sleeping, Dining and Parlour Car Department and Certain Dining Car Employees, Toronto.

Changes were effected in April, 1930, in the operation of the dining car service between Toronto and Winnipeg and between Toronto and Windsor, resulting in the dining cars certain trains on the former run being linked up with the latter service. Questions arose as to the assignment of crews as between the various runs that were affected by these changes, certain of the crews finding that their working conditions, as affecting "lay-over" and rest privileges, were much worse than they had been previously. The employees claimed that they had sustained a reduction in time amounting to 156 hours and 34 minutes per month, while in addition to suffering that loss, they were required to report more frequently for duty each month. They submitted that additional crews should be assigned to the combined dining car run in order to maintain working conditions as favourable as those formerly obtaining.

The company stated that the changes were made only with a view to the train service and for no other purpose. The changes in the working conditions, as affecting rest and layover, were in their opinion, very slightly different from those in effect before the changes were made; and they were even better in some respects, such as providing for more nights to be spent by some of the employees at their home terminal. They explained further that the addition of an eighth crew in the combined run, Toronto-Winnipeg-Windsor, as proposed by the employees, would work out so as to make an unreasonable disproportion (as compared with similar runs in the system) between hours of layover and of service. The company submitted therefore that no special hardship was involved for the employees under the new working conditions, and that there was no justification for placing an additional dining car and crew in this service at an additional expense of about \$1,000 per month.

The Board decided that additional relief should be given to the crews affected in order that their lay-over time should not be less than it was formerly, or that these crews should be compensated for the loss of lay-over time in conformity with Article 6, Clause (d) of the schedule.

Coal Mining in Canada in 1930

Further particulars of mineral production in Canada in 1930 are contained in a preliminary report on this subject, published by the Dominion Bureau of Statistics. Estimates from the same source are given in the *LABOUR GAZETTE*, January, 1930, page 45. The position of coal mining last year is described in the new report as follows:—

Production of coal from Canadian mines in 1930 declined to a point 15 per cent below the 1929 level, and 9.4 per cent below the average for the past five years. Compared with the 1929 output losses were recorded in the five important producing provinces; the most serious declines were as follows: Nova Scotia, 11.4 per cent; Alberta, 19.5 per cent; and British Columbia, 16.4 per cent. Saskatchewan's output was only slightly below the previous year's record, while New Brunswick mines reported a falling off of 4.3 per cent in production. The Yukon total was higher than in 1929. Nova Scotia was the principal producing province, accounting for 42 per cent of the total output in 1930, and Alberta followed with 33.7 per cent. Canadian production during the year consisted of 10,824,291

tons of bituminous coal, 3,451,079 tons of lignite coal and 603,358 tons of sub-bituminous coal. Imports of coal totalled 17,620,074 tons, including 4,256,090 tons of anthracite, 13,345,308 tons of bituminous and 18,676 tons of lignite. Anthracite imports consisted of 2,955,954 tons from the United States, 996,127 tons from Great Britain, 291,407 tons from Russia, 11,480 tons from Germany, and 1,122 tons from the French East Indies. Bituminous importations were obtained principally from the United States. The lignite coal imported was purchased from the United States. Exports of Canadian coal declined 26 per cent in 1930. Coal made available for consumption in Canada during 1930 totalled 31,874,290 tons as compared with 35,272,885 tons in the preceding year. The seasonal trend of employment in the Canadian coal mines was more pronounced than usual in 1930; during January 30,839 men were employed, a steady falling off was recorded during the following months and the low point for the year was reached in June when 24,693 men were on the mine pay rolls. During December 30,558 men were employed in the industry.

CONCILIATION WORK OF THE DEPARTMENT OF LABOUR DURING THE FISCAL YEAR ENDING MARCH 31, 1931

DURING the past twelve months the services of the Department of Labour were utilized in connection with a number of labour disputes. In some of these cases strikes or lockouts had already occurred, and in others cessation of work appeared to be imminent or there was difficulty in carrying on negotiations in connection with wages and working conditions. In most cases the proceedings were under the provisions of the Conciliation and Labour Act, which empowers the Minister to inquire into the causes and circumstances of a dispute, and to take such steps as seem expedient for the purpose of bringing the parties together, appointing a conciliator or an arbitrator when requested by the parties concerned. In some disputes occurring in industries coming directly under the Industrial Disputes Investigation Act, namely, mines and public utilities, preliminary inquiries by officers of the Department resulted in the settlement of the matters in dispute without further proceedings through the establishment of Boards of Conciliation and Investigation under the Act.

The following is a list of the most important cases in connection with which mediation work was performed during the year by personal intervention on the part of the Minister of Labour, or by officials of the Department, on request of one or both parties to the dispute.

Construction

HAMILTON, ONT.—On or about February 25, 1930, a dispute arose between the Brotherhood of Painters, Decorators and Paperhangers of America, Local 205, and the Hamilton chapter of Master Painters and Decorators, involving an increase of wages with agreement. The Department received a request for assistance from the painters and an officer of the Department was assigned to the case. Conferences were held with both parties to the dispute but it developed that the employers were absolutely opposed to the granting of any increase at the time, insisting that it would be detrimental to business. The employees were quite agreeable that the matter should be dealt with by a Board of Conciliation and Investigation, but in view of the attitude of the employers it was finally agreed in May that the matter should remain in abeyance in the meantime.

SAINT JOHN, N.B.—A dispute arose on or about February 15, 1930, involving the Saint John Dry Dock and Shipbuilding Company, Limited, and the machinists in the employ

of that Company in respect to alleged violation of agreement by the employer in not paying overtime rates to maintenance men. This matter was brought to the attention of the Department and as a result of action taken a further meeting between the Company officials and representatives of the employees on April 9th resulted in an agreement whereby the Company agreed in future to pay overtime to maintenance men, while the employees' claims for back overtime pay were waived.

SAINT JOHN, N.B.—Bricklayers, masons and plasterers in Saint John ceased work May 1, 1930, demanding an increase in wages from \$1.00 to \$1.25 per hour. This matter was brought to the attention of the Department and an officer was sent to Saint John to offer his services. This officer had arranged for a conference to take place between the parties concerned to be held on the morning of May 8th. However, negotiations the previous evening between the parties directly concerned resulted in settlement and work was resumed on May 8th at an hourly rate of \$1.15. The settlement was negotiated with the Saint John Branch of the Canadian Construction Association.

HALIFAX, N.S.—The Constructive and Mechanical Trades Exchange having refused the demands of the painters for an increase in wages from 73 cents to 90 cents per hour and a decrease in hours from 44 to 40 per week, the painters ceased work May 1, 1930. The services of the Department were not asked for prior to the strike. Subsequently every possible effort was made to bring about a settlement but without success. The Brotherhood of Painters and Decorators was agreeable that all the matters in dispute be referred to a Board of Conciliation and Investigation. The Constructive and Mechanical Trades Exchange, however, would not agree to such proceedings. Work was resumed July 18, 1930, under the former conditions.

SAINT JOHN, N.B.—On May 12, 1930, sixty painters, members of the Brotherhood of Painters, Decorators and Paperhangers of America, Local 1009, employed by certain firms who were members of the Canadian Construction Association, Saint John Branch, ceased work on account of their demands for increased wages from 50 cents and 60 cents to 75 cents per hour not having been conceded. This matter was brought to the attention of the Department by the Secretary of the Canadian Construction Association, Saint

John, with the request that this Department intervene to settle the dispute. An officer of the Department was assigned to the case and as a result of his efforts both parties agreed to have the dispute referred to a Board of Conciliation and Investigation. The painters returned to work on May 21 pending the findings of such Board.

SAINT JOHN, N.B.—Early in May, 1930, members of Local Union No. 502, International Brotherhood of Electrical Workers, reached a deadlock in their negotiations with the Canadian Construction Association, Saint John Branch, in regard to a new working agreement. An official of the Department dealt with the matter and, not being able to bring about a mutually satisfactory arrangement, succeeded in obtaining the consent of both parties to allow the matter to be handled by a Board of Conciliation and Investigation. Subsequently it developed that the employers' association did not represent the majority of the employers in Saint John and for that reason the Association withdrew its consent to Board proceedings. Upon the position of the Canadian Construction Association being made known to the Brotherhood of Electrical Workers their application for a Board was withdrawn.

HALIFAX, N.S.—On May 30, 1930, a dispute arose over the employment of non-union painters who were engaged on work being done by the Fisheries Biological Board which threatened to bring about a general strike. An officer of the Department investigated this matter and as a result of his efforts the difficulty was adjusted and the dispute terminated June 4th.

SAINT JOHN, N.B.—On or about August 1, 1930, a dispute arose between the Canadian Construction Association, Saint John Branch (master plumbers and steamfitters), and Plumbers and Steamfitters Local 574 over the demand of the employees for an increase in wages from 75 cents to 80 cents per hour to date from August 1, 1930. This matter was brought to the attention of the Department on August 5, 1930, and a mediator was immediately instructed to offer his services. His efforts resulted in both parties to the dispute agreeing that the matter be referred to a Board of Conciliation and Investigation for adjustment.

VANCOUVER, B.C.—On January 3, 1931, pile-drivers, bridge builders and hoisting engineers in the employ of Dawson Wade and Company and Hodgson, King and Marble, Limited (constructing Burrard Street bridge), went on strike, insisting that only members of their Union be employed, these workers,

with the exception of the hoisting engineers, being members of Local No. 2404 of the United Brotherhood of Carpenters and Joiners. An officer of the Department discussed the situation with representatives of both employers and employees but was unsuccessful in settling the dispute. Work on the bridge was resumed on January 17 and although strike had not been called off at that time it was no longer effective.

Manufacturing

LONDON, ONT.—The brass finishers and metal polishers employed by the Empire Brass Manufacturing Company, London, Ontario, ceased work April 3, 1930, in protest against an anticipated cut in piece work rates as a result of efficiency tests being made by the company. After the strike had taken place the Department was requested by the Union for assistance. Efforts were made by a representative of the Department to bring about a settlement of the difficulty but without success.

FORT WILLIAM, ONT.—On or about May 6, 1930, a dispute arose in regard to wages and overtime rates in the plant of the Great Lakes Paper Company operated by Backus Brooks Company, Minneapolis, Minnesota, and indirectly their subsidiaries at Kenora and Fort Frances, involving papermakers, sulphite workers, machinists, electricians and steam engineers. This dispute had reached the point where a favourable strike vote had been taken. A two-day conference between Union officials and Backus Brooks officers had failed to solve the difficulty. Owing to the seriousness of the situation a special meeting of the City Council was held and a resolution was passed requesting that the Minister of Labour intervene. The Minister had a conference with the interested parties at Fort William and as a result of his mediation it was agreed that an officer of the Department of Labour should proceed to Minneapolis and there discuss with the representatives of the various organizations and Mr. Backus of Backus Brooks Company a basis of settlement. As a result of the conferences which took place a new agreement was brought about which increased the hourly rate of machine tenders at the Fort William mill and made certain concessions in respect to overtime rates which proved acceptable to the employees. In this dispute about 300 were directly and 1,000 indirectly affected.

BROWNSBURG, P.Q.—The paving cutters in the employ of Jos. Brunet, Brownsburg, P.Q., ceased work July 25, 1930, due to the refusal

of the employer to sign an agreement with Local No. 39 of the Paving Cutters Union of the United States and Canada. The Union representatives and employers attended a conference in Montreal in the previous March for the purpose of settling wages and conditions for 1930. An agreement was reached which was to be signed by the various employers individually and the Union Local representative. An officer of the Department proceeded to Brownsburg August 4 and discussed the situation with the interested parties. As a result of the conference some misunderstanding was cleared up and as the dispute did not relate to piece or day rates, simply to one or two items as to conditions, it was understood that a satisfactory settlement would shortly be reached as a result of suggestions made at the time. It developed, however, that due to lack of business the quarry ceased operations before an agreement was signed. It was understood that operations would not likely be resumed before spring.

SASKATOON, SASK.—The bakery drivers employed by the Saskatoon Bread Company, Limited, ceased work September 22, 1930, to secure a union agreement and higher wages and as a protest against the treatment of union drivers. A mediator of the Department proceeded to Saskatoon and conferred with both parties to the dispute. The company conceded the right to their employees to belong to a union but would not agree to pay higher wages nor to remove three canvassers to whom the union objected. Three of the former drivers returned to the company's employ in October and the strike was no longer effective at October 15.

GUELPH AND MOUNT DENNIS, ONT.—Members of Local No. 44 of the American Federation of Full-Fashioned Hosiery Workers (United Textile Workers of America) in the employ of Landers, Limited, Guelph and Mount Dennis, ceased work October 30, 1930, protesting against a cut in piece rates of 17½ per cent and 23½ per cent affecting employees receiving over \$20 per week. About 110 employees were directly affected and 175 indirectly. On the request of the employees an officer of the Department discussed the whole matter with officials of the company as well as officers of the union but in view of the conditions which existed at the time a satisfactory solution of the difficulty could not be reached. The employers maintained that due to the drop in market prices of their product and the severe competition which they had to contend with from other sources they were

compelled either to reduce the wages of certain of their employees or, on the other hand, to close the plant. The company officials stated that under the circumstances nothing could be gained by discussing the matter with their employees and they declined to do so. They also refused to allow the matter to be dealt with by a Board of Conciliation and Investigation. It was intimated by the company that to the extent they might require extra help preference of employment would be given to former employees who might desire to return to work.

TORONTO, ONT.—The upholsters employed by the Reliable Manufacturing Company, Limited, members of Upholstery, Carpet and Linoleum Makers International Union, Local No. 30, ceased work December 11, 1930, in protest against the enforcement of a 35 per cent reduction in wages, the written agreement being violated by the company. The union representatives had several unsuccessful interviews with the management. Later on a representative of the Department met the management but was unable to gain the consent of the management to adhere to the terms of the agreement between the company and the employees which provided a method for the adjustment of disputes of this nature. The employees who ceased work were replaced by workmen secured locally and elsewhere.

Mining

LUSCAR, ALTA.—On April 25, 1930, a dispute arose between the coal miners and the management of the Luscar Collieries, Limited, Luscar, Alta., over the proposal of the miners for an increase in day wage rates for certain occupations, and other changes. A representative of the Department discussed the situation with the interested parties early in May with the object of finding a basis of settlement. This effort having failed the question was dealt with by a Board of Conciliation and Investigation, established on May 21. The miners were members of Mine Workers' Union of Canada, Local No. 24.

SHAUGHNESSY, ALTA.—Coal miners, being members of Mine Workers' Union of Canada, Local No. 11, in the employ of the Cadillac Coal Company, Limited (Standard Mine), Shaughnessy, Alta., ceased work September 10, 1930, due to a dispute as to piece rates. The management declined to make any adjustment due to these rates being established in a two-year agreement still in force. It also appeared that the men had ceased work in violation of their agreement with the Company. A representative of the Department investigated the situation and on September

27 a new agreement was entered into providing for resumption of work at a day wage basis until piece rates could be mutually agreed upon. Work was resumed September 29, 1930.

SHAUGHNESSY, ALTA.—Members of Mine Workers Union of Canada, Local No. 11, in the employ of the Cadillac Coal Company, Limited (Standard Mine), Shaughnessy, Alta. ceased work January 15, 1931, as a protest against the discharge of two miners accused by the management of mining less coal than others without giving explanation. The demand of the Union for reinstatement of the dismissed miners was refused by the Company. A representative of the Department attempted mediation to bring about a settlement of the dispute but his efforts were unsuccessful, largely due to the bad feeling which had arisen between the parties. On February 5 about forty of the former staff of one hundred and thirty miners returned to work and as the industry was in a depressed condition the Company claimed to be able to fill their orders with the reduced staff. A written agreement had been entered into with the men returning to work on February 4.

Service

CALGARY, ALTA.—Garage mechanics, members of International Association of Machinists (motor mechanics), in the employ of the Calgary Dealers' Association threatened to cease work May 15, 1930, unless the Dealers' Association would put into effect the findings of a Board of Conciliation and Arbitration established under the Alberta Labour Disputes Act, which Board had dealt with their wages demands. Under date of April 30 the services of this Department were requested by the employees. A mediator therefore discussed the situation with the President of the Calgary Garage Dealers' Association but was unsuccessful in bringing about a settlement. The employers refused to consider the Board's recommendation for higher wages, giving as a reason the depressed conditions in industry. The employees did not press the issue further.

EDMONTON, ALTA.—Early in May, 1930, a dispute arose in Edmonton, involving the policemen and the labourers in the employ of the City of Edmonton. The policemen were demanding an increase in salary while the labourers were protesting against a decrease in wages. An officer of the Department held conferences with the interested parties. The final outcome resulted in an increase for the policemen but the labourers failed to secure the former rate. Owing to friction existing between the two labourers' Unions involved the Department's efforts at conciliation were discontinued.

PORT ARTHUR AND FORT WILLIAM, ONT.—Early in June, 1930, electrical workers, members of International Brotherhood of Electrical Workers, Local 339, in the employ of the Port Arthur and Fort William Utilities Commissions requested the services of a mediator of the Department to assist in the adjustment of a dispute which had been pending for some time. Both Commissions had refused to consider the demands of the employees or to agree to refer the dispute to a Board of Conciliation and Investigation. An officer of the Department proceeded to the Head of the Lakes and as a result of discussions which took place a basis of settlement was reached and new agreements signed, the dispute being settled on June 12. Slight concessions were made by both Commissions in the new agreements which proved acceptable to the employees.

VANCOUVER, B.C.—Early in August, 1930, a dispute arose between the motion picture projectionists, members of B. C. Projectionists' Society, Local No. 348, International Alliance of Theatrical Stage Employees and Motion Picture Projectionists and the Independent Owners' Association over the employment of projectionists not first-class as required by provincial law. Mediation was refused by the Theatre Owners and further efforts to conciliation were not made owing to the dispute having to do especially with the enforcement of a provincial statute.

MONTREAL, P.Q.—Musicians, members of Montreal Musicians' Protective Association, A. F. of M., Local No. 406, in the employ of the Capitol Theatre, Montreal, P.Q., ceased work September 1, 1931, as a result of the demand of the employer to have a two weeks' cancellation clause inserted in the contract. A mediator of the Department aided in the subsequent negotiations and a compromise agreement was reached September 30 providing for a four weeks cancellation clause. Other musicians from Loew's, Imperial and Palace Theatres ceased work in sympathy with the Capitol musicians on September 13, 1930, returning to work on termination of original dispute on September 30, 1930.

Trade

HAMILTON, ONT.—On October 28, 1930, at the request of the milk drivers and dairy employees, members of Milk Drivers and Dairy Employees Union No. 357, International Brotherhood of Chauffeurs, Teamsters, Stablemen and Helpers, in the employ of the Hamilton Dairies Limited (operated by the Borden Milk Company), a mediator of the Department was sent to Hamilton to offer his services in the adjustment of a dispute which had arisen over the discharge of the Union Secretary because of his refusal to sign an

individual agreement presented to all employees. The union claimed that the Secretary was discharged because of his union activities. This was denied by the company. A settlement of the dispute was brought about by the secretary signing the contract on October 30.

Transportation

GLACE BAY, N.S.—On February 21, 1930, an application for a Board of Conciliation and Investigation was received from the Canadian Brotherhood of Railway Employees, said to be freight handlers, baggagemen, trackmen and clerks in the employ of the Sydney and Louisburg Railway, Glace Bay and County of Cape Breton, to deal with wages increases and minor changes in working conditions. Upon receipt of this application an officer of the Department discussed the matter at issue with both parties concerned. It seemed to be the company's position that certain of the employees mentioned in this application, namely, freight handlers, baggagemen and clerks, were already covered in an existing agreement between the company and the United Mine Workers, and the company could not enter into an agreement covering these men with another organization. It developed, however, that the sectionmen were not covered in the existing agreement and as a result of mediation of the Department carried on over a considerable period an agreement covering the sectionmen and section foremen was entered into between a committee representing the employees and the management of the company on July 15, 1930. A Board was therefore not established.

HALIFAX, N.S.—Longshoremén, members of Halifax Local No. 269 of International Longshoremén's Association, who were engaged in the unloading of a Canadian National freighter ceased work on April 10, 1930, in protest against an alleged violation of agreement in regard to the interpretation of Clause 19 having to do with the number of men to be employed in the hold of the ship in question. The Longshoremén maintained that six men should be used; the company's position was that four men would be sufficient. Through the efforts of the Department it was arranged that the men should return to work with six men in the hold, pending the findings of a Board of Conciliation and Investigation which the Minister proposed to establish. Work was resumed on April 19.

VANCOUVER, B.C.—An application for a Board of Conciliation and Investigation reached the Department April 28, 1930, from

the longshoremén, members of the Vancouver and District Waterfront Workers' Association, to deal with increased wages and other matters which the Organization had been unable to adjust directly with the Shipping Federation of British Columbia, Limited. Immediately upon receipt of the application a Departmental officer offered his services as a mediator and succeeded in bringing both parties together in conference. As a result of the conferences the Shipping Federation made a counter proposal which, upon being voted on by the men, was declined. Subsequently a Board of Conciliation and Investigation was established and as an outcome of the Board's findings and efforts and further efforts on the part of the Departmental officer an agreement was reached, effective November 1, 1930.

MONTREAL, P.Q., and HALIFAX, N.S.—In April, 1930, a dispute arose over a notice posted by the superintendent engineer that the engineers shore gang would cease to exist at the end of the winter season. This involved the International Association of Machinists, the International Brotherhood of Blacksmiths, Drop Forgers and Helpers of America, the International Brotherhood of Boilermakers, Iron Shipbuilders and Helpers of America, and the Canadian National Steamships, Marine Shops, at Montreal, P.Q., and Halifax, N.S. The assistance of the Department was solicited by representatives of the employees with the object of having the notice referred to withdrawn. It was ascertained through an investigation made by Departmental officers that it was the company's position that the work which was being performed at these two shops could be done to better advantage and much more cheaply if done by contract. An application for a Board of Conciliation and Investigation from the employees was received April 30, 1930, and following receipt of the application a conference was arranged between the parties to the dispute with the object of bringing about an adjustment. A satisfactory solution, however, could not be found but the company officials offered to find employment for the men with concerns with whom they were awarding contracts.

WINNIPEG, MAN.—In May, 1930, a dispute arose between the Street Railway Employees, O.B.U. Street Railway Unit, Winnipeg, and the Winnipeg Electric Railway Company over the dismissal of three motormén for alleged incompetency. A Departmental officer had several interviews with the parties to the dispute in Winnipeg and although the com-

pany intimated that certain concessions would be made these were not of sufficient merit to meet with the approval of the employees. Subsequently the matter was dealt with by a Board of Conciliation and Investigation.

TORONTO, ONT.—Negotiations between representatives of electrical workers, International Brotherhood of Electrical Workers, Local No. 636, Toronto, Ont., having reached a deadlock with the employer, the Toronto Transportation Commission, the services of the Department were requested with the object of bringing about a solution of the difficulty. The dispute had to do with an upward revision of the wages schedule. Two officers of the Department discussed with representatives of the employees and an officer of the company in Toronto the various matters in dispute. It was contended by the company that an upward revision of the wages schedule under the present circumstances could not be favourably considered, nor would they be agreeable to having the dispute dealt with by a Board of Conciliation and Investigation. Subsequently certain correspondence took place between the Department and the Commission, but without favourable results.

WINNIPEG, MAN.—In December, 1930, it was brought to the attention of the Department that a dispute existed between the motormen, conductors and busmen, mechanical department employees of Trackmen O.B.U. Street Railway Unit, and the Winnipeg Electric Company, over the desire of the Company to insert two new clauses in agreement before signing which would reserve the right of the Company to terminate wages

schedule on ten days' notice. A dispute over wages and working conditions, etc., had been dealt with by a Board of Conciliation and Investigation, the Company agreeing to accept the Board's recommendations. Subsequently they proposed insertion of the two extra clauses. A Departmental officer dealt with this dispute and it was finally agreed to by both parties that the agreement should remain unchanged and unsigned and that its conditions would be continued. The employees' representative agreed that there would be no cessation of work without first requesting the intervention of the Department in case of further trouble.

QUEBEC, P.Q.—On December 31, 1930, the Department was advised that the agreement existing between the shopmen employed in the Linoilou Shops and the Quebec Railway, Light and Power Company, Quebec, P.Q., expired on that date, that difficulty had arisen over the renewal of the agreement, and requested the assistance of the Department in the matter. Certain correspondence developed and finally an officer of the Department proceeded to Quebec and interviewed officials of the Company and a committee representing the employees. As a result of these conferences a new agreement was entered into and signed on January 28, 1931. Among other things the agreement provided for the reduction of hours of employment from 8½ to 8 hours per day, the Company agreeing to increase the hourly rate sufficiently to absorb one-half the loss of wages resulting from the reduction. In addition to the new agreement the representative of the Department adjusted satisfactorily certain grievances which existed at the time in regard to seniority rights, etc.

The Surgeon-General of the United States Public Health Service announces that through the co-operation of the United States Coast Guard, medical advice by radio will be given from the Marine Hospital at Port Townsend, Washington, through the local Coast Guard base radio station located in that vicinity. For the past ten years the Public Health Service has been giving medical advice by radio to vessels at sea. The establishment of this additional station will provide facilities, the need of which has been recognized for some time, especially for vessels plying in Alaskan waters and the North Pacific.

The annual report of the Department of Agriculture of Nova Scotia, covering the fiscal year ended September 30, 1930, includes a review of the operations of the Employment

Service offices in that province, as well as the report of the factory inspector.

The activities of the Nova Scotia offices of the Employment Service for the year are summarized as follows: total applicants, 35,999; total placements, 8,661; average cost per placement, \$1.37.

The report of the factory inspector indicates that the total number of accidents in factories during the year, as based on records of the Workmen's Compensation Board and the Accident Prevention Association, totalled 1,172; being an increase of 77 as compared with the previous year. Of the total number of accidents, 8 were fatal. The greatest number of accidents occurred in the metal trades, there being 154 in this group. In the paper manufacturing industry there were 131 accidents, while in the various steel plants of the province there were 127 accidents.

STRIKES AND LOCKOUTS IN CANADA DURING MARCH, 1931

THE number of strikes and lockouts in existence in Canada during March, 1931, was four, as compared with eight in the preceding month. The number of workers involved showed a very slight decline although the time loss incurred was almost three times as great owing to a strike of women's clothing factory workers in Toronto which commenced late in February and continued throughout March, involving some 1,700 workers at its beginning and causing some 25,000 days time loss during March. Comparing the figures with those for March, 1930, while the same number of disputes occurred with very little difference in the numbers of workers involved, the time loss was over three times as large, due chiefly to the above-mentioned strike of clothing workers.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Mar. 1931...	4	1,815	25,969
*Feb. 1931...	8	1,966	9,505
Mar. 1930...	4	1,598	7,049

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Three disputes, involving approximately 1,716 workers, were carried over from February and one dispute commenced during March. Of these four disputes two terminated during the month, the result of one being recorded as partially successful while the other was in favour of the employer concerned. At the end of March, therefore, there were two dis-

putes recorded as strikes or lockouts, namely: clothing factory workers, Toronto, Ont., and motion picture projectionists, Ottawa, Ont.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not yet declared terminated. Information is available as to five such disputes, namely: electrotypers, Toronto, Ont., December 20, 1926, one employer; photo engravers, Toronto, Ont., January 7, 1929, one employer; bakery drivers, Saskatoon, Sask., September 22, 1930, one employer; coal miners, Shaughnessy, Alta., January 15, 1931, one employer; and pile drivers, Vancouver, B.C., January 3, 1931, two employers. The dispute involving upholsterers employed by one firm in Toronto, commencing December 10, 1930, and carried in this list for some months, was called off by the union involved on March 7, 1931.

A dispute between halibut fishermen and vessel owners at Prince Rupert, B.C., regarding changes in agreement, to which reference was made in the March issue of the *LABOUR GAZETTE*, was, as there stated, satisfactorily settled early in March, an agreement being signed between the deep sea fishermen's union and the fishing vessel owners' association for the ensuing season. It has been ascertained that no cessation of work occurred as the settlement was reached before fishing was to begin. The agreement is summarized elsewhere in this issue.

A dispute involving employees in a women's clothing factory in Montreal was reported as occurring on February 28, fifteen employees ceasing work until March 16, because two workers were laid off. These were reinstated, but four strikers were arrested and fined in connection with picketing.

A dispute as to employment of union operators, involving moving picture projectionists in four theatres at New Liskeard and Timmins, Ont., on March 3, 1931, has been reported. At the end of the month no settlement had been reached.

Information as to a number of disputes during January and February was received too late to include in previous issues of the *LABOUR GAZETTE*. In January employees in three men's clothing manufacturing establishments in Montreal ceased work to prevent reductions in wages, the disputes being settled satisfactorily within a few hours. The strike of employees of two fur manufacturing establish-

ments in Toronto, beginning January 14, 1931, and terminating February 14, 1931 (*LABOUR GAZETTE*, March, 1931, pages 280-281), was accompanied by a sympathetic lockout for the same period in the establishments of nine other firms in sympathy with the two firms whose employees were on strike. It is stated by the officials of the employers' association involved that the reduction in wages leading to the strike was intended to be temporary for the dull season only, and that the union refused to arbitrate as provided by the agreement. One hundred labourers, employed by the city of Fernie, B.C., to cut wood as an unemployment relief measure at \$1 per rick, ceased work on February 25 and February 26, demanding a higher rate. The Council raised the rate to \$1.20 and the work was resumed.

The following paragraphs give particulars regarding certain disputes in addition to the information in the tabular statement.

WOMEN'S CLOTHING FACTORY WORKERS, TORONTO, ONT.—In the strike involving employees in some seventy dressmaking establishments in Toronto, commencing February 25, 1931, a number of employers reached agreements with the union early in March, so that by the middle of the month it was

reported that upwards of six hundred employees had resumed work. The terms of the agreement are summarized elsewhere in this issue. Toward the end of March, conciliation officers of the Department discussed the dispute with representatives of both parties, but the employers refused to meet representatives of the union, having already discussed the matter with them in company with the provincial authorities without result. The employers particularly objected to the demand of the union for a closed shop and also to the system of determining piece rates on the various models of dresses which they claimed to be constantly changing. At the end of the month, therefore, over one-half of the employees were still involved in the dispute. The employers stated that in some of the large shops no employees ceased work and that in some other shops very few had gone out and that these had been partially replaced. In connection with picketing a number of strikers were arrested for disorderly conduct, assault, intimidation, etc., a number being convicted.

MOTION PICTURE PROJECTIONISTS, OTTAWA, ONT.—In the dispute involving motion picture projectionists employed in three

STRIKES AND LOCKOUTS IN CANADA DURING MARCH, 1931*

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
(a) Strikes and Lockouts in Progress Prior to March, 1931			
MANUFACTURING— <i>Textiles, Clothing, etc.—</i> Women's clothing factory workers, dressmakers, Toronto, Ont.....	1,700	25,000	Commenced February 25, 1931; for union wages and working conditions; untermi- nated.
SERVICE— <i>Recreational—</i> Motion picture projectionists, Ottawa, Ont.....	6	156	Commenced February 23, 1931; to maintain union working conditions; untermi- nated.
<i>Business and Personal—</i> Waitresses (restaurant), Van- couver, B.C.....	10	120	Commenced February 23, 1931; against reduction in wages; terminated March 16, 1931; partially successful.
(b) Strikes and Lockouts Commencing during March, 1931			
MANUFACTURING— <i>Textiles, Clothing, etc.—</i> Weavers (silk factory), Cowansville, P.Q.....	99	693	Commenced March 2, 1931; against reduction in piece rates; terminated March 10, 1931; in favour of employer.

* For two disputes reported too late to be included in the table, see text.

theatres in Ottawa, operated by one proprietor, beginning February 23, 1931, at the end of March the six workers involved were still picketing the theatres, the employer having immediately replaced the union employees alleged to have been locked out.

WAITRESSES (RESTAURANT), VANCOUVER, B.C.—The dispute resulting from a reduction in wages and involving waitresses in two restaurants in Vancouver from February 3, 1931, was called off by the union on March 16. The proprietor of one restaurant had renewed his former agreement with the union.

In the other restaurant no settlement was reached but all the employees involved except two secured work elsewhere.

WEAVERS (SILK FACTORY), COWANSVILLE, P.Q.—Weavers in a silk manufacturing establishment at Cowansville, P.Q., ceased work on March 2, 1931, in protest against a reduction in wages, piece rates, estimated as reducing earnings from \$25 per week to \$20, fifty-five hours per week. On March 10 work was resumed at the reduced rates but the employer conceded a ten per cent bonus for night work.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue for February, 1931, in the review of Strikes and Lockouts in Canada and Other Countries, 1930. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates.

Great Britain

The number of disputes beginning in February was 24, and 10 were still in progress from the previous month, making a total of 34 disputes in progress during the month, involving 127,000 workpeople and resulting in a time loss of 1,495,000 working days for the month. Of the 24 disputes beginning in February, 7 were over proposed reductions in wages, 8 over other wages questions, 2 on questions respecting working hours, 6 on questions respecting the employment of particular classes or persons and one on a question of working arrangements. Settlements were reached in 18 disputes, of which 7 were in favour of workpeople, 5 in favour of employers and 6 ended in compromises. In the case of one other dispute, work was resumed pending negotiations.

Finland

The number of disputes reported for the year 1930 was 11, involving 32 establishments and 1,673 workers with a time loss of 12,120 working days for the year. Of the 11 disputes, 10 were over wages questions and one concerned a collective agreement. The results of

the disputes show that 4 were in favour of employers, 2 in favour of workers and 5 ended in compromises.

Latvia

For the year 1930, the number of establishments involved by strikes was 38, the number of workers affected was 1,547, with a time loss of 12,077 working days.

United States

During January, the number of new disputes reported was 48 and 26 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 2,439 and the time loss for the month was 186,207 working days.

Of the 48 disputes beginning in January, 13 were in the building trades, 8 in the textile industry, 6 in the clothing industry, 5 in mining, and the others in various other industries.

In the last issue of the *LABOUR GAZETTE*, page 314, the new regulations under the Coal Mines Regulation Act of Alberta were detailed. The *Alberta Gazette*, March 14, announces the amendment of Regulation No. 4, which concerns mine ventilation and provides for the installation in every mine (other than a small mine) of an automatic recording pressure gauge, to be kept constantly in use in connection with every ventilating fan. This regulation is now amended, the words "other than a small mine" being struck out, the regulation being thus made applicable to all mines.

The correspondent of the *LABOUR GAZETTE*, at Thetford Mines reported a slight improvement in employment conditions on April 1 as compared with the preceding month, with an increase in work on construction and in the mines.

UNEMPLOYMENT RELIEF ACT, 1930

Report Presented to Parliament on Administration of Act up to March 16

A REPORT prepared by Mr. Harry Hereford, Dominion Director of Unemployment Relief, on the administration of the Unemployment Relief Act, 1930, was presented to Parliament during March, in conformity with the provision contained in the Act that a statement of expenditures should be made within fifteen days after the opening of the session now current. In addition to the information called for by the Act the report gives particulars of the extent of the relief afforded and the total commitments of the governments and municipalities, up to March 16 (the date of the report) in respect to public works and undertakings to relieve unemployment to be carried out under the Act.

The Act was assented to on September 23, 1930 (LABOUR GAZETTE, September, 1930, page 1050) and an Order in Council, P.C. 2246, was issued on September 26, 1930, vesting the administration of the Act in the Minister of Labour, and appointing the Minister of Labour, the Minister of Railways and Canals, the Minister of Public Works, the Minister of the Interior and the Minister of Marine to act as an Advisory Committee. The Order also set forth the principles to be followed in the administration of the Act, these being contained in a series of Regulations (LABOUR GAZETTE, October, 1930, page 1141). Under these Regulations, the Minister was authorized to enter into agreements with the several provinces for the expenditure of the \$20,000,000 appropriated under the Act, by contributing to Municipal and Provincial expenditures for public works and undertakings to provide employment, and to supplement the expenditures of the Municipal and Provincial authorities for direct relief where no employment could be arranged. Out of this fund the sum of \$4,000,000 was set aside to provide for the payment to municipalities of one-third of their expenditures for direct relief where suitable work could not be provided for the unemployed, or for one-half of the relief given by the Provincial authorities in unorganized districts.

In regard to public works undertaken for the relief of unemployment, the regulations provide that agreements may be made between the Minister of Labour, on behalf of the Dominion Government, and the Provincial Governments, whereby the municipalities would pay one-half the total expenditures on public works undertaken by them, the Dominion and Provincial Governments concerned each contributing one-fourth of the

total amount. Exception is made where municipalities, by reason of recent abnormal expenditures, are unable to bear one-half the cost of such public works. The regulations stipulate that any agreements involving the expenditure of the Dominion grant shall contain a provision for the payment of fair wages to the workers engaged, and for the observance of the eight hour day in accordance with the principles contained in the Fair Wages and Eight Hour Day Act, 1930, and the Fair Wages Order in Council.

On September 30, 1930, by Order in Council P.C. 2292, the Minister of Labour was authorized to enter into an agreement with the Canadian Pacific Railway Company and the Canadian National Railways, whereby there would be expended by these Railway Companies the sum of approximately \$25,000,000 in the performance of certain works, and the purchase of certain material over and above the normal expenditure of the said railways, such works to be commenced immediately and to be completed within the ensuing fifteen months. As compensation to the railway companies for undertaking these works immediately, the Minister of Labour was authorized to pay, out of the amount appropriated by the Unemployment Relief Act, interest at the rate of five per cent per annum, calculated for a period of eighteen months, on the total estimated cost of the works referred to.

Conferences between the Minister of Labour and the governments of the various provinces were held, and agreements, as provided in the regulations, were executed with regard to expenditures for direct relief and for public works and undertakings for the purpose of providing work for the unemployed. The agreements provided, in accordance with the regulations, for the payment by the Dominion Government of one-third of the cost of direct relief undertaken by the municipalities, the province agreeing to contribute an amount equal to that paid by the Dominion. The agreements further provided that the Dominion may pay one-half of the amount expended by the provinces for direct relief in unorganized districts. The agreements also provided that there may be paid by the Dominion twenty-five per cent of the cost of public works and undertakings carried on by municipalities to provide work for the unemployed, and that the provinces would contribute, towards such public works and undertakings, a like amount.

The agreements further provided that the Dominion would pay one-half of the cost of provincial public works and undertakings carried on to provide suitable work for the unemployed, including one-half of any amount expended by the provinces on the Trans-Canada Highway.

The amounts allocated for such public works and undertakings in the various provinces, by the agreements referred to, were as follows: Prince Edward Island, \$90,000; Nova Scotia, \$700,000; New Brunswick, \$500,000; Quebec, \$2,850,000; Ontario, \$3,850,000; Manitoba, \$900,000; Saskatchewan, \$1,000,000; Alberta, \$900,000; British Columbia, \$900,000; Yukon, \$20,000.

A subsequent agreement was entered into with the Province of Saskatchewan to provide for the payment of a sum not to exceed \$500,000 for the relief of distress in the drought area of that province, this sum to reimburse the province for one-half of the cost of its expenditures for undertakings carried on by the Province to provide necessary relief in the drought area.

The original agreement with the Government of the Province of British Columbia allotted the province the sum of \$900,000, but following representations made in March by the government of the province to the effect that, on account of the number of unemployed in that province, they would require a larger sum for expenditure on public works and undertakings than had been originally allotted to them, an additional sum not to exceed \$200,000 was allocated to that Province by Order in Council, P.C. 487, March 4, 1931.

By Order in Council P.C. 2582, November 5, 1930, authority was given to transfer \$500,000 from the Unemployment Relief Fund to the Grade Crossing Fund, administered by the Board of Railway Commissioners, to be used to supplement the fund available to the Board of Railway Commissioners for the elimination of grade crossings, so that unemployment might be relieved by the building of subways. This amount was allocated by the Board of Railway Commissioners for work on subways at Saskatoon, Windsor, Toronto, London, and Whitehead, Man.

As a result of conferences between the Minister of Labour, the Dominion Steel and Coal Company and the Canadian National Railways managements, it was agreed that, in order to provide employment for Canadian miners in the Nova Scotia coal mines, and further to create a greater consumption of this Canadian product, to bank, during the winter for 1930 and 1931, an additional 100,000 tons of Nova Scotia bituminous coal, for use by the Canadian National Railways in areas

west of Montreal, the amount of the additional cost of this work to be borne in equal shares of one-third each by the Canadian National Railways, the coal producers and the Dominion Government, the total cost payable by the Federal Government not to exceed \$50,000.

By Order in Council P.C. 74, January 14, 1931, the sum of \$33,000 was allocated to the Department of the Interior, to provide for winter employment in Banff, Jasper and Waterton Lakes areas, this amount to be administered by and through the Department of the Interior. This grant was made on account of the fact that a substantial number of men, including some eighty returned soldiers residing in the above mentioned park areas, were in need of employment.

A tripartite form of agreement was drafted, to be entered into by any municipality obtaining a grant under the Act, with the province and the Dominion and a form of two-party agreement was drafted for provincial undertakings.

All the agreements entered into with the provinces contain a provision that on all works toward which the Dominion may make a contribution under the Unemployment Relief Act, 1930, fair wages will be paid and hours of work not exceeded, in accordance with the intent of the Fair Wages and Eight Hour Day Act, 1930, and the Fair Wages policy of the Government as set forth in Order in Council P.C. 1206, dated June 7th, 1922, and amendments thereto; and that all persons employed on such public works shall be, as far as practicable, residents of the locality in which the work might be performed, and that there should be no discrimination in the employment of persons by reason of their political affiliation. The agreements also provide that the provinces must submit, for the approval of the Minister of Labour, memoranda setting forth the public works and undertakings to be carried on by the provinces and the municipalities to which the Dominion agrees to contribute.

At the date of the report, March 16, 1931, the \$20,000,000 provided by the Unemployment Relief Act, had been utilized as shown in the following table, which shows the amount allocated to each province, the proportion of the allotted amount which the Dominion Government has to date approved as its proportion of the joint expenditure under the various agreements, the balance allotted to the provinces but not yet taken up by them, and the total cost of the public works to be undertaken, as a result of the Dominion, Provincial, Municipal and Railway expenditures.

ALLOTMENTS TO PROVINCES, COST OF PUBLIC WORKS, ETC.

Province	Allotment	Dominion Commitments Approved	Balance Unallotted	Total Cost of Public Works
	\$	\$	\$	\$

Canadian National Railways.....	3,180	75,522
Total.....	228,351	3,975,355

(1) This figure does not include repeaters, i.e.—no one individual is counted more than once although he may have been laid off and re-employed.
 (2) Incomplete figures.

The above table takes no account of men engaged in the production and distribution of the materials of all kinds necessarily involved.

The accounts so far rendered for direct relief do not present a complete picture of the direct relief given to March 16, owing to the fact that statements for the disbursements

made by the Municipalities have in many cases not yet been rendered to the Dominion Government for payment.

The following table shows the number of families and individuals reported by the Provinces as having received direct relief to February 28, 1931.

FAMILIES AND PERSONS RECEIVING DIRECT RELIEF

Province	Families granted Direct Relief	Individuals granted Direct Relief
Nova Scotia.....	2,331	
Prince Edward Island.....		275
New Brunswick.....		
(1) Quebec.....	22,095 incl	uding 81,344
(2) Ontario.....	17,000	
Manitoba.....		36,968
Saskatchewan.....		14,151
Alberta.....	4,150 and	1,277
British Columbia.....	4,370 and	12,101

(1) In addition to above, the City of Montreal reports having given 178,659 nights' lodgings to single men and 1,063,834 meals.

(2) Figure given for Ontario is number of cases including heads of families and single men.

The following table is compiled from estimates received from the Provinces within a few days of the date of this report and indicates approximately the amount which the Dominion Government will be called upon to expend for direct relief where employment cannot be provided.

ESTIMATE OF EXPENDITURES FOR DIRECT RELIEF

	Estimated Expenditure to March 31, 1931	Estimated Expenditure during April 1931	Total
	\$	\$	\$
Nova Scotia.....	17,057 00	2,425 00	19,482 00
Prince Edward Island.....	2,094,00	1,000 00	3,094 00
New Brunswick.....	10,000 00	10,000 00
Quebec.....	170,186 00	180,000 00	350,186 00
Ontario.....	289,680 00	200,000 00	489,680 00
Manitoba.....	170,186 00	75,000 00	372,000 00
Saskatchewan.....	102,000 00	21,000 00	123,000 00
Alberta.....	173,922 00	40,000 00	213,022 00
British Columbia.....	178,000 00	40,000 00	218,000 00
Totals.....	1,239,039 00	559,425 00	1,798,464 00

The regulations provide that there may be paid out of the moneys provided by the Act, such sums as may be required for administration purposes, including salaries of temporary employees, not more than one-half of one per cent of the amount appropriated under the Act, namely \$100,000. The accompanying table shows the expenditures made for admin-

istration purposes up to the date of this report:—

	\$	cts.
Salaries.....	9,087	30
Printing and stationery.....	2,091	86
Petty cash.....	75	10
Telegraphs and telephone.....	932	94
Travelling expenses.....	1,075	78
Total.....	13,262	98

SUPPLEMENTARY REPORT ON RECENT ACTIVITIES UNDER UNEMPLOYMENT RELIEF ACT

The various Provinces, Railway Companies and Departments of the Government, which are co-operating under the Unemployment Relief Act, 1930, have furnished statistics showing the actual volume of employment given to March 31, 1931. Details for each Province are as follows:—

the rural municipalities have not responded in full to requests for statistics.

However, it will be seen from the above figures that at least 248,274 individuals have been given employment and 4,857,217 man-days work from the commencement of operation, under the Unemployment Relief Act, to March 31, 1931.

It may be observed that the above figures take no account of individuals engaged in the production and distribution of the materials of all kinds which have been necessarily involved in the construction of the public works and undertakings which have been so far carried on.

The following figures show the number of families and individuals reported by the provinces as having received direct relief to March 31, 1931.

Locality, etc.	(1) Individuals given employment	Number of man-days work given
Nova Scotia.....	30,777	408,981
Prince Edward Island.....	1,215	8,711
New Brunswick.....	17,000	189,611
(2) Quebec.....	58,937	662,763
Ontario.....	43,000	1,890,000
Manitoba.....	23,309	233,425
Saskatchewan.....	19,569	458,756
Alberta.....	17,351	282,019
British Columbia.....	27,975	483,018
Yukon.....	150	2,096
Canadian Pacific Railway Company.....	5,337	152,666
Canadian National Railways.....	3,654	85,171
Totals.....	248,274	4,857,217

Province	Families granted direct relief	Individuals granted direct relief
Nova Scotia.....	2,598
(1) Prince Edward Island.....	275
New Brunswick.....	255
(2) Quebec.....	28,257 including	122,946
Ontario.....	19,000
Manitoba.....	38,342
Saskatchewan.....	15,768
Alberta.....	5,329 and	15,577
British Columbia.....	4,611 and	12,515

(1) This figure does not include repeaters, i.e. no one individual is counted more than once although he may have been laid off and re-employed.

(2) 601 Municipalities.

The complete figures cannot be presented as in the Province of Quebec, where Unemployment Relief work has been approved of, to be carried on in over one thousand municipalities, the provincial authorities find themselves unable to furnish a complete statement at the present time, owing to the fact that

(1) March figures not available.
(2) In addition to above the City of Montreal reports having given 226,213 nights' lodgings to single men and 1,320,566 meals.
